THE AMERICAN BOY

Vol. VII. January, 1906. No. 3

Is an Athletic Boy

He plays hard when he plays.
He works hard when he works.
He needs the powerful muscles,
the strong bones, the keen eyes,
the clear brain, the rugged,
sturdy Health and Strength that
come from eating plenty of
pure, wholesome

Quaker Oats

ATTENTION!

Twenty-five Thousand Boys

TWENTY-FIVE thousand boys will find at the bottom of the page opposite this one a notice to the effect that their subscription to THE AMERICAN BOY has expired, and that it is time for them to renew. Am I asking too much when I ask every boy of this twenty-five thousand to renew his subscription promptly?

You probably cannot understand how close I feel to every one of the readers of THE AMERICAN BOY. It is so close that when there is a discontinuance of a subscription, I feel that I have actually lost a friend.

KEEPING A FRIEND.—I cannot believe that my efforts in behalf of the boys lack appreciation in the heart of a single one of the readers of this paper, because I do not recall having received during the six years of my editorship a single letter from a boy complaining that THE AMERICAN BOY is not good, wholesome, interesting reading. On the other hand I can say, without exaggeration that I could fill a dozen store boxes with letters expressing the most enthusiastic regard for the paper; and, what is even more pleasant to me as an individual, I have thousands of letters expressing warm regard for me personally. This chorus of approval has made me proud—but not vain, I hope. It is indeed a great thing to be the friend and the helper of one boy; it is a hundred and twenty-five thousand times greater thing to be the friend and helper of a hundred and twenty-five thousand boys.

In fact, I feel sometimes like the father of a big family. And did ever a father lose a child that he did not think that child the very best one of the whole number? So it is with me; when I lose a subscription (which seems to me the losing of a boy out of my big family), it seems of more importance to me than the gaining of ever so many new ones. Indeed, what is the use of getting friends if one cannot keep them?

OUR AIM.—When THE AMERICAN BOY was established, over six years ago, we said, "We will publish a paper that every boy will want to read, and every boy's parents will want him to read." Think of that for a moment. There are many kinds of papers and books boys want to read which their parents do not want them to read; then there are many kinds of papers and books boys' parents want them to read which they themselves do not want to read. We argued that if we could please both sides, that is, the boy and his parents, we would be doing a great thing. That we have done it we feel assured because in six years we have built up the largest subscription list ever obtained by a publication for boys, and that, too, in the face of the fact that at the beginning nearly everyone prophesied another failure in this field. We know, therefore, that we have pleased both the boys and their parents. But we have not yet reached the mark that we set for ourselves. We want a better paper, and it is only by the help of the boys of America that we can improve both in the quantity and quality of what we have been giving them.

We want your renewal of subscription, therefore, for two reasons: First, because we do not want to lose your friendly interest, and, Second, because we need you to carry out our plans.

GOOD THINGS IN STORE.—We have bought in the last year a large amount of matter of great interest to boys, much of which is yet to appear in our pages, and it is of the very highest quality. We have been growing very particular of late, buying nothing that is at all doubtful and culling out carefully only the very best. As an illustration of the many good things we have in store, we point to a story the first chapters of which appear in this number, namely: "The Relief of the North-Branch Fort," by John Barr. This is a continued story of the kind that boys love to read, and it is by an experienced writer. Another continued story along a new line begins in this number under the title, "Denny, a Mule Driver." It is a story of a boy and a mule in the Pennsylvania coal mines. We know every boy will enjoy it. We have not the room to speak in detail of the more than one hundred stories that will appear in the 1906 volume, nor can we begin to enumerate the hundreds of leading articles, and literally thousands of items under the various department heads. We had, at first, thought of enumerating a few score titles, but it could only be a few score, and these would be but a drop in the bucket of what we have all ready for the type-setter and the printer.

IN CONCLUSION.—You have not outgrown THE AMERICAN BOY—even though you have become a voter. Thousands of grown-ups find interesting reading in its pages. No man, unless he has lost his boy heart, can fail to retain an interest in THE AMERICAN BOY. Now, we are sure that the year you have been with us has so attached you to the paper that you will not permit your subscription to lapse, nor miss a single number.

Will not every boy of the twenty-five thousand consider this a personal letter to himself, read it to his father or mother, and ask them if a better dollar's worth could come into his life during the coming year than what is contained in twelve issues of THE AMERICAN BOY.

Permit me to wish for every one of you a happy and a prosperous year, and to wish for myself and my associates a continuance of the pleasant relations with you that we have hitherto enjoyed.

Yours sincerely,

WILLIAM C. SPRAGUE,

Editor of THE AMERICAN BOY.

Stories Out of My Own Life

By THE EDITOR

No. 3--Won by a Cheat

YOU DO NOT remember the time when the walking fever struck the country, do you? Well, let me tell you about it.

It was a craze. How crazes start nobody can tell. They say the king of England sets the style for Englishmen's clothes. I do not know how that is. But somebody started the walking craze—and, doing it, did a good thing because he got people out-of-doors who never could have been persuaded to go out had it not been the style. Men, women, boys and girls all took to their legs and everybody was walking—walking—walking. There were walking matches everywhere—from the big Madison Square Garden in New York City, holding its thousands, to the little skating rinks and public halls in the small towns. Boys like to do what their elders do, so walking matches between boys of all ages were all the go. And such practicing! Boys thought nothing of walking ten miles at a stretch and after a brief rest ten miles back again. It made millions of aching, sore muscles, but it was a grand, good thing, for there's no better exercise in the whole gymnasium than a good, swinging walk. In fact you can get along without a gymnasium if you have two legs and room to walk. Just try a mile or two today. Hold your head up and your shoulders back. Throw out your chest. Bend your arms till your fists are on a level with your elbows. Strike out at a good, swinging pace. Breathe deep. Let the weight of the body come down on the ball of the foot, and after a mile of it see how your nerves tingle and your blood goes galloping through your body, carrying life to every part. You weak-chested, bent over, shamble-gaited, crooked, pale-faced boy, try it—and try it every day for a while, and see how soon you will be showing your muscles to your friends and throwing out your chest for your sister to thump with her little fist, and admiring yourself in the glass, as you dress in the morning. Oh, there's everything in getting a good body at the start, boys. Crooked trees become crooked when they are sprouts and it's when they are sprouts that they can be straightened—not when they are grown trees. Ten teams of oxen couldn't straighten for a minute one of the great oaks in the forest, but a child's hand can straighten the little sapling.

Straighten up now. Start right. Then when you become a man you can not easily be bent. What a difference there is between the little, weazened-up, bent over old man, who shambles along the sidewalk, and the tall, straight, white-haired old man who walks with ease and dignity by his side! But no more different than that crooked, loose-jointed, sickly-looking youth and the one who walks by his side, erect, firm-limbed, firm-gaited, and clear-eyed.

But to return to the walking craze.

It struck the college I was attending and every mother's son in the school and the professors, too, took to walking. Rain or shine, hot or cold, dust or mud, fair or foul, we walked. The country road to a town ten miles away was the favorite route, and any day—and particularly Saturdays—you might see from a dozen to half a hundred boys and men counting off the miles, racing against one another or against their own time, or fulfilling some vow they had made to make the trip once, twice, or more times a week.

I remember one day all the members of my class joined in a walking contest. The course was straightaway for the ten miles and back. No boy was allowed to run, and every fellow was on his honor. The start was to be made early in the morning.

Immediately after breakfast a sloshing rain set in. Back out? Postpone? Not a bit of it. We were boys, and to boys who are set on doing a thing such matters as rain and mud are mere circumstances. What boy is afraid of getting wet? But the road lay low, part of the way alongside a creek, and the soil was a sticky clay—something we well knew. But what of that? There was the indomitable spirit of healthy, vigorous, aspiring, never-say-die boyhood.

We lined up in the outskirts of town in a drenching flood. We could scarcely see the road before us. Already our boots—and many of us wore the rubber variety that came above the knees—were heavy with the sticky mire. "Go," shouted the starter, and off we went with long swinging strides, fists doubled upon our chests and teeth and lips tight closed. A short quarter of an hour and it was a dismal procession, but a plucky one. A half hour and, carrying pounds of clayey weights on our feet, we were dragging heavily. An hour and the water was out of the channels of the creek and over the roadway. Now a misstep might mean a bath, if not something worse. But one couldn't be wetter were he to lie down in the stream than we were already. An hour and a half and one of the boys fell by the wayside holding his side.

"A cramp, boys, I can't go on."

"Sorry, old fellow, see you later," and on we jogged. A little farther on a boy's shoe, or was it nothing but a great gob of mud, came off his foot and "one shoe off und one shoe on" he kept going A little farther a boy gave out—faint and dizzy he sat on a rock by the roadside, his head in his hands.

"I'll be with you, fellows, in a minute. Just a little groggy," he wailed.

A little farther on one fellow was helping another one through the water. He had lost the road. Like a good Samaritan one of his competitors—the enemy—had helped him find it. Two weary, heart-breaking, leg-torturing hours, and the leaders had done the ten miles and turned for home. The champion walker of our class turned second—but close behind the leader. There had ever been fierce rivalry between the two boys now in the lead. On, on these two went, struggling, reeling, falling, rising again, passing in the shadows of a fast gathering night the stragglers who kept pluckily on their way—now desperately determined to cover the ten miles one way at least. The rain continued, though now but a faint drizzle. The night came on—a night without moon or star. Still these two of the boys who started on that fearful trip were yet unconquered. The champion of the class had passed his rival and was fighting the contest of his life for a victory that would go down in college annals for many a year. He knew his competitor—his hated rival—was close in pursuit. Once he had stopped for breath and heard the splash, splash, splash behind him that told him the race was yet far from won. And then as he started again he felt a twinge of pain across the groin and then another. His heart almost stopped beating. Another such twinge and he could go no farther. Then he heard the rumble of wheels behind and the splash of horses' hoofs. A thought flashed across his mind. It almost made him reel with the suddenness of its coming. Why not? No one will know! For the space of two—three minutes a contest of forces raged within him more awful than any he had known in all his career as champion pedestrian of his class.

The horses and wagon drew close up behind him in the darkness. He reeled aside into the blackness to make room and to escape observation. It passed, the horses at a slow trot. It was the work of but a moment. The demon of evil conquered the boy that storm and flood and pain could not daunt or dismay. With a leap he flung himself after the vehicle, grasped with both his hands the tailboard and hidden from the view of the driver he hung on, half riding, half running—till a half mile from the starting point, on the edge of the town, he let go his hold and stood, hot and panting, in the middle of the road. Then, sitting down by the roadside, he waited, minutes—hours it seemed to him, till he should hear the footsteps of his competitor. Suddenly his ear caught a sound—a slow, uncertain tramp as of an old man stumbling in the dark. A rush of exultation swept him to his feet and off he went, walking in something of his old-time form straight down the way for the goal. Men met him many yards down the road. Torches lit up the scene and cheers filled the air, as he fell, almost unconscious, into the arms of waiting admirers. Five minutes later a face full of misery peered wildly out of the darkness into the burning glare of the torches swung high in enthusiastic welcome of the only man who kept the track with the champion.

If the cowardly trick of the victor of that day's awful race had never been discovered my story would have ended here. But there is another chapter—a sad one and a short one.

Two boys who had gone far down the road to meet the racers had stood aside to let a team and wagon pass them. Hanging to its tailboard they saw a bedraggled form and followed.

The next day a rumor went like wildfire throug' the college. It came to the ears of the champion.

(Continued on page 70.)

HE FELL, ALMOST UNCONSCIOUS, INTO THE ARMS OF WAITING ADMIRERS

RELIEF OF THE NORTH BRANCH FORT

By JOHN BARR

"GEE CRACKY! I missed again."

"Don't swear, Jim. It won't make the balls go any straighter, and you know it isn't right. Try this one," and his sister handed him a freshly loaded rifle.

"Don't swear! I didn't swear. You don't know what swearin' is. You remember the chap me and Jack paddled up the river? Well, he showed us swearin' when we capsized, and he only laughed at what we said. Gee cracky ain't swearin' at all. My! I wisht I could shoot straight, and I wisht I knew where Jack is."

Here the boy handed his smoking rifle to his sister and received the loaded one in return. His face bore that pained expression of mingled sorrow and anger. He believed he had missed several shots and he was anxious to make a record in the presence of the soldier whose marksmanship he was wont to scorn. At the same time he was racked with anxiety as to the fate of his brother, Jack. The two had been widely separated when the alarm of Indians on the warpath had come, and on reaching the fort Jim had immediately been placed at a loophole to keep off the savages, his elder sister at his side to assist in loading. His anxiety about Jack had partly unnerved the little backwoodsman and he failed to see any effect of his own shooting.

His sister quietly reassured him. She poured the powder from a horn into a thimble and from the thimble into the muzzle of the gun. There was not the slightest unsteadiness in her hand and no grain of precious powder was lost. She might have been preparing some cooking in the security of her home for all the sign she gave of excitement.

"Don't be in a hurry, Jim," she said in an encouraging voice. "You're shooting oftener than any of the men."

She was now ramming into the rifle a small patch of that paper-like building stuff manufactured by hornets. The large nest had been captured during the winter, the material making excellent wadding. Carefully she selected a bullet she herself had cast. This followed the wadding so reluctantly that, after being forced down a few inches, it was necessary to swing the rifle so as to bring the end of the ramrod against the timbers of the stockade. Each swing forced the bullet a few inches down until it was tight against the wadding. Then she pulled the percussion cap in position and the gun was ready for use.

"I believe you've hit some of 'em even if you didn't see 'em fall," she said, trying to encourage him. "I can't believe you missed all the times you've shot."

"Seein's believin' and I can't see no dead Injuns."

"Oh, Jim, here comes a soldier."

Jim stood back from the loophole and turned to face the stranger.

"Young man," said the soldier, "Captain Mitchell sends his compliments to you. We've been watching your work and you've hit five of them. One crawled off and the others are where you left them. You're a good shot for such a young fellow."

Jim was so surprised at the good news that he simply said, "gee cracky!"

The soldier turned with a smile to walk away when Margie called to him. "Please, sir," she said with some hesitation, "is our brother Jack in the fort?"

"I don't know anyone's name," he said, "but there's a chap a little bigger than this boy; looks like him, too, and is good enough shot to be his brother. I haven't heard of any boys being killed, so I guess your brother's all right."

"What did he say the captain sent me?" asked Jim when the soldier was out of hearing.

"I don't know. I didn't quite understand, but whatever it is he's got it yet, for he didn't leave anything."

"I wish it was something to eat. I——" Jim was looking out the loophole when he spoke and something that he saw made him cut the sentence short. There was a sharp report, and as the smoke cleared away Jim jumped back and executed a war dance. "I got him, gee cracky, I got him. Look! You can see him sprawled out on the grass."

Margie stepped toward the opening, but the pat, pat of several bullets against the stockade checked her.

"I guess you got him, but his friends want to get you. I think they're all tryin' at us."

For a time the two stood in a safe place, while the outsiders concentrated their fire on the loophole from which the death-dealing shots had been coming.

A few minutes later a group of soldiers came up and the young rifleman received more compliments and was relieved from duty. Brother and sister ran across the open space where flint-headed arrows were falling frequently enough to render the place decidedly unsafe, and in a central building met the other members of the family. Jack and Jim were glad to see each other again, and each was pleased by the success of the other in shooting. After something to eat the two boys were sent to another building, where a lot of tired men and boys made themselves as comfortable as circumstances would permit. All were weary with the day's work and anxiety, and soon all voices were hushed in deep sleep. Just before closing his eyes, Jack whispered to his brother:

"I'm going out tonight."

"Where?"

"To try and get past the Injuns and take word to the down-river fort."

"Well, I'm goin', too."

"I guess the captain won't let you. Well, let's go to sleep, for I'm awfully tired."

"Please don't go without me, Jack," pleaded the little fellow, but Jack was asleep.

Jim did not sleep at first. He knew how dangerous the night job would be and wished to be in it, but to nature he at last surrendered. A few hours later two soldiers passed quietly among the sleepers, scanning them by the light of the lantern.

"Here they are," said one of the soldiers.

"Which one?"

"The big fellow."

"Both small enough I should say."

They found Jim's arm across his brother, the little fellow having taken this way of guarding against being left behind, but Jack was instantly awake and gently withdrew himself from his brother's sleeping embrace. Lovingly he placed the little arm in a comfortable position without awakening its owner and followed the soldiers into the presence of an officer, who questioned him closely as to his intended plan of escape, his knowledge of the country, and other points bearing on his fitness for the dangerous undertaking. The examination was satisfactory and Jack was next conducted to a side room, where a few eagle feathers were fastened in his long, black hair, and he was otherwise dressed that he might pass for an Indian if seen in the night. His rifle, small and light, was corked tightly at muzzle and breach, for a dip in the water might injure it, and his powder horn was similarly safeguarded. Thus equipped, he was conducted to a well-guarded gate, which was opened silently. A soldier stepped out and a few minutes later returned.

"All clear as far as I can see," he muttered to the officer. "It's black dark and I think they're afraid to come close."

The officer looked at Jack as if regretting the sacrifice. "Are you ready, my boy?" he asked in a kindly tone.

"Yes, sir; and I'd like to get away before it's any lighter."

"All right. Be very careful and come back if you meet too much trouble. This gate will be watched and will be opened for you at any time. Now take good care. Good luck to you," and he patted the little fellow in a kindly way.

The boy passed quickly out of the gate and appeared to slide along the ground to the river a few yards away. Causing scarcely a ripple and making not the slightest sound, he ducked into the water and faded from sight of the men.

"Pretty smart boy," said the officer.

"He'll need all his smartness," replied the other in a despondent tone.

"You don't appear hopeful."

"When you know as much about Indians as I do you'll know why I have no hope. That boy'll be killed as sure as the sun rises tomorrow morning. He's got simply no chance."

By this time the two had reached headquarters, where Capt. Mitchell sat worrying over some rough maps. He looked up with a very anxious face as the report of the boy's departure was made, but voices outside interrupted the conversation.

"I want to go with my brother!" shouted Jim.

"You can't get in here," replied the sentry.

"Let me see the captain. I must go."

"What's the trouble out there?" asked Captain Mitchell.

"That's the brother of the boy that went out. He wants to go, too."

"Let him in," ordered the captain.

Jim was angry almost to the point of crying. His eyes were wet and his lips quivering, and there was rebellion in every inch of him as he stood before the captain. The latter looked at him with a kindly expression and said: "Well, my little man, you're the best shot in the fort. What can I do for you?"

"I want to go with my brother."

"But your brother's gone. You'd better take another sleep and shoot some more Indians for me in the morning. I need a lot of boys like you. There's no use in both of you going."

"Me and Jack always hunt together. I can't stay without him. Please let me go. He may need me."

"What do you think?" asked the captain, in doubting mood, turning to the two who had escorted Jack to the river.

"Might as well let him go; two chances are better than one," said one of the men. Then he muttered under his breath, "Neither will get through."

Jim's quick eye caught the movement of the lips and he correctly guessed what was passing in the man's mind.

"He will get through," he shouted defiantly. "Me and Jack can get past all the Injuns in the woods." Then turning to the captain, "Please let me go before Jack gets any farther away."

"I think," said the captain, noting the boy's eagerness, "we might as well let him go. He's a smart chap and may be a lot of help to his brother. We're in desperate straits and he's about as safe out as in. Fix him up and let him go."

Jim almost bounded to the door in his eagerness. He had no time to thank anyone. In the outer room he could scarcely restrain himself while being dressed. His rough disguise was almost the same as his brother's, and while preparing him the men explained their plan. He was to attempt to swim down past the Indian watchers. Then, if possible, steal a pony and follow the trail for forty miles through the woods to the large fort. If a pony could not be secured he must attempt the journey on foot.

It was still quite dark when the gate of the fort was opened a second time and Jim slid into the water just as his brother had done an hour earlier. Turning on his back he simply floated, letting the current take him along.

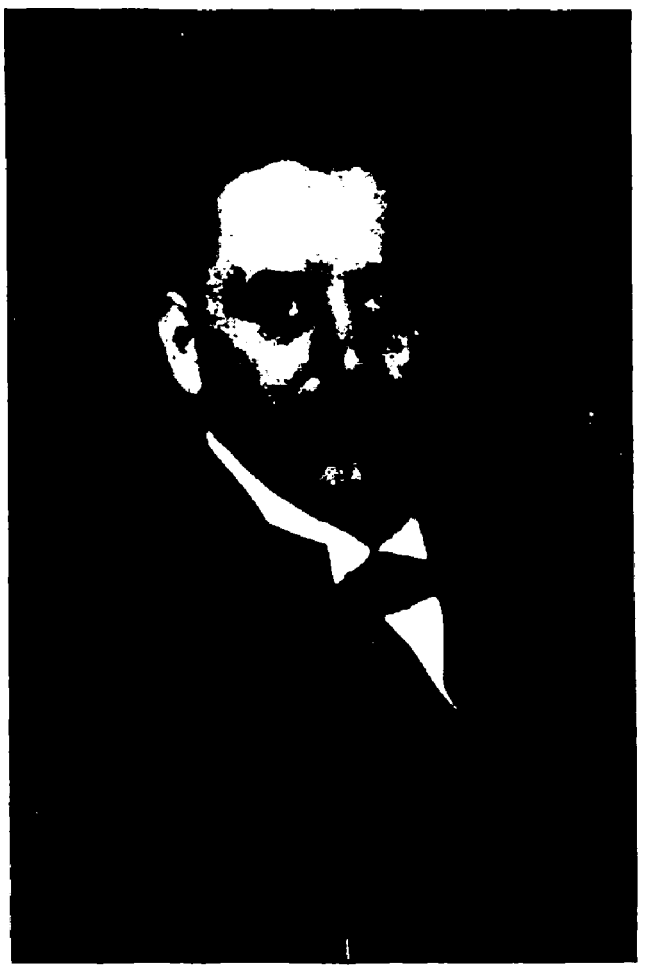
Down below the bend, where he knew the Indians were camped, there was a glow of watchfires that told of vigilance, and the little fellow kept out in the stream until near the point of land which hid the lower reach of the river. Here he noted that big fires on each side illuminated the entire width of the water. His original plan of passing down the dark center must be abandoned. Quietly he swam to shallow water and rested to think over a plan; to pass that patch of light appeared quite impossible and he feared that daylight would force him back to the fort with a defeat against him. He glanced over his shoulder to the fort and could dimly make out the outline of part of the stockade. As he looked he became conscious of some dark object moving down the river not far away. Crouching lower he watched, believing that some Indian was patrolling the river. Slowly the object came drifting with the stream. He was soon convinced that it was no Indian, and a little later recognized a lifeless tree. It was an old friend of his from far up the river. Coming down over the rapids one spring this huge forest king had caught among the rocks, and for several summers had formed a familiar object, partly submerged in the rushing water. Often had he and Jack worked their way out on its slippery trunk to spear fish as they fought their way up the stiff current. Jim looked on a little sadly as he realized that taking fish would now be more difficult, when suddenly a new thought came to him. Quietly he again launched himself forward and noiselessly swam to the floating tree. To climb on the trunk he knew would be to court disaster, so he secured a grip on one of the bare old

"OH, JACK, WAIT FOR ME! JACK, JACK"

branches. Around swung the tree like a living thing, the slight weight of the boy being enough to disturb the center of gravity, but it became steadier as the boy held on, his body submerged and only his head above water. Almost before he was ready the tree was entering the lighted zone, its white, barkless branches standing out boldly from the dark water. Jim held his breath and kept his head low. His precaution was well taken, for the tree had gone but a few feet into the light when there was a singing of arrows. Some splashed in the water near him, while others hit the trunk and stood quivering there. After the first volley there was a lull. Then he heard the splash of canoes and paddles and knew that the Indians were about to make a careful examination. Out came the canoes from each bank. Swiftly they approached and he could see the dark forms of the Indians against the bright watchfires. Lower and lower the little head went down into the friendly shelter of the water until scarcely a spot showed among the dead branches. The first canoe came alongside the trunk and an Indian pulled out one of the arrows. A few grunting words were spoken and then the canoe made a complete circle around the tree. By this time one from the other side of the river had arrived and a short consultation was held. Meanwhile the tree slowly passed out into the darkness and Jim crept cautiously into a more comfortable position. Back in the patch of light he could see the canoes returning shoreward and he knew the first danger of his journey was safely passed.

"I wonder how Jack got past?" he muttered. That Jack might not have succeeded never crossed his mind. He was far too loyal to entertain such a thought even for a passing moment. He simply wondered as to the strategy his brother had employed to get through.

Along the shore watchfires still twinkled, showing an encampment much larger than he had expected, but after passing around a second bend he found that both banks were in total darkness, and sliding off, he swam to shore and rested for awhile. But there was no time to lose. Already dawn was warming the eastern sky and he must be on his way soon or remain concealed all day. From tree to tree he worked his way back toward the watchfires, which were now burning low, closely scanning every object, but the Indians were not on the lookout for an attack from the rear, and just before daybreak he succeeded in securing a fine pony. He did not mount at once, but led the animal into the forest and was some miles away before he entrusted himself on its back. Well acquainted with Indians and their ponies, Jim had no trouble in making progress. He knew the forest paths for miles in all directions, and when the sun or stars were not shining to guide him, could tell the points of the compass by examining moss growing on trees. His chief anxiety now was to find the path his brother had taken. The best one was along the river bank, but Jim feared to take it lest Indians capture him. He figured that his brother would follow the same reasoning, and so took the next best way a little farther in the forest. When the rising sun had made it light enough he dismounted and carefully examined the ground. Yes, there were pony tracks and the dew had been knocked off the leaves. Some one had passed along there within an hour and he made up his mind that Jack was not far ahead. Mounting again he urged the pony forward, an the creature, tough and speedy, soon put a wide stretch of forest between Jim and the enclosure that held his father, mother, sister and neighbors. About noon, having reached a high piece



Very truly Yours
John Barr

THE AUTHOR OF "RELIEF OF THE NORTH BRANCH FORT"

of land, he spied some distance ahead a lone rider. With a yell he urged on his pony, but the fellow ahead, after a surprised glance backward, whipped his pony up in evident fright. On they dashed for an hour with their relative positions unchanged; Jim wondering why his brother should race away from him, while Jack finding himself followed and believing Jim to be still in the fort, thought he was pursued by an Indian who had seen him escaping with the stolen pony. Little by little Jack realized that his pony could not stand the pace and he felt that something must be done to avoid a fight. A little farther ahead he knew there was a creek and he determined to turn down this in an attempt to throw his pursuer off the track. With his pony almost ready to drop exhausted he reached the stream and turned down in the middle, where the swift water was a little more than knee deep. The cold water restored the animal and he dashed along while Jack bent low to avoid the overspreading branches. At a safe distance he dismounted, tethered the pony and scrambled back toward the pathway, thinking he might get a shot at his pursuer. It was a longer way back than he had figured, and he was just making his way through a thicket, when, away down in the hollow near the stream he saw the pursuing horseman flash through an opening. Instantly he recognized his brother Jim and sent up a shout of joy. But the distance was too great. Only a wild yell reached the ears of the little rider, and as the sound came from the rear, he at once jumped to the conclusion that he was pursued by Indians. Bending lower over his pony's neck he urged the tiring animal on, and scarcely glanced back for fear of seeing the whole tribe in full cry after him. It was useless for Jack to yell, so he worked his way back to his pony and set out in pursuit of his erstwhile pursuer.

Although weary with the day's fighting, young Eagle Wing, son of the chief, was about early on the morning of the second day of the siege, for he was anxious to see how his pony was being cared for, but to his dismay he could find no trace of the animal. Search revealed the fact that another of the best of the herd was missing, and a careful examination of the ground showed that both had taken the same direction. Quickly mounting one of the swiftest ponies and taking with him a bow, a number of arrows and a keen hunting knife, Eagle Wing was off in pursuit, while yet the sun had scarcely tipped the tallest trees with its first shafts of light. When Jack had failed to make Jim understand and was returning for his pony, young Eagle Wing, passed on in pursuit of Jim, and when Jack got back to the pathway, the Indian was between him and his brother.

A short distance beyond the stream Eagle Wing caught a glimpse of Jim and the stolen pony. His first impulse to rush on and fight was easily checked, for he was Indian enough to fear an equal combat. Knowing the woods well he left the path and took a short cut past a hill, intending to shoot Jim from ambush at a point a few miles farther on, but by mistake he reached the path again unexpectedly and was about to turn back and seek cover from which to shoot when Jim suddenly appeared. The latter was watching for Jack, whom he believed to be ahead of him, and the first intimation the Indian had that his scheme had failed was a joyous shout from the unsuspecting rider of the stolen pony.

"Oh, Jack, wait for me! Jack, Jack."

Thus calling, Jim rode on, waving his hands over his head and utterly unprepared for a hostile reception. Eagle Wing's answer was promptly sent. With deadly aim and all his strength he shot an arrow at the unsuspecting boy, who saw it just in time to dodge violently to one side. With a vicious hum it grazed him. It was immediately followed by another, but Jim was on his guard, and the second was knocked aside by the butt of his gun as Jim swung it to his shoulder. The bullet that now sped toward the Indian was only partly successful. The lack of time for aiming and the unsteady position of the shooter gave it a direction slightly less true than usual, but it snapped the string of Eagle Wing's bow, and the Indian, at once realizing that his advantage had been lost, wheeled his pony and dashed into the woods. Jim's first impulse was to follow, but he remembered the words of the officer at the fort, "Don't fight, don't hunt, just go straight ahead and get to the fort." Reloading as he went he urged his pony to a gallop and muttered, "Gee cracky, didn't I almost get it! I wonder where Jack is?"

Quickly ascertaining that he was not followed, the Indian returned to the path and determined to get back to his people. Mending his bow-string as he jogged along, he was suddenly startled by a voice in front of him.

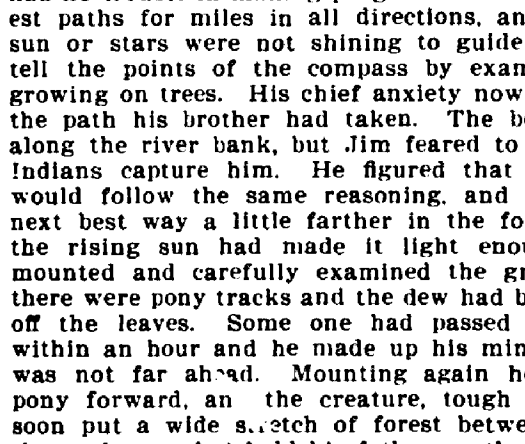
"Halloo, Jim! I've been trying to catch you ever since noon."

(To be continued.)

How to Make a Moccasin

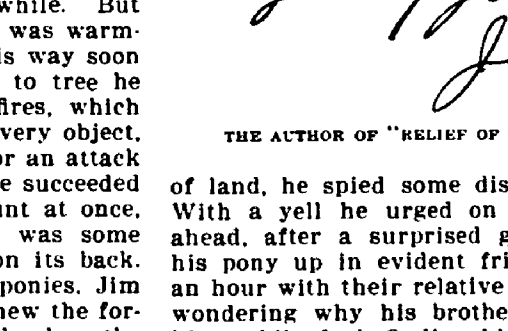
TAPPAN ADNEY IN RECREATION

THERE IS NOTHING better for wearing about the house, or when in camp or in a canoe, than an Indian moccasin. There are various kinds of moccasins, however, some of which, especially those so handsomely ornamented with beadwork, that I think rather unsuitable for rough wear; while those made of soft buckskin and moosehide are suitable only for winter wear in countries where the snow is dry, or in places where they do not get wet, as they soak up water like blotting paper. The Indians of New Brunswick and Maine make a moccasin for their own



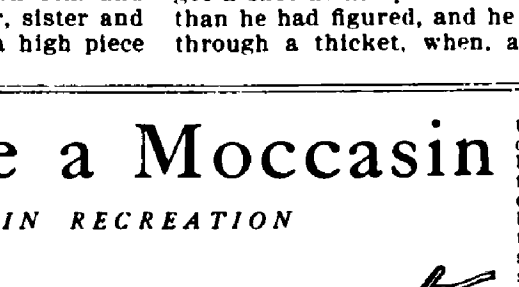
use which is very serviceable and may be easily made by anyone who can use a needle and thread and an awl. The material is a stout, but not hard and stiff ordinary heavy calf skin or cowhide. The Indian sometimes makes a very good pair out of the tops of a pair of old boots. A coarse sewing or shoemaker's needle, some waxed shoemaker's thread, and a slender awl are needed.

The Indian does not use such a thing as a "last," but cuts out the leather and judges its shape by the eye. The squaw —for it is the women usually who make the moccasins—takes the leather and places it in a pan of water to soak. The

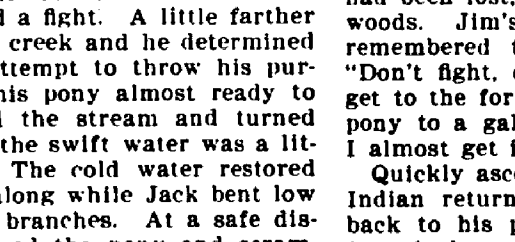


leather must be large enough to cut out two pieces shaped as in Figure 1, for each moccasin. The larger piece must be as long as the foot to be covered, and there should be at least two inches to spare besides. She takes a string and measures around the ball of the foot. The smaller piece will be exactly the same shape as the other, one-half as long, and somewhat less than a third of the distance around the foot; the two pieces edge to edge must be exactly the distance. In order not to spoil a good piece of leather, it might be well the first time to make a paper pattern to cut the leather by. The large and the small piece are then placed edge to edge and sewn together as shown in Figure 1.

The holes are made with the awl. About three stitches, as indicated, will bring out to the curves, and it is here



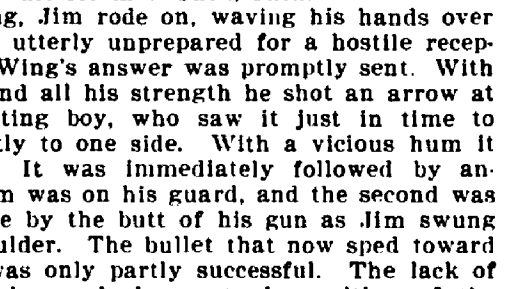
that a little judgment is required. The distance along the curve of the solepiece being at least twice as long as that of the other, it must be "crimped," about every quarter of an inch. This is done by taking each stitch in the sole about twice the length of the corresponding stitch in the top piece, or "tongue," as shown in Figure 2. If the crimps have been taken right the two sides will have the same number of crimps in them, and the final fastening will be exactly opposite the place of beginning. When the moccasin has been completed at this point it is placed upon a flat stone or board, and the sewing carefully pounded in. The future wearer then puts his foot into it, the back part is brought around behind the heel, and the edges of the leather notched with a knife. Then the moccasin is taken off and the spare leather, if any, is cut off by a straight square cut (Figure 4), and then while the edges are still together another little slit is made (Figure 4), to fit the round of the heel; but this is not cut through, there is left a little two-pointed "sail." The seam is then sewed up by an over-and-over stitch, which is also pounded flat, when the moccasin is ready for the strings.



Four double slits are cut along each side, and another in the middle of the tongue piece, as shown in Figure 5, and a leather string is run through, the ends crossing under the slit in the tongue, and carried over to opposite sides and passed either through a slit cut there for the purpose, or passed under the side string, as shown in Figure 5, and the moccasin is completed.

There are no "rights" and "lefts," as the moccasin after some wearing takes the form of the foot. A tan leather makes the nicest looking moccasin.

The lumbermen in many places use a moccasin made this shape out of oil-tanned leather which is nearly waterproof. Sometimes a leather top is sewn around the upper edge, the lacing string is dispensed with, and the result is a "shoe-pack," laced like a common shoe. But this is a "civilized" white man's contrivance, and not an Indian's. The Indians of Canada will take a moosehide moccasin made this way, sew a top four inches wide on, and fold the top around the ankle and lash it in place with a string which passes over the tongue of the moccasin and through two little loops at each side at the point where in our



diagrams the final sewing is done. This is their snowshoe moccasin. But the moccasin here described, if made large enough for several pairs of heavy socks, is also used in winter for the same purpose.

A Little Hero

Some pathetic incidents fall under the notice of officers of city courts. Out in Denver one day early in November a fifteen-year-old boy, Hector Miles, was brought into the Denver court. He had been working in a picture store at $5 a week delivering pictures. Accidentally he broke a frame. The proprietors insisted that he pay them 75 cents. The boy refused, saying that he needed the money to live on, whereupon his employers gave him a severe beating. The sequel was that the two employers were brought into court along with the boy. The boy told his story, from which it appeared that he was sending $4 out of his $5 weekly wages to his sick mother in a country town in Colorado, and with the remaining one dollar was managing to rent a garret room and find enough to eat. A bystander, hearing the story, took the boy to the office of the mayor and repeated to the latter the story he had heard from the boy's lips. The mayor then said to Hector: "I am proud, young man, to shake your hand. Write to your sick mother that your hard times are over. I want you to come out and live with me. I am only a mayor, but you are a hero." The mayor then gave Miles the job of taking care of his new team of black thoroughbreds, and promised that later on the boy should be sent to school.

How America Came by Its Name

By LOUISE B. MITCHELL

AMONG YOUNG students of history a feeling of prejudice may sometimes arise against Amerigo Vespucci, because America happened to be named for him instead of for Christopher Columbus. In fact, so many historians regard Amerigo Vespucci as a sort of historical interloper that they have unjustly accused him of wresting from Columbus "the glory of giving his name to the New World." Nowadays, it is generally conceded that previous to the memorable year, 1492, Europeans had certainly visited America.

From Icelandic chronicles we learn that in the tenth century Northmen founded Greenland and that about the year one thousand, A. D., Leif Ericsson, one of their Vikings, had explored the coast of America and, at a point near New Bedford, Mass., had founded a settlement which was called "Vinland," from the abundance of wild grapes growing there. If this, and other early explorations are at all authentic, the honor of naming the Western Continent could not have belonged wholly to Columbus on the ground of the existence of a prior right.

"The discovery of America was a very gradual process, not a single event," writes a noted historian; but adds elsewhere that "the contact of the Old and New World of the white man and the red practically begins in 1492." Every schoolboy and schoolgirl is familiar with the life of Christopher Columbus. The man himself, greatly helped posterity in this respect by leaving over seventy letters and reports—twenty-three of these having been written by his own hand. All of these have been published and given to the world. Besides this, his son, Ferdinand Columbus, a most accomplished scholar, wrote an able biography of his father, and a faithful friend of Columbus, Las Casas, has given such an excellent account of his life and actions that Washington Irving speaks of it as "the corner-stone of the history of the American Continent."

On the other hand, such a meagre sketch of Amerigo Vespucci is given in school histories that a more complete account may prove both interesting and instructive to all boys and girls. His name, Amerigo, is a form of the old German Amalrich, which means "the Steadfast." His birthplace was the old Italian City of Florence, where he was born in the year 1451. In his native city, on the walls of the old church of Ognissanti, there is a fresco of the "Madonna della Misericordia," painted by Ghirlandajo (the "garland-twiner"), a Florentine artist of the fifteenth century, which has an interesting history. After being whitewashed in 1616, this long-lost picture was brought to light in 1898. Among the figures of which the painting consists there is a portrait of a youth said to be that of Amerigo Vespucci.

In appearance, Amerigo was of middle height, strong and somewhat thickset, and with aquiline features and olive complexion. His hair and eyes were black and his mouth was firm and refined. His character has been described as "modest and quiet, but somewhat playful in manner, mild in temper, but endowed with keen intelligence." He was the third son of a notary, of a family that was old and respectable and that had once been wealthy. He was educated by his uncle, a Dominican monk, and at an early age showed a great aptitude for natural philosophy, astronomy and geography, three studies that ranked very high at that period because of their commercial importance. He was also known as an expert in calculating latitude and longitude, in which he was unsurpassed by any of his contemporaries.

After school days were over, Amerigo was taken into the great commercial house of the Medici and seems to have led an uneventful life until he was nearly forty years of age. In his leisure hours he devoted himself to the study of geography and was such an eager collector of maps, charts and globes, that upon one occasion he paid "one hundred and thirty golden ducats" for a map drawn in 1439. He also became clever in making maps himself.

About 1490 he was sent to Spain as the confidential agent of the Medici, and a few years later we find him at the head of a large concern at Seville. As this house fitted out the second expedition for Columbus in 1493, it was about this time that the two men met and the relations between them thereafter seem ever to have been most cordial. The success of Columbus as an explorer inflamed Amerigo with a passion for discovery, and he finally abandoned business and sailed from Cadiz in 1497 in the expedition commanded by Admiral Hojeda in which he held the post of astronomer.

This expedition explored the Bay of Paria lying between the Island of Trinidad and the mainland and proceeded some hundred miles along the coast of South America. His second voyage under Admiral Pinzon, resulted in the discovery of a group of small islands in the Gulf of Mexico. Later in life he was allured by promises into the service of Emanuel, King of Portugal, and undertook two other voyages with Portuguese ships in 1501-1503. In attempting to discover a passage to Malacca, misfortune overtook him. He lost one of his ships, and it was only after undergoing great perils that the other five found refuge in All Saints' Bay on the coast of Brazil.

The monarch under whom he served gave orders that some of the remains of the ship "Victoria" in which Amerigo had made his last voyage should be suspended in the cathedral of Lisbon, but fulfilled none of the promises he had made. Amerigo subsequently returned to Spain and in 1508 was appointed Pilot-Major, when it became his duty to superintend the examination of all candidates for the position of pilot and to pass judgment upon their proficiency in practical astronomy and navigation. But he held this position for a few years only, for his death occurred at Seville in 1512.

As in the case of Columbus, Amerigo Vespucci also wrote a narrative of his "American" voyages; but, strangely enough, both of these great explorers died without having suspected the actual significance of the discoveries in which each had been concerned. A selection from the narrative of Amerigo at length found its way into Germany, and from there to the little town of Saint-Dié situated in one of the quiet valleys of the Vosges Mountains where the "blue-eyed, gentle René," Duke of Lorraine, had founded a college, which, in a two-fold manner, became curiously connected with the discovery of America. In the first place, it was there that "Imago Mundi" was written, the book which so powerfully influenced the thought of Christopher Columbus. Secondly, Martin Waldseemüller of Freiburg, Germany, was professor of geography at Saint-Dié about the beginning of the sixteenth century, and on April 25th, 1507, he published a little treatise entitled "Cosmographic Introductio" in which the letters of Amerigo Vespucci were translated into Latin and given as an appendix.

As the college had its own printing-press, three other editions of the book were published during the same year, and were eagerly sought after as being the first account of the wonderful discovery. The only known copy of the first edition is in the possession of the Lenox Library of New York City. In this rare book occurs *the first suggestion of the name America.*

After having treated of the division of the earth's inhabited surface into three parts—Europe, Asia, and Africa,—Waldseemüller speaks of the discovery of a fourth part which translated from the Latin reads as follows:

"But now these parts have been more extensively explored and another fourth part has been discovered by Americus Vespucci. Therefore I do not see what is rightly to hinder us from calling it Amerige, or America, i. e., the land of Americus, after its discoverer, Americus, a man of sagacious mind, since both Europe and Asia have got their names from women."

"Such were the winged words, but for which," quotes a writer, "the Western Hemisphere might have come to be known as Atlantis, or Hesperides, or Santa Cruz, or New India, or perhaps Columbia."

Martin Waldseemüller proposed the name only for that part of the land now known as South America and to which it was for some time restricted; but it was owing to his suggestion, also, and which was evidently quickly adopted, that America came by its name.

WON BY A CHEAT

(Continued from page 67.)

From that moment the boy who won the great twenty-mile race through the blinding storm became an outcast. Suspected, shunned, he became the thing he once loathed. He left college, and by a deliberate plan set out to win success in the wide world by any means, fair or foul. The decision by the roadside that night when the brave, strong, victorious youth became the deceiver, the make-believe the coward, the weakling, became a decision for life—for eternity.

PROSPECT HILL

By GEORGE WHITEFIELD D'VYS

GEORGE WHITEFIELD D'VYS

"PROSPECT HILL!"

Words that stir the blood, and thrill through and through the heart of every American boy, even as do Lexington, Concord, Bunker Hill, Yorktown, Appomattox, Manila and Santiago, for well he knows that this historic eminence was the birthplace of our nation—the mightiest of any age.

Here, too, on New Year's day, one hundred and thirty years ago, was born the spirit of 1776, when was hoisted the first American Union flag that ever floated to the breeze, one of the most momentous events in the history of our country.

Prospect Hill is situated in the beautiful and historic city of Somerville, Mass., just across the Charles river from the famous old city of Boston, and perhaps not more than a mile to the westward of Bunker hill.

On the evening of the ever memorable April 19, 1775, in their wild flight from Lexington and Concord, the Britishers passed the southerly base of this hill, and here it was they encountered the fiercest firing of the day, and had not their flight been in such haste, baffling the massing of the patriots, right here at Prospect Hill the red-coated troops must surely have surrendered or been annihilated, as from all directions to this eminence came the sturdy, liberty-loving yeomen—our own grandsires.

June 17, old Prospect Hill again came into prominence. At Bunker hill, lack of powder had left the Americans without the means of fight, so they retired. Yet even as the English gloated over their Pyrrhic victory, the 4,000 patriots were, with characteristic energy and foresight, fortifying Prospect Hill, General Putnam in command. On Bunker Hill during that eventful day they showed that they could fight, and now at Prospect Hill they showed they could stand, and here they became a liberty-demanding nation.

From that time until the evacuation of Boston, March 17, 1776, there were stirring times on Prospect Hill, for not alone was it the strongest and most formidable fortification in the besieging lines, but it was the most important. It commanded both the basin of the Charles and the town of Boston, holding the enemy in check and protecting the American army, which was quartered in Cambridge, about Harvard university, scarcely a mile to the westward, and protecting also their powder magazine in the old powder house a little to the northward.

All the great leaders of our army were here on Prospect Hill—Washington, Lee (who was second in command), Putnam, Sullivan, Stark, Ward, Greene, and today, about a quarter of a mile to the westward, on the southerly side of Somerville avenue, stands the old General Greene homestead, beneath whose roof Washington often slept, and where oft-times Hancock, Otis, Adams and other patriots met in secret.

Another event of importance was the raising of the standard of the Third Connecticut regiment on Prospect Hill, July 18, 1775, the first time our American flag was unfurled to the breeze before an enemy.

The previous April, the General Asembly of Connecticut had voted to raise seven regiments for the defense of the colony. Each regiment had a different color, that of the Third being scarlet. It was this scarlet standard that General Putnam, a Massachusetts born boy, raised on Prospect Hill, while our artillery thundered a mighty salute and 20,000 soldiers cheered as only American soldiers can cheer. Over on Bunker Hill the Britishers heard it all and took alarm, at once parading themselves in battle array.

While the enemy persistently stormed our citadel with shot and shell, but little real damage was done; on the other hand, our riflemen were costing the Britons many lives by the accuracy of their marksmanship. Most of these sharpshooters were from Virginia and Pennsylvania, where from boyhood they had been accustomed to using the rifle.

Late in 1775 the Continental Congress appointed a committee of three—Franklin, Lynch and Harrison—to design a **"Union"** flag, and their conception—the first American Union flag—was first hoisted to the breeze January 1, 1776, on Prospect Hill (the very day on which our new Continental army was organized), and this same flag was in triumph carried by Ensign Richards into Boston on Evacuation Day—Evacuation Day in truth, for since March 17, 1776, the narrow, winding streets and avenues of dear old historic Boston have never known the flutter, in triumph, of an alien flag.

So may it ever be!

To return to the day of the birth of the spirit of '76. General Washington declared the new flag was raised in compliment to the thirteen colonies.

It contained thirteen alternating stripes of red and white. In the center of the flag were the crosses of St. George and St. Andrew, indicating still the loyalty of the colonies to Great Britain. Not until June, 1777, was the original of our present flag made by Betsy Ross at Philadelphia.

Other events of interest took place on Prospect Hill, both during and after the siege, aye and they are still taking place. Here, from November, 1777, to October, 1778, guarded by the American troops under General Heath, were quartered "the flower of the British army," prisoners of war who surrendered at Saratoga.

Here in 1862, answering their country's call, mustered the soldiers of Somerville, whose record in the Civil War is well worthy of highest honor.

Hallowed spot!

In recent years the spirit of '76 again became rampant among the citizens of patriotic Somerville, and at a cost of $75,000, what commerce had left of the hill was purchased and deeded to the city. Today its sacred fields are covered with a beautiful park, sightly residences, well-kept streets and lawns, and last yet foremost, here stands Somerville's magnificent memorial to patriotism—a massive granite observatory.

It but remains for the American boys to guard our rich heritage of freedom. May we love and serve our country, not alone being willing to die for it, as did many of our fathers—but honor and defend it by living pure, patriotic and serviceable lives. And our flag—"Old Glory"—may we honor it as ever the symbol of union, liberty and equality.

An Awful Threat

"SPEAKING of punishment for youthful offenders against school discipline reminds me of an experience I had some time ago," said a public school teacher the other day.

"The boy's reputation had followed him to my classroom from several private schools, to which his indulgent mamma had sent him and from which he had been politely asked to depart. He was not one of those street arabs who often come into a classroom with quaint and impractical ideas of discipline, but one of that too numerous type known as 'mamma's baby.' The rod had been spared and so he was a real specimen of the spoiled child.

"While his classmates counted their candy money in nickels and dimes, he carried nothing less than quarters and half dollars, with plenty of the 'long green' to replenish his supply of change at all times.

"For all that he was not popular among his classmates and he certainly was a 'thorn in the flesh' of his teacher. I was about to give him up when as a last resort I consulted the principal.

"On the following day, in response to a note from that official, the school was honored by a visit from the boy's mamma. She was both surprised that Harold should be the occasion of any trouble and indignant that she had been obliged to come.

"When we had all assembled in the principal's office for a sort of court martial and had reviewed the numberless misdemeanors of which the boy had been guilty, the following crushing sentence was passed by the fond mamma:

"'Harold,' (adjusting glasses and looking very firm), 'your conduct has forced me to climb these four flights of stairs. I am tired, grieved and shocked. If you do not mend your ways I shall have to send you to Europe.'

"Harold seemed rather pleased and smiled in anticipation of the annoyance he could be.

"The principal calmly assured mamma that the threatened banishment would no doubt have a most salutary effect on Harold's future behavior and closed the case.

"Harold is now sojourning (in punishment for new and unheard of crimes against his teacher) in southern Europe."

Alto, Mich., Dec. 7, 1905.

W. C. Sprague, Editor:

Dear Sir—I received the book which was given as a prize for Pictorial Proverb A in November number of THE AMERICAN BOY, on Monday, December 4. I think it is a generous prize and thank you for it.

PERRY HARRIS.

American Boy Day in 1906

DETROIT, January 1st, 1906.

ALREADY inquiries are coming relative to the celebration of AMERICAN BOY DAY in 1906. This letter is designed to meet all inquiries on the subject.

The publishers of THE AMERICAN BOY are prepared to co-operate with boys and their friends in the celebrating of AMERICAN BOY DAY in 1906 on any date they may fix as being suited to their localities.

WHAT AMERICAN BOY DAY IS.

AMERICAN BOY DAY is the name given to a day (date to be selected by the managers of the day in every locality where held), when boys and the friends of boys gather at some central meeting place and join in patriotic exercises, the leading performers on the program being boys. It is a boy celebration, bringing out the boy talent of the community under the lead and direction of adults. It is for all boys, whether readers of THE AMERICAN BOY or not, though, naturally, the readers of THE AMERICAN BOY will take the lead in formulating plans.

HISTORY OF THE DAY.

Early in 1904 the managers of the St. Louis World's Fair undertook to set apart a day at the fair for American boys, calling it AMERICAN BOY DAY. Mr. William C. Sprague, the editor of THE AMERICAN BOY, was given full charge of the day. He immediately set to work and obtained the best boy talent from all over the country in the way of boy orators, declaimers, musicians, gymnasts, and so on, and on the 5th of July these boys appeared on the stage of Festival Hall at the Exposition grounds, before the largest audience that up to that time had assembled in that great structure. For two hours the boys rendered a remarkable program. Immediately on the adjournment of the Festival Hall meeting the entire company paraded through the grounds to the Pennsylvania Building, where further exercises were held about Liberty Bell, during which one of the boys, in behalf of the boys of America, crowned the bell with a wreath of roses. From the Pennsylvania Building the company proceeded to the Michigan Building, where exercises were held, consisting mostly of the reading of letters from the president of the United States, and the governors of the various states.

So great was the success of the affair that it was asked on all sides that some such celebration be held every year. As it required someone to take the lead in the adopting of the suggestion, the publishers of THE AMERICAN BOY volunteered to do so. The result was that in the following year, 1905, a like celebration was held on July 5th, at the Portland Exposition, Portland, Oregon, with Mr. Sprague as the master of ceremonies. The largest audience building on the grounds of the exposition was comfortably filled on the afternoon of that day, and one of the most interesting programs of the entire exposition was rendered by boys. At the same time a celebration was being held at Bedford, Pennsylvania, under the auspices of two of the teachers in the public schools; at Chautauqua, N. Y., and at Cairo, Illinois. Other minor celebrations were held in small towns under the auspices of boys' clubs.

THE PROSPECTS FOR 1906.

Already boys and their grown-up friends are preparing for celebrations for 1906. In San Francisco one of the leaders in boys' work has made great progress in interesting the citizens of San Francisco in a celebration that shall be truly municipal. Badges have been made and distributed to the pupils in the schools, and the talent is being selected. Boys and their friends are writing us from all over the country, asking how to go to work for this year. This indicates that while there will be no great exposition in 1906, there will be many celebrations of AMERICAN BOY DAY.

HOW TO GO ABOUT IT.

Get the interest and co-operation of the leaders in boys' work in your city or village. If there are no such persons, get the interest and co-operation of the principals of the schools, or some one or more of the teachers, the mayor of the city, the editors of papers, the secretary of the Y. M. C. A., and any and all persons or agencies that are interested in boys, or can be induced to become interested.

Have these persons gather at some convenient place and discuss the matter of a date for holding the celebration. Select any date that you please. Make it a day or an evening program, as you please. Having selected the date, notify the Editor of THE AMERICAN BOY at Detroit.

The next thing to do is to find the best boy talent in the community. You can learn this by inquiry of the school teachers, the secretary of the Y. M. C. A., the club leaders, the Sunday School superintendent, and others. There are always boys, even in the smallest villages, who are specially fitted for delivering orations, reciting, singing, playing some sort of an instrument, doing athletic stunts, or entertaining in some way or other.

Appoint a program committee well in advance. Let the orations and declamations be on patriotic subjects. As the time draws near, THE AMERICAN BOY will furnish good subjects for orations, and will furnish the best of declamations, so that all that will be needed of the committee will be the selecting of the boys to take the parts. Let some one have charge of the musical part of the program who is fitted for selecting and training the talent.

Get the co-operation of the paper or papers published in your town. They will be glad to do everything for the enterprise. Furnish to the papers pictures of those who are to take part.

SUGGESTIONS GROWING OUT OF EXPERIENCE.

The following shows something of what the celebrations heretofore have embraced in their programs. No one celebration has had them all, however. Some of these you may adopt:

March from Tannhauser on the pipe organ. Music by Band of Fifty Pieces. Invocation by the Secretary of the Y. M. C. A. Address of Welcome by a Boy. Response by a Boy. Five Minute Address by the Chairman of the Day (usually an adult). Salute to the Flag (a spectacular number on the program in which all join; the method of carrying this out will be explained by the Publishers of THE AMERICAN BOY on request). Oration, "The Coming Man," by a Boy. Oration, "The American Government," by a Boy. Vocal Solo, "The Deathless Army," by a Boy. Vocal Solo, "Daddy," by a Boy. Recitation, Beecher's "American Flag," by a Boy. Letters from Prominent Men, addressed to Boys. Declamation by an Indian Boy. Greetings from the Boys of Japan by a Japanese Boy. Messages Read from Prominent Authors of Boys' Books. Gymnastic Work by a Team of Tumblers from the Y. M. C. A. Address, "The Heritage of the American Boy," by a Boy. Violin Solo, by a Boy. Solo, "Angels Ever Bright and Fair," by a Choir Boy in costume. "The Lost Chord," by a Quartette of Indian Girls. Apostrophe to Liberty Bell, Composed and Recited by a Boy. Recitation, "The Unknown Speaker," by a Boy. Singing of THE AMERICAN BOY Prize Hymn (composed by a boy; prize given by the Publishers of THE AMERICAN BOY). AMERICAN BOY DAY Prize Poem (Recited by its composer, prize being given by the Publishers of THE AMERICAN BOY). Soprano Solo, "Love the Pedlar," by a Choir Boy. Sword Dance, by a Boy, in Scotch Highland costume. Vocal Quartette of Indian Boys. Recitation, "As the Moon Rose," by a Boy. Solo, "For All Eternity," by a Choir Boy. Recitation, "Marshal Ney's Last Charge at Waterloo," by a Boy. Vocal Solo, "My Own United States," by a Boy. Singing of "America" by the audience. Singing of the "Star Spangled Banner" by the audience. Violin Chorus, by eight Boys. Recitation, "Custer's Last Charge," by a Boy. Soprano Solo, "Sleep Little Tulip," by a Boy. Oration, "Abraham Lincoln," by a Boy. Twenty-four boy voices in "The Stars and Stripes Forever." Oration, "The Ideal American," by a Boy. Fantastic Drill in costume, by Boys and Girls. Welcoming Address, by the Mayor. Male Chorus, "All Hail, Land of the Free." Recitation, "Cheer, Cheer the Flag," by a Boy. Entire audience sings Keller's American Hymn. Bow and Arrow Drill, by five Boys in Indian costume. Oration, "The American Boy of Yesterday," by a Boy. Declamation, "Independence Bell," by a Boy. Oration, "Old Glory," by a Boy. Oration, "The American Boy of Today," by a Boy. Oration, "The American Boy of Tomorrow," by a Boy. Scarf Drill, by Boys. Piano Solo, by a Boy. Oration, "Americanism," by a Boy. Egg Race. Rabbit Race, and other athletic sports. Basket Dinner in the woods. Children's Chorus. Oration, "Our Country," by a Boy. Talk to Boys, by an adult. Cornet Solo, by a Boy Mandolin Club.

IN CONCLUSION.

A few persons can readily get the talent and obtain the use of a church or hall and do everything necessary to make the day a success. THE AMERICAN BOY will publish in its pages the plans of local promoters, and will help in the furnishing of declamations, letters from prominent men, formula for saluting the flag, and such other features as cannot well be provided locally.

All that you have to do is to find some man or woman who will undertake to correspond with us and take the lead in getting things started. We prefer to have a grown-up at the head of the enterprise, so that everything may pass off creditably and there may be no failure. Address THE AMERICAN BOY, Detroit, Mich.

Through Celestial Spaces

An Astronomer's Dream

By JOHN C. PACKARD

A TREMENDOUS contract! To explore the remote recesses of the visible universe and report to a waiting world!

* * * * * * *

A spin around the world by way of a preparation for our journey! We shall need a fast horse even here. 25,000 miles is no small distance. A railway train traveling at the rate of 60 miles an hour by day and by night, without a stop, would require nearly 18 days! We must go faster than that. A cannon ball, hurled from a modern gun at the rate of 20 miles a minute, would carry us around the globe in a single day. That's not so bad. We will take the Cannon Ball Express. * * * How do you like such rapid transit? Flying, isn't it? Almost takes one's breath away. But then, it is a vast distance around the earth and one must travel fast. * * *

Back again from our trial trip, and now we are off upon the first stage of our journey. To the Moon—240,000 miles! Ten times our trial spin! * * * Ten days elapse. We are close upon our satellite—a cold, dead world with no sign of life or vestige of beauty.

We must hasten on. Above us is the genial sun, 93,000,000 miles away. Surely we must visit him, the central figure of our solar system, the "king of our little corner of the universe!" But 93,000,000 miles is a long distance. Let's figure a bit. Our Cannon Ball express travels at the rate of 25,000 miles a day. To travel 93,000,000 miles will take nearly 4,000 days, or about 11 years. We must go faster. Comets have been known to whirl around the sun at the rate of a million miles an hour! 93,000,000 miles? About four days. Let's try the Comet Express. Away we go. Makes your head swim. Rapid isn't it?—a million miles an hour. * * * Well, four days are soon over and here we are—a long way from home—upon a tremendous globe of fire, by the side of which our earth would appear no larger than a mustard seed beside a cannon ball. 330,000 earths to make one sun!

But time flies. We must away. To the nearest star! Untold billions of miles! Our comet is too slow. We must travel faster yet. Light speeds away at the rate of 186,000 miles a second—eight times around the earth in a second of time—to the moon while you are counting "one, two;" to the sun in eight minutes. Good enough. We will take the Sunlight Express. Ready! Go! Whew! Makes your ears tingle. * * * The earth is out of sight. The sun is disappearing—a mere speck—gone. Yet we are no nearer the stars than when we started. Millions of millions of miles! A tremendous distance. Four years and more at the rate of 186,000 miles a second! * * *

Arrived at last; travel-stained, worn and weary. * * * Such gigantic orbs! Full three times as big as our sun, a million times as big as our earth, and hot! Whew! * * *

CHILDREN OF THE GUATEMALAN MINISTER TO THE UNITED STATES

But there are other stars still farther off. Billions of billions of miles! A thousand years by the Sunlight express. Is there nothing faster? Imagination, alone. Thought travels at an infinite pace—speed without end; velocity beyond compare. Let's think a bit.

* * * * * * * * * * * *

Here we are—at the limits of the visible universe. Vast! Vast! Vast! Our brain reels. The mind gives way. We cannot grasp such infinite dimensions. We look about us in our bewilderment and sigh for relief. * * * The calm spaces at length restore our senses. We look about us and humbly note that order and system still prevail on every hand. THE INFINITE GOD IS IN THE MIDST OF HIS INFINITE UNIVERSE.

Messages to American Boys From Two Western Governors

FROM THE GOVERNOR OF NORTH DAKOTA.

E. Y. Sarles,
Governor of North Dakota.

God bless our boys. The destiny of our republic is in your hands. Ever be ambitious to excel in all you undertake. "Be not weary in well doing."

Absolute integrity combined with energy and ability are highly essential. Boys, always be strictly honest, considerate and patriotic. You have my best wishes for success and happiness.

E. Y. SARLES.

FROM THE GOVERNOR OF NEBRASKA.

Executive Chamber,
Lincoln, Nebraska.

To the Boys of America:

The world needs manly men. It is too true that not all who attain to physical manhood are worthy the name of men when measured by the moral and intellectual standards. The demand of the hour is for men who hold principle above desire for selfish gain, who can resist temptation, who want to do right because they love righteousness and who are honest in all things not because "honesty is the best policy" but rather because honesty is essentially right and is the only safe conduct in man's dealings with himself, his fellow man and his God. "As the twig is bent the tree's inclined." Manly boys make manly men.

JOHN H. MICKEY,
Governor.

THE JOY CLAIM

A STORY OF THE NEUTRAL LANDS

By WILL LISENBEE

In Three Parts ✂ Part III

WHEN MARTHA looked up and saw the evil face of Peter Davis she closed her hand about the stump ore and faltered:

"I—I—don't know what it is."

"Give it ter me," commanded Davis, advancing and stretching out his hand. "I ken tell ye what it is."

Martha cast a startled glance at the intruder, and reluctantly laid the fragment of ore in his hand.

For several moments he stood examining it, a greedy look coming into his small, bead-like eyes.

"Whar'd ye git this, sissy?" he asked.

Martha pointed to the hole she had been digging.

"Think ye've found a silver mine, I reckon?"

"I don't know," answered Martha.

"Wall, ye hain't. 'Taint nothin' but mundic, and that ain't worth more'n rock."

Martha's face fell.

"I was digging out the spring when I found it," she explained. "I—I—thought maybe it was silver," and a lump rose in her throat.

A low, harsh laugh escaped the man.

"I wouldn't be tellin' any one about it," he said, trying to speak in a softer tone. "They'd be laughin' at ye, sissy, an' callin' ye a fool."

"There's no one to tell but my mother," returned Martha.

"Of course not, but ye needn't be showin' the stuff to any one that comes along."

Martha remained silent.

"Yer ma hain't been contractin' with ole Joy for the claim, has she?" he asked after a pause.

"No," she answered.

"That's right. The league hain't bothered ye, 'cause we 'lowed ye was havin' hard enough time since yer pa died, an' I didn't think yer ma could do anything ter get ye inter trouble." And with this he strode away, leaving Martha standing by the spring.

"I'll take a piece of this home and show it to mother, anyway," she said, stooping to pick up a fragment of the broken ore that lay at her feet. "I don't think old Davis would tell me if he knew it was gold."

"Then what are we to do, mother?"

"We'll haf ter contract with ole Joy fer the claim—if we don't someone else will."

"But where are we to get the money?"

"It don't have to be paid all at oncet, and I've got a hundred dollars that was paid on the note for the cattle we sold over in Missoury. We can pay that much down and have the contract draw'd up, and I reckon the mine will soon make us enough to pay the rest."

"But the leaguers, mother, won't they drive us away from the claim if we contract with Joy?"

"Mebby they will, but we needn't let them know about it. I reckon the man at the land office ain't goin' to tell 'em if we tell him not to do it."

"Then we must make the contract at once," answered Martha.

"I will go over to Baxter Springs tomorrow, and see what can be done," said Mrs. Babbett.

It was almost sunset when they returned to the cabin. Mrs. Babbett began to clear away the supper dishes, while Martha hurried across the prairie to look for the cows.

It was quite dark when she found the cattle and drove them in the direction of home.

She was just crossing the little ravine near the spring, and was making her way through a patch of sumachs, when the sound of voices near her attracted her attention.

Glancing to the left, she saw the dark forms of two men approaching from the direction of the spring.

Without hardly knowing why, Martha crouched in the sumachs and waited for the men to pass by.

"I'll tell ye what it is, Jim," said one of the men, whom Martha recognized as Peter Davis, "thar's a forchun in it, an' no mistake. It's a run uv pure lead ore, worth thirty-five dollars a thousand."

"But how are we goin' to profit by it?" asked the other. "We hain't got the claim."

"GIMME THAT PAPER"

It was almost supper time now, and turning about she walked in the direction of home. On reaching the cabin she found her mother busy preparing the evening meal.

"Look what I found in the well, mother," she said, holding up the piece of ore.

Mrs. Babbett took it, an exclamation of surprise escaping her as she did so.

"W'y, child!" she cried, in an excited tone, "it's lead ore as I live."

"Oh, mother! are you sure?" exclaimed Martha.

"Sure?—of course I am. Didn't I use to live in Galena, Illinois, when I was a leetle gal, and I know a piece of lead ore when I see it.

"Why, Mr. Davis said it was—something not worth more than rocks."

"And he lied when he said it. How did he come to see the ore?"

"He happened to come along when I was at work just as I found it," answered Martha.

A troubled look crossed Mrs. Babbett's face.

"He's up to some rascality," she said. "There's a fortune in a good lead mine, and its plain ter see that ole Davis knows it's lead and wants ter keep us ignorant of the fact."

"He told me not to mention it to any one," said Martha, "and now I see what his reasons were. Do you think he'll try to get the mine away from us?"

"I know he will if he has a chance, and we must watch him. But we'll take a look at the hole as soon as supper's over, and see what kind of a prospect it is."

A half hour later when they reached the spring they found that quite a pool of water had collected in the bottom. As soon as this could be bailed out Mrs. Babbett descended into the spring. She took the pick, and after making a close examination of the ground, came out bringing a large piece of mineral.

"It's a vein of 'float,'"* she said, "and may lead to somethin' good. But the claim hain't been contracted fer yit, and we're liable to lose it if people find out there's lead on it."

"That's just it; an' that's what I brought ye down hyar fer. Ye've got some money an' I hain't, so I takes ye in with me. We contracts with ole Joy fer the claim and the mine's ours. It'll make us both a forchun er I'm mistaken."

"But the widder; hain't she already contracted fer it?"

"Not by a jug full. I've seed to that, an' the coast is all clear."

"Hanged if this ain't the best thing I've struck in a coon's age," cried the other enthusiastically. "But it won't do ter fool about the business; we must git the claim at onct."

"That's my idee exactly, an' in order to make shore uv a good thing, I've decided that we must start fer Baxter Springs in the mornin' before daylight; that'll put us ahead uv the widder, even if she knows about the lead an' wants ter contract fer the claim."

The remainder of the conversation did not reach Martha, for the two men had passed beyond her hearing. But she had heard enough to convince her that they were plotting to rob her mother of her claim, and with a wildly beating heart she rose from her place of concealment and fled in the direction of home.

As soon as she reached it, she told her mother what she had overheard.

The poor woman was in despair.

"Thar's no remedy for us but to lose the claim, I reckon," she said, despairingly. "They'll be at the land office and have the claim contracted fer before I could git there to-morrow."

"But will the land agent sell them the land, mother, when they are not living on it?"

"Yes, child. The leaguers have made sich a war on the land agents that they are now selling to whoever comes, whether they're settlers or not."

"Then we have got to do something right away, or lose the claim."

"I'm afraid we can't do anything now till it would be too late."

"But, mother, they will not start to the land office till nearly daylight, tomorrow morning; there is yet a chance to beat them. I will go to Baxter Springs to-night."

"W'y child! what do you mean? It is twenty miles across a wild, unsettled country."

"But I know the way, mother, and can make the trip as well as not. Give me the money to pay on the claim, and the papers giving the location and I will start in a half-hour."

"My sakes! child, I'm feared for you to make the trip alone and——"

"Never mind, mother, I'm not afraid, and Dobby can carry me over the road as swift as a bird."

"Heaven bless you, my child," said her mother affectionately, putting her arms about Martha. "I don't know what I'd do if it wasn't for you. You always seem to know what to do, and if you will go, may heaven protect you on your journey."

Pressing a kiss on her mother's cheek, Martha left the house for the sheds, and soon returned, leading Dobby, bridled, and with her mother's saddle girthed securely upon his back. Hitching the horse to a post, she entered the house to prepare for her journey.

"'Taint no use for you to start now, child," said her mother. "Better wait till nearly midnight—that'll put you ahead of ole Davis, and give you daylight to come back in."

"Perhaps you are right, mother, but I'll get ready now, and start whenever you think best."

When everything was in readiness for setting out, Martha and her mother sat down under the little kitchen shed and began to talk over their plans for the future.

"If we git the claim contracted for," said Mrs. Babbett, "I'm going to write to one of the mining companies over in Missoury, and mebby we can sell 'em the mine for a big price. They air always on the look out for new mines, and I reckon they'll send a man right up here if I let 'em know."

"But couldn't we work the mine ourselves?" asked Martha.

"Yes, we might do it, but it would take a good deal of money to git the work started, and that we hain't got. But we'll not sell unless we receive a good price, for we can work it if we have to."

It was nearly midnight when Martha mounted her horse to start on her journey.

"Here's the paper and the money, tied up in a handkerchief," said Mrs. Babbett, as she handed Martha a small parcel. "Jist tie it around your neck and you won't lose it."

Martha did as directed, and then bidding her mother goodnight, she rode away through the darkness in the direction of Baxter Springs.

A half hour's ride brought her to the old Military Road, then with a plain road before her and no chance of going astray, she urged her horse into a gallop.

A half hour later the moon rose out of the waste of prairie and cast a dull, red light across her path.

The strip of country through which she was passing was thinly settled, but now and then she would catch sight of some lone prairie cabin standing dark and silent in the high grass.

For an hour she continued to ride at an easy gallop, and then being satisfied that she was far in advance of Peter Davis and his companion, she reined in her horse and proceeded at a more leisurely gait.

It was nearly three o'clock when she reached the outskirts of Baxter. In the light of the rising moon she could see a row of white tents standing near the road.

She had barely time to note this, when with a little gasp of terror she saw the dark form of a man standing in her path with a gun.

"Halt!" The words came sharp and imperative from the figure in the road.

With an involuntary movement Martha reined in her horse and waited for the man to speak. The moonlight falling upon him, revealed the bright buttons and uniform of a soldier, and Martha rightly guessed that he was one of the company of troops that had lately been sent to that place.

"Who are you? and where are you going?" demanded the sentinel.

"I—I want to find the land office," she answered. "Can you tell me where I can find the agent?"

"You want to find the land office! and at this time of night?"

*A name given to a shallow vein of lead ore.

There was a ring of suspicion in the man's tone, as he bent forward to scrutinize the girl's face.

"Surely you don't expect to find the office open at this time," he continued.

"I must see the agent on important business," Martha answered.

"This is unusual, and I shall have to detain you a few minutes at least," was the reply. "Corporal of the Guard!" he called in a loud voice, and in a few moments the form of a man in soldier's dress emerged from the darkness.

"Here is some one who has come from the country to see the land agent," explained the sentinel. "The time of her coming looked a little suspicious, so I held her."

"Very well," replied the corporal. "I will question her."

He walked to Martha's side as he spoke, and lifting his hat, said politely:

"Will you be kind enough to explain your errand here to-night, Miss? The threatened outbreak among the leaguers compels us to observe the strictest vigilance in these matters."

"I have come to see the land agent about my mother's claim," Martha answered. And she explained in a few brief words, the circumstances that had forced her to make the journey in the night.

When she had finished the officer turned to the guard and said:

"It's all right, Perkins. Let her pass."

Then signalling Martha to follow him, he led the way in the direction of the town.

Five minutes' travel brought them in front of a large two-story frame hotel where they halted.

"This is where the agent for the Joy lands is staying," said the officer, assisting Martha from her horse. Then hitching the animal to a rock near by, the two made their way to the hotel door. The house was closed and wrapped in darkness, save where a solitary light burned in the little office.

The officer's knock soon brought the clerk to the door, who quickly threw it open for the two to enter.

"Tell Major Cox, the land agent, that I wish to see him on important business," said the officer to the clerk as they entered.

"Yes sir," responded the clerk, as he disappeared to execute the order.

In a short time he returned, saying that the major would be down in a few moments.

Martha seated herself in a chair by a small table that stood in the office. In a few minutes the hall door opened, and Major Cox, the Land Agent, entered the room.

"Well, what is it, corporal? Are the leaguers becoming troublesome again?" he asked, glancing at the visitors.

"Here is a young lady who has ridden twenty miles to see you to-night," said the officer. "She and her mother have been having some trouble with the leaguers, it seems, and she wishes to speak with you about her mother's claim."

"Well, what can I do for you?" asked the major, turning and bowing to Martha.

"Mother sent me here to contract with you for her claim," answered Martha. Then she told briefly, the story of their troubles with the leaguers, the death of her father, and last the scheme of Davis to get her mother's claim. "We knew he would be here early this morning to contract for the claim," she went on, "and there was nothing to do but for me to make the journey in the night or lose the claim."

"You are a brave girl, and did the right thing," said the major, approvingly. "You need have no fear. Your mother shall have the claim. Although the papers cannot be made out without your mother's presence, I will receive her payment on the claim which will secure it until she finds it convenient to come to town."

"Oh, thank you," said Martha, gratefully. "That will do. Here is a hundred dollars mother sent, and the paper giving the location of the claim." And she laid the contents of the handkerchief on the table.

After examining the paper and counting the roll of bills, the major said:

"I will make out a receipt for this money as paid on the claim indicated in the paper, which will be sufficient for the present, and as soon as it is convenient for your mother to do so, she can come to my office and the contract can be completed."

He took a book from his pocket and drew a receipt which he handed to Martha, adding: "If the leaguers give you any further trouble, just report the matter to me, and I'll see that you are afforded protection."

With expressions of gratitude Martha rose to take her leave.

"If you apprehend any danger in returning," said the officer, "I will see that you have a military escort to your home."

"No, no," said Martha, hastily. "I am not afraid." Then, thanking the officer for his kindness, she left the hotel.

Fifteen minutes later she had left the town and was riding rapidly in the direction of home, a sense of happiness at her heart at having been so successful with what she had undertaken; and there was something like a feeling of triumph in her breast as she thought how completely she had outwitted the unscrupulous Peter Davis.

The faint streaks of day began to appear in the eastern horizon as she emerged from the wooded hills north of the town and began her journey across the prairie.

A cool south wind blew through the long dewy grass; a lark sang from a neighboring patch of sumach, and the white-breasted bee-martin, rising from the top of a wild indigo weed, uttered a succession of sharp, discordant notes as he wheeled upward in pursuit of some insect, beating the air with his white and black wings.

The sun was throwing its first golden blaze across the prairie, when Martha rode through a narrow strip of timber that skirted the banks of Big Cow Creek.

Turning an angle in the road, she came suddenly face to face with Peter Davis and Jim Baker, who were riding in the direction of the town.

A frightened look swept over Martha's face as she pulled her horse to one side to allow them to pass.

An exclamation of anger and astonishment escaped Peter Davis as he recognized the girl.

"What in the name of Davy Jones air ye doin' hyar?" he demanded, reining in his horse.

"You have no right to inquire into my business," answered Martha.

"Haven't I. Wall, we'll see about that. What's that paper ye've got in yer hand?"

Martha, who had been carrying the land agent's receipt in her hand, now thrust it quickly into the bosom of her dress.

"The paper belongs to my mother," she answered.

"Yer mar, is it? Been contractin' with old Joy, has she?"

Martha remained silent.

"Gimme that paper!" demanded Peter Davis, spurring his horse up to the girl's side.

She drew back, a little cry escaping her lips.

"You—you have no right to it," she said. "It is not yours."

"I'll jist show ye whose it is." As he spoke he reached out to grasp Martha by the arm, but before he could do so she gave her horse a sharp cut with the end of the bridle rein. The animal sprang forward with a flash, and the next moment was galloping down the road with his rider, beyond the reach of the discomfited Davis.

Exclamations of rage and disappointment came from the man's lips, and wheeling his horse he started in pursuit. But he soon discovered that he could not overtake the girl on the horse he was riding, and he gave up the chase in disgust.

"It's no use ter go to the land office now," he said, as he rejoined his companion. "We've been beat by a girl, an' I reckon we orter go home an' try ter keep out uv the way uv the Fool-killer."

"That's about the size uv it," responded Jim Baker. "She's been an' contracted for the claim, an' we're outwitted."

"I'll have the leaguers after them," growled Peter Davis in a rage. "I'll teach 'em how to be contractin' with ole Joy after we've give 'em notice ter not do it."

"Mebby we'd better let the matter drop," suggested Jim Baker, after a short silence. "If it was to come out that we war goin' to contract for the widder's claim it might git us inter trouble—least ways it wouldn't do us any good."

"But thar hain't nobody goin' ter know it but us," said Peter Davis, "an' I reckon we hain't goin' to tell it."

"Mebby no one don't know it, an' mebby they do. If the widder hain't found out somethin' about it, how did she come ter go ter town in the night?"

"Thar may be somethin' in what ye say, an' I reckon the jig's up with us," answered Davis in a tone of disgust.

Meantime, Martha Babbett had kept her horse going at a swift gallop for a quarter of an hour. Then, glancing back and seeing that she was not pursued, she allowed her animal to proceed at a more leisurely gait.

It was nine o'clock when she reached home. She found her mother anxiously awaiting her return, and hastened to acquaint her with the success of her trip.

"They cannot get the claim away from us now, mother," said Martha, handing her mother the land agent's receipt. "He said he'd see that we got the land, and as soon as you can come to his office he'll draw up the contract."

"We owe all our good fortune to you, my child," said her mother, tenderly, putting her arms about Martha's neck. "Heaven only knows what I would have done without you. You have been my only stay since yer poor father died."

"Why, mother, I just had to do what I have done," she answered, kissing her parent and smiling through her tears.

Although Mrs. Babbett expected to have trouble with the leaguers, now that the claim had been contracted for, her fears proved groundless.

The leaguers soon discovered the folly of their lawless course and rapidly disbanded, leaving the settlers free to contract for their claims as they pleased.

During the fall the troops were withdrawn from the Neutral Lands, and peace between the Joy and anti-Joy factions were fully restored. Thus ended one of the most remarkable local warfares known in the history of the state.

Meanwhile the title of Joy to the Neutral Lands had been discussed at great length in Congress. In answer to the demands made by the settlers, the Hon. William Lawrence, of Ohio, the Hon. Geo. W. Julian, of Indiana, and the Hon. Benjamin F. Butler, of Massachusetts, all members of Congress, formulated their opinion that the Cherokees had abandoned the lands and could not cede them to the United States, therefore they could not authorize a sale. It was also held that the lands having reverted to the United States, could not be sold without an act of Congress authorizing the sale. This opinion was entertained by many members of Congress, and much time was occupied by that body in attempting to legislate on the subject in order to carry it into practical effect. But the question of title had to be settled in the courts, the United States District Court for the District of Kansas deciding in favor of the Joy purchase.

As soon as the question had been settled, immigration poured into the Neutral Lands, and every vacant claim was speedily taken up.

The news of the discovery of lead on the Babbett claim spread through the surrounding country, causing considerable excitement among the settlers, and many prospect holes were sunk in that vicinity, but without success.

Not having sufficient capital to operate the mine on her claim, Mrs. Babbett sold it to a mining company of Granby, Missouri, for a sum of money sufficient to enable the little family to live in comfort, and to make substantial improvements on the claim.

Although no other valuable mines were found in that immediate vicinity, this discovery led to further prospecting in the country and finally resulted in the discovery of the great Short Creek lead district, which embraces some of the most valuable lead and zinc mines in the United States.

Martha Babbett became the wife of a prosperous farmer, and now lives in Southeastern Kansas, surrounded by all the comforts of a modern home; but she will never forget the dark days when she and her widowed mother were left to battle with the hardships and privations of life on a Joy claim.

(THE END.)

The Next Olympic Games

The International Olympic games for 1906 will take place in Athens, Greece, from the 16th until the 26th of April. These games will take place in the Panathenian Stadium, which will hold 60,000 spectators. The American committee for these games has for its honorary president His Excellency, President Theodore Roosevelt. Mr. James E. Sullivan, Secretary of the Amateur Athletic Union of the United States, is the secretary of the committee, and Caspar Whitney is chairman.

THE FAMILY HOME OF FIELD MARSHAL OYAMA, TOKIO, JAPAN

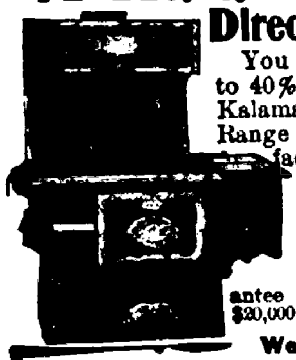
"A Kalamazoo Direct to You"



You save from 20% to 40% by buying a Kalamazoo Stove or Range direct from the factory at lowest factory prices. Moreover, you get a stove or range not excelled by any in the world. We guarantee quality under a $20,000 bank bond.

We Ship On 360 DAYS APPROVAL and We Pay the Freight.

If you do not find the Kalamazoo *exactly* as represented, the trial does not cost you a cent. It will pay you to investigate.

Send Postal for Catalog No. 365.

All Kalamazoos are shipped properly, blacked, polished and ready for use.

Kalamazoo Stove Co., Mfrs., Kalamazoo, Mich.

All our cook stoves and ranges are fitted with patent oven thermometer which makes baking easy.

Oven Thermometer

"Best 50 Years Ago—The Best To-day"

WINSLOW Skates

Club and Hockey

The product of the oldest skate makers in America. Made to last; stay sharp and stay on.

If your dealer hasn't them send for Catalogue, Dept. B.,

THE SAMUEL WINSLOW SKATE MFG. CO., Worcester, Mass.

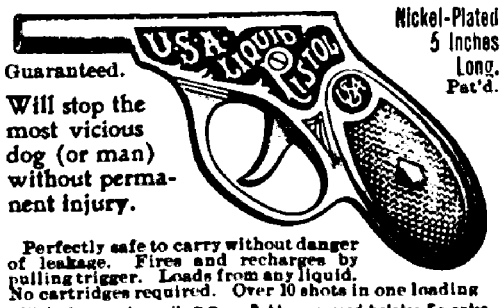
8 Long Lane, London, E. C., England.

Makers of all kinds of skates, including skates especially designed for rink use, figure skating, hockey, skate sailing.

All Clamp and Half Clamp. Skates to screw on.
Plain and Flanged Runners. Speed Skates.
Double Runner Skates for Children. Wood Top.
Only practical brace to support weak ankles. Rockers.

And the famous "VINEYARD" WINSLOW ROLLER SKATES.

U. S. A. LIQUID PISTOL



Nickel-Plated 5 Inches Long. Pat'd.

Guaranteed.

Will stop the most vicious dog (or man) without permanent injury.

Perfectly safe to carry without danger of leakage. Fires and recharges by pulling trigger. Loads from any liquid. No cartridges required. Over 10 shots in one loading

All dealers, or by mail, 50c. Rubber covered holster 5c extra.

PARKER, STEARNS & SUTTON, 229 South St., New York, U. S. A.

SEND NO MONEY. We give 100 premiums for selling our Best Quality NEW GOLD EYE NEEDLES at 5c a package Quick sellers We give FREE with every two packages a Silver Aluminum Thimble. Send us your name and address, letter or postal, ordering two dozen needle papers and one dozen thimbles. We send at once postpaid with Large NEW Premium List. When sold send us $1.20 and we will send premium which you select and are entitled to, in the premium list. Write to-day and get extra present FREE.

PEERLESS MFG. CO., Greenville, Pa. Box 199

EARN Gold Watch AND RING

An American Movement Watch with beautifully engraved Solid Gold Plated Case equal in appearance to a 25 year Solid Gold Filled Watch. Fully warranted to keep correct time. Also a Solid Rolled Gold Ring set with a rare Cleo Gem, sparkling with the fiery brilliancy of a $50 diamond, are given absolutely Free to anyone for selling 20 pieces of our handsome jewelry at 10c each. Order 20 pieces and when sold send us the $2, and we positively send you both the watch and ring, and a choice ladies or gents style.

ERIE MFG. CO., DEPT. 89 CHICAGO.

WHICH CYCLOPEDIA?

Special bargains in all of them. Old Cyclopedias exchanged; write; mention *American Boy*.

Cyclopedia Exchange, 47 4th Av., N. Y. City

For Christmas Goldfish, Globes, Food and Plants, Angora Kittens, Guinea Pigs, Pigeons, Quail, Dogs and Pheasants. We are the largest breeders in America. For $1.00—8-in. Globe, four Goldfish, Food, Tadpole, Plant and Instructions; worth $2.00 Stamp for price list. Wellfleet Goldfish Co., Dept. L, Wellfleet, Mass.

Cold Weather Fishing is made doubly attractive by using our new "No Wait for Bite Bait." Splendid sport certain. Good for all kinds of fish (salt or fresh water). Package mail 15c, 2 for 25c. Elegant premiums given.

BONN SPECIALTY CO., Beverly, Mass.

BOYS AND GIRLS can get a beautiful Doll with 3 dresses and 3 hats, or a complete Printing Outfit. Send names of 3 boys and 3 girls with 10c to CUI BONO, 88 Stanley Place, Hackensack, N. J.

DENNY, A MULE DRIVER

A STORY OF THE PENNSYLVANIA COAL MINES

By LAFAYETTE I. PARKS

CHAPTER I.

THE WOLF AT THE DOOR.

IN THE mountains of Pennsylvania lie many little mining villages. The one to which our story relates does not make a pretty picture, but it furnishes homes and a means of sustenance for the poor creatures who pass their monotonous lives there; and, perhaps, as many tender memories cling around its rude huts as there do about any other homes in all the wide world.

In one of the huts of this village Denny Roberts stands, gazing out through the darkness at a rapidly gathering storm toward the coal company's buildings, with a big lump in his throat.

Denny is not a coward, but there are times in many a boy's life when he feels that his lot is far from being a pleasant one, and that his trials are greater than a boy ought to be expected to bear. And if Denny Roberts is nearer to crying on this gloomy November day than ever before in his life, there is small blame to him, for Denny, let it be known, has burdens to bear that would discourage grown men.

Denny's father has been dead three years now, and ever since that awful day in August when Barney Logan, his face showing white even through the deep coating of coal dust, came hurriedly up to the door to tell Mrs. Roberts of the explosion in the mines that made her a widow, Denny, as the oldest member of the family left suddenly without means of support, has struggled along assisting his mother as best he could to keep the little family from starvation.

These burdens have made him old beyond his years, and today, as he thinks over the slim prospects for the coming winter, his heart is very sad, and he wonders in a vague sort of way what will become of them all if he fails to earn the pitiably small sum weekly, that is so necessary to keep the breath of life in their frail bodies. Not that he cares for himself, but there is Elsie, his merry little sister of six, and poor, little, crippled Ben, with his crooked limbs, pale face and unfailing courage—a prime favorite in the family. Denny could go hungry every day of his life for their sakes if necessary; in fact he has done so many times in order that they might have enough.

And now, as he chokes back the sobs in his throat and closes his lips tight in the determination not to give in, he turns and glances furtively at the pale, worried face of his mother. If the present crisis in their affairs has affected brave Denny, it has also added a heavy weight to the mother's heart. As he notes the drawn look about her eyes, his soul rises angry within him; he feels very bitter for the moment against a world that could be so heartless as to cause such a dear mother so much worry and suffering.

As this feeling of indignation grows within him, Denny regains his courage. He goes over to little Ben, who is lying on his shabby cot in a dark corner. Gently he soothes the little sufferer by kind words and funny antics, until at length poor Ben forgets his pain and bursts out laughing. At this unusual sound Mrs. Roberts turns toward them. Then the cloud that has hung over her brow all day lifts and she smiles softly to herself, thankful that her children can forget for a time their misery.

Denny, however, had been busying his mind all day over a project for helping the family, and now he speaks aloud his thoughts:

"I am going over to the works today, mother."

Mrs. Roberts looks up quickly, a shade of doubt coming to her face.

"It don't seem to do much good for you to go over there, Denny. They always say you're too small to be any good to them. I don't see what you can do."

"Well, I just won't let 'em put me off any longer. I'll see Mr. Harper—he's the head superintendent now. I'm just going to tell him that he's got to give me something to do." This very determinedly, while his mother shakes her head uncertainly.

"I don't know as it'll do any hurt to try, but then it don't seem much use."

"I know," continued Denny, "as long as Big Bill Grogan was boss over there I couldn't get in—he never liked any of us, though I don't know why. I never did anything against him that I can remember."

"But he's workin' in the mines yet, ain't he?" queried Mrs. Roberts anxiously.

"Yes, but he ain't the head one any more," answered Denny, triumphantly.

"Well, you know best, Denny, but I'm afraid you might get into trouble with that man if you should get to work in the mines."

"Never mind about me, mother," said Denny cheerily, getting up and kissing her fondly, "if I'm lucky enough to get in I'll tend strictly to business an' I guess nobody'll hurt me."

As he finished he picked up his hat and started toward the door manfully, calling back a breezy good-bye to Elsie and Ben and waving his hand to his mother who looked after him proudly as he vanished up the road toward the bridge.

CHAPTER II.

IN WHICH DENNY MEETS A FOE.

As Denny walked briskly along the rough road leading to the "works," he could not help thinking of the words of warning his mother had spoken concerning Big Bill Grogan. The man was an ill-tempered bully who never lost an opportunity of picking a quarrel, no matter with whom. Denny remembered now of having heard that when his father was alive Grogan and he had been enemies, and although he tried to dismiss the subject from his mind it would not leave him. He felt that Grogan would not be able to harm him in any way, but the uneasy feeling still lingered with him despite his efforts to shake it off.

He made his way to the superintendent's office and, upon his arrival, saw that something out of the ordinary had occurred, for the clerks were all talking very earnestly together. They did not notice Denny's approach and he might have waited a long time before getting any attention, but at this moment an inner door opened and Denny, turning in that direction, saw Superintendent Harper come out, and Bill Grogan with him. They were talking loudly and Denny could not help hearing the conversation.

"I tell you, Grogan," began Superintendent Harper, "this thing has got to be stopped. That's the second time this week someone has been hurt by that mule. We can't afford to have our hands crippled up like this. He'll be killing some one first thing you know."

"You can't expect me to watch everybody in the mine to see that they don't get hurt," answered Grogan sullenly.

"No, I don't," said the superintendent, "but it's your business to warn the drivers to watch out for Tim. He's a vicious beast always, and if he isn't handled with care there'll be a dead driver hauled out of the mine pretty soon. I'll hold you responsible for it, if there is."

"You can't get any one that knows Tim to drive him. If I'd tell 'em about his meanness that'd settle it, they wouldn't go near him."

"Well, I don't want to hear any more reports of this kind," said the superintendent as he turned on his heel sharply, while Grogan left the office with a lowering face and went back to the mine-shaft.

When the superintendent came into the office all the clerks had resumed their work, and Denny stepped forward. Now that he was in the presence of the man who could do so much for him, the lad felt his courage oozing away.

"Please, sir, I'd like to——" and then as the superintendent turned gruffly toward him, his voice stopped.

"Well, boy, speak out; what is it?"

Thus admonished, Denny quickly recovered his voice and stated his errand. As the boy told his sad story the man who inspired awe in others besides little boys like Denny, listened kindly.

"I don't know about it," he began, undecidedly. "I'm afraid you are not big enough to drive one of the mules; if you were, I might find a place for you."

"I may not look very big," replied Denny eagerly, "but I'm strong and can work as hard as any of the other boys. If you'll only give me a chance, Mr. Harper, I'll prove it to you."

"All right," said the superintendent, turning toward his private office, "you be on hand tomorrow morning, bright and early, at the mine-shaft and we'll give you something to do."

"Thank you, sir," said Denny; then, his face flushing with pleasure, he left the superintendent's office.

Mrs. Roberts, Elsie and little Ben were as much delighted over Denny's prospects of securing a situation in the "works" as was the boy himself, and the gloom that had hung about the little household was now lifted. Although the larder was dangerously near empty, they knew that with Denny employed regularly in the mines they would not starve.

Bright and early the next morning Denny arose and, kissing his mother and bidding her a cheery farewell, he started briskly off toward the "works." Upon his approach to the building that covered the mine-shaft he espied a crowd of men and boys waiting outside until the big doors should open. They had not long to wait, so that several of the boys who worked as mule drivers in the mine had scarcely finished their inspection of the "new boy" when the doors swung back and all pushed hurriedly into the building.

Once within the big, barn-like structure Denny, at a loss where to go, stood bewildered. He wanted to ask someone, but all hurried by paying little heed to him. When the room was nearly emptied, a man standing near the entrance of the mine-shaft called out angrily:

"Hurry up there, you boy, or you'll miss the cage!"

At this Denny hastened over, and in a few moments more found himself crowded closely with a number of mine-workers in the cage of the mine-shaft, on his first journey down into the midnight depths of the great coal mines. As the cage dropped slowly and steadily, the boy glanced around in the dim light cast by the flickering lamps on the miners' caps and scanned the faces of those nearest him. Most of them were neighbors and a few nodded familiarly, and this made him feel better, as the hurrying and strangeness of the scene had rather frightened him.

Finally the bottom of the shaft was reached and the men poured out of the close, hot cage like bees out of a hive, and started off in different directions into the dismal, underground passages that led off in several directions. As the men filed off Denny glanced about to see who was "bossing" the work underground and, to his dismay, saw coming out of the cage Big Bill Grogan, the man who had always cherished, for reasons unknown to the boy, a hatred against him.

As Grogan saw the lad shrinking against the side of the cage he recognized the son of his old enemy. Scowling, he laid his hand heavily on the lad's shoulder.

CHAPTER III.

DENNY IS INTRODUCED TO HIS CHARGE.

When Denny felt the weight of Big Bill Grogan's hand and looked up into the wicked face bent over him, his first impulse was to cry out for help. Grogan evidently divined the boy's intention and spoke up gruffly:

"Close up, now! Not a word out of ye, or ye'll be sorry!" Thus admonished the lad stifled his first impulse to cry out, but indignant at such treatment, he looked steadily into Grogan's face.

Grogan noticed the boy's attitude and decided that it would not do to handle him roughly, at least when there were so many men near at hand who would rush to the boy's assistance should he call for help. But even as he quelled his desire to harm the lad, another plan to get even with the son of his old enemy formed in his evil mind.

"Well, what brings you here, anyway?" asked Grogan, taking his hand reluctantly from Denny's shoulder.

"Superintendent Harper told me I could have a place and that I was to come here this morning," answered the boy.

"He did, hey," said Grogan, his respect for the boy increasing at the mention of the superintendent's name. "Well, I don't know what he thought a baby like you could do in a mine-shaft along o' men." Then he chuckled as he saw Denny color up at the allusion to his small stature.

"I'm as able to work here as any of the other boys," replied Denny stoutly.

"We'll see about that, we'll see," and he chuckled again as if he had thought of something very pleasant. His apparent good nature did not last long, however, and turning to Denny with an oath he said: "You can't loaf 'round this place, you got to work here ef ye stay."

"I'm ready to begin just as soon as I know what you want me to do," answered Denny quietly.

"You follow me an' I'll give you all ye want to do," and the boss started down one of the long, dark passageways, stretching off into the very bowels of the earth, while Denny scrambled along as best he might, keeping the great hulking figure of Grogan in view for fear he might lose him and then go astray in some of the tunnels that forked off from the main passage.

At length Grogan brought up abruptly where the passage widened out into a large, open space, and the sight that Denny saw here was a novel one indeed, one that did not fail to impress him. This open space had been hollowed out of the glistening anthracite coal and converted into a stable where the mules employed in the mines were confined when not at work.

Boys and men were hurrying hither and thither among the rows of mules, feeding, cleaning and harnessing them preparatory to the long day's work about to begin. In the gloom of the underground stable weird pictures were thrown against the rocky walls by the flaring lamps carried by the mine-workers. Denny was not given much of an opportunity to study the scene, however, for Grogan, leading him quickly down the narrow aisle between the stamping, kicking mules and halting at a stall where a large, dun-colored mule was busily feeding, said, pointing to the animal:

"Here's yer mule, young un, an' see that ye git him out to the cars on time with the rest o' 'em."

At these instructions from the boss Denny started briskly forward to enter the stall, but as he did so the mule laid back his long ears with a shrill squeal, and let drive viciously with his hind feet. Grogan had evidently been waiting for something of this sort, for, as the boy darted hastily aside, barely escaping the sharp heels of the animal, he chuckled in a pleased manner, remarking as he started away:

"He's a vicious beast, he is, an' youse got to watch 'im close," and with this parting injunction Grogan disappeared, leaving the lad to conquer the unruly mule as best he might.

CHAPTER IV.

GETTING ACQUAINTED.

Denny was not the kind of a boy to be easily frightened, however, and, besides, he was thinking just at this time of his hard-working mother in the little cabin across the river, and of the little mouths that must, in some way, be filled with bread.

He felt thankful that Grogan had given him a hint concerning the mule's disposition, although the words had been spoken, not as a kindly warning, but, as Denny felt, with secret satisfaction that the boy would be in constant danger of the mule's sharp hoofs and would perhaps give up his position in the mine. These thoughts passed through Denny's mind in a sort of confused way, but as he could not understand just why Grogan should hold a grudge against him and wish him out of the way, he concluded that after all it might be mostly his imaginings; so he resolved not to bother himself about the matter, but let things take their own course.

Denny knew enough about the temper of the mules worked in the mines to realize that he would be obliged to use the utmost caution when around the animal Grogan had placed in his charge; he felt that as long as he did this he would be in no great danger of injury. He had often noticed the different drivers unmercifully belaboring the poor brutes, and the pitiful cries of the suffering animals never failed to fill his heart with hot indignation against the men and boys guilty of the cruelty.

As Denny went about quietly harnessing his mule, angry cries and shouts from the drivers, mingled with the loud squealing of the mules that were being pounded into submission, fell on his ears. A large boy by the name of Sam, whom Denny slightly knew, came by at this time and, noticing the quiet that pervaded in Denny's stall, raised his lamp and peered into the boy's face; upon recognizing him he laughed boisterously. At this demonstration upon the part of Sam, several other drivers who were hurrying by stopped to inquire the cause of his merriment.

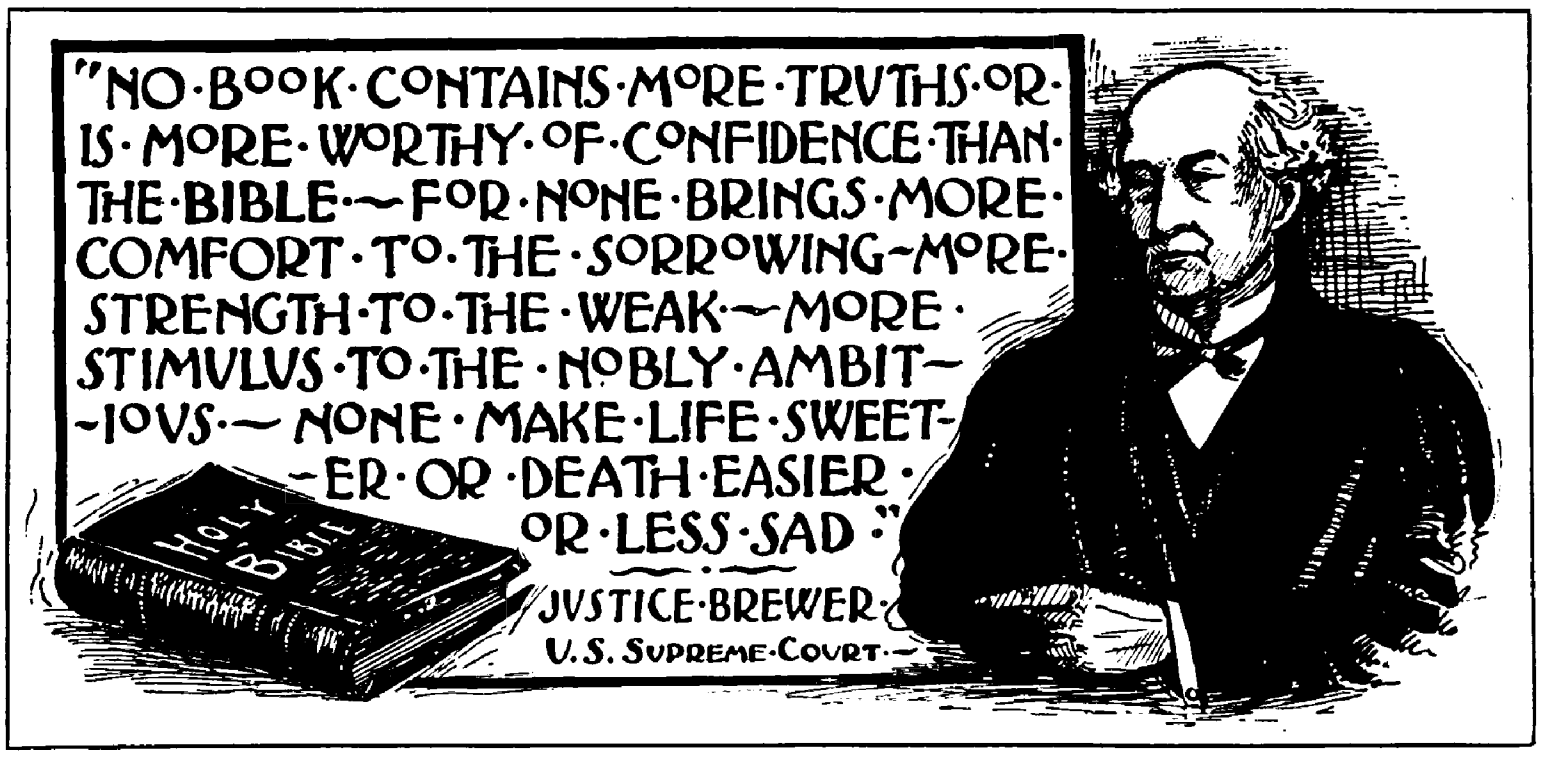
"Aw, why shouldn't I laugh?" said Sam in answer to their questions, at the same time pointing to Denny. "Wy, to be sure, 'e is a reglar crack at drivin' so they all say, an' I never thought of it," and he laughed again, while the others crowded up closer and peered at Denny with growing curiosity.

"What's the matter?" asked one out of patience with Sam's hilarity, "I can't see nothin' to laugh at."

Sam turned upon his questioner witheringly. "No, of course ye can't, stupid. I don't spose ye ever heerd tell o' Tim, the champeen mule kicker and all round fighter o' the Injun Ridge mines? Well, ef ye ain't, here he is an' I'll interjuce 'im to ye," and he waved his hand airily toward the mule in Denny's stall. "An' here," he continued, glancing contemptuously toward Denny, "is the champeen mule driver what's goin' to break 'im of his wicious habits."

At this heartless sally which Sam intended for wit, the other drivers gathered admiringly about him and laughed with keen enjoyment, while poor Denny felt the hot color flaming into his cheeks and his hands twitching with anger at the thought of what he was forced to suffer at the hands of the unfeeling Sam. But Denny resolved, and very wisely, too, to restrain his wrath, as he knew quite well that if he showed signs of displeasure the drivers clustered about him would only be the more pleased and would renew their efforts to tantalize him.

CRICKET ON THE ICE



Sam, however, had no intention of quitting, and was on the point of pursuing his annoying attentions further when the loud voice of Grogan was heard. The mine boss was a hard taskmaster and when his keen eye caught sight of the group of idle drivers his wrath instantly arose. Cracking a long donkey whip viciously he came toward the group in a towering rage and the men and boys scattered in all directions, leaving Denny alone for the time being.

The boy felt that his trials were just beginning, however, and that he would be compelled to suffer many such unpleasant things at the hands of the rough element employed in the mines. And now, too, he knew that Grogan was sure to take every advantage of him, for he had purposely placed him in charge of Tim, the vicious animal that Superintendent Harper had spoken of in the office the day before.

At the clang of a large gong the drivers led out their mules and filed down the main passage. Denny followed, thinking all the time he would give a good deal to be up on the surface, far away from the gloomy underground passages, the noxious odors and the clamor of the shouting, cursing drivers, who seemed to Denny more like demons of the infernal regions than human beings, as with faces covered with coal dust they darted about in the fitful glare of the lamps, shrieking and howling at the tops of their voices.

At length they emerged into a wider passage where the cars stood on the mine tracks. Denny was taken in hand by Grogan and given a car, and before many minutes had passed he was so hard at work with the others that he had not time to think about his surroundings, or the annoyances and dangers which might be in store for him.

It seemed to the toiling lad as though it must be nightfall before the signal was given for the drivers to stop for dinner. He had worked as hard as he possibly could every moment and was very glad for the brief rest he obtained while devouring hungrily the lunch his mother had provided for him.

The long, weary afternoon dragged out its slow length at last and, after caring for his mule, the tired lad rode to the surface in the cage.

When he arrived at home, black with dust, but cheerful and talkative notwithstanding his weariness, his mother, sister and brother overwhelmed him with questions concerning his first day's experience in the "works." It is needless to say that the evening passed by quickly, and Denny had not half finished his description of the eventful day when his mother warned him that it was time for bed if he wanted to be up in time for work in the morning.

(To be continued.)

BY RIGHT OF BIRTH

BY AN UNWRITTEN law of war every company of soldiers is entitled to a pet. In the States this object of military affection is generally a dog; he may be black or brown or white, he may be large or small, he may be a dog of pedigree or a cur of curs. But independent of size, shape or shade, if he learns to love a private soldier and to growl at an officer, he is then a true soldier dog; the men of his company give him the freedom of bunks and barracks; at pay-day they take up a collection and buy him a silver collar. And woe to Company F if they maltreat Company B's dog.

In the Philippines, Company B picked up a dog on its first campaign. So did Company F; likewise Company C. They were native dogs, lean and hungry; and finding that with Americans meals are a regular habit, they were glad to attach themselves to the Americans.

But Companies F and B soon discharged their dogs, which proved to be infested with fleas; and before long Company C found it convenient to trade its dog for a pet monkey. Companies F and B were for a time forlorn, without anything on which to lavish their playfulness and affection, and Company C seemed unduly happy in its new and amusing acquisition. Finally Company F recognized Ding, a chunky Chinese boy, as personal property, and Company B adopted Tommy.

"I comes over from 'Frisco wid a Spaniard about a year ago," said Tommy, by way of explanation. "But I finds I likes yous best, because yous is Americans. And so I brings me blanket over here, and I eats wid yous fellows and I hikes wid yous fellows 'cause I's an American. Sabe?"

He was an undersized boy about fifteen years old, whose early advantages had been few. From childhood he had been forced to provide for himself. Of education he had nothing. But he was honest, he was truthful, he was brave. When a man in Company B was sick—a daily occurrence—Tommy waited on him, hand and foot. He filled his canteen, he cooked his coffee and bacon, he ran to the doctor with a plea for quinine.

"De comp'ny's good t' me, and I don't go back on de comp'ny," he said, in his tough little way. "An American boy is always square wid his frien's. An' I'se an American."

Between Tommy and Ding, Company F's Chinaman, there was great rivalry. It began one afternoon when the two boys were foraging in a native barrio. Had there been two chickens in the little village there would have been no trouble; but when a bruised and battered Ding, with a mutilated and unfeathered chicken, returned to Company F at about the same time that a torn and scratched Tommy, without a chicken, returned to Company B, it was easy to imagine what had happened.

"He's bigger'n me," said Tommy. "But he's a Chino, an' I's an American. So I's de bes' man, and some day yous is goin' to know it. So is de fellows in Comp'ny F."

But Company F jeered at Company B, and made sneering remarks about the baby Company B was raising.

The regiment was at Angeles at the time of the chicken episode. Aguinaldo's men were on all sides of the town, and shots were exchanged daily. But there were no indications of an advance, and when topics of conversation became scarce, members of Company F strutted down to Company B's shacks and announced that Ding could whip Tommy with one hand.

Company B only scowled and looked black when these things were said, but Tommy took them more to heart. "Maybe he can lick me," said he, "but he'll know when he does it."

Once, after a payday, two soldiers of the regiment ran a foot race. That evening a Company F man shouted at Company B: "Our Ding can whip your Tommy! And he can beat him running! D'ye hear? Sabe?"

This was too much. Company B liked Tommy; by the unwritten law he was theirs, and they stood pledged to make a man of him. They could stand taunts about Ding whipping him because Ding was the larger boy; but they objected to having their favorite taking second place in everything.

"See here," said the Company B man who walked up to the rival company to accept the challenge, "if you fellows think your Chino can beat our Tommy in a foot race, why, put up your money for a purse for the winner, that's all. Company B will chip in an equal amount for the purse."

The date was fixed. Tommy went into training. At dawn of the race day the Filipinos on the north and west of Angeles opened a brisk fire. A general attack on the town was expected, and all the troops were ordered out to the trenches. Company B and Company F lay side by side on the eastern limits of the town. A thousand yards in front of them lay a small village that, at times, had been occupied by the Filipinos.

Suddenly cries came faintly from the village far in front of them. A moment later two small figures emerged from the shacks. At their heels was a third figure, much larger and clothed in the red trousers that distinguished Aguinaldo's chosen regiment. Down the road pattered two little fellows; close behind them the Filipino soldier followed in pursuit.

Company B's captain stood looking through his field-glasses.

"Tommy and Ding!" he muttered. "The young rascals have been foraging again!"

"Tommy and Ding!" yelled Companies B. and F. "Tommy and Ding!"

Pursued and pursuer were now in plain sight. It was impossible to fire at the Filipino for fear of hitting the boys. The little fellows were coming down the road neck and neck, holding their lead, and, barring accident, in no immediate danger.

"The race!" shouted a man in Company B.

"The race!" answered Company F. "The first boy over the trenches gets the money!"

Evidently the red-legged Filipino was ignorant of the position of the American trenches. He brandished a huge bolo in one hand, and seemed determined to catch the little foragers.

"Run, Ding! Run, Ding!" howled Company F.

"Run, Tommy, run!" yelled Company B. "It's the race. It's the race!"

"Faster, Tommy, faster! Get ahead of him!"

"Come along, Ding! Come and get your money!"

The rivals and their pursuer had approached to within a hundred yards of the American position before the Filipino soldier realized that he was running into his enemy's hands. He stopped, fumbled at his belt, and drawing a revolver, took quick aim at the little fellows ahead of him.

The bullets whistled harmlessly over them or fell short, but they added terror to Ding's speed. He gave one frightened howl and shot ahead of Tommy. Like an arrow he came toward his goal.

Company F yelled in triumph: "Ding wins! Ding wins!"

Down in the road an undersized boy stopped in his tracks. His rival was yards ahead of him. He waved his hand at the men in the trenches. The Filipino had stopped shooting.

"Give Ding de money!" Tommy shouted in his shrill voice. "Give Ding de money! I's an American! We don't run dat way!"

Quickly he faced about, drew from his pocket an old pistol, and sent a bullet at his pursuer. Then he dashed toward him.

"Surrender!" he screamed. "Surrender!"

In a minute the race was over. As the terror-stricken Ding dashed over the trenches, a red-legged Filipino, three hundred yards down the road, with only empty cartridges in his revolver, dropped on his knees and begged mercy from a small captor who, with empty pistol, stood threateningly confronting him.

A cheer went up from the trenches. It was not for Ding, the winner. Company F, to its credit, cheered as loudly as Company B, and all the cheers were for an undersized American boy who had captured a soldier of Aguinaldo's guard.

Some of the men wanted to go out to Tommy's assistance.

"Let him alone," said an officer. "If the boy captured him, let him bring him in. The prisoner is his."

And bring him in he did. Five minutes later a terrified Filipino walked into the American lines. He was followed by a small American boy with a grin on his face and an empty pistol in one outstretched hand.

"I turn de prisoner over t' you, sir," he said to Company B's captain.

To the north and west the firing had ceased. The Filipino attack had failed. Orders came to withdraw the troops and leave only the usual outposts in the trenches.

Company F held a whispered consultation. "Send Tommy over here!" they called to Company B. "We want to give him something."

"Give it to Ding!" called back Company B.

"No," answered Company F. "Ding's gone. We've had enough of him. We sent him to join the scratchy dog. Let Tommy come over for a minute."

And the American boy went. He returned rich in money as well as glory, for Company F had given him the purse which had been offered to the winner of the race.—Lt. Wassell, U. S. A., in Trinity.

To Purify College Athletics

President E. Benjamin Andrews, of the State University of Nebraska, proposes the following as tending to prevent irregularities in amateur sport in American colleges:

1. Let no man represent any college in any match until he has been in that college a year, failing in no study and gaining at least 60 per cent general average standing.

2. Promptly disqualify, whether during training season or midseason, any candidate or contestant who for a month falls below the general average named, or is guilty of any immorality, breach of training, or impropriety in play.

3. Require of every team member his written statement upon honor, detailing his revenue and means of support; money from home, wages, and for what, gifts, and from whom, etc., with the understanding that aught of misrepresentation in the amount will be discovered, and permanently blacklist the man throughout the association and the country.

OVER 5,000,000 POUNDS SOLD IN 1905

I am John Mackintosh the Toffee King

Another Mackintosh Toffee year has passed

Mackintosh's Toffee

THE FAMOUS OLD ENGLISH CANDY

was eaten by the Americans more in 1905 than in the preceding year. I shall increase my capacity for this new year. More families are eating Mackintosh's Toffee regularly. They have discovered that delicious flavor and are convinced of its purity. That's the secret. And, besides, it tastes different from any other candy in America. Grandfather, Grandmother, Father, Mother, Son and Daughter can eat Mackintosh's Toffee and it cannot do them any harm; and the more they eat of it the more they want of it. Sold by most every candy dealer, grocery or confectioner. If your dealer cannot supply you, send us his name and ten cents and receive a full size package.

DEALERS This advertising is done as much for your benefit as mine. My Toffee has a permanent sale, for American people are beginning to buy Mackintosh's Toffee regularly. Any jobber can supply you with Mackintosh's Toffee; if not, write me.

JOHN MACKINTOSH, Dept. 43, 78 Hudson St., New York

A FRENCH FROG AND AN AMERICAN EAGLE

AN ENGLISH SCHOOL STORY—*By E. S. TYLEE*

BEGUN IN MARCH, 1905

CHAPTER XV.

A MYSTERY.

WHEN THE BOYS came in to tea, on the day after the debate, they found the following notice posted on the board in the lobby:

Silas Q. Pickens' Scholarship Examination.

The Physics Scholarship is awarded to

J. M. Mainwaring, 95 marks.
T. F. Pongher, 77 marks.
E. W. Rashleigh, 54 marks.
Maximum 100.

The Chemistry Scholarship is awarded to

R. M. Briant, 91 marks.
H. L. Ascott, 84 marks.
W. B. Postlethwaite, 75 marks.
V. F. Roberts, 62 marks.

S. A. HARDRESS,
Headmaster.

There was already a congratulating crowd around Mainwaring and a somewhat smaller group encircling Briant. Both of the successful candidates took their triumph with calmness. In the case of Mainwaring the expected had happened, and although greater uncertainty had attached to the chemistry competition, the victory of Briant had been generally anticipated after his brilliant work on the first morning.

Carclough told us at tea that he had been pumping Henderson on the subject, and that the latter had mentioned that René had obtained full marks on that first paper of his, had fallen a little behind on the work of the afternoon, but had again distanced his rivals in the practical experiments of the second day. That the don at Manchester had pronounced Briant "a most promising young chemist," and that his report was to be forwarded to Mr. Pickens as a proof that his benefactions were being so well bestowed.

There was so much noise at the bottom of the second table that Mr. Villiers Brown thrice bounded from his own seat in his dear old impetuous way to quell it. Rage seems to swell him so that I am confident he will one day go pop. Then there will be mourning in the pleasant town of Sheffield and we shall have a little peace. The centre of the disturbance seemed to be Puffy Adams, who was holding forth to a select circle of admirers on the iniquitous character of the recent award and his own conviction that the second scholarship ought to have been given to Ascott, for whom Puffy had apparently conceived a profound admiration.

"Who's Henderson?" he asked scornfully, of a small boy who had mentioned the master's name as an authority. "What's he know about it? Why his father's a grocer at Birmingham, I tell you. I've seen the shop. Anybody can go there and buy a pound of tea. Of course the scholarship was given to Briant because he sucks up to Pickens. Jolly mean I call it, but some chaps will do anything s'long as they score. And now poor old Ascott will have to leave: the best three-quarter back in the school, bar none!"

"You were pretty thick with Pickens yourself a while ago!" remarked a neighboring friend.

"What's that you say? Well, naturally I looked him up, being a new fellow, and was kind to him, till I found out what sort of a fellow he was. Then, I dropped him like a shot!" Puffy's massive features assumed an expression of virtuous indignation. You don't catch me running after Pickens just because his pater's got a pile of tin. But those froggies don't mind how much dirt they eat. Pass the seed cake, please!"

"You're wanted in the study, Mordaunt," said Carclough to me as we left the dining hall. "Henderson is there, and my belief is there's going to be a row."

But when we reached the Chamber of Horrors, the doctor was sitting quite calmly in his great arm-chair flanked by the terrestrial and celestial globes, which are kept to awe the ignorant parent, and there was no trembling and expectant culprit present, unless it were Mr. Henderson, who indeed was wearing a somewhat downcast air.

"I sent for you, Carclough and Mordaunt, as the two senior boys," said the Head, addressing us. "Mr. Henderson has just made a communication to me which has troubled me exceedingly. But before I mention the matter to you, I must require your promise to treat it for the present as a confidential one. Have I your words for that?"

Carclough and I assented, wondering what could possibly be coming.

"It is in connection with the scholarship examination just concluded," said the doctor. "You are aware that Mr. Lane, of Owens' College, who conducted that examination, occupied, for two nights, the rooms of Mr. Henderson here, who was kind enough to offer to vacate them in favor of our guest, there being no other apartments so suitable. It was on the second evening of his visit that Mr. Lane came down to dinner, leaving on the table a handsome and valuable ruby ring which he habitually wore."

In fact we had all noticed and admired it.

"When Mr. Lane returned to his room some three hours later," continued the Head after an impressive pause, "he found the ring missing. The room showed no signs of disturbance and his papers were just as he had left them. The bedroom communicates with the sitting room, and it was necessary for the chambermaid, whose duty it was to put it in order, to pass through the latter, both going and coming. The maid declares that the ring was on the table when she left the rooms. The boys would be going to bed about an hour or so later. After that, and until the masters retired, no one would be on the dormitory story except the janitor. I imagine we may put him out of the question."

Here Henderson broke in, "Old Brown is as honest as the day, I am sure!"

"Just so!" answered the doctor. "But that very fact only makes the affair more bewildering. I may tell you that Mr. Lane has left the matter completely in my hands, and is only anxious that it should cause as little trouble and annoyance as possible. He particularly requested that the police should not be called in. Of course that step can only be delayed, unless the mystery is cleared up by other means."

"I suppose the servants have already been questioned, sir?" said Carclough.

"Discreetly, yes!" the doctor replied. "That is to say, there has been no systematic inquisition, but we have ascertained, through the matron, that none of them were near Mr. Lane's rooms after nine o'clock, when we know, with tolerable certainty, that the ring was still safe and sound."

"The maid closed the door, of course?" queried Carclough.

"Certainly," said the Head. "The window was open at the bottom, by the bye, as it was such a warm evening. But I think you will agree with me that, considering the narrowness of the ledge, and its height from the ground, it is out of the question that any marauder can have entered by that way."

"Then there is absolutely no clue?" said Carclough.

"None of any importance, I fear," said Henderson, answering the question, which was addressed to the doctor. "But here is a small shirt button which I picked up on the floor of the room. It is of a very ordinary sort, however."

He handed the small article to Doctor Hardress who inspected it gravely. It was imperfect, having been broken off close by the shank. The doctor then passed it to me. I studied it with a becoming seriousness, and gave it to Carclough, who put it into his pocket.

"Well, it seems that we must leave the matter for the present," said the doctor. "I may have something more to say to you in a day or two. I need hardly repeat what I said before of the necessity for preserving a discreet silence. I believe I can trust you both implicitly. Good evening!"

We left the study with the masters still in close conference. Carclough took my arm as we went out and guided me to his own den, where he planted me in one arm-chair and placed himself opposite me in the other, all in solemn silence. Then,

"I am in a dilemma, Mordaunt," he said.

"I'll call the matron if you like," I answered. "She will give you some of her celebrated soothing syrup!"

"No—don't humbug! I tell you, this is a serious matter. It is a jolly lucky thing that I have read Wilkie Collins and Sherlock Holmes, and all those beggars, and know how to go to work with the patient cunning of an expert. Listen to me! You saw how I bagged that button which Henderson found?"

"Yes," I said. "In fact I was surprised that he let you keep it."

"It is the way with these amateurs. They take a hasty glance at a thing and make up their minds about it at once. So it is with Henderson: a button with a beveled rim a mere shirt button is to him, and it is nothing more. But I have got eyes in my head and know how to use them."

"Well!"

"Well, the moment I saw this little article I examined the back for some distinguishing mark or stamp of the manufacturers. Of course there was no maker's name, there never is, but if you look at the brass back you will notice the initials J. D. and something that looks like Fr or Fl. Do you see?"

I did not see at first, and said so, but on closer inspection made out the letters of which the captain spoke. I complimented him on his sagacity.

"Oh, that is nothing," he replied with the modesty of true genius. "I sometimes think I ought to chuck Sandhurst and make the detection of crime my profession. Now do you see what you and I must do next?"

"Certainly," I said. "Find out what chap has got a button off his shirt, and nail him!"

I really thought I had scored, but Carclough looked mournful, and spoke quite reproachfully.

"Now, now, Mordaunt!" he said, "I thought you had a better edge on you than that. Of course that is what that duffer Henderson is doing. I'll bet you anything you please that he is interviewing Mrs. Mole at this very moment. Much good may it do him! I have a far superior plan, but never mind! An old hound like myself never gives tongue too soon. Only wait a day or two and I'll tell you who took the don's ring."

He stopped rather suddenly, and I was somewhat surprised to see him moving with swift but noiseless steps towards the door, waving to me at the same time to be silent. In the stillness that ensued a sound of heavy breathing was apparent.

Bang!

The door was violently pulled open and a shapeless mass of humanity fell forward into the room in a floundering sprawl. When Carclough had addressed a few forcible observations to it and kicked it a little, the mass sat up and began rubbing its elbows and other vulnerable spots. Puffy Adams, of course.

"Oh, I say, Carclough," he whined, "You might be a little more careful! I was just coming to ask you to lend me your Liddell and Scott, and it was so dark outside I couldn't find the handle of the door, and so—"

"And so you were feeling for it with your nose," said the captain sternly. "I'll teach you to come eavesdropping outside my study. I'll give you the finest swiping you ever dreamed of—." He looked round for a convenient weapon. Adams whimpered.

"Oh, please, Carclough, let me off this time! I swear I never thought of such a thing. And you can't catch a single word, the door is so thick, not a single word! I promise you I won't say anything about it, on my honor I won't!"

"On your what?" asked the captain, bamboo in hand.

"How could I help hearing what you were saying, when you talked so precious loud?" went on Puffy gathering courage as the captain stood irresolute. "Why it was jolly lucky that it was me. Might have been some leaky beggar who would go and repeat things. And you know what a patent safe I am."

"Get up!" Carclough sharply commanded.

"Well, promise you won't swipe me then!" stipulated Adams who evidently believed in Bunyan's good old maxim: "He that is down need fear no fall." "You mayn't think it but I'm no end delicate. You might say something for me, Mordaunt! Oh! You are a brute!"

For I had emphatically advised the captain to lay on and spare not.

"It's no good, Mordaunt," answered Carclough, laying aside the bamboo. "The fellow makes me too sick. I couldn't touch him. He's not worth it. Now you—you disgrace, get up this moment, and make tracks, before I change my mind."

Puffy rose with great alacrity and shuffled towards the door, not even waiting to brush off the dust he had gathered in his fall.

"I always said you were an awfully decent sort, Carclough," he said in a tone of much feeling. "I'll get ma to invite you to our place next holidays; you see if I don't. You will enjoy it!" Then he vanished, before the astounded and indignant captain could find words to express his emotions.

"Why didn't you swipe him?" I asked as Carclough sat down again. "The fellow will go and trumpet the affair all over the school."

"Oh! I don't think so!" answered Carclough. "He knows that I would make sausages of him if he did, and he won't risk it. All the same I'm extremely vexed with myself for not seeing that the lodge was properly tiled before we began. Sherlock Holmes would never have been caught like that. Never mind," he concluded, "Even Bonaparte made mistakes now and then. Hand over the chess board and we will have a game."

He gave me the odds of the Queen's Knight as usual but his thoughts were not on the game, and for once in a way I beat him easily. The massive mind of the captain was elsewhere perplexing itself with greater and more important problems.

CHAPTER XVI.

AT THE CIRCUS.

There happened to be no particular fixture for the Saturday following the events narrated in the last chapter; so Carclough for once left the Footer entirely in the hands of Villiers Brown, and invited Crickhowell, Anstruther, Baines, and myself to walk with him into Winston, which on that day only was ruled to be within bounds. It was market-day too; there was a traveling circus in the place; on the whole we expected to have a fairly decent afternoon.

There was only one person whom it was necessary to dodge. Beamish, the mathematical master, was spreading himself over the gymnasium, as we came through it on our way out, with a bland smile on his features, a wide-brimmed straw on his head, and a huge collecting tin, for botanical specimens, slung at his side. He knew this was an off-day for games, and this get-up signified that he was looking out for fellows to go geologising with him, and carry the great glass jar in which he puts the odopuses and mionbes and things he finds in the brooks. Puffy Adams went once, under the impression that the specimen tin contained sandwiches; and has abused Mr. Beamish horribly ever since.

Fortunately he is pretty shortsighted; and we got through without any fatality. The high road to Winston was full of carts and gigs going to market late, or returning early. We had a world of trouble in repressing Baines, who insisted on amusing himself by asking people whom he had never met about others who never existed. He always took off his hat, as he spoke, with an insinuating twirl; and then apologized profusely for the mistake. One red-faced country wife, whom he thus addressed, was so taken with his manners, that we heard her remark to a friend, as we moved on: "That's a well-spoken young gentleman, ain't he! I 'ope he'll find Mr. Mite, the cheesemonger, as he was inquiring after. Happen 'tis his father, poor young gent!"

Baines didn't half like it, for he is really pretty coxy about his relations. And we rubbed it in. So for the rest of the walk he was glad to let people alone; and we reached the town without further adventures.

The place was as crowded as it usually is on market day, and the noise was deafening. There was a pig loose in High street as we entered, and a lot of duffers driving him different ways in a vain attempt at catching him. We chipped in, and had a rousing hunt; beginning at the town clock and ending behind the counter of Potts, the chemist, where Baines bagged him with a neat, low tackle, quite beyond his usual form. In the course of the game the animal brought down two apple-carts, one crockery stall, and an old woman. I pass over the damage to Baines' waistcoat. Served him right for putting on such a showy thing!

As soon as we had got our wind and washed our hands at the hairdresser's, we made the round of the principal streets, which certainly did not take us long; and looked into the chief shops; that is to say, all the shops. Now and then we met other fellows from Crosscombe, but of course we took no notice of them, except those who were members of the Gang. Presently we hurried into Quarrender's, the confectioner's, where we had hare-soup to warm us up, and ices, afterwards, to cool us down. That brought us to half past two, nearly time for the circus, so we left the pastrycook's place, cosy as it was, and sallied out into High street again.

"There's Briant!" suddenly exclaimed Crickhowell, as we strolled along among the stalls. "I wonder what he is doing here, all by himself."

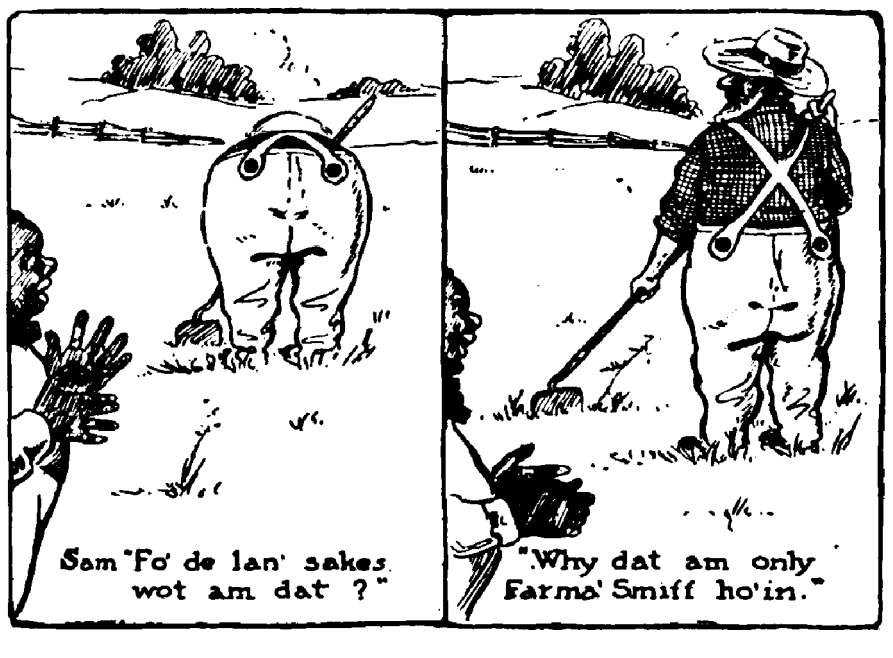
René was standing at the corner by the postoffice and did not at first see us as we aproached. Then he turned and with his usual flash of white teeth asked whether we were going to the circus. We acknowledged the fact. "I also," he said, with easy geniality.

"Bother the fellow!" exclaimed Anstruther aside, in a surly growl. Dropping back, Carclough with difficulty persuaded him to be quiet, and we went on together to where the circus tent was pitched in a low lying meadow on the skirts of the town.

High up in a sort of triumphal car a brass band brayed its loudest, to excite the public to part with their sixpences without regret. Not that they required much encouragement! It was so seldom that a show of that sort visited our quiet part of the country, and the yokels were so eager, that people were flocking in by thousands, and we were really lucky in getting any seats at all, though by paying two shillings we were admitted to a little enclosure where the benches were covered with baize. It was also disagreeably close to the dromedaries, which were pretty mangy.

It was rather a good show on the whole, for such a small place as Winston. There was some really clever wire-walking, and the trapeze performance was nearly as remarkable as it was on the posters. Anstruther of course lost his heart to the raven-haired young lady who, as La Signora Tuttifrutti, gave an exhibition on her trained horse Lightning; but all the other chaps were just as bad, and the way they stared at her was extremely amusing to a confirmed misogynist like myself. If they had as many sisters as I have they would not be so easily impressed. Nettie Terris is a nice girl though, I must say that.

But the greatest attraction of this particular circus came towards the end of the programme. Mademoiselle Lemare, the celebrated clairvoyante, was to exhibit her marvellous powers with which she had already astonished the principal crowned heads of Europe; who must be rather a weak-minded set, I should think, for I notice that there is



hardly a juggler going, who has not at some time or other excited their admiring awe. We ourselves had nothing on our heads but school caps, but every fellow immediately made up his mind to puzzle the clairvoyante, and show what a Rook the whole thing was.

Well, to tell the truth, the intended exposure did not come off. The mesmerist, who was the same man who had been spinning plates and swallowing fire earlier in the afternoon, set the young lady to sleep on a gilded sofa, and then walked swiftly round the ring touching in succession the various small articles presented to him by members of the audience. Rapid as he was, however, mademoiselle easily kept pace with him, and in answer to his impatient questions, gave him a full and accurate description of the walking-sticks, handkerchiefs and breast-pins that were offered. Baines thought at first he was going to score off her with a chewed piece of india-rubber. It did not baffle mademoiselle though, for she not only said immediately what it was, but added that it was the chief sustenance of an unfortunate young gentleman who was an inmate of a school where the diet was rather defective. There was a great roar of laughter at this, and Baines looked as if he wished he had not been so eager.

Then the mesmerist came on to Briant, who was sitting quite at the end of our row and did not at first seem inclined to test the clairvoyante's powers. But presently we saw that the man had succeeded in getting something from him, which he held as usual between thumb and finger, commanding his sleeping assistant to tell him its nature. The answer came immediately in the curious muffled tones which the clairvoyante had used all through her performance:

"An article of jewelry."

"Of what sort?"

"A ring!"

"Tell me immediately what sort of ring! Describe it to us fully!" cried the mesmerist with a stamp of his foot.

The lady was a little slower now: "It is a gold ring," she began in deliberate tones. "A gentleman's gold ring." She paused for a few seconds and then went on more rapidly. "A gentleman's gold ring with a red stone, a ruby, I think, in old-fashioned claw-setting. There is an inscription within it. I am afraid I cannot read the inscription!" Another pause and then a little joyous cry: "Ah! now I see it clearly, D," she was beginning to spell when Briant, whose face was scarlet, suddenly snatched the ring from the mesmerist's hands. The latter bowed as he relinquished it, and said to René with a sardonic smile:

"Has mademoiselle given a correct description of the ring?"

Then scarcely waiting for René's mumbled reply, he passed on, and in another moment had captured a pipe from a fat countryman, and was making the whole circus tent ring with laughter by requiring from mademoiselle not only the name of the article but also a short description of its owner. Then he demanded to be informed what the latter had dined upon that day and was told that it was beans and bacon. The chuckle-headed young farmer seemed as much delighted as anybody, and the performance ended amid general merriment. Two or three members of the crowd, however, did not join in this gaiety. Carclough and myself were only anxious for the whole thing to finish and the remaining items on the programme seemed to us unbearably long. We could not leave our seats without attracting the notice and surprise of our friends, so we sat on, feeling about as easy and comfortable as a cockchafer on a pin.

At last the elephants, which had been accompanying the patriotic airs played by the band in the gilded chariot, by banging big drums with their trunks, trooped out to the strains of the National Anthem, and everybody got up to go. The captain and I did not find it difficult to get separated from the rest of our party in the crowd, and when at last we were clear of that noisy entanglement, we found ourselves at the far end of the town, in a quiet, side street where we were tolerably safe from any interruption, inasmuch as the only living creature in sight was a large retriever dog lying in the very middle of the road.

"Now I know exactly what you are going to say," declared Carclough, as I began to express my feelings. "But please keep quiet a little longer! The case is not complete; and I must warn you against any hasty conclusions. You have no idea with what patient thoroughness I intend to work the whole thing out. Just come a few steps with me and you shall see something of my methods. I feel more certain than ever that I have found my true vocation."

He led the way down a narrow alley which took us into the High street just by the market place. The market was over and the square was deserted save for a few scattered stall-keepers who were already preparing to pack up and leave. We crossed the wide open space littered with loose straw and discarded cabbage leaves, to a large bow-windowed shop on the other side. The stock in trade seemed to be of a miscellaneous character, but consisted chiefly of fancy articles and curiosities of various kinds besides a large amount of cheap jewelry.

As we entered, an exceedingly stout old man rose from a small lathe at which he had been working, and advanced to serve us.

"You have some cards of cheap shirt-studs in the window!" said Carclough. The shopkeeper acknowledged the fact. "Will you let me see one if you please?"

The card was immediately handed to him by the obliging tradesman. Carclough solemnly inspected the studs and then handed them to me.

"What do you think of them, Billings?" he asked.

I was going to remind him that my name wasn't Billings, nor anything like it, thank goodness, when I caught the captain's eye. There was such a world of meaning in it, that I stopped short:

"What do you think of them, Ezekiel Billings?" repeated Carclough with another significant glance.

This was more than flesh and blood could endure. I thought they were beastly, and said so, glad to have something that I could abuse. Carclough handed them back to the man, and said that he would take them at sixpence, having apparently been decided by my strong recommendation. Then he felt in his pocket and fished out the stud that Henderson had found. This he handed to the man and asked him if he had any like it. The man said he had not, and added that the stud was of foreign make, probably French. I got another thrilling look from the captain. The old shopkeeper said that if we chose to leave the stud with him he might be able to match it. Carclough declined the offer, and we drifted out of the shop into High Street again.

By this time I was boiling with righteous indignation:

"What's the matter with you, Carclough?" I asked. "Why did you buy those rotten old studs which I should be ashamed to wear? And why in the name of Julius Caesar did you give me out to that old Crock as Billings and Ezekiel, too, which is worse?" I stopped, choking.

The captain was quite calm. "I am sorry if it annoyed you," he said. "It was the only name I could think of for the moment. But you must be able to see for yourself how important it is to cover our own traces. Otherwise the guilty person finding that we are on his track will take the alarm and we shall have our trouble for nothing."

"Seems to me," I remarked, "that if you think, as you appear to do, that Briant took the thing, that the straightest course would be to send for him and tax him with it. For the matter of that, it may be all a mistake. In fact I feel certain it is. Why, hang it! Briant saved Pickens' life, you know he did! Is it likely that a chap who would do that would go boning rings?" Then a sudden idea occurred to me. "Look here, Carclough, how do we know that old cuckoo didn't bag the ring himself?"

"We don't!" replied the captain. "The scientific crime investigator takes nothing for granted and suspects everybody. I hope you won't mind my saying, Mordaunt, that if any suspicious circumstances pointed to you as the marauder, I should consider them with an open mind, in spite of our close friendship and the sincere esteem which I have for you."

"Much obliged!" I said. "Same to you, sir, and many of them. But if this is what the detective profession leads us to, I for one mean to stick to Sandhurst. And now we'd better be nipping along to school, or else I fancy I know two scientific crime investigators that will probably get potted."

(To be continued.)

TWO BOYS, TWO BURGLARS, AND A TELEPHONE.

BY GLENN ALLEN MITCHELL

WHEN JOHN EVERETT was eleven years old, his people moved for the third time in two years. The first move had been from Cedar Falls, Iowa, to Portland, Oregon. Notwithstanding the wonders of the trip over mountains and plains, and the beauties of the new home city, John had many homesick longings for the boy playmates left behind.

The second change had been merely from one rented house to another in a better neighborhood. And it was there that the baby sister came to live with them.

The third move was into a lovely new home of their very own, built in a pleasant, growing suburb, a short ride from the business part of the city.

It was in the new home that John had the strange experience with the burglars, and helped, by his nerve and coolness, to capture them.

Robert Seeley was one of the boys in the new neighborhood. Robert was an older boy, a bright, clever lad nearly fifteen, at this time quite absorbed in the study of electricity. John was of course, soon aroused to great interest in the same subject.

Among other electrical toys and novelties, Robert owned a small telephone outfit, of the kind popularly known as a watch-case phone, and looked very much like the end cut off from an ordinary telephone receiver. One instrument at each end of the line served both as transmitter and receiver, and it required some agility to successfully carry on a conversation.

For several days, the boys amused themselves running short lines around the house, and holding conversations which generally consisted of "Hello, John!" "Hello Rob!" "Say, I can hear you. Can you hear me?" "Sure, can you hear me?"

Then Robert suggested, "Let's run a line between your house and ours."

"Can we do it?" asked John, rather doubtfully. "Sure thing," answered Robert, "I used to have a telegraph line between our house and another boy's where we lived before. I know we can make this work."

The two went to work with great zeal. Robert lived on the opposite side of the street in the next block, but there were no houses between, and after much rather dangerous climbing in and out of gable windows, and plenty of hard work, the boys succeeded in connecting the two houses by an overhead wire. A heavy wire was used for the main line and a very fine, covered copper wire ran down from the garret window, along the side of the house and under the sash of the kitchen window. Batteries were installed in the kitchens of both houses, grounders run down into the basements, and, to the boys' delight, when the little telephones were connected, they did excellent work.

Later, they added an electric call bell at each end of the line and Robert arranged a really ingenious little switchboard; but, at first, they called each other up by a shrill whistle, a sort of weird "Hoo, hoo!" that could be heard at some distance from the telephone.

After the novelty of their success had worn off, the boys tried more experiments. They began to run wires into different rooms. Along the sides of doors and windows, and under the rugs, ran their lines, and sweeping became a fine art. They carried the receiver around with them, and made connections and called each other up, whenever the spirit moved them.

Mrs. Everett thought matters had reached a climax when, on going upstairs for the night, she found John, whom she had supposed peacefully sleeping for an hour, lying in bed with his receiver at his ear, listening blissfully to the pianola that was being played at Robert's house. After that, the boys rarely failed to carry their telephones up-stairs and have a last good night talk before falling asleep.

The time came very soon, when the boys' telephone and particularly the connection between their two bedrooms, proved of vital service to the Everetts.

Mr. Everett's business included buying and selling of real estate and lands in different parts of the state. He was frequently absent from home, and often brought back with him, on his return, a great deal of money.

Keeping several hundred dollars in the house over night, as was often necessary, was a source of much anxiety to Mrs. Everett, and to relieve her mind Mr. Everett installed a small safe in his den or study.

This study was at the rear of the house and was merely an extension of the dining room. John's bed room was directly overhead, being in the rear on the second floor, while Mr. and Mrs. Everett had the room at the front of the house on the same side. A strip, dividing the two rooms, formed two closets, one for each room and a doorway had been left between the closets, so that it was possible, in case of sickness or for any other reason, to slip from one bedroom to the other without going into the hall.

One dark, rainy night in the early part of January, Mr. Everett reached home from a trip in the eastern part of the state, with over six hundred dollars in gold, besides several thousands in drafts and checks. Mrs. Everett was unusually nervous over such an amount remaining in the house over night, for the town had been having a regular season of burglaries. Robberies and hold-ups were of nightly occurrence, and so far the police had been unable to secure any of the thieves, or to put a stop to the outrages.

Even Mr. Everett acknowledged to a feeling of uneasiness and attended more strictly than usual to locking the house for the night. The baby, Mrs. Everett said, was their one comfort, for the restless, wakeful, little thing would surely prove an excellent burglar alarm, if any person tried to break into the house.

Once asleep, the softly falling Oregon mist lulled them all to deep oblivion, and it was nearly two o'clock in the morning, when Mrs. Everett awoke with a start, to the realization that some one was in the room. She sprang up, and reached instinctively towards the baby's cradle, but a rough voice arrested the movement, "Keep quiet there," and poor Mrs. Everett became very much awake, as she looked up into a cruel, hard face near her own, and saw the revolver that the man held, pointed in her direction.

Another evil-looking man guarded Mr. Everett, who was slowly dressing himself. "Hurry up, now," said the second man, "all we want of you is to unlock that safe, and we don't want you to be all night about it, either. Sorry to disturb the lady, though," with a leer at Mrs. Everett, who faint and white, had sunk down on the pillow again.

Through Mr. Everett's mind flashed pictures of all that the loss of this money would mean to them. They were just beginning to feel that fortune was smiling on them, and then to lose so much would mean inevitable ruin. Oh, for some way to get assistance to them! Alone, he knew himself to be helpless, in the power of the burglars. Then, suddenly, the boys' telephone occurred to him. John had his 'phone in his room, he was certain. Could Mrs. Everett and John secure aid by arousing the Seeleys, while he kept the burglars occupied downstairs? Could he suggest the idea to his wife without arousing the suspicion of the men? It was worth the trial, anyway. He turned to Mrs. Everett, "Is there any probability that Robert can be aroused by this? Just a call over the telephone wakes him sometimes, you know." "I don't want the children to be frightened," he added hastily, to the men, speaking as if Robert were his own boy; for they were beginning to look at him rather suspiciously.

One of the men growled, "If you don't get a gait on yer, there'll be a rousing of all the innocents here, in a way not very pleasant to you, either. Come on, now, guess you needn't make a full dress toilet to crack that little jim crow safe of yours."

"I'll look after Robert," said Mrs. Everett, trying to speak bravely, for although she had grasped quickly at Mr. Everett's scheme, it seemed a very daring and impossible one. "But, do be careful, yourself. Let them take the money. What does the money count, compared with your safety?" Then to the men she pleaded, "Don't hurry him. Give him time."

"Now, don't you go worrying yourself, woman, so long as your husband behaves himself and helps us get at that cash, we'll give him reasonable time; but, if he tries any monkey work, we'll just put him out of commission and do the job ourselves. I guess we'll just lock you in your room about now, for we'd kind of like a half-hour undisturbed."

This, as they led Mr. Everett into the hall. For one instant, after the key turned in the lock, Mrs. Everett lay, shuddering; but the three had not reached the stairs when she sprang up. Thankful for the unsuspected opening through the closets into John's room, she hurried into his room, but still doubts and fears assailed her. Could she wake John without terrifying him? Could he rouse Robert. Could they telephone without being heard by the robbers in the room below?

She crept, first, to the door leading from John's room into the hall, closed and locked it, then went to the bed. A frightened little voice whispered, "What is it all about, mamma?" John was awake.

"There are burglars in the house, darling," she whispered softly. "They have heard about that money. They have taken papa downstairs to open the safe. Can you be a man now? Try if you can wake Robert over your telephone, and have him rouse his father and telephone from there to the police station for help. Hurry, for every minute counts! Put the receiver under the covers and be as quiet as possible."

When the familiar whistle sounded, it seemed to Mrs. Everett so loud and shrill that it must bring the burglars upon them. Again and again the call was repeated and no reply.

They were almost in despair, when they heard Robert's answering call, and Mrs. Everett smiled involuntarily, despite her suspense, when she heard John's every-day formula, "Hello, Robert, this is John talking."

And then, "Robert, there are burglars in our house. Papa has a lot of money here tonight, and they are making him open the safe to get it. Mamma and I are upstairs. Wake your father, have him telephone the police for help. Be quick, Rob, for fear the men will leave before the police come."

They heard Robert's startled exclamation and then a hurried "All right! I'll wake father at once." Then, there was silence. Scarcely daring to breathe they waited, John with the telephone at his ear. Minutes passed. No sound reached them from below. Then tension grew unbearable.

Then, there came a signal at the telephone. This time it was Mr. Seeley talking. He had called up the nearest police station, and three mounted policemen, who were at the station when his message came, had started instantly for the scene. In ten minutes, if the burglars lingered that long, their capture would be assured. Mr. Seeley added a word of cheer, asked a few questions, and then said he would try to telephone Mr. Bainbridge and Mr. Rankin, other neighbors, that they might be of some assistance, if necessary.

Then, John and his mother were left to their anxious waiting once more. Mrs. Everett ventured to creep out to the head of the stairs. The men already had the money. With a sinking heart she heard the clink of the gold. They were dividing their plunder at once, strange to say. They seemed in high good humor. One of them made a demand for something to eat and she heard her husband's voice, as he led them to the kitchen. With a fervent prayer that they might linger over their lunch, and a feeling of thankfulness that Mr. Everett was safe, Mrs. Everett stole back into John's room.

While they waited, John and she quickly and noiselessly dressed. Mrs. Everett ventured again into the hall to listen. The robbers were making preparations for leaving. There had been no further message from the Seeleys. Could it be possible that the promised aid would fail them? The men came into the front hall. Evidently they intended to leave boldly by the front door. With every nerve strained to the utmost tension, Mrs. Everett and John waited in the darkness at the head of the stairs.

They heard the men order Mr. Everett to remain quiet for fifteen minutes after they had gone, heard their rough laughter when they told him they would leave his watch for him to tell the time, heard them open the vestibule door. "Merciful Heaven," breathed Mrs. Everett, "will they escape after all?" Then the outer door opened, and—"Thank God, thank God," for a determined voice rang out, "Stand back there! You are my prisoners!"

Mrs. Everett's trembling fingers sought the electric button and the lower hall was flooded with light. With misty eyes she saw two thoroughly surprised and cowed men, facing three sturdy policemen. A second later, the click of the handcuffs was heard. They had captured the burglars, and saved the money.

Some half-hour afterward, the officers had bundled their prisoners into a patrol wagon and had driven away, Mr. and Mrs. Everett were listening to the congratulations of friends and neighbors who had been aroused, and John and Robert were receiving praise enough to turn most boys' heads, when some one asked, "Where is the baby? Has she slept through all this noise?"

The baby, whose fitful slumbers compelled the family to walk on tip-toe and to talk in whispers! Mrs. Everett gasped, "Bless the darling, I had entirely forgotten her." Then, from upstairs came a sudden, loud, compelling cry. The baby, their precious little burglar alarm, was awake.

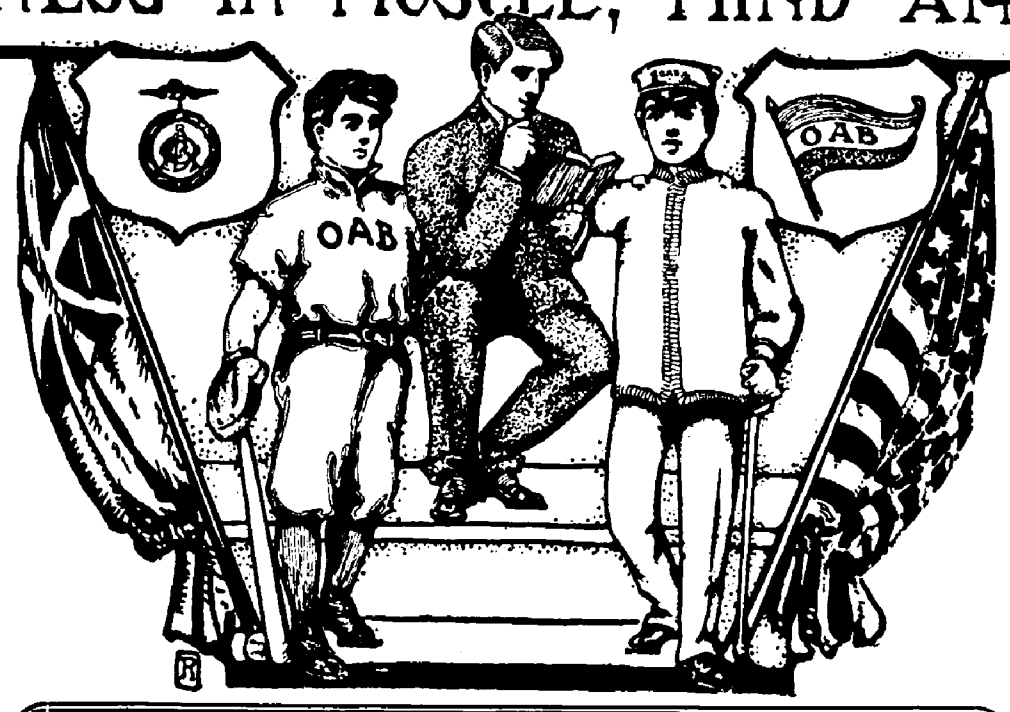
The Great American Boy Army.

FOR MANLINESS IN MUSCLE, MIND AND MORALS.



The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

Under the Auspices of "The American Boy"

Object:—*The* Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

New Companies Organized

Company News

SILVER GATE COMPANY, No. 26, San Diego, Cal., acknowledges receipt of special prize for increased membership, and says "we are delighted with the book, pennant, and the picture of 'Old Abe,' which we have had framed." The book is being read at its meetings, a chapter at each. This company recently elected the following officers: Frank Smith, Capt.; Will Cralle, V. C.; Lester Banks, Secty.; Lesly Cassie, Libn. It has a membership of 24 and is in a most prosperous condition. ROCKY MOUNTAIN BOYS COMPANY, No. 5, Ogden, Utah, started company meetings again in October with a membership of 8 and more in prospect. The officers elected for the ensuing year are: Robert Thorburn, Capt.; Harvey Snow, V. C.; Clarence Wright, Secty. and Treas., and Arthur Fell, Libn. The company intends to move to a larger club room shortly and will have a fully equipped gym. It has $3.00 in the treasury. It intends to go in for electrical experiments and will try to get together a lot of apparatus for that purpose. The secretary writes that the boys are very enthusiastic and hope to have a most prosperous year. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y. It would be strange to read the Company News without the report of this enthusiastic and prosperous company. This is its thirty-seventh report and there is no abatement of vim or earnestness in its members. During October it held five meetings and a delightful Halloween entertainment. A checker tournament, causing considerable excitement, is being held, and the victors will be awarded suitable prizes.

YOUNG AMERICANS ATHLETIC CO. No. 28, PETALUMA, CAL.

The members have revised the constitution and rules and printed copies will be distributed among the members. We shall be glad to have a copy. A new departure in the work will be the purchase of a printing press and the publishing of a regular monthly paper. As several experienced amateur printers will join the company and it has already on its roll capable illustrators, the paper will start out with every element of success. Don't forget to send a copy to headquarters. THE SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill., is an example of what a Company can do when its efforts are directed by an enthusiastic and energetic Company Counsel. On November 1st the members gave a Corn-night Masque Party at one of the member's homes, and had a most enjoyable time. When the time came to unmask there were many surprises. Members are much interested in the local Y. M. C. A., especially the gym, and it is expected the majority of the boys will join. This is a first-class idea. The company is continuing its helpful work for others, by visiting and taking flowers and books to a boy who lies in the hospital with a broken leg. A later letter brings to headquarters a warm welcome to attend the Second Annual Thanksgiving entertainment on November 29th. We have written expressing our regret at not being able to be there, but we are sure from the fine program being arranged that it will be a success. The members of the Boys' Club of St. John's Church are to be the guests of buildings of which the members have the use rent free. Its officers are: Miller Hughes, Capt.; Naylor B. Humphrey, V. C.; J. H. Henderson, C. C.; C. H. Schwartz, Secty.; Harry A. Boyd, Treas.; M. E. Williams, Libn. This company was awarded the second prize in one of the special contests for increased membership. Dues 5 cents a month, with fines for various offenses. This company is mostly interested in politics and as the members are divided on certain questions, lively the evening. HENRY CLAY COMPANY, No. 7, Wickliffe, Ky., has 9 members and about $3.00 in the treasury. It has also its charter framed, two O. A. B. pennants, and a bookcase with over 20 books. It has a club room on the second story of one of the principal meetings are held, but the company is harmonious and prosperous. MOVILLE HAWKEYE COMPANY, No. 59, Moville, Ia., has voted to extend the terms of its office holders from six months to one year. The members were entertained at supper at the home of the secretary and had a most enjoyable time. YOUNG AMERICANS ATHLETIC COMPANY, No. 28, Petaluma, Calif., recently elected officers as follows: Earl Pressey, Capt.; York Hoffman, Lieut.; Willie Hoffman, Secty.; Donald McLean, Treas.; Harold Madison, Libn., and Emil Nicolaisen, Janitor. It has a fine clubroom and the members will fit up a gym. It has a football team and expects to play and win a good many games this season. The captain sends us a picture. FREE SOILER COMPANY, No. 73, Iron River, Mich., has eleven members, $4.00 in the treasury and meets at the homes of members each Wednesday evening. Its officers are: Peter Diederichs, Capt.; Raymond Mahon, V. C.; Frank Henley, Secty.; Joe Henley, Treas.; Gil. Williams, Libn., and Will Williams, S. A. GLENWOOD COMPANY, No. 51, Medina, N. Y., recently put in a supply of pop corn and cord wood for winter use. It holds meetings each Thursday evening and has started a library, the Company Counsel also giving the members the privilege of his library. It has $13.00 in the treasury. The company has limited its membership to 10. At a debate recently held it was resolved, that the negroes should have equal privileges and suffrage with the white people, immediately. The members are enthusiastic American boys. MOUNT LOWE COMPANY, No. 31, Los Angeles, Calif., recently received two new members, and has the following officers: Robert H. Mulks, Capt.; J. Sanborn, Secty. and Treas.; Jamie Averton, V. C.; Montgomery Beall, Libn. It has its charter neatly framed and has purchased an O. A. B. pennant. THE KNIGHTS OF JEWELL COMPANY, No. 34, Jewell, Kans., has now the following officers: John R. McClung, Capt.; Fred Gray, V. C.; Harold Sandborn, Treas. It meets in a private gymnasium and the members intend giving an amateur play soon. They are busy also planning other things to keep up the enthusiasm. TRUE BLUE COMPANY, No. 9, Hinkley, Me., regrets to report the resignation of several members on account of leaving the town, but new members are coming in and the company is doing well. The officers are: Earle Palmer, Capt.; Carl Dunbar, Secty. and Treas., and John Cayford, Libn. PILOT ROCK COMPANY, No. 19, Ashland, Ore., has taken in a new member during November and has had a box social which netted the treasury $10.00, making $17.00 in the strong box. The members are trying to raise money to build a club house, and it looks as if they would succeed. Copy of Pamphlet costs 2 cents, Captain's Badge 15 cents, and Member's Badge 5 cents. THE SPRAGUE COMPANY, No. 71, Alliance, O., has elected the following officers: Floyd Randall, Capt.; Carl Rickard, V. C.; Ray Abegglen, Secty.; Alfred Abegglen, Treas.; Fred Shaffer, Asst. Secty. Meetings are held every Wednesday evening. It has a Company Counsel, and the treasury is rich to the extent of $3.75.

J. A. BROCKWAY, JR.
COMPANY COUNSEL OF SANGAMON BAY LEAF CO. NO. 45, DECATUR, ILL.

Extracts From Mr. Sprague's January "Company Letter"

I have to hear from one reader of THE AMERICAN BOY who, during 1905, was dissatisfied with any number of the paper. On the other hand, there have come to me stacks of letters praising it, not only for the splendid stories and the inspiring articles, but especially for the great help it has been to boys who desired to be and do something. And these evidences of appreciation have helped me, have helped my associates, and have caused us to determine that during 1906 no good means will be left untried, and no efforts of time, or money, or labor will be spared in not only maintaining the high standard already set, but in raising it. I am making no idle boast in saying that during 1906 THE AMERICAN BOY will in its stories, helpful articles and practical departments become a greater power than ever before in inclining boys to strive for what is truest and best in life; and as the members of our Order have already given valuable assistance in spreading a knowledge of THE AMERICAN BOY among others, I have every confidence that they will increase their efforts in this direction during the year upon which we have just entered.

SPECIAL PRIZES DURING 1906.

In order that the companies be stimulated to work for increase in their membership, it has been decided to continue to award special prizes during 1906. There will be twelve prizes awarded, viz.: Four first prizes, four second prizes and four third prizes under the following conditions:

To the company sending us the largest number of subscriptions for new members between January 1st and March 31st, we will give one of our handsome O. A. B. pennants, a good book for boys, and a fine picture of "Old Abe," the famous war eagle.

To the company sending us the second largest number of subscriptions during the same period, an O. A. B. pennant and a good book.

To the company sending us the third largest number of subscriptions during the same period, a good book or a picture of "Old Abe," or a pennant, as desired.

The same prizes will be awarded each three months during 1906, the dates of closing the contests being March 31st, June 30th, September 30th and December 31st.

In sending us subscriptions in these contests, the sender must be careful to state that the boy for whom the subscription is sent is to be a member of a company, as otherwise our records cannot show this.

Remember that these special prizes are given in addition to the usual commissions and premiums for obtaining new subscriptions.

This gives each company a splendid chance to decorate its club room and add to its library.

OUR PICTURE GALLERY.

We are glad to have company pictures capable of being reproduced in THE AMERICAN BOY and to adorn our O. A. B. Picture Gallery, and every company is urged to have a picture taken and a copy sent to headquarters.

I Will Make You Prosperous.

If you are honest and ambitious write me today. No matter where you live or what your occupation has been, I will teach you the Real Estate business by mail; appoint you Special Representative of my Company in your town; start you in a profitable business of your own, and help you make big money at once.

Unusual opportunity for men without capital to become independent for life. Valuable book and full particulars free. Write today.

EDWIN R. MARDEN, Pres.

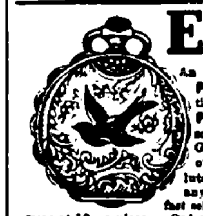
EARN Watch and Ring



An American movement watch with **Solid Gold Plated Case** fully warranted to keep correct time, equal in appearance to any **Solid Gold Filled Watch** warranted twenty-five years. Also a **Solid Rolled Gold Ring**, set with Cleo Gem, sparkling with fine brilliancy of a $50.00 diamond, given absolutely **Free** to Boys and Girls or anyone for selling twenty of our fast selling novelties for ladies' wear at 10c. a piece. Order twenty novelties to-day and when sold send us the $2.00 and we will positively send you both watch and ring, and a chain. Address JOHN HENRY & CO., Dept. 21, Chicago, Ill.

THE HUMANATONE

Nothing like it ever before heard of. It is hard to describe, for it is made on a new principle, never before applied to Musical Instruments. A handsome article, nickel plated, and covering both the nose and mouth, gives forth a hollow, musical sound. When played with piano accompaniment effect is fine; a feature for concerts and entertainments. Packed in a box with simple instructions. 25c. postpaid. H. E. McMILLIN, 706 Superior Ave., N.W., Cleveland, O.

—MEN WANTED—

—GOOD PAY—

WANTED Men everywhere—to distribute circulars, advertising matter, tack signs, etc. No canvassing. Address NATIONAL ADVERTISING CO., 6 Oakland Bank Bldg., Chicago, Ill.

RAILROADING—WANTED FIREMEN AND BRAKEMEN for all North American Railroads. Experience unnecessary. Firemen $70, become Engineers and earn $150. Brakemen $65, become Conductors and earn $140. Unequaled opportunity for strong, ambitious YOUNG MEN. Name position preferred. State age. Address: RAILWAY ASSOCIATION, Room 1, 227 Monroe Street, Brooklyn, N. Y.

THE RIGHT WAY — EDUCATOR SHOE — THE WRONG WAY

REGISTERED

"Lets the Child's Foot Grow as it Should"

Made in Black Kid, Box and Russia Calf, Patent Colt. Strong, durable Oak soles. A pliable, neat and reliable shoe. *None genuine unless stamped Educator on sole.*

SIZES

First Steps, (tan or blk. kid)	2 to 6	$1.25
Infants'	5 to 8	1.50
Child's	8½ to 11	1.75
Misses'	11½ to 2	2.00
Girls' (lace or blu. kid)	2½ to 6	2.50
Boys' (not Pat. Colt)	1 to 5½	2.50
Boys' (b. cf. ex. high cut)	1 to 5½	3.00

By Mail, 25 cents extra.

Educators also made for Men and Women.

We make shoes for every member of the family in our seven large factories, including the famous "All America" $3.50 and $4.00 Shoe. *Send to-day for Illustrated Catalogues.*

Educator Rubbers Fit Educator Shoes.

EDUCATOR WAY

Room for 5 Toes. Broad Tread. Med. Sole—A Shoe Without an Equal.

WRONG WAY

Pinched Toes, Corns, Bunions, Deformed Feet.

BIRD STUDIES MADE BY THE SCHOOL CHILDREN OF NORWAY

BY HARRY A. PECKHAM

"I THINK that this is an oriole, but the markings of his breast almost make me doubt it. There! There! I have a better view; now I am sure it is, and it is the first one of the season."

The speaker was one of a group of boys and girls in the neighborhood of the little village of Norway, Maine, who were trooping across the fields in search of songsters.

The study of birds that is being made in this little Maine village of scarcely three thousand inhabitants, its introduction into the public schools, and the interest taken in it by teachers and pupils alike is attracting the attention of men well known in the scientific world.

No text-books on the subject are used in the schools, excepting by way of reference. The fields are the class rooms.

The work of teaching the young people along scientific lines by out-of-door methods began some five or six years ago. The May, 1904, number of THE AMERICAN BOY contains an interesting article relating to the boys and girls and their instructors, and to that anyone interested in the subject is invited to turn.

The leader in the work is Mr. George R. Howe, of Norway. His assistants are such men as George K. Noyes, whose specialty is that of an artist-instructor.

The only return for their labor that these two gentlemen ask is that the boys and girls of Norway shall think along higher lines than do the average village boys and girls.

Many mornings you can see the classes making their way along the shores of Pennesseewassee Lake in search of water birds, or scattering through the woods and fields near the town in search of land specimens. Their investigations cover the whole of Oxford county, and are not confined to birds, but embrace ferns, trees, minerals and such things.

The membership includes several photographers. The result is that the boys and girls of Norway cover the walls of their rooms and dens with bird pictures, and many have interesting collections of minerals and jars full of preserved vegetable specimens.

For a long time it was believed that no such monstrosity as a double bird was ever found in the wild state, but the young Norway scientists found just such an animal. It was the myrtle warbler, with two heads and bodies.

Under the leadership of Mr. Howe they have given considerable attention to the spring mating song of the bird commonly called the Northern shrike, or butcher bird. This bird is classed as one of our most imitative songsters. He imitates very closely the spring peep of the frogs, the early trill of the toads, the clear notes of the red-winged blackbird, and the mew of the cat-bird.

The boys and girls thoroughly believe in Thoreau's maxim that "a bird in the bush is worth two in the hand." They have learned to respect the rights of birds and to protect them.

To illustrate how the students became acquainted with the birds, the other day during a walk by the lake the pupils with their teacher came upon two loons. Without a moment's hesitation the teacher whipped her note book from her pocket and read its description; then the opera glasses were brought into play, and the pupils became at once thoroughly familiar with this curious bird.

The boys have adopted a regular uniform for use on their trips. Its distinguishing feature is the white hat and white canvas shoes. As an outfit they carry white duck haversacks with apartments for provisions, alcohol for use in preserving, compass, drinking cup, hatchet, chloroform and formaline, blotters for preserving flowers, boxes for roots, leaves, etc., prospecting hammer and other things necessary in the work. The boy's pack does not often weigh more than sixteen pounds, including enough provisions to last for several days.

One of the aims of the movement is to teach the children to love wild flowers and to prefer them growing wild. They are never needlessly picked by this little company. It would seem that the good work has spread, for the Maine legislature has been trying to pass a law to protect the trailing arbutus. There is need everywhere of this same work of protecting the wild flowers, for in the older localities of our country the wild flowers are going fast.

The spirit of kindness developing in the boys and girls of Norway is spreading to the older people of the village, and Mr. Harriman, who has a store on one of the main streets of the village, makes a practice every morning of feeding the doves that have learned to come to him for regular feasts. The result is the doves in and about Norway are tame—so tame they will feed from the hand and light on the shoulder without fear.

Let Mr. Howe describe some of the experiences that happen when the boys go camping out: "Of all the varied sensations," said Mr. Howe, in discussing this outdoor work, "there is none that can equal the first night spent out of doors. During the daytime if everything progresses smoothly there is something to occupy the mind, and after supper is eaten and the great camp fire kindled the boys are all in anticipation of a much-talked-of sleep out of doors. They listen for the hooting of an owl or the shrill whistle of the loon, and can name the birds when they hear them a second time.

"When the tent is opened and the blankets spread out over the sweet smelling cedar boughs there is a general scramble for the softest spot, but I know they will not get to sleep as quickly as they expect. When the fire is raked and the last spark extinguished, darkness settles over the camp and the quietness has the effect of putting the boys into a state of mental agitation that makes sleep impossible for awhile.

"I recall one trip in particular in which the boys were uneasy. The sounds that earlier in the evening sounded so welcome now seemed near and wild. I was thinking over the day's happenings and planning for the morrow and did not notice the long drawn hoot of an owl over by the swamp, but one of the boys nearest me clutched my shoulder and whispered, 'What is it?'

"Assuring him there was no occasion for alarm, I was almost asleep when the plaintive cry of a loon had the camp in an uproar. Not one of the boys had been able to sleep, and now they were thoroughly frightened. Hastily striking a match I let the boys look into each other's blanched faces, when they all laughed and made another attempt to sleep. Twice during the night did a coon disturb our slumbers, and the peck peck at the edge of the swamp told me that a woodpecker was restless in his sleep. To the boys it sounded as if another camping party were near us. Once a heavy thump, thump, and the crackling of twigs caused the boys to whisper, 'A bear,' but a well-aimed club in the thicket had the effect of sending away a too sociable rabbit.

Such is the good work being done at Norway, Maine.

What shall we do with our young people, so many ask. Mr. Howe seems to have solved the problem. Teach them the value of out-of-door things, things that are real and fundamental; teach them nature in all her branches. There is no monotony in the woods and the water; every succeeding trip reveals new and added charms.

Winter is not without its interesting out-of-door life. The boys and girls of Norway, Maine, with their snowshoe outfits, keep up their investigations long after the snow flies.

SOME OF THE BOY NATURALISTS OF NORWAY, ME.

An Experiment in Feeding Hungry School Children

On the lower east side of New York City there are many little children who from the day of their birth to the time when they are able to earn their own living are improperly nourished. They come to the schools feeble from hunger and are in no condition to do the tasks assigned to them by the teachers. It is almost a hopeless undertaking to teach a child when its mind is constantly diverted by the pangs of hunger, and the New York Board of Education has come to realize the fact.

How to help these little sufferers, however, has been a hard problem to solve. The board has no right to provide this food, for it has no appropriation for such things. It can feed the mind with knowledge, for that has in view the making of good citizens, but to feed the body is to dispense public charity, and that is outside of the sphere of the public school system.

A way has been found, however, without evading the law and without giving the deed the appearance of alms.

In each one of the large schools of this large city there is a cooking school, where the girls are taught domestic economy. It has been found that the food cooked by these girls can be made to serve the excellent purpose of feeding those who come to school with an aching void, and this has been done and is being done in Public School No. 1.

The girls are learning to cook and the hungry children are being nourished with such foods as boiled rice, cereals, roast beef and the vegetables in season; puddings and custards form a part of the meal twice each week.

Not to have it an almsgiving, each child brings one cent each day to pay for the milk.

The experiment has given great satisfaction.

The Amateur Athletic Union of the United States comprises in its membership 155 athletic clubs, with a total of 11,555 registered athletes.

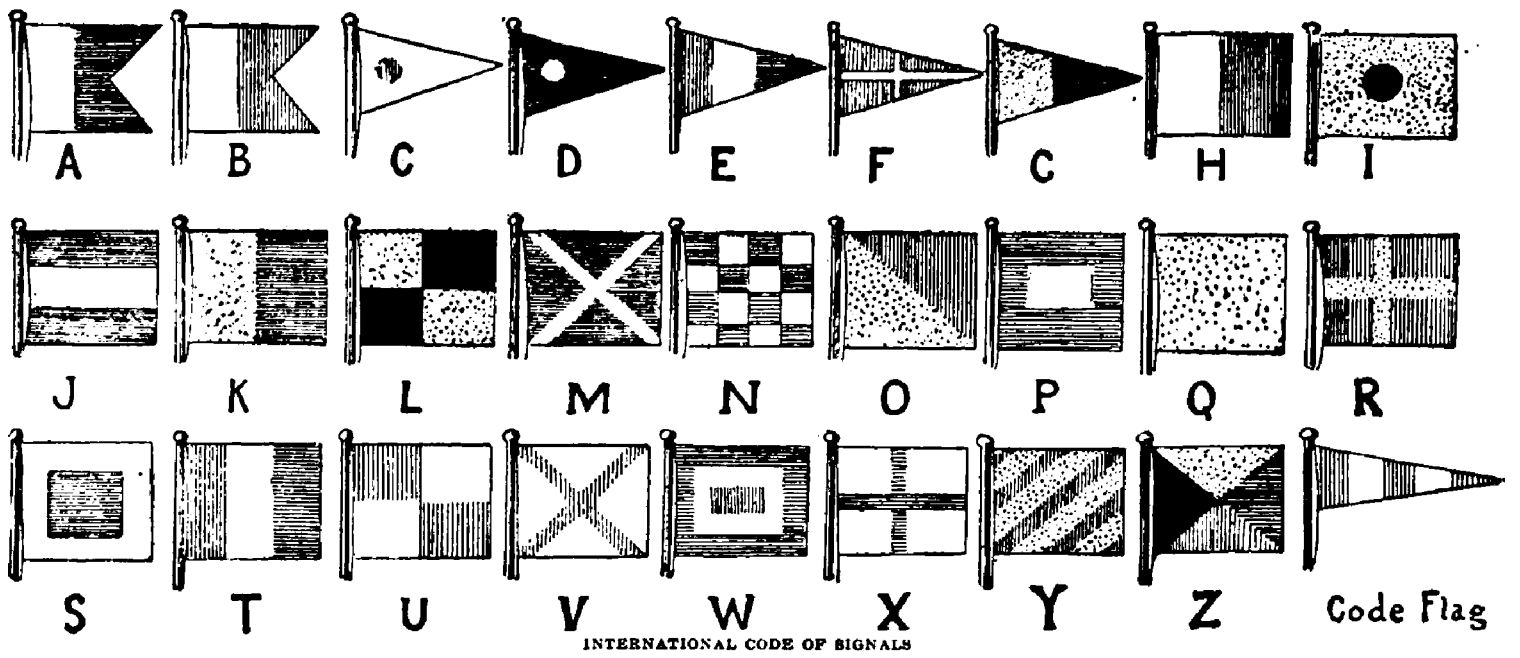
THE LANGUAGE OF THE SHIP

By GEORGE P. MOON



INTERNATIONAL CODE OF SIGNALS

THE LANGUAGE of a ship is a language of signs. But notwithstanding this circumstance, all possible questions may be asked and answered, and every item of information given in the fullest degree by its medium, even though the conversing crafts be miles asunder.

The alphabet of this silent tongue is usually flags of various shapes and colors. But should the distance between the ships, or between the ship and a signaling station, be too great for colors to be distinguished, or should the wind be blowing between the two so that the flags are end on, one of two other methods must be adopted. The first is to represent each letter by combinations of three shapes—a cone, a ball, and a drum. The second is to make use of a semaphore having three arms, the positions of which with regard to one side or the other of the post, and whether they are horizontal, upturned, or downturned, indicate the letter desired.

As the ships which speak to each other are frequently of different nationalities, it is necessary that the signal should be international or common to all; and this is so. And another desirable thing is also provided.

It will, I dare say, occur to you that if a message, even one of brief length, were to be spelt out letter by letter, the operation would be exceedingly tiresome and consume time that perhaps could be ill afforded. To remove these objections a code has been made out dealing with all matters marine, by means of which a hoist of flags (from two to four in number) indicate whole sentences. For example, the flags Q, D and S ask the question, "How does the land lie?" F, D, "Are you in danger?" And so on.

In the illustration of the flags here given of this international code of signals the various colors are indicated thus: Yellow by dots, red by vertical, and blue by horizontal lines. You will therefore, have no difficulty in picturing the true appearance of each.

It is only since January 1, 1902, that the code as here illustrated has been in exclusive use. The former code possesed no flags to represent the vowels; X, Y and Z have been added; and an alteration has been made in the design and colors of a couple of the other flags, F and L.

Prior to 1857 there was a multitude of signaling codes in daily use at sea printed in many languages, and the resulting confusion may be readily imagined. But in April of that year a committee appointed by the Board of Trade two years before "to inquire into and report upon the subject of a code of signals to be used at sea," had their suggestions put into practical shape by the issue of the "International Code Book of Directions," which was adopted by all the nautical powers. This, as I have just said, has been entirely superseded by the improved version, introduced in January, 1901, after the two ran concurrently for a year.

You will notice that one of the flags—a pennant, or flag running to a point, having two white vertical stripes on a red ground—is termed the code signal and answering pennant. When in use as the first, it indicates that the International Code is being employed. When used as the second—as the answering flag—its significance is equivalent to, "I notice you are wishful to communicate with me."

When a ship desires to speak to another she opens the ball by hoisting her ensign with the code flag beneath it.

The ship spoken to immediately responds to the signal by hoisting the answering pennant at the "dip"—that is, two-thirds of the way up to, say, the masthead or peak.

The first then makes the desired signal, which may consist of two, three or four flags; but never more than four.

Should the second ship comprehend the signal, she makes known the fact by hoisting the answering pennant "close up," in which position it is retained till the signaling craft has hauled down her flags. It is then lowered to the "dip" again in readiness for the continuation of the message.

Should the signal be not distinguishable, or appear not to be applicable to the situation, the ship spoken to must intimate the fact by hoisting the proper flags for the purpose, keeping the answering pennant at the "dip" until the signal is thoroughly comprehended, when it is hoisted "close up."

Two-flag signals, from A B to Y Z, are urgent and of importance, and take up ten pages of the code book. "Want a pilot," P T; "Machinery out of order," R J, are examples of the nature of these hoists.

Three-flag signals occupy the greater part of the code book, from page 20 to page 421. The bearings of the compass run from A B C to A S T.

Then we have the names of the various coins of all countries; for example, A U Y equals a rupee, followed by the weights and measures, A Y I equals a ton, decimals and fractions, B C X equals .09, and auxiliary phrases—i. e., containing the auxiliary verbs, such as B H W, "They must not be."

The general vocabulary is indicated by the flags C X A to Z N P, and takes up the pages of the code book from 64 to 414. "Pilot has been sent to you," T J I, and "Must take in more ballast," F T S, may be given as illustrations.

The degrees of latitude and longitude, divisions of time, height of the barometer and thermometer, are signaled by a hoist comprising two flags under the code pennant; while figures from cipher to five millions are denoted by two flags over the code pennant.

Geographical signals are shown by four-flag hoists, such as: A U Y T equals Callao; A E H V equals London.

The code flag over one flag has various significances. For example, when it is over L, the hoist denotes that cholera, plague, or yellow fever is on board. Over I, "Have not a clean bill of health." Over E indicates that the flags which follow do not allude to the code, but must be, taken as representing the letters of the alphabet each stands for. This is the alphabetical signal, and is employed when a name or address is about to be spelled out letter by letter. The code flag over F and over G indicate, in one case the end of a word or dot between initials, and in the other that the alphabetical signals are terminated.

Numeral signal—i. e., that the following flags are to be taken as representing the figures assigned to each of them in a table found in the book—is made known by hoisting the code pennant over M. Over N indicates the decimal point, and over O the end of the numeral signal.

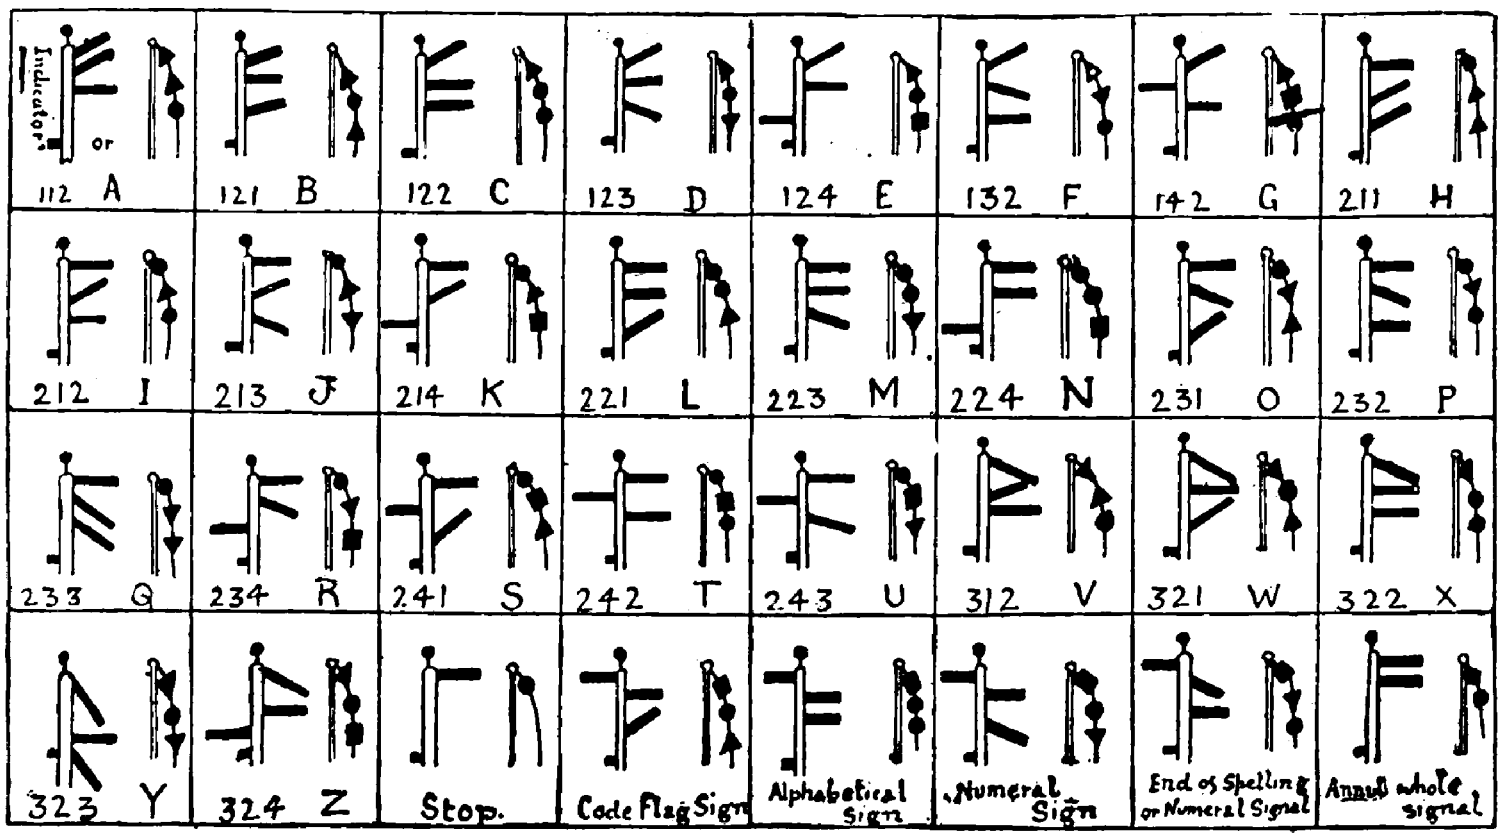
If the name or the number contain more than four letters or four figures, it must be given in more than one hoist; for four is the maximum number of flags of which a hoist must consist. And if a letter or figure be duplicated, or contained more than once in any name or number, such letter or figure "must, on its second occurrence, begin or be in a second hoist, and on its third occurrence, it must begin or be in a third hoist."

The illustration of the distant and semaphore signals is almost self-explanatory.

It will be noticed that each letter of the alphabet is indicated, in the distant, by a hoist of three shapes—a cone, a ball, and a drum; and, in the semaphore, by the inclination and position (with reference to the post) of three arms.

The cone with the point upward is termed number 1, and corresponds with the semaphore arm pointing upward. The ball is number 2, and is equivalent to the horizontal arm of the other. The down-pointing cone corresponds with the down-pointing arm of the semaphore, and is numbered 3. All these positions of the arm are on the side of the post opposite to the indicator. Number 4 is represented by a drum or by a horizontal arm on the same side as the indicator.

Owing to the fact that these distant and semaphore signals take more time than the flag system, requiring always two or more hoists, thirty-seven special urgent signals needing one hoist only have been provided in the Code Book; such as: "32. Short of provisions. Starving." "24. Want water immediately." "312. Is war declared?" The "Stop" signal indicates the end of the sentence.



SEMAPHORE AND DISTANT SIGNALS

Boys' Books Reviewed

A FIRST BOOK OF ALGEBRA, by John W. Hopkins and P. H. Underwood. Both of these authors have had long experience in the work of teaching and this book dealing with this special branch of mathematics shows the results of that experience and most careful, painstaking and conscientious work. In the preface the authors state that as far as they know "this is the first beginners' book that graphically illustrates the fundamental rules, fundamental laws and facts, and incidentally brings out in bold relief the essential connection between arithmetic, algebra and concrete geometry." The twelve chapters in the book contain The Language of Algebra, The Equation, The four Simple Rules, Fundamental Laws, Factors, Fractions, Problems, Percentage, Simultaneous Equations, Symbols, Simple Equations, Ratio and Proportion, Involution, Square Root, Quadratic Equations, Radicals, Theory of Exponents, Radical Equations, Graphs of Functions. The many illustrations and exercises making and testing everything as the student proceeds make it a valuable work for school and college and teachers will find it of great use in the class room. The answers to the exercises are in the end of the book. 246 pages. Strongly bound. Price 50 cents. The Macmillan Co.

HEROES OF ICELAND, by Allen French, author of Rolf and the Viking's Bow, etc. The stories of far off olden times will never cease to thrill and delight the reader and listener: The Niebelungen Lied, Charlemagne, Roland of Roucesvalles, King Arthur and His Round Table, will never lose their interest, and Mr. French has in this book a story which in point of valor, faith, courtesy and all the grand virtues of the heroic age equals, if it does not surpass these familiar tales. It is a tale that stirs the blood; it shows us the life of our part ancestor, the Norseman, and upholds a high and heroic standard of courage. A book for any boy. The illustrations are by E. W. D. Hamilton. 297 pages. Price $1.50. Little, Brown & Co.

THE RACE OF THE SWIFT, by Edwin Carlile Litsey. This is a collection of seven stories of different animals, written by one who knows their habits and characteristics. The animals told about are: A mother fox, a hawk, a gray wolf, a wild cat, a raccoon, a coon dog, and a sheep dog "turned bad." The stories are finely told, showing the author to be a master of descriptive virile writing. Unlike many stories about animals, everything here stated is strictly within the range of probability. There is a touch of London's "Call of the Wild" in all of them. Readers of the book will not be confined to boys, as adults will enjoy it as well. The illustrations by Charles Livingston Ball are particularly good. A first-class book for a Christmas gift. 151 pages. Price $1.25. Little, Brown & Co.

THE GREGORY GUARDS, by Emma Lee Benedict. This is a good and well-told story, illustrating the truth of the advice of "The Preacher": "Cast thy bread upon the waters; for thou shalt find it after many days." Cyrus Gregory, owner of Gregory Lodge and Island, unable to walk because of spinal complaint, is administrator of a fund to help worthy boys to a start in life. Six boys are brought to the Island on probation, and because of attempts at robbery constitute themselves "The Gregory Guards." How Cyrus became poor because of a wicked trustee and how he again came into his own through the efforts of two of the boys he helped are all delightfully told in the book. Illustrated by Frank T. Merrill. 302 pages. Price $1.25. Lothrop, Lee & Shepard Co.

TIMOTHY BAILEY'S father kept a bee farm in the village of Cardiff, New York, about twelve miles from the city of Syracuse. He was known as a honey expert throughout most of the Onondaga valley, so the sweet white clover, or darker buckwheat production of his bees found a ready market, not only among his neighbors but also at Syracuse.

Some three miles from Cardiff, northward toward Syracuse, was the reservation set aside by the government for the remnant of the tribe of Onondaga Indians. These red-men, a mere handful of a once powerful band, lived peaceful lives on their small farms. Some, who did not care to till the soil, found work with neighboring farmers, or even in the city, where they were employed as day laborers.

The Castle was the council house where, on somewhat rare occasions, the few warriors who still had the pride of the tribe in their hearts, met and kept up the traditions of their race. There were two factions among the Indians, namely, the Christian Indians, who accepted the teachings of the missionary and attended the church he had established, and the unbelievers, who clung to the old faith and traditions. Between the two, however, there was no bad feeling.

It was among the Indians, both Christian and non-Christian, that Bert Bailey found a good market for his honey, the red-men being very fond of the sweet stuff.

"Tim," called Mr. Bailey to his son, one evening just at dusk. "Tom Ironaxe down at the Castle sent word he wanted some honey. His boy brought me the money and said his father wanted the stuff tonight, sure. I was going to send the hired man down, but the horse needs a shoe, and so George has to take it to the blacksmith shop. Couldn't you take a walk to the Castle? It'll be moonlight coming home."

"I guess so, dad," replied Tim. "Is the honey heavy?"

"No, it's about ten pounds of broken comb, clover and buckwheat mixed. I had your mother put it in a milk pail, and tie some cheese cloth over the top. If you start now you'll be back by nine o'clock."

Tim didn't mind the six mile walk to the Castle and back, for it was a pleasant spring evening, and he knew many of the more civilized Indians. Ironaxe was one of the "wild" Indians, as they were called, though they were really far from being wild or savage.

"I'll start right now, dad," said Tim, and, taking the pail of honey, and stuffing his pockets full of molasses cookies, he went down the road, whistling merrily. On the way through the center of the village Tim met Truem Wright, his fifteen-year-old chum.

"Where you goin'?" called Truem.

"Got to take some honey to Tom Ironaxe at the Castle. Want to go 'long?"

"Sure."

The journey didn't seem such a task to Tim now that he had company. Though two boys may not be able to go on an errand in double the time of one, still, the way seems but half as long as it would to the single wayfarer. As for thinking the journey work, the boys talked too much to let that worry them. Thrusting a stick through the pail handle they carried the honey between them, and neither noticed the weight.

Almost before they knew it the boys had covered two miles, and were traveling down the slope that led into the reservation.

Now and then they passed log or slab cabins in which the Indians lived, and then they were fairly within the Indian village. To reach the home of Ironaxe they had to pass through the village and about half a mile beyond the Castle.

Usually the Castle was closed, for it was used only when the Indians who refused to be Christianized went through some of their old ceremonies in it. But this time, as the boys came opposite the building, they saw lights gleaming within.

"Wonder what's up," said Tim.

"Maybe it's a war dance," suggested Truem, catching his breath sharply at the idea.

As they came nearer, following the path that led past the council house, they heard from the interior, a low, monotonous chanting, interspersed now and then with yells. There was also a faint, rattling sound.

"That's what it is; a war dance!" exclaimed Truem. "Say, I'm going back. Come on."

"No," objected Tim, coming to a halt. "I've got to leave this honey for Ironaxe; he's paid for it and he wants it."

"But your father didn't know the Indians would be having a war dance," argued Truem. "He wouldn't want us to get hurt, even if Ironaxe didn't get his honey."

"This isn't a war dance," said Tim. "The Onondaga Indians don't have 'em any more. They're partly civilized. Say," he cried suddenly, "I know what all the excitement is about."

"What?"

"It's the green corn dance—succotash dance, the Indians call it. I heard Ironaxe telling my father about it the other day. The Indians are saying prayers to the Great Spirit, so they'll have a good crop of corn."

"I guess you're right," admitted Truem, after a little thought. "Sounds like a war dance, though."

The boys set the pail of honey down and listened. Then the same thought came to both of them.

"I'd like to look in and see what it's like," said Truem.

"So would I. Let's do it," said Tim.

It was quite dark now, and the moon would not be up for some time. The council house stood back about five rods from the road, and no one seemed to be keeping guard about the place. There were long glass windows on each of the four sides of the Castle, and one of these, the boys thought, would afford a glimpse within. They glanced all about them. The whole village was in darkness excepting the council house. Tim took the pail of honey and both boys moved cautiously forward.

A number of years ago, and at the time this adventure befell Truem and Tim, the Onondaga Indians were jealous of their tribal ceremonies. The green corn dance, the incantations over the white dog, and some other rites, were guarded from inquisitive eyes as closely as in the days of the wild wilderness life of the red-men. No paleface had ever witnessed the dances, though newspaper men had made several attempts, openly and otherwise, to gain admittance. At the present time it is different; the once noble Indian is not averse to letting the white men in at twenty-five cents a head, so that the green corn dance has degenerated into a shadow of what it was.

HIS FINGERS WERE SOON IN HIS MOUTH

But, up to this time, few, if any, whites had seen the ceremony, though Tim and Truem didn't know this. Nor did it enter their heads that they might be doing a wrong thing to thus intrude where they had no right.

Cautiously they approached the Castle, taking care to make no noise. Tiptoeing to one of the windows, they found to their chagrin that the Indians had daubed the lower panes with paint, so that it was not possible to see through them.

"Cracky!" whispered Tim, "but I'd like to look in, first rate. Just hear 'em yell!"

The noise inside was increasing. Tim set the pail of honey down on the ground, and looked about him.

"I have it!" he said, softly. "Those trees!" and he pointed toward two small ones growing near the council house. "We can climb them, and then we can see in through the top window lights."

Truem at once shinned up a sapling with an ease born of long practice.

Tim did likewise, having moved his pail of honey close to the base of the tree. Foot by foot the boys wiggled up until they could look right down into the interior of the Castle.

A strange sight met their gaze. In the center of the long room, on a slightly raised platform, sat an old Indian, who appeared to be a chief. He was attired in gaily colored blankets, and his black hair was crowned with a head dress of feathers. About him circled a score of braves. They each wore only a pair of trousers, and their faces, as well as the upper parts of their bodies, were gaily painted. Each Indian carried a dried gourd in his hand, the top and bottom of the vegetable having been cut away, and the openings closed with a dried pig's bladder. Inside the gourd were kernels of corn which rattled about like peas in a drum, striking the sides of the instrument and the skin heads with a sharp sound.

Violently shaking these queer rattles the Indians circled about the chief, each one uttering cries in strange, weird tones. Sometimes the voices were low and crooning. Then they reached a high pitch, only to sink again, like waves washing on a shore. First loud, then soft surged the song of the dancers.

Pagan though the belief and ceremony of the Indians might be called, they were imploring their God, the Great Spirit, as best they knew how, to grant them a plentiful harvest of corn, on which they depended for their winter store of food. They shook the dried kernels of the cereal within the gourds to emphasize their petition.

"Aye—ya-ya-ya-a-a-a! Ei-yi-yi-yi-i-i! Ha! Ya! Aye-ya-ya-a-a-a! Yip! Hi! Yi!"

Thus shouted the red-men, dwelling long on the vowel sounds.

Spellbound the two boys watched the performance. Faster and faster circled the braves. Louder and more impassioned grew the shouts. Sharper and sharper rattled the kernels in the gourds. They stamped their moccasined feet on the board floor with a noise like distant thunder. A dust arose making a haze in the room that almost hid the dancers.

"It's great, ain't it?" called Truem to Tim in a shrill whisper.

"Hush!" cautioned Tim, "some one might hear you. We don't want to be caught looking in. They wouldn't like it."

The boys were craning their necks, and leaning half out of the trees in order that they might not miss a single movement. They never heeded some one walking about on the ground below them, nor at Tim's whisper did they see a dusky figure stop as it was about to enter the Castle. The first thing they knew a heavy hand shook the tree in which Tim was perched, and a voice grunted:

"Come down, boy!"

"We're caught!" called Tim, sliding to the ground. "Run for it, Truem! If they get us they may kill us!"

Frightened almost out of their wits the two boys fell from the trees, and started off at top speed in the darkness.

After a few steps, Tim's course was suddenly checked, and he felt a heavy hand on his shoulder and knew that an Indian had him. Captured, as he had been playing the spy, the boy shuddered and caught his breath.

True, the Indians were government wards and were not supposed to be violent, but, worked up to a frenzy by their ancient ceremonies, there was no telling what they might do.

"He's got me!" wailed Tim. "Run, Truem! Run home and tell the folks."

But suddenly the grip of the Indian's hand relaxed. He seemed to halt quickly, and then he stumbled. There was a rattle of tin, and the red-man muttered something in his native tongue. At the same instant he released Tim, who gave a wild glance backward as he leaped forward to freedom.

What the boy saw, by the light of the moon, that just then rose from behind the trees, almost made him stop and laugh. The Indian who had caught him, had, in running after the boy, come upon the pail of honey Tim left on the ground near the tree. In his haste the brave had put his foot in the ten pounds of sweet stuff, plunging his moccasin through the cheesecloth covering, and going right down to the bottom, where the sticky stuff held him as if it had been so much glue.

The Indian's exclamation of astonishment as he felt the clinging weight, was followed by a grunt of satisfaction as he reached his hand down and discovered what had trapped him.

His fingers covered with the sweet honey were soon in his mouth, and he was licking them as a bear does his paws, when he thrusts them into a wild bee nest. Then, heedless of the flight of the two young palefaces, he sat down on a convenient stone, pulled his foot from the pail, and muttered:

"Heap good!"

There he sat devouring the comb and juice, which trickled all over his face and hands. The pursuit of those who had sought to spy on the green corn dance was over as far as he was concerned. Let the other braves implore the Great Spirit for a plenteous harvest. Good fortune had come to him already.

Tim and Truem sped on, until, after a time, they stopped and discovered no one was after them. Then they settled down into a walk, their hearts beating wildly from the chase.

"My, but that was a close call," said Truem. "I wonder what made him stop chasing us. And where's the pail of honey?"

"Back there," replied Tim. "I guess ther ain't much left by now," and, laughing in spite of the scare, he told Truem what had happened.

"Did you give Ironaxe his honey?" asked Mr. Bailey, as his son reached home about nine o'clock.

"No, sir," replied the boy.

"Why not?"

"Another Indian got it first," and then he told his adventure.

The next day Tim took a second pail of the sweet stuff to Ironaxe. This time he went alone, and he made no stop at the council house. He found Ironaxe sitting in the shade of his cabin.

"I've brought you the honey," said Tim. "I was coming last night, but I lost the pail."

"Hu!" grunted the Indian, "that yo bucket, lil boy?" and he pointed to a milk pail, on the sides of which honey was smeared.

"It—it looks like it," Tim admitted, recognizing the pail. "Where'd you get it?"

"Foun' him las' night," grunted Ironaxe, without the trace of a smile on his face, though he glanced at Tim sharply. "Foun' him. Full honey. Step in pail honey like bear' Huh!"

Then he took the second supply Tim had brought.

The mother of Harry C. R. Elliott, of Fullerton, Cal., in sending in a renewal of her son's subscription, writes: "I want to thank you for THE AMERICAN BOY. My son enjoys that paper as he does no other. I also enjoy reading it, and am glad there is such a paper for our boys. Thanking you for the interest you take in boys, I remain, a dear friend to THE AMERICAN BOY.

"HARRY'S MOTHER."

STUDEBAKER JR.

King of Little Wagons

Every healthy child is full of energy and go—every Studebaker Junior is strong and built to go.

Can't you imagine what joy there would be if your child and a Studebaker Junior got together?

This splendid wagon is fashioned in style after the celebrated Studebaker farm wagon. Its likeness to the "grown up" wagons tickles the pride of its juvenile owners. Built with the idea of strength and endurance, it has a sturdy oak frame, farm wagon gearing with bent hounds and adjustable reach, parts strongly ironed and braced. We believe it the most attractive and durable child's play wagon ever put together.

Call on your Studebaker agent or order direct.

HISTORY HEAD.

BY BAILEY MILLARD

"YOU DON'T look like a very husky brusher, young fellow," said the foreman to Cliff Harvey, the pale Berkeley student with the large head and the lean legs that did not begin to fill the suspiciously new denim trousers. "Do you really think you can cut brush?"

"I guess I can," was the reply with emphasis on the "can." "Let me try, anyway. I've got to do something," and he glanced, as he spoke, up the canon where under the hot Californian sun, a gang of Portuguese was gashing the side of a steep scarp for a railroad.

Cliff was trying to work his way through college. He was in his freshman year, and this was vacation time. Although he was the son of a poor bookkeeper, he had been the only boy in the high school who could have told you who the Ephesians were and given an idea of their ancient buildings, or could relate in detail Tamerlane's victories. Before he entered college Cliff was so far advanced in his studies of the ancient Greeks, Hebrews, Egyptians and Saracens that he astonished his instructor again and again by his knowledge, which had been gained in patient plodding over library books at home. He would have liked to go in for athletics, but he did not feel that he could spare the time. While the other boys were developing their muscles on the football field he was developing a memory for the dates of Caesar's conquests. He could hardly have explained to you what a touchdown was, but he could have given you the names of all the Assyrian monarchs known to historians.

As Cliff was preparing to work his way to a university he felt that he had little time for "fooling around" with other boys. So he rarely sought their society. The result was that he became shy, diffident and quite original. He had an abrupt, nervous way about him, and on the occasion of one of his rare visits at the home of a friend his hostess always trembled, as he could hardly touch a piece of china without breaking it. When he became excited over the discussion of a question in history his eyes would blaze and his hands would sweep about, so that all the bric-a-brac were in danger of destruction. By his school friends he was known as History Head. Whenever anyone wanted the date of a discovery or of a battle they went to him.

As his father could do very little toward helping him at college, Cliff, who was determined to graduate and become a professor of history, hit upon the brilliant idea of sleeping in a workman's shanty near the campus and living on oatmeal mush and hardtack. At the end of a month he wrote home a glowing letter to his father, showing how he had boarded himself for thirty-one days on one dollar and fifty cents. His father became alarmed and wrote to him that while he appreciated the spirit he showed he would have to take him out of college unless he ate more and better food.

Cliff had become thin and pale, but he had put a dozen "posers" to his instructor in history and had answered offhand as many "tra-" questions. The students hazed him unmercifully, but he didn't seem to care. Being in college, on any terms, was to him a sort of paradise.

And now in vacation time was his golden opportunity. He had scorned an offer of fruit-picking at $1.50 a day because he had read an advertisement of the S. P. Company offering $2.25 a day to railroad graders. The foreman did not like his looks, and said his hands were not the right shape for handling a shovel. He might be able to work with the brush-cutters, but he doubted it.

"Well, I'll give you a trial, anyway," said the good-natured boss. "There's an axe there. Look out you don't cut your tender feet with it."

Cliff grasped the axe handle firmly. It was the Handle of Opportunity to him. He set to work eagerly, and while he did not cut his feet he did blister his hands, and came near killing a Portuguese, close past whose swarthy face his axe whizzed.

In the afternoon of this first trial day, when the sun glared pitilessly down into the canon and the sweat and dust made Cliff's face almost unrecognizable, a calm, cool young man in "correct" outing clothes and a soft Panama hat came loitering by, smoking a cigarette. Cliff recognized the young man at once as Harold Sutliffe, a member of his class who belonged to the most expensive "frat" in Berkeley. He honed that Sutliffe would not recognize him, for he felt uncomfortable in his dirt and sweat; but Sutliffe, who was not of a social disposition, though he enjoyed lording it over the poorer students at college, stared hard for a minute and then took a few strides in Cliff's direction and said:

"Hullo, History Head. What are you trying to do here?"

"Brushing land for a railway grade," said Cliff rather shortly, swinging his axe.

"How do you like your brother dagoes?" asked Sutliffe with a smile.

"Oh, they're quiet; 'they' don't bother me," he answered.

"It's going to be a great road," remarked Sutliffe. "It's going to run right through Pine Gap to Bunkerville, 'way up in the Sierras. Dad's got the contract. That's why I'm up here. I didn't know he wanted me to help out on the books and the pay roll or I shouldn't have come. It's too much like work. I cut the job yesterday. I'm too keen to be trapped into anything like that in vacation time. But the fishing's pretty good up here this summer. I'm going to wet a line toward evening, when it's a little cooler. Gee! Ain't it hot now?"

"It is hot," said Cliff, swinging his axe against a scrub oak dangerously near Sutliffe. "But I don't mind it. Sweating hard like this is awful good for the liver."

"Glad you like it," said Sutliffe. "Well, by-by. Guess I'll go over to Bingham's camp and get into one of his hammocks. He's got a lot of good novels over there and it's cool under the pines."

Cliff's back was aching and the muscles of his arms were lame, while his blistered hands smarted as by fire, but there was no room in his thoughts for the seeming unkindness of the fate which offered a cool hammock and a book to his classmate and the hot sun and a brush axe to him. He saw ahead of him the post-graduate course and the professorship, and he clutched the Handle of Opportunity with firm, though painful fingers.

"You're getting the hang of it, young fellow," said the foreman, after Cliff had worked a week. "I guess you'll do, though you don't look tough."

Harold Sutliffe came around two or three times during that week. Once he came by with a fishing rod and a basket which he assured Cliff was full of trout. Cliff, having little curiosity on the subject, did not ask to see the fish, but he had his doubts as to their filling the basket, as Sutliffe was noted for his great yarns.

By the end of the fifth week, in the dry, hot month of July, the brush had all been cut for the grade and Cliff was set to work as a drill-holder in the tunnel. He liked the change. It was cool in the tunnel and though it was rather restricted as to view, he was not "bothering about scenery," as he said. He was at first afraid the strikers would hit his hands with their hammers, but this fear gradually left him. Sometimes he wanted to strike for a while to break the monotony of the work, but noticing how awkward he was, none of the men would hold the drill for him. They valued their fingers and wrists too highly for that.

One very warm Sunday evening Cliff lay before his tent flap, reading in the afterglow. It had been a day of riotous delight for the Portuguese, who had all been down to Shantytown and had come staggering back to camp, breaking the peaceful mountain quiet with their wine-inspired yells; but now they were all still, having settled down into drunken slumber. A dozen were prostrate behind the powder house and there was another sleeping group farther along down the gulch. Cliff was glad they had stopped yelling and had settled down to sleep, for he wanted to read. He was fated to be further disturbed, however, for the nearby pine needles cracked and Harold Sutliffe strolled down toward the tent.

"What are you reading, History Head?" asked the young man throwing himself down upon the ground and rolling a cigarette.

"Tacitus."

"Tacitus? You're on the dig all the while, ain't you? Don't you ever get tired?"

"Not of Tacitus—no. I wish they could find the rest of his 'Annals.'"

"Didn't know any of 'em had ever been lost. What do you suppose the missing ones were about?"

"Oh, all about the Julian dynasty," said Cliff. "Just think what the world has lost."

"What do you suppose the Julian dynasty was about, that is missing from the 'Annals'?" asked Sutliffe, who remembered how the boys at college had interrogated Cliff Harvey into white heats of classic interest and had enjoyed what they called his "historical hysterics." Harold baited him with a few more questions and then History Head was off in one of his rapt monologues, speculating freely and, perhaps, rather luridly, upon what the missing "Annals" contained. Meanwhile Sutliffe smoked his cigarette and threw the stump behind him. He was enjoying the wild sweep of History Head's arms, and the way his eyebrows worked and his bright eyes gleamed.

"But, now, Vespasian," Cliff was saying—"Vespasian wouldn't have done anything like that. Vespasian would have——"

He paused. A great glare of yellow light was shooting up behind Sutliffe. There was an abrupt ending of the supplement to Tacitus. History Head sprang to his feet.

"The woods are afire!" he exclaimed, pointing behind Sutliffe. "It was your cigarette. And the wind is right toward the powder house!"

He grasped a couple of empty sacks that were lying near, dipped them into a pail of water and handed one of them to Sutliffe.

"Take this," he said. "It's got quite a start, but I think we can manage it."

The fire blazed and crackled in the dry brush and among the resinous pine cones. It leaped halfway up a young bull pine and flashed in a grass clump at Sutliffe's feet.

"The powder house!" exclaimed Sutliffe. "Why, that isn't a hundred feet away! Excuse me. It's too close. You might be blown to little bits any minute."

"But the workmen!" shouted History Head, beating out the fire in the grass clump with his sack, and springing toward the roaring flames in the brush ahead. "There's a dozen men just behind the powder house and they'll all be killed. Get to work!" He flung at the flames like a thing possessed, scattering the brush heap with a pole and beating out the detached fires with his sack.

Sutliffe gave a frightened shout and ran away, shouting. "Guess that'll scare 'em up, and they can get away all right."

He did not know that the men were lying in a drunken stupor and incapable of heeding an alarm. But History Head knew. The fire was running quickly along the leaves and grass toward the powder house, near which was another pile of dead brush. Cliff thought that if the flames caught in this brush nothing could save the stupid men from destruction. His month of hard work in the mountains had made him very wiry and strong, and, as he fought the fire singlehanded he was reminded oddly of Theseus fighting his way to Athens. If he could slay this roaring, yellow dragon he could save many lives and ten tons of dynamite. Not once did he think of his own danger or of the fact that the lives he was trying to save were those of a lot of drunken Portuguese. To him each life was a life and worth fighting for. It occurred to him in his quick-breathing, hot-whirling strife, as he worked nearer and nearer the dynamite, that possibly he might arouse the sleeping men after all, and, as he swung his cinder-blackened stick, he shouted the first call that came into his head, bellowing it out between strokes. It was his college yell and it had never been more lustily given:

"Rah, 'rah, 'rah!
Cal-i-for-ni-a!
U. C., Ber-ke-ley,
Zip—boom—ah!"

Over and over again, while he beat out the flames, he gave the yell, but no one responded. He had made a great, black smoking circle to the right, but to the left the fire was running toward the powder house. On the windward side it had crept up to the tent over which it passed on its way to the creek where, at that end, it would probably stop.

It was with the frenzy of despair that Cliff saw the flames leap toward the brush pile next to the shanty where the high explosives were stored. He beat the fire with the sack and stamped on it with his feet, roaring out the college yell at the top of his voice.

"'Rah, 'rah, 'rah!
Cal-i-for-ni-a!"

His heart sank as he saw a little tongue of flame, fanned by the wind, catch in an overhanging projection of the brush pile. The next minute the whole heap was a mass of leaping fire. He seized a shovel that lay near and, attacking the flames while he yelled, he scattered the brush back upon the burnt space and stamped the lower reaches of the flames with his hot, curling soles. He was close to the powder house now, his back against it, his face to the flames. He was fighting like a demon, and still yelling:

"'Rah, 'rah, 'rah!
Cal-i-for-ni-a!"

The flames sent up an intolerable heat, and radiated against the side of the powder house. He ran for the water-pail, seized it and, coming back, dashed its contents over the side of the shanty. He had gained a new breath of cooler air by going back, and with this new stimulus, he beat and beat the fire until he saw it begin to dwindle and die. Then he scraped back the burning embers with his shovel and nothing remained but its ashes. He had conquered! The powder house and the workmen were saved!

Going around to where the Portuguese lay he poked at them with his feet. They sat up and jabbered angrily, calling him all sorts of names.

Edward Sutliffe, the contractor, hurried up from his cabin, accompanied by his son, Harold. On seeing the blackened face and singed eyebrows of History Head, Mr. Sutliffe extended his hand, with the most cordial thanks and congratulations.

"I know how it happened," he said. "Harold has confessed his carelessness about the cigarette and how he ran away and left you to fight the fire alone. I hope you were not injured in any way."

"No, sir; I'm all right," said History Head, hoarsely. "But, my books. I've lost my 'Tacitus,' my 'Caesar Interlinear' and my 'Condensed Gibbon.'"

"History books in a grading camp!" said Mr. Sutliffe, surprised. "Well, well!"

Harold had something to say on this point, and he said it in a way that showed his growing respect and esteem for History Head.

"And he's working like a Trojan to get through college. Can't you help him, father? He deserves it, doesn't he?"

"I should say he does," was the pleased reply of Edward Sutliffe. "A boy like that. I wish you, Harold—but I'll talk to you later. Mr. Harvey, I want to tell you that if you wish to go through college I'll see that you get through without having to work your way. I owe it to you. You're the bravest——"

"Excuse me, sir," interrupted History Head. "I'm grateful for your offer and regret that I can't accept it. All you can do for me is to let me keep my job. I didn't put out the fire for you, but for the men. I thought I could save their lives and I did. That was all."

"But you needn't work so hard," said Mr. Sutliffe. "I can save you all that."

"Work doesn't hurt me," said History Head, proudly. "It's just what a man needs. If you want to help me, please tell the foreman to let me stay on until the fifteenth of next month. That will make seventy-eight days, and at $2.25 a day, I shall earn $175.50 for my vacation's work, out of which, when my board is paid, I shall have $105. That's all I need for the sophomore year."

"And you, Harold," said Mr. Sutliffe, reproachfully, "spent over a thousand dollars as a freshman. All right, Mr. Harvey; I understand your scruples about not accepting aid from me, and I like your independent spirit. But if ever you need any help—you might get sick, you know, or something—be sure to let me know. As for the books you lost, you'll let me replace them, won't you?"

"Thank you. You're very kind. I will."

When History Head went back to college he found a big box awaiting him at his lodgings. In it were copies of the books he had lost and in addition a complete Macaulay in stout sheepskin.

"There's no use sending such a boy books bound in fancy covers," said Mr. Sutliffe, glancing about his own luxurious and little-used library and then at his wife. "He's not likely to bother about the outsides of the books; it's the insides he's after."

"Yes," said Mrs. Sutliffe, "and I'm glad such a boy has come into Harold's life. Our boy used to be rather hard on young men who were working their way in college; but last night he told me he was getting tired of going to you for every cent he wanted to use, and that next vacation he was going to strike out and earn some money of his own."

"Did he?" asked the father, his eyes a little moist. "That's the best news I've heard since he stopped smoking cigarettes."

"But it's too bad that boy won't let you give him a little money, continued Mrs. Sutliffe. "Harold says the poor fellow eats only two meals a day, and that's not enough for a hard-working student."

"No; I've thought it over, Annie, and I've come to the conclusion that though he may be faring rather slimly at times—which is certainly better than to overeat, as most rich boys do—the only real help I can give such a boy is my best wishes and good pay for a good day's work."

ROARING OUT HIS "RAH! RAH! RAH! CAL-I-FOR-NI-A!"

"No man is beaten until he admits it," so runs a gallant old proverb.

"It's dogged that does it," says the sturdy Cornish saw.

MONEY IN WEEDS

By E. M. HEAGAN

ONE OF the simplest and most novel ways for a boy to earn money is gathering the leaves and roots of weeds that grow by the roadside, and in the fields where they pester the farmer.

The most annoying weed the farmer has to deal with is "witch-grass," "couch-grass," or "quack-grass." It was regarded once as a good thing, but it has become a nuisance. It is a coarse grass growing in clumps of two or three stems from two to four feet high from a creeping, pointed root-stalk, and bears densely-flowered, spike-like heads resembling those of rye or beardless wheat. The stems are round, smooth, thickened at the joints, and hollow, bearing from five to seven sheath-like leaves. The grass is one of the most difficult weeds to eradicate on account of the long-jointed root-stalk, each joint of which is the source of a new plant.

These roots are caught by the harrow when the land is cultivated and it has to be dumped of its trailing burden at the edge of the patch. Here is the chance for the lad after money. The part of the grass most valuable to the pharmacist is the part most aggravating to the farmer. It is the long, tough, creeping root-stalk which creeps along just under the surface. In color it is pale yellow, smooth, about one-eighth of an inch in diameter, with joints at intervals of about an inch, from which slender, branching rootlets are produced. The tip of a root is needle-pointed.

After the root-stalks have been collected and washed, the rootlets should be removed and the root-stalk cut into short pieces about two-fifths of an inch long. The lever-feed cutter that farmers use for cutting corn fodder is good for this work. The chopped roots should then be spread out to dry on shelves in a shed or barn where there is light and air. They should be spread thinly and turned from day to day until completely cured. This process takes from three to six weeks. Be near, for the bright, clean roots bring the highest prices.

In the drug trade "witch-grass" is known as triticum. As sold at stores it is in the form of small angular pieces, straw-colored, shiny and hollow. For medicinal purposes it is almost wholly an imported article. About 250,000 pounds are imported annually from Europe and the price paid is from three to seven cents per pound. In selling drugs, a sample lot, a handful, should be sent for inspection and quotation to the nearest commission merchants dealing in drugs, whose address may be secured at the home drug store. "Witch-grass" roots are best gathered in the spring when the land is under cultivation.

Later in the summer a new weed, the dandelion, is at its best for medicinal purposes. This common plant thrives everywhere but in the South. It is found in fields, in the rank roadside growths, and is especially annoying on lawns. The part of the plant valuable as a drug is its long top-root from twelve to eighteen inches long, thick and fleshy like a parsnip, dull yellow or brownish on the outside, clear white on the inside, odorless and very bitter. A thick, milky juice oozes from the root when it is cut or bruised. The time to dig the root is from July to September when the milky juice is thickening and the bitterness is increasing. The root should be thoroughly washed and dried. It wrinkles lengthwise in drying and decreases in weight one-half. Last year the imports of dandelion root amounted to 115,522 pounds and the price paid varied from four to six cents per pound.

Other weeds that are valuable as drugs, wholly or in part, are the burdocks, mullein, lobelia and tansy. Ambitious boys may pick up considerable money in collecting drugs for the market and even "grown-ups" may find it profitable. The modern manufacturer is successful in proportion to his ability to utilize the by-products of his factory. In the same way farmers and farmers' sons may convert the necessary evil by-products of their business, the weeds, into coin of the realm.

The Fitness of Things

"There is perhaps no department of the city public school system where the fitness of things can be taught with as excellent effect as in the Manual Training Department," said a New York City teacher the other day.

"We have for instance a boy making a book rack out of a piece of wood. He must decide upon size, making it suit the particular place where it is to be used; the kind of joint to hold the posts together, so that it may have the required stability; the form and shape of the supporting blocks, to avoid the appearance of crudeness. When he has the model constructed to comply with these tests of its fitness he is confronted with blank spaces which suggest the desirability of decoration. His first impulse will be to fill these spaces with copies of pictures,—perhaps prints of masterpieces in art. Soon, however, he will know that even a masterpiece looks out of place, except in a place for which it was designed by the artist; that the eternal fitness of things forbids painting a brilliant posey, however well done, on a block of wood designed to support books.

"Is it fit," the boy must ask himself, and in the answering of the question he develops a wholesome regard for the fitness of things.

Chester Harlan, Stockport, Iowa, who has been reading THE AMERICAN BOY for three years, sends us a few rhymes, in which he compliments the editor and expresses the hope that THE AMERICAN BOY may never cease to live. The lad shows talent as a rhyme-maker.

BUILD YOUR OWN BOAT

BY THE BROOKS SYSTEM

There is no reason why you cannot own as good a boat as the best boat factory can produce, if you will use your leisure time to advantage and build it yourself.

The fact that anyone using the Brooks System, no matter how inexperienced he is in the use of tools, can build his own boat at the cost of a little lumber and a few nails, has brought boats within the reach of all. All the boats built last year, by all the boat factories in the United States, combined in one fleet, would not equal the number of boats built during the same time by novices using the Brooks System. Our catalogue gives pages of testimonials with photographs of the boats built by amateurs using the Brooks System.

The Brooks System consists of exact size printed paper patterns of every piece that goes into the boat, a complete set of halftone illustrations showing an actual picture of each step of the work properly done, detailed instructions to build, covering the entire construction of the boat and an itemized bill of all material required and how to secure it.

We tell you how to lay the pattern of each particular part on the proper piece of material and exactly how to cut—you cut. We then tell you how to fasten each part in its right place—what kind of a nail to use—how to drive it—you drive it.

You need no mechanical ability, the Brooks System supplies this—how is shown in the catalogue.

Many professional men are taking up the Brooks System for mental relaxation—for the pleasure of working with their hands and for exercise.

We have started hundreds in the boat building business. One man built sixteen boats from one set of patterns last season—another built ten—the materials cost very little—we furnished the design—they did the work and sold the boats at a big profit.

You need buy nothing from us but the patterns. We have them of all kinds and sizes, from small Row Boats and Canoes to Sea-going Yachts. We have over 50 styles and sizes of boats and boat patterns, each one perfect in design for its purpose. Our catalogue illustrates the product of the best staff of designers in the world.

Over ten thousand amateurs throughout the world successfully built boats by the Brooks System in 1905.

When so ordered, Patterns are Expressed, Charges Prepaid, C. O. D., Allowing Examination.

KNOCK DOWN BOATS

Complete from keel to cushions and fittings. We send you a complete Knocked Down Boat, even to the paint, at a cost of very little more than the cost of the raw material.

Catalogue with full particulars free. For 25c, 100-page catalogue showing several working illustrations taken from the instructions of each boat and a full set for one boat; also valuable information for the amateur yachtsman, rules for sailing, steering, passing, fog and engine signals, etc.

Amateur Journalism Department

EDITED BY WM. R. MURPHY

The Bulletin Board

The Max-Par Amateur Press Club has been organized by Chester E. McCormick, at Knox, Indiana.

Smith Bros., Fergus Falls, Minn., have published an exchange list containing the names of papers published by members of the United Amateur Press Association.

M. B. Ferguson and C. Albert Haugh, both of Baltimore, are candidates for the presidency of the Atlantic Coast Amateur Press Association, whose convention was held in Baltimore January first.

The darling ambition of most amateur journalists is to print their papers in their own printing shops. Ezra D. Sargent, of Ezra, Kentucky, has reached the goal of his ambition in that respect and will print "The American Youth" in the future, as well as act as its editor.

The Gotham Press Club has just concluded the first six months of its history. During the six months it made several pilgrimages to points of literary interest. The following are the officers for the coming half year: President, J. Fred Crosley; Vice-President, Alice M. Heins; Secretary, Eleanor Keating; Treasurer, A. M. Adams; Official Editor, Robert R. Gregory. Indoor literary meetings are to be held this winter.

The Philadelphia Amateur Journalists' Club held its seventh birthday exercises the last week in October. This is probably the best all-round amateur press club in the country. It has a good membership list, publishes some of the best as well as oldest of the amateur papers of the country, numbers several laureateship holders among its members, and has not skipped a regular meeting during its seven years' history.

In order to take care of the 1906 convention of the United Amateur Press Association several New Yorkers have organized the New York Press-Literary Club, with the following officers: President, W. B. Dillon; Vice-President, Raymond Wilcox; Secretary, E. Keating; Treasurer, Ethelwyn Dithridge; Literary Editor, Harold B. Pratt. The last named is the organizer of the Stephen Decatur company of the Order of the American Boy.

The International Amateur Press Association, at its third annual convention, held at Albany recently, was not largely attended. However, much business of importance was transacted, including the adoption of a new constitution and the election of officers. The following will have the guiding of the Association during the coming year: President, George B. Bryan; Vice-President, J. J. Hennessy; Secretary, Charles A. Nichols; Treasurer, Nick Bruhl; Official Editor, A. M. Hamilton; Historian, David J. Welsh; Manuscript Manager, W. E. Eliot; Official Organ, "Friendship Junior"; Convention Seat, 1906, Niagara Falls. The reception committee, which consisted of David J. Welsh and David J. Powers, editors of "The Fairy Amateur," deserves credit for its efforts in behalf of the convention.

"THE MITE," (THE OLD AND THE NEW) AND ITS PUBLISHER M. BRADLEY NORTON

A Future Magazine Magnate

A remarkable record in amateur journalism has been made by M. Bradley Norton, a bright fifteen-year-old school boy of Olean, New York, who presents a fine combination of business energy and journalistic ability. He has increased the circulation of his paper, "The Mite," from less than one hundred to more than a thousand copies a month. It is a record to be proud of. Bradley must be making money, judging from the prosperous appearance of his advertising columns.

"Looking Backward" is an excellent review of the year's work by Frank P. Murphy and, barring a few omissions, is very accurate.

The American boy has only one equal, the American girl, and she is often a very efficient amateur journalist. Ada Parkhurst, of Wichita, Kansas, has issued a very dainty sheet, entitled "A Kansas Zephyr." It is printed in pale green and on paper of corn color. Several poems by the editress appear in the issue before us. They are well written, as are the editorial comments.

George Kilpatrick, of Memphis, Tennessee, whose portrait we printed some months ago, has "arrived" with his "The Boys' Companion," a neatly printed and arranged bimonthly. The only criticism we have to offer on the typography of the second issue is that the type seems to have been too heavily inked. We suggest that in future issues he omit matter clipped from other papers. It ought not to be difficult to secure original contributions.

The second edition of an interesting booklet entitled "A Talk with Recruits" has just been published by Paul J. Campbell, of Georgetown, Illinois, "wherein," says the motto, "are contained some things that were never told me." The booklet contains twenty pages full of interesting matter about amateur journalism. A number of the booklets have been given to the editor of this department for free distribution to AMERICAN BOY readers. The editor, by the way, has always many amateur papers on hand which he is glad to give to boys who send him a self-addressed, stamped wrapper.

"The United Amateur," edited by fourteen-year-old Paul J. Appleby of Sedalia, Missouri, is one of the best organs of amateurdom that we have seen for a long time. It is carefully edited, the official and the news matter being nicely balanced. Paul's work as editor of "The Chum" has already been praised in this department. "The United Amateur" is a bimonthly magazine of sixteen pages and cover, each seven by ten inches in size. The "Views and Reviews, by an Old Timer," in which Major A. H. Hutchinson sizes up the merits and demerits of various papers in an impartial way, is especially helpful.

Debating by Correspondence

Debates by correspondence have been quite the fashion in the amateur journalistic club world during the past year. The idea of inter-club correspondence debates originated in Philadelphia, the first being held between the Philadelphia Amateur Journalists' Club and the Baltimore Amateur Press Club. The former won. The Baltimore Club, however, recently scored a victory against the Amateur Press Club of Chicago in a debate on yellow journalism. It might be well to form an inter-club debating league similar to the inter-scholastic debating leagues. Nothing is better for forming habits of logical thought and ease of expression, as well as habits of research, than debating. What do our readers think of the suggestion?

The Reviewer

Postal cards have several times served as the foundation for amateur papers. The latest in this line is "The Postal," sub-titled "A Maine Freak." Issued by William B. Tracy at Hinckley, Maine. Tracy is one of the best hustlers in the amateur ranks.

Neatly printed on green-glazed paper, the convention issue of "The Inland Amateur" of Champlain, Minnesota, presents a striking appearance. We are glad to note that this paper gives space to literary contributions.

Among the Boys

EWART P. JAQUES, Sterling, Ill., suggests that we find out the date of the birth of the first white boy born within the limits of the United States, and make that the date for "American Boy Day." The suggestion is not without its interest, but it would probably be a matter of impossibility to determine when the first white American boy was born.

Paul D. Adams writes from Findlay, Ohio, words of appreciation of THE AMERICAN BOY. Paul is unable to go to school because he was hurt recently by a street car running over his foot. Now he wishes THE AMERICAN BOY could come every day. He will be missed from school, where last term he won a medal for getting the highest average grade in his class.

Please Mention The American Boy When Writing

Recovering Historic Warships Near Detroit

By J. OLIVIER CURWOOD

ONE OF THE RAISED WARSHIPS IN THE RIVER THAMES, ONTARIO, CANADA

AFTER LYING for nearly one hundred years under the water of the Thames river, near Lake St. Clair, three British warships lost in the days when Michigan was a vast wilderness are being recovered and will soon be brought to Detroit. Blackened by fire and pierced with shot-holes, these ships are romantic reminders of one of the most dramatic episodes in American history, and bring to mind stories with which every boy in the country is more or less familiar. On the decks of these vessels, which only a short time before their destruction were engaged in the great battle with Perry on Lake Erie, have walked some of the most famous characters in history. History says that on one of them, Tecumseh, the great warrior who planned to drive all whites from the middle west, held council; that Split-log, the terror of the Canadian wilderness, and Marpot, his equal in ferocity and daring, helped to plan there the great fight in which Tecumseh lost his life. All of these characters, with Proctor, Harrison, Johnson (who killed Tecumseh), Shelby and Cass have not only played their parts in history, but in fiction as well; and in many a thrilling story of those days have the boats now being recovered found a place.

That page of history partly made up of the adventures of the newly found warships reads almost like fiction. Perry had defeated the British on Lake Erie. Flying before a favorable wind several vessels escaped and came to Detroit. This was the moment when the sovereignty of the west trembled in the balance. If Proctor could defeat the Americans on land the Northwest Territory, including Michigan, Illinois and parts of Ohio and Indiana, would still remain under the British flag. Proctor determined to abandon Detroit and to choose his own battlefield on the banks of the River Thames. There, with his fleet of warships, Tecumseh, Split-log, Marpot and hundreds of Indian warriors, he would destroy the Americans and then return to Detroit in triumph.

But close behind the battered British warships came Perry, with the Niagara, Lady Prevost, Scorpion, Tigress and Ariel. Then came the pursuit up the Thames. The forest swarmed with savages, and again and again the vessels were ambuscaded from the shore. As the boats were fleeing, Proctor, Tecumseh and Split-log quarreled. The savages wished to fight—the British general to gain time. Proctor gained his point, and to retard the American fleet set fire to one of his ships and scuttled it in the river channel. A few hours later followed a second, but the Americans passed it uninjured. Each mile found Proctor's two remaining ships in a tighter corner. Then came the battle—the wilderness fight in which Tecumseh died, and with him the hopes of his tribe. The last vestige of the British fleet was destroyed, Proctor and his savage allies were scattered, and British power passed from Detroit and Michigan forever.

After that the Canadian wilderness became quiet again. Civilization centered around Detroit. As the years passed signs of the battle along the Thames passed away. Indians paddled up and down the river in their canoes. Wild beasts were almost undisturbed along its banks. And down under the still waters of the stream, battered, burned and with decks that had once run red with blood, slept the old warships.

The sleep was undisturbed. The Indian warriors who had once watched them from the shores passed into the Happy Hunting Grounds. Where they sank was no longer known. New generations came to live along the River Thames. Trees that were small in Tecumseh's day were now among the monarchs of the woods. Wild beasts passed away with the Indians, towns sprang up along the river, almost a century passed away.

Then a twentieth century boy, a youngster who loved to read of the old Indian days, and who, like most boys, wished that he had lived then, went in swimming—and knocked his head against the bow of a boat which Tecumseh had once fought to save.

This gave the general location of the sunken vessels, and led by C. M. Burton, of Detroit, a search for the historic warships was recently begun. The warship discovered by the boy swimmer was badly burned, but it was raised by Canadians and placed in Tecumseh Park, Chatham. When the Americans began, the river-bed was explored foot by foot. One day the diver at work came upon another of the ships, half buried under the drifting sand of almost a century. Signaling that he had made a discovery, he climbed upon the deck. Amidships were a large number of barrels and boxes, nearly all in a good state of preservation. These the diver soon found to be filled with cannon balls.

This boat has now been raised, and is shown in an accompanying picture. It is built of solid oak timbers, the bow being formed of a solid log. Much of the vessel's timber is burned black, and in places she is shattered, as though having stood a severe fire from an enemy. When found the vessel had no cannon or small arms aboard, a fact that puzzled the explorers until it was suggested that before abandoning their ship the British had carried off all weapons. A third warship has been located, entirely buried under a promontory that has formed over her during the last ninety-three years. Over this vessel is growing a large tree more than a yard in circumference. It is possible that when she is dug out not only ammunition but guns and other things of historical value will be found.

Boys' Books Reviewed

BOOKS REVIEWED HERE MAY BE PURCHASED OF THE AMERICAN BOY

THE HAPPY HOME, by Rev. J. B. Culpepper. The matter of this book is a lecture and a sermon. The home and how to make it happy is set forth in plain, simple talk. There are a number of verses and happy and apt illustrations which will make pleasant reading, and maybe increase the harmony of the home circle. 116 pages. Price 50 cents. Pickett Publishing Co.

THE CORLISS ENGINE, REFRIGERATION, ENGINES AND BOILERS AND SLIDE VALVE are four of a series of Practical Handbooks, all written by men who are authorities in their particular lines. They are intended for the young American who is anxious to succeed in his chosen work, and to such the books will be found very helpful. Price (each) $1.00. Spon & Chamberlain.

AESOP'S FABLES FOR CHILDREN, arranged by Nellie Perkins Dobbs. The arrangement here made of the work of the Greek fabulist is for the reading of children of tender years. The fables are told in the simplest language, and the large type, apt illustrations and general makeup of the book sufficiently carry out the purpose of the compiler. 141 pages. Price 50 cents. Crane & Co.

A LITTLE GARDEN CALENDAR for Boys and Girls, by Albert Bigelow Paine. This dainty little volume tells in language easily understood by little boys and girls a great deal about plants with traditions and fairy tales regarding their origin and characteristics, with a calendar, showing the different months in the year for planting and gathering as well as the taking care of the various species. The finely colored illustrations are from photographs taken especially for the book. A splendid guide to the simpler study of botany and one which boys and girls who love their gardens, will prize. 329 pages. Price, $1.00. Henry Altemus Co.

ON A LARK TO THE PLANETS, by Frances Trego Montgomery. The success which that most enjoyable work "The Wonderful Electric Elephant," received, demanded a sequel and this present volume is equally pleasing and delightful. The wonderful adventures which Harold and Ione and their friends the Prince and the little Princess encounter, the people and animals they meet, the countries they visit and the sights they see, set forth as they are by the author's able pen, entitle us to say that no more delightfully fascinating volume could be placed in the hands of boys or girls. The illustrations, in colors, by Winifred D. Elrod, are excellent, and the whole make-up of the book is above the average. 180 pages. Price $1.50. The Saalfield Publishing Co.

AT THE FALL OF PORT ARTHUR, by Edward Stratemeyer. This volume forms the third of the "Soldiers of Fortune Series," in which we continue to follow the fortunes of the old friends of whom we enjoyed reading in "Under Dewey at Manila." Larry Russell and Luke Striker in the "Columbia," carrying a cargo for Japan, fall in with and are captured by a Russian cruiser and the life of the Russian man-of-war's man is described. The Russian cruiser is in turn seized by the Japanese and Larry and Luke taken before Admiral Togo. Ben Russell and Gilbert Pennington, who are officers in the Japanese navy, soon have the two heroes enlisting for the Mikado. At Port Arthur they have plenty of fighting both on land and sea until Stoessel surrenders and the victorious Japanese enter the city. Accurate descriptive and historical information have always characterized Mr. Stratemeyer's work, and the young reader will find this book not only intensely interesting as a story, but full of valuable instruction. A. B. Shute is responsible for the appropriate illustrations. 281 pages. Price $1.25. Lothrop, Lee & Shepard.

LITTLE PETER—Famous Children of Literature Series, edited by Frederic Lawrence Knowles. "Peter Simple," by Captain Marryat, for considerably over half a century has been the delight of boys and girls and grown-ups as well, and the editor has done good work in presenting the boyhood of Peter in a form suited to the younger readers who would find the entire novel too cumbersome. Peter is a brave, truthful, honest little chap, whom even the temptations and discouragements and hard knocks he receives fail to change. His adventures on sea and land, his experiences in prison and in the enemy's country with his great, staunch, big-hearted chum O'Brien cannot fail to interest and delight the young reader. There are fine illustrations by Bertha G. Davidson. 157 pages. Price, $1.00. Dana Estes & Co.

DEERFOOT IN THE FOREST, by Edward S. Ellis. The names Ellis and Deerfoot have become almost inseparable in the minds of the hosts of boys and grown ups, who have followed with interest and delight the adventures of the brave, young, Christian Shawanoe Indian. When, therefore, Mr. Ellis had him die in "The Last War Trail," a veritable storm of protest arose and calls for his revivifying were continuous. In obedience to the demand, Mr. Ellis has begun a series of books for boys with Deerfoot as the foremost character, and the present volume is number 1. The book contains everything in the way of excitement, thrilling incidents and hairbreadth escapes that any healthy boy could wish, and Deerfoot is just the same unerring shot and the same courteous, brave and gentle hero as he appeared in Mr. Ellis's former works. The book is illustrated in colors and will make a handsome Christmas present for any boy. 366 pages. Price $1.00. The John C. Winston Co.

THE BOY CAPTIVE IN CANADA, by Mary P. Wells Smith. It is well for American boys of today that such books as this should be written, describing the hardships and the sufferings of those brave pioneers who blazed the way that succeeding generations might have easier traveling. This, the second volume of the Old Deerfield Series, graphically and most interestingly describes the stirring experiences which befell little ten-year-old Stephen Williams during his wanderings with his Indian captors in Vermont and Canada and of his restoration at length to his family. The historical setting is authentic and the volume is sure to delight the boys. There are fine illustrations by A. E. Beecher. 352 pages. Price $1.25. Little, Brown & Co.

JIM CROW TALES, by Burton Stoner. A crow which Tom the farmer's son captures after infinite trouble, becomes, by kindness and patience, quite tame and talkative. On wet days when Tom has nothing to do the crow sits on his shoulder and tells him stories of how the forest animals live and all about what they do, and the reader will find them delightfully interesting and amusing. It is a book which will assuredly please the little folks. There are a great many nice pictures, some of them full page. 149 large quarto pages, good paper and clear type. Price $1.00. The Saalfield Publishing Co.

OILING AN ELEPHANT'S SKIN TO PREVENT ITS CRACKING

In the wild state the elephant rolls in the mud and keeps his skin soft. In captivity neats-foot oil has to be applied and worked vigorously into the animal's hide, to his great enjoyment.

An Ogre of the Deep

By GEO. H COOMER

NOT LONG SINCE it came in my way to go on board a weather-beaten whaleship called the Andes, just in from a four years' voyage, during which she had circumnavigated the globe. Such a ship is always an interesting object to me, for there is that about her which speaks of many seas and many lands.

The Andes had a motley crew, com- Kanakas from the Sandwich Islands, and Lascars from Madagascar, with a small sprinkling of Americans, the only men in her forecastle who made the round voyage in her.

She had brought home a white cockatoo, procured in New Guinea; a wild peacock captured in Java, after being slightly wing-broken; and two squalling richly-marked parrots, caught when young on the Pacific coast of Mexico.

Then, too, she had on board a sperm whale's jaw entire; the skull of a hippopotamus, taken after a fierce battle at least a hundred feet long—had got hold of our boat, and it was as if we were moored to a wharf by a hawser. The shorter ones could not quite reach us, but they were all around the other boat, and some of her men were already caught by them. We could hear Mr. Dale shouting to his crew 'cut! cut! cut' and saw them slashing away with their knives.

"In spite of all that we could do with our oars, the monster drew us closer to him, and we could see his shorter feelers as a whaleman's trypots.

"Our men were frightened almost to death, as well they might be; and no sooner did they see that the boat was held fast, than overboard they went on the opposite side, leaving the officer and myself to fight it out.

"'In with your oar, Jack!' cried Mr. Borden; 'we can do nothing in this way—grab a harpoon or take your knife!'

"Suiting the action to the word, he prising Portuguese from the Azores, caught up one of the irons and cut off the big tentacle at a blow.

"But just then, one of the shorter feelers reached him, seeming to cover him all over with the suckers that branched from it. Both his arms were confined, and he fell across the boat's gunwale as helpless as a baby. If ever I did quick work it was then—for it must be quick work, I knew, or he was gone. I cut him a little as well as the tentacles, but that couldn't be helped.

"Something pulled me over backwards just as I had set him free; and the next moment I was under water. The thought flashed through my mind that the monster was sinking and taking me down with him to make a meal of me at his leisure. But I felt that some one had hold of my clothing, trying to hold me back, and cutting at the suckers that held me.

"I went, perhaps, six feet below the surface, then bobbed up with the horrid spider-like branches dropping off from me where they had been cut by Mr. Borden's knife. He had plunged after me and severed my fastenings; but I was covered with blood, for he had cut me unavoidably, very much as I had cut him.

"We rose to find that the ogre was gone, sure enough, leaving the second of his two long tentacles in Mr. Dale's boat, as he had left the first in ours. Where he disappeared the water was left almost as black as ink from some matter that he threw out.

"The men who had jumped overboard were picked up unhurt, but Mr. Dale had lost one of his crew, a poor fellow who had been seized upon at the beginning of the battle and taken right out of the boat before he could be cut clear of those horrible feelers.

"We pulled back to the ship, taking our trophies with us, they being the arms and suckers which you see in that coil; and I never went up the side of the old Andes with a readier will than then. Her deck, I thought, was a very good place for me under the circumstances.

(Continued on page 86)

THE LONG AND THE SHORT OF IT

Here are two Eldora, Iowa, school boys, each 18 years of age last December, who well illustrate "The long and the short of it." One is Ivan Rubow, three feet and four inches tall, and the other is Virile C. Whinery, over six feet tall. These two boys attend the same school and have the same teacher. Rubow came from Germany two years ago. Whinery is a native American, born in South Dakota, where his parents still live on a farm. Rubow is stage struck, while Whinery has an ambition; he learned the business in Germany. He practices in his brother's shop at Eldora. Whinery is a great football player, and is the idol of the high-school boys of Eldora.

IN THE beginning he was just an ordinary, onery runt calf, that despite the pailfuls of milk he consumed, steadily refused to put on fat. The butcher didn't want him because he was too thin. The farmers wouldn't buy him because "calves were dirt cheap, anyhow; wouldn't take him as a gift, no sir, not if you threw in fifty cents." So finally Jimmy Jones's father, known to the community as Skim-milk Jones, turned him over to Jimmy.

"There, James, is a calf for you. Feed him regularly or both you and he will have cause to regret it. In other words, you'll get a thrashing."

Now, Jimmy, in the course of twelve adventurous years, had owned considerable live stock. He began, as boys usually do, with rabbits and about the time they girdled the pear trees, he traded them for a pair of squirrels. These were followed by three dogs, of various breeds, a crow warranted to talk, a garter snake and lastly, for seven exciting days and nights, he owned a goat named Bunker.

The goat cost him one fifty, besides the articles he threw in to boot, and it was going, Jimmy fondly believed, to lay the foundations of his fortune. Since Bunker's specialty was bunting, Jimmy proposed to place him at the head of a system of transportation. Air ships, auto cars, they couldn't hold a candle to it.

Say you wanted to go anywhere, Dodgeville or Cooktown, all you had to do was to get in front of Bunker and let him bunt you over the ground, at a cost of ten cents a bunt. Supposing there

WITH BERT AT THE CALF'S HEAD, THE SHAVING BEGAN

were twenty bunts to a mile and Dodgeville ten miles away, that was only two dollars, while a livery would cost two fifty. The scheme might have worked if the first passenger to travel by the Bunker Route had not happened to be Jimmy's own father. He went over the fence and through the orchard at a speed truly exhilarating, but the outcome was not pleasant.

"James Napoleon Jones, you take that goat back to the boy you got him from just as soon as you know how. If I find him on the place when I get back tonight, you'll get another whipping on top of the one you've just had."

So much for the goat. The calf did not arouse Jimmy's enthusiasm. He was too small to enter into any of the boy's plans and he might easily become a nuisance.

"Huh, just another chore for me to 'tend to," he muttered, as, hands in pockets, he strode away from his bleating pet.

He took a circuitous route to the wood-pile by way of the sweeting tree and struck a few indecisive blows at a pine board. Presently Bert Powers climbed over the fence separating their respective domains.

"'Low there, Jimmy," he hailed.

"Hellow, yourself," Jimmy retorted. Then, the pride of ownership swelling up in him, he added, "Say, I've got a calf."

"Crickety!" Bert exclaimed, helping himself to an apple from Jimmy's pile. "Where'd you get it. Trade, eh?"

"No, I didn't. Pa gave it to me."

"Well, that's luck for us. We've needed a calf for a long time."

Bert sat down on a pile of kindling to finish his apple while Jimmy knocked a barrel to pieces. Things always looked lucky to Bert and nothing ever happened that he did not immediately see a way to make some money out of it. From paper peddling to pop-corn raising, there was scarcely anything that he had not tried.

"I tell you, Jimmy, there's no end to the things we'll do with that calf. I knew a boy over to East Troy who had one that he rode all over. We'll begin training him right away and after a while we'll do trucking with him. Say! but we'll make a pile."

"Aw, wait till you see him," said Jimmy. "He ain't very big."

"He'll grow. All he needs is plenty of milk and, and oil cake. They say that's good for calves. Once I knew an old lady who fed hers on clover tea. You might try that for yours. Why, before long, he'll be as strong as an ox. Then we'll do things with him. Father made a lot of money when he was a boy, doing breaking with a pair of oxen. Let's have a look at him."

"All right," said Jimmy, and he led the way to the pasture. At the far end of it gamboled a tiny, much be-freckled calf, who bleated loudly when he saw the boys.

"W-hew!" exclaimed Bert, his enthusiasm cooling a little. "He ain't very big, is he? Jim," he added, after a few moments, "how old is Jupiter?"

"I don't know," Jimmy answered. "I was over to Uncle Harry's when he came. Two months, mebbe."

"Was he fat when you first saw him?"

"Fatter 'n he is now. I don't see what he does with all the milk he swallers. Pa says he eats enough for three."

"That's just exactly what I thought. He isn't an ordinary calf at all. He's a freak. He'll keep getting smaller and smaller until he isn't any bigger than a lamb. Then you and I will hire a tent and go around showing him to people. We'll call him the smallest calf in the world. When we've made about a million dollars that way and he's so small you can stand him on a doughnut, we'll sell him for a hundred thousand."

Jimmy began to be interested. He laid one hand on the small head. Then he felt of the pipe-stem legs and the thin flanks, whereat Jupiter laid a moist, red tongue on his master's cheek.

"Here, you," said Jimmy, drawing back, "quit that. I ain't no clover blossom."

"He likes you," said Bert. "That will be all the better when we come to show him. If he gets rambunctious, you can pat him and say 'so bossy, so.' Lets go get some posters ready."

On the way back to the house the boys made out a list of the places where they intended to exhibit Jupiter. Then Bert went home to study up on routes.

One week passed, two, and then three, still Jupiter did not grow any smaller, not even when Jimmy reduced his rations by half. He actually began to put on a little flesh.

"That scheme's gone up," said Bert, one day after a thorough examination had convinced him that his prodigy was growing fat. "Well, I never did think much of it anyway. We'll have to get up something else. Lets begin training him."

Nothing loath Jimmy got a rope and they began. The calf was perfectly willing to lead, but follow he would not. So in order to leave both hands free, Jimmy tied the rope around his waist and struck the calf lightly with a willow switch while Bert held a measure of oats temptingly before him.

Just then the pride of the village, a flaming red auto car dashed around a corner of the road. With one wild bleat of terror Jupiter flung up his head and fled pellmell across the pasture, while Jimmy followed as best he might. Through the scrub oaks and across the creek they went, then over an old rail fence, pausing finally in a remote corner of the lot.

When Bert appeared, a badly lacerated boy was untwisting himself from the rope, while Jupiter, thoroughly subdued, nibbled timothy. Since the plan had been Bert's, he reasoned that silence was better than speech, at least till Jimmy calmed down a little. So, with an air of deep concern, he approached his partner. The race had not been all fun even to the calf, for a low hanging branch had struck him squarely across the left shoulder, scraping the hair from a three-inch strip and laying bare the white, smooth skin. The sight of this gave Bert a new idea.

"Jim," he said, "did you ever hear of a hairless calf?"

"No, course not. Nobody ever did."

"Well, there's hairless dogs. They live in Mexico where its hot. I saw one once at a sideshow. It was little and brown and smooth as your hand."

Jimmy looked at the scratches furrowing his freckled hands, but said nothing.

"I paid ten cents to see that dog and it wasn't bigger than a cat. If it had been as big as a sheep, I expect it would have cost a quarter."

"Well," said Jimmy, pulling a beggar's lice out of his coat sleeve, "I don't see what that has to do with this calf."

"You don't? Well, you are slow. See that place on his leg? If he had gone through a few more fences and under some more trees, 'twould have scraped the hair all off him. And since it didn't, I don't see what's to prevent us from doing it. There's going to be a winged horse and a wild man at the fair next week, but what are them compared with a hairless calf? Let's go right to work and get him ready. 'Spose you could horry your dad's razor?"

"Mebbe," said Jimmy, catching the spirit of the thing. "I'll go see."

Jones, Sr., was out of town visiting a cousin and Mrs. Jones had gone to stay with a neighbor, so it was an easy matter for Jimmy to abstract the razor from the drawer where his father kept it. Then, with Bert at the calf's head, the shaving began. The lunch which Jimmy thoughtfully provided, diverted the calf's attention so that he kept pretty still, but it was slow work. By chore-time he was only half done and as the next day was Sunday, they blanketed him and tied him in a remote corner of the barn.

Monday they finished him and the razor, too. Bert spent the rest of the day in painting a picture of the Hairless Wonder, to be hung in front of the tent they hired. He was clever at drawing but the paint he used spread a little and made the calf's legs look as if they were made of sausages.

Both boys had leave to attend the fair and long before daylight they set up the little tent and fastened the picture in front of it. Then Jupiter, carefully blanketed to prevent anyone from getting a free view, was conducted behind the wavering walls.

Customers were shy until Jimmy admitted a few chosen friends, and these spread the news so that by nightfall, ten dimes jingled musically in the cigar-box treasury. Wednesday, things promised very well. Older people began to drop in and, departing well satisfied, induced others to visit the tent where Jupiter held court.

"By Friday night we'll be rich," said Bert, jubilantly counting up their gains at the close of the day.

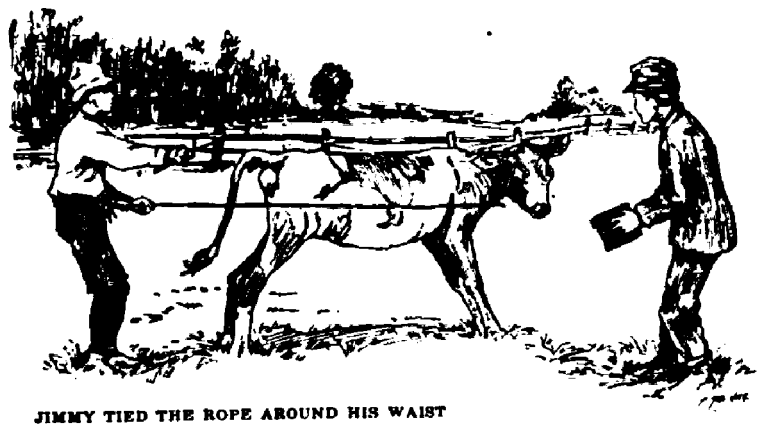
But alas for human hopes! Skim-milk Jones came home unexpectedly and instituted a search for his razor. The little pile of red and white hair excited his suspicions; later he found the battered razor. Immediately he decided to hunt up Jimmy and have a settlement with him. On the way to the fair grounds he met Deacon Johnson.

"Clever youngster, that of yours, Jones," said the Deacon. "I kinder think he'll make some kind of a mark in the world. That hairless calf's wuth going to see, but would you mind telling me where Jimmy got him from? I suspect—"

"I suspect, too," Jimmy's father interrupted. "That speckled calf I gave him is missing, and—"

Just what he intended to say no one ever knew, for just then he caught sight of the tent where Bert, megaphone in hand, was shouting:

"Right here, ladies and gentlemen, is the wonderful hairless calf. The only one in existence, now on exhibition for the first time. Milk white and smooth as your hand."



JIMMY TIED THE ROPE AROUND HIS WAIST

Five minutes later two boys speechless with indignation looked on while an irate man loaded the calf into his buggy and drove toward the butcher's, calling back, "You, James Napoleon Jones, and you, Adelbert Powers, take what money you collected and pay for the tent. What's left goes to me for the razor you've spoiled. James, I guess you know what's waiting for you at home."

Among the Boys

Rudolph Nichel, East Owens, New Jersey, seeing an example of optical illusions in the November number, sends us two that are equally interesting.

Charles E. Shank, a sixteen-year-old reader of THE AMERICAN BOY at Angola, Indiana, is studying oratory with the purpose of fitting himself for the position of instructor in this line. He holds a medal for oratory in his county. He has been a reader of THE AMERICAN BOY for five years and writes appreciatively of it.

Roscoe Vandervoort, 6437 Yale avenue, Chicago, is a very successful boy soprano, his services being in demand for concert and church work, and social functions generally. His repertoire includes many beautiful compositions for recital work, as well as the principal oratorios, cantatas, etc. The young artist is thirteen years of age and has a voice clear and flexible.

Applying for a Position

HAVE YOU ever made a written application for a position and found no reply forthcoming? If so, you have no doubt given some time to wondering why your application was not considered favorably. You are not the only boy who has had such an experience. The following is just what happened to seventy-five communications written in response to an advertisement for an office boy that appeared in a city newspaper.

The man who advertised was a New York City banker. He thought he could pick out just the kind of boy needed for his office by examining the written applications and the references given. The postman brought him seventy-five answers and these he examined at his first leisure moments.

First he sorted out the postal cards and tossed them unread into the waste basket,—there were twenty of them, and as they fell among the scraps in the basket he said: "This job is worth more than a postal card to the boy who gets it."

Of the fifty-five letters twelve had evidently been written hurriedly in the office of the newspaper which printed the advertisement, for they appeared on blank forms provided in these offices for the use of advertisers. All twelve followed the postals into the basket with never a regret at the waste of effort on the part of the boys who wrote them.

The remaining forty-three were given some consideration.

Considering that the office boy would be required to do considerable writing, in the full performance of his duties, the first test to which these remaining letters were put was that of penmanship. Eighteen were disqualified on that score, leaving twenty-five letters that could be read without the aid of an expert.

The remarks of the banker as he rejected the eighteen were a bit illuminating.

"A college president or an editor of a newspaper," said he, "may indulge in the most abominable kind of scribbling, but an office boy must write a plain, easily readable hand. Only a genius can adopt bad penmanship as a mark of his individuality."

The difficulty in spelling, barred ten more of the applicants. "Business men," said the banker, "must adhere to the kind of spelling found in dictionaries. They cannot countenance or promote reforms, much needed as they may be, in their business correspondence.

Four letters were refused further consideration because the writers had used the kind of wording commonly found in Telegrams. One of these said "Just saw your ad. Offer my services. Am eighteen. Can call tomorrow." He was not invited to call, for while economy is a virtue well worth practicing, when applied to the use of words in an application for a position, it is no longer "good form."

The advertisement called for two references. Only three of those which passed the other tests had remembered this requirement, so the selection narrowed itself down to these three.

Of these three only one gave evidence, in his letter that he understood something of typewriting. He had graduated from the grammar school, had taken up commercial work in an evening school, had rented a typewriting machine, so as to fit himself for office work. This boy received a notice to appear at the banker's office. He proved to be a manly fellow and was put to work at once.

If your application for a position has ever been rejected perhaps it was because you thought too little of the things which guided this banker in the selection of that one boy out of the seventy-five.

AN OGRE OF THE DEEP

(*Continued from page 84.*)

"The loss of seven men, and the great danger of losing more, caused our stay in the Gulf of Aden to be cut short; and whoever wishes to hunt for whales there, is welcome to do so as far as Jack Robbins is concerned. We ran down to the Comoro Islands, then cruised about Madagascar and along the Mozambique shore, picking up a few whales; and one day, in the Zambesi River, we killed that hippopotamus. It was a female, and she was as ferocious as a meat axe.

"Well, it seems good to get home again, and all the better because we come in with a full ship at last. But no more whaling in the Gulf of Aden for me!"

So ended Jack's remarkable narration, and it evidently had the merit of truth. The fearful creature he described, undoubtedly belonged to that family of sea-monsters called the Giant Squid, than which nothing more terrible inhabits the caverns of the great deep.

FOR 1906

The publishers of THE AMERICAN BOY have in store some delightful surprises for the boys who read THE AMERICAN BOY the coming year!

Hezekiah Butterworth and Birthplace. Copyright 1905 by G. B. Church, Warren, R. I.

HEZEKIAH BUTTERWORTH, A FRIEND OF AMERICAN BOYS

Hezekiah Butterworth and the Boys of Boston.

By FREDERICK J. HALE

LAST JULY there appeared in THE AMERICAN BOY a sketch of Hezekiah Butterworth, written by his intimate friend, J. L. Harbour. Since then Mr. Butterworth has died.

I remember having met Mr. Butterworth three years ago on Lincoln's birthday in the parlors of the Boston Y. M. C. A., when he gave some personal reminiscences of Abraham Lincoln to a group of about a dozen boys. I remember how intimately the boys gathered about him, and recall his hearty handshake and his "Glad to know you."

It was during the last year of his life that I came to know him intimately, and learned in what high regard he was held by the boys.

At the opening reception of the United Boys' Club in Boston last year, about two hundred of the schoolboys of Boston shook hands with him and then escorted him to their banquet hall.

That evening the boys shouted their club yells, and called and kept calling for more "cocoa, cake—cake, cake, ice-cream." Mr. Butterworth entered into the fun, and when a lady suggested that the boys be quieted he said:

"Let the boys have their fun, they'll be boys only once." This brought out a great cheer for Mr. Butterworth.

When, at half past nine, after Mrs. Ruggles had sung his poem, "The Bird with the Broken Pinion," he rose to tell a story, a hush came over the room that lasted for an hour. One could hear the clock tick.

That evening, although it was late, over twenty-five of the boys asked to accompany Mr. Butterworth to his home.

Without doubt Hezekiah Butterworth was the favorite speaker and story-teller with the Boston boys.

When I asked the boys who should be our opening speaker, at our Sunday Vespers, it was Hezekiah Butterworth.

That was a glorious Sunday. Mr. Butterworth arrived early and seemed so happy with the crowd of boys about him.

As the boys sang, Mr. Butterworth leaned back in his chair, his eyes closed and seemingly drinking in every word and note. As the shadows deepened he told the story of "Nearer My God to Thee," then the story of the hymn Abraham Lincoln was so fond of, "O, for the Wings of a Dove," and then "Abide with Me."

On a Saturday afternoon two weeks later the Boston school boys assembled in old Faneuil hall, the "Cradle of Liberty," to do him honor as president of the Anti-Cigarette League. As they marched from their respective schools the streets rang with cheers for Butterworth.

"Zig, zag, zig zag,
Zig, zag, zar,
Hezekiah Butterworth,
'Rah, 'Rah, 'Rah!"

As Mr. Butterworth rose to call the meeting to order, one great cheer went up that certainly must have reminded the rafters of the exciting times of the Revolution.

Mr. Butterworth was always ready to join with the boys in their fun. In the early spring of 1905, one of the boys' clubs was preparing a play entitled "The Deestrick Skule." Mr. Butterworth gave many suggestions. The boys would go over to his old-fashioned home on Worcester street, and then Mr. Butterworth, the boys around him, would tell the stories of the many mementoes on the walls of his room; the flag on the wall, the pictures, the autographs, and the books—books on every shelf and table and even on the floor; these were his friends and companions—the boys and the books.

On the evening the entertainment was given, although ill, Mr. Butterworth was in the front row of seats, surrounded by a group of boys. He laughed at the jokes and seemed to be living over the times sixty-five years ago when he was a lad at the "Deestrick Skule."

Last May Mr. Butterworth made his last public appearance, as the guest of honor at the parents' reception of the Union Church Boys' Clubs.

As the boys passed him in the receiving line, I could see that he had lost some of his vigor and strength, yet his love for the boys still shone out conspicuously.

That evening after some of the favorite songs had been sung, and Mr. J. L. Harbour, his friend, had contributed a few numbers, Mr. Butterworth read that famous poem of his, "Whitman's Ride to Oregon." Then Keats Lorenze, a boy soprano, in surplice robes, sang "Angels ever Bright and Fair." Mr. Butterworth's eyes closed, and tears trickled through the lids. When the song was over he asked that it be sung again; and again Keats sang the beautiful song, soft and low. As the dear old man sat there every boy in the audience reverenced and loved him.

And thus came to a close the last evening the Boston boys spent with Hezekiah Butterworth, and now the Butterworth section in the Boston public library is more popular than ever.

Hezekiah Butterworth by his sturdy character and example has builded a monument of love to himself in the hearts of the Boston boys, yes, the New England boys; yes the boys of America.

A Glimpse of Hezekiah Butterworth's Inner Life.

We have received from Otto Stromberg, of Frederick, South Dakota, an article entitled "An Afternoon with Joe Butterworth," which relates how the writer met Joe Butterworth, a brother of the late Hezekiah Butterworth, on his farm near Frederick. At the time of Mr. Stromberg's interview with Joe Butterworth the latter was in his onion field, deep in the work of harvesting his crop. He was not averse, however, to stopping long enough to talk sympathetically about his famous brother.

"Hezekiah," he said, "never liked farming. Early in life he began to scribble and get his work into the local papers of Rhode Island, where we lived at the time. Hezekiah was never strong physically, and there was some doubt in the minds of the family whether he would ever reach manhood. Nevertheless, he went to Boston, obtained a position as a proofreader in a newspaper office, and went to work. From that time on, I think, for over thirty years, he was connected with newspapers and magazines. Hezekiah never married, but his interest in young people was always very great. Every once in a while he would write to me and send me some of his books for the boys to read. Everything he wrote for the young was with the aim of strengthening their moral character and giving them inspiration."

In his home later in the day Joe Butterworth quoted to Mr. Stromberg what appeared in THE AMERICAN BOY some months ago relating to Mr. Butterworth's work as a writer for boys, and seemed very proud of it. Then he brought forth a letter written to his oldest boy by the boy's uncle Hezekiah, a short time before the latter's death. It reads as follows:

"Dear Nephew:

"I have heard through your mother that you have worked out and have brought your earnings to your father, which is certainly a very noble thing for a boy to do.

"I hear that your father is quite unwell and that you and your mother will have to help him during the summer. You are yet young, and it will not be too late for you to get an education, even if you do have to labor for your father a part of the time, or go out to work.

"Why can you not lead the family in planting a large garden? I will help you if I can. My health is very poor, but if my health permits I could help you in a struggle for freedom from debt, and your struggle would make you and your brothers stronger and manlier for life.

"I may like to come and live with you for a time some day, or I may die of an organic disease which I have, in which case I would leave you enough to pay your debt and give you a new start in life. I would be rich now but for my losses and ill-health.

"You might, by some help from me, which I will render if my health will permit, get out of debt in a few years and receive for yourself a home and move to a warmer climate, but the people of the cold climate of the northwest are, as a rule, healthy, happy and prosperous.

"I cannot promise you much now, but my heart is with you. I hope to go there this summer and to Florida next winter so that I may continue to write.

"I now have a new chance to write for a London firm if I can do it. I will be very helpful to you, but my friends say that I must stop writing.

"God knows that you will always be a stronger and better man for bearing the burden in your youth.

"Face life bravely. Be a John Halifax.

"Write to me.

Yours always,
HEZEKIAH BUTTERWORTH."

Tribute by Willis Edwin Hurd.

"This week is 'Food Fair,' and Dewey comes on Saturday. Now, to be plain, I am less interested in either of these than I am in a thorough study of 'Old New England.' I would like to have you come down and pass Dewey Day and Sunday with me, that we might talk of our own dear work, and that you might see the 'shows' about which I care nothing, but to which it would give me great pleasure to take you."

This was the main paragraph of the first letter I ever received from Hezekiah Butterworth, back on that memorable ninth of October, 1899.

I was writing a series of sketches of New England authors for an amateur magazine at that time, and I dared ask him for a few facts in his life history, that I might prepare an article really worth the while, partly from a real personal standpoint.

In response, came that wonderful letter, which took me for the first time in my life into real, inspiring haunts—into the companionship of the dearest stranger a young aspirant to authorship could imagine.

What a warmth there was in that first personal greeting, when he took me in his arms at the head of the stairway leading to his room, and bade me welcome with all the affection of a long-lost bosom friend.

That afternoon we went to the famous Library, to the author's retreat for meditation and rest in Trinity Church, and into the Boston office of Orison Swett Marden, whose "Success" was just gaining a good headway in the magazine world. And that night we saw Admiral Dewey.

But better than all martial sights was the heart-to-heart, inspiring companionship of the man who said to me, on our return home that evening:

"O how I like to make people happy!"

Dear author! he gave of his whole life to others, surrounding all his young friends with oceans of love and sympathy, and his remembrance in their hearts will be sweet for all time!

A Tribute by George Whitefield D'Vys.

In the passing of Hezekiah Butterworth many thousands of the American boys of today, as well as many of yesterday, will undoubtedly feel a keen personal loss. It was not his way to sit with an open atlas and an encyclopedia before him and dole out tales of travel and adventure, for each of his numerous books represents his own travels and observations—and therein lay the charm. Mr. Butterworth was a Rhode Island born boy. He passed the greater part of his life on a farm. His keen and wholesome interest in the wonders of nature was but the simple and sincere interest of the country bred boy in the great and marvelous. Mr. Butterworth was a simple, kindly, high-minded gentleman, with hand, heart and purse always unobtrusively open for the struggling; so, boys, we can all sincerely echo the sentiment in the heart of each of the throng of sorrowing children that followed him to the grave: "We have lost a real friend."

* * * * * *

When Hezekiah Butterworth, on September 8th, was laid to rest in the cemetery at Warren, Rhode Island, the public schools of that town were closed for the day, and the pupils marched in a body to the First Baptist Church, where each placed a sprig of golden rod upon the casket.

JOE. BUTTERWORTH'S HOME AT FREDERICK, S. D.

A Novel Use for Stamps

The monks at the Hospital of St. Jean de Dieu, at Ghent, have in their leisure moments decorated the walls with gorgeous landscapes, glowing with color and full of life, formed entirely by means of the postage stamps of all the nations of the world. Palaces, forests, streams and mountains are represented, butterflies flit about in the air, birds of beautiful plumage perch on branches, snakes and lizards glide about, and innumerable animals find places here and there. Already between 9,000,000 and 10,000,000 stamps have been used.

"Pluck, plus joy," is a modern novelist's recipe for success.

HEZEKIAH BUTTERWORTH, OUR FRIEND

IN THE passing away of Hezekiah Butterworth the publishers of The American Boy have lost a friend. Numerous letters passed between him and our editor during the last two or three years of Mr. Butterworth's life. In one, written about a year before his death, he paid a tribute to The American Boy that has been treasured as the expression of a man who dealt with American boys all his life and knew what they wanted. The words were few, but they expressed much. He said:

"The boys like your paper. It enters into their life."

Mr. Butterworth came into close contact with boys. His observations and his deductions therefrom were not mistaken.

JOE BUTTERWORTH, HEZEKIAH'S BROTHER, IN HIS ONION FIELD

A Thirteen-Year-Old Air-ship Builder

Cromwell Dixon, a thirteen-year-old Columbus, Ohio, boy, is building an air-ship, and it is not a toy, either. That he and others about him have faith in his ability to make a ship that will actually sail in the air is indicated by the fact that the engine is already in place, and that a hundred yards of Japanese silk for the making of the gas bag, has been purchased at a cost of $300. When built, the air-ship will closely resemble the Knabenshue ship. The frame is twelve and a half feet long and will support three hundred pounds.

Young Dixon is a natural born mechanic. When a mere baby he managed to take a clock to pieces and make a very good effort at

CROMWELL DIXON

putting it together again. He repairs the clocks about his own home when they are out of order. Long ago he wired his home for electric lights, putting in the necessary switches, etc. He has made a camera which works as well, it is claimed, as those bought at the stores. Two years ago he built a row boat to hold three persons. Knabenshue has become acquainted with the young inventor and takes a great interest in him.

Cromwell's shop is in the back yard of his home, but the shop was not big enough for the work required to be done on the air-ship, so he is building it in a room at a factory nearby, offered him by its proprietor. He says he will make the first trial of his air-ship on the grounds of the Ohio State University.

The boy is in the seventh grade at school, plays the cornet, violin, and the mandolin, and is a member of the school band.

Earl Stanza Keeps on Climbing

Readers of THE AMERICAN BOY for 1904, and particularly such of our readers as had the opportunity of attending the AMERICAN BOY DAY exercises in Festival Hall, at the St. Louis Exposition, July 5th, will recall the name of Earl Stanza, of St. Louis, who was one of the boy orators of the occasion. Earl has now won four medals for oratory in the W. C. T. U. Demerest contests. His second medal won was of silver, the third of gold and the fourth a diamond. The fourth was won at the state convention of the W. C. T. U. There were fourteen contestants for the silver medal. Eight counties of the state were represented in the contest for the diamond medal. Earl is a senior in the Central High School, St. Louis, and expects to be a lawyer. He is president of The Assembly, a boys' high school literary society, president of his class, an ex-president of his fraternity, and secretary of a Christian Endeavor society.

EARL STANZA

Boys, Take Care *of* Your Teeth

By J. AUSTIN BUCKNALL, D. D. S.

(Begun in December, 1905, number.)

Keep two small, well selected brushes, which have stiff bristles cut irregularly at the business end. After using, hang them up to dry. There are many powders, such as Colgate's, Sozodont, Geer's and Graves', and many pastes, such as Dentacura, Euthymol and Sanitol, that may be applied with the brush to advantage. If you have none of these, chalk will do. Having applied a little of the powder or paste to the brush, rub the surface of the teeth; not sidewise, but up and down. Persistent rubbing with gritty substances across the face of the teeth will, in the course of years, cut the enamel. If you want to make a good job of it, pass silk (dental floss) in the interstices between the teeth. To do this easily, wind the end of the thread around the first finger of one hand and hold the spool on which the silk is wound in the other. It is in the space between the teeth where they touch each other that the worst form of decay begins. The silk removes the ferment which the brush cannot reach. If there is decay there, the broken edges of the enamel will cut the silk. This should be a warning to you to have a dentist do some filling. Use one brush in the morning and the other at night.

In case of children, after the teeth are cleaned they should be bathed with milk of magnesia. Especially is this of value where the teeth are soft with white patches showing near the gums, or where there is persistent decay, that is, where the best of care does not prevent new cavities forming continually. Negligence in the care of the teeth with young children is particularly bad because of their frequent eating of candies.

When you are ill and cannot use the brush regularly, the milk of magnesia is valuable, especially after fevers, where no care of the teeth has been taken. Teeth that were sound a few months before the sickness began now show disease. I noticed this quick change in the mouths of two or three young men who were ill at Chattanooga during the Spanish-American war, and whose teeth before that time were perfect.

Where there is bleeding of the gums, frequent use of the brush, even if it hurts, will finally effect a cure. Should the gums become purple or unsightly, you should visit a dentist, not one of those who give cleanliness little attention, but a careful man who understands its value. Sometimes you attribute a swollen cheek or jaw to a cold you think you have caught, when it may all come from a bad tooth. Consult a dentist. He may find that the tooth is badly decayed and that it must be removed, but a good dentist will always try to save the tooth. In such cases hot water bags and poultices should not be applied to the face, as they have a tendency to draw matter from the dead nerve through the cheek and form an opening that will leave a scar. Hot applications of towels will relieve the pain; be careful to spread the towel from the chin to the temple.

The teeth of young children should be as carefully watched as is the second or permanent set, and especially should the large tooth which comes at the age of six be watched. The mother should not be afraid to consult the dentist often as it will pay in the end, as imperfect teeth not only form a blemish to what might otherwise be a handsome face, but have an ill effect on the health.

(To be continued.)

OUR TOAST—Here's for a Happy New Year to every American Boy!

The American Boy Legion of Honor (Open to all Boys Everywhere)

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school, ending on a date since September 1st, 1905, have received the highest average term grade in their classes in all studies and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts.

LEGION OF HONOR ROLL.

It Was Only Papa

It was April Fool's Day, and innocent little Willie thought to play a joke on his mother. Looking very much excited, he ran to his mother and said: "Oh, mamma, there's a strange man holding Julia (their maid) and kissing her like fun." "Indeed!" exclaimed the mother, indignantly, running toward the stairway, "I will put a stop to this at once." "Oh, April fool, mamma," said Willie, elatedly; "it's only papa!"

DENTACURA

Tooth Paste

Differs from the ordinary dentifrice in minimizing the causes of decay. Endorsed by thousands of Dentists. It is deliciously flavored, and a delightful adjunct to the dental toilet.

For sale at best stores. 25c. per tube. Avoid substitutes. Send for our free book "Taking Care of the Teeth," which contains valuable information concisely written.

THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November number. No. I of the Series treated of Ulysses Simpson Grant; No. II of David G. Farragaut.

No. III--Benjamin Franklin

THE LIFE of any man whose work has been of such immense importance to humanity as to cause two great nations to celebrate his birth ought to be worth studying. On the seventeenth of this month of January, France and America will each commemorate with appropriate exercises the two-hundredth birthday of Benjamin Franklin, an American boy, who became a great author, diplomatist, statesman and philanthropist.

To the boy who is determined to succeed, there are no difficulties. The obstacles that appear like mountains in the eyes of the ordinary boy resolves into ant heaps before the boy of patience, persistence and courage.

Benjamin Franklin was born in the city of Boston, Massachusetts, January 17th, 1706. The site of his birthplace is now occupied by newspaper offices. His father, Josiah Franklin, who had emigrated from England about 1685, if he were living now would applaud President Roosevelt's strenuous words on race suicide, as he was the father of seventeen children, ten boys and seven girls, of whom Benjamin was the fifteenth child and the youngest son. Benjamin's mother, Josiah Franklin's second wife, was Abiah Folger, also one of a large family.

In naming his youngest son, Josiah Franklin had sound Biblical warrant as our readers will remember that the youngest son of the patriarch Jacob was named Benjamin, meaning Fortunate.

Benjamin's father was a man of considerable knowledge and had clear views on practical subjects. His trade had been that of a wool dyer, but finding that the income from it was not enough to provide for his large and growing family he became a soap boiler, a trade that promised larger returns.

Young Franklin's education must have begun at a very early age, as he says in the book of his life, which he wrote when an old man, that he could not remember the time when he could not read. He always wanted to know about things and was willing to do anything to obtain knowledge. His father's scanty library consisting of a copy of Plutarch's Lives, Bunyan's Pilgrim's Progress, and Cotton Mather's To Do Good were read again and again by the young learner. It must not be supposed that the boy cared for nothing but study. He was still very much of a boy, ready for anything in the shape of fun or mischief, and was generally the leader, even of boys older than himself, in any of the boyish pranks of the neighborhood. He tells how some boys and himself were in the habit of fishing for minnows in a pond near his home, and by their constant standing and trampling the bank had become a mud hole. Benjamin proposed that they should build a dock from which to fish, and as there was a large pile of stones lying near where masons were building a house, they set to work one evening and under his directions soon had a small wharf made running out into the pond. Next morning the stones were missed by the workmen, and on search being made, they found the wharf and identified their property. The offenders were also discovered, and each boy received from his parents due punishment for his conduct. Franklin afterwards declared that while he showed the wharf to be useful his father thoroughly impressed upon him that that which was not honest could not be truly useful.

Josiah Franklin was diligent in having all his children receive something of an education, but at an early age apprenticed the boys to some useful trade. Noting, however, Benjamin's fondness for books and reading and his eagerness for knowledge, he planned to give the boy such an education as would fit him for the ministry. Accordingly, at the age of seven Benjamin was sent to a grammar school where, in a few months, he rose not only to be head of the class in which he was first placed, but also head of the higher class to which he was transferred. There is no doubt that in school and college Benjamin Franklin would have taken the very highest honors, but at the end of his first school year, his father was forced by poverty and the increased demands of his large family, to take him away and give up the hope for him of a ministerial career. However, for another year Benjamin attended what would today be called a business school, where only writing and arithmetic were taught.

Even when very young Benjamin showed an inventive genius which enabled him to overcome many childish difficulties. On the water he was quite at home, whether managing a boat or swimming, floating and diving. In fact when a young man he thought of becoming an instructor in the art of swimming. Concluding that he could increase his swimming powers by a little ingenuity, he fashioned pieces of thin wood somewhat like a painter's palette, and fitted them to his hands and feet, but he found that, although they helped him to swim faster, they hurt his wrists and ankles. Nothing daunted at this failure he was soon trying another method. He was the best maker and flyer of kites in his neighborhood and conceived the idea of making his kite draw him through the water,

BENJAMIN FRANKLIN

which it did at a great rate with little effort on his part.

This knowledge of kite-flying in later years enabled Franklin to make one of the greatest of scientific discoveries, namely, that lightning was the same as electricity, a discovery for which Yale and Harvard Universities honored him with a doctor's degree, and the great Royal Society of Great Britain awarded him the Copley gold medal as one of the foremost scientists of the age.

Benjamin's school life occupied but two years and at the age of ten, when most boys are entering the fifth or sixth grade, his father put him to work at running errands, filling candle molds and taking care of the chandler's shop, work which the boy so detested that, although he never shirked his duties, he seriously thought of going off to sea as an elder brother had done sometime before. His father, at length realizing the boy's downright hatred of the business, went around to various shops and factories to find what his son had a liking for. In these visits the young lad learned a good deal about tools and their use, which in after life he turned to good account in the making of articles required in his scientific experiments.

It was at length decided that Benjamin should be apprenticed to his brother James, who had recently started in business as a printer. We may well imagine that this just suited the boy, then twelve years old, as he would have greater opportunity for reading and study. By steady application to his work he soon made himself a valuable workman and the friends he formed among the booksellers' apprentices of the city he turned to good account by borrowing books from them. He was always careful to return the books promptly, often sitting up the greater part of the night that the book might be returned in the morning. A merchant of the city, Mr. Adams, who frequently visited the printer's shop, learning of young Franklin's love of books, generously allowed him to use his library.

Many years afterward Benjamin Franklin established the first circulating library in America in order that poor boys might not be kept from books who desired to study.

At this time the young printer came under the influence of the poetic muse. Two ballads that he wrote, printed and sold in the streets caused him to think that he might some day become a great poet. The boy's father, however, shattered his poetic aspirations by telling him that "versemakers were generally beggars."

Dissuaded from poetry Benjamin took to writing prose, and his efforts in obtaining a mastery of pure English were greatly aided by reading and studying Addison and Steele's Spectator. This book was his model, and the ingenious way he took of forming his style deserves mention if only to show his originality and perseverance. Carefully reading over an article he would at the same time jot down short notes. After a few days he would try to reconstruct the article from his notes, then compare his work with the Spectator and correct his mistakes. Finding by this that he had a very limited command of words, he took to turning prose articles into verse, and the work of finding the exact word to fit the thought considerably extended his vocabulary.

At the age of sixteen he got hold of a book which proclaimed the benefits to be derived from the non-use of meat as food. The arguments of the book appealed very strongly to him and for a considerable time he refused to eat animal food. As meat formed a large item in his board money expense, he proposed to his brother that he should take half of the money and be allowed to board himself, the saving thus effected enabling him to purchase more books, and as his dinner, which frequently consisted of a roll of bread and some raisins with a glass of water, was soon eaten, he had more time for study. And so it came about that in time he mastered navigation, rhetoric and arithmetic and read such works as Locke on The Human Understanding, The Art of Thinking, and Xenophon's Memorabilia of Socrates. This was reading of a rather heavy kind for a boy of sixteen.

The elder brother, James, started the publication of the second newspaper in America, "The New England Courant," and Benjamin was very anxious to write articles for it, but his brother and himself did not get along very well, the former having a very quick and passionate temper and overbearing manner, and the latter being at times resentful and inclined to "talk back." Having little hope of anything being accepted from his pen by his brother, if given to him openly, Benjamin wrote an article in a disguised hand and one night slipped it under the office door. His satisfaction was great on seeing it in print. He continued this plan of getting into type for several months. James at this time suffered a term of imprisonment for refusing to tell the name of the author of an article which appeared in his paper, and during his brother's absence Benjamin became editor and publisher, a position which the boy of sixteen years of age filled with success.

After James' return quarrels between the brothers were frequent. The climax came when one day James struck Benjamin. Then the boy determined to leave Boston and, selling his beloved books to pay his way, he took passage for New York, without telling even his parents of his intention. Finding no work there, he at once set out (walking most of the way) for Philadelphia, where he arrived footsore, weary, dirty and hungry, dressed in his working clothes, with only a dollar and a few cents in his pocket and not a friend in the strange city.

While the lad must have felt somewhat discouraged, I believe he then and there determined that he would not be beaten; and that, you know, is the surest beginning of success. Entering a baker's shop and buying three rolls he proceeded to satisfy his hunger as he limped painfully along the streets. Meeting a poorly-clad, hungry-looking woman he handed her what remained of his rolls, receiving in return earnest expressions of thanks. Boys, the lad who, in spite of his own misfortune and troubles, will stop to sympathize with and help others in worse condition than himself has in him the making of a good and great man, and I love to think that this simple deed of kindness when a boy had some influence in raising Benjamin Franklin many years after to be the loved and honored Governor of that whole Province of Pennsylvania. Entering a Quaker chapel he fell asleep on one of the hard benches, to be awakened at the close of the service by a young Quaker to whom Franklin explained his position, and by whom he was directed to a place of shelter for the night, where he slept as only a thoroughly tired boy can sleep.

A Mr. Bradford, a printer in New York, had told Benjamin to apply to his son, Andrew Bradford, printer in Philadel-

FRANKLIN'S BIRTHPLACE

MAGIC LANTERN AND OUTFIT GIVEN

Mention This Paper in Answering Advertisements

phia, for work, but on calling there he found to his disappointment that Mr. Bradford had no need of more employes. Applying at the only other printer's shop in the city, the proprietor, Mr. Keimer, gave him only a promise of work in the future. However, Keimer's old printing press was sadly in need of repairs and Benjamin's knowledge of mechanics enabled him to mend it satisfactorily, with the result that Keimer was so much pleased that he put Benjamin to work at a "case." His wages being now sufficient to supply his wants Franklin began to make the acquaintance of young men who, like himself, were fond of reading and study. He also entered into the social life of the city, where his pleasing manners and intellectual attainments made him always a welcome guest.

While Benjamin was thus comfortably situated in Philadelphia, he received a letter from his brother-in-law, Captain Holmes, reproaching him for having left Boston without notifying his parents or friends, and urging his return. The boy at once gave such a good defense of his conduct that Captain Holmes declared the lad "had not been so much in the wrong as he had apprehended." This letter was read by Holmes in the presence of Sir William Keith, Governor of Pennsylvania, who, on being informed of the circumstances, expressed surprise at such purity of language, logical reasoning and lofty sentiments coming from a mere boy. Later the governor called upon Benjamin and, in the kindliest manner making himself known, requested the company of the lad to dinner. Here the governor urged Franklin to begin business on his own account, promising to assist him in every way possible. While pleased at such a prospect, Benjamin had no money of his own and said he would require to apply to his father for the necessary funds. The governor at once promised to write to his father, setting forth the brilliant prospects that surely awaited his son. Thereafter Benjamin was frequently a guest at the governor's home, where he was treated in the most friendly manner.

In the spring of the following year Benjamin returned to Boston and received a warm and joyful welcome from his parents and old friends. Governor Keith had given him the promised letter to his father, who on reading it declared Benjamin to be too young for such an undertaking, intimating, however, that when the boy had had more experience the matter might be reconsidered.

Here we close the boyhood days of this truly great man, trusting that our young readers may find this sketch sufficiently interesting to pursue the story further and learn how, step by step, he rose from one high position in his country's service to another, until he was able to stand before kings, and lords and princes were proud to own the friendship of the "printer's apprentice."

SYNOPSIS OF BENJAMIN FRANKLIN'S SUBSEQUENT CAREER.

1724—Visited London to buy printing outfit.
1726—Part owner of a printing office in Philadelphia.
1729—Founded the Pennsylvania Gazette and soon gained wide influence as editor, author, politician and public teacher.

REPLICA OF PHILADELPHIA'S STATUE OF FRANKLIN TO BE UNVEILED IN PARIS DURING FRANKLIN CELEBRATION.

The regard of Frenchmen for the memory of Benjamin Franklin, the first American minister to France, will be shown in the unveiling of a statue of Franklin on January 17, 1906, when the two hundredth anniversary of the birth of that famous American will be celebrated in Paris and elsewhere. The statue, which will be a replica of the one in front of the Philadelphia postoffice, will be placed in the small grass-covered plot in the Rue Franklin, near the Place de Trocadero and just in front of the Trocadero Palace, which has been given for that purpose by the Municipal Council of Paris. The statue, which will be of bronze, is given to the City of Paris by John H. Harjes, at present the resident member in Paris of the firm of Morgan, Harjes & Co.

The statue will be produced by the sculptor who made the one in front of the Philadelphia postoffice, John J. Boyle, of New York. It was originally intended that the gift should come from the citizens of Philadelphia, and an attempt was made to have it presented under the auspices of the University of Pennsylvania, but little progress was made and the plan was finally abandoned.

1731—Established first circulating library in America.
1732-1757—Issued Poor Richard's Almanac. Studied French, Italian, Spanish and Latin and became proficient in all.
1736-1746—Clerk of the General Assembly. Assisted in founding University of Pennsylvania. Advocated paved streets, a hospital and the American Philosophical society.
1747-1752—Engrossed in research into lightning and electricity, which received the contempt of the Royal Society of London. The society afterwards repented and gave him honor.
1754—Put forward plan for defense of colonies.
1762—Honored by St. Andrew's University, Scotland, with degree of LL. D. Had literary relations with Adam Smith, Burke and others. Urged retention of Canada.
1764—Sent to England to urge grievances of colonists. Through his efforts British Parliament repealed Stamp Act.
1776—One of the five who drew up Declaration of Independence. Sent as commissioner to France, remaining there nine years. Efforts on behalf of his country of great importance.
1777-1778—With Adams and Lee made treaty with France.
1778—Received by Louis XVI.
1779—Minister Plenipotentiary of the United States.
1781—Commissioner to conclude peace with Great Britain.
1783—Signed treaty of Versailles, September 30. President of Pennsylvania Assembly.
1787—Member of Constitutional Convention. President of Pennsylvania Society for Abolition of Slavery.
1790—Died, April 17.

FRANKLIN TABLET IN THE HALL OF FAME

BENJAMIN FRANKLIN
1706-1790

This Constitution can end in despotism, as other forms have done before it, only when the people shall become so corrupted as to need despotic government, being incapable of any other.

The American Boy

Edwin Booth, of Hamilton, Kansas, writes a good letter to the Editor, and suggests that we print for the edification of our readers the following verses by Caroline Gilman, and this we are pleased to do:

THE AMERICAN BOY.

Look up, my young American!
Stand firmly on the earth,
Where noble deeds and mental power
Give titles over birth.

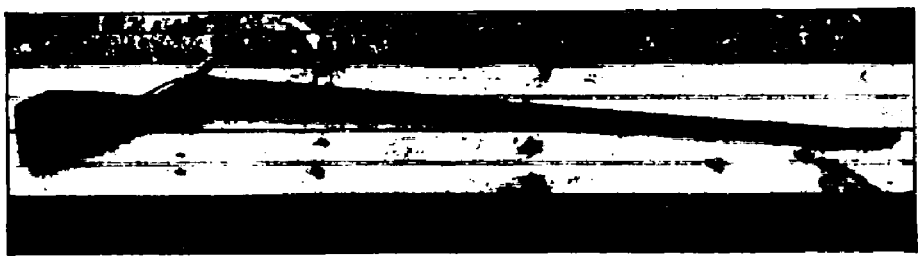
A hallow'd land thou claim'st my boy,
By early struggles bought,
Heaped up with noble memories,
And wide, ay, wide as thought!

What though we boast no ancient towers
Where "ivied" streamers twine,
The laurel lives upon our soul,
The laurel, boy, is thine.

And when thou'rt told of knighthood's shield,
And English battles won,
Look up, my boy, and breathe one word,
The name of Washington.

Robinson Crusoe's Gun Now Owned by an American

By PERCY TRENCHARD



THE ROBINSON CRUSOE GUN

EVERY BOY who has read Robinson Crusoe, and that means every boy in America, will be interested in learning that the Robinson Crusoe gun is now owned by a Philadelphian. Of course we all know that Daniel de Foe, who wrote Robinson Crusoe, founded his world-famous story on the adventures of Alexander Selkirk on the island of Juan Fernandez, off the coast of South America. The gun that has come into the possession of a Philadelphian is the original gun that Selkirk had when living his Robinson Crusoe life on Juan Fernandez. Miss Huldah B. White, of 201 North Thirty-fourth street, Philadelphia, a collector of curios, while traveling in England recently learned that the famous gun, which had been an heirloom in the Selkirk family, was to be sold at auction. She sent an agent to attend the sale, at Edinburgh, Scotland, and he managed to secure the coveted prize for thirty-two pounds, eleven shillings, or about $160 in American money.

When the news of the purchase was made public and the distressing fact dawned upon the British sentimentalists that the Robinson Crusoe gun was to be taken to America, there was a tremendous outcry and Miss White was besought to sell the relic to one of the many English bidders. Miss White entertained some offers, but the would-be purchasers were so slow in coming to time that she at last sailed without re-selling the gun.

In the catalogue of the sale at which the relic was purchased by Miss White, it is described as follows:

"Robinson Crusoe's (Alexander Selkirk's) musket, a fine old specimen with long barrel, old flint-lock and beautifully balanced. The Robinson Crusoe firelock is referred to in Sibbald's 'Fife 1803,' as being in the possession of a family in the neighborhood of Largo. James Gilles, aged 80, in 1895, informed General Briggs that his mother was a grandniece of Alexander Selkirk. She gave the gun to the late Major John Lumsdaine, of Lathallon, about the beginning of the century."

It was in consequence of the death of Major Lumsdaine's heir that the gun came to be sold at auction. Miss White returned with it to America and it is now in her possession.

It is a curious old weapon, almost six feet long and, although quite two centuries old, is in perfect preservation. The flint-lock still works on its hinges and answers to the touch of the trigger. The wood has worn away from the barrel and is kept in place by pieces of tape, which are wrapped around the barrel at the end and around the stock near the trigger. The size of the gun can be judged by the picture, in which it is seen held by a boy who was pressed into service when Miss White kindly permitted a photograph of the relic to be made especially for THE AMERICAN BOY.

Few boys really know the story of Alexander Selkirk, the Robinson Crusoe of fiction. Selkirk was a Scotchman, son of a tanner of Largo, a seaboard town of Fifeshire. He was always in trouble when a boy and ran away to sea to escape the consequences of a youthful prank. He appears to have been as hard to get along with afloat as ashore, for he came to be the original Robinson Crusoe through a quarrel with the captain of the ship. He was not wrecked, as De Foe causes Crusoe to be, but was sent ashore to his island, with a few personal effects and the famous gun seen in the photograph.

For four years and four months Selkirk lived his lonely life on Juan Fernandez. He made clothes from skins when his own were worn to rags. He killed goats with his musket until the powder gave out and then perforce he killed the goats by hand, becoming so fleet of foot in time that no animal could outrun him. Tiring of the loneliness, he moved heaven and earth to escape from his island, building fires nightly and keeping a close watch for passing ships. But he was far from the beaten track, and it was years before a ship came that way to rescue the strange looking scarecrow in the skin clothes.

Selkirk was the sensation of the day when he returned to England, and he told his story over and over again, and the newspapers of the day devoted entire pages to his adventures. When Selkirk returned to his father's house the habits of four years of solitude were so strong that he built a cave in the rear of his house and lived alone in this place, taking long walks along the loneliest part of the coast and avoiding every one. He went to sea again and died on the Weymouth, a British warship. He left no children, but there are many descendants of the original Selkirk family of eight boys still living in Scotland.

(*Continued on page 94.*)

S. S.—Document stamp of 1859 with head of Queen Victoria is a British revenue; it has little if any value. James M.—3c 1851 red brown U. S. lists 2c; $2 blue and black internal rev. 60c; the two French revenue stamps list one cent each. S. W. D.—Your stamps are from, 1. Austria; 2. Hungary; 3. Egypt; 4. France (revenue); 5. India (revenue); 6. French Guiana; 7. France; 8 and 9. Greece; 10. Crete; 11. Austria or Germany; 12. Corea; 13. Hungary; 14. Bulgaria; 15. Somali Coast (Africa). G. W. D.—The 1c Pan-American, inverted centre, catalogues $25.00. It retails at about $15.00. B. B. K.—It would be impossible to tell the value of your stamps without examination. There are a number of reliable dealers in San Francisco who will buy them if they are of any value. W. C. C.—No stamps were issued in commemoration of the Portland, Oregon, fair. T. J. W.—A very common French revenue stamp. A. C. R.—You have probably a 1c 1856 issue; there are several varieties of this stamp, the cheapest of which lists 50 cents unused. C. C. L. J.—The postage stamps you describe are all very common; the 3c proprietary revenue lists 20c. C. F. D.—You have a Spanish revenue stamp. CHAS. C.—The two stamps of which you send sketches are a Spanish and a Cuban revenue. The International albums do not have spaces for foreign revenues.

Cuba's Stamp History

(Continued from last month.)

In 1855, when Cuban postage stamps had their beginning, the twin Spanish colonies of Cuba and Porto Rico were closely associated for administrative purposes, a fact which serves to explain why the issues from 1855 to 1873 were for the common use of the two islands.

At the beginning of its philatelic history, Cuba presents us with a problem which has, at various times, provoked a spirited controversy among stamp collectors. We refer to the surcharge "Y ¼" upon the 2 real stamps of 1855. Why was this surcharge applied? Was it, as some contend, to supply a value of 2¼ reals, the "Y" being simply the Spanish form of the word "and," or was it intended that the "Y" should stand for the word "Interior," sometimes rendered in Spanish "Ynterior"? Many leading authorities on the stamps of Spain and colonies favor the latter theory, and hold that the stamps were surcharged simply to supply a low value label for use on letters dispatched from Havana and other coast towns to the interior of the island. It is a question which has never been positively settled one way or the other, and the fact that the stamps surcharged "Y ¼" are still listed in certain catalogues as being of the face value of 2¼ reals, shows that the "And ¼" theory still finds many adherents. The earlier issues of these surcharged stamps are scarce, and one has to be chary of buying specimens without a personal guarantee of genuineness, since the overprint has been frequently counterfeited. There are, by the way, at least two very distinct varieties of the "Y ¼" surcharge—one showing a broad "Y" and a short fraction bar to the "¼," while the other has a narrow "Y" and a much longer fraction bar. Specialists of these stamps, however, have discovered no less than four distinctive types, and a minor variety chronicled some years ago as existing in a famous American collection has no fraction bar to the "¼" at all!

In 1857, the 2 reals rose-red of that year received the "Y ¼" overprint in the same manner as the previous 2 real stamps. This, however, is comparatively common. One may distinguish the stamp, not only by its color, but by the absence of watermark. The stamps of 1855 had a watermark of loops, but those of 1856 a watermark of crossed lines, but for subsequent issues the watermark was abandoned.

Cuba and Porto Rico remained partners in postage stamps until 1873, when the first stamps "for Cuba only" made their appearance. A curious feature of many of the Cuban and other Spanish colonial issues is the insertion of the date of issue as a portion of the design. This is a custom that it still retained for the stamps of Fernando Poo and other remnants of the once mighty Empire of Spain, though it has long been abandoned by the Mother Country. From 1855 until the last of the "Spanish" issues, the stamps of Cuba form an interesting portrait gallery of the reigning monarchs of Spain—Queen Isabella, King Amadeus, King Alfonso XII., and his son, the present Alfonso XIII. In 1883 there came a series of curious surcharges, consisting mostly of numerals within various ornamental frames. The "Habilitado" surcharges of 1868, and the further series of 1898-99—the last stamps of Cuba prior to the American regime—are quite a study in themselves, abounding in type varieties and errors of printing. To grapple with Cuba in its entirety, however, is becoming an expensive and difficult pursuit, as the stamps of the island have enjoyed a considerable boom since the period of the Hispano-American War, and many varieties are now hard to get either in used or unused condition.

The stamps of "American Cuba," if one may use that term to indicate the Cuba of the past six or seven years, form a section of the subject that the young collector might well take up with profit and pleasure. On the termination of the war a "stop-gap" issue was provided by surcharging the then current stamps of the United States with the name "Cuba" and the value in "cents de peso," which must not be confused with the Spanish "cents de peseta." The present currency of Cuba approximates as closely as may be to that of the United States, the "centara" equaling the American "cent," and the "peso" the "dollar." Regular stamps for Cuba, bearing appropriate pictorial designs, made their appearance in 1900. Of the 2 centavos stamp varying shades of color, from carmine to scarlet, may be found.

A curious error of spelling occurred in connection with the issue of the "Special Delivery" stamps of 1903. The stamps being supplied from America, it is not perhaps astonishing that the Spanish word IMEDIATA was mis-spelled with two "M's"—IMMEDIATA. This remained unnoticed for some little time, when the mis-spelling was brought to the notice of the administration, and the die was corrected.

The arms of Cuba as pictured in one of the latest stamp designs remain substantially the same as those which adorned the postage stamps issued by the insurgent leaders in the first great Cuban rebellion of 1873. We illustrate the rebel stamp of that date (there was a re-issue, by the way, in 1897) side by side with an enlargement of the Cuban arms as pictured today.—Hobbies.

Philately

The $60 newspaper stamp of the United States is the stamp of largest face value that has ever been issued.

The finest collection of stamps in the world is that of the British Museum. The collection is valued at $200,000.

The rarest stamp is, doubtless, the one-cent 1856 of British Guiana, only one specimen being known to exist at the present time.

It is stated on a reliable source that the stamps of Corea are to become obsolete, the postal service of that country being taken over by Japan. At an early date Japanese stamps will be in use throughout Corea, and as there is no very great stock of remainders, the Corean stamps are likely to advance in value.

The Numismatic Sphinx

Floyd Harper.—The round 50-cent California gold half-dollar of 1872 is worth $2.00. The same, octagonal, $1.50. C. S. H., Eau Claire.—The eagle cent of 1856 is selling for about ten dollars. Sweden, ⅛ skilling of 1819, fifteen cents. 1831 half-dollar, if in fine condition, seventy-five cents. Henry Johnson.—Your coin is evidently a kopeck of Russia, 1860, Alexander II. It is common. H. A. A., Lebanon, Pa.—So much depends upon the condition of your coins, and this you do not mention, that it would be impossible to estimate their value. Unless they are in at least good condition it is safe to say that they will not bring over face value. Jos. H. Groff.—See answer to C. S. H. W. N. Hutchings.—The cent of 1837 is worth ten cents. If in fine condition it will bring more. H. W. Merrill.—The Columbia half-dollar of 1892 sells for seventy-five cents. Donald O. Noble.—The half-eagle of 1846, unless in fine condition, will hardly bring a premium. W. Heber Thames.—The 1820 half-dollar sells at the dealers for seventy-five cents. Rexford Sexton.—The dime of 1835, unless in fine condition, will not bring you a premium. H. A. Stanhope.—The copper cents for 1845 and 1848 sell for from five to ten cents each. Prince Edward Island cents and East India quarter annas will also bring the same price. Any coin dealer will put you in the way to obtain a coin cabinet if you will write him. C. R. Armstrong.—Your New Jersey colonial bill for £3, issued March 25th, 1776, is worth fifty cents. That is the price the dealers would charge for good specimens. Walter T. Oliver.—You have some nice pieces for a collection, but your coins are all quite common. The "Union for Ever" is a common Civil War token of 1864. Jos. R. Paupusch.—The dealers charge seventy-five cents each for the half-dollar of 1833 and the quarter of 1834. The Lafayette dollar of 1900 is held at $2.00. Fifty thousand of these were issued. 1816 cent, ten cents. 1861 half-dime, face value only. W. B. Sampson.—The half-dollars of 1826 and 1830 sell for seventy-five cents each. Trade dollars of 1877, fifty-five to eighty-five cents, depending upon condition. Sherwood Chapman.—Your rubbings are all from current nickel and silver coins that will hardly bring much over face. (1 and 2) Helvetia (Switzerland). (3) Netherlands (Holland). (4) Prussia. (5) Austria. (6) Pontifical States (Rome). (7) France. S. S. Phelps.—The cents of 1844, 1846 and 1852 sell from five to ten cents each. Your "Success to the Lowestoff Fisheries" penny is an English token worth fifteen cents. Belgium 2 centimes, common. Others face value. John L. Fisher.—Your coin is the new 2½ cent silver coin of Panama. They are selling for twelve cents each. They were struck at the Philadelphia mint. Frank W. Booth: The large oval brass coin with queer characters on is no doubt a Japanese tempo. These odd coins were in use in Japan sixty to seventy-five years ago and are still quite common, selling for fifteen cents each. Louis Masters: St. Helena has never had but one coin and that a half-penny struck for the island in 1821. The dealers would charge you twenty-five cents for one in good condition. Carlton Corwith: 1817 and 1826 cents, ten cents each. Austrian 1 kreutzer, 1816, five cents. English farthing, 1749, ten cents. 1801 cent, if in good condition, seevnty-five cents. Others face value. Frank Jackson: The half dollars of 1828 and 1829 are catalogued at seventy-five cents each. E. G. Stimson: The dollar of 1842 sells for $2.00. Frank Mitchell: Your rubbing is from a 10 centimes of Luxemburg. There are three pieces in this set, viz.: 2½, 5 and 10 centimes. They sell for ten cents each at the dealers. John Moss: Your coin is a half anna of Bengal. The date in the native inscription is 1782. It sells for fifteen cents when in good condition.

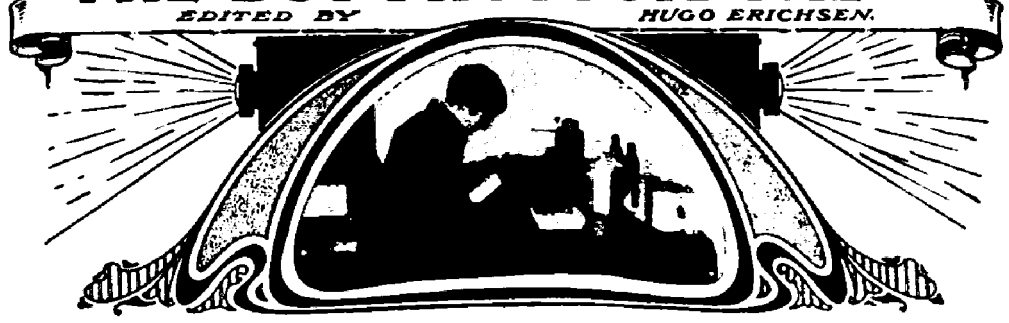
TO
"STAMP MEN"
No paper in America reaches so many prospective stamp buyers as does The American Boy

THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.



THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

Squarely Own Up

One of the hardest things to do in life, my dear lads, is to acknowledge a mistake. But that is the only way to rectify it. If you will give everybody else a square deal, in the words of our beloved President, you will get one yourself.

The above will prepare you for the confession that the editor made a mistake himself and is now going to own up. Of course, it was unintentional and entirely due to the fact that no name appeared on the back of the photograph to which first prize was awarded in our Brownie contest. The photograph was attributed to a New England boy, when credit should have been given to Fred J. Fisher, of 1509 Lexington avenue, New York City. Honor to whom honor is due. THE EDITOR.

The Letter Box

E. P. Howell—You will have to get a regular copying lens for the purpose. Write to the Eastman Kodak Co., Rochester, N. Y., about it. Fred. Nesbitt—A description of how to make a good enlarging camera at a cost not exceeding $1 appeared in our March (1905) issue. If you no longer have it, we will send it to you on receipt of ten cents.

Our Prize Pictures

"A Pool in the Woods," by Carl L. Hartshorn, of 59 Irving street, West Somerville, Mass., to whom first prize is awarded in this month's contest, is a beautiful piece of camera work from an artistic as well as technical standpoint. Another landscape study, by Henry J. Rettke, of 18 Grave street, Marinette, Wis., which captured the second prize, is also deserving of the highest praise.

Current Comments

John L. Hopper—Not a bad idea, but the dog's head should have been lower and in focus. Ralph L. Hay—Both of your pictures show halation; if you do not know what this means, visit the public library in your city, which contains a large assortment of photographic books, and read it up. Kerr Forman—Such a picture as yours should be taken with a backed or non-halation plate, if taken at all in the day-time. A flash-light, after nightfall, would give still better results.

A Moving Picture Feat

The taking of 10,800 moving pictures of a train in the New York subway was the occasion of a recent novel experiment in illumination, which resulted successfully. Seventy-two mercury vapor lamps were arranged on a freight car in nine banks, with a reflector back of each. The camera was placed on another car on a parallel track, and on the third track was the train whose progress was to be photographed. The pictures were taken for an official of the transit company and not intended for public exhibition.

Honorable Mention

Two photographs among the number submitted by those entitled to the above distinction are so unusually good that we feel they deserve especial mention. If there were such a thing as third and fourth prize in our contests, they would have received the award. We allude, in the order of merit, to the "Sentinel" by Harry W. Phillips, and "The Old Swimming Hole," by Raymond H. Osborne. The remainder entitled to Honorable Mention are: Kurt Stolberg, Earl V. Hudson, Russell S. Mack, Fred. Conningham, Ernest S. Houghton, Joseph Hunter, E. E. Trumbull, Percy N. Trask, H. E. Fry and Clay L. Pearse.

Inexpensive Trays

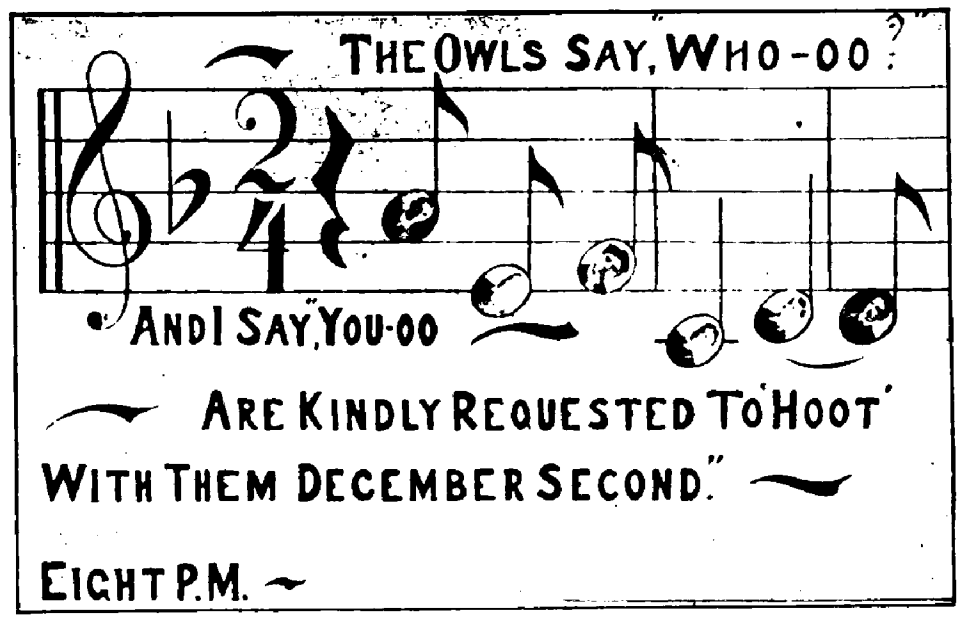
Secure as many cigar boxes as you desire to make trays. Take off the lids and remove all paper from the inside of the boxes. Next place them inside the oven of an ordinary cook stove until they become quite hot. By this time you should have secured a ten-cent cake of paraffine wax, scrape pint cup half full of the shavings and set to melt on the stove. Let the wax come to a boil and then taking your mounting brush, give your hot cigar boxes a coating of wax, both inside and out. Allow them to cool, and apply a second coat. You will have a supply of trays that will be both water and acid proof. If you wish to make a little more workmanlike job, it is not a difficult matter to carefully take the boxes apart, cut the wood to the right size and then nail together again with the nails removed in taking the original box apart. These can be coated with wax in the same way as advised for the boxes.—Wharton Schooler in "The Photographic Exchange."

Our Book Table

ODD BITS OF TRAVEL WITH BRUSH AND CAMERA, by Chas. M. Taylor, Jr., Philadelphia: Geo. W. Jacobs & Co. $1.60 net. This book contains many hints that will prove of service to amateur photographers contemplating the grand European tour. The illustrations, representing landscapes and street-views in England, the Netherlands, France and Germany, are from photographs by the author. Here and there, in the text, one will come across a gem like the following: "Happiness consists not in possessing much, but in being content with what we possess. HE WHO WANTS LITTLE ALWAYS HAS ENOUGH." That such an expert photographer as Taylor should write a book entitled: "WHY MY PHOTOGRAPHS ARE BAD" is another illustration of the happening of the unexpected. The book takes up and illustrates the mistakes commonly made by beginners. It was also published by Jacobs & Co. and is sold at $1 net. Either volume may be procured through THE AMERICAN BOY, by mail, at $1.76 and $1.15 respectively.

Caught in the Act

Dwight Gardner, a Michigan lad, sends us a photograph that is a decided novelty. It represents a boy, who was photographed while stealing grapes at night. And this is how our friend explains the work was done: "The photograph was taken by means of a No. 3 Eastman F. P. K., with Eastman's Spreader Cartridge Flash Pistol and Spreader Flash Cartridges. At the back of our house is a small grape arbor which, of late, was visited by thieves almost every night, who helped themselves liberally. I thought of a scheme that would give them a bad scare and at the same time show who they were. I took a clothesline and fastened it to one of the end posts. Running it the whole length of the arbor, I then fastened it to the other end post, where I placed the kodak and flashlight. I put the flash cartridge in a box with the opening toward the arbor and placed the kodak in a smaller box on top of this. Thus, being in a box, they were protected from the damp and the box served as a reflector for the flashlight. Next I passed the rope under a pulley and up through a small hole in the bottom of the lower box and put a knot in it so that it could only be drawn just so far before it would strike the hole in the bottom of the box and stop, whereupon I fastened the end of the rope to the trigger of the flash-lamp. Then I put a piece of 2x4, about a foot long, in the second box, hinging it at one end and propping it up at the other by means of a pencil. A cord attached to the pencil was passed down through the box and fastened to the trigger of the flash-lamp. Finally the kodak was placed in the upper box, with the bulb under the 2x4, and set for time exposure. In order that I would know when it was snapped, I fastened a piece of tin on the 2x4 and right under it I placed another, with one end raised about an inch. This placed them about one-quarter of an inch apart. To each piece of tin I attached a wire and ran them into the house, where I connected them with an electric bell. Thus when the thief tried to get some grapes, he pressed against the rope. This pulled the prop out from under the 2x4, which fell on the bulb and opened the shutter, then set off the flash-light and at the same time rang the bell in the house." Evidently the plan worked to perfection.



A postal card invitation sent out by a society called "The Owls." The music staff and notes were first drawn on cardboard, and the photos cut out and pasted in the notes. Then the whole was photographed down to postal card size.

"A POOL IN THE WOODS"
FIRST PRIZE PHOTO. BY CARL L. HARTSHORN

Boys! Here is a Dollar Knife For You, FREE

—and a chance to make $9.00 a week, and in addition, earn $500 in gold by January 1, 1907

The picture below shows the exact size of my two-bladed buck-horn handle Sheffield steel knife—regular price $1.00.

It is just the knife every boy wants to own.

And I want a lot of bright, euergetic hustling boys to get one of these knives, free—all charges paid.

I don't want them to sell anything for me—or send me any money—not a cent—to get this knife.

In addition to the chance to get the knife, I want to give every boy a chance to earn some money—more money than he could make selling papers, or running errands—or in any other way.

I don't want him to peddle bills, or ring an auction bell, sell anything for me, or send me any money—

I simply want him to go and see some of his friends and acquaintances—which will be more like fun than work.

Here is the plan: I make

Parker's Perfect Paint—

Made to Order—Sold Direct from My Factory—On My Pay-if-you-like-it Plan

I want to sell it to everyone in your town who is going to paint.

It's this way—I don't sell paint by the gallon—but by the JOB. I sell a man enough paint to do his entire job of painting—no money down—no deposit—and I pay all freight on my paint to the man who orders it.

—And if the paint the man puts on his buildings satisfies him in every way, he pays me for it—otherwise it is *absolutely free*.

You see, my way of selling paint is a brand-new way.

I tell a customer for how many dollars I will furnish all the paint for the buildings he wants to paint—in any number of coats—and I guarantee that he will have some paint left over.

If I tell a customer that I will furnish three coats of paint for his buildings for $11, I will do it—no matter how many gallons it takes.

To tell him just what I will charge him for the paint to do his entire job, I must get him to fill out and send to me one of my blank applications, giving the size of the buildings he wants to paint. Now, *that* is what I want *you* to do for me.

There are a lot of people in your town who are going to paint this next year, and I want you to run around and get them to give me their names and addresses, and fill out an inquiry for my Paint Book and blank application.

I have inquiry blanks for this purpose—and I will send you 10 of them free, if you will send me your name and address.

You run around to the people who are going to paint—and tell them that Parker, the Paint-Maker, wants to give them a price on the complete cost of the paint for their work, all delivered, charges prepaid—to be paid for if satisfactory to them—otherwise to be absolutely free.

Now, every man wants to know how much a big paint manufacturer will charge him for enough paint to do the work—and he will be glad to fill out one of these inquiry blanks for you.

So it won't take any trouble to get these blanks filled in—then send them to me.

Then I can tell him just how much I will charge him for sufficient paint to do his entire job—

—And for getting me the first 10 inquiries I will send you, at once, all charges paid, this Buckhorn handled knife, which regularly costs $1.00.

Now, nearly every man who fills out one of these inquiry blanks, after hearing from me, will be so favorably impressed with my paint proposition that he will order his paint from me, and I will send you 50c. *for each one of these orders.*

Then at the end of the year 1906, I am going to figure up, and to the boy who sends me the most inquiries that result in orders, in proportion to the population of his town, according to the last U. S. census, *I am going to give $500 in gold.*

When you have filled in and sent me the first 10 inquiry blanks, I will send you 10 more, and so on.

Now, see here, Boys, this is a fine chance for you. First you get the dollar knife in just no time, for sending in the 10 inquiries. Then you get 50c. in cash for each man who orders paint, and on top of that you have the splendid chance to earn the $500 in gold by sending in the most inquiries that result in orders for my paint.

Don't think that if you live in a small town you haven't as good a chance of earning the $500 as the boy who lives in a large town, because I figure the number of orders received in proportion to the population of the town.

Now, if you want to take advantage of this offer—and get the knife and commence to earn money right away; you'd better hurry and send in for the inquiry blanks, which I will send to you absolutely free. Just write me on a postal card, saying "Send me 10 inquiry blanks." Send the postal to

The President, Parker Perfect Paint Co. 415 G 6th st. St. Louis, Mo.

The Boy Mechanic *and* Electrician

A Permanent Department — Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns. — *Edited by Robt. G. Griswold*

Experimental Lessons in Electricity

No. VII—The Galvanometer

IN THE LAST lesson we learned how to make two measuring instruments, a voltmeter and an ammeter, and in this lesson we will take up the construction of another very sensitive instrument for the detection of a small current of electricity called a galvanometer, an instrument used in measuring resistances of wires, lamps, coils, etc.

A somewhat simpler form could be adopted but it would not be so sensitive and for the purpose of measuring resistances this feature is of the greatest importance.

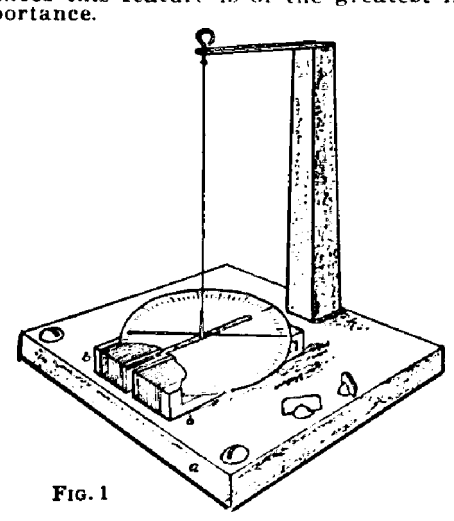


FIG. 1

The instrument is shown in Fig. 1. Upon the base a are mounted two coils, very similar to those made in our last lesson, excepting that the opening in the bobbin is not so wide and they are wrapped with much finer wire. Make the two wooden bobbins as shown in Fig. 2 of cherry or other close-grained hard wood and wind each in the same direction with No. 36 silk or cotton covered wire, leaving ends about six inches in length for attaching to the binding posts. The bobbins can be secured to the base of a coat of shellac varnish, as an attempt to fasten them with a screw or nail might result in an injury to the wire or insulation although the outer flanges may be made ⅜" wide to accommodate a screw passing through the base.

But before these coils are secured in place the post e is firmly driven into a hole in the base and secured by glue. To the top of this post is fastened an arm from which is suspended the magnetic needle by means of a silk fibre. When the base, post and arm are finished give the whole a coat of shellac varnish. Then mount the two wound bobbins, leaving about 1/16" space between the inside flanges through which the needle may pass. Connect the wires so that the end of the outside layer of the first coil is connected with the end of the inside layer of the next coil. This allows the current to travel through the winding in the same continuous direction exactly the same as though the bobbin was one single spool.

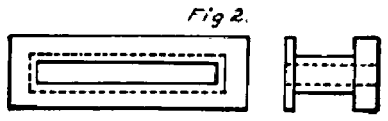
Secure two very fine sewing needles and magnetize both at the same time to insure their being as nearly alike as possible with regard to magnetic strength. Then make a small paper stirrup as shown in Fig. 3, a of good note paper and about 1/16" wide. Place the needles in the stirrup as shown at b with the eyes and points reversed, thus making the north pole of one magnet stand opposite the south end of the other. The distance between them should be about ½" and they may be securely fastened between the paper strips by a drop of shellac as at b.

A small disk is then cut from cardboard a little larger in diameter than the length of the needle and a slot is cut on its diameter through which to pass the needle as shown at c. The divisions on this circle need not have any particular spacing other than an equal space between them. This disk is then fastened to the top of the bobbins with shellac, the slot in the card being placed exactly over the space between the bobbins.

A fine fibre is then unraveled from a piece of embroidery silk, about six inches in length. One end is fastened to the top of the stirrup by shellac and the other end to the lower end of the wire which passes through the arm above. The needles should hang in such a position that the lower one swings exactly in the center of the bobbins while the upper needle swings just clear of the card.

One fact will be noticed when these needles are suspended which is that they take up no particular direction although both are equally magnetized. This is due to their being opposed and the force tending to making one needle point north and south is exactly balanced by the force tending to turn the other needle in the same direction. This is known as an "astatic" needle (as-ta-tik). It is, however, extremely sensitive to any outside magnetic force and even the slight current generated by placing the ends of two wires of different metals on the tip of the tongue will, if the instrument is well made and balanced, give quite a swing to the needles. It is a great many times more sensitive than the instruments made in the last lesson, but cannot be used in their places. The small wire hook at the top may be twisted so that the needles may be brought to zero on the scale. The finer the fibre the more sensitive will the instrument be, and a piece of spider's web is the best thing that can be had for the purpose, but it is very delicate.

Fig 2.



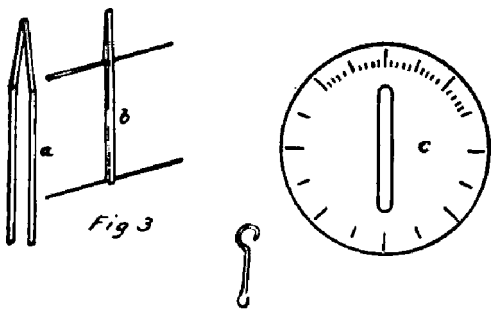


Fig 3

This galvanometer is used almost entirely to measure resistances, as was stated in connection with the Wheatstone Bridge, the description of which and full directions for using will be published in the next lesson. This galvanometer should be provided with a glass case similar to the ones which were built for the am- and volt-meter described in our last lesson. Use the greatest of care in making this instrument as much depends upon its sensitiveness, and it will well repay you for the time.

THE EDITOR'S QUERY BOX

How many feet of No. 25 cotton-covered magnet wire are there to the pound? How many feet of No. 25 wire would be required to wind the magnets on the telegraph instrument recently described? Will the battery described in the July issue operate this instrument, and if so, how many cells would be required? Could blue vitriol be used in place of sulphuric acid, and if so, in what proportion should it be mixed with the water? Would one pound of No. 18 wire be sufficient to wind both field and armature of Mr. Crowell's motor? What voltage is necessary to operate this motor? Do the commutator segments make connection with each other or is there a gap between them?—D. S. K., Hanoverton, Ohio.

Ans. About 800 feet. About ten feet. Yes, but three or four cells would be required and it polarizes rapidly. No, blue vitriol will not take the place of sulphuric acid in this type of cell. One pound of wire should be amply sufficient. This motor will operate on a current of two or three amperes and three or four volts. Two cells of any good battery should operate it. The commutator segments do not touch; there is a gap of about 1-32 inch between them.

I would like to know if it is possible to make a motor out of an old telephone generator?—A. G. C., Muskogee, I. T.

Ans. Yes; the armature will need rewinding with a larger size wire and a commutator will have to be arranged so that the poles of the armature will be constantly changed. The field poles always remain the same. A two segment commutator is all that is necessary and No. 20 single cotton-covered magnet wire will be about the right size to use.

1. What is the difference between an induction coil and a spark coil? 2. Would an induction coil of 500 ohms spark a one h. p. marine engine? 3. Could an electric motor be made to run a motor boat? If so, would the speed of the motor be too fast to drive direct to the propeller by shaft? How many batteries would it take to run a half h. p. motor?—J. C., Manhattan, Kansas.

Ans. 1. An induction coil is one that transforms a current of low potential into one of high potential, or vice versa, while the common application of the term "spark coil" may apply to this type of coil or the ordinary coil used in gas lighting, which is simply an iron core wrapped with many turns of wire. This has no secondary winding but the sudden breaking of the circuit is attended by a very fat, hot spark at the broken contact. 2. Induction coils are generally designated by the length of spark that they will give and not the resistance in ohms, which is generally very high. A coil giving a good ½" spark will ignite the charges in a marine engine. 3. Yes, but it would be very expensive. The motor could be wound so as to run slowly, but if the ordinary type was used, running at about 2,000 R. P. M., it would be better to gear it down so that the propeller would not make over 500 or 600 revolutions per minute. The number of batteries required, which should be storage cells, cannot be given exactly as the type of motor and current required are factors that govern the number of cells required. If your motor required 52 volts, at least 26 cells would be necessary, as they have a voltage of about 2, and the seven amperes of current necessary would require that the cells be of ample size. The operation of motor boats by electric power is very expensive, far more so than when the gasoline motor is used.

(*Continued on page 93.*)

Using Boy Energy to Advantage in the Schools

HOW TO MAKE use of boy activity so that it shall benefit not only the boy who gives vent to it but to his associates as well, is a problem which has troubled many who are engaged in planning school work. So much of the activity goes to absolute waste, so much of it could be made to help others, that any successful effort at intelligently directing it, deserves liberal notice.

One effort in this direction has met with remarkable success in New York City. Dr. James P. Hanly, director of Mechanical Training, in this large school system, assisted by a corps of thirty-five trained teachers, a few years ago set out to employ some of the surplus activity in the making of things useful in the schoolroom. He not only made excellent use of it but aroused an interest in real work which made it possible to do double the amount originally planned.

Director Hanly and his assistants prepared drawings for all manner of instruments and apparatus by which the problems in mathematics, nature study, science, etc., could be more easily explained, and when all were ready set the 15,000 boys, who have access to the school workshops in the city, to work at making these things.

In some of the shops the workshop classes made models illustrating geometrical problems—such as these: Showing that the sum of the angles in any triangle equals two right angles—that the area of a square inscribed in a circle is equal to two times the square in the radius of the circle; that the square on the hypotenuse of a right-angled triangle is equal to the sum of the squares on the other two sides, etc.

In one school the instructor devoted such time as was allotted to this work to making electrical apparatus. Some of the boys furnished wire, others sheet tin and copper, others binding posts and chemicals. The plans called for the making of several sets of telegraph keys and sounders. A few boys were set to making the parts, which could be shaped out of wood; others wound the coils and prepared the batteries. When all the parts had been made the whole class gathered about the bench to see one of their number do the assembling and testing. A picture is given herewith showing one of these boys sending and another receiving a message over the wires.

The instruments were later installed, one set in the class room and one in the workshop. By the use of the radiator in each of these two rooms it became necessary to put up only one wire, the ground serving as the other. Every boy in the class had a copy of the Morse code in his pocket so that on science day, when messages passed back and forth between the classroom and the shop, each boy was ready to translate the dots and dashes into letters and words. A few weeks later when the superintendent visited the class and asked a few questions about electricity, he was fairly overwhelmed to learn that these boys really knew as much about the subject as he had ever known.

In some of the other schools the subject of sound has been made clear by means of such instruments as the siren, the sonometer, Koenig's sound-wave meter, the organ pipe and other models constructed by the school boy artisans.

Heat, light and the mechanical powers were illustrated by practical models in some of the other schools.

In no school, however, was so great an effort made to clear up the mysteries of natural philosophy as in Public School No. 40, at 310 East 20th street. Both Mr. Shiels, the principal, and Mr. Wolfe, the instructor in manual work, are en-

10,000 YOUNG MEN WANTED

To qualify for positions as
RAILWAY BRAKEMEN, FIREMEN,
At Salaries from $60 to $125 a Month
We teach you by mail the Standard Rules and Modern Methods employed by leading railroads and assist you to a position when you are qualified. School conducted by prominent railroad men and endorsed by railroad managers who want our students. The greatest field today for young men is railroading. Our course is intensely interesting and fits you for immediate employment and promotion. Many positions now open. Begin at once. Write for catalog today.
THE WENTHE RAILWAY CORRESPONDENCE SCHOOL, DEPT 130 FREEPORT, ILL.

VENETIAN BENT IRON WORK
trains hand and eye. An interesting, useful art. Complete sets for classes and individuals. The Nation's Headquarters for Manual Training Supplies. Catalogs, No. 7 Manual Training; No. 8, Copper Work. Address Dept. A.
CHANDLER & BARBER
124 Summer St., Boston, Mass.

JOURNALISM
Bright young men and women, with a taste for writing, should cultivate it. The field of Journalism offers to ambitious students, money, fame, power. We train *by mail* to do every branch of literary work for newspaper and magazine. Write for "The How of It." Free.
SPRAGUE CORRESPONDENCE SCHOOL OF JOURNALISM,
503 Majestic Building, Detroit, Mich.

WHY NOT LEARN SHOW CARD WRITING?
Sign Painting or Lettering. Only field not overworked. Three separate courses. Ours is the only practical, thorough and personal instruction. We teach by mail and guarantee success. Easy terms. Write for large interesting FREE catalogue.
The Detroit School of Lettering, Dept. D, Detroit, Mich.
"Oldest and Largest School of its kind."

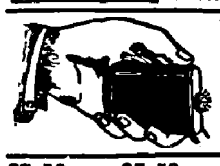
LEARN TELEGRAPHY BOOKKEEPING OR SHORTHAND
BY MAIL—AT YOUR OWN HOME
Anyone can learn it easily in a few weeks. We are unable to supply the demand for telegraph operators, bookkeepers and stenographers. No charge for tuition until position is secured. Write today for particulars.
MICHIGAN BUSINESS INSTITUTE,
507 Institute Building, - Kalamazoo, Mich.

STUDY MUSIC FREE
TWO YEARS' COURSE IN YOUR OWN HOME
We can quickly teach you, by mail in your own home, to play the **Piano, Organ, Violin, Banjo, Guitar, Cornet or Mandolin.** No expensive teacher or inconvenience, our method is unique. We guarantee satisfaction. For a limited time to quickly introduce our school in your locality, we will give you a **Two Years' Course Absolutely Free.** Your only expense will be the postage and necessary music, the cost of which is small and can be paid for as used. Write today for FREE Book. **U. S. SCHOOL OF MUSIC, Box 28, 19 Union Square, New York, N. Y.**

Wireless Telegraph
The "Telimco" Complete Outfit, comprising 1 in. Spark Coil, Balls, Key, Relay, Coherer, Automatic Decoherer and Sounder, 4 Cells Battery, Send and Catch Wires and Connections, with instructions and diagrams. A practical, perfect working outfit. Introduction price $8.50. After February 1, $9.50. Illustrated pamphlet. Sixty-four page Catalogue.
ELECTRO IMPORTING CO.,
32 Park Place, - NEW YORK

AUTOMOBILE users, drivers, repairmen, chauffeurs, and others wanted all over the country; 50,000 machines built last year in United States, affording great opportunities for men trained in this coming business; six cents a day will qualify you for good wages in this field, in which the demand is such that ability counts ahead of pull and length of service. For full particulars, address the
CORRESPONDENCE SCHOOL OF AUTOMOBILE ENGINEERING
Suite 1208 Flatiron Building NEW YORK CITY

Learn by Mail to **MOUNT BIRDS** and animals. A fascinating work for Men, Women and Boys. Quickly learned in your own home; cost low; 15 complete lessons; Standard methods; satisfaction guaranteed. Save your fine specimens; decorate home and den. Big Profits for spare time. Write for full particulars, fine catalogue and taxidermy magazine—all free, send today. The N. W. School of Taxidermy, 98 K St., Omaha, Neb.



Electric Pocket Lamps
65c (postpaid). Press the button, gives an instant brilliant light. Conveniently carried in pocket. Superior battery. Send 65c money-order for one. Better grades $1.00 to $2.25. Circular free. **Electric Novelty Co.,** 21st St., Galveston, Tex.

$7.50 $7.50 $7.50 $7.50 $7.50
WIRELESS TELEGRAPH Outfit $7.50
Powerful transmitting coil, sending key, coherer, decoherer, sensitive relay, batteries, 100 ft. aerial wires, insulators, ground clamps; full instructions and diagrams. Most remarkable outfit. Send for bulletin.
NEW ENGLAND COIL WINDING CO., Atlantic, Mass.

MOTOR HOW TO MAKE IT. High speed; enormous power; no commutator parts; no armature windings; shaft not insulated; all three in one piece. Any size for two or more cells. Easy to make. Details and drawings 15c. **B. F. DAVIS,** Miami, Fla.

THE BOYS AT PUBLIC SCHOOL NO. 166, NEW YORK CITY, USING THE TELEGRAPH APPARATUS MADE BY THE SCIENCE CLASS IN THE SCHOOL WORKSHOP

thusiasts in science work. This school is the center for the practical study of all problems in science.

Under the inspiration of Principal Shiels' hearty co-operation Mr. Wolfe designed and had made by the boys two models which deserve special mention. One is a planitarium showing clearly the relations existing between sun, moon and earth. The other a river system designed to show, in a manner as near to the real as possible, how drainage is effected in this busy sphere of ours.

The planitarium, shown herewith, looks like a complex bit of machinery, but the boys who made it say it is very simple. The fact of the matter is—a child can operate it.

A glass globe, formerly used on an arc light, inside of which are several electric bulbs, represents the sun; an old school globe, six inches in diameter, represents the earth; a smaller globe, made of paper and fastened to a circular wire frame, is the model moon. The earth is made to rotate upon its axis and moves around the sun in a six-foot circle and the moon, which does not rotate on its axis, moves around the earth in a two-foot circle. By means of pulleys and belts the whole apparatus can be set in motion when one wheel is turned. The whole model was made at a trifling expense for material.

Mr. Shiels has had it placed in the school "dark room," or camera room, where it is being daily used in the study of geography and astronomy. In the picture one of the teachers is shown explaining how the one journey of the earth around the sun may occupy the period of one year. How during one such journey the sun rotates upon its axis fourteen times, the earth upon its axis 365 times, and the moon around the earth twelve times. The model does this by actual count and that is what is very convincing to boys.

The children are also shown the location and meaning of zones, the cause and periodicity of eclipses, and the phases of the moon. An explanation that would sound abstract and which would fall upon ears keyed for other sounds, is by this instrument imbued with life and interest for grammar school children.

What adds immensely to the interest is that every bit of this complex apparatus was made by the boys themselves. It is safe to say that those who made it will live long in the memory of the school's future pupils.

NEW YORK PUBLIC SCHOOL BOYS AT WORK IN THEIR SHOP

The other model planned by Messrs. Shiels and Wolfe is a river system from its source in the mountains to its entrance into the sea. The model is twenty feet long and represents in several sections all the features of a river system.

One section of the apparatus shows the beginning of a river system. A wooden mountain has been built. On its summit a few tufts of white cotton represent the portion above the snow line—where glaciers are formed. On the north end of the mountain it is shown how portions of the glacier are broken off by the action of wind and waves, and formed into the icebergs of the northern seas. To the south a river rises from the melting snow and ice.

Another section shows the river dropping over a waterfall which makes it impossible for navigation. At this point a canal lock has been constructed and is in actual operation, showing how commercial man will not be balked by mere nature and her obstacles. Part of the water, instead of passing over the waterfall, branches off and flows into a valley. A dam has been built across the river at a narrow part, the valley is filled with water, forming a water reservoir such as we have at Croton, near New York city, for the use of the city.

One section shows how a river may be either broad and shallow, or narrow and deep; how in the mountain regions it flows swiftly, carrying a sediment which it later deposits when the current is less swift; how this forms river islands, sandbars and deltas.

Any one of these sections may be taken into the classroom, and the features of the river system taken up on a given day can be shown so that every child will understand.

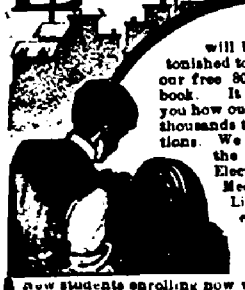
The whole system is made of wood well oiled and waxed and stained in close imitation of nature, and every bit of it was carved out by the boys of the school. It was a task involving much labor, much planning and reading, but there never was one moment when the interest lagged. The boys brought books and atlases galore to the shop, and they read and studied them as they never had studied these ordinarily uninteresting publications before.

These boys did not devote any less time to their out-door sports. They played ball as hard and long as ever, but they were too busy to loiter on the street corners or make trouble for others. All their loitering time was devoted to looking up and thinking out suggestions for the extra work in the shop, and much of the enthusiasm was due to the feeling that in this work they were helping others. They had realized their importance as workers in a community of workers.

PLANITARIUM BEING USED IN THE DARK ROOM IN PUBLIC SCHOOL NO. 40, N. Y. CITY

ELECTRICAL SCIENTIFIC NOVELTIES. Models of Locomotives, Railways, Dynamos, Water Motor Dynamos and Gas Engines. Trains and Street Cars operated by dry batteries. Catalogue B, sent free, contains full information. THE CARLISLE & FINCH CO., 240 East Clifton Avenue, CINCINNATI, OHIO

ENGINEERING TAUGHT BY MAIL HAS PUT THOUSANDS OF DOLLARS IN THE POCKETS OF OUR STUDENTS



You will be astonished to read our free 80-page book. It tells you how our practical mail courses enable thousands to earn good salaries and positions. We helped them do it. We can do the same for you. Courses in Electrical Engineering, Steam and Mechanical Engineering, Electric Lighting, Electric Railways, Telegraphy, Mechanical Drawing, Dynamo Tender, Motorman.

FREE

Now students enrolling now will be provided, free of charge with our Reference Library and a set of Electrical Apparatus. Write for our free 80-page book and testimonials.

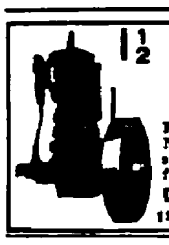
Earn this Beautiful Pocket Electric Flashlight Lamp

Send us your name and address and we will mail you 20 of the fastest selling 10c goods ever made. When sold, send us $2.00 and we will send you prepaid this wonderful electric lamp. We trust you with our goods. Circular free. SYLVAN SUPPLY CO., 805 East 42nd St., New York



1½ H. P. MARINE ENGINE

$33.50 Engine Only

Engine and Engine Fittings $37.50

For your New Boat, Sail Boat or Launch

No cranks to start—No cams, valves, gears, springs or sprockets. All working parts in full view. We build all sizes Boat Engines.

DETROIT ENGINE WORKS, 187 JEFFERSON AVE. DETROIT, MICH.

The Wonder Dynamo Motor

JUST THE THING FOR BOYS

Lights, lamps, runs motors, decomposes water, etc. Output twelve watts wound for any voltage up to ten. Has laminated armature making the most efficient little machine of its kind on the market. Will run on a 110-volt circuit. Weight 4 lbs.; height 5 inches. Send stamp for catalogue. Agents wanted everywhere. THE R. H. CORNWELL CO., 401 S. Salina St., Syracuse, N. Y., U. S. A.

Every Boy His Own Toymaker

Greatest boys' book ever written. Tells how to make a Steam Engine, a Camera, Windmill, Microscope, an Electric Telegraph, Telephone, Magic Lantern, Boats of every kind, kites, balloons, toys, wagons, bows and arrows, stilts, animal traps, etc., etc. Over 500 pictures. Every boy should have this great book. Price only 10 cents, postpaid, 3 for 25 cents. W. H. MILLER & CO., St. Paul, Minn.

POPULAR BOOKS

..ELECTRICITY..

How to make a Dynamo, a Telephone, a Motor, a Storage Battery, a Voltmeter, a Medical Coil, a Telegraph Instrument, an Electric Bell, a Toy Motor, a 1-8 h. p. Dynamo. 10 books $1.00. 10c

EARN Stereoscope and 36 Colored Views

of War Scenes, famous places, St. Louis Fair scenes, funy pictures, etc. Sell 20 imported shell hat pins at 10c each. Send the $2.00 to us and we will send at once Stereoscope and 36 colored views, Send no money. Send name and address and we will send pins at once.

Warren & Co., 6587 Sangamon Street, Dept. C, Chicago.

COIN VANISHER

Contrivance that makes all coin tricks impossible of detection. Very simple to operate. 10c. Catalog of good things free. Dept. R, LYNNHAVEN SPECIALTY CO., Norfolk, Va.

Please Mention *The* American Boy When Writing

The Editor's Query Box

(*Continued from page 92.*)

Will you please tell me if the plunge battery described in THE AMERICAN BOY for September would be large enough to furnish four incandescent lamps, and if so how long would they burn with one filling? What size wire is best for wiring a house for lights? Is it necessary to use one size of wire throughout, or may two or three sizes be used? Is it necessary to use covered wire in places where it does not come in contact with anything to cause a ground?—C. D. O., Calif.

Ans.—The battery described in the September issue is not sufficiently powerful to operate the ordinary sixteen candle-power lamps to which you refer, but you could operate the small two and four-volt lamps known as Miniature Electric Lamps. The size of wire necessary for such lamps is quite immaterial, but number fourteen would perhaps be as small as you should use. By all means use the same size wire throughout with the exception of that leading into the individual lamps, and while not absolutely necessary to have the wire insulated, it is by far the best practice.

Will you please tell me how to construct a boiler with a small steam engine, ¾" bore by 2" stroke, which I have just made. I would like to make a boiler which would be cheap and efficient. I would like to have a photograph of my engine published in THE AMERICAN BOY.—C. D. S., Ill.

Ans.—Since you have built a small engine you should have little difficulty in building a boiler for the same. A very good boiler can be made from a piece of 6" wrought iron pipe with two caps screwed on either end. This will withstand a pressure of 70 to 100 lbs. with safety, and if you want to go still further you may drill holes in the caps and insert copper tubes to act as flues. Make the holes a very close fit for the copper tubing and when the tubes are in place drive a steel pin into each end which will expand the copper and make a joint. If you then mount this little boiler in a brick setting with a small grate underneath, you will have a very good little plant.

We shall be glad to have the photograph of your engine and also the boiler when you have it finished.

Will you kindly tell me how I can use a pole to support my aerial wires in my wireless telegraph outfit, and also if I can use a four ohm sounder with the set described in the January and February numbers?—C. D. B., Morristown, N. J.

Ans.—You may support your aerial wire from the top of any pole if two or three porcelain insulators are used to prevent the current grounding through a hole. The four ohm sounder should operate with this outfit.

I am making the plunge battery described in the September issue and wish to ask if it can be made with one zinc and one carbon plate? I would also like to know where I can buy these plates? What will be the voltage if only two plates are used?—B. G., Erie, Pa.

Ans.—You can make this battery with only two plates in each cell and the voltage will be just the same, but your output will be slightly less. The greater the number of plates the less the internal resistance of the cell, which is of course one of the determining factors in the output of any cell.

A YOUNG ELECTRICIAN IN HIS SHOP

In the description of the Edison-Lalande cell, the negative plate was covered with copper oxide. Will plain copper without the copper oxide do as well? If not, please tell me the price of copper oxide and where it may be purchased. How much caustic potash will be needed for one cell? What is the E. M. F. of this cell? How many would be required to operate a 150-foot telegraph line?—G. B., Toledo, O.

Ans.—In this type of cell the main factor is the copper oxide plate, and we doubt very much if plain copper would take its place. Such a substitution might give a very small output compared with the regular oxide plate. The copper oxide may be purchased from any dealer in chemicals. It is the usual practice to put about one pound of caustic potash in each cell. The E. M. F. of each cell is about one volt, and two cells would probably operate your telegraph line.

Please explain how to connect the cells of the plunge battery shown in the September issue. Should the zinc of one cell be connected to the carbon of the next cell?

O. P. EATON, Ind.

Ans.—When connected in series the carbon plate of one cell is connected to the zinc plate of the next cell. If the cells are to be connected in parallel, all the zincs are connected together and all the carbon plates.

Please tell me what a "clutch" is and how it works? R. O. Pt. Jervis, N. Y.

Ans.—A clutch is a piece of mechanism for connecting at will two moving shafts, one generally a driving shaft and the other a driven shaft. The clutch, of which there are a good many forms, enables the two separate shafts to be rigidly connected so that the motion of one is imparted to the other without stopping. The simplest form is undoubtedly that of a cone, faced with a strip of leather, fitted into a conical cup or recess, the cone being fitted to one shaft and the cup to the other. The friction between the two serves to transfer the motion from one to the other.

Please tell me if a round carbon pencil 3-8 inch in diameter will answer in place of the flat style mentioned in the description of the plunge battery in the September issue?

D. C. A., Kingman, Kan.

Ans.—Yes, they will answer, but you should have several in each cell, connected together at the top.

The American Boy

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper or wrapper shows to what time your subscription is paid.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed. Subscribers can, by watching the expiration date on their address label, renew early and thus be sure of getting all the numbers as issued.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

A Swarm of Be's for the New Year. Prize: A Good Book. See Rules.

Why I am Proud of My State

The essay contest, subject, Why I am Proud of Massachusetts, brought some very good essays from Massachusetts boys. So good were several of them that it was difficult to make a selection of the best one. Frank Scribner, 83 Brookside avenue, Jamaica Plain, Mass., has been awarded the $5.00 prize.

We give complimentary mention to the essays of Robert Bayley, Jamaica Plain; E. Stanley Lewis, Worcester; Geo. E. Gregory, Cambridge; Paul P. Cram, Haverhill; Stearns Morse, Lowell; E. P. Cutler, Jr., Waban; Howard Mulhall, Dorchester; Louis A. Stearns, Jefferson; Robert Grenville Armstrong, Northampton; Earl Delano, Newburyport; John J. Till, Jr., Malden; R. H. Chamberlain, Jr., E. Oakland, Cal., (who writes that he was born in Masachusetts); Alfred H. Brown, Athol; Judson H. Webster, Haverhill; Herman Fowle, Newburyport; Horatio G. Mann, Rochland; George A. Day, Warren.

In recounting the reasons for their pride these boys have mentioned the following:

The landing of the Pilgrims, the conduct of Massachusetts soldiers in the Revolution, and during the Civil War, Bunker Hill, Lexington, Concord, John Adams, John Quincy Adams, John Hancock, Washington taking command of the army at Cambridge, the school boys on Boston Common, Paul Revere, Israel Putnam, Gen. Knox, Gen. Sullivan, Wm. Lloyd Garrison, Wendell Phillips, Longfellow, Holmes, Lowell, Whittier, the public school system of Massachusetts, the Sixth Massachusetts Regiment, first to start to the front in the Civil War; Massachusetts soldiers the first to give up their lives in the Civil War, President Roosevelt educated at Harvard College, Old Ironsides built in Massachusetts, the existence of a high sense of honor and respect for laws, Harvard College, Massachusetts the first to resent unjust taxation, Benjamin Franklin, Massachusetts Institute of Technology, the first successful settlement in America; Standish, Bradford, Carver, Winslow, Winthrop, John Eliot, the apostle to the Indians; Massachusetts' part in the French and Indian war; a high place in commerce and manufacturing; Jacob Perkins; Isaac Babbit; Joseph Dixon; Jas. Campbell; S. F. B. Morse; Alexander Graham Bell, among the foremost pioneer inventors and manufacturers. Hawthorne; Horace Mann; the Hoosac Tunnel; the Boston Subway, the first in America; Samuel Adams; Charles Sumner; her historic and beautiful capital; her bustling cities and thriving towns; her rugged sea shore; Boston, the Hub of the universe; Jas. Otis; Emerson; Daniel Webster; Amherst College; Williams College; Tufts; Wellesley; Smith; Boston University; the first railroad in America laid at Quincy in 1827; old South Church, Boston; the harbor; the fisheries; the establishment of Thanksgiving Day; the Boston Tea Party; Jonathan Edwards; Breed's Hill; it gives me, says one boy, my education and a chance to make the best of myself; first in the manufacture of boots and shoes; the battleship Massachusetts; the first to fight in a just and righteous cause; laws best enforced.

The essays of these Massachusetts boys show a fervent spirit of loyalty to state and country that it will trouble the boys of other states to equal.

WHY I AM PROUD OF MY STATE

To the Ohio boy who sends us before January 15th the best letter of not over five hundred words telling us why he is proud of his state — Ohio, we will give $5.00; in addition, we will print his letter in an early number of The American Boy.

WHY I AM PROUD OF MY STATE

Massachusetts Prize Essay, by Frank Scribner, Jamaica Plain

Because I am an American, and because I believe the very grandest pages of our American history are those closely linked with the Old Bay State and the sufferings, steadfastness, valor, zeal, and triumphs of her sons in those achievements which have made us a world power, second to none.

Innumerable cod in Massachusetts waters first led Europeans here, and it was their tales of this shore which spurred the persecuted Pilgrims to cross the Atlantic, in the great, glorious cause of Liberty.

Read now of what those pioneers endured. Read on and on, and surely you must soon feel, even as I feel, proud, beyond degree, of their perseverance, and proud, oh so proud, of our nation of today.

Massachusetts men first dared rebel against unjust taxation and her sons dared to board the British ships and destroy their cargoes of tea as a protest against the increased tax thereon.

I am proud of Gerry, Otis, Hancock, Adams, Eliot, Revere, Prescott, and others, each a Massachusetts born hero of the Revolution, a struggle in which our sod was first to receive the blood of martyrs to freedom. Here, too, was unfurled the flag which first bespoke a rebellion of the thirteen colonies, the first flag to hurl defiance to the British foe.

This is old, you say—yes, but it is history, and history makes me proud of Massachusetts.

In every walk of life—commerce, statesmanship, art, science, literature, invention, teaching, in war and in peace, Massachusetts stands pre-eminent. Has any sister state such a list of illustrious names?

There never was but one Franklin. Morse invented the telegraph. Ether, that God-send to suffering mankind, was the product of Massachusetts' genius; and here, too, originated the telephone, all marvels of the age.

Here was founded that grand American institution, the free public school.

Here is Faneuil Hall, the cradle of American liberty. Here, too, not only are Provincetown and Plymouth, but Boston, Lexington, Concord and Prospect and Bunker Hills, each one of which adds page upon page of glory to old Massachusetts.

Here was the birthplace of abolition, the home of Phillips, Garrison, Hale, Higginson, Mrs. Livermore, Mrs. Cheeney and Mrs. Julia Ward Howe, and, for protection, it was to Massachusetts came the fleeing slave.

Look at her poets: Poe, Lowell, Whittier, Longfellow, Holmes, Knowles, and so on down the unequalled list.

Look, too, at her list of writers dear to the heart of American boys: Olcott, Cobb, Oliver Optic, Brooks, Trowbridge, Butterworth, D'Vys, Connelly, Whitson,—and there never was but one Hamilton, never but one Emerson.

I am proud of Massachusetts because of her glory and the grand, noble deeds of her sons in the furtherance of liberty, Christianity, and civilization.

All honor to Massachusetts.
Hurrah for Massachusetts!

A Filipino American Boy

One of the best written letters from boys that we have ever read has been received by us from Martin Suyat, a seventeen-year old Filipino, who writes from San Fernando, Union, P. I., on October 6th last to THE AMERICAN BOY. We would be glad to print this letter entire as showing what the native Filipino boy is capable of doing. His handwriting is better than any we have seen from a native American boy in many months. The composition, too, of his letter is creditable in the extreme. It shows care in every respect, and that is something that we find lacking in many of the letters we receive from the boys of the United States. With the true politeness of an Oriental, he begins his letter "Dear Friend:—I send you a letter, and I am very happy if you are in good health at the time you read it." Then he goes on to say:

"Last year my teacher told me to write a letter for the boys in your native land. I wrote a letter very soon after because I wish to be a friend to the pupils in your own native land.

"My name is Martin Suyat. I am seventeen years old. I live in San Fernando, Union. I belong to the Ilocanas people that live in the northwestern part of Luzon Island. After the American soldiers got the Philippines they built a large school house in every town and told all the boys and girls to come to school. The children's parents have to go to jail if their children do not go to school, and they get a big fine. Since I have heard this I go to school every day, because I wish to learn a new language. I study Arithmetic, Language, Geography, Nature Study, Music and the Fourth Reader. The principal teacher in my school is James G. Barry. The other teachers are Mr. Gibbons, Mr. Parker, Mr. Egan, Mr. Evans and Mrs. Evans."

The letter then goes on to give us some account of the various plants and fruits that grow on the island, and in conclusion asks the editor to answer and tell many things, which he cannot take time to do. Possibly some of the readers of THE AMERICAN BOY may wish to correspond with this young man. If they do they will find him a very intelligent correspondent. Here are some questions that he wants answered: Tell me something that you have in your town. What kind of schools do you have? In what country and state do you live? In what "country" do the Filipino boys live that come to study in your land? What is your occupation and principal work? If you know the names of all the beautiful birds and animals in your country, will you tell me about them?

In closing he adds, "I have many sisters and one brother, but they cannot speak the English language." He signs himself "Very, very truly yours."

Rules

In sending in solutions to the posers in this department, observe the following rules:

1st. Address your envelope to PRIZE PUZZLE DEPARTMENT, AMERICAN BOY, DETROIT, MICH.

2nd. Mail your answers or solutions so they will reach Detroit not earlier than the 10th day of the month of issue and not later than the 15th. Answers received before midnight of the 9th and after five o'clock of the afternoon of the 15th will not be considered.

The prizes in each case will be given to the boy whose solution is the **first correct** one read by us in the order of the opening of the mail beginning the morning of the 10th.

3rd. Our Editor's decisions are final. He cannot take time to correspond with contestants, who, each month, number thousands.

4th. When two or more correct answers are received on the same day, the prize will be given to the one most neatly gotten up.

5th. Write nothing in your letter but the answer to the puzzle. If you have anything else to say, write it on a separate sheet of paper, giving your name and address on each separate sheet.

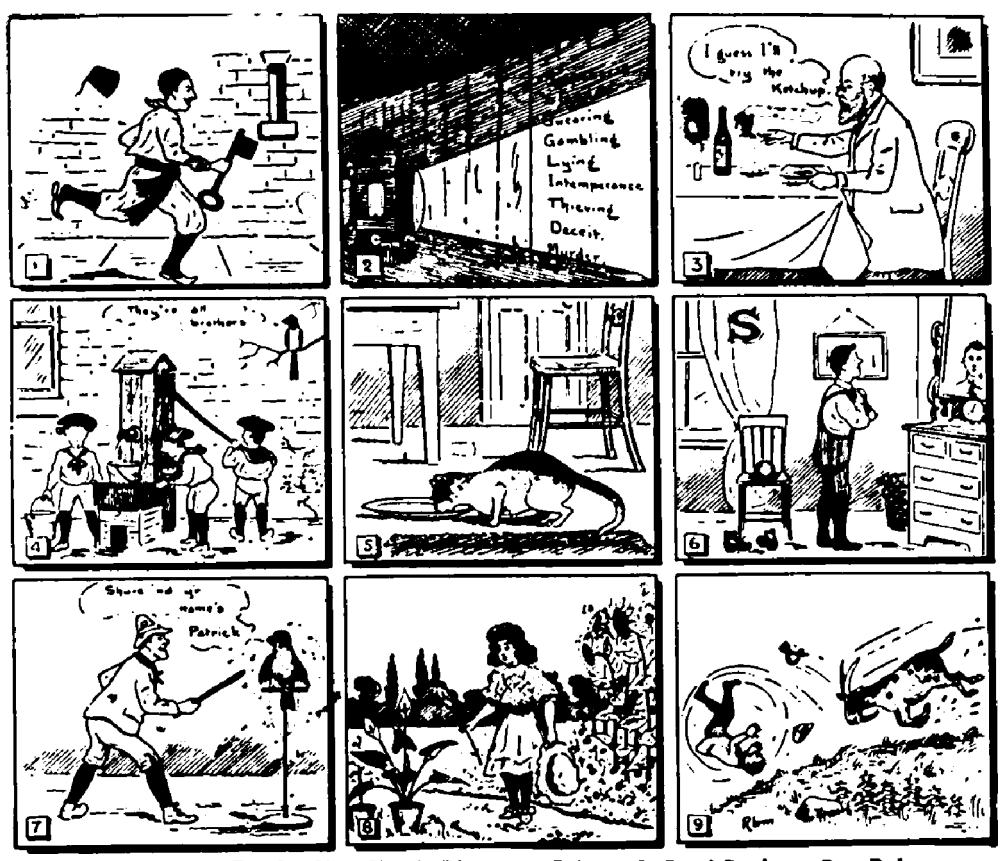
6th. If you send solutions to several puzzles, send them on separate sheets of paper, and put your name and address on each.

Mr. Bryan Gives a Success Recipe

Honorable William J. Bryan, in a letter to a high school lad in Iowa, wrote the following success recipe:

"Preparation is essential to success, but the best preparation that one can have for any work will include honesty and industry. If a man has these two qualities he can prepare himself in time for any work. If he does not have these his preparation will be of little service to him. After honesty and industry I would place ability, and—other things being equal—one's success ought to be proportionate to his ability.

"Ability is a difficult thing to define. Often that which is the result of careful preparation is attributed to genius. In fact, genius has been described as the ability to do a great deal of hard work. Sucess in politics might be described as the conjunction of preparation and ability, but the preparation must be so broadly defined as to include the qualities that enable one to take advantage of an opportunity."



Good Things to Eat for New Year's Dinner. Prize: A Good Book. See Rules.

ROBINSON CRUSOE'S GUN

(*Continued from page 89.*)

On the spot where Selkirk nightly built his island signal fire a tablet has been erected, reading:

"In memory of Alexander Selkirk, mariner, a native of Largo, in the County of Fife, Scotland, who lived on this island in complete solitude for four years and four months. He was landed from the Cinque Ports galley, 96 tons, 18 guns, A. D. 12 February, 1709. He died lieutenant of H. M. S. Weymouth, 1723, aged 47. This tablet is erected near Selkirk's lookout by Commander Powell and the officers of H. M. S. Topaze, A. D. 1868."

"Robinson Crusoe" was published in 1719, seven years after Selkirk's story was first told.

Results of December Picture Puzzle Contests

Between four and five thousand boys sent in their attempts to solve the picture puzzles in our December number. Notwithstanding this fact two of the puzzles went unsolved.

"The Composite Animal," page 41. The prize goes to Lorans Drummond, Punxsutawney, Pa. The correct solution is as follows: 1, Stag; 2, Antelope; 3, Hippopotamus; 4, Walrus; 5, Elephant; 6, Giraffe; 7, Rhinoceros; 8, American Bison; 9, Zebra; 10, Tiger; 11, Camel; 12, Leopard.

"A Christmas Silhouette," page 43. The prize goes to F. A. Coates, Rouse's Point, N. Y. The pictures by Edward Miller, Lock Haven, Pa., and Perry Barlow, McKinney, Texas, came very close seconds.

"For Whom Are the Presents?" page 45. No correct solution to this puzzle was received though thousands of attempts were made to solve it. Many came within two of the correct solution, their mistake being the giving of the box of paints to Elsie and the box of candy to Alice. The correct solution required the reverse, and is as follows: 1, Tom; 2, Willie; 3, Aunt Mary; 4, Elsie; 5, George; 6, Mother; 7, Baby; 8, Arthur; 9, Alice; 10, Mabel; 11, Uncle Jack; 12, Father.

"The Editor's Greeting to his Readers," page 46. There were many correct solutions to this puzzle. Under the terms of the offer the prize should go to Edward V. Orvis, No. 23 Stanley place, Hackensack, N. J. In the same mail with his letter came a correct solution from E. A. Holiger, 365 Wabash street, Toledo, O. Edward V. Orvis' envelope was the first of the two that was opened. Notwithstanding this, we have concluded to give a prize to each of the boys. Correct solutions came within a few hours thereafter from Alexander Quay, Washington, Pa., and Frank N. Blanchard, West Somerville, Mass. The correct solution to the cipher puzzle is as follows:

"May every reader, far and near,
A jolly Christmas spend,
And all throughout the coming year
Have good things without end."

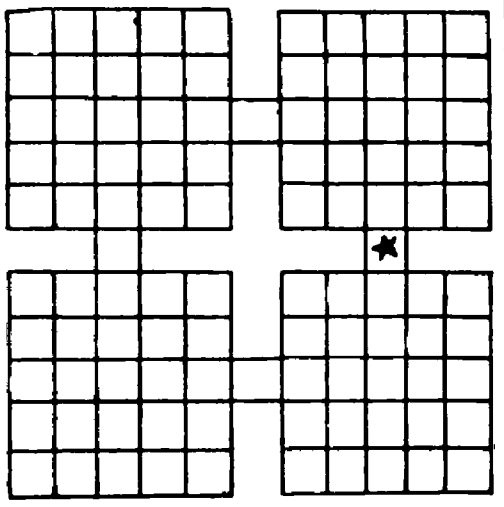
"Questions Needing Answers," page 47. No correct solution to this puzzle was received. Following we give the correct answers: 1, Why is a Christmas turkey like a jest? Because it contains a merry thought. 2, Why should the turkey be only half-cooked? Because that which is done, cannot be helped. 3, When is wine like a pig's tooth? When it's in a hogshead. 4, When is a wine glass like a prophecy come true? When it's full filled. 5, Why is a plum pudding like the ocean? Because it contains many currents. 6, Which is the left side of a plum pudding? The side which isn't eaten.

Mail your answers or solutions so they will reach Detroit not earlier than the 10th day of the month of issue and not later than the 15th. Answers received before midnight of the 9th and after five o'clock of the afternoon of the 15th will not be considered.

The prizes in each case will be given to the boy whose solution is the **first correct** one read by us in the order of the opening of the mail beginning the morning of the 10th.

Puzzle Submitted by Raymond C. Bunch, Handley, Texas

Draw a line beginning at the star and continue up or down through EVERY square without entering the square but once and



without the line crossing itself, finally ending up at the cross. A good boys' book for the first correct solution received.

A Good Match Trick

Here is a good trick with a few matches which will keep your friends guessing for a long while, before they finally see how the trick is done. Take any number of matches, 15 will do nicely; lay them out in a row and state that you will **draw one, two or three,** alternately, with anyone and leave the **last match** for them to take every time.

It is a very simple trick, when once the method of working has been explained to you, but until that time it will mystify the cleverest of heads.

If you will closely observe the following rules you can win every time and run very little risk of ever failing. First know exactly how many matches are laid out, and here let it be said, it is policy to change that number every few minutes (make the number more or less)

otherwise your opponent will learn your moves as a parrot learns poetry.

You will find when you have drawn nearly all the matches and only 5 are left, you win, because if your opponent draws 2 you do the same, if three, you take one, and vice versa.

You will readily see, that progress may be made throughout the play by fours, just as it was when there were five matches—(four and the last one)—left. Now then we count the number and mentally deducting the last match, work back by fours. Suppose 18 matches are laid out—18 minus 1=17. Now back by fours, 17—13—9—5—1. If you draw first and take 1 match you can win; if not, aim for the fifth match and failing that, try for the ninth. These matches might be called key matches; if you fail to take in the first of these, try for the second, or, if necessary, the third.

Once you draw a key match, move forward by fours, if your opponent takes 2 you take 2, if 1 you take 3, if 3 you draw 1.

Try this trick some dull evening and you'll be surprised to find how pleasantly the time will go.

Born a Prince, Living a Priest

Seven years ago, as the crack cavalry regiment of all Saxony rode off the field after maneuvers, there was one among the gaily-uniformed officers who on that day cast thinkingly the die that took from him the princely prerogatives of birth, including the possibilities of a throne, to take up his share of the big world's work in the most self-sacrificing of its callings. Prince Max it was; then in the manly vigor of an athletic young manhood of twenty-seven, not long a graduate of Dresden's university. The life he was leading, and the titled ease to which he had been born, did not satisfy him; he had decided to take priestly orders, and devote his abilities to the closer spiritual needs of the people over whom he else might have ruled.

He did not ride back to quarters that June morning, but to a nearby monastery, where he doffed his brilliant trappings, laid by sword and spurs, and put on the dull, gray garb of priest—and ever since has he served his church.

Today, at thirty-four, he is a professor of theology, so honored in the German branch of Roman Catholicism that he will probably receive the first vacant archbishopric; that, almost certainly, will prove his stepping-stone into the College of Cardinals—and (so his admirers insist) that, in its turn, to lead this princely "father" to the papal throne of St. Peter itself. "He has given up a temporal throne," many a peasant puts it, "and he shall therefore inherit a spiritual."

There have been other titled Cardinals. Cardinal Fesch was an uncle of the great Napoleon, and Cardinal Bonaparte was his grand-nephew; and there were those nobly-born statesmen the Cardinals of Louraine and Braganza. But this Max of Saxony, whom a devoted people call "father," sets the best example of all in his cheerful days of labor among his fellows, preferred to the emptier but far more gorgeous existence he might have led as their monarch.

"FATHER MAX"

Among the Boys

Floyd E. Greiner, Anthony, Florida, in sending in solutions to some of our puzzles, writes a few words about himself. He pronounces himself a great friend of THE AMERICAN BOY, and says that he has all the numbers from March, 1902. Floyd is something of a farmer, having earned in seventeen days last summer, $31.75 packing cantaloupes. He raised a large pumpkin which weighed one hundred and two pounds. We are not sure but what in this young man we have the prize "Longfellow," as well as the prize pumpkin grower, as Floyd is 6 feet, 1¾ inches tall and only fifteen years of age. Can any of our boys beat him, either in height or in pumpkin growing?

"YOUNG AND OLD"
ALIKE EXPERIENCE THE KEENEST ENJOYMENT IN HANDLING A PERFECT WEAPON

SELF MADE MEN WHO BECAME GREAT LAWYERS. Study Law at Home

MANY a man has made a mistake in thinking that he could be a successful lawyer. No man, however, ever made a mistake in studying law, because no study has so great a tendency to broaden the mind, elevate and cultivate thought, sharpen the reason as the study of law. A young man versed in the law has a better chance for success in any direction in which he may turn his talents. A man is a better preacher, a better teacher, a better statesman a better workman in any department of physical or mental activity for having studied the law. The law is a great stepping-stone to preferment. A law school is the best place in which to study law. It is not the only place. The men whose portraits appear in this advertisement, and countless others, have made great successes without law school instruction. They became great lawyers not because they never attended the law school, ***but despite the fact that they did not.*** The opportunities open to these men for study were inferior in number and in character to those open to any young man nowadays.

The correspondence system of study which claims to be second only to study in a resident school and infinitely better than study in an office or alone, comes near bringing the law school to the home of the student. Certainly what young men have done, young men can do again under more favorable conditions.

We want you to write us for our handsome catalogue of particulars with reference to the corresponding system of the study of the law, and our book of testimonials from hundreds of students, many of whom have become successful practicing lawyers in every State in the Union and in some foreign countries.

These are furnished free of charge. They will interest you and may lead to something of great advantage to you.

Address: THE SPRAGUE CORRESPONDENCE SCHOOL OF LAW,
474 Majestic Building, DETROIT, MICH.

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

The prize for best list of answers to November Tangles is divided between Frank L. Rogers, Alden, Iowa, and J. Parsons Greenleaf, Sparta, New Jersey.

Others who answered every word correctly are: Hubert Hoyt, Dudley B. Kimball, Allert Brager, Louis O. S. Wallace, Clyde Underwood and F. C. Millspaugh.

Willie R. Schoenberger, R. F. D. 1, Upper Sandusky, Ohio, wins the prize for the best lot of original puzzles.

Honorable mention is accorded the following for excellence: Irving Martin, Jr., Lenora B. V. Wallace, Noble P. Hollister, Bunting Hankins Roe, Nels Waldemar Kindgren, Lewis Smith, John H. Seamans, Cleary Bullard, Sarah Gilles, Eric Kohler, Richard E. Rundell, Arthur L. Diamond, Leonard M. Steburg, Ralph H. Wirt, Edgar M. Hansen, Vernor Lovett, Walter Horton, Albert Ellard, James E. Shields, Nellie Loring Roberts, M. Gray, George H. Stanbery, A. W. Youell, Frank M. Field, C. Clyde Nickum, Oscar A. Olson, Louie Tellner, J. Eddie Prass, Clarence Swavely, Susie M. Wells, J. Horace Trumbull, Frank Hall, Roy Jeffries, Wallace A. Philgreen, Harry Dinges, Carlyle Weston, Goodwin A. Johnson, Cary Wagner, Harley Wight, Everett J. Holmes, Warren P. Smith, Stanley B. Weld, E. R. Cook, Robert D. Holmes, Jr., Katherine Haren, Osborn J. Dunn, George V. Jehu, Clinton Fisk Elliott, Leland Andrews (in pencil).

A prize of two dollars will be given for the best lot of original puzzles suitable for the month of March, received by January 20.

A prize of a new book will be given for the best list of answers to the January Tangles received by January 20.

New Tangles

1. JANUARY RESEARCH.

Each numbered clipping is taken from some story or article that appeared in the November, 1905, AMERICAN BOY. Find the story or article from which each is taken. One letter taken from the title of each, in numerical order, will spell a January holiday.

The letter to be found in each title is as follows: In 1, the sixth letter; in 2, the twelfth; in 3, the seventh; in 4, the sixth; in 5, the seventh; in 6, the ninth; in 7, the sixth in 8, the sixth; in 9, the ninth; in 10, the twelfth; in 11, the sixth.

—Willie R. Schoenberger.

2. PRESIDENTIAL ACROSTIC.

All words of uniform length. The primals spell the name of a president born in January. 1. A pit from which water is drawn. 2. A sacred bird of the ancient Egyptians. 3. The king of beasts. 4. The common name of the great northern diver (bird). 5. The ruler of Russia at the time Columbus discovered America. 6. The capital of Upolu island. 7. 63,360 inches. 8. An American fur-bearing animal. 9. A young horse. 10. A mule's prerogative. 11. The sacred image which the Russian priests carried in the Japanese war, to bring victory. 12. The river that Aaron turned into blood. 13. The capital of a South American republic. 14. A city separated from Canada by a lake of the same name. 15. A city and shire of England.

—Irving Martin, Jr.

3. PICTORIAL ZIG-ZAG.

Interpret the pictures by words of four letters. Write the words one below the other in numerical order. The zig-zag letters, in the line of the star path in the diagram, will spell the name of a famous American statesman who was born in January.

1 × — — —
2 — × — —

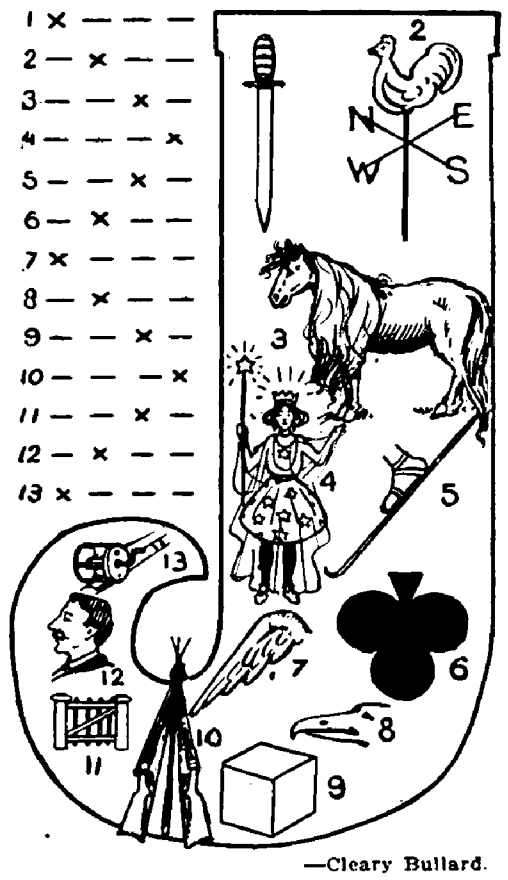
8 — × — —
9 — — × —
10 — — — ×
11 — — × —
12 — × — —
13 × — — —



—Cleary Bullard.

4. SLIDE THE SLIPS.

Write each of the following four rows of letters on a slip of paper, place the four slips the same as they are here, and move them to the right and left till six perpendicular rows are found which will spell a famous American document that was issued in January.

T Y H E C T P L T R A S
H M I I R A I P A D E G
E O P Q A P O O M O T V
R A K S T N A N C A N Y

—James E. Shields.

5. NEW YEAR'S BELL.

Each of the numbered diagrams is the outline of a certain county in the United States. The names of these counties are of uniform length, and their initials, in numerical order, will spell a January greeting.

The numbered counties are from the following states: 1, Oregon; 2, 3, 4, California; 5, North Carolina; 6, Arizona; 7, Idaho; 8, Tennessee; 9, North Carolina; 10, Nevada; 11, Washington; 12, Mississippi.

—Richard Rundell.

6. CENTRAL ACROSTIC.

The primals are identical; the finals are identical; the words are of uniform length. The central letters spell the name of a famous American general, who was born in January.

1. A kind of cloth. 2. Range of view. 3. A fur-bearing animal. 4. A portion of an act in a play. 5. A rolling swell of water. 6. A Mediterranean vessel. 7. A utensil for sifting. 8. A healing ointment. 9. A continued attempt to gain possession. 10. A gulf of Lake Victoria Nyanza, named after a famous African explorer.

—Osborn J. Dunn.

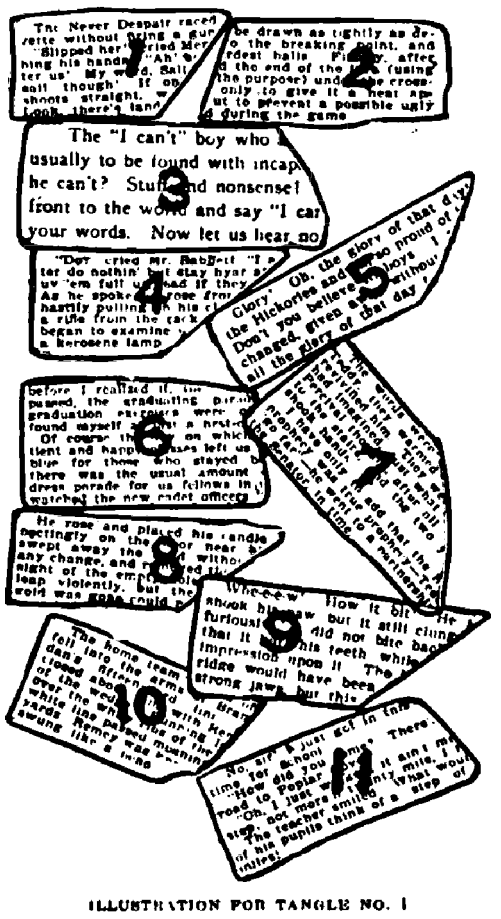


ILLUSTRATION FOR TANGLE NO. 1

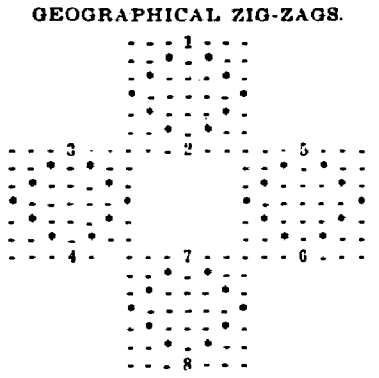
7. SHAKESPEAREAN REBUS.

Hamlet's first speech.

—Prairie State.

8. GEOGRAPHICAL ZIG-ZAGS.



Upper: A county, river and "basin" of Quebec; a lake in German East Africa; a city and province in Lombardy, Italy; a seaport on Cape Breton island; a town near Worcester, England; a butte in Navajo county, Arizona; a province of Spain. Left zig-zag, 1 to 2, a province of Austria; right zig-zag, 1 to 2, one of the United States.

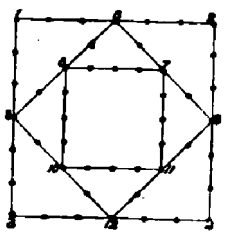
Left: A sea on the Russian border; a town near Panama, on the canal; a town near Warsaw, Russian Poland; an island south of New Zealand; a town in Chihuahua, Mexico; a river in British Columbia and Alaska; a group of islands in the Atlantic, near the U. S. Left zig-zag, 3 to 4, a kingdom of Europe; right zig-zag, 3 to 4, a town near Florence, Italy.

Right: A town of Siberia, on the Trans-Siberian railway; a capital city of South America; an Alabama county seat; a Kansas county seat; a lake of northern New York; a town on the western coast of India; a lake near the center of Australia. Left zig-zag, 5 to 6, an island belonging to Great Britain; right zig-zag, 5 to 6, an island belonging to Denmark.

Lower: A town and division of Palestine in the time of Christ; one of the northernmost towns of Idaho; a department and town of Uruguay; a county seat of New York; a county of Kentucky; a Georgia county seat in a county without a railroad; a kingdom of Europe, on the Danube. Left zig-zag, 7 to 8, a southern state; right zig-zag, 7 to 8, a country of Europe.

—Allert Brager.

9. SQUARES IN SQUARES.



1 to 2, garments. 1 to 3, to rebuke. 3 to 4, to rival. 2 to 4, to drip. 5 to 8, a skinflint. 8 to 12, pertaining to the country. 5 to 9, sorcery. 9 to 12, an artificial waterway. 6 to 7, to throw. 6 to 10, to clean by rubbing. 10 to 11, a certain bird. 7 to 11, verdant.

—Frank C. McMillan.

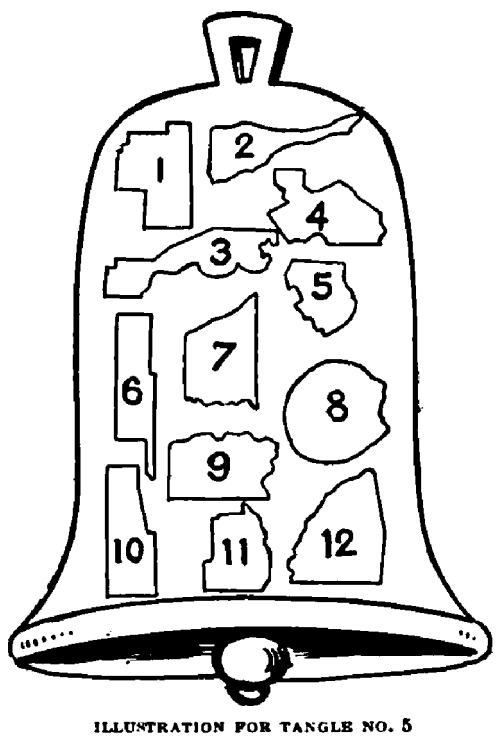


ILLUSTRATION FOR TANGLE NO. 5

10. COMBINING SYLLABLES.

BON, CAN, CAR, CEL, CUS, DEB, ENT, FLU, GAR, MEL, MEN, NER, NET, PAR, PID, POR, POT, ROT, SON, STU, TAL, TED, TER, TON, TOR, TOU, VUL, WAN.

Build 60 or more two-syllable words by combining pairs of the above twenty-eight syllables; as, Bon-net, Par-son, etc. Every syllable is employed at least twice in forming the 60 words. Bon-bon, and similar duplication of syllables, is not combining pairs. Common geographical words are admissible.

—Parson Queer.

11. VIRGINIA PENTAGON.

The words defined read across and down the same.
1. A letter in American.
2. A negative. 3. A man's name. 4. Produced. 5. Liveliness. 6. A formal public speech. 7. Adieu. 8. An eternity. 9. A letter in American.

—Benjamin L. Miller.

"Bee Redi"

Professor George E. MacLean, of the State University of Iowa, speaking of how great men became great, has the following to say:

"The MacLean clan has a motto which has had influence with me. The motto is in the old spelling, 'Bee redi' (Be ready). In New England, the home of my childhood, the sentiment is very common that one should take time to prepare to do things thoroughly. A saw there is 'What is worth doing at all is worth doing well.' In our Sunday school and church life we were taught that every man's life was a plan of God and that there was a place for one who would have faith to prepare for it. The New Englander, like many in the West, desired the best. The proverb that 'The best is the cheapest in the long run' was popular."

AMERICAN BOY POST CARDS

PRINTED IN THREE COLORS RED, YELLOW AND BLACK

EIGHT CARDS IN THE SET

"Just Got a Raise" Card
"Foot Ball" Card
"Base Ball" Card
"Swimming" Card
"Boy and Dog" Card
"Fishing" Card
"Treed by a Bull" Card
"Up in a Balloon" Card

THEY ARE CATCHY AND FUNNY

One set of 8 cards costs 20c postpaid. If you want to make money selling these cards to your boy friends you can buy them in quantities at the following prices:

100 assorted cards for $1.00, postpaid
500 " " " 4.50 "
1000 " " " 8.00 "
Cash with order.

They sell at retail for 3c apiece, or 2 for 5c. Orders filled promptly. Send orders now to

THE SPRAGUE PUBLISHING COMPANY

In Buying Boys' Books
Do Not Forget These

If you are a boy under sixteen years of age, you should own a copy of our editor's "Three Boys in the Mountains." Price 75c.

If you are a boy or young man under twenty-one, you should have "On the Field of Honor," being stories of heroism. Price 75c.

Have you our editor's "Making of Our Country Series," two volumes of which have been issued, namely, "The Boy Pathfinder," (a story of the Oregon trail), price $1.20, and "The Boy Courier of Napoleon," (a story of the Louisiana Purchase), price $1.20?

Do you know, too, that our editor has written a "Life of Napoleon Bonaparte" for boys? Price $1.00?

Then, we have a "Life of William McKinley" that we sell at $1.25.

Do not forget the two pamphlets, one written by Prof. Williams of Denison University, Granville, O., on the Rhodes Scholarships and Oxford University, and the other on American Boy Day at St. Louis. Each of these sells at 25c.

If you were not a subscriber to The American Boy last year, you ought to have Vol. VI., including 12 numbers (November, 1904—October, 1905), handsomely bound in cloth. Delivered free at $2.00.

THE LAW as a profession, to-day, offers no impossible barriers to the ambitious young man in either city or country. On the other hand, it is ever offering greater opportunities for high achievements in fame and fortune. In modern business pursuits the young man with a knowledge of commercial law, rapidly advances to the higher positions, because his mind is broader; his judgment clearer; his decision better.

The Sprague Correspondence School of Law was founded for the young man who cannot afford the time and money necessary to attend a law college. It carries to his home **BY MAIL** all there is to be had at a college. It demands no sacrifice of the student. It does not burden him with expense. requires nothing but honest effort. Thousands of students of the

Sprague Correspondence School of Law

have distinguished themselves by passing the required examinations in every State, and being admitted to the bar without other preparation than the **Sprague Course by Mail.** The cost is small. The terms are easy. There is no time limit. Write for **FREE** educational literature, and see how great are the possibilities of your success.

Premiums for Boys who will send us NEW Subscriptions to "The American Boy"

☞ The sender's own subscription cannot be included. Neither can a renewal subscription. Yearly subscription price is $1.00.

No. 416. "The American Boy" Chain Pocket Knife. A splendid knife. Everybody wants it. Ebony handle 3⅛ x ¾ inch. Double steel bolster, brass lined, two best steel blades, steel chain about seventeen inches long, with loop to fasten to button on pants or coat. Neat and handy. You always know where your knife is.

Given for 1 new yearly subscription. Price 50c. postpaid.

No. 406. The Automatic Rotary Press. It is durably built, and will print eight lines with one revolution of the cylinder. It is self-inking and has automatic feed. Dimensions of frame: Length, 6 inches; width, 5¼ inches; height, 5¼ inches; width of feed, 4 inches; entire printing surface, 2¾ inches wide, 3 inches long. Capacity, 8 lines. Outfit included with this press: One box and type tray, one special font style C type, one can of our Excelsior Ink, one box gold bronze, one bronzing puff, one pack visiting cards, one pair type tweezers and one roll paper.

Given for 2 new yearly subscriptions; or for 1 new yearly subscription and 65c. Price $1.25, delivery charges prepaid.

No. 412. 14-K. Solid Gold "Diamond Point" Fountain Pen. Fully warranted and will give satisfaction equal to many of the more expensive kind. We have sent out thousands of them. Full length is 6 inches.

Given for 1 new yearly subscription. Price 75c. postpaid.

No. 411. Weeden Upright Engine, stands 8 inches high. The steam chest, steam and exhaust ports, whistle, whistle valve and throttle valve seats are all cast in one piece, and locked steam tight to top of boiler. It is made throughout of well tempered polished sheet brass. It exhausts steam through the smokestack as shown in cut.

Given for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price $1.00 postpaid.

No. 417. The Popular Book for boys—**"Three Boys in the Mountains,"** written by the Editor of "The American Boy." 2,000 copies sold in December alone. A clean story of western adventure. 192 pages—4½ in. by 7¼ in. **Handsomely bound in cloth and illustrated.**

Given for 1 new yearly subscription. Price 75c. postpaid.

You can easily get new subscriptions for the best magazine for boys in the world. Premiums can be bought of us at prices named.

Stories Out of My Own Life

By THE EDITOR

No. 4--Up in The World

I NEVER HAD a "hankering" for going up in a balloon; indeed you could not hire me to set foot in a balloon basket, let it be tied ever so securely to the earth; it might break loose, you know, and a loose balloon is about the wildest thing a fellow can ride. You may call "whoa" till your breath gives out, and jerk the ropes, and plead with tears in your eyes, and scold yourself red in the face, but you can no more stop or direct the course of the thing than you could stop or direct the course of a comet were you seated astride its tail. You must just wait till it gets ready to stop, and be satisfied to be set down any place that may suit its royal fancy—the top of a tree, or the middle of a lake, or the roof of somebody's house—mighty uncomfortable places any of these. No one ever heard of a balloon landing a man at his front door, or setting him down in a soft bed of moss—it's always in some outlandish place, fifty miles from civilization and with a broken leg or neck.

The nearest I ever came to going up in a balloon was in Hyde Park, London, where for a few pence, you may take a ride in a captive wind-bag, but I only got so far as to stand fifty feet away and see some scared friends of mine try it. No, thank you! No ballooning for me; I am not ready to fly yet.

I never liked getting far above the common, ordinary level of the earth in any way. I wouldn't be a good bridge builder, or tight-rope walker, or carpenter on a sky-scraper, or mountain climber. I like looking up at the waving tops of big trees, the tapering spires of stately churches, the shifting, ever-changing clouds, the silvery moon and the star-bedecked sky, but let me get up into the air a few feet and look down, and I am flabbergasted, confused—plain scared.

I haven't a bit of curiosity about what's at the bottom of holes in the ground, either.

Down in Mammoth Cave, Kentucky, my guide held a torch over a big, black hole and said, "this is the bottomless pit." "All right," I said. "I'll take your word for it. Let's go on."

"But throw a stone down into it and prove it for yourself," he said. "You'll not hear it strike bottom."

"Now, why should I doubt you," I replied. "You, of course, know there's no bottom to it. You've been down there. I haven't; and then what's the use of my throwing stones down there and filling up the hole and maybe hit some fellow—some Chinaman. I don't like holes without bottoms. No self-respecting hole would go around bottomless, anyway." I refused to be interested, you see.

Up and Up the Narrow Iron Stairway

One day when a boy I climbed up and up the narrow iron stairway that leads you to the tip top of the dome of the United States Capitol at Washington and walked boldly out on to the little balcony, from which you may look down hundreds of feet and find the earth peopled with little, insignificant, ant-like men and women, and fly-like boys and girls, and whole trains of cars that look like worms, and a great city resembling a colony of big insects. Just one look and my head swam. Actually I felt as if something were just pulling me off from that balcony, and that if I didn't hold on hard I'd go right through the lattice work of the railing. If I had been up in a balloon I would have climbed out and dived right into space. That's the way it affected me.

Then one day when I was in Paris it began to rain. I was near the beautiful Arc de Triomphe which Napoleon erected (or began to erect, for others finished it), to celebrate his great victories. I ran under it to keep from getting wet. It then occurred to me that I had never been on the top of it; so up I went. I didn't know it was so high or I might never have started. Once up I walked about on the broad, flat top, gazing out over the beautiful city—there was the Champs Elysees, and beyond it the gardens of the Louvre, there the Pantheon, there the Madeleine, there the Eiffel Tower; and then I happened to slip up close to the railing and look down at the open square directly below me. For the first time, I realized I was alone. There was not a soul on that roof but myself, and there was that awful sense of something hauling, tugging at me as if to force me over the edge. In a hurry I turned and walked grim and determined to the little door that led to the stairway, and thence to the ground.

I have had the same sensation at the top of Pike's Peak, in Colorado, and in the head of the Statue of Liberty in New York Harbor. And when my friends take me to the windows of their offices in the top of twenty-story sky-scrapers and tell me to look down at the insignificant world beneath, I say, "no, thank you, I'll just look away off yonder at the stretch of river, or bay, or ocean, miles and miles away. I like that view best. You look down—I'll look up or straight ahead."

But I must tell you of one up-in-the-air experience that I thoroughly enjoyed. It took place in Switzerland. You must know that Switzerland is the paradise of mountain climbers, for Switzerland is a country that stands mostly on edge. When traveling in Switzerland you are seldom going on a level; if you are not going up, you are coming down. It's a country of mountains and valleys—mountains that rear their snow-capped heads amid the clouds, and valleys that bloom and blossom on either side of rushing streams that take their rise at the feet of mighty glaciers. And so it is, that every summer, men, and women too, from every land, who love to conquer the giant peaks and stand victors on their summits, flock to Switzerland, 'till not one of the great mountain tops of the Alps can boast it has not been subdued.

Old Matterhorn for many years laughed at those daring climbers who braved her dangers and went down to death in her avalanches, but now every year this wonder-peak is subdued by not one but many. Just so our own Pike's Peak once stood defiant and said to those who tried to reach her top, "No, death awaits him who tries to reach my rock-crowned summit," and men came away and said, "Pike's Peak must remain ever impassable," but now, if you are in the pretty little village of Manitou any summer evening, you may see men and women with staffs in hand and bundles on back, starting for the climb, and at sunrise the next morning they will be standing upon the crown of the heaven-kissing mass of rock watching a glorious sunrise above the clouds.

Pike's Peak has succumbed to the bravery and the skill of man, and so has Mt. Blanc and the Matterhorn and a hundred other peaks that once defied man's most heroic efforts.

Zermatt is a little village, high up in a pretty valley of Switzerland, in a region of eternal winter—the highest above the sea, they say, of any town in Europe. Famous is it also for its views of mighty mountain tops, prominent among which are Monte Rosa and the Matterhorn.

From Zermatt there runs up the face of a mountain two slender strips of steel—a wonderful piece of mountain railway, for at times the road bed seems to climb nearly a perpendicular. It is a fearful climb for the nervous man or woman, and I noticed that my fellow passengers—some of them children—were very quiet as we went slowly up, up, up, through forests of alpine cedar and out on the very edge of rocky cliffs. We were climbing to the summit of a great mountain only to see another and greater one which rose before us grand and majestic across an intervening valley—the Matterhorn, 10,290 feet in height.

The road ended at a little station near the top, and, August as it was, we buttoned our overcoats tightly about us and trudged briskly, to keep warm, to our hotel, the Rippelalp, where, 8,400 feet above the

Any Place That May Suit Its Royal Fancy

sea level, we looked directly against the face of the mighty Matterhorn.

The next morning early I was up and out, not to miss a moment of the precious time. A small telescope stood in front of the hotel, pointed toward the top of the Matterhorn. Eagerly I seated myself and pressed my eye to the glass. At once the rugged old hide of the monster came close before me. What appeared to my unaided eye as a flat surface of snow-covered rock near the top, now appeared broken into massive walls and buttresses, with dark crevices and caverns between.

Awed by the sight, I stepped aside to allow another, a stranger to me, to take a look. "Did you see those men?" he asked after a moment, as if asking the question of himself.

"What men?" I said, at once eagerly curious. The stranger replied without taking his eye from the glass: "There are three men climbing up near the top—no, there are four; one of them is down. The others have stopped to assist him. He is sick or played out. Now he is up and crawling on all fours. The whole party are in a bad way. Now he is down again."

"Let me see," I urged excitedly, forgetting my manners. "This is something I did not expect."

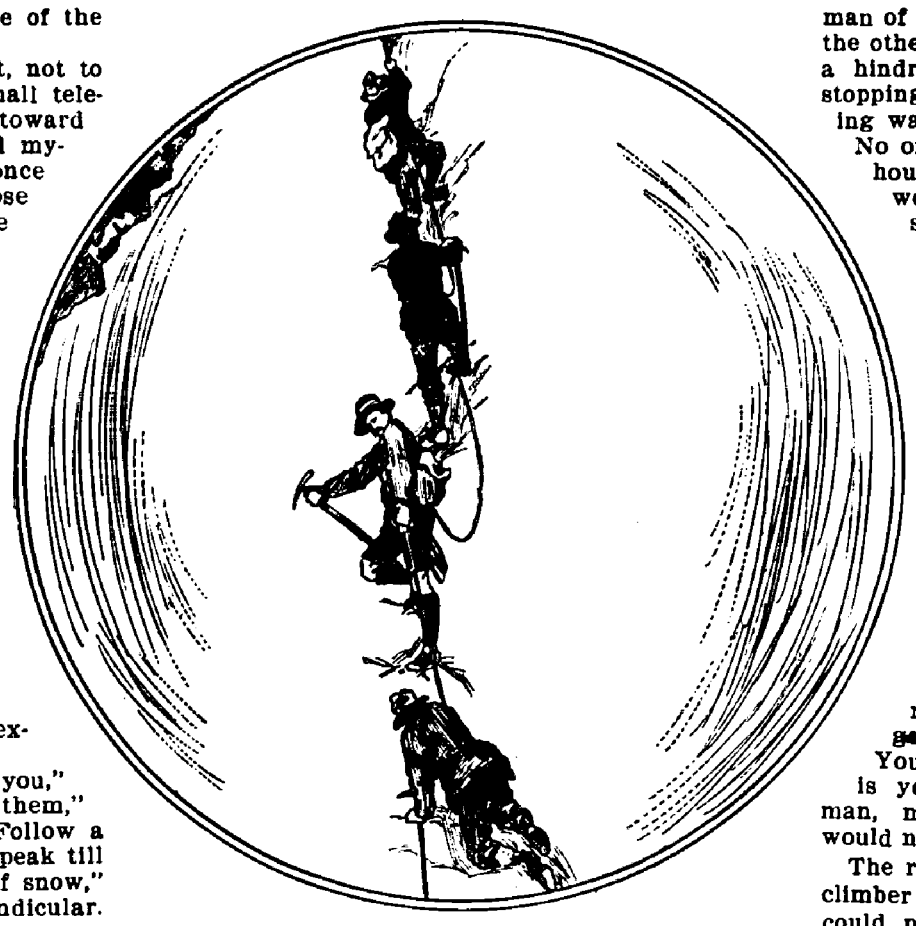
The man politely gave me the seat. "Thank you," I said, sliding into his place. "I do not see them," I whispered, nervously, a moment later. "Follow a line down from the center of the top of the peak till you strike what appears to be a clear field of snow," he said, "It looks to be standing perpendicular. About the middle of that field you will see four moving figures. Look close; they are very small."

"I see them!" I almost shouted, trembling in my agitation, "they are moving! Why it looks like a perpendicular wall they are climbing! They are close together and move one at a time! The one ahead moves a little ways and stops; then the second moves and stops; then the third; now the fourth; but he is crawling and the third man appears to be pulling him by a rope."

"They are tied together, the last man in the line is fagged. The others must carry him along," remarked my companion.

"Will you look again?" I said, not taking my eye from the glass.

"No, I'll go in to breakfast."



"Thank you," I replied, as if the man had done me the greatest favor imaginable in leaving me alone to watch that fearful spectacle. For a half hour I sat with my eye glued to that glass, watching the struggles of those four daring men, as bound, each to each, they climbed foot by foot, the mighty face of snow, and at last disappeared over what appeared to be a shoulder of the mountain. Then with a great breath of relief I arose from my chair and went in to breakfast.

Ah, the lesson that sight has been to me all my life since that hour! The mountain of life! The awful climb to the summit, in which we are all engaged! The responsibility of each person for every other, a responsibility no one of us may throw off without being a coward! Suppose when that last man of the four had tired and had fallen by the way, the others had cut the rope. Why not? He was only a hindrance. Precious time was being wasted in stopping to wait for him. Precious strength was being wasted in lifting him. Why not cut the rope? No one would know. He would die, and in a few hours the snows would cover him, and the others would be far away at the top, with no one to say he saw them cut a brother off.

Why be handicapped by the other boys in our struggle in life? Isn't it hard enough to bear one's own burdens without having those of others. Ah, one wiser and better than we has said, "Bear ye one another's burdens." "You who are strong ought to bear the infirmities of the weak."

You and I are tied to others by cords. You would not cut these if you could. They are cords of blood. There is a father who has grown old and weak and perhaps poor and helpless. You would not cut the rope, would you? There is a mother, old-fashioned, out-of-date, wrinkled, gray, perhaps a little childish. You would not cut the rope, would you? There is a brother, crippled, weak, dissipated, wicked, ungrateful, prodigal. You would not cut the rope, would you? There is a son, unfilial, forgetful, worldly, blinded, going to perdition. You would not cut the rope, would you? There is your friend, your acquaintance, your fellow man, mistaken, foolish, perverse, wicked. You would not cut the rope, would you?

The rope was the salvation of that weak mountain climber that day on the Matterhorn's awful steep. I could not hear what he said. He may have been pleading, crying, complaining or cursing, but I know only that the rope held him, and that in due time I saw the four—every one of those men, mount the edge of that glassy steep, and in my imagination I could hear them give a shout of triumph and see tears of gratitude in the eyes of the one who suffered and by the help of others persevered to the end.

Boys, it is grand to climb alone, to overcome difficulties alone, to conquer, to achieve alone, but it is infinitely grander to know that in climbing we have helped others also to climb; that in overcoming, we have helped others to overcome; that in conquering and achieving we have helped others to conquer and achieve.

The Comforting of the Master

By GERTRUDE ROBINSON

UP AND DOWN the schoolroom the old master paced. His worn, thin hands clasped tightly the roll of exercises. How he had dreaded to correct them in other days; to see how little of his teaching had been of use! But now he could not bear to begin because it was the last Time. All his life, since young manhood, had been passed in this old school. He had seen many classes of boys grow up and leave to make room for others. Now he, too, was to leave. He saw each desk peopled with a multitude of forms, some of them dear, some of them dreaded, yet all precious to memory. But next week a new master, a progressive, strong man, who would not be haunted with visions of the past, was coming. The old man sat down at the desk and buried his face in his hands. The bitterness of failure was upon him.

Out in the yard the boys were lingering to play snowball. Their shouts were not so merry as usual, but were more boisterous. They were trying to forget how the old master's voice trembled when he told them, at the close of the session, that they were to have a new master on Monday. They had never realized before that they cared for him. They were not conscious of it now. But their boyish hearts still tingled in response to the unselfish nobility of his last words:

"He'll be a good master to you, lads; a better one than I've been—or—can be. I've tried my best with you, laddies. Now, another man is to have the chance to try his best. Help him succeed, my boys. God bless you and him!"

The boys were, apparently, playing ball. Each was ashamed to say to the other that he was waiting to see the master close the schoolhouse for the last time, and to receive his "good-bye." They knew he must finish his exercises before leaving. It seemed to take him longer than usual.

Presently a small boy climbed up on the bank and peeped in the window. When he dropped down, his ruddy face was puckered up. He looked ready to cry. Instead he made a mammoth snowball, dipped it in water, hurled it at the bad boy of the school, opposite—and burst into tears.

"Cry-baby," sneered someone.

"Shut up," roared the "bad boy"; "he isn't. We're all crying inside, 'cept you. Ain't ashamed, nuther."

The "bad boy" picked up the ice ball that had been thrown at him, eyed the sneerer critically, and added, in a casual tone:

"We're all sorrier 'en the master himself, an' I'm a-goin' to tell him so."

Then the "bad boy," having made a longer speech than the master's ferule could ever have elicited on declamation day, marched sturdily into the schoolhouse.

At the door he paused. The old master looked up lovingly. The "bad boy's" voice suddenly receded, leaving only an ache in his throat. He looked appealingly at the man he had come to comfort.

"What is it, Thomas?" asked the master.

Thomas did not answer. He stalked across the room and planted himself determinedly at his old desk. The look on his young face resembled curiously that on the master's. After him came trooping the other boys, silently. It was only the small boy who, having cried, and so being able to find his voice, explained:

"We thought—we'd—like to—stay after school—a bit—with—you—'cause we're sorry—we can't—ever again."

The master rose from his chair; he looked down the roomful of boys, letting his gaze rest steadily upon each. As he looked he read love written large in each countenance. The room seemed filled with the glory of it. After a second he stretched out his arms in mute benediction; then he turned slowly and walked from the room, while the boys' heads were still bowed beneath his blessing.

The bitterness of failure had passed.

Messages From the Governors to American Boys

FROM THE GOVERNOR OF OKLAHOMA.

Executive Office,
Territory of Oklahoma.
Guthrie.

In response to your letter asking me for a few words in the way of a message or greeting to the boys of America, permit me to express the following:

The boy of today is the man of tomorrow. The door of opportunity stands open to every boy in America. The present has use for boys with clear heads, strong hands, and true hearts. To make life what it should be, the boy must be earnest, brave, and hopeful. We need boys who will take a stand for the better things and cultivate the higher ideals in life. The future destiny of the world's greatest republic rests with the youth of today, upon whom great responsibilities will soon be placed. The country calls for boys who will develop into men who will put forth their best energies in behalf of patriotism, good citizenship, good government, and integrity in public and private life.

Very respectfully,
T. B. FERGUSON,
Governor.

FROM THE GOVERNOR OF NEW MEXICO.

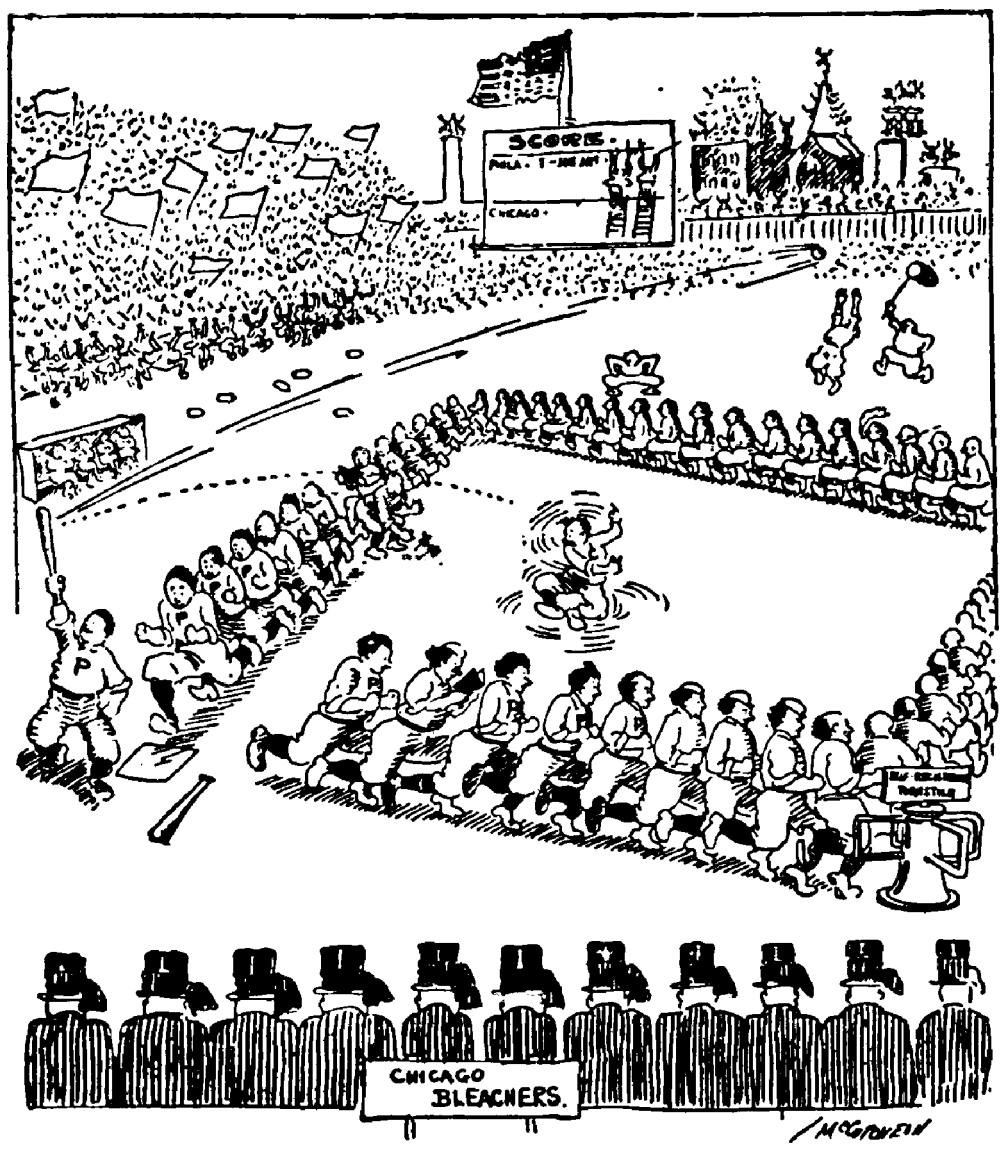
Department of the Interior,
Territory of New Mexico.
Office of the Executive,
Santa Fe.

I have recently returned from a trip to the Pacific coast and find on my desk your letter of the 12th ult.

With a son of my own growing into young manhood, and near to my heart, I thank you for the opportunity given me to repeat to the boys of America what I seek to impress upon my own son—that is: Whatever you do, do with all your might; be it work or play, study or planning, put your whole soul into it. Nothing that you do is too trivial not to be done well. It is better to do one thing supremely well than half a dozen things only fairly well. That is the road to success in business, in politics, in the professions and in art. It is the master who rises above the level of competition, and for him this is the grandest land and the greatest age of opportunity.

Yours with love and admiration for the American Boy,

MIGUEL A. OTERO,
Governor of New Mexico.



A Cartoon by McCutcheon, the Great Cartoonist, Which Appeared Last Fall in the Chicago Tribune, When the Philadelphia Baseball Twirlers were Having a Merry Time Defeating the Chicagos. The Cartoon will Bear Study.

RELIEF OF THE NORTH BRANCH FORT

By JOHN BARR

BEGUN IN JANUARY

SYNOPSIS OF PRECEDING CHAPTER.

The North Branch Fort is besieged by Indians. Among the soldiers and civilians in the fort are two brothers, Jack and Jim, who are expert backwoodsmen. Captain Mitchell sends Jack to seek relief from another fort and Jim is, unknown to his brother, allowed to go out a few hours later. They are both disguised as Indians. On the way each sees the other, but Jack, not knowing that Jim has left the fort, thinks the latter is an Indian. An Indian boy, White Eagle, discovers the loss of two ponies and, proceeding to find them, spies Jim some distance ahead. Jim at the same time sees the Indian and, thinking he is his brother, shouts to him. The Indian shoots at him but misses and escapes. As he is hurrying away, he is suddenly startled by a voice crying: "Halloo, Jim! I've been trying to catch you ever since noon."

EAGLE WING stopped his pony, and glancing ahead, saw another boy, much like the one he had just fought with, coming toward him, waving his hands over his head and riding the other stolen pony.

"Strange," he muttered. "One call me Jack, one call me Jim. Both glad to see me." Then he drew his knife and slid to the ground, keeping his pony between himself and Jack. The latter noted the movement, but his pony recognizing a friend in the Indian's mount refused to stop.

"Halloo, Jim, what's the matter?" he shouted in alarm.

For answer Eagle Wing slid from the shelter of his pony and flung himself at Jack. The latter, however, was on his guard. Before the speeding Indian had reached him he was on the ground and an instant later the knife gleamed over the back of the pony, with Jack barely out of reach. Having no time to draw knife or reach for the gun that hung at his back, Jack had recourse to the white man's natural weapon. Taking one quick step forward he planted his right fist full in the face of the Indian, whose head and shoulders appeared over the pony's back, before he had time to recover from the delivery of the knife thrust. The blow sent Eagle Wing reeling to the ground and the knife went hurling along the road, but although dazed by the blow, the young Indian knew well the importance of securing his weapon again. He sprang nimbly to his feet, but Jack wanted the knife, too, and as Eagle Wing ran for it, Jack was by his side. With their shoulders pressing together, like two football players, they ran, stooping and reaching for the piece of glittering steel; but while the Indian was swift and nimble, he was no match for his white antagonist in strength, and before the knife was reached Jack had pushed him so far out of his course that the weapon was beyond its owner's reach. Quickly realizing that the game was up, the Indian never stopped, but sprang on into the forest, barely missing the slash Jack made at him with his own knife.

As the dusky form of Eagle Wing disappeared among the underwood Jack whipped his rifle from his back and fired. Seeing no effect following his shot, he mounted his pony and dashed off. He was willing to continue the fight, but remembered the captain's injunction delivered to him with such earnestness as he left the fort, "Don't turn to the right or left. Don't fight or hunt if you can avoid it. Get through to the fort, for an hour's delay may lose all the lives in here."

So he urged the pony on, wondering why he had not thought of using his rifle earlier in the battle. He hung the Indian's bow over his back, stuck the knife carefully in his belt and reloaded as he galloped away. "I wonder," he thought, "where Jim is? Could I have mistaken that Injun for him?" Several miles farther on little Jim turned his head to one side as he heard far behind the firing of a gun. "More Injuns after me," he muttered, "and my pony almost ready to drop. Gee cracky! I wish I could find Jack."

Just as Eagle Wing imagined he had eluded his antagonist, he heard the sharp crack of Jack's rifle and the same instant felt a piercing, burning pain below his left shoulder blade. He staggered and fell, but believed he had tripped and quickly regained his feet only to go down again. His entire frame was racked with pain. His next attempt to regain his feet was a failure and he again fell forward panting and in great agony. He heard the patter of the pony's feet as Jack rode away, but it was mingled with other strange sounds. He thought he heard the strains of wild music and a golden light enveloped him. The pain ceased. Once more mounted on his pony he galloped away lightly over a vast prairie covered with flowers and abounding in game, and, strangest of all, he found the two boys he had been fighting were his companions. They smiled on him just as they had smiled when they rode up to him on the stolen ponies, and he felt no resentment. But a twinge of pain made him open his eyes and he saw his pony standing near and looking wonderingly at him. An attempt to mount brought him such great pain that again the golden light suffused everything and the two boys were there waiting for him. They did not appear to speak, but he knew they wished to be friendly. He felt no bitterness against them and there appeared between them perfect harmony and good-fellowship. His complete happiness seemed to last for ages, but again he opened his eyes. All appeared vacant about him and he was too weak to grope about. Slowly his memory returned, but he also retained a consciousness of his experience in the other world. Little by little his reviving senses revealed his surroundings to him. He was in a tepee, but seemed to be alone. A little later a face appeared above him, a coarse, heavy featured face, ugly—very ugly according to the views of the white man—a face deeply furrowed by care, toil and hatred, and bearing the pathetic aspect of one who had suffered great wrongs; of one defeated, but unconquered—the face of his mother. Neither spoke, but by that telepathic communication, unexplained by science, he knew that the war had been disastrous. As he regained his health and strength, he remembered his golden dreams, and he lived to overcome hate and become a great peace-chief, leading his people to love the whites and live in amity with them.

With Jack and Jim pursuing each other the afternoon wore into evening and strange shadows alarmed the younger boy. Then came night and all shadows were merged into solid black. Jim, brave though he was, imagined an Indian behind every tree and felt an awful loneliness. Now and then the "hoot" of an owl or the far-off cry of a wolf startled him.

At last he realized that his pony could go no farther, so he dismounted and pushed some distance into the woods to find a camping place. Not far away Jack gave up the chase and turned aside for the night. Both secured their ponies and in utter exhaustion sank to sleep, and both dreamed that they were hunting in company with Eagle Wing.

Jack was first astir next morning and was on his way munching some cold meat and dry bread while yet the trees seemed ghostly in the dull light and morning mist. He had proceeded some distance when little Jim awoke. His first thought was to light a fire and warm some meat, but remembering the Indian and the other dangers that might be near, he concluded to eat it cold. His breakfast was very dry and he had just quenched his thirst at a small stream when a slight sound caught his ever alert ear. It might be an Indian or a wild animal, and he had no desire to encounter either just then, so he dropped flat on the ground near the trunk of a fallen tree and awaited developments. In a short time he heard more noise and was able to make out the form of someone on a pony passing a short distance from him. He quickly reasoned that Jack was ahead of him, therefore this must be an Indian. This opinion was confirmed when he noted the gleam of the white hickory bow at the rider's back, while the shape of the head indicated the presence of feathers. With an Indian between him and the fort he must change his original course and make a detour. All this flashed through his nimble brain while yet the supposed enemy was near. The temptation to shoot was great, but he could take no chances in the dim light.

"That chap's looking for me, but I'll fool him," muttered Jim as he unhitched and mounted his now well rested pony and made off by a new route. Jack, a short distance ahead, heard the noise of someone behind him. It might be an Indian and it might be Jim. He was not sure Jim had left the fort and he was sure the Indians were after him. He decided to take no chances, so he sped through the vanishing mist, riding hard. Jim, by another road, was in just as great a hurry, and both ponies suffered.

Shortly after noon, Jim emerged from the forest on the western side of the fort and saw what he took to be an Indian just breaking through at the eastern side. Jack, entering at the eastern side of the clearing that surrounded the fort, saw an Indian just leaving the forest on the opposite side. Madly urging their exhausted ponies each strove to reach a place of safety, and the groups of soldiers idling about were astonished at the sight. The boys entered the stockade by different gates and staggered from their ponies almost into each other's arms.

"Gee cracky! brother Jack!" shouted the smaller of the two in surprise and delight. "I took an Injun for you and then I took you for an Injun."

"That you, Jim? I thought I was chasin' you and it was an Injun. He almost got me."

"Same fellow I had a fight with, I'll bet."

"Well, take those feathers out of your hair and try to look like a white man. Somebody is likely to kill you for a redskin."

"Take your own feathers out. You came nearer being killed than I did."

As a matter of fact both had forgotten their Indian disguises.

At this point an officer strode up and the soldiers who had gathered about stood back. At sight of him Jack began fumbling in the inside pocket of his jacket for a paper. "The Injuns," he said, addressing the officer, "are up at North Branch and the settlers are all drove in. Captain Mitchell sends his compliments, and will you help him at once with all the men you can spare? I had it on paper, but I've lost it."

"That's what Captain Mitchell sent me," said Jim. "I never got it and now you've lost it."

"What?"

"His compliments."

"His compliments ain't nothin'. That's just his way of sayin' 'good-mornin'.'"

"Take the boys in and give them something to eat," said the officer, "and remove those dead ponies."

While the boys were eating what to them was the grandest banquet that had ever been prepared for two starving chaps, an officer questioned them closely regarding conditions at North Branch and their ride for help. Jack answered his interrogations satisfactorily, between mouthfuls of army food, but as he finished his meal his eyes became dim and he could keep them open only with much effort. He was too sleepy and tired to volunteer any information and could scarcely stand up after finishing his meal. Little Jim, with no questions to answer, had dropped off as soon as his hunger had been satisfied, and now had to be almost carried into the next room. Jack, quite as weary, but having a little greater endurance, undressed his brother and made him comfortable, but was barely able to do as much for himself, and a few minutes later both were away with Eagle Wing again having a good time while their weary bodies were refreshed by a long, sweet sleep.

Meantime there was hurry without confusion outside, and those who slept that night did so with their fighting gear close at hand. Before dawn a troop of cavalry was moving through the woods, the intention being to reach the endangered fort on the following day.

The fact that someone had escaped from the North Branch fort was more than suspected by the besieging Indians. Jack's descent of the river had been detected and a vigorous attempt made to capture or kill him. Many arrows and not a few precious bullets had been sent against him, but the Indians could not tell what their success had been in the dark. This incident had made the guards more alert, almost resulting in the killing of Jim. Next morning an examination of the ground gave plenty of proof that two and probably a third had stolen ponies, and a pursuit was organized that might have resulted in the capture of the boys had they not been engaged in chasing each other to the limit of the endurance of their ponies. Distanced in the race and enraged at having been so easily outwitted, the Indians returned, bringing with them the almost lifeless body of their chief's son. An ambuscade was at once arranged for the soldiers, and when the new colonel galloped out with his troopers in the early morning the enemy were busy arranging a reception.

The deep sleep the boys were enjoying was disturbed late on the following morning by some low-toned conversation near them; two grizzled troopers sat not far away. One had his arm in a sling and the other nursed a bandaged foot.

"He rushed out without any idea about what he had to do," said one.

"Like as not," responded the other. "Well, it's all right if the Injun don't know he's comin', but if they know the boys got out——"

"He'll know he's had a fight."

"Yes, and we'll get ours if they lick him. What shape are we in to hold old Two Bear off?"

"What are they talking about?" whispered Jim.

"I think the soldiers have gone and left us and they think the soldiers 'll get licked."

Jim at once bounded from the couch, followed by Jack, and as they dressed the men questioned them.

"There, what did I tell you?" said the one with the sore foot as Jack told of the fight with Eagle Wing. "The Injuns know all about it. Did you tell the colonel about the fight on the way?"

"No, sir! He didn't give me time," said Jack. "He seemed to think he knew all about it already."

"That's him all over."

"Has he gone without us?" asked Jim.

"Yes, my boy, he has; but he isn't far away and you may catch him. What do you think, Bill? Hadn't they better follow and put him on his guard?"

"They'd better and there's no time to lose. He'll stumble into any trap they set for him if somebody doesn't warn him."

The upshot was that an hour later the boys were on their way along the road through the woods again. They were well mounted on cavalry horses and had provisions for several days, neatly put up by the army cook.

"You know," said Jim, after riding in silence for a time, "I'm almost glad we didn't kill that Indian boy. He looked like a nice fellow. I was dreaming about him last night and I've been thinking about him all morning."

"I'm not so sure he wasn't hit," said Jack. "You know when you shoot quick-like and you're in danger, you're almost sure to hit. I couldn't see him, but it seemed to me that I hit him. I had a feeling as if I heard the ball go 'pat' against him. Maybe it's just as well if I didn't. We haven't any bad feeling toward him, but if he fights we must fight." Jack had not carried the memory of the dream back to his waking consciousness, but it had affected him, nevertheless, and he felt a softening towards his late adversary, a feeling that he would like to hunt with him provided there was no danger of a fight.

Sharply noting the hoofprints of the troopers' horses, they rode along in silence, all their energy being exerted in keeping note of every sign that might mean anything to the backwoodsman. Suddenly Jack checked his horse, and dismounting, carefully inspected the hoofprints.

"Sure as you live," he shouted, as if the two had been discussing something.

"Ponies?"

"Yes, and lots of 'em."

"'Tween us and the soldiers?"

"Sure."

"Gee cracky!"

"We've been coming pretty swift and they can't be far away. We must get around them and let the soldiers know."

"Guess we'd better keep away from the river, close along the hills. Even then we may run into them."

"Guess I'd better swim my horse across the river and work along the other side. Then one of us may get past."

"I hate to let you go alone."

"I hate you to go alone, too, but we're worse off if we're together."

"I tell you, Jim, you cross and make for home. See if you can get in and let Captain Mitchell know. It'll be hard work, but you can do it. These soldiers are going pretty slow and the Injuns won't touch them till they're in the right place. I'll try to get around by the hills and let the soldiers know in time."

"That's a good plan, Jack, and we'd better get moving. Here, I've got too much of this dried beef. You take some."

"No, no; I have more'n I need. You take some of mine. It's awful nice."

"I don't want any more, but——"

"We'd better not stand here and quarrel while the Injuns get us all."

"That's so. I guess we've both got enough. Be very careful, Jim. I hate to let you go alone."

"Jack!"

"What?"

"Wait a minute." Little Jim's lip was quivering as he turned the big horse around to bring him closer to his brother. Then he leaned over as far as he dared and pursed up his mouth. Jack smiled and met the advance. He put a strong but gentle arm about his brother and the two little faces, sunburned and weather-beaten, were pressed close together. There was just a suspicion of a tear in Jim's eye.

"Cheer up, Jim," said the elder one, "we'll have lots of fun hunting and fishing when this is all over. Now off you go and take good care. Brace up, little boy."

Turning his face away so as to hide something he was ashamed of, Jim dug his heel at the horse's side and without another word the two rode in opposite directions. It was a hard ride for both, with no path and the low branches scratching their faces, but there was no such thing as turning back.

A little before daylight next morning a small form entered the colonel's tent. After hard and careful riding Jack had abandoned his horse and by slow and silent work, sometimes crawling on hands and knees, often remaining motionless for several minutes when the Indians were too near, he had finally evaded both Indians and sentinels and reached his goal. The officers, astonished at his success in passing their guards, were still more surprised when told that their camp was surrounded by Indians, who had dogged them all day and were preparing an ambuscade for them a little farther ahead.

The Indians had withdrawn their men from the siege of the fort, well knowing that their war would be easy with the relieving army crushed. It thus happened that when little Jim, after a lot of hard riding, with face and hands scratched, clothes torn, feet sore, cautiously crawled to the river bank opposite the fort, he found no enemy. Up and down the river he scouted, but while he found recently occupied camps, there were no red men. He was about to enter the water for a swim to the fort when he noted a party crossing with two canoes. They, too, had discovered the absence of the beleaguering forces, and had determined on a little scouting. Jim tired almost to the point of exhaustion, was taken into one of the canoes and soon explained the situation to Captain Mitchell, who promptly prepared to go out and attack the Indians from the rear. As the band of soldiers and backwoodsmen sallied from the stockade they heard firing from the direction of the ravine. The battle was on and Jim's excitement made him forget all about the fatigue that had almost put him out of business. On rushed the little band, arriving just in time to check the retreat of the Indians, who had been flanked and driven from their cover by the dismounted troopers, the trappers having been themselves trapped owing to the knowledge of their positions given by Jack. The Indians in dismay were forced back on the soldiers and badly cut up, only a remnant of the great war party managing to escape in the gathering darkness. While the battle raged Jack could scarcely handle his rifle, so great was his anxiety as to the fate of Jim. Had he managed to get through or was he lost in the woods? Jim on the other hand felt sure Jack had succeeded, else the Indians would not have been retreating. He kept cool and the crack of his rifle sounded as often as that of any of those in the fight.

"Thank you for timely relief," said Captain Mitchell, as he saluted the victorious colonel.

"Thank you for coming out and helping," answered the superior officer, as they shook hands, "but those two boys you sent out deserve the whole credit. They kept me out of an ambuscade. Where is Jack?" he inquired, looking about him.

But Jack was darting about looking for Jim. All had seen him during the battle, but no answer now came, although a score were calling his name and searching for him. It was Jack who found him stretched on the ground near some bushes. Quickly he caught the limp form in his arms and to his delight found that he was alive and unhurt.

"Brace up, Jim, brace up," he shouted, as he undid the fainting lad's collar. "Brace up. We've licked 'em. It's all over. Are you hit?" asked Jack, as he rubbed his palm over his brother's face and head feeling for blood.

"No, no, just tired out. I'm better now," and Jim struggled to his feet.

A shout went up when it was found that Jim was all right. The two were mounted on a big cavalry horse, and all marched to the fort where bonfires were already blazing to celebrate the victory.

"We're going to get medals for this, the colonel told me," said Jack by way of cheering his brother, the next day. The little chap was stretched on a cot before his father's cabin. There was quietness now that the uprising had been quelled and the pioneers were again busy turning the forest into farms. The excitement and fatigue of the past few days had been too much for the smaller boy and he was taking a good rest.

"I don't know what a medal is," replied Jim, "but I hope it's something of more use than Captain Mitchell's compliments."

(The End.)

The Young George Washington

By WILLIAM F. CARNE

FROM the lively gossip of Parson Weems comes the first stories of the boyhood of George Washington. Of his lessons in virtue and knowledge, of the cabbage seed which grew into green clusters that spelled his name; of the cherry tree which is little less renowned than his laurels; of his boyish leadership in school battles; of his feats of strength and horsemanship—the parson has made pleasing little dramas of them all. The skill and pains of Sparks and Irving have gathered and arranged many of the incidents of Washington's youth, others have followed their beaten paths, and varied only in the telling the story of his life. It may be interesting to allow Washington to tell of his boyhood in his own way, and for us to read what he says of the adventures of his youth. Did Washington, when a boy, write of himself his studies and his adventures? Yes, he wrote of them in part and he left other material which may, in some sort, be arranged as the autobiography of his young days.

All that is left of the written work—other than his field notes and the plats of his surveys—put on paper before he reached manhood, is now cared for as a sacred relic at the state department in Washington. The writer examined the manuscript and copied large portions of it under pleasant circumstances. General Washington, in 1785, endowed a free school in the town of Alexandria near Mount Vernon. About one hundred years afterwards the school was placed in a new building. It was known that the school exercises of Washington's boyhood in arithmetic had been transcribed by him into a volume of manuscript at the state department, and it was proposed to allow each grade in the school to celebrate the anniversary of his endowment, by working the same exercises in number (or sums) that he had worked as he advanced in his school life from one grade to another. With this view the writer was given access to the treasured volume. It had then begun to show evidences of decay, but the leaves have since been protected; some of the broken pages being now enclosed in thin isinglass.

He found in the manuscripts far more than young Washington's exercises in arithmetic. It was, in fact, a sort of commonplace book of all the boy had cared to write down for himself, most of it probably being intended for his eye alone. The use of that manuscript volume and of an old journal of Washington enables the writer to make the boy George Washington, for awhile, at least, the companion of all the youths in America. The book was finished by Washington in his last school days at the home of his half-brother Augustine, at Wakefield on the Potomac river about forty miles below Mount Vernon. Mr. Williams, a graduate of Wakefield school in England, was Washington's teacher, and his cousins and the sons of the neighboring gentry were his schoolmates at this same school. This book gives a summary of his lessons in land surveying, arthmetic and geography, but shows neither examples nor rules in English grammar as to its spelling, framework or punctuation, so that his attention could never have been fixed upon them.

Washington's father penned the first few lines concerning his son—to be afterwards multiplied by millions—when he wrote in his family bible:

"George Washington, son of Augustine Washington and Mary his wife, was born ye 11th day of February 1731-2, about ten in the morning, and was baptised the 3rd of April following; Mr. Beverly Whiting and Captain Christopher Brooks godfathers and Mrs. Mildred Gregory, god mother."

This was the way of writing when Washington was a boy. "Ye" was used for "the," because in the early days when Englishmen wrote Saxon, there was a letter which stood for "th," but was in shape somewhat like an old-fashioned "y" and so "the" came to be written "ye."

The 11th day of the month was then counted for what is now the 22nd, because, in 1752, not long before Washington was twenty-one years of age, the King and Parliament of Great Britain struck twelve days out of the year, and made the day next after the 2nd of September to be the 14th of September. The year 1732 is given as 1731-2, because at that time, some people kept the 25th of March, as New Year's Day, while the others kept it on the 1st of January, so all January and February and the first twenty-four days of March were marked as belonging to both years. Afterwards the law fixed the opening of the year to be on the 1st day of January. So now there is no doubt at all that the 22nd of February, 1906, is Washington's one hundred and seventy-fourth birthday.

These lines in the back of the home bible were written about him, but he, himself, wrote nothing, that now remains, until he was over twelve years old. He lived with his mother at Falmouth, in Virginia, and was a pupil at the church school, there taught by Hobby, the sexton, under the direction of the Rev. Mr. Mayre, the rector. There he learned to write, in a rude way; but all his boyish hand wrote has passed away. A bogus letter, about an "elefant book," which the letter says, his father bought for him in Alexandria, was found to be false as soon as it was put in print, because his father died before Alexandria was founded. It was also at one time said that the boy Washington made some "Rules of Conduct," which are in his handwriting, but it has been found out that these rules were only dictation exercises given out at Rev. Mr. Mayre's school near Fredericksburg, and these show that Washington was not at the head of the spelling class, for he spelt tongue, "tonge," roll "rowl," etc. His stops and his capitals seem to have been very free from rule, and he wr" :s:

"When you Sit down Keep your feet firm and Even.

"If You Cough, Sneeze or yawn do it not Loud but, privately."

It is most likely that the first of young Washington's original compositions now extant are these rhymes:

"'Twas perfect love before
But now I do adore."

They are to be found in his first book and show that Washington knew a pretty, sweet girl of whom he thought very much, indeed. Most boys have cut names on trees or scribbled them in books as Washington did.

He came to Mount Vernon in 1744, and in all the future years, though he was sometimes long absent, his home was there on the grassy hill beside the Potomac where all that is mortal of him still remains. Nine miles distant north the hamlet of Belhaven had grown up around a Colonial Tobacco Warehouse, a public institution, founded in the year he was born. A short distance south the Fairfax mansion of Belvoir capped the hill-top that was neighbor of Mount Vernon. One was the center of the social life of the neighborhood, the other its commercial capital where a wharf had been erected and Dutch and English vessels came bringing goods to exchange for tobacco. Lord Fairfax was often a visitor at Belvoir and sometimes a ship-of-war lay off Belhaven, and it was there that young Washington was tempted to enter the naval service of the King, and laid his conquered temptation at his mother's feet. Few days ran by in which he did not visit Belhaven and mingle with the people that came there to trade. Englishmen, Hollanders, Indians, negroes and Virginians as well as inhabitants of the other colonies were there trading tobacco, furs and other domestic produce for foreign goods which came in the ships. Soon it was determined to get a charter and lay out a town at the Tobacco Warehouse of Belhaven. Mr. John Wert employed young Washington to assist in laying out the new town, and Belhaven became Alexandria.

While he was spending some time in Belhaven he made the acquaintance of several lads there, to one of whom he wrote a letter which he copied into his book, and it reads this way for it has no punctuation at all and its capital letters are left to caprice.

"I should [like to] receive a Letter or Letters from you by the first and all oppertunetys with the greatest sense or mark of your esteem and affection whereas its the greatest Pleasure I can forsee of having in Fairfax to hear from my Intimate friends and acquaintances I hope you in Particular will not Bauk (bauk for balk, spelled after the Virginia pronunciation) me of what I so ardently wish for."

Washington's first book after he left school was begun when he was just sixteen years old. He left Alexandria on the 11th of March, old style, 1748 and he thus records his first day's travel:

"Fryday March 11, 1747-8, Began my Journey in Company with George Fairfax Esqr; we travellid this day 40 Miles to Mr. George Weavels in Prince William county."

This entry is without other punctuation than periods and one semicolon and shows a superabundance of capital letters according to the modern style, but in those days all nouns were capitalized, as may be seen in the state papers of the early days of the Republic. This method is still the rule in the German letters.

"Wednesday 23d Rained till about two oClock & Clearid when we were agreeably surpris'd at y. sight of thirty odd Indians coming from War with Only one Scalp We had some Liquor with us of which we gave them Part A elevating there Spirits put them in y. Humour of Dauncing of whom we had a War Daunce there manner of Dauncing is as follows Viz They clear a Large Circle & make a Great Fire in y. (so in the original) middle then seats themselves around it y. Speaker makes a grand Speech telling them in what Manner they are to Daunce after he has finish'd y. best Dauncer Jumps up as one awaked out of a Sleep & Runs & jumps about y. Ring in a most comicle Manner he is followed by y. Rest then begins there Muscians to Play ye Musick is a Pot half of Water with a Deerskin Streched over it as tight as it can & a goard with some Shott in it to Rattle & a Piece of an horses Tail tied to it to make it louk fine y. one keeps Rattling and y. other Drumming all y. while y. others is Dauncing."

"Saterday April 2d. Last night was a blowing & Rainy night Our straw catch'd a fire yt we were laying upon & was luckily Preserv'd by one of Mens awaking when it was in a flame We run four Lots this Day.

"Sunday 3d. Last Night was a much more blostering night than ye former we had our Tent Carried Quite of with ye wind and was obliged to Lie Ye Latter part of ye night without covering there came several Persons to see us this day one of our Men Shot a Wild Turkie.

"Monday 4th this morning Mr. Fairfax left us with intent to go down to ye mouth of ye Branch we did two Lots & was attended by a great Company of People Men Women & Children that attended us through the woods as we went showing there Antick tricks I really think they seem to be a Ignorant a set of People as the Indians they would never speak English but when spoken to they speak all Dutch this day our Tent was blown down by the Violentness of ye Wind."

"Thursday 7th Rained Successively all Last night this morning one of our men Killed a Wild Turkie that weight 20 Pounds we went and Survey'd 15 Hundred Acres of Land and returned to Van Metris's about 1 oclock about 2 I heard that Mr. Fairfax was come up & at 1 Peter Casseys about 2 Miles of in ye same Old Field I then took my Horse & went up to see him we eat our Dinners & walked down to Van Metris's we stayed about two Hours & Walked back again and slept at Cassey's House which is ye first Night I had slept in a House since I came to ye branch.

Another letter written by him during his absence from Alexandria and Mount Vernon and while making surveys of wild lands for Lord Fairfax gives this picture of his life: "I received [your letter] amongst a parcel of Barbarians and an uncouth set of People * * * Since October Last I have not sleep'd above three Nights or four in a bed, but after Walking a good deal of the Day lay down before the upon a Little Hay Straw Fodder or bearskins whichever is to be had with Man Wife and Children like a Parcel of Dogs or Catts & happy's he that gets the Birth nearest the fire there's nothing would make it pass of tolerably but a good reward a Dubbleloon is my constant gain every Day that the Weather will permit my going out and some time Six Pistoles the coldness of the Weather will not permit my making a long stay as the Lodging is rather too cold for the time of Year I have never had my Cloths of but lay and sleep in them like a Negro except the few Nights I have lay'n in Frederick Town."

There are many pages of Washington's book which describes this journey and it concludes thus:

"Wednesday ye 13th of April 1748

"Mr. Fairfax got safe home [at Belvoir] and I safe at my Brothers [Mount Vernon] which concludes my journal."

Of course you see how many words the brave and hardy lad misspelled, in his journal, but, in those days, in Virginia, not much attention was paid to spelling, for schools were few and sometimes the schoolmaster was a man who had not been himself well educated. Indeed, the records of Virginia show that, sometimes, the vestries of the churches which were, to some extent, the school boards of the neighborhood bought the teacher's time from the captains of the ship to whom he owed money for his fare over the ocean. "Bought a school master for L——" is an entry to be found in some of the olden vestry books of the colony. It is said that "Hobby," Washington's first teacher, was a bought schoolmaster whom the law required to serve his purchasers until his work repaid the money they had paid to the ship's captain to discharge his debt.

No boy who has been well taught in these days would write, as did young Washington, without colons, commas or periods, but he had more to do in the tobacco fields or in the wild forest than the lads of today in comfortable cities or on the settled countryside. He constantly improved and always made plain and clear whatever he wished to make known; and before he was twenty years old he wrote the English language with correctness; and, at last, his pen turned sentences of force and beauty. He has given scores of other pens abundant employment in weaving anew in varied forms of literature the rich threads of a life spun when the Fates lifted their distaff highest among the sons of men.

RENEW PROMPTLY

A BOY cannot learn too early the importance of meeting his obligations promptly. In the matter of renewing subscriptions to periodicals the habit of delaying until after the subscriber is in debt to the publishers is one easily formed. We hope our boys will not grow into the habit. Of the more than 25,000 subscriptions to The American Boy that expired in January, you would be surprised to know how many failed to send in their dollars during that month. What is very gratifying, however, is that there was an exceedingly small percentage of discontinuances. This indicates to us that almost the entire number of subscribers whose subscriptions ran out in January intend to continue their subscriptions, and that their failure to remit their dollars for renewals was simply oversight, or carelessness, or the result of a purpose to send the money in sometime. While the appeal in our January number brought many thousands of renewals, it did not bring anywhere near the number that it ought to have brought. We now urge all boys whose subscriptions have expired, including those whose subscriptions expire this month, to send in their dollars and make the hearts of the publishers glad. We are satisfied that The American Boy renews as large a percentage of its subscribers as any publication in the world, but what we want is to have them all renew, and renew promptly. Will you not be one to take the hint?

NEEVUS and the WOLF-PACK

A story of the early days

BY GEO. ALLEN ENGLAND

NEEVUS BEAVERS was an old, old nigger fiddler, said Uncle Zeke, knocking the ashes out of his corn-cob pipe, and he lived in Keene, New Hampshire, seventy years ago. There wasn't a man in those parts, either, that could beat him with a fiddle bow when he got right into the swing of it! Three dollars in silver he asked for playin' at a dance; and he'd saw from dawn to dark as long as there was a single couple on the floor and never play the same tune twice. There's few of our fiddlers today could do the same!

The dance I'm tellin' you about was at Freeman Morse's, in Winchester, twelve miles down the Ashuelot River from Keene. Ten of those miles were through solid woods, heavy spruce and tamarack first-growth. A lonelier, more varmint-infested road you never want to travel! 'Twas in February, with two foot of snow on the level and a full moon.

Well, about three in the mornin' the dance broke up. Beavers got out his green baize fiddle-bag, took his fur cap and his three dollars and started for home.

Halfway down Winchester village street he met with old Doctor Peters. Doctor had been out on a hurry call and was just gettin' home.

"Good evening, Neevus!" says doc.

"Evenin', boss!" says Beevers.

"Where you bound, this time o' night? Isn't this pretty late for you to be prospectin' round a village where there's so many hencoops as there is at Winchester?"

"Now, doc, yo' sholey don' mean dat! I'se ben playin' up heah to Morse's dance, dat's all, an' now I'se a-gwine home. Fine ebenin', ain't it, fer a good long walk? I mus' be gettin' along now, so I reckons I'll jes' hab to bid yo' good-night, doctah!"

"You don't mean to say you're going to walk to Keene tonight? Why, you must be crazy! You'll never get halfway! Don't you know the wolves are thicker 'n huckleberries? They'll catch you before you even reach the halfway camp! I heard 'em hollerin' out in the Marlboro woods when I was comin' home tonight. You'd better come along with me; I'll give you a good bed and some breakfast in the mornin'. No man in his right mind would try the Ten-Mile woods on foot this time of night, with wolves as bold and plenty as they are! You come along with me!"

"Lawsee, massa! How you du talk! Wolvses? Shucks, doctah, I'se not skeered of no wolvses! Sakes alive, dey don't like dark meat good 'nuff for to tackle ol' black Neevus! Good night, doctah; I mus' be trabellin'."

"Come with me, Neevus! I warn you now, you'll never get through alive!"

"Good night, massa, good night!"

"You black old fool, you! Come back here and save your skin!"

Neevus said never a word, but tucked his fiddle-bag under his arm and piked along down the street. In ten minutes he was out of the village, and by the time Doc. Peters had got home he was already in the Ten-Mile woods.

The wind was blowin' hard; the road was heavy with drift snow. Neevus hunched up his shoulders and struck out at a good gait. After he'd gone three or four miles the moon came up behind him and began to throw long, black shadders. He could see his own stretchin' out ahead of him down the road. The woods was full of dim light and inky black places. It looked mighty skeery; but Neevus was no coward, so he pegged along right smart, talkin' to himself as his custom was.

"Mercy me! Doc Peters think I'se done skeered ob de woods, an' me borned an' brought up right amongst 'em? Sakes alive, what idees dese yere white folks has. Ha! Ha! Neevus Beavers afeared ob de woods! Haw! Haw! Whoop—ceee!"

The echo of his carryin's-on hadn't died out before somethin' answered him 'way off in the woods, with a long, mournful cry—the hunting cry of a wolf!

"Whow-oo-oo-oo-ow!" rose the distant wail, summoning the pack. Then, still farther off, long and weird and shivery, another and another cry came wailing through the frosty night. 'Twas taken up all over the woods as far's he could hear.

Old Neevus was no coward, as I've said, but his heart stood plum still then and his wool began to curl. 'Twould have risen right up on end if it hadn't been so powerful kinky. He knew what was comin' and comin' quick—a run for his life! The first wolf to give tongue is always responsible for the game and he's bound to get it; if he fails, the others will turn to and rend him into bits. That's their law and they always live up to it. Neevus knew all about wolves and he didn't waste any time deliberatin'. He couldn't stay in a tree till mornin' without freezin' to death, so 'twas just a case of get to the log cabin in the halfway clearing or else resign himself to be a dinner for the wolves. He just slipped his fiddle-bag string over his shoulder and lit out like sixty for the camp. 'Twas a deserted, tumble-down old shack, but it had a door and a loft, and it meant life to Neevus. So of all the runnin' he ever did in his life, that there runnin' was the fastest.

Back of him, and off to the sides, he began to hear cracklin's in the brush, and the wolf-howls came louder and nearer. In two minutes a pack had gathered in and settled to the chase, huntin' down that poor, old man and makin' the forest ring with their terrible chorus. In a minute, some broke into the road, behind; and old Neevus, glancin' over his shoulder, had a glimpse of long, low bodies flashing with awful, silent swiftness, through the bars of moonlight on the snow. Neevus was a good runner; but what can a man do against wolves? As he kited 'round the bend in the road by the camp they were within ten rod; when he reached the clearin' they were close on his heels, and when he got to the door they were a-yappin' at his very clothes to drag him down.

In he rushed like a crazy cyclone and darted up the ladder into the loft, just in the nick of time. His boots were torn and scarred in more than one place by their sharp fangs, too. When he got safely up and turned to look down, the whole room was full of the critters, big and little, and all madder 'n a mess of yellow-jackets—a howlin', yelpin' pack of savagery. Neevus didn't care a straw for their noise; he just took a good hold of the ladder and pulled it right up into the loft, and there he was, snug's a bug in a rug and little the worse for his run.

It so happened that the door of the camp opened inward and had a great big wooden latch, very easy to hook and very strong. Neevus, gazin' down on his menagerie, began to think out a little plan. All the time those wolves were hollerin' bloody murder and jumpin' up toward the loft, only to fall back again with snarls of rage. Neevus kept cool and looked 'round him. Down below there was a half-light from the moonlight through the door, but up above it was pretty dark. However, by crawlin' here and there, feelin' with his hands, he soon found what he wanted—a loose board. He laid hold of it, pried it, tugged it and got it free at last, a twelve-foot strip of Norway pine. The next minute he'd braced himself over the ladder-hole and was reachin' down for the top of the door. He touched it, swung the door round slow and gave it a good hard push. It banged shut, the big wooden pin fell into the socket, and Neevus Beavers was housed up snug and warm with more than a score of the maddest wolves that ever made night hideous.

When the old nigger saw that, he hollered and he yelled, lay down and rolled over and carried on (they do say) scandalously.

"Yaaaah! Haw! Haw! Haw! He! He!! Oh, Lawsee! Lawsee massy me."

Then he reached down and jabbed the wolves and hollered some more. Well, of all the noises! Those wolves were pretty nigh insane. They took it up twenty-fold, every one tryin' to screech louder than all the rest, with Neevus leadin' the whole concert, and I reckon they did some pretty lively singin' there for about ten minutes.

When Neevus got tired of that he took out his old fiddle, tuned her up and sailed in on the "Arkansaw Traveller," sittin' on the floor with his legs hangin' down the ladder-hole. When the music struck 'em they yowled and hollered four times louder, and ran every which way to get out, but there wasn't any get-out to the place, not even a window; so they just had to stay right there and take it. From the "Traveller" he ran into the "Durang Hornpipe" and then played "Old Zip Coon," with all the variations and long-drawn high-notes. Wolves are just like dogs about music, and everyone knows how music makes a dog feel! So old Neevus kept the camp a-humming, now I tell you! He played about two hours, till they were all plum tuckered out, with their tails dragging and their tongues a-lolling; then he put his fiddle into its bag, kicked a plank off the gable-end of the loft and crawled out, fiddle and all. He dropped twelve feet into soft snow, picked himself up and made off home, takin' his own time and figurin' what he'd make before very long on hides an' bounties.

Just as the sun was risin' over old Monadnock he footed into Keene. Half an hour later all the men and boys in town had turned out, and Neevus was leadin' em, all armed with guns and scythes and clubs, back to the old log cabin in the woods. Folks say the like of it was never seen in Cheshire county. Two hundred and fifty dollars—that was what the lot brought, and Neevus he got half. A hundred and twenty-five dollars for one night's work, yes, sir! He used to say 'twas a hundred for the run they gave him an' twenty-five for the killin'. How about the music? Oh, he didn't charge 'em anything for that; he claimed 'twas the only time he ever fiddled when he enjoyed it more than the audience! Neevus had good nerve all right enough! As for me, when I fiddle, I'd rather not have it for a score of hungry wolves on a dark night, out in the deep midwinter forests of New Hampshire!

Words of Wisdom From Senator Beveridge

"Be honest with the world and the world will be honest with you. This is the fundamental truth of all real prosperity and happiness.

"Get the habit of happiness."

"The world is hungry for faith."

"Let every failure merely teach you the game."

"A man who won't get up when he is knocked down is of no use."

They Were Close on His Heels

GIVEN TO BOYS

BOYS YOU CAN HAVE THIS HANDSOME BASE BALL OUTFIT OR A NUMBER OF OTHER PREMIUMS. FOR SELLING ONLY 24 OF OUR FAST SELLING, PURE GELATINE RED HOT CINNAMON HEART SHAPED SWEETS AT 10cts. EACH—WE PAY ALL EXPRESS CHARGES

Outfit consists of flannel Shirt, padded Pants, college style Cap, and fine Belt. Color, light gray. A nobby strong suit.

Boys we trust you. Twenty-four Handkerchiefs sent at one time. Outfit will be delivered express company charges prepaid, same day money from sale is received. Write at once.

STANDARD MANUFACTURING CO., 107 GARFIELD ST. GARFIELD, N.J.

Hosiery For Your Entire Family For $1.00

To introduce our 25c. trade-mark Hosiery

"CHILHOWEE" BRAND

We will upon receipt of $1.00 send postpaid to any address in U. S., seven pairs high class socks or stockings. You may take seven pairs of either men's, women's or children's, or assort your order to suit the needs of your family. In ordering state number of pairs of each size. "Chilhowee Twenty-five Cent Hosiery" is guaranteed fast black, seamless, reinforced heels and toes. Knit to fit from select quality yarns. With our Cotton grown and spun, our Coal mined and Labor raised right here in Tennessee we produce the biggest value Hosiery in the world, and want you to try it. Satisfaction or money refunded. Sample pair of either kind for twenty-five cents.

Consumers Mdse. Co., 140 Union St., Knoxville, Tenn.

BIG MONEY AT HOME

We want a number of people (men, women, boys or girls) in every neighborhood to keep on hand our advertising matter, which we furnish FREE delivered at your home, to hand out to people, and we will pay you well. It's a grand opportunity, and there are several hundred dollars in cash in it for those who will do so. This is the only opportunity of the kind ever offered and is quickly accepted by every one when they know the little time it takes and the BIG MONEY there is in it. Well adapted and very profitable for women and young people. Send at once for particulars.

MILLS' Mail Order House, Box 51, ROSE HILL, N.Y.

EARN A WATCH and RING

We positively give both a Solid Gold Laid STEM WIND American movement Watch highly engraved and fully warranted timekeeper equal in appearance to a Solid Gold Watch; also a Solid Gold Laid Ring, set with a Famous Congo Gem, sparkling with the fiery brilliancy of a $50 diamond, for selling 20 pieces of handsome jewelry at 10c each. Order 20 pieces and when sold send us the $2.00 and we will positively send you the watch and ring; also a chain. Ladies or Gents style. ALTON WATCH CO., Dept. 39, Chicago.

RING GIVEN AWAY.

Send us your name and we will send you 5 pieces of our handsome NEW STYLE jewelry and our illustrated catalogue of rings and other premiums. Sell the jewelry at ten cents each and then send us the fifty cents and we will send you any one of the rings you select. They are not cheap plated ones but they are guaranteed GOLD FILLED and warranted for years. Money cheerfully refunded if you are not entirely satisfied. WALTERS MFG. CO., 14 Dutch St., Dept 58, New York, N. Y.

150 MAGIC TRICKS 10c

For 10 cents we will send you by return mail 150 Magic Tricks with cards, ribbons, rings, coins, etc., all so clearly explained and illustrated that with only a little practice you can easily perform them and be as great a magician as Herrman or Keller. No other means of entertaining is so effective, yet it is easy to learn. We guarantee success. Big Catalog of many other tricks sent free with each order. Get these tricks and be popular with your friends. H. DRAKE, Dept 201 610 Jackson St., Chicago

Be Your Own Boss!

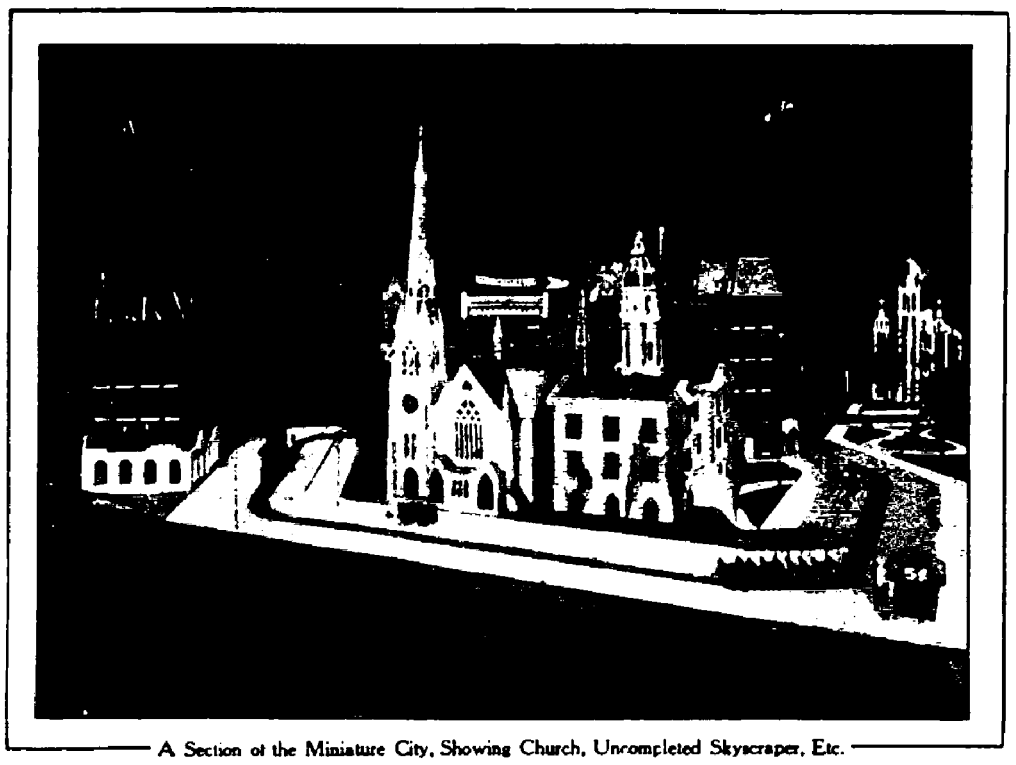
WANTED Men everywhere—to distribute circulars, advertising matter, tack signs, etc. No canvassing. Address NATIONAL ADVERTISING CO., 6 Oakland Bank Bldg., Chicago, Ill.

Fred S. Kempf's Miniature City

Section of the Miniature City Showing Tunnel, Mill, Water Tank, Railway, Train, Etc.



A Section of the Miniature City, Showing Church, Uncompleted Skyscraper, Etc.

BOYS who have a copy of the May, 1902, number of THE AMERICAN BOY, by referring to page 219 will see a story about Fred S. Kempf of Capac, Mich., who was at that time a 17-year-old lad. The story related how young Kempf, at the age of 15, built an engine complete in every particular, and an illustration from a photograph of the engine was shown in connection with the article. It was stated that the boy did the work in the kitchen of his home, with only a few tools. Other wonderful mechanical appliances, seeing that they were made by a boy, were referred to as being products of the genius of this young mechanic. Among the things mentioned was a miniature city, upon which young Kempf was at that time at work. The young inventor's aim was to make a city in miniature, the scale to be one-eighth of an inch to the foot. The account states that the boy was to spend his odd moments in building the little city, and that when it was completed, he was to have a photograph of it made to show the boys who read this paper what can be accomplished in this direction by skill and application.

True to his promise, made nearly three years ago, young Kempf has completed his city, and now we have the privilege of showing pictures of it to the readers of THE AMERICAN BOY. The pictures speak for themselves. They are illustrations from photographs, and are, therefore, true to life.

The miniature city is sixteen feet long and three feet wide. One end of the city is a section of a mountain, showing on one side the vertical section of a coal mine with miners at work. You can see the coal train as it is being hauled out of the mine by a model electric locomotive. You see a summit railway, with an observation car making trips from the foot of the mountain to the summit. There is a stream of water running down the side of the mountain, furnishing power to a tiny sawmill, which saws lumber. It is contrived so that the boards are seen to drop and the men to carry the lumber out into the sheds and come back empty-handed. You may see the logs going up the skidway from the mill-pond to the mill. A model vestibule express train makes trips at regular intervals, passing from a tunnel beneath the mountain and running up to the station where it stops to allow the passengers to alight. The engine and mail car then leave the two passenger coaches, pass down the yards over the railway bridge, up to the Post Office, where the mail car is detached, and the engine and tender pass on to the turn table, where, after turning, they pass over another track, then back up and couple to the mail car, when they again proceed back over the bridge to the water tank, where they take on water. They then switch back and couple to the two passenger coaches, after which the entire train runs into a tunnel underneath the mountain, where it turns completely around and is ready for another trip. Electric and cable cars ply up and down the little thoroughfares of the city. Nearly every type of automobile is in evidence. Drays, omnibuses, wagons and other vehicles, with horses and mules attached, are seen. A ferry-boat makes trips from the river ferry landing out into the lake and passes under a perfect working model of the Halsted Street, Chicago, lift-bridge, and also a swing-bridge, in connection with which you see the tender swing and close the bridge after the boat has passed through. Models of great passenger liners, schooners, barges, yachts, and other craft line the wharves. There is a shipyard showing a hull nearly completed. A pile-driver is busily engaged driving piles in the river. A dredge is dredging a sandbar out of the lake, making all the movements in exact time. A coal unloader is taking coal from a barge into the power plant—real coal at that, too. A grist-mill with men carrying and wheeling grain is seen. Elevators laden with passengers and freight are seen running in the buildings. An automobile factory is in full operation. A man is seen splitting an impossible chunk of wood. There is a man on top of one of the roofs, tarring. There are big stores, churches, public schools, a courthouse, an office building, a modern flat, the skeleton of a steel building not yet completed, and other things too numerous to mention. One of the main features is a theater where you can look in upon the actors giving a three-act melodrama, and an acrobatic scene with tiny men three-quarters of an inch high performing on trapeze, rings, horizontal bars, and doing tumbling stunts. There is a Japanese juggler performing. There are dancing figures going through movements as natural as life.

The city is operated by electricity, the streets being lighted by tiny electric lamps, as are also the buildings. When the miniature city is seen at night lighted up by the electric lights the effect is great.

Young Kempf has been five years in the construction of the work. He is now 21 years of age, and, unless all signs fail, is on the threshold of a remarkable career as an inventor and mechanic.

FRED S. KEMPF
Builder of the Miniature City

Fred S. Kempf in His Workshop

What Does it Cost to Live at Harvard?

By EMERY HEAGAN

NOT long ago there were sent from the college office at Harvard University circular letters to various upper-classmen for the purpose of ascertaining the cost of living at Harvard. The information secured was especially designed for the benefit of those students planning to come to Harvard. The letter and questions asked ran somewhat after the following fashion:

"One of the questions most frequently asked by students planning to come to Harvard is, 'How much does it cost to live at Harvard?' Will you kindly give these men the benefit of your experience by answering the following questions, confining your estimates of expenses to the college year and not including the summer vacation? I think it would also be very helpful if you would give at the end any conclusions you have derived from your experience here as to (1) the amount of money absolutely necessary for the expenses of a year, (2) possible ways of making student life more comfortable and economical, (3) those things which a new student—especially one who must live economically—should know before coming."

1. What has been your total expenditure for each college year
2. If it had been necessary to do so, by how much could you have reduced your expenditures?
3. Where have you lived here? (If you have lived in a suite, give the number of rooms.)
4. What consideration determined your choice of a room?
5. What was the actual cost of your room or suite?
6. Did the cost of your room include furniture, attendance, fuel and light, use of private bath and other privileges?
7. Where have you obtained board?
8. What has been the average cost of board for a week each college year?
9. What have your expenses led you to think is the best plan for students to adopt in regard to board:

(a) If obliged to exercise extreme frugality consistent with health?
(b) If able to pay about four dollars a week?
(c) If not obliged to consider the expense?

10. What has been the average cost of your clothing and washing for a college year?
11. What has been the average cost of your books and instruments for a college year?
12. To what extent have you used libraries instead of buying books?
13. What expenses, in addition to the necessities of board, lodging, heat, light, clothes, books, etc., do you think a man might advantageously incur, even though he were obliged to exercise strict economy? Can you suggest an amount for such expense?
14. If you have worked during term-time to obtain money for college expenses, what work have you done, and with what results?
15. If you have worked during the summer, what have you done, and with what results?
16. What does your experience suggest as advisable or inadvisable for a student of slender means to do:

(a) In economizing? (b) In earning money?

It might be interesting to see the answers of

When the late Sir George Williams was a young clerk, with a very small salary, he and another clerk were crossing Blackfriars Bridge one night on their way home from work. Williams suddenly proposed that they should call their fellow clerks together, and form a society to help one another to lead better lives. They met with a good deal of ridicule at first, but ten joined them after a time, and their employer gave them a little room for a meeting-place. Here, more than sixty-one years ago, the first meeting of the Y. M. C. A. was held.

one student whose career at Harvard has been far from meteoric; a student who has worked his way, who grew up on a farm, who has warmed his feet on fallish, frosty mornings where the sheep and cows have lain, who thought he had all the necessary prerequisites of greatness. He said in substance:

Students not especially brilliant and resourceful should have $150 when they enter Harvard; that is, enough to pay the mid-year term bills, issued in February, which comprises two-thirds of the tuition fee, or $100, and the board bill up to the middle of January, if one boards at Memorial or Randall Dining Halls. But it is barely possible for a student to enter with just enough to get started, say $20; however, it is risky. The prudent mediocre should have $150. A student needs at least from $350 to $375 for the year's expenses.

I do not see by what means student life may be made more comfortable or economical than it is now. A student may do his studying in the libraries if he finds his room too cold or dreary. Then there is Philips Brooks House, the center of Harvard's religious life, a veritable oasis for some students, with its cosy reading rooms where the latest magazines and papers are on file.

Understand that scholarships are not easy to win. Do not think, as stated by the donor in the description of one particular scholarship, that the money is not awarded "solely by reference to the student's rank or standing as a scholar, but that regard is also to be had to earnest and honest endeavor to attain excellence." The rank as a scholar alone, I find, now determines the award of scholarships. Do not, therefore, rely on paying expenses by such means. There are a few brilliant men here, and generally, I observe that the moderately well to do students who have enough to secure themselves against the necessity of work for self-support win the scholarships, while the poorest students fail, because they are compelled to work from day to day, and therefore lose time which should be devoted to their own work, and besides, their minds are diverted from their studies, which should be the chief subject of their thought. But prudent mediocrity, when combined with stability of character, wins the kindly regard of the Dean and Faculty, and may, even with low marks, win that aid from the college, designed especially for Freshmen and known as the Price Greenleaf Aid. This aid I secured with only C's—third grade marks — to my credit, and it was due, I think, to the combination of the two qualities named above. But a student must come well-recommended by his preparatory school to hope for recognition. I came to Harvard confident of winning scholarships, but I failed to realize my hopes. My ideas in regard to accepting aid not awarded for scholarship were lofty at first, but I have descended from my pedestal and have come to this conclusion, since the funds are intended for needy and worthy students whose marks are not high enough to win scholarships, that it is not dishonorable or demoralizing to receive aid from the Loan or the Beneficiary Funds, because, we may regard our college literally and in reality as our Alma Mater, and why not accept graciously that which she has for us, providing that in the acceptance, we pledge it to ourselves to repay all when earners.

The numbered questions of the lettter were answered in order as follows:

1. Freshman year, $387.38.
Sophomore year, $441.73.
2. $30.00. For extra books, and the expense of going home at the Christmas and Easter vacations.
$25.00 Sophomore year. For the same reasons as above.
3. At private houses in a single room.
4. Cost. Nearness to the college buildings.
5. $61.25 Freshman year.
$50.00 Sophomore year.
6. Yes, all.
7. At Randall Hall.
8. $3.00 in Freshman year. $3.50 in Sophomore year.
9. (a)—Become a member of Randall Hall Dining association and eat sparingly of meats.
(b)—Become a member of Harvard Dining association at Memorial Hall.
(c)—Experiment at the start with the various halls, the Union Cafe, and the different Cambridge cafes, then choose the one that best suits the taste and requirements.
10. $24.00 each year. I came to college well supplied with clothing, such as it was.
11. $25.00 each year, perhaps more than necessary, but many, to which I did not become attached, I sold when through with.
12. None whatever during the Freshman year.
To some extent the Sophomore year.
13. Twenty dollars I spent each year incidentally. This includes fees for club memberships, subscriptions to class crews, theater tickets—rarely, and only when a noted actor or some classical play was scheduled to appear—and personal trifles of various kinds. It seems to me that the new student can not let pass by the clubs, debating for instance, nor the theaters, for they are part of the many opportunities offered by the college environment.

11. Freshman year:

Waiting on tables at Randall	$101.25
Clerical work	15.00

Sophomore year:

Waiting on tables at Randall	$120.00
Incidental work	75.00
Clerical work	20.00
Monitorships	40.00

As my object in coming to college was to study, I worked in excess of my regular scheduled time at Randall Hall only when short of ready money.

15. My aim during the summer was not so much to earn a large sum of money as it was to recuperate and fortify myself physically. Therefore, I spent the summers by working at home on my father's farm in Maine, receiving about $50.00 each summer.

16. (a) Select courses that enable the use of library books rather than those which compel the purchase of books, and avoid laboratory courses. The ability to do this depends naturally on what course the student has planned to pursue. A room in a college dormitory may be secured by early application as explained in the catalogue. These rooms range in price from $45 to $350 a year and most of them are unfurnished. In selecting a room in a private house do a bit of personal canvassing and examine the bulletin boards for opportunities. I know of one fellow who paid in his Freshman year $120 for a room. Then discovering the conditions, he paid $55 the following year. Books may be bought second-hand at a store on Brattle Street not far from the Square. Then, to live cheaply, a student should board at Randall Hall. By doing this an opportunity to work there as waiter is opened. A few words explaining the magnitude of the Randall Dining Hall Association may be interesting. There are seventy-five student waiters on the pay roll and they receive twenty-five cents an hour, so that the pay roll for one week amounts to about three hundred dollars. Simple articles of food are served at cost, making it possible for a student to pay as little as two dollars and a half a week, but this is advisable only in the case of exceptionally strong students.

(b) Early in the summer before coming to college apply for a position as waiter at Randall Hall. One

DENNY, A MULE DRIVER

A STORY OF THE PENNSYLVANIA COAL MINES

By LAFAYETTE I. PARKS

BEGUN IN JANUARY

CHAPTER V.

TIM'S REFORMATION.

AFTER the first few days of Denny's experience in working in the coal mines the hard labor lost a good deal of its irksomeness, and the boy found himself taking a keen interest in things. Every day he was learning something new and this pleased him.

The other drivers and boys who at first showed a disposition to laugh at him soon found out that he attended strictly to his work and performed his duties quite as well as any of them, and this, as much as his quiet but firm manner, impressed them, so that even if Denny did not gain their friendship, he at least was not annoyed by them.

One thing that caused his companions to look up to him was the successful manner in which he handled Tim. At first the boy found Tim rather disposed to be unruly, but when he recovered from his first surprise of not being beaten every day, as Denny never raised his hand against him, he evinced a good deal of curiosity concerning his new master, and slowly dropped his evil ways.

Tim's reformation was a nine days' wonder among the drivers. They could not understand the secret of Denny's success. When after a time they learned that kindness really was the cause of Tim's attachment to his young master a gradual change came about in their treatment of the mules under their care; blows and angry curses were not nearly so frequent in the mine stable as before Denny joined the ranks of the mule drivers.

The boy could not fail to note the difference and was secretly gratified at the change.

Big Bill Grogan tried in numerous ways at first to cause Denny trouble; whenever there was a difficult piece of work to perform he unfailingly ordered the boy to do it. Denny could not understand this.

It had been whispered that when John Roberts, Denny's father, was killed in the mines by an explosion three years before, Grogan and he had just been quarreling over some matter; that the bullying mine boss knew more concerning the cause of the explosion than it would be healthy for him to tell. As no conclusive evidence of crime against Grogan could be produced the matter was finally dropped, but most of the miners avoided Grogan after that and looked upon him as a dangerous man to have for an enemy.

Denny knew something of these rumors, but he studiously concealed them from his mother, as he knew they would cause her uneasiness as long as he worked in the mines, and he felt that by keeping a close watch upon Grogan no danger would befall him.

Grogan knew that Denny suspected him, and so long as he saw that the boy was watching him he refrained from attempting any harm, for he knew the consequences would be fastened upon him, everyone in the mines knowing of his aversion to the lad. But deep down in the bully's heart was cherished a deadly hatred of the boy. He always felt that the youth was spying upon his movements, and fear that his crime might some day be brought to light through information obtained by Denny caused Grogan to desire to get rid of him.

When Grogan found out that he could not force Denny to throw up his position in the "works" his evil mind began plotting a scheme by which he could rid himself of the lad and thus prevent his crime ever being discovered. How near he succeeded in his wicked purpose will be shown in the following chapters.

CHAPTER VI.

A RECKLESS COMMAND.

It was along toward the latter part of April. Denny Roberts had been an employee of the Indian Ridge colliery for nearly six months and had succeeded in making friends with nearly all the drivers, who, with scarcely an exception, were rather proud to claim friendship with the cheery-voiced, obliging youth.

Denny's unfailing good nature, no matter how hard the day's work had been, and his patience and gentleness in dealing with Tim, set an admirable example for his companions who were so used to brutal methods and angry words.

Big Bill Grogan could not fail to notice the gradual change that was being worked upon the men in his charge; to such a cruel nature this knowledge was anything but pleasant.

One morning the passage where drivers were at work was damp and slimy from the moisture that seeped through from above. The week before they had been working in a tunnel that led away to the south, in a direction opposite to the one in which they now were engaged.

The south tunnel was a long, winding passage that led beneath the river which ran through the valley. Since the heavy spring rains that portion of the tunnel directly beneath the river had shown signs of weakness, and the superintendent had given orders to cease operations in it until all danger from the spring freshet had passed. The men had not been sorry to obey such orders, having all experienced a feeling of uneasiness when working there.

When the change was made a number of empty cars were left in the old tunnel, and as there was no positive need for them, it was thought best to allow them to remain, at least until all danger from the flood had passed. But the drivers in reaching such a conclusion had not reckoned with Grogan. When he learned of the cars being left behind he fell into a towering rage and swore he would have them brought out if every driver in the "works" were drowned in getting them. When he shouted this declaration out at his men they made no move to obey him but kept at their posts in sullen silence, determined to resist an order that might mean death to any one who would be so reckless as to venture into the abandoned tunnel.

Grogan seeing that such an order from him would be met with determined resistance, and not wishing to expose himself to the humiliation of having his commands disobeyed, resolved to make an inspection of the tunnel first, and, if it appeared safe, he would have the cars brought out, or discharge the men who refused to obey.

He was absent a long time on his errand—so long, in fact, that some of the men feared the tunnel had caved in upon him. On his returning to the men they saw that his face was haggard and that a strange gleam was in his eyes. Glancing over the little group of drivers that waited for him to speak, his eyes rested on Denny. Then he began:

"If there's one o' ye in the works that's afeared to go into the tunnel he ain't got no excuse to be workin' here. I don't want no babies 'round me I tell ye! I knows when there's danger, an' I knows when there ain't, an' I tell ye that tunnel's as safe as where ye are now."

The drivers shifted uneasily, but no one ventured to speak, fearing Grogan's wrath. The boss waited a few moments and then went on.

"I'm goin' to hev those cars brought out o' that tunnel this mornin', an' I'm goin' to hev 'em right away. Now, you four can knock off here till ye git those cars out o' the south tunnel," and with a wave of his brawny hand he indicated the four drivers nearest him, including Denny.

The four upon whom the perilous task devolved looked at one another hesitatingly, while their comrades murmured their disapproval. But Grogan's fierce glance, as he turned upon them, quickly subdued any thought of rebellion.

CHAPTER VII.

GROGAN PAYS THE PENALTY.

As Denny and his three companions slowly unhitched their mules from the cars and prepared to move off toward the south tunnel, Grogan started to follow them.

"You needn't think that I'm goin' to stay behind ye 'cause of a little scare. Not much! I'm goin' to follow ye an' see that the work's done."

Denny Roberts thought of many things as he led Tim through the long, dark tunnel, followed by the other drivers, with Grogan bringing up the rear. He realized full well the danger they were being forced into. He felt the injustice practiced upon him and his companions, and he secretly believed that if Superintendent Harper knew of Grogan's orders he would not keep him in authority longer. He resolved, therefore, if they were lucky enough to escape harm, to try and get the men to stand together and report Grogan for needlessly exposing their lives.

Finally the little party reached the south tunnel and came to the place where it passed under the river. Here they halted and inspected the roof, and what they saw did not relieve their apprehensions. Water was dripping from it in many places, and here and there at short intervals patches of earth were loosening and falling into the water that covered the bottom of the tunnel to a depth of several inches. As they were hesitating Grogan came swiftly up out of the darkness.

"You'd think the whole roof was goin' to cave in next minit the way you uns stand gapin' at it. Why don't you go on an' not be standin' here wastin' o' yer time? Move, I say, move!"

At these words from the boss, Denny and his companions started to splash through the chilly water; the mules hung back frightened, but Grogan's shouts and curses drove them on.

The tunnel came to an end a short distance beyond the river and here the cars, for which Grogan was risking the lives of his drivers, stood. There were nearly a dozen of them and as each driver could only take one at a time up the steep grade that led back to the main tunnel and again to safety, three separate trips would be necessary to complete the task.

As they hitched the mules to the first four empty cars and rattled off noisily through the damp passage, Grogan called out to them that he would stay there until the last trip and then ride out with them.

When Denny passed under the river on his first trip out he noticed with growing alarm that the flow of water was increasing, and when he arrived at the end of the line with the three other drivers they questioned whether they should return. Owing to the fact that Grogan had remained behind they concluded that, although he had forced them to go into the danger against their wishes, it would be only right for them to return and tell him of the increasing peril so that he also would be given an opportunity to escape.

As they moved swiftly down the grade on their way back they did not stop to examine the roof again as they realized that time was too precious to be thus wasted. Soon they reached Grogan and informed him of the condition of the tunnel roof; in a rage he answered that he would not leave that end of the tunnel, nor would he allow them to do so, until every car was hauled out to the main passage.

By this time Denny and the others were ready to start with the second lot of cars, Denny was the first out. As he listened to Grogan's tirade of abuse, a strange rumbling sound came to his ears from the direction of the river. He felt a sudden rush of chill air blowing in his face, while a strange terror seized him. The thing they had dreaded had occurred—the roaring mountain river had at last burst through the weakened roof of the mine tunnel. And even as he stood, stupefied with terror, still leaning over the front of his car as he was about to pick up the lines and speak to Tim, he could hear the splashing and runmbling sound as the torrent of water poured into the tunnel from above. Turning, he saw that the others had heard the terrible noise and realized what had happened.

Back a little distance in the gloom stood Grogan, the flickering lights falling on his face, now ghastly with the dread of death. What thoughts came into the mind of the wicked mine boss as he stood there in the damp tunnel listening to the roaring of angry waters rushing on to engulf and destroy its victims will never be known, but the sight of his strained face and staring eyes will linger in the memory of Denny until the day of his death.

Not one moment did Denny hesitate, however, when he recovered from his first shock of terror, but seizing the lines he leaned over the front of the car; in a twinkling he released Tim and in another he leaped to the back of the mule and plunged ahead into the darkness of the tunnel toward the approaching flood.

As the boy sped off toward the only avenue of escape he glanced back over his shoulder and shouted to his comrades to follow, which they hurriedly did, leaving Grogan standing alone for the pitiless flood to destroy. Then the rushing waters from the break in the tunnel struck them; what happened from that time on till they found themselves in the main tunnel beyond the river safe and sound, clinging with a death-like grip to the staggering, dripping mules, Denny and his companions could never tell exactly. All that Denny remembered was a blinding, roaring swirl of icy water through which Tim, with an understanding almost human, struggled bravely, till, forcing his way past the break and then on through the tunnel, he reached safety.

When the crowd of miners and drivers who found the four drivers and their mules exhausted in the main tunnel went to look for Grogan, they found that the cruel waters had buried him miserably in the narrow passage. It truly seemed that the hand of Providence had been stretched out to save Denny and his friends, and that the man who was directly responsible for placing them in that dangerous position had paid the penalty of his sin.

After all this Denny could not find it in his heart to part with Tim, and for a small sum he bought him from the company and give him a ride upward in the shaft cage and out into the bright sunlight, where he is spending a very happy old age.

And now there is little more to add. When Mrs. Roberts learned of her boy's narrow escape from death she would not hear of his again entering the mines. Superintendent Harper had kept his eye on the lad for some time and knew his metal. He made a place for Denny in his office, where with the same thoroughness and attention to his duties that he had given when a mule driver, the lad made his services valuable to his employers, so that today a visitor to the Indian Ridge colliery will find him still there, honored and respected by all.

(*The End.*)

BOYS' BOOKS REVIEWED

FRANCES AND THE IRREPRESSIBLES AT BUENA VISTA FARM, by Frances Trego Montgomery. My, what a perfectly glorious time the Irrepressibles—couldn't have been a better name—must have had. Talk about fun! there is more fun and enjoyment in this book, than can be got in a carload of monkeys. The boy or girl who fails to enjoy the pranks and mischief of these young people ought to have a doctor prescribe for them. The pictures are splendid and the makeup of the book in type, paper and binding is first class. 257 large quarto pages. Price $1.50. The Saalfield Publishing Co.

YOUNG VOYAGERS OF THE NILE, by St. George Rathbone. Larry Kennedy, an American boy, is paddling down the Nile to Cairo, having, because of a wager, traveled to the camp of General Kitchener. He meets with a young Englishman who is seeking a monster crocodile that devoured his uncle, his only means of identifying the particular saurian being his uncle's false teeth. The two boys join forces and have many adventures and escapes from the wild Arabs, all of which will interest the boy reader. The book is nicely illustrated by A. B. Shute. 205 pages. Price $1.00. The Saalfield Publishing Co.

WITH SPURS OF GOLD, by Frances N. Greene and Dolly Williams Kirk. Historical fact, and legendary lore are blended in such lively, entertaining fashion in this prettily gotten-up volume that the young reader is sure to be pleased. The stories of knightly valor of Roland and Oliver, The Cid, Richard of the Lion Heart, Chevalier Bayard and others have always been interesting and instructive to old and young alike. Harold M. Brett has caught the spirit of the stories in his fine illustrations. 292 pages. Price $1.50. Little, Brown & Co.

CHRISTMAS WITH SANTA CLAUS, by Frances Trego Montgomery. A splendid book for the little ones. Two little tots, a boy and a girl, spend some time before Christmas with Santa Claus and his wife in their home at the other side of the North Pole. All the wonderful things they saw and the wonderful things they did and their wonderful home-coming are set down in a delightfully entertaining way. The large page illustrations (in colors) are by Ruth Hallock. 154 large quarto size pages. Price $1.00. The Saalfield Publishing Co.

DAN MONROE, a Story of Bunker Hill, by W. O. Stoddard. The reputation of Mr. Stoddard as a writer of reliable American history in the form of stories for young people does not suffer in the present volume. Dan Monroe, from reliable sources, was found to be the name of the drummer boy of Lexington, and Nat Harrington was the fifer. Round these two and the opening of the war of the Revolution the author has woven a story which will delight every reader. Historical names and places are given in such a way as to show the author's thorough knowledge of his subject. Handsomely illustrated by J. W. Kennedy. 329 pages. Price $1.25. Lothrop, Lee & Shepard Co.

REAL ELECTRIC TOY-MAKING FOR BOYS, by Thomas M. St. John, Met. E. The author in designing this book considered that unless the materials and apparatus were explained in the clearest and simplest language his purpose of interesting and edifying boys would be defeated, so that every toy and piece of apparatus mentioned were tried and experimented with until perfection both in the drawing and completed toys was obtained. The materials and tools are such as can be obtained at very little outlay of money, while no boy of average ability can fail to understand the plain and explicit instruction. To the boy making electricity his hobby this little volume will be an invaluable help 140 pages. Over 100 original drawings, diagrams and full-page plates. Price, postpaid, $1.00. Thomas M. St. John.

IN THE LINE, by A. T. Dudley. In this the third volume of his "Phillips Exeter Series," Mr. Dudley has well sustained his reputation as a writer who tells a clean, wholesome, yet vigorous and inspiriting story of college life. His heroes are neither stuffed figures nor wooden images, but healthy, happy boys who study and play with equal zest and enthusiasm. We are sure that this volume will increase the already large number of delighted admirers of Mr. Dudley's work. The book is handsomely illustrated from drawings of Charles Copeland. 309 pages. Price $1.25. Lothrop, Lee & Shepard Co.

HOW TWO BOYS MADE THEIR OWN ELECTRICAL APPARATUS, by Thomas M. St. John, Met. E. For the boy who desires to study about electricity, but who has little money to spend in buying instruments, coils, motors, switches, etc., this little book has been specially designed. It tells how almost all necessary apparatus can be made from old tin tomato cans, cracker boxes, screws, wire and wood. In simple, direct language the author gives every detail by which the boy of average intelligence can build useful electrical apparatus and at the same time understand what he is doing. The numerous diagrams and cuts will greatly assist the young electrician. The twenty-one chapters of the book are replete with every information, from cells and batteries to tools and materials. 141 pages. Price, postpaid, $1.00. Thomas M. St. John.

DOROTHY DAINTY AT THE SHORE, by Amy Brooks. This is the fourth volume of the author's "Dorothy Dainty Series," and the young reader will find the little heroine just as sweet, loving, gentle and dainty as her name implies, and her friends just the most charming little girls that one could meet. Their adventures and good times at "Crest Villa" with its fine lawns and beach, as well as on the water will make splendid reading for the young folks. The fine illustrations are also the work of the author and add to the attractiveness of the book. 216 pages. Price $1.00. Lothrop, Lee & Shepard Co.

NELSON'S YANKEE BOY, by F. H. Costello. A story of 1805, when British men-o-war ruled the seas and did not disdain to impress Yankee seamen to help them. Al Graham, a Yankee boy, is pressed into the British navy. By a series of adventures he finds himself a messenger boy on Admiral Nelson's flagship, the Victory, and upon her deck helps to win the battle of Trafalgar and is close by the couch of the great admiral who received his death wound in the moment of victory. At Gibraltar Al sails for the West Indies, is shipwrecked and picked up by an American merchantman, finally landing on Yankee land. In the war of 1812 he does good work on board a privateer capturing many prizes. There is plenty of excitement and the description of the battle of Trafalgar which finally settled the supremacy of old England's wooden walls, is most vivid and thrilling. The illustrations are by W. H. Dunton. A book which boys will thoroughly enjoy. 293 pages. Price $1.50. Henry Holt & Co.

Lieutenant U. S. Grant, 3rd, Appointed as Social Aide at all White House Functions.

Grant and Lee

Two great names, Grant and Lee, are again associated in the persons of Lieut. Ulysses S. Grant 3rd and Capt. Fitzhugh Lee, Jr., the former a grandson of Gen. Ulysses S. Grant, and the latter a grandson of Gen. Robert E. Lee. These two young men are employed in the White House at Washington as military attaches of the President.

It has been the policy of President Roosevelt to give recognition to the sons and grandsons of the soldiers of the Civil War. Only recently he appointed a grandson of Gen. Stonewall Jackson to West Point.

The two young men first named are both graduates of our great military academy on the Hudson. Young Grant is 24 years old. From 1889 to 1893 he was attached to the American legation at Vienna. During that time he attended the state school, where were educated the late king of Spain and the present khedive of Egypt. Afterwards he graduated from Columbia College, and then joined his father, Gen. Fred D. Grant, in Porto Rico.

It will be remembered that young Grant was made a cadet at West Point by President McKinley, on a request made in a letter written by Gen. Grant, just before his death. The request was indorsed by Gen. W. T. Sherman. There were no vacancies for any of the states, so President McKinley made him a cadet at large. That he deserved recognition is shown by the fact that in 1903 he was graduated sixth in a class of 97. At once ordered to the Philippines, he aided in making a survey of a railroad which was to be built there.

Captain Fitzhugh Lee, Son of the Late Gen. Lee, Appointed as Social Aide at all White House Functions.

WHAT DOES IT COST TO LIVE AT HARVARD?

(*Continued from page 105.*)

should do this work only if he has no special talent and is obliged to rely on the income which the common work of hands and feet may bring. It affords a small but steady income of from $2 to $4 a week. A typewriter or shorthand writer may secure steady employment by becoming a member of the Stenographic Bureau, having quarters in Lawrence Hall. Last, but not least, be familiar with the catalogue, and understand the means of securing money which it tells about, such as Scholarships, Prizes, Loan and Beneficiary Funds, etc. Then a student may procure monitorships; that is, the work of taking attendance, in courses which he expects to pursue, by applying in writing to the Recorder at the College Office. The Appointment Committee finds work also for students, such as positions as library attendants, clerical work, etc. The Athletic Association, too, employs students on the occasion of the intercollegiate games, both as clerks in the office and as ticket-takers. There are many ways of earning money and vigilance here as everywhere is the price of success."

These statements made in regard to the cost of living at Harvard were taken from the personal accounts of the above mentioned student. He had a little red-leather account book and into it went the record of every money transaction, no matter how trivial. In fact, from a statement made on the fly leaf it seems probable that the student had foreseen what was coming for he had written: "A detailed statement of every transaction for the purpose of ascertaining the actual cost of living as a resident student at Harvard University." These accounts covered the first two years of his college career and, at the end of the book, there was an itemized account of receipts and expenditures, as follows:

FRESHMAN YEAR RECEIPTS

Bank account, represents two years' work before entering Harvard—farming and school-teaching	$191 80
Amount of cash on hand	34 16
Work at Randall Dining Hall	101 25
Price Greenleaf Aid	100 00
Sold books	6 35
Clerical work	9 95
Total	$443 51

EXPENDITURES.

Board bill at Randall Hall	$ 94 02
Room rent	61 25
Books	27 68
Traveling expenses and car fare	19 79
Laundry and clothing	14 99
Incidental	19 65
Tuition	150 00
Total	$387 38
Balance on hand at end of year	$ 56 13

SOPHOMORE YEAR RECEIPTS.

Bank account comprising balance from preceding year and income from summer's work	$ 80 05
Cash on hand	30 07
Sold books	7 95
Work at Randall Hall	116 43
Clerical work	17 15
Monitorships	40 00
Received from loan fund	40 00
Received from beneficiary fund	50 00
Incidental work	75 00
Total	$456 65

EXPENDITURES.

Paid for board	$141 01
Room rent	50 00
Books	24 82
Traveling expenses and car fare	18 45
Laundry and clothing	37 05
Incidental expenses	20 40
Tuition	150 00
Total	$441 73
Balance on hand at end of year	$ 14 92

Although this student was obliged to exercise strict economy it did not take from his enjoyment of college life. He had all the privileges that the college offers to rich and poor alike, who are in regular standing. The library, the third largest in the country, representing the accumulated wisdom of the ages, was his to draw from and enjoy at will. The work for self-support was not disagreeable. It brought the student into connection with people whom it was a privilege to know. In fact, he says that his sojourn at Harvard has been the brightest period of his life.

Before entering college every prospective Freshman should read carefully, and commune over it with himself, Dean Brigg's "School, College, and Character," especially that admirable first chapter bearing the title, "Fathers, Mothers, and Freshmen." The author has realized with wonderful correctness, the position of the new student in his unhomelike surroundings and has enabled him to understand what the college expects him to do. There are passages that deserve to be framed and hung conspicuously that all men might see. In the opening lines we read:

"The college sends her alumni into the world with nothing more than a warrant that they are presentable intellectually. Yet her unwritten and ugspoken purpose is not so much intellectual as moral, and her strongest hope is to stamp her graduates with an abiding character. A college stands for learning, for culture, and for power; in particular, it stands for an aim higher than money-getting. It is a place where our young men shall see visions; where even the idlest and lowest man of all must catch glimpses of ideals which, if he could see them steadfastly, would transfigure life."

Winning Good Opinions

It's something for a boy to win the good opinion of his grown-up acquaintances. From Lacon, Ill., comes a letter written by someone who takes an interest in boys regarding Elmer Fiero, a 14-year-old boy who lives in that town. He is not a boy-wonder; he is no great genius. But this is what he is, as his friend describes him: Elmer Fiero, of Lacon, has attracted the attention of many by his polite, quiet manner, his gentle disposition and his faithful performance of simple

duties. Part of his work is to drive cows from pasture to the hotel in town. At other times he assists about the hotel, acting as clerk on occasions. He has no father and no mother, and is dependent upon himself. With his many admirable qualities he is making a host of friends, and we predict that he will grow up to be a fine man.

Doubtless the same words might be written of many an American boy. We are just as glad to print an item of this kind as we are to tell of the doings of some boy genius. The picture of Elmer on a novel mount shows him to be a pleasant faced, intelligent youngster.

Harry C. R. Elliott, of Fullerton, Cal., is a good friend of THE AMERICAN BOY. He is something more than that, for he wears a gold medal, awarded to him as the winner of an oratorical contest, participated in by

Harry C. R. Elliott

the orators of the high schools of Orange County, Cal. In the contest he represented the freshman class of the Fullerton Union High School.

Beginning at the Ladder's Foot

Franklin Farrell, Jr., is another of those wise young men, who see the wisdom of preparing for tomorrow's millions, by today learning their work from the bottom up. Whether or no he appreciated the ethical value of choosing to play a man's part in the world rather than loaf away the years in the luxury which his parents' wealth made possible, he certainly did see the wisdom of the move practically. If he was some day to control a great business he must know how to run it, and to learn that best was to go in and take hold of the work itself in all its successive details.

That is precisely what he has done. Graduating from Yale three years ago, he has spent those thirty-six months in the ranks of the laborers employed in the Farrell Mills, at Ansonia, Connecticut. Promptly at seven of a morning must he report at the foundry, else his salary is docked as though he were any other hand at hearth or forge. All of this took pluck—"nerve"—but that is young Farrell's long suit. Not only does he do the dirty work which falls to his share, and do it well; not only does he wear jumper and overalls, quite as Cornelius Vanderbilt wore them in his apprenticeship; but, among his fellow laborers, he is as democratic as a thoroughly sensible American young man should be, and not one of them but has good words for this future "boss."

A Boy Singer

Roscoe Vandervoort, of Chicago, has been singing before the public since he was ten years of age. He has studied at the Chicago Conservatory of Music, but is now a pupil of Prof. H. F. Stone. His voice is a high, clear soprano of fine quality. For one season he did solo work at the Trinity Episcopal Church, of Chicago. He has sung in many churches and taken part in many concerts, never failing to please. He has received many tempting offers to travel, but prefers to continue his studies at school. He is in the first year class of the Englewood High School, is 13 years old, and a thorough boy. Roscoe has a bank account and is saving money with which to complete his education. He expects to enter the University of Chicago when he completes his high school course.

Roscoe Vandervoort

Prize Winners Among the Boys Who Sell The American Boy

Hundreds of boys have taken advantage of the plan we offer, by which they may make money selling and delivering THE AMERICAN BOY to customers, month by month, as it is issued. By reference to page 116, our readers will learn how boys get started in the sale of THE AMERICAN BOY. The boy who sold the most copies of the December number of THE AMERICAN BOY, and received $2.00 as a prize in addition to his profit of 5 cents on each copy sold, was Elmer Metcalfe. Each of the three following boys received an Ingersoll watch for good work done: Jacob Stockings, Floyd Deickman and Arthur Thorp.

Now, you boys who are not taking advantage of our proposition, read the advertisement on page 116, entitled "Earn Money in Spare Moments," and then get to work. Send a postal to us saying that you want to take advantage of our offer, and we will send you ten copies of THE AMERICAN BOY free. Sell these at 10 cents each, and you can buy your supplies for the following months at 5 cents a copy, thus enabling you to make a profit of 100 per cent on your investment and stand a good chance of winning a prize in addition.

AMATEUR JOURNALISM DEPARTMENT

Edited by W. R. MURPHY

[The editor will send copies of typical amateur papers to boys interested in the hobby, providing a stamped addressed wrapper is sent.]

Russell Williams, Editor and Owner of a Six-Column, Four-Page Newspaper at Hoskins, Nebraska

It isn't a "make-believe" newspaper of which Russell Williams, aged sixteen, of Hoskins, Nebraska, is editor, publisher and owner, but a six-column, four-page journal containing all the news of the town.

Russell Williams was born on a farm and attended the common school until he reached the eighth grade. He was compelled to quit school because of ill health. Then he learned the barber's trade, but it was not to his liking. Renting an office, he secured an equipment suitable for a newspaper, hired a compositor, and went to work. The name of the paper is "The Headlight." It contains on the average twelve columns of advertising, which in a town the size of Hoskins is a very fair showing. The paper has already become a factor in local politics and is making itself felt in the business life of the town.

The Letter Box

George Kilpatrick writes a long and chatty letter about his experiences in the typographical field. He and his brother have a 3x5 inch press and expect to get a larger one in the summer. George worked during last vacation in a local printing office. The billhead he sends as a sample is very creditable; the cards are not quite so good because the names and addresses are set from fonts of type which do not harmonize. George is undecided whether to go into a regular printing office or to start in with his brother and a boy friend. With his knowledge of printing the latter would be the better, as the work could be done at odd times and there would be no necessity for leaving school. Cuts can be secured from any large printers' supply house, or made by a local engraving firm. Advertisers usually furnish their own cuts. The editor is always glad to answer to the best of his knowledge, queries relating to journalism and typography. George's letter was written on both sides of the paper, and we hope he won't do this the next time he writes. In handling hundreds of letters, even the time required to turn the sheets counts up.

Leon A. Darrone—Berry H. Akers

Leon A. Darrone is one of the most recent recruits to the ranks of amateur journalism. He is preparing to issue in the spring an amateur literary magazine in his home town of Auburn, N. Y.

Berry H. Akers, of Richmond, Missouri, is a well-known amateur journalist. His first paper was called the "Missouri Amateur," and appeared at intervals for some two years. His latest venture is "The Stork," a large amateur "newspaper" that appears bi-monthly and contains much interesting and well-edited matter of news interest. It is issued alternately with the "Amateur World," edited by Lee B. Chase, of Chicago, Berry printing the paper at the office of the "Richmond (Mo.) Missourian," where he is employed. Young Akers has attended several Press Association conventions, at one of which, held in Minneapolis, he was elected treasurer of the United Amateur Press Association. He is an enthusiastic amateur photographer.

Berry H. Akers

What Some Wise Men Have Said

"There is no secret of success but work," said Turner. Rufus Choate more than once expressed a similar conviction.

"Would you live long, work hard," said Rowland Hill—and proved it.

"Every man the architect of his own fortune," has been credited to President Carter of Williams College as the watchword of his life and efforts. "You cannot dream yourself into a character, you must forge one," he also says.

A FRENCH FROG AND AN AMERICAN EAGLE

AN ENGLISH SCHOOL STORY—*By E. S. TYLEE*

BEGUN IN MARCH, 1905

CHAPTER XVII.

THE MYSTERY DEEPENS.

AS CARCLOUGH and I were boxing in the gym a few days later, Mr. Henderson looked in and beckoned to us. We were reluctant to stop, for we were in the midst of a brisk rally, but as soon as we had tossed away the gloves and crossed the tan floor we found the master in such a state of excitement that it infected us, and we waited eagerly to hear what he had to say.

"We have found a clue," he said in a loud whisper, "a most certain clue. We are on the track of the fellow who lost the button. He will be identified this very afternoon."

"By the matron, sir?" asked Carclough.

"Well, no!" replied Mr. Henderson, looking a little annoyed, "Mrs. Mole could give us no help whatever. Most extraordinary thing, the majority of the boys' nightshirts were found to be deficient of a collar-button." Carclough gave me another of his slow, solemn, significant glances. "It really seems as if they moulted them. The matron has assured me that all such deficiencies are repaired as soon as they are observed, and that the consumption of buttons in Crosscombe is positively phenomenal. "However," continued Mr. Henderson, smiling, "we are fortunately not dependent on our button. From inquiries that we have made in Winston it appears that the ring was sold to a shopkeeper there, shortly after it disappeared from my room. The tradesman himself will be here this evening with the ring. He seems a perfectly honest and straightforward person and willing to give every assistance. I should like you both to be present when I see him, so take care to be in the way tonight between six and seven."

"One question, sir," put in Carclough, "was the ring sold by a Crosscombe boy?"

"It was," answered Henderson. "It is surprising, of course, that it should have been sold so soon and in Winston, where it could so easily be traced; but I suppose thieves do these foolish acts occasionally or the honest men would have no chance. However, we shall know more this evening." He disappeared as suddenly as he had come, leaving us to return to our boxing.

But hardly had the door closed behind the master when it opened again and the American boy, Washington Pickens, came in. He walked straight up to Carclough, and addressed him in his usual cool and self-possessed manner:

"Say! What is this the fellows are saying about Briant?"

"About Briant!" echoed the captain somewhat staggered by the sudden question. "Who has been saying anything about him?"

"That is what I want to know, and you can bet your boots I'm going to find out!" replied Pickens resolutely. "The last words dad said to me were that I was to be good to René, and you'd better believe I mean to be good to him, or break something. There's not a chap in the school who has got a civil word for Froggy today; but they are a mean set, and no one will tell me what they have got against him. Will you tell me? Come now!" He clenched his hands and stuck up his chin in the most determined fashion.

"You had better ask Briant himself," said the captain, quietly.

"No, sir. There's not one of those fellows who would not mind what you say, and if they have anything against my friend you are bound to have heard it. I am going to see this thing through."

"Well, I am afraid I cannot help you," said Carlough, turning away. The self-assertive manner of the young Yankee always grated upon him, and he spoke rather superciliously. Washington flushed up and his voice grew more nasal than ever.

"You won't help me? Then you are against Briant, too. Well, you can elect some one else to your old gang for I am going to send in my checks. I see how it is. There's a ring against Briant because he's a stranger. The railroad people made one against my dad, years ago; but he burst it up, as I am going to burst this one up. You hear me! No, I won't shut up, Mordaunt, and I don't care a cent if he is captain; he can't boss me. I've seen better captains handling coal on the Mississippi at a dollar a day." Even Carclough's patience gave way here and he made a wrathful step or two towards Pickens, who deeming discretion the better part of valour retreated to the door where he paused a moment to deliver his parting shot:

"Mind what I say, you, young Johnny Bulls! France and America are in alliance again, and don't you forget it! We whipped you at Saratoga and Brooklyn, and we'll whip you again! So long!" He closed the door just in time to escape a single-stick hurled by the indignant captain, and we heard him clatter away along the corridor at a speed rather more suggestive of Bull's Run than of the victories which America prefers to commemorate.

Carclough did not pursue him. Indeed, after a few seconds his wrath so far evaporated that he burst out laughing. The contrast between Pickens' war-like speech and his rapid retirement from the scene of action was too exquisitely absurd to witness with a grave face. Besides I suppose the youngster's audacious defiance of the captain of the school was amusing enough in itself. It was like a street arab shaking his fist at the Emperor of Russia!

"After all, though, it is no laughing matter," he said, as soon as he was serious again. "It is pretty evident that that cad, Adams, has been chattering, and that he has put two and two together as we have done. I remember noticing him at that blessed circus. I am extremely sorry now that I didn't follow your suggestion, Mordaunt, and lick him. But I do hate to hurt anybody, and that's the truth."

"I know you do," I said to the good-natured captain, and that is why we all love and admire you so. But a thorough sneak like Adams understands nothing but toko, and nothing else does him any good. Anyhow, if the brute has really been giving the show away I'll lick him myself, and save you the trouble. There's the dinner-bell! Come along!"

It was quite late in the evening when a note from Henderson, marked 'Very Private,' was brought to me by one of the Juniors. I was wrestling with a fiendish problem in trigonometry, and getting heavily thrown every time. In spite of its mysterious endorsement the note merely requested my presence in Henderson's room, so I gladly laid my work aside and betook myself to the master's sanctum, which was on the same floor as the dormitories, and almost adjacent to our own. Henderson had only recently moved into it, declaring that his previous apartments were inconveniently small. Of course we knew better, and that it was a deep laid plot.

I found Carclough already there with Henderson, and the two were contemplating with troubled expressions, an individual who was established in the arm-chair and appeared very much at his ease. At the first glance I recognized the fat old man who had sold Carclough the studs. He recognized me, too, and greeted me at once.

"Good evening, Master Billings!" he said. "I hope I see you well, sir!"

So that was what had come of the captain's ingenious device for concealing our identities! Henderson stared in amazement, and did not seem at all softened when I had lamely explained. He seemed to consider that Carclough and I had compromised the dignity of the school. As for the old tradesman he had manifestly formed a theory that we were both more or less concerned in the fraud, whatever it was, and the discovery that I had passed under an alias confirmed it. But he was a good-natured old chap, too, and appeared anxious to shield us from the consequences of our crimes.

"Take my advice, sir," he said to Henderson, "and 'ush it up. 'Twon't do the college no good to have a rumpus. And as for these here young gentlemen, I'll lay they're main sorry for what they've a gone and done!"

"Your intentions are most excellent," said Henderson, stiffly. "But you are laboring under a mistaken impression, I assure you!"

"That's what I says, sir," said the old fellow in a satisfied kind of way. "'Ush it up. B'ys will be b'ys. Lor' bless 'ee, sir, I've robbed orchards myself as a b'y."

"No doubt! No doubt! interposed Henderson in rather a nasty tone. He seemed to find the old man rather exasperating.

"Ah, that I 'ave! Many a time!" continued the Ancient. "I dessay you have yourself, sir, before now!" he added, favoring us with a portentous wink.

But Cuckoo was not to be drawn into autobiography, however sure he might be of an appreciative audience.

"Perhaps you will allow me to bring you to the point," he said, rather testily. "Have you the ring about you?"

The fat shop-keeper was already struggling to get at his trouser pocket. It was a strange and fearful spectacle. He had to brace himself back in his chair as if he were striving to hold in a restive horse. His lips were tightly pursed and the veins in his forehead swelled in the most alarming manner. Just as we were expecting to see him go pop, out it came, suddenly, a square cardboard box of the usual size; and one could not help thinking how it must have dented him.

Henderson took the box in his hand, drew out a mass of cotton-wool, and extracted the ring. Then his face fell.

"There is some mistake here, Mr. Lidgett!" he said. "This is not the ring which we missed."

"A rewby ring!" said Mr. Lidgett, evidently quoting from memory. "Claw-setting! With an inscription."

"Yes, yes," returned the master testily. "That is all quite correct so far. Nevertheless this is quite a different ring. I have never seen this before. Why, it is not much more than half the size of the one I wrote to you about. I should think this had been worn by a child."

"Which the young gentleman as sold it to me took it off 'is own finger," commented the fat man. "Then you mean to say, sir, as how I 'ave 'ad all my trouble for nothing?"

"Oh, we will compensate you for your loss of time, if you require it!" Henderson answered airly. "I will speak to the Doctor about it."

The stout Mr. Lidgett slowly rose and prepared to leave, looking very hard into the hat which Carclough handed to him. Apparently he found an idea in the lining, for suddenly his bewildered expression changed, and he smiled an oily smile:

"I think you are puffickly right, sir," he remarked to Henderson, in a confidential low tone, as if there were a secret understanding between them. "The ring ain't worth more'n a pound or two, and what's that to make a row about, as I said before? 'Ush it up! that's what I says, 'Ush it up!"

Nor was it of any use for Cuckoo to assume a lofty air, and addressing him as "my good man" to assure him that he was absolutely wrong in his conclusions. The "good man" had thoroughly settled it in his own mind that Henderson, from motives of high policy, had refused to recognize the ring. The last we heard of him as the door closed behind them both, he was still comforting Henderson with the assurance that he was "puffickly right," and exhorting him, above all things, "to 'ush the matter up!"

As soon as we had taken leave of the crest-fallen Henderson and returned to the sweet seclusion of the captain's study, Carclough, who had been silent and thoughtful during the interview with Mr. Lidgett, planted himself before me with his elbows on the back of a chair, and unburdened his soul.

"Mordaunt!" he said, "I am going to chuck this detective business; it isn't decent!"

I said that I was just thinking so myself.

"I wish that old don from Manchester had been in—in his native city, before he came here with his beastly old rings, making mischief in the Gang and sending us all prowling about like weasels." The captain was quite red in the face. "Here have we been dogging young Froggy about the country as if he were a pickpocket, instead of one of the nicest youngsters that ever entered the school. And that ass, Henderson, is just as bad, with his rotten old clues. I only hope no one else has got scent of the business. If we have done any harm to Briant I shall never forgive myself."

"Oh! I don't think there is any fear of that!" I said. "I hope not. Anyhow, I have had enough of Sherlock Holmes for one while. I shall stick to Sandhurst now!"

"Well, there's a chance for the good old British army after all!"

The captain took no notice of my flippancy.

"I don't know," he said, slowly and reflectively, "whether a detective can be a gentleman. Perhaps he can. But—" he added more briskly, "I am jolly well sure a gentleman can't be a detective. It isn't possible."

"That's all very well," I said. "But who do you think took the thing then?"

"I verily believe the old don swallowed it," answered the captain with an air of conviction. "And my only regret is that it didn't choke him.

CHAPTER XVIII.

"BEHOLD HOW GREAT A MATTER A LITTLE FIRE KINDLETH."

It was all very well for the captain to express a pious hope that no injurious reports against Briant had gone abroad in the school. Only a day or two were needed to convince us that the indignant Pickens was right, and that slanderous tongues had indeed been busy against his friend, though we were completely baffled in our endeavors to discover who the scandalmongers were. Of course our first thought was of Puffy Adams. Unfortunately when we proceeded to interview and question him we found that we had been forestalled by Pizarro, who had already taxed Puffy with being the originator of the rumors against Rene, and had only succeeded in putting him on his guard. Adams expressed a pained surprise at our having doubted his discretion, again referred to himself as a kind of human strongroom for his friends' secrets and promised his best assistance in contradicting the reports. This he did so elaborately, that in a week or so nearly all Briant's former companions were tacitly avoiding him, and the French boy, but for myself and Pickens, would have been left practically alone in the school. Alone that is, but for one most important exception. The small Parlor Boarder, Bobby Reynolds, otherwise known as the Tadpole, had taken Briant under his wing from the first, and now that René was ostracised by so many of the seniors, he seemed to value the youngster's friendship more than ever. Nor was that friendship one to be lightly esteemed. Everybody more or less, made a pet of Bobby, but he was fastidious in his choice of intimates and no amount of bribery could attach him to persons of whom he did not approve. Anstruther had been a great patron of his, but ceased to take much notice of him when he discovered that the loyal little fellow would not consent to desert the outlaw.

"I think their heads must be made of wood," declared Carclough to me one day when he had been vainly expostulating with some of the leaders of the Gang in regard to their treatment of Briant. "I have explained to them till I am hoarse, how the mistake arose about René; and I might as well have whistled jigs to a milestone. All that Ascott and Baines and the rest will say is that the whole thing is precious queer, and they'd rather not have anything to do with René till it is cleared up. As for Anstruther, he simply refuses to talk about it. Only now and then he throws out mysterious hints to the effect that he knows more about the matter than I do. And now they have made a party cry of it, and I can't say much to Anstruther till this rotten election is over."

"Of course not," I said, "but all the same I don't think Anstruther really believes that Briant is a thief. I think it is just his nasty prejudice."

"It is going to lose me the football captaincy, anyhow," remarked Carclough; "and goodness knows I shouldn't care a jot about that if the Gang were only united once more. But we are all at sixes and sevens."

It was true, as Carclough said, that the question of the hour was beginning to exercise an important effect on the football contest, and as the polling day drew nigh it became evident that the Reds would be in strong force, and that our utmost exertions would be needed to secure Carclough's re-election. Ever since the debate on "Alien Immigration" there had been an anti-foreign party in the school, composed of such as resented Briant's rapid success or the young American's airs of confident superiority. Hitherto, however, the faction had chiefly consisted of the "undesirables" of Crosscombe, but Anstruther's leadership, and his nomination as a candidate for the captaincy, had given it a certain respectability; and now, thanks to the unfortunate scandal of which we have been speaking, it was making numerous recruits among our own party.

The following Saturday would be decisive; for the Yeobridge match was the most important fixture on our card, and the votes of all waverers would be determined by the form shown by the two candidates who sought their suffrages. Everyone knows that the Yeobridge club is the best in all Westshire and generally supplies a good third of the county fifteen. For three years in succession they had beaten us; and this time there was a grim determination in our team to break this succession of disasters, or perish in the attempt.

Crickhowell said that he would take any odds on the perishing; and enlarged on the inconvenience that would be caused to Doctor Hardress by having fifteen inquests at once. He was not himself a member of the team, being no athlete, and preferring the kindly shelter of the pavilion and the role of the Sardonic Critic. It is an easy and attractive part to play; and one can establish quite a reputation, without having to wade through three feet of mud for it, with your jersey half off your back and a lump as big as your fist over your left eye.

There was plenty of the former article, I mean mud, on that exciting Saturday afternoon, for we had had several days of a fine thick drizzle and, though it cleared up on the morning of the match, the ground was in a fearful state, and at every step you took it nearly sucked your laced boot off. The weather was so warm that it seemed ridiculous to be playing Rugger at all. Never had such a fine and genial autumn been known in our neighborhood, and there was a great deal to be said for Crikey's suggestion that ices should be handed round at half time instead of the usual lemons. It was a comforting reflection that our opponents were a heavy set of men and would probably be much more oppressed by the heat than ourselves.

The Yeobridge Fifteen arrived as usual in one large brake, and at the first glance we saw that we had our work cut out for us. Six county players were in the team, and though the rest of them were not up to that standard they were a most formidable side, and it was all against us that we had lost the toss and that our opponents would start the game with all advantages of sun and wind in their favor.

They were a beefy lot. They began to press from the very first; and for a long time all we could do, was to wheel the scrums that we had no chance of holding, and spread ourselves over the ball directly it got loose. That bothered them exceedingly, for they were by no means a clever team; but at last they succeeded in scoring a try, rolling us over the line by sheer weight and strength, our men hanging to them like wolves on bisons. Thanks to a strong

The Boyhood of a Great Novelist

WILLIAM DEAN HOWELLS, who is today among the foremost novelists of the United States, when a boy "played Indian" in the Miami valley in Ohio. His home was for a time in a log cabin not far from Zenia, in that state, and it is related of him that he was fond of diving in the village dam, and hunting wild ducks on the river near there. His birthplace was at Martin's Ferry, Ohio,

America's Foremost Novelist

but the house in which he was born was long since torn down.

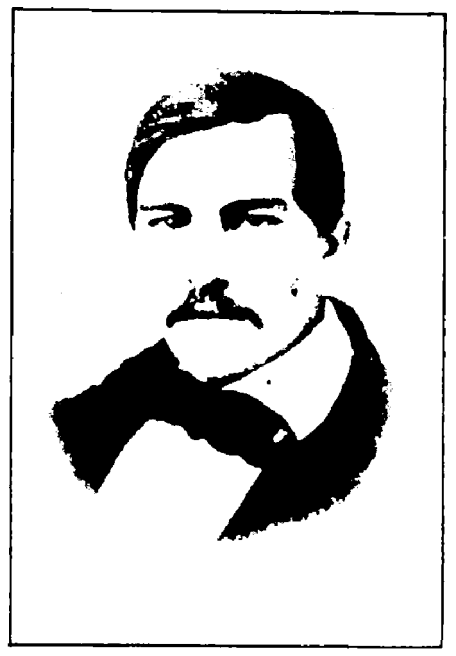
At the age of ten it is said that he decided to become a writer. The year before, he had written an essay which he entitled "Human Life," and this was published in his father's newspaper, the boy setting up the type himself.

Jefferson, Ohio, was the home of young Howells during an important part of his boyhood, his father at that time being publisher of the "Ashtabula Sentinel." In this office young Howells translated a story from the Spanish and put it into type without writing it out. While still in his teens he became a master of several languages and an omnivorous reader of books, particularly the writings of Longfellow and Lowell, with whom he soon became personally acquainted. Young Howells was a great lover of home and he seldom went far away from his father's house; it is said that when he did leave for any length of time he was usually very homesick. No companions interested him so much as did his father and his mother.

After working for several years in the old printing office at Jefferson, Howells became a reporter on the newspapers of Columbus and Cincinnati. At the age of twenty-four he was appointed United States Consul to Venice. This enabled him on his return to his native country to write an entertaining book entitled "Venetian Life."

When but a boy Howells found that he could write poetry, but he cared more to write prose. Many of his early manuscripts were rejected, his early discouragements being those usually accorded beginners in literature.

There is encouragement in the career of William Dean Howells for a boy who is compelled to leave school early, for he left school at the age of twelve. Yet it should be noted that he did not in leaving school leave off study or habits of industry. It is quite remarkable that a man who could boast of so few years schooling in his boyhood should have received the honorary degree of Doctor of Civil Law from Oxford University, one of the most famous universities in the world. Perhaps no higher honor could fall to a writer than this.



William D. Howells at 21

Mr. Howells' Boyhood Home at Jefferson, Ohio

Chinese Boys and Their Ways

By Rev. G. A. Bunbury, M. A., Hong-Kong

CHINA—the land of topsy-turveydom, where people are always counted a year older than they really are, where books begin at the last page and end at the first, where you write your letters not in lines but in columns, and where the mariner's compass points to the south! But, in spite of all this, Chinese boys are much the same as American boys. Like them, they go to school and play games, and get into scrapes and out of them again.

It is just three years ago since my students, returning from their summer holidays to their work at St. Paul's College, Hong-Kong, brought back with them eight small boys, sons and younger brothers.

These boys were all sons of Christians, and if we had sent them home again would have been compelled to find an education in heathen schools. This was, of course, impossible, and so we decided to take them in, although our buildings were, and still are, somewhat small. The number has now increased from eight to twenty-four, and we could take in many more if we had room.

Our school day is as carefully timed as in your school. At 6:30 a. m. a bell rings, and all the boys get up from their beds. These beds are formed out of two planks laid upon trestles. How would you like a plank bed? Chinese boys seem to like no other. They roll up their quilts, made of rough cotton-wool, which serve them both for blanket and sheet, and then go out to wash. At seven o'clock there is ten minutes' silence for prayers. At 7:10 school begins.

Anyone near at hand always knows when school begins, for the boys all learn their repetition aloud, each seeming to try to shout down the others. Shouting during the learning of repetition is the rule throughout China, and in a village where there are two or more schools a father who wishes his son to learn sends him to the school where most noise is made! About a quarter to eight the Chinese master hears the repetition. Each boy in turn brings his book to the master, and then, turning his back to him, repeats it as fast as he can. A foreign master needs to be fairly expert in the language before he can hear repetition. The word used for "to repeat repetition" and "to turn one's back on a person" is the same.

At eight o'clock the bell rings again, and boys and students come down to the chapel for morning prayers. The service begins with a hymn, the same words and same tune as English boys sing. After prayers, at 8:30, a bell rings for breakfast. Breakfast consists of bowls of rice with little bits of fish or vegetable to help it down. No knives or forks are seen, only chop-sticks, with which all Chinese are highly expert. As "there's many a slip 'twixt the cup and the lip," it is the correct thing to raise the bowl to the lips and then shovel the rice into the mouth. Most boys can get through two or three well-filled bowls of rice.

After breakfast, the boys have a free time, during which cues have to be plaited—an operation which takes a long time.

At 9:45 we have drill on three days in each week, and daily at ten o'clock study commences, lasting till one. All the work—Scripture, geography, arithmetic, or whatever it is—is taught in Chinese, as well as the native classics. At one o'clock there is an hour's interval before afternoon school. All the boys now have a light meal of rice-broth, eaten with China spoons from small round bowls. About this time the tuck-shop arrives. The tuck-shop consists of two small light wooden tables, from the corners of which rise two arching pieces of bamboo. These are so arranged that the owner can hang a table on either end of his bamboo pole, and carry away the whole on his shoulder.

What does the tuck-shop man sell? Peanuts, sugar cane cut into lengths quite convenient for you to suck, ginger, white or pink, besides olives and several other kinds of fruit unknown elsewhere. Each table is divided into little partitions, and on these the goods are set forth. They are very cheap, for most Chinese are poor. The coin most in use is the cash—a round coin with a square hole in the center, of which about thirty-six go to one cent. Think how much "grub," then, a penny would buy! Probably, however, you would, if a Chinese boy, be considered quite rich if you got five cents pocket money per week.

At two o'clock the bell rings. School continues, with a break of fifteen minutes, till four. At 4:15 the boys have "tea." This is not a good name for the meal, since usually no tea is drunk then. They drink tea whenever they are thirsty in this very hot climate, and they are nearly always thirsty; so a big teapot always stands in the classroom, and when master or boy is thirsty he helps himself. The cook fills up the teapot

(*Continued on page 116.*)

A FRENCH FROG AND AN AMERICAN EAGLE

(*Continued from preceding page.*)

cross wind, the kick at goal was an utter failure; and when the ball was restarted our fellows were so fierce and so quick that they rushed it right across the ground, Baines scoring just off one corner before the slow countrymen had realized what was happening.

The cheering was tremendous from our supporters; for indeed nearly everybody had expected that our opponents would have a walkover, over our bodies. Of course the affair was far from being decided as yet, but we observed with satisfaction that the other side seemed already somewhat blown with their exertions; whilst our men were as fresh as paint.

To our surprise, as soon as the game was resumed, Carclough took another man out of the scrum.

"What's the sense of doing that?" muttered Ascott discontentedly, to his nearest neighbor. "As if we were not weak enough already, forward. Now, those brawny beggars will simply carry us around the field. Silly, I call it."

"You duffer, put away your flute, and play the game!" said Baines, scornfully. "Carclough knows what he is about. We could not carry the scrums in any case. And I never saw a slower set of three-quarters than theirs. You see if we are not all round them presently."

The event justified Mainwaring's confidence in the cap'en's judgment. Keeping the scrimmages as loose as possible and wheeling them whenever it was practicable, the school's forwards contrived to give continual openings to our admirable backs, of which the latter were not slow to take advantage. More especially were Anstruther and the captain conspicuous; the one for his Odyssean wiliness, and the marvelous faculty he showed for being always on the spot at a critical moment, the other an Achilles like strength and ferocity, which indeed, sometimes did more harm than good, since it impelled him to charge impetuously where Carclough would have dodged craftily. Nay, on one occasion he ran half the length of the ground, almost at top-speed, apparently oblivious of the fact that a burly Westshire man was clinging to him like a leech; and he was only brought to earth at last by the efforts of a regular syndicate of foes. Big as our opponents were, Anstruther was manifestly by far the strongest man on the field, and when presently his hard-tried jersey opened in a great gaping rent, it showed a pair of shoulders that would have done honor to a navvy.

But time was passing and as yet Crosscombe had not succeeded in gaining a winning advantage, while the weight of our foes steadily forced us nearer and nearer to our own goal. Twice in the last half hour they nearly scored, and each time it was our wary captain that brought the man down just on the line. In fact Carclough seemed to be everywhere at once, and thanks to him the score was still a tie, when the referee began to fumble with his watch, and the word went round that it wanted only five minutes to the call of time.

They packed the next scrimmage close up to our goal; in fact the feet of our forwards were almost on the line. I suppose their certainty of success made them careless, for presently when our over-weighted men gave way, and the ball rolled out on their side, the Westshire half-back who picked it up, made the wildest possible attempt at a pass, which was intercepted by Ascott, who handed it to Anstruther. Two of their three quarter-backs immediately threw themselves upon the latter; but with a mighty effort he wrenched himself free, and sent them spinning. There was no one now between him and the Westshire goal save their full-back, and the poor man had been chiefly occupied in trying to keep himself warm by flapping his arms like an idle cabman. The shouts of his friends roused him just in time to see Anstruther bearing down upon him at topspeed, with the whole field in hot but hopeless pursuit.

The back did his best, but he was manifestly uncertain whether our man meant to dodge or to charge him; while Anstruther, who was in no two minds about it, came on like a thunderbolt. There was a momentary collision, from which Anstruther rallied with scarcely a stagger, leaving a very sick Westshire man on the turf behind him, and racing on, grounded the ball just under the center of the posts, amid a perfect tornado of frantic applause.

Ascott placed for Carclough and the captain kicked the winning goal just a few seconds before the whistle sounded. There was so much noise then that few at first noticed that a little group of us had formed round Anstruther, and not merely to congratulate him. The hero of the match had not emerged scatheless from his encounter with the two half-backs and was nursing a badly wrenched arm. Villiers Brown has had an ambulance course, and thinks himself no end of a medicine man, on the strength of it. He came striding up to the group in his old toga of an ulster, still brandishing the little flag with which he had been acting as one of the touch judges. Small jobs of that kind please masters, and keep them employed and out of mischief in cases when you can't put them in the team.

The fellows were crowding Anstruther pretty closely, and asking him continually how he felt, though he answered them only with inarticulate growls.

"Now then, boys, stand back, stand back, and give him air," said Brown, spreading his arms right and left, as though he were trying to swim. The crowd scattered a little. "Where is his hurt, Carclough?" he continued.

"Bad sprain of the left wrist, I fancy, sir," replied the cap'en. "Run and fetch a glass of water," said he to the nearest junior. He had already slit the sleeve of Anstruther's jersey all the way up. To be sure, that was not difficult, considering its condition.

Brown crammed his great fur gloves into one of the overcoat pockets, while the little flag stuck stiffly out of the other, like a banderilla fixed in the flank of a bull. Then, assuming that swell pince-nez of his, he bent to examine the limb. Pure swagger! He no more needs it, bless you, than a toad wants a side-pocket.

"I hope there may be nothing broken," he said at last, looking as wise as all Harley street. Then he thought it best to hedge. "But I think we ought to have Doctor Geoghegan's opinion at once. Send some one directly, Carclough, anybody you can trust!"

All this time Anstruther had been frowning and biting his lips as if he were in great pain; but now he jerked his head up suddenly, and protested.

"It's nothing, sir, really," he said. "Give me a basin of hot water, and no doctors, and I shall be all right tomorrow. There's really no occasion for fuss. I hate fuss!"

This was all that was wanted to make Villiers Brown resolute. He is like iron when he knows he is trampling on your feelings. Then he thinks he must be treading the path of duty.

"Nonsense, nonsense," he said. "This is perfectly childish in you, Anstruther. Of course you must go to the infirmary at once. Mrs. Mole will attend to you; and the surgeon must see your arm as soon as he arrives."

Fanshawe chose this moment to deliver his opinion. He had been standing by, listening in his solemn way to what passed; and now remarked lugubriously:

"I say, Anstruther, your arm does look bad, you know. I saw a fellow's wrist swollen up like yours, you know, only not quite so bad perhaps; and he was in bed for months and months, and never got the full use of it again."

"Get out, you old Raven," said Carclough, goodhumoredly thrusting aside Micaiah, as Fanshawe was called, on account of his continual prophecies of disaster. "Don't mind him, Anstruther, old man, but trot along with me to the infirmary, and Geoghegan will put you as right as rain, before old Micaiah has got his mourning made!" He passed his arm through his friend's sound one, and the two went off together as amicably as if there never had been such a thing as an election in the school. So true it is that great minds can rise above party spirit, and the petty animosities which divide their ignorant followers.

A salvo of cheers, in which the defeated Westshire men took their full part, greeted our two paladins as they passed the pavilion, and as I, as the captain's deputy, escorted our opponents to their brake; they were loud in their praise of the Crosscombe fifteen, and especially of the great three-quarter back who had been the most prominent figure of the match.

In such an excited condition of public feeling it may well be imagined what a tremendous sensation was produced by the news of Anstruther's mishap, which, as presently appeared from the doctor's report, was serious and for the present, crippling. There was an immediate revulsion in favor of the candidate who had suffered thus severely in the cause of the school. The wily Mainwaring, who called himself Anstruther's Election Agent, did not fail to take advantage of the sympathy felt for his client. An entirely fresh series of handbills came out at once, and stirred the glow of enthusiasm into a flame. Some of these, headed "The Wounded Hero: Anstruther Bleeds for Crosscombe," gave a highly-colored description of the accident, and concluded by putting into the mouth of the sufferer the most beautiful and magnanimous sentiments, supposed to have been uttered by him while still writhing on the battlefield. Another series, bitterly satirical at the enemy's expense, recommended voters, in letters a foot high to "Plump for Carclough, the safe man. Our club needs a Captain who will not Rashly Expose Himself." These latter, however, were torn down later in the day in obedience to a peremptory order from the Red candidate himself, who waxed highly indignant when he heard of the unjust libel on his opponent. Not to be baffled Mainwaring proceeded to issue handbills containing an account of his chief's generosity in this instance and on a new wave of poular feeling Anstruther was carried to victory. The election took place as usual in the gymnasium, and was conducted with great secrecy and decorum, only ten agents on each side being allowed to be present in the polling-booth, to check the votes of their promised supporters and to smack the heads of defaulters. The result of the poll was declared at tea, Anstruther being elected captain by the handsome majority of twenty-nine.

AMERICAN FLAG CO., No. 34, Division of California, Sacramento, Cal.

Company News

HAMLIN GARLAND COMPANY, No. 21, Osage, Ia., reports having had a prosperous and profitable summer. It has gained six new members and lost three, which makes the total company strength twenty. It has held two field meets, and played a number of good baseball games. The members are enthusiastic over the football team. During this winter the members will organize an orchestra of twelve pieces, also hold meetings for debates, and play hockey. The company has $12.00 in the treasury, and is provided with all baseball and football goods, etc. This company seems to be doing things and we wish it every success. MOUNTAIN VIEW COMPANY, No. 17, Delta, Colo., intends doing things in style. The members have adopted colors, red, white and blue in the form of a rosette with O. A. B. badges in center. We think they will look fine. This company is going to do its business in a business way and we are sure it will be successful. The rules in the O. A. B. pamphlet are simply suggestions, and each captain may use whatever words he chooses in addressing members in meeting. The company name was chosen because of the grand old mountains, such as Grand Mesa, San Juan and others which tower on every side of Delta. We are promised a picture soon. ARCHIE ROOSEVELT COMPANY, No. 41, California, Pa., is getting along all right. It is going to start a gymnasium and has gathered together boxing gloves and other things necessary. When the captain wrote us the members were preparing to enjoy a Thanksgiving dinner together. ANTHONY SUNFLOWER COMPANY, No. 32, Anthony, Kansas, recently elected the following officers to serve during the ensuing six months: Herbert Whitney, Capt.; Forest Butler, V. C.; Ross Cary, Sec'y; Ray E. Smythe, Treas. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its thirty-eighth report, from which we note that during November it held four successful meetings and had an outing to Ellis Island, where the emigrants land from the ocean steamers. This company proposes to organize the Decatur Association and intends to give a great entertainment to inaugurate the movement. Its club house has an assembly room seating two hundred, and expects to fill it at its entertainment. Handsome prizes have been awarded the winners in the checker tournament which was held during October and November. THE TOM SAWYER COMPANY, No. 20, St. Louis, Mo., has now got a club room with a stove, eight chairs, two tables, a book-case and a file of AMERICAN BOYS, Youth's Companions and other magazines, with a map of the United States and one of St. Louis, also an American flag and O. A. B. pennant. It has had its charter framed. BUSTER BROWN COMPANY, No. 35, Richmond, Ind., is working to get together a gym. outfit. It has punching bag, boxing gloves, Indian clubs, dumb-bells, etc. The following officers were recently elected: Raymond Weisbrod, Capt. and Treas.; Blare Converse, Sec'y. We are promised a picture soon. SILVER GATE COMPANY, No. 26, San Diego, Cal., has now twenty-six members, over $17.00 in the treasury, a library of 25 books and over 100 magazines. This is a company of which it would be well for other companies to take note. GEORGE A. CUSTER COMPANY, No. 68, Detroit, Mich., sends us Christmas and New Year greetings, and reports that it is getting along nicely. Officers were recently elected as follows: James Penhale, Capt.; John Rogers, V. C., and Treas. There is $2.25 in the treasury, and the members have an Over and Under team which has played so far 7 games, winning 5, losing 1 and tieing 1. This company is experiencing just the difficulty that other companies write about, viz., the inconvenience of meeting at the members' homes. We should think that if parents who have a spare room or barn were properly approached they would allow the company the use of such a place, as they would then know where the boys were in the evenings. ROBERT DALE OWEN COMPANY, No. 4, Stewartsville, Ind., sends a brief but satisfactory report. It has 26 members in good standing, 100 books in the library, and $60.00 in bank. Its officers are: Jacob W. Schettler, Capt.; Larkin Stallings, V. C.; Eugene Kincheloe, Sec'y.; William J. Gardner, Treas.; Burnell Welborn, Lib'n.; Louis Demberger, Historian, and Carl Schettler, Cor. Sec'y. JAMES LICK ATHLETIC COMPANY, No. 30, Campbell, Cal., held its second semi-annual election of officers recently and the following was the result: Wilbur Doxsee, Capt.; Herbert Scholz, Sec'y. and Treas., and Paul Clark, Athletic Captain. The secretary writes: "We are playing a series of five games of baseball," and in December, when we in the north and east are skating, and shivering in the icy winds. We are promised a picture of the members in the near future. CLINTON ATHLETIC COMPANY, No. 37, Frankfort, Ind., has 16 members, and its officers are: George Young, Capt.; Hugh Skidmore, V. C.; Paul Roush, S. A.; Kenneth Monroe, Sec'y.-Treas., and Walter Fowler, Lib'n. The members are interested this winter in their ice teams, and also in literary programs at their meetings. Meetings are meantime held every two weeks. WORTH BAGLEY COMPANY, No. 1, Concord, N. C., is progressing nicely, and has fixed up its gym. with rings, punching bag and horizontal bar. The following are its officers: Merlin Shank, Capt.; Linwood Fink, V. C. and Lib'n.; Alfred Brewer, Sec'y.; John Boger, Treas. The members intended to hold a stag party at Christmas and we hope to receive a report of it. SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill., sends us hearty Christmas and New Year greetings. We are glad to be remembered in this way and we certainly wish the members of this company and the able company counsel all good things during 1906. PILOT ROCK COMPANY, No. 19, Ashland, Ore., writes asking if a boy can be a member of a company who is taking only a trial subscription of The American Boy. No. All members of companies must be yearly subscribers. TAR HEEL COMPANY, No. 4, Lexington, N. C., has now 13 members, 17 books and $2.35 in the treasury. Mr. C. A. Little is now company counsel, vice Miss Burkhead resigned. From a clipping from a local newspaper we note that the members held a spirited debate lately on the question: Resolved, That the city boy in the country is greener than the country boy in the city, and the affirmative won. GENERAL LAFAYETTE COMPANY, No. 3, Washington, D. C., entered upon the third year of its existence in December last, and in the words of the report is "just as frisky as its monkey mascot at the National Zoological Park, born on the same day as the company." Its officers are: W. Thompson, Capt.; R. T. Holden, V. C.; G. W. Hodgkins, Sec'y.; H. W. Hodgkins, Treas. Meetings are held every second Friday evening at the homes of its members. The meetings consist of reports, unfinished business, new bills, miscellaneous business, and a special program consisting of debates, readings, games, then refreshments. This company is becoming more of a social club now than a parliamentary one. New members are conducted through a comic initiation which is enjoyed by all. This company will be glad to correspond with other companies with a view to exchanging ideas on the new member question, the conduct of meetings and other points of interest. COLONEL MORGAN COMPANY, No. 14, Fort Morgan, Colo., has elected the following officers: Milton S. Kimball, Capt.; John J. Barkley, V. C.; Fred O. Scott, Sec'y.; Abner S. Baker, Treas.; Earl Ross, S. A. It is trying to get a club room and intends getting a picture taken. There are 13 members in the company with a strong prospect of more as interest in the order has greatly revived. The company has $17.00 worth of athletic goods. The captain in his report says: "Give us Colorado boys a chance to tell why we are proud of our state, she beats 'em all." We hope to do so. J. FRANK HANLEY COMPANY, No. 27, Westfield, Ind., held its Thanksgiving entertainment in the Methodist church, and was pronounced a great success. Our suggested Thanksgiving program was almost entirely used. The secretary writes that the entertainment has gained for the company the high opinion of the public, and has given the curious an idea of what the company is doing. We are greatly pleased at this company's successful work. MOVILLE HAWK-EYE COMPANY, No. 59, Moville, Ia., will at its next meeting debate the question as to whether wood is more useful than coal. This company also desires to correspond with other companies as to debates and subjects for programs.

The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

Under the Auspices of "The American Boy"

Object:—*The* Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

SPECIAL PRIZE AWARDS

Every Company should strive to win the Special Prizes of books, O. A. B. pennants, and pictures, awarded each three months to the companies having the greatest increase in membership. These prizes are in addition to the handsome premiums regularly given for new subscribers.

SILVER GATE COMPANY, No. 26, O. A. B., SAN DIEGO, CAL.

Captain Frank Smith Sits Holding the Charter, and is Flanked Left and Right by the Vice-Captain and Secretary-Treasurer

SOME INTELLIGENT HORSES

By W. FRANK McCLURE

Shadeland Vargo, Who, Contrary to the General Rule, Will Perform Only When Paid for it in Advance

EVERY BOY who owns or has the care of a horse should keep in mind that no other animal, unless it be a dog, possesses a greater degree of intelligence or is more susceptible to proper training. In actions, manner and disposition a horse shows out very many of the characteristics of the human being, and doubtless thousands of little demonstrations of equine knowingness that should appeal to us, go by unnoticed in the busy whirl of affairs.

I am going to tell you about a few intelligent horses I have known, with a view to stimulating your interest in the horse in particular and dumb animals in general. In my home town of Ashtabula, Ohio, there is an extremely smart and useful horse named Dixie. Everyone who has lived long in Ashtabula knows Dixie and he has attained to some newspaper notoriety as well. He is an errand horse belonging to a liveryman. Up and down the streets Dixie runs without a rider. You would surely think he was a runaway steed if you didn't know him. Strangers in town have often taken him for such, and not a few heroic attempts at stopping him have been made.

When not on an errand Dixie is always at the barn where he has an open stall and the barn door stands wide open at all times. After breakfast each morning Dixie starts from the livery stable to the residence of his owner, some distance away and, arriving there, waits for him to come out and get into the saddle. Later, perhaps, a man comes to the barn in a great hurry to catch a train. Dixie, who stands bridled and saddled, is always ready for such emergencies. The traveler is soon on his back and going with all speed to the train. As soon as Dixie sees that his passenger has safely caught his train the faithful animal returns on a trot up the long street from the depot, then over a residence thoroughfare, and then through the main business section, back to his stall. Nothing delays him for an instant, not even an automobile. For a great many kinds of errands he is much more serviceable than an errand boy would be. His strict attention to business and his promptness present a lesson that may well be learned by many an errand boy.

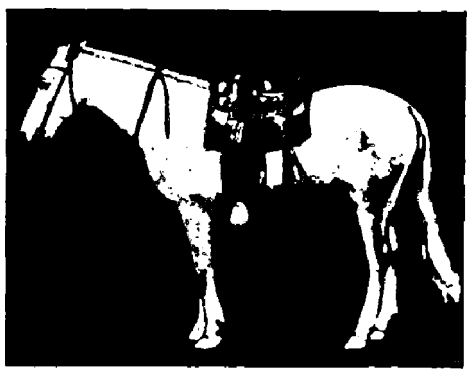
Not far from Mantua, in New Jersey, on the farm of A. C. Wilson, lives a faithful horse named Ben. For nearly seven years Ben has pumped all the water used on the farm. Without any direction from his owner he goes direct to the task every morning, operating the pump by means of a tread-mill built for his use. The most remarkable thing about his performance is that he seems to be able to tell time to a certain extent. While his duties at the farm pumps are a daily occurrence, the tank at the house is filled but twice a week. It is said that he can always be depended on to go to the house pumps at just the right time of week of his own accord. This is not unlike the case of the little dog owned by E. A. Webb, a photographer in Ashtabula. On Sunday mornings Mr. Webb allows the dog to go with him to the gallery, but never during the week. The dog watches him leave the house each week day morning and never offers to follow, but on Sunday morning he is always ready and makes a great fuss if he is left at home. Mr. Webb wears a different suit of clothes on Sunday and does not go down town till much later than usual. It is probable that this assists the dog in distinguishing between days.

Dandy, a well-known Cleveland ambulance horse, possesses powers that are quite remarkable. Like a well-trained horse of a fire department, Dandy is always ready to start when the ambulance calls come in and loses no time in getting under his collar. There are calls corresponding to different parts of the city and it is claimed by those who have the care of Dandy that he distinguishes between these calls, that is that he knows from which direction they come and starts from the barn always in the right direction. He has been in the service so long that he has become used to every route the ambulance can possibly take in the various directions.

Dandy

Equine intelligence is, of course, also demonstrated in the ability of a horse to perform in accordance with the directions of his owner. Mizpah is the name of a horse owned by L. F. Sunlin, of Grand Rapids, Mich. This horse has been trained to perform as follows: He will pick up a handkerchief and hand it to his rider. He will kneel instantly at command. One of the photographs shows him kneeling. He will also march, waltz, two-step, or perform a cake-walk and do other interesting things.

Thomas C. Rogers, of Bellevue, Ohio, has a four-year-old colt which will take



Dixie, the Notable Errand Horse of Ashtabula, Ohio

off his own blanket without assistance. He will also take off his master's coat. When a handkerchief is tied to his hind foot he will untie it and remove it with perfect ease. This horse is credited with being able to tell his own name in print, that is, of course, when it is in large letters. With a big clock within his reach, he will, when asked the dinner hour, turn the hands to 12.

Mr. Nie Job, of Dorranceton, Pa., has a Shetland pony who is very original in his ways. He will perform beautifully, but he always wants his pay in advance. Usually horses or dogs will perform best if fed delicacies after each act, but the reverse is true of the Dorranceton pony. This pony's name is Shadeland Vargo. He dearly likes sugar, apples and peanuts, and when given any of these will repay his owner by standing on a barrel and going through the motions of making a stump speech, by ringing a bell with his teeth, or he will jump through a wire hoop three feet in diameter. He will also stand on his hind feet and take down a flag from some high point. This pony weighs but 250 pounds. Shetlands are usually very susceptible to training and when brought up with children become almost like one of them. When allowed to do so they will come into the house, go from room to room, play hide and seek and eat pie and cake.

Mizpah, Kneeling

A Texas Boy, on Traps and Trapping

J. C. Burkhalter, of Mountcalm, Texas, writes a chatty letter on the subject of traps and trapping. "Very few boys," says he, "know the pleasure and profit there is in trapping for furs. Any boy who likes out-of-door life will enjoy trapping. The winter is the proper season, for it is then that the fur-bearing animals are beginning to put on their winter furs. One can get in this locality from $1.00 to $1.50 for a raccoon, from $1.50 to $2.00 for a mink, and from $1.00 to $1.80 for a skunk. You should wear buckskin gloves in setting traps, as the sense of smell with all animals is very keen, and they are suspicious of the slightest human odor. A scalping knife is a necessary thing to have in starting to skin the animal. When once the skin is started it is easily pulled off by the hand.

For trapping coons I would use a No. 2 or No. 3 trap. Set it at the edge of the water, about one and a half inches below the surface, staking the chain securely. Drive a small post down by the trap and let it stand about two feet out of the water. Place on the top of it a piece either of fish, frog, bird or rabbit. When the coon sees the bait he will jump for it, and when he comes down, he will invariably get his paws into the trap. Raccoons may also be caught in the corn and cane fields. Place the trap where the animal has made a path, taking care to have the trap covered with leaves, moss or rotten wood, and make everything about it look as natural as possible. Mink frequent the banks of streams, ponds and lakes. Bird, rabbit, fish or frogs make good bait. When mink traps are set in the water they should be put in shallow places, where the depth is but a few inches, the bait should be placed on a small post, two and a half feet above the trap, so that the mink is compelled to stand on his hind legs or jump in order to get at it. You may put traps along the banks of the stream, about two feet from the water's edge, and make a trail between the traps by dragging along the ground a piece of meat. The mink crossing this line will turn and follow one way or the other till it comes to a trap. Skunk are not cunning, and are easily caught in almost any kind of a trap when bait is used. A little piece of the meat of a chicken placed on the pan of a steel-trap is effective.

Inspirations to Greatness

"One thing at a time, and that done well," was the guiding principle of Gladstone's life.

"What has been done can be done again," Lord Beaconsfield believed and practiced.

"Hitch your wagon to a star," inspired Emerson as, in turn, it has inspired and encouraged many others.

"Be just and fear not," is the life motto of several great and successful men.

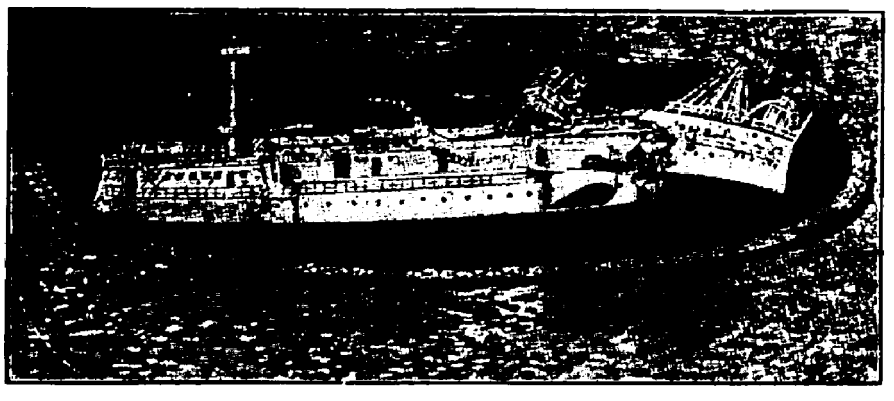
"Be cautious but bold," the great Rothschild claimed as his chosen business maxim.

"Doing good to others," George W. Childs believed in as not only the supreme mode of pleasure bringing, but also the best builder of success possible to humanity.

"It takes infinite patience and courage to compel men to have confidence in you," said John D. Rockefeller. "I believe I have both these qualities, and I also believe that they are the secrets of my success."

"Never use what is not your own; never buy what you cannot pay for; never sell what you haven't got." This, a business motto of Commodore Vanderbilt, undoubtedly helped him far successward.

To "Whatsoever thy hand findeth to do, do it with thy might," Dr. N. S. Davis of Chicago once attributed much of his large and helpful influence in the medical world.



Plan Proposed for Raising the Maine

An effort is again being made to organize a company to raise the Maine, which is an obstruction to navigation in the harbor of Havana. It is now more than seven years since the wreck occurred, and during this time the hull with its heavy load has been constantly sinking in the soft, muddy bottom of the bay. The only possible way to raise the vessel would be to inclose it in a cofferdam, and pump the water out. Whether it could then be patched and floated would depend upon how badly the hull is shattered.

The proposed dam would be about 400 feet in diameter and 100 feet deep. The prospect of recovery grows less each year, as the machinery, guns and other valuable salvage is being rapidly corroded in the warm salt water. The authorities claim that the wreck is a menace to navigation.—Popular Mechanics.

Robert Louis Stevenson's Motto

Every one knows the splendid motto of Robert Louis Stevenson, beginning "To be honest, to be kind, to be cheerful, to earn a little, and spend a little less," that has been so widely potent for the uplifting and encouraging of his fellows. Every one knows, too, how successful and beloved it made him, despite ill health, poverty, any number of trials and setbacks.

FORGETFUL THOMAS.

BY HELEN FRANCES HUNTINGTON.

"YOU'RE BIG enough, both of you boys, to do your ma's errands right," said Mr. Binns severely, addressing two youthful customers who had forgotten one of the three light errands entrusted to them by their busy mother.

"I think 'twas bakin' powders ma wanted," said the younger of the boys hopefully, "'cause she always bakes a lot on Saturdays."

"She scrubs, too," the other boy put in as an afterthought, "an' I think she wants washin' powders. Give us a little o' both 'cause we ain't got time to wait. Jerry Brown's goin' to leave us ride around by the mill pond with him. Hurry, please."

Mr. Binns complied reluctantly.

"When I was a boy," began Mr. Binns, watching the hasty retreat of the two boys toward a lumbering farm wagon that rolled slowly down the cool green road toward the delectable mill pond, "I had the same trouble as them youngsters—always forgettin' everything but my

"'Cordin' to My Deserts"

meals. Send me to the store an' I'd be sure to forget what I went for. I studied 'cause I had to, but never failed to forgit my lessons by school time. Couldn't help it, I always said. I'd forgit to water the cows an' change the tethered calves if father didn't keep remindin' me, which was as much trouble as doin' the chores himself, if not more. Mother talked an' reasoned with me on the quiet an' it done about as much good as pourin' water on a duck's back, for I'd promise an' forgit, reg'lar as clock work. She told father something ailed my brains an' kept stavin' off his intentions to cure me in his own way, which was strictly 'cordin' to scripture, for father believed in a judicious use of the rod, while he was by nature a peace-lovin' man. Mother wasn't in good health an' every time he walloped me 'cordin' to my deserts she'd break down an' cry herself sick, wherefore father was sorter handicapped in bringin' up a boy of my stripe, for it went again his grain to do anything that hurt mother's feelin's.

"Jest 'fore my eleventh birthday my Aunt Sarah, that lived out in Ohio, wrote an' begged ma to go out an' stay a few weeks while she was gittin' over a spell of fever an' mother went right straight. The last thing she said to father was for him not to forgit about my birthday, to which father answered that he'd see how things turned out by then. I kinder suspicioned something might happen while mother was gone, an' I made up my mind to walk purty straight; but nothin' turned up of any account up to the mornin' of my birthday when I woke early an' got down stairs 'fore father'd finished stirrin' up the batter cakes for breakfast. "Wash an' let's have breakfast right off," said he, "cause I've concluded to take you down to the city today."

"Under ordinary circumstances that would a been birthday treat enough for me. We ginerally went to town twict a year, the hull three of us, an' though father was savin' by nature he never scrimped at them times. No, siree! There was ice cream, sody water, car rides an' any show that happened to ketch his notice. I hurried that mornin,' I tell you! About half-way through breakfast father looked over at me an' said, kinder thoughtful, "Thomas, seein' that something has got to be done about your forgetfulness I've concluded to take you to a good doctor an' have your brain examined. If he says there is anything wrong I'll git him to doctor you, an' if he says there ain't—' father drunk up his coffee 'fore he finished. 'If he says there ain't then we'll tend to the matter ourselves, Thomas," says he real significant.

"All the way to town I kept thinkin' about that doctor an' dreadin' the ordeal wonderful, for I was a little coward about everything that hurt, an' I'd almost as soon a took a whippin' as a dose of medicine of any kind, but I knowed from father's determined looks that there was no use tryin' to beg off, an' I knowed, too, that I'd have to take whatever the doctor said, spechully while mother was gone. Father lowed we'd better go straight to the doctor's an' have it over with 'fore we done anything else, so we went, an' had to wait a long while 'fore our turn came to be let in to the doctor's office. Pa went straight to the point. 'I want you to find out what ails this boy of mine,' says he, laying his big, firm hand on my shoulder in a business-like way. 'He can't rec'lect anything above an hour an' hardly that. His mother thinks it's some kind of brain trouble.'

"'Brain trouble, eh?' says the doctor with a bit of a grin. 'He's a purty healthy lookin' boy for that sort of thing, but you never can tell. Sit down, boy, an' I'll see what can be done for you.'

"The doctor then asked father all sorts of questions while he made dents in my head with his fingers, an' I kept lookin' at all the queer instruments that littered the room, wonderin' what they was for. After a while he smoothed down my hair an' stepped toward a half-open door, motionin' father to follow him. 'If you'll come in here,' said he, 'I'll have a little talk with you about this matter.' Well, I didn't mean to listen but all of a sudden I heard something that went all over me like hot knives, leavin' me so sick an' scared and dumb that I couldn't a moved or spoke just then if the world had come to an end. It was the doctor that sounded the crack o' doom. He told father that my brain was full of air-holes that would have to be plugged up, 'cause it leaked just like an old tin-pan.

"'Will it hurt him much?' father asked, real concerned like.

"'It will that!' answered the doctor, 'jest like hammerin' red-hot nails in his skull, but it won't kill him—I'll answer for that. There's jest one little chance of not havin' to perform the operation an' that lies in givin' him a big dose of electricity. Sometimes them air-holes closes up after a rattling good electric treatment, but his case is so uncommon bad that I don't much believe anything but the plugging will do the work. However, you'd better let me give him a treatment now an' see if it does any good. If he ain't no better in two weeks bring him back an' I'll operate on his brain for he won't never be any good to himself or you neither in his present condition. Feed him up well in the meantime so's to have him in fine condition by the time you fetch him back cause that pluggin' business will wear him to the bone.'

"I never could rec'lect anything the doctor said to me after that, but seems that he got me into a big, high-backed chair with sort of an umbrella top an' glass wheels all around it, an' 'fore I got a real deep breath he'd showered me all over with invisible needles that made the air turn all colors. Not under any other circumstances could he or father have induced me to take that or any other kind of treatment that I didn't fully understand, but you can be sure I didn't kick agin that dose. No, siree, I was glad to take that or anything else that held out the least hopes of stavin' off that fearful pluggin' business. It took hours, almost days, it seemed to me, to git through in that doctor's office, an' I was more'n surprised when father took out his old silver watch at the street door and said we'd have plenty of time to take in some sort of a show before dinner. So we went to the museum, but all pleasures had lost their flavor through dread of that awful operation which followed me every minute of the day till I tumbled into my own bed, so dead tired that sleep came to my relief on the instant.

"Two weeks seems a very short time to work a big cure, don't it? Two days did the work for me. Peared like everything father told me to do stuck in my memory like cockle burrs after that day in town. It warn't no trouble at all to remember about the cows an' the tethered calves, an' my lessons got learned so well that I could say 'em right off without any help. On the third mornin' father took notice of my improvement. 'Thomas,' says he, 'I do believe that electric treatment helped you some. If you keep on improvin' like this there won't have to be no operation, I guess. It's amazin' what a little electricity will do, ain't it? I hope you'll keep right on mendin' so's I can write the doctor a good report.'

"I mended all right. By the end of them two weeks my memory was as sharp as tacks. I could even rec'lect things 'fore they happened, that is to say, father didn't have to mention what he expected me to do 'fore I done it. Father was real pleased. He spent a good hour writin' to the doctor an' put five dollars in the letter to pay for the treatment that cured me. I went with him to mail that letter—cured to stay, you'd better believe!

"For some reason or other father didn't lemme know when mother was comin' home but I went to the station to meet her alone. I seen 'em when they was comin' though, an' run to meet the buggy an' when I'd climbed in mother she jest grabbed me around the neck an' hugged me tight without a word till I eased away an' snuggled down twixt her'n father. Then she got hold of my hand and laughed good an' hearty. 'Oh, Tommy boy, what a narrer escape you had,' said she.

"An' that's jest what I thought till I was mighty near grown an' my memory was so good that there wan't any danger of a relapse, then ma let the cat out of the bag."

"All of a Sudden I Heard Something"

The "Sneak-Cat"

By Hopkins J. Moorhouse
In Outdoor Canada

NOT A SINGLE trapper along the whole river or up the bay liked him, and when it leaked out at the Post that he could see a dollar a mile away and would walk backwards or tumble over everything to reach it, the men frowned. He was a surly little black-whiskered man, and lived in a lonely shack far up the French River—this Lomass.

When Andy Ferrier found the door of his shed broken open one morning not long before Christmas, and some brand new otter-traps, a good cant-hook, a new axe, and a quantity of ammunition missing, he lost his temper and wasted the best part of a day following a difficult trail through the tamarack swamp. It only led to Lomass' shack and he might have known that the woods thereabouts contained but one "sneak-cat" on two legs. There are generally reasons for things and in this particular instance there was one big reason which Andy Ferrier and his brother, Fletch, knew about.

The ice had been so smooth and windswept all winter that most of the trappers had skated down to the fur-trading stations along the Georgian Bay, dragging their pelts on pack-sleds over the ice. When the Ferrier boys built the ice-boat, however, and beat the time record down to half, the men became interested in the offer of carrying their skins for a small fee. The journeys to the Post were long, toilsome even for the best skaters, and often fraught with danger, so that after Chris Hoskins took the lead and allowed the Ferriers to carry his pelts, it was not long before the young men had worked up quite a custom. Lomass never had many skins of his own and had been carrying any extra packs he could pick up on the trip, being paid a small commission for the service; but since the ice-boat monopolized patrons, his long trips to the Bay now brought very small returns.

The day before Christmas, the Ferriers found it necessary to make a trip to the Post for provisions. On the advice of Chris Hoskins, they had decided to keep the theft quiet and await developments. The offense was of the "high sass" order and indignation would run riot for miles around if the men heard it; Lomass would not be safe.

Hoskins was making some new steel traps over a fire of hemlock and spruce when he heard a shrill whistle and saw the ice-boat bearing up the inlet to where his shanty stood.

"Hullo! boys," he called out. "Reckon ye'll not be scufflin' along much this mornin' with sech a wind."

"'Tis rather slow," agreed Andy, "but it's on the increase."

Hoskins sniffed the air.

"I 'low it's comin' on to snow 'fore night an' it'll be colder'n Biter by mornin'—reg'lar bliz."

"So much the better; we'll come home full tilt," cried Andy. "Cold 'nough las' night, you bet; it's made a few cracks in the ice. Over on the Big Pond there's one with about a dozen feet split."

"Yes, an' what d'you think, Chris?" Fletch interposed, "the ninny was wonderin' if the Sprite could jump it."

"So she could in a stiff wind," retorted Andy, while the trapper laughed a big, silent laugh.

"Seed any bobcats lately?" he asked.

"Nary a one."

"I heerd 'em screechin' last cupple nights over'n the swamp. An' say, boys, the wolves is gittin' mighty oneasy in this here cold snap; reckon ye better be a-kinder keerful. Jerry Humphreys sayed as he seed seven tracks other day, all at oncet."

"Bah!" Andy laughed aloud. "Why, there ain't a wolf in the timber could keep the Sprite in sight for a mile," he scoffed.

"Ye're too sartin sure o' that there blame rigamajig," said Hoskins doubtfully. "I 'low ye'll git ketched when ye ain't a-calk'latin' on't one o' these times. There ain't many critters fer ye to tote this mornin'," he added, "but I'll git ye them there is."

He went into the shanty and presently came out with a pack of pelts.

"We're all expectin' you over to dinner to-morrow, Chris. You're comin', of course?"

"Thank ye, boys. I was 'lowin' I would." The ice-boat was moving away. "Reckon Lomass ain't been askin' ye to fergive him for his sass yet?" Fletch shook his head and Andy's face darkened. "Don't ye go worryin' ower that measly sneak—he ain't wurth it. He's a thoroughbred skunk!"

This last was shouted out, for the Sprite was gathering headway, and an echo flung the word "skunk" through the trees.

About three o'clock in the afternoon the Ferriers reached the mouth of the river and were coasting among the islands along the bay shore when Fletch caught sight of a man with an empty pack-sled just rounding an islet opposite the river. He was too far away to be definitely recognized, but the figure was that of Lomass.

By the time the ice-boat had been unloaded and repacked with provisions night was closing in. It got dark very quickly, and no trained eye was needed to note the sign of an approaching storm. The men from along the bay who had come to the Post, and whose shanties were at any distance, were not long in deciding to remain over night, and when it became known that the young men were bent on setting out for home there was a murmur of dissent.

"I reckon ye better not try fer it," Jerry Humphreys whispered after calling Andy aside." "There's snow in that sky an'—"

"Tah! man, we'll be home before the storm breaks; the wind couldn't be better."

"Ye'll smash to smithereens in the dark an' there's wolves about, fer I seen 'em."

But Andy shrugged a shoulder and proceeded to overhaul the sail ropes. Twenty minutes later the Post buildings were rapidly fading out in the gloom as the ice-boat sped away into the night

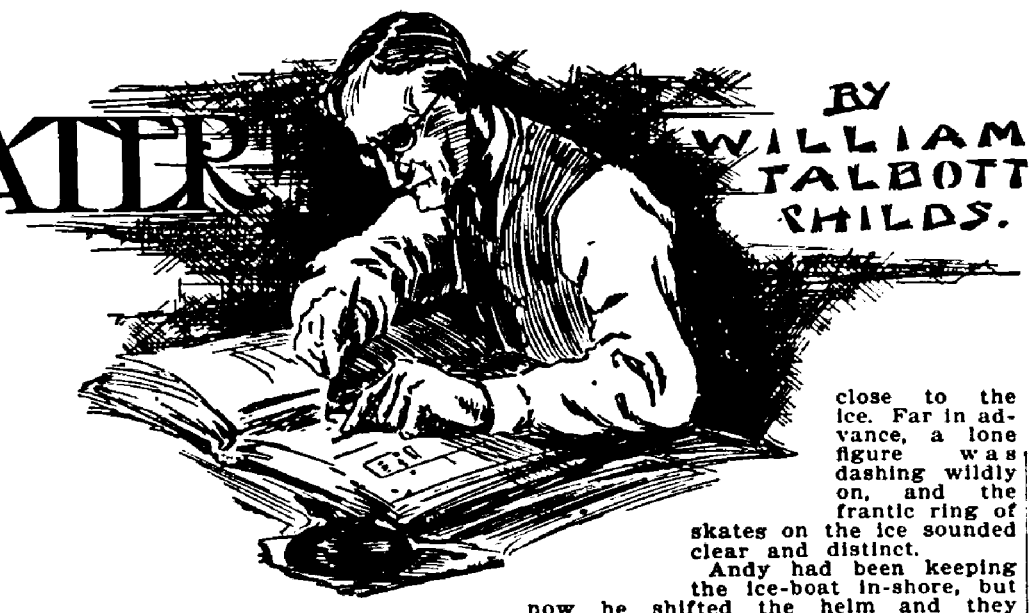
"Made Dents in My Head"

"CAKE EATER"



BY WILLIAM TALBOTT CHILDS.

JOHNNY was a bright, light-hearted, little chap; often innocently boisterous; always good-natured. Why the bookkeeper tried to discourage and make him miserable the other boys could not understand, unless it were that he was one of those individuals who must have some one to "pick on."

"What's the matter with you now, kid? Want to knock the door off its hinges?" Unheeding the bookkeeper's sarcasm, which he was used to, in response to Johnny's pleasant "Good morning!" the lad hastened to the wardrobe and hung his hat upon a hook in order that he might be at his post at eight-thirty sharp.

"Good ev'ning!" the bookkeeper answered Johnny's cheerful "Good morning!" the next morning.

Johnny was exactly one minute late, but it was no concern of the bookkeeper's when the office boy reported. Of course Johnny knew this, but his submission on this and other occasions did not stop the ill-natured remarks of his tormentor. But Johnny put on his thinking cap. He argued that there must be an end to forbearance—at least so far as he was concerned.

One day while standing at the copying-press, all the clerks of the office could plainly hear Johnny's soliloquy. "As long as the world lasts," he began, "men and women will hanker after decorations. No race has yet been contented with Nature's adornments and embellishments. The Indian is Indian no more when paint and feathers are disassociated with him."

"What are you talking about, kid? Why don't you attend to your work?" Johnny had anticipated such comment from the bookkeeper.

"Is Mr. Cake Eater Here?"

"And women—well, they are the greatest decorators; but of course they are excusable. But when men come to it—golly!"

"Shut up!" angrily yelled the bookkeeper.

"I've seen some men wear badges and buttons, and—"

"Look here, kid. If you're aiming at me, you'd better stop where you are! I'll give you that for a pointer!"

"C. E. Wonder what it means?" Johnny ignored the bookkeeper's warning.

"Why, it means Christian Endeavor; you blockhead!" bawled the bookkeeper. And then he said no more. He must have felt, when the eyes of all the clerks were turned upon him, that his manner was inconsistent with the principles of the Y. P. S. C. E.

Now, the bookkeeper was one of those economical fellows. In fact he was actually stingy. He brought his lunch to the office every day, not primarily to satisfy his hunger, but to save the price of a sandwich and glass of milk at the restaurant. He did not have to be "close;" he drew a fair salary, and it was generally known that he had married money. He always wore his C. E. button on the lapel of his coat.

Johnny's thinking cap was becoming effective. He lit upon a scheme that would squelch his tormentor, when one day he observed that the bookkeeper cast aside all his luncheon except a piece of cake.

"Mr. Jackson, do you like cake?" Johnny asked, with a smile that betrayed nothing.

"Yes. Why do you want to know?"

"Oh, I just wondered!"

"Well, stop your wondering, and go to work!" It was lunch hour and Johnny was not expected to be at work.

Several days passed. At lunch hour each day Johnny observed that the bookkeeper ate only the cake that was in his lunch box.

"Cake Eater!" exclaimed Johnny once in the afternoon when quiet prevailed.

"Cake Eater!" he repeated, as he hastened to answer the telephone.

"Hurry up and answer the 'phone!" bawled the bookkeeper.

"Cake Eater! Hello!" exclaimed Johnny.

The person at the other end of the line repeated that he would like to speak with Mr. Jackson.

"Is Mr. Cake Eater here?" asked Johnny, turning toward the bookkeeper. "I mean—er—Mr. Jackson."

The bookkeeper had not long resumed his seat when the irrepressible, the tantalizing Johnny again broke the silence with "Cake Eater!"

Bang!

The bookkeeper's patience had been tried to the utmost. But Johnny was on his guard; he was too good a baseball player to be caught napping. The bottle of ink struck the floor instead of Johnny. The stingy Mr. Jackson mopped up the ink himself; his principles of economy forbade him turning the disagreeable job over to the janitor.

It was not long before Johnny began to soliloquize again: "I don't see that it's anything to brag about! It's not hard to eat cake; I like cake myself, but I don't advertise it. And a cake eater isn't any better than an onion eater; I never saw an onion eater wear a button with C. E. on it."

Poor Jackson! He was fast losing his religion. Exasperated beyond control, he made a dash for Johnny, but the youngster was soon out of harm's reach, and returned to the office upon the heels of his boss. Undaunted, he continued.

"Anybody can eat cake!" he exclaimed.

The clerks roared; so much so that the boss rang the electric bell for Johnny.

"You've gone too far!" threatened the bookkeeper as Johnny passed him and grinned.

Johnny returned from the boss' private office and said aloud, "The boss says don't make so much noise out here!"

Quiet prevailed—for three minutes. Then Johnny again exclaimed, "Cake Eater!"

"I'll fix you!" threatened the bookkeeper. "I'll see the boss!"

"All right; I'll accompany you!" answered Johnny. "And let me warn you," he continued, "I shall tell the boss that you are constantly interfering with me, and trying to make my life miserable, and that I am now simply giving you some of your own medicine!"

The bookkeeper returned to his desk. Johnny had nothing further to say. Thereafter Johnny was not molested, nevertheless Jackson retained the sobriquet of "Cake Eater."

THE "SNEAK-CAT"

(Continued from preceding page.)

The wind moaned through the forest and swept along the river with increasing force. At the end of two hours it was blowing half a gale and the Sprite was obliged to hug the lee of the river and the islands. It was too dark to discern objects at any great distance, and though Andy knew every turn of the river, there was the constant danger of running into a snag, while away out in the center the mad rush of the wind was even more to be feared. It was bitterly cold, and the young men snuggled down amongst the furs beside the tiller and drew their heavy caps close over their ears. They were traveling at a great rate, with the white rime streaming away from the iron heels of the runners, which were sending out a low, singing hum.

Suddenly Fletch uttered a cry and jerked back as a low, black object whizzed by on the ice, scarcely a foot away. Andy glanced quickly over his shoulder just in time to recognize it before the darkness swallowed it up.

"If we'd hit that log—!" Fletch gasped.

"That was no log!" cried his brother, excitedly. "Fletch, something's happened to Lomass!"

"Lomass!"

"That was his sled!"

"Why, what—?"

But Andy was listening to a faint noise far ahead, scarcely to be distinguished above the roaring draught of the wind and the drone of the runners. Soon it grew louder and the young men looked quickly at each other.

"It's wolves!" cried Fletch.

Andy nodded as the ice-boat sped around a turn in the river. They were just entering the Big Pond, where the river widened out into a long lake.

With a sudden ejaculation Andy peered into the gloom ahead. He could make out a low, dark shadow skimming along close to the ice. Far in advance, a lone figure was dashing wildly on, and the frantic ring of skates on the ice sounded clear and distinct.

Andy had been keeping the ice-boat in-shore, but now he shifted the helm and they shot out into the full blast of the gale. The Sprite was sailing close to the wind, and she careened and shivered and fairly flew. Fletch glanced in alarm at his brother, whose white face had set with a grim determination.

"What—?"

"Shut up!"

All at once the low shadow swerved sharply to the right and an involuntary cry broke from Andy's lips.

"We've got to save him, Fletch!" he shouted above the whistling of the wind in the ropes, and threw the helm over a point to the left. Their speed was awful.

"The crack! The crack!" screamed Fletch, seizing the other by the shoulder.

But Andy deliberately shifted their course another point to the left, so that they would meet the ten-foot opening in the ice head on. They were flying at an an appalling rate and there was no time now to avoid the crevice. If they would save the man their only chance lay in crossing it and reaching him in advance of the howling pack.

"Hang on!"

There was a wild leap into space and the whole fabric trembled with the shock as the ice-boat struck the opposite side. The steering runner chipped the edge, then the boat pitched forward with a thud onto the level surface beyond. There was the sound of breaking wood, and the white faces of the boys went whiter still as they thought for a moment that a runner was gone. Like some startled wild thing the Sprite shuddered in the wind, gave a sudden lurch and scooted away.

The wolves were coming swiftly back into the course, but they were ahead of them now. Fletch seized his Martini and scattered several shots amongst the animals while the ice-boat was rapidly bearing up to the figure ahead.

At sound of the rifle, Lomass had turned and his failing hopes revived. Down swept the Sprite and Andy shouted to him as she hummed past. Intuitively divining the helmsman's meaning, the trapper skated around an island just as the ice-boat luffed sharply into the wind.

"Quick, man!" shouted Andy.

The sail was snapping and threatening every instant to rip to shreds, but before the boat's headway was altogether checked, Lomass had skated alongside and dropped upon the boards in a state of exhaustion.

There was not a moment to spare for the wolves were again in headlong pursuit. The helm was thrown hard over and the Sprite fell off on another tack—faster and faster until she was spinning. Fletch used his repeater to good purpose, but held the pack in check for a moment only. The taste of blood had maddened them, but no wolf could keep pace with the ice-boat in that wind, and once she had gathered headway, the danger was over. The howls dropped farther and farther to the rear as the miles slipped by and soon all sound of the animals was lost in the distance.

The Bottle of Ink Struck the Floor Instead of Johnny

Lomass lay like a log where he had first thrown himself, until they were running up an inlet near his shack.

"We'll drop you off at the Point," said Andy.

But Lomass gave no sign that he heard. When the ice-boat came to a stop in the lee of the Point, he roused himself as from a dream, got to his feet and without a word skated away, fading into the night like a shadow.

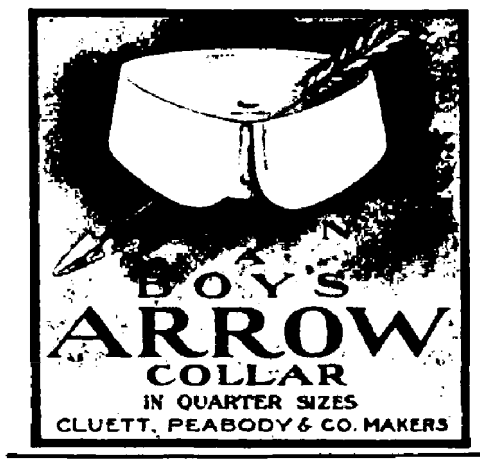
"Well of all the things you ever heard tell!" cried Fletch in amazement. "Not even a 'thank you'!"

Andy laughed harshly as they headed for home.

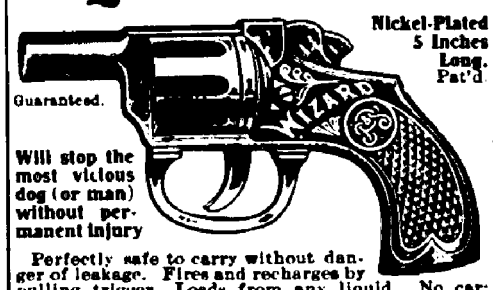
Through the whole night the storm ramped and raged and swept across the country. Christmas morning broke clear and cold upon a world of snow that lay in great drifts of diamond sparkles beneath the sun.

Chris Hoskins was slowly breaking a path across a small bay, opposite the Ferriers' place. The thongs that bound his snowshoes to his moccasins squeaked at every stride and he was whistling for very joy of being alive. He stopped short.

It was the end of an old toboggan sticking up out of a drift. Hoskins took off one of his racquettes and scraped away the snow, slowly at first; but soon he was digging with all his might. It was only a battered toboggan on which were lashed some traps, a cant-hook, an axe, and a package of ammunition.



WIZARD REPEATING
LIQUID PISTOL



Perfectly safe to carry without danger of leakage. Fires and recharges by pulling trigger. Loads from any liquid. No cartridges required. Over six shots in one loading. All dealers, or by mail, 50c. Rubber covered holster 5c. extra.

The Hall of Fame for Great Americans

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November number. No. I of the Series treated of Ulysses Simpson Grant; No. II of David G. Farragaut; No. III of Benjamin Franklin.

No. IV--Abraham Lincoln

BOOKS ALMOST without end have been written about this greatest of Americans. The most diligent search has been made for anything bearing upon the Abraham Lincoln family history, and it is now well established that to find the first of the American Lincolns we must go back to about the year 1637 when there came to Hingham, Massachusetts, from Norfolk, England, three brothers of whom Samuel Lincoln was one. The grandsons of Samuel distinguished themselves during the years of the Revolution in the army, the legislature and in the executive department of the government. The love of adventure and the spirit of the pioneer seem to have been strong in the Lincolns, for we find that two of these grandsons, Mordecai and Abraham, removed first to New Jersey and afterwards to Pennsylvania where they became wealthy, and at their deaths left large estates to their children. Mordecai was the great, great grandfather of President Lincoln; his son John, who was, of course, the President's great grandfather, subsequently moved to Virginia and reared a large family. On account of the financial distress which the thirteen colonies experienced after the Revolutionary war, and the glowing accounts received regarding the west there was a large migration of families to that part of the country. Among them came Abraham Lincoln, son of John and grandfather of the President, who sold out his Virginia estate left him by his father, and moved into the then trackless forests of Kentucky, at that time almost wholly inhabited by wild beasts and savage Indians, the latter hostile because of the invasion of the white men into their country and ever a constant menace and terror to the few, scattered settlers.

With the proceeds of the sale of his Virginia lands Abraham Lincoln bought seventeen hundred acres near to what is now the city of Louisville, built a cabin of logs and settled. Trouble followed, of course, with the Indians. One day while Abraham with his youngest son, Thomas, a boy of six, were working in the fields an Indian lying in ambush shot and killed the father and was just in the act of lifting the little boy to carry him off when a well-directed bullet from the rifle of an elder brother avenged the murder of the father.

Of the five children of Abraham Lincoln (the President's grandfather) all seem to have done well except Thomas, the youngest, who in some unaccountable way appears to have been wholly neglected when a child, and forced to make his own way in the world. Without any education whatever he hired himself out at any kind of rough labor, such as cutting down trees, breaking the soil for crops, and building the rough shelters which these pioneer settlers called homes. He, however, learned the trade of a carpenter, and those who knew him, say that "he was a good carpenter for those days, when a cabin was built mainly with the axe, and not a nail or bolt-hinge in it; only leathers and pins to the door, and no glass except in watches and spectacles and bottles."

In appearance and disposition, Thomas Lincoln when a young man was tall and muscular, a good hunter and a dead shot; very amiable and good natured, by no means energetic or particularly fond of work. His lack of energy and his failure to succeed he always said was caused by his want of education, and he maintained that his children should never be handicapped as he had been. However, he seems to have been thrifty and ambitious enough to be able at the age of twenty-five to buy a farm in Hardin, now Larue County, Kentucky.

It was while working at his trade of carpentering in the shop of Joseph Hanks at Elizabethtown, that Thomas Lincoln met and married Nancy Hanks, his employer's niece. In all the books concerning her illustrious son, she is described as being much the superior of her husband in intellect and character. A delicate, sensitive woman with an education and ideas of refinement above her station, yet compelled by the loss of her parents, her health, and her dependence upon the charity of a relative, to restrain her ambitions and yearnings, we can readily see how her love and ambition would be lavished upon her children, and can understand the feelings of President Lincoln when in later years he said, "All that I am, or hope to be, I owe to my angel mother—blessings on her memory," and also get a glimpse into the grandly noble nature of him who uttered such words.

The young couple took up life's burden together in Elizabethtown and there their first child—a girl, named Sarah, was born. Shortly thereafter, considering possibly that with an increased family, expenses would also increase, Thomas Lincoln moved to his farm situated near Nolin Creek, in Hardin, now Larue County, three miles from Hodgensville and fourteen miles from Elizabethtown, where he could be both farmer and carpenter.

There, in a small one-roomed cabin, built of roughly hewn logs plastered with mud, with a dirt floor, one door and a window of oiled paper, but with a large fire-place the chimney of which was built on the outside, on February 12th, 1809, the child who was destined

Abraham Lincoln

to be not alone President of the United States, but the preserver of a nation and the savior of a race, was born. It has been truly said that the utmost stretch of the imagination could hardly reach to the White House from such a home. His parents gave to this child the name Abraham, after his grandfather, and as we read of the pioneer wanderings of the Lincoln family we do not wonder that the name of the first patriarch of all pioneers was so favored among its members.

While the home that sheltered the little child was very poor and of the humblest description, it was neither better nor worse than the majority of the settlers' homes in that locality; and notwithstanding the poverty and hardships the Lincoln home was a happy one, and the children were well cared for by loving parents.

The boy grew up healthy and strong finding plenty of exercise for his sturdy limbs. He had a few playmates among whom was Austin Gollaher, who many years afterward told of how he saved young Lincoln from drowning. It appears that Gollaher and his mother one Sunday visited the Lincolns, and the two boys went on a hunt for partridges. They had to cross the creek which at that time was greatly swollen by rain, and while on the narrow log that spanned the creek Lincoln's foot slipped and he tumbled into the water. Gollaher got a long pole and stretching it out so that Lincoln could grasp it, he was pulled ashore where he became unconscious. Although much frightened the other lad by vigorous pounding and shaking managed to revive him, and after getting rid of a considerable quantity of muddy water he had swallowed was all right again.

Knowing that if they presented themselves to their mother in their wet and bedraggled condition punishment would surely be meted out to them, the two boys took off their clothes and spread them out to be dried by the sun; as it was in June this was soon accomplished.

When Abraham was about seven years old a teacher named Zachariah Riney moved into the neighborhood and opened school, and the boy became one of his pupils.

It is very hard for the boys of today accustomed to fine, warm, airy schoolhouses, good teachers and everything to help make their study pleasant and easy, to imagine the conditions which existed in the west less than one hundred years ago. The schoolhouse, built of rough logs, daubed with mud, floorless and windowless, with seats and benches made of great slabs, was only in session when some one came along who would teach for a term or two or until he got something better to do. Generally these teachers were ignorant and uncultivated, rough in speech and manner, seldom able to instruct their pupils beyond the "three Rs"—a teacher who knew latin being looked upon as a miracle of learning. Young Abraham, however, had received some knowledge of letters from his mother who was fond of reading, and afterward when President he was wont to tell how his sister and himself sat at their mother's knee in the long evenings, while she read to them or told them stories.

At school young Lincoln was unusually bright and eager to learn. He took special delight in writing and would form letters and words with charcoal in the dust, or in the snow or anything else that would take impressions; or when he could get paper, which was seldom, he would make a "turkey-buzzard pen," and use ink made of brier root. Another source of education which benefited young Lincoln was listening to the preaching of the ministers who visited at intervals these distant settlements. Possibly it was from these preachers, rough, uncouth, unlearned as they were, yet full of earnestness that the idea of speaking in public first took hold of the boy. Nothing pleased him more than to get his schoolmates round him and give them a realistic imitation of some preacher's oratory.

Abraham was eight years old when his father moved to Gentryville, Spencer County, Indiana. They settled in what was a wild, unbroken country. At first all the shelter they had was a "half-faced camp," fourteen feet square, the rear part higher than the front, open altogether on one side, without windows or chimney. Skins stretched on poles across the open front and the openings in the sides closed with chips and clay, protected somewhat the inmates from rain and cold.

Young Lincoln was tall for his age and strong, and his help was always needed. An axe was put into his hand, and until he came of age that useful instrument was almost constantly with him. There was no school at this time, but I fancy, young as he was, he not only did not forget the little he had learned but added to his store. A writer describing the boy's appearance says, he was tall, ungainly, fast growing, and long-legged. His dress was a shirt of linsey-woolsey, homespun; his trousers and hunting shirt were made of deerskin; his feet, which never felt a stocking until he was a young man, were covered with moccasins made by his mother, and on his head was a coon-skin cap with the tail hanging down behind. To the boys of today who worry over the color of a necktie, the fit of a coat, or the crease in their trousers, young Lincoln's appearance would only provoke jeers, but it is true, that the coat does not make the man, and those who many years after saw that long, ungainly form clad in the familiar tail coat and tall hat, never thought of his outward appearance—they only saw the great, patient, heroic, dignified nobility of the man.

A better and more comfortable cabin was built by Thomas Lincoln and his son the following year. It had a loft, in one corner of which was the boy's bed consisting of a heap of dried leaves. To reach the loft pegs were driven into the wall to form a stairway. In all the work of building the cabin, as well that of felling trees, plowing, planting and harvesting, the boy of nine years bore his part.

When Abraham was ten years old, a great sorrow fell upon the little family. The mother, never very strong, could not stand the hard work and exposure, and when an epidemic of sickness appeared she sickened and died. Her grief-stricken family and their few neighbors laid her to rest under the shade of the great trees. No funeral service, no minister to say a prayer over the grave; yet I believe that her son, as he lay heart-broken that day beside the newly-filled grave, and remembered some of the things his mother had taught him, resolved to follow out her counsels and become the boy and man she wanted him to be. Six months afterward Abraham composed his first letter and sent it to Parson Elkins, asking him to come and preach a funeral sermon at his mother's grave. The good parson complied with the request the following summer, and the people gathered from far and near to listen.

Thomas Lincoln's second wife was Mrs. Sally Bush Johnston, a widow with three children of her own. When she came to the Lincoln home, the motherless children were made much more comfortable, as the new Mrs. Lincoln brought quite a large store of household goods.

She was a woman of force, thrift and gentleness and speedily took a warm liking to her two stepchildren. Abraham long after said, "she was a noble woman, good and kind."

The boyhood of Lincoln was spent in almost continuous labor. If his father did not need him, he hired out to neighboring farmers, and his wages—twenty-five cents a day—helped the family along. Every one liked him, he was always cheerful, willing and obliging, ready to do anything, from taking grist to the mill where in waiting his turn he delighted in listening to and telling stories, to helping the women in their household duties.

In such a life there were few opportunities for study, but such as he had young Lincoln made use of. Among the limited number of books he read were "Robinson Crusoe," "Aesop's Fables," "Pilgrim's Progress," "Life of Washington," by Weems; Cooper's "Leather Stocking Tales," and Burns' Poems, the last of which he almost wholly committed to memory. Every passage which pleased him he wrote down on boards if he had no paper. When he did get paper he re-wrote the passages and memorized them. We must not think, however, that with Lincoln it was all work and study. In all the fun and sport of the neighborhood he took part and could more than hold his own in swimming, wrestling, jumping, and running. He never cared for hunting, once he shot a wild turkey but he never afterward aimed at anything larger.

Abraham was almost fourteen when he went again to school, and it was only for a short time; but he let no opportunity of acquiring knowledge escape him. He says that he read every book to be had within a radius of fifty miles. A storekeeper in Gentryville subscribed for a Louisville paper and young Lincoln was always on hand to read and discuss the news. Soon it became the custom for the neighbors to gather in the store and listen to the boy reading and commenting upon the contents. Politics and slavery were keenly and warmly discussed and Abraham obtained a great reputation as a political orator. Speeches and poems also he would deliver with such effect as to gain him unstinted applause.

While at the age of seventeen he again attended school, all the instruction he ever received amounted only to about a year. But to a boy like Lincoln one year's schooling meant more than a whole school and college course to other boys. Whatever he learned, he thoroughly understood. He was never satisfied until he got at the foundation of things. He was at this time also learning to write as well as speak, some of his articles were printed in the local press and naturally increased the respect of his friends and neighbors. Speechmaking, however, was his greatest delight. He was a constant attendant at the sessions of the courts held in the neighborhood listening to the speeches of the lawyers and judges. A copy of the "Revised Statutes of Indiana" fell into his hands, and it is said he read that amazingly dry volume so thoroughly that years after other lawyers consulted him as an authority upon Indiana laws.

All the men and women who were acquainted with the boyhood of Abraham Lincoln speak well of him, of his kindness, his helpfulness, his physical and moral cleanliness. He never used tobacco or drank liquor. A man who was very much struck with young Lincoln's penmanship, asked him to write a few copies; one of the couplets the boy wrote was:

"Good boys who to their books apply
Will all be great men by and by."

His consideration and care for others have been much written about. His warm heart was ever prompting him to deeds of kindness and sympathy. The story is told that on the day he left Springfield for Washington, a little boy was among the crowd who shook hands and talked with him. The little fellow was naturally very proud of the incident and boasted of it among his schoolmates, who would not believe him. The boy at once wrote to the President and received the following reply:

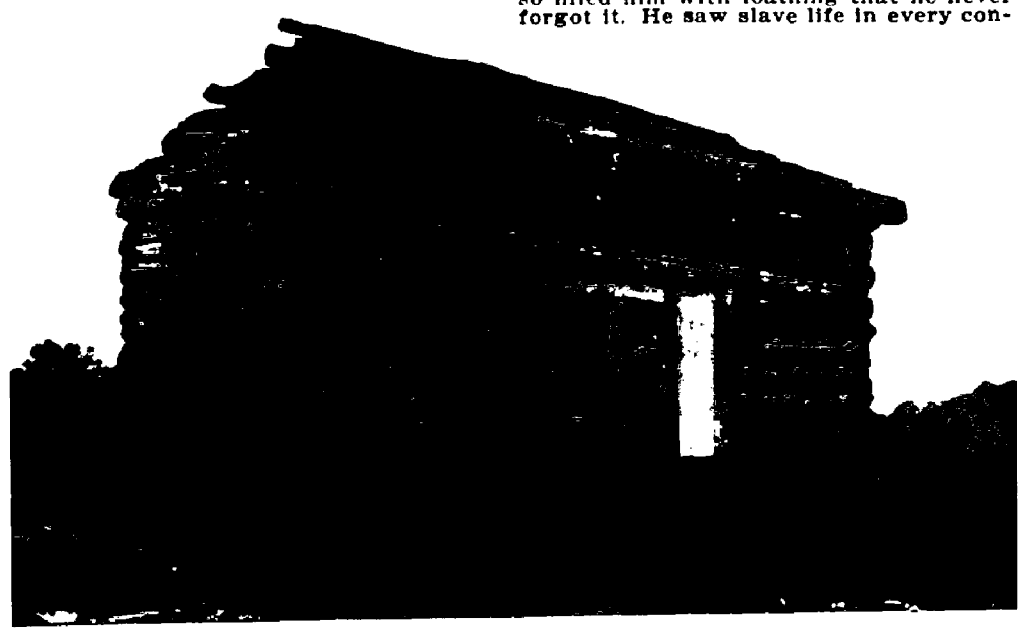
"Executive Mansion,
March 19, 1861.

"Whom It May Concern:

"I did see and talk with Master George Evans Patten, last May, at Springfield, Illinois.

"Respectfully,
"A. LINCOLN."

This, of course, completely squelched the unbelievers. At the age of nineteen Abraham had a great desire to see something of the great world which lay beyond the narrow boundary of his home. An opening presented itself when a storekeeper, Mr. Gentry, hired him to help take a flat boat filled with bacon, garden truck and other produce down the Ohio and Mississippi to New Orleans. The journey of nearly eighteen hundred miles and return took three months. Here Abraham saw something of the great world, and he saw also something that so filled him with loathing that he never forgot it. He saw slave life in every con-



Cabin in Which Abraham Lincoln was Born

dition, and it was the sight of a slave auction he witnessed in New Orleans that partly inspired that immortal document the Emancipation Proclamation.

The life of Abraham Lincoln and of other great men are just books from whose pages we may learn great lessons to inspire us with the desire to make the most of every opportunity that comes to our hand, believing at the same time that we, by indomitable, unwavering perseverance and diligence, may also overcome the difficulties that lie in the pathway to usefulness and a glorious success.

SYNOPSIS OF ABRAHAM LINCOLN'S SUBSEQUENT CAREER.

1830. Removed to Macon County, Illinois. The hard labor he did in clearing the homestead brought him the name of "The Rail-Splitter."
1831. Captain in the Black Hawk war, afterwards Postmaster at New Salem, and became deputy county surveyor.
1834-'36-'38-'40. Elected to Illinois legislature.
1836. Admitted to the bar.
1846. Elected to Congress.
1854. Repeal of Missouri Compromise brought the beginning of his national career.
1858. Debates with Senator Douglas on Slavery
1860. Nominated for Presidency and elected.
1861. Took his seat as President, March 4. Fort Sumter capitulated, April 13, and President called for 75,000 volunteers.
1863. Issued Proclamation of Emancipation, January 1.
1864. Re-elected to Presidency.
1865. Attended Peace Conference with Southern Commissioners at Hampton Roads, February 3. No result.
1865. Assassinated in Ford's theatre, Washington, by John Wilkes Booth, an actor, April 14. Died April 15.

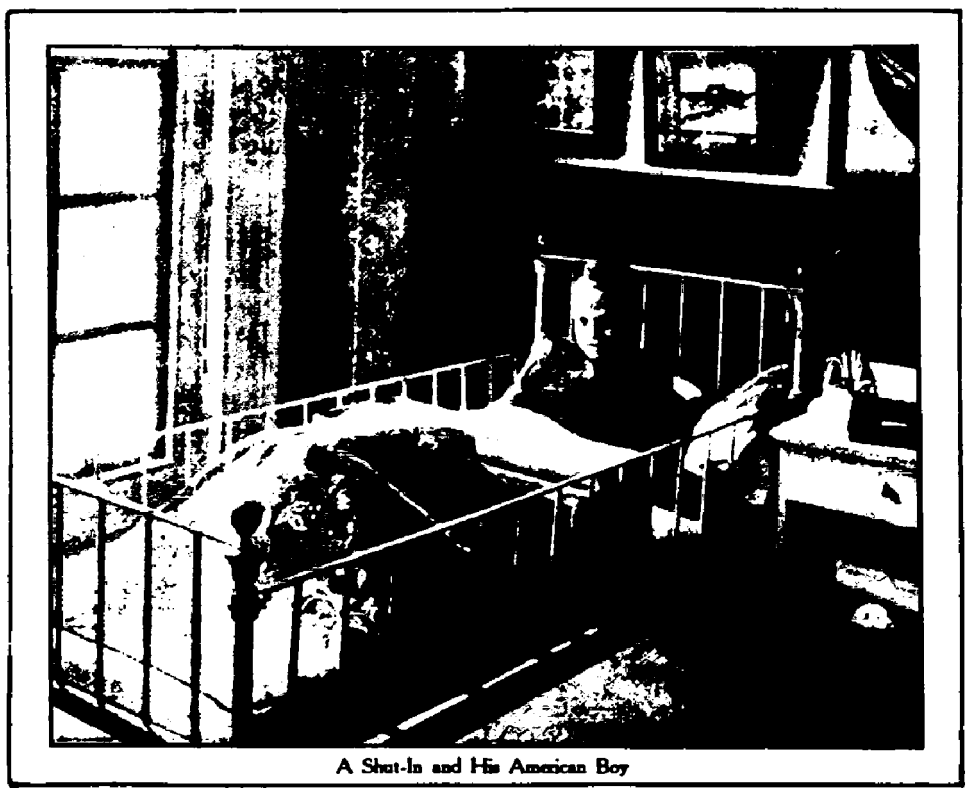
INSCRIPTION ON TABLET IN HALL OF FAME

ABRAHAM LINCOLN
1809—1865

With malice towards none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in.

A Word About Shut-Ins

In the early history of THE AMERICAN BOY, we decided to give free subscriptions to shut-ins, that is, boys who are confined within doors by reason of permanent illness or disability. The demands upon our liberality in this respect soon became so great that it was necessary to stop the practice. It was an unpleasant thing, you may be sure, for us to withhold from the many deserving boys, whose cases were represented to us, as being pitiful in the extreme, the welcome visits of THE AMERICAN BOY. Since we discontinued the practice we have had letters from charitably disposed persons promising to pay for subscriptions furnished to one, two, or more deserving shut-ins. Up to this time we have been able without any difficulty to place the subscriptions with deserving boys. At this time we have two subscriptions that we can give away, the two being the gift of Carl L. Hartshorn, of West Somerville, Massachusetts, who devotes the prize money he earned last month in our photographic contest to this end. We have not, however, the names of shut-ins to whom we may credit the subscriptions. Readers of THE AMERICAN BOY are at liberty to send us names of deserving boys who are too poor to buy the paper themselves, and who fall under the head of shut-ins. We cannot promise to furnish the paper to all the names we may receive, but as fast as money is contributed for the purpose, the subscriptions will be furnished. Do not in any event tell the boys whose names you send us that they will receive the paper, for it might happen in scores of instances that we could not furnish it.



A Shut-In and His American Boy

In the World of Science

Johnny—"My Pa's an astronomer. He says there's going to be a collapse of the moon!"

Think on These

"The greatest good of the greatest number," was the motto that, catching Jeremy Bentham's eye in youth, made of him a great political economist.

Dr. Theodore Cuyler's motto is: "No one was ever lost on a straight road."

"Always in haste, but never in a hurry," was the measure of John Wesley's working.

"It is better to deserve success than to have it," the late Gen. A. C. McClurg of Chicago claimed as his motto.

"Faithful in the least, faithful also in much," keeps Anthony Comstock cheerfully progressing.

"Spend less than you earn each year, and practice economy," the Hon. C. B. Farwell of Chicago once gave as his life's precept.

A Few of President Roosevelt's Sayings

"Be ready."

"A square deal for every man."

"It is hard to fail, but worse never to have tried to succeed."

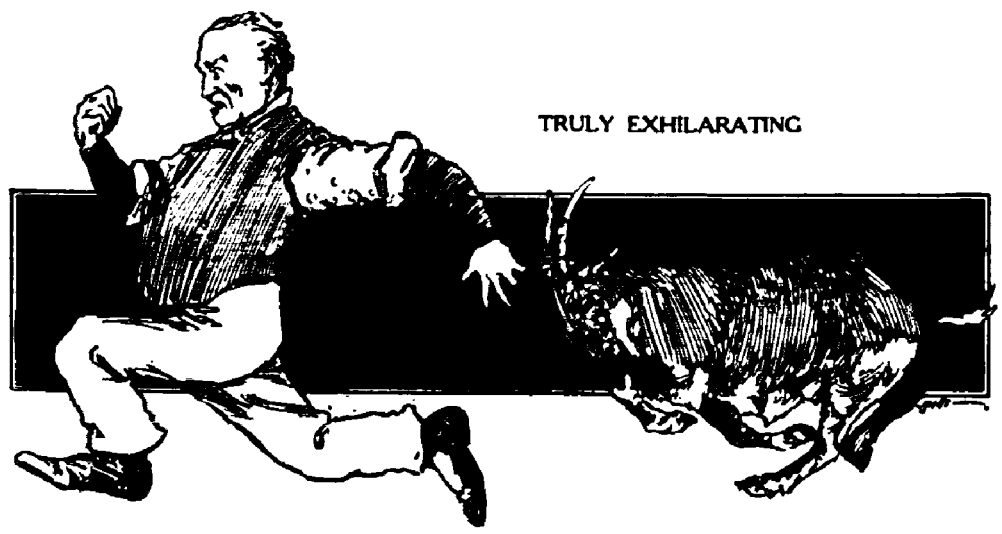
"Face the facts as you find them; strive steadily for the best."

"Be never content with less than the possible best and never throw away the possible best because it is not the ideal best."

"It is better to be faithful than famous."

"Have all the fun you honestly and decently can; it is your right."

TRULY EXHILARATING



They get up in the night for Mackintosh's Toffee

I am John Mackintosh the Toffee King

Mackintosh's Toffee

Is as Safe to Eat as Bread and Butter

and does one as much good, yet is as "more-ish" as jam tarts.

This OLD ENGLISH CANDY

originated in Yorkshire, England, where its immense factories supply the world, is, without doubt the purest and best candy made.

You don't get Toffee unless you get Mackintosh's. Look for my face on every package. I use my face for the protection of my customers.

Whatever you are, whether tinker, tailor, soldier, sailor, rich man or poor man, eat Mackintosh's Toffee; it will make you feel happy and do you good.

Sold wherever candy is sold; or send ten cents for a trial package.

DEALERS—I am doing this advertising for your benefit. Mackintosh's Toffee is the largest advertised candy in the world. Keep a good supply on hand.

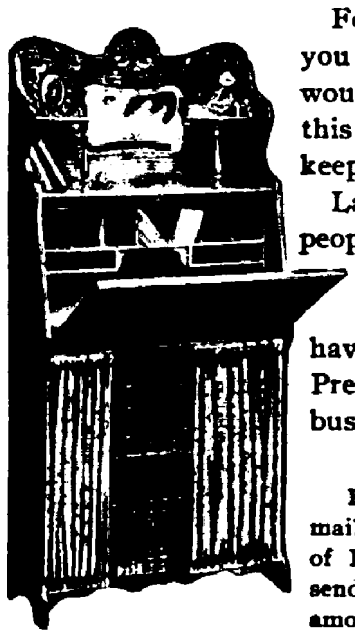
JOHN MACKINTOSH, Dept. 43, 78 Hudson St., New York

BOYS AND GIRLS

EASILY OBTAIN

$10 Larkin Premiums Free

ANY boy or girl who wants a Bob-sled, Desk, Chair, Camera, Watch, Gun, etc., can easily fulfill the wish without spending a single penny. It is only necessary to take orders among friends and neighbors a few afternoons after school hours for $10.00 worth of **Larkin Laundry and Toilet Soaps, Toilet Articles, Coffee, Teas, Spices, Extracts, Baking Powder, etc.**



For every $10.00 worth of Larkin Products you sell, we give to you, free, a Premium that would cost you $10.00 at any store. You see, this is our way of giving you the profits of storekeepers and wholesale dealers.

Larkin Products are so good in every way that people are glad to buy them right along. Every good-sized family has use for $10.00 worth in a few weeks. Many boys and girls have earned a dozen different Larkin Premiums, besides getting an early business training.

WE HELP YOU

Fill out the coupon below, and mail it to us today. The 25 lists of Larkin Products that we send you to distribute among customers make it easy to secure orders. A customer once is a customer always.

NED and BILLY.

BY ERNEST GILMORE

NED WAS SITTING in a comfortable hammock under a big tree in a breezy yard, reading a most delightful library book.

Billy was seated in a shaky box on wheels, which an old dog was laboriously dragging along the dusty sidewalk.

Ned was so fully absorbed in his book that he would not have known of Billy's presence had he not heard the sound of a whack on the dog's back and the driver calling out in a shrill voice:

"Get a move on you—can't you?"

The interesting book closed with a snap as Ned sprang to his feet. Before he could get outside the gate, the driver of the dog gave another cut to the old dog's back.

"Stop, you cruel boy!" shouted Ned, seizing Billy's arm and taking the whip away from him, "How dare you beat that poor old dog with the bones most sticking through him?"

Billy looked scared, but did not speak.

"How dare you?" Ned repeated angrily.

"I've got to get home," whimpered the boy, "an' he won't go fast."

"Won't go fast," mimicked Ned, "who'd expect a dog that's hardly able to crawl to go fast? You'd better get out and walk. Put the poor dog in the cart, and you draw him."

The boy in the cart looked hurt.

"I couldn't if I wanted to," he said, lifting up an old linen duster that had been spread over his knees. "See there! If it wasn't for them I wouldn't have to drive old Carlo."

Ned looked, and—to his surprise—saw that the poor little chap had only one leg. A rude crutch lay in the bottom of the cart. Ned felt distressed, and—being a big-hearted fellow, he regretted his harshness of speech. Not giving thought to the afflicted boy's grimy hands, he held out his own in a friendly grasp.

"Please pardon me," he said gently, "I didn't know there was anything the matter with you. I was only thinking of the poor old dog."

The pale, grimy, one-legged boy regarded the manly, well-dressed one in surprise, not being accustomed to being treated politely.

"I don't like to hit poor old Carlo," he admitted, "but I can't get home 'less I do. Granny said I should hurry. She's waitin' for these things."

He pointed to a bunch of wilted vegetables in the back of the cart.

"Where do you live?" asked Ned.

"I live on Martin's Meadow."

Ned knew where Martin's Meadow was, although he had only seen it as he had passed by in his father's automobile. "If you'll let Rackabones get in beside you, I'll draw you home," he said.

Billy could hardly believe what he heard, but he called Carlo to the cart and helped him in, and presently, the volunteer horse was pulling the rickety cart along the street. It was a quarter of a mile to Martin's Meadow. There was a dozen or more shanties scattered here and there over the rough ground. Off by itself in a corner—stood the worst-looking hut of the lot. An old woman, leaning on a cane, was hobbling around the stony dooryard. A little girl sat on the doorstep.

"There's where I live," Billy said, as old Carlo got out of the cart and made his way to the little girl, who patted his head gently.

As Ned drew the cart up to the open doorway he had a glimpse of the interior of the hut, which was barren in the extreme. The old woman walked slowly to the cart and took out the wilted vegetables, giving Ned a keen, questioning look as she did so. She was wondering how such a fine-looking, well-dressed boy happened to draw Billy and the old cart. The little girl felt the same wonder, but she regarded Ned with a faint smile. She was a frail child and her thin, pale face showed traces of tears. Ned only lingered a few minutes, but that was long enough to convince him of the poverty and need of that humble home. While he was on the way there—acting in the capacity of a horse—he had found out that Billy was a newsboy—that he took morning journeys to a certain corner, and—after leaving Carlo and the rickety cart in the care of an old apple woman—he sold papers. He did not sell a great many either, but the little he earned in this way was all he had to support the family (including Carlo) of four.

"Not much wonder," thought Ned, as he hurried homeward, "that they're all as thin as rails—even poor old Carlo."

"I've got to do something for that poor little chap," he told himself decidedly, "but what shall I do?"

He put on his thinking cap.

"What'll I do?" he questioned himself. "What would I do if I were in Billy's shoes. No, what would I do if I were in Billy's shoe? He hasn't got but one foot, so he hasn't got but one shoe. Just think of it, one shoe! one foot! Whew, that's rather hard on Billy. And that poor old woman with the withered vegetables and an old bone to make soup out of! And that little pale-faced girl, whispering longingly to Billy, 'Didn't the old apple woman give you an apple?' I'm glad I'm not Billy."

* * * * * *

It was evening. Billy, little Elsie and granny sat just outside the cabin door, Carlo lying down beside them. Each and all looked weary and famished, but Billy was trying to cheer the others.

"Maybe I'll sell more papers to-morrow," he said hopefully, "an then granny'll get a nice bone with some meat on it, an' some good potatoes. An' I'll get an apple for you, sis, see if I don't."

"Oh, Billy, look there," cried Sis, "there comes that nice boy that brought you home in the cart."

Sure enough, there was Ned sitting on the front seat of a delivery wagon beside the driver. The team drew up in front of the door and stopped.

"Hello, Billy," called Ned, jumping out. "Here's a dog for you that I think you'll like."

The driver lifted out a tricycle, that being the "dog" Ned had spoken of.

"It was mine," said he, "and it'll give you good service. You won't need to drive old Carlo any more."

Billy could not speak for surprise and joy.

"Say, Billy," continued Ned, "Carlo looks as if he was hungry. Just stop at our house when you are out on your tricycle and Betty'll have a basket of scraps for the dog."

"You're awful good," Billy managed to say, "I dunno how to thank you."

"That's all right," said Ned, and, jumping in the wagon, was gone.

It was not until the delivery wagon was out of sight that a big covered basket which had been set down beside them was unpacked.

Billy Looked Scared, But Did Not Speak

When it was there was great rejoicing, for such a store of good things the family had never known. Tears of joy ran down old granny's face. Little Elsie laughed and clapped her hands. As for poor Billy he shouted and threw up his old cap. Even Carlo showed his delight.

"I never saw such a boy as that one," said granny, "he's thought of everything. See! Here's tea and coffee and bread and butter and—"

"Oh!" interrupted Elsie, "and apples and oranges and cookies and—and—oh, my, granny, what's that?"

Granny laughed aloud.

"It's a roast chicken," she said, "a real roast chicken for us, just think."

"Oh," said Billy, "was there ever any one else like Ned? No, there never was. Oh, I wish we could do something for him."

"We can," said granny, "we can ask God to bless him."

And they all knelt down and did so, after which they rose up and had a feast.

CHINESE BOYS AND THEIR WAYS

(*Continued from page 109.*)

once during morning school and once in the afternoon.

From five o'clock until chapel at seven the boys have a free time. This is spent usually in walks, not in the town, which is "out of bounds," but along some of the many hill roads, or in the Botanical Gardens which are very near the college. Here there are a large pond of goldfish (all Chinese like goldfish, and often breed them) and an aviary, and also some Chinese deer, all of which our boys seem never tired of watching. In the winter, when it becomes dark earlier, they amuse themselves by playing Chinese chess or draughts, or by making kites or shuttlecocks.

At seven o'clock the bell rings for evening chapel. Preparation begins immediately after. By half-past eight work is over. Some boys go to bed almost at once; others stay up till nine, when lights are put out. Only a few of the older boys are allowed to sit up later.

Pillow-fights? Yes, sometimes; only there are no pillows, so the cotton coverlets are used instead. A Chinese boy's pillow is a square framework of wood, covered with cloth, ten inches long, six high, and four broad, which he puts, not under his head, but under his neck. Some boys prefer similar "pillows" of earthenware, scarcely less hard than the wood and leather kind.

Saturdays and saints' days are half-holidays. Saturday is a "half," I suppose, all the world over. Saints' days are given to make up for the loss of certain heathen festivals kept as a holiday in non-Christian schools.

How do they spend the Saturday? Well, in the morning, as in some of your resident schools, they revise the week's work. When the week's repetition has been said, the next thing to do is to shave heads. This is a very important work. Ever since the present Manchu dynasty came into power the Chinese have been forced by their rulers to wear the cue. This was at first intended to be a mark of subjection—a cow's tail hanging down—but it is now an object of great attention and care on its owner's part, and the loss of it would be one of the severest punishments which he could suffer. In order that it may grow long and strong he shaves his forehead and the nape of his neck. But the hair grows again quickly in the shaved parts, and in order to look tidy he ought to be shaved at least once in ten days. But our boys must be clean for Sunday, so, when school is over, they find the barber waiting to shave them.

The Chinaman has an infinite capacity for sleep, and his idea of a holiday is to sit in the house, or, better still, to go to bed. So the new boys find it very hard work to go out on a bright winter afternoon to roll call at a place two miles away. They say that the hard roads wear out the soles of their shoes (which are made of paper), and try to beg off. "Master, I am very weak to-day," was said to me by a boy who, when at home, had to walk miles of rough mountain road, because he had heard that roll call was a little farther off than usual. But he soon got into our ways. Here I may say that a walk for pleasure is something which no Chinese can understand. He will willingly walk two or three miles in order to give his pet lark an airing, but he sees no good in an airing for himself. When, then, a foreigner in a Chinese town goes for a walk he is supposed either to be doing some form of worship, or, if he walks near the hills, to be prospecting for gold.

Chinese boys' games are not like American, in this, that each player plays for his own hand, and "sides" are generally unknown. In kite-flying and kicking up the shuttlecock rivalry comes in. You may get your kite up higher than another boy, or you may kick up your shuttlecock more times than he his, but you always play for yourself, not for your side. Hence Chinese games are rather poor, and not much fun to watch. Here, however, our boys are beginning to learn to play together, and to fight for side as well as for self.

'SPICE

First Telegraph Messenger: "I don't like delivering messages in there."

Second Messenger: "Why?"

First Messenger: "All the doors are fixed so's yer can't slam 'em."

Teacher—Willie, give me a sentence containing the word delight.

Willie—My mother puts out de light when I'm in bed.—Philadelphia Telegraph.

Jim Johnson—Am yo'r horse afraid ob automobiles?

Joe Jackson—Yais.

Jim Johnson—Ah thought he was blind and deaf?

Joe Jackson—He am—but he kin smell.—Puck

On coming home from church on Sunday Archie's mother asked him how he liked it, and Archie said it was fine.

"What do you like most in the church?" asked his mother.

"Well, the best part is where they pass around the money," and turning to his father, said: "How much did you get? I got a dime."

A Dutchman was relating his marvellous escape from death when thirteen of his companions were drowned by the upsetting of a boat, and he alone was saved.

"How did you escape their fate?" asked one of his hearers.

"I tid not go in te boat," was the Dutchman's placid reply.

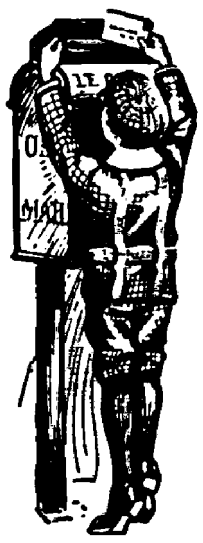
"The American Boy," Detroit, Mich.

Dear Sirs:—Enclosed find * * * * * for which please send me my next month's supply of ten (10) AMERICAN BOYS. I want to thank you for those ten copies you sent me for October. I received them at noon, and before school had taken up I had sold them all. Easy, wasn't it?

When I send for December's supply I will remit the money for my own subscription.

Yours truly,
LESTER C. PETERMAN.



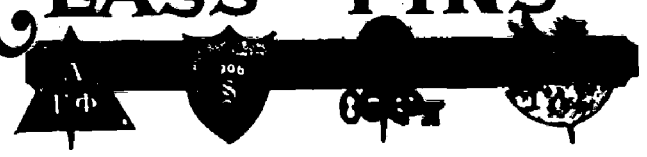
¶In Addition to your profit on each copy sold we give cash prizes, watches, books, football goods, etc., as premiums.

¶Send a postal TODAY and address

"The American Boy"

Detroit, Mich.

CLASS PINS



¶ Maker to wearer! ¶ High-grade work at low prices. ¶ Write for illustrations. ¶ Special designs in colors will be made free of charge. ¶ Satisfaction guaranteed in every instance.

The TEST of ALLEN MURRAY.

By JETTIE M. PHILLY.

"NOW, I call that good luck," said Allen Murray across the tea table to his mother. "Here it is a week after commencement and I'm the only fellow in the class who has struck a job."

"They say old Brady is pretty cranky. Just jumps on you all over if you don't walk the chalk line; but, as for that—I've made up my mind to suit him and I will!" Allen's strong, white teeth closed firmly together.

"Why, with thirty-five a month as a starter, we'll be regular aristocrats, won't we?" he ran on merrily. "Just wait and watch us after we belong to Jim Brady's Coal and Lumber Company!"

His mood became more serious.

"In two years I ought to save enough to pay off the mortgage, and—let me tell you right now that there will be no more baking for you. With a wage-earner in the family, you can tell your customers that henceforth you are to be a lady of leisure," he said, smiling affectionately at his mother.

True to his expectations Allen found that the man who worked for James Brady must keep his eyes open.

"Murray," said Brady one morning during Allen's first week of service, "Brown, who usually drives this team, is sick. You jump on to this load of coal and take it around to the I. X. L. Laundry on Exchange street. I'll send a man around to help you unload."

Upon Allen's return he was summoned to the office.

"You delivered that coal to the laundry on Exchange street?" questioned Brady curtly.

"Yes, sir."

"Then why on earth did you go down East street? Don't you know that Wabash street would have been at least twenty-five rods nearer?"

"Yes, I know it, but I didn't think of it at the time," stammered Allen.

"Well, after this think then. That's what I'm paying you for," said Brady sharply as he turned to his desk.

"You may bet your hat I don't make that blunder again," muttered Allen to himself as he returned to his work.

Brady found no ground for a second reprimand. He even made the discovery that he rather liked this straightforward, alert young fellow who looked one straight in the eyes. As a matter of business it paid to have someone in the company who could help out the bookkeeper if need be; who could turn in a letter for signature correct, clear, concise; or whose muscular arm could shovel coal with the steady swing of a stoker.

"Brady is really becoming quite genial," said Allen to his mother over a year later. "He asked me today if I thought he and I could run the business while Rhodes went up to the mountains for a month. You know Rhodes's lungs are in bad condition. Brady is sending him up there, footing the bill and all that. Rhodes intimated as much to me last night, and said the boss told him, 'If you ever so much as thank me, Rhodes, I'm not sure but I'll discharge you on the spot.'

"Brady is kind-hearted for all his apparent crustiness, and the men fairly swear by him. He does the fair thing and the square thing by them every time. They know they can bank on that," Allen went on loyally.

"Why, Martin O'Brien would lay down his life for Brady if necessary. You know it was Martin's boy, Joe, that Brady sent up to the hospital for that operation, and the kid can walk now as straight as I can. I was in the office when Martin with tears in his eyes came in to thank Brady. The boss just clapped his hand over Mart's shoulder and said, 'That's all right, O'Brien! You know I haven't any boys of my own, and of course I have to look after all of those in the company.'

"Half of Brady's gruffness comes from his nerves. He looks miserable and in my opinion ought to be taking a rest himself," said Allen, real concern in his face.

Three years passed by and Brady, although apparently on the verge of nervous prostration, obstinately refused to admit that his condition was at all serious, or that he was in need of a vacation.

"You have it straight, Jim, you have about reached your limit." Dr. Stuart leaned back in one of the leather chairs in Brady's private office and looked critically at the haggard face opposite. "You may have your choice," he continued, "either drop everything and take six months off—I'm giving you the minimum time—or in another six months, your business will drop you and about all you will need will be your six feet of earth."

"Nonsense, doc, cut it out! cut it out! I'll take a couple of weeks, or a month off and run down to the seashore. How will that suit you?"

"Six months and a sea voyage," said the doctor. "It's the only thing I'll consider."

"Why, man! Do you think a fellow can pull up every time you doctors get scared, and pack off to Egypt or some other outlandish place? What will become of things? Maybe you don't think it, but it takes a little headwork to run this business of Jim Brady's. Who'll run things while I'm prancing around the globe? Tell me that, will you?"

"Well, you won't long, if you don't get out of here. I'll promise you that," exclaimed the doctor warmly.

Brady's eyes twinkled. "You're an old granny, doc, or else you're trying to get even with me for the time I licked you when we were boys at Shelby's Corners."

The doctor laughed.

"No use in your talking, Jim. I'll order your stateroom on the Celtic for the sixteenth."

"Tom, you're an old fool; I've always surmised it. Now I know it," said Brady almost tenderly as the doctor left the office.

For fully twenty minutes the head of the firm of Brady and Company sat with his hands thrust into his trousers pockets staring intently at the floor. Then he touched a bell sharply. Bob, the office boy, appeared.

"Look Murray up and send him here at once," he ordered.

"See here, Murray," said Brady as Allen entered the private office in response to his summons. "Here is a little matter I want you to look after. I sold Bradshaw and Company coal so low that the only way we can save ourselves is to dock the amount a little. You see to it that every ton delivered to that firm is at least one hundred pounds short. That's all." Brady turned to his letters.

Allen stared blankly.

"What are you waiting for?" asked Brady irritably.

"Do I understand—you mean to—to cheat them?" stammered Allen at last.

"Understand that you are to obey orders. I'll give them," said Brady imperiously.

The stalwart figure of Allen Murray straightened. His face turned white under its healthy coat of tan, but his eyes met those of Brady's coolly, unflinchingly.

"I can't do it, Mr. Brady," he said quietly.

"Why not, if I may presume to ask?" Brady's eyes, keen, piercing were upon him.

"It's a question of honesty, sir."

"Oh, it's honesty, is it?" Brady's voice was full of sarcasm.

"If you can't obey orders, I'll find someone who can."

"Very well." Allen wheeled about.

"Wait a minute, Murray," said Brady in a conciliatory tone. "You have done good work since you have been here. I'll give you an advance of twenty dollars a month and three days to consider the matter."

Allen left the office puzzled beyond expression. He had known Brady to discharge a man for measuring lumber incorrectly. He could not understand it.

"Hello, Allen! You look like you'd seen your grandmother's ghost," sang out Bob as Allen passed through the outer office. "Boss jump on you hard?"

"I'm fired."

"The dickens you are!" Bob peered down the corridor in amazement at Allen's fast retreating form.

Young Murray felt humiliated that the twenty-dollar increase kept recurring to his mind. He would not consider it, and yet—twenty dollars would mean two hundred and forty a year. It was no mean sum to be rejected.

Expenses had been heavier than he had anticipated during his three years with Brady. The house had reached a condition where repairs were imperative. Shingles and paint had been among the improvements. Then, the thriving town had voted all walks must be of flagstone or cement; and the Murray corner lot had proved an increased expense.

Barely were these demands settled before his mother was taken seriously ill. Not only were the services of a trained nurse required; but a maid had been necessary to look after the housework. Recently the doctor in presenting his bill had suggested that a change of scene might hasten Mrs. Murray's convalescence.

"Doctor's bill not yet paid, girl to hire all winter, coal to buy, taxes to pay, keep things running, a mortgage of six hundred hanging over the place, and mother needing a change of scene!

"That's a nice prospect, especially when you're out of a job," thought Allen bitterly. How that two hundred forty would help to pay expenses! Under the circumstances would he not be justified in complying with Brady's demands? No, it was stealing in plain English. There was no way of getting around that.

Mr. Murray had been a carpenter as to trade, a philosopher as to life, a nobleman as to character. Over and over again he had impressed upon the mind of his son, his views of right living. All these precepts like faint ghosts of his childhood days passed through Allen's mind at this crisis of his life.

"I remember," he mused, "how often father used to say, 'I'd rather have you honest and truthful, my son, than the richest man in the state.'"

When Allen turned into the yard at noon the question was settled. Mr. Brady could have had his answer then and there. He would look for other work.

"I'll just keep it shy from mother until I'm settled in other pastures," he said, summoning a smile to his usually bright face as he entered the house.

THE PERNICIOUS DIME NOVEL READING HABIT, AND THE CURE

BUILD YOUR OWN BOAT

BY THE BROOKS SYSTEM

There is no reason why you cannot own as good a boat as the best boat factory can produce, if you will use your leisure time to advantage and build it yourself.

The fact that anyone using the Brooks System, no matter how inexperienced he is in the use of tools, can build his own boat at the cost of a little lumber and a few nails, has brought boats within the reach of all. All the boats built last year, by all the boat factories in the United States, combined in one fleet, would not equal the number of boats built during the same time by novices using the Brooks System. Our catalogue gives pages of testimonials with photographs of the boats built by amateurs using the Brooks System.

The Brooks System consists of exact size printed paper patterns of every piece that goes into the boat, a complete set of halftone illustrations showing an actual picture of each step of the work properly done, detailed instructions to build, covering the entire construction of the boat and an itemized bill of all material required and how to secure it.

We tell you how to lay the pattern of each particular part on the proper piece of material and exactly how to cut—you cut. We then tell you how to fasten each part in its right place—what kind of a nail to use—how to drive it—you drive it.

You need no mechanical ability, the Brooks System supplies this—how is shown in the catalogue.

Many professional men are taking up the Brooks System for mental relaxation—for the pleasure of working with their hands and for exercise.

We have started hundreds in the boat building business. One man built sixteen boats from one set of patterns last season—another built ten—the materials cost very little—we furnished the design—they did the work and sold the boats at a big profit.

You need buy nothing from us but the patterns. We have them of all kinds and sizes, from small Row Boats and Canoes to Sea-going Yachts. We have over 50 styles and sizes of boats and boat patterns, each one perfect in design for its purpose. Our catalogue illustrates the product of the best staff of designers in the world.

Over ten thousand amateurs throughout the world successfully built boats by the Brooks System in 1905.

When so ordered, Patterns are Expressed, Charges Prepaid, C. O. D., Allowing Examination.

KNOCK DOWN BOATS

Complete from keel to cushions and fittings. We send you a complete Knocked Down Boat, even to the paint, at a cost of very little more than the cost of the raw material.

Catalogue with full particulars free. For 25c, 100-page catalogue showing several working illustrations taken from the instructions of each boat and a full set for one boat; also valuable information for the amateur yachtsman, rules for sailing, steering, passing, fog and engine signals, etc.

Please Mention The American Boy When Answering Advertisements

THE OFFICE · BOY

BY FRANK H. SWEET.

"'TAIN'T HONEST, n' I'm goin'."

The boy spoke stubbornly with his eyes fixed squarely upon his employer and his short, sturdy figure drawn to its full height.

The man finished writing his letter, ran a nickel-handled roller blotter across it, read it over carefully, and then folded and slipped it into an envelope and directed the envelope with the elaborate flourishes of a writing master. All this in a leisurely, impressive manner, then he turned slowly in his revolving office chair.

"Take this over to the postoffice, Luther," he said graciously; "and oh, yes, you may bring me a dollar's worth of stamps. Get the money out of Mr. Long's desk there. We are to be congratulated on having a boy we can so thoroughly trust."

"I said I was goin'—"

But the man had turned calmly back and dipped his pen into the official-looking inkstand on his desk. Luther hesitated, then got the money and went out and posted the letter and purchased the stamps. But the doubt had become too firmly fixed in his mind to be easily satisfied. At the early hour of office closing he was again beside his employer's desk.

"Don't seem to me the business is honest, Mr. Cass," he said, "so I'm goin.'"

His employer was in the act of closing his desk, and he finished the operation, slipping the key into his pocket. Then he looked down with amused toleration.

"I think you mentioned something to the same effect this noon, Luther," he observed. "I suppose some of the outside office boys have been talking with you. Now what is it—but first there is a matter I wish to speak of, before I forget it. Mr. Long was talking to me yesterday about your efficiency. We think you are worth more to us than we are paying. I meant to have told you this morning, but have been so very busy the little matter slipped my mind. Let me see, we pay you four dollars a week now, I believe. How will seven do for the future, beginning tomorrow morning?"

Luther's eyes widened, then snapped. Seven dollars a week! It was more than any boy on the street received—as much as some of the grown men who worked as clerks in stores.

"I—I ain't wuth it, sir," he stammered.

"Oh, yes, you are," reassuringly; "perhaps more, though that is all we can pay just now. Maybe later—" He smiled and nodded significantly, adding: "You—er—lack a little in education, of course; but that doesn't affect our interests in the least. And besides, it is something you can remedy in time."

He had taken down his hat and reached the door, when suddenly the light died out of Luther's face.

"I—I forgot, sir," he cried, with keen disappointment in his voice; "but I can't stay. I must be goin.'"

"Oh, yes, about something not being honest," kindly. "Suppose you explain it to me a little more fully, Luther. I am in a great hurry, but I can spare you a few minutes. I was once an office boy like you, and a great many things that I did not understand sometimes assumed malignant shapes. You are from the country, you know, and business matters are still very new to you." He paused inquiringly, smiling down at the boy with benevolent but amused eyes.

Luther was red and embarrassed. Only four weeks before, when this smiling, soft-spoken gentleman had come out into the country and offered him the magnificent position in his office, he had thought him the finest man in the world; and even now he believed him to be the pleasantest and most kind-hearted, as he believed the keen-faced partner, Mr. Long, the shrewdest of business men. He could not understand why such people should have selected him, a diffident, uneducated, country boy, when there were so many bright town ones who would have been glad of the chance. And that was just as much of a mystery now as on the first day he came. The only sensible reason he could see was that they were a new firm, only in business a week before hiring him, and perhaps they did not know better—and yet that was no reason either, or they would have dismissed him on discovering the mistake. And instead of that, here they were ready to raise him to seven dollars.

What he did not understand was that his homely face and straight gaze were the very essence of honesty. No one could look at them and suspect guile, and his very diffidence added to the impression. He was the ideal of a boy to stand in the office of a questionable company and open the door for prospective customers. A good first impression, followed by the cordial friendliness of Mr. Cass and the business versatility of Mr. Long were reasonably sure to win over the most obdurate. That, however, was but one reason; the real one was to appear later.

"Well," reminded Mr. Cass, patiently. "I am waiting. And I am in somewhat of a hurry."

"It's this way," blurted out Luther, desperately. "I—I'd like to work for you the worst kind if only I could; but I can't. The business don't seem to me like it could be honest. I heard you say to Mr. Long one day when I was cleaning the back room windows that you'd both been strapped to the last cent, an' this business was to pull you out of the hole. I didn't mean to listen, but I couldn't help it; an' it set me to thinkin', an'—an' to watchin.' Folks have been comin' in—poor folks, some of 'em, that I know—an' buyin' sheers. Yesterday old Mis' Green, who works round, came an' begged Mr. Long to let her have the ten dollars back that she'd put in, an' he talked to her so she took another sheer for a present an' went off grinnin', thinkin' she'd be awful rich in a few days sure." Luther paused a moment, then went on impetuously; "An' there's old Mr. Perkins who lives in the big farm house just across from me. He's terrible rich, an' some say he's a miser an' has more thousands than most folks has cents, but he's old an' childish an' all alone in the world, an' he believes everything anybody tells him. I did his chores an' slept over there most the time an' sort o' looked out for him. Him an' me are good friends."

"Yes," smiled Mr. Cass. "He told me that you were the finest boy he ever knew, just like your father and grandfather and uncles, and he was acquainted with them all. He said you were so absolutely honest that he would risk everything he owned on just your word or in anything with which you were connected. It was his confidence in you that first recommended you to our notice."

Luther looked at him gratefully, but a little suspiciously.

"Thank you," he said; "but Mr. Perkins ain't keen like he used to be. I hope you won't try to sell him any sheers."

"Why?"

"'Cause folks outside say it's nothing but a swindle," sharply, "that the sheers themselves are only paper, an' when you've sold all you can you'll slip off. I don't understand such things myself, only what you said about bein' strapped an' this helpin' you out of a hole. You an' Mr. Long are spendin' lots o' money right along. Yesterday Mr. Long bought a ring that I heard him say he paid two hundred dollars for, an' you bought a new horse an' more clothes, an' you both ride 'round in automobiles an' give suppers an' live at a big hotel. If you hain't no money except what folks bring in for sheers how can you do it an'—an' be honest? I'm awful sorry, but I must be goin.'"

He Turned and Walked Deliberately Toward His House

Mr. Cass opened his handsome hunting-case watch smilingly. It was another of his recent purchases, and as he clicked it shut he slipped it back into his pocket caressingly.

"My time's up, Luther," he said, regretfully; "if it wasn't for that I'd like to have a long talk with you about this matter, for I remember how I used to misunderstand things when I was an office boy. Things explained as we go along helps us so much, especially when we are young. But we will talk this over in the morning. You will be here, of course?"

"Y—es, I guess so," doubtfully; "but I don't think I can stay."

"That is all right," kindly. "We do not want to urge anyone against his convictions. But come and open the office as usual, and then after I have set you right about the mistake you may leave if you still wish to. That will save us from any unfriendly feelings."

Luther went home with his mind in a confliction of doubts. But when he returned the next morning his doubts were again all in one direction. He had heard more comments.

Soon after the office was swept and made ready for the day, Mr. Cass swung round in front of the entrance in an automobile.

"Oh, there, Luther," he called: "I will not have a moment's spare time today for that little talk. I am going to the mine now. Supose you jump into the automobile and ride out with me. We can speak of that matter on the way and not lose time. Hurry!"

Luther caught his breath a little. Ride out to the mine, which he had heard them say was twelve miles away, and which he had come to believe was wholly fictitious. And he had never been in an automobile in his life. Perhaps he and everybody else were mistaken, after all, and Cass & Long, Stock Brokers, were just what they represented themselves to be.

It was a smooth, open road, and in less than half an hour the automobile swerved up beside the bars of a small rocky pasture. As farm land or timber land, or even pasture, it was evidently as worthless as land well could be. But as they alighted and climbed the bars, Mr. Cass nodded toward it significantly.

"Not very promising in appearance, Luther," he said. "You would scarcely suppose it could contain such riches as you never dreamed of. Look at this."

They were a dozen feet inside the bars now, and he kicked a few inches of loose soil from what seemed the surface cropping of a ledge of rocks. As it was exposed, Luther's wondering gaze caught the yellow glitter of metal. Mr. Cass picked up a piece and held it out.

"You have seen the gold nuggets in my desk, Luther," he said smilingly, "the ones we show customers. How do they compare with this?"

"They're just like it, sir, I think," Luther gasped.

"I thought you would say so. Now we will walk out to the middle of the pasture, where there is a much larger ledge than this, and much richer. I came out to satisfy myself more accurately about the location, but am glad to have you along. I do not like for even our office boy to misjudge us."

When they returned to the office Mr. Cass took a gold nugget from his desk and gave it to Luther.

"I want you to take this to several of the banks and ask their opinion of it," he said.

Luther drew back, turning red.

"If you please, sir, I'd rather not," he demurred. "I'm satisfied now."

"No, no, Luther," Mr. Cass insisted; "I want you to be satisfied beyond the influence of outside talk. Take it to several banks. You will know what they say can be depended on."

When Luther returned and gave back the nugget he was very subdued.

"It's gold all right," he said apologetically, "an' awful rich."

"Yes, I know it is; and you saw the two big ledges of it out there. Now do you understand how we can promise to give thousands of dollars for a hundred, perhaps even for ten? You know that Mr. Long and I have no money. You overheard me say so. It will take but little capital to open those ledges, and then the profit will be enormous. You can go if you like."

He turned to his desk and took from it a roll of money, but Luther's hand touched his arm timidly, desisting him.

"If you please, Mr. Cass," he said, "I'd much rather not go, an' I'll do the best I can."

"Why, certainly, Luther," cordially. "I am only too glad to have you stay. Tomorrow I am going to see Mr. Perkins. He is talking of putting all his money into stock. It will make him enormously rich, and will enable us to begin operations at once. He is only waiting for your opinion on the matter. I shall take you with me. Do you know, Luther," impressively, "it is a tremendous compliment to a boy of your age for a rich man like Mr. Perkins to place such implicit confidence in his judgment. But then he knew your father and grandfather, and he says they never did a dishonest trick in their lives."

This last sentence was Mr. Cass's mistake, for the words rang in Luther's brain on the way home, bringing back some of the old doubt. He could not let the simple-minded, trusting old man risk his money without being absolutely certain of the matter. Before he reached home he turned abruptly from his course and started straight toward the rocky pasture, twelve miles back in the country. It would be a hard all night's walk, there and back; but a disturbing thought had occurred to him.

When one of the banks opened next morning he was the first at the window, thrusting a glittering piece of metal beneath the cashier's face.

"That all right?" he asked.

The cashier's eyes rested upon it carelessly.

"All right for iron pyrites," he answered.

"Ain't it pretty valuable?"

"Not more so than any common stone."

"But I brought some to you yesterday an' you called it gold."

The cashier smiled. "Suppose you put the two beside each other and compare them," he suggested. "I think you will see the difference then."

Luther went to the other banks. They all said the same. Then he went straight to Mr. Cass.

"'Tain't honest," he said. "I've found out, an' now I'm goin.'"

"But look here, Luther," expostulated Mr. Cass. "I—"

"'Tain't honest," interrupted Luther sharply, "an' I'm goin.'"

For the first time Mr. Cass showed impatience.

"Very well, go!" he snapped.

But he looked uneasy, and almost before the boy was out of sight he had closed his desk and was hurrying toward the livery stable where he kept his horse. Ten minutes later he was driving furiously toward Mr. Perkins.' The old man was leaning on his fence.

"Hullo, here ye be," was his greeting. "But where's Luther? Thought ye said ye'd bring him along."

"Oh, there was no need for that," beamed Mr. Cass. "You and I can fix it up all right. Besides, Luther's busy."

"Well, I ain't busy," chuckled the old man; "so I guess I'll ride back with ye to the office. I want to see Luther." And he opened the gate and started toward the buggy.

Mr. Cass looked annoyed.

"There isn't the least need," he expostulated. "And, anyway, Luther isn't at the office. He—er—did not quite suit us, and we had to dismiss him."

The old man straightened suddenly.

"I knowed his father an' his grandfather afore him," he said slowly, "an' there's never been a crooked thought in the stock. An' now ye've had to dismiss him 'cause ye couldn't pull together. Um! I guess I ain't no money to put in with ye."

"But look here—"

"Ain't no money to put in with ye," repeated the old man calmly, and he turned and walked deliberately toward his house.

Mr. Cass looked at him irresolutely. But he realized there would be no yielding in the tottering old figure, and muttering something under his breath he whirled his horse savagely and dashed back toward town.

A few days later the firm of Cass & Long, Stock Brokers, became a thing of the past, for it had been the hope of Mr. Perkins's money alone that had brought it into existence.

The American Boy Legion of Honor (Open to all Boys Everywhere)

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school, ending on a date since September 1st, 1905, have received the highest average term grade in their classes in all studies and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts.

JOS. W. ELWELL, Gloucester, Mass., School Record

The name of Walter Juedes, Amsterdam, N. Y., goes on our Legion of Honor roll, and a badge for the young man has been sent to the Rev. W. N. P. Dailey, of Amsterdam, N. Y., by whom the particulars of his act of heroism were sent us. The account in brief is as follows: A crowd of youngsters was skating on the mill pond near Amsterdam on the evening of Wednesday, Dec. 13th. The ice breaking, nearly every member of the party was precipitated into the water which, at that point, was some five feet deep. Hearing the cries of the children, Walter Juedes, a ten-year-old boy, who happened to be in the vicinity, rushed to the edge of the ice regardless of the danger to himself and rescued a little girl; then with the help of a man who came upon the scene just in the nick of time, he was enabled to rescue two others. Two of the boys in the company saved themselves. Three of the children lost their lives. It is said that the three children rescued would have been drowned, had it not been for the heroic efforts of Walter Juedes.

G. W. Lawton, Lawton, Mich., who receives a School Record badge this month, has received the highest standing in his grade for the full term of 1905, and was neither absent nor tardy during the term.

Harry A. Boyde received the highest general average, 92 per cent, of anyone in the eighth grade for the term beginning September 11th and ending December 1st, in the Wickliffe, Kentucky, public schools.

Alfred Owen Phillips, Nashville, Tennessee, nine years old, in the term of school beginning September 11th last, led not only his class, but the whole school of nearly two hundred members. He had a grade of 100 in every study, as well as in scholarship. He is a grandson of Dr. Alfred Owen, now presi-

Habibullah Khan, Amir of Afghanistan (Wearing Turban), and Some British Official Guests

A Disuniting Unionist

He calls himself the "Light of Union and Religion," does Habibullah Khan, thirty-three-year-old monarch of Afghanistan. So far as the "Union" in the title is concerned, however, he is more buffer than coupling pin, for England to the south and Russia to the north, seem as far as ever from a peaceable agreement as to which shall become paramount in Asia. Afghanistan separates their present territories, and for either to attempt encroachment upon the holdings of the other, would mean a march through Habibullah's mountainous land; wherefore is he a most important figure upon the international chessboard, this young man who has ruled only four years over 4,000,000 of wild, warlike people.

His country is not a mere spot on the map of the world. Its inhabitants (about as many of them as are settled in Ohio or Illinois) dwell in a territory paralleling in size the combined commonwealths of Nevada and Colorado—a territory rough, uncultivated and uninviting almost beyond the understanding of any save those few who have penetrated its inhospitable borders.

Habibullah is a most interesting character. In his autobiography he tells how he was "a prisoner in fetters at one time, a cook at another; a viceroy at one time, a subject at another; a general at one time, under the command of a lieutenant at another; an engineer and blacksmith and emperor." He learned reading and writing through love of a girl, for he could not read what she wrote him and so was "unhappy, till helped to read by the hidden mysteries of Heaven." As may be guessed from this, he is hungry for all learning,—and once even mastered how to tune a piano. He smokes little, drinks nothing save tea or water, is passionately fond of birds, and his great hobby is growing Japanese pumpkins and American carrots—the one for their coloring, the other for their foliage.

These May Help You

"Pay as you go," John Randolph described as the philosopher's stone.

The famous Wardsworth mottoes, given world renown by Dr. Edward Everett Hale, have helped thousands.

"Look up and not down, look forward and not back, look out and not in, and lend a hand," they run.

"The master word is work," says Dr. William Osler, not long since called from Johns Hopkins University to the Regius professorship of medicine at Oxford.

In two short words, "hard work," Carroll D. Wright sums up at once his personal motto and the secret of success. "Hard work, and do the duty of the day" is the full maxim by which he lives.

Senator Hoar in his old age declared that most of the successful men he had known excelled their fellows not in genius but in willing capacity for hard work.

Creator of the "Bertillon System"

Many a boy, who visited the Parisian police exhibit at the St. Louis Fair, will remember how interesting were those "methods" by which the French detectives are enabled to identify suspected criminals, no matter how cleverly disguised. Many will remember that the system bore the name of Bertillon, after the man who had created and perfected its measurements. But how many are aware that this Bertillon was a mere youth of twenty-seven when he evolved the scheme now used almost universally throughout the civilized world?

Alphonse Bertillon, today a man of fifty-two and head of the Identification Department of the Paris Prefecture of Police, was, from the first, "keen" for mathematics, and had barely graduated when he began to apply his figures to the measurements of men. As he himself puts it: "I found certain measurements of the human frame practically never vary from youth to age—the length of the head, its breadth; the length of the left middle finger and the left foot; of the left forearm to the top of the middle finger, and of the right ear." Consequently, he judged, a record of such measurements, made of known criminals, could be used again to identify one of them, should he continue in crime, and be captured disguised. Later, the recognized fact that the finger-prints of no two people are exactly identical was added to the measurement system.

In one of the six volumes which M.

Alphonse Bertillon

Bertillon has written on his hobby, he says: "The majority of criminals have given up trying to evade recognition once they are in custody. They realize it is hopeless. As to mistakes; there have been none." What a record of usefulness, to crown the work of a mathematician of less than thirty!

TOO STRENUOUS.

"My son tells me you have discharged him," said the office boys' mother. "It's very strange; you advertised for a strong boy and that's what he is——"

"He's too strong, madam," replied the employer; "in the single day he was here he broke all the rules of this office and some of the furniture."—Philadelphia Press.

The chief factor in a success of any kind is work; and if you add to that the next essential, which is to work for the work's sake and not for the money it may bring, you have covered the ground.—Edward W Bok, Editor of the Ladies' Home Journal.

Trade-Mark stamped on sole

EDUCATOR SHOE

REGISTERED

"Lets the Child's Foot Grow as it Should."

Made in Box and Russia Calf, Patent Colt. Strong, durable Oak soles. A pliable, neat and reliable shoe. *None genuine unless stamped Educator on sole.*

RICE & HUTCHINS, Inc.

14 High Street, BOSTON, MASS.

Shoemakers with 40 years' experience and reputation.

THE Ingersoll Dollar Watch

Imitations, which inevitably follow in the train of success, are sometimes sold to persons who think they are purchasing an *Ingersoll* watch.

$1

The injustice of the thing is that the *Ingersoll* is then blamed for the poor time-keeping of a substituted article.

Look for INGERSOLL on the dial!

Only the invaluable patents, the tremendous output (8,000 daily), the organization and experience of years make a watch like the *Ingersoll* possible at One Dollar. The *Ingersoll does* keep accurate time, and is *guaranteed* to do so. And it lasts for years. Imitations, which are unreliable, short-lived and a nuisance while they last, resemble it only in appearance. Their manufacturers have not the facilities for making a real watch for this price, nor have they a reputation of years' standing to sustain.

You can always distinguish the *Ingersoll* Watch by the name on the dial. It answers all the requirements of nine-tenths of the people, and is used largely by prompt, practical business men.

Sold by dealers throughout the country, or postpaid by the makers. Booklet free.

Other Ingersolls, $1.50 and $1.75. Ladies' "Midget" Ingersoll, $2.

ROBT. H. INGERSOLL & BRO., 34 Jewelers Court, New York

THE KINDNESS CLUB

By THORNDIKE COLTON

The Kindness Club

THE KINDNESS CLUB, of Boston is a very interesting club of boys that other boys would do well to copy.

The club was started by the Animal Rescue League of Carver Street, Boston, and the club has a room in the League home. It now consists of about eighteen boys of ages ranging from ten to fifteen years.

The purpose of the club is for each member to do some kind deed every day to old people, little children, animals or birds, and to seek occasions for helpfulness at home. Removing broken glass out of the public ways is another deed of kindness. Each boy has a little blank book in which he enters the record of his kind deeds, and the boys take turns in reading their books after the president has opened the meeting and the secretary and treasurer read their reports. After the reading, games of a quiet nature are played, then the boys select a book from the bookcase, have it recorded, and after a polite leave-taking go home.

The boys elect officers from their own number, and carry on the meeting with oversight and promptings, and usually a little talk from the president of the League.

At their own request they bring three cents each Thursday when they meet, and they will decide later by vote upon the disposition of the money. Members of the League are invited to send good books and games for boys or for girls, as the girls are now requesting the formation of a similar club for themselves, and it may be formed a little later.

Such clubs should do much good in teaching boys to be kind, but it is useless to form them unless an older person who has sympathy for and patience with the young and can enter into their joys and sorrows is constantly present with them at their meetings.

A few pages from their record books may give an idea to others who wish to form such clubs.

I put a blanket on a horse which had fallen off.

I saw a little dog with a piece of wire in his paw and I took it out. Then he licked my hand.

My mother was sick and I helped her do her work.

I found a cat with its paw cut. I brought it home and gave it some milk and bandaged its paw. I kept it a day. My aunt came in the next day and I gave it to her.

On Jan. 23 I found a cat that was almost frozen and I took her in my house and gave her some milk, and after she drank it I took her to the League.

On Jan. 21, 1904, I stopped a boy from hitting his dog.

A horse's blanket was half off and it was cold, so I put it all on.

I stopped some boys from hitting a cat.

I did some errands for my mother when she was tired.

I swept some glass into the gutter in front of 219 Eliot street.

I opened a door for a cat on Providence street, Jan. 23.

I stopped some boys from throwing snow at a horse's nose.

I took a blind visitor to one of my neighbors.

Some boys were jumping on a heavily loaded sleigh and I asked them if they would please get off.

I put a blanket on a horse hitched to a dray.

I stopped some boys from throwing snow at an old man.

Dec. 18. On Fayette street I stopped a boy from teasing a dog.

I stopped some boys from throwing snow at a dog.

I took some glass off Carver street and put it in the gutter.

I opened a door for a small child who was trying hard to open it.

Dec. 19, 1903. As I was going down Devonshire street I saw a horse with his mouth bleeding from his bit, and I unloosed his halter so it would not hurt him, and when the man came out, he said he was going to put something on it so it would not hurt him.

Sunday, Dec. 20. I was taking a walk through West Ninth street past a house where a cat was standing outside the door in the rain and was crying. I went up to the door and let it in.

Dec. 21. There was a cat locked in a house in Newburn place and was nearly starved, and I took the cover off the stairs and took him in and fed him and gave it to a lady who said she would give it a good home.

On Dec. 21 I saw some boys throwing stones at a dog and I picked the dog up in my arms until they went away.

I took some broken glass out of the street and put it in an ash barrel.

I led a blind man to Tremont street, Jan. 11, 1904.

I saw a man beating a horse and I told him to stop, and he said he would do the same to me.

I helped an old lady across the street.

Dec. 26. Opened a door for a cat.

Dec. 22. Brought a cat into my house in the night very late and brought him to the League next day, where he was restored to his owner.

Dec. 29. Led six horses across Park square, then fixed the harness on them.

Jan. 12. Helped a child off a car.

I must add one more recent record worthy of special note. February 11, when the club met, they all united in out-of-door kindness work. Carver street was almost a glare of ice and the horses were slipping badly. It was proposed that the boys collect ashes and plentifully sprinkle the whole street. They took up the idea with enthusiasm. Going to different houses on the street they were provided with ashes and hods or pans, and in the course of an hour Carver street, from Eliot to Pleasant street, was brown with ashes. A teamster gratified the boys by shouting words of praise as he passed by. The boys enjoyed it and enjoyed hot chocolate and a piece of cake when, rosy and gay, they trooped into the Rescue League after this kind deed was over. Could something of this sort be done all over the country much suffering of the horses might be saved.

LEGION OF HONOR ROLL

(*Continued from page 118.*)

dent of the Tennessee College, and at one time the president of an Ohio college, at a time when the editor of THE AMERICAN BOY was a student in the same college.

Allen C. Wentworth, Stark, N. H., whose name goes on our Legion of Honor roll this month, stood at the head of his class in all his studies for the school term just past.

Leon W. Miller, Lima, O., who receives a School Record badge this month, has received the highest standing in his grade for the full term of 1905, and was neither tardy nor absent during the term.

G. Blake Thackston, Elmwood, Tenn., whose name goes on our Legion of Honor roll this month, stood at the head of his class in all his studies for the school term just past.

Jos. W. Elwell, seventh grade, Point Grammar School, Gloucester, Mass., has been neither absent nor tardy during the past five years' attendance of the Primary and Point Grammar schools, at Gloucester.

HENS THAT LAY GOLDEN EGGS

By HUGO ERICHSEN

I SUPPOSE you have all heard of the goose that laid golden eggs, but you will probably be surprised to learn that some hens do likewise. That is to say, they do not exactly lay eggs composed of the yellow metal, but "hen-fruit" that is easily converted into gold; all you have to do is to take it to the grocer.

Thomas Owen, a Kansas farmer, who is an expert on poultry, says: "That poultry pays, goes without saying," a statement I am prepared to endorse from actual experience.

Years ago, when an amateur farmer in Oakland county, Mich., I proved the matter to my own satisfaction. I started with eleven chickens, which hatched thirty-one eggs, only two of the chicks died. One of the chicks also hatched half a dozen duck eggs, and when the little ducks appeared that fowl was the most disgusted hen I ever saw. It actually made her sick to look at what she considered unnatural offspring, but after a day or two she made up her mind to bemother the feathered orphans, and cared for them as faithfully as though they were of her own kind. In addition to the chicks and ducks I obtained 411 eggs, which paid all the expenses connected with the experiment.

If you embark in the chicken business to make a little pocket money or to help out the folks at home or to pay for a college education otherwise unobtainable, my advice to you is to start right by having pure-bred poultry. It costs no more to take care of a thoroughbred fowl than it does of a scrub and the profit is much greater.

The choice of a suitable variety is apt to be puzzling. But for general purpose fowls no chickens are better than the American breeds known as the Plymouth Rocks and Wyandottes. They are of medium size, good as broilers, good as roasters, and good as egg-producers. The hens are also good sitters and good mothers. If egg-producing is the main purpose, however, the so-called Mediterranean breeds, particularly the Leghorns, Minorcas and Spanish are to be recommended. These chickens are smaller, more active, and greater foragers than the Rocks or Wyandottes, and as layers they are unsurpassed.

In order to do well, chickens must have comfortable and healthful quarters, they must have proper food and nesting facilities, but it is not at all necessary that there should be extravagant expenditure in supplying these.

A poultry house need not be elaborate in its fittings or expensive in construction. It must be placed, however, upon soil which is well-drained and dry. Moreover, if it is sheltered from the north or northwest winds by a group of evergreens, or some other buildings this will be a decided advantage in the colder parts of the country.

The poultry house should face the south, have all the windows in the front and yet be free from drafts. A good house may be made of two layers of boards, with tar paper between; seven feet high in front and four feet at the back. Place the door in the east corner. Have a double door, the outer one swinging outward, hinged to the left door post, and the inner one, swinging inward, hinged to the right. This will prevent drafts on cold days and yet admit the sun. The building should be one foot wider on the ground than at the top, so as to throw the sunlight on the scratching-place right under the windows. Cut the inner door in two, with a slide trap in the lower half. Then you can close it all on cold days except the trap, and the hens can go in and out yet be exposed to little or no draft or cold. All along the front, except by the door, build a pen one foot high and five feet wide and fill with litter for the hens to scratch in. Leave two to three feet for an aisle, and devote the rest of the space to perch-room. Make the perches all the same hight, fastened together at the ends with cross-pieces. Suspend the whole, by means of wires, from the ceiling, 18 inches or two feet from the floor. Finally place a row of neat boxes, three feet from the floor, along the west end of the building.

Buy a good breeding pen of one rooster and ten hens. From these in one season you can raise at least one hundred chickens, besides selling twenty sittings of eggs at from one dollar to two dollars per sitting. You can get a still cheaper start by buying eggs from pure-bred stock, though you will lose a year's time by that process.

There is no such thing as luck in the chicken business. Good care means gain and neglect means loss. The habit of careful attention to details means success in all undertakings, great or small.

When they are twenty-four hours old, feed your chicks with fine oatmeal or hard-boiled egg and bread mixed fine and dry, sprinkled on clean sand. Continue this for a week and then give them hominy or small grain. Many chickens die from feeding sloppy food without sufficient sand.

Later feed your pullets three times a day, as follows: To twenty-five hens, in the morning, two quarts of oats; these are not omitted summer or winter, although less is fed when the birds are at large. Scatter the oats in the chaff. At noon feed a little over two quarts of bran and one pound of meat scraps chopped fine, mixed with enough boiling water to moisten it well without rendering it sloppy. About four o'clock, just before nightfall, three pints of shelled corn are fed in the chaff. Occasionally sunflower heads may be substituted for the noon feed and wheat for the corn in the evening, as the chickens like a change as much as you do.

Grit, in some form, should be before the chickens all the time; it is their teeth. A dust-box is another necessity. It is to the chicken what your bathroom is to you. Always provide your poultry with sufficient clean water, warmed at least once a day in cold weather.

The diseases of poultry are mostly due to filth and neglect. If you keep your poultry house clean and sprinkle your hens at intervals with a liberal quantity of insect powder, they will not be troubled with lice, with which they are commonly infested.

When you get started in the chicken business, it will not be long before you'll want an incubator, which is a sign of ambition and therefore eminently praiseworthy. Go slow. Don't buy the largest size to begin with. Try the medium size first; then when you have become accustomed to its use buy another and still another, as long as necessity demands. Now is the time to start your incubator so that the early broilers will be ready for the market in season.

Let Me Tell You the Special Price On This Genuine 1906 Chatham Incubator

YOU see we make more incubators than any other concern in the world.

We have two big factories equipped with every up-to-date labor-saving appliance.

We buy lumber in immense quantities.

And turn out from six to seven hundred Incubators a day.

This means high grade machines at low cost.

Now we are after the trade with an Incubator of up-stairs quality at a down-stairs price. And to prove to you that Chatham Incubators are the best made, we are willing to let you try one 84 days **FREE.**

You can take off four hatches, and, if the machine isn't exactly as represented send it back at our expense. Could we make a fairer offer?

But we go further even than this and guarantee every Incubator we sell for five years—a direct Iron-clad guarantee. Send for our FREE Catalog today.

Your name and address on a post card mailed at once gets the whole story by return mail.

GEOGRAPHISTS are rejoicing over the news, just received, that one of the casks thrown overboard several years ago to test the existence of ocean currents in the far north, has floated ashore in Iceland. On September 13, 1899, this identical cask, one of a hundred similar ones distributed in various seas, was placed on an ice floe northwest of Barrow Point, Alaska, in latitude 71 degrees 53 minutes north and longitude 164 degrees 50 minutes west, by Captain B. T. Tilton, of the steam whaler Alexander.

"Cast your barrels on the water and in due time they will return to you if the ice doesn't get them," jokingly remarked a member of the Geographical Society at the time the casks were set adrift. It seemed so long before any news was received of the silent messengers sent to seek a way to freedom through the circumpolar basin that many had given up

Admiral Melville

hope of ever hearing of the casks again, when at last there came the news that one of the barrels had been cast ashore in Iceland.

The Iceland farmer who found the cask must have been a man of unusual intelligence, for the photograph of the message printed on this page shows that he was able to write the record of his discovery in good English. It will be seen that this reports that Vigfus Benidikteson, of Nupskatla, Iceland, picked up the cask on June 7th, 1905, it having drifted ashore about one mile east of Cape Rauda Nupr. The course the cask must have taken to reach this point from the place where it was set adrift proves in the words of Henry G. Bryant, the well-known explorer and President of the Geographical Society of Philadelphia, "the existence of a current from the Behring Ocean around the circumpolar basin over to the Atlantic."

The finding of this cask has made the members of the Geographical Society jubilantly hopeful of the further success of the experiment made so long ago. Admiral Melville, to whom belongs the credit of having suggested this plan of ascertaining the existence of currents in the far north, has written to Mr. Bryant as follows:

"More of the casks have come through, but have not been found; while others no doubt, have been found, but not reported. There is no telling how long the cask found on Iceland drifted about in open water before it was cast ashore. A ship drifting the same way no doubt might have come through two years earlier. No doubt others have passed around Cape Farewell, Greenland, and are now on the West Coast, and if they are not picked up will eventually come south in the Labrador current. We will yet hear of more of them."

The story of this experiment dates back to the time when Admiral Melville pointed out that the only reason why men should endanger their lives in Arctic drifts was that they could make notes of what they saw on the way. Without this feature of the voyage casks set adrift in the northern seas would determine just as much in the interests of geography and do it without any loss of life.

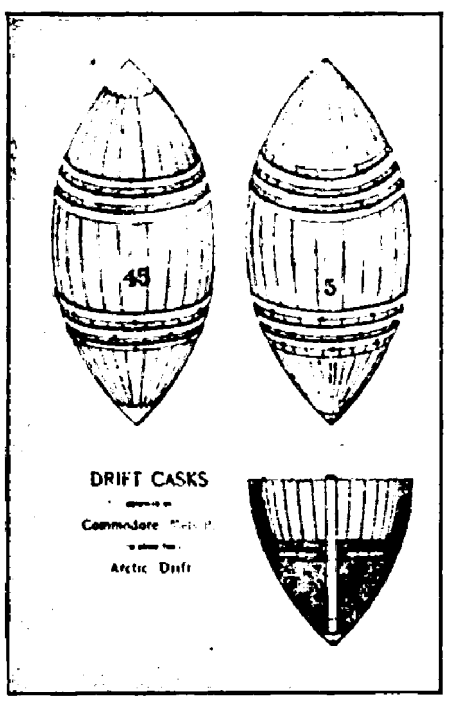
Acting on this suggestion the Geographical Society of Philadelphia had constructed from designs made by Admiral Melville a hundred casks in the shape of a parabolic spindle, made of heavy oak staves one and a quarter inches thick, encompassed by iron hoops three-sixteenths of an inch thick and two inches wide. A coating of pitch and resin was applied to make the casks waterproof and prevent corrosion and each cask was given a number etched into the wood as well as painted on the outside.

The casks were provided with a reinforced bunghole and through this the message, in a glass case, was inserted, the interior of the cask having first been filled with shavings to prevent the bottle being broken in its long voyage through Arctic drifts. The message paper enclosed in this way was printed on linoleum paper, by a permanent blue print process which rendered it practically impervious to salt water. The message was printed in the English, Norwegian, German and French languages and embodied the following particulars:

Space for name of vessel and master assisting in distribution, date, number of cask and latitude and longitude of point where it was set adrift; directions as to filling in record and sealing up tube; blank space for insertion of name of finder, date and locality where cask was picked up; clause requesting finder to forward message paper to the nearest United States Consul at his home port, or to send it direct to the Geographical Society of Philadelphia.

When the casks were prepared they were carried on government vessels and whalers through Behring Strait and set adrift in sets of five, numbered consecutively; commencing with the first five these were sent on their long voyage near Herald Island. Then proceeding northward the boats deposited the casks on the ice floes until the highest latitude consistent with safety to the ships was reached.

After all these years one of these derelicts has at last found a lodging place in Iceland and, it is hoped, now that the story is revived, that others will appear



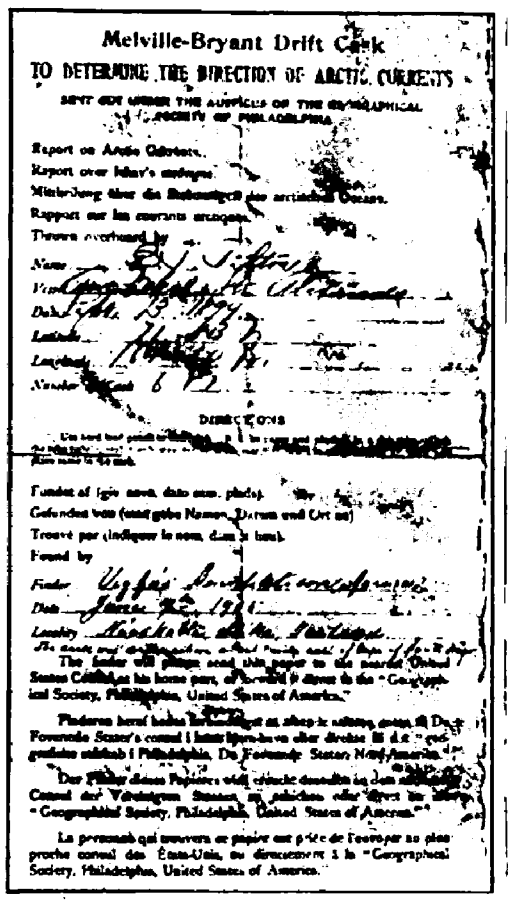
from points to which they have drifted and been overlooked by those who did not recognize their significance to geographists. Many of them are doubtless locked in the ice in inaccessible points of the unknown north; but others of the little flotilla are sure to appear in waters frequented by man and will be recognized and rescued after their long voyage through the mysterious unknown.

"There is no difficulty to him who wills," said Louis Kossuth, voicing his brave opinion from the steps of Independence hall.

A Boy and the President

One boy—one of many—who had the honor of meeting the President, now acts as if Mr. Roosevelt's eyes were constantly on him. This lad was not a small boy when he was presented; he was big enough to play baseball with skill and energy, and on ordinary occasions he was a haughty sophomore. This boy wanted to see the President, but his outward calmness was disturbed by the intimation from his sisters that he would have to make three bows as he approached the President and say, "Your Excellency." The courage that had stood six hours' exposure in a heavy sea on the keel of an upturned boat weakened before this prospect. A benevolent friend corrected the alarming suggestions of the sisters by telling him that he would simply be expected to say, "Mr. President," to stand until everybody was seated, and to go when the President should rise. This seemed easy, still, it was evident that the fearless athlete was reverently practicing "Mr. President" with his lips as he approached the White House. All uneasiness disappeared, however, when the President, catching sight of the boy, stepped forward and called him by his surname. "Sit down!" he said, and then he began to talk about a subject dear to the lad's heart—the recent races at Poughkeepsie. Etiquette was forgotten; the boy held fast to "Mr. President," when he thought of it, in the delight of talking with somebody who "really knew" all about the ins and outs of intercollegiate races, but sometimes he forgot and merely said "you."

The boy was pained for a moment to discover that the President could not play baseball. To a near-sighted man who must wear glasses a baseball flying at large is much worse than a bullet. The lad admitted this, and said afterward that "if Thackeray were alive and played baseball instead of cricket, he would have had the same difficulty." The President showed him a very scientific jiu-jitsu grip. And this was followed by an interchange of lore on this interesting Japanese science of physical culture, with illustrations, in which the boy entirely forgot his fear of the "court presentation," and talked and acted with entire respect, but entire freedom. The boy seemed



From Photograph of the Record Sent by the Finder of the Cask that Floated Ashore in Iceland

to think that American muscle was a match for Oriental skill, but he was plainly convinced that the President had both. Questions of boxing and riding came up, and the President spoke as an expert, and the boy listened and talked as one who understood but felt his limitations. Young Theodore, who has this year entered Harvard, was then at school; but every now and then his father culled a bit from his son's experience in out-of-door sport. It was plain that, through sympathy, in these matters he had the same point of view as his son.

The talk drew out of the President his knowledge of the games that boys love.

"When it comes to boxing or riding," he said, with conviction, "I think that my boys and I can hold our own." And several times the "we" was repeated in a way which showed that Mr. Roosevelt and his sons were to be considered a happy family of boys thoroughly in accord. It is not convenient to take his large "boy family" on his Western and Southern bear-hunts, but the President does the next best thing. Every summer he goes "into camp" with his boys a few miles from his summer home at Oyster Bay.—From St. Nicholas.

YOU FARM BOYS

Right there on dad's farm is a piece of waste land. Write us today. We will tell you how to turn it into a COLLEGE EDUCATION OR A GOLD MINE. We are not a city firm trying to tell you "how to do it"—we have been farmers for years—we are farmers now. We make small, waste pieces of farm land pay big dividends. We want you, while you are young and progressive, ambitious, eager to make money, to write us, saying "send me full particulars of your Farm Boys' Plan." Then sign your name and full address. The letter and ideas we send you will repay you a thousand fold.

COUNTRY-TOWN BOYS TOO

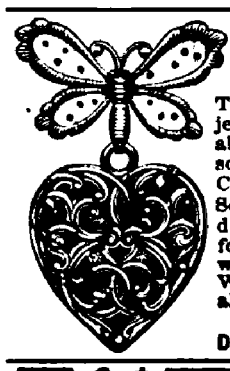
Boys in small cities where "home" means a big yard and room for gardens, trees and flowers—for you we have a big money making plan. We are "way out" in Nebraska, but our reputation for fair, square, honest dealings is known the country over. Address Galbraith Nurseries, Box 104, Fairbury, Nebraska.

FERRY'S SEEDS

Make sure a yield of quantity and quality. When your father planted Ferry's, they were the best on the market, but they have been improving ever since. We are experts in flower and vegetable seeds.
1906 Seed Annual, beautifully illustrated, free to all applicants.
D. M. FERRY & CO., Detroit, Mich.

OUR PLANTS, ROSES,

Seeds, Shrubs, FRUIT AND ORNAMENTAL TREES have been the standard of excellence for over half a century. You take no chances in buying of us as no fairer prices are quoted on high quality goods. The best are always most satisfactory in results. We mail postpaid Seeds, Roses, Plants, Bulbs, Vines, Etc., and guarantee safe arrival and satisfaction, larger by express or freight. You will be interested in our extraordinary cheap offers of over half a hundred choice collections of Seeds, Plants, Roses, Etc. Your address on a postal will bring you our elegant 168-page Catalogue FREE. Send for it today and see what values we give for a little money. 52 years. 44 greenhouses. 1200 acres.
THE STORRS & HARRISON CO.,
Box 102, PAINESVILLE, OHIO.



FREE

To introduce our up-to-date jewelry we will give away, absolutely free, this handsome Perfumed Lucky Charm, the latest novelty. Send your name and address to-day and we will forward it to you at once without expense to you. Wear one and be in luck all the time. Address,
MILFORD JEWELRY CO.,
Dept. 952. Milford, Conn.

Stamps, Coins and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

Answers to Inquiries

S. A. L. and R. H. A.—Common U. S. stamps of 1c and 2c denom. have no value canceled; higher values and foreign stamps, if they have any value, can be disposed of to many of the dealers advertising in THE AMERICAN BOY. E. H.—Your stamp is a 10 pfennig German issued in 1900. It has no value. J. L.—The 3c Columbian lists 6c. The balance of list you give have little, if any value. C. F. D.—In the 2c U. S. 1894, with triangles in corners, the lines crossing the triangle are of the same thickness throughout. In type 2 they are thinner between the two parallel lines forming the triangle, and in type 3 have been cut out altogether between the parallel lines. L. W. D.—"Ned Indie" means "Dutch Indies"; your other stamps are probably Austrian newspaper stamps, but cannot say positively without better description. J. R. H.—Your German stamp is worthless; 2½d Bahamas, 4c; 1d Transvaal, 2c; 1 anna India "On H. M. S.," 1c; 20c green stamp Holland; 10c gray Dutch Indies.

Stamp Notes

Barbados is on the qui vive for the Nelson stamps, expected in the island very shortly.

At a recent London auction sale a 12 pence, 1851 Canada, imperforate on laid paper realized $200.00.

Upon three values of its current set Bermuda pictures a dock said to be 545 feet long, one of the best in the world.

The stamps of Tonga are so large that it is said the natives lick the envelopes rather than the stamp. This is a news item that needs confirmation.

Of the three provisional stamps recently issued in the Danish West Indies made by overprinting 4, 5 and 8c values "5 BIT, 1905" none are now obtainable.

A book will soon be issued by the Junior Philatelic Society of London, "The Stamps of the United States" treating in a popular style our regular postal issues.

Japan has issued some postal cards in glorification of Admiral Togo and the manner in which the war with Russia was ended. They are described as beautiful and elaborate, being printed in gold and colors.

The Olympian games set for Greece 1906 will picture ancient Greek art in a very attractive form. The new set will comprise 14 values from 1 lepta to 5 drachmas engraved and printed by a London firm.

When Queen Makea, of Cook Islands, was having her portrait placed on the 1893 issue of stamps, Mr. Ross the English representative urged upon the engravers: "Take care that Makea's likeness is not made too dark."

Obock is a French possession on the Red Sea, and it is reported that its capital city is a village of huts. It is nevertheless civilized enough to have postage stamps as witness eighty-two different varieties during the years 1892, 1893, 1894.

A very efficient committee has been given charge of arrangements for the annual convention of the American Philatelic Association to be held in Boston next August. As the leading stamp society in the country a very large attendance will be planned for.

The Earl of Crawford is adding to his laurels by calling at the islands of Tristan da Cunha in the capacity of mail carrier. One thousand miles west of Cape of Good Hope, isolated as they are, the barely one hundred inhabitants of this group of islands will appreciate the favor done them.

An English stamp paper commenting upon the use of chalk surfaced paper by various colonies to prevent the washing off of cancellations calls attention to the employment of this paper on the stamps of Portugal as long ago as 1881. "Stamps printed on this paper are brittle and if creased at all are irretrievably spoiled; there is no such thing as pressing a crease out of a stamp printed on chalk surfaced paper, neither will the stamps stand moisture."

It is estimated that the deficit for the last fiscal year will be something like $10,000,000, as against $14,000,000 for the year previous. But for the $29,000,000 drain for rural free delivery service there would be a handsome surplus; one that would give us one-cent letter postage. The Canadian postoffice department for the fiscal year 1905 shows a clear surplus of $500,000. In 1896 they had a deficit of $781,000. However, the Canadian service is not as good as ours. For example in the city of St. Thomas, with 14,000 inhabitants mail is not delivered by carrier. In this country every town of 5,000 has carrier delivery.

The Numismatic Sphinx

Eugene Henderson, Jr.: The 1853 cent is worth from five to ten cents, depending upon condition. Your other rubbing is from a XII heller of Aix-la-Chapelle, (Achen), 1765. It is worth a quarter of a dollar. Victor Husband: The dime of 1853 has no premium. Alfred C. Wilcox: Your rubbing is from a 5 drachmai of Greece, 1875 (George I. 1863-). It sells for $2.00 at the dealers. It was struck at the Paris mint. C. M., Keokuk, Ia.: The dime of 1842 will hardly bring you a premium. The dealers charge a quarter for them when the coin is in good condition. Otto W. Payne: The same answer may be given you regarding your dime of 1845 as to C. M., above. E. M. Hyatt: Good half dollars of 1828, and quarters of 1838 sell for seventy-five cents each. 1847 cent, five to ten cents. 1857 three cent silver, fifteen cents. Fractional currency of 1863, if in fine condition, sells for at least double face value. If it has been in circulation, then only face value. The 1859 gold halves and quarters are bringing about $1.50 each. The gold dollar of 1849 is worth $1.75. The 2-cent piece of 1870 will hardly bring a premium. Robert Lum: The half dollars of 1812, 1818, 1827, 1828, 1835 and 1836 sell for from seventy-five to eighty-five cents each. A good 1831 dime, twenty-five cents. The drawing is from a common Chinese cash coin. It is brass, not gold. Walter Brown: 1868 two-cent piece, face value. 1817 cent, ten cents. Flying eagle cent of 1858, face value, only. 1859 Indian head the same. Maurice A. Danziger: The East India Company issued a large variety of coins in different metals in 1835. You will have to tell us the metal and denomination before we can answer your question. Rexford Sexton: The half dime of 1835, if in good condition, is worth twenty cents. Philip B. Blake: The 1853 three-cent silver piece sells for fifteen cents. Spanish or Mexican silver unless in fine condition, will not bring over face value. Arthur F. Stephens: The 1854 half dollar will not command a premium. Herbert Clark: A good English farthing of 1672 is worth forty cents. The modern coins of England, France, Germany, Canada, Italy and Mexico—those now in actual circulation—whatever metal they may be struck in, as a rule, will not bring much over face value. A coin so poor that you cannot make out the general design or date may be considered worthless from the collector's standpoint. Japanese, 5 sen, five cents. Lloyd E. Warner: The old copper cents you mention can be bought at the dealers for from five to ten cents each in good condition. Your piece with the "All Seeing Eye," and three links, is probably an Odd Fellows medal. Your "Specie Payments Resumed" is a Jackson Token or cent, sometimes called "Hard Times" token. There is quite a variety of these tokens struck between 1834 and 1841. The most of them are common, selling for from five to ten cents each. Our dollar of 1798 sells for $2.50. The 1863 cent is only worth face. Floyd S. Curran: Your Canadian half dollar is only worth face value. John M. Berwick: We think you are mistaken in seeing a dollar of 1905. We are informed that none have been or will be issued at any of our mints. Floyd Harper: The 1864 two cent piece has no premium. The only piece of this series to command a premium is that of 1873. Arnold B. Fletcher: Your rubbing is from a 5 franc piece of Napoleon I, 1809. It sells at the dealers for about $1.50. Sherman Dunning: The old half dollars of 1819 and 1826 sell for from seventy-five to eighty-five cents each, if they are in good condition. Your other rubbings are from coins that will not bring a premium. Robert Willman: (1) 1853 cent, ten cents; (2) common war token; (3) three cent silver piece of 1851, fifteen cents; (4) Canadian silver of current use will not bring a premium; (5) U. S. dime too poor to bring over face value; (6) Spanish 2 reals of 1773, very common; (7) this is usually classed as Corean cash. It was struck in Japan and used in Corea during the period 1605-23, A. D. The characters are "Kuan yung tung pac," which means current money of Kuan Yung. The coin sells for about twenty-five cents. (8) This is a third bronze coin of ancient Rome. The rubbing is so imperfect that we cannot tell you just what emperor it belongs to. H. D. Silsby: The half dollar of 1831 sells for 75 cents. J. G. C. Smith, Jr.: The only year this government has failed to issue cents from the beginning in 1793 to the present date, is 1815. Why none were issued in this year we do not know. Possibly some of our wise readers can tell us. William McCann: The quarter of 1853 with arrow points by the date, are worth only face value. J. R. P.: (1) Portugal XX reis, 1883, five cents. (2) Third bronze of the Roman emperor Constantius, 355-361 A. D. The coin usually can be bought for a quarter at the dealers. G. L. Hattabaugh: The 1893 Columbian half dollar at first sold for a dollar. They can now be bought for fifty-seven cents, and can often be picked up in circulation for face value. Marion A. Wilkes: We presume your $1.00 bill on the Yokohama Specie Bank at Shanghai to be worth only about half a dollar. China and Japan are still on a silver basis. Robert Rich: Both your coins are common English silver pieces and will bring no premium with collectors of coin. J. J. Young: Your rubbing is taken from a silver 960 reis coin of Brazil, 1810. For a good piece, as yours seems to be, the dealers would charge $2.50. J. B. Dexter: Your first coin is a common copper penny of the Bank of Montreal, 1842. Your 2 ore, 1876, is from Norway, and is common. 1852 half dime, face value. We cannot tell you anything about your "¼ cent dated 1631" without further particulars. Of course it cannot be of the cents denomination, for "cents" were not issued until the latter part of the eighteenth century. Hiram Peel: Probably the rarest date in our cents is that of 1799. Next would follow 1804, 1793, etc. S. J. T.: "Union for Ever." This is one of those Civil War Tokens that were so numerous and passed as cents during the scarcity of small change at the time of the Civil War. There were thousands of varieties issued. The government later prohibited their use as a circulating medium.

COINS PAPER MONEY etc., FOR SALE. Good U. S. Cent, date 1808 or 1810, each, 1c. Bills, 20 for 25c. Cut Gems, 10 for 35c. Coins with dates before 1760, 5 for 25c., dates before 1700, 3 for 25c. Civil War token with Indian head like small cent, reading "NOT One Cent," each 5c. or 7 for 25c. Rare Coin Book, U. S. & for'n, 750 illustr'ns, 160 pp., cloth bound, each 25c. Retail list free. T. L. ELDER, 32 E. 23rd St., N. Y. City. Send 25c. for year's subscription to Elder's Monthly, the fine new magazine on Numismatics, General Collecting and Historical subjects.

THE NUMISMATIST
The only Illustrated Monthly Coin Collectors Magazine published in America.
One Dollar per annum and always worth twice the price. Volume XIX begins with January, 1906. Special inducements now to new subscribers. If you are interested in Coin Collecting send Ten Cents now for two sample copies and full particulars. Address
The Numismatist, - Monroe, Mich.

RARE COLLECTION OF OLD COINS
Representing 25 different countries, consisting of gold, silver, nickel, copper, will be sent by mail for one dollar. 150 page coin-book 25c. **C. W. FRANKLIN, 239 4th Ave., Pittsburg, Pa.**

POST CARDS POST CARDS from JAPAN
Mail us 10 cents in coin and we will post you, from picturesque JAPAN, a beautifully tinted bromide POST CARD; or for 20 cents in coin there will be sent you the daintiest hand painted POST CARD you ever possessed.
Creations of Japanese Art.
THE ANGLO-JAPAN POST CARD CO., 247 W. 48th St., New York.
Write for quotations on our carefully selected albums

SOUVENIR POST CARDS
10 beautiful Boston views and our Club plan, 10c. You will receive cards from all over the world. Postal Card collections now all the rage. Commence one today. **IDEAL CO., Dept. D, 322 Geneva Ave., Dorchester, Mass**

Collectors' Names Wanted
Send me the names of all honest, active collectors in your locality, over 15 years old, with their ages, size of collections, etc., and I will send you a fine stamp free, that will please you. LARGEST, FINEST, NEATEST—50 per cent approval books (not sheets) in the world for collectors with less than 10,000 var. Please give age, size of collection, and reference. Following sets are fine value. **No two stamps alike.**

30 Austria 10c	7 Wahn 10c	8 Reunion 12c
25 Belgium 10c	4 Gwalior 10c	27 Spain 10c

THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

"MARY"

Second Prize Photo, by M. H. Tardy, Birmingham, Ala.

As a Mountant

Liesegang recommends 20 grains of calcium nitrate and 80 grains of dextrine in 2 ounces of cold water.

Current Comments

Joe Leedom—Picture should have been taken against a light background, so as to outline figure, and care should have been taken to include whole length. B. F. Bond—Your "Our Pets" is out of focus.

Camera Craft

In welcoming this interesting monthly to our exchange list, we are pleased to note the progress it has made under the able editorship of Fayette J. Clute. Its practical information and artistic illustrations render it of especial interest to the amateur.

A New Way to Use Masks

One of our readers suggests the advisability of placing the mask before the plate, prior to exposure, by fastening it in the holder with small tacks, instead of using it in making the print. Perhaps this may be of advantage in some instances.

The Letter Box

Mrs. J. F. Swingle—It would be manifestly unfair to admit photographs to our contests that are turned out either wholly or partly by professionals. Gordon McCulloch—We must decline to republish formulas that have appeared in former issues of this magazine; our space is too valuable. Duplicate copies of back numbers are promptly mailed on receipt of 10 cents. Write to Am. Aristotype Co., Jamestown, N. Y., for printed directions in regard to the toning of Aristo-Platino. Morton A. Wilder—Your compliments made the editor blush. The plan you propose was tried before, but did not work. Photographs entered in our contests may be either mounted or unmounted. Description should be on the back. Eventually you will be able to do good work. Harry H. Phillips—The composition of your landscapes is good, technique is fair.

Honorable Mention

Vernon Heverly, with his artistic landscapes of "Blue Creek" and "The Bridge," deserves to head our roll of honor this month. The distinction is also conferred upon: Otis Shepard Goode, Arthur Soderstrom, Harry A. Packard, Charles Green, Earl Rodda, Geo. F. Neill, Charles Evans, Kerr Forman, and last but not least Raymond Fitts, whose "Sentinel" is a very creditable bit of work.

He is a "Brick"

The editor seldom indulges in slang, but the word brick is so apt in the case of Harold H. Lund, of Nunda, Ills., that no other seems appropriate. It stands for pluck and fits Harold to a T. In sending us a praiseworthy "Brownie No. 2" photograph, entitled "A Morning Sunbath," our friend writes: "I am 12 years old and I have had hip-disease for 15 months now and I have only been able to get about on crutches for 5 months. I took the picture about two months ago. I expect to leave my crutches behind in a year, or to get a great deal better than I am now at least." With his courage under adversity, Harold is in a class by himself. We hope his wishes will be realized soon.

Our Prize Pictures

This month first prize is awarded to an excellent photograph of the Madrid (Ia.) high school football team. Technically the photograph is nearly perfect and the grouping is very good. The picture was taken by Guy R. Frise, of Madrid, with a Pony Premo No. 3 on a Hammer plate. The lens was a rapid rectilinear and the exposure one-fifth of a second. The plate was developed with Hydro-Metol and the print made on Aristo Jr. paper. M. H. Tardy, whose "Mary" captured the second prize, is a resident of Birmingham, Ala. The photograph represents his sister. "I wrapped her hair with white paper," he states, "draped her neck with white cheese cloth, tied a pedestal of cardboard around her waist, powdered her white and placed her in front of a black curtain. I then wrapped her arms with black cloth also. We had lots of fun in taking the picture."

A Pyro Developer That Will Keep

The No. 1 solution is made by dissolving an ounce of pyro in six ounces of water and then adding one dram of alcohol and finally, drop by drop, three minims of sulphuric acid. The No. 2 solution is made by dissolving one hundred and ninety-two grains of sodium carbonate and one and one-half ounces of sodium sulphite in sixteen ounces of water. To use for normal exposures one takes one dram of No. 1 and two ounces of No. 2 and adds five ounces of water. Bromide is used as usual if over-exposure is feared, and varying the amounts of the two solutions together with the water added will adapt this developer to any requirements. As given, it is particularly recommended as a developer for white drapery correctly exposed. Increasing the pyro and adding bromide will give any amount of contrast that may be desired.—Camera Craft.

Improving Bromide Prints

It frequently happens, says Mr. Sylvester in The Bromide Monthly, that bromide or gaslight prints which one wants to have black turn out rusty or green. Instead of throwing them away they can be improved by toning with gold. The solution for this purpose is made of:

Ammonium sulphocyanide	30 grains
Gold chloride	2 grains
Boiling water	4 ounces

Now the proper way to make this is to dissolve the sulphocyanide in half the water and the gold in the other half and add the gold gradually to the sulphocyanide, stirring all the time. It will be ready for use as soon as cool. The print after fixation must be well washed, and should then be squeegeed face up on a sheet of glass, and the above gold bath brushed over the surface with a broad and flat camel's-hair brush till the color of the image is satisfactory; a thorough washing completes the operation.

First Prize Photo—Madrid (Iowa) High School Football Team—by Guy R. Frise, Madrid, Ia.

Packing Negatives Safely.

There are, of course, many fairly safe ways of packing negatives, but the plan given below is one of the most simple and satisfactory. The negatives are put together without anything between them. One at the bottom should be film upward, and the others placed above it film downward, thus ensuring a glass surface on either side. They should then be done up very securely in paper—not more than twelve in a batch—and put in a plate box. This should then be wrapped in two strips of corrugated cardboard—one each way of the box, and the whole finally covered with brown paper and tied up. No harm can come to negatives done up in this way.

STEVENS

The American Boy—the Outdoor Girl—the occasional Shooter—the ardent Sportsman—the expert Sharpshooter—all shoot

Ask your dealer and insist on the STEVENS. If you cannot obtain our goods, we will ship direct, express prepaid, upon receipt of price.

Stevens Rifles, Shotguns, Pistols

We make ARMS suitable for every requirement—the most extensive and varied output of one manufacturer.

Illustrated catalog mailed for two 2-cent stamps to pay postage. It is replete with information, a book of reference, and all interested in shooting should have it.

Beautiful three-color Aluminum Hanger will be forwarded for 10 cents in stamps.

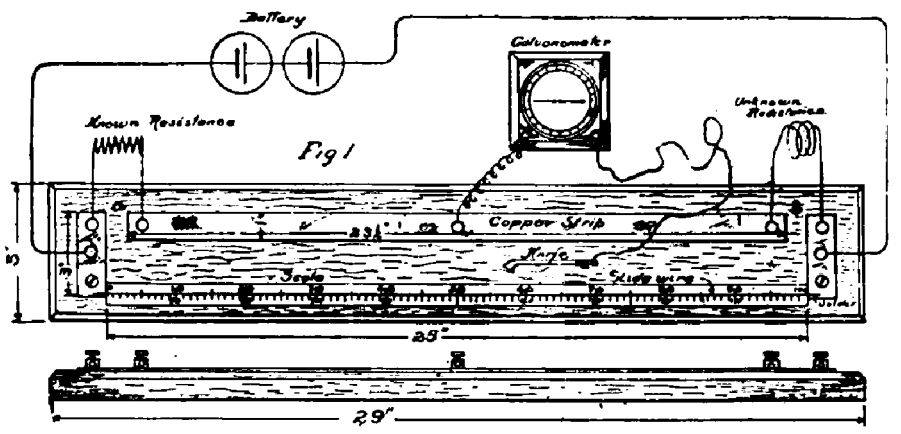
Experimental Lessons in Electricity



No. VIII—The Wheatstone Bridge

THE MEASUREMENT of resistance in any electrical circuit is usually accomplished by comparing its resistance with that of some known circuit such as a coil of wire. The instrument by means of which this is accomplished is called the Wheatstone Bridge, so named from the man who first brought this method into prominence, Sir Charles Wheatstone, although the method was invented or devised by a Mr. Christie some time before.

In our last lesson we made a very sensitive astatic galvanometer which is used in connection with this instrument, and, after describing the construction of the bridge, the measurement of resistances will be described. We will then be in a position to take any one of the three important electrical measurements, viz.: the pressure in volts, the current in amperes, and the resistance in ohms.

The Wheatstone Bridge, while a very simple instrument, is remarkably sensitive and accurate if well made. It is shown in outline in Fig. 1. The baseboard is made of a piece of well-seasoned oak or cherry, thoroughly dried and varnished. Secure at some hardware store or tinshop two strips of copper 1 inch wide and 3 inches in length, and one strip 1 inch wide and 23½ inches in length. Also get a piece of german silver wire 27 inches in length and about No. 30 gauge. The gauge is not very particular, but should not be larger, and if german silver wire cannot be obtained, steel wire will do in its place, although the latter corrodes very easily. Seven small binding posts may also be purchased, but, if they cannot be obtained, the home-made post (round-headed brass screw with wing soldered in slot) will answer.

When the varnish on the base is dry, mount the copper strips as shown, being very particular to have a distance of just 25 inches between the inside edges of the end pieces. Two round-headed brass screws are sufficient to hold these end strips in place, since the screw of the binding post passes through the base, thus holding that end securely.

A paper scale is then made just 25 inches long, divided as shown into 100 equal divisions of one-quarter inch each, and every fifth division being marked with a slightly longer mark, and every tenth division with a double length line. This scale is pasted to the base beneath the slide wire, the ends coinciding exactly with the edges of the end pieces or copper strips. The german silver (or steel) wire is then soldered at one end to one of the strips, stretched tightly and soldered to the other strip. When the binding posts are all in place and the scale marked as shown, the instrument is practically complete.

The "knife" with which a sliding contact is made with the slide wire, may be made of a piece of stout copper or brass wire sharpened at one end. To the other end is soldered a length of at least 24 inches of flexible cord, such as is used for electric lamp fixtures.

The sensitive astatic galvanometer is then connected as shown, one wire leading from the middle post in the long strip and the other wire leading to the knife.

A cell or two of dry battery will form a sufficient source of current for testing purposes, and one cell will frequently be found more than required, so very sensitive is the galvanometer. The battery is connected to the end strips as shown, binding posts being provided for that purpose.

Now while the construction of this instrument is so very simple, the directions for its use are not so easily grasped perhaps by many of our younger readers. However, if you will patiently and carefully study the following description, you need have little trouble.

In using the Wheatstone Bridge we measure the resistance of one thing by comparing it with the known resistance of some other thing, the value of which we know. It is just the same as though you went to a store for a pound of sugar. The sugar would be exactly balanced by weights of known value, and, feeling reasonably certain that the weights were correct, we would say that we had one, two or five pounds of sugar, as the case might be.

Just so in the measurements of electrical resistance. Our known resistance is usually in the form of a coil of german silver or platinum wire, the value of whose resistance in ohms has been carefully tested. And before going further, the ohm is the unit of electrical resistance just as the pound is the unit of weight. Therefore, when we pass a current of electricity through a wire, it does not go through without meeting with some resistance to its passage, and we say that the wire has a resistance of so many ohms, just as we would say that it took twenty pounds to push a wagon.

Our first step, then, is to make up some standard resistance coils. Secure from some electrical dealer 200 feet of No. 31 single cotton covered copper magnet wire. Also get ten pieces of stout bare copper wire, No. 12 or 14, each about two inches long. You will need five common thread spools and a dish of melted paraffine.

Cut the wire into the following lengths, laying it straight on the floor or table, but do not pull it or it will stretch perceptibly and be less accurate. For the one-half ohm coil cut a piece 4 feet 10 inches in length; for the one ohm coil a piece 9 feet 8 inches long; the two-ohm coil 19 feet 4 inches long; the five-ohm coil 48 feet 3½ inches, and the ten-ohm coil 96 feet 7 inches. These lengths are then wrapped on the spools in the following manner, known as the non-inductive method, since it does not generate a magnetic field to affect the galvanometer needle.

The wire is doubled exactly in the middle of each length and this double strand is then wrapped on the spools like a single wire, the two ends being left free for soldering to the terminals as shown on the pen sketch Fig. 2. A small drop of solder is then dropped on the end of each wire to permanently secure it to the heavier wires. The spools are then dipped into the bath of melted paraffine and boiled until the air bubbles cease coming to the surface. The heavy wires, which are driven into the ends of the spools, are then bent as shown so that they will slip into the binding screw holes with ease.

And now we come to the hardest part of this lesson, the directions telling how

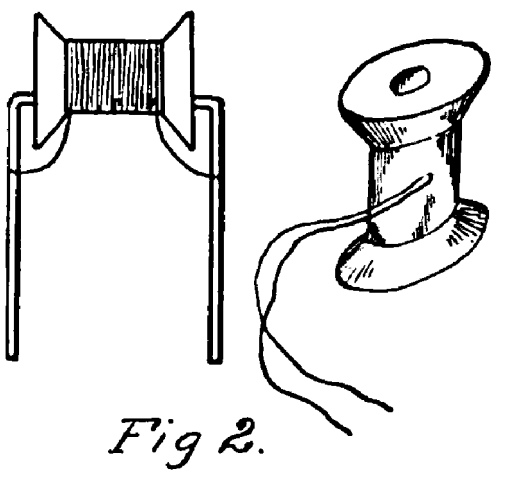


Fig 2.

to use the bridge. The battery and galvanometer being connected as shown in Fig. 1, with a small switch in one of the wires leading from the cells, the unknown resistance is connected across the gap b and one of the standard coils connected across the gap a. Then the sharp edge of the knife is moved along the slide wire over the scale until a point is reached where there is no deflection or movement of the needle. If this point lies very far to one side or the other of the middle scale division, substitute the next higher or lower standard spool until the reading falls nearer the center of the scale. While a reading could be taken in the extreme positions, it is not best to do so, owing to the very small movement of the knife that is necessary to throw the needle off of zero.

Now, most of you have gone far enough in arithmetic to do simple proportion, and after the reading is taken the following simple calculation must be made which will give the resistance of the unknown coil. The resistance of the standard coil bears the same ratio to that of the unknown coil as the number of divisions between the knife edge and the left hand end of the scale (upper row of figures) bears to the number of divisions between the knife edge and the right hand end of the scale (lower row of figures). Then in order to find the unknown resistance, we simply multiply the standard resistance by the number of the left hand divisions, and divide the product by the number of right hand divisions; the quotient will be the unknown resistance in ohms. Thus suppose a 2-ohm coil was used in a test and the needle stopped swinging when the knife edge rested on the 63rd division from the left hand end, or the 37th from the right. Our calculation would be as follows:

$(2\times37)\div63=1.17$ ohms.

Now, while this explanation may seem very long, it is really very simple, and when you once master it you can make many measurements of resistance in your experiments which will add greatly to their interest and value.

THE EDITOR'S QUERY BOX

Will you please tell me what a double opposed motor is? How can two bells be connected on the same wires with two telephone receivers? I have difficulty with my spark lighting apparatus. It works well at times and then very poorly. It is operated by two batteries, one wet cell and one dry cell. Would this make any difference?

C. C. M., Providence, R. I.

Ans.—The term "double opposed motor" refers to a gas engine having two cylinders working opposite each other; that is, one cylinder on opposite sides of the crank. Since you do not state clearly just what purpose is to be served by the bells an intelligent answer cannot be given. Try two wet or two dry cells in place of the combination and you may have less trouble with the gas lighting arrangements. Dry and wet cells never work well together.

Will the coil from a medical battery operate a wireless telegraph outfit?

E. B., Drummond, O. T.

Ans.—No, there is not sufficient power to such small coils.

What are the relative merits of the double and single pole telephone receivers? Can a telephone receiver be used as a transmitter? How does the transmitter differ from the receiver? On a short line could not a watch-case receiver be used as a transmitter and the ordinary receiver as a receiver? Since anthracite coal is almost pure carbon, could not that be used instead of the ordinary "carbon plate" in wet cells of the Le Clanche type?

S. L., Dearborn, Mich.

Ans.—The double pole receiver is much more sensitive and reproduces the voice with greater clearness than the single pole, and, owing to the magnetic circuit in the former being nearly closed, the strength of the magnet cores is greatly preserved. A receiver may be used as a transmitter but the currents generated in the transmitting instrument are exceedingly feeble, and a very weak reproduction is the result. Either style of receiver may be used. While anthracite coal is almost pure carbon, it is of such a very dense nature that it is poorly suited for the purpose.

A Work Bench

By John F. Adams, in "Amateur Work"

A GOOD work bench is a great aid in turning out work, greater accuracy being secured as well as greater rapidity, yet how many, especially amateurs, are to be found working at some make-shift contrivance of old boards, not because they cannot afford the amount required for stock for making a bench, but rather that they have never realized the value of one in their work. To readers of this class let me say, let no time be lost in ordering the necessary stock and making a bench according to these directions, as I am sure that the increased facilities afforded by such a bench will be sufficiently appreciated to win the thanks of those acting upon this suggestion.

If funds be limited, spruce can be used and will make a strong bench, but care must be used not to mar it by heavy pounding or cutting with metal tools. Maple will increase the cost, but is a fine wood to wear under heavy duty, although no bench should be used as an anvil or to stop cuts with a chisel or bit. The illustration shows a bench fitted with a quick acting vise, a fixture well worth having if one can afford the $5 necessary to secure it. Where economy is necessary an ordinary carpenter's vise can be substituted, the iron screw for the same costing about 60 cents.

The lumber bill is as follows: 1 plank 6 ft. long, 12 in. wide and 1¾ in. thick; 1 board 6 ft. long, 12 in. wide and ⅞ in. thick; 1 strip 6 ft. long, 1¾ in. wide and ⅞ in. thick, for the top. For legs, 4 pieces 3x4 in. stock 32 in. long which, planed on all sides, will be ⅛ in. less each way. For the long braces 2 pieces 2x4 in. stock, 5 ft. 6 in. long, and for the short braces, top and bottom, 4 pieces 2x4 in. stock, 18 in. long.

Tenons are cut on the short braces

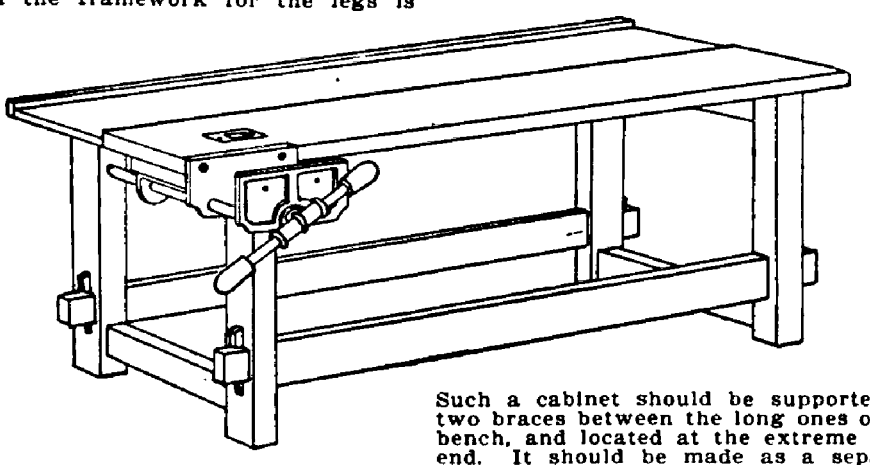
These telephones are complete in every feature—transmitter, receiver, push button and bell, and can be easily installed by any man or boy, as we send complete instructions with each instrument. Sent on receipt of price.

H. M. WHITMAN, CANTON, PENNA.

2¾ in. long and 3x1¼ in. Mortises are cut in the posts for same to bring the top ones flush with the top of the posts, and the top edges of the lower ones 7 in. from the floor. The tenons on the long braces are 4 in. long and 3x1½ in., the mortises for same in the posts being located to clear those for the cross braces by 1 in. After these are fitted, mark out and cut holes in the tenons to receive wedges 5 in. long, ¼ in. thick and ⅞-⅝ in. wide. The object of using wedges is to give increased rigidity. All joints should be laid out with a marking gauge and carefully cut to exact fits. Poor joints mean a rickety bench.

When the framework for the legs is



completed, the front (2 in.) plank is attached by large wood or small lag screws put up through the top braces, boring 1 in. holes 3 in. deep and then continuing with a gimlet bit of the size to give a snug fit to the screws. Use three screws at each end. This plank projects forward 2 in. beyond the front of the posts. Next, attach the ⅞ in. board in the same way, using care that the two pieces are closed up to leave no crack between them.

Another way of fastening the frame is to use 3 in. angle irons, eight being necessary. The strip at the back is then attached by wood screws, the top edge of this piece to be the same height as that of the front plank, so that work placed across the two will lie level.

If preferred a wide board with racks along the top for tools may be substituted, but the writer prefers to keep his tools in cabinets where dust and moisture will not injure them. A bench stop is also to be fitted to the left end of the bench about 6 in. from the end of the bench and 3 in. from the front edge. Get the kind with hand nut for adjusting to height, instead of the kind requiring the use of a screwdriver.

Another very useful attachment not shown in the illustration is an arrangement for planing boards of various widths and lengths. A board about 22 in. long, 8 in. wide and 11-16 in. thick will be needed. Also 4 strips 4 ft. long and ½ in. square. Two of these are fastened to the edges of the front brace at the right end, leaving a ⅝ in. space between for the board above mentioned. The remaining two are fastened to the under side of the front plank directly over those below, thus forming channels in which the board slips freely. The board is slipped in from the left end after boring ⅝ in. holes at distances from the top of the bench varying by 1 in., but in 4 vertical lines, so that the holes will not be too near together. A plug is placed in the appropriate hole, upon which the work is rested.

Another valuable feature is a cabinet of drawers for tools, there being ample room for one with drawers 36 in. long and 12 in. wide; having two drawers 3 in. deep, one 4 in. and one 7 in. deep, with the necessary space of ⅝ in. between them, and ⅝ in. top and bottom. Such a cabinet should be supported by two braces between the long ones of the bench, and located at the extreme right end. It should be made as a separate fixture to facilitate removal when moving the bench about.

THE TEST *of* ALLEN MURRAY

(*Continued from page 117.*)

"Do you need another man?" inquired Allen that afternoon of the superintendent of a large establishment on Main Street.

"No. If you'd been around this morning, Murray, I might have given you something. There's nothing now. I'm sorry," he added looking kindly at the square shouldered young fellow. He had known Allen away back in his newspaper days.

At the next place the proprietor asked where he had been working.

"At Brady's," answered Allen briefly.

"Why did you leave Brady?"

That was a poser. Allen hesitated. His sense of honor forbade going into details. "It was over a question of personal honesty," he answered at last.

The man smiled insolently.

The color flamed into Allen's face at the look. That his explanation admitted two interpretations had not occurred to him.

"We're not wanting such help," said the man curtly.

"Gee! Catch me making that kind of an idiot of myself again," muttered Allen under his breath as he stalked angrily out of the shop.

Places were just filled, he might call next week, or they required no more men. It was not so easy after all—this obtaining work when one was out of a job.

Allen recalled a series of articles written for a prominent magazine, the personal experiences of a college man seeking work in Chicago. At the time he had considered them overdrawn; in the light of his present experience they appeared true to life.

On the afternoon of his second day, he came upon a foreman overseeing a gang of workmen digging a sewer ditch.

"That's better than tramping around looking for a job. My coal shoveling may do me a good turn now," he said smiling grimly as he walked over to the foreman.

Had young Murray seen the smile of satisfaction on James Brady's face as the latter drove around the corner with Dr. Stuart behind a span of Brady's high-steppers, he would have felt puzzled indeed.

"Doc," exclaimed Brady, "do you see that boy? Bless me, if he isn't working with a gang of dagoes! He's the right stuff. We'll telegraph for that stateroom at once."

That night Mr. Brady received the following note. It was brief and to the point.

Mr. James Brady,

Dear Sir: No inducements you may be able to offer can alter my decision of yesterday. It is still a matter of personal honesty. Thanking you for past favors, I am, yours respectfully,

ALLEN MURRAY.

Two hours after the receipt of this letter another in James Brady's well-known hand was left by special messenger at the Murray home. It said:

My dear Murray:

With you it was a question of honor; with me it was a question of honor and business. The two are, in my opinion, inseparable.

It is absolutely essential that the superintendent of Brady's Coal and Lumber Company be honest, not because it is the best policy, but because honesty is right. You have come out of the test, the purer, the stronger, the braver for it, as I felt confident you would.

I have the honor of offering you the position of superintendent of Brady's Coal and Lumber Company at a salary of two thousand dollars a year.

Dr. Stuart, not satisfied with worrying his other patients into their graves, has taken it into his head to banish me to Timbuctoo, or the North Pole—perhaps he knows where—I'm sure I don't!

I leave on the New York Express tomorrow evening.

If you will run up in the morning we will talk over a few matters that may be of interest to our new superintendent. Most cordially yours,

JAMES BRADY.

How to Build a Skiff or Fishing Punt

By J. W. SEAVER, JR.

THE ACCOMPANYING drawings show the construction of a skiff, or fishing punt, built by a boy of fourteen without assistance from anyone except his juvenile friends, and as all boys are naturally fond of the water, perhaps a few may wish to imitate his example and build such a craft, of which the following is a short description.

We live near a small river, hardly more than a creek, and my young friend wanted a boat in which he could go fishing and exploring during the summer holidays. So by selling papers and doing odd jobs he managed to earn about five dollars with which he purchased all the necessary lumber, nails, paint, etc.

The plans we drew together, or rather I drew them from his suggestions, and with the tools about the place he commenced work.

The frames were built first with square ends as shown in the sketch. Then the sides, which were made of two wide boards, were sawed to shape with a gradual curve running from the center to the ends. These were secured to the frames by nails, and the end pieces carefully fitted. Then the entire framework was turnd over and the bottom boards fitted and nailed in place, a generous application of thick paint being put on the edges and surfaces in contact with the boards to make the joints water-tight.

After the planking was completed, the entire boat received two coats of paint inside and out and when dry was ready for the seats, deck and finishing touches. This boat was built of ¾" boards, except the deck, which was of ¼" stock. The floor gratings were made to take up for cleaning and bailing and there was ample locker room in each end for fishing tackle, etc.

If desired oar-locks may be added but we preferred to use a couple of poles, the river being very shallow.

The boat proved very satisfactory and a credit to her builder; it was safe, drew very little water, cost a little less than five dollars, and afforded lots of pleasure not only to her owner but to his boy friends, and on more than one occasion the boat was borrowed by "grown-up boys" for a fishing excursion.

The total length of the boat on deck was 10 feet. The width or beam was three feet. The midship depth was two feet, and the sides tapered to a depth of one foot at the ends.

Note.—In building boats of this type, it is always well to lay a piece of loosely twisted lamp-wicking soaked in either white or red lead, between the edges of the boards and beneath them where they are nailed to the sides. Oakum is a material that is also used a great deal. This material makes a very tight joint and has the advantage of not checking or cracking when the boat is left out of water for a few days.—Editor.

The American Boy
Copyright, 1906, by The Sprague Publishing Company

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper or wrapper shows to what time your subscription is paid.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed. Subscribers can, by watching the expiration date on their address label, renew early and thus be sure of getting all the numbers as issued.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

WILLIAM C. SPRAGUE, - - President and Editor.
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

Rules

In sending in solutions to the posers in this department, observe the following rules:

1st. Address your envelope to PRIZE PUZZLE DEPARTMENT, AMERICAN BOY, DETROIT, MICH.

2nd. Mail your answers or solutions so they will reach Detroit not earlier than the 10th day of the month of issue and not later than the 15th. Answers received before midnight of the 9th and after five o'clock of the afternoon of the 15th will not be considered.

Th prizes in each case will be given to the boy whose solution is the **first correct** one read by us in the order of the opening of the mail beginning the morning of the 10th.

3rd. Our Editor's decisions are final. He cannot take time to correspond with contestants, who, each month, number thousands.

4th. Write nothing in your letter but the answer to the puzzle. If you have anything else to say, write it on a separate sheet of paper, giving your name and address on each separate sheet.

5th. If you send solutions to several puzzles, send them on separate sheets of paper, and put your name and address on each.

Boys' Brain Sharpeners

A B C D E

A Valentine Puzzle

Here we have five young ladies, all of whom will be eager on St. Valentine's Day to see whether the mail carrier brings anything for them. But alas! four of the five are doomed to be disappointed—only one will receive a valentine. We leave it to our readers to discover, if possible, which of the five ladies Dame Fortune smiles upon in this respect.

When answering, give the letter found below the selected lady, and then state in not more than ten words your reason for deciding in her favor.

This is not mere guesswork—something has been introduced into the sketch which makes only one solution possible. Prize, a good book. See rules.

plays an important part in gaining your solution.

Lay over the puzzle a sheet of thin writing or tracing paper (something that you can clearly see the lines through) and stick a fine needle point exactly through the centre of the cross, then you are ready to start operations.

Now trace the nose, and then turn paper around until the forehead or mouth can be added, then fix up the beard and various locks of hair, and so on until your sketch is complete. All the lines will fall correctly into place if you are careful to get the centre of the cross mark. Trace in pencil first (if you prefer), but go over your solution in ink afterwards. Remember neatness will be taken into consideration when awarding the prize. Prize, a good book. See rules.

Paper Pyrography

Anything we cannot understand always attracts and interests us until the mystery is solved.

Here is something new along the line of magic art. A boy produces several sheets of thin white paper; these he spreads out flat upon dinner plates, and states that with a lighted match he will produce pictures of various subjects.

The match is struck and allowed to burn a little while and then quickly blown out—the end is red and glowing—this it touched against the various sheets at a point marked by a star or cross.

As though by magic, lines of fire run off in all directions, forming pictures as they run—now an elephant appears on one—on another the profile of a girl and on a third, a motto appropriate for the occasion.

But how is it done?

Any boy can prepare such sheets without being either artist or magician. It is very simple indeed!

Get a little nitre from the drug store and a small brush, such as artists use.

Dissolve a portion of your nitre in water, and test its strength by making strokes with your small brush upon some sheets of thin paper. When dry touch with a lighted match and if of the right strength, the lines will burn evenly until the end:—if too weak, they will not burn at all,—if too strong they will burn too fiercely, making broad, uneven lines.

Now for your subjects: Select good strong outlines—any good bold picture will do. Lay above it a sheet of thin paper and fasten with thumb tacks around. You can now see your subject plainly through the paper and you have only to make a tracing, with brush and nitre solution, of all the principal lines.

Don't forget to place a dot or star somewhere along the outline, in pencil or ink, so that you may know exactly where to apply the match when dry.

"Right makes might," was Abraham Lincoln's motto for times of struggle and contest.

"Do the best, but if you can't do the best, then do the best you can," was his watchword for all kinds of days.

Why I am Proud of My State

RESULT OF ESSAY CONTEST

The essay contest, subject, Why I Am Proud of Texas, brought to our office the largest number of essays we have yet received from the boys of any state. The prize of $5.00 was awarded to George Lee, 336 Masten street, Dallas, Texas.

We give below the names of those whose essays deserve complimentary mention: Louis E. Mohrhardt, L. W. Coleman, Jr., Chas. Touchon, J. C. Ledbetter, and Philip Marvin Cordell, Dallas; Karl F. Mirus, Spencer H. Jack and Roy Smith, Corsicana; Charlie Barrett, J. E. Kerr, Coy Stockard, and Henry C. Barlow, McKinney; Lawrence Grier, Harlie Woods, and Hubert R. Battle, Abilene; Jack Carvel and Olin Arnold, Georgetown; Henry Lynch, Bernard Miller, and Onius Stoff, Hamilton; J. S. Crate and Eddie Weachman, Houston; J. Edward Daugherty, Frank Daugherty, E. A. Graebner, Ralph Cadwallader, Eli T. Yantis, Orin M. Seay, and Milton McAllister, San Antonio; George McCall, Jr., and Thornton Mullane, Weatherford; Geo. T. Yowell and Eugene Eubank, Ennis; Dennis M. Corwin, Austin; John T. Yantis, Brownwood; Norman E. Griffin, Big Springs; Alaric B. Davis, Bonham; Thos. R. Smith, Colorado; Pendleton Howard, Cleburne; Carl A. Carlton, Commerce; Willie Bond, Crews; L. S. Redwine, Comanche; Eldon Young, Denton; Edward M. Gleason, Jr., El Paso; Jim Meyer, Flatonia; Walter Johnson, Galveston; James C. Attebery, Greenville; G. Bee Willett, Gonzales; Allen B. Hannay, Hempstead; Sam Orenbaum, Hillsboro; Jas. R. Irion, Jr., Henderson; Oscar P. Friley, Huntsville; Julian LaCrosse, Luling; Ray L. Coffee, Lamesa; Calvin Dodson, Leonard; Maynard King, Manchaca; Ernest Knopp, Morales; Marc Jenkins, Monahans; Wm. Storland, Missouri City; John Wynne Barton, Overton; Edgar Clark, Paris; Dudley W. Ritchford, Paint Rock; Witt Bowden, Rising Star; James W. Pryor, Rusk; Wm. Meiners, San Marcos; Robert Wilson, Quanah; Pinckney Woodruff, Santa Anna; Donald Hayes Black, Smithville; Clyde Eagleton, Sherman; Warren Dibrell, Seguin; Joseph Dedek, Sebesta; Ethalmore Wall, Tolbert; Kay Dupre, Troupe; J. Wimberly Garnett, Tyler; M. C. Jones, Waco; Byrne Moody, Springtown; Carl Yeager, Wichita Falls; Carroll Counts, Long Beach, Cal. (who tells us in his letter that Texas is his native state); Joe H. McDaniel and Edwin Aldridge (who failed to give the names of the towns they live in).

We received two essays which had nothing about them to tell us who sent them, nor where they came from. One essay was too full of slang to be even considered in the contest. The essay of Carl Yeager, Wichita Falls, was given in rhyme which we found pleasant reading.

Among the reasons given by the boys for being proud of Texas are the following:

Texas was the only state that entered the Union as an independent republic; great area, which gives the state all varieties of climate; magnificent coast line; mountains stocked with valuable minerals; prairies furnishing food for enormous herds of cattle; high rank in producing cotton, cattle, rice, iron, oil, pecans, honey and lumber; varied and beautiful scenery, including rivers that contain large quantities of fish, the largest springs in the United States, deep canyons and picturesque caves; agricultural products, including wheat, oats and corn; largest cotton-seed-oil mills in the world; sea wall at Galveston; banner Democratic state of the Union; plenty of game, ranging in size from quails to bears and deer, also still a few wild horses; many artesian wells; romantic Indian legends; the oldest town in the United States, Ysleta, founded about 1550 (?); greatest ranch in the world; famous missions built by the Spaniards; the "homestead law;" nearly 1,200 miles of railroads; largest population west of the Mississippi; largest manufacturing state of the South; largest cotton-gin in the world; handsome railway station at Fort Worth; numerous health resorts; famous "Black Waxey" land around Dallas said to be the richest in the world; Mr. Lanham, the governor; "Rough Riders" organized at San Antonio by Col. Roosevelt, and composed principally of Texas cowboys; largest state capitol in the Union, second largest building in the United States and seventh largest in the world, being built of native granite; excellent public school system, also chartered colleges, a fine state university, and ample provision for afflicted and unfortunate, the city of Dallas alone containing three orphan homes; the character of citizenship; people hospitable, generous and kind-hearted; unique and romantic history; battles of the Alamo, San Jacinto, Sabine Pass, and last battle of the Civil war fought at Brazos Santiago; roll of great men, among whom are Austin, Houston, Travis, Bowie, Crockett, Dick Dowling, and Albert Sidney Johnson.

WHY I AM PROUD OF MY STATE

Texas Prize Essay, by George Lee, Dallas, Tex.

I am proud of my state, and I have many reasonable causes to be so. The first theme is its glorious history. We can trace its history from Cabena de Vaca to M. Austin. It has been a country under six flags. 1. France, who made a settlement before any other nation. 2. Spain, who made many attempts at colonization, but all in vain. 3. Mexico, when Austin was permitted to settle the country with citizens from the United States. But suddenly Mexico began to oppress the settlers. The Texans were liberty-loving, so they rebelled and war was declared. In the Alamo at San Antonio many heroic Texans were murdered. At Goliad in like manner were the Texans massacred. But at last the time came when the Mexicans suffered defeat at the hands of General Sam Houston. Santa Anna, the Mexican general, surrendered and made peace. Thus Texas was freed from the hated Mexican rule. 4. As a prosperous republic ruled by President Sam Houston; then as a state under the United States. 5. Texas as a Confederate state, furnished many soldiers to the Confederacy. The last battle of the civil war was fought in Texas, and this state was one of the last to surrender. 6. As a state in the United States of America. The largest and one of the wealthiest states in the Union, Texas ranks sixth in population among the states.

In agriculture Texas ranks high. She stands first in the production of King Cotton, fifth in wheat and sixth in corn. Stock-raising is an important industry, and she ranks first in cattle.

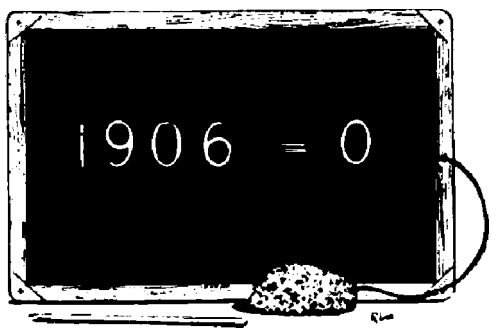
The minerals of Texas are few, but of great importance, such as coal, iron, copper and marble.

The commerce of Texas is destined to become of great importance. Her excellent seacoast and the harbor facilities at Galveston afford ample power for great commercial activity. The government has given much money for the rivers of Texas, and they will soon be navigable. The railroad mileage of Texas is greater than that of any other state.

I am proud of the governors of Texas, who made the state endowment school fund, which consists of twenty-one million dollars in interest-bearing bonds and land notes. Texas has also twenty-three million acres of unsold land and the total funds are $93,454,869. The University of Texas is renowned among state universities. Public schools are in every city and hamlet in Texas.

Besides the cattle of West Texas, the wheat of North Texas, the cotton of East Texas, and the rice and oil of South Texas, the capitol is very handsome.

All these things tend to make me proud of my state.



A 1906 Puzzle

Arrange the four figures denoting the year, in such a manner that when totaled up the solution is 0.

Prize, a good book. See rules.

A LINCOLN PUZZLE

If you will look carefully into this jumble of lines, you may see a nose, an eye, an ear and sundry locks of hair and beard. The whole if rightly arranged will form a profile sketch of Abram Lincoln. We do not wish our readers to mutilate their papers when solving these puzzles, so that in this matter of arrangement we have devised a simpler and neater way.

In the centre, or thereabouts, you will see a small cross mark; note this carefully as it

Results of January Picture Puzzle Contest

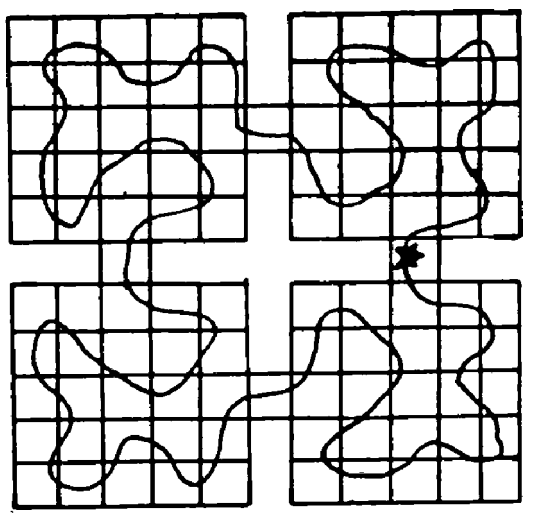
Following is the answer to the "Swarm of Be's for the New Year," page 94: 1. Be honest (on nest). 2. Be on time. 3. Be behind hand in naught. 4. Be courteous (core tea us). 5. Be independent (in D pendant). 6. Be afraid of naught. (A frayed.) 7. Be on hand. 8. Be wise. 9. Be polite (pole eight). 10. Be kind to all (K in D two awl). 11. Be backward in naught. 12. Be watchful. The prize winner is Lyle H. Kloeppel, 12120 Parnell avenue, W. Pullman, Chicago, Ill.

The answer to "Good Things to Eat for New Year's Day," is as follows: 1. Turkey. 2. Raisins (ray sins). 3. Sausage (sauce age). 4. Pumpkin pie. 5. Catsup. 6. Salad dressing. 7. Patties (Pat tease). 8. Piccalilli (pick a lily). 9. Rolls & butter. The prize winner is Roy B. Searing, 1213 Fourteenth street, Sioux City, Ia.

The answer to "Pictorial Proverb B," page 94, is: Appearances are often deceitful. (Ape ear antsS r often D seat full.) The prize winner is Geo. C. Alden, 317 Prospect street, Warren, O.

The answer to "Can You Read This," page 95, is: "May every true American Boy have health, and happiness, and joy." The prize winner is C. B. Easton, Jr., Deerfield, Lake Co., Ill.

The puzzle submitted by Raymond C. Bunch, on page 95, is correctly solved by



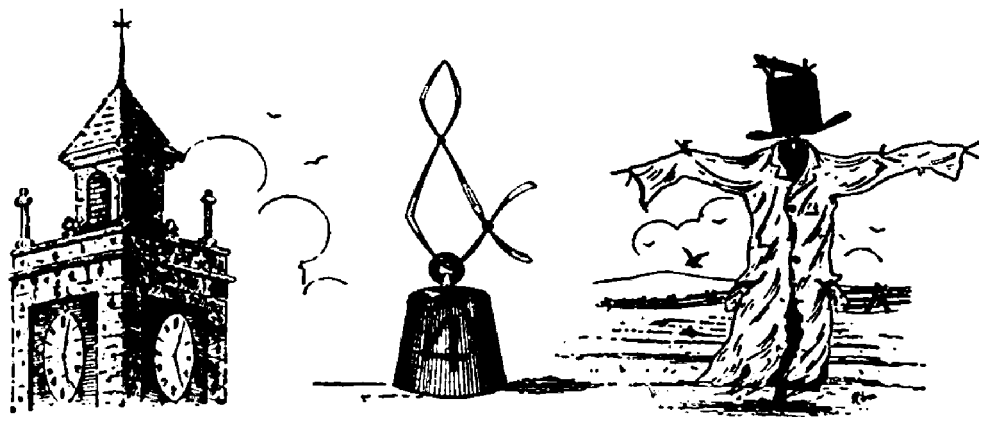
Delmar A. Ray, Colfax, Ill., and by many others. The boy mentioned was the lucky one.

The following is the solution of the puzzle, "Good Advice—But Can You Read It?" on page 95: "In haste accuse no man." Prize winner, Charles Stein, R. R. No. 2, Hillsboro, Iowa.

WHY I AM PROUD OF MY STATE

To the Colorado boy who sends us before February 15th the best letter of not over five hundred words telling us why he is proud of his state—Colorado, we will give $5.00; in addition, we will print his letter in an early number of The American Boy.

A Pictorial Proverb



Prize, a good book. See rules.

The Swimming Needle

If you tell your friends that you can make a needle swim, they will probably laugh at you. But the trick is not at all difficult, and there is no "catch" about it, either. Fill a glass globe with water to the brim and place it on a firm base so that it will not tremble. Then select a fine sewing needle and cut a piece of letter paper into a small oblong so that it shall be a little longer than the needle. Set this piece of paper gently on the water. Put a tiny drop of

oil on your finger and rub the needle with it. Then lay it carefully on the paper.

Of course the paper will support the needle and everybody will say: "Huh! That's nothing." But just tell them to wait.

Within a few moments, the paper, becoming soaked with water, will sink slowly to the bottom of the glass. But the needle will not go down with it. If the surface of the water is perfectly still the needle will remain afloat.

Leading the Singing

The London Mirror prints these sketches to show the characteristic attitudes assumed by Mr. Alexander, the

singing evangelist, in conducting the big choruses at the Torrey-Alexander revival meetings.

The Puzzle of Matches

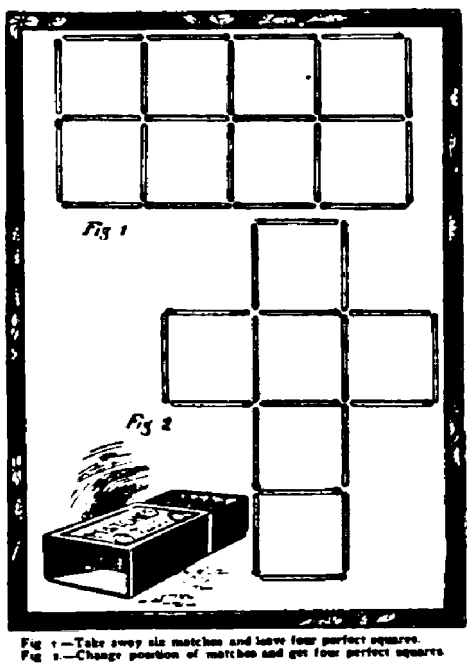


Fig 1.—Take away six matches and leave four perfect squares.
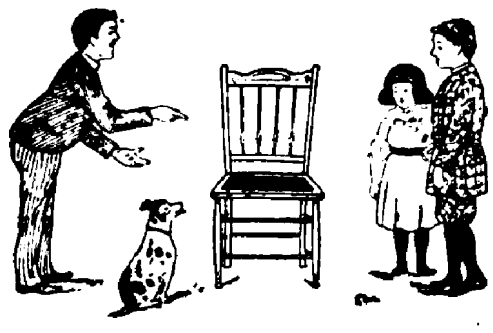
Fig 2.—Change position of matches and get four perfect squares.

A Happy Boy

Lewis A. Smith, Chicago, Ill.; writes December 21st, as follows: "Accept my heartiest thanks for the check which I have just received for the best list of answers to October tangles. I was the happiest boy in the country when it came. LONG LIVE THE AMERICAN BOY! Wishing you a Merry Christmas and a Happy New Year.

Questions About a Chair



1. When is a chair like a lady's dress?
2. When is a chair like a tailor's bill?
3. Why is a chair like the subjunctive mood?

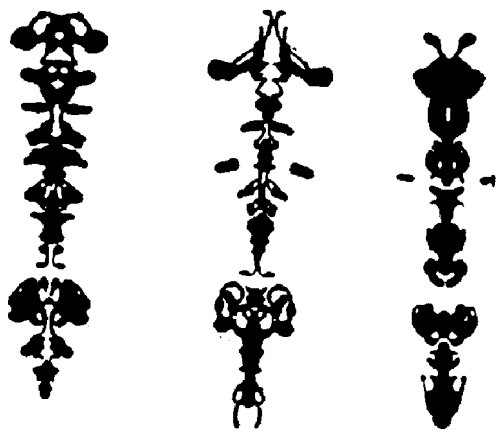
Prize, a good book. See rules

Smudgeographs

Now and again when entertaining young people we need something which will amuse them for an odd half-hour, making "smudgeographs" will be found most useful for this purpose.

Get your young friends to seat themselves around the table and provide them with sheets of white paper, pens and ink.

The fun consists in making marks or writing names upon the paper and while the ink is still wet, folding the paper and squeezing the ink in all directions.



Very curious designs may be produced in this way.

The best results are obtained by first folding the paper and then writing, with plenty of ink, along the crease. Now fold the paper quickly and pass the fingers several times firmly across the back.

The three accompanying "smudgeographs" are of the "American Boy" in different styles of writing. Probably if a hundred persons wrote this name, the results would all be different. Write your own name, just once, squeeze it out while still wet, and you won't recognize it.

Boys, Take Care *of* Your Teeth

By J. AUSTIN BUCKNALL, D. D. S.

(Begun in December, 1905, number.)

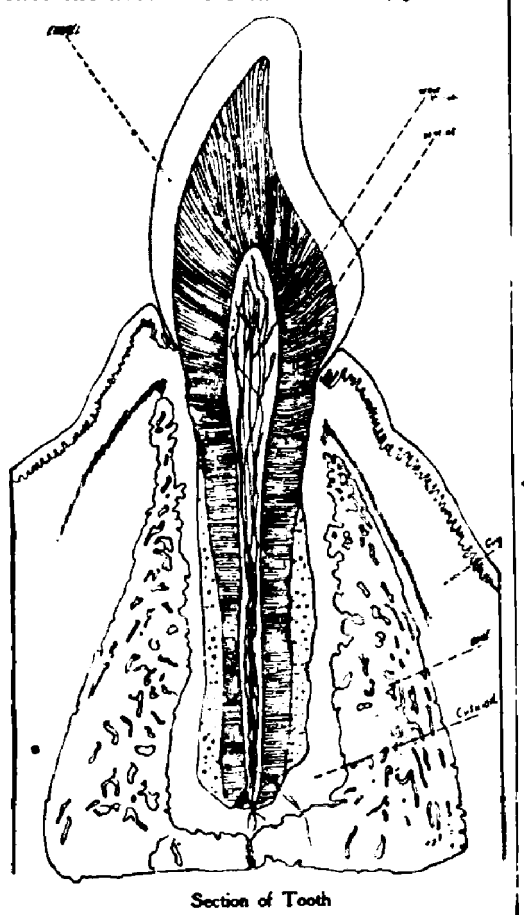
POOR TEETH cause trouble that is far-reaching. Indeed life may be materially shortened by reason of them. Not only are the effects visible in indigestion and other troubles that are apparent to the victim, but there are secret troubles that it takes a physician or a dentist to trace to their source. The cavities in the teeth become a lurking place and a breeding ground for diseases, which in time attack the tissues of the bronchial tubes and even the lungs. We are very particular about the cleanliness of the vessels in which our food is cooked, hence, how strange it is that we are careless regarding the implements that we carry about with us in our mouths for the preparation of the food ere it goes into the stomach.

Crooked teeth are the result usually of the decay of the first teeth. The permanent teeth seek an outlet at their proper time, and, being tender, are easily thrown to one side or the other by the decayed baby set. Decay in the baby teeth causes the death of the nerve, which is the active agent for removal or absorption of the root. The baby tooth should have no root when it is due to give place to its permanent follower. If the root is there, the baby tooth cannot fall out, and the new tooth will have to avoid the obstruction by squeezing its way to one side. Should such irregularities exist in the mouth of a young person, he should consult a dentist who understands straightening the teeth. This is a comparatively easy thing for the dentist to do when the child is young. Later, when the teeth become well set, it is not so easy. In the years from 9 to 13 this work is best accomplished. Some regard, however, must be had to the child's temperament, and to the form of the irregularities.

Now, you must not think that the teeth are poor, miserable things, and badly made, because they give you trouble. On the contrary, they are rarely other than perfect when they first come. It is only your own neglect that prevents their remaining perfect. The Creator has made a wonderful thing in the making of a tooth. No other machine constructed can stand the wear and tear of fifty or sixty years of life, and still be in working condition. I have seen many well preserved sets of teeth that are doing excellent work after being in constant use sixty years.

Each tooth fits in a rubber-like cushion, so that when a strain comes, it gives. It is not fixed solidly to the bone but has a distinct movement. When the enamel of the toth is sound, it is found to be so hard that a steel drill will not penetrate it any easier than the same tool will make a hole in glass. Dentists do not make holes in the enamel. Decay eats away a spot, and it is then enamel no longer, but a soft substance easily removed. Under the enamel is a substance called dentine, a part that is much softer than enamel, in the hollow of which lives the nerve. I remember as a boy, I had a queer pet. He grew in a pond, made himself a mud house, and then a door. After this he sealed up the door and died. He was a funny fellow about an inch long. I used to keep him with tadpoles and other things. Well, the nerve does very much as did my friend. He makes his house, then shuts the door and dies. Before he dies, however, he is very much alive, as you will find out if you touch him. If you do not want, therefore, some day to touch him when you do not intend to, you had better not disturb his house, in other words, it will be well for you to take care of that house. This house corresponds to the root of the tooth. Some teeth have only one root, others two, three, four and even five. Down in each of these lies Mr. nerve.

The nerve is made up of arteries, veins, and nerve fibre. The arteries bring in blood; the veins take it out, and the process keeps up, day and night, just as it does in other parts of the body. If you damage the wall of the house that protects this busy nerve in its work, you may look out for trouble. The trouble comes in this way: When the decay gets through the enamel, through the dentine, into the hole where the nerve is, you will



Section of Tooth

first hear a boy say he does not like candy; a little later on ice-water will bother him, and, still a little later, even air makes him jump. This all shows that the nerve objects very strenuously to being robbed of his house. His way of objecting is to give you pain. Now you go to the dentist, and the dentist sets to work to put you out of your misery by killing the nerve, who was really your best friend. So much trouble and pain, all from not knowing and caring for this wonderfully essential thing—a perfect tooth!

A healthy tooth in a good rubber cushion in a boy's jaw, is worth a great deal of money. You can't buy one for any amount of money. It shows how people value their teeth when they seek damages from the railroad company for loss of their teeth in an accident. A Russian woman once got 50,000 roubles for five teeth. Is there anything else that we value so much when we lose them that at the same time gets so little thought and care while we have them?

While the nerve is being robbed of its house, it keeps busy trying to rebuild it. At the same time it shrinks into smaller space. While it is doing this, there are days and nights of torture. The fact is, the nerve is dying at its hopeless task. It is at this stage that hot water, tea, or coffee hurt. The poor nerve once dead is probably left without a decent burial. The result is what might be expected: Gases are given off from the putrid remains that not only make it a nuisance, but infect the surrounding tissue. Inflammation of the entire tooth and cushion now takes place. Poisonous matter forms that begins burrowing through the bony socket in an effort to get out. Then comes the dull throbbing pain, the swollen face, and you hurry to the dentist, telling him you have got a cold in your tooth—but he knows better.

(To be continued.)

GIVEN TO BOYS
A HANDSOME AIR RIFLE

BOYS
They're Beauties.
Shoots 150 times without reloading; shooting barrel can be removed; no clogging. Genuine black walnut stock, blue steel barrel, nickel plated pistol grip. Repeater attachment works perfectly.
Free for selling only 20 Handkerchiefs.

BOYS AND GIRLS You can have any of our handsome premiums, all express charges prepaid, for selling only 20 of our good Handkerchiefs at 10cts. each.
Send No Money we trust you.
Twenty Handkerchiefs sent in one shipment. Premium forwarded same day money from sale is received. Write at once.

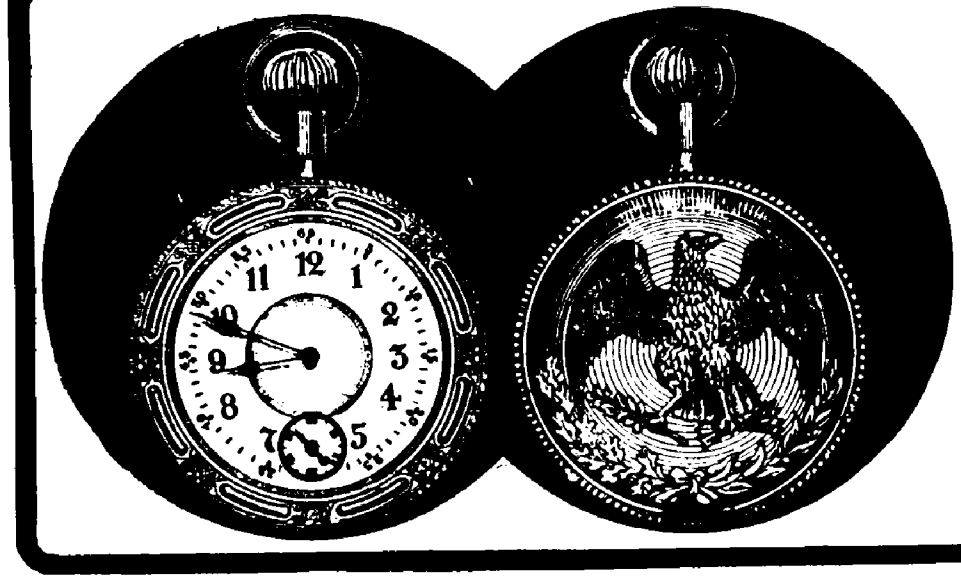
DENTACURA

Tooth Paste

Differs from the ordinary dentifrice in minimizing the causes of decay. Endorsed by thousands of Dentists. It is deliciously flavored, and a delightful adjunct to the dental toilet. For sale at best stores. 25c. per tube. Avoid substitutes. Send for our free book "Taking Care of the Teeth," which contains valuable information concisely written.

DENTACURA COMPANY
170 ALLING ST., NEWARK, N. J., U. S. A.

STAMMERING CANNOT BE CURED
Save only CORRECTING the CAUSE. This we do. Many stammer no more, after one lesson. Correspondence invited. CARSWELL INSTITUTE, 2314 N. 7th St., Phila.



GENUINE GOLD PLATED
WATCH
A PRESENT
FOR YOU!
Do you want a full-sized Stem Winding, Stem Setting Watch—an absolutely accurate Time Keeper, (Warranted) beautifully engraved, as illustrated, Genuine Gold Plated Case? If you want one as a present, then send your name and address. It will cost you NOTHING, NOT ONE CENT of YOUR MONEY is REQUIRED—simply a little of your time. Write to-Day. ADDRESS
S. ASHLEY, Supply Agent, Dept. A E
182 East 127th Street, NEW YORK

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

John H. Black, Prairie Depot, Ohio, wins the prize for the best list of answers to December Tangles.

Others who answered every word correctly are: Burton F. Jennings, Wm. J. Yopp, Jr., Julian D. Sears, J. Alfred Lynd, Sidney Stadsvold, Andrew Wilson, Jr., George M. Jackson, Miss K. Haren, George H. Stanbery, Walter Benton, Walter T. Horton.

Cleary Bullard, No. 8, A Row, Fort Snelling, Minn., wins the prize for best original puzzles.

Honorable mention is accorded the following for excellence: E. R. Cook, Lee M. Hovey, Carl E. Tewksbury, Lewis Smith, Nettie Doke, Rodney Thompson, Stanley Wiegel, E. Louis McReynolds, Randall Ross, Roy Jeffries, Myron S. Hermann, John Wanamaker, Edward Bell, Thomas H. Quigley, Dana Reed, Leonard Steburg, Robert J. Needham, Horace R. Harkins, Walter F. Baltz, J. Horace Trumbull, Sarah Gilles, Chas. Carnes, Harold Bosler Pratt, Robert E. Ward, Paul Passmore, J. Eddie Prass, Whitney H. Shepardson, Clinton Fisk Elliott, Robert D. Holmes, Sherman Wilkins Reardon, Andrew Gault, Benjamin L. Miller, Leo J. Hahn, Osborn J. Dunn, Ralph Williams, Louis A. Potsdamer, Fred Balcom, Fred E. Day, Branson Tharp, Raymond F. Sitter, Fred W. Hammil and some others whose November answers were late, and Roy Bates, who used both sides of his paper.

A prize of a new book will be given for the best lot of original puzzles suitable for the month of April, received by February 20.

A prize of two dollars will be given for the best list of answers to February Tangles, received by February 20.

Answers to January Tangles

1. The titles are: (1) Under Nelson's Flag. (2) How to Inflate a Football. (3) The Boy Who Thinks He Can't. (4) The Joy Claim. (5) A Conquering Hero. (6) My Four Years at West Point. (7) A Modern Knight. (8) The Lost Money Bag. (9) The Tripod Fox. (10) The Stuff of Captains. (11) The Boy From Poplar Cove. The required letters spell: New Years Day.

New Tangles

12. FEBRUARY F.

Write the words, as below defined, in their indicated places on the big F. The letters that will then come where the numbers now are are to be written on a chess board of eight squares each way. Place letter number 1 on the upper left square, and the rest, in numerical rotation, horizontally across the board, filling the top row, then the next to the top, etc.; letter number 64 thus coming in the lower right hand corner square. Letter number 65 is to be written outside the chess board below square number 59. Now commence with the letter on square number 1, read by the king's move, which is one square only in either direction, using each letter once only, ending with number 65, and obtain the name and date of birth of an American President.

37	61	43	39	47	5	48	16	63
10	—	—	—	—	—	—	—	17
	24	—	—	—	—	—	—	42
	40	z	x	23	26	6	—	21
	56	—	—	62			19	32
	64	—	—	53				
	55	—	—	28				
	36	—	—	11		4	3	
	34	—	—	30	45	—	38	
	14	—	—	29	—	—	9	
	31	—	—	27	54	—	59	
	15	—	—	12		1	2	
	22	—	—	18				
	50	—	—	35				
	33	—	—	7				
	49	—	—	13				
	58	—	—	57				
44	52	—	—	8	20			
60	46	51	65	41	25			

The words making up the F are thus defined: 37 and 10, a personal pronoun. 61 to 40, to detest. 43 to z, to harm. 39 to x, a rent. 47 to 23, the back of the neck. 5 to 26, to depict. 48 to 6, a game at cards. 16 to 19, a tree or plant whose root is used by Mexicans for soap. 63 to 32, to moisten gently. 56 to 62, a Roman emperor. 64 to 53, a baking place. 55 to 28, to throw lightly. 36 to 11, one of the great lakes. 34 to 38, the office of a dean. 14 to 9, a city on the Delaware. 31 to 59, to sprinkle over. 1, 2, 3 and 4, a county and county seat in Kansas. 15 to 12, a large tree of Java, fabulously invested with deadly influence upon whatever comes under its branches. 22 to 18, to tinkle. 60 to 35, a single thing. 33 to 7, a noise made by winds, waves or wild beasts. 49 to 13, a collection of dwellings, smaller than a city. 58 to 57, a flat utensil for carrying dishes. 44 to 20, a native of India. 50 to 25, to treat as if not known.

—Cleary Bullard.

13. BUNCH OF CHERRIES.

Interpret the eight words pictured on cherry A and place them in order on diagram A; then, the four words on each cherry, B and C, and place them on diagrams B and C, respectively. The numbered letters on diagram A, in order, spell the name of a president.

The numbered letters on diagram B, in numerical order, spell his natal month. The numbered letters on diagram C, in order, spell his native state. The diagrams also serve as a key to the number of letters in the required words.

14. BURIED TREASURE.

Find the reversed name of a precious stone in each sentence. 1. Every burnt child dreads the fire. 2. Down the street a gaily dressed procession was marching. 3. Do tell a portion of the story now. 4. On a similar occasion he varied the performance. 5. Eliza pottered around her flowers and was happy. 6. Quite often ragged clothes cover a warm heart. 7. The teacher gently but firmly rebuked him. 8. The little bird piped a joyful lay. 9. She called for a maid; no maid appeared. 10. No truth ever in the world? La, remember George Washington. —Frank C. McMillan.

15. FEBRUARY GEOGRAPHY.

(1) * - - - - - - -
(2) - 5 - - - 2 * 1
(3) - - - d - * - j
(4) * - - 6 - c - -
(5) - - - 7 - * - 3
(6) - * 1 - a - - -
(7) - - * h - b - -
(8) - - - * - 4 - -
(9) - * - g - - e -
(10) - - * - - - - -
(11) - - - * - - - f

The star path from top to bottom spells the patron saint of one February day; the letter path, in alphabetical order, the surname of a president born in February; the number path, in numerical order, the surname of another president born in February. The cross-words are geographical, as follows:

1. The land that gave us Robert Burns. 2. A gulf near Panama. 3. The Elm City. 4. An island that is a county of Wales. 5. A western Pennsylvania county seat. 6. An important eastern river that rises in a county, flows by a state and empties into a bay, each of the same name as itself. 7. A capital city, the most populous city on the Pacific side of South America. 8. The state in which Abraham Lincoln was born. 9. The state in which George Washington was born. 10. The county seat of a corner county of Utah. 11. A county and county seat of South Carolina.

—Leo J. Hahn.

16. DOUBLE ACROSTIC.

All the words have six letters. The initials spell the title and name of a European monarch upon whom the eyes of the world are now turned; the fifth letters, in order, the city in which he resides.

1. A dairy product, made from curd of milk. 2. A point directly overhead. 3. A Turkish city, east of Antioch. 4. Looking back with sorrow. 5. The sum of the number of chapters contained in Genesis and Exodus. 6. Impregnated. 7. Bright and cheerful. 8. Trustworthy. 9. The Wisconsin war eagle. 10. A coloring matter, used to tinge paper blue, to test soil, etc., for acid. 11. A conduit that conveys blood from the heart. 12. Unkempt, as hair or mane. —Ralph Williams.

17. PICTORIAL HYMN.

The first two lines of a well-known hymn; written at Elkhorn, Wis.

—J. P. Webster.

18. NAUTICAL PUNS.

Words spelled and pronounced alike, but differing in meaning, as defined. Example: A sailor; a product of the pine. Ans.: Tar.

1. A part of a ship; to box. 2. A part of a ship; a pack of playing cards. 3. A part of a ship; the fruit of forest trees as food for animals. 4. A part of a ship; an English river. 5. A part of a ship; an obeisance. 6. A part of a ship; to tumble over. 7. A part of a ship; to take passage in a ship. 8. A part of a ship; austere. 9. A ship's track; an Irish festivity while sitting up with the dead. 10. A part of a ship; a measure of length. 11. A rope used to fasten a boat; one who represents objects in color. 12. The master of a ship; the cheese magot. 13. A part of a ship; the roar of a cannon. 14. The ship's kitchen; a printer's tray. 15. A ship's flag; a certain naval officer. —C. Shore.

19. BLANK VERSE.

Fill the blanks as follows: The first and third blanks in each verse with words written alike but pronounced differently; the second and fourth blanks, with words written differently but pronounced alike. Example:

The OBJECT of this verse is just the same
As if I worked before you with a PLANE:
So don't OBJECT, pray, to my little game,
And try to make your answer very PLAIN.

1. I had a friend, the — of a Prince,
Who never questioned my superior —.
And would — himself, and never wince,
When sometimes I imposed some mystic —.

2. He could not — himself away from me,
Though sometimes running like a hun'ed —,
When in mine eyes a rising — he'd see,
Which would spring up for some departed —.

3. His — anywhere would cause a wond'ring gaze,
When first he stepped upon the —;
He did — us with his princely ways,
And a more graceful man is seldom —.

4. But now the — comes up with violent roar,
And indicates there soon will be some —;
So I'll — up this lay and cease to soar,
And yield once more to common prose its —.

—Benjamin L. Miller.

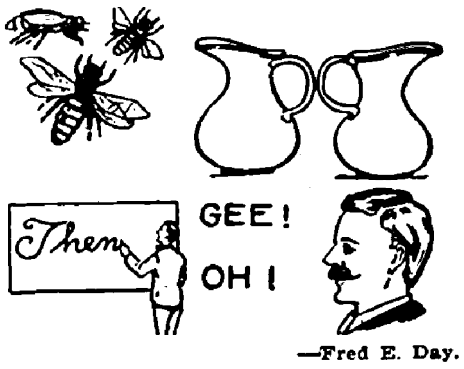
20. ANAGRAMS.

Maiden names of wives of certain Presidents. 1. A big mail, this. 2. Raid the cow. 3. I call 'em crazed. 4. Ha, ha, no hens. 5. Idle jaunt. 6. Pelt no Japan seamen. 7. M. S. Seaman, N. Y. 8. Let it sit in a chair. 9. Tom Ray, D. D. 10. Said no tax.

—Allert Brager.

21. MOTTO REBUS.

Every boy knows this saying of Davy Crockett's.



—Fred E. Day.

BOYS! Get ready for Spring and Summer Games. Earn one or more of these nice premiums.

Get NEW subscriptions to THE AMERICAN BOY. Your own can not be included in earning a premium, neither can a renewal subscription. Yearly subscription price $1.00.

No. 400.
REACH PROFESSIONAL BALL.
Made regulation size and weight, of good material, good quality Horse Hide Cover. A first-class ball for amateurs.
Given for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price 85c, postpaid.

No. 401.
REACH LACED YOUTH'S CATCHER'S MITT.
Is made of fine Buck Dressed Drab Leather, Patent Hump, Patent Laced Thumb and Patent Deep Pocket.
Given for 1 new yearly subscription. Price 50c postpaid.

No. 402.
REACH LACED CATCHER'S MITT.
Made of fine Olive Tan Leather, face and finger, brown tan back and strip. Patent hump, patent laced thumb, and patent deep pocket, strap and buckle at wrist. Something extra fine.
Given for 2 new yearly subscriptions, or for only 1 new yearly subscription and 45c. Price $1.25 postpaid.

No. 403.
REACH LACED FIRST BASEMAN'S MITT.
Is made of fine Craven Leather, Well Padded, Patent Laced Thumb, Patent Hump and Patent Deep Pocket, Patent Buckle at Wrist.
Given for 2 new yearly subscriptions, or for 1 new yearly subscription and 45c. Price $1.25 postpaid.

No. 404.
REACH BOYS' FIELDERS' GLOVE.
Is made of Fine Drab Asbestos Buck, Well Padded, Patent Hump, Webb Thumb and Patent Deep Pocket.
Given for 1 new yearly subscription. Price 65c postpaid.

We have used these goods for years as premiums and they give excellent satisfaction. They can be bought of us at prices named.

AT THE TIME when our story begins Shaggycoat was a two-year-old beaver, fleeing with his grandfather from he knew not what. They had been so happy in the woodland lake, which was their home before the terrible intrusion, that the whole matter seemed more like a hideous dream, than a reality.

When Shaggycoat thought of the old days and his family, he could remember warm summer afternoons upon clean sandbanks, where he and his brothers and sisters frolicked together. Then there were such delightful swims in the deep lake, where they played water-tag, and all sorts of games, diving and plunging and swimming straight away, not to mention deep plunges to the bottom of the lake where they vied with one another in staying down. Then when they were hungry the bulbs of the lily and a cluster of wild hops made a dinner that would make a beaver's mouth water; with perhaps some spicy bark added as a relish.

Then came the cold and the pond was covered with ice. They could still see the sun by day and the stars by night, but they could not come to the surface to breathe as they had done before. There were a great many airholes, and places under the ice where the water did not reach it, but for breathing space they had to depend to a great extent upon the queer conical houses in which they lived and their burrows along the bank.

There was still another way to breathe that I had nearly forgotten. A beaver or any of these little Water Folks can come up to the surface and breathe against the ice. A big flat bubble is at once formed and as it strikes the ice it is purified and then the beaver breathes it in again and it is almost as fresh as though it came from the upper air. This he can do two or three times before having to find an airhole or going into one of the houses or burrows.

The beavers were very snug under the ice which kept away the wind and cold, and also their worst enemy, man.

The breath of the family made the houses warm, and as the walls were frozen solid, and were two or three feet thick they were very hard to break into.

A store of wood had been laid up from which the bark was stripped for food as fast as it was needed, so that Beaver City had been very snug and comfortable, before the trouble came.

Then when they were sleeping through the short winter days, and prowling about the lake in the night in search of fresh twigs or sticks that had been frozen into the ice, the trouble began.

First there came the sound of pounding and soon there were holes in the ice near their supply of wood. Then occasionally a beaver who was hungry and had gone for breakfast was missed from the family, or lodge, where he lived. At first they thought he had gone for a swim on the lake and would soon come back, but when several had gone out to the winter's store and had not returned the truth dawned upon some of the older and wiser beavers. Their forest lake had been invaded by some enemy, probably man, and one by one the colony was being slaughtered.

There is but one thing to do at such a time and that is to take safety in flight, for the beaver does not consider that he can match his cunning against that of man.

While the beavers were still considering whether to go at once or wait another day, there were sounds of heavy blows upon the tops of their houses and then there was a loud explosion and the water began to fall. Then they fled in every direction, some taking refuge in the burrows they had dug under the banks all along the lake for such an emergency, while others sought to leave the lake altogether; some going up stream and some down.

But the destruction of Beaver City had been planned very carefully by their cunning enemy, man, and most of them perished while leaving the lake.

When the men who were watching on the ice above saw a beaver swimming in the water under them, they would follow upon the ice, going just where the beaver went. The beaver would stay near the bottom of the lake as long as he could hold his breath, but finally he would have to come to the surface for air, when the trapper would strike a hard blow upon the ice, stunning him, or perhaps killing him outright. Then he would cut a hole in the ice and fish out his unfortunate victim. It was from such perils as these, although they were not fully understood by the beavers, that Shaggycoat and his grandfather fled the second night of this reign of terror. They would gladly have gone in a larger company, with Shaggycoat's brothers and sisters and with his father and mother, but all the rest of their immediate family were missing and they never saw them again.

They went in the inky night, before the moon had risen. Silently, like dark shadows they glided along the bottom of the lake, which was still about half full of water, for the white man's thunder had not been able to entirely destroy the beaver's strong dam.

Shaggycoat's grandfather, being very old, and wise according to his years, took the lead, and the younger beaver followed, keeping close to the tail of his guide. They swam near the bottom and were careful to avoid the bright light of the great fires that men had built upon the ice in many places to prevent their escape.

By the time the moon had risen they were near the upper end of the lake. They at once took refuge in an old burrow that the trappers had overlooked and lay still until the moon went under a cloud, when they came out and crept along the bank, still going under the ice. When the moon appeared again they hid under the roots of a tree that made a sort of natural burrow. There they lay for all the world like the ends of two black logs, until a friendly cloud again obscured the moon, when they pushed on. Once the trappers came very near to them when they were hiding behind some stones, waiting for a friendly cloud, and Shaggycoat was about to dash away and betray their whereabouts to the trappers. But his grandfather nipped him severely in the shoulder and he kept still, which alone saved his fine, glossy coat.

They were now getting well up into the river that had supplied their lake, and it was not so easy to find breathing places, as it had been in the lake, where the water was low. But they could usually find some crack or crevice or some point where there was a few inches between the water and the ice where they could fill their lungs before they journeyed on.

They had come so far and so fast that poor Shaggycoat's legs ached with the ceaseless motion. But the older beaver gave him no rest, but led him on and on, swimming with easy, steady strokes.

Although his own legs were weary and a bit rheumatic, he valued his life more than he did his legs, and so set his teeth and breasted the current bravely. They both held their forepaws close up under them and used their hind legs entirely for propelling themselves, so these had to do double duty, plying away like the screw wheel on a great steamer.

When Shaggycoat remonstrated against going any farther, saying, in beaver language, that his legs were ready to drop off, his senior reminded him that his skin would drop off if they stopped, and with a new, wild terror tugging at his heart he fled on.

When daylight came they had covered five good English miles up the river, and were nearly eight miles from their dam and the beautiful woodland lake that had been their home.

Then the old beaver began looking for some burrow or overhanging bank, where they might hide during the day and get some sleep, of which they were in great need. Finally they found a suitable place where the bank had shelved in, leaving a natural den, high and dry above the water. Here they rested and passed the day, getting nothing better to eat than a few frozen lily stems and some dead bark from a log that had been frozen into the ice. The dry, lifeless bark was not much like the tender, juicy bark that they were used to, but it helped a little to still the gnawings of hunger, and in this retreat they soon fell asleep and slept nearly the whole of the day.

But the older beaver was always watchful, sleeping with one eye open, as you might say, and waking very easily.

Once, when he was awakened by a sense of danger, he saw a large otter swim leisurely by their hiding place and his heart beat hard and fast until he was out of sight, for he knew that if the otter discovered them he would at once attack them and the battle would probably end in his favor.

Shaggycoat would be of little help in a real fight for life and the old beaver was far past his prime, his teeth being dull and broken. When the otter was out of sight the watchman lay down and resumed his nap.

When Shaggycoat awoke, he knew it was evening, for the stars were shining, he could see them plainly through the ice, which was quite transparent.

His legs were cramped and stiff and there was a

gnawing sensation in the region of his stomach, but there was nothing in sight to eat. His grandfather informed him in beaver language that there were weary miles to cover before they could rest again.

As soon as it was fairly dark they came out from under the overhanging bank that had shielded them so nicely during the day and resumed their journey, swimming like two ocean liners, on and on. Their track was not as straight as that of the boats would have been, for they dodged in and out, going where the darker ice and projecting banks gave them cover, and stopping when they scented danger.

When they had gone about a mile they found a spot where the river had set back over the bank, freezing in some alder bushes. Upon the stems of these they made a scanty meal and went on feeling a bit better. This night seemed longer and wearier to Shaggycoat than the first had. He was not so fresh and the first excitement was over, but the old beaver would not let him rest, as he knew their only safety lay in putting a long distance between them and their destroyers.

They were not so fortunate in finding a hiding place as they had been the day before, but they finally took refuge in a deserted otter's burrow, which made them a very good nest, although it was possible that some wandering otter might happen in, and dispossess them.

When night again came round they made a light supper on frozen lily stems and pushed on. They covered less distance that night than they had done before, for both were feeling the strain of the long flight. So they rested frequently and took more time to hunt for food.

About daybreak of this third night of their journey, they found an open place in the ice where the stream was rapid and went ashore, where they soon satisfied their hunger upon the bark of poplar and birch.

When they had made a good meal, the prudent old beaver, assisted by Shaggycoat, felled several small poplars and cutting them in pieces about three feet long dragged them under the ice to a protected bank and hid them against the time of need, for he had decided to spend a few days where they were, getting rest and sleep, which they both needed.

II

For two or three weeks the beavers kept very quiet in their new retreat, only going out at night, which is their usual habit. They replenished their food of birch and poplar bark frequently by felling small saplings, cutting them up in pieces about three feet in length and then securing them under the ice.

This was great fun for Shaggycoat, who had never done any work before, and he loved to see the tall saplings come swishing down, but it was no fun for his grandfather, who was getting very old. The long flight, and loss of sleep and want of food had been too much for him, and he did not recuperate as quickly as the two-year-old.

One day just at dusk, Shaggycoat thought he would steal out and fell a tree for himself. His teeth fairly ached to be gnawing something. So he slipped away from his grandfather and paddled out to the open spot in the ice. Although he is a great swimmer and is only excelled by the otter, the beaver does not swim like other quadrupeds, for he holds his fore feet up under him, and works his powerful hind legs like lightning. As the feet are broad and webbed and he strikes at a slight angle, he propels himself through the water with great velocity.

As Shaggycoat neared the open place in the river where the water ran swiftly and it was easy to clamber out on the bank, a queer feeling came over him.

He was not afraid to go out alone, although his grandfather had always gone with him. It was only a few steps. Nothing could harm him. But something seemed to hold him back and fill him with a sense of danger. Then he happened to glance up and close to the opening in the ice, he saw a large gray animal crouched, watching the hole intently.

The stranger was two or three times the size of Shaggycoat, as large as any beaver he had ever seen. But he was not a beaver. His forepaws were too long and powerful, his head, with tipped ears, was too flat, and his eyes were too cruel and hungry. The longer Shaggycoat looked at the fierce animal above him on the ice, the greater grew his fear, until he fled at a headlong pace to the overhanging bank, where his grandfather was sleeping. His precipitate flight into the burrow awoke the old beaver, who slept lightly and was always watchful.

When Shaggycoat related his adventure the old beaver looked troubled, and combed his head thoughtfully with the claws upon his hind leg. After dusk had fallen and the stars appeared he carefully reconnoitred, leaving Shaggycoat in the burrow. After half an hour's time, he returned and his manner was anxious.

He told Shaggycoat that they must not use the opening in the ice any more or go upon the land, for a lynx had found their hiding-place and would watch by their front door until he dined upon beaver meat. They must start that very night and go farther up the river and find a new opening, and even then they must be cautious. This was sorrowful news for them both and the younger beaver remonstrated against leaving their fine store of bark, but he got a sharp nip in his ear and was told to keep his advice until it was asked for. So after making a hearty supper they went sorrowfully upon their way to find a new open spot in the river, where the lynx should not be watching for them.

They went only about a mile that night, but found several open spots. The ice was getting ready to break up. At last they found a place that suited them and dragged themselves up under a sheltering bank, near a rapid, that afforded them a chance to go in search of food. Then the old beaver slept long and sound, leaving Shaggycoat upon guard, with orders to wake him if anything uncommon appeared.

The young beaver did not like these silent vigils and the hours seemed very long to him, but he did as he was told. He thought his grandfather never would wake, but at last he did, late in the afternoon. But they did not go ashore for bark. It was too dangerous, the older beaver said. So they had a slim supper of frozen lily pads. But this was not enough for the hungry stomach of Shaggycoat, who gnawed away at some tree roots that pierced the bank where they were hid. It was not as good as the fresh bark of the birch, but it filled him up and made him feel better.

If Shaggycoat had been older and wiser, he would have been alarmed at the old beaver's symptoms. But he was young and thoughtless, and knew not of age, or the signs of failing life.

At last the spring freshet came and the ice in the river broke up. Then they had to look for a spot where the bank was very high so they would not be drowned out. It was a long and arduous search to find the right spot, but at last it was found just in time, for the old beaver's strength was nearly spent.

Once the Trappers Came Very Near

But every day that the snow melted and the ice went out of the river, food for the beavers grew more plentiful and the sunshine and hope of spring made them glad.

Shaggycoat was now left to himself to swim in the river and feed upon the bark of saplings along the shore. The old beaver was too tired with the long journey to venture out of the burrow they had chosen. He gave Shaggycoat much good advice, and among other things told him to always keep close to the water, where he was comparatively safe. While upon land, he was an easy prey of all his natural enemies. The peculiar angle of his hind legs made it impossible for him, or any other beaver, to travel much on shore, while in the water they were his safeguard.

These were delightful days for the two-year-old. The water was getting warm and the mere act of swimming filled him with delight. Besides it seemed like a very wonderful world in which he lived. He had come so far and seen so many strange things. He wondered if there were other rivers and if they were all as long as this one.

One spring morning when the air was warm and balmy and birds had begun to sing in the treetops along the bank, Shaggycoat went for a swim in a deep pool. It was not his custom to be abroad in the daylight, for beavers as a rule love the dark and do most of their work in inky darkness, but the two-year-old felt restless. He must be stirring. His grandfather was too old and stupid for him, so he went alone.

He had a delightful play and a good breakfast upon some alders that grew in a little cove. He stayed much longer than usual, so that when he returned the sun was low in the west.

He found his grandfather stretched out much as he had left him, but there was something peculiar about him. He was so still. He was not sleeping, for there was no motion of the chest and no steam from the nostrils. Shaggycoat went up to him and put his nose to his, but it was quite cold. Then he poked him gently with his paw, but he did not stir. Then he nipped his ear as the older beaver had so frequently done to him, but there was no response.

He would wait; perhaps this was a new kind of sleep. He would probably wake in the morning, but a strange uneasiness filled Shaggycoat. He was almost afraid of his grandfather, he was so quiet and his nose was so cold.

He waited an hour or two and then tried to wake him again, but with no better success. This time to touch the icy nose of the old beaver sent a chill through Shaggycoat's every nerve, and a sudden terror of the lifeless, silent thing before him seized him.

Then a sense of loss, coupled with a great fear, came over him and he fled from the burrow like a hunted creature. He must put as many miles as possible between himself and that sleep from which there was no awaking.

The river had never seemed so dark and uninviting before, nor held so many terrors. His grandfather had always led the way and he had merely to follow. Now he was to lead. But where? He did not know the way, but that silence and the terror of that stiff form with the cold nose haunted him as he fled on.

Morning found him many miles from the shelving bank where the old beaver had been left behind.

Shaggycoat feared the river and all it contained. The world, too, was strange to him, but most of all he feared that silent form under the dark bank.

From that day he became a wanderer in the great world. He went by river courses and through mountain lakes, always keeping out of danger as well as he could.

Many scraps of good advice he now remembered which had been given him by his grandfather. Perhaps his grandfather had felt the heavy sleep coming upon him and had given the advice that Shaggycoat might take care of himself when he should be left alone, or maybe it was only an instinct that had come down through many generations of aquatic builders. But certain things he did and others he refrained from doing, because something told him that it would be dangerous.

Other bits of information he gathered from sad experience. Many things befell him that probably never would, had he been in company with wiser heads. But he was an orphan, and the lot of the orphan is always hard.

These are a few of the lessons that he learned during that adventurous summer:

That the water is the beaver's element, but on land he is the laughing-stock of all who behold him. That in the water is comparative safety, but on land are many dangers. That the otter is the beaver's deadly enemy, always to be avoided if possible. That minks and muskrats are harmless little creatures, but not suitable company for a self-respecting beaver. That sweet-smelling meat for which you do not have to work is dangerous and bites like a clam, holding on even more persistently.

These and other things too numerous to mention Shaggycoat learned, some by observation and some by personal experience.

At first the summer passed quickly. There were so many things to see, and so many rivers and lakes to visit, but by degrees a sense of loneliness came over him. He had no friend, no companion. He was positively alone in all the great world.

(To be continued.)

HAS SUCCESS AN AGE LIMIT?

ONE OF THE common "saws" of today is that "this is the age of young men." This phrase we are constantly meeting in the literature put forth by a certain class of magazines, and it has also become a part of the stock in trade of popular lecturers. Analyzed, it is meant to express the belief that in all the active pursuits of life, the young man is in the saddle; that the young man of this age has his hand on the throttle of the world.

And yet young men play no greater, no more prominent part in this generation than they did in others. Luther in the sixteenth century, Newton in the seventeenth, Napoleon and Pitt in the eighteenth, and thousands of others—dating from the present back to Alexander the Great, who conquered the then known world before he was thirty—bear witness that the young man of ability, of initiative, is not the peculiar creation of this generation, but common to all time. In estimating the success of young men in past centuries, we must judge them by the achievements which mean success in their own age, not by what means success in ours.

The secret of success has never been a matter of age. A man may be old or young, and fail. Success depends upon the quality of a man's ability and the steadfastness of his purpose. Men of ability and moral strength have won success at fifty as often as have men of twenty-five. It is simply a question of paying the price. If a man is unwilling to pay in time, skill, patience, the price demanded to attain a certain end—no matter whether he be twenty-five or seventy, he will fail. The young man who starts out with the idea that in the active affairs of life the old men are on the shelf, makes a mighty big mistake.—The Technical World.

TWO GOOD RULES.

1. Never put off till to-morrow what you can do to-day.

2. Never trouble another for what you can do yourself.

A Large Gray Animal Crouched, Watching the Hole Intently

Stories Out of My Own Life

By THE EDITOR

No. 5—My Last Game of Ball

YOU MAY have suspected from something I have said that baseball was my favorite game in my youth. True, it was. Others might choose hunting, or boating, or cricket, or football, or kites, or fishing—but for me, baseball every time.

And I have never gotten over it. I like even yet, old as I am, to see a good game of baseball as our American boys play it in an open town lot—and some days, too, I slip away from business to sit on the "bleachers" and watch the professionals, ofttimes finding myself "rooting' myself hoarse for my home team, though I know not a single one among them even by name, and I realize that not a man of them belongs to my home city but is hired for money by some company that makes a business of it for the profit there is in the gate receipts. But I can't help it; it is bred in the bone.

Long after my ball-playing days were over, I found myself secretly longing to get into the game, but having grown to manhood, gone into business, married and "settled down," I felt it was unbecoming, to say the least, for me to don a baseball suit and be one of a nine.

I am a true American, and we Americans do not carry athletics quite so far as do our English cousins. An Englishman counts it no letting down of his dignity to play cricket at any age; indeed, every Englishman is more or less of an athlete as long as his legs carry him; but we Americans, once we become absorbed in business, are apt to leave the sports of our boyhood as being things suited only to boys, and to think we condescend very much, if once or twice a season we sit out a ball game. Indeed, we soon begin to grumble at the time and money the young fellows spend in sport and prophesy that the craze for athletics is going to end in a bad state of affairs.

I must confess that I got on my dignity quite early. From being an ardent follower of the game—a player who would forget his meals on Saturdays to play all day—I developed at once on marrying into a typical American business man, with a mind for business only and no time for sport.

But I must tell you about one game of ball that I played long after I had entered business and at a time when I supposed I had given up the game for good. It possesses additional interest for me, too, in that it was the last game of ball I played.

I am not going to tell you how old I was when I married, but the game in question took place just five days after the eventful day when I became a Benedict.

It came about in this way:

It was in the month of June, just when weddings and baseball are both in full swing.

I had just been married to a young woman in a city several hundreds of miles away from my home, and I had done what every fellow sooner or later does after he "gets married"—I had taken my young bride home to show her off to "the folks."

To my great gratification there was to be a ball game the day after my arrival, between the Stars, the old team in which I had years before been a player, and a nine from a visiting town. Our village was all astir over the game for it was the third of a series, and the first two games had broken even.

The boys importuned me to go into the game, but I laughed at them.

"I play ball!" I exclaimed. "I haven't played in five years. Then I have just been married and am visiting. I have nothing to wear but my new shoes, my long-tailed black coat, and my silk hat. A sorry figure I would cut. Why, even if I could find clothes of the right kind I would be laughed off the field by the small boys, for I couldn't hit a ball as big as a balloon. No, I have quit playing ball. Excuse me! But I will be on hand to see the game. I will bring my wife and we will root for the Stars, you may be sure. My wife knows all about the Stars. I have told her about the old nine and how I played captain and catcher season after season, till she thinks you are some kind of wonderful beings greater than mere men. You must not disappoint her. No. We'll join the crowd along the foul lines and you'll hear my 'whoop.'"

So I didn't go into the game. I just put on my silk hat, my Prince Albert coat, my light trousers, and my patent leather shoes, and with my wife all dressed in pretty white, we went to the game.

Everyone and his cousin was there, and everyone was eager and excited. It was to be a hot game and no mistake. The visitors were a husky lot. The pitcher was a muscular leviathan, the catcher a broad-shouldered chap with hands big enough to catch a cannon ball, the first baseman a six-footer; and the rest of the nine matched up well with these.

The game began. Runs were speedily made, for that was the day of bounding balls, long hits and big scores, but for some reason, unaccountable it seemed to me, the visitors made all the runs. They were good fielders, good base runners, good batters, but so were the Stars. The umpire was fair, but goose-egg after goose-egg went on to the scorer's tally sheet to the credit of the Stars. Our townspeople were at first uneasy, then surprised, then chagrined, then disgusted; finally they began to applaud the visitors, while all the small boys began to nag our men by

I Just Put on My Silk Hat . . . and We Went to the Game

calling them names and poking fun at their every play. Then the Stars became demoralized—"rattled," as the boys say, and it looked like certain and disgraceful defeat. I became interested early in the game, and then anxious. Were these the boys I used to win games with? Had they lost all their cunning? I left my seat with a bevy of young men and women among the spectators, and regardless of the small boys' shout of "Shoot the hat," "Who is the guy?" "Put him off the grounds," I hurried over to the little group of disconsolate, discouraged Stars who were watching one of their number strike out, and I said:

"What's the matter, fellows? Don't lose your nerve. There's three innings left. You can beat them yet. I have seen many a defeat turned into victory in the last inning. Come, brace up!"

Many of the spectators were going home, disgusted with a score of 7 to 0 in favor of the visitors.

"It's no use," muttered the Stars' captain, "we can't hit the ball."

"You can hit the ball. You are just rattled. That's an easy ball—too easy. You are all hitting too quick at it. Take your time. Wait for the ball. He's pitching wild and if you wait you'll get bases, and in addition tire the pitcher out."

"But Shorty is done out. He's sick," replied the captain.

Shorty was the pitcher of the Stars.

"Then put Mayhew in his place," said I, for I had heard someone say the first baseman could pitch.

"But there'll be no one to cover first. We had hard work getting nine men to start with, and we have no substitute," the captain replied dejectedly.

"Then delay the game," I cried excitedly, for a thought had struck me and it came with the force of a trip-hammer. "Let somebody get hit—dispute the decisions—anything to give me a chance. I'll be back in ten minutes."

"You'll play?" shouted the boys, flocking around me.

"You'll see," I said, and off I sped in an undignified run toward my father's house, not five hundred yards away. Up the front steps I bolted, three steps at a jump, in the front door I rushed, then up a flight of stairs, and then another, into the attic. An old trunk—a relic, but in my early days a hiding place for my precious belongings—was stored in a dark corner. In a moment I had it out in the middle of the floor, the lid thrown back, and the stuff tumbled out. There was the old suit of blue, with the white star on the breast, the cap and the shoes, just where I had left them years before. My mother never destroyed anything that belonged to my boyhood days. And it had only been five years!

My silk hat, wedding coat, vest, trousers, shining shoes were off in a minute, and in another minute I had on the dear old Star uniform. I rushed down stairs, burst into the parlor to see myself in a big mirror, laughed a little at how I had grown, and then for the ball field.

Our boys had gone out in one, two, three order, and had taken the field, and now were coming in for their eighth inning at bat—score 12 to 1 against us.

I ran panting right up to the plate. No one of the spectators knew me. My own mother wouldn't have recognized me. My wife didn't, till I waved my hand to her.

A few words with the captain of the visitors showed him the situation—a sick pitcher, which was true, his withdrawal from the game, the first baseman to go in and pitch, and a substitute (myself) for first base. It was made plain I was no professional, and the game went on.

"Two innings, boys, and eleven runs to tie and twelve to win," I shouted. "Let's do it. Every man wait for his ball. Don't strike till you are sure. It's nine balls take a base and you can afford to wait. Tire 'em out, that's the way. Teaze 'em. Get the crowd going. Let me coach!"

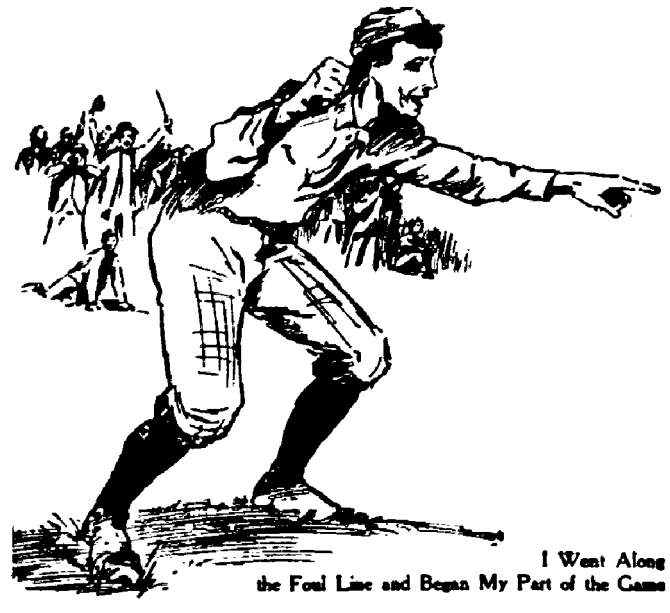
"All right," shouted the captain of the Stars, and down I went along the left foul line nearly to third base and began my part of the game.

I talked to the batter. I poked fun at the pitcher. I talked loud so the crowd could hear. I danced up and down. I ran around like one possessed. I mimicked the pitcher's motions. I stirred up the crowd, and had them laughing, cheering, shouting. The small boys whistled and yelled, and a perfect pandemonium ensued. I shall never forget it. I was back in my old game, on the old field, among the old boys and in the old uniform. "Bang" and a hit—a big biff that broke the bat, landed a man on second. I ran for the broken bat and waved part of it in the air, shouting like mad. The next man came to bat and, merciful goodness! he just lifted that ball into the air till it looked like a pewee hunting the stars. The short stop, the third baseman, and the pitcher, ran to catch it and smashed into one another, while the ball came to the ground with a thud inside the baseline and two men skipped around the bases like mad. I raced the first man in to the home plate, shook hands with him, patted him on the back and waved my cap.

"Keep it up. We've got 'em, boys. They're on the run," I shouted above the tumult.

A third man came to bat and fouled out.

"Put up another man, quick! Close up the ranks! That's nothing. Only one man out. Now, Chester, smash her into the cornfield," and will you believe me, he did, and he landed on third. Then another fury struck the crowd. We had our eyes on the ball at last. The pitcher was mad, he was dizzy, he couldn't see straight. His men were fumbling the ball, rolling over one another, saying mean things to one another, and this with their wild throws and mis-



I Went Along the Foul Line and Began My Part of the Game

judgments of flies made the eighth inning a slaughter with eight runs to our credit.

We jumped into the field quick. Every man cocked and primed to make the enemy's ninth a goose-egg or die in the attempt.

I was on first, still talking to the men—urging attention to every point, and calling on the pitcher to hold 'em down.

The crowd was now breathless with interest. No jeering, no sallies of wit at the expense of our men, no calling of names.

The visiting nine was unnerved, worried, weak. One, two, three of their men in succession in their last inning threw down their bats in disgust, and amid a torrent of cheers, our fellows rushed in from the field for the last attack.

"Play ball, boys," I yelled again from my station near third, "twelve to nine! three to tie, four to win!"

Our poorest hitters were to come first to bat. The first one hit the ball a long fly. A great shout went up and then collapsed like a bag of gas punched into a thousand holes when the long fly lit kerplunk in the hands of the center-fielder.

"Never mind," I yelled. "Get your bat quick, Bob, and smash it. Go for 'em, boys." The crowd was yelling like mad. Everybody was crowded along the two foul lines, and everybody was rooting. Small boys in front on all fours, bigger boys behind, and men and women bringing up the rear—long lines of eager, crazy people were a unit for us. Bob sent a safe one between third and short and slid twenty feet into first on the seat of his trousers. Then such a yell! Then came Skinny, our light weight. He had struck out every time. A frenzy of grit seized him. He set his teeth hard, and eyed that ball as it came towards his waiting bat as a snake eyes a bird it seeks to charm. Nobody breathed. What would Skinny do? What could he do? Hit it? I should think he did, and with the speed of the wind Bob landed on third. The ball had chased him there, but was thrown wild, and twisted out of the third baseman's hands.

"Go, go for second," yelled everybody to Skinny, and Skinny obeyed like a good soldier, and there on second he squatted fierce and exultant while the pitcher faced the next man at bat. The next man was unlucky and went out on a foul. Score 12 to 9, two out, two men on bases. Talk about excitement! The next man to bat got a base. Three bases full—two men out. A good hit would bring in two, a long drive would tie the game, and I to bat!

I have been in many trying places in sport and business. I have faced difficulties, problems, embarrassments without number, but oh, the feeling of that moment as I ran in to face that pitcher. I had not succeeded in making a hit since I entered the game. I was new, raw, unpracticed. I had been striking out—never getting within a mile of the ball. But nobody was unkind to me. Nobody cried, "Where did you get that hat?" The crowd just waited while I rubbed my hands in the dust, brushed off the home plate, got a grip on my bat and stood, every muscle tense, watching that ball in the pitcher's hands. For a brief moment I caught my wife's eyes and saw her flutter her handkerchief. I have often wanted to win victories for her sake. At that moment I would have given a year of life to hit that ball. And now it was coming. It looked as big as a pumpkin. It was coming slow. The pitcher was trying to fool me.

"One ball!" shouted the umpire. I had not struck. The crowd yelled. The impulse seized me to wait for balls and try to get a base. As quick as the impulse came it vanished. What! and miss the chance to win by a good hit? Jog along to first by the permission of the umpire and leave the next man to do the trick? Never!

Again the ball came—a good one. I struck and missed. Did I hear a groan? No, I heard nothing but the beating of my heart against my ribs. Then another came and I met it, fairly jumped for it, hit at it with all the strength my two arms could muster, and in as many seconds as it takes to write this sentence I was scrambling, tumbling, rolling and finally standing dirty, confused, bruised, but triumphant on third base, while the three men on the bases ahead of me scored and made the game a tie.

I didn't hear the bedlam of noise that followed, I just knew that a mass of crazy people crowded out on the foul line from third base to the home plate, and that a good strong batter was wielding the hickory. Two minutes later I crossed the home plate and the game was won.

That evening as I walked down the street with my wife I overheard a small boy say to another, "there he goes," and I knew I was a great man for at least a day.

That was my last game of ball. For two weeks after that I had to be helped in and out of bed, for there was not an inch of muscle in my body that wasn't twisted and bruised.

This only shows how near a man is to being a boy. Just give him the chance, put him in the old associations, stir him with the old battle cry, and staid and dignified, pompous and important as he may have grown, he'll throw dignity to the winds and be a boy again.

It shows, too, this game does, that it is well never to say die. "As long as there is life there is hope." More defeats come through lack of heart than through lack of brain or muscle, or skill. Napoleon made up his mind early never to be defeated. It made him the greatest general of his time and one of the greatest of all time. Mirabeau called "impossible" a blockhead word. Remember Sheridan at Winchester, and learn to turn defeat into victory.

There's a great deal in enthusiasm, too. The enthusiastic man knows no obstacles. Enthusiasm makes up for many a deficiency.

Learn, too, to help the discouraged, the dispirited, the loser. Cheer the faint-hearted. If necessary put your own shoulder to the wheel and push for them. Many persons go through life discouraging all around them, "knocking" everything, and never "boosting." Don't be a "knocker," be a "booster."

I Was Scrambling, Tumbling, Rolling

The Obedient Coins

Here is a trick that requires a little practice; but with a reasonable amount of skill you will find that it never fails after you have attained the deftness that you need for it.

When you have found that you can do it, you can amuse a party at any time, for all that you need for the trick is a shallow plate and a dozen coins, preferably silver quarter dollars.

Pile the coins neatly on top of each other in the plate so that they form a little pillar of silver, and then say to the company that the problem is to remove them from the plate and place them on the table just as they are, without touching them with the hand.

Of course, most of the party will laugh and declare that there must be a "catch" in it; but you assure them that there is nothing except a clever trick in the problem. Some of them may try it then; unless they know the trick, they will simply succeed in making funny failures of it.

After they have given it up, you lift the plate until it is about three feet above the table. Then bring it down about two feet smartly, but so steadily that the coins are not shaken, and then pull it swiftly toward yourself. The coins, owing to the simple mechanical principle of inertia, will not move with the plate, but will drop to the table in exactly the formation in which they were piled on the plate.

Tid-Bits of General Information

The canaries of Germany excel all other canaries as singers. One has been recorded to continue a single trill for one and one-quarter minutes, with twenty changes of note in it.

Finland has a larger percentage of wooded area, in comparison with its total surface, than any other European country. It leads with 51.2 per cent, while Great Britain has the smallest, or 3.6 per cent.

To such an extent does religion prevail at Gonoatoa, in the South Seas, that every man, woman, and child on that island who does not go to church at least three times a week is liable to be arrested and fined, the fine going to the king.

Anonymous Stories

We receive from time to time letters signed "One of your readers," "A subscriber," "A friend," etc., telling us of some act of heroism done by a boy, and asking us to print the facts as narrated. The editor desires to say that he will pay no attention to anonymous stories. Only such acts of heroism will be mentioned in the columns of THE AMERICAN BOY and rewarded by the Legion of Honor Badge, as are vouched for by evidence satisfactory to the editor, and this evidence must be the written statements of eye witnesses who are not afraid or ashamed to vouch for the truth of their statements by signing their names thereto.

Every Boy Should and Can Have the Latest Thing Out, a

POCKET KNIFE TOOL KIT

Any tool **firmly** attached to the Pocket Knife, as indicated by arrow, in one second by a simple backward wrist movement, and as quickly removed by a forward wrist movement.

More useful than any other Pocket Knife Combination ever made. With more or less frequency almost every one has use for a Knife, Reamer, File, Saw, Chisel or Screw Driver, and this outfit is so practical, yet so small, that the owner, by carrying it in his pocket, always has it at hand for immediate use whe her Camping, Boating, Teaming, Driving, Automobiling, Bicycling, in the Shop, Factory, Office, Store, Warehouse, on the Farm, or around the home. MADE BY SKILLED AMERICAN WORKMEN, of the best material

ONE-THIRD SMALLER THAN ACTUAL SIZE.

No. 1 Shows Leather **Pocket Book,**
4½ in. long
3¼ " wide
¾ " thick
Containing all of the tools illustrated, making a convenient case, easily carried in the pocket.

No. 2—Pocket Knife, 3⅞ in. long
No. 3—Reamer, 3½ in. long
No. 4—File, 4 in. long
No. 5—Saw, 4 in. long
No. 6—Chisel, 3⅝ in. long
No. 7—Screw Driver, 3¾ in. long

We will send this Pocket Knife Tool Kit, all charges prepaid for three new yearly subscriptions to THE AMERICAN BOY at $1.00 each, not including the sender's subscription; or we will send it for two new yearly subscriptions and 50 cents, or we will send it for one new yearly subscription and $1.00. The purchase price is $2.00 and we will send it anywhere in the United States, charges prepaid, on receipt of that amount. Address

Boy Lumbermen of the Northwest

By WALDON FAWCETT

A Typical Lumber Crew

Copyright, 1905, by Waldon Fawcett

IN THE northwest corner of the United States, in the great territory made known to white men just one hundred years ago by the explorers, Lewis and Clark, an army of men and boys is now engaged in the picturesque task of logging or lumbering the biggest trees in the world. Although the forest giants, which are being cut down in the States of Oregon, Washington and northern California, are so large that ordinary trees look like twigs in comparison, a considerable portion of the work of turning them into lumber is performed by lads who have not yet reached their majority. Some of these boys are the sons of veteran lumbermen who have come to this new "timber country" from Maine and Michigan where the lumber-yielding forests are almost exhausted, but a goodly proportion of them are natives of the Northwest,—boys who have grown up in the wonderful climate which appears to foster bigness and strength.

But some reader may be inclined to inquire how it is that mere boys can do so much of the work of handling monster trees which it might be supposed would tax the strength of the most powerful men to handle. The explanation is found in the fact that in the Northwest lumbering is carried on largely by steam power and of course a bright, intelligent boy is fully the equal of an older man in applying this force. Indeed, it may be explained that nowhere else on the globe are trees taken from the forests in the manner followed in this region—possibly because nowhere else is the lumber harvester confronted with trees from ten to twenty feet in diameter and towering to a height of from one hundred to two hundred feet.

The boy lumbermen of our north Pacific coast live, for the most part, in cabins, roughly constructed of boards and the location of which is changed several times each season as each successive locality is stripped of its trees and the lumber crew moves to a new scene of activity. It is a healthful life but it can scarcely be said to be an easy one. If a boy happens to be one of the lumberers assigned to prepare breakfast he must be astir each morning as early as 3 o'clock. Otherwise he is allowed to sleep until 4 o'clock or 4:30 o'clock, but in any event he must tumble out of bed as promptly as a West Point cadet when the rising signal is sounded. However, there is little danger that the young lumber workers of the Northwest will suffer from cold at any season of the year. Every boy who has ever visited or worked in a lumber camp in the east knows that in winter, with the thermometer registering many degrees below zero, frozen hands and faces are an every-day incident. In the Northwest, however, the Frost King is a rare visitor. Although this part of the country is as far north as Labrador the climate is very mild and winter brings rain instead of snow storms.

On the other hand the lumbermen of the Puget Sound country, if they are spared the biting cold of New England and the Middle West, are also denied the assistance which snow and ice renders the lumber workers in those localities. In Maine and Michigan and other lumber producing States east of the Mississippi, the trees are felled in the autumn and are sledded over ice roads in the dead of winter to the banks of streams down which they float when the snow melts in the spring. In the far Northwest, however, the trees, which may be felled at any time of year, are dragged from the forest to the waiting railroad cars which convey them to the mills by means of great wire cables, operated by engines so powerful that the tree trunks can be drawn through the forest despite the uneven ground and growth of tangled underbrush.

The work of cutting down one of the giant trees of the Pacific coast is one of the most interesting operations in the lumbering industry of the Northwest. The tree trunk is not severed at a point a few feet above the ground as is the custom with ordinary trees. The "swell" at the bottom of these forest monarchs is usually of a poor quality of lumber and so the tree is cut at a point perhaps ten feet above the ground, leaving a stump of that height. In order to render it possible to chop and saw through the tremendous tree body at this height notches are cut in the trunk and into these boards are fitted, forming shelves on which the lumbermen stand.

As the first operation of felling the tree, men with axes "undercut" by chopping about one-third the distance through the ponderous trunk. Then two men, each at one end of an eight-foot saw, begin operations on the opposite side of the tree and saw through the trunk to a point about ten inches distant from that where the choppers ceased work. With the tree completely severed, save for a "hinge," not more than ten inches thick, steel wedges are driven in and the towering giant is gradually forced over in the direction desired. Great care must be exercised in choosing the direction in which a tree shall be made to fall, lest the trunk in crashing to earth damage other good trees and possibly sustain injury itself calculated to lessen its value to the lumberman.

After the tree is down it is sawed into log lengths and these are dragged out of the forest by the wire cables previously mentioned. Great difficulty is often experienced in placing the big logs on the railroad trucks which are to carry them to the mills where they will be sawed up into the various forms of lumber in which they will reach the consumer. A log which will yield, say, forty thousand shingles, is too big and too heavy to be placed aboard any regular freight car. The only way to move it satisfactorily is to set it down upon pairs of railroad trucks provided for the purpose, and this is by no means a slight chore.

The stumps of the giant trees in the Northwest are frequently put to odd uses. At one point in Washington such a stump has been converted into a cosy one-room house, and another stump was leveled off and affords an ideal dancing platform on which a dozen couples can dance at one time. The lumbering of the giant trees has been going on for some time past, but it is probable that the National Congress will ere long put a stop to it. These giant trees are one of the world's greatest natural curiosities and President Roosevelt and other prominent men are strongly of the opinion that they should be preserved. To that end most of the forests containing the giant trees are being converted into national forest reserves or national parks.

Suggestion Regarding Shut-Ins

George C. Ogle, a Spencerburg, Mo., boy, suggests that when boys send any money to renew their subscriptions they each add five or ten cents or any amount they may be willing to give—the extra money to go to the shut-in fund to enable the publishers of THE AMERICAN BOY to furnish the paper to shut-in boys who cannot afford to buy it.

The suggestion shows our subscriber to be a boy of good heart; however, it does not meet with our approval. We shall be glad to have any one at any time send us $1.00 for an annual subscription to be given to a shut-in boy, whose name may be furnished by the one sending the money or by some other one. The looking after small remittances like five and ten cents we would prefer not to undertake.

CHAPTER I.

IN THE PIONEER days of Wisconsin a family named Wilkins removed from Ohio to that state and settled within a mile of the village of Midvale.

The family consisted of father, mother and two boys. The latter were aged fourteen and twelve, respectively, and their names were Joseph and Daniel. These names were shortened to Joe and Dan.

Mr. Wilkins took up land right in the unbroken forest, as many other men were doing at the time, and after building a log house he began pioneer life.

It would be hard for the boys and girls of today to understand the life of the pioneers of seventy or eighty years ago.

There was little money, and that little was hard to get. Carpenters and bricklayers, when they could find work at all, got no better wages than a dollar a day. The people wore the coarsest clothing and lived on the plainest fare, and it was all hard work with them.

While Joe and Dan were only young boys they were of much aid to their father in helping to clear up the land. They cut down the smaller trees, piled up the limbs and brush for burning, and when an acre or so had been cleared they helped to plant it to corn and turnips.

That was the food of most pioneer families—corn meal and turnips, with such wild meat as could be killed in the forest around.

After the first crop had been harvested and winter was coming on, an old hunter stopped at the Wilkins cabin one day. He was going to a town fifty miles away to spend the winter.

When he had partaken of a meal with the family and smoked a pipe, he said to Mr. Wilkins:

"Your boys will be of some help to you this winter in clearing up your land, but I think they can do better than that. I have thirty steel traps which I wish to leave with you for two or three months. I may not come back before spring.

"If you can feed and lodge me for two or three days I will tell the boys all about trapping. You have a river here at your door, and they should be able to catch many mink and muskrats. There are also coons, possums, wolves and foxes to be trapped in the forest. The furs will always find a buyer, and in this way you will profit far more than if you kept the boys at work with their axes."

It was plain to Mr. Wilkins that this was so, and the old trapper remained for a week. During this time he was out with the boys every day. He taught them how to set and bait a trap for every kind of animal taken in traps.

When through with the river he showed them how to construct deadfalls for the capture of wolves and foxes, and they had secured quite a number of skins before he took his departure.

That was a good winter for the family and an exciting one for the boys. They kept their traps out along the river, and their deadfalls in the woods, and not a day passed that they did not catch something.

Among the game were three wolves, a bear and four foxes, to say nothing of more than a hundred muskrats and five or six minks.

These furs sold for ten times more than the boys could have earned any other way, and with the money Mr. Wilkins was able to hire men to help him in his chopping.

It was late in the winter before the old trapper came back. When he had heard what the boys had done he said:

"That is very good, and it shows that you are smart boys. The trapping season is now about over, and during the summer you will work on the land again. I am going to tell you, however, how you can make enough money next fall to buy your own traps for the winter.

"Beginning in June, whenever your father can spare you for half a day, you want to become bee hunters. Here and there in the woods are wild swarms of bees. They take possession of dead trees, and I have known them to store up several hundred pounds of honey.

A BIG BEAR DROPPED TO THE GROUND WITH A GROWL AND MADE OFF.

Haven't you ever noticed bees flying about when you have been at work?"

Both boys answered that they had, and the old man continued:

"You must get your eye on one particular bee, and when he rises from a flower you must watch his flight. He will go straight to the tree where the swarm is. It may be a mile or two away. If you lose him, then watch another. You may have to watch half a dozen, but you will surely come to the tree in time."

"But how are we to get the honey?" asked Joe.

"You must locate and mark your tree. Then some night your father will cut it down for you. Bees cannot see in the night, but you will have some dry grass and limbs ready to make torches, and thus kill them off with the smoke. Any honey that you find will always sell for a good price. If you find a bee tree at any time in the summer, you must wait until about the tenth of September to cut it. Then the bees will have gathered their full store."

When spring came and Joe and Dan resumed their work in the forest they were constantly on the watch for the bees. As the warm weather drew on, the insects buzzed about in plenty, and before July came in the boys had located three bee trees. All of them were within a mile of the cabin.

In locating the third one they discovered that some one else was also in that line of business. As they approached the tree a big black bear that had climbed up to investigate dropped to the ground with a growl and made off.

They had been told by the hunter that bears were as fond of honey as human beings, and that they must look out that bruin did not get ahead of them.

CHAPTER II.

As fast as a bee tree was found, it was marked so that it might easily be found again, and for the reason that other persons were hunting them.

When the bees had about completed their store for the season, a night was chosen; and the trees cut down and the honey secured without much trouble.

From the three trees there came about three hundred pounds of nice comb honey. It was not as white and crisp as the clover honey of today, but the people at the village were glad enough to buy it.

September had come and almost gone when there came a warm spell of weather. One afternoon, as the boys were working with their hoes in the field they decided to "locate" one more bee tree, if possible.

They found a flower with several bees robbing it of its last sweets, and pretty soon they were off in chase. A loaded bee does not fly very high nor very fast, and it is possible for a boy with sharp eyes and good legs to keep him in sight for a long distance. If one bee is lost sight of, there will be others going the same road.

How far Joe and Dan followed the bee from the clearing they could not say. After a time they realized that he was making a long flight of it, and they were traveling over ground they had never set foot on before.

By and by the bee flew into a hollow far up on the side of a dead sycamore, and their chase was ended.

Joe had brought an ax and Dan a hoe. They placed their mark on the tree and were ready to make their way back when the afternon began to grow dark and the rumble of thunder was heard.

In their haste to get home before the storm broke they were not as careful of the direction as they should have been and they had not been running half an hour when Joe halted and said:

"See here, Dan, I think we are lost. Here is a hill and a creek I am sure we never saw before."

"But haven't we been going straight toward home?" asked Dan.

"I thought we were keeping a straight course, but we must have left it. The storm is close at hand, and the only thing we can do is to take shelter until it passes over."

They found a big tree with a hollow large enough to shelter both, and they had not been tucked away five minutes when the rain began to descend.

Before it had ceased to fall it was dark in the woods. The boys knew little about the forest, but they had been told that if it ever happened that they were lost, they must not get frightened and begin running, as a lost person is almost sure to do. He is always sure to go wrong then.

"We shall simply have to pass the night right here," said Joe after the storm had ceased. "We would not know which way to go if it were daylight, while in the darkness we would simply go 'round and 'round in a circle or get farther away from home."

"But there are bears and wolves in the woods!" replied Dan, as he began to whimper.

"So there are, but we will hope that they will not discover us. If they do, I will give them a taste of this ax. When morning comes we may hear a rooster crow or a dog bark to guide us in the right direction. If we don't, then we must try some other way. We must stay here all night, and it is no use to whimper."

"But won't father come with a lantern to look for us?" asked the younger brother.

"We can't hope that he will. In the first place, he does not know in which direction to look for us, and in the next he might get lost himself if he went prowling about the forest. We may be three or four miles from home, and a dozen men could not find us. Sit down and go to sleep if you can. I will keep watch and it may be that some time during the night I shall hear father calling."

It was an hour later when Dan fell asleep. There was room in the hollow for both to sit down, and the night came on dark and lonely.

The lads were both hungry and thirsty but there was no way of satisfying their wants until day came again. Dan whimpered himself to sleep at last, and for two hours Joe remained on watch and heard nothing to disturb him.

Then he heard the footsteps of some animal pattering over the leaves, and two minutes later a wolf howled. The beast had come across the tracks of the boys and followed them until he knew they were in the hollow of the tree.

The howl awoke Dan, and he cried out to know what was happening.

"It is a wolf," replied Joe, "and his howl has been answered by two or three more, and we shall soon have a number of them around us. I do not think they will dare attack us, but if they do, this is a first rate place in which to give them a fight. My ax is sharp and only one can come at a time."

"But father has always told us to climb trees if wolves got after us," said Dan.

"This tree has no limbs and is too big for us to climb. If we went looking for other trees in the darkness the wolves might rush upon us. There must be five or six around us now and more coming up every minute. Stand here in the doorway with me. While I use the ax you can jab them with the handle of your hoe. I tell you, brother, we are in a tight place, and must fight for our lives."

Looking out from the hollow they could see the shadowy forms of the wolves skulking about, and whenever a beast faced them his eyes shone like coals of fire. They were a hungry pack, but they were waiting to get their courage up before attacking.

CHAPTER III.

The attack of the wolves was not delayed long. When seven or eight had gathered they began circling around the hollow tree in which Joe and Dan had taken refuge, and suddenly the leader of the pack rushed straight for the opening.

Joe had his sharp ax upraised to deliver a blow, and when he brought it down the blade was sunk into the wolf's head and the beast rolled aside dead.

It was hardly a minute before another rushed and met the same fate.

The boys had been told that one wolf would eat another up as soon as killed or wounded, and here they had proof of it.

The wolves that had been struck with the ax were quickly dragged aside by the others and feasted on, and the savageness of the survivors seemed to be blunted by the meal.

They hung about for a time, licking their chops and growling, but all at once the howl of a wolf in the distance sent them scurrying away to be seen no more.

You may be sure that both boys were too excited to think of sleep during the remainder of the night, and that both were wide awake to every sound in the forest.

An hour after the wolves had disappeared a deer came treading softly over the leaves, but as soon as he got scent of the boys he dashed away.

Later, a bear came blundering along. He sniffed at the bones of the wolves and came within ten feet of the hollow tree and growled away to himself, but as the boys kept quiet he finally moved off.

That was the last disturbance of the night.

When daylight had fully dawned Joe and Dan stepped forth from their shelter and went down to the creek for a drink. Then they sat down on a log and Joe said:

"There has been no barking of dogs or crowing of roosters, and I am sure we are far in the woods. The bark of our own dog could be heard two miles on such a still morning as this. When we started to follow the first bee we went to the west. How we got off the track I cannot say, but we must have turned to the south. We know there are no settlers in that direction for many miles. We have got all turned around, but if we do not get scared I think we will come out all right. We

"WE ARE IN A TIGHT PLACE AND MUST FIGHT FOR OUR LIVES," SAID JOE.

have matches to build a fire, but how believe it. I have known of half a dozen shall we get something to eat?"

The question was soon answered. As they sat there a strange dog came trotting through the woods and stopped at their feet and made friends with them.

The boys knew every dog for three or four miles around their father's cabin, and they were sure they had never seen this one before. He was part hound, and the only way they could figure it out was that he belonged to some hunter in the woods.

They stood on the log and shouted at the top of their voices, hoping to hear a human voice in answer, but none came. Their shouts started a rabbit from a thicket, and no sooner had bunny started to run away than the dog was after him like a flash and soon picked him up.

A fire was made, the rabbit skinned and roasted, and although it was not much of a meal, the boys felt the better of it.

"Now, then," said Dan, when the fire had been trampled out, "let us see what the dog will do for us. Let him start off and we will follow, and I am sure he will lead us to some hunter's hut or settler's cabin."

"But I believe the dog himself is lost," replied Joe.

"I never heard that a dog could be lost, but it may be so. Let us keep quiet and say nothing to him, and see what he will do."

The dog lay down at their feet and seemed content for five minutes. Then he got up and whined and looked about him, and when the boys rose up he started off through the woods.

They followed, but not for long. He had not gone more than forty rods before they saw that he was turning about for the place they started from. This was proof that he was lost, and could not be depended on.

You may read in books that a dog cannot be lost in the forest. Don't you

cases where dogs became utterly confused.

It is true that you may take one fifty miles from home along a highway, and he will follow the road back, but that is because he has landmarks to guide him. A horse will do the same thing, and yet you leave a horse in the midst of a forest, and he is helpless to find his way back to the stable.

"He is no good to help us," said Joe, when the dog had made a failure of it, "and so we will try another way. We will take our hollow tree for a starting point. We will go east for a mile, blazing the trees as we go along. If we do not find familiar ground we will try the other points of the compass. Whatever else we do, we must not get frightened. You have got your lip up and there are tears in your eyes."

"We may have to stay in the woods another night, and the wolves may come again," whimpered Dan.

"And we may be home in time for dinner. Don't be a baby. Even if we are lost for a week we shall come out all right. Cheer up now, and help me to find a way out, and while I am busy with the trees you make friends with the dog. I don't want him to leave us."

While Dan stood by the hollow tree Joe started off to the east and walked as far as he could without losing sight of his brother. Then with his ax he chipped a large piece of bark off the trunk of a tree. Then Dan advanced to that spot and Joe went on again. They did not stop until they had gone a mile or more. The ground was still strange to them.

"We are not going right, and must return to the hollow tree and take another direction," said Joe. "Let us first play with the dog and get him to barking. It may be that some settler's dog will hear him and bark in answer."

(To be continued.)

BOYS' BOOKS REVIEWED

THE FORT IN THE WILDERNESS, by Edward Stratemeyer. In this the fifth volume of Mr. Stratemeyer's "Colonial Series," we renew our interest in the adventures of Dave and Henry Morris, that stout old hunter, Sam Barringford, the friendly Delaware, White Buffalo as well as the treacherous renegade Frenchman, Jean Bevoir. The story describes the rising of the Indian, Pontiac against the whites, and the thrilling experiences of those pioneer days are described with all the author's well-known vivacity. The reader gets here a good story as well as authentic history. The illustrations it is sufficient to know are by A. B. Shule. 306 pages. Price $1.25. Lothrop, Lee & Shepard Co.

DEERFOOT ON THE PRAIRIES, by Edward S. Ellis. This veteran writer for boys presents in this volume the second of his new Deerfoot series, and the reader's interest in the fortunes of that splendid Indian is fully sustained. Adventures and experiences of every kind among the ferocious beasts and hostile Indians of the plains fill the pages and the boys' nerves will tingle till the last word is read. J. Steeple Davis' illustrations in colors and black add to the book's attractiveness. 366 pages. Price $1.00. The John C. Winston Co.

DEERFOOT IN THE MOUNTAINS, by Edward S. Ellis. This is the third and concluding volume of the "New Deerfoot Series," and the reader's interest in the adventures of the brave, chivalrous young Shawanoe is kept up till the last. The fight between Deerfoot and Chief Taggarak and the meeting with Lewis and Clark will especially delight the young reader. 363 pages. Price $1.00. The John C. Winston Co.

MY LITTLE LADY IN WAITING, by Louise E. Catlin. No reader, old or young, will fail to be interested in and sympathize with lonely little Nellie Ross and rejoice with her in the good fortune which ultimately reaches her. A thoroughly pleasant, readable story, and the illustrations by E. Pollak are equally good. 283 pages. Price $1.25. Lothrop, Lee & Shepard Co.

HOW BARBARA KEPT HER PROMISE, by Nina Rhoades. Barbara and Hazel Lyndhurst, two little orphaned girls, of twelve and eight years of age, are sent from England to New York to live with their mother's family. Barbara had promised her parents to watch over and care for little Hazel, who has been much spoiled and is inclined to be selfish, self-willed and mischievous. How good, faithful, lovable Barbara keeps her promise in spite of all discouragements and difficulties is most interestingly told in the book, which is sure to be a favorite with its young readers. It is nicely illustrated by Bertha G. Davidson. 245 pages. Price, $1.00. Lothrop, Lee & Shepard Co.

DAVE PORTER AT OAK HALL, by Edward Stratemeyer. Mr. Stratemeyer is so widely and well known as the most prolific as well as one of the most interesting writers of books for boys, that anything from his pen is sure to please. The present volume is the first of a series to be called "Dave Porter Series," and tries to show the American boarding school and the boys who obtain their education at such institutions. The boys are ordinary schoolboys, some good, bright and clever, others somewhat the reverse, just as are to be found everywhere. Dave Porter, the hero, is a manly, straightforward young fellow whose career will be followed with pleasure by many delighted readers. The illustrations by Harid M. Brett are very good. 312 pages. Price $1.25. Lothrop, Lee & Shepard Co.

BEN PEPPER, by Margaret Sidney. As illustrating the wide popularity of the famous "Pepper Books," it is sufficient to state that the present is the tenth volume, and it fully maintains the well established reputation of the author as one of the most delightful and entertaining writers of books for young people that we have. The character of Ben, quiet, brave, true and dependable, is one that the boy and girl readers would do well to study. Altogether it is a worthy addition to the previous volumes. For the fine illustrations Eugenia M. Wereinan is responsible. 474 pages. Price $1.50. Lothrop, Lee & Shepard Co.

THE MEN WHO MADE THE NATION. An outline history of the United States from 1760 to 1865, by Edwin E. Sparks, Ph. D. In his prefatory note the author states that his book is based upon certain hypotheses, one of them being that: "The making of the nation is the story of the men who made it." The lives of the men chosen to illustrate and prove the proposition are: Benjamin Franklin, Samuel Adams, John Adams, Robert Morris, Alexander Hamilton, George Washington, Thomas Jefferson, Henry Clay, Andrew Jackson, Daniel Webster, Horace Greeley, Abraham Lincoln. The life work of each of these men taught better, deeper, wider and more generous ideas of national life than had been known before, and because of the practice of those ideas America today stands in the forefront of the nations of the the earth. The author has performed a good work in placing such a book before the public, and he who reads it will feel an increased pride in the country which gave birth to such men. The many illustrations of contemporary prints add greatly to the historical value of the book. The get up of the book is excellent. 415 pages. The Macmillan Co.

WHEN GRANDMAMMA WAS FOURTEEN, by Marion Harland. This is a sort of sequel to another of the author's books for young people, entitled "When Grandmamma was New," and will please and delight its readers as greatly as the former did. The glimpse of society in the south, the old-fashioned courtesy, courtliness and kindliness of manner and deed of the old Virginian ladies and gentlemen in the years "befo' the wa," are lovingly and eloquently portrayed, and the little touches of pathos and humor only serve to enhance the pleasure in the reading of such a thoroughly delightful book. The illustrations are by Etheldred B. Barry. 399 pages. Price $1.25. Lothrop, Lee & Shepard Co.

FRENCH PATHFINDERS IN NORTH AMERICA, by William Henry Johnson. Mr. Johnson's previous books "The World's Discoverers," and "Pioneer Spaniards in North America," amply fit him for the present work. The young people of North America of today cannot appreciate too much the unfaltering bravery and indomitable perseverance, as well as the importance of the discoveries made by such intrepid explorers as Champlain, Jacques Cartier, Father Jacques Marquette, Jean Nicollet and many others. The author has written the account of their discoveries in such plain and simple fashion as cannot fail to interest and inform. The first three chapters on the origin and distribution of the Indians, their social life, customs and tribal connections, and the copious index at the end of the volume are of great educational value. The book is illustrated with seven full-page plates. 347 pages. Price $1.50. Little, Brown & Co.

THE WINNING RUN, by Captain Ralph Bonehill. This is a baseball story with various incidents on the side. We have read books of a more exciting character, but the narrative is pleasing, the boys are good, healthy and manly, fond of fun and are clear grit all through. Altogether it is a satisfactory and enjoyable volume, and it is nicely illustrated. 315 pages. Price $1.25. A. S. Barnes & Co.

CHATTERBOX FOR 1905. To many thousands of little folks the Christmas joys would be incomplete if this time-honored volume were missing. Stories, essays, poems, puzzles and pictures all delightful as well as most interesting fill up the 412 pages of the book. Stoutly bound in illuminated board covers. Price $1.25. Dana, Estes & Co.

In the Inside Inn

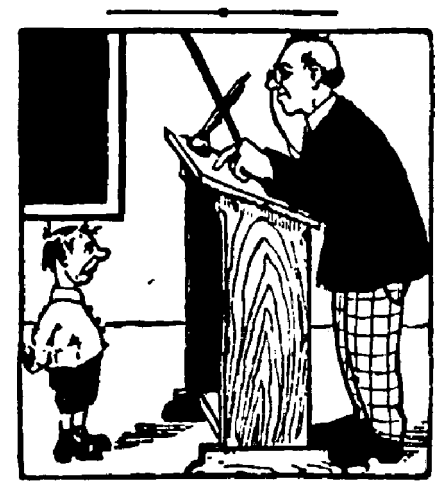
A visitor at the fair walked up to the inside clerk of the Inside inn and asked:

"Excuse me, sir; is this the Inside inn—and is the proprietor of the Inside Inn in?"

"Yes," replied the clerk; "this is the Inside inn, and you will find the proprietor of the Inside inn outside by the inn's side. He has kept the Inside inn for several weeks. Once on an ocean trip he couldn't keep his inside in, but that is inside information and he doesn't want it known outside."

"All right," said the inquirer, "If this is the Inside inn, we want to see its inside as well as outside before we look inside of any of the outside inns. If we like the Inside inn's inside and outside better than we like the outside inns' outside and inside, we may bring our things from outside inside and stop inside the Inside inn, because we won't have to go from the inside outside, or come back from the outside inside, but can remain inside or outside the Inside inn, it being the only inn inside of the grounds. The other inns are on the outside and furnish no more comforts inside or outside than does the Inside inn with exhibits close outside and inside, while those who stop in the outside inns have to go inside to get in and outside to get in their inn, so you see—"

But the clerk had fainted and fallen inside the Inside inn's desk, and bell boys were hurrying with water for his outside and medicine for his inside. In their excitement that which was meant for his inside was applied outside and that which was intended for his outside inside.—Magazine of Fun.



Schoolmaster (to Tommy, who has been called out for inattention to Scripture lesson)—Who killed Goliath with a stone?

Tommy—Please, sir, I saw Willie Smith throwing stones.—Scraps.

"Spotted Dog" a Dainty Sea Morsel

One evening my friend, the skipper, suddenly clapped his hand on my back and blithely announced that tomorrow would be his birthday.

"And, gee whiz!" he continued, "we must have some 'spotted dog.'"

This is always considered a rare treat aboard ship. Just why it is so regarded is as rare as a hen's tooth. "Spotted dog" is a sailor's term for plum pudding. In my wanderings around the world I have seen it served scores of times to celebrate some great event, and taken from the table untouched. Mayhap some young woman who is learning to cook would like the recipe, so here goes:

SPOTTED DOG; FOR TEN PERSONS.

Take about three-fourths of a bushel of flour in a large dish pan and add sufficient water to make a pasty dough. Do not knead it thoroughly, and do not add any yeast for fear it may rise when baking. When you have finished kneading, place the pan containing the dough against the wall, and step back about five paces. Take several heaping handfuls of dried currants and throw them with all your might and main at the dough. Those that hit the dough will give it a freckled appearance—hence its name. Place in a slow oven. If any of the currants miss fire, sweep them up and add while baking, as they give the dish a peculiar piquancy and zest.

I never knew a special occasion aboard a sailing ship when this concoction was not served as the piece de resistance. I have known passengers to fast for days and pass by every other offering on the table in order to whet their appetite for it, but I never knew one to eat it when it was set before him. Of all the edibles of a ship's cuisine, it is the most unpalatable. It might be replaced by lignum-vitæ or cobblestones.—Charles Sarka in Success Magazine.

Bill Nye's Cow Advertisement

Bill Nye, the humorist, once had a cow to sell, the story goes, and advertised her as follows: "Owing to my ill health, I will sell at my residence, in township 19, range 18, according to the government survey, one plush raspberry cow, aged eight years. She is of undoubted courage and gives milk frequently. To a man who does not fear death in any form she would be a great boon. She is very much attached to her present home with a stay chain, but she will be sold to any one who will agree to treat her right. She is one-fourth Shorthorn and three-fourths hyena. I will also throw in a double-barrel shotgun, which goes with her. In May she usually goes away for a week or two and returns with a tall, red calf with wabbly legs. Her name is Rose. I would rather sell her to a non-resident."

Alden, Iowa, January 7, 1906:—I received my January AMERICAN BOY containing the announcement that I had won the prize for answers to November Tangles, and this morning a check came, a very pleasant surprise and an acceptable birthday gift—today being my sixteenth birthday.

With best wishes, I remain a faithful reader, FRANK L. ROGERS.

A MODEL BOYS' CLUB

By the Head Worker, Major Sidney S. Peixotto, N. G. C.

The Crack Drum and Bugle Corps of Columbia Park Boys' Club

IT IS NOW fifteen years since I began to work among the boys. I was originally attracted to the work by the invitation of a dear friend, and it was as a result of this invitation that I became acquainted with a boys' club, and the possibilities that lay in such an organization. I was always of a temperament that I could not do anything in a half-hearted way, and so in the long years that I have been actively engaged in following this vocation I have made it my business to study and improve the boys' club idea. I feel that in presenting the Columbia Park Boys' Club of San Francisco to the notice of any set of readers, I am presenting one of the most intelligent expressions of the wonderful possibilities that lie in boys and in what they can accomplish.

I have always made it my effort to give boys what they want, not what people think they ought to have, and it has been one of the reasons of my success. The Columbia Park Boys' Club stands as an expression of what boys long for and love best. Under my leadership and with my energy back of their work, I have led them to express themselves far more intelligently than they ever could possibly think of doing if they were working by themselves.

A Group at the Summer Republic at Carmel-by-the-Sea, Showing the Camp Uniform

I found early in my career that boys are exactly the same as men, and that if left to themselves they develop just as commonly and just as one-sidedly as most men develop. I found boys who read only one author, for instance, until the last book of the hundred he had written was exhausted. I found boys who had no thought in life but baseball; other boys were crazy on cheap theatre going; others thought swimming the only thing in life. In fact, boys, as a rule, get into a bent mostly through the general tendencies of the gang with which they are associated, and there seems to be the end of their development. I started out with the purpose to develop the boys I came in contact with into what I would call "all-round boys," that is, that they should make use of all the qualities with which every boy born into this world is endowed. In the club which I organized, I established military drill for the sake of its training and its high order of discipline. We went into baseball under lines laid down by the highest thought in amateur circles; we began work in workshops because this is an appealing part of every boy's life; a part they enjoy the most; we took up singing because almost every boy that lives is endowed with an organ for this purpose of the most exquisite quality; we went into dramatics because dramatics is natural expression and has a fascination for every boy. We also began the gymnasium work so that boys in the earliest years could be taught how to logically develop their physical being. In the same way we took up, later on, band music, drumming, bugling, summer country walking trips; almost every phase of human expression is part of the work of today, and so in the long ten years since the Columbia Park Boys' Club has been established I have worked night and day to make this a demonstration of the wonderful possibilities that lie in the boys' world. People think that a boy is so dense and impossible that it is a difficult and thankless task, this interesting boys in themselves. Though the club is a neighborhood club, and we limit the membership to boys who live within a certain district five blocks square, we have handled in these ten years two thousand two hundred boys, some of whom have stayed through all trials and difficulties of these severe years of experience, and many of whom are now my leaders and teachers and best workers.

The boys in the neighborhood from the very start, arose in arms against this peaceable invasion. It seems to be the duty of every boy to appear indifferent and rebellious at the intrusion of any man who elects to dictate to them as to their mode of life and their individual method of living. Men who begin work among them meet with the fiercest opposition. The boys within the club make every effort to appear uninfluenced by his words or by his advice. They will most willingly accept all that is given them, but with the utmost outward appearance of being indifferent. They misunderstand his motives; they talk most unkindly about him on the street corners; they use every effort to make the teacher feel that his work is useless and of little meaning to them. This sentiment comes to a large extent because of the powerful influence which exists outside the club. The boys who do not belong to the club make every effort to make the boys who do belong feel that they are toadying and living under a foolish restraint. They are part of a system which boys make a particularly strong effort to undermine. We had, therefore, to create at the Columbia Park Boys' Club an alluring temptation. We had to make everything we did so positively appealing that there must be some excuse given for boys to retain their membership. I have always worked on the basis that there is nothing too good for boys. I have always realized that it costs great sums of money to raise good children. Boys must have the best of things to grow up to be the best of men and their idle hours, if it is possible to do so, must be made valuable to them. The first thought then, in our club, should be given towards its proper equipment. In the military department, for instance, I thought that the military uniforms should be of the very finest quality. There are ways of getting these by buying the cloth and employing a tailor to make them up, which allows one to work in this way, and I provided our military with suits of which the boys could really be proud. Before a year had passed the club owned two sets of fine baseball uniforms; we also provided every boy who went into the gymnasium with an inexpensive shirt and running pants, giving him the advantage of taking his physical work in a hygienic condition. Our chorus has always sung in a quaint black uniform that has been very much admired. We have gathered closets and closets of old clothes for the dramatic department. We have purchased the best kind of drums and musical instruments; in fact, everything to give each boy a chance to develop along lines best suited to his growth. We have made every effort to provide the boys of this club with such inducements that would make them feel proud of being members of the organization, and this to a great extent has been the attractive feature of the club and has held the attention of the boys within, and it has made the boys without agree that though they did not belong to the club, it was all right. I believe that in this particular the Columbia Park Boys' Club is distinguished from any in the country. It is true that there are much more elaborate club houses, and it is true that there are club houses where more boys attend, but it is not true that there is any boys' club work of this kind that has within it such wonderfully complete organization. It is a truism in San Francisco that whatever the Columbia Park Boys do, they do well. Our military band, for instance, is a well-balanced organization of boys who read music at sight, who are able to give concerts in which the music of the finest writers is interpreted; they have achieved a distinction in this regard which very few boys' bands ever attain. Our drum corps is not only noted for its cleverness with the sticks, but all the boys do is so different from the work of any other drum corps as to make it the aim of most drumming organizations in the city to equal it. Our chorus of boys has been maintained for five consecutive years; it has entertained this city's most cultured people, and one who has ever heard the boys sing will never forget the beauty of their work, the wonderful quality of the programmes sung and the charming work of the solo singers.

The stage work that has been developed in the club house has brought the club to be one of the largest entertaining bureaus in the city. We are called upon time and again each month to assist in fashionable charity entertainments, and it is generally the testimony that the work of the boys is the most entertaining part of the evening's performance. We have given military exhibitions with our splendid battalion before the Governor and his staff, and the Adjutant General, and in all military parades, the boys are always considered a pleasing feature. The gymnasium work of the club is able to compete with the best work of the German Turn Vereins or other gymnasiums of the city. It is really wonderful, the quality of the work these boys have attained in tumbling or in building pyramids, or in any other field that lies within the scope of the all-round gymnast. All over the coast of California the Columbia Park Boys' Club baseball teams are considered the very acme of boys' work in this line, and it is safe to say that the boys' team who meets the boys of this club would have the time of their lives if they could ever defeat them.

The manual training work which was originally simple shop work, has gradually developed until now the boys of the club are engaged in various lines of art expression which last year culminated in a display of their work in May in the leading art gallery of the city, and this display was visited in connection with an exhibit of paintings by a prominent artist of San Francisco, and was pronounced one of the finest expressions of what American boys can do if they are properly interested and properly led.

It must be remembered that all this work has been accomplished with what most people would call ordinary boys. The club lies in the city's district known locally as the "South of Market Street." It would conform, in a way, to a comparison with the East Side of New York. The population of the district consists largely of families of foreign extraction. The boys who come to the club are mostly schoolboys, and in the highest sense of the word, just fine healthy boys. They are as willing to learn about good things as about bad things; the only difficulty in their past has been that there is virtually nobody who takes interest enough in them to teach them what good things are: and, for this reason, the record of the district is that most boys grow bad because all the rest of them are and have been, bad. In the ten years that the club has been established, we have been able to see the school which is near to the club, completely change its character. Where once it was dominated by a rough element, it is now one of the best disciplined schools in the city, and it is especially true of the boy's yard. The club has been an influence in making the boys of the whole city look upon it as a model for which they must all aim. If a band is established in the city of San Francisco the one effort made is to equal that crack boy's band of the club, and the energy directed towards improving the

A Chess Game in the Reference Library

The DAISY Air Rifle

JUST the thing for the boy with red blood in his veins, who loves to feel the thrill of pleasure that comes from pressing the trigger of a real gun. That boy should have a Daisy Air Rifle. It trains eye, hand and brain *without danger*. Shoots with force and accuracy by means of compressed air instead of powder. Has hammerless lever action, perfect sights, genuine oval walnut stock, beautifully polished and nickeled steel barrel.

1,000 Shot Daisy costs $2

Other Daisy Models $1 to $1.75

Sold by dealers everywhere, or sent charges prepaid on receipt of price, direct from factory. The "Daisy" book free, write for it.

Mention The American Boy When Answering Advertisements

Company C, Captain John Lovell, the Champion of the Three Companies Composing the Battalion

boys of the city today is ten-fold to that given to the boys ten years ago.

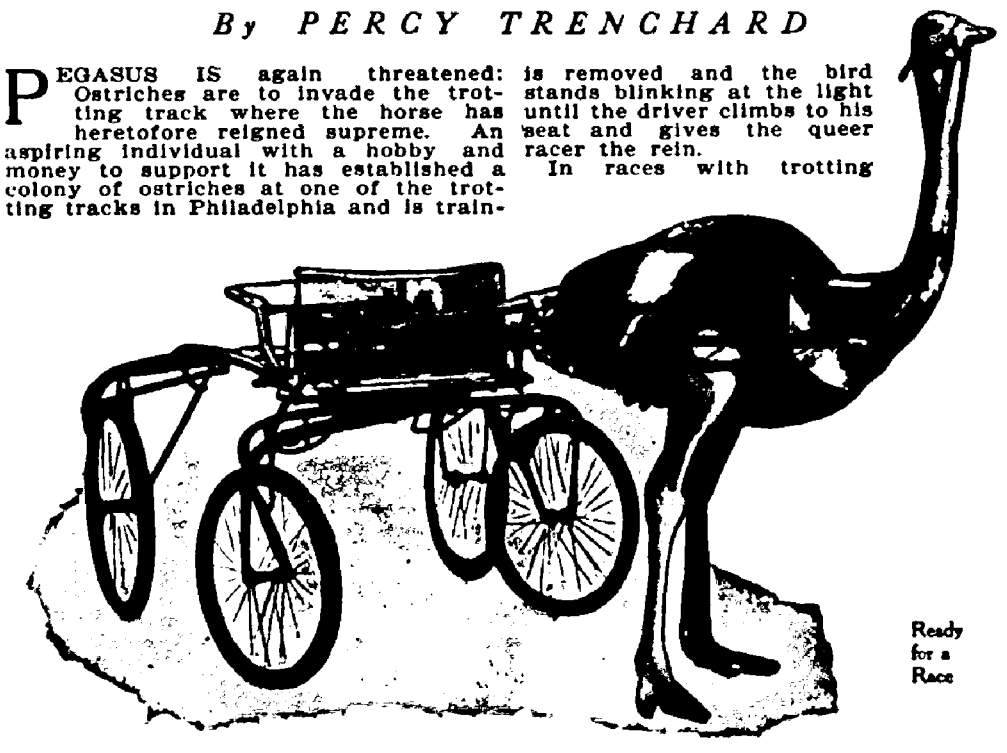
One of the great features of this club is, as I started out to say, that the boys of the club are not divided into a base-ball set, or a band set, or a gymnasium set. It is necessary in this club for a boy if he cares to amount to anything to be in everything. I could point to fifty examples of this condition. I could point to a boy who, besides being a model school boy, a model boy in his life outside the club, is a captain in the military department, is a leading member of the gymnasium, has won the 115-pound championship of the Pacific Coast as a wrestler, is the pitcher of the first baseball team of the club, has cleared nineteen feet nine inches as a boy in the broad jump, is a runner of no mean ability, and has been one of the most versatile boys in his work-room work we have ever developed, and besides this is an instructor in another boys' club gymnasium. He is but a type of fifty of the boys of the Columbia Park Boys' Club, all the leading members of which consider it their duty to be perfect in everything rather than a specialist in one thing. It is true that a boy who attains this perfection must be one who lives an almost perfect day and who must systematize his work so completely that every hour is used to its utmost advantage. We teach young boys this most valuable lesson in their earliest years, and this makes certain that the type of boy which comes out of this influence will be a man of more than ordinary character.

Ten years is just about time for any one man working along these lines to win his battle with the boys and prove to them that he is their master and able to lead them; to prove to them that his work and his word among them is for their benefit and that he can be trusted implicitly. This battle has been won. The present set of boys proves this positively in their life, in their devotion to the club, in their loyalty to the men and women who are the teachers, and in their giving up their personal self to further the work in the same way that we have devoted our time in the years gone by. Thus has come about the ultimate end that we had in view. With this splendid condition of affairs existing, it is the intention of this body of men and women to begin to establish other clubs in other neighborhoods We are establishing a home this year for men who are going to devote their time and energy to study this work, and from this interest in other neighborhoods it is hoped that at the end of the next ten years instead of only two hundred and forty boys who compose the present members enjoying this splendid influence in their young lives, we shall have two thousand marching in two regiments and spending their time in the same healthy atmosphere that the present club boys have learned to value and prize.

OSTRICH RACING

By PERCY TRENCHARD

PEGASUS IS again threatened: Ostriches are to invade the trotting track where the horse has heretofore reigned supreme. An aspiring individual with a hobby and money to support it has established a colony of ostriches at one of the trotting tracks in Philadelphia and is training the big birds to run to harness, with the firm belief that in time the trotting ostrich will oust the trotting horse from the racing field and give an entirely new aspect to the "sport of kings."



Ready for a Race

"Dey are sure de dumbest things ever," was the disgusted comment of the negro in charge of the ostrich colony, when asked what progress had been made in the breaking-in process. "Ostriches go contrary in eberyting. Horses turn the side the rein is pulled; ostriches insist on turning just de other way. So we let 'em turn and train 'em dat way."

Several of the ostriches in the stable are broken to harness, but nothing has been able to tame their wild spirit. When harnessed to the sulky and "given his head" the bird settles down to work and goes like the wind, covering the ground with prodigious strides in an amazingly short time and obeying the driver in making the turns and stopping when pulled up. But the agonizing part of the undertaking is getting the bird to submit to be harnessed, for he fights to the last, and only submits when the harness is actually on and fastened to the last strap and buckle. No matter how many times the operation is repeated, the ostrich is just as much opposed to the ordeal of harnessing. As the big birds are capable of striking a tremendous blow with their great legs, thrusting outward and downward and tearing the object of their anger with powerful claws, the stablemen at the ostrich colony have a wholsome respect for their charges and are ever on the alert when harnessing time comes.

One man or two, if two can be spared, hold the bird by neck and wings, taking care to keep out of the way of the possible blow from the leg, and a third man then blindfolds the bird by pulling a black hood down over its beak and fastening it around the neck. When the ostrich finds itself in darkness it becomes docile at once, standing perfectly still while the harness is hastily slipped on and the bird strapped to the sulky. Then the ostrich, still blinded by the hood, has to be pushed and pulled from the stable to the track, where the hood is removed and the bird stands blinking at the light until the driver climbs to his seat and gives the queer racer the rein.

In races with trotting horses, the trotting ostrich has almost invariably won, for the speed of the bird is wonderful. It is not intended by the owner of the trained ostriches, however, to race them against horses, but against one another. He honestly believes that as a sport ostrich racing will be one of the popular features when the birds are fully trained or as much so as their wild and untamable nature will allow.

As the ostriches are valued at about a thousand dollars each, the trainers have to be very careful in handling them, lest in the daily struggle to adjust the harness one of the birds suffers permanent injury. For this reason the men take a blow rather than give one in the scrimmage, and several can show scars where the big claws have caught them off their guard.

A small income accrues from the venture even while the birds are being trained, for ostrich feathers are always in demand and sell at substantial prices. Apart from this, however, the optimistic owner of the colony expects to reap a rich harvest when he turns his trotting ostriches loose on the sport-loving public. The new sport will at least have the charm of novelty, and the public that views the races from the stands will never know of the heart-breaking work entailed in training the ostriches to run to harness.

"That Stupid School"

"That stupid school!" said Henry, angrily. "A fellow can never do anything that he'd like to do. I wish there wasn't any!"

"Aha!" said his father. "Well, there is no better way to punish a person who wishes for something foolish than to let him have his wish. You may stay out of school as long as you wish."

"You're only joking, aren't you, sir?" asked Henry.

"No," said his father. "I am perfectly serious. I will be responsible to your teacher."

Henry was mad with delight. He rushed out and shouted to his comrades:

"Hurrah! Hurrah! My father says that I don't need to go to school unless I want to, and you may be sure I will never want to."

His comrades wished that their fathers would show as much sense and liberality as Henry's father, but as this was not to be they had to go into the school, while Henry ran off.

All that day he wandered around the streets, and hardly gave himself time to eat his meals for fear of missing something. On the second day he wandered around the streets again, but he was not nearly so much interested. On the third day he appeared in the house before noon, and picked up a book.

"Stop!" said his father. "You can't have books if you don't go to school!"

Harry put the book down and loitered around the streets again, but it was very tiresome. At last he found himself actually hanging around in front of the schoolhouse, and he stood there, wondering what the other boys were doing just then.

The next day was worse yet, and on the following morning he appeared at the breakfast table with his schoolbooks, ready to go to school.

"Got enough, eh, Henry?" asked his father.

"Yes, sir," said Henry, turning red. And his father laughed and nodded his head.

A Quibble

"That is, a quibble, a mere quibble," said Walter Camp, Yale's athletic adviser, in a discussion of football rules.

He laughed ironically.

"That reminds me," he said, "of the children of a friend of mine whom I visited in the summer.

"These children, two boys, got on none too well.

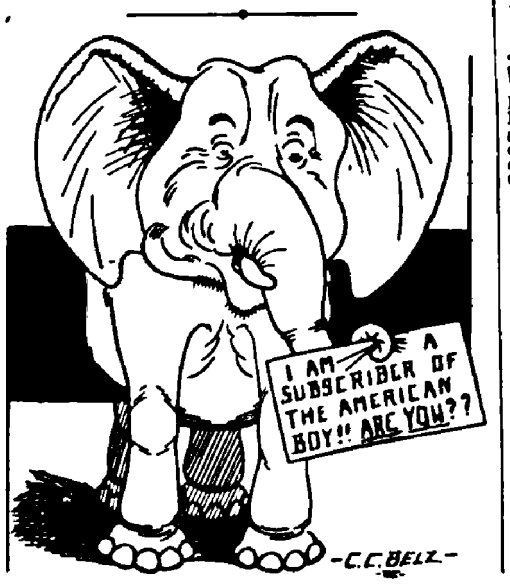
"'Here,' said their mother to the elder of them one day, 'here is a banana. Divide it with your little brother and see that he gets the lion's share.'

"The younger child, a few minutes later, set up a great bawling.

"'Mamma,' he shrieked, 'John hasn't given me any banana.'

"'What's this?' said the mother, hurrying in.

"'It's all right,' explained the elder boy. 'Lions don't eat bananas.'"—Rehoboth Sunday Herald.



$100.00 a Month Divided Among American Boy Canvassers

We pay liberal commissions to canvassers for subscriptions to *The* American Boy and divide $100.00 a month besides among the 39 agents who send the largest lists. A chance for everybody—boys, girls, men and women—to make money easily. Send for particulars to

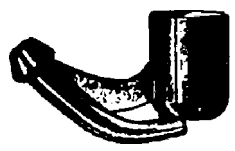
LATEST MUSICAL NOVELTY!
THE AURIONET



is the latest musical invention, combining flute, piccolo and ocarina, as well as other wind instruments. Nothing like it ever before heard of; it is hard to describe, for it is made on a new principle never before applied to musical instruments. When played with piano accompaniment effect is fine; a feature for concerts and entertainments; the youngest to the oldest can play any tune in a few minutes without practice, as being without key-holes, it requires no tedious use of the fingers; the notes are controlled and executed in the same manner as in singing. We will guarantee that you will be fascinated, delighted and surprised. Send for one today. Price only 25 cents, postpaid. The Aurionet Co., Dept. 4, Malden, Mass.

WANTED FIREMEN AND BRAKEMEN
FOR ALL NORTH AMERICAN RAILROADS
Experience unnecessary. Firemen $100, become Engineers and earn $200 monthly. Brakemen $75, become Conductors and earn $150. State age. Send stamp. Name position preferred. RAILWAY ASSOCIATION, Room 1, 227 Monroe Street, Brooklyn, N. Y.

Learn to Entertain. Sleight of Hand easily acquired; experts made of everyone. Success guaranteed. Trial Trick, complete apparatus and direction, 10 cents. Manual of latest tricks for stage or parlor free. Chester School of Magic, Station A, New Haven, Conn.

BOYS AND GIRLS A CHANCE TO MAKE MONEY
10 beautiful pictures, 8½x8, suitable for framing or school work. Your name and address brings them. You lose nothing. Sell at 5 cents each and return 25 cents. Unsold pictures may be returned.
American Picture Company, Canaan, Conn

ODD ENTERTAINMENTS
of all kinds for the home, club, lodge, sewing circle, etc., are in our 144 page illustrated catalog No. 6, yours for the asking. Send us a postal and it will be sent to you, postpaid. FREE

A FRENCH FROG AND AN AMERICAN EAGLE

AN ENGLISH SCHOOL STORY—*By E. S. TYLEE*

BEGUN IN MARCH, 1905

CHAPTER XIX.

PHILANTHROPY OF THE PARLOR BOARDER.

IF ANSTRUTHER, as he had said, "hated fuss," it is certain that he now got enough to disgust him thoroughly. Geoghegan on his arrival, having inspected the wounded arm, looked serious and prophesied a week's imprisonment at least. Anstruther defiantly asserted that he would be all right in twenty-four hours.

"We'll see that," said Geoghegan.

And as the event proved, it was not until ten days after his accident that Anstruther for the first time left the precincts of the infirmary. During that interval the unlucky Mrs. Mole acquired a worried expression and several fresh gray hairs. One of the maids engaged in waiting on the patient gave formal warning; and informed her fellow servants that she would rather attend to "a raging lying." Puffy Adams was in our sanatorium when Austin first entered, suffering from one of his regular mid-term "headaches." A few days later that inveterate malingerer returned of his own motion to the cold outer world of discipline and boiled beef. Anstruther had made the sick-room too hot to hold him.

Geoghegan said there would have been no fever at all, to speak of, if Anstruther had practiced a little patience. But perhaps he might have put the thing conversely with equal justice. Anyhow, I know that we members of the Gang loyally took turns to visit our disabled brother, and "sit with" him. It was worth money; pounds of money.

My turn had come round for the third time, one Saturday afternoon, and I was on my way to do my duty; though I knew it would be no picnic. The infirmary is a field's length beyond the chapel. You see nothing of the school from the windows, nor anything else disturbing. Nothing but the green slopes, leading down into the deep water meadows, full of easy-going cows, and, across the river, over the massed tops of the young oaks, the heathery hills.

Halfway across I came up with little Reynolds. He was making great play with very short legs. As he was pretty constantly an inmate of the infirmary, and was evidently steering for the place at that moment, I asked him whether he felt his quinsy coming on again.

"Don't stop me, please, Mordaunt!" he said, panting. "I'm in a hurry, and it is exceedingly important." He had a habit of using long words, much above the weight of a youngster like him; and always brought them out very deliberately, and as if they began with capital letters.

"I'm going to see Anstruther," he went on, still breathless. "Doctor Hardress says I may, and read to him for a while, but not be troublesome. And I have got some positively enchanting books here."

He was bending under a whole pile of thick volumes, which he handed to me while he stood to recover his wind. I looked them over. They were rather a scratch lot. One ought to be pretty strong to stand Mayne Reid's Scalp Hunters and the Swiss Family Robinson, both in one afternoon; and if you are weak and ill enough to sit still under Harry and Lucy, I should hardly think Tales of the Genii was the best thing to flavor your gruel. Then there was a big old-fashioned Natural History, profusely illustrated.

"That's for him to color the pictures; and I've got my best paint-box in one of my pockets," said the Tadpole, balancing himself upon one leg. "The doctor said Anstruther must have recreation."

I couldn't help being amused at the kid. "Look here, my son!" I said, "If you take my advice you will just trot back to the school. Do you think Anstruther wants to spend the afternon with an infant like you. Why he barely tolerates me who am double your age. You would be but a mouthful for him in his present nervous state."

Reynolds, still on one leg, coiled the other round it, and looked obstinate.

"Me and Anstruther are great friends," he declared impressively. "I'm not going to desert him now he is on a bed of sickness." I suppose he got that out of one of his books. "Of course he can't stand beasts like Elizabeth Ann. Mrs. Mole says she was like an elephant in a sickroom."

"Come along then," I said. "We'll both go and see him, and he can take his choice. I'm sure I shall be pleased enough if he can do without me. I want to go fishing."

I must say I was a little surprised at the way Anstruther received us. "How do, Mordaunt! Any news?" was all he found to say to me; while, as soon as he saw that queer little beggar Reynolds, his face lighted up in the most marvelous way. "Come along, Bobby," he said, "I've been wanting to see you this long time. I hope you can stay the afternoon, and we'll have tea together."

I confess I didn't quite like it, and I suppose spoke rather coldly and stiffly. "I suppose you won't want me then? I did think of going up the Ripple with Fanshawe."

"Well, if you must go!" was all the opposition he made. "But give us a call on your way back, and show us all the big fellows you have caught. Bobby and I will try to keep jolly, won't we, Bobby?"

So I went off. It was pretty frosty of Anstruther, I think, after the way I had ministered to him the last time, and let him call me a fool, and all that. I should not have taken the trouble to come if I had known he wanted to play with the baby * * *

However, as things turned out, it was a very good fishing afternoon, and we had a capital time up the Ripple. It was just the close, cloudy sort of day the little beggars like, and we were putting out all the time almost as fast as we put in. Fanshawe, who is never quite happy unless he is at the fool end of a rod, is as dumb as any old carp, so I had plenty of time for thinking about Anstruther, and wondering how he was getting on with the parlor boarder. A little before 4 o'clock a nice, soaking drizzle came down, and we were glad to get into our mackintoshes; but the fish still rose like fat in a frying pan, so we went on giving them a free lunch and a home.

"I say, I vote we cut tea and prep," said Fanshawe at last, breaking the silence for the first time in thre hours.

"Too much row!" I objected, despondently.

"Not a bit of it," said Fanshawe with unusual energy. Nobody but McClosky is on duty, and he'll be all right if I show him our baskets. Bless you, he's been out with me scores of times. He's as keen as mustard. There's a twenty-pound pike in his rooms, in a glass case. He caught it himself. Anyhow, he says so."

Well, we settled to stay, and chance it. The sport we had was fit for the Pope. I hate to hear fellows exaggerate, so I will only say that the creatures came round us in crowds. It was a mass-meeting. The wetter we grew, the jollier we felt, for the fish had apparently settled that our baskets were the only safe place to get out of the rain. Fanshawe was wearing a new black bowler, which he said was the proper fashionable hat for an angler. Presently the thing began to dissolve, and thin streams of black ink, or something, went meandering down his face, and spoilt his collar. As for me, who had stuck to comfort and a cap, there seemed to be a slow but steady water-snake writhing his chilly coils along the whole length of my spine; and my boots gave curious gasping sucks whenever I moved.

"Seems to me we had better be trotting," I said at last, getting up and stretching my cramped limbs.

Fanshawe only grunted in reply, sitting hunched up on a willow stump that projected over the river, grim and quiet as the Red Fisherman in the poem. His cheeks were streaked with the thawings of his hat; and his clammy fingers could hardly hold the rod; but he still watched his bobbing float with absorbed devotion, and every now and then, with a quick turn of the wrist, sent a streak of silver into the air, to shimmer and dance for a moment in the waning light, till the straightening of the rod brought the fish within reach of his ready left hand.

It was necessary to rouse him from his trance, however, for the evening was already well advanced, and the dark would soon be upon us. So without wasting more words, I quietly seized the bait tin and removed it from his side. Presently he mechanically stretched out his hand to rebait, missed the tin and, waking up, began to reel in his line.

We made the journey back to the school in record time, as much for the sake of restoring our circulation as to give ourselves every chance with McClosky. The fields squirted a little stream at us wherever we put our feet down, as we ran; and when we got into the road, the sand and gravel were being washed away and leaving great ruts and hollows everywhere. In half an hour we had seen frogs enough for a pie; all of them like ourselves in a violent hurry. The worst of it was that our half-hundred weight of fish spoilt the pace; and several times I proposed abandoning our catch to some hole in the hedge, and marking the place where we left it. But Fanshawe would not hear of such a thing.

"I'd rather leave the school, and make a living on the river," he declared desperately.

So we stuck to our baskets, and put on the best speed we could. And it was fairly early, considering, when we spun in at the great gates of Crosscombe and started up the avenue at a gallop.

But at that moment Fanshawe suddenly gripped my arm, and pointed to the house.

"We're done!" he said, panting, and stopped short.

And indeed it seemed so. Someone was just coming out at the door, someone who had seen us, too; for he beckoned to us as he unfurled his umbrella. It must be a master, and not the sympathetic McClosky, for he must be superintending prep.

"We shall be simply slain," I said.

However, it was of no use backing out now, so we put the best face we could on the matter, and crawled slowly up to meet our fate, who, on his part, advanced towards us in the same leisurely fashion.

"Bon Jour, meg enfants! Quelle pluie!" said a well-known and most comfortable voice. It was Froggy.

We were saved. Monsieur had been making a special visit to the school, in connection with the arrangements for some coming examination; had been entertained by the good old doctor; and was now starting for home in the best of humors and his rough-weather goloshes.

He examined our creels with interest, even going so far as to poke one or two of the fish in the gills, with a fat forefinger to make sure that they had been properly killed on being captured. They received his attentions so languidly that he became more gracious than ever, and said we were brave people.

"Oh, if you please, sir," I petitioned. "May we say that you met us and kept us? We are rather late, and perhaps there will be a row."

But Monsieur, who was the soul of honor, would not hear of it, and said it would be mendacity. However, he told us that we might inform McClosky that he had met us in the avenue and that he "begged"—repeating the word in his grandest manner—with his compliments, that we might not be punished for our late arrival.

And then he put up the old green umbrella; buttoned his great coat across his chest, chirped out a command to us to change our clothes without delay, and started down the drive.

Then he stopped suddenly, wheeled round, and called to us.

"I forget one thing," he said. "Saturday next I go to give a—what you call it—'peek neek' on the downs. You will give me ze pleasure of seeing you, is it not so? Bon! Briant is coming. You will receive tomorrow invitations from Madame, my sister."

"What an old knight of a chap it is!" I could not help saying, as the muffled-up figure disappeared in the gathering shadows.

Fanshawe made no answer at first. As the event proved, he was busily revolving a joke. Now, those who knew him best would as soon have expected to hear Fanshawe make a joke, as to see the gilt weather-cock on Crosscombe Church lay an egg. Out it came, however, presently.

"Look here, Mordaunt! It was jolly lucky for us there were so many frogs hopping about the road today, wasn't it?"

So, after I had nipped him, as our custom is in such cases, in the fleshy part of the arm, and laughed a little to oblige him, we scuttled in to give our fish to Mrs. Mole, and change our dripping garments. Then we put on black jackets and our solemnest faces, and crept in to preparation, giving McClosky a delightful surprise.

(To be continued.)

The President's Son at Harvard

By LIVINGSTON WRIGHT

Teddy, Jr., Being Taken Off the Field After Injuries Received in Harvard-Yale Football Game

LET US BE just. Let us remember that to be the son of a President, to be incessantly in the public eye, and to maintain a shred of poise, dignity, and liberty is one of the most difficult positions a human being can be born into.

Especially vital do the foregoing observations seem at the present time when we have the son of the President of the Republic in the freshman class at Harvard. Never was there a time when the public should exercise greater sense, calmness, and charity, than now in studying the progress of the President's eldest son. Let us all remember that though a boy is born of high estate, he has some inalienable rights of boyhood—the right to be gawky and sedgy and jolly and above all—happy! Let us realize that possibly Young Teddy, as we all call him, is human.

How would you like it, if, when you arose and began to wash your face a dozen cameras were leveled at you, and a dozen reporters for hysterical newspapers began to scribble in their notebooks for dear life, while a lusty fellow with a megaphone bawled at the top of his lungs?

"Great excitement! Breathless throngs! He is now washing his face!" And three minutes later: "Intense excitement! He has finished his face." One minute later: "Wiped his hands!" Three minutes later: "Is now eating breakfast!" Five minutes later: "Sensational! Just do see that creature eat!" And a half hour afterward the grounds were filled with wild urchins holding up sheets fresh from the press and screaming:

"Eggstry! Eggstry! Aawl about the Pres'dunts Chawley boy gittin' up 'n the mawnin'!"

How would YOU like it?

Yet—that is what Theodore Roosevelt, Jr. has to endure day by day, week by week, and month by month, and will have to as long as he is at Harvard. The hysterical class of newspapers have relays of reporters and camera sharps told off to watch this inoffensive boy. When one squad gives out, another is prepared to take its place.

If this sort of thing is hard for a mature man to bear, consider the difficulty of a growing boy maintaining eternally the absolutely perfect composure that the public unthinkingly demands of the son of the highest official of the land!

Were Teddy not a fitting son of his father; not a lad of remarkable grit; not a thoroughly manly, clean-hearted, typical American, he never would be able to endure the ordeal, to say nothing of coming through with a vestige of dignity!

Teddy had been through his four years at Groton; and Groton, Mass., is where one of the finest of boys' schools is located. He entered Harvard last autumn, and the several thousands of students began to "size him up." Outwardly, try their utmost to deny the conclusion, Teddy had much of the typical boy in his make-up. He was addicted to real boyish snickering, he squinted, he had boyish "opinions" on things, he was lanky and "rangy" and awkward in a boyish way; and he proved that he was a boy, and in one respect at least, fitted for a freshman, when he forthwith displayed a thoroughly boyish disposition to get a lot of plunder with which to "fix" his "den." In fact, the purposeful Theodore, Jr., had hardly arrived in Cambridge ere he set out with a relative for the city across the big bridge. No exhorter or publicist ever had a more definite purpose than did this lad. He dragged that relative through such a string of furniture shops, athletic-goods stores, novelty shops and bric-a-brac places that she could not but give an exhausted cry of thankfulness when Teddy's money at last gave out!

Of course, hysterical accounts flared forth in certain sheets that the President's son "had established himself in a bower of sumptuousness in one of the most magnificent apartments for students at Harvard." Now, as Chief Justice Shaw was wont to say to the famous Rufus Choate when the latter imposed too greatly upon credulity, "Tis'nt so!" The truth is that young Teddy is living in a well but not extravagantly furnished suite of rooms in Claverly Hall, and that the equipments are no more than every person of the great American public if he could see them, would feel it proper for the son of the President to have. The truth is that Teddy's food and habits are plain and boyish—for, God bless him, he is the typical American boy in every lineament of his grinning, squinting, manly little face.

When Teddy had, after the manner of the youthful barbarian of all species, "got his den fixed up," his fellow freshmen let him have a few days' breathing spell, and then they demanded the greatest test that can come to a boy—the "trying out." And let me tell you that Teddy proved to have "sand" enough for not only himself, but some to spare. They had heard good reports of him at Groton. He had boxed and played football and indicated strongly of "being all right." In the Harvard-Yale Freshman Football game early in November they planned to give Teddy a "try-out" that could not be other than genuine. He was an end on the Harvard team, and they tackled him with a vigor that passed to absolute imposition—for it was not quite the thing to purposely maul a lad just because he happened to be "the President's son." They battered him up badly, broke his nose, and lamed him savagely. When they realized, however, that they might even kill him and he would not "squeal," Teddy found himself, in an instant, a Harvard idol. He was laid up for two weeks from his injuries, so viciously had he been "tackled." He has gotten all over his soreness, and should you happen to be about Harvard University any afternoon, you might come upon a lad wearing spectacles, a squint, and a peculiar half grin, and when you exclaimed: "Looks enough like him! I'll venture that's the President's son;" you might be very right in your conclusion.

Let us be as fair with Teddy in judging his four years at Harvard as we would be in judging any American boy!

The Downfall of Dennis

By J. E. NORMAN

DENNIS MULLIGAN rose out of bed with a bound. "Shure," he said to himself, "Oi fale loike a two-year-old this marnin'; 'tis loike a b'y Oi fale agin. Not a sthroke ov wurruk will Oi do this day, be gorry.

With this determination he went to breakfast, but, being a wise man, he said nothing at all on the subject to the "ould woman," as he styled his better half, or rather three-quarters, for Mrs. Mulligan constituted that portion of the domestic household.

So, having fortified his inner man, he was soon on his way to the domicile of his friend and crony, Pat Cooley, gaily swinging his dinner pail and whistling "Finnegan's Wake" as he strode along. Arriving there, he knocked and was admitted by Mrs. Cooley.

"Th' top o' th' marnin' to yez, Mrs. Cooley," said Dennis, "and is Pat up yet?"

"Good mornin', Misther Mulligan," answered Mrs. Cooley. "He is not, the lazy rogue. But he soon will be," she added ominously and thereupon, having given her caller a chair, she laboriously climbed the flight of stairs leading to the sleeping room, from whence shortly came down a murmur of voices and finally a bang that fairly shook the house and sounded as if she had thrown her "lord and master" bodily out upon the floor.

In a few moments Pat descended the stairs sheepishly rubbing the back of his head, and greeted his chum.

"Mornin', Pat," said Dennis.

"Mornin', Dinny," answered Pat. "And wot brings ye out so early this mornin'?"

"Whist! Not a wurrud!" whispered Dennis mysteriously. "Hurry up wid yer breal:fast, Oi'll tell ye outside."

Thus admonished, Pat said no more, but hurriedly ate his meal and was soon outside.

"Pat," began Dennis, when they were well away from the house, "Oi'm goin' to be a boy again today."

"And who told ye so?" said Pat.

"Oi fale it in me bones. Oi'm goin' to sphend th' day as Oi used to when a b'y. And having thus outlined his intentions to the astonished Pat, he started in to persuade him to accompany him on his jaunt.

At first the cautious Pat flatly refused, having a wholesome fear of the wrath of Mrs. Cooley if she should ever hear of such doings. But, having his objections overcome one by one, he finally consented.

"And where do we go furrst?" asked Pat after the argument had subsided.

"To th' ould orchard fer some apples. Oi used to go there ivery mornin' whin Oi was a b'y," answered Dennis.

Turning off from the main road they took a short-cut, and after much wading through tall grass and ploughing through bushes they came to a fine old apple tree.

Now, Dennis, being the only boy in the crowd, elected to do the climbing, which with a great expenditure of puffing and clawing he at last accomplished and was soon seated triumphantly in the branches shaking down the mellow fruit to his companion below. But, alas! Not being a boy except in mind, his foot slipped and losing his hold upon a branch, he took another short-cut and with a yell struck the ground.

"Dinny! Dinny! Are ye kilt intoirely?" cried Pat, running to the spot where he had fallen.

"Pat," murmured Dennis feebly, "did Oi all come down, is there any ov me left up in the tree?"

"Not a bit ov ye kin Oi see up there," said Pat gravely after a careful examination of the branches overhead. "Yer all down, Dinny, me b'y."

"Oi'm glad ov thot," said Dennis in a relieved tone. "Oi shtarted so quick Oi thought Oi might ov forgotten somethin'."

"Ye didn't fergit th' way down," retorted Pat hiding a huge grin behind his hand. "But are ye hurrt at all, at all?"

"Oi dunno," said Dennis, rising painfully, "Oi think not."

"How in th' wurruld did ye ivver come to do such a thing," exclaimed Pat as he brushed off his fallen comrade.

"Me fut shlipped when Oi wasn't lookin'," explained Dennis.

"Well, whoy didn't ye hould on wid yer hands?" queried Pat.

"Shure Oi held on wid all Oi had!" answered Dennis indignantly. "And Oi would ov held on wid a few more if Oi'd had 'em."

But Dennis was more frightened than hurt, having tried conclusions with a large bunch of grass instead of the ground, and he was soon as chipper as ever. So after having rested in the shade for a while, he proposed that they go down to the brook for a swim. With a sigh of resignation Pat agreed, determining in his mind that Dennis should do all the swimming for that party.

It was not far to the brook, and Dennis was soon "stripped for the fray." Advancing to the edge of the water he cautiously put in one foot. But 'tis with regret to state, it had been many long, weary months since Dennis had touched water to himself on the outside, so the sensation was rather unexpected. "Ow it's could!" he exclaimed, jumping back from the edge.

That jump did the business. As he came down he struck a nice, round, smooth stone, and describing a neat parabola, he disappeared with a great splash into the deepest part of the brook.

"Hooray!" shouted Pat, thinking he had made a dive. "Thot was foine, Dinny, ye couldn't ov done betther when ye was a b'y." Then, after a pause, "But whoy don't he come up?"

As he spoke Pat suddenly caught sight of a pair of feet sticking out of the water bottoms up, and while he looked the feet began to kick vigorously. "Shure," said Pat, "thot must be Dinny, but thot isn't th' way he used to come up; he must be sthuck somewhere," and laying hold of the feet. He gave a long pull and a strong pull—nothing doing,—then another—this time something broke, and the coughing and sputtering Dennis was ignominiously hauled out on the bank with part of an old water-soaked root still clutched in both hands.

Having a dim recollection of what had been done in simfiar cases in his youth, Pat, in his excitement, still holding his companion by both feet, dragged him to a nearby log, threw him across it face down, and proceeded to punch him in the back with both fists, varying the action with a knee now and then.

"Git arf me back, ye big hippypotty-muss!" growled a smothered voice from somewhere down in the weeds. Pat jumped as if the proverbial bee had stung him. "Th' saints defend us!" he cried. "Did ye shpake wid yer head thot time, Dinny?"

"Naw, wid me fate!" growled Dennis, gathering himself up like a huge inchworm. "How cud Oi shpake wid me head when me nose was sthuck in th' durrt up to me neck?"

"Shure Oi thought yez was drowned," said Pat.

"And was ye thryin' to bury me?" asked Dennis suspiciously.

"Is it crazy ye are?" Wot made ye ask thot!" exclaimed Pat in astonishment.

Dennis made no answer, but, having righted himself with some difficulty, proceeded to put himself in condition to appear again before the gaze of the world.

"Dinny," said Pat after a while, "wot made ye hould on to thot ould root whin Oi pulled ye out?"

"Shure ye tould me to hold on wid me hands th' lasht toime Oi shlipped, so Oi did," answered Dennis from the depths of the shirt into which he was struggling.

Pat had just opened his mouth to retort when he was interrupted by a loud crashing in the bushes nearby, and then an angry bellow that made him jump.

"Pat! Pat! Wot is it?" cried Dennis, in his excitement trying to put his head through one of the sleeves.

"It's Farmer Brown's ould bull! Run fer yer loife!" shouted Pat, setting a fine example.

Dennis suddenly gave up trying to put his head through the sleeve and, getting one eye clear, made for the nearest tree with the sleeve streaming back like a huge, red nightcap, and the way he went up that tree would have filled Darwin with joy.

"Are ye all roight, Pat?" he called when he had safely landed.

"Oi can't answer ye, Dinny," said a voice from the tall grass. "If Oi shpake the bull'll hear me. It's quoiet Oi'm kapin'."

But in the meantime Dennis was getting very uncomfortable. He raised first one foot and then the other, for the rough bark was irritating to his bare feet, and to make matters worse, a troop of ants persisted in running over his toes.

Now when a stout, middle-aged man starts to do an impromptu skirt dance on the not over-strong limb of a tree about twelve feet from the ground, there can be but one result. The limb unused to such treatment, gave way, and for the third time that day Dennis started down. The first six feet he went frog-fashion, head down, feet up, then he turned and continued his descent the other end up, and came down on the bull's neck just behind his horns, which he immediately grabbed and held on to with all his might.

For a moment the bull staggered under the shock. Then with an angry bellow he raised his head with a jerk causing Dennis to throw his feet into the air with all the grace and abandon of a circus athlete. Then away went the bull with Dennis clinging tightly to its horns, and occasionally doing wonderful things with his heels as it raised and lowered its head in an effort to dislodge the unusual burden, the shirt flapping behind like a banner as the two disappeared through the bushes.

As soon as silence reigned once more upon the rural scene, Pat crept cautiously from his hiding place and started in pursuit.

He crossed the next field, and, after climbing a fence, came suddenly upon Dennis seated on a stone calmly finishing the operation of inserting himself into his upper garment.

"Th' saints be praised, yer aloive!" cried Pat. "Shure an' Oi expected to see yez comin' back dead! How did ye git arf?"

"Th' ould villian doomped me arf in a poile o' hay," answered Dennis, emerging at last through the right hole in his shirt, and adding with a sigh. "Pat, me b'y, toimes ain't wot they used to be. Somehow things don't seem to be the same these days."

"Ye've done purty well, so fur," said Pat encouragingly. "But ye'd betther come back an' git th' rist o' yer cloze on, or ye'll be laid up wid roometism tomorry."

"Oi'm a b'y today an' nothin' can hurrt me," declared Dennis, but he didn't say it quite so aggressively as at first. It seemed as if he had some doubt about it as he arose and followed Pat to the brook.

"There's wan thing more Oi'd loike to do," said Dennis rather doubtfully after he had gotten over the effects of his last explcit. "Oi'd loike to play a game o' leapfrog."

"If ye do thot there'll be an earthquake or sithin else, shure!" exclaimed Pat. "Ye'd betther be aisy, or ye'll be goin' home in paces furrst thing ye know!"

"Oi'm goin' to do it anyway," announced Dennis, rising as he spoke.

"Ware be ye goin'?" asked Pat.

"Down to th' back road beyant Clancey's. Come on." And Dennis led the way across the fields.

"Now, Pat," said Dennis, as they came out on the road, "Oi'll let ye have th' furrst thry. Oi'll shtoop down here, and yez can go back a ways and run."

Pat didn't like the idea much, but to please his friend he went back quite a ways in order to take a good running start, not being as limber as he was in his youth; but as he leaned forward to run, something white whizzed by him. It was Clancey's goat.

"Fer th' love o' hivvin, Dinny!" shouted Pat, "Look out fer Clancey's goat! Arrah! He's got 'im!"

With a loud whack, the goat, going like a comet, struck the unsuspecting Dennis in the back square amidships, and a cloud of dust hid the rest of the disgraceful sight.

As soon as Pat recovered the use of his wits, he rushed to the scene of the collision. As he approached, a dusty figure slowly arose and, assuming a dignified attitude, spoke in the voice of Dennis Mulligan. "Patrick Cooley, 'tis no friend of mine ye are! Hittin' me in th' back wid a road roller whin Oi wasn't lookin'!"

"Dinnis," said Pat solemnly, "it was Clancey's goat. Oi told ye to luk out fer 'im."

"Goat, is it! Oi cud take me oath it wor a soyclone!" said the figure. "G'wan, Oi'm done wid yez!" and with a flourish of his arms Dennis walked slowly away.

Now poor Pat had been struggling with a mighty desire to laugh; so as the rear view of Dennis was turned to his gaze, his fortitude gave way, and he burst into such a roar of laughter that Clancey's goat, the innocent (?) cause of the trouble, fled at top speed until it was out of sight.

"Oh, my, Oh, my!" gasped Pat between roars. "He looked fer all th' wurruld loike a thrunk after Jim the baggageman gits through wid it!" And so chuckling and laughing, he started homeward.

And what of Dennis? That gentleman was sorely vexed in spirit, and as he proceeded homeward he pondered deeply as to how he should explain the cause of his disreputable appearance, and his coming home at such an unusual hour.

Suddenly he was aroused from his brown study by a shrill voice.

"O-o-o-o! Look wot's comin'!"

Then a chorous of yells broke out, and with a feeling of dismay poor Dennis realized that in his abstraction he had taken a wrong turn; but it was too late now to go back, a gang of urchins playing in the street had caught sight of him and more were coming from all directions.

"Say, mister, did yer autymobeel t'row yer?" queried one youngster anxiously.

"Aw g'wan!" exclaimed another. "He's been trav'lin' on his face, dat's wot!"

"Looks like one o' dem wild men from Afriky wot de teechur wuz tellin' us about de odder day," observed a third.

And then as he passed them the shouts grew louder. "Hey, mister, yer cloze don't fit yer, dey'er all busted up de back!"

"He's trying' ter sneak out o' his cloze de back way!"

"Hey, mister, de back door's open!" And so on until poor Dennis was out of sight.

With head down he hurried on, running plump into someone who had just turned a corner. There was a sudden shower of eggs and a frightened voice cried, "Oh, my lan'! Wa's dat!" And then in an angry tone, "Go 'way fum yere, yo' bad niggah man! Wa' yo' scare me like dat? I lam yo' good!" And the stout, angry colored woman, seizing her now empty basket in both hands, began to belabor the paralyzed Dennis over the head with it.

This was too much. To be taken for a colored man was the last straw, and with a howl of despair, poor Dennis broke into a run. Dogs ran after him and barked, women stuck their heads out of windows to see what the row was about, and children yelled at him as he went by, but he kept on until he reached his own gate and then fear overcame him and he stopped.

But as bad luck would have it, Mrs. Mulligan at that moment came to the door and caught sight of him. For a moment she paused, but her sharp eyes recognized her worse half in spite of the battle scars.

"Fer th' love o' th' saints, Dinnis Mulligan, wot have ye been doin'?"

"Shure Oi was blowed up wid a blasht at de quarry," said Dennis as he came slowly through the gate.

"Ye musht have been ashleep on it then!" she exclaimed suspiciously, her eyes catching sight of his rear section as he turned to close the gate. Then in a tone of deadly menace that Dennis knew only too well.

"Dinnis Mulligan! 'Tis not th' truth ye are tellin' me! Come into th' house. 'Tis th' truth Oi want, an' th' truth Oi'll get!"

With a slow, mournful step Dennis crossed the sill, the door closed behind them with a bang, and the downfall of Dennis was complete.

Reach

Reach gives your money back

When you buy a Reach ball, mitt, glove or any other Reach sporting goods, the deal isn't closed. Use the ball or whatever you buy and if it doesn't give entire satisfaction we replace it free of charge or return your money. The only exceptions are base-balls and bats selling for less than $1. Other Reach goods are guaranteed regardless of price.

The Reach trade-mark is a **guarantee of quality** as well as of fair play.

The Reach base-ball is official for all the big leagues, and Reach mitts and gloves are used by the best men on the diamond.

Base-balls 5 cents to $1.50
First Basemen's Mitts $1.00 to $4.00

C., Washington, D. C.

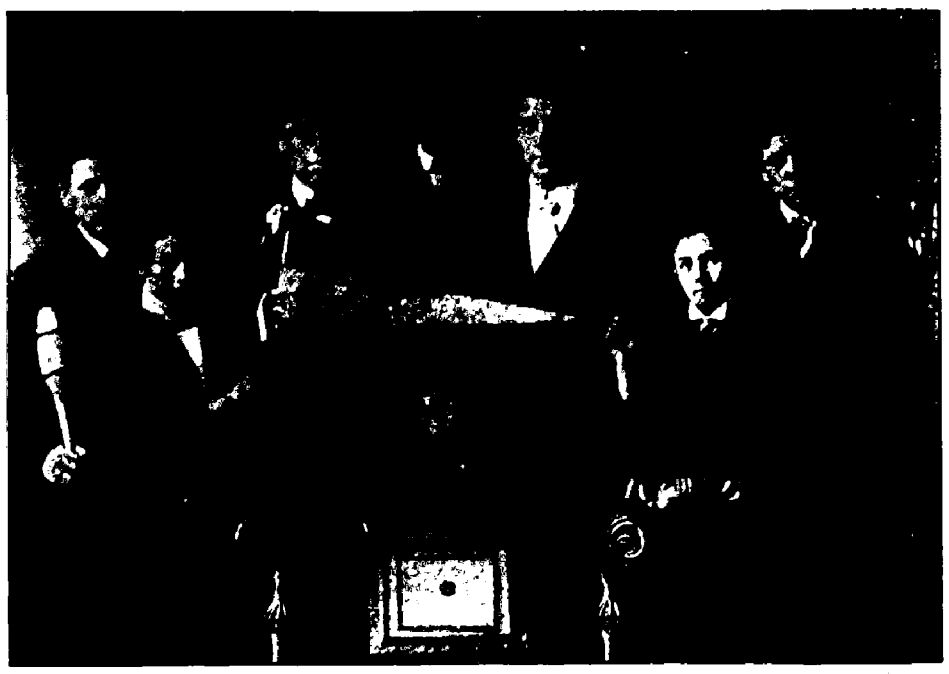
Company News

JUNCTION CITY COMPANY, No. 4, Ogden, Utah, is getting along nicely. In its club room it has a furnace and gymnasium. The gymnasium consists of two pair dumbells, a rowing machine, two sets of boxing gloves, punching bag and weight exerciser; the most of which have been donated to the club by the father of one of the members. It has added two new members, and its present membership numbers 10. It has 80 cents in the treasury, and expects to have a stronger membership in the near future. PILOT ROCK COMPANY, No. 19, Ashland, Ore., has rented a club-house and got things fitted up pretty well. It has a punching bag and boxing gloves and a library of nearly 40 volumes, and it subscribes for various athletic, etc., magazines. Meetings are held every Friday evening. It gave a benefit social on the 15th of December at the home of the captain and had a splendid time. The members served refreshments in the shape of oysters and coffee, cake and soda water. Its charter has been framed. SEMINOLE COMPANY, No. 56, Rockford, Ill., has superseded The Massasoit Company, No. 37, Rockford, Ill. The new company recently elected the following officers: R. H. Woolsey, Capt.; R. E. Davis, V. C.; William Kellberg, Sec'y; Frank Keig, Treas.; Frank Curtis, Libn. The captain writes us that the prospects for a good, and a strong company, are most favorable. TOM SAWYER COMPANY, No. 20, St. Louis, Mo., recently held its election of officers, at which Frank Schoff was elected captain, Allen Gilbert, Treas.; Alton Lowry, Sec.; and Lester Kleinschmidt, V. C. THEODORE ROOSEVELT COMPANY, No. 51, Nashville, Ill., sends us a photograph of its football team. It has a splendid library to which books are being added every now and then, and every Tuesday evening at its meetings there is something doing. SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill., recently elected the following officers: Glenn Porter, Capt.; Kenneth Montgomery, V. C.; Robert W. Henry, Sec'y; Chester Stafford, Ass't. Sec'y.; Edw. H. Bishop, Libn.; J. A. Brockway, Jr., Treas. and C. C.; Willis Langdale, Marshall, and Donald Wood, Escort. The company counsel sends us a souvenir post card, representing the unveiling of a monument in Decatur on April 6th of last year, at which the company was present. LEWIS AND CLARK COMPANY, No. 15, Clarkston, Wash., holds its meetings at the homes of the members. It recently elected the following officers: Harry McCready, Capt.; Edward Herrick, V. C.; Charlie Howard, Sec'y.; Emmet Schoonmaker, Treas.; Allan McCready, S. A. This company is in a prosperous condition, having $11.85 in the treasury. We are promised a picture of the company at an early date. It has its charter framed. GENESEE VALLEY COMPANY, No. 53, Wellsville, N. Y., held its election of officers in December, the following being the result: Raymond Ball, Capt.; William McEwen, V. C.; Jay Fuller, Sec'y. and Treas.; Harley Wight, Libn.; Herbert Ward, S. A. This company has over $5.00 in the treasury; recently purchased one of our O. A. B. pennants, and has its charter framed. Meetings are held every Wednesday evening, dues being 10 cents a month. The captain informs us that the members intend forming a ski club during the winter, or as soon as snow comes. This company wishes to correspond with other companies of the order. WAGONER GRIT COMPANY, No. 1, Wagoner, I. T., recently held its election of officers, which resulted as follows: Theodore Sullivan, Capt.; L. O'Brien, Sec'y.; and Kent Ruble, Treas. The prospects are bright for a considerable increase in the membership of this company. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its 39th company report, from which we note that five meetings were held in the company's new club house during December in addition to a grand entertainment and reception. The program at the reception included declamations, recitations, musical selections, songs, stereopticon views, a talk on "True Fraternity" by Mr. Fred B. Hawkins, humorous sketches, and a short account of the work that had been done by the company. At the close refreshments were served. The assembly room was most artistically decorated with flags, bunting, holly, patriotic pictures, and art work done by the members. Everybody enjoyed themselves. This company is organizing an orchestra, which it is hoped will be of great assistance at the company's various entertainments. The sixth semi-annual election of officers was recently held, and the following were elected: John Swan, Capt.; Russell G. Bruce, V. C.; Freeman H. Smith, Rec.; Harold B. Pratt, Cor. Sec'y.; Howard R. Palmer, Treas.; Amos Pascual, Libn.; and Amos K. Hobby, S. A. This is one of the most enthusiastic companies, as well as one of the strongest in the order, and we are always glad to have its reports, showing that the companies of the order are not selfishly keeping all their enjoyment to themselves, but are extending a helping hand, and giving others an opportunity of enjoyment. SALEM ATHLETIC COMPANY, No. 30, Salem, Ind., recently elected the following officers: Frank Clarke, Capt.; Seward Snyder, V. C.; Ralph Faulkner, Sec'y.; Wilbur Hobbs, Treas.; and Ray Collins, S. A. It has now a membership of 9, with several more about to come in. Reecntly it held a shooting match, a football game and a basketball game, in all of which the teams of the company were successful. It hopes in the near future to have a large club room, a portion of which can be used as a gym. The company recently gave a party at the home of the treasurer, and spent a very pleasant evening. The refreshments consisted of fruit salad, punch and cake. We think that this company is doing good work, and at these company meetings in order to keep up the interest of the members, we would suggest that a program something along the lines of that given in the company letter might be used. At the present time there are no other companies in the town of Salem. ANTHONY SUNFLOWER COMPANY, No. 32, Anthony, Kan., seems to have the same difficulty as has been felt by many other companies, namely, how to keep up the interest of the members. We would just make a suggestion that the program given in each company letter might be used. This company recently elected the following officers: Herbert Whitney, Capt.; Forest Butler, V. C.; Ross Cary, Sec'y; Cecil Burchfeil, Libn.; and Roy Smythe, Treas. MT. LASSEN COMPANY, No. 32, Redding, Cal., has now 21 members in the company, and intends to install electric lights in its club room. At its election of officers recently, Roscoe Williams was elected Captain, Clyde Robinson, V. C.; Carloes Furber, Treas.; Carson Martin, Sec'y.; and Fred Ross, Libn. A fine banquet was held after the installation, which was much enjoyed. This company intends to organize a ball team for the coming season. CAHOKIA COMPANY, No. 23, Edwardsville, Ill., held its semi-annual election of officers with the following result: Frederic Isensee, Capt.; Leverett Whitford, V. C.; Don L. Proctor, Sec'y. and Treas. It recently had its club room remodeled, and has organized a basketball team. LEROY POPE WALKER COMPANY, No. 8, Brewton, Ala., had a fine party given to it Christmas by the V. C., and everybody had a splendid time. The company's basketball team has played quite a number of games recently and has not yet been beaten. It intends to have parlor games at its meetings, prizes to be given to the winners each month. This seems to us a good plan by which the interest of the members might be kept up. We would suggest that there are debates, recitations, declamations and songs, which the members can easily get hold of, that could be utilized for entertainments at the company's meetings. We are desirous that all the members of any company should feel it to be their duty to help keep up the interest in the company doings according to the principles of the order. Unless the members of the company all pull together, it can never be very strong, and we would advise the members to put away their personal feelings and strive together for the benefit of the company. ROBERT DALE OWEN COMPANY, No. 4, Stewartsville, Ind., writes us a letter of advice, and the members will see that the February number of THE AMERICAN BOY is all that they can desire in the way of attractiveness. We are always pleased to have the companies write us with their suggestions, whether we are able to follow them out or not. REPUBLICAN VALLEY COMPANY, No. 20, Republican City, Neb., has the following officers: Harry Gould, Capt.; Howard Camp, V. C.; Earl Camp, Sec'y.; Glen Fanbiers, Treas.; Glen McQuiston, Libn. We are promised a group picture of the company, at an early date. JOE CANNON COMPANY, No. 50, Ridgefarm, Ill. This company is progressing nicely, has a fine club room and has given about $10.00 towards helping others who are not so well off as themselves. The members have uniforms and have regular drills. At its recent election of officers Walter Hester was elected captain, Chas. Fletcher, Lieut.; Geo. Wright, Sec'y.; Howard Fletcher, Treas.; and Claud Porter, Libn. It has over $10.00 in the treasury. HENRY CLAY COMPANY, No. 7, Wickliffe, Ky., sends us the second report of its doings. It has at present 9 members, and three more are expected to come soon. The officers are C. H. Schwartz, Supt.; M. E. Williams, V. C.; Thos. Y. Boyd, C. C.; Lewis E. Nance, Sec'y.; Miller Hughes, Treas.; and Cryan Rothrock, S. A. Previous to the election there was quite a hot time among the various candidates, but the election itself passed off quietly. It has $5.00 in the treasury, with about $1.50 yet to be collected, 12 books in the library, and its club room has been fitted up with chairs, tables, etc. The dues are 15 cents a month, which will be increased to 20 cents very soon. Meetings are held every Saturday at 2:00 o'clock P. M. We are promised a picture of the company very soon. FARWELL ATHLETIC COMPANY, No. 74, Farwell, Mich., has the following officers: Bernie Wiesman, Capt.; John Armstrong, V. C.; Ed Armstrong, Sec'y.; Fred Bingham, Asst. Sec'y.; Percy Saxton, Treas. It has 6 members, $1.50 in the treasury, and the members are planning to hold a celebration of American Boy Day. The members of a company can change the term of its officers to any period they may choose, provided, the resolution to make the change receives a two-thirds vote of the members at any regular meeting. It is not, however, desirable that officers should be installed for less than three months, because, in a less time they would be unable to get acquainted with their duties. The captain sends us a picture of one of its members, representing him working in his tool-shop. OLYMPIA COMPANY, No. 35, Emporia, Kan., has the following officers: Dono Peters, Capt.; David Bailey, V. C.; Calvin Lambert, Sec'y.; Harry Martin, Treas.; and Geo. Culbertson, Libn. The members held a taffy-pull at the home of one of the members recently, at which each one supplied a part of the material, and it was greatly enjoyed. The members have various other plans for entertainments in view, which it is expected will retain the interest of the members in the meetings. A group picture of the company is promised us soon. MARQUETTE COMPANY, No. 66, Greenville, Mich., has now 7 members, with the following officers: Morris Curtis, Capt.; Claude Hyde, V. C.; Hugh Graham, Sec'y.; Kenneth Gracey, Treas. The club room is at the captain's home, where the members hold their meetings every other Friday night, and at which various scientific experiments are shown by the captain. It has $2.50 in the treasury and is in a first-class condition. THE FRANKLIN PEIRCE COMPANY, No. 8, Keene, N. H., held its annual meeting on Jan. 12, and elected the following officers: Winthrop Faulkner, Capt.; Everet Whitcomb, V. C.; Robert Dort, Sec'y.; Edward Kingsbury, Treas. At the same meeting two new members were admitted. This company has now 21 members and is doing well. WORTH BAGLEY COMPANY, No. 1, Concord, N. C., has recently fixed up an office for the captain in part of its gymnasium. While it has recently dropped three members for various causes, the addition of new members has fully kept up the company's strength. It has recently been adding new books to its library. THE ELECTRIC CITY COMPANY, No. 50, Scranton, Pa., on January 11th held its election of officers, which resulted as follows: Walter S. Bennett, Capt.; Jas. W. Carpenter, V. C.; Karl S. Robinson, Treas.; Dixon Kirkpatrick, Sec'y.; Chas. Kinsley, Ass't. Sec'y. At the same meeting one new member was received. The company has $1.95 in the treasury, and expects soon to be in a position to have a gym. and a club room of its own. DIXIE ATHLETIC COMPANY, No. 12, Montgomery, Ala., has the following officers: William McGregor Snodgrass, Capt.; Edmond U. Ragland, Sec'y. and Libn.; L. McLeod Rice, V. C.; J. B. Hastings, Jr., Treas. This company has a very nice club room, fitted up with punching bag, boxing gloves, Indian clubs, dumbbells, etc. It has about $3.00 in the treasury and 50 good books in its library. According to its title, the members are especially interested in all kinds of athletics.

Theodore Roosevelt Company, No. 54, Nashville, Ill.



Moville Hawkeye Company, No. 59, Moville, Ia. Captain, William Kruetz

INCREASING SCARCITY OF FINE HORNS

A Fine Specimen of Elk Horns

WITH THE scarcity of American big game and the increasing severity of the game laws has come a new industry, the smuggling of horns from the hunting States to some city where antlers can be disposed of without risk. The antlers of the elk and moose are in immense demand just now, for the reason that they are difficult to get, and with the ever increasing number of rich Americans such trophies are eagerly sought. The game wardens of the States where such animals as nature has provided with fine horns still manage to avoid the relentless hunters are jealously watchful that the law against the gunners is not violated. In some States it is illegal to kill such game at all except at rare intervals; in others only so many may be killed during a season by any one hunter; the prohibition of the sale of game killed is generally enforced and it is becoming increasingly difficult for the hunter to carry home with him the game he has legally killed, unless he lives in the State in which the killing was done.

But the American millionaire must have trophies of the chase for the adornment of his mansion; the man who would be regarded as a great Nimrod must supplement his stories of wonderful killings with the hide or horns of the animal, and clubhouses must be decorated with antlers to complete their furnishings. So there has sprung into existence a new variety of smugglers, those who kill big game illegally and smuggle the evidence of their wrongdoing across the border into a new State by various tricks.

The favorite method of transporting moose horns is to saw the horns in two in the middle. This of course mutilates a valuable pair of horns, but done skillfully the mutilation will pass unnoticed when the taxidermist has finished mounting the specimen. The horns are sawed in two in the center of the forehead, where the hide will cover them when the horns are mounted. In this shape the horns can be placed flat against each other and will go in half the space they would originally. It is not difficult to pack a pair of moose horns in an ordinary trunk when sawn apart, and in this way many are being smuggled through to the taxidermist. The latter individual has no easy task before him to fix the horns together before covering them with the hide. It is done by covering with papier mache and allowing this to set hard. Then the horns are carefully mounted on a framework to represent the head and more cement added from time to time until a cement cast has been made over which the hide can be arranged. The work has to be done with the greatest care, for the slightest touch before the horns are thoroughly covered and the cement has hardened will disarrange the position and throw the horns out of plumb. When the cast is finished and hardened the head is put on and a fine specimen of the chase has been built up from the smuggled horns. Any head will do; the horns are the main thing. It is safe saying that not many of the antlered heads seen nowadays were in life partnership during the forest days; the taxidermist joins them, setting the prized horns to the head that sets them off best.

Horns of the Mountain Goat

A Will *and* a Way

By ELIZABETH ROBBINS

MRS. CUMMINGS looked over her spectacles and out of the window at the sixteen-year-old youth walking listlessly across the yard. "I do wish there was something to occupy that boy's mind," she sighed. "I s'pose they sent him out here to keep him from going into consumption, and, I declare, I believe he'll worry himself into it if he stays. I don't wonder he's restless and wants to be earning something, long's he can't be studying, but the country's a poor place—" Here she was interrupted by the coming of the groceryman.

Meantime the boy had seated himself dejectedly on one end of the doorstep and was thinking. "They say that where there's a will there's a way," he soliloquized. "I have will enough, but—where's the way? Here I am planted for the summer and fall. I mustn't study. I want to earn money the worst kind, but I'm forbidden to do any hard work, and that seems to be all the kind anybody wants to hire done. My father is to pay my board here, and I'm just a dead weight. I wonder if it wouldn't be as well if I were dead myself." He suddenly squared his thin shoulders. "That is fool talk," he added in a decided tone. "I won't be a coward, whatever happens. Let's look about and find that way, perhaps there's inspiration in the landscape. There's that patch of rhubarb; now what are the possibilities in that?"

He paused in his meditations, for the grocery man was coming out. "I see you've got some fine looking tomato plants, Mis' Cummings," he was saying. "I hope you've laid out to can a good lot of 'em this year. My wife thinks there's nothing like your canned tomatoes, and there's a number of my neighbors who'd be tickled enough to get it. They're kind of afraid of tin cans, somehow."

Ned turned around suddenly. "Would they want rhubarb?" he asked.

The grocery-man looked a little surprised. "Why, I don't know why they wouldn't," he said, "or any other canned stuff, if 'twas put up in glass jars."

Ned thought a little longer, then arose and went into the house. "Aunt Nancy, how much do they give a jar?" he asked.

"What?" she exclaimed.

He laughed at the expression of bewilderment on her face as he explained. "How much did those people give for your canned tomatoes?" She told him.

"Could you make anything at that price?"

"Land, yes! I have thought of giving up summer boarders and going into the canning business, but picking things is hard work for me, and boarders somehow fit in better with my housework."

"Would you sell me that rhubarb, and tell me how to can it?" Ned asked.

"Well, I declare!" his aunt exclaimed, as she saw the drift of his question. "I don't know why that isn't a first-rate idea. I wouldn't encourage every boy in it, but you have some idea of neatness, which most boys your age haven't. And you needn't talk of buying things. There's a lot of stuff goes to waste, year after year; your uncle won't peddle, and there ain't enough to wholesale, so it just lays and rots on the ground. It frets me terribly, and if you could make it of some use and get a little money out of it, I should be glad enough."

"Do you suppose I can do it as well as you do?—or well enough?" Ned asked.

"There isn't a single reason why you can't if you do exactly as I tell you," she replied.

"The grocery-man comes back this way, doesn't he?" Ned asked a moment later, "and if I order the jars and sugar he will bring them this afternoon?" He looked so animated he didn't seem like the same fellow. "Lucky that father gave me what money he did," he added. "If I can sell the stuff as fast as I get it done, I shan't have to call on him for any more."

The next morning found Ned washing his jars and getting off the bits of glass that sometimes cling to the inside, and in the afternoon, when Aunt Nancy was not using the cook stove, he weighed out the rhubarb and sugar for his first attempt at canning.

His aunt found him the most tractable of pupils, and as he was naturally neat and methodical, he easily fell into her exact ways. She had him put up an awning beside the back door, and when the weather permitted insisted on his doing all his cutting and preparing there, standing up to a bench, "for," she said, "you mustn't hinder your getting strong by sitting down and bending over, or by being too much in the hot kitchen."

"Really, Aunt Nancy," Ned said, when, at the end of the rhubarb caninng he screwed on the last cover, "this isn't unpleasant work; to tell the truth I rather like it."

"If a person does any work that is useful and takes pains to do it in a superior manner, he or she can't help liking it," said Aunt Nancy, quickly.

When it became known that fruit was being put up under Aunt Nancy's supervision, her old customers bought it eagerly, as soon as it was ready. It seemed so nice to have it where they could see it in their own preserve closets, they said.

After rhubarb, came thirty quarts of strawberries that would never have been even picked had it not been for Ned, and as many cherries, that would have been picked by the birds. Then a few plums and peaches, many jars of pears, several quarts of currants, grapes, and more tomatoes than anything else. Besides these cultivated fruits, Ned spent many days in meadows and pastures picking huckleberries, raspberries, blackberries and barberries.

He became so interested in the work, and was so glad to be able to earn something, that he almost forgot there was such a thing as weak lungs and tired brains. Uncle Jared and Aunt Nancy were almost as interested in his success as he was himself, and the summer and fall passed with what seemed surprising swiftness.

Moose Horns

One day in October, Ned's father suddenly appeared. He had expected Ned home in another week, but the son wrote so few letters and said so little about himself and how he spent his time, that the fears of the father got the better of him, and he could bear the suspense no longer.

As he walked into the yard at his sister's, someone coming briskly down the walk suddenly stopped, then with a joyful exclamation of "Father!" came quickly toward him. Mr. Ennis could hardly believe his eyes, for the thin, despondent, consumptive looking boy he had left in the spring was no longer thin; his face was a healthy brown, his eyes were bright, his step springy.

"Why, my dear boy!" he managed to falter. "This is so different from what I expected. How well you look!"

"I am well, and as sound as a nut."

When they had gone into the house and all the questions about home had been asked and answered, Ned showed his father the money he had made on his summer and fall work, and when he saw the expression of astonishment on his father's face, he declared that was worth as much more.

"But I never could have earned so much," he said, "if Aunt Nancy hadn't given me the fruit, and showed me just how, and let me have her customers."

"Nonsense!" said his aunt. "I might have shown a dozen boys I could name just how exactly, and they'd never done it. If you'd been careless, or not neat, or not willing to bother about little things, and hadn't taken pains to have every jar exactly like all the others of the same kind of fruit, do you think you'd have succeeded? No, you can't blame your success onto me. If you hadn't been conscientious and tried to do your very best, none of my customers would have taken your fruit as a gift, and there wouldn't have been any success."

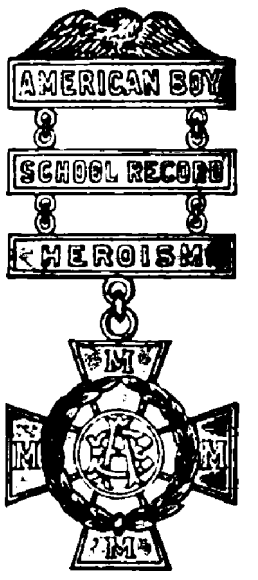
"Nevertheless, Aunt Nancy," laughed Ned, "I shall always insist upon it that you are principally to blame—you and Uncle Jared."

Then he turned to his father. "They want me to come next summer," he said, "and have promised me the old cornhouse for a cannery. I shall be a great deal stronger than I have been this year, and able to work harder. I shall help about the chores to pay for my board, and can fruit the rest of my time. I intend experimenting with jellies and piccallili, too.

"So, you see, father, you needn't worry any longer about not being able to send me to college, for I've found a way to send myself."

The American Boy Legion of Honor (Open to all Boys Everywhere)

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school, ending on a date since September 1st, 1905, have received the highest average term grade in their classes in all studies and (3) to boys of ten years of age or over whose record for school atendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for schol record unless their letters are accompanied by corroborative statements from their teachers who know the facts.



LEGION OF HONOR ROLL.

Note: S. R. means school record; H. means heroism.

ALBERT SCHOBER, Bern, Kan.	S. R.
WALTER DRIGGS, Bern, Kan.	S. R.
MILAN WHITMAN, Lodi, O.	S. R

Ralph Dedcovich, whose name appears on our Legion of Honor Roll this month, has been perfect in attendance at school for five successive years.

Harry Gilberry, of Hartline, Washington, whose name is entered upon our Legion of Honor Roll this month, has received the highest average in each study in his grade, the eighth.

Asher Kahn, Norwalk, Ohio, who receives a School Record badge this month, has the highest standing in his grade for the school term ending in January, 1906, and has made the highest percentage in his class in all studies.

Jos. W. Elwell, E. Gloucester, Mass., writes an appreciative letter. He says: "I thought I ought to thank you for sending medal. My teacher told me I ought to be very proud of it, and so I am. I enclose you a piece clipped form the Gloucester Times about it. I am going to try to keep up the record every year I go to school."

Leon W. Miller, Lima, O., acknowledges receipt of his Legion of Honor badge for School Record, saying "I will always keep it and remember where and how I got it. It is a beautiful badge, and I thank you for it. I have never taken a paper I like so much as THE AMERICAN BOY. I can hardly wait until it comes each month.

G. Blake Thackston, Elmwood, Tenn., who has received THE AMERICAN BOY School Record badge, writes an enthusiastic letter thanking us for the badge, which he says THE AMERICAN BOY helped him to win. He writes: "I think THE AMERICAN BOY is the best boys' paper ever published. I have been taking it ever since October, 1903, and intend to take it the rest of my life. It has helped me in many ways and I know that it has helped other boys."

Perhaps no boys deserve the Legion of Honor badge more than do Benjamin O. Wilkins, 18 years old, and his brother, James de Voe Wilkins, 16 years old, of Port Chester, N. Y. Benjamin has not missed a day in school in over eleven consecutive years, and James in over nine consecutive years. To show how heroically these boys have stuck to their school work it is only necessary to say that they have gone to school with broken arms, abscesses on neck, and toothaches, and that nothing has been able to keep them away. Fortunately, no contagious diseases have visited them except during vacation periods. They attend school at Stamford, Conn., five stations on the railway away from their home, yet they have never been late or missed a train. These boys are record-making boys in other ways. We have called attention to their records in time past, and we are glad this year to be able to repeat the compliment we have several times bestowed.

A STEPSON OF THE BOYS CLUB

BY LEE McRAE.

"HOUSE, COME TO ORDER!" cried Wash Jones pounding upon a table with the back of a bootblack's brush.

There was a scramble for seats and some noisy laughter, but the boys settled down quickly, and looked at him with eyes full of expectancy. Wash was always worth listening to. He cleared his throat, shifted his position a time or two, stuck his thumb into his pocket, and began:

"Some of us boys has called this special meetin' 'cause we think somethin' oughter be done. This here Boys' Club hasn't done nothin' except enjoy theirselves ever since we was started. We let Mrs. Butler an' the directors pay what it costs to run this here building an' things, an' we just have a good time."

"We pay our dues," interrupted a voice from the back row.

"O yes, ten cents apiece a year helps

Wash Was Always Worth Listening To

o' course," admitted the chairman, "but I think it wouldn't hurt us to do a few good turns 'casionally,—Well, what I'm tryin' to get at is this: Mebbe you alls seen that poor little kid that moved into the green house 'cross the way a week or so ago?" And Wash jerked his thumb toward the nearest window.

"There's him now, a-settin' in a chair by the door!" cried one, craning his neck to look out.

"That's him. Jim Jackson an' me was goin' by yesterday, an' he stopped us, an' wanted to know if all us boys lived in this big house."

Everybody laughed, and Wash went on.

"Sixty-seven boys an' no girls is a pretty big family, ain't it? I told him this was our club buildin', but we did live here mostly, outside o' school hours. He never even heard of a gym, an' he thought a club was nothin' but a big stick. We talked to him quite a while, he was so queer an' lonesome like. His mother does scrubbin' at the Gayoso Hotel, an' she's all the folks he ever had. Both of his legs was run over by a street car when he was little, so he's got only his body an' head an' arms. He says he's eight years old, but he's no bigger or stronger than a five-year-old. She puts him in that chair, an' there he has to set till she gets home. Jim an' me felt so sorry for him that we been talkin' to some o' the other fellers, an' we decided to have this called meetin' to see if we couldn't do somethin' for him. Motions is in order."

Wash thumped upon the table again as a sort of a period to his long speech, and sat down.

"I move he joins the club!" cried George Stout.

"He hasn't money for dues." "He couldn't do a thing in the gym!" "Why he can't even walk across the street," were the quick objections.

"We could take up a collection and pay his ten cents for him, and we could carry him over so he could sit and look on," replied the warm-hearted George.

"That's right," said the chairman. "We planned it that far, but we alls are in school most of the day, an' he couldn't enjoy this readin' room 'cause he can't read. He just don't know nothin'!"

Jim Jackson arose, coughing loudly to attract attention:

"It's my idea," he said, loftily, "that the club ought to kind o' adopt this little Don Winters, and not only amuse him, but look after his egecating. Now, some of us fellers is well up in the higher branches, 'rithmetic, gogerfy, an' all that, an' we might take turns givin' him lessons. Since he ain't got no legs, he'll have to earn his livin' with his arms when he gets to be a man. But first we ought to adopt him—make him a—a—stepson of the club."

There was great applause. The motion was made and seconded in short order.

"That ain't exactly the right word for it," said the chairman, dubiously, "but I guess it's as good as any. All in favor of adoptin' Don Winters for a stepson to this club say 'Aye.' Motion's carried!"

So the wizened-faced little cripple across the street, intently watching the flies hovering over his sticky fist, was adopted, and became the only honorary member of that great institution, the Boys' Club.

But the flies were forgotten the moment the "called meeting" adjourned and the boys came trooping out of the big building which he regarded with so much awe. A crowd of them were coming across, right toward his door! He wondered how it would feel to have legs and walk! His comical little face was full of surprise and admiration when the crowd paused before him, and Wash said:

"We've voted you into the club. That is, we're goin' to take you over to the readin' room every day, and let you see pictures, and—and—see us do things."

"Me!" cried the boy weakly. "Why—why, I ain't got no legs!"

"O, we'll carry you across, chair and all," said several at once.

Poor little Don was struck dumb with delight. Would it come true? Would he get to go somewhere—into that big house?

When Miss Sheldon, the manager of the club, heard the news, she was neither delighted nor struck dumb.

"It is very good of you boys, and I like to see you so kind-hearted," she said, "but how can you take care of him when you are in school? My hours here are only from three o'clock until we close at night, and the janitor is too busy to look after him."

"Oh, he can sit here by himself as well as over there, and it's so much nicer and cleaner, and he can have picture books here. Then just three weeks and school will be out, and we can all take care of him. Please, Miss Sheldon," pleaded the boys.

"Well, if you get Sanders' consent and his mother's," she answered, turning back to her desk.

Miss Sheldon was not at all hard-hearted, but she was already overburdened, and the addition of this helpless boy to her large flock meant more than the boys realized. But the mother was almost as much pleased as Don, and Sanders, the janitor, was easily won over, for he had been pitying the cripple sitting in the doorway of the tumble-down house, and wondering why he was left alone hour after hour.

The very next morning there was a triumphal march across the street, the four biggest boys carrying the chair in which Don sat as straight as a king on his throne, one boy lugging a dirty cushion, another a piece of a quilt, a third the paper sack of lunch which his mother had fixed for him, and the rest of the club either leading the way or marching behind for the sheer fun of being in it. Sanders stood at the door, leaning hard upon his broom, and smiling a welcome.

Jim Jackson waited until the noisy procession had passed on into the reading room, then he whispered:

"Sanders, he's the dirtiest kid that ever was! We've got to give him a life-sized bath first thing! Just think! he says he never seen a tub, that his mother just washes him with a rag once in a while! Ugh!"

Sanders laughed outright. He remembered that Jim, and indeed few of the club, had ever seen a bathtub before this building had been opened six months before.

"There'll be no flies ter pester him here, an' some of us will drop in at noon to see how he's gettin' on," promised Wash as he and the rest rushed out and off to school, leaving Don perched up near the pleasantest window of the reading room, his lunch and a pitcher of water upon one side, and a pile of picture books upon the other.

But the cripple was too busy to look at pictures yet awhile; he could only stare across at the green house and wonder if he was the boy who used to live there. Whenever Sanders would peep in to see if he wanted anything he would have a blissfully contented little smile on his face.

At noon a dozen of the boys stopped in on their way home to say: "We're goin' to put wheels on to your chair so we can push you around. George Crafts donates 'em off'n his express wagon, an' we'll put 'em on soon as school is out today."

Don smiled, and pointed to the clock high up on the wall. "Teach me that," he said solemnly.

Now the noon hour was partly gone, Jim was many blocks from home and extremely hungry, but he began very patiently to explain the Roman numerals; but Don could not count twelve.

"Some day mebbe I can learn all that gibberish," he said. "'Spose you make marks on the clock for when school is out."

So the teacher climbed upon a chair and made broad chalk marks against twelve and four. The stepson's "egecating" had begun.

That evening Don sat on the floor in the gymnasium while Wash put wheels on his chair, and he shrieked with delight and amazement at the acrobatic performances of the boys. Then, seeing the tears in his eyes and guessing the reason for them, a group gathered around him, and Harry Wills, dropping upon the floor in Turkish fashion, cried: "Let's have a legless party, and see what we could do if the street-cars ran over us."

In half a minute a dozen boys were pulling themselves over the rubber mat by means of their arms alone. Don tried to do likewise, but his arms were too thin and weak to move his small body. From that, however, came the idea of daily practice, which meant more to him and more to the boys themselves than they dreamed of. They invented "arm games," and the physical director who drilled the club once a week, made out a special course of exercises for him, so that Don had something to do besides looking at pictures and watching the clock hands creep toward the chalk marks.

With the coming of vacation his "egecating" was begun in earnest. Wash, Jim, Sandy-top Jones and Harry Wills were appointed "perfessors in readin', writin', spellin' and 'rithmetic," each

The Four Teachers Met One Day for Consultation

AMATEUR JOURNALISM DEPARTMENT

Edited by W. R. MURPHY

From Amateur to Professional.

Arthur R. Stanton, of Philadelphia, has been an amateur journalist for several years, the truth of which statement is substantiated by the fact that "The Pioneer," the amateur journal which he founded, is now in its tenth volume. Those to whom the mutable life of the ordinary amateur journal is well known will regard Mr. Stanton's record as remarkable. "The Pioneer" was started in 1897 and has been published with great regularity as an amateur monthly magazine ever since. Mr. Stanton relinquished actual control about three years ago. He printed several volumes of the paper, and as the result of his efforts in building up an amateur print shop and the experience gained therein, has a large and well-equipped printing establishment of which he is proprietor and general manager.

A. R. Stanton, Philadelphia.

In spite of his youthfulness, Mr. Stanton is identified with the Philadelphia Amateur Journalists' Club, of which he was twice president. He is also a member of the United Amateur Press Association and the National Amateur Press Association. He attended the New York 1899 and Philadelphia 1902 conventions of the former. Mr. Stanton is a fine specimen of the all-'round amateur journalist, who has gained experience and friends in amateur journalism, and who does not hesitate to ascribe much of his success to his career as an amateur journalist.

An Atlantic Coast Amateur.

"The Atlantic City News" is the name of a neat amateur paper hailing from the great eastern coast watering place. Curiously enough another Atlantic City News was published in the Jersey seashore resort about four years ago by Frank Henderson. Frank Ingersoll, proprietor and editor of the present News knew nothing about his predecessor in the field. The News started life modestly enough. About six months ago it had a remarkable growth. The size being increased to eight pages each, containing five columns, measuring 13 ems in width. The News is one of the papers that pays. Some issues are entirely sold out shortly after publication. The

Frank Ingersoll, Atlantic City, N. J.

subscription list is large and the advertising columns show good "business." This, as the editor explains, is due to hustling. What one boy has done in this line others can do. Frank, who is 16 years of age and a student at the Atlantic City High School, writes "My paper takes well and has a circulation which pleases my advertisers." The paper is printed by the editor and proprietor. He has a neat little "office" at 15 South Ohio avenue, which contains among other printer's paraphernalia, a couple of hundred pounds of 8-point body type and thirty pounds of display type, as well as a fine foot power printing press.

Atlantic Coast Amateur Press Association.

Of making amateur press associations there is no end. But the more the merrier, for they all aid in promoting activity and keeping enthusiasm at a high pitch. Somebody (a foreigner probably) has wittily said, referring to our national tendency for organization, that if two Americans were shipwrecked on a desert island they would organize the Robinson Crusoe Club with one as president and the other as secretary. So it is with amateur journalists. The long list of useful organizations has been augmented by the Atlantic Coast Amateur Press Association. The first convention of the new body was held on New Year's day at Baltimore, Maryland. A score of local amateurs and visitors gathered and had a splendid time. The sessions were held at the Hotel Rennert and the banquet, inevitable at an amateur affair, was given at the Casewell Hotel. Before and after the sessions visits were made to historic places of the Monumental City, and one afternoon was devoted to a jaunt to an old, haunted Revolutionary mansion. A tea party was held afterwards. "The Pipers," a select social organization, gave a "feast" in the evening. Of course, the election of officers created lots of excitement; it always does at conventions of amateur journalists. The board of officers elected was as follows: President, M. B. Ferguson (Baltimore Amateur), Baltimore, Md.; vice-president, Frank C. Van Name (Sparkler), Brooklyn, N. Y.; secretary, Mary M. McCully, Baltimore, Md.; treasurer, Charles H. Russell (Good Things), Philadelphia, Pa.; official editor, David J. Welsh (Fairy Amateur), Albany, N. Y.; historian, Eva Aldridge, Baltimore, Md.; laureate recorder, Vincent M. Haggerty (The Pilgrim), Bridgeport, Conn.; directors, C. Albert Haugh (Defender), Baltimore, Md.; W. Paul Cook (Monadnock Monthly), Hanover Court House, N. H.; and Sophie M. Baer, Baltimore, Md. The next convention will be held on New Year's day, 1907, in New York, N. Y.

The editor has a large number of typical amateur papers which he will send to those of our readers who will forward addressed stamped wrappers.

PATSY CONNER'S WOLVES

By ALVAH MILTON KERR

AWAY UP the Rogue River in Oregon, where the valley is driven into the mountains like a crooked wedge and creeks plunge down from many small canons to join their willowy bodies to the larger stream, Patsy Conner had his odd fight with wolves. One may still hear the story among the sheep-herders and miners, and sometimes it will be related to one as far down as Medford, where the valley is broad and beautiful and given over to fruit culture and wheat farming.

Patsy was a fifteen-year-old lad who worked at the Morning Glory mine, a successful quartz lode on the Rogue, thirty miles above Bandy Bow. Patsy's father had lost his life in the Morning Glory through an accident, leaving Mrs. Conner and three children to face the rather baffling problem as to how they might exist. Patsy was the eldest of the children. Matters would have been less puzzling to them had not the Morning Glory changed ownership, leaving the management under no particular obligation to the family on account of Mr. Conner's taking-off. John Hampton, the big, serious superintendent of the mine, readily gave Patsy such employment about the office and quartz mill as the lad was capable of performing, while Mrs. Conner took to the small industry of mending clothes for the miners, and so, after a fashion, the family got on.

One thing you would hear both day and night up at the Morning Glory, that was the steady thunder of the battery of eight-hundred-pound iron stamps beating the quartz to powder in the great mortar in the mill. But for that it was a singularly quiet region. Of course, within the heart of the mountain there was blasting of the wide ledge of low grade quartz, but this was not very audible, save when one stood near the mouth of the tunnel.

At the end of a year Patsy had become quite indispensable to Hampton. It was said that Hampton rarely smiled at anything save the lusty, blue-eyed Irish boy's wit and native humor. Patsy was both "funny" and honest, two qualities that do not always go together. These appealed strongly to the superintendent, hence Patsy became both trusted and liked.

When the particular season with which we are dealing had drawn on into December, the desire grew very keen in Patsy to purchase his mother a new cloak, something nice and warm, such as an imaginative boy who loved his mother might fancy. But so great a sum of money as was necessary was not easy for Patsy to get, since very nearly the whole of his earnings went to the support of the family. However, the problem solved itself in a very astonishing manner.

One Friday morning, Joe Clanter, a mine teamster, received orders from Hampton to take a sled and go down to Bandy Bow and bring up some supplies to the Morning Glory. Hams, bags of beans and sugar, rice, canned goods, half a carcass of beef and a case of dynamite were to constitute the load. Hunter Blake was generally given this work to do, but the trusty old fellow being ill, Clanter was commissioned to go in his stead. Clanter was thought reliable, though he was possessed of a hot temper and an unusual pride in physical contests. These traits got him into trouble on the journey. When he was about starting Hampton called Patsy.

"Get on your overcoat and go down with Clanter; sort of keep your eye on things," he said.

Patsy donned his overcoat and pulled his cap over his ears and climbed in among the blankets with Clanter. A half-mile from the mine they crossed the Rogue River on the ice and skirted down on its western side for two miles, then crossed back to the eastern side and followed the winding river down to Bandy Bow, arriving there in the evening. That night Clanter indulged in fisticuffs and got himself locked up. The next day at noon the town marshal advised Patsy to take the supplies to the Morning Glory, and to tell Superintendent Hampton that his man would probably be released about the middle of the following week.

Patsy promptly drove off for the Morning Glory, with the prospect of arriving there near midnight, for, though the load was not very heavy, much of the way was slightly up grade and the road was long. Over all the region lay snow with a hard crust upon it, white and sparkling in the sun, save where clouds of pines mantled the hills and mountains, for pine trees in Oregon are well nigh as plentiful as grass blades in some countries. When twilight began to fall Patsy was still ten miles from the Morning Glory. As he drove through the dusk, which lay in banks of dark purple under the pines and spread blue and vapory over the open reaches of snow, a moon, golden and enormous, pushed its weird face over the mountains and looked down upon him. Presently he began to hear occasional cries in the ghostly forest, the quivering scream of a bobcat or the sharp howl of a wandering wolf. He noticed that these latter cries increased in number as he proceeded. Though the whole situation was lonely and depressing, it did not once occur to Patsy that wolves might attack him. Such boldness and savagery on the part of these animals was almost unknown in the region. However, there were many more of these animals in that great, mountainous, forest-covered country than men were aware of, though their annoying attacks upon the flocks of the sheep ranches had been so frequent as to cause the county authorities to offer a premium of two dollars for each wolf-scalp brought to the county treasurer. At present the flocks were in guarded corrals in the valleys, the bears were in their winter dens, the deer had been almost entirely driven out of the region by the wolves, and, as the whole country was covered with snow, these wild dogs of the forest were hard pressed for food. Had not the long sled-box contained several hams and a half-carcass of beef no doubt Patsy would have gone unmolested.

As it was, he presently began to notice gray, gaunt shapes flitting and skurrying through the shadowy woods on either side of the road. Once he pulled up the team and listened. He could hear feet pattering on the snow-crust here and there, and long, curdling howls, as if the leaders were calling together the starving pack. Something chillier than the winter cold crept over Patsy's flesh and up into his hair-roots. He laid the whip on the tired horses' backs and urged them onward rapidly.

When he was within, perhaps, four miles of the Morning Glory, the leaders of the wolves were running close beside the sled, and following close behind it were at least two dozen, snapping and fighting and snarling. The horses were wildly frightened and pressed forward at a gallop. Patsy flung back a ham. It was instantly torn in pieces and the yelping pack came on, the odor of beef in their nostrils.

"Ye thievin' brutes, ye can't have any more, not another bite!" shouted the Irish lad. Frightened as he was he was still more angry. To be chased homeward by a lot of creatures like this roused a wild anger in him. If he gave them the meat what would Hampton say? "Not another bite!" he shouted and ground his teeth together on the words. Then a happy thought flashed through Patsy's mind. He wound the lines about a box and let the horses run while he clambered over the goods to the rear of the load, and breaking the seal, lifted the lid of the dynamite case. In it were a hundred cartridges, each lying as in a tiny, padded cell, each cartridge filled with guncotton soaked in nitro-glycerine, to be exploded by a little fuse and percussion cap. A blow, sharp and hard, from any source, however, would effect the same terrible result.

Patsy hurled one of the cartridges back among the wolves. A dozen of them, thinking it was another ham, leaped upon it, snapping their steely teeth in hungry rage. The next instant there was a crash as of thunder, the thunder burst against the mountain sides in clapping echoes, the team reared and leaped madly, and Patsy fell flat among the goods, knocked down by the concussion. When he got to his knees and looked back he saw that seemingly half the pack had disappeared and the brutes that had been racing and slavering on either side of the sled were now tearing along through the woods at some distance, whining and barking in angry terror.

"Come back, ye idiots, come back an' have another taste!" he shouted, thrilling with triumph.

They did come back. Just before he reached the river the wild pack was again about the sled, yelping, snapping and leaping as if they might land in the sled-box.

"If one of the horses should fall—well, it would be good-by-Johnny for the team and me," thought Patsy. Though his anger and courage were high, he was quivering from head to foot.

As the team plunged across the ice of the little river and struck the opposite shore, Patsy lifted another cartridge and flung it. It struck among the wolves on the ice. Again there was a thunderous crash and the echoes bellowed up and down the narrow valley. The panting team labored onward but Patsy saw no more of his pursuers. When the horses, with quaking flanks and steaming in the cold with perspiration, drew up in front of the mine office, Superintendent Hampton came out, bareheaded and anxious.

"Where's Clanter?" he said.

"Town marshal is boarding him; be home next week," laughed Patsy. His teeth were chattering with excitement and cold. "I'm short one ham and two dynamite sticks, sir," he went on, as he jumped to the ground.

"What became of them?" asked Hampton.

"Fed 'em to wolves. They wanted the beef and me an' the horses, so I offered 'em dynamite. It satisfied 'em," said Patsy.

When Hampton fully understood he put his arm about Patsy and laughed loud and long. "Think of the premium, Patsy! You'll have a fine sum!" he said.

As near as could be ascertained, though there was necessarily some guess-work about it, twenty-two of the animals had been slain. With the proceeds Patsy purchased his mother a very comfortable cloak.

Patsy Fell Flat Among the Goods, Knocked Down by the Concussion

The B. A. C. Club

Floyd Wiedemann, of Harvey, Illinois, writes an account of the B. A. C. Club that he and a number of his boy friends organized some time ago. The club has built its own club house. According to our informant it was built from money made from selling stationery, the boys buying it at wholesale and selling it to their friends at retail. Floyd is president, Harry Ruthraneff is secretary, Ray Wiedemann is treasurer, Ruth Wiedemann, cook, and Fred Wiedemann, janitor. The club house contains a fire-place, a center table, and desks for each of the officers. The outside of the house is painted black, showing in big, yellow letters "B. A. C."

A Stepson *of* the Boys Club

(*Continued from page 144.*)

pledged to give the stepson a lesson "whenever it suited 'em."

Don took to this schooling with considerable interest, yet his progress, for some reason or another, was so slow that the four teachers met one day in an empty box car on the mill-switch for consultation. Said Harry:

"My teachin's all right, 'cause I asked Miss Miller how to start a little un in figgers, an' she told me all about it."

"Well, his readin' is pretty good," declared Wash, "when he knows the words. If Sandy-top could only learn him to spell better, he'd get on all right in it."

"But spellin' seems so hard for him! I tell him to spell some like they sound, and others, o' course, has got to be like they are in the book—not like they sound, you know—an' he gets all mixed up over it," declared Sandy-top, professor of orthography.

"And his writin' is the funniest thing you ever saw!" exclaimed Jim. "Every turn of a letter is a square corner. Then he just won't practice! Half his paper is covered with pictures and they're killin' funny! But you know he's got to make his livin' with his arms, and we decided at the last meetin' to make a bank clerk outen him, 'cause they don't need legs a-just sittin' in a nice place, cashin' checks. But a bank clerk's got to write good, and I don't believe Don ever will. He'd be drawin' pigs and mules all over the morgiges. We'll have to scold him like thunder, that's what!"

They tried to, but the thunder became very mild indeed when the tears came into Don's eyes and his chin quivered. Miss Sheldon happened to overhear them and came to the rescue, saying:

"Why, he's getting on splendidly, I think. He learned to use the telephone on my desk yesterday, and talked to my mother, away up on Central avenue—didn't you, Don?"

"Yes, I did, boys!" he cried, all aglow. "She heard me talk and she couldn't see me!"

They all laughed. Then Miss Sheldon patiently explained the invention, and how man came to know and use the power God put into the world so long before.

"Has He got different power?" asked Don.

"Different kinds? Yes. He controls all the different kinds of power there are in the world," she said slowly.

"And power means be strong and do things? Could He make my arms strong like Jim's?"

"He Says He Never Seen a Tub"

she "If He thought best," she replied. "Now, boys, go into the gymnasium and have a good romp. Remember school begins next week."

So the vacation—every day of which had been a delight to Don, although his "egecating" had gone on vigorously—came to an end, and he found himself alone in the reading room one rainy September day. The dreariness without and the silence within sent a chill thro' his frail body, and all the old lonesomeness swept in upon him. He craned his neck to look out of the window at the old school building near by, where "his boys" were.

"What was that in the basement? A lamp? No, a bit of flame!" The big house was afire right under the halls, and nobody knew it!

"God give me some power!" cried Don squirming out of his high-up chair, and dropping upon the floor with a thud. somehow—he never knew how—he wriggled himself across the room to Miss Sheldon's desk, lifted himself by the arms into her chair, and seized the telephone.

"Central, the Water Street school house is on fire!" he shrieked over the wire. "Tell the fire company, and tell the head teacher! I can't 'cause I ain't got no legs."

Evidently "Central" understood, for she only asked "What school?" and he repeated his directions. For a moment he clutched the desk and shut his eyes; then he dropped to the floor once more and wriggled painfully toward the door.

It was an old structure, condemned by the city authorities, but still used because the south side population had increased more rapidly than the public funds.

Thanks to a stern principal, the fire drill had been rigorously taught, so in that time of need, the throngs of children were marched out to safety. Once outside a panic seized them. The walls were tottering, and the firemen were shouting to them to flee for their lives.

Right in the middle of the street they stumbled upon Don in a dead faint. The boys carried him back to the reading room, and when by and by he opened his eyes he asked faintly, "All out?"

"Yes, every soul of us!" was the reply.

"Then look at the tel'phone. I dropped and broke it, but God sent the power outen it into my arms. I know He did!"

"Three cheers for our stepson!" cried Jim, and all the boys shouted. And while there was applause for him all over the great city that night, Don he rd and cared only for that within the club rooms.

Years after, a strong-armed but legless young man might have been found beside a desk in a newspaper office, not writing eloquent editorials, but drawing cartoons that made the whole state laugh. He often talked of his "adoption," adding:

"But the boys couldn't teach me to spell, and they failed to make a bank clerk out of me. Still, as Wash would say, 'Twarn't their fault!'"

BASEBALL TRAINING

By GUY M. JOHNSON
Of the University of Michigan

HIGH SCHOOL boys need not feel badly because they do not have a big gymnasium and a cage in which to get ready for spring baseball. Indoor bat practice is, in my experience, detrimental, and the other training necessary to being ready early to play matched games can be done in a room large enough to allow the candidate to work comfortably. The most important feature of early training is to get into good physical condition, to get the muscles softened and limbered up, "to get the board out of the back," as ball players say, which means that you must be able to bend over quickly and gracefully. This may be done by proper exercise. Then enough outdoor walking and long runs will give the endurance which is necessary to enable one to play the last inning just as hard as the first. A ball game is never ended until the last man is out, and many times the team that is in best condition wins out, for the players have the life and fight to finish strong, which only endurance will give.

The indoor exercise should be general work for arms, legs and back, and care should be taken that the muscles do not get hard. Keep them soft so that when you move quickly they will not strain and get sore. A quick move in the spring when the muscles are stiff and not thoroughly loosened up may cause a strain which can be avoided if the right kind of exercise is taken, preliminary to going out on the field after the snow is off the ground and the wind is not so cold that work out of doors is injurious.

The cage used for indoor bat practice at some of the universities is a four-sided net affair with a top, the dimensions depending upon the size of the gymnasium. The one used at the University of Michigan is about eighty feet long and fifty feet wide. This is used so that the batted and thrown balls will not break windows or gymnastic machinery.

The men are lined up on either side of the cage for bat practice. A net is let down in the center, dividing the cage into two alleys, so that the batted balls from one side will not strike the men on the other. The pitchers for each batting squad line up on the other end of the cage, awaiting their turn, having previously been warmed up outside. Heavy gym mats are used for them to stand upon so that they will not slip when delivering the ball. The great obstacle which we have to contend with is the unwillingness of the younger men and the under-classmen to work up slowly. They have to be watched continually for they work too fast and too hard. They will throw as hard as they can the first day, hoping to make a good impression with the coaches. It is a good head as well as a good arm that the coaches are looking for, particularly in pitchers, and such things do not make much of a hit. Besides it gives a man a black eye with the older men because they have learned, both by experience and from the coaches, how foolish it is to work this way. But some young heads will not learn except by their own folly, and sometimes a valuable man is laid up with a sore arm at the beginning of the season and just at the time that he is needed most. He often thus loses his place by not being able to report for practice when he is needed, and another man given the "try out."

Speaking in this way then, there are so many don'ts that ought to be minded in spring training that we must emphasize them first, for if you do not mind the "don'ts" the "do" things will not be of much use to you.

1. Don't work too long.

For the first days ten to fifteen minutes are long enough to spend in training, and the most of the time should be given to building up the wind, loosening up the muscles, and quickening the eye. If the weather and ground will permit, long walks and short runs are desirable. Endurance may be attained by playing basket ball, hand ball, boxing, and all three of these games will assist in other ways. Several seasons ago I used to get into condition with Charley Ganzel, the old Detroit and Boston catcher; Johnnie Ganzel, New York's first baseman, and Louis Criger, Boston's great catcher. We used these games to good advantage and after two weeks' work with eight or ten miles of walking, when the weather permitted, we were rounding into pretty good physical condition. Start out slowly; do just enough the second and third days to limber up and in this way you will avoid the stiff joints and sore muscles that come from too much work at first.

2. Don't throw hard indoors.

There are several reasons why you should not do this. In the first place you do not have the footing, and a wrench or a strain may happen at any time. The work which is done for accuracy and speed will be thrown away, because the light and the air are so different indoors that the training has all to be gone over again when the work is started in the open air. Just work easily. The motion of the arm and the body and the handling of the ball to get used to its feeling and its weight is the only value that can come from indoor throwing.

THEY'RE OFF!
First Game of the Season

3. Don't let your muscles get hard and short.

Lengthen them and if they are hard to start with, use plenty of salt in your bath water. Work them by manipulation and massage, but do not pound them or slap them for this often causes an irritation which sets up inflammation, resulting in "Charley horse." In the case of "Charley horse" let the part alone as far as massage and manipulation are concerned. Instead, wind several towels around and pour on a steady stream of hot water, thoroughly steaming. This may be done to good advantage for several days, using the part as little as possible until well. We do what is called "ironing out" the part by applying very hot irons to wet towels wrapped around the injured member. This process drives the steam into the leg The same condition exists as is found in a rope which has been dried after lying out in a storm all night. The muscle is made up of fibers, the smaller divisions being called fibrils. These fibrils are arranged in bundles with a covering around them called the sarcoplasm and a fluid between the fibrils called sarcoplasma. This allows room for the fibrils to stretch or contract. A number of bundles of these fibers made up of bundles of fibrils are bound together by a covering called the endomysium, and between the several bundles of fibers, bound together by this endomysium, is a connective tissue which again gives a space for contraction and relaxation. These several fibers are bound together by a thicker connective tissue called perimesium and these several fasciluiae made up of several fibers, are bound together and surrounded by a covering called the epimesium.

This then should show plainly how much alike the construction of a rope and muscle are. If we allow the rope to get stiff and hard, a quick jerk or strain will make it squeak and the hard surfaces of the fibrils and fibers, pressing against each other, do not allow their free movement. Keep your muscle soft and free from shortening as much as possible.

The thing we feel like doing when we get out of doors for the first time is to see how far we can throw, for then our arms feel strong.

Don't allow yourself to throw hard or for a long distance. The first work out of doors should not last over a half-hour in handling the ball. If there are more than ten men in your squad, arrange yourselves into small squads of four or five, taking turns in batting out flies, but being careful to station yourselves at different distances from the batter so that the ball can be relayed back after a long hit. This will not only keep everyone busy but it will save the long throws which must be avoided.

HUMANATONE.

The most marvelous musical instrument ever invented. No instrument in the world produces sweeter music, whether it be the joyous notes of a quickstep or the solemn strain of a church hymn, in fact any class of music can be played upon the Humanatone without practice, as it is almost a self-playing instrument. When played with a piano accompaniment or any other musical instrument the effect is beautiful. Special offer. Send 12 cents in stamps.

AMONG THE BOYS

Harold A. Maxwell, Morrison, Ill., is a lover of birds, or as he describes himself, "a lover of our feathered neighbors." He sends us a list of the birds seen by himself during the year 1905 on a square mile of territory, the center of which is one and one-half miles west of Morrison. The total number of kinds is 124. In addition to this number he names nine kinds that he has seen in other parts of the country.

Roy Plasket, No. Industry, O., sends a few lines of verse, reading as follows:

"To work I must go,
And right away;
For sitting around,
It will not pay.

It's always best,
As many say—
Take first the work,
And then the play."

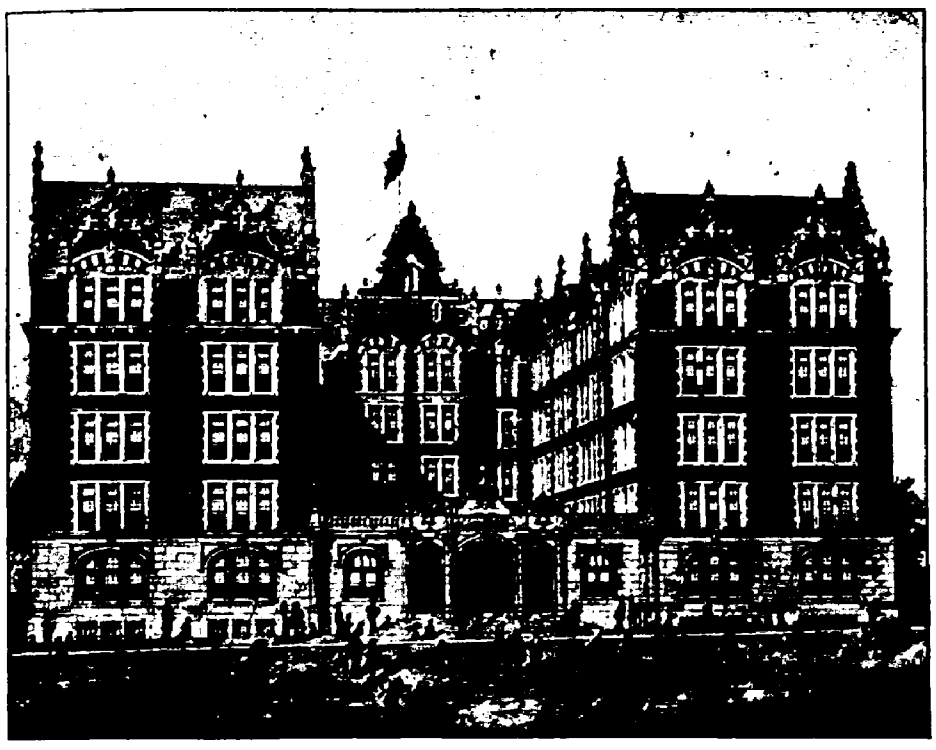
A SCHOOL PALACE FOR AMERICAN BOYS

By L. H. TASKER



The DeWitt Clinton High School for Boys

AN IMMENSE high school building for boys has just been completed in New York City. It enjoys the distinction of being at the present time the largest and finest boys' high school in the world. How long it will remain such it is not wise to predict in this age of continuous school development, when a million dollars or more is not thought too much to spend on a single building for the proper education of the bright American boy.

This magnificent new school, which marks the climax of school construction and equipment, is situated on Tenth avenue between 58th and 59th streets. It is called the DeWitt Clinton High School after Governor DeWitt Clinton, who played such an important part in the history of New York State in the early years of last century.

This latest and grandest of the great schoolhouses now being erected by the Department of Education contains more peculiar features than are to be found in any other boys' school. Among them are a lunch room, a gigantic swimming tank, a great auditorium decorated with mural paintings, and gymnasiums with every up-to-date feature—even running tracks. Altogether four thousand boys will find a home in this big schoolhouse and, more than that, they will be provided with every possible convenience that makes for good health and good work.

The Superintendent of School Buildings has designed this building in the style of the Flemish Renaissance with modifications. On the various fronts are large gables and dormers covered by high pitched roofs. Gray limestone is the material used up to the level of the second story window sills, and above this a dark brick with terra cotta trimmings. As a whole the shape of the building resembles the style of the capital letter H, with a sub-basement or cellar, a basement, and above this five stories and an attic.

In the sub-basement are placed the heating and ventilating apparatus and space for storing coal. The basement proper is largely taken up by the main floor of the auditorium which is situated in the center of the building. This is the largest of the auditoriums yet provided in the new school buildings and has seats for over two thousand persons. The auditoriums in the new school buildings are used not only for opening exercises in the school, but also for free lectures to adults on one or two evenings of each week. The main floor of the auditorium is below the street level, and a number of wide stairways give access to all parts of it. The gallery is on a level with the first floor and is lighted from above by skylights. A very large stage has been provided with space to the right and left for mural paintings. Provision has also been made for a pipe organ. The walls and ceiling of the auditorium are finished in ornamental plaster work.

In this great hall, which is upwards of a hundred feet square, the chief decorations are two immense wall paintings—one on either side of the stage. These are being executed by the well-known mural artist, Mr. Charles Y. Turner, and portray scenes attending the opening of the first Erie Canal in 1825 which marked the zenith of DeWitt Clinton's political career. Each is a scene in the triumphal progress of the governor and his party on the first canal boat to make its way from Lake Erie to the Atlantic.

The first picture shows the flower-bedecked barge with the governor and his friends on the bow of the boat as it entered the Mohawk Valley in October, 1825; the second depicts Governor Clinton marrying the waters of the Great Lakes with the ocean, when he raised aloft a silver bound keg of fresh water from Lake Erie and solemnly poured it into the salt waters of the ocean off Sandy Hook. This is the first instance of the placing of pretentious historical paintings on the walls of a great public school.

But there is more than the auditorium on the basement floor. Large gymnasiums and the natatorium where the boys will have a chance to swim to their heart's content, take up a considerable portion of the floor space.

The first floor contains, in addition to the galleries of the auditorium, the offices of the principal and his clerks, offices for the superintendents, and the classrooms. The main entrance to the building, on Tenth avenue, leads directly to this floor, and is approached through a large covered porch thirty-five feet long and ten deep. The ceiling of this porch is of stone and formed with intersecting vaults. From the porch, eight doors lead to the foyer, which is finished in marble. From the foyer, corridors lead to the right and left to the main stairways of the building.

Above the second floor the building assumes the shape of the letter H. The roof of the auditorium is at a level with the second story and thus forms a large court, by which light and air reach the classrooms of the upper stories.

On the second floor are situated the biological laboratories, the library, a number of classrooms, and a small gymnasium. The third floor is similarly arranged with laboratories for the study of physics in the south wing, the rest of the space being taken up by lecture rooms and classrooms, and a large study hall. On the fourth floor there are other classrooms and another study hall and library. The fifth floor is occupied by laboratories for chemistry and a large number of classrooms.

For the first time in the history of school architecture a large and well-arranged lunch room will be provided with every facility for supplying lunch to a large number of pupils in a very short space of time. The lunch room and its appurtenances are situated in the attic.

All classrooms will have direct outside light, no room having less than one hundred and fifty square feet of window openings. The building is heated by steam, and the most approved methods of ventilation are installed.

The contract price for general construction was six hundred and fifty thousand dollars. This is exclusive of steam heating, plumbing, electric wiring, elevators and furniture. Together with the site the total cost is considerably over a million dollars.

LOCOMOTIVE WHISTLE SIGNALS

Just one long blast on the whistle, ——— this style,
Is a sign of nearing town,
A railway crossing or junction, maybe;
And this —, the brakes whistled down.

Two long ——— ——— are just the reverse of the last;
And this ——— —— the engine's reply,
When word comes from the conductor to stop,
A sort of cheerful Ay! Ay!

These three ——— ——— ——— will show when the train comes apart;
This — — — means two different things:
That the train will back, or asks you to note
Some special signal it brings.

These four ——— ——— ——— ——— belong to the flagman alone,
And these ——— ——— ——— ——— are meant for the crew;
But this one ——— ——— — —, when crossing a road at a grade.
More nearly interests you.

Five short ones — — — — — say to a flagman on guard,
"Look out for a rear attack!"
And a lot like this — — — — — — —, that a heedless cow
Or a deaf man's on the track!

—The Technical World.

A High School Class Studying Electricity

Baseball in California

From the San Francisco Chronicle.

Californians buy more baseballs and bats with which to play the national game than the people of any other State in the Union in proportion to population.

Close to 50,000 balls and 20,000 bats are annually required to supply the demand created by the strong hold which the great American game has secured in this State. Climatic conditions in California impose no limitations on the playing season, and therefore the game is in evidence here during every month of the year, which, of course, furnishes one of the explanations why a greater number of balls and bats are required than in other less favored localities.

Of course the professional leagues use up a great many balls in the course of a season, but they are by no means as important a factor in the trade as are the numerous amateur teams organized among the business houses of a large city like San Francisco. These amateur teams cut a very much greater figure than would be imagined by the casual observer.

It is worthy of note that at the present time there are six baseball teams in San Francisco made up of Japanese, all of whom are well equipped with uniforms and the other appurtenances necessary to the playing of the great American game in the most up-to-date style. The Orientals declare that they like the game very much indeed, and they readily become proficient players. Baseball is making a big hit in Japan, and the sport may become as popular in the realm of the Mikado as it is in America.

In the temporary absence of the beauty editor, the question was handed by mistake to the sporting editor:

"How should one get rid of superfluous hairs on the upper lip?"

"That's easy," he wrote in reply. "Push the young man away."

A young man once said to Thomas A. Edison, the inventor: "Mr. Edison, don't you believe that genius is inspiration?"

"No," replied Edison; "genius is perspiration."—Life.

"I'm afraid our boy isn't industrious," said Mr. Brownjohn to his wife.

"I don't know how you can talk that way about him," answered the lad's mother, "after seein' how busy he was in that football game."

"Now, Tommy," said Mrs. Bull, "I want you to be good while I'm out."

"I'll be good for a nickel," replied Tommy.

"Tommy," said she, "I want you to remember that you can not be a son of mine unless you are good for nothing."

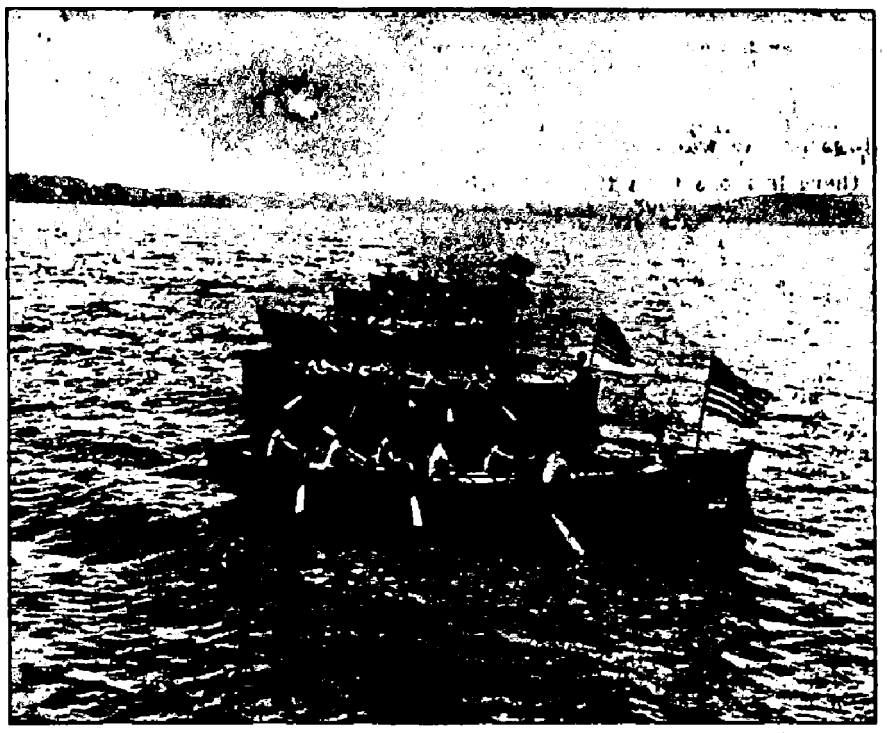
A School for Young Jack Tars

Life on the School Ship St. Mary's



Boys of the School Ship St. Mary's Off for a Boat Race — Long Island Sound

ONE HUNDRED and five strong, agile, wholesome American boys are now off on the rolling billows for a fifteen thousand mile cruise. Those who have this eagerly-sought opportunity have registered as sailor-students on board the famous old sloop of war St. Mary's, which for the last thirty-two years has been the training ship of the New York Board of Education for lithe, lusty young lads who have the desire to become officers in the American merchant marine.

The school ship is under command of G. C. Hanus (U. S. N., retired) with the official rank of superintendent. He is assisted in the management by Lieut. Christopher Marsden, formerly commander of the American liner Kensington, as executive officer; Lieut. Charles E. Littlefield as senior instructor and navigator, and Ensign Frederic S. McMurray as junior instructor and watch officer.

The St. Mary's is a ship-rigged vessel of the type known as a sloop of war. She carries an immense amount of sail for her size, her main truck being no less than one hundred and fifty feet above the water. Built in 1844 for the purpose of chasing slavers, she was at one time the fastest sailing vessel in the United States navy. In the Mexican and civil wars she took an active part, but for the last thirty years a peaceful existence has been her lot, for she is the school and home of a hundred bright-eyed American youths who have heard the call to go "down to the sea in ships."

During the winter the vessel is tied up at her dock, East 24th street, New York, but when the spring breezes blow invitingly she casts off her moorings and proceeds up Long Island Sound to give the boys a month's practice in navigation before ploughing her way across the ocean. The first call on the long summer cruise is at Queenstown, Ireland, from which place the boys are allowed to visit Killarney and Cork. Thence to Cherbourg, from which an inland trip is made to Paris. Then they go to Gibraltar, and from there to Funchal, in the Madeira Islands. At Funchal fresh water and provisions are taken aboard for the home voyage to New York in late September.

While at sea or in foreign port, all hands must be up at five o'clock. The boys strap up their hammocks, and receive their coffee. Until seven o'clock they must scrub decks, wash clothes, clean ladders and prepare the ship for inspection. They then prepare for wash inspection, which comes at 7:45. The divisions are lined up on the decks and looked over by the commanding officer. Cleanliness is regarded as the most important consideration on board the school ship. At eight o'clock they get their breakfast, which consists usually of a cereal, fresh milk, coffee and sugar. After breakfast they clean all the brass and bright work until 9:30, when they have another inspection and prayers. Then comes the drill or instruction and at twelve o'clock, dinner. Quite a plain dinner, too, but the boys can live and work on it. If on the sea, it consists usually of canned roast beef, potatoes and vegetables.

In the afternoon there is more drill and instruction, the decks are swept and clothes are scrubbed once more. At six o'clock there is a supper of cold meat, stewed fruit, tea, sugar, milk and usually molasses. Bread or biscuits and butter are served at each meal. After supper there is study until taps at nine o'clock, at which all must be in their hammocks tucked up for the night.

The St. Mary's is equipped with all nautical instruments, text-books and apparatus for studying navigation and seamanship. On the vessel there is, moreover, a crew of able-bodied seamen in sufficient number to work the vessel if necessary without the help of a single sailor-student. The course of study continues for two years and every means is taken to make it absolutely practical, for the students are required to assume all the active duties of seamen, such as standing watches, steering and handling sail.

The theoretical part of the education received on the St. Mary's is much the same as that of any other boarding school, but in addition to the regular studies of English and mathematics the boys are constantly instructed in the duties of their profession. They receive practical lessons in seamanship, including knotting and splicing ropes, cutting, sewing, setting, furling and reefing the sails, as well as working the ship under all conditions. They are taught how to send up the masts and yards, to place and set up the rigging, to lower and hoist boats, and to use the measuring lead and log line. They learn the rules of the road, flags and signals, and steering by wind and by course. They receive lectures on the stowage of cargoes, bills of lading, freights and passages, saving life at sea, and all that pertains to the management of sailing ships.

Their technical instruction on navigation includes logarithms, the calculation of latitude and longitude by all methods, the use of all nautical and astronomical instruments, and the calculation of time and distance to ascertain the ship's position. Many of the boys are so ambitious that on a cruise they frequently work out the ship's position by ten or twelve star sights, as well as by the altitude of the sun, and by dead reckoning. They take the time to do this out of their hours of recreation, and in a short time their calculations can be depended upon absolutely.

Dr. Keran O'Brien instructs the boys in elementary medicine and surgery. As many of the students will ultimately command sailing vessels on which there are no regular physicians, it is considered necessary to give them practical instruction in the symptoms of disease, and the chief features of the more common constitutional diseases. Special attention is given to the prevention and treatment of communicable and parasitic diseases. The boys are taught a great deal of human anatomy and physiology, the functions of the brain and nervous system, the circulation of the blood, and the processes of digestion. They receive frequent lectures and demonstrations on "First Aid to the Injured." The restoration of the apparently drowned is practiced at regular intervals, and the treatment of sunstroke, fainting, shock, hemorrhages, burns, fractures, etc., with practical lessons in nursing and the transportation of the sick and injured. The general treatment of poisoning is also taught, and particular attention is paid to such poisons as are more commonly taken with suicidal intent. The application of all kinds of bandages and surgical dressings is demonstrated, and the use of the tourniquet and the stomach pump. This course of elementary medicine and minor surgery covers such a wide field, that it is quite unlikely that these future officers will ever be called on to deal with an accident or emergency to which they cannot apply the teaching they received on the old St. Mary's.

Means of recreation are not forgotten in the equipment of the vessel. Sporting goods, such as baseball and football outfits, punching bags, fencing foils, boxing gloves, and all kinds of gymnastic apparatus are provided, and even a fife and drum corps is a feature of the ship. During the winter months, on each Wednesday evening, the boys are given a lecture on travel, illustrated by stereopticon views.

Altogether it is a happy, healthy life for an active boy, and, by the time the two years' course is over, the sea has so exercised its fascination on the students that almost all determine to continue in the practice of their chosen profession. Nearly every one is offered a position on a ship the day of his graduation, and the American companies seem anxious to secure the services of those who have proved themselves worthy of their hard-earned diplomas, for it is reasonably certain that they will continue to show the sterling qualities of mind and muscle which they exhibited in their training on the school ship.

Please Mention The American Boy When Writing

My Sprinting Experience in Great Britain

By
HARRY A. HYMAN

Harry A. Hyman, of the University of Pennsylvania, holder of the American Intercollegiate Quarter-Mile Championship, and the English Amateur Two Hundred and Twenty Yards Championship. This picture was snapped at Ibrox Park, Glasgow, Scotland, the famous athletic grounds of the Glasgow Rangers, and shows Hyman training in heavy underclothes, giving some idea of the raw, cold weather encountered in Scotland even in summer. The hardy little Scotch lad in the background, however, managed to stand it barefooted.

ON JUNE 15th, the day after I was graduated from the University of Pennsylvania, I left Philadelphia for New York, where I joined Edward Amsler, the intercollegiate hurdle champion, and George Turner, the University of Pennsylvania ground-keeper, one of the jolliest and most popular men connected with the University. We sailed on the White Star steamer Arabic on June 16th for England, but got only as far as Coney Island, where we ran into a bank of fog and were tied up for twenty-eight hours.

The second day we ran into a storm which set everything rolling; but after the storm and some seasickness we ate ravenously, despite the fact that they fed us five times a day. I kept myself in running condition by skipping rope for half an hour and walking about four miles around the deck each day.

Our boat was due to land on Saturday, but we did not get in until Monday morning, the 26th. After the arduous windup of the college year's studies and racing, the rest on the steamer did me a world of good. Should any of my readers be run down from overwork let me advise an ocean trip, and by all means get seasick.

We went direct to Manchester, where Tyler, the intercollegiate 440-yard record holder, awaited us, and we began training at once. On Wednesday, the second day off the boat, I won my first race—a 220-yard handicap, with sixteen-yard limit. My time was 22 2-5 around two turns. The prize was a large cabinet of cutlery valued at forty dollars.

We left Manchester on Friday morning for London to compete in the English championships on Saturday, July 1st. We left our hotel in London on Saturday at 12:30 in a four-wheeler bound for the grounds, but the cabby got lost, and after traveling all over London by train and cab, we finally arrived at the grounds at 3:20. The state of our feelings while hunting the grounds after coming so far to compete may be appreciated. I had just twenty minutes to "rub down" before my heat, in which I was entered against Malfait, the French champion. On the toss I won the inside position—the English seldom run the 220 straight away—which was some advantage, and I won my heat in 23 seconds. The track, by the way, was new and soft, which accounts for the slow times, my heat being the fastest of the four.

In the final heat I was pitted against Jupp, the English 220 champion; Watson, the Scottish champion, and O'Connor, the Irish champion. I was again fortunate enough to get the inside position and won the race in 22 2-5 seconds, equaling the English record. In the evening a reception was given the athletes at the Trocadero Cafe, in London, and the honorary members of the association, which included the Lord Mayor and several other lords, were present. As the only American present, I was given a seat of honor to the left hand of the Honorable President. England, Scotland, Ireland and France each had her champions present and they were called upon in turn for speeches, winding up with America. Dennis Horgan, the jolliest Irishman alive, who has won the shot-put at the English championships for nine successive seasons, represented Ireland, and was half the life of the banquet. After the toasts and all else was over the banquet was ended by singing "Auld Lang Syne," all standing upon their chairs, and some upon the table while singing. After the banquet a few of the "big uns" wanted to show me London, and thinking this an opportunity of a lifetime I consented to accompany them. New York cannot be compared to London after dark. As a prize for my championship victory I received a solid gold medal valued at fifty dollars, and can hold for one year the Championship Cup presented by Lord—Somebody. We returned to Manchester on Monday, and on Saturday, July 8th, competed at Birmingham.

Amsler competed in the hurdles at the championships and only the roughest kind of luck prevented his winning out. He tripped over the eighth hurdle while far in the lead, so was beaten out by Stronach, the redoubtable Scotch hurdle champion.

At Birmingham, on the 8th of July, I competed in the 300-yard scratch race, and covered the distance in the final in 31 seconds flat. The English record, made away back in 1887, is 31 2-5 seconds. Unfortunately, on remeasurement of the course, it was found just a few feet short, which deprived me of the honor of breaking the record. At Birmingham I was presented with a diamond ring worth over one hundred dollars, for my exhibition. The next day a party of thirty of us were taken as guests on a visit to Stratford-on-Avon, the home of Shakespeare. We saw his grave and memorial, Ann Hathaway's cottage, and other places of interest. In the afternoon our hosts chartered a launch and we spent the remainder of the day on the Avon. The river was full of pretentious gondolas, among the finest being that of Marie Corelli, the authoress. Returning to Manchester, we set out again, this time headed for Belfast, Ireland. Anyone who has spent July 12th in Belfast need not be told of the day. I have in my time seen parades, heard noises and seen fights all at one time, but never before had I seen such a sight as that in Belfast on the great anniversary of the Battle of the Boyne. The tumultuous Orangemen—followers of William of Orange—celebrate in a way that has the American Fourth of July beaten miles.

After competing at Belfast we were taken to see the Giant's Causeway, one of the wonders of the world, in an Irish jaunting car which itself is another of the wonders. And so we continued jaunting up and down the little islands, until I turned a bad wrench in my knee which lamed me for the balance of the season.

Certainly the English are hospitable, entertain you lavishly and treat you impartially, despite the number of Yankee athletes who have invaded the country and carried away a large share of the prizes.

Boys' Printing Press As a Money-Maker

By WILL S. KNOX

IN ADDITION to the instruction, pleasure, and amusement to be obtained from a small printing press and outfit, the boy who is so fortunate as to possess one can, with a little extra effort, make it bring him in a revenue—sufficient for him to buy his own books, clothing and other needed articles, as well as furnish him pocket money.

I know not one but several men, now successful printers and publishers, with business interests valued at thousands of dollars, who obtained their liking for and start in the printing business by working with the little printing outfits they received as Christmas gifts from their parents. As their experience and their liking for the work grew stronger, their first small outfits were added to gradually, or were entirely replaced with larger and better presses and a greater variety of material.

The printing of cards is the first and most common method adopted by the boy printer to obtain money. It is also the most profitable. Calling cards ("name cards") are always in demand by ladies, girls and boys. Say the printer charges fifty cents a hundred for these cards, containing just a name or a name and address (this being only half the price asked by professional printers). He would realize a profit of forty cents or more on each order, as an excellent grade of cut cards can be had at from seventy-five cents to one dollar a thousand. Under the head of cards (which, by the way, are the simplest and easiest work of the printer), come business cards, advertising cards, tickets, checks, etc. These require more composition by the printer, but in some cases the card stock is cheaper than for visiting cards.

Envelopes and noteheads, printed, are becoming more generally used, and are always in demand by persons engaged in business. Good qualities in either can be had at a dollar a thousand and even less. Cards, envelopes and noteheads all bring about the same price: 50 cents for 100; 250 for $1; 500 for $1.50; 1,000 for $2.50. Professional printers seldom print in smaller lots than five hundred, which makes an opening for the "small lot" printer.

Boy Printers

Besides these, the boy printer, by a little energetic canvassing, could print labels for school-books and libraries, report-cards for teachers, badges for school classes and societies. Then, too, there is the church printing. The modern church is becoming quite an advertiser, and there are always announcements, cards, envelopes, programs, etc., required. And all of this work the boy printer can do just as well as the professional printer, at a much less cost to the customer, and still make a very handsome profit.

A Boy's Diary for 1905

"New Year's, 1905—Got up resolved to eat more sugar on my oatmeal—to have my share of the fried eggs—to have a second cup of coffee. Dad held himself in till after breakfast and then warmed me up.

"Washington's birthday—Got a lickin' for not bein' like George. He couldn't tell a lie, but I could.

"Fourth of July—No peanuts—no candy—no lemonade—no whoopin' her up for Bunker Hill. Got another lickin' and fireworks in the evenin.'

"Thanksgiving—Same fodder as the day before. Dad said I ought to be thankful to get that. Blamed me for not bein' a Pilgrim father and tanned my jacket. Went to bed feelin' thankful that I didn't get two of 'em.

"Christmas—Got a fried cake in my stockin'. Got a lickin' for throwin' it through the winder. Asked dad why they had Christmas, and he said it was an excuse for lickin' bad boys. Laid it on good and stout. While other boys got nothin', I got it redhot.

"Goodby, old year. Nothin' doin'. Hail, 1906! Between me 'n dad and you things will move along and the gate hinges won't get rusty. Throw in a circus or two if you can and remember a poor boy and make it a good year for stealin' harvest apples."—Baltimore American.

STEVENS

An Old Stand-by—a Stevens Rifle

The remarkable ACCURACY which distinguished this make forty years ago, holds good for the STEVENS to-day.

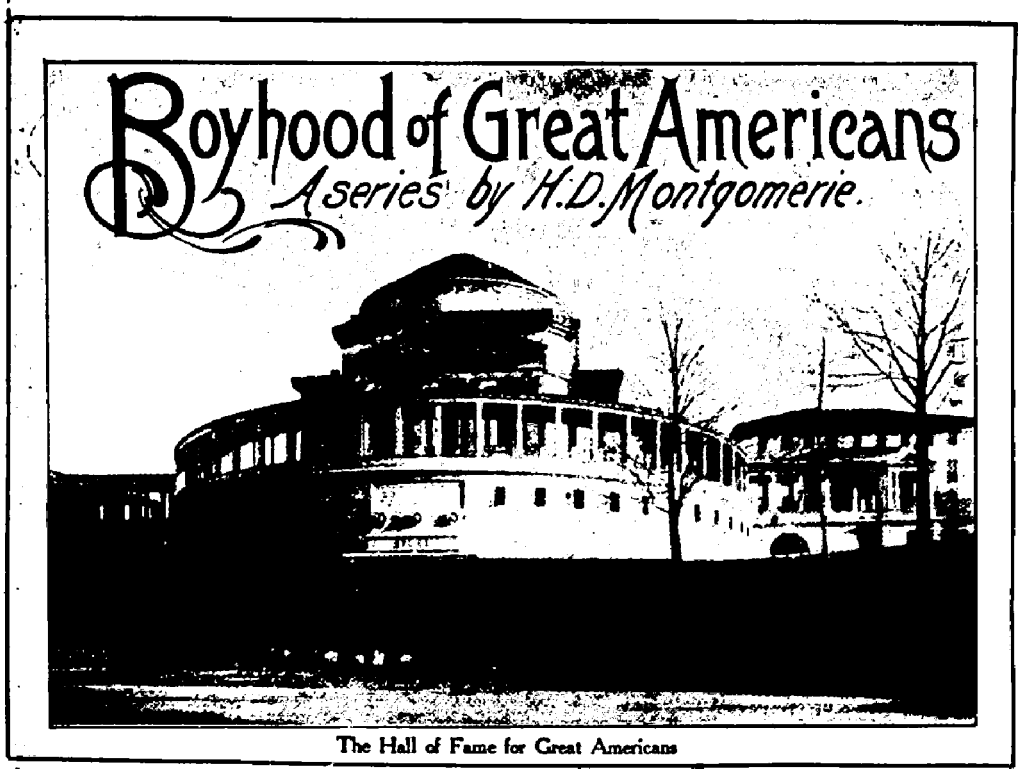
Mention The American Boy When Answering Advertisements



The Hall of Fame for Great Americans

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November number. No. I of the Series treated of Ulysses Simpson Grant; No. II of David G. Farragut No. III of Benjamin Franklin; No. IV of Abraham Lincoln.

No. V--John Adams

AMONG THE many illustrious names which the American boy should treasure, there is not one which should be held more dear than that of John Adams, for to him with a few others belongs the honor of having laid the foundations of our great Republic.

In 1636, only sixteen years after the "Pilgrim Fathers" landed on that "wild New England shore," there is a record of Henry Adams, who was a great grandfather of John Adams, receiving grants of land at Mount Wollaston, now a part of Quincy—in the colony of Massachusetts. There the descendents of Henry Adams can still be found.

Barren, rocky land and the continual warfare which the Indians waged against the invasion of their territory by the white men made the lives of these first settlers one long, arduous struggle for a bare living, and prevented their ever becoming well to do; so that when Henry Adams died, he was able to leave to his heirs only a small bit of land, a house consisting of three rooms, a barn containing a cow and calf and a few pigs. The house furnishings consisted only of three beds, a few pots, pans and dishes, one silver spoon and some books—the whole valued in English money at seventy-five pounds thirteen shillings, but what would now amount to ten times that figure.

Fortune, however, smiled more genially upon the efforts of the succeeding generations of the Adams family, and they became fairly prosperous.

The father of President John Adams, whose name was also John, was a grandson of Henry Adams. He is described as being a farmer in fairly comfortable circumstances, though he was forced to work early and late to provide for the simple wants of his family. He was looked up to and honored in his neighborhood for his sturdy, honest character. As a deacon of the church he exercised considerable influence among his fellow townsmen. His wife was Susanna Boylston, the daughter of Peter Boylston, a resident of the neighboring town of Brookline. She was in all respects a woman of high character and noble principle. To this worthy couple there was born a son on October 19th, 1735, to whom they gave the name of John. The quaint old house in which this child was born still stands in the town of Quincy and is annually visited by thousands of patriotic Americans. As with the Old Boston State House and Faneuil Hall, so this house has been called "The Cradle of Liberty;" and if any home in America deserves the name it is surely the one in which "The Father of Independence" was born. The boy grew up strong and hardy, his mind and morals being carefully watched and nurtured by his conscientious Puritan parents. There is extremely little recorded of the boyhood of John Adams. He began his diary when he was twenty years old, but it tells hardly anything of the years up to that age. We know, however, that his parents were most desirous of giving their son such an education as would fit him for the ministry, an ambition of many parents in those days, for clergymen in New England in colonial times exercised authority not only in religious matters, but in civil affairs. So it is not a matter for wonder that the greatest hope of these New England fathers and mothers was that their boys should have the word "Reverend" tacked to their names.

Young John Adams, like many other boys, at first cared little for books. The great forests round about his home, wherein dwelt every species of wild animal life; the birds in the meadows; the streams and brooks wherein the wily trout in great shoals only waited the bait of the fisherman—all the glorious fascinations of life in the open held more attractions for young Adams than did anything he saw in books.

The boys and girls of the New England colonies at the beginning of the eighteenth century, had not much time for sport or play. Work and plenty of it was their portion, and their parents, hose stern, devout old Puritans, had very little sympathy with young folks in their fun. Yet it could not be all work. There was skating and sledding in the winter; ball games and running and wrestling in the summer, occasional hunting trips and camping parties.

At a very early age John Adams decided that he would be a farmer. The following story, one of the very few recorded, is told concerning his boyhood's choice of occupation. He had just entered his fourteenth year when his father one day said: "My son, it is now time that you should make a decision as to your future occupation in life. What business do you want to follow?"

John Adams

"I want to be a farmer," replied the boy.

"Very well," said his father; "it is time now that you should comence your life work. You must give up play, and enter upon that steady, hard work, without which no farmer can get a living."

And so, the next morning, at what seemed to him too early an hour, the would-be farmer was roused from sleep, a hoe placed in his hands, and he was directed to a field that required attention. From early morn till noon, he pursued his work diligently; then home for dinner and back to the field, where he continued working all afternoon till the evening shadows fell and darkness came.

Working all alone that afternoon, under a hot sun, the boy began to think. The wonderful delights of a farmer's life somehow did not appeal to him so strongly as before. Tired and aching, he went home in the evening, and, when the frugal supper was finished, he looked at his parent and said: "Father, I have been thinking today and have concluded that I should like to try my books." We imagine that a smile of grim humor must have lighted up the usually stern face of the elder Adams as he listened to the boy's half-concealed confession. Hearty consent was at once given, the father offering to make every sacrifice to help his son acquire an education, provided the boy was in earnest and meant to apply himself with diligence to his books.

For two years Adams attended school at Braintree and so well did he acquit himself that at the age of sixteen he was able to enter Harvard College.

Of John Adams's student days we have very little record, but we know that on his graduation in 1755, he left Harvard with a reputation for energy, ability and good scholarship. The graduating class numbered twenty-four and young Adams stood fourteenth; but it must be explained that the rank of a student did not, strange to say, depend so much on scholarship as on the social position held by the student's parents. And as the father and mother of John Adams belonged only to the small farmer class, their son's position is easily accounted for.

Immediately on graduation the young man had to look around for something to do. His father had made considerable sacrifices in order that he might have an education, being forced to take up shoemaking in addition to farming that he might make ends meet. The public school of Worcester required an instructor and young John Adams got the position. On the place where this schoolhouse stood there has been erected a monument by the Daughters of the American Revolution having a tablet bearing this inscription: "In front of this tablet stood the first schoolhouse in Worcester where John Adams, second President of the United States, taught, 1755-1758. Much to his parents' disappointment he gave up the idea of becoming a minister, although his diary, which he began at the time he left Harvard and kept up for over twenty-two years, in its early pages gives evidence of a leaning towards the pulpit. Finding, however, that he was not fitted for the ministry, he began, in 1756, to read law in the office of Judge Putnam, stating that, "The study and practice of law, I am sure, does not dissolve the obligations of morality or religion." His boyish dislike to books and study seems now to have disappeared, as we learn that he was an earnest student. His days were given to teaching and his evenings and spare time to his law studies. In taking up this course, in which courage and great self-denial were required, John Adams was actuated by the noblest of motives. It was to fit himself worthily for the service of his country, if he should be called upon. He could see that the policy of oppression which Great Britain was pursuing towards her colonies was arousing a spirit of resistance; that unless this policy were abandoned the end would be war. Young as he was, John Adams pondered deeply over these things and in a letter to a friend he prophesied the coming greatness of America.

In the dissipations and so-called pleasures in which the young men of his day indulged, young Adams not only took no part, but scathingly rebuked. His words might well be taken to heart by the boys and young men of today: "What pleasure," he asks, "can a young gentleman, who is capable of thinking, take in playing cards? It gratifies none of the senses. It can entertain the mind only by hushing its clamors. Cards, backgammon, etc., are the great antidotes to reflection, to thinking. What learning and sense are we to expect from young gentlemen in whom a fondness for cards, etc., outgrows and chokes the desire of knowledge?"

Having been admitted to the bar, John Adams went back to Braintree and there hung out his shingle. His honesty and integrity of purpose, as well as his reputation for knowledge, soon brought him clients and, altho' fees were small, he got plenty to do.

While always an intense patriot, it was the iniquitous Stamp Act which the British government issued against her colonies that brought John Adams prominently before his fellow countrymen and started him on that career of public service which ended only at his death. Along with James Otis, that great lawyer, statesman, and scholar who had already contested the legality of the right of Great Britain to authorize search warrants, and of whose speech in court John Adams wrote: "American independence was then and there born," he presented a petition to Governor Bernard and the council to re-open the courts which had been closed because of the refusal to use the hated stamps. In support of the petition John Adams made the bold declaration that "the Stamp Act is invalid, it not being in any sense our act, we having never consented to it."

From that hour John Adams became a marked man in the councils of his countrymen, taking rank with such leaders as Otis, Hancock and others in their endeavors to obtain their country's freedom from the intolerable oppression of Great Britain—endeavors which were finally crowned with a glorious success.

SYNOPSIS OF JOHN ADAMS'S SUBSEQUENT CAREER

1768. Removed to Boston.
1770-71. Defended English soldiers accused of taking part in Boston Massacre.
1772. Protested against interference of British government with colonial judiciary.
1774. Sent to first Colonial Congress and drew up resolution concerning colonial rights.
1775. Member of second Continental Congress. Proposed Washington as commander-in-chief of the Continental army. Foremost in bringing about the adoption of the Declaration of Independence, gaining thereby from Jefferson the name of "the colossus of that debate."
1777. American Commissioner in France—obtained appointment of Franklin as sole Commissioner.
1779. Appointed Commissioner to treat with Great Britain for peace.
1782. Commercial treaty between Holland and United States.
1783. Peace with Great Britain concluded by Adams, Franklin and Jay.
1784. Concluded treaties with several European states.
1785. First American minister to England.
1788. Returned to U. S. Received thanks of Congress.
1789. Chosen first Vice-President of U. S.
1792. Re-elected Vice-President.
1796. Elected second President of U. S.
1800. Defeated by Jefferson for re-election to Presidency. Retired to Quincy, Massachusetts, where he lived until 1826. Died, July 4.

INSCRIPTION ON TABLET IN HALL OF FAME:

JOHN ADAMS
1735—1826

As a government so popular can be supported only by universal knowledge and virtue, it is the duty of all ranks to promote the means of education as well as true religion, purity of manners, and integrity of life.

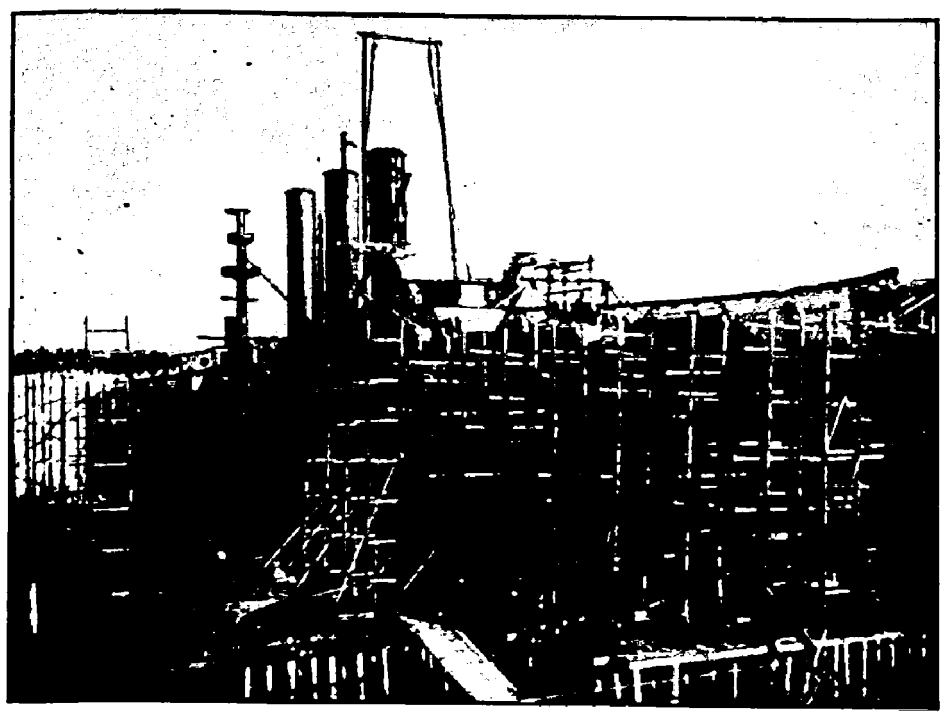
THE WAY AN OCEAN LINER IS BUILT

By HARRY A. PACKARD



A Few Days Before the Launching

DID YOU ever visit a shipyard where the huge ocean-going ships are built? If not, you cannot understand the immense amount of work modern war and travel has caused. Today the art of shipbuilding is a wonderful art, compared, as tradition has it, with the shipbuilding that was first successfully attempted in Egypt, and brought to Greece by Danaus, about 1485 B. C.

In historic times the Phoenicians took the lead in the art. In England the first two-decked vessel was the "Royal Harry," built in 1488; it had five masts. Steamships were first constructed about 1812; they were of wood. The first two of iron were launched in 1833 and 1834, to ply on the Humber.

A shipyard is always an interesting place to visit. The picture shows a big ship in her stocks in the shipyard a few days before the launching.

When the contract for the construction of a vessel is signed, and as soon as the dimensions, general arrangement, plans and specifications are approved by the owners, work commences immediately in the draughting rooms. The lines and shape of the hull to fulfill requirements regarding speed, dead weight, capacity, etc., are first determined upon. These lines are then faired up on a large scale and the offsets furnished to the mold loft, where the work of laying down the vessel to its full size is commenced at once.

In the meantime, a wooden model on a ¼, ⅜, or ½ scale, according to the size of the vessel, has been made by the pattern-maker from the original office lines, and on this model is lined off all the plate edges, butt laps, etc., of the shell plating. If the vessel has a double bottom following the outer bottom and sides, such as is usually fitted on war vessels, a model of the inner bottom is made and lined. The keel, bulkheads, decks, foundations, bow and stern fittings, framings, deck-house, casings, etc., are roughly outlined. The floor-heads, keelsons, and strin,s are marked on a frame body-plan taken from the large scale-drawings, and within a few days of the signing of the contract all the steel plates and shapes are ordered.

The stem, stern-posts, rudder and other large forgings or castings, rivets, deck-plan, and wood for all other carpenter and joiner work is then ordered. The drawings are gradually finished, traced, approved, and sent into the yard and shops ready for work when the material arrives.

If the vessel is a steamship, the engineering department is notified as soon as the contract is signed what power is required for the vessel, the general type of the machinery, and the space available for the same, and it proceeds to determine the size of engines and boilers and prepare general arrangement plans.

When the ship is completed and ready for the launching, the staging is removed, and the standing and sliding ways with packing are placed in position. On the morning of the launching day, the standing ways are well greased. When all is ready, the wedges are driven in and the ship is raised sufficiently to release the stress upon the blocks. These are then split from end to end of the vessel, allowing the whole weight to rest upon the permanent or groundways.

After the blocks are split and the ship lies on the launching cradle (which, by the way, is lashed under the keel by strong rope-toggles) the shore braces are knocked down one by one, thus removing from about the hull the last semblance of ground support.

At this stage the ship would break away and slide into the water, were it not held in place by an arrangement of iron rods, pins and rope lashings. This arrangement secures the sliding of the permanent ways, and until it is removed there is no possibility of the ship's starting.

Then comes the launching. The pins and rope lashings are cut away. There is a sharp cracking and rending. The huge mass is seen slowly to move, rapidly augmenting in speed for its final plunge. Then a mass of white water leaps into the air, and with a mighty plunge the ship enters the water.

Some Mottoes.

"To be honest, to be kind, to be brave, to be cheerful; to do always the best I can, to make always the best of things, to be glad over the work of those who surpass me, and to help the next fellow along," this is the "working creed" of a cheery Chicago toiler who finds friends plentiful and life well worth living.

"To do the best we can and rejoice with those who can do better" is the admirable motto of a New York Boys' Club.

"Do your stunt and do not grunt," is the manner in which a successful business man of Chicago and New York expresses his own helpful watchword.

"Paradise is the believing in it," is another good motto, pleasantly suggestive of the ends and aims of faith.

A LITTLE HEALTH SERMON

By THE EDITOR

Just a word about breathing. The nose is not so much for use in talking as in breathing. An athlete is taught to breathe through his nostrils. An Indian does not have to be taught so to breathe; he does it naturally, because when a mere infant his mother compelled him to do so, if he was inclined to do otherwise. If an Indian mother finds her baby breathing with its mouth open, she puts a strap of rawhide around its jaws. She thinks that if the baby cannot breathe through its nose it had better die, because it will never be healthy and strong.

Another thing to learn is, that one should breathe deep. Do not breathe from the chest, but from the lower ribs. It is said that the whisper of Sarah Bernhardt, the great actress, has wonderful carrying quality. It is not that her vocal cords are so strong, and her enunciation so clear, but that behind her breathing is powerful bellows; so that when she whispers, the words come with force that carries them.

The Indian teaches us a lesson, too, in deep breathing. Indians have been known to cover eighty to a hundred miles on foot in a day, and as much as two hundred miles on horseback. Their strength and endurance largely comes from their open-air life, their sturdy habits, their deep breathing. If you want to live a hundred years, you cannot expect to do it if you breathe only from the little space under the upper ribs.

One thing, too, about your clothing. If you find that your coat or your vest is tight when buttoned, have the buttons moved over so that there will be sufficient room for deep breathing. Women and girls have much said to them along this line, but men and boys need it as well. Unbutton your vest and coat and see how far apart the buttons are from the buttonholes when you breathe naturally. You may know then that if you must draw them together in order to button them, you are not giving enough room to your stomach and lungs.

Perhaps your mother and father do not appreciate what this all means to you. Nevertheless take my word for it; no better advice from the health standpoint can be given you.

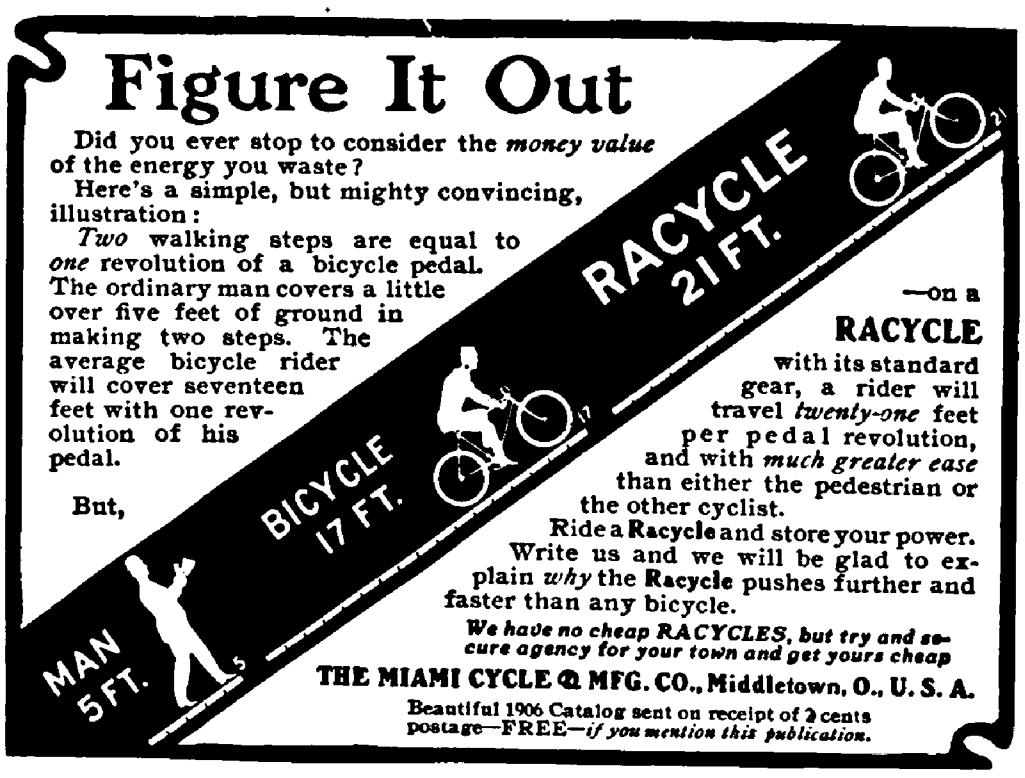
Figure It Out

Did you ever stop to consider the *money value* of the energy you waste?

Here's a simple, but mighty convincing, illustration:

Two walking steps are equal to *one* revolution of a bicycle pedal. The ordinary man covers a little over five feet of ground in making two steps. The average bicycle rider will cover seventeen feet with one revolution of his pedal.

But,



—on a **RACYCLE** with its standard gear, a rider will travel *twenty-one* feet per pedal revolution, and with *much greater ease* than either the pedestrian or the other cyclist.

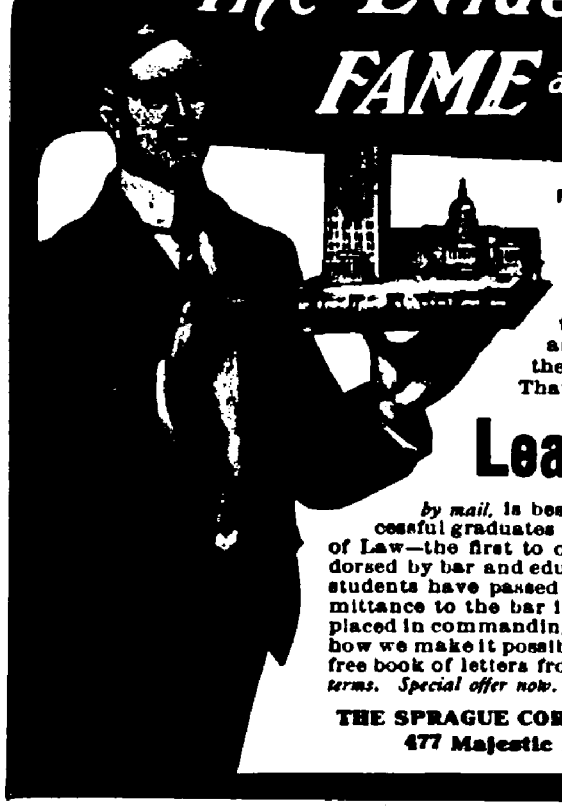
Ride a **Racycle** and store your power. Write us and we will be glad to explain *why* the **Racycle** pushes further and faster than any bicycle.

We have no cheap RACYCLES, but try and secure agency for your town and get yours cheap

THE MIAMI CYCLE & MFG. CO., Middletown, O., U. S. A.

Beautiful 1906 Catalog sent on receipt of 2 cents postage—FREE—*if you mention this publication.*

The Evidence of **FAME** *and* **FORTUNE**



THAT the law offers many flattering opportunities to the young man is best evidenced by a look into the big office buildings, court rooms and capitols. Here will be found the heads of great business and financial institutions, prominent lawyers, legal advisers and statesmen, almost all of whom owe their triumphs to a knowledge of the law. That any ambitious young man can

Learn Law at Home

by mail, is best evidenced by the thousands of successful graduates of the Sprague Correspondence School of Law—the first to offer this system of instruction. Endorsed by bar and educators. If you want to know how our students have passed the state board examinations for admittance to the bar in every state; how others have been placed in commanding positions in business and public life; how we make it possible for you to do as much, send for our free book of letters from hundreds of these students. *Liberal terms. THE PANCAKE EARTH AND ITS PRESS AGENT

Eleven-Year-Old Boston Boy is the Youngest Press Agent in the World

By GARLAND P. FERRELL

"A PRESS AGENT to see you, sir," said the office boy to the city editor of a Boston newspaper one Saturday night recently, "and he says he is in a hurry."

"I wonder what has happened now," replied the editor to a group of reporters who were chatting in the office. "I suppose it is the same old yarns; some chorus girls have inhaled poison from a bouquet thrown over the footlights, and have been saved by the heroic work of seven doctors; or perhaps the leading lady has stood too close to the curtain when it rolled up, and being caught by the hair has been hung in the air fifteen feet above the stage until the curtain was rung down; or maybe it is the still older yarn; she has inherited five million dollars from an old miner who had taken a fancy to her one night when she acted as Little Eva in an 'Uncle Tom's Cabin' company out in Deadwood; but at any rate you fellows want to keep your ears open for a big fib of some kind."

The press agent of a show is the man who goes around to the newspaper offices, telling big yarns about his show and the people in it, so that the editor will think he is hearing news and will consequently print a lot of free advertising. The press agent is generally a fat, good-natured individual who tells the editor funny stories, having first handed out a good fat cigar, and generally leaves some complimentary tickets to the show.

Consequently the city editor and the reporters waited with a feeling of anxious amusement for the fat, laughing individual to bow himself into the room. But no such character appeared. It was a little freckle-faced, barefooted boy that came in looking very serious indeed, as he respectfully removed his straw hat.

"I'll see you in a minute, sonny," said the city editor. "Just now I am waiting to see a press agent who has been announced, and is overdue."

"That's me," said the youngster as a broad smile spread over his freckles. "I would like you to put a notice in your paper saying that J. Broom will speak on Boston Common tomorrow afternoon, on the subject: 'Is It or Is It Not.'"

"I don't think it is," laughed a reporter who was immensely amused to see the way the editor stared in astonishment at the little fellow.

"Now, this is serious," answered the barefoot boy.

"My father believes this earth is a plane and not a sphere, and he is going to try to prove it. Here is the notice."

The neat manuscript which the boy handed to the editor was as follows; it was written by himself:

"IS IT, OR IS IT NOT?"

Everybody welcome.

The creation, formation, and foundation of the world is the subject booked for consideration at the Charles Street hall, on the Boston Common, for Sunday, Aug. 2 (weather permitting) by J. Broom, D. and B. A. of Toronto, Ont., Can. In which the question as to whether the earth is a globe or a plane will be treated fairly free from supposition and mainly from a Biblical standpoint. Get there early and secure standing room. Remember the time, sharp from 12:30 P. M., continuing to 2:30 P. M. A half hour will be cut off for the answering of questions pointedly on the subject which may be presented by anyone there present. The speaker desires to see a goodly number and will make it both interesting and edifying to the attentive hearer."

As the little fellow's father has poor eye-sight, the young press agent not only writes all of his notices, but also, as his private secretary, writes about fifteen letters a week of which he makes two copies by pen. In this way he is becoming an expert in penmanship, at the same time keeping a file of the correspondence.

James Broom Jr. is not exactly an American boy, though he lives in Boston, since he was born in Canada. He has some characteristics, however, that are worthy of American boys, as this incident will show: On the last Fourth of July, he wanted to celebrate with the young Americans in his neighborhood, but in honor of his birth-place he wished to display a Union Jack, the flag of Great Britain. Nowhere at the stores could he find one within his reach, but not to be disappointed he set heroically to work with red and blue paper and

James Broom Jr.

made a little flag which he flaunted from his window. The Boston boys, however, took this for a challenge and bombarded the foreign flag with rocks. One well-aimed missile tore the emblem badly, but the persistent Canadian patched it up. "And it stayed out the window all day long, too," he added with a gleam of triumph in his eyes and a quick, decisive jerk of his head, as he finished the story.

Although the teacher of the sixth grade of the Dwight School has taught young Broom the geography lesson that the earth is a sphere like an orange, the press agent says he has been doing some thinking of his own and he defends his father's theory vehemently.

"Now, I want to ask you a question," he said to the city editor, "and, mind you, I'm not sassing you. I simply want to learn your idea on the subject. If the earth is round why don't the water fall off?"

"Oh, that's easy," smiled the editor. "It is held by the force of gravitation."

"That is what President Eliot, of Harvard, told me when I went to him about it, but that doesn't make it clear to me. Another thing I have been thinking about. I have been reading about wireless telegraphy. Now how do those waves go? Do they go straight or curved?"

"Straight," answered a reporter.

"Then why don't they miss their mark if the earth is curved," quizzed the young theorist.

"I want you to think of this, too," retorted the little fellow, getting warmed up because the men laughed at him. "If you go up in a balloon a number of miles and stay in the air six hours, and then come down in the same place, why is it, if the earth revolves, that you don't come down fifteen degrees from where you went up?"

The answer to this was a chorus of laughter, and the little fellow took it for granted that he had won the debate.

While his fighting spirit was up, he paid his respects to the condition of the newspaper office, where torn papers, letters and crumbled manuscripts litter the floor at the end of day.

"One of the Toronto paper offices looked just like this," said he, "so I decided to give the editor a lesson. Long before Christmas I began saving my pennies, and when I had enough I bought a broom and a dust pan. On Christmas morning I wrapped them up so that nobody could see what I had, and I carried them to the editor and told him I had brought him a practical Christmas present. He took the hint and his office now doesn't look like yours."

"I want to ask," he added, "what day do you reporters keep as the Sabbath?"

This was a ticklish subject and produced a long pause. Finally some one said that as the paper is printed seven days a week that reporters rested every day between editions.

"Well, you ought to strike," said the boy with emphasis.

"We would get struck so quick we wouldn't know where to go to eat," was the answer.

"Oh, no," retorted the little agitator, "all you need to do is to show you mean business, and your employers will allow you a day of rest."

When the office boy had shown the youngest press agent in the world how to get out of the office, he came back jubilant.

"Say, dat kid's a wonder," he said.

"Do the next thing," is the motto that enables John Wannamaker to successfully manage his own business and the largest Sunday school in the world.

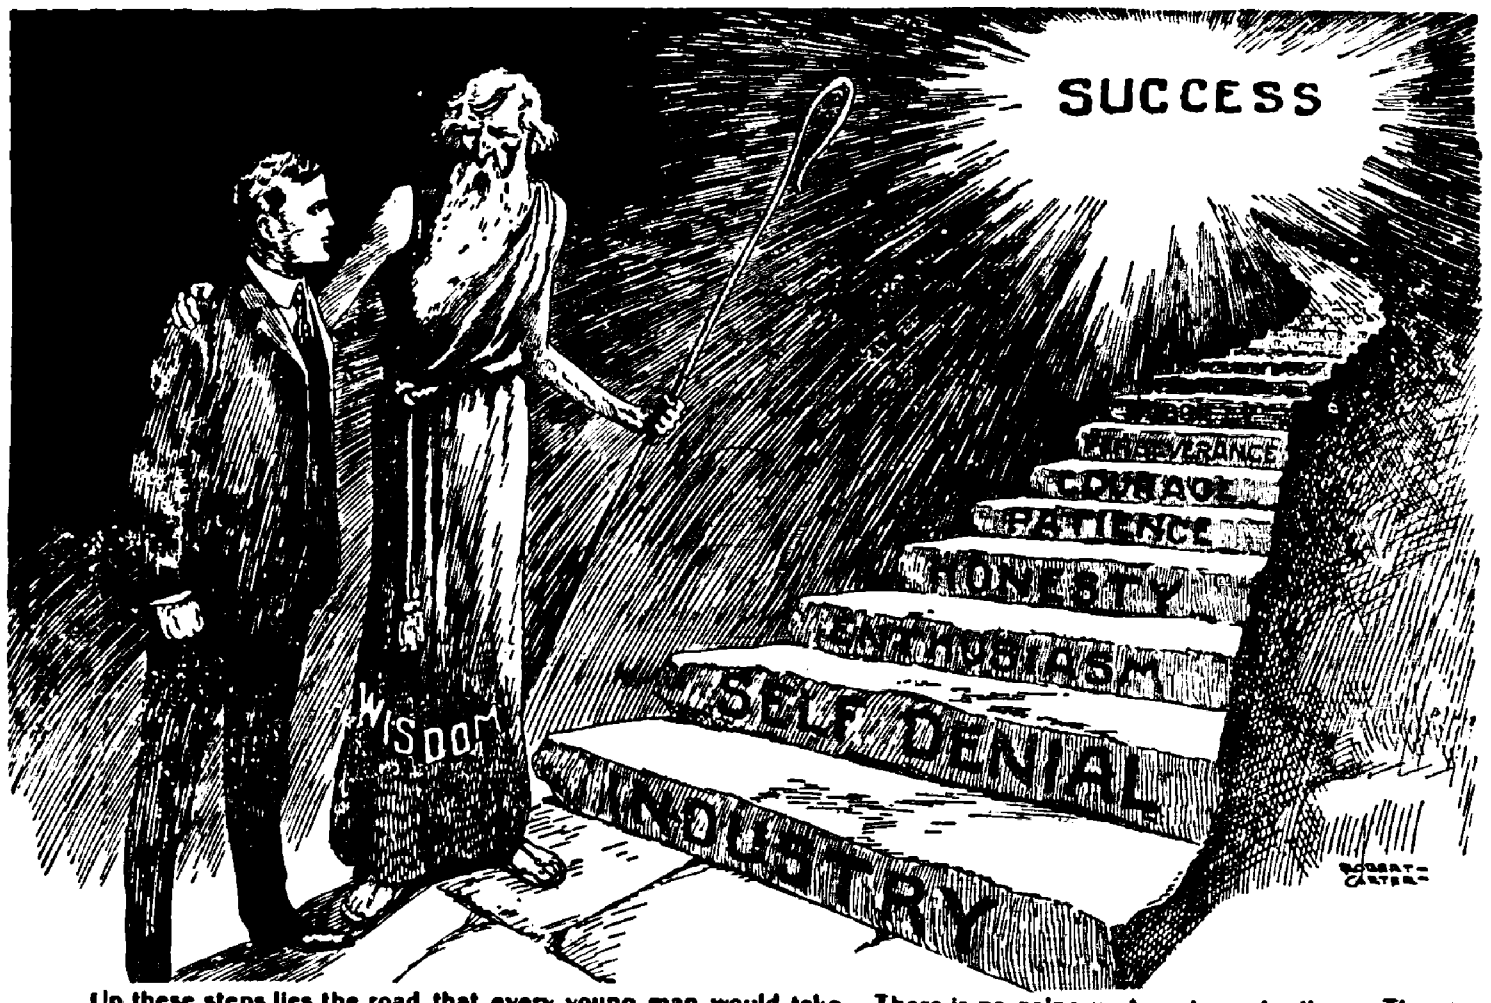
"Today," inscribed upon a large piece of chalcedony, was the motto of Ruskin, always in plain sight on his study table.

"Deeds, not words," is the motto of Gen. Neal Dow, who also insists "Always try to be on the side of the right, always against the wrong."

BEGINS NEXT MONTH.

An illustrated account of Arthur Duffey's sprinting triumphs in Australia.

YOU MUST DO YOUR OWN CLIMBING



Up these steps lies the road that every young man would take. There is no going up two steps at a time. The steps are high, broad. And the climb is a long one—to REAL SUCCESS.

—Chicago American.

Let Me Tell You the Special Price On This Genuine 1906 Chatham Incubator

YOU see we make more incubators than any other concern in the world.

We have two big factories equipped with every up-to-date labor-saving appliance.

We buy lumber in immense quantities.

And turn out from six to seven hundred Incubators a day.

This means high grade machines at low cost.

Now we are after the trade with an Incubator of up-stairs quality at a down-stairs price. And to prove to you that Chatham Incubators are the best made, we are willing to let you try one 84 days **FREE.**

You can take off four hatches, and, if the machine isn't exactly as represented send it back at our expense. Could we make a fairer offer?

But we go further even than this and guarantee every Incubator we sell for five years—a direct Iron-clad guarantee. Send for our FREE Catalog today.

Your name and address on a post card mailed at once gets the whole story by return mail.

The Manson Campbell Co., Ltd.
259 Wesson Avenue, Detroit, Mich.

THE Victor BOOK FREE TO YOU

It tells how to make hens lay when eggs are dear—how to raise chickens to sell at early spring prices. See how easy you can make money in the poultry business. The Victor hatches every fertile egg. Our 40 years experience and large facilities enable us to make the best incubator at the lowest relative price. We pay freight, send guarantee bond with machine and refund money if not as represented. Write us today. Say, "Send the Victor Book" and we'll do it.

GEO. ERTEL CO., Quincy, Ill. Established 1867.

Syd, The Strenuous.

When Syd is six,
  Who now is only five,
No more display of any baby tricks,
  He's going to shed his kilts, as I'm alive,
When he is six.

When Syd is six
  What wonders will arrive!
A really, truly nickel watch that ticks;
  A cart and pony, too, for him to drive,
When he is six.

When Syd is six
  He's going to swim and dive
And shoot—in fact, my brain is in a fix
  To think of anything he won't contrive,
When he is six.

When Syd is six—
  I hope we will survive,
I hope we won't be turned to lunatics
  From hearing of the strenuous way he'll strive,
When he is six!

Rose Millis Powers, in The Pilgrim.

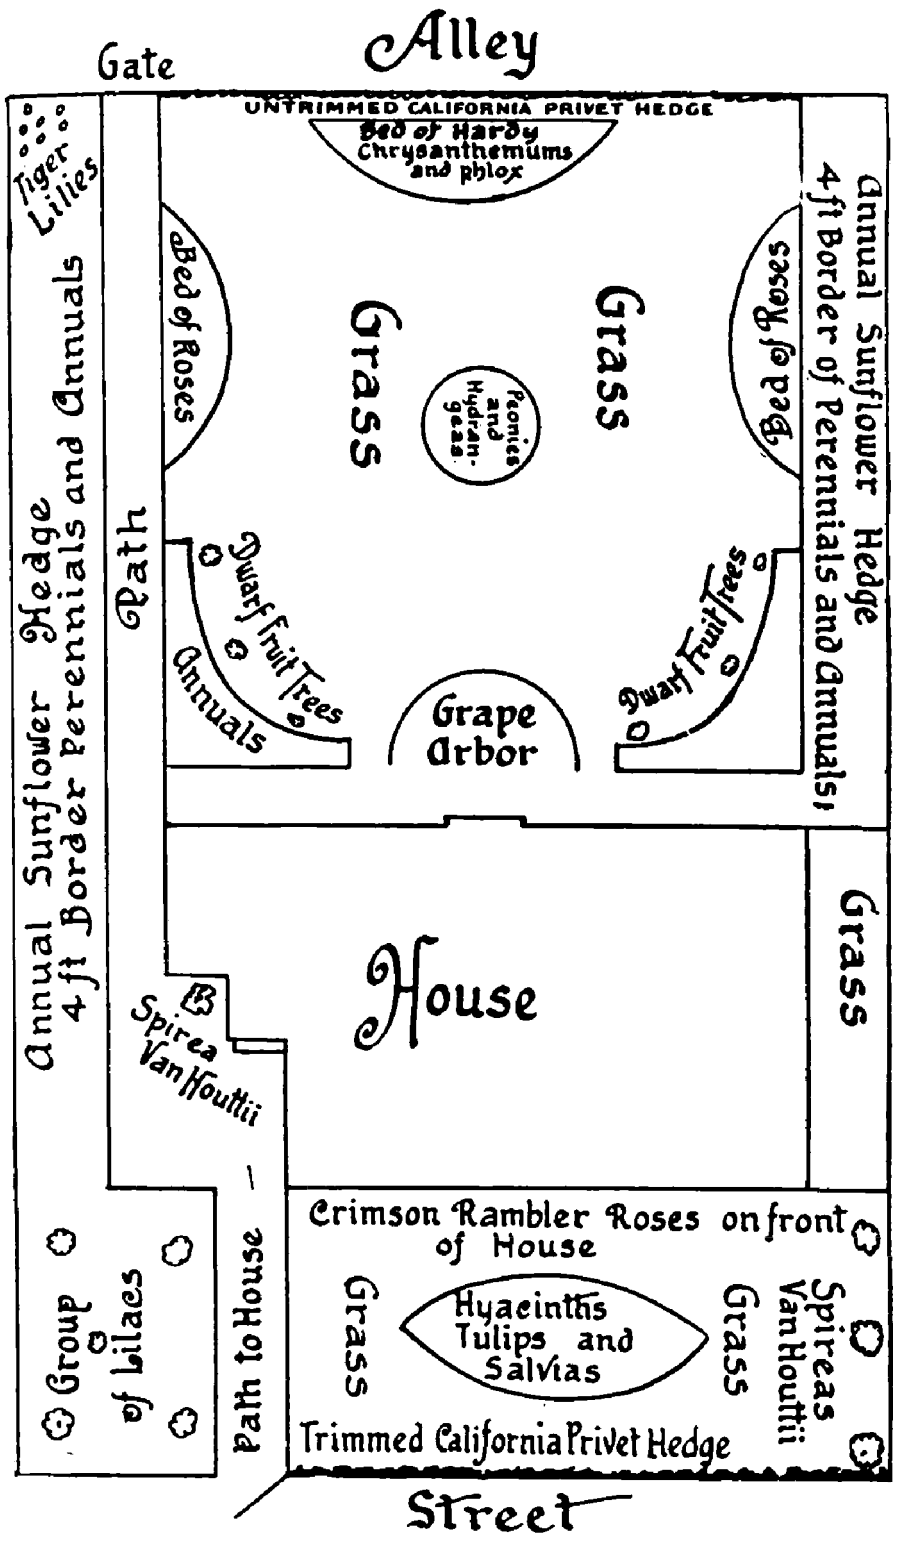
One Thing Certain.

"I say, father," said the studious youth to his parent, "here's a question in the paper that seems interesting: 'If a cannon ball going at twenty miles a minute were fired from the back of a train going sixty miles an hour, where would the cannon-ball alight?'"

"I don't know exactly where it would 'light,'" replied the parent, "but I'm pretty sure it would do a lot of damage. It couldn't hit anywhere without hurting a lot of people that were standing about without anything better to do than puzzle their heads over such silly questions."

THE BOY'S GARDEN

By DR. HUGO ERICHSEN
Honorary Member Detroit Florists' Club



GARDEN-MAKING is fun, if you go about it in the right way. Go slow and do things right. If you have a fairly good soil to work with and do not allow the weeds to get the start of you, you are bound to succeed.

Most boys know how to handle a spade, hoe and rake, and these tools together with a good wheelbarrow and a strong manure fork, are all the garden implements required to do the work. Some people may tell you that you can get along without the manure fork, but do not believe then; they do not know what they are talking about. A plant, like a human being, requires nourishment during the period of its growth, and manure is the kind of food it likes best. The old gardener was right when he said that manure "is the boss of the garden." It's like putting money into the bank; the more you put in, the more you can take out. You can probably obtain all the manure you need by getting on the right side of your milkman. Take an occasional ride with him over his route and get him some new customers. He will appreciate this and either let you have the manure for nothing or sell it to you at a low price.

Of course, the principal object of a flower-garden is to beautify the home, to make it as attractive as possible. In designing the plan that accompanies the article, the author kept this purpose in view and subordinated everything to the idea that the garden is a setting for the house. I suppose it is scarcely necessary to say that I do not expect you to follow the plan in all of its details, but would rather have you regard it as suggestive. It will call your attention to certain features that may be carried out to advantage in your own garden. Or the plan can be modified to adapt it to other locations; as it is now, it is intended for a lot running north and south, with the rear in the latter direction.

You may not care for the ornamental gardening on the lawn and prefer a simple grass plot, or you may make up your mind to divide the back yard into a number of flower beds of irregular size. If you decide to do the latter, be sure that the beds are not so large that you can not reach across them, and make your walks wide enough so that you won't have to go along like a tight-rope performer when you are at work. And don't try to pattern after a cemetery effect. Make your beds flat and do not raise them too high above the level of the ground. No definite directions can be given, as the proper height of a bed depends upon its length and width.

But let us suppose you intend to carry out the design just as it stands. At first, as you look at it, it may appear to be rather complicated, to such an extent, in fact, that you may lose heart. You want to remember, however, that you are not going to do it all at once. A garden is not made in a season, any more than Rome was built in a day. If you manage to make the lawn in the front and the rear of the house and get the borders on either side of the lot ready for planting, you will be doing exceedingly well this spring. As you will not want to be wholly without flowers, even this summer, scatter seeds of annuals up and down the borders. Do not mix the seed so as to produce a jumble of bloom, but sow each kind in a separate place and secure large splotches of color that will be far more effective. The seeds of annuals are cheap, and one package at five cents produces hundreds of flowering plants. I can particularly recommend the following annuals for your purpose: Ageratum, Sweet Alyssum, Balsam, Calendula, Calliopsis, Candytuft, Cosmos, Dahlia, Eschscholtzia, Gaillardia, Marigold, Mignonette, Nasturtium, Nicotiana, Pansies, Petunia, all kinds of poppies, and various shades of Zinnias. These will all attain perfection and flower from seed the first season and will make a show in the garden that will astonish the neighbors and please you. Many of the annuals are excellent for cut flowers and will last a long time in the house.

In preparing the ground for the lawns, make it perfectly level and work in as much manure as possible. If the surface is uneven in some places, it may be necessary to fill up. Buy your grass seed from a reliable seedman and sow it liberally. It is an advantage to have the lawns rolled before and after seeding, but you will probably have to do without this, unless you can have the work done by somebody else, as rollers are very heavy. Perhaps you can interest your father in your undertaking and get him to do the work for you. The first year the lawns should not be cut closely or frequently, hence they will require little attention outside of watering.

In sowing your annuals, those known to be the largest and showiest should be used as a background. They include: Cosmos, Nicotiana, the tall poppies and the Zinnias. The Dahlia should, of course, be employed in the same manner, although, strictly speaking, it is not an annual. The dwarfer plants, on the contrary, are used in the foreground. If an edging is desired, it can be easily made by the use of still smaller plants, such as the Tom Thumb Ageratum, Alyssum Compacta, Portulacca, and the Lilliput Zinnia.

As might be expected, the first outlay for seeds is the most considerable. In the fall you will be able to gather plenty of seeds for the next season. You will then have more than you can use, in fact. Sell or give away the surplus. If you are well acquainted with the proprietor of the corner grocery, perhaps you can induce him to buy bouquets and seeds of you and thus make the garden pay for itself to a large extent, if not entirely. If you are popular, the people in your neighborhood will give your seeds the preference, and you will be popular if you raise flowers.

Late in the spring, after the other work is done, set aside a part of the border on the west side of the garden for the purpose of raising hardy perennials. Botanists call every plant a perennial that exists for two years or more, but some last nearly a lifetime and become more of the plants in the list given below will perfect with every year. The bed in the western border is intended for temporary quarters only, whence the seedlings are to be transplanted to permanent situations in the fall. When severe cold weather sets in, in the late autumn, it is well to give them a protective covering, which should be removed, however, as soon as the danger from severe late frosts is over.

Among the taller sorts of hardy flowering perennials the following are particularly desirable: Anemone, Queen Charlotte, Columbine, Canterbury Bell, Coreopsis, Larkspur, Foxglove, Gaillardia, Hibiscus, Hollyhock, Peony, Hardy Phlox, Platycodon, Oriental and Iceland Poppies, Scabiosa Caucasica, Tritoma, the German and Japanese Irises, and the hardy Chrysanthemums. The best low-growing varieties include the hardy Alyssum and Candytuft, Myosotis, Achillea, Armeria, Pinks and that dear old acquaintance of ours, Sweet William.

You cannot be expected, of course, to be familiar with the names and habits of all of these different plants, but a postal to any seedsman will secure you a catalogue that contains all the information you will require and each package of seeds bears directions for cultivation.

At the close of the season, you will cut out the lawn in front of the house, as indicated, to make your flower-bed. When it is ready to receive the bulbs, put in your hyacinths and tulips, the former in the center. Possibly you may prefer to plant tulips only in these winter quarters, as they are quite inexpensive, when purchased by the hundred, and just as showy in the spring. In that case it would be best to select one color, say red, which would produce a pleasing effect in contrast with the lawn. Do not plant your bulbs later than the last of October, as they must be well rooted before winter sets in. Salvias, started in seed boxes in the house, in the early part of March, will be ready to take the place of the tulips in the begining of June.

On the front of the house, on either side of the windows, you may now plant Crimson Rambler roses or Clematis Paniculata, on light trellises, or attach them to the clapboards by means of small leather straps and tacks. The spireas, lilacs and tiger lilies may be planted next. Syringa Frau Dammann (white), with a truss of an immense size, and Syringa Ludwig Spaeth, with long panicles and large single individual flowers of a dark purplish red, are among the best lilacs of recent introduction. If you cannot afford to buy these, however, try to discover this spring where good lilacs are in bloom and request the owner to let you have some of the suckers in the fall. These should, of course be taken up with plenty of roots and will eventually make large plants.

Besides the hardy chrysanthemums and phloxes in the bed at the extreme rear of the garden, you may plant hardy gaillardias, which will make a very striking combination.

For the rose beds I would suggest the following collection: Gen. Jacqueminot, Paul Neyron, Prince Camille de Rohan, Magna Charta, Maman Cochet, Mrs. John Laing, Madame Plantier, Clio and Clotilde Soupert. I have grown all of these roses personally and know they will give satisfaction.

In the circular bed, on the rear lawn, the hardy hydrangeas should be placed in the center of the peonies. An edging of white ageratum or sweet alyssum for this bed would look very pretty and enhance the beauty of the other plants.

The only thing that remains to complete the plan is the planting of the California privets. Although these are very inexpensive, you can get them for nothing by procuring the cuttings when the owner of some well-established hedge of the kind trims it. Select the largest cuttings and plant them in sand in the cellar, where they are left until spring. By that time they have formed a callous and will take root if planted out.

BURPEE'S Farm Annual for 1906
"The Leading American Seed Catalogue."
Mailed FREE to all who want the BEST SEEDS that Grow!
This *Thirtieth Anniversary Edition* is a bright book of 168 pages and tells the *plain truth*. With Cover and Colored Plates it shows, *painted from nature*, Seven Superb Specialties in Vegetables of unequaled merit and Six Novelties in Flowers, including LUTHER BURBANK'S *New Floral Wonder*.
WRITE TO-DAY!—the very day you read this advertisement. Mention this paper and address

Stamp Inquiries

Geo. K.—India proofs are not reprints, but are printed on India paper by the government or contractor as samples for distribution. 1c and 3c U. S. stamps of the issue of 1873 are not worth any more on the envelope. Match and medicine albums do not as a rule have spaces for regular revenue stamps. Your Canada law stamps are worth about 5c each. Date of issue of 20c Col. Republic must be wrong. The 20c purple 1890 lists $1. Green surcharge is probably a cancellation. Remaining stamps are worth about 2c each. J. S. W.—2c Liberty head U. S. rev. lists 1c; 3c Locomotive, 4c; your other descriptions of stamps are not explicit enough. I. W.—Your envelope is an "albino," that is, printed without color. It occasionally happens that two sheets of paper stick together when going through the press; both will be embossed, but only one will have the printed impression. We have seen many which have done postal duty. They are interesting but not uncommon. O. E. G. Mekeel's Weekly Stamp News, Boston, is the most prominent weekly stamp paper in the U. S. The American Journal of Philately, 18 East 23rd st., New York, is the oldest monthly. Both are 50 cents a year. A. L. S.—Your envelope is a "mis-strike" and is occasioned in somewhat the same way as the "albino" described above. They are supposed to be destroyed, but sometimes slip through undetected. New York—The Lenoir N. C. local lists $1; the 2c Mobile, $40; Brooklyn City Express, $3; the Boyd's local, if an envelope stamp, lists $10. We do not find an adhesive stamp like your drawing. Allen B.—Your stamp is a 2c U. S. issued in 1882. It has no value. Aubrey B.—Bergedorf ½ sch. blue, 1861, unused, lists 75c; but these stamps have been extensively reprinted and it is likely yours is a reprint. If the cross-bar of H in "Halber" is broken it is a reprint. P. A. S.—Your stamp was issued by Spain in 1860 or 1864; it lists 2c. L. C. F.—1c and 2c Canal Zone, such as you inclose, are worth 2c each. L. H.—Your 1c, 2c and 8c stamps were issued to commemorate the Omaha Exposition, and the 2c "Fast Express" the Buffalo Exposition. The 3c green and 3c red were issued in 1870 and 1861 respectively. E. B.—Stamps with "Marco de Bollo" on are Italian revenues. "Communicaciones" is found on Spanish postage stamps. Your other stamp is a Swedish local. None of these stamps are rare. S. McW.—Your stamp is a 2 heller, Austria, newspaper stamp issued in 1900 and worth 1c. L. W.—Your description is not explicit enough. Better make a drawing of the stamp. What is the denomination? R. D.—Your 1c Proprietary is the issue of 1875; it is common. The other stamp is probably an essay printed on gold beater's skin and is worth from 15c to 25c. C. E. K.—The highest denomination of postage stamps issued by any government is the $100 newspaper and periodical issued by the U. S. in 1895. These were not sold to the public while they were current, but were placed on the stubs of receipts for the payment of postage on newspapers in bulk. In 1903 Rhodesia issued a stamp of the denomination of £100 (about $500), available for both postage and revenue purposes, but we have never heard of any being used for the pre-payment of postage. M. B. W.—Following is catalogue value of your stamps: Brazil 1850, 60r., 6c; Cape of Good Hope 1853, 4p., 40c; Great B. 1840, 1p. black, 15c; Great B. 1841, 1p. red, 2c; Great B. 1870, ½p., 3c; Peru 1894, 1c green, 3c; U. S. 1870, 2c, 3c; U. S. 1879, 2c, 1c; U. S. 1851, 3c, 3c. Your Heligolands. The Dutch postal law provides that in case there is writing on the face of the card the recipient is fined in the sum of six cents, our money.

The Numismatic Sphinx

Jay V. Dohrn: Fractional currency, if in fine condition, will usually fetch double face value. It is safe to say that dealers will not pay a premium on the Columbian half-dollars of either date. A good three-cent silver coin of 1869 is worth about fifty cents. The nickel of the same date only face value. Current Canadian coins will not bring a premium. J. B. Frisbie: The cent of 1838, in good condition, is worth ten cents. 1852 half-dime, face value only. Harold Walpul: Your coins of the U. S., France and Mexico are all quite common. While the old half-dollars previous to 1838 are catalogued by the dealers at from seventy-five to eighty-five cents each, they seem to be well stocked and paying but very little over face value for them. A fine coin, or one in uncirculated condition, of this class is only likely to obtain a premium. The Irish ten pence of 1805 is worth a dollar. East Indian 1847, two annas, ten cents. R. A. P.: We are unable to inform you as to the fictitious value of the five and ten dollar notes on the Bank of Howardsville, Va., of 1861. These old broken bank notes may be picked up in great variety for a few cents each, but as far as we know no serious attempt has ever been made to catalogue and price them. Stanley T. Ford: The one skilling of Denmark of the date of 1771 is a very common coin. Frank Poshbyam: None of the flying eagle cents but that of 1856 will bring a premium. 1853 copper cents, five cents. There were both silver and nickel three-cent pieces issued in 1866. You do not state which one. Leo H. Bobb: Your query is elsewhere answered. J. R. Roorde: The half-dime of 1852 will not bring a premium. Thomas G. Shaffer: The half-dollar of 1840 sells at the dealers for seventy-five cents. Willie Freeland: The half-dollar of 1810 is worth eighty-five cents. Your others face only. Carl Patterson Wiand: Your rubbing shows the common variety of the 1853 quarter. The rare one has no rays around the eagle or arrow points by the date. Warren Woodward: Your coin is a Connecticut cent of 1787; in good condition this piece is worth from a quarter to half a dollar. The two-cent piece of 1864 is quite common. Leo Robinson: Your coins are quite common, selling for from five to ten cents each, depending upon condition. Mrs. M. M. Tresslar: Your Canadian coin of 185: is common. The coin that is so worn that the date cannot be determined is a New Jersey cent, but its conditions debars its having a premium. We do not know of anyone purchasing Confederate bills or bonds. Lloyd H. Adams: Your coin is a cent of 1805. If it is in good condition it is worth at least seventy-five cents. Beecher I. Sheridan: The dollars (silver) of 1884 are all common. The rarest dollar is that 1804, of which but eight or ten are known. Louis B. Saxe: Your coin is one of Constantine the Great of Rome, A. D. 306-337. Notwithstanding the great age of the coin it is comparatively common, selling at the dealers for twenty-five cents. They were issued in enormous quantities at the time. The head on the obverse is that of Constantine, and not that of a woman as you surmise. Frank Easton: Notwithstanding the article that you saw in your paper, the Denver mint has not yet begun to issue coins. Their first will be issued some time this year. The mint-mark will be D. J. H. R.: (1)2 kopecks of Russia, 1813, ten cents. (2) 5 tornese of Sicily, 1798, twenty-five cents. (3) IIII pfennig of Aachen (Aix-la-Chapelle), 1758, fifteen cents. (4, 6, 8 and 9) common coins of Switzerland, Germany and England. (5 and 7) common tokens of the Civil War period. The Trade dollar of 1878 has no premium. Henry Luethke: Your sheet of impressions show some very nice silver and gold coins of Mexico, France, Italy, Austria, Belgium and Hungary. They are all to be picked up in general circulation in these countries and are therefore of no particular value above face to collectors. Chas. C. Lea: (1) France, 1729, Louis XV. You do not give size of this coin (2) Belgium, 1868, five francs, face value. (3, 4 and 5) Mexican and Spanish silver, though they may be old, hardly bring a premium unless in the finest possible condition. Others face value only. Chester Dunham: Your sheet of drawings show some nice pieces for a collection, but are mostly common. Five of the drawings represent old French tokens. There are many of these and can be bought up at from ten to fifteen cents each.

Color of Ten Cent Stamps

There appears to be considerable discussion over the question of change of color of the current 10-cent stamp. It having been contended on the one hand that a noticeable change has been made and on the other hand that the change referred to applies to the 4 cent stamp rather than the 10. Your correspondent has been shown this week copies of the 10-cent stamp received by a dealer in one day's mail in which two distinct shades are easily seen. Inquiry at the postoffice elicits the statement that the 10-cent stamps now being received are much lighter in color than those used up to within a couple of months. It is stated that this change was made on the order of the chief of the stamp division. It is also stated that the brown of the 4 cents was made slightly darker, although the difference does not appear to be so marked as in the case of the 10 cents.

The public is warned against writing anything except the address on the face of pictorial cards intended for parties in the Neth-

THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

Drying Prints

A good method of drying prints—or, for that matter, negatives—quickly is to expose them to the action of a good current of air, provided that the latter is fairly free from dust particles. A favorite method of mine is to slightly raise the lower sash of a window, and then lay the prints or negatives down upon a flat, clean piece of board placed upon the window-sill. In the case of negatives particularly it is surprising how quickly the draft of air sucks up the moisture.—Simplex.

Our Prize Pictures

"Chums," by T. E. Rein, of Chicago, to which first prize is awarded this month, appeals to one not only on account of the excellence of its pictorial composition, that is, its merits as a picture, but also because of sentimental considerations. One feels instinctively that the boy and the dog are close friends and that the title is well chosen. Altogether, it is a photographic work of art; even the technique is perfect. The second prize, "Foreshadowing of the Millenium," on the other hand, interests us principally on account of the subject, as it foreshadows the golden age when the lion and the lamb shall lie down peacefully together. It was taken by S. Weaver, Plattsburg, N. Y.

"CHUMS"

First Prize, by T. E. Rein, Chicago, Ill.

Attention, Competitors!

We have received three requests—from Lansing, Minn., Limaville, O., and Magnum, Okla.—for particulars concerning our monthly contests. As these are given on this page in every issue of THE AMERICAN BOY, we cannot afford to waste valuable space by repeating the information.

Some of our friends are laboring under a misapprehension with reference to the late Brownie contest. This was a special contest and ended September 1, 1905. All Brownie photos that reach us now are entered in the regular monthly contests.

Praises "Boy Photographer"

Under date of Jan. 5, Ferdinand Lofgren, of Lindsborg, Ks., writes us: "Happy New Year. I have never before written the photograph department, but I will now do it and thank you for giving so much good advice. The first thing I get THE AMERICAN BOY, I open up the photograph page. I hope you will always have success with your department and in general with THE AMERICAN BOY. I have never read a better paper for boys and will surely recommend it to all the boys I know."

Honorable Mention

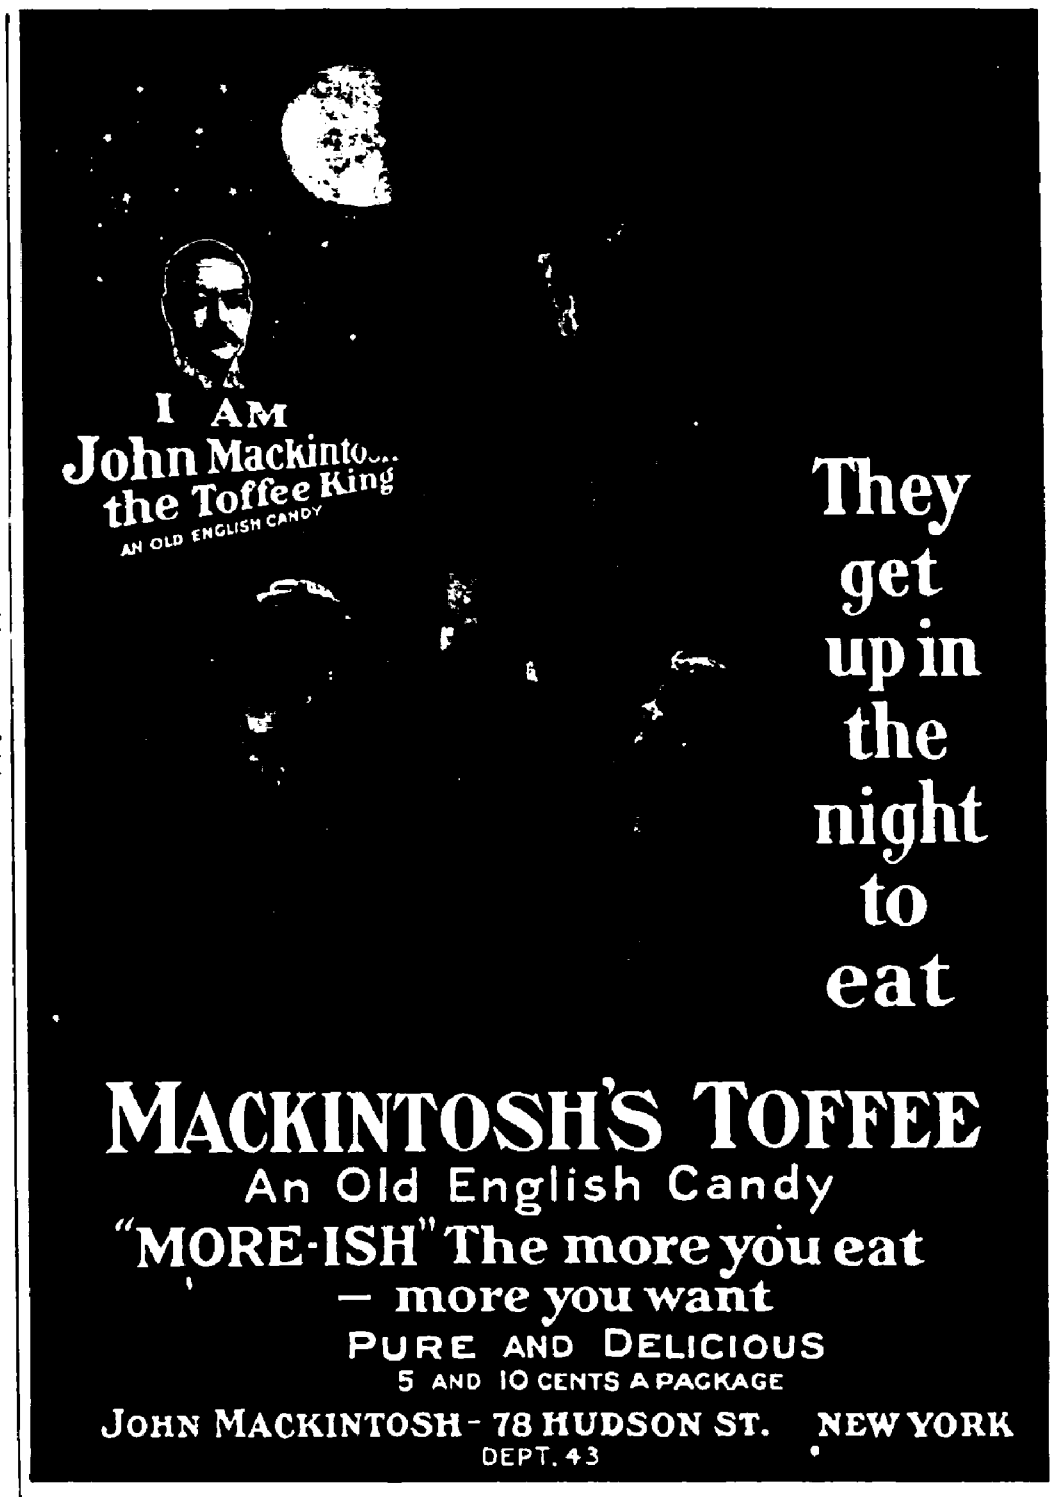
If there were such a thing as third prize in our contests, it would have been unhesitatingly awarded to H. Edward Fry this month for an admirable group of horses. E. E. Trumbull is a close second in this respect and also deserves to be singled out from the remainder of the photo. artists upon whom the above named honor is conferred. They include: Nick Bruehl, Willie E. Elliott, R. D. Von Nieda, David Brodkey, F. H. Roley, C. M. Staples, Kurt Stolberg, A. J. Klnts, Perry N. Trask, Ralph Hay, Harry H. Phillips (for print entitled "A Country Road"), Stanley Gordon Jones, and Everett W. Skilton.

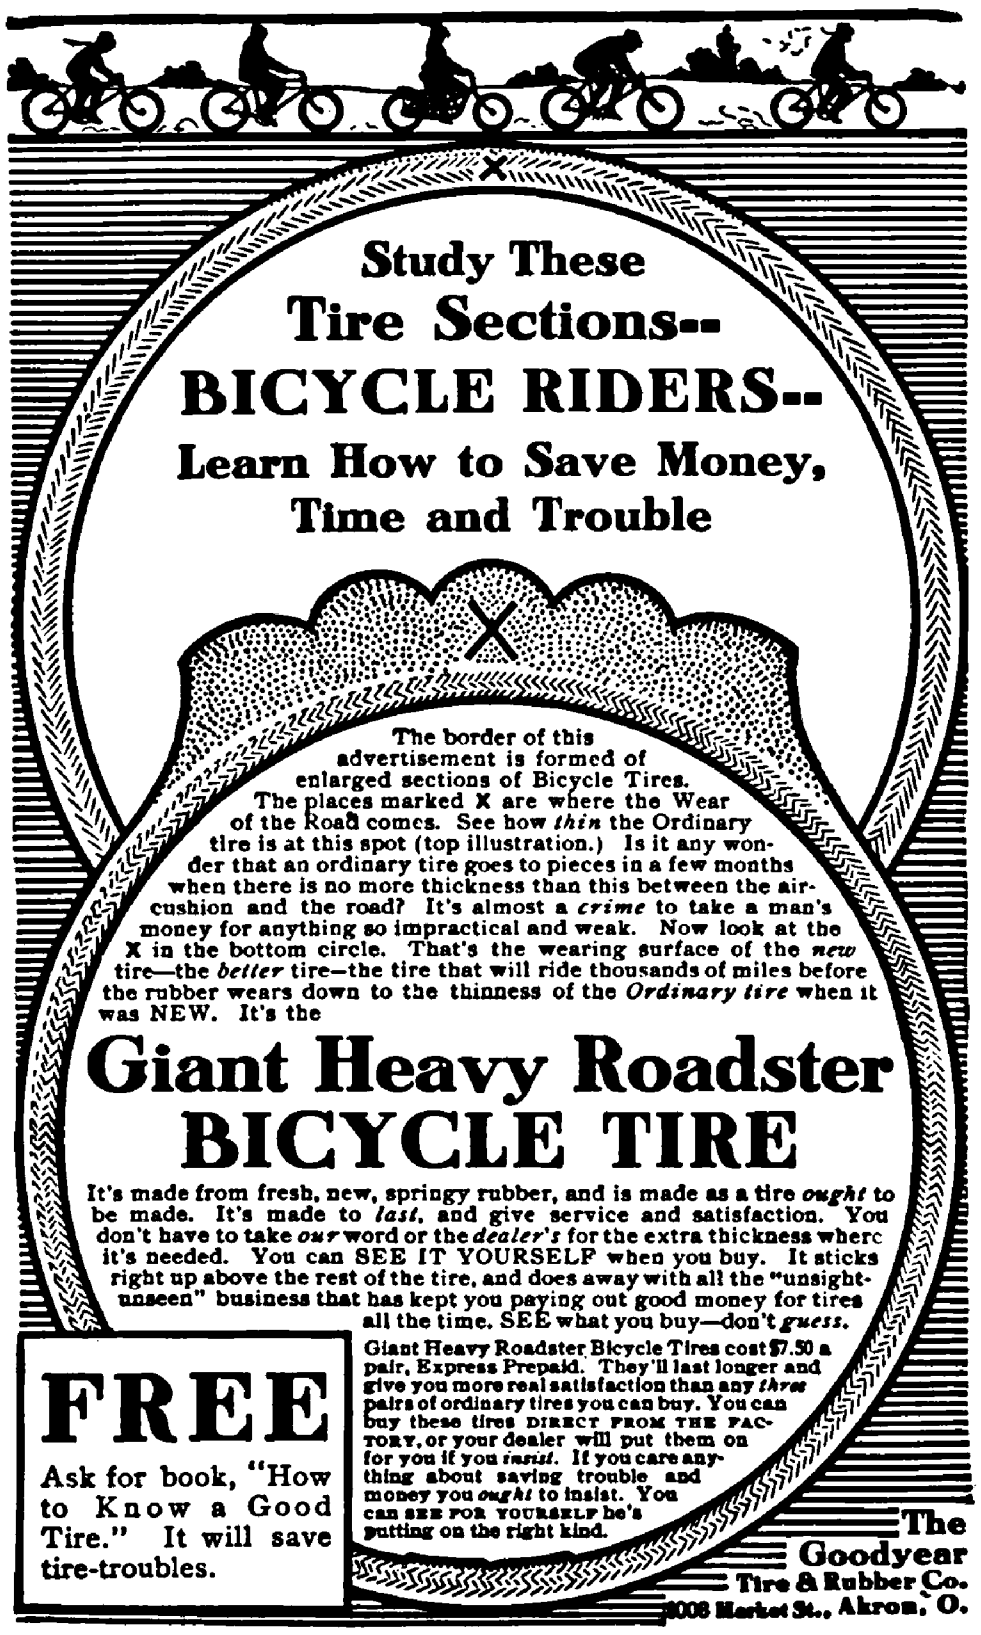
The Letter Box

Richard V. Cole: Your plan is feasible, but the water used for washing should not be employed again. Prints should remain in this running fresh water for half an hour; photos will be permanent, if they have been fixed sufficiently.—Arthur C. Ripley: An ink for producing white letters on a dark background, such as a Velox post-card, may be made as follows: Iodide of potassium..10 parts; water ..30 parts; iodine..1 part; and gum..1 part. Use an ordinary pen and write on the dark portions of the photograph. Yes, a background for portraits can be made of ordinary brown or gray window shades that are fastened to some support; a large frame will do. —J. Webb Saffold: Your "Festival Hall At Night" is very good. The black streak in the other picture is evidently due to the paper and not to any defect in the negative. If that were not the case, the edge of your print would be white, as you employed a mat. Try another kind of paper.—Harry M. Biggin: For general photographic work, I think a Rapid Rectilinear lens is preferable. Both cameras you name are very satisfactory.—O. B. Cardwell: There is no way to mend your torn film, so it will not show in the print. Make another exposure.—Alfred Kringle: According to the Encyclopedic Dictionary of Photography, the black spots of which you complain, are due to a defect of the negative. Are you sure that your lens is clean? If you have any further trouble, send the film to the Eastman Kodak Co., at Rochester, N. Y. They are experts on the subject.

"FORESHADOWING THE MILLENIUM"

Second Prize, by S. Weaver, Plattsburg, N. Y.





The Boy Mechanic *and* Electrician

A Permanent Department — Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns. — *Edited by Robt. G. Griswold*

The Right Way to Use Tools

By C. H. CLAUDY

THERE IS NOTHING a boy can buy with his pocket-money that will give him more pleasure, if he be of a mechanical turn of mind, than tools; and if he starts when he is a boy, by the time he is grown he will have a set of tools which will be simply invaluable to him, always provided he has learned to use them.

Now it is obvious that even a person who has never used a saw can pull it back and forth across a board, and haggle off a piece somehow, but that isn't sawing. And the same is true of other tools: while most anyone can use them after a fashion, if they do not use them correctly, they are not getting all out of the implement that is in it, and are wasting time and strength and botching the job, to no purpose.

The right way is usually very simple. With a saw, for instance, it is just as easy to keep the forearm rigid with the handle, and saw with the upper arm and the back and shoulder, as it is to hold the saw upright and push and pull with the entire arm. Yet the first way is the right way, and the second, a very wrong way indeed. Just look at the two pictures of the young man sawing, and see how awkward the arm is in the second one; then compare with the first one, and see how the arm below the elbow seems one piece with the saw and how the powerful shoulder muscles take all the hard work, and the wrist muscles have nothing harder to do than holding on. Sawing the first way is to saw straight and easily; and, by the way, saw with all the blade, not just the heel, or handle end. All the teeth were made to be used; hence, take long strokes. The teeth are made to cut one way only, therefore don't try to cut when pulling the saw back.

A plane seems to be a tool you can't use wrongly, does it not? Yet it is the most abused of tools. Nearly every one who uses a plane for the first time tries to make it work while holding it at an angle with the board. Now the plane will make shavings used this way, and I have no doubt lots of boards have been smoothed in this manner and were plenty good enough; but the point is that it takes longer to do it this way; you have to work harder and you can't do a good job. Besides, it is bad for the plane.

The proper way is to set the plane squarely on the work, and push. When you finish the stroke, lift the plane while still in motion—DON'T just stop pushing and pick it up. If you do this latter, there will be a mark on the work where the knife stopped cutting; if you do it as I have said, the shaving will taper off to nothing and leave a smooth cut. When you hold the plane at an angle, you take a narrow shaving, meaning you have to take more of them. If your plane is not "set" just right, you will make a "dig" into the work with one edge of the plane, and lastly, you will find it hard to keep the plane going straight. With certain kinds of wood, too, this method of planing will roughen the surface.

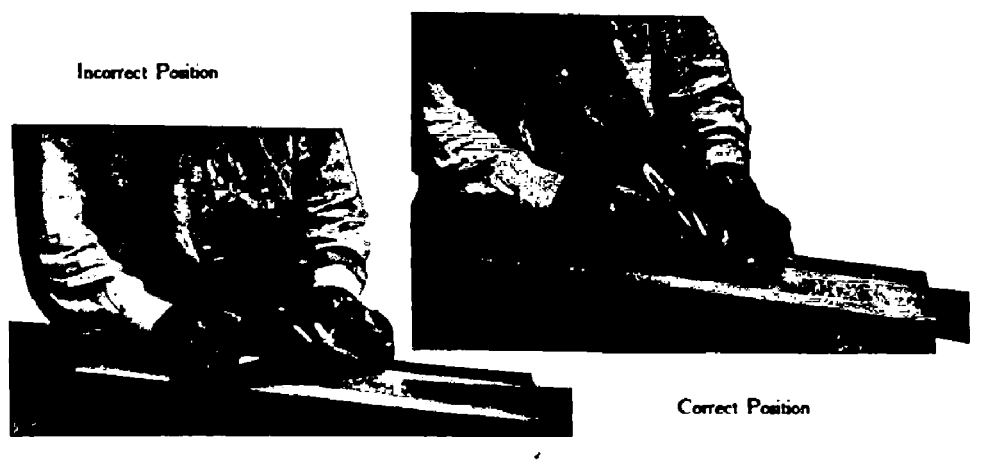
Right Position for Starting; Wrong for Boring

When you bore a hole with a brace and bit, the odds are you use the right position for boring, which is wrong for starting the bit, at first; and that you then assume the wrong position for boring, which happens to be the right one for starting. Does that seem complicated? With the help of the pictures, I will explain. The most important thing about a hole in wood is to have it straight. And as you, presumably, like to keep your tools in working order it is important that you do not bend the bit. Hence, a proper start of the hole must be made. Look at the picture showing a bit just being started. Notice that the left hand holds the push-end of the brace away from the body. This is done so that you may take a good look at the bit and see that it is perpendicular. When you have it in enough to stand alone, look at it from the other sides, and see that it is right all around. Then, when you are ready to go ahead with the boring, put your weight on the brace, as shown in the picture—get right on top of it and look down. Now this advice is to be taken with modification, according to the wood. In putting a half-inch hole in a half-inch soft pine plank, the "worm" of the bit—the little screw at the end—will pull the bit into the wood quite as fast as it needs to go in; but with a bigger hole and harder wood, the bit must have weight on it, and the picture shows you the proper way to hold it to secure that result. You now see that the right way to start is the wrong way to bore, and the wrong way to bore is the right way to start, just as I said it was. One thing more: If you have started the hole crooked, don't try to straighten it by bending the bit. A bent bit will not bore that or any other hole straight. Either enlarge the hole to make it straight, use another piece of wood, or, if you must have that hole in that place in that particular piece of wood, cut a plug to fit what you have bored, glue it in, let it set, plane off smooth and start again.

Now I know you are wondering what I can find about driving a chisel with a mallet that a fellow can do wrong. But that is just where I have you. Didn't I use to do it all wrong, time out of mind, until one day a friendly carpenter showed me the right way? You see, a chisel is sharpened on one side only for a reason. If you are making a square hole in a piece of wood, with a chisel—a mortise, for instance—you want the sides straight, and the edges sharp. But if your chisel was sharpened on both sides, it would be like a wedge entering the wood, and press the fibers away from it on both sides. But with the ordinary chisel the fibers are crowded out of the way only one side—the side where the hole is going to be, and where it does not matter. Therefore, the first thing you have to remember about a chisel is keep the straight side of the chisel away from the hole, the level side in to it. On the other hand, there are times when the bevel side should be down, as when you want to lift a very thin shaving and want to be sure the chisel will not cut too deep. In the two pictures, you see a man hammering the chisel with the mallet right and wrong. The first one shows the left hand well up on the handle, and the mallet used on the end. The second shows the left hand too far down on the blade—the cause of barked knuckles—and the mallet used flat, another reason for hurt fingers. Using the mallet flat is the idea of someone who is afraid he can't aim straight enough, and thus fears missing the chisel and hitting his fingers. As a matter of fact, however, if one can't aim straight enough to use the mallet correctly, he is not likely to strike just in the center with the flat of it, and if he doesn't do that, the mallet will turn in the hand and hit the fingers anyway! Moreover, what are a few stinging fingers compared to learning how to do the work correctly? Blows can be better graduated as to force and the chisel more carefully directed if the mallet is used end for end, and if the left hand is held near the top end of the chisel, the blows which miss the chisel won't hurt so much, and the chisel can be better guided.

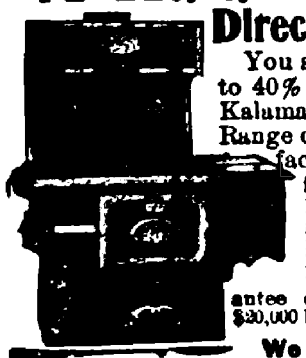
Now there is one more thing. All edge tools should be sharp. A dull tool is frequently worse than no tool at all. To sharpen plane bits, chisels, knives, etc., we use an oil stone. And this is a tool which is hard to use right and easy to use wrong.

Look at the illustrations. In one, the bevel of the plane bit is flat on the face of the stone and slanted to its length, so that the whole of the cutting edge rests on the stone; this is right. In the other, the edge itself only is touching the stone, and not for its whole length; this is wrong. The bevel should be kept flat, to allow an even sharpening and the making of an edge that will stay on. The holding of the entire blade on the stone is to prevent sharpening a depression in the center. As a matter of fact, the blade should be "crowned," that is, be a little, just a trifle, higher in the center than at the edges, as this prevents having a point of the blade dig up the work. But the crowning should be very slight indeed, and unskilled hands had better not attempt more than a mere rounding-off of the corners of the plane bit. It does not matter whether the blade, be it chisel, plane, or knife, be moved straight up and down, or with a circular motion, so that motion is even, not too hard, and so that the bevel is kept flat and patience must mix with the oil, otherwise the work cannot be properly done. One of those stones which cuts like lightning, so a tool is sharp in a minute, is not the kind to use. Quick sharpening means rough edges; slow but sure does it, and then, when you really have an edge, you have one which will stay on and do nice, smooth, clean work, the kind we all try to do.



Right Position for Boring Hole; Wrong for Starting

"A Kalamazoo Direct to You"



You save from 20% to 40% by buying a Kalamazoo Stove or Range direct from the factory at lowest factory prices. Moreover, you get a stove or range not excelled by any in the world. We guarantee quality under a $20,000 bank bond.

We Ship On
360 DAYS APPROVAL
and We Pay the Freight.

If you do not find the Kalamazoo *exactly* as represented, the trial does not cost you a cent. It will pay you to investigate.

Send Postal for Catalog No. 365.

All Kalamazoos are shipped properly, blacked, polished and ready for use.

Kalamazoo Stove Co., Mfrs., Kalamazoo, Mich.

All our cook stoves and ranges are fitted with patent oven thermometer which makes baking easy.

Oven Thermometer

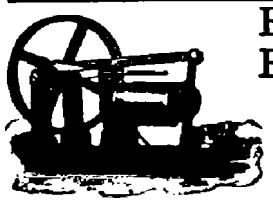
GIVEN TO BOYS

A Complete Base Ball Players Outfit, consisting of Chest Protector, Catcher's Mitt, Fielder's Glove, Catcher's Mask, line Belt, Chicago Cap, good Base Ball, or *A Complete Base Ball Outfit,* consisting of Flannel Shirt, lace front; Padded Pants; College Cap; line Belt.

Boys send no money, we trust you with jewelry to sell. Sell same at 10cts. each, and same day $2.00 from sale is received we will send you *complete outfit, all express charges prepaid. Write at once.*

JEWELRY NOVELTIES at 10cts. each

UNITED MANUFACTURING CO.
816 WASHINGTON STREET, GARFIELD, N. J.



Earn an Electric Engine

Boys Would you like to OWN an Electric Engine that will run machinery for you? Write today and we'll tell you how you can EARN one. With it we give complete instructions and a practical lesson on electricity that you can understand. A dry battery runs the engine.

Parents Let your boy answer this advertisement. If he wants to, it is an indication that he is inclined toward mechanics. His desire perhaps foreshadows a successful career in this line of work. Our system of instruction is unique and modern. Help the boy develop naturally. Engine, lesson (with diagrams), and complete instructions delivered for $1.25.

THE DIAMOND ELECTRIC COMPANY
301 Forrest Street, Warren, Ohio

FREE

A handbook on Gas and Oil Engines, Freehand Drawing or Electric Wiring (cloth bound, 64 to 96 pages, 7 x 9 inches in size), to every subscriber (before May 1st) to the TECHNICAL WORLD MAGAZINE, a standard monthly magazine of information along new and inspiring lines. Full of fascinating stories based on the romances of invention and the possibilities of engineering. Send one dollar bill at our risk for full year's subscription and free handbook. If not satisfied we will refund money and you may keep magazine and handbook for your trouble. Technical World Magazine, Dept. 13, Chicago

$3.00 A PAIR SENT PREPAID
Electric Telephones

Needed in every house. Handsomely nickle plated trimmings, call bells, push button, watch case receiver. Fully guaranteed. Send 2c stamp for catalog of dynamos, motors and gas engines

The Griswold Manufacturing Co.
Dept. E. Bingham, Mass.

$5.00 Water Motor, $3.50

A $5 Divine Faucet Water Motor for a limited time, $3.50, complete. Guaranteed. Attached to any faucet. For polishing, sharpening and grinding. Runs all kinds of light machines like washing and sewing machines. Largest and most powerful water motor. Outfit includes emery wheel, buffing wheel, polishing wheel, wooden pulley, leather belting, oil can, and polishing material. Money refunded if not satisfactory. Order now or write immediately for free booklet. Morton Mfg Co., Dept. 31, 120 Fulton St., New York

Electric Telephone 50c

We absolutely guarantee these telephones to work as well and as far as any battery telephone made. Complete outfit, 2 telephones, wire, battery, etc., express paid by us, $1.50. WE HAVE THEM FOR ALL PURPOSES. CIRCULAR FREE.

EAGLE ELECTRIC CO.,
1061 N. Albany Ave. Chicago, Ill.

6 VOLT PLUNGE BATTERY

COMPLETE $1.50 PREPAID. With Switch, Wire and Chemicals. Nicely finished with good sized crystal glass jars. Just the thing for running motors and small lamps. Gives 6 volts and 5 amperes. Sent promptly prepaid anywhere on receipt of $1.50. Send for descriptive circular.

RUSH ELECTRIC WORKS - MASONIC TEMPLE, CHICAGO

Electric Pocket Lamps

65c (postpaid). Press the button, gives an instant brilliant light. Conveniently carried in pocket. Superior battery. Send 65c money-order for one. Better grades $1.00 to $2.25. Circular free. Electric Novelty Co., 21st St., Galveston, Tex.

Correct Position

Experimental Lessons in Electricity

No. IX—Wires, Gauges, Etc.

DURING the past year we have taken up the construction and use of several electrical testing instruments and some apparatus. The many questions asked in the numerous letters received from the readers of this department, lead the editor to believe that a short talk on some general electrical topics may be very welcome.

Incorrect Position

In the first place a thorough understanding of the many wire gauges in use is essential. Wire for electrical purposes is measured by a series of definite sizes, represented in decimal parts of an inch. The diameter of any particular wire is known as its "gauge" and in any system, each gauge number has a definite value.

It is rather confusing to the amateur to meet in his reading with wire sizes given in two or three different gauges. but it is a fact that in this country there are no less than five different wire gauges. These are known as the Birmingham (or Stubb's Iron Wire Gauge) and generally abbreviated "B. W. G." Thus the expression "No. 26 B. W. G." means "Number 26 wire, Birmingham Wire Gauge." The next most commonly used is the Brown & Sharpe gauge, also known as the American standard, and abbreviated "B. & S." The Edison gauge is not met so frequently and is based on rather a different scheme, while Roebling's gauge and the Trenton Wire Co.'s gauge are seldom used in electrical literature. So when in your reading you see the expressions "No. 36 B. W. G." or "No. 36 B. & S." you will know that the first is No. 36 of the Birmingham gauge, while the latter is No. 36 of the Brown & Sharpe gauge. There is a difference of only one-thousandth of an inch between these two numbers, the first being .004" in diameter, and the latter .005". While the difference in sizes is slight it is well to know about it, and this explanation has been given to make the matter perfectly clear

For the convenience of our amateur readers we have compiled the wire table given below, which gives the number of the wire in the Brown & Sharpe, (or American) system, and opposite each size is given the diameter in decimal parts of an inch, number of feet of bare copper wire to the pound, and number of feet of that size required to offer a resistance of one ohm, at a temperature of 77° F.

COPPER WIRE TABLE.

Gauge.	Diameter.	Feet per pound.	Feet per ohm.
0000	0.460	1.561	20,440
000	0.4096	1.969	16,210
00	0.3648	2.482	12,850
0	0.3249	3.130	10,190
1	0.2893	3.947	8,083
2	0.2576	4.977	6,410

16	0.05082	127.9	249.4
17	0.04526	161.3	197.8
18	0.04030	203.4	156.9
19	0.03589	256.5	124.4
20	0.03196	323.4	98.66
21	0.02846	407.8	78.24
22	0.02535	514.2	62.05
23	0.02257	648.4	49.21
24	0.02010	817.6	39.02
25	0.01790	1,031	30.95
26	0.01594	1,300	24.54
27	0.0142	1,639	19.46
28	0.01264	2,067	15.43
29	0.01126	2,607	12.24
30	0.01003	3,287	9.707
31	0.008928	4,145	7.698
32	0.007950	5,227	6.105
33	0.007080	6,591	4.841
34	0.006305	8,311	3.839
35	0.005615	10,480	3.045
36	0.0050	13,210	2.414
37	0.004453	16,660	1.915
38	0.003965	21,010	1.519
39	0.003531	26,500	1.204
40	0.003145	33,410	0.9550

In this table one may find the number of feet of wire in a pound, or what resistance any particular length of wire offers.

When copper wire is used for winding magnets it is wrapped with some insulating material, such as cotton, silk, paper or gutta percha, but generally cotton and silk. These may be wound on in single or double layers from whence come the names "single covered cotton or silk," or "double covered silk or cotton." The thickness of this insulation varies, but may be generally considered to agree with the following table, which gives it in thousandths of an inch.

B. & S. Gauge.	Single Cotton	Double Cotton.	Sing. Silk.	Doub. Silk.
No. 0 to 10	.007	.014		
No. 10 to 18	.005	.010		
No. 18 to 36	.004	.008	.002	.004

In bell, telephone and annunciator work extra heavy coverings are used, but the above table represents the practice of several manufacturers. Silk is seldom used on wires larger than No. 18.

In using insulated wire for magnets, etc., great care must be exercised to prevent injuring the insulation. If the insulator should become broken or torn while winding, a repair may be instantly made by varnishing the spot with shellac varnish. The question of just which insulation to use in any case is sometimes perplexing, but we will endeavor to tell our readers just which insulation to use in particular cases. The double windings cost more than single and silk more than cotton. Now for all ordinary purposes cotton covered wire is good enough, and if a low voltage is to be used, as for instance in toy motors, bells, etc., the single cotton winding is sufficient. When a higher voltage is used. a heavier insulation is necessary, and the double winding is used. The silk windings are generally used in instrument work, either for its appearance, better insulating qualities, or smaller size. More silk covered wire of a given size can be wrapped in a given space than cotton covered, owing to its smaller diameter, but for the amateur, the cotton covered wire is much cheaper and quite as good.

In making connections in electrical work, do not be satisfied with just twisting the ends of two wires together where a permanent joint is to be made, but take time to solder them.

BUILD YOUR OWN BOAT

BY THE BROOKS SYSTEM

There is no reason why you cannot own as good a boat as the best boat factory can produce, if you will use your leisure time to advantage and build it yourself.

The fact that anyone using the Brooks System, no matter how inexperienced he is in the use of tools, can build his own boat at the cost of a little lumber and a few nails, has brought boats within the reach of all. All the boats built last year, by all the boat factories in the United States, combined in one fleet, would not equal the number of boats built during the same time by novices using the Brooks System. Our catalogue gives pages of testimonials with photographs of the boats built by amateurs using the Brooks System.

The Brooks System consists of exact size printed paper patterns of every piece that goes into the boat, a complete set of halftone illustrations showing an actual picture of each step of the work properly done, detailed instructions to build, covering the entire construction of the boat and an itemized bill of all material required and how to secure it.

We tell you how to lay the pattern of each particular part on the proper piece of material and exactly how to cut—you cut. We then tell you how to fasten each part in its right place—what kind of a nail to use—how to drive it—you drive it.

You need no mechanical ability, the Brooks System supplies this—how is shown in the catalogue.

Many professional men are taking up the Brooks System for mental relaxation—for the pleasure of working with their hands and for exercise.

We have started hundreds in the boat building business. One man built sixteen boats from one set of patterns last season—another built ten—the materials cost very little—we furnished the design—they did the work and sold the boats at a big profit.

You need buy nothing from us but the patterns. We have them of all kinds and sizes, from small Row Boats and Canoes to Sea-going Yachts. We have over 50 styles and sizes of boats and boat patterns, each one perfect in design for its purpose. Our catalogue illustrates the product of the best staff of designers in the world.

Over ten thousand amateurs throughout the world successfully built boats by the Brooks System in 1905.

When so ordered, Patterns are Expressed, Charges Prepaid, C. O. D., Allowing Examination.

KNOCK DOWN BOATS

Complete from keel to cushions and fittings. We send you a complete Knocked Down Boat, even to the paint, at a cost of very little more than the cost of the raw material.

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper or wrapper shows to what time your subscription is paid.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed. Subscribers can, by watching the expiration date on their address label, renew early and thus be sure of getting all the numbers as issued.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

WILLIAM C. SPRAGUE, - - President and Editor.
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only, and in the case of the coins, a rubbing.

Don't send in answers to the Boys' Brain Sharpeners without reading the rules published on the page on which the Sharpeners appear.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

Rules

In sending in solutions to the posers in this department, observe the following rules:

1st. Address your envelope to PRIZE PUZZLE DEPARTMENT, AMERICAN BOY, DETROIT, MICH.

2nd. Mail your answers or solutions so they will reach Detroit not earlier than the 10th day of the month of issue and not later than the 15th. Answers received before midnight of the 9th and after five o'clock of the afternoon of the 15th will not be considered.

Th prizes in each case will be given to the boy whose solution is the **first correct** one read by us in the order of the opening of the mail beginning the morning of the 10th.

3rd. Our Editor's decisions are final. He cannot take time to correspond with contestants, who, each month, number thousands.

4th. Write nothing in your letter but the answer to the puzzle. If you have anything else to say, write it on a separate sheet of paper, giving your name and address on each separate sheet.

5th. If you send solutions to several puzzles, send them on separate sheets of paper, and put your name and address on each.

Why I am Proud of My State

The prize of $5.00 for the best essay on "Why I Am Proud of Ohio," has been given to Harry A. Linch, Steubenville, Ohio.

Perhaps special mention should be made of the essays from Chance Phillips, Springfield; Maynard A. Norris, Fostoria; and Roy Jackson, Jr., Level.

Good essays were also submitted by the following boys: Ralph P. Haas and Howard N. Hedges, Ashville; John M. Legg and Ernest Rhoads, Columbus; Frank Ellsworth Miller and John D. McKee, Smithville; John H. Longbon and Walter A. Cope, Liverpool; Ruskin S. Freer, Frank Naylor and J. Urban Fox, Painesville; Russell W. Alt and Lee S. Bibler, Baltimore; Fred G. Volk and Ralph Henriques, Cleveland; Raymond Fager, Lewisburg; William Schmidt, Cincinnati; Lester B. Russell, Canton; Ralph W. Crozier, Lyndon; Willard Montgomery, Huntsville; Branson Tharp, Hemlock; Ray H. Bamer, Weston; Paul D. Adams, Findlay; Bryce W. Gillespie, Millville; Francis McCook, Steubenville; Jesse H. Leighninger, West Lafayette; Paul T. Wingate, Massillon; Will Richards, Clyde; Mason Baldwin, Marysville; J. F. Wagner, Warsaw; Lloyd M. Wallick, Strasburg; Mathias Sanor, Salem; Floyd Cary, Linden Heights; Harold Lamp, Newark; Clifford Thompson, Lexington; Clyde Ault, Armstrong's Mills; Elwood Long, Fernwood; Carl Edwards, Rempel; J. Arthur Alban, Oak Hill; Clarence Mahlar, Twinsburg; Willie Rohrer, Creston; Harry Cornwell, North Washington; L. Stanley Stevenson, Circleville; Hugo E. Buehler, Stone Creek; Henry M. Smith, Lowellville; Vinton E. McVicker, Jackson; Arthur Burnett, Leavittsburg; Melvin Miller, Millersburg; R. L. Powell, Langsville; E. K. Jewell, Minsman; Merle Summers, West Jefferson; Harold Edmonds, Mansfield; Frank Mock, Lowellville; Henry Leimbach, Jr., North Amherst; Frank Floyd, Euphemia; Theodore Jones, Bradford; Roy M. Bechett, Rayland; Willard A. Bicker, Newcomerstown; Hugh M. Parker, Freedon Station; Clifford D. Johnson, Youngstown; Lester A. Beck, Warsaw; John Stambaugh, Ada; Donald Wright, Bellefontaine; Wilson W. Galloway, Xenia; Reuben Horchow, Portsmouth; Raymond Williams, Irondale; Walter R. Roberts, Vaughansville; Paul P. Steffan, Osborn; Wayne P. Taggart, Cadiz; Walter E. Wright, Granville; James

Boys' Brain Sharpeners

American Cities in Anagram Form. Prize, a Good Book. See Rules.

Henry Carr, Ripley; Jesse Osborne, Oberlin; Dwight DeLong, Corning; Earl Simpson, Flushing; Wilbur K. Brooks, Arcadia; W. Kent Hagerman, Leipsic; Cecil Bovee, Kingsville; Robert Rowland, Perry; Herbert Jacobs and Elmer Backus, Cincinnati. We received one very neatly written essay which had no name signed.

Ohio boys found many good reasons for being proud of their state. Among the reasons most frequently given are the following: Mild, healthful climate; fertile soil, enabling Ohio to rank well in agriculture; valuable minerals, such as coal, iron, potter's clay, gypsum, limestone and salt, natural advantages for manufacturing; unsurpassed facilities for transportation among which are over nine thousand miles of railroad, seven hundred miles of canals, two hundred thirty miles of lake front, the Ohio river, and innumerable trolley lines; rich oil wells and a good supply of natural gas; large and important cities—Cincinnati, Cleveland, Toledo, Columbus; only successful air-ship yet produced built by an Ohioan; has no cyclones; recent election of Governor John M. Pattison; abundant fishing; numerous important factories; great power in the state of the Anti-Saloon League; contains more pensioned soldiers than any other state; seventeen charitable and penal institutions, which are well conducted; Lake Mercer, in Mercer County, the largest artificial body of water in the world; natural bridge in Hocking County; ranks first in the production of wool; fewer labor strikes than other states having an equal number of manufacturing towns; natural curiosities, chief among which are the mounds left by the Mound Builders, and the mineral springs; Perry's victory off the north coast of Ohio on September 10, 1813, when an entire British fleet was

Solution of Lincoln Puzzle Given in February Number

captured and the famous message, "We have met the enemy and they are ours," was sent; largest stove foundry and novelty works in the world; over two hundred fifty libraries; large number of Ohio soldiers in the Civil war, also famous generals—Grant, Sherman, Rosecrans, Sheridan, McClellan, McPherson, McDowell, Buell; first officer killed in the Spanish-American war, Ensign Bagley, an Ohioan; the Beecher family, the Cary sisters, and William Dean Howells; four presidents: Harrison, Grant, Garfield and McKinley; many other noted men, such as John Hay, Thomas A. Edison, Whitelaw Reid, Artemus Ward, Joseph B. Foraker, Salmon P. Chase, John Sherman.

We are sure that Ohio boys are enthusiastic over their state, for nearly one-half of the essays received contained some variety of "Cheers for Ohio;" or were they put in because the boys did not want to be outdone by that "Hurrah for Massachusetts!" that appeared in the prize-winning Massachusetts essay?

WHY I AM PROUD OF OHIO

Prize Essay by Harry A. Linch, Steubenville, Ohio

I am proud of Ohio, the first state of those made from the Northwest Territory to be admitted into the Union, because of her past achievements, present prosperity, and future prospects.

Almost every one has heard of the Underground Railway and the man, Levi Coffin, who aided so many slaves by this and other means to freedom that he was called the "President of the Underground Railway."

When the great Civil War came upon us, Ohio furnished more than 300,000 men to help preserve the Union. She sent her best men as officers for this war—Grant, Sherman, Sheridan, McClellan, Rosecrans, McCook, McDowell, Buell, Garfield, Hayes, Custer, Mitchell, Schenk, and Steedman.

From Ohio Lincoln chose two of his cabinet officers, Stanton, Secretary of War and Chase, Secretary of the Treasury, to serve during the war.

Ohio has been called the "Mother of Presidents," only one other state exceeding in the number of national executives sent to Washington. She sent Grant, Hayes, Garfield, Harrison, and the beloved William McKinley, to the White House.

She has furnished two chief justices to the Supreme Court, and almost all our senators and representatives are powerful men, of which the late Senator Hanna was a fine example.

John James Piatt, the great poet, and William Dean Howells, one of America's greatest novelists, were born in this state. Henry Ward Beecher, the greatest preacher of his time, and Whitelaw Reid, who wrote the best history of the Civil War, were from Ohio. John Q. A. Ward, Ohio's great sculptor, made the fine bronze statue of Garfield which stands in Washington. Besides these examples of illustrious men, great men all around us are working for the good of civilization.

Ohio has a great lake commerce and has almost numberless great railways. Here are mined coal, iron, and fireclay, and limestone, cement rock, and other useful and valuable stones are quarried. Ever since oil has been discovered, her oil wells have been increasing until now she has a perfect network of gas-pipe lines.

The soil of Ohio is rich and fertile, and she has some of the finest and best farms throughout her area.

Besides producing the raw material, she turns out the finished product. The iron and steel mills are running day and night, turning out some of the finest iron and steel work in the world. Almost every vocation is represented in this state.

Ohio is hardly second to any state in caring for the education of her youth. Graded schools, high schools, colleges, and universities abound, and a good education may be had for the asking. This can be appreciated by all those who wish to advance themselves in life and must do it through their own efforts.

Best of all, for a boy, here we have beautiful hills and valleys, rolling plains and running streams, where all the known sports may be indulged in; here we may grow up healthy and happy men, better and truer for having loved and honored our beautiful state. Happy is he who can say, "I am from Ohio."

Patient Under Insult

Two boys wrote insulting letters to Frank Scribner, the boy who won the prize for the best essay on the subject, "Why I am Proud of My State—Massachusetts." Young Scribner sends the letters to us, saying that he will make no reply to them.

We shall not give the names of the writers of these letters, nor even give information as to the state in which they live. Both happen to live in the same state and in the same town. Their letters are much alike; evidently they agreed between themselves to write and make the Massachusetts boy feel as unhappy as they could.

Young Scribner takes the manly course in making no response to these letters. The letters are mean and uncalled for. The result has been that the Massachusetts boy stands higher than ever in our estimation, and the other boys have fallen to a point beneath notice.

The fact that one boy is proud of his state should not cause another boy living in some other state to feel unhappy. Certainly it should not make him angry and lead him to write an insulting letter.

An Easy One

Laurence Soland, Spaulding, Minn., gives the following puzzle which he thinks will be of interest to boys:

YY—U—R—YY—U—B
I—C—U—R—YY—4—ME.

The answer is: Too wise you are, too wise you be, I see you are too wise for me.

Two Claims to Longfellow

Herbert Jacobs finds fault with the boy who won the prize for the Massachusetts essay for his having claimed Longfellow as a poet of Massachusetts, when as a fact Longfellow was born in Portland, Maine, lived all his early life in Maine, and attended college at Bowdoin, New Brunswick, Me.

It must be observed, however, that all of Longfellow's poetical works were published while he was a resident of the State of Massachusetts and, therefore, the writer of the essay was strictly within the facts when he claimed Longfellow as one of the poets of that state.

Either trace the three hearts which form the shamrock leaf, or cut the diagram from the paper; and then with three straight lines see how many pieces you can divide them into. If you trace the diagram do so in ink, and rule your lines perfectly straight. State the total number of pieces. Remember the stem does not count. Be neat as possible with your replies.

Prize, a good book. See rules.

There is Money in Selling The American Boy

The boys who win prizes for buying the most copies of the January number of THE AMERICAN BOY are as follows: M. McElroy, check for $2.00; Ray Smith, Ingersoll Watch; Harold Baker, Ingersoll Watch, and Oliver P. Kernodle, Football.

Besides these prizes, these boys made a handsome profit on the copies which they sold. The plan is this: We will send to any boy who writes us, ten copies of the current number of THE AMERICAN BOY, and for these we will make no charge whatever. These copies he can sell at ten cents each and he can keep all of the money. That will give him a working capital so that he can buy his next month's supply at a price that will pay him a nice profit. As stated above, we give to the four boys who buy the largest number of papers during the month, a nice prize, besides what they make on the papers they sell. Boys who have not ordered ten copies to be sent free should do so and make an effort to get regular customers who will buy copies of THE AMERICAN BOY from them each month. Address The Sprague Publishing Company, Detroit, Mich.

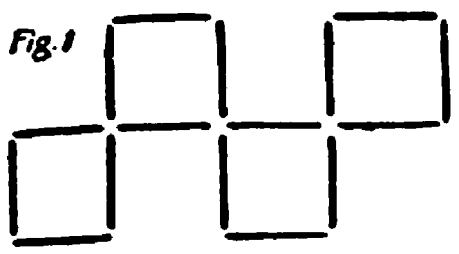
Questions to Answer

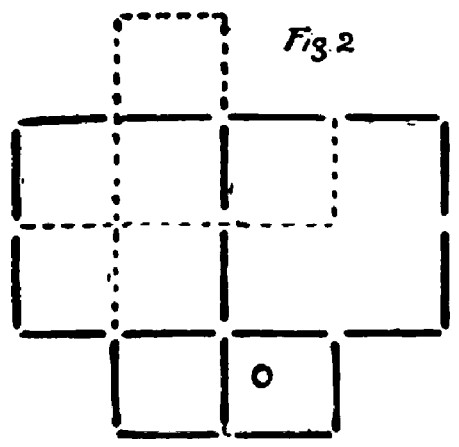
1. What date is ordered to go forward?
2. Why is a wintry night like a child with a cold in its head?
3. What color was the wind and the waves in a recent storm?

Prize, a good book. See Rules.

WHY I AM PROUD OF MY STATE

¶ To the Mississippi boy who sends us before March 15th the best letter of not over five hundred words telling us why he is proud of his state—Mississippi, we will give $5.00; in addition, we will print his letter in an early number of The American Boy.





Solution of Match Puzzle in February Number

Redeeming Mutilated Money

The United States government will pay for a mutilated bill provided that three-fifths of it are recovered. The method of determining just what part of the note remains is rather interesting. Each mutilated bill is carefully pasted on a backing of paper the size of the complete bill. The expert has a piece of glass the exact size of the bill. This glass is divided into forty squares. When placed over the bill, if the expert can find that the remnants of the bill fill twenty-four of the squares, or three-fifths of them, the bill will be redeemed.

Not long ago a Missouri farmer was leaning over to fed his pigs when he dropped his purse into the pen. When he discovered his loss an hour later he searched the pen and found the purse, but nothing of its contents. The pigs were slaughtered that day and the remains of the money taken to Washington. Three hundred dollars were returned to the farmer.

Burned money is the hardest for the government experts to work on, with the possible exception of money which has been gnawed by mice. The department at Washington once received a cigar box full of money which had been sent from Philadelphia with the necessary affidavit showing that it had been inside a poorly constructed safe and had been burned to the condition in which it was forwarded. Evidently with the idea that the original package ought not to be broken, the sender enclosed the charred pieces with some silver coins which had also been in the badly burned safe. In its passage through the mails the heavy silver was shaken through the charred bills till there was hardly a piece left the size of the head of a pin.

Mrs. Brown, who is at the head of the experts who handle the mutilated money, called two of her best helpers and the three, by the aid of magnifying glasses, soon brought out four fifty-dollar bills, and within an hour recommended that they be redeemed by the Treasury.

Only infinite care and patience can bring any result with the mice chewed bills. Each of the pieces is laid out on a hard, smooth surface, and with the assistance of magnifying glasses they can be placed in their proper position in relation to one another. The experts have a copy of every bill which has been issued by the government. These are used as models as soon as enough of the bill has been laid out to establish its issue. The experts say that the best bills were printed by the government during the civil war period. The grade of paper was superior to any other used and the engraving has never been excelled.

Something About the Burro

For more than three centuries the patient little burro has been an inhabitant of the New World. He is of Egyptian descent, and it may be that he helped to build the pyramids; but it is to Spain that we are indebted for his coming. Soon after Cortez conquered the Aztec land, we hear of the burro in America. He is found chiefly in Mexico and the southwestern states, especially in the mining districts, where he may be seen carrying great loads of ore. He is opposed to the use of machinery. Miners call a bunch of laden burros a pack train. He is a very sure-footed little animal, and prospectors use him when they go forth into the mountains to explore. Mexicans find him very useful in carrying.

He is so gentle that children may ride upon his back in threes and fours. He appears to have no resentment, and will take a kick or a cuff with the patience of Job. There is no doubt but that he is terribly imposed upon, and people call him a degenerate; yet no member of the animal kingdom works harder than he, and it is generally conceded that he has aided largely in the development and building of mines and railroads.—Helen Gray, in Recreation.

The Swimming Needle

Robert Snelling, Liberty, Missouri, one of our subscribers, seeing in our February number an account of how to make a needle swim, or rather float, suggests another way of doing it. He says: "Bend the two points of a hair-pin so as to make a double hook. Lay the needle in the same and lower it slowly into the water. The needle must be perfectly dry when the test is made." We have not made the experiment, but our raders can do it for themselves.

An X-Ray Illusion

Roy T. Risley, Mount Carmel, Illinois, sends a very simple device that in a measure serves as an X-ray apparatus for viewing the bones of a hand, the lead in a pencil, the spindle of a full spool of thread, and such things. He describes it as follows: Cut a round hole, about three-eighths of an inch in diameter through two calling cards, and between the cards paste the "smooth part" of the tip of a feather. Then paste the cards together and you have the X-ray. To examine the skeleton of your hand place the card close to your eye and hold your hand about fifteen inches from it, facing the window or a strong light.

"AFTER CHRISTMAS"

Prize Silhouette Picture. Offer Made on Page 43, December Number. Winner, F. A. Coates, Rouse's Point, N. Y.

OTHER GOOD ANSWERS

Christmas Silhouette by Edward Miller, Lock Haven, Pa.

Christmas Silhouette by Perry Barlow, McKinney, Tex.

Arthur Duffey's Trip to the Antipodes

IN OUR April number we shall publish the first part of a two-part serial describing the racing experience in Australia and New Zealand of Arthur Duffey, the world's champion short-distance runner, and A. E. Shrubb, the English boy, who is, perhaps, the world's greatest long-distance runner, the story being written for THE AMERICAN BOY by Mr. Duffey. The story will be illustrated with photographs furnished by the author.

Some of Our Prize Winners

The following won prizes in the puzle contest under the head of "Boys' Brain Sharpeners," pages 126 and 127, February number:

A VALENTINE PUZZLE.—William P. Cross, 40 Boardman St., Rochester, N. Y. Answer: The young lady designated as "D," because she is the only one who has a bow.

THE 1906 PUZZLE.—Anton Kaufman, Saginaw, Mich. Answer: 09—9=0.

PICTORIAL PROVERBS.—William P. Cross, Rochester, N. Y. Answer: Time and tide wait for no man.

QUESTIONS ABOUT A CHAIR.—Ruel L. Smith, Richland, Mo. Answer: 1. When it is satin. 2. When it is reseated. 3. Because it is would, or should be.

LINCOLN PUZZLE.—Walter Zimmermann, Arlington, Minn. There were 32 pictures submitted in this contest.

Prize State Essayists

The following states have been represented in the prize essay contests:
Wisconsin—John Roberts, Racine, Wis.
Massachusetts—Frank Scribner, Jamaica Plain, Mass.
Texas—George Lee, Dallas, Texas.
Ohio—Harry A. Linch, Steubenville, Ohio.

Nashville, Tenn., Dec. 28, 1905.

Dear Mr. Sprague—

I received the Legion of Honor badge for school record last week. It is just fine, and I am proud to wear it. I am in the third grade of the Lockland school. I like to study and I like to play.

Yours truly,
(Signed) ALFRED OWEN PHILLIPS.

Boys, Take Care *of* Your Teeth

By J. AUSTIN BUCKNALL, D. D. S.

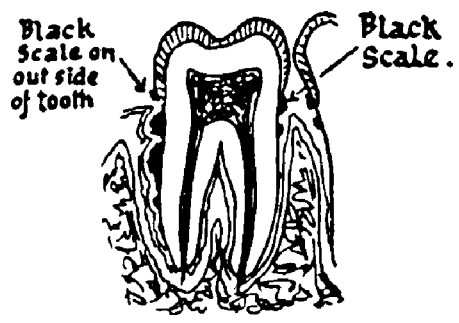
(Begun in December, 1905, number.)

A well kept gun will never rust. Brush the teeth, and they will neither rust nor decay. The chalk and the brush, together with the silk thread, will do the work, as I told you in my January paper. Don't let the decay begin and then you may be sure you will not have the miserable toothache.

Sometimes fine, strong teeth loosen and fall out, or are taken out to give relief from pain. This comes from a disease in the gums that is the result of neglect. The first sign of this trouble is the bleeding of the gum together with soreness, and where the gum comes in contact with the teeth the color is red instead of pink. The cause of this trouble is usually little particles of food that have been left lying in the spaces between the teeth. These particles, in time, ferment and poison the gum, then after a time black patches of hard stuff attach themselves to the teeth below the gums. If not removed by the dentist, these little patches increase in number and size so as to push the gums away from the teeth. Under a microscope these little patches show sharp, pointed surface and edges, which continually irritate the gums, producing the bleeding mentioned.

At the backs of the lower teeth, and on the outer side of the upper teeth, against the gum, another substance called tartar forms unless the tooth-brush is rubbed around these places every day. These patches of tartar also hold decaying matter against the gum and damage it so that it bleeds to the touch. All this trouble begins without any indication of soreness. The soreness comes only after considerable harm has been done to the tissue surrounding the tooth. When your attention is called to this matter by soreness, the tartar and the little black patches will be found to be very firmly attached like barnacles on a ship and they must be scraped off, and then the surface of the tooth must be polished.

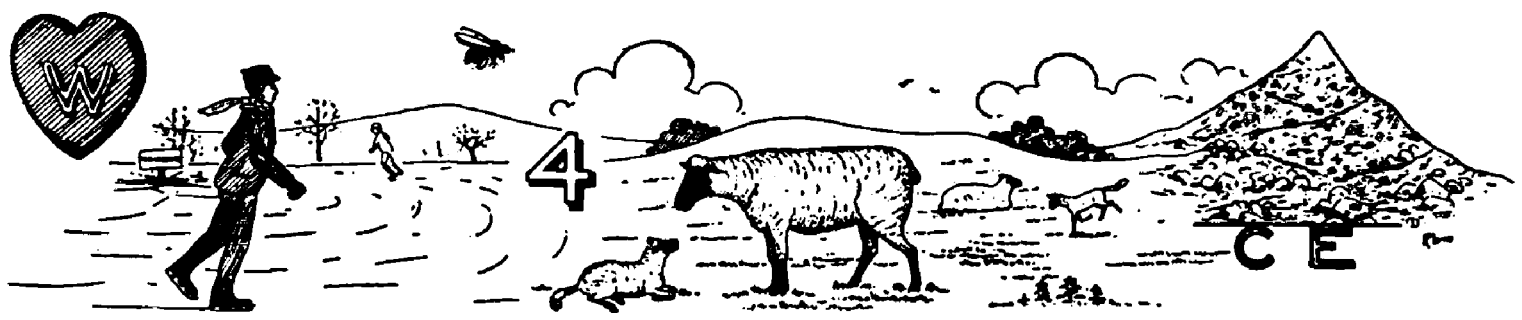
Some teeth have these calculi patches in great masses; others but very sparingly. Now look at the drawing and form an idea of what they do. They push the delicate lining away from the tooth and then push the bone away. Matter collects in the pockets thus made and soon there is no bone at all to support the tooth. As the bone goes the gum sinks down and the tooth becomes more and more exposed. Diseased all around, the tooth loosens and pus or bad matter oozes out, for this is forming rapidly from the dead tissue.



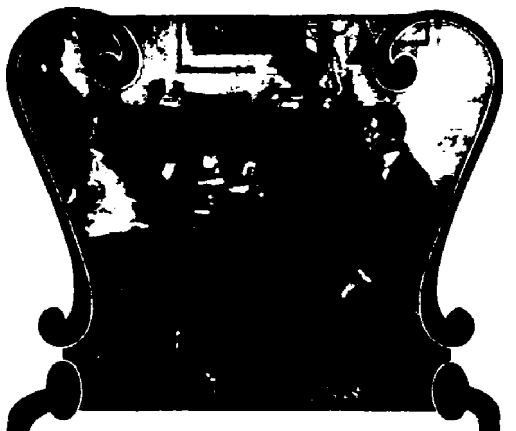
This pus may find its way down the throat, into the stomach, or into the lung passages; then there is trouble—the cause of which is rarely suspected; nobody thinks of the teeth as being the mischief-makers.

(To be continued.)

Pictorial Proverb



Prize, a good book. See rules.



How Much Salary Are You WORTH?

That is the question asked by the employer of to-day. How much salary are you worth—What can you do to earn it? If you can do one thing well you are in **demand all the time, and are worth from four to ten times as much as the man of no special ability.**

The International Correspondence Schools were founded and Five Million Dollars have been invested to help men of *no special ability*; men who had to leave school early; men who are earning but little and who are struggling against adversity in uncongenial positions.

The I. C. S. does this great work by mail at *an expense so small anyone can afford it*—the worker neither leaving home nor losing time. One spare hour each day will do it. So wonderful has been the success of this system that a *partial* record just completed shows the names and addresses of 54,000 students who have actually been benefited by the I. C. S.

Every man or woman who can read and write is eligible. To learn how easily and quickly *you* can be helped, indicate on the coupon the kind of position you would like. In return you will receive without cost or obligation, literature, information and personal advice of the most helpful character. Isn't such a proposition from such an Institution worthy of investigation?

International Correspondence Schools
Box 1278 Scranton, Pa.

Please explain, without further obligation on my part, how I can qualify for a larger salary in the position before which I have marked X

Advertise in The American Boy for Results

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

Carl A. Bottomly, 42 Richmond ave., Worcester, Mass., wins the prize for the best list of answers to January Tangles.

George Harrison Stanbery, R. F. D. 13, Box 30, Hopewell, Ohio, wins the prize for the best lot of original puzzles.

Honorable mention is accorded the following for excellence: Albert Ellard, Lewis Alway Smith, Clinton Fisk Elliott, Clarence Russell Carter, Walter W. Freeman, Waldo D. Trow, Robert Kneisel, Manning Marquess, Sarah Gilles, F. C. Millspaugh, Albert F. Foye, J. Horace Trumbull, Arthur L. Diamond, Julian Loebenstein, Dudley B. Kimball, Bruce H. McIntosh, Edw. D. Jones, Raymond G. Helm, Harry Latimer Janeway 3d, N. Waldemar Kindgren, Arthur Townsend, Kenneth Mehaffey, Emmons Emerson, M. M. Katterjohn, Harold Colegrove, James Alfred Lynd, Dana Iteld, Earle Sitlington, Rodney Werner, Harold Mayo, S. L. Stanley, Jr., Harry Shoup, Kenneth B. Hay, George Whitcomb, Wm. G. Nyce, Raymond M. Reese, Charles W. Shreve, Edwin E. Hutchinson, Elmer Potter, John Thoen, Ivan Kirlin, Ralph R. Williams, Albert L. Amos, Myron B. Craver, Henry Hill, Wallace A. Philgreen, Boyd Alexander and others from Buffalo, Iowa Falls and elsewhere, who forgot that they had names.

Failure to observe our simple rules, printed at the head of this column every month, precludes the possibility of winning prizes or securing mention in this department. We are receiving innumerable answers written in pencil, or on both sides of the paper, or without name on each sheet, and often with no name or address anywhere. Some are not even sent to Uncle Tangler. Answers to "form" Tangles must be written out in full. To write in "George Washington, February, Virginia," for instance, as the answer to number 13 this month is not accepted. Cross-words and details must be shown, just as we print the answers from month to month. Use your eyes and your wits. That is what this Tangle department is for. Another pointer that will hold good for you all your life: Have one name, and stick to it. Harry Elger, Harry H. Elger, Harry Elger, Jr., may be three people. Harry knows how many folks he is, but we don't. If you do not know your name, how can we tell it? We are obliged to omit from this list every month the names of very many who would secure recognition and perhaps awards, if they would but think, use a little of the commonest kind of common sense and follow our printed rules.

A prize of one dollar will be given for the best list of answers to the March Tangles; also, a new book for the second best list of answers; received by March 20.

A prize of one dollar will be given for the best lot of original puzzles received by March 20, to be published in May.

23. Two such lazy sisters. We call them the drones. I have seen sister Hester nod at church, and once she snored the entire service through. She gives three nods, and then she is off to sleep. It is amusing to see sister Esther don a dozen wraps and shed ten or eleven of them before church. When father shortened her weekly allowance she at once, in spite of all we could do, sent her own cattle away to be sold. She sold, O, ten herds, I should think, and what could father do? He, stern and unrelenting, was mad as a Dorset hen. You would think him ready to rend those who opposed him. He, like sister, is very set. Horned cattle are his fad. They call me Rufus, or the red son, because I have honest red hair. As pitcher in our nine I am considered a hot sender. In the choir I sing tenor; shed my good clothes as soon as I get home, and tend horse. The barn I always enter shod in my heavy work boots. I once had a horse dent my boots by stepping on them. Our barn is a ten-horsed affair. In the poultry house one hen stored away a lot of eggs. I tend her so carefully and do her nest up so neatly that she lays most every day. My hens need short naps. That is a hen rest. Do they take after my sisters? But hens are first sleepers and then doers. I sowed millet seed north of the poultry house, and what did my sister do? She rent a big hole in the poultry netting and let the hens through. Such a sister dethrones all one's sentiment about matrimony.

25. MARCH ZOOLOGY.

The names of the birds and animals in our Zoo are all of the same number of letters. When written in numerical order their central letters in rotation will spell the name of one of the United States that was admitted into the Union in the month of March.—George Harrison Stanbery.

26. STATE ACROSTICS.

Each of the words here defined has four letters. The initials read downward and the finals read upward each spell a state admitted into the Union in the month of March.

1. Rapid. 2. Thin. 3. A state. 4. To wander. 5. Munich's river. 6. The bird of peace. 7. A sea of south Russia. — Harry Latimer Janeway 3d.

27. HIDDEN ZIG-ZAG

1. * - - -
2. - * - - -
3. - - * - -
4. - - - * -
5. - - - - *
6. - - - * -
7. - - * - -
8. - * - - -
9. * - - -

The following sentences appeared in the January Tangles. Find one hidden word in each and write the nine words thus found on the diagram in numerical order. The star path will spell the name of a President born in March.

1. One letter taken from each in numerical order. 2. To clean by rubbing. 3. Idaho, Tennessee, North Carolina. 4. Liveliness. A formal public speech. 5. A lake in German East Africa. 6. Every syllable is employed. 7. A famous American document. 8. An American fur bearing animal. 9. The primals are identical.—Harold Colegrove.

28. MARCH MATHEMATICS.

Hold this in a certain position, and you will read a March proverb.

O/2 4+a+q d/2 a/ 4+a+5+6/5 p+a+5+6

—N. Waldemar Kindgren.

29. HISTORICAL SLIDE.

Slide the following rows of letters to the right or left until seven and a fraction perpendicular rows appear that shall spell the names of two gun boats that met in conflict during the Civil War in the month of March, the name of the defeated commander, and the names of the inventor and commander of the victorious boat.

```
A M C M M M M N B N I N E O
O E A I U A C W N C O I A U

```

—George Harrison Stanbery.

32. PICTURED PROVERB.

A well-known verse from the Book of Proverbs.

(See illustration in fourth column.)

—Emmons Emerson.

33. PRESIDENTIAL ACROSTICS.

The words are of uniform length. The initials and finals read downward in order spell the surnames of four Presidents who were born in March.

1. To deserve. 2. Excessive pain. 3. The evil one. 4. An effigy. 5. To divide. 6. Pertaining to the eye. 7. Pertaining to the nose. 8. The father of David. 9. "The year five" in Latin. 10. To cut meat. 11. A death signal. 12. The capital of the European principality over which Prince Ferdinand rules. 13. A musical instrument. 14. A wanderer.

—Arthur Townsend.

34. MARCH ACROSTICS.

The words are of uniform length. The initials spell a President who died in March; the finals, the March day when we all wear the green.

1. Censures. 2. A county seat of New York. 3. The native name of Naples. 4. The one river of Palestine. 5. Sudden. 6. An accident. 7. A peninsula of Austria. 8. Nothing. 9. A painful emotion of fear. 10. Male graduates of a school, university or college. 11. Rural. 12. A county seat of Iowa. 13. A "Harbor" of Nova Scotia. 14. Holy. 15. A Canadian city. 16. To inform.

—N. Waldemar Kindgren.

Illustration for Puzzle No. 32

35. HOMOPHONOUS BLANKS.

Fill the blanks in each sentence with words pronounced alike but differing in spelling and meaning.

1. The boy —— at the man with the —— head. 2. The —— old gentleman —— at our house a week. 3. The hounds —— the fox to a small —— of timber. 4. The boy beat the dog —— a ——. 5. When he tasted the —— bread he made a very —— face. 6. The —— cause of his failure has been his lack of ——. 7. The Bible does not say that —— killed his brother with a ——. 8. He called me a —— when I denied that I had taken his ——. 9. The man who does not —— with other people's affairs deserves to have a ——. 10. The —— rode forth into the dark ——. 11. It is —— that the —— is dull.

—Frank C. McMillan.

Boys! Here is a Dollar Knife For You, FREE

—and a chance to make $9.00 a week, and in addition, earn $500 in gold by January 1, 1907

The picture below shows the exact size of my two-bladed buck-horn handle Sheffield steel knife—regular price $1.00.

It is just the knife every boy wants to own.

And I want a lot of bright, energetic hustling boys to get one of these knives, free—all charges paid.

I don't want them to sell anything for me—or send me any money—not a cent—to get this knife.

In addition to the chance to get the knife, I want to give every boy a chance to earn some money—more money than he could make selling papers, o running errands—or in any other way.

I don't want him to peddle bills, or ring an auction bell, sell a thing for me, or send me any money—

I simply want him to go and see some of his friends and acquaintances—which will be more like fun than work.

Here is the plan: I make

Parker's Perfect Paint—

Made to Order—Sold Direct from My Factory—On My Pay-if-you-like-it Plan

I want to sell it to everyone in your town who is going to paint.

It's this way—I don't sell paint by the gallon—but by the JOB. I sell a man enough paint to do his entire job of painting—no money down—no deposit—and I pay all freight on my paint to the man who orders it.

—And if the paint the man puts on his buildings satisfies him in every way, he pays me for it—otherwise it is *absolutely free.*

You see, my way of selling paint is a brand-new way.

I tell a customer for how many dollars I will furnish all the paint for the buildings he wants to paint—in any number of coats—and I guarantee that he will have some paint left over.

If I tell a customer that I will furnish three coats of paint for his buildings for $11, I will do it—no matter how many gallons it takes.

To tell him just what I will charge him for the paint to do his entire job, I must get him to fill out and send to me one of my blank applications, giving the size of the buildings he wants to paint. Now, *that* is what I want *you* to do for me.

There are a lot of people in your town who are going to paint this next year, and I want you to run around and get them to give me their names and addresses, and fill out an inquiry for my Paint Book and blank application.

I have inquiry blanks for this purpose—and I will send you 10 of them free, if you will send me your name and address.

You run around to the people who are going to paint—and tell them that Parker, the Paint-Maker, wants to give them a price on the complete cost of the paint for their work, all delivered, charges prepaid—to be paid for if satisfactory to them—otherwise to be absolutely free.

Now, every man wants to know how much a big paint manufacturer will charge him for enough paint to do the work—and he will be glad to fill out one of these inquiry blanks for you.

So it won't take any trouble to get these blanks filled in—then send them to me.

Then I can tell him just how much I will charge him for sufficient paint to do his entire job—

—And for getting me the first 10 inquiries I will send you, at once, all charges paid, this Buckhorn handled knife, which regularly costs $1.00.

Now, nearly every man who fills out one of these inquiry blanks, after hearing from me, will be so favorably impressed with my paint proposition that he will order his paint from me, and I will send you 50c. *for each one of these orders.*

Then at the end of the year 1906, I am going to figure up, and to the boy who sends me the most inquiries that result in orders, in proportion to the population of his town, according to the last U. S. census, *I am going to give $500 in gold.*

When you have filled in and sent me the first 10 inquiry blanks, I will send you 10 more, and so on.

Now, see here, Boys, this is a fine chance for you. First you get the dollar knife in just no time, for sending in the 10 inquiries. Then you get 50c. in cash for each man who orders paint, and on top of that you have the splendid chance to earn the $500 in gold by sending in the most inquiries that result in orders for my paint.

Don't think that if you live in a small town you haven't as good a chance of earning the $500 as the boy who lives in a large town, because I figure the number of orders received in proportion to the population of the town.

Now, if you want to take advantage of this offer—and get the knife and commence to earn money right away; you'd better hurry and send in for the inquiry blanks, which I will send to you absolutely free. Just write me on a postal card, saying "Send me 10 inquiry blanks." Send the postal to

American Boy

APRIL 1906

BUILD YOUR OWN BOAT
BY THE BROOKS SYSTEM

We want every boy who sees this page to write us about a

Special Offer

we are making to the readers of The American Boy on the patterns of our most popular Row-boat—No. 31—length 14 ft., beam (width) 41 in., depth 14 in. The patterns are priced in our catalog at $3.00. You may have them if you mention The American Boy for $2.00. Good until July 1, 1906.

With these patterns and a few dollars worth of lumber and hardware—any boy over 12 years old can build this boat as well as the professional boat builder. There is no healthier or more inspiring amusement for a boy than to build a boat for himself. It teaches him self-reliance—practical mechanics and is a training useful in after life.

What The Brooks System Is

The Patterns—are printed on heavy paper—the exact size of the parts—and there is a separate pattern for every piece that goes into the boat. We tell you how to lay each pattern on the material from which it is to be cut. We tell you exactly how to cut—you cut. We then tell you how to fasten each part in its place—what kind of a nail to use and how to drive it—you drive it.

The Instruction Sheets thoroughly cover every bit of the building of the boat and contain many illustrations of it in the different stages of construction.

They explain how to cut each part from the pattern—how to put the parts together and finish and fit out the boat. There can be no mistake.

10,686 novices—many of them boys—most of them with no tool experience whatever—built boats during the past twelve months by the Brooks System—boats of all styles and sizes—canoes—rowboats—sail boats and launches, etc., ranging from 9 to 40 ft., the patterns varying in price from $3.00 to $25.00. Nearly every one of these boats was built at home—in leisure hours. Over fifty per cent of these same amateur builders are now building their second boats. Our new catalog contains hundreds of letters from these builders and photos of the boats they have built.

Complete Knock-Down Boats

We manufacture and keep in stock a complete line in the knock-down form. These include the frame, planking, decking, hardware, fittings, and paint, with full illustrated instructions for putting together. These knock-down boats are supplied principally for those who cannot get good material at home. We prepay delivery charges on all patterns to any point in the world.

Just think of a rice cereal as dainty and light as a snowflake, as wholesome and satisfying as meat, and yet so tempting that every child and every grown-up wants *more* when once they have tasted it.

Quaker Rice
(Puffed)

is that cereal. Made from the choicest white rice, by a patented "puffing" process that expands each grain or kernel many times in size, it has a dainty flavor, distinctively its own.

The same process that puffs the rice, also cooks it thoroughly. Quaker Rice is instantly ready to serve, with milk or cream and a dash of sugar, *after warming for a minute in a hot oven.*

While rice has a world-wide fame as a healthful and wholesome food, Quaker Rice is a revelation of its dainty deliciousness. Order a package of your grocer today, and learn how truly delightful it is.

Quaker Rice can be made into the most delicious and wholesome candies, such as Quaker Rice Balls, Quaker Rice Brittle, etc., recipes for which will be found on each package. Children can eat all they want without the slightest fear of consequences.

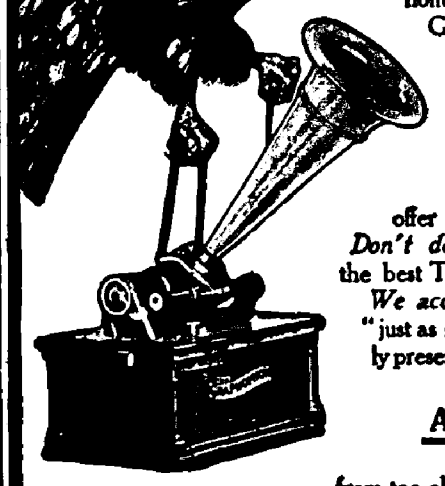
Quaker Rice is sold by grocers everywhere at 10c the package.

Made by the Manufacturers of Quaker Oats. Address, Chicago, U. S. A

COLUMBIA GRAPHOPHONE

The Loftiest Flight of Inventive Genius

Disc and Cylinder 1906 Models



The Graphophone has many imitators, but no rivals. Made by the *Creators* of the Talking Machine industry, its honors have been won in competition with all makes. The Graphophone is made in both disc and cylinder styles.

BEGUN IN MARCH

III

MY YOUNG READERS may wonder why I have called the beaver whose fortunes we are following, Shaggycoat, so I will tell them.

The fur of the beaver and the otter is very thick and soft; but in its natural state it is quite different from what it is when worn by women in cloaks and coats. For the fine short fur is sprinkled with longer hairs, that give the coat, a shaggy, uneven appearance. In the case of our own beaver, Shaggycoat, these long hairs were very pronounced, so you see the name fitted him nicely.

When the fur of any of these little animals is prepared for market, the long hairs are all pulled out, with a small pair of tweezers. This is called plucking the skin.

As the summer days went by and August ripened into September, the loneliness that had oppressed Shaggycoat during the summer grew ten-fold and he became more restless than ever. There seemed to be something for which he was looking and longing. It was not right that he should wander up and down lakes and streams, and have no living creature stop to speak with him. His world was too large, the lakes and streams were too endless. He wanted to share them with somebody or something. He had found many a wondrous water nook, which he would like to show to some one; but still up and down he wandered, and no one did he find to share his great world. Yet it seemed sometimes as though he had come near to somebody or something, for which he was looking, but it always vanished at the next turn of the stream or at the waterfall.

Thus in this endless searching, that came to naught, like searching for the pot of gold at the end of the rainbow, the autumn days passed.

The maples and the oaks shook out their crimson and golden streamers, and a touch of surpassing glory was on all the world. Sometimes the merry wind would shower down maple leaves until the edge of the stream was as bright as the boughs above.

It seemed that their fire touched Shaggycoat as he swam among them, making him to burn and glow like the autumn forest.

Then a new plan came into his wise head. If what he was looking for could not be found by searching, perhaps it might be coaxed to come to him. He would try and see.

So he gathered some grass and mud and made a very queer patty, which looked much like a child's mud pie. This he smoothed off with as much care as a baker would a cream cake.

This patty had been made by a beaver. He was sure that whoever found it would know that, for it had a strong musky smell. So he left his love-letter under a bush near a watercourse, and went away to wait developments.

A day he waited, but his letter remained unopened, and of course unread. Two days, and no better result, but the third day he found to his great joy that the letter had been opened. There was an unmistakable beaver musk about it, and new paw and nose prints upon it.

This was his answer. It said as plainly as words could have said: "I have read your letter and know what it means. I am waiting in some pool, or under a shelving bank near by; come."

Then Shaggycoat raced up and down the stream, churning the water like a tug-boat, until he found fresh beaver tracks in the mud. These he followed rapidly along the bank until he came to where it overhung the water and there he found his mate waiting for him with glad eyes.

Shaggycoat went up to her and rubbed his nose against hers. It was not like his grandfather's nose, cold and repellant, but warm and caressing. He backed away a pace or two to look at her; there was new joy in his heart.

She was not quite as large as he, and her coat was just a shade lighter drab, but she was very sleek and Shaggycoat was well satisfied.

HE SHOWED HER HIS WATERFALL

I know not what they said, there under the shelving bank, during their first tryst. But I do not agree with those niggardly naturalists who would strip the brute kingdom of feeling and intelligence and the power to express joy and pain, and appropriate all these feelings to themselves.

It may be that Shaggycoat told his newly found mate how bright her eyes were and how long he had searched for her, or, perhaps, she confessed that she had seen him many times just around the bend in the stream, but had not thought that he was looking for her. We are none of us certain of any of these things, but we are sure of one thing—it was a very happy meeting.

Then Shaggycoat led the way through lake and river to many wonderful water grottoes. To deep pools where the bottom of the lake was as dark and forbidding as midnight, or to shallows, where the bottom of the stream was gay with bright pebbles, and where the sunlight danced upon the uneven water until it made a wondrous, many-colored mirror.

He showed her his waterfall, and a part of a small dam that he had constructed across a little brook just for fun. The waterfall was not really his any more than it was anyone's else, but he called it his.

These and many other water wonders he showed his young mate, and her eyes grew brighter as the wonders of their world grew. She wondered how he had traveled so far, and seen so many things. But all the time Shaggycoat was leading the way towards a dear little brook that he knew of away back in the wilderness, in one of the fastnesses of nature. He had a definite plan in his head concerning this stream. He had made it weeks before and arranged many of its details.

But one day as they journeyed a sad accident befell Brighteyes, and for a time it bade fair to end all their hopes.

They were swimming leisurely up stream and had stopped at the mouth of a little rill where the water was very fresh, when Brighteyes discovered a stick of sweet-smelling birch hanging just above the water's edge. It fairly made her mouth water.

But Shaggycoat was suspicious. He had seen wood fixed like this before. He had tasted it and something had caught him by the paw, and only after several hours of wrenching had he been able to free himself. Even then he had left one claw and a part of the toe in the trap.

So he pushed Brighteyes from the trap and tried to hurry away with her. But with true feminine willfulness and curiosity, she persisted, and a moment later the trap was sprung and she was held fast by the toes of one of her fore feet.

She tugged and twisted, pulled and turned in every direction, but it would not let go. Then Shaggycoat got hold of the chain with his teeth and pulled too, but with no better success.

Brighteyes struggled until her paw was nearly wrenched from the shoulder, but the persistent thing that held her by three toes still clung like a vice.

At last when both beavers were filled with despair, and a wild terror of being held so firmly had seized them, a bright idea came to Shaggycoat. He gnawed off the stake that held the chain upon the trap and his mate was free to go, with the trap still clinging to her paw, and the chain rattling along upon the stones. Then they tried all sorts of experiments to get the trap off, the two most ingenious ways being drowning it, and burying it in the mud and then seeking to steal away quietly without disturbing it. But the trap was not to be taken unawares in this way, and always followed. Finally it caught between two stones where the brook was shallow, and came off itself. You may imagine they were glad to see the last of it, and Brighteyes never forgot the lesson.

It was several days before her shoulder got fairly over the wrenching, but it may have saved her glossy coat in after years.

Finally after about a week's leisurely travel they came to the mountain stream that Shaggycoat had in mind. It wound through a broad, alder-covered meadow, with steep foothills a mile or so back on either side. The meadow was about two miles long and at the lower end, where the stream ran into a narrow valley, there were two large pines, one on either bank.

Up in the foothills were innumerable birch and maple saplings and here and there in the meadow were knolls of higher land, covered with small pines and spruces.

Perhaps Shaggycoat had seen this wild meadow covered with water in the spring during a freshet, or maybe he had only imagined it, but there was a picture in his active mind of a strong beaver dam at the foot of the narrows and a broad lake that should be enclosed by the foothills; upon the islands were to be many beaver lodges; the first of which should be occupied by Brighteyes and himself.

IV

Shaggycoat of course had had no experience in dam building, but he had often watched repairs upon the dam in the colony where he and his grandfather had lived, before that terrible winter and the destruction of their snug city. He was too young at the time to be allowed to help in such important work as strengthening the dam, which needed old and wise heads, but there was no rule against his watching and seeing how it was done.

He had planned to model his dam in the alder meadow after the one at the old colony.

He had traveled many weary miles by lakes and rivers, to find a spot where such a dam could be built. . . . A broad meadow surrounded by foothills, with a narrow neck at the lower end where the dam was to be, and large trees near to use in its construction. There were many places where the ordinary dams, made of short sections of logs, piled up like a cob house, could be built. The brush and stone dam could also be made almost anywhere, but the kind Shaggycoat wanted, which was easier to make than any other, could be built only in certain places. So he had chosen the spot with great care.

His observation of repairs on the old dam would stand him in good stead, but even had he not seen this work, it is probable that his beaver's building instinct would have supplied the needed knowledge. His kind had been dam builders for ages.

It was the beaver dams of the eighteenth century that gave us most of our pleasant meadows, where hay and crops now grow so plentifully. Originally these lowlands were covered with timber, but the beaver dams overflowed the valleys, and made them fertile; this also killed off the timber, which finally rotted and fell into the water, and the meadow was cleared as effectually as the settlers did it with their axes. Traces of these dams may still be found.

Just to illustrate how ingrained the building instinct is in the beaver. A young beaver was held in captivity in the third story of an apartment house in London. There was no mud, no stick, and nothing to suggest building. He had no parents to teach him this industry, yet he soon set to work and built brushes, shoes, hassocks and anything else movable that he could get hold of into a wall across one corner of the room. That was his dam.

One October evening, when the harvest moon was at its full and its mellow radiance shimmered on treetop and water, and the world was like a beautiful dream, half in light and half in shadow, Shaggycoat and Brighteyes took their places at the foot of one of the great pines at the lower end of the meadow and the work of dam building began. But just how they set to work you could never guess, unless you are familiar with the habits of these most interesting animals.

They stood upon their hind legs, balancing themselves nicely upon their broad flat tails, and began nipping a ring about the tree. It was not a very deep cut, and looked for all the world like the girdle that the nurseryman makes upon his apple trees, only it was a little more ragged. When the tree had been circled, they began again about three inches above the first girdle, and cut another. When they touched noses again at the farther side of the tree, they began pulling out the chip betwen the two girdles. When this operation had been completed for the entire circumference of the tree, they had made the first cut which was about three inches broad, and perhaps a half an inch deep, for they had the bark to help them, and this was the easiest cut on the tree.

Do you imagine that they stopped for a frolic when the first cut had been made, as many boys or girls would have done? Not a bit of it, for they knew better than man could have told them, how soon cold weather would make work upon the dam impossible, and there was the lodge to build after the dam had been made.

You would have laughed if you had seen these two comparatively small animals at the foot of that giant pine, nipping away at it like persistent little wood-choppers. The old tree was tall and majestic. It had withstood the winds of a century, and its heart was still stout. The chips that they took were so small, and the task before them so great. But if you had happened by the following day and seen the furrow, some two or three inches in depth, you would have marveled, and not been so sure of the old pine's ability to withstand these ambitious rodents.

Night after night they worked, and once or twice they had to widen the cut, which had got so narrow that they could not get their heads in to work, but even as water wears away stone by constant action they wore away the stout heart of the old pine.

At last one morning, just as the moon was setting and the pale stars were fading, a shudder ran through the tall pine and it quivered as they cut through the last fibers of its strong heart. A moment it tottered like an old man upon his staff, then swayed, as though uncertain which way to go, and fell with a rush of wind, and a roar that resounded from foothill to foothill, until the meadow echoed with the downfall of the old sentinel.

It had fallen squarely across the stream, just as they had hoped. This was probably not through any prowess of the beavers as woodmen, but owing to the fact that nearly all timber that grows upon the banks of a stream leans towards the water, as it grows more freely upon that side, so it had happened just right.

The sun was now rising, so they left their work, well pleased that the tree was down. But by dusk they were at it again.

TOOK THEIR PLACES AT THE FOOT OF ONE OF THE GREAT PINES

The trunk of the pine, and particularly its thick foliage, had dammed the water somewhat, so it was already beginning to set back, but most of it trickled through, and went upon its way rejoicing at its escape. Some large limbs upon the tree still held it several feet from the ground, so they set to work on the under side of the tree, cutting off the limbs and lowering the trunk to just the height they wished. Some of this work had to be done under water, but that is no hardship for a beaver, for he can stay under several minutes. When breathing had become difficult they would come up, bringing the severed limb with them in their teeth. These would be jammed into the mud just in front of the tree trunk, like the pickets upon a fence. If you had tried to pull out one of these limbs after they had once planted it, you would have found it a difficult task.

In two nights they lowered the pine to the desired height, and made it look like a dam.

The following night they began upon the other pine on the opposite bank, and girdled it as they had done the first. The tree looked lonely now with its mate gone. Perhaps it felt so and did not care that the sharp teeth were nipping away at its bark, or maybe it still longed to battle with the elements, and this spasmodic pain in its sap filled it with forebodings.

As relentlessly as they had gnawed away at the first tree, they worked at the second, until it, too, fell, with a rush of air, and the snap of breaking branches and that thunderous thud, that shook the valley. They were not as fortunate this time as they had been before, and though the pine fell across the stream, it fell farther up than its mate, leaving a gap between them.

You could never guess how they remedied this mishap. They certainly could not move the tree, but that was really what they did, for they gnawed off the limbs that supported the tree on the down stream side, and it rolled over of its own weight, so the gap was filled. The structure now looked quite like the outline of a dam.

Then work upon it was suspended for a time and they went up stream about twenty rods and dug three holes in a knoll that would soon be an island, as the water was now setting back quite rapidly. These holes were started near the bank of the stream running back under ground for several feet, and then turning upward and coming out at the surface. Three such holes were dug, each leading to a different place near the bank of the stream, but all coming out at the same spot at the top of the knoll.

Then they resumed work upon the dam. Soon small trees and brush might have been seen floating down the stream, guided by industrious beavers, who gave the material a shove here, and a push there to keep it in the current. Now that the dam was beginning to flow the meadows, they would make the stream do their carrying, just as it did cargoes for man.

The brush and saplings were stuck vertically in front of the pine barricade, and the holes between were plastered up with mud and sods, until the structure was fairly tight. The mud they carried in their fore paws hugged up under the chin, or on the broad tail, which made a fine trowel with which to smooth it off.

Little by little the holes on the dam were filled, until finally it was quite smooth and symmetrical. It could be built larger and stronger the next year, but for this year they only needed a small pond that should make a primitive Venice for them, and shield their lodge, from a land attack. By the time the first hard freeze came, the dam had been completed for that year, and the freeze strengthened it just as they had intended.

A beautiful little lake, about a quarter of a mile in length, and half as wide, now shimmered and sparkled in the valley and the beavers were glad that they had been so prospered.

(To be continued.)

Working Your Way

By A. H. WILCOX

"THE BOYS" OF the class of 1880 were gathered at Wesleyan University for their twenty-fifth reunion. They didn't all look like the boys of a quarter century ago, for the peach fuzz on their faces had given place to the ripened stubble of full beards and gray-streaked mustaches. "The boys" wore high-cut foreheads as a rule, with bare circles of varying diameter farther up. A striking exception was a foxy dominie, who had reinforced his bald head with a blonde wig. This little deception was fortunately discovered, before the vote was taken to decide which of "the boys" seemed the best preserved. Sitting around the banquet table, the "Revs.," "Doctors," "Professors" and kindred titles were dropped for the time being and the old nicknames, bestowed early in college days, were frequent on the lip.

At the head of the table sat the toastmaster, who had just been elected to the presidency of a western university. Next to him sat a New York business man with an annual income of ten thousand dollars. There were others with neither fame nor riches, whose work, perchance, had been as nobly done as that of their fellows; whose lot it had been to plod a harder road, content with smaller salaries, from which they sacrificed for the education of their boys and girls as fast as they came along.

A list of thirty questions was submitted to each of "the boys," the answers to which were designed to show the important changes which had come over each individual life during the twenty-five years. One of these questions was as follows: "What part of your college course do you now consider of the greatest value?"

The answers were more or less complimentary to certain professors whose teaching had awakened new ambitions, or given a new conception of important truths. The answers, however, took a new turn when, near the end of the list, one was called whose life during the four years at Wesleyan had been marked by struggle and privation.

And this is what he said:

"Fellows, much as I prize the influence of the faithful men to whom we looked for instruction, my answer to this question differs from all the rest, because, as you will remember, there were some requirements in my college course from which you were exempt. Looking backward, it seems to me that the hard experience of working my way for four years, has proved my greatest blessing ever since. Pushing a wheelbarrow up and down these Middletown hills, with the laundry boxes of the students piled higher than my head; lugging cans of midnight oil up and down the streets for the small commission that should eke out my slender income; these were not the easiest things to do, but because they were the things nearest to hand, I stuffed my pride and sensitiveness in my pocket, and, regardless of what others might say or think, went ahead in the beaten path of duty. Fellows, the lessons I learned in the school of hardship have stood by me through life, enabling me to tackle all the other hard problems with cheerfulness and confidence."

The old boys broke out into applause, and the ten-thousand-dollar man at the end of the table said, "Ajax, old fellow, we remember those days, and we want you to know that every man in the class of 'Eighty honored you then, as they do today, for your courage and faithfulness."

Boys of today, Men of tomorrow! This is not only a true story, but it is being repeated over and over. Now, as always, moral courage is taken at par value. The boy who struggles for his education and goes without the luxuries, and many of the comforts, to accomplish his life purpose, will reap the benefit in his own life; and as he carries himself bravely, uncomplainingly, the world looking on is more likely to applaud than to sneer. And if men sneer, smile it back in their faces. Give them a jolly, good-natured laugh for the meanest fling, and their own manliness will assert itself, and the sneer will end in a cheer.

Next month our editor will resume his talks with boys under the head of "Just Between Ourselves."

CLARENCE HAWKES, THE BLIND POET-NATURALIST, WHO WRITES NATURE STORIES FOR THE AMERICAN BOY, AND, AMONG THEM, "SHAGGYCOAT," BEGUN LAST MONTH

Stories Out of My Own Life

By THE EDITOR

No. 6--A 40 to 1 Game

DO YOU remember when baseball pitchers began to throw curved balls?

You don't, because baseball pitchers, big and little, have been throwing curved balls ever since the day you were born. But pitchers haven't always thrown curved balls. I can remember when to be a pitcher one had to really *pitch*—and it had to be a straight-arm pitch and no throw about it. The least little crook of the elbow made the movement a throw, and that was a "balk," allowing the batter and the base runners each to take a base. But you mustn't think that those straight-arm pitchers of twenty-five years ago couldn't pitch a swift ball, for they could—sometimes wonderfully swift. I remember a straight-arm pitcher in the Hickories, a fine old baseball team that played in my native town in Ohio when I was a boy, nearly thirty years ago, who was a marvel of speed. He was a tall, slim fellow with a long, lank arm, long wrist and long hands. Everything about him indeed was long but his name, and that was Tom.

The shortstop on that team was as short as Tom was long. His name was Jim, but to the boys he was always "Banty," because he looked like a bantam rooster in size compared with the others in the nine. I tell you a ball had a hard time getting over Tom the pitcher and under "Banty" the shortstop. That club surely had "the long and short of it."

Well, when Tom drew that long arm back as far as it could go, with the ball perched away out on the ends of his long fingers, the batter knew it was time to look sharp and the catcher settled for a hot one. Then came the long swing of the arm until the hands nearly touched the ground, and the ball went like a stone from a David's sling, straight as a bullet to the mark. No batter ever stood in more fear of getting hit by a pitched ball than did those who stood up before Tom of the famous Hickories. I say *famous* because I ought to. The Hickories were the pride of the little country town of less than two thousand people, in which I lived. Of course, they beat everything in the town; then everything in the county; and then the celebrated Cincinnati Red Stockings offered a handsome silver ball in a satin case to that Ohio club who could beat them two out of three.

The Hickories just packed up their bats and balls and suits—they didn't wear big padded gloves and masks in those days; every boy in town would have laughed them to shame had they done so—and they went down to Cincinnati, these country boys did, and brought home that ball. Then Tom became a hero and the Hickories were famous.

Those were great days for our town, when the great clubs from all over Ohio came to take that silver ball away from the Hickories; but they didn't take it. No, indeed! It stayed right there season after season, displayed in the window of our only jewelry store with the names of our players engraved on it—Thomas and James—and not Tom and "Banty"—and all the rest of the nine.

And how we boys used to worship those fellows—particularly Tom; and no hero ever trod the earth more modestly than did the captain and pitcher of the Hickories in the little country community that loved and honored him for his skill as a ball tosser.

Then the day of the pitched ball passed and the fellows who made the rules said that pitchers might bend the elbow so long as the hand did not go above the belt. That was the day of the "under-hand throw;" but that day did not last long. After it, came the regular "throw" and then pitchers were no longer pitchers but throwers; they were permitted to deliver the ball to the batter just as they liked, so they did not jerk it. Now it became a matter of mere muscle; the fellow who could throw the swiftest ball was the best man. Then, along about 1880, it was found that by holding the ball in certain ways and making certain twists in letting it go, it could be made to go crooked, or, rather, curved. It could be made to appear to be coming straight when in fact it wasn't coming straight at all. It would look as if coming plumb over the plate, when suddenly it would dodge in or out and the poor batter would find himself fanning the air. It would look like a ball coming breast high, when suddenly it would take a dip and go half a foot lower—and all before the puzzled batter knew what had happened. Then every pitcher suddenly developed curves; boys everywhere were throwing balls at marks on barns and fences, trying to solve the mystery of the down and the up and the in and the out shoots. Then it became not a matter altogether of strength or speed but a matter of stratagem—fooling the batter.

Then the game ceased being a game at which nine men played on a side, but a game of two on a side and these two the pitcher and the catcher. Then there was not so much fun chasing balls and running bases. It became a procession of put-outs—most of them on strikes. Then there were no more scores of twenty and thirty and forty runs to a side and any number of balls literally knocked out of sight and games called on account of darkness, though begun just after noon; but in their place we had the sacrifice hits, the cheerful single baggers, the hour and a half games, and the scores of 1 to 0 in eleven innings.

Ah, boys, if I played ball now I would want to be back there a quarter of a century ago, hitting balls out of sight, making home runs, playing all the afternoon, and up bright and early the next day for more. But fashions change in baseball as in everything else, and doubtless the boys of today have as much fun with their dead balls, curved throwing, sacrifice hits, and four-balls-take-a-base, as we used to have with our lively balls made in good part of rubber, our straight pitching, our long hits and daisy cutters, and our nine-balls-take-a-base.

But I started to tell you about the first time I struck at a curved ball. It was in a game between two college nines. One college I will call A, the other B. I was regular catcher in the B nine. We were visiting the A nine. My hands were so sore from a "match game" played the day before that I couldn't catch for the A game, so I played third, and a substitute caught.

It was a beautiful day and there was a great crowd. Everybody in A college was there ready to cheer the A nine. A few of our friends were there, having come up from B college to cheer us, wearing their colors, carrying horns, and all primed well for a boisterous time such as only college boys can have. But we were not afraid of the A nine and their five hundred backers. We had beaten everything we had tried and nothing could rattle us, as we thought. The sequel proved otherwise.

The A nine went to bat first, made one run, and the crowd yelled itself hoarse. I was first at the bat for the B's. A's pitcher was a little, fat fellow who looked in his uniform like a jack-in-the-box. "We'll make mince-meat of him," said Brundage, our big-muscled pitcher. "Knock him out of the box," whispered Keeler, our substitute catcher, as I selected my bat and strutted confidently up to the plate. My prize hits were all of the daisy-cutter variety that went spinning over the ground between third base and shortstop, and generally had a way, too, of getting by the fellows at these positions, giving me a chance to land safely on second. I squared myself for a good hit, for I realized that a good deal depended on getting in a good hit at the start. Mentally I figured just about where my ball should go and waited. The pitcher looked over the field, doubled himself up in a funny way, and let drive. It was not a swift ball. I saw it every inch of its way coming straight over the plate and waist high—just my kind. Swing went the bat, and to my consternation I missed. I hadn't reached it, by six inches.

A yell went up that stirred the leaves on the trees back of the grounds. Chagrined, I stooped, rubbed my hands in the dust, grabbed my bat fiercely, and watched for the ball. "This time I'll hit it in the nose sure. He's pitching a slow ball," I muttered. Suddenly like a shot the ball came tearing in and I fouled. That was a swift one! Again it came slow-like and sort of teasing. Again I swung, this time viciously, and missed. The ball passed nearly a foot beyond the end of my bat!

Puzzled beyond measure, I stepped close to the plate. "I have been standing too far away," I said. The next one came so close to my body I had to jump to escape it, and everybody laughed. Now I was mad. I just gripped that bat like I was frozen to it. "Come on, now," I said between set teeth; and the little, round pitcher did come on with a beauty. I struck at it and missed it by a foot. Kerplunk it landed in the catcher's hands. I had struck out! My daisy cutter was all in my mind.

Our next man struck out and so did our next. Not one of us touched the ball unless to foul.

In our second inning we began going down again as in the first, in one, two, three order. I was captain of the B nine. Something must be done. Our best batters had fallen, and in the third our weakest certainly would do nothing. Then I walked over directly behind the catcher, but well back, and watched that ball as it left the pitcher's hands, and wonder of wonders! it came in on a curve. It started all right, then seemed to think of something, suddenly turned and shot off some place else, and our poor batters were fanning the air all around the plate looking for it.

"Stand as nearly over the plate as you can," I whispered to the next batter. He did, and a straight one came and took him in the ribs. "Stand as far ahead of the plate as you can and get it before it begins to get crazy," I shouted to another batter. He did, and then nearly threw himself away trying to reach that ball. "Stand back of the plate and wait. Those balls don't come over the plate. The umpire will call balls on those things," I counseled. Then that little pitcher just seemed to throw straight at the batter's hip-pocket, making the batter dodge, while the ball, as innocent as a young canary, went flying right square over the plate. Then the whole nine of us, all but the one man at the bat, went around behind the catcher and watched that ball cut up its monkey-shines.

Well, so awfully cut up were we, that we couldn't in the last half of that game have hit pumpkins with butter-paddles. The curved ball had come and this was our introduction to it. Certain it was, we didn't like it on first acquaintance.

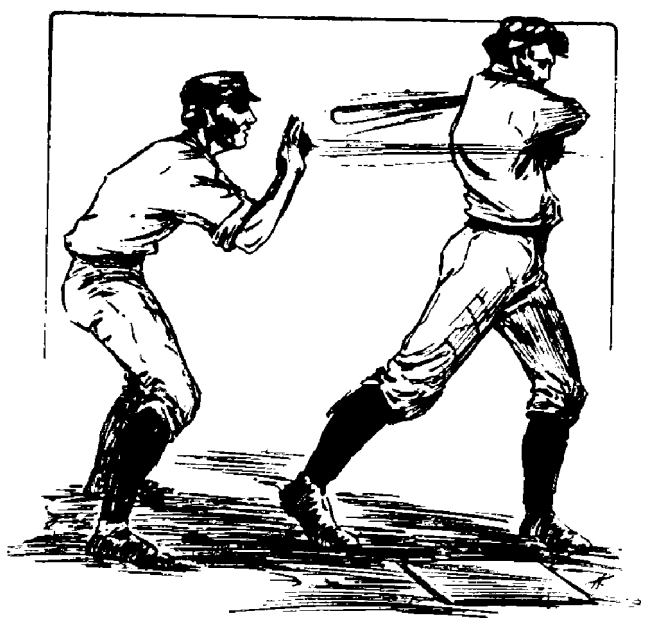
The game closed with the score 40 to 1 against us. Our pride was in our boots. The curved ball had humbled us completely.

That night we took a late train for home, sneaked up the back streets of the village; and not once did we give the college yell. We were no longer the heroes, no longer the holders of an unbroken season's record. We had met our Waterloo. The terrible slaughter of that day wiped out a score of victories on other fields.

We had learned a valuable lesson that everybody ought early to learn, that no matter how much a fellow may know about a thing, the chances are that there is something he may yet learn; that no matter how successful a boy may be he must be on his guard lest some day someone may come along who knows more than he does. The boy who knows it all is in a bad way because he is off his guard. Such a boy is self-sufficient; he wants no advice; he takes none. No one can tell him anything. That's just the way I felt about that college club of which I was captain. We had won so many victories I felt we were invincible, but a little, fat, pudgy pitcher that we poked fun at just took every ounce of conceit out of us and made us the laughing stock of our little college world, and that was the whole world to us then.

THE PITCHER DOUBLED HIMSELF UP IN A FUNNY WAY AND LET DRIVE

It is the unexpected, boys, that is always happening in life. "O I didn't expect that!



KERPLUNK IT LANDED IN THE CATCHER'S HANDS. I HAD STRUCK OUT

I didn't think of that," is the cry when something has suddenly turned up to spoil our success. Well, it's the best plan for boys as for men to prepare for the unexpected.

A boy once prepared for examination by cramming hard on a certain part of his arithmetic because he expected the teacher would examine on that; but the teacher didn't examine on that, but on some other part, and the boy failed. He didn't expect that.

Much sympathy did my ball club get at home when they told their friends that their opponents had a pitcher who threw a ball that wiggled like a snake. The people only laughed the louder, and to this day that 40-to-1 game is remembered with a smile by boys now grown to men, and they tell it to younger men, who smile in their turn as they tell it to still others.

It is very humiliating, boys, when you grow up to be a man, to find that you haven't a monopoly of skill and brains; so it is well for a boy not to get into the bad habit of thinking that he needs no instruction, no advice, no counsel, in order to make a success.

Why, the junk shops and back yards of our factories are full of discarded machinery that men spent their lives to perfect, till one day a man came along with something that could do the work better, and away went the first man's boasted achievement. The lesson is that no one should rest contented with his achievements, but ever seek to do better and better work. While you are resting the world is sweeping on, and one day soon someone will startle you by going you one better in the race.

"Still achieving, still pursuing,
Learn to labor and to wait."

But the waiting here does not mean idling or sleeping, or even resting. It means that while we labor we are not to be impatient for the reward, but ever to be pursuing, achieving, going from good to better, from better to the best possible.

"Is the boy a good student? Let him not be content with that. Let him strive to be a better one. Is he good in the ball field? Let him not rest on his laurels, but study and practice to be a better. Is he a good declaimer or debater? Let him study to be a better one. Is he good with tools or with pencil and brush? Let him strive to be better. What matter if he be the best in his school, his town, his state even. Should he now rest? No. His school, his town, his state are but a small part of the great world of boys. In that great world there may be hundreds superior in skill and power.

There are no heights of achievement but that there rises above them the glory-tipped summits of still others.

Remember the lesson of the first curved ball. It may save you humiliation some day. Be ready for the unexpected. Don't be caught napping at your own game.

Some Boys' Mistakes

By J. L. HARBOUR

IT IS A MISTAKE for a boy to think that a dashing, swaggering manner will commend him to others. The fact is, that the quiet, modest boy is much more in demand than the boy of the swaggering type. More than one boy has lessened his chances of success in life by acquiring in boyhood a pert, smart, dashing manner particularly offensive to men of real intelligence and refinement. Modesty is as admirable a trait in a man as in a woman, and the wise boy will find it to his distinct advantage to be quiet and modest in manner.

It is a mistake for a boy to put too high an estimate on his own wisdom. He will find it to be to his advantage to rely on the far greater wisdom of those much older than himself. And he will find it still more to his advantage to rely on God's Word for direction in all the important affairs of life.

It is a mistake for a boy to feel at any time in all of the days of his boyhood that it is not his duty to be respectful and deferential to his father and mother. The noblest men in the world have felt this to be their duty not only in boyhood but when their boyhood days were far behind them. It is a bad sign when a boy begins to show signs of disrespect to his parents.

It is a mistake for a boy to suppose that there is any better or safer place for him than his own home after nightfall. The boy who forms the habit of running the streets at night is sure to fall in with evil companions, for the better class of boys will be in their own homes at night. Records of crime prove that many a boy has begun a criminal career by strolling the streets at night. There is no better place for young people than the "sweet, safe corner of the household fire."

It is a mistake for a boy to feel that there is any better way of acquiring a dollar than by honestly earning it. The real "royal road to fortune" is by the road that requires honest toil and the giving of the best one has to give in return for money received. Every right-minded boy will want to earn his money, and he will ask nothing at the hands of mere fortune. It is true, as Benjamin Franklin once said, that "industry and patience are the surest means of plenty."

It is a sad mistake for a boy to feel that religion is something intended for women and girls, and that it is unmanly for him to go to church and Sunday school. The world has never known better or manlier men than those who have been faithful attendants at both church and Sunday school. Real piety is the foundation of all character, and the scoffer at religion is never respected by those whose respect it is worth while to have.

It is a mistake for a boy to do anything "on the sly." The sly boy is sure to be found out, and when he has once lost the confidence of his friends it is extremely difficult for him to regain it. The wise boy will be "as honest as the day." Woe to him if he is not!

It is a serious mistake for a boy to feel that he can get along in life just as well without an education as with one. Of course there are men who have attained a high degree of success in life with but a limited education, but those men will admit that the degree of their success might have been greater had they had the distinct advantage of a good education.

Grandpa's Childhood

By MARGARET B. SHIPP

"If I were a boy, I'd like the pockets of my coat
Stuffed with marbles, jackrocks, twine, and knife and ball,
Want a yellow dog or two, and a spotted goat,
And a dandy cart to drive in—that would be the best of all!
Drive out to an apple tree, the big one on the road.
Eat up all I wanted, then I'd fetch me home a load.
Swap some for tobacco tags, like 'Peach' and 'Golden Joy,' "—
"Gran'pa," put in Tommy, "'spect you must er been a boy!"

William Rainey Harper

By FRANCIS W. SHEPARDSON
For Several Years President Harper's Secretary

THE LATE WILLIAM RAINEY HARPER

THE LIFE OF the late President Harper of the University of Chicago is full of suggestions for a thoughtful boy. It shows how much it is possible to get out of life. It shows, too, how a person's career may be changed by the people whom he may meet in school, in college, in the church, or in the ordinary walks of daily life. He was born on July 26, 1856, in the village of New Concord, Ohio, where there was a small college which had been established to train men to be ministers. The Bible was a regular book for study, both in English and in other languages. His father, a dry goods merchant, was one of the college trustees, and he started his son as a student in the preparatory department when he was only eight years old. The boy was fond of books and easily kept up his work to the mark set by much older students. At fourteen he graduated from college, delivering his commencement oration in Hebrew. He clerked in his father's store and studied privately for three years, for part of his recreation leading the cornet band of the village. In 1873 he took this band to the neighboring college town of Granville to furnish the music for commencement at Denison University. He liked the looks of the place and made some acquaintances there. That fall he went to Yale College and came under the influence of Professor Whitney, the great philologist. Two years later he received from Yale the degree of Doctor of Philosophy and went back home filled with a desire to be a powerful teacher. He married one of his childhood companions and began to teach in a small school in Tennessee. Then he went to Granville, Ohio, again, this time as a tutor in the preparatory department. Two important elements came into his life. He became a warm friend of the president of the college, Dr. E. Benjamin Andrews, now at the University of Nebraska. He joined the Baptist church. He made a place for himself in the community by hard work and faithfulness to duty. Then when the Baptist Theological Seminary at Morgan Park, Illinois, wanted a teacher of Hebrew, President Andrews recommended Dr. Harper. The seminary was small and struggling, but he made his students his friends and inspired them so much that his fame as a teacher spread. He believed that it was possible for many a person who was kept from school privileges to learn much from lessons given by correspondence. He taught Hebrew in this way, and planned to arouse interest everywhere in the study of the Bible. The Chautauqua movement attracted him and he became one of the directors of that work. This gave him a wide acquaintance with educated and thoughtful people. He aroused enthusiasm about the Bible by public lectures given in various cities and at many universities. In the meantime, eleven years after he received his diploma from Yale, he was called to be professor of Hebrew and similar languages there, and a little later was also made professor of Biblical literature. About that time Dr. George W. Northrup, president of the Morgan Park Seminary, recommended Dr. Harper to Mr. John D. Rockefeller, who was looking for a Baptist teacher, who had the right training, ideals and ability to take hold of a new university to be established in Chicago. So he went back to Chicago to work for fourteen years in planning, establishing and guiding the University of Chicago for whose development more than twenty million dollars were given by enthusiastic friends. In this institution he gathered a strong faculty, selecting many of the teachers from among those whom he had known personally at Granville, at Morgan Park, at Yale, or in his Chautauqua work. He made instruction by correspondence and Bible study foundation stones of the university. He made the giving of lectures wherever they were desired a part of the institution. And there was no feature of the student life in which he took greater interest than in the organization and maintenance of a good cornet band, while from the standpoint of the faculty he paid special attention to the training of men to become teachers. Dr. Harper undoubtedly was a genius, that is, he was equipped with powers beyond those of the ordinary individual, but he was able to do so much and to keep interest in so many things during his lifetime, because he worked by system. He was an early riser, a tireless worker during the day, and then burned the midnight oil. He used to keep within reach a little red book, in which he kept the outline for his daily routine. As an administrator he had occasion to interview many persons who were heads of departments, secretaries, or special assistants in one thing or another. To each of these individuals he allotted a certain space in his book, in which he wrote down carefully numbered points for conference. If he had asked for suggestions upon any subject his plan was to tell his caller to go ahead and outline his suggestions. Usually, no matter how thorough the individual had been, when he had made his six, eight, or ten propositions, Dr. Harper would say "Those are good, but I have ten more." And then he would take up the whole subject in a way that indicated careful thought and mastery, the result being that his caller would leave impressed with a higher opinion of his chief than he had had before, and also with intention next time to have just as many possible points for discussion as Dr. Harper could think out. By such quiet training many men were greatly helped by these business interviews. If it happened that all matters could not be discussed at one interview, then such as were passed for the time were written down on another page to await the next interview. By carrying items forward in this way, and by keeping a daily rearranged list of matters of "unfinished business" constantly before him, by utilizing the odd minutes which many waste, and by training many subordinates to adopt the same methods of work Dr. Harper accomplished in his less than fifteen years at the University of Chicago the remarkable things which are credited to him. He used this method in all of his activities. If he was holding a meeting of his Sunday school officers, a faculty meeting at the University, a committee meeting with business men, the same system was evident. Such a system adhered to during a term of years enabled him to do the work of several men during the life of one. Thus in every position he had in his career he worked hard, inspired others to work hard, and made faithfulness in the discharge of duty his highest aim. Then, when death came to him before he was fifty years old, and his life was reviewed, it was seen that it had been a series of steps, each leading to the next, as if God had guided him year by year, toward the goal of his ambition to be known as an inspiring teacher and a teacher, too, of the greatest of all books, the Bible. Many boys neglect the earlier years of their lives, planning to do something and to be somebody by and by. In President Harper's case his whole life's career seems to have been shaped by the ideas he had and the people he met before he was twenty-one years old.

AMONG THE BOYS

PHOTO BY WM. SLEEMAN, ESPLIN PITTS, PA.

Golden Eagle Lassoed by Boys

(From the Cincinnati Commercial Tribune.)

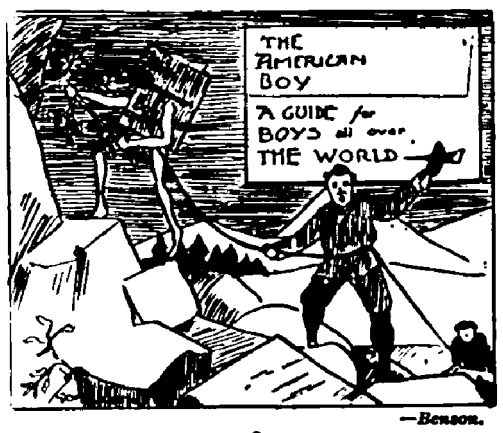
Two small boys armed with a lasso captured a golden eagle late Wednesday afternon after an interesting struggle with the bird. The boys are the sons of Edward Franks. They were playing in the yard of their home when the great bird swooped down and lighted on the back fence. A hurried search for a gun was unfruitful, and as the bird seemed disinclined to leave, other measures were employed by the nimrods.

Somebody suggested a lasso, and finally a noose of clothesline was cast about the bird and he was captured after a sharp battle.

It is said that the eagle probably flew so high that he encountered extreme cold and was unable to resist it.

Newsboy Finds $4,000 and Refuses Reward

Harry Spencer, a 15-year-old newsboy of Harlem, N. Y., found a pocketbook recently containing a certified check for $4,000, a considerable sum of money in bills and some valuable jewelry, and refused to accept a reward from the owner. Harry is now pointed out as the wonder of wonders by the other "newsies" in Harlem, who cannot understand why he refused the proffered reward for his honesty.



—Benson.

Going to School in Germany

James A. Canfield, editor of the Patchogue Advance, Patchogue, New York, sends us the following letter written to him by his nephew, who is attending school in Germany. It will interest the boys, we are sure:

Jena, Germany, Feb. 11, 1906.

Dear Uncle Jim:

I thank you very much for the American Boy. I received the first number in January and I am now waiting anxiously for the February number. We are having fine winter weather now with plenty of snow, but it is not very cold. The town is surrounded with mountains and the coasting is fine. Yesterday I went up with German friends and there were about two hundred people there. Many men, women, students, boys and girls were going down and they went very fast. At first I could not steer the way they did, but now can do quite well and I go most every day. Most of the sleds are very small, and they do not have the large toboggans that we use in America. When they go down they yell "Bahn" or "way." A man was killed here last year, and I saw a girl break her leg the other day.

We are only a few feet from the station, but the trains are so small and light that we hardly ever hear them. The cars are very small and there are four classes, first, second, third and fourth. Most of the people go third.

I am studying Latin, Algebra and German, as I am trying to make my year in school. I go one hour in the German school and it is very queer. The classes are not like they are at home, because the boys and girls do not go in the same room. Men teach the boys and women teach the girls. The teachers whip lots more than they do at home, but they are very friendly, too. My teacher whistles and sings right during the recitations and when anybody makes a mistake he calls them dumb heads, sheep, donkeys, etc. One morning twenty-seven out of forty-five got whipped or slapped.

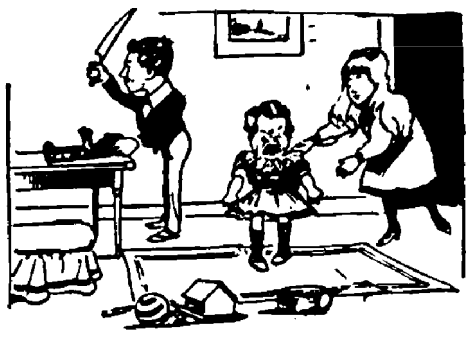
Your nephew,
ALFRED R. HAVIGHURST.

Boys We Like

Elmer E. Jeter writes an interesting letter from Colfax, Louisiana, which contains many good words for THE AMERICAN BOY. Elmer, who is not yet fourteen years old, says he has earned his spending money since he was ten years old. Among things he has bought for himself are a pony, a buggy and harness, a saddle and bridle, and a violin. We are sure he must be particularly proud of the rifle that he earned taking subscriptions for THE AMERICAN BOY. Besides earning all of these things, Elmer finds time to attend school regularly, stand well in his classes, and to do his share of the chores about the house.

George Watsen and John Kimberly, East River, ..., are much interested in electricity. They live in the country about a mile and a half apart, but are connected by a telephone made from directions given in THE AMERICAN BOY. They have also constructed a sort of automobile which works very well, and are now at work upon a wireless telegraph. We are sure that the workshop in which they spend so much time must be a very busy place. One of the boys has a taste for music as well as mechanics, and plays the violin, piano, and cornet.

A Juvenile Surgeon



His Own "Composure"

Allen Bagley, Moyock, N. C., a 14-year-old, sends the following, of his own "composure," as he says:

WHAT I WISH TO DO.

I want to go to college,
To the good old Orange and Blue,
And be a football player,
A Heston number two.

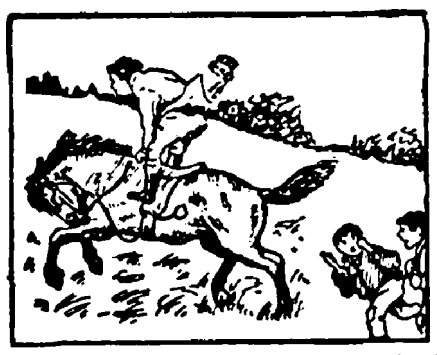
And when I finish college
Learn the trade of engineers,
Make fifty million dollars
And live five hundred years.

When I get through engineering
I'll go where it is cold,
Skate to my satisfaction,
And live in a house of gold.
When I get through skating
I'll go where it is hot,
'Way down in old Virginia,
And swimming 'll be my lot.

When I finish swimming
I'll get me a boat and row,
Until I get a boy again
(A man's a boy twice, you know).

When I get a boy again
I'll be full of joy,
Sit back in my mansion and
Read THE AMERICAN BOY.

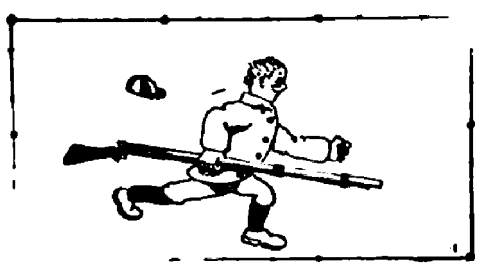
Before the Fall



Offensive boy—Hi, Bill, come on! This gent's a hackerobat. He's goin' to stand up on 'is 'oss!—New York Press.

A 13-Year-Year-Old Writer

R. W. Chipman, Middletown, Nova Scotia, sends us a story that appeared in print in a local paper, entitled "Study and Pleasure." As we understand it the story was written by our subscriber. We congratulate him on his success in writing so early, as he is only 13 years of age.



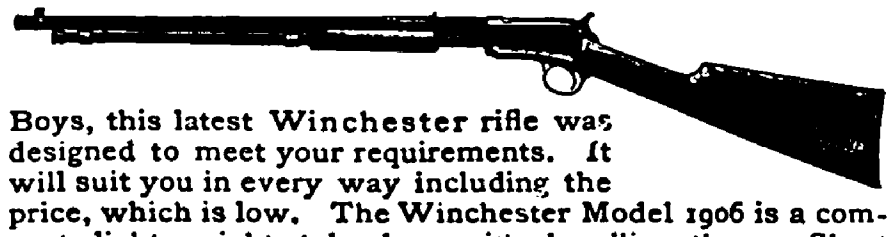
"LITTLE SAM TOOK HIS GRANDFATHER'S GUN, AND STARTED FROM HOME ON A RUN —

—By J. M. Meyers.

— GRANDPA GOT ON HIS TRACK BROUGHT THE YOUNG RASCAL BACK— AND YOU OUGHT TO HAVE WITNESSED THE FUN!"

WINCHESTER

MODEL 1906 .22 CALIBER
Extra Light Weight Repeating Rifles



Boys, this latest Winchester rifle was designed to meet your requirements. It will suit you in every way including the price, which is low. The Winchester Model 1906 is a compact, light weight, take-down rifle handling the .22 Short Rim Fire cartridges only. It is attractive in appearance and outline, and in accuracy, reliability of operation and finish it is fully up to the established Winchester standard. This rifle is made with a 20-inch round barrel fitted with a sporting front sight and an adjustable open rear sight. It has a handsome straight grip stock finished with a rubber butt plate and weighs about 5 pounds. The magazine holds 15 cartridges. If your dealer cannot show you this model rifle, let us know.

FREE: Send for circular fully describing this rifle.

WINCHESTER REPEATING ARMS CO., NEW HAVEN, CONN.

A Wreck

—By D. O'Brien, Boy Artist.

Trapping in Iowa

Henry Johnson, Kanawha, Ia., reading in our February issue of the experience of one of our subscribers in trapping in the State of Texas, writes to tell us how much pleasure he gets from trapping in Iowa. Here, says he, we get mink, white weasel, skunk and muskrat. The mink are very shrewd and not easily caught. They are caught in streams and in muskrat holes. The traps used for mink are No. 1½. When in use they must be covered well. Skunks are easily caught; they may be dug out of their holes by means of an axe and spade; the hole is seldom more than three feet deep. Mink bring from $2.00 to $6.00 each; skunks from 75 cents to $2.50; weasels from 25 cents to $1.00 and muskrats from 10 cents to 20 cents. Henry made $30.00 last winter trapping.

Well Wishes From Far Away

The following letter indicates that THE AMERICAN BOY has friends a long way from home:

Princes Town,
Trinidad, B. W. I.,
January 24th, 1906.

Dear Editor: I wish THE AMERICAN BOY the continued and complete success it so well deserves. DUDLEY DONAWA.

Be Patient

Boys from all over the country are writing us, "why not give us a chance to tell why we are proud of our state?" In the nature of things we cannot admit more than one essay a month. We hope that boys of every state will have an opportunity to write on the subject, but they must wait their turn.

DON'T OVERLOOK IT

See the prize offer in connection with Dr. Bucknall's contribution on page 185.

GIVEN TO BOYS

BEGUN IN MARCH

CHAPTER IV.

THE BOYS found the strange dog quite willing for a frolic, and by chasing him around they soon had him barking at his loudest. Had there been a human being within a mile of them he must have heard the racket, but the experiment was a failure.

They heard two or three frightened deer crashing through the forest, and a dozen squirrels in the trees around them chattered away in wonder and affright, but no man called out and neither did they hear the bark of another dog in answer.

"We will try to the north and south and west," said Joe, and he started off to blaze a fresh trail.

It was noon before he had finished with the four points of the compass. The dog had chased and caught another rabbit, and Dan had built another fire and roasted it.

"Well, we have failed all around," said Joe, as he returned from blazing the last trail, "but we must not give up. When we are rested we will start out in some certain direction, and as long as the sun shines we can keep it. We may have to walk for two or three days, but we are certain to come out at some settlement in the end. Plenty of boys have been lost in the woods and found their way out again."

"If it wasn't for the wolves, I wouldn't care so much," replied Dan, who was trying hard to be brave, and who did not feel so lonesome since the arrival of the dog.

"Before dark we will find a beech tree with low branches and climb it. We will have to roost on the limbs like wild turkeys, and we shall not get much sleep, but we shall be safe from the wolves."

It was an hour after dinner when they set off for the north. They felt that they might go this way as well as any other, as they had no idea of the true direction of home. As a matter of fact, I may tell you that they were going right away from home.

In their anxiety to follow the bees to their nest they had traveled a far longer distance than they suspected. When they did not return at dark the father was very much worried, but as he did not know in which direction they had gone he did not set out to look for them.

Every hour all night long the parents hoped for the arrival of the boys, but when morning came and nothing had been heard from them Mr. Wilkins said:

"It is likely that the boys followed a bee far into the forest and have become lost. I have no idea which way to look for them, but I will go to the village and give the alarm and get three or four parties to start out."

In those days it frequently happened that children, and even men and women, were lost in the woods. In such cases the villagers and settlers dropped all work and turned out on a grand hunt. They took their dogs with them, and also took along dinner horns to blow and rifles and shotguns to be discharged.

As many of the men were at work, it took time to spread the news and get them together, and it was decided that they should not start out until the next day.

Said one of the men to Mr. Wilkins:

"It is warm weather yet and your boys will not suffer. There may be wolves about, but the lads will know enough to climb trees. They will find roots and nuts and berries in the woods, and I have no doubt we shall come across them in a couple of days. Don't worry. They are not the first boys who have been lost and found again."

Bright and early next morning three different parties of ten men and boys each arrived at the cabin of Mr. Wilkins and set off in different directions.

It so happened that none of the parties went the right way to discover the boys, and after beating the forest for seven or eight miles around they returned at night tired out and no good news to communicate. Next morning they set out again, and this time one of the parties took the right direction. Before ten o'clock they came upon the trees which Joe had blazed in four different directions, and when they had followed them back to the hollow tree the leader said:

"It was here the boys passed the first night, and you see they made a fire and cooked something. They went at it the right way to find their way out of the woods, but they were in too deep.

"They must have hung about this place for at least half a day, but they have gone on, and no one can say what direction they took. Here is a matter I don't understand. In the soft soil here you can see the prints of a dog's feet. Whose dog is it? How did he come to them? Let us blow the horns, fire off our guns and shout as loudly as we can. If they are within two miles of us they will hear the rumpus."

A great noise was made in the forest, but no answer was returned. The reason was that Joe and Dan had left the place hours before and were then five or six miles away. They had set out hoping they were going toward home, but as a matter of fact they were going right away from it.

They continued to travel at a good pace until sundown. When the woods began to grow dark the dog caught a coon that was shifting his place from one tree to another, and they built a small fire and for supper had coon meat.

The dog got his fair share, and before it got too dark a tree with limbs growing very low was selected and the boys climbed up to be safe from the wolves. They tried to get the dog up with them, but he was so heavy that he had to be left behind. He curled himself up at the foot of the tree to sleep and to watch, and by and by the night came down and the woods were dark and lonely and almost without a sound.

CHAPTER V.

Although the boys were as comfortable as any one can be seated on the limb of a tree, there was no sleep for them that night. Whenever they began to doze they found themselves falling, and Dan was all the time in fear that a bear would come along and climb the tree after them.

For an hour after night shut down the forest was very quiet. Then there were noises from every direction. The big wood crickets began to chirp, the owls to whoop, and the coons, 'possums and foxes to skulk about, and now and then they heard afar off the howl of a wolf or the cry of wildcat or panther.

The dog that had come to them was a courageous fellow, and the boys saw that he must be used to the noises of the woods. He did not leave his place at the foot of the tree until about ten o'clock.

Then they heard a bear breaking his way through the underbrush. The dog sprang up and gave tongue, and the boys cried out, and between the three of them the bear got scared and made off.

He must have wondered what sort of game he had come across. That was the only real alarm during the night. If any wolves came that way they were careful not to draw too near.

When morning dawned the boys dropped to the ground and found they must pick up a breakfast as best they could. Although the dog started up two or three rabbits and gave them a chase, he did not succeed in overtaking them. However, they found plenty of chestnuts and thorn apples, and, with a drink from a cold brook, managed to stay their hunger. When they had finished, Joe said:

"I do not know that we can do anything except to keep on walking. As long as we can see the sun we can keep our direction, and in the end we are sure to come out somewhere."

Dan hadn't the courage of his brother. Besides, his loss of sleep had broken him up, and one of his boots was rubbing away at his heel. He began to whimper and declare that he could not walk a mile, but after Joe had called him a booby and laughed at his tears he rose up and followed on.

One of the searching parties was within three miles of them at noon that day, but as there was a strong wind blowing in a contrary direction the boys did not hear the discharge of firearms and the blowing of horns. At noon they rested for an hour, and they dug roots and plucked wild grapes for their food.

About three o'clock in the afternoon the boys met with an adventure. They were walking along a path in the woods which really was a deer trail, and of a sudden they heard a queer noise behind them. They had just time to step aside when a buck deer flashed past them, and close at his heels was a single wolf.

Before the lost boys could be sure of what they had seen the dog uttered a bark and took after the wolf. Five minutes later there was a great growling and snarling in the forest ahead, and presently the boys came upon the wolf and the dog.

He was a big wolf, but having chased the deer for miles he was in no condition to fight. The dog had overtaken him and seized him by the throat, and he was shaking the last of the life out of the beast as the boys came up.

But this wasn't all. In his frantic terror of the wolf the deer had leaped aside and been caught between two saplings growing about a foot apart. Struggle as he would, he could not get loose.

"Here is meat to last us and the dog for two or three days," said Joe, as he understood the situation, and he stepped forward with his ax and gave the struggling animal its death-blow.

Mr. Wilkins had often shot deer almost from his own dorstep, and the boys had helped him to dress the carcasses. Each had a stout pocket knife, and it was not long before they had the hide off and the body cut up. The dog got all he could eat, and then Joe said:

"We will go on for about a mile and then build a fire and have supper. If we are to keep any of this venison for to-morrow it must be roasted. To-night there will be plenty of wolves here to fight over what we have left."

At the end of another mile they came to a creek with a steep and rocky bank on one side. Dan climbed up the bank to see what it was like while Joe was building a fire, and presently he called out:

"There is a great mass of rock up here, and in the middle of it is a cave. Come up and see it. It will be a good place for us to sleep in to-night."

Joe climbed up, and when he had put his head and shoulders into the mouth of the cave and drawn a long breath he said:

"It is the cave of some wild animal. It smells as if a bear made his home here. Let me get a blazing stick and see if he is at home."

Fire was brought and flung into the cave, but when no movement was heard Joe crawled in.

The mouth of the cave was no longer than a barrel, but once within it was quite a room. It was decided that it might be occupied for the night if a fire was built near by, and for the next hour the boys were busy cooking their venison.

With his ax Joe peeled a piece of clean bark off a slippery elm tree, and when the meat was fairly well roasted it was wrapped up in the bark to be carried along with them on the morrow.

Then a second fire was built near the entrance of the cave, and a big stone rolled in to shut off most of the space, and when the sun went down and darkness began to fall the boys and the dog crept into the snug retreat to spend the night.

Several armfuls of leaves had been gathered, and the beds were almost as good as the boys had at home. They were both tired out with the day's tramp, and within half an hour after lying down they were sound asleep.

Two hours later the forest resounded to such a terrific noise that they awoke with their hearts in their mouths.

CHAPTER VI.

The noise that had aroused the boys from sleep was made by wolves. The beasts had scented out the spot where the deer had been killed and dressed, and a dozen of them engaged in a fierce fight over the remains.

They were a mile away, but as the forest was quiet their howls and growls and yelps seemed to be close at hand. The dog had rushed out of the cave before the boys awoke, and it was three or four minutes before the youngsters could figure out just what the noise meant.

"It's the wolves fighting over what we left of the deer," said Joe, "and I do not think there is any cause for us to fear. Even if they come this way they cannot get at us. Here is a piece of stout string. While you creep out of the cave and throw more wood on the fire and whistle to the dog, I will lash my knife to the hoe handle. We will use it for a spear if the beasts do come."

Dan crept out of the cave to find the fire almost out. There was plenty of limbs at hand to start it up again, and when he had a good blaze going he whistled and called for the dog. Five minutes passed and the animal did not return, while all of a sudden the wolves set up a new clamor.

"The idiot of a dog rushed through the woods to see what was the matter," said Joe, "and the wolves have spied him out and are after him. They are coming this way, and we must get into the cave and be prepared for a fight."

Two minutes later the dog was heard scratching and whining at the blocked entrance. The stone was quickly shoved aside and he was admitted, and just then the pack of wolves came sweeping up and halted a few feet from the fire.

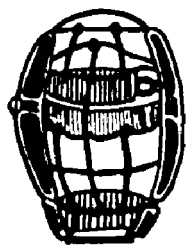
The dog had received a bad bite and was pretty well scared. The boys knew that all wild animals dreaded fire, and they hoped the wolves would soon go away. Perhaps the beasts would have done so had they not scented the cooked meat that the boys had wrapped up in the bark and taken into the cave with them. Then it suddenly began raining, and in a quarter of an hour the fire was

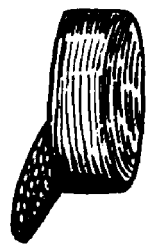
THEY BUILT A SMALL FIRE AND FOR SUPPER HAD COON MEAT

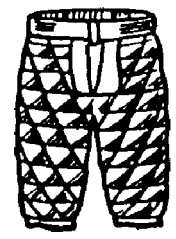
A BUCK DEER FLASHED PAST THEM AND CLOSE AT HIS HEELS WAS A SINGLE WOLF

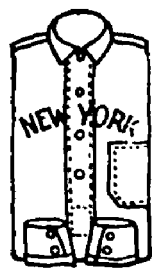
$120 SPALDING Base Ball Outfit

FOR A LITTLE WORK AFTER SCHOOL









Every American boy wants to play base ball this summer. In every city, town and village local nines are being formed. The burning question is: "Where can we get the money for uniforms and equipment?"

The McKinney Plan

Answers the question—solves the problem. Ten boys can form a McKinney Base Ball Club, and secure a complete genuine Spalding nine outfit without a cent of cost to them except the postage to answer this ad and the small transportation charges on the goods.

How We Do It

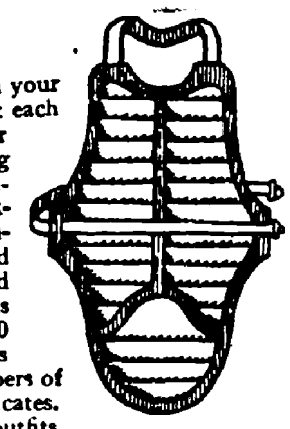
For thirty years we have been importing, manufacturing and selling fine teas, coffees, extracts, spices, soaps, perfumes and fancy groceries. Our True Blue Brand goods have a splendid reputation for quality and purity. In order to extend our business over the entire country, we want bright boys everywhere to explain our proposition to mothers and neighbors, and induce them to give us trial orders for our guaranteed groceries.

Easy to Earn an Outfit

A very little effort on your part will secure the order, because every housekeeper must buy somewhere such products as we sell. She will be glad to order through you because we sell them with the understanding that if they are not as good or better than those for which she has been paying the same or higher prices, we agree to take them back within 30 days and refund the money and freight charges. We depend upon the freshness, purity and quality of our products for future orders.

How to Equip a McKinney Nine

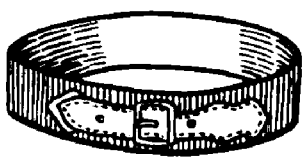
Form a McKinney Club-of Ten by getting nine other boys to join your Base Ball Club. Elect one of your members as cashier. Then let each boy agree to earn a complete outfit for himself by taking orders for $10 worth of our guaranteed groceries. This individual Spalding outfit, which we ship with the groceries, is valued at $10 and consists of: **Gray outing cloth cap, blouse, and padded pants, belt, stockings, shoe plates, fielder's mitt, second-growth ash bat, and regulation $1.25 guaranteed League Ball.** The blouse will be lettered with the name of the club. All members of the club should send in their orders through the cashier, who is known on our records as the Club Former. We will ship each individual outfit and $10 order just as he directs and give him two Club Former's Certificates for each $10 order. Thus for the ten orders sent in by the members of the club, including his own, he will receive in all twenty Certificates. Understand these 20 certificates are in addition to the individual outfits given as premiums on the $10 orders. In exchange for these we will give the Club our complete Spalding Nine Outfit, valued at $20, as follows: **Catcher's mitt, mask and pneumatic body protector, one set of three canvas bases with straps and spikes, and one regulation league ball.** Thus the club will have a complete nine outfit, and each of the ten members will have his individual outfit, valued in all at $120.

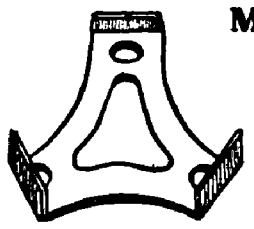


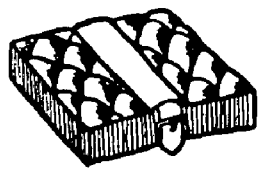
The Best Outfit for the Least Work—Do not confuse the genuine Spalding outfit we offer with the trashy articles usually given as premiums. Spalding goods are known the world over as the best and most expensive. We furnish sizes for men or boys as desired. Our goods are very easy to sell, because of their quality and because everybody needs them. If a boy's mother cannot use all of a $10 order he can easily make up the balance by selling $1.00 worth to each of several neighbors.

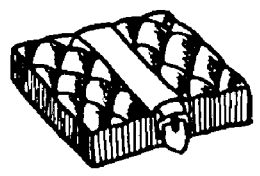
Be First in Your Neighborhood—To get the orders quickly, be the first to ask for them. Write at once for our free Base Ball Club circular and list of products and premiums for boys, girls, and the home.

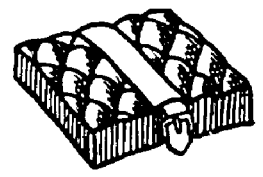
McKINNEY & CO., 181 State Street, BINGHAMTON, N. Y.

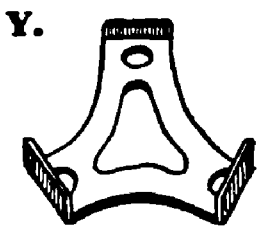












out the wolves were doing their best to force their way into the cave.

It was lucky that Joe had thought of the knife. He could not reach a wolf with the ax, but as the beasts scratched at the big stone blocking the mouth of the cave and tried to roll it aside, he jabbed at them with his spear and wounded every one that came near.

They were a fierce and hungry lot and determined to get at their prey, but after half an hour something happened to give them a great fright.

The boys suddenly heard the scream of a wild beast above the snarls of the wolves, and then there was a terrific fight for a minute. Then the wolves were heard scampering away, and Joe whispered to Dan:

"I know what has happened. This cave is the den of a bear or panther, and the beast has come home. Look there, and you can see his eyes shining."

It was a panther, and a big one. He had killed one wolf and driven the others away in terror. For a few minutes he was quiet, being surprised at the smell of smoke and the situation of affairs, but presently he began growling and snarling, and trying to force his way into the cave.

The dog crouched down and shivered, and Dan was of no use, but Joe crept forward with his spear and wounded the panther at the first thrust. Then the enraged beast broke loose, and made the forest ring with his fierce cries. But for Dan and his lance he could have shouldered the stone away in a minute, but the boy was on the watch for him.

Every time the beast came near enough he got a jab from the sharp knife, and after being wounded three or four times he finally withdrew, and was heard of no more.

The rest of the night passed without alarm, but the boys did not sleep again. When daylight came they peered out and saw a dead wolf with many tufts of hair lying about, and it was with the greatest caution that they finally emerged from the cave.

They looked into the trees about them, but the panther was nowhere to be seen. It had rained all night, and was still raining, but they had no need to build a fire. Their breakfast was wrapped up in the piece of bark.

The dog was not acting at all like his old self. He seemed ashamed of his conduct in running after the wolves, and though the boys spoke to him kindly he went about with drooping tail, and would not respond. He finally made a sneak down the bank and across the creek, and although they called and whistled, he would not return.

At about ten o'clock the rain ceased and the sun came out, and the boys pursued their way, holding in the same general direction as the day before.

They had traveled for two hours when they came upon a good sized creek that had to be crossed. Owing to the rain, the creek was in flood, and could not be waded. The boys were following its banks in hopes to find a fallen tree over which they could pass, when they heard growls and snarls not far away.

Turning a thicket, they came upon a queer sight. There was a fallen tree across the creek, and on this tree and close together stood a bear and a panther. Each had started to cross from a different direction, and they had met in the center. Their noses were not two feet apart, and each beast was threatening the other.

How long they had been there could not be told, but the boys had not been looking on more than two minutes when both beasts suddenly sprang for each other. They fought for a few seconds and then rolled off into the water, and were carried away with a rush. It was such a funny sight that both boys sat down and laughed heartily.

An hour later, as they were making ther way along a deer trail which ran in the direction they wanted to go, they came to a clear spot in the woods, and saw before them an Indian wigwam. There was a bit of fire near the wigwam, and an Indian sat on a log cleaning his rifle.

"Now we will know how to get out of the woods," whispered Dan, as they halted.

"Don't be too sure about that," replied Joe. "There are plenty of bad Indians about, and this fellow may be one of them."

(To be continued).

About Marbles

Marbles got their name from the fact that originally little bits of marbles were rolled down the hills and rounded and pounded by other stones until they become toys for children to play with.

It is said that the Dutchmen exported them to England, from where we got them. Whether they did or not makes little difference to the boys and girls of today. No matter who introduced the world to marbles as toys, they are with us, and always will be. Some of you win them from other children—some of you trade postage stamps for them; but some person originally bought them from the little store around the corner, whose owner got them from that greatest toy shop in the world—Germany.

In the beginning marbles were called bowls, and men and women played with them, as well as children. Hundreds of millions of commies and agates and glassies and shiners are sent to America, and the children get more pleasure out of theses cheap little toys than almost anything else.—Washington Star.

Boys' Books Reviewed

BOOKS REVIEWED HERE MAY BE PURCHASED OF THE AMERICAN BOY

THE WAR FOR INDEPENDENCE, by Everett T. Tomlinson, Ph. D. (Stories of Colony and Nation.) The sixteen stories in this little volume of the men and women who contributed so much to bring about the freedom of America from British oppression will be read with delight by both boys and girls. They will also be an incentive to more extended reading of our country's history. The pictures are good and apt. 178 pages. Silver, Burdett & Co.

FISHING ACROSS THE CONTINENT, by W. N. Hull, A. M. To the boy who loves fishing, the stories—true ones—which are here related will prove a source of delight and he will obtain some valuable information, as to the habits of the various species of the "finny tribe." The stories are most interestingly told and the illustrations are good. 245 pages. Price $1.00. A. Flanagan Co.

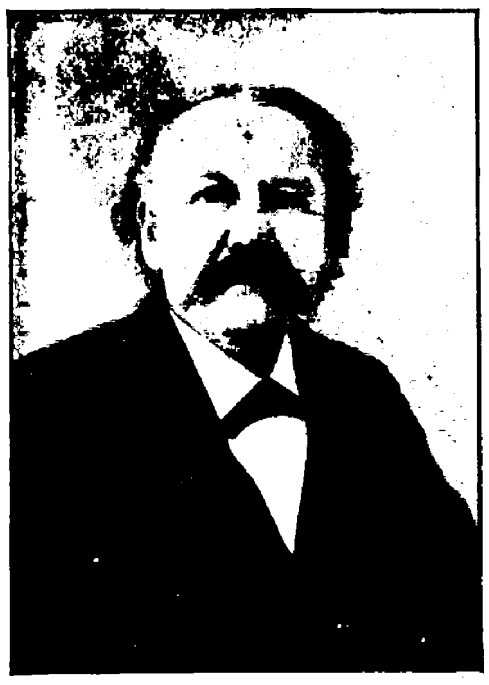
LADS AND LASSIES OF OTHER DAYS, by Lillian L. Price. For supplementary reading in history for the schoolroom, and for the boys and girls in the home, these little stories of the boys and girls of the Colonial and Revolutionary period of our country's history, will be found full of interest. The illustrations will increase the pleasure in the book. 180 pages. Silver, Burdett & Co.

THE RANCH ON THE OX HIDE, a story of Boys' and Girls' Life on the Frontier, by Henry Inman. The writer of this book was an officer in the U. S. Army and the scenes and incidents he describes are what he himself witnessed. Here is life on the plains with all the excitement and thrilling adventures which accompany it. The hunting of buffaloes, wolves and lynx; capturing wild horses; Indian raids, and other incidents too numerous for mention here are all set down in a fashion sure to delight the boy reader. In addition the young reader will acquire a fund of useful information as to the nature and habits of the wild animals to be found in the great plains of the West. It is a first class book and the illustrations are fine. 297 pages. Price $1.50. The Macmillan Co.

THE REACH OFFICIAL AMERICAN LEAGUE BASEBALL GUIDE FOR 1906. The twenty-fourth annual issue of this publication is at hand, and to say that it fully sustains its well-won reputation as to its completness concerning the doings, records, and averages of the American League is only uttering a truism. The National League and the minor leagues of the National Association are also fully covered. The lover of the "national game" will find this handy little volume everything that he could wish to know put down in the most accessible way. As a supplement there is a large picture of the second game of the World's Champion Series played at New York City. Price 10 cents. A. I. Reach & Company.

A TALK WITH "HARRY CASTLEMON"

By CARABEL LEWIS MUNGER



CHARLES A. FOSDICK (HARRY CASTLEMON) AS HE IS TODAY

A WELL KNOWN publisher of a boys' magazine recently concluded a statement of his editorial needs, with these words: "We want such stories as Horatio Alger and Harry Castlemon used to write." I thought at once of "Phil, The Fiddler," "Brave and Bold," and other delightful tales, but Harry Castlemon—what had he written?

If you wish to know anything about a boy's writer ask a boy. I appealed to my fourteen-year-old son who immediately hunted up an old number of Golden Days and pointed triumphantly to this caption:

"OSCAR IN AFRICA.

By Harry Castlemon,

Author of 'The Camp in the Foot-Hills,' 'Two Ways of Becoming a Hunter,' 'Our Fellows,' 'The Mystery of Lost River Canyon, etc., etc.'"

Nor was this all. I learned from the same source that Harry Castlemon was the nom-de-plume of a Mr. Fosdick, living at Westfield, N. Y., a village but fifteen miles from my home.

A few days later found me a visitor at the home of Dr. J. D. Davis, who, for many years, had lived in close proximity to this famous writer of boys' books—an American Henty of whose life and ways so little is known.

"I wish to meet Mr. Fosdick; can you manage it?" I asked my host.

The genial doctor looked a trifle nonplussed. "Mrs. Davis can introduce you if——" and then he hesitated so long that my rosy dreams of an interview began to fade.

"In fact," he said abruptly, "Fosdick is a hard man to get at—pleasant to meet, if you can meet him, affable if you corner him, but a bit quiet, very retiring, and exceedingly likely to be out if you call."

I next tried the boy of the house, a six-footer in football togs. "Do you know Mr. Fosdick?" I queried.

"Harry Castlemon? Yes, I know his books."

"What sort of books are they?" I asked.

"Rattlers!"

I persisted: "And Mr. Fosdick—do you boys ever visit him and thank him for his delightful books?"

The boy looked his astonishment. "I think," he said slowly, "that very few of the fellows know him by sight even. We lived in the same street with him for years, and he never said anything to me."

So it was with many misgivings that we waited in the pleasant parlor of the house where Mr. Fosdick has boarded since the death of his wife.

We had not long to wait—then all of my doubts vanished in the warmth of the greeting given in response to Mrs. Davis's introduction. Having "cornered him" I found him not only affable but much more; under a very thin shell of reserve I found him enthusiastic, original, and brilliant in conversation.

Permission to talk with him about his work was readily given. "In my work," he said, "I have tried to help boys to be men. Patriotism has been my keynote. What Hale brought out so well in his 'Man Without a Country,' it has been my wish to bring out, but in a different way. If I have any message for the boy of today, it is this: Success lies in application, and in doing what you can do well, and with tenacity of purpose."

His first book, written when he was fifteen years old, is before me, drawn from the Westfield high school library where all his books, fifty-two in number, and all boys' books are to be found. This book was first called "Frank the Young Naturalist," but before publication it was changed to "Frank the Gun Boat Boy." This copy is badly worn, and many of the leaves are gummed in place; in a boyish hand on the title page I find this eloquent tribute, "A Jim-Dandy."

Charles Austin Fosdick was born at Randolph, New York, September sixth, 1842, and was educated at the Buffalo High School, Buffalo, N. Y. The family was one of refinement, the father a popular teacher. For some unknown reason they looked with disfavor on the literary aspirations of their son, so that much of his earlier work was done in secret, and none of it offered for publication.

At the beginning of the Civil War, he enlisted and shipped as landsman on the magazine ship, Illinois, one of the Mississippi squadron, was promoted four times; was later on the ship, Sovereign, which made trips down the river to provision the ironclads which were blockaded by low water at St. Helena; next served as paymaster on the gunboat St. Clair during the Yazoo Pass expedition that ended with the surrender of Vicksburg; was in the navy and militia for eight years, until the close of the war, and is a prominent G. A. R. man.

When Mr. Fosdick entered the service, he carried the manuscript of the book which he had written when he was fifteen years old, and after two years, he found courage to ask Admiral David B. Porter to examine it; he was then on the Ticonderoga. After a careful reading the admiral expressed great surprise at the excellence of the effort, and advised young Fosdick to submit the story to Robert W. Carrol, of Cincinnati, Ohio. With great misgivings on the part of the writer, it was accordingly sent to Mr. Carrol, who sent a personal letter to the young writer, enclosing a check for one hundred and fifty dollars, warmly praising the story, and suggesting that he write five more books, making Frank the hero, and renaming the book, "Frank the Gun Boat Boy." And thus the famous "Gun Boat" series was inaugurated.

"I walked on air that day," said Mr. Fosdick. "Mr. Carrol's words kindled a spark which is alive today. In the next two years I wrote the other five books, receiving two hundred dollars for each of them. I have since written fifty-two books, and never received less than one thousand dollars for a book manuscript, and often more; but that one hundred and fifty dollars meant more to me than all the rest."

"I went ashore with Joe Harvey that day," he continued. "He was the best fellow that ever lived. I had that check in my pocket; the river was gold; the misty hills capped with snowy clouds, suggested purple and fine linen. As was usual, then, Mr. Carrol had asked me to select a nom-de-plume. I had this in mind as we went ashore from the small boat. I saw a man coming down the avenue which led up to one of the stately homes on the river. The house was many-gabled, with turrets rising high above the trees. Through the rose-colored glasses I wore on that never-to-be-forgotten day, that house seemed a castle. Harry was the name of a favorite friend; like a flash I saw it, the name I would make famous—"Harry Castlemon." —and so it was forwarded the next day." He paused; in his eye was the look of one who holds a tryst with memory.

"And after this first success," I ventured, "of course you met with the usual discouragements?"

The far-away look left his face. "No," said he, looking at me frankly, "I never met with one rejection, or one word of adverse criticism from any editor."

He showed me many pictures of old gunboats, and faded photographs of naval officers, also pictures of Robert W. Carrol, and a fine photograph of James Elverson, editor of the Golden Days; many of Mr. Fosdick's best known books were first issued as serials in that periodical.

Mr. Fosdick was married in 1873 to Miss Sarah Stoddard. He spoke very feelingly of her death. Her portrait revealed a delicate, high-bred face. As he handed me the picture he said reverently: "She was beautiful when I married her, and beautiful all along."

Mr. Fosdick has two sons, one a farmer and one a civil engineer.

"You must love boys," I said, "to write for them so acceptably."

With a quizzical smile, he looked at his old neighbor, Mrs. Davis. "I love the boy of my fancy," he said, "because he is lovable."

"Will you write other books?" I asked as we took our leave.

"It takes me three months to write a book," he said; "in my present state of health I dread to undertake it; next year, perhaps—a Lake Erie story—but I am growing old."

"A short story then," I urged. "The American Boy would be sure to want it."

A momentary flash illumined his countenance which indeed looks prematurely old. "I might do that," he said, "I have never written a short story."

Then we came away and left him standing in the doorway, looking across the blue water of the lake, and I hoped that somehow the short story would be evolved, that it would be a Lake Erie story, and that Commodore Perry would furnish the keynote, and that my little sons might read it.

HOME OF CHARLES A. FOSDICK (HARRY CASTLEMON) AT WESTFIELD, N. Y., WHERE HE LIVED FOR THIRTY YEARS AND WROTE NEARLY ALL OF HIS BOOKS

A Soldier Born and Bred

When today's talk turns upon the Japanese army, as often it does, in view of its amazing victories over physical conditions and disease, as well as over Russia's forces, the well-informed remark: "That army is the creation of Iwawa Oyama."

FIELD MARSHAL OYAMA, COMMANDER-IN-CHIEF OF THE JAPANESE ARMY

The American boy knows the man, but he is worth knowing much of. That he is Field Marshal and Marquis and a giant in build,—in that respect quite exceptional among his compatriots,—is interesting, but of side value. The gist of what is best worth remembering of him is that he has personally created the Mikado's splendid fighting machine. He is a military organizer of unusual talents, as well as a practical fighter.

Experts call Oyama a military genius, and talk of his achievements as of those of Hannibal, Caesar, Napoleon, and Grant. Sprung from warlike ancestors he has inherited instincts; to this he added marked natural liking for war; and, finally, for forty-seven of his sixty-one years, he has been actively employed in matters military,—to inheritance and inclination he has added the most thorough education.

"Kruger without the goat-beard," is he described by one of the correspondents, "rather uncouth in appearance, yet a second look at the tall, deep-chested, broad-shouldered leader shows his native geniality. Personally he is the soul of any company, however his official name may have been stamped as taciturn."

Baron Kaneko, Japan's confidential agent here during the "late unpleasantness" in the Far East, served with Oyama for nine years in the imperial cabinet, and is authority for the statement that he is "our big man—big in more than height and weight."

The "Carnegie of Canada"

At one end of life's ladder, in 1820, lay a tiny Scotch baby, just christened Donald Alexander Smith. At the other end, today, is Lord Strathcona and Mount Royal, Canada's richest man and one of the most honored leaders throughout the British Empire. The eighty-five years between these extremes holds the best of texts for the American boy who would study the way to power.

LORD STRATHCONA AND MOUNT ROYAL. WHO HAS RISEN FROM THE RANKS TO BE CALLED TODAY "THE CARNEGIE OF CANADA"

The Smiths were poor in this world's goods, but they endowed their son richly. His was plain living and high thinking, indeed, but before he left home, a youth of seventeen, he had learned morality and temperance, thrift and perseverance, and these legacies made of him the man he is.

He came over to Labrador in 1837 in the service of the Hudson Bay Fur Company. By hard work, honesty, an eye ready for opportunities, and constant cheerfulness, he had, by 1870, climbed to be his company's High Commissioner and territorial governor. Careful investments of careful savings brought wealth and made him president of the Bank of Montreal; his interest in public questions and his sound views upon them carried him into the Dominion Parliament, while his services in quieting the Red River Indians, during their uprisings, brought him knighthood. His latest honor was elevation to the peerage, and his creation as High Commissioner for Canada, resident in London, whence the Strathcona money flows freely for all good ends. They call him "The Carnegie of Canada."

This venerable multi-millionaire lays all credit for his advances to a Scotch training, but the good things that come from that point of the compass are not peculiar to the land of mist and mountain. Frugality, attention to business, regard for the spirit as well as the letter of the law, consistently happy effort,—these are traits as American as Scotch, as many a self-made American has proven.

Advice by Men Who Know

An opportunity lost is the greatest misfortune—Andrew Carnegie.

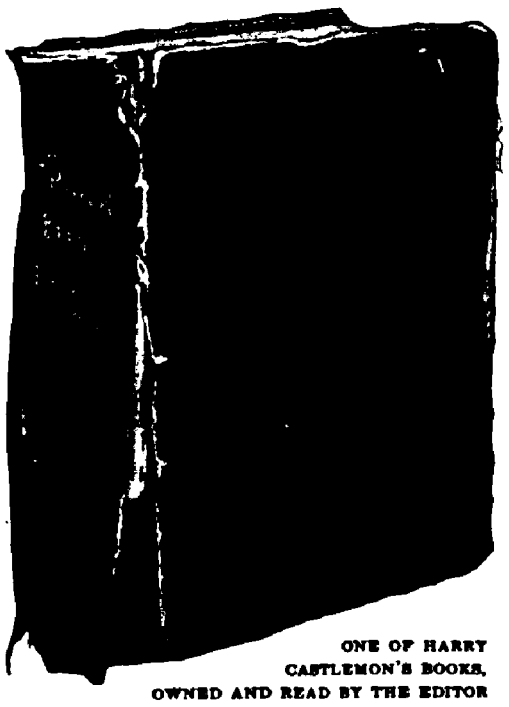
Work, work, work for success.—William H. Newman, President New York Central Railroad.

Work hard and save something each week.—Randolph Guggenheimer, prominent New York lawyer.

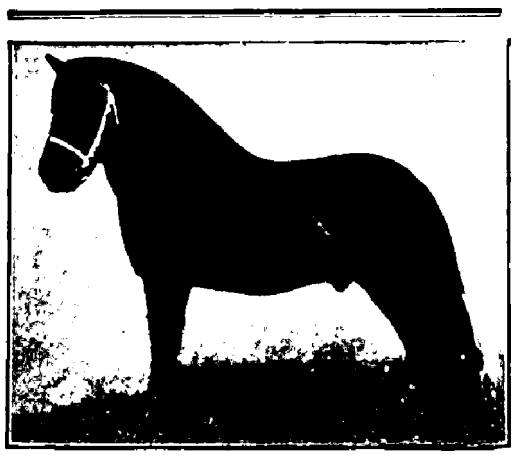
Avoid bad associates and work constantly.—Henry Siegel, one of the greatest merchants in America.

Be honorable, reliant, prompt and truthful.—Leroy B. Crane, New York magistrate.

Think all the time how you can better yourself.—O. Hammerstein, great theatrical manager.



ONE OF HARRY CASTLEMON'S BOOKS, OWNED AND READ BY THE EDITOR OF THE AMERICAN BOY WHEN HE WAS A BOY OF THIRTEEN, AND NOW BEING READ BY THE EDITOR'S THIRTEEN-YEAR-OLD SON



BOYS! BOYS!

DON'T miss this. On June 26, 1906, some bright boy will get this Shetland Pony for a little diligent work. By making only 8 points you have a chance to name him and win $5.00 anyway. We are also giving additional CASH PRIZES to the amount of $125.00. Can you use some of it?

This liberal offer is made by Vick's Magazine, one of the best in the country. Contest closes June 26, 1906. Write at once for sample copy and full particulars.

VICK'S MAGAZINE, P. O. Box B4, Dansville, N. Y.

PLEASE MENTION THE AMERICAN BOY WHEN ANSWERING ADVERTISEMENTS

THE TRUE HISTORY OF CAPTAIN KIDD

By L. H. TASKER

CAPTAIN KIDD ON HIS SHIP "ADVENTURE GALLEY"

MORE FAMILIAR to every American boy than the names of Henry Morgan, Solonois, and De Grammont, the nobler and lesser known buccaneers, is that of Captain Kidd and his band, one of the last, but in reality the most inconsiderable of the bands of bold sea robbers that infested the North Atlantic waters in the latter half of the 17th century. In song and story he has stood forth as a bloodthirsty pirate who, "leagued with the devil," scuttled and sank the ships of honest merchants, and, leaving not a man to tell the tale, hurried to the shores of Connecticut and Long Island, where he buried untold treasure with all sorts of bloody charms and sulphurous incantations. An old ballad of the time sets forth the current belief of the superstitious:

"I'll sing you a song that you'll wonder to hear,
Of a freebooter lucky and bold,
Of old Captain Kidd—of the man without fear,
How himself to the devil he sold.

"His ship was a trim one as ever did swim,
His comrades were hearty and brave
Twelve pistols he carried, that freebooter grim,
As he fearlessly ploughed the wild wave."

In the latter part of the seventeenth century European nations were almost continually in a state of warfare, and the governments were encouraging private citizens to fit out vessels of war to plunder the enemy's commerce. It was but a step from cruising against the ships of the enemy to hoisting the black flag and plundering the ships of all nations.

These freebooters became bolder and bolder, and during the early days of the English occupancy of New York, legitimate commerce was almost at a standstill. The American coasts were infested by pirates who dared even to swoop down on the ships in New York harbor and drag them out, before the very eyes of the helpless citizens.

In 1695, Governor Bellomont requested that an armed force be sent against the buccaneers. But England was embroiled at that time with France, and every ship was needed for home defense. Lord Bellomont thereupon organized a stock company for the purpose of fitting out a private expedition against the pirates. In this the king himself took one-tenth interest, while Lord Somers, the High Chancellor of England, the Earl of Oxford, the Earl of Romney, the Duke of Shrewsbury, Robert Livingston, and others were shareholders. Six thousand pounds were raised for the enterprise and the "Adventure Galley," a ship manned by sixty sailors and carrying twenty-five guns, was fitted out.

The command of the vessel was given to Captain William Kidd, a sea captain of New York, who happened to be in London at the time. As an incentive to strenuous action, one-fifth of the cargoes of captured pirate vessels was promised him.

Kidd had previously commanded a privateer in the West Indies and more recently had been a respectable captain of a packet ship which plied regularly between New York and London. He had acquired a competency by trade and was himself the owner of several ships. Indeed he was accounted rich in those days, for his home on Pearl Street, at Hanover Square, New York, was the most richly furnished of any in the city, and boasted of the first modern carpet; it had been made in Turkey and covered the whole room. The possession of this carpet set the captain's family quite above their Dutch and English neighbors, for the other houses had their parlor floors sanded, and for decoration such design as could be traced in the sand by the good wife's broom.

In April, 1696, Kidd sailed for New York in his new vessel, under the king's commission to cruise against the pirates. For a time he served faithfully and with advantage to the country; and as an additional reward two hundred and fifty pounds were voted him by the assembly.

But on the next voyage, the temptation to turn pirate himself and take all instead of one-fifth, was too much for the virtuous captain, so he hoisted the black flag and sailed for the Indian Ocean. For some time the Island of Madagascar was his headquarters. He is said "to have ranged along the Indian coast from the Red Sea to Malabar and to have extended his depredations from the Eastern ocean back along the Atlantic coast of South America, through the Bahamas, and the West Indies, to home waters and the shores of Long Island." Certain it is that in 1698 he took up his station off Montauk Point, the eastern extremity of Long Island, and waited under the skull and crossbones for a fleet of merchant vessels homeward bound to Boston, laden with rich silk hangings, spices and precious stones.

In due time the pirate fell in with "The Quidder Merchant," one of the expected ships. After a fierce hand-to-hand fight, the doughty privateersman won the day, and those who remained of the crew of the merchant ship were made to "walk the plank." After loading the cargo into his own vessel, the "Quidder Merchant" was scuttled and Kidd sailed for Gardiner's Island. This isolated spot is nearly opposite New London, Connecticut, and situated at the entrance of the sheet of water that separates Long Island from the mainland. It was owned at that time by the grandson of Captain Lion Gardiner, who had purchased it from the Indians in 1640.

It was rather hard on the nerves of the peaceful household when the pirate chief strode into the kitchen of the quiet house and demanded that he be served with a sucking pig roasted whole and a flagon of ale. The terrified servants tremblingly prepared him his dinner, which the captain had the grace to pay for by a cradle blanket, a handsome piece of brocaded velvet inwrought with gold, and a diamond—a part of his easily gotten treasure. The head of the house was informed that a treasure was buried in a hollow a mile or so west of the house, and, further, that if it was disinterred or information given to the authorities, he would on his return cut off his ears and nose and hang him from the yard arm.

It is probable that Kidd had many hiding places on Long Island. On one of the "Thimble Islands" in Sachem's Head harbor is the "pirate's cavern," and near by is an artificial excavation of an oval form, holding about the measure of a barrel, called "Kidd's Punch Bowl." According to current rumor, it is here that he used to carouse with his crew. Another of his hiding places was called "Kidd's Rock," at Manhassett, Long Island.

After cruising for more than a year in upper Atlantic waters, Kidd was foolish enough to venture into Boston harbor, believing that his commission as a police officer on the high seas was sufficient to conceal his escapades. But for once, his good fortune deserted this wolf in sheep's clothing. The Boston magistrates were suspicious and detained him pending investigation. The captain wrote to Lord Bellomont appealing for protection on the ground that his lordship had shared in the profits of his enterprises without inquiring too closely how the goods were obtained. The governor, however, abandoned him to his fate, and he was sent to England, tried for piracy, found guilty and hanged in chains in 1701.

The ballads of the time all point a moral by the well-deserved fate of the noted captain, as, for example, the following mournful specimen:

"Farewell to young and old,
All jolly seamen bold;
You are welcome to my gold,
For I must die; I must die.

"Farewell, for I must die;
Then to eternity,
In hideous misery,
I must lie, I must lie."

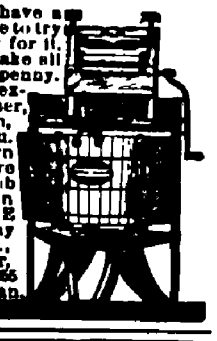
For many years it was the common belief that the pirate had untold wealth buried in various places on Long Island, but with the exception of the booty discovered in "Kidd's Hollow" near "Cherry Tree Harbor," Gardiner's Island, none has been discovered. That found was brought to Boston and easily proved to have been the cargo of the ill-fated "Quidder Merchant." The amount was by no means the fabulous treasure which the credulous people of the time believed had been buried there. Of gold, in coins, bars, and gold dust, there were seven hundred and fifty ounces, of silver five hundred and six ounces, and of precious stones sixteen ounces. If the captain buried treasure in other places, either it has not been discovered or the lucky finders have kept it to themselves.

CAPTAIN KIDD'S HOME IN NEW YORK

Free Care of Children's Teeth

False teeth will not be in demand in Germany if the free care of children's teeth continues to grow in popularity. Strasburg started the movement in 1902 and Darmstadt, Muhlhausen and other cities have followed suit. The third annual report from Strasburg says that there were 12,691 visits to the clinic last year and that the children are improving in the care they give their teeth.

1900 Washer FREE!



Any worthy person can have a "1900" Gravity Washer free to try four weeks just by writing for it. We pay the freight and take all risk. You don't risk a penny. Test it four weeks at our expense. If you like the Washer, keep it on the "1900" plan, which we will explain to you. If you don't like it return it at our expense, so you are nothing out. Washes a tub full of dirty clothes clean in Six Minutes. Get it FREE by addressing a postal today to "1900" WASHER CO., No. 5611 Henry Street, Binghamton, N. Y., or 355 Yonge Street, Toronto, Can.

BASE BALL OUTFIT GIVEN AWAY

Each Outfit contains 218 Pieces:
1 Base Ball Cape,
1 Base Ball Belt,
1 Base Ball,
1 Fielder's Glove,
1 Catcher's Mitt,
1 Catcher's Mask,
1 Base Ball Rules.

BOYS We give complete outfit Free for selling 25 Useful Household Articles at 10 cents. Every boy wants his club in uniform. Now is the chance. You can earn it in a day. We trust you. Send us your address and we will send articles postpaid. When sold send us $2.50 and we will positively send you our Complete Base Ball Outfit Free. 150 other gifts.
TRUE BLUE CO., DEPT. 798, BOSTON, MASS.

MENNEN'S BORATED TALCUM TOILET POWDER

A Positive Relief For CHAPPED HANDS, CHAFING, and all affections of the skin. "A little higher in price, perhaps, than worthless substitutes, but a reason for it." Delightful after shaving. Sold everywhere, or mailed on receipt of 25c.
Get Mennen's (the original). Simple form.
GERHARD MENNEN CO., Newark, N. J.

VENTRILOQUISM
Learned by any Man or Boy at home. Small cost. Send today 2c stamp for particulars and proof.
O. A. SMITH, Box A, 2040 Knoxville Ave., Peoria, Ill

1000 PLAYS
of every variety; stage effects, theatrical paraphernalia, wigs, makeup, costumes, scenery, etc., can be found in our new catalog, over 100 pages, illustrated; sent on request, postpaid.

WOLVES at the DOOR.

A STORY OF SOUTH DAKOTA

BY S. B. McMANUS.

PEOPLE WHO WRITE stories, true and otherwise, are very fond of speaking of "the wolf at the door," meaning that some one is short on food and clothing, but very few of them, I venture to say, know what it means to have real wolves at the door, not one, but half a dozen, and hungry and savage ones at that. I want to tell you what it means to have a pack of the real genuine article howling round your house, climbing on to the roof, scratching at your door, and looking through the cracks with their mean, wicked, red eyes.

It was this way. There was Will Henry, Billy von Berg, Clyde Harding and myself. We styled ourselves "The Big Four" when we started out, but I want to tell you now that there were times when we felt like a mighty small four and didn't want to spell it with capital letters either.

We had come from away down east—leastwise it seemed way down east to us as we sat in our lonesome shacks out on the boundless prairie of South Dakota about a day's broncho ride east of the Black Hills and another, north of the famous "Red Bud Reservation," and a little farther from the famous "Bad Lands," whose very name makes the creeps go up one's back and feel around to see if one's shooter is all right in his hip pocket.

However, we only came from down in Indiana near the Michigan line. But just thinking of it and not figuring it out, it seemed thousands of miles away.

We had all got tired of being hired hands, working sixteen hours a day for some other fellow, rousting out at four o'clock in the morning, almost before we had had our first nap, and rustling round for wages that would never make a man rich or even decently well off, even if he worked a thousand years; so we made up our minds to strike out, and, as we had not much to lose, we had not much to risk. We bade good-bye to our folks—this was the hardest part of all—harder for them though, I guess, than for us, for we were too much excited about going, to think very seriously of anything else.

In Chicago we ticketed for Chamberlain, South Dakota, where we had heard there was land yet to be pre-empted; Chamberlain was then the terminus of the Chicago, Milwaukee & St. Paul railroad. Here we entered our claims, bought our outfits and started overland for our new possessions, feeling very rich and independent with papers in our pockets calling for a quarter section of nice land apiece. Our claims were a hundred miles or more out, nearly due west. We each bought a wagon and span of horses; then we bought two cows and some sheep together, and a coop of chickens, and one of the boys picked up a kitten on the street and this with a dog that did not promise to be of much use, completed our outfit of live stock.

Clyde Harding painted on his wagon, in his best style, which was very bad, "South Dacota or Bust." This was funny, considering that he spelled Dakota with a C instead of a K, and the whole inscription was on a fearful slant. A surveyor who was acquainted with our section went with us to locate and stake our claims. The trip went all right. Everything was new and full of novelty and interest to us. The spring weather was fine, and I must say that four happier, more hopeful fellows could not have been found in as many states.

After six days' travel we reached our destination. We reached our claim just at sundown, unhitched and unharnessed our tired horses, turned them loose with the other stock, ate our suppers, and laid down to sleep under the wagons. I shall never forget that first night on our claims. There was no moon, but more stars in the sky it seemed to me than I had ever seen in all my life before; and every one of them was looking down at us as if wondering what we were doing out here alone so far from our folks. And the stillness was something awful; you could almost actually feel it, and it made one think of ghosts and murdered men and deep water covered with leaves, just as if something dreadful was going to happen. Then two or three times in the night we heard the wolves howl, but they were a long way off, down on Medicine Creek, or over among the bluffs that lay in the distance so fearfully solemn and still. It was the lonesomest and longest night of my life. There was not much sleep for any of us. Our heads were full of strange new thoughts. We realized now, as we never had before, that we were up to a fairly big proposition such as we had read of a good deal and heard of some, and it was for us to face it and win out, or back down and go home whipped.

S. B. McMANUS
AUTHOR OF "WOLVES AT THE DOOR"

I did not start out to tell you how we put in that first year; it would be too long a story for just now; but let me say it was full of interest and excitement, and, while sometimes we were flat on our backs with homesickness,. we never seriously thought for a minute of giving up. We built our shacks at the intersections of the quarter sections, placing them forty-five feet apart in order to legalize our claims and comply with government requirements. By this means we were close neighbors and our eight by ten houses looked like four lonesome but victorious men on an immense checkerboard. Our buildings were not in the least handsome, nor yet very substantial, but, as it proved, they answered our purpose until we needed and were able to build larger and better ones.

The first summer passed and fall was well on its way to winter. The work on our claims that it was possible to do was about all done and we were beginning to have more time on our hands than we knew exactly what to do with. We hunted more or less and made a trip to the Black Hills and busied and amused ourselves as best we could. But time was beginning to hang heavy on our hands, and oftener and oftener as the days passed we would come upon each other with our heads down, sitting very still and thinking with our eyes turned eastward. But we knew this would never do; we must make something happen, even if it was not very much, and so it came to pass that we made up our minds to celebrate our birthdays by having big dinners, and as good a time as we could plan out. We had plenty to eat; besides our garden truck, much of which we had safely stowed away in holes and of which we had raised more than enough, we had canned goods from Chamberlain and prairie chickens for the shooting, at our doors. So we were all right as far as eatables were concerned. We compared notes on birthdays and found that Billy von Berg's came first, so we began making preparations for celebrating the occasion at his shack. We always liked to visit Billy. His shack had a "homier" look than did the others, and we were glad that the first celebration should be held in it. By mistake or good fortune, or by longsightedness of Billy his shack was a little larger than the rest, and it was always a good deal cleaner.

There were pictures tacked on his walls and a dish of flowers standing around somewhere, and a white frilled curtain hung over his window that someone had sent him done up in a newspaper. But Billy most always kept this curtain folded and put away in a box, but this was one of the days it was to be up. We had agreed that we would not do a thing this day but our chores and that we would make the most of it. We went over to Billy's shack early in order to have plenty of time for dinner preparations. We decided to serve the meal at three o'clock, which Clyde Harding, who seemed to be authority on such things, said would be swell. We togged out in our best clothes, shoes, neckties, scarf pins, and it can't be denied but what we presented quite a natty appearance.

The prairie chickens had been shot and dressed the day before, and Billy left us to attend to the baking of them while he went in search of one of the cows which had wandered away with her six weeks' old calf, since milking time the night before. We decided that she had gone to the creek bottom for fresher pasture, and were not greatly uneasy about her, although we had heard the wolves howling more or less of late and at times unpleasantly near our shacks. Billy rode away, promising to be back in time to set the table, as he had a notion, and we all had the same notion, that he could do this in a tidier way than the rest of us. Noon came and one, two and three o'clock, our dinner time, and he had not yet returned, so we began to get uneasy and anxious.

The morning had been dark and cold, with frost in the air, and a storm of some kind was brewing and no mistake, and by four o'clock it began to snow and blow violently; a blizzard of the worst kind was apparently upon us.

Pitch darkness came and Billy was still away and our uneasiness gave place to the worst kind of alarm. Almost anything could happen to him in a blizzard after dark. You have read about these terrible storms, but reading about them by a comfortable fire doesn't give you much of an idea how awful they are. It was useless to search for our missing shackman for it was not long before we could barely see our hands before our faces. There was not much that we could do. We spliced together two pieces of shiplap that had been left of our shacks, and tying our four lanterns to this, fastened the board to the gable of his house, which, as good luck would have it, was built upon the highest ground. This gave out a little light, but not enough to be seen only a short distance away, the night was so pitchy dark.

The little wooden clock on Billy's shelf had just struck the hour of seven in its thin, quick way, when we heard a shout, or rather a sound betwixt a shout and a scream, and almost before we could rush pell-mell to the door, Billy dashed up to the shack, hatless and coatless, threw himself from the horse, plunged through the open door, yelling to us to slam it shut, which we did without being told a second time; but, as it proved, we were none too quick, for we had scarcely latched it when a pack of snarling wolves jumped upon it, and had it not been a new and strong door it would have surely have been broken in. For an instant there was a great tumbling over each other and biting and snapping in a most hair-raising and blood-curdling way. Then round the house they ran, yelping and barking to beat anything. They jumped upon the roof and tore and stripped the tarred paper from the sheeting, tumbling to the ground, falling upon each other, and having a general free-for-all fight and round-up. Then they circled the shack again, always stopping at the door to snarl and grit their teeth in their awful rage, in a way to make a tenderfoot's blood run cold.

BILLY DASHED UP TO THE SHACK . . . THREW HIMSELF FROM THE HORSE

We tried to get sight of them through a window, but the darkness was so dense we could not even get a glimpse of them; then, too, except for an occasional shot, our guns were useless. Every now and then there would be a lull in the noise, as if the brutes were in consultation as to what next to do, to be broken by a sudden dash at the door that made the shack tremble. They evidently took their defeat hard and were resolved not to be cheated out of their prey.

When Billy jumped from his horse, it had dashed away at full speed and had, we hoped, been forgotten by the wolves, as had our other stock, which we had taken pains to house uncommonly well before dark. In order to keep the brutes more completely diverted from our sheds we agreed that we would keep up a constant noise, making such sounds as occurred to us might especially interest and aggravate them. This furnished us some amusement and helped to make the hours go faster, which were full long enough, I need not take pains to say.

Meanwhile Billy related his day's adventure.

It seems that he did not find the cow and calf where he expected and so kept up his search, riding on and on until with the falling snow he became confused and lost his way. He was slowly riding along, giving the broncho its rein and going he knew not where or in what direction, when he heard the howling of a wolf, and then of another and another until the air seemed hot with the awful sound. He hoped at first they were not upon his track, but a little later found that they were, as every minute the sounds came nearer and nearer. Almost without hope of saving himself he spurred his broncho to top speed; but the wolves constantly gained upon him. Once they stopped to quarrel over his hat, that had blown off. This gave him an idea, and as they came nearer again he threw off his coat, and another time his vest, and last his lasso. He was riding for dear life, the wolves close upon his heels, when he saw the light and dashed up to the door of the shack just in time to save himself. Our beacon light on the shiplap had served him well, as he had no idea until he saw it where he was.

We ate our dinner at midnight, which we all agreed was a very swell hour, with the wolves outside snarling and howling for orchestra. It was a queer, gruesome meal, and one that the "Big Four" are likely to never forget. And it was also one of the times when we did not feel so wonderfully "big." It goes without saying that there was no sleep for us that night, and with the din inside which we kept up for the entertainment of our unwelcome guests, and theirs outside for our diversion, the hours wore away and daylight came. For some little time before sunrise the wolves had been quiet and, upon cautiously peering out, we discovered they had gone. With our guns ready to fire we ventured to open the door. A little after daylight came a queer sight met our eyes and one that gave us a great deal of pleasure and satisfaction. The snow that had fallen during the night lay deep upon the ground, but it was light and yielded to every footstep no matter how gentle. In plain view, not a quarter of a mile distant, we saw the wolves, six of them, jumping and floundering in the snow in a vain attempt to make good their escape. But they could make but sorry headway; all their courage and bluff were gone, and they were more like a pack of sheep-killing dogs caught in the act, than the dangerous, bloodthirsty brutes of a few hours ago. We went near enough to them to take decent aim, and shot them down without mercy; it was more like butchery than marksmanship, but we were not splitting hairs just then. We found Billy's horse safe in the shelter of a shed, but we never saw or heard anything of the missing cow and calf.

Wolves at the door? While none of us are cowards, we all agree that we never want an experience like that again and Billy's ride for life is something we dream of yet.

The High School Fraternity

In November, 1904, at a conference of academies and high schools, working in co-operation with the University of Chicago, a committee, which had been busily engaged for several months in an investigation of high school fraternities, made a report to the effect that high school fraternities were objectionable on the following grounds:

1. Their influence is detrimental to the school.

2. They are detrimental to the student himself.

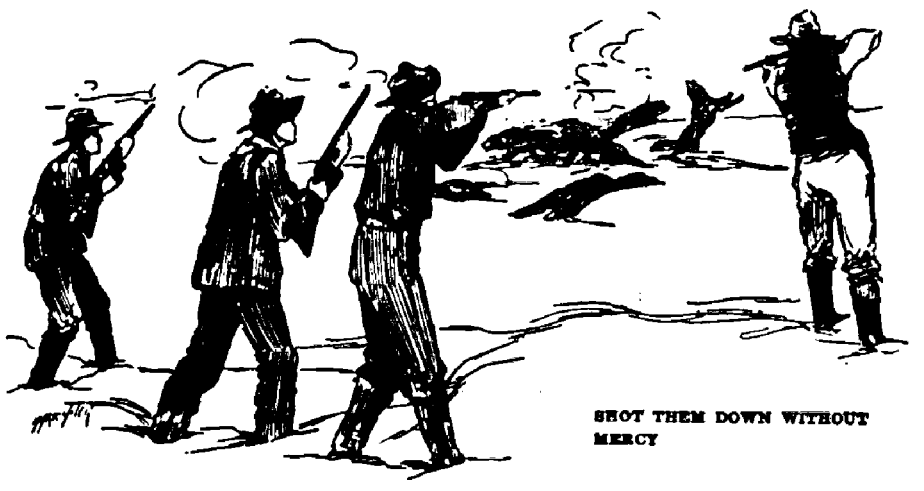
3. They are unnecessary.

4. They are undemocratic.

5. The standards they set up are different from, if not opposed to, the standards ideally set up by the school authorities.

6. They are often an element of danger in the government of the school.

7. Any system is radically vicious that makes paramount the decisions of immature minds on questions of social or other school distinctions.

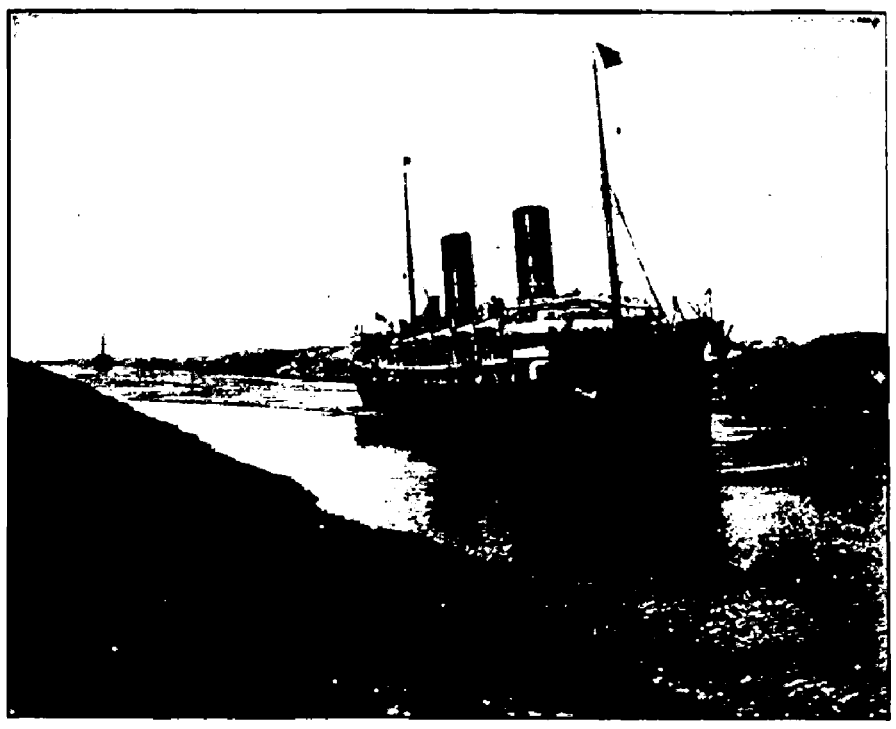


SHOT THEM DOWN WITHOUT MERCY

MY TOUR IN THE ANTIPODES

By ARTHUR DUFFEY

Interesting Experiences of the World's Champion Short Distance Runner Among the Athletic Enthusiasts of Australia and New Zealand



GOING THROUGH THE SUEZ CANAL

IN THE AMERICAN BOY of June and July, 1904, I gave an account of an athletic tour which I took through the British Isles. That tour was unquestionably the most successful that I ever had in the course of my career as an athlete, for not only was I victorious in all the level races in which I competed, but, in addition, many new records were established by me. My tour through the Antipodes, though not so productive of victories, was, nevertheless, more interesting and pleasant, owing to the hospitality of the genial colonials. This same hospitality I believe was one of the principal reasons why my racing was not so brilliant as in times preceding.

All American boys are interested in feats of athletic skill. So thinking that my own might prove of interest to them, I herewith give a description of the races that I ran while in Australia and New Zealand. My companion on the trip was Alfred Shrubb, the World's Long Distance Champion.

At the close of last year's season it was not my intention to again don my athletic togs; in fact, I had fully determined to retire from active competition on the cinder path. But just as I was about to sail from England, I received a cordial invitation from the combined Australian and New Zealand Associations requesting me to join Morton and Shrubb, two English champions who likewise had been invited, and thus make one of the team to visit their shores and compete against their champions. Shrubb and I immediately accepted the kind invitation, but Morton, for some unforeseen reason, decided not to make the trip. Consequently, I postponed my sailing to America and awaited further developments. Slowly the days passed on, nothing definite was forthcoming, and ill at ease and rather disappointed, I at length abandoned the project and sailed from Liverpool for New York.

Upon my arrival in New York, fearing lest there might be some misunderstanding concerning letters, etc., I at once cabled to New Zealand, and after a few days received an answer directing me to sail the next day from New York to join the Orient liner "Ortona," which was to depart from Plymouth just one week later. Without a moment's delay, and scarcely having time to bid my friends adieu, the next day, Saturday, Christmas Eve, I hopped on board the American liner "St. Paul" and commenced my race across the ocean against time and the elements to catch the "Ortona" at Plymouth.

The voyage from New York to Plymouth was a most tempestuous one and without doubt the roughest I had ever encountered. Sailing away in the midst of a blinding snow blizzard, we were finally forced to lay too and await the abating of the terrific gale. But this was not the only impediment which helped to increase my anxiety regarding catching the "Ortona," for scarcely had we advanced a few days when we were forced to "heave to," owing to some fault with the engines. Never shall I forget my uneasiness as we lay motionless in the middle of the broad Atlantic, and, upon learning from the officers that we would be quite late in arriving at Plymouth, I abandoned all hope of ever making connections.

At last we reached Plymouth harbor and immediately I scanned the horizon to see if the "Ortona" was discernible, and, as we gradually approached nearer and nearer, I saw the huge Orient liner all activity, evidently about to sail. It was a most anxious moment for me, but still feeling that I had a chance left to reach her before she got under weigh, I at once inquired for telegrams, expecting word directing me what to do. As there were none for me I hardly knew which way to turn when, just as the lighter was leaving the ship with the mails and passengers for Plymouth, I was informed by the Company's agent, who had been searching the ship for me, that my ticket for Australia was with the purser of the "Ortona," and it was absolutely necessary that I get on board her at once. But how was I to get there? That was the next question. It was a most puzzling situation, when suddenly

TWO GREAT ATHLETES

The One Standing is Alfred Shrubb, Champion of the World 1 1-2 Mile Run. The One Sitting is Arthur Duffey, American Athlete, Who Ran a Hundred Yards in 9 3-5 Seconds.

I espied a small fisherman's dory, which I at once hailed and, amid hearty cheers and good-byes to my friends on the "St. Paul," bag and baggage, I was lowered over the side of the ship into the fisherman's boat and started my race for the "Ortona," which lay fully three hundred yards away. It was without question the most exciting sprint that I ever tackled, and never did oarsman tug and strain at the blades more eagerly than the old fisherman and myself. In spite of the waves that dashed over us at every stroke, gradually we neared our goal. Shouting at the top of my lungs to the officers on the bridge that I was a passenger, the stairway was lowered and eagerly I clambered up the side of the ship to the deck, where my pal Shrubb was waiting to meet me, just as the ship slipped from her moorings.

Time and space forbid my enumerating all the different interesting ports we visited in the course of our journey through the Mediterranean Sea, Suez Canal and Indian Ocean, and all that took place on the trip from Plymouth to Melbourne; suffice it to say that it was a most delightful journey full of many interesting incidents.

Our training on ship-board was of a very light nature and consisted mostly in skipping rope and indulging in long walks around the ship's spacious deck and contesting in the ship's sports, at which Shrubb proved himself upon more than one occasion a veritable champion. It was our custom when in port to try and snatch a jog, so to speak. And shall I ever forget what a vast amount of interest our presence created when we had a run in Colombo? The natives enjoyed our running immensely and, upon learning that Shrubb was a great racer, they dropped rickshaws, baskets and all, and a strange sight it was to see the dapper Englishman racing a crowd of half-naked blacks, who kept uttering most peculiar cries.

Upon arriving in Freemantle and Adelaide, the first ports in Australia, in spite of the many precautions we took, it was surprising to see what a great amount of superfluous flesh we had put on and what a peculiar effect in general the long sea voyage had upon us. All this was a serious handicap to our racing.

Arriving at last in Melbourne, we felt highly elated at the completion of our long voyage. But it must be confessed that we felt extremely anxious about our coming race, which was only a few days off. At the wharf to meet us was the committee of the Victorian Association, who escorted us to the city, and on the following Monday we were tendered a banquet by the Melbourne Cricket Club and there officially welcomed to the Colonies by the eminent jurist, Sir John Madden, and other distinguished gentlemen.

Our reception in Melbourne was a most pleasant one. As guests of the Amateur Association we were enthusiastically received everywhere: Banquets, balls, drives from various organizations were tendered us, and in a word, the hospitality and kindness of the Australians seemed boundless. We often remarked to the committee, "You will kill us with such kindnesses," and it really looked like it.

Our first contest, which was held on the grounds of the Melbourne Cricket Club, seemed to us the most difficult one. Scarcely having had time to discard our "sea legs," we found ourselves upon a soft, spongy track with climatic conditions very different from those at home. Anxiously we came upon the track, where we received a deafening ovation from the spectators. For me it seemed a most critical moment as I came to the scratch in the sprint, but feeling confident that my old form would return to me, I screwed my courage up, and after a magnificent race was defeated on the post by Mueller, the Bendigo champion, in 10 3-10 seconds.

Rather disheartened at my initial failure, it was with a source of keen satisfaction and pride that I watched Shrubb's performances in the distance runs, and although the "Horsham wonder" was far from his English form, the easy manner in which he disposed of his competitors

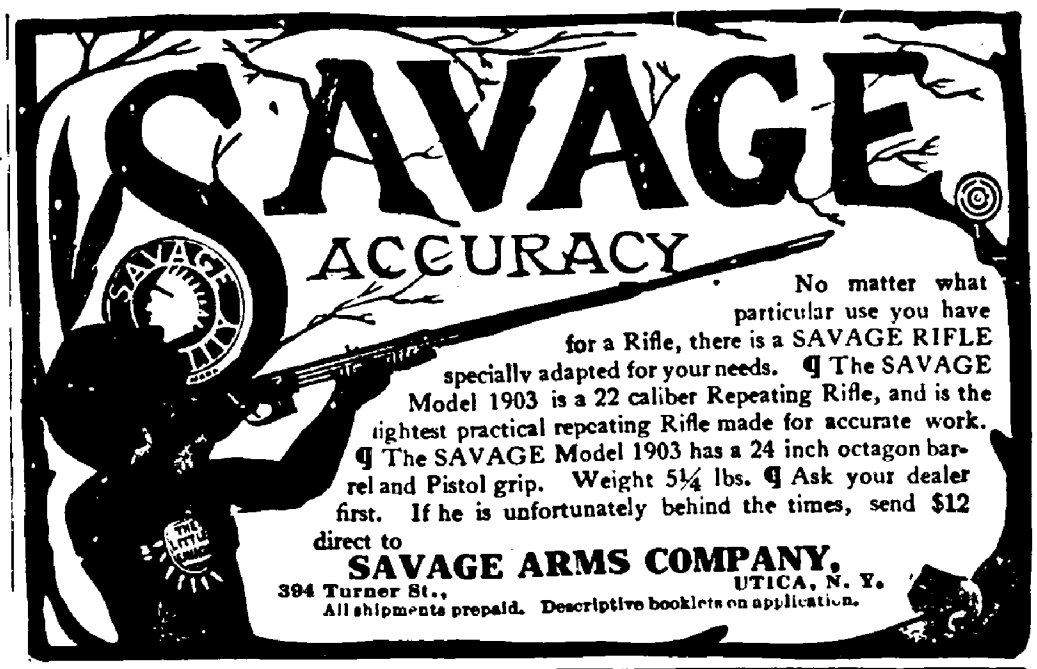
ARAB VILLAGE AND PYRAMID

ARAB PREPARED FOR GAMES OR WAR



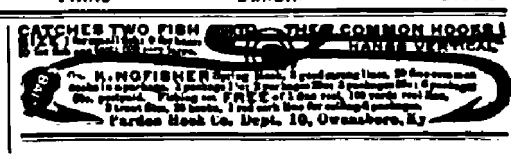
"The Boy is Father to the Man"

When a boy begins shaving he should begin right; that is, with the best shaving soap made. He will avoid the troubles which come from impure soap and shaving will be easy and pleasant if he always uses

Williams' Shaving Soap

To any boy mentioning this paper and sending us the name and address of his father and stating what kind of shaving soap his father uses, we will send, free, a useful little combination pocket tool—a key ring, screw driver, paper cutter and bottle decapper. This offer not good after May 1, 1906.

THE J. B. WILLIAMS COMPANY
DEPT. A, GLASTONBURY, CONN.
LONDON PARIS BERLIN SYDNEY



A Brave Korean

HERE IS a little story of a great deed. It is not a "made up" story, but is true. It comes from far-off Korea.

In a part of that country it is the law that if a son, not of age, commits a crime and succeeds in escaping from the land or evading the officers of the law, his father may be taken and punished in his son's stead.

Last winter it happened that a young man committed the awful crime of murder. The instant he saw what he had done he fled from the country. The officers of the law searched long and diligently, but without success. The young man's escape had been skillfully planned and carried out.

After a time the young man's father was arrested. He was an old man, bowed with years. He had grieved deeply over the loss of his son, but more over his shocking crime. Until his arrest, however, he had not known of the law above mentioned, nor of the awful position in which his son's act had placed him.

The Koreans are very particular regarding enforcing their laws; they aim to have every part of it rigidly satisfied, no matter what the cost, so, strange as it may seem, the old man was brought into court and placed on trial for his son's crime.

The trial was not long. The evidence against the culprit was overwhelming. Bound as they were by the statute, there was but one course open to the officers of the law. Sentence of death was accordingly pronounced upon the father for his son's deed; but in order that the example might have its full moral effect in educating parents on the responsibility of training their children aright, the execution was delayed, and the news that it was to take place circulated over the entire country.

It happened that these tidings came at length to the self-exiled, guilty son. Like men, he had never known of the strange statute by which his father now stood condemned.

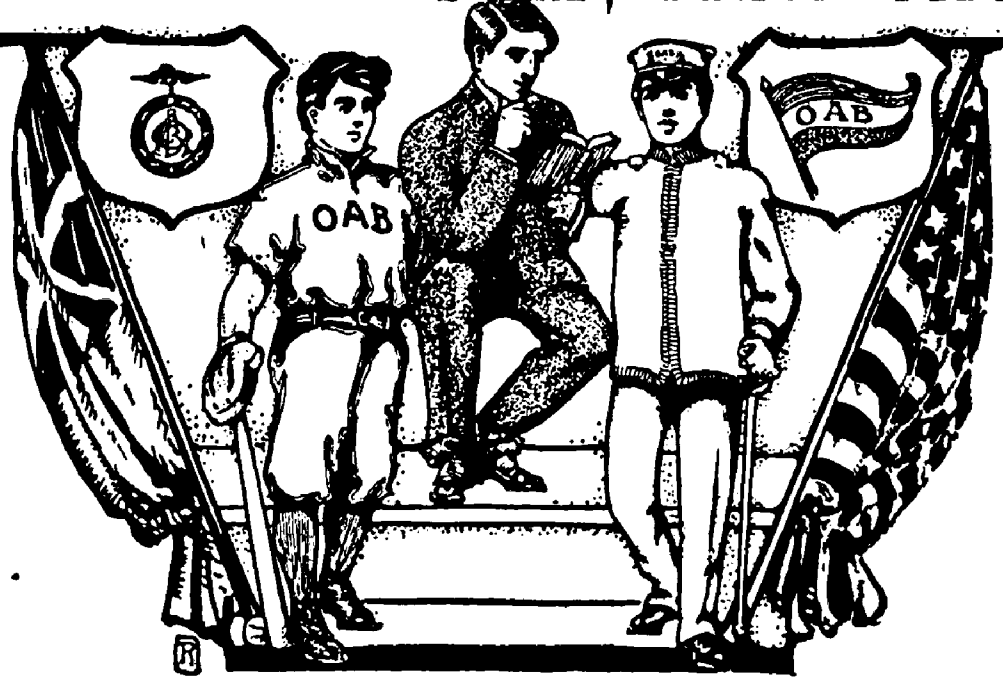
At first the situation was too horrible for him to thoroughly grasp. Conscience had previously driven him almost to desperation, and thousands of his countrymen's spair; but this was maddening. He was in a distant country. Perhaps, already, all was over. Before, the sharpest pangs of remorse had come from the thought that he had brought his parent to disgrace; now, he saw he had brought him to the scaffold. But with this thought the young man's weakness left him. He arose, as from a dream, strong in the strength of a young man's resolve to do the right. He had come to himself. A few moments later he was hastening towards the borders of his own land.

The temptation to lengthen the story is strong, but the end of it all is this: Some days before the time set for the execution of the father the son arrived at home. He instantly gave himself up, confessed his crime, and made known his willingness to suffer. The chains were then taken from the father and fastened to the son.

But the young man's deed reached the governor's ears. It reached also the nation's heart, stirring it to the depths. Rigid as was the law, it must yield to such a deed of self-sacrifice as that; and it did. The day set for his execution, the young man was pardoned and freed.

The Great American Boy Army.

FOR MANLINESS IN MUSCLE, MIND AND MORALS.



New Companies Organized

LONE STAR STATE CO., No. 36, Division of Texas, Winters, Tex. NATIONAL CAPITOL CO., No. 5, Division of Dist. of Columbia, Wash., D. C. OHIOIAN CO., No. 85, Division of Ohio, Dennison, Ohio. KERMIT ROOSEVELT CO., No. 36, Division of Kansas, Clyde, Kans. THE ARTESIA CO., No. 57, Division of Illinois, Potomac, Ill. RISING SUN CO., No. 59, Division of Pennsylvania, Brooklyn, Pa.

Company News

PILOT ROCK COMPANY, No. 17, Ashland, Ore., has been doing good work during January, having taken in three members. It has a membership now of 19, and a library of 57 books. The members are renting a club house at present but intend soon to be in a position to purchase it. Every one of the members are anxious to compete for the special prizes given by us for the largest increase in membership. The Company is much interested in debating. It recently held a debate on the question resolved, that "The coming generation is weaker than the past generation." The negative side won. This company has also been corresponding with other companies to mutual advantage. WATCH OUR SMOKE COMPANY, No. 15, Pueblo, Colo., has 11 members and a library of 60 books, also a silk flag, and baseball and football paraphernalia. It holds its meetings every Monday evening and the greater part of its program consists in studying the early history of the United States. This company will celebrate its first anniversary on or about March 28th, and of course, we shall be glad to know that the celebration was a successful one. WEB FOOT COMPANY, No. 21, Roseburg, Ore., recently gave a banquet to the members and had a splendid time with songs and games. Benj. Eddy has been elected to succeed Ralston Bridges in the Secretary's office. The programs at these meetings consist of talks on current topics, and compositions written by the members on various subjects. Meetings are held usually at the home of the Treasurer. BLUE LAKE COMPANY, No. 45, Onawa, Ia., has recently elected the following officers: Vernon Prichard, Capt.; Wayne Ellis, V. C.; Harold Underhill, Sec.; Raymond Thurston, Treas., and it has appointed Mr. E. I. Sheppard, Principal of the Onawa High School, as Company Counsel. THE SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill., held a McKinley birthday celebration in connection with carnation day recently and short papers were read on the life of our late president and an address was also given by the Company Counsel on the "Relation of Carnation Day and McKinley's Birthday." The meeting was largely attended. The Company Counsel has also presented to the company two large pictures, one of ex-President McKinley and the other of the boy Christ. This company is doing good work in the way of bringing about a more brotherly feeling between companies in various states, and we are glad that this should be so. There also ought to exist a fraternal feeling among all the companies and members of the Order. A most enjoyable Valentine Social was held at the home of one of the members on February 14th in the nature of a masque party. Some of the members were dressed to represent jockeys, wolves, pages, and in other fanciful costumes. They had a jolly time and sat down to a first-class banquet. The decorations of the hall were red and pink hearts, and each one present received a small red heart as a souvenir. Washington and Lincoln's birthday was celebrated by the company on the evening of February 21st. This company has instituted a "question box" in which members who desire information write out their questions, place them in the box, and at the next meeting the Company Counsel, or other person answers them. We should think that this would be the means of the members acquiring valuable information. THE BOYS' ATHLETIC AND DEBATING COMPANY, No. 23, Oregon City, Ore., have the following officers: Robert Ward, Capt.; Howard Zinzer, V. C.; Carl Schram, Sec.; Orval Hunt, Treas. This company has been holding debates and a mock trial. The members heretofore met every two weeks, but are arranging to hold meetings once a week. CLAN ALPINE COMPANY, No. 19, Boulder, Colo., has the following officers: Elbert E. Bidwell, Capt.; Lester B. Tilton, V. C.; Chauncey R. Parsons, Sec.; Herman Krenger, Treas.; Arthur F. Johnson, Lib. The company holds its meetings every Tuesday evening at the members' homes, but it expects to have a club room of its own very soon. It has started a library and has already 11 volumes. The dues are 20 cents a month. The company has six members, and expects to receive four more during this month. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its fortieth company report, and there seems to be no lack of enthusiasm among the members. Five regular meetings were held during January, at which entertainment of a high order was provided. It held a Salmagundi party in the club room on January 30th, to which members and friends were invited and a jolly evening was spent. This company intends to largely increase its membership during the current year, and will also endeavor to make American Boy Day in Brooklyn a "howling success." We find that the total number of the company's meetings held up to date is 137. We are promised some pictures of the company soon. J. FRANK HANLY COMPANY, No. 27, Westfield, Ind., is getting along nicely. Stirring and interesting debates are being held at the meetings, and the members had a most enjoyable time on February 22nd with a special program. We are glad that this company intends to celebrate American Boy Day, and when the time draws near we will assist them, and all other companies, in getting up their program if members of the companies will write to us as to the date and the plans they propose to carry out. MINNESOTA SKIRMISHERS COMPANY, No. 22, St. Paul, Minn., has started out in good shape. It has its charter framed and is working hard to get new subscribers and more members for the company. The members are interested in military matters and have bought a "Drilling Book of Army Regulations." We hope to receive good reports of this company's continued progress. LONE STAR COMPANY, No. 33, Hamilton, Texas, recently elected the following officers: Wright Felt, Capt.; Bernard Miller, V. C.; Clay Lecrest, Sec.; Lee Lecrest, Asst. Sec.; Henry Lynch, Treas. The company is in funds to the extent of $7.28. We are promised a picture of the members at an early date. JOHN EVANS COMPANY, No. 13, Evans, Colo., holds its meetings each Friday evening in the club room and has started a library with ten books. It has also its charter framed and $3.00 in the treasury. A picture of the company members is promised us in the near future. THE SHACKAMAXON COMPANY, No. 25, Tunkhannock, Pa., has held its election of officers with the following result: Lloyd Burgess, Capt.; Bruce Leighton, Sec.; Chase Herrick, Treas. Last summer the members spent two weeks camping on the Susquehanna. They had two G. A. R. tents, one for eating, the other for sleeping, and cooked their meals on a stove consisting of a piece of sheet-iron. They were also equipped with hammocks and camp chairs, and spent their time reading, swimming, fishing and playing ball. Each member of the company paid $1.00 a week towards the expense. They had a most enjoyable time and were frequently visited by both their boy and girl friends. This Company has a gymnasium apparatus of 12 pairs of dumb bells, 10 pairs of Indian clubs, boxing gloves, flying rings, punching bag and trapeze. The Company Counsel gave a Valentine party on Feb. 14th which was greatly enjoyed. The Company baseball team won 14 games of 17 which they played last season. We found much difficulty in carrying out our ideas regarding the free circulating libraries, and have discontinued sending them in the meantime. THE RIFLE RANGERS COMPANY, No. 75, Smithville, O., meets at the home of the librarian. It has the following officers: Frank E. Miller, Capt.; Leland Miller, V. C.; John McKee, Sec.; Chas. Sanders, Treas. It has a library of 26 books, a U. S. flag and a banner with the name of the Company printed on it. Its colors are red and blue. The members intend to become agents for THE AMERICAN BOY in order to obtain money for the treasury. MOUNTAIN VIEW COMPANY, No. 17, Delta, Colo., sends its report on a nicely gotten up letter head containing views of some of the wonders of Colorado. It has its charter framed and thirteen books in its library. It held a literary program in February and had a first class meeting. The members are arranging to hold a checker tournament during May, and have also arranged to hold field days during the summer months. It hopes to have a baseball team which shall defeat all comers. The Company intend to celebrate American Boy Day this year either on the 4th or fifth of July. MIDWAY CITY CO. No. 19, Kearney, Neb., held its election of officers in February which resulted as follows: Frank Wallace, Capt.; Willie Spurgin, V. C.; John Freeman, Sec.; Kimbal Failing, Treas.; Donald Gregg, Lib. This Company has held several most successful meetings. It has used some of its money to purchase books, baseball goods and other things. The members intend to raise the dues so as to have money to pay the expenses of a camping trip during the coming summer. The meetings are held at the members' homes, but it intends to have a permanent club room of its own at no distant date. THE WHITEHALL ATHLETIC COMPANY, No. 56, Allenwood, Pa., holds its meetings every Wednesday evening, has nine members, and recently elected the following officers: Lester D. Sedam, Capt.; Glennie Buck, Lieut.; S. T. Sedam, Sec'y.; Edwin J. Sage, Asst. Sec'y.; Edward Best, Treas.; Charles B. Best, Libn. It holds its meetings at the homes of the members. It has an O. A. B. pennant and has recently purchased a set of boxing gloves, striking bag and pictures. It has $16.70 in the treasury, and recently held a debate at which the following question was discussed: Resolved, That the steamboat is more useful to commerce than the steam engine. The dues are 5 cents a month. ROGUE REX'S VOL. COMPANY, No. 75, Rockford, Mich., is getting along nicely with nine members, and three more who have promised to come in. It has framed its charter, and has a nice library of 48 books in addition to many papers and magazines. It has also 61 cents in its treasury. The officers are: Ortho Parks, Capt.; Harry Gaines, V. C.; Boyd M. Jones, Sec'y. The members are fortunate in having as C. C. Mr. G. E. Van Houten, the principal of the Rockford High School, who is much interested in the boys. Meetings are held every Wednesday evening at the homes of the members. The company has decided to hold an entertainment in the near future. We trust that this company will begin planning to hold an American Boy Day celebration this year, and will let us know its plans as early as they can. MOVILLE HAWKEYE COMPANY, No. 59, Moville, Ia., is planning to give a fine entertainment in the near future. We would suggest that a good program for February would be along the line of the Washington and Lincoln program given in the company letter for February. TIMOTHY MURPHY COMPANY, No. 1, Cobleskill, N. Y., reports that it is doing nicely. Its meetings are held every Friday evening at the homes of the members. Last season its baseball team played 12 games, losing only two of them. The team has gray uniforms with the letters O. A. B. At its election of officers recently, the following was the result: David Beard, Capt.; Stanley Sommers, V. C.; Horace Mann, Sec'y. and Treas.; Celistino Cabanjas, Libn. The members are talking about organizing a battalion with military drills. The company's report is sent to us on a nicely gotten up letter head, bearing the company name, the division, the object of the organization, and the names of the various officers. We are always glad to have a report from this, one of the oldest companies in the Order.

The Order of The American Boy

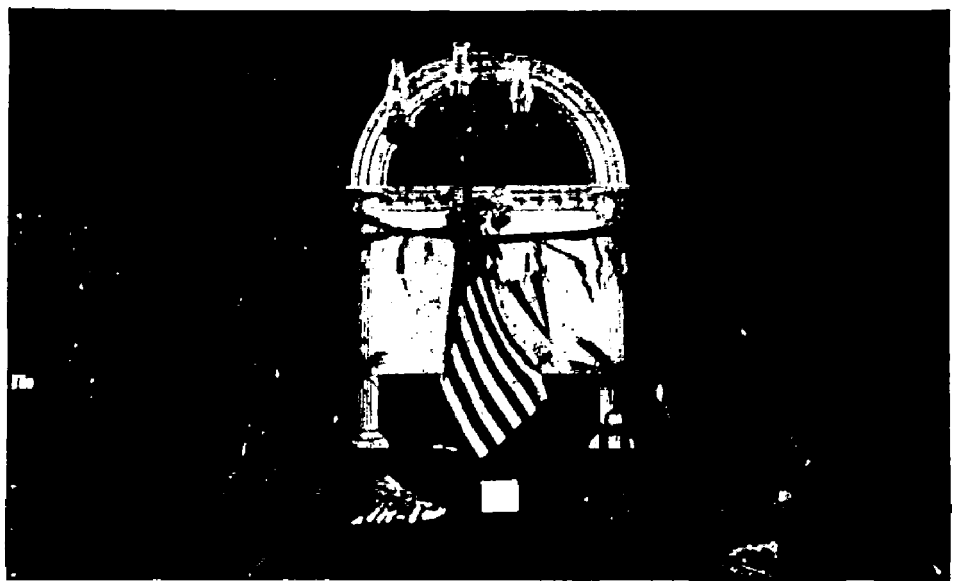
A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

Under the Auspices of "The American Boy"

Object:—*The* Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.



A CHURCH STAGE DECORATED FOR THE THANKSGIVING EXERCISES OF THE J. FRANK HANLEY CO. NO. 27, O. A. B., AT WESTFIELD, IND. CAPTAIN, PAUL P. ROYSTER

The American Boy Legion of Honor (Open to all Boys Everywhere)

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school, ending on a date since September 1st, 1905, have received the highest average term grade in their classes in all studies and (3) to boys of ten years of age or over whose record for school atendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for schol record unless their letters are accompanied by corroborative statements from their teachers who know the facts.

LEGION OF HONOR ROLL.

Note: S. R. means school record; H. means heroism.

A letter from Geo. E. Hungerford, Manhattan, Kansas, acknowledges receipt of the Legion of Honor Badge which was presented to him by the Superintendent of the city schools, in behalf of THE AMERICAN BOY. He writes: "I appreciate THE AMERICAN BOY and believe that the stories in it are the best that can be secured. I take an interest in all the various departments, but particularly the Amateur Journalism Department. I have worked in a printing office for over a year, and so know something about printing. I am fourteen years old and have been going to school since I was seven."

Uncle Sam's Weather Map

THE WEATHER MAP COMPLETED

EVERYONE knows the weather map, and those who depend upon it for daily guidance in their business would find themselves at a serious loss without it. But how few are aware that this little sheet is gotten together and printed in exactly the same way as one of the great dailies, hundreds of correspondents being required for the gathering of the news that is crystallized into one page, the items having to be telegraphed in time to enable the printer and stereotyper to have the form ready for press at exactly the time necessary to catch the mail train, and all the exciting concomitants of the work of "putting the paper to bed" being present at the final stage.

Every morning at eight o'clock, Washington having by that time digested the reports of the weather experts from all over the country, the wire is kept free for the service of the Weather Bureau. All the employes at the various local weather bureaus are at that time on the alert for the news from Washington. The information is flashed along the wire in circuits, each office on that circuit reading it for its own map. Every man in the bureau, from the local forecaster down to the printer's devil, must be an expert in the code, for the messages all come in code form. Here is a sample message:

"York Gemsbok Melbourne Imbue Unto Kicking Chignon Chip."

The message is written on "flimsy" by the telegraph operator who receives it. Flimsy is the feather weight paper used in newspaper offices for typewriting manifold copies. One copy of the message goes to the map maker, one to the printer, one to the local forecaster, etc., and immediately each man is busy with his own particular work, for not a moment is to be lost if the mail train is to be caught with the papers.

Each man being familiar with the code, it is easy to see that the words quoted above mean that in New York the barometer is 30.44, temperature 18, wind 5, weather cloudy, maximum temperature 18, velocity of wind six miles an hour, lowest temperature in morning 10, registered two below yesterday, barometer fell .06 during the last two hours, strata of cumulus clouds moving from S. W., a fine haze in the air. All that told in the two lines recorded above, and every man in the office aware of it within a minute of its reception.

With the York Gemsbok, etc., message before him, the printer is at work correcting his table for the daily paper, while at his elbow the man who makes the chalk plate from which the stereotype plate is made for the map is hard at it digging little holes in the bed of chalk and tracing lines over it to show the temperature all over the country. If the man who makes the chalk plate waited for the map maker to give him a finished map the little paper would never get to press on time. Each man must keep up with the other and be only a few minutes behind the telegrapher, for the messages are coming in from eight o'clock to half past nine, and at ten o'clock the chalk plate and the various tables must be ready for the stereotyper.

There is usually time for the map maker to compare his work with the chalk plate, but more frequently the chalk plate maker has to be trusted to do his work correctly, for at eleven o'clock the hundreds of copies that each weather bureau sends out must be on the train. The tension becomes greater as the time approaches for the locking up of the little form. The telegraph operator cannot record the messages fast enough to suit him. All hands hurry their work to be even with each other for the grand finale. The last tick has sounded from the wire, the last chalk line or circle has been made in the chalk plate, the final touch given to the typographical matter. The form is hastily locked up and rushed to the stereotyper. This individual can manage the work without assistance, for it is a very tiny form. The metal is melted over a small gas jet and ladled into the case in which the form is with a ladle little larger than an ordinary table spoon. In a few minutes the metal is ready for the press. Everything so far is so similar to the work of a great newspaper office that the temptation is strong to say something about the "big presses beginning to revolve with a grinding crash as the mighty machinery gathers the paper to its heart and throws it off a finished daily." But the little press on which Uncle Sam's little newspaper is printed allows no such use of adjectives. It is a press worked by power, it is true, and not one that is "kicked," but it is not of impressive size. The same man who sets the type runs the press. When the paper has gone to press he becomes a printer again. Occasionally he does the stereotyping, too. Sometimes it devolves upon the local forecaster himself to do the stereotyping. The paper must be got to press on time.

All sorts and conditions of people would be inconvenienced if the weather map failed to arrive on time. With the information supplied free by the weather bureau it is possible for the planter to protect produce of all kinds from freezing, for the householder to watch his water pipes, for railroads to regulate the size and movement of their freight trains, ice men to prepare for the harvesting and the general public to make plans for business or pleasure. The warnings of frost and freezing weather are also of immense value, particularly to the fruit, sugar, tobacco, cranberry and market gardening interests. The early truck raising industry, so extensively carried on in the regions bordering on the Gulf and south Atlantic coasts and in Florida and which has increased so greatly in the last few years, is largely dependent for its success on the information supplied by the weather bureau, and the growers of oranges and other fruits in Florida and California have invested large sums in tents, screens, heating, smudging and irrigating apparatus for the protection of their groves and orchards, which they put into use when notified by the weather map of the expected occurrence of injuriously low temperatures. Shippers of perishable produce and goods liable to injury by heat or cold, are guided largely by the weather map in making shipments and directing their movements while on the road, and large dealers in produce, by careful attention to the daily reports, inform themselves as to the regions where conditions most favorable for certain crops have occurred and are thus enabled to judge of the probable supply and to make purchases to advantage. The importance of the little sheet to those who receive it daily can scarcely be exaggerated, and knowing this it is not to be wondered at that the force in the weather bureau strains every nerve daily to get it out on time.

IF THE MAN WHO MAKES THE CHALK PLATE WAITED FOR THE MAP MAKER TO GIVE HIM A FINISHED MAP THE LITTLE PAPER WOULD NEVER GET TO PRESS ON TIME

FROM THE CHALK PLATE A MATRIX IS MADE

THE SAME MAN WHO SETS THE TYPE RUNS THE PRESS

WITH THE YORK-GEMSBOK MESSAGE BEFORE HIM THE PRINTER IS AT WORK CORRECTING HIS TABLE FOR THE DAILY PAPERS

THE MESSAGE IS WRITTEN ON "FLIMSY" BY THE TELEGRAPH OPERATOR WHO RECEIVES IT

SOMETIMES IT DEVOLVES UPON THE LOCAL FORECASTER HIMSELF TO DO THE STEREOTYPING

HARD AT IT DIGGING LITTLE HOLES IN THE BED OF CHALK

OUT TO-DAY

SPALDING'S OFFICIAL BASE BALL GUIDE

Edited by Henry Chadwick, "Father of Base Ball."

The largest Base Ball Guide ever issued, containing over 800 pages. The contents include the

New Playing Rules

National and American League statistics, with a critical and analytical review of the season's work in both leagues; all the minor league averages, with a special review of the season in each organization; a spec al report f the world's championship series illustrated, with a recor and account of all previous world's championship events from 1886 to 1905; a chapter on the thirty odd yea s of professional Base Ball history, compiled by Mr. Chadwick, that is invaluable as a work of reference; a special chapter of current comment, by the editor; a chapter on the Rise and Progress of Professional Base Ball; a record of unusual features of the National and American Leagues' season of 1906; scores of college games; directions for finding percentages; rules for a simple way for laying off a ball field; schedules of the National and American Leagues and minor leagues and a great deal of other valuable information.

The illustrations surpass anything ever before offered in a Base Ball Guide and embrace the portraits of over 2,000 players, including all the prominent professional and college teams.

BOYS

Send a stamp and receive instructions as to how to organize a Company of the Order of The American Boy

IF YOU SHOULD take a trip to Mexico and happen to stop where there are no Americans or American innovations, you would wonder why there was no bus or conveyance at the station. But if you will be patient and remain at the station long enough, you will presently hear something lumbering along on the hard cobble-stone pavement, and presently there will loom up in the distance a stage coach, and out of it half a dozen or more Mexican boys—peons in sandals and sombreros, or Indians in gay, soiled blankets, will alight. Upon seeing you they will approach with as much alacrity as does an American newsboy when he has scented a customer, and will begin to jabber something in unintelligible Spanish.

You haven't time to consult the Spanish dictionary, which contains a lot of the most commonly used phrases that, if you are gifted with foresight, you have in your pocket. Besides you remember a few of those phrases that you memorized just after crossing the Rio Grande, so you use these volubly; but to no avail, for although the Mexican boy is too polite to laugh in your face at the peculiar and unmistakably English accent you give your Spanish, he shakes his head positively and says, "Me no sabe." At the same time half a dozen boys rush at your valise, which, in your excitement, you have unwisely deposited on the ground nearby. Just as you are angrily protesting against these incomprehensible proceedings, and trying to regain possession of your baggage, the station master approaches, and, seeing your predicament, and glad to meet anyone—even an entire stranger—if from the United States, for he is an American, says, "Those are only cargadores."

"Only what?" you ask anxiously.

"Just cargadores—boys who run errands, carry baggage, do anything to earn an honest penny," he replied. "And as there is nothing but that huge, lumbering coach, and as a ride in it to the hotel, if it does not break your bones, may jolt your anatomy into pieces, so it might be a wise idea to get one of those cargadoes to carry your baggage and show you to the hotel. It is only a few blocks away, and you will be out only a pleasant walk, and a few centavos.

So knowing not what else to do, you follow his advice, and hire the most prepossessing of the cargadores to lead you to the hotel with your baggage.

"But what about your trunk?" and turning you observe the station master examining the check upon your trunk.

"I do not know how to get it to the hotel," you explain as you return and hand him the check.

"Why, that is easily enough done," he answers. Then he calls, "Here, Pedro, come and take the senor's trunk to the hotel," and—would you believe it?—in another moment the largest of the saffron-faced boys has approached, untied the rope which secured the trunk, and in a twinkling, with the agent's assistance, has re-tied the rope in such a manner that the ends dangle about a yard each. Then, with a dexterous move and the agent's help, he has the trunk upon his back, and grins while the agent ties the rope around his neck.

You wonder if he can move under such a load, and wonder more as presently you see him not staggering as an American boy of his size would do, but walking along with apparent ease. As he moves forward you observe and admire the muscled arms and the stout, though stubby body of this unique dray. The peon, or Mexican Indian boy, is not nearly so large as the American boy of the same age, nor is the former so tall when grown.

The cargador, a very good definition of which is carry-all, does not pant nor perspire when he reaches the hotel and deposits your baggage in the room the landlord has assigned you. Neither does he forget to show you all of his dirty teeth when you hand over a few centavos more than he asked, and in musical Spanish say, "Gracios, senor," or senorita, or senora as the case may be. But the bestowal of the extra centavos before the other cargadores and servants at the hotel is a bad policy, as you soon learn; for all Mexicans seem to entertain the opinion that the Americano is invariably rich; and the peon is an inveterate beggar. Seeing this exhibition of your generosity, if not your wealth, the other servants will not, if possible, wait upon you without being previously tipped.

And not only do Mexican boy cargadores transport trunks and baggage of every description, but all kinds of transportable commodities from a load of hay or alfalfa to a small hand-bag. They are accustomed to bear heavy burdens from early childhood, and as a result their shoulders that have a pitiful stoop, their gnarled muscles, and knotted veins proclaim their trade and arouse the pity of the most casual observer. It is, perhaps, his fine intuitive sense of the laws of balance that enables the cargador to transport such burdens as he undertakes to carry. Usually a very heavy trunk is balanced on a pad on the cargador's shoulders and is secured around his neck by a rope that passes around his head. These "beasts of burden" are not to be censured for sometimes groaning and sweating under their loads.

It is amusing to see some of the burdens the cargador attempts to carry, for he is not only a dray, a cart, but a water-carrier, a charcoal-bringer, a milk-cart or a nurse, as the occasion demands.

Besides boy cargadores there are burro cargadores. These latter are more numerous, and even more queer looking than the former. The burro is the milk-cart, the furniture dray, the lumber cart when the boy cargador is employed. He comes from distant mines laden with ore from the sandy plateaus, and he brings fruit and farm products from distant haciendas. Plodding through the narrow streets he looks very clumsy with the tin cans full of milk strapped to his shaggy sides. These cans are deposited in wooden boxes that are secured by stout thongs to the burro. On top of the burro's sharp back an ugly peon in a red blanket and worn sandals seats himself and dispenses milk through the city. Packed in crates that look like bird cages and are suspended across his sharp backbone, are the thin Mexican bricks that clink out a merry tune of their own as the burro passes over the loose stones that cover the byways, leading to the unfinished buildings that are in course of construction. The rider reaches down into the crates, and taking out the bricks, hands them over the wall. One diminutive donkey who looks all hair on top of a stack of bones will drag two heavy beams to be used in the frame-work of the structure.

No peon seems to consider any load too heavy for the scrawny beast that, in his eyes, represents an earthly fortune, and he is so cruel to this faithful animal who serves him that the foreigner's pity is often evoked.

The burro and the cargodor are each not only early inured to poverty, but to hardships as well. Each is half fed and each has no roof to cover him, save the kindly sky, the burro sleeping on the hard ground, the cargador on his soiled, worn-out blanket. But the cargador's breakfast of pumpkin seed or tortillas, with a banana or fig now and then, is satisfying. He is contented and knows that there is no better fate for him—in Mexico.

Sliding to Bases

Baseball players do not give enough study to the art of sliding to bases, says the New York Sun. It quotes Clark Griffith, manager of the New York Americans as saying:

They save themselves too much. I insist on my players hitting the dirt at every possible chance. There could be greater improvement in this department if more players would try to acquire the twist slide.

Feet first is the only way. There are two ways of making the twist slide feet first. One is by crossing the left leg over the right, which throws the body to the right, and the other by crossing the right leg over the left, throwing the body to the left. The principle is the same as a boy guiding a sled with his legs. The body is guided by the legs. Whether the body should be twisted to the right or left depends on where the baseman is. If he is taking the throw in front of the bag the idea is to throw the body outward and away from him, and if he is playing back the body is drawn toward the infield and away from him. The reasons are apparent. The chances are that the baseman will miss the body, and he has only the leg or foot to touch. That bothers him more than when he can touch the body.

The cases I have just mentioned refer to sliding into second base. The third base slide is somewhat different. When a left-handed hitter is up, or a fast right-hander, third basemen can't play deep, and they are playing in on the grass a good deal of their time. To head off a ball they have to back up and yet watch the catcher. The head foremost slide is the best for third base, but for no other base. This is a different play altogether from the one at second base. The body is thrown out toward the outfield to elude the third baseman's reach, while the outstretched arm touches the bag. If the third baseman has had to back up he can't get you unless on the run, and that is a small target to strike for. When the throw is coming from the catcher the runner never should slide in front of the third bag.

As a rule shortstops have the better chance to get a man at second base, as the play is in front of them oftener than it is with the second baseman, who frequently is moving in the same direction as the runner. That is a situation that depends on what's doing, on what the signals are, who the batter is and what understanding there is between the pitcher, catcher and fielder. Pitchers pitch a good deal on what's doing on the bases.

I believe there are times when it is a good thing to slide for first base. No time is gained by doing it, but a fast man like Harry Bay often fools the umpire by doing it. If it is a dry day and he hits the ground seven or eight feet in front of the bag he raises a cloud of dust which makes it all the harder for an umpire to see whether he beat the throw or not. I've seen many a man steal a base hit by sliding to first.

The slide home calls for a feet first slide and the body twist. The runner can't see the ball coming in and doesn't know where it is, but he keeps his eye on the catcher. If the catcher waits behind the plate for the throw it is up to the base runner to slide in front of the plate; if the catcher steps up forward to take the throw-in then the runner slides behind the plate. Anyway, he ought to watch the catcher and be guided by the latter's movements. There are catchers clever enough to give no indication as to where the ball is, and thus deceive the runner.

The player who always has to be told by the coacher where the ball is makes a poor base runner. The coacher can't help a runner much at second base, and if the runner buries his hand when he slides to second and gets caught through not watching the ball that is his fault, not the coacher's. I think the best slider I ever saw was Bill Lange, except possibly Dave Fultz. Dahlen, too, is a first-class slider—one of the best. So is Elberfeld, also Frank Chance. Heidrick was a great slider. Lange stole twice as many bases in one season—'96 I think it was—as the best base runners steal these days.

Capt. Mark Casto—Hero

Captain Mark Casto, skipper of the little fishing schooner "Alberta," with his crew risked his life and boat in a successful effort to save the lives of the passengers and crew on the wrecked Clyde line steamer "Cherokee" which had gone ashore near Atlantic City, N. J., in January, in a fearful storm. Casto and his men made two trips out to the wreck in a frightful sea, and brought off all the passengers and crew after the professional lifesavers had failed to effect a rescue.

CAPT. MARK CASTO

The trustees of the Hero Fund established by Andrew Carnegie investigated this case of heroism and have awarded a gold medal and $1,500 to Casto to pay off the mortgage on his little home; $5,000 to educate his son; and to each of Casto's crew a silver medal and $500.

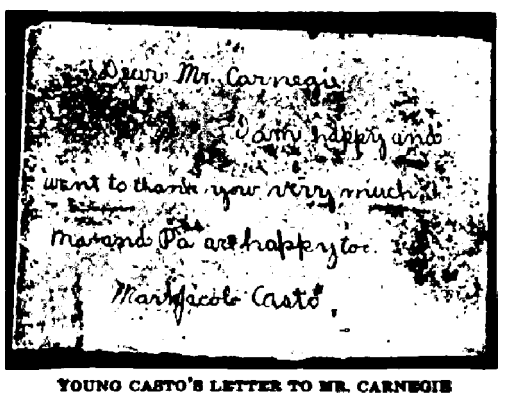
This was said to be one of the best cases of genuine heroism that the trustees had investigated since the establishment of the fund. Casto modestly refused any substantial reward but said he would like to have his boy educated and told of the mortgage on his home.

This young son of Capt. Mark Casto, the Atlantic City hero of the "Cherokee" wreck, will be educated by Andrew Carnegie as a part

MARK CASTO, JR.

recognition of the heroism of his father. The trustees of the Carnegie Fund for Heroes have voted $5,000 after investigating the case, to be invested for his benefit and the income of this will be used to educate the boy.

When young Mark Casto, son of the hero of the wrecked S. S. "Cherokee" heard that the trustees of the Carnegie Fund for Heroes had appropriated $5,000 to pay for his education, as a partial recognition of his father's bravery, he immediately sat down and wrote a letter to Mr. Carnegie, without even consulting his parents. This is a copy of the letter:



YOUNG CASTO'S LETTER TO MR. CARNEGIE

BIRD MIGRATION

BY CRAIG S. THOMS

WE SHALL best be able to understand the migrations of birds if we separate them into four classes: First, those that remain with us all the year; second, those that winter with us; third, those that summer with us; and fourth, those that neither summer nor winter with us, but pass northward in the spring and southward in the autumn.

Of the first class—those which remain during the whole year—the bluejay is doubtless the most familiar example. Unless we feed them, however, they do not frequent the vicinity of our homes much in the winter, but seek the shelter of timber; yet, where food is obtainable, they are thievish enough to lay claim to it, whether we mean it for them or not. The black-capped chickadees are more frequently seen in winter than in summer. They find good shelter in some nearby woodpecker's nest, while in the summer they retire to the remoter woods to rear their young. The downy and hairy woodpeckers chisel new homes for themselves in some convenient limb, and make their winter meals from insect eggs and larvae found in bark crevices and dead limbs.

Perhaps the most familiar bird of this class found in the open country is the shore lark. It looks not unlike a sparrow, but has less russet in its plumage and runs gracefully. During the winter these birds are in every barn yard, around straw stacks, and they frequently feed in the wagon tracks of public highways where the grain has sifted from the wagon boxes of the farmers. In summer they retire to open pastures and meadows to build their nests.

The American goldfinch seems to leave us in the autumn, and to come new and fresh from the southland in the late spring; but these beautiful birds, with their soft notes and gentle ways, are the very same at which we have been looking all winter as they fed upon wild sunflower seeds. Just as the male bobolinks change their proud black and white for the tawny and blackish of the female before going south in the autumn, so the male goldfinches change their bright gold and black for the dusky olive of their mates; but they remain with us all winter.

Of the second class—those that spend the winter with us—junco, or the black snowbird, is perhaps the best known, at least in the Middle West. These birds spend the summer in the British Provinces, in Alaska, and on high mountain plateaus. During the winter they are common in our gardens and shrubbery, and may be easily recognized by their whitish bill, slate-colored plumage, and white side tail feathers.

The tree sparrows also come to us in the autumn, and return north again in the spring. A black spot in the middle of their plain, dull-white breasts, helps to identify them. In early March they are seen in large flocks, and their chorus chippering—it can hardly be called singing—is very pleasant to the ear. The males seem to be tuning their lyres in anticipation of the mating season. This bird nests in high altitudes, or far north even to the Arctic coast.

Another winter visitant, somber-colored, almost silent, and the impersonation of diligence, is the brown creeper One is most apt to find these birds in the untamed woods, where they search all the trees, even to the Gulf coast, though their young are reared, except in high altitudes, from Minnesota and Maine northward.

To the third class, of course, belong the birds that we know the best; they come in the spring and depart in the autumn. Of these, the first to arrive are the bluebirds and robins, which are closely followed by the meadow-larks and blackbirds. All four make their winter home in the Southern states. The brown thrasher, which arrives just before our orchards are white and fragrant with blossoms, also winters in the Southern states; but the catbird, kingbird and wood thrush, which come nearly at the same time, push farther south and make their home in the West Indies Mexico, and Central America; while the rose-breasted grosbeak and scarlet tanager continue their autumn migrations until South America is reached.

In the spring, most of our summer residents seem to arrive from the South singly; we see a meadowlark on a roadside post, or a robin on the lawn; a single oriole sings from a tree in our yard, a single wood thrush from some shady ravine, and a single brown thrasher from the hedgerow. Some of these, noticeably the meadowlarks and robins, we have seen gather in large, though scattered flocks in the autumn; and from this fact we knew that they were gathering to make their journey southward. In similar flocks they doubtless migrate northward in the spring, scattering when they arrive in that latitude where the summer is to be spent. The crows gather in flocks during the winter, and scatter over the country in the nesting season. The veery thrushes, which nest in our northern tier of states, often take possession of a town for a single day on their way thither. In southern South Dakota I have seen them in every yard, upon every fence, hopping upon every lawn. In the streets they could be counted by dozens. Likewise, the olive-backed thrushes, which nest north of the Canadian line, I have seen in central Iowa by scores and fifties. They had dropped down out of the night into a patch of open underbrush to rest and feed. The next day they were gone. The kinglets also, while passing to their northern summer home, do not go singly They are scattered freely through the trees, and one of them is perhaps seldom out of anothers' hearing.

Doubtless all these birds seem to arrive singly in their summer homes, as do the meadowlarks and robins with us though many are together during their migrations. The red-winged blackbirds arrive in flocks from the South, and remain together for some time after their arrival; but, unlike the other birds mentioned, they are semi-gregarious during their nesting season.

The birds of the fourth class, those that spend neither winter nor summer with us, we see only as they pass northward in the spring and southward in the autumn. To this class belong most of the warblers, many of which nest as far north as Alaska, and winter as far south as Brazil; several of the largest and most beautiful sparrows, such as the fox, the hooded crown, and the white-throated; the veery and olive-backed thrushes, and many others.

Some birds that nested in the Middle West before it was so thickly settled, must also be placed in the fourth class such are cranes, geese, and many of the ducks and snipes. The golden plovers summer in northern North America and winter in southern South America.

Most birds migrate during the night and rest and feed during the day. To this rule, however, there are certain exceptions. Dr. F. H. Knowlton of the United States National Museum, says: "Only a comparatively few species, such as ducks, cranes, certain large hawks swallows, swifts and nightingales, migrate during the daytime, and these, it will be observed, are either rapacious birds or mainly those that enjoy such power of rapid flight as to be relatively safe from capture."

Bird flights are preferably upon still, clear nights, and are thought at times to reach an altitude of at least three miles. If a storm is raging, the birds cannot hear each other's calls, and, becoming confused and flying low, often perish by dashing themselves against monuments, light-houses, telegraph poles and wires and even the sides of buildings. It is stated upon the best authority that "Over 1,500 birds have been found dead at the base of the Bartholdi statue in New York harbor in a single morning, and 230 birds of one species—black-poll warblers—were killed in a single night by the Fire Island light. The Washington Monument, though not illuminated at night, causes the death of hundreds of birds annually." I have seen the Lapland longspurs wounded or killed in large numbers by dashing themselves against telephone wires and the sides of buildings during a stormy night of snow and wind.

Looking through a telescope focused on the moon during migrations, the observer sees many birds cross the moon's disc. In this way the direction of flight is noted, their height calculated, and often even the species recognized.

The multitude of feathered migrants that fill the air at such times may be discovered, at least in part, by counting the calls heard as the birds pass.

I stood one evening in early September on the shore of Pickerel Lake, in South Dakota, and watched the passing of Franklin's rosy gulls. They flew southward in great streams. When one stream had passed, and what seemed a few belated stragglers, were hurrying forward, another stream would appear in the distance, then another, and another. For half an hour I watched them, and wondered if there was to be no end. A year later, and within a few days of the former date, I witnessed the same beautiful sight a second time. So regular are seasonal conditions, so constant also the habits of most birds, that one who observes dates can tell within a few days when any bird will appear.

A sudden drop of temperature during spring migrations will often cause birds which otherwise would pass on, to remain about for days. I have known the black terns to even linger for weeks as though settled for the summer. A pleasant autumn also will retard the fall migrations of many of the feathered folk especially those that come to us early in the spring, and do not winter far south.

Nationality Didn't Count

A mother went into a shoe store to buy a pair of shoes for her little son, who accompanied her. A clerk came briskly forward, and learning that shoes were wanted for the boy looked at him intently for a moment. "French kid?" he said.

"'Tis none of your business whether he do be French or Irish," flashed the mother; "I want a pair of shoes fur 'im."

As Long as He Can Earn a Dollar

Fred E. Dace, Rushville, Ill., says: "I have read THE AMERICAN BOY for four years and will not cease to take it as long as I can earn a dollar." Fred is sixteen years old and a junior in the Rushville High School. He is particularly interested in electricity, and has a miniature electric light plant, a water motor which works excellently, an induction coil and closed circuit battery, and a one-half horse power steam engine.

THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November number. No. I of the Series was Ulysses Simpson Grant; No. II, David G. Farragut; No. III, Benjamin Franklin; No. IV, Abraham Lincoln; No. V, John Adams.

No. VI--Thomas Jefferson

THE HISTORY of nations is largely made up of the life histories of men and women. That is, perhaps, more true of our beloved America than of any other country. As we think of the Revolutionary period, there arises before our mind's eye the names of Washington, Hancock, Franklin, Lee, Adams and many others. When we think of the sad period of the Civil War, we instinctively pronounce the names of Lincoln, Grant, Sherman, Lee and those who were the leaders among their fellows. It is, therefore, of the greatest importance that American boys, who will soon occupy the places of power and influence, should study the lives of those men whom Providence had ready when occasion called.

Of all the men prominent in the founding of our country, there is no one whose life deserves more earnest study than the one whose intellect conceived and whose pen framed that imperishable document, the Declaration of Independence.

While yet that sturdy, heroic band of men and women whom Americans revere as the "Pilgrim Fathers," were preparing for their memorable voyage in the Speedwell and Mayflower, the first representative assembly ever held in America was in session at Jamestown, then the capital of Virginia. Among the twenty-two representatives in attendance at that assembly was the first American Jefferson, who had emigrated from Wales some time before.

Another of the members present, it may be interesting to note, was John Rolfe, the husband of the celebrated Pocahontas, daughter of the equally celebrated Indian chief Powhatan.

During the first quarter of the eighteenth century, Peter Jefferson, a young man of twenty-eight, became the owner of one thousand acres of unbroken land among the forests and valleys of central Virginia, near the James and Rivanna rivers, and about one hundred and fifty miles northwest of Williamsburg, which had succeeded Jamestown as the capital of Virginia. Peter Jefferson is described as of large physical proportions and possessed of strong mental and moral qualities. As an example of his unusual strength it is said that he could "head up" at once, two hogsheads of tobacco, each weighing one thousand pounds.

The trees of the forest soon yielded to the blows of this stalwart young pioneer, a farm was opened, a log house built, and to this home in the wilderness Peter Jefferson brought his bride, Jane Randolph, daughter of Isham Randolph, one of the wealthy, aristocratic planters of Virginia. Although the family of Peter Jefferson was one of the oldest in the colony, it could not claim kindred, as the Randolphs could, with members of the English ruling class, yet Isham Randolph so fully appreciated the sterling qualities of mind and heart of the young man that there was no hesitation in accepting him as his son-in-law.

As time passed more acres were added to the Jefferson estate, the home was enlarged, and Shadwell (named for the birthplace of the owner's wife), became noted far and wide for its generous hospitality. Indians and whites alike being frequent partakers of its bounty.

Thomas Jefferson was the third child and the eldest son of Peter and Jane Jefferson. He was born on April 13th, 1743, a date which should be celebrated along with the birthdays of Washington and Lincoln.

Fully aware that a sound education was the first important step to success in life, the parents of Thomas Jefferson wisely resolved that he should have the best to be obtained. The boy's training began at home and the plan carried out could be adopted by many parents today with benefit. It consisted in the training of the boy both mentally and physically. Along with books and study went athletic exercises, such as swimming, running, wrestling, the use of the sword and gun, and horsemanship. It is recorded that while yet almost a child Thomas Jefferson was able to swim his horse across the Rivanna river, a turbulent, muddy stream of some width. Another of the boy's studies in which he took delight was music. When an old man he wrote that for twelve years he practiced three hours a day upon the violin, or, as it was termed in Virginia, where it was most popular, the "fiddle." He was early taught, too, the business of cultivating the soil and managing an estate.

When Thomas Jefferson was five years old he attended a little school for young children near his home, where the only thing taught was English in the simplest form. But to the little boy accustomed to the fields and the woods, the hours spent in the school room seemed long, and it is said that one day, when earnestly wishing for the hour of freedom to arrive, he went outside the school building, knelt and repeated the Lord's Prayer, thinking by that means his wish might be realized.

Young Jefferson continued his attendance at the little school for four years, when his parents placed him as a boarding pupil with the Rev. William Douglass, who was the Episcopalian clergyman of the parish in which the Jeffersons lived. As a minister's salary was by no means great, it was the custom to add to it by taking a few pupils into the home. Greek, Latin and French were the principal subjects taught and the future president proved to be an intelligent and studious pupil. In later years, his knowledge of the French language was of great service to him while

THOMAS JEFFERSON

acting as the commissioner of the United States to France during the Revolution. Other studies he delighted in were mathematics, music and architecture, the last enabling him to plan the erection in later years of his beloved Monticello.

A great sorrow came upon the happy household at Shadwell when Thomas was only fourteen, in the death of his father, and it was a specially severe blow to the boy, as the two had always been very close comrades. But it was now that the fruits of the wise and kindly home training were seen, for, boy that he was, Thomas at once shouldered his responsibilities and proceeded to carry out his father's wish. As his mother had not only the care of a large family of young children, but also the task of managing the large estate, Thomas had to do much of his own planning. In his old age he thus wrote to a young relative:

"When I recollect that at fourteen years of age the whole care and direction of myself was thrown on myself entirely, without a relative or friend qualified to advise or guide me, and recollect the various sorts of bad company with which I associated from time to time, I am astonished I did not turn off with some of them and become as worthless to society as they were."

But Thomas Jefferson was made of good stuff. His father's teaching as well as his own high ideals kept him from joining in the dissipations and useless mode of living in which many young Virginians indulged.

In his will Peter Jefferson strongly urged that his eldest son should continue his studies and receive a thorough education.

Thomas Jefferson resolved to prepare himself for admission to college, and to do so became a pupil of the Rev. James Maury, a worthy gentleman and a thorough scholar. Under his instruction Jefferson gained a good knowledge of Latin and Greek, so that at the end of two years he was noted for his persistence in study as well as his learning. In obedience to his father's wise counsel physical exercise had not been neglected. He was a daring and skillful rider to hounds, and a runner and swimmer of no mean ability.

In 1760, just after he had reached his sixteenth year, Thomas Jefferson set out on horseback for Williamsburg to become a student in the then celebrated college of William and Mary. It was the first time the boy had ever seen a village and we can imagine the open-eyed wonder and curiosity with which he gazed upon the sights of the Virginia capital, then described as "the center of taste, fashion and refinement." At the present time it would be called a village, and a small one at that, the population numbering only about one thousand. It was, however, well laid out, being the model after which the city of Washington was built. There was just one street, one hundred feet wide and three-quarters of a mile long, having the state house at one end and the college at the other. In the center was a large square containing the governor's residence, called the "palace," and various public buildings.

Jefferson's biographers describe him at this time as being tall and slightly built, but well set up, strong, and very quick in all his movements. His face was long and his head covered with reddish hair. In manner he was shy but on acquaintance was a cheerful and jolly companion. While in his youth he was by no means good looking, yet in middle life he was considered a handsome man. The superintendent of his estate says that "as a man he was well proportioned and straight as a gun-barrel. He had an iron constitution and was very strong." His health was perfect and although a large cultivator of tobacco he never smoked and he drank very little wine.

On his mother's side young Jefferson could claim relationship with many of the officials of the government, and the wealthy planters who made their homes at the capital during the winter months when the assembly was sitting; at their houses he was always a welcome guest.

The generous hospitality thus almost forced upon the boy might have had a bad effect upon him, had he not at the beginning of his student life come into close friendship with some men whose mental attainments and high character influenced him greatly. Of one of these men he afterwards wrote: "It was my great good fortune and what, perhaps, fixed the destinies of my life, that Dr. William Small, of Scotland, was the professor of mathematics, a man profound in most of the useful branches of science, with a happy talent of communication and an enlarged, liberal mind. He, most happily for me, soon became attached to me, and made me his daily companion when not engaged in the school; and from his conversation I got my first views of the expansion of science and of the system of things in which we are placed."

Through Dr. Small young Jefferson formed the acquaintance of the then acting governor of the province, Francis Fauquier, an accomplished scholar with wide experience among men and knowledge of the great questions agitating European countries. Unfortunately, his love for gambling had an unhappy influence upon the Virginians, especially the young men. Jefferson seems, however, to have escaped the bad example, for we are told that he never knew one card from another and never allowed them in his home.

One other friendship the young man formed at this time was with George Wythe, a truly great and noble man, who most worthily filled the high positions to which his countrymen called him. Thomas Jefferson regarded Wythe with the warmest affection, styling him "my second father."

In the company of these men Jefferson took great delight. We can easily understand what a stimulus and inspiration their views and opinions would have upon the ardent, enthusiastic and patriotic young Virginian.

At college Jefferson was what in student slang is termed a "grind." His biographer relates that he studied fifteen hours a day, even sending home his horses and taking his only exercise in a run of about two miles in the evening. Only a thoroughly strong constitution could withstand such close application; but it did him no harm, and he was able to complete the full college course in two years. It was during his student life that Jefferson made the acquaintance of Patrick Henry, then a fun-loving, care-free young man, with whom he was in later years to be closely connected.

Both in Massachusetts and Virginia the young college graduate was expected to enter one of the so-called learned professions, but there was a difference in the esteem in which these professions was held. In Massachusetts the ministry was preferred, the profession of law being looked down upon, while in Virginia the clergy did not command the respect of the people, and law, with which naturally went politics, was the only career open.

The friendship which existed between Wythe and Jefferson was increased by the former admitting the latter to read law in his office, and during the four years following his graduation, the youth's winters were spent in Williamsburg in study and attendance upon the courts, while the remaining months were devoted to his home, overseeing and managing his estate.

His capacity for work was tremendous. He always rose at five o'clock, even during the coldest mornings, and everything during the day was performed according to a fixed schedule. The various ledgers and account books he kept are still to be seen; and they are models of penmanship as well as of exactness. The most prominent feature of Jefferson's character was his thoroughness. He could not endure slip-shod methods of work and he would never take anything for granted, but went straight to the root of the matter, sparing neither effort nor time, to obtain a true under-

MACKINTOSH'S TOFFEE
THE OLD ENGLISH CANDY
has a taste all its own. No other candy is like it. In England the people call it "more-ish." The more you eat of it the more you want of it. Think for a minute of the most delicious eatable that you have ever had, and then go out and buy a cake of MACKINTOSH'S TOFFEE, and you will find it even more delicious.
I use my face for the protection of my customers on every box and package.

standing of any subject he had in hand.

Immediately on admission to the bar, Jefferson began the active practice of the law and, partly owing to his influential relatives, but more to his undoubted ability and high character, he was successful from the start. We are told that he was not a great orator, but his thorough knowledge of legal principles, as well as his industry and methodical habit of mind, enabled him to state his case so clearly and briefly that argument and oratory were not required.

At the age of twenty-five Thomas Jefferson entered politics, being elected to represent his county in the Virginia legislature. The declaration of principle which he then made is well worthy the thought of the boys and young men of today. He resolved, "never to engage, while in public office, in any kind of enterprise for the improvement of my fortune." How well he kept that resolution may be learned from the fact that at his death he was in poverty, his beloved Monticello was sold, and the Virginia legislature granted to his widow and children the sum of ten thousand dollars, to prevent their going penniless.

SYNOPSIS OF THOMAS JEFFERSON'S SUBSEQUENT CAREER.

1768. Member of Virginia House of Burgesses. Sought to modify the severe slave laws.
1770. Took up his residence at Monticello.
1774. Published "A Summary View of the Rights of British America," giving his views on the relationship of the colonies with Great Britain and the king.
1776. Chairman of the committee of five appointed to draw up the Declaration of Independence which was adopted July 4, 1776. The draft of the document was Jefferson's work.
1779. Elected Governor of Virginia.
1782. Re-entered Congress.
1785. Succeeded Franklin as minister to France.
1789. Appointed by Washington, Secretary of State; resigned 1793.
1796. Elected Vice-President of the United States.
1800. Chosen President of the United States.
1804. Re-elected President.
During his administration the Algerian pirates were defeated, the Louisiana territory purchased, and the Lewis and Clark expedition sent out. Helped to establish the University of Virginia.
1826. Died, July 4th, exactly fifty years after adoption of Declaration of Independence and just a few hours before his friend John Adams expired.

INSCRIPTION ON TABLET IN HALL OF FAME.

THOMAS JEFFERSON
1743—1826

We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness.

My Tour in the Antipodes

(*Continued from page 178.*)

in the mile and a half scratch was most surprising. He simply cantered home, and in the two-mile handicap, though conceding liberal handicaps to Victoria's best distance runners, he won as he liked and brought the large crowd to their feet by his electrical sprint at the finish.

Leaving Melbourne the following Monday, after a long, tedious journey, we arrived in Bendigo, the celebrated gold-mining center. Upon arriving at the station the whole town seemed to be out en masse to welcome us. It was an intensely hot day and as we drove through the streets to the town hall, we were received with cheers and such remarks as "We can't beat Shrubb, but we can beat the Yank. Wait till Mueller gets at him."

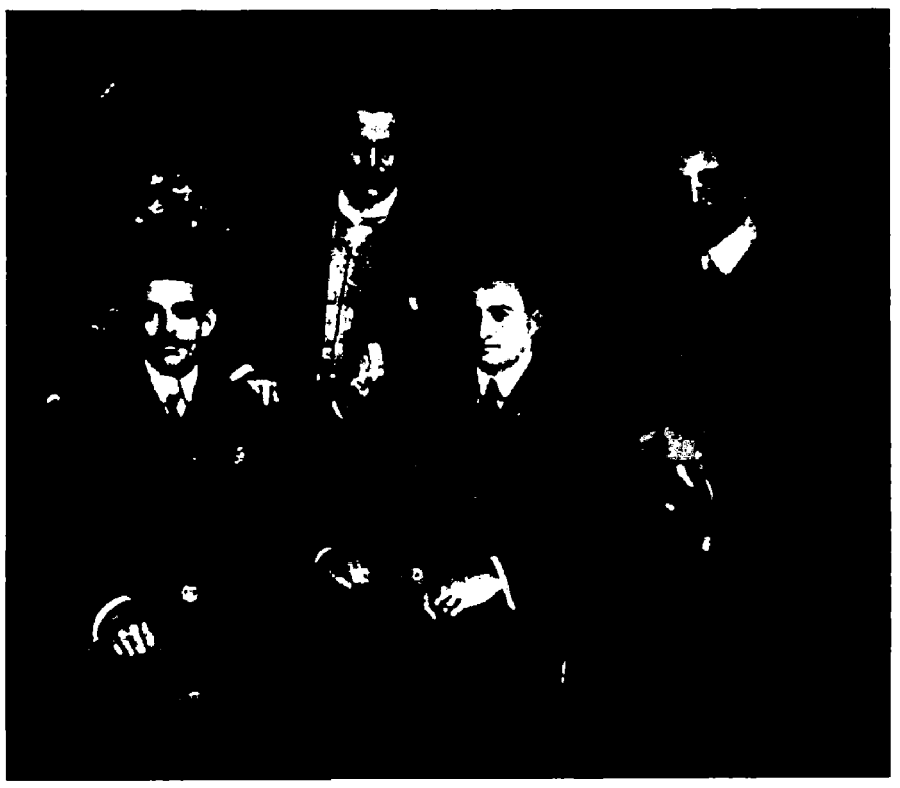
ersed it was plainly evident that Shrubb would again win, which he did and likewise annexed the three-mile championship of Victoria to his already crowded championship belt.

From Bendigo we returned to Melbourne and on the following Saturday we repeated our Bendigo successes, I winning the 100 yards invitation handicap, defeating Mueller from one-yard mark, and G. A. Widmer, the New South Wales champion, in 10 1-10 seconds, and Shrubb winning the one-mile Victorian and four-mile handicap.

By this time the intensely hot climate began to tell on us and it was with a great deal of difficulty that we were able to continue our hard training. Personally the hot weather did not affect me so much, but with Shrubb it played havoc. After his last race he eventually succumbed and was seized with an acute attack of gastritis.

Shrubb's condition gradually becoming worse, and the time for our proposed sailing for New Zealand being near at hand, Shrubb was advised to remain behind; so I continued the journey, embarking March 1st accompanied by G. A. Widmer, the New South Wales champion sprinter, and G. A. Wheatley, the Victorian half-mile champion, for Dunedin, New Zealand.

(*To be continued.*)



This Picture Shows Shrubb and Duffey, Sitting in the Foreground, and, Back of Them, Standing, R. W. E. Wilmot, President of the Victorian Association of Australia, and Sitting on the Table, A. L. Shapleigh, Official Starter of the Victorian Association.

Our reception here was a very enthusiastic one and great interest naturally centered in the race, which eventually resolved itself in a match between the local man, Mueller, and myself. Firmly determined to try and even matters with my conqueror, our race proved a magnificent one, and in spite of the handicap I was conceding, after a terrific finish I managed to defeat my rival on the post.

After the sprint the public anxiously awaited the mile match between Shrubb and Wheatley, the Victorian champion. It was a very interesting race to watch, but after half the journey had been trav-

Duffey Defeating Mueller and Widmer on the Tape at the Melbourne Cricket Club, Melbourne, Australia. In this Race Mueller had 1¼ Yards Handicap, and Widmer had 1 Yard.

SUCCESS Through a LEGAL EDUCATION

The law is the avenue through which men are carried on and up to success in every calling. It is the force that places men into positions of honor and trust in public life; that leads others to prominence and power at the bar. It is the very essence of good training for a successful commercial career. Every young man who would do things, should know the law. If the college is beyond your reach for lack of either time or money, you can

LEARN LAW AT HOME

by mail, in your spare time, at a small cost, through The Sprague Correspondence School of Law—the original. Our 14 years' successful teaching of Law, enables us to say this positively. Our thousands of successful graduates everywhere prove it. Plan endorsed by bar and educators. Three practical courses: College, Preparatory and Business Law. Write for book of interesting letters from hundreds of students whom we have helped.

LIBERAL TERMS. SPECIAL OFFER NOW.

THE SPRAGUE CORRESPONDENCE SCHOOL OF LAW, 878 Majestic Bldg., Detroit, Mich.

Kenneth Mackenzie

Many times in the course of a year must we read letters informing us of the death of a subscriber and friend of THE AMERICAN BOY. In all such cases the temptation is strong to write obituary notices expressive of our sorrow. In one case that has recently fallen to our observation we break our rule.

Kenneth Mackenzie was no ordinary boy. He was a boy with all of a boy's enthusiasms and ambitions, but he was an invalid for life and never knew what it was to play as other boys do. One who knew him well says: "He was the greatest boy I ever knew; the most patient and uncomplaining." He was 16 years old at the time of his death, which took place at his home at Portland, Oregon, on Dec. 5th last. He was a student in the Portland Academy, where he was much interested in his work, especially so because of the fact that his father, W. R. Mackenzie, is one of the officers of the institution.

The Troubadour, the academy magazine, speaking of young Mackenzie says: "His was a well known figure about the buildings because of the physical infirmity with which he struggled. We all remember how he often sat patiently at the foot of the steps waiting for a stronger boy to help him to the recitation room, and often have we rejoiced to see the ready assistance given by the strong to the weak. And with our admiration for this ready help came the greater admiration for Kenneth's patience and courage as he overcame the obstacles and plodded along from year to year until he reached regular standing in the second-year class. His class-room work was always good and, indeed, remarkable in view of his frequent illness and absence. He was a constant and appreciative reader of good books and

WILLIAM KENNETH MACKENZIE
Born June 25, 1889. Died December 5, 1905.

was well informed on all subjects of interest to boys. He was diligent in doing his part in any organization of which he was a member."

He was a very capable and enthusiastic photographer. During the Portland exhibition he worked as a ticket accountant, and the first use he made of his money was to buy a camera. The portrait that we reproduce is one he took of himself and afterwards developed and printed. The father, W. R. Mackenzie, was the auditor of the Lewis and Clark Exposition, and rendered good service to the Editor of THE AMERICAN BOY in helping him complete arrangements for the celebration of American Boy Day at the Exposition, on July 5th last.

Some of the streets of Warsaw, Poland, are paved with straw pressed into blocks and made hard enough to be used for this purpose.

MAJOR O. C. HULVEY, Supt.

The Boys at Work

If you are looking for the causes which are responsible for that American spirit of initiative, alertness and enterprise that has become the wonder of the industrial world just take a look into one of the school workshops connected with the New York city public schools," said Mr. Walter M. Mohr, secretary of the New York Arts and Crafts Club, the other day. "You will find there groups of four or five boys working at the bench, under the guidance of one of their number. This leader is known as the foreman. In the foreman's charge are a set of drawings, describing, in detail and assembled, all the parts of such mechanical instruments as the water-wheel, weighing machine, sound producer, etc. The foreman, who has been selected by the instructor for his executive rather than his constructive ability, assigns to different members of the group the making of such part as is best suited to his familiarity with tools and tool processes. He sees to it that each boy has a readable drawing and enough material to make the desired part, then holds himself ready to give aid and direction where needed. When all the parts are completed, in a manner satisfactory to the instructor—who really stands in the place of proprietor of the shop—they are put together. This assembling of the parts becomes an interesting portion of the work and is usually observed by all connected with the 'job.'

"With the exception of preparing the drawings the responsibility for the entire process of construction falls upon the shoulders of the foreman, who, in turn, holds those in his group responsible for their parts. Usually there are four or five of these groups of boys working in the shop at the same time, each group being busy at a different model.

"It is an inspiring sight to see these model shops in full working order. And it is this kind of commercial work that makes the boys feel that they fit into and are really a part of the world's busy life. Boys enjoy positions of responsibility, and the work in these shops has proven that it is of great benefit to them to let them take such positions."

Lincoln's Mental Powers

Lincoln was always strong with a jury. He knew how to handle men, and he had a direct way of going to the heart of things. He had, moreover, unusual powers of mental discipline. It was after his return from Congress, when he had long been acknowledged one of the foremost lawyers of the state, that he made up his mind he lacked the power of close and sustained reasoning, and set himself like a schoolboy to study works of logic and mathematics to remedy the defect. At this time he committed to memory six books of the propositions of Euclid; and, as always, he was an eager reader on many subjects, striving in this way to make up for the lack of education he had had as a boy. He was always interested in mechanical principles and their workings, and in May, 1849, patented a device for lifting vessels over shoals, which had evidently been dormant in his mind since the days of his early Mississippi River experiences. The little model of a boat, whittled out with his own hand, that he sent to the Patent Office when he filed his application is still shown to visitors, though the invention itself failed to bring about any change in steamboat architecture.—St. Nicholas.

Tell Your Friends Tell your boy friends about the new Stratemeyer Serial and the Horatio Alger Serial about to begin in The American Boy and have them subscribe.

AFTER THE middle of February the shad fishermen begin preparing for the opening of the season on the Delaware. While the river was full of ice the veteran fisherman, Captain Rice, had his men at work getting the immense net ready, caulking the boats and repairing the houses in which the little army of shad fishermen are sheltered during the season. As soon as the river was sufficiently clear of ice the preliminary and all-important work of cleaning up the floatsam and jetsam so as to leave the fishing ground free for the net was begun. It takes weeks of hard work to clear up the debris of a winter. The Delaware shad fishing grounds are the graveyard of all the floating wreckage, old junk and miscellaneous rubbish that finds its way

CAPTAIN RICE, THE VETERAN SHAD FISHERMAN, (ON THE RIGHT) AND HIS FIRST LIEUTENANT

down the river, and the shad fishermen have a ghastly time of it during the cleaning-up period. Every foot of the river has to be gone over. The process of cleaning up brings to the surface broken benches from some of the river-side parks, sofas without legs and legs without sofas, chairs without backs and backs without chairs, dilapidated tables, packing boxes innumerable, empty bottles by the thousand, planks studded with jagged nails, remnants of baskets, odds and ends of sodden wearing apparel, and sometimes an unrecognizable body that has lain at the bottom of the river all winter hiding the story of a murder or suicide.

When the river is cleared of the rubbish, so that the big net can be cast without fear of it being ripped to pieces during the process of hauling in, the shad fishermen are ready to begin work. The sight is so picturesque that hundreds go down to Gloucester to see the net cast, to the great gratification of the proprietor of a picnic ground who would probably be seeking his fortune elsewhere but for the attraction of the shad fishing. Captain Rice, the veteran shad fisherman, employs the services of seventy-five men, and these are assisted by no less than eight horses during the hauling of the nets. Two casts are made daily. It takes so long to cast the net and draw it in that it is impossible to make more than two casts a day.

The huge net, the biggest in the world, is two miles long. That is to say the net itself is a mile long and the ropes that support it are another mile in length, half a mile on either side of the net proper, so that the operations of the fishermen cover a distance of not less than two miles every time the net is cast. In the middle the net is thirty feet deep, tapering to ten feet at other parts. After the net has been properly cast, it requires the united exertions of the men and the eight horses for one perspiring hour before the haul is brought near shore. It is the hauling in that presents the most interesting sight. The casting is done too far from the banks for the spectators to see much of it. A huge boat with a double row of oarsmen is the craft used to take the net out for the casting. Great care has to be exercised in loading the great net on the boat, for if the strands are entangled the cast will be a failure.

When the experienced men have loaded the net on the boat, the captain of the casters directs the oarsmen where to row for the attempt, and having selected his ground he throws the end of the net overboard and pays it out as the men row away. When every foot is thrown from the boat, the signal is given to the haulers and the work of dragging in the net is begun.

The haulers stand thigh deep, sometimes waist deep in the waters of the Delaware. In the center of the two lines stands Captain Rice directing the men. Inch by inch, foot by foot, with the aid of the horses, the men haul in the net. Captain Rice encourages them with a monotonous sing-song that runs something like this:

"A little stronger pull on the left. Now all together. Here she comes. Bring her in, boys. A-l-l t-o-g-e-t-h-e-r, now, boys," and so on.

After an almost interminable amount of pulling at an apparently endless rope the network begins to show itself on the surface of the water. By and by the men get hold of the rope that holds the net and then the Delaware begins to look like a river ruffled by a tremendous hail storm. The surface is churned into foam by the frantic efforts of thousands of fish to break through the net. The smaller fish are able to get away through the wide meshes of the net. Some of the shad even escape by jumping bodily out of the water and getting into safe water over the top of the net. Slowly the net nears the shore, with its struggling mass of silvery shad, and Captain Rice drops his sing song and prepares for action. His orders to the men are sharp and snappy. Carelessness at this stage means the loss of valuable fish, for if the ropes are not held taut the shad can escape over the top. Sometimes the veteran leaves his post in the center of the lines and takes a hand himself at the hauling. As soon, however, as fish begin to come within seizing distance Captain Rice takes the center of the stage, so to speak, for no one but the leader and his trusted lieutenants handles the fish. A boat is propelled into the middle of the mass of shad, now in comparatively shallow water, and the fish are caught and thrown into the boat.

They are usually so numerous that they can be picked up by hand from the meshes of the net. When the catch seems to be all in the boat the net is hauled up, the last remaining stragglers taken out of the meshes and deposited with their friends and relatives in the boat and the net is immediately got ready for the second cast.

Then the spectators descend from their posts of vantage on the bank and bid for the fattest shad in the heap. It is considered something to be proud of to be able to say: "I bought a shad at the fishing bank, fresh from the river, still kicking. My, but it was fine." So quite a profitable business is done as soon as the net is hauled in, provided the day is fine and the spectators are many.

The sharps predict an unusually fine shad season, for the signs are propitious and the rivers have been well stocked. A good catch will net as many as three thousand shad at one haul, although the record haul is much greater than that. The men are paid by the week and boarded by Captain Rice. They usually gather for the shad fishing at the same time every year, just as harvesters gather for the harvesting.

To Writers and Would-be Writers

We are sending this month several thousand samole copies of THE AMERICAN BOY to writers and would-be writers to induce them to become interested in it for themselves and for their boy friends. THE AMERICAN BOY buys substantially all the matter that appears in its columns; hence it is of interest to writers. To induce this class of persons to subscribe for the paper and study it we make the following offer: For one dollar we will send **two one dollar publications** (THE AMERICAN BOY and HOW TO WRITE) for one year to one address or to separate addresses. HOW TO WRITE is a 32-page monthly issued by The Sprague Correspondence School of Journalism. Its contents embrace instructions, experiences of writers, hints on placing Mss., suggestions to beginners, and there is just now starting in its pages, serial instruction papers on punctuating and paragraphing, worth to any writer many times the subscription price. Remember, then, the two publications named for one dollar, provided the subscription is a new one and not a renewal, and provided that in subscribing you indicate that you wish to take advantage of this offer. None but those to whom this sample copy is sent and in whose copy this item is marked with a blue pencil may take advantage of it. The time is limited to May 1st, 1906.

Respectfully,
THE SPRAGUE PUBLISHING CO.,
Publishers of THE AMERICAN BOY.
Detroit, Mich., April 1, 1906.

Please Mention The American Boy When Answering Advertisements

Young Prince Joachim of Germany

By MARLOWE

EMPEROR WILLIAM of Germany and his interesting family of six sons and one daughter have been very much in what we call the "public eye" in recent years. We have all sorts of interesting accounts of the home life of the German Emperor and of his method of rearing his children.

American boys and girls often have very erroneous and amusing ideas regarding the every-day life of young princes and princesses. Nothing could be farther from the truth than to suppose that they are always elegantly clad, fed on the daintiest food and allowed to follow the leadings of their own sweet wills. The children of the Emperor of Germany are under stricter discipline than the children in most American households. The Emperor is said to be a good deal of an autocrat in his home as he is in his position as ruler of Germany. He has all the true German's fondness for his children, but he is a rigid disciplinarian, just the same, and his boys must "mind father" just as the poorest boy in Germany must mind his father. Obedience to parental authority is one of the predominant characteristics of German domestic life. Boys and girls are taught to yield strict obedience to their fathers and mothers, and children in the highest walks of life are not exempt from this parental authority.

The children of an emperor are early taught to bear in mind the fact that they are "of the blood royal" and that much is expected of them on that account. Indeed, they have so much to "live up to" because of their royal parentage that they are hedged about with a good many restrictions that makes it doubtful if they enjoy life as much as the children of the common people who are free from the restrictions royal birth imposes. The children of an emperor may not follow the leadings of their own hearts in that which counts for most in the happiness or unhappiness of their lives after they have become men and women, for they may not have the privilege of marrying whom they will. All of the boys and the daughter of the Emperor of Germany must be subject to certain laws governing royal marriages, and the Emperor will not permit them to marry any one to whom they may "take a fancy." They must choose some one who is also "of the blood royal." Indeed, their husbands and wives are practically chosen for them. Sometimes the royal couples have sincere affection for each other, but all royal weddings are not "love matches." The bride of the Crown Prince of Germany, who was married last spring, was not of his own choosing. It was a marriage "of convenience," and rumor has it that the youthful crown prince would rather have married some one else, but he had to "mind father" to the extent of marrying the young German princess his royal sire had chosen for him. The second son of the Emperor, young Prince Eitel-Frederick, is to be married soon to a young princess for whom it is said he has sincere affection.

The youngest son of the Emperor William is Prince Joachim, who was born in the year 1890 and who is now in his sixteenth year. He is said to resemble his royal father very closely not only in looks but in some of his characteristics. The emperor is devoted to the army, and every one of his sons has had the best of military training. Emperor William feels that this military training is essential to the education of every prince, and it is doubtful if there is an American boy of the age of young Prince Joachim who can equal him when it comes to military tactics and horsemanship. Young Prince Joachim is a very little and alert little German lad, and he is said to be a great favorite with the German people. Unswerving loyalty to the royal family is one of the marked characteristics of the people of Germany, and the children of the Emperor are very fortunate in that they have a firm place in the affections of their father's subjects.

Tire Sections--
BICYCLE RIDERS--
Learn How to Save Money, Time and Trouble

The border of this advertisement is formed of enlarged sections of Bicycle Tires. The places marked X are where the Wear of the Road comes. See how *thin* the Ordinary tire is at this spot (top illustration.) Is it any wonder that an ordinary tire goes to pieces in a few months when there is no more thickness than this between the air-cushion and the road? It's almost a *crime* to take a man's money for anything so impractical and weak. Now look at the X in the bottom circle. That's the wearing surface of the *new* tire—the *better* tire—the tire that will ride thousands of miles before the rubber wears down to the thinness of the *Ordinary tire* when it was NEW. It's the

Giant Heavy Roadster BICYCLE TIRE

It's made from fresh, new, springy rubber, and is made as a tire *ought* to be made. It's made to *last*, and give service and satisfaction. You don't have to take *our* word or the *dealer's* for the extra thickness where it's needed. You can SEE IT YOURSELF when you buy. It sticks right up above the rest of the tire, and does away with all the "unsight-unseen" business that has kept you paying out good money for tires all the time. SEE what you buy—don't *guess*.

FREE
Ask for book, "How to Know a Good Tire." It will save tire-troubles.

Giant Heavy Roadster Bicycle Tires cost $7.50 a pair, Express Prepaid. They'll last longer and give you more real satisfaction than any *three* pairs of ordinary tires you can buy. You can buy these tires DIRECT FROM THE FACTORY, or your dealer will put them on for you if you *insist*. If you care anything about saving trouble and money you *ought* to insist. You can SEE FOR YOURSELF he's putting on the right kind.

The Goodyear Tire & Rubber Co.
1008 Market St., Akron, O.

Additions to Our Legion of Honor Roll.

Claude Tears, Deferiet, New York, received the highest standing in his grade, the fifth, for the term ending in January, 1906, and a School Record Badge has been sent. Well done for a nine-year-old boy!

Alonzo W. Meek, Montgomery, Alabama, is a fifth grade boy who recently received our School Record Badge for obtaining the highest average in his class.

A general average of 92 per cent in the examination for the winter term entitled Clarence Schwartz, of Wickliffe, Kentucky, to a School Record Badge. Clarence is in the eighth grade.

Noel Antrim, Sheridan, Indiana, has not only been perfect in attendance at school for five years, entitling him to a School Record Badge, but has never missed a day nor been tardy in his school life. He is now in the eighth grade.

George E. Hungerford, Manhattan, Kansas, is entitled to a School Record Badge, his term average being 94½ per cent, 2 per cent better than the average received by any classmate.

Miller Hughes, Wickliffe, Kentucky, whose name appears on our Legion of Honor Roll, is the youngest in his class, and says he had a hard job on hand to obtain the high average, 97½ per cent, which entitled him to a School Record Badge. Miller is the second member of his company of the O. A. B. to obtain a place on the Roll, and he thinks more are trying for it.

P. Cleary Bullard, of St. Paul, Minn., who has received the Legion of Honor badge, received the highest average in his grade, 91⅝, for the school year that ended last November, his school being the Cretin High School.

One of our subscribers in Big Spring, Kentucky, Karl Meyer, has received the School Record Badge for securing the highest average in his class during the last term of school.

Aubrey Campbell, Aberdeen, South Dakota, has not been tardy nor absent for more than seven years, entitling him to a School Record Badge. He also stands near the head of his class.

Eric Shaw, a seventh grade pupil of Natchez, Mississippi, led his class of twenty-nine during the term recently ended. He made an average of 93.8 per cent.

Ray R. Sonneman, Kansas City, Missouri, has received a School Record Badge in consideration of five years' perfect attendance at school.

Leroy Sheffield, Randalia, Iowa, has won a badge through his regularity of attendance at school. He has not been absent nor tardy for the last seven years.

Bennie Sturges, Cripple Creek, Colorado, has held first place in a class of thirty-six for the term just past, receiving an average of 93 per cent.

Twelve-year-old Carl H. Grossman, Madison, Indiana, has received a School Record Badge for winning the highest grade in all studies for one term.

Thomas Y. Boyd, Wickliffe, Kentucky, is the second member of his family to receive a School Record Badge, his brother having already won one of the medals. Thomas is in the sixth grade and is a member of the O. A. B. club in his town, holding the office of prorecuting attorney.

"The West Virginian's" Editor

Another boy who learned of the charmed circle of amateur journalism through the columns of THE AMERICAN BOY is Herbert P. McGinnis, of Donahue, West Virginia. Shortly after becoming acquainted with the fact that it was possible to publish a miniature paper as he long had wished to do and that many other young people were doing precisely this thing, he began to publish "The West Virginian," which has come out regularly since. Herbert is one of the amateur journalists who are also interested from the

HERBERT P. McGINNIS, DONAHUE, W. VA.

typographical standpoint. In the beginning he secured a press and some type. Lately he has got a new press, and from time to time his type stock has increased until now he has a nice printing office. He contemplates issuing soon a new paper, which is to be editorial and political. "The West Virginian" will remain a literary journal. Herbert is a member of the Southern Amateur Journalists' Association and the National Amateur Press Association, in which he holds the position of a member of the Bureau of Publicity. He expects to attend the Philadelphia convention next July.

Boys, Take Notice!

THE publishers of The American Boy have effected arrangements with several of the best story writers for boys to be found in this country by which The American Boy will be able to give its readers some great serials after the order of the two great Kirk Munroe serials that ran in 1904 and 1905. The first of these will be a new 75,000 word serial by that popular writer for boys, Edward Stratemeyer, who has written nearly 40 books for boys that are eagerly read in every English speaking country. The story will begin next month (May) and run through ten or more numbers. We are arranging for an Alger serial and for others. The Alger serial will probably begin in June. There is a feast of good things just ahead, boys.

BOYS MAKE MONEY

We want a boy in every town to act as our agent. We send you a bundle of papers. You sell them and keep 2 cents out of each nickel you take in. You do not pay for unsold papers.

WE START YOU IN BUSINESS We want you to send us your name and we will send you a bundle of papers, agent's certificate, report blanks, envelopes and full instructions. No experience is necessary. We guarantee that you can make a nice sum each week without taking any chances.

NO MONEY REQUIRED We will write you a letter giving you full instructions so that you can begin at once. All we ask you to do now is to send in your name and address on the blank below.

..... CUT OUT HERE .....

Chicago Ledger, 112 Dearborn St. CHICAGO, ILL. U.S.

Gentlemen:— I would like to act as your agent. You may send me a bundle of papers, agent's outfit and full instructions. I will agree to try and sell these papers and to pay you for all I sell, less my commission. I agree to report every week.

I take the agency with the understanding that I am not to pay for any unsold papers.

THE BIGGEST FOOL AT LAST.

FOR SOME reason not very difficult to understand no one ever feels very sorry when the practical joker falls into his own trap, and the embarrassment he has planned to bring to others comes to himself. A joke causing real fright or mortifying annoyance to others is a poor sort of a joke at best, and many practical jokes are of this kind.

Herbert Raynor was the practical joker in the little town in which I lived when I was a boy. He was "always fooling," as some of the people expressed it, and a boy who acquires this reputation is generally regarded with more or less suspicion in the community.

Like most practical jokers, Herbert was self-conceited, and he had an idea that he was about the wittiest and the smartest boy in the town, and he often boasted that he never got "left" when it came to joking.

"You will have to get up before breakfast in the morning if you want to play any tricks on me," Herbert had been heard to say.

There was always a good deal of "April-fooling" on the first day of April in the town in which we lived, and at this time Herbert was sure to exert himself to the utmost to "fool" as many persons as possible. He was indifferent in regard to the trouble or annoyance or actual pain any of his tricks caused, and the people of the town had learned to fight shy of him on this day in particular. The other boys in the town naturally took particular pains to "fool" Herbert, if possible, but he was very wary and it was not easy to catch him napping.

There lived near Herbert's home on the outskirts of the little town an elderly, unmarried woman named Jemima Dart. She lived quite alone in a little house of her own and was a kindly soul although somewhat peculiar in some respects. Minden, the village in which she lived, was a dead little place in which a petty larceny would have been almost a sensation, and an actual burglary would have been a nine days' wonder. One day shortly before the first of April Miss Jemima Dart was over to Mr. Raynor's house and Herbert heard her say to his mother.

"I reckon I'm real foolish, Mrs. Raynor; but every night of my life I look under my bed to see if there ain't a man hid there before I go to bed. I don't s'pose I've missed lookin' under my bed before I put out the light a single night in twenty years, an' I've done it so long it's got to be a habit with me. I would no more think of omitting it than I would think of omitting my prayers. Of course I ain't ever found any one, an' I ain't the least idee I ever will, but I keep on looking for that man just the same."

"What would you do if you found him?" asked Mrs. Raynor.

"Oh, I reckon I'd faint away or I'd jump to my feet an' come tearin' over here screechin' for help like all possessed! If you ever hear me givin' blood-curdlin' yells about nine o'clock at night do come a-runnin', for you can make up your mind that I have found that man at last."

"I guess you'll never be troubled by him in this little place where such a thing as a burglar hidden in a house was never heard of," said Mrs. Raynor.

"I hope I won't," replied Miss Jemima devoutly.

Herbert overheard this conversation, and it at once suggested what he regarded as a happy—even a brilliant April fool scheme. He confided his scheme to me that evening after school.

"It will be the best April fool joke of the season," he said to me. "You know that doors are never locked here in Minden, and after dark I'll go over to Miss Jemima's house and watch my chance to slip into the house and into her bedroom. Then I'll hide under the bed and when she comes in to peep under the bed for the imaginary man she'll find what she'll suppose to be a real one. I'll put a mask over my face and wear a pair of father's big boots and his long coat, and they'll make me look more like a man. Won't it be a lark? It will be the best April fool joke of the season. After she's given a screech and started to run I'll yell out 'April fool!' and run and won't she feel as cheap as thirty cents?"

The plan did not commend itself to me, but Herbert and I were rather "chummy," and I did not like to throw cold water on what seemed to him to be such a delightful project. My conscience smote me a little when I promised Herbert that I would keep his scheme a profound secret, for I suddenly remembered that Miss Jemima had been the soul of kindness to me when I had had a slow fever the fall before and had been confined to my room for weeks. She had brought me a great many tempting dishes and had been very helpful to my mother in caring for me. But Herbert convinced me that his scheme was a very harmless one and that Miss Jemima, who was a fun-loving person, would herself laugh heartily over it in the end. I therefore kept silence when I should have given Miss Jemima warning of the plan made to "fool" her.

On the evening of April first Herbert carried out his plan of going over to Miss Jemima's house between eight and nine in the evening. She was a very methodical woman, and she always retired at exactly nine o'clock. It was a few minutes after eight when Herbert reached the house. A moment later Miss Jemima came out of the house and went out to the rear of her lot to fasten her hen house in which there was a brood of little chicks she did not want to come out until the sun had dried up the dew and warmed the chilly April air in the morning. It was easy for Herbert to slip into the house during the brief absence of Miss Jemima. He was familiar with every room in the little house. Miss Jemima's bed was in a little room adjoining her neat little sitting room. The bedstead was an old-fashioned four-poster with a valance of purple calico and white curtains. Herbert crawled under the bed and awaited the coming of poor Miss Jemima. She returned to the sitting-room in a few minutes. After winding her clock and giving some attention to some bread she had set to rise Miss Jemima picked up a small hand-lamp, stepped into the bedroom, set the lamp on a low stand at the head of the bed, threw up the valance and looked under the bed. Herbert's big boots were so near she could have laid her hand on them. He lay grinning behind his black cambric mask expecting to hear an unearthly scream rent the air. But, strange to relate, this did not happen. In fact, Miss Jemima's voice was rather firm and pitched but little above its ordinary key when she said:

"My good land! If I ain't found him at last—the villain!"

Quick as a flash she jumped to her feet, pulled the bed away from Herbert, drew off the huge feather bed and dropped it on to the dazed boy. Adding her own one hundred and eighty-

ADDING HER OWN 185 POUNDS TO THE WEIGHT OF THE FEATHER BED

five pounds to the weight of the feather bed she pinioned the boy down until he was so nearly smothered he had to gasp for breath.

"You scoundrel—you scamp!" cried Miss Jemima as she hammered the feather-tick with her strong fists. "I'll show you how to come sneakin' into my house to rob and mebbe murder an unprotected woman! I'll show you—you scoundrel!"

She was a very strong woman and Herbert was helpless under her weight. Sitting on him she reached out and jerked the rope loose from the old-fashioned rope bedstead. Herbert tried to cry out and proclaim his identity, but only a muffled, unintelligible sound came from beneath the feather tick. Speedily and deftly did Miss Jemima wind the long rope around and around the struggling boy. He succeeded in protruding his head once, but before he could say a word Miss Jemima had given him a sound cuff on the masked cheek and had said:

"Got on a mask, hey? An out an' out burglar, for sure'"

She pushed his head back to the floor and covered it with a corner of the feather tick so nearly smothering the boy that he was beyond speaking. Having bound him securely she rose to her feet and said grimly:

"Mebbe you're too warm for such a mild night so I'll cool you off a bit."

A large pitcher of cold water stood on the little stand at the head of the bed. Seizing the pitcher Miss Jemima poured its contents over the feather tick in such a way that Herbert was well drenched. Then she dragged him to a very large closet in a corner of the room, rolled him into it, closed and locked the door and said with biting sarcasm:

"Skeered a poor, lone woman out of a year's growth, ain't you? My, but I am skeered! But mebbe I ain't any more so than you are, my fine fellow. I reckon you'll be a little more skeered before I am through with you!"

Throwing a shawl over her head Miss Jemima soon appeared at the door of the Raynor home where she said:

"I want you to come right over to my house, Mr. Raynor. I've found a man under the bed at last! I want help in gittin' rid of him. He's a regular burglar, mask and all."

"Then I guess that we'd better go to the village constable's house and take him with us," said Mr. Raynor.

It happened that there had been a singing school in the village schoolhouse that night, and the fifty or sixty young people in attendance were just coming out when Mr. Raynor, Constable Shire and four or five other men were going by with Miss Jemima. I and perhaps twenty of the older boys and girls of the village had been attending the singing-school and the entire party joined the constable and the other men on the way to Miss Jemima's. I felt reasonably sure of the identity of the burglar, but again I kept silent.

Miss Jemima's little sitting-room and bedroom were filled to overflowing when Constable Shire rapped on the closet door and said sternly.

"We are about to open this door, sir, and I warn you that it will be best for you to make no resistance. We are fully armed and there are a great many of us. I have a loaded six-shooter in my hand and it will be my duty to discharge it if you show fight. Beware!"

Miss Jemima unlocked the door and dragged the unresisting burglar forth. Indeed, resistance would have been impossible in his bound and half-smothered condition. Untying the rope Miss Jemima unwound it and drew the wet feather tick away from Herbert. Constable Shire reached forward, collared the offender and jerked him to his feet. Miss Jemima tore off the mask and Mr. Raynor cried out:

"Herbert Raynor! What does this mean, boy?"

"I should say as much!" cried Miss Jemima.

"Great burglar you are!" exclaimed the constable.

Again Mr. Raynor asked, "What does this mean?" and this time he took Herbert roughly by the shoulder.

"I—I—was just—just—April fooling," said Herbert meekly.

"April fooling!" almost screamed Miss Jemima. "Upon my soul! Well, as the old sayin' goes, you're 'the biggest fool at last!'"

"That's what I say," said Mr. Raynor severely.

Shouts of laughter went up as the crowd pressed forward to get a glimpse of the burglar. His nose had bled profusely and he looked very much as if he had been weeping. A more downcast, utterly chagrined boy never stood before a company of unfeeling spectators. No one could help laughing nor could one help feeling that the boy really deserved at least a part of the mortification that had come to him. Miss Jemima's cheerful prophecy that he would "never hear the last of it" seemed likely to be verified, for weeks later some of the boys would say with a grin when Herbert was trying to be a little too "fresh," as the boys put it:

"Remember that burglar at Jemima Dart's."

Herbert was very cautious in playing tricks when the first of April came around again. Perhaps he felt the force of Miss Jemima's words when she said on that eventful night that he was "the biggest fool at last."

Too Busy to Grow

A small office boy, who had worked in the same position for two years on a salary of $3 a week, finally plucked up enough courage to ask for an increase in wages.

"How much more would you like to have?" inquired his employer.

"Well," answered the lad, "I don't think $2 more a week would be too much."

"Well, you seem to me a rather small boy to be earning $5 a week," remarked his employer.

"I surpose I do. I know I'm small for my age," the boy explained, "but to tell you the truth, since I've been here I haven't had time to grow.

He got the raise.—St. Nicholas.

Hurrah!

"Who gave the bride away?"

"Her little brother. He stood up right in the middle of the ceremony and yelled, 'Hurrah, Fanny, you've got him at last!'"

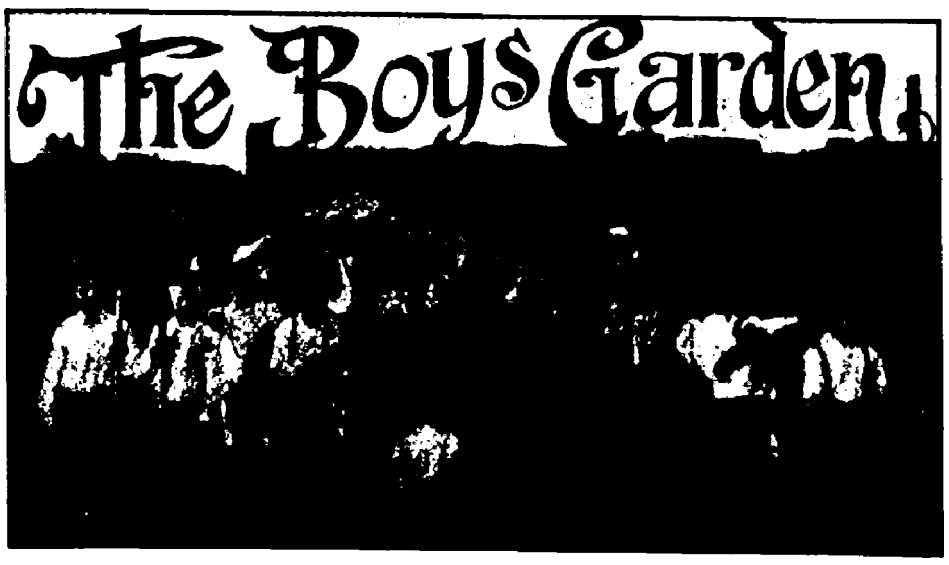
Mention The American Boy When Answering Advertisements



THERE ARE some things that Europe can teach us and one of them is "intensive gardening," a term that means the getting as much out of the ground as is possible and the making of every inch of the soil give an account of itself. The people of Holland and France are experts in this line of garden work and really do things on a small plot of ground that are almost miraculous and that must be seen to be appreciated. It is wonderful what a quantity of vegetables they can get out of a garden no larger than your backyard. Among those who have distinguished themselves in the direction of intensive gardening in this country is Mr. Charles H. Parker, of Burlington, N. J. The size of his vegetable gardens is 47x95 feet, which is almost a tenth of an acre. Mr. Parker kept an account with his garden, giving it credit the same as if he had purchased the produce in the market at the current rates. The following is a portion of the report published:

"I have supplied my family of ten persons with vegetables all summer. By actual count and measure the little patch, 47x95 feet, yielded the following:

"Tomatoes, Ponderosa, 1,133 pounds; Tomatoes, eighteen baskets earlies and second earlies; Rhubarb, sixty-eight bunches; Onions, four baskets; Cabbage, forty-seven heads; Egg Plants, sixty-four; String Beans, seven and one-half baskets; Lima Beans, fifteen baskets and one-half peck; Celery, between 1,000 and 1,100 roots; Pickles, one bushel; Strawberries, thirty-one quarts; Peas, sixteen baskets and one-half peck; Sweet Corn, 480 ears; Beets, 654, all counts; Peppers, two baskets of Bull Nose and one bushel of the little Cayenne; Radishes, both spring and winter, for family use; Horseradish, enough and to spare, and Lettuce, both in the hotbed and in the open. There are also two rows, forty-five feet long each, of Parsnips, and twenty-five feet long of Salsify. I had Spinach for family use. At the prices current when we ate these vegetables this produce would have cost just $108.33."

Now, what Mr. Parker has done, you can do. He could not devote much time to his garden and was obliged to take care of it mornings and evenings, outside of his regular business hours. You, on the contrary, will have the whole summer vacation before you and you can put in eight or ten hours right away every Saturday. Even after allowing for a lack of experience, you ought to do as well as he did and possibly you may do still better. There's no telling what's in you, until you find out. Cultivate self-reliance; you'll need it throughout life and it will stand you in god stead in other understakings besides gardening. Never give up the battle before the fight has begun.

If you raise two crops a year or three crops in two years, you can make your garden pay and to yield returns that will enable you to gratify any reasonable wish you may have entertained for a long, long time. If you want a new gun, or a bicycle, or a phonograph, or a camera, or even a Shetland pony and cart, they will all be within reach when you make your garden pay.

In order to obtain the best results, a garden must be free from shade and the roots of large trees. Plants require sunlight and all the nourishment that is in the ground. In fact, as a rule, the soil does not contain enough plant food and must be fertilized. Well-rotted cow manure is the best for this purpose, but if your folks protest against the not altogether unobjectionable odor of that material, you will be obliged to use commercial fertilizers. Those who have employed the latter extensively in their gardening operations claim that they are cleaner, cheaper, more healthful and in every way better, but I must confess that I am still prejudiced in favor of the old-fashioned plant food after an experience with both.

But a few tools are required to be successful in the backyard "farm" or kitchen garden. First-class tools are a necessity and they should be taken good care of; whenever they have served your purpose, wipe them off and put them away; don't let them rust on the garden beds out in the rain. A spade, a hoe, a rake, and a trowel are all the tools that you will need to cultivate even a fairly large garden, but when your backyard farm is unusually large you will say with me: "Blessed be the man who invented the wheelhoe, for he has banished the horticultural backache forever." The wheelhoe is so arranged that both sides of a row may be cultivated or weeded at the same time and, therefore, is a very valuable labor-saving device.

If you are an old reader of this magazine, you will remember that I have had a great deal to say in the past in regard to the preparation of the garden, which must receive careful attention in order to ensure success. The old saw: "Well begun is half won" applies to gardening as well as to other pursuits. Spade up the soil to a depth of a foot and a half and then rake it fine. If the garden is exceedingly large, it may pay to hire a man to plow and harrow it. When it is ready for planting, let it lie a week before you put in the seed. In the meantime you will have to decide whether you want to lay out your garden in beds or rows. If you have a wheelhoe, rows will facilitate the garden work, but probably a combination of the two systems will afford the greatest satisfaction. At any rate, do not make your walks over two feet wide and restrict the size of your beds to a width enabling you to conveniently reach every part of them with hoe or rake.

All this time, of course, you have been anxious to ask me a question. "How can I possibly buy seeds and fertilizer," I imagine I hear you say, "without any money?" Ah, that's where what we call credit comes in. Your father knows that you are a manly, self-reliant lad. Go to him and lay your plan before him. Tell him that you want to borrow the money to buy seeds, etc., and that you are going to supply the household with fresh vegetables at the market price and earn the difference between receipts and expenditures. The chances are he will tell you to go ahead and give you some good advice. Always remember that your parents are your best friends and consult them whenever you may be in doubt in regard to anything.

If there is anything cheaper in the world than seeds, I can't remember just now what it is. But seeds purchased from an irresponsible dealer are dear at any price, so it pays to buy the best.

As I said before, to get the greatest possible returns out of the soil it must be stuffed with plants, as it were, not an inch of the ground being wasted. If lettuce plants will mature when planted a foot apart radishes or some other short-lived plants should be grown between them. If a cucumber vine covers six inches at one time and six feet at another, it is evident that good use may be made of considerable space while the plant is still small.

I am not going to burden you with minute directions for cultivation, as these may be found in many catalogues and on every package of seeds you buy. But I would impress one rule upon you that governs succession, namely, never to let vegetables of the same family follow each other. This is called rotation and has been practiced by farmers for centuries. With us variety is merely the spice of life, but in the vegetable world it appears to be an absolutely indispensable requirement for existence. Follow radishes and lettuce with late corn, and beans with lettuce and plant cabbage, cauliflower or spinach in the space previously occupied by the early corn. Peas should be planted in rows that are four feet apart, the intervening space being taken up by a first sowing of spinach. When the early peas are gone, their place may be taken by celery, and lettuce may be sown after the small early carrots are pulled. A good succession crop for early beets is fall spinach and for early green beans—cress, lettuce or endive. Melons may be followed by winter spinach and New Zealand spinach by corn. Cabbages may be raised successfully where the tomatoes stood, even though the latter are gathered rather late. Thus, it will be seen, almost endless combinations can be made that will utilize every part of the garden.

To succeed with onions, they must be given a rich soil, sown not too thickly and thinned to stand two inches apart. As onions and parsley are improved by transplanting, it is advisable to have both exchange locations, that is to say to put the parsley where the onions were and vice versa.

Among all the vegetables that I have mentioned, radishes are easiest to grow and may be sown every ten days from the first of May until the middle of June. Lettuce is another crop with which most people succeed and which is particularly suited to a very small garden.

In a recent issue of the Ladies' Home Journal Martha Parloa points out a novel way of raising cucumbers, as follows: "Put one or two barrels near the house, and partially fill with stones, leaves, etc., for drainage. Fill with good soil and fertilize well. Plant the seeds. When they come up, leave about four in a barrel. Keep well watered."

Whenever possible, devote a bed or two to flowers for cutting. Nasturtiums and sweet peas are particularly useful for this purpose.

By supplying your own family and the neighbors with fresh vegetables and flowers, at the regular market price, during the season, you will be able to earn enough to buy that canoe you wanted so long and have enough money left for Christmas presents. The following is a list of seeds required for a small garden, with an estimate of cost that may be of service:

Peas, 2 quarts	$ .60
Bush Lima, 1 packet	.10
Pole Lima, 1 packet	.10
Wax Beans, 1 packet	.10
Beets, 1 ounce	.10
Carrots, 1 package	.05
Late Carrots, 1 packet	.05
Early Cabbage, 1 packet	.05
Cauliflower, 1 packet	.05
Celery, 1 packet	.10
Early Corn, 1 packet	.10
Late Corn, 1 packet	.10
Cucumbers, 1 packet	.05
Kohlrabi, 1 packet	.05
Lettuce, 3 packets	.15
Radishes, 2 packets	.10
Spinach, 2 packets	.10
New Zealand Spinach, 1 packet	.05
12 Tomato plants	.30
Parsley, 1 packet	.05
Total	$2.35

How Steam is Produced

Steam is produced as follows: Water, although a continuous mass, is made up of a multitude of drops. Each drop of water is an elastic shell containing a certain amount of oxygen (air). If one will take a clean kettle and place it on an ordinary fire he will notice that as soon as the water begins to get warm at the bottom little bubbles begin to form. This is caused by the expansion of the air in the water. The expansion continues until 212° Fahr. (boiling point) is reached, when the bubble bursts, the heated and expanded air passes through the water to the top, and in such passage picks up more or less of the water and becomes vaporous, when you get an expanded vapor caused by the passage of heated and expanded air through the water. In this state it has less friction than the air when expanded. In English we call it steam; the Frenchman says vapeur; the German says dampf, hot, moist air. We say a steam carriage, the German says ein dampf wagon.

A Great Thermometer

The most expensive thermometer is in use at the Johns Hopkins University. It is valued at $10,000, and is an absolutely perfect instrument. The graduations on the glass are so fine that it is necessary to use a microscope to read them.

Ed Weachman, Houston, Texas, sends the Editor a very pretty souvenir post card of a Turpentine Still.

THE BOY who cherishes the illusion that he would like to be a cowboy usually has little idea of what that individual's duties are. The cowboy of the yellow-covered novel is such a very different person from the cowboy of real life. The yellow-covered novel makes him appear as an uproariously jolly fellow in fringed buckskin trousers, red flannel shirt and Mexican sombrero with a brace of pistols at his belt. In the novel he seems to have nothing to do but to race like mad here and there on his pony performing deeds of daring and terrorizing the people in general. He is made to appear as a great Indian fighter in localities in which Indians are as harmless as rabbits, and he is forever rescuing young maidens from perilous situations.

Now the great majority of cowboys never do any of these things. They do a great deal of mad racing here and there over the plains on their fleet little ponies, but it is all done in the line of duty, and it is very hard work, for when they do this they are in pursuit of fractious cattle instead of fractious Indians. In the early days of cattle rearing on the great western plains the cowboys would now and then "paint a town red" when their hilarity reached a certain point, but this did not happen very often and one never hears of such things in the present advanced stage of civilization in the West.

There is no occupation in which there is more hard work than falls to the lot of the cowboy. It is not unusual for him to be in the saddle sixteen hours at a time regardless of wind and weather. He must be an expert horseman and absolutely fearless in time of danger. There are no more dangerous foes than infuriated cattle, and he will some times be compelled to deal with such foes. Some of the boys who think that they would like to be cowboys would be "scared out of a year's growth" the first time they found themselves in the position in which cowboys often find themselves.

The great ranges of the West still swarm with cattle, but they are not herded in vast herds as they once were, and the ranges are now enclosed in miles and miles of wire fence, two facts that have somewhat changed the character of cowboy life. It was as a lassoist that the cowboy of old was seen at his best. He could do wonders with his rope, as he called it. His lasso, or rope, was always on the saddle of the cowboy. It was as useful and as necessary to him as the gun to the soldier or the oar to the fisherman. It is said that it was Cortez who introduced the lasso to North America, and his followers used it in roping their cattle. Spaniards and Mexicans have long been famous for their wonderful skill in throwing the lasso. The Mexican lasso was usually of braided hide, while that of the cowboy is of hempen rope about half an inch in thickness and from thirty to forty feet in length. This rope is made very soft and pliable by being dragged on the ground from the horn of the saddle. The value of the cowboy's services often depends on his skill with his rope. He must be able to throw it with lightning-like swiftness and with certain accuracy of aim. This requires a steady hand and strength of muscle. It also requires indifference to fear, for the cowboy must sometimes ride into a herd and rope a fractious steer which may become one of the most dangerous of foes.

If one would see the cowboy when he is at his best and when he performs his most skillful feats in riding and in lassoing one should see him actually at work on one of the great western ranges when a round-up occurs. These are occasions of great interest to those who see them for the first time. The round-up is a time of joy to the real cowboy, because it requires no end of dash and go and gives him unlimited opportunities of showing off his skill as a rider. The more exciting and dangerous the round-up the greater is the cowboy's enjoyment of it. On cow ranches there is always a spring round-up when the calves are separated from the rest of the herd and branded, or "burned," as the cowboy would be more likely to call it. Indeed, there is always more or less of branding to be done on a cattle range. It is not always easy to capture and brand a lively young steer that may for some reason have escaped branding until it is a year or two old. The cowboy wants to be sure that his pony is in good trim before he starts on a round-up. The pony is pretty apt to have a name suggested by some marked peculiarity of temperament, it being unnecessary to explain further why a pony should be given the name of "Wildfire Dick" or "Greased Lightning." Theodore Roosevelt in his admirable book descriptive of ranch life thus refers to this naming of the ponies of the cowboys:

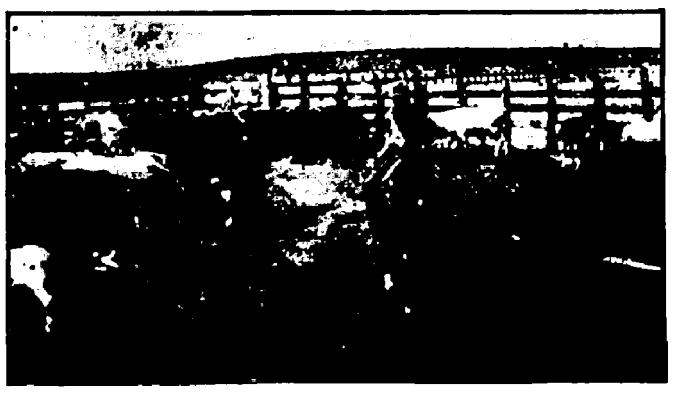
"One of our horses having been gone eighteen months, has, since his return, been suggestively dubbed 'Dynamite Jimmy,' on account of the incessant and eruptive energy with which he bucks. 'Wire Fence,' when being broken, ran into one of the abominations, after which he is now called; 'Hackamore' once got away and remained out for three weeks with a hackamore, or breaking-halter, on him; 'Macaulay' contracted the habit of regularly getting rid of the huge Scotchman to whom he was intrusted; 'Bulberry Johnny' spent the hour or two after he was first mounted in a large patch of thorny bulberry bushes, his distracted rider unable to get him to do anything but move round sidewise in a circle; 'Water Skip' always jumps mud-puddles; and there are a dozen of others with names as purely descriptive.

To be chosen captain of a round-up is a distinction that the cowboy covets. It is in itself a tribute to his superior skill as a cowboy. No novice may hope to be captain or foreman of a round-up. The man chosen for this position must have not only wide experience, but he must have good judgment and he must never "lose his head." He must be able to wisely direct the movements of the cowboys and his other responsibilities are many. But some one may ask "What is a round-up?" It is a gathering together of "the cattle on a thousand hills," as it were, for the purpose of literally "taking account of stock." The calves must be branded, the cattle to be sent to market must be separated from the others, and there may be half a dozen other reasons why it is necessary to round-up all the cattle belonging to a certain company or individual. There may be fifty thousand head of these cattle and they may be scattered over fifty or more miles of range. Months of entire freedom will have made many of them as wild as deer, and some of them will be almost as fleet of foot.

The fleet-footed little bronco pony described in the September (1903) number of THE AMERICAN BOY is an important factor of the round-up. No horse can surpass the bronco in fleetness nor in obstreperousness. The cowboy is very fond of racing, and bronco racing is one of the diversions of a dull day in the cowboy camp. If ever riders really go "with the speed of the wind" the cowboy goes over the brown prairie with that degree of speed when he is matching the powers of his pony against that of the pony of a fellow cowboy. The cowboy rides bareback when racing and the possibility of the racer having his neck broken by some vicious and treacherous bucking bronco seems to add zest to the occasion. One who has lived the life of a cowboy says of the beginning of the cowboy's day:

"In the morning the cook is preparing breakfast long before the first glimmer of dawn. As soon as it is ready, probably about three o'clock, he utters a long-drawn shout, and all the sleepers feel it is time to be up on the instant, for they know there can be no such thing as delay on the round-up, under penalty of being set afoot. Accordingly they bundle out, rubbing their eyes and yawning, draw on their boots and trousers,—if they have taken the latter off,—roll up and cord their bedding, and usually without any attempt at washing crowd over to the little smouldering fire, which is placed in a hole dug in the ground, so that there may be no risk of its spreading. The men are rarely very hungry at breakfast, and it is a meal that has to be eaten in the shortest order, so it is perhaps the least important. Each man, as he comes up, grasps a tin cup and plate from the mess-box, pours out his tea or coffee, with sugar, but, of course, no milk, helps himself to one or two of the biscuits that have been baked in a Dutch oven, and perhaps also to a slice of the fat pork swimming in the grease of the frying-pan, ladles himself out some beans, if there are any, and squats down on the ground to eat his breakfast. The meal is not an elaborate one; nevertheless, a man will have to

THROWING THE LASSO

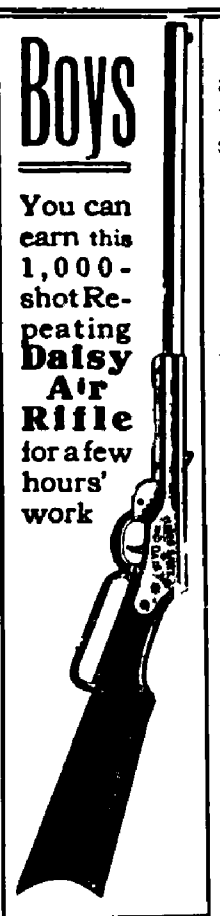


IN THE CORRAL

AT DINNER

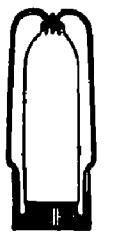
Boys

You can earn this 1,000-shot Repeating **Daisy Air Rifle** for a few hours' work



Simply go about among your friends who use gas, and sell them 25 of the celebrated

Ready-Lite Mantles



the best gas mantles made, for 15c each. Equal to any mantle sold at the sum of 25c.

They sell quickly, as everybody who needs gas will take, at least, one Ready-Lite Gas Mantle, perhaps a dozen. Churches, schools and hotels often take as many as 100 at a time.

If you will take orders in advance, and send us the money with your letter, we will send the gas mantles and the Air Rifle, express prepaid, or if you wish to have the gas mantles first, we will trust you. A few hours work will dispose of the entire lot; then return the money to us, and we will ship the air rifle. You need not take a cent of risk.

We want you to understand that this is different from any doubtful scheme which asks you to sell cheap jewelry, etc. Practically every family who uses gas, also uses gas mantles. They need them, and are glad to buy as good a mantle as the Ready-Lite at such a low price.

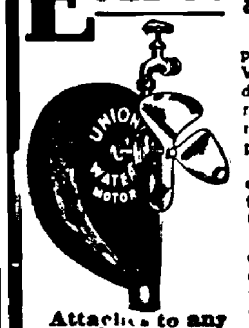
And for this light work, which you can do in a few hours, we offer you the best air rifle made, a 1000-shot repeating Daisy air rifle of the best make—the kind which you have to pay $2.00 for at the stores. Isn't it worth doing a little work?

We refer you as to our reliability to the Old Detroit National Bank, and the Detroit Trust Co.

Write to us today, saying you would like to get the rifle, and we will send the goods to you, express prepaid; or better still, send us the full amount, $1.75, and we will send rifle, mantles and all, express prepaid, as soon as your letter is received.

THE READY-LITE GAS MANTLE CO.
1017 Union Trust Bldg. Detroit, Mich.

EARN Faucet Water Motor and Cooling Fan :::



Attaches to any Faucet.

You can have one at no expense to you. Act at once. We are seed growers and dealers and will handsomely reward you if you will sell at retail our 4c., 8c. and 22c. packages of seeds.

Sell for us $3 worth of selected flower and vegetable seeds from our book catalogue. (Everybody buys seeds.)

Motor and fan outfit includes emery wheel for sharpening and grinding, polishing wheel for cleaning and polishing silverware, etc., wood pulley for other purposes, 12 feet of leather belting, three-bladed 10-inch fan and one motor 12 inches high; also necessary oil can and washers and full directions.

Write today. We will send seed catalogues and ten packages of seeds to start you; also order blank and full directions.

This offer withdrawn May 15th, price of motor and outfit alone, $2.50. Write for premium list.

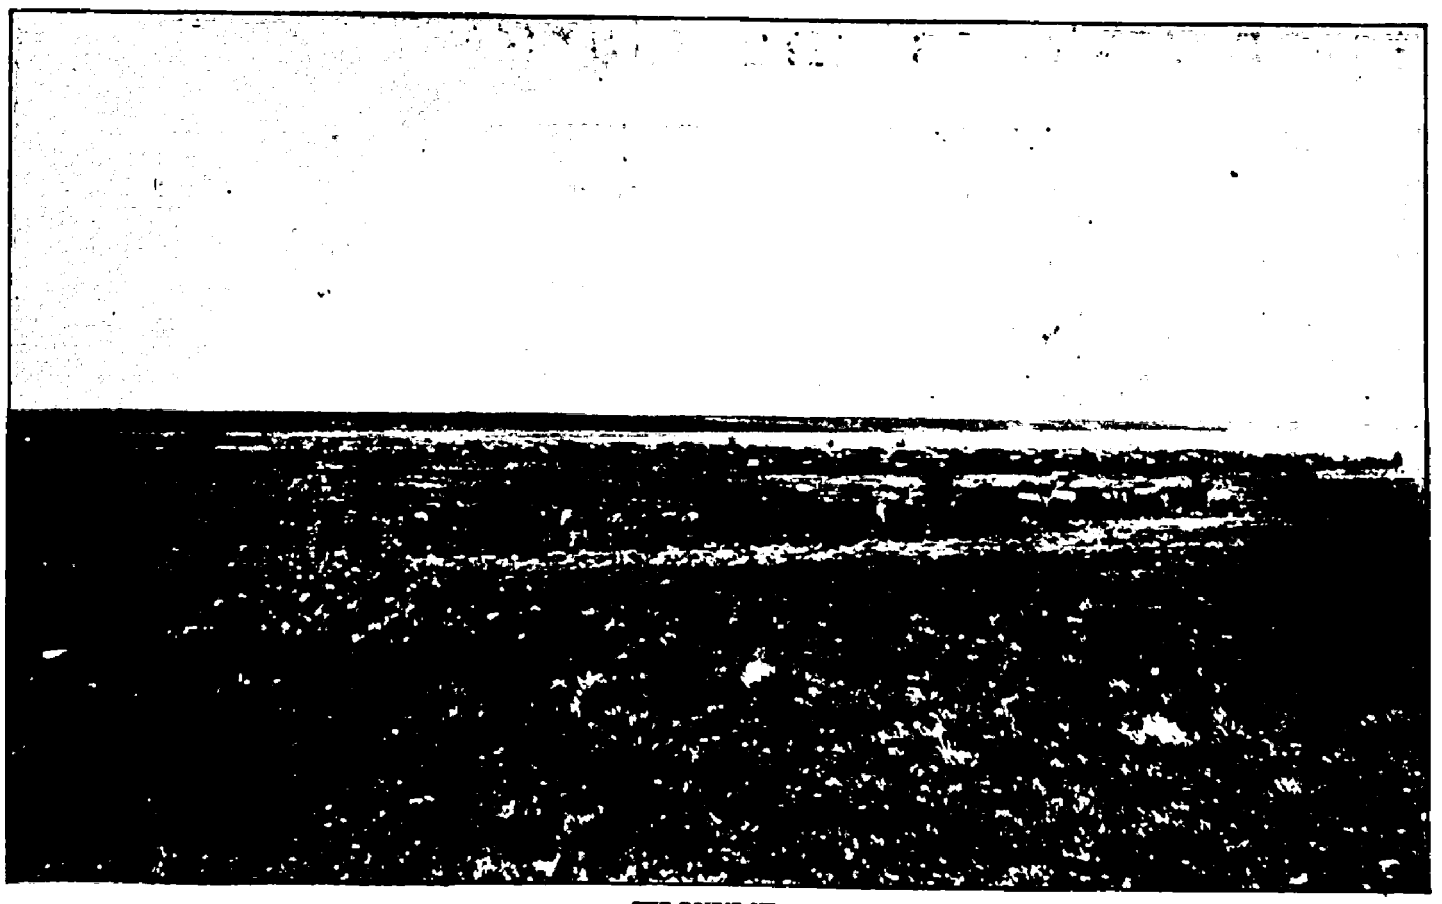
Remember, you run no risk as we take back unsold goods. Address, UNION LINEN CO., Dept. A-12 Bridgeport, Conn.

Please Mention The American Boy When Writing



THE ROUND-UP

hurry if he wishes to eat it before hearing the foreman sing out, 'Come, boys, catch your horses!'"

The ever-present lasso of the cowboy will be brought into active use in the round-up, for it will be necessary to capture some of the animals and throw them down to brand them or to examine the brands already on them. The speed and skill with which a man can rope and bring down a steer or cow are proof of his ability, and a good roper is regarded as a valuable man. The grace and skill with which he will send his lariat out over the backs of a herd of cows and bring it down around the horns of the animal he has singled out are well worth witnessing. A trained hand will lasso a cow, bring her to the ground and tie her good and fast in less than a minute. Another experience that calls forth all the skill of the cowboy on horseback is the stampeding of a herd of cattle. A herd of three or four thousand cattle may with one common impulse conclude to defy all control and authority and make a wild break for liberty. When this happens the cowboys must ride fast and furiously or the work of several days may be lost, for the herd may scatter and race back to the ranges from which they have been so carefully driven to the main herd. A stampede in the night is not a common occurrence, but when it happens the woes of the cowboy are many.

There is monotony as well as excitement in the life of the cowboy. Simply watching a herd to keep it from going astray or driving a well-behaved herd on its way is wearisome and monotonous work, while the life of a lone herder on the plains is the acme of dreariness and desolation. The writer recalls an interview he once had with a sheep-herder who said in closing the account of his experiences:

"I just had to give it up or go crazy. The sense of utter loneliness and desolation was more than I could bear. For days and weeks and even months at a time I did not see a living soul. My only shelter was a little tent and several times it was swept away over the plains in times of fearful storms. There was nothing for me to do but sit on the grass day in and day out watching the sheep, and only those who have tried it can understand how unutterably monotonous such work can be. Had it not been for the faithful shepherd dog I had with me I believe I would have lost my reason at the end of the first week. For unspeakable monotony and maddening loneliness commend me to the life of the sheep-herder on the great plains of the West."

Then there are the long and cold winters to be reckoned with, the winters when desolation reigns supreme on the great plains and on the almost treeless hills, the winters when there are no round-ups and no exhilarating races over the prairies. The winter is the cowboy's season of discontent if at any time he falls a victim to that disorder. If the cowboy is fortunate enough to be the occupant of a good ranch house he may fare very well, for there will be cheery open fires in a big fireplace, and if he happens to have jolly fellows for companions they will pull through the winter without too much ennui. They will be apt to wear out several packs of cards before the fire on long winter evenings. They will read, and one need not be greatly surprised if they choose Shakespeare instead of the yellow-covered novels they are commonly supposed to delight in. Then they have some work to do, for the wandering herds will need some attention even in the winter months. It is no light task to ride out with the thermometer below zero, looking after weak and feeble cattle and getting them to the ranch, where they may be cared for. Some of the things that helped to make up the "fun" of the old days of cowboy life may well become things of the past. With all his failings the cowboy has many "good streaks," and the majority of cowboys are not nearly so bad as some writers would make them seem to be.

BIG GAME.

Photo by Charles Detwiler, R. F. D. 25, Delta, Ohio. The boy in the picture is Charles's brother. He holds a mouse in his hand.

Addition to Legion of Honor Roll

Leo Hyde, of Lynn, Mass., to whom we give the Heroism Badge, has the enviable record of saving three lives in the fourteen years of his life. The last rescue was made on January 26th, while skating on a pond near his home. Bertha Kimball, a fourteen-year-old girl, broke through thin ice so near the channel that she was in great danger of drowning. Several men who were near saw the girl's plight but made no effort to save her, and it remained for young Hyde to prove himself equal to the occasion. Plunging into the water, he made his way to the girl, grasped her by the dress, and struck out for thick ice. Owing to the weight of his burden, it was only with great difficulty that he succeeded in reaching safe ice, where he was assisted by those anxiously awaiting him.

Photo by L. E. Harmon, Independence, Kans.

Good News, if You Like Fish

No wonder the fish crop is never "short." The flounder lays 7,000,000 eggs annually; several others from 1,000,000 to 3,000,000; while the turbot is credited with depositing from 11,000,000 to 12,000,000 during each breeding season.

Boys, Take Care *of* Your Teeth

By J. AUSTIN BUCKNALL, D. D. S.

(Begun in December, 1905, number.)

ONE MINUTE night and morning spent with a toothbrush and silk, as I have said, will keep your teeth in very good condition. The result will amply justify the expense of time. A boy with sound, fine appearing teeth has something attractive about him. We perhaps may not especially note what it is, but it is there, and he will be hired by an employer rather than will the boy with an unsightly mouth. It will be understood that he has attained a result by continued effort. There is an air of confidence and frankness in the boy who has nothing to hide. Where the teeth are neglected, the lips lose their proper lines in the effort to mask the defects. The face of a person whose teeth have been extracted is usually wanting in beauty, while in conversation the play of the lips over a perfect set of teeth is a cause of admiration.

In any walk of life personal appearance is a part of one's stock in trade. Boys should not forget this, inasmuch as they are growing up to be men and will have to come in contact with others, and upon the impressions of others regarding them will depend largely their success. A boy wants, when he grows to be a man, to appear well, and also to be able to talk naturally and confidently. Neither of these can be attained by a boy who is conscious of defective teeth. Bad breath, too, is objectionable, and bad teeth are generally the cause of bad breath. Right here I should say that while the habits of gum chewing and tobacco chewing do not result in great harm to the teeth, yet they are objectionable on many other grounds. The continued use of a pipe will wear away the teeth and cause them to become stained. One wants good, hard, sound teeth.

Coarse foods are the best for tooth culture. Soft teeth are largely produced through the lack of exercise that teeth get when only soft foods are eaten. It is said that in the skulls of Indians we find nearly always perfect teeth. Why? Because the Indians use hard food, which they chew to a pulp with their teeth, thus keeping them firm and strong and sound in their sockets, just as the exercise of a boy's muscles makes them strong.

Two seemingly trivial habits have an effect upon the teeth; namely, thumb sucking and sleeping with the mouth open. The first forces the upper teeth forward and the second deforms the mouth so that it becomes long and narrow, instead of broad and round. Not having proper room, the teeth of the mouth-breather take irregular positions. To prove this a young calf's nostrils were filled with cotton batting so that it had to breathe through the mouth. The result was that the bones of both jaws became deformed. The passages back of the nostrils as well as the nostrils themselves, are provided with means for cleansing the air and preparing it for the lungs. Deep and proper breathing keeps the walls of these passages in good health and free from catarrh. If the proper exercise of breathing through the nose is omitted, the lining becomes inflamed and diseased. The speech, too, of the mouth-breather is poor. There is a lack of resonance. If you are in the habit of sleeping with your mouth open, tie a band around your chin at night and keep your mouth closed. After this preventive is used for a time, you will naturally breathe with the mouth closed, and then the bandages may be omitted.

* * *

The editor of this paper has had these articles written for the benefit of the BOYS, and he hopes that every boy has read them. It may be that some have not read the articles preceding this one. To induce every boy to read what has been said, the following offer is made:

Five dollars will be given to the four boys who make the best replies to the following questions; that is, $2 for the best reply, $1.50 for the second best, $1 for the third best, and fifty cents for the fourth best:

FIRST—What will best prevent decay of the teeth?

SECOND—Why is it wrong to extract teeth?

THIRD—What causes connected with the teeth produce a swollen face?

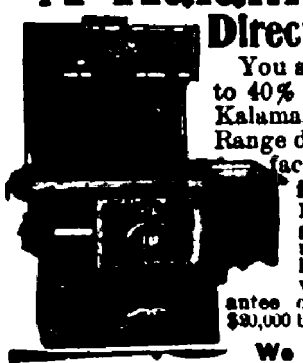
FOURTH—What word will the letters T-E-L-N-G-E-C make that represents the cause of gum diseases?

Do not use more than fifty words in your answers. Send in your reply so that it will reach us not before April 10th, nor after April 15th, and address Dentistry, care THE AMERICAN BOY, Detroit, Mich.

If there are several equally correct answers, the prizes will be given to those which are gotten up the neatest.

(*The End.*)

"A Kalamazoo Direct to You"



You save from 20% to 40% by buying a Kalamazoo Stove or Range direct from the factory at lowest factory prices. Moreover, you get a stove or range not excelled by any in the world. We guarantee quality under a $30,000 bank bond.

Stamps, Coins and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

Stamp Notes

A new series of stamps may be expected shortly as a consequence of the recent death of Grand Duke Adolphus.

News from Luxemburg says that all the obsolete postal issues of that duchy were demonetized January 1, 1906.

Japan has issued some postal cards in glorification of Admiral Togo and the manner in which the war with Russia was ended. They are described as beautiful and elaborate, being printed in gold and colors.

The square 5 pence green New South Wales is known as the "Grand Stamp of Philately." On December 1, 1905, it had been in use continuously for 50 years as an adhesive postage stamp and has always been printed from the same steel plate.

Labuan a Crown Colony

The London Times on December 7, 1905, says: An agreement has been concluded with the Sultan of Brunei which provides for the appointment of a British resident with powers to control the general administration of the state. As a matter of convenience in giving effect to this arrangement, it has been decided that his Majesty's government shall resume the responsibility of the government of the Crown Colony of Labuan, the administration of which has been entrusted for some years to the British North Borneo Company.

"The new arrangement will come into force on January 1st next."

Which all means that the North Borneo Company will no longer control the postal issues of Labnau, and collectors will be spared a new series of rubbish, canceled to order, every little while—Labuan and North Borneo stamps from 1894 to 1904 are a poor investment for stamp collectors, many of whom exclude them from their collections.

Would be Appreciated Here

The postal authorities of the Netherlands are inaugurating an innovation that it is not unlikely will be adopted by other countries in the postal union, to wit: carrying a stock of the stamps of other countries of the value of 5 cents, the denomination of the stamp required to frank letters from one country to another. There is great need of a universal postage stamp of the value of 5 cents. At present a citizen of the United States cannot write to a person in England and enclose reply postage because the 5-cent U. S. stamp would not be available for postage in England. Thus far it has been impossible to arrange for this universal stamp because of the slight difference in monetary standards of the various countries. This may be worked out later, but the Dutch government is going a long way toward solving the problem by carrying in stock the 5-cent stamps of the United States, the 2½ penny stamps of Great Britain, the 20 pfennig stamps of Germany, the 25 centimes stamps of France, etc. Thus a person in Netherlands writing to a man in this country will be able to enclose a 5-cent stamp to frank the reply desired. Following this plan the United States would carry on sale at its leading offices the stamps of England, Germany, France, Netherlands, etc., of the value corresponding to our 5-cent stamp. It is probable the matter will be brought to the attention of the United States postal authorities and a small appropriation may be set aside for the purchase of stamps for this purpose. Once made the appropriation would never have to be renewed as the revenue from the sale of these stamps would always buy additional supplies.

The Numismatic Sphinx

Wesley Sprecher: The 1851 silver three-cent piece is worth fifteen cents. Your other U. S. will hardly bring over face value. The 1 drelling of 1866 is a base silver coin of Hamburg and is of little value.—William S. Preston: There are so many of these Chinese and Japanese small brass coins issued, and in so many varieties, that it would be impossible to say further regarding your piece without a good rubbing of it.—F. R. Orchard: The half dollars of 1854 and 1858 are common.—Charles E. Pendarvis: The cent of 1836 and 1844 sell for from five to ten cents each.—D. H. Stager: Your 1799 dollar sells at the dealers for $2.75.—Geo. L. Carr: The twenty cent piece of the CC (Carson City) mint of 1875 is only worth face, unless in uncirculated condition. The 1802 cent, in good condition, sells for thirty-five cents. "Helvetia" on a coin signifies Switzerland. The other pieces you mention are very common.—Gilbert Grell: The English half-pennies you mention will not bring a premium.—Harold Bickelhauft: The cent of 1847 sells for about ten cents.—H. J. C. Fowler, Ind.: (1) Sweden, 50 ore, 1875; twenty-five cents. (2) Austria, crown of 1790; $1.50. (3) Germany, half crown, 1859; face value.—Lester Brown: (1) Denmark, 1771, 1 skilling; common. (2) French Colonies, 1827, 5 centimes; ten cents. (3) "Franklin" cent of 1787; in good condition is worth fifty cents. (4) English half-penny token; fifteen cents.—Harry T. Shipman: There are two varieties of the half dime of 1848, viz.: small and large dates. The first sells at the dealers for twenty cents; the other for $1.50. To obtain these prices they must be in good condition.—Leland R. Gilbert: Your coin is a 25 ore of Sweden. It is common.—E. H. Ingram: The quarter of 1854 is only worth face. The dealers charge twenty-five cents for a cent of 1822, if it is in good condition.—Dana Reid: The half eagle of 1850 will hardly obtain a premium.—Frank Jones: (1) New Jersey cent, 1787; thirty-five cents. (2) Spain, 1782, 2 reals; very common. (3) Papal States, 1802, 1 bajocco; twenty-five cents. The 1828 half cent sells for fifteen cents.—J. Sanford Williams: Your coins are from India, Austria (not Russia), Canada, and Demarara (British Guiana). They sell for from five to ten cents each at the dealers. Columbian half dollar of 1893, fifty-seven cents.—Linwood C. Fink: The Panama dollar is selling for $1.50 and the 2½ cent silver for fifteen cents. The latter piece will be withdrawn from circulation, it is said, on account of its small size.—Irvin D. Wolf: The last 1856 flying eagle cent sold at auction brought $8.50. The 1798 cent sells for about thirty-five cents.—Percy Kehew: Your rubbing is from a common 2 filler of Hungary.—David Williams: Your drawing is from a 2 faloos coin of Morocco. Its date 1216 is A. H. (after the Hegira or flight of Mahomet), not A. D. It is a common coin.—Almon W. Bushnell: (1) U. S. nickel three cent piece of 1867; face value only. (2) California half dollar, gold 1871; $1.50.—Ervin C. Perkins: Your coins are mostly quite common and worth little over face.—H. C. Frost: No premiums on the 1854 half dollar or the 1858 quarter.—Allyn Moser: The cents of 1834 and 1856 copper are worth from five to ten cents each. Your old coin of 1816 is an Austrian Kreutzer of little value.—Edgar F. Roung: Your drawing is from an East Indian rupee, worth about seventy-five cents.—D. A. Holbrook: The dime of 1857 will not bring a premium.—E. E. Hawkes: The half cent of 1804 is worth a quarter. It is one of the commonest of the old half cents.—L. A. Carpenter and R. L. Duncan: Face value only.—Archie S. Hall: 8,812,050 silver dollars were coined in 1904. So it can easily be seen there will be no premium on them.—"Collector": The 1858 half dollars were all without arrow points. No premium on them.—N. Embry: The Mexican peso (1867) of the Emperor Maximilian sells for $1.50.—Paul Downing: The quarter dollar of 1818 is worth seventy-five cents.—George W. Chapman: See answer to Archie S. Hall.—Russel Dickey: Your rubbing is from a 2 lira of Italy, 1883, worth half a dollar. The nickel cents of 1857 and 1858 are worth only face. The V nickel of 1883 face value only. Cent of 1847, five to ten cents. Others you mention are very common.—Earl Pierce Calhoun: The dollar of 1804 is very rare. Less than a dozen authentic pieces are known. The last one sold at public sale brought $1,100.00 and the party that bought it has refused twice that amount for it.—Harold Pierce: The half dollar of 1814 is worth eighty-five cents at the dealers. The old Spanish and Mexican silver bring no premium.—Robert Provost: A good 1829 dime sells for a quarter. Others face value only.—Clarence K. Appleby: France, 50 centimes of Napoleon III, 1867: face value only.—Ward Totman: Your questions are answered elsewhere.—Patton Hawkins: The ordinary quarter of 1853 is only worth face value. There is a rare variety without arrow points or rays that sells for about five dollars.—C. W. R. Swartz: See answer to last.—A. Z. B.: The half dollar of 1853 sells for seventy-five cents.—Earl S. Garand: The $5.00 gold pieces are mostly common. That for 1847 will not bring a premium.—Raymond Wright: The old Confederate bills are mostly quite common. The $500 and $100 you mention sell for about a quarter to ten cents each at the dealers.—Robert Barton: Your question is answered elsewhere in this column.—Arthur Waldelich: The dollar of 1800 sells for $3.00.—Hugo G. Lindblom: (1) Hesse Cassel, 3 heller; ten cents. (2) Poland, 1840, 10 groszy; twenty-five cents. (3) Finland, 1866, 25 pennia; fifteen cents. (4) Sweden, 1852, 1-32 rksdl; twenty cents.—H. Terry: The $2.00 Continental bill of 1777, and the $55.00 bill of 1779 sell for fifty cents each at the dealers. The 5 franc of Louis Philippe of France sells for $1.50. Others face value.

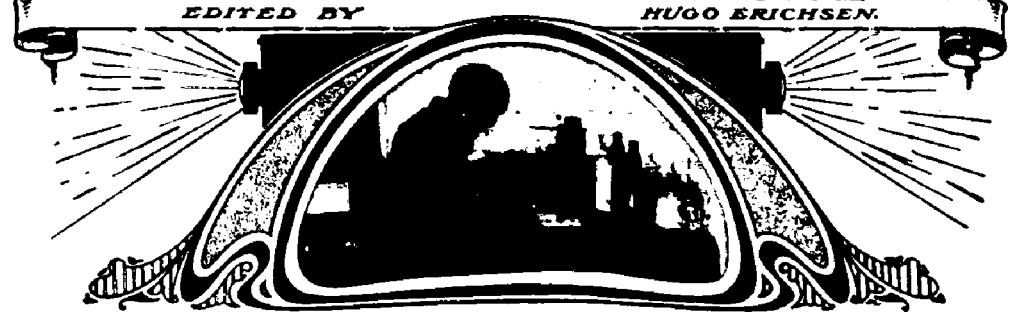
THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.



THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

Our Roll of Honor

Among the Brownie photographs that reached us during the past month, two are particularly meritorious and therefore entitled to Honorable Mention, namely "Sunset on Lake Champlain," by Donald R. O'Brien, and "My Cat," by Donald Smith. The Donalds are

FIRST PRIZE PHOTO
By Leon D. Rule, Lancaster, Kan.

at the head of the procession this month. The other successful contestants include Nick Bruehl, Perry N. Trask, Stanley Mytholer (for his "Home Portrait"), George Alexander Smith, Kerr Forman, James Andrews (for his "Sunset On Lake Erie"), Ray S. Zimmerman, F. H. Seitz, F. E. Foster, E. E. Trumbull, and Arthur H. St. Amour.

Toning Bath

The following is a formula for a little-used toning bath, which is, however, fairly economical, and gives excellent results. It can be used immediately after making up, and keeps well. Almost any brown or black tone may be obtained by its use:

Gold chloride	2½ grs.
Salt (common)	96 grs.
Sulpho-urea	5 grs.
Water	about 15 oz.

The amount of water may be varied considerably, according to the worker's desire for quick or slow toning and the color he desires his prints to be.

Chrome Alum Clearing Bath

The following is a good clearing bath—excellent for pyro-stained negatives:

Citric acid	1 oz.
Chrome alum	2 oz.
Water	20 oz.

The plate, after fixing and well washing, should be immersed in the bath for about three seconds, or longer if the stain is not removed. It should then be very thoroughly washed in water.

Ground Glass Varnish

Gum sandaras	2½ ounce
Gum mastic	½ ounce
Ether	24 ounces
Benzole	6 to 18 ounces

The quantity of benzole determines the nature of the matt obtained.—Ex.

Our Prize Pictures

Leon D. Rule, of Lancaster, Ks., the first prize winner of this month's competition, is an artist with the camera. His "Where The Frost-King Reigns" is one of the most beautiful photographs of winter scenery we have ever seen, full of delicate tone gradations and interesting from a pictorial point of view. "In The Swimming-Pool," by M. Hornback, of Dorsey, Ill., awarded second prize, requires no explanation. Some city boys and most country boys probably know of a similar place.

The Letter Box

Chester Simpson—I prefer printing out paper (glossy) for landscapes, with the exception of winter scenes, and the gaslight papers, so-called, for portraits, interiors, etc. On the whole I should say I prefer the P. O. P. because the process of making prints can be better controlled. Prints that reach us by the 15th of the month will receive attention in the issue of the succeeding month. Fred. E. Nesbitt—Yes, a print of the size you mention may be entered in our contests. To make a transparency, a large printing frame containing a sheet of clear glass must be used. A special kind of a plate is also required, which may be obtained by the dozen from any dealer in photographic supplies; each package contains directions.

Our Library Table

The beginner will find the dime series of photographic handbooks, published by the Photo-Beacon Co., of Chicago, of service. The booklets are well written and contain instructive illustrations. We have received the following: No. 1. Development, by Alfred Watkins. 2. Photographic Printing Processes, by Louis H. Hoyt. No. 3. Beginners' Troubles, by J. Edgar Ross. No. 4. The Elements of Pictorial Composition, by F. Dundas Todd, and No. 5. Isochromatic Photography, by R. James Wallace. The seventh edition of the practical Photo-Beacon exposure tables is also before us.

Each issue of The Photo-Miniature, a monthly magazine of Photographic information, published by Tennant & Ward, of New York City, is devoted to a specific subject. Our readers will be particularly interested in No. 4, "Photography Outdoors;" No. 5, "Stereoscopic Photography;" No. 8, "Photography at Home;" No. 14, "Street Photography;" No. 37, "Film Photography," and No. 57, "Winter Photography." These manuals are obtainable, separately, from the publishers, at 25 cents each.

Pictures of the Home Folks

It is the desire of everyone possessing a camera to make pictures of the home people as they see them. And every operator in every studio has heard and will continue to hear the hope expressed that "I wish I could get mother's or father's picture as we see them at home;" or, "I wish I could get baby playing as we see her at home," and such wishes. This is a desire of everyone that has pictures made, and the studio man is laboring under great disadvantages when he tries to please the customer who has such a longing. All pictures are sized up for their likeness to the people as we see them about the house, in certain occupations that have become familiar to us, and if the studio worker cannot

SECOND PRIZE PHOTO
By M. Hornback, Dorsey, Ill.

get the picture to show these little familiar traits in his work we are dissatisfied.

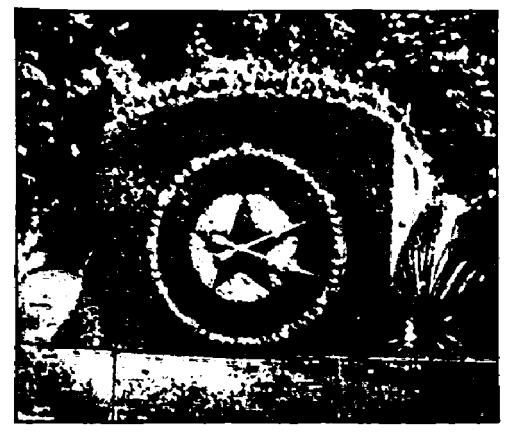
But in later years, nay, I may say months, it has become an easy matter for the amateur with his kodak, or whatever camera he may have, to make some of the very best pictures to be had.—Felix Raymer, in Recreation.

A New Contest

In our 1905 March and August issues we described apparatus for making enlargements from small negatives that could easily be constructed by amateurs at home. We presume a number of our readers have made one of these simple enlarging cameras and are prepared to enter the competition for enlargements herewith announced. Enlargements on bromide paper (unmounted, to reduce postage) may be entered at any time before September 1st, but must be accompanied by the negative from which the enlargement has been made. The prizes will consist of two books, "The Boy Courier of Napoleon," by William C. Sprague, and "The Boy Pathfinder," by the same author, the winner of the first prize having the choice between the two. To still further stimulate the interest in this competition, Mr. Sprague has kindly consented to write his autograph in each volume besides making a statement that the books are awarded as prizes in this competition. This will give them an enduring value, aside from the interest of the stories. If you have not yet made an enlarging camera, get out the above mentioned back-numbers of THE AMERICAN BOY and make one now. Don't miss this competition.

Current Comments

M. H. Tardy—Your photograph of three exposures of yourself on the same plate is interesting, but would have been improved if you had placed some kind of a platform to stand upon in front of the black curtain that served as a background. This should, of course, also be covered with black material. Trimming would not have corrected the defect to which you referred in your letter. The platform suggested will also enable you to place the background far enough back, so that its folds will not be defined. Try it again; we know that you can do better. Arthur J. Lamm—You should have photographed your white horse against the background of the barn, where it would have been sharply outlined, instead of against the wintry landscape. Herford T. Cowling—To take a marble statue against a light sky is hardly ever satisfactory; you would have obtained more contrast in the upper part of your picture if you would have photographed the monument on a cloudy day. H. H. Phillips—Your "Still Life" is unsatisfactory for several reasons. In the first place, the whole of the tabouret should have been included and more of its top shown; in the second, the composition could be improved upon, not only as regards subject but arrangement. Fruits and flowers would be more pleasing. George E. Allen—Your "Old Mill" has only one defect, namely too much foreground, but this can be remedied by trimming. Trim it on a line with the base of the tree and note the improvement. H. B. Terry—

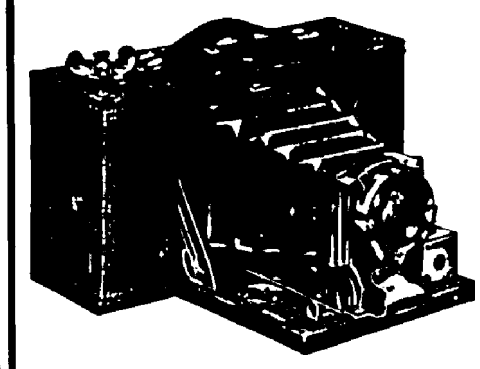


FLORAL CLOCK, WATER WORKS PARK, DETROIT, MICH.
Photo by Arthur H. St. Amour, 475 Hurlbut Ave., Detroit, Mich.

Your "Bunch of Blackberries" would have probably received a prize and would at least have entitled you to "Honorable Mention," if you had not amputated the feet of the foremost row of the group. Don't do it again

OUT FOR EASTER
Photo by E. B. Trumbull, Plattsburg N. Y.

"Daylight All The Way"



No. 2 Folding BROWNIE

Built on the Kodak plan. That means loading, unloading, developing and printing—all without a dark-room, It means simplicity and quality too.

The No. 2 Folding Brownie takes pictures 2½ x 3½ inches and loads in daylight for 6 exposures. It has an automatic shutter, with iris diaphragm, and a fine meniscus lens. It has the three-lock focusing device by which the front locks automatically at 8, 20 or 100 feet focus. With the focus set at the 20 foot mark the instrument may be used as a fixed focus camera. Reversible finder for vertical or horizontal exposures, two tripod sockets. Covered with a fine quality imitation leather, has full nickeled fittings; beautifully finished.

Price, - $5.00.

EASTMAN KODAK CO.,

Brownie Booklet, free at the Kodak dealers or by mail. Rochester, N. Y. *The Kodak City.*

BOYS WANTED TO SELL EVERSWEET PERFUMED LOCKET, also

Agent's Outfit Free.—Delight, Biscuit, Cake and Doughnut Cutter, Apple Corer and Strainer. 5 articles in one. Sells on sight. Large Catalog free. RICHARDSON MFG. CO., Dept. 13, BATH, N.Y.

Magic Puzzle Keys

Two keys securely caught together. Puzzles everybody how to get them apart until you show them the secret. Price with secret directions, 10 cts., postpaid, or 3 for 25cts. Bargain catalog FREE.

WM. CULLEN & CO., St. Paul, Minn.

125,000 Actual Count

Means Over 250,000 Readers

THE AMERICAN BOY has fully 250,000 readers, as 2 is a low multiple to use in estimating readers from circulation with such a publication as THE AMERICAN BOY.

1 CENT IS ALL IT WILL COST YOU to get our large Bicycle and Tire catalogues, showing the most complete line of high-grade bicycles, tires and sundries at LOWER PRICES than can be made by any other manufacturer or dealer in the world. Simply write us a postal card saying, "*send me your catalogues*," and all the catalogues will be sent you by return mail, FREE, postpaid. In them are fully illustrated and described every detail of construction of all our models; you will be shown the difference between high class work and cheap construction. We explain how we can sell bicycles with coaster brakes, puncture proof tires and best equipment direct to the rider at less than dealer's cost.

WE EXPLAIN HOW we ship to any person, anywhere ON APPROVAL without a cent deposit, pay the freight and allow TEN DAYS' FREE TRIAL on every bicycle we sell, and other new and marvelous offers. You will learn everything by simply writing us a postal.

WE WILL CONVINCE YOU that we can sell you a better bicycle for less money than any other house that ever made or sold a bicycle. These offers are genuine; our sole protection is *good bicycles, low prices*, and *pleased purchasers*. Deal direct with the factory, who make and guarantee their bicycles. YOU CAN MAKE MONEY without interfering with your other work. We need a Rider Agent in each town to represent us and are prepared to offer a very profitable opportunity to suitable young men who apply at once. IF YOU OWN A BICYCLE write to us anyway; there are suggestions and information in our catalogues that will be of immense value to you.

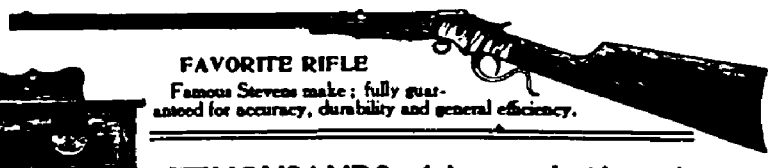
TIRES, COASTER-BRAKES, built-up-wheels, saddles, pedals, parts and repairs and everything in the bicycle line are sold by us at half the usual prices charged by dealers and repair men. Ask for our tire and sundry catalogue.

DO NOT WAIT but write us a postal today. Do not think of buying a bicycle or a pair of tires from anyone until you know the new and wonderful offers we are making. It only costs a postal to learn everything. Write it now.

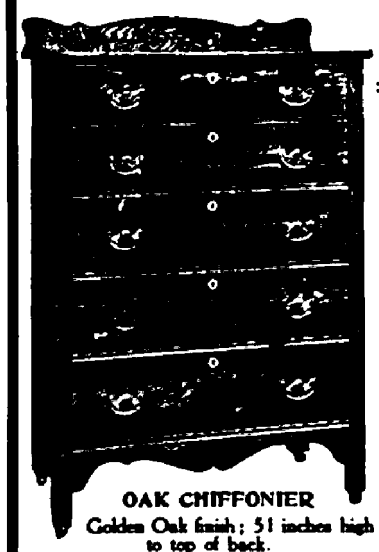
MEAD CYCLE COMPANY, Dept. C. 19 CHICAGO, ILL.

LARKIN

BOYS AND GIRLS EASILY EARN $10 PREMIUMS FREE



FAVORITE RIFLE
Famous Stevens make; fully guaranteed for accuracy, durability and general efficiency.



OAK CHIFFONIER
Golden Oak finish; 51 inches high to top of back.

THOUSANDS of boys and girls easily earn several Larkin $10.00 Premiums by taking orders in their neighborhood for

LARKIN LAUNDRY and TOILET SOAPS, TOILET ARTICLES, COFFEE, TEAS, SPICES, EXTRACTS, BAKING POWDER, ETC.

Any family will use $10.00 worth in a few weeks. Everybody appreciates the purity and goodness of Larkin Products, so you can quickly secure regular customers. Think how many splendid Premiums you can obtain in this way. You get a $10.00 Premium with every $10.00 order.

The Boy Mechanic *and* Electrician

A Permanent Department — Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns. — *Edited by Robt. G. Griswold*

Experimental Lessons in Electricity

No. X—Electrical Terms and Phrases

THROUGHOUT our series of lessons we have used several expressions, the exact meaning of which could not well be explained in as thorough a manner as is necessary to give our readers a thorough understanding of the work. In order to use the instruments that we have learned to make, we should know exactly how to use the proper electrical terms and units of measurement, so in this lesson we will go into the subject in greater detail.

In the first place, we can best understand our subject if we compare the terms used in speaking of electricity with those used in treating water, or steam or air. When we speak of water in a pipe, we at once think of it as having weight, and also a certain volume. In other words, we know that if we hold a pint measure under a faucet, we can draw just a pint of water. Then if we place the water just drawn, on a scale, we find that it also has weight.

And then if we try to hold our finger over the open end of the faucet when the handle is turned, we find that the water forces it off and the little streams of water fly off in all directions with great force. This teaches us that the water is forced through the pipes with a great deal of pressure, and, in fact, it is this pressure that causes the water to move and run out into the pint measure.

Now electricity may be likened to water in many ways, and the comparison of electric currents flowing along a wire to water flowing through a pipe is about as good as can be made for the sake of illustration. All of us know about water, so it will be very easy to think about the current of electricity replacing the water.

The most familiar term is undoubtedly the **volt.** The word volt is used to describe the pressure with which the current of electricity is forced along a wire, just as the water is forced through a pipe. We say that the water issues from a pipe with fifty pounds pressure per square inch, meaning that at every point along the pipe there is a pressure of fifty pounds on every square inch of the surface. And this is just what we mean by saying that a current has a **pressure of fifty volts.** The current cannot flow without some pressure behind it, and instead of using the word **pound,** we use **volt,** because electricity cannot be weighed like water—we can neither see, feel nor otherwise handle it as we can water, stone, sand or steam, but only know of its presence by the effect it has on certain measuring instruments.

And for this very reason it is difficult for the young reader to fully appreciate the meaning of these words, because he is trying to imagine "things" about something he has never seen, never handled as a solid form of matter, and cannot draw a mental picture of its form.

Therefore, when we use the term **volt** we mean the pressure forcing an electric current along a wire.

So much for the pressure. And now we come to the next term, **ampere.** We spoke above of measuring the water delivered by the faucet, in a pint measure. We know, therefore, that a pint of water flowed through the pipe, and also that it took a certain time, say one minute, to fill the measure. Then the water flowed through the pipe at the rate of one pint in one minute.

And the word **ampere** means the measure or quantity of electricity that will flow through a wire in a certain time. Thus, as we say a pipe carries ten pints of water per minute, we may say that a wire carries ten amperes of current. As the student advances further in his studies he will understand the more scientific definitions of these words, but this article is meant to help the young experimenter and not confuse him unnecessarily.

When the water is flowing through a pipe it requires a certain pressure to make it move due to the resistance offered by the friction with the sides, in turning bends and elbows. This resistance is also met with in electrical work, and it requires a pressure to move the current of electricity. This is the pressure we referred to by the term **"volt."**

This resistance also has a value and is referred to as the **ohm** and we say that a wire has a resistance of so many ohms. It would be confusing to go into the explanation of the exact value of the **ohm** but the reader may form a vague idea of the resistance of various wires (which is the most important at present) from the table published last month, giving the resistances of copper wires.

These three terms are the ones most commonly in use. The **watt** is a term expressing an exact quantity of electrical energy, and measures the work done per second. It is equal to the product of the pressure in volts, multiplied by the strength of the current in amperes. Therefore, a current of one ampere at a pressure of one volt, flowing for one second, will develop one watt and the watt is the one-seven hundred and forty-sixth part of a horsepower; or, a horsepower is equal to 746 watts.

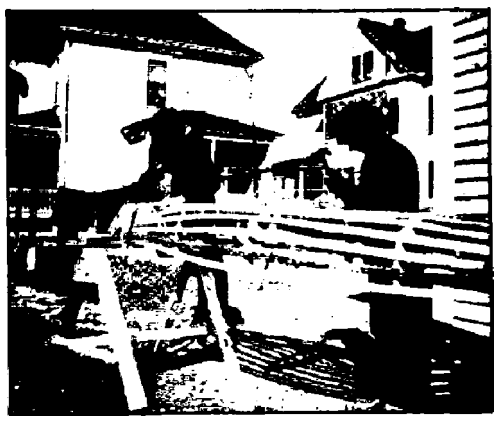
An attempt has been made to make this chapter quite elementary, but it is a difficult subject to deal with in a manner that can be readily understood by our readers, but it is very essential that a thorough understanding of the meaning of these terms should be had before proceeding much further along experimental lines.

"Lawton, Mich., Jan. 22, 1906.

"The School Record Badge was presented to me by my teacher, Miss Reed, last Monday morning. I am proud of it and thank you very much for sending it.

"Very truly yours,

"G. W. LAWTON."



BOY BOAT BUILDERS

QUERY BOX

What is the gauge of the enclosed wire? If I used this for the secondary and No. 20 for the primary of an induction coil, would the coil work? What is the difference between direct and alternating currents? What is the highest known voltage? How much of the enclosed wire will have a resistance of one ohm? How many volts would it require to heat this fine wire to a white heat? To melt it? Please tell me the names of some good electrical papers.—C. R. M., Princeton, Ill.

Ans. No. 36 wire. Yes, if properly insulated, as the sample you sent is bare. Direct currents are currents that are constant in their flow, or those that flow in one direction only, while an alternating current is one that is constantly changing its direction of flow, first flowing one way and then the other, often many hundreds of times per second. The highest known voltage would be hard to state as a million volts have been derived from some transformers, while lightning discharges are estimated to be much higher. At 68° Fahrenheit, a piece of this wire 18.54 inches (about 18.17-32") will have a resistance of one ohm. Your question probably refers to the number of amperes required to heat this fine wire, as the "volt" refers only to pressure. One or two amperes would heat this wire, while five or six amperes would probably melt it. The American Electrician and Electrical World and Engineer are well-known electrical magazines.

Will a motor of the following description run a 300-watt dynamo? Size 5"x5"x6½", steel shaft 6⅝"x¼", 4 volts, ⅛ H. P. Clears 10" fan and weighs 12 pounds. The dynamo will operate at least 6 sixteen candle-power lamps, will it not?—A. P., Markle, Ind.

Your description is rather vague, but if the motor will develop only ⅛ horsepower, it would not run the dynamo which is almost four-tenths (.4) of a horse-power. It would require at least a one horse-power motor to operate this dynamo to its full capacity owing to the large percentage of loss in transforming the energy of the motor into electrical energy again. This machine would probably not light to full power more than four 16 candle-power lamps, although calculations would give six lamps.

I would like to have you answer a few questions in your valued columns in THE AMERICAN BOY. Is the bobbin used in the voltmeter and ammeter made out of a solid piece of wood or four separate pieces glued together? Is the bobbin slotted out 3-16" all around so as to hold the wire? I would like to make a voltmeter reading up to 110 volts. How large a scale would I need and what size wire?—W. E. W., Columbus, Ohio.

The bobbin has the slot passing entirely around the core and is cut from a solid block, although four pieces could be glued together just as well. To make the instrument read to 110 volts it would be necessary to load the armature on one side by a small piece of lead so that 110 volts would carry the pointer or "spear" only to the other end of the scale. The best way of doing this is to drill a small hole in the armature, in which is riveted a piece of wire, hanging down perpendicularly when the voltmeter is level. Then a small bob is secured to this wire and adjusted until 110 volts just brings the spear to the end of the scale divisions. No. 36 wire is about the right size.

Can a satisfactory electro-magnet be made of a horseshoe magnet?—C. W. G., Muncie, Ind.

Ans.—A horseshoe magnet may be turned into an electro-magnet by winding each pole with insulated wire and passing the electric current through the coils. It must, however, be so wound and the current passed through it in such a direction, that the magnetic poles, due to the electric current, will be the same as those originally possessed by the horseshoe magnet.

Is there any method of transforming a motor into a dynamo?—S. W. S., Philadelphia, Pa.

Ans.—Any motor with a wire wound armature can be operated as a dynamo, provided there is sufficient residual magnetism in the fields to set up a current upon starting the machine.

How can dry batteries be re-charged?—F. G., Bristol, Pa.

Ans.—The re-charging of dry batteries is not, at all times, satisfactory, but the following method can be used with excellent results, and the writer's experience with this method has been that in some instances, a dry battery may be made to do service for a full year after it has been completely exhausted in its dry state. The paper casing is removed from the dry cell, and if the zinc casing has been varnished, this varnish is removed, either by sand-papering or scraping, until the bright metal is exposed. Then, with a nail, the shell is punched full of holes, and the cell placed in a glass jar large enough to hold it. A solution of sal-ammoniac is then made up and poured into the jar, filling it within an inch of the top. This solution supplies the necessary moisture, and the sal-ammoniac supplies that exhausted in the interior of the cell. Batteries fixed in this way will prove to give excellent service, but of course they are no longer dry cells. If it is necessary to have the cell in a dry state, the best way to repair same is to dig out the black asphalt composition in the top, pour out the contents, mix same with sal-ammoniac, and enough water to make a stiff paste, repack, and close, by melting the asphalt or pitch and pouring on the top. This will re-charge the cell and make it virtually as good as new.

Please give formula for the solution used in gravity cells?—C. A. T., Osage, Iowa.

Ans.—The solution used in gravity cells is made in the following manner. After the cell is set up, and sufficient water placed in the jar to cover the zinc, about one pound of copper sulphate (blue vitriol) is placed in the bottom of the jar. As this dissolves, the blue color gradually comes toward the top. When in action, there is a distinct line between the upper layer of zinc sulpnate, which is formed by the action of the free sulphuric acid on the zinc, and the copper sulphate solution. These solutions should always be kept separate, or at least the line of separation should be an inch or so below the bottom of the zinc. If it is required to use the batteries very shortly after charging, it is well to make up a solution by dissolving some zinc sulphate in water, and carefully pouring it on top of the solution of copper sulphate.

Does the first layer of wire on any coil come in contact with the core; that is, is the first layer of wire laid bare where it comes in contact with the metal core?—H. L. P., Jr., Mayoden, N. C.

Ans.—In winding any core with insulated wire, the greatest care is taken to thoroughly insulate the first layer from the core, and the insulation is not laid bare. If this was the case, the entire first layer would be short-circuited, and the magnetic effect, due to this layer of winding, would be entirely lost.

How many pounds of atmospheric pressure to the square inch are necessary to keep down any body of water?—J. P. N., Lambertville, N. J.

Ans.—Your question is rather ambiguous, but we presume that you wish to know what the pressure of the atmosphere is per square inch. At the sea level this pressure is 14.7 pounds per square inch, but this pressure is not the force which "keeps down" a body of water. Water remains in a level plane, due to the action of gravity, and not to the pressure of air. It is true that the human body supports a pressure of 14.7 pounds for every square inch of surface, or over a ton for every square foot of surface on our bodies. This means that for the entire surface of the body there is, perhaps, a pressure of three or four tons. There is no discomfort occasioned by this pressure, however, since the tissues of the body are permeated by air, which serves to equalize the pressure, inside and out. This fact is well illustrated in deep sea fishing, where the pressure of the water at a great depth is tremendous. There are certain fish accustomed to living in these great depths, which are of a decidedly flimsy and cellular structure. At times these fish are brought up in nets, and when they reach the surface, it is found that the release of this great pressure is sufficient to burst their bodies asunder, and they cannot be brought up in their whole state.

A Young Canoe Builder

Last winter Ray B. Whitman, of Pittsburg, together with his brother, succeeded in making a good canoe at a surprisingly low cost. The designs and some instruction relative to the work were secured by them from a firm that advertised in THE AMERICAN BOY not

long ago. A few books in addition on the subject of canoe building gave other ideas. The result was the "Bubble," whose dimensions are 11½ feet long, 30 inches in beam, 17 inches deep at the ends, and 10 inches deep at the center. The total cost of the canoe was $8.97. In addition the fittings, including sail, two paddles and cushions, cost $4.04. Work was begun in November, 1904, and finished in June, 1905. The "Bubble" is a canvas canoe, the "planking" consisting of 4¾ yards of No. 10 Duck canvas, 53 inches wide. The framework of the canoe consists of a pine keelson (to backbone the boat), stem and stern posts cut from a wide oak plank, 12 ribbands, including gunwales and 18 steam-bent ribs, equally spaced, each one inch wide and one-quarter of an inch thick and made of white oak. This framework was fastened together entirely with screws. Small copper tacks attached the canvas to the ribbands, these being outside of the ribs. There were just two things that were hard to do, namely, the steaming of the ribs and the stretching of the canvas tightly and smoothly. For steaming the ribs the boys made a long box, about six inches wide and high, with tight joints and a small hole in one side to which to fit the spout of the tea-kettle. The stretching of the canvas required only patience. They painted the "Bubble" three coats of light gray on the inside, and three of olive green and one of varnish on the outside. The woodwork is stained green and varnished. There are large lockers in bow and stern, and through the one in the bow the boys stepped a mast which supports the lateen sail of about 20 square feet area. They bought the paddles from a boat manufacturing company. The "Bubble" weighs about 45 pounds. In the picture, Ray sits in the stern of the boat and wears a big hat.

The Wizard of Menlo

What the world needs is men with the grit to work steadily on whether it applaud or hiss,—and that is the sort that

THOMAS ALVA EDISON, GREATEST OF TODAY'S PRACTICAL SCIENTISTS.

arrived here on February 11, 1847, when Thomas Alva Edison was born in Milan, Ohio. To see him today one notes first his carelessness in dress and that he is under the average in physical development, but a longer look takes in a face where sit strength, humanity, and humor. This is the man who has invented more telegraphic appliances than any other living. The incandescent system sprang from his experiments. His name belongs on practically every megaphone, kinetoscope, aeroplane and phonograph in the market,—this is the "Wizard of Menlo Park," cleverest of all present-day scientists.

It's a tremendous amount of work to be accomplished in fifty-eight years. What is the philosophy behind it? "I work as long as I feel like it," Edison himself puts it, "but my life is essentially quiet. I don't worry. I'm fond of fun. I have as little as possible to do with men who devote their whole time to piling up money. I take a little outdoor exercise (not much)—and I don't play golf. I guess that's all." But it isn't, for the wizard once wrote: "All things come to those who hustle while they wait." That's the real secret of Edisonian success.

There is perhaps another element behind these achievements: Edison has ever been a voracious reader. The other day he said: "Reading's a good thing—but once it came within an inch of being death to me. I was telegraph operator in a western town, and my pay permitted my buying books only at auctions, when I chanced on a bargain—a huge bundle of magazines for $2. 'Good Night' signal never reached me till three a. m., and then I hustled home to unwrap my treasure. As I hurried along my back street, 'zipp,' went a bullet past me! You can guess I stopped quick. Up came a puffing policeman, gun still smoking. 'What ye got there?' he panted, 'and why didn't ye stop whin Oi told ye to?' I had been too busy thinking of my bundle to hear him, and, as he said disgustedly when he had ripped open my innocent periodicals: 'Had Oi been a purtier shot ye'd niver had rid thim at all.'"

1905 in the Patent Office

The year 1905 broke the Patent Office record. The total receipts were $1,850,000, and the department enjoyed the distinction, rare in Government affairs, of paying its own expenses and turning over to the Treasury a profit of $327,000.

More than 31,000 patents were granted during the year, that being the largest number in the history of the office. At this rate the total number issued since the establishment of the department will soon reach the million mark.

Just now the automobile industry is the chief field for the inventor. There has been a great falling off in patents on agricultural machinery, where there is supposed to be little room left for invention.

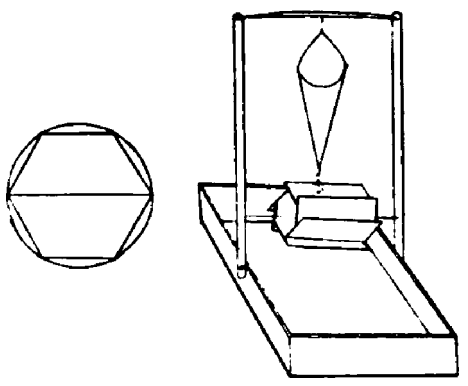
How to Make a Sand Wheel

By RUTH BRADEN

George had been to the exposition and had seen the representation of an old-time grist mill with real water flowing over its many-slatted wheel. Being immediately filled with the desire to make a machine of his own on a small scale, he ran over in his mind the difficulties in the way of using water for the purpose. How would sand do? Good idea! Sand would not soak into things, and would also for this reason be less liable to objections from his parents. That very afternoon he set to work. I will tell you how to follow out his ideas:

First, procure a broad, shallow box about the size and shape of the kitchen table drawer—only don't take that—and nail to it an upright framework about a foot and a half in height.

Next, make two regular hexagons, or six-sided figures, out of some heavy cardboard, as follows: With a radius of two inches draw a circle. With the same radius as a measure, mark off the circle into equal parts and join the



points by straight lines; the lines will be of equal length. Cut out the hexagons, punching a tiny hole in the center of each; these pieces are the ends of your wheel. You will need six oblong pieces, 3x5 or 6 inches, for slats, and the short edges of these are to be mucilaged over the edges of the hexagons, each one projecting about an inch beyond. Run a stiff, smooth wire through the wheel and fasten the ends to the upright pieces of the framework.

Now make a large cornucopia of some tough, stiff material like building paper, or a piece of an old window shade, leaving a tiny hole at the apex. Suspend this in such a way that when filled with finely sifted sand, the sand will fall in the proper place upon your wheel. The cornucopia is better for this purpose than a funnel, because the size of the little hole at the bottom can be regulated.

If properly constructed, the little wheel will turn merrily round and round for a long time, until the sand in the horn has to be replenished. Perhaps you can go even further than this and contrive to make of it a little motor with which to turn some miniature machinery of your own.

A Miniature War Ship

Boys who attended the World's Fair at St. Louis will remember seeing the "Battle of Santiago," one of the great attractions of the exposition. These boys will be interested in our picture reproduced from a photograph of one of

the war ships used in the exhibition, the photograph having been taken by Chester A. Kennedy, of St. Louis, age 14. Just a few minutes before he took the picture the boat had arrived from the factory and was being made ready for service.

Newport, R. I., Boys Cripple the Navy Department

There are said to be nine boys at Newport, R. I., possessing effective wireless telegraphy apparatus, and that in consequence of their operations the atmosphere is so disturbed that the expensive government plant nearby has had to suspend operations; in other words, the boys so filled the atmosphere with dots and dashes that the operations of the government apparatus was greatly interfered with. What will happen when the boys all over the country get into the wireless telegraphy business? The result will be such a jumble of words, that no one can give or get a message.

One of the Newport boys, Lloyd Manuel, age 17, sits beside his wireless apparatus and picks out of the air all the messages that are sent from the government station to the Fall River steamers as they come down the bay. Manuel got the wireless fever some little time ago, and after that it was impossible to keep him in school. He began studying electricity when he was 13. First he got nine dry batteries and placed them in series multiple, and then he obtained a Massie coherer. Later he begged two old telephones, wound them anew to render them a little more sensitive, transformed an electric light globe into a potentia meter, and began to pick messages out of the air. He built a station in the backyard, and saved enough money to buy a Ruhmkorff coil. Now he is able to transmit messages for a distance of two miles.

Another boy at Newport, who is making a success of wireless telegraphy, is Chas. Fielding, Jr. His apparatus is the most complete one in operation among the boys. He has had the advantage of professional advice. Recently he read a message from a ship forty miles at sea. "Send an ambulance to the dock for a boy with mumps," he heard her say, and then he heard the answer buzzing through the air, "Aye, aye." Fielding is 16 years of age, and has been a telegraph messenger for three years. It was only last December that he began trying his hand at wireless. The cost of his apparatus was about $30.00.

First he used a carbon receiver made out of two old electric light carbons. He could hear with its use, but it did not suit him and he discarded it. Then he got an electric light bulb and filled it with acid, and his success was better. His first pole was elevated above the roof of his home only eight feet. Now he has two fifteen foot poles rising about forty-five feet above the level of the sea. The first coil he had he made by winding No. 14 wire around a wooden cylinder.

Then Fielding decided to go into transmitting. He took an old battery jar and wound it with many feet of ordinary No. 4 copper wire, and thus he developed a tuning coil. At a garage he purchased a discarded automobile coil for a mere song and added it for purposes of induction. Old nails driven into a pine board made gaps for the sparks to jump, and then Fielding found that he could send. Since then he has improved his apparatus step by step, the board and nail sparker having given way to zinc. Recently Fielding has raised the power of his battery from nine to forty cells, and since then he has found that he has interfered with the navy wireless on several occasions.

Other home-made apparatus is owned by William H. Comstock and Joseph Willoughby.

The Coon Hunt

By VICTOR A. HERMAN

De moon am full, de night am ca'm,
De woods am white wid snow;
Cum erlong Remus, Jaspeh, Sam—
Down in de swamps below.
Torches red fum de lightwood lawgs
Will keep de snow paff light;
Bring dem sticks en bring dem dawgs—
Deh's fun foh all tonight.

Remus:
"Luk et de sinneh up det tree!
Bless de Lawd, he grinned et me;
He shook his hed en he showed his teef,
En grinned et de dawgs down underneaf!"

Jasper:
"Keep still deh, you onry pup!
Cum heah, Remus, lif' me up;
Ah'll shake det tree en Ah'll bring him down—
Ah cleeh he weighs sum twenty poun'."

Sam:
"Ol' Brer Coon is es sly es kin be,
He hide hisself in de hollow tree;
Yu reach foh him he nip yo' thumb,
En down he go in de heaht ob de gum."

Midnight cum en midnight gon',
Heah det spooky owl;
De gatepos's blink en de grabeyahds yawn—
En de ebil spirits prowl.
What's det soun' down bac' ob de hill?
What's det peepin' fro de trees?
Ah cleeh Ah feel a creepy chill
Det ketch me by de knees!

Remus:
"Hesh! Hesh! Hesh! Did yu heah det soun'?
What's det movin' in de grabeyahd groun'?
Ghos' lak cloud am on de moon—
Huhhy up, man, en lan' det coon!"

Jasper (up the tree):
"D-deed, Ah cleeh Ah'm s-skeehed to deff.
Han'ts to de right en han'ts to de lef';
Sumfin in a shroud flyin' in de aih,
Chill mah bones en rais' mah haih."

Sam:
"Light det torch. Ah'm skeehed in de dahk.
Lawzee, how dem coon dawgs bahk;
Lim's am crackin', he'll cum down soon—
Ketch him! Sic him! Grab det coon!"

(Going Home Chorus):
Pass det grabeyahd, hol' yo' bref',
En hol' det bush-tail sinneh;
Han'ts to de right en han'ts to de lef'—
But we's got tomorrow's dinneh!"

—N. Y. Times.

Chemistry for Boys

Several requests have been made for short talks on Chemistry, and considerable interest has been shown on the part of many of our readers in this intensely interesting subject. A series of short articles will be given in these columns for those interested in experimental work, and a knowledge of chemistry is very valuable to every electrician.

Let us first consider what the science of chemistry really is, and what it teaches. Chemistry is that science which tells us how matter is made up—of what it is composed. By its aid we learn how to make medicines, paints, colors, etc., and also how to find out the substances that have been mixed together to make something else.

In the first place let it be understood that the study of chemistry is not dangerous, but is one of the greatest pastimes and is intensely interesting. It is not necesary to have a large room fitted up as a laboratory, with expensive apparatus, etc., although this is a great help. But almost every boy may have a corner in some attic room where there is good light. A table or bench may be fitted up, with a row of shelves back against the wall, for bottles.

Cleanliness is one of the greatest requisites in chemistry, and every boy should start right by having and keeping everything as clean as "a new pin." Wash every piece of apparatus or bottle, after using, so that it may be clean for the next time. Have two or three drawers beneath the table for apparatus, test tubes, etc. The top of the table should be covered with white oil cloth, or better still, coated with a layer of Portland cement, which, when hard, gives a table unsurpassed for wear, and it can readily be kept clean. Acids dropped upon it do not injure it if wiped off at once, and there is no danger of fire from laying hot things upon it.

Of course it is necessary to have a supply of bottles, but there are few boys who cannot secure almost an unlimited quantity in some rubbish heap. Take only the cleanest of these and, if possible, use white glass only. You may find some with glass stoppers—these are just the thing for acids, as the stoppers will not corrode. When you have a supply of say twenty or twenty-five, some large and some small, wash them thoroughly until perfectly clean inside and out, dry, and place on your shelves.

A supply of different sizes of corks should also be obtained, and some glass tubing, which may be obtained from a druggist. This should be of assorted diameters. Two or three feet of rubber tubing will be sufficient for connections between the glass tubes; it should be of a diameter that will fit tightly over the glass tubing. As much of the apparatus may be made as needed, its description will be given as required.

While a source of running water is very convenient, it is not absolutely necessary. A very good substitute may be made by placing a bucket on a shelf near the ceiling, and leading a piece of glass tubing from it to a large pan on a box beside the bench. A short length of rubber tubing slipped on the lower end, over which a spring clothes pin may be snapped, makes an excellent faucet. By pressing the clothes-pin together, the rubber tube opens sufficiently to allow the water to flow, and releasing it presses the tube together again. It is not necessary to use great quantities of water in this work and, with care, a bucket full will last through several experiments, as it is used chiefly for washing the apparatus.

Chemistry

From letters received from many boys we are led to believe that our series of articles on chemistry begun this month will prove a popular feature of THE AMERICAN BOY.

An Offer To All Poorly Paid Men

To every man, and woman too, who is struggling along against adversity, striving to make the best of an uncongenial position and a poor salary, the International Correspondence Schools, the standing and achievements of which are known and honored everywhere, makes this offer: If you will indicate by a mark like this X on the coupon below, which occupation you prefer, the I. C. S. will *at its own expense and without obligation on your part*, show you how it is not only possible, but actually easy for you to enter that occupation, not as a poorly paid apprentice, but with all the qualifications necessary to command a good salary.

Have you enough curiosity to ask HOW?

International Correspondence Schools
Box 1278, Scranton, Pa.

Please explain, without further obligation on my part, how I can qualify for a larger salary in the position before which I have marked X

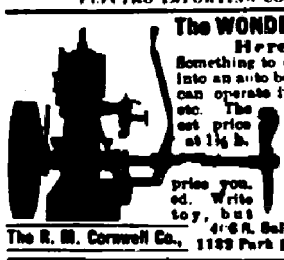
Earn an Electric Engine

Boys Would you like to OWN an Electric Engine that will run machinery for you? Write today and we'll tell you how you can EARN one. With it we give complete instructions and a practical lesson on electricity that you can understand. A dry battery runs the engine.

Parents Let your boy answer this advertisement. If he wants to, it is an indication that he is inclined toward mechanics. His desire perhaps foreshadows a successful career in this line of work. Our system of instruction is unique and modern. Help the boy develop naturally. Engine, lesson (with diagrams), and complete instructions delivered for $1.25.

THE DIAMOND ELECTRIC COMPANY
302 Forrest Street, Warren, Ohio

PATENTED FOR WIRELESS TELEGRAPH, "Tollmac No. 2" Comp. Outfit; works up to 1 mile, $13.80; Agts. wanted; Pamphlet. Spark Coils, with vibrator; 1 in. spark $4.80. By mail—Geissler Tubes, 75c. Voltmeters accurate, gun metal finish, 2½ in. face, 1-12 volts, $3.70 Comb. Volt-Ammeter, with leather case, $3.75. Tubular Sockets. Light $3.10; Pocket Flashlight, 60c. New elec. cat.
ELECTRO IMPORTING CO., 87 Warren St., New York



The WONDER GASOLINE ENGINE
Here It Is At Last!
Something to convert the row or sail boat into an auto boat. It is so simple any one can operate it. No valves, gears, cams, etc. The simplest, strongest and low-cost price you outfit on the market. Rated 1½ h. p. furnishes nearly two. Solid or reversing propeller. Jump spark. Prices will surprise you. Supply is going to be limited. Write today. This is no toy, but fully guaranteed.
The R. H. Cornwell Co., 4 to 6 N. Salina St., SYRACUSE, N. Y. 1199 Park Row Bld., NEW YORK CITY.

WONDERFUL 10c. WIRELESS TELEGRAPH
With our little outfit you can send messages across a large room or from one room to another; complete with Morse Alphabet and full instructions 10 cents. FEARLESS MFG. CO., Dept. 21, Norwalk, Conn.

Mention This Paper When Answering Ads.

ELECTRICAL SCIENTIFIC NOVELTIES. Models of Locomotives, Railways, Dynamos, Water Motor Dynamos and Gas Engines. Trains and Street Cars operated by dry batteries. Catalogue B, sent free, contains full information. THE CARLISLE & FINCH CO., 240 East Clifton Avenue, CINCINNATI, OHIO.

The American Boy

Copyright, 1906, by The Sprague Publishing Company

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co., Majestic Building, Detroit, Mich.**

WILLIAM C. SPRAGUE, - - President and Editor.
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only, and in the case of the coins, a rubbing.

Don't send in answers to the Boys' Brain Sharpeners without reading the rules published on the page on which the Sharpeners appear.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

Rules

In sending in solutions to the posers in this department, observe the following rules:

1st. Address your envelope to PRIZE PUZZLE DEPARTMENT, AMERICAN BOY, DETROIT, MICH.

2nd. Mail your answers or solutions so they will reach Detroit not earlier than the 10th day of the month of issue and not later than the 15th. Answers received before midnight of the 9th and after five o'clock of the afternoon of the 15th will not be considered.

Th prizes in each case will be given to the boy whose solution is the first correct one read by us in the order of the opening of the mail beginning the morning of the 10th.

3rd. Our Editor's decisions are final. He cannot take time to correspond with contestants, who, each month, number thousands.

4th. Write nothing in your letter but the answer to the puzzle. If you have anything else to say, write it on a separate sheet of paper, giving your name and address on each separate sheet.

5th. If you send solutions to several puzzles, send them on separate sheets of paper, and put your name and address on each.

Both are Right

A Connecticut boy, Dana Sibley Merriman, of Bristol, criticises Harry A. Linch, of Steubenville, Ohio, who won the prize in the Ohio essay contest as announced in our March number, in that young Linch says Henry Ward Beecher and Artemus Ward were from Ohio, and that Artemas Ward commanded the Colonial troops at Bunker Hill before Ohio was ever thought of. Our critic will notice that the essayist did not say that Mr. Beecher was born in Ohio, though perhaps it was what he meant to say. Mr. Beecher lived for a time in Ohio, but was born in Connecticut. The Ohio boy does not mention the name of Artemus Ward at all. The only Ward he names is J. Q. A. Ward, the sculptor, who was born in Ohio. The Connecticut boy should remember, however, that there are two Artemus (Artemas) Wards; the one a soldier of the Revolution, whom he has in mind in writing, and the other a Toledo (Ohio) humorist who died in 1867; his real name was Charles Farrar Browne. There is a difference in the spelling of Artemus, the soldier's name being Artemas and Mr. Browne's pen name being Artemus.

Why I am Proud of My State

It was quite a difficult matter to decide which among the many good essays sent in from Colorado was really the best, but the prize was finally awarded to Harold T. Davis, of Delta, for his practical and comprehensive little essay.

It gives us pleasure to name the following boys who submitted essays especially worthy of mention: Frank W. Barnett, Winslow Baker, Harlan Wolfe, Joseph B. Hosmer, and Leonard E. Sweitzer.

The names of other Colorado boys who submitted pleasing essays are as follows: Carl Wright, Harry Jenison, Myrna Lee Wight, Neil West Kimball, Ewell Clark, George P. Dennis, Willie Haskell, Chris Tong, Leslie Brewer, George Sears, Wilford M. Dean, Robert Chedister, Jr., Wellman Grigsby, Linn Amos, Joe C. Olin, Joel Johnson, Frank A. Fisher, David M. Miller, Abner Nichols, Ernest T. Gray, Philip Moulton, Oscar Lewis, C. A. Brockway, Francis P. Kennedy, Charles Harrison, Nicholas Robinson, Lester B. Harper, Harold Smith, Carl Wilson, Harry B. Flora, James P. Lewis, Milton S. Kimball, Arthur Lyon, Earl R. Adams, David Pence, Vincent Beckett, Clarence Paul Short, Paul Greedy, Joe Horan, James Beattie, Edward Shearer, Edward T. Leech, J. Mark Shields, Avery Bent, Sidney A. Mewhirter, Arthur B. Rakestraw, Homer J. Griffin, Charles N. Lee, Fred S. Bailey, Morris Baruch, Norvin Evans, Denver Vickers, Leo Williams, Robert Ross, Paul Reed Peak.

Among the reasons given by Colorado boys for being proud of their state were the following: Good climate, almost perpetual sunshine, beautiful mountain scenery, bounteous supply of minerals, including gold, silver and lead in great quantities, also coal, iron and building stone; the Garden of the Gods, near Colorado Springs; precious stones, including sapphires, opals, garnets, jasper and onyx; Mount Blanca (14,404 feet high), Pike's Peak, Long's Peak, the Royal Gorge, the Great Stone Wall, the Seven Falls; wonderful feats of engineering skill in building railroads over, around or through mountains; abundance of fish and game in the mountains; great numbers of cattle, sheep and horses raised; the development of agriculture by irrigation, making it possible to raise enormous quantities of sugar beets, and to produce the famous Greeley potatoes, Rocky Ford cantaloupes and Grand Junction peaches, as well as other varieties of fruit and vegetables; the cog-wheel road running to the summit of Pike's Peak; many mineral springs; relics of the Cliff Dwellers in Las Animas county; the "Rocky Mountain Canary;" the Mount of the Holy Cross (the snow remaining always in two great crevices, forms a large cross on the side of this mountain); many health resorts where invalids from all over the world are benefited by the dry, invigorating atmosphere; thirty public libraries, containing about 60,000 volumes; excellent educational system, including the State University at Boulder, the School of Mines at Golden, the Agricultural College at Fort Collins, the Normal School at Greeley, and the School for the Mute and Blind at Colorado Springs; the new United States Mint at Denver; the only state that ever had three governors in one day (This occurred in the spring of 1905, when Mr. Adams, elected in November, served until near noon; then Mr. Peabody, who was declared governor by the jury, took the oath of office and resigned immediately in favor of Mr. McDonald, the third governor); the city of Denver is said to be one of the cleanest and most beautiful cities in the country; the fine capitol building at Denver; Judge Ben Lindsey, of Denver, the well-known friend of boys.

WHY I AM PROUD OF COLORADO

Colorado Prize Essay, by Harold T. Davis, of Delta, Colorado.

To me, Colorado, the home of fresh air and bright sunshine, is the finest, and, if I may use the word, the most glorious state in the Union.

First, its history began in 1803, when part of it was acquired from France in the Louisiana purchase, and the remainder in the Mexican cession of 1848. It was explored by the daring adventurer, Coronado, in 1540 on his hunt for the golden cities, of which de Vaca had brought glowing descriptions.

Mentioning the golden cities naturally leads one to think of mining. Quantities of the yellow metal are found yearly in rich Colorado, the tremendous sum of $23,534,531 being realized from it in 1898. In the same year, Colorado ranked first in its output of the yellow and the white metal, the latter being valued at $13,690,265. Lead and copper also yield large annual incomes, while coal is found in great quantities in the valuable hills of this state.

Agriculture follows next with its countless numbers of irrigated acres, 5,000,000 in all, half of these already under cultivation, wheat, oats, alfalfa, potatoes and fruit being the leading crops, and yielding a large yearly income to the farmers.

Fruit is one of the largest products. In 1894, 100,000 acres were under cultivation, yielding the sum of $3,000,000 to the planters.

Stock raising is an important industry on the western slope, 1,000,000 acres being used for grazing purposes, and many thousands of dollars in value of the cattle and sheep raised. The number of sheep amounted in 1898 to over one million and a half, making Colorado rank among the great wool-producing states in the Union.

The forests of this productive state are very valuable, 13,000,000 acres of land waiting to be cleared by the woodman's axe, containing chiefly, yellow and white pine, spruce, pinon, red oak and black cherry.

In these large forests there lurk many wild beasts to be exterminated by the huntsman, the variety being mountain lion, elk, deer, grizzly, brown and black bear, antelope, etc., while in the tiny brooks that twine among the forest giants, and in the small, picturesque lakes of the mountain regions are several species of trout.

The schools of the state are excellent, there being 41 public high schools and several important colleges and universities.

Colorado contains one of the largest cities in the western part of the United States, Denver, called and being, without doubt, the Queen City of the Plains.

The climate is the best that can be found, fresh, invigorating and healthful, and consequently many invalids are drawn to the bracing mountain air.

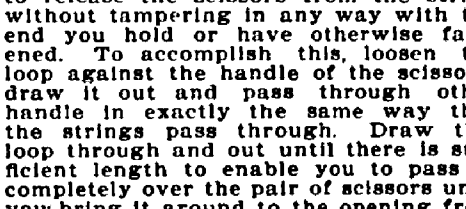
And last, but not least, there is the scenery. The most beautiful views that can be found in all the world are in Colorado, the world-famed Pike's Peak and the Mount of the Holy Cross being two of the beautiful sights; and the two other large peaks, Long's and Harvard, are seen bathed in eternal snows, while numerous hot springs are found all over the state. There are also several natural parks, the best known being the North Park, the Middle Park and the South Park. The famous Garden of the Gods is also in this state.

Should not these things fill one with pride? Colorado, to me, rises far above all the other states in this grand Union of ours. It may be my pride, but people cannot but admit that Colorado contains everything that can lift it to fame and success.

Try This With a Rule

Many a person, who could master the most difficult mathematical problem, is puzzled by a simple catch—sometimes so simple, that they laugh at their own dullness when finally they know just how the thing is done.

The following is a simple catch, but a good one; its success depends much upon the remembrance of one or two important points. Hand someone an ordinary four-fold rule, being sure to see that the central hinge or two ends are away from him, and ask him to open out the folds three times away from him. It is impossible to do it from this position. After several failures, take it from him, and keeping the ends towards you and undermost, as illustrated in the sketch. With the right hand, first raise three folds; this is the most important part



and is the one we have had drawn; next open out the central hinge and finally the last fold.

In every case the move has been away from you.

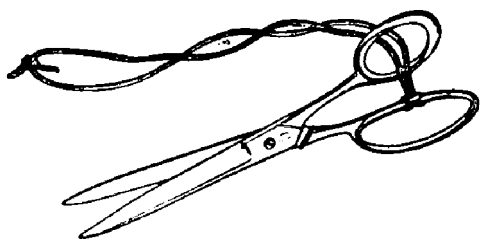
Commit to memory the exact position of the rule and how to start off right, and don't forget (when giving it to another to try their skill) to turn it over, as this action confuses them immediately.

A Good Trick

The following is a very good trick, and one which needs no special apparatus:

Take a piece of string, about half a yard long, and tie the ends securely. Now take a pair of scissors, and pass one end of your string through one of the openings in the handles of the scissors—then thread the other end through this and pass through the opening in the other handle. Now draw the loop light, and it should appear like that shown in the accompanying illustration.

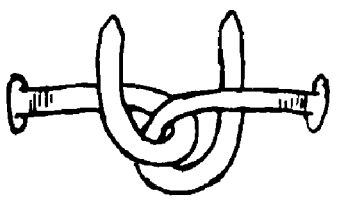
Next take the free end of the string and either hold it between the fingers or fasten upon a hook, and ask someone



to release the scissors from the string without tampering in any way with the end you hold or have otherwise fastened. To accomplish this, loosen the loop against the handle of the scissors; draw it out and pass through other handle in exactly the same way that the strings pass through. Draw this loop through and out until there is sufficient length to enable you to pass it completely over the pair of scissors until you bring it around to the opening from which you started. Keep your string free from twists during this operation, otherwise you will get it hopelessly entangled. If you follow these directions carefully, the loop will slip through the openings and your scissors are free.

A Wire Nail Puzzle

Fred Wright, of Philadelphia, describes a novel puzzle that can be made by taking two wire nails, each about four inches long and bending them as illus-



trated in the picture, leaving a small space where the nails cross. The puzzle is to get the nails apart and put them together again. In the right position they will come apart readily.

Edwin E. Hutchinson of Pearl Creek, N. Y., sends the following. Can you read it? Next month we shall tell you how.

stand take to takings
I you throw my

WHY I AM PROUD OF MY STATE

¶ To the Michigan boy who sends us before April 15th the best letter of not over five hundred words telling us why he is proud of his state—Michigan we will give $5.00; in addition, we will print his letter in an early number of The American Boy.

TRY THIS BICYCLE 10 DAYS FREE

WE WILL SEND YOU THIS BICYCLE to ride ten days FREE, and if you don't say it is the easiest running, highest grade, strongest, handsomest, most graceful, comfortable and easy riding bicycle you ever saw, the ten days' trial won't cost you one cent. Our FREE Bicycle Catalogue shows this great genuine ten days' free trial offer. $11.75 BUYS OUR NEW 1906 MODEL KENWOOD, the long famous $16.00 bicycle, strictly high grade, worth three of the bicycles sold by others at $15.00 to $25.00, a wonderful model, guaranteed for two years and offered on ten days' free trial, all fully illustrated and described in our new Free Special Bicycle Catalogue. In our Free Bicycle Catalogue we show our entire line of beautiful new 1906 model bicycles for men, women, boys and girls, the finest wheels ever put on the market, and our low prices, liberal terms, guarantees, free trial plan, offers, inducements and privileges will surprise you. Write at once for the FREE Bicycle Catalogue.

THIS SILVERWARE SET FREE

YOU CAN GET THIS HANDSOME INITIAL SILVERWARE SET (any initial engraved and complete in leatherette case) FREE if you buy from us or take orders for a few bicycles; or you can get your choice of a gun, camera, watch, clock, suit of clothes or many other valuable articles given FREE for sending us your orders. This astonishing offer is also shown in our Free Bicycle Catalogue. Write us a letter or postal now and say: "Send me your Free Bicycle Catalogue," and the big book with handsome pictures of all our new bicycles, showing every piece and part, why our bicycles are the highest grade bicycles made in the world the wonderful construction which makes them so easy running, so strong and durable, why we can make such wonderfully low prices, such liberal terms, such remarkable offers, such broad guarantees, the free silverware offer, our other offers of valuable articles free, everything will be sent to you at once by return mail, FREE and postpaid. DON'T FAIL TO GET OUR NEW 1906 BICYCLE PROPOSITION; it's a marvelous offer. Write this minute. Address,

SEARS, ROEBUCK & CO., CHICAGO, ILLINOIS.

WIZARD REPEATING
LIQUID PISTOL

Nickel-Plated 5 Inches Long. Pat'd

Guaranteed.

Will stop the most vicious dog (or man) without permanent injury

Perfectly safe to carry without danger of leakage. Fires and recharges by pulling trigger. Loads from any liquid. No cartridges required. Over six shots in one loading. All dealers, or by mail, 50c. Rubber covered holster 5c. extra.

PARKER, STEARNS & CO., 239 South St., New York, U.S.A.

BUY FROM THE MANUFACTURER CLASS PINS OR BADGES

For College, School, Class Club, Society or Lodge.

$100.00 For a Name

Sit down at once and write for particulars. We want bright, hustling boys, to sell our clever knife-pencil-eraser combination. It's the handiest, newest and most attractive little article you ever saw, and one that every boy, girl, man and woman will want. Each purchaser can compete for our $100 cash prize. You make large profits on all you sell. You do not pay us a cent until goods are sold. Write right away — for our proposition.

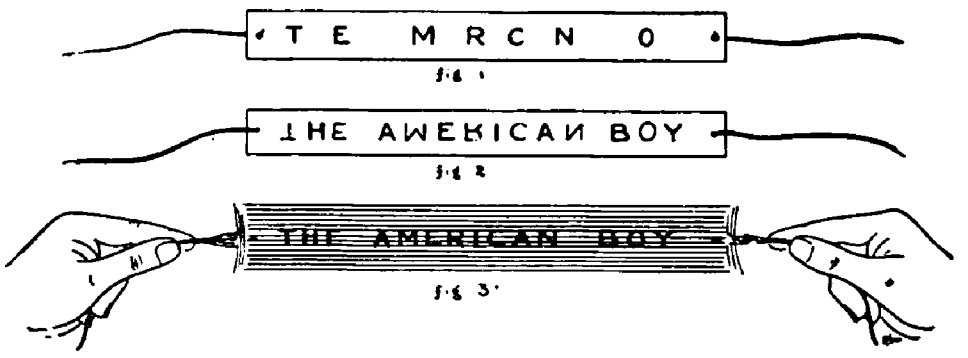
The Goldsmith Co., 810-E Lippincott Bldg., Philadelphia, Pa.

Magic Tricks

Five good tricks, complete apparatus, full directions, 15c. Illustrated catalog of all kinds of Magical Apparatus Free.

BAILEY & TRIPP CO., Box 415, Cambridgeport, Mass.

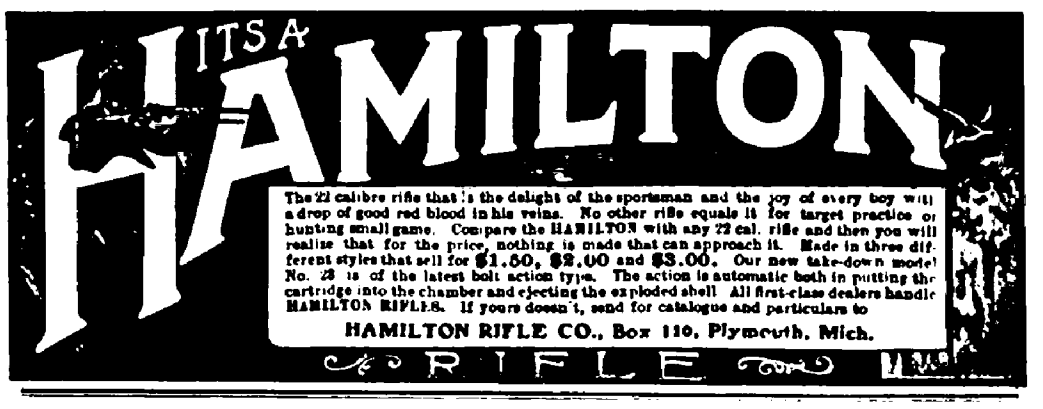
An Optical Illusion



Take a strip of thick white paper, about six inches long by three-fourths of an inch wide, and upon one side draw faintly in pencil the letters which form the words "The American Boy." Now pen over with ink every alternate letter, as shown in Fig. 1, and rub out every trace of pencil marks. Then turn the paper over and pressing against the window pane, so that you may see through, draw in the letters that you omitted before in their relative positions. The letters upon the other side should appear upside down when viewed through the paper, as shown in Fig. 2.

Next bore a small hole in the centre at both ends, and passing a short string through each, tie with a knot, so that they shall be secure.

Now, if the strings are held between the fingers and thumbs and twirled rapidly around, the eyes apparently see both sides of the paper at once, and the title "The American Boy" can be easily and clearly read.



An After Dinner Trick

There are few occasions when a good trick is more acceptable than while sitting around the table after dinner. Here is an interesting little trick, which is especially suitable for the dinner table, as a napkin ring is all that is required.

Take the ring and pass a forefinger through from either side. Now follow closely, for the next few movements constitute the whole trick. Turn the fingers around a few times within the ring and then, when the right finger is uppermost, as in Fig. 1, turn the left hand towards and the right hand away from you and bring the tip of each forefinger to that of its respective thumb.

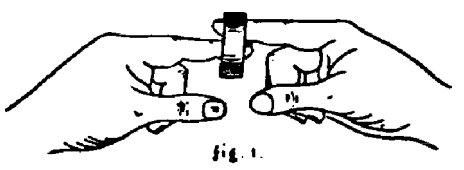


fig. 1.

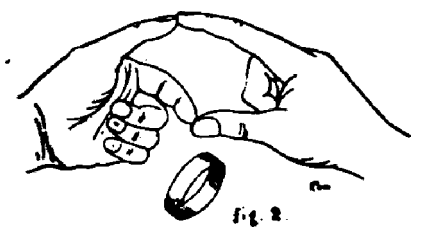

fig. 2.

Now the forefingers and thumbs are together in the centre of the ring, and if you have followed the directions correctly, the right forefinger will be against the left thumb on the one side, and the left forefinger against the right thumb upon the other. To complete the trick, keep the forefingers in contact with the thumbs of the opposite hands and gradually open out, as in Fig. 2, when the napkin ring will fall away without any apparent disconnection of your fingers from start to finish.

This trick will probably require considerable practice before you can perform it neatly and accurately, but it is well worth learning, and once learned is not easily forgotten.

Two From Kentucky

The following are sent in by Robert B. Cottrell, Owensboro, Kentucky:

o
BeD
GIRL

The answer to the first is "a little darky in bed with nothing over it;" to the second, "A cross-eyed girl."

How Long is It?

Martin Knutsen, Ridgway, Wisconsin, suggests the following problem: If a fish's head is as long as its tail and half its body, and its body is as long as its head and tail, and its tail is three feet long, how long is the fish? He says the correct answer is twenty-four feet. Figure it out, for yourself.

Two Good Ones

Orson Thorp, Redlands, California, offers the following: Out of four 9's make 100. Here is the answer:

99 9/9=100.

Arthur Strong, of Pontiac, Illinois, sends a puzzle that has appeared in THE AMERICAN BOY. He gives one that is new: Why is this gone? I D

The answer is, because it is (D) parted.

B Out of 13

Frederick Fischer, a New York boy, shows us how to make a capital B out of the figure 13. By folding the paper on which 13 is written, or doubling it on itself, he brings the curves of the 3 up against the 1, thus forming a very presentable B.

Wait

Another boy wants to know why we do not offer a prize for the best essay on "Why I Am Proud of My Country." Wait. Don't push.

1. Why is this number of THE AMERICAN BOY like a newly hatched chicken?
2. Why is this same chicken like a donkey's tail?
3. And why is an egg like a young horse?

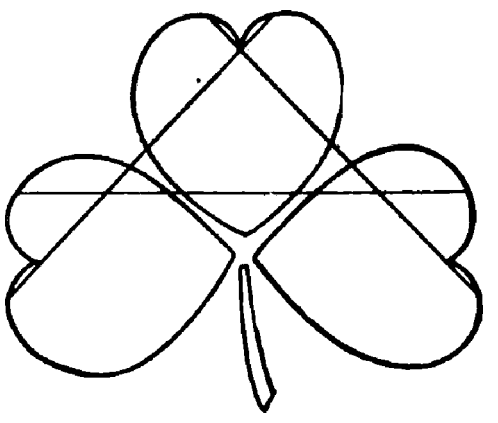
Prize—A good book. See rules.

Some of Our Prize Winners

The following won the prizes in the puzzle contests under the head of Boys' Brain Sharpeners, pages 158 and 159, March number:

American Cities in Anagram Form.—J. E. Carncross, Okee, Wisconsin. Answer: Detroit, New York, Indianapolis, St. Paul, Grand Rapids, Philadelphia, Los Angeles, Baltimore, New Orleans, Milwaukee, Pittsburg, Minneapolis.

The Shamrock Puzzle.—Coy E. Stotkard, McKinney, Texas. The accompanying diagram gives the solution to the Shamrock puzzle. The three hearts are divided into sixteen pieces by three straight lines.



Answers to Questions.—Charles O. Bartlett Boston, Ohio, R. F. D. 12. Answer: (1) March fourth. (2) It blows, it snows. (3) The wind blew, and the waves rose.

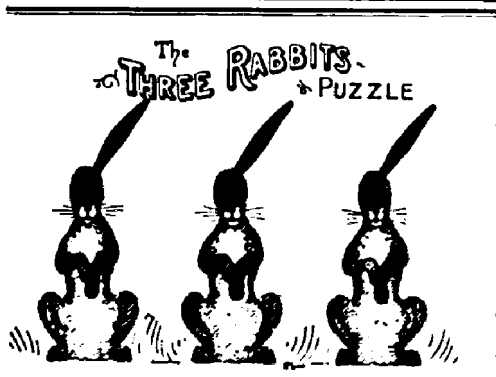
Pictorial Proverb.—A. Douglas Farquhar, Sandy Spring, Maryland. Answer: Hear twice before you speak once.

Prize State Essayists

The following are the states on which prize essays have been written, and the boys who have won the prizes:

Wisconsin—John Roberts, Racine.
Massachusetts—Frank Scribner, Jamaica Plain.
Texas—George Lee, Dallas.
Ohio—Harry A. Linch, Steubenville.
Colorado—Harold T. Davis, Delta.

Prize, a good book. See rules



Here we have three rabbits, each looking strangely one-sided—fact is, they have each lost an ear.

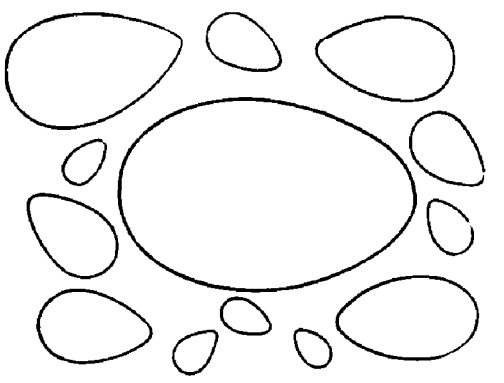
Now rabbits are not like crabs;—when the latter lose a member another grows in its place, not so with rabbits however. These three forlorn looking animals are relying upon the skill of our readers to restore their missing ears. We want competitors to copy the rabbits in pen and ink (trace them if you like) and so arrange them that each one shall be blessed with the use of two ears.

This is by no means a difficult task and will give those readers artistically inclined an opportunity to show their skill. Remember that a poor drawing in which the rabbits are correctly placed is preferable to a good one which is not correct, but that a good drawing and correct solution is better than either.

Prize—A good book. See rules.

An Easter Egg Problem

How many of the smaller eggs can you pack inside the largest egg so that none of their outlines overlap?



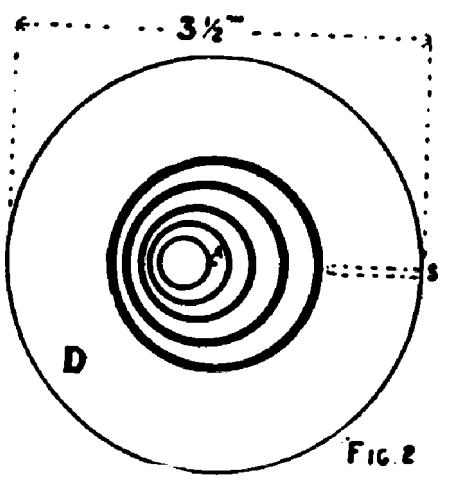
Cut out the eggs and paste them in position, or trace the ovals if you do not wish to mutilate your paper.

Prize—A good book. See rules.

IN THE SPORT of whirling a burning stick in the hand until the red-hot end seems a fiery hoop, the illusion is due, as many are aware, to what is called "persistence of vision," or the fact that an image or picture of an object remains for a certain time—about one-fifteenth to one-tenth of a second—on the retina of the eye. The glowing end of the firebrand forms different images in the eye, as it is moved; but these follow one another so quickly that they are blended into one, and appear as a ring of light. In a similar manner, if whilst looking at an object we wink some ten or fifteen times a second, that object will be visible all the time. This phenomenon has long been known, and the present day wonders of the so-called "living pictures of the cinematograph" owe their origin to the same principle.

In our present illusion the law of persistence of vision is taken advantage of, and also the fact that, with each of our eyes we see slightly different views of every object we look at. Our two eyes are separated a distance of a few inches apart. It therefore stands to reason that, when holding the head rigid and looking with both eyes at a collection of objects, we see the objects from two different viewpoints. The celebrated philosopher Wheatstone took advantage of this optical law of vision in the principle of his ingenious instrument called the "Stereoscope," which instrument was improved upon by Sir David Brewster. By the combination of two geometrical figures such as shown in figs. 3 and 4, effects of solidity and relief are produced, but of these we shall speak presently.

In fig. 1 a boy is seen looking through a slot, S, made in a disc, D, into a mirror, M, in which he sees a series of rings apparently suspended in mid-air. Each ring, as it diminishes in size from the largest one, appears to come nearer and nearer to the observer's eyes.



Now the puzzling thing about these rings is that they are produced by a reflection of a single plain diagram shown in fig. 2. This is how it is done. Take a clean postal card, and on the blank side draw with a pair of compasses, with black Indian ink, the fine outer circle, which is intended merely as a guide when cutting out from the postal card. Cut the disc out with a pair of scissors or a penknife, and then rule a line across its diameter, bisecting the center, A. Next draw the thicker lined circles, starting with the largest from the center of the disc, and striking the smaller ones from points working towards the left hand and along the pencil line before mentioned.

Cut out the slot indicated by the dotted lines at S, provide a small mirror, M, an ordinary pin, and a penholder or pencil, P. Rest the mirror against some support so that it stands vertically, as shown in fig. 1 at M. Stick the pin through the center of the disc, making the hole large enough to enable the disc to revolve freely. The pin is now inserted at right angles with and into the side of the penholder, P.

A strong light falling upon the surface of the disc facing the mirror should strike the diagram in the direction indicated by the dotted arrows. To observe the illusion, it only remains to hold the penholder in the left hand and strike the edge of the disc with the right hand, so that it revolves at as high a speed as possible. Looking through the slot S, as it arrives alternately opposite the two eyes, the observer sees in the mirror the "magic circles."

The best effects are obtained by having the eyes horizontal with the center of the disc.

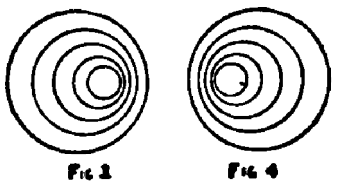


FIG 3 FIG 4

The requisites for the illusion are, as shown, of the simplest character, and, whilst providing a source of amusement to the average boy, the one with a scientific turn of mind should find in it the means of demonstrating the laws of "persistence of vision," "reflection," and "binocular vision."

From a Prize Winner

Guy R. Frise, Madrid, Ia.—I have received your check for $2.00 and was surprised at winning first prize. Please accept my thanks.

Another Successful Young Machinist

Clay Jennings, Uniontown, Pa., seeing the account of Fred S. Kempf's miniature city in the February number of THE AMERICAN BOY, writes that he has made an engine of one and a half horsepower that runs a lathe, an emery wheel, and other things.

A Haymow Tunnel

Francis P. Knight, Riley E. Williams and Harry H. Sackwriter, of Monticello, Illinois, send a diagram of their haymow tunnel. There is nothing very remarkable about the diagram. It simply shows that the boys have dug a passage back and forth through the haymow, here and there widening the tunnel into caves or rooms. According to the description the hay is in bales.

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

Clinton Fisk Elliott, 345 Norton street, New Haven, Conn., wins the prize for the best list of answers to February Tangles.

Morton L. Mitchell, Orillia, Iowa, wins the prize for the best lot of original puzzles.

Honorable mention is accorded the following for excellence: M. Gray, Ross Richtmyer, Almon W. Bushnell, George E. Egge, Walter G. Benton, E. R. Cook, Sarah Gilles, Grafton Darby, J. Horace Trumbull, Burton F. Jennings, Lee and Cleary Bullard, George Harrison Stanbery, Walter C. Stimson, I. Rose, J. Alfred Lynd, Ernest V. Morton, Morris A. Ward, H. Lyman Armes, Hubert Fentress, Clinton Story. Several dozen others failed to observe our rules.

A prize of one dollar will be given for the best list of answers to the April Tangles; also, a new book for the second best list of answers; received by April 20.

A prize of one dollar will be given for the best lot of original puzzles received by April 20, to be published in June.

Get your thinking caps on for original Fourth of July puzzles, for which the grand prize offer will be announced next month.

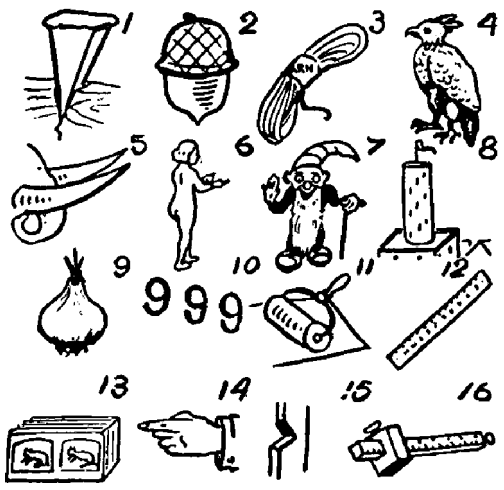
Each quotation is from a well-known English, Scotch or American poet. Write the surnames of these eight poets in numerical order as in the diagram, and the star path downward will spell the surname of a famous English poet laureate who could not tolerate Americans.

1. Breathes there a man with soul so dead
Who never to himself hath said
This is my own my native land?
2. Oh! ever thus, from childhood's hour.
I've seen my fondest hopes decay.
3. 'Mid pleasures and palaces though we may roam,
Be it ever so humble, there's no place like home.
4. The melancholy days are come,
The saddest of the year.
5. Full many a flower is born to blush unseen,
And waste its sweetness on the desert air.
6. Should auld acquaintance be forgot
And never brought to mind?
7. I've seen your stormy seas and stormy women,
And pity lovers rather more than seamen.
8. The boy stood on the burning deck
Whence all but he had fled.

—Hubert Fentress.

40. PICTORIAL ACROSTICS.

The words are of uniform length. The initials in numerical order spell the name of a famous American writer who was born in April.



Now take the fourth letters of numbers 2, 3 and 4; the second letters of 5, 6 and 7, and the third letters of 8 to 13, inclusive, and obtain the hero of one of this author's stories, a character that has interested every American boy. —Lee and Cleary Bullard.

41. TELEGRAPH TANGLE.

The following messages were transmitted by telegraph to various cities of the United States. The city to which each of the telegrams was sent may be found by taking one letter from each word in order, in each telegram. The state name (in parenthesis), only indicates the location of the required city, and no letter is to be taken from it.

1. Goods arrived via Great Western. Ship orders from Detroit. (Iowa.) 2. Must remain over Sunday in town at hotel. (Georgia.) 3. Jones has disappeared with everything. Wire Louisville police immediately. (Tennessee.) 4. Train derailed. Several killed. Am unhurt save sprained wrist. Details later. (Florida.) 5. Impossible make connections for Portland. Remain here until eight o'clock. (California.) 6. Prices satisfactory. Inquire at bank for statement. (New Mexico.) 7. Land sale opens Monday, corner Fifth and Vine streets. (Iowa.) 8. Excursion leaves West depot for Providence tonight. (Rhode Island.) —Morton L. Mitchell.

42. SECRETARIES OF STATE.

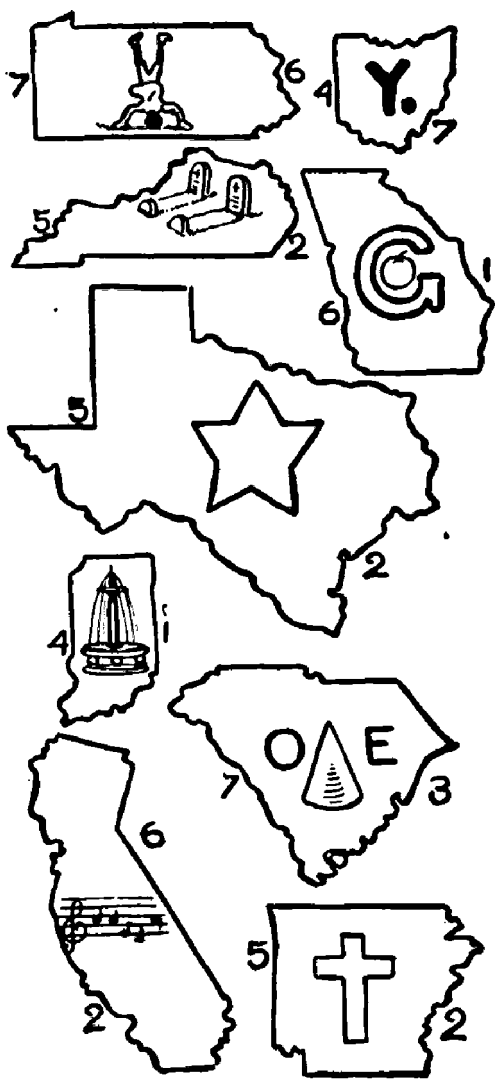
In each of the following sentences is concealed the name of a secretary of state, spelled backwards.

1. Will you draw Esther's picture? 2. Lucy crammed the clothes into the box. 3. This sack has a hole in it. 4. The German boy answered "yah" instead of yes. 5. Mary addressed the woman's club. 6. You say it was a meteor? No, madam, it was not. 7. He got into a terrible rage last night. 8. Take the frets off of the guitar.

—Allert Brager.

43. APRIL GEOGRAPHY.

Here are the outlines of nine states, with one county of each depicted in rebus form. From the name of each state shown take one letter, indicated by the left hand numeral, and obtain the only state admitted to the Union in April. From the name of each illustrated county take the letter indicated by the right hand numeral, and obtain the birthplace of a great dramatist, born in April.



—Morton L. Mitchell.

44. TANGLER'S CHESS.

Find 35 or more surnames of Tanglers, whose names have appeared in this department as prize winners, contributors or among the honorable mentions. Use the king's move, which is one square only, using the letters as often as needed, but not repeating a letter till moving from its square. (I am going to withhold the publication of the answer one month, in order to see how many more than 35 bona fide Tanglers' names you can find on our chess board.—Uncle Tangler.)

M	T	K	E	R	I	N	Y
C	I	G	A	B	E	F	A
H	M	L	U	H	Y	L	D
U	E	B	L	O	U	D	A

S	G	I	U	G	E	B	E
W	A	C	K	R	U	T	S

(Sorry I couldn't get all the Tanglers in.)

—James E. Shields.

45. SEARCH THE ATLAS.

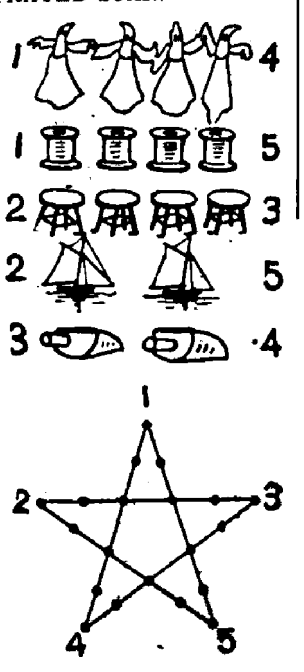
Example: Find a city in the city of Emporia. Ans.: Peoria.

1. Find a country in Argentine Republic. 2. Find a state in Minnesota. 3. Find a sea in the Mediterranean. 4. Find a lake in Superior. 5. Find a capital city in Providence. 6. Find a continent in South America. 7. Find an ocean in the Antarctic.

—Dudley B. Kimball.

46. ILLUSTRATED STAR.

Fill the star with five words of six letters each, which here are illustrated instead of defined. Their order on the star is indicated by the numbers. The five numbered letters at the points of the star are identical; the five inner letters where the points of the star meet are also identical. —Harold Colegrove.



47. ORNITHOLOGICAL PUNS.

Example: A bird; a country of Europe. Ans.: Turkey.

1. A bird; a gulp. 2. A fowl; a tailor's iron. 3. A bird; a cloth from which flags are made. 4. A fowl; to thrust under water. 5. A bird; a certain fowl's salutation. 6. A web-footed bird; a native of Louisiana. 7. A long-legged bird; a mechanical power. 8. A bird; a kitchen utensil. 9. A bird; to falter in fear. 10. A sea-bird; to cheat out of. 11. A bird; to peddle. 12. A bird; an outdoor toy. 13. A bird; a gawk. 14. A bird; a frolic. 15. A bird; a stick of wood. 16. A bird; a name for the castle in chess. —Fred E. Day.

48. PROGRESSIVE ENIGMAS.

(1) The 1-2-3-4-5 lived in a 1-2-3-4-5-6-7-8-9 hut, but he was 6-7-8-9 to live in a palace. (2) 1-2-3 record as a 4-5-6-7 has come down in 1-2-3-4-5-6-7. (3) If he is too 4-5-6-7 to play the 1-2-3-4 at the concert he will 1-2-3-4-5-6-7 the rules of his music society. (4) While traveling in India I hired a 6-7-8-9-10-11 tailor to 1-2-3-4-5 my garment, as that was the only 1-2-3-4-5-6-7-8-9-10-11 that offered. (5) The small band of raw recruits was like an 1-2-3-4-5-6 1-2 the hands of the well trained 1-2-3-4-5-6-7-8, although they did 6-7-8 to defend themselves. (6) The gentleman who 1-2-3 near us with the smile of 1-2-3-4-5-6-7-8-9-10-11-12 on his face 4-5 the leader of a political 6-7-8-9-10-11-12 in this state. (7) The lady regretted that the 1-2-3-4 had eaten the cloak which 4-5-6 1-2-3-4-5-6 had given her. —Ralph Williams.

The Greatest Boys' Paper in the World

See the Evidence! Read this Page! Tell Your Friends!

THE AMERICAN BOY has laid claim to being the greatest boys' paper in the world. A quarter of a million boys are ready to back up the claim. There is easily a million more who would do so, if they knew the paper. If, regardless of expense, the publishers of The American Boy show themselves ready to buy the very best matter obtainable from the very best writers for boys, and if they spare no pains to fill their pages with the cleanest and best literature to be had, have they not a right to make the claim thus confidently put forth to being the best representative of boy literature in this or any other country? If there is any question in the mind of any boy as to where he can get the most and the best reading matter for his money, let him read what we have to say with reference to the good things now running in The American Boy and the good things in prospect. If you have not been a reader of boy literature long enough to know who are the great writers in this line, ask your older brothers or your fathers, who have been readers longer than you have. If you know of another boys' paper or magazine in the world that presents the array of talent that even begins to compare with that employed by The American Boy in the getting up of its feast of stories, special articles, and department matter, tell us where it can be found, and if on putting the matter to test we find we are wrong, we will gladly admit it

Here are some of the writers and some of the things they have written especially for the pages of The American Boy. We name no article but what is either appearing now in the pages of the magazine, or about to appear. Isn't this an array of talent and a program of good things of which we have reason to boast? Are not the boys of America fortunate in having a publication of their own at the nominal price of one dollar a year that looks out so conscientiously and so well for their best interests?

A FEAST FIT FOR A BOY

IN DEFENSE OF HIS FLAG, OR A BOY IN BLUE AND A BOY IN GRAY—By Edward Stratemeyer. In this number of THE AMERICAN BOY may be found the first chapters of this splendid war serial. It will contain in all about 75,000 words, and run throughout the remaining months of the year 1906. What boy has not heard of Edward Stratemeyer, known also as "Captain Ralph Bonehill" and "Arthur M. Winfield"? For years Mr. Stratemeyer was an editor of youths' publications. Then he began to write boys' books, until nearly forty of them are on the market. To name them all would take nearly half a page of this paper. During the last ten years he has probably been the most prolific writer of boys' stories in the world, and today stands among the very best paid, best loved of writers for boys. "In Defense of His Flag" was written for The American Boy and has never appeared in print. After it has run as a serial in The American Boy, it will be published in book form at the regular dollar and a half price. Our boys get the reading of the story entire in these pages at no extra expense over and above their subscriptions.

THE YOUNG BOOK AGENT—By Horatio Alger, Jr. Here is a writer that your fathers read. After graduating at Harvard in 1852 he began to write, first on Boston newspapers. Then after a tour of Europe he took up writing for boys, having become deeply interested in the condition of street boys in New York. Did you ever hear of "The Ragged Dick Series," "The Tattered Tom Series," and "Luck and Pluck?" Horatio Alger, Jr., is dead, but among his papers were some uncompleted stories—stories mapped out and ready for the last writing. One of these has been edited by a friend who himself is a great writer. We have bought "The Young Book Agent," after reading it and finding it to be a tiptop Alger story. It has only recently been put in book form, and makes 272 pages. Few of our readers have seen it. We have purchased the right to print it in serial form. The first chapters of it will begin in our June number. It will run through the remainder of 1906.

THE CAMP FIRE OF MAD ANTHONY—By Everett T. Tomlinson. We have heard Tomlinson called "The Henty of America." Some may dispute his right to the title, for we all differ in our estimate of writers. However, Tomlinson has won his spurs as a writer for boys. He is a graduate of Williams College and of Colgate University. He was at one time principal of the Auburn, New York, High School, and afterwards head master of the preparatory department of Rutgers College. His first book, "The Search for Andrew Field," came out in 1894. At once it was discovered that boys had a new friend. Then followed in rapid succession "The Boy Soldiers of 1812," "The Colonial Boys," "The Boy Officers of 1812," "Three Young Continentals," and so on until his nearly twenty-five Tomlinson books are selling wherever there are boys who read the English language. "The Camp Fire of Mad Anthony" is a story of the early Revolution. It will begin in our July number and will contain 75,000 words, running the greater part of a year.

OFF THE RESERVATION—By Edward S. Ellis. Is there an American boy who has never heard of old Chief Geronimo? Well, Edward S. Ellis is writing a serial for The American Boy based on the exploits of that rascally old Indian chief, who gave Uncle Sam more trouble in his day than almost any other one Indian. Mr. Ellis has promised us 60,000 words, and the first chapters will begin in September or October of this year. It will take nearly a year to run the entire story. Does any one ask Who is Edward S. Ellis? Not many boys, we are sure. He is a graduate of Princeton College. For years he was superintendent of schools at Trenton, New Jersey, and a writer of school text-books. He is best known among boys because he wrote the "Deerfoot Series" of juveniles, and in addition some fifty other books for boys—all since 1885. There is no better writer for boys than Edward S. Ellis.

PLUPY IN PEACE AND WAR, OR CHAPTERS FROM THE LIVES OF PLUPY, BEANY, PEWT, AND OTHERS—By Judge Henry A. Shute. Ask your father and mother if they read during 1904 and 1905 in the magazines, or afterwards in book form, the "Real Diary of a Real Boy," "Sequil," "Letters to Beany and Love Letters of Plupy Shute," or "Real Boys." The chances are that they did, and they will tell you that Mr. Shute can write genuine humor about real boys. You will be surprised to know that Mr. Shute is a lawyer, and more than that, that he has been a judge for twenty years up in New Hampshire. He doesn't seem to have forgotten a single thing about his boyhood. He writes about boys just as if he had always been a boy, and his pages are cram full of genuine fun—all about those young rascals, Plupy Shute and Plupy's friends, Beany, Pewt, and others. "Plupy in Peace and War" that Judge Shute is now writing for THE AMERICAN BOY will contain 40,000 words, and will run through six or eight numbers of THE AMERICAN BOY, beginning either in July or August.

TIM—By Jessie P. Frothingham. Miss Frothingham was educated abroad, and since returning to her native America has contributed numerous articles to the periodical press and written many books, of which "Sea-Fighters from Drake to Farragut" and "Sea Wolves of Seven Shores" are the latest.

THE RUNAWAY PUP. HOW IT HAPPENED. THE DIARY OF A FLY—By George Reiter Brill. Here are three short stories chock-full of fun, both in text and in pictures, by one who has made a reputation for his humor through contributions to Life, Puck, Texas Siftings, and other papers of humor. Mr. Brill is a member of the leading art clubs of the East, and the creator of at least two well-known books, "Andy and the Ignoramus" and "Bobby Bumpkin." We have been searching for some time for an artist with genuine humor who could not only draw a good picture, but tell a good story; we believe we have found him in Mr. Brill. In addition to the three short stories named we expect others to follow.

WHY THE STORKS BUILD THEIR NESTS ON HOUSETOPS. RIGA AND THE BUTTERFLY—By Capt. Charles McIlvaine. The stork story appears in this number. How do you like it? We have at least one other from Capt. McIlvaine yet to appear, with a promise of others. Capt. McIlvaine is a Civil War veteran. He was on the staffs of General Terry and General Hawley. He has traveled in Europe. He is a member of many societies, among them the Society of American Authors. He has not only written many books, but has contributed nearly sixty stories and articles to the leading magazines, usually under the pen name "Tobe Hodge." When you are reading what Capt. McIlvaine writes, you are reading good literature.

DRUMS AND DRUMMER BOYS. HOW MY HAIR TURNED WHITE—By J. C. Julius Langbein. The author of these two stories has had an experience that certainly entitles him to the attention of boys who like to read about heroes and heroism, for he is Commander of the Medal of Honor Legion of the United States of America. He was a drummer boy in the Army of the Union during the Civil War, and came out a hero. His article on "Drums and Drummer Boys," that will appear in the July number, is of stirring interest, and his "How My Hair Turned White" has enough adventure in it to please the most exacting of our adventure-loving boys.

FOUR BOYS IN CAMP—By J. L. Harbour. This serial, beginning this month, is but one of many stories that Mr. Harbour has contributed to our pages. When it is known that for seventeen years Mr. Harbour was an associate editor of the Youth's Companion, and that he is the author of more than seven hundred short stories published in that paper, Harper's Bazar, St. Nicholas, The Outlook, and similar periodicals, and that he is a successful lecturer on "Blessed Be Humor," there will be no doubt of the literary value of Mr. Harbour's writings and the interest they hold for boys.

A NICE QUESTION. A Nonsense Story by Tudor Jenks, illustrated by the author. Mr. Jenks is a graduate of Yale, and studied art in Paris. For some years he practiced law. Later he went on the staff of the St. Nicholas magazine, and then began writing books. For twenty years he has been a contributor to the leading magazines. Every reader of St. Nicholas from 1887 to 1902 will remember him with pleasure. His work will contribute an attractive feature to The American Boy.

BERTEL THORVALDSEN—By Helen Leah Reed. All familiar with The American Boy know that it is not devoted entirely to stories, but that special articles, educative in their nature, make up a very large part of its contents from month to month. Falling under the head of educative matter we have work from Miss Reed, a thoroughly educated woman, graduated at Radcliffe, and the first winner of the Sargent prize at Harvard for translations from Horace. She is secretary of the Women's Boston Branch of the American Folk-Lore Society, as well as a member of many other women's organizations and clubs.

A HOT TWENTY MINUTES, and Other Short Stories—By Ernest Ingersoll. As a naturalist and writer Mr. Ingersoll has made a record to be proud of. As an editor at one time of the Canadian Pacific Railway's publications he became thoroughly familiar with the great West, and such books as "Knocking Around the Rockies," the "Crest of the Continent," "The Book of the Ocean," "Silver Caves," and "Island in the Air" came naturally as the result. Mr. Ingersoll's name has appeared before this in the pages of The American Boy. "A Hot Twenty Minutes" is what the title implies.

AN EXCITING FOURTH OF JULY, A CODFISH, and Other Stories—By George Whitefield D'Vys. Few writers whose names have appeared in The American Boy have ingratiated themselves more into the favor of our boys than has Mr. D'Vys, who, notwithstanding infirmities that would crush most men, is a prolific writer and has contributed since 1900 over 300 short stories, mostly for boys, to American periodicals. His stories are chiefly salt sea yarns, and his "An Exciting Fourth of July" has to do with the sea.

REUB, AND OTHER STORIES—By Frank H. Sweet. Mr. Sweet's name has appeared in The American Boy a number of times, and always to the delight of the boys. We have several of his stories awaiting publication. To those who do not know him we would say that probably no one of our short story writers finds more frequent entrance into the pages of the magazines for boys than does Mr. Sweet. He is a prolific writer, often causing us to wonder how he can accomplish so much. His work is always clean and helpful.

THE SHIP FRIENDS—By Harriet Prescott Spofford. Few grown-ups will admit to not knowing the name of Harriet Prescott Spofford. Some of our boys will remember having read at least one of her stories in the pages of The American Boy in times past. "The Ship Friends" is a short story of the sea and just the kind of a story that boys like. The list of this writer's books and contributions to the American press would fill a column. Her friends among both young and old are legion.

HOW TO PLAY BASEBALL—By Professor Walter B. Norris, Instructor in Athletics in the Wenonah Military Academy, Wenonah, New Jersey. Our boys all think they know how to play baseball. But do they? This is a series of practical articles telling a boy just how to play the various positions. It begins this month and will continue throughout the summer.

HOW THREE BOYS CAPTURED A BUZZARD. THE RETURN OF THE COYOTE. AND OTHER STORIES—By Professor Craig S. Thoms. Our readers have become somewhat familiar with Mr. Thoms' bird articles that have appeared from time to time in these pages. Any man who can write of birds as entertainingly as he, can certainly appreciate nature, and ought to be able to write a good nature story. He has done so, and in the several we have on hand ready to appear when there is room for them the boys have a treat.

Hundreds of Other Stories, by Professor Eugene Parsons, James Buckham, Alice May Douglas, and Other Well Known Writers

The American Boy

CHAPTER I.

SIGNS OF WAR.

"HULLO, LOUIS! Want to ride to the depot with me? I am going to bring father home."

"Certainly, Andy, I'll go along. Do you expect your father on the eleven o'clock train?"

"He wrote he would most likely be back on that, if he could get away from Washington. He said everything was in such a state of excitement it was impossible to talk business."

"I suppose that is true," returned Louis Rockford, as he hopped up on the seat of the wagon, beside his chum. "My father wrote me that it looked as if war must come after all. What a shame Congress can't settle this matter peaceably."

"It could, if the Northerners would give us Southerners a chance," burst out Andy Arlington, as he gave the horse a flick with the whip and sent the animal down the rocky road on a gallop. "The whole trouble is the Northern states want to interfere with our rights, and we won't have it."

"I thought the trouble was about the slaves."

"Well, you can put it that way if you want to. The Southern states own their slaves and have a right to do with them as they please."

"I don't think the negroes ought to be slaves, Andy."

"I don't know about that. We have got to have help to run the cotton and tobacco plantations, and I reckon most of the colored people are better off now than they would be if they were free. Just look at the free negroes idling about. They are not worth their salt."

"That may be true. Still, I don't believe any human being ought to be a slave—it's barbarous!"

"There's another thing," added Andy, with a second flick of the whip. "Years ago—and not so many, either—the Northern states had slaves, and when they got rid of 'em, what did they do? Sold most of 'em to the planters down South. Now those same people want to stop us from using those slaves as we please."

"I don't believe they want to do that, exactly, Andy. They want to stop the extension of slavery."

"It amounts to the same thing."

"No, it doesn't."

"I say it does. The Northern states want to dictate to us—and we won't have it—father says so, and Mr. Carroll, and Doctor Barnsby, and all of them—and they ought to know."

The words were spoken with great emphasis, and as he spoke the Southern lad, with his ruddy-brown face and coal-black hair, glanced half defiantly at his companion. Louis Rockford's face fell and then a half-amused look crossed it.

"How hot-headed you do get, Andy! I trust you're not going to fight over this thing."

"I'll fight if I'm called on to fight. I believe in sticking up for my rights. Wouldn't you fight for your rights?"

"Certainly. But the politicians and the other big men on both sides ought to do their best to prevent bloodshed."

EDWARD STRATEMEYER

Andy Arlington drew a long breath, and urged forward his horse again. "This thing has been a-brewing a long time—ever since old John Brown seized the arsenal at Harper's Ferry and tried to get the negroes to arm themselves. Jefferson Davis and the others have tried their best to straighten matters out and the Northerners won't listen to them, and I say if it comes to fighting, it will be the fault of the North, and not of the South."

"LET GO, OR I'LL LET YOU HAVE THIS ACROSS THE FACE!"

"And I think you are greatly mistaken," was the quiet but firm answer. "However," went on Louis Rockford, as he saw his chum's face darken, "whatever happens, Andy, let us remain friends."

"Oh, I'm not making this a personal affair, Louis," was the hasty response. "I wouldn't want to count you my enemy for a good deal. But—but—hang it all, I wish you would look at this matter as I, and father, and the rest do."

"And I wish you would look at it as I and my father do," laughed Louis. "We're as bad as the politicians, aren't we? But I'll tell you one thing," went on Louis, gravely. "I'll never stand for having our glorious United States break up into separate republics. Our forefathers fought too hard for our colonies to allow anything like that to happen."

"Well, it is a kind of a shame, in one way, Louis. But the Northern states must learn to keep their hands out of our business—must learn to leave us alone," said Andy Arlington, with as much spirit as before; and now the mountain road became so rough that the rattle of the farm wagon over the stones made further conversation just then impossible.

As has been mentioned, Louis Rockford and Andy Arlington were chums. Both were nearly seventeen years of age, tall, well-built and muscular. Andy was dark while Louis was fair, and each had been brought up upon a large farm or plantation.

The Rockford homestead lay in a valley near the southern boundary of Pennsylvania, at a point where the State of Maryland divided it from Virginia by a stretch of less than twenty miles. It was a well-kept, although rather rocky, farm of a hundred acres, and to it was attached a dairy of no mean proportions.

The Rockford family consisted of five persons—Mr. and Mrs. Rockford, Louis, the only son, and Lucy and Martha, two daughters, one older and the other younger than their brother.

Mr. Rockford had emigrated to Pennsylvania from New York State some fifteen years before and he was, in consequence, a thorough Northern man at heart, and had but little sympathy for those of the South who intended to make slavery and state rights a basis for war. Louis followed his father's views closely, but both parent and son were of a quiet, peaceful nature, and the idea of possible bloodshed filled them with dismay.

The Arlingtons belonged to one of the oldest families in upper Virginia. Clarence Arlington, the grandfather of Andy, had fought with Washington during the Revolution, and Hugo Arlington, Andy's father, had followed General Scott to Mexico and lost a leg at the memorable battle of Chapultepec. Father and son were full of the war spirit, and it was plain to see that, as the father, being crippled, could not go, Andy would take up a musket at the first call to arms.

The plantation of the Arlingtons was extensive, but as the ground was not of the best, the tobacco which was planted from year to year, did only fairly well, and four years before the opening of this story Mr. Arlington had become interested in dairy matters. His first herd of cows had been purchased from Mr. Rockford, and this transfer of property had led to the two families becoming warm friends. Later on, both men had purchased a drove of cattle from the west, and in the work of dividing up this herd Louis and Andy had assisted, and soon the two boys were the warmest kind of chums, and when either took a vacation it was only to spend the time at the house of the other.

Louis had now been stopping at the Arlington homestead for over a week. It was just before Christmas time, and there was but little for him to do at home. Early that morning he had gone off alone to see what he could bag in the way of game in the woods along the highway. He had wanted Andy to go with him, but some of the cows were sick, and Andy had to remain behind to give advice concerning the cattle. Louis had shot several rabbits, which now rested in his game pouch. He had been standing near the highway, reloading his shotgun, when Andy came along and invited him to take the ride to the depot at Lee Run, three miles away.

That war was threatened, there could be no doubt. For over two years the North and the South had wrangled over the slave question and over the equally important question of state rights, and a settlement was now further off than ever. More than this, the leaders in South Carolina had actually called a convention for the purpose of deciding whether or not that state should withdraw from the Union. The convention was to have met at Columbia, but as that city was largely infested with smallpox, the convention was removed to Charleston, to deliberate there behind closed doors. And while this was going on the Southern statesmen and politicians at Washington, and in the other states, were plotting to throw down the gauntlet of war whenever the favorable opportunity arrived.

"Look, Andy, something is up!" cried Louis, as they drove up to the main street of Lee Run. "See what an excited crowd there is at the railroad station."

"Hurrah! Hurrah for South Carolina!" was the sudden cry which reached their ears. "She's the state! Hurrah! and may gallant Virginia soon follow her!"

"What is it, Mr. Deems?" yelled Andy, as he drew rein in front of the general store fronting the depot. "What's the shouting about?"

"Didn't you hear the news, Arlington? South Carolina has seceded from the Union. They are having the greatest jubilication ever heard of down there. 'T won't be long afore we follow 'em, I reckon," added the storekeeper.

"Seceded from the Union!" repeated Louis. "Oh, that's too bad!"

"Bad? Didn't ye say bad?" interrupted a tall mountaineer, who stood by, whittling a plug of tobacco with his jacknife. "I opine ye don't know much, boy. Why, it's jess the best all-fired news I heard tell on fer ten years."

"That is where our opinions differ," answered Louis, coldly. "In fact, I don't see how a state can leave the Union, unless all the other states agree to it."

"Don't ye? Say, ain't ye just a bit Northern-like now?" and the mountaineer squinted one eye suggestively.

"I am from Pennsylvania, if that is what you mean."

"Thought so. An' ye don't agree with us? Think our ideas about slavery an' sech ain't o' no account."

"I think this present difficulty ought to be settled without breaking up our Union and shedding blood."

"Waal——" the mountaineer paused long enough to transfer a whittling of hard tobacco to his mouth,—" all I've got to say is, we ain't gittin' on

our knees to save this infernal Union, nohow, so thar!"

"You ought to be ashamed to speak of our Union as an infernal one," burst out Louis. "Our Union is the greatest and grandest on this globe, and I for one will help uphold it to the last."

"Oh, don't talk so much, Louis!" put in Andy, with a swift rush of blood to his face. "The crowd around here is excited and may not like what you say."

"But he called our Union an infernal one—"

"Don't pay any attention to him. I know him. His name is Sam Jacks, and he never did an honest stroke of work in his life. Here comes the train. Let us go over and meet my father and see what he has to say."

Leaving the horse tied to a nearby tree, the two lads made their way through the crowd to the edge of the depot platform. Soon the train rolled in and the first man to hop down, upon his cork leg, was Hugo Arlington.

"What's the latest from Washington, Arlington?" cried half a dozen voices, and in a twinkling the veteran was surrounded, so that Andy and Louis could scarcely reach him.

"South Carolina has seceded, that's the main news—" began Mr. Arlington.

"Yes, yes, we know that. But what do they say at the Capitol?"

"Most of the people can't believe it. The crowds around the telegraph and newspaper offices are tremendous, and there is a regular mob around the Capitol and the White House."

"What does President Buchanan say?"

"Hasn't said anything yet. But there is a rumor that General Scott is to be sent for," and Mr. Arlington shook his head gravely, for the hero of Mexico was still dear to his heart.

"General Scott! Then they are going to fight it?"

"It looks that way, neighbors."

A deep murmur arose, and half a dozen began to ask as many different questions. In the meantime the train had rolled away. Mr. Arlington answered the questions as best he could, shook hands with his son and with Louis; and ten minutes later moved over to where the farm wagon had been left standing.

"I must get some groceries before we go home," said Andy, and hurried into the store.

"Mr. Arlington, do you really think we'll have war?" asked Louis, when he was left alone with the Southern veteran.

"It looks so, Louis; although I allow I don't think it will last long if it does come. I think the South will split from the North, and that will be the end of it."

"But that will be too bad."

"That's as how you look at it. The South will be better off alone than under the thumb of Northern dictators. One thing is certain, we'll do as we please with our slaves."

At this Louis said no more, for he saw that an agreement with his chum's father was out of the question. Finding Andy did not return, Mr. Arlington presently leaped from the wagon to learn what had become of him. As Louis sat alone he noticed half a dozen men gathered across the way and talking earnestly. In the crowd was the mountaineer, Sam Jacks, and presently the boy saw this man point towards him.

"We ought to teach thet kind a lesson," were the words which drifted to his ears, and at once Louis became alert, for he felt he was the subject of the talk that was taking place.

Five minutes more passed, and Louis wished Andy and his father would reappear. Then the crowd stalked over to the farm wagon. The men were all mountaineers and of the roughest class to be found in that vicinity.

"Say, you're a Northern lad, ain't ye?" drawled one.

"I am from Goreville, Pennsylvania," answered Louis.

"Got a big head on ye, 'bout wot the Northerners are goin' to do to us," added a second of the group.

To this Louis made no reply. His silence seemed to anger the entire crowd.

"Git down from thet seat!" suddenly roared Jacks, catching Louis by the arm and jerking him forward.

"Let go! What do you mean?" cried the youth, trying to draw away.

"We aire goin' to teach you-uns a lesson!" cried another of the mountaineers. "Come down!" and he, too, caught hold of Louis.

But now the youth was fairly aroused, and leaping to his feet managed to wrest himself free from his second assailant. Then, as quick as a flash, he caught up the horsewhip.

"Let go!" he commanded, to Jacks. "Let go, or I'll let you have this across the face!"

"I'll let go—I will!" roared the mountaineer, and pulled Louis to the ground. Yet, as the youth went down, the whip swung around, and the lash took Jacks across the nose, leaving an ugly ridge behind.

The next moment Louis found himself surrounded. In vain he tried to beat off his captors. With a savage cry, Jacks felled him to the ground, and ere he could recover the mountaineers caught him up by the arms and legs and bore him off in triumph towards the town pump and watering-trough.

CHAPTER II.

IN A HOSTILE NEIGHBORHOOD.

It was the intention of the mountaineers to duck Louis in the icy water of the horse trough. Sam Jacks had dilated upon what the Northern youth had said, and all hands had agreed that a "coolin' off" would do the Northern mud-sill good. The spirit of rebellion had already reached to the quiet town of Lee Run, and Louis was to be the first victim of the over-zealous inhabitants.

As the little crowd made its way around the depot to where the pump and trough were situated it attracted immediate attention, and folks came running from all directions wanting to know what was the matter. To all of these Jacks explained the case in his own peculiar way, until half of those assembled felt certain that Louis was about the worst traitor that neighborhood had ever held.

"Duck him good, Jacks!" was the cry. "Let him cool off thoroughly."

"Trust me for it!" puffed Jacks, as he felt of the ridge on his nose. "I'll duck him once on our country's account and twice on my own account!"

It must not be imagined that Louis submitted tamely to the proceedings. As soon as he was able, he began to struggle with might and main to free himself, and so vigorously did he haul and kick that soon one of the men holding his feet received a crack in the stomach which made him falter and lose his grip. But the others closed in, and in a moment more the place where the icy bath was to be administered was reached.

In the meantime, Andy and his father had come from the store. Seeing the wagon empty, they looked around for Louis.

"They took him over to the pump, Mr. Arlington," piped up a child standing near.

"Dey is dun gwine ter duck him," explained a darky, who sat on the edge of the store stoop, too lazy to get up and witness proceedings.

"To duck him!" gasped Andy. "What for?"

"Take de Northern starch outer him, I dun racken, sah."

"The—the brutes!" murmured the Southern youth, and away he sped for the square, with his father stumping after him as rapidly as the cork leg would allow.

"Here, you, let my friend alone!" cried Andy, bursting into the crowd. "What's the meaning of this?"

"You stand back, Andy Arlington!" growled Jacks. "We're goin' ter give him a duckin', as he deserves."

"Not much! He is my friend and guest, and you must let him alone."

"Yes, yes; let him alone," put in Mr. Arlington.

"He's a Northerner an' is talkin' ag'in we-uns!" burst out one of the mountaineers.

"We don't know but what he's a spy," added Jacks, determined, on account of the blow received, to make out the worst possible case against Louis.

"A spy! you are crazy!" answered Andy. "He came down from Goreville just on a friendly visit. Let go of him, or I'll knock you down, Sam Jacks!"

"WELL, GOOD-BYE AND GOOD LUCK TO YOU"

And Andy squared off in such a determined fashion that Jacks fell back, and seeing this his companions did the same; and Louis struggled to his feet.

"There is certainly a mistake here," said Mr. Arlington, with a deliberateness which instantly commanded attention. "This boy is a friend of our family and I can vouch for him that he means no harm in this neighborhood. I am as loyal to Virginia as any of you, but we have not yet reached the point where we must be on the lookout for spies. Come, Louis, we'll drive home, and you can depend upon it that you shall be safe as long as you remain with me."

He ranged upon one side of the boy, and, taking the hint, Andy ranged up on the other side. There were half a dozen murmurs, but the temper of the old veteran was well known, and it was likewise known, and this was even more important, that he carried an effective side weapon with him upon all occasions.

Having reached the wagon unmolested, Louis clambered in and the others followed. There was the snap of the whip, and soon Lee Run and the discontented ones were left behind. When the town had disappeared from view, Louis drew a long breath.

"It looks as if affairs were getting too hot down here for my safety," he said, with a faint smile. "I never dreamed of being attacked in this fashion."

"You will find hot-heads wherever you go, Louis," answered Mr. Arlington. Then, after a moment's reflection, he continued: "But, all told, I don't know but what it will be as well for you to get home before long, not but what I would like you to spend Christmas with us."

"I promised mother to be home on Christmas. I think I'll start tomorrow morning. It was very kind of you and Andy to come to my aid. I don't want you to get into trouble with your neighbors on my account."

"Those rough mountaineers are hardly neighbors," said Mr. Arlington. "They are very impulsive and generally aching for a chance to quarrel with someone, especially a newcomer. This talk of war has stirred them so that some of them have lost their heads completely and they'll want to go shooting at something by tomorrow."

"Well, they needn't shoot at me," answered Louis, but in a light tone, for he did not dream of the perils so close at hand.

The drive to the plantation was quickly at an end, and Mr. Arlington stumped into the house, to be warmly embraced by his wife and by pretty Grace Arlington, Andy's only sister, a girl of fifteen. In the meantime Louis took the rabbits he had shot around to the kitchen and handed them over to the colored cook. Then he joined Andy down in the stable yard, to see that his horse was being cared for properly.

"I think I'll leave directly after breakfast," he said to his chum. "Father will most likely hear of what is up, and he'll be anxious about me."

"I would rather have you stay," answered Andy, his face flushing. "Northern or not, I want folks around here to understand that they shan't mistreat my guest."

"You're a chum worth having," laughed Louis, and they returned to the house arm in arm, never, alas, thinking of how soon the cruel war was to separate them and make them, to a certain degree, enemies.

Grace Arlington had been questioning her father eagerly about the course of public events, and when Louis appeared she lost no time in pouncing down upon him.

"Oh, Louis, is it true, are we going to fight you Northern people?" she burst out.

"Well, I trust you won't fight me," he replied, with a smile, for deep down in his heart the youth thought Grace Arlington just the best and most lovable girl he had ever known.

"I don't know about that—if you join the Northerners," she pouted. "If you fight against us I'll think you real mean."

"You would want a fellow to stick up for what he considered his duty, wouldn't you, Grace?"

"I suppose I would, but—but—how can you think of fighting us when we are so entirely in the right," and she bent a reproachful pair of brown eyes on him in such a manner that his heart gave a big jump, and he was forced to turn away.

Luckily Andy interrupted the brief tete-a-tete at this point, and in a little while the conversation became general. Soon dinner was announced and once again Louis found Grace at his side. But now he was on his guard, and not to wound her feelings talked about everything else he could think of but the threatened war.

The evening which followed, full of songs and music from Grace, who could both play on the piano and sing very well, and filled in with war anecdotes by Mr. Arlington, was one Louis never forgot. What a happy and good-natured family they were, and what a truly jolly girl Grace was! Many were the times he remembered every detail of the scene, as he lay in the trenches in the rain and darkness, in front of the enemy and, for all he knew to the contrary, in front of Andy!

But the best of times must come to an end, and at 11 o'clock the gathering broke up, and Louis went off, to sleep his last sleep by Andy's side for many a weary, perilous month to come.

Six o'clock found the two boys stirring. Both walked to the dairy and then to the barn, where Louis saw to it that his horse would be ready for him immediately after breakfast.

The morning meal, in honor of the departing guest, was more elaborate than usual, and during the progress of the breakfast Mr. Arlington expressed the hope that Louis would have no trouble in getting home.

"Pomp tells me that the news that South Carolina has seceded has traveled everywhere during the night, and in consequence, the country folks are growing suspicious of all strangers. You had better go straight on through Maryland without stopping."

"I wonder if Maryland will join us if it comes to war?" put in Andy.

"Of course she will join," answered Mr. Arlington. But in this the veteran was mistaken. Although a slave state and with strong Southern tendencies, Maryland, when the all-important test came, remained in the Union. And, as a matter of fact, even a portion of Mr. Arlington's home state also remained, forming what has since been known as West Virginia.

The breakfast over, Louis felt that he must be on his way. It was a raw winter's day and the distance to be covered was nearer forty miles than thirty. There was a winding turnpike leading to the Potomac River, and, this crossed, there remained a choice of two roads, one almost direct, but very hilly and stony, and the other a serpentine way several miles longer but much more easily traveled.

"Well, good-bye and good luck to you!" were Andy's parting words, and the two shook hands, and Louis expressed the wish that when they met again all inter-state difficulties would be settled once and forever.

Louis found the parting from Grace harder than ever. There were tears in the eyes of the little Virginian, and the boy could scarcely speak to her because of the lump which arose in his throat.

But at last it was all over, and he had mounted his horse, which one of the slaves had brought up to the door. He was just about to tip his hat in a parting adieu when, on glancing towards a side road skirting the plantation on the left, his eyes caught sight of half a dozen men galloping swiftly towards him. A closer inspection revealed the fact that the men were mountaineers and at their head rode Sam Jacks!

"They are after me!" he thought. He was about to turn to his friends, when he as quickly changed his mind. There was a good chance to escape those approaching, and why should he cause the Arlingtons further trouble on his behalf? He tipped his hat, urged forward his horse, and in five seconds was galloping towards the main road at top speed.

"He certainly means to get home before night fall," cried Andy, as he watched Louis disappear in a cloud of dust. "I wish he believed as we do and could stay here."

He had scarcely spoken when Mr. Arlington discovered Sam Jacks and his followers. The men rode

straight for the house, cutting into a lane leading up from the dairy.

"Well, Jacks, what brings you this morning?" demanded the veteran, as the mountaineer came to a halt.

"We came to have a talk with that boy," was the gruff answer. The mountaineers had talked matters over and had decided to put on a bold front.

"So you came here to insult our guest, did you?"

"We came here to find out what he's up to in these parts, Colonel," put in a second of the newcomers.

"I told you yesterday he was here only on a friendly visit."

"Jacks thinks he is a spy."

"Jacks is too forward entirely in his thinking. Take my word for it, men, there are no spies as yet around Lee Run. The time is not yet ripe for that sort of thing."

"Where's the boy?"

"He has left."

"Gone away!" came in a chorus.

"Yes."

"Gone away for good?" demanded Jacks, sourly.

"Yes; he left for his home in Pennsylvania directly after breakfast, fearing his folks would grow anxious about him."

The face of the leader of the mountaineers fell. He had not forgotten the blow Louis had given him across the face and he was longing, with the aid of his followers, to "square accounts."

"Which way did he go?"

"Went on horseback," put in Andy, before his father could speak. He understood very well that Jacks wanted to know what road had been taken, but purposely pretended to misunderstand the fellow.

"There is no use of trying to catch him—now," said Mr. Arlington, taking up the cue. "He has gone, and as he is a perfectly innocent young fellow I trust he reaches home in safety. Come, Grace, come, wife," and he turned into the house, and Andy followed. From the parlor windows they saw Jacks and his men consult together for several minutes and then ride slowly away.

"It's a good thing they didn't get here half an hour ago," said Andy, with a sigh of relief, in which Grace readily joined. "Even if we had prevented them from getting at Louis here they would have waylaid him when he did start off. They are fooled now—and serves 'em right."

But were Jacks and his men fooled? Let us wait and see. (*To be continued.*)

Just Between Ourselves

Dear Boys:

Does the title look familiar? Are you glad to see it again? Some of you are, I know, because when I dropped these intimate talks for "Stories Out of My Own Life," I received a number of letters expressing regret. Well, the fact is, I switched over to the stories because I thought you were tired of hearing me just talk. Now, I am back again, and for a few months it will be "Just Between Ourselves," as of yore. If you will do your share of the talking we can have a good time. There's no bore, you know, quite so unpleasant as the fellow who wants to monopolize a conversation.

OUR FRONT COVERS.

First, a word about our front covers. There are, as you know, two big departments in a magazine publishing enterprise, namely, the Editorial and the Business. It is very hard for them to get along peacefully sometimes. The Editorial wants to please the reader; the Business wants to get in the money. The Business says I want a certain page for advertising; the Editorial says I need that for a certain story. Somebody must give way.

Now, the Business department of THE AMERICAN BOY recently discovered it could add seven thousand five hundred dollars to its receipts in twelve months by selling the front cover to advertisers. The advertisers were ready to promise to make the front covers attractive so that our subscribers would not disapprove. You can rest assured the Editorial department was unhappy over the suggestion and demurred, but arguments came thick and fast, until finally the Business department won.

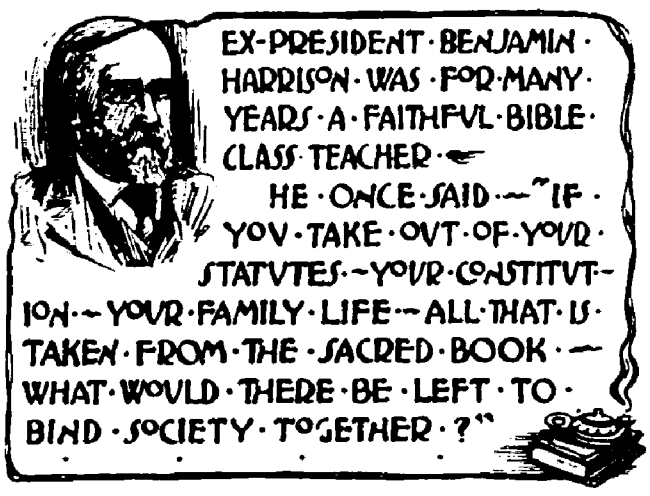
The result is, three front covers have appeared, each owned by an advertiser, who, in two instances at least, made their designs attractive enough, you will agree. These three covers brought us, in three months, over eighteen hundred dollars in money, but they also brought us twenty-five letters, or thereabouts, from boys scolding about our selling front covers for advertising purposes.

Then the Editorial and Business departments got their heads together again. The Business department counted the money. Eighteen hundred dollars is a big pile. The Editorial department read the letters. But what were twenty-five letters when nearly a half a million boys read THE AMERICAN BOY! But if twenty-five boys took the trouble to write, how many more boys might be shaking their fists at us behind our backs and saying nothing? That scared the Business department, for you can't get advertising unless you keep subscribers, and you can't keep subscribers if you displease them. We could not discover that even one boy had dropped his paper because of the advertising covers. But what of that, if it was a fact that our good friends felt grieved and badly treated?

So, it was seven thousand five hundred dollars and the disapproval of some of our good friends; or not a dollar for front covers and the good opinion of all. Which should it be? The conference was soon over. There will be no more advertising covers. You saw the last one last month. It is a big pile of money deliberately to turn away from, but we prefer the approval of the boys—all the boys. There are some things better than money. Now to something else.

DON'T BE A ROWDY AT PLAY.

The head master of a boys' school, in a letter to me expressing his pleasure in reading the stories out of my own life, says: "You are doing great good, and we are in accord on everything save in the course you have advocated in No. 5. I am trying to inculcate sportsmanlike conduct in games, fair play, and honesty. I am trying to teach the boys to cheer their own side as much as they please, and even a good play on the opposite side, but never to try, by groans and shouts, to rattle their opponents. That



might be all well enough if the two sides were enemies. Had I been Sitting Bull, I should have done just as his followers did, shake blankets in the face of Custer's horses, and try to stampede them. Custer and Sitting Bull were enemies. But when two neighboring ball teams meet for a game, it is different, and the game should be won or lost only on a question of merit. In your last game you won through rattling the other side. You got them on the run—unnerved, worried, weak, and so won the game by unfair means.

"I write in the kindest spirit and with the deepest wish that you will look on this as I do, for there is need of reform in this method of conducting games all over the country. I think if we can teach our boys to play fair, and in a sportsmanlike manner, when they become men, they will conduct their business honestly."

Now, I want to say, I have no defense to make to this criticism. I told the story according to the facts. My home team was about to lose the game simply through lack of heart, and for this reason the opposition team was getting an undue advantage over my team. My coming to the rescue at the right moment and putting a little ginger into the home team, and at the same time throwing the visiting team into a panic, turned defeat into victory.

I agree with my critic that the end does not always justify the means in a game of ball any more than it does in business. That which gives an unfair advantage should not be practiced in any sort of game.

Is there not, however, a view of this matter that in a way excuses the "rattling" of an opponent? A game of ball is not only a trial between two teams as to who can hit the ball the safest, who can run the bases best, who can stop a "daisy cutter" and catch flies the surest, but who can keep his balance, his equilibrium, his poise the best. Playing a match game of ball is putting to the test more than mere physical qualities. There really would not be much fun in it if that were all. No team is put to the test of what it can do until it is put under fire, and only the team that can, notwithstanding a hurricane of cat-calls, still put up a good game, is worthy of victory.

I think in one sense it is well for a boy to withstand clamor and abuse, particularly where it is known that the opposition is playful, though sometimes in deadly earnest. Men have to put up with this in business. They are frequently put to this sort of test in the competitions of life. It is well for the man, if, as a boy, he learned to struggle manfully on, disregarding the crowd that sought to rattle and unnerve him.

I have much sympathy for the stand taken by our correspondent. I like to see a decent game. I like to see the visiting team applauded for good work. But I am not sure that I go to the full extent of decrying all that we are accustomed to seeing in an exciting baseball game, much of which is intended to irritate and annoy the opposition.

I think the most exciting games of ball I ever saw were games in which the visiting teams had opposed to them, not only nine strong players, but five thousand spectators as well. One such game I have in mind was played some years ago, but I can remember still the admiration in which I held the visiting team for its magnificent nerve and its courageous, never-say-die way of battling against opposition, and finally winning. It took ball playing of the highest order to win that game, because winning in that case meant not only the required physical skill and endurance, but mental discipline of the highest order.

Everybody who has played ball, or has seen ball played, and is familiar with the game, knows that listless onlookers make listless players. If you want to put a team on its mettle and stir it up to action, wake up first the spectators. If you have observed baseball games closely you have noticed how much the bleachers have to do with good ball playing.

And yet after all, our critic is more nearly in the right. The average American baseball crowd is inclined to be unchivalrous and even rowdyish.

SOME DONT'S.

I do not like to say "Don't" to a boy, but sometimes it is necessary. Here are a few that I must say: Don't, boys, send us poems and stories. There is not room enough in our paper for them. Our readers demand the best stories by the best authors. Don't send us stamps and coins, asking us what they are worth. Just describe the stamps as best you can, and in the case of the coins, send us "rubbings." Don't send answers to the puzzles, excepting such as appear in the Tangle Department, to reach us before the 10th of the month or after the 15th. Don't say you are entitled to a Legion of Honor Badge for heroism or school record without, in the case of heroism, sending us the word of some adult eye-witness, and in the case of school record, sending us a certificate from your teacher or teachers stating the facts after they have read the requirements. Don't let your subscription expire. If you intend to keep on taking the paper, send your renewal money promptly. Don't expect a receipt for subscription money sent. Your getting your paper will indicate that we received the money. Don't say you cannot get a new subscriber to THE AMERICAN BOY in your neighborhood or among your friends and acquaintances, for you can if you try hard enough. You ought to have one of those watches we are offering this month. My word for it, you will not be disappointed. If you get a new subscriber and get a watch, tell the subscriber that he can get a watch too by getting another subscriber, if he does it before June first. Don't be worried if a complaint you may happen to make regarding some business deal with us is not immediately attended to. The majority of the complaints we find to be trivial and without cause, due to the carelessness of the boys, who sometimes write us without giving their addresses, or change their addresses without notifying us of the new address and at the same time giving us the old one, which is necessary. Many other things give trouble and cause labor and delay here in our office where the fault is not ours. Exercise patience. Don't expect your photographs returned unless in sending them you send postage for return. Don't answer puzzles outside of the Tangle Department without reading the rules printed always on the same page with the puzzles.

SHAGGYCOAT---The Biography of a Beaver

Written for The American Boy by Clarence Hawkes, the Blind Naturalist

BEGUN IN MARCH

CHAPTER V.

IT WILL BE remembered that before beginning work on the dam the beavers went to a point a few rods above where it was to be placed and dug three holes running back from the stream. These holes started at different points in the bank but all converged at the top of the knoll.

The water had now set back and covered the lower end of the holes near the stream, but the opening at the top of the knoll was high and dry.

The beavers now set to work with mud, sticks, stones, fine brush and weeds, and build a circular wall about eight feet in diameter around the hole at the top of the knoll. The wall was about two feet thick and during the first two or three days of building looked for all the world like the snow fort that children build by rolling huge snowballs into a circular wall, and then plastering in the cracks with loose snow. Only the beavers' work was more regular and symmetrical than that of the children.

It was now the first of November, and freezing a little each night. Just the best time imaginable for a beaver to work upon his house, for it was really a house that the beavers were building.

HE TORE AWAY AT THE FROZEN MUD HOUSE LIKE A FURY

So while the November sky was bright with stars, and the milky way was luminous, while the frost scaled over the edges of their little pond, and the fresh north winds rapidly stripped the forest of its last leaves, the beavers worked upon their house with that industry that is proverbial of them. They brought mud in their paws or on their broad flat tails, and sticks and brush in their teeth and plastered away like skillful masons. When a pile of mud had been placed in the proper position, it would be smoothed off carefully with the patient fore-paws or perhaps that broad strong tail would come down upon it with a resounding slap and the trick was done. When the wall began to round over for the roof, the difficulty began. Here they had to put in rafters. These were formed of pliable sticks of alder or willow, one end being stuck in the mud wall, and the other bent over at the top, until all came together, where the chimney would be; just like the poles in an Indian's wigwam. Here they also had to use great care in placing the mud, for it would frequently fall through between the rafters, or slide down upon them.

If they could work when it was freezing, the cold froze the mud to the rafters and helped to keep it in place. Several times part of the roof fell in and had to be relaid, but they still worked away like beavers, and finally all but a very small opening, two or three inches in diameter, had been closed. This opening was the vent or chimney, where foul air might escape. This hole had to be just large enough to permit the escape of hot air, but not large enough to admit any of their enemies.

The same night that the final touches were put upon the roof of this curious dome-shaped house, the ground froze hard, and in the morning the wall of Mr. and Mrs. Beaver's new abode was quite substantial. But later on when the hard freeze had made the earth like rock, this little mud house would be a veritable fortress, capable of withstanding almost any onset with ordinary weapons. Even a man with a crowbar and axe would have found it a hard task to enter this stronghold of these queer little people.

So you see the beaver had planned his work well, and the frost and the wind had helped him. He had harnessed the stream to do his work, and made its water protect him from his enemies. Just as men built their castles in days of old, the beaver had made his dam, so that a moat should surround his house, where the drawbridge should always be up, and the only way of entrance or exit should be by water. You may wonder how after the roof of their house had been closed up, and no door left, the beavers went to and from their dwelling, but do you not remember the three holes that had been dug several weeks before. These were now their three submerged channels to the outer world, through which only a good swimmer could pass. This was the way they went. A plunge down the hole at the center of the lodge, and a dark form would shoot out at the bank of the river. Perhaps a beaver's head, dripping with water, would be poked up, only a few feet from the mud house, or maybe they would go the entire width of the pond; before coming to the surface, for they are great swimmers, and can stay down for several minutes without coming to the surface to breathe.

Besides having three doors through which to escape to their water world, the beavers took other precautions against being entrapped in their snug house, or caught in the pond without a place of refuge to flee to.

They searched the bank for places where it was steep or shelving, overhanging the water. At such points they dug burrows back into the bank, gradually running them upward, but stopping a foot or two short of the surface. Here they would scoop out a snug burrow or nest to which they could retreat, when the house became dangerous. They made three or four such burrows, the lower end of each being under water, and the nest end high and dry, but still underground. By this time they felt that their pond was fairly well fortified, and they set to work, laying in their winter store of food, for they knew that the pond would soon freeze over and they would be prisoners under the ice for the entire winter, so they must make their plans accordingly.

They went to the upper end of the pond and began felling birch, poplar and maple saplings, three or four inches in diameter. These small trees they limbed out, and cut up into pieces about three feet in length, just as a woodchopper would cut cord wood.

When a tree had been cut up into these convenient pieces, one of the beavers would load it upon the shoulders of the other, who would cling to the stick with his teeth and they would begin dragging it to the water. The beaver usually went obliquely, dragging the stick after him, with one end trailing. When it had been rolled into the water, it was left to the current which they knew would float it down to the dam. If the channel became blocked and logs lodged along the shore, they pushed them off like good logmen, that they were. It took two or three weeks to cut the winter's supply of wood, which was not for fuel but food. All the logs had been floated down to the dam and secured under water near the lodge, when the great freeze came. It was quite difficult to make the sticks stay, but this they managed to do in several ways. Some of them they thrust into the mud, while others were secured under roots, and a large pile made safe at the dam, by thrusting one stick under another, and allowing the top sticks to keep the under ones down.

One clear crisp night, about the first of December, the north wind awoke and came galloping over his frozen fields, bringing with him legions of frost folks. The fingers of these myriad little people were like icicles, and everything that they touched was congealed. They found the beavers' pond, and danced a merry dance over the sparkling water, and every time that they stooped and touched the clear water, crystals of ice formed and spread in every direction.

It had been a very pleasant autumn, but the north wind was angry tonight, and he howled like a demon, and smote lake and river, with his icy mittens, so that when the sun rose next morning, lakes and streams were cased in a glittering armor of ice, and the beavers were prisoners for the winter.

For the next four or five months they would live under ice. But they did not care for that. For this they had planned and worked for weeks. They were snugly housed with plenty of tender bark, for their winter's food, so the wind might howl, and the frost freeze. It would only strengthen their barricade and make them more secure against the outer world.

In their thick walled house it was quite snug. The heat of their bodies made it warm and the vent at the top carried off the bad air. Whenever they were tired of confinement, they would go for a swim in the pond, through one of the three under water passages, just as though the pond had not been frozen over. The only care that they needed to exercise was to look out that these holes did not ice over and thus lock them in their lodge like rats in a trap. To prevent this they broke the ice frequently with their tails during cold days. Some cold nights they were obliged to watch the holes for hours to prevent them from freezing.

It was twilight of a bleak December day. The sun had taken his accustomed plunge behind the western hills, but still shone blood red upon the clouds above the gray hills. There was still light enough from the afterglow to cast shadows, and phantom shapes peopled the aisles of the forest, or stretched their long arms across the fields.

The moon was just rising in the east, and made shadows and shapes uncanny and unearthly. Already the heavens were studded with stars, and the wind moaned fitfully, rattling down snow and ice and whistling in the leafless twigs. Down from the foothills, coming like a wary hunter, a wildcat prowled to the edge of the beaver's pond. A part of the way he had followed a rabbit's track, but it had proved so old that he had finally given it up. When he hurried he went by quick jumps, bringing down all four feet at a time, quite close together, and leaving those four telltale paw-prints in a bunch, that hunters know so well. When he wanted to be more cautious, he walked, cat-like, setting his fore paw down as softly as though his foot had been velvet. He was an ugly looking brute. Rather heavily built, with a heavy head, and square topped club ears that usually lay back close to his head. His visage was generously sprinkled with whiskers, but it was accented by two hungry yellow-green eyes, that seemed almost phosphorescent.

His habitual expression was a snarl.

At the edge of the beaver pond, he tried the wind this way and that. His nostrils dilated, his eyes snapped fire, and his stump of a tail twitched. There was game abroad. He knew that scent of old. It was quite common away to the north from whence he had wandered. Cautiously he crept forward, putting down his paws in the dainty cat-like manner; but he must have known that the beaver were out of his reach at this time of year. Perhaps his hunger made him forgetful or he may have looked for the unexpected.

Halfway across the pond he stopped and sniffed again; it was close at hand now. Then he noticed the conical house on the island near, and crept cautiously towards it. Twice he walked about the house, which was now partly covered with snow, then with one jump he landed upon the very dome of the beavers' dwelling and peeked in at the air hole. What he saw made saliva drip from his lips and his eyes dilate. There within three feet of his death dealing paws, were a sleek pair of beavers, warm and cozy. The hot scent fairly ravished his nostrils. It was unendurable, and he tore at the frozen mud house, like a fury, first with his fore paws and then with his powerful hind paws armed with one of the best set of claws in the New England woods. But it was as hard as a stone wall and the beavers might just as well have been miles away as far as he was concerned. Then he peeked in again, and ungovernable rage seized him. He reared upon his haunches, and beat the air with his fore paws, and howled and shrieked like a demon. The beavers started from their twilight nap with sudden terror. This fury, that was tearing at their house, and filling the night with awful sounds seemed almost upon their very backs, so they fled precipitately through the water passages into the pond and took refuge in one of the burrows along the bank.

A moment later when the wild cat again peeked in at the vent, the house was quite empty. Then after a few more futile efforts to break through the frozen walls he went away, going from bush to bush, alert and watchful. Only the tracks remained to tell that the beavers had had so unwelcome a caller.

CHAPTER VI.

December came and went, and the first of the new year found the beavers snugly caught beneath a barricade of six inches of ice. The water from the little brook that fed their pond was very clear, so that the ice was as transparent as glass. This enabled them to see what was going on outside, almost as well as they could before the ice had formed, and besides, it kept out the wind and the cold.

You may wonder at this, and think that no place on earth could be colder than the bottom of an ice-bound pond. But I am sure that a thermometer under water would have registered much higher temperature than one above, for if this were not so, the water would freeze solid, to the bottom.

Did you ever have your playmates bury you in the snow just for fun? The snow looks cold, and seems uninviting, but once snugly tucked away in it, it is quite a warm white blanket. People of northern latitudes frequently save their lives, when caught out in a cold storm, by covering themselves in the snow. In the same manner, the dog teams, in Alaska, pass the bitter cold nights of an arctic winter, buried in the snow. So the ice made the beavers' pond snug in the same manner.

Besides being warmed by its coating of ice, the frost folks had also made the pond very beautiful. Whenever there was an uneven spot in the ice, the sunlight was broken into a wonderful rainbow prism of dazzling colors, that showed more plainly under the ice than above. There were green, blue, opal and many shades of light red, all of which made a beautiful roof for the beavers' winter palace.

In addition to this, all the grasses and reeds along the edge of the pond were gemmed with ice-dia-

A SENSE OF RESTLESSNESS CAME OVER SHAGGYCOAT

monds. These globules of ice caught the sun's rays, and in many cases refracted them as brilliantly as real diamonds would have done. In all the little inlets where reeds and flags had been frozen into the ice, the frost folks had played queer pranks, so that the pond was a most beautiful place, as well as a very snug one.

The phrase, "as busy as a beaver," was anything but descriptive of their life now, for they did little but sleep and eat bark. They had provided well for these cold months, and now they had nothing to do but enjoy themselves. I am inclined to think that the maxim about working like a beaver only applies to two or three months in the autumn, for the rest of the year the beaver is a very lazy fellow. All through the winter months he sleeps in his snug house, or nibbles away at his store of bark. Then, as soon as the ice breaks up, all the male beavers over three years of age, start on their annual wanderings through lakes and streams. There is no particular object in this quest, but it is just a nomadic habit, an impulse that stirs in the blood, as soon as the sap starts in the maple, and keeps them moving until sometime in September.

One day must have been very much like another under their covering of ice. Inside the lodge, the diameter was three or four feet, and about the same in height. Each beaver has his own particular bed, which he always occupies, and the house is kept very neat and clean. I do not imagine there was much regularity in their meals, but whenever they felt hungry, one would go to the pile of logs near the dam, and select a piece. This was then dragged into the lodge, and peeled leisurely. When it was white and shining, it was taken back and thrust into some crevice in the dam, or piled by itself. It had served its turn, and was now discarded.

One enemy the beavers had, who gave them considerable annoyance, and some anxiety. This was the gluttonous wolverine, which is a mongrel wolf, meaner than any other member of the family. His prey is small animals, and his particular delicacy is beaver meat. He is also a lover of carrion, and dark deeds, and is altogether a despicable fellow.

The crowning event in the life of the beaver lodge during that first winter, was the coming of four fuzzy, awkward, beaver babies. They were very queer looking little chaps, with long, clumsy hind legs, which they never knew quite how to use until they were shown the mysteries of the water world, and swimming. These mites of beavers were not as well clad as their parents, for their fur was very short, but they nestled close to their mother, and, by dint of wriggling into her warm coat, kept warm until spring.

Shaggycoat was much busier after the young beavers came, for he now had to bring all the wood into the lodge, for Brighteyes stuck close to her children, and Shaggycoat was glad to wait upon her. So, when she was hungry, he brought logs into the mud house and peeled them for her.

Several times, during the winter, they heard sounds of some animal digging at the outer wall of their castle, and occasionally an ugly-looking wolfish muzzle was thrust in at the vent, which at first gave them great uneasiness, but, by degrees this wore away, as they found out how strong the house was, and how little the digging of their enemy accomplished.

At last the spring rains came, and the ice began to break up. Then, as the water rose, and the ice was tumbled about by the current, which was swollen, there were loud reports from the cracking ice, that echoed across the valley, just as it had when the great pines fell.

Huge cakes of ice were piled upon their island, and one struck the mud house, threatening to demolish it, but it withstood the shock.

The dam was severely tried during these spring freshets. The ice pounded and ground away at it, and the water set back, until the pond was twice the size it had been in the autumn. The beavers were nearly drowned out of their lodge during this high water, but finally a portion of the dam gave way, and the water fell. Then the ice went churning and scraping through the break. Driftwood and brush, and all sorts of debris, came down with the flood, and the water was full of roil. The pond was not the crystal lake it had been.

But it gradually settled, and things looked as they had in the autumn, the trees were leafless, and the landscape cheerless. The pond also froze over along the edges, at night, and thawed by day.

Away down in the heart of the earth, the secret forces of nature were stirring. The maple had already felt the touch of life, and its sap coursed gleefully in its veins. The awakening had not come yet, but it was coming. The flowers and the buds had been sleeping, the nuts and the seeds had been waiting patiently, but their time of waiting was nearly over.

Already daffodil and arbutus stirred uneasily in their slumber. Their dreams were light, like the sleep of early morning. Into their dreams would steal a sense of soft winds, and warm sunshine.

Then, one day, the sense of this life about them became so certain, and their dreams were so real, that they awoke, and spring had really come. Up they sprang, like children who had overslept, and opened their hearts to the joy of living in the warmth of the new spring.

Now the pond was no longer frozen over along the bank, but the shores were very muddy, with the coming out of the frost. Soon birds began to sing in the bushes along the pond, and a sense of restlessness came over Shaggycoat, for everything seemed to be moving. The birds were all going somewhere, and why not he?

He first cut a good supply of fresh poplar logs at the upper end of the pond and floated them down near the lodge. This took him several days, all of which time the spring had been advancing, so when this task was finished, the frogs were singing in his pond. This was a sure sign of spring, and one that should not go unheeded.

The water was pouring through several large breaks in his dam, but what cared he? There was still water enough in the pond to keep the entrances to the lodge under water, but even if it did not, the house could be abandoned, and his family could live in one of the burrows along the bank for a while.

There were Brighteyes and the four frolicsome young beavers to keep him but the rush of distant waters was in his ears, and he felt just like swimming miles and miles away. Distant waterfalls and wonderful mountain lakes were all waiting for him.

THE BUCK GAVE A MIGHTY LEAP

So, one day, when the air was soft and sweet, and the water was getting warm, he slipped away, and Brighteyes knew that she should not see him again until early in September. He was gone to the world of water wonders far beyond their limited horizon. She would stay and take care of the babies until his return.

CHAPTER VII.

We have followed the fortunes of Shaggycoat so long that the reader will be interested to know just how he looked, as he swam away into his water world on this warm spring morning.

He was three years old and his weight was already about thirty-five pounds. When he was fully grown, he would weigh fifty-five or possibly sixty pounds. His length was about forty inches, and he would add five or six more to it before he got his full size.

His head and body would then be two feet and three quarters or three feet of his length, and the other foot would be the queerest kind of a paddle-shaped tail you ever saw.

It was six inches broad at the widest place, and instead of being covered with fur, like the rest of the beaver's body, it was covered with a tough scaly skin, that gave it quite a fishy look.

It was believed by the ancients that the beaver's tail was fish, and the rest of him was flesh. So it was lawful to eat the beaver's tail on fast days, when they could not eat meat.

If Shaggycoat had lifted his head out of the water and looked at you as he swam you would have seen that it was rather small and flat, and that his ears which were small even for the head, nestled down in his fur so as hardly to be noticed. If you could have examined him near by you would have seen that the entrance of each ear was guarded by a fur-covered water pad, which the beaver can close at will and keep the water from his ears. This is very important as he lives so much of the time in the water.

The fact is noticeable all through nature, and particularly in the study of animals, that whenever animals have need for a peculiar organ, or a peculiar sense, it has been given them.

Sometimes it is a specially warm coat to shield them from the cold, as in the case of the beaver or otter. Again it will be a long bill, with which to bore in the mud for worms, like that which whistle-wings the woodcock possesses. Or perhaps it is a stout beak, which can bore into the heart of oak or maple, as the woodpecker does. Wherever there is a peculiar need in nature, there is always a peculiar make-up of a bird or beast to supply it.

Shaggycoat's fore paws were very short and held well up under him as he swam. He rarely used them in the water except to hold things in. So they were used more like hands than feet. But his hind legs were long and stout, and they worked away like the screw upon a steamboat, as he moved easily along through the water. His hind feet were also webbed, which gave more resistance, while the legs were set high up on the body, and the stroke was given at an angle, which gave him greater power and sweep. He was altogether a wonderful animal built specially for swimming.

His front teeth were shovel-shaped, two upon each jaw, and they came together like wire cutters, and whatever was between them was severed. An alder stick an inch or two in diameter was severed at a single bite, and small saplings came down in a few seconds.

You may wonder what Shaggycoat saw as he loitered by lake and stream, now skirting a noisy waterfall or turbulent rapids and now loitering in a deep pool. It was a most wonderful world, full of strange creatures and fishes, and the shores of the rivers were frequented by many creatures.

Water is the first necessity with which to sustain life, and lakes and springs are the drinking places of the wild creatures, as well as the homes of many of them.

With the fishes that swam in the stream, Shaggycoat was well acquainted, but he rarely molested them and never caught them as the otter did, for he was a vegetarian and preferred bark.

A beautiful sight that he frequently saw was a lot of salmon jumping a low fall to the pool above. There would be a ripple and a splash. A shower of water would be thrown up, and the sunlight would break into a myriad rainbow hues. And the silver gleam of the fish would glint for a moment in the light. Then there would be a big splash and another rainbow in the pool above and the salmon was gone, and the way was clear for the next one.

Sometimes Osprey, the great fish hawk of the Atlantic seaboard (also called in Florida the gray fishing eagle) would come sailing majestically by.

Frequently he uttered his piercing fisherman's cry as he flew. Occasionally he would almost pause in mid air, giving just enough motion to his wings to steady himself, then down he would come like a falling star, cleaving the water easily and when he appeared a second or two later, a fish was usually dangling from his talons. Sometimes it was a sucker, or chub, or if he had been unusually successful, it might be a pickerel or trout.

When he came up there was always a great shower of water. This when the sunlight played upon it made him look like a bird of wondrous plumage, but when he had shaken off the water he was just the plain fishhawk, but magnificent in flight.

Another smaller fisherman was the queer black and white kingfisher who caught his fish in his beak instead of his claws. He did not make a great plunge like the fishhawk when he went fishing, but skimmed along close to the water, and plunged under suddenly and was up again in a second.

He was a comparatively small bird so had to content himself with small fish.

Then there was Bluecoat, the frog catcher, who could wade easily in a foot of water, his legs were so long and slender. He looked more like a bird on stilts than one on his natural legs, and his beak, which was made especially for frog catching, was long and strong.

He might be seen stepping daintly in some shallow near the shore where there were plenty of lily pads and water grasses. He was very cautious in his movements so as not to scare his victim. He would stand for half a minute on one leg, if he suddenly discovered a frog that he was afraid of scaring. Then his long neck would suddenly shoot out. When he drew up his head a frog would be seen kicking in his bill. He would then hammer the frog on a rock, or spear him with his bill, until life had left him, when he would hide the catch upon the bank and return to his sport.

At dawn and twilight Shaggycoat often saw flocks of ducks and wild geese feeding upon water grasses in sheltered coves. Some of them picked away at things above the water, but others would dive head first and come up bringing a choice bit of grass.

Once a couple of half-grown muskrats were playing in a shallow, chasing each other about in high glee, when the ugly head of a water snake shot out, and jaws that gripped like death closed upon the young rat's throat. There was a short struggle, under water, and then a few bubbles floated to the surface, and the musquash had been done for. A few moments later Shaggycoat saw the snake swallowing his breakfast on an island in the middle of the stream.

These and other experiences taught the young beaver to always be on the watch and distrust things that seemed strange to him.

The buck drank in the river, and the pretty doe, lank and half-starved from suckling her fawn, ate ravenously of the lily pads in the shallow water.

One evening just at twilight thoughts of Brighteyes and the baby beavers had so haunted Shaggycoat that he had turned his nose homeward, when a peculiar object came round the bend in the stream and on towards the pool, where the beaver was playing. It came like a duck, but it was larger than many ducks, and it had two wings, like the fish-hawk, which rose and fell regularly, with a splash of water each time.

There was a buck drinking in the opposite side of the pool from the beaver, and he, too, saw the strange, bright bird, that sailed like a duck, with wings that splashed in the water. Then a bright flame leaped up, and a roar like thunder resounded across the waters and rolled away into the distant foothills. The buck snorted, gave a mighty leap, and fell midway in the stream, kicking and thrashing like a frenzied thing.

All this was strange and terrible to the beaver, who

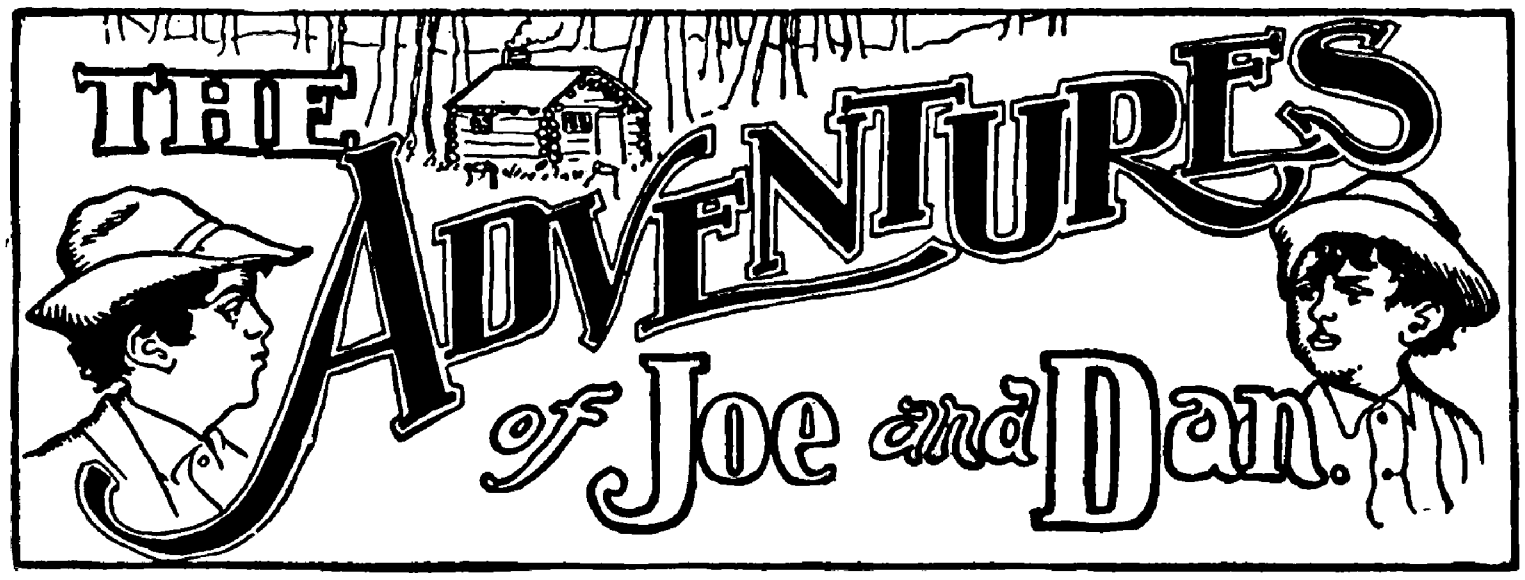
BLUECOAT, THE FROG CATCHER



BEGUN IN MARCH

CHAPTER VII.

THE BOYS crept nearer to the Indian and saw that he was a surly looking fellow and quite alone in the woods. The wigwam was made of deer hides and blankets and was a poor affair. Why the redskin should be there alone it was hard to say, but Joe finally whispered to his brother:

"He must know the way out of the woods, and we have got to speak to him. I have the ax and you have the knife on the hoe handle. Don't be scared by anything he may say or do. If he lays hands on us we must fight. Come on, now."

They had approached the Indian within twenty feet when he looked up and saw them. He at once sprang to his feet, and Joe called out:

"You need not be afraid. We are two boys who have been lost in the woods and are anxious to find our way out."

"No like white folks," grunted the Indian.

"But won't you tell us the way out?"

"Where white boys live?"

"Near the village of Midvale."

"Ugh! You tell lie!"

"No, we don't. We are lost and want to go home."

"What you got in that pack?" asked the Indian as he motioned toward the meat.

"It is venison," replied Joe, as he stripped the bark off and exposed the meat."

The Indian picked up the haunch of venison and tossed it into his wigwam, and then turning to the boys he said:

"Give me ax and knife."

"You can't have them," replied Joe, as he stepped back and raised the ax to his shoulder, and at the same time cautioned Dan to be ready to assist him.

"White boy give 'em up or I kill them!"

The Indian picked up his rifle and brought it to his shoulder, but as the boys had seen him cleaning it they knew that it was not loaded.

He pointed the gun first at one and then the other, but seeing that they did not scare he lowered the weapon and with a fierce scowl shouted out:

"Go away! Go on! I want nothing to do with you!"

"Won't you tell us how to get out of the woods?"

"No!"

"Then we will leave you, but we must have our meat."

"No can have meat."

Joe had made a step or two toward the wigwam when the Indian seized him and a struggle began for possession of the ax.

"Stick him in the legs with the lance, Dan!" called Joe, and the younger brother was about to obey when something happened.

The dog that had deserted them early that morning, and which they had never expected to see again, came rushing through the forest with a bark, and, seeming to realize how things were, he fastened his teeth in the Indian's legs and began worrying him. This was too much for the red man. He began yelling for them to take the dog off, but before doing so Joe gave him a twist that flung him on his back.

"Now, Dan, you and the dog watch him and I will get our meat and see what he has got in his wigwam. If he tries to get up, give him a good jab with the lance."

But the Indian had had all the fight he wanted. He lay quite still, though cursing all the time, and Joe went into the wigwam and turned things topsy turvy.

Not much was found there. The redskin had either been driven away from his tribe for some crime, or had elected to live alone like a hermit.

He had no provisions on hand, and only the crudest cooking utensils. Joe brought forth the meat and wrapped it up again, and then as the dog was called off he asked:

"Will you tell us how to reach the house of some white man?"

"Is white boys lost?" asked the Indian.

"Yes."

"Then you go this way, and in two hours you reach a house."

"If you had told us that in the first place you would not have been bitten by the dog. We are going now and good-bye to you!"

They set off in the direction pointed out by the Indian, but they had not gone half a mile when the dog came to a stop and began whining and pointing his nose in another direction.

"Why does he act that way?" asked Dan.

"He seems to want us to go another way, and I think we would better follow him. I have been thinking ever since he left us this morning why he acted so queer. I think now that he recognized the cave as being near his home, and that he has been home and come back for us. That wolf bite on his hip looks as if some one had dressed it with oil since morning. He is now just as full of fun and frolic as he was yesterday. I would sooner trust him than the Indian, and we will follow wherever he goes."

That afternoon the boys had a laughable adventure. In making their way along the edge of a cranberry marsh they came in sight of a large bear about half-way up a dead tree. It was a bee-tree and one found by the bear himself.

He was up there thrusting his paw into a hole and bringing out the honey, of which you must know bruin is very fond. Pretty soon the angry bees came swarming out, and as the bear had not yet got his new coat for the winter, there were many places on his body where they could thrust in their stings.

He whined and whimpered and growled and stood it as long as he could, but by and by the bees came so thick that Mr. Bruin let go his hold, dropped to the ground and went off through the brush, whining and complaining at every step.

CHAPTER VIII.

The boys had great hopes that the dog would lead them out of the forest before night, but in this they were to be disappointed. The animal kept steadily to one course, looking back now and then to see if they followed, but the forest was dense and it was hard work to push a way along except when they found the trails made by wild animals.

Dan's sore heel had also given him a great deal of trouble for two days, and now, when the sun was still an hour high, he sat down on a log and said he could go no further.

"All right," replied Joe. "It may be miles yet before we get out of the woods, and I am tired enough to go into camp myself. We will sleep here under this tree and build two or three fires and perhaps we shall not be disturbed."

He hunted about and found some chestnuts, and when roasted these with the venison formed their supper. The dog seemed anxious for awhile to go on, but as he saw the boys making camp he lay down and was content.

It was hardly dark in the woods before Joe and Dan were asleep. Had it been a month later in the season they would have suffered for the want of blankets, but the warm spell continued and they stretched out on their beds of leaves in the most comfortable manner.

Three fires were built around their camp, and before going to sleep they provided themselves with extra fuel. The dog curled up at their feet, and by and by the camp was quiet except for the chirp of the crickets.

The Indian whom they had worsted wanted revenge for the bite the dog had given him and for his failure to get possession of the ax and knife.

Had they taken the direction he gave them they would soon have been tangled up in a great cranberry swamp. This was what he hoped would befall them, and as soon as they were out of sight he loaded his rifle and followed on. Although he kept out of their sight, he could track them through the woods with the greatest ease.

When he reached the spot where they had turned away and followed the dog he gave utterance to savage curses. For a moment he thought to turn back, but then changed his mind and hastened along the trail. Pretty soon he came in sight of the boys, and from that moment he kept them in view.

They pressed forward without the slightest suspicion that they were being dogged, and when they built their campfire the red man was watching them from behind a tree not over ten rods away.

There were two things he meant to do. He meant to kill the dog and to get possession of the ax and knife and anything else of value the boys had about them. He must wait till they were asleep, and on account of the dog he must approach their camp very carefully.

The boys had been asleep for an hour before the Indian moved. No fox or rabbit would have made less noise. He crept along on hands and knees, inch by inch, and he carefully moved every limb and twig from his path with his hands. Now and then he paused for two or three minutes and remained so quiet that had one of the boys been wide awake and looking at him he could not have detected a sign of life.

Then he would go creeping forward again, drawing nearer and nearer, and at last he was close to the boys' feet and the dog.

The ax and the lance were lying beside Joe, and the Indian reached over and removed them without a sound. Then he drew a hunting knife from his belt and made ready to stab the dog.

The dog may not have been as keen-scented as some, or perhaps he was overtired. He did not get the scent of the redskin until the knife was raised.

Then he suddenly sprang to his feet, and a yard away, but turned at once and sprang upon the intruder. He leaped for the Indian's throat, but the man threw up the hand in which he held the knife, and the dog caught him by the wrist.

It was lucky that he got such a hold. The knife fell to the ground, and struggle as he would, the Indian could not break the hold.

Joe and Dan were aroused by the dog's first snarl, but it was a minute or two before they understood the situation. They saw the dog and man struggling, but whether it was an Indian or a white man they could not tell until Dan threw some leaves and twigs on the fire and made a blaze.

THE DOG CAUGHT HIM BY THE WRIST

Then Joe grabbed his ax and Dan his lance, and the revengeful but cowardly Indian lay down on the ground and called for mercy. Some strips of the slippery elm bark were peeled off and used as ropes, and the boys tied the fellow hand and foot before they said a word.

Then, when it was a question of what should be done with him, Joe said:

"He followed us to get revenge, and but for the dog there's no telling what he would have done. He had that naked knife in his hand when the dog seized him. He surely ought to be punished in some way."

"But what can we do?" asked Dan.

"I will think it over and tell you in the morning. You may go to sleep again. I will watch the rest of the night with the dog."

The excitement was too great for any further sleeping. Now and then the boys dozed for a few minutes, but as soon as they began to nod their eyes opened very wide. They knew that the Indian was a crafty fellow, and that he was ready to take any advantage he could.

There was no way of telling time, but Joe, judging that it was two hours after midnight when a familiar sound came floating to them through the still forest,

"By crackey, but what's that!" exclaimed Dan, as he sprang up.

Joe waited until the sound came again, and then replied:

"It is the crow of a rooster, and not more than a mile away! Dan, we shall be out of the woods the first thing in the morning. Take notice from which direction the sound comes, so that we may not go wrong."

From that hour until daylight came stealing through the trees the clarion voice of the rooster was heard at brief intervals, and the boys felt sure that their tramp would soon be ended.

CHAPTER IX.

The Indian had made no attempt to secure his liberty during the night, but it was not because he did not wish to get away. He was tightly bound, with the dog and the two boys there to watch him, and he would have been a cunning redskin to outwit them.

Now and then he mumbled and muttered to himself, but he had nothing to say to his captors nor they to him.

The light of morning was just stealing through the trees when the dog suddenly left. As he ran through the trees the boys could hear him barking, and Joe said to his brother:

"That dog has gone to the house of the settler who owns him. It is where we heard the roosters crowing and not ove a mile away. I shouldn't wonder if he brought the man with him."

The Indian heard and understood this and said:

"White boys no lost any more. Indian glad. White boys go home now. Indian also want to go back to his wigwam."

"Oh, do you? You want us to untie you and let you take your rifle and knife and make off?"

"Good white boys! Brave white boys! Indian very sorry if he made them any trouble."

"It won't do you any good to talk," said Joe, as he saw that the bonds were still tight. "You wanted to rob us at our camp, and you might have killed us here last night but for the dog. We will keep you until some settler gets sight of you and can tell us who you are."

The Indian fell to cursing and threatening, but the boys gave him no attention. In less than an hour they heard the dog barking and a man halloing, and soon after they had answered, a settler made his appearance.

"Well, well, boys, but what does all this mean?" he asked. "My dog came home this morning and he almost asked me to follow him. Who are you?"

"We have been lost in the woods for the last three or four days," replied Joe, "and your dog was with us a part of the time. Our names are Wilkins, and we live within a mile of Midvale."

"Midvale? Why, have you any idea where that town is? It is a good thirty miles away. You must have had a pretty hard time of it in the woods. Who is that lying on the ground?"

The boys told him of coming across the Indian the day before, and how he had followed them and stolen upon them in the night, and the settler, who had given his name as Mr. Davis, said:

"I know him. His Indian name is White Crow, but the Indians will have nothing to do with him. He has stolen many things from settlers, and there are men who would shoot him on sight. Let me see that rifle."

The weapon was handed to him, and after a moment, he said:

"This is a stolen rifle. It has the name of 'White' engraved on this silver plate, and no doubt the Indian stole it."

"No steal gun!" shouted White Crow. "Buy gun of white man for ten dollar."

"He never had ten dollars in his life," laughed the settler, "but as long as we don't know Mr. White, we can't take the gun. We will have to let White Crow go his way, but there will be a little performance first. You boys go over to that thicket and cut some switches."

When the lads returned the settler said to the Indian:

"White Crow, you are a bad man. You are a liar and a thief. I am going to give you a whipping, and if ever you come within a mile of my place I shall shoot you."

The Indian begged and made many promises, but Mr. Davis wore out two of the switches on him and then said:

"Perhaps this will do you good. I shall fire off the rifle and hand it over to you, and you can also take your knife along, but remember what I have told you."

The bark bonds were cut and the Indian assisted to his feet, and after a few minutes he moved off through the forest, to be seen no more. When he had passed out of sight, the settler turned to the boys with a smile and said:

"Now come along with me to the cabin and we will have breakfast and then you can tell your story."

They found Mrs. Davis to be a motherly woman and took to her at once, and in her kindness she insisted on their eating so much that they wondered if ever they would be hungry again. When their story was told, Mr. Davis said:

"You are very lucky to get through the forest as you have. There are bears, wolves and panthers about, and only two nights ago we had a panther on the roof of this cabin. The dog went off on a hunt by himself and got lost, and that is why you ran across him in the depths of the forest. We are rejoiced that you have come out all right, and now comes the question of getting you home."

That was soon settled. Before noon a trapper and hunter came along, who said that he was going to Midvale to buy powder and shot and traps, and that he would be glad to act as guide for the boys.

They would have to camp one night in the woods, but the settler's wife furnished them with provisions and they would suffer no hardship. They made their start next day, and two days later they walked into their father's cabin, to be received as if drawn back from the dead. Men were still searching for them but it was generally believed that they had met their fate in the forest.

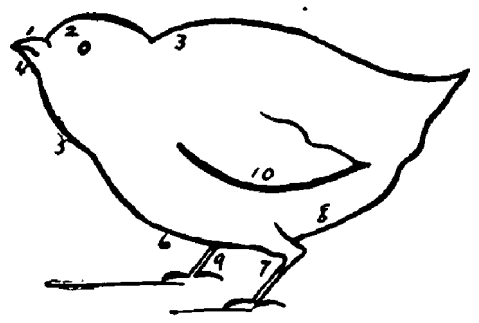
I have but a word or two more to add. The boy whom I have called Joe has been Governor of the state in which he was lost, and is today filling an office full of honor, while Dan is one of the most successful merchants in a thriving Western city. What I have told you I heard from the Governor himself.

(THE END.)

A stem-wind, stem-set watch for every boy. See page 223.

HOW TO DRAW

By W. N. HULL

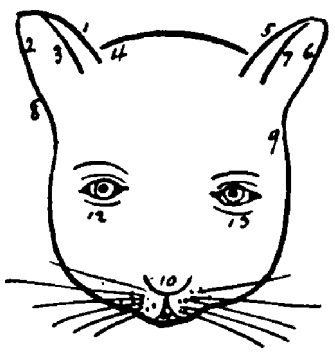


How to Draw a Chicken

Look for the figure 1, move to the right on the bill, head and body, all very slight curves. Now 4 down, then 5, swelling the neck a little, then 6 and in your sketch you may carry this line right on up past 8, but when you ink it follow 7, then put in 9 and 10. Our aim is to see how few lines we can use.

When you get a good form, take some yellow blackboard crayon and make it all over yellow with the chalk. Then take pen and ink and work in short light lines around where the shade should be. You can fix the chalk so it will not rub off by a spray of white shellac, using a tin atomizer.

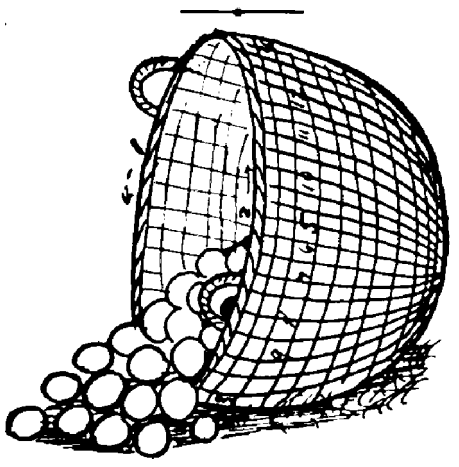
Put in grass or ground.



How to Draw a Cat's Head

Commence where you see the figure 1 and draw the ear line outward, then 2 inward, then 3. Now the head line 4 over to the other ear, then 5, 6, 7, making the ears alike. Now draw the left side of the face downward, 8, then the right, 9, curving them a little as they approach the mouth, then the nose 10. Put in the eyes, 12 and 13, at half the length of the head.

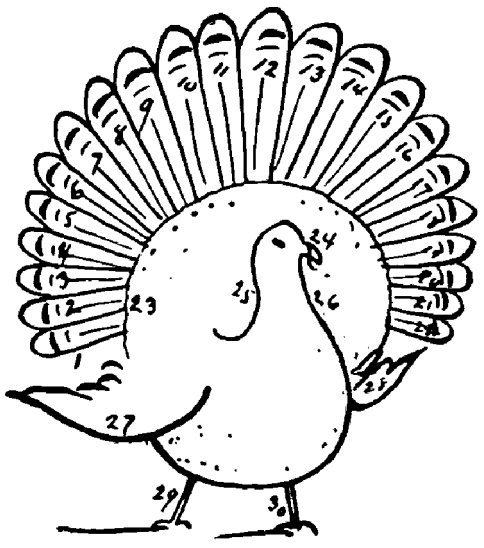
Sketch very lightly in lead pencil, aiming to get the correct line, very carefully. Control the muscle. Say I WILL, then try, try, try.



How to Draw an Upset Basket of Apples

A side view of the top of the basket gives us an ellipse, or elliptical form. This form is very common. When anything that is round is turned more or less sideways to us it will show us the form of an ellipse of various widths from a straight line to a circle.

Sketch the left side of the ellipse down and the right side up till you have a true, regular form. Then draw the left or under side of the basket, holding your paper so that it will be level, then the right side down. Make the curves alike. Put in the middle splint 5 first straight, then curve the others more and more until, when the side is reached, the curve will be like the side. Put in rings for apples. Make the ground green with chalk and spray it.



How to Draw a Turkey

Draw two rings, one for the outside of the tail and the other for the outside of the body. Work the tail feathers around from 1 to 22, then the body line from 23.

Now put in the head 24 and neck 25. Then the breast, 26, and the wings, 27 and 28. Finish with the legs and feet, 29 and 30. Put in ground. Erase all lead pencil lines after the ink is dry.

(Additional designs next month)

Mottoes for Workers

"Do your own work well, whether it be for life or death."

"Help other people at theirs when you can, and seek to avenge no injury."

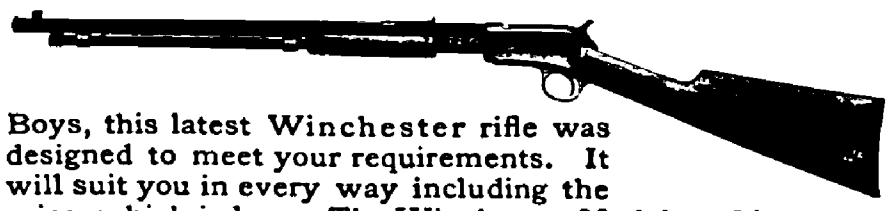
"Be sure you can obey good laws before you seek to alter bad ones."

"Rather die than make any destroying mechanisms or compound."

WINCHESTER

MODEL 1906 .22 CALIBER

Extra Light Weight Repeating Rifles



Boys, this latest Winchester rifle was designed to meet your requirements. It will suit you in every way including the price, which is low. The Winchester Model 1906 is a compact, light weight, take-down rifle handling the .22 Short Rim Fire cartridges only. It is attractive in appearance and outline, and in accuracy, reliability of operation and finish it is fully up to the established Winchester standard. This rifle is made with a 20-inch round barrel fitted with a sporting front sight and an adjustable open rear sight. It has a handsome straight grip stock finished with a rubber butt plate and weighs about 5 pounds. The magazine holds 15 cartridges. If your dealer cannot show you this model rifle, let us know.

FREE: Send for circular fully describing this rifle.

Imitations, which are short-lived and unreliable, are sometimes palmed off in place of the genuine.

Ingersoll

The announcement of the stem-wind Dollar Watch comes as a result of years of constant effort in this particular direction.

For fourteen years *accuracy* and *durability* have been the watchwords of the Ingersoll factory, the watch itself has demonstrated to twelve million wearers that it is worth anybody's attention from the standpoint of utility alone.

By these guiding principles a demand greater than for all other watches combined (over 8,000 daily) has been built up until now the tremendous output coupled with the invaluable Ingersoll patents and the marvellous factory equipment have made it possible to consistently adopt the stem-wind feature. This constitutes the most important event in watchmaking since the first Ingersoll was made and sold for One Dollar.

So-called watches, stem-wind, have sold even below $1.00 but they are not worthy of the name because they can't keep time. "Features" without quality are easy.

Ingersoll Watches are sold by dealers everywhere or postpaid for $1.00.

Booklet free. Guaranteed for one year—this is a genuine test

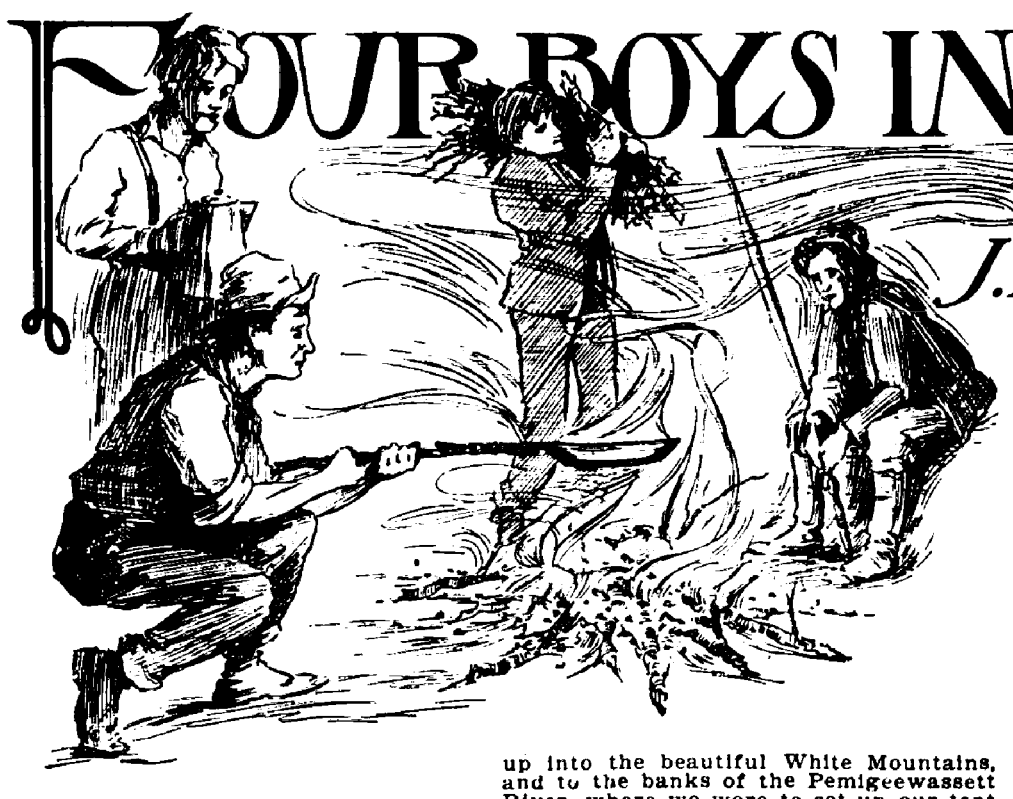
FOUR BOYS IN CAMP.

By J. L. HARBOUR.



PART I.

I THINK that Tad Fryer, Simmy Burton, Benny Kidson, and I were as happy a quartette of boys as ever walked the earth the day we started on our "camping out" trip one beautiful September morning, so many years ago that I could hardly tell the exact year without doing some reckoning. It was a good many years ago, for the oldest of us was but seventeen then and all of us have good-sized boys of our own now. Yes, and these boys are beginning to want to know if they can't go camping just as their fathers did, and we are telling them that we will "see about it." We think that three or four weeks of "roughing it" is a good thing for a boy, but we do not care to have our boys "rough it" in just the way that we did. We think that the "boys' camp" or the "summer school" for boys out in the woods, or the Y. M. C. A. way of camping out is better for boys than our way was. Then it is safer and less exciting than wandering off into the wilderness as we did. Of course, we had adventures, else why should I be writing this?

The three boys I have named and I lived in a New England village not far from Boston. It was Tad Fryer who "thought up" the camping out scheme. Tad was great at "thinking up" things. He had a vivid imagination, and was very fertile in invention. Our town of Wainford would have been much duller than it was had it not been for Tad. And you may be sure that Tad was a jolly boy to camp out with. He had what every boy who goes on a camping out trip should have, and that is unfailing good nature. Nothing could lessen or dampen his enthusiasm. I remember that while we were on that never to be forgotten trip we one day had to cross a noisy, saucy little stream on a narrow foot-bridge consisting of nothing more than a slippery log with a wobbly handrail made of a sapling or two.

Simmy and Benny and I had crossed over in safety with our packs on our backs and Tad was to follow us. He had fallen behind a little while on the march and we waited for him to come up. When he reached the footbridge, Benny Kidson called out:

"You want to walk carefully, my son."

"Better save your good advice for those that need it," retorted Tad with a laugh, and then he added:

"Bet you I can do what none of you other fellows did. I can cross that log without once touching the handrail."

"Dare you to," called out Benny.

"Here goes!" replied Tad, and he started across the stream with his head up and his arms akimbo. He reached the very middle of the stream when he swayed to the right, then to the left, and then slid off, and down he went ten feet into three feet of ice-cold water. Of course we laughed joyously, and Tad —well, he laughed even louder than we did. This shows what an abundance of good nature he had, and how hard it was to dampen his enthusiasm.

But here I am miles from our starting place before I have told you anything about how we started, and I want you to know something about that. We had some older brothers who had gone camping and they were as free with their advice as they were with their uncalled-for remarks that we would get "good and sick of it" and that we would "cry for our mothers" the first night out. Benny's brother had a tent he was very good to loan us particularly as he declared that he "never expected to see it again." Tad's brother Joe said that there would be some "tall yelling" if we saw the bear he and the other boys had seen when they were on their camping-out trip. He prophesied that no harm from wild beasts would come to us because our yells of terror would "paralyze" even a hyena.

There was to be a good deal of hard work for us, for we were to carry our provisions, our tent, our cooking utensils, and our entire camping outfit on our backs together with two changes of underwear. We had large knapsacks made of heavy brown canvas, and our older brothers gave us really valuable assistance in packing and in showing us how to set up our tent quickly. In fact, we set it up in Simmy Burton's backyard and slept in it the night before we left Wainford. The unusual spectacle of a tent in the Burtons' backyard brought thirty or forty other boys in eager haste to the spot, and about half of them expressed a desire to stay all night with us. This being denied them they ventured the assertion that we would no doubt become "scared to death" and steal into the house before morning.

We were to ride a hundred and forty miles by rail. This would carry us far up into the beautiful White Mountains, and to the banks of the Pemigeewassett River, where we were to set up our tent the first night. Then we were to start out on a walking trip of more than a hundred miles, making a new camp every night. This was really a good deal of an undertaking for four boys of our years. There was, however, little danger if we kept to the beaten paths or trails, but, boy-like, we were unwise enough not to do this.

Acting on the advice of our brothers we had "started out with some system" when it came to the actual work to be done. It was agreed that I should do the cooking while Benny and Simmy were to unpack and put up the tent each night and take it down and re-pack it the next morning. To Tad fell the duty of collecting firewood and washing the dishes after each meal. Merry-hearted as Tad was he made a wry face over this last duty, and said:

"What boy who is any kind of a boy ever liked to wash and wipe dishes? But I'm not going to be the first to kick about anything. I reckon there will be some dandy dish-washing done in our camps."

Our beds were to be of soft and odorous hemlock boughs over which we were to spread our blankets. All of us were to take a hand in collecting these boughs, and we found that it took all four of us a long time to collect boughs enough for a bed that would not be "humpy" or hard. We had had fond visions of the delights of a bed of hemlock boughs, but Tad confided to me after his first night on a bed of this sort that it was not what it was "cracked up to be," and that he preferred a bed made of fence rails, although I am sure that he had never slept on a bed of that sort.

As we were to live chiefly on the "canned goods" we had brought with us, my duties did not require the experience of a professional cook. We had some self-raising buckwheat and white flour from which I was expected to make delicious cakes and bread, and although my mother had kindly given me all the instruction she could along this line my efforts were not wholly satisfactory. Frying buckwheat cakes in a skillet tied to a pole and thrust over flames that at times entirely concealed the skillet is not the best way to give a "rich brown" to cakes of any kind. Tad was right when he said that my first skillet of cakes had "gone into mourning," for they were as black as the skillet itself. This was due in part to the fact that I had neglected to grease the skillet before putting in the batter, with the result that the batter had adhered in a burnt mass to the skillet. Removing my first batch of cakes by scraping them from the skillet with the camp hatchet I greased the skillet well with a bacon rind and poured in a fresh supply of batter. I think these cakes would have been more satisfactory had it not been for the fact that just as I was getting ready to turn them the skillet itself took a notion to save me the trouble by turning of its own accord and the cakes fell into the flames. This caused Tad to suggest that I write a book to be called "Duties of a Camp Chef."

"It is one of his duties not to lose his temper when others sit by making foolish remarks," I retorted.

"I guess you can perform that duty better than you can make and bake pancakes," said Tad.

"If at first you don't succeed,
Try, try again."

I finally succeeded in producing six sodden and untempting looking cakes. Tad took one on his tin plate and said solemnly to Simmy:

"Say, Simmy, if anything should happen suddenly to me after I have eaten this tell my folks that I said you could have my baseball club and that I forgive Jimmy everything."

I was Jimmy and it was a little hard for me to forgive Tad when, after swallowing one mouthful of my cakes, he threw up both hands and fell over backward, exclaiming:

"Good-bye, vain world!"

But it was my turn to laugh when Tad's curly brown head went into the pan with a good deal of batter still in it directly behind him.

I think that Simmy was right when he said that our camp fire was too big and too hot for cooking purposes.

"You want just hot coals instead of roaring flames for cooking purposes," said Simmy, and I soon discovered that he was quite right about this.

We named our first camp "Camp Pemigeewassett," because it was there on the beautiful river of that name. In fact all New England streams are beautiful, because they are so clear. Some of the guests at a summer hotel not far away made it a little embarrassing by coming down to our camp while we were eating our supper from a huge stump on the bank of the river. They asked us if we were "lost," and one dapper little man in spotless white duck trousers and white shirt with a shining black belt and a baby blue tie fluttering at his throat asked us if our mothers "knew we were out." Tad was about to retort with something equally impertinent, but he checked himself and said when they had gone:

"I thought I wouldn't be ill-bred just because he was."

We were so tired after our long and warm ride on the cars and the effort of making our first camp that we went to bed as soon as it was dark and I for one wandered into dreamland almost immediately and knew nothing until I felt some one shaking me the next morning. I opened my eyes to find Tad by my side fully dressed.

"What kind of a cook are you?" he asked. "I have been a mile up the river and here you are snoozing away. If you don't do better than this we will turn you off and hire you over again. Hunger is gnawing at my vitals in such a way that I could eat even one of your pancakes."

"You'll not get a chance to eat one of them this morning," I said, "for I am going to give you hot canned baked beans and the loaf of brown bread your mother put in for us."

This made us a very good breakfast. I had made some coffee, but its appearance as I poured some of it into a tin cup Benny held out to me with some condensed milk in it led me to say in a threatening tone:

"Any one who passes any remarks about this coffee will answer for it to me."

Tad had also put two or three spoonsful of the condensed milk into his tin cup, but when he saw the pea-green shade of the coffee in Benny's cup and saw a thick coating of grounds on it he said:

"Some folks always take coffee without milk, but I think that this morning I prefer to take milk without coffee."

I packed up while Tad washed the dishes and the other boys took down the tent, and we were on the march by eight o'clock. The sky was cloudless, the air fresh and wonderfully invigorating and we were in high spirits when we set off with our belongings on our backs.

We were eager to find some good fishing, and when we had gone about a mile over an excellent road we met an old man who, as Tad said, "looked like a native of the soil." To him I said:

"Can you tell us, sir, if there is any good fishing around here?"

"No, they aint," he replied, rather abruptly. "Too many summer people around here nowadays to find good fishin' within ten mile of a hotel. If you wanter fish you'll have to git away from the reg'lar roads. A neighbor o' mine was up to Scott Pond fishin' an' gatherin' blueb'ries last week, an' he come home with a fine string o' fish. He said they bit like flies an' you could haul 'em out fast as you could bait your line an' throw it in."

"Where is Scott's Pond?" we asked eagerly.

"Wal, it's a matter o' fifteen mile or so from here. Considerable of a ja'nt for city-bred boys, but it wouldn't faze one o' our country boys to make it."

"I think we are good for it," I said.

"Wal, you've got the hull day for it, an' you'll need it fer it's a hard road to travel. You keep on this road about a mile and you'll come to a place where the road leads to the left by a hoss-waterin' trough. Foller that road until you come to what was once a railroad track, but there aint nothin' left but the ties an' the roadbed. It was a track built to fetch out the lumber on when they was several hundred men cuttin' timber 'round here ten years ago. You'll find deserted lumber camps all along the way. All you got to do is to foller that old track until you come to Scott's Pond, which will be the first pond of any consid'able bigness you come to. Then you'll know it by there bein' an old ingine-house there where they used to keep their railroad ingines. Skeered o' b'ars?"

"We don't know," said Tad, with a laugh. "Never saw one loose to find out. I guess we'd be real polite to one."

"Perliter than he would be, likely, speshly if he was a she bear with cubs near by. My neighbors saw one on the aidge o' the pond gawmin' down blueb'ries at a turrible rate. B'ars air turrible fond o' blueb'ries, an'—boys."

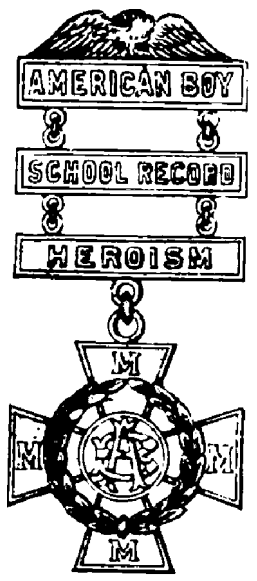
He grinned when he said this, and after some further conversation he went on his way and we set out for Scott's Pond, where Tad's wish that "something exciting would happen" did happen.

(To be continued.)

"GOOD-BYE, VAIN WORLD"

The American Boy Legion of Honor (Open to all Boys Everywhere)

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school ending on a date since September 1st, 1905, have stood at the head of their classes, taking the average of all their study grades for the term, and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts.



LEGION OF HONOR ROLL.

Note: S. R. means school record; H. means heroism.

How They Won

C. W. Allshouse, South Newbury, Ohio, writes that he has received the School Record Badge and is very proud to wear it. He says: "Everyone seems to notice it. I am going to try to keep it all my life."

M. C. Morrison, principal of the public schools of Colo, Iowa, writes a letter thanking us for the badge sent to Roger Hopkins. He writes: "I presented it in the presence of the grammar and high rooms and we all considered it fine. I think it will have a good effect on the other boys."

Island of Dead.

By
H. TECUMSEH COOK

I WAS first mate of the schooner John H. Tibbits, bound from the West Indies for Baltimore, with a cargo of fruit.

Our crew numbered fourteen; three of these were old hands, the rest had been signed at the Indies. They were made up of a half dozen or more nationalities, and were the most ruffianly looking lot I had ever set eyes on. I knew from the start that we would have trouble, by the sullen way they obeyed orders. Particularly with a seaman named Alverado, an ugly-tempered Spaniard who I imagined was trying to stir up trouble between the men. He had been sulky and grouchy from the day he came aboard.

Captain Haverlock plainly showed that he was not pleased with his crew, but as his cargo was a very perishable one, a hasty departure was necessary; so he was compelled to sign whoever the runners brought aboard. Captain Haverlock was an experienced sailor of the old school, a strict disciplinarian, and a man of few words, who rigidly enforced his rules and soon convinced the crew that he was master of the ship.

"Bill" Masterson, the second mate, was a thin, wiry young fellow of a jovial disposition, whose experience as a sailor dated back to the time of his birth, having been born in mid ocean on one of his father's ships. Tom Tibbits, the cabin boy, was a nephew of the owner of our schooner, and was as likely a little chap as ever selected a seafaring life for his career. His first voyage convinced us that he possessed the true instincts of a sailor, as events proved.

As a rule, we carried no passengers, but on this occasion we made an exception in the case of a young medical student, Everett by name, whose father was an intimate friend of the captain. The young man had made an extensive pleasure trip through the Indies and was now on his way back to the states.

We had been out about three days and were sailing along at a fine clip, when a great misfortune hapened to us which made the voyage of the John H. Tibbits a memorable one.

It was on Thursday when the trouble began; the watch had just gone below. Captain Haverlock, Mr. Everett and myself were standing aft conjecturing on the value of a chronometer aboard a ship, when our conversation was interrupted by young Tibbits, who, after apologizing for his intrusion, drew the captain aside and with an air of importance whispered something confidentially in his ear. Mr. Everett and I continued our talk, when it was suddenly brought to a halt by the gruff tones of the skipper a moment later. The captain appeared greatly agitated; then with a muttered oath and the words "I'll fix them," turned abruptly and entered the cabin.

The door had scarcely closed behind him when he reappeared. His right hand was plunged deep into his coat pocket, as if he were grasping a hidden weapon; then without making any comment he strode toward the forecastle. But before he reached the companionway we saw him reel and with a clutch at his heart stagger and fall full length upon the deck. We rushed to his assistance, and as we stooped over him and met the cold stare of his glassy eyes we were horrified to find that the man was dead.

The news of the captain's sudden death spread quickly, and I thought I saw a look of sinister satisfaction upon the faces of several of the crew. After the body of the captain had been removed to his cabin an examination was made by Mr. Everett, who pronounced the cause of death due to heart trouble.

Being first mate, the command of the ship naturally fell to me and I immediately took charge.

I called upon Tibbits later for an explanation of the secret he had imparted to the captain and which had ended so fatally.

It was some time before the boy could summon sufficient courage to tell his story. When he eventually calmed down he told how for the past two nights he had overheard several of the crew secretly discussing a plan of going in search of some treasure which one of their number claimed was secreted on the Island of Trinidid in the South Atlantic Ocean. According to the story told by Jose Alverado, the originator of the plot, the island was located in latitude twenty deg. thirty min. south, seven hundred miles from Bahia in Brazil.

The treasure, which included a great quantity of gold, silver and coin, had been buried there by pirates during the Peruvian war in 1821. The pirates were captured by a Spanish man-of-war soon after, and were hung, all but one, a Finn, who escaped. This man in 1850 told a Newcastle man, the captain of an East Indiaman, of the treasure, and the skipper fitted out a vessel and went in search of the hoard, but the expedition resulted in a failureas no place could be found to land on the island's rocky surf-pounded coast.

Alverado, however, claimed that he and another sailor had swam ashore, and located the place where the plunder lay buried. But, fearing that they would not get a sufficient share of the booty, they reported when they were hauled back to the ship by a life-line, that they had explored the island from end to end and it was their firm belief that the piratical story was all a myth. They said the island was overrun with large crabs and was almost barren of vegetation. Thoroughly discouraged the search was abandoned and the expedition returned home.

Alverado now said that they had done this, in order that they themselves might return at some future day and carry off the wealth. But his companion met a sad end, being killed in a gale on the way back and consequently the secret remained with Alverado alone. Alverado was willing to share it with the men if they would recognize him as their leader and join him in the enterprise. Five of the men were thoroughly in sympathy with him, but the others held aloof, more from the idea that the plan was impracticable than from any scruples of conscience. However, Alverado was determined that his plan should not fail and kept sedulously at them, eventually winning them over.

Saturday was the day practically agreed upon when they were to seize the ship for their nefarious undertaking. Young Tibbit's blood had thrilled with excitement as he listened to Alverado's wonderful tale of hidden treasure, reviving in his mind the stories he had read of Captain Kidd and Sir Henry Morgan's cutthroat crews, and he longed to join them in their search until he heard how it was to be accomplished. Then he made all haste to warn the captain of the danger. This was the secret the boy had disclosed to the captain when we were discussing the chronometer. I was dumbfounded at the boldness of their scheme. But, would they dare carry it out? While I had suspected trouble all along I did not think they would resort to such desperate means. I knew Alverado was a dangerous character and had evidently turned the heads of his forecastle companions.

Now, how was I to frustrate their designs? My first impulse was to let them know without delay that I was aware of their plot, but upon reflection I concluded that the situation was too grave for hasty action. After some thought I decided to consult with Masterson, who was now first mate, and perhaps between us we could formulate a plan of action. I dismissed Tom, cautioning him to keep his secret and await further developments.

JOSE ALVERADO

When I revealed the conspiracy to Masterson he was almost as impulsive as I had been and wanted to nip Alverado's enterprise in the bud. I convinced him, however, that the odds were too much against us and that we needed reinforcements. I thought we could depend on the three old hands, Mr. Everett and Tom, and upon conferring with them later found that our confidence had not been misplaced, for they were willing and enxious to assist us.

Friday morning the body of Captain Haverlock was consigned to the deep. It was while this ceremony was taking place that I hit upon an idea which, when submitted to our allies, was hailed with delight, particularly by Tom who was to play the leading role in the drama.

Having arranged our plan, we cautiously set to work to put it in operation. The usual routine was observed during the day, so as not to arouse the suspicion of the conspirators. Secretly the loyal hands among the crew were supplied with arms in case our plan miscarried and trouble should ensue on the morrow. Everything went along smoothly until sunset, when it began to rain, and a stiff breeze sprang up from the north, north-east, which soon worked itself into a gale and increased in violence as the night advanced.

After we had made everything snug we laid-to under a close-reefed foresail and prepared to ride out the blow. At midnight it was blowing a hurricane; the velocity of the storm was at least one hundred miles. The voice of the gale, as it howled through the rigging, mingled with the creaking timbers, and the roar of the angry waters as they dashed against and over the bulwarks, made a din too terrifying to describe, but the John H. Tibbits was a staunch little craft and weathered the storm, though she rolled heavily and was driven several points out of her course. Towards morning the gale abated, the wind shifting from east to northeast, and we were able to resume our original course.

As the day grew older the weather moderated and the wind steadily fell, so that by eight bells we had every stitch of canvas out to catch the light breeze.

It is needless to state that I had been laboring under a great strain since I had learned of the intended mutiny and now that the day appointed for the seizing of the ship had arrived, I felt completely unnerved and had to summon all the courage I possessed to nerve me for the ordeal.

I had watched the men closely all morning and caught them several times earnestly conversing in groups, but upon my approach they would disperse in a rather confused manner, which in itself showed guilt.

I decided that the time for action had arrived. Leaving Masterson on deck to watch, I sent for Tom and we were soon securely locked in my cabin and hard at work on my scheme. Our idea was to work on the superstitious imagination of the sailors by disguising Tom to impersonate the dead captain.

In less time than it takes to relate, Tom had slipped into one of Captain Haverlock's uniforms, and with the aid of some paste and a false beard which he had used in some amateur theatricals ashore, he soon assumed the appearance of the dead seaman. After everything had been arranged to our satisfaction and he had received his final instructions, I locked him in the cabin to await a propitious time for his appearance.

The night was clear and the sea calm. Jim Foster, one of our loyal band, who had taken the wheel just before the men went below for mess, whispered as I sauntered up, that an attempt would be made to take the ship that night. Even as I spoke I could distinctly hear a gradual crescendo of coarse voices from the forecastle as if they were wrangling in heated argument.

Shortly afterward Steve Chalmers, another of our allies, came on deck, and after looking about to see that he was not observed, made a trumpet of his hands and uttered the one word "tonight." With that he disappeared below.

Believing the critical moment had come I lost no time in conveying the news to Masterson and we prepared for action at once. We released Tom from his prison and smuggled him into the dory, which was tied astern of the ship in a manner which could be easily cut loose.

Silence now reigned on board the John H. Tibbits. It was a tense, taut-drawn silence such as heralds the explosion of a storm. It was suddenly broken by the rushing of many feet and a chorus of hoarse shouts from below; then, led by Alverado, the men clambered on deck and closed in upon me.

"What is the meaning of this," I demanded as the men crowded threateningly around me.

"It means," said Alvarado, who acted as spokesman, "that we are going to relieve you of the command of the ship, and the less fuss you make about it the better it will be for you, eh, men?"

"Aye, aye, cap," the men cried in response.

"That means mutiny," I exclaimed in feigned surprise.

"Call it what you will," Alverado roared, "we have been ordered about long enough by you, and we don't intend to stand it any longer."

Thereupon the ruffian advanced with outstretched arms, as if to pick me up and hurl me overboard. But, before he had advanced a single pace, Masterson and Everett, who had been standing in the shadow of the mainmast, leaped forward and confronted him with drawn revolvers. Simultaneously a cry of "ship ahoy," floated to us over the waters, and as the moon emerged from behind the heavy clouds it revealed a little dory with a single occupant rowing vigorously toward the ship.

(Continued on page 205.)

SAVAGE JUNIOR

THE SAVAGE "JUNIOR"
in outward appearance may look similar to other rifles of this class, but the similarity ends there

SOME OF THE SAVAGE "JUNIOR'S" EXCLUSIVE FEATURES:
1. It is the only rifle of this type that throws the shell out—the Savage "Junior" not only throws out the shells, but flings them several feet to one side.
2. It is the only self feeder—the cartridge is simply dropped into the receiver or breech and the action closed.

It is strong and safe in every particular, being modelled after the best modern military rifles. In a word, it is not only the kind of a rifle to entrust to a boy, but it is an excellent companion piece for fishing or shooting.
Savage "Junior" shoots the short, long and long rifle cartridges. Eighteen inches round barrel, 22 caliber; weight 3 pounds; shot gun butt stock. Price $4.00 at your dealer's, or from us direct if he cannot supply you.

SAVAGE ARMS COMPANY
All shipments prepaid 395 Turner St., Utica, New York, U. S. A.

When you combine perfect visible writing with durability, the goal at which all typewriter manufacturers have been striving has been reached.

It Has Been Accomplished in

THE NEW FOX VISIBLE

And in doing it, we have added all those features which tend to make a typewriter desirable.

HERE IS A SHORT DESCRIPTION

Visible Writing that is visible; every letter in plain view as written and does not pass out of sight.

Durability that Equals Any "Basket Type" Machine

The durability in any typewriter is determined by the kind of bearing there is in the type bar hanger. In building the ordinary visible writer, there is not sufficient width in the "basket" to use a bearing having any width or wearing qualities. By means of a special manner of assembling these type bars in the Fox, we are able to use a pivotal bearing 7-16 of an inch wide. This bearing is adjustable by the operator, so that wear can be taken up as it occurs and the most perfect alignment can thus be retained through the entire life of the machine. No argument could be more convincing of superiority than to compare the type bar used in the New Fox Visible with that used in other machines.

Two Color Ribbon—By simply touching a button the second color is secured.

Automatic Ribbon—Ribbon reverses itself and oscillates so that entire surface is used. This simply doubles the life of the ribbon.

Interchangeable Carriage—The regular carriage on the machine can be removed and a different length or longer carriage substituted for special work.

Detachable Platen—The Platen is detachable, and an extra platen for stencil cutting or mimeograph work can be quickly substituted.

Line Lock—The keys all lock firmly at the end of any predetermined line.

These are the features you have always wanted in a typewriter. They are found only in

THE NEW FOX VISIBLE

Every expert who has examined this machine has pronounced it a marvel of completeness.

Ask our nearest dealer or branch office to show you both the Regular Models of the Fox and the New Fox Visible, or, if he is not convenient, write us and we can arrange it direct.

MY TOUR IN THE ANTIPODES

Written for The American Boy by
ARTHUR DUFFEY

Interesting Experiences of the World's Champion Short Distance Runner Among the Athletic Enthusiasts of Australia and New Zealand

PART II

A GROUP OF CHAMPIONS

Beginning on the left, we see Stanley Rowley, Ex-Australian Champion Sprinter; Nigel Barker, Australian Champion Sprinter; Arthur Duffey, American Sprinter, and Alfred Shrubb, the World's Long Distance Runner.

ARRIVING in Dunedin after a most delightful voyage, during which we visited Milford Sounds, Hobart and the Bluff, we were immediately impressed by its picturesque site, and its distinctly Scotch appearance. As in Australia, we were met at the wharf by the Dunedin committee and tendered the same hospitality and kindness. Our contests here were held on the celebrated Carisbrook Grounds, and before a record gate we made our first appearance on New Zealand soil, though considerable disappointment was expressed at the non-appearance of Shrubb.

Pitted against me in the sprints were some of the smartest sprinters I ever met, and, what surprised me the most, as I came to the scratch in the 50 yards handicap was the New Zealander's idea

ALFRED SHRUBB, WORLD'S CHAMPION LONG DISTANCE RUNNER

of worsted barriers at the start, evidently to prevent the runner making a false start. This was a new wrinkle to me for it seemed so strange to have a string across one's chest as the crouch was assumed, but desiring to conform to their rules I gradually became accustomed to it. After a hard race I succeeded in winning the short sprint in 5 2-5 seconds, thus establishing a new world's grass record for the distance. In the longer sprint the handicaps were too liberal and I was unable to get placed.

Anxious to know how Shrubb was getting on in Melbourne I felt extremely pleased when I received news that the Englishman had sailed from Melbourne on the "Warrimoo." It was good news to committee and public alike, and all expressed their appreciation by the loyal manner in which Shrubb was received at the station when he arrived in Christchurch, the scene of the New Zealand championship. Looking extremely haggard and worn, with nerves all unstrung from the long voyage and the misfortune to be on the "Warrimoo" when she took fire at sea, it was under these conditions that the champion had to compete in the sports the next day, March 17.

The championship meeting was a two-day affair, the preliminary heats being held on Friday and the finals on Saturday. The first day's sport proved very favorable to us both, and it appeared that we would sweep the board. In the three-mile championship Shrubb won cleverly, though one could easily notice that the Englishman was far from being fit. In the sprints my trial heats proved rather easy for me as I was in fine form and, in the semi-finals, accomplished even time on a rather slow track.

The next day, Saturday, a beautiful day, before another record gate, we contested the finals, though feeling very tired and stiff from our previous day's exertions. In the final sprint, getting away to a beautiful start against a strong wind, I won handily in 10 2-5 seconds, and later in the day won the 50 yards handicap, equalling the world's record. In the mile championship, however, things did not fare so luckily with my pal, Shrubb, for it was plainly evident, after he had gone the first half, that the previous day's racing was too much for him. Gradually the pace told on him and H. G. Burke, the New Zealander, gradually forged to the front amid the swinging of arms and the excited cheers of his countrymen. Although the time was only 4.27 2-5 seconds, I might here say that Burke is one of the finest milers I ever saw, and could have accomplished much faster time on a better track. After the mile championship, Shrubb turned out later in the day and eventually won the four-mile handicap.

Completely worn out and tired of racing and traveling, on the following Monday we wended our way to Wellington to take part in the sports there. Upon arriving, a royal reception awaited us. It was most gratifying to us to see the large crowds that attended the sports, and how enthusiastically we were received as we came upon the course. At these sports my form still remained with me and in spite of the handicaps succeeded in winning the 75 yards sprint, getting second in 50 yards, and third in the 100, being defeated in these sprints by Goodtchere and Seddon, the latter the son of the Prime Minister. As Shrubb was still unfit from his sickness, he was unable to do himself justice in the mile handicap, and in the three-mile succeeded in getting second. During our delightful visit to Wellington we had the honor to be entertained at the Prime Minister's home by the Misses Seddon.

Leaving Wellington after a long journey, our last appearance in New Zealand was made on the Auckland Domain, without doubt the fastest track we met on the tour. In vain did the Auckland Association strive to bring Shrubb and Burke together in a special mile match, but the sturdy Dunedinite found it impossible to accept, and as a result Shrubb was forced to battle his way through the mile handicap, which he won by a magnificent burst at the finish, and succeeded in lowering the New Zealand record to 4 minutes, 22 seconds. Not contented with his already record breaking feat he turned out later in the three-mile handicap and repeated a popular record breaking win.

In the sprints my powers of endurance seemed to forsake me at the most critical

ARTHUR DUFFEY AND J. KANE, AFTER A HARD RACE AT DUNEDIN

moment, all of which I accounted for by my visit to Rotorura, the home of the Maoris, where I spent the week previous to the sports, sight-seeing. I felt extremely tired as I competed in the 75 yards dash, and although my first heat was a record breaking performance, accomplishing 7 3-5 seconds, in the final I lacked my usual finishing burst and could do no better than third. In the 50 yards sprint my running was a repetition of the former event, and again I was forced to accept third prize, though I must add that in both events my competitors received very liberal handicaps.

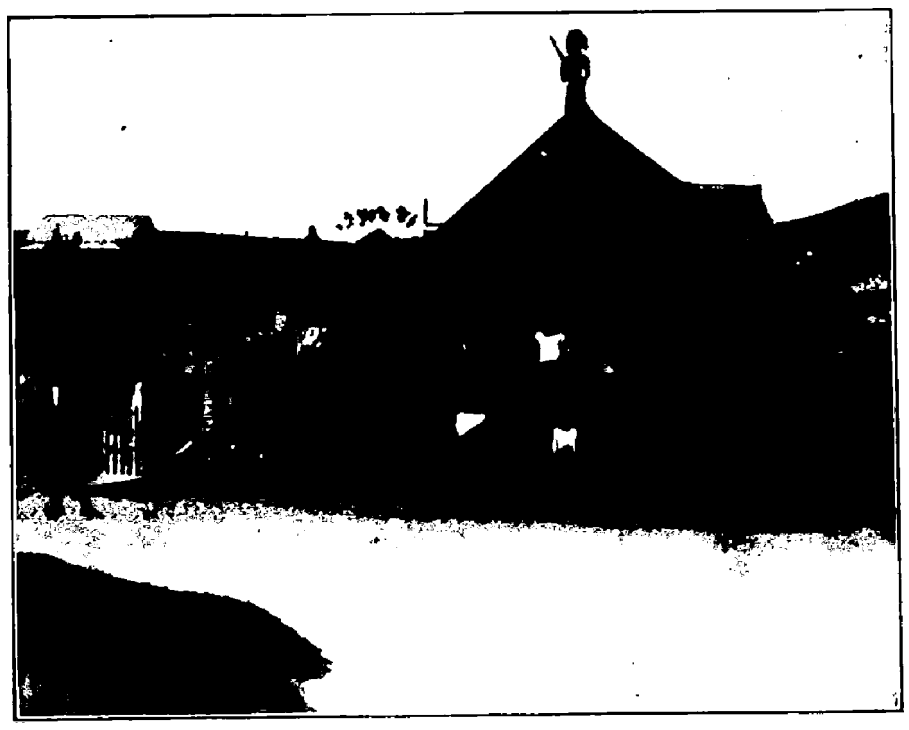
On the following Monday, before a large crowd of enthusiasts who were present at the wharf to bid us a last farewell to New Zealand, we sailed away from Auckland for Sydney, New South Wales. Our voyage was a most delightful one, and after a few days once more we were back in Australia, where we were again tendered a royal welcome by the committee representing the various branches of sport. So much could be written about our visit to New South Wales, concerning our receptions, sight-seeing, amusement, etc., that I shall not tax the reader's mind, but we must confess that our visit to Sydney was the most enjoyable part of our tour, and it was with difficulty that we were able to continue our training owing to the long programme of entertainment that the commitee had provided for us.

Our contests here were held on the Sydney Cricket Grounds, and unquestionably were the keenest in which we had taken part. Patiently had the followers of athletes awaited my arrival in Sydney, for great interest and enthusiasm had been aroused over the special sprint match. My competitors in this race were Nigel Barker (Sydney University), and Stanley Rowley (ex-Australian champion), without doubt the fastest men I had yet met. Realizing that I had a difficult task before me in defeating these men, assiduously I prepared for the coming contest, and on the following Saturday, to an enthusiastic reception from the "Australian Barrackers," we came to the scratch to decide the question of supremacy.

The start was a magnificent one. Starting with my usual precision, at the report of the pistol I was off, and after taking a few strides I could not help but noticing how slow the Australian sprinters were leaving the mark. My starting

A MAORI CHIEF

Here, also, although the sports proved to be but a little meeting, the competition was as keen as we ever encountered, for the committee had arranged another match sprint between Barker, Rowley and myself and had provided Shrubb with a two-mile handicap. In our sprint race it seemed a most regrettable affair that our match should again prove so dissatisfying to all, for, after a close finish, the judges were unable to pick a winner, some contending I had won, and others claiming a dead-heat. At any rate, the race was again left undecided. After Shrubb trotted home a winner in the two-mile handicap, again lowering the Australian record to 9 minutes, 33 seconds, we caught the train for Melbourne that evening and embarked the next day on the "Ophir" for London, thoroughly satisfied with our Australian experiences.



SOME OF THE FOREMOST MAORI ATHLETES. THE MAORI FOOTBALLERS HAVE ONE OF THE STRONGEST TEAMS IN AUSTRALIA

seemed an enigma to the spectators and runners alike, and in spite of the lead I obtained at the start—my long spikes on the soft track bored me down so that I gradually weakened towards the finish and to my dismay Barker forged ahead, winning by inches in 10 1-5 seconds.

After the sprint race Shrubb competed in the mile New South Wales Championship and the two-mile handicap, winning both events by long margins, and winning the former event in 4 minutes 26 seconds, establishing a new New South Wales record and lowering the two-mile record to 9 minutes 42 seconds.

On the following Saturday the sports were continued with another special sprint race between the same competitors, and a five-mile handicap was substituted for Shrubb, in order to give him an opportunity to establish a new Australian record. As before, my manner of starting caused considerable comment, but not heeding the many remarks I could not help but hearing about me, again we came to the scratch. Getting away as usual, amid excited cries, I raced through the distance at top speed, only to be told upon my return to the judges that it was no race, owing to my beating the pistol. Rather vexed at the officials for not stopping me before completing the full distance, I was prevailed upon by the committee to run the event after the handicap sprint. But after competing in the latter event, which I eventually won, creating a new world's record for the distance, I felt so stiff and sore from the wretched condition of the track that I decided not to compete; as a result the match was left undecided and was postponed till the following Monday.

Although my action in refusing to turn out and run the race was disappointing to the crowd, still the spectators were amply repaid when the "Horsham harrier" appeared in the longer distance and tendered them a surprise by his wonderful powers of endurance. Starting from scratch in a large field of entries, gradually the champion passed one by one and won out easily, creating a new Australian record of 25 minutes 5 seconds.

As one can easily imagine by this time, our thoughts were gradually becoming centered more on home than on our racing. It was probably one of the happiest moments of our lives when we started on the following Monday to Concord to run our last race at St. Luke's Park

A. H. WIDMER, AUSTRALIAN QUARTER MILE CHAMPION

A PICTURE THAT MAY HAVE DONE GOOD SERVICE.

One of our Wisconsin subscribers says the picture of the boys in a lumber camp that appeared in our March number, has, as he thinks, served to locate his brother, whom he has not seen nor heard from for eighteen years.

I would rather my boy grew up able to build a great structure like the Brooklyn Bridge than to receive the highest honors that the people could bestow upon him.

GROVER CLEVELAND.

Given to the Sunday World at the Hotel Dover, New York, Jan. 20, 1906.

SHAGGYCOAT

(*Continued from page 199.*)

had never heard such thunder, or seen such deadly lightning before. So, without waiting to see more, he fled down stream, and hid under the first shelving bank that offered him a hiding place.

There he lay very still for several hours, but when he ventured out it was quite dark and the stranger had gone.

It was man with his deadly thunderstick, and even the strong buck, with the feet of the wind, had been as helpless when it spoke as his little dappled fawn would have been, in the same spot.

Although he never saw these things again, Shaggy-coat never forgot the scene, or the roar of the thunderstick, and the scent of the strange creature seemed to linger in his nostrils for days. He had seen enough of this strange and terrible water world for one summer, and would seek his pond, and Brighteyes.

(*To be continued.*)

RISEN FROM THE DEAD

(*Continued from page 203.*)

The hostile attitude of the crew was brought to a sudden stop, and the sailors looked aghast as the figure of the dead captain showed up plainly in the bright moonlight.

Before they had recovered from their fright, a line had been thrown unobserved, by Foster, to the man in the boat, and the "apparition" soon climbed aboard and stood among us.

It was the exact counterpart of Captain Haverlock. In his hands he carried a long plank, a sheet and a heavy iron chain, similar to the one used in sinking his body. The deception was realistic even to the wet clothing from which the water was dripping, giving the appearance that he had just stepped frim his ocean grave.

The scene was an awe inspiring one, and the mutineers stood as if rooted to the deck as they gazed with horror on the "awful ghost." To quicken the terror of the thoroughly frightened men the "apparition" began to speak in hollow, unearthly tones.

"What is going on here?" it said, as the plank and chain clattered on the deck.

Alverado was the first to recover from his stupor, and replied defiantly: "We mean to take the ship even if the devil himself appears." With that, drawing an ugly-looking knife, he commanded his confederates to throw us overboard, but he called upon them in vain. Instead of advancing they fell back. They seemed paralyzed with fear, and kept their eyes riveted upon the figure of the captain, who they evidently regarded as a being from another world. I shall never forget the sight of that big desperado as he stood there in his red undershirt and trousers, furious with rage when he failed to arouse his companions from their stupor. Believing that they had cowardly deserted him, Alvarado lashed them unmercifully with his tongue, calling them all the foul names he could command.

Then, with eyes blazing and the fury of a madman, he hurled his great bulk full upon me. The impact was so sudden and unexpected that I was taken unaware and knocked sprawling on tne deck.

Before the others could come to my assistance, the half-crazed wretch had plunged his knife with crushing force through my left shoulder. I was on my feet in an instant, for the wound that he had inflicted did not disable me entirely. Furious with rage and pain I closed in on my opponent. In the struggle which followed he dropped the knife, but not until he had slashed me several times. I was so enraged that I did not know where he hit me. The men made no effort to separate us as we staggered back and forth on the deck, apparently too fascinated with the battle. It was a struggle to the death. Once I had him down, but although I showered blow upon blow upon him they had no effect. The fellow seemed void of all feeling and possessed the strength of a Hercules. Finally, from exhaustion and loss of blood, I felt my strength rapidly leaving me. Alvaredo evidently knew that the fight was his for he cried, savagely, "Now, Turner, I've got you!"

Just at that moment Masterson came to my aid. Grabbing up a belaying pin he hit the mutineer a fearful blow over the head. He fell like a log over my prostrate body, for I was unconscious.

They told me after I regained consciousness that Alverado's skull was almost crushed in by Masterson's mighty club, but just as they were about to move him he struggled to his feet and cried, "If I can't get the ship, you will never take me alive."

With that, more dead than alive, the desperate man sprang over the rail and disappeared from view.

During the melee the excitement on the ship was intense. Taking advantage of the uproar the mutineers were soon overpowered and in irons. A guard was placed over them during the night. When morning came they were fully subdued and begged to be released. Being short-handed and still having many miles to cover, I took them at their word, and they were soon back to work again. We arrived at our destination without further adventure.

JUST AT THAT MOMENT MASTERSON CAME TO MY AID

THE GOOD OLD KID DAYS

THEY WERE ALL RIGHT, ALL RIGHT

An Error in Judgement

An examiner on going into a class in a public school asked a little lad which he would prefer, a half of an orange or a quarter of one. The boy without hesitation answered that he would take the quarter, and with some uncomplimentary remarks he was told to sit down.

After school hours some of the little boy's companions went to the teacher and asked her why Johnny was counted wrong. The teacher replied sharply:

"Don't you boys know one-half is more than one-quarter?"

"Teacher," said the spokesman of the group, "Johnny doesn't like oranges."

The British Licked Again!

Say! We got a new word---"more-ish." It's all right, too. "It's English you know." When a thing tastes awful good they say "it tastes more-ish." That's what the British boys say about MACKINTOSH'S TOFFEE. They're all right, too. More you eat, more you want. Best is, Mother says: "Eat all you want. It's good for you." Never had the chance before to eat all the candy I wanted, 'cept once. Then I *was* sick. Say, up at the house they call me Oliver Twist, 'cause I'm always askin' for more MACKINTOSH'S TOFFEE. An' say! All the boys are catching on. Hear what Billy said? "We licked the British an' now we're lickin' the British Toffee." Not so worse, eh? Say, you got any money? Come on---I'll show you where to get some

MACKINTOSH'S TOFFEE

This famous OLD ENGLISH CANDY is the purest and creamiest Taffy made. It grows in favor, for its "more-ish" flavor is always the same--a tempting deliciousness found in no other candy.

5c and 10c packages—At all dealers.

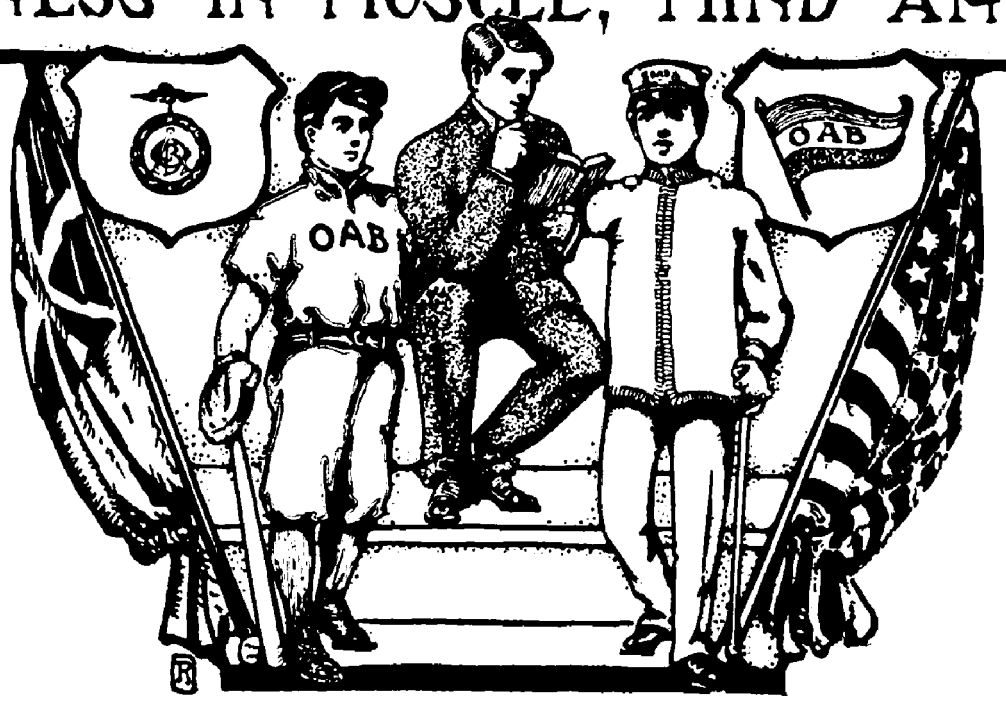
The Great American Boy Army.

FOR MANLINESS IN MUSCLE, MIND AND MORALS.



The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

Under the Auspices of "The American Boy"

Object:—*The* Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

New Companies Organized

President Lincoln Co., No. 58, Division of Illinois, Bradford, Ill.; East End Washington Co., No. 61, Division of Iowa, Washington, Iowa; Confederate States Co., No. 7, Division of Mississippi, Houston, Miss.; Cowaseelone Military Co., No. 56, Division of New York, Canastota, N. Company News

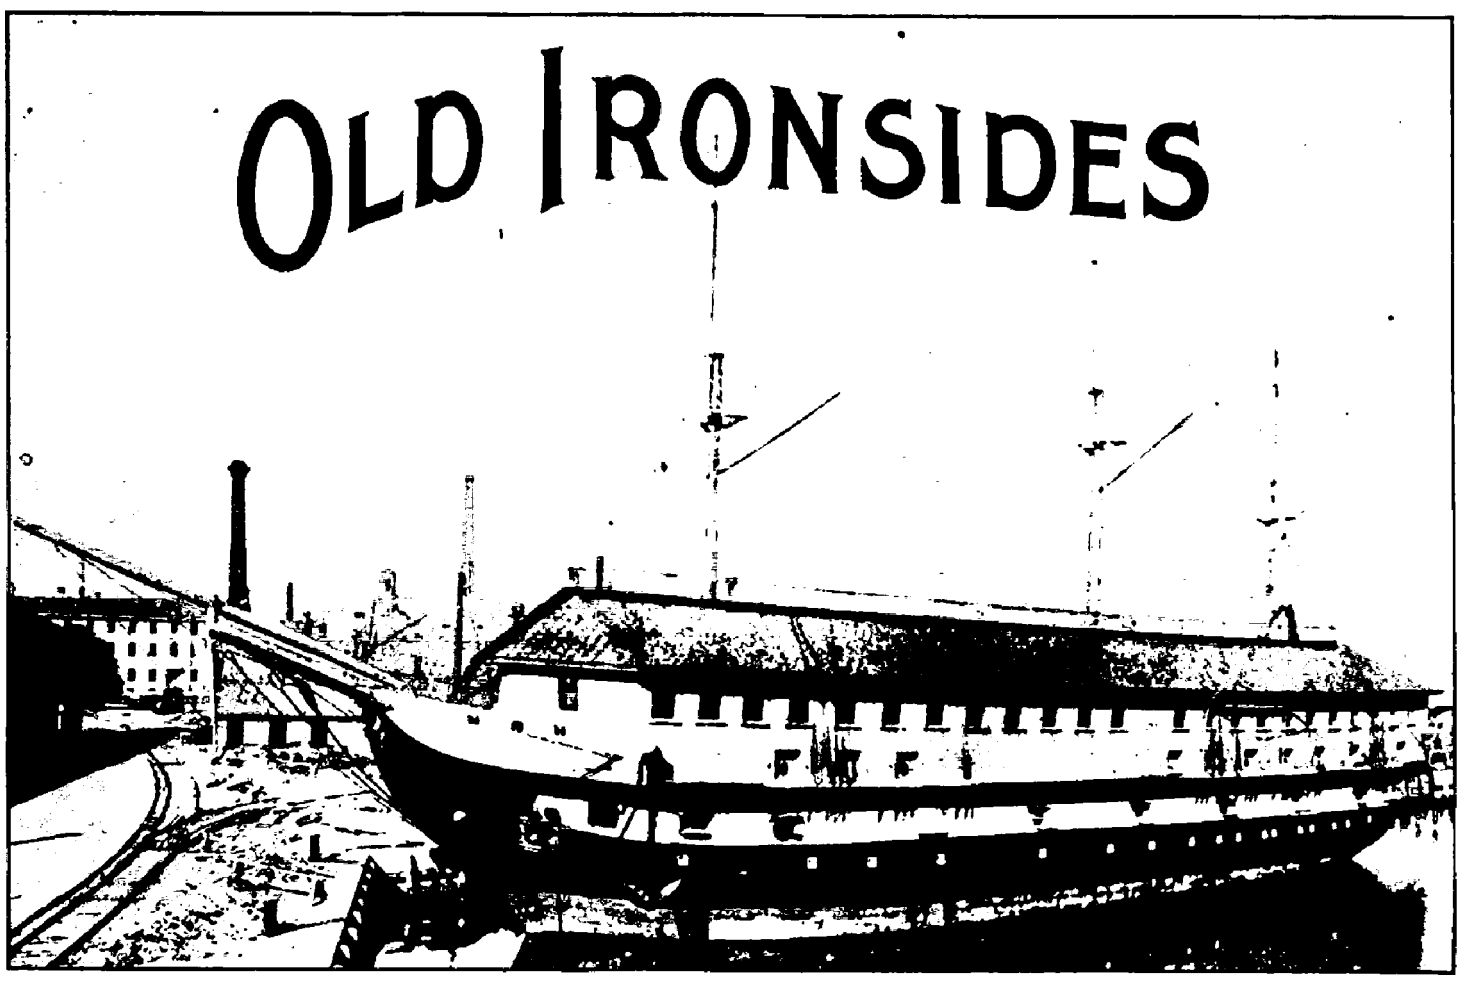
MAGNOLIA COMPANY, No. 8, Magnolia, Ark., has added three new members to the company and expects before long to double its present membership. Its officers are: Miles Prator, Capt.; Buck Bird, Sec.; Frank Prator, Treas.; John Bird, Libn.; John MacNeil, V. C. This company has begun well financially, as it has $2.45 in the treasury and exacts dues from its members of 25c per month. Meetings are held each Friday evening at the members' homes. SALEM ATHLETIC COMPANY, No. 30, Salem, Ind., meets every Friday evening, and recently elected its officers, who are: Frank Gray, Capt.; Wilbur Hobbs, V. C.; Grant Wheasler, Sec.; Frank Clarke, Treas. In addition there was elected a Company Counsel, and with his aid it is expected that better and more systematic work will be done. This company has ten members, and good prospects for more. It has $5 in the treasury, and as soon as the season opens intends purchasing athletic goods for a track team. The baseball team and the track captains are busy scheduling games and every member is anxious for victory in the games this season. The members are also planning a big outing on White River immediately after school closes. THE RISING SUN COMPANY, No. 59, Brooklyn, Pa., has seventeen members, and the secretary writes is having all kinds of good luck. It has the beginning of a fine library with seventy-five books, also boxing gloves and other athletic apparatus, and about $2 in the treasury. Dues are 10c a month. We expect to hear great things of this company. HONEST ABE COMPANY, No. 38, Freeport, L. I., N. Y., celebrated its second anniversary with a banquet on March 2d. The members and friends discussed an excellent dinner, after which they listened to a fine program, and had a splendid time. At the recent election of officers the following were declared elected: Hilbrt R. Johnson, Capt.; Harry Gunning, V. C.; Carl Gunning, Sec.; Eliot Ross, Treas., and Fred Hunt, Physical Instructor. It has nearly $8 in the treasury and the members occupy one of the best club rooms on Long Island, furnished with a good library of periodicals. MINNESOTA SKIRMISHERS COMPANY, No. 22, Saint Paul, Minn., celebrated Washington's birthday on the afternon of February 22d. The secretary sends us a copy of the program, from which we note that it consisted of essays, songs, dialogues, both for boys and girls, tableaux and choruses. This company is most enthusiastic and is going in for military drill. It has a fine American flag, 6x10 feet in size. We shall be glad to hear further of its doings. SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill., has been adding new members to its fine company, and also corresponding with other companies of the Order. This is something that we would heartily recommend to all the companies, because the exchange of ideas and of plans regarding the conduct of the meetings of the companies cannot but be helpful. The Company Counsel was recently presented with a nice fountain pen as a token of the members' appreciation of his efforts on their behalf. The principal item for its next company meeting will be a debate, Resolved: "That playing marbles for keeps is gambling." We expect to have a report of the result of the debate. YOUNG AMERICANS' ATHLETIC COMPANY, No. 28, Petaluma, Cal., has recently increased its membership, and the members have bought college style caps, navy blue, and with a gold colored "O. A. B." on them. The captain writes us that a good many of the members expect to take part in the celebration of AMERICAN BOY DAY at San Francisco on July 5th. We would say to Captain Pressey that the boy to whom he refers as being in possession of the badge, ribbons and stamps of the Order is undoubtedly an individual member of the Order, and he has gained them by meritorious work on behalf of THE AMERICAN BOY. If he should request admission to your company, a majority vote would either admit or reject him. U. S. GRANT COMPANY, No. 55, Lincoln, Ill., has six members with more promised, $3.75 in the treasury, and meets every Tuesday evening. The dues have been fixed at 10c a month. The programs at its meetings consist of debates, recitations, songs, and musical selections. Its officers are: Paul Cannon, Capt.; Charles Miller, V. C.; Leland Davy, Sec., and Sherman Coates, Treas. We are pleased to know that this company recently purchased a bicycle and presented it to a poor, crippled boy, and at the same time procured him a year's subscription to THE AMERICAN BOY. We trust that this example of sympathy and kindness to others will not be lost upon other companies. The captain promises us a picture of the members shortly. OHIOAN COMPANY, No. 85, Dennison, Ohio, recently held three most successful meetings, adding two new members to the company and expecting more soon. The monthly dues have been set at 15c, and the company has at present $1 in the treasury. Fines are imposed for various offenses. KICKAPOO BADGER COMPANY, Viola, Wis., recently elected the following officers: Russell Cooley, Capt.; Will Gerlock, V. C.; Andrew Anderson Jr., Sec.; Harry Bender, Treas., and Prof. Geo. E. Sanford, C. C. COLONEL MORGAN COMPANY, No. 14, Fort Morgan, Colo., recently elected the following officers: Earl Ross, Capt.; Owen Simpson, V. C.; Milton S. Kimball, Sec.; Wyllys Warner, Treas.; Abner S. Baker, S. A. We would just hint to the captain of this company that we want to get as near as possible to each company, and the only means we have of doing this is by obtaining an account of each company's doings. KERMIT ROOSEVELT COMPANY, No. 36, Clyde, Kan., promises us a picture of the members in a few days, and seems to be getting along very nicely, except that the captain finds some difficulty in keeping up the interest of the members and obtaining their attendance at the meetings. We think that if the suggested programs given in our monthly company letters are looked over, some things could be got from them that would make a pleasing evening's entertainment, at least once a month. Then the long days are coming, and the members will be practicing baseball, running, and other games, and indoor meetings will not be held as often as during the winter months. OLD NORTH STATE COMPANY, No. 7, Washington, N. C., has a membership of nine, a library of eighteen books, $2 in the treasury, and recently had its charter framed and placed in a conspicuous position over the captain's desk. It also has a nice club room, with a large oil stove, which keeps the members very comfortable during their meetings. MUSKINGUM VALLEY COMPANY, No. 49, Zanesville, Ohio, recently held its semi-annual election of officers, resulting as follows: Everett Hastings, Captain.; Roy Sulcer, V. C.; Earl Sulcer, Sec.; Hector McLean, Treas.; Stanley Hastings, S. A. This company has $3.50 in the treasury and recently purchased considerable material for its club room. Its meetings are held once every two weeks. WEBFOOTERS COMPANY, No. 21, Roseburg, Ore., held its election of officers in February, with the following result: Seth Hamilton, Capt.; Benj. Eddy, V. C.; Bonnie Buchanan, Sec.; Benj. Clare, Treas.; Wallace Benson, Libn. The members had an outing on a recent Saturday, going back into the hills and having a fine time gathering wild lilies and playing games. The programs at its meetings generally consist of debates, talks on local happenings, and songs and recitations. After the meetings the members indulge in boxing and wrestling matches. It has at present a membership of nine with good prospects of more. THEODORE ROOSEVELT COMPANY, No. 51, Nashville, Ill., gave a reception to ten of their young lady friends on March 16th, at the home of the treasurer. Refreshments in the shape of chicken sandwiches, chocolate, ice cream and cake were served, after which games of various kinds were enjoyed. Everyone present spent a very pleasant evening. The treasurer reports $3.50 in the treasury. Plans are being made by the members to form a tennis team, and during the summer all the members intend to go out camping. Company meetings are held every Friday evening at the members' homes, the meeting places being arranged alphabtically. The dues are 10c a month, with fines which are imposed for various offenses. This company also has its charter nicely framed. OLYMPIA COMPANY, No. 35, Emporia, Kan., is in first-rate shape. A picture of the members was taken recently, but at the time of the secretary's writing had not been printed. However, we expect to get a copy within a very few days. At its last meeting the program consisted of a mock trial, the charge against the accused being "chicken stealing." The treasurer reports $2.48 in the treasury. J. W. DAVIDSON COMPANY, No. 5, Division of China, Shanghai, China, has recently elected the following officers: Joe Evans, Capt.; Earle Woodbury, Sec and Treas. These were elected in place of officers who are coming from China to America. WAGONER GRIT COMPANY, No. 1, Wagoner, I. T. This company held a nice meeting on the celebration of Washington's birthday and had quite a number of invited boy friends. It has $3 in the treasury, and has organized a baseball team for the coming season. The members are preparing to celebrate American Boy Day. HAMLIN GARLAND COMPANY, No. 21, Osage, Ia., recently held its third annual banquet and election of officers. Percy Lapham is the new captain, Dick Smith, V. C.; Allyn Sheldon, Treas., and Lee Hill, Sec. This company at its meeting get up programs and amusements, which are of interest to all members, and has instituted a bank account. LAKE CLUB COMPANY, No. 77, Empire, Mich. This company has elected the following officers: Dale Reynolds, Capt.; Ralph Daly, V. C.; Merton Voice, Sec and Treas.; Clayton Wyse, Libn. It has $1.79 in the treasury and is having its charter nicely framed. FARWELL ATHLETIC COMPANY, No. 74, Farwell, Mich., is progressing nicely. It has a club room fitted up with chairs, pictures, stove, reading table, books, papers, two lamps and a new carpet. It also has two pairs of Indian clubs and boxing gloves. The treasury is rich to the extent of $2.78. It recently gave a geographical party and had a good attendance and a fine time. Its membership numbers twelve. HAMILTON ATHLETIC COMPANY, No. 20, Hamilton, Ind., has the following officers: Paul Dargue, Capt.; Orville Sewell, V. C.; Harold Renner, Sec.; Orville Sewell, Treas.; Paul H. Zeigler, Libn and S. A. Its gymnastic apparatus consists of a punching bag and a set of boxing gloves. It has also many games and a library of 45 books, with a number of magazines. It has eight members and holds its meetings every Thursday evening, and the dues are 5c a month. HENRY CLAY COMPANY, No. 7, Wickliffe, Ky., recently held a debate on the subject: "Resolved, that George Washington was a greater man than Lincoln." The judges, however, failed to come to a decision. PILOT ROCK COMPANY, No. 19, Ashland, Ore., has recently got into its new quarters, consisting of three rooms, one of which is used as a library, and it also has one-half acre of ground for athletic purposes, for all which it pays a rent of $3. The members held a St. Valentine social at the home of one of the members, and all present enjoyed themselves. This company is much interested in debating and at a recent meeting discussed the qustion: "Resolved, that immigration is a detriment to the United States." The members are trying to win one of our special prizes for the largest increase in membership. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its forty-first regular report, from which we note that four meetings were held in February, and at each meeting there was a special program along literary and scientific lines. The company intends to hold a mass meeting in its new auditorium, and cards of announcement are being sent to all desirable young men and boys in the vicinity. The members expect by this to greatly increase their membership and every one of its branch societies. The secretary sends us four photographs of some of the members of the company, which we are sorry on account of their indistinctness cannot be reproduced in THE AMERICAN BOY, but we shall place them in our picture gallery. He also sends us a copy of a little paper, "The Sunbeam," which has a nice picture on its cover page, and is altogether well gotten up. J. FRANK HANLY COMPANY, No. 27, Westfield, Ind., has recently elected the following officers: Wm. J. Metzger, Capt.; Thos. B. Lindley, V. C.; Frank P. Brannon, Sec.; Chas. Alford, Treas. Its recent meetings have been taken up with discussions on the world's famous men, one mock trial and two debates. The members also carried out the February program as suggested in our company letter, and everyone enjoyed it. It has a track team and intended trying conclusions with the Y. W. C. A. The two company counsel are endeavoring to make the company what it ought to be, according to the principles of the Order.

BASKET BALL TEAM OF THE SALEM (IND.) ATHLETIC CO. NO. 30, O. A. B. J. KESSLER, COACH AND COMPANY COUNSEL, IN THE REAR

CENTRAL ATHLETIC CLUB, WOOSTER, OHIO
Fourteen-year-old Champions of 1905. Won 7 games out of 7.

OLD IRONSIDES



THE NINETEENTH of August of the year 1812 was a great day in the history of America's naval warfare, for it was on that day that the frigate Constitution met and sunk the British frigate Guerriere eight hundred miles from Boston south of Cape Race. Ten days later the Constitution sailed into Boston Harbor, and the next day her brave commander, Isaac Hull, met with a reception something like that given to Admiral Dewey in all the American cities he visited after "the affair of the Maine." The victory of Captain Hull had a far greater significance than did the victory of Admiral Dewey. The America of the year 1812 was looked upon by all other nations as a third or fourth-class power incapable of any very great achievements. The people seemed to have lost both pride and courage, and the English papers referred to us as a people who "the more they were chastised the more obsequious they became." We were told that we "could not be kicked into a war" and the nation had suffered so many humiliating defeats that it had become an object of sneering ridicule. It was given to Captain Hull and the frigate Constitution to achieve a sudden victory that inspired the people with hope and confidence and that increased the respect of other nations for our country.

The Constitution was launched on the 21st of October in the year 1797. The wharf from which she was launched in the Charlestown district of Boston is still called Constitution Wharf, and the old frigate has for seven or eight years been at anchor near this wharf. All Boston and many patriotic people in other parts of our country rose in revolt when Secretary Bonaparte of the Navy recommended that the old battleship be towed out to sea and used as a target by the big guns of the North Atlantic squadron. It was not the first time that the people of our country have united in a vigorous protest to save the historic vessel from destruction. She was threatened with destruction away back in 1837, and would perhaps have gone out of existence had not Oliver Wendell Holmes, then a student at Harvard, sent forth his stirring poem entitled "Old Ironsides," in which he wrote in the first stanza:

"Aye, tear her tattered ensign down,
Long has it waved on high,
And many an eye has danced to see
That banner in the sky;
Beneath it rang the battle shout
And burst the cannon's roar,
The meteor of the ocean air
Shall sweep the clouds no more."

This poem created a renewed feeling of gratitude and of obligation toward the Constitution and she was saved. Again she fell into decay and a second wave of enthusiasm and of patriotism saved her from destruction in the year 1876.

In 1897 the Constitution was brought from Portsmouth to Boston and overhauled and repaired, and a year or two ago the Massachusetts Historical Society addressed a long petition to Congress asking that steps be taken for the permanent preservation of the Constitution. These petitioners said with certain truth in their petition:

"In the memory of the people of the United States the Constitution is, throughout her long record, inseparably associated with feats of daring and seamanship—devotion and dash—than which none in all naval history is more skillful or more stirring or more deserving of commemoration by the pious and lasting preservation of the ancient ship now rotting at the wharf opposite to which she was launched six years more than a century ago."

Space cannot be given to record in detail all of the victories of the Constitution, and but brief mention may be made of her most memorable triumph—the sinking of the British battleship Guerriere that nineteenth day of August in the year 1812. England ruled the seas at that time and was arrogant accordingly. She had nothing but contempt for our little navy and seemed to enjoy nothing more than our humiliation over her triumphs. The American people, many of them, had come to believe that it was of no use to wage warfare against a mighty power like England, and had become apathetic. Possibly they would have remained so until utterly routed and defeated by the British had it not been for the skill and daring of Captain Hull on the day he sunk the Guerriere. When he returned to Boston on the Constitution with the information that the Guerriere was at the bottom of the sea the effect was almost magical. Captain Hull became the hero of the hour and his name endures as one of the bravest and best of our American soldiers of the sea. He died in the year 1843 and the Constitution has done some very good service since that time, but she has for many years been out of commission and is now valuable only as an historical relic worthy of preservation because of her past achievements.

Of course there is very little of the original Constitution left. Her decks have been replaced several times and her portholes are now windows, but she is still the Constitution in name and in her outline. It is not at all likely that she will ever be towed out to sea to become the target of other vessels. "Old Ironsides" has a strong hold on the affections of the American people as has been evidenced by the wave of protest that swept the country when Secretary Bonaparte suggested that she be destroyed. The old "Fighting Frigate of 1812" deserves better things at our hands than destruction by our own battleships. The protest Oliver Wendell Holmes made when her destruction was threatened nearly threescore and ten years ago will again be made, and again will the people feel as the young poet at Harvard felt when he wrote:

"Oh, better that her shattered hulk
Should sink beneath the wave!
Her thunder shook the mighty deep,
And there should be her grave.
Nail to the mast her holy flag,
Set every threadbare sail,
And give her to the god of storm,
The lightning and the gale."

A FUND FOR SHUT-IN BOYS

WOULD YOU like to assist some bedridden or shut-in poor boy in getting THE AMERICAN BOY every month? Do you know that there are thousands of boys, just as truly American boys as you are, who are confined to their beds or to wheel-chairs every hour of their lives, and are unable to play the games that you play, or go to school, and at the same time are so poor that they cannot even buy reading matter that would help them pass pleasantly the long hours? Can you begin to realize what it means for a boy to be a confirmed invalid? Don't you think that THE AMERICAN BOY in the life of such a boy would be a God-send? Of course you answer yes to this last question. If THE AMERICAN BOY interests you, with all your varied opportunities for play and work, how much more would it interest a boy with all a boy's instincts and longings, who cannot enter into boy activities as you can? Are you willing to help some such boy to the extent of a few cents and thereby enable him to get THE AMERICAN BOY every month? Will you send us a little money, no matter how little, to go into THE SHUT-IN FUND. Our plan is this:

As soon as fifty cents is made up by our readers, we will contribute another fifty cents and enter up a subscription for an entire year for some shut-in boy who cannot afford to pay for it himself. You may send as little even as one cent and it will be applied to this cause. If you send fifty cents, we will give you the name and address of the boy to whom the subscription is sent, so that you may know whom you are helping. Your fifty cents does not really pay the actual cost to us of the subscription. We are willing to forego all the profit and something besides in order to help the cause.

Then, too, if you know of a shut-in, poverty-stricken boy who ought to be one of the number to receive THE AMERICAN BOY through the kindness of others, you can send us his name and address, but with it you must send a letter from some responsible adult, man or woman, who knows and vouches for the facts. The boy must be a confirmed invalid, not one merely temporarily ill, and must be so poor that he cannot afford to buy the paper himself.

We shall publish in THE AMERICAN BOY from month to month the names of the boys who contribute to this fund. Two boys within the last ten days, without knowing anything of our plan, have sent us money, asking that it be applied to some such end. These boys are

Jeff Thompson, Centralia, Illinois .....15 cents
Guy M. Rigan, Laurel, Florida.....75 cents

If boys will thus send us money for this purpose without being asked, there ought to be thousands of boys who will send money when they know that we are ready and anxious to apply it to s ch a praiseworthy end.

Address Shut-In Department of THE SPRAGUE PUBLISHING COMPANY, Detroit, Michigan. When you are sending money for yourself, add a little something for some one else, stating that the additional money is for THE SHUT-IN FUND. Our acknowledgment will be the publication of your name and the amount in THE AMERICAN BOY as soon as possible after the receipt of the money.

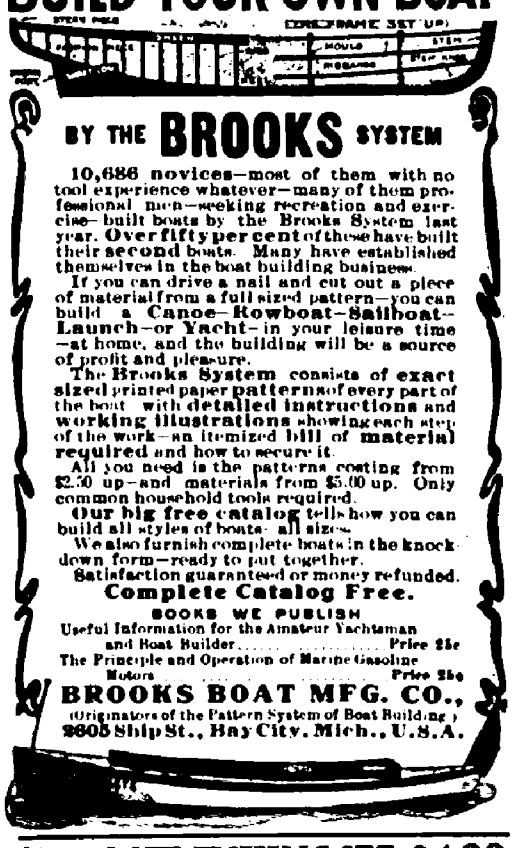
BUILD YOUR OWN BOAT



BY THE **BROOKS** SYSTEM

10,686 novices—most of them with no tool experience whatever—many of them professional men—seeking recreation and exercise—built boats by the Brooks System last year. Over fifty per cent of these have built their second boats. Many have established themselves in the boat building business.

If you can drive a nail and cut out a piece of material from a full sized pattern—you can build a Canoe—Rowboat—Sailboat—Launch—or Yacht—in your leisure time—at home, and the building will be a source of profit and pleasure.

The Brooks System consists of exact sized printed paper patterns of every part of the boat with detailed instructions and working illustrations showing each step of the work—an itemized bill of material required and how to secure it.

All you need is the patterns costing from $2.50 up—and materials from $5.00 up. Only common household tools required.

Our big free catalog tells how you can build all styles of boats—all sizes.

We also furnish complete boats in the knock-down form—ready to put together.

Satisfaction guaranteed or money refunded.

Complete Catalog Free.

DANIEL BOONE
The Pioneer.

BY MARIANNE G. SPRATLEY.

THERE IS no character in American history whose life reads more like a romance than that of Daniel Boone. He gained his world-wide reputation not as a statesman, nor as a military genius, but simply as a great hunter and brave pioneer, who opened the way into the American wilderness and civilization followed, making the grand old state of Kentucky, "the dark and bloody ground," so called from early conflicts with the Indians.

Boone's parents came from England and settled near Bristol, Bucks County, Pennsylvania, where the famous pioneer was born in February, 1735. Here, on the banks of the Delaware, his boyhood was spent, and he early learned to handle his rifle with a steady eye and an unerring aim. Few frontier schools taught more than the common rudiments of education, consequently Daniel's opportunities were limited; but he was a thoughtful, observant boy, and obtained a practical knowledge of many things which made up for his deficiency in book-learning. Though without literary culture, he was not an ignorant man, a fact verified by his letters and a journal which was published while he lived.

When Daniel was in his eighteenth year the family removed to North Carolina, and settled on the Yadkin river. Indians and wild beasts held undisputed possession of the country at that time, and Boone, who loved the freedom and solitude of the woods, learned to be cautious and vigilant in his hunting expeditions. He understood Indian character, their cunning and sagacity and, like them, he was without fear and ever on the alert. He became familiar with the habits of animals and birds, learning much of natural history while roaming through the forest. It is related that a tree he notched in the wilderness was remembered by him twenty years after, and, to prove it, he stripped off the new bark and found beneath the mark of his ax.

According to tradition, his passion for hunting nearly brought him to grief one day. He saw shining in a thicket what he supposed was the eye of a deer, and, lifting his rifle, was about to fire, when a little feminine scream stopped him. He was surprised to see that it was a fair young girl, with flashing, hazel eyes—a dear, but not a deer. Boone spoke to her and learned that her name was Rebecca Bryan. This romantic incident may be only tradition, but he married a young woman of that name, and they lived many happy years on a farm on the Yadkin river.

John Finley, an adventurous hunter, had penetrated the wilderness in a westerly direction, and traded with the Indians, who were not very hostile then. He gave such glowing accounts of the country and the abundance of game that Boone's interest was deeply stirred, and he yearned to explore the unknown region so full of promise. On the first of May, 1769, a party composed of himself, John Finley, Joseph Holden, William Cool, John Stuart and James Money, started off on the journey through the mountainous wilderness. They traveled westward, stopping only at night to rest, and early in June reached Red River, an affluent of the Kentucky. In that part of the state which is now Morgan County, they halted and erected shelters to protect them from inclement weather, reconnoitered the country and hunted successfully until December.

In his journal Boone wrote: "We found abundance of wild beasts in the vast forest. The buffaloes were more numerous than cattle on other settlements, browsing upon the leaves of the cane, or cropping the herbage of these extensive plains. We saw hundreds in a drove, and the numbers about the salt springs were amazing." As they had encountered no Indians, a feeling of security was felt and they decided to divide the company, so that a larger expanse of territory could be explored.

Boone and John Stuart went in the direction of the Kentucky river. They passed through a great forest, where the silence was broken by the songs of birds, and numerous wild animals were seen. While descending a hill near the river, a party of Indians rushed from a thick cane-brake and made them prisoners. They were robbed of all they possessed, but treated with great hospitality, as the Indians evidently wanted them to join their tribe. A week went by and as they manifested no inclination to escape, the savages became less suspicious and watchful. One night all were lying around a pile of burning logs, fast asleep, except Boone, who thought it was a favorable time for flight, and signaled Stuart. Stealthily they crept away into the darkness, and on entering the forest made their way as fast as possible in the direction of their camp. Great was their consternation to find that it had been plundered during their absence, and their companions gone. Their fate was a secret of the wilderness—they were never heard of again. This made the two men more cautious, and when they saw two persons approaching one day, Boone shouted:

"Hello, strangers, who are you?"

"White men and friends," was answered back.

Their surprise and joy was great when they discovered that one of the men was Boone's brother, Squire, and another adventurer from North Carolina, who had followed their trail. They brought good news from home and a supply of powder and lead, and gave greater security to the party. This did not last long, however, as Boone and Stuart, while looking around for game, were again attacked by Indians. Boone escaped, but poor Stuart was caught and scalped. The hunter who had come with Squire Boone started home alone, and the only clew to his fate was a skeleton and fragments of clothing found near a swamp.

The brothers were left alone, exposed to peril from hostile savages and wild beasts. They built a little cabin to protect them from winter storms and hunted in safety until spring. It was while there alone that Daniel said to his brother: "You see how little human nature requires. It is in our hearts, rather than in the things around us, that we are to seek felicity. A man may be happy in any state. It only asks a perfect resignation to the will of Providence." His contentment under all conditions of life revealed the philosopher, and his intense love of nature the poet. It is said the two American characters in which Byron took a special interest were Patrick Henry for his oratory, and Daniel Boone for his philosophical contentment.

BOONE FEIGNED DELIGHT AT SEEING THEM, AND WHEN IMPATIENTLY ORDERED TO COME DOWN, HE ASKED FOR A FEW MOMENTS TO SAVE HIS TOBACCO

Squire Boone returned to North Caroline for horses and supplies in May, 1770. Daniel was left alone in the vast solitude, but was seldom lonely. There were times when thoughts of wife, children and home saddened his heart—then would he take up his rifle and stroll into the forest, or would start out on an exploring journey. It was on one of these occasions in early summer that he wrote: "One day I undertook a tour through the country, where the diversity and beauties of nature I met with in this charming season expelled every gloomy thought. Just at the close of day the gentle gales ceased; a profound calm ensued; not a breath shook the tremulous leaf. I had gained the summit of a commanding ridge, and, looking round with astonishment and delight, beheld the ample plains and beauteous tracts below. On one hand the famous Ohio, rolling in silent dignity, and marking the western boundary of Kentucky with inconceivable grandeur. At a vast distance I beheld the mountains lift their venerable brows and penetrate the clouds. All things were still. I kindled a fire near a fountain of sweet water, and feasted on the loin of a buck which a few hours before I had killed. The shades of night soon overspread the hemisphere, and the earth seemed to gasp after the hovering moisture. My excursion had fatigued my body and amused my mind. I laid me down to sleep and awoke not until the sun had chased away the night."
