This vivid picture gives an insight into the mind of the man alone with God and nature. He loved solitude and adventure, but not for this alone did he choose that wild life. With prophetic vision, he felt that he had a mission, which is explained in his own words: "Many dark and sleepless nights have I spent, separated from the cheerful society of men, scorched by summer's sun and pinched by winter's cold, an instrument ordained to settle the wilderness." This he accomplished, and on it rests his imperishable fame.

After an absence of three months Squire Boone returned, bringing horses and supplies. As signs of Indians were seen, the brothers removed to the Cumberland river, reconnoitering and giving names to rivers. Daniel had been away from his home two years when, in March, 1771, he and his brother returned to North Carolina, intending to bring their families so soon as possible to what they considered a second Eden.

It was not until September, 1776, that they took leave of relatives and friends on the Yadkin and began the journey to Kentucky. Pack horses conveyed their effects, and cattle and swine to form a herd in the western wilderness were also carried. At Powell's Valley five other families and forty armed men joined the expedition, which had its charms as well as perils. When evening came they camped near a spring or watercourse, tents were erected and large fires kindled, which not only enlivened the scene, but was protection against wild beasts. We can imagine how the young people enjoyed it, and how children sported from tent to tent, unconscious of the danger which older heads realized.

Their route was through a country famous still for the wild grandeur of its scenery—silvery streams glided through beautiful valleys and the rich green of unbroken forests, while as far as the eye could reach mountain rose above mountain until lost in the blue haze of distance. This was the land the white man coveted—it was the Indian's happy hunting ground, for which he gave his blood as freely as flows the waters of his dearly loved rivers. They had passed over Powell's and Walden's ridges and were approaching Cumberland Gap, when seven young men who had charge of the cattle in the rear, were attacked by savages—six were killed, among them the eldest son of Daniel Boone—the cattle became panic-stricken and scattered in the forest. The Indians were driven off, but this calamity was so disheartening the whole company refused to go farther, notwithstanding the entreaties of Boone, and retreated forty miles to settlement on Clinch River, Virginia.

Boonesborough, a fort near the Kentucky River, was constructed during the spring of 1775, and the following June Boone brought his family to it—"his wife and daughters being the first white women that stood on the banks of the Kentucky River." Other families followed, and though cut off from all intercourse with the world, the little garrison had its social pleasures—and even Cupid, the little god, who finds his way

"Through paths where wolves would fear to prey,"

entered there. Samuel Henderson and Elizabeth Calloway became engaged and were married in the fort, on the 6th of August, 1776; which it is said, was the first marriage ceremony solemnized in Kentucky. One evening, about a month previous to that event, Elizabeth and Fanny, daughters of Colonel Calloway, and Jemima, daughter of Daniel Boone, the last two fourteen years of age, were captured by Indians while strolling near the river. Their screams were heard at the fort, but before help could come, they were carried away. Boone, with eighteen men, Samuel Henderson included, went in pursuit; but not until the second day were they overtaken. In thick woods the Indians had started a fire to cook, when the excited party dashed upon them—the crack of rifles echoed through the forest, and the surprised savages fled in dismay, leaving two of

their number dead. The terror-stricken captives were saved unhurt, and so great was the joy of all, they returned to the fort without further pursuing the enemy.

Boonesborough was the starting point of civilization in the western wilderness—it was indeed the little acorn planted by the brave pioneer, that became the mighty oak which now shelters thousands. Truly did he say, the history of the western country was his history—it came like an inspiration that he it was who should open the way to build up a new civilization and, perhaps, as he mused alone in the great solitude he heard, with the ear of hope, "the tread of countless millions." Other garrisons and settlements sprang up, and these encroachments on what they considered their territory by right of possession, aroused the vengeance of the red men. In 1777, they assaulted at different times, the various forts and settlements, but were always repulsed with small loss to the pioneers. This caused great alarm, but more damage was done by shooting under cover, and cutting off communication, than by open warfare.

Boone possessed a charmed life that evaded the arrows and bullets of the enemy, and though captured several times, he always managed to gain his liberty. In January, 1778, he went with thirty men to the Blue Licks on Licking river, to manufacture salt for the garrisons. While hunting for meat one day, he met a company of one hundred Indians marching on Boonesborough. Escape was impossible, and fearing he and his men might be massacred, he parleyed with the Indians and, by his tact, obtained an honorable capitaulation. This diverted them from their attack on the fort, and they carried the prisoners to old Chillicothe, on the Little Miami, where they remained about a month. "On the 10th day of March," says Boone, "I and ten of my men were conducted by forty Indians to Detroit, where we arrived on the 30th, and were treated by Governor Hamilton, the British commander at that post, with great humanity. The Indians had such an affection for me, that they refused one hundred pounds sterling offered them by the governor, if they would leave me with the others, on purpose that he might send me home on my parole."

They took him back to Chillicothe, where a chief, Blackfish, adopted him as a son, and all treated him with great kindness. He joined them in their sports but in shooting matches, was careful not to surpass them, knowing it excited their envy. To avoid suspicion he assumed contentment, but yearned for liberty and those he loved. After five months of captivity, they carried him to the salt springs on the Sciota, and were there ten days making salt. When they returned to Chillicothe he found four hundred and fifty warriors hideously painted and armed, for an expedition against Boonesborough. This determined him to attempt escape at all hazards—and at dawn next day, he was on his way to the fort. A journey of one hundred and sixty miles was made in four days, with only one meal during that time. His appearance astonished everybody, as they thought he was killed; and his wife believing this had, with some of their children, returned to North Carolina.

The enemy did not appear before Boonesborough until August, 1778. They were officered by Canadian Frenchmen and some of their chiefs, among whom was Boone's would-be father, Blackfish. The siege lasted nine days, and women assisted in the defense by moulding bullets and loading the guns. The savages had to retire, leaving thirty-seven killed and many wounded, while the pioneers' loss was only two killed and four wounded. No further attempt was ever made on the fort. A disastrous conflict occurred on the 19th of August, 1782, in which Boone, then a colonel, took an important part; and had his counsel prevailed, the result might have been different. The white men were routed, and a terrible slaughter ensued. Among the slain was young Israel, Colonel Boone's son. When General George Rogers Clarke, who commanded the Kentucky troops, heard of this defeat, he organized a large expedition, resolving to crush the enemy. Their towns were reduced to ashes, their corn destroyed and their territory desolated.

An era of peace dawned upon the settlers. Colonel Boone built a comfortable log house and started a farm. One day while attending to some tobacco that was spread out on the top of a small house to dry, he was surprised by four armed Indians he had met before.

"Now, Boone, we got you!" one cried exultantly. "You no get way more! We carry you off to Chillicothe this time. You no cheat us any more!"

Boone feigned delight at seeing them, and when impatiently ordered to come down, he asked for a few moments to save his tobacco, engaging their attention with inquiries about former comrades. In the meantime, he had gathered some dried leaves which he crushed in his hands and threw down into their ugly faces. While they were choking and sneezing, he jumped to the ground and escaped to his cabin.

In 1792, Kentucky was admitted into the Federal Union as a state. Immigration rapidly increased and there were many lawsuits about titles to lands. Colonel Boone lost the home for which many sacrifices had been made, and, deeply grieved, moved to Missouri, where eight hundred acres of land was given him by the Spanish government This was before the Louisiana purchase but the grant was confirmed by Congress in 1812.

His wife died in 1813, and he survived her seven years. The old man continued his habit of hunting and trapping bears until strength failed; then he would sit in the open air, with his faithful dog by his side, his useless rifle in his feeble hands, gazing into the forest and dreaming of the days that were no more. He died on the 26th of September, 1820; and a half century later, Kentucky honored her old pioneer and his wife—they were removed to the cemetery of Frankfort. Meet it was that their dust should mingle with that of the land they loved so well.

AMATEUR JOURNALISM DEPARTMENT

Edited by W. R. MURPHY

[The editor will send copies of typical amateur papers to boys interested in the hobby, providing a stamped addressed wrapper is sent.]

A Young Editor Who has "Made Good"

Frank C. Van Name, of Brooklyn, N. Y., has been known in amateur journalism for less than a year, yet he has come to be recognized as a leader among the younger element, because of the energy he manifests, the excellent paper he publishes, and the literary improvement he has made.

About a year ago a small paper came out of Brooklyn. It was called The Speck and was not noteworthy for either contents or appearance. Three issues of the paper came out, each showing marked improvement over its predecessor, and amateur journalists began to inquire about Frank C. Van Name. It was found that he was a Brooklyn schoolboy of seventeen years of age. In July the paper became a bi-monthly under the title of The Sparkler, in order not to conflict in name with a longer-established amateur journal of Williamsport, Pa. Since that time The Sparkler has appeared regularly, containing a generous assortment of poems, essays and stories, as well as interesting editorials and comments. Van Name publishes The Sparkler entirely as a recreation and medium of culture, and without any attempt at profit. He is a student at the Brooklyn High School and will in due course enter Columbia University, from which several amateur journalists of the past have graduated. Van Name is already Eastern Manuscript Manager of the United Amateur Press Association and a member of the Gotham Press Club and the National Amateur Press Association, the convention of which he will attend in Philadelphia next July. He is a formidable and worthy candidate for official editor of the United Amateur Press Association.

FRANK C. VAN NAME

From Amateur Journal to Metropolitan Daily

The career of Foster Gilroy is an interesting and impressive object lesson to the aspiring amateur journalist. In his earliest days of amateur journalism his work showed such enterprise and ability that he soon became an important figure in the little world of letters. He entered amateur journalism back in 1899, when in conjunction with Richard C. Newbold, of Ridley Park, Pa., he edited and published Our Boys and Girls, which rapidly came to the front as an exponent of amateur typography and literature. His first independent paper was a small sheet devoted to the interests of the Lansdowne, Pa., High School, from which he later graduated, going to the Drexel School of Philadelphia for special work in English, history and the classics. This paper developed into The Stylus, which had a charm and influence of its own on account of its originality and individuality. Mr. Gilroy soon joined the Philadelphia Amateur Journalists' Club, becoming in time its official editor. The National Amateur Press Association also honored him with the following offices at various conventions: Corresponding secretary, Nashville, 1901; first vice-president, New York, 1902; executive judge, Chicago, 1903; executive judge, San Francisco, 1904. In 1903-'04 he was promoted to the presidency by the then board of executive judges, upon the resignation of Albert E. Barnard. In 1903 Mr. Gilroy became a reporter on the Evening Bulletin and later became a member of the local staff of the North American, one of the oldest and best morning newspapers in America. The same energy and ability evidenced by Mr. Gilroy in amateur journalism have demonstrated his fitness for a high place in his chosen profession. He has "covered" many important "assignments" and his "stories" are readable as well as informative. He has recently been elected a member of the board of governors of the exclusive Pen and Pencil Club, composed of newspaper men, artists and literary people. He is also identified with The Fossils, an association of old-time and inactive amateur journalists.

How a Boy Should Treat His Mother

Answer given by the Rev. Thomas B. Gregory, of New York City, for some years a prominent Universalist minister, now on the editorial staff of the New York American.

In far too many instances "father" and "mother" are giving way to "the old man" and "the old woman," for whom the "kids" seem to have but little of the warm filial love and beautiful filial respect that used to characterize the child's feeling toward the parents.

A boy should treat his mother with a heartfelt, uniform kindness. He should strive to love her with all his heart and soul and strength, and to love her that way right along.

Once a mother always a mother, is the word that every son should thoroughly believe in.

The mother may sin, for she is human, but she can commit no sin so rank and monstrous as would be committed by the son who, in her sin and sorrow, would desert her.

In saying that a boy should love his mother, I say all that it is possible to say; for to love one's mother is to be kind to her, to be respectful to her, to study her comfort and peace, and in every way to be true and faithful to her.

When the great Mirabeau was dying, he called for flowers and music, desiring to die in the midst of sweet odors and rich melodies.

I am sure that the sweetest fragrance, the richest music that anyone can have about him in the solemn death hour is the memory of filial gratitude, the recollection of the fact that one was always true to father and mother.

I regret to say, however, and consider it an alarming sign, that there were never so many ungrateful, disrespectful children in the world as there are today, and that the number is steadily on the increase.

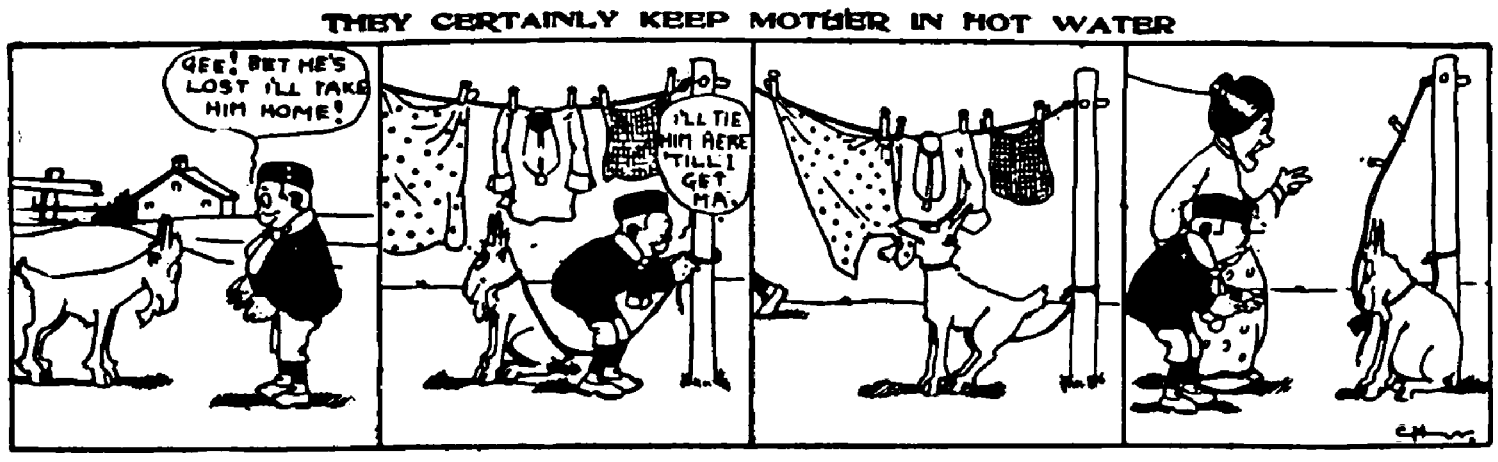
WILLIE'S PETS

THEY CERTAINLY KEEP MOTHER IN HOT WATER



The BEARDING of the LION: An Exploit of "PAUL JONES."

By J. Allen Bartlett, an English Writer.

IN THE RECORDS of Great Britain you can seldom find a more critical or disastrous period than that which lies between the years 1770 and 1815. Impoverished and misgoverned at home, taxed almost beyond human endurance, weakened by disloyalty and intrigue, the poor sick lion beheld its most valuable crown colony of America slipping from its grasp, whilst across the narrow waters of the English Channel Europe watched, ready to let loose the dogs of war upon its defenseless flanks.

And never in all that trying period was the dear old lion's tail so twisted as upon the night of September 23, 1779, beneath the stern grey cliffs of Flamborough, and almost within range of one of the most powerful sea fortresses of the north.

Perhaps, looking back upon the affair through the mellowing atmosphere of time, our amour propre may derive some spice of comfort from the reflection that one of our own island sons alone was found capable of such audacity; for, although treachery is rightly held to be a cardinal sin, yet it cannot be denied that every Englishman—ay, and every English boy—would sooner get a thorough drubbing in a fair and square encounter with British fists than with those of an alien race.

Let us then, salving our wounded pride with this reflection, go back for a moment to the days of our great-great-grandfathers, the days when the bluffest of bluff wooden walls, slow as tortoises, and deficient in every fighting quality save solidity, carried the brave old flag over the seas of the world, or wallowed to leeward on ironbound coasts, yielding to Neptune a tribute of stout hearts and sturdy bodies greater far than any levied at the mouth of foreign cannon. When, later on, we found it economical and convenient to annex a large portion of our neighbor's fleets, we learned from these beautifully modelled types and designs that there were better "lines" than those exemplified by the Great Harry of the sixteenth century, and the more recent, but equally unwieldy, Royal Sovereign.

For the French, like the Boers of today, were well aware that a blow struck swiftly, and with the power of abandoning the offensive for a clean pair of heels, is often more productive of results than an irresistible but slowly moving force.

Another nation had also at that time made the discovery, and in its efforts to obtain independence had not hesitated to cut itself free from the routine and conservatism which pervaded, and still to some extent pervades, the army and navy of Great Britain.

As a result, it evolved a method of warfare which, from Bunker Hill onward, was attended by almost invariable success against infantry which, for pluck, stamina, and resolution was without a rival; while at the same time it perfected battleships which, with the lines of Australian clippers, were nevertheless so well equipped that they could more than hold their own with the navies of the mother country.

Hence, when Paul Jones, erstwhile slave-trader, pirate, buccaneer, and now admiral of the American navy, took command of his trim little fleet on the other side of the "Herring Pond," he was in a position to dangle a rope's end to the fastest line-of-battle ship of his Majesty's navy.

Filled with an implacable hostility to everything English, an animosity as inexplicable as it was deadly, this redoubtable sea rover found himself, in the second week of September of the year before mentioned, tacking to and fro in the Firth of Forth, and seeking for anything and everything flying the British flag in British waters.

His feelings must have been peculiar, and perhaps not altogether happy, as he waited, like a bird of prey, ready to pounce on the merchandise destined for the port of Edinburgh. He was not, as is sometimes asserted, a Welshman, neither was his name Paul Jones!

The son of a Scottish farmer, in the old border county of Dumfries, he may have inherited the hostility born of the old feuds with the folk "over the Border," or possibly the glamour of the Stuarts may have blinded his eyes to the more substantial benefits of the Protestant succession. What the cause was we shall never know, but now, as he lay waiting almost within sound of the bells of the capital of his native land, and with the scent of the heather borne to his nostrils across the salt waters of the Firth, some sad and bitter memories must have stirred in the heart of him who was once John Paul! Perhaps some consideration for his father's name may have made him assume the ubiquitous name of Jones; and in his gallant and chivalrous treatment of the Countess of Selkirk, when he restored the jewels and plate which only the most pressing need could ever have caused him to "commandeer," we may trace some lingering kindliness towards the country and race to which he belonged.

But on the present occasion, at any rate, the renegade son of Scotland was not permitted to spoil his native land.

Caledonia herself rose to defend her own, and blew with such a mighty blast down the foaming Firth that Jones and his privateers were fain to stagger south to the lee of the wild Northumbrian coast, reeling along under bare poles, and never checking their wild flight till the great cliffs of Flamborough Head were hull down on their starboard quarter. Then, and not till then, did the furious blasts cease to shriek in the straining cordage and the wild white horses sink beneath the undulations of the cold North Sea.

Then did Paul Jones, admiral and buccaneer, pull himself together, and shout lustily from his quarterdeck to the cosmopolitan crew beneath him:

"Cheerily, my lads; we'll spoil the Egyptian yet! A golden guinea to the first man who cries 'Sail ho!' be it unarmed merchantman or all the British fleet!"

But all that day and half the next the mastheadmen swept in dizzy arcs above the dying swell, clinging like limpets to the lofty spars, while all around them the bare face of the North Sea shone in the autumn sun.

Then, when the murmurings of mutiny began to arise from the deep chests of the half-disciplined desperadoes who manned his privateers, the welcome cry rang out:

"Sail on the port bow! Sail abeam! Fleet hull-down, heading N.W. by W."

The hard, clear-cut face of the admiral lighted with a momentary gleam of satisfaction.

"It is well timed," he ejaculated. "We have the Baltic convoy, and, with good fortune, a pretty bit of fighting to give it flavor."

Running up the signals for a general chase, he wore his flagship, and strove to push her between the distant convoy and the land.

But a stern chase is always a long chase, and with a dropping wind on the quarter the fastest clipper afloat can make but little progress; and so it happened that long before the flying merchantmen could be brought within reach of the bow-chasers, the huge mass of Flamborough loomed upon the lee, and the astonished gunners of Scarborough Castle stood at attention behind their shotted guns.

Another hour and the white wings were safely furled beneath the gray old bastions, and the danger was past; for the sea-hawks knew better than to venture within range of the great guns that waited in ominous silence behind those castle walls.

The prey had indeed escaped, but a grim drama was yet to be enacted within the lengthening shadows of Flamborough Head! Two gallant frigates, the Serapis and the Countess of Scarborough, disdaining the shelter of the fortress, and burning to avenge the insult offered to the mistress of the seas, had worked into the Bay of Filey, and, coming on to the starboard tack, had sailed through the gathering twilight down the coast to Flamborough Head.

There, drifting out to sea before the last puffs of the dying breeze, they lay and waited for the onset of the foe.

It was almost dark when Paul Jones, moving slowly northward in his ship, the Bon Homme Richard, found himself within range of the Serapis, which, under her gallant and fearless commander, Pearson, loomed grim and menacing, a picture of outraged and resentful dignity.

Behind her, and farther to the north, moved the equally majestic Countess of Scarborough, her starboard guns run out and trained, and every jolly Jack aboard her burning to avenge the insult offered to the flag.

And who could doubt the issue of the conflict?

On the one hand, the pirate, as they scornfully termed her, deprived by the absence of wind of her one advantage—speed—and inferior to even one frigate in her artillery, manned by a scratch crew whose discipline could not be compared with the highly trained unity of the British navy, and separated by a wide stretch of sea from the support of her nearest consort.

On the other hand, two well-armed men-o-war, coming up on the windward berth, and acting almost within gunshot of their own land.

But the heart of the bold buccaneer did not fail him in the crisis. Creeping up to within almost pistol range of the Serapis he discharged his heavy guns one by one as he crossed her bows, pouring in at the same time a murderous fire of small arms, which laid many a brave tar low upon the frigate's deck. Gliding on over the glassy water he then engaged the second frigate, and, luffing-up between the two, discharged every available weapon into the two British ships.

They, on their part, were not slow to reply, and the Bon Homme Richard staggered and rolled like a drunken man as the heavy metal crashed into her to port and starboard.

In a few minutes her decks were like a shambles, and to add to the confusion the eighteen-pounders on her poop burst one after another, annihilating the guns' crews and scattering their limbs and bodies in horrible confusion.

With only two guns available on his upper decks Paul Jones still fought desperately in the darkness, pouring in such a terrible musketry fire from his tops that the decks of the frigates became well-nigh untenable.

The sea-hawk was using beak and talons with the fury of desperation.

With scarcely enough wind to keep steerage-way, the battle raged through the night, and the garrison of far-off Scarborough heard the tumult pealing across the quiet sea. The shepherd on Flamborough Head strove in vain to pierce the gloom of the rolling war-cloud, and the village folk from far inland came hurrying to the coast, startled from their beds by the roar of the artillery.

Then slowly the moon rose over the waste of waters, turning the sea into a mirror of polished silver and outlining the bays and headlands of the wild Yorkshire coast; but even its rays could not penetrate the smoke that drifted over and around the fighting ships and swept in great undulating billows away to the open sea. Here and there in the dense curtain the watchers on shore could see the momentary glow when the forty pounders belched their deadly broadsides, and could catch a glimpse of a spar or mast that emerged, only to be lost again in that shroud of death and destruction.

But the combat was not destined to be much longer a matter of two to one.

Slowly forging across the lane of molten silver which the moon made upon the water, another ship of the hostile squadron, the Alliance, tacked ever nearer to the scene of conflict, and presently, disappearing in the war-cloud, her broadsides rang sharp and clear above the tumult.

But these broadsides, owing to some mistake made in the gloom and confusion, poured into the fated timbers of the Bon Homme Richard, which thus became the centre of three simultaneous attacks!

The mistake was soon rectified, and the Alliance, engaging the Countess of Scarborough, drifted off in a death grip which lasted till the dear old Union Jack dipped sadly in token of surrender.

At about this time the bowsprit of the Serapis swept across the poop of the Bon Homme Richard, and ere it could be freed Paul Jones with his own hands made it fast, lashing it to his boom and taffrail so securely that it remained immovable during the remainder of the fight.

Then, calling on his men for one last effort, he poured his musketry with redoubled energy into the British ship, supplementing it with a continuous torrent of hand grenades at close quarters. The British guns replied with their deep thunder, and both decks resembled a slaughter-house, while the sea poured into the riddled hull of the privateer in such a flood that the clanking chain-pumps wrestled with it in vain.

Suddenly a shout arose. A chain-shot whizzing across the quarterdeck of the Bon Homme Richard took the lieutenant fairly in the body, and he and the redoubtable Jones disappeared beneath a pile of groaning, quivering humanity!

At the same time a report arose that the ship was sinking, and in the breathless pause that followed the roar of many waters pouring into the fast filling hold could be distinctly heard.

The master gunner, thinking that he was now the only responsible officer in command, called upon the crew of the Bon Homme Richard to throw down their arms and surrender at discretion; but the colours were shot away and could not be dipped.

Then Captain Pearson, blackened with the smoke of battle, gave a sigh of relief, for he thought the hard-won victory was within his grasp.

Ordering his men to cease firing, he went forward to take over the American ship; but his hopes were premature. There arose a great heaving and struggling on the quarterdeck of the enemy, and then Paul Jones, half-stunned and blinded with blood, struggled to his feet.

"Never surrender, boys!" he shouted. "If we're sinking, let us go down fighting like men!"

Nearly three hundred men lay dead and dying upon his decks; but the survivors and the wounded raised a mighty yell of defiance which was heard upon the shore.

In the midst of the renewed conflict, while the issue of the fight lay in the lap of the gods, a Scotch seaman on board the Bon Homme Richard crawled out upon the main yard, which, owing to the drawing together of the ships, lay right over the open waist of the Serapis.

Down in that waist a great pile of cartridges lay ready for use; and the canny Scot was quick to see his opportunity.

Taking careful aim, and risking his own life in the attempt, he dropped a hand grenade right into the middle of the inflammable pile. A terrific explosion followed, which shook the British ship from truck to keelson, and hurled her crew, wounded and dismembered, in all directions.

It was an appalling calamity, and the hearts of the brave men-o-warsmen failed them in the presence of such a scene of carnage.

Further resistance was out of the question, and, bitterly humiliated, the brave Pearson stepped aboard his adversary's sinking ship and delivered up his sword; whilst the remnant of his crew, almost paralyzed with their impotent indignation, proceeded to clear their blood-stained decks from the gruesome traces of the fight.

SOMETHING ABOUT INDIAN BABIES

By WM. R. DRAPER

A KIOWA BOY

THE RICHEST children in the United States, as a race, are those of the affiliated tribes of southern Oklahoma, known as the Kiowas, Comanches, Apaches and Wichitas.

Each infant has a farm worth from three to five thousand dollars, and will quite soon share equally in a distribution of two million dollars to the tribes, of which there are but three thousand members.

This infant band of redskins are the most interesting of the West. Within a short time they have been made citizens of the territory of Oklahoma, to become United States citizens when that Territory is admitted to the Union. As a class they are the richest American infants in the United States.

In a few more years, on account of the intermarriage of Indians and whites, there will be no more of these full-blood babies. Indeed, the race now growing up will be the last generation. Full-blood women and men are marrying half-breeds and white people all the while, and the inter-marriage of a full-blood couple is quite a surprise.

These full-blood babies of the affiliated Oklahoma tribes, are a peculiar lot of infants. They are a fat, healthy lot of youngsters, and despite their rough usage grow up strong boys and girls. The little baby is born without any medical care. It is fed on sofki, milk and hominy, until it is quite able to partake of strong food; then it is allowed to eat as much and often as it will. From the time it is strong enough to stand the out-door air it is put in a papoose sack upon its mother's back, and there it remains almost constantly. It is bathed often, contrary to general belief. A cold bath, twice every twenty-four hours, plenty of fresh air and rough food, no petting, and numerous hardships makes the papoose a strong child. Formerly the Indian mother kept her baby constantly in a sack of buckskin upon her back, but of late years the ordinary go-cart of civilization has come into use. Dolls are also coming to be a part of the little redskins' playthings, whereas heretofore nothing but toads, lizards and dogs were the regulation playthings they knew about.

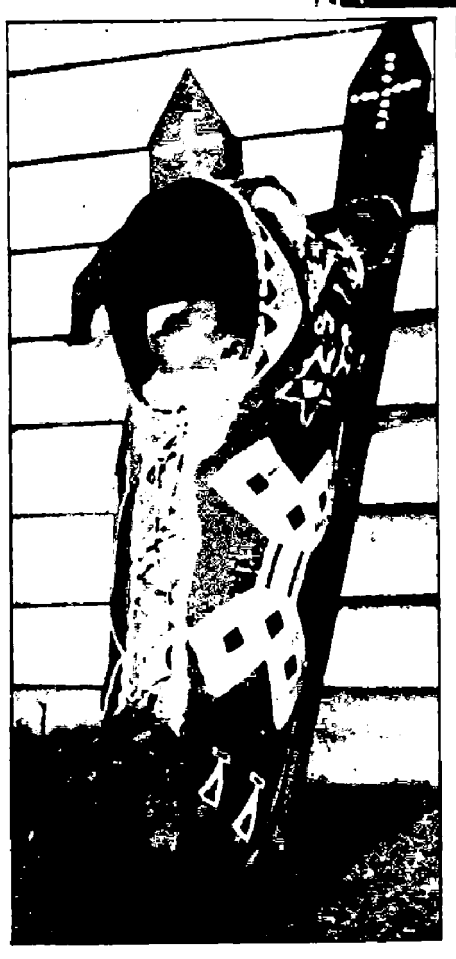
Mothers are not overly attentive to their young, excepting in certain instances where the father of the child is extremely cruel and neglectful of the squaw, which causes the woman to cling to her baby more closely. Fathers seldom pay the least bit of attention to their children. If, however, the child be a boy, the father will watch it closely to see whether or not he "puts his ear" to the medicine talk or listens to the tales of the warrior. If the latter, he is to be a warrior, if the former, he is conducted into the woods and taught the lore of the medicine man. Nowadays the boys are put to work cultivating the crops which the government's agents have caused them to set out and which the older redskins refuse to attend.

On the reservations nowadays the boys and girls must commence to attend school at six years of age, and when they have completed the course on the reservation, most of them are sent east to the larger Indian schools, Chilocco, Haskell, and Carlisle.

The games of the Indian youth are very rough indeed. Going on the war-path (which is an imitation in miniature of fighting a battle) is one of the principal games of the boys, while the Indian girls have tepees erected and play at housekeeping and cooking. Early in life the girl is taught that she must wait upon the other sex and be at his every beck and call.

COMANCHE SQUAW AND PAPOOSE

The redskin baby is born healthy and continues healthy unless a contagion strikes the reservation. The deathbed scene of an Indian is one indeed pitiful. Very recently the child of Quahan Parker, a rich Comanche chieftain, died of spinal meningitis. It was a hopeless case from the first, but the medicine men insisted upon using their power. The baby was put on a coarse bed, the body bared, and three men blew upon the body some white looking powder which they claimed would frighten away death. Of course it did no good, and when life had fled the medicine men claimed that the child was an unbeliever in their power. The dead are never spoken of, nor do parents look upon the faces of their infants after death.



"AT EASE"

THE BEARDING OF THE LION

(*Continued from page 210.*)

Thus was the British lion successfully bearded in his den, and the glory of the British navy sullied at the hands of a buccaneer!

In the grey mist of the early morning the Bon Homme Richard rolled uneasily in the tranquil water as she slowly settled down beneath the surface of the sea.

Her crew hastened aboard the captured frigate, and scarcely had Paul Jones left her side when, with a deep groan, she descended into her watery tomb, taking with her almost every article of value which her admiral possessed.

So ended the battle of Flamborough Head, one of the most remarkable in history, and one of the very few in which "the flag that's braved a thousand years" has been compelled to dip to the superior prowess of a foe.

That no ignominy attached to the defeat is evident from the fact that not long afterwards Jones, with the chivalry for which he is so justly celebrated, returned the surrendered sword to Captain Pearson, saying that he could not conscientiously retain the weapon of so brave and gallant a man.

The Serapis never sailed the sea again. Battered and ruined beyond hope of repair, she was spared the humiliation of having to carry an alien flag in her native waters, and soon after her defeat she yielded her stout ribs and oaken sides to be broken up in the timber-yards of Texel.

AN INDIAN BELLE

DORA WHIRLINGWATER, WEARING $600 WORTH OF ELKS' TEETH

HAD SAVED HIS HAT.

A farm boy from the little town of Conway went to the city to seek his fortune. For six months not a word was heard from him. Then one winter afternoon his father got this note:

"Dear Pa — Meet me under the old bridge tomorrow after dark. Bring with you a blanket or a suit of clothes. I have a hat."

And all small game know how dangerous it is to them. For a good day's sport and a well filled game bag, take a HAMILTON RIFLE every time. No other rifle equals it for target practice. Compare the HAMILTON with any other 22 cal. rifle and then you will realize that for the price nothing is made in the gun line that can approach it. Made in three different styles that sell for $1.50, $2.00 and $3.00. Our new take-down Model No. 23 is of the latest Bolt Action type. The action is automatic both in putting the cartridge into the chamber and ejecting the exploded shell. All first-class dealers handle HAMILTON RIFLES. If yours doesn't, send for catalogue and particulars to

Hamilton Rifle Co., Box 110, Plymouth, Mich

10 DAYS FREE TRIAL SEND NO MONEY

Simply write us a postal card saying "*send me your catalogues and free trial offer*" and we will send you by return mail, **free, postpaid,** the handsomest **art catalogue** of the season and our **new and marvelous propositions,** the **most liberal bicycle offers** ever made by any house.

OUR CATALOGUES SHOW large photographic illustrations of all our models, the most complete line of high grade bicycles in the world, and describe and explain every detail of construction. They show the difference between **high class material** and **work** and cheap contract built wheels. **We explain how** we can manufacture bicycles of the very **best material,** furnish the **finest equipment, coaster-brakes, puncture-proof tires** and sell direct to the rider at less than dealer's cost.

WE SHIP ON APPROVAL to any person, anywhere, **without a cent deposit, pay the freight** and allow **ten days free trial** on all our bicycles. *Write for our catalogues, select your wheel, and send us your order on these terms. Do not buy elsewhere until you try our wheel 10 days free.*

We will convince you that we sell BETTER BICYCLES at LOWER PRICES and broader guarantee than any other manufacturer or dealer in the world. We have **reliable** bicycles for men and women, boys and girls, **cheaper** than the lowest prices of any other house; we have the **highest grade** bicycles that it is possible to make at prices as low as a jobber can get in 1000 lots. We have branch houses in Liverpool and London, and we sell bicycles in every country on the globe.

BICYCLE DEALERS You can sell our bicycles under your own name plate at double our prices. Orders filled the day received. Many dealers are handling our line. **Rider Agents make money** selling our bicycles, tires and sundries without interfering with their other work. Splendid opportunity for one agent in each town. If you own a bicycle write to us anyway; there are suggestions and information in our catalogues that will be of immense value to you.

TIRES, COASTER-BRAKES, built-up-wheels, saddles, pedals, parts and repairs and everything in the bicycle line are sold by us at half the usual prices charged by dealers and repair men. Ask for our **tire** and sundry catalogue. If you want **children's wheels** ask for Juvenile Catalogues.

DO NOT WAIT but write us a postal today. **Do not think of buying** a bicycle or a pair of tires from anyone until you know the new and wonderful offers we are making. It only costs a postal to learn everything. Write it **now.**

MEAD CYCLE COMPANY, Dept. C 19 CHICAGO, ILL.

Why the Storks build their Nests on the Housetops.

BY CHAS. McILVAINE.

THE OLD German schoolmaster of Potato Valley—Hanus Gogle—was in fine good humor. The boys and girls had been especially good. To be sure, there had been some giggling, a little whispering, and a few slate pencils dropped on the floor, but no boy had stuck a pin into another boy, or put shoemaker's wax on a bench to fasten the sitter to it. The scholars had all said their lessons well. That pleased him.

Old Hanus had a kind face, but when he was happy, the wrinkles across his forehead went farther up than usual, even to the great bald place on top of his head; his eyes grew rounder and bluer under his bushy eyebrows, his cheeks looked like red apples halved, and his wide mouth grew wider with smiles. The children could easily tell what was coming when old Hanus showed these signs. They knew that as soon as the lessons were all said, the old master would tell them a story or play tunes on his fiddle. These tunes and these stories had made Hanus famous among all the Pennsylvania Germans, or "Dutch" as they are called, of Potato Valley and its regions.

The last lesson was over. The school was quiet. Old Hanus could not hold in his gratitude any longer. 'Py geeminycrooks, you haf been goot boys und girls de whole day. Dot pleases me so better as never was. You pig boys und girls, pring de penches arount, und you leetle poys und girls, get in dere laps oop, und I take some of dem on my knees yet. Den I tell you a story, once—Why de storks build dere nests on de housetops."

The children burst into laugh and chatter. The benches were pushed and carried and crowded close to the old master. The big girls hugged the little ones in their laps; the big boys held their smaller brothers, the smallest of all toddled up to old Hanus and reached up their arms to be lifted to wherever he could get sticking room for them. When all was quiet again and all eyes were looking at him brightly, he began:

"In de old country, de Faderland, where I come from, und all your pappies and mammies come from, dere de storks lif in de summer time. In de winter time, when it beginnin' to get cold, dey make oop flyin' bartles, und dey fly und fly to de Sout', 'till dey come to warm countries. Dey don't stay where it is cold, und wrap up, und go sleddin' like you poys und girls. Dey haf flyin' bartles, mit wings; dey slide on de air. Dey go Sout' because dere legs is long, und thin as de legs of fire tongs, und dere toes is too far down to sit on, if dey get cold mit de cold. Und dere bills, dem is de stork's noses—dey is red, already. So what goot is it for dem storks to stay in de cold countries up Nort' to get dere noses redder? By geeminycrooks, dem storks is sensible, smart birds. When dey, flyin' back Nort' in de spring dey come to dere old homes, und build dere nests on de housetops oop, und raise dere four children. De old pappy stork und de old mammy stork is de schoolmaster and de schoolmam of dem leetle storks. Dey teaches dem to talk stork, und to fly, und to stand on one leg, und to go fishin' for frogs, just like I teaches you, already. (Now, what you are laughin' for—you pig poys und girls? You tink you are storks dat I teachin'? Eh? by geeminycrooks, I like to see you laughin', so better dan never was.)

"Dot stork nest on de housetop is a sign uf goot luck to dot house. Dem storks pring goot luck to dot house und de beoples what lif in it. I know dot, ever since I was a leetle boy, already. Dem storks told me. Und I believe dem storks; dere faces is so long, und serious, und goot.

"Efery night, as de sun goin' down, und de storks came flyin' home, dere long wings floppin' slowly, like clothes on a line, und dere legs comin' along behindt them like strips, my goot mammie used to say: 'Hanus, my dear poy, haf you put sometings to eat for de storks down? Dey are comin' from the Nort'—from the Zuyder Zee, und de mines, und dey haf seen de nixies und de brownies, und dey bring us goot luck. Take goot care uf dem storks, Hanus.' Und I'd say, 'Yes, mammy, I gif dem some frogs dot I catch. und some worms dot I dig, und a leetle snake what I hit mit a stick.' Und den mammy, she would say, 'Hanus, you is a goot poy, like your pappy was.' Und den I felt pig und brave. When dark came some more down, mammy, she'd slip out some pie und some milk de door out, for de brownies, und in de morning it was all gone. I catch old dog Fritz eatin' dot pie und milk once, und by geeminycrooks, I spank him some.

"One night when I was a leetle poy, about as pig as Stuffy (Christopher) Stauffer, dere; I was tiret, already yet, und I went to my bed oop so soon as I had fet de storks. De old storks had not come home, und de four leetle storks was talkin' togeder in de nest my headt over. Dey was talkin' like ebberytings. I listen. Dey did not know dat I was so close under. Dey talkin' about what dere mammy and pappy would pring dem. One said, 'frogs;' (Dey all liked frogs de best), one said, 'No, lizards, because frogs was too dear to haf ebbery day;' one said, 'worms because it was Monday, und dat was washday;' another said, 'I guess we get pollywogs; pollywogs are tings dot are goin' to be frogs some day; dey are pieces uf frogs. We always haf scrap dinners on dem washdays.' Den dey all hollered, 'Snakes!' Und den de whole four snapped dere beaks as if dey was eatin' snakes already. Den I hear de pappy und mammy storks backing dere wings und lightin' de roof on, und dey crammed dem youngsters' moufs so full uf frogs, und worms, und snakes, und lizards dot dey hat to stop talkin'.

"I neffer could stay awake, still, to find out if I was asleep yet. I tought I was awake. I heard one uf dem leetle storks say: 'Mammy, today Hanus Gogle asked his mammy why de storks built dere nests on de housetops oop, und don't build dem on de ground und in trees, like dem oder birds. Und his mammy say she didn't know. Mammy, what is dot reason?' Und de mammy stork say: 'Your pappy will tell you. He keeps de family record. Pappy, you tell dem children once.'

"De pappy stork cleared his long throat, und stood on one leg, und scratched his head mit de oder foot, for thinkin'. Den he said: 'Once on a time—once upon a time was a time a long ago—dere was a king of de Nort' dot was stingy. He hadt his cellar full uf goldt, und diamonds, und pearls, und plenty uf money to buy some more, yet. But he didn't spent it. He was so stingy dot when de nights come, he didn't put pie und milk on his steps, de door out, for de brownies, und de gnomes, und dem pretty nixies. Und he did not gif anything to dem poor beoples; und he wore a brass crown instead uf de goldt one dot his pappy left him, so dot he could put dot goldt crown in de cellar mit his goldt. Und he lifed on capbages. He raised dem capbages his ownself. All roundt his palace, what his pappy left him, was capbages—noting but capbages.

" 'Hallowe'en, dot is a great time mit dem brownies, und dem gnomes, und dem nixies. Hallowe'en night dey all coom from de mines out, und de streams oop, und dey go de worldt over, helpin' dem dot is goot, und blayin' tricks on dem dot is badt. A pig crowdt uf dem got togedder, one Hallowe'en night, when dot stingy oldt king was lifin', und de king uf de brownies saidt: "What shall we do, still," Und dey all shouted: "Let us go to dot stingy oldt King Keepall's capbage patch, und take effery headt uf dot capbage, und gif it to de poor beoples." Und de king uf de brownies saidt: "All right. Dot is goot. Let us go right away, quick." Den de brownies joomp, und dance, und holler und laugh. Und quick as a flash uf dot fire you see runnin' down de cloudts, when storms comin', mit de pig noise after it, dey all foundt demselves in King Keepall's capbage patch. Each brownie, und each gnome, und each nixie pulled oop a headt uf capbage, und ran off down de pig road mit it in dere arms, so fast as dere legs wouldt carry dem to gif the capbages to de poor beoples. Dey make such a noise mit dere hollers—laughin' und shoutin'—dot King Keepall heardt dem mit his ears. Und he joomped oop from his supper taple, where he was eating capbages for supper, und he grapbed his stick, und he hollered: 'Dere is somebodies stealin' my capbages! I will starf to death mitoudt dem capbages!' Und he was so madt as neffer was. He run und joomp, und tumbled, und scolded, till he coom to where his capbages were all any more. Dere was noting but some leafs, und holes in de groundt where dem brownies had pulled dem oop. He scoldedt, und he was madt, I tell you. Den he saw dem leetle beoples scamperin' down de pig road, mit his capbages in dere arms. He shook his stick at dem, und he hollered, 'Stop.' But dey didn't stop. Den he started after dem, madt, so madt as a bumblebee when de poys poke him in his nest mit a stick.

"Dere was a stout, chunky mammy brownie dot hadt her paby along mit her. She wanted to see de fun, und she didn't want to leafe dot paby. So she tied a knot de ends of her shawl in, und put her paby in de loop, und slung it her back on, mit de knot on her forehead. She was a stout, chunky brownie, und she couldn't run fast, mit de rest. She come along first behindt. Dot headt uf capbage dot she huggedt in her arms was big und heaffy. She heardt dot old King Keepall coomin', stormin', und thumpin', und makin' his cane whistle, behindt her. She puffed, und blowed, und run. De oldt King Keepall was not more dan ten feet behindt her, reachin' for dot paby, und hollering, 'Stop.' Dot mammy brownie joomed when he hollered, und she jolted dot paby out uf de loop, und it fell from her back down in de mittle uf de pig road. Dot capbage what she carried was so pig und heaffy dot she didn't miss her leetle paby from her back. She joost ran on, so fast as she couldt. De old King Keepall he saw dot paby drop. He laughed. 'Now,' he said, 'now I haf dem b r o w n i e s. Now, dey will gif me anydings, ebberytings, goldt, und diamonds, und pearls, for dot brownie paby. I don't gif him to dem till dey do.' He grabpt to pick up dot paby, joost as de mammy brownie screamed, 'I haf lost me leetle paby. Hellup!'

"UND ALL DE WHOLE LITTLE BEOPLES SHOUTED, 'YES WE MUST, DOT IS SO' "

"In a fence corner, py de side uf de pig road, a mammy stork had her nest. (In dem days de storks buildt dere nests de groundt on.) Und de pappy stork, he was standin' on one leg on de fence, keepin' de mammy stork company. He saw de baby brownie drop, und he saidt, 'mammy, dere is a nice leetle baby brownie, what its mammy dropped. We must take goot care uf it, und pring it oop mit our children.' Und de old mammy stork, she say: 'Dot is so, pappy. Poor leetle ting. But I am afraidt dot it won't raise well on frogs, und lizards und stork livin'. But I will do my best, already. You pring it to me, pappy," she said. "De children are sleepin'. I don't wake dem.'

"De pappy stork hopped to de groundt, und joost as dot old King Keepall grabpt for dot paby, he saw him, und he shot out, quick, his long neck, und he took dot paby in his beak carefully, und he fly to a high tree. Dot paby was safed!

"De brownies heardt de scream uf dot mammy brownie—'I haf lost my fettle paby, Hellup!'—und dey dropped de capbages und came runnin' back to hellup. Dey findt old King Keepall stormin' und scoldin' und shakin' his stick at dot stork in de tree oop. When de pappy stork saw dem brownies comin,' und de mammy brownie screamin' und cryin' for her paby, he flew down from de tree, und gave it to its mammy from his beak. Dot paby was not hurt one scrimption bit. It was laughin' for de nice fly it hadt hadt. Und dot mammy! Dot mammy was so gladt as neffer was, und she cried more yet, because she was gladt. Und she couldn't tank dot pappy stork for cryin.'

"De brownies, dey joomped on old King Keepall, und dey climbed oop his legs, und oop his coattails, und dey thumped him, und pulled his ears, und his nose, und his hair till he was baldt. Und dem pretty nixies, dey stood off und made faces at him. Dey pulled at him till dey made him gif his promise dot he would gif all his goldt dot he got in his cellar down from being stingy, to de poor beoples, und dot he would raise enough capbages to gif dem each one a headt on Hallowe'en. Den dey let him go.

"De pappy stork he stood on one leg on de fence, laughin'. De mammy stork was so gladt dat dot paby had foundt its mammy, dot she raised her foot to wipe dem tears from her eyes. Dot waked de children und dey hollered.

"De king uf dem brownies, he climbed oop on de fence, 'longside de pappy stork. Und he say: Brownies, und gnomes, und nixies, dis noble pappy stork has done a goot ting, a great ting for us—he has safed dot paby from dot stingy King Keepall, und from eatin' capbages, until we pay a pig price for him. We must gif dis noble stork tree wishes.' Und all de whole leetle beoples shouted, 'Yes, we must. Dot is so!'

" 'Den de king uf de brownies asked de pappy stork to say tree tings dot he wished. Und de pappy stork he say: 'I don't like my wife to haf to sit de groundt on, und raise her children in a fence corner. She gets rheumatiz in her legs, und de children catches colds in dere beaks. I wish mammy to haf her nest on de housetop.'

" 'Dot is a goot wish,' said de king uf de brownies, 'Always und forever und more, too, yet, all storks shall build dere nests on de housetops. What wish coom next?'

"Den de pappy stork say, 'My wife she likes children so better as neffer was. She wanted to raise dot leetle brownie paby joost so goot as her own. Dot she can't do, because pabies don't eat frogs. I wish dot de children in de houses where storks build dere nests on de roof oop, shall catch frogs und lizards und pring dem for de baby storks, dot please mammy.'

" 'Dot is goot wish again,' said de king. 'De poys und girls und effery bodies will be goot to de storks. Now, den, number tree.'

" 'Well," saidt de pappy stork, 'as de paby brought goot luck to de storks, I wish dot de storks pring goot luck to effery house where dere is a baby, or children dot was pabies, or pig beoples dot was children and pabies once. Dot would't please mammy, und me, und de children.'

" 'Dot is goot tree times. You gets all dem wishes.'

"Den de brownies, und de gnomes, und ed nixies all hollored, 'Long life to de storks!'

"JOOST AS DOT OLD KING KEEPALL GRABPT FOR DOT PABY, HE SAW HIM, UND HE SHOT OUT, QUICK, HIS LONG NECK UND TOOK DOT PABY IN HIS BEAK CAREFULLY"

"Den I don't remember, still, what happened after dot. I guess I went to sleep, once."

Isaac's First Initiation

Say, Jack, was youse ever initiated? No? Well, don't. I thought I was brave and dere wit' de goods, so I tells de leader I'd be willin' to join the society. I'm sorry now. As soon as I comes in de club-rooms, de gang runs up to me and says, "Welcome brudder, welcome," and dey all begins shakin' me mitts so nice dat I t'ought dey was ladies. Well, after dey handed me out the hot air about dem wishin' me to belong an' all dat, dey gits down to business. Dey ties up me hands and feet and den blindfolds me. Den de circus began. I was led in a room, and some guy, de main squeeze I t'inks, says: "We have reached de chamber o' mystery, let de ceremony begin." Soon as he says dis, bang, some guy wallops me across de mug wid somet'in' and dey all follers him—just to please de leader. I saw stars already, and dey was only beginnin'. Two guys den grab me by de arms and bring me to anodder room, where dey gives me anodder reception. Was I sweatin'? Quit your foolin', or I don't put you wise. Well, den de same guy asks me wedder I was workin' or not, and to make de gang t'ink good o' me, I says "Yes." Den he asks me wedder I had bin lately raised by de boss, and I, t'inkin' dey was gonne pay me for dere fun, says "No." Me funeral commenced. I heard de silence an 'new somet'in' was comin'. It did. In a minute I found meself up in de air, wid some power behind me, an' de fust t'ing I 'new, I was on de floor ag'in. After I come to, dey wasn't satisfied, an' dey puts me tru an examination. De same main guy asks: "What's your name?" I was just gonne answer, when, biff, I gets a crack on the coko, dat made me see stars. Jack, if you'd have got dat, I t'ink you'd bin a-gonner. Dey kept dis up for awhile an' den started on a new track. Dey put water down me back, till I t'ought I was swimmin'. Dey rubbed me face wid a scrubbin' brush an' tickled me ears wid straws till I t'ought I'd die. Just t'ink, Jack, me hands tied an' dey ticklin' me ears. At last, de leader says: "De ceremony is now over." I jumped wid joy. But w'en I asks him w'en de next meetin' was, de bloke looked at me in a piterful way, and says, "Dis is on'y de fust degree, dere's five more comin'." Say, I t'ought I'd croak. But now I've started a society, an' I'll get mine. Won't you please join my society, Jack? Please do."

ISAAC COHEN.

Waiting His Turn

A lady in a small Alabama town had occasion to call at the cabin of her washerwoman, Aunt Betsy. While waiting for the article she sought to be found, she observed a woolly head which appeared from under the edge of the bed, and asked:

"Is that one of your children, Aunt Betsy?"

" 'Deed an' 'tis, honey," was the reply.

"What is its name?"

"Dat chile ain't got no name yet, Miss Rosa," Aunt Betsy said.

"Why, it must be five or six years old; surely it ought to have a name at that age," the lady said.

Aunt Betsy nodded.

"Dat done worried me a whole lot, honey, hit sho' has," she said. "But whut Ah gwine do? My ole man, he done used up all de good names on de dawgs, an' now dat chile des hatter wait twell one ob dem die, so he can git his name."—Success Magazine.

The Bad Boy of the Sixth Grade.

BY MARION BRIER.

THE sixth grade teacher stood by her desk, patiently waiting while the forty restless boys and girls took their seats and settled into comparative quiet.

When the last shuffling foot was still she raised the lid of her desk to take out the roll-call. There was a quick rustling among the papers and like a flash out sprang a frightened little grey mouse almost in Miss Speare's face. It was too much for her tired nerves and she sprang back with a scream while the mouse scurried down the room, raising wild commotion on its way. The girls shrieked and climbed up on their seats, while the boys laughed uproariously.

Miss Speare gave a swift look at the excited faces. Her quick eye, long experienced in picking out culprits, settled without hesitation upon one face.

She rang the bell sharply, but it was fully five minutes before she could get the giggling, excited room into anything like order again.

When partial quiet was at last restored she looked down severely toward the corner of the room where most of her annoyances usually originated. An innocent-looking geography stood widespread on the dsk. Nothing was visible beyond it but a mop of curly, dark hair at the top and a ragged coat-sleeve at the side. Miss Speare fixed her eyes on the geography and said sternly, "Wesley Clark, did you put that mouse in the desk?"

The room suddenly became quiet. Forty pair of curious eyes turned toward the corner of the room.

The geography remained immovable.

"Wesley, I expect an answer." The tone was yet sterner this time.

"Say, no. We'll all stand by you," whispered a voice from the seat behind him.

Wesley's brown eyes flashed; the geography dropped to the desk and he looked up at Miss Speare.

"I'm waiting," she said. "Did you do it?"

"Yes, ma'am," Wesley answered clearly.

Miss Speare looked at the merry face and mischievous eyes thoughtfully. She felt almost discouraged. Wesley had given her so much trouble that term. It was certainly time that he had a severe lesson. She took up her pencil and wrote rapidly a moment, then handed the note to Wesley with the command, "Take that to Professor Kirk."

Wesley took the note and climbed the stairs to the office, that Court of Justice for evil-doers. It was not the first time his shabby shoes had climbed those stairs.

The professor read the note silently, then looked keenly at Wesley. "I have had a good many complaints about you this term, young man," he said, in his most judicial tone. "My patience is about exhausted. I will see you after school tonight. You may come to the office at four o'clock and remain until I am ready for you. I have some business to attend to after school and it will be six o'clock before I can come to you. That is all; you may go now."

Now it happened that, the afternoon before, a pale little face had pressed close to the window in the little house that was Wesley's home; and a pair of wistful blue eyes had peered eagerly down the street for two hours after four o'clock. It was the same window that had framed Bernie's little world nearly all of the time for the seven years of his life. A pair of tiny crutches beside him told the pathetic story of pain. Bernie found the days spent by that little window very long and lonely since the day two years before when his mother died. The one bright spot in them now was when Wesley came home from school. Wesley was his hero, his all in all.

"I do wish Wes. would come home pretty soon," he said at last, resting his chin wearily on his thin little hand and drawing a long sigh. Just then his sharp eyes caught sight of the familiar boyish figure down the street. Instantly the patient little face lighted up. The eager blue eyes never moved from the beloved figure as it moved swiftly down the street.

"He's got his hand behind his back; that means a 'sprise. Oh, goody!" he exclaimed presently, clapping his small, white hands softly. "Oh, I wish he would hurry; I most can't wait. Oh, he's waving his cap to me!" Bernie's tiny square of white cambric waved frantically in reply.

"O, Wes, what did you bring me?" he exclaimed eagerly as the door opened.

"Shut your eyes, old chap, and guess," commanded Wesley gaily.

Instantly the white lids were shut tightly over the blue eyes. Wesley took his hand from behind him. It held a great bunch of blue violets. He waved them gently before the eager, little face.

"Oh, it's flowers! I smell 'em!" Bernie's eyes flew open and he caught the bouquet and buried his face lovingly among the flowers. "Where'd you get 'em, Wes? I haven't seen one before this year."

"Oh, there's oceans of 'em down by the river," Wesley asserted.

"Oh, I wish I could see 'em once." There was a wistfulness in the patient little voice that went straight to Wesley's heart.

"You just shall see 'em," he exclaimed. "Jack Smith told me he'd got to go out in the country after some potatoes for his father tomorrow after school. He'll let us ride that far and I can carry you down to where the flowers are just as easy and you can pick all you want to. Then in about an hour Jack'll come back and we can ride home with him."

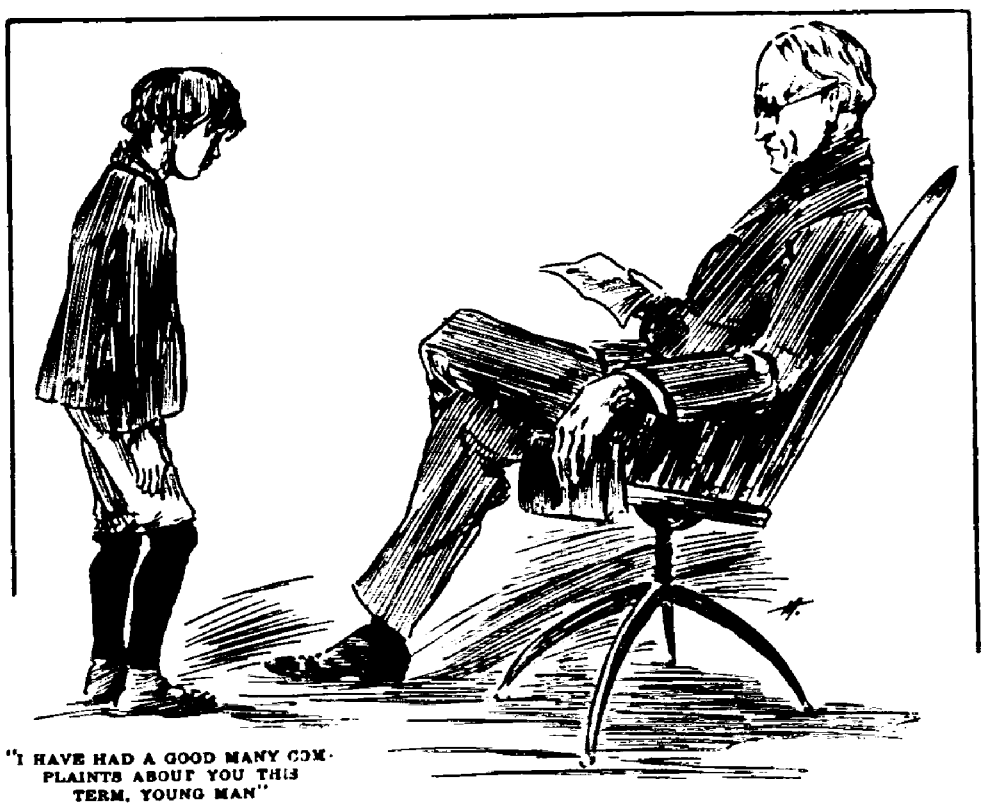
"O, Wes! Will you, really and truly?" The little face was the picture of excited rapture.

"Sure I will. Shake!" The rough, brown hand and the tiny, white one clasped in solemn ratification of the plan.

Bernie watched the sky in feverish anxiety after that. Rain the next day would be an unendurable calamity. But the morning dawned bright and fair and Bernie's face was ecstatic.

Wesley was thinking of that face as he listened to Professor Kirk. The idea of a whipping didn't trouble him; he was used to them; but if he had to stay in the office until six o'clock, Bernie would miss his trip. He couldn't even let him know why he didn't come for him. Wesley knew just how the little face at the window would look. Something must be done. He hated to ask a favor but he would do it for Bernie's sake. "Say, couldn't I go home at four o'clock and come back at six," he enquired in desperation.

"No, you couldn't." The professor eyed him disapprovingly.



"I HAVE HAD A GOOD MANY COMPLAINTS ABOUT YOU THIS TERM, YOUNG MAN"

Wesley's face grew very red. "He thinks I'm just trying to sneak out of staying here," he thought indignantly. But it must be arranged someway. He had a bright idea. "You could whip me twice as hard to make up, you know," he suggested eagerly.

Professor Kirk looked curiously at the earnest face. "You will have to show me good reason for making any change," he said at last.

There was a straw of hope in that and the story of Bernie was soon told. "So, if you'd just let me go home at four o'clock and then give me a double whipping instead, I'd be much obliged," Wesley concluded earnestly.

Professor Kirk's stern face had softened a little during the recital but he still looked uncompromisingly judicial. "The time to have thought of that, young man, was before you got into mischief," he said, looking sharply at Wesley. "It is a lesson you will have to learn that we cannot do thoughtless or wrong deeds without causing others to suffer as well as ourselves." He paused and looked thoughtful. Wesley's heart sank.

After what seemed like an endless pause he went on, "Your punishment was to include two hours' solitary confinement. The best I can do for you is to say that you may remain in the office from six to eight o'clock instead of from four to six. Is that satisfactory?"

Wesley's mind worked fast. From six to eight o'clock! That was hard lines when there was to be an entertainment by trained horses and dogs in town that evening. Wesley had studied the bills for two weeks and knew the names of every one of the leading horses and dogs; from the superb Arabian horse, Prince, down to the funny little dogs, Punch and Judy, who were to be the clowns. He had read over and over again of the wonderful feats they were to perform. To be sure he had no money so of course he could not get into the hall, but they were to give a free entertainment on the street from seven to seven-thirty. That would give him a chance to see the horses and dogs anyway and they would certainly do some of the marvelous things that were advertised then. But now he would have to miss it all if he took Bernie out to the river. Surely that was too much to ask of him. But even as he told himself so the pale, patient face with the wistful eyes rose before him and Wesley had decided. "Yes, sir, I'll do it," he said firmly.

Professor Kirk's keen eyes had read the sharp conflict going on in the boy's mind, but he said nothing.

At six o'clock a happy faced little fellow lay back in the chair by the window surrounded by flowers. "Oh, it was the bestest time I ever had," he was whispering softly to himself. "I wonder where Wes has gone."

At the same time a sober-faced boy was climbing the schoolhouse stairs to the office.

Two hours later Wesley came down the stairs again and turned dejectedly toward home.

Bernie waved frantically to him when he came in sight of the window. Why, how excited the little fellow was. Wesley tried to put on a cheerful face.

"O, Wes, what do you think!" Bernie shouted in his shrill treble as Wesley opened the door. "Miss Speare said she'd got more tickets than she could use and she wished we'd use 'em. And her mother wants to go tonight, so they're going to drive to the hall and they'll come and take me too, right away," he ended breathlessly and incoherently.

Someway the teacher of the sixth grade never had any more trouble with the "Bad Boy."

Crocodile—Won't you come into my spring opening?

Monkey—Not much. I happen to know that you have a spring shutting!—Jester.

From the Land of the Rising Sun

come many delightful and charming sentiments, and one great food principle—the use of rice. It has been left to the cleverness and ingenuity of the American to originate a distinct improvement upon the Japanese way of using rice.

Quaker Rice
(Puffed)

is the lightest, daintiest, most delicate food you have ever eaten. By a wonderful patented process the rice kernels are "puffed" or expanded to many times their ordinary size, and give a most delicious crispness. This marvelous process perfectly cooks the rice, making it ready to serve by simply warming in a pan as it comes from the package, with the addition of milk, cream or sugar to your taste.

The more you eat of Quaker Rice, the more you will want; it is so light and delicate that you cannot over-eat. Children fairly love Quaker Rice, and it is excellent for them, because it is easily digested and contains exactly the food values the growing child requires.

On each package of Quaker Rice you will find directions for making Quaker Rice Candy, Quaker Rice Brittle, etc. These very delightful confections can be easily and quickly made in your own home, and will give untold delight to every member of the family. Children can eat all they want without the slightest fear of consequences.

Quaker Rice is sold by grocers everywhere at 10c the package.

Made by the Manufacturers of Quaker Oats. Address, Chicago, U. S. A.

FISHERMAN'S OUTFIT

$1.00

No. 9500-B

Not a mere boy's outfit, as you may at first imagine from the extremely low price of $1.00, but an outfit that any fisherman may well feel proud of. The rod alone is worth double the price that we ask for the entire outfit. The outfit consists of a hexagon, three-jointed, split bamboo rod, with nickel-plated mountings; it is made of split bamboo, carefully glued, and finished with silk wrappings. The rod not only makes a splendid appearance, but is one of the strongest three-jointed bamboo rods ever produced. It has the regulation cork handle, the same as high-priced rods; the rod is 8½ feet long, and is fitted with solid metal reel seat. We include in this outfit one good substantial Anchor Brand Reel, nickel click, single action, with riveted raised pillar, very strong, and which will hold 25 yds. of line; also 25 yds. of No 6 braided linle thread line, best quality, one 1-yard leader; 1 doz. snelled hooks, 1 box of split shot sinkers (2 doz.), and 1 bright enamel float. Write today for our general Catalogue. Sent free upon application.

THE BIG STORE ACROSS THE STREET

SIEGEL COOPER CO.

SIXTH AVE. 18TH & 19TH STS.

NEW YORK CITY, N.Y.

This outfit would ordinarily sell for $2.50 to $3.00. SPECIAL PRICE:

$1.00

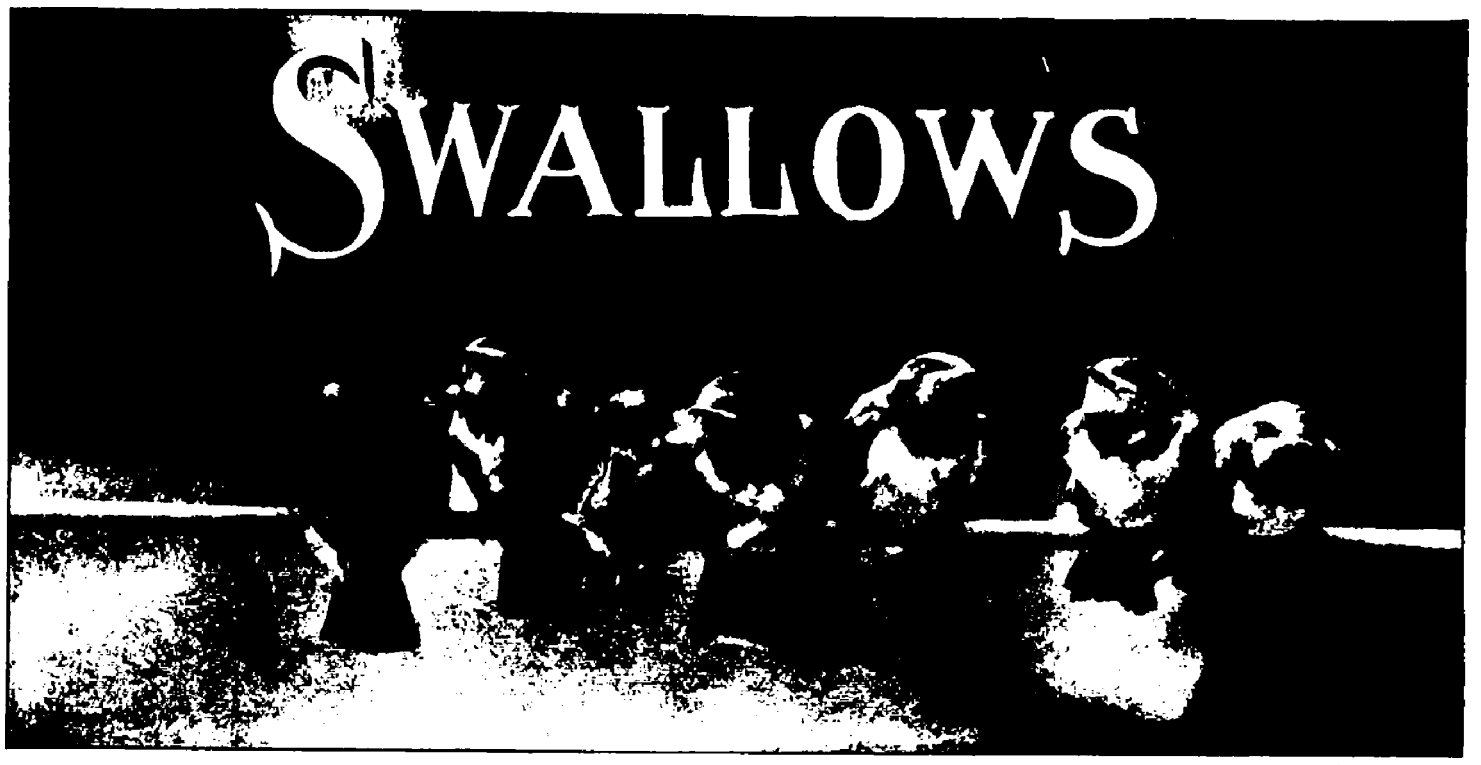
School of Taxidermy, 20 T St., Omaha, Neb.



THE SWALLOWS which are gliding and wheeling over the fields and streams are now such familiar objects, and take such an important place in the summer landscape, that it is almost difficult to remember that the autumn will come, all too soon, when we shall no longer see their burnished plumage shining in the sun, nor hear their joyous twitterings from barn and cottage. But it is an unpleasant thought, so let us enjoy our summer while we may; unlike them we cannot, all of us, follow the sun, but must stop and endure cold and frost, and possess our souls in patience till our feathered wanderers come again. That birds of such powerful flight as swallows should voyage to warmer countries in search of food, is such a natural thing for them to do, that it seems very remarkable how reluctant were even educated observers to admit it. It is easier to imagine birds of feeble flight or of known reluctance to fly, like landrails, spending the winter in a torpid state hidden away in some hole, as bats and reptiles are known to be; but that such active beings as swallows could be deemed capable of such existence does seem surprising.

It is curious to read Gilbert White in this connection, and to note his waverings and doubts on a subject which undoubtedly exercised a great fascination over his mind. At one time he is so convinced that swallows do retire into "hybernacula" at the approach of winter, that he organizes a party of laborers to dig up and search a certain sheltered part of his parish where he thinks they may be hidden away. At another time he appears to be convinced that they do migrate south, no doubt being influenced by the letters of his brother from Gibraltar, as well as by his own observations of parties of swallows in the autumn passing across England.

In spite of the instinct which leads the more northern birds to delay their journey until long after many of their fellows have departed, they can still, one may suppose, only calculate on average seasons, and an exceptionally late summer like that of last year must cause great mortality in their ranks. According to Saunders, the farthest northern limit for the swallow is "Iceland, Spitzbergen, and Novaya Zemblya. It nests in Scandinavia up to 70 deg. N. lat., but not quite so far north as the Arctic Circle in Russia." While it constantly accompanies mankind, and nests freely in houses and outbuildings, it never condescends to the slightest familiarity or friendliness, but rather ignores his presence altogether. Trusting to its speed, it will catch flies within a foot of your nose again and again, and will accompany you as you walk through the meadows merely for the sake of the insects which may be disturbed from the grass, in just the same way as it will accompany a herd of cows or other animals for the same reason.

It is shameful to think that a bird like this—so useful, so beautiful, and of such universal interest, should be slaughtered wholesale for millinery purposes. As I write, hundreds of swallows are being sold in New York shops, mostly young birds caught on their first migration. Nothing, however, is sacred from tasteless barbarity. Such heartlessness is quite inexcusable; but it appears to be impossible to fight against the whims of fashion. So the swallow suffers along with thousands of other beautiful creatures all over the globe.

The favorite situation for the curious mud nest is the roof-beam of a barn or cowshed; bridges and chimneys are also often selected. The mud, which is chiefly collected from ponds and roadside puddles, is largely mixed with straw, and the nest is sparingly lined with dry grass and a few feathers. It is usually supported beneath by some beam or other projection. A fresh nest is usually made every year; but sometimes I have known the old nest of the previous year to be relined and made use of again. No birds are more faithful to their building sites than swallows. Year after year they return to the same corner of the barn, or to the same porch or chimney, with unfailing regularity, and are nearly always sure of a welcome. On a hot day they will sit and bask in the sun on the roofs and farmhouses, or on the branches of the trees, but, like bee catchers, woodchats, and many other insect-eating birds, they almost invariably choose a dead and leafless branch at the summit of a tree, comparatively seldom perching among foliage of any kind. The reason for this probably is that they like to see all around, so that no unwary insect may escape their ever-watchful eyes; or, on the other hand, it may be they choose these exposed positions so that they can immediately detect the approach of any enemy. In these situations, and also while on the wing, the song is constantly uttered, which, simple as it is, has a sweetness and cheerfulness that make it one of the most pleasing sounds of summer.

Panther Hunting by Amateurs

OUR CAMP on the Frio River could not have been better located. It was situated on rising ground, amid the live oaks that fringed the banks of the river. The shade, drainage, etc., thus afforded was perfect, and game plentiful enough to suit the most avaricious; in fact, our larder being full we had let up on the deer, turkey and quail. Doc and Mickey had taken to fishing; Charlie was away to the foothills for foxes, while I busied myself with overhauling our armament and doing other camp duties. One day while thus engaged, Charlie raced into camp with his eyes almost starting from their sockets, saying: "Mac, I seen a panther." "Where?" I asked. "Over in those foothills." "Did you take a shot at him?" "You bet not. I would not trust this 32-20—don't shoot strong enough. Say, you take the Krag, I'll take the Springfield, and we will go after him right away." "Done," said I, "but wait—let us take something to eat." While stuffing two haversacks with cornpone, cold quail and bacon, Doc and Mickey arrived in camp with a nice string of fish, and to them Charlie related his experience. "Well," said Mickey, "it's useless for you to go after him now. Why don't you wait until dark and bait him." "Bait him?" I asked. "What do you mean?" "Why, just take some meat and stake it out near where you saw him, then get under cover and wait until he comes." "A good idea," said I, "but where will we get the bait?" "That's easy," said Mickey. "Over in yon hollow is the ribs of the last two deer we killed, provided the coyotes have not been around. Take these and stake 'em out securely, as I told you."

Off we went for the hollow, without noticing the mischievous twinkle in Mickey's eye. And, sure enough, the ribs were there, but smelling fearfully strong. However, our hunting fever overcame this, and to tie them up and drag them out of the hollow was the work of a few minutes.

An hour before sundown we started, and had trudged but a short distance when our bait became very oppressive, causing us to relieve each other frequently in carrying the load. On the way we jumped three deer shortly after leaving camp, and farther on walked plump into a bunch of wild turkeys seeking roost, and the noise of their taking flight made me think that every tree in the thicket was falling down. We carefully refrained from taking a shot, as we were very near the panther's lair. The night was well on when we reached the place, and after depositing our bait on a little plateau we crossed a gully and took cover about eighty yards away. Patiently we waited in the dim moonlight for our quarry, but he came not. An hour passed, and we became uneasy through the constant vigil. Finally we gave up hope of getting the panther that night and sorrowfully made our way back to camp. The fire was blazing brightly as we approached camp, revealing several forms seated around, which betokened visitors. On entering the circle of light the horse-laughs that greeted us were long and loud. The visitors proved to be Mr. B., who owned the nearest ranch, and his two sons. Noticing my crestfallen appearance, Mr. B. took me in hand and gave me an insight of a panther's habits. Said he: "A panther prefers to be his own butcher, for he is very fond of fresh blood. If he eats the meat it is generally the saddle—no tough parts for him. Now, I'll tell you what I will do. There is a lively young billygoat at the ranch which I will send you to-morrow morning. Stake him out in the vicinity of where you saw the panther, and if one is in the neighborhood the kid will draw him."

This proposition struck me immensely, as it did all our party. On retiring that night Mickey was lulled to sleep by words from us that I am sure he never heard in his childhood days on similar occasions.

Next morning along came a Mexican from the ranch with the goat, and a very frisky little fellow he was. He soon chased our dogs out of camp and proceeded to make himself generally disagreeable. Mickey happened to be engaged in scrubbing some pots in a stooping position, and the goat, seeing an opportunity, collided with him so violently that he remembered the incident many days afterward every time he sat down. It took our combined efforts to keep Mickey, who was mad clear through, from killing the goat right there. Along in the afternoon the B. boys came into camp with their Winchesters, and shortly before dark our party started out with the goat. We made much better time this night, and it was not long before Billy unwillingly took his position as decoy and we retired to cover. We had waited, perhaps, half an hour with no sign of our prey when, of a sudden, Billy began to bleat loudly and tugged at his rope violently. A cloud obscured the moon, shutting out Billy from view, but I knew that something was about to happen, for I felt my old enemy, the buck fever, creeping on me. In a few moments the cloud passed and the moon again shone brightly, revealing to my benumbed senses a long, yellow body crawling almost on his belly, his tail moving slowly from side to side, his eyes blazing like a cat's, and heading straight for the goat. Suddenly a shot rang out on my left; then an irregular volley, my contribution being given with both eyes firmly closed. When the smoke cleared away there, with his youthful whisker pointing straight to the moon, was poor Billy giving his last kicks, while away toward the open prairie a yellow streak marked the course of the frightened panther putting yards of territory behind him at every bound. It would indeed be a hard matter to picture the countenances as we stood around, ready to blame each other for the bungling. A post-mortem was held over the goat, and it revealed the fact that the deceased came to his death by a 40-82 bullet fired from a model 1886 Winchester rifle, and all eyes were immediately turned on Mickey, who handled that rifle. He stoutly denied deliberately killing, but a knowledge of his being a sharpshooter in the U. S. army for many years, coupled with the incident of the morning, made the crime a first degree one, and a hastily assembled court-martial sentenced him to give the goat a decent burial and do camp chores for the remainder of the hunt. Both were faithfully executed, and even now, should any huntsman or traveler happen by where the San Miguel empties into the Frio, he will see a small mound surmounted by a board, on which is inscribed the following epitaph:

Here lies

Why a Young Man Should Enlist in The Navy

By GEORGE DEWEY Admiral of the Navy, in Popular Mechanics

ADMIRAL GEORGE DEWEY

IT GIVES me much pleasure to comply with your request for my views on this subject. It is very near my heart, for it is upon the young men of the country that we must depend for the defense of our country's honor on the sea; and when the advantages of enlistment are better known, there should be no lack of applicants for positions in our naval service.

The naval career offers many advantages to a young man; but primarily he should have a taste for the sea, and then, in order to rise, in this career as in all others, he must apply himself diligently to acquiring all the details of a life full of interesting features. The Navy needs active, intelligent young men, and to those who will devote themselves to learning their profession every encouragement is held out.

Enlisting at seventeen years of age, the recruit at once becomes self-supporting; he is supplied with a complete outfit of clothing and from that time until he dies, provided he remains in the service of the government, he is cared for in sickness or in health; and after thirty years of service if he is still an enlisted man, or upon reaching the age of sixty-two if he holds a commission, he may retire and receive for the remainder of his life three-fourths of the sea pay to which he was entitled at the time of his retirement.

The pay at first may seem small, when compared with what a brother may receive in civil life; but the young man should remember that in addition to his pay the government provides him with quarters and food, and that the naval life gives him an opportunity of visiting various parts of the world. This last consideration alone must counterbalance much that comes to a man in civil life, for there is nothing which broadens and educates as does travel.

In August last, Lieutenant Henry B. Soule, U. S. Navy, who entered the service as an enlisted man, wrote a letter which is so much in the line of this subject, "Why a Young Man Should Enlist in the Navy," that I quote the following:

"My personal experience has been that no man who shows the least desire to learn and to improve himself in the naval service will ever lack assistance from officers or enlisted men of longer experience.

"No concern on shore offers more for the intelligence invested than does the Navy to the average American boy. As the law stands today, a boy can enter the service at 17 years, reach warrant rank with a salary of from $1,200 to $1,800 a year by the time he is 24 or 25 years of age, secure a commission in the line three years later, and enjoy the rank of full Lieutenant at the age of 30. From then on, his promotion is just as rapid and he will just as surely reach the grade of Rear-Admiral, as any other officer of similar rank.

"Should a young man lack the ambition or education to reach one of these higher grades (commissioned rank), he can still win out against his brother in civil life if he sticks to the service. During the thirty years an enlisted man is required to serve before retirement, his pay will average $40 per month. He ought to save $30 of that if he is as careful of his earnings as he would have to be in civil life, and should have $9,000 in the bank, not counting interest, when he is ready to retire at the age of 47, with $40 a month for the remainder of his life. Can you beat that in the factory, in the store, or on the railroad?"

But a young man should not be discouraged because he fails to obtain an officer's commission, nor must he expect to win this prize unless he devotes himself honestly to the work of preparation. The examinations are severe, and rightly so; for the young man who pursues a course at the Naval Academy has to work hard all of the time in order to obtain his commission, so it is but just that the young man whom we are considering should also have to work for it.

A last consideration which I trust will appeal to every American is the patriotic desire of a young man to serve his country. The deeds of naval officers have added many brilliant names to our country's roll of honor; and when a young man enters the Navy he may feel that it is quite possible his own name may sometime be added to the list.

TWO GOOD HABITS

By REV. CHAS. T. WHITE

IN THE MUCH which is said, and wisely for the most part, about bad habits and their avoidance, perhaps we do not give sufficient emphasis to the good habits which may be formed in early life, and may prove valuable acquisitions in after years. Out of the many, which might be treated of, I speak of two, which, to me, seem especially important.

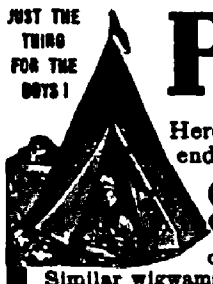
A pupil in a boys' boarding school, in writing to his parents at home, commended one of his instructors as "not much to look at, but awful thorough." All teachers, I fear, would not answer to this description; but, were I a boy again, as I never expect to be, I think I should be at great pains to cultivate the habit of *thoroughness*. That means going through a thing to the very end; indeed the word might be called a frequentative of "through," meaning to go through again and again. If I were in school, and could learn but three lessons a week, I should try to master each of the three perfectly; not merely with the intent of passing muster at the recitation hour, but rather with the intent of adding the subject matter of the lesson to my fund of personal knowledge.

REV. CHAS. T. WHITE

If I were studying the history of any country, or any branch of science, I should make it my aim to carry away with me, not a confused jumble of facts, dates, and incidents to be forgotten in a month's time, but a clear, well-digested outline of the whole subject, which would stay with me, and which I could use in later years as a working basis for further reading or investigation. If I chanced to be a farmer's boy, and mended a piece of fence, I should try to do it in such a way as to make sure it would not require mending soon again. If I had a pile of firewood to cut, I should see to it that every stick was sawed the proper length, and split the required fineness, and neatly piled in the proper place.

But extreme thoroughness tends to slowness of execution. The quality of the work reacts upon the quantity, unless due caution is observed. Therefore, if I were a boy again, I should cultivate alongside the habit of thoroughness a *capacity for doing work*. I should try to avoid dawdling over any task, however distasteful. If I had a lesson to learn, I should make every minute count in learning it, even if I had the leisure to give a whole day or a whole evening to it. In doing manual work, I should cultivate the art of rapid and effective movement. I should train myself to avoid the drudgery of taking unnecessary steps. Among brainworkers and hand-workers alike men are found who can accomplish in an hour what others, with apparently as much natural ability, require three hours to accomplish.

JUST THE THING FOR THE BOYS!



Play Indian

Here is a novelty in tents with which boys and girls can have no end of healthy amusement. Every boy wants one. Don't you?

$1.50 buys this wigwam made of heavy sheeting decorated in genuine Indian design. 4 feet high and 5 feet in diameter. Supported by a tripod—no center pole—all clear space inside—clapped together and put up in a few seconds. The best bargain in tents ever offered.

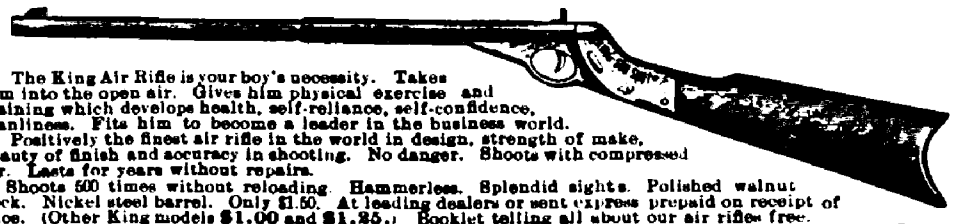
Similar wigwams, 7½ feet high, in white drill, 8 standard colored drill or 8-ounce duck, $4.00 to..... ..... **$5.00**

GOING TO CAMP? We Can Fit You Out

FREE! Write for catalog of all kinds of camping supplies and other canvas goods, circulars on tents, and booklet on wigwams.

Address Canvas Goods Dept., **H. Channon Company.** Desk 8E, 28 Market St., Chicago

The KING Air Rifle



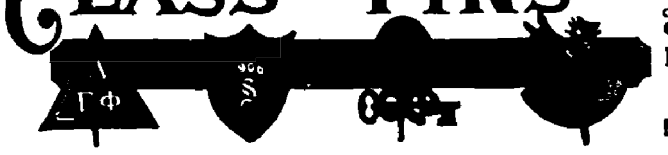
The King Air Rifle is your boy's necessity. Takes him into the open air. Gives him physical exercise and training which develops health, self-reliance, self-confidence, manliness. Fits him to become a leader in the business world.

Positively the finest air rifle in the world in design, strength of make, beauty of finish and accuracy in shooting. No danger. Shoots with compressed air. Lasts for years without repairs.

Shoots 500 times without reloading. Hammerless. Splendid sights. Polished walnut stock. Nickel steel barrel. Only $1.50. At leading dealers or sent express prepaid on receipt of price. (Other King models $1.00 and $1.25.) Booklet telling all about our air rifles free.

The Markham Air Rifle Co., Plymouth, Mich., U. S. A.
The Largest Air Rifle Factory in the World.

CLASS PINS



¶ Maker to wearer! ¶ High-grade work at low prices. ¶ Write for illustrations. ¶ Special designs in colors will be made free of charge. ¶ Satisfaction guaranteed in every instance.

MILWAUKEE, WISCONSIN

RAILROADING WANTED FIREMEN AND BRAKEMEN for all North American Railroads. Experience unnecessary. Firemen $70, become Engineers and earn $150. Brakemen $65, become Conductors and earn $140. Unequaled Opportunity for YOUNG MEN. Name position preferred. State age. Send Stamp. Address RAILWAY ASSOCIATION, Room 1—227 Monroe St., Brooklyn, N. Y.

A Great Career

HENRY CLAY began his illustrious career as statesman, orator and lawyer by declaiming to the chickens and cattle in the barn. By mere determination and persistent effort to learn the law he overcame lack of opportunities and obstacles that do not confront the young man of to-day. The ambitious youth who would achieve fame and fortune at the bar, in public affairs or business, but who cannot afford the time and money necessary to attend a law college, should

Learn Law at Home

through the Sprague Correspondence School of Law—*the original*. It brings to his home, by mail, the instruction and drill of the college. Thousands of our students have passed the required state examinations, and have been admitted to the bar in every state. Others have applied this knowledge toward commercial pursuits, and through it have gained prominent positions. Send for our catalogue, which tells all about our three courses: Preparatory, Commercial and College Law Course. Also book of interesting letters from hundreds of our successful students. **Liberal Terms—Special Offer now.** Write to-day and let us help you.

THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November number. No. I of the Series was Ulysses Simpson Grant; No. II, David G. Farragut; No. III, Benjamin Franklin; No. IV, Abraham Lincoln· No. V John Adams; No. VI Thomas Jefferson.

No. VII--Ralph Waldo Emerson

ALL THE sketches hitherto given of the "Boyhood of Great Americans" have been of men who, in great crises in our country's history, became great, either as generals, admirals, or statesmen. While they deservedly occupy a high place, there have been others no less worthy, who have not been so markedly prominent in the public eye. These latter by taste and training far removed from war or politics, have, in the comparative quietness of the college class-room, lecture platform, or study, been enabled by the force of intellect to open up wide fields of thought concerning religion, philosophy, literature, and life itself.

It has been well said that "peace hath her victories no less than war," and the influence of such men as the subject of our present sketch, has gone far to lift men's thoughts above strife, greed of wealth and merely material objects.

Ralph Waldo Emerson was born in the old parish house, Summer street, Boston, on May 25th, 1803. He was the third son and fourth child of the Reverend William Emerson, minister of the First Church in Boston, and Ruth Haskins Emerson, his wife. Sixty years afterward, the poet and philosopher, then famous among the learned men of two continents, recorded in his diary a visit he paid to the scene of his birth and his bewilderment at the changes that had taken place. In his childhood, Summer street and the region round about, consisted of gardens and pastures, where the boys of the neighborhood could enjoy themselves in all kinds of games and sport. One who also lived there as a boy says: "It was a boys' paradise and echoed every holiday afternoon and midday recess with 'Coram' and 'Hy-spy,' having just the right admixture of open ground, fences and thoroughfares, with intricacies and lurking-places of sheds and wood-houses, and here and there a deserted barn, with open doors and a remnant of hay long untouched. There was even a pond,where a beginner might try his first skates; and the salt water was close by with wharves, where he might catch flounders and tom-cod."

The Reverend William Emerson was the worthy descendant of a long line of puritan ministers who had been the spiritual advisers of New England congregations for nearly two centuries. He loved books—indeed this was his only extravagance—and the society of learned men, being an active member of the Massachusetts Historical Society, and one of the founders of The Philosophical Society. The Boston Athenaeum Library owed its beginning to his efforts. His prominence in the pulpit and in literary pursuits brought him many honors from his fellow citizens, such as overseer of Harvard College, Chaplain to the State Senate and to the Ancient and Honorable Artillery Company. He was also editor of The Monthly Anthology, the contributors to which were judges, lawyers, ministers and the learned of cultured Boston. At his death, which occurred on May 12, 1811, Buckminster said: "The town has lost a diligent observer of its youth and their education; the academy and Historical Society an associate greatly interested in their flourishing state; the university an attentive overseer. The clergy throughout the country have lost a hospitable and liberal brother; his family a most careful and excellent father, husband and master; and his friends an honorable and faithful friend."

Mrs. Emerson's ancestors were also, many of them, members of the clerical profession and had contributed greatly to the staunch faith and sturdy independence of the citizens of New England. She herself was a woman of exceeding graciousness of manner and a loving mother whose ambition was to raise her children to be honored and respected among their fellows. The testimony of one who knew her well is, "I do not remember ever to have seen her impatient, or to have heard her express dissatisfaction at any time."

The death of the husband and father was a severe affliction, and the burden thus cast upon the widow in bringing up her children was heavy indeed. She had been left with little or no means of support, but generous aid came from the congregation of the First Church. Her husband's full salary was continued to her for six months, and for seven years she received annually five hundred dollars, together with the use of the parish house until it should be required. Many kind friends also came to the assistance of the bereaved family. It was still, however, a hard struggle. A smaller house outside the city would have lessened expenses, but Mrs. Emerson was determined that the children should be educated and for that reason continued to live in Boston. To accomplish her purpose she received boarders into her home, and early and late this heroic—for it was nothing short of that—mother toiled, doing by far the greatest part of the work herself, with such slight help only as could be given by the children as they grew up. These pinching times of poverty and privation, when even the necessities of life were hard to get, are recalled in a letter which the eldest son, William, wrote to his mother many years after. He says: "Our circumstances have been such that the increase of expense which would necessarily have attended upon the sickness of any one of us might have reduced us to real distress."

As further illustrating the hard straits to which Mrs. Emerson and her children were reduced, it is recorded that Ralph and his brother, Edward, had only one great-coat between them, each taking his turn in wearing it. This fact coming to the knowledge of their schoolfellows,

RALPH WALDO EMERSON

the two boys often had to endure their jeers and taunting enquiries as to "whose turn is it to wear the coat today?"

While Emerson's childhood years were passed amid poverty and hardship, the lessons thereby taught were of great and lasting benefit to him. They became, indeed, blessings in after life. It is just possible that, notwithstanding his genius, had he not been called upon in these youthful years to bear poverty and work hard, he would hav· failed to occupy the high place among the world's great thinkers which history has awarded him.

Many years after, Emerson acknowledged the debt he owed to the poverty of his youth. In his essay on "Domestic Life," in telling of boys who had been able to steal a few hours for study amid lives of hard work and stern duty, he says: "What is the hoop that holds them staunch? It is the iron band of poverty, of necessity, of austerity, which, excluding them from the sensual enjoyments which makes other boys too early old, has directed their activity into safe and right channels, and made them, despite themselves, reverers of the grand, the beautiful, and the good. Ah, short-sighted students of books, of nature, and of man! Too happy could they know their advantages, they pine for freedom from that mild parental yoke; they sigh for fine clothes, for riches, for the theatre, and premature freedom and dissipation which others possess. Woe to them if their wishes were crowned. The angels that dwell with them, and are weaving laurels of life for their youthful brows are Toil and Want, and Truth and Mutual Faith." It would be well for American boys of today to read and earnestly think over these words of this wise man.

There was one person who exercised great and peculiar authority over the Emerson household. Miss Mary Moody Emerson, the children's aunt, loved her nephews fondly, yet concealed her affection by sharp and bitter reproofs when they showed anything of a departure from her idea of duty. Weakness she would not tolerate. She had high ambitions for the boys, and was always holding up before them the examples of great men of the past. The story is told that a friend of the family calling one day unexpectedly, found the family with nothing to eat, and the aunt consoling the children by telling them stories of heroic endurance. Rather a queer way of hushing the cries of empty stomachs.

As might be expected in a home such as that of Emerson's parents, the education of the children began at a very early age. Indeed, Ralph's schooling seems to have commenced before he was three, as a week before his third birthday his father complained that "Ralph does not read very well yet." At the present time a boy of that age would still be in the nursery. He attended first a school kept by a lady, and afterwards he, with his brother, William, became the pupils of one Lawson Lyon, who is described as "a severe teacher, whose ruler and cowskin did active service."

For these boys, young as they were, there was little time allowed for play. Ralph never even possessed that winter delight of all small boys, a sled, and on account of the rough boys of the neighborhood would never have ventured to use one. His mother's cautions against the rude, noisy boys of the street kept him always inside his own gate, from which we can well believe he gazed long and, perhaps, wistfully, after other boys as they went shouting and whistling down the street.

In his tenth year Ralph began his studies in the famous Boston Latin school. There he came under the instruction of Mr. Apthorp Gould, who was "an excellent master, who loved a good scholar and waked his ambition." While at school he began to make speeches and rhymes on the American sea victories over Great Britain in the war of 1812, and whatever other themes struck his youthful fancy. He was noted also as an elocutionist, his favorite pieces being "Warsaw's Last Champion" and parts of "The Pleasures of Hope." One who was his classmate writes of Emerson in school, saying, "Ralph and I used to sit together. I can see him now, at his copy-book; quite a laborious operation it appeared, as his tongue worked up and down with his pen." He was always a good scholar, as he was forced to study hard at home, but he did not show any sort of excellence. While he never took any great part in the sports and fun of his school fellows, he did not stay away from them. Although his physical weakness prevented him from joining in the school games and play, he was still very much of a boy. He played "hookey" two or three times and was punished with a diet of bread and water.

During the war of 1812, which lasted as every school boy knows until 1815, the coasts of New England suffered greatly from the assaults of the British warships, Boston being a post of considerable commercial importance was especially liable to be attacked. One day the schoolmaster of the Boston Latin school told the scholars of a report that Boston harbor was to be invaded by British men-o-war, and the boys were asked to give one day to helping place Noodle's Island in a state of defense. It was given out that all who were willing to go should gather next morning and proceed to the island. Every boy went, among them Ralph Emerson, but he says that he never could remember that he or his schoolmates did a stroke of work.

Emerson seems to have made much of his gift of rhyming, as during his last year at school, he composed various original poems and delivered them on exhibition days. These were considered so good that his teacher took a great deal of pride in showing them to the school committee. Quite a number of these are in existence, but the space at my command forbids my quoting.

In October, 1817, at the age of fourteen, when the majority of the boys of today are just preparing for High School, young Emerson entered Harvard College. From one of his letters to his brother at this time, he seems to have made up his mind to become a minister like his father and many other of his ancestors. His poverty prevented him from enrolling as a regular student at Harvard. He was, however, appointed "president's freshman," which enabled him to pay for at least a part of his tuition by performing certain duties. The duties of "president's freshman" were to act as a messenger between the president and the students, to read out the various announcements, and to do whatever else the president called for. Such a position, however, did not affect his standing as a student, nor did it involve any loss of self-respect.

While Emerson entered Harvard much younger than the majority of students, his knowledge of books and literature was unusually great for a boy of his years. And it would have been strange, indeed, if, coming from a home where education was held so highly, and spurred by his mother and his aunt, it could have been otherwise. During his freshman year, at least, he did not mingle much with his fellow students. In addition to his not being strong physically, he was somewhat shy and hardly cared for the noise and the jokes of the other boys. Besides, his duties as "president's freshman" and his studies kept him well employed. Notwithstanding his shyness and his not mingling among the students, he seems to have made himself somewhat of a favorite among them by his pleasant manners and kindly ways. He was well liked by his teachers, because he was a dependable boy—one whom they could trust.

While the noisier students fought shy of him, there were others of a quieter and more studious nature who found him to be a choice companion, so his room became the meeting place of a select company who desired to have a wider range of study than they could get from the text-books. Shakespeare and Chaucer and Addison and Sheridan and other English dramatists and poets were read and discussed. Emerson formed these comrades into a little club, the members, or rather those whose purses could afford it, buying books and periodicals not found in the college library. At the meetings these books were read aloud so that all might enjoy them at once. Some of Sir Walter Scott's novels were bought in this way, and often the delightful pages of Guy Mannering, Old Mortality, Ivanhoe, The Heart of Midlothian, or Rob Roy interfered sadly with the preparation of college recitations. While thus reading Rob Roy Emerson conceived the idea of declaiming some of its heroic passages at the college exercises. He did this with such force and passion as to cause quite a sensation among his hearers.

In his classroom studies Greek was Emerson's favorite, with Latin occupying second place. In philosophy, curiously enough, he was far from being good, and mathematics he simply could do nothing with. There were other studies, however, in which he showed a high standing. He gained a Boylston prize for declamation, and in his junior year took a prize for his essay on "The Character of Socrates." Another prize was won during his senior year with a composition on "The Present State of Ethical Philosophy." These papers showed that the boy had benefited greatly by the wideness of his reading and that he was beginning to think and reason things for himself. Of course, his rhyming genius was frequently called upon in the making of college songs, jokes and hits on college affairs. He was made Class Day poet, and his poem on that occasion was considered to have been far above the average.

After his graduation Emerson took up the work of teaching, with his brother William, who had a short time before started a school in Boston. The work of teaching, however, was by no means to his taste, although boys and girls ever found in him a wise counselor and a delightful and sympathetic friend.

In his old age nothing delighted him more than to have a company of young people assemble on a Sunday evening in the parlors of his home for pleasant talks, and it was a yearly event much looked forward to by the children of Concord to spend a day at Emerson's home in merry games and dances.

SYNOPSIS OF SUBSEQUENT CAREER OF RALPH WALDO EMERSON.

1829. Became a Unitarian minister.
1832. Traveled in Europe.—Formed a strong friendship with Thomas Carlyle.
1836. Published his first Book, Nature.
1841. First Volume of his essays published.
1840-'44. Many of his essays appeared in The Dial.
1847. Lectured in England and Scotland.
1856. Published his English Traits.
1866. Received from Harvard the degree of LL. D., and he was also elected a member of the Board of Overseers.
1867. Published his poem, May-Day.
1882. Died April 27, buried in Concord, near the graves of Hawthorne and Thoreau.

INSCRIPTION ON TABLET IN HALL OF FAME.

RALPH WALDO EMERSON
1803-1882

The day is always his who works in it with serenity and great aims. The unstable estimates of men crowd to him whose mind is filled with the truth as the neaped waves of the Atlantic follow the moon.

CHESTER SCOFIELD, BOY ORGANIST

The youngest full-fledged pipe organist in the United States holding a regular position of this kind is believed to be Chester Marshall Scofield, son of Mr. and Mrs. Harry E. Scofield, of Green Hill, Pa. Chester is thirteen years old and plays the pipe organ of the Dowington Methodist Church. Six years ago, after taking music lessons from his mother for two years, he began playing the organ for the Howellville Presbyterian Sabbath school. Later he became organist of the Berwyn Presbyterian Church, where he played regularly for two years prior to his present position. He has also officiated at many of the big organs of this section of Pennsylvania in which he lives. Saturday afternoons he plays at the Employees' Reading Rooms, Broad Street station, Philadelphia. Chester also plays several other musical instruments besides an organ. It is very commendable in him that he remembers the sick and infirm and enjoys calling at their homes and playing for them.

A FRENCH FROG AND AN AMERICAN EAGLE

AN ENGLISH SCHOOL STORY By E. S. TYLEE

BEGUN IN MARCH, 1905

CHAPTER XX.

THE CONCLUSION

MONSIEUR'S "peek neek" was enlivened for us by stories of his army life. I was sorry for having tried to draw him out when I saw how it affected him to speak of the death of his brother Adolphe, killed by a Prussian lancer, and of the sister-in-law and little girl who disappeared during the siege and were never found by Monsieur. The tale interested us deeply, but it had a strange effect on René which we could not understand until it came out that his mother was as a little child in Paris during the siege. On the way home Monsieur Bontemps and René sat together and talked rapidly in French of the terrible days of the siege and I noticed that Froggy was asking eager questions faster than René could answer them.

After Anstruther's recovery he apologized to René for being, as he expressed it, "such a cad in picking up a bit of gossip here and a morsel of scandal there, and not going straight to headquarters." René accepted the apology in good part and was glad that it came before Anstruther knew that the Pickens had come across the missing Chemistry paper in Crikey's locker, where Mahomed had placed it for safe keeping in his miscellaneous collection; and that Crikey himself had found the lost ring during one of his rambles among the chimneys. These excursions into the unknown, which Crikey was so fond of taking, had never been so productive of good as when he discovered the ring lodged in a jackdaw's nest. Pickens, who was with him at the time, was quite beside himself with joy and excitement, and even the imperturbable Crikey was stirred quite out of his usual calm.

Adams was roundly rated for starting the gossip about René, and compelled by the gang to sign a confession that its author, Crickhowell, declared to be a masterpiece, and so poor Adams must have thought it before he had made and distributed copies to each member of the gang, which was a part of his punishment.

Of the festivities of the night when the recruited society took René, its wronged and innocent member, to its bosom, there is no space to speak. Besides, Crikey has got everything down in the minute book, much of which can only be shown to the initiated. Suffice it to say that it was an occasion to be remembered to the remotest ages, and that the nutshells which strewed the dormitory floor were a subject of strict but totally useless inquiry next day.

Everybody knows that our little parlor boarder, Bobby Reynolds, is nephew to Lord Westshire and that if the poor youngster only lives to be a man he may live to be a lord as well. Of course, it is a great thing for the School and for Doctor Hardress, though to do the dear old Head justice, I don't suppose he thought about it when he accepted Bobby. But when Mrs. Bastable, the new tenant of the Moat House, heard of the circumstance, she remembered at once that she was an old schoolfellow of Mrs. Reynolds and decided that Crosscombe would be just the place for her Algernon, a highly interesting child of eight. Mr. Bastable boiled soap for years, amid great applause, but he has retired now and has quite forgotten how the thing is made. As for Mrs. Bastable, as Crikey once remarked, she has washed her hands of it long ago, and is extremely particular about the people she meets.

The Doctor and Beamish were so pleased with my mathematics and general charm of manner and conversation that I got a card for the At Home at which this lady was to be introduced to the school and make the Tadpole's acquaintance. Mrs. Beamish generally acts as hostess on these occasions, Doctor Hardress being a widower, with only an orphan grand-daughter of tender years. It was quite a score, for of the other fellows only Carclough, Crickhowell, and Briant were asked, and when I arrived both the house and the grounds were rather empty, as it was a singularly hot day for late September, and most of the visitors preferred to come late.

As soon as I had spoken to Mr. Beamish and paid a first visit to the claret-cup I strolled over to where a little group had formed on the terrace where Mrs. Mole, the matron, and Mr. Magruder seemed to be closely catechising the Tadpole, who stood between them, in a singularly dirty state and with some small object clasped in his right hand.

"Just look at him, Mr. Magruder, sir, please!" said the matron appealing to the master against the unmoved Bobby. "You don't know the trouble I had with him only half an hour ago, to make him presentable, and now he's not fit to be seen!"

"Capital advertisement for Mr. Bastable's soap!" said Magruder with a chuckle as I came up. "How do, Mordaunt? Nice day! Now then, you little rascal," he went on to Bobby, "what do you mean by getting into this condition, eh!"

"It is those nasty white mice of his, sir!" said the matron, "that he's always playing with. And now, if you'll believe me, he's gone and upset the pagoda where they was kept, and every-one of the creatures is loose somewhere about the grounds. I'm sure I don't for the world know what to do, with the visitors coming, and all."

"Upon my word," Magruder remarked. "There seems to be a sort of epidemic of vermin in the school of late. I shall get the Doctor to make a strict rule against pets of any sort."

"You know well my objections to them, Master Reynolds," added the matron, "and you didn't ought to have done it!"

"It wasn't my fault, really it wasn't, Mrs. Mole," protested the Tadpole. "I promised Brutus to Arthur Sparks, and he was to give him a kind home, and cocoanut candy twice a week. And so I was going to get him out of the cage. But Sparks was so eager, he wouldn't wait, and jogged my elbow. And the whole thing went over in a moment. And they ran like racehorses, really they did, Mrs. Mole. And so they all got away, all but Cicero, that missed his way and went up the leg of my knickerbockers by mistake. And here he is!"

So saying little Reynolds opened one warm and slightly grimy hand, and cautiously exhibited his pet. The matron recoiled.

"Now, take and put the nasty thing back, there's a good boy!" she said. "For it gives me the horrors, it does."

"It's not very nice of you to say that," said Bobby. Cicero will be miserable for days and days. And the rest of them will be killed," he added plaintively, beginning to whimper a little. "I feel sure they will be killed!"

"I hope so," said Magruder viciously. "Run along and do as you are told directly!" The Tadpole disappeared. "Mrs. Mole, these things must be captured as soon as possible. You had better call the maids, and organize a systematic hunt. Eh! What pay? Pooh! Nonsense! Of course they must, whether they object or not. I wish I had my little terrier here. He would make short work of them."

Thus it came to pass that a stout and rather showily dressed lady, seated alone in a little flowering arbor, in the temporary absence of her escort, who had gone to fetch her sunshade, was startled by the sudden apparition of a small and exceedingly dirty urchin who appeared before her breathless, and fixed upon her a gaze that was somewhat embarrassing.

"I'm almost sure he ran in here!" began the Tadpole with a fine contempt of preface.

He had the advantage of the lady he addressed knowing her very well by sight, while she herself was totally ignorant of his identity.

"Run away, little boy!" said Mrs. Bastable at last with great dignity. "Hasn't anyone ever taught you that it is very rude to stare so?"

"Please, Mrs. Bastable," began the Tadpole, "I think you are sitting on Nehemiah!"

"Good heavens! the child is an idiot," exclaimed the surprised lady. "I didn't know that Doctor Hardress took imbecile pupils. I must speak to Ronald about it. My dear," she continued in a kinder tone to the child, who stood balancing himself on one leg before her, "I think you must have been out too long in this hot sun. Run away, there's a good boy, and tell them to give you a cooling drink'"

But the Tadpole was not to be got rid of so easily.

"I think you are a very cruel lady," he said with growing wrath. "I tell you he's exceedingly delicate. He has to have regular air and exercise. Lots! Please will you stand up and let me get at him! You had better take care! He bites jolly sharp when he's in a rage!" he added, appealing to the lady's sense of fear, in default of reaching her better nature.

"Won't somebody come and take this unfortunate child away!" cried Mrs. Bastable looking wildly round for succour. "This is terrible!"

"So it is! He'll be suffocated!" assented Bobby Reynolds. Then he uttered a joyous cry, "There's Mr. Magruder coming. Now you'll see! He says he's determined to put down cruelty to animals wherever he finds it. He caned Biggs for torturing a toad, he did. And Nehemiah is worth dozens of them."

The master approached. "I see you have made friends with our little parlor boarder, Mrs. Bastable," he said blandly. "I hope he has not been troublesome!"

By this time poor little Reynolds was sobbing convulsively. "Oh please! Mr. Magruder! Won't you make her get up? She's sitting on poor dear little Nehemiah!"

"That's the wild way he has been talking, Mr. Magruder," observed Mrs. Bastable with tranquil severity. "His Bible lesson seems to have been too much for the child's mind. It is over pressure, I suppose!"

"Oh! It's too late! He must be flat by this time!" cried the Tadpole, casting himself on the grass in utter abandonment of grief.

"Or else he is a little deficient!" went on Mrs. Bastable. "I don't think, I really don't think I should like Algernon to associate with children of imperfect intellect."

"I—I believe he is all right, though a little excitable!" said Mr. Magruder soothingly. He was anxious to get the lady out of the summer house without a shock to her sensitive nerves. "By the way, I think you have not yet been over conservatories. We are rather proud of them, though no doubt they will seem to you of modest dimensions indeed after those at Wyncote. May I have the pleasure?"

Mrs. Bastable graciously rose and accompanied the courtly Magruder, while a small and exceedingly dirty white mouse, which had been at once sheltered and imprisoned by the voluminous folds of the lady's robe, emerged to life and liberty once more, and made a desperate dash across the gravel. Mrs. Bastable half turned, as though something had caught her eye, but Magruder gave a prodigious hem and began to talk so fast that his companion had no leisure to notice Bobby's delighted pounce upon his recovered favorite, nor the wrathful mutterings with which he pursued her retreating form. Mr. Magruder carefully piloted his charge to the refreshments, saw her happily established in the center of the most select group of visitors and furnished with an ice, and then hastened away to assist his chief on the other side of the grounds. He found Doctor Hardress overwhelmed by the constantly arriving parties of parents and friends, and with only the incapable assistance of Mr. Beamish, the senior mathematical master who could do nothing but smile feebly at intervals and remark that it was very warm, a fact as incontrovertible as the elementary truths of his own favorite study.

Things promised to brighten up, however, when Monsieur Bontemps and Madame Sophie Flon were announced. Monsieur was always most punctilious in attending the school functions, and was generally the life and soul of these gatherings, making himself positively red hot in his endeavors to provide every lady at once with a seat and refreshments, and throwing himself into the games of tennis and croquet with an enthusiasm which was only equalled by his utter incompetency, or the radiant good humor with which he joined in the laughter at his mistakes. But today he seemed comparatively grave and preoccupied, and as soon as he had found his sister a seat in the shade and a master to entertain her, he came across to where I was standing and asked where he would find Briant.

"He is over by the shrubbery. Shall I fetch him for you, Monsieur?" I said wondering.

"No, I thank you, I go to seek him myself," answered Monsieur Felix with a mysterious smile. "Do you remember the day of our so delightful peek-neek? Myself, never shall I forget it that day. René too will always remember. But pardon! I go too fast. You shall know all in a little time!" He disappeared in the direction of the shrubbery and I proceeded to pay my respects to Madame Sophie.

It was while I was sitting chatting to her that I observed careful search being made for the parlor boarder. Presently he appeared, fresh from the matron's hands, in his new little Norfolk suit, his face shining like that of any Moses from the vigorous application of soap and water. He also wore a somewhat sulky expression.

"That is right!" said Doctor Hardress. "Mrs. Bastable was most anxious to make Bobby's acquaintance. Oh! Here is Mrs. Bastable," he continued, as that lady approached all smiles and graciousness. "Mrs. Bastable, this is our youngest pupil, Master Bobby Reynolds."

"Oh! the little darling!" cried Mrs. Bastable in a fluttering ecstacy bending and extending her hands to the Tadpole. "My dear, do you know I have a little boy just about as old as you, who is coming to your school, and I hope that you and he will be great friends!"

"The other hand, Bobby!" admonished the Doctor as the child grudgingly proffered his left, the right being tightly rammed into the pocket of his knickerbockers.

"Oh we have already made acquaintance, haven't we, darling?" cried the lady enthusiastically. "He found me out all by his own little self. Something seemed to tell me that he was my dear Eleanor's child. How like, how very like he is to his uncle, Lord Westshire!" she went on in an admiring tone aside to the Doctor. "His speaking image!"

"I ain't a bit like!" burst out the indignant image. For Bobby had a vivid recollection of the gouty, red-faced old gentleman in whose presence he was always required to keep unnaturally quiet. "Oh! what stories you do tell!"

"Hush! Hush!" from the Doctor.

"She does though!" asserted little Reynolds. "And she nearly killed my poor, dear little Nehemiah. He's been trembling like a blanc-mange ever since!" he added appealing to the Doctor for sympathy. "I thought he was going to have a fit. She's a nasty, cruel lady, and I don't like her."

To what further lengths the parlor boarder would have gone is uncertain. Fortunately at this moment a diversion occurred. Monsieur Bontemps approached, accompanied by René, and with his good-humored face wearing a look of unwonted solemnity. It was evident that Monsieur was about to make an important announcement, and meant to take full advantage of the dramatic possibilities of the situation.

"Doctor!" he said bowing and indicating Briant with one plump hand. "Permit that I present to you my grand-nephew, Monsieur René Marie Briant of the ancient family of Duchêne," and then as if he could contain himself no longer, he burst out into a flood of voluble explanation, accompanied by a lightning play of gesture which supplied the deficiency of his English. "Figure to yourself, my dear Doctor, that I know nothing certain till yesterday. Often have I thought to perceive a resemblance in René here to my dear Adolphe. But I answer always to myself, 'Bah! You are an old fool, Bontemps! You see the same face everywhere. The child is Norman. He knows nothing of you or of your people. Go!' So it remains until one time that I interrogate René here, who tells me that his family also were originally of my department, until the war and the dispossession. He speaks also of a ring given to him by his mother, fashioned from a locket which she wore as a child. Long I desire to see that ring, but in vain. It is that the unfortunate has sold it! What do I say? He did right; it was for a good object. But yesterday I pass by chance the shop where it is exposed for sale. At once I enter and demand permission to inspect it, and lo! it is indeed the jewel which my poor Thérèse wore as a child, and which was round her neck when her mother fled with her from their burning house. By what happy chance was it preserved when her mother perished at the hands of the communards? Who can say? They were not thieves, those poor deluded ones! So I arrive here today determined to make clear the matter; and now, Monsieur waved his hand towards René, "behold him!"

The group round us had gradually enlarged as Monsieur Felix's disjointed narrative proceeded, until now it included all the masters and most of the visitors. What between the heat of the weather and the excitement of his story, Monsieur was by this time in such an explosive condition that I verily believe if anyone had suddenly struck a match he would have gone pop. No one did so, however, and just then some thoughtful and obliging person (initials H. M.) placed a chair behind him into which he dropped thankfully and mopped his steaming brow. Then the Head's bland tones were heard:

I am sure that all present will sympathize with you in your joy, Monsieur Bontemps!" he said. "And now, pray let me offer you a cup of tea. I am sure that you must be in need of it."

"Not a drop, not one little drop, Doctor!" protested Monsieur with vivacity, "until you have promised to grant the first request that I shall make to you!"

"Well! I think I may do that without rashness," said Doctor Hardress smiling. "I fancy I can guess what the request will be!"

"My faith! I think so, yes!" cried Monsieur. "Eh bien! There will be a half holiday on Monday, when I pray that the members of my class will make a little visit to me at Les Ormes, to me and to my dear nephew, here present. What do I say? To my son, as he will be henceforward. René, mon fils bring me a cup of tea! Today I can drink it, medicinal as it is, without grimacing. And go yonder my child and salute your good aunt! How stupid I am——— Your——— Mother!"

Well; and all that was a year ago; and now my own time has almost come to leave good old Crosscombe, and the gang, and the Red Dormitory, and the larks and the rows; and all the earthquakes, as Monsieur would say. I am not one of your sentimental beggars I hope, and of course I am jolly glad to

Tools of Fortune

Every man is the architect of his own fortune, the only tools required to make the plans being a pencil and a knife. A pencil to indicate the CHOICE OF CAREER on the famous I. C. S. coupon; a knife with which the coupon may be cut out for mailing.

Go where you will, you find in high positions men who have risen from the ranks solely by the help of the I. C. S.; men who were earning but a dollar a day; men with wives and children depending upon them; men with no education, but the ability to read and write.

Go where you will, you find these men to-day as Foremen, Superintendents, Managers, Engineers, Contractors, Owners. Their success reads like romance; and yet it is all readily understood once you know how EASY the I. C. S. makes the way.

Work at what you may, live where you will, choose what occupation you like, the I. C. S. can qualify you for it, by mail, in your spare time. It costs nothing to fill in, cut out and mail the coupon, asking how You can qualify for the position before which you mark X.

Commencement Day
Exercises, Songs, Drills, Plays, Novel Entertainments, etc., can be found in our CATALOG specially compiled for this purpose. It will be sent on request.

The American Boy contains more stamp, coin, and curio advertisements than all other magazines of similar character combined. This fact shows that the advertisers obtain results.

Stamps, Coins, and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

Stamp Inquiries

G. F. H.: Triangles I, II and III, of the 2c U. S. 1894 differ as follows: In type I the lines forming the ground work are of the same thickness between the two parallel lines forming the triangle as without. In type II they are thinner, and in type III are entirely cut away between the two parallel lines.—Lee D.: The Columbian stamps from 1 to 10 cents are worth unused about 50 cents and used 15 cents.—Collector: The 6 kr. broken circle Bavaria differs from the common type in that the line forming the circle around the 6 is intersected by the lines forming the square outside the circle; the 3 kr. of the same issue is of the broken circle type.—W. S. P.: "Magyar Kir Posta" means "Hungarian Postage." The stamp you describe is very common.—T. B. H.: Letters punched in English stamps are initials of business houses who purchase large quantities, and do this to prevent their being stolen and then sold.—H. J.: "Belgique" stands for Belgium and "Nederland" for Netherlands. Both stamps are very common.—Edw. L. C.: The 10c French Congo surcharged on 25c French colonies catalogues $2.00, either used or unused.—Wm. J. C.: "Resellada" is a surcharge found on Venezuela stamps issued in 1900.—J. K.: Imperforate stamps are generally worth more in pairs and blocks than single copies. This is also true of the rarer perforated stamps. Cape of Good Hope triangular stamps catalogue respectively 1 p., $1.10; 4 p., 40c; 6 p., $2.25; 1 sh., $4.50; same style "woodblock," 1 p., $28, and 4 p., $15—Cincinnati City Delivery 10 cents and Allen's City Dispatch 2 cents.—W. T. G.: Cannot locate your first and third stamp from description; better send a sketch of them.—The Bavarian revenue has little value in this country.—I. B. C. and F. W. D.: Envelopes with stamps printed in wrong location or embossed without color are freaks, and while interesting have no catalogue value.—John O'C.: "Timbre Movil" is found on Spanish revenue stamps—5 and 10c D. W. I., list 10 and 5 cents respectively; U. S. revenues imperf.—5c In Ex. lists 15 cents, 25c certificate 35c, and 50c conveyance $1.50. We do not consider the last three stamps worth nearly as much as they are listed.—F. K. C.: For valuation of triangular Cape of Good Hope stamps see answer to J. K. above.—Wm. G. B.: The 1c Pan-American, with lake steamer in center is worth used 25c per 100.—It is the stamp with steamer printed upside down that is worth $20 to $25.—R. M. R.: The 15c 1869 U. S. lists $1.50, a variety having no frame around the picture lists $3.50.—John D.: Your stamp is from Bolivia, not Brazil.—There are five issues containing a 10c stamp such as you describe ranging in value from 6 to 60 cents.—E. D. E.: There are several shades of the old U. S. postage due stamps ranging from claret to yellow brown. Your 10c stamp is probably the brown shade which lists 50c unused.—A. H., Lynchburg: Your stamp is an Austrian newspaper stamp issued in 1900 and catalogues 1 cent.—Joe S.: Your Philippine stamps are all revenues, except last three, which are common postage stamps.—At the close of the Spanish war millions of the old revenue stamps issued under Spanish Dominion, were found throughout the islands and have been sent to the United States in immense quantities. They are worth very little.—E. P.: "Sverige" stands for Sweden and "Norge" for Norway. The 5 ore stamps of both countries are very common.—G. A. M.: The following Chinese Treaty Ports have issued stamps, viz.: Amoy, Chefoo, Chinkiang, Chungking, Foochow, Hankow, Ichang, Kewkiang, Nanking, Shanghai, Wei Hai Wei and Wuhu. None of these stamps are now available for postage.—V. A. C.: Your stamp is a Swiss unpaid letter stamp catalogued 2 cents. The postmark is Lucerne.—T. B., No. 272: No. 1 is a Belgium unpaid letter stamp current, listed 2c; No. 2, North German Postal District issued in 1868, listed 1c; No. 3, a Spanish revenue stamp issued in 1898, for a tax upon letters to help provide revenue to carry on the war. It is sometimes called a "Mourning stamp."—E. Q.: The stamps you list are all common stamps, mostly current and are such as are found in most 150 variety packets which sell for 10 cents.—E. R. S.: The four stamps you illustrate are those issued by the Revolutionary organization under Aguinaldo. A few were actually used within the rebel lines, but most of them fell into the hands of the American army.—Stamp catalogues do not quote them, but a set of four is probably worth 25 to 50 cents.—R. S. S.: You illustrate two Canadian bill stamps worth about 2c each.—O. B. H.: The 3c Canada with head of Queen Victoria as she appeared in 1837 and in 1897 was issued in 1897 in commemoration of the 60th year of the sixtieth year of the queen's reign. The set of which the 3c is the most common contains 16 values, ranging from ½c to $5.00.—Reader: As a rule unused stamps are more valuable than used stamps, but not always—Prince Edward Islands, some issues of Newfoundland, and of the old German States are much more valuable in a used condition. This is due to large quantities of remainders being demonetized, i. e., made unavailable for postage, and then sold, often for much below face value.—F. M. N.: Your illustration is of the 2c stamp of 1875, which is still common, and can be bought for 50 cents per 100.—The same stamp, but printed in brown, was issued in 1870.—R. A. P.: Your stamp is a common English revenue, worth about 2 cents.—C. J. M.: You describe the 10c 1847 U. S., which is of the first government issue, the other value being 5c. The 10c catalogues $5, though copies can frequently be bought for half the amount. Do not cut the stamps apart as they are more desirable in the pair.

The Numismatic Sphinx

Arthur E. Bender: (1) Common 3 pfennige of Prussia. (4) China; Sung dynasty, Emperor Jin Tsung, coin period 1023-32; "Tien yuen tung pao." (3) Hannover, 2 pfennige, 1850, ten cents. (2) China, Tsung dynasty, 1661-1722, common. (5, 6, 7, 8) Brazil, Sweden, Hesse, and Austria, respectively, all quite common. (9) Russia, Nicholas I, 1 kopeck of 1852, ten cents. (10) Morocco, 1 faloos. (11) Prince Edward Island, 1857, half penny, ten cents. Arthur Bevan: Your coins will not bring a premium. Reno Villadsen: Your Mexican dollar and 5 centavos nickel will hardly bring over face value. Sweden, 1707, 1 ore, forty cents; 1724, twenty cents; 1802 and 1805, ¼ and ½ skillings, twenty cents each. The 1 ore of 1675 is a base silver coin of Sweden also and sells for about a quarter. 1852 silver trime, fifteen cents. Ernest L. Johnson: 1818 half dollar, eight-five cents. Your coin with LXXX on it is an 80 reis of Brazil. As it is in rather poor condition, judging from the rubbing it will hardly bring a premium. 1817 cent, ten cents. 1804 half cent, twenty-five cents. Connecticut cent of 1787 (not 1757) seems to be rather poor. Your 1837 with a turtle and jackass running is a "hard times" token worth about ten cents. E. P. Dutton: The old Spanish and Mexican silver are very common. Your piece will not bring a premium. Verne Gebhart: The old pennies and half-pennies of the Canadian provinces bring from five to ten cents each, depending upon condition. The same may be said of the ordinary run of our old copper cents. Your 2 kopeck of 1813 is from Russia and is very common. Your "Millions for Defence" 1841 is a "hard times" token worth about ten cents in usual condition. Yartin Hairs: Your rubbing is from an old Roman second bronze coin, but it is so indistinct that I cannot just make out what emperor it belongs to. R. H. Chamberlain: The English half penny of 1861 is worth only face. H. B. Brunot: (1) New Jersey cent. (2) Same. (3) Connecticut cent. These three coins are almost valueless from the collector's point of view on account of their poor condition, not even the dates being decipherable. (4) Franklin cent, 1787. "Mind your Business," fifty cents. (5) Washington cent, 1783, military bust, fifty cents. (6) Chain cent of 1793. This coin seems also to be in poor condition. William J. Stich: The 1855 quarter with arrows is worth twenty-five cents. W. L., Cincinnati: 1820 cent, ten cents, and the half cent of 1828, fifteen cents. Elmer Walters: A half dime of 1840 in fair condition, will hardly bring a premium. Stephen Springer: Unless the fractional currency is in perfect condition, clean and uncirculated, it will not bring a premium. In this condition it will always bring double face value at least. C. L. Maskey: 1812 half dollar, eighty-five cents. The Newfoundland silver pieces are common. Edward Lehman: The 1795 cent in good condition sells for about $1.25 at the dealers. 1835 half cent sells for fifteen cents when in good condition. Walter Barrett: The 1854 quarter is only worth face. Stanley T. Ford: The coins you mention are all quite common. Fred M. Seeley: The silver dollar of 1904 is only worth face value. Some pieces of this date in proof condition have sold for more which has given rise to these newspaper reports. The same may be said of any of our late issues. Proof pieces always commanding a premium. Paul R. Mellinger: Your "1493 X. R. L." is not a coin but the result of the inventive genius of some freak. Coins were not struck bearing dates at this period. Your "un sou" is common. Kenneth Gracey: (1) Persia, 2 shahia, twenty-five cents. (2) Morocco, 1288 A. H. 3 faloos, fifteen cents. E. B. Seymour: 1809 half cent, in good condition, twenty-five cents. Others face value only. Mrs. C. S. Johnson: The half dollar of 1821 sells for seventy-five cents at the dealers. A. F. Ruehmer: The 5-cent nickel of 1866 is worth only face. Garm Norbury: 1820 cent, ten cents. Ralph Rugan: Your coin is a common German piece. John Davis: A good 1795 half dollar is worth $1.75. Ralph O. Canaday: Your strange silver coin is what is called "cob" money. They were used in the Spanish colonies of America. Your other coin is a 1 ore of Sweden and is common. Floyd G. Beam: Your coins are only worth face value. W. J. G.: The 1853 dime is only worth face. John Lang: The Spanish real of 1614 sells for about seventy-five cents. Wm. J. Stich: The quarter of 1856 is only worth face. E. W., San Francisco: The half eagle of 1856 will not bring a premium. M. B. M., Warren, Ill.: Three cent pieces were issued in 1867 in both silver and nickel. The former is the rarer of the two. Alexander Baker: Your rubbing is from an English half penny of 1738. It sells for ten cents at the dealers. As this country did not issue cents in 1738 (and has never issued any pennies) we are at a loss to place your coin. John T. Allen, Jr.: Confederate bills as a general thing are quite common, selling for a few cents each as curios. At the same time among the earlier issues there are some rare pieces. Gowan Jones: Your gold dollar of 1853 is worth $1.75. Ted Pope: The 1853 half dollar with rays and arrow points is only worth fifty cents. There is a rare variety lacking the rays and arrow heads which is probably the one you noticed advertised at $25.00. Ira Cole: The $3.00 gold piece sells for about $5.00. Carl J. Meacham: It is difficult to place a value on your old bank bill. Most of them are common while some will command a premium for curiosities. R. M. Coleman: Your drawing is from a Spanish 4 reals, 1810 struck at the mint in Mexico. It has no premium. Hal. Hare: Your coins are all very common. C. B. Glick: Spain 4 reals, 1712, common. Leonard Wanecek: 1849 quarter eagle, common. Gerald R. Butz: It certainly will impair the value of any bill to paste it into a book or frame. It should never be done. The coins you mention are all tolerably common and you have them properly identified. Your piece with "funny" letters we must have a rubbing from to place for you. The three cent nickel of 1881 does not command a premium.

THE ELDER MONTHLY
A NEW COLLECTOR'S PUBLICATION
An up-to-date, bright, finely printed magazine devoted to collecting in all its branches. 50c per year. Sample copy for 5c stamps. We will refund your money if you are not pleased. If a collector, send for my retail lists of Coins, Gems, Paper Money, etc. My 1906 Rare Coin book is better than ever, 150 pages, 1,000 illustr U. S. and Foreign, only 25c. 25 diff. U. S. or Foreign coins or Bills for 50c. U. S. Half Cents, 1804, 1809, etc., each 15c. 8c. Nickel or 2c pieces, 6c each. Eagle Cents, 5c.
THOMAS L. ELDER, 32 E. 23d St., N. Y. City.

THE NUMISMATIST
The only Illustrated Monthly Coin Collectors Magazine published in America.
One Dollar per annum and always worth twice the price. Volume XIX begins with January, 1906. Special inducements now to new subscribers. If you are interested in Coin Collecting send Ten Cents now for two sample copies and full particulars. Address
The Numismatist, - Monroe, Mich.

SOUVENIR POST CARDS 10 beautiful colored Boston views and our Club plan, 10c. You will receive cards from all over the world in exchange. Postal Card collections now all the rage. Commence one today. **IDEAL CO., Dept. D, Dorchester, Mass.**

Post Card Collectors! A card is not a real souvenir without sender's autograph and cancelled mailing stamp. Enroll in live and active exchange lists of **International Associated Post Card Collectors** and receive these completed souvenirs from members. Adult and Junior lists. Other new features. Have no cards to sell. Send name on postal to-day. I'll write you all about best system.

THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

PORTRAIT
First prize, by Paul Fournier, East Aurora, N. Y.

Don't Roll Prints

Competitors in our photographic contests are earnestly requested not to roll their prints in sending them through the mails. In unrolling them, they are liable to crack.

Our New Competition

Our new contest of bromide enlargements from small negatives, to which a reference was made in the last issue, will end September 1st. That is to say, no entries will be accepted after that date.

Camera Artists

The list of those entitled to Honorable Mention this month is not very extensive, although the number of contestants was as large as usual. This makes the distinction all the more valuable and should be an additional source of gratification to those who have obtained it. They include: Clyde Deihaugh, Milton Reimers, Leon D. Rule, Edgar Wamhoid, Kurt Stolberg, Harry A. Greene, Frank Field, Oscar P. Friley, Morton A. Wilder and G. A. Haeusler.

Queries and Answers

Geo. Howard, Jr.—So far as we know, there is no way of removing the spots to which you refer. Donald Ewing—There is no limit to the number of prints that may be entered in our contests. Gerald L. Lillie—The Eastman Kodak Co., of Rochester, N. Y., makes all kinds of films and will probably be able to supply you with the unusual size you require. Chester Simpson—We would advise you to select one kind of developing solution and stick to it; you will then know exactly what it will do. As for the choice of paper, that is largely a matter of individual preference. Some only use the bromide papers, others do all their "printing" with the so-called P. O. P. (which means printing out paper), and a few use both. Try a few of both kinds and select the best. Wm. Carlin—The print is what we want, preferably unmounted. P. W. Nelles—Prints made with any kind of a camera are admitted to our regular contests. Henry Ingraham—Photograph, to which your letter referred, was not enclosed.

Removal of Yellow Fog

Negatives that have become yellow by too long immersion in the developer may be cleared by being placed in a bath of sodium sulphite, to which sulphuric acid has been added, until the odor of sulphur is apparent.—Photo. Chronik.

Toning Bath

When negatives take a long time to print on account of being too yellow, as is sometimes the case when they have been developed with pyro, they can be toned to a suitable color in the following bath: Sulphocyanide of ammonium, 8 grs.; chloride of gold, 1 gr.; water, 2 oz. Mix.—Photo. Times.

Always Welcome

The editor of this department was pleasantly surprised not long ago by a visit from Harry M. Biggin, of Kinsman, Ohio, who has repeatedly participated in our competitions and is a capable amateur photographer. The editor will be glad to meet any of his boy friends that may chance to visit Detroit. They are always welcome.

Prevents Staining

H. Edward Fry, one of our Philadelphia readers, sends us the following suggestion to prevent the staining of finger-nails by the chemicals employed in photography, particularly developers: "Buy a small bottle of flexile collodion of your druggist. Put a little of this into a wide-mouthed bottle and dip the forefinger and thumb of each hand into it before developing. When you are through, the collodion can easily be removed with equal parts of methylated spirits and ether.

The Prize Winners

The portrait by Paul Fournier, of East Aurora, N. Y., to which the first prize is awarded this month, is a good example of what is termed the Rembrandt style of portraiture. This is characterized particularly by a strong contrast in light and shade, for which the paintings of the great Dutch artist are noted. Matthews H. Tardy, of Birmingham, Ala., the winner of the second prize, is evidently an artist in outdoor portraiture, as his "Two of a Kind" demonstrates.

Blisters

Blisters seem to have disappeared from printing papers, but should they ever make their unwelcome appearance, a short immersion in the following will effectually prevent them:

Water	100 parts.
Formalin	10 parts.
Sodium sulphite	2 parts.

The prints should be soaked in this for five minutes, washed for a few minutes in several changes of water, and toned and fixed in the ordinary way.

Current Comments

Oliver B. Cardwell—You chose a difficult subject for your first attempt. To photograph a snow-covered pine against a cloudy sky with a very small camera is a task that would even make a professional photographer "sit up." Try to photograph the tree now, when it is sharply outlined against the background, and you will be more successful. Hurley Begun—Your "Man Behind the Gun" is insufficiently toned and trimmed. W. H. Thames—The negative of your "Fight" was probably underdeveloped; the exposure seems to have been all right

Blue Print Paper

In a letter of recent date, Harry H. Phillips, of Pittsburg, writes: "I have gotten so much help from THE AMERICAN BOY, in the line of photography, that I would like to help all I can. I am sending you a formula for making blue print paper, as follows: Coat a good grade of paper, common linen writing paper will do, with a solution composed of 56 grains of Iron and Ammonium Citrate, 37 grains of Ferricyanide of Potash, and one ounce of water and allow it to dry in the dark room. The paper should, of course, be kept from the light, until it is used." The letter was accompanied by a blue-print which showed that the formula is a good one.

"TWO OF A KIND"
Second prize photo, by Matthews H. Tardy, Birmingham, Ala.

The Ideal Camera

The ideal camera for naturalist purposes is one of the reflex type, in which the photographer can see his object, the size of it will be reproduced on his plate, the right way up, and can see it until the moment of exposure. Such a camera with a long bellows and a lens which is intended for a plate at least one size larger than the plate he is using in his camera, and also provided with a curtain shutter, which works just in front of the plate, with speeds varying from a time exposure up to one two-thousandth part of a second, is the kind of instrument used by men like Carlin, Dugmore and most of the naturalist photographers whose work appears in print.—Outdoors.

Boys, Take Care of Your Teeth

Prize Award.

A serial under the title of "Boys, Take Care of Your Teeth," written by J. Austin Bucknall, D. D. S., which began in the December, 1905, number and ended in the April, 1906, number, created considerable interest among the boys and we have no doubt did good. In our April number we offered four prizes to boys who would read the entire series and write the best replies to four questions asked. It was stated that in case there were several answers equally correct, the prizes would be given to the boys sending in the neatest answers. There were over eighty boys who sent in correct answers to the four questions, making it very difficult to select the best. The first prize has been awarded by Dr. Bucknall to Benno F. Bernstein, the second to Carl F. Tewksbury, the third to Vernon Lovett, and the fourth to William Stone. The correct answers to the questions are. First, What will best prevent decay of the teeth? Brushing the teeth regularly, front and back. Second, Why is it wrong to extract teeth? Because the teeth brace one another and the loss of one weakens the whole formation. Third, What causes connected with the teeth produce a swollen face? When the teeth are not brushed, the food lodges in between them, causing first the decay of the enamel, then the dentine, and then the nerve. Decay of the nerve causes inflammation of the entire tooth and cushion. Poisonous matter forms which begins to burrow through the bony socket in an effort to get out. This causes the face to swell and gives pain. Fourth, What word will the letters T E L N G E C make that represents the cause of gum diseases? Neglect.

As a consolation prize we are sending to each of the seventy-six boys whose answers were correct, a little pamphlet, with the compliments of Dr. Bucknall, that will be of interest to them.

"DEEPLY INTERESTED"
Photo by Clay D. Woodcock, Maria, Pa.

Our Book Table

Photography For Profit. New York: Tennant & Ward. Paper, 25 cents. This latest number of the Photo-Miniature series shows how the camera can be made to pay for itself. The booklet contains a number of articles by various contributors and several illustrations, of which those by E. S. Curtis are particularly notable.

Photographic Amusements, by Walter E. Woodbury. New York: Photographic Times Publishing Association. Paper, $1. A new edition of a book already well-known to amateur photographers. It is intended particularly for those who have already mastered the technical difficulties of photographic practice, and describes a number of novel and curious effects that can be obtained by the aid of the camera, together with some instructive and interesting photographic experiments.

The Book of Photography, by Paul N. Hasluck, New York: Cassell & Co., Ltd. Cloth, $3. The most comprehensive treatise on photography I have ever perused. In fact, with its 744 pages and copious illustrations, it is a veritable encyclopedia on the subject and, therefore, of value to the advanced student as well as the beginner. It is clear and exact in its explanations and entirely up to date. In some sections of the work, the author has availed himself of the superior knowledge of well-known experts, whose assistance is gracefully acknowledged in the preface.

KODAK and BROWNIE CAMERAS have made photography so simple that anybody can take good pictures.

Every step is easy; no dark-room is needed and there is as great pleasure in taking and making pictures as in presenting them to friends or preserving them in ones collection.

The New Kodak Catalogue, free at the dealers or by mail, tells all about the goods and explains how the dark-room has been done away with. Write for catalogue and if there is no dealer in your town let us know and we will give you the name and address of one in your locality. If you use a film camera there is no trouble about getting all of your supplies by mail at slight cost.

Photography is inexpensive now-a-days; it is interesting and educational *if you start right*. We will be glad to furnish you with printed matter, or take up the question of your wants by correspondence.

Brownies, $1 to $9. Kodaks, $5 and upward.

EASTMAN KODAK CO.
358 State St., Rochester, N.Y.

Pro-phy-lac-tic TOOTH BRUSH

Indispensable for travellers. As necessary a part of the travelling equipment as a comb and brush. More important than these in its relation to health—for teeth have more to do with health than most people realize. To have good teeth you must clean them regularly, frequently, thoroughly,—cleaning behind and between the teeth,—and this is why we give the Prophylactic its peculiar shape.

Adults' 35c. Youths' 25c. Children's 25c.

A Permanent Department — Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns. — *Edited by Robt. G. Griswold*

Chemistry For Boys

Lesson I

WE WILL begin our experimental lessons in chemistry by studying something about one of the most widely diffused elements in nature, oxygen. First let us understand the meaning of the term "element," which is one we will frequently meet during our course.

An element is a substance that has not been divided into two or more simpler substances. Thus, if we should hold a platinum wire in a flame, we would notice that while it would get red hot, it would not melt nor otherwise alter its appearance. Even if we should heat it directly in the flame of a blowpipe, the intense heat would have no effect upon it. Neither could we dissolve it by treating it with any single acid. We would find that we could not succeed in separating the platinum into two or more different substances.

This fact is of importance, as platinum cannot be separated into any other substances by any process known to man. And there are about sixty-eight other substances besides platinum that have not been separated into any simpler forms. These substances are called elements, and gold, silver, lead, tin, iron, oxygen, nitrogen and carbon are other elements belonging in this list of sixty-eight. But do not think that all these substances will act the same as the platinum for they will not. The gold would melt, the silver would dissolve, and, in fact, they would all undergo very marked changes under different treatments.

Now we have another class known as **compounds** which are formed by the combination of two or more elements, such as iron-oxide, a compound of iron and oxygen, both elements. Sugar is another compound, composed of carbon, hydrogen and oxygen, carbon being the

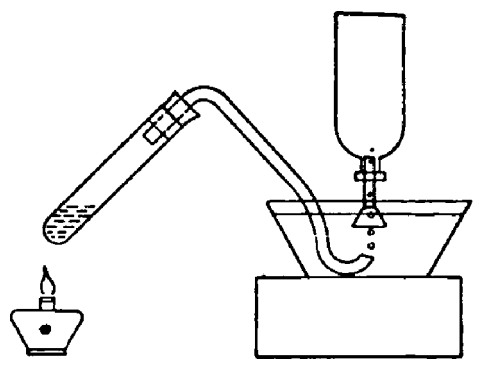

Fig. 1

black substance of which charcoal, coal and lampblack are composed, while the hydrogen and oxygen are both gases.

We have just learned what the two great subdivisions of matter are, and what they are called. All matter must have a foundation which is the element, and no matter what it is, it is composed of one of the sixty odd elements, either of one element alone as iron, or of two, three or four of them combined, as in the case of sugar.

But now let us study for a while the most widely distributed element in nature, oxygen. Oxygen is a gas at ordinary temperatures, and is found almost everywhere, even in the stars. It constitutes between 44 and 28 per cent of the weight of the earth's crust, 88.89 per cent of the water (oceans, rivers and lakes), and about 23 per cent of the air we breathe. Oxygen combines with every known element except flourine. It is a life-giving principle of the air; every time we drink a glass of water we take almost a glassful of oxygen in combination with hydrogen. Were it not for the oxygen in the air, not only could we not live, but our fires would not burn.

Air is composed of a mixture of oxygen and nitrogen; the nitrogen dilutes the mixture to such an extent that the oxygen does not cause too rapid combustion in fires. Were it not for the presence of nitrogen in the atmosphere, a fire once started would undoubtedly consume everything on the surface of the earth, for the simple reason that so great is the affinity displayed by oxygen for almost every known substance, that a very rapid combustion takes place, especially in the presence of heat. What we know as fire or flame is in reality a violent chemical action taking place between some substances, such as wood or paper with the oxygen of the air, and without this oxygen it would be impossible for a flame, in the ordinary sense, to exist.

Now we will try a few experiments with this element oxygen. First take a glass tube about a quarter of an inch in diameter and heat over an alcohol lamp or gas jet, until it is very soft or red hot. Then gently pull the ends of the tube apart until the softened section collapses, when the two pieces may be broken apart entirely. Hold the now fluid ends in the flame until they are melted, making small, closed end, glass tubes. These tubes will be spoken of hereafter as ignition tubes.

From your druggist procure a few cents' worth of mercuric oxide. Place a very small quantity, about as much as can be held on the end of a pen-knife blade, in the bottom of one of these ignition tubes, and hold over the flame of an alcohol lamp. You will observe that the red color begins to change to a brown, and immediately above the flame, on the inside of the glass, you will notice little bright globules of mercury. This mercury is condensed from the vapors, being thrown off by the mercuric oxide. This mercuric oxide is a compound of mercury and oxygen, but the affinity between the two is not so great but that a slight degree of heat will cause them to separate.

Now while this heating is in progress, and you are holding the little glass tube in a pair of forceps or a wooden pinch clothes pin with the left hand, strike a match with the right and after it has burned to a coal, blow out the flame and before the red ember has a chance to die out, insert this glowing piece of charcoal into the glass tube. You will note that it takes fire at once and burns with great brilliancy.

This is caused by the almost pure oxygen in the tube, combined with the carbon of the coal, and no matter how many times the process is repeated, as long as there is any oxygen left there will always be this flash of brightness.

We will now need more of this oxygen gas to experiment with than can be easily obtained from the small process just described. Take a stout test-tube six or eight inches in length and about one inch in diameter, which may be secured from almost any druggist, and fit the open end with a cork, through which a glass tube passes, bent into the shape shown in Figure 1. Then lead a small piece of rubber tubing, which has been stretched over the open end of this delivery tube, into a bowl of water as shown, placing over the rubber tube an inverted bottle, with a small funnel in its neck, the bottle having been previcusly filled with water.

Now place in a test tube a mixture of potassium chlorate and black oxide of manganese (both of which may be obtained from your druggist), mixing them in the proportion of three parts potassium chlorate to one part of the black oxide of manganese. Replace the cork tightly and hold the mixture in the test tube over the flame of a burner or alcohol lamp. It is better to have a small stand for supporting these pieces of apparatus and same can be easily made by using the common wooden-pinch clothespins. These clothes-pins may be fastened to the top of small sticks, which are driven into holes bored in the center of square blocks of wood, and they will then serve as cheap, but good, supports for the apparatus.

While heating this mixture in the test-tube, move the flame to and fro around the end, so that the glass will not become too highly heated in one spot, which might cause a breakage. These glass test-tubes, while very thin, will stand a surprising amount of heat, but they must not be allowed to come in contact with any cold body while in this heated state. As soon as this mixture begins to be heated an evolution of gas takes place, and you will notice the bubbles of oxygen, which is the gas being given off, rise through the water into the inverted bottle overhead. As the gas enters the bottle the water is displaced and eventually the bottle will be filled with almost pure oxygen gas. If the quantity of gas evolved is greater than sufficient to fill the bottle, another bottle may be filled with water and inverted, and the balance of the gas collected. Place a tightly-fitted cork in the neck of the bottle that you have already filled to preserve this gas for following experiments.

When the evolution of gas stops, remove the rubber tubing from the water first, and then remove the flame from under the test-tube. If this is not done, as soon as the test-tube begins to cool it will draw the water back from the rubber tube on to the heated glass, causing it to crack.

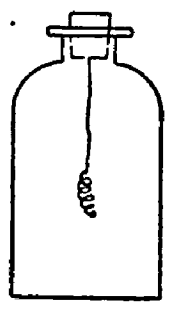

Fig. 2

There is only one caution to be given to the amateur in this experiment. You will notice at one point that the gas begins to come off with great rapidity, and at this point you must remove the flame from beneath the mixture to prevent its blowing the cork from the test-tube. As the bubbles begin to decrease, gradually apply the heat again and in this way no damage to your test-tube will occur.

You may now have one or two bottles filled with almost pure oxygen gas, with which to perform the following very interesting experiments.

Take a piece of fine steel wire or a piece of watch-spring. To one end of this wire attach a small drop of sulphur, by warming the end of the steel so that it will cement itself thereto. Then hang the spring from a wire driven into the cork, so that the whole may be placed into the bottle containing the gas, as shown in Figure 2. Now ignite the small bit of sulphur, and while it is still burning, quickly remove the cork from the bottle and introduce the burning sulphur and watch spring, suspended from wire, into the oxygen gas, closing the mouth of the bottle with a piece of paper or just allowing the cork to rest lightly in the neck. You will now notice that the watch spring begins to burn with great brilliancy, throwing off sparks and molten globules of metal, which drop to the bottom of the bottle as the combustion takes place. This is a combination of pure steel, and is due to the rapid combustion between the oxygen in the bottle and the steel of the watch spring. This is a very beautiful experiment and one that if well performed, will be extremely interesting and instructive. This same experiment may be tried by fastening a small piece of charcoal to a wire and heating it in the flame of a match until it is red hot. Immediately upon this glowing charcoal being introduced into the jar of oxygen, it will burst into flame.

A piece of phosphorus fastened in a little loop of wire and introduced into the jar will burn with a brilliant white light. In performing this experiment, however, the amateur must be very careful because the burns received from phosphorus are very serious, and the fumes that are emitted are poisonous if inhaled in large quantities.

If a piece of zinc foil is cut into thin strips and tied in a little bundle on the end of the wire and tipped with sulphur as in the case of the watch spring, they will also burn brilliantly in the jar of oxygen. It gives a very white light and the light flimy mass floating in the jar is known as "philosopher's wool."

Other experiments will be taken up in our next lesson. We will endeavor to give such experiments as may be readily performed by our young readers, and only use such materials as may be found in the ordinary drug store.

In all your work use great care and be very neat, for successful experimenting in chemistry depends largely upon neatness, cleanliness and carefulness.

QUERY BOX

May the field be made of iron 10"x1"x⅛" and bent by heating, or must several strips be used as described? In wrapping the wire around the cores is the wire wound backwards and forwards like a spool of thread or is the spool filled full from one end completing the winding as you go along? Are the bridges E necessary for the circuit or anything else besides supporting the magnets? Are the binding screws O the screws that hold the field to base, and is the base wood? Must the end of wire soldered to binding screw be in connection with the field, that is, so electricity may pass through? Is not the brush K continually in contact with the shaft H?—J. F. S., Latrobe, Pa.

Ans.—Yes, the field may be made of one piece of iron, but it is not as good as the laminated field such as was described. In wrapping the wire about the field spools, it is wound to and fro exactly the same as a spool of thread. The method you describe would make a fair magnet but would be very impracticable. The bridges E are not necessary for the circuit and they are merely to hold the field magnet in place. The binding screws O are not attached to the field nor do they aid in holding the field to the base. These are two separate screws passing through from the back of the base, which is made of wood. The wires do not connect with the field at any place. The brush K is not connected with the shaft at all times. The other brush comes in contact with the commutator only at certain intervals.

I would like to know if my partner and I could put the aerial wires for our wireless on the tops of our houses. We live only six blocks apart and our houses are each two stories high.—R. C. D., Kansas City, Mo.

Ans.—The aerial wires may be placed on top of your houses. A good plan would be to erect a pole twelve or fifteen feet high above the roofs and suspend the aerial wires therefrom.

I am making the motor illustrated in the December number and wish to ask a few questions regarding it. Where is the battery attached to the binding screws shown? Would No. 18 double cotton covered wire do as well as No. 18 single cotton covered for the field coils? Would there be any special object in interlacing iron wire around the armature? Would not copper wire do just as well as iron wire, or better?—A. M. O., Hemingford, Neb.

Ans.—The battery is attached to the two binding posts shown in front of the motor. No 18 double cotton covered wire will do just as well as single cotton covered. Iron wire is used for interlacing in the armature for the reason that it forms a path for the magnetic lines from one field to the other. Copper wire would not do this, and for this reason is not so good. This wire was not used for any other purpose than to provide a magnetic path.

Will you please tell me how to make a cheap battery suitable for running a small motor?—C. S., Rushville, Neb.

Ans.—There is no better battery for operating a small motor than the bichromate plunge battery described in the September issue of THE AMERICAN BOY.

Will you please explain the meaning of the word kilowatt? Will a learner's telegraph key and sounder of 20 ohms work on a wireless telegraph outfit?—F. H. F., Iowa Falls, Iowa.

Ans.—The term kilowatt is an electrical expression meaning one thousand watts. It is an expression generally used to designate the power generated by dynamos. Watt is a unit of electrical measurement and 746 watts are equivalent to 1 H.-P. Your telegraph key and sounder, if properly connected, can be made to work on a wireless outfit.

Could I use the carbons taken from dry cells instead of the plates 2"x7" in making the plunge battery described in the September issue, and if so, what size zinc should I provide, using two carbons to the cell? I am told I can re-charge a dry battery by punching the shell full of holes and placing it in a jar of water in which sal-ammoniac has been dissolved. Is this true?—W. C. F., Lexington, Ky.

Ans.—The carbons shown in your sketch will be very good to use in the plunge battery and the zincs may be either in the form of plate as described, or 4x6 ordinary zinc rods, such as used in the ordinary sal-ammoniac batteries. The dry cell may be made to do good service again by punching the side full of holes and placing in a jar of sal-ammoniac as you describe. This is not recharging the cells, however. These cells are not charged in the proper sense of the word. The current of electricity derived from them is generated by magnetic action within the cell, and no previous charge of electric current has been used in their manufacture as is the case in storage batteries.

FIREWORKS
$5.00 SPECIAL Crest assortment No. 1. Great variety—45 highly colored pieces for evening display. Selections of all kinds at lowest prices in our Illustrated Catalog. Sent on request.

How to Play Base Ball

By Walter B. Norris,

Instructor in Athletics at the Wenonah Military Academy

Wenonah, N. J.

IT IS characteristic of the American boy to wish to do everything better than somebody else, whether it is work or play. That is the essence of athletic sports today, and varied are the helps that are offered him. Too many of them, however, are far beyond the beginner and are more adapted to the player who is already well trained. But the beginner needs help as well, and it is to him, as well as the more experienced player, that I write.

The average boy is in pretty good training all the time and does not need to be told to do gymnastic exercises to limber him up. Still, if a boy has got out of condition during the winter, or wishes to develop some part that is weak, he should do a little special work each day. He should raise the body up and down, keeping the back straight, and bending the knees; he should bend the back from the hips, keeping the arms straight out from the shoulders, and try to touch the floor without bending the knees; he should raise himself on tiptoe and twist to the right and left with arms outstretched horizontally; and, lastly, with hands on hips, he should bend the trunk to the right and left. Used with dumb-bells or on the pulley-weights, these exercises become still more beneficial and are real muscle-developers.

When the first warm days come in March or the early part of April, the coming player should get out of doors and throw the ball a little. He should take care, however, not to throw hard but to be content to throw a short distance only and with no great speed. Forget this advice and the result will be that he is out of the game for the rest of the season because the muscles have been strained beyond the possibility of quick recovery. Furthermore, he must be careful to be warmly dressed during these chilly days.

When spring has really come and the team is ready for real work, let each day's practice begin with about fifteen minutes spent in throwing the ball from one to another. Then should come a half hour of batting practice, followed by an equal amount of fielding practice. After a week or more of such work, let the fielding practice be shortened to twenty minutes, and the afternoon's work end with a short practice game. We will take up these kinds of work in the order given.

It is gradually becoming recognized that the prime essential in winning a game is batting. Fielding, though it keeps one's opponents from scoring and so assists in winning the game, can never bring victory by itself. The only sure way to win is to bat out hits and bring in runs. It is by no mere chance, therefore, that batting comes first. Here as everywhere it is pleasant to be born with the gift, but as such men are very few, the rest of us have plenty of company.

HOW TO BAT

How to place your feet: A right-handed batter stands with his weight thrown on his rear foot, his right, and with his left resting easily on the ground and not far in front, but in a natural position. He should stand as close to the plate as he is allowed to do, that is six inches away. When he steps forward to hit the ball he should plant his left foot no farther away from the plate than it was before, and he will frequently need to place it still nearer in order to reach a ball over the outside corner. Never on any occasion let the pitcher drive you back from the plate, but step up into the ball every time as a ter of habit. Nothing will spoil a batter sooner than to get into the habit of stepping away from the ball. If nothing else will cure you, place a board to the left of your left foot and then you cannot step back.

Hitting the ball: Grasp the bat with the right hand above the left, unless you are a left-handed batter, when the opposite is done; and in both cases grasp the bat well up from the handle end in order that you may be able to control the swing. With the bat in position you are ready for the swing. One should make the swing from the wrist and elbow rather than from the shoulder. The chief thing in batting is not to hit the ball hard but to hit it at all or in the right direction. The long swing back as the pitcher throws the ball generally results in missing the ball altogether. Use the short wrist swing and you are not as likely to throw your glance off the ball and so miss it. Furthermore, do not swing back as if you felt you needed to knock the ball to the planet Mars, but just place the ball over the third baseman's head, and you have done your duty to the team. Notice the pictures of the best batters and you will see that their position is with the elbow farthest back close to the body and used as a pivot for the swing.

WHAT IF HE HITS IT?

A good eye is almost an essential in a batter, for if he is at all near-sighted he cannot follow the ball as it speeds toward him from the pitcher. Perhaps the best way to get your eye on the ball is to stand so that your eyes are looking directly at the pitcher, not looking at him sideways or out of the corners of your eyes. Also learn to keep the eyes on the ball till it reaches you, and do not let the glance be thrown off by making a long swing with the bat. If you watch carefully, you will find that a curve breaks just before it reaches the plate, and one must learn to see this happen and act instantly. After a little you will be able to see whether it is an in or an out and will act without thinking about it.

Hard as it is to acquire batting ability, it will come if one takes sufficient practice. When practicing, have someone throw in easy balls to you, straight balls without any curve, and bat them out correctly. Do not try to hit them hard but meet every one with a correct short swing, trying to put it where you want it to go. Keep batting these easy balls for a while and you will get correct form in batting and be able to stand before a pitcher with confidence. When the team practices batting have a half dozen balls and bats in use and let each one get his share.

Another important part of batting, and one too often neglected, is bunting. A bunt is striking the ball so easily that it rolls only a few feet in front or to one side of the home plate, just where it takes the pitcher, catcher, or third baseman some time to reach it and get it to a base. Of course, the chief use of bunting is to advance a man who is on first base and wishes to reach second. The batter, at a given signal, bunts the ball while the man on first base races for second. The latter, if he starts soon enough, will probably reach his base safely, which is the purpose of the play, even though the batter fails to reach first. At any rate, a man is on second, where a good hit may bring him home.

In bunting the bat is held loosely, not tight as in batting, and the outer hand is pushed out till it grasps the middle or end of the bat. No swing is made, as the bat meets the ball as easily as possible. Only a low ball can be bunted successfully, as a high ball will fly into the air and become an easy "pop" fly. The best place for a bunt to go is half way toward third base and a little distance from the base line.

In conclusion, a few words about left-handed batting may be in order. It can be proved, I think, that a left-handed batter cannot hit the ball any more easily than one who hats right-handed. But the former has two advantages that are decisive. He is more than a step nearer first base and has so much less distance to run. Besides, his swing throws him directly into his natural stride for running, while the right-handed batter has to change his step before he is in a position to run at all. As every little thing counts in baseball, these two advantages of batting left-handed ought to convince every boy that if he can learn to bat left-handed he should do so. Against a fast fielding team it may mean reaching first base every time, instead of not at all. Next month our subject is Playing the Infield.

(To be continued).

Author of How to Play Base Ball

How They Won Their Badges

Durrell C. Davis, Corvallis, Oregon, received an average of 97 1/3% during the term recently ended, entitling him to a School Record Badge.

Roger Hopkins, Colo, Iowa, who is in the eighth grade of his school, has not been absent nor tardy for six years, and has received the badge.

Albert C. Wright, of Brockton, Massachusetts, has a remarkable school record, not having been absent nor tardy for the past seven years. A badge has been sent him.

Floyd M. Yaney, Coldwater, Ohio, received an average of 96⅞% in all eighth grade branches during the recent school term, entitling him to a badge which has been sent.

C. Fay Marshall, Aubrey, Texas, has just won a School Record Badge with a general average of 95%, which was the highest obtained in the school. He is in the seventh grade.

Harry Nelson, Belle Center, Ohio, won his Badge by just one-seventh of a per cent. His average for the term was 89 4/7%, while that of Leonard Manahan was 89 3/7%. Pretty close, wasn't it?

"I am more than proud of the School Record Badge you sent me," is the word from Roger Hopkins, Colo, Iowa. He also has a good word to say for THE AMERICAN BOY and likes best the department "The Boy Mechanic and Electrician."

Elmer Winter, Richmond, Ohio, is in the sophomore class of the Richwood High School and has been a subscriber to THE AMERICAN BOY for two years. He has received a School Record Badge for obtaining the highest average for the year from September 1st to March 1st.

John A. Smarsh, Chambersburg, Pennsylvania, entered the public schools in 1896, and since that time has been tardy but once and absent but one-half day. For the last eight years he has been perfect in attendance. He is now in his sophomore year in the high school and is one of the most promising pupils of his class.

J. Oren Chaille, a twelve-year-old boy of Otwell, Indiana, has just been promoted to the eighth grade and is proud to say that he has not been absent nor tardy during the last five years. He writes: "I like THE AMERICAN BOY very much and shall continue to take it. Last year during the summer vacation I worked some in our newspaper office and saved $40, which I now have loaned, so you see if papa does not want to pay my subscription for me, I can do so myself."

Frederick Herendeen, an eleven-year-old boy of Chicago, Illinois, won the Heroism Badge for saving two boys from drowning on March 16th of this year. In front of the Herendeen residence is an artificial lake and here the children of the neighborhood slide and skate during the winter. On this particular afternoon they were playing the game of "Follow My Leader" when the two little sons of Charles Sanderson, aged five and seven years, ran upon a thin sheet of ice, which broke through under their weight. Young Herendeen saw the accident from an upper room of his home, and running to the lake, tried to reach the struggling children by lying flat on the ice at the edge of the hole. This he was unable to do, and he then waded out into the pond and with great difficulty succeeded in lifting the two small boys and shoving them across the ice to safety.

John Drumgould, a seventeen-year-old boy of Barre, Vermont, has been given the Heroism Badge for his daring rescue of nine-year-old James Cruickshank from drowning. The deed was performed on the afternoon of November 24th, when a number of small boys were playing on the ice of Stevens branch in the north end of the city. The ice on this section of the river was very thin, and one of the boys broke through into the water. In trying to rescue him, three of his companions were also submerged. John Drumgould heard the screams and ran to the assistance of the boys. Three of them had already disappeared, and Drumgould dived into the water just in time to catch James Cruickshank as he was going down for the last time. Drumgould came up under the ice, but it was so thin that he broke it with his fist and managed to get to shore with his burden. By this time men who had been attracted to the river were searching for the other boys and breaking up the ice in the hope that they might be just under it, but it was not until an hour later that the bodies of the three were recovered.

Spalding's Athletic Library

Spalding's Official Base Ball Guide for 1906 The leading base ball annual of the country, and the official authority of the game. Edited by Henry Chadwick, the "Father of Base Ball." Contains the official playing rules, pictures of all the teams in the National, American and minor leagues; official averages; reviews of the season in all the professional organizations; college base ball; early history of the game, and a great deal of information. Price 10 cents.

Spalding's Athletic Library No. 230 How to Pitch A new, up-to-date book. No boy can afford to be without a copy of it. Edited by John B. Foster of the Evening Telegram (New York). The object of this book is to aid the beginners who aspire to become clever twirlers, and its contents are the practical teaching of men who have reached the top as pitchers, and who have had experience. Price 10 cents.

The American Boy

Copyright, 1906, by The Sprague Publishing Company

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

WILLIAM C. SPRAGUE, - - President and Editor
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only, and in the case of the coins, a rubbing.

Don't send in answers to the Boys' Brain Sharpeners without reading the rules published on the page on which the Sharpeners appear.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

Rules

In sending in solutions to the posers in this department, observe the following rules:

1st. Address your envelope to PRIZE PUZZLE DEPARTMENT, AMERICAN BOY, DETROIT, MICH.

2nd. Mail your answers or solutions so they will reach Detroit not earlier than the 10th day of the month of issue and not later than the 15th. Answers received before midnight of the 9th and after five o'clock of the afternoon of the 15th will not be considered.

Th prizes in each case will be given to the boy whose solution is the **first correct** one read by us in the order of the opening of the mail beginning the morning of the 10th.

3rd. Our Editor's decisions are final. He cannot take time to correspond with contestants, who, each month, number thousands.

4th. Write nothing in your letter but the answer to the puzzle. If you have anything else to say, write it on a separate sheet of paper, giving your name and address on each separate sheet.

5th. If you send solutions to several puzzles, send them on separate sheets of paper, and put your name and address on each.

Why I am Proud of My State

Chester McAlexander, Mack, Miss., wins the prize for the best essay on "Why I Am Proud of Mississippi." Close competitors for first place were Manlius Hall, Holly Springs; Percy A. Laws, Bethlehem; Paul Allen, Tupelo, and Emmett M. Reed, Iuka.

Other good essays were written by A. Palmer Hudson, Claude A. Titche, J. Laurie Mecklin, Will Evans, Thomas Mayo, Charlie J. Currie, J. Robert Owen, Rad H. Reed, Geo. H. Moore, Grady Peerey, Charles H. Thompson, J. Eric Shaw, J. A. Gofford, E. P. Coleman, Jr., Charles Tillman Price, Nolan B. Harmon, Jr., Edwin W. Romberger, J. F. Noble, John McFerrin Curlee, Jamie Thompson, Douglas Simmons, Louis A. Martin, Jr., Howard R. Lowenp, Warren B. Trimble, Fred Wiggins, Ernest C. Hill, Howard Haley and Boyce H. Caldwell.

One neatly typewritten essay was unsigned, and even the postmark on the envelope was not readable.

There were a variety of reasons given for being proud of Mississippi. All the boys were agreed as to the delightful climate and the fertile soil of the state. Other reasons for pride were given as follows: An abundance of game; beautiful song birds; countless numbers of mineral springs whose health-giving waters are unsurpassed; finest harbor on the Gulf at Gulfport, Miss.; out of seventy-five counties in the state, seventy-one are prohibition; first state to found an industrial school for girls; the famous Yazoo Delta which grows more cotton, than any other single district in the world; many clay beds for the manufacture of brick; valuable fisheries; great forests of pine and hardwood producing not only lumber, but tar, pitch, and turpentine; at the world's fair Mississippi had the largest ear of corn, the biggest watermelon, and the biggest pumpkin; won a gold medal on alfalfa, on forestry, and on dressed lumber; captured the grand prize on cotton, and many smaller prizes; produces abundantly tobacco, rice, sugar-cane, corn, oats, almost every kind of vegetable, and many fruits, including grapes and oranges as large and luscious as those of California; borders on the Mississippi river and this gives unexcelled shipping facilities; Wesson contains one of the largest cotton mills in the South; an excellent state university at Oxford; contains one of the oldest towns in the United States, Biloxi, settled by the French in 1699; although the state is but 336 miles long, the numerous bends in the Mississippi river make the river border 500 miles long; a population of over 1,280,000 and an area of 46,810 square miles; contains over 100,000 farms; large marble quarries, also other building stones; increasing facilities for the manufacture of raw material, especially cotton and lumber mills; Jefferson Davis, President of the Confederacy, spent many years at Beauvoir; L. Q. C. Lamar, citizen and statesman; J. Z. George, lawyer and legislator; E. C. Walthall, soldier and statesman; S. S. Prentiss and Charles E. Hooker; Thos. Spight, the only present Congressman who was a southern soldier, and whose son worthily wore the "Blue" during the Spanish-American War; John Sharpe Williams, the brilliant minority leader in Congress; many famous battles fought on Mississippi soil, notably the Siege of Vicksburg and the battles of Shiloh, Iuka and Corinth.

WHY I AM PROUD OF MISSISSIPPI

Mississippi Prize Essay, by Chester McAlexander, of Mack, Mississippi

I am proud of Mississippi because of her past achievements, present prosperity, and future prospects.

I am proud because she is one of the Sunny Southern States, and a member of these grand and glorious United States. Mississippi has been under five separate and distinct governments—France, Spain, England, the Confederate States, and the United States. In defending their country and state rights, and their liberty the people of Mississippi are second to none.

The troops of Mississippi played an important part in the War of 1812, especially in the battle of New Orleans. Many Mississippians fought with the Texans in their war against Mexico for independence. In the war between Mexico and the United States men from Mississippi distinguished themselves by their bravery. It was the First Mississippi regiment of volunteers that, by forming a V-shape across a narrow pass, turned defeat into victory and saved the day at Buena Vista. General Taylor, in speaking of this battle, said that the Mississippi regiment was whipped three times without knowing it, and that the men fought on as if nothing uncommon had happened. General Quitman, of Mississippi, distinguished himself by being the first to enter the fortress of Chapultepec, the first on the wall of the capitol, the first to raise the American flag, and the first to take charge of the city. Earl Van Dorn, another Mississippian, gained distinction by exposing himself to the fire of the enemy in order to replace an American flag that had been cut down by a cannon ball.

In the great Civil War Mississippi was the second state to secede, and in this war she furnished more than 87,000 soldiers to protect Southern rights and Southern liberty. Eighty engagements took place on her soil, among which were the great siege of Vicksburg and the battles of Corinth, Port Gibson, Iuka, Jackson, Holly Springs, and many others.

In the late war with Spain Mississippi raised three regiments of volunteers, but the war ended before they reached the scene of hostilities.

In agriculture Mississippi ranks high, her soil being particularly adapted to that occupation. The Yazoo Delta—the richest body of alluvial land in the United States—contains over four and one-half million acres. Cotton is the leading staple, and in its production Mississippi ranks third with an annual crop of one and a quarter million bales. Corn is the next crop in value. Others are oats, hay, Irish and sweet potatoes, peas, wheat, sorghum, tobacco, peanuts, rice and broom-corn.

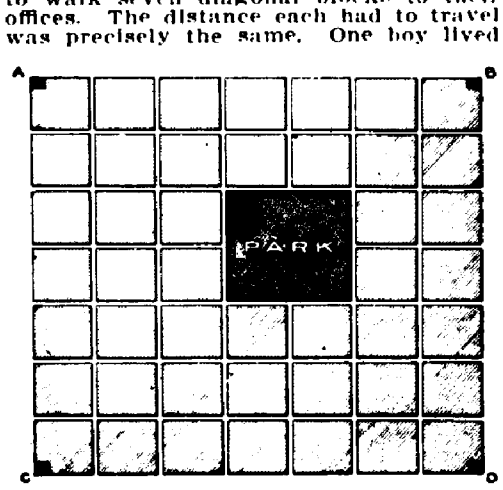
The numerous rivers and railways afford excellent transportation facilities. Manufactures have assumed large proportions and represent millions of dollars profitably invested. The lumber industry is most important, as the state contains vast forests of pine and hardwoods. There are many cotton-seed-oil mills and many compresses, nearly all the cotton being compressed before shipment. Cotton factories are in successful operation in many places, as are ice, fertilizer, and other factories.

Mississippi is making rapid strides in education. There is a system of free schools for the education of all, and there are many high schools and colleges. The university is located at Oxford. It is co-educational, and tuition is free except to law students.

All in all, ours is a grand old state, and these are only a few of the reasons for being proud of Mississippi.

How Many Ways

Two boys, well acquainted with each other, daily walked to their respective offices, which were situated some seven blocks from one another. Now the curious part is this, that the two boys lived seven blocks from each other, and had to walk seven diagonal blocks to their offices. The distance each had to travel was precisely the same. One boy lived



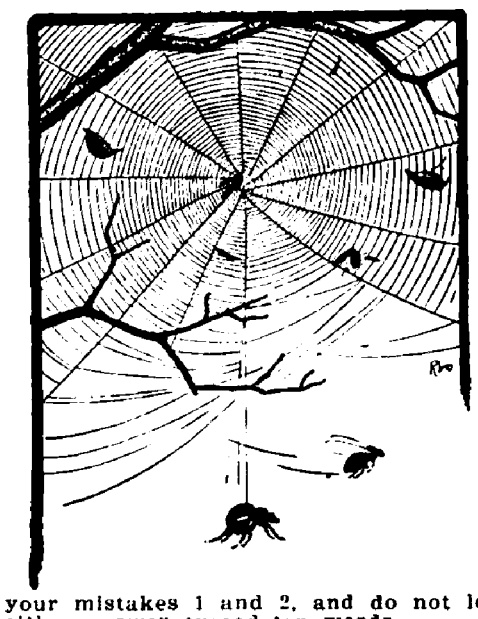
at A and had to walk each day to D; the other lived at B and his office was located on the corner at C.

It will be noticed in the diagram that a park occupies the area of four blocks; neither boy ever walked through this, firstly, because it was enclosed and locked at night and seldom opened early in the morning, and again because its paths wound in and out and around too much to please the boys. In the course of conversation, on one occasion, the dispute arose as to which boy, A or B, had choice of the greatest number of different ways of reaching his office. Every different move counts as a separate route; but every move must be forward, so that every route shall be of equal length. Can our readers figure out how many different ways A might reach D and B might reach C? The two boys in question will watch the solution to this problem with much interest.

Prize—A boys' book See rules.

What's Wrong?

Two serious mistakes have been intentionally made in the drawing of this spider descending from its web. Can you tell us what is wrong? Number



your mistakes 1 and 2, and do not let either answer exceed ten words.

Then answer the question: Why is a spider a good correspondent?

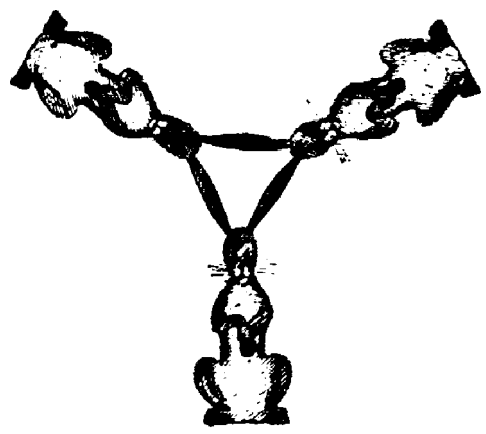
Prize—A boys' book. See rules.

Prize Winners

The following won prizes in the puzzle contests that appeared on page 191, April number:

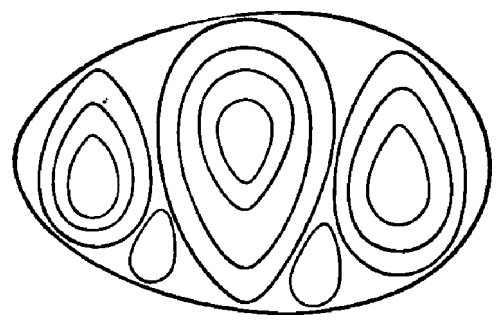
Conundrum—Leon Scott, Alston, Mich. Answer 1. Because it is just out. 2. Because never seen before. 3. It is not usable until broken.

Three Rabbits Puzzle—Allert Brager, Mount Horeb, Wis. Correct solution:



Hidden Proverb—No correct solution. "Many strokes fell great oaks."

Egg Puzzle—Leslie T. Goodlin, Bergholz, Ohio. Solution as follows:



"After me, the deluge," was the watchword of the great Napoleon, who died in exile.

If at a minute after eight, it is past eight, why at thirty minutes after eight do we say it is half-past eight?

Picture Proverb—Prize, a boys' book. See rules.

WHY I AM PROUD OF MY STATE

¶ To the Vermont boy who sends us before May 15th the best letter of not over five hundred words telling us why he is proud of his state—Vermont we will give $5.00; in addition, we will print his letter in an early number of The American Boy.

Vermont Next

The following are the states on which prize essays have been written and the names of the prize winners:

Wisconsin—John Roberts, Racine.
Massachusetts—Frank Scribner, Jamaica Plain.
Texas—George Lee, Dallas.
Ohio—Harry A. Linch, Steubenville.
Colorado—Harold T. Davis, Delta.
Mississippi — Chester McAlexander, Mack.

Canoes $31.50 up
Best Cedar, canvas covered—highest possible quality—prompt deliveries. Write for 1906 Catalog No. 5.

BONN SPECIALTY COMPANY, Beverly, Mass.

A FRENCH FLAG AND AN AMERICAN EAGLE

Continued from page 217

have passed, first shot, for Sandhurst, but I am not ashamed to say that when I woke up this morning and heard that wretched bell, that we all used to abuse so much, jangling away in the turret, I felt pretty sick to think how few times I was to hear the old slave-driver's cracked voice again. What is more, I pity the fellow who does not feel much the same when he leaves his old school! Depend upon it, he is probably no loss to the place, and will not be much of an acquisition to the next society he adorns. Of course that is only my private opinion. And all schools are not like Crosscombe. I should think not indeed?

René Briant is living at Les Ormes now, and has degenerated into a day-boy. However his time at the school is short, for as soon as Monsieur and Madame Sophie can spare him he is to go to Leipsic for a course in experimental chemistry. Young Pizarro is already there, having begun that educational tour of the globe which his father has planned for him. Mr. Pickens is establishing a great English agency for his business, and Briant is to enter it as soon as he is old enough, if Monsieur approves. So I suppose his fortune is made. Mr. Pickens wanted to do the same for Crickhowell, but Crikey has his own ideas for his future, and they are not directed towards money-making. He has won a scholarship at Oxford, and will be going up next year. I expect he will be offered the Laureateship before long, though he says he shall decline it, because he doesn't like sherry. Mahomed came to a sad end shortly after his removal; met Euripides, the school cat on the stairs, and had a slight altercation with him; no flowers.

I hope to see Anstruther at Sandhurst in a year or so, if his mathematics do not prove fatal to him. Carclough is going in for Woolwich. As for the parlor boarder, he enjoys, as the Irishman said, as bad health as usual, but nevertheless flourishes fairly well on the whole. He tells me that he has already chosen his profession. He is to be an Arctic explorer.

The bell is going for dinner. Good bye!

THE END.

Some Good Ones

Hector J. Carpenter, Houlton, Maine, sends THE AMERICAN BOY some conundrums, of which the following are samples:

Why is a schoolboy like a postage stamp?

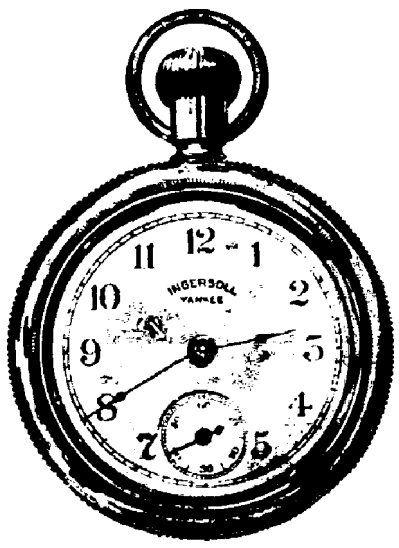
Because he gets licked and put in a corner.

Which is more valuable, a five dollar bill or five gold dollars?

A bill, because when you put it in your pocket you double it, and when you take it our you find it in creases (increases).

Do You Want a Watch?

Yes, of Course, You Do. All Right. Here's One For You, and It's a Beauty!



This watch is a **stem-wind, stem-set, latest model, Ingersoll** watch. Think of it, boys, **not** a watch wound and set with a key like your grandfather's, but **stem-wound** and **stem-set** like the best of modern watches. This watch is **not a plaything,** but a **reliable, accurate** time-keeper, and **almost indestructible.** It received the gold medals at the St. Louis and Portland Expositions, the highest awards given to watches in their class. The following guarantee goes with each watch:

This watch is guaranteed to keep good time for one year, and will be repaired by us free if, without abuse, it fails to do so. It should run properly for ten years and after the first year will be repaired by us for 25c. See the copy of guarantee shown.

Could anything be fairer?

A newly devised hinge is one of the important features of the watch. The front bezel snaps on. Newly devised hands of delicate proportion, perfectly polished and blued, with polished centers, adorn the face. The dial itself is made of porcelate, so closely imitating porcelain as to defy any but an actual test. The finish of the exposed parts of of the movement, including the plate, is of the highest character, the latter being in gold finish with satin effect. An improved regulator of improved style with polished center gives the final touch of "watchy" appearance.

This watch has been on the market for fourteen years, but not until within a few months past has it been furnished with the stem-wind and stem-set device. You will have every reason to be proud of owning one of these splendid watches, and we are proud of being able to offer to our boys for so little work as the obtaining of one subscription.

How You Can Get It

Send us the name of just one new subscriber to THE AMERICAN BOY and his One Dollar, and as quick as the mail can take it, the watch goes to you.

Easy? Why it will not trouble the average American boy a minute to get that watch.

How can we afford to do it?

Never you mind. We agree to do it and that's enough. There's a watch for every boy and we hope that every one of our boys—one hundred and twenty-five thousand of them—will get one.

Bear in mind: To get a watch you must observe the following conditions:

1. *You mail us a new subscription before June first.*
2. *You must yourself be a subscriber. If you get your paper at a store, that counts.*
3. *You can't send your own subscription or a renewal and claim a watch.*
4. *If you are NOT a subscriber, send your own subscription and another new one and you get the watch. Two subscriptions (your own not counted) and you get two watches, and so on.*
5. *This offer expires at midnight May 31. You have up to and including May 31 in which to send the subscription.*

REMEMBER: A WATCH FOR EVERY BOY BEFORE JUNE FIRST

Say To Your Friends That "The American Boy" is the Best Boys' Paper on Earth

BECAUSE IT IS

1. The Largest, 384 big pages a year.
2. Beautifully Illustrated, 1000 Pictures a year.
3. Chock-full of short stories, 150 a year.
4. Devoted to what boys like. 12 pages to Photography; 12 to Stamps and Coins; 12 to Puzzles; 12 to Boyhood of Great Americans; 24 to Mechanics and Electricity; 12 to Money Making.
5. Clean, Wholesome, Inspiring.
6. The Only Paper covering the field of Games and Sports.
7. Read by over a Quarter of a Million Boys in every quarter of the globe and only 6½ years old.
8. Full of Articles that tell boys how to accomplish things and get ahead.

AND

9. ITS SERIAL STORIES ARE BY THE BEST WRITERS FOR BOYS! See these names that have appeared or are about to appear in its pages.

EDWARD STRATEMEYER			FRANK H. SWEET
HORATIO ALGER, Jr.	HENRY A. SHUTE	GEORGE A. HENTY	GEORGE W. D'VYS
KIRK MUNRO	JOHN T. TROWBRIDGE	WILLIAM MURRAY GRAYDON	J. MacDONALD OXLEY
EDWARD S. ELLIS	WALDON FAWCETT	JAMES BUCKHAM	WILLIAM JENNINGS BRYAN
HEZEKIAH BUTTERWORTH	CAROLINE K. HERRICK	SEUMAS MacMANUS	TUDOR JENKS
J. L. HARBOUR	CLARENCE HAWKES	JESSIE P. FROTHINGHAM	ARTHUR DUFFEY (Sprinter)
EVERETT T. TOMLINSON	CHARLES BATTELL LOOMIS	HARRIETT PRESCOTT SPOFFORD	JAMES E. SULLIVAN (Athletics)

LOOK! SHOW THE BOYS!

Show this number to your friends. Point out "In Defense of His Flag," which will run for ten months; "How to Play Baseball"; and the hundred other good things in this number alone. Tell them that "The Young Book-Agent," by Alger begins next month, and that a serial by Tomlinson begins in July or August. THEN, if you can't get a subscription and a fine new watch, you are in hard luck. But you CAN. Any level-headed boy will know that 12 numbers of such a paper are worth twenty times $1.00 to any boy.

THERE'S A WATCH FOR YOU. Get just one subscriber.

Respectfully,

THE SPRAGUE PUBLISHING COMPANY.

DETROIT, MICHIGAN.

Publishers of "The American Boy."

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

Almon W. Bushnell, Copperfield, Vermont, wins the prize for the best list of answers to March Tangles.

Miss K. Haren, 4575 Forest Park Boul., St. Louis, Mo., wins the second prize.

Cecil Drew, Box 89, Mesa, Arizona, wins the prize for the best lot of original puzzles.

Honorable mention is accorded the following for excellence: Burton F. Jennings, George Harrison Stanbery, Clinton Fisk Elliott, Evan L. Jenkins, John A. Jessup, Harry Schwartz, Master Percy Andrews, Samuel Lapham, Jr., Lisle E. Bagwill, John I. and Edward Carbiener, Thomas Hollingsworth, Benjamin Miesenhelder, Albertus K. Richards, Arthur L. Diamond, Chas. T. Haas, Ernest Stifel, Russell B. Smith, J. Harold Esenwein, Willie R. Schoenberger, Kenneth L. Aleshire, Herman H. Voelker, Edward Wyatt, Lewis Caldwell, Hayden S. Fisher, Archie N. Kesterson, Julius Wagschal, J. Paul Richter, Randall Ross, Howard Conklin, Kenneth Fullerton, Geo. Frary Hutchison, Harry South, Lewis Alway Smith, Clarkson Stelle, Reuel L. Smith, S. L. Stanley, Jr., Benjamin L. Miller, F. Ross Brown, Karl W. Kooth, H. B. Cary, Wayne McDonald, Lloyd Edward Owens, Wm. Moellman, Willie Reed, John Guitteau, Donald G. McCall, Paul A. Parker, Leon H. Cox, Percy H. Dulmage, J. Horace Trumbull, Geo. O. Welmer, Sarah Gilles, Homer C. Au, Roy D. Brown, Harold R. Kistler, Robert F. Elliott, Noah S. Guengerich, Will Babcock, Gerald Limric, Wm. Ruxton, Melvin Wright, Robert H. Wolters, Herman Tinhave, Francis Smith. Forty others failed to observe our rules.

A grand prize of a beautiful silk American flag, 4 feet by 2½ feet, mounted on a solid ash staff, with maple spear head, bronzed, will be given for the best Fourth of July puzzle received by May 20.

A prize of two dollars will be given for the best list of answers to the May Tangles, received by May 20.

Answers to April Tangles

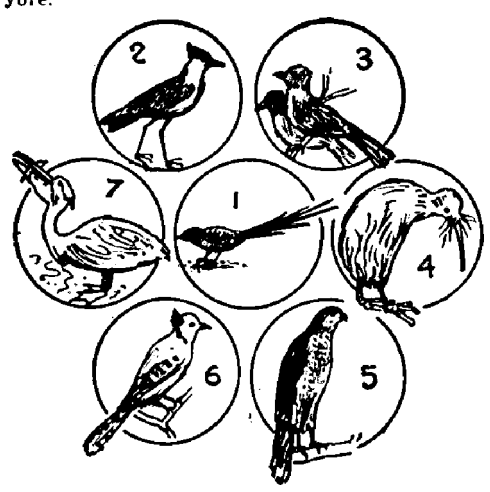
New Tangles

49. MAY AVIARY.

The names of the seven bird pictures are of equal length. The second letters in numerical order spell the object about which the people danced in May-day festivities throughout Europe, and especially in England, in days of yore.



—Cecil Drew.

50. AMERICAN ACROSTIC.

All the words are of even length. The initials spell an American colony founded in May 299 years ago.

1. A prison city of Illinois. 2. A prison city of New York. 3. Toledo's river and bay. 4. A New Hampshire county seat. 5. A river, county, lake and pass of eastern Texas. 6. A Maryland county. 7. A city of New Jersey. 8. A prison city of Wisconsin. 9. A city and bay of New Jersey. —Arthur L. Diamond.

51. HISTORICAL SLIDES.

Slide the five horizontal rows of letters to the right or left until four vertical rows appear that spell an engagement of the civil war that occurred in Virginia in May. Again, and four vertical rows will spell an important event of the revolutionary war that occurred in New York state in May.

K L O C R I E M B E L S
G A O L B V A E C R O W
M O S T F I U P O O O L
E T F N G I T W A R T S
S I L I M G O U T D A W

—John I. Carbiener.

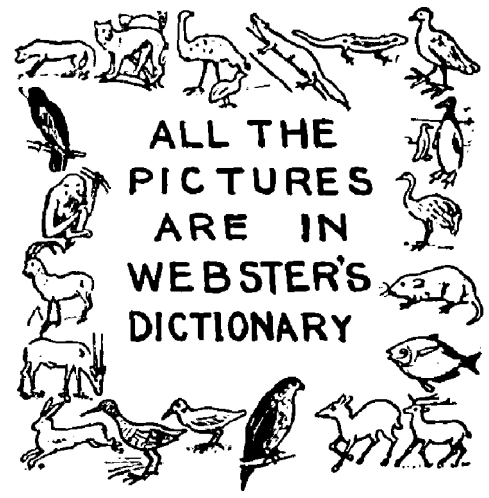
52. NONSENSE HISTORY.

Reading from a certain point, taking letters at regular intervals once through this comical sentence, discover a momentous American victory that occurred in May.

This nonsense has gone the world over twice; try to divert six thirty or by the old Astor hotel escape pagans with sin half in linen vest to bat at Tom or a tin brindle calf. calf. —Herman H. Voelker.

53. MAY MENAGERIE.

Here are twenty pictures, each to be interpreted by a word of four letters. Beginning in the lower left corner proceed up and around to the right, using every alternate picture once around, and their initial letters will spell the full name of the last veteran survivor of the war of 1812, who died in May, 1905, aged 105 years. Then begin in the lower right corner and read the alternate pictures in the opposite direction, and the initials of this half will spell the name of the town and state in which he died.



—George Harrison Stanbery.

54. ZIG-ZAG GEOGRAPHY.

1. - * - - Fill the blanks with the
2. - - * - names of counties. The starred
3. - - - * - letters read downward spell a
4. - - - * state admitted into the Union
5. - * - - in May, also its capital. The
6. - - * - counties are from the following
7. - - - * states, in order, and but one
8. - * - - county in either state will fill
9. - - * - the conditions.
10. - - * -
11. - * - - 1. Indiana. 2. Kentucky. 3. Illinois. 4. Colorado. 5. Florida.
12. - - * - 6. Rhode Island. 7. Michigan.
13. - * - - 8. Utah. 9. Washington. 10.
14. - * - - Colorado. 11. Mississippi. 12.
15. - - * - Georgia. 13. Kentucky. 14.
16. - - * - North Carolina. 15. Michigan. 16. Minnesota.

—Willie R. Schoenberger.

55. MAY CRISS-CROSS.

The words are of uniform length, and when written, one below the other the criss-cross path of letters from the initial of 1 to the final of 7 and across to the initial of 13, will spell a May holiday.

1. A tooth doctor. 2. The innermost planet of the solar system. 3. A building where anything is made. 4. An Oregon town, named for a New York millionaire. 5. Comes back. 6. In place of. 7. An idea. 8. A round of applause. 9. The metropolis of the western hemisphere. 10. Admonishing of danger. 11. Insanity. 12. Fathers and mothers. 13. A peninsula of Mexico.

—Albertus K. Richards.

56. PROS AND CONS.

Example: For, to exasperate; against, to call together. Ans.: Provoke, convoke.

1. For, a denunciation; against, drafting for military service. 2. For, to dissent; against, to strive to win. 3. For, farm products; against, to bring about. 4. For, deep; against, to baffle. 5. For, lavish; against, to dismay. 6. For, to avow; against, to acknowledge guilt. 7. For, to lengthen; against, to shrink. 8. For, a division of a country; against, to persuade. —Russell B. Smith.

Big Pay For Little Work

As announced in the March and April numbers, we are distributing $100.00 a month among the canvassers for subscriptions to "THE AMERICAN BOY." The first contest closed April 10th, and it will be seen by the list given below that the person who received a cash prize of $25.00 sent us only 14 subscriptions. Anyone with pluck and perseverance can win a nice cash prize aside from the liberal commissions which we pay. The prize winners are:

Subscriptions	Winners	Prizes	Subscriptions	Winners	Prizes
14	Edwin Payne	$25.00	2	Geo. W. Petter	1.00
9	S. F. Chaflin	15.00	2	Elizabeth Gibson	1.00
7	Mrs. S. L. Watson	7.67	2	Harold Hands	1.00
7	Ben H. Minton	7.67	2	T. Oliver Huckle	1.00
7	D. J. Willoughby	7.67	2	Nellie Kennedy	1.00
5	Robt. Isensee	2.50	2	Payton Marshall	1.00
5	H. Goldberger	2.50	2	Robt. McCall	1.00
5	Frank P. Tew	1.00	2	Alfred B. Morrill	1.00
4	J. B. Williamson	1.00	2	Raymond Nugent	1.00
4	Arthur Adelburg	1.00	2	J. P. Olmstead	1.00
3	Mrs. H. H. Elgin	1.00	2	Mrs. S. A. Phillip	1.00
3	Mrs. E. B. Gothard	1.00	2	H. McRae Pinner	1.00
3	Alex. Heath	1.00	2	John P. Sheffey, Jr.	1.00
3	Alfred P. Hedges	1.00	1	Roy E. Sampson	1.00
3	Wm. J. Osborne, Jr.	1.00	1	Mrs. E. W. Vatteau	1.00
3	Dr. A. L. Warner	1.00	1	E. H. DePoy	1.00
2	Lelia B. Anderson	1.00	1	W. R. Cremeans	1.00

SINGLE COPIES 10¢. PER ANNUM $1.00

I GOT MINE

Did you get yours? If not, I would advise you to get that one subscription to The American Boy and send it in before July 1st

DEAR FELLOWS:

The watch the publishers of THE AMERICAN BOY *sent me for the one subscription I got them is a dandy. I did not expect such a fine present for so little work. They told me I could get a watch, but I couldn't believe it would be anything more than a toy. But it is a real watch and keeps as good time as my father's does. It is just what they said, a stem wind, stem set, model watch, of just the right size for a boy. It keeps good time, and the company guarantees it for a year; and even after the year they will repair it for 25c if there is anything wrong with it. They say it will run properly for ten years. If so, they are certainly giving me value received for the little work I did. I wish I could show my watch to you, and let you see its handsome face, with its delicate, polished hands, porcelate dial, and "watchy" appearance. I would not take several dollars for my watch if I couldn't get another. Father says it is just as good a timekeeper as his is, and he paid a good many dollars for his. I show it to all the boys, and they say they are going to get one. As June 30th is the last day, according to the terms of the extended offer made by the company, don't waste any time, for if you ever want a watch, you cannot get one for less work than the getting of one subscription for* THE AMERICAN BOY.

Yours truly,
ONE OF THE BOYS.

A WATCH FOR EVERY BOY

In our May number we offered to every boy who was a paid-up subscriber to THE AMERICAN BOY a "guaranteed" watch for every new subscription he sent in before June first. Hundreds of boys quickly saw the point and sent in their subscriptions, and today are proud in the possession of a splendid watch that keeps time as accurately as do watches costing a hundred dollars.

But there are always boys who put off doing things until the last minute, and some who forget. Now we are going to give to these boys a further opportunity of getting a watch, and are extending the offer to the first of July. In other words, to any **paid-up subscriber** who mails us a new subscription before July first we will send a watch just like the one pictured in our illustration and described by the boy whose talk appears at the head of the page. If you get your paper at a store, you are considered a subscriber just the same as if you were on our regular subscription list. You do not get a watch for sending your own subscription or a renewal of your subscription. If you are not a subscriber, send your own subscription and another new one and you get the watch; two subscriptions (your own not counted), and you get two watches; and so on. If you are already a paid-up subscriber, all you have to do is to get another boy to subscribe and send us his one dollar, and as soon as the mail can take it to you, you will get the watch. Remember you have up to and including June 30th in which to send the subscription.

Don't say you can't get a subscriber for THE AMERICAN BOY. You can. There is not a boy in the United States who is able to read, and certainly not a father or mother who has an interest in the welfare of their boy but will quickly see from the examination of your copy of the paper that it is well worth a dollar a year. Or there may be some friend or acquaintance or relative, or some poor boy to whom you want to make a present of a subscription. That would count just as much for the watch as if the dollar was paid by the boy himself.

You know well enough that THE AMERICAN BOY is the best boys' paper in the world. You never saw a better one, and you never heard of a better one. You can talk it with all the enthusiasm and confidence of absolute knowledge. There is more original matter in this number of THE AMERICAN BOY, for instance, than in any two numbers of any other boys' paper in the world. Just look it over. First, the handsome front cover; then Mr. Stratemeyer's stirring serial story, "In Defense of His Flag"; then "Shaggycoat" by Clarence Hawkes, the blind naturalist—you don't read any better animal stories anywhere; then Mr. Harbour's "Four Boys in Camp." Mr. Harbour has been writing for boys for many years. For a long time he was one of the editors of the Youth's Companion. He now contributes to THE AMERICAN BOY more matter than does any other writer. Then there is Horatio Alger Jr.'s story just begun, entitled "The Young Book Agent." You know Alger. There never was a more popular writer of boys' stories. The boys are told how to play baseball in a serial by Walter B. Norris, instructor in athletics, and a funny story is told by Tudor Jenks, formerly on the staff of St. Nicholas. Will Levington Comfort, who was newspaper correspondent in the Philippines during the Spanish-American War, and, later, newspaper correspondent in the Russo-Japanese War, is the author of a fine story entitled "The Iron Hole." All about how to handle guns is told by an expert. William M. Rownd, a college man himself and a preacher who has not ceased to be a boy, gives us a school story, "The Immortal Five." Helen Leah Reed, a well-known woman author, writes of Thorvaldsen, the sculptor. Fred Myron Colby gives us a Revolutionary story, "A Boy at Old Ti'ge." "The Swimming Match" is a good one by Webb Donnell. Under the head of biography comes the story of Henry Ward Beecher by Mr. Montgomerie. "A Wild Elk Round-up" gives us a view of the West. And this is not all—scores of shorter stories and items of interest fill out the pages so that there is no boy, whatever his disposition or liking, but will say at once, "That is the kind of a paper I want."

Now, go out and get that one subscriber. Many of our boys last month sent in two subscriptions, and a few sent in more than two, getting a watch for each subscription and keeping one for themselves and giving the others away. You can get at least one. If you want a sample copy to send to someone, let us know and we will let you have it free on your asking, or sending us the name and address. Don't say you can't. That is a word that ought not to be in any American boy's vocabulary.

Here is something that ought to satisfy you: If when you get the watch you think it is not what it was represented to be, or if you are in any way dissatisfied with it, return it to us and we will send you back the dollar and give the subscription you sent us free. Can anything be fairer than that?

This offer may not be repeated. The very last date is June 30th. We do not want a single reader of THE AMERICAN BOY to fail in owning one of these watches, for there is one for every boy. Address

CHAPTER III.

A DISCOVERY AND A SURPRISE.

By EDWARD STRATEMEYER

Author of the "Old Glory Series," "Soldiers of Fortune Series," "Colonial Series," "Pan-American Series," Etc.

Copyright 1906 by Edward Stratemeyer

AS ANDY ARLINGTON—whose full name, by the way, was Andrew Jackson Arlington—had said, the trouble between the Northern and the Southern states had been brewing for a long time, and the gathering trouble had brought to the surface many men upon both sides, who were hot-tempered and hasty and the last persons in the world to settle a difficulty of this sort, although in many cases these men thought they were the very persons to settle the difficulty.

In the North these ill-advised persons gathered on the street corners and elsewhere, shouting to liberate the slaves and demanding that war be declared, that they might go South and in a few short weeks put to an end the rebel boasting forever. They were perfectly certain that no war could last more than two or three months at the most, and were equally certain that they could "lick the rebs out of their boots!" When the war with all of its horrors did come these ranting fellows were, in nine cases out of ten, scared out of their wits, and the bloody battle of Bull Run was a nightmare from which they never recovered.

The South also had its share of hot-heads, fellows who were equally certain of immediate victory, and who thought that our great government at Washington could be turned upside down in an equally short space of time. How much of a task they cut out for themselves history has shown.

But there were others in the South who were cooler and more farseeing, and feeling that war was slowly but surely approaching they began to prepare for it, at first in secret and then more and more openly as the time for action drew near. At first Northern business connections were severed, and this accomplished, the leaders began to form military and cavalry companies in their local districts, fitting the men out on the sly and drilling them in unfrequented and out-of-the-way places. Some reports of these doings reached the North, but never, until the actual opening of the war, was it suspected how thorough these preparations had been.

In the district about Lee Run, which, I may as well admit here, is not the real name of the country town with which our opening chapters have had to do, several military companies and one troop of cavalry had thus far been formed, organizations having nothing in common with the regular state militia. Of these companies Mr. Arlington was cognizant, but because of his cork leg and his generally shattered health, he had taken no active part in the work, although joining with the leaders in heart and spirit.

He understood Jacks when spy work was spoken of, but he was satisfied that Louis during his stay at the plantation had discovered nothing of importance. Yet he was now glad the boy was gone, for there was no telling what a day would bring forth.

On and on along the winding turnpike galloped Louis's faithful steed, named Jess, after a cherished aunt in New York state. The day was cloudy, and on rising the lad had felt that a shower was not far off. He was yet three miles from the next town, situated in Maryland, when it began to rain. At first the drops came down scatteringly, then followed a perfect deluge, and he was glad enough to seek the shelter of a deserted tobacco house, standing on the edge of a large clearing.

MUCH AGAINST HIS WILL, THE YOUTH RODE OFF IN THE MIDST OF THE MOUNTAINEERS

He had occupied the shelter for less than three minutes, when, on looking forth from the wide open doors, he saw something which filled him with astonishment not unmixed with dismay. A band of soldiers were approaching, an odd-looking set of men, wearing their ordinary clothing but each with a gun and bayonet, and a belt with a cartridge box At the head of the crowd, which numbered probably forty, rode a man named Pickering, the postmaster of Lee Run.

"Left wheel!" came the command, and leaving the roadway the company set out for the tobacco house. Then followed the order: "Double Quick!" and on came the men at increased speed.

"They must be some rebel recruits!" was the thought which flashed through Louis's mind. For a moment he allowed his horse to stand still. Then he wheeled about, dashed out of the rear doors of the tobacco house, and entered a small thicket five hundred feet away.

By the time he had tethered Jess and come down to the edge of the thicket once more, the company of strange soldiers had entered the tobacco house, and having broken ranks, were stamping around shaking off the rain. He wondered if he had been seen, but as no effort was made to trace him, he concluded that he had gotten away without being noticed.

The rain was now coming down more furiously than ever and Louis was quite content to keep off the exposed highway until the storm should abate. As he waited his curiosity arose concerning the strange body of men, and at length, at the risk of being discovered and subjected to harsh criticism, if not to rough handling, he left the thicket and approached the tobacco house from the south side. Here there was no regular opening, but several boards were loose, and through the cracks he could plainly hear and see all that was taking place within.

"Drillin' today didn't last long," he heard a soldier close to him remark. "But I reckon it doesn't matter much—we've got the movements down pretty fine."

"You're right, Higwin," came from a comrade. "Captain Pickering knows how to put the fellows through and no mistake."

"I wonder how long it will be before we're called on to go to war," put in a third soldier. "I'm tired of this drilling in secret. I wish we could get at the dirty Yankees—we'll teach 'em a lesson."

"It won't be long now, Gosby—with South Carolina seceded. Virginia and North Carolina and the rest will follow in short order and then the North will have to fight, or give up the reins at Washington."

"I understand our leaders intend to seize all the forts along the coast," put in another man. "It's a good job done, to my way of thinking.'

"We ought to seize the arsenals, too," put in the first soldier who had spoken. "If we—Hi, what's up outside?"

He broke off short, and in company with his companions made a rush for the open doorway, there to behold two of the company in full pursuit of Louis who was making his way back to the thicket with a speed which would have done credit to a professional runner.

The youth had been somewhat surprised by the sudden appearance of the men. But he had had time enough to back away and run, and he was still thirty yards in advance when the first belt of timber was gained.

"Halt, or I'll fire!" called out one of the men. His gun was not loaded, but he thought the threat would be sufficient to bring the youth to a stop. But Louis kept on; and in a moment the thicket hid him from view.

Once behind the shelter of the trees, the boy did not diminish his speed, but crashing along through the small brush, soon gained his horse's side. The tether was untied, he flung himself on the mare's back, and off they went in a circuitous route for the turnpike. Ere the men who had followed cleared the wood again he was out of sight and hearing.

What he had seen and heard filled his mind with strange thoughts. "They are a newly-formed rebel company," he said to himself. "A rebel company sworn in, no doubt, to fight our government the minute the leaders in the South give the order. I wonder how many more such companies there are down here? No doubt hundreds—and perhaps thousands!"

Feeling he would have an interesting story to tell when he arrived home, Louis urged forward his horse as rapidly as the muddy road would permit. He soon reached the hamlet of Deems, but the rain had driven everyone indoors and he passed on unquestioned. Half a mile outside of the hamlet Jess began to limp, and he alighted to find out the cause of the trouble. A shoe was loose and in such a condition that it must be tightened before the journey

could be continued. Under such conditions there was nothing to do but to turn back to Deems and call in the aid of the local blacksmith.

The smithy was soon found, a low, smoke-begrimed place at the lower end of the hamlet. The door was swung open and Louis rode in, to find himself in the presence of the blacksmith and half a dozen boon companions, all of whom had been discussing the war question with all the warmth of their Southern natures.

"I would like to have that shoe fastened," said Louis, as the blacksmith strode forward to greet him.

"Yes, sir," was the reply, and the man set to work without delay. Having nothing to do, the youth strode up to one side of the fire at the forge and tried to dry his clothing.

While he stood there the others in the smithy eyed him curiously and the talk lagged and was turned into other channels. Louis had seen one of

TWO OF THE COMPANY IN FULL PURSUIT OF LOUIS

the men at Lee Run some days before, and this man now whispered something to the others and all eyed the youth narrowly. It was evident they knew he was a Northerner and would treat him accordingly No effort, however, was made to molest him, but he was made to feel that he was no longer a friend but an enemy. Such was the spirit in the South just before the war, a spirit which speedily found its counterpart in the North.

In a quarter of an hour the shoe was readjusted and Louis handed over the twenty cents asked in payment. He was glad to think he had not been detained longer, and lost no further time in getting on his way. But the halt, brief as it was, was sufficient to bring him into serious trouble, as we shall soon learn.

The trouble came from Sam Jacks and his followers. Chagrined at the failure to find Louis at Mr. Arlington's plantation, the mountaineer had set off for Deems, to learn if the youth had passed in that direction. Jacks was of the class of men who never forget or forgive a blow, no matter how much deserved, and he was determined to "square accounts" or know the reason why. The men with him were a rough, dissolute set, willing to enter into anything which promised excitement and sport—men who afterwards became unauthorized guerillas, to prey upon any helpless band of soldiers they ran across, and who cared nothing about who won on the battlefield so long as they could add to their plunder. Jacks and his followers arrived in Deems less than five minutes after Louis had left the hamlet, and at the smithy received full particulars concerning the youth.

"Forward, boys," he cried to the other mountaineers. "We'll soon be up to the Yankee lick-spittle!" And away they went down the hill beyond Deems and up the next, where they beheld Louis just crossing the ridge. In a few minutes more the youth found himself surrounded.

Although not actually frightened, he was much disturbed, for the mountaineers were a wild-looking set and he knew from the look upon Jacks's face that the fellow meant him no good. As the others rode directly in front of him he was compelled to draw rein.

"So, I've caught you, have I?" sneered Jacks, as he ranged up beside Louis. "Didn't reckon I'd make it, did you?"

"You have no right to detain me, Jacks," replied Louis, as calmly as he could.

"Hain't we? Wall, all I kin say is, we're a-takin' the right; eh, boys?"

"Thet's so, Sam."

"And what is your object, gentlemen?"

"Oh, you needn't git on no high horse," returned Jack. "Yer know well enough what our object is."

"You-uns ain't gwine ter spy on us," put in another of the horsemen, a fellow horribly pitted with smallpox marks. "Jacks, I reckon its best to search him."

"Of course we'll search him," came from several of the others.

"You have no authority to touch me," answered Louis, with all the dignity he could command.

"You march along with us," returned Jacks, and caught hold of Jess's bridle. "Hogwell, git on one side of him and Ross, you git on the other. The rest go behind. He shan't git away this trip. Forward!"

"Where are you going to take me?" asked Louis, in alarm.

"Shut up! You'll find out soon enough. Git along!"

There was no help for it, and much against his will, the youth rode off in the midst of the mountaineers. The road taken was along the ridge of the hill, at right angles to the turnpike. An eighth of a mile was covered, and they descended into a thickly wooded hollow and presently halted in front of what had once been a sawmill, on the south bank of a half-frozen stream.

Here Louis was compelled to dismount, while his horse was led away with those of the mountaineers. With Jacks on one side of him and Hogwell on the other he was forced to enter the deserted and half-tumbled down mill. The rain, which had let up for a bit, now came down as hard as ever.

"Fetch a rope, boys, and we'll bind him," were Jacks's next words, and this order was speedily obeyed, and in spite of a desperate struggle Louis was made a prisoner.

He was then searched, and four dollars and his silver watch were taken from him—"as payment on thet insult at Lee Run"—so Jacks put it. Then the mountaineer began to question him closely about what he had seen and heard while in and about the town mentioned. But Louis was on his guard and revealed nothing, and this so angered the mountaineers they abused him roundly.

"I'll tell you what we'll do, boys," said Jacks, suddenly. "We'll leave him bound up here until tomorrow morning. A night of cold and hunger will bring him to terms."

This was agreed to, and, as they did not wish to take along the extra horse, Jess was tied up in the mill beside Louis. Then with mocking adieus the rascals withdrew, leaving the lad to his fate.

CHAPTER IV.

THE PROGRESS OF THE UPRISING.

It would be hard to put Louis's feelings into words when he found himself alone once more. Here he was bound hands and feet to a corner post of the old mill, robbed of his valuables, and with the prospect of even harsher treatment in the morning.

"They are thorough rascals, if ever there were any," he thought, bitterly. "I believe they would murder me if they thought they could get anything more out of me by doing it. I'm in a scrape and no mistake. What's to be done, Jess?"

For reply the faithful mare bent her soft eyes on him and gave an unsatisfactory whinny. Evidently she felt something was wrong. On her back rested a rusty brown saddle, which one of the mountaineers had "swapped" for Louis's new trappings.

"It's a shame the way they treated us," went on the youth. "But never mind, only let us get away and some day we'll get square, won't we? I wonder how strong this confounded rope is?"

Louis found it much stronger than expected—far too strong to be either stretched or broken—and a half hour's work upon it only sufficed to chafe his wrists and ankles to the blood-drawing point. He stopped his struggles and drew a long breath.

"They understand tying a fellow up," he murmured. "Is it possible I must remain in this dismal place all night?"

It was not long before Louis was shivering, for he was wet to the skin, and the wind that was rising swept through every opening in the old mill. Jess, too, began to grow impatient, wanting her blanket and her noonday meal. Slowly the hours dragged by until nightfall.

Louis had about given up all hope of getting free when through the wind he heard a broad, negro voice singing loudly:

"Oh my Sue, my Sue, I lub you!
Oh, my Sue, my Sue be mine!
An' de possum, an——"

The negro voice came to a sudden stop as Louis cried loudly for help. A period of silence followed.

"Wot's dat?"

"Help me! I am tied up in the mill!"

"Golly, who is yo'?" There was a crashing through the woods and presently a tall darky, weighing all of two hundred pounds, blocked up the entrance to the mill. "Golly, yere's a bit ob work!"

"Release me, will you?" asked Louis, eagerly.

"Who tied you' up like dat, massa?"

"Some rascals who robbed me of my watch and money. Cut that rope. I am most perished with cold."

The negro at once complied with Louis's request, and once free the youth drew a long sigh of relief.

"Who war dem fellows, massa?" questioned the negro, eagerly.

"One of them is named Sam Jacks. He is the leader. Two of the others were named Hogwell and Ross. Do you know them?"

"I dun heered tell of dem, massa. Dey cum from de mountains over yonder—a mighty bad crowd, dem."

"I am much obliged for coming to my assistance. I am sorry I can't reward you, but they took all my money, as well as my watch and my new horse saddle."

"Dat's all right, massa—glad to do yo' a good turn, sah. Yere, let me help yo' fasten dat old saddle, sah—seein' it's de best yo' got left, sah," and the ponderous black friend went to work with a will. In two minutes more Louis was on Jess's back, and, bidding his friend good-bye, made off up the hill in the direction of the turnpike. The negro watched him out of sight and then went on his way, singing as before, as though to forget the discomforts of the storm in melody.

Once on the highway again, Louis put spurs to his mare, and in less than an hour gained a good-sized town in Maryland. Here he put up at the hotel for two hours, in the meantime getting dinner and having Jess fed. He told the hotel keeper how he had been robbed, and as the man happened to know the youth's father, he readily trusted Louis for the accommodations furnished.

It was getting well towards night when Maryland soil was left behind and Louis turned up the well-known road leading to Goreville. His hard riding had tired him greatly, and he was not sorry when towards midnight the home acres were gained, and he was permitted to place faithful Jess in the stable, silence the watch-dog, and enter the house.

"Louis! And in all this rain!" exclaimed his father, as he descended from his bedroom to greet his son. "I've been looking for you for the past two days, but I didn't think you would start out in such weather as this."

The son's story was soon related, and then it had to be repeated for the benefit of Mrs. Rockford and Lucy and Martha. All listened with close attention to what was told.

"I have suspected as much," declared Mr. Rockford. "The South is bound to bring on a war. They won't argue the point or listen to reason. The seceding of South Carolina has started a flame which will take hard work to quench."

"Never mind the war just now, father. What am I to do about my watch and money?"

"Better let them go, Louis. You can prove nothing against Jacks and his companions, for if brought into court they would deny everything, and as matters stand down there, their word would be taken in preference to yours."

"I don't believe any fair-minded men, even if they are so-called rebels, will uphold such actions. Mr. Arlington is a rebel, and so is Andy, but they are honest and square for all that. They are merely sticking up for what they believe is right."

"Gracious, Lou, you are not going to turn rebel, are you?" exclaimed Lucy, half in horror.

"I'll wager pretty Grace Arlington has been trying to convert him to slavery," put in Martha, who was the tease of the family.

"No, I'm not going to turn rebel," answered the boy, blushing at the mention of Grace. "But I want you to understand that there are a good many gentlemen and men of honor down South, and some mighty nice people, too, for all of their notions about slavery and state rights."

"Of course there are, my son," said Mr. Rockford. "And, as you say, they think they are in the right, and they are willing to fight for what they think. But, for all that, they are wrong, and sooner or later they must acknowledge it."

"Mr. Arlington told me, one day, that there used to be nearly as many slaves in the North as there were in the South, and when we gave up slavery here we sold our slaves to the South."

"There is something of truth in that, Louis—we certainly had slaves, and some were sent South—how many I do not know."

"And he said, now we wanted to free those same slaves or their children—after taking Southern money for them," went on the boy, earnestly.

"What I object to, Louis, is the extension of slavery. I think it ought to be allowed to die out. I am sure the matter could be arranged if the real statesmen could get together, without the interference of the hot-heads on both sides. It would be much better to arrange things peaceably than to plunge the whole nation into civil war."

Soon after this the conversation was interrupted by Mrs. Rockford, who had prepared a hasty but hot midnight meal for her son. Louis partook of this with avidity, and on retiring rolled himself in a flannel blanket, to sweat out any cold he might have caught when out in the wintry rain.

For several days after Louis returned home matters moved along quietly at the dairy farm. Then came Christmas, and among the boy's gifts was a new silver watch and chain from his mother and father, and knit mittens and a neck muffler from

"IT LOOKS AS THOUGH YOU WERE AFRAID"

Lucy and Martha. Of course Louis made gifts in return, gifts bought with some money left at home when he had started on his visit to Andy; and the holiday passed with a pleasantness long to be remembered.

A few days later came news from Charleston which set everybody to talking. It was to the effect that Major Anderson, in command of Fort Moultrie, had abandoned that stronghold, spiked his guns and burnt their carriages, and moved to Fort Sumter. The fort where this United States officer had been stopping, was a low-walled place, hard to defend, and on the coast; the place to which he had withdrawn was on an island in the harbor, and was as strong as a fort could well be.

The South Carolinians had for a long while thought they could swoop down upon Major Anderson and

his force and command an easy surrender. Now, when they saw the plucky commander entrenched behind the frowning walls of Fort Sumter they grew furious, and they at once made preparations to occupy not only the works which the Union men had abandoned but also a number of other places, including ancient Fort Johnson, which had been abandoned since the Revolution. "We'll drive the Yankees out in fine style," they told each other. And then came a wait of several months, as winter set in throughout the North, and other matters claimed attention in the South.

South Carolina had seceded from the Union on the twentieth of December, 1860. On the ninth of January following, Mississippi joined her Southern sister, and then Florida, Alabama, Georgia, Louisiana and Texas did likewise by the first of February. There followed a lull, and then came the shot which, as some writers have said, was heard around the world, a shot which threw our great and glorious nation into a war that lasted four years and cost thousands upon thousands of lives, and millions upon millions of dollars.

Fort Sumter was fired upon by the Confederates. Major Anderson had been called upon to evacuate and had refused. On Friday morning, April twelfth, 1861, at exactly half past four o'clock, a shell was thrown from Fort Johnson and burst directly over Sumter. It was a signal gun, and directly afterwards came a shot from an ironclad battery on Morris Island; and then began a fierce bombardment which lasted all day and all night, and the greater part of the next day. Fort Sumter was fairly riddled with cannon balls and torn up by shells, and was set on fire a score of times. Such a fierce onslaught could not last forever, and feeling the uselessness of fighting further, and being about out of provisions, a flag of truce was displayed, and arrangements were made to evacuate the next day.

When word came to Washington that Fort Sumter had fallen the excitement was intense. Everybody looked to President Lincoln, who had succeeded Buchanan in March, for he was the head of the nation, and must decide in a crisis like this. This was on Sunday. On Monday came a proclamation, calling for seventy-five thousand men to go to the war.

The proclamation aroused the nation as never before. It was published in the newspapers and scattered broadcast, and inside of three days companies were forming in all of the Northern states and getting ready to march to Washington. Old uniforms were brushed up, old guns cleaned and oiled, old drums reheaded, and every man and boy began to study Hardee's Tactics. What the effects of this proclamation were in the South we will see later on, when we follow the daring career of Andy Arlington.

It was Mr. Rockford who brought home the news to Louis and the others that the President wanted seventy-five thousand men, and wanted them immediately. He had been down to Goreville and came back stating that the citizens were going half crazy.

"Paulding has already issued an address, calling on the men of this neighborhood to join a company he is forming," said Mr. Rockford. "Harley, the miller, is going, and so is that young Bingham, the clerk in the grocery store, and Umbleton and Dilks. You never heard such spouting and shouting in your life."

"Will you join, father?" asked Louis, quickly, and his usually grave face lit up with sudden earnestness.

"I don't know. Paulding urged me, but I said I wouldn't commit myself until I had talked matters over at home."

"Oh, John!" cried Mrs. Rockford, and then stopped short. She did not want her husband to leave her, and yet she wanted to see him do his duty as a citizen.

"If you don't go, father, I'll go—if they'll take me," went on the son, but in rather a low tone.

"You, Louis!" burst from mother and both sisters.

"Yes. Why not, mother? I am as tall and strong as some of the men. I really think one or the other of us ought to go."

"If either of us go it will be me," said Mr. Rockford, decidedly. "But we will talk it over in the morning," went on the husband, as he saw his wife was on the verge of tears.

Fate decided for Mr. Rockford before he had a chance to decide for himself, although secretly he was much in favor of going, if matters around the dairy could be arranged. That evening, when passing among the cows, one particularly vicious animal turned upon him and jammed him into a corner of the barn, breaking his collar bone and otherwise injuring him.

The accident frightened the others of the family very much, and a hired man was sent post-haste for the village doctor. It was after midnight before Mr. Rockford was pronounced out of danger, and then the doctor announced that he would not be able to leave his bed for many weeks and perhaps months to come.

Ordinarily such an accident would have brought in many neighbors to sympathize and offer aid, but now the war was the one subject on everybody's mind, and the family was passed by, excepting by a few of the most intimate friends.

It was two days later, when Louis was down in the village at the general store, that he was addressed about going to Washington with Captain Paulding's company. Robert Paulding had been nothing but a plain lawyer a few days previous, yet now everybody called him captain, and many of the men tipped their hats unconsciously whenever he passed.

It was Harry Bingham, the grocer's clerk, who addressed Louis as he measured out some cotton goods Mrs. Rockford needed for bandages. "Now your father can't go, Louis, you ought to take his place," he said. "Your family ought to be represented, you know; and there are lots of young fellows going besides me—Dick Coombs, Jerry Rowe, Mart Wilkins and a lot more."

"I've been thinking of it, Harry," answered Louis. "I'll go if mother can spare me."

"Well, you want to make up your mind pretty soon. Captain Paulding is going to start us off for Washington by the middle of next week if he can."

Just then another young fellow came into the grocery. It was Jerry Rowe, the son of a local horse doctor. He was an overbearing fellow, and Louis did not like him.

"Hullo, Rockford!" he cried. "They tell me you haven't joined the company yet. What's the matter, are you afraid?"

No, I am not afraid," replied Louis, his face flushing. "I——"

"It looks as if you were afraid; doesn't it, Harry? All the fellows who are not afraid are going," went on Jerry Rowe, and then he moved on to another part of the store, before Louis could say another word. But those cruel, thoughtless words of Rowe decided Louis. Come what might, he must obtain permission to enlist inside of the next twenty-four hours.

(To be continued.)

BEGUN IN MARCH

CHAPTER VIII.

SHAGGYCOAT made his way home in a leisurely manner, stopping a day here and there at some lake or river that pleased his fancy. The home sense had not yet fully mastered him and he still found pleasure in running water, and upon grassy fringed banks.

One morning when he had been upon his homeward journey for about a week, he turned aside to explore a little stream that looked inviting. He intended to return to the river and resume his journey in a few minutes, but the unexpected happened and he did not do as he had intended. He was swimming leisurely in a shallow spot, where the stream was very narrow, when without any warning, or premonition of danger, he set his foot in a trap. The trap had not been baited but merely set at a narrow point in the stream, in hope that some stray mink or muskrat would blunder into it. It was nothing that Shaggycoat could blame himself for, but merely one of those accidents that befall the most wary animals at times.

The trap was rather light for a beaver, but it had caught him just above the first joint, and held on like a vise. At first Shaggycoat tore about frantically, churning up the water and roiling the stream, and seeking by mere strength to free himself. But he soon found that this was in vain. He then tried drowning the trap, but this was equally futile. Next he buried it in the mud, but it always came up after him when he sought to steal away. Then he waited for a long time and was quiet, thinking it might let him go of its own accord, but the trap had no such intention.

As the hours wore on, his paw began to swell and pain him, but finally the pain gave place to numbness, and his whole arm began to prickle and feel queer. But with each hour that passed, a wild terror grew upon Shaggycoat, a terror of he knew not what. But the trap gripped him tighter and tighter, and Brighteyes and the young beavers seemed so far away, that he despaired of ever seeing them again.

Finally the day passed, the sun set, and the stars came out. The hours of darkness that hold no gloom for a beaver, in which he glories as the other creatures do in day, were at hand, but they held no joy for poor Shaggycoat. Every few minutes he would have a spell of wrenching at the trap, but he was becoming exhausted, although he had thought his strength inexhaustible. At last a desperate thought came to him. It seemed the only way out of the difficulty.

He edged the end of the trap where the chain was between two stones, then began slowly moving about it in a circle. Occasionally the trap would come loose then it would be replaced and the twisting process renewed. Finally there was a snap, like the crack of a dry twig, and the bone had been broken. The worst was over. He gnawed away and twisted at the broken paw until it was severed.

Did it hurt? There was no outcry. Only the splashing of the water, and a bright trail of blood floated down stream, and the trap sunk to the bottom to hide the ragged bleeding paw that it still held; while a wiser and a sadder beaver made his way cautiously back to the main stream, licking the ragged stump of his fore-paw as he went.

The cold water soon stopped the bleeding and helped to reduce the fever, but Shaggycoat was so spent with the night in the trap that he stopped to rest for two days before resuming his journey homeward.

Just as the sun peeped over the eastern hills on the morning that Shaggycoat freed himself from the trap, a boy of some twelve summers might have been seen hurrying across the fields towards the brook, closely followed by an old black and tan hound. The boy carried a small Stevens rifle, known as the hunter's pet, across his arm, and both boy and dog were excited and eager for the morning's tramp.

In low places, where it was moist, the first frost of the season lay heavy upon the grass, and its delicate lace-work was still plainly seen on stones and by the brookside. It was a fresh, crisp morning, just such a morning as makes one's blood tingle, and whets the appetite.

The birds, as well as the boy, had seen the frost, and the robins were flocking, though most of the summer songsters had already gone.

About half an hour after Shaggycoat left his

ragged paw in the trap and swam away, leaving a trail of blood behind him, the boy and dog parted the alder bushes, and came to the spot where the trap had been set.

"By vum, Trixy, something has been in the trap," exclaimed the boy, as he noted the muddy water and the tracks upon the bank. But he could not see whether there was still anything in the trap because of the roile. So he began slowly to haul up the chain, Trixy watching the process eagerly. At last the end of the chain was reached, and the trap, dripping water, but containing only the ragged paw, came to the surface.

"Why! Trixy, he's gone. It wasn't no muskrat, either. I'll bet it was an otter."

After examining his bloody trophy carefully for a time, the boy reset the trap, and wrapping the paw in some fern leaves, took it home to prove his story; but it was not until several days afterwards, when he showed the paw to an old trapper, that he learned that a beaver had been in his trap.

While Shaggycoat is making his way painfully back to his mountain lake, occasionally stopping to favor his freshly amputated paw, let us go back to the lake, and see how Brighteyes and the young beaver have been spending the summer.

For the first few days after Shaggy-coat's going, it had seemed very lonely without him. He had always been so active, coming and going, that he was greatly missed. But a mother beaver with four lively youngsters to provide for has many things to think of, so Brighteyes soon found that she was kept quite busy attending to the family and providing food, which had been done before by her mate.

One bright May morning when the air was sweet with the scent of quickening buds, the winds soft with the breath of spring and a throb of joy was in each heart, when beast and bird and man were all glad because the spring had come again, Brighteyes went to the upper end of the pond for some saplings, for the supply of bark was low. She left the young beavers in the lodge, where they seemed to be quite safe. But the smell of beaver meat had been tickling the nostrils of the gluttonous wolverine, and he had lingered about the pond all the spring. The beaver lodge had been too hard for him to dig through in midwinter, when it was frozen like a rock, but the sun and winds had drawn the frost from the walls, and now it was no harder than any other mud house.

It was so pleasant outside where everything was singing and springing to the light that Brighteyes stayed longer than she intended, and when she returned and dove into the underground passage, leading to the lodge, she was surprised to find three of the young beavers in the underground channel, as close to the water as they could get. They were very much frightened and did not want to go back into the lodge. So she took them to one of the underground burrows along the bank, and left them there while she reconnoitered. She found to her great surprise that a large hole had been dug in the side of the lodge, and through the opening, she could see the brown coat of the wolverine. He was eating something. She could hear the crunching of bones. Presently he heard Brighteyes in the passage and thrust his ugly wolfish head through the hole in the wall. His eye was evil and his chops were bloody, and something told the mother beaver that the blood was that of her missing young one. Then the wolverine sprang for her through the opening, and she fled precipitately and the friendly water of the pond enfolded her, where she was safe from the glutton.

Brighteyes returned to the remaining youngsters, and after that she guarded them with untiring vigilance. They did not return to the lodge that summer, but lived in the burrows that Shaggycoat had made along the bank. When they got tired of living in one, they moved to another. In this way they were able to shift their base, and still keep the friendly waters of the pond about them.

Although the glutton lingered about the lake for a week or two, he did not again taste beaver meat. So one night he slunk away into the woods in search of some rabbit burrow or fox's hole, from which he might dig out the luckless victims, and the beavers did not see him again. After he had been gone for several days they came out of hiding and had the freedom of the pond.

When they were large enough they were initiated into the mysteries of swimming and diving, at which they would play for an hour at a time. In fact they never tired of it.

When they had explored the pond and knew all its windings and its many water recesses, they went upon the bank, but their watchful mother never allowed them to go far ashore. They early learned that the water world was the only safe place for them, and there were dangers to be guarded against even there.

Sometimes, after a swim, they would come upon the bank and sit in the sun and make their toilet. They would rest upon their flat tails, and comb their soft fur with the claws upon their hind paws. It was hard to reach all places upon the body, but they were very patient, and combed away as persistently as a society belle, and when they had finished, and the sun had dried their coats, they were very sleek and glossy.

One starlight night in September, Brighteyes was swimming home from the upper end of the pond, when she heard a splash in the lake behind her. She quickened her pace, but her pursuer came steadily nearer. There seemed to be something familiar in the sound, so she stopped to investigate. She was now certain of it, so with true female coquetry, she slipped out upon the bank and hid. A moment later Shaggycoat found her there, pretending that she did not know all the time it was him.

Her nose was just as warm, and he was just as glad to see her, as he had been that first night of their tryst. Then the queerest love song that ever broke the starry stillness floated out across the pond. It was a mere murmur, like the sighing of autumn winds in leafless branches. This plaintive love ditty and the weird concert heard in beaver lodges during the summer months and the signal whistle given when a beaver is lost are the three vocal accomplishments of the colony.

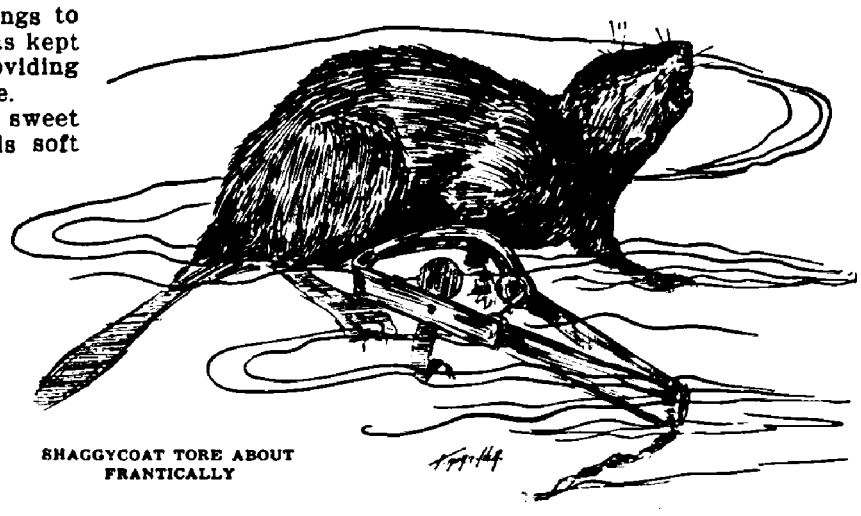
CHAPTER IX.

After his return to the shimmering Mountain Lake, Shaggycoat allowed himself a few days' leisure in which to enjoy the company of Brighteyes, and get acquainted with the frolicsome young beavers. They were very shy of him at first, but finally came to know that he was the head of the lodge.

One crisp autumn morning when he went for a swim he discovered that the frost had painted all the trees on the hilltops, and seared the grasses and fronds along the bank of the lake. Then he knew that this idling must cease and hard work upon the dam begin.

The same day just at twilight he went far up stream to see where he could get material for the dam. It had been badly washed by the spring freshet, and his lake had shrunk to about half its original size. He now planned to rebuild the whole structure, using the two old pines as foundation.

He had slipped out upon the bank, and was busily girdling a poplar, when a strange rhythmic splashing in the stream above fell upon his ear. His first



SHAGGYCOAT TORE ABOUT FRANTICALLY

impression was that he had heard something like it before, and somehow the sound filled him with a strange dread. He scrambled quickly to the water and slipped under a friendly screen of pickerel grass, where he lay watching and waiting. He could hear the steady splashing plainer now. Then in an instant he remembered the terrifying scene of the drinking buck and the roaring thunderstick, and his own precipitate flight. This splashing was the same that the great duck had made when it came round the bend in the stream. He had hoped to leave that dread thing far behind, and here it was coming to his own home to seek him out, and perhaps destroy them all as it had the buck.

Then it came in sight and he saw that it was larger than many ducks, with its two wings rising and falling, making a bright splash in the water at each stroke.

Shaggycoat waited to see no more, but fled swiftly and noiselessly towards his dilapidated lodge. But he occasionally stopped in a well-screened spot to watch and listen for the coming of this monster.

It was not many minutes before he saw it enter the lake, and then he knew that his retreat had been discovered by the most subtle and destructive of all his foes, man.

Then Shaggycoat fled to the lodge and told Brighteyes all that he had seen and heard, and they counseled together as to what course to pursue.

Brighteyes was for fleeing at once, but Shaggycoat could not tear himself away from this spot that he had selected so carefully and the dam that had cost him so much labor, so he counseled waiting another day. They could be very wary and never show themselves except by night and if they kept to the burrows that he had dug along the bank he felt quite sure that the stranger could not get at them. So he went back to watch these invaders of his stronghold, while Brighteyes hid the young beavers in the largest of the burrows near the dam. Although the water was low in the lake, it was deep here, and she felt quite secure.

The two canoeists never imagined as they paddled down the lake that a wary beaver was keeping just so far ahead of them, swimming from stump to overhanging bank and watching their every movement. When they hauled their canoe ashore and made a campfire they little suspected that they were camping within fifty feet of the underground burrow of the beaver.

While they were cooking supper a flock of ducks came sailing over, and three of their number alighted in the lake to feed upon water grass. Then Shaggycoat saw one of the strangers pick up the bright glittering stick, that stick that had spoken so loudly to the buck on the river bank a few days before. He felt a strong impulse to flee, but there was a strange fascination about it all and he wanted to see what happened.

While he was still wondering which was the better course to pursue, the thunderstick spoke, and its echo rolled along the lake and was thrown from hillside to hillside, again and again. It seemed to Shaggycoat that his quiet lake had suddenly become the abode of thunder and lightning. He waited to see no more, but fled to the burrow, where he found Brighteyes and the young beavers trembling with fright.

The same evening, an hour or two later, Shaggycoat heard an ominous whack, whack, whack upon his dam. It reminded him so forcibly of the pounding that they heard in the old Beaver City, before he and his grandfather had fled, that he was filled with dismay. Was his own small dam, and the lodge that he had reared with so much labor, to be destroyed just as the old Beaver City had been, and he and Brighteyes slain?

The following day the strangers made very free with the beaver's pond, or at least Shaggycoat thought so, as he watched them covertly from a bunch of alders that grew partly in the water.

What right had they to go paddling about in their great red duck just as though they owned his lake?

They stopped at the island and examined the dilapidated lodge critically, but they took still greater liberties, for they finally dug a hole in the side of the house and one of them stuck his head inside.

They were much interested in the beaver's dwelling and seemed to be trying to find out all about him.

It angered Shaggycoat extremely to see all these liberties taken with his possessions, but what could he do against the strangers with a thunderstick that could kill a tall buck? So he discreetly kept out of sight, knowing that he could repair the house in a few minutes if they would only go away and leave the lake to its rightful owners.

At night the strangers again killed a duck with the thunderstick and drawing their canoe upon the bank, made a fire.

Shaggycoat determined to go nearer to them that night and see if he could discover what kind of creatures they were. He had just left the burrow upon his hazardous expedition, when he heard a pounding that reminded him of the pounding on the ice when the trappers had come and cut holes in the ice about their lodges. It could not be that they were cutting holes in the ice now, for there was no ice, but the steady pounding filled him with dread.

Again Brighteyes counseled that they flee at once, leaving all to the strangers, but Shaggycoat would not go.

When the pounding ceased and the usual quiet reigned, for there was always the sighing of the wind, or perhaps the hooting of an owl, he crept cautiously forth to see what these meddlesome creatures had been doing.

The first thing he discovered alarmed him extremely. The water was falling and there was a great hole in his dam. Why not flee at once? But where? Had not he and his grandfather fled for days and weeks, and the strangers had found him out at last. They would discover him if he fled again.

But the rapidity with which the water was falling alarmed him more than even the thought of these dread strangers. If it should fall below the mouth of their burrow, their enemies could get them. The break in the dam must be repaired at once. So he hurried back to the burrow and told his mate and they set to work.

First they sought to stem the flow of water temporarily, until they could do it thoroughly. So they swam up the lake fifteen or twenty rods and going ashore gathered each an armful of weeds and cattails. These they carried to the dam, holding them in their arms and swimming in a more upright position than usual.

They threw the weeds into the break, but the swift current swept them away in a very few seconds. This would not do, they must try something more substantial. So Shaggycoat went ashore and cut strong stakes and stuck them in the mud at either end of the break. Then they cut a dozen alder bushes and laid them across, allowing the stakes to hold them at either end. The current could not sweep this away, but the water still flowed freely through the bushes and something finer was now needed.

So they again swam up the lake and returned with their arms full of weeds. These they wove in and out among the alder bushes. But the work was not complete until they had brought mud and plastered it solid. When this had been done the flow of water was effectually stopped.

Then Shaggycoat sat upon his broad tail and viewed their work critically. He had become so absorbed in repairing the dam that he had for the moment forgotten the strangers who had caused him this trouble.

He was wondering whether they had better bring more mud when a strong puff of wind filled his nostrils with a strange, repugnant scent. It sent a shiver of dread through him, and caused the long hairs to rise upon his neck. Where had he smelled that before. Somewhere he had caught such a scent, and the remembrance of it was not pleasant.

Then it came back to him it was at the old Beaver City, when the trappers were chopping holes in the ice and destroying its inhabitants. The trap also into which he had stepped the summer before had been strong with the same taint. Then the beaver's eyes grew big with wonder and fright, for there in the tree above him, not fifty feet away, he saw one of the dreaded strangers watching him. With a resounding slap his tail smote the water and a second later only a ripple showed where the beaver had disappeared.

The following morning the meddlesome strangers loaded their belongings into the great duck, carried it around the end of the dam, and paddled away down stream.

It was with great joy that Shaggycoat observed these movements on their part, from his place of hiding.

But he thought they might be trying to fool him, so followed at a distance.

When he had seen them round a bend in the stream nearly a mile from the dam, he concluded that their leaving was no sham, and went back to his lake, well pleased with the turn of affairs.

He and Brighteyes and another pair of beavers who had returned with him from his summer ramble began work on the dam, and by the time the first freeze came it was strong and symmetrical, and higher and longer than it had been before. This made the water set back and several families of musquash, who had built along the shore of the lake, were drowned out, and obliged to gather new supplies of winter edibles.

This angered the muskrat families, who revenged themselves on the beavers in a way they did not like.

In the morning when the builders left off working on the dam, it would be in good shape, but by twilight it would be leaking.

Examination showed many holes tunneled through the mud, which made the dam leak badly. For several days Shaggycoat could not discover who was molesting his dam, but he finally set a watchman, and the destroyers were caught in the act. After that whenever a muskrat was seen anywhere near the dam, he was rudely hurried to another part of the lake. When the dam had been repaired the lodge was attended to, but this winter there were two lodges on the island instead of one.

The forest was now entirely denuded and the naked arms of maple and poplar swayed fitfully in the rude gusts of the boisterous early wintry wind. In its mad careering down the aisles of the pathetic forest it caught up the dead leaves and whirled them about gleefully.

Summer had had its day, and November must now have its inning.

Down from the distant foothills which were now sere and brown came a shuffling, shambling black figure, closely followed by two little shuffling, shambling figures. It was evident that more strangers were coming to the beaver's lake.

They sniffed at the bushes, and poked under the dead leaves inquisitively as they came. Whenever they discovered nuts they ate them greedily. These figures were not agile, like most of the denizens of the woods, but rather clumsy. Whenever they planted their large paws (which were armed with massive claws) upon a twig, it crunched under the weight with a muffled sound.

It did not snap as it would have done under the hoof of a deer, or crack as under the hoof of a moose, but it simply crunched.

The figures did not go stealthily like the cat family or furtively like a fox, but there was a certain cunning in their manner which was more shrewd than suspicious.

Whenever they crowded through heavy underbrush they occasionally left long black hairs, which hunters would at once identify as coming from the warm winter coat of Bruin.

An old mother bear and two cubs were making their way down towards the beaver's lake, which they had seen from the foothills.

The old bear was leading the way, as was her wont, and the cubs were following like dutiful children.

There were no sheep folds in this wilderness, so far from the haunts of man, and as for pig, the old bear had not tasted it since early in the spring. Some instinct or intuition told her that the beautiful forest lake was the work of a beaver, and if their houses had not been frozen up too hard, they might be broken into and made to pay toll to the family of Bruin.

(To be continued.)

Just Between Ourselves

Dear Boys:

"Hurrah for The American Boy with no advertisements on its front cover!" shouts Harold Ranney of Fredonia, New York. Other words have come to me that make me think what I said last month regarding front covers pleased our readers. But I have had some boys tell me they did not object to the advertising because "it is not the outside of the paper that a boy reads, but the inside." So writes Robert W. Parsons, of Terre Haute, Indiana. He adds, "It does not make the paper quite so attractive to have advertising on its outside cover, but I should think the six hundred dollars a month could be used to make the paper a great deal more attractive on the inside." And so it goes. I presume there is no question on which all of us can agree. The front cover question, however, has been settled—there will be no more advertising on front covers. Now I will let you into a secret: Beginning with the September number, our covers will be in two colors and very attractive. How do you like the cover this month? Isn't it a work of art? The July cover is going to be one that will make every boy's pulse beat high. By the way, the July number is going to have some extra fine features, and I hope no boy will let his subscription expire and thereby miss what is coming.

THE SHUT-IN FUND.

I am delighted with the response to the suggestion I made last month that the readers of The American Boy subscribe as much as they can, even though it be but a few cents each, to the building up of a fund that will permit us to send the paper to bed-ridden, shut-in boys who cannot afford to buy it. At this writing The American Boy has not been in the hands of its readers more than five days, and there has not been time for us to hear from points other than those near at hand; and yet many boys—(see list in another column)—have sent in their contributions, very liberal in amount, indicating that before the month is over we shall be able to send The American Boy for a year to as many as a hundred shut-in boys; at least, I hope that will be the result. Do not let us end the matter with a hundred. If any boy has failed to read what I said in the May number on page 207, let him now read it. If any boy has forgotten to send in his contribution, let him do so now without fail. There are thousands of shut-in boys in our country who are just as good American boys as we are. Have you ever been sick in bed for a week, and unable to join your boy friends at school or at play? If so, then you have just a little idea—a very little one—of what it means to be confined to the house for months and months, and perhaps years. Let me quote to you from a letter I have just received:

"My Dear Mr. Sprague:

"I am one of the shut-ins you are sending The American Boy to, and I want to thank you most heartily and sincerely. I have been suffering all winter and unable to hold a pen in my crippled hands. For long, weary years I have lain in one position, suffering almost constantly from rheumatism. Faith in God and a determined will have alone made it possible for me to endure such a life. I try to cultivate an optimistic spirit and look on the bright side. There is no condition in life so bad but it could be worse. I will never sit up nor walk again in this world. I am glad the old world is growing better. Such men as you, Mr. Editor, prove that there is more brotherly love and kindness than ever before. May your tribe increase.

"Your grateful friend, etc."

Now that sort of a letter makes me wish that I could put The American Boy into the hands of every sick boy in the United States. Of course there are many sick boys who can afford to buy it, and where such is the case it is their own fault if they do not have good reading matter. But there are thousands of boys, as I have said, who cannot afford to do so. Many of them have not even the necessities of life, let alone its luxuries. I want every boy who reads The American Boy to have a hand in this good work. Every boy who sends us money for this fund, whether it be one cent or one dollar, will have his name published in the pages of The American Boy as a supporter of this fund.

Do you know of any shut-ins to whom you would like to have me send The American Boy, as beneficiaries of this fund? Remember, they must be real shut-ins—that is, boys who are sick or crippled, who cannot go to school and join in the play of their fellows. They need not be "sick abed," but they must be confined to the house or yard and unable to run about. They must be too poor to buy the paper for themselves. Now, if you know of any such, and will give me their names and addresses, I will, so far as the money goes, send them The American Boy. Our part is the contribution of one-half the subscription price; that is, for every cent sent in by our readers we contribute another cent, so that, for instance, as soon as fifty cents has been sent to us, we contribute the other fifty cents, and the paper is sent for one year to some boy. This produces no profit for us; in fact, it is a loss; but it is a sort of loss that is in the end a real gain.

AMERICAN BOY DAY.

Will there be an American Boy Day celebration on a big scale in 1906? You remember that in 1904 a big celebration was held at the Saint Louis exposition, and in 1905 at the Portland exposition. We had all our arrangements made for a big celebration this coming summer at San Francisco under the auspices of the Columbia Park Boys' Club, one of the great boys' clubs of the country, of which Major Sidney S. Peixotto was at the head. He was to be ably seconded by Major Hutchinson, of the Roosevelt Boys' Club of the same city. The great disaster that overtook San Francisco in April upset our plans, and it now remains to be seen whether there is any other community with the spirit and energy adequate to the undertaking. There are several small towns where companies of the Order of The American Boy will celebrate, but what we want is some great celebration such as we had last year and the year before. Who will make the move? We are ready to assist with heart and hand any individual or society that will undertake the responsibility locally. Boys, talk this up among your elders. Why can't you have an American Boy Day celebration in your town?

TO THE LEGION OF HONOR BOYS.

I would like to have photographs of the boys who have won the Legion of Honor Badge, a list of whose names appears on another page of this number of The American Boy. I have in mind the publishing of a big group photograph the size of a page of The American Boy. Our badges are going like hot cakes. They can't go any too fast to suit me. I want the names and addresses of honor boys in school, and young heroes, but, before sending them in, read what we say regarding the conditions under which these badges are given.

STORIES WRITTEN BY BOYS.

Perhaps nothing connected with the editing of The American Boy gives me so much regret as the necessity that arises daily of returning to boys stories they have written and submitted to me for publication. I could fill The American Boy with such stories. Notwithstanding the fact that I have said many times that we could not print such stories, they keep on coming. If we were once to allow such stories to make their appearance in The American Boy, we would be flooded by them. Long ago we had to decide whether or not to print stories written by boys. There could be but one decision. While a boy's story interests him and his friends, and perhaps might interest a few others, yet the many thousands of readers of The American Boy demand stories written by experts. They are not paying for a paper written by juveniles, but they are paying for, and have a right to expect, a paper written by the best story writers for boys that can be found among the men and women of the literary world. There is not room in The American Boy for everything that we would like to see there. You say, "Why not print a page of stories by boys?" If we did that we would be in a peck of trouble. Then, instead of having stories come by ones and twos every day, we would have them by the bushel; for every boy sooner or later tries his hand at a story, and every boy's story is good, of course. I just have to return your stories to you, boys, and run the risk of offending you. Don't think my doing so means that I want to discourage your writing, or that I disapprove of your efforts. The contrary is the case. But it is simply impossible under present limitations for me to accept such stories.

Yours sincerely,

W. C. Sprague

EDITOR.

The Danger in Mere "Brains"

MOST PEOPLE believe a brainy man can accomplish anything he wishes. "That young man," they say, "is brilliant. He will make his mark in the world."

The power of sheer intellect is largely overestimated; nothing in the world is more futile than mere brains. How many of these precocious young men fulfil the early expectations of their friends? Very few. Endowed as they are by nature with a preponderant brilliancy, they generally tire quickly, having come to consider all things easy before their great genius. Accomplishment of things difficult to others has always required of them only a simple effort, and the result is that will power has not been strengthened by intense and continued effort, so, when the great trial comes and the tremendous obstacle besets, they know not what to do. They see that a mere effort, such as they usually make, will not suffice, so they say "impossible." Then the fellow who has had to work hard all his life looks neither to the right hand nor the left, considers not the difficulty or the hardship, but does the thing next to his hand, and lo! the impossible is done!

"He keeps his purpose," says Fichte, "and whatever he has resolved to do, that he does, were it only because he has resolved to do it." To do the next thing in the inevitable course of events, no matter what advantage might be temporarily gained by swerving from the predetermined path, is to be strong; otherwise, be you brilliant or mediocre, you are weak. Many an ordinary man thus gathers great power. So did Columbus and Luther wield an influence above and beyond themselves.

Says Emerson in his essay on wealth: "Profligacy does not consist in spending years of time and chests of money, but in spending them off the line of your career. The crime which bankrupts men and states is job work—declining from your main design to serve a term here and there. Nothing is beneath you if it is in the direction of your life; nothing is great or desirable if it is off from that."

Our July number will surpass anything ever attempted by a boys' publication.

FROM LOGGING CAMP TO U. S. SENATE

NO MAN IS more capable of giving good advice to boys than a man who is what we call self-made, the man who has overcome obstacles and been undismayed by the hindrances set in his way. Very few boys sail upward to the goal of success "on flowery beds of ease" in our day. Competition is too fierce and there are too many ambitious and determined-to-get-there boys and young men in the field for the plodder and the lover of ease to hope for success.

Senator A. J. Beveridge of Indiana is an excellent example of the successful young man of our day, and after one has read his recent book, "The Young Man and the World," one does not need to ask how he did it. There is little doubt that he has proved in his own early experience the truths he seeks to impress on other young men and on boys who are seeking success of the right kind in life. The very first line in the book contains an incontestable truth. It is this: "Be honest with the world and the world will be honest with you." Then follows this excellent advice: "Do not pretend to be what you are not—no affectations, no simulations, no falsehoods either of speech or thought, of conduct or attitude. Let truth abide in the very heart."

Good enough! This is a pretty keen-eyed age, boys. People are on the alert and they are not to be tricked by any thin veneer of fair seeming. Shams are being discovered every day, discovered and despised. A boy must "ring true" if he wants to make a good impression on the best people of the world today.

Albert J. Beveridge is a United States senator from Indiana although he is a native of Ohio. I think that one would know from the breeziness of his writing and manner that he was a true son of the vigorous West. He is now but forty-four years old and has been a senator for several years. It is doubtful if there is in all the Senate of the United States a man who has risen to his position from lower depths of poverty or from harder conditions than Senator Beveridge has known. His parents moved from Indiana to Illinois soon after the Civil War and from the age of twelve years the life of the boy Albert was one of many privations. He was a plowboy at twelve years of age and a common railroad laborer at fourteen. He was a logger and a teamster in a logging camp at fifteen years of age, and if you have ever been in a logging camp you must know that it is no place for idlers. The work is of the very hardest kind and the hardships are many. Only a boy of tremendous moral force and strong physical power could have lived through all that he lived through in a logging camp and then rise to the position of a United States senator.

Copyright 1905 by Klinedinst
SENATOR A. J. BEVERIDGE OF INDIANA

One day the spirit of ambition, the desire to rise to higher and better things, took possession of the boy in the logging camp and he resolved to "be somebody" in the world. He saved his earnings and went to school and worked his way into De Pauw University. With indomitable resolution he overcame the obstacles in his way. He studied law and then became interested in the world of politics, a world in which there is a crying need of more high-minded men. Today he is a United States senator and is recognized as one of the most brilliant men of his time. What has been done can be done. If one boy can go from plow handles and from a logging camp to Congress other boys can do the same, but they cannot do it without work.

A highly successful man of today was asked not long ago to what one thing more than another he attributed the secret of his great success in life. He made reply in a single word—"Work!" Every truly successful man in the world could make the same reply. Work! That is the open sesame to the best things in this life. "Seest thou a man diligent in his business? He shall stand before kings." I can tell you that he will never stand worthily before even the common people if he is downright lazy. All classes of people have contempt for that sort of a man. No one wants you to become a slave. No one asks you to keep your "nose to the grindstone" all of the time. But don't dawdle away more hours than you work, and don't dawdle when you are supposed to be at work. If you have been set to dust your employer's office, don't dust a few minutes and then stand before the window a few minutes and so keep on working and dawdling. Keep "everlastingly at it" while you do work. Then play as heartily as you have worked. And keep ever in mind this absolute fact that nothing but the noble and the good ever really succeed in the end. Nothing else endures. And never get despondent. Flaunt a flag of defiance in the face of the "blues" and scream "no surrender" in the ears of despondency. Never let anyone make you believe that there is "no chance" for you. It isn't true. There is a chance for every boy with a pair of strong hands, an honest heart and the spirit of the conqueror.

FOUR BOYS IN CAMP

By J. L. HARBOUR

BEGUN IN MAY

PART II

IT IS PUTTING it mildly to write that the walk up that old railroad bed was more than we had bargained for. There had been a great many trestles in the road. Some of them had been burned away by forest fires, and there was not enough of any of them left for us to walk across in safety. We had, therefore, to leave the rough road-bed many times and get across the great gulches and rocky beds of streams as best we could. All of us got more than one tumble, and Simmy came scrambling up out of one stony brook bed with his nose bleeding profusely, while Tad lost his footing in one place and went rolling down an embankment a distance of forty feet.

The country grew wilder with every mile, and we saw no sign of a human habitation as we tramped along. A forest fire was burning among the pines far above us, and hot cinders sometimes fell around us. The decayed framework of one old bridge over which we passed was burning, and there was so much smoke in the narrow ravine in which the roadbed lay that the sun looked like a huge red ball through it. Sometimes a hot wave came sweeping down from the burning timber. I didn't confess it to the other boys, but a mighty homesickness oppressed me for several hours, and I have a strong suspicion that my comrades shared my feeling.

It was up grade all the way, and the road was so rough and we had such difficulty in getting over some of the long trestles that we had not yet come to our destination when the setting sun began to cast long, black shadows into the ravine.

"I think that old chap made a mistake when he told us that it was fifteen miles to Scott's Pond," said Tad. "I think he meant to say, or perhaps he did say fifty miles, and we didn't understand him. I feel as if I had walked forty-nine and a half miles, and if it's more than another half mile I'll give up. Fifty miles in one day on a road like this with forty pounds on my back is my limit. I believe that——"

"Hooray!" suddenly cut in Simmy, who was a few rods ahead of us and had just rounded an abrupt curve in the road. "There she is, boys!"

"She!" retorted Tad. "If there's any shes around here I want to seek seclusion until 'she' disappears, for I never was so dirty since I was born. Who is she?"

"Scott's Pond," replied Simmy. "At any rate I think it's the pond. It's a good-sized sheet of water, and there's an old building on the bank that must be the engine-house that old man spoke of."

"I guess it's Scott's Pond all right," I replied, and so it proved to be.

A drearier spot than Scott's Pond could not well have been found. It was a good-sized sheet of water surrounded on all sides by timber growing to the very edge of the water. Reeds and rushes appeared above the water close to the shore. A small raft with most of the boards gone floated near the shore. Empty meat and sardine cans and the ashes of a fire gave proof of the fact that it had not been long since there had been campers on the shore of the pond. Presently Simmy found even more convincing proof of the recent campers, for on one side of the old engine-house was pinned a leaf from a note-book, and on the leaf was written with a lead pencil:

"No Fish in this Here Pond. Nothing but Pollywogs an Loansomer than Robinson Crewso's Iland. Bewair of Snaiks, Cattymonts, Bares and Liakses and Spooks. The woods is full of them and the pond is Hanted. Best Sleap with one Eye open."

The date of this startling communication indicated that it had been but ten days since the writer had fastened it with pins to the wall of the ricketty old engine-house. Simmy called to us to come and read the communication, and when we had done so Tad said:

"I guess some one did that for a joke."

"Mighty poor joke," said Benny Kidson, gloomily.

"I vum if it don't look around here as if all he's written might be true," said Simmy, ominously.

"The engine-house would have been a poor protection had all that was written on the scrap of paper been true. Its large, double doors were lying on the ground. Boards were missing on all sides of it, and two or three feet of the lower end of nearly all of the "up and down" board siding had rotted away.

The sky had been overcast for several hours and suddenly it began to rain in perfect torrents, and darkness set in fast. We were glad to find that the roof of the engine-house leaked but little, so the building afforded us a dry place of shelter. Some old railroad ties made a good fire, and we got out our provisions and ate supper. But we were far less hilarious than we had been in our camp the night before. We were weary almost to the point of exhaustion, and Scott's Pond would have been disappointing even had we not found the unpleasant notice fastened to the wall of the engine-house. Even the rollicking Tad seemed a good deal subdued, but after eating a pan of hot canned baked beans and a lot of crackers, washed down with some coffee, a good deal better than I had made that morning, his spirits rose to such a degree that he said:

"Say, boys; this isn't half bad after all. And if it keeps on raining like this I guess the bears and catamounts and spooks will stay in their lairs tonight, and we can clear out of here tomorrow."

"We'd better clear out, sure," said Benny.

The rain and the lateness of our arrival at the pond made it impossible for us to gather any hemlock boughs for beds. There was a litle hay in a corner of the engine-house. We spread this on the bare ground floor of the building near the fire, unpacked and unrolled our blankets, and prepared to go to bed soon after supper. It was still raining "great guns," as Tad said, and he also declared that it was "as dark as a stack of black cats." The wind had risen and the old engine-house creaked and shook in a way that made us fear it might come down over our heads. Some of the loose boards flapped constantly, and we could not well have been in a more dismal situation. It was hard to keep up our drooping spirits, and I heard Benny sigh as he wrapped himself in his blanket and laid down on the scanty bit of hay. The rest of us soon followed his example, but we were in that peculiar state of physical weariness that causes people to say that they are "too tired to sleep." This always means an unstrung condition of the nerves, and few boys of our years would have been in any other condition situated as we were. We had never before camped out, and Benny Kidson had told us before we left home that he had never slept away from home a night in his life. He was only fifteen and, being an only child, he had been "babied" a good deal. He covered his face with a corner of his blanket when he laid down and I was sure that he was having all he could do to keep from crying. Before we laid down Tad and I went out to carry in three or four of the old railroad ties, fearing that if we did not do so they would be too water-soaked to burn in the morning, and we would have no dry fuel with which to cook our breakfast. When we were outside the engine-house Tad said in a low tone,

"Benny's mighty homesick."

"Aren't you, too? Honest Injun?" I asked.

Tad laughed and said evasively,

"Shucks!"

The ties were not more than twenty feet from the building, and we had found our way to them and were feeling for one of the ties when we heard a low and ominous growl.

"What's that?" Tad and I said in the same breath, and I clutched at Tad's arm.

The growl was repeated, and we made for the engine-house as fast as our legs would carry us. I stumbled and fell headlong and Tad said afterward that as I struck the ground I yelled,

"Wait, Tad! Wait for me!"

He did not wait, but I jumped to my feet so speedily and ran so fast that I was not four feet behind him when he ran into the engine-house.

"What's the matter?" asked Simmy, who was sitting by the fire.

"Bears, I guess!" said Tad.

Simmy jumped to his feet, and Benny threw the corner of the blanket from his face and said as he drew himself to a sitting position,

"What's that you are saying?"

"We heard something, sure as guns!" I said.

"Is 'something' bears?" asked Simmy.

"It may be," I replied. "We heard a fearful growl out there by the pile of ties, didn't we, Tad?"

"O Johnny get your gun!" quoted Simmy.

"That's what I am going to do," said Tad.

Tad was the only one of the party who had a gun of any kind. His older brother had loaned Tad a revolver, and had given him full instructions in regard to the right use of it. Tad took the revolver from his knapsack and went to the edge of the open end of the building.

"Scat!" he said.

"The idea of saying 'scat' to a bear!" said Simmy. "Why don't you say 'shoo' or 'go 'way, you naughty thing!' or something really terrifying."

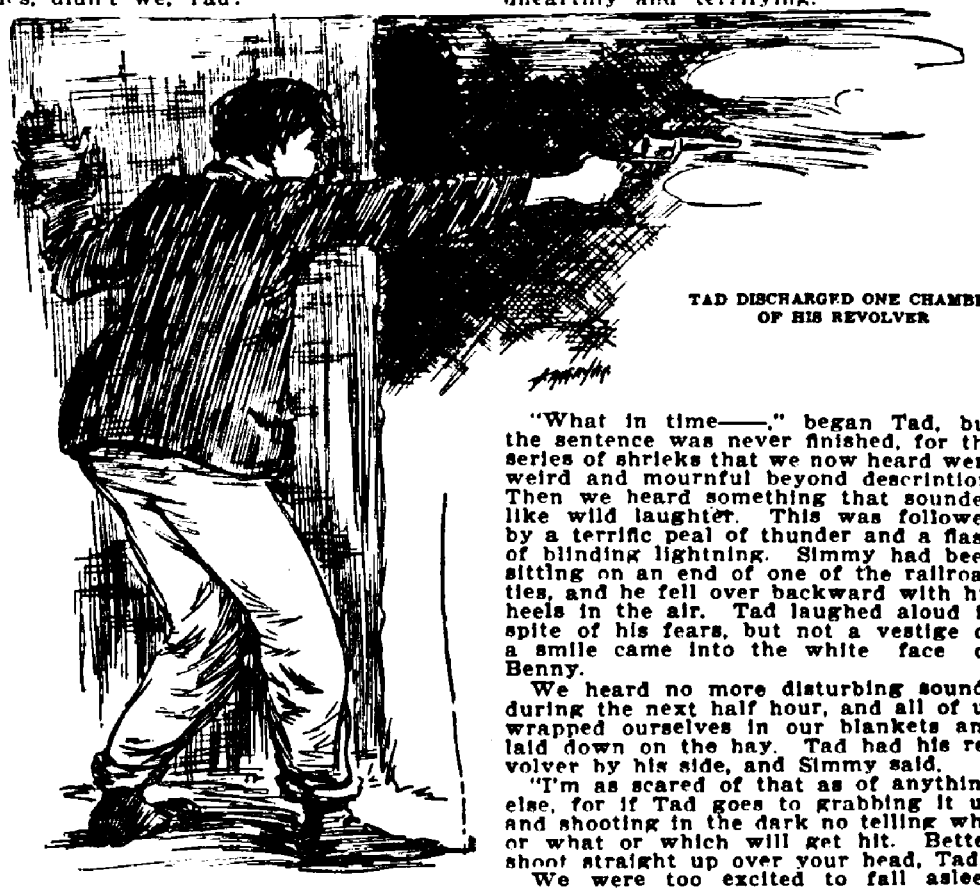
Tad discharged one chamber of the revolver, and we distinctly heard some animal scurry away in the darkness. We heard the underbrush crack. Tad said later that Benny's eyes stood out as big as saucers and his teeth chattered.

"I don't believe that it was a bear," said Tad. "It may have been a fox."

While we were sitting by the dying embers of the fire discussing the matter, Tad and I again said in the same breath,

"What's that?"

There had suddenly risen above the noise of the storm a series of the most unearthly yells and screeches coming, apparently, from out in the pond. We listened with bated breath. The blood-curdling sounds were repeated. Benny Kidson's face showed ghastly white, and Simmy's mouth was wide open, although no sound came from it. Tad had given a little jump, and I have no doubt that I looked as scared as any of them. I am sure that I did if I looked as I felt. Again and again were the wild cries repeated, varying some in character but always unearthly and terrifying.



TAD DISCHARGED ONE CHAMBER OF HIS REVOLVER

"What in time——," began Tad, but the sentence was never finished, for the series of shrieks that we now heard were weird and mournful beyond description. Then we heard something that sounded like wild laughter. This was followed by a terrific peal of thunder and a flash of blinding lightning. Simmy had been sitting on an end of one of the railroad ties, and he fell over backward with his heels in the air. Tad laughed aloud in spite of his fears, but not a vestige of a smile came into the white face of Benny.

We heard no more disturbing sounds during the next half hour, and all of us wrapped ourselves in our blankets and laid down on the hay. Tad had his revolver by his side, and Simmy said,

"I'm as scared of that as of anything else, for if Tad goes to grabbing it up and shooting in the dark no telling who or what or which will get hit. Better shoot straight up over your head, Tad."

We were too excited to fall asleep

WE MADE FOR THE ENGINE HOUSE AS FAST AS OUR LEGS COULD CARRY US

readily, and we were all awake when we had been lying for half an hour on the hay. I was just dozing off when I felt Simmy nudge me with his elbow, while he said,

"Listen, listen! What can that be?"

All of us heard the "sniff, sniff" of an animal of some kind at the farther end of the building. Our fire had almost entirely died out and the few dull coals that were left sent forth no light. We sat up in our blankets and listened.

"Scat!" Tad suddenly yelled, frightening Benny so badly that he gave utterance to a loud scream.

The sniffing sound ceased, but it was repeated in a few minutes. It was certain that there was an animal of some kind at the other end of the building where there were so many boards missing that an animal of large size could easily have entered. I picked up one of the smoking brands from the fire and flung it in the direction from whence the sound came. We heard something jump as the brand struck a timber and sent forth a few sparks. Tad fired his revolver and we heard the creature hurry away into the darkness.

"I tell you what it is, gentlemen," said Simmy. "I'm going to start up the fire and sit up. I don't propose to lie here and be eaten up in my sleep. I can't sleep anyhow, after all we've heard in this miserable hole."

"Supposing two of us sit up and keep guard half the night and then the other two take their places," said Tad.

We agreed to this, and Simmy and I agreed to sit up during the first half of the dismal night. We sat up until eleven o'clock, and then we grew so sleepy that Simmy said,

"Say, we haven't heard anything more, and I propose that we lie down and go to sleep with the other boys."

This we did without disturbing Tad and Benny, who were sleeping soundly. Simmy and I soon wandered off into dreamland, and I knew nothing more until the sharp report of a pistol aroused me and Tad cried out,

"I've hit him this time! I've hit him! Hear him thrash around! Get up, boys, and let's see what it is!"

(To be continued.)

BIG CANNON SHOTS

By CAPTAIN A. B. HAWSER

The Russo-Japanese war was so full of big things that a little reminiscence like mine may seem very trifling. But I will tell it because it conveys some interesting truths about the wonderful power of big guns.

I took a merchant vessel into Port Arthur by running the Japanese blockade one night. The next day the Jap warships opened a furious attack on the outer coast defences of the port and as I had landed close under them, I was in position to study the effects of great gun fire.

Well, the bombardment didn't do much harm. Most of the projectiles buried themselves in sand and even when the shells exploded they did little except kick up a lot of dust. But one big 900 pound projectile from a 12-inch rifled cannon did strike a plate of nickel steel Krupp armor straight and true, and it went through the fourteen inches of steel as easily as a drill would go into soft pine. It cut a round hole into the plate the edges of which were as smooth and sharp as if they had been bored by the finest tools.

When I went up to look at the plate about twenty minutes after the shot had been fired, it was so hot that I could not bring my face near enough to it to examine it. For half an hour it continued to sing and crack from the heat that had been engendered by the fearful impact. Later on we discovered another queer thing. For an experiment, one of the Russian officers had the shell dug out of the sand mound in which it had buried itself, and after soldiers had swung it on chains and raised it with a crane, they tried to force it through the hole that it had made. It would not go in. In other words, it had hit the plate with such tremendous might that it had not even made a hole as big as itself. In that moment of striking, both the hard steel of the shell and the nickel steel of the armor had been compressed and thus the shell had actually passed through a hole too small for it.

After the hole in the plate had cooled enough so that I could put my head in, I found something else that showed me the absolutely inconceivable power of these modern great guns. I found a bit of the soft copper banding that is put around the bases of projectiles to make them follow the rifling of the guns. It is very soft copper—so soft that a man can roll it up in his fingers. But the force of the shot had been so vast that this soft copper had actually been driven into the hard steel armor as a toothpick might be driven into cheese.

To Make Smoke Pictures

Theodore D. Smith, a Bricefield, Alabama, boy, wants the boys to know his plan for making his room more attractive. He describes it as follows: Take a piece of drawing paper and hold it over the flame of a lamp—the chimney being off—until it is smoked thoroughly and is quite black, being careful not to let it scorch. After doing this, select some picture—a snow scene is preferable—and trace it upon the smoked paper with a toothpick or match. With your finger rub off the soot in places where the model is light. A little practice will enable you to make very pretty pictures which, hung on your walls, will make a pleasing effect.

Our June History Calendar

WINCHESTER

MODEL 1906 .22 CALIBER

Extra Light Weight Repeating Rifles

Many a boy has often wished for a repeating rifle such as men use. Men's rifles are too heavy and too costly for most boys. The Winchester Model 1906 .22 Caliber repeater was designed to meet the requirements of young sportsmen, and it will surely suit them in every way, including the price which is low. It is cheap in price but not in quality. Ask your dealer to show you the new Winchester.

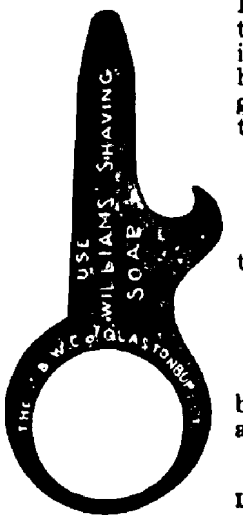
This Funny Shaped Article



Is a handy thing for a boy to have in his pocket—or a man, for that matter. It has a key ring, can be used as a screw driver, is a good paper knife, and you can use it to pull tin caps from bottles. This novelty will be sent free to any boy who will get his father to answer the following questions, and send the answers to us:

What shaving soap do you use?
Why do you use it?
Is it entirely satisfactory?

We want every boy, as well as every boy's father, to know that the best soap to use for shaving, is

Williams' Shaving Soap

because it gives such rich, creamy lather, and a lather that is antiseptic—that is, it is soothing and prevents irritation.

Williams' Shaving Sticks and Shaving Cakes sold everywhere.

Send 4 cents in stamps for a Williams' Shaving Stick or a cake of Luxury Shaving Soap (trial size) enough for fifty shaves.

THE YOUNG BOOK AGENT

OR, FRANK HARDY'S ROAD TO SUCCESS

By HORATIO ALGER, JR.

Author of "Lost at Sea," "Nelson the Newsboy," "Out for Business," "Young Captain Jack," "Ragged Dick Series," Tattered Tom Series," Etc.

Copyright 1905 by Stitt Publishing Co.

"BOOKS! YOU GET RIGHT OUT OF THIS DOORWAY!"

CHAPTER I.
FRANK AT HOME.

FRANK HARDY came up the short garden path whistling merrily to himself. He was a tall, good-natured looking boy of sixteen, with dark eyes and dark, curly hair.

"One more week of school and then hurrah for a long vacation in the country!" he murmured to himself as he mounted the piazza steps. "Oh, but won't we have a dandy time swimming and fishing when we get to Cloverdale!"

His little dog Frisky was at the door to greet him with short, sharp barks of pleasure. Frank caught the animal up and began to coddle him.

"Glad to see me, eh?" he cried. "Frisky, won't you be glad when we get to the country and you can roam all over the fields?"

For answer the dog barked again and wagged his tail vigorously. Still holding the animal, Frank entered the dining-room and passed into the kitchen, where his mother was assisting the servant in the preparation of the evening meal.

"Mother, is father back from Philadelphia yet?" he asked, as he hung up his cap and slipped into the sink pantry to wash his hands.

"Not yet, Frank," answered Mrs. Hardy.

"He must have quite some business to attend to, to stay away so late. I thought I was late myself."

"You are late, Frank—it is a quarter after six. I expected your father in on the half-past five train, but he must have missed that."

"Then he won't be here until nearly eight o'clock. Must I wait for my supper?"

"No; we can have our supper directly. I know you must be hungry."

"I am, mother. Baseball gives a fellow an appetite, especially if he runs bases and plays in the field, as I did. We played the Hopeville Stars and beat them 12 to 7. I made three runs."

"You must certainly love the game?"

"I do. Sometimes I wish I could be a professional ball player."

"I shouldn't wish you to be that, Frank. I want you to go to college and be a professional man," added Mrs. Hardy, with a fond smile.

"Oh, I was only talking, mother. But some professional ball players are college men."

Frank entered the dining-room and sat down to the table. He was soon joined by his little brother, Georgie, and his sister, Ruth, who was twelve years of age.

"How do you get along with your lessons?" he asked of Ruth, who had been practicing on the piano in the parlor.

"I think I am doing real well," returned the sister, who was very fair, with golden hair and bright blue eyes. "Professor Hartman says I will make a good player if I do plenty of practicing. And, oh, I love it so" added the girl, enthusiastically.

"The one who loves it is the one who is bound to make a good player," said Frank. "Now, there is Dan Dixon. His folks want him to learn to play the violin, and he takes lessons. But he doesn't like it at all, and I am sure he will never make a player."

"That is true in all things," came from Mrs. Hardy, as she sat down to pour the tea. "If one wants to do well at anything, one's heart must be in the work. I once knew a girl whose family wanted her to learn how to paint. She hadn't any talent for it, and though she took lessons for two years she never drew or painted anything really worth showing."

"I know what I like real well," came from little Georgie. "I'm going to keep a candy store when I grow up. I like that real well."

"Good for you, Georgie!" laughed Frank. "Only don't eat up all the stock yourself."

"Will you buy from me when I keep the store?" continued the little fellow.

"To be sure, I will—or, maybe, I'll be a salesman for you—and Ruth can be the cashier."

"What's a cashier?"

"The one who takes in the money."

"No, I want to take in the money myself," came from Georgie, promptly.

Thus the talking went on, and while it is in progress and the family are waiting for the return of Mr. Hardy from his business trip, let me take the opportunity of introducing them more specifically than I have already done.

The Hardy family were six in number, Mr. Thomas Hardy and his wife; Mark, who was three years older than Frank, and the children already introduced.

Mr. Hardy was a flour and feed dealer, and at one time had had the principal store in that line in Claster, the town in which the family resided. He had made considerable money, and the family were counted well to do. But during the past two years two rivals with capital had come into the field, and trade with the flour and feed merchant had consequently fallen off greatly.

Mr. Hardy had expected to send his oldest son, Mark, to college, but the youth had begged to be allowed to take an ocean trip, and had at last been allowed to ship on a voyage to South America. He was to return home in seven or eight months, but during the past three months nothing had been heard of him.

Frank, Ruth, and little Georgie all attended the same school in Claster, Georgie being in the kindergarten, and Ruth in one of the grammar grades. Frank was in the graduating class, and after a vacation in the country, expected to prepare himself for high school. He was just now deep in his final examinations at the grammar school, and so far had done well, much to his parents' satisfaction.

"Mother, what took father to Philadelphia?" asked Frank, after a spell of silence, during which he had devoted himself to the viands set before him.

At this question a shade of anxiety crossed Mrs. Hardy's face.

"He went on very important business, Frank. I cannot explain to you exactly what it was. He was to see Mr. Garrison, the man he used to buy flour from."

"Jabez Garrison?"

"Yes."

"I never liked that man, mother; did you?"

"I really can't say, Frank—I never had much to do with him."

"I saw him at the store several times—doing business with father. He somehow put me in mind of a snake."

"Oh, Frank!" burst in Ruth.

"A man don't look like a snake," was little Georgie's sober comment.

"That is not a very complimentary thing to say, Frank," said Mrs. Hardy, somewhat severely.

"I can't help it, mother. He has such an oily, smooth manner about him."

"Your father has spoken of him as a very good friend in business. I believe he gave your father prices which were better than he could get elsewhere."

"Well, he didn't look it. If I were father, I'd keep my eyes on him."

"He went to Philadelphia to make inquiries about Mr. Garrison. I cannot tell you more than that just now."

"Didn't father loan him some money?".

"Not exactly that; but he went his security when Mr. Garrison was made treasurer of a certain benevolent order in Philadelphia."

"How much security?"

"Ten thousand dollars."

"That's a big sum of money."

"Yes, Frank—but I was told that it was more a matter of form than anything else."

"I don't see it, mother. If Jabez Garrison had a lot of money to handle, he could steal it if he wanted to."

"Frank, you are certainly not in love with Mr. Garrison. Did he ever say anything to you?"

"Not a word. Only I don't like his looks, that's all."

Further talk on this subject was cut off by Ruth, who chanced to look out of the bay window of the dining-room.

"There goes the hospital ambulance," she cried. "Somebody must be hurt."

Frank, filled with curiosity, leaped up and ran to the front door, and then down to the gate.

"What's the trouble?" he asked of a boy who was running past.

"Big accident on the railroad, down at Barber's Cut," answered the boy. "Freight train ran into the Philadelphia local, and about a dozen passengers have been killed or hurt."

"The Philadelphia local!" echoed Frank, and for the moment his heart almost stopped beating. "Can father have been on that train?"

He ran back into the house and told his mother the news. Mrs. Hardy was almost prostrated, but quickly recovered.

"I will go down and see if your father is in that wreck," she said. "Frank, you can go along." And a moment later they set out for the scene of the disaster.

CHAPTER II.
DOWN AT THE WRECK.

Claster was a thriving town of four thousand inhabitants, with several churches and schools, a bank, two weekly newspapers, and six blocks of stores. There was a neat railroad station at which two score of trains stoped daily, bound either north or south, for the line ran from Philadelphia to Jersey City.

Barber's Cut was a nasty curve on the line, just south of the town. Here there was a rocky hill, and in one spot the cut was twenty feet deep. At the end of the cut was a hollow where a railroad bridge crossed Claster Creek.

Frank and his mother found a great many of the townspeople hurrying to the scene of the wreck. All sorts of rumors were afloat, and it was said the passenger cars were on fire, and the helpless inmates were being roasted alive. The local fire department was called out, but fortunately the fire was confined to a freight car loaded with unfinished wagon wheels, so but comparatively little damage was done through the conflagration.

The rumor that a dozen passengers had been killed or hurt was false. But four people on the passenger train had been injured, and only one severely—this man having several ribs crushed in and an arm broken.

"I don't see anything of father," said Frank, after he and his mother had looked at three of the injured persons. "I guess he wasn't on this train after all."

"It is very fortunate."

"Your father was on this train," said a man standing near. "I was talking to him just a short while before the smash-up occurred."

"Oh!" ejaculated Mrs. Hardy. "Then where is he now?"

"There he is!" burst out Frank, and pointed to a form which four men were carrying from a wrecked car. "Mother, he is—is hurt. You had better go back and I'll—I'll tend to him." Frank found he could scarcely speak, he was so agitated.

"My husband!" murmured Mrs. Hardy, and ran forward with Frank at her side. "Oh, tell me, he is not—not dead?"

"No, ma'am, he isn't dead," came promptly from one of the men. "He got his foot crushed, and he's fainted, that's all."

"Thank Heaven it is no worse!" murmured Mrs. Hardy, and when the men laid her husband on the grass above the cut, she knelt beside him, and sent Frank down to the creek for some water with which to wash Mr. Hardy's face, for it was covered with dust and dirt.

As Frank ran down to the creek for the water he saw something shiny lying in the grass. He picked the object up, and was surprised to learn that it was a silver spectacle case, containing a fine pair of gold-rimmed spectacles.

"Somebody dropped these in the excitement," he reasoned. "I'll have to look for the owner later;" and he shoved the case into his pocket.

Of the four that had been hurt two were removed to the hospital and the others were taken to their homes. Mr. Hardy was carried to his residence, and there his physician and his family did all they could to make him comfortable.

"The foot is in rather bad shape," said Doctor Basswood. "Yet I feel certain I can bring it around so you can walk on it as before. But it will take time."

"How much time, doctor?" questioned Mr. Hardy, faintly.

"Four or five months, and perhaps longer. But that is much better than having your foot amputated."

"True. But I can't afford to lay around the house for six months."

At this the physician shrugged his shoulders.

"It's the best I can do, Mr. Hardy."

"Oh, it is not your fault, doctor. But——" Mr. Hardy paused.

"You are thinking of your store?"

"Yes."

"It is a pity your son, Frank, isn't older. He might be able to run it for you."

"Unfortunately, Frank knows little or nothing about the business. I have kept him at school."

"Perhaps you can get a good man to run it for you."

"Perhaps. I don't know what I'll do yet."

"What do you do when you go away, as you did to-day?"

"I lock the place up, and leave a slate out for orders. Trade is not as brisk as it used to be."

"You mean as it was before Benning and Jack Peterson started in the business?"

"That's it. The town can't support three flour and feed stores."

"Won't your old customers stick by you?"

"A few of them do; but both Benning and Peterson are doing their best to get the trade away from me. They offer all sorts of inducements, and sometimes sell at less than the goods cost, just to get a customer."

"Nobody in business can afford to do that very long."

"They want to drive me out, and each wants to drive out the other. Then the one who is left will make prices to suit himself;" and here Mr. Hardy had to stop talking, for he felt very much exhausted.

In the meantime Frank had been sent down to the drug store for several articles which the doctor had said were needed for the injured man. While he was waiting for the articles a burly and rather pleasant-faced man came in and purchased a handful of cigars.

"Is there an optician in town?" questioned the man of the druggist. "I was in that wreck, and somehow I lost my glasses, and I want to get another pair."

"The watchmaker across the way keeps spectacles," answered the drugist. "But if he can fit you or not I don't know."

"I'll try him," said the man, and started for the door.

"Excuse me," put in Frank, stepping up. "What sort of spectacles did you drop?"

"Did you find them?"

"Perhaps I did."

"Mine were in a silver case. They are thick glasses, with a gold frame."

"Then these must be yours," and Frank drew the case from his pocket and passed it over.

"They are mine!" cried the burly man, and looked well pleased to have his property returned to him. "Where did you find them?"

"In the grass between the wreck and the creek. I was down at the creek getting some water for my father, who was hurt. I almost stepped on the case."

"I see. So your father was hurt. Which one was he?"

"He had his foot crushed."

"Oh, yes, I remember. They took him to your home up the street."

"Yes, sir."

"I hope the hurt isn't serious?"

"It's bad enough. But Doctor Basswood says he can save the foot."

"Well, that's a great consolation. It's no fun to have a foot cut off. May I ask your name?"

"Frank Hardy."

"Mine is Philip Vincent. I am very much obliged for returning the glasses to me."

"Oh, that's all right, Mr. Vincent. I was going to hunt up the owner as soon as everything was all right at our house."

"These glasses are a very fine pair, and I prize them exceedingly. Let me reward you for returning them," and Philip Vincent put his hand in his pocket.

"I don't want a reward, sir," said Frank, promptly.

"But I want to show you that I appreciate having them returned," insisted the burly gentleman.

"It's all right."

"I'll tell you what I'll do. I'm in the book business in New York. I'll send you a good boy's book. How will that suit you?" and the gentleman smiled blandly.

"I must say I never go back on a good story book," answered Frank, honestly.

"Most boys like to read. I suppose you go to school here?"

"Yes, sir."

"Well, I shan't forget you," concluded Philip Vincent, and shaking hands, he left the drug store.

"What a pleasant kind of a man," thought Frank. "I'd like to see more of

him." And then he wondered what sort of a story book Mr. Vincent would send him.

A little later Frank obtained the articles needed from the druggist, and then he started for home. He did not dream of the disagreeable surprise which was in store for him.

CHAPTER III.

DISAGREEABLE NEWS.

"How is father feeling?" asked Frank when he entered the house with his packages under his arm.

"I think he is a little feverish," answered Mrs. Hardy.

"Does his foot hurt him much?"

"He says not. Doctor Basswood put something on to ease the pain." Mrs. Hardy paused for a moment. "Your father brought bad news from Philadelphia," she continued.

"What bad news, mother?"

"It is about Mr. Garrison. He has got into trouble with that benevolent order."

"What kind of trouble?"

"There is a shortage in the funds of the order."

"For which Jabez Garrison is responsible?"

"So they claim."

"What does Mr. Garrison say about it?"

"He told your father that it would all be straightened out in a week."

"Does father believe it?"

"He won't say. He is much worried, and I don't wish to ask too many questions for fear it might make your father worse."

"Didn't I say Garrison was a snake?" went on Frank. "I am sorry father trusted him."

"So am I—now. But it can't be helped."

"Do you know what father was going to do about it?"

"He said he had intended to go to Philadelphia again next Monday. But of course, he can't go now."

"Can't I go for him?"

"Possibly, although I don't see what you can do."

"I could have a talk with Mr. Garrison and also with the other men who are interested in the order."

"Well, we'll wait and see how matters turn," said Mrs. Hardy, with a sigh.

The accident had happened on Saturday, and during Sunday Mr. Hardy was decidedly feverish, so that the doctor had to come and attend him twice. The night to follow was an anxious one for the whole family, but by Monday noon the sufferer felt much better, although, on account of his crushed foot, he did not dare to move.

The store had been closed, but before and after school Frank delivered the orders that were left on the slate, and also went to such customers as his father mentioned. Trade was indeed slow, and the boy could readily see that the two rivals of his parent were doing the larger portion of the business. And this was not to be wondered at, since each had a fine location and made a very attractive display. If the truth must be told, Mr. Hardy was a bit old-fashioned in his ways, and he allowed his rivals to go ahead of him without much of a protest.

"I wish I knew all about the store," thought Frank. "I'd go in for all the business there was."

A letter had been sent to Jabez Garrison by Mrs. Hardy—the letter being dictated by her husband—but Wednesday passed without any answer being received. On this day Frank returned from school, stating that the final examination was at an end.

"And I received ninety-three per cent out of a possible hundred," said he, with just a little pride.

"You have certainly done very well," answered Mrs. Hardy, and gave him a fond kiss. "Then you are sure of your grammar-school diploma?"

"Of course."

"I am very glad to hear it, Frank."

"How is father?"

"No different from what he was this morning. He is very anxious to hear from Mr. Garrison."

"Then you have no word yet?"

"None whatever."

"I don't like that."

"Neither do I."

"Perhaps I'd better go to Philadelphia for him after all."

"He says he will wait another day."

The next day passed and still no word was received.

"Frank, do you think you could talk to Mr. Garrison?" questioned the boy's father.

"Yes, sir—if you'll tell me about what you'll want me to say."

"I want to find out just how he stands in relation to that benevolent order. If you can't find out from him I want you to go to Mr. Bardwell Mason, the secretary. Here is his address on a card. I want to know exactly how matters stand."

"What shall I do if I find Mr. Garrison has used up some money that doesn't belong to him?"

"Tell him for me that he must straighten out the matter at once. If he does not I shall apply to the authorities for protection."

"Could the authorities make you pay that ten thousand dollars if Jabez Garrison didn't pay it?"

"Certainly, if he was in arrears that amount."

"It's a big sum of money, father."

"To lose that amount would ruin me, Frank."

"Ruin you?"

"Yes. Business is so bad that I need the money to help matters along. If I lose the cash I'll have to close up or sell out."

"Then I think you ought to get after Mr. Garrison without delay—or let me get after him."

"I do not wish to appear too forward—in case everything turns out right, Frank. Mr. Garrison has done me some good turns in business in the past."

Father and son had a talk lasting the best part of an hour, and then Frank came up to his room to prepare himself for the journey.

The youth had been to Philadelphia several times during the past two years, so he knew he would not feel as strange as though the city was totally new to him.

The wreck on the railroad had been cleared away in a few hours after it occurred, so there was nothing to hinder the trains from going through on time. Frank left home at ten in the morning and promised to be back by eight o'clock in the evening, or else to send a telegram stating why he was detained. If necessary he was to stop over night at a hotel his father mentioned to him.

The day was a bright, clear one in late June, and had our hero not had so much on his mind he would have enjoyed the trip very much. As it was, however, he could not help but think of what was before him, and of just how he should approach Mr. Jabez Garrison when he met that individual.

"I musn't say too much," he reasoned. "And yet it won't do to say too little. My opinion of it is, that father is altogether too easy on him. A man who can't act on the square when he is handling money belonging to others doesn't deserve nice treatment."

It was some time before noon when Frank reached the Quaker City, as Philadelphia is often called. The ride had made him hungry, but he determined to call on Jabez Garrison before hunting up a restaurant for lunch.

The office of the wholesale flour and feed merchant was on Broad street, and hither Frank found his way.

"Is Mr. Garrison in?" he asked of the clerk who came forward to meet him.

"What name, please?"

"Frank Hardy. I was sent here by my father, Thomas Hardy, of Claster."

"I'll see if Mr. Garrison will see you. He is very busy at present."

"Tell him it is very important."

The clerk walked to the rear of the place and entered a private office, closing the door behind him.

Frank heard some strong conversation for several minutes and then the clerk returned.

"Mr. Garrison is very sorry, but just now he cannot see you, as he has an important account to look after. He says if you will call at three o'clock this afternoon he will see you, and explain everything to your father's entire satisfaction."

"At three o'clock," repeated Frank.

"That's it. Just now he has got to look after an account that is worth something like fifteen thousand dollars to him."

"All right then. I'll call at three o'clock sharp," said our hero, and left the place.

The statement the clerk had made was rather reassuring, for if Jabez Garrison had an account of fifteen thousand dollars coming to him he certainly could not be in a very bad condition financially.

"Perhaps this unpleasantness will all blow over after all," thought Frank. "Father may be right, and I may be misjudging this man."

He found a restaurant that suited him, and as he had a long time to wait, took his leisure in eating. Then he visited several department stores, spending a full hour in the picture and book departments. Books particularly interested him, and as he had a quarter to spend he let it go in the purchase of a volume which was slightly soiled, and therefore sold to him at one-third of its real value.

"I wouldn't mind owning a bookstore of my own," he said to himself, as he set out once again for Jabez Garrison's offices. "It's a business that would just suit me. I wonder if Mr. Philip Vincent has a place as large as that department I just visited?" And then he wondered when the gentleman from New York intended to send the book he had promised.

When Frank arrived at the flour dealer's offices the clerk met him with rather a troubled look on his face.

"Mr. Garrison isn't here," he said. "He went out about two hours ago, and I can't say how soon he'll be back."

(To be continued)

When Frank Ran Away

By S. ROWLAND HALL

A FLOCK of crows, startled by the skulking figure underneath, dashed out of the treetops with noisy caws. Their alarm was needless, for the boy hurried on.

The sun was almost down when he reached the bank of the great Yeocomico. The river looked like a mirror, in the soft shades of the dying day. Away across its banks another lad was singing as he fed the stock for the night. His happy, mellow music, floating over the river, brought a choking sensation to the throat of the runaway. At home hungry beasts were calling impatiently and vainly for his familiar voice and step. But Frank Morris had no time now to think of these things. He was tired, but he trudged on up the bank of the river toward the ferry wharf.

Suddenly his melancholy thoughts were dispersed and his heart made to beat faster by a sound he knew well. It was the whistle of the Georgianna, blowing the three signal blasts for the wharf. He had heard the noise of her wheels some time before, but had thought it distant rumbling of thunder. He would have to run; and even then, unless there was much freight for the steamer, she would not remain at the wharf long enough for him to get on board. It would be two days before the steamer would come in the river again. If he missed, it might mean to be taken back home in disgrace. The thought filled his heart with despair, as he sped on in the growing darkness.

He had not gone half a mile before the steamer's departing blast smote loudly on the chilly night air, and utter hopelessness took possession of his heart. He threw himself on the ground and groaned; then he suddenly sprang up and ran swiftly down to the bank of the river. He had remembered that the channel along the river was marked out by numerous bush buoys—buoys made of three or four small trees driven in the mud and nailed together. He would swim out to one of these buoys and hail the steamer as she came by. This was his last hope. He undressed hastily and tied his clothing in a bundle that he fastened on his head. Then wading out into the cool current, he struck off for one of the little clusters out on the dark channel.

The boy was desperate and lightly considered the risk and foolhardiness of his venture. He had not been swimming long before he heard the distant rumble of the Georgianna's paddle wheels up the river. As he swam, the noise grew more and more distinct until he could hear the thrust of each paddle. A while longer, and, floating on his side, he saw the bright bow light swing around a distant point, then the green and red side lights, as the steamer wheeled and came straight down the river. The boy swam faster now than ever, for he was not sure on which side of the channel the buoy was stationed. He managed to reach the buoy just as the wheelsman put down the steamer's helm to round it. The fugitive held on to one of the braces with his body half out of the water, and waited.

The Georgianna plowed down toward him with the bright bow light shining straight in his face like a great eye. The lad caught a glimpse of the watchman, as he paused at the end of his walk across the forward deck. Now was the time. Lifting himself out of the water, he shouted at the top of his voice. He shouted again and again, but his voice was drowned in the roar of the mighty paddle wheels, as they churned the waters of the channel into foam. He continued to call out piteously, but the Georgianna, with her bright lights and warm, open gangways, a vision of beauty in the night, thundered on past, and the currents of seething water from her wheels almost whirled him from the buoy. He hung there and watched the lights of the steamer vanish in the gloom of the river, hardly knowing whether to sink to the bottom in despair or to swim back to the shore and risk being sent home.

Half an hour later Frank Morris was swimming wearily back to land. Reaching the shore, he put on his damp clothing and wandered up into the woods, then dropped down and cried as if his heart was breaking. Out in the meadows along the river the frogs were chanting the first of their summer night melodies. A wild duck, frightened from his rest, sped up the river in the darkness with his peculiar "widdy-widdy" sound. Overhead the tops of the pines sighed in the gentle wind, and the loneliness seemed ten-fold to the poor runaway boy. For some time he lay there, not knowing what to do next. Then, finding a sheltered spot, he lay down again and slept, with the tall pine trees for his sentinels and with no eye on him save that of the great God above.

While he slept, at home there were troubled hearts and eyes that refused to close. John Morris felt that the chastisement administered to Frank had been deserved and wisely given, but his heart was heavy as he prayed earnestly that no harm might befall him who had rebelled and fled from home and parental authority.

Frank awoke next morning, feeling as if the day before had been a dream. He was stiff and hungry, and would have to go somewhere. He finally concluded to confide in one of the tenants on the farm of his Uncle Addison, a few miles down the river. He struck out through the woods and an hour or so later came out in one of the upper fields. A man was down at the other end, hammering on a plow.

Frank walked slowly across the field, and when it was too late to retreat, the man looked up and recognized him. It was Uncle Addison. His kind eyes caught something of the seriousness of the situation from Frank's appearance, and he had put his hand on the boy's shoulder before Frank could decide what to say. His sympathizing, persuasive tones wrought on the boy's tenderest feelings and he shed tears that relieved some of the bitterness of his heart.

In the twilight of that evening, Addison Morris drove into the lane leading to his brother John's home, with Frank by his side. The boy's face was pale and he felt awkward. He stayed outside with downcast eyes, while Uncle Addison went in and did as he had promised. A few minutes later there were quick steps on the gravel walk, and a wayward boy sobbed out his penitence in the arms of a silent but forgiving father.

DO YOU REMEMBER

"JONAH AN' DE WHALE"

By ERNEST GILMORE

"DE WHITE FOLKS am allus wantin' stories ob befo' de wah!" complained old Uncle Nick. "Why doan ye s'pose de well eber goin' ter get dry?"

"Not while you live," was the answer.

"He, he! Well, den, heah's one moah story an' dat's all. I'se most ninety but my name ain't Methuselah, an' when I'se done, de well 'll be dry shuah 'nuff. He, he! Say, Massa Roland, de old well pears kind o' dry now."

Everybody laughed.

"All right, Uncle Nick, I'll get you the best cup of coffee you ever drank."

"It's mighty fine," was old Uncle Nick's comment after he had drained the cup, "an' now I'll tell you de story ob Jonah an' de whale."

"You needn't," objected someone, "I've heard that story no end of times and read it, too. If you're going to tell me a story, tell me something new."

"He, he! Hole yer hosses. Dat's jess what I'se aimin' at—to tell yer somethin' new—new to yo'—it's bl' nuff for me. Jonah an' de whale—dat's my subjeck, an'," smiling serenely at the listeners, "now here she goes. Once upon a time—long time ago—befo' de wah—(now is yo' satisfied?) dare wuz de bes' massa dat eber libed. His name was Massa Gawdge Clinton—Massa Gawdge we called him, an' what you' s'pose Massa Gawdge call us?"

"Whatever your name was, of course."

"Well, yes, he call us by our names, but 'twas more'n dat I wuz thinkin' 'bout. Massa Gawdge called us 'his people.'"

"That was because you were his slaves—wasn't it?"

"No sech thing. We wuz his slaves, but Massa Gawdge didn't mean dat; he called us his people cause he loved us."

"YO' LOVED YO' MASSA GAWDGE, LITTLE JONAH," SHE SAID

Old Uncle Nick seemed disposed to end his story of "Jonah and the whale" before it was begun. He fell into a reminiscent mood, looking into the sparkling grate fire with eyes "turned backward."

"What about Jonah and the whale?" prompted the most impatient one.

"I'se goin' ter tell yo'. Jonah wuz Aunt Jerushy's leetle witless boy. He wuz all she had an' though she wuz allus scoldin' an' cuffin' him when Massa Gawdge wuzn't aroun', she loved him. Po' leetle Jonah, he wuz allus whar he wuzn't wanted—allus in somebody's way. It wuz his natur. Well, der came a day when little Jonah got in somebody's way once too often. Massa Gawdge and Missie Clinton had a big banquet. All de high-toned folks wuz dare—jess de sclusive set. Land o' Goshen, I kin see dat table ter day an' I mos' ninety. I wuz Massa Gawdge's butler. Seein''twas me dat set dat table I'd oughter know what wuz on it an' I do mostly. Ef yo' could hev tasted dat pigeon pie dat Aunt Jerushy made—you'd hev said that wuz a pie. An' dare wuz baked ham, sweet and tender, all frosted wid I dunno what, an' it had cloves a stickin' in it. An' dare wuz two big tukeys an' Ca'liny tators an' sheeps' tongues an' a big haunch of baked ven'son. But lan' sakes, if I should tell you all dem tings we had fo' dinner—where'd Jonah and de whale come in? I'se jess goin' to slip by a lot ob dem good things cause time's passin' away. Dey'd had dessert—all sorts ob good tings, beginning wid ice cream an' sherbets an' endin' wid some ole sherry dat Massa Gawdge bringed up—wid his own han's—from de wine cellar. It had been in the family fo' generations an' wuz ober a hundred yeahs ole. It came from ober de ocean somewhar—I'se mos' forgot from whar, but 'pears ter me—Massa Gawdge said from Spain. He wouldn't lemme wipe off dem bottles, but took 'em, cobwebs an' all, right in de silver tray to de table. All de guests say dey nebber befo' tasted sech sherry as dat wuz. Dat wuz sech a busy day dat Aunt Jerushy, who wuz de head an' front ob cookin' dat dinner, couldn't look arter Jonah as usual. Dare wuz Topsy an' Sally an' Polly an' Jemimy an' Solomon a helpin' wid de cookin', and dey wuz all flustered. Aunt Jerushy had tole Topsy ter keep an eye on de boy an' Topsy had tole Sally ter keep her eye on him, an' Sally had tole Polly, an' Polly Jemimy, an' Jemimy had tole Sol'mon ter keep his eye on him, an' he wuz an obstinate feller an' so he said ter himself, he wouldn't, an' he didn't. Well, mebbe Sol'mon wuzn't ter blame, 'cause he hed his hands full in de kitchen, 'sides, ter tell de truf, anybody'd had ter hev one eye on purpose if he wuz goin' to keep it on Jonah. Dat boy wuz everywhar. Aunt Jerushy had tole Jonah not to set foot in de front ya'd while de guests wuz dare, dat's de reason he went dar—he semed to think 'twas his duty to obey the law of contraries. Jonah got ter chasin' a butterfly while de guests wuz eatin' de blah'mage an' custards an' fruits an' eberything, an' he chased it roun' inter de front y'ad. De butterfly went roun' de roses an' de lilies an' de myrtle an' de jassamine, an' so did Jonah. But, arter all, he didn't ketch it, an', at last', he give up an' lay down to res'. No one else ever thought ob' layin' down whar Jonah did—right on de po'ch in front ob de do' step. He fell asleep as peacefully as if 'twas de mos' s'cluded place in de world. De firs' guest ter come out de doah wuz Mr. Jerry Dobson. He didn't see Jonah, an'—of course—stumbled ober him, an' down he went on the po'ch. Lan' o' Goshen! Wuzn't he mad? He riz right up an' kicked Jonah viciously.

"'Yo' good fo' nothin' black imp!' he said, 'I'll take de hide off ye!'

"'Yo' will—will you?' 'Twas Massa Gawdge a talkin' an' his eyes wuz blazin', 'I don't b'lieve yo'll hab dat pleasure,' an' then seein' leetle Jonah holdin' his head an' cryin', he wuz down on his knees side ob him, sayin' gently, 'Whar did that—that'—he couldn't say man—'whar wuz yo' kicked, leetle one?' An' when Jonah didn't answer, on'y moaned, Massa Gawdge lifted him up gently, an' carried him right t'roo de front hall an' de dinin' room, and de kitchen an' 'cross de back po'ch an' de ya'd ter Aunt Jerushy's cabin—Missie Clinton a follerin' him an' all de cullud folks a follerin' her. When Massa Gawdge had laid Jonah down on de bed, he sent all de cullud folks 'cept Aunt Jerushy an' me out ob de cabin. Aunt Jerushy wuz a howlin' nuff ter beat de ban'. Massa Gawdge let her howl till he'd 'zamined Jonah, den he said, 'Stop howlin', Aunt Jerushy, Jonah'll come out all right. If dat kick had been jess a little lower on his head he'd been in—in—well, he wouldn't a been here.'

"Massa Gawdge had studied med'cine an' surgery an' he knew what he knew. There wuz big lumps come out on Jonah's temple an' on his arm, and Massa Gawdge put on a lotion an' bound 'em up. But, Massa Gawdge wouldn't leab dat cabin till all de fear died out ob de witless eyes.

"'Nich'las,' Massa Gawdge said ter me, 'go fix up a tray ob de nicest of everything an' bring it here to pore little Jonah.' He wuz standin' by de bed, a lookin' so tender and lovin', an' I see dare wuz tears in his eyes, an' Jonah wuz a lookin' at him wid sech a look as I neber seen on his pore, little face befo', jess as if he wuz mos' dyin' ter ask somethin', but wuz 'fraid ter. 'What is it, Jonah?' says Massa Gawdge. 'What do yo' want ter ask me? Don't be afraid.'

"'I wish I could talk jess like Massa Gawdge did 'stead ob quotin' his words in the cullud folks' dialec'. I wish I could show yo' how he looked dat day a standin' dare in all his beauty. When he said, 'Don't be 'fraid,' I can see de flash of his diamon' ring as he reached out one ob his white han's to press de little black ones. Thus reassured, Jonah stammered, 'I is sorry I is sech a bodder ter yo', but I cayn't seem ter help it, I lov' —yo'—Massa Gawdge.'

"Dare—I see it now—what happened. Massa Gawdge bit his lip—his face quivered, and den—it's de solemn truf, he bent his head an' kissed dat little, witless Jonah on the forehead. 'I love yo,' little Jonah,' he said, 'I love all my people; I'd give a good deal if I could take back dem kicks—God knows I would.' Now, yo' know what kind ob a man Massa Gawdge wuz. Well, the nex' day, Massa Gawdge sent Solomon to the toy store wid a bill, an' when he came back little Jonah could a mos' set up shop, he had so many t'ings.

"Befo' de week wuz gone, Massa Gawdge bought de whale."

"The whale?"

"Yes, that wuz what he called it an' so did we; it wuz a dog wid de bigges' mouf yo' eber saw. I do b'lieve it stretched from eah ter eah. He, he! what a mouf? An' Massa Gawdge gib de whale ter little Jonah. He said ter me, 'Nich'las,' said he, 'that kind ob a dog gets devoted ter its master, it'll get devoted to leetle Jonah an'll be his protector. Nobody'll dare ter kick de pore leetle fellow when de whale's aroun'. De whale ain't goin' ter swallow Jonah, but mebbe it'll have occasion ter swallow other t'ings sech as bites outer trousers,' an' he laughed. I sta'ted ter tell yo' 'bout Jonah an' de whale an' I can't tell yo 'bout all de good t'ings massa wuz allus doin' for his people. It'ud take all night an' den I wouldn't be through. I'll jess stick ter my tex'—Jonah an' de whale. Dey wuz friends from de start. Whar Jonah wuz, dare yo'd allus find de whale, an' whar de whale wuz dare wuz Jonah. An' so de yeahs went by.

"Land o' Goshen! It's mighty hard to t'ink ob dat time when Massa Gawdge died. Oh 'twas dreffu!! When it comes ter me, I allus t'ink of dat verse in Matthew when dat cruel King Herod slew all dose little children in Bethlehem. 'In Rama wuz dare a voice heard, lamentation an' weepin', an' great mournin'. Rachel weepin' for her chillun an' wouldn't be comforted 'cause dey is not.' It wuzn't Rama, but 'twas ole Virginy, an' it wasn't mothers a-weepin' fer der chillun, but 'twas us 'his people' a-weepin' an' a-mournin' 'cause he'd gone to de New Jerusalem an lef' us behin'. Missie Clinton wuz pros'rated wid de awful b'reavement, but she didn't cry, she couldn't, not even when de deah body ob our blessed massa wuz put under de groun'. De doctor tole Aunt Cynthy, who wuz a nursin' Missie Clinton, dat he hoped de tears ud come soon—he said dey mus' come or 'twould be a ser'ous matter. But de tears didn't come. After de fun'ral Missie Clinton shut herself in her room an' wouldn't see any one 'cept Aunt Cynthy. She jess moaned and groaned and cried out, Gawdge! Gawdge!' and that she wished she wuz dead. Poor missie, 'twas a dreffu! blow to her. De arternoon wore away and the night come on. Missie Clinton wuz a-lyin' on de couch when de clock struck nine, Aunt Cynthy keepin' guard. Suddenly Missie Clinton started up, 'What's dat I hear, auntie?' she said. 'I dunno, honey,' was de answer. 'It sounded like a drum—a muffled drum. Dare, don't yo' hea?' And dey both listened. It shorely wuz de sound ob a muffled drum an' de tread ob many feet outside de window.

"Missie Clinton hurried out on de po'ch —Aunt Cynthy follerin'. Dey wuz jess in time ter see de rear end ob a long procession ob cullud men and boys—leetle Jonah bein' de tag end, wid de whale alongside ob him. Missie Clinton wuz as white as a ghost, but she didn't speak, jess stood dare lookin' and wonderin' as she leaned against de big pillar ob dat po'ch. Aunt Cynthy went up close to her an' put an arm aroun' her lovin'ly. 'Lean on me, honey,' she said, and missie did. De scent ob jessamine wuz heavy on de air. On went de ret'nue, two by two, swayin' to an' fro to a low, sweet ha'mony a-soundin' like bye-lo-bye-lo. Dey ma'ched right along to de grave-ya'd an' dare dey stopped 'side ob Massa Gawdge's new-made grave. Dare dey moaned an' cried an' waved de torches. Suddenly dare wuz de fiddle an' de bow, an' de banjo an' de muffled drum, an' den every lovin' voice broke forth in song. Ev'rybody knows dat ob all voices de cullud folks' voices is de fullest ob music. An' w'at yo' s'pose dey wuz singin'? Why jess w'at der hearts wuz full ob, 'Massa's in de col', col' ground'."

"Round de meadows am a-ringin'
The darky's mournful song,
While de mockin'-bird am singin',
Happy as de day am long.
Where de ivy am a-creepin',
O'er de grassy mound,
Dare our massa am a-sleepin',
Sleepin' in de col', col' ground.

Down in de cornfield,
Hear dat mournful sound;
All de darkys am a-weepin',
Massa's in de col', col' ground.

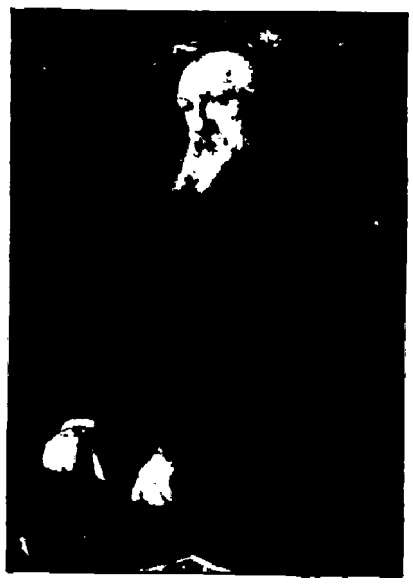
"Massa make de darkys love him,
Cayse he was so kind,
Now, dey sadly weep above him,
Mourning cayse he leave dem behind,
I cannot work before tomorrow,
Cayse de tear drop flow,
I try to drive away my sorrow,
Pickin' on de old banjo.

Down in de cornfield,
Hear dat mournful sound;
All de darkys am a-weepin',
Massa's in de col', col' ground.

"Well, when Missie Clinton heard dat song an' dem voices singin' it, dem blessed tears came at last. Dey jess streamed down her cheeks—no danger of her head goin' back on her, 'cause, yo' see, her heart wuz full. When de procession came back, she called dem ter halt, an' went out alone ter meet 'em. 'Yo' deah people,' she said, 'how yo' love yo' Massa Gawdge, an' how he loved yo'.' Then she shook eb'ry single one by de han'. When she came to de las' one—little witless Jonah—she took both of his han's in hers an' smiled into his face. 'Yo' loved yo' Massa Gawdge, little Jonah,' she said, 'an' he loved yo' an' all his dear people. I love yo', too, yo' an' all my people—God bless yo', every one, an' some day we'll all meet yo' deah massa in "Jerusalem de Golden".' Den, a tinkin' ob Massa Gawdge, she stooped down an' kissed Jonah on de forehead. It wuz still as death for a minute, den dat little witless Jonah looked up in her face a-smilin', 'I loves yo',' he said. 'Twasn't quiet den. Tears wuz rollin' down de men's cheeks like rain an' den dare burst forth a storm ob music dat wuz like a shout ob vict'ry. The torches waved, dare wuz de banjo an' de fiddle an' de bow, an eb'ry voice wuz a singin' 'Jerusalem de Golden.'

"Dat's all—dat's de end ob de story ob Jonah an' de whale." There were tears rolling down the cheeks of the old colored man. But he did not have a monopoly of the tears.

The Good Old Kid Days



AUGUSTE RODIN
AN IMPRESSIVE FIGURE IN THE WORLD OF ART TODAY

A Giant of Free Art

Auguste Rodin, sculptor, is one of the great figures in present-day art. He is the most original, and most discussed. His genius (it is more than talent) entitles him to study; his character properly wins admiration from all good republicans, who appreciate that genuine advance must follow work which refuses to be trammeled by mere tradition.

Rodin has done this from the first. "Freedom in art" is his motto, and since he began to exhibit in 1864 (then only twenty-four), he has governed his chisel by this sole idea. Artists and critics fought such behavior. Rodin was made fun of, belittled, attacked; but he stuck to his guns, and for sixteen years endured opposition without once retreating from his insistent demand for "freedom." In 1880 he "won out," as sportsmen put it, and today is the honored president of that famous International Society of the Fine Arts, and may write half a dozen degrees after his name.

This is a man whose advice is worth hearkening to, and today, when so many American boys are turning to art, especially in its commercial phases, what he says of that high calling is of real value. "Patient effort is one of the two great essentials to success in art. Talent is, of course, the other, but talent can lead to nothing out of the common without the steady determination to add, little by little, day by day, to one's store. Art is a splendid profession, and is becoming better and better paid, but also is it a difficult calling. Problems are to be met and obstacles overcome to the very end of the artist's life, but the fellow willing to go slowly, and able to go steadily, will surely find ultimate victory."

JOHN CHRISTIAN WATSON
AUSTRALIA'S PRINTER-PREMIER

From Printer to Premier

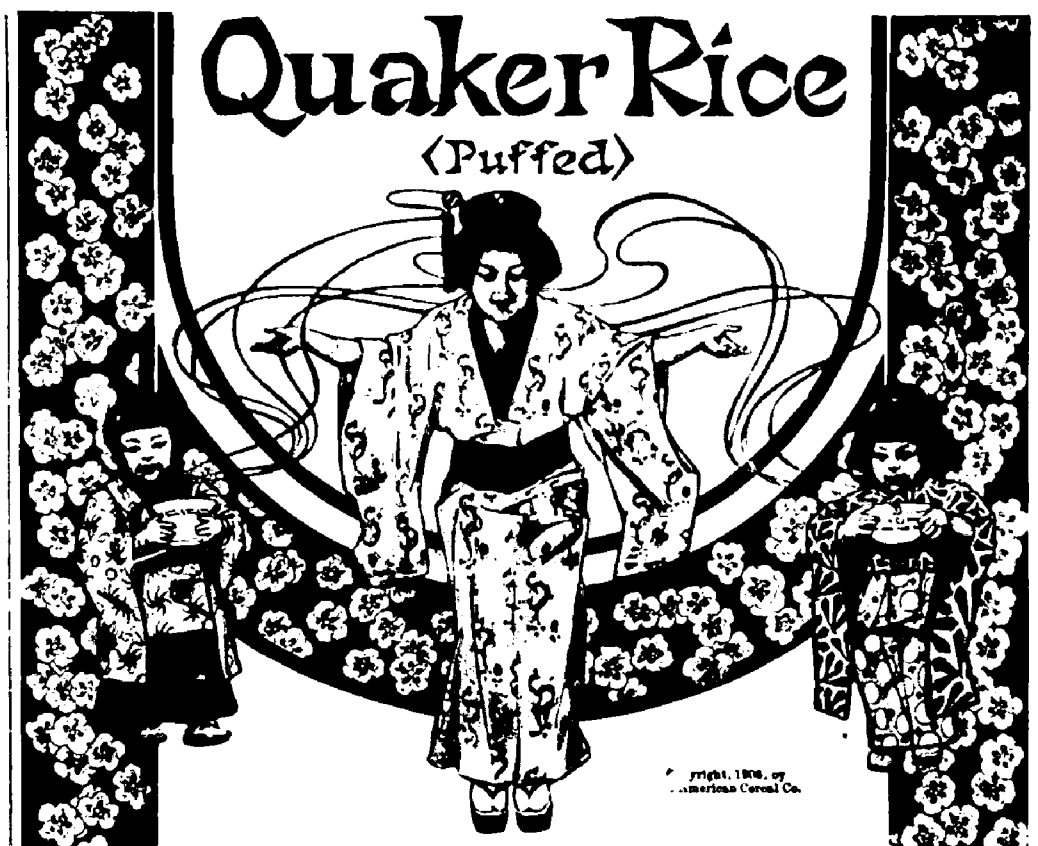
Australia, "the Land of Surprises," has lately again justified her right to that nickname by calling a journeyman printer to become her third Premier—Secretary of State, we might say. John Christian Watson is the man, and, in the expressive slang of the American boy, he is "a comer."

Born of English parents in Valparaiso, Chili, some forty years ago, he found himself in far-away New Zealand almost before such schooling as he was to have had begun, and in the South Pacific islands has all his life been spent—in hard work, steady endeavor to improve his condition, and intelligent effort to better the laboring man. This last has made him what he is.

He took up the printer's trade, and eventually found himself at a composing case in the office of one of the journals of Sydney—a city nearly the size of Baltimore. He did his work well, but also did he study continually and practically the labor problems which he found around him, with the result that 1901 sent him to Australia's parliament on the labor ticket. He was young for the post (about thirty-five), but he had studied his way to it, and knew thoroughly every inch of his ground. Wherefore he became at once the recognized "boss" of his fellow-labor members, leading them to victory after victory, bringing disunited factions into line, and at last carrying through a bill creating a Federal Arbitration Court, to fix the rate of wages and prescribe the conditions under which labor is to be carried on.

This success brought Watson the premiership, and enemies as well as admirers predict that he has not yet stopped climbing his ladder—this boy of humble parentage, of scanty education, but of dogged perseverance and high ideals.

Quaker Rice
(Puffed)



You cannot resist the temptation to eat Quaker Rice once you taste it—nor is there any reason why you should resist, because Quaker Rice agrees perfectly with even the weakest stomach.

Quaker Rice
(Puffed)

is distinctly different from any other cereal you have ever tasted. It is made by a wonderful, patented process that puffs or inflates each rice kernel many times its usual size, and gives to it a delicacy of flavor and a dainty crispness that you never dreamed rice could possess.

Quaker Rice is thoroughly cooked and ready to serve with milk, cream or sugar, just as it comes from the package, altho' a minute's warming in a hot oven will add to its deliciousness.

Quaker Rice Candy and Quaker Rice Brittle and other delightful confections can be easily made at home by following the directions on the package. Quaker Rice is so easily digested and thoroughly good that you can let your children eat it in unlimited quantity without the slightest hesitation—and the children like it any way you serve it.

Quaker Rice is sold by grocers everywhere at 10 cents the package.

Made by the Manufacturers of Quaker Oats.
Address, Chicago, U. S. A.

PROF. JOHN MILNE
AN EARTHQUAKE SPECIALIST

By Earthquake Telegraph

Last year's great earthquakes, which claimed 25,000 lives in India and Italy, were first known in England by John Milne. He is not dependent on dispatches for such news; his messages come through the earth itself, making records beyond all questioning on the professor's seismograph. Just what this is, the inventor shall tell.

Holding out a strip of bromide paper, irregularly marked down its center, he explains: "This moves by a clockwork arrangement beneath a pendulum, the image of whose point is marked on the photographic film by a small light, always burning. When there is no earth tremor this forms a perfectly straight line; when there is a disturbance anywhere the pendulum moves correspondingly irregularly, forming a wavy line, indicating the time of the quake, its maximum and its duration."

All of which may sound quite simple, yet this man of fifty-six, who once worked for Cyrus Field as a mining engineer in Labrador, who served the Mikado for years as imperial geologist, and who has been the world over, the better to master the art of measuring earthquakes, is honored today by every scientific society in existence.

Naturally, he has had odd experiences, the strangest coming when he was studying in Japan, where slight earth tremors are of almost weekly occurrence. Mutsuhito asked to see the seismograph in action, and Milne rented a large piece of waste ground, erected houses on it, mined it with dynamite, and then, at a safe distance, set up his instrument in a pavilion from which the Mikado might start the show and see it. He appeared, prompt, calm, imperturbable. Calmly he pressed the button, which exploded the charges, and calmly gazed upon the wreckage. No surprise; no excitement. Then he was shown the seismograph and informed how the needle had varied through the action of the explosion. Then at last "The Son of Heaven" vouchsafed to speak—a laconic, passive "Really!"

THE LATE PAUL LAURENCE DUNBAR
THE BURNS OF THE NEGRO RACE

A Negro Poet

February's death roll held the name of a remarkable young man—Paul Laurence Dunbar; "remarkable," since, like Burns, he set to rhyme the very heart-throbs of his people; "young," since, like Byron, his passing came when he was yet in his thirties. A real poet, though not a great one, he had won a definite place in literature. Yet he was a negro! Let the true American boy, judging a man by his work not his ancestry, remember Dunbar as the best example the world has had of the negro's possibilities in spiritual expression and artistic development.

Dayton, Ohio, was the poet's birthplace; his parentage was of the unmixed negro blood of Kentucky slaves. When four he could read—liked "Robinson Crusoe" and disliked "Uncle Tom's Cabin." When six, he rhymed jingles, and on his thirteenth birthday publicly recited a composition of his own. The public schools and life as seen through the elevator gratings of an office building—this was his education, but poetry was in him.

His first slim volume, rich in the humor and pathos characteristic of the colored race, and redolent of their imaginative, exaggerated expressions, he peddled among those who rode in his elevator, and when another book had followed this, the critics "discovered" him. That was in 1894, and the decade since placed Dunbar's name on seventeen volumes.

Chicago, New York and Washington followed Dayton, the man ever at work, till health gave out. If Dunbar's life suggests Byron's and Burns's, so, too, does it parallel Stevenson's in that its last years were clouded by disease, victorious at length. His earnest "stick-to-it-iveness" was admirable; the place he won is honorable. He was the first black to feel the aesthetic side of negro life and voice it lyrically.

A GREAT FUTURE

In a Legal Education The lawyer today is the right hand to every great business undertaking. Every commercial enterprise of any importance has its salaried legal adviser. Often the lawyer will be found on the executive board of the great corporation as well as in the diplomatic department of the governmept. There is a great demand for young men with a knowledge of the law. The opportunities for fame and fortune are almost unlimited in this rapidly growing field, due to modern industrial developments. Any man can

Learn Law at Home

by mail, through The Sprague Correspondence School of Law—the originators of the system that has put thousands in commanding positions at the bar, in business and public life. Successful graduates in every state. Endorsed by judges, lawyers and law colleges. Three practical courses—Preparatory, Commercial and College Law Course. If you are ambitious write and we will send our free catalogue together with book of letters from hundreds of our successful students. Liberal terms. Special offer now.

The Sprague Correspondence School of Law,
370 Majestic Building Detroit, Mich.

10 DAYS FREE TRIAL SEND NO MONEY

Simply write us a postal card saying "*send me your catalogues and free trial offer*" and we will send you by return mail, **free, postpaid,** the handsomest **art catalogue** of the season and our **new and marvelous propositions,** the **most liberal bicycle offers** ever made by any house.

OUR CATALOGUES SHOW large photographic illustrations of all our models, the most complete line of high grade bicycles in the world, and describe and explain every detail of construction. They show the difference between **high class material** and **work** and cheap contract built wheels. **We explain how** we can manufacture bicycles of the very **best material,** furnish the **finest equipment, coaster-brakes, puncture-proof tires** and sell direct to the rider at less than dealer's cost.

WE SHIP ON APPROVAL to any person, anywhere, **without a cent deposit, pay the freight** and allow ten **days free trial** on all our bicycles. *Write for our catalogues, select your wheel, and send us your order on these terms. Do not buy elsewhere until you try our wheel 10 days free.*

We will convince you that we sell BETTER BICYCLES at LOWER PRICES and broader guarantee than any other manufacturer or dealer in the world. We have **reliable** bicycles for men and women, boys and girls, **cheaper** than the lowest prices of any other house; we have the **highest grade** bicycles that it is possible to make at prices as low as a jobber can get in 1000 lots. We have branch houses in Liverpool and London, and we sell bicycles in every country on the globe.

BICYCLE DEALERS You can sell our bicycles under your own name plate at double our prices. Orders filled the day received. Many dealers are handling our line. **Rider Agents make money** selling our bicycles, tires and sundries without interfering with their other work. Splendid opportunity for one agent in each town. If you own a bicycle write to us anyway; there are suggestions and information in our catalogues that will be of immense value to you.

TIRES, COASTER-BRAKES, built-up-wheels, saddles, pedals, parts and repairs and everything in the bicycle line are sold by us at half the usual prices charged by dealers and repair men. Ask for our **tire** and sundry catalogue. If you want **children's wheels** ask for Juvenile Catalogues.

DO NOT WAIT but write us a postal today. **Do not think of buying** a bicycle or a pair of tires from anyone until you know the new and wonderful offers we are making. It only costs a postal to learn everything. Write it **now.**

Company News

SALEM ATHLETIC COMPANY, No. 30, Salem, Ind., has recently had some fine debates, which were greatly enjoyed. The baseball, basketball, football and track teams have been supplied with suits and other equipment, and there are $2.00 still in the treasury. This company intends, as soon as school closes, to enjoy a week's camping on White River. It has increased its membership from 5 to 11. HAMLIN GARLAND COMPANY, No. 21, Osage, Iowa, has recently taken in 7 new members, and has adopted a new constitution, and will settle all arguments by "Robert's Rules of Order." An athletic department has been organized, which, it is hoped, will give a good account of itself this season. JAMES LICK ATHLETIC COMPANY, No. 30, Campbell, Calif., has recently obtained 5 new members, which makes 11 all told. It has a strong baseball team, and the members are going in strongly for athletics. Bats, balls, gloves and mitts have been purchased. The following officers have been elected: Herbert Scholz, Capt.; J. D. Lathim, Sec. and Treas.; Howard De Selle, A. M. TAR HEEL COMPANY, No. 4, Lexington, N. C., is in good condition, having 12 members, $5.70 in the treasury, and 17 books in its library. It recently held its election of officers, with the following result: Luther Propst, Capt.; Blair Hankins, V. C.; Clarence Ausband, Sec.; Ralph Moffitt, Treas.; Frank Hill, Libn.; Miss Camille Hunt, C. C. PILOT ROCK COMPANY, No. 19, Ashland, Ore., has elected the following officers: Donald Spencer, Capt.; Fred Barneburg, V. C.; Guy Spencer, Sec.; John Trouton, Treas.; Lloyd Stratton, Libn. and S. A. The company has rented a three-room house with a half-acre of ground, for use as a club room and gym. It has also a library of 60 volumes with many magazines. It has placed $15.00 to its credit in the bank, and is, in every way, in a prosperous condition. It celebrated its 3d anniversary April 5. We are promised a picture soon. E. A. MEXIA COMPANY, No. 34, Mexia, Texas, recently elected the following officers: Leslie Sinclair, Capt.; Alf Harper, V. C.; Blake Hancock, Sec.; Paul Lacey, Treas.; John Parker, Libn. It has a nice club-room with gym apparatus, a set of 50 books, and $2.50 in the treasury. EAST END WASHINGTON COMPANY, No. 61, Washington, Iowa, intends to secure grounds in which to play baseball and other games, and to have military drills. The members also expect to take physical culture. The company refuses to admit to membership any boy who uses tobacco or intoxicating liquors, or who indulges in profane language. The members intend to make money for the use of the company by conducting stands at the show grounds, and also at the Chatauqua grounds. It has its charter framed, and also has 75 cents in the treasury. TEXAS LONE STAR COMPANY, No. 37, Goldthwaite, Texas, has the following officers: Loule Miller, Capt.; Dow Hudson, Sec.; Alvin Street, Treas. The prospects for a strong company look excellent. IOWA ROUGH RIDERS COMPANY, No. 62, Sheldon, Iowa, has the following officers: Verne Valentine, Capt.; Chas. Stoker, Lieut.; Clifford Jory, Sec.; Herbert Demming, Treas. It recently obtained 3 new members. CUYAHOGA AGASSIZ COMPANY, No. 88, Cuyahoga Falls, Ohio, is a new company, and very enthusiastic. It has the following officers: Clayton Schnabel, Capt.; Harland Willeston, Sec. and Treas. Meetings are held each week, and we are promised a picture of the members at an early date. LORD BALTIMORE COMPANY, No. 4, Baltimore, Md., celebrated its first anniversary March 29, to which it invited its friends, and all had a most enjoyable time. It now has officers as follows: P. H. Schell, Capt.; H. F. Magnum, V. C.; H. A. Feick, Sec. and Treas. It intends to have a permanent club room and gym in the near future. CLAN ALPINE COMPANY, No. 19, Boulder, Colo., has now 11 members, and expects more to come in. In February, it celebrated Washington's and Lincoln's Birthday, using the suggested program given in the Company Letter. Dues are 15 cents a month, and it has $2.00 in the treasury. It has a debating team, and a baseball team, and holds its meetings once a week. The members are trying to find a permanent club room. PRESIDENT LINCOLN COMPANY, No. 58, Bradford, Ill., has the following officers: Eddie Scholes, Capt.; Cliff Mokler, V. C.; Ray Blaisdell, Sec.; Ralph Black, Treas. This company is getting along nicely, having 11 members, with 2 more expected soon. It may be well to explain that we have discontinued sending out free circulating libraries, as we found the expense of expressage was too great for many of the companies. SEYMOUR COMPANY, No. 25, Seymour, Mo., has officers as follows: Judson Alderman, Capt.; Everett Cardwell, V. C.; Earl Hawthorne, Sec.; Jesse Beckner, Capt.; Ed. Goodwin, V. C.; Pett Goodwin, Sec and Treas.; Carl Goodwin, Libn. It has $2.40 in the treasury, and in every way is in a prosperous condition. It meets every Saturday evening in the public library. Its dues are 10 cents a month. THE OKLAHOMA BOOMER COMPANY, Carney, Okla., has the following officers: Guy Prendergraft, Capt.; H. Jolly, V. C.; S. Jolly, Sec.; C. Dean, Treas.; S. Hoefgen, Libn. It is preparing to give a public entertainment for the benefit of the company at an early date. MOUNTAIN VIEW COMPANY, No. 17, Delta, Colo., has the following officers: Leonard Sweitzer, Capt.; Albert Cook, V. C.; Leslie Brewer, Sec.; Morgan Sweitzer, Treas.; Floyd Schmid, Libn. Four new members have been received during the last six months, making a membership up to date of 11. It has appointed a committee to make arrangements for celebrating American Boy Day. The captain suggests that we should use two pages for company news, but, we are unfortunately unable to carry out such a suggestion. THE PIKER'S COMPANY, No. 24, Bowling Green, Mo., has officers as follows: E. Peck, Capt.; W. T. Grey, Sec.; J. R. Hucksley, V. C.; Berry Davis, Libn.; Arguile Pollard, Treas.; Clarence James, S. A.; Burkett McPike, P. D. It has 9 members and 2 more will be received at its next meeting. It has also 50 books in its library, and its dues are 10 cents a month. The members intend to celebrate American Boy Day. They would also like to correspond with companies which use an initiation ceremony when receiving new members. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its 42d monthly report, from which we notice that it held 5 fine meetings during the past month. It will issue in the near future its monthly paper called "The Universal Gazette." We hope to receive a copy. The members are arranging to have a camping expedition on Long Island, one of the members agreeing to purchase an acre of ground for the accommodation of the company. During the summer months outings to places of interest will be a feature. THE STARRUM COMPANY, No. 59, De Land, Ill., recently held its election of officers as follows: Cecil Bowsher, Capt.; Ross Rinehart, V. C.; Loren Kesler, Sec.; Frank Goodman, Treas.; Don Carter, Libn. The American Boy Field Days begin in May. GLENWOOD COMPANY, No. 51, Medina, N. Y., has the following officers: Percy H. Krompart, Capt.; Fred Ryan, V. C.; Merritt Clark, Sec.; Arthur Drake, Treas.; William Seefelt, Libn.; Arthur J. Howard, C. C. It has now 14 members, and dues are 20 cents a month. They have a nice club room fitted up with chairs, tables, a stove, pictures, a desk, etc. Fines are imposed for violation of the rules, and the club rooms are always open to visitors. SILVER GATE COMPANY, No. 26, San Diego, Cal., held its semi-annual election of officers recently with the following result: Roscoe S. Porter, Capt.; Daniel Devine, Lieut.; Rich. F. Barthelmess, Adjt. The Company has purchased a club house, and is going to enlarge it to accommodate its members, and in which to hold entertainments. The meetings are held every Tuesday evening. The members subscribed $5.00 towards the Bennington Memorial Fund in memory of the officers and seamen who were killed on that ship. ABRAHAM LINCOLN COMPANY, No. 41, Peru, Ill., sends us a clipping from a local paper, which mentions that the company has an organization of 10 members, and has given various entertainments, the proceeds of which went for charitable purposes. They recently purchased and sent to a local hospital an invalid's wheeling chair, which is greatly appreciated. This is the kind of work that we commend to our companies. AMERICAN BOY COMPANY, No. 24, Myrtle Creek, Ore., has the following officers: Will Humphreys, Capt.; Dean Piper, V. C.; Chas. Lyon, Treas.; Ervin Sherman, Sec.; Clifford Boyless, Libn. QUEEN CITY COMPANY, No. 79, Traverse City, Mich., has the following officers: Albert G. Davidson, Capt.; Earl Doyle, V. C.; Arthur Bachant, Sec.; Robert Loudon, Treas. This company expects to have a number of new members enrolled very soon. CHAIRTOWN COMPANY, No. 23, Gardner, Mass. The officers of this company are as follows: James Hoskins, Capt.; M. Alan Moore, Libn. Albert Lovejoy, V. C.; Edgar Godfrey, Sec.; Roger Woodbury, Treas. THE GENESEE VALLEY COMPANY, No. 53, Wellsville, N. Y., is in a very prosperous condition. It has a fine library, $6.75 in the treasury and is adding new members to the company. It gave a Washington and Lincoln banquet February 22d, which was much enjoyed by everyone present. Its officers are: Donald Wilson, Capt.; Raymond Ball, V. C.; Jay Fuller, Sec. and Treas.; Wm. McEwan, S A. TIGER ATHLETIC COMPANY, No. 17, Rochester, Wash., has officers as follows: Clyde Paton, Capt.; Guy Neely, V. C. and Treas.; Clarence Ludden, Sec.; Alvin Huston, Libn. Meetings are held each Friday at the members' homes, and the dues are 10c a month. CLINTON VALLEY COMPANY, No. 37, Frankfort, Ind., has recently taken in three new members, and sends us a nicely gotten up card of invitation to a party to be held at the home of Private Richard Kramer on March 30. Sorry we could not attend. MOUNTAIN VIEW COMPANY, No. 17, Delta, Colo., is doing nicely and it recently added two new members, its full membership now being eight. It has arranged for a debate, the subject being "Resolved, that card playing is less harmful than dancing," which promises to be lively. The members are also preparing to celebrate American Boy Day July 4, when they hope to have a splendid time. Our May company letter will contain the first of our field day programs. NICHOLAS LONGWORTH COMPANY, No. 6, St. Petersburg, Fla., has elected the following officers: Charles S. Tibbetts, Capt.; Chester McCardell, V. C.; Orville Miller, Sec.; Robert Whitney, Treas.; Philip Graham, Libn.; Jack Riddle, S. A. It is also having its charter framed. THEODORE ROOSEVELT COMPANY, No. 51, Nashville, Ill., recently took in two new members and is doing nicely. RAINBOW FALLS COMPANY, No. 3, Great Falls, Mont., has officers as follows: Guy Millegan, Capt.; Donald Hoffman, V. C.; Homer Millegan, Sec. and Treas. YELLOW BREECHES COMPANY, No. 60, Mechanicsburg, Pa., recently enrolled four new members, and has the following officers: Wm. Fink, Capt.; S. Brittinger, Sec.; H. W. Mumper, V. C.; R. Mounts, Treas.; Wm. Mumper, Libn. We are promised a picture of the members soon. THE SPRAGUE COMPANY, No. 71, Alliance, O., has recently adopted a new constitution for the guidance of the company. It holds monthly meetings, and the members have formed both a basket-ball and baseball team.

The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

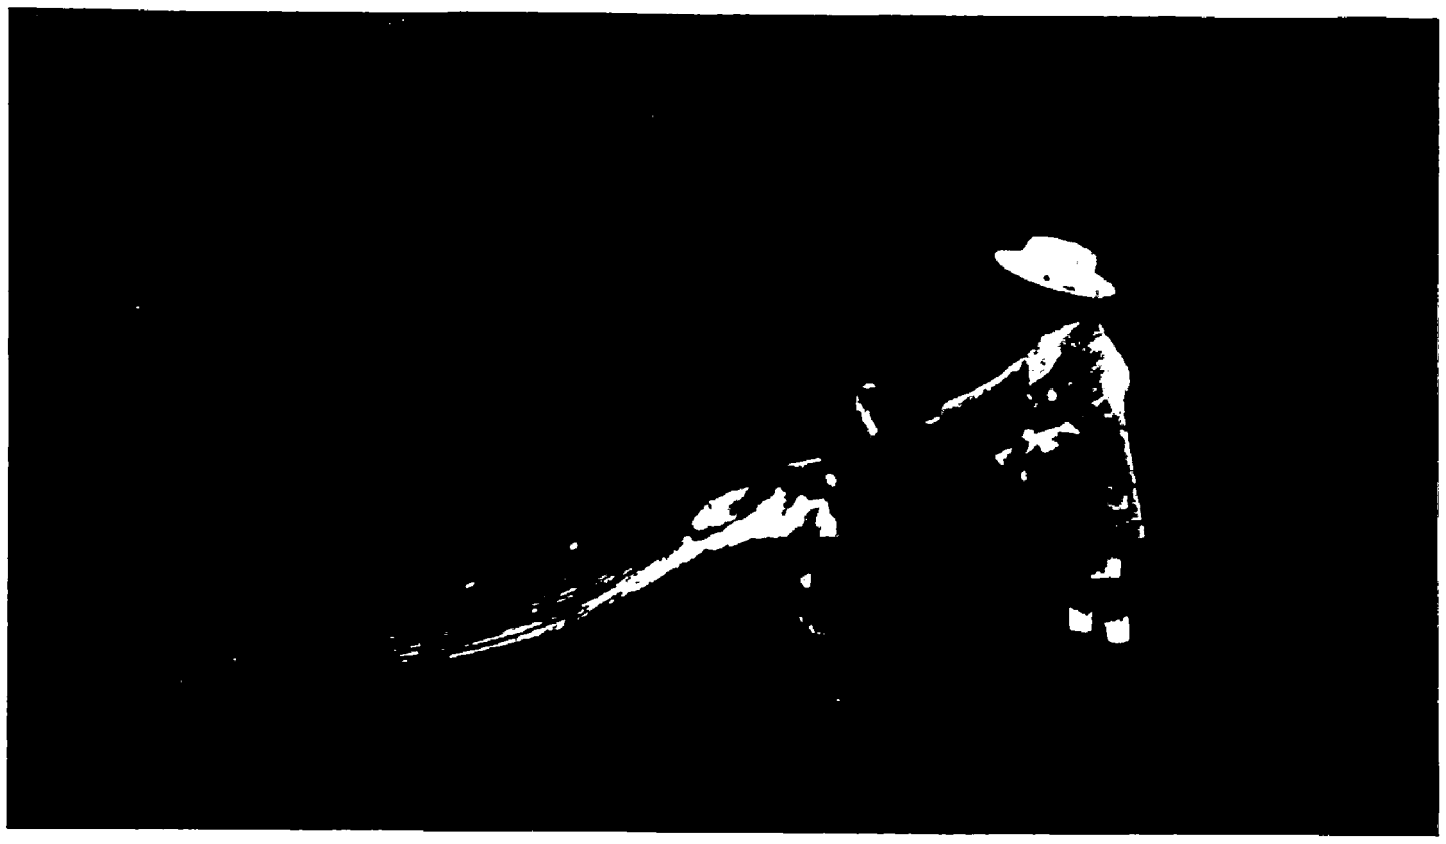
Under the Auspices of "The American Boy"

Object:—*The* Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

OLYMPIA DOMPANY, NO. 35, EMPORIA, KANSAS



COMRADES

A WILD ELK ROUND-UP

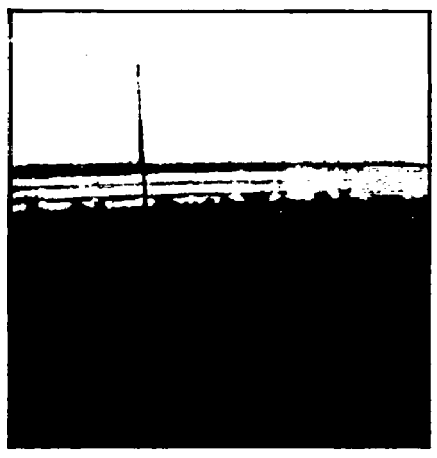
By ABRAHAM SIMON

AS A RESULT of the recent thrilling wild elk round-up on the great mesa along the Coast Range, where were the only surviving elk outside of United States parks, the remnant of the great bands of the antlered beasts that once roamed the western plains in large numbers, thirty-two beautiful large specimens, were captured and successfully transferred to the Sequoia National Park near the Yosemite Valley.

Stirring scenes were those connected with the capture of these elk. Men whose life training has been among the cattle herds of the West, each of whom is a part of the animal he rides, whose eye is clear and whose wrist and hand possess the cunning that comes only from a life practice—fifty of these picturesque vaqueros—the pick of the men who attend the countless herds on the great cattle ranches in New Mexico, Arizona, Nevada and California, led in the work of rounding up the elk.

A year ago an effort was made to take these California elk into captivity and transfer them to the government reserve, but the attempt was an utter failure, inasmuch as the plan adopted was to drive the elk. On that occasion two bands of elk were headed northward by the vaqueros, but when they found that they were being driven they stampeded, attacked the horsemen, and scattered out over the vast territory, which is practically desert, adjacent to the Coast Range mountains; efforts to stop their flight resulted in the death from exhaustion of some thirty elk.

The method so successfully operated in the last chase was to lasso and tie the animals individually. Two days' work of this kind resulted in the capture of thirty-two. These were placed in temporary captivity in a strong stock corral; after that a transfer to the Sequoia Park, one hundred and fifty miles distant, was easy.



A BAND OF WILD ELK HERDED INTO AN ENCLOSURE

The history of this band of elk is unique. When the last of their kind had disappeared from mountain, plains and valleys throughout the West, and when it was presumed that so far as California was concerned there were no elk in existence it was discovered that there were a few survivors running loose on the vast ranges of the cattle kings, Miller and Lux, in the neighborhood of Button Willow, thirty-eight miles southwest of Bakersfield, Cal.

Occasionally the vaqueros spied an antlered head amongst the long horns in some lonely canyon, and at times an elk would be driven in with a band of cattle into one of the great enclosed fields. Here on the cattle ranches the remnant of all that was left of the elk kind in California had increased from year to year until over two hundred and fifty full-grown elk roamed over the cattle farms, across the mesa lands, and into the foothills.

The lone survivors have lost most of their fear of man, and it is not uncommon for them to break into enclosed fields and play havoc with the wheat, Egyptian corn, and other crops.

For some years past the management of the Miller & Lux ranch has been anxious to have the government move the elk to one of the United States reserves, so a plan was adopted by the Interior Department at Washington and within the next few months the last wild elk will be safely enclosed and become in fact the ward of Uncle Sam.

The thrilling scenes enacted while the chase was in progress may perhaps never be again witnessed in the western hemisphere. The first reconnoisance was made by the vaqueros in the neighborhood of Button Willow. A small body of elk had moved away from its usual feeding grounds and five big-horned bucks only were discovered in the tules near a slough. Without much

A KERN COUNTY ELK

difficulty these were surrounded. The bucks made strenuous breaks for liberty, but fleet of limb as they were, they found themselves unable to escape the trained cattlemen who pursued. Manuel Roderidguez, chief vaquero in the employ of the Kern County Land Company, was first to effect a capture. Urging his horse in fast pursuit after a flying buck and with riata in hand, at a distance of fifty feet the coil shot unerringly from the trained hand and the noose settled over the animal's head, then other riatas were thrown until his elkship was safely held, just as the wild steer becomes helpless under the skilled manipulation of the vaquero. Antone Felis, a young Mexican cowboy, accomplished the preliminary work on the next three, and La Salle Quinn put his rope over a fifth. The captured beasts fought savagely while being tied. Roderidguez was bucked seriously on the shoulder and had to be sent to Bakersfield for medical treatment. The subdued elks were taken to the corrals at Lo Kern and there they were placed in crates.

The vaqueros secured a good rest and broke camp at daybreak next morning for the second day's chase. Each rider was on his favorite cow-pony, and each was prepared to do his hardest riding. Jests were bandied back and forth in English and Spanish as the vaqueros dashed off. With gaudy bandanas flapping from bronzed necks, with wide sombreros bobbing up and down and spurs glinting, the band made a splendid picture when the sun appeared from behind the hills.

Out from the tall grasses along the canal bank there first came four immense bucks and, within a few minutes afterwards, an antlered band of a hundred was led over the divide and made for the low hills at the west and south. The sight was an inspiring one. The herd took quick note that its liberty was at stake and each individual elk was soon racing for safety toward the higher land.

The fifty vaqueros were given an order by Superintendent James Ogden to form two divergent lines, and in this manner they quickly took up the chase. When the riders closed in the infuriated bulls charged the desperate horsemen. After Leo Castro had lasooed two, a powerful animal with the coil over his horns, caught the husky Mexican off his guard and dashed at his pony. Castro was unseated and his pony dropped dead. Castro secured a fresh mount, pursued the elk with the coil dangling from its horns and re-captured him after a hot run. Great skill was generally displayed by the cowmen. Jim Wagy lassooed four, Antone Felis scored again with three, Harry Gifford, Will Stubblefield, and Ed. Turner were successful twice. Warren McDonald displayed remarkable nerve by chasing after the band, and snapping a kodak with some success from his pony's back.

BIG-HORNED ANIMAL CAUGHT IN ROPES

A feature of the round-up was the graceful manner in which Ed. Blanco, a left-handed cowboy, threw a riata sixty feet over the horns of a fighting bull. A number of excited elks were thrown and roped and it was necessary to saw the horns from others. Three elks and three ponies died from exhaustion.

The captured elk were shipped in cars from Lo Kern to Exeter, over the Southern Pacific Railroad, and from that point were hauled overland to the Sequoia National Park. In the consignment that arrived safely were ten large bucks, twelve cow elk and ten calves.

Organized round-ups will take place from time to time and when the entire herd has been transferred Kern county will lose a rare sport.

ANTONE FELIS, WHO CAPTURED SIX ELK

Freddy's Kind Ideas

When I grow up into a man
I hope that I will be
Much nicer to all little boys
Than big folks are to me.

I will not rumple up their hair
And try to make them fret,
By asking things in jography
That most small boys forget.

No. I'll just say to little boys:
"How would you like a dime?"
I bet that they will be real glad
To see me every time.

A NICE QUESTION

Written for The American Boy by Tudor Jenks, formerly of the Staff of St. Nicholas, Author of the Boys' Book of Explorations, etc. Illustrated by Uncle Charley.

"UNCLE CHARLEY, please tell us a story!" cried the children.

"With pleasure," said Uncle Charley.

When order was established he began:

An American Aborigine, who had ceased to take an interest in hunting Tapirs, borrowed two dollars and thirty-six cents from the President of the United States, and carefully secreted the same in the top of a Cocoanut Palm, little dreaming that his favorite Kangaroo watched his every movement with jealous eyes.

A year elapsed while the Kangaroo fruitlessly endeavored to swarm up the trunk. Then, despairing of success, the Kangaroo besought a Telegraphic Lineman to lend him the iron things he climbed with. And he said he wouldn't. But he did, for the sight of a crying Kangaroo moved him sorely.

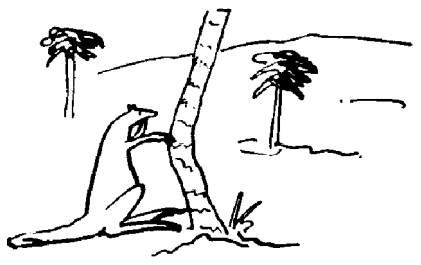
Adjusting the climbers, the overjoyed Kangaroo sought the tree, feeling that the two dollars and thirty-six cents was within his grasp. Just then the policeman upon that beat lounged up and inquired what was the matter. The Kangaroo informed him that he had in view the climbing of the graceful Cocoanut tree.

"No one can climb these trees without a permit!" said the policeman in a tone well calculated to impress one with the rigor of the law.

"And where," inquired the Kangaroo, with difficulty repressing a sob, "where can a permit be obtained?"

"At the Railroad Crossing. Look out for the whistle when the engine rings," replied the stern minion of the law, as he indifferently pursued his rounds.

So the persevering Kangaroo, too preoccupied to remove the climbing irons from his legs, sought the Railroad Crossing. There he found a Flagman sewing brass buttons on a blue coat.



THE KANGAROO ENDEAVORED TO SWARM UP THE TRUNK

"Flagman," said the Kangaroo, "I eagerly desire a permit which will enable me to climb a tree in yonder forest."

"Very well," replied the Flagman, in an official tone, as he drew a book of permits from his hat. "The price of the permits for Kangaroos is two dollars and thirty-six cents."

"But," objected the Kangaroo, after a moment's hesitation, "I am penniless!"

"Then I cannot issue a permit," replied the heartless Flagman, as he threaded a needle.

"Can you advise me," timidly inquired the Kangaroo, "in what manner the fee can be procured?"

The Flagman mused a moment. "Why," he asked, a sudden glance at the Kangaroo's hind legs having suggested the question, "why do you not enter the Jumping Match?"

"I will!" replied the overjoyed Kangaroo. "What is the prize?"

After a moment spent in examining the "Jumping Record," the Flagman answered:

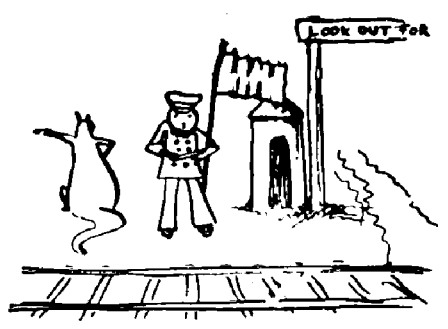
"Two dollars and thirty-six cents."

"And where is it held?"

"In the northwestern part of Nova Zembla."

"And where, may I ask, is Nova Zembla?"

"I cannot tell," he said frankly, "for I do not know. You will, however, find a Distinguished Member of the Royal Geographical Society at the Museum."



THE KANGAROO SOUGHT THE RAILROAD CROSSING

With hopeful leaps the Kangaroo soon reached the Museum.

The girl who answered the bell said that the Geographer was discussing a light lunch. This was not good English, but that does not matter. She then politely invited the Kangaroo to sit down, saying the Geographer would not be more than a week or two, she thought. The Kangaroo, with dignified hauteur, explained that he was sitting down; that Kangaroos always sat down in just that way. So the girl left the Kangaroo patiently waiting near an Egyptian Sarcophagus. A few brief moments ebbed away. A mummy raised the lid of the Sarcophagus and inquired with polite interest: "Kangaroo, what are you seeking?"

"Nova Zembla," replied the Kangaroo, "with the intention of entering the Jumping Match."

"I will accompany you," said the Mummy.

"Agreed, agreed!" cried the Kangaroo. So the Mummy climbed from the Sarcophagus and promised that if the Kangaroo would follow him they would soon reach the northwestern part of Nova Zembla.

So they started.

Reaching Nova Zembla, they found a vast crowd assembled and all agog for the match.

Picture for yourselves the dismay of the Kangaroo when the American Aborigine arose in the midst of the vast gathering and announced, in the flowery oratory of his forefathers, that he offered as a prize to the best jumper, two dollars and thirty-six cents—and that the money was doubly valuable because it was a loan from the President of the United States!—or, as he expressed it, had come from his "Great Father at Washington."

The Kangaroo remarked to the Mummy, in a subdued tone:

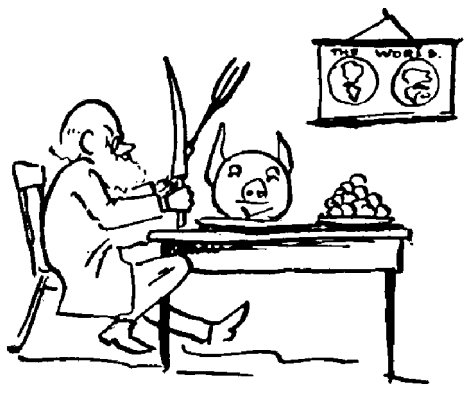
"It is certainly true that a rolling stone gathers little or no moss!"

The Kangaroo then forsook that busy scene and returned to the Museum.

"Servant girl," inquired the Kangaroo as the door was opened, "has the Geographer concluded his lunch?"

"Not yet!"

"Tell him it is of no importance, then," replied the Kangaroo, vaguely.



THE GEOGRAPHER WAS DISCUSSING A LIGHT LUNCH

Then he sought the Flagman.

"I do not want your permit," remarked the Kangaroo.

The Flagman silently replaced the book of permits.

Next he met the Telegraphic Lineman.

"Can you," he asked of the Lineman, "climb yonder Cocoanut Palm?"

"I can," replied the Lineman.

"And will you?"

"I will," again replied the Lineman.

"Ascertain," said the Kangaroo, with the caution of a lawyer, "whether there is not some money secreted in its top."

The Lineman ascended the palm and found two dollars and thirty-six cents. This he secured and descended.

The Kangaroo then inquired the result of his researches.

"I found two dollars and thirty-six cents," replied the honest Lineman, with a broad smile of satisfaction, "and I'm obliged to you!"

"Suppose," suggested that disheartened Kangaroo, "suppose we go halves!"

"By all means," responded the new-made capitalist. "I will owe you one dollar and eighteen cents!" and thereupon he walked off gaily to a picnic.

THE AMERICAN ABORIGINE AROSE

"This is harrowing," said the Kangaroo, as he gazed ruefully upon the departing form. "Confession is good for the soul!"

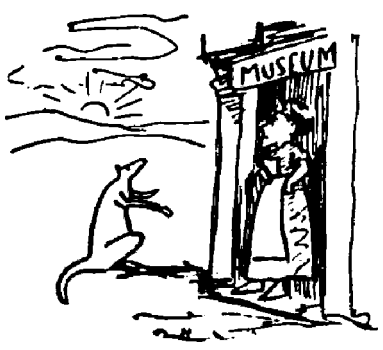
Hastening home, he made a clean breast of it to his master, the Aborigine, and told him Kangaroofully that he was prepared to face the music.

"There is no music," said the kind-hearted Son of the primeval forest. "The Jumping Match failed for lack of a hearty popular support, and I then resolved to devote the amount of the prize to the purchase of an elegant Christmas Gift for you!"

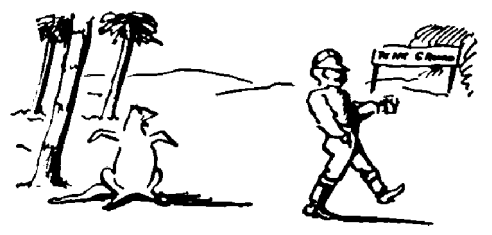
Hastily consulting a pocket Almanac, the Kangaroo ascertained that it was then the twenty-fourth day of December, and concluded that the next day would have brought the Gift, had it not been—and he burst into tears. When he had regained his composure, he said:

"Dear master, I am at last convinced that Honesty begins at home!"

"My noble Marsupial," cried his overjoyed master, "I would rather have you cut down another cherry-tree than to have this harrowing experience repeated often!"



"SERVANT GIRL" INQUIRED THE KANGAROO, "HAS THE GEOGRAPHER CONCLUDED HIS LUNCH?"



HE WALKED OFF GAILY

That very night they went arm-in-fore-leg to the village store and the Aborigine purchased for his faithful Kangaroo a second-hand pair of Roller Skates.

Then who was so happy as the Kangaroo?

No one—except the Geographer, who was still at lunch. The Mummy returned to his Sarcophagus.

As Uncle Charley finished, the children asked in chorus:

"Is that story true?"

"Parts of the original Arabic version are founded upon fact," said Uncle Charley, cautiously; "but those parts I omitted, in order that the tale might not be amusing."

Some of the children doubted some of the incidents, but all felt that the Lineman owed some reparation to somebody. But it is a nice question. You see, the money was originally borrowed. Then the Kangaroo had no right to it until the end. The Lineman confessed that he owed the Kangaroo a part of it—and claimed that the Kangaroo gave him the rest, and I think that he did. Perhaps the fairest way would be to give the President the Roller Skates. What do you think?

The Duty of the Boy of Today

The following quoted from The Ohio State Journal of January 4th, should be studied by every reader of THE AMERICAN BOY:

The fruits of the present awakening of conscience in politics, business and society will be gathered, if gathered at all, some years from now, when the boys, now entering manhood, are in charge of affairs. The great question, how they will acquit themselves, depends very much upon the character they are making and the ideas they are acquiring now.

It is going to take courage, clear thinking, moral purpose, and a serious view of duty, to turn this incipient revolt against the corruptions, depravities, oppressions, and vices of the day, into a realization of a pure and upright social and public life. That will be the duty of the boy of today. Is he getting ready for it? Are the home, the school, the social status, preparing him for the splendid task?

Better than any crisis of history, will it be ten years from now, for heroism to exert itself. The boys who are now equipping themselves for the splendid ordeal, will shine in the doing of such deeds and the making of great names. It will require nerve, and conscience, and clear-thinking. Now is the time for the boy to take his training in these things.

He need not abandon his boyhood instincts, or disappear from the red letter days of youth, but amid it all, he should cultivate a love of truth, of justice, of temperance, of unselfishness, of self-reliance. There is nothing so beautiful in this world as a boyhood of courage and principle. It is something to tie to and hope for. Let there be fun, and bright brows, and happy hearts, but deeper than them all, let there be cultivated an impulse toward righteousness and duty.

We speak for the future; for the good of humanity that is to be, and for the man upon whom that good will depend, which is the boy today. Sometimes there is cause to fear, that the trend is not the best—that society is so frivolous, homes so desolate, parents so foolish, and schools so insipid that the boy may not pass through it all safely and come out his very best. There is the risk, and it is greater than we are apt to concede. But it reveals a duty to go as far as possible, in home, society, school, and street to implant the heroic virtues in the hearts of the youth.

How Judge Lindsey Saves Boys

The old proverb, "An ounce of prevention is worth a pound of cure," is demonstrated by the juvenile court of Denver beyond the shadow of a doubt. Judge Lindsey's description of how he came to start the paroling system of delinquent juveniles is most interesting. His heart was moved by the wails and lamentations of the Italian mother of a sixteen-year-old boy sentenced some years ago to the reform school. He suspended the sentence, out of pity for this wildly weeping woman, who clung frantically to her boy and moaned in agony at the sentence. The suspended sentence—which was never pronounced, because there was no need of it—was never regretted. The boy simply appreciated the leniency of the court, and reformed. The judge kept track of him and the family, and never had cause to wish he had acted otherwise. If one boy would reform and cease to regard himself as an outcast, and an Ishmael against the world, why not others? This thought started the juvenile court, now spreading as did gentleness of treatment in the insane asylums, kindness in the penitentiaries, and humanity in war. The wonder is that the most essential of all, the saving of the tree by protecting the roots, should be the last of the much-needed reforms.—Sunset Magazine.

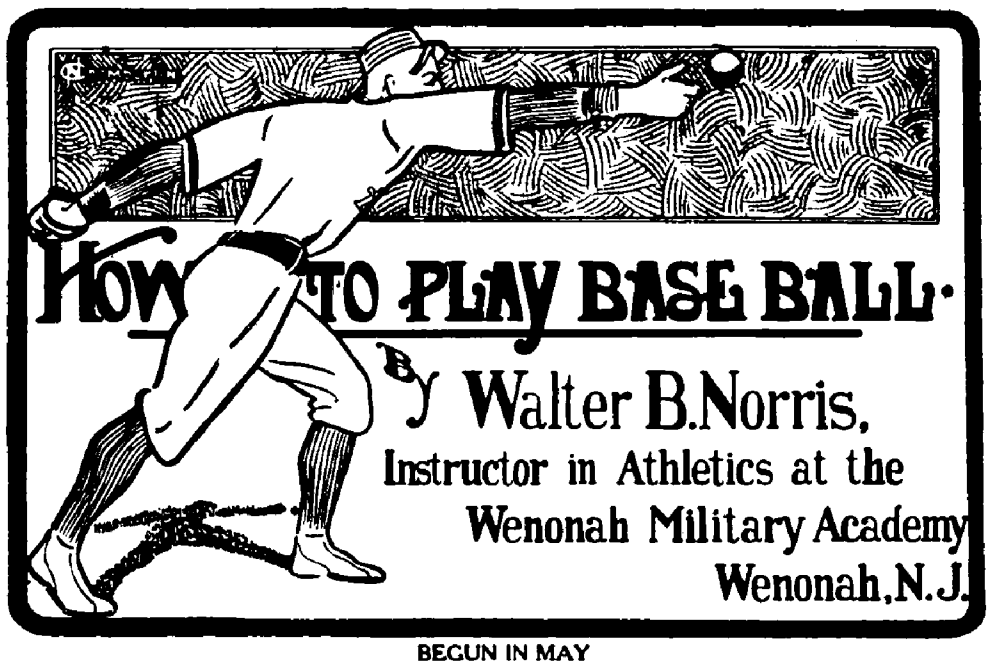
Please Mention The American Boy When Writing



How TO PLAY BASE BALL

By Walter B. Norris,

Instructor in Athletics at the Wenonah Military Academy, Wenonah, N.J.

BEGUN IN MAY

PART II

HOW TO PLAY THE INFIELD

NOWHERE in baseball, perhaps, is ready and accurate knowledge so much needed as in playing within the diamond itself. Hits come quickly and must be handled instantly if runs are not to come in. One must first know just what to do and then practice it at once. It is always advisable to think out the problem before the hit is made. The infielder should know how many men are on bases, how many are out, and how many balls and strikes the batter has. He should also if possible understand the pitcher's signals and so know when to expect a hit.

The position of the fielder is important. The first baseman should stand some ten feet inside first base and somewhat back of the base line, between first and second. He should throw his weight on his toes that he may get a quick start.

The second baseman should be about ten feet from second in the direction of first base, and somewhat back from the base line according to the man at the bat.

Shortstop plays a similar distance on the other side of second, and the third baseman the same from third except that he stays on the base line to look out for bunts. A man, however, will not bunt when he has had two strikes called on him.

These are the positions at the beginning of the game and when none are on bases. When a man is on first, the first baseman stays at the bag till the pitcher throws back his arm, and then he runs out to fill the gap between him and second If, however, other men are on bases, he need not cover the base at all. When a base-runner is on second, the second baseman and the shortstop keep running to the base to hold the runner from getting too much of a start for third. They do not, however, stay on the base.

When a base-runner is on third, the third baseman covers the bag, running out as the pitcher draws back his arm. With a man on third, the other infielders, unless there are two men out, play in from their usual positions at least as far as the base line, and often seven or eight feet farther in, in order to make a quick return to the catcher, if a hit is made, thus preventing the man on third from scoring. If two men are out, the man on third cannot score unless the batter makes first base safely, and so the fielders play back and try to get the batter out at first.

Whenever the ball is hit, the infielders, except the man who receives the hit, run to their bases in order to receive a throw there. In fielding the ball the aim is to cut off the man nearest home and so prevent a run. When all the bases behind a man are occupied, he is said to be forced, that is, he must run for the next base when the batter makes any kind of a hit. To put out a man that is forced it is only necessary to touch the base he is bound for, before he reaches there. The only exceptions in the way of hits are when the batter strikes out, when the batter knocks a foul, or when less than two are out and the batter sends up a fly ball to an infielder. At other times he must run.

The best way to receive a hard ground ball is standing with heels together and bending over till the hands touch the ground. Be sure the glove is pushed against the ground, else the ball may wedge itself under it and escape. Kneeling down on one knee is effective in stopping the ball but prevents one from changing his position in case the ball swerves to the right or left. In throwing to first base, throw carefully, taking time to aim. The first baseman should hold out his hands as a target to hit. He should keep one foot on the base unless the ball goes wide, when his first business is to stop it anyhow, as a passed ball will mean several bases.

Let us suppose now that we have our men in position and that no men are on the bases. If a ground ball is hit to any part of the infield, the one receiving it should, of course, throw to first base. The same would be done even if two men were out. If, however, less than two men are out and a base-runner is on first, whoever receives the hit throws to second base to cut off the man coming from first. Then the ball is thrown to first base to catch the batter who will arrive last, as he has not the start of the base-runner. This will complete the double play.

If, however, the fielder fumbles the ball, he should throw straight to first, as he cannot hope to catch the man coming to second. At second we have two men who may receive the throw, the second baseman and the shortstop. If the ball is hit on the shortstop's side of the diamond, the second baseman covers second and makes the out, otherwise the shortstop. Even if the ball was hit to the first baseman the same thing is done, except that the pitcher covers first base in case he sees that the first baseman cannot get there at once. One thing to remember in such plays is that the second baseman and the shortstop should throw very easily to their base, as the distance is short. A quick toss without drawing back the arm is the best. Always throw, never carry the ball to second, as that prevents time for a double play. When the ball is hit to third, the play must be very fast to catch a man at second. Of course, if two are out we take the easiest play and throw the ball to first.

Suppose now that we have a man on second, with the other bases empty, and less than two men out. Theoretically, we should try to catch the man going to third, and we may do it if the hit is to shortstop or third baseman and the runner has not a good start. On a hit made to the third baseman the shortstop covers third, if necessary. Practically, however, it is safer to send the ball to first base and make sure of that man being put out.

With a man on third and less than two out, the infielders play in, and on a hit being made, send the ball home if they see the man on third starting. If he makes no start, of course, the ball goes to first and the first baseman watches to see him start home. If the man on third does start, the first baseman throws to the catcher. In case two are out, the infielders keep their usual positions and play for first base only.

When both first and second are occupied, and less than two men are out, all play for third base. If, however, the first or second baseman receives the hit, he should let the man running to third go and try for a double play at first and second. If the hit is to the men on the other side of second, they may be able to touch the man as he passes and then throw wherever there is a good chance. Never, however, throw where you feel you cannot catch a man; instead, throw to first or else hold the ball.

When second and third are occupied and less than two are out, the infielders play in and throw to the catcher. He, after tagging the man from third, throws to first base. The first baseman should watch out that the man on second does not steal third.

When men are on first and third, or all the bases are occupied, the play is the same as just given, and the infielders play in unless two men are out.

When two men are out, the play is generally for the batter, but if a baseman receives the ball near his base he can touch that if a man is coming toward it and thus save risking a throw across the diamond. On such occasions play for the easiest man to get. When one man is out and men are on first and second, any double play will retire the side, and it is best to take the safest place. If the hit is to the third baseman, he can touch third and then throw to first. Others would naturally throw to second, then to first. If all the bases are full and less than two are out, the fielder throws to the catcher, who needs merely to touch the home plate to put out the man coming from third, and can then throw wherever he has a good chance to catch a man, probably to first, but perhaps to third.

These are about all the plays an infielder will need to handle on hits. Men steal bases, however, and such cases must now be provided for.

In case a man on first attempts to steal second, how must we plan to catch him? The man on first can run safely as soon as the pitcher draws back his arm to throw, as to throw to first after that is a balk and entitles a runner to a base. The pitcher must now throw the ball without much preliminary swing, as that takes time and gives the runner a chance to reach second. The pitcher should also throw the ball to first base at times just to keep the runner from taking too great a lead away. In case he does try to steal, the catcher should throw quickly to second base. He himself should snap the ball down without using much of a swing and must throw straight for the base, sending the ball too short rather than too high. With a left-handed man at the bat, the shortstop covers second on a steal, as a hit is less likely to come to him than to the second baseman. Of course, he does not leave his fielding position and start for the base until he sees the man begin to steal. He must tag the man, as the latter is not forced. With a right-handed batter the second baseman covers the base and makes the out. The center fielder should run up for an overthrow and the second baseman and shortstop should co-operate in backing each other up.

If a man on second tries to steal third, the catcher throws to third base, and the left fielder looks out for on overthrow. In all cases the ball is sent to the base and the baseman must be there to receive it.

Again, if a man is on third and another on first, with less than two out, it is a problem how to keep the man on first from stealing second without letting in the man on third. Many teams simply let the man steal second, but such a gift is unnecessary. When the pitcher throws the ball if the batter bats right-handed, the shortstop should run in from his position till he is about twelve feet ahead of second base and behind the pitcher. On the man's trying to steal, the catcher throws the ball toward second. The second baseman runs to his base, notices whether the man on third is starting for home or not, and if so, yells to the shortstop to take the ball. The shortstop intercepts the catcher's throw and returns the ball to home for the catcher to tag the man coming from third base. If the second baseman sees the man on third is not to steal home, he yells "Let me have it," and puts out the man coming from first. With a left-handed batter the shortstop and second baseman exchange places.

When a man is caught between the bases, he should be driven back toward his base until about ten feet from it. Then the ball should be thrown. The aim should be to get the runner going so fast that he can not stop when the ball is thrown.

In conclusion, perhaps a few remarks about the qualifications of infielders should be given. The first baseman needs to be a sure catch of thrown balls, bounces, and pick-ups, and should have a long reach in order to get balls thrown wide and high. He need not have such a good throwing arm as the other basemen, as he throws less often, though it is never a disadvantage. As his fielding can be taught him, he is generally required to be a good batter. Some short men have succeeded in the position, but most are tall and with long arms.

The second baseman needs no special physical qualifications, although a long reach helps. As his throws are short, he need not have as good a throwing arm as the shortstop, but must be able to work fast and throw well underhanded to first. He must also be able to receive a hard thrown ball from the catcher and put it on a man as he comes charging into him.

The shortstop should have perhaps the best throwing arm of the infielders, as his is called into use most. With that he must be quick and a sure fielder, covering much distance. His specialty should be fielding, and he should master the underhand throw and the throw without taking time to get set.

The third baseman needs another strong arm and, on account of his being nearest to the batter, he must be especially quick to get started for bunts toward third base.

(*To be continued.*)

Spalding Official League Ball

Used exclusively by the National League, Minor Leagues, and by all Intercollegiate and other Associations for over a quarter of a century. Each ball wrapped in tin-foil and put in a separate box, and sealed in accordance with the regulations of the National League and American Association. Warranted to last a full game when used under ordinary conditions.

No. 1. Official League Ball. Each, $1.25

Spalding's Base Ball Mitts

SPALDING BASE BALL CATCHERS' MITTS come so close to the point of perfection in the opinion of the most prominent players in the country that it is exceedingly difficult, even with our most up-to-date equipment to produce something that can be considered an improvement, either from the view of greater utility or improved design, finish or material.

Spalding's Base Ball Uniforms

For over a quarter of a century we have made the suits worn by the best players in the country, outfitting all the league clubs and colleges. Today we are turning out uniforms which possess all the advantages made possible by our accumulated experience during that period, aided by a factory equipment second to none.

A. G. SPALDING & BROS.

NEW YORK, CHICAGO, ST. LOUIS, DENVER, SAN FRANCISCO

$120 SPALDING OUTFIT

For a Little Work After School

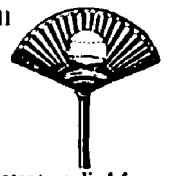
Every American boy wants to play ball this summer. The question of where to get the uniforms and equipment is answered by the McKinney plan. Any boy can easily earn a $10 Spalding Base Ball Outfit, or a club of ten boys can earn a $120 Spalding Nine Outfit, by inducing their mothers and neighbors to give us trial orders for our guaranteed groceries. Write to-day for full particulars and big illustrated catalog of this and other premiums for boys, girls and the home.

McKINNEY & CO.,

131 State St., Binghamton, N. Y.

Are you a Fan?

Show it by wearing a "Baseball fan" Badge like this



America's Sport Emblem.

EVERY "FAN" WEARS ONE.

Very Attractive! Patent applied for.

Made from two kinds of Metal, gilt and gun metal, with ball enameled. Can be worn on coat lapels or as scarf pins.

Price 10c. and 2c. Postage.

AGENTS WANTED EVERYWHERE.

THIS IS A BIG MONEY MAKER.

Metropolitan Badge & Novelty Co.

95 Worth Street, Dept. C, New York.

BOYS!

Can You Throw A Curve?

I can teach you by mail how to throw 32 different kinds and to have absolute control over them—Outshoots, In-shoots, Raise-shoots, Drops, and the famous "Spit-ball."

MY SYSTEM OF TEACHING BASE BALL

is based on scientific principles—the result of 25 years' experience in the game. **I Guarantee Results.** I pitched for the Chicago Nationals under Capt. Anson and other noted teams, and have the greatest pitching record in the profession. Write for Booklet "The Road to Success." Address

TED KENNEDY, 500 Olive St., St. Louis, Mo.

Reach

The Reach trade-mark is a guarantee

It insures you against defects in Reach base-balls, mitts, gloves and other sporting goods.

Every article you buy which bears the Reach trade-mark must prove absolutely satisfactory to you, or you get a new article or your money back.

Balls and bats costing less than $1 are the only exceptions to this rule.

Base-balls, 5c to $1.50
First Basemen's Mitts, $1 to $4
Fielders' Gloves, 25c to $3
Catchers' Mitts, 10c to $8
Fielders' Mitts, 25c to $3
Bats, 5c to $1.25

Don't take any sporting goods without the Reach trade-mark. Notify us if your dealer won't supply you.

Write for catalogue and we will send you free a handsome button-badge fac-simile of the Reach ball.

A. J. REACH CO., 1701 Tulip St., Phila.

Do you know the playing rules for 1906? The Reach Base-ball Guide contains them, and also schedules of the American and National leagues, averages of players and clubs, and a large half-tone photograph of the greatest game in the World's Series. 10 cents at all dealer's or by mail.

The IRON HOLE.

WHEN the St. Croix tunnel was merely newspaper talk, Jimmy Stuart regarded it as an extremely important matter. Jimmy was a high school student, seventeen years of age, very strong in arms, legs, lungs and mathematics. But while figures were as natural as exercises to the boy, Latin and Greek came hard.

The papers announced that work was to begin at once upon the tunnel. A giant tube was to extend, almost seven thousand feet over-all, from Mount Huron, where Jimmy and his mother lived, under the St. Croix river to Sanria. Both towns were tremendously excited, but it is hardly probable that Jimmy's fervor was anywhere equalled. From a baby he had been deeply interested in anything like a machine. He knew all about locomotives, steamboats and sewing machines.

His father, a conductor on the Great Shore Line, had been killed in a wreck, three years before, and Jimmy had to share in the rigid economy of his mother, because his education and many of his future hopes hinged upon it.

Everybody was looking for Hilton to come, for upon Hilton's young shoulders rested the responsibility of the great undertaking. Hilton defied the doubting heads of the whole country in declaring that he would make the American and Canadian shields of the tunnel come together within an inch of each other beneath the center of the broad river bed. Moreover Hilton said that he would perform this miraculous feat of engineering (given men and material) within a certain length of time and within a certain amount of money.

Jimmy's imagination did not extend so far as to form an exact picture of the master engineer in advance, but in his mind, thoughts of Hilton were inseparably associated with huge physical proportions, a thundering voice, and—power.

Upon a train bearing a gang of mechanics and laborers, Hilton came—a quick-moving little man of thirty-five, whose dark hair was tinged with gray about the temples, and whose black eyes, when they looked into yours, seemed to pierce to the centre. One Saturday morning, several weeks after Hilton came, Jimmy was out looking on at the work. The half-mile down-grade was

INSTEAD, THE LATTER GRASPED THE THROTTLE

assuming a business-like look. Hundreds of laborers and horses were in the huge ditch, and the air was filled with men's voices and straining harness. Jimmy was looking at a big pile of castings for the tunnel proper, when the master engineer stepped up behind him and asked him good-naturedly:

"Do you want to earn a quarter, young man? * * * All right. Run up to my hotel in town, give the clerk this card and bring me my mail."

Never in the history of tunnel construction was an errand done more quickly, for Jimmy's mind, busy with a peculiar idea, flew like his legs. The fact that the great Hilton, the hero of his worship, had spoken to him, appealed to the boy as the biggest thing of his life; and while the money was desirable in a thousand ways, the act of accepting it from such a personage was revolting to him.

The master engineer accepted a package of letters from the panting, red-faced boy and in return held out the quarter, but the boy drew back.

"Come, come," the engineer said hastily. "You've earned the money honestly."

"I'd rather not take it from you, sir," Jimmy said. He was very embarrassed and uncomfortable.

Hilton for a moment carefully studied the boy's face and knew that neither false modesty nor absurd pride had caused the refusal, and he turned away feeling an unusual interest in the lad.

The tunnel became an object of intense interest to Jimmy, and this interest was not unnoticed by the master engineer. Strangely enough, in time a good understanding grew up between the two.

Half of June was gone. The tremendous shields were straining toward each other under the river bed, for trains were scheduled to pass through the iron hole in September.

For over a year the man who achieved and the boy who admired had watched each other. One morning, Jimmy said to Hilton:

"It's vacation now in High School, sir, and I've got ten weeks. I want to ask you if there isn't something I can do on the job—carrying water to the men or something like that. You see, Mr. Hilton, I like awfully well to be around here——"

The chief smiled. "Jimmy," he said, "you've been one of the faithful since we began. I've seen you all anxious and excited when we came to some hard place. I believe you truly like this kind of work."

"I do, sir," said Jimmy, whose face was a study of color, "and I'm reading all kinds of books on tunnel work and bridge building."

"And have you managed to keep up your Latin?" Hilton asked laughingly.

"Fairly well, sir, but not so well as my mathematics."

"Same old breed," muttered the chief, remembering his own difficulties with the classics not so many years ago. A moment later, he added: "I'm sorry, but we've got plenty of water boys. However, I can use you. Keep within hailing distance. Guess you can earn as much as a water boy."

Hilton then entered the tunnel. Wet sand and mud which had borne the weight of the big river since the world began was being conveyed past him from below. Muffled shouts from a point far ahead warned the chief of another cave-in—one of the innumerable difficulties which his brain had to overcome. He hurried forward, and following after "within hailing distance, hastened Jimmy.

* * * * * * *

At last came the never-to-be-forgotten day when the Canadian shield from Sanria and the American shield from Mount Huron—great worms which had groped toward each other for over a year—met in the soggy clay and sand under the river. Almost seven thousand feet apart, each of these twin monsters had started to grow toward its mate, and in all that distance they had veered less than an inch from their aim. The "pickled" ties and steel rails were now laid; cement was hardening and every casting was in place; the great lights and wires were hung—all was in readiness for the official inspection, a formality that was passed without a single hitch, and ten days later the regular trains were passing through.

The departure of the master engineer was bitter indeed for Jimmy to contemplate. He sought the chief at the American entrance and reported for duty, as he supposed, for the last time. Hilton's hand trembled and his face told the story of overwork, yet as he looked kindly upon the boy in whom he had found honesty, modesty, a quick hand and a quicker mind, an idea slowly formed in his tired brain. He would watch this boy from a distance—watch him grow into a man, and perhaps he could shape his growth a little here and there. He would invent an excuse that would keep him in direct touch with the boy.

"Jimmy," he said, "though I leave here tomorrow, I'm hardly reconciled to giving this work up yet. I want you to write to me every day or so about it—not officially, but as you'd write about a good friend whom we both knew. Your pay will go on just the same. Then in a few months we'll cary out a little idea of mine about you——"

A shout arose at this moment from the crowd of workmen who were about the entrance, and hours passed before Jimmy heard the rest about that idea. Thompson's tunnel-engine had entered twelve minutes before and had not reported at Sanria. Had all been well, the O. K. wire would have been sent back within five minutes. There must be a congestion in the big tube. Hilton was vitally concerned in an instant. A smoking engine was lying sidetracked at the top of the grade. Jimmy was dispatched toward it at full speed. The fireman was alone in the cab, waiting for Mackey, his engineer.

"Something's wrong in the tunnel," Jimmy shouted breathlessly. "Mr. Hilton wants this engine quick."

"He'll have to wait for Mackey," the fireman answered, "I've no license to pull out."

"But there's a crew — Thompson and his fireman—dying, maybe, in the hole!" Jimmy yelled.

The fireman stared at him sullenly. The boy was thinking fast. He knew that the fireman was right from his standpoint, that even Mr. Hilton was not empowered to command in this case, yet many firemen had been promoted to engineers in crucial instances like this, because of their presence of mind. Jimmy climbed into the cab. There was only one thing to do. Somewhere in the tunnel, derailed possibly, Thompson's engine was lying, creating deadly gases and choking the air-currents with its bulk. The engineer and fireman would be struck down by the fumes, and each second's delay removed farther the hope of restoring them to life.

"Get out of the cab," shouted the fireman to Jimmy.

Instead, the latter grasped the throttle, and, while the engine started slowly down grade and bumped off the siding into the main track, Jimmy and the fireman fought desperately for possession of the engine. The head of the fireman struck the boiler head and Jimmy had won. At the tunnel entrance, Hilton helped lift out the unconscious man, and a moment later sprang to the levers, with Jimmy attending the fires, and sealing the cab which was constructed for tunnel use and practically air-tight.

The headlight of the engine shot a white bar ahead. The air was stifling in the sealed cab by the time the engine reached the center of the tunnel, where the American down-grade gives way to the Canadian rise. A blotch appeared in the white ray ahead. Hilton jerked the throttle, the brakes began to grind the drivers, and the locomotive came to a full stop, on a stretch of battered roadbed. Twenty feet ahead was a derailed coal car which had wrought the harm. The smoke entirely hid Thompson's engine. Both men understood the danger from the coal gas, now generated by two engines at a standstill, but Hilton sprang out heedlessly, with Jimmy following. A blast of hot, deadly vapor rushed into the cab. With head far forward, the chief staggered toward the derailed car. The boy thought of how white Hilton's face had looked, and how his hand had trembled an hour before. His own lips seemed to have frozen and dropped off, so that icy air smote his bare gums. One moment there was a furnace in his chest; then a lump of ice and the sensation of drowning. His ears seemed to hear the roaring sound of falling sand and water. In the garish, smoke-dimmed light from Mackey's engine, Hilton was fumbling upon the roadbed at the right of Thompson's locomotive.

The body of Thompson was lying face downward at the edge of the ties. His coat was wraped tightly about his head and knotted. Hilton's lips moved as he seized Thompson's shoulders. Jimmy clutched the fallen engineer's feet. Between them they dragged forward the body toward Mackey's cab. Hilton was ahead, Jimmy following upon his knees, with one of the fallen engineer's legs under each arm. With a giant effort they lifted the body to the floor of the cab, then Hilton, groping blindly for an instant, fell back. The fearful struggle had weakened him.

The shock of the master's fall gave Jimmy a new and dreadful power. Blood was trickling from his nostrils, and his head seemed miles above his body; yet he succeeded in lifting the body of Hilton to the floor of the cab, beside that of Thompson. Thompson's fireman had not been seen, and the boy dared not search farther lest he should be overcome and all be lost. Loosening the brakes and gripping the reverse lever, he started the engine back toward the pure air of the American portal, and then he fell unconscious beside his fellows.

A shout arose from the workmen when they heard the engine approaching. A moment later apprehensions were renewed for it emerged altogether too slowly. Besides, the door of the cab was swinging. Mackey, having returned, climbed upon the step as the locomotive pulled out of the tunnel. Stepping over the three forms, he sprung the brakes.

Jimmy was the first to revive, as by the grace of splendid lungs and perfect health he had been the last to fall; Hilton was then brought to half-consciousness, and last of all poor Thompson, whose tunnel service was all but finished.

Two hours later the wrecking outfit arrived. By noon the next day the tunnel was cleared and the roadbed repaired. The body of Thompson's fireman was found in front of his engine. He had fallen while groping his way to safety.

When Jimmy awoke the following morning he was lying in the little parlor of his home, his mother by his side. On a cot not far away was Hilton, the master engineer.

"They told me all about what you did yesterday, Jimmy," the chief said, pressing his temples with both hands. "I knew you were a game youngster, but it required an ugly test to show—how game."

Slowly the fearful experience returned to the boy's mind, and with it a gladness he had never known before—the gladness which comes with a hard service well done. The words of Hilton were now dearer to him than gold.

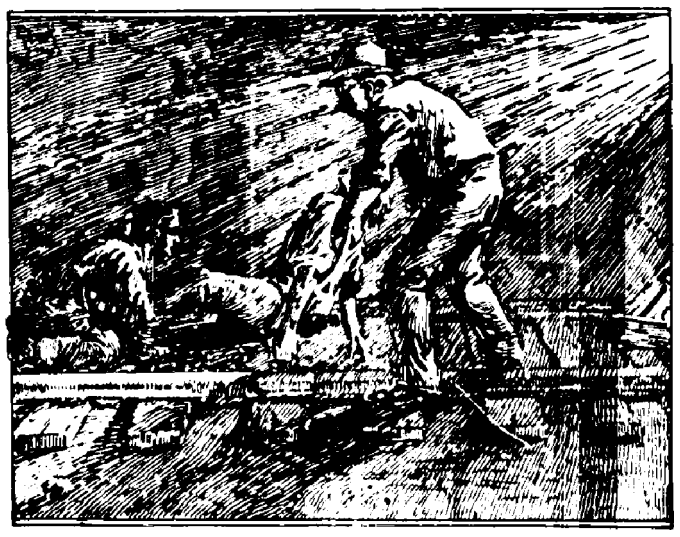
"How about that fireman—who didn't want me to take the engine?" he asked, slowly.

"Oh, he's all right—just a little bruise on the head, they say," replied Hilton. Then a moment later, he added, "You remember what we were talking about, there at the portal just before the warning came—that idea?"

Jimmy remembered.

"I was thinking of putting you in an engineering school after a while—my old school in C—, and there's none better. I've now concluded to do it right off. You seem to have a head for our kind of work, and by and by we'll be building tunnels and bridges together. You'll go?"

It was all very much like a fairy tale to the boy—this realization of his dearest dream. He saw pride and anxiety and hope in his mother's face, and a look of pleasure in the tired eyes of the master engineer.—*By Will Levington Comfort.*



BETWEEN THEM THEY DRAGGED FORWARD THE BODY

How Squirrels Steer

Bobbie and his father were walking in the park, stopping occasionally to throw a peanut to one of the squirrels that were hopping over the ground and scrambling up the trees.

"Do you know why it is that a squirrel has a bushy tail while a rabbit and a guinea pig have none, Bobbie?" asked his father.

Bobbie said that, come to think of it, he really didn't believe he knew.

"Do you know why it is that the sailors equip their boats with so many different sails and why it is that the Indian feathers his arrows? The sailor shifts his sails to get the help of the wind. The Indian feathers his arrows to hold their flight true. The squirrel uses his tail for the same purposes Now, watch the next squirrel that jumps from one tree to another."

In a few minutes a squirrel launched himself out from the top of a big tree. He seemed bound for the limb of another tree standing about ten feet away.

Bobbie watched him give his feathery tail a sudden twist, and in a flash he landed upon the trunk of the tree instead of the limb. And then Bobbie said that he understood.

A Boy With a Future

Henry Morgan, the office boy to a large manufacturing company, was a smart youngster, and one day when he was sent to one of the operating departments with a message he noticed at once that something was wrong with the machinery. He gave the alarm, and thus prevented much damage.

The matter was reported to the head of the firm, who summoned Henry.

"You have done me a very great service, my boy," said the genial chief. "Your wages will be increased by one dollar weekly."

"Thank you, sir," said Henry. "I will do my best to be worth it."

The reply struck the chief almost as much as the boy's previous service had done.

"That's the right spirit," he said. "In all the years I have been in business no one has ever thanked me in that way. I will make the increase two dollars. Now, what do you say to that?"

"Well, sir," answered Henry, after a moment's hesitation, "would you mind if I said it again?"

Bobbie's Press

One day papa took Robbie down to see the presses print the books and papers and pictures, and the little boy was very much interested.

"Papa," said he, "let me come down every day and run the presses."

"Oh, I couldn't let you do that," said his papa, "but maybe I'll have a little printing press made for you, just your size."

The weeks and months passed away and papa forgot all about his promise, but Robbie didn't. It was fully a year later that he came home from Sunday school and said, "Papa, teacher said that God made the world in six days. Is that so?"

"I guess it is," said papa.

"The water and the dirt and the trees and the dogs and birds' nests and everything?"

"Yes."

"Gee, whiz!" said Robbie, "that was quick work. Six days to make all the world, and you've been a year and ain't got that printin' press done yet!"

THE AMERICAN BOY has many readers in the Philippine Islands, but none more enthusiastic, perhaps, than is Gabino Tabunar, of San Fernando, Union Province.

MY YOUNG SPORTSMAN

A Series of Articles Descriptive of Firearms and Their Use

Written for The American Boy by Edward Van Antwerp

IF THESE articles required a dedication I would say by all means dedicate them to the American boy who loves the broad fields, the mighty woods, and the noble lakes of our republic. For where among the American people do we not find an inherent love for the green fields and crystal waters? How few there are who care nothing for outdoor sport in nature's playground. With most of us it is an inheritance strong and irresistible. In babyhood we hear the chattering of squirrels in the tree tops, or the plaintive call of quail in the stubble, and they are to us childish lullabys. As we grow older we dream of hunting fields, where the strong mallard rising from the rice of the lake shore falls a victim to a well-directed shot.

The time was when firearms were luxuries, when ammunition was far more expensive than now, so that when a boy became the possessor of a good fowling piece he was the object of envious admiration for miles around. Today it is all changed. Modern science has not only improved the art of gun-making, but it has also changed and cheapened the product to such an extent that almost everyone, young or old, can be the owner of a good gun. Perhaps the only objection my young friends encounter is that of parents or maiden aunts, who imagine that you are not old enough, or are not sufficiently familiar with the use of firearms to be the possessor of them. Well is it for parents who see that their sons are instructed in the use of arms, and who furnish good books and papers pertaining to the subject, for in the words of an old sportsman, "it is better for a young man to devote his days to the green fields than his nights to the green table."

The proper selection of a gun, whether intended for a young sportsman or an old one, is one of the greatest importance, for there are several points to be looked after or he will be handicapped right at the beginning of his career.

In the first place do not buy a gun because it is cheap, for it will prove to be a poor investment in the long run. Good material and good work are expensive things in one sense, but they are really much cheaper in the end. A gun, so-called, consisting of a combination of gas pipe and cheap wood bedaubed with varnish, is sold for a song. In some cases it is even sold with the assurance that the stock is of imported walnut and the barrel damascus. But where among thinking people can you find an owner who does not long for something better?

There are many guns on the market that are of splendid quality, of good material and attractive finish, and which can be purchased at a very reasonable price. It would not, however, be consistent with the purpose of this article to name any particular make of gun as preferable to any other make. As a matter of fact, most of the American-made guns are of high grade, both in material and workmanship. In addition to this they have an enviable reputation for shooting qualities. The selection is purely a matter of personal taste. If I were to impress upon your mind any one general rule, I would say be sure and buy the gun of some reputable American maker. In so doing you are not apt to make any very serious mistake.

In purchasing a gun one of the most important things to consider is the weight. Never make the fatal mistake of so many amateur sportsmen, in thinking that a small cannon is necessary to bring down the feathered game. It is true that a heavy gun will kill farther, and at the same time handle a heavier load of shot, but that does not signify that more game will come to bag in a day's sport because of it. By overloading ourselves with a heavy gun we soon tire out. In wing shooting the gun comes to shoulder less quickly than it otherwise would, allowing the birds to get farther away. And when we remember that some of our game birds cut the air at the rate of ninety miles an hour, we realize the importance of shooting quickly, for a delay in many cases means the difference between feathers and fowl, or perhaps we are so unfortunate as to get neither.

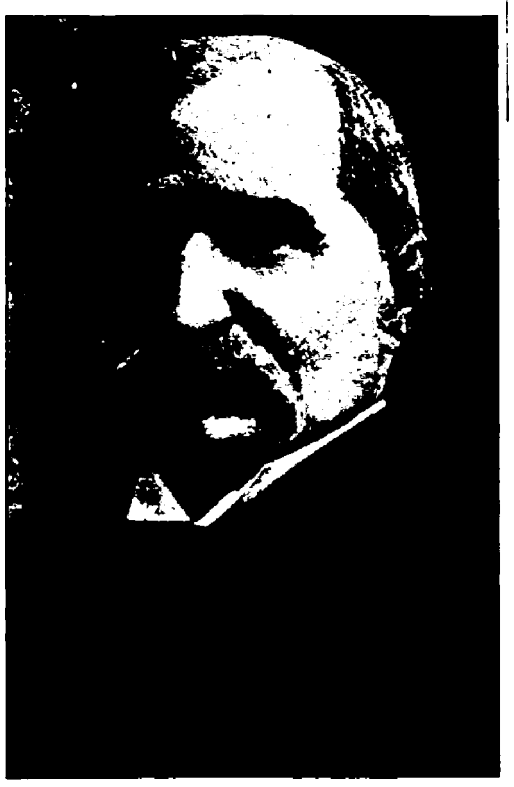
Persons of good physique, capable of standing a considerable amount of tramping without exertion, should have a gun of from seven to eight pounds weight. If they contemplate using it for duck shooting alone, it might weigh a trifle more. Persons of a less rugged nature, including our younger sportsmen, must content themselves with a gun weighing from six to seven pounds. In the selection of a light gun you do not make such a sacrifice as the diminution in weight might lead one to suppose, for mathematics have demonstrated that the efficiency of a load is almost the same as the square root of its weight. To illustrate the point: You have a gun weighing six pounds and using one ounce of shot; you also have a gun weighing twenty-four pounds and using four ounces of shot. The heavy gun will not shoot four times as far as the light one, but only about twice as far in accordance with the mathematical formula previously stated.

A gun should be shaped to suit the requirements of the individual who is to use it. This is sometimes considered so important that measurements are taken, in accordance with which the gun is afterward made, precisely as the tailor measures and fits a garment. This is hardly necessary, especially where one resides near a city wherein the dealers carry a more or less extensive and varied assortment of arms. The two principal items of measurement are, the length of the stock, and the drop. The stock is measured from the butt to the first trigger, and it should be just long enough, so that it can be easily reached by the forefinger when the gun is at the shoulder. If too long, it is difficult to shoot moving objects, especially where an instant's delay is detrimental.

The drop of stock in guns varies from two, to three and one-half inches. It is measured by placing a straight edge along the top of barrels and over stock, then by means of a rule determine the distance from lower side of straight edge to the upper side of butt. At one time it was thought that a drop of from three to three and a half inches was absolutely necessary, but the fashion has changed and now a drop of from two and one-half to two and three-quarters is considered perfection. With a straight stock the tendency is to shoot a little high, and for that reason they are much used at the trap, where the targets, usually rising, are quite liable to be missed unless the gunner holds a trifle high.

The barrels of a gun should not be more than thirty-two inches in length. In "ye olden time" fowling pieces were made as long as the shooter; indeed, the barrels alone often measured four feet or more. It has long been scientifically demonstrated that nothing is gained in using a long barrel. Undue length is sure to make an arm muzzle heavy. The balance will be destroyed, and rapidity of aim is absolutely impossible. Probably the best length for an all-around gun is thirty inches, or, if we intend to hunt in brush and timber land exclusively, a twenty-eight or even a twenty-seven inch barrel will prove entirely satisfactory. But a very little difference is noticeable in the pattern made by a twenty-six inch, and that made by a twenty-eight, thirty, or even a thirty-two inch barrel. Where nitro powders are used no difference whatever can be observed. In the succeeding chapter we will discuss the gauge, choke, and finish of the gun.

(To be Continued)



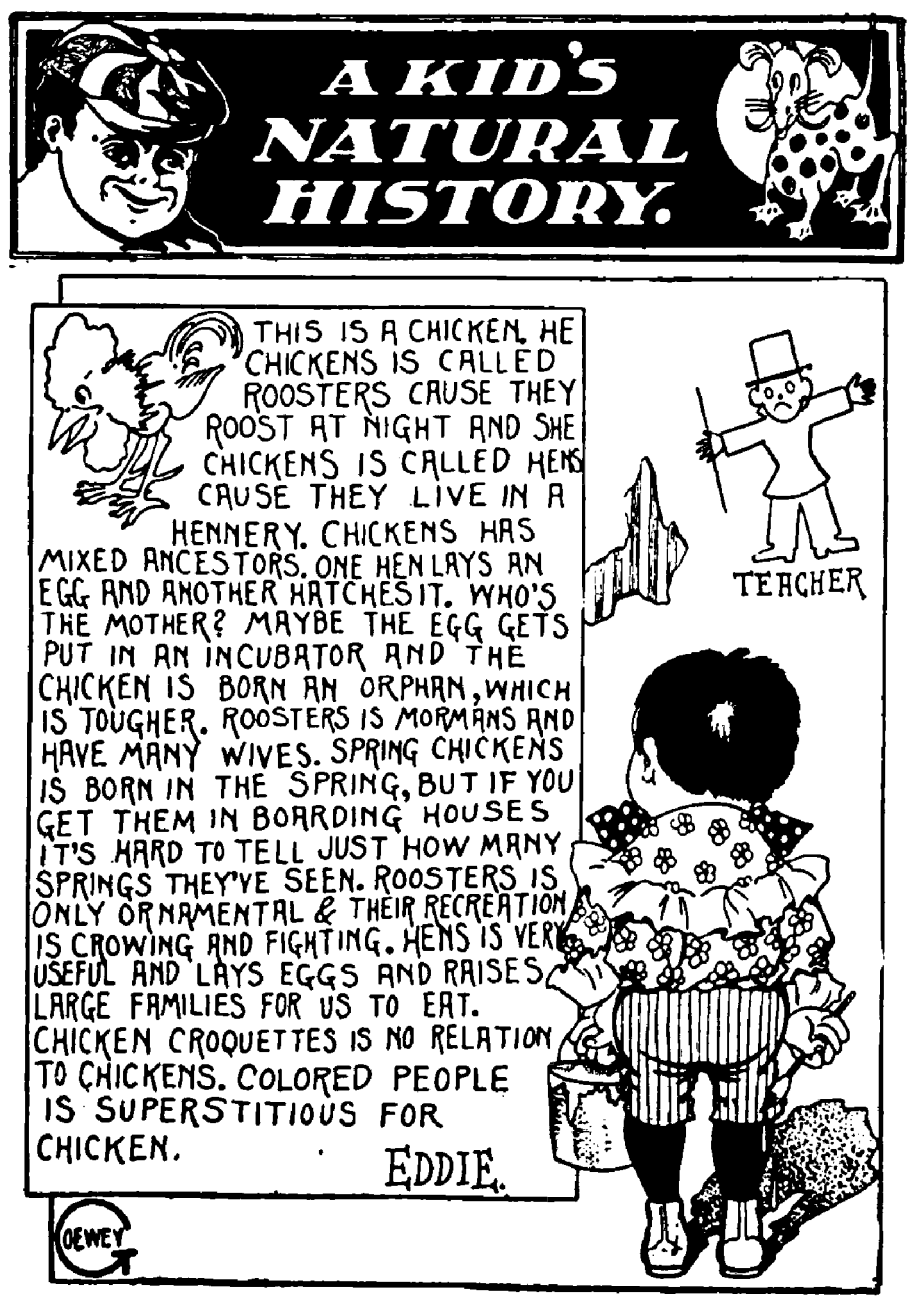
SENOR J. B. DE OBALDIS
THE FIRST MINISTER OF PANAMA TO THIS COUNTRY

A Big Citizen of a Baby State

Tiny Panama, newest and smallest of the world's two dozen republics, has accredited her representatives to the "Powers," sending to Washington the ablest of her sons,—as was proper, seeing that Panama came to birth wholly through the good influences of this country. J. B. de Obaldis, the Panama minister at our Federal capital, is a charming gentleman,—genial, courtly, and of delightful humor,—but his worth lies mainly upon what one may call his "official side." For he has a more intimate knowledge of the entire problem of a canal to cut the Central American Isthmus than any other man. He has studied the question in all its phases for years, and, with him in Washington, the constructive work which the government has now undertaken cannot but be aided.

Just after the Panama senor had arrived here, someone chanced to quote in his presence that epigram of Herbert Spencer's: "Know something of everything, and everything of something." "I can't live up to his first bit of advice," said he, smiling, "but I think I come as near the second part as most men. There is no canal detail I cannot talk of understandingly."

Washington predicts large success for de Obaldis, and he may himself, in those few words, have taken men into his confidence as to why such success should be his.



If You Don't Shoot Straight With This HOPKINS and ALLEN .22 Rifle It's *Your* Fault

IT HITS WHERE YOU AIM

Little and light but a wonder for hard, straight shooting. Can be taken down in a jiffy for packing in your trunk; put together again at a moment's notice Just the thing for killing rabbits, squirrels and all small game. Can be carried all afternoon without tiring your shoulders or arms. A rifle for the whole family.

The barrel is 18 inches long and is rifled with our new patented improved quick twist which insures remarkable force and accuracy in delivering the ball. Chambered for .22 short or long rimfire cartridges.

Has solid breech block action with automatic shell-ejector, beautiful case-hardened frame and handsomely finished American Walnut stock with hard rubber butt plate. Weight, 3½ pounds. The most serviceable little rifle made.

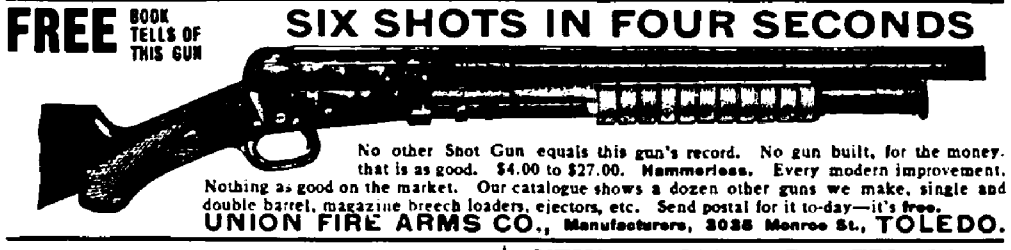
A Sample Target

If your dealer cannot supply you, send $3.50 and we will deliver it to you free of charge. This Rifle is inspected and tested before it leaves the factory. No better Rifle was ever sold at the same price.

Send for our illustrated catalogue of rifles, revolvers and shotguns when writing. We make the largest and finest general line of firearms in the world.

Hopkins & Allen Arms Co., 118 Franklin St., Norwich, Conn. Makers of the Celebrated Hopkins & Allen Schuetzen Rifle

FREE BOOK TELLS OF THIS GUN — **SIX SHOTS IN FOUR SECONDS**

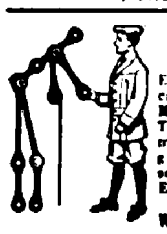


No other Shot Gun equals this gun's record. No gun built, for the money, that is as good. $4.00 to $27.00. Hammerless. Every modern improvement. Nothing as good on the market. Our catalogue shows a dozen other guns we make, single and double barrel, magazine breech loaders, ejectors, etc. Send postal for it to-day—it's free.

UNION FIRE ARMS CO., Manufacturers, 2038 Monroe St., TOLEDO.

"NEW IDEA" BASE BALL CURVER

Greatest invention in base ball since the discovery of the curve. Get one now if you want to be the best pitcher of your team. It is so small the batsmen cannot see it, and they all wonder where those awful curves come from. It imparts a rapid whirling motion to the ball thus causing a wide curve. Fits either hand and does not interfere with catching or throwing. **SPECIAL OFFER.** Send us 25 cents and we will send you post paid, the New Idea Curver, with full directions, also a large 64 page book of "OUT DOOR SPORTS," containing latest playing rules for base ball. It gives illustrations showing how the ball should be held for throwing all the different curves. Special chapters on batting, base-running, fielding, etc. Also contains playing rules for foot ball lawn tennis, polo, cricket, croquet, etc. Don't wait, be the first in your town to have one. Send a silver quarter today and we will send you the Curver and book by return mail. Address, **THE CURVER CO., Box N, Brady, Neb.**



BOYS—Get acquainted with the **IMPROVED INDESTRUCTIBLE KILBOURN'S CONSTRUCTION STRIPS**

Endless, mechanically perfect, working toys can be made with the set. Shoot the Chute, Machine Shop, Ferris Wheel, may be run with TOY MOTOR, ENGINE or WINDMILL. Windmill, Bridges, Performing Skeleton, Pantograph are easily made. Used in the public schools. Ask your dealer for it. PRICE $1.50. Express prepaid from factory 50 cents extra. Circular free.

W. D. KILBOURN, Mfr., Middletown, Conn

$1.00 to $5.00 A WEEK FOR BOYS

who are willing to do just a little pleasant work every Saturday, or if you have the time to spare every day, you can easily earn $2.50 to $10.00 a week; a chance to make a lot of money during summer holidays; we supply everything. Write us at once for full particulars—don't delay one moment as we will only let one person work for us in a town or locality.

Please Mention *The American Boy* When Writing

THE IMMORTAL FIVE

BY WILLIAM M. ROWND.

SECRET SOCIETIES had been under the ban at Grandison College for many years. If any chapters existed under the shadow of her classic walls it was sub rosa. In response to many petitions more modern ideas finally prevailed and the prohibitory law was repealed. At once fraternities sprang up on all sides. The Greek letters of several well-known societies were soon proudly displayed. The advent of each fraternity was greeted with applause by admiring students who inquired into the standing of each society and eagerly studied its mysterious letters.

One day, however, the students were nonplused by a new and unknown design. Five boys had appeared at chapel wearing badges on which were inscribed the letters "I. F." When asked what the mysterious leters meant, they looked wise and said:

"If you can find out, do so."

After so many years we may state, without any breach of faith, that the letters really stood for the words "Immortal Five," and had been carefully chosen by the five sophomores who wore them. The five did not constitute a secret society in the usual sense of the word. They were bound together by mutual tastes and common ambitions. They had drifted together the first week of their freshmen year, and the passing months had made the union of sentiment more strong. Their names were Verne, Ted, Will, Charley and Osman. For the purposes of this story it is not necessary to recall their surnames. They usually attended to their studies, obtained fair credits, and were not ashamed of their classroom work. With no thought of egotism they had chosen the letters which had so mystified the school.

What could those letters mean? Many conjectures were formed. It was called the "I Flunk" society, though that would hardly do for all the boys stood above the average in their studies. Never were letters more punned upon. At dinner some one would cry out,

"I feed."

If one of them glanced at a lady friend he was almost sure to hear some one say,

"I flirt."

And so whatever they did, the words were shouted, sung, or written.

"I fall," "I fly," "I fish," and so on ad infinitum. The words finally agreed upon by the school were "Irrepressible Freaks."

"I am heartily tired of the letters," said Charley, one evening as he came into the room where they were accustomed to meet after supper. "Just now the janitor said to me, "Sure, do them letters stand for Iscaped Freshmen?"

"We might tell the real meaning if it did not sound too bombastic," said Ted, with a mournful shake of the head.

"We will have to grin and bear it," replied Charley, grimly. "But I should like to thrash some of the impudent fellows. To think of being called 'Inanimate Frogs' by that little Sam Black."

"They are good, honest letters and have a good meaning. I propose to stick to them," replied Verne, with emphasis; "and to prove we are not ninnies we must do something to show we are immortal."

No opportunity to do anything remarkable seemed to present itself until early spring. At that time the college authorities were digging a well on the campus. It was during the days of the oil excitement in one of the neighboring states. Some were asking why oil might not be found at Grandison. To be sure Texas was far away, but oil had been found much nearer and why not at Grandison? The embryo geologists among the students had fully discussed the question. This circumstance brought the long desired opportunity to the "Immortal Five."

"Boys," said Verne, "we have never stirred this old college as we can stir it. We must mark our sophomore year by something worth while. Next year we shall be "Jolly Juniors," then "Grave and Reverend Seniors," and nothing done. We must make a name for ourselves by surpassing anything ever done here."

"Hear Verne talking of becoming a grind," ejaculated Charley with a laugh. "When will wonders cease? Fan me, some one."

"Oh, I was not thinking of that," replied Verne, throwing a book at Charley's head. "My standing is all right without that."

"What then?" asked Ted.

"Strike oil," was the reply.

"Where?"

"How?"

"What do you mean?"

"You look like it."

"Alas, his mind is unbalanced."

"Soothe him, boys."

"Much learning has made him mad."

"One at a time, boys," said Verne, interrupting the volley of expressions fired at him. "I mean make the old college feel rich."

"Rich in brains, but not in gold," murmured Ted.

"No, listen. I am in earnest."

The boys became silent, perceiving that he had something unusual in mind.

"I have been thinking how easy it would be to pour oil down the well some night, and when the workmen came in the morning they would find a seven days' wonder."

"Go to," replied Will; "it must be crude oil to deceive anyone, and we have none in Grandison."

"I have thought of that," declared Verne, "and I have a cousin at Oilville who could ship us some crude oil and keep mum."

The idea seemed so original and out of the ordinary that the boys speedily determined to investigate and see what could be done. That night a letter was sent to the cousin, who soon sent a favorable reply.

To avoid suspicion, a barrel of crude oil was shipped from Oilville to a small station about five miles from Grandison. It was consigned to a farmer named Peters, who entered into the plot. In a few days the boys received notice that the shipment had arrived. Setting out for a walk after dark, they continued the exercise until they arrived at Mr. Peters's house.

"I don't just like the idea, boys," began Mr. Peters. "Perhaps you had better give it up."

"We have gone too far to back out now," declared Charlie. "There is no moon and but little chance of being seen upon a lonely country road. If you are afraid, we will take the team and return it after we have finished the job."

"Oh, I shall carry out my part of the agreement, Dave Peters never fails," was the reply.

"Then let us start as soon as possible, or we shall not be through before daylight," said Will.

They experienced no difficulty in loading the barrel into the farmer's wagon. It was decided to hold no conversation on the way unless absolutely necessary, and then all communications were to be in whispers. After a silent journey of about an hour the wagon was halted a quarter of a mile from the campus, the barrel was unloaded and rolled over the ground to the well. It was now one o'clock and no lights were visible about the dormitories or the campus. In absolute silence the plug was drawn and the oil carefully poured into the well. The barrel was then returned to the wagon and five students retired about three o'clock. Their plans had moved without a mishap.

"I can scarcely face the fellows without letting them see something is in the wind. I should like to see how the well diggers look when they first see that oil," said Charley, on the way to breakfast next morning. For though they had had so little sleep they were prompt to arise, that no one might suspect them.

"Won't Prexy open his eyes, though," said Will, with a chuckle.

There was little opportunity to discuss the matter, however, for others were at the breakfast table. The conspirators hastened back to the campus, where they were hailed by a group of students already on the way to the well. They were chanting,

"Oil, oil. We've struck oil!"

"Where?" asked Verne, keeping sober by an effort.

"In the new well. When the workmen started this morning they found the well half full of oil," was the reply.

Falling in with the group they proceeded to the well, where they found half the school present while others were coming.

"There comes Prexy," said one. "Guess he will find that endowment he has been trying to get."

"This means a great university," said another.

The president came up, took off his coat and, amid resounding cheers, went down into the well to make a personal inspection. He soon came up and shaking hands with the man in charge he said,

"Ah, Mr. Jones, this is a wonderful day. But we must adjourn to the chapel for it is 9 o'clock."

Never were such chapel exercises. Amid great enthusiasm the president made a speech in which he enlarged upon the prospects of the college. It was just beginning to dawn upon the "I. F." society that matters were getting serious when they were thunderstruck to hear the president say,

"I have telegraphed to the most prominent trustees. Some of them have replied and will be here by noon. Young gentlemen, you may have a holiday today. I am sure no one can study for joy."

Some one improvised new words for an old tune, and the whole school marched out singing,

"The riches of the earth are found,
Grandison, oh Grandison.
Let all the air with joy resound,
Grandison, oh Grandison."

But while students and faculty were so filled with joy, five of their number were filled with dismay. What was to be the result? As quickly as possible they met in their usual room.

"Boys, this is awful," said Charley with a groan. "My father is a trustee and will come on the first train. He is an oil expert, and will detect the fraud at once."

"It must all come out. Can't we let the president know in time to stop them?" asked Verne.

"No," replied Ted. "They are on the way now. Besides would we dare let them know we did it?"

"That is just it," said Charley. "We must never be found out; it would mean expulsion. Who could have dreamed of such results? But come, it will not do to remain here while everyone else is on the campus."

Out they went once more and joined their fellows. It was hard to join in the general rejoicing with such a burden on the heart. The forenoon wore wearily away. When the one o'clock train arrived it was met by the whole school. A half dozen trustees were there. Among them was Charley's father. In the hurried greetings he did not notice the boy's agitation, and was soon at the president's side. A little procession was formed and the trustees were escorted to the well.

The oil had been carefully dipped out in the morning and had more than half-filled a barrel. Investigation now disclosed the fact that no more had flowed in during the morning hours. The water was coming in very slowly, but did not have even the smell of petroleum.

The college officials withdrew to discuss the situation. The well-diggers were ordered to continue their work. As the afternoon wore away, it became evident that no more oil was to be found.

"Not a trace of oil, sir," said Mr. Jones. "I cannot understand it. I should like to know where that oil came from."

Little was said before the students, but Charley knew from his father's manner that he more than suspected the true state of affairs.

The "Immortal Five" slept little that night. Utterly bewildered by the tempest they had raised they did not know what to expect next. They had no spirit to discuss the situation and retired to think over the gloomy prospect alone.

By chapel time next morning it was generally known that the whole affair was a hoax. The trustees were present. The president announced the fraud, then said:

"I cannot believe this was done by any of the students. If, however, anyone has been so thoughtless I hope he will have the manhood to confess and take whatever punishment may be administered. Think it over until tomorrow morning."

There was a solemn meeting of the "Immortal Five" that evening.

"Boys, I am in favor of confessing when all are agreed, but not before," said Charley. "I know how my father and mother will feel. But I cannot stand this."

"I just cannot do it," said Osman. "If I am expelled, it means the loss of my uncle's good-will, and also the loss of a trip to Europe, which he promised me on graduation."

"I do not believe they can find out who did it," said Ted with some confidence. "I do not propose to confess."

A rap at the door startled them. It was only Bob Evans, who put in his head to say:

"They have caught him. It was Henry Barnes. He was out late that night and refuses to tell where he was. The sheriff has him in jail."

"This is worse than ever," groaned Will after Bob had withdrawn. "What will Henry do? His mother will be frantic. Henry was the only one of her boys who seemed to try to do right. Jim and Tom have turned out so badly, but Henry was straight."

The boys looked at each other in dismay. The question was discussed over and over again.

"No harm can be done. They cannot prove it against him because he did not do it," urged Will.

"No; but he will always be suspected, and it will injure him here where he has had such hard work to win confidence," said Osman. "I wish we had listened to Mr. Peters's advice."

"There is only one thing to be done," insisted Charley. "The 'I. F.' society is not composed of rascals. I do not wish anyone else to suffer for my mistakes. At the same time I shall make no confession unless we are unanimous."

After long discussion it was unanimously decided that a confession must be made. At twelve o'clock that night a letter was handed in at the president's door. At chapel next morning five heavy-eyed pupils were present. After the usual exercises the president arose and said:

"Young gentlemen, a confession has been made. I am relieved and sorry. We owe an apology to Henry Barnes."

Then placing his glasses in position, he read:

"To the President of Grandison College:

"Dear Sir—We desire to confess that we are responsible for putting the oil in the well. We did it thoughtlessly and without the remotest idea that it would cause so much disturbance, or have any other than local results. We have no other excuse, and are willing to take whatever punishment may seem just."

The president paused a moment, then amid breathless silence he read the five names.

The boys were suspended for a time. I am glad to say, however, that they returned and finally graduated with their class. They had learned a bitter lesson.

They were never able to live down their name, and were sometimes called "Interesting Frauds."

THE PRESIDENT CAME UP * * * AND AMID RESOUNDING CHEERS WENT DOWN INTO THE WELL

A Wounded Grizzly

A wounded grizzly is a mean thing to fight, and if there is a tree handy it is a pretty good thing to climb if anything gets wrong with your shooting-irons. I do not think a grizzly will climb a tree, though brown and black bears will. Any bear is pretty sure to fight if crippled, but I know there is this difference between a black or brown bear and a grizzly. If you meet a black bear face to face unexpectedly, give him five seconds and he will be out of sight, but meet a grizzly the same way and give him five seconds, and you will be out of business.

About the most fascinating way to hunt bear, which is even better than night work, is to trail him right to his home, and meet him in broad daylight on his own doorstep, as it were. It can be done, but everything must be just right. The ground might be covered with a light fall of snow, and the snow ought to be melting. Then the twigs won't break. One has to be very careful, and when bruin is found, which is generally at the foot of a large tree, one must never forget that instead of one there may be two, and, in that case, one must be able to shoot fast and straight, and implicit confidence in the gun he carries is about the best stock in trade a man can possess. About the surest place to shoot a bear, to stop him quickly, to my way of thinking, is directly in the brain. It is really not a hard shot usually at short range, and it puts him out mighty quick. —Charles A. Sartain in Field and Stream.

Ought to Have Known the Rules

Marshall P. Wilder says that the small son of a friend in Brooklyn came home one day with a badly disfigured face. The "old man" took him aside for the usual heart-to-heart talk.

"What have you been up to now?" he asked.

"Fightin'," answered the lad sullenly.

"And after all I've said to you about fighting!"

"He smashed me on the cheek."

"How often have I told you that the Good Book bids us turn the other cheek?"

"I did, dad—honest; but he smashed me on the nose. I call that a foul; so pitched in and licked the stuffin' out of him. Dad, he's been to Sunday school just as much as I have, and he ought to have known the rules!"—Rehoboth Sunday Herald.

Bertel Thorvaldsen

He Carved His Own Fortune

By HELEN LEAH REED

CUPIDS AND SWAN, BY THORVALDSEN

ONE PLEASANT morning, more than a hundred years ago, some gendarmes passing through the Square King's New Market in Copenhagen, saw an astonishing sight. In the center was a fine statue of a horse trampling under his feet the monster, Envy, and bearing on his back an image of King Christian V. But what astonished the gendarmes was to see, perched on the back of the horse, beside the king, a tiny boy wearing a red cotton cap. The child looked very much frightened, and his fright increased as the gendarmes, or policemen, dragged him down and carried him off to the station house. Of course he was not severely punished, for he was able to make the gendarmes understand that he had been placed on the horse against his own will. Some of his mischievous school companions had come upon him standing in a dream of admiration before the statue. He had not answered when they spoke to him, and so, just for fun, they had seized him and hoisted him up on the horse. They then had run away, leaving

BERTEL THORVALDSEN

him perched so high that he did not dare jump down.

The little boy whose admiration for the statue had caused him all this trouble was Bertel Thorvaldsen, who was born in Copenhagen in November, 1770. The parents of Bertel were poor, simple-minded people. His mother was the daughter of an honest Danish peasant, and his father was descended from an Icelandic family. His father was a wood carver, whose time was spent in carving figureheads for merchant vessels. Bertel, a pretty boy with blue eyes and light hair, often visited his father in the shipyard. He took great interest in his work, and felt very proud when permitted to help a little on the figure his father was carving. The elder Thorvaldsen, though uneducated, was a wise man. He saw that his little son had real artistic talent, so he determined to have him educated in drawing. When he was eleven years old, Bertel began to study at the free school of the Royal Academy of Fine Arts. Here he showed great ability, and at seventeen he received the silver medal, an unusual thing for one of his age. While studying art, he also attended an ordinary school, in which, however, he did not do nearly as well.

"Thorvaldsen," said his school-teacher, who had read in the newspapers the names of the Academy prize winners, "Thorvaldsen, is it a brother of yours who has just taken a prize at the Academy?"

Bertel looked up with a blush, "It is myself, Herr Chaplain."

The teacher was surprised at this. "Herr Thorvaldsen," said he, "please pass up to the first class."

Now to address the young son of poor parents as "Herr" meant a great deal. When a famous man, honored in every country, Thorvaldsen said that glory had never been so sweet to him as on that day when he was thus distinguished by his school-teacher. His teacher's words showed the young boy that he had already won a place for himself in the world. Success, however, made young Bertel neither vain nor indifferent to his parents.

Two years after winning the first prize, he won another, for his bas-relief, "Love in Repose," and two years later still another for "The Expulsion of Heliodorus from the Temple."

Bertel's father did not desire for his son a loftier career than his own. He merely wished him to have a kind of training that would enable him to produce correct work. But his teacher, Abildgaard, saw in the boy the possibilities of a wide career and persuaded Bertel's father to let him carry his studies far beyond what had been intended. He began to carve figures and bas-reliefs in stone, and before he was twenty-one the whole city was interested in the young sculptor. The Academy granted him money to help him continue his studies, and by teaching, and drawing vignettes for publishers, he was able to support himself, and help his parents. In 1793 he won the great gold medal of the Academy, which gave him, in addition, the right to a pension for three years' travel. Three years later, when he started out on his journey, he was accompanied by his dog, Hector. The captain of the ship on which he sailed wrote home about Thorvaldsen: "He has a big dog whom he has christened Hector. He sleeps late in the morning, and thinks only about his comforts and his eating. But everybody likes him because he is such a good fellow."

It is strange that Thorvaldsen, who became an unusually hard-working man, impressed everyone in his youth with his indolence. It is true that he did not shirk his duties, and that he won several prizes, but he did not work with energy.

"I was born on the 8th of March, 1797," he used to say. "Before then I did not exist." The 8th of March, 1797, was the date of his entering Rome. The wonderful statues which he saw there acted like magic on the young man. He studied them for weeks and months. He became filled with the spirit of the antique.

Several of his works made during his first years at Rome imitated some of the great classic statues. Later his sculpture, though classic in style, was thoroughly original. Thorvaldsen did not win his way to high fame at once. He had years of hard work before him, he had to contend with those who were jealous of him, and he had to experience the indifference of the great. But at length he was recognized as the most eminent sculptor of his time. Kings and princes sought him, and begged him to work for them, and money poured in upon him.

He was always so busy that he could get no time to return to his native country until twenty-three years after he had left it. When he reached Copenha-

ANGEL OF THE BAPTISM, BY THORVALDSEN

gen in 1820, the newspapers were filled with his praises, the Academy gave him a grand reception, and the city thronged to see him. Drums and trumpets and the firing of cannon greeted him on his way to the hall, a cantata composed for the occasion was sung by the choral society, and the poet Oehlenschaegle made an address, in the course of which he said: "If our ancestors were once guilty of throwing down in Rome the old masterpieces of art, they are today, thanks to the genius of a son of the North, raised up again in all their pristine beauty."

Finally, in the eyes of the Danes, came the greatest honor of all. Thorvaldsen was invited to court, and dined at the table of the king. He was constantly consulted about decorating new public buildings, for their pride in Thorvaldsen made the Danes anxious to beautify their city with sculpture.

During a later visit, which Thorvaldsen made to Copenhagen, the people who thronged to welcome him removed the horses from his carriage and dragged it themselves through the streets. After living a long time in Italy, as the intimate friend of princes and great men, Thorvaldsen returned to Copenhagen to spend his closing years among his own people. He never forgot his early poverty. Sometimes with his faithful servant he would pass in front of the humble house where he had lived with his parents. He would point out the little room where he had begun his work in sculpture. Probably he remembered, too, the day when the gendarmes had discovered him seated beside the statue of King Christian.

In 1844, Thorvaldsen, an old man of seventy-four, died suddenly. His coffin lay in state in the hall of antique sculpture in the Charlottenborg palace, and he was buried with almost royal honors. His body now rests in a tomb in the center of the Thorvaldsen Museum. This museum was erected by public subscription, with help from the city of Copenhagen. It is filled with bas-reliefs and statues, the work of Thorvaldsen. The great Danish sculptor bequeathed to this museum all his works that were not private property. What artist ever had a nobler monument than this? It is a monument to the genius of a persevering boy.

He Talks With Animals

One of our big city dailies tells of a strange case of understanding between man and animals. Down in eastern Alabama is a six-year-old boy, Howard Erwin, who is said to be able to converse with, understand and make himself understood perfectly by animals of all kinds. By some mysterious power that he possesses he holds long talks with cows, mules, dogs, horses, sheep, cats, and even with the barnyard fowls. How he does it nobody knows. The power seems to have been born in him. It is known that when he is near an animal both he and the animal make sounds, though he speaks nothing that is intelligible to the human ear. The negroes in the vicinity avoid the boy through superstitious fear.

One evening his father, tired from the day's work, was lying on the grass, when Howard came trotting in from the barn.

"Paw, he said, "Jen told me her knee hurt her. She says she sprained it plowing today."

"I reckon that mule lied to you, son," remarked his father. "I reckon she's jes' powerful lazy and don't want to work tomorrow."

"She says she can't work tomorrow," said the boy. "Her leg is so sore she cant' hardly touch it to the ground."

"I reckon she's just tellin' you that so's you'll tell me," remarked the father.

The next day Jen was put to work, but before noon her leg was so swollen that Erwin was forced to abandon his plowing and bring the suffering animal into the barn. And for weeks she was unable to work.

"I don't understand it," remarked the man. "There wasn't a mark or a swelling on her, for I examined her closely before taking her out to work."

"Maw," said Howard another day. "Trace says he had a fine time killing sheep the other night."

"Listen to the boy," said the mother. "The idea of Trace killing sheep. Why, there ain't any sheep around here, except Mr. Tomlinson's, and none of them has been killed."

"Well," argued the boy, "he says him and the Norton dog killed two sheep in Mr. Tomlinson's back pasture."

And the next day the carcasses of two sheep were found in the bushes at the edge of the pasture.

"You'd better tell Trace he'll be killed if he does that any more," said the father.

Shortly afterward Howard reported that Trace had promised never to kill sheep any more—and, so far as is known, he never has, although the Norton dog was caught and killed a few weeks afterward while eating the body of a sheep.

When the child was 5 years old his power seemed at its greatest. He was sent for by planters from all the country around when valuable animals got sick. He would walk to the side of the sick animal, slowly stroke its head with his hand—and then come away and tell exactly what the matter was. Once, when Maj. Pettit's Durham bull got wild, refused to permit any one to come near it, and raved around its pasture lot as if mad, the boy calmly walked up to it, and, after a time, came away and reported.

"The bull says that there is something hurting its foot and that the pain is making it mad."

The negroes, under orders, lassoed the bull, and a wire nail was found sticking in the cleft of its front foot, rusting while the wound festered. He reported that a valuable horse belonging to Gen. Dunston, merely had the toothache, after veterinarians had tried in vain to cure it—and, when the tooth was removed the horse got well.

He told what the pet rabbits said, he even talked with the pigs, and, in time, as the facts became known, he was regarded with superstitious awe. The animals seemed to know by instinct that he understood them and even the wild rabbits and the possums would come to him, and the wild birds did not seem a bit afraid of him. Often when he sat in the front yard in front of the house he would be surrounded by a flock of birds.

UNCLE SAM'S FLAG SHOP

By LOUISE D. MITCHELL

FIGUREHEAD ON A SHIP'S PROW

WHEN Greater New York was formed and Manhattan embraced its sister city, one of the most valuable acquisitions was the Brooklyn Navy Yard, comprising one hundred and forty-four acres on a little bay in the East River known as Wallabout Channel, and protected by a substantial sea wall of granite about three miles in length.

Originally a shipyard, it was purchased by the Government in 1801. Lieutenant Jonathan Thorn, the first commandant, took charge on June 1st, 1806. The ship of the line, Ohio, was the first vessel built in the Brooklyn Navy Yard, and the Maine which was blown up in Havana Harbor was the last.

In 1815, the Fulton, the first steam war vessel, was built at the yard after plans prepared by Robert Fulton. Up to the present time it is estimated that the Brooklyn Navy Yard has cost the Government over one billion dollars, but the property itself has increased in valuation to fifty million dollars. The first dry-dock was begun in 1841 and was completed ten years later at a cost of two million dollars.

Adjoining the commandant's office is a triangular green plot, aptly named Trophy Park from the number of relics displayed there. The marble column commemorating the twelve American seamen who fell at the capture of the Barrier Forts on the Canton River, China, in 1856, is in this park. The column was erected by the shipmates of the dead heroes on the three vessels, San Jacinto, Portsmouth, and Levante. Guns captured from the British frigate Macedonian, and the iron prow of the confederate ram Mississippi, are placed near this monument, and nearby are a number of guns captured during the Spanish-American war.

One of the storehouses in the Yard contains clothing, canned goods, and marine supplies amounting to over a million dollars in value. In one of the buildings all of the clothing used in the Navy—except that worn by the officers—is cut out by machinery; it is then sent out of the Yard to be finished. In another, all of the coffee used by the Navy is roasted, ground, and put up in tins; besides the machine shops, workshops and foundries, there is a building for anchor chains and a rigging loft, besides a blacksmith's shop, paint shop, construction department, and steam-engineering department.

Cob Dock is an interesting place. It

BUILDING IN THE BROOKLYN NAVY YARD, ON WHOSE UPPER FLOOR UNCLE SAM'S FLAG SHOP IS LOCATED

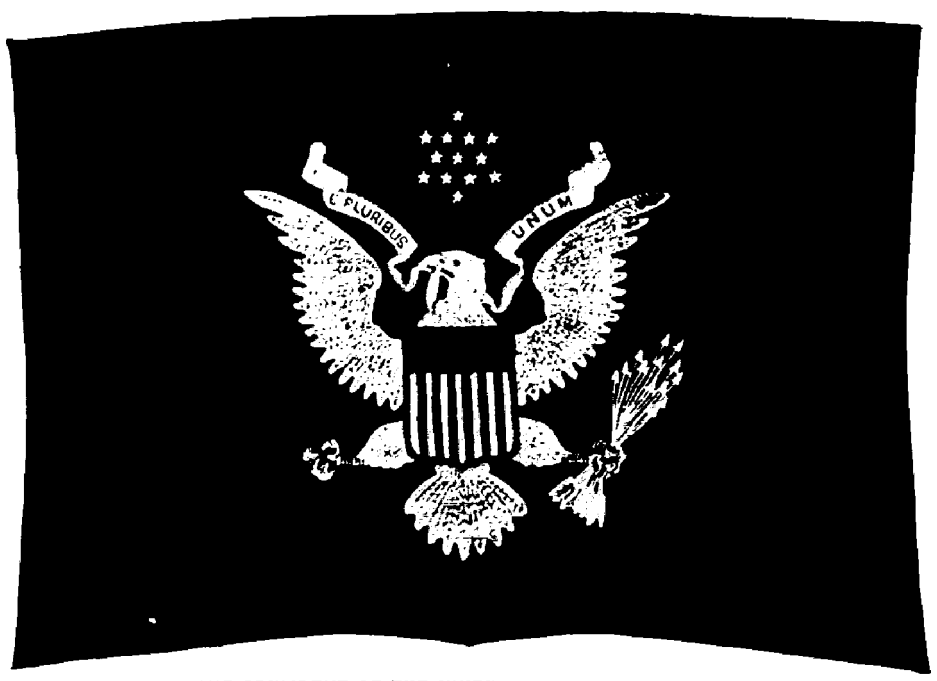
is an artificial island of nineteen acres and separated from the main Navy Yard by Wallabout Channel and reached by a chain ferry. Here is the resting place for the celebrated meteorite brought from the Arctic regions by Lieutenant Peary in 1877. It weighs about one hundred tons and, particularly because of the steel it contains, is valued at fifty thousand dollars. Another valuable relic is the first submarine boat built in the United States. This old craft, which is named the Intelligent Whale, is cigar-shaped, is made of wrought iron, is thirty feet long, and about eight feet in diameter at its widest part. The Government spent about thirty thousand dollars in the construction of the boat, but after repeated experiments, it proved a failure.

Perhaps the most interesting spot in all the Yard is Uncle Sam's Flag Shop where all flags and bunting used by the United States navy, as well as flags of other nations, are made by women, the most of whom are the widows of men who have lost their lives in the service of their country. The number of flags a warship floats to the breeze is not generally known outside of naval circles, and the number is surprising. In all there are one hundred and sixty: twenty-five foreign—according to the station on which she will cruise—twenty American ensigns, eleven pennants, four Union Jacks, and, if a flagship, twelve rear admiral's, twenty international signals, and the remainder signal and miscellaneous flags. Hence, to make the flags for Uncle Sam's navy is a work of no mean importance.

THOMAS MALOY
FLAG-MASTER IN UNCLE SAM'S FLAG SHOP

The women are paid at so much a yard for their work on the flags with plain seams, but on many of the al-

Note: The photographs from which our illustrations come were made by the author of the article on the ground. It is understood that the taking of photographs of government forts and buildings of a military or naval character, are not permitted by the Government as a rule. The photographs were made under a permit issued by the Commandant of the Brooklyn Navy Yard, for the use of THE AMERICAN BOY.



THE FLAG OF THE PRESIDENT OF THE UNITED STATES. MADE ENTIRELY BY HAND. PHOTOGRAPHED FOR THE AMERICAN BOY

leged artistic creations for which other countries are responsible, the workers are paid according to time. Foreign flags are ambitious in design and variegated in hue. The smaller and more insignificant the nation the more startling the flag. Ensigns (Stars and Stripes, of course) run in eight sizes, from that used on vessels with very long spars, which is nineteen feet on the hoist and thirty-six feet on the fly, to the little 2.37 by 4.50 foot boat flag, too small to sport more than the original thirteen States in its union. When a captain puts his ship into commission he hoists a pennant in addtion to the ensign. This has a fly of seventy feet, the union occupying 17.50 feet with thirteen stars.

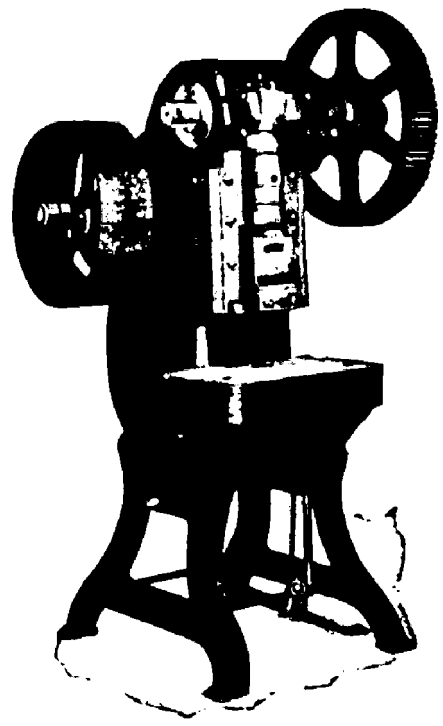
The admiral's and vice-admiral's flags of the United States navy, when these ranks are filled, are blue with four and three white stars, respectively. The Secretary of the Navy flies a blue flag with four white stars, an anchor and a cable; the assistant secretary reverses the colors. The President of the United States flies a flag that is blue, with the arms of the United States, the eagle and stars, white, and the shield preserving the "tinctures."

In the manufacture of the American naval flags the bunting used comes from Lowell, Mass., and the supply is laid in twice a year. Every piece is subjected to the most severe test. It must weigh five pounds to every forty yards and stand the weight-test of seventy pounds to two square inches. It is steeped in salt water for six hours and then exposed to the sun for the same period of time. If, after this treatment, it continues to be bunting of a distinguishable color, it is pronounced fit for service.

The material then goes to the cutting room, where it is put on the counter and the foreman of the flag shop cuts out the national ensigns. The red bunting is placed over the white bunting and six stripes are cut out at one time with a formidable pair of gigantic shears. The foreman cuts eight different sized ensign flags varying in length from 36 to 4½ feet. The makers of those flags of the United States which are sewed in straight seams, usually take home their work. After the stripes are put together the flag must be brought back to the cutting-room, on the floor of which is a diagram for measurement. The flag must be perfect in every detail. It must correspond exactly from hem to hem, on all four edges, with the nail-heads placed in the floor. No apology from the worker helps it to pass muster, and if not found correct to a thread, it must be made over.

In earlier days the foreman literally carved the stars from the bleached muslin, for he used a mallet and chisel to do so. Twenty yards of cotton cloth were folded and placed upon the block, a copper star was laid on top for a pattern, and thirty stars were cut out at one time; but now this work is done by a machine run by electricity. After the stars are cut out, they are turned down on all sides to a size indicated by a model, properly stationed, basted and hemmed down, and then another one is sewed directly at its back, fitting in so perfectly that they look like one solid star. This is an achievement not as simple as it appears.

When the flag is finally ready for bind-



MACHINE USED FOR CUTTING OUT STARS

ing, it is sent on to another department where a sailor puts on the canvas binding and makes it strong enough to defy the winds of heaven on its three years' cruise, which is its estimated period of usefulness.

FISHERMAN'S OUTFIT

$1.00
No. 8500-B

Not a mere boy's outfit, as you may at first imagine from the extremely low price of $1.00, but an outfit that any fisherman may well feel proud of. The rod alone is worth double the price that we ask for the entire outfit. The outfit consists of a hexagon, three-jointed, split bamboo rod, with nickel-plated mountings; it is made of split-bamboo, carefully glued, and finished with silk wrappings. The rod not only makes a splendid appearance, but is one of the strongest three-jointed bamboo rods ever produced. It has the regulation cork handle, the same as high-priced rods; the rod is 8½ feet long, and is fitted with solid metal reel seat. We include in this outfit one good substantial Anchor Brand Reel, nickel click, single action, with riveted raised pillar, very strong, and which will hold 25 yds. of line; also 75 yds. of No. 6 braided lisle thread line, best quality, one 1-yard leader: 1 doz. snelled hooks, 1 box of split shot sinkers (2 doz.), and 1 bright enamel float. Write today for our general Catalogue. Sent free upon application.

This outfit would ordinarily sell for $2.50 to $3.00; SPECIAL PRICE: $1.00

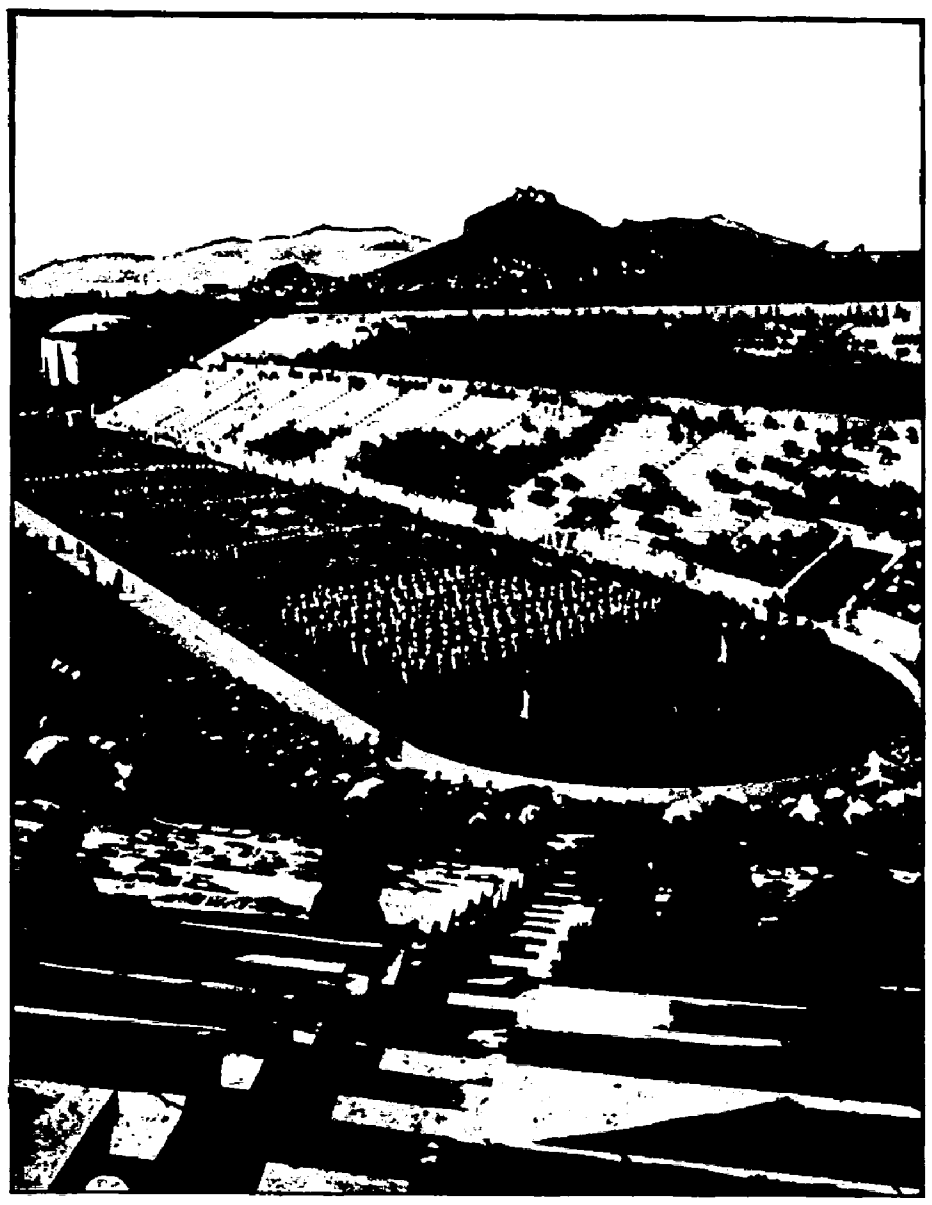
Mention The American Boy When Answering Advertisements



From Stereograph, Copyright 1906 by Underwood & Underwood, N. Y

The Pan-Athenic Stadion, Athens, Greece

This greatest theatre of the world, where the International Olympic games were held, April 22nd to May 2nd, 1906.

The Stadion seats 60,000 people. It is the theatre of the Pan-Athenaean games which was laid out by the orator Lykourgos about 330 B. C., and which was rebuilt 470 years later (about 140 A. D.), in white Pentellic marble. This magnificent pile of marble was burned for lime and otherwise used up during the dark ages.

Within the last few years it has been rebuilt of white marble at an expense of some millions of francs by Mr. Averof, of Alexandria. The excavation and removal of the earth and debris was at the private expense of King George.

The entire length of the course is 670 feet; the width 109 feet.

News From the San Francisco Boys' Clubs

Major A. H. Hutchinson, manager of the Roosevelt Boys' Club of San Francisco, writes us, under date of April 30th, relating some of his experiences during the recent earthquake and sending us photographs, which we reproduce herewith. He says.

"You will be pleased to learn of the safety of the headquarters of the Roosevelt Boys' Club at 1231 Treat avenue, opposite Garfield Square, and that we have learned of the safety of all but one of our local members. The one who has not reported at the club house is probably all right, but we have so far failed to locate him. The boys' clubs in the main part of the city are all burned out. Our boys, who were old enough, have helped the local companies of the National Guard, and those who were in the Lick school have been busy in the machine shop connected with the school, doing work for the city. The public library being gone, our club library of over 800 books was in great demand yesterday, and the sleeping rooms of the house have been in demand. As the best equipped boys' club now left on this side of the city, we expect to do good work during the next few months. Our printing office has been very busy for the relief committee, as long as we have any paper or cards. We have issued one number of our little paper, entitled "Our Junior Citizens," and an extra since the fire. The extra was printed on brown butcher's paper, and was issued more to cheer up the neighbors and those camping in the park across the way from our headquarters than anything else. It was unexpectedly popular, however, and we are rather proud of it. I expect this will knock out our AMERICAN BOY DAY celebration."

Some items from the earthquake edition of "Our Junior Citizens" may be interesting to the boys. Here are a few of them:

"Don't believe half you hear relative to the number of dead. It is bad enough, but not nearly as bad as you think."

"The man who comes up with extended hand and says 'shake' is not popular these days."

"We always did think we would find a use for this brown paper, but we had no idea that it would be for an earthquake extra. Do not mind errors, as the lights are out in our printing office."

"We are sending out our first mail by Mr. J. A. Wallace, who is starting for his home in Ohio."

"Do not argue with the soldier who tells you to do something. He may be wrong, but his arguments beat yours."

MAJ. A. H. HUTCHINSON
OF THE ROOSEVELT BOYS' CLUB, SAN FRANCISCO, CAL.

A letter from Major Sidney S. Peixotto of the Columbia Park Boys' Club tells us that he is in San Luis Obispo, and that he has lost everything—the fruit of many years' work, and that he is on his way east. The Columbia Park Boys' Club was fully described in the March number of THE AMERICAN BOY. In his letter to us, Major Peixotto writes:

"Just at the height of my hopes all that I have labored for in the last fifteen years has been swept away—home, work and all. I am trying to be brave in the face of my misfortune, and am full of courage and hope. I left the city day before yesterday, walking down the peninsula, amid towns badly shaken, but full of hope. I am heading for the East. I want to talk over this boys' club work with its friends there. The calamity is too far-reaching to think of any aid for months to come from hereabouts. The Columbia Park Boys' Club is too valuable an institution to be allowed to perish, and I know you will agree with me. I was just about ready to take up plans for the celebration of AMERICAN BOY DAY here. Alas, it is all a wasted effort."

Can You Decipher This?

A few years ago the writer found himself within the gates of a large and well-known cemetery on Decoration Day. The old soldiers were there, revently placing flowers upon the graves of their comrades, and marking each site with a miniature flag, bearing the Stars and Stripes. One grave which had thus been visited had a headstone, upon which was an inscription, much weather-worn, but none the less interesting. A remarkable fact about this inscription was, that the lower halves of the letters had entirely disappeared—worn completely away—while the upper portions, better protected from the elements, could still be deciphered without difficulty. The writer made a note of this at the time, and the little puzzle here presented is a result of this incident.

How many boys can decipher this inscription from the upper portions of the letters here given?

A prize of a book to the first correct answer received after June 9th.

The SWIMMING MATCH.

"YOU'RE a brick, Billy Souther—a regular brick!" cried Tommy Sanborn enthusiastically.

"A pressed brick, Billy!" suggested Wally Apgar, as Tom clinched his compliment by throwing his arms about the hero of the occasion and giving him a tremendous hug.

"Come, now," said another of the group, "don't go to squeezing all the breath out of the young fellow; he'll need a considerable part of it if he's going to swim up the lake and back! Now, when can we set this match off, fellows?"

This started half a dozen to talking all at once.

"Send the challenge tomorrow—send it tomorrow, Billy!" cried several, eagerly. "That will bring the challenge to the Hamden boys before they have had a chance to get even a suspicion as to our plans."

"Likewise and also," said Tom, "the water will never be warmer than it is now, and tomorrow there'll be no school to interfere."

"Tomorrow let it be," said Billy promptly, and all the other boys applauded.

Sebantic Lake is two and one-half miles in length—a beautiful little sheet of water nestling among the hills of Maine. Two villages are situated on its shores, one near its upper, and the other near its lower end, but upon opposite sides. Between the boys of these two villages there had been a keen rivalry in sport for at least two generations. The fathers in each village had handed down to their sons the ambition to surpass their rivals, and the sons had accepted their inheritance with enthusiasm.

Cranford, the lower village, had been victorious for years in nearly all the contests, but the Hamden boys had lost none of their courage. Defeat simply made them more determined than ever.

There had been meetings upon the baseball and football fields. There had been sailing matches and skating matches, joint debates and spelling contests, snowshoe meets and hunting trials, checker games and chess tournaments. But victory had almost always perched upon the Cranford banners. This naturally had the effect of making one side feel very self-satisfied, while some bitter feelings had at times characterized the other side.

Just now the Cranford boys were excited over the proposal to send a new challenge to the boys up the lake—a challenge for a grand swimming race. Billy Souther, of Cranford, was simply a wonder in the water. His aquatic feats would take a column to describe, and his speed—well, no other boy in Cranford could stay with him for five minutes.

Interest at the present time rested not only in the challenge itself, but also in the way in which it was to be delivered.

The boys of the lower village delighted to "throw down the glove" to their opponents in as dramatic a manner as possible. Billy proposed that in the present instance he should swim up the lake carrying the challenge wrapped in oiled silk, and toss it from the water to any of the Hamden boys who might happen to be upon the shore, then turn and swim back to his friends, who would be waiting in their boats for him, down the lake. That would be a bold way to send a challenge for a swimming match! Not since a baseball, with its challenge plainly written upon its white surface, had been thrown into a group of Hamden boys by a messenger from the lower village, had any form of challenging so greatly pleased the Cranford enthusiasts.

A big delegation of boys in boats were on hand the next morning to accompany Billy a part of the way up the lake, and to escort him back when his mission had been accomplished.

Clad in his swimming trunks, with the oiled-silk package tucked carefully beneath them, Billy slipped into the water from the float to which the Cranford boys' boats were moored, amid the cheers of his admiring companions. He struck out deliberately, but strongly, and was soon well on his way up the lake. He floated upon his back when tired, and in this way went over the lake's length with almost as little fatigue as he would have experienced in walking the same distance.

Great was the amazement of a party of Hamden boys as they saw, out in the lake, a swimmer coming toward the shore with long, easy strokes. They were just getting their boats in readiness for a sail, but now they suspended operations to watch the approaching stranger.

Greater still was their amazement when they saw him "tread water," within a couple of rods of the shore, and after flinging toward them a little, dripping, oiled-silk package, turn and swim back down the lake.

When Billy reached his companions who were waiting in their boats behind a jutting point of land, he scorned their offers of a chance to rest, and striking off down the "home stretch" led the line of boats with their cheering occupants to the landing float.

The challenge was accepted and a day appointed for the contest. The Hamden boys contented themselves with sending their answer by way of Uncle Sam's mail-bags. Perhaps they had no swimmer who could traverse Sebantic Lake and return without once leaving the water, or did they have a surprise in store for their rivals? Certain it was that there were many secret confabs in the upper village, and many gleeful expressions of confidence—all carefully concealed, however, from the general public. When unfair tactics have been decided upon, it is necessary to keep the secret from the honorable boys in the community, for these are sure to take a stand for clean and honest sport. Were they really up to some trickery?

It happened that just at this time a dissipated young fellow, Johnson by name, had come down from Boston to visit relatives in Hamden. He took a great deal of interest in the challenge that had been received from down the lake, and soon struck up a great intimacy with the Hamden boy who had been selected to meet Billy Souther. A few other boys of no great reputation for honorable dealing were admitted to Johnson's confidence.

Down at the other end of the lake great preparations were being made for the coming contest. It was to be a "feature" of a great celebration to be held on the seventy-fifth anniversary of the settlement of Cranford. Hundreds of visitors were expected from the country round about. Parades, speeches, a balloon ascension and fireworks had been provided for, but the swimming match was the first event set down on the programme.

The Cranford boys had confidence in Billy Souther's ability to win the race, but their interest was greatly stimulated by the reports that floated down the lake regarding the wonderful swiftness of the Hamden swimmer. These reports, curiously enough, came almost wholly through Johnson, the boy from Boston, though this was not noticed particularly at the time. It had not been known before in Cranford that Nate Patterson possessed exceptional ability in

THE BOYS IN THE BOAT AT ONCE PULLED NATE OVER THE SIDE

the water, and while the reports added spice to the coming race, no boy in Cranford lost any sleep over the matter.

A regular flotilla of boats conveyed the Cranford swimmer to the race on the day appointed. A single boat conveyed his opponent from Hamden to the starting line; his boat arrived first. Nate Patterson, in swimming trunks, at once went over the side into the water, keeping close beside his boat until the signal was given to prepare for the start.

A course of half a mile and return had been laid off, and the position of each swimmer, two rods apart, had been determined. No boat was to approach within six rods of either swimmer.

The shores were lined with spectators and scores of boats were hovering on the prescribed limits of the course, their occupants eager to see every movement of the rival swimmers.

When the starting gun was fired, both struck out strongly, but almost immediately a great cheer arose from a Hamden group, gathered on the shore opposite the starting point, as Nate Patterson was seen to take the lead and maintain it, apparently, with ease. At the same time the faces of the Cranford boys and their sympathizers fell.

"What does it mean?" cried Wally Apgar, excitedly. "Billy told me he would never allow himself to be headed for a moment, and here's Patterson a rod ahead of him at the start. I don't understand it."

"I don't see but that Billy is swimming as fast as he always did," said another. "He's taking smooth, clean strokes, and as many to the minute as Patterson, but he's falling behind right along."

As the race went on, there was consternation ashore and on the Cranford boats that lined the course. No one at the lower end of the lake had dreamed that Billy Souther could be defeated, and yet here he was three rods behind his antagonist and losing distance every moment.

Above the babel of voices along the shore could be heard that of Johnson calling to Nate Patterson, "Take it easier, Nate, and save your strength. Take it easier!" There was a note of anxiety in Johnson's voice. He did not want Nate to forge too far ahead of his rival.

But the latter was not in a mood to listen to advice. The intoxication of success was spurring him on to make his coming victory still more complete.

"Goes as though he had a propeller hitched to him!" declared one of the Cranford boys with disgust. "Just see him shoot through the water!"

The remark was uttered without thought, but it had the effect of setting another Cranford boy thinking.

Ralph Andrews had been watching the race thus far with anxiety. He had as great faith in Billy Souther's speed as had any of the other boys, and it was simply incomprehensible to him that Nate Patterson could be so easily winning the race.

The remark about the propeller set Ralph's wits working. The more he thought, the more excited he became, and presently he turned his boat and crossed over to the shore in the rear of the swimmers.

The course lay past the float where the Cranford boats were always moored. At the outer edge of this float had been built three bath houses, each with an entrance to the water from its interior. The two swimmers had passed by the float on their way up the course. They would pass it again on the way down.

Ralph Andrews walked around on the shore and out upon the float to one of the bath houses, which he entered unobserved. He put on his swimming trunks which were hanging there, and standing by the little window that faced the lake, he waited for the reappearance of the contestants. Like most of the Cranford boys Ralph was an expert swimmer, but his skill was more in diving and swimming under water than in straight away swimming. He now meditated a long swim under water.

Fifteen minutes later Nate Patterson appeared coming down the "home stretch," with Billy Souther far in the rear, but still making a plucky struggle. The course lay very close to the end of the float, and when Nate Patterson was almost opposite its upper corner, Ralph slipped into the water. Diving quietly he swam straight out toward the Hamden leader.

What happened next was talked about for many a day at both ends of the lake. As the crowds on shore and in the boats were intently watching the swimmers, and marveling at the wonderful speed of Patterson, they saw him give a leap half out of the water, and then begin a violent thrashing about with his arms, as though he had suddenly gone crazy.

Before even the most excited could cry, "Cramp! Help him!" the spectators beheld Ralph grappling with Nate Patterson and shouting excitedly.

What could it mean? The crowd on shore went wild with excitement, while those in boats rowed swiftly up to the two boys in the water.

"Pull him in! Pull the rascal in just as he is!" cried Ralph as the first boat came rushing up. "I want you to see just how his feet look—the cheat!"

The boys in the boat at once pulled Nate over the side, despite his struggles. On his hands were "web-footed" swimming gloves, very light and thin, but very effective in increasing the power of a swimmer's strokes. Nothing of the kind had ever before been seen in Cranford. But the swimming gloves were not so astonishing as the foot gear.

The gloves had been purchased of a firm dealing in sporting goods, but the ingenious contrivances upon the feet were evidently of home make, but none the less effective for that.

Light sandals were bound to the soles of his feet, and to these were attached thin plates, hinged along the middle of the soles. When the foot was drawn forward through the water, the plates shut up like the sides of a checker-board—though not allowed fully to close together; but in the backward stroke against the water, the plates opened out and quadrupled the surface of the swimmer's feet, and aided greatly in sending him along. This foot gear was the invention of Johnson.

Nate Patterson took the discovery in sullen silence, and only scowled as boat load after boat load of Cranford people pressed up to learn what the disturbance was all about. His own friends had suddenly lost interest in the contest, and some of them, including Johnson, had disappeared.

The leaders among the Cranford boys consulted together for a moment, then two of them took Nate Patterson and threw him "head-first" into the lake.

"There," cried one of them, as the spluttering boy came to the surface, "you use your patent swimming machinery for paddling straight out of this part of the world. We've no earthly use down here for cheats and humbugs!"

That was the last challenge that ever went from Cranford up the lake, and though this occurred some years ago, the disgrace of attempting to cheat in a contest of skill and endurance has not yet been removed from the little village at the head of Sebantic Lake

BUILD YOUR OWN BOAT

By the Brooks System

10,086 novices—most of them with no tool experience whatever—built boats by the Brooks System last year. Over fifty per cent of these have built their second boats. Many have established themselves in the boat building business.

If you can drive a nail and cut out a piece of material from a full sized pattern—you can build a Canoe—Rowboat—Sailboat—Launch—or Yacht—in your leisure time—at home.

The Brooks System consists of exact sized printed paper patterns of every part of the boat—with detailed instructions and working illustrations showing each step of the work—an itemized bill of material required and how to secure it.

All you need is the patterns costing from $2.50 up—and materials from $5.00 up. Only common household tools required.

We also furnish complete boats in the knock-down form—ready to put together.

Satisfaction guaranteed or money refunded.

Our big free catalog tells how you can build all styles of boats—all sizes

A BOY at OLD TIGE.

A Liberty Story.

BY FRED MYRON COLBY.

THE MONTH of May, 1775. The day was serenely fair, and the warm sunshine of spring shone pleasantly upon a beautiful scene. A broad, green clearing sloped toward the long tract of the far stretching waters of Lake Champlain which seemed to lie asleep in the rays of the descending luminary. Through the clearing meandered a little brook, which emptied itself into the lake at a place where a narrow bay indented the land. In the midst of the opening, and but a few rods from the shore of the lake, stood an old-fashioned farmhouse, with an outhouse, barn and garden, all showing signs of more or less enterprise and thrift. From the chimney of the farmhouse curled a cloud of smoke that floated dreamily over the landscape, and finally melted away into the vapory atmosphere. Several other chimneys belonging to scattered farmhouses that stood farther back from the lake were sending up smoke likewise, and back of the little settlement, with green forests and uplands between, extended a range of hills, forest-clad to their summits. Across the lake and in full view rose the frowning walls of Ticonderoga, from which floated the lion flag of Great Britain, soon to be plucked down by the fearless hands of the free sons of America.

"Supper will be ready as soon as Nathan comes," said a matronly woman appearing at the door of the farmhouse, sleeves rolled to the elbows, and the signs of culinary toil apparent on her person.

"It's time that he was here," replied Farmer Beman, as he straightened up from bending over a harrow that he was mending and turned his bronzed, honest face towards the lake. "He isn't usually so late as this."

The figure in the doorway followed the direction of his gaze, shading her eyes with one hand from the rays of the westering sun.

"I think he's coming now; yes, that is his boat. You can just see it in the glare of the sun. Well, I suppose you are ready when he gets here." And Mrs. Beman disappeared within the kitchen.

The Bemans, being thrifty people and living on the shore of the lake, here only a mile wide, were in the habit of sending their produce to the fort, where the soldiers paid good prices for the same. Their son, Nathan, a boy of fourteen, usually acted as agent on these occasions, and this particular afternoon he had rowed across the lake with a basket of poultry and fresh eggs for the garrison. He had started immediately after dinner and expected to be back in three or four hours, but it was nearly six o'clock as he drove his canoe up the mouth of the little brook and anchored it to a clump of hazel bushes. He walked up the path, crushing whole phalanxes of the starry blossoms of the white wood violets—a sturdy, boyish figure, clad in shirt and trousers, without shoes, and with a ragged cocked hat on his head. Whistling merrily, basket on arm, he entered the farmhouse, from the open door and windows of which came the fragrant odors of steaming flapjacks and hoecakes and pennyroyal tea.

"You are late, Nathan," said his mother, who was just pouring a cup of the hot drink.

"Yes, mother, I know I am, but there was a good deal to see, and I couldn't seem to get away."

"Anything new at old Ti?" asked Mr. Beman.

"Nothing particular, father, only they've got a barber there."

"A what?"

"A barber, a man who cuts hair and shaves you. The soldiers were all being shaved; it was fun to see some of them wince and squirm."

"Did you see the commander?"

"Yes, Captain de la Place bought the chickens and eggs himself, and took me to his room to pay me. He told me, mother, that he did not get such nice eggs as yours anywhere else."

Mrs. Beman smiled with pleased vanity. "Well, I keep good hens and feed them well, and I always sell my eggs fresh," she said.

"Yes, mother," said her husband, "and you make more money from your poultry than I do from my farm. However, we've always worked together. But, Nathan, you are sober; what are you thinking about?"

FRED MYRON COLBY
AUTHOR OF "A BOY AT OLD TI'GE"

"Oh, I was thinking how easy old Ti could be taken," answered Nathan.

"Capture old Ti!" exclaimed his father, "why, lad, the thing's impossible. Abercrombie lost two thousand men there in '58, and young Lord Howe was killed. I wasn't ten feet from him when he fell. The fort's impregnable. But what in the world put the thought into your head? Who is there to take it?"

"I don't know, father, but ever since we heard of the battle of Lexington between the redcoats and our farmers, I have been thinking how old Ti might be taken. You don't know how careless they are. There were no sentinels on duty this afternoon, and the soldiers were drinking and gambling."

"That may be, but Ticonderoga isn't a gal to be taken by the first wooer. 'Twould be a great stroke for liberty, but, no, no, there's nobody to do it." And Farmer Beman, who was a thoroughly patriotic American, shook his head firmly.

But as the farmer and Nathan were milking the cows that night, tramp, tramp, tramp, came the sound of many feet, and rising with their filled pails to see what the matter might be, they saw the road filled with more than three hundred armed men.

"They are not redcoats, but who can they be, Nathan, and what can their errand be?" asked the elder Beman with honest surprise.

He was answered by the appearance of two officers of rank—one a large, tall man of Herculean cast, dressed in high, heavy boots, buff breeches and waistcoat, and a high-collared white shagcoat; the other a slighter man, but well made and of noble bearing, whose garments were richer and more fashionable in their cut. Both were on horseback, and wore swords, epaulets and other insignia of rank.

"As I'm alive, it's Colonel Ethan Allen!" exclaimed Farmer Beman, addressing the colossal figure.

"And you are Ebenezer Beman," cried the famous Green Mountain hero. "This is Colonel Arnold, and we are on our way to take old Ti."

"You must be mad, Colonel Allen," cried the farmer aghast. "General Abercrombie had fifteen thousand men and failed."

"But I am not General Abercrombie, nor does insanity run in my family," answered Allen, sturdily. "Yonder fort will be in the hands of free men tomorrow morning, or Ethan Allen will be no more among the living."

Young Nathan Beman stood looking with all his eyes upon the stalwart figure of the Green Mountain hero, who to him was the personification of everything great and glorious in the world. The looks of Arnold he did not like as well; he had a reckless air and a proud, contemptuous expression of countenance, but those flashing eyes and sinister lips did not then foretell the ill fame that was to come to this brave and gifted man.

"I suppose you have made provision for boats to transport your troops across the lake, Colonel Allen," said the farmer.

"I have sent a party to secure what boats they could above here, and another party has gone to Skenesboro, but I trusted to find certain craft at this place," answered Allen. "Could I have been misinformed?"

"There is an excellent scow a half-mile above here, and there are a dozen skiffs down yonder that you are welcome to."

"And now, Mr. Beman," said Allen, bending upon him the steady gaze of his stern blue eyes, "do you know of any one that we can depend on as a guide, someone that knows all about the fort and its approaches? I wish to avoid if possible any danger from the salute of a charge of grapeshot or canister from the wide-mouthed war dogs of old Ti."

"I don't know of any one that knows old Ti better than my son, Nathan here; he goes over there as often as once a week."

"And can you, young man, conduct us to the fort and show us to the commandant's quarters? Are you sure you can do it?" Colonel Allen's voice was stern and decisive, for it was an important task that was required, and the person that served him must not fail him.

"I know the fort as well as I know our house yonder," declared Nathan, boldly. "I've been all over it by daylight, sir, and I think I could find my way over it by night."

"And do you know where the commandant's quarters are?" inquired Arnold.

"I've been there a dozen times, sir, and should know the place blindfolded," answered the lad.

"Then you are the boy for us," returned the other. "Colonel Allen, if we get the boats, the morning sun will see the red rag of England pulled down from yonder ramparts."

"Aye, and we will hope that it will never float there again," responded Allen solemnly.

During the next few hours the soldiers were busy gathering the boats of the neighborhood, and it was a little after midnight that Allen and Arnold and about eighty of the troops crossed to the western shore of the lake. The boats they expected from Skenesboro and Panton did not arrive, but neither of the great leaders dared delay any longer. In the last boat that crossed went Nathan Beman, the boy guide of the expedition.

After landing their passengers the boats were sent back for another load, while their companions waited on the shore of the lake. It was a soft May night, bright with starlight. The frogs kept up their chorus through all the night hours, and at intervals the sharp call of the whippoorwill sounded a diapason. The first streak of the dawn appeared in the east.

Ethan Allen gazed anxiously across the lake.

"It will never do to wait for the boats to return," he muttered. "Daylight will soon be here, and if the garrison espy us we are lost."

Delay was indeed hazardous, and the two commanders resolved to proceed to the attack at once.

The men were accordingly drawn up in three ranks upon the shore, and in a few brief words Allen told them of his determination. Then placing himself at their head, he called to Nathan Beman.

"Conduct us to the sally port, and mind that you do not run into any unnecessary danger."

The boy guide looked up into the face of his superior officer with a firm, brave glance. "I'm not afraid, sir, and perhaps God will fight for us."

"God will fight for us," cried the Green Mountain hero, clasping Nathan's hand. "Forward, men, in the name of the Lord!"

Slowly and silently the little band advanced. The vast bulk of the fortress rose dark and frowning above them. No sound came from the walls. The band of light in the east had broadened into a great, glowing belt of radiance.

Up within twenty paces of the entrance gate they marched before their presence was discovered. The surprised sentinel gazed in mute astonishment and alarm for an instant; then raising his musket he leveled it full at the towering figure of Allen. Luckily the weapon missed fire, and as he turned to flee the patriots followed him.

"This way," cried Nathan, running under cover within the walls.

In a brief time the rushing column of Americans swept like a whirlwind into the parade in front of the barracks, where they gave three thundering cheers that made the old walls tremble, and roused the sleeping garrison from their beds in wild dismay at the unwonted sound. Filing off in two divisions, the patriots formed a line of forty men along each of the two ranges of barracks, so that the soldiers of the fortress were made prisoners as fast as they arrived upon the scene.

"Now, Nathan, lead me to Captain de la Place's room," commanded Allen, sword in hand.

Up the stairway sprang the boy and the great leader, and in another moment the hero's sword was banging away upon the commandant's door.

Captain de la Place came to the door, his clothes in his hand, but when he saw the majestic form of Allen, he stood amazed and speechless.

"I demand the immediate surrender of this fort, Captain de la Place," cried Allen.

"But by whose authority do you make this bold demand of his Majesty's fortress?" asked the commandant, scarcely realizing the situation, which was no wonder.

"In the name of the great Jehovah and the Continental Congress," replied Allen, in a tone that could not be gainsaid. De la Place relinquished his sword and the capture was complete.

The spoil that fell into the hands of the victors consisted of one hundred and twenty pieces of iron cannon, fifty swivels, ten tons of musket balls, three cartloads of flints, a lot of gunpowder, a fine array of muskets, and a large quantity of other stores, all of which proved of incalculable value to the patriot army near Boston.

As the sun rose up over the green hills of Vermont, Nathan Beman stood beside Allen and Arnold on the ramparts of Ticonderoga, while British cannon were pealing forth their deep-mouthed thunder to the reverberating mountains—the proclamation of victory.

"God has indeed fought for us," said Allen, solemnly, as he placed his hand upon the boy guide's shoulder.

"Aye, and it is the first triumph of young freedom over the arms of her haughty oppressor," cried the future hero of Quebec and Saratoga.

Probably

"What are you crying for?"

"I fell down on the ice and papa laughed at me."

"But that's nothing to cry about."

"I know it, and I ain't crying about that; but papa fell down on the ice and I laughed at him."

"Well, I wouldn't cry about that either."

"You would if you got the spankin' I got."—Housto Post.

Our Special Waterproof Wall Tents

7 x 7 ft., Waterproof $8.25

Are the most perfect on the market. Made of very strong close woven cotton twill, treated with a special process which strengthens it and renders it mildew proof. It is Khaki Color and will not attract insects. We have increased and extended our stock of tents, canoes and campers' supplies, so that this year we have a more complete and varied line than ever before.

Send for Camp and Canoe Outfits Catalog D; contains a great deal of useful information for the camper and canoeist. Mailed on application.

The South's Ideal College-Preparatory Home School

Georgia Military Academy

College Park (suburb of Atlanta), Ga.

Your son's destiny is fixed as he passes from 12 to 18 years of age. The paramount question with every parent—What teachers, what companions, what environment will fully satisfy the peculiar needs of my son and insure his fullest development, social, moral, intellectual, physical? Correspondence with us will aid any parent.

In this academy every teacher is a specialist, every opportunity is afforded every boy, the full limit of attendance is reached every year. Splendid equipment, perfect health, delightful Southern winters of the famous Piedmont region, 1,300 ft above sea level. About 80 boarding pupils live with president and faculty of 10. Highest moral and social tone. Select patronage from many states. Regular military drills, good gymnasium, modern reading room, wholesome athletics under trained director, thorough preparation for any college or the national academies, bookkeeping, stenography, typewriting, manual training, music.

Col. J. C. Woodward, A. M.

Fishburne Military School

Waynesboro, Va. Young men and boys thoroughly prepared for college, university or business. Cadets pr sent from Seattle, Wash., to Hartford, Conn.—from Michigan to Florida. Four hours from Washington, D. C. Able instructors. Pleasant home and social surroundings. Write for catalogue.
JAS. A. FISHBURNE, A. B., Principal.

Engineering TAUGHT BY CORRESPONDENCE

Our system of training by mail has helped thousands hold down in poor positions to rise to better salaries and situations. Your chance to rise is just as good as others. Write for our free book, "How to Become an Electrical, Mechanical or Steam Engineer." THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

"A SPRING CREEK"
First prize photo, by Robert C. Line, Columbus, Montana

Alum in the Fixing Bath

Never add alum to the fixing solution. Where it is necessary, either for plates or paper, it should be employed either before or after fixing, with sufficient washing between.

Get in Line

Entries for our new bromide enlargements competition are already beginning to come in. As announced before, it closes September 1. Do not put off your entries until the last moment.

Honorable Mention

Those entitled to the foregoing distinction this month are: Earl W. White, Maurice F. Fry, Fred L. Weir, Chester Farnsworth, H. Ed. Fry, Victor Halligan, James L. Hendry, Fred H. Gibbs, and Alvin Stadtfeld.

A Good Suggestion

George Kump, one of our subscribers, writes: "I find I can buy Velox, size 4x6, for the same amount that I can buy my 4x5 negatives. This gives me an inch off of each to use to time my exposures for the sheet."

Printing on Linen

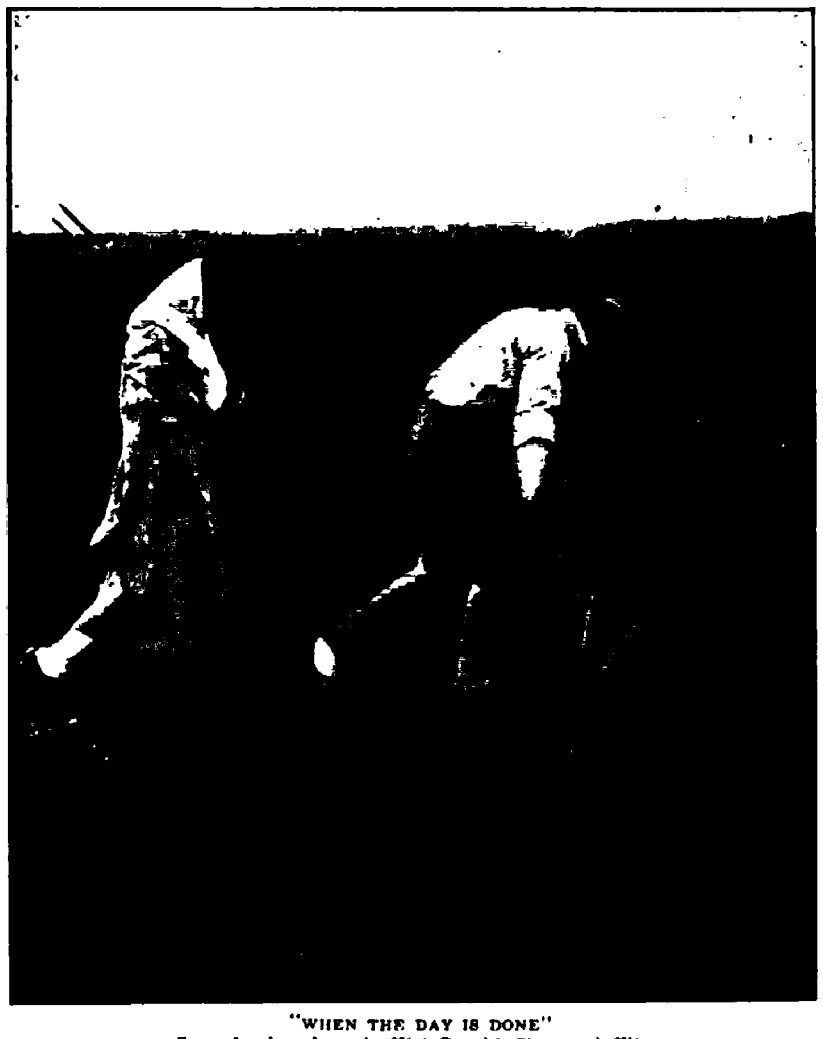
The linen is first thoroughly washed, and then soaked in the following: Water, 8 ounces; potassium bromide, 45 grains; cadmium bromide, 15 grains; potassium iodide, 15 grains. After drying, it is sensitized in the dark-room in a solution of water, 5 ounces; silver nitrate, 15 grains; citric acid, 15 grains. It is dried in the dark, and, when printed, developed with water, 7 ounces; pyrogallol, 75 grains; citric acid, 6 drams. A good washing next follows, when it may, if desired, be toned with a bath made as follows: Water, 1 pint; ammonium sulphocyanide, 187.5 grains; gold chloride, 7 grains. It is then fixed and washed in the customary way.—Photo. Gazette.

Our Prize Pictures

"A Spring Run," by Robert C. Line, of Columbus, Mont., which captured the first prize this month, is a capital illustration of a typical winter landscape towards Spring. The name was taken from a running spring, which is discharged into the creek by means of the trough in the foreground. The prize-winner informs us that it was taken with a No. 4 Screen Focus Eastman Kodak and he concludes his letter by stating that "Montana is a fine place to take pictures." The second prize picture of our old friend Nick Bruehl (Sherwood, Wis.), while inferior to the "Spring Run" in technique, is a very creditable composition. It is entitled "When the Day is Done" and clearly shows the influence that some of the creations of Millet (the painter of the "Angelus") have had upon the photographer. It was taken in the evening, August 7, 1905, with a Premo camera, stop 4, one second exposure, on a Standard plate. The print was made on Solio paper.

Our Letter Box

David Brodkey—We could not enter your photo in our competition, because it had been rolled and was cracked in the mail. Oliver B. Cardwell—To prepare an ink for writing on photographs make up a solution of: Iodide of potassium 10 parts, water 30 parts, iodine 1 part, and gum 1 part. By gum we do not mean chewing-gum, of course, but such as may be procured from a druggist. An ordinary pen is used, and the writing with this fluid is made on the dark portions of the photograph. The action of the solution is to bleach by converting the silver into silver iodide, and thus it is possible to obtain white letters, which show well on the black or dark ground. Yes, special apparatus is required for making enlargements; bromide paper is the simplest to work with. Robert R. Thompson—The completeness of fixing must be ascertained by holding up the film and making sure that no specks or patches of unaltered silver bromide remain in any part. Gail B. Helgeson—As the editor has not purchased any photo.-supplies from the dealers you mention, he is not in a position to answer your question. Mrs. C. W. Hill—Blue prints are excluded from our contests. Wesley Reed—Are you sure the formalin procured was the genuine article? The "Photogram" is generally reliable. George Kump—The diagram you enclosed relates to the distance of the object from the camera in instantaneous photography and enables you to dispense with focusing. You have to guess the distance, as near as possible, and set the indicator accordingly. The distance is expressed in metres and feet and everything over 30 metres or 100 feet away is in focus. If your ray-filter fits the lens, it can be used. The kind of Velox paper that should be used depends upon the quality of the negative. Send to the firm for printed matter and read it up. If the exposure is correct, the tank developer will do just as well. Edward H. Keating—There is no limit to the number of photos that may be entered in our contests. Tom Alvord—Opinions are divided on that subject. Personally I should say, a folding Eastman Kodak with a Goerz lens.



"WHEN THE DAY IS DONE"
Second prize photo, by Nick Bruehl, Sherwood, Wis.

The American Boy Legion of Honor
(Open to all Boys Everywhere)

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school ending on a date since September 1st, 1905, have stood at the head of their classes, taking the average of all their study grades for the term, and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts.

LEGION OF HONOR ROLL.

Note: S. R. means school record; H. means heroism.

John E. Wood, Harrisburg, Missouri, made the highest average in all his classes during the term ended March 23d, 1906.

Chas. Darrow, Valentine, Indiana, has won a School Record Badge. He is in the sixth year class of the Valentine Graded School.

Lloyd Douglas, Crestline, Kansas, made the highest average during the school term recently ended, and has been awarded a badge.

Milan Whitman, Lodi, O., who goes on our Legion of Honor Roll this month, has attended school for seven and one-half years without being tardy once.

Kenneth E. Potter, Huntington, Ohio, won the highest average in the eighth grade for the winter term, ended March 16th. His standing averaged 96%.

Cyril A. Nelson, Moray, Kansas, obtained the highest grade in his class. His average was 96%, and his teacher certifies to the fact that it was won by hard work.

Guy Rhodes, Worland, Wyoming, won his School Record Badge with an average of 99 6/9%. This was the highest average in the school, the next being 97 7/9%.

The highest average in the seventh year class of the College Corner School, Centerville, Indiana, was obtained by Lynn L. Hosier, who has received his badge.

Victor P. Morris, an eighth grade pupil of the Patterson school at Eugene, Oregon, won the School Record Badge with an average standing for the term of 97 4/10%.

Harold Stinson, Iola, Kansas, secured the best grades in all studies and in deportment during the term which closed in March. Harold attends the Prairie Union School and has not been absent or tardy since last September.

John Acree Phillips, Strayhorn, Mississippi, who has received a School Record Badge, writes that he has taken THE AMERICAN BOY only three months, but likes it very much.

Leslie Homer Brasel, a twelve-year-old boy of Farina, Illinois, has received a School Record Badge for obtaining the highest average rank in his class during the term just ended.

Walter P. Mitchell, a Stanton, Delaware, boy, received the highest average in all of his studies during the term beginning September, 1905, and has been sent a School Record Badge.

Paul Fowler, a ten-year-old boy of Pottsville, Texas, received a term average of 95%, which was the highest in his class, and was also the best in attendance and deportment during the term.

Kenneth Bryden, an eight-year-old member of Wild Cat School, Monticello, Illinois, not only received the highest average in his class during the term, but was neither absent nor tardy in that time.

Robert Harris, a pupil in the seventh grade of the Kelly School, Wilkinsburg, Pennsylvania, has made the highest average in his room for two successive terms. Robert is thirteen years old.

Perfect attendance during the eighth grade year and for four high school years is a pretty good record, and entitled the boy who made it, Otis F. Smith, Sedalia, Missouri, to a School Record Badge.

The seventh grade teacher at Beaver Dam, Wisconsin, writes us that Stanley Schnetzler obtained the highest average in his class during the term ended December 22d, 1905, and we have sent him a badge.

Lennis E. A. Nance, Wickliffe, Kentucky, who recently received a School Record Badge for obtaining the highest class average in the seventh grade, is an enthusiastic member of Henry Clay Company No. 7, O. A. B., and is secretary of the club.

Charles Drach, Jr., Jeanette, Pennsylvania, in writing to thank us for the School Record Badge received by him, says: "The superintendent of our school gave it to me in front of the whole room. The boys said it was fine and that they wished they had it."

Durrell C. Davis, of Corvallis, Oregon, writes to thank us for the School Record Badge sent him recently, and says: "The badge is fine, much better than I expected or deserved." Durrell is now attending town school and says his work keeps him very busy indeed.

Emil Leard, who is a senior in the Hartwell Institute, Hartwell, Georgia, received an average of 98 2/7 in his studies, and a badge has been sent him. In 1904 Emil received a medal for making the highest average in the eighth grade. He is fourteen years of age and the youngest in his class.

Thomas A. Harris, a sixteen-year-old boy of Ogden, Utah, won the Heroism Badge by saving two lives. In 1905 he saved a baby who was caught on the track from being run over, by flagging the on-coming train with his hat; and on March 25th he rescued a young girl from drowning at a great risk of his own life.

Convass Dean, Ulysses, Pennsylvania, had a comparatively easy time in winning a Badge for the highest average in his class, as he is the only pupil in the eleventh grade. However, as his average was 99 and a fraction, we cannot see that this fact kept him from making a good record.

We received a pleasant little letter from Price R. Moore, of New Cumberland, Ohio, who won the highest average in his grade during the recent term of school. Price is eleven years old and has never received a tardy mark since starting to school when he was six. He has a big brother and sister, and says they all enjoy THE AMERICAN BOY very much.

"I desire to thank you for the Legion of Honor Badge which was presented to me by my teacher. I appreciate, not only the badge, but also the honor of having my name on your Roll." This is a paragraph from a letter written us by Victor P. Morris, of Eugene, Oregon, who adds that he thinks THE AMERICAN BOY the best paper printed for boys, and is hoping to get us some new subscribers.

Among the names added this month to our Legion of Honor Roll is that of Carl Wayne Allshouse, South Newbury, Ohio. This boy, although not yet twelve years of age, will soon complete his sixth year of school. During this time he has not been absent or tardy, nor has he missed a recitation. As he lives on a farm a mile from the school, he has sometimes found that it takes a good deal of grit to keep up such a record in all kinds of weather. Not only has Carl been regular in attendance, but he is a good student, having always stood at the head of his classes. He writes: "This is the third year I have received THE AMERICAN BOY, which I like very much, as a premium for obtaining a club for the Ohio Farmer."

Boys Get Nice Prizes and Earn Money Selling "THE AMERICAN BOY"

The following boys win prizes for buying the most copies of the May number of "THE AMERICAN BOY" to be sold by them: S. Byck, $2.00; M. McElroy, Ingersoll Watch; Elmer Metcalfe, Football; Harold L. Spedden, copy of the book "Three Boys in the Mountains." Besides these prizes the boys made a big profit on the copies they sold. The plan is this: To start a boy in the work we send him, if he asks for them, ten copies of the current number of "THE AMERICAN BOY," and for these we make no charge whatever. These copies he sells at ten cents each and keeps the money. That gives him a working capital so that he can buy his next month's supply at a price that will pay him a nice profit, as he must sell his copies at ten cents each. As indicated above, we give to the four boys who buy the largest number of papers during the month, a nice prize.

Lester C. Peterman, of Groveport, Ohio, writes—"The Ingersoll watch you sent me as a prize for selling next to the largest number of March AMERICAN BOYS came duly to hand, and I am more than pleased with it because it came from such a great publishing company as THE SPRAGUE PUBLISHING COMPANY, for selling their fine paper. It is something I can use every day and be justly proud of, and I earnestly thank you for it."

Boys who have not ordered ten copies to be sent free should do so, and make an effort to get regular customers who will buy copies of "THE AMERICAN BOY" from them each month. Address
THE SPRAGUE PUBLISHING CO., Detroit, Mich.

If you wish to receive a copy of the book mentioned in this advertisement, write your name and address in the space above, tear off this corner and mail to **Battle Creek Sanitarium Co., Ltd., Dept. A-200, Battle Creek, Mich.**

CUT OUT HERE

If we could convince you in this ad. of the value to YOU of our *Free* new book, "THE BATTLE CREEK IDEA," you would be glad to pay $10.00 for it.

This book is valuable because it shows you how to be well and strong without taking drugs or medicines. All it costs you, however, is the price of a stamp—we send it absolutely free.

If the attainment or retention of your own good health—and the good health of those dear to you—is worth a postal, send us one today (or use above coupon) and we will forward the book promptly.

You do not obligate yourself in any way by answering this advertisement. You are neither required to buy anything nor to promise anything. All we ask is that you read the book carefully.

It tells how you can live, in your own home, without disturbing your daily routine in any way, a sane, healthful life—the life that has restored thousands to health at the famous Battle Creek Sanitarium.

It is now recognized that nine-tenths of all diseases are caused by improper diet.

You eat disease; and you eat health. It is all in the choice of Foods. "The Battle Creek Idea" will tell you how to choose right, so as to get and keep good health.

If the health is worth having, the book is worth asking for today. Address

The Battle Creek Sanitarium Co., Ltd., Dept. A-200. Battle Creek, Mich.

Stamps, Coins, and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

The Numismatic Sphinx

Albert Holmes: Your 1883 V nickel with an E over the V was not issued by the government as such. The E has no doubt been counterstamped on it by some one and does not add to its value. W. G. S., Cedarville, O.: The quarter of 1876 is only worth face. Lloyd Riley: Your coins are only worth face value unless they happen to be in proof condition. D. Zentmire: Face value only. Wm. N Brown: 1834 cent, ten cents. Old Carolina broken bank bills can be purchased for from five to ten cents each. E. W. Robinson: Your German coin is a very common 1 pfennig. Your other rubbing is a common Canadian sou. Others face value. F. H. Edson: (1) 1806 half cent, twenty-five cents; (2 and 3) common Canadian and English pennies; (4) common cash coin of the present Chinese dynasty; (5) Austrian 2 heller, common. Ravenwood, Mo.: 1852 cent, five cents. 1858 flying eagle cent, face value. Others very common. Wm. Lindahl: Denmark 1719, half skilling, thirty cents. 1771 half and 1 skilling, ten and five cents each. 1818 1 rigsbank skilling, ten cents. Michael Hojem: Your coin is a 6 skilling of Denmark worth twenty cents. Donald Best: The half cent of 1835 is worth fifteen cents. Arthur J. Danielson: The half dollar of 1853 is only worth face. The same may be said of the quarter of this date. Ralph Phillip: Your rubbing is from a common (5) "cinco" centimos of Spain. Ray Gould: See answer to Arthur J. Danielson. Harold McConnell: Your rubbings are from a Chinese cash and a Russian 2 kopecks. Both are common. None of the two-cent pieces, with the exception of that of 1873, will bring a premium worth considering. Others face value only. Paul Pard: Your rubbing is from an old Roman first bronze. It is so poor that it cannot be positively identified and is consequently almost valueless. LeRoy Crowell: Canadian current coins only bring face value. Old Spanish and Mexican silver, unless in fine condition, are only worth bullion value. The Confederatio of 1783 is worth thirty-five cents. Herbert Magney: Your Swedish coins are worth from five to ten cents each. All you mention are quite common. Ralph C. Sherman: Old Confederate bills sell for only a few cents each as curios. The ones you mention are of the commonest varieties. Cents of 1831, 1853 and 1834 sell for from five to ten cents each when in ordinary condition. Canada cents, face value only. Robert T. Rich: The half dollar of 1855 is very common. Hubert Turner: The 1853 dime is worth ten cents only. Dean Walton: The nickel 5-cent piece of 1866 with stars and bars, and the half dime of 1838 are worth ten cents each if they are in fine condition. Fred Poyner: The cent of 1841 sells for ten cents. Kenneth H. Hill: The 1857 flying eagle cent sells for face value. The half cents of 1829 and 1834 sell for fifteen cents each. Lincoln D. White: See answer to LeRoy Crowell. G. Y.: An 1834 cent is worth ten cents if in good condition. Geo. B. Forristall: Says he has heard that "if one could obtain five 10-cent pieces with the mint marks S O U T H on them they would be worth $5.00." As we have no mints with the mint marks U T and H of course this is untrue. Harry Wolking: The half dollars of 1877 and 1859 are only worth face value when in ordinary condition. M. H. Feld: The half dime of 1853 is worth five cents only. Leigh H. Slocum: A half dollar of 1825 sells for seventy-five cents at the dealers. 1838 dime, in fine condition, twenty-five cents. Harry N. Elwell: The half cent of New Brunswick, 1861, is worth five cents. Ralph W. Rider: The Philippine centavo of 1903 sells for five cents. The half dollar of 1832, seventy-five cents. James S. Tyron: The quarter dollars of 1819 and 1821 are worth seventy-five cents each. E. M. Youngs: Your query is elsewhere answered in this column. Paul Fleming: You will have trouble in getting more than a dollar each for your dollars of 1904. Only those in proof condition will bring a premium. Frank Svacka: (1) Austrian crown of Leopold 1704. (2) Same of Rudolph II. (3) Saxon crown of John, Christian, George and Augustus, 1599. These three old German crowns sell usually for about $2.50 each. (4) Austrian silver of 1803 (Francis II), half a dollar (5) Hungarian ducat (gold) Charles VI, 1739; intrinsic value $2.25. (6) Common English penny. (7) Austrian ducat, Joseph II, 1779, same value as last. 1837 quarter, fifty cents. H. K. (Woodmere): The only coin among your rubbings of any particular premium value is the little octagon California gold of 1853. This is worth $1.50. W. H Geach: The copper that you inquire particularly about is from Spain. It is an 8 Marivedes, and is common.

GEORGE R. BRILL

Get Into Business

Take advantage of the reigning fashion among the best people in the large cities of having the family name on an Engraved Silver Name Plate on the front door, and secure exclusive control of a town or a county for Engraved Silver Name and Number Door Plates.

Start in business for yourself. Many representatives to whom we have given exclusive territory have numbers of sub-agents working for them. We want intelligent, high-grade representatives. Our exclusive territory arrangement guarantees you a big income. As each plate is engraved to order they cannot be bought in stores and you will have a monopoly in your territory.

You can readily see how easy it is to sell these beautiful Name Plates when you consider that never before has it been possible to make them for less than $5.00 each, and that through our unlimited resources we can make them to your order so that you can sell them for $1.50 each, clearing 75c on each sale.

Write today for full size reproductions of New Method Engraved Silver Name and Number Door Plates. They are of perfect design and the engraving is deeper and better than has ever been done before. They wear forever. Nothing so popular has ever been offered the public heretofore. Territory is being rapidly awarded, first applications in every instance being given the town or county applied for. Write for your choice of territory and complete selling instructions today. Active and intelligent agents are making from $1.00 an hour up during the time they work, and where our representatives are employing sub-agents in addition, their income is both large and steady. You owe to yourself to examine this opportunity at once. All information will be mailed you on receipt of your postal card request.

NEW METHOD CO.,
5706 Prairie Ave., Chicago.

WONDERFUL 10c. WIRELESS TELEGRAPH With our little outfit you can send messages across a large room or from one room to another complete with Morse Alphabet and full instructions 10 cents. PEERLESS MFG. CO. Dept. L 31, Norwalk, Conn.

COMBINATION PRAIRIE WHISTLE You can imitate any bird or animal. Astonish your friends by making them believe you are a Ventriloquist. The instrument is concealed in the roof of the mouth and detection is impossible. If ladies are near imitate a mouse and see them grab their skirts and climb a chair. Boys, if you like fun, get one. Price 10 cents with full directions and our big bargain catalog FREE. Address AMERICAN SUPPLY CO., 529 Minnehaha Street, St. Paul, Minn.

BOYS We will pay you CASH

During vacation, write to-day for particulars. We will give **JOHNNY GUN** free to the first boy in each away one town who will distribute one hundred circulars for us. No canvassing whatever. **THE ENGINE TOOL COMPANY, Minneapolis, Minn.**

LOTS OF FUN FOR A DIME

Ventriloquists Double Throat Fits roof of mouth. Always invisible, greatest thing yet. Astonish and mystify your friends. Imitate Punch & Judy, neigh like a horse, sing like a canary or imitate any bird or beast of field or forest. **LOADS OF FUN.** Wonderful invention. Thousands sold. Price only 10 cents or 4 for 25 cents. DOUBLE THROAT CO. DEPT. 14 FRENCHTOWN, N. J.

BOYS AND GIRLS MAKE $2 A DAY SELLING PRINCESS RIBBON LEADER —a new invention—every woman buys one—Sample 10 cents; Booklet free.

Ontario Supply Co., Dept. B, Rochester, N.Y.

Mekeel's Weekly Stamp News, Boston, Mass., is the biggest, brightest and best stamp paper in the world. *Sample free!* 6 mos. for 25c and one of these premiums FREE "What Stamp Collecting Teaches" book of 80p fully illustrated. Packet of foreign stamps all different. Catalog value $2.85. Set of Persia 1891, 5, 10, 14c unused catalog .35. 1900 peelable hinges "Superb" worth .15c. Menagerie Packet bird and animal stamps all diff. 200 foreign stamps all different no rubbish. Nicaragua, 1862, 5c black Scott's No. 6 catalog 75c. Peru, '88, 1 sol and '94, 50c both catalog value .70c.

A 40-page Album, 10 blank app. sheets, 100 stamp hinges, 25 var. stamps and a 3c post-office dept. only 1xc. 100 Foreign all diff. and a Base Ball Glove, only 35c.

1000 Foreign Mixed	10c	4 Round Egypt official	10c
1000 U. S. fine	10c	10 diff. Animal Stamps	10c

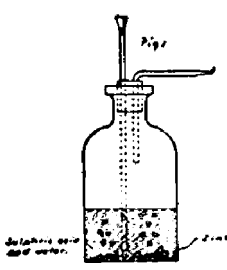
Chemistry For Boys

Lesson II.—Hydrogen

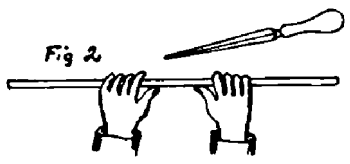
NEXT TO the element studied in our last lesson, oxygen, perhaps hydrogen holds second place in importance, as far as the life of man is concerned. Hydrogen is the element which, combined with oxygen, forms water, a substance that we could not well do without. Think of it—the combination of two gases (which these elements really are), making a palatable, clear, colorless liquid. And yet, were we to be placed in an atmosphere of pure oxygen, our bodies would soon be consumed, so violently would it attack our system. We would become very active, our blood would tingle, and a general exhilaration would be the result at first. On the other hand, if we were placed in at atmosphere of pure hydrogen, it would soon prove fatal to us. Our voices would become high-toned squeaks and unconsciousness would soon result.



But this gas constitutes 11.11 per cent by weight of water—that is, every hundred pounds of water contains 11.11 pounds of hydrogen. Astronomers also tell us that immense quantities of hydrogen are present in the sun in an incandescent state, flaming and burning and throwing out a terrible heat, warming our planet, as well as the others of our solar system.

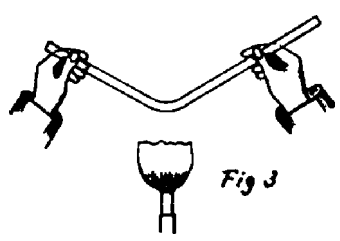
Hydrogen may be easily obtained for experiments—far more readily than oxygen, but you must be very careful, as when it is mixed with air it makes an explosive mixture easily ignited by a match. However, if these directions are carefully followed, no danger need be feared.

We will make a generator flask, as shown in Fig. 1, from an old, wide-mouthed, pickle bottle, having a sound cork. Bore two holes about half an inch apart, somewhat smaller than the glass tubing. Then cut a piece of tubing (glass tubing may be cut quite readily by nicking it on one side with a three-cornered file, placing the hands on either side of the scratch, pulling apart on the tube, at the same time bending it, the thumbs resting against the back of the tube immediately behind the scratch (Fig. 2), when it will break off smooth and true, long enough to reach to the bottom of the flask and eight or ten inches above it. Pass through one hole in the cork. Then bend a piece of the same tubing, about ten inches long,



into a right angle or "L" shaped piece. (To bend a glass tube, take the piece to be bent between the thumb and forefinger of each hand and gradually bring into the flame of a gas jet, oil lamp, alcohol lamp or candle, turning the tube to and fro constantly in the meantime, to insure an even heating. When the tube begins to soften, allow the heated portion to drop downwards, when a smooth bend will result. Remove from flame and it will set in a few seconds. See Fig. 3, drawing out the end to a fine point by heating the portion near the end red hot and suddenly drawing the softened section apart. The result will be as shown in Fig. 4. Break off, leaving about an inch of the fine tube attached, the small end being again heated and bent upwards.

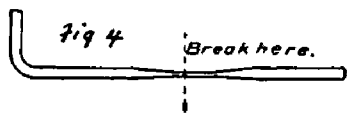
Now thrust the large end of the tube through the other hole in the cork, as shown in Fig. 1, leaving the fine point extending outwards. Secure some small pieces of zinc, which may be taken from an old washboard or battery zincs, and



cut into small pieces. Place these in the bottom of the bottle and cover them with about an inch of water. Place the cork in the bottle again and make a small funnel of writing paper, so that you can readily pour some sulphuric down into the flask through the long tube, the bottom of which should extend below the surface of the liquid. When you are ready to generate the hydrogen, pour about two teaspoonfuls of sulphuric acid through this long tube, shaking the contents of the bottle together, so as to thoroughly mix the water and acid, when a violent ebullition will take place, and the mixture of hydrogen gas and air will flow from the small exit tube. Do not attempt to light this small issue of gas at first, as it will result in an explosion which would break the bottle and send pieces of glass flying, possibly into your eyes. The best way to test this gas, so as to insure its purity, is to hold an inverted test-tube over the end of the delivery tube, allowing the tube to fill with this hydrogen gas. Then remove the test-tube a couple of feet from the flask, and while still inverted, hold a lighted match beneath the tube. If the mixture still has air in it, a sharp report will be given, but no danger will result, as the tubing, being open, will prevent any explosion. Repeat this until the hydrogen burns with a blue flame in the test-tube without giving any report. You may then light the stream of gas issuing from the delivery tube without any fear of an explosion, as pure hydrogen will not explode, and it must have air or oxygen to take fire at all.

Now, while this flask is generating this hydrogen gas, there are many beautiful experiments that can be tried with it. You will notice the almost colorless flame. This is one of the peculiarities of hydrogen, but even though there is very little flame seen, there is an intense heat; in fact, by the use of hydrogen gas in combination with oxygen, one of the most intense heats that it is possible to produce, is derived, by means of which some of the most refractory metals are melted. The oxy-hydrogen blow-pipe is the instrument in which this mixture of hydrogen and oxygen are burned. It is also used in magic lanterns to give the beautiful white limelight which, doubtless, you have all witnessed.

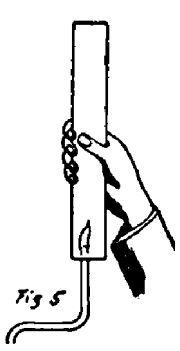
A very interesting experiment, known as the "singing flame," may now be tried. A glass tube of ½ to ¾ inches inside diameter, is held over the end of the delivery tube, as shown in Fig. 5. As soon as the tube is placed down over the flame, a loud noise, which is called the singing of the hydrogen flame, will begin. This is caused by the very rapid explosion of the mixture of hydrogen and oxygen that occurs at the point of the delivery tube. By varying the distances that the flame is allowed to enter into the tube, a few different tones may be produced. If a piece of tube two feet



in length is not easily procured, an Argand lamp chimney may be used with fair results, although it is sometimes difficult to set up the singing in a tube of such large diameter.

Now take a wide-mouthed bottle, which has been wiped perfectly clean both inside and out, and hold over the hydrogen flame for a few moments. It will not be long before a very heavy film of mist or condensed moisture will collect on the sides of the bottle. This water is the product through combustion, of the hydrogen and the oxygen in the air and the hydrogen that is burning. If the sides of the bottle were kept cool and the bottle turned slightly to one side, so that the moisture would collect and drip down, quite a considerable quantity of water could be collected. This same phenomena can be frequently noticed when a lamp is first lit. The chimney will be perfectly dry, but as soon as the flame starts to burn, a layer of moisture will collect on the inside of the lamp chimney. This is also water, but not as pure as in the case just mentioned, as it is mixed with other products of combustion.

The explosive force of hydrogen may easily be shown by inverting a pint bottle over the delivery tube and allowing the hydrogen gas to flow into it for a few seconds. This will give a mixture of air and hydrogen. Now cover the mouth of the bottle with your hand and shake thoroughly to mix the air and hydrogen. Place a card over the mouth and stand the bottle up on the table, several feet away from your flask. Now, with a long wax taper, knock the card from off the mouth of the bottle and bring the lighted end of the taper over the mouth. A violent explosion will occur, but as the mouth of the bottle is open, it will not break the glass, but simply pass upwards into the air. Notice that there is neither smoke nor odor after this explosion. This could not be for the simple reason that the product of the combination of the oxygen and hydrogen is pure water.



Hydrogen is used in some of the arts, but perhaps the most familiar use to which it is put is the filling of balloons. Hydrogen is the lightest substance known, and it is from this that we derive our standard for the various atomic weights of the elements, which will be spoken of later on when we become more familiar with our chemicals. Hydrogen is so very light and diffuses so rapidly that it is almost impossible to retain it in any glass vessel. If a bottle was filled with hydrogen gas, and an ordinary cork placed in the bottle, and allowed to stand a few hours, there would be very little hydrogen gas left. It would have passed out through the pores of the cork and air would have entered. A glass stopper will sometimes allow the hydrogen to escape around it. A small crack in the bottle, which would be entirely too small to allow air or water to pass through, will allow hydrogen to escape with great rapidity. Thus when a balloon is filled with hydrogen gas it becomes very buoyant, as it is several times lighter than the air which it displaces. In fact, air is fourteen and one-half times as heavy as hydrogen.

QUERY BOX

Q. I have an old air reservoir from a locomotive that I wish to use as a steam boiler, which is 32 inches long, 1 foot in diameter, ¼ of an inch in thickness, and with rivets placed about ¾ of an inch apart, single row. Would this make a boiler sufficiently large for a 4 h. p. engine and how many pounds of steam would it carry? Would it be best to use it in a horizontal or upright position?—F. H. S., Ramer, Ala.

A. Not knowing the condition of the tank, we would not like to advise you with regard to its steam capacity. Undoubtedly, if it is in perfect condition, it should be perfectly safe to carry forty or fifty pounds of steam, as the air tanks on locomotives are generally required to carry pressure from eighty pounds upwards. It would be better to use the boiler in a horizontal position, but you might have some little difficulty in running a 4 h. p. engine from it, owing to the fact that you have no tubes running through it, and it is hardly probable that you could get sufficient evaporation from the small heating surface presented to operate an engine of this size.

Q. Could a set of telephones be made of two receivers and a battery, and if so, what length of line would they operate and could they be used on a plunge battery of 6 volts and 5 amperes?—E. C. S., Muncie, Ind.

A. Satisfactory telephones cannot well be made of two common receivers and a battery. A battery is not necessary when two telephone receivers are connected together to act as a telephone, as the current is generated in the telephone itself, owing to the permanent magnet that is used inside the coils. A plunge battery of the capacity you mention would be entirely too strong for any telephone.

Q. Can glue or mucilage be used to cover the windings of a magnet coil in place of shellac?—F. L., Zanesville, O.

A. Neither mucilage nor glue are good insulators, and that is what shellac is used for.

Q. What is the gauge of enclosed bare wire; of the insulated wire? What is a dead centre?—D. C. B., Lawrence, Mass.

A. The bare wire is No. 22 gauge. The covered, 24 gauge. The term "dead centre" is used generally in steam engine practice, where it means that the crank is in line with the connecting rod and the piston rod, so that no matter how much pressure is placed upon the piston, it has no turning effect on the shaft.

Q. Of what is the solution to recharge worn out dry batteries composed? In the December issue some person asked how these batteries were recharged, but did not ask the solution. One of my friends knows the solution but will not tell me; why, I do not know. He makes a hole in the battery, taking out the carbon and pours the solution in. Then they must be sealed so as to dry. Of course, the removed carbon is then replaced.—H. G., Kiel, Wis.

A. The solution used to re-charge batteries is nothing but a saturated solution of sal-ammoniac in water. The best plan is to remove all of the carbon from the cells, wash it in clean water, replace it, and add the solution of sal-ammoniac, which should be made so as to allow the water to take up as much sal-ammoniac as possible.

Q. In what proportion should sal-ammoniac and water be mixed in a carbon-zinc cell? What kind of wire is the enclosed and what is the nature of the insulation? In ascertaining the weight of zinc plates, how many cubic inches should be allowed to the pound? How many amperes will the Plunge Battery give with two plates? With five plates per cell? Will this battery operate a 10-volt lamp? What is electrical steel?—L. J. K., Gladbrook, Iowa.

A. Use a saturated solution. Wire enclosed is No. 22 German silver. It is insulated with wool. It is the first sample of this kind that we have ever seen. Zinc weighs—Cast, .2479 lbs. per cubic inch; rolled, .2598 lbs. per cubic inch. There are about 4 cubic inches to the pound. It depends on the size of the plates and the strength of the electrolytic solution. Yes, but it would require at least five cells. We do not know of any steel known as electrical steel. It may be the name given to some particular grade, about which we have no information.

Q. Can the carbon in a common dry cell be used in the battery described in the September number of THE AMERICAN BOY? Can the sal-ammoniac used for soldering be used for battery purposes? Please explain in an early issue how to make a dynamo of from 5 to 15 volts and use stove pipe iron instead of Swedish. Can a common telephone generator be used for running motors and miniature lamps?—J. W. R., Rusk, Texas.

A. Yes. Yes. Space, at present, will not permit this description. No.

Q. How can a hole be bored in a piece of corset steel to make the ammeter and the voltmeter described in THE AMERICAN BOY? Can No. 33 double cotton covered wire be used instead of No. 36 silk covered wire in winding the bobbin? Will solder conduct electricity without giving too great a resistance? What is platinum worth? How can I gear down a 1-16th h. p. motor so that it will pull more and have greater strength?—H. G. W., Fort Worth, Texas.

A. Heat the steel red hot and allow it to cool in the ashes. This will anneal it. Then cut off a piece the size you wish and with a drill, drill the hole where desired. The No. 33 wire may be used in winding the bobbin. Solder may be used for making connections, and it does not offer any marked resistance to the circuit, on account of the liberal quantities generally used. Just what the market price of platinum is at present we cannot say, but it generally sells somewhere in the neighborhood of 90c to $1.00 a gram. It is impossible to gear a 1-16th h. p. motor so that it will give greater power.

Q. How far will a five-ohm telegraph instrument work on one battery?—C. L., Lima, N. Y.

A. It depends entirely upon the resistance of the line and the strength of your battery.

Q. How many feet of cotton covered magnet wire are there to the pound, of the numbers from 16 to 36 inclusive? In which direction does the current flow through a battery? In preparing shellac for varnish, is it melted by heat or is it dissolved by some liquid substance? Is a magnet core made weaker or stronger by winding with the same number of ounces of fine wire, as if larger wire were used?—L. A., Goldfield, Iowa.

A. We would refer you to the list in the catalogue of some electrical dealer. It is generally conceded that the current in a battery flows from the zinc to the carbon, and that the carbon is the positive pole and the zinc, the negative pole. Shellac varnish is made by dissolving the gum in alcohol, and either wood or grain alcohol may be used. The latter is preferred. The strength of a magnet depends upon the quantity of current flowing through the coil and the number of times it passes around the core. Therefore, if we have a certain current and it passes around the iron core ten times, you will have a magnet of a certain strength, but if you pass it around twenty times, the magnet will be about twice as strong. The finer the wire, the greater the resistance to the flow of the current, and if the current is cut down, the magnet will not be as strong. Fine wire is only used in making magnets where the current is very small, and it is necessary to make it pass around the core several times, in order to energize the magnet sufficiently to make it work.

Q. Please tell me the gauge of the enclosed wire? I am making a resistance box and want it to cut off 100 volts, that is, I want to light a four-volt lamp with the electric light current of one hundred and four volts. Would this wire do for the resistance box, and if so, how many feet would it take? Is there any way to rewind an alternating current motor so that it will run by a direct current?—A. C., Louisville, Ky.

A. The size of the wire enclosed is No. 36. It would not do for your resistance coils for a current of this size. The wire used in your resistance coils must be of such size that it will carry the current required by the lamp, without undue heating, and No. 36 wire will not carry sufficient current for your purpose. An alternating current motor is so different in construction from the direct current type that it would not be a very easy matter to rewind the former to act as the latter.

Q. In winding an induction coil, is the wire in the secondary and in the primary wound in the same or opposite directions?—H. R. S., Vanderbilt, Mich.

A. It makes little difference which way the wire is wound, as the currents set up in the secondary wire are alternating in character. Owing to methods of construction, however, it is generally the fact that the windings are made in the same direction.

"LITTLE SKIPPER" MARINE ENGINE
For Canoes, Row-Boats and Small Launches
2 ACTUAL H.P. Engine Only $24.90
Simplest, strongest, most powerful and speedy engine of its class, drives boat 6 to 10 mi. per hour, reversible, anyone can install and run it, always safe and certain to go. SOLD UNDER FIVE YEAR GUARANTEE. Catalog FREE.
ST. CLAIR MOTOR CO., Dept. 1, Detroit, Mich.

PAT. APPLIED FOR
WIRELESS TELEGRAPH: "Telimco No. 2," complete experimental outfit, comprising one inch spark coil, Balls, Key, 75 ohm Relay, Coherer with autom. Decoherer, 5 cells Battery, Wiring, Connections, instructions, diagrams, etc. Will work up to 5 mile. Price $13.50. Agents wanted. New catalog of European and Amer. Elec. novelties. Electro Importing Co., 87 Warren St., New York.

ELECTRIC SUPPLIES, TELEPHONES, NOVELTIES. Catalog of 200 Free. If it's Electric we have it. Big Catalog 4c

INDUCTION COILS. Half-inch secondaries, $1.75; primaries and cores, 50 cts.; Inch secondaries, $4; primaries and cores, 75 cts.; vibrators, 75 cts. to $2; condensers, 50 cts. to $1; Lowest net prices in America on Relays, Coherers, big coils, etc.
NEW. ENG. COIL WDG. CO., ATLANTIC, - - - MASS.

2 LONG DISTANCE NEIGHBORHOOD TELEPHONES
With complete terminal equipment including batteries. Practical for houses and distant buildings, factories, stores or offices. Guaranteed to be electrically and mechanically perfect or money refunded. These telephones are thoroughly reliable and durable. No experience is required for installing and testing as full directions are sent with each pair of telephones. SHIPPED PREPAID ON RECEIPT OF $7.00. Catalogue free. Best quality in everything electrical. References: Union Trust Co., or any Express Company in Chicago. Ready Appliance Electrical Co., 85 Randolph Street, Chicago, Ill.

ELECTRICAL SCIENTIFIC NOVELTIES. Models of Locomotives, Railways, Dynamos, Water Motor Dynamos and Gas Engines. Trains and Street Cars operated by dry batteries. Catalogue B. sent free, contains full information. THE CARLISLE & FINCH CO., 240 East Clifton Avenue, CINCINNATI, OHIO.

THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November number. No. I of the Series was Ulysses Simpson Grant; No. II, David G. Farragut; No. III, Benjamin Franklin; No. IV, Abraham Lincoln; No. V John Adams; No. VI Thomas Jefferson; No. VII Ralph Waldo Emerson.

No. VIII--Henry Ward Beecher

PERHAPS NO other man in America wielded such commanding influence from pulpit and platform during the troublous, anxious period of the Civil War as did the subject of this short sketch.

Henry Ward Beecher, the eighth child of the Reverend Lyman Beecher and Roxanna Foote Beecher, was born in Litchfield, Connecticut, June 24th, 1813. The Beecher family was a large one, the sons and daughters numbering thirteen. To superstitious minds this number has generally been associated with trouble and misfortune, but it proved otherwise to the Beechers, for almost all of the children distinguished themselves in after years, particularly one, Harriet Elizabeth, or, as she is better known, Mrs. Harriet Beecher Stowe, the author of "Uncle Tom's Cabin," a book which has been read by men and women, boys and girls, everywhere.

The Beecher family was among the earliest established in New England, the first of the American line having settled in New Haven in 1638. The grandfather of Henry Ward Beecher was a blacksmith, noted as much for his sound sense and argumentative disposition as for the excellence of the work he did. His son, Lyman, Henry Ward Becher's father, was born in the memorable year of 1775 that witnessed the opening of the war of the Revolution. He, as a boy, took his father's trade and in addition engaged in farming. Later he prepared himself for the ministry. His success in the pulpit was immediate. From East Hampton, on Long Island, he removed to Litchfield, Connecticut, where he became noted as among the strongest members of his denomination. He was not deeply learned, yet he possessed fine power of mind, and was gifted with great eloquence. He was also a man of powerful will and a determination that nothing could overcome. Evil in every form he fought fearlessly, and his sympathies for any cause that appealed to him were quickly roused. Of music he was very fond, the fiddle being his favorite instrument. Indeed he obtained the name of "the fiddling parson." It is further said that in addition to his playing he would often dance a jig on the kitchen floor.

In business matters Lyman Beecher showed none of the clear-headed sagacity that he exhibited in the pulpit. In fact, he was what might well be termed shiftless. No appeal to him for money for any worthy object was ever made without response. As his salary was small and his household large, this reckless giving was a matter of serious concern to Mrs. Beecher. On one occasion she had given him twenty-five dollars to buy a coat of which he was in need. On his way downtown he stopped at a missionary meeting and when the collection box was passed round, in went his little roll of bills. Many other stories are told of his peculiar ways. On a dark night he was driving home from a meeting with Mrs. Beecher and Mrs. Stowe, when the carriage was upset and the occupants were spilled out. The two women found they had escaped unhurt and were duly giving thanks to a kind Providence, when Dr. Beecher exclaimed, "Speak for yourselves, I have got a good many bumps, anyhow."

Boys at the beginning of the nineteenth century, especially in the small towns and villages of New England, had not so many "good times" as boys enjoy today. The seriousness of life began then at a very early age. Rigid obedience was at all times expected and failure was severely punished by whippings and imprisonment in the dark closet. Ministers' sons were, perhaps, even more strictly brought up than were other boys, and Henry Ward's breaking of the rules was never allowed to pass lightly. Mrs. Stowe in writing of her brother's boyhood says: "There was then no children's literature; there were no children's books. The Sunday school was yet an experiment, in a fluctuating, uncertain state of trial. There were no children's days of presents or fetes, no Christmas or New Year festivals. The annual Thanksgiving was only associated with one day's unlimited range of pies of every sort—too much for one day, and too soon things of the past. The childhood of Henry Ward was unmarked by the possession of a single toy as a gift from any older person, or a single fete. Very early, too, strict duties devolved upon him. A daily portion of the work of the establishment, the care of the domestic animals, the cutting and piling of wood, or tasks in the garden, strengthened his muscles and gave vigor and tone to his nerves. From his father he inherited a perfectly solid, healthy organization of brain, muscle and nerves, and the uncaressing, let-alone system, under which he was brought up, gave him early habits of vigor and reliance." What a difference here from the pampering and coddling that many boys of today receive.

Henry's father was always so busy and his mother had so much to do in looking after the other children, that after his chores were done he was able to spend considerable time in play.

The boy's education was at first taken care of at home. In such a home where everything not only connected with religion, but the events of the day were vigorously discussed, Henry obtained such knowledge as few boys do. Religious doctrines and Bible texts and their meanings, ideas about the wickedness of riches and the condemnation of those who had wealth, were ever before the child's mind as literal truths. One Sunday his father preached from the text, "How hardly shall they that have riches enter into the Kingdom of Heaven." During the following week one of his father's admirers sent the minister a present of a dinner service of china, and the boy watched while it was being unpacked. As one after another of the cups were placed on the table, the boy's fear for his father's safety in view of the preceding Sunday's text, was aroused, and he said: "Ma, ain't pa rich?" "No, my dear," said his mother. This soothed him for a little, but as the dinner plates and the dessert plates were being piled

HENRY WARD BEECHER

high on the table, he burst out again: "Ma, ain't pa rich now?" "Why, no, my dear; stand away!" The tureens and the larger articles next came into view and the boy was fairly frightened; again he asked: "Ma, *ain't* pa rich?" "Henry, I have told you that papa is not rich; go out of the kitchen." Into another room he went, but peeking through the keyhole, he saw platters and dishes in an apparently endless stream being unpacked, and, unable to bear the thought that his father must be condemned, he opened the door and almost shouted: "Ma, AIN'T pa rich?" Henry's reverence for and belief in his father were most intense. He says that as a child he looked up to his father as more than a common man, and he held to the belief that his father could whip any man in Litchfield. In after years he said: "I never saw my father do a thing that had duplicity in it in my life."

His mother died when he was three years old, and of her his recollection was only shadowy, but he always had the greatest reverence for her memory. In his sermons years after he was fond of referring to her in words of the deepest affection. His greatest regret was that he never had a picture of her. It was from his mother that he inherited his love for nature, music, pictures and animals, that tenderness and sweetness of spirit and kindness of heart which made him so loved by his friends.

Mr. Beecher, in recalling his boyhood days, says that he seemed to be punished often for things that as a child he could not help, and, as he was very shy, he was unable to explain how they happened. In church the minister's pew was right under the pulpit. The sides were so high that the little fellow could only sit and listen without being able to see the speaker. One Sunday to his delight he was allowed, after many cautions as to his behavior, to sit in the gallery. He tried hard to keep his promise to be good, but a boy who sat beside him pushed him off the seat, tearing his coat as he fell. On reaching home, his mother saw the tear and asked: "Henry, how came that rent there?" The boy tried to tell her that it was not his fault, and thought he explained it properly when he replied: "O, mother, it was done in fun," but the word conveyed a different meaning to his mother, and for years after he was barred from the gallery.

The boy spent some time in the little country school at Litchfield, where he did not learn much. He was then sent to a private school in the town of Bethlehem, where he was the only boy among forty girls. He continued there until he was about fourteen. At school he was a rather indifferent scholar. A growing boy, careless, frolicsome, fond of outdoor sports, taking a foremost part in all boyish pranks, and finding both church and school terribly dull and tiresome. He excelled in swimming, and in the summer, when he could get away, he was either splashing in the creek, or away in the woods gathering flowers or hunting squirrels. In the winter, there was skating and sliding down the snowy hillsides. In his boyish love for fun he often thoughtlessly broke the strictness of the maternal rule, and the hickory switch and other punishment were rigorously used.

When the family moved into Boston, the rough, romping, healthy boy became a leader of the boys of his neighborhood, and whether it was a trial of skill in wrestling, jumping, or swimming, or waging war in the territory of other boys, he would dare to the verge of danger. There is a story told of these days which shows his daring, determined spirit: A favorite game of the North Enders was, "Follow my Leader," and one day young Beecher was "leader." Along the street he led his followers, jumping the wall into Copp's Hill burying ground, thence to the edge of a dirt embankment fully fifteen feet deep; down this he slid, many of the boys balking at it; on to Gray's wharf and in and out and over the bales of cotton stored there, to the water's edge, where was moored a large ship, went the young leader, seeing to his delight that many of his followers had dropped out. Climbing up the side of the ship to the deck, with only two of the band behind him, he caught hold of a rope, shinned up the rigging to the shrouds and walked to the end of the mainyard. Grasping another rope he hung for a moment, suspended from the yard, then with a shout of "Follow my leader," he dropped into the Charles river with all his clothes on, while his two friends walked back to the wharf. Splashing and sputtering, young Beecher swam to the landing, a hero among his comrades.

It was at this time that, like most boys living in a seaport city and accustomed to the sight of ships coming and going, and listening to the wonderful yarns of the sailors, Henry made up his mind to go to sea. No thought of running away or doing anything without his father's consent, I believe, ever occurred to him. His father, when told of his wish, did not oppose it; on the contrary, he seemed to favor the idea. But he showed the boy that if he went to sea as he was, he could never expect to become more than a common seaman. He pointed out that if he desired to become captain of a ship, there were certain subjects he must learn, such as navigation, geography and mathematics. The boy expressed his willingness to study, so he was sent at the age of fourteen to Mt. Pleasant preparatory school at Amherst. This was probably the best thing that could have happened to him, as he was now back in the country, away from the companionships and by no means healthy influences of the city. In any event a change came over him. Formerly he had been careless, indifferent and unwilling to study, preferring the streets and the docks to his books; now, helped by good and earnest teachers, he began to put that vigor and earnestness into mathematics and elocution that he had formerly wasted in wrestling and other forms of sport. He began to see that if he would conquer he must work; that hard places were only made to be overcome. It was during his stay at Mt. Pleasant that he became a member of the church.

Young Beecher returned to Boston, and after a short time at the Boston Latin school, to further prepare himself he entered Amherst College, being then seventeen years of age. This college had been organized to provide for the education for the ministry of promising but poor young men. It had at this time a faculty consisting of a president and six professors. The students numbered about two hundred. Amherst college was by no means wealthy either in money or land. Those who attended as students paid from $1.00 to $1.25 a week for board, took care of their own rooms, made their own fires and sawed their own wood. Discipline, as became a college of New England, was strict and even severe. Obedience to the rules was enforced by a system of fines. How young Beecher spent the time at college may be shown by describing a student's day's work: During the severe winter months the students assembled for prayers at a quarter before six o'clock every morning, and in the summer one hour earlier. The working day was divided into three parts, two, or sometimes three, hours in each being spent in study, and after each study there was a recitation. As the students were generally poor and had to make their way through college by doing other work, they were given long vacations, which were often employed in teaching in country schools.

Mr. Beecher never stood high in his classwork. He tells, however, that he once stood next to the head of his class, but, he adds, it happened when the class stood in a circle. Of course, he studied his lessons, but only so far as enabled him to a "pass." Yet he did study, and there were books that he loved. He says that before going to college, he asked his father what his expenses would be, in order that by stinting himself, he might have a little over to buy books. "Pooh!" said his father; "I know how it will be; you will spend all the money for books, and then come to me for more, to pay your expenses with." So his father paid his bills and the boy's hope of getting books in that way failed. Nothing daunted, he tried other means to obtain the coveted volumes. One time when a delegate to a temperance convention, he saved a dollar or two by walking to and from the place of meeting. At another time he went to Brattleboro to deliver a temperance lecture, for which he received ten dollars, that enabled him to buy an edition of Burke. Money was sent him to pay his way home to Boston, but he saved that

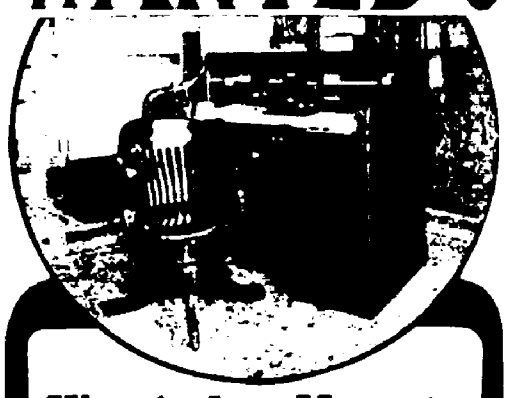
WANTED!



Wanted—Men to Fill Good Positions

The INTERNATIONAL CORRESPONDENCE SCHOOLS, that great institution that has done so much in the past and is doing so much every minute for working men and women, offers you a direct and easy way to help yourself to a most desirable position in the trade or profession that best suits your taste and ambition.

The I. C. S. Plan enables you to help yourself right where you are, without losing an hour's work or a dollar of pay; without changing positions until you are ready to step into the one you desire; without obligating you to pay more than your present salary will afford no matter how small it is.

Special Self-Help Offer—Start Now!

To assist those who have been hesitating, the I. C. S. has inaugurated *the most remarkable plan of self-help ever conceived.*

Between May 15th and July 1st, everyone asking for information will be entitled *to a special discount if they decide to enroll.* This gives you every advantage the I. C. S. has to offer at a *cost so small* and *terms so easy* that the last barrier is removed.

There is *absolutely no charge for information.* Simply select from the list the kind of occupation, you prefer, writing a postal card to the INTERNATIONAL CORRESPONDENCE SCHOOLS, asking how you can become a success in that position. By return mail you will receive books, literature and helpful advice that will surprise you.

Write the postal card to-day. INTERNATIONAL CORRESPONDENCE SCHOOLS, Box 1278, Scranton, Pa.

Here is a List of Good Positions

Select the one you prefer, write a postal to **The International Correspondence Schools, Box 1278, Scranton, Pa.**, and ask how you can qualify to fill it at a good salary.

Be sure and mention the position you prefer:

Bookkeeper	Mechanical Draftsman
Stenographer	Foreman Plumber
Advertisement Writer	Elec. Lighting Supt.
Show Card Writer	Mechan. Engineer

The American Boy

Copyright, 1906, by The Sprague Publishing Company

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

WILLIAM C. SPRAGUE, - - President and Editor
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only, and in the case of the coins, a rubbing.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

When You were a Youngster

Spring has come. All the little boys are turned out of doors—to be out of the way. Were they content to remain indoors, though manifestly in need of the air and exercise, doubtless most of them would be allowed to do so. But it is boy nature to crave freedom, and to a boy that exists only in the open. So, now that the bluebirds are nesting, and the deciduous trees beginning to answer the call of the April winds for a little more green in the landscape, the wayfarer sees all sorts of odd little chaps on sunny doorsteps and swinging on rickety gates. You were just such a ruddy-cheeked, chubby-fisted, muffled little duffer, eternally eating, and either wanting to get into the house or out of it. But wasn't it great when you were first turned out, all tightly buttoned, in the warm sunshine and the frolicsome April breezes, to run on the new grass—if there was any? Surely the first five minutes of ecstacy were worth a winter's waiting.—Outdoors.

Why I am Proud of My State

So many and so good were the essays with which Michigan boys responded to our call that we found the utmost difficulty in making the award. The decision was finally reached that the prize, $5, should go to Abraham Geldhof, 15 Dwight avenue, Grand Rapids, and that a book should be sent to each of the four other boys whose essays came nearest to first place, as consolation prizes. The names of these boys are: Norman Jones, 1214 Eighth street, Port Huron; Karl Fisher, Box 86, Interlochen; Harold L. Townsend, Box 16, Flat Rock, Wayne County, and Ralph D. Ernest, Blaine, St. Clair County.

Among the essays which we took pleasure in reading were those written by the following boys: Roger Whitten, Roy E. Sampson, Roy Decker, Lester Von Thum, Vernor Lovett, Ralph Neelands, Elon H. Moore, Theodore T. Gibson, Clare Griffin, Victor J. Swanson, Hugh V. Yerex, James Penhale, Louis D. Guard, Jr., Brockway Dickie, Arthur W. Long, John Gunnell, Julius Lereggen, Kerby L. Wilkins, Arthur Brukardt, Howard V. Webb, Clarence Whitney, J. B. Dexter, Raymond Whitney, Vern Doan, Geo. E. Mills, Fred Ricker, Walker E. Tiffany, Harry Leach, Ferrie Hall, Harold Tuttle, Ronald E. Weaver, Robert Kramer, Harold Utley, Clarence D. Luther, Harrison Plant, Chas. H. Filley, C. Parker Shields, Ralph Kelley, A. Z. Sponenburg, Edgar Sprague, Elmo Hubbard, Leslie H. Bonine, Ernest A. Bachman, Albert Liese, Henry C. Bogle, Harry Dudley, Alfred Bakewell, Paul Fiedler, Howard R. Scott, Samuel Trettin, Harry Stout, Arlo Wixson, R. Glynn Nash, Mark L. Worth, G. W. Lawlon, A. I. Thompson, F. Harold Goodrich, Edward F. Rawson, Harold W. Hulbert, Howard B. Allen, Frayne L. Richardson, Lysle Grunsides, Wallace Rapley, Thomas MacLennan, Ivan Kenaga, Tom Reid, Max Christie.

Michigan boys found many reasons for pride, judging from their essays. Among these reasons were mentioned the following:

Michigan stands first in lumber, iron ore, charcoal, salt, gypsum, hardwood, furniture, fruit, and peppermint oil, and has the largest number of summer resorts; coast line enough to reach from Maine to Florida; furnished 88,700 men in the Civil War, of whom 14,855 died in service; most productive fresh water fisheries in the United States, the value of our yearly catch of fish exceeding that taken in fresh waters in all the other states combined; ten cities with a population of over 20,000; Detroit possesses a park unsurpassed by any in the country, also fine water works, good street car service, a fine line of ferry boats, and the largest music publishing house in the world; Battle Creek, the "Food City," has more prepared food factories than any city in the country; more tonnage enters and leaves the Detroit River than any other river or canal in the world; many railroads, both steam and electric; noted for the manufacture of stoves, bicycles, cement, iron and steel products, and farming implements; the longest completed tunnel in the country goes from Port Huron under the Saint Clair River to Sarnia; about 5,000 inland lakes; produces one-third of the total amount of salt in the United States; the scene of Longfellow's "Hiawatha" is laid in Northern Michigan, along the shores of Lake Superior; occupies an area of 58,915 square miles; forest lands yield an average of $60,000,000 worth of lumber per annum; has many car factories and excels in ship-building; the largest seed establishment, drug manufactory, and varnish factory in the world; thirty-one United States Life Saving Stations, containing eight or nine men each, dot the coast of Michigan; is noted for the production of celery, apples, beet-sugar, corn, potatoes, and wheat; also graphite, limestone, marble, brick clay, gold, silver, soda ash, sandstone, and sand; leads in the manufacture of automobiles; improved farm lands cover 9,000,000 acres of ground; 350,000 pupils attend the public schools each year; the Sault Ste. Marie canal is one of the most famous in America; many famous institutions of learning among which are two State Normals, the Michigan Agricultural College, the State School of Mines, and the University of Michigan at Ann Arbor.

Almost every essay received contained mention of the fact that THE AMERICAN BOY is a Michigan publication. Michigan boys find this a source of much gratification and pride, if we may judge from these essays.

WHY I AM PROUD OF MICHIGAN

Prize Essay, by Abraham Geldhof, 15 Dwight Avenue, Grand Rapids

Why am I proud of Michigan? Because, in the first place, no American boy is a true, loyal citizen unless he loves and is proud of his native state.

Then I am proud of my state because of her history, her progress, and her natural and educational advantages. Situated as she is in the very midst of the Great Lakes, the facilities for commerce, manufacturing, agriculture and, in fact, all vocations are unbounded.

In commerce, Michigan's position gives her the lead in inland trade. Detroit is one of the most important cities on the Great Lakes in commercial and shipping interests. Furniture from Grand Rapids, "The Furniture City," is famous. Here some of the best furniture in the world is made.

In agriculture, all other states take a back seat for Michigan. The rich, fertile soil is of the best, and the naturally rigorous climate is greatly tempered by contact with the Great Lakes. Michigan pears, peaches, and apples are famous; and crops of all kinds, especially grain and potatoes, are raised in abundance and exported.

The state abounds in minerals, such as iron, coal, silver, salt, gypsum, and copper. The northern peninsula contains the richest copper mines in the world, including the celebrated "Calumet and Hecla" mine. Michigan copper pays 65 per cent. of all the dividends paid in the United States. Such productions as this afford opportunities which make the heart of every Wolverine boy swell with pride.

Michigan has also much beautiful scenery. The Pictured Rocks on Lake Superior are celebrated for beauty, and the hills and diversified surface in different parts are very picturesque.

Then there is our splendid school system. Every child must attend school until the age of sixteen, under a penalty. Unlike many other states, Michigan rigidly enforces the numerous child-labor and education laws. The public schools rank with the best, and the higher institutions of learning are numbered among the most prominent in the country. In 1904, the University of Michigan won every football game she played.

As to history, the Wolverine state has had an illustrious career. Settled by the hardy French Jesuits; brought under the sway of England in 1763; and finally forming part of the United States as a section of the Northwest Territory, she was claimed by six states, but was finally organized as a territory under the celebrated Ordinance of 1787. The state was the center of activity during the War of 1812, and played an important part in the Civil War. She was among the first to respond to the call for troops, and kept sending them all through the war. It was a Michigan Regiment, the Fourth, that captured Jefferson Davis.

Michigan has also furnished many illustrious men.

It is true that Michigan is not one of the oldest states, being admitted in 1837, but that fact speaks the more loudly for the progress she has made in less time than many of the older states.

All these things contribute to make a Michigan boy sing, in his love and enthusiasm, "Michigan, My Michigan"; but there is yet one fact without which Michigan's claim to that pride would not be complete; one product of Michigan which, in its swift and well-deserved progress, is representative of the progress of Michigan; for in Michigan is published that magazine which proves to the boys of the country the precedence of the "Lake State"—the most noble and inspiring work that has ever been the product of Michigan hands and Michigan minds—"THE AMERICAN BOY."

Among the Boys

Mr. Jack MacGillivray, New Glasgow, Nova Scotia, sends us a picture post card, showing the photographs of three Nova Scotia boys, who have undertaken to walk from North Sydney to San Francisco and return in 366 days. They will receive $300.00 if they succeed. They are not allowed to take any money with them, and must beg or earn it as they go along.

Fred W. Rogers, Tucson, Arizona, is in the Eighth grade of school. He is the youngest in the class and yet has the rank of fourth. He is the proud possessor of $28.00 of his own, which he made selling papers. He is particularly interested in our department devoted to Electricity and Mechanics.

Rawson E. Stark, who lives in Dunedin, New Zealand, is an American boy and a reader of THE AMERICAN BOY. He says, "I came to New Zealand in October, 1904. In December, 1903, I left San Francisco for Florida, and in March left Florida for Cleveland, Ohio, my birthplace. In August I went to San Francisco. I remained there a fortnight and then sailed for New Zealand. I took your paper in 1903, but on my travels I forgot about it, so did not see it for a long time until I found it here in the hands of a friend, and now I am going to subscribe.

I have a shop which I built with my father's assistance, in which I have tools and all sorts of appliances for working in chemicals. I have a wireless telegraph and a telephone by means of which I can talk across the bay, a distance of about a mile.

New Tangles

57. TANGLED AUTHORS.

The following fifteen stories appeared in THE AMERICAN BOY for January, February or March, 1906. The authorship of each is here incorrectly stated. Assign each author to his own work, which will employ every name once. Leave the titles in their present order, transferring the writers' names only. A single letter, indicated by the number in parenthesis, is to be taken from each writer's name. This series of letters, in order, spells the full name of a celebrated American Revolutionary general, who was born in May and died in June.

1. Ferrell wrote (5) The Joy Claim. 2. Johnson wrote (7) Ostrich Farming. 3. Barr wrote (6) Boy Lumbermen of the Northwest. 4. Lisenbee wrote (5) The Sneak-Cat. 5. Gilmore wrote (3) Money in Weeds. 6. Tylee wrote (4) The Young George Washington. 7. Moorhouse wrote (3) Cake Eater. 8. Trenchard wrote (4) A French Frog and an American Eagle. 9. Childs wrote (6) The Pancake Earth and Its Press Agent. 10. Mitchell wrote (4) The President's Son at Harvard. 11. McClure wrote (3) Relief of the North Branch Fort. 12. Fawcett wrote (7) Some Intelligent Horses. 13. Heagan wrote (7) Ned and Billy. 14. Wright wrote (4) Baseball Training. 15. Carne wrote (5) How America Came by Its Name. —Herman H. Voelker.

58. JUNE HISTORY.

Take two letters from each word in order and find an event in American history that occurred in June ninety-four years ago.

Funston writes President Roosevelt that earthquakes demolished California; charity flowed toward California, greatly relieving destitution, grandly demonstrating stability, christian traits, unselfishness.
—Noah S. Guengerich.

59. JUNE STATES.

Each word has five letters. The initials spell a state admitted into the Union in June, 1836; the second letters, one of the original colonies whose state constitution was framed in June, 1776, and adopted in July.

1. Keep away from. 2. Stiff. 3. The great cannon maker of Germany. 4. Intense suffering. 5. An African river. 6. A common gastropod mollusk. 7. Directed. 8. A certain silk fabric. —Leo Hahn.

60. HISTORICAL FORESTRY.

From the names of the common American trees whose leaves are here pictured take the letters indicated by the Arabic numerals, in order, and obtain a Revolutionary battle which was won by the Americans under Washington over the British under Clinton on a June day in 1778, in New Jersey.
—Almon W. Bushnell.

61. UNITED STATES CHESS.

By the king's move, one square in any direction, find 23 states, using every letter once and as often as needed, but repeating no letter until after moving from its square.

R	E	J	W	Y	R	A	S
S	E	C	K	E	O	K	N
Y	I	S	U	N	R	D	A
W	T	S	O	T	H	T	K

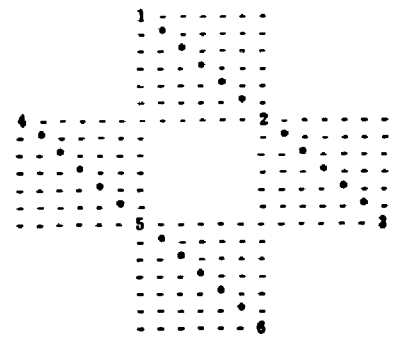
G	S	R	F	L	O	D	I
N	I	O	W	A	C	R	O

—Fred E. Day.

62. FOREIGN CAPITALS.

Anagrams. 1. Louse. 2. Cow at pen. 3. V, air moon. 4. Anna Jus. 5. In Alma. 6. Lemon Rube. 7. Lake T. 8. A bulk. 9. Kank bog. 10. Bugs pester T. R. 11. Points not clean. 12. O, variant Anna. 13. Page N. Cohen. 14. Cool mob. 15. Her ante. 16. Lock moths. 17. N towelling. 18. Via a bat. 19. China star, II. —Kenneth L. Aleshire.

63. GEOGRAPHICAL DIAGONALS.



Upper: A city of Persia; a republic of South America, not on salt water; a county of Ark., Ga., Ill. and ten other states; a city of central France; a river of France which rises in Spain; a strait at the entrance of the Adriatic; a country of northern Africa. Diagonal, 1 to 2, a city of Canada.

Left: A county of Ga. and N. C.; a city and khanate of southern Asiatic Russia; a city and province of northern Italy; a county and county seat of R. I.; a city of eastern England; a town and county of central England; a city, canton and volcano east of the city of Mexico. Diagonal, 4 to 5, an island in the Mediterranean.

Right: A city of Wis. on Lake Winnebago; a territory threatened with statehood; a county of Ill., Ind., Iowa and six other states; a southern city and province of Spain; a city of Tuscany, Italy; one of the Balearic islands; a province of Canada. Diagonal, 2 to 3, a river of South America.

Lower: A town of Corsica, the birth place of Napoleon; one of the Leeward islands; a central state; a southern kingdom of the German Empire; an eastern river of the U. S.; a town, county and bay of northern Ireland; a county of Wyo. Diagonal, 5 to 6, islands in the bay of Bengal, a penal colony of Great Britain. —Frank C. McMillan.

INTERESTED!

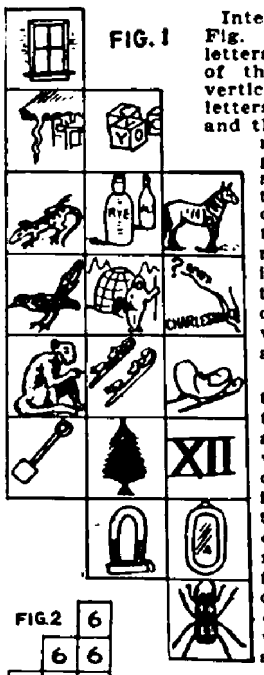
MILWAUKEE, WISCONSIN

64. ENGLISH AUTHOR.



Interpret each square in Fig. 1 by a word of six letters. Use the first letters of the words in the left vertical row, the second letters in the central row, and the third letters in the right hand row. Beginning with the top square, read the letters above indicated only in each horizontal row from left to right, taking the rows in order downward to the lowest square, and obtain a great English writer, who was born and who died in April.

Now move the vertical rows to the position shown in Fig. 2, and take from each word the letter indicated by the number in the square. Read the letters specified only in each horizontal row from left to right, taking the rows in order downward, and obtain two well-known works of the above author.
—Morton L. Mitchell.

66. QUEEN'S BIRTHDAY.

1. * - - - - The star path downward
2. - * - - - spells a queen born in May.
3. - - * - - 1. A city of Ecuador. 2.
4. - - - * - Question. 3. Search. 4. Pe-
5. - - - - * culiar. 5. The sacred book of
6. - - - * - the Mohammedans. 6. Fear-
7. - - * - - less. 7. The English comman-
8. - * - - - der at Plassey. 8. A stage per-
9. * - - - - former. 9. The second largest
10. - * - - - river of Italy. 10. A famous
11. - - * - - state prison of London. 11.
12. - - - * - The king of Judea at the time
13. - - - - * of Christ's birth. 12. The legendary son of Priam, who stole Helen and caused the Trojan war. 13. A female character in Twelfth Night. —Arthur L. Diamond.

67. ALL THE OLOGIES.

1. * - - - - - - - - - Each word ends in
2. - * - - - - - - - -OLOGY. 1. A discourse
3. - - * - - - - - - -on flowers. 2. The
4. - - - * - - - - - -science of the human
5. * - - - - - - - - -soul. 3. The science of
6. - * - - - - - - - -insects. 4. A discourse
7. - - * - - - - - - -on heat. 5. The science
8. - - - * - - - - - of the organs and their functions in animals and plants. 6. The science of the structure and habits of mollusks. 7. The science of shells and the animals that inhabit them. 8. A science of plants. Affix OLOGY to the upper star path, and obtain the art of judging the influence of the stars upon human affairs. Affix OLOGY to the lower star path, and obtain a systematic view of all branches of human knowledge. To the initials of these two star path words add OLOGY, and obtain an expression of regret for wrong doing. —Ernest A. Stifel.

68. CONCEALED WORD SQUARE.

A five-word square is concealed in the following:

"The bell rang, Erasmus," said Mrs. Jenks, "and Jennie will serve dinner very soon." In the dining room a negro and a little girl, looking like Uncle Tom and Eva, devoted their attention to boiling over a hot fire new laid eggs fresh from the nests.
—Albertus K. Richards.

69. OCTAGON.

Read across and down the same.

- - - A railway carriage; a leader;
- - - - - an enchanter; an opening to
- - - - - - - admit air; to shape anew; a
- - - - - - - segment of the rim of a
- - - - - - - wooden wheel; a color.
- - - - - —Mendell H. T. McKenney.
- - -

70. GEOGRAPHICAL ANAGRAMS.

1. On a perch. (The southernmost continental extremity.) 2. Sing on, Kent. (A suburb of London, containing a royal palace.) 3. One halt. (A town in the center of Ireland.) 4. O, that drum. (A coast town of Devonshire.) 5. Lo, best soap. (A Black sea port.) 6. Gay law. (An Irish county.) 7. Try a romp. (A coast town in Cumberland.) 8. Bare plants. (A town and bay in Devonshire.)
—Robert E. Arnold.

71. SYNCOPATED CENTRALS.

Example: If I went away a leader would become a head cook. Ans.: Ch-i-ef, chef.

If I went away: 1. To raise would become a multitude. 2. A sound would become part of one's face. 3. To relinquish would become to brandish. 4. To worship would become to challenge. 5. To depict would become to gasp. 6. A Scotch child would become a stable. 7. Corn would become a labyrinth. 8. An assumed name would become an ejaculation.

Example: If U went away a weight would become a small lake. Ans.: Po-u-nd, pond.

If U went away: 9. A vehicle would become to combat. 10. A dwelling would become a flexible pipe. 11. A measure would become a kind of plum. 12. An organ of the head would become an insect. 13. A leap would become a tie. 14. A way would become a repetition. 15. To awaken would become a flower. 16. To grieve would become a part of the day.
—Russell B. Smith.

"WATER WINGS"
MAKE SWIMMING EASY

Any boy or girl can learn to swim in one trial by using a pair of Water Wings. Our picture illustrates how they are worn. Can be carried in the pocket—easily inflated and will float from fifty to two hundred and fifty pounds.

Children who have Water Wings can go in the water with perfect safety. We will send a pair, postage prepaid, to any address on receipt of

HENRY WARD BEECHER

(*Continued from page 255.*)

by walking the whole way. His living expenses he cut down as far as possible in order that he might add to his library. It was his proud boast that when he left Amherst he had a collection of about fifty volumes, every one earned by himself. So, if Henry Ward Beecher did not show off well in his classroom, it certainly was not because he did not care for books. During his college course he took part in many religious meetings, gave lectures on temperance and phrenology, a study of the latter having been taken up by him with great enthusiasm. As a debater he was an opponent to be feared. It will thus be seen that the shyness of his boyhood was gradually disappearing.

At the age of twenty-one, Henry Ward Beecher was graduated. He left Amherst, carrying with him the respect of his classmates and the hearty good wishes of his teachers. His resolve was now to use his experience and education for the uplifting of his fellowmen. How well he carried out his resolution those who have read of his work during the succeeding years can testify.

Mr. Beecher had always a special fondness for young folks. During his long ministry in Plymouth Tabernacle every boy in Brooklyn came to know him. He was ever ready to listen, to advise, and to help. As I have said, he always had a liking for swimming. There was a large floating bath or boathouse near the Fulton ferry, where he was accustomed to go for a plunge in the East river. The price of a bath was a quarter. One warm day on his way down he met a boy whom he knew. He asked him if he did not want to come and have a swim. The boy's eyes sparkled, but he had not the money, and told Mr. Beecher so. Taking him by the hand the great preacher said: "Come along. When you ask a young lady to take ice cream with you, you don't expect her to pay for it, do you?"

I have tried to give the readers of THE AMERICAN BOY some idea of the boyhood of this man who became the foremost of American preachers, trusting that they may feel enough interest to continue the study of his life, being assured that such study will well repay the effort.

SYNOPSIS OF SUBSEQUENT CAREER OF HENRY WARD BEECHER.

1837 Accepted a charge at Lawrenceburg, Ind.
1839 Served a Presbyterian church at Indianapolis and drew much attention by his lectures to young men.
1847 Accepted call to Plymouth church, where he remained for 40 years until his death.
1863 Delivered addresses on Slavery in Great Britain.
1870 Editor of Christian Union.
1887 March 8. Died. Buried in Greenwood cemetery, Brooklyn.

INSCRIPTION ON TABLET IN HALL OF FAME.

HENRY WARD BEECHER

CHAPTER V.

OFF FOR WASHINGTON

By EDWARD STRATEMEYER

Author of the "Old Glory Series," "Soldiers of Fortune Series," "Colonial Series," "Pan-American Series," Etc.

Copyright 1906 by Edward Stratemeyer

NOW, THEN, who is the next volunteer? Come, gentlemen and fellow citizens, you have read our worthy President's proclamation; you know how urgent is the call; you know that the rebels are collecting a great force to capture our noble Capitol at Washington; you know how those same rebels have taunted us, saying the North could not be kicked into a war; and you know also what the cities and towns and villages around us are doing—enrolling their patriots as fast as the names can be put down. Shall it be said that Goreville stood back when called upon to do her duty? Never! Come, who is the next volunteer?"

Captain Paulding stood upon the stoop of the grocery store, addressing the crowd which had collected at the roll of the drum in the hands of young Benny Bruce, who had also enlisted, although less than fifteen years old. The captain had been "spouting" earnestly for half an hour, but no new volunteers had appeared. The muster roll numbered thirty-four names and Captain Paulding wanted forty before starting on the long march for Washington.

Behind the captain sat a clerk with the list in hand and a table with pens and ink beside him, for the captain knew that many volunteers had to be "caught on the fly," or their enthusiasm would wane and they would not sign the enlistment paper. Beside the clerk sat Josiah Bruce, the father of Benny, a veteran who had lost a hand in the Mexican war, and who was much crippled by rheumatism.

"Come, boys; come and sign!" cried Josiah Bruce, waving his stump of an arm over his head. "I went to Mexico, and my son there is goin' to beat the drum fer ye. Sign, I say, an' be patriots! Hurrah for the Stars and Stripes! Oh, if I wasn't doubled up with this ere rheumatism, I'd show ye! Benny, beat the drum ag'in. Perhaps some o' the men standin' aroun' hain't heard it yet!"

And Benny beat the drum so vigorously that a larger crowd than ever began to collect. Again Captain Paulding addressed those before him.

"Shall it be said that the majority of the men of Goreville were cowards; that they would not march forth to uphold the hand of their President? No, never! Come now and sign; place your names on the golden roll of honor ere it is too late. Ha! Here is another, our worthy citizen, Moses Blackwell. Moses is a blacksmith, as we all know, and creation help the rebel that gets in front of him in a hand-to-hand fight. Soldiers, three cheers for our new member, Moses Blackwell."

And as Moses, a tall, thin, but, nevertheless, powerful fellow, put down the rough scrawl which went for his signature the cheers were given with a will. As the blacksmith stepped back, two others came to the front, one a man who had just hopped from a farm wagon, and who came forward with his pants tucked in his boots and his whip in his hand.

"Bart Callings and Nathan Hornsby!" announced Captain Paulding. "Keep the ball a-rolling, boys. Now is the time, remember, ere it is too late. Soldiers, three cheers for Callings and Hornsby! That makes thirty-seven. We want at least three more. Come, now! Come! Everybody join in, please.

"My country, 'tis of thee,
Sweet land of liberty;
Of thee I sing!"

Loud and clear arose the song on the bracing April air, and ere the refrain had died away two more names had been added to the list. The echo of the final word yet rang over the distant hills when Louis Rockford slipped shyly from his horse and mounted the store porch from the side.

"I want to sign, please," he almost whispered to the clerk.

"Hullo, Rockford! Then you are really going after all!" cried the clerk. "I'm glad to hear it. Rowe put you down as too cowardly, but I knew better and said so. Captain, Louis Rockford will sign."

"SHALL IT BE SAID THAT GOREVILLE STOOD BACK WHEN CALLED UPON TO DO HER DUTY?"

"Another! The fortieth!" shouted Captain Paulding. He shook Louis by the hand. "Going in place of your poor father, I suppose. Soldiers, three cheers for our fortieth man, Louis Rockford."

And once more the cheers rang out, this time with an extra will, for Louis had many friends among the younger members of the company. But during the cheering Louis's quick eye detected that Jerry Rowe's lips did not move. Almost instinctively he felt that though he had many friends in the company, he had also one enemy.

Louis had had an easier time than he anticipated getting his parents to consent to his enlistment. The reason for this was, that now Mr. Rockford could not go, he felt the family should be in some way represented and had whispered as much to his wife during the moments when not in pain. And Mrs. Rockford had agreed, but with tears in her eyes, for her only son was sorely needed about the dairy, and the thought that he must go forth to meet great danger filled her with alarm. A deeply religious woman, she spent a night in prayer, then called Louis to her side, and kissing him fondly, told him to do his duty to his country.

The days which followed the enlistment flew on wings, so much was there to do. Louis was called on each day to drill for three hours, from four o'clock to seven in the afternoon and evening—this time being chosen that the men might do a fair day's work at home before commencing. At first he was put in the "awkward squad," drilled by old Josiah Bruce, and rapidly taught how to stand at "attention," how to "right face," "left face," "about face," "mark time" and "march." This learned, he was given a gun and put through the manual of arms until he could handle the weapon as well as any of them.

Louis's earnestness was warmly approved by the old Mexican veteran. "You're a born soldier, Louis," he said one day when the drilling was over. "Keep on as you have begun and my word on it, you'll come out of the war with shoulder straps."

"Now I've started I mean to do my best," was the quiet answer, and those words told the whole story, as the chapters which follow will testify.

At last came the day when the company was to start for Washington, that being then the objective point of all the Union troops. It was felt that if the South struck any blow at all it would be at our Capitol.

Louis had taken an affectionate farewell of his father and his mother at home, and now Lucy and Martha took him down to Goreville Square in a dairy wagon, not only to see him off, but to witness the celebration given in honor of the departure of the Goreville Volunteers. Big bonfires were blazing, a flag flew from the front of every house and place of business, and the small boys were shooting off all the powder and crackers they could lay hands on, while in the midst of all little Benny Bruce was rolling his drum as never before, calling the men together for their first march of a hundred and fifty miles or more.

"Fall in, men!" cried Captain Paulding. There was a hasty handshaking and a kissing all around, and the men hurried to the center of the square. "Company, attention! Shoulder arms! Forward march!"

Rap! Rap! Rap-rap-rap! went Benny Bruce's big drum, and off the company started in two rather irregular lines. Old Bruce gave a rousing cheer and this was taken up on all sides, while the ladies waved their handkerchiefs and some of the boys set off the cannon they had borrowed from somewhere. The Goreville Volunteers were off at last.

Each man was provided with a gun of some kind, finding the weapon for himself, and each had likewise furnished himself with a belt and ammunition box, a haversack and a blanket. None of the privates had uniforms outside of caps, which the general store keeper at Goreville had donated. The officers wore uniforms of their own selecting, while Benny Bruce had been tricked out with uniform and drum by his enthusiastic father. The flag the company carried had been presented by the ladies of the district, who had held a large "donation" party for the purpose of raising the necessary funds. Each man's haversack was stocked to overflowing with rations, and behind the company drove a wagon packed with other necessities of camp life.

The course of the company lay directly southeast through the State of Maryland. At that time it was known that Maryland was "on the fence" so far as joining the North or the South was concerned, and hardly had the boundary line of the state been crossed than Captain Paulding halted the company and made a brief address.

"Men, we have now entered the State of Maryland," he began. "We trust this state will remain true to the Union, but we are not sure that she will do so. I know personally that there are many people living here who are rebels at heart, and some of these people may try to make us trouble—"

"Let 'em try it on, that's all," came in a growl from the rear line.

"Silence in the ranks. I feel as you do about this matter, but at the same time if we can reach Washington without open trouble, we had best do so. Of course, we will maintain our rights, but to seek a quarrel will only delay us."

Having spoken thus, Captain Paulding paused for a moment and then commanded Privates Rockford and Bingham to step forward. Wondering what was

up, Louis did as ordered, and Harry Bingham followed.

"You will go on ahead," said the captain. "Take the road to Frederick and keep on until about four o'clock this afternoon, when you can look around for a good halting place. If you see anything alarming report to me as quickly as you can."

Louis and Bingham replied that they would. Then they saluted the captain in true military style and hurried off side by side.

"I'm glad he detailed us for this work," said Louis, a few minutes later. "It's much pleasanter to have a friend along."

"Rather have me than Jerry Rowe, eh?" replied Harry Bingham. "Well, I don't blame you. Rowe is very overbearing. But I reckon he'll have the starch taken out of him before the war is over."

Knowing what was expected of them, they hurried off at a rapid pace, and soon the company was lost to sight behind a turn in the road. It was a clear and by no means cold day and both felt in capital spirits, and Louis would have started to whistle, but suddenly thought better of it. Their course lay along a low hill, and this passed, they came within sight of several farmhouses. As they passed the first of these, two farmers came out to meet them.

"Hullo, sodgers; whar ye goin'?" questioned one.

"Down the road," answered Louis, pleasantly.

"Goin' to Washington, I allow," put in the second farmer.

"Perhaps we are," said Harry, with spirit. "Any objections?"

"Objections? Not at all, young man. Only——"

"Only what?"

"Reckon ye'll wish ye hadn't gone afore long—when Jeff Davis takes hold o' things at the Capitol."

Both farmers laughed meaningly; in the midst of which Louis and his friend proceeded on their way.

"Captain Paulding was right; Maryland is full of rebels," said Louis, when they were out of hearing. "We must be on our guard and not let the company run into trouble."

On and on they went, over one hill after another; past open fields and through heavy woods. At the noon hour they halted beside a brook and partook of a portion of the rations contained in their haversacks.

"I'll tell you one thing," remarked Harry, as he munched a sandwich. "We are not going to live as well as we did at home—not by a good deal."

"Fortune of war," laughed Louis. "Think of what the old Revolutionary heroes had to put up with."

"Yes, and the heroes of the War of 1812 and the Mexican War. Do you know what made me enlist? It was old Bruce's stories of how General Scott took Mexico."

"I am glad President Lincoln has called General Scott to take charge in Washington. I want to see the old fellow. Who knows but what——. Hist! Who is that coming?"

Louis broke off short as three horsemen appeared at the ridge of the hill just beyond the brook. The three horsemen wore the uniforms and trappings of cavalrymen. In a moment more they were leading their animals down to the brook for a drink. Feeling they might be a detachment of the enemy the two Union boys started to withdraw from sight. But the movement came too late.

"Halt, there!" came the command, and in a moment more the three cavalrymen were upon them.

CHAPTER VI.

THE VOLUNTEERS AT THE CAPITOL

The men who had come so unexpectedly upon Louis and Harry Bingham were noble looking fellows, all well built and past middle age. Their trappings were of the finest, and by his shoulder-straps Louis saw that one of the number was a captain.

"Well, young men, where are you bound?" demanded the captain of the trio.

"Bound for Frederick," answered Harry, having taken his cue from Louis' former speech.

"Frederick, eh? Do you intend to remain in that city?"

"That depends."

"Don't you think you are bound for Washington?" put in a second of the cavalrymen.

"What if we were?" asked Louis, cautiously.

"Well, if I were in your place I wouldn't be ashamed to own it."

"Neither we are," burst out Harry, without stopping to think twice.

"Are you alone?" was the next question put.

"Cannot you see that we are?" was Louis's counter query.

"But by your caps you belong to some company, I take it," went on the cavalry captain. "Where is the rest of that company?"

"On the road somewhere."

"Humph!" There was a moment of silence. "Come, boys, it is useless to waste time here," and having watered his horse the captain of the strangers rode off, followed by his two companions.

"Now, what does that mean?" demanded Harry Bingham, as soon as they were left alone.

"That is what I would like to know," said Louis, much disturbed. "I wonder if those fellows belong to a cavalry troop close at hand?"

"More than likely."

"Then they may hunt up our boys and cause trouble."

"Shall we go back?"

"I think one of us might. The other can go ahead, as Captain Paulding directed."

This was agreed to, and by tossing up a cent it was decided that Harry Bingham should return to the Goreville Volunteers, while Louis went on as originally intended, but with increased vigilance.

In five minutes more they had separated and Louis was stalking sturdily along towards Frederick. The road now led along a number of plantation fields where numerous colored hands were hard at work getting the ground into shape for the coming summer. Many of the slaves eyed Louis curiously, but none asked him questions. Several, noting his cap, haversack and gun, grinned broadly, but that was all.

Towards four o'clock the young soldier, remembering his captain's words, began to cast about for a good spot for the night's camp. He soon came to a patch of woods, in the midst of which was a clearing backed up by rocks, and this he concluded would be as good a place as any, having both wood and water handy. Marking the spot on the roadway, so it could not be missed, he started back to join his company.

He had proceeded less than a quarter of a mile on the back track when a loud shouting reached his ears and made him quicken his pace. The shouting came from familiar voices, and loudest of all was the voice of Jerry Rowe.

"Help! Help! Save me! Shoot the critter, somebody!" came the cry from Rowe, and then there burst into view half a dozen of the Goreville Volunteers, with Jerry Rowe bringing up in the rear. Behind the flying squad, in deadly pursuit, was—a bull.

"Save me! Save me! Shoot him, somebody!" shrieked Jerry Rowe again. "Don't let the savage critter horn me!"

"Shoot him yourself!" cried several of his companions. "You are the nearest," added one.

But Jerry Rowe was too scared to fire his weapon, and when, at last, he did manage to pull the trigger, the ball passed about six feet over the beast's head. Having fired, Jerry threw away his gun and ran harder than ever.

There was no doubt but that the bull was a bad one, for his eyes were bloodshot and the foam was flying from his jaws as he lumbered on with wonderful rapidity. Yet with it all Louis could not help but laugh at the scene. Here were soldiers enlisted to fight the enemy flying from a barnyard beast! What would these volunteers do in the face of an armed battery?

Bang! Coming to a halt by the roadside, he waited until the bull was almost even with him, then aimed at a bloodshot eye and fired. The aim was true, and with a roar of pain the beast staggered, pitched forward upon his knees, and then rolled over in a cloud of dust with a thud that shook the earth.

"Hurrah! Louis Rockford has killed him!" came from one of the young fellows in front. "That was a dandy shot, Louis."

"I hit him, too," panted Jerry Rowe. "See, my shot struck him directly in the eye."

"It was I who hit him in the eye!" answered Louis, indignantly. "You didn't come within a mile of him."

"Go on with you; I know I hit him," blustered Jerry. "Do you think you are the only marksman in the company?"

"Louis hit him in the eye," put in another of the crowd. "I fired aways back of him, but the bullet passed under him, I think."

"How on earth did you start him up?" questioned Louis, coolly, as he proceeded to load up again.

"We didn't start him up. He broke out of a field that we were passing and came for us red hot, before we realized what was up."

By this time the bull had breathed his last, and the little crowd gathered around and waited for the others of the company to come up. When they did, Captain Paulding's face was as red as a beet.

"To run from a cow!" he burst out. "Boys, I am ashamed of you. What would the rebels say to this if they heard of it?"

"But he came upon us so unexpectedly, captain?" pleaded one.

"Soldiers should never be taken unawares. Didn't I warn you we might be passing through a hostile country, and all must be on guard?"

"But we weren't looking for a bull rebel, cap'n," put in Jack Melburn, the joker of the company.

The captain made no reply to this. Learning that Louis had shot the beast, he praised the youth for his alertness and good aim, and then re-formed his company and marched on.

Nothing more had been seen of the strange cavalrymen, but as soon as the volunteers went into camp a strict guard was set, that there might be no surprise during the night. Several old tents had been brought along, and these and the blankets were all the protection at hand, but even these were better than some of the accommodations experienced by the volunteers later.

Morning was just about to dawn, and Louis was still fast asleep, with his head upon a pine branch pillow, when a sudden shot from the direction of the roadway set the camp in immediate commotion. Two farmers had tried to pass the guard and the soldier had fired as a signal for assistance.

When Captain Paulding went out to meet the intruders, with his company drawn up behind him, the farmers looked rather disconcerted. Yet one of them plucked up courage enough to state that he was the owner of the bull that had been slain, and he wanted to know what the "sodgers was a-gwine ter do about the deestruction o' his val-able property."

"The bull attacked my men while they were on the public highway," returned the captain. "They had to kill him in self-defense. We propose to do nothing."

"Thet bull was wuth a heap o' money," growled the farmer.

"I am sorry for you, but I can do nothing," went on Captain Paulding.

"I reckon you air some of them cussed Yankees."

"We are Union men, sir," and the captain looked so stern that the farmer's jaw dropped. Seeing he could do nothing by intimidation, he finally offered to sell the beef meat at a reasonable price. This offer was accepted, and for the remainder of the trip to the Capitol the Goreville Volunteers lived on roast beef and beefsteaks galore.

"It was an easy way out of the trouble," said the captain when in camp the next noon. "Had we not bought the meat the farmer might have spread the report that we were confiscating his goods and the whole neighborhood would have been aroused."

Frederick had been passed by a circuitous route, and now the company took the most direct road to Rockville and Washington. Everybody still felt fresh and none complained of the long marches. Once they encountered a slight shower, but otherwise the weather remained perfect.

It was towards the close of the fourth day out that word reached the company, through several Union sympathizers, that trouble had occurred at Baltimore between the citizens and some Massachusetts troops which were passing through the city from one railroad station to another. A mob had collected, sticks and stones had been used, and a sharp skirmish had ensued, ending in the death of a number on both sides. This trouble at Baltimore was kept up until some time later, when General Butler took possession of the city and placed it under military rule. By this it will be seen how near Maryland was at one time to joining her Southern sisters in the great rebellion.

The news from Baltimore made Captain Paulding more vigilant than ever, and four advance guards or skirmishers were sent out whenever the volunteers moved. At a little place called Bowker's the company was attacked by two men and half a dozen big boys, who threw stones and clods of dirt, but these Southern sympathizers fled at the first order from Captain Paulding to halt and take aim.

When the order came to point his gun, Louis's heart leaped into his throat. Was he really to fire upon a fellow human being? he asked himself. It is not to be wondered at that his aim was high. Very few men in their first encounter on the battlefield shoot to kill. One must be nerved up by the course of events to do this deliberately.

Bowker's passed, the little band struck out through a fertile country

SHAGGYCOAT

The Biography of a Beaver

BEGUN IN MARCH

By CLARENCE HAWKES

CHAPTER X.

SO THE errand of these strangers boded no good for Shaggycoat and his household.

The old bear and the two cubs came out upon the lake just at the dam, and as there was a fresh wind blowing from up stream, beaver scent was strong.

Then the countenance of the old bear, which was usually droll and good-natured, became cunning and eager with the thought of beaver meat.

The conical beaver houses were out on an island some distance from the shore, but the old bear tried the ice and found it held. So she went slipping and sliding over the smooth surface to the island, closely followed by the cubs.

She walked about the larger of the two lodges several times before deciding what to do, then reared upon her hind legs and peeped in at the vent. There, almost within reach of her paw, were four or five sleek beavers.

The sight of meat so near at hand caused the old bear to forget her cunning and she thrust one of her powerful forearms in at the vent, and reached wildly for the beaver. Then what a scrambling there was for both the front and back door of the lodge, as the astonished and terrified beavers made their escape.

Seeing that this tactic was useless, Bruin withdrew her paw and again peeped in, but the beaver house was quite empty.

Even with her strong arm she could not tear off the top of the lodge, which was frozen hard as stone.

After spending two days in futile efforts to get at the beaver, the three bears shambled off through the woods in search of winter quarters.

They were not long in finding a fallen tree with a heavy top, which made a good covering. So they crawled in and went to sleep. Soon the heavy snowstorms covered them up snug and warm, and the only evidence that the treetop was the home of three bears was a small hole melted in the snow where the breath of the three sleepers thawed it. This was their chimney, through which their warm breath would ascend until spring.

When the strong forearm of the old bear, with its powerful claws, had raked the beaver's lodge in search of supper, Shaggycoat and his family had not fully understood the intruder's motive, although they knew quite well that it was sinister.

BRINGING A HALF DROWNED BEAVER IN HIS JAWS

The following summer, however, during his annual ramble, Shaggycoat learned all about the bear's fondness for the beaver, and this bit of knowledge increased his fears of the bear family.

He had frequently seen Bruin watching the fish in some deep pool and trying whenever they came to the surface to sweep one out on the land with his paw, but one day he discovered a bear watching something else in the water.

Shaggycoat could not see anything to watch, but he did notice an occasional bubble coming to the surface. This was what interested the bear.

Presently Bruin dove head-first into the water and after remaining down for several seconds came blowing and puffing to the surface, bringing a half-drowned beaver in his jaws. If anything more was needed to add to the unfortunate beaver's trouble, it was that one of his forepaws was firmly held in a trap. The bear had evidently discovered the beaver in a trap, and had driven him to the bottom. He laid his unfortunate victim down and with one blow of his strong arm, broke the beaver's neck.

This was enough for Shaggycoat and he fled like a hunted thing, and after that day he always kept as much water between himself and the bear family as possible.

Eight years have now passed since Shaggycoat brought his mate into the beautiful wilderness valley, and they had proceeded to make it habitable, according to the ideas of a beaver.

Wonderful changes have taken place in the alder meadow since then, and one would not know it to be the same spot. It is no more an alder meadow, but a beautiful forest lake, stretching away into the distance until it is lost between the foothills, nearly two miles above the dam. On either side the sparkling waters flow back to the amphitheatre of hills that enfold it, and the lake is altogether like a wonderful sparkling jewel set in the emerald surrounding of the foothills.

Each summer during his wanderings Shaggycoat has met other wanderers like himself, and many of them have returned with him to his mountain lake. Even the first autumn, when he returned with his amputated paw, a pair of sleek beavers came with him, so there were two beaver lodges in the pond during the second winter instead of one. The dam was also strengthened and broadened during that second autumn, until the pond was twice its original size.

The third spring Shaggycoat's own first family of beavers left the lodge to roam during the summer months, and to return in the autumn with mates. This is the arrangement in a well-ordered beaver lodge. The children stay with their parents until they are three years of age, so a lodge usually contains the babies, the yearlings and two-year-olds, who allow themselves shelter under the family lodge until their third birthday, when they are shoved out to make room for the babies, who have just come. So there is a general nose-breaking at this time, and the elders are sent into the world while all the rest are promoted. But I do not imagine that they have to be shoved very hard, for their love of freedom and wild life, and also the mating instinct, is calling to them that third year, and they always obey the call of nature.

It must not be imagined that the little dam originally built on the spot, with the two great pines as its backbone, flows all this broad expanse of country, for year by year it has been added to, until now the gorge is blocked by a log and stone structure that would do credit to man, with all his building and engineering skill. It seems to me that the beaver, with his building instinct, and his ingenuity in making this world over to suit his manner of life, more nearly resembles man than any other wild creature.

Each beaver colony is a veritable city, and each lodge contains a large and well-ordered family. The house is always scrupulously clean, and each member of the family has his own bed which he occupies. The front gate is surrounded by a moat, like the castles of old, and the drawbridge is always up.

The beaver is a veritable Venetian, and his city is a real Venice, with its waterway and its islands of solid earth, upon which stand the houses of its many citizens. The new dam which is most important to Beaver City, for it holds the water above the entrances of the score or more of houses, is a fine structure about two hundred feet in length and nine feet in diameter at its base. Into the structure many thousand logs have been rolled, some of them coming from two or three miles up the lake, for timber is not so plentiful near to the dam as it was.

At the bottom of the dam there are three tiers of these logs. When it is built up for three or four feet, two logs are used, and at the top one tier. The logs are laid with their butts pointing up stream, and are kept in place by heavy stones, while the chinks are plastered up with mud.

The engineering genius of this huge undertaking was Shaggycoat, who sat upon his broad, flat tail and directed his many workmen. Near by, seated upon the top of one of the lodges, a sentinel was always posted while they worked. He warned them of danger, and they gave their whole attention to the work. At the first suspicious sound he would bring his broad tail down upon the water with a resounding slap that could be heard all along the dam, and all through Beaver City, for the water is very mobile and conducts motion or sound easily. At this well-known signal the workers, who a moment before might have been lifting and tugging logs or laying on mortar, would disappear as though the lake had opened and swallowed them. This was really just what happened, but the waters did not open, they were always waiting and ready to receive their little water folks. For a few moments the lake would be as quiet as though there was not a beaver in the whole shimmering expanse. Then a brown muzzle dripping water would be cautiously thrust up, from some shady corner of the dam, and a careful reconnoissance would be made. When the beaver had made sure that it was a false alarm, he would call the rest and work would go on as before.

Most of the conical-shaped houses, of which there are now about twenty, are on islands, or on the bank, near the dam. They look as much like a small Indian village as they do like the abodes of wild animals.

For a long time the overflow water from the lake troubled the beavers, by wearing away their dam, but finally they dug a little channel in the sand around one end of the dam, and now the water runs off nicely in this artificial duct, and the dam is left unimpaired by the flow. If you could stand upon this dam, partly overgrown by willows, and see the symmetrical structure and the little lodges of Beaver City above, and the sparkling water running nicely away in the artificial sluiceway, you would marvel at the ingenuity and patience of these ingenious rodents. But the wisest and oldest head in the colony is that of Shaggycoat, or Old Shag, as I shall now call him, for he was the pioneer of the city, and his was the first lodge on the large island.

Little by little he has seen his lake widen and broaden, and one by one new lodges have been reared, until now, as he sits upon his broad tail and views Beaver City from the vantage-ground of the dam, he must be well satisfied with his planning, for it is all his world and he loves it as each wild creature does the element it inhabits. To his ears the sound of running water is sweetest music, and the roar of the freshet, which fills man with dismay, has no terrors for him; he knows it is only his beloved water world, wild and turbulent, with the joy of melting snow, and the bliss of spring rains. For then he knows that soon the buds will start and the birds sing, and he will be off for his summer ramble. He has never outgrown the habit of wandering during the summer months, but autumn will surely see him back directing repairs upon the dam and seeing that the winter supply of unpeeled logs is stored. It takes a great many logs to supply Beaver City with food now, so that when the winter supply is piled up in the water along in front of the dam, it would probably make several cords. If you could have seen the ever-changing beauty of that forest lake through spring, summer and autumn and winter, you would not have been surprised that the beavers were well satisfied with their surroundings, or that the water seemed always to be calling to them in low, sweet tones.

When the spring freshet filled their lake to overflowing the ice piled up against the dam, and the mad waters rushed through the crevasse roaring and hissing like an infuriated monster. Though the waters were angry and tossed the great cakes of ice about disdainfully, yet the foam upon its fretful surface looked soft as wool and the little water folks knew that the anger would pass, even as the fury of the spring wind.

Finally the water would go down, and the lake become clear and limpid. Then it was a wonderful opal, like the spring sky from which it took its color. When the warm spring winds kissed its sparkling surface it dimpled and sparkled, and little wavelets lapped the pebbly beach with a low soft sound.

Then June came with its lily pads, and the pickerel grass in the shallows along the edge, and the waters near shore were green like emerald. July brought the lilies, whose mysterious sweetness ravished the nostrils and whose creamy white faces nestled among the green pads in sweet content.

The summer passed like a wonderful dream, with soft skies, balmy winds, and warm delightful waters in which to swim, but the male beavers over three years of age were always away during the summer, and the lake was left to the females and the youngsters.

Then autumn came and the maples back in the foothills were made gorgeous by the first frost. The merry fall winds soon rattled down showers of scarlet and crimson and yellow and golden leaves, till the waters along the edge of the lake were as bright as the branches above. Even then the trees were all reflected in the lake, so it had its own beauty as well as that of the world above it.

When the first frost came the male beavers returned, and repaired the dam, and built new lodges, or repaired the old ones. These were active nights, when the sky was so thick with stars that there was hardly room for more, and the milky way was bright and luminous.

When the clear glass window was shut down over the lake and the beavers in their snug city were made prisoners for the winter, December had come.

Then the whole lake sparkled like a jewel, and by night it vied with the stars for mysterious beauty. But soon the lake would be covered with snow, and then it would be a wonderful marble floor, smooth as a board, stretching away as far as the eye could reach.

There, snugly locked under the ice, where not even the gluttonous wolverine can dig them out, with plenty of food for the coming winter, let us leave the inhabitants of Beaver City, happy in the assurance that spring will come again, when their lake will be warm and bright, nestling like a wonderful jewel, on the breast of mother earth.

(The End)

Just Between Ourselves

Dear Boys:

I took a day off recently to visit a friend in Ann Arbor, and incidentally to attend the Track Meet of the Michigan Inter-Scholastic Athletic League on Ferry Field, Michigan University's athletic grounds.

It is not often nowadays that I have the opportunity of mingling with boys—particularly boys of the high school age, so that the occasion was one much enjoyed and long to be remembered.

The day was an ideal one for athletics. The crowd was large and enthusiastic, composed chiefly of high school boys from Ann Arbor, Detroit, Grand Rapids, and other Michigan cities, and not a few from Chicago and points still farther away, who had come to cheer on their favorites. It was a great day for high school athletics, for not less than eleven old records in the League were broken.

My interest in the day was enlivened by my companions, two small boys (one of them bearing my name) and my college friend, as old as I am, but much more frisky.

Interest was added to the games by the presence on the field of some of the crack University athletes —and what heroes they are to the average small boy, and to many a large one!

When the games were over my Ann Arbor friend introduced me to Keene Fitzpatrick, the great U. of M. trainer, who has probably made more world record breakers among amateur athletes than has any other trainer that ever lived. Fortunately for me, the little conversation I expected to have with Mr. Fitzpatrick lengthened itself out into a long talk, for with the introduction came a rain shower, and we were forced under cover, where he was compelled to "stand and deliver" in answer to my many questions. I saw I had an opportunity of finding out some things for the benefit of the readers of THE AMERICAN BOY, and I lost no time, you may be sure.

I could scarcely realize that I was standing before the man who had made Michigan University famous in athletics the world over. Giving due credit to coach Yost, still it must be said that the training of Keene Fitzpatrick lies at the foundation of all the good work done by Michigan athletes of recent years. Perhaps it may not be known to many of ou: boys who live far distant from Michigan that a generation ago Yale was the home of the college champions in all kinds of sports. They can scarcely fail to know, however, that today Michigan University holds a position away above that of any other institution so far as making world's champions is concerned. In 1901 their track team won first place in competition with the principal colleges of the West, repeating the performance in 1902 and 1903, and in that same year winning the four-mile relay race at Philadelphia. Not satisfied with three successive victories, Michigan won in 1904, and a short time ago won for the fourth consecutive year the relay race in competition with the greatest runners of the East. Archie Hahn, who a few weeks ago won the Olympic races in Greece over runners from all over the world, is a product of Keene Fitzpatrick's training. Rose, until recently the world's champion shot-putter, won his greatest triumphs while at Ann Arbor; and Coe, his successor, is now in the University. Garrels of the Michigan Track Team of last year, is the world's champion discus thrower. Columns might be written of the wonderful records made by University of Michigan athletes who have passed under the care of this prince of trainers. No wonder the high school boys in competition that day on Ferry Field, with Keene Fitzpatrick looking on, did their "level best." Probably there was not one of them but was looking forward to the time when he should enter the university and come under the training of this man.

I asked Mr. Fitzpatrick who of all the youngsters he had seen perform during the day seemed the most likely to make a record breaker.

"Cook," he replied, referring to Harry Cook, a boy entered by the Chillicothe, Ohio, high school. "He is the greatest all-around high school athlete in the country. He will be heard from in the future, if his advisors do not spoil him. The great difficulty with phenomenal boy athletes," he went on, "is this: They are likely to get puffed up and think they can get along without training. They are flattered to believe that because they succeed in one direction, they can succeed in all. So they enter for too many events. The result is that they wear themselves out. It is the old story of 'the Jack of all trades and master of none.' I have seen many a young athlete enter college with great hopes, expecting at once to get into the football squad, or on the baseball nine, because in his home town he overtopped everything in all kinds of sport."

I was glad to have my boy, who was with me at the time, drinking in the words of this great trainer, hear this, for, while I do not expect him ever to become a great athlete, yet it gave me a text, on which I was not slow to preach a little sermon. It may not be out of place for me to say just here what I said to my boy that evening in talking over the matter. Boys are very easily spoiled, not only in matters athletic, but in other matters as well. It is a sad day for a boy when he feels that he can win out at whatever he attempts without any great effort, and that he is born to be an all-around champion. Many a boy has frittered away his chances of making a success in some one line by directing his study and his efforts in too many directions. It is very seldom that a boy who makes a champion sprinter also makes a champion shot-putter, or that a champion high jumper makes a champion long distance runner. University men who have succeeded in athletics have succeeded usually along special lines, practicing week in and week out with the one purpose ever before them of doing the one thing better than any other boy in the world does it. They may practice at other things for recreation or for limbering up unused muscles and keeping their bodies symmetrical, but when it comes to hard practice and training, it is to accomplish some one or, at the most, some few things. I had had a sort of notion that this was true, and it gave me pleasure to hear my idea confirmed by so great a trainer as Keene Fitzpatrick.

Young Cook was a wonder. He was practically the only contestant sent to the Meet by the Chillicothe School. By his unaided efforts he won twenty points for Chillicothe against thirteen for Orchard Lake, eleven for Grand Rapids, ten and a half for Ann Arbor, five for Clinton, Illinois, three for the Cleveland Central, two for Plymouth, Michigan, two for Hyde Park, Illinois, and one for Battle Creek, Michigan. There were but three schools ahead of Chillicothe, namely, the Lewis Institute of Chicago with thirty-six and a half, the Detroit University School with thirty-three, and the Detroit Central High with twenty-eight. Cook won first place in the pole vault, jumping eleven feet and tying the League record. In the broad jump he broke the record, covering twenty-three feet and five inches, a much better record than most college records. In addition to this he won the hundred yard dash, and was second in the high jump, being beaten by Patterson of the Detroit University School, a phenomenal young jumper who recently opened the eyes of Eastern boys in a Meet at Philadelphia. His record at Ann Arbor that day was six feet one and one-fourth inches. If you want to realize how high that is, stand on one side of a board fence six feet one and one-fourth inches high, and think of jumping over it.

But will Cook be spoiled, or will Keene Fitzpatrick's hopes for the young man be realized? Time will tell.

Another remark made by the great trainer impressed me. Our conversation soon turned on the work of Garrels, the University of Michigan athlete who holds now the world's champion record as discus thrower. I had the opportunity of seeing Garrels at work, for after the Meet was over he came into the field in track uniform to practice jumping the hurdles. He impressed me as the most splendidly proportioned man I had ever seen, and when to warm himself up he took a sprint around the half-mile track, I began to feel something of the enthusiasm that all Ann Arbor feels for him.

"And yet," said Mr. Fitzpatrick, "there was a time not long ago that I despaired of making anything out of him. He had the bone and muscle and all that goes to make a great athlete. I had to turn him down last year for the football squad because in the try-outs I discovered that he lacked one thing—he did not go in to win."

"What do you mean by that?" I asked in an endeavor to get something more definite; his reply was instructive.

"There are two kinds of athletes. They may be equal in nearly everything that goes to make successful contestants, but one man goes in to win or die in the attempt, and the other man doesn't."

A little later, my college friend told me of how he had seen boys in the Michigan University football squad blinded and dazed and almost unconscious, and yet fighting to the last, and I understood what Keene Fitzpatrick meant. He wanted men who never know when they are whipped, for such men can't be whipped.

"Garrels took his disappointment hard," said Fitzpatrick, "but the next year he made good."

He did not use the word "persistence," but that was what he meant. That was what my boy understood him to mean, and I was glad that the youngster got that lesson. I tried to impress on him afterwards that it was not alone in athletics that the "never say die" spirit wins in the world.

From Stereograph, Copyright by Underwood & Underwood, N. Y.
SPEAK FOR IT

When the college men meet at Ann Arbor in the fall, and it is so in other colleges, many of the athletes of the year before return. In addition to these are many new ones who come from the high schools throughout the country, some of them with records of which they are ready to boast. They think, "Surely I will get a place on the team and will wear the M." They go to work in the gymnasium and in the field, all under the watchful eye of Keene Fitzpatrick and his assistants. In a few weeks the trainer has picked out the most likely men. These, with the athletes of former times who have returned for, perhaps, their graduating year, are given harder work, which they go at with terrific vim, for they know that being picked out by Keene Fitzpatrick means they have a chance to wear the coveted letter—the M that means membership in the Michigan team that is to maintain the athletic prestige of the university in the year to come.

Then come the final try-outs, when the men are pitted against one another, and the weeding-out process begins. Here it is that something besides bone and muscle counts. Here the expert trainer notes the spirit of the man, and here many a promising athlete fails because his work lacks that dogged determination that counts more than brute strength. Thus it is that when the University of Michigan track team, football squad, and baseball nine are ready for the great events on Ferry Field at Ann Arbor, and Marshall Field in Chicago, and elsewhere, they are the best selected, best trained college athletes in the West, if not in the United States, which means the world.

Keene Fitzpatrick is a man whom you would not pick out among a crowd of men as a trainer of athletes. He is short of stature, small of build, modest and unassuming in his deportment—a quiet, gentlemanly individual whom you would rather expect to see selling goods over a counter than training young men for athletic championships. But in the conversation I had with him I discovered that he possesses that which he requires of the boys who come under his instruction, that is, quiet determination, intelligent persistence, and the inability to recognize defeat when he meets it.

Keene Fitzpatrick was once athletic instructor at Yale, and Yale would now be glad to have him back. But Keene Fitzpatrick is wedded to the University of Michigan. Here he reigns with coach Yost in a world of his own. He is supreme in athletic matters, and rightly so. The University of Michigan will do well to give its athletic trainer full rein.

Just at this time when so many readers of THE AMERICAN BOY are interested in athletics, this talk will certainly do no harm, and may do good. I do not want to turn everything into a sermon, but I would suggest to the boys that there is very much to learn in athletics which will do an immense amount of good in their lives if they will apply it to something more than athletics. I have called attention to two or three things that Keene Fitzpatrick told me. Any man who wants to see boys succeed will say that I am right when I say that a boy should early determine what he wants to succeed in, and that he should direct all his training, so far as possible, toward that end; that he do not fritter away his time in trying to make a success of too many things; that he do not permit flattery and the applause of friends to spoil him; and that, when he goes into a contest, whatever it be, if it be honorable, he go in to win, regardless of cost.

* * *

Changing the subject, I want to call your attention to a few things in which you and I ought to be mutually interested.

FIRST. Next month I am going to give you the first chapters of a new serial story, the title of which is, "The Camp Fire of Mad Anthony;" the author is Everett T. Tomlinson, whom every boy who reads much knows, by reputation, at least. "The Camp Fire of Mad Anthony" is a story of the early days of the Revolution. Perhaps you think we are having more war stories than is necessary. Still, if I judge your likes and dislikes as I know my own, you will not be sorry. Mr. Tomlinson, who has been writing for boys since 1894, ought to know something about boys, for after graduating from Williams College and Colgate University, he became principal of the Auburn, New York, High School, and, later, head master of the preparatory department of Rutgers College. His first book, published in 1894, was "The Search for Andrew Field," then, following in quick succession, "The Boy Soldiers of 1812," "Colonial Boys," "Boy Officers of 1812," "Three Young Continentals," and so on, until more than twenty-five of his books were in the hands of American boys, and his place in their regard was fixed. We are sure "The Camp Fire of Mad Anthony" will be up to the standard of his many books that have so pleased young Americans. Remember, the first chapters appear next month.

SECOND. I want you to consider thoughtfully the matter I have referred to several times relating to furnishing THE AMERICAN BOY to shut-ins. Let me tell you again what I mean by a shut-in. A shut-in is a boy who is shut in out of the sunlight, a sick boy, a crippled boy, or a boy who is, for any reason, unable to run and romp like other boys do. I do not mean boys who simply have a headache or a stomachache and get over it the next day; I mean boys who are shut up to a wheel chair or confined to the bed month in and month out, year after year. I want

that every such boy in the United States and Canada shall have THE AMERICAN BOY to read every month. The publishers of THE AMERICAN BOY cannot afford to give it to them free of charge. Uncle Sam's post office regulations would not permit them to do so if they could afford it. What we are asking the boys to do is this: Send us any amount of money, from one cent up to one dollar, or more, and for every cent that you contribute we contribute one cent, so that every time as much as 50 cents comes to us, in pennies or otherwise, we contribute another 50 cents. That gives THE AMERICAN BOY for one year to some shut-in. Of course, we don't give it to a shut-in who can afford to pay for it—that would be unfair to the other boys.

Are you not ready to help? Can't you spare a little for this good cause? Watch the clock that will appear from month to month in this paper. We are going to move the minute hand of this clock every month, and by January 1, next, we want the minute hand to strike twelve, which means that $2,000 has been contributed—$1,000 by you, and $1,000 by us. Two thousand shut-in boys will then have THE AMERICAN BOY for a year. By looking at the face of the clock as printed you will find that about $41.50 has been sent in. That, with our contribution of $41.50, enables us to send THE AMERICAN BOY to 83 shut-in boys. Another thing: You must help us find these boys. There are many thousands of them; but you must help us find them. Send us the name and address of any one or more of them you know of. Be sure that what you tell us is founded on fact; you must not guess. The boy must be a poor boy and must be a shut-in. To the boy sending us 50 cents or more for the fund we will send the name of the shut-in to whom the paper goes, and the shut-in will be told the name of the person who enables us to send him the paper.

THIRD. We feel proud of the reports made by our boys as shown by the Legion of Honor roll. Not a day passes now but we receive two or three letters with certificates from teachers, giving the names and addresses of the honor boys in their schools. The badges cost us some money, but we give them free of charge. We want every boy who has taken first grades in his school to be on our Legion of Honor roll, and possess a Legion of Honor badge. You will see a further explanation in another part of this paper. I speak of it here that you may not fail to read it this month.

I am very grateful to the boys for the interest they are taking in our various enterprises.

With the co-operation of every reader the editor of THE AMERICAN BOY expects to do more and more in the way of perfecting a magazine that will be absolutely beyond criticism, and without equal in the world as a publication for boys of the English-speaking race.

FROM THE GOVERNOR OF KENTUCKY.

Commonwealth of Kentucky,
Executive Department,
Frankfort.

The Governor directs me to express through you to the boys of America his great interest in their welfare.

Very truly, EDW. O. LEIGH,
Secretary to the Governor.

WINCHESTER

MODEL 1906 .22 CALIBER

Extra Light Weight Repeating Rifles

Many a boy has often wished for a repeating rifle such as men use. Men's rifles are too heavy and too costly for most boys. The Winchester Model 1906 .22 Caliber repeater was designed to meet the requirements of young sportsmen, and it will surely suit them in every way, including the price which is low. It is cheap in price but not in quality. Ask your dealer to show you the new Winchester.

FREE: Send for circular fully describing this rifle.

WINCHESTER REPEATING ARMS CO., NEW HAVEN, CONN.

FROM THE GOVERNOR OF KANSAS.

E. W. Hoch, Governor,
Topeka.

I gladly send this little message to the Boys of America. It is a good thing to be young, just to be young, to be in the vestibule of the twentieth century, with all its splendid possibilities before one. But in the best of books I read "to whomsoever much is given of him much will be required." Surely much is given to the boys of today. Never have their opportunities been so great. All the doors of opportunity in church, in state, and in commercial circles are wide open.

But the world demands more than ever before, more intelligence, more culture, more integrity, in a word, more all around character. Not ancestral lineage, not royal birth, not wealth of parentage, but character—this is what counts today.

Very truly yours,
E. W. HOCH.

FROM THE GOVERNOR OF SOUTH DAKOTA.

Executive Department,
State of South Dakota,
Pierre.

The American boy should always and at all times look on the bright side of things, should be industrious, truthful and prompt; should attend to his own affairs and should be especially careful not to pry into others' business, should love the flag which Washington, the father of our country, designed.

In a word, there is no safer code of rules for the American boy than the Ten Commandments, and the new Commandment that "ye love one another."

Yours very truly,
S. H. ELROD,
Governor of South Dakota.

TWO THOUSAND SHUT-INS TO HAVE THE AMERICAN BOY

We have received many letters indicating that our subscribers are in thorough sympathy with our plan of giving THE AMERICAN BOY to shut-in boys. Herbert A. Welch, of Wayne, Nebraska, writes: "I have earned 50c by sweeping and scrubbing my father's law office, and I want to put the money into the Shut-In Fund. I think it is a fine thing. I know there are plenty of sick boys who would like the paper and cannot buy it." Allen Bagley, Moyock, North Carolina, writes suggesting that we print the amounts sent in by the different states in separate columns, so that boys' state pride will be aroused. "There are few boys," he says, "who do not like to see their native state ahead of all things."

The "Shut-In Fund" scheme was announced a few days before our June number went to press, yet we were able to announce in that number contributions from 30 boys. Since the issue of the June number 87 more boys have "chipped in" and there is every evidence that ere long we shall be able to place THE AMERICAN BOY in the hands of every deserving American boy shut-in in the land.

The showing to date is as follows:

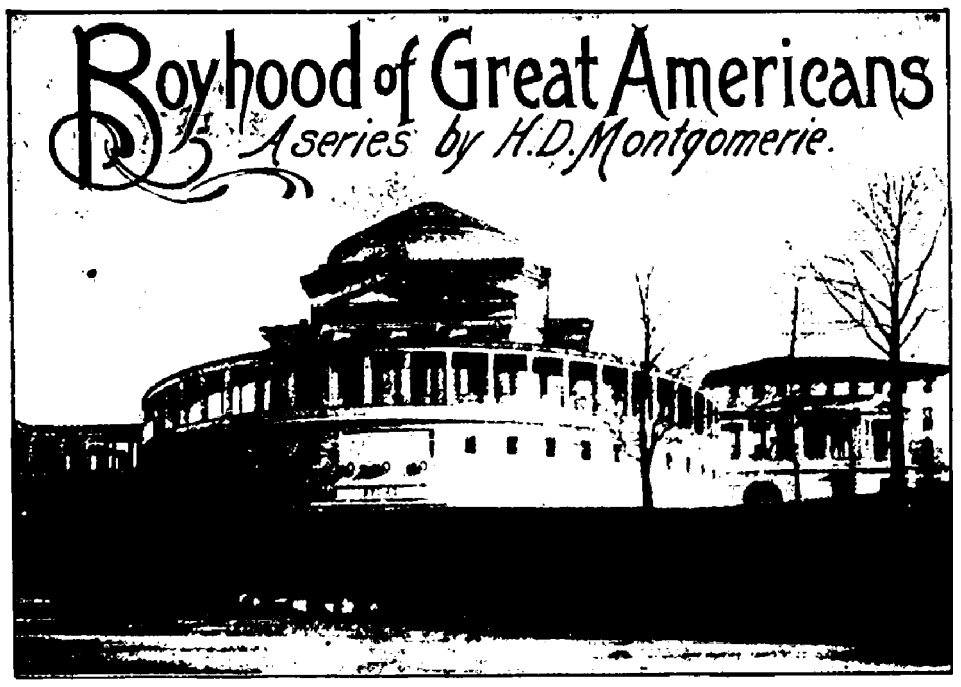
Total to June 4.....$41.79
Contributed by the publishers of THE AMERICAN BOY $41.79

Total to date by subscriptions.....$83.58

This enables us to give THE AMERICAN BOY for one year to 83 shut-ins and have 58 cents left over toward the 84th. Let us see if we can not buy 100 more subscriptions for our poor, bed-ridden boy friends by the date of our August issue. Send in the name and address of any poor, deserving shut-in boy who is confined to his home or bed by permanent illness or infirmity and is too poor to buy a subscription for himself.

How a Shut-In Writes

Edward L. Beale, Portland, Maine, writes: "Enclosed I send you thirty cents in stamps as a small aid to the shut-in fund, fifteen cents for Miss ..... and fifteen cents for myself. It is a good object. I am a shut-in myself, having had locomotor ataxia for twelve years, and for about four years having been confined in the hospital near my home. I know what it is to be a shut-in from the world, and what is more is the suffering I undergo, not being one moment free from it. I find the world, on the whole, a most selfish one, yet I have had some very good friends; but if every one should have a little bitter with the sweet, there would be more thought, I guess, of the other fellow. I have cut out of THE AMERICAN BOY the notice you have printed and will read it to those who call on me. I will do my part towards getting it into the hands of those who will respond."



THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November number. No. I of the Series was Ulysses Simpson Grant; No. II, David G. Farragut; No. III, Benjamin Franklin; No. IV, Abraham Lincoln; No. V John Adams; No. VI Thomas Jefferson; No. VII Ralph Waldo Emerson; No. VIII Henry Ward Beecher.

No. IX--Nathaniel Hawthorne

AMONG the companions of the good and great John Winthrop, who, in 1630, shared with him the dangers of the Atlantic Ocean in the good ship Arabella, on his memorable voyage to the shores of an almost unknown country, was a young man named William Hawthorne, or as he spelled it, Hathorne. William Hathorne emigrated from Wilton, in Wiltshire, England, and soon in his new home proved himself to be of the stuff of which successful pioneers are made. He received grants of land in and around the town of Salem, where he established himself. Muscular and energetic, he soon took a prominent position in the community, being active, both in peace and in war, for the protection and extension of the infant colony. He was an officer, with the rank of major, in the local militia and showed both courage and ability in innumerable conflicts with the Indians. As a magistrate of the town of Salem, William Hathorne exhibited, however, a narrow, puritanical severity towards the Quakers, who were being denounced and punished as heretics. One instance of the persecution which that peaceful people suffered, irrespective of sex, is recorded in the annals of New England, by an order of Major William Hathorne that "Anne Coleman and four of her friends" should be whipped through Salem, Boston, and Dedham.

While this first American Hawthorne showed in great degree traits of bigotry and severity toward those who differed from him in matters of religion—a severity which has stained and darkened the otherwise glorious history of the New England Puritans—his acts may be considered mild and gentle in comparison with that of his son, John Hawthorne.

As a soldier John Hawthorne, like his father, showed himself a leader in strategy and courage, but his name has been handed down through the years mainly on account of his work as a judge. He was one of those Puritans who would have delighted Oliver Cromwell, being of the narrowest, strictest type, with the most violent hatred of heretics.

Every schoolboy in his study of the history of New England will remember what is said concerning witchcraft, and the silly superstitions as to the powers possessed by so-called witches.

It was during these black days of New England history that John Hawthorne was a judge in Salem, where witchmania was at its worst.

It is recorded that nineteen persons were tried and hanged for witchcraft in that town. Judge Hawthorne was one of the foremost of their persecutors. So merciless was he as a judge that the husband of one woman whom he had sentenced to death, in open court cursed him and his children's children. In succeeding generations of the family any ill-fortune that came was set down to the influence of that curse.

With the third generation the importance of the Hawthornes declined. Some of them became farmers, going about their simple duties with contentment. Others went to sea, making long voyages to far distant lands.

Daniel Hawthorne, a privateersman during the Revolutionary war, gained much fame by his bravery on behalf of the colonies. His son, Nathaniel, father of the subject of our sketch, was also early apprenticed to a seafaring life, in due time rising to the command of a Chinese trader.

Between voyages Nathaniel Hawthorne had wooed and married Elizabeth Clarke Manning, member of a family which had also been prominent in the history of the Commonwealth. She was a woman of great beauty, finely educated, a devoted wife and a loving mother.

The young couple went to housekeeping in the house on Union street, Salem, which had been the home of the stout old privateer, Daniel Hawthorne, and there, on the anniversary of the signing of the Declaration of Independence, July 4th, 1804, their second child and only son was born.

The boy received his father's name of Nathaniel. In the study of his life one may find a noteworthy resemblance to that other Nathaniel who was described by the greatest of authorities as "an Israelite indeed in whom is no guile."

When Nathaniel was four years old his father, at the age of thirty-two, died of fever at Surinam, or as that country is now generally known, Dutch Guiana, in South America.

Although shipmasters in those days were generally men of rough character, Hawthorne's father seems to have been a man of some education, as it is recorded he always took with him on a voyage a supply of books to study.

Mrs. Hawthorne, then only twenty-seven years of age, was sorely grieved at her husband's death; indeed, until her death, which occurred forty years afterward, she kept closely to her own room, even taking her meals apart from the household. Moving with her little family to her father's home on Herbert street, Salem, there Nathaniel grew up.

The town of Salem, during the beginning of the nineteenth century, was a seaport of considerable importance, and the home of many wealthy merchants and shipowners. Vessels of large tonnage, filled with all kinds of merchandise, sailed from the port of Salem for India, China and the far East, and it is just possible, had Captain Hawthorne lived longer, his son would have become a sailor; indeed, there is sufficient evi-

NATHANIEL HAWTHORNE

dence to show that young Nathaniel did want to follow his father's profession. Had he done so the literature of America would never have been enriched by "The Scarlet Letter," "The Blithedale Romance," or "The House of The Seven Gables."

The boyhood lives of famous men, as a rule, give very little promise of future greatness. Thus it was with young Hawthorne. But, considering his home life, with his sisters as his only playmates, and without his mother's active, cheerful sympathy in his boyish schemes, we would have been very much surprised if told that such a boy would ever rise to any height above his fellows.

There are very few incidents recorded of Hawthorne's childhood years. The first school he attended was kept by Dr. Worcester, who, in later years, became the compiler of the dictionary that bears his name. During the first years of his school life the boy was struck on the leg by a ball while at play, and the injury was so serious as to confine him to the house and compel him to use crutches for nearly four years.

Although thus handicapped, he was able to continue his studies, his teacher going to his home as a tutor. At the end of his twelfth year he seems to have so completely recovered from his lameness that he was able to attend the dancing school.

While young Hawthorne may have been fond of reading before his accident, it must have been during these four years, when he was unable to attend school or join in the sports and fun of his comrades, that such fondness became a settled habit. His biographers tell that he could at almost any time be found lying at full length upon the floor, reading Milton's Paradise Lost, Bunyan's Pilgrim's Progress, or a volume of Shakespeare. Such books would hardly suit the taste of many American boys of today; but it must be remembered that magazines and books for young people were almost unheard of in Hawthorne's boyhood. In many respects, perhaps, this lack of so-called reading matter for young people, with its careless spelling, indifferent English, and blood and thunder stories, was a good thing for those boys who, like Nathaniel Hawthorne, Emerson, or Longfellow, became great men in literature. Their being confined to the reading of Shakespeare, Milton and the like enabled them to acquire that lofty style and that purity of English which makes their writings today so much admired. Correct spelling and the right use of good English marks the educated boy or man, and the way to acquire these is by reading and studying the works of the great masters in literature.

In all that is written of Hawthorne's boyhood we find little mention of boy friends. He seems to have been much alone, probably because of his mother's continued grief and his own long continued lameness.

In adition to his growing fondness for books, Hawthorne was kind and gentle towards animals, as, when not reading, he would generally be found playing with the family cats and teaching them all kinds of tricks. In his diary he writes that one day a man passed the house driving sheep, and one little lamb, poor, dumb creature," he says, "looked tired out, could go no farther. "The into my eyes, and I thought I knew what he would say if he could speak, and so asked the man what he would sell him for. 'Just the price of his pelt, and that will bring sixty-five cents,' was the answer. I ran and petitioned mother for the money, which she soon gave me, saying with a smile that she tried to make severe, but could not, that I was a great spendthrift. The lamb is in our orchard now, and he made a bow (without taking off his hat), and thanked me this morning for saving him from the butcher."

Nathaniel was about fourteen when the family moved to the little town of Raymond, in Maine, where his uncle, Robert Manning, was owner of a large estate upon which he had built a house for his widowed sister and her children. Here the boy lived for over a year. He says, speaking of this time, "I lived in Maine like a bird of the air, so perfect was the freedom I enjoyed."

The little town of Raymond was situated in the midst of great forests and inland lakes. Here Hawthorne could be as much alone as he pleased. In the summer he was off in the woods with his gun, and during the long moonlight nights of winter he skated all alone on the lake until midnight. In his diary, which he kept during this period, there is the record of his boyish exploits of swimming, sailing, fishing and hunting, and accounts of birds and snakes and long excursions, showing that while the boy had few companions and preferred to be alone, he had all a real boy's fondness for life out of doors.

Nathaniel was sent back to Salem, to another uncle, in order that he might attend school, leaving his mother and two sisters at Raymond. In his sixteenth year he left school to be prepared for college. In writing to his mother of his life in Salem, he says: "I get my lessons at home, and recite them to my teacher at seven o'clock in the morning. Shall you want me to be a minister, doctor, or lawyer? A minister I will not be." While in Salem he began to write compositions and make rhymes, the latter being spoken of as "clever stanzas, well written." In connection with his prose writings, he became an amateur journalist, issuing at intervals four numbers of "The Spectator." The paper was printed on small note paper, with a pen, containing schoolboy essays on "Industry" and "Solitude." There were also several columns containing family news and items of boyish fun.

In 1821 Hawthorne entered Bowdoin College, Brunswick, Maine, a small institution, then graduating about thirty students yearly. The class of 1821 numbered some young men who, in later life, became famous. Among Hawthorne's fellow students were Henry Wadsworth Longfellow, then a lad of fourteen, who became one of America's greatest poets, and Franklin Pierce, who rose to the highest position in the United States, becoming the fourteenth president.

It is somewhat of a surprise to find Hawthorne joining the Athenaeum society, composed of students who were more inclined for fun than study, instead of the quieter and more studious Peucinian society, of which young Longfellow was a shining member.

Some one has described Hawthorne in his student days as being "a slender lad, having a massive head, with dark, brilliant, and most expressive eyes, heavy eyebrows and a profusion of dark hair. He carried his head on one side, which gave a singularity to his figure, and he had a generally countrified appearance. He was reticent in speech, reserved in manner, and averse to intimacy." He, however, shared in all that went on in college. Though never caring much for athletics, he joined the military company, which was captained by Pierce.

While it is recorded that Hawthorne, with other students, sometimes broke the college rules in their pranks, and was fined in one year to the extent of nine shillings, these escapades could not have been very serious as his letters show that he was not ashamed of his actions. In class work, while a fair scholar, he was not brilliant. When a schoolboy, he once tried to declaim and was laughed at, and at college he persistently refused to try it again. This refusal was the cause of his not being given a part at Commencement. Latin and English were his favorite studies, mathematics, metaphysics and other branches receiving little attention. His time was mostly spent in the little library of eight hundred books which belonged to the Athenaeum society.

The family was by no means wealthy and, although his college expenses were small, the worn condition of his clothes often caused him worry. He, however, had a hatred of debt, was always self-respecting, and his manly honesty gained him the goodwill of his fellows.

Leaving Bowdoin on his graduation he went back to Salem, the home of his childhood, there to begin his life work in literature. At first he met with many disappointments and discouragements; yet, having faith in himself and a determination to succeed, the disappointments and discouragements were overcome and a grand success assured.

SYNOPSIS OF SUBSEQUENT CAREER OF NATHANIEL HAWTHORNE.

1826 Published anonymously, Fanshawe, a novel.
1837 First series of Twice-Told Tales appeared.
1839 Appointed to Boston Custom House.
1842 Married Miss Sophia Peabody and settled at Concord.
1845 Second series of Twice-Told Tales.
1846 Surveyor of Port at Salem.
1850 Published The Scarlet Letter.
1851 Published The House of the Seven Gables, also The Blithedale Romance.
1853 Appointed U. S. Consul at Liverpool, England.
1860 Published the Marble Faun.
1863 Published Our Old Home.
1864 May 18, died at Plymouth, N. H., buried at Concord, Mass.

INSCRIPTION ON TABLET IN HALL OF FAME.

Nathaniel Hawthorne.

1804-1864.

Living in solitude till the fitness of time, I still kept the dew of my youth and the freshness of my heart.

School Lets out the First of June

Written for The American Boy by Lincoln Hulley, President of the John B. Stetson University

School lets out the first of June,
Heads are getting hazy.
See the little boys and girls
Nearly going crazy.
Tiny Tim and Joe and Jim
And little Sue and Sallie
Full of joy up to the brim
Skipping down the valley.

School lets out the first of June,
Come, slip off your duster,
Take a swim the river in
Where the lilies cluster.
Climbing into cherry trees,
Picking berry bushes,
Fishing in the creek for trout
'Neath the elder bushes.

School lets out the first of June.
Isn't summer jolly—
Fishing all the afternoon
Or romping round with collie?
Berries, cherries, apples, plums,
Belly-ache and blisters.
School lets out the first of June;
Joy and June are sisters.

School lets out the first of June.
Bees are in the clover,
Air is laden with perfume,
Work and care are over.
Winds are warm and skies are blue;
Wind and sky together
Lure little boys to play
Who bless the summer weather.

AMATEUR JOURNALISM DEPARTMENT

Edited by W. R. MURPHY

[The editor will send copies of typical amateur papers to boys interested in the hobby, providing a stamped addressed wrapper is sent.]

One of the leading amateur journalists of the past few years is Frank D. Murphy, of Brantford, Ontario, Canada, who has done much for amateur journalism. Mr. Murphy's first interest in the work was aroused nearly five years ago through philatelic journals, and as he was then an invalid he found the pursuit a diversion from physical suffering as well as interesting and profitable. He early became noted as a forceful editorial writer and author of serious and well-written essays. He has since been awarded a laureateship in the United Amateur Press Association. He early entered into the work of organized and amateur journalism and soon became active in its councils. His first office was as Laureate Recorder of the U. A. P. A., and he was then promoted to the secretaryship, in which he served very efficiently. He is now a member of the Board of Directors (mail election). Mr. Murphy is affiliated with the National, United, and Interstate Amateur Press Associations. He was formerly associate editor of The Siren and now holds the same office on The Chum. He at one time published The Liberal and is now publisher of The International Amateur.

Amateur journalists of Philadelphia and vicinity are making big preparations for the thirty-first convention of the National Amateur Press Association, which is scheduled for the Quaker City on July 2, 3 and 4, 1906. Every AMERICAN BOY reader who expects to be in Philadelphia at that time or who desires to make a trip to the convention will receive a cordial welcome and will have the time of his life in the way of enjoyment. The attendance will be large and opportunity will be given to meet not only present day amateurs but also those who made amateur history in the past. Philadelphia is an ideal convention city by reason of its unsurpassed chances for sightseeing. The venerable memorials of Colonial and Revolutionary history, including the Liberty Bell and the Memorial Hall will be the scene of a patriotic pilgrimage, and a visit will be made to the shipyard which builds so many of the great American battleships, and the locomotive works where complete engines can be manufactured in a day. An automobile tour of the city, pleasure jaunts to the parks, and a banquet are among the features. The new Bellevue-Stratford, one of the largest and finest hotels in the country, will be headquarters.

A labor of love for amateur journalism is the splendid MONADNOCK MONTHLY, published frequently by W. Paul Cook, Hanover, N. H. An average issue consists of 32 pages, seven by ten inches in size, several beautiful half-tones and a neat cover. The contents include a large amount of interesting fiction and verse, seasonable editorials and reviews, and usually an article about some New Hampshire professional or amateur author. The sincerity of Mr. Cook's professions is shown by The Monadnock's sub-heading, "An Amateur Magazine—You Can't Buy It!"

FOUR BOYS IN CAMP

By J. L. HARBOUR

BEGUN IN MAY
PART III

NOT A SPARK of our fire remained and we were in total darkness. It took Tad some time to find the matches, and it was ten or fifteen minutes before we could get a fire started. Then Tad took a burning brand and he and I went to the farther end of the building. A moment later Tad cried out,

"Cracky! It was nothing but a dog!"

"A dog?" said Simmy.

"Yes, and a 'yeller' dog at that!" exclaimed Tad, in deep disgust. "And here I was pluming myself on how I could tell all the boys at home that I had killed a bear or a mountain lion. You disappointing cur you!"

He struck the dog lightly with his foot as he spoke. The other boys now came forward and the burning brand revealed to all of us a large yellow dog of mongrel breed stretched out quite dead, with blood trickling from its side near the heart.

"Where could the creature have come from?" I asked.

"There may be other campers in the vicinity, and the dog may have belonged to them," replied Tad.

There were now faint signs of the coming dawn in the eastern sky. The rain had ceased and the stars were shining. We laid down again and all of us soon slept so soundly that we knew nothing until the bright sunshine came streaming in at the open end of the cabin and fell on our faces.

We jumped up and went down to the edge of the pond to wash our hands and faces. The pond and its surroundings did not look so dreary in the bright sunshine. We could see across the pond a thin, graceful column of smoke rising among the trees, and Tad said:

"It's as I thought it must be. There are other campers here."

We were eating our breakfast when two men suddenly appeared from the woods near us. They wore the garb of the regular "camper-out."

"Hello, youngsters!" said one of them in a friendly tone of voice. "Camping out?"

"Yes, sir," I replied.

"Pretty young to be away off up here in this lonely place. Any one with you?"

"Just we four."

"How did you happen to come trailing away off up here?"

We told him, and after some further conversation one of the men asked,

"Seen anything of a big, yellow dog?"

We glanced at each other and Tad said,

"Well, yes; we have. Was he yours?"

"I suppose he was as much ours as he was any other person's. He followed us up here from the main road down below, and has been with us for three or four days. He was about as much use as a day-old pup would be. He hasn't been around our camp this morning and we have been wondering if he wearied of our society and set off to find more agreeable associates."

"He got left if he did," said Tad, dryly.

"What makes you think that, boy?"

Tad grinned and said,

"Because he came to us, and there he is."

Tad pointed toward the rear of the engine-house where the dog still lay. The man who had been questioning us looked a little indignant and said,

"What did you shoot the poor beast for? He wouldn't have harmed a flea, and I think that there were several hundred on him."

Tad was always the soul of honor and truthfulness, and he told the strangers the simple truth regarding our fright of the night before and the causes leading up to the death of the dog. Then Tad asked,

"Did you men hear those unearthly yells and howls last night?"

"What howls and yells?"

Tad gave them a detailed account of the frightful sounds we had heard and was frank enough to admit that they had made our blood "run cold." Then both men burst into a laugh, and one of them said,

"That was Jim Peters."

"Who is Jim Peters?" I asked.

"He's one of the men camping on the other side of the pond with us. He's been all over creation, and last night as we sat around our campfire he was giving us an account of an experience he once had with Indians out west, and he gave us imitations of the war cries of a band of Sioux Indians. He's a great mimic and he got to mimicking the cries of different wild animals. It almost made our blood run cold to hear him giving the cry of the coyote and the mountain lion. You heard him away over here, did you?"

"Ask Benny Kidson there if we didn't," said Simmy. "I think Benny was scared out of a year's growth, and I nearly chattered my teeth loose."

"I don't wonder at that. But Jim will laugh when he hears about the effect of his imitations on a lot of youngsters camping out alone for the first time. Great chap Jim is. You'd better come over and make his acquaintance."

We showed the men the scrap of paper fastened to one side of the engine-house.

"That's all nonsense," said one of the men as he tore down the paper. "The fishing is disappointing, for there's nothing in the pond but a few catfish or horned pout. There may be a few bears in the woods, but I guess they'll let you alone if you let them alone. As for spooks, there are none here nor any place else. You needn't worry any more about wild animals molesting you."

This was a real relief to us and we had confidence in all that the men said. Later in the day we walked around the pond to their camp. They had preferred a couple of tents of their own to the old engine-house for a camp. The ground on which their tent was pitched was an open space in the woods and more attractive than our camping place. There were five of the men. We met Jim Peters, a big, talkative man with a laugh that sounded like a roar.

"So I gave you youngsters a scare last night, did I?" he said, and we were honest enough to admit that this was true.

"It's a scarey sort of a place anyhow," replied Jim. "And I tell you, boys, if I were you I wouldn't stay in that old engine-house. It's very ricketty and it might come down at any minute. Better pitch your tent and stay in that."

We told him that we did not intend to remain at Scott's Pond more than another night. Indeed, we would have gone down into the valley that day, but we were all so stiff and sore from our walking, climbing, tumbling, rolling experience of the day before that we felt unequal to the task of going back until we had "rested up" for at least a day. We had spent an almost sleepless night, and that had helped to "break us up," as Tad put it.

We decided while walking back to the engine-house that we would pitch our tent before night, for the old engine-house seemed to be leaning more than ever when we got back to it.

The old raft had drifted in quite close to the shore. Tad and Simmy waded out to it with a couple of poles with which to steer and a couple of boards for oars and said that they were going on a "sailing expedition." They had gone out perhaps fifty yards when Benny and I, sitting on the shore watching them, saw the raft dip down into the water on the side on which they were standing and both of them slid into the water with a yell. They went quite out of sight, but came up in an instant and were soon back on the raft. This brought the "sailing expedition" to a speedy close, for the water was extremely cold, and the two mariners felt the necessity of making port and getting off their chilly garments. Both of them had dry underwear in their knapsacks, but we had not brought a change of outer garments, and they had to sit around in their underwear while their wet trousers and jackets were drying by the fire we had kindled. Jim Peters and two of the men from the nearby camp came to see us while the clothes were drying, and Tad made a comical apology for receiving them in what he called his "undress uniform."

AT THAT MOMENT THERE WAS A VIVID FLASH OF LIGHTNING

Jim threw himself down on the ground near our fire and told us some very entertaining stories of his camping-out experiences in the Rocky Mountains and far up in the Maine woods where, as he said, there were "bears and other wild varmints a-plenty."

When our callers had gone we "fooled around" until noon when we got our dinner. Then we felt so refreshed that Simmy proposed that we go on an "exploring expedition" and try to climb to the summit of a high hill, or small mountain, near us. The very heavy rain of the night before had put out the forest fire and the day was much cooler than the day before had been.

Piling all of our knapsacks into a corner of the engine-house we threw a blanket over them, and started to climb the mountain. Within ten minutes we were in dense pine woods. We had struck a faintly-outlined trail on entering the woods, but it grew more and more indistinct until it disappeared altogether.

"But we can get to the summit anyhow," said Tad. "All we have to do is to keep on climbing until we reach the top."

"My brother Ora said that we must be careful not to get away from the trails," said Benny Kidson. "He said it was awfully easy to get lost in a wilderness like this."

"We'll soon be up to where we can see just where we are," replied Tad. "The timber is all burned off higher up, and when we reach that part of the mountain we can look right down and see the pond and the old engine-house and get our bearings."

We climbed and climbed, and at last got to where a great deal of timber had been burned, but we could not see the pond, and Tad said we would have to go still farther up the mountain. Then we blundered around among charred and fallen timber and over the blackened ground until we were so black ourselves that we could easily have been mistaken for negroes.

The open land for which we were looking did not come into sight, and we could find no trace of a trail. The sun had gone under clouds soon after we had started, and now we heard the sullen rumble of thunder and it grew so dark in the blackened woods that we could hardly see our way.

"Say, boys; we want to turn tail and get down to our camp right forthwith and faster," I said.

"That's what we do," said Simmy, panting for breath and wiping the perspiration from his brow with the back of one grimy hand. If the boys who read this have never walked over a burned tract of rough mountain land they can have no idea of what hard and dirty work it is.

We started to descend the mountain and after blundering around for an hour found ourselves in as veritable a wilderness as could be found in any mountainous land. None of us had dared say it, but I think that all of us had for some time had the conviction that we were lost. The roar of the thunder had continued and there had been blinding flashes of lightning. Then we heard a roaring sound as of an approaching hurricane, and the wind came howling through the woods followed by a rainfall so terrific that it is not exaggerating to say that the water came down in waves and sheets. The dense timber did not protect us long in such a rainfall, and we were soon drenched to the skin. We sought the slight shelter of several bowlders near us and huddled together, wet, dirty, tired, hungry and not a little frightened.

"Sich a time and nobody to it," said Tad, with a desperate attempt to be cheerful.

"I wish I wasn't to it," replied Benny.

"You'd probably wish it more if you could see yourself in the glass," said Tad. "Your own grandmother wouldn't know you."

"The kettle shouldn't call the pot 'blacky,'" retorted Benny. "You look as if you might be twin brother to a Hottentot."

But there was no bantering of any kind when it became evident that nightfall was at hand and the rain continued to fall in torrents. We made a desperate effort to find our way out of the wilderness in the few minutes of daylight left to us, but all was unavailing. We stumbled over charred logs and fell headlong over blackened rocks until it became so dark that we could not see five feet ahead of us.

We were huddled close together in the darkness, discussing what seemed to be a hopeless situation when we were startled by a gruff voice calling out near us,

"Who are ye? Where be ye? What do ye here?"

"Who are you?" asked Tad.

At that moment there was a vivid flash of lightning and we caught a glimpse of a tall, gaunt man with a long, white beard standing near us with a long staff in his hand. Then all was dark and we heard the man coming nearer. He was standing right by us when he said laconically,

"Lost?"

"Yes, we are," I replied.

"What ye sich fools as to be prowlin' 'round here in a storm for?" he asked gruffly. Without waiting for a reply he said,

"Keep close together an' follow me, ye passel o' young fools! Anything that happens to ye will sarve ye right. Come on!"

His voice was harsh and forbidding, and his wild appearance in the glimpse we had caught of him during the flash of lightning was anything but reassuring; but we feared to disobey him, and, keeping close together, we followed him as best we could.

We laughed afterward about the way in which Simmy had taken hold of the skirt of Tad's coat, while I took hold of Simmy's coat, and Benny brought up the rear hanging to the tail of my coat, that never-to-be-forgotten night when we blundered along in the darkness following our strange guide. We clung to each other so closely that when one fell all fell. We got accustomed to the darkness and it stopped raining so that we could see at a little distance the tall man treading his way through the trees ahead of us. He kept muttering to himself in a way that made us very uncomfortable, and it did not make us any more comfortable in our minds to have him turn around now and then and say,

"Come along—fools!"

Benny, a nervous, timid boy, was palpably frightened, and once he said to me in a tremulous whisper,

"What do you reckon he is going to do with us?"

An ill-timed spirit of mischief suddenly took possession of me, and I ground my teeth and said over my shoulder, quoting from a foolish fairy tale:

"Fee, fo, fi, fum;
I smell the blood of an Englishman;
Be he alive or be he dead,
I'll grind his bones to make me bread."

Benny gave the tail of my coat a jerk and said in a whisper,

"Sh-sh-sh! He'll hear you, and he may at least break your bones for sure then!"

We followed our mumbling, muttering guide for at least half an hour when he stopped short and said harshly,

"Stop where you are for a bit!"

We halted and stood there a silent, wondering, weary company of boys, each of us secretly wishing ourselves at home and in our own clean, snug beds.

CHAPTER IV.

THE HUNT FOR A MISSING MAN.

ON ENTERING the offices Frank had glanced at a clock on the wall and found it was five minutes past three.

"You don't know how soon he will be back?" he queried.

"No."

"If you will remember, I had an appointment at three sharp."

"I remember it very well." The clerk hesitated. "Would you mind telling me what your business was with Mr. Garrison?"

"It was a private matter."

"Relating to money matters?"

"In a way, yes. Why do you ask?"

"Oh, I have reasons. Perhaps you had better sit down and wait for him."

"That is what I intend to do. If necessary, I'll wait for him until you shut up," added our hero, as he dropped into a chair.

"Then you are bound to see him."

"I am."

The clerk said no more, but turned to a set of books and began to write. Frank remained silent for perhaps ten minutes.

"Did Mr. Garrison say where he was going?" he asked.

"Out to collect a bill."

"Near by?"

"He didn't say."

"Did he go out alone?"

"Yes."

There was another spell of silence, and then the outer door opened quickly, and two well-dressed men stepped in.

"We wish to see Mr. Garrison," said one, while he looked about to see if that individual was in sight.

"Sorry, sir; but he's out," said the clerk.

"When will he be back?" put in the second man.

"I can't say."

The two men exchanged glances, and one uttered a low whistle.

"Reckon we're too late," muttered the latter of the pair.

"It looks like it, Mason," was the answer.

"What's to do next?"

"Find him—if we can—and do it right away."

"But it's like looking for a pin in a haystack."

"That's true, too." The man turned again to the clerk. "You are sure you don't know where to find Mr. Garrison?"

"I haven't the least idea where he has gone to."

The other man had walked to the rear and glanced into the private office.

"Did Mr. Garrison have a satchel with him when he left?" he asked.

"He has a dress-suit case with him."

"Humph!"

Frank listened to the talk with close attention. Then he arose and turned to the man who had been addressed as Mason.

"Excuse me, sir, but is your name Bardwell Mason?" he questioned.

"It is. Who are you?"

"I am Frank Hardy. My father is Thomas Hardy, of Claster."

"Phew! Then you are after Garrison, too, eh?"

"I wish to see him. He was here this morning and promised to see me at three o'clock. It is now half-past three."

"When did you call this morning?"

"About half-past eleven."

"And you had a talk with him?"

"No, sir; I sent my name into the private office by this clerk."

"Of course you want to see him about this security business."

"Yes, sir. My father told me that if I couldn't get any satisfaction here I should call upon you."

Bardwell Mason nodded. Then he bent forward and lowered his voice.

"I'm afraid the fat's in the fire here," he whispered.

"What do you mean?"

"I mean that Jabez Garrison knows he is found out and that he has flown."

"You mean that he has run away?" whispered Frank, in horror.

"It certainly looks that way. We have had an expert on his books for two days, and it is a fact beyond question that he has swindled our benevolent order out of at least thirty-five thousand dollars."

"Then he ought to be locked up."

"If we can lay hands on him."

"Why don't you notify the police?"

"That's what we will do—if he doesn't come back pretty soon."

"We must catch him by all means—for my father's sake as much as for yours."

"True, my boy; but if he has really run away he has probably covered his tracks well."

A half-hour went by, and leaving Frank to watch at the office, Bardwell Mason and his companion went off to interview the police.

"I guess the boss is getting himself in hot water," said the clerk to Frank, when the two were again left alone.

"It begins to look that way," answered our hero. "But I don't feel like saying too much."

"It's over that benevolent order affair, isn't it?"

"Yes. Do you know anything about it?"

"Oh, I heard the boss and Mr. Mason talking about it one day in the office. They had it pretty hot. I made up my mind then matters were coming to a head."

"What will you do if Mr. Garrison doesn't come back?"

"Shut up and go home at six o'clock."

"Will you open up in the morning?"

"The boy does that. He's out on an errand for me now."

"Have you any stock on hand—I mean flour and feed?"

"We don't keep stock any more. We simply sell on commission."

At this announcement Frank felt more depressed than ever. There would then be nothing to attach, in case Jabez Garrison had really fled. He looked at the office furniture. It was old and dilapidated, and if put up at auction would probably not fetch over twenty or thirty dollars.

"Does Mr. Garrison own any property?"

"Not that I know of. He used to have a house on Walnut street, but he sold that about a year ago."

Here was more cause for regret, and Frank heaved a deep sigh. He felt that the news he would carry home would nearly prostrate his parents.

"And just when father is helpless with that crushed foot," he thought. "It's too bad! Oh! if only I could catch this Jabez Garrison and make him give up what he has stolen."

It was after five o'clock when Bardwell Mason returned.

"Have you seen anything of him?" he asked briefly.

"Nothing whatever," answered Frank.. "He has flown beyond a doubt."

"What have you done, Mr. Mason?"

"I have placed the police and a first-class detective on his track."

At these words the clerk looked up in wonder.

"Do you mean to say Mr. Garrison has run away?" he demanded.

"We think he has, young man—anyway, he is not to be found, and at the place where he boarded he removed the best of his clothing this noon."

"Was he married?" asked Frank.

"No, he was a bachelor."

The clerk was now all attention, and asked for some details, which were given to him. He asked what he had best do regarding the offices.

"Better consult the police about that," said Mr. Mason, and the clerk promised to do so.

"This is rough on me," he said. "I haven't been paid last week's salary, and now I'm out of a job without a minute's warning."

"It certainly is rough on you," said Frank.

The clerk locked up the place and walked off, and Frank and Bardwell Mason also took their departure.

"Mr. Mason, if Mr. Garrison is not found will my father have to make good the amount of the bond on which he went security?" asked our hero, as the pair took themselves to the gentleman's office.

"Certainly; and he'll have to make good anyway, unless Garrison pays back what he has appropriated."

"It will be a great blow to my father."

"I presume it will be. But that is not my fault, nor the fault of anybody in our order. Your father made a great mistake when he went security for such a slick rascal as Jabez Garrison."

"Do you think the police will catch him?"

"Possibly. But he may have taken a steamer to some foreign land from which it will be impossible to bring him back."

Frank hardly knew what to do next, but decided to call on the police himself. At headquarters he was informed that everything possible would be done to find Jabez Garrison.

"Mr. Mason has placed a very shrewd detective on the track," said an officer to our hero. "He will probably learn something sooner or later."

Before leaving Philadelphia Frank called at the house where the missing man had boarded. He was met at the door by a sharp-faced woman with a high-pitched voice.

"Yes, I guess he has run away and for good," she said, tartly. "They say he stole fifty thousand dollars. He owed me for two weeks' board, and seventy-five cents that I paid only two days ago for his laundry. He was a villain if ever there was one."

"Didn't he leave anything behind?"

"Yes, a lot of old clothing and worn-out shoes worth about fifty cents to the junkman. Oh, I wish I could catch hold of him! I'd tear his eyes out!"

"I wish I could get hold of him, too," returned Frank, and there being nothing more to say he withdrew.

CHAPTER V.

FRANK AT THE STORE.

When Frank returned home and told of what had occurred in Philadelphia, there was consternation in the Hardy family. Mr. Hardy shook his head over and over again, and Mrs. Hardy shed bitter tears.

"I was a fool to trust Garrison," said the disabled husband. "Now, here he is running away while I cannot even make a search for him."

"I am afraid that such a search would be useless," responded his wife. "And even if he were captured what good would it do, if he has squandered the money?"

"No good, so far as I am concerned, my dear." Mr. Hardy heaved a long sigh. "Do you realize what this means for me?" he went on, bitterly.

"You will have to pay that ten thousand dollars."

"Assuredly."

"How much money have you in the bank, Thomas?"

"Nine thousand five hundred dollars."

"Indeed! I thought you had more."

"I used to have more, but the competition in business has forced me to put in additional capital, which I took from the savings bank."

"Then you will have to take all the money in the bank and make up five hundred dollars besides?"

"Yes, if they call on me to make good the amount for which I went security."

"Can you spare the five hundred out of the business?"

At this question Mr. Hardy hung his head.

"I am afraid I cannot, Margy. Business has been very bad lately, and I have many bills coming due inside of thirty and sixty days."

At this candid statement Mrs. Hardy grew very pale.

"Oh, Thomas, do you mean that we—we——"

"This will drive me to the wall." Mr. Hardy gave another sigh and his voice shook. "I am ruined."

"Ruined!"

"That is the one word to use. Competition has almost forced me out of business, and this affair will take away nearly every cent I possess."

After this confession the matter was discussed freely until Mr. Hardy grew so feverish that his wife told him he must be quiet and left to himself. She passed down into the sitting-room and there met Frank.

"Mother, you have been crying," said the boy, coming up and embracing her.

"I cannot deny it, Frank; this blow is an awful one."

"Perhaps it won't be so bad as you think."

The lady of the house shook her head.

"It won't take all of father's money, will it?"

"Every dollar, Frank."

"But he will still have the business, won't he?"

"Not free and clear. He will have to take out of it five hundred dollars, and pay some bills besides."

"That's bad."

"Your father says he is ruined, and I really think he is. The business will have to be sold for what it will bring."

"And what will father do then?"

"I am sure I don't know. He will have to get well first."

"I wish I could catch Jabez Garrison. I'd—I'd strangle him!"

"Frank, you mustn't speak like that!"

"I don't care, mother. See what mischief he has created."

"Well, we must face the truth, Frank." Mrs. Hardy wrung her hands. "I am sure I do not know what we shall do."

"I know what I am going to do, mother," he returned, quickly. "I've been thinking it over ever since I got home."

"What is that?"

"I'm going to work."

The fond mother smiled faintly.

"Yes; I'm afraid we shall no longer be able to support you unless you do something."

"I shall find something to do just as soon as I can, and bring all my wages home to you. Maybe they won't be much, but they'll be something."

The mother embraced him again.

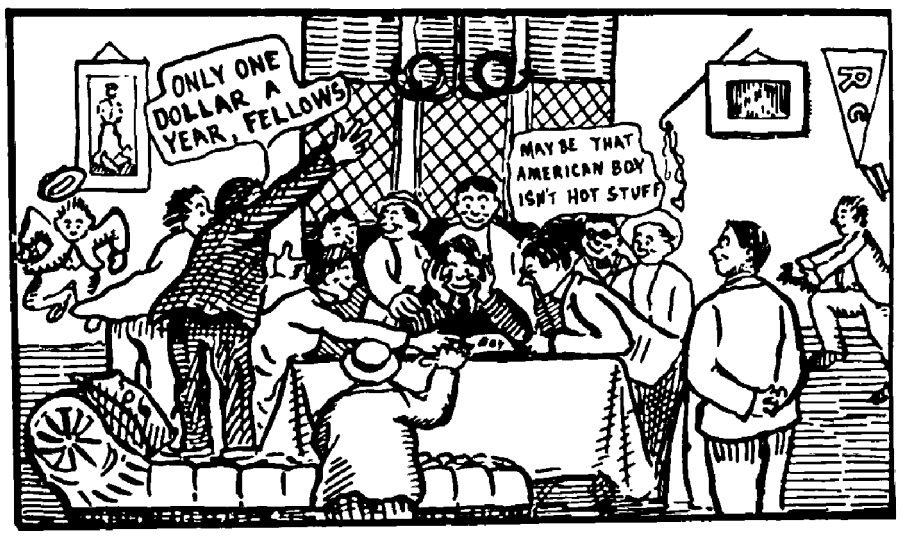
"Frank, you are truly a son worth having. But it will be too bad to keep you from high school."

"Never mind; perhaps I can study at night."

"If you do that, I'll help you all I can. But I am sure I do not know where you can get a position."

"Oh, I'll get something. But first of all, I'm going down to father's store and do all I can to sell what goods he has on hand."

"Yes; I was going to ask you to do that."



BUSY TIME AT THE CLUB WHEN THE AMERICAN BOY ARRIVES

True to his word, Frank opened the store bright and early the next morning. He felt that he must do something, and during the day cleaned the windows and arranged the goods on the shelves and in the big storeroom. He also called on several regular customers and asked if they did not wish fresh supplies.

"So you are going to help your father out, eh?" said one old gentleman. "I'm glad to see it. Yes, you can send me two bags of oats and a bushel of corn, and also a barrel of that best flour for the house. I'll help you all I can." And Frank went away delighted with the order.

But the work was not all so agreeable. Some found fault, and others said they were buying elsewhere. Looking over the old store books the boy soon learned that the receipts had been falling off steadily for six months—ever since the opposition had started.

"I guess it needs an experienced man with more capital than we now have to make a success of this," he reasoned, and he was correct in his surmise. The two rivals carried big stocks, and both were very active, consequently more than three-quarters of the business of the town and vicinity went to them.

A few days later Mr. Hardy received a formal notification of what Jabez Garrison had done and was told that he must "make good" without delay or the benevolent order would sue him. Following this, Mr. Bardwell Mason paid him a visit.

"I am very sorry this has occurred," said the gentleman from Philadelphia. "But business is business, and the order looks to me to have this matter straightened out."

"I do not see what I can do excepting to give the bank notice to hold that money for you until we have time to look for Jabez Garrison," answered Mr. Hardy.

"Have you the whole amount in the bank?"

"I have it, less five hundred dollars."

"Where is that to come from, if I may ask?"

"I own my business and this house."

"I see. Then there will be no trouble, Mr. Hardy. I am sorry to bother you at such a time as this. It looks like hitting a man when he is down. But you know what these orders are. They look to me to do my duty, and if I don't do it some of the members will be sure to make trouble for me."

"They are not very benevolent in my case."

"Well, you see, you are not a member."

The talk was continued for a good hour, and in the end Mr. Hardy sent a note down to the bank introducing Mr. Mason, and relating the object of that gentleman's call. By this means, the account was, for the time being, tied up so that Mr. Hardy could not touch it.

On Monday of the following week, Frank was in the store packing up a small order for delivery, when a dapper young man entered.

"Is Mr. Hardy around?" questioned the newcomer.

"No, sir; my father is at home with a crushed foot," answered our hero.

"How did he crush it, in the store?"

"No; he had it crushed on the railroad."

"Oh, was he in that wreck near here?"

"He was."

"Then I suppose he'll soak the railroad company good for it?"

"I think he expects them to pay something."

"I'd soak them for all I was worth," went on the dapper young man, sitting down across the counter. "They can stand it, and he can put in any kind of an old bill he wants to."

To this Frank did not answer, but continued to put up the order upon which he had been working.

"I suppose you don't know who I am," went on the young man, after he had lit a cigarette.

"I do not."

"I'm the representative of the Blargo-Leeds Flour Company. There's a bill due us and I want to find out why it hasn't been paid. Your father promised to pay it some time ago."

"How much is it?" asked Frank uneasily, although he knew something of the bill already.

"Two hundred and sixty-eight dollars. It's been due now for three weeks."

"Well, I'll try to find out for you."

"Can't you pay it now?"

"No."

"My firm says that bill has got to be paid inside of the next ten days."

"Very well; we'll try to pay it."

"If you don't they will sue. The young man leaped down from the counter. "Sure you can't pay it now?"

"No; I haven't the money."

"I've heard your father is in a peck of trouble over some bond he went on. I'm sorry for him. But that bill must be paid, remember that. In ten days, or it's a suit at law." And lighting another cigarette, the dapper young man hurried out as quickly as he had entered.

CHAPTER VI.

THE RIVAL MERCHANTS.

When Frank went home to dinner he expected to tell both his father and his mother about the visit from the dapper young man; but he found both of them so much worried that he did not say a word. He ate his meal in silence, and hurried back to the place of business as soon as he could.

"I'll tell them to-night or to-morrow," he thought. "One thing is certain: we can't pay that bill, for we haven't the money on hand with which to do it."

The youth worked hard during the afternoon, and made several sales which were rather gratifying—one of some middlings which had become slightly spoiled and which his father had despaired of selling. Frank sold the stuff for just what it was, so that no fault might be found later.

He was placing the nine dollars he had received in the transaction in the money

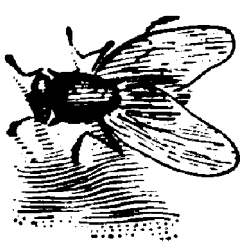
THE DIARY OF A FLY



By GEORGE REITER BRILL

Illustrated by the Author

JUNE 1ST.—RAINY; hung around outside of a kitchen screen door for two hours before I could get in. People of the house are overparticular and had cut newspapers attached to the outside which bothered me considerably until I got used to them. Got in at last and found the kitchen very interesting, especially the sink, where I found plenty to eat; the cook was quite affable and kind, leaving me lots of jelly and spots of good grease in the most convenient places, while her garbage can was open, too, at all times, giving me a continuous feast. Some nebby person came in from time to time, trying to cause a disturbance; she said that the flies were running off with the house. There were a good many of us, I admit, but the place was large, and I was glad to hear the cook tell the person that she guessed she could take care of the kitchen end of it if the "person" held down the other.

GEORGE R. BRILL

Two of my friends met untimely deaths in a custard pie, while I had a narrow escape from a milky grave, as it was I nearly froze to death in the ice chest and barely escaped on a plate of butter at supper time.

June 2nd.—Clear and warm. Got into the dining room today, but found it a hard place in which to live. The people of the house—unlike the cook—are parsimonious and have every crumb scraped up and carried out. There is fly paper in the most unexpected places, keeping one ever on the alert. Twice I was caught and came within an ace of sticking forever but, luck being with me, I got off with only sticky feet, which, of course, is botherso me enough.

Their small boy, Willie, is a fine child, though, and I took quite a fancy to him; he had so much delightful jelly about him, such nice spots of syrup and gravy that I stuck to him most of the day.

His mother was terribly jealous of me and tried in every way to separate us, even going so far as to change his clothes and wash him from head to foot with water and bad tasting soap. But Willie, dear little soul, went at once and replenished his stock of goodies so that we enjoyed each other's society 'till night. I followed him even to his room, as I thought, but must have lost my way for he is nowhere to be seen.

June 3rd.—Cloudy and damp again. Woke up in a big pink bedroom at five o'clock—couldn't sleep very well on account of Willie's father, who snores dreadfully. I wakened him at last after considerable effort, but he, at once, became very violent and howled that hereafter he would sleep in armor. He tried to sleep again, but every time he snored I went for him. Then he covered his bald head with a sheet, but that being too short, left his bare feet at my mercy; so finally he opened the door and forced me from the room, much to my delight, as I wanted to go where there was something to eat for, under ordinary circumstances, I like an early breakfast.

This came near accomplishing my destruction, because my hunger and eagerness blunted my astuteness and I tried some brown stuff in a saucer which I found upon the hall mantle and proved to be fly poison against which I had been frequently warned. I laid, therefore, in the bottom of a delft vase pretty much all day, suffering the most acute pain and caring little what might happen to me.

June 4th.—Sunday. Warm and clear. Managed to crawl out of the vase when I heard Willie's voice. The dear little fellow had a good breakfast for me of cereal and sugar on his Sunday blouse, but his mother, as usual, scarcely let me eat in peace. Followed them to church and heard some good music; also contrived to get some bread a d wine there. Lost Willie and went home with an old gentleman whom I found very patient and obliging and who, to my delight, owned a large, badly kept stable. To me, stable fare is a pleasant change sometimes, although one is compelled to dodge horse flies and spiders to some extent.

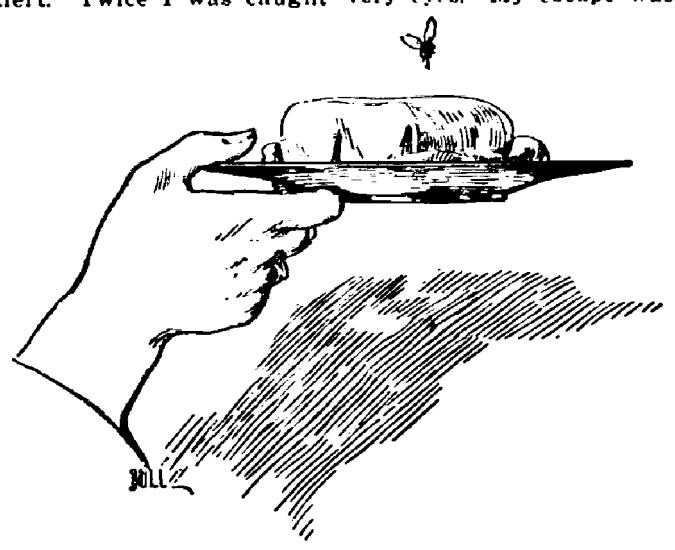
One old spider in the hay loft was particularly anxious that I should try his web, but yours truly is a little too fly for that.

I did, however, carelessly fall into some axle grease and got some varnish on my left wing which, by tonight, I hope to have eradicated.

June 5th.—Still in the stable. Varnish not quite off my wing. Impedes my flying a trifle.

June 6th.—Calm and clear. Varnish off at last and I am over at Chisholm's grocery store. Fine place here, plenty of signs to rest on and quantities of grub. I never saw such generosity in any store keeper; he is absolutely prodigal and everything that is his, is mine for the taking. Everybody that comes in remarks upon it; one woman said she never saw such carelessness. She belonged to the class, no doubt, that would cover up and conceal things out of pure maliciousness. I got acquainted with four or five hundred pleasant flies who took pains to show me the best parts of the establishment where one could fairly revel in syrup and other dainty viands.

June 7th.—Came over to the bakery today with a party of excursionists and was treated royally; had one accident that nearly proved my last. We were in the bake shop looking at the process of pie making when a fellow with a white cap suddenly scooped up the pile of raisins, on which I was making some tests, and threw them recklessly into a large plate of butter; it was sticky stuff and I had the struggle of my life to free my wings of the mess in which I saw six of my dear friends perish before my very eyes. My escape was in the shape of a miracle so I turned post haste to the grocery store where flies are safer.



BARELY ESCAPED IN A PLATE OF BUTTER

June 8th.—Followed a boy with a raisin pie today and saw what I expected, three of my dear friends, who were not so fortunate as I was, buried therein. Even the people themselves were shocked at such unwarranted loss of life and berated the baker for his dire carelessness. I came away convinced that there are some good people in this world who value the life of a fly too highly to eat him in their pies.

June 9th.—In a trap, and in the very grocery store I thought so safe. Ah! how little we know whom we can trust on this circling globe.

Have tried all day to get out, but, so far, without success. My life must end here at the hand of a friend, and as Caesar said: Et tu Brute.

Correct!

Teacher—Willie, give me a sentence containing the word delight.

Willie—My mother puts out de light when I'm in bed.—Philadelphia Telegraph.

FOLLOWED A BOY WITH A RAISIN PIE

The Young Book Agent

(*Continued from page 266*)

drawer, when a dark, middle-aged man came in and looked around.

"I suppose Mr. Hardy isn't here?" he said.

"No, sir; my father is at home with a crushed foot," answered Frank, telling what he had repeated many times before.

"I am Jackson Devore, the feed man. I have a bill of ninety dollars that has been running for some time. I want to know when your father intends to pay it."

"I guess he'll pay it as soon as he can, Mr. Devore."

"That is what he told me when I saw him last. This bill has got to be paid at once."

"I can't pay it now."

"Well, if it isn't paid by the day after to-morrow, I'll bring suit."

"The day after to-morrow is the Fourth of July."

"Well, then, the next day," snarled Jackson Devore. "And tell your father I won't wait a minute longer. He has let his business run down and go to pieces, and it looks to me like he didn't intend to pay anything." And out of the store bounded the man, shaking his head and his fist at the same time.

"This is certainly getting interesting," said Frank to himself. "We will have to do something soon; that is certain."

He had exactly twenty-seven dollars on hand, and this cash he took home at supper time. Then he told his parents of what had happened during the day.

"I expected it," groaned Mr. Hardy. "To keep the store going longer would be folly. I may as well sell out as best I can, and settle these bills as best I can, too."

"Who will you sell out to?" asked Frank.

"I'm sure I don't know. I might offer the place to my rivals."

"They wouldn't buy anything but the stock."

"They might be able to use the fixtures, such as they are."

"I'll tell you what I can do," said Frank. "I can go to each of our rivals and get them to submit offers. Perhaps they will bid pretty well against each other—for each wants the business in this town, and they know your good will is worth something."

"That is a good idea!" said Mr. Hardy, brightening. "You might go and see both of them this evening, if you wish."

"Frank looks tired," interposed his mother.

"Never mind, mother, I'll go anyway. Perhaps Mr. Benning and Mr. Peterson will walk over here and see father."

"Yes, you might ask them to call," said the sick man.

A little later Frank went to see Andrew Benning, who lived but a short distance from the Hardy homestead. He found the storekeeper, who was a shrewd Yankee, reading the local weekly paper.

"Your father would like to see me, eh?" said the man. "What about, Frank?"

"He is going to sell out and thought you might like to buy."

"Hum! Has he set any figger?"

"No, sir."

"Well, I'll call an' see him first thing in the morning. I don't reckon as how the place is wuth much—it's so run down."

"Oh, there is quite some stock," answered our hero. "What time shall I say you will call?"

"About nine o'clock. I'll take a look at the place first. Will you be around there early?"

"At seven o'clock."

"All right."

From the Benning home, Frank hurried to the place where Mr. Peterson, the other rival, boarded.

"I'm sorry for your father," said Mr. Peterson, who was a young man and rather pleasant. "I might buy him out if he'll sell cheap enough."

"He'll sell at a fair figure."

"Do you know what he has on hand?"

"Yes, sir, in a general way."

"Very well. I'll go up with you now and see him." And in a minute more the two were on the way. When they reached the Hardy home the rival flour and feed man shook hands cordially with Mrs. Hardy and also with the sick man.

"So you are going to sell out," said he to Frank's father. "Well, I thought one of us would have to give up pretty soon. The town can't support three dealers."

The matter was talked over, and it soon developed that John Peterson was as shrewd as Andrew Benning. The best offer he would make was seventy per cent of the wholesale value of the stock and a hundred dollars for the fixtures and good will.

"Seventy per cent is not enough," said Mr. Hardy. "I think I can get more elsewhere."

"I think Mr. Benning will give more," said Frank.

"Is he going to have a chance to buy it?" cried John Peterson.

"I shall sell to the highest bidder," answered Mr. Hardy.

"Oh, then you want us to bid against each other, eh?"

"Can you blame me?"

"Not exactly, Mr. Hardy—but it don't just look right, either. I'll tell you what I'll do—I'll give you seventy-five per cent of the value of the stock."

"Make it ninety and I'll take you up."

"No, that is my best figure."

"Then I'll let you know by tomorrow night."

"Very well," answered John Peterson, and soon after this he left.

"Do you think that is a fair price, father?" asked Frank after the visitor had departed.

"No, my son. But what shall I do?"

"Perhaps Andrew Benning will make a better offer."

"Let us hope so."

Early the next morning Frank went to the store and arranged the stock to the best possible advantage. He was just finishing the work when the rival dealer came in and began to look around.

Although Frank did not know it, Andrew Benning had, late the evening before, met John Peterson, and the rivals had talked over the matter of buying Mr. Hardy out, and reached an agreement by which neither was to outbid the other. If either got the place he was to divide the goods with the other, and also the fixtures, and both were to settle jointly for the good will—and then each was to catch what customers he could as in the past.

"I'll tell you what I'll do, and you can tell your father," said Andrew Benning. "I'll give him sixty per cent of the value of his stock at wholesale and fifty dollars for his fixtures and good will."

"Thank you, but my father can get more than that," answered Frank, coldly.

"All right, then, he had better do it," was Andrew Benning's retort, and he stalked out without another word.

But our hero had not reckoned on the plot the rivals had hatched out. On going to dinner he learned that his father had just received a note from John Peterson, which ran as follows.

"Mr. Thomas Hardy.

"Dear Sir: I have thought over the matter of buying your store out and have come to the conclusion that the best I can offer you is sixty per cent of the regular wholesale value of the stock, and fifty dollars for all the fixtures. As the place is run down I do not consider that the good will is worth figuring in the transaction. This offer is open for one week. Yours ob't'ly,

"JOHN PETERSON."

"He has dropped to the very figures that Andrew Benning offered," said Frank, in dismay.

"I believe they are in league with each other," sighed Mr. Hardy. "They know they have me down and that I cannot help myself."

"Perhaps we can sell the goods elsewhere, father."

"Possibly; but it will cost money to transport the goods, and few people want to buy goods that they consider are second-hand."

"Supposing I try to sell the goods to Mr. Fardale, of Porthaven?"

"You might try it. But Mr. Fardale is as close as Benning, if not closer."

"If he would only give ten per cent more it would be something."

"That is true. Well, you can see him the day after the Fourth of July."

"I will," answered Frank. "I can go up on the stage," he added, for Porthaven was six miles from Claster.

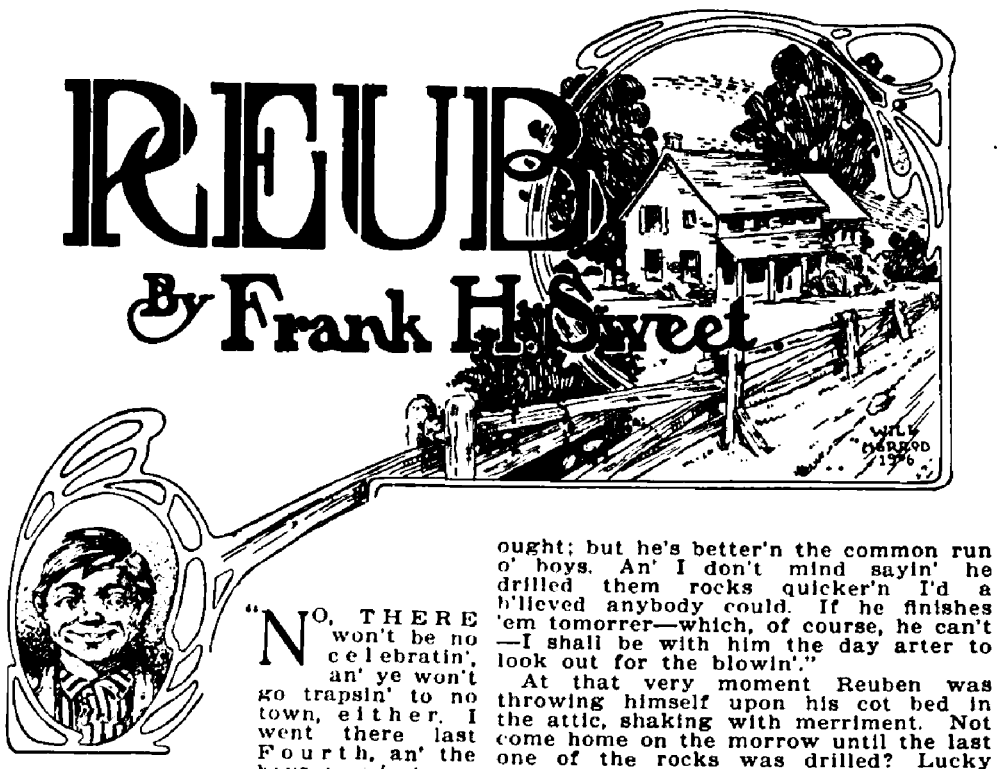
REUB

By Frank H. Sweet



"NO, THERE won't be no celebratin', an' ye won't go trapsin' to no town, either. I went there last Fourth, an' the boys scairt my horse so he run off and broke four dozen eggs. Nobody's goin' to step a foot off this farm tomorrer, not if I know it. The Fourth's all humbug an' foolishness."

"But ye said I might have a day off for workin' so hard through the spring," ventured the boy, a little rebelliously.

"Mebbe I did, an' mebbe I didn't, but 't ain't to be on the Fourth. Ye'll have the day some quiet time, when there ain't horses to scare, an' leadin's on to mischief. If ye're sensible, ye'll wait till huckleberries are ripe, when ye'n pick enough in a day to buy a pair o' shoes."

"But we furnish Reub's clothin', Enos," remonstrated his wife, hesitatingly. "You know that was our 'greement with his uncle. An' Reub has worked awful hard since he come, an' been a good boy."

"Reasonable clothin', Ann," impatiently, "that's the 'greement. I've had one suit o' clothes the last year, an' Reub's had one; I've had one straw hat an' one home-made cap, an' Reub's had just the same; an' last Christmas I bought two pair o' fine dollar shoes—mine's good yet, an' Reub's jest about gone. Talk o' bein' reasonable! Not many men would treat their help jest like themselves. When my shoes are worn out, I'll buy two more pair. An' now, Reub," turning again to the boy, "ye'd best be gettin' off to bed. Ye must be up early tomorrer. Them stones must be all out an' the ground leveled by next week, so we'n be gittin' in the turnip seed. How's it comin' on?"

"NOBODY'S GOIN' TO STEP A FOOT OFF THIS FARM TOMORRER"

"Purty well, I guess, sir. I've got about forty big rocks drilled."

"Forty?" with some appearance of surprise, which, however, was instantly checked as he went on: "Seems to me ye might have done more'n that if ye'd hurried. Well, soon's they're all done they must be set off so we'n gather up the stones an' cart 'em away. If ye hurry like ye'd ought to, mebbe ye can finish 'em tomorrer, then I'll help carry down the powder, and we'll set 'em off. Better do it 'fore it's fairly light, on account o' the paster bein' next the main road. Some fool horse might git scairt, and the owner be pesterin' us 'bout damages. "Come," as Reuben stood silent, but with an odd look on his face, "didn't ye hear me tell ye to be gittin' off to bed? An' don't come home tomorrer till the last o' them big stones is drilled."

Reuben slipped quickly from the room, glad to escape any direct questions. In spite of the hard work and lack of commendation, he had never tried to evade the truth. Enos Judkins was suspicious by nature, and sometimes not overscrupulous, but he knew that he could trust the boy to do just as good work when off in a field by himself as when in full view of the house, and that whatever the boy said could be relied on as being absolutely true.

"Be ye goin' to let Reub help set the rocks off?" said Mrs. Judkins, as the receding footsteps grew fainter up the attic stairs. "Powder's mighty unreliable for boys to mix up with."

"Reub's safe enough," gruffly, "he helped me last year, an' has helped other folks. He don't do so much work as he ought; but he's better'n the common run o' boys. An' I don't mind sayin' he drilled them rocks quicker'n I'd a b'lieved anybody could. If he finishes 'em tomorrer—which, of course, he can't—I shall be with him the day arter to look out for the blowin'."

At that very moment Reuben was throwing himself upon his cot bed in the attic, shaking with merriment. Not come home on the morrow until the last one of the rocks was drilled? Lucky Mr. Judkins had been too busy to go to the road pasture during the last few days, and lucky that tree grew just outside his attic window, so he could shin down when he wanted to do a little extra work by moonlight. Wouldn't Mr. Judkins be surprised if he knew that a considerable portion of the powder had disappeared from its dry storage in the barn, and was at that moment packed solidly in the bottom of a hundred or more deep holes drilled in about forty rocks—each with a fuse leading a few inches away from the top? And he had told the truth, for there were only about forty rocks altogether—he had counted them, and Mr. Judkins had not. And not only that, had not Mr. Judkins' words implied that he wanted the rocks "set off" just as soon as they were ready? Well, he would attend to it, and would see that they were set off before it was light enough for travel to commence on the road.

Enos Judkins was an extremely early riser, some times not waiting for the first call from the barnyard to be up and out. But the next morning even the most alert of the roosters was asleep when there came a crash that shook the very windows of the house. Enos Judkins threw himself half up, then fell back with a snarl.

"Them loonatic Fourth o' Julyers," he grumbled, "they're startin' wuss'n they did last year. I never heered the winders rattle afore. Folks'd think 't was right in the next room, 'stead of in a village a half mile off. Heh!" for another tremendous crash, louder even than the first, again set the windows to rattling. "What they got over there, anyhow? Gov'ment artilleries or Mount P'elees? The cannon they had last year didn't make quarter that noise. L-a-n-d!" as a succession of half a dozen explosions, followed by an almost continuous rumble, with scarcely an appreciable space between, shook the earth. "What is the matter, anyhow, the world comin' to an end?" He rose hastily and began to dress, for the roosters were now all crowing and the dogs barking, and from the barn came a frightened bellowing and stamping of cattle. In the darkness and utter stillness of the night the crashes were terrifying. Before he could don his clothes and get outside, there were a dozen or fifteen more explosions, some coming singly, others in a long, scarcely broken rumble or in one great crash.

But once outside, the mystery was partly explained, for the air was strong with the smell of burned powder. It was the Fourth of July, as he had first thought; but how in the name of reason had they managed to make so much noise?

Then came the last crashing explosion, and he stared, at first blankly, then with sudden comprehension. The crash had not come from exactly the direction of the village, but from the road pasture.

"The young reprobate!" he cried wrathfully. "He's been settin' off them rocks, an' I told him plain they was to be let be till all was drilled. I might 'a' s'picioned from the way he took my scoldin' an' then slipped off upstairs. He needs a good larrupin', that's what he needs, an' I feel jest the right way now to give it to him." Then something of the humor of the situation seemed to strike him, for he commenced to chuckle, which was, however, instantly suppressed. "Didn't he make a noise, though!" he went on. "Whew!" he must 'a' been up all night gittin' that powder ready. I wonder what the village Fourth o' Julyers are thinkin' of 'bout now, gittin' beat at their own game by a little farm they won't ask to none o' their doin's? I've a good mind to walk down that way an' see, an' then come back an' give Reub his larrupin'. If 't wa'n't that he didn't wait like he was told, I'd beminded to let him off easy, jest for shakin' the village winders. I ain't heered so much as a torpeder from there yit; p'raps they ain't been able to catch their breath back."

He stood hesitating for a few moments. Over in the east a long line of daylight was beginning to appear. Then came a loud barking from the road pasture, toward which the dogs had rushed at the very beginning of the explosion; then he heard Reub's voice, calling the dogs. Well, he was glad the young scamp was not hurt, though of course there had been no real danger. He had never known the boy to be careless about such matters.

Suddenly he seemed to make up his mind, for he turned and walked rapidly toward the village, muttering as he did so: "I've got to larrup Reub for not waitin' till all the stones was drilled, of course, but I'm glad 't was done so early, 'fore travel begun. I've laid awake nights lately, thinkin' 'bout accidents an' damages."

The village was awake, as he had expected, but none of its own celebrating seemed to have yet commenced. Apparently its enthusiasm was momentarily paralyzed by the unexpected and tremendous noise which it could not hope to emulate. As he approached among them, Enos could see fingers begin pointing toward him from the various groups and he raised his head defiantly. He was accustomed to pointing fingers, and even to hooting from the younger boys. He had not been a public spirited man, and the village had resented it. None from his farm were ever asked to join in any of the "doings."

But now something very strange happened. Behind the pointing fingers he began to see smiling, admiring, even cordial faces. Several of the prominent men started toward him with extended hands.

"Well, Enos, you certainly did us up that time," chuckled the doctor, as he held on to the horny hand and looked at its owner admiringly, "and what's more to the purpose, you did up the folks in the town across the river. They've been crowing over us for ten years, setting themselves up as the most patriotic village in the county—and I'll admit they did make an outrageous racket on the Fourth. But this year we made up our minds we'd beat 'em, if it split the last gun. And here you come in, without so much as a horn blowing on ahead, and do us both up. Well, it serves us right for not asking you to join us—though none of us thought you cared for such things. But how'd you come to hatch out such a plan, Enos?"

"'Twan't me. That boy Reub—"

"Oh, yes, we know that boy Reub did the firing. And I must say he's a prime hand at it. Some of the smaller boys started for your place at the first explosion; but when they got in sight of the field, the air was so full of rocks and smoke they got scared and skurried back. Then some of us older ones went out and saw your boy Reub running the field like an engineer at his throttle. Well, it was certainly a great plan."

"But I tell ye 't was Reub—"

"Tut, tut! You've been having those rocks drilled for two weeks past. I've been by there and know. One day I saw you working with the boy yourself. And there hasn't been a single explosion in two weeks. Needn't talk to me. You've been saving up for this morning. But there's something else. We're planning for a pretty big day, and we want you and your folks to join in. It's late asking, I know, and we feel ashamed of having overlooked you. But you must let bygones be bygones. There's to be a big dinner in the hall, and some speeches, and in the afternoon games, and then fireworks and ice-cream and some other things for the evening. And by the way, we want that boy Reub of yours to help let off the fireworks. He's a prime hand. No," as he saw protest on Enos Judkins' face, "there isn't to be any ifs or ands. You just hurry home and tell your wife to get ready, and then come right over to my house. We'll start from there. But excuse me," as a figure passed them on the sidewalk, "there goes one of my patients. I want to see him a minute."

Enos Judkins walked back toward his farm in a dazed manner. The villagers, wanted him to join them in everything—to be one of them. It seemed incredible. His farm people had always lived apart from the village, in a social way. Even his father had felt and been considered outside. It was their way.

But something in the cordial grasp of the doctor's hand—which he had never felt before—and in the new way the people had looked at him, was stirring a strange, unknown chord in the crabbed old man's heart. He had never voluntarily given a dollar for public good, and he understood perfectly that being one of the village people in a social way would involve this also, but for some reason the thought did not make him wrinkle up his face as it would have done an hour before. Indeed, it would almost seem that he found the thought a pleasant one, for more than once on the way to the road pasture he muttered, "Mebbe 't would be wuth it, mebbe it would be wuth it. An' he's a real nice man, that doctor."

"THEY GOT SCARED AND SKURRIED BACK"

But when he came opposite the pasture and saw Reub working among the stones, whistling, his face hardened.

"Come here, Reub!" he called angrily; then, as the boy approached: "What did ye set them stones off for, when I told ye to wait till they's all drilled?"

"They was all drilled," answered Reub. "I drilled the last rock an' had the powder all in 'fore I went home last night."

"Then why didn't ye tell me?"

"Ye didn't ask. Ye said they was to be set when all was done; an' ye said ye didn't want 'em set by daylight, when travel was goin' on. An'—an' to-day's the Fourth."

Enos Judkins' eyes twinkled a little, but his face remained grave. He continued to regard the boy for some moments in silence.

"Yes, 't is the Fourth," he said at last. "I guess ye'd better go on to the house, Reub, an' put on your good clothes. An' tell Ann to git ready. We're goin' over to the village to help with the doin's."

How to Fold a Suit of Clothes

By C. HORNER

The Germans have a proverb, "Nicht immer macht das Kleid den Mann" (Clothes do not always make the man). Clothes do, however, reveal character in a man or boy, and he who is careful and provident will show these traits even in the handling of his garments.

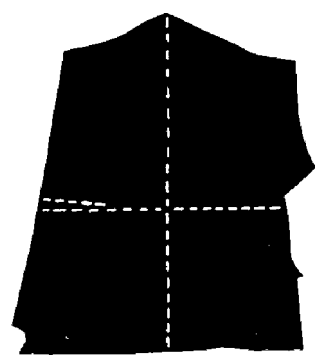


FIG. 1

The most expensive suit of clothes, thrown down in a slovenly heap or tossed into a box, will fit and hang worse than a cheap suit that was folded correctly and laid away with care. By the aid of the photos (taken under the supervision of a tailor) and the following text, our readers will be able to fold their garments in the orthodox fashion, so as not only to occupy the least possible space, but also to show the correct creases.

FIG. 2

Beginning with the coat; lay it out flat on the table with the lining underneath. Take the sleeves and double each back at the elbow where the horizontal dotted line is seen in the photograph (fig. 1). They should then be both similar to the sleeve on the right hand side of the picture. Next, turn the coat fronts back over them and double the coat as shown by the vertical dotted line. Finally, double the entire coat across the middle, and, hey presto! all is finished in less time than this paragraph was written.

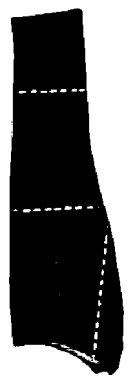

FIG. 3

The waistcoat is folded in two down the seam of the lining back (fig. 2). The lining is next turned over on to the front, and the second garment is finished.

Nothing looks worse than baggy trouser-legs, and nothing better than nether garments that hang with military precision, and a center crease that satisfies the geometrical definition of a vertical line. To ensure the latter the garment should be folded with the second waist buttons in contact, passing the hand between the two legs to ensure that no creases are formed. The back should then be folded over, as shown by the oblique line (fig. 3). The legs are next doubled over where the dotted lines are marked, so as to make all compact. A small piece of camphor placed among the folded garments wards off the ravages of the larvae of the clothes-moth.

The American Boy was Their Teacher

What do you think of THE AMERICAN BOY as a teacher of wireless telegraphy? We are sure it must be a good one, for Robert Denny and his friend, Royal Fillmore—two bright Kansas City boys—learned from articles printed in THE AMERICAN BOY all they know of electricity, and this knowledge enabled them to install a system of wireless telegraphy which works with perfect success. These boys educated themselves in telegraphy, obtaining a copy of the Morse alphabet and studying together. They then bought their "coils," "keys" and the few other parts that could not be made outside a factory; made their own condensers, and set up their wireless outfits. Denny has his "set" in his bedroom, and Fillmore uses the basement. There is fortunately a high tree in the yard of each home. Denny has his antennae wire fastened to a cross-arm of his own making on the topmost branch of a sixty-foot tree, and Fillmore's tree is arranged in practically the same way, but sometimes he uses a huge kite on which he sends his wire up a great distance. The boys live seven or eight blocks apart, and they talk to each other for an hour at a time, discussing their lessons and exchanging school gossip of the Manual Training High School, where they are pupils.

Samuel C. Bartlett writes from Sapporo, Japan, that his four boys get a great deal of pleasure from THE AMERICAN BOY. Their only regret is that delay sometimes occurs, owing to the fact that the English address on the magazine has to be translated and rewritten in Yokohama.

The Truth about the Mutual Life

THIS is a matter of great interest to the public, and of still greater interest to thousands of individuals. People with the fairest minds—and that means most people—have been disturbed and unsettled by the developments and denunciations of the past few months. What these people want is the truth—the plain unvarnished truth. To give them this truth is the object of this announcement.

The Mutual Life Insurance Company was organized in 1843, the first of its kind in America. In 24 years it had become the largest in the world. For 39 years, in spite of the keenest competition, it has held the lead, passing unharmed through panics, failures, strikes and wars; meeting with promptness its every obligation and having over 470 millions of assets to-day.

The recent Insurance agitation was unique. The investigation certainly was thorough. As every one knows the Mutual Life was on the firing line. The smoke has now cleared away. What do we find?

In the first place we find that the Mutual Life is still the largest and staunchest Life Insurance Company in the world. Without defending or in the least belittling the abuses and extravagances recently brought to light, everybody should keep in mind the fact that the solvency of this Company has not for a moment been affected thereby. Concerning the work of the finance committee which has been attacked in the press, this Company's auditing committee consisting of Messrs. Truesdale, Auchincloss, Fish and Dixon stated on February 15th, 1906:

"The Committee certify that the investments of the Company are of the highest order and well selected," and "have found the valuation given safe and conservative, in many instances less than the market value and in none in excess of such value."

In the next place, extravagance has been stopped, and those responsible for it have gone; a new management has been installed, and retrenchments have been effected that have already saved vast sums of money and will save much more as time goes on. Legislative reforms have likewise been anticipated, and the Company is now as sound at the circumference as it always has been at the core.

In the next place, the ending of the first quarter presents an excellent opportunity for comparing this year with last.

The amount paid policy holders is $9,608,436.50, an increase of $1,070,835.26. The receipts for premiums were $15,082,484.57, a decrease of $857,995.29 for the period. This is a shrinkage of less than 5½ per cent. The amount paid for expenses was $2,935,552.44, a reduction of $1,547,279.36.

This remarkable showing is a good thing to be kept in mind by everybody—those now insured in the Mutual Life, and those who should be. It cannot be accounted for by the smaller amount of new business written. Of the saving for the quarter, the sum of $390,961.52 is in items not connected with the obtaining of new business.

In the next place we find that this Company is doing business—more business than any other company in the world with one exception. Far from being paralyzed or demoralized it is forging right ahead. Policies by the hundred are being written each day; honest trustees, keenly alert, are directing its affairs; faithful and experienced men are doing its intricate work; loyal agents are explaining its advantages and discriminating people are obtaining its protection.

In the next place we find that there need be no question as to the future. A policy in the Mutual Life is just as good as gold. No obligation could possibly be better. A bond of the United States Government is no safer. It will, therefore, be a misfortune if any one is misled by the writer who prints for revenue or for notoriety, or by the attorney who is out for his clients, or the competitor who is out for himself, or even by the gentlemen who have organized themselves into committees under an honest misapprehension of the facts. Such incidents may tend to hinder business, but need deter no one who needs insurance.

With economy, which means rapid improvement in regard to earning of surplus for dividends, everywhere at work in the Mutual Life; with its immense size as the basis for moderate general expenses; with smaller liability for renewal commissions to agents than any other company; with the cost of new business limited by law for all Companies, how can any one possibly better provide for the uncertainties of the future than through a policy in the first Insurance Company in America, and the strongest in the world—

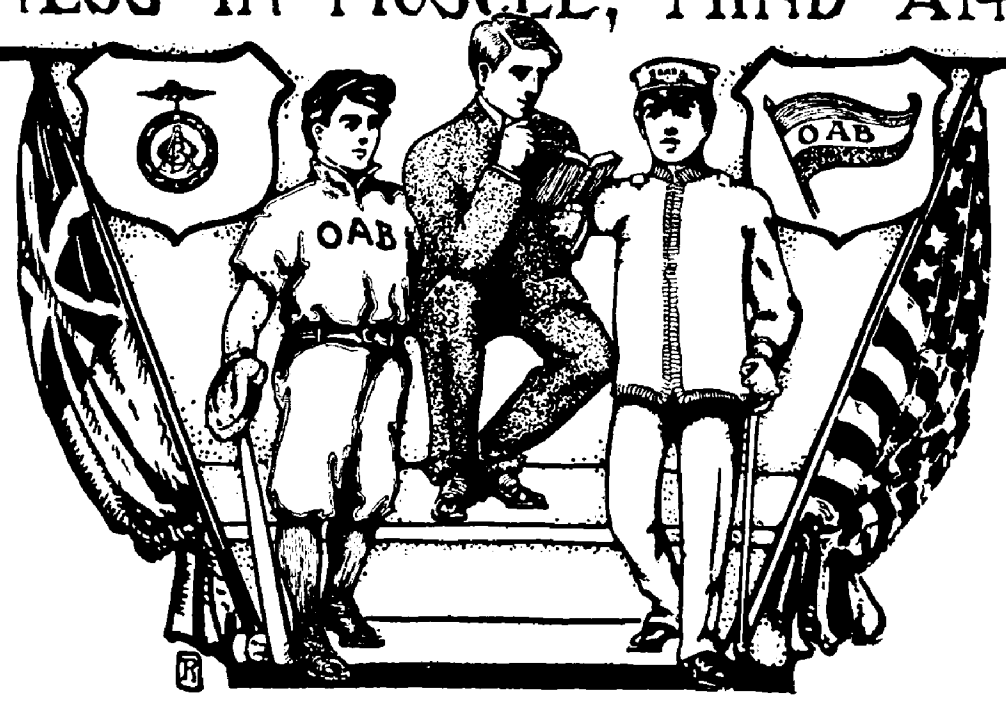
The Mutual Life Insurance Company of New York

New York

The Mutual Life has devised and placed on the market at a notably low rate, a policy which provides protection more far-reaching than an ordinary contract. Send your address and let us inform you as to the particulars.

The Great American Boy Army.

FOR MANLINESS IN MUSCLE, MIND AND MORALS.



New Companies Organized

Bull Dog Company No. 38, Division of Indiana, Selma, Ind. Tip Top Company No. 57, Division of New York, Little Valley, N. Y. The Liberty Boys Company No. 4, Division of Louisiana, Lenoir, La. Wild Rose Company No. 12, Division of South Dakota, Doland, S. D. Mt. Phacatchit Company No. 39, Division of California, Arroy Grand, Cal. Thomas Bard Company No. 40, Division of California, Somis, Cal. The Blue Muskingum Company No. 91, Division of Ohio, New Concord, Ohio. Keewahdin Company No. 80, Division of Michigan, Port Huron, Mich. Stonewall Jackson Company No. 8, Division of Kentucky, Frankfort, Ky. The Neosha Company No. 41, Division of Kansas, Iola, Kans. Men of Tomorrow Company No. 40, Division of Kansas, Wichita, Kans. Four Leaf Clover Company No. 31, Division of Wisconsin, Phillips, Wis. Volusia Company No. 8, Division of Florida, De Land, Fla. Ojibways Company No. 58, Division of New York, Yonkers, N. Y. Glen Rock Company No. 62, Division of Pennsylvania, Glen Rock, Pa. Iroquois Company No. 62, Division of Illinois, Decatur, Ill.

Company News

TAMPA COMPANY No. 7, Tampa, Fla., has elected Chas. Bush, Capt.; Gilbert Freeman, Sec. and Treas.; Company Counsel are Messrs. J. T. McCollum and Z. P. Freeman. We expect to have good reports of this company in the near future. LEWIS & CLARK No. 15, Clarkstown, Wash., has recently enrolled four new members. At their meetings they have been debating recently the question: "Resolved, That the curfew ordinance should be adopted in Clarkstown." The negative won. The captain reports that the company's baseball team recently won four out of six games played. OLD HICKORY COMPANY No. 39, Sterling, Kans., has elected the following officers: Glenn Tippin, Capt.; Parcon Brown, V. C.; John Berry, Sec.; Harold Higley, Treas. The dues are 5 cents every two weeks, and fines are imposed for various offenses. ESSEX COMPANY No. 14, Newark, N. J., had a recent meeting, and elected the following officers: Harry Matthews, Capt.; H. Wilson, V. C.; H. Molloy, Sec. and Treas.; A. Hanes, Libn. The members have a physical director, and intend to give a good account of themselves during the athletic season. U. S. GRANT COMPANY No. 55, Lincoln, Ill., has nine members, a baseball team, twenty-two books in its library, and $6.47 in the treasury. The members intended going camping during June. CORN HUSKERS COMPANY No. 23, Ulysses, Neb., is a new company starting out with great enthusiasm, and will have good reports to make headquarters as soon as they get settled down to business. GEORGE WASHINGTON COMPANY No. 12, Foxcroft, Me., has elected Alfred O. Bragg, Capt.; Claire Hutchinson, Sec.; Everett Ham, Treas. We are promised a picture of the members at an early date. This company has fitted up a club room, and installed an electric bell, being much interested in electricity. Dues are 5 cents a month, and fines are imposed for various offenses. The membership numbers seven, with good prospects of adding to same. EBENEZER COMPANY No. 89, Springfield, O., has the following officers: Edgar Sparrow, Capt.; H. M. Stewart, Sec.; A. Callison, Treas.; Clarence Walters, Libn. GLENWOOD COMPANY No. 51, Medina, O., sends us a clipping from a local paper, containing an account of a pleasant and enjoyable meeting had in celebrating its first anniversary. The rooms were tastefully decorated with flags and bunting, and friends to the number of twenty heartily enjoyed the good things provided for them. This seems to be one of the progressive companies of the order. We are always glad to report the doings of such companies in the Company News. THE POTOMAC COMPANY No. 6, Hagerstown, Md., has the following officers: John J. Fiery, Capt.; John K. Baker, Sec. and Treas. This Company is anxious to increase its membership, and gladly welcomes any eligible boys in Hagerstown, who take THE AMERICAN BOY. CHAIRTOWN COMPANY No. 23, Gardner, Mass., sends us its report for March and April, in which we note that there are seven members, dues are 5 cents a month, and meetings are held every week. The members recently debated the question: "Resolved, That a lock canal would be more satisfactory at Panama than a sea-level canal." The negative won. The captain sends a clipping from a local newspaper containing a report of an athletic meeting, which was much enjoyed by the members, the program being in line with that furnished in the Company letter. It has organized two crokinole teams, and is altogether in a prosperous condition. FOREST CITY COMPANY No. 13, Portland, Me., has officers as follows: Linwood Easton, Capt.; Fernando Norcross, V. C.; Phil. Sawyer, Sec.; Irving Hayes, Treas.; Chas. Morton, Libn. The members are considering the adoption of private club colors. They will hold their meetings in a room over the school. We think it wise that every company should decide for itself as to club colors, and all other such matters, as we do not know the circumstances and condition of the companies. FARWELL ATHLETIC COMPANY No. 74, Farwell, Mich., has started a band, and each member of it pays 25 cents a lesson. It has 14 players and all have instruments. The treasury is rich to the extent of $7.00, with some to come. THE ARKANSAS COMPANY No. 9, New Edinburg, Ark., has the following officers: B. F. Rohuck, Capt.; D. G. Campbell, Sec.; Troy Carmical, Treas.; Lafayette Mosby, V. C.; J. H. Hunter, C. C. This company has ordered an O. A. B. pennant, and intends to become as prosperous as any in the Order. THE 1906 COMPANY No. 38, Independence, Kans., has twenty-four members, and its officers are: Pericles Miller, Capt.; Claude Martin, Sec.; Paul Neep, Lieut.; Paul Otto, Treas.; Raymond Andrews, Libn. This company is composed of some of the members of the Verdigris Valley Company, which lately disbanded, and is getting along nicely. The members are interested in athletics and are furnishing their gymnasium with punching bag, boxing gloves, exercisers, etc. STEPHEN DECATUR COMPANY No. 28, Brooklyn, N. Y., sends us its forty-third report. We note that four meetings were held in the club room during April, and several new members were admitted. The company at present is devoting itself to athletics, having organized a baseball team. The secretary sends us a copy of the monthly paper "The Universal Gazette," which we have enjoyed. It seems to be well gotten up, and in type, style, and reading matter compares most favorably with many a more pretentious magazine. The publishers have started in with a fair line of advertising. We wish "The Gazette" every success. This company continues in excellent shape, and is carrying on its work in full accord with the principles of the O. A. B. RAINBOW FALLS COMPANY No. 3, Great Falls, Mont., has nine members, and meets every Friday evening at the members' homes. Its officers are: Guy Millegan, Capt.; Donald Hoffman, V. C.; Homer Millegan, Sec. and Treas.; Clarence Lytle, Libn. It has its charter framed, and is fitting up a gymnasium. Dues are 10 cents a month, and fines are imposed for disorderly conduct and other offenses. The members are going to have an entertainment in order to increase its balance in the treasury. SANGAMON BAY LEAF COMPANY No. 45, Decatur, Ill., has twenty regular members, seven honorary members, and four individual members. As we have said before, we do not issue a charter except on what appears to us good grounds, where there has been a split in a company. The company has now taken possession of its new club room, having held its first meeting there during April at which they held a social. This company celebrated its second anniversary in June. It has also revised its rules as to receiving new members. There is now over $25.00 in the treasury, part of which was contributed by one of the Illinois congressmen who is a great friend of the boys. BULL DOG COMPANY No. 38, Selma, Ind., has the following officers: Floyd C. Duncan, Capt.; Claud Bartlett, V. C.; Fletcher Hoffman, Sec.; W. Worz, Treas.; Claud Orr, Libn. We hope to have a fuller report from this company in the near future. BUSTER BROWN COMPANY No. 35, Richmond, Ind., has twelve members, a gymnasium outfit and a baseball outfit. It will celebrate its first anniversary in the near future, and we are promised a picture very soon. WILD ROSE COMPANY No. 12, Doland, S. D., has the following officers: Leslie Lawrence, Capt.; T. Lowrie, V. C.; G. Motley, Sec.; M. Lawrence, Treas. This company holds its meetings every two weeks in its own club room, where it has an organ, a table and sufficient chairs. The members intend to give a social for the benefit of the company treasury. It has now ten members with good prospects of increasing that number. YELLOW BREECHES COMPANY No. 60, Mechanicsburg, Pa., is getting along nicely, having nine members and $1.83 in the treasury. The members are looking forward to a camping outing during the summer. YOUNG AMERICA ATHLETIC COMPANY No. 28, Petaluma, Cal., "still lives after the big earthquake" as their captain informs us, and we are glad that no injury was sustained by any of the members during that disastrous time. As part of the membership live in the country and part in the city, two companies have been formed, but for athletic and other exercises they form one company. TIPTOP ATHLETIC COMPANY No. 57, Little Valley, N. Y., has elected Harry E. Wade, Capt.; Glen Griffith, V. C.; Leone Brown, Sec.; De Silver Drew, Treas.; A. D. Case, Libn. It has ten members at present, with good prospects of adding to that number. THE QUILNA COMPANY No. 86, Lima, O., at a recent meeting held a debate on the question: "Resolved, That electricity is of more benefit to mankind than steam." The affirmative side won. At that meeting the members took up a subscription for the "shut-in" fund of THE AMERICAN BOY, and got a total of 50 cents. This company has enrolled five new members during the last two months. Its meetings are held at the homes of the members every two weeks, and the dues are 5 cents a month. LAKE SIDE COMPANY No. 90, Conneaut, O., has recently taken in two new members. At a recent meeting they raffled a pillow, and thereby increased the company treasury to the extent of $2.10. The members intend to save up until they have sufficient money to pay the expenses of a camping trip this summer. Dues are 5 cents a week. CLINTON ATHLETIC COMPANY No. 37, Frankfort, Ind., recently elected Harry Kuhns, Capt.; Walter Fowler, Lieut.; George Young, Sec. and Treas.; Max Fowler, S. A.; Glenn Taylor, Libn. A baseball team has been organized, and has already played two games, both of which were won by the company. McKINLEY COMPANY No. 36, Highland, Cal., is a new company that has started out very strongly, having forty-six members, with several applications yet to be acted upon. The Company Counsel, Mr. Desmond, writes us that there will be, shortly, fifty boys supplied with uniforms. A company having its efforts directed by such friends of the boys as Dr. Burke, Prof. Guy Stewart and S. A. Desmond will, undoubtedly, have a splendid influence for good upon the young people of the community. We are pleased, indeed, to announce the organization of such a strong company, and will take pleasure in noting its doings in our Company News from month to month. MOUNTAIN VIEW COMPANY No. 17, Delta, Colo., reports the holding of two meetings recently at which the attendance was good. The members are still trying to secure a club room for themselves, and we trust they will be successful. The athletic members will take part in our field-day contests. It recently held a debate upon the subject: "Resolved, That card playing is less harmful than dancing," in which the affirmative side was victorious. This company raised $5.00 for the San Francisco Relief Fund, which is work of a kind that we most heartily commend. THE ARTESIA COMPANY No. 57, Potomac, Ill., has twenty members, who, the captain says, are the "cream" of the boys of the town, their ages ranging from twelve to twenty-one. Dues are 5 cents a month, and tobacco and liquor in any form are prohibited. Meetings are held every two weeks, and in addition to regular business, the members hold open meetings, which consist of songs, music, debates and recitations. The members are striving to purchase uniforms, bugle, drum, etc., in order that they may organize themselves into a military company. They had good hopes of being fully equipped by Memorial Day. We are glad to have a report from such a progressive and enterprising company. KERMIT ROOSEVELT COMPANY No. 36, Clyde, Kans., has the following officers: Earl Stephens, Capt.; Elliott Ranney, Sec.; Worth Sterling, Treas.; Rowland Carroll, Libn. THE SAM HOUSTON COMPANY No. 38, Oakdale, Texas, recently elected R. L. Anderson, Capt.; Lee Hall, V. C.; Oliver Cole, Lieut.; Ebb Wright, S. A. PILOT ROCK COMPANY No. 19, Ashland, Ore., recently had a picture taken, but the members did not consider it good enough for THE AMERICAN BOY, and have decided to have another taken, and they will send us a copy. This is another company which raised $5.00 for the San Francisco Relief Fund, and it has $6.00 in the treasury. The members will celebrate AMERICAN BOY DAY, July 29. MARCUS WHITEMAN COMPANY No. 18, N. Yakima, Wash., recently increased its membership by two, which brings the total up to twenty-four. Its charter has been neatly framed, dues are 15 cents a month, and it has $3.35 in the treasury. ROGUE REX VOLUNTEER COMPANY No. 75, Rockford, Mich., has Charles Keetch, Capt.; Otho Parks, V. C.; Harry Gaines, Sec.; Raymond June, Treas. DE GIRARDOT COMPANY No. 23, Cape Girardeau, Mo., has recently elected new officers. It intends to celebrate AMERICAN BOY DAY, and is also trying to increase its membership. THE STARRUM COMPANY No. 59, Deland, Ill., recently took in two new members which now makes seven. It has had its charter framed and recently purchased an O. A. B. pennant. It has $2.00 in the treasury, and gives a literary program at each meeting. The members are making all the furniture for their clubroom, and are also going in for athletics. We do not supply uniforms for companies, allowing them to use their own judgment and supply themselves with whatever equipment they require. NEOSHA HUSTLERS COMPANY No. 41, Iola, Kans., has adopted the suggested constitution and by-laws, and has elected the following officers: Claude Newton, Capt.; Chauncey Sawyer, V. C.; Lynn Wheeler, Sec.; Cary Christian, Treas.; John Meely, Libn. As this company has only recently been organized, it has decided to postpone celebrating AMERICAN BOY DAY until later. FOUR LEAF CLOVERS COMPANY No. 31, Phillips, Wis., has elected Evans Phelan, Capt.; Harold Riley, V. C.; Will Chamberlain, Sec.; Sherly Neef, Treas.; Lyle Lane, Libn. The company colors are green and white. It may as well be stated that the field day contests as given out with the Company letter may be changed by any company desiring to do so. The Company has fixed the member's dues at 20 cents a month. STONEWALL JACKSON ATHLETIC COMPANY No. 8, Frankfort, Ky., recently elected Richard Lillis, Capt.; Leo Meagher, Sec.; Barnard Brislin, Treas.; Michael Sullivan, S. A. We expect to have a good report from this company in the near future. BLUE MUSKINGUM COMPANY No. 91, New Concord, O., has elected John A. Clark, Capt. and Wilmer Trace, Secy.

The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

Under the Auspices of "The American Boy"

Object:—*The* Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

THE WAUKEGAN (ILL.) JUNIOR ORCHESTRA.

We are glad to be able to give a picture of the Waukegan (Ill.) Junior Orchestra, organized largely through the efforts of Leo Farmer, one of our subscribers, who in the picture is seen on the extreme left. The average age of the orchestra members is under fourteen, and although the orchestra was organized only last September, it has fairly bounded into popularity. The manager and director of the orchestra is William L. Farmer. The boys are somewhat inspired by the fact that James Cooper, a Waukegan boy who made his debut in a juvenile band, is today one of the world's greatest trombone soloists.

TALK IT UP

¶ I hope that while members of the O. A. B. are enjoying the vacation time, they are not forgetting to spread word as to the advantages and privileges of membership in the Order among the boys whom they meet.

WM. C. SPRAGUE,
President-General

Where "Yankee Doodle" Was Written

By J. E. BOOS

FRONT OF FORT CRAILO
See the port-holes between the windows

"Father and I went down to camp,
Along with Captain Gooding.
There we saw the men and boys,
As thick as hasty pudding."

THUS RUNS our oldest national song, not so fine in the way of words, but there's an awful lot of music in the tune—the kind that arouses a fellow's spirits and makes him feel proud he's a "Yankee Doodle Dandy."

When the redcoats played the tune at Bunker Hill, those raw "Yankee Doodles" caught the tune in their hearts; a new light sprang into their lives, and they stood their ground like veterans, and if their ammunition had held out, the British would have left Boston long before they did. The soldiers took up the tune; it slowly traveled from town to town, colony to colony, until it was known and played everywhere.

The redcoats dropped the song, as though it were so much hot-shot, because when they played it, "those confounded rebels" seemed to get new life in them and fight like demons.

At Saratoga, after Burgoyne's army had laid down its arms and begun its march through the long line of Americans, before it was sent home on parole, the first tune the band struck up was this famous old war song.

Thus the trained regiments of Great Britain marched to the tune they had been deriding the Americans with for twenty years, and I might also state, that one of these same captured regiments took part in the battle of Bunker Hill.

Within a hundred feet of the Hudson River, in the lower part of the city of Rensselaer, stands a very old house. It is in good condition now, but five years ago the doors and windows were boarded up and it looked as though it would soon go the way of all things, either ruined through neglect or pulled apart by relic hunters. But at this time, the Daughters of the Revolution bought the building with the announced purpose of presenting it to the state. The building is known by many names, as "The Old Van Rensselaer Manor House," "The Yankee Doodle House," "Fort Crailo," and "The Oldest House in America."

It received the name of Van Rensselaer because it was built by one of that name as a home, and to be used as a refuge in case of trouble with the Indians. It was soon called a fort, because a strong stockade of posts was built around it so that the colonists could go to it in case of an uprising. The building is three stories high, with a half-story garret. The doors and windows are modern, excepting the door on the north side, which is very old, being of the kind that was used so much in this section before the Revolution, that is, divided laterally through the middle.

When the knocker sounded, the good housewife would open the upper half of the door to see what was wanted, and if the visitor proved to be a friend, the lower half was opened and he was admitted.

The bricks in the house were brought from Holland, and on some of them is stamped the year 1629, but from the earliest records that can be found, it is supposed the house was built in 1642, making it the oldest colonial house. Some records claim that Elizabeth Van Rensselaer, who became the wife of the Revolutionary general, Philip Schuyler, was born here in 1735. It is known that the house was standing in 1642, but there is no proof that it was built before that time.

Although such an old house, the walls are just as good today as they were in the year they were built. Even the timbers show no trace of decay, those under the first floor being twenty inches square. Another interesting thing about the house is the old portholes, of which there were nine originally, but three only are left, one on each side of the door and one lately found in the cellar. These were made of a block of sandstone, about one foot square, into one side of which was dug a conical shaped hole; from the other side an opening was made about the shape of a keyhole. In case of an attack, the defenders could fire on the enemy without exposing themselves.

Some fifteen feet back of the house, now covered with boards, is an old well. Upon this spot our song was written.

It was in 1757, while the house was surrounded by the camps of British and Indians, awaiting reinforcements from the colonies, when they were to move northward and attempt the capture of Crown Point and Ticonderoga.

This army, under General Abercrombie, it was expected, would drive the French from the north and out of Canada, putting all this vast territory under the standard of Britain's king. But, alas, they, too, soon returned, utterly routed by a terrible defeat.

Soon the militia came, in groups or in companies, and instead of brightly colored uniforms, they wore the homespun garments which mothers, wives, and sisters made for them at home. Some were fitted all right, but the most of them wore clothes that were either too large or too small. This meant fun for the soldiers, who immediately made them the laughing stock of the camp.

During this wait, Yankee Doodle was written by Dr. Shackburg, while sitting on the well. It was taken up by the bands of the expedition; the soldiers caught the tune, and soon all were singing.

"Yankee-Doodle, keep it up,
Yankee-Doodle Dandy!
Mind the music and the step,
And with the gals be handy."

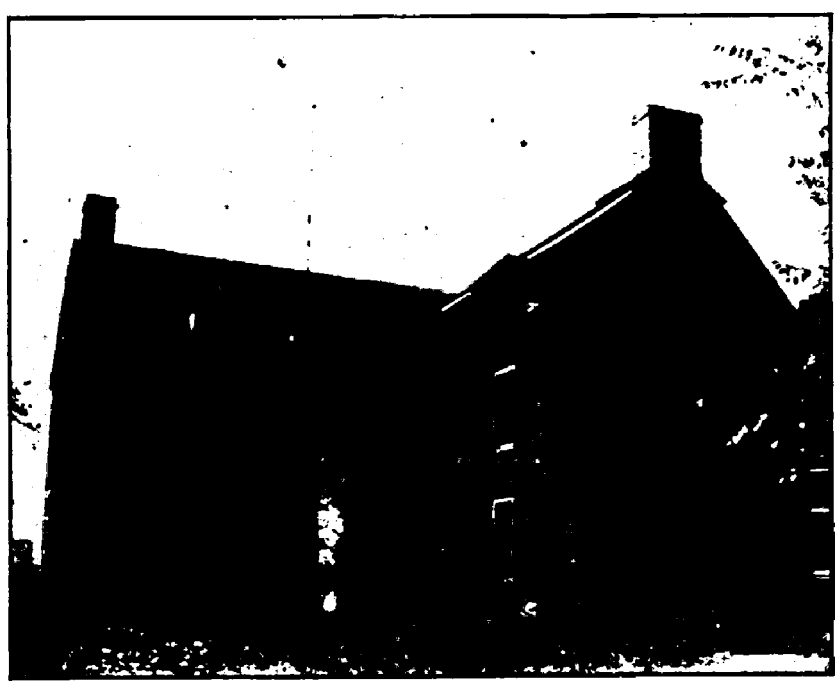
Wherever there was an English regiment or a fort garrisoned by English troops in the colonies, this song was played in derision of the colonists, who were considered to be below a born Britisher. Little did they think that these same recruits would some day sing this song as their farewell chorus, and the flag of Old England would disappear from our land forever.

The tune is very old and was known by the name of Kitty Fisher's Jig. During Cromwell's time, words were set to it, and sung in contempt of the "Lord High Protector" and his "Roundheads."

In the Revolution, "Yankee Doodle House" was still in the possession of the Van Rensselaers. This family was a very patriotic one. Out of eighteen males, twelve were officers in the Continental army, two were too old to fight and the other four were too young. The family originally owned twenty-four square miles of land along the Hudson River, granted them by the states-general of Holland upon which to plant a colony in the new world. This colony was planted in 1633, and has since grown into the present city of Albany.

There is a beautiful picture by Willard, in Abbott Hall, Marblehead, showing a fife and drum corps marching to victory playing "Yankee Doodle." The drummers and fifer are proudly playing away, while the soldiers are waving their hats and the wounded lying along the road are cheering them on. [This picture is reproduced on our cover.—Editor.]

For almost one hundred and fifty years this song has been ringing in our ears, and may it ever ring to inspire our hearts in time of trouble, as it did the heroes of '76; to give us new courage, and keep our flag flying over a land devoted to liberty and justice.



REAR OF FORT CRAILO

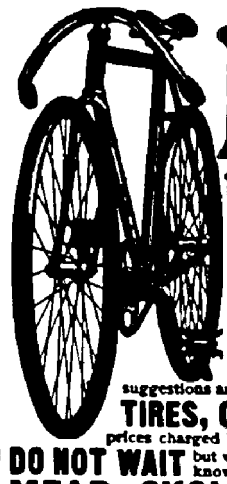
Quality Counts for Everything in a Revolver

Price (Nickel) $2.50

H. & R. REVOLVERS

will stand the closest scrutiny. Investigate them and you will buy no other.
The H. & R. Revolvers are known around the world for their safety, accuracy, durability, perfect design, and general superiority.
Only the most skilled mechanics and only the finest quality of material employed in their manufacture. Every piece is finished to the 1000th part of an inch and fits perfectly, *no rattle* in "H. & R." such as a quick shake reveals in other makes. Every revolver that leaves the factory has passed the most rigid inspection and is guaranteed perfect. Barrel and cylinder drilled from solid piece of finest forged steel, solid steel frame, handsome rubber stock, affording good grip.
Noted for smooth action, perfect accuracy and power. Don't experiment with an unreliable make because low price is offered as a tempting bait. The H. & R. Model 1906 Double Action Revolver is medium in size, weight and price, but an effective weapon. 32 caliber, 5 shot C. F. S. & W. cartridge.
2½ in. barrel, nickel finish, **$2.50.** 4½ in. barrel, **$3.00** 6 in. barrel, **$3.50.**
For blue finish add 50c. to either size. Greatest value ever offered for the price.
Sold by all dealers in reliable sporting goods. If not sold in your town, we will ship direct prepaid on receipt of price.
HARRINGTON & RICHARDSON ARMS CO., 234 Park Ave., Worcester, Mass.
Send for catalog of our full line including our famous Safety Hammerless.



1 CENT IS ALL IT WILL COST YOU to get our large Bicycle and Tire catalogues, showing the most complete line of high-grade bicycles, tires and sundries at LOWER PRICES than can be made by any other manufacturer or dealer in the world. Simply write us a postal card saying, "*send me your catalogues*," and all the catalogues will be sent you by return mail, FREE, postpaid. In them are fully illustrated and described every detail of construction of all our models; you will be shown the difference between high class work and cheap construction. We explain how we can sell bicycles with coaster brakes, puncture proof tires and best equipment direct to the rider at less than dealer's cost.

WE EXPLAIN HOW we ship to any person, anywhere ON APPROVAL without a cent deposit, pay the freight and allow TEN DAYS' FREE TRIAL on every bicycle we sell, and other new and marvelous offers. You will learn everything by simply writing us a postal.

WE WILL CONVINCE YOU that we can sell you a better bicycle for less money than any other house that ever made or sold a bicycle. These offers are genuine; our sole protection is *good bicycles, low prices*, and *pleased purchasers*. Deal direct with the factory, who make and guarantee their bicycles. YOU CAN MAKE MONEY without interfering with your other work. We need a Rider Agent in each town to represent us and are prepared to offer a very profitable opportunity to suitable young man who apply at once. IF YOU OWN A BICYCLE write to us anyway; there are suggestions and information in our catalogues that will be of immense value to you.

TIRES, COASTER-BRAKES, built-up-wheels, saddles, pedals, parts and repairs and everything in the bicycle line are sold by us at half the usual prices charged by dealers and repair men. Ask for our tire and sundry catalogue.

DO NOT WAIT but write us a postal today. Do not think of buying a bicycle or a pair of tires from anyone until you know the new and wonderful offers we are making. It only costs a postal to learn everything. Write it now.

MEAD CYCLE COMPANY, Dept. M-19, CHICAGO, ILL.

The Campfire of Mad Anthony

A New Serial Starts in August

In our August number will start a serial story by Dr. Everett T. Tomlinson, entitled "The Camp Fire of Mad Anthony." It is a stirring story of the Revolution. Soon after the first announcement of the fact that Dr. Tomlinson would write for us, a prominent daily paper in the East, noticing the announcement, spoke as follows in its columns:

"Dr. Everett T. Tomlinson's features, which are still well remembered by the village boys who were among his pupils some time in the early eighties, meet the vision of old friends who chance to look over the last number of a juvenile publication known as THE AMERICAN BOY. It is highly appropriate that a magazine with that attractive title should be selected as the medium to introduce Dr. Tomlinson's pleasant face to his army of young (and old) readers. He has certainly been a mighty good friend to thousands of American boys during the dozen years or more that he has employed his literary skill in their behalf. He has published a whole lot of rattling good stories with enough historical background to enable his readers to acquire a fondness for truth as well as fiction. Doubtless he has made money out of it; we certainly hope he has, for he deserves all the good fortune his books may have brought him. He is firmly established in the friendship of American boys of all ages. He is the boys' patron saint, worthy to rank with Harry Castlemon, Kirk Munroe and other masters of juvenile literature."

A Boy Financier

Robert Brennan, a fourteen-year-old pupil in the public school at Great Neck, Long Island, it is said, never spent a cent for candy. For years he has put all his spare pennies on deposit in the school savings bank. The result is that a few days ago he drew $350 from the bank, and loaned it out on a bond and mortgage at 5 per cent. The boy has not only saved this money, but what is equally to his credit, he earned it.

DRUMS AND DRUMMERS

By J. C. JULIUS LANGBEIN

IN TWO PARTS
PART I

"Now merrily, merrily rise on the ear,
The roll of the drum and the fife's note so clear."

"No more his hands the fierce tatoo shall beat,
The shrill reveille, the long roll, or sound the charge."

Commander Medal of Honor Legion, United States of America, who served as a drummer boy in the famous fighting regiment known as the Ninth New York Volunteers (Hawkins's Zouaves)

J. C. JULIUS LANGBEIN

EDITOR'S NOTE.

J. C. Julius Langbein, author of "Drums and Drummers," on May 4, 1861, at the age of fourteen enlisted in the Northern Army and marched to the front as a drummer boy. His regiment was the famous fighting regiment known as the Ninth New York Volunteers—Hawkins's Zouaves. He was the youngest drummer boy to enlist from the state of New York, and the third youngest in the entire country. On account of his feminine appearance at the time, he was known to his comrades as "Jennie." He served during the entire service of the regiment, and was in every battle in which it was engaged, among them being Big Bethel, Capture of Hatteras Inlet, Roanoke Island, Camden, South Mountain, Antietam, Fredericksburg, and the Siege of Suffolk. His Medal of Honor was granted him by Congress "for most distinguished gallantry in voluntarily, under a heavy fire, going to the aid of a wounded officer at the battle of Camden, April 19, 1862." At Antietam a horse placed in his charge by the Adjutant General of the brigade was shot under him while crossing the now famous Burnside Bridge; at Fredericksburg his drum was riddled with bullets, and at Suffolk the tassel of his fez was shot away by one of the enemy's sharpshooters. He also served seven years in the First Infantry N. G. S. N. Y., and was honorably mustered out as captain. At the breaking out of the war with Spain, he promptly volunteered his services. He is now commander of the Medal of Honor Legion of the United States of America.

THE BEGINNINGS OF THE DRUM

ALMOST ALL INSTRUMENTS of music had their origin in some natural cause. The primeval man in pounding on the trunk of a hollow tree (rhythmically, of course, for the sense of rhythm is inborn), discovered the principle of the drum and the continuous beating of the never ceasing waves have the rhythm of eternity as they ceaselessly roll on the ever beating waves of the ocean.

The gentle art of music has from earliest times been associated with the rude art of war. Joshua threw down the walls of an old city with the shofar. Troops march to music, they gain heart from it; it is the solace of their leisure; it softens the asperities of the camp; they rise and sleep, eat and move by the call of the bugle or sound of the drum. Many a wavering patriot, doubting if he owed the more of himself to his country or to his shop, when war broke out, has decided to fight for his country when he hears his national anthem. Since men first fought each other, whether barbarous or civilized, the inspiration of national music has been recognized. Men have marched to certain death with quick steps and exhausted spirits with the music of their home land sounding in their ear, who otherwise would have fled in terror in the face of the forlorn hope. The trumpet and the bugle date back to biblical times. For ages the soldier has been awakened by the bugles bold blast, the ear-piercing shrill of the fife and the beat of the spirit-stirring drum. They have called him to drill; they have summoned him to battle, and to rest; and

MUSIC BEGAN WITH THUMPS ON A CALABASH

at the last the beautiful haunting taps sound over his grave, to lull him to sleep forever.

Music's first step was the drum. As you wander through the displays made of the primitive musical instruments of savage races, those that have only one, have the drum. Music began with thumps on a calabash, and, later on, the skin of a wild animal was drawn over the mouth of the calabash. The bass drum is not so far removed from the calabash drum that it cannot be recognized.

The first use of field music, of which we have absolutely authentic information, was at the battle of Bouvines, that village of French Flanders where the French have won no fewer than three victories—Philip Augustus defeating Otto IV. of Germany there in 1214; Philip of Valois defeating the English there in 1340, while in 1794 the French defeated the Austrians at the same place. It was at Bouvines in 1214 that trumpets sounded the signal for the victorious French charge, the first authentic instance of a command given by a trumpet call.

THE KHANH

With drums the sense of rhythm in the human mentality is first expressed. The Indian adds his "kiyi," and most savages accompany the drum with the voice. It must have been a long time before the first reed pipe was invented to increase the volume of the barbarian orchestra. Stringed instruments came next. The banjo in its varied forms is repeated through all the nations. The Chinese show their three-stringed snakeskin guitar, and from Burmah and India come instruments that are twanged with the fingers. The naked little Igorrote boys stretch a taut cord triangularly about on the top of three pegs in the ground and keep time with the dance of the older Igorrotes near by.

The chronicle of the drum begins much earlier than is thought. The Chinese "Book of Rites" (and no one knows how old that is) tells us that the wise men of ancient times made hand-drums and drums, the clay whistle, and the bamboo flute, and that these were the instruments that produced the virtuous airs of those sages. But another text, which preserves some ruder traditionary gloss, made the first drums of clay, with drumsticks of the same. With these clay drums were played a reed pipe like the "Punch-and-Judy" man's and certain "chaff pillows," which were struck so as to produce, doubtless, a sound of chaff.

Those "awfully jolly" instruments (to quote a so-called comic song not unknown to our legal case books) were followed (in the records) by the sound stone of jade. There is a flat sounding stone still extant in Annam called a khanh (just our word gong, which is said to be Malay), or a tam-tam. It is ornamentally cut from a very fine-grained calcareous stone, on which there is a boss left for striking with a little wooden mallet when the khanh is suspended by a ring. It is, in fact, a link between the bell and the drum, and may be the most ancient musical instrument known. Stones for such uses as signals, or calls, or general noise must have preceded the use of metals.

Several of these khanh are hung on a frame to form a sort of harmonica, and an archaic text puts into the mouth of one Emperor Tuan, forty-one centuries ago, this statement: "When I make the sonorous stones resound that form my khanh the animals come around me and shiver with pleasure."

The history of the drum whose stirring notes, together with that of the shrill fife, have rung in the ears of countless heroes and cheered them on to victory, is probably as old as that of the human race itself, for it has from time immemorial been the favorite instrument of all barbarous tribes. The drum is supposed to be an Eastern invention and to have been brought into

FROM BURMAH AND INDIA COME INSTRUMENTS THAT ARE TWANGED WITH THE FINGERS

Europe by the Arabians. History informs us that 1,600 years before the Christian era, the Egyptians were possessed of drums. The Greeks ascribe their invention to Bacchus, and in Hindoostan their legendary history goes back to the mystic gloom in which tradition itself is born.

It is said that in Asia the drum was an inseparable attribute of every aristocratic household; magnificent kettle drums of polished metals and borne on splendid caparisoned steeds, followed the great man on his journeys and campaigns. Savage chiefs made their marches to the harsh thump of rude drums fashioned of burned-out logs with a sheepskin over the end, and braids and festoons of their enemies' teeth, and even skulls dangling from them by way of ornament. In the Aztec temples were found war drums, which the priests beat to call the people to arms, made of serpents' skins and enriched with ornaments of gold and other metal. In fact, we can search wherever we please in the remotest parts of history and we find invention of the drum in same form or shape. It is the universal instrument whose music possesses that simple cadence, that tap and roll, which almost everyone can so readily understand.

"Oh! the drum—it rattles so loud!
There's no such stirring sound
Is heard the wide world round,
As the drum—Oh! the drum.

Sounds that once so charmed our ears,
We no longer now can hear!
They are all an empty hum,
For the drum! Oh! the drum."

The Encyclopedia Americana gives the following account of this instrument:

"Drum. A musical instrument formed by stretching the parchment of animals over the heads of a cylinder of wood or over a bowl. There are three kinds of drums.

1. The long drum or bass drum with two heads held laterally and played on both ends with stuffed knob drum sticks.

2. The side drum, having two heads, the upper one only being played on by two sticks of wood; the lower head has occasionally strings of cat-gut stretched across its surface, and then it is called a snare drum.

3. The kettle drum is always employed in pairs. Of these (1) is the ordinary

STORY of a DRUM

"A regiment in motion, and the story of a drum,
With a rat, tat, tat and a rat tat tum;
Fear is on the face of some, others stepping with aplomb,
And steady is the patter and the clatter of the drum.

Sweeping lines in evolution, fast the wheeling columns come,
And a thousand men are stepping to the tapping of the drum;
There are countenances glum, there are senses dull and dumb,
But a boy is stepping proudly there, playing on the drum.

The rage and roar of battle, and the rattle of a drum,
The shrapnel shot are flying with a zip and a zum,
Cruel shells exploding come, and the bullets hiss and hum,
But a drum still echoes loudly, will the thing be never mum?"

Darkness on the field of battle, where the body seekers come,
The storm of death is ended and displayed the struggle's sum,
A pallid face, a drum, there is blood, and both are dumb,
A story of a drummer, and a story of a drum."

Please Mention The American Boy When Writing

drum used by an infantry or marching band. It is employed mainly to mark the time, and also to increase the fortes. The big drum, or grosse caisse, of the modern orchestra is a modification of the ordinary drum with the diameter greatly increased and the length of the cylinder lessened. It is struck on one side only. (2) Is the side drum of the fife and drum bands. It is occasionally employed in the orchestra for special effects. (3) Are either the small kettle drums of the cavalry band, played on horseback; or, the proper orchestra drum, larger in size, but similar in construction. They are generally tuned to the tonic and dominant of the composition in which they are used, but this rule is not without exceptions. The tambourine is a species of drum consisting of a single skin on a frame or vessel open at the bottom. The heads are tightened by cords and braces, or by rods and screws.

The drum was a martial instrument among the ancient Egyptians, as the sculptures of Thebes testify. Their long drum was like the Indian tam-tam and was beaten by the hand. It was about eighteen inches long, had a case of wood or metals, and heads of prepared skin, resembling parchment. These were braced by cords in a manner somewhat similar to the modern drum. The instrument was carried by a belt and was slung behind the back on a march. The invention of the drum is ascribed to Bacchus, who, according to Polygoenus, gave his signal of battle by cymbal and drum. It was, however, known in very early ages, and in some form or other among almost all nations."

THE INDIAN ADDS HIS "KIYI"

About the year 1768 the beat and calls of the drum, then used in the service, were put into a permanent shape. The tattoo, or beat of the drum, calling soldiers to their quarters at night, was once called "taptoe," from the Dutch word signifying "no more drink to be tapped or sold."

Taptoe is not the only way in which tattoo was formerly spelt; tatto and taptoo are also to be found in old books. Watson's Military Dictionary, fifth edition, 1758, gives the following:

"To beat the Tat-to, to order all to repair to their quarters. . . . Tat-to, sometimes called the Retreat; the beat of drum at night for all soldiers in garrison to repair to their quarters, and to their tents in the field."

In the 1788 edition of Grose's Military Antiquities the following is to be found:

"Taptoo; the signal for soldiers to retire to their quarters or barracks, and to the sutlers to draw no more liquor, from whence it derives its name; the taptoo is seldom beat in camp."

In Johnson's Dictionary "tapotez tous," meaning a general beat of drums, was given as the derivation of tatoo, but that was surely one of the "whimsical guesses at etymology suggested by previous writers." Watson says that the beat called "The General" was to give notice to the forces that they are to march, and that "batterie de tambour" was the corresponding term in French.

When Edward III. and his Queen made their triumphal entry into Calais, during the time of the first crusade, "tambours" or drums were among the instruments which were played in their honor. Another of these was called a "naker" or kettledrum, taken, together with its name, from the Arabs. The poet Chaucer also mentions this instrument in his description of the tournament in the "Knightes Tale":

"Fyfes, trompes, nakeres, and clariounes,
That in the bataille blowen blody
sounes."

The King generally kept a troupe of these bandsmen or minstrels in his employ; and we read that Edward II. on one occasion gave a sum of sixty shillings to Roger the Trumpeter, Janino the Nakerer, and others for their performances.

KINDS OF DRUMS

Musicians divide the drum into three classes: one in which the instrument consists of a single skin stretched on a frame and open at the bottom. The tambourine and the modern Egyptian drum are representatives of this class, not to mention the instruments in use among barbaric and savage tribes; and there is that of the drums which are made by stretching two skins over the ends of a cylinder, thus forming the familiar side or snare drum; while still another is the kettle drum.

The Greeks and Romans called the drum Tympanum; the Saracens and Moors, Tumbur; the Spaniards, Tambor; the Germans, Trommel; the Danes, Trome; and the English, Drum. The kettle drum consists of a metallic shell, generally of copper, though the French make them of brass, and in the shape of a stew kettle; the head is of vellum, which being first wetted is then stretched by means of an iron rim around the head of the shell; when it dries, it forms a surface smooth and stiff by tension as a board. In addition to this natural tension, the head may be tightened or slackened by screws working on the rim which stretches it. Two kettle drums are always used together in orchestras, or by cavalry, where one is carried on each side of the horse's neck. The latter, however, is no longer common. One of these instruments is tuned down to the key-note, and the other to the fifth of the key. In orchestras they stand on iron tri-pods. They are beaten, when the best implement is used, with sticks made of whalebone, with a small wooden bottom at the end, covered with a very fine sponge. With these, every effect, loud or soft, can be produced. Next in excellence come flexible sticks, with a small knob made of felt, and after them range the new fashioned and, among musicians, very unpopular, India rubber disks. The very worst sticks are those which have the old-fashioned cork knobs covered with leather. Composers call them "melody murderers," because they obscure the clearing which distinguishes the kettle drum. Skilled kettle drummers never strike the center of the skin, but tap it about a quarter of its diameter from the rim.

The ordinary drum, such as "sheepskin fiddlers" used in the army, and which is so dear to the militia and the "small boy," consists of a wooden or brass cylinder with a skin head at each end; the skins are lapped at their edges around a small hoop which encircles the cylinder, and a larger hoop rests on this and presses it down in place. The large hoops at each end are connected by a cord running through holes in their outer edges and zigzagging up and down the sides of the cylinder from hoop to hoop. Each loop of this cord is surrounded by a sliding leather brace, and by pushing these down, so as to draw the hoops together, or up so as to loosen them, the drum is tightened or slackened, and the clear tense, or harsh loose notes produced. Some side drums are made flatter, and are tightened by rods and screws instead of cords. The side-drum gets its name of "snare-drum" from the fact that several cords of cat-gut are stretched across the lower end. Strange as it may appear, a well-made snare-drum consists of 248 pieces, not including sticks, hooks and belt. Everything must be of first-class quality, for a good drum must, first of all, have tone, and it must also be constructed so as to stand rough usage and handling in all kinds of wind and weather. There is just as much difference in drums as in any other musical instrument, though most people would not think so. The drums required in orchestra and band work have a certain sharpness of tone, while those used in corps and military work must have a duller tone, and the drum must not be so sensitive to the touch.

The bass drum is the giant among drums. It was formerly called the long drum on account of its former great length, but that portion of it has now been shortened so as to almost equalize its length to its diameter. The heads of the bass drum are tightened by cords like the snare drum, but it is beaten with a stick ending in a soft round knob. Noise is all that a musician requires of a bass drum. Its note has no particular value of itself, and by simply beating it hard or soft, its tones are adapted to any key or chord; so,

"If you would a musician be,
Don't seek the drummer's place;
For a little drum is a snare
And a big one's always base."

If the reader is interested in the further description of this instrument he will find an interesting article thereon published in the Atlantic monthly of June, 1877, entitled "Crude and Curious Inventions."

(To be continued).

Mere Curiosity

Anyone who has ever traveled by rail between Baltimore and Annapolis will be likely to remember the little narrow-gauge railroad which furnishes so much amusement, as well as exasperation, to those who have to employ it. Here is one from among the many stories the navy people tell of its eccentricities:

A New York man came rushing into the station inquiring for a fast express to Annapolis. On being directed to a train that was just about to leave, he piled on breathlessly and fell gasping into a seat.

When the train was half on hour on its way the conductor was aroused by a cry of "Man overboard!" Running out to the rear platform, he discovered the missing passenger standing on the track peering under the train.

"Here, come back here! What's the matter with you?" yelled the conductor.

The man gazed up at him sadly. "You told me that this was the fast express, and I just thought I'd get out and see what she was fast to."—Lippincott's Magazine.

THE GOOD OLD KID DAYS

THEY WERE ALL RIGHT, ALL RIGHT

The *Marlin* Baby Featherweight Repeater. A new high-grade .22 caliber repeating rifle which weighs only 3 pounds 10 ounces!

But this gun is no toy. It is a new and business-like rifle. It combines all the good old *Marlin* features—solid top, side ejection and simple mechanism—with the newer sliding forearm action which is so easy to work without spoiling the aim.

The reduction of cost and weight is positively not at the expense of *Marlin* quality. The high standard *Marlin* drop forgings are used in the breech block, frame and inside working parts. The rifle has the pleasant *Marlin* balance. Both .22 short and .22 long-rifle cartridges can, by means of an extra carrier, be used in the same gun—a *Marlin* feature which all rifle shooters greatly enjoy.

The *Marlin* standard of accuracy is maintained in the highest degree by the most careful boring and the deepest grooving, which last care gives the barrel about double the life of the product of other rifle makers.

Take a *Marlin* Featherweight on your fishing trip or to the summer camp. Take one home to the farm or wherever your vacation finds you, and see what pleasure a good, light .22 caliber repeater can add to your outing.

It is an ideal squirrel rifle and can be relied upon to get all the killing power there is out of any .22 cartridge in hunting any sort of small game.

If your dealer cannot supply you write us direct. A complete description of this little rifle is given in our 1906 Catalogue. Sent FREE for six cents postage.

George Thorndike Angell

The Boy who Cared for Animals

By MARJORIE R. JOHNSON

GEORGE THORNDIKE ANGELL

NOT LONG ago the following question was put to the subject of this sketch: "Have you had any failures in your life, Mr. Angell?" After a few moments' reflection, firm and clear came the answer: "I believe I have succeeded in everything I ever tried to do."

The work which Mr. Angell has done for the suffering dumb creation is well known throughout the civilized world; few, perhaps, appreciate the gigantic difficulties with which he had to contend at the outset. He was a man eminently fitted to lead a great movement; a

MR. ANGELL'S BIRTHPLACE, SOUTHBRIDGE, MASS.

college graduate whose faculties had been stimulated by a struggle with poverty in early life; whose indomitable will had overcome obstacles and carried through projects in the face of opposition which would have crushed one of less splendid fibre; a lawyer, possessing a keen, judicial mind, logical, capable of intense concentration; of unusual quickness of perception; possessing also a moderate competence which rendered him to a great extent independent of outside aid and enabled him to undertake the publishing and distributing of vast quantities of literature, as well as to travel from place to place and disseminate by personal influence the knowledge on this important subject of kindness to animals which he wished to scatter broadcast over the land.

In order to accomplish the great work which he had set himself to do it was necessary that he should renounce a legal career of unusual promise and brilliancy, and this he did not hesitate to do, although how great the work would become, and how widespread its influence, he little dreamed at the time.

George Thorndike Angell was born in the little village of Southbridge, Mass., on June 5th, 1823. His father was the Rev. George Angell, formerly of Providence, Rhode Island, and for many years pastor of the Baptist church at Southbridge, which, under his care, grew from a feeble church to a large and prosperous one. He was a man whose life stands out prominently in the history of the Baptist pulpit, and a career of remarkable usefulness and promise was cut short when he died on the 18th of February, 1827, at the comparatively early age of 42, leaving a widow and his only child then between 3 and 4 years of age. Mrs. Angell was a woman of marked ability and strength of character. Left with but little maintenance, she taught in private schools for young ladies in Salem, Mass., and in other places and otherwise exerted herself to maintain and educate her son. "No man ever had a better mother," is Mr. Angell's own testimony to her worth.

There is some mystic freemasonry among animals by which they seem to know their friends, and so it happened they were all attracted to the boy. He handled with safety dangerous dogs that others feared to handle. A horse so spirited that others could with difficulty get into the saddle would stand quietly for him. A cow that he once found in distress and relieved showed her gratitude by lapping his coat-sleeve with her tongue. When driving past farmhouses he would quiet with a few kind words the furiously barking dogs that would rush out on the passers-by. Pigeons and sparrows came to him every day for food; his canary followed him about the house from room to room like a pet dog, would stand on his finger, his shoulder, his head, and play hide and seek with him with an intelligence almost human.

As time went on he grew more and more pained with the thoughtless and intentional cruelty he found inflicted on his dumb friends. One cold evening in winter, while calling upon a wealthy woman, the servant announced that a poor, half-frozen, half-starved dog had come to the house asking in its dumb way for food and shelter. The woman gave orders that the dog should be thrust into the street. Pain filled the heart of young Angell and, bidding his hostess a hasty good-evening, he hastened after the outcast dog, took him to a comfortable home, and nursed and fed him back to health.

A horse which he had hired for a pleasure drive was observed by him to be "tired and unhappy." He drove back to the stable and the hostler was obliged to admit that the long-suffering creature had already been driven forty miles that day.

One day in early spring as Mr. Angell, now a young man, was passing the house of a wealthy woman, he saw driven out of her yard a cow that was so weak that it could scarcely walk. He asked what was the matter with the creature and was told that it was the custom of this woman to keep the animal the entire winter just at the point of starvation in order to save the cost of hay. There was at this time no law to punish her or to prevent the adoption of such cruel methods of economy.

In the town in which he made his home a man owning a valuable lot of cattle left them in the care of another man. This man quarrelled with the owner and, out of revenge, locked the stable doors and starved the creatures to death in their stalls. When the neighbors broke into the stable and found the poor creatures lying dead, they tried to find some law by which that man could be punished, but alas! this was not to be found, no law relating to such matters existing at that time.

At a great horse-race in February, 1868, two horses were killed by cruel driving. This hastened the formation of the Society for the Prevention of Cruelty to Animals. The whole terrible facts were published in the papers and Mr. Angell came forward publicly as the champion of the cause of the oppressed. A letter which he wrote to the "Boston Daily Advertiser" on the subject brought numerous responses from the large number who were interested, and visitors poured into his offices. The Mayor of Boston, not to be behindhand in the good cause, granted him the services of seventeen policemen for three weeks to collect money for the society, and the legislature of the state passed without difficulty the laws he asked. It came then to be against the law to starve animals, to put them to death in cruel ways, to carry them on trains without proper arrangements for their care.

Mr. Angell early saw the importance of circulating information as to the treatment of animals, and to this end he proposed the first paper of its kind in the world, "Our Dumb Animals," and by vote of the new society printed 200,000 copies of its first number.

In April, 1869, he crossed the ocean for the benefit of his health and for the purpose of making observations on the treatment of animals in the countries of Europe. In Ireland, "that beautiful country"—so he alludes to it—he saw very little use of the check-rein on horses and was much interested in finding at Cork a fine hospital for animals where Turkish baths were given to horses and other four-footed invalids. Here he hoped to have his first sight of an English robin, but there was not such a thing in all Ireland—they were all "Irish" robins, he was informed. In Scotland a great delight to him was that wonderful race of dogs, half human, without whose help sheep could not be kept in that mountainous country and a large part of Scotland would be worthless. Here, too, he observed that the check-rein was rarely used.

In England he went to the Derby races, and here he saw less cruelty to animals

MRS. GEO. T. ANGELL

than he had sometimes seen on the streets of his home city in a single day. When the horse that drew him to the races stumbled and fell, the driver spoke to him as kindly as though he had been his child.

In London he called at the offices of the Royal Society for the Prevention of Cruelty to Animals, the mother of all the other humane societies of the world, and was invited to make an address on the work in America. The Lord Bishop of Gloucester and Bristol presided at the meeting and at the close of his address Field-Marshal Sir John Burgoyne, then an aged man, rose and "with the utmost dignity" moved a vote of thanks to Mr. Angell. He was invited to meet a party of friends the next day at the house of the Baroness Burdett-Coutts and lay before them his plans for humane education. As one result of this gathering a humane educational committee was formed, having at its head the distinguished lady at whose house the meeting was held.

From England he went to the continent. He mentions that on the morning after his arrival in Paris a white dove came in at the open window of his lodging as if to welcome him to the city. In the gardens of the Tuileries he was gladdened by the sight of wild birds so tame they would feed from the hand. At the annual meeting of the French Society for the Protection of Animals an interesting sight was the presentation of a medal to a little boy who had given his dinner to a starving dog on the street. As the lad came forward to receive the reward so unexpected to him, he was loudly cheered by 2,000 men and women.

MR. ANGELL, ATTENDED BY ONE OF THE HOTEL BOYS IN FRONT OF THE WESTMINSTER HOTEL, BOSTON, WHERE HE LIVES

Incidents such as these, rather than the ordinary sights sought after by the tourist, made a deep impression upon his mind.

In Switzerland the famous dogs of the convent of St. Bernard, one of whom had saved the lives of about forty Alpine travelers, claimed his interested attention; and, in Venice, the daily feeding of thousands of pigeons in the Square of San Marco.

A sad contrast to these cheering scenes awaited him on his return to America. In 1870 he visited Chicago, at that time one of the cruelest cities in the world. Here he visited the stockyards and saw the dead and dying animals pulled off the cars and piled on platforms. Men with great spiked poles weighing eight or ten pounds were thrusting them into the cattle to urge them on. "I should think," he remarked to one of these men, "that there would be danger of putting out the eyes of the animals." The man replied with an oath that they "didn't care if they did."

He found that the water was cut off from these stockyards every Saturday and that tens of thousands of animals were required to stand there without water during all the long hours until Monday morning. Resolving to do something for the amelioration of the lot of these poor sufferers he took an office in the city and went to work to form a humane society, the result of which was that today the millions of animals in these stockyards are properly fed, watered, and protected from cruelty by the society which he then formed.

All over this country, from New England and Dakota in the North, to New Orleans in the South, Mr. Angell has since gone, preaching the gospel of kindness to the lower creatures. His audiences have been State Legislatures, Colleges, Universities, Normal Schools, national and state conventions, the assembled police of Philadelphia, 3,000 drivers and teamsters in Boston, great union meetings of clergy and churches in the northern, eastern, western and southern cities.

In 1882 he started the American Bands of Mercy whose branches now numbering over 60,000, reach every state in the United States and British America, and comprise an army of over 3,000,000 American boys and girls, all pledged to be kind to all harmless living creatures and to endeavor to protect them from cruel treatment.

It is Mr. Angell's firm conviction that if children were taught the principles of humanity in the schools, and if youths were taught it in the colleges and universities, wars would cease on the earth. War, in his estimation, is a monstrous evil, and he would have our youth taught to so regard it. The efforts he has made in the cause of peace are well known. "He is the most effective peace worker we have," said the Secretary of the American Peace Society to the writer not long ago.

At 82 George Thorndike Angell is still at his post, thinking, speaking, writing, planning for the work he loves so well.

MR. ANGELL IN HIS OFFICE

J. E. Neisz, Canton, Ohio, sends the editor a chip from the corner stone of the McKinley Memorial Monument that was laid November 16th last in the presence of some 8,000 school children at Canton, Ohio. Among the notables present on the occasion were Vice-President Fairbanks, Ex-Governor Herrick, William R. Day, and many others. The monument is located in West Lawn Cemetery on a high hill overlooking Canton.

Fourth of July Among the Kiowas

By IDA A. ROFF

ON PARADE

AT NO PLACE is the Fourth of July more enthusiastically celebrated than on the Kiowa Reservation in Oklahoma. The Indians and some of the white men who live there little realize the full meaning of the day. They know, however, that it is a day to be looked forward to eagerly.

For several days before the Fourth, the Indians gather at some spot on the prairie and set up their tepees. For months they have been training their ponies to take part in the races, and now, as the Fourth is approaching, they may be seen daily at practice in the presence of several hundred spectators who gather on the hillside to watch.

It is remarkable how quiet the Indian is, even when interested and excited. When a mule races with a pony, or when a rabbit, venturing its way across the track, is discovered, the Indian loses some of his self control and comes near being excited after the manner of the white man, but as a rule he is quiet and undemonstrative.

At early dawn of the Fourth, everyone is astir; horses are running about, here, there, and everywhere, their riders apparently discharging important duties. There is a band and a band wagon and a great parade to the picnic grounds. Mounted Indian police head the procession, followed by the band wagon, and then come the men, women, boys, and girls on horses or mules, riding two abreast, and all carrying flags. A motley crowd, in buggies, covered wagons, on horseback, or on foot bring up the rear. It is a gay procession, for the Indians wear shirts of bright green, red, blue, or purple. Their faces are painted red and yellow and their hair is twisted and tied with bright colored worsteds or long strips of fur. Their blankets are of red or blue, although it is not unusual to see an Indian wrapped in a white sheet. The women dress in bright colors, although once in a while a velvet or silk dress, or a handsome shawl, is seen. Not infrequently a buckskin suit, trimmed with beads, shells, and elks' teeth, is conspicuous among the rest. It is indeed a gorgeous spectacle, for there, besides, is the vast expanse of out of doors, the blue sky, and green grass carpeting the endless prairie.

"GEN L. MILES" IN HIS REGIMENTALS

Once at the picnic grounds, two eyes and two ears are not enough to take in the interesting sights. First, there is cattle roping by the cowboys. The cattle are provided for the feast by the cattle men, but the cowboys must first have their fun. A dozen or more cattle are surrounded and at a signal one after another is let out of the circle to be lassoed and roped. A prize of ten dollars is given to the one accomplishing the feat in the shortest time, and often less than a minute is consumed by the cowboy who, riding after the steer on the dead jump, throws the rope, lassoes the animal, and then, riding round and round his victim, tightly encircles him and brings him to a stand. An unruly steer perhaps takes a notion to run toward the spectators, and then there is a general scramble. The wonder is that no one is hurt. Then the cattle are all turned loose to run over the prairie. No sooner, however, have they commenced to graze, seemingly forgetful of the indignities that have been heaped upon them, than up rides the Indian police who chase them and shoot them down, one after another. Then follows the butchering, which is done by the women.

After dinner the horse racing begins and with it the chief pleasure and excitement of the day. The track is a circle, one mile in length, and about it gathers the entire company. Then come the foot races, the hurdle races, and the ball games, as well as other athletic sports. A young Indian boy now holds the territorial record for vaulting.

The funny feature of the day is the appearance of the mud-men. A number of Indians, having completely covered themselves and their ponies with mud, so that they look like hideous monstrous pieces of clay endowed with life suddenly ride among the people. A great shout goes up, for the mud-men are awful to behold. At the shout the terrible creatures pretend to run into the crowd, upon which there is pandemonium. The fright is all assumed for nobody is really afraid.

Toward sunset you hear the tom-tom, which is the signal for the Indian dances. The dancers are covered with paint and feathers, and make music as they move. for fastened below their knees are strings of bells. Men, women, and children all take part, no matter how old or how ponderously fat; everybody joins. Far into the night the merry-making continues and not until long past midnight does quiet reign in the camp.

Next Month

Everett T. Tomlinson's great serial story, THE CAMP FIRE OF MAD ANTHONY, begins next month.

AN INDIAN WARRIOR

INDIAN WOMAN WEARING BUCKSKIN DRESS TRIMMED WITH ELK-TEETH

As Dainty as the Fragrance of Flowers

There is a subtle charm in daintiness, whether it be that of flowers or of foods—the dainty always appeals to our senses, and particularly to the sense of taste.

You like dainty foods, whether you are a man, a woman or a child, and of all the dainty, delicious, appetizing and satisfying foods there is nothing that can compare with

Quaker Rice
(Puffed)

The marvelous, patented process that both puffs the rice kernel to many times its natural size and cooks it to a dainty, nut-like crispness at the same time, makes of rice a new food, far more enjoyable than anything made of rice which you have ever tasted.

All the purity, strength and goodness of the rice is retained, and to it there is added the charm of a most delicate flavor and an exquisite lightness that make you think you can never get enough.

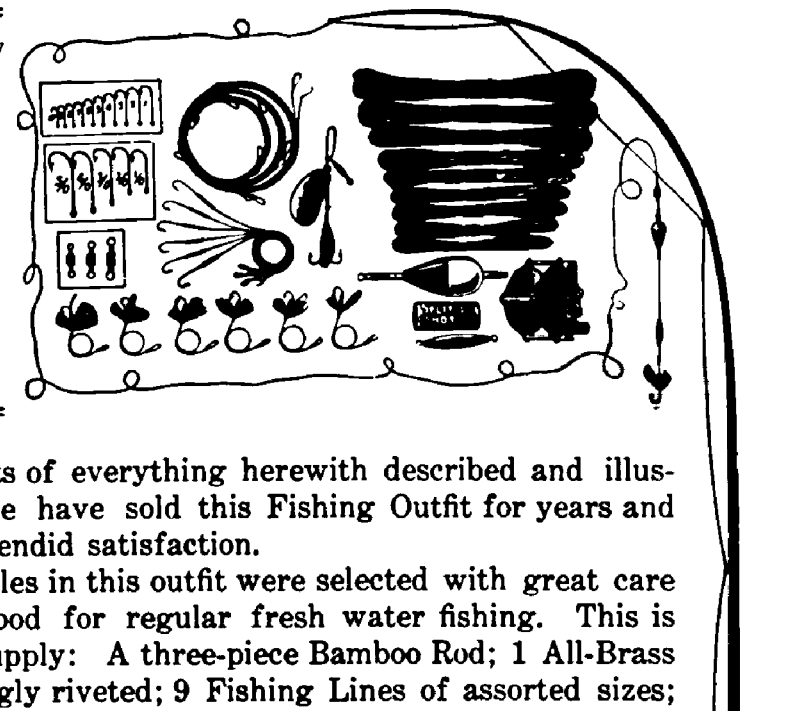
To the joy and delight of every child who loves sweets, full directions for making many wholesome confections, such as Quaker Rice Candy and Quaker Rice Brittle, will be found on each package. Made in your own home, you know they are pure.

Quaker Rice is sold by grocers everywhere at 10 cents the package.

Made by the Manufacturers of Quaker Oats.
Address, Chicago, U. S. A.

BOYS! You Can Earn THIS FIRST CLASS Fishing Outfit

Secure New Subscriptions to "The American Boy" and get Our Special Fishing Outfit



It consists of everything herewith described and illustrated. We have sold this Fishing Outfit for years and it gives splendid satisfaction.

The articles in this outfit were selected with great care and are good for regular fresh water fishing. This is what we supply: A three-piece Bamboo Rod; 1 All-Brass Reel, strongly riveted; 9 Fishing Lines of assorted sizes; 6 Trout and Bass Flies, popular styles; ½ doz. Snelled Hooks; 2 doz. Kirby Hooks, assorted sizes; 1 Kidney Bait; 3 three-foot Leaders; 1 Float, 1¼ inches; 1 Patent Adjustable Sinker; 2 doz. Split Shot and 3 Swivels.

We send everything herewith set forth. Sent securely packed by mail. Your own subscription cannot be included.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 45c; or for 1 new yearly subscription and 90c. (This does not apply on one's own subscription or on a renewal subscription.)

Price $1.50. We pay delivery charges

SNITCHING UP

By MARY TALBOT CAMPBELL

A RESTLESS murmur filled the court room.

"Jiminy! but they's a big bunch o' kids today."

"You bet! but gee! it's slow waitin'. Pass it on!" With this, Ted administered a sharp kick to the calf of his companion's leg. A pained surprise merged into a quick appreciation of the game, as the injured one sent the compliment on down the line, coupled with the same advice. A wavy upheaval rippled stormily over the moving sea of faces, but Judge Findley's quiet entrance stemmed the current of mischief.

The first case on the juvenile docket named Michael Cahoot as defendant.

"Surely you're not in trouble, Cahoot? You, a deputy of this court!" A mottled red painfully blotched the small face.

"Why, Mike, we're in 'cahoots' to keep the other fellows out of scrapes! Isn't this some mistake?"

A dejected nod of the head, and the color drained out of Cahoot's face, only to rush back in a consuming fire, the child's angry eyes a-blaze, as a large, fleshy officer stepped forward. Judge Findley thought, with pathos-tinged humor, of David and Goliath, as looking from one to the other, he wondered if fate had in store some potent sling-shot of defense for this little modern waif.

"You appear against this boy, Mr. Strong?"

"Yes, your honor."

"The charge?"

A small, roughened hand was flung out in dumb appeal.

"Please, jedge, I kin snitch up on my own self, can't I?"

Strong nodded his willingness and the judge motioned to the boy to proceed. The child's lips were distorted, as achingly he wrung forth the words:

"I swiped—a—knife, jedge!"

"I'm hard hit, Mike! I thought we'd got you beyond all that! Why, I trusted you, Mike, and bragged on you—and now—"

The lifeless drop of his honor's voice and the friendly comradeship of the "we," clutched the boy's throbbing remorse with an added twinge.

"P'raps yer work won't 'pear all t'rowed away, jedge w'en—"

"Yes, when—my boy?"

"W'en I's done. De ol' man he sicked me on. Not ez dat counts, fer I ain't forgit w'acher sez 'bout havin' backbone—"

"You weren't told to steal?"

"N—o, but w'en I ast 'im fer a knife ter make a kite, he tol' me ter git it any ol' place, any ol' way I—I liked—only not ter git pulled, less'n I wanted ter stay canned, fer he ain't got no money ter buy up dis court—"

The judge interrupted with an order to his clerk and then bent softening eyes upon the boy.

"I kep' a-thinking o' dat kite I could make—'n' how high she'd fly dese yere blowy days—'n'—I swiped it—'n'—"

"And then?"

"'N' den—I made de kite—'n'—she's a bird!—but—I—"

"But, Cahoot?"

"But I couldn't git no fun a-flyin' of her!"

"Why, Mike? Because you'd been caught?"

The boy's eyes wore the look of a dog's, struck by a friendly hand: "On de square, no, jedge! I never knowed till yisteddy—"

Like a dumb animal in pain, he lifted a hopeless prayer of mute appeal to his enemy.

"No, your honor, he's told the truth so far. I didn't want to spoil the kid's whole week by dreading it, so I held my tongue about seeing him steal the knife, till yesterday."

"Bleeged, I'm sure!" Infinite scorn charged the small voice, "You wuz jus' skeered stiff I'd hot-foot it!"

"Then what spoiled your fun, Cahoot?" The judge spoke unsteadily.

"I—kep' a-thinkin' how you'd backed me ter play square again de hull push—'n'—showed yer trust makin' me a off'cer ter he'p pull de kids inter de juvenyle court 'n' out o' trouble—'n'—"

"Yes, my boy?"

The ring of hope pulsed in the patient voice and it was music to the prisoner at the bar.

"'N' I worked empt'n ashpits 'n' sellin' papers 'n' went back ter dat store—'n' ast de jolly guy wid kid eyes, w'at he'd take fer de loan of a knife fer three days."

"Yes?"

Suppressed eagerness throbbed in the question.

"He sort o' grinned 'n' looked wise like he was sizin' up me 'n' my pile, 'n' sez.

"'Bout fifteen cents ter you, kid.'

"You bet I up 'n' paid it like greased lightnin' 'n' forked over de knife 'n' snitched up!"

"Good for you, my boy!"

The tears sprang smarting to the child's eyes, as an uplifted hand smote him with brotherly fervor:—

"You're a prince of fine fellows! I told 'em you wouldn't fail me, Mike!"

At the ringing jubilation of his honor's tone and the comforting warmth of his gripping fingers, Cahoot's eyes fell, while a shamefaced grin of glowing rapture spread swiftly upward, creeping in beneath the lowered lids, which lifted shyly to disclose a great, wet gladness.

"And the 'jolly guy,' you trump? Tell me more!"

"He sez ez how all men, even cops, is kids onct 'n' he'd eat his hat if I lost my job wid dis court, after I'd snitched up hones' ter Jedge Findley! He sez he knowed w'at it wuz fer a kid ter be widout no knife 'n' worse'n no father, 'n' he reckoned he'd pass on a kindness did ter 'im w'en a kid, 'n' be mum."

Judge Findley tipped back in his chair, hands deep in his pockets, as he fingered a knife which of a sudden burdened him. Sunny gleams from a boyish heart made beautiful the clear depths of his laughing eyes, uplifted to the waiting officer:

"Well, Strong, where's your case?"

But Mike broke in:

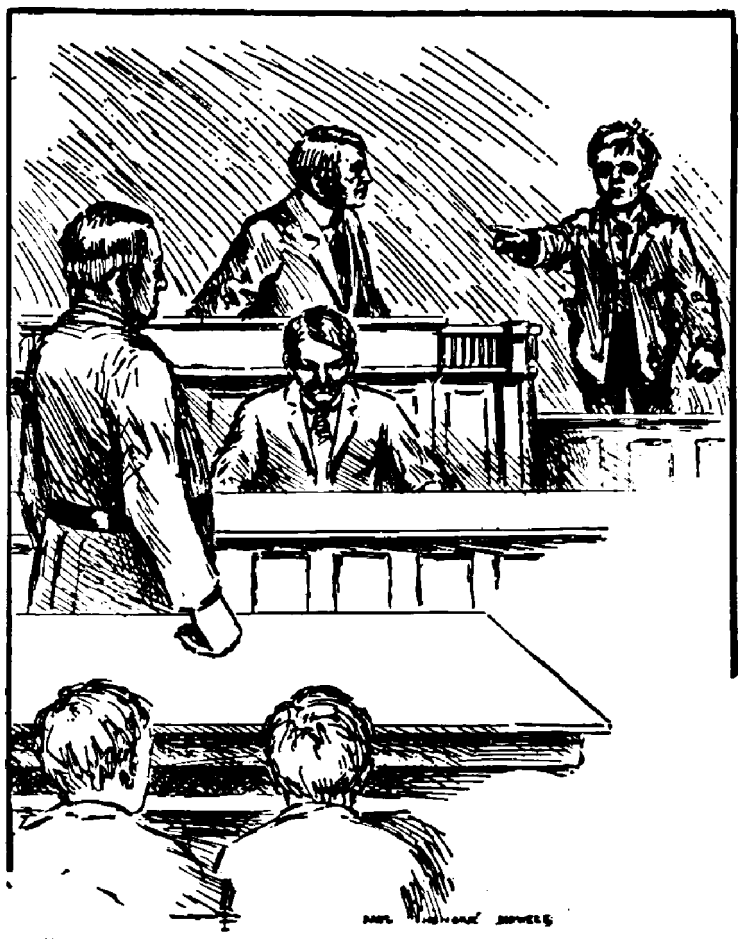
"Please, jedge, I ain't t'rough yit!"

"Well, rush it along, Cahoot!"

David drew his shabby little form proudly erect, and taking aim at Goliath with accusing finger, fired:

"Ez a off'cer o' dis court, I charge Fatty Felix wid swipin'!"

The judge's tilted chair came down with a thump, while laughter thrilled the crowd, and small figures crept daringly forward, glorying in spunky Cahoot's scrap with the dreaded "Tramway Cop." Goliath felt conspicuously big and red as, dumbfounded, he strove to grin himself back into self-repose.



"EZ A OFF'CER O' DIS COURT I CHARGE FATTY FELIX WID SWIPIN"

The judge rubbed his hands together and turning to David, said:

"Report, Mr. Deputy!"

"Don'cher see, jedge, dese yere cops is jes' a-itchin' ter run us kids in 'n' git de laugh on yer Court, fer bein' easy wid us—dey sez—but us fellers won't stand fer it, see? So, w'en I run up agin' Fatty Felix after my scrimmage, I swore I'd queer 'em yit—'n' I ketched 'im in great shape!"

The boyish voice shook with elation, as Mike paused, the dramatic figure in a stirring scene:

"I shaddered 'im ter Pat McCarthy's stand, keepin' on his blind side, 'n' dat's his hind side! 'N' by gum, w'en Pat wuz sellin' popcorn, Fatty up 'n' keerless like swipes his big fist full o' peanuts, 'n' slid 'em blamed easy inter his pocket. 'N' w'en poor Pat rubbers 'round, Fatty wuz moonin' off kinder empty like, 'sif he ain't never had no idee, ner ever heard tell o' three little niggers in a peanut shell, 'n'—"

But a joyous roar drowned the small accuser's voice, and in the first lull Mr. Strong said chokingly:

"May it please the Court, I withdraw all charges against Michael Cahoot!"

The laugh in the great voice caught at the little deputy's ready friendliness.

"Same here, jedge, 'n' if yer 'gree'ble, we'll call it off!"

David's hard, tiny fist was swallowed up in the great hand of Goliath. Then flashing a loyal smile at the court, the boy turned away to the deserved homage of "de gang."

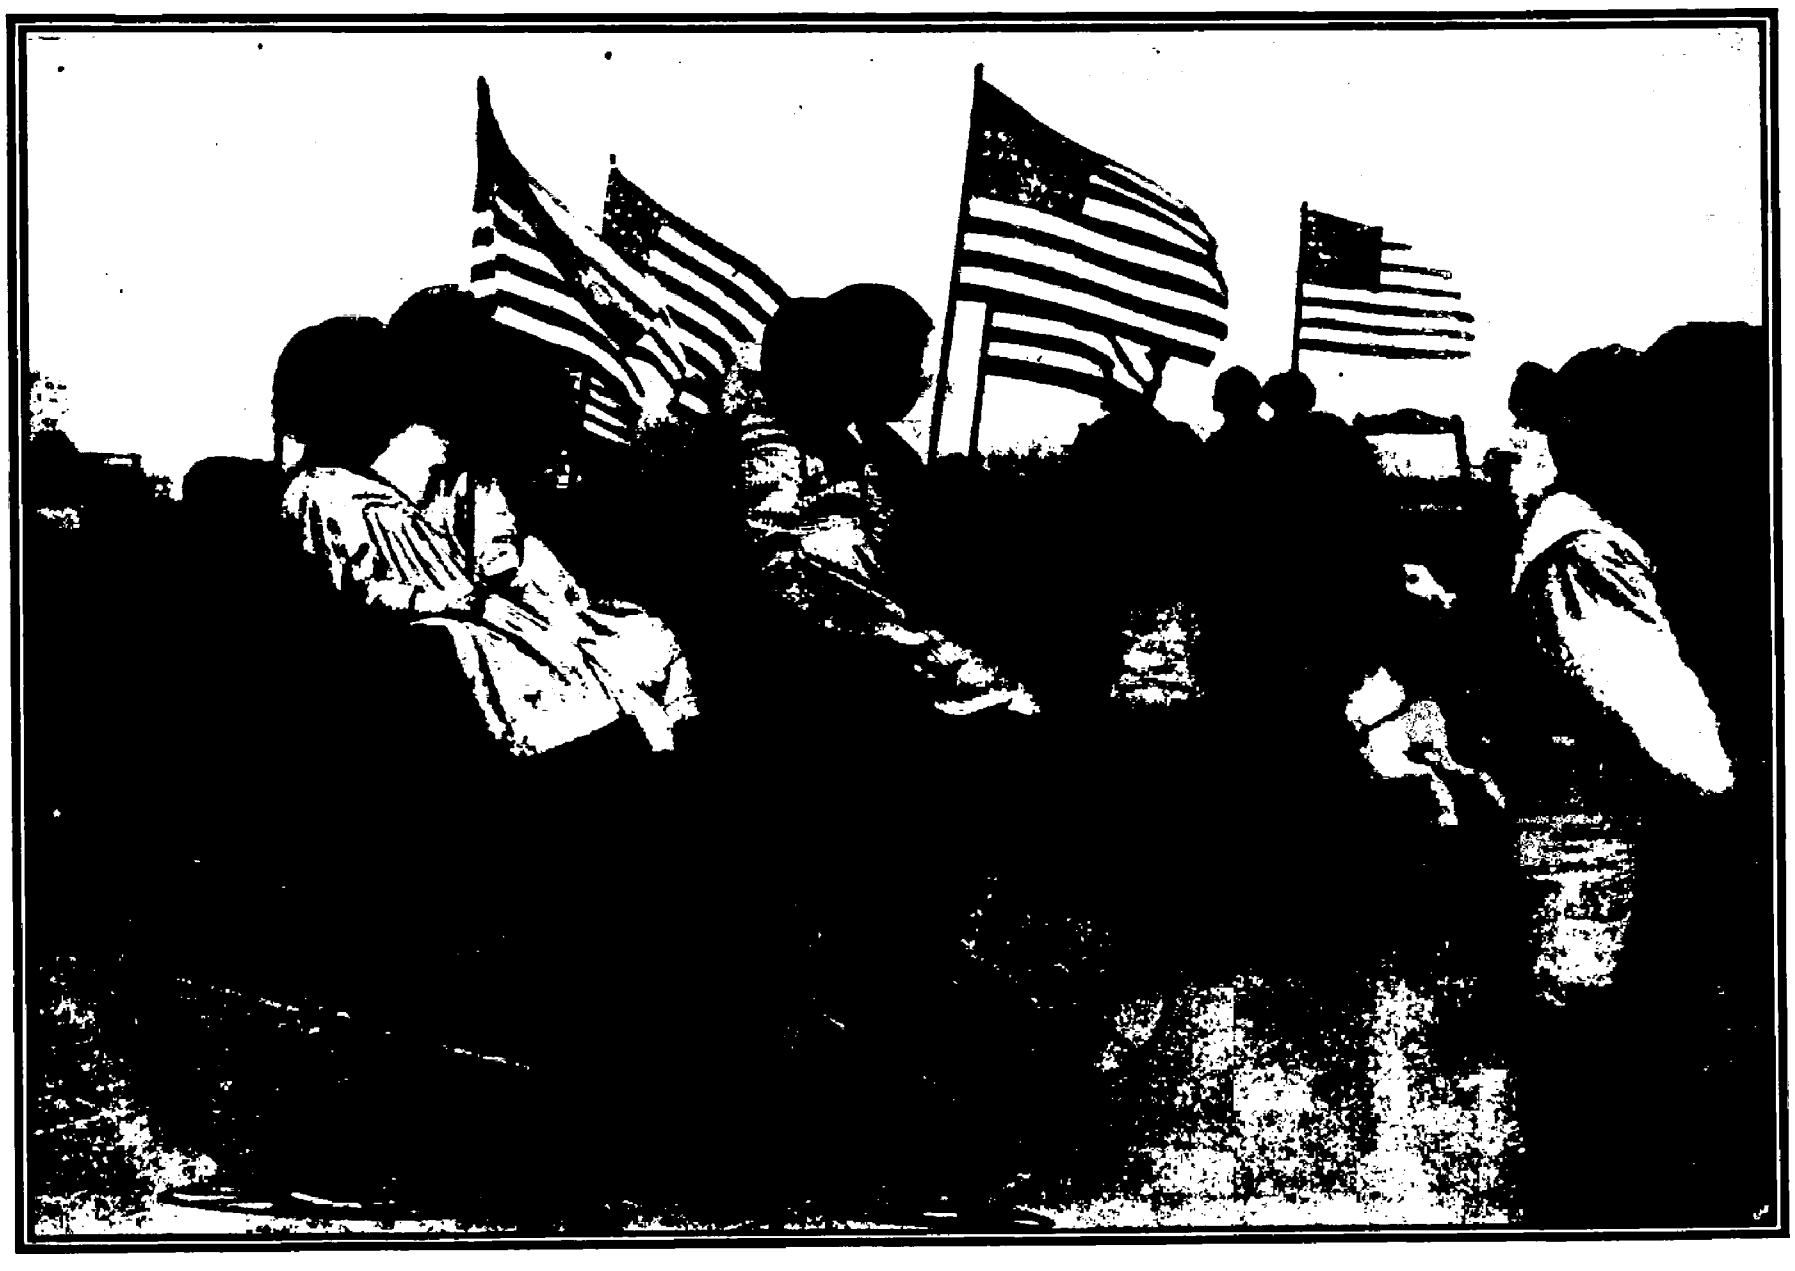
But Miss Burke, the pretty girl who did the write-ups for Cahoot's paper, proffered a friendly palm, declaring he'd helped her "scoop" the other dailies.

"Don't mention it, miss! But wontcher please ter put yer yarn on de sportin' page? Fer I'd like all my fren's ter see how I done up Fatty Felix, 'n' de fellers don't read yer s'ciety stunts. Gee! I wisht I had a photo ter head her wid, but I ain't never set!"

A Coin and Handkerchief Trick

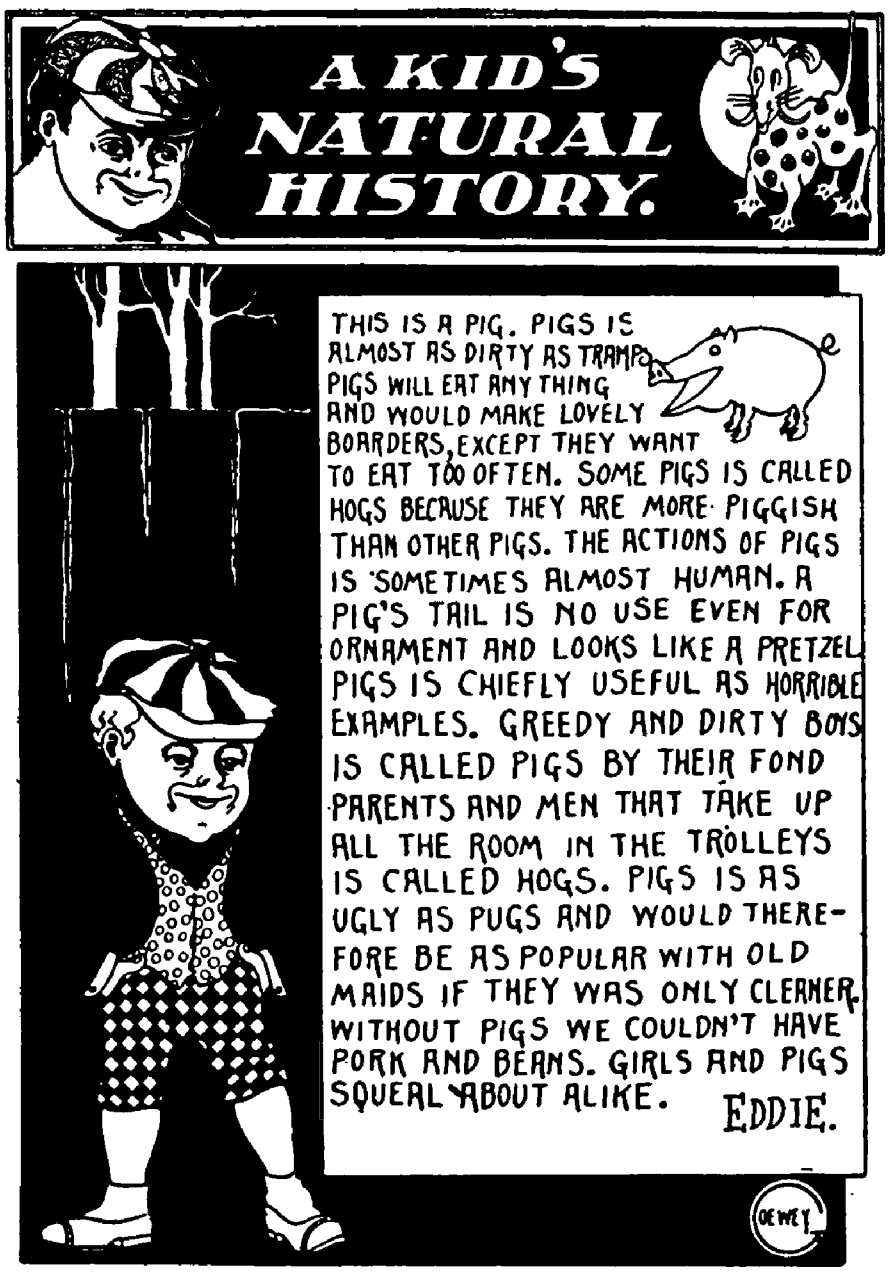
Chester L. Dows, an AMERICAN BOY reader at Lowell, Mass., sends the following as a description of a neat little trick.

All that is necessary to have in order to perform the trick is a handkerchief, a ten-cent piece, and a piece of soap. With a knife cut off a piece of soap about a quarter of an inch in diameter, and stick this piece of soap on the hem of the handkerchief in one corner. Place the dime in the center of the handkerchief, which must lay flat on the table. Take the corner which has the soap on it and fold it over, placing it gently on the dime; now fold the other corners over, placing each corner on the dime. The corner that has the soap on it is the one to your right. When the corners are folded, the handkerchief will be in the form of a diamond with one of the points towards the performer. Place the thumb and forefinger of each hand at the point of the diamond nearest to you. Pick it up, letting the four corners fall apart, at the same time sliding the right hand to the corner where the dime is. Shake the handkerchief and show that the dime has disappeared.



IMMIGRANT CHILDREN ON THE ELLIS ISLAND ROOF GARDEN

Uncle Sam is a great lover of children; in fact I believe that if he alone were consulted in the matter, immigration would be restricted to children. He naturally feels that the little tots are innocent of all the taint to which the older people of foreign countries have been subjected. Having the pure article to begin with he has a better chance of making good citizens. The picture given herewith shows that good old Uncle Sam loses no time in instilling the spirit of patriotism. Even before they set foot on the main land—while they are yet aliens in detention—he teaches the little boys and girls to love the stars and stripes.



My Young Sportsman

A Series of Articles Descriptive of Firearms and Their Use

Written for The American Boy by Edward Van Antwerp

CHAPTER II.

IN THE PRECEDING chapter we discussed the weight and length of barrels which are considered preferable in the ideal arm. Another important thing for our consideration is the gauge, for in the fashionable arm this has changed fully as much as have the length of the barrels. At one time a small bore was considered necessary, and many were the weapons made of eighteen, twenty, or even twenty-two sizes. A reaction finally took place and gradually the gauge increased until a ten, or even an eight, was looked upon as exceedingly proper. Again the pendulum swung, and at the present time a twelve gauge is considered standard. It is a happy medium between the sixteen and ten, and, if loaded properly, is about the correct thing for all-around purposes.

Guns are either bored plain cylinders, chokes, or modified chokes. The plain cylinder is the gun for woods shooting where it is desirable to scatter the charge over a considerable space. The modified choke is much used for trap shooting as well as for game. The full choke is the closest shooting gun, throwing its charge in a compact bunch, and, at short range, making too close a pattern for hunting purposes. At long range, and especially for ducks, it is by all means the "weapon" to use. If a single barrel arm is to be purchased, it is probably a good plan to get a modified choke, but if a double barrel is selected, and it is intended for woods hunting, let one barrel be modified and the other cylinder. If it is intended for both ducks and woods shooting, get a combination of modified and full choke. A full choke, both barrels, is the thing to use exclusively for ducks and other aquatic fowl.

In addition to all the things we have named pertaining to a good gun, your arm should have a pleasing balance. The barrels should have a graceful taper from breech to muzzle, and the gun should be neatly and carefully finished.

By the term "finished," we do not mean necessarily fancy engraving, but we do mean a carefully fitted stock that is well oiled and polished, and a set of barrels that are carefully browned. In short, the general make-up of a gun should be such that the owner of it experiences a sense of satisfaction in the use and care of it. A poor gun is a constant nuisance and source of trouble, while a good one is a thing of beauty and a joy for years. By all means get the very best your pocket can afford.

In all the preceding we have had reference to the shotgun, and it would seem that this article would be incomplete without mention of its brother, the rifle. The rifle is considered by many to be the highest product of the gunmaker's art. There are thousands of sportsmen who do not care to use a shotgun, but who are at the same time old friends of the rifle.

In some parts of the great west I have known the miners and cowboys to refer with contempt to the "spatter guns" of their eastern friends, and in all probability there is a reason for this. The sectional prejudice, if it may be called such, is directly traceable to the wide difference in the game hunted. While most of us cling to the good old shotgun for a day's sport afield, yet at the same time we admire the rifle, for really there is no grander weapon of the chase in all the world.

In selecting a rifle we must be governed by the use we expect to make of it, for a 22-caliber is hardly the thing for deer or bear, and on the other hand, we would not use a 45-70 for squirrels. So under the circumstances, a caliber must be selected to meet our particular requirements. The 22-caliber short, 22-caliber long; 22-caliber long rifle, etc., are excellent for small game of almost every kind. The 22-long rifle is a "wicked" shooting piece of ammunition, and on a still day is considered accurate at 150 yards. The other small calibers up to 38 are used more or less for small game, and in some cases where a long shell is used, as in the 32-40, and the 38-55, they have done splendid work on large game.

Above the 38's are the big guns, which are never adapted to small game unless we are so expert as to always pick a head.

Mention should be made of the new 30-calibers recently placed on the market. They are adapted for hunting large game, and although of comparatively small caliber, their high velocity and the peculiar style of their ammunition, produces an effect upon game similar to a 50-caliber express. The bullets are metal jacketed, with the exception of the point, which is left bare. When a projectile of this kind meets with any substance in its flight, other than air, it immediately expands, or mushrooms. The shattering effects of such a missile is something terrible, and no game even though found in the jungle can withstand it.

Manufacturers of arms using the expansive bullets have placed on the market what are called "short range cartridges." The bullets are of lead and the shells are loaded with a few grains of smokeless powder, the greater part of the shell remaining empty. Fairly good results have been obtained from this form of ammunition, but the writer's experience has been that it is preferable to use a separate rifle for your small game shooting.

In this and the preceding chapter the writer has endeavored to discuss the points necessary for the information of his young friends, in order that they may intelligently select a firearm.

In the next chapter we will take up the subject of Ammunition and Its Preparation.

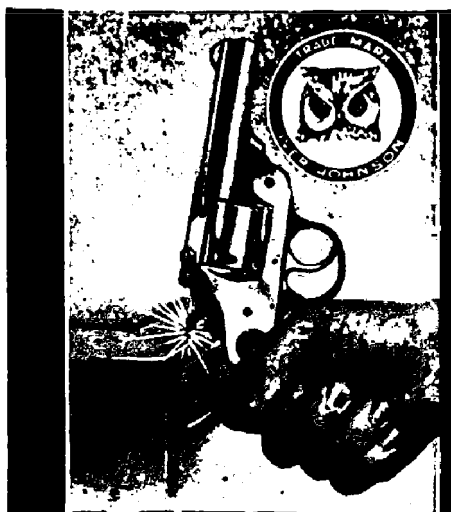
A Father's Opinion

Alliance, Nebraska, April 23, 1906.
Sprague Publishing Co.,
Detroit, Mich.

Dear Sirs: I enclose you draft for $1.50 for the following, etc. My son is a subscriber and he is sending through me the above amount, which entitles him to ..... I desire to say that I buy THE AMERICAN BOY of a dealer here to read myself, and after I am through with it I always give it to some boy to read. I do not understand how any parent can afford to allow his boy to grow up without THE AMERICAN BOY. It is good for any one between the ages of four and a hundred.

Yours respectfully,
T. J. SHRELKELD.

If the Owl's Head trade-mark is on the Stock, you may "HAMMER THE HAMMER"



without fear of discharge, because the revolver hammer never touches the firing pin. This safety principle, found only in the Iver Johnson Safety Automatic Revolver, is due to the fact that the lever which transmits the blow from the hammer to the firing pin is never in position to do so except when the trigger is pulled all the way back.

SEND FOR BOOKLET "SHOTS"

It's full of firearm lore; gives important facts that every owner of firearms should know, and goes into details and illustrates by sectional views the peculiar construction of the Iver Johnson.

Iver Johnson Safety Hammer Revolver
3-in. barrel, nickel-plated finish, 22 rim fire cartridge, 32-38 center fire cartridge - - $5.00

Iver Johnson Safety Hammerless Revolver
3-inch barrel, nickel-plated finish, 32-38 center fire cartridge - - $6.00

For sale by Hardware and Sporting Goods dealers everywhere, or will be sent prepaid on receipt of price if your dealer will not supply.

Iver Johnson's Arms and Cycle Works

Too Little Authority Exercised Over Boys

In the April number of Munsey's Magazine appeared an article by Rev. Dr. Chas. H. Parkhurst, the eminent New York clergyman and lecturer, which ought to be read by boys and their elders. He says, in effect, that there is too little authority exercised over boys on the part of those to whom authority rightfully belongs, that is, their parents. He fears the result of this, not only in the breaking up of our home life, but in its effects on the cause of education. He suggests that there is not enough whipping, and makes the remark that we all need to be whipped, and all will be whipped at one end of life or the other. If we do not get lashed in our boy[illegible] we are liable to get lashed in our old age. He thinks that one stroke given us while we are young is better than a dozen after we become tough. He thinks we all, whether boys or grown-ups, ought to learn to respect and obey external authority, and not put our own whims and self-will to the fore. He says the American child has been indulged, coddled and inflated into a pretentious little egotist that scorns respect for anybody but himself. His own fully matured opinions, tastes and judgments are as good as those of any one else, if not, in fact, better. He knows everything knowable, and a few other things about diet, bedtime, school, education, and the Constitution of the United States, and is competent to express the final, decisive judgment on each one of them; and he wants his own way in respect of them all. In fact, he models after the famous little son of Themistocles, of whom his father said on meeting him on the street in Athens.

"That boy is the greatest power in Greece, for I rule the whole Grecian State, and his mother rules me, and he rules his mother."

He insists that children rule the public schools, and that boys rule the colleges, and says that if it comes to a tug of war over the ethics of football, half the college presidents in the land are afraid to tackle the question with decision as against the boys.

There is a kernel of truth in Dr. Parkhurst's position. The sooner we learn that even although we are living in a free republic, we must accustom ourselves to life under law, the better it will be for us. To learn to obey one's parents is the first step toward learning to obey the law and becoming a good citizen. Then, too, "children, obey your parents, for it is right."

Photograph of Grover Cleveland and his son Richard

Through a regrettable error the picture of Grover Cleveland and his son Richard, which appeared in our May issue, was not credited to the photographers who made it. This interesting and striking picture was made from a stereograph by Underwood & Underwood, N. Y., and copyrighted, 1905, by this well-known firm.

How Washington Celebrated a Fourth of July

By FRED MYRON COLBY

A RUDE stockade of earth and logs thrown hastily up in the wilderness; a lazy brook flowing near by, and all around the wild forest green and beautiful with the emerald foliage of early summer. This is the scene. The time is July 3rd, 1754.

Within this rude frontier fort were assembled four hundred Virginian provincials, dressed in deerskin hunting coats and leggings, and about a hundred friendly Indians in warpaint and feathers. Their commander was a tall, stately young man of twenty-two, whose steady blue eyes and composed features indicated one born to leadership. He was then known as Major George Washington.

The young Virginian had been sent with this small force and nine swivels mounted on carriages to take possession of the territory between the Susquehanna and the Ohio, which was claimed alike by the English and the French. The latter had established several forts already in the country, and had a much larger number of soldiers to defend them.

Washington knew the country, for he had been there once before on an embassy to the commandant of the French forts. But he had no adequate force to carry out his plans, and though he was successful at first, having met a small French detachment and defeated it, later on he was obliged to retreat before a superior body of the enemy.

He retraced his steps to a place called the Great Meadows, where he halted and threw up such breastworks of earth and rocks and trees as they could manage with the tools at their command.

"I shall call this place Fort Necessity," he said to his officers; "for it is necessity, not choice that made me retreat here."

Here through the hot July days they waited for the dreaded Frenchmen and their red allies. But they did not mean to be surprised, and a ceaseless vigilance was sustained.

At length on the morning of the 3rd of July the gay uniform and the bright muskets of the French were seen through the forest trees as they advanced to the attack. There were fully a thousand of them, and the woods soon rang with the shouts of battle and the discharge of musketry.

Washington had made the best arrangements for defense possible. His swivels were mounted where they commanded the widest approaches, and his men were ordered to withhold their fire till the French were within range.

But they were sadly handicapped by a lack of ammunition, and they had no bread whatever, being forced to subsist wholly on fresh beef. The fort was hardly defensible, and to make matters worse a furious thunder storm arose late in the afternoon, drenching the defenders to the skin. The fresh earth of the entrenchment was turned to soft mud, and the men at the outposts stood to their knees in water.

The fight continued all through that July day and into the night, Washington and his men stubbornly defending every inch of ground. The young leader clearly saw there could be but one outcome to it, but he was not the man to ask for quarter. They were fighting not for victory, but for honor, and the braver their defense the better would be the terms offered them.

Villars, the French commander, duly appreciated the valor of the young American officer, and as he had already lost a number of his men, to save further lives, he sent a flag of truce forward and proposed a parley. Washington had fired his last shot, and his men were exhausted, and he was ready to listen to terms of capitulation. With a drum-head for a table, and a log of wood for a seat he called his officers about him, and by the gleams of a sputtering candle, the terms were gravely discussed. The conditions were highly honorable. By midnight the articles were signed. They provided that the English should march out with drums beating and colors flying, carrying with them their swivels and all their other property, and that they should be protected from the Indians.

Washington could not have asked for better terms, but he could not sleep that night. His men dozed around the gloomy campfires.

The next morning, the Fourth of July, then an unmarked day in the calendar, dawned fair and bright. The storm was over, the birds sang from the thickets and the leaves danced in the sunlight. But it was a dark and gloomy day for Washington.

At nine o'clock, the hour set for the surrender, Washington and his men marched out of the fort to the sound of fife and drum. Everything was done by the French to lessen the humiliation of the defeated, but no one can smile amid disaster. Their horses and cattle had been shot by the savages, and they were obliged to carry the sick and wounded upon their backs.

It was a sad and dispiriting spectacle, and Washington could hardly restrain the tears from coming into his eyes. The miserable morning was probably the darkest of his life. One ray of sunshine brightened his face for a moment, when the French commander, a grizzled veteran, saluting him said:

"Major Washington, I had been told you were young, but not till now did I fully realize it. All day yesterday I thought I was fighting a man as old in war as I am, and I have been a soldier for thirty years. You have great things before you."

To the core of his heart Washington felt the cordial respect given him by his enemies.

But he had bitter thoughts on that homeward march through the forests over the Alleghanies. He had been sent out to do great things, and he went back a defeated man. His ambition seemed blighted in the bud. Little could he foresee the future and realize that by heroism in defeat and victory he would make the Fourth of July forever glorious to a new-born nation that was to hail him as its father.

A SAN FRANCISCO STREET AFTER THE GREAT EARTHQUAKE

IN DEFENSE OF HIS FLAG

(*Continued from page 260*)

for Rockville. Up to this time nothing had been heard of the cavalrymen Louis and Harry Bingham had met. But now, about four o'clock in the afternoon, Jerry Rowe, one of the advance guards sent out, came running back, his face as white as a sheet.

"The Southern cavalry!" he gasped. "They are on the road, a hundred or more strong, and are coming this way! Run for your lives!"

"Rowe!" ejaculated Captain Paulding so fiercely that Jerry nearly sank in new terror.

"But, captain, they are a hundred strong, and all armed—and—"

"Enough. They are riding this way?"

"Yes, sir."

"Very well; that is sufficient. Take your place in the ranks. Company, halt!"

"But, captain—"

"Silence, or I'll place you under arrest. You are positively the worst coward I ever met."

Without a word more Jerry sneaked to his place, glad that it was in the second and not the first division of the command. He trembled from head to foot.

Another of the guards now came back. It was Moses Blackwell, the blacksmith. He had remained long enough to ascertain that the cavalry numbered less than sixty men, but all well armed and mounted. That they were Confederates he was certain, for, although they wore the United States uniform, every U. S. had been stripped from their clothing, as well as from their horses' trappings.

"I left Dunham and Wells behind," said Blackwell. "They are going to watch and see if any more of the enemy are on the way."

"How far off are the cavalry?"

"Not more'n half a mile, sir."

"Very good. Return to the ranks. Company, attention! Forward march! Left wheel! Forward march! Left wheel! Forward march!" came the various commands, and in half a minute the volunteers were moving in the direction from whence they had come.

Louis wondered if they were really going to retreat, but he did not have to wonder long. In five minutes they reached a spot where the road widened and where at one side was a patch of rocky woodland, fringed by a strip of heavy but low brush. Here Captain Paulding halted his command and drew them up in a single line just in front of the brush.

"Men, we will wait here until the enemy apears," he said, quietly but firmly. "If they show a disposition to pass us without trouble, well and good. If they want to fight, leap behind the brush and wait for the command to fire. If we can't hold the brush, we will take to the woods, where, if they want to follow us, they'll have to do it on foot."

Having thus shown his military sagacity, Captain Paulding set the command at rest and went among "his boys" to encourage them to keep calm. The drummer boy was sent to the rear and every gun and pistol was examined to see that it was properly loaded.

A cloud of dust soon indicated the approach of the cavalry, and in a minute more they rode into sight. As they came closer Louis noted that the captain he had spoken to at the brook was at their head.

The volunteers were not discovered until the two comands were less than three hundred feet apart, for the cavalry had not expected trouble in that vicinity and had no guard in advance. The instant the volunteers were sighted the captain called a halt. There was a few seconds of consultation, then the cavalry leader rode forward holding up a white handkerchief. With his own handkerchief over his shoulder, Captain Paulding went forward to meet him. The two saluted in true military style.

"What company is that?" demanded the Confederate.

"The Goreville Volunteers, United States Army, from Pennsylvania, unattached. What cavalry is that?"

"Nelson's Potomac Chargers, unattached, of the South," the last words with peculiar emphasis. "Where are you going?"

"To Washington." "And you?"

"To Frederick."

Then came a pause. Both leaders looked each other squarely in the eyes.

"Do you anticipate trouble on the road, captain?" asked the Confederate, with a faint smile.

"I'm not looking for trouble, captain; but I am ready to meet it if it comes."

"Are you holding this road?"

"Oh, no."

"Then I reckon I'll bid you good day and go on."

"Good day, captain."

Again the two saluted, and each went back to his command. In a minute more the cavalrymen rode by, their sabers clanking loudly. They were certainly a fine body of men. A few scowled at the volunteers, a few smiled, and the majority, including the officers, looked straight ahead, as though the company along the roadside had never existed. Five minutes more, and the dust again swallowed them from view.

Before they had disappeared the volunteers were again in motion, and the wagon came forth from its place of concealment in the woods. Now the danger was past. Jerry Rowe began to murmur and wanted to know "why they hadn't been permitted to blow the heads off of every pesky rebel." But Moses, the blacksmith, soon silenced him.

"Jerry, you make me weary," he said. "If we ever git to shootin', you'll be the fust to run. Shut up!" and Jerry did.

The encounter with the cavalry was the last incident of importance in the march to the Capitol. One Sunday was spent on the road, and the following Tuesday night found them in Washington. They found some other commands from Pennsylvania, Massachusetts, and New York already there, in camp on the large parade ground near the White House and in the Capitol buildings. Some of the men who had come in were unarmed, but these were speedily furnished weapons by the United States authorities, and the veteran General Scott took command of the troops.

Throughout the South the cry was "On to Washington!" and it was feared that the Capitol might be attacked at any time. But General Scott was alive to the situation, and, as more and more troops came in, the city was well fortified against an attack and that danger was, for the time being, averted.

A 7-Year-Old Telegrapher

This is the story of how a seven-year-old boy surprised a whole roomful of telegraph operators not long ago in the city of Topeka, Kansas. N. B. Peck, of Watonga, Oklahoma, who for fifteen years has been telegraph operator, station agent or trainmaster of the Rock Island railway, while on a visit to Topeka, took his son Glenn with him to the dispatcher's office. Glenn went into the office a few moments ahead of his papa and when Mr. Peck opened the door he found the entire office force gathered about his little son, who was engaged in calling by telegraph an office several hundred miles away. His speed and accuracy upon the wire astonished spectators and the fact that twenty-five instruments were at work all about him did not confuse the boy in the least. Glenn seems to have a natural born instinct for telegraphy. Not only is his father a telegrapher but his mother has also been an experienced operator for ten years past. Three or four years ago Glenn began to take a great interest in a telegraph instrument and he was able to send a message before he could read and write. Before being able to write he would call for a message on the wire and his mother would write it out for him. Glenn is now going to school.

GLENN AT HIS KEY

Youth, the plastic morning of life, is the time when we must do our effective work in character-building. If it is neglected then, or postponed, it will be well-nigh impossible to mold a perfect character.—"Success Magazine."

HOW THREE BOYS CAPTURED A BUZZARD.

BY CRAIG S. THOMAS.

Photographs by the Author.

THERE are few people whom we grown folks enjoy more than our boy friends. They come to me for all kinds of information about nature subjects, and usually bring liberal pay in advance in the shape of curious specimens, and, to them, rare insects, butterflies, flowers and birds.

Only the other day Laurel and Lee came in great glee to tell me that they, together with Bennie, had captured a live hawk. He did not seem able to fly far at a time, they said; and after chasing him a good way, they succeeded in surrounding him. He then seemed to regard his chance of escape by flight cut off, and so showed fight. Lee and Laurel were curious to see what Bennie would do. Flowers were more to Bennie's liking; he had analyzed over a hundred specimens that very season. He did not like the looks of the hawk's eyes, and was not anxious for an encounter with his majesty's hooked bill and curved talons. Yet he did not flinch, for this was an encounter calling for pluck.

None of the boys, however, cared to undertake the capture with bare hands; so, after numerous plans were discussed, a happy thought struck them. Off came their coats; together they made a rush, and landed their garments on top of the threatening bird. Then, while the other boys held his feet and beak through the coats, Laurel carefully worked his hands inside of the covering and down along the legs of the bird until both feet were tightly secured. Now the coats were removed, and Mr. Hawk, notwithstanding much pecking and clawing, was borne home in triumph; not, however, before the boys had received more than one painful dab from his sharp beak.

"What kind of a hawk is it?" they inquired. One friend thought it was a rough-legged buzzard; but its legs were not feathered to the toes—the unvarying sign of the rough-leg. It was not easy to identify the big fellow, for though full grown, he was a young bird, and young birds are never marked exactly like the old ones, and sometimes they are very different in coloration. By careful measurements and close examination, however, it was at length found to be a red-tailed buzzard; though not until next year would the tail change to reddish-brown.

At Laurel's home the boys found a large box, which they screened on one side with wire netting, and this made a good, large cage. In the bottom a hole was cut large enough to admit the bird. The box, which rested on a bench, was then raised, the buzzard pushed in, and the box lowered again to the bench, which effectively closed the door.

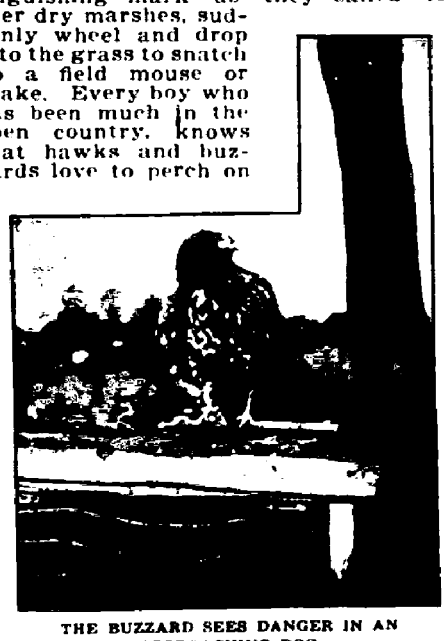
Now the problem of feeding began, and it was no small task to supply so large a bird. Liver was secured from the market; odd scraps of meat were picked up in the kitchen; recently dead young chickens were found at the barn. With relentless talons and effective beak the caged buzzard devoured them all.

Did you ever think how many mice, rats, weasels, snakes, rabbits, gophers, ground squirrels, and other small animals hawks and buzzards destroy? We call them birds of prey, and hunters often think it a good deed to kill one; but, although they occasionally capture a prairie chicken, grouse, quail, or partridge, it is not easy for them to find these birds, which have effective means of eluding their search.

When a boy I was hunting prairie chickens late one afternoon without a dog, when a large hawk, which went sailing across the field a long distance ahead of me, flushed a covey of seven chickens, which whirred away to the long slough grass, with the hawk in hot pursuit. But the powerful bird did not overtake them, and after soaring and wheeling low for a time over the place where they lit and lay hid, he gave up the search and flew away.

There is no doubt that the greater part of the quarry of these birds consists of the small quadrupeds and snakes above referred to. While hunting one day with a friend, we were walking through a bit of open timber, when a hawk, holding something in its talons, flew over us. A shot failed to kill the hawk—at which I was glad—but it made him drop his quarry, and a headless garter snake came tumbling through the trees to the ground.

Who has not observed the marsh hawks—the white rump being their distinguishing mark—as they sailed low over dry marshes, suddenly wheel and drop into the grass to snatch up a field mouse or snake. Every boy who has been much in the open country, knows that hawks and buzzards love to perch on old hay and straw stacks. Here mice and rats are always to be found, and they are watching for them.



THE BUZZARD SEES DANGER IN AN APPROACHING DOG

More than once when a boy, I have found the rabbit in my trap torn to shreds by some strong-taloned buzzard, and his fur strewn about the trap; and many times since, while hunting, I have come upon the remnant of the feast of some hawk in the shape of blood-besprinkled snow, a well picked skeleton, and bits of fur; but it was usually the remnant of some quadruped which in one way or another was injurious to man—as, the rabbit to his trees, the mice to his grain, or the weasel to his chickens.

The boys, elated with their success in capturing the buzzard, wanted me to come and photograph their prize. It was no small conquest they had made, and photographs of the bird would keep the memory of its capture green for years, and get the story told over and over again to other boys, and be palpable evidence of its truthfulness. These things the boys did not mention, but I was once a boy myself, and know how many thoughts and hopes lie at the root of a boy's brain, which he never utters, and most of the time does not himself suspect. It would be jolly to have the bird's picture taken, that was all.

So I gladly went to Laurel's home with my camera, and found Mr. Buzzard in the cage which I have described. To show me how he would perform, one of the boys brought the family cat. Both buzzard and cat seemed equally afraid. Stepping back as far as his cage would permit, the bird raised his beautiful wings threateningly; vicious anger flashed from his determined eyes, while his mandibles clicked defiance. The poor cat at once became panic stricken, and, with spread claws, tore herself from the boy's arms and made for the wood pile. The family dog was less afraid, and yet he saw in the buzzard a dangerous enemy which it was well to avoid, and so required considerable coaxing and patting to be persuaded to come near.

We secured a number of good photographs, and by the aid of the recovered cat and much-coaxed dog, several were taken, showing this noble bird in various defensive attitudes.

"What are you going to do with him, boys?" I asked. "Keep him; he can't hustle for himself; something is the matter with his wings," was the quick response. What is more noble and chivalrous than the spirit of a boy towards any beast or bird that has really gained his interest. For the boys to know and love the birds is to protect them.

There is promise now of a good trade in the meat business in the town where Laurel, Lee, and Bennie live, and if the buzzard survives the ordeal of taming, their parents may become bankrupt paying the bills.

LAUREL, LEE, AND BENNIE, AS THEY BROUGHT HOME THE BUZZARD

SAVAGE

JUNIOR

SAFE, ACCURATE

and beautifully finished, modeled after the best military rifles now in use. The same Savage care and accuracy are exercised in the manufacturing of the Savage Junior Rifles as in making our high priced guns.

Savage Junior is the quickest and easiest single shot gun to load. The empty shells are automatically ejected and thrown several feet to one side.

Savage Junior is a safe rifle to intrust to a boy, and an excellent companion for your big game gun in camp. 18 inch round barrel. 22 caliber. Weight 3 pounds. At your dealers $4.00, or from us direct if he cannot supply you.

TELL YOUR BOY FRIENDS

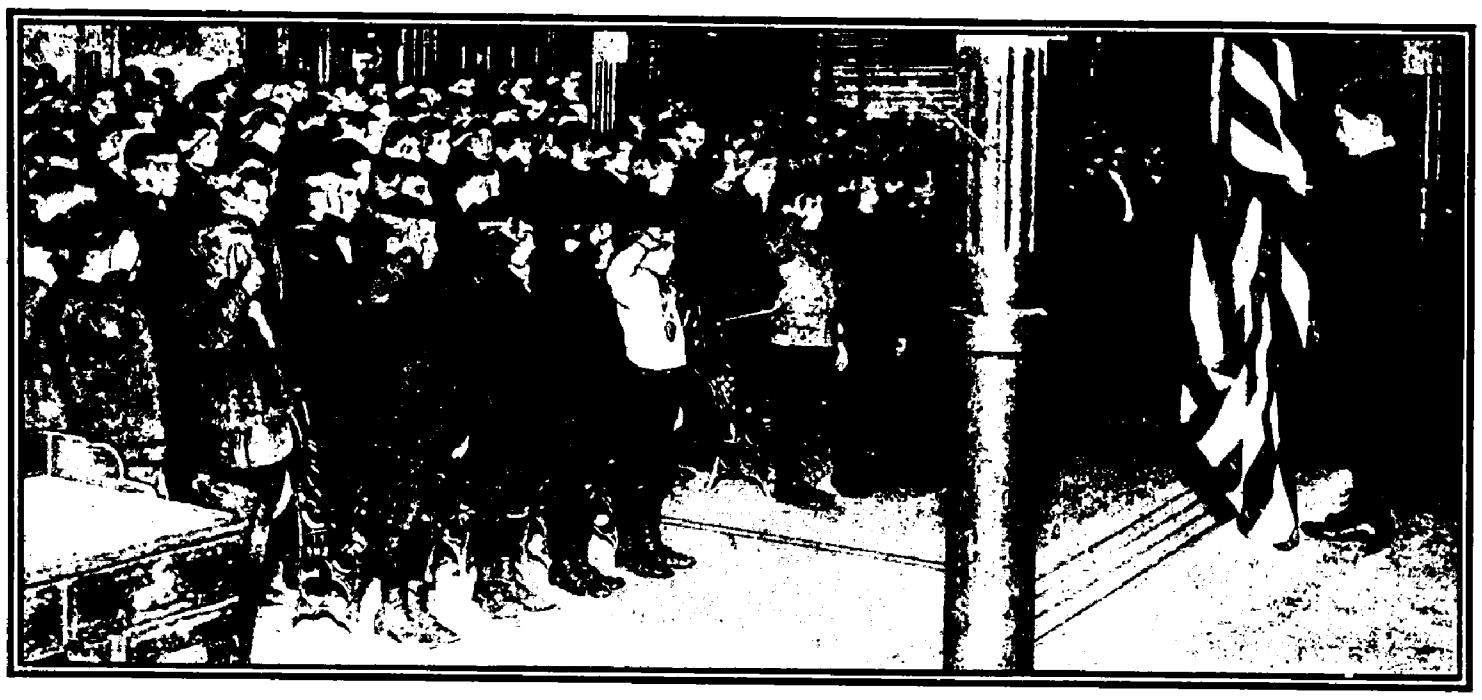
Opportunity and Honesty

Governor John A. Johnson, of Minnesota, in a recent article setting forth the evil of living simply to amass money, has a word to say to the young man about opportunity. "It has often been said," he writes, "that the opportunities for the young man are as good today as ever they were in the history of the world, and I heartily agree with that idea. When I was a young man I thought that if I had come to Minnesota in 1854 I would have had better opportunities than I did have, but it was a mistaken idea of youth." Governor Johnson says that character is the most desirable thing in the world and the foundation for all true success, and that all the money in the world cannot buy an honest man. He makes an appeal to boys to aim always to be achieving something and to be honest in every effort. "It is honesty," he says, "that makes men railway managers and bank presidents, and there never was such a demand for honest men in the world as there is today."

Look out for Your Laurels

Less than five years ago, a negro was selected as class orator at Harvard Commencement. A few weeks ago, the George William Curtis gold medal, the highest oratorical honor conferred by Columbia University, was awarded to a full-blooded Zulu. On March 16th last, a Japanese student, K. S. Inui, won first honors in the annual oratorical contest at the University of Michigan, his reward being $100 in gold and the Chicago Alumni gold medal. It also entitled Mr. Inui to represent the University of Michigan in the northern oratorical contest held in May at Oberlin, where the prize orators of a number of northern colleges and universities strove for the prize. When the contest took place, Inui, the University of Michigan Japanese, won first honors for his university. Boys who were readers of THE AMERICAN BOY two years ago will remember that this young man was one of the speakers on AMERICAN BOY DAY in Festival Hall, at the St. Louis Exposition; THE AMERICAN BOY, therefore, feels special pride in his success. The achievements of these two boys, a Zulu and a Japanese, whose orations were delivered in other than their mother tongue, should stimulate American boys to renewed efforts to win the prizes of oratory.

SALUTING THE FLAG AT A NEW YORK CITY SCHOOL

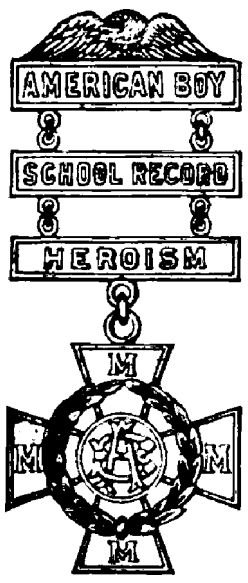


Love and respect for the flag is taught in every institution in Greater New York. Down in the neighborhood of Public School No. 8 boys are not born with this love and respect. Their parents are nearly all foreigners, with love for another kind of a flag than the stars and stripes, and it is not to be expected that the training of patriotism occupies much of their home life. At school, however, as the picture shows, the appearance of a banner made of stars and stripes is immediately the signal for every one to stand and make a respectful salute.

The American Boy Legion of Honor

(Open to all Boys Everywhere)

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school ending on a date since September 1st, 1905, have stood at the head of their classes, taking the average of all their study grades for the term, and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts.



LEGION OF HONOR ROLL.

Note: S. R. means school record; H. means heroism.

Don M. Harris, a fifteen-year-old boy of Medina, Texas, made the highest average in the eighth grade during the term ended April 20th. His average was 93 15-28%.

John B. Nicola, a St. Catherine, Missouri, boy, has received the highest average in his grade for the entire school year, which began September 30th and ended March 30th. His average was 94 2-3%.

George L. Beaver, Jr., a pupil of Moreland Grammar School, Campbell, California, received the highest average in the seventh grade for the entire school year, which began September 12th, 1905.

The Junior Class of the Kewanna, Indiana, High School has for its leader Rodman Carpenter, who won a final average of 99% in his studies. He has also been perfect in attendance during the year.

Oscar Lenski, a pupil in the ninth grade at Anna, Ohio, sends us his grade card and a statement from his teacher showing that he stood first in his class during the term. He is now promoted to high school.

Gerald R. Butz, an eleven-year-old boy of State College, Pennsylvania, made the highest average in the seventh grade, receiving a final standing of 97%. He writes also that he has not been absent or tardy during the term.

We are in receipt of a grade card from Crim O'Brian, nine years old, of Edwardsport, Indiana, which shows that he has led the fifth and sixth grades during two recent terms. He passed from the fifth grade to the sixth in December.

Robert E. Jacobson, Bishop Hill, Illinois, stood first in his classes in the eighth grade during both the fall and winter terms, and received the highest marks in the township central examination held at Bishop Hill, in February.

Two boys of Milroy, Pennsylvania, Duke Klinger and Harry Parker, have been presented with School Record Badges. Duke made the highest average mark for the term, and Harry has been perfect in school attendance for the last five years.

Walter P. Cottam, St. George, Utah, is eleven years old, and in the A class of the fifth grade. He passed his examinations with the highest standing for the year ended May 5th, and also made a perfect record for regular and punctual attendance at school.

Russel Harris, Arcanum, Ohio, has received the highest average for the Freshman year of the Arcanum High School. His highest grade, 98%, was in Latin, and his general average was 97½%. He writes us that the secret of his success is attentiveness and application.

Herbert Diefenderfer, of Fullerton, Pennsylvania, stands not only at the head of his class, but at the head of the Packer Hill Grammar School, as he is a member of the A class. His teacher writes that this good record has been made by constant effort and perseverance.

Henry Jackson Hollenbeck, Pittville, California, stood at the head of his class in all studies for the eight-months' term ended May 10th. He is now in the seventh grade, and writes that he has never been tardy during his school days, and has not been absent for the last three terms.

Joel K. L. Schwartz, Berne, Indiana, made an average of 98½%, which was the highest in the class, during the recent term. He writes that he was neither absent nor tardy during four out of the eight years that he has attended school.

Frank R. Keck, Cotulla, Texas, made the highest term average by 4% of any member of the eighth grade. He is fourteen years old, and writes that he likes THE AMERICAN BOY very much. Frank's teacher speaks very highly of him in the certificate sent.

M. L. Parker, President of The Hartwell Institute, Hartwell, Georgia, writes to thank us for the School Record Badge sent to Emil Leard, and sends the names of three more boys who stood at the head of their respective grades. These boys are Herbert Galphin, Grover Mann, and McCade Alford.

"The Heroism Medal for Harry Reigger arrived safely, and young Reigger is the happiest boy in Medina. He certainly earned it, and I am glad that you saw fit to reward him." This is taken from a letter written by E. P. Brainerd, Medina, Ohio, to whom was sent the medal for Harry Reigger.

Mr. Ross K. Adams, of Ogden, Utah, who was instrumental in securing the Heroism Badge for Thomas A. Harris, in recognition of his bravery in saving the lives of two persons, writes to acknowledge receipt of the medal, and says: "Your action in this matter is highly appreciated and is receiving proper notice from the public press. I turned the medal over to the Salt Lake Tribune for presentation. Young Harris is much pleased with your gift, and you will hear from him personally. THE AMERICAN BOY has certainly found a warm spot in the heart of Ogden."

One of our Legion of Honor Badges was sent to a young hero, Thomas A. Harris, of Ogden, Utah, who rescued a young woman from drowning on March 25th. The publishers of THE AMERICON BOY at once awarded young Harris the Heroism Medal of the Legion of Honor. The presentation of the badge was made by the Ogden representative of the Salt Lake Tribune in the offices of the Tribune. The Tribune, in describing the presentation, said of Harris: "He is a big boy, and extremely bashful. There is nothing of the spectacular in him. He was clad in overalls, having donned these to do work at home after the dismissal of school for the day. He was embarrassed when the medal was offered him, and when it was pinned on his coat, he flushed up like a girl."

Cranston Rader and his brother Miles were crossing a cattle guard on the electric road running into Arvada, Colorado, their home, when five-year-old Miles caught his foot between the bars. Just then they heard a car coming at the rate of fifty miles an hour. The combined strength of both Cranston and Miles was not sufficient to release the foot, and the little fellow's life was in the greatest peril. Cranston, who is ten years old, started down the track toward the car, waving his hands and shouting. Nearer and nearer came the car. The motorman, being used to boys who remain on the track until the car is almost upon them, paid very little attention to Cranston. But the boy would not leave the track, although the motorman blew his whistle and shouted at him. At last the motorman realized that something was wrong, and the car was brought to a stop within a few inches of the boy. They then managed to extricate the foot by removing Miles' shoe.

ROCK RIDGE SCHOOL
Wellesley Hills, Mass.

Characterized by Strength of Teachers.

The many considerations of a boy's life at school form the text of a pamphlet that has been written about this school. Though it may not influence a selection in favor of this school, it will be read with interest by all who are impressed with the equipment and methods that are essential for a thoroughly modern preparatory school.

This pamphlet, which has been prepared with care and illustrated with numerous photographic reproductions, describes both by word and picture many details of the school life as well as the advantages, natural beauty and historic interest of the school's surroundings. Sent without charge on request by postal card or otherwise. Please address

The South's Ideal College-Preparatory Home School
Georgia Military Academy
COLLEGE PARK (suburb of Atlanta), GA.

Your son's destiny is fixed as he passes from 12 to 18 years of age. The paramount question with every parent—What teachers, what companions, what environment will fully satisfy the peculiar needs of my son and insure his fullest development, social, moral, intellectual, physical? Correspondence with us will aid any parent.

In this academy every teacher is a specialist, every opportunity is afforded every boy, the full limit of attendance is reached every year. Splendid equipment, perfect health, delightful Southern winters of the famous Piedmont region, 1,300 ft above sea level. About 80 boarding pupils live with president and faculty of 10. Highest moral and social tone. Select patronage from many states. Regular military drills, good gymnasium, modern reading room, wholesome athletics under trained director, thorough preparation for any college or the national academies, bookkeeping, stenography, typewriting, manual training, music.

Col. J. C. Woodward, A. M.

Waban School SUPERIOR HOME SCHOOL Box 14 B, WABAN, MASS.
Physical, Athletic and Manual Training. Prepares for any college; advanced standing if desired. Tutoring for college if desired. SCHOOL CAMP on Maine coast. Yacht, gasoline launch and rowboats.

Tennessee, Sweetwater. Founded in 1874
TENNESSEE MILITARY INSTITUTE
On Main Line of Southern Ry., in mountains of East Tenn., THE SWITZERLAND OF AMERICA. Most charming climate, due to Southern location and Northern elevation. Boys from 14 states, N. Y. to Texas, and Mich. to Fla. Illustrated catalogue.
MAJOR O. C. HULVEY, Supt.

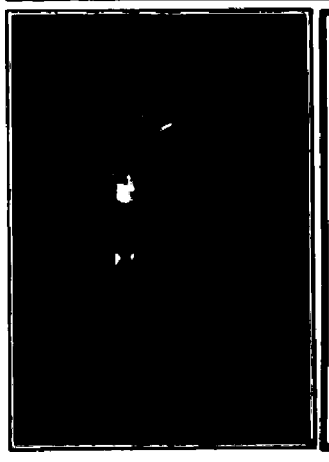
Todd Seminary for Boys
68th year. An ideal school near Chicago, where the American boy is taught how to become a good American citizen. We educate the whole boy. Send for prospectus, and come and see us.
NOBLE HILL, Prin., WOODSTOCK, ILL.

AGASSIZ HALL A school for boys among the Sierra pines. Remarkable climate. Prepares for the best colleges and universities. Boys may enter at any time. Out-Door sports. Summer Camp at Lake Tahoe. For booklets write the Headmaster,
W. W. PRICE, M. A., Alta, Cal.

LAKE FOREST ACADEMY
In Chicago's most beautiful suburb. 60 years of success in training good citizens. If you cannot visit our campus, let us send the campus to you in an attractive book of views. Address WILLIAM MATHER LEWIS, Box B, Lake Forest, Illinois.

TRAVEL SCHOOL FOR BOYS
Different itinerary each year. Round the world trip just completed. 3d year beginning Oct. 1. European countries. Usual school studies. Individual instruction. Send for prospectus. PORTER E. SARGENT, Box 24, Cambridge, Mass.

ST. CHARLES MILITARY COLLEGE ST. CHARLES, MO. Location unsurpassed. Buildings modern and newly equipped. Extraordinary advantages in Special, Graduate, and Business Courses. Faculty of 10 experienced men. Careful moral training. Oldest College West of Mississippi River. Number Limited. Prepares for active life as well as for West Point, Annapolis, or any college or university. Illustrated catalogue free. COL. GEO. W. BRUCE, A. M., Pres.

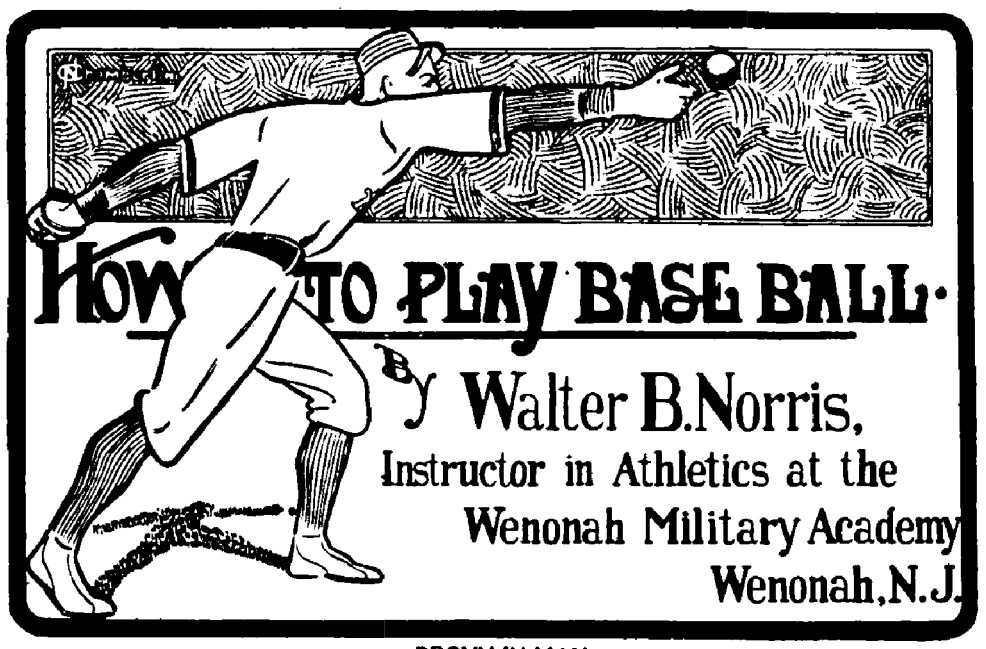


Staunton Military Academy

275 Boys from 40 States last session. Largest Private Academy in the South. Boys from 10 to 18 years old prepared for the Universities, Government Academies, or Business.

An Ideal Home School for Manly Boys.

1,600 feet above sea-level; pure, dry, bracing mountain air of the famous, proverbially healthful and beautiful Valley of the Shenandoah. Pure mineral spring waters. High moral tone. Parental discipline. Military training develops obedience, health, manly carriage. Fine, shady lawns, expensively equipped gymnasium, swimming pool and athletic park. All manly sports encouraged. Daily drills and exercises in *open air*. Boys from homes of culture and refinement only desired. Personal, individual instruction by our tutorial system. Standards and traditions high. Academy forty-six years old. New $50,000 barracks, full equipment, absolutely fire-proof. Charges $360. Handsome catalogue free. Address
CAPTAIN WM. H. KABLE, A.M., Principal, Staunton, Va.



How TO PLAY BASE BALL

By Walter B. Norris,

Instructor in Athletics at the Wenonah Military Academy

Wenonah, N.J.

BEGUN IN MAY

PART III

PLAYING THE OUTFIELD.

THE OUTFIELD presents an entirely different problem from the infield. While the infielders make a specialty of stopping the ball and of throwing to bases, the outfielder is generally chosen from the good hitters, if he is at all speedy and has a fair arm. This is because a man can learn the fielding end, but seems to need natural ability at the bat. In fact, catching the ball is the easiest part of the outfielders' work. Harder than that is the quick start which gets one to the spot where the ball is to come before the ball reaches there. Once there and waiting, it is no difficult matter to catch the ball.

Outfielders, of course, should have good arms, although a man need not be able to throw home from very far out, but should be helped by others in the throw to home plate. The best fielder in the way of covering ground should occupy center field, where he will have most to do. The weakest should be in right field. A fielder should place himself according to the batter. For a left-handed batter he should play nearer right field than for a right-handed man, who is unlikely to drive the ball toward right field. If one knows how a man bats, whether long or short, one can place himself accordingly.

Whenever a fielder sees that a ball will go over his head considerably, he should not back back, but should turn and run back, and, when he is what seems to him the right distance, he should turn and find the ball and make the catch. It takes courage sometimes to turn your back on the ball thus, but it is the only way to get one far behind you, and by practice a man can judge accurately how far to run. The other fielders should coach the runner and assist him in every way. In case the fly is far out in the field, the nearest fielder to the man receiving the ball should come in and receive the ball from him and then throw to home, as the other man is too far away to do so. On all throws to the home plate the ball should land just ahead of the pitcher's plate and bound into the catcher's hands. This prevents an overthrow, and enables the pitcher, in case he sees there is nothing to be gained by sending the ball home, to intercept it and throw to a base. On all such throws to the catcher, the first baseman should back up the catcher. In throwing home, throw as low as possible, as a high ball takes more time and is more likely to go over the mark.

In catching a high fly too many players receive it high over the head. This is all right when the ball is too high for you to reach, but it is probably safer to get the ball with the hands about the hight of the waist, letting the body serve as a sort of protection against a muff. Every boy should be able to catch in the latter fashion. The thing to avoid in the high catch is sticking the fingers straight up in the air. That means many a sore finger. Rather, bring the little finger side of the hand toward the ball, bending the hands back at the wrists. Any fielder who must catch flies looking toward the sun should wear a pair of green goggles. As soon as the fielder has the ball, he should throw. Before the ball reaches him he should decide where he needs to throw it.

Not all the balls an outfielder receives are in the air, and he should have considerable practice stopping ground balls. As many outfields are rough, so that a ball bounds irregularly, and as a passed ball on an outfielder is worth many a base, it is absolutely necessary that the fielder stop the ball. To be sure of it, do not run up much, but wait for it and follow its bounds to one side or the other. At last stop it with the body and hands. If you are sure of it, run up and so save time, but do not let it fly neatly between your legs or over your head.

On all hits to the outfield the ball should be thrown one base ahead of the runner. In other words, the outfielders never throw to first to catch a man who has just hit the ball. It is important that this be lived up to, else you will find fielders throwing all sorts of impossible balls to first, thus allowing the hitter to go to second. On a hit for one base throw to second, for two bases to third, for three bases or more to home plate.

With a man on first and a one-base hit made, throw to third. On a hit for more than one base, throw to the home plate. When a man is on second, or on first and second, and a hit to the outfield is made for one base, throw to the home plate, also for two or three-base hits under similar conditions. With all the bases full, throw to the home plate on all hits to the outfield. When men are on second and third, and a one or three-base hit is made, play the ball to the home plate. On a two-base hit, all the men on bases will probably come home anyway, so play the ball to third base to block the hitter. With a man on first and third and a one-base hit made to the outfield, play the ball to third base. On a two or three-base hit, play the ball to home plate.

All these plays suppose that the hit is not caught. If a fielder does catch the ball, men on bases are not forced to run for the next base, but must hold their base till the ball is caught. A runner, of course, when he thinks a fielder will catch a fly, will run about ten feet toward the next base and then, if the ball is caught, he can get back to his base before the ball can be thrown there to put him out. He must return there before the ball reaches there or he is out. If the ball is missed he must run, and, having already part of the distance, can make the rest before the ball reaches that base. The only exception to this is for the man on third, when less than two are out. He should stand on his base till the ball is caught or missed, and then run home if the ball cannot reach there before him. If the hit is far out the fielder should not try to catch a man on third but throw to some base.

With a man on first and a fly ball caught by an outfielder, the play is to second base to head off the man on first who runs for second after the ball is caught. In case he does not hold his base till the ball is caught, the ball is thrown to first base if there is any chance of catching him. This will be possible only when the hit was to short right field, and the base runner took considerable lead from the base. With a man on second and a fly caught, play to third base. With a man on third, play home if there is a chance of getting the runner, or to second if there is not.

With men on first and second, play to third base; with men on second and third, play home. With all the bases full, play home. When the score is tied and the runner is on third with less than two out, outfielders should not try to catch long foul flies, as the man on third will come home and score after the ball is caught but before it can be returned to the catcher. Such a catch might win the game for the opposing side.

An outfielder can be of great assistance in backing up the infield. On all hits to the first baseman, or throws to him, the right fielder should back him up. On all to the second baseman or shortstop the center fielder should do his share, especially on throws from the catcher, and the same is true of the third baseman and the left fielder. Nine times out of ten it will be unnecessary, but the tenth time is the one that decides the game. Do not be afraid of working all the time, instead of posing in the field for the benefit of the spectators. When the ball is knocked to right field, the center fielder should back up the right fielder, and should do the same for the left field. When a hit is made to center, let the fielder on that side back up the center man. A ball may bound off a man's glove and the other fielder be able to secure it, which still counts as an out.

The best way for a young player to learn to play the outfield is to practice all the parts of his work. Too often he catches flies enough, but does not have them knocked him at all times or in all places. Play your regular position and have balls knocked to you far over your head, far to one side, and far ahead of you. Do not let the batter tell to whom he is to knock the ball, but let each one be expecting it. It is also well to practice getting quick starts and sprinting short distances up to a hundred yards.

At the beginning of the season outfielders should be careful not to throw too much or too far. To keep off soreness rub with witch hazel or alcohol.

It is important to remember that a hard hit ball does not go straight. A low hard drive to center will curve up and fall quickly, while a hit over first base is likely to curve off toward the base line quite decidedly.

Baseball Advice

Here is some baseball advice from three of the great players:

Willie Keeler says: "Young players should take the most practice on fly hits that go over their heads, as they are the hardest to judge. Fielders who are adept in catching that kind are those who get into the big leagues the quickest."

Hans Wagner says: "In hitting the ball keep the arms free—don't let the forearm be stiff, nor the elbow rigid. Never take your eyes off the ball. Watch it as it comes from the pitcher's hand, and follow it as it approaches. Learn to be easy on your feet, so you can step in or out quickly to meet curves."

Art Devlin, in telling how to run bases, says: "Watch the pitcher carefully—learn his preliminary motions; the coach should keep you posted on what the first baseman is doing. When you make up your mind to try for second be ready to start on your toes, and don't be caught off your balance. Slide behind the baseman and not in front of him."

Bouncing Bubbles

Bobbie and Catherine were busy blowing soap bubbles when their big brother Reid walked in.

He watched them for a while as they blew the bubbles and let them burst on the floor. Then he said. "Let me show you two kids a trick."

While they were blowing the bubbles he brought a big Turkish towel.

"Now, take hold of the towel, one at each end," said Brother Reid, "and pull it tight between you."

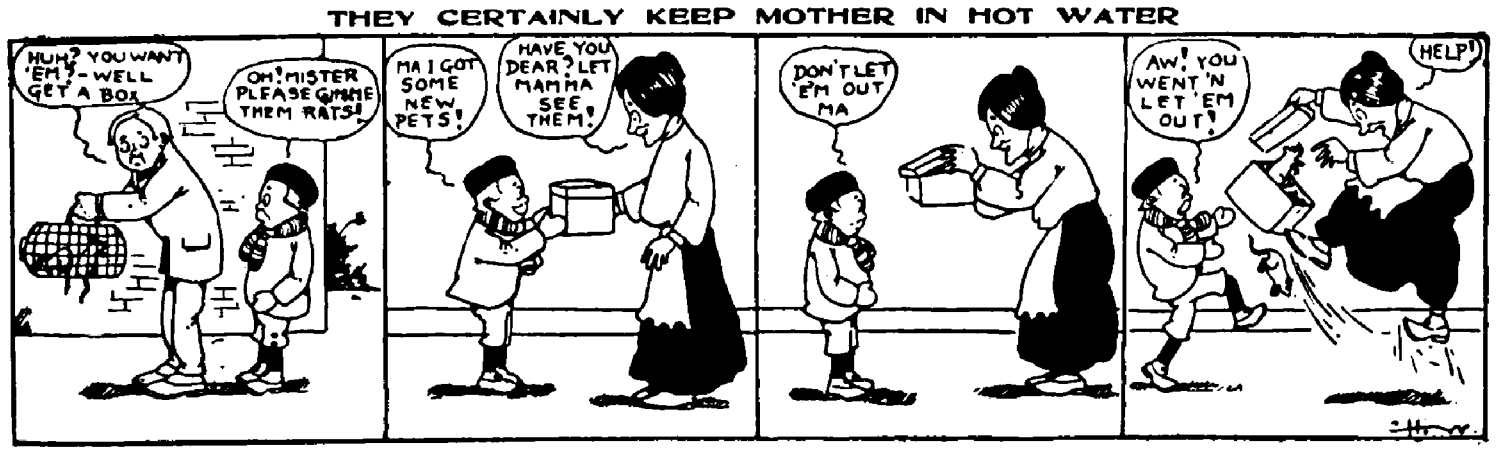
Then he dropped the bubbles upon the towel, where they rolled back and forth. "Now let the towel fall slack, then pull it tight again," said Brother Reid. This they did, and found that the bubbles bounded up into the air and slowly alighted again to be bounced up once more. Brother Reid blew more bubbles and dropped them upon the towel until it was full of bubbles, which tumbled and rolled all over each other.

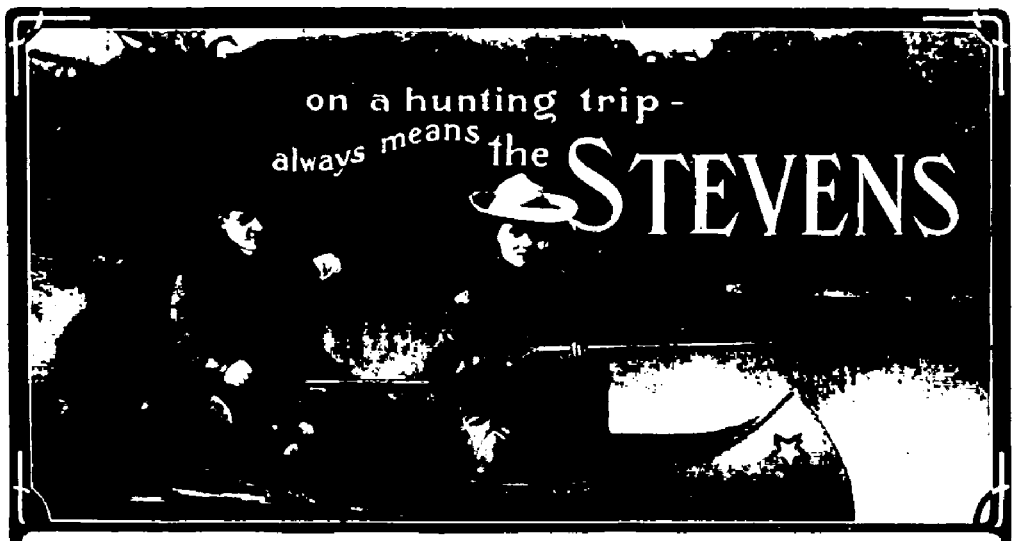
A farm boy from the little town of Conway went to the city to seek his fortune. For six months not a word was heard from him. Then one winter afternoon his father got this note:

"Dear Pa—Meet me under the old bridge tomorrow after dark. Bring with you a blanket or a suit of clothes. I have a hat."

WILLIE'S PETS

THEY CERTAINLY KEEP MOTHER IN HOT WATER





VACATION TIME suggests the "Great-Out-of-Doors"—getting near to Nature—and all its attendant pleasures. Your outing will be a complete success if you are equipped with one of our *tried* and *proved* **Rifles, Pistols or Shotguns.**

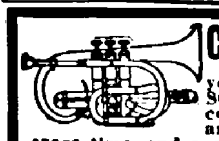
The Charles J. Godfrey Company
111 Chambers St., New York, U. S. A.

"NEW IDEA" BASE BALL CURVER

Greatest invention in base ball since the discovery of the curve. Get one now if you want to be the best pitcher of your team. It is so small the batsmen cannot see it, and they all wonder where those awful curves come from. It imparts a rapid whirling motion to the ball thus causing a wide curve. Fits either hand and does not interfere with catching or throwing. **SPECIAL OFFER.** Send us 25 cents and we will send you post paid, the New Idea Curver, with full directions, also a large 64 page book of "OUT DOOR SPORTS," containing latest playing rules for base ball. It gives illustrations showing how the ball should be held for throwing all the different curves. Special chapters on batting, base-running, fielding, etc. Also contains playing rules for foot ball, lawn tennis, polo, cricket, croquet, etc. Don't wait, be the first in your town to have one. Send a silver quarter today and we will send you the Curver and book by return mail. Address, **THE CURVER CO., Box N, Brady, Neb**

MAGIC BASE BALL CURVER

Curve pitching is made easy by its use. The pitcher who uses one can throw Large Curves and strike out the batsmen as fast as they come to bat. It is so small that the batters cannot see it and they all wonder where those Awful curves come from. With it an amateur can beat a professional. Price by mail, only 25c, 3 for 50c
H. C. Bateman, 41 STATE ST., TOWVILLE, N. Y.



CORNET GIVEN

We teach by mail and give you this beautiful cornet ABSOLUTELY FREE. The lessons come to you by mail weekly, and can be studied in your spare time, and are yours to refer to always; no knowledge of music necessary; we have hundreds of satisfied pupils from 8 to 80 years of age, from all parts of the country. Don't say you cannot learn but send for our booklet and tuition offer.
Address **INTERNATIONAL CORNET SCHOOL**
41 MUSIC HALL, BOSTON, MASS.

JOURNALISM

Bright young men and women, with a taste for writing, should cultivate it. The field of Journalism offers to ambitious students, money, fame, power. We train *by mail* to do every branch of literary work for newspaper and magazine. Write for "The How of It." Free.
SPRAGUE CORRESPONDENCE SCHOOL OF JOURNALISM,
103 Majestic Building, Detroit, Mich.

Reach

Reach trade-mark is your protection

See that it is on all sporting goods you buy. Then if they don't wear as they should, you can come back at us.

Just return the article and we will replace it and refund the money you spent in sending it to us.

Balls and bats less than $1 in price are the only articles not covered by the Reach guarantee, but everything bearing the Reach trade-mark is as good as gold and worth every cent of its cost.

Base-balls	5c to $1.50
First Basemen's Mitts	$1 to $4
Fielders' Gloves	25c to $3
Catchers' Mitts	10c to $8
Fielders' Mitts	25c to $3
Bats	5c to $1.25

If your dealer can't supply you with Reach goods, notify us and we'll see that you get them.

Button-badge free (fac simile of the Reach ball), if you write to us for the Reach catalogue.

A. J. REACH CO.,
1701 Tulip St., Philadelphia

The White Ant's Appetite

Nothing South African Kind Does Not Eat Except Metals.

"If ever a pest existed to plague the human family, white ants fill the bill," said Richard Douglas, of Bulawayo, South Africa.

"There is nothing they will not devour except corrugated iron. They will eat your shoes, your hat, your trousers, and I've had them utterly destroy a fine leather valise. An adobe hut offers no resistance to their invasion, and only hard bricks resist their attacks.

"The foundations of houses are protected with tin to keep them out. They are bred in myriads by a queen ant which is fully three inches long, and which is estimated to produce 500,000 of her progeny each day. The government offers a substantial cash bonus for each queen destroyed.

"There has as yet been found no successful method of exterminating them, although great hope is had of a new invention, a machine that will scatter fumes of sulphuric acid in the ranks of the devouring armies."—Washington Post.

A Young Experimenter

Maurice Hineline, one of our fifteen-year-old readers, is much interested in the Mechanical and Electrical Department. He is fortunate in having a well-lighted and convenient workshop in the attic of his home. This is fitted up with a switchboard that controls two motors, a miniature lamp and an electric car; an electric call bell connected with the kitchen; a 110-volt lamp circuit; a galvanometer, and other electrical devices. Maurice writes that he is now turning his attention principally to chemistry, and gives a list of chemical compounds with which he is familiar. He has made an acetylene gas machine which gives good light and heat.

Earle Woodberry sends us a picture from far-off Shanghai.

Some Interesting Facts Relating to Postage Stamps

From an article published in the New York Tribune recently, we extract the following statements that will be of more or less interest to all interested in stamp collecting:

Stamps were not in use before 1840. Before that time the postmasters in the United States in large towns and cities kept a private account with all well-known persons, and at the end of each month rendered a bill for postage.

Sir Rowland Hill, a member of the English parliament, has the distinction of introducing the postage stamp, date May 6, 1840. On that date the English government adopted the penny post system. Brazil followed England in 1843, after which came the United States in 1847, Russia in 1848, Tuscany, Belgium, and New South Wales in 1849, and other countries soon after.

In our country before 1847, and as early as 1842, certain owners of local delivery companies began to sell stamps to their customers. The first of these was the City Dispatch Post in New York. After being in the business for a few months, the proprietor sold the entire system to the United States government. Soon afterwards other cities adopted local stamps, as Baltimore, New Haven, Providence and St. Louis. The stamps of these cities were used before the government service began. They command large prices. The stamps of Millbury, Mass., command a price of $500 and upwards. The Baltimore stamp is listed at $300 to $400.

Many a bundle of letters which was carefully laid away thirty or forty years ago has, on being brought to light, brought to its owner a large sum of money. Today the traffic in old postage stamps is an important part of the world's industry, and the money invested in collections represents millions of dollars. A single stamp has brought as high as $7,500. King Edward bought a one penny 1847 Mauritius stamp, paying that sum for it. Another of these stamps sold to the German Postal Museum for $5,000. There are, so far as known, only nine two-cent British Guiana stamps issued in 1850. One recently sold for $1,710. Two of the nine are in the British Museum, two in a Paris collection, and two in a New York city collection. The two in the New York city collection were bought for about $5,000, the proceeds of the sale of the two stamps being used for the erection of a church in Guiana.

Among the private stamp collectors of the world Americans stand out quite prominently. A Mr. Duveen, of Manhattan, has a collection valued at $400,000. A Mr. Sussdorff's collection is worth $200,000. Charles Gregory, a Brooklynite, is worth $100,000 in stamps.

The finest collection of stamps in the world is owned by Count de Ferrary of Paris, and is valued at a million dollars. The Tapling collection, one of the finest in the world, now in the British Museum, is worth a million dollars. The Czar Nicholas of Russia, the Queen of Italy, and the King of Spain are all stamp students and collectors.

The Numismatic Sphinx

Milton Curtis: Your rubbing is from an ecu of France, 1726. It being holed spoils it for numismatic purposes and probably for commercial purposes as well, so notwithstanding its age it will hardly bring more than bullion value. The 1854 quarter is worth only face. Miss Helen Funston: The dollar of 1904 is worth only face value. Raymond Morgan: The silver three-cent pieces of 1851 and 1852 sell for about fifteen cents each when in good condition. Cleve Ramey: The quarter of 1872 is worth face value only. Thomas Devlin: You will not be able to get a premium on the nickel five-cent piece of 1866. Abe Stromberg: The gold dollar of 1851 is worth $1.75. Theo. Sjooldema: (1) Common Canadian half-penny token. (2) Spain, 8 maravedes 1818, worth about ten cents. Herbert Johnson: Your quarter eagle of 1839 unless in fine condition, will not bring over face value. F. C.: Your rubbing is apparently from an English shilling of George III., 1787, and if this is in silver it is worth half a dollar. Your other rubbings are from very common coins. Fred Haffner: No particular premiums on your coins. C. H. T.: The Canadian penny of 1852 is common. Your other coin is an 8 reals of Spain issued at the Mexican mint in 1797. It has no value over face. L. R. Enright: Your rubbings are from a real of Ferdinand VII., 1820 (Spain), and a Jackson token. Neither one has any particular value. Harold Stinson: Your rubbing is from a common 20 centimes of Switzerland (Helvetia). They are sold by the dealers for five cents each. Kenneth D. Clark: All dollar gold pieces now will bring at least $1.75 if they are in good condition. The $5.00 of 1882 is worth only face. Kenneth Hartman: Your rubbings are all from common coins. Don Rook: The cent of 1826 is worth ten cents. Walter Atwood: Your coin is a 120 grano of Sicily, Charles III. (1733). The fact of it being holed and in barely fair condition will bring its value down to nearly that of bullion. Willie Adams: Your 2 maravedes, 1844, of Spain, is worth ten cents. Edison Edwards: (1) Common spielmarke or play money. (2) Morocco, 3 falus, 1288 A. H., worth about ten cents. (3) Japanese cash, "Kuan yong pao tung." These are sometimes ascribed to Korea as well as Japan. They were issued in China during the period 1605-1623 for use in both of the aforesaid countries. They were struck in great quantities and are even now very common. W. E. Kennymore: Quarters of 1853 or 1856 will not bring a premium. Mrs. A. B. Phicker: Your query is elsewhere answered in this column. W. F. Z. B.: An 1856 copper cent, if in good condition, is worth ten cents. C. R. Kingsbury: The 1893 S dime is only worth face. If it was 1894 the same would bring at least $50.00. Stewart Abell: Your rubbings are very good. The coins taken from are mostly all quite common, selling at the dealers for from three to five cents each. Francis E. Bullard: The dealers would charge a quarter for an 1841 half dime. They would ask about ten cents each for the fifty and hundred dollar bills of the Confederacy, 1864 issue. Edmund Mills, Jr., and Ralph Wolfgang: Your coins are worth face value only. C. R. Brown: The cents of 1803 and 1808, if in good condition, are worth from fifty to seventy-five cents each. Arthur Whitaker: (1) Brazil, 1893, 200 reis. (2) Spain, 10 centimos, 1870. (3) Uruguay, 2 centimos, 1901. These coins sell for about ten cents each. The French coins you mention are also very common. Herbert Turner: Dollar of 1860, two dollars. Half dollars of 1824 and 1827, seventy-five cents each. The dealers would charge the same for the half dollars of 1844 and 1848. The others you mention will not bring a premium. Gerald Cronan: The 2½ cent of Columbia, ten cents. Sinaloa, 1852, ¼ real, twenty-five cents. Prince Edward's Island, 1855, half penny, ten cents. A German 20 mark coin is worth $4.75.

Stamps, Coins, and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

Stamp Inquiries

L. A.—The 6c United States Columbian issued in 1893 has the picture of Columbus welcomed at Barcelona. It is catalogued at 10c. The other stamps you describe are all common European. "Republique Francaise" being France, "Belzique" Belgium, and "Communicaciones" is found on Spanish stamps. W. G. S.—There are 14 different 1c blue U. S. stamps with the head of Franklin, not counting varieties in type or shade; but there are none 25x11 mm. O. C.—Most of the stamp dealers advertising in THE AMERICAN BOY can supply you with St. Louis stamps in quantities. The two telegraph stamps are worth about 10c each. E. L. I.—The 10c Antwerp Exhibition stamp lists at 3c cancelled. H. M.—U. S. 3c green and 2c brown stamps are not worth anything. "Magyar Kir Posta" is the inscription found on Hungarian stamps. G. F. H.—Rouletted is that method of effecting separation of stamps by means of cuts in the paper but in which no paper is removed. All of the revenue stamps issued during the Spanish-American war were rouletted. A grill is a rectangle of points impressed in the paper of the U. S. stamps issued from 1868 to 1870 and in some Peruvian stamps to prevent cancellations being removed. In the U. S. 2c green envelop of 1887 Die A has the bust pointing between the third and fourth notches of the inner oval and "G" of postage has no cross bar. In Die B the bust points between the 2nd and 3rd notches and "G" has a bar. Your 2 precancelled stamps have no value. The 1906 edition of the Standard Postage Stamp catalogue has a minute description of original and reprinted Hamburg stamps, but it is too long to quote here. If the stamp has a watermark of wavy lines it is genuine. Dan C.—Cannot locate either of the stamps you describe. The "band" stamp is not a postage stamp. O. M. L.—The 3c blue U. S. stamp with locomotive on lists 4c. What is denomination of and inscription on the revenue stamp? There are many different kinds. H. B.—There are 8 varieties of the 2c 1894-95 U. S. stamp with triangles in corners, and which require considerable skill and good eyesight to sort. Unsorted they are not worth anything, and the sorting will hardly pay for the trouble. J. E. E.—Your stamp is a French revenue used on documents. Its face value is 5 centimes, equal to 1 cent. It is very common. Mort B.—A Hungarian revenue. It has no value. H. Z. N.—A Swiss revenue. R. McM.—Probably an Austrian newspaper stamp. It is very common. C. R. P.—20c France issue of 1863; worth one cent. Harold B.—The 1c "Marquette on the Miss." and 2c "Farming in the West" are from the set issued in commemoration of the Trans-Mississippi Exposition at Omaha in 1898. The others are common foreign stamps. C. L. R.—1c Honduras officials list 2c. Escuelas and Camos are Spanish for Schools and Postage. 20c Foreign Exchange catalogues $1.00. 2c Propy blue 10c. Dan R.—1c Propy lists 5c, 1c Omaha 1c. John A.—U. S. 2c Jackson black issued in 1862 lists 6c. Helvetia-Switzerland; Natal, a British colony in South Africa; Oesten-Post, Austrian Postage; Reich-Post, Imperial Postage; Bayern-Bavaria, Deutsch Reich, German Empire, Communicaciones Letten. G. M.—Stamps impressed on checks used during the Spanish-American war have no value. There are millions of them in existence. Edwin B.—Catalogue values of stamps named are: Imp 5c certificate, 25c; 5c Express, 40c; Ppf. 2c cert. blue, 60c; 2c Play. C., blue, 25c; 3c Playing C., $6.00; 3c Teleg., 25c; 4c Prop'y, 20c; 5c Play C., 75c; 25c Life Ins., 20c; all of above can be bought for 50 to 60 per cent under above amounts. D. R. M.—See preceding answer. D. W. H.—Servia-"Ultramar" means "Beyond the Sea," and is found on the stamps used in Cuba and Porto Rico from 1868 to 1873. H. L.—No. 1, Hungarian revenue; No. 2, "Segnatasse" is found on Italian unpaid letter stamps; No. 3, Tasmania is an island south of Australia and belongs to Great Britain; Hobart is the capital. M. B. G.—German locals such as you describe are not listed in American catalogues. Most of them are of little value. E. L. B. Jr.—Description is not definite enough to give value. There are many different stamps of denomination you ask about.

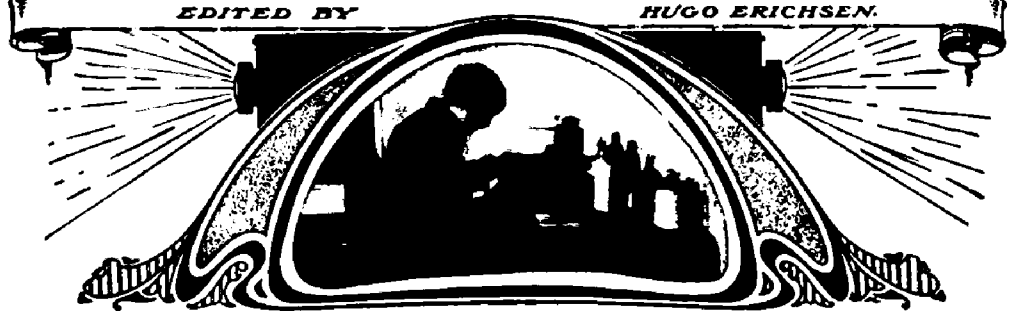
THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.



THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

Flower Photography

Those interested in the above branch of "the dark art" should not fail to procure the May issue of the Photo-Era (Boston), which devotes a number of articles and a great many fine illustrations to the subject.

member, the nearer an object is to a camera, the more time is required for exposure.

How to Copy a Picture Without a Camera

Hubert Turner, one of our subscribers in Illinois, sends us the following: "I have been a subscriber of THE AMERICAN BOY since March, but in that short time I have received much help from the Boy Photographer and I would like to help it along as much as possible. I am sending you the following directions for enlarging pictures or photographs without the use of a camera: First, get a printing-frame with a clear glass in it, then select the picture you wish to copy, which in all cases must be free from printed matter on the back. It must also be thin enough to see through. Lay the picture face upwards in the printing-frame and take into dark-room, then lay the plate film side down toward the printed side of picture. Then expose 12 seconds (more or less according to the thickness of the picture) to a 16-candle power electric light, develop in dark-room and print as usual."

"A LITTER OF BEAUTIES"
First prize photo., by Monroe Engler, Clarence, Mo.

The Prize Winners

All the information M. Engler, of Clarence, Mo., gives us in regard to "A Litter of Beauties," the winner of the first prize, is that it was taken with a No. 16 stop. The second prize picture "A Herald of Summer," by Charles K. McFarlin, of East Orange, N. J., shows a Wistaria in full bloom in the yard of a suburban home in New Jersey.

Hypo in the Developer

It has long been known that a trace of hypo added to the ferrous oxalate developer increased its action, and now no less an authority than Dr. Eder says a good word for that hitherto much abused chemical. He recommends the addition of about one-sixth of a grain to each ounce of the ordinary metol developer as tending to give greater brilliance and pluck to the negative, and says that it acts as a restrainer better than a bromide, and at the same time has considerable influence in preventing fog.—Ex.

Artists With the Camera

What is true about the man behind the gun is true about the photographer behind the camera; it makes a great deal of difference if an artist manipulates the latter. For this reason, the following, who are selected from a large number for HONORABLE MENTION this month, have every reason to be proud of the distinction: Kurt Stolberg; Leslie Smith, John E. Wood, C. H. Bennett, Harry M. Biggin, Herman Eggers, Edward H. Smith, Edwin Peterson, Clarence Steinkirchner, Jos. W. Clokey, Jas. A. Lynd, Ernest C. Kendall, B. J. Parrott, Darby Kenyon, A. B. Harrington and Chas. W. Bartlett.

X-Ray Photography

In a letter of recent date Walter E. Gee, one of our Ohio subscribers, enclosed an interesting X-ray photograph, that was taken by himself and a boy named Wade Hazeltine, with the following explanation: "We took the photograph with a machine belonging to Wade and an X-ray tube from the laboratory of the high school. The picture was taken through a book several inches thick and the coins in the pocketbook are plainly visible. Wade has lately received the patent papers for the invention of a gas-generator and feels pretty big about it, although he has not got the swelled head."

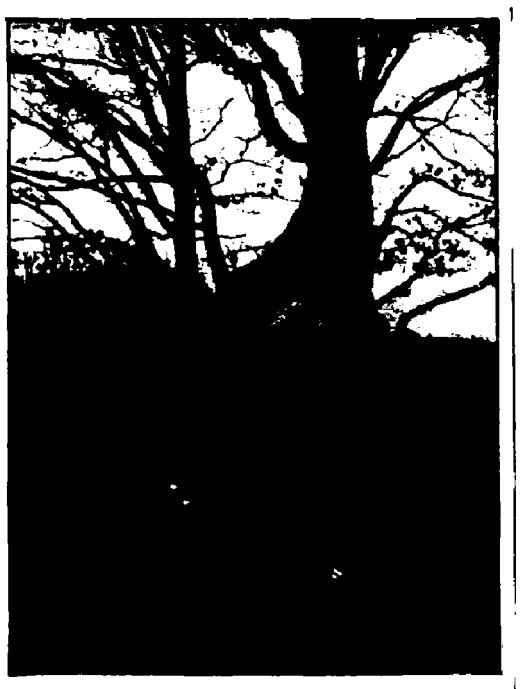
Current Comments

David Brodkey: Your photograph is evidently a copy of some picture in black and white and such copies are not admitted to our contests. In order to receive consideration, your negative must be made from nature. Ralph Pelta: Compare the size of the legs with that of the arms and you will see what is wrong with your photograph; the figures should have been taken on the same plane. H. N. Loeb: Your landscape has too much foreground, and could be very much improved by trimming. C. D. Woodcock: The films you sent us were evidently underexposed. Try again and give more time. Re-

The Letter Box

John Mullin: The smallest plate cameras, so far as the editor knows, make a 3½x3½ print. The Amateur Photographer, New York, will answer your purpose. It is cheaper to buy bromide paper than to make it yourself. Every package of the gelatine papers, to which you refer, contains formulas for toning and fixing. G. W. Hemphill: Why not make your own mounts? Perhaps you can get what you want from the Eastman Kodak Co., of Rochester, N. Y. Take your film from the developer as soon as sufficient density has been obtained. Arthur Ward: Yes, enlargements from photos submitted are eligible. Send small pictures with enlargement when entry is made. R. W. Waterbury: The contestant selects his own subjects. Graham Devoe: The periodical you name is a good one; the price does not determine its value. Herbert W. Braden: Get a copy of Alexander Black's "Photography In And Out" (Boston: Houghton, Mifflin & Co.), a cheap camera and a supply of chemicals and go to work. Take pictures for pay and, as soon as you can spare the money, buy a better camera. You will learn by experience. J. Ratts: Your trouble is probably due to an acid fixing bath; try a plain hypo solution instead. Wm. Bennett: 1. No. 2. A Rapid Rectilinear. Geo. Howard, Jr.—So far as we know, there is no way of removing the spots to which you refer. Donald Ewing—There is no limit to the number of prints that may be entered in our contests. Gerald L. Lillie—The Eastman Kodak Co., of Rochester, N. Y., makes all kinds of films and will probably be able to supply you with the unusual size you require. Chester Simpson—We would advise you to select one kind of developing solution and stick to it; you will then know exactly what it will do. As for the choice of paper, that is largely a matter of individual preference. Some only use the bromide papers, others do all their "printing" with the so-called P. O. P. (which means printing out paper), and a few use both. Try a few of both kinds and select the best. Wm. Carlin—The print is what we want, preferably unmounted. P. W. Nelles—Prints made with any kind of a camera are admitted to our regular contests. Henry Ingraham—Photograph, to which your letter referred, was not enclosed.

SENATOR CHAUNCEY M. DEPEW'S PET CAT



A PECULIAR TREE

Clarence E. Kintigh, Irwin, Pennsylvania, sends a photograph of a peculiar tree. The tree grows in Westmoreland County, Pennsylvania. It appears to have two trunks, which join as shown in the picture. The tree is supposed to be about seventy years old.

Very Sick Boy

Mark Twain, on his last visit to his birthplace, Hannibal, Mo., told to the school children a true story about a schoolboy.

"This boy," he said, "awoke one morning very ill. His groans alarmed the household. The doctor was sent for and came post haste.

"'Well,' said the doctor as he entered the sick room, 'what is the trouble?'

"'A pain in my side,' said the boy.

"'Any pain in the head?'

"'Yes, sir.'

"'Is the right hand stiff?'

"'A little.'

"'How about the right foot?'

"'That's stiff, too.'

"The doctor winked at the boy's mother.

"'Well,' he said, 'you're pretty sick. But you'll be able to go to school on Monday. Let me see, today is Saturday and—'

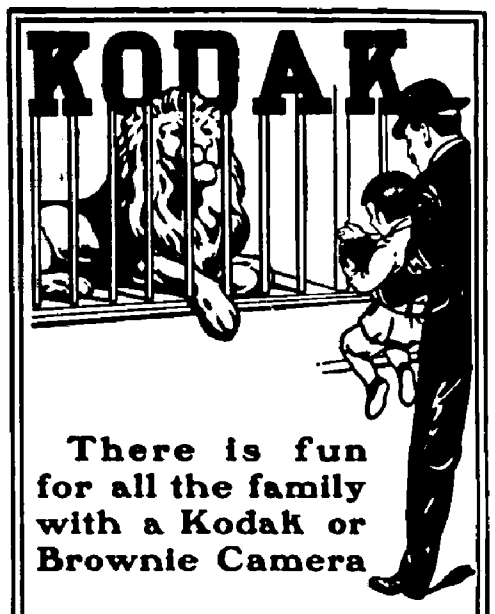
"'Is today Saturday?' said the boy in a vexed tone. 'I thought it was Friday.'

"Half an hour later that boy declared himself healed and got up. Then they packed him off to school, for it was Friday, after all."—Philadelphia Record.

RENEW PROMPTLY

If your subscription has expired, please renew promptly. You will thereby confer a favor on the publishers.

KODAK



There is fun for all the family with a Kodak or Brownie Camera

The New Kodak Catalogue, free at the dealers or by mail, tells all about the goods and explains how the dark-room has been done away with. Write for catalogue and if there is no dealer in your town let us know and we will give you the name and address of one in your locality. If you use a film camera there is no trouble about getting all of your supplies by mail at slight cost.

Photography is inexpensive now-a-days; it is interesting and educational *if you start right*. We will be glad to furnish you with printed matter, or take up the question of your wants by correspondence.

Brownies, $1 to $9. Kodaks, $5 and upward.
EASTMAN KODAK CO.
Rochester, N. Y.

BOYS
BUY A NAIL CLIPPER

for your Mother and Sister. The 91 **Red Devil** clipper will clean, shape, trim the nails perfectly; also remove hang nails. Easily operated and will not injure the flesh.
PRICE ONLY 25c EACH.
Postage Paid.
20c and this ad. will get the clipper.

The Best Nail Clipper in the World.
SMITH & HEMENWAY CO., 108-110 Duane St., New York

American Boy Correspondence Clubs

BOYS, do you want to correspond with other boys regarding your hobbies? If so, enroll in one or more of THE AMERICAN BOY CORRESPONDENCE CLUBS. For fifty cents a year we will enter your name in any one of these clubs and send you on the first of every month, for 12 months, the names of the members of that club as fast as they join it. A boy can join more than one club on the payment of the fifty-cent fee for each. This fee is all used by us in expenses attending the sending of the lists every month and keeping the records In sending in your fee give us your age, for we do not want the boys corresponding with men, boys alone being members. The following are the clubs. Which one do you want to join?

THE ELECTRICAL CORRESPONDENCE CLUB. This club is composed of boys interested in electricity in all its various workings, and correspondence may relate to any matter in which electricity plays a part.

THE MECHANICAL CORRESPONDENCE CLUB. This club covers all subjects embraced under the term Mechanics. Correspondence will relate to machines and machinery.

THE STAMP CORRESPONDENCE CLUB. As indicated by the name, boys interested in stamp collecting, exchanging of stamps, and the study of stamps in general become members of this club.

THE LITERARY AND EDUCATIONAL CORRESPONDENCE CLUB. Thousands of boys with a love for reading or a desire for an education are so situated that the getting of good reading matter and the obtaining of an education is difficult. Many helpful suggestions from one boy to another can be given in such a club.

THE CURIO CORRESPONDENCE CLUB. All boys interested in curios and the collecting of rare articles such as Indian, Japanese and Mexican things of interest and rare value group themselves under this club name. Boys who collect various kinds of ore, minerals, etc., are included.

THE AMATEUR JOURNALISTS' CORRESPONDENCE CLUB. This club affords an opportunity for all boys interested in printing and journalism to correspond with one another, exchanging their papers and products and coming into friendly competition and a helpful relation.

THE AMATEUR PHOTOGRAPHERS' CORRESPONDENCE CLUB. Boys interested in photography are invited to associate themselves under this name. No club can be of more advantage to its members than this one, as the members can exchange interesting photographs. A boy may learn by comparison of his own work with that of his fellows wherein he is deficient.

THE AMATEUR ARTISTS' CORRESPONDENCE CLUB. All boys interested in drawing, painting, sculpture and kindred arts are invited to join this club and, by correspondence with one another and mutual exchange of samples of work and mutual criticism, assist one another.

THE INTERNATIONAL CORRESPONDENCE CLUB. Boys residing in every part of the world, desirous of corresponding with boys living in other countries than their own, are, through the medium of this club, enabled to obtain correspondents. It must not be forgoten that THE AMERICAN BOY circulates in every country on the globe. Few things could be more pleasurable or profitable to an American boy than corresponding with a boy in some foreign country.

THE YOUNG FARMERS' CORRESPONDENCE CLUB. Boys on farms, young gardeners, and florists, will find great benefit from correspondence with other boys in like situations in other parts of the country, comparing notes as to varieties of seeds, crops, etc.

THE YOUNG HUNTERS' CORRESPONDENCE CLUB. All boys interested in hunting, and desirous of corresponding with boys about hunting will find much pleasure and profit in corre pondence to be had through membership in this club.

THE POULTRY AND PET STOCK CORRESPONDENCE CLUB. In joining this club, boys are requested to state in what sort of stock they are interested, whether poultry, bees, dogs, rabbits, or other animals.

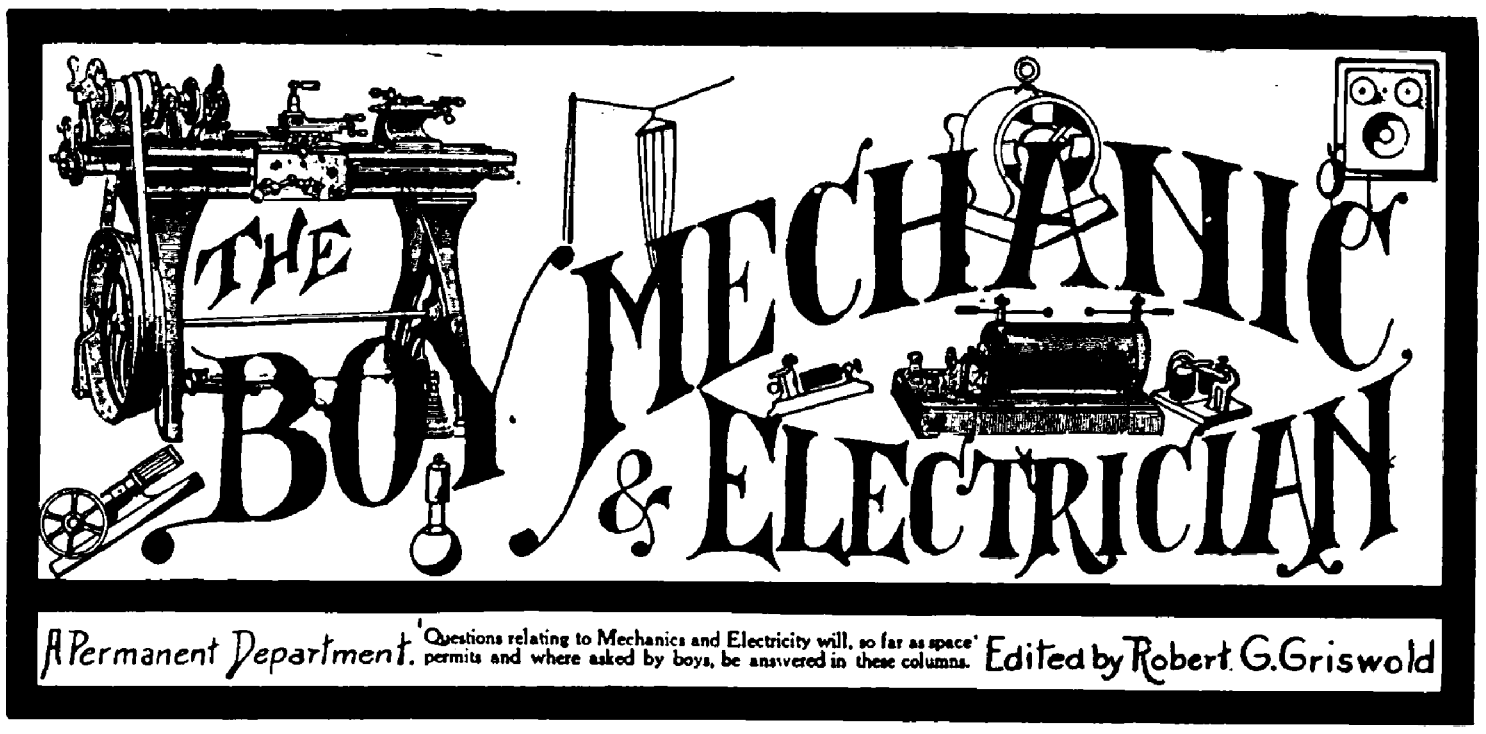
THE COIN CORRESPONDENCE CLUB. Boys interested in exchanging coins, and the buying or selling of rare coins, and desirous of exchanging experience and asking questions, etc., regarding coins, come into correspondence under this club name.

THE "HOW I MAKE MONEY" CORRESPONDENCE CLUB This club gives boys the opportunity to correspond with other boys on the subject of money making and saving. Many boys by employing spare moments are earning and saving money and would be glad to tell other boys how to go about it.

THE BOY NATURALISTS' CORRESPONDENCE CLUB. Under this head boys may write one another about animal and vegetable life, fossils, minerals, etc. A comparison of notes by boys in various parts of the earth should prove very interesting and profitable.

THE BOY MUSICIANS' CORRESPONDENCE CLUB. This is a club for boys who want to write about their music. State what instrument you are interested in, or whether it is vocal music.

BOYS' SOUVENIR POST CARD CORRESPONDENCE CLUB. This club enables boys to write each other on the subject of souvenir post cards, which have become quite a fad among the young people, and to exchange such cards.



Chemistry For Boys

Lesson III.—Hydrogen—Concluded

IN CONCLUSION it may be well for us to consider at greater length the compound of hydrogen and oxygen, namely water. There are many interesting facts regarding the properties of water which it will be well for us to know before proceeding further with our studies.

It is known to all of us, perhaps, as the fluid most necessary to sustain life. But aside from this, water is an almost universal solvent; that is, it will dissolve almost every known substance in

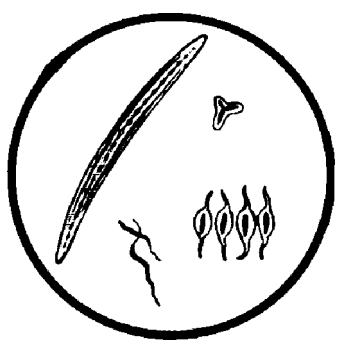


Fig. 1. The field of a microscope showing little forms of life, known as animalculae, in water

greater or less proportions. It is for this reason that pure water does not occur in nature. Perhaps the purest form would be that derived from melted snow flakes, but during their passage through the air they come in contact with particles of dust floating therein, and thus become contaminated. There are also many noxious gases which are present in the air and these are absorbed by the snow flake during its downward passage. The water of Lake Superior is very nearly pure, in fact, perhaps as pure as any body of water to be found in nature. The bed of the lake is composed of old, Azoic rocks, which are practically insoluable and for this reason the water does not pick up substances from the lake bed. This lake is fed for the most part by melting snow and ice, and rain.

The water of the sea, with which we are more or less familiar, and which impresses us as being particularly bitter in taste, contains in solution, almost every known substance. Minute chemical analysis shows that even gold is dissolved by the sea water, to a small extent. The rivers and their tributaries from every part of the world are constantly emptying into the ocean the soluble material that they have picked up, during their course. All of this tends to make up a very complex solution and the currents traveling from one side of the world to the other thoroughly mix the solution into one having almost a universally similar formula.

Water is capable of expansion and contraction with varying degrees of heat the same as several substances. It does, however, arrive at its maximum density at four degrees Centigrade, or forty degrees Fahrenheit. Any variation of temperature, either above or below, will cause the water to again expand. This is the reason why any vessel which is filled with water and allowed to freeze will burst, if there is no escape for the water from the vessel, or no means whereby the pressure of the expanding

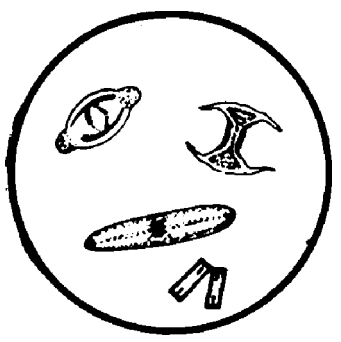

Fig. 2. Other forms of lower animal life in water

fluid can relieve itself. The force exerted is almost irresistible, and freezing water will readily burst asunder strong iron tanks or heavy iron shells.

This is one of the most powerful agents in nature for disintegrating and breaking up rock formations. If we will take the trouble to notice the smooth face of some rocky precipice during the fall and preserve a good mental picture of its condition, and then examine the same the following spring after the frosts have gotten out of the rock, we will find that the surface has been broken into thousands of pieces which have fallen off and lie at the base of the rock. This action is due to the freezing of the water that has crept in between the layers of rock, the expansion of which has split the small particles of rock off, and as soon as the temperature was sufficient to melt the ice, they have dropped away. This process has been going on for ages and has resulted in loosening and breaking up thousands of tons of rock.

The fact that water does expand at a temperature lower than forty degrees is a most fortunate provision, for otherwise ice would not float on top of our rivers and lakes. If the contraction continued below this temperature, when it arrived at thirty-two degrees, or freezing, the ice would be heavier than the surrounding water, and it would consequently sink, and our rivers and lakes would thus become frozen solid to the bottom. If a hole is dug in the ice at any time during the winter period and a thermometer is placed therein, it will be found to register about forty degrees at almost any depth. This constant temperature is preserved owing to the fact that the water, in order to freeze, must give up all its latent heat, and requires considerable time. Furthermore heat is constantly being absorbed from the earth. Were our rivers to freeze solid to their beds, the hottest summer would not be sufficient to thaw them out and plants and animals would soon be deprived of their life-giving moisture and would die. The earth itself would become uninhabitable.

It is well for us all to appreciate the value of pure water for drinking purposes. Since water is such a universal solvent it is apt to, and does, contain many organic and inorganic impurities. Many of these are injurious to our health and give rise to such diseases as typhoid fever. Water that flows over decaying vegetation will often be highly colored and will have a bad taste. Such water should not be taken into the

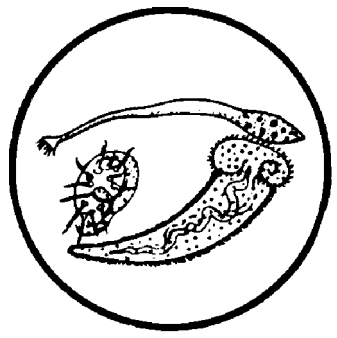

Fig. 3. Lower forms of plant life in water

system. Again there are cases where animals have, of their own volition, entered some pool or source of drinking supply, and died or have been thrown there after death by careless people, when the decaying body poisoned the water to such an extent that it caused some terrible disease. We have more to fear from the organic matters which would be formed by decaying vegetation and animal matter than we have from the inorganic substances, such as rocks, earth and mineral salts, for there are very few of these which are injurious to the human body unless taken in large quantities.

But it will be well for us to know of a few simple tests that we may apply to our drinking water in order to determine its purity, and for this reason the following experimental tests are given.

A tall glass jar is filled with the water to be tested and a few drops of sulphuric acid are added and the solution stirred. Then a few drops of a solution of potassium permanganate in water are added until the whole assumes a deep purplish tint. Stand the jar in a warm place for an hour or two, when, if any organic matter is present, these impurities will decolorize the solution. If the water is pure it will still retain its purplish tint. Another test when a great deal of poisonous matter is contained is to fill a tightly stoppered bottle full of the water and set in a warm place for a few days. If, when the stopper is taken out, an offensive odor is given off, this indicates that considerable quantities of organic matter are present and the water should be avoided, as it is very dangerous to drink.

A good charcoal filter will remove small amounts of organic matter, but cannot be depended upon to purify the water entirely, because if matter is filtered out it remains in the bed of charcoal and all subsequent water must pass over it.

One of the most suspicious elements to be found in drinking water is chlorine, as its presence indicates that it has passed through earth containing decaying vegetable or animal matter, as sewage water contains chlorine in considerable quantities. It may give rise to the opinion that a leak exists from some drainage system to the well or source of supply. This however does not apply in the case of salt wells located near the ocean, but this can be found only very near the sea, so the test will apply for almost every case. Take a quart of the water to be tested and boil it until it has been reduced to about one pint, and acidulate with just a few drops of nitric acid. Then add a few drops of a solution of silver nitrate. If a white precipitate is formed which falls to the bottom, and, after pouring off the solution, this precipitate is soluble in ammonia and insoluble in nitric acid, chlorine is present and the water should be looked upon with suspicion. There are several other tests which would be very interesting to make, but owing to the fact that we have not gone far enough in our studies to properly perform these, we will leave them until another time.

Aside from impurities in solution, water very frequently carries in suspension, animalculae, or little animals and insects. Very frequently some of these cause serious disorders in the system. On the other hand, do not be alarmed when you are told that all water contains some form of life, because water that will not support these forms of life is unfit to drink. Under the microscope thousands of these wriggling, squirming little animals can be seen, but they do not, in any way, affect the purity of the water for our use.

Strictly pure water may be obtained by distillation, but it is most unpalatable, and very few of us would care to drink it as a steady diet.

QUERY BOX

Q. Will you please tell me whether you are going to publish any more lessons on Magnetism and Electricity in THE AMERICAN BOY?—E. J. Lakewood, N. J.

A. The lessons on Magnetism and Electricity will be continued from time to time. It is our endeavor to make this department a little more versatile, owing to the many requirements of our readers.

Q. I would like to know the use of a spark coil in a gasoline engine. Would a solid plunger made of good Babbitt metal and a cylinder made of brass, work successfully for a gasoline engine?—D. G., Red Hook, N. Y.

Ans.—A spark coil is used to ignite a charge of gasoline vapor and air in the engine cylinder. We doubt very much if you would have success with an engine built as you describe. A plunger made of Babbitt metal would be very apt to melt under the high temperature of explosion. Brass does not make a good cylinder as it is too soft and wears very quickly.

Q. How is the Massie coherer made? How is the electrolytic coherer made? How far would a one-inch spark coil send messages having an aerial wire about three feet above a thirty-foot house, with other houses and trees between the two stations?—J. P., Buffalo, N. Y.

A. One type of Massie coherer is composed of two carbon plates with a superimposed steel needle, which is held in place by a magnet. The electrolytic coherer consists of a very thin platinum wire dipping into a solution of special composition contained in a carbon cup. A one-inch spark coil would, perhaps, if sufficient batteries were used, send a message for a distance of half a mile, but not knowing the conditions or the sensitiveness of your receiving apparatus, it would be difficult to answer correctly. In all probability you would have to do a great deal of experimenting.

Q. What size wire should be used for rewinding the armature of a six-bar (18 magnets) telephone generator? Will a telegraph instrument, wound to 4 ohms' resistance, work up to a distance of one-fourth of a mile? If so, how many dry batteries will it take?—F. Mc K., Vernon, Texas.

A. You do not give sufficient information for us to know what current you wish to derive and without this information it would be impossible to answer your question. Your telegraph instrument should work over a distance of a quarter of a mile, but the resistance of the instrument is rather low and would require a great many cells of dry battery to operate it efficiently.

Q. What is the difference between magnetic wire and other wire and how can one tell the difference between them? Can a medical battery be used for anything else? Can any wire, other than copper, be used for experiments. If not, why?—D. De B., Rochester, N. Y.

A. We are not familiar with any wire known as magnetic wire, and it must be that you have misunderstood the term. A medical battery, that is, if you refer to the battery proper, can be used in any place where the general type of batteries are used. Any kind of wire can be used for experiments, but copper wire is generally used, owing to the readiness with which it bends, to its high conductivity, and more especially, owing to the fact that it is more easily obtained.

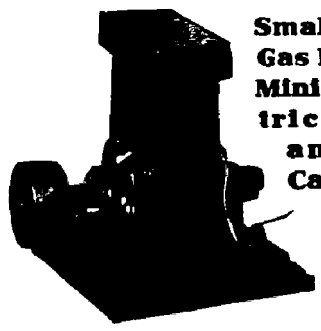
Q. Could the primary of an induction coil be made of No. 18 wire and would No. 23 do for the secondary? Is the secondary wound in the same direction as the primary?—E. L. W., Westport, Conn.

A. No. 18 will do for the primary but No. 23 is too large for the secondary. You should use at least No. 36. The secondary may be wound in the same direction as the primary.

Q. Instead of using sheets of tin in the armature and field, could you make castings out of babbitt metal, in the motor described in March, 1905? If babbitt metal will not do, is there any other metal that is easy to melt that would?—S. W., Sioux Falls, S. Dakota.

A. No, the fields and armature cannot be made of babbitt metal, as that is not magnetic. The field and armature must be made of iron or steel.

ELECTRIC SCIENTIFIC NOVELTIES



Small Dynamos, Gas Engines and Miniature Electric Railroads and Trolley Cars.

Our Catalogue "B" contains much of interest to young electricians.

THE CARLISLE & FINCH CO.
240 E. Clifton Ave. Cincinnati, O.

Wireless Telegraph: "Telimco No. 2," complete experimental outfit, comprising one inch spark coil, Balls, Key, 75 ohm Relay, Coherer with autom. Decoherer, 5 cells Battery, Wiring, Connections, instructions, diagrams, etc. Will work up to a mile. Price $15.50. Agents wanted. New catalog of European and Amer. Elec. novelties. Electro Importing Co., 87 Warren St., New York

Engineering TAUGHT BY CORRESPONDENCE

Our system of training by mail has helped thousands held down in poor positions to rise to better salaries and situations. Your chance to rise is just as good as others. Write for our free book, "How to Become an Electrical, Mechanical or Steam Engineer." We teach by mail Electrical Engineering, Mechanical Engineering, Steam Engineering, Mechanical Drawing, Electric Lighting, Electric Railways. 2 LONG DISTANCE NEIGHBORHOOD TELEPHONES

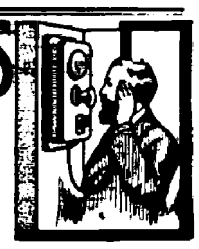
With complete terminal equipment including batteries. Practical for houses and distant buildings, factories, stores or offices. Guaranteed to be electrically and mechanically perfect or money refunded. These telephones are thoroughly reliable and durable. No experience is required for installing and testing as full directions are sent with each pair of telephones. SHIPPED PREPAID ON RECEIPT OF $7.00. Catalogue free. Best quality in everything electrical. References: Union Trust Co., or any Express Company in Chicago. Ready Appliance Electrical Co., 86 Randolph Street, Chicago, Ill.



WORKSHOP NOTES

Under This Heading Will be Given Various Useful Schemes and Formulas That Will Materially Assist the Amateur in his Experimental Work

1. **Soldering Acid.** For use in soldering iron and steel, tinned iron, copper, brass and zinc. Place in a bottle a mixture of equal parts of water and muriatic acid (hydrochloric acid) and drop in several pieces of zinc until the solution will dissolve no more. Make a small swab of a piece of flannel and fasten to the end of a copper wire driven into the cork. The swab should not touch the bottom of the bottle. After straining the solution through a cloth, replace in the bottle, insert the cork and set away for future use. When a joint is to be soldered just touch it with the wet swab and the solder will flow very readily. This acid makes a very much cleaner job than resin.

2. **To solder lead, or lead and tin pipes.** Scrape the surfaces until clean and bright and apply a thin coating of tallow for lead, or resin and sweet oil for tin pipes. Care must be exercised not to have the soldering copper too hot, as it will readily melt through the pipe wall.

3. **To drive screws into hard wood.** Soft brass and iron screws may be readily driven into hard woods such as oak, ash, cherry and maple by first drilling a small hole and coating the screw with beeswax, by pushing it into a lump of the wax. A paraffin candle will also work well in place of the beeswax.

4. **To sharpen old files.** After files have been used for some time they become too dull to cut well, and they may be resharpened by chemical means so that they will again render good service. The files are first boiled in a strong solution of lye or soda, to remove all the grease and oil, a small brush being useful in removing the particles that do not drop off at once. The files are then washed with clean water and immediately dipped into a solution composed of nitric acid one part, water four parts. They are allowed to remain in this acid until it eats away the surfaces of the teeth, rendering them sharp. Fine files require much less time than coarse ones. After the desired action has taken place the files are removed, dried quickly and brushed over with a thin oil to prevent rusting.

5. **Quick cutting mixture for oil-stones.** Do not use a heavy oil on an oil-stone. It fills up the pores and the steel then glides over the surface without being ground by the stone. The following mixture is excellent and gives great keenness to the stone, keeping the pores clear and open. Light machine or sweet oil, four parts; turpentine, five parts; coal-oil, one part. Wipe the stone thoroughly after each using. A good Arkansas stone will last for years without gumming if this mixture is used, and remain very sharp. (Sharpness refers to the cutting qualities of the stone.)

Prize Winners

But one of the three puzzles that appeared on page 222 of our May number was solved by our readers. The "Picture Proverb" was solved first by Charles S. Burlingham, Jr., 1746 Park avenue, Baltimore, Maryland. Solution. "Well begun is half done."

The solution to "How Many Ways" is as follows:

A to D, 1148 different ways; B to C, 1048 different ways. The method for solving this class of puzzles was fully explained in the March, 1905, number.

The solution of "What Is Wrong" is as follows:

One—Spiders descend or ascend feet uppermost.

Two—Spiders have eight legs, not six.

Three—Because it drops a line by every post.

The puzzle "Can You Decipher This" which appeared in our June number, was answered correctly by several hundred boys. The first correct solution was received from DeWit Inman, 1910 Harmon avenue, Zion City, Ill., and he receives the prize.

A Word to Boys who Send us Puzzles, &c.

If the boys who send us conundrums, puzzles, jokes, etc., do not find them in the pages of THE AMERICAN BOY, after a reasonable time, they will understand that we consider what has been sent as not suited to our pages or too old to be used.

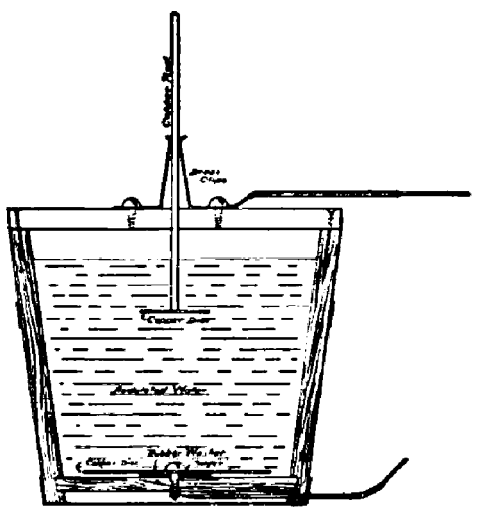
Experimental Lessons in Electricity—Lesson XI.

HOW TO MAKE A RHEOSTAT.

A rheostat, frequently called a resistance box, is to an electric circuit what a valve is to a steam or water line. It is used to regulate the flow of the electric current, which it does in exactly the same manner as a valve. When we close a valve part way the opening in the pipe is partially closed, and, since the pressure on the steam or water does not alter, less will pass through the smaller opening, owing to the increase of resistance to its flow. Therefore, if we place some instrument in an electrical circuit whereby we may readily vary the amount of resistance through which the current is flowing, a greater or lesser current may be obtained for any experimental purpose.

The construction of a rheostat is very simple and two forms will be described. The cheapest form may be described as a water rheostat and is shown in Fig. 1. Procure a small wooden pail such as usually sold for toys at the seashore or toy stores. A small wooden bucket will do if the pail cannot be secured, but it must be of wood or some non-conducting material—metal would not do. Dry it thoroughly in an oven and drive the hoops on so as to draw the staves together tightly. Then give the inside a good coat of melted paraffine, so as to make the wood impervious to moisture.

Cut two discs from sheet copper, one and three inches in diameter respectively. Clean the discs thoroughly by scouring with emery cloth. Fasten the larger disc to the bottom of the pail by a one inch, round headed brass wood-screw passing through the bottom. Place a rubber washer, cut from an old gum shoe or boot, between the disc and bottom before the screw is driven in, to prevent the acidulated water from attacking the screw. Then with a soldering iron drop some solder over the screw head, making a good contact with the copper disc. A little soldering acid will make the solder flow and unite with the two metals. (The soldering acid is described under the new heading "Workshop Notes," begun in this issue.)



Then solder the one inch disc to a straight copper or brass wire about No. 10 B. W. G., and eight or ten inches long—at least three inches longer than the pail is deep. Make a wood support long enough to reach across the top of the pail and drill a hole in the centre large enough to let the wire slide through. Bend two pieces of spring brass to the shape shown and fasten by screws so that the free ends grip the rod and hold it in position, also forming a sliding connector. The wire leading from the top should be soldered to both clips, thus reducing the resistance of this contact. The rod is pushed through the hole and the wood strip nailed to the pail.

A solution is then made to fill the pail to within about an inch of the top, composed of twenty parts water and one part sulphuric acid. The acid renders the water a conductor.

When the upper disc is withdrawn from the solution, the circuit is broken, but as it is pushed down towards the bottom, the resistance of the water gradually decreases until the two discs come in contact. Thus the quantity of current is readily regulated from nearly zero to full strength. The less acid mixed with the water the greater will be its resistance as pure water is not a very good conductor.

This is a very cheap rheostat and readily built at home in a short time. It is adjusted within great limits and has a large capacity, and if a heavy current was pressing, the heat generated would be readily absorbed by the solution. The acid will not attack the copper and if well made, it will last a long while.

Why I am Proud of My State

The prize of $5 goes to Charles S. Sykes, Richford, Vermont, whose essay appears on this page. The boys deserving honorable mention are Horace A. Colburn, Rutland; H. M. Boyd, Wilmington; Howard Mandigo, Richford, and O. S. Smithers, Waterbury.

Other boys who wrote good essays are the following named: Rodney Babcock, Ernest R. Harvey, J. Randall Norton, Thomas Ripley Dorr, David W. Howe, George Aiken, Fred W. Davis, Irving W. Eastman, Clarence St. Louis, E. Ernest Luther, Fred C. Smith, Clayton E. Fisher, and Charlie Merriam.

The following are some of the reasons Vermont boys gave for being proud of their state:

The first steamboat was built and launched by Robert Morey on a lake in Orange county that now bears his name. This boat was sunk in the lake by unknown parties who were jealous of Morey's invention, and it has never been found, although an attempt was made to secure it for exhibition at the World's Fair in Chicago. There are eighteen peaks in the Green Mountains, ranging from 3,500 to 4,279 feet high, Mt. Mansfield being the highest. The deepest marble quarries in the world are situated at West Rutland, and five-sevenths of the marble used in the United States is furnished by Vermont. Lakes Bomoseen, St. Catherine, and Dunmore, situated wholly in the state, and Lake Champlain, bordering on the western side, have many beautiful summer resorts. The chief colleges are the University of Vermont and Middlebury College. Senator Redfield Proctor, born in Proctor, Vermont, has now the largest marble business in the world. Carrol S. Page of Hyde Park, who started as a boy dealing in calf skins, is now the largest dealer in hides in the world. Sir Thaddeus Fairbanks, the only man from Vermont who was knighted, invented the Fairbanks scales, and gave a splendid academy to the town of St. Johnsbury. Julia R. Dorr, a Vermont woman, wrote the famous poem "Gettysburg." Norwich University, now at Northfield, furnished more men during the Civil War than any other college except Crown Point. Vermont furnished for the Civil War over 35,000 men, and according to the report of the War Department the total loss, in proportion to the number in the service, was more than that of any other state excepting Pennsylvania. Vermont gave $10,000,000 towards war expenses. Captain Charles Clark, in the Spanish-American War, brought the Oregon from San Francisco to the Atlantic in sixty-six days and joined Sampson's fleet before Santiago. Great quantities of Morgan horses and merino sheep are shipped from Vermont each year. The best milk in the Boston and New York markets comes from Vermont. The first blood of the Revolution was shed at Westminster, when William French was killed by the Tories. No Vermont colors were taken in battle during the Civil War. Vermont is free from graft, and has no state debt. General Sheridan said of the Vermont troops in the Civil War: "I have never commanded troops in whom I had more confidence than I had in the Vermont soldiers; and I do not know but that I can say I never commanded troops in whom I had as much confidence as in those of this gallant state." Few states in the Union surpass Vermont in beauty. From the summit of Mt. Killington the whole state, and even Mt. Washington can be seen on clear days. Public libraries are established in almost every town. One-third of all the maple sugar produced in the country comes from Vermont. Thirty scholarships are given each year by the state to needy students who wish to enter college. During the Revolution the "Green Mountain Boys," under Colonel Starke, defeated the British with great loss, preparing the way for their final downfall at Saratoga. Vermont has water connection with New York by Lake Champlain and a canal which joins the lake and the Hudson river. Vermont has 49 national banks, 40 savings banks, 7 fire, and 3 life insurance companies. Burlington, the largest city in the state, has been called the most beautiful city in the Union. Large and small game are found in the forests, and trout and other fish in the lakes and rivers. The yearly crop of hay exceeds 1,000,000 tons, valued at $11,000,000. The schools are supported by a direct tax, and education is compulsory.

The Vermont poet, Saxe, once said that the state is famous for four things, its men, women, maple sugar, and horses.

"The first are strong,
The last are fleet,
The second and third exceedingly sweet,
And all are extremely hard to beat."

One boy says: "Hail, my Green Mountain State! Though small on the map, if thou wert ironed out, thou wouldst appear as large as some of thy sister states."

We must congratulate the Vermont boys on the neat appearance of their essays, and the almost universally good penmanship displayed.

WHY I AM PROUD OF VERMONT

Prize Essay by Charles S. Sykes, Richford, Vermont

I am proud of Vermont, the first state to be admitted into the Union under the Constitution, because of her beautiful hills and Green Mountains, and I am proud that she was named for these mountains.

Vermonters have always valued liberty highly. Between 1720 and 1775 there were many disputes between Massachusetts, New York, and New Hampshire, regarding parts of the territory which now constitutes our state, but which was then known as the "New Hampshire Grants." The settlers of these grants fought bravely for their rights, and remained practically independent, although nominally under the jurisdiction of New York.

Both the regular troops and the volunteers from this state did excellent service during the Revolutionary War, and were honorably discharged. In 1775 Ethan Allen, with less than one hundred "Green Mountain Boys," captured Fort Ticonderoga, and secured the supplies and ammunition so much needed by the Continental troops. Two years later, Seth Warner, with the Vermont soldiers, aided the New Hampshire and Massachusetts forces in checking the British advance in the Battle of Bennington, thus preparing for the decisive victory at Saratoga.

Vermont's soldiers fought bravely in the War of 1812, and in the Civil War she furnished more troops in proportion to her population than any other state. The manner in which they fought for the preservation of the Union is made clear by the words which General Sedgwick uttered at Gettysburg:

"Put the Vermonters ahead and keep the column well closed up."

Two of the most prominent and bravest men in the Spanish-American War, Admiral Dewey, the hero of Manila, and Clark, the captain who took the Oregon halfway around the world to join the fleet at Santiago, were born and educated in this state.

As an agricultural state Vermont ranks high, producing excellent butter, cheese, beef, pork, and poultry, and without question more and better maple sugar than any other state. The Morgan horses, famed for their beauty and speed, originated here, and it is here that the best are still bred.

Vermont possesses one of the largest creameries in the world, located at St. Albans, one of the principal lumber marts of the country, best marble quarries, and plentiful supplies of slate. Her forests contain abundant lumber, including the finest quality of spruce and rock maple. She also turns out many finished products, among which are the Fairbanks scales, the standard of the world.

At an early date Vermont began to provide for the education of her youth, and few states have a better public school system. Two colleges and three academies were founded more than a century ago, and now a good education is within the reach of every one.

I am proud of the high character of Vermont men as shown both by those who fill positions of honor at home and abroad. Among those well entitled to a place on her roll of honor are: President Arthur, General Howard, Senators Foot, Collamer, Edmunds, Morrill, Proctor, and Dillingham; Smith, governor during the Civil War; Phelps, Minister to England; Shaw, Secretary of the Treasury; Ide, Governor General of the Philippines, and Saxe, the noted humorous poet.

Vermont's desire to pay loving tribute to her honored dead is indicated by the recent erection of monuments at the birthplace of the late President Arthur, at Hayen's Notch, and at Fort Ethan Allen.

All in all, ours is a grand old state, and there are abundant reasons why every Green Mountain lad should be proud to say, "I am from Vermont."

ILLINOIS NEXT

¶ To the Illinois boy who sends us before July 10th the best letter of not over five hundred words telling us why he is proud of his state, we will give $5.00; in addition, we will print his letter in an early number of The American Boy.

What Do You Get On Pay Day

—Just enough to carry you until the next, without a dollar to invest? Then this offer of the International Correspondence Schools is **vital** to you! If you will indicate on the coupon below your choice of an occupation this great institution will **at its own expense** show you how you can without neglecting your present work, leaving home, or *distressing yourself financially*, qualify yourself for a high position and a good salary. There is no risk; no catch; no humbug! This is a bona-fide offer to *earnest men and women* by an institution of fourteen years standing, representing an invested capital of $5,000,000. *Can you afford to pass it by?*

Special Offer—For a short time everyone asking for information will be entitled to a special discount if they decide to enroll. Act now and profit by this special self-help offer.

International Correspondence Schools
Box 1278, SCRANTON, PA.

Please explain, without further obligation on my part, how I can qualify for a larger salary in the position before which I have marked X

The American Boy

Copyright, 1906, by The Sprague Publishing Company

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

WILLIAM C. SPRAGUE, - - President and Editor
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only; and in the case of the coins, a rubbing.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

The Knuckle Calendar

If you double up your fist and hold it with the back of the hand upward you will see the four knuckles of the hand standing up in little prominences with little depressions between the bases of the fingers.

Now, if you will start ticking off the months on these prominences and depressions, one for each prominence, and one for each depression, in regular order, you will find the long months all come on the high places and the short months all in the low ones.

First knuckle, high place, January; first depression, low place, February; next knuckle, March; next depression, April; next knuckle, May; next low place, June; and then the fourth and last knuckle, July. Then you come back to the first knuckle and start over again; high place, August; and first depression, September; next knuckle, October; next depression, November, and the next knuckle, December.

Pleased With His Prize

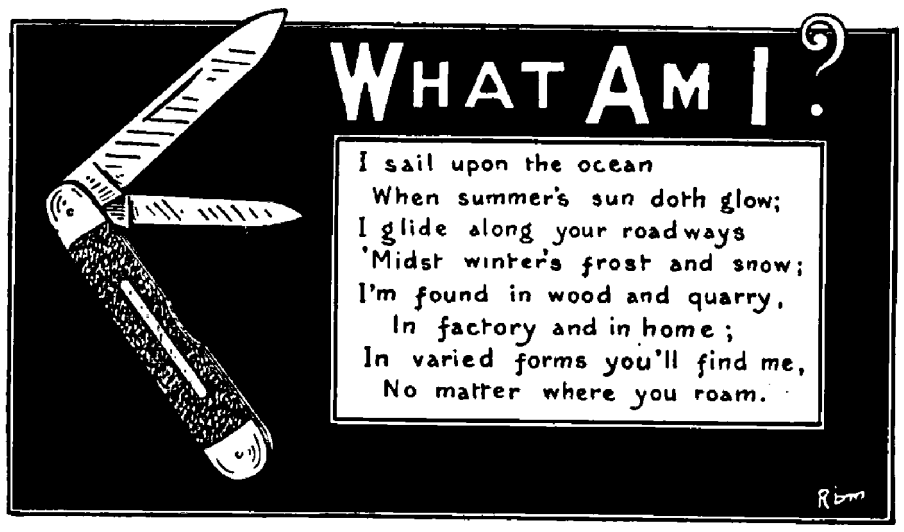
A. Douglas Farquhar, Sandyspring, Maryland, winner of an AMERICAN BOY puzzle prize, writes: "The book which you sent me for solving one of the puzzles came some time ago, but I have waited until I finished reading it so that I could truthfully tell you how fine it was. The history in it is of great importance, and the reading most interesting. When my subscription expired last fall I thought for a while I would not renew it, but the last number I received was so interesting that I could not resist renewing, and now I have been more than remunerated with a good book, besides getting the worth of my money out of the magazine already. Enclosed please find sixty cents. You will please hand over fifty cents of it to the shut-in fund, and for the remaining ten cents send me the May number, which I would like to show to some of my boy friends. I would not like to part with my own copy for even a few days while some one looked over it. I have pasted the letter which I received with the book on the fly leaf so that I may know how I obtained it, and also have your autograph in it."

Among the Boys

Harry C. McKown, of Gilson, Illinois, writes us as follows:

"Jewell Scott and myself got it into our heads to make a wireless telegraph station in each of our houses. We made our telegraph instruments in the following manner: Take a box about 14x10 and make a swinging door at the back of it. Then take and make a 2-inch hole in front with a lever to close it with. In the back of the box put a piece of 8-10 looking glass. Take a small lamp and put it in the box in front of the looking-glass. Make an alphabet and get into a dark room and light the lamp, (the one in the instrument.) Have the person to whom you are going to talk get his machine, and both of you get in a window and FLASH the message across the street. The room in which you are must be dark, (without a light.) If you have a good one you can talk (on a good night) nearly one-half mile. I take THE AMERICAN BOY and think it is the best boy's paper I ever heard of. As long as I can earn a dollar I mean to take it. I am 14 years old and am in the ninth grade in the Gilson High School. I am going to try to earn a watch."

The writer of this letter has sent fifteen cents for the fund for shut-in boys. He is something of a declaimer, having won third prize—a solid silver medal—in a recent contest, it being the first time that he ever participated in a contest. He thinks the story we started in the May number ("In Defense of His Flag") is a fine one, and he does not see how we can print so good a paper for a dollar a year.



Harry Gilbery, of Hartline, Washington, sends us the "Problem of Nines," which he explains as follows:

Tell a person to take some number, multiply it by 3, multiply the product by 3, and then cancel one figure from the result. If they tell you the figures left, you can tell the one that was cancelled. This is the way you do it: Add the figures given you and subtract the sum from the first multiple of 9 that is larger than the result gotten by adding. For instance, take the number 88 and multiply it by 3, which equals 264; then multiply by 3 again and you have 792. Cancel the 2; you have left 7 and 9, which added make 16. Now subtract this from 18 (the first multiple of 9 larger than 16) and you have 2, the number cancelled.

John C. Root, an inmate of the Flower Mission Hospital, Indianapolis, Indiana, writes us an interesting letter. He says: "I am sixteen years old. I graduated from the common school when I was thirteen years old, but have never had a chance to go to school since, because of my physical condition. When I get well I shall have a good education, and I will be patient till that time comes. The following is a verse of mine, and I think all boys should bear it in mind:

"As acorns make shrubs,
And shrubs make trees;
Patience brings success
By unseen degrees."

John adds his good word for THE AMERICAN BOY, saying that it has seemed to him absolutely perfect during the eighteen months he has been a subscriber. He also sends a puzzle that may interest some of our readers. It is as follows:

What is the least number of sheep two men (A and B) could have, so that if A stole one from B, he would have two times as many as B; or if B stole one from A, he would have just as many as A?

Answer: A should have 7 and B should have 5. If A stole one from B, he would have 8, or two times as many as the 4 that B would have left; and if B stole one from A, he would have 6, or just as many as the 6 that A would have left.

From San Fernando, Union, Philippine Islands, comes a letter which will interest the boys and give them a great deal of information as well. The letter is written by Gregorio Abellera, who would like to hear from American boys living in the United States. The following is a part of the letter:

"I am a Filipino boy, nearly fourteen years old. I am going to school in San Fernando, the capital of Union province. My native town is Cava, about thirteen miles from San Fernando. I am in the fourth grade in the Intermediate School. We are studying six different subjects, which are Arithmetic, Geography, Grammar, Nature Study, Reading, and Music. We are also studying Spelling. There are eight teachers in this school.

"Now, I am going to tell you about the Philippines. These islands were first ruled by the Spanish nation, and then by the British nation. After a time England gave them again to Spain. When the people here felt that the Spaniards were so unkind to them, they began to try to send them away. The United States helped the Philippines in her trouble and now the United States is keeping this country in peace.

"There are hundreds of plants in the Philippines which are used for food. The most important is rice. Corn also grows well here. The exports of this country are hemp, sugar, cocoanut, and tobacco. Some of the fruits which are common to us here are mango, chico, lansones, guava, lomboy, damartes, granada, banana, orange, sarguelas, plum, salamagui, remando, atis, santol, amonas, mabolo, and many others. These fruits can be eaten without cooking, but most of them are not sweet when they are green. Will you please tell me the different kinds of fruits there which are used for food without cooking?

"There are also many kinds of fishes here. Some of them are tulingan, susay, pating, munamon, aramang, porong, lagui, dalag, pasayan, bonag, dadali, and many others.

"There are a few domestic animals. They are the horses, carabaos, pigs, cattle, dogs, cats, etc.

"Some of the people in the Philippines are savages. The Filipinos have many dialects. The dialect which we are using here is Ilocano. Therefore all the people who were born where this dialect is spoken are called Ilocanos.

"I wish that you would tell your friends to write to me if they want to. I live in San Fernando in school days, and I live in Cava in vacation days.

"Your loving friend,
"GREGORIO ABELLERA."

A POSTAL CARD PUZZLE

Detroit	you	now	have	don't	we
hesitate	shall	contains	hope	much	often
promised	of	to	but	to	come
see	when	you	interest	come	to
many	for	we	but	the	have
visitor	never	few	a	repeat	few
days	you	yet	yours	done	cities
so	possess	this	more	summer	Sam

TWO of our clever readers have been corresponding for some time upon postal cards, but in such a manner no one but themselves can make any sense whatever out of what they have written.

As an example of this method of secret writing, we reproduce a postal card mailed by a Detroit boy to his chum, who resides in a distant city.

You will see for yourself how very little the casual observer can learn from scanning what is written there. As there is always a certain amount of interest attached to anything of a mysterious nature, perhaps a few remarks upon this method of secret writing may not be out of place.

The information upon the accompanying postal can only be deciphered by means of a stencil or mask, by means of which certain words are read through open spaces, while other words are masked out. The latter are read by reversing the card, then turning it completely over and reversing again—four different positions of the stencil in all.

Both correspondents, it is needless to say, use exactly similar stencils. To write such a card, one lays his mask over the postal, and writes the words straight across the lines in the spaces as they occur.

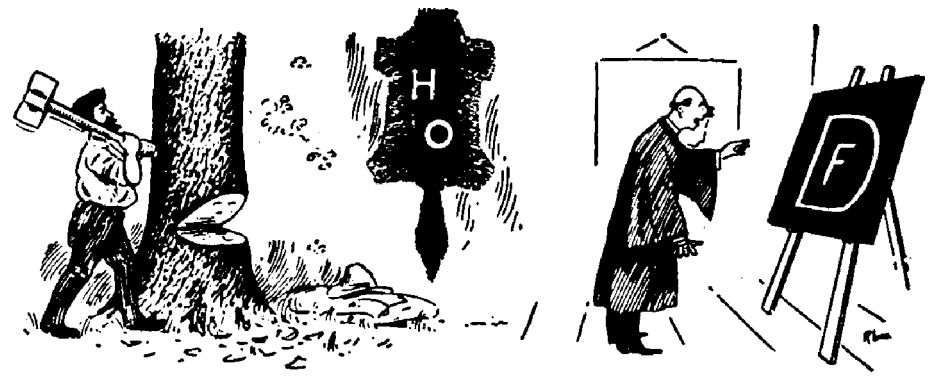
Perhaps an example will make matters more clear to our readers. Suppose you divide a postal into four equal parts with dividers, pencil or rule, and cut away one quarter; you have then the simplest form of mask possible. Now by laying this over your card you could write one word in the open space, then turn it around, and a new space appears while you lose sight of the word already written. And so on, you could turn this mask over and then again reverse position until a word was written in each of four spaces. This same rule holds good with practically any number of words—in this case 48 words are written—12 spaces (one for each word of one-fourth part) must be made.

Let it be clearly understood, in preparing this stencil, your card must be ruled into 48 equal spaces, and then 12 of them, selected from different parts of that card, removed.

We hope with the hints that we have given you, some of our clever readers will be able to puzzle out what is written here.

Next month we will reproduce the stencil which is necessary to correctly read this postal.

Picture Proverb



Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

Allert Brager, Mount Horeb, Wis., wins the grand prize of a silk flag for the best original Fourth of July Tangle.

Wm. Roberts Kruse, Elwyn, Delaware Co., Penn., wins the prize for the best list of answers to May Tangles.

Honorable mention is accorded the following for excellence: Raymond F. Katterjohn, Benjamin L. Miller, Percy C. King, Clinton Fisk Elliott, Osborn J. Dunn, J. Milton Boyer, Grafton Darby, Mrs. C. D. Darby, William P. Channon, Noah S. Guengerich, Lloyd Edward Owens, Wallace A. Philgreen, J. Cuthbert Long, Geo. D. Skelton, Dudley B. Kimball, Albertus K. Richards, Leonard M. Steburg, Leo E. Bourdon, Elmer Rodgers, Grady Peerey, Bunting Hankins Roe, Obert Burkett, Russell Ashby Walker, Lawrence Phelps, Frank Kelly, Kenneth Fullerton, Geo. Dennis, Nellie Meyers, Floyd Clark, Alfred Thomas, Carol Seven, James A. Lynd, M. Gray, C. Clyde Nickum, Arthur Townsend, Frank von Tobel, Edwin A. Berry, J. Horace Trumbull, Auburn Setzer, James B. Dannemille, Walter J. Tilton, Clarence Luther, Willie Whitaker, Harvey Guetzloe, Sarah Gilles, Frank B. Bolton, Carl Ohm, Howard V. Webb, Russell Procter, Ernest A. Stifel, Frank C. McCourt, Paul L. Field, J. Paul Richter, Harold Peterson, Geo. Frary Hutchison, Arthur L. Diamond, Frank Stocking, Clarence M. Carson, Floyd Williams, True Bayley, Lewis Caldwell, Moxie Craus.

A prize of one dollar will be given for the best list of answers to the July Tangles; also, a new book for the second best list of answers; received by July 18.

A prize of one dollar will be given for the best lot of original puzzles received by July 18; to be published in September.

Tangle Talk

So many excellent original Fourth of July puzzles were received as to render most difficult the selection of a single one to receive our award. While rejoicing with the winner, it is with feelings of sincerest regret that we must make a choice that will not include all the deserving Tanglers. Many splendid contributions, entered in our flag contest, cannot even be printed because of our limitations as to space. And we are just as sorry as you are.

Mr. Kruse gave every word of the answers exactly as their authors had them, excepting "acclaim" for "plaudit," which is not counted as an error, since both the definition and the conditions are fully met by either, and many of you seemed to prefer acclaim. The stumbling blocks were the prison towns, Neptune for Mercury, and proscript for proscription. Several came within a single word of equaling the prize winner in the correctness of their answers.

Clinton Fisk Elliott's wonderful Flag Tangle would have occupied too much space and its solution would have required more time, we fear, than our Tanglers would be inclined to give to it. Its preparation must have required months of study.

When Uncle Tangler was a boy there were no prizes given for answers or for new puzzles in the few magazines that had puzzle departments. Neither were there any honorable mentions. The great honor then was to get a puzzle printed over your nom de plume, your real name seldom or never being printed or known to your fellows. I sometimes wonder if my Tanglers realize how great an honor it really is to have printed one of their original contributions in this department of THE AMERICAN BOY, leaving out of consideration the still greater honor of winning a prize. If you could sit down with me in my library when that big bunch of your letters is ready to be opened each month, and could look over my shoulder as I read the answers and the new puzzles you have sent in, I am sure you would realize then the distinction that accompanies the winning of a place for your name among the honorable mentions, in the hot competition of all the boys of America and the world. Take my word for it, the men of tomorrow are showing their mettle in the Tangles of today. A few years hence and the names with which you are most familiar will be the names that stand for accomplishment in every line of human endeavor.

With this issue Uncle Tangler completes his fifth year, his sixtieth consecutive month, as editor-in-chief of the mystic band of Tanglers. It seems a fitting time, therefore, to thank you for your earnest support and interest in his endeavors to create a department that should be more than a mere puzzle department, more than a mere play upon words—but a department, in fact, that should bear a message of the value of earnest study and thought, developing the possibilities of research in bible, history, literature, science, geography and the higher enlightenment. The lessons you have unconsciously absorbed by our pleasant method of instilling the facts will remain with you through life, while the memory of the pleasure you find in our friendly contests will never cease to brighten the thoughts of your mature years. Meanwhile Uncle Tangler is having just as good a time over it all as you are, and is trying to learn something every day so as to keep up with your younger wit and maintain the mutual interest unabated.

Uncle Tangler does not live in Detroit. On the night of the closing of our contest each month, Mr. Sprague bundles all your letters up and sends them away

by express to your uncle's home in another city. He has preserved his incognito during all these years for much the same reason that Santa Claus has concealed his personality. The fun seems gone, someway, when the mystery is gone. So he will continue to be just Uncle Tangler to his nephews and nieces as long as he can. For anything you know Uncle Tangler may live right in your town. His incognito enables him to walk by your house and even to pass some of you on the street without your recognition.

I wonder if the boy who said "Get out of the way!" to me the other day, as he bumped against me on the sidewalk, would have been quite so brusk about it had he known it was Uncle Tangler he was so rude to! And he was a subscriber to THE AMERICAN BOY, too.

I am going to tell you this much about your uncle. Uncle Tangler is a business man. He is connected with a large business house that is known, by name at least, to nearly every one of you. Tangles are his relaxation, his pleasure and study, not his bread and butter. He puts in his spare time at this play-work because he enjoys it—has enjoyed it ever since he was a boy himself and used to send off his puzzles to other editors for them to print or put in the waste basket, same as he does now with yours! So you see he knows just how it feels! Every evening from the nineteenth of the month, when your letters arrive from Mr. Sprague, until the first of the next month, Uncle Tangler devotes faithfully to consideration of your lists of answers and original contributions. Every word you write is read and weighed and enjoyed. He enters into your spirit of friendly rivalry, puts the best side of your work to the front, hopes with your hopes, sorrows at your temporary failures and rejoices at your ultimate proficiency. He observes your sincere efforts to excel, knows the many patient hours you have devoted to careful reasearch as well as though you told him, and sees with pleasure where mothers and fathers and teachers have entered into the spirit of the thing and guided you along the right way.

Don't get discouraged. Keep at it. It is no disgrace to fail. Few have won at their first attempt; few have failed to win who have persisted. Your every effort is watched and welcomed by

UNCLE TANGLER.

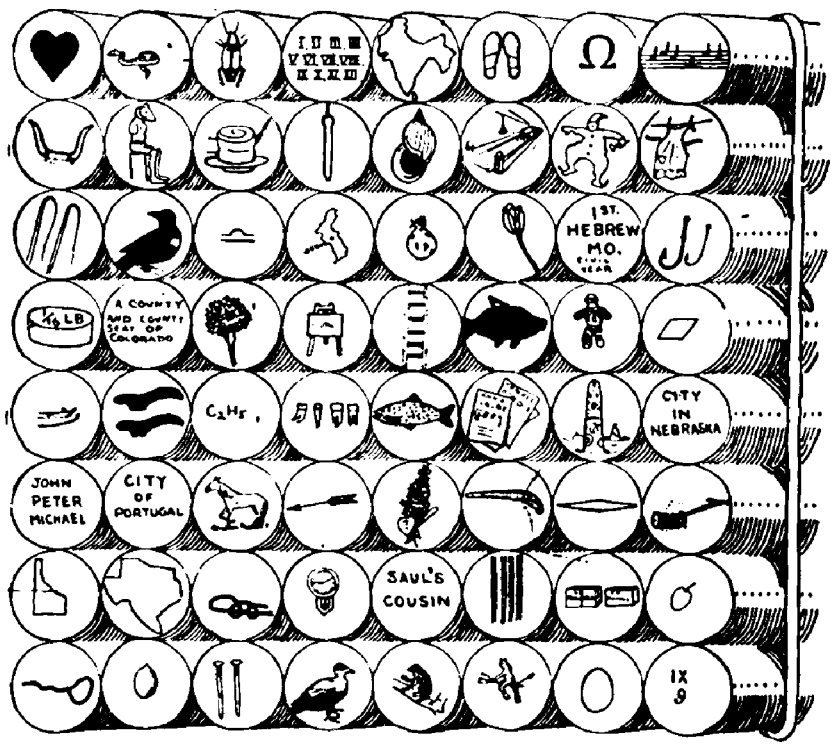
70. 1. Cape Horn. 2. Kensington. 3. Athlone. 4. Dartmouth. 5. Sebastopol. 6. Galway. 7. Maryport. 8. Barnstaple.

71. 1. Hoist, host. 2. Noise, nose. 3. Waive, wave. 4. Defy, defy. 5. Paint, pant. 6. Bairn, barn. 7. Maize, maze. 8. Alias, alas. 9. Coupe, cope. 10. House, hose. 11. Gauge, gage. 12. Mouth, moth. 13. Bound, bond. 14. Route, rote. 15. Rouse, rose. 16. Mourn, morn.

New Tangles

1. BUNCH OF FIRECRACKERS.

Interpret all pictures by words of uniform length. Their initials will spell eleven signers of the Declaration of Independence. Now divide this bunch of sixty-four firecrackers into four bunches with an equal number of crackers in each. Arrange these four into one bunch so that the third letters in order will spell eleven more signers.



—Allert Brager.

2. REVOLUTIONARY DATES.

For each date given find one word that shall describe an important event in American history, occurring within the year specified. The seven initials in order spell that for which our forefathers fought.

1775. (Scene of the first bloodshed of the Revolution.)
1776. (The subject of a great document, promulgated in July.)
1777. (Commander of the British army, who surrendered at Saratoga.)
1778. (A word by which the British army's departure from Philadelphia for New York is historically designated.)
1779. (What Anthony Wayne did to Stony Point in July.)
1780. (What Arnold was guilty of.)
1781. (Where Cornwallis surrendered, ending the war.) —Albertus K. Richards.

3. QUINTUPLE SLIDE.

1st. Slide the five horizontal rows of letters right or left until five vertical rows spell an important document connected with the Fourth of July.

2d. Slide again, until three vertical rows spell an American statesman connected with its drafting.

3d. Again, until one and a part of another vertical row spells a southern town that surrendered on a Fourth of July during the civil war.

4th. Still again, until five vertical rows and part of another spell an important event in the Spanish-American war, the news of which became universally known and was celebrated on a Fourth of July.

5th. Now the only letter remaining unused will be the initial of a popular president's surname.

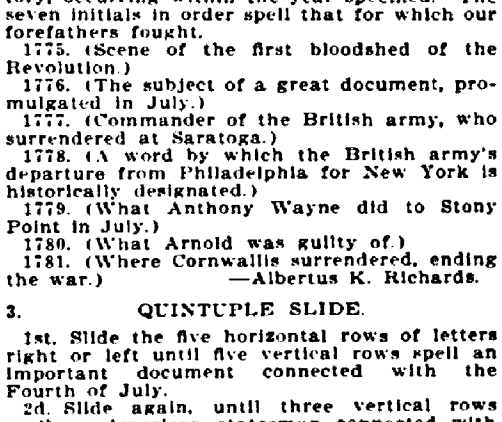
—Wallace A. Philgreen.

4. GREAT AMERICANS.

The names of sixteen great Americans are required. Write one name in each horizontal row of squares, one letter of the name in each square. The lower one is to be written from right to left. Eleven of these names are honored in the Hall of Fame for Great Americans. (See November, 1905, AMERICAN BOY.) The left side of the firecracker read downward spells a July holiday. The right side, read upward, an adjunct of this holiday. The letter path, at the fuse and sparks, in alphabetical order, another adjunct of this day.

1. A civil war general, in the Hall of Fame, whose boyhood life has been told in THE AMERICAN BOY. 2. A great divine, in the Hall of Fame. 3. A revolutionary war general, in the Hall of Fame. 4. A celebrated American philanthropist who was a London banker; in the Hall of Fame. 5. A great statesman, connected with the Declaration of Independence, in the Hall of Fame. 6. A civil war general; in the Hall of Fame. 7. A great poet, essayist, scholar, editor and diplomatist, who died fifteen years ago. 8. A celebrated philosopher, statesman, printer, editor, inventor and diplomatist; in the Hall of Fame. 9. A great inventor, manufacturer and philanthropist, once candidate for president; in the Hall of Fame. 10. A chief justice of the United States Supreme Court; in the Hall of Fame. 11. An engineer and inventor, who built the first war steamboat; in the Hall of Fame. 12. An American inventor who constructed and operated steamboats before Fulton did, but committed suicide in discouragement on the second of July, 1798. 13. An ornithologist, born in New Orleans, educated in Paris; in the Hall of Fame. 14. The first attorney general. 15. A secretary of war under President Jackson and secretary of state under President Buchanan, who died in Detroit. 16. A signer of the Declaration of Independence from New York.



—Raymond F. Katterjohn.

5. HISTORICAL ACROSTIC.

The words are of unequal length. The initials spell a U. S. gunboat that blew up at San Diego, Cal., in July, 1905, having the same name as a battle of the Revolution fought in August in Vermont.

1. A Confederate general at the battle of Bull Run. 2. A signer of the Declaration of Independence from Rhode Island. 3. A battle of the war of 1812 which was fought after peace was signed. 4. A city in which a terrible fire occurred December 16, 1835. 5. A battleship in the naval fight off Santiago, during the war with Spain. 6. A state admitted into the Union during the civil war. 7. The democratic candidate for president during the campaign of 1872. 8. The twelfth president. 9. The popular name of the frigate Constitution. 10. The race of people whose sailors are said to have discovered America before Columbus. —Morton L. Mitchell.

6. SEARCH THE DECLARATION.

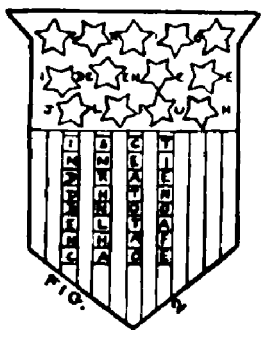
What the Fourth of July is to all Americans will be found by the following research in the Declaration of Independence. The answer contains as many letters as there were original states.

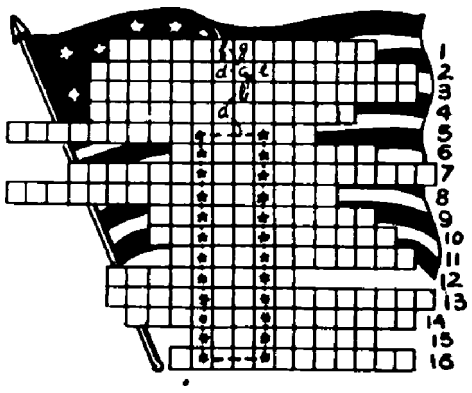
1. The first vowel after "We hold these truths to be self-evident." 2. The final letter in the sentence beginning "He has forbidden his governors." 3. The third letter in the Declaration of Independence. 4. The letter that last appears in the Declaration of Independence as the initial of the tenth word from the end. 5 and 6. The last two letters of the Declaration of Independence. 7. The vowel that appears more often than any other in the paragraph beginning "For taking away our charters." 8. A consonant that appears but once in four certain consecutive sentences, the first one beginning "He has made judges dependent," and following. 9. A consonant not present in the paragraph "For imposing taxes on us without our consent," but found in every preceding paragraph of the Declaration of Independence. 10. The second letter in the second sentence. 11. The final letter of the sentence beginning "He has refused to assent to laws." 12. The initial of the fourth word from the end. 13. A letter that first appears as the final letter of the tenth word.

—Frank Kelly.

7. FOURTH OF JULY BANNER.

Place the stars from figure one on the stars in figure two so that the letters will read in order the name of a famous document and the month, day and year of its promulgation. Place the four stripes in figure one alongside or between the lettered stripes in figure two so as to form a chess board, on which, using each letter once only by the king's move, starting with a certain letter in the top row and reading in continuous order, may be found the name of the assembly that met in Philadelphia one hundred and thirty years ago, the name afterwards given to the building where they gathered, and the names of the first signer and the author of the document told of in the stars.





—Benj. L. Miller.

8. DOUBLE ACROSTIC.

All words of uniform length. The initials spell a signer of the Declaration of Independence; the finals, the town and the abbreviation of the state in which he was born.

1. A large tropical bird with an immense beak. 2. Reverential regard. 3. A lawless person. 4. A domestic servant. 5. A musical term, meaning slow; slower than andante. 6. A janitor of a church. 7. The number of ten thousand. 8. A loose Japanese robe. 9. A kind of flag. 10. In a state of sleep. 11. A distant star cluster. —Leo E. Bourdon.

9. DOUBLE DEFINITIONS.

The initials of the words here defined will spell in order one name of a banner universally displayed on the Fourth of July. Now for each of the words you have just used substitute another, defined the same and having the same number of letters, and their initials will spell the name of a famous American who signed the Declaration of Independence and afterwards became President of the United States.

1. Drowsy. 2. Strong. 3. To secure. 4. Cause. 5. To arrange. 6. Keen. 7. A former postmaster general. 8. To discover. 9. Thrifty. 10. Weak. 11. Respect. 12. Honesty. 13. Dignified. 14. Clear. 15. A state capital of the United States. —The Nomad.

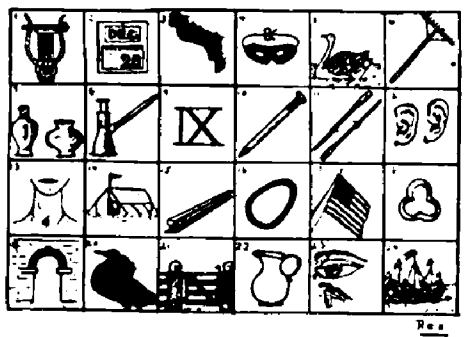
10. PATRIOTIC ACROSTIC.

All the words have three letters. The initials spell a patriotic American city, and the finals declare the sentiment of a famous document which emanated from that city.

1. A national food of the Hawaiians. 2. A Hebrew measure of liquids. 3. The poetical name for India. 4. A sheltered place. 5. A small, hooded, venomous serpent of Egypt. 6. A river of Scotland. 7. An age. 8. A movable cover. 9. An American article of food. 10. One of an ancient warlike nomadic people, of Asia. 11. A Japanese measure of length. 12. Reverential fear. —J. Milton Boyer.

11. JULY LABYRINTH.

The names of the twenty-four objects are of equal length. The initials, beginning with a certain one and following a certain path, using each picture but once, spell the names of three prominent Americans and the month in which they died.



12. BUILD A CHESS BOARD.

Slide the five horizontal rows of letters either way until five vertical rows spell an important document closely connected with the Fourth of July. Remove these letters, and commencing with T in the upper left corner arrange the remaining 64 letters in consecutive order on a chess board, eight squares each way. Fill in the letters from left to right, the top row first, and so on downward. When correctly done the four corner letters will be T, C, D, A. By the king's move, which is one square in either direction, using each letter as often as needed, find the surnames of twenty-seven signers of the above document.

```
T G E O M D R N D D Y L C S H U R
L E E D L S O E A O E E N R L A H E

M W T R C L I I E C A E Y E H L A O
P A O N N E L N W R D W M S C N D A
```

—Kenneth Fullerton.

13. SEASONABLE HISTORY.

Taking two letters from each word in order find the author of the Declaration of Independence and the date of his birth.

Without promising Castro's dejected officers their poison, anybody, for instance President Fallieres himself, could understand precisely whatever interest, whatever underhanded, uncontrollable desire prompted officers inordinately thirsty, hungry, sleepy.

—Lawrence Phelps.

14. MILITARY ACROSTIC.

All words of uniform length. The initials spell a great military man who with 5,000 soldiers routed 15,000 Turks at Abukir on a certain July day.

1. A famous British admiral, who defeated the French-Spanish fleet at Trafalgar. 2. An American Revolutionary general and traitor. 3. An American admiral, prominent at Vicksburg, in July, 1863. 4. The nickname of General Israel Putnam. 5. The American general who captured El Caney, Cuba, July 1, 1898. 6. A secretary of war under President Madison. 7. Napoleon's Irish surgeon at St. Helena. 8. A celebrated battle in which Fairfax and Cromwell defeated Charles I. and Rupert, in 1645. —Wallace A. Philgreen.

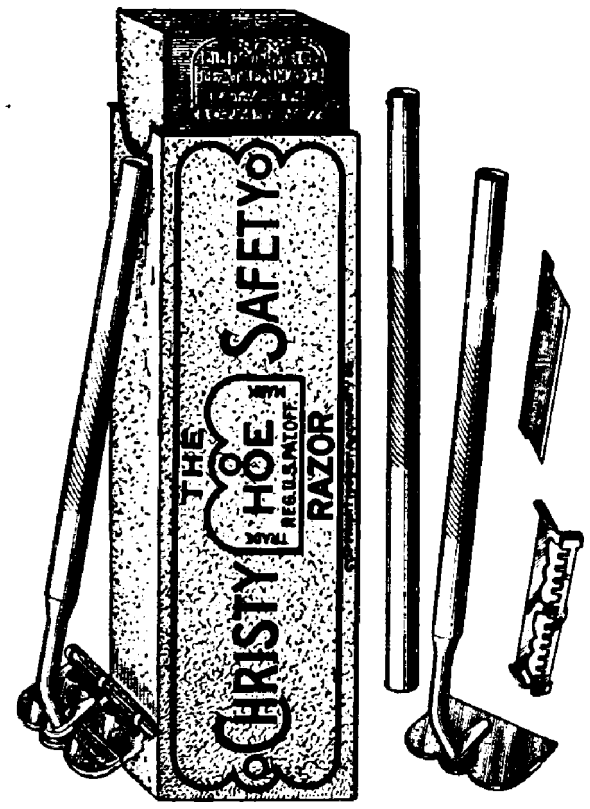
A FIRST CLASS SAFETY RAZOR BEFORE SEPTEMBER 1st AT NO COST TO YOU

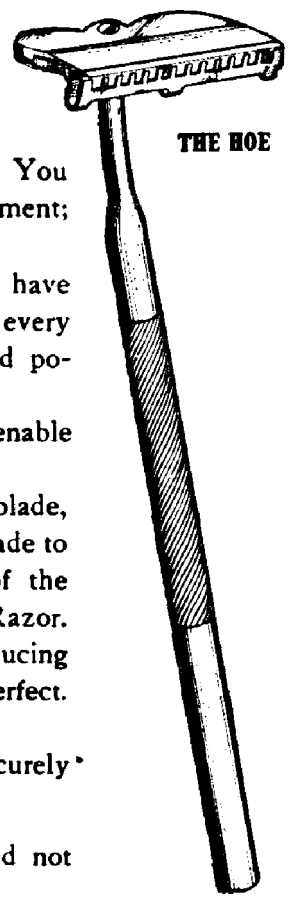
EVERY BOY AND EVERY YOUNG MAN SOONER OR LATER MUST BEGIN TO SHAVE. THE BOY WHO FORMS THE LIFE HABIT NOW OF SHAVING HIMSELF, WILL BE AHEAD ON THE FOLLOWING POINTS:



THE BEST SAFETY RAZOR IN THE WORLD

1—He will save money. Every visit to a barber shop costs 10c to 25c.
2—He will save time—no waiting in stuffy barber shops.
3—He will not run the risk of contracting dangerous skin diseases.
4—He will form a habit that is cleanly and one that is a decided luxury.

Safety razors are sold by the thousand and give excellent satisfaction, but in the main they are high-priced and complicated. We have made a deal on a safety razor that is reasonable in price, gives perfect satisfaction and is simple in construction. It is called the "HOE" Safety Razor. Read what the manufacturers say about it:



THE HOE

"In designing the 'HOE' Safety Razor, my aim has been to overcome all faults that other Safety Razors have, and so successful have been my efforts that a novice can shave the first time without practice, annoyance or inconvenience.

"Unlike all other Safety Razors, the 'HOE' requires no adjusting of the blade. It is self-adjusting; there are no troublesome springs, hinges or screws to arrange. You cannot put a blade in the 'HOE' wrong if you try to. It is easily done in a moment; there is no chance for a mistake.

"In their efforts to make a razor that can be used with convenience, makers have overlooked one feature of the utmost importance, viz.: the handle. This part of every Razor on the market is a serious inconvenience in shaving, necessitating a cramped position of the hand at almost every angle.

"The handle of the 'HOE' has the length necessary to be easily grasped and enable one to hold at the proper angle in all positions, and is perfectly balanced.

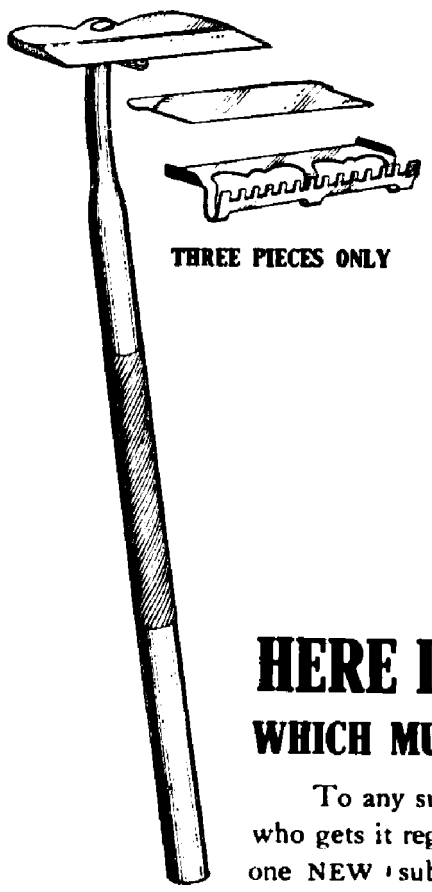
"Guard—This is one of the most important features of a Safety Razor, forming as it does the protection from the edge of the blade, all makers using practically the same form, and until the invention of the Christy Comb Guard, no particular efforts have been made to perfect it. In the Christy Comb Guard the teeth of the guard point toward the blade. It is so designed as to leave the edge of the blade free with a clear space for lather to pass through upon the top of blade, just like, and, with all the advantages of an ordinary Razor.

"The heart and life of a Razor is the blade. The process used in making the blades of the "HOE" Razor is absolu ely new, producing blades of uniform temper, and lasting cutting quality, and is a wide departure from the usual method. Every blade warranted, perfect.

"The Strop is an item to be considered in the cost of a Razor most makers charging 75c to $1.50 extra for same.

"Without extra charge the case in which the 'HOE' Safety Razor is packed, is supplied with an especially prepared strop, securely fastened to the top of the case. A swinging or swivel strop should never be used, as it rounds the edge of the blade."

This is a sample of the kind of letter the manufacturers get. Note that this man would not take $100.00 for his razor if he could not get another.



THREE PIECES ONLY

THE LAKE SHORE & MICHIGAN SOUTHERN RAILWAY
BUFFALO, N. Y.

The R. J. Christy Co., *June 15th, 1905.*
Fremont, O.

Gentlemen:—I have waited until now before acknowledging receipt of your Hoe razor, preferring to give it a thorough trial, and, if possible, tell you of its defects.

I have used the one blade (sent with the outfit) every day for over six months, and it is as good today as when first received.

Whoever is responsible for the Christy Hoe has done his fellowmen a service they cannot appreciate until they have tried this really complete razor.

Let me conclude by adding that, were it not possible for me to secure another, my Hoe could not be bought for $100.00.

Yours truly,
Alf. P. Blosier, T. P. A.

HERE IS OUR SPLENDID OFFER

WHICH MUST BE ACCEPTED BY SEPT. 1st.

To any subscriber to "The American Boy" or to any boy who gets it regularly at a store, who will send us one dollar for one NEW subscription (not a renewal or his own subscription) we will send

1 HOE Safety Razor and 1 extra blade, 1 box with prepared Razor Strop, postage prepaid.

If two new subscriptions are sent we will send two outfits—and so on—one outfit for each new subscription, or *we will send the outfit to any one, post paid on receipt of $1.00.*

CHAPTER VII.

ANDY OFF FOR MANASSAS.

By EDWARD STRATEMEYER

Author of the "Old Glory Series," "Soldiers of Fortune Series," "Colonial Series," "Pan-American Series," Etc.

Copyright 1906 by Edward Stratemeyer

"HURRAH! HURRAH, father, the Yankees are whipped. Fort Sumter is taken. Didn't I tell you they couldn't stand up against our fellows. My, but don't I just wish I had been in Charleston to see the bombardment."

And Andy Arlington rushed into the sitting room pell-mell, throwing his cap into the air, and giving his sister Grace a hug in his delight.

"Fort Sumter taken!" repeated his father. "Is it really true, my son? Then the war has opened at last."

The old Mexican veteran took the newspaper his son had brought in from the post office. Yes, it was true, as the great black scare lines proved; the fort had been taken, Major Anderson had departed for the North on the Baltic, and all of Charleston was mad with joy.

"I wonder what Louis will say to that when he reads it," said Andy, as he turned again to Grace. "I told him right along we'd whip if it came to fighting."

"Well, one battle doesn't constitute a whole war, Andy," replied Grace, instinctively standing up for the enemy who was yet her dearest friend. "And Louis knows that as well as we do."

"It's not such a tremendous victory, either," put in Mrs. Arlington. "The fort was surrounded by the other forts and floating batteries, and the garrison must have been about starved out, being cut off from shore for three months. I wonder what the North will do next?"

"They won't do much," said the husband. "I believe the saying is true, they can't be kicked into a fight. Even at Fort Sumter they stood only on the defensive."

Grace listened and her face grew red. She could not get Louis out of her mind. "Maybe it will take a long while to arouse the North, but when they are aroused—" She did not finish.

"Oh, pshaw! We'll lick 'em out of their boots; see if we don't!" ejaculated Andy. "Why, you ought to hear the talk down at the post office and over to the tavern. Half the district is fairly wild over the news, and Frederick Mason is going to organize a company of volunteers if they'll have 'em, and Captain Montgomery is going to try to fit out some cavalry. I'd like to join Captain Montgomery—he's such a good fellow," and Andy's eyes beamed at the prospect. Mrs. Arlington said nothing, but as she thought of her only son riding to battle her eyes filled with tears and she had to turn away.

The proclamation calling for Union troops was speedily followed by a similar call for men in the South. The call was an urgent one, and aroused the warm, Southern blood to its highest pitch. Military companies and troops of cavalry were formed everywhere, and young and old went forth to fight against those who threatened their plantations, their industries and their firesides. The enthusiasm of the South was equal to that of the North in many particulars.

It was understood that Mr. Arlington could not take part in this conflict. When, even with his cork leg, he might have joined the cavalry, his general condition was such that his wife would not for one moment entertain the idea of his leaving home.

"You have fought enough, father," she would say. "Let the younger men carry this war through."

"But I feel as if I ought to go," he would plead, but she would shake her head, and then he would remain silent.

As the days went by and news came of how the South was gaining a little here and there, attacking this fort and that arsenal and capturing them, Andy grew more and more impatient. Captain Montgomery had begun to form his cavalry troop and the youth watched them wistfully as they went through their drill on Lee Run Square.

"Father, I'm going to join; that's all there is to it," he said at last. "If I don't go they'll call me a coward, and I want to go awfully bad. I've got a horse and money enough to buy trappings and a sword, and there's no reason why I should stay home."

At this the eyes of the veteran glistened. "I know the feeling, Andy," he said. "I've been thinking it over a good deal, too. Since I cannot go I don't know but what you might—if you can get your mother to consent."

At first Mrs. Arlington could not think of it. But then came a short letter from the Rockfords, telling of the accident which had happened to Mr. Rockford, and that Louis had joined a volunteer company. The letter was written by Lucy, who said Louis was too busy to do more than ask to be remembered to Andy and Grace, and Lucy added that she supposed Andy would soon be on his way to fight against her brother. The letter was very friendly and closed by hoping that the present difficulty would soon be settled. This was the last letter which passed between the families for a long while to come.

"You see how it is," said Andy, as he handed the letter to his mother after perusing it. "Even the Rockfords think I will go. How can you make me stand back in the face of that? Why don't you let me show that I am at least as brave as Louis?"

This was Andy's clinching argument. Mrs. Arlington's Southern pride would not permit her to keep her son at home when the son of her Northern friend was already off to the seat of war. She consented that night, and Andy enrolled under Captain Montgomery the next day.

The cavalry was called Montgomery's Grays, and each trooper was required to clothe himself in a gray suit of a certain design, with a plumed hat to match. At first it was thought to seat every man on a gray horse, but this was found impossible in the short space of time allowed for equipment, and the cavalrymen rode such animals as they possessed.

"STOP WHERE YOU ARE!" HE COMMANDED

The seat of government for the states which had seceded was soon to be at Richmond, but the Confederate forces were gathering at Manassas Junction, a place about thirty-five miles west of Washington, and an important point from the fact that two of the principal Southern railroads met there. It was this gathering at Manassas that made Northern folks think an attack on Washington was close at hand.

Soon came the day for Andy to leave home. Lee Run was gaily decorated—as much so as Goreville had been when Louis left. There were flags and bunting in abundance, but the glorious stars and stripes were missing. Instead the state flag was unfurled, for the stars and bars of the Confederacy had not yet come into use.

The cavalry made an imposing appearance as they moved off four abreast, the horses prancing gaily to the trumpet notes of the bugler. Shout after shout went up, which continued until the Montgomery Grays were lost to sight in a cloud of dust half a mile from the town center.

"I'm glad we're off," remarked one of the young men to Andy as they cantered along. "I've been itching to get at the Yankees ever since the trouble began."

The young man's name was Leroy Wellington. His father's plantation adjoined that of the Arlingtons, and both youths were on the best of terms. Leroy had traveled much, and a rough, outdoor life just suited him.

"So am I glad we are off," answered Andy, as he patted Firefly, his horse, affectionately upon the neck. "I wonder how soon we'll fight our first battle?"

"That will depend altogether upon our leaders. I understand Harper's Ferry has been taken. That will give us a lot of guns and ammunition from the arsenal."

"Yes, and a victory at Norfolk navy yard will be still more important."

"By the way, how about that Pennsylvania friend of yours?" went on Leroy Wellington. "What does he think of things now?"

"Oh, he has already joined the volunteers called for by Lincoln."

"Humph! Then we may meet on the field of battle?"

"I trust I don't have to fight Louis face to face," answered Andy, very seriously. "War is one thing, and shooting or cutting down your friend is another."

"I suppose that is so, Andy; but if my friend chooses to become my enemy that is his lookout, not mine," concluded Leroy Wellington.

On and on went the cavalry until about six o'clock in the evening. They had now arrived at a small village called Parker's Mills, and it was decided to put up here for the night. Accommodations were found for the horses in the various stables in the neighborhood, and as patriots the cavalrymen were entertained at the various homes in the vicinity.

Parker's Mills was full of slaves, and it had been whispered about that there was fear of an uprising among the colored folks. For this reason every slave was watched closely, and if any were found to be at all rebellious, they were chained up and subjected to severe lashings.

It was about eleven o'clock that Andy was aroused from a light sleep into which he had fallen by the sounds of a violent struggle in the sitting room below the bedchamber he was occupying. Slipping into a portion of his clothing, he hurried below, to find the master of the house, a Mr. Rockleigh, struggling valiantly in the grasp of two burly negroes who were his slaves. The negroes had contemplated flight, but before going had sneaked into the house in an attempt to steal some money which had been left in an old-fashioned secretary in the room.

"Let go, Pomp," gasped Mr. Rockleigh. "Let go, or as sure as I live I'll flay you alive for this."

"Dun yo' let go, Pomp," put in one of the burly negroes. "We is in dis to de end, remember!"

"I ain't a-lettin' go, Cuffy," came from Pomp. "Now, Massa Rockleigh, yo' quit yo' noise, or I'll knock yo' ober de head wid dis yere club. We knows well enough yo' wife is away an' de young ladies, too, an' we is bound to hab our own way."

"You—you scoundrels!" cried the master, but even as he spoke the club descended and, hit upon the head, the man of the house fell back partly unconscious.

It was at this moment that Andy leaped into the sitting room. On coming down he had caught up his sword, and taking in the situation at a glance, he advanced upon the two slaves.

"Stop where you are!" he commanded; "stop, unless you want your heads cut open!"

His words nearly dumfounded the negroes, who had supposed Mr. Rockleigh in the house alone, save for an old woman who was more than half deaf, and who had not up to this time heard the commotion. Both stared hard and fell back a few steps.

"Who—who is yo'?" finally demanded Pomp, with an ugly scowl.

"Never mind who I am," replied Andy. "Drop your clubs at once."

"But see yere, sah——"

"I won't argue with you. Drop your clubs."

Instead of doing this, however, both negroes made for the doorway leading into the kitchen. By this time Mr. Rockleigh had partly recovered and he staggered to his feet.

"Don't let them get away," he cried. "They are my slaves and have robbed me of several hundred dollars in gold."

"Stand where you are or I will fire at you!" said Andy. And now he exhibited a pistol he had also brought along.

"Don't—don't shoot me!" yelled Cuffy, in abject terror. "Please, massa sodger, don't shoot!" and he dropped upon his knees. He could stand almost anything but a display of firearms.

"Cuffy, yo' is a fool!" howled Pomp. "Come on, if yo' is gwine wid me. Remember, if we is cotched now we'll be more dan half killed wid de lash. Take dat."

As the last words were uttered Pomp launched forth the heavy club he carried. His aim was for Andy's head and had the young cavalryman not dodged in a hurry, he might have suffered from a cracked skull. As it was, the club grazed his ear and then went crashing through a closed window, carrying away part of the frame and several lights of glass.

"Fire at him!" ordered Mr. Rockleigh, and the words were yet on his lips when Andy pulled the trigger of his pistol. Pomp was hit in the shoulder, but not seriously injured, and the next moment both slaves fled forth from the kitchen of the house into the darkness of the night.

CHAPTER VIII.

ANDY ON THE BREASTWORKS.

At home Andy had never experienced any difficulty with his father's slaves, for the colored people were well cared for and were too happy to create any disturbances. To be sure, minor difficulties arose from time to time, but these had been readily adjusted, and there was not a man or woman on the Arlington plantation who would not have been willing to lay down his or her life for any member of the family. These slaves were true to the Arlingtons all through the war, and when liberated by President Lincoln's proclamation, made no effort to take advantage of that liberty. As attaches of that plantation and dairy, they felt they were being better taken care of than they would be if they tried to do for themselves.

To come in contact, then, with such rascals as Pomp and Cuffy was to the youth much of a surprise, and having seen the slaves dash away, he stood still, not knowing what to do, until Mr. Rockleigh caught him by the arm.

"Come, we must stop them. They have my gold and they will try to reach the North if they can," burst from the plantation owner.

Out he sped, and Andy came upon his heels. The report of the pistol and the smashing of the glass had aroused a number of inhabitants living on the other side of the main road upon which the house stood, and now windows were thrown up and anxious faces appeared, and voices demanded to know what was the trouble. Matters were quickly explained, and soon a dozen men were in the saddle and on foot in pursuit of the runaway thieves.

One man living a distance up the road had seen Pomp and Cuffy taking a side path leading due northward, and it was in this direction the pursuing party headed, spreading out over several open fields, that the negroes might not double on their trail and escape in that manner. Mr. Rockleigh wanted to follow them with bloodhounds, but not a dog of that breed was handy.

"Just let me catch them," he cried, in a fearful rage. "I'll skin them both alive. I'll cut out their black hearts with my whip." He was naturally a passionate man, and this was one reason why his slaves had revolted.

THE GALLANT LEADER WAS KILLED INSTANTLY

The pursuit was kept up until six o'clock in the morning. It was then discovered that the two runaways had separated. One party, including Andy, continued after Pomp, while the second followed up the trail of Cuffy. By ten o'clock Andy dropped out of the search to ride post-haste back to his command. Some time later he learned that Pomp had not been captured.

Cuffy was taken while in hiding in a brook in a patch of woods. He was dragged out of the water by his heels and at once searched. A hundred dollars in gold was found in his shirt bosom. The remainder of the money he insisted was in Pomp's possession. He was marched back to the Rockleigh plantation, where he was chained up in one of the barns and flogged until he dropped like one dead, from exhaustion and loss of blood.

This was the only incident of note which occurred on the trip from Lee Run to Manassas Junction. Arriving at the Junction the Montgomery Grays selected a camping spot in the vicinity of a number of other Virginia troops, and immediately went into quarters in true military style.

Their camp was in an Orchard of trees which had borne their best fruit years before, and which were, consequently, good for little else than firewood. The Montgomery Grays occupied one "street" about a hundred and fifty feet long. At the upper end of the "street" were the officers' tents, at the center the horses' quarters, and at the lower end the cook's quarters. The cook was a fat darky known as Mungo, a jolly fellow who sang from morning to night, and who could play a banjo to perfection. Mungo had brought his banjo with him, a home-made instrument, the head of which was almost as black as his own, and this banjo he declared must go along whenever they moved, no matter what else had to be left behind.

"I would jess mope away an' die ef I didn't hab dat dere instrument, cap'n," he explained to Captain Montgomery. "It's been my pet fo' ten yahs an' mo'. Ef I'se killed in dis yere wah, bury de banjo wid me."

"All right, Mungo, I'll remember that," answered the captain. "But don't forget, if you get the chance, to smash that banjo over some Yankee's head. Do that, and I'll buy you the best instrument to be found in Richmond."

"De Yankee ain't born whose head am good enuf to hab dis yere banjo smashed ober it," murmured Mungo, and there the subject was dropped.

The main body of the Confederate army was stationed in and about Manassas Junction and along a little stream known as Bull Run; but there were also bodies of troops at Centerville and Fairfax Court House, situated between Manassas and Washington, and also detachments at Alexandria on the Potomac and at Arlington Heights, just across the river from the Capitol.

Andy had been in camp less than a week when he received his first real taste of war life, if not of war itself. In order to strengthen the position of the army at Bull Run, it was decided to throw up breastworks, and this was done under the orders of General Beauregard, who now had under him a force of nearly twenty thousand men.

Bull Run is a sluggish stream of water, flowing between steep banks and through a well-timbered country. Its winding course contained many fords and several bridges. The Confederate army occupied about eight miles of the southern bank of this stream, and at once began the work of defending seven of the fords and one of the bridges by throwing up breastworks of dirt and brushwood.

With the others in his company, Andy was given first a pick and then a shovel and set to work like any common day laborer. The youth was not used to this, and when night came his back ached as it never had before. The work took the best part of a week, and then Andy found his hands blistered.

"Call this fighting?" he grumbled. "It wouldn't be so bad if a fellow was out in California digging gold, but to work like a nigger on the streets of a town——" He did not finish but heaved a big sigh. That night it rained "pitchforks;" the tent Andy occupied with Leroy was blown down, and he felt utterly discouraged.

"Never mind, Andy," said Leroy, trying to cheer him. "We'll be fighting before long, and then you can show your mettle to better advantage. I heard some of the officers saying that the soldiers over in Washington would be out this way before the month was up. If they come we ought to give it to 'em red hot."

"They can't come any too quick for me," growled Andy.

Even with the work on the defenses the drilling went on daily without interruption. First they would drill in company, then with other detached cavalry troops, and finally would come the grand drill of the division. The drilling was not always done in an open field, but among the trees and on rough ground, and often fences had to be jumped and streams forded. It was not play but hard work; yet Andy liked it a good deal better than handling a pick and a shovel, something he thought altogether beneath him.

"It's life to be on horseback, dashing here and there," he observed to Leroy Wellington. "If only the Yankees would appear and give us a little more of this sort to do. I wonder if they are going to wait for us to attack them?"

The breastworks along Bull Run completed, advance guards were sent out along the Potomac just above Washington. Then the Confederates sent their engineers along Arlington Heights to survey the territory and report on the advisability of planting a battery there. Some of the Southern leaders were certain that such a battery could successfully shell Washington and compel President Lincoln and the members of Congress to flee for their lives. The only trouble was, could they hold such a position? Might not the Union forces come down upon them from the upper Potomac and cut them off from their base of supplies and from Richmond?

The question was answered before the Southern generals had time to act upon their idea. One day a Union officer, while in a boat near the foot of Arlington Heights, discovered a number of men walking about among the rocks and brush. The officer happened to have a powerful spy-glass with him, and using this, discovered that one of the men was Robert E. Lee, who was then the military adviser of President Davis of the Confederacy, and who afterwards became the general-in-chief of the Southern army. Lee was laying out fortifications, and the Union officer lost no time in reporting to General Scott to that effect.

General Scott saw at once that this work must be stopped instantly, or Washington would be at the enemy's mercy. Orders were accordingly given for certain detachments of the Union troops to cross the river without delay, and take possession of the opposite shore.

The advance from Washington was made at two o'clock at night. Two bridges crossed the Potomac at this point, and a column of the army passed over by each, while a third division embarked on vessels for Alexandria, a short distance below Arlington Heights. As soon as the Confederates heard of the approach of the Union men they retreated, and the shore of the Potomac opposite Washington was occupied without great difficulty.

Louis was just about to retire for the night when the sudden roll of the drum made him leap to his feet. In a few seconds Harry Bingham came rushing into the tent.

"We are off, Louis!" he ejaculated. "The war has begun."

"Off! Where to?" burst from Louis' lips.

"I don't know. Across the river to somewhere, I believe. Come on!" and off Harry ran, with Louis at his heels. The parade ground was filled with men, on foot and on horseback, scurrying in all directions.

From their captain the youths soon learned that the Union army, or a portion of it, was to take possession of the other shore of the river. The various commands had been divided into three parts and the Goreville Volunteers were to be attached to the Ellsworth Zouaves and some other companies, bound by boat for Alexandria. In less than two hours all was ready for embarkation.

The trip down the stream to one of the main docks in Alexandria did not take long. Company after company came ashore unmolested, although mutterings could be heard on every side. Having landed all of his troops, Colonel Ellsworth marched up the main street, called upon the city authorities to surrender the town, and then started for the telegraph office, with the intention of cutting off all communications with the South—certainly a very clever movement.

The Goreville Volunteers soon found themselves not far from the telegraph office for which Colonel Ellsworth was bound. They had become detached from the main body of the soldiers and now, without warning, were surrounded by a mob of two hundred people, armed with pistols, clubs, and stones.

"Down with the Yankees! Down with the Northern mud-sills!" was the cry, and in a moment the air became thick with flying stones and lumps of dirt. Captain Paulding at once halted his men in two lines, and gave the rear line the order to "about face." Next came the order to take aim, but by this time the mob saw that the soldiers "meant business," and it melted away as quickly as it had gathered.

"A bloodless victory," smiled Harry, who stood next to Louis.

Louis smiled and then he nodded his head in the direction where Jerry Rowe stood. Poor Jerry was shaking so he could scarcely hold his gun.

"He'll collapse when he gets into a regular battle," said Harry, and then the command came for silence in the ranks and nothing further was said.

A little later the command marched past the Marshall House, one of the leading hotels of Alexandria. From the top waved a Confederate flag—a flag which President Lincoln and others had often seen from a window in the White House.

"Gosh! that flag ought to come down," whispered Louis. He had scarcely spoken when down the street came Colonel Ellsworth, accompanied by only two or three of his command. Ellsworth had noted the flag and now he ran into the hotel to tear it down with his own hands.

"Whose flag is that?" he demanded of the first man he met.

"I don't know," was the surly reply.

"I want it lowered at once."

"Do you? All right, go take it yourself."

"I will," answered the Union officer, and ran up one pair of stairs after another to the roof of the hotel. Here the halliards of the flag-staff were cut and the flag brought down on a run. With the colors wound over his arm, Ellsworth began to descend to the street. He had just reached the second floor of the building when the proprietor of the hotel, a man named Jackson, appeared in the hallway armed with a double-barrel shotgunt.

"Will haul it down, will you!" he muttered, and pointing his weapon at Ellsworth's breast, fired. The gallant leader of the Ellsworth Zouaves was killed instantly, and sank down without a moan.

"Ellsworth is shot! Help!" came the cry from the Union's officer's companions, and then one fired at Jackson with fatal effect. As the hotel man went down in a pool of blood the others leaped upon the body and thrust it through with their sabers.

"Spare him!" came in a woman's voice, and the secessionist's wife came rushing forth from a bedroom. Thinking her husband might still breathe, she threw herself on his corpse, while the Union men, knowing he was dead, picked up their dead leader and carried him away.

CHAPTER IX.

THE ADVANCE TO BULL RUN.

The excitement around the hotel was for a time intense, and not only the Zouaves, but also the Goreville Volunteers had all they could do to restore order and thus prevent further bloodshed. Many of the Union men were in favor of burning the Marshall House to the ground, but other counsel prevailed and the building was spared.

It may be added here that later on Colonel Ellsworth's body was sent on to New York city, where the funeral services were among the largest and most imposing ever witnessed in that city. The funeral of Jackson was also well attended, and each man was looked upon as a martyr by those whose side he happened to represent.

The death of Ellsworth was a shock to Louis. It was the first soldier he had heard of being slain, and he shuddered when, later on, he gazed at the cold, set face of the dashing Zouave, whose striking uniform of red, blue and yellow had made him more dashing than ever. It was the lad's first taste of grim war—and there was much more still in store.

The Zouaves having taken complete possession of Alexandria, the Goreville Volunteers were sent back to their old quarters at Washington, to remain there for a possible call from the upper Potomac. It was during this wait that Louis one day came almost face to face with President Lincoln, who was inspecting the remnant of the army, in company with General Scott. The sad, earnest face of the president impressed him greatly, and he could not help but think of what a tremendous responsibility now rested on the shoulders of the nation's chief executive.

"He's got more of a load than I would like to carry," said he to Harry Bingham. "With so many thousands of eyes upon him, he can't afford to make a mismove."

"You are right, Louis. I would rather be a private in the ranks."

"If I was president I would soon end this war," blustered Jerry Rowe, who had heard the remarks.

"Would you, indeed, Jerry?" answered Louis, curiously. "How could you do it?"

"Never mind—I'd do it, and that's enough for you to know," and Jerry stalked off, fearful of being pinned down to some plan of campaign.

"Jerry is a cooler," murmured Harry. "He is a coward at heart, yet how he does love to brag."

"Benny Bruce was complaining to me about him," said Louis. "He says Jerry is picking at him whenever the chance offers. Jerry always did love to tease the little fellows."

"He ought to have his head punched for it," concluded Harry.

Having taken possession of Arlington Heights, the Union troops at once began to build fortifications there, and soon the danger that had threatened Washington was past. Close at hand were the beautiful grounds of Mount Vernon, where Washington had lived, but these were not touched during the entire war, both North and South considering the ground as sacred.

The Goreville Volunteers were not left in Washington long. More troops from New York, New Jersey and down east had arrived, and on one bright day in May the brigade moved across the river and went into camp in an orchard near Arlington Heights. Not far away was Arlington House, the homestead of the Lee family. The Lees had deserted the beautiful abode, and it was now the headquarters of General Sandford, commander of the Army in Virginia.

"It seems a shame to destroy all these beautiful places," remarked Louis one day, when he and Harry Bingham were off duty and were strolling around in the confines of the camp. "Just look at this orchard. It looks as if a cyclone had struck it.

"This is bad enough," replied Harry. "But supposing the rebs had come up and shelled Washington,

WITH A QUICK LEAP THE PENNSYLVANIA FARMER WAS ON THE MOUND OF DIRT

wouldn't that have been worse to have the Capitol and the White House and other buildings laid in ruins?"

"Oh, I'm not comparing the two, Harry. But think of how long it took to get this orchard growing like this. If we stay here another month every tree will be ruined—if not cut up for firewood."

"We won't stay here much longer. The authorities in Washington are growing too impatient to do something," concluded Harry Bingham.

Late in May, Brigadier-General Irwin McDowell, of the regular army, took command, General Sandford being transferred. The coming of this hero of the Mexican War was an event, and the inspection and drill which followed was not soon forgotten by the boys in blue. From henceforth strict military discipline prevailed, and every soldier had to "toe the mark" in earnest.

Yet week after week went by and the army did not move. It was known the Confederates were growing stronger and stronger in their position at Manassas Junction and along Bull Run, and many of the soldiers wondered why something was not done.

"Boys, don't you know it takes a lot of time to get everything in readiness for such an immense army as this?" said Captain Paulding one day, by way of an explanation. "Think of the thousands of horses required for the wagons and batteries, the immense stock of rations, and hundreds of other things. Why, you must remember that the moving of such a body of men as we have here is like an exodus. But we'll march before long, never fear."

Fourth of July was spent in camp in a lusty manner, the soldiers celebrating as much as their means allowed. In the evening bonfires blazed forth on every hand, making the vast camping field as bright as day. There were orations, sham battles and some of the boys in blue got up a minstrel show and an amateur circus, at both of which the fun was uproarious. It was like the comedy which precedes the tragic in a melodrama.

At last, on the sixteenth of July, came the orders to break camp. The army had been divided into five grand divisions, each division moving forward by a different route. Soon every highway leading towards Fairfax Court House, Centerville and Manassas Junction was filled with tramping soldiers, dashing cavalry, fifers and drummers and bands of music, with hundreds upon hundreds of heavy batteries plowing their way along through the dirt, and followed by thousands of provision and sutlers' wagons and ambulances; and last of all the carriages of politicians and others who were curious to see what was going to take place now the North was about to strike her first regular blow at the Confederacy.

"My gracious, I had no idea that there were so many of us!" murmured Louis to Harry, as they stood in the ranks, waiting for their turn to move, and watching regiment after regiment of their comrades march by, with colors flying and every face full of hope and determination. "We ought to conquer by sheer force of numbers, if nothing else."

"They'll have just as many men," put in Moses Blackwell. "It's a bloody struggle we have afore us, mark the words."

Louis had expected a fatiguing advance of fifteen or twenty miles, and he was rather surprised when, early in the afternoon, their company entered Fairfax Court House and they were ordered into camp for the night. The advance along the road had been made with caution, and although it was known the Confederates had outposts posted along the routes these advance guards had fallen back as the boys in blue marched forward.

Fairfax Court House was but a small town, and the majority of the inhabitants were thoroughly scared at the arrival of so many troops. Many of the men were away, in the service of the enemy, and the women folks viewed the appearance of each new soldier with much misgivings.

"Spare me and you can take all I have!" wailed one old lady to Louis, as he appeared at her kitchen door for a pail of water. "Oh, do not kill me!"

"Madam, I'm not going to touch you," answered the youth, more than half-amused. "I came in to see if you would be kind enough to give me a bucket of water."

At this the old lady stared, thinking she had not heard aright.

"You—you only want some water?" she faltered, trying vainly to recover.

"That is all, madam—unless you have some cookies you are keeping for our boys. We never refuse those, you know," and Louis smiled.

"I declare, I reckon you ain't so fierce as I took you to be."

"I'm only a soldier boy, trying to do my duty. Can I have the water?"

"Certainly! certainly! Take all you want. I haven't any cookies, as you call 'em. But I've got some eggs, just laid—you can have them if you want 'em."

"Thank you, madam, 'I'll take them with pleasure. But remember, I don't demand them. We have strict orders to demand nothing."

"Oh, it's all right. You can have 'em, even if you are a Northerner. I see you're nothing but a boy, and I have a boy in the army—on our side, and I reckon he'd like a fresh laid egg now an' then," and she ran off to bring back eight large, white eggs tied up in a bit of cotton cloth. That evening Louis, Harry and several of the others of "their crowd" enjoyed the freshest omelet they had had since leaving home.

But some of the soldiers, be it said to their discredit, were not as considerate as Louis had been. Thinking themselves in the enemy's country, they plundered a number of houses, threatened the inmates, and in two cases buildings were set on fire and destroyed. During the evening a number of the thoughtless ones arrayed themselves in some stolen female wearing apparel, and thus masqueraded, paraded about until stopped by the officers.

From Fairfax Court House the army moved slowly the next day towards Centerville. They were now but a few miles from Bull Run, and although the Goreville Volunteers were not yet called into action, yet the distant sounds of firearms told that no longer was everything "quiet along the line." On the day following a fierce fight took place between a portion of General Tyler's division and the enemy entrenched at a spot called Blackburn's Ford, and in this encounter nineteen of the boys in blue were killed and twice as many wounded. This was really the opening of the great battle of Bull Run. The Union soldiers found they could make no advance, and accordingly it was decided to wait several days until the entire army could be brought into position for a simultaneous attack. Additional supplies were also needed, and these did not arrive when expected. At last came the orders to go forward.

"Now for bloody war, my boy!" cried Moses Blackwell to Louis. "Ye'll git enough of it now, see if ye don't."

It was early Sunday morning. The soldiers were to have moved at two o'clock, but it was nearly sunrise before the Goreville Volunteers were in motion; and the day promised to be a scorcher.

Little Benny Bruce beat his drum loudly, his eyes glistening brightly, for the spirit of war seemed to be a very part of his nature. Seeing Benny so brave, Louis could not help but look at Jerry Rowe. The boaster was pale and his fishy eyes were full of uncertainty. The next twenty-four hours were well calculated to sift the cowards from those who were truly brave.

To go into all of the details of the great battle of Bull Run would be both impossible and apart from my purpose in writing this story of personal adventures on both sides of the great conflict. Suffice it, then, to say that the attack on the Confederate forces was begun between six and seven in the morning at a place known as the Stone Bridge, and from that hour the battle kept on steadily until the middle of the afternoon. By this time both sides had sustained heavy losses and were worn out, but the arrival of a large body of fresh Confederate troops under General Johnson put new life into those who marched under the Stars and Bars, and they attacked the Union men with such increased vigor that nothing could stand before them. By sundown the Union men were in full retreat for Washington, and thinking the fresh Confederate force much larger than it really was the retreat degenerated into an actual panic.

But Louis thought of none of these things as he

marched forward mile after mile in the blazing sun. The dust on the road was several inches deep, and a heavy battery traveling just in front of the Goreville Volunteers kicked up such a dust that the lad was all but blinded. He was glad enough when the orders came to turn to the left and enter a by-road leading through a heavy woods.

"Halt!" The command came full and clear along the line of soldiers stretched out among the trees and brush. A clearing was just ahead and on the opposite side of this could be seen a number of hastily-constructed breastworks, and the glitter of two brass cannons. The order to halt had hardly come when the cannons boomed forth, and a mass of grapeshot came tearing through the thickets, clipping off branches of trees and tops of brush and sending half a dozen dead and dying to earth.

"Oh, I'm killed!" yelled Jerry Rowe, falling back. But it was only a cut-away branch which had struck him. Somebody laughed, and then every gun was clutched closer, as the order came to charge. Louis was in battle at last!

There is no denying the faot that his heart was in his throat. To move forward under fire for the first time in one's life is no light thing. He looked at Harry on one side of him and saw the pale, set face. Then he got a dig in the ribs from Moses Blackwell, who was on the other side.

"Can't die but once, Louis. Hurrah! fer the Stars and Stripes! Down with the rebels!"

The cry was taken up on all sides. An answering call came back: "Here they come! Down with the Yankees!" And then came a blaze from a long line of rifles, and two of the Goreville Volunteers went down to their deaths before being permitted to strike even one blow in the cause for which they had enlisted.

"Take aim! Fire!" came the command from Captain Paulding, and steadying himself, Louis aimed his gun straight at one of the enemy and pulled the trigger. The death of two men he knew well had nerved him for the deed, and he saw the Confederate throw up his hands and fall back, shot through the shoulder.

"Forward again, boys! Forward! We must gain those breastworks! " came the cries. Away they went, out of the woods, to confront that deadly fire again. Three went down, wounded, and the men were ordered to "close up." The smoke now became thick and in the midst of this the brass cannons spoke again, but the shots were too high and did no damage.

Louis now found himself at the edge of the breastworks, with Harry and Moses Blackwell still beside him. Close at hand was Nathan Hornsby, and with a quick leap the Pennsylvania farmer was on the mound of dirt and brush, and Louis scrambled after him. Others followed in rapid succession and the breastworks were taken.

But not for long. With a wild yell the Confederates rallied and bore down upon their enemy. The brass cannons had been hauled away and the open field became the ground for a fierce hand-to-hand conflict. Louis tried to keep close to his friends, but in the melee this was impossible, and in a minute more he found himself alone and in the very midst of the enemy!

(To be continued.)

CHAPTER I.

THE SWALLOW AND THE GREYHOUND.

"I THOUGHT you said you knew where every sandbar in Delaware Bay was?"

"I did say so."

"What do you mean, then, by running us aground here?"

"This is one of the bars."

"And you knew it was here?"

"I know it now."

For a moment Caleb Davis stared blankly into the face of his friend, Noah Dare, and then laughed aloud. "I half believe you, Noah," he said. "It would be just like you to run us aground out here and keep us on this bar till the tide comes in. It wouldn't be the first time you have played a trick like that on your friends."

"Cale, you're too lazy to help pole The Swallow, that's all the trouble with you."

"Pole her!" retorted Caleb; "I've broken the only pole you had on your old tub."

"Yes, you don't know much about poling, that's a fact. If you really want to get off this bar before midnight, I'll tell you what you can do."

"What's that?" demanded Caleb eagerly. "I'll do it, whatever it is. I don't want to stay out here and freeze."

"Just get overboard and push her off. Oh, the water isn't deep. It won't come much above your knees. It isn't so very cold, either," Noah added dryly, as his friend shivered as he peered over at the waters.

"How do you know it isn't cold?" demanded Caleb.

"Oh, it never is very cold in December."

"I'll tell you what I'll do, Noah," suggested Caleb quickly. "I'll take the tiller and let you do the pushing. I'm not much of a sailor, you know."

"I 'know' that," assented Noah, his eyes twinkling as he spoke, "and you don't suppose I'm going to trust my boat to a lubber, do you? Nay, kind sir, here I stay till the tide lifts us or you shove us off this bar."

"Then I'll stay with you, Noah," laughed Caleb. "I always did like to be where you were. I wouldn't leave you now—not even for a cup of tea." As he spoke, Caleb Davis drew his coat more closely about him and seated himself beside his friend, Noah Dare. Early in the afternoon of that day, late in December of the year 1774, they had set sail from Philadelphia in Noah Dare's fleet little catboat, bound for Greenwich in New Jersey, where Noah's home was. Caleb Davis, his cousin, had ridden on horseback that morning from Chester and, agreeable to the arrangement which had previously been made, at the wharf at the foot of Market street, had reported to Noah, who was in waiting there with his trim little craft, The Swallow, the pride of the young sailor's heart. Caleb's luggage was speedily placed on board, his horse was stabled in a nearby barn, there to remain until its owner's visit at the home of his cousin in Greenwich had been completed, when Caleb would return and ride back to Chester.

The December day was unusually mild and the sail had been enjoyed by both boys until, unfortunately in the low tide, The Swallow had stuck fast upon a sandbar about three miles from their destination. Caleb's efforts to use the pole had resulted in failure and the pole itself had snapped in his hands. As a consequence, hope of speedy relief had departed and if no passing boat should come to their relief, there was slight prospect of their resuming their voyage before the incoming tide should float them once more. And three hours at least must pass before the tide would be in.

Noah Dare had accepted the misfortune in the same indifferent manner in which most of the events in his life had been received. Easy going, warm-hearted, seldom angered, Noah was likely to deceive a chance observer by his manner. Short, broad-shouldered, muscular, his little eyes twinkling with the spirit of mischief, his apparently unruffled demeanor might easily lead a stranger to believe that Noah was not one to care much for anything, or at least for anything long. But such a conclusion would have been misleading as Noah's best friends, and his cousin Caleb Davis most of all, well knew. His quiet manner concealed an intensely strong determination, and in spite of the impressions of good nature, which the expression of his face indicated, Noah Dare's anger was easily aroused, and once aroused was intense.

In sharp contrast was his cousin, Caleb Davis. There were no freckles on his face, like those to be seen on Noah's countenance, he was at least six inches taller, and his body was thin and wiry. When the boys had gone on their hunting expeditions, as they frequently did in the autumn of each year, it was Caleb who led the way on the long tramps, and whose skill with the use of the rifle was their main reliance, for Noah boasted of no prowess as a marksman. On the water, however, it was Noah who was the leader, and the inability of his cousin to learn even the simplest of nautical expressions was a never-ending source of delight to him. Indeed, Noah had repeatedly declared that "Caleb never could tell the difference between a fo-castle yarn and a belaying pin."

The affection between the boys had been exceedingly strong from their earliest days. They had attended the same school in Philadelphia, their vacations had been spent together, and now that both boys were eighteen years of age, the feeling each cherished for the other, though less demonstrative than when they were younger, was no less strong. Caleb's impulsiveness found its complement in Noah's quiet sturdiness, while the latter's keen enjoyment of a joke was a source of delight to his cousin, who never failed to respond to Noah's droll words and ways.

"What are you looking for, Noah?" demanded Caleb, when the two boys had been silent for several minutes.

"I didn't know but I might see something of Elias and Ananias. They were in Philadelphia today and were going to sail back home. If I could get a sight of their craft anywhere I'd make them haul us off this bar." As Noah spoke both boys peered eagerly over the water, but not a sight of their friends' boat could they obtain. In the distance they could see a huge sloop, but it was the only sail to be seen upon the bay.

"Noah, I've often wondered where Ananias got his name," suggested Caleb.

"You mustn't blame him. There was a good man named Ananias as well as the liar, wasn't there?"

"Yes. Which one was he named for?" inquired Caleb.

"I can't just say," replied Noah so soberly that his friend laughed aloud. "Sometimes I think it's one and then again I think it's the other. He does tell some pretty good sized stories sometimes."

Elias Bacon and Ananias Smally were boys who dwelt at Greenwich, friends and neighbors of Noah and frequent companions of both boys, so that Caleb's laugh at his cousin's words was born of his personal acquaintance with the two lads.

"What has Ananias been telling now?" inquired Caleb.

"Cale, do you know the Elmer house?"

"The old house near the dock? The one that—"

"Yes, that's the one," interrupted Noah. "Well, Ananias says that the doors of the old house open and shut, and the windows rattle and great sounds are heard there every night, and yet when anybody rushes in not a soul can be found from cellar to garret."

"Do you believe it?"

"I don't know. I've never seen it," said Noah indifferently.

"Noah, let's stop there tonight and see it! It's not far from the dock. What do you say?"

"I'm agreed," laughed Noah. "I'm afraid, though."

"Afraid! What are you afraid of? This isn't Salem, I'd have you know! They believe in witches down there and in whipping Quakers and all sorts of things. But Jersey isn't as foolish as all that."

"I'm not afraid of witches. What I'm afraid of is that that we shan't leave this sandbar in time. We're likely to stay here a while, Cale," Noah added suddenly; "have you noticed that sloop?" As he spoke the young sailor gazed long at the sail which now was not far from the place where The Swallow was aground. His companion, too, now watched the sloop whose actions certainly were puzzling. The sun had been below the horizon for some time, but the course of the boat could be plainly seen. She would stand upon one tack and then suddenly reverse her course, apparently not attempting to make any progress at all. Occasionally the sound of the voices of the sailors came across the water and even their words could be heard as the sharp call to come about was given. A half dozen or more times she covered the same course and at the end was nearly in the same position as when she had first tacked.

"I can't make her out," said Noah thoughtfully. "I've never seen her before."

"There are several boats that come into the Delaware which were never here before," suggested Caleb lightly. "This may be one of them."

"Yes, that's so, Cale," responded Noah, thoughtfully, after another brief silence, during which he had watched the sloop run in closer to them than she had before done, and then abruptly come about and speed across the bay. "Yes, that's so. They had some boats loaded with tea that landed in Boston and some 'Mohawks' were there to meet them, too. And they had another down at Annapolis and chests caught fire there, too, just the way they were dumped overboard in Boston. They tried it in New York and Philadelphia, you know, but they wouldn't even let the cargo be landed in either place. I never could see why the colonists made so much of the Boston tea party and never say a word about what Philadelphia or New York has done. It seems to me it's better and takes more nerve not to let a ship land than it does to make a great time after she has docked."

"You don't think there's tea aboard that sloop, do you?" laughed Caleb.

"I don't know what she has on board besides her numbskull of a captain. He seems to be doing his best either to run her aground or lose his way."

"Maybe he's waiting for somebody to pilot him and the man hasn't shown up yet," suggested Caleb.

Noah made no reply as he continued to watch the distant sloop, which had by this time almost become

indistinguishable in the dim light. In a brief time, however, she was seen returning on her course and apparently headed directly for the spot where The Swallow was aground. In a few moments, with a great flapping of the sails the sloop once more came about and at the same time there was a call heard from her deck.

"Ahoy, there!" shouted some one. "Is that Sam McGear?"

"No, it isn't," shouted Noah. Then in a low voice he said to Caleb: "It's just what I thought. They're waiting for somebody here. That's why she's been standing off and on the way she's been doing."

"They're lowering a yawl," whispered Caleb, excitedly. "You don't suppose they're coming here, do you?"

Noah did not reply, as he watched the yawl which now was manned and was swiftly approaching The Swallow. Caleb's query was speedily answered, for the yawl was stopped when it had come within a few yards of the catboat and the man who was seated in the stern hailed the boys.

CHAPTER II.

A MYSTERIOUS DISAPPEARANCE.

"What boat is that?" demanded the sailor.

"This boat is The Swallow; captain, Noah Dare, of Greenwich," responded Noah.

"Bound for Greenwich now?"

"Yes, sir."

"Why don't you go on then? What are you anchored here for?"

"We're aground. We're waiting for the tide."

"What's the trouble? Don't you know the channel?"

"Noah knows every inch of Delaware Bay," spoke up Caleb. "This bar is one that he has just found. He knew it was here all the time, though."

The man laughed, apparently relieved by the words he had heard, and, in a tone different from that in which he had first spoken, inquired: "Do you know a man named Sam McGear?"

"Yes, sir," responded Noah. "He's one of the best pilots in these parts."

"He knows Delaware Bay almost as well as Noah does," suggested Caleb.

Again the man laughed as he said: "Have you seen him this afternoon or tonight?"

"No, sir," replied Noah.

"He was to pilot us up the bay to Greenwich," explained the sailor, plainly annoyed by the failure of Sam McGear to appear.

"What sloop is that?" inquired Noah.

"The Greyhound. We can't wait here much longer. I wonder if one of you could point out the channel for us? Doesn't look as if you knew very much about the course from the way you are stuck fast here," he added.

"Oh, Noah knows every foot of Delaware Bay," said Caleb quickly, perceiving in the suggestion a way of escape from The Swallow's predicament. "He's sailed it for years. He lives in Greenwich and sails to Philadelphia every week."

The man hesitated a moment, and then said: "Come aboard with me. I don't know what the captain will think, but there's no harm in trying."

"All right; give us a tow and we're with you," responded Caleb eagerly.

At the bidding of the man in the stern of the yawl one of the sailors arose and tossed a line to Caleb, who quickly made it fast to the bow of The Swallow, and as the tide had meanwhile been steadily rising, when the men obediently "gave way," the little catboat slid slowly over the bar and soon was in the deeper water. Caleb had quickly lowered the sail and the boat was towed toward the sloop which was awaiting the return of the yawl.

"This is getting out of our scrape a good deal more easily than I thought we would," whispered Caleb to his cousin.

"I'm not so sure about that," responded Noah.

"Why? What's wrong? You don't think this sloop is —" began Caleb.

"I don't know what to think. Better keep your eyes open and your mouth shut tight, Cale. There's something queer here, but I can't see just what it is."

There was no opportunity for further conversation as the yawl had now drawn alongside the sloop. From the rail Noah and Caleb could perceive the faces of the sailors peering down at them and could hear the captain's query as he said, "Was it McGear?"

The man in the stern of the yawl made a response in so low a voice that the boys could not hear what was said, and their interest was intensified when the sailors clambored up the ladder and held a brief whispered conversation with the captain. That the conversation concerned themselves both Noah and Caleb could perceive from the frequent glances that were cast at them.

At last the captain hailed them. "We'll take your craft in tow and both of you come up on deck."

Disinclined as Noah was to heed the call, he nevertheless was persuaded that the wisest course was to obey, and as soon as The Swallow had dropped back to the stern of the sloop and there been made fast, both boys clambered up the swaying ladder and gained the deck. The name of the sloop had been plainly seen, for in ornamental letters the word Greyhound could be discerned even in the dim light. It was manifest, too, that the name was in a measure descriptive of the sloop, for she had been built for speed, and her trim shape was not more impressive than the great amount of canvas she could carry.

"Who owns that catboat?" demanded the captain when the boys stood before him.

"I do, sir," responded Noah, quietly.

"Where do you live?"

"At Greenwich."

"I hear you've sailed the bay and know every foot of it."

"I know it pretty well."

"Can you show us the channel?"

"Yes, sir."

"All the way to Greenwich?"

"Yes, sir."

"We expected to take on a pilot here but he didn't live up to his promise."

"Sam McGear has a way of doing that, sir," said Noah, quietly.

"I know it now. I wish I had known it before and I'd have saved all this bother," said the captain in a manner that betrayed his annoyance. "What did you say your name was?" he added.

"I did not say, sir, but my name is Noah Dare."

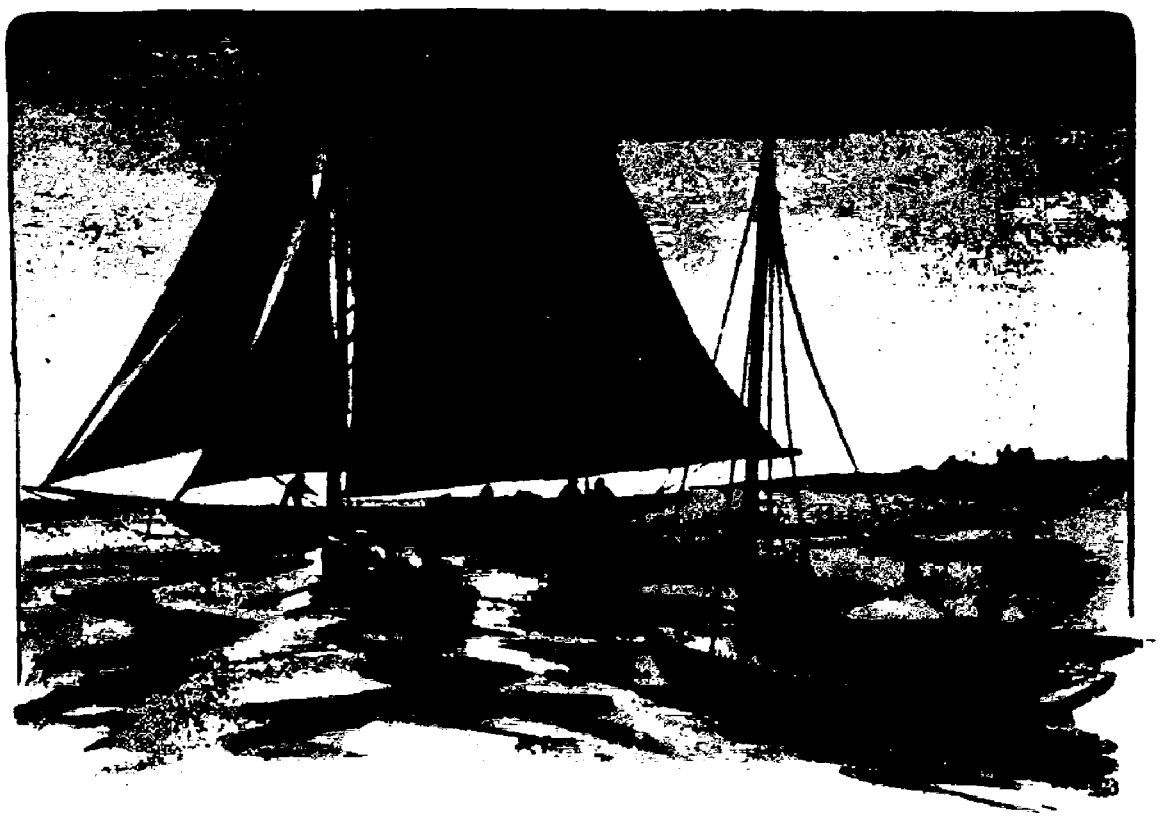
"And who is this lad?" inquired the captain, placing his hand on Caleb's shoulder and peering half-suspiciously into the lad's face as he spoke.

"Caleb Davis, my cousin from Chester," explained Noah.

"Does he know Delaware Bay as well as you do?"

"No, sir; I don't know anything about the bay, except where that bar is which we found, and I'm not sure I could find that again," said Caleb, quickly.

"You'll do," said the captain dryly. "Now, then," he continued, turning once more to Noah, "if you'll point out the channel and we get safely to the Greenwich dock, I'll see that you have a guinea for your work. That's good pay and just what I promised this Sam McGear. If you run us aground or try any tricks on us, then I'll—"



THE BOAT WAS TOWED TOWARD THE SLOOP

The captain did not explain what his implied threat might include, but as his haste plainly was urgent, he at once led Noah from the spot, leaving Caleb to amuse himself as best he might. In a brief time the Greyhound was speeding up the bay before the light wind and not more than an hour had elapsed before she had arrived at the dock she was seeking. True to his word the captain rewarded Noah with the guinea he had promised and even assisted the boys in casting off The Swallow. Noah was convinced from the man's manner that he was as eager for the boys to depart as he had previously been for their assistance; but it was impossible to perceive what the cause of the anxiety was, and without referring to his own suspicions the young sailor made his catboat fast to the end of the dock, and then he and Caleb started up the street toward the Dare homestead. It was not later than ten o'clock, but not a soul was to be seen upon the street. The houses, too, were dark and it was evident that the candles had been extinguished and that Greenwich village was not disturbed either by the arrival of the Greyhound or the return of Noah Dare in his catboat.

"Do we go to the Elmer house tonight, Noah?" inquired Caleb as the boys opened the gate into the yard that surrounded the latter's home.

"Just as you say, Cale. For myself, I think I've had enough for one day, but if you want to go I'm your man."

"How about tomorrow night, then?"

"That will suit me better. We ought to be in good trim if we're going to hear doors slam and windows rattle and all that. For my part, I never thought there was anything in it. Ananias says there is, though."

"Noah, what do you think that sloop is here for?"

"The Greyhound? Oh, I don't know. Probably to load up with some stuff the Quakers want to ship. They're about all the men here that have anything to sell, anyway."

"Do you think the Greyhound brought any cargo?"

"I didn't see any. Did you?"

"No. She stood high out of the water and didn't seem to be loaded much. She could run, if she had to, and there wasn't much of a breeze."

"She could that," acknowledged Noah, and the conversation ceased as the boys entered the house and quietly sought their rooms.

At the breakfast table on the following morning, where Noah and his cousin greeted the members of the family, they related their experiences of the preceding day, and when Caleb told how Noah had been taken on board the Greyhound as pilot, in place of the missing Sam McGear, and how he had safely brought the sloop to her dock in Greenwich, Mr. Dare looked up quickly and said: "What is that? You say you brought a sloop in here last night?"

"Yes, sir; that is, Noah did," laughed Caleb. "I didn't do anything. Noah says I don't know the difference between sailor's yarn and a dress of silk."

"There is no sloop at the dock now," said Mr. Dare quietly.

"What!" exclaimed Noah; "no sloop there? Why we saw her last night and it was only about ten o'clock."

"She isn't there now, whatever you may have seen last night. I went down to the dock before breakfast and there wasn't a sign of her to be seen," said Mr. Dare.

Caleb looked in astonishment at his cousin, who also was plainly puzzled by his father's announcement, and for a time neither of the boys spoke. As soon as they rose from the table they both hastened to the place where the Greyhound had been made fast to the dock, and as they drew near they were aware that Mr. Dare had spoken truly. The sloop was nowhere to be seen.

"Doesn't that beat the Dutch!" exclaimed Caleb. "Perhaps we didn't see any sloop after all. Maybe we just dreamed it. No, I'll tell you what it was, Noah. It was one of Ananias's stories; that's what it was. It was another piece of his story about the Elmer house."

"There comes Ananias and Elias now," said Noah quietly, as their two friends were seen approaching the dock. With them was a young Quaker of their own age, Elnathan Todd. The last named personage wore the sombre garb of the Friends, and in spite of the high regard in which the members of the body, to which Elnathan belonged, were held in Greenwich, for Elnathan and his father, Noah, at least, cherished a feeling of suspicion and dislike.

The approach of the three boys was eagerly hailed by Caleb, who was ignorant of his cousin's prejudice, and as they drew nearer he ran forward to greet them. Elias Bacon, tall, heavy, muscular, and dark, presented a sharp contrast to Ananias, who was much shorter than his friend, fair-haired and stout, and his bright blue eyes betrayed his impulsive disposition and his keen interest in whatever events the exciting times might afford.

Quietly greeting his friends Noah turned sharply to the young Quaker and said: "Elnathan, what time did the Greyhound sail?"

For a moment Elnathan gazed at Noah in silence, while a deep red spread slowly over his face. "The Greyhound!" he said at last in confusion. "What dost thou know of the Greyhound? Does thee think I had anything to do with her coming or going?"

(To be continued.)

OUR FATHER'S BUSINESS

By A. C. VOTEY

It was a boy twelve years old who said: "I must be about my Father's business." And he did not mean the business of the carpenter shop, in Nazareth, sixty miles away. *God* was his real Father, not Joseph; and *His* business at that time lay right there in the *house* where he was, and the *Book* he was studying. Boys don't expect to go into business till they get through school; but indeed education *is* business, and the schoolroom is their workshop. But whether it be home, or school, or shop, or store, the right-minded boy will *feel*, if he does not *say*, "I am about my Father's business."

Henry Drummond, that great lover of boys, has this to say:

"Sooner or later we find out that life is not a *holiday*, but a *discipline*. Earlier or later we discover that the world is not a *playground*—it is quite clear that God means it for a school. The moment we forget that, the puzzle of life begins. We try to play in school; the Master does not mind that so much for His own sake, for He likes to see His children happy, but in our playing we neglect our lessons."

Theodore Roosevelt is as striking an expression of American opportunity and inspiration as was Abraham Lincoln. Lowly birth and extreme poverty were as ineffectual against the rise of the one man to power and great usefulness as inherited wealth and high social connections were against the rise of the other. Character in its best estate told in both cases. The one man surmounted all the obstacles of his station and the other all the temptations of his. Hard work and lofty ideals explain the achievements of both.—Washington Star.

SILVER PRINCE

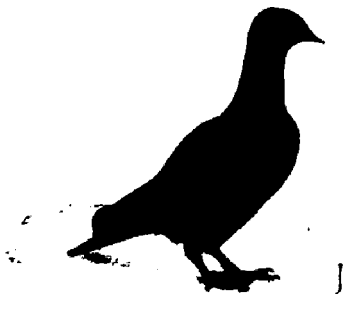
A HOMER PIGEON OF ROYAL BLOOD—*By L. C. BYCE*

PIGEONS have been used at various times in the world's history to convey messages, and at times the messages have been of momentous character and importance, such as to materially effect the destiny of a nation.

In 1849 the citizens of Venice when besieged by the Austrian troops used pigeons to communicate with the outside world to very great advantage.

It was the homing pigeon that carried the news of raging battles to those in the pent-up city of Paris when the French were shut in by the German armies in 1870-71. Following this memorable war many of the governments of leading countries provided their army and navy departments with large contingents of homing pigeons, believing that they would play an important part in future warfare.

Individual birds have shown remarkable traits and have become specifically



SILVER PRINCE WHEN 5 WEEKS OLD

noted for such, just as some horse within the bounds of our own recollection has become noted for a high degree of intelligence or a wonderful development of speed and for which reason has become enormously valuable.

Man's judgment in selecting and coupling races of pigeons has evolved a type whose usefulness, intelligence, remarkable speed, and almost inconceivable endurance has made it the most highly prized favorite of all, and well does it deserve to occupy this proud distinction; it is the homer, the king of pigeons.

Its attractivity is doing much to bring together kindred spirits and generally the associations are good. The boy with his single pair of birds, the man of moderate means, the professional man and the man of wealth are all found belonging to the same club and vying with each other in good-natured rivalry in the inspiring and fascinating sport of pigeon flying. Hundreds of other boys and men are engaged in the more

THE NATIONAL MESSAGE HOLDER

modest but no less interesting plan of sending their birds out to fly in order that those at home may indulge in the anxious expectancy and extreme delight of witnessing the return of the bird which each may have chosen as the first to reach the loft.

To be "well born is half raised" finds confirmation in the subject of this story, for Silver Prince's parents are birds that in many a flight have demonstrated remarkable swiftness of wing and staying qualities. His father has flown from Reidsville, N. C., to Boston, a distance of 613 miles, in a single day, a feat seldom accomplished, and his mother has a record of a few miles less; hence, it was reasonable to expect their son to develop into more than the ordinary.

Silver Prince seemed to have a decided advantage over his nest-mate in that he grew to a size more than a third larger in the short space of four weeks. On the fifth day of his existence, seamless bands were slipped over his then slender toes, bearing the letters and numbers as follows: "M. B. 11" on one leg, and "P26016" on the other. As soon as feathered and able to use his wings, he, like the studious and clever boy at school, desired to show what he could do. He was always on hand, the first one of the bunch whenever the attendant entered the loft, and if, as was ofttimes the case, the extended hand contained a few grains of hemp seed, he was the first to see it and alight upon the hand. For this and other reasons he soon became a universal pet. The days of his babyhood soon passed away and he with others was taken out of town a few miles for a first flight. Only those who have enjoyed similar experiences can imagine the moments of anxiety of the family of watchers who were soon rewarded by the sight of the entire flock on wing circling over the loft with one considerably in the lead. As soon as near enough to distinguish them it was found the leader was the favored one, Silver Prince. A little thing, it is true, a short flight, indeed, and yet as with the baby when it takes its first steps successfully, each one felt like fondling the bird and whispering in its ear, well done.

How much beauty we can discover in a pet we have learned to admire! See that shapely neck, its plumage reflecting those changeable metallic colorings. That eye of brilliancy; that symmetrical shape; no one dare even suggest the slightest imperfection.

In a few days the basket was again filled with ten choice specimens, including the pet of the loft, and shipped to the adjoining town of Santa Rosa, where they were liberated at 12 o'clock noon in the presence of several hundred school children. While the family at home were enjoying lunch, and even before the birds were expected, one of the boys looked out of the window and exclaimed: "There's Silver Prince on the loft," and sure enough there he stood for a few moments pluming himself and then entered the trap. In a few minutes others came, while the tardies came in one by one.

Allowing a few days rest, for be it known these birds were not yet three months old, they were sent to Healdsburg with instructions to liberate at an early hour. Quite a crowd congregated at the loft where was arranged a bulletin board, on which was placed the names and band numbers of the birds. Nearly every person selected some name

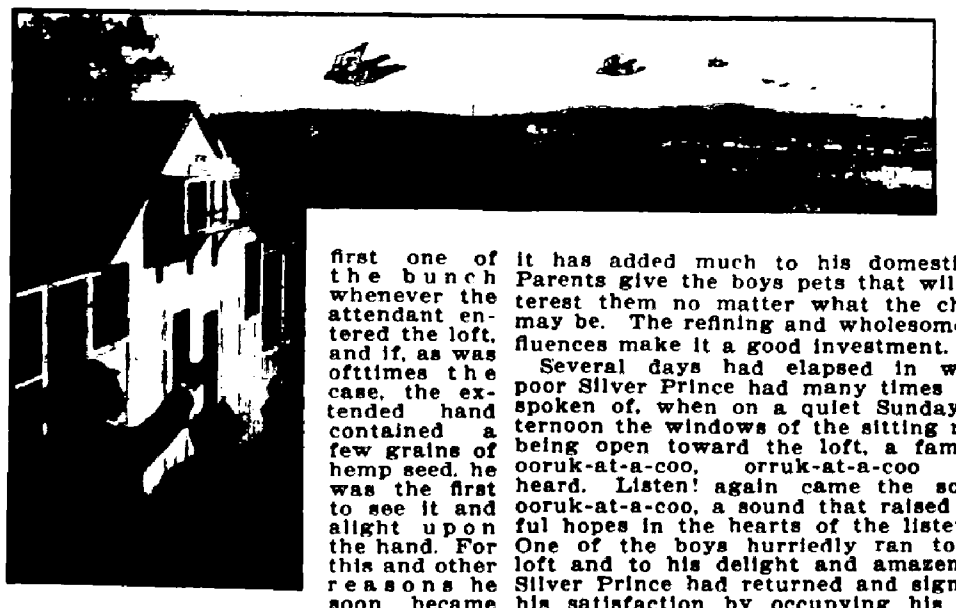
as the bird of their choice, the majority selecting Silver Prince. A telephone message, announcing the exact time of liberation, was received and hence the company of watchers knew pretty well when to expect the birds. Knowing ones fell to discussing the performance of other birds, and the merits of homing pigeons in general, and for the moment forgot that it takes good birds but a few minutes to cover the distance these were to fly. Suddenly some one shouted: "Here they come like the wind," one, as usual, in the lead, but alas, to the disappointment of many, it was not the favorite, but a little blue-checked hen, "Belgique, P26027." Quicker than can be described the swish of wings landed all but two, one of which was seen to make a last flap of its wings and tumble like a ball of feathers on the top of the wire-covered fly. Impelled by the strong homing instinct implanted within, it tenaciously clung to life in exercising a supreme effort to reach home. Upon scrutinizing the bird it was found that some heartless wretch had used a shotgun with the result as above stated. Where was Silver Prince? With one accord it was conceded that the shot in his case had been fatal and the loft would no longer be graced by his presence. Possibly the wielder of the gun does not know to this day how much pain was caused by his wanton act.

Many states have enacted laws, making the shooting of homing pigeons a grave offense and prescribing severe penalties. It is hoped California will do likewise.

Those in sympathy can appreciate the loss felt, for the wonderful intelligence displayed by this young bird was sufficient to attract anyone to him. Where is the person, who having formed an attachment for some pet, that has not wept at its loss. The one who has never admired or loved a pet certainly has a cold unresponsive heart, is of little value to a community and will bear watching.

Bad boys have ofttimes been turned from their wicked ways by pets with which to occupy the minds and employ their time. Good boys and men, yes, and even women, have derived much benefit and solace from their pets, and such influences have created stronger bonds in many a family.

The writer of this reflects with much pleasure upon the interest manifested by his entire family in any hobby in which he has indulged, and doubts not that it has added much to his domesticity. Parents give the boys pets that will interest them no matter what the choice may be. The refining and wholesome influences make it a good investment.

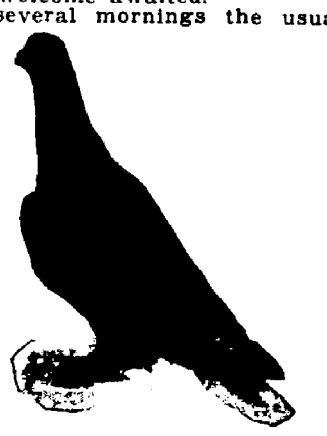


THE RETURN

Several days had elapsed in which poor Silver Prince had many times been spoken of, when on a quiet Sunday afternoon the windows of the sitting room being open toward the loft, a familiar ooruk-at-a-coo, orruk-at-a-coo was heard. Listen! again came the sound, ooruk-at-a-coo, a sound that raised joyful hopes in the hearts of the listeners. One of the boys hurriedly ran to the loft and to his delight and amazement, Silver Prince had returned and signified his satisfaction by occupying his own perch and cooing with more than usual zest. There was certainly joy in the household over the one that was lost and had returned. 'Twas but the work of a minute to catch him and upon examination marks of shot were plainly visible on the plumage, a slight wound not yet quite healed on one wing, and both the private band "M. B. 11," and the National Federation band, "P26016," removed.

It is a fair inference that the miscreant, after shooting the bird, picked it up and, discovering the bands upon the legs bearing the numbers as indicated, knew that it was a bird of no common stock; that he carried it home and made an attempt to hide its identity by cutting the bands off the legs, which act is equal to or worse than stealing. Doubtless the bird chafed under the restraint to which it was subjected, and it is possible the shooter imagined that after a few days of imprisonment, it could be allowed its liberty like other pigeons, and thus was presented the opportunity to exercise the true homer instinct by catering to that indefinable desire for home, where a hearty welcome awaited.

For several mornings the usual ex-



SILVER PRINCE

ercising flights were indulged in, Silver Prince apparently none the worse for what he had passed through; then they were again placed in a basket, Silver Prince and Belgique each with a message holder attached to one leg, and forwarded to the postmaster at Cloverdale, with instructions to write some message to the Petaluma Argus, for this flight was being made under the auspices of that paper, to place the messages in the holders, liberate the birds and immediately telephone the Argus reporter, which was done; watches were compared, and the time of liberation communicated.

An unusual number of people had congregated to witness this flight. The birds were sent off in two sections of a few minutes apart, Silver Prince in one and Belgique in the other. Considering that the birds were all young the flight of 55 miles was made in the remarkably good time of one hour and five minutes, and one hour and eight minutes, Silver Prince and Belgique leading their respective sections. This is what the message holders contained:

Cloverdale, 5-13-05.

Editor Argus: Weather and conditions look favorable for a record-breaking flight. Quite a crowd to see the birds off. Hope our next means of communication will be by electric railway.

BAER.

The leader of the second contingent bore the following:

Cloverdale, 5-13-05.

Editor Argus: I am helping papa liberate the pigeons. It is great fun. Let's keep it up all summer.

MARKELL C. BAER.

A full account of this flight was published in the Petaluma Argus and the San Francisco Chronicle.

The latter performance was accomplished with apparent ease, the birds standing upon the loft for a few minutes pluming themselves and looking for all the world as though saying "Give us something hard," then entered the trap through the "bob-wires," where they found the usual treat of hemp seed and fresh water. Determined to try them out at 100 miles before they had passed the four months' mark, with but two days' rest, they were again shipped, and from this distance all returned in good time but two, Silver Prince being one of the missing. The series of mishaps to which this bird was subjected can be accounted for in no other way than being too speedy for the others, he had to take all chances singly and therefore was a prominent mark for prey.

Every day for two weeks watchful vigils were kept but no return of the missing one. One of the boys, more enthusiastic than other members of the family, declared that he would come home even if he had to walk. Several days after the liberation it was learned from men employed on the California Northwestern R. R., that they were eye-witnesses to a flock of pigeons in passing Squaw Rock, apparently descending to the river at this point, when a monster eagle, whose nesting place has been for years at an unapproachable position in this rocky prominence, was seen to swoop at one of the birds in advance of the others, but only succeeded in making some feathers fly, quickly recovered itself and darting among those that followed, caught one and with an exultant scream flew to its eyrie.

It is no uncommon thing for lives to be sacrificed at the altar of Squaw Rock. Here California lions and grizzly bears make their haunts and countless bones lie bleaching in and around the dens. Here it was that the dusky Indian maiden and her white admirer met and exchanged their words of love, for the last time. Having been forbidden to see each other, the maiden took advantage of this strategic place to signal to her lover. Their meeting place was at last discovered and while they were seated in a supposedly unobserved place, a band of warriors descended upon them in all the fury of their bloodthirsty race. There was but a moment for reflection with no possible means of escape, and a death which knows no greater severity should he be captured. The lover entreated the maiden to return to her people, and threw himself over the almost perpendicular face of the mountain to the rocky river bed below, and was immediately followed by the Indian maiden, who shared his fate and thus was consummated a deed demonstrating that death is often preferred to separation.

Time has changed conditions. Indians have scattered. Wild animals have had to flee before civilization. The iron horse goes puffing and trembling through the tunnel in the base of the mountain, but winged birds of prey still hold sway and build their nests upon the projecting lips of the face so plainly chiseled by nature, and which the Indians declare did not exist before the tragic event, but which they claim rapidly developed into a striking resemblance of the maiden.

Eagles will no doubt continue to occupy these to them favored quarters inaccessible to man, and as they must of necessity continue to feed their young, it will be a lasting menace to all winged messengers passing that way. None of us, however, are willing to sacrifice our pets for that purpose.

Taking advantage of the possibility that Silver Prince had not been killed by the attack, and clinging to the hope that he had been but slightly wounded, we still kept up the watching and waiting. Every slight commotion in the loft was a signal for close scrutiny. One evening, just as the birds had subsided from activity and each one had settled upon its perch for the night, something seemed to transpire, causing unusual cooing, aparently participated in by every bird in the loft, but amidst all of it the keen ear of one of the boys who knows and recognizes the peculiarity of every coo and can name the bird from its coo, caught a sound which was music to his ears and with a shout, "It's Silver Prince come home again," bounded up the steps leading to the loft, and there upon the floor, dejected, forlorn, tired and hungry, stood the pride of the young birds, Silver Prince, cooing faintly and lovingly with all the joy which the home-coming can give, to the little blue-checked hen Belgique, which he had previously selected for his mate.

How he succeeded in reaching home, what efforts were put forth to again see the choice of his first love making, to be again among those of his companions that had grown up with him, and last of all to be able to rest upon the perch for the possession of which he had many times bitterly fought, and where he had spent so many nights in the only home

OVER THE MOUNTAINS

known to him, are secrets that will never be told.

How much stronger our attachment to this noble bird has become cannot be expressed in words, but suffice it to say, that after such a varied experience, with courage undaunted, and a love of home unsurpassed, our sympathetic hearts can never allow him to again be sent away from home, but he will be cared for tenderly, and looked upon again and again as illustrating the striking lesson of:

"Be it ever so humble,
There is no place like home."

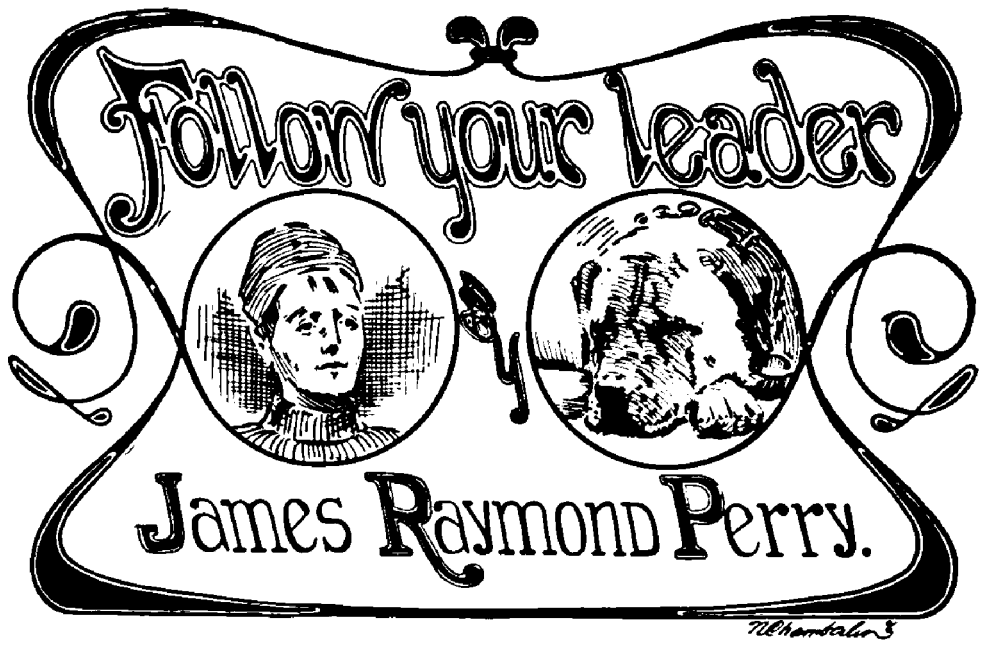
Sled for Moving Lawn Sprinkler

In watering a lawn in the old-fashioned way one has to do much walking in moving the sprinkler from place to place, shutting off the water and turning it on again, and is certain to get his feet wet in the operation. To avoid all this trouble, make a little sled of 1x4 in. pine, 24 in. long, with ½-in. board nailed across the runners, which should be about 20 in. apart.

Then fasten the sprinkler on the sled, well toward the front, attach about 8

Sled for Moving Lawn Sprinkler

ft. of rope to the sled to draw it by, and arrange the hose so it will run out back of the sled to prevent its tipping over. The sprinkler can then be moved to any point on the lawn without one's running back and forth through the wet grass to turn the water on and off.—J. S. Wallace, in Popular Mechanic.



"YOU'RE 'FRAID to fight, Tom King!"

"I'm not."

"You are!"

"I'm not; truly, I'm not."

"Then why don't you?"

"Because—I won't tell."

"Huh! It's 'cause you're 'fraid, an' I'm goin' to slap your face."

"You'll have to catch me first, Bobbie," Tom laughed, dodging the blow. "Say, I'll race you; I can beat you running."

The pugilistic Bob merely growled, and aimed another blow, which was dodged as deftly as the first. Then with a mixture of disgust and determination on his face he set out to catch his light-footed antagonist, who laughed and ran and laughed as if it was all a very good joke—all the better joke because Bobbie couldn't see it. Panting hard, the heavier boy almost had his hand on Tom's shoulder, when, somehow, he didn't know just how it happened—he fell sprawling over a foot expertly thrust his way. When he picked himself up Tom had entered his own dooryard and was unconcernedly strolling towards the house.

"Coward!" Bob shouted, but Tom gave no sign that he had heard, and a moment later disappeared in the house.

Bob lingered a few moments and then, as Tom did not come out again, he sauntered down to the next square, where Captain Morgan's new house was being built. There he met Sam Berkely, who was brandishing a lath at an imaginary foe.

"What you doin', Sam?"

"Killin' Russians; I just killed sixteen," the warlike Sam asserted.

Bob picked up a lath, and the two crossed swords. "I'm a Jap," he said, "an' you're a Russian."

"I'm not, either; I'm a Jap myself. If anybody's a Russian, you are."

"I'm not."

"You are."

They dropped their laths, and proceeded to fight it out with fists. Sam conquered, as usual, and then they sat on the pile of laths and amicably inspected the carpenters at work on the roof of the new house.

"You dassen't stand where he's standin'," Bob announced, as a carpenter issued from a dormer window and stood on the narrow ledge circling the roof.

"You dassen't, either," answered Sam comfortably. Having just "licked" his man he didn't have to resent this imputation on his courage.

Then Bob's mind reverted to Tom King, and disgust overspread his face.

"There's a new boy 'cross the street from us," he said; "he's 'fraid to fight; I told him so."

"Why didn't you make him?" queried Sam.

"I——," but too much mortification of spirit lay in the exact recital of the facts, so he shifted. "The little coward ran into his own yard," he explained.

"Why didn't you chase after him? I would," Sam asserted.

"I guess you wouldn't," retorted Bob. But Sam's resentment was not awakened by the retort. His mind had gone back to other matters.

"Gee!" he said, "there's a new boy down our way who'll fight. He's the quickest little kid I ever saw. See that?" and Sam lifted his cap to display a bruise over his right eye. "He did it," he announced with a kind of shy pride in the other's achievement. "He had me down and was punching me to beat the band when a woman came along and made him stop."

"Gee!" echoed Bob, sympathetically.

The next morning Tom King was out in the yard when Billy Temple came by. Billy was younger than Tom and for that reason did not feel it incumbent to fight before making friends with him. Tom had won Billy's friendship two days before by showing him how to make a bow and arrows. This friendship had been put to a strain, it is true, by the news that had come to Billy since yesterday. Even a small boy can't afford to associate with a coward; and at first Billy was for going by without speaking. But Tom had brought a green parrot out on the lawn, and green parrots, if you happen never to have seen one before, which was Billy's case, are calculated to upset sterner principles than had yet found lodgment in Billy's breast. He turned into Tom's dooryard.

"What's that?" he asked, edging nearer.

"A parrot. Didn't you ever see one?" Tom asked.

Billy shook his head. But he had heard of parrots, and he asked: "Can he talk?"

"No, not yet; I'm going to teach him to, though," Tom answered. "We've only had him a little while."

If the bird couldn't talk he wasn't much different from any other bird, and Billy's mind went to other matters—matters of real importance. "Bob Hunter says he's goin' to lick you the first time he catches you out your yard," he said.

"Poor Poll! Say 'Poor Poll!'" Tom instructed the parrot.

Billy looked at him in wonder. It had not happened to be his lot before to witness such indifference to a declaration of war.

"He says you're a coward," Billy went on accusingly. It even crossed Billy's mind to punch Tom himself, and so win everlasting glory among the younger boys for daring to fight a new boy bigger than himself.

"Polly want a cracker?" questioned Tom, looking at the parrot instead of Billy. But his face was a shade redder than before. Then he turned suddenly towards Billy, who shrank back and gave up all thoughts of punching Tom. But though Tom's eyes were bright, his attitude was not warlike.

"I'm not a coward, Billy," he said. "If I was I'd fight," he added. But this was too deep for Billy, though he was constrained to believe that Tom was speaking some non-understandable truth.

"Tom!" called a voice from the house.

"Yes, mama."

"Will you go down to the post office? It's time for the mail."

"All right."

He took the parrot back to the piazza and put him in his cage, and then came down to the gate where Billy, a little doubtful as to the course he ought to pursue, still waited.

"ARE YOU READY TO FIGHT NOW?" BOB DEMANDED

"Bob Hunter may see you," he said.

"I don't care," laughed Tom; "I can beat him running.

This sentiment was distasteful to Billy. For a boy to depend upon his legs to save his skin was not according to the Waterville code. "I don't know about that," he said; "Bob can run pretty fast."

But Tom did not so much as glance towards the Hunter's yard, though Billy cast furtive glances in that direction. Notwithstanding the fear that his reputation might be imperilled, Billy continued to walk down the street with Tom. They had got a little beyond Captain Morgan's new house, when they heard the deep-toned barking of a dog. "That's Mr. Cartwright's Czar," Billy announced "Let's go look at him."

Going down the alley they came to a high fence surrounding three sides of a small enclosure. The stable wall constituted the fourth side. Gazing between the boards of the fence they saw a mastiff of uncommon size. After one contemptuous glance in their direction the dog paid no further attention to them.

"There don't nobody dare go near him 'cept Mr. Cartwright an' the coachman," said Billy, unmindful of surplus negatives. "He's awful ugly. He bit a man last winter."

"I'd hate to have a dog nobody could go near," commented Tom.

The next day was Saturday. Bob Hunter and two or three other boys were on the street in front of Bob's yard. Billy Temple came past and joined them.

"If he comes out, are you goin' to lick him, Bob?" asked one of the group, Henry Clapp.

"You bet I am, Hen," Bob responded. He spat on his hands, rubbed them briskly together, and then seized Billy and shook him sportively. "If you were bigger, you little rascal, I'd lick you, too," he said. "Maybe I will if you don't quit playin' with that coward."

Something moved Billy to say, "He ain't a coward." Perhaps it was the memory of the bow and arrow. What punishment Bob would have thought necessary to inflict upon Billy for expressing these treasonable sentiments must forever remain in doubt, for just then a shout arose, "Here he comes!" and Bob's attention was turned to graver matters. Tom was coming down the walk to the gate with an unconcern that was particularly irritating to Bob. A coward ought not to come out of his yard to meet a foe with quite such an air of indifference. It was a bit disconcerting. Nevertheless, Bob spat on his hands, rubbed them briskly together, and waited. Tom did not pause the fraction of a second at the gate, but to the no little amazement of the group came directly across the street towards them. He was smiling, and there was a kind of birdlike brightness in his eyes and alertness to his movements. It was apparent that he had come out for a purpose.

"Let's play 'Follow Your Leader,'" he suggested cheerfully.

The others looked at Bob, who had struck a pugilistic attitude and was eyeing Tom scowlingly.

"Are you ready to fight now?" Bob demanded.

Tom flushed a little and shook his head.

"You're a 'fraid cat!" shouted Bob. And then, as that did not seem quite strong enough to meet the extreme exasperation of the occasion, he hurled at him, packed with scorn, "Coward!"

For an instant Tom's fists clenched, and then he laughed, not nervously, but goodnaturedly.

"I suppose I do seem like a coward," he said, looking straight at Bob; "but I'm not one—at least not the way you think I am. I told you the other day I wouldn't fight, and I won't; but it isn't because I'm afraid to. And you could see it isn't, if you'd got any sense, Bobbie. Some day you'll meet a fellow whom you'll stupidly think is a coward and he'll give you the worst drubbing you ever had in your life. And it'll do you good. The only way fellows like you can learn sense is by having it knocked into you."

This speech had a curious effect on the boys. It was a little as if a man was speaking to them. They had never heard a boy talk that way before, and they were a trifle awed. That a coward would talk like that was unbelievable; even Bob felt that.

"There are other ways of proving you're not a coward besides fighting," Tom went on a little eagerly. "If you'll all play 'Follow Your Leader' and let me lead, I'll show that I'm not a coward."

Tom's tone was almost pleading now. The curiosity of the other boys was awakened. There was something to the idea afer all. It appealed to them. They looked at Bob.

"You'll have to fight first," commanded the young pugilist.

"I told you I wouldn't fight," Tom answered sharply, stepping nearer Bob. "Can't you understand plain English? Are you a dunce as well as a coward? You've called me a coward and now I'll call you one. You don't dare follow your leader with me leading! You don't dare!"

Tom's fists were clenched again, though he made no threat to strike. Bob gazed at him an instant. Deep in his heart was the conviction that Tom was not afraid of him. Added to this was the mystery of the whole thing, dizzily incomprehensible. This was the oddest new boy he had ever met.

"I guess I do dare," he answered sullenly. "You lead, an' you'll see!" He looked around at the others, wagging his head.

"All right, Bobbie," Tom answered, his face gone smiling again. "Come on, follow your leader!" he called, starting down the street. The other boys trailing after him, Bob next to him, and little Billy Temple at the end of the line, each assiduously copying every move of the one in front.

Circling, crossing, climbing over one obstacle after another, Tom led the little line down the street. His first novel act to win approval of the others was when he climbed upon the rear of a grocer's cart, ran forward to the seat, scrambled over that, gave the driver a little tap on the top of his head, and then jumped off with the horse still trotting. The others promptly followed Tom's lead, the driver laughing good naturedly and slowing up his horse to let little Billy jump off when it came his turn. Here was an original leader; and all save Bob were now about ready to forget the stain on Tom's escutcheon.

When they came opposite Captain Morgan's new house, Tom promptly led his line up the plank to the front door, as yet minus its flight of steps. It was Saturday afternoon and the carpenters had quit work early, so the building was deserted. Climbing over one obstruction after another, Tom led them to the skeleton stairway rising to the second floor. Up this he went, the others scrambling after him. Between the second and third floors there was as yet only a ladder, up which the nimble Tom climbed like a monkey with the others following. Loose boards here and there formed the flooring of the third story, and over these Tom picked his way to one of the windows. Through this he crawled upon the narrow ledge in front. "Tell Billy to stay inside!" he shouted back, and then began edging along the ledge, a dizzy thirty feet above ground. Bob grimly followed, and the others came carefully after, all save Billy, who, released by the leader's orders, went back to the ladder and slowly and cautiously let himself down. When Tom had safely rounded the first corner and started along the ledge towards the rear of the building, he cautiously got upon his feet, and balancing himself, walked erect to the next corner. Bob, a little pale but determined, followed his example, and the rest imitated Bob, the forms of none, however, being quite as erect as that of the blithe young leader. Around the four sides of the building he led them, back to the window through which they had emerged, and on, down ladder and staircase, to the ground.

Down the street they went, Billy once more bringing up the rear. When they came to Cartwright's Tom turned in at the alley and led the others back to the enclosure where Czar was imprisoned. Without an instant's pause Tom climbed the high fence and began walking along the narrow top. Billy and the boy ahead of him balked, but Bob and the two others followed Tom. The mastiff had cast one or two disdainful glances at them and then, lion-like, gazed off over their heads.

After leading them along the top of the fence to the stable wall Tom paused and glanced round at Bob. Then with a laugh he jumped into the enclosure and

(Continued on page 299.)

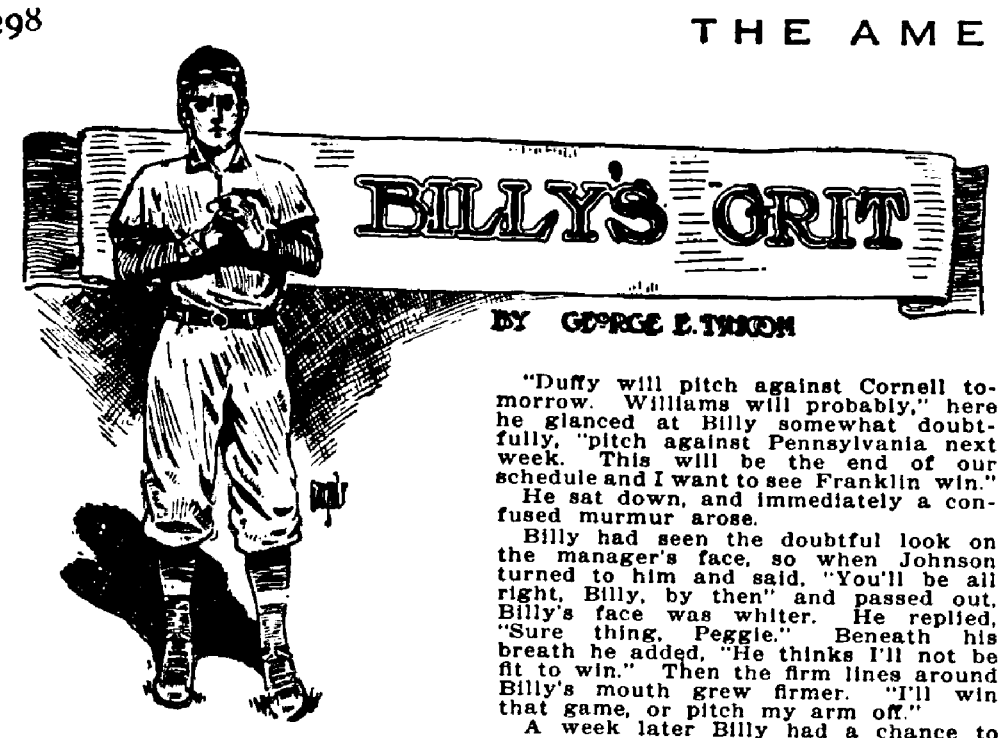
WINCHESTER

MODEL 1906 .22 CALIBER
Extra Light Weight Repeating Rifle

This new rifle might properly be called the "Boy's Winchester," because it was designed to suit young sportsmen. It shoots the accurate but inexpensive .22 Short Rim Fire cartridge, and, although a first-class rifle in every way, it's price is not beyond a boy's pocketbook. This rifle is made with a 20-inch round barrel fitted with a sporting front sight and an adjustable open rear sight. It has a handsome straight grip stock finished with a rubber butt plate and weighs about 5 pounds. The magazine holds 15 cartridges. If your dealer cannot show you this model rifle, let us know.

FREE: Send for circular fully describing this rifle.

WINCHESTER REPEATING ARMS CO., NEW HAVEN, CONN.



BILLY'S GRIT

BY GEORGE L. TIBBOTS

THE CAPTAIN of the baseball team paused before the group of young fellows on the campus. His face was solemn and his voice almost trembled as he addressed them.

"Fellows, Billy's hurt."

"What's that?" came from big Wilson, the hammer-thrower, Williams hurt?"

A chorus of excited "whats" came from the rest.

"How badly?" asked Brown. "How'd he get hurt, anyway?"

"Fell right after chapel yesterday while practicing. Doc says he's broken a tendon of his arm—his pitching arm. I see where we get white-washed to-morrow."

"What's the matter with putting in Duffy?"

"Why, he pitched yesterday, and we've got to have him against 'Pennsy' next week," replied the captain.

"Why not try Orne, Phil?" asked Wilson.

"No use; those Cornell guys are heavy hitters, and they'd kill him," interposed Ted Keeler, the little shortstop.

At that minute, Ted, who was Billy's chum and room-mate, left the group and ran to meet a young fellow who had just come out of the South Dormitory, and was slowly walking toward them.

"Gee, here comes Billy, now," said Brown, and they all watched the strangely-mated chums approaching. Keeler's laughing face, merry eyes, and diminutive form, topped by a shock of bricky red hair, made a strong contrast to the tall, broad-shouldered youth beside him.

Billy's usually healthy face was now white, and his sober gray eyes were filled with trouble as he nervously brushed his curly black hair from his forehead, and in answer to the many excited queries of his friends, replied. "Fellows, I can't pitch any more. Greyson says if I pitch to-morrow I'll have a glass arm for a year. I can't afford to take chances for fall football's only a couple of months off."

They all saw the force of this declaration, but it brought a chorus of groans and lamentations from the hearers; it seemed worse coming from Billy's own mouth.

Just then Sherman looked at his watch and saw it was time to go up to the training table, so with Billy and Ted he started for Harmon Hall, on the north side of the campus, the temporary quarters of the baseball squad.

The entrance of these three popular members of the team was the signal for much good-natured chaffing, until the crowd noted the sober faces of the captain and the pitcher.

Johnson, the manager, who was explaining to a promising aspirant for the outfield the proper way to size up a batter, stopped short in his explanations and hurriedly joined the three.

What's the matter, Billy?" was his immediate question.

In mute reply Billy lifted his bandaged wrist. This act caused a buzz of surprise and hurried exclamations:

"Williams has hurt his arm."

"Billy's broken his wrist."

"No, he's sprained it."

Johnson took Billy to one side. After a few minutes talk they returned to the table. At the close of the meal, the manager rose and held up his hand for silence.

"Duffy will pitch against Cornell to-morrow. Williams will probably," here he glanced at Billy somewhat doubtfully, "pitch against Pennsylvania next week. This will be the end of our schedule and I want to see Franklin win."

He sat down, and immediately a confused murmur arose.

Billy had seen the doubtful look on the manager's face, so when Johnson turned to him and said, "You'll be all right, Billy, by then" and passed out, Billy's face was whiter. He replied, "Sure thing, Peggie." Beneath his breath he added, "He thinks I'll not be fit to win." Then the firm lines around Billy's mouth grew firmer. "I'll win that game, or pitch my arm off."

A week later Billy had a chance to prove this.

The visiting team had arrived, confident in the extreme, with just as confident a crowd of rooters.

Even now their deafening cheers rolled across the diamond and struck on his ear like a dirge.

It was Billy's first big game, and, as he was practicing on the side lines, the wavering cheers which rolled back from Franklin made his heart sink. In all that volume of sound the keynote was uncertainty.

Bitterly he gritted his teeth, and thought, "They haven't any confidence in me," and then sent in such a speedy out-shoot that the catcher missed it altogether. But the effort had its cost, for a sharp pang of pain shot through his wrist. Yet he said nothing. Billy was no squealer!

He had seen Duffy, the mighty Duffy, the pride of his team, batted out of the box in the third inning of the Cornell game, and Orne, who replaced him, served in the same way. It was Billy who had stopped that avalanche of runs, after Johnson had almost begged him to go in.

"And now they have no confidence in me!" The very thought made him grind his teeth in rage.

No, Billy was no squealer, and as he warmed up to take the kinks out of his arm, he determined to pitch the game of his life.

Then the black-bloused umpire came on the field.

He brushed the dust off the rubber plate, broke the seals of the new league balls, and tossed one to Overton, Pennsy's pitcher. The great crowd commenced to get impatient.

"Play ball!" Overton swung his arm and the game was on.

"Crack!"

Keeler, the first man up for Franklin, sent a long, low drive to right. Before the ball could be fielded he was safe.

On the next ball pitched he made a dive for second.

"Slide, slide," the coacher yelled frantically, and Ted slid.

Like a bullet the catcher sent the ball back to second. The baseman almost knocked all the breath out of Ted's body, in his quick move to tag him, but was too late. Ted's right hand, thrust way out in front of him, touched the bag first.

"Safe," drawled the umpire, and cries of dissent came from Pennsylvania's rooters.

A straggling cheer from Franklin made Keeler forget that thump in the back and he played way off.

The next man up flied to short, but Brown, who followed him, made a neat sacrifice, advancing Keeler to third. Franklin's rooters began to take heart and cheer. Here was an opportunity to score in the first inning.

Shad Wilson stepped up to the bat, a "now or never" look on his face. The first ball was a wild out-shoot. He struck at it—and missed. The next was a swift in-shoot which curved over the heart of the plate. Shad made a terrific slash at it, and to his great surprise sent a long "Texas-leaguer" out to left, right into the fielder's hands; Ted started for home.

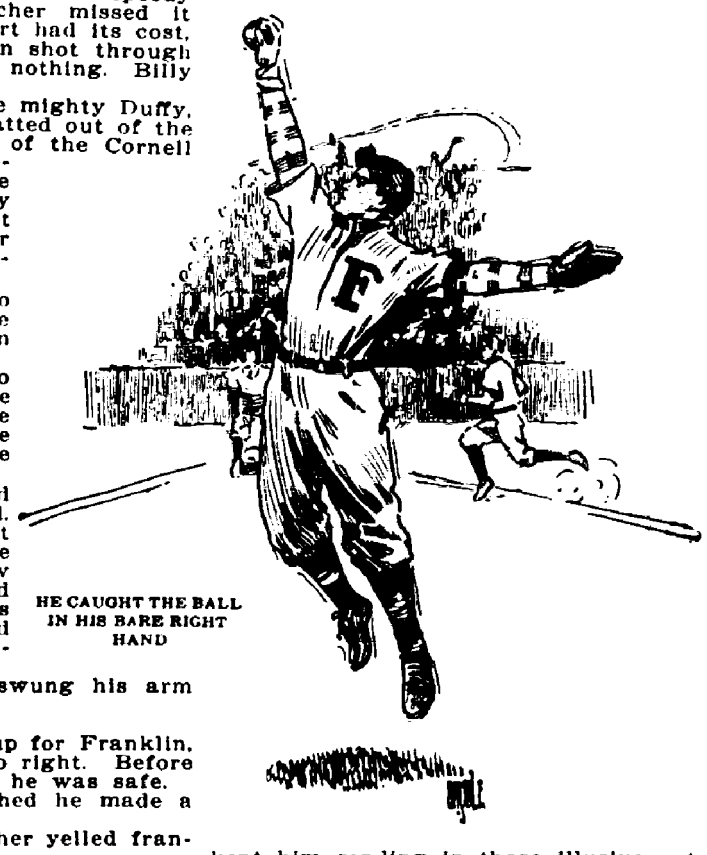
The crowd was breathless in suspense as the fielder threw to second and the baseman threw home. Plunk, the ball landed in the catcher's mitt. Too late! Ted had slid home in a cloud of dust and was declared "safe" by the umpire.

Cheer after cheer rolled from Franklin's side, and cheer after cheer came thundering back from Pennsy's loyal rooters, still as confident as ever.

There was only two out and "Pinkie" Orne faced Overton. The best he could do was to send a hot liner to the shortstop, which was gathered in by that worthy without moving from his tracks, and the side was retired.

It was with a wildly beating heart that Billy took his place in the box and glanced around him. On one side was the orange and black of his own college, waving back and forth, and the whole body was singing a song of triumph which ended with Billy's name. On the other, the blue of Pennsylvania merged in with the blue of the clouds, and from that solid bank of color rolled Pennsylvania's slogan, still with that confident ring most prominent. Billy looked at Ted and his spirit received some of the encouragement that shone in his eyes, and he heard him whisper, "Take it easy, old pal." Then he heard the drawling voice of Shad away out in center; "Let 'em hit, Billy, we'll get 'em."

Then Billy resolved to rely on his support as much as possible. Well it was for him that he did, for when eight innings had passed without any more scoring, his every movement brought an accompanying spasm of pain across his pallid face. His arm seemed a dead weight hanging from his shoulder, and his wrist was swollen to twice the normal size. Worst of all, Billy realized that he was all gone. Sheer nerve had



HE CAUGHT THE BALL IN HIS BARE RIGHT HAND

kept him sending in those illusive outshoots, sheer nerve had made those brilliant stops and clever assists, and now that nerve was gone.

Ah, how Billy regretted those three innings when he had gone in against Cornell to save his team from an overwhelming defeat. Rather defeat by Cornell than lose both games, thought Billy.

It was with a sinking heart that he watched the last man on his side go out, and walked slowly to the box. With great effort he swung his arm and pitched the ball. The racking pain which shot through his whole arm brought a cry of pain from his bloodless lips.

"Crack," like a shot the ball came toward him. Mechanically he stuck out his gloveless hand. "Spat." The ball struck and stayed there.

No applause greeted this phenomenal catch, for the intense strain under which both sides were laboring was too great.

The sudden shock and the pain of throwing roused Billy somewhat from the stupor which was coming over him, and muttering "only two more," he pitched again.

"Ball," shouted the umpire. Billy groaned and swung his arm again. His whole right side was racked by that agonizing pain. The ball dropped at his feet.

"Balk, take your base," said the umpire, and the gleeful batter trotted to first.

As one man, the whole Pennsylvania stand rose to its feet. Hats, flags, canes, everything was thrown into the air regardless of where it landed and an exultant, hopeful shout rolled from that mass of blue.

During the excitement Ted came up to Billy and, noting the look of pain on his face, was about to ask Sherman to call in Orne. But that one appealing look from Billy silenced him, and he went back to his position, determined to get everything that came "within a mile" of him, as he declared afterward.

Billy turned to the next batter and passed his hand across his face as if to brush a haze from before his eyes. Dimly he saw the batter swinging his bat across the plate; then there seemed two batters instead of one. In desperation he threw the ball. The pain had gone, but so had Billy's speed. The ball seemed to hang in the air. "Crack," the batter met it with a terrific slash, and the runner made a dash for second.

At the crack of the ball Billy instinctively gathered himself and leaped high into the air. He caught the ball in his bare right hand, wheeled like a cat as soon as his feet touched the earth and threw to first, making the quickest double play ever seen on that diamond; and Franklin had won.

For a moment Billy stupidly looked at the first baseman and heard the yells of victory from his classmates; then suddenly it occurred to him that the game was over.

The reaction was too great. Trembling like a leaf, he blinked his eyes a moment, then, sobbing like a child, he fell limply into Ted Keeler's arms.

No, Billy never pitched again. His arm was paralyzed for two years, and by that time he was through college, and—well, if you want to know any more about him, go up to Franklin College some day and ask for Professor William W. Williams. He'll tell you—if he isn't too modest.

"FELLOWS, BILLY'S HURT"

Capturing a Python

A Fight for Life With one of the Royal Constrictors

By Captain A. B. Hawser

ABOUT FIVE years ago I headed an expedition into the interior of Sumatra, our object being to gather great apes and snakes for one of the large zoological gardens of Europe.

We had done pretty well, so far as the mammals were concerned, and several fine specimens of the man-apes were already on their way to Europe; but we had failed absolutely to catch or even hear of a really big python.

Finally we broke camp and moved to a valley between two high wooded hills, where I had seen great snakes on a previous visit.

The day after we pitched camp in the new spot, I took my heavy express rifle and started into the jungle to look for the beautiful antlered Sumatra deer.

It was extremely thick, and the high trees made the forest almost as dark as if it were evening, although the sun was high. I stepped softly, and to do this, I often had to look down pretty closely so as to avoid creepers and other tangled vegetation that obstructed the ground and made nasty traps for unwary feet.

I had just cleared a particularly bad tangle and was in the very act of raising my eyes again to peer ahead, when I became aware of something hanging almost in front of me. Before I had more than perceived the thing it moved backward and then forward like a flash, and the next instant it drove straight at my chest and struck me such a terrific blow that it would unfailingly have crushed my sternum if I had not been protected by my heavy cartridge belt which hung across my breast from one shoulder.

As it was, the blow knocked me at least five feet as if I had been a tennis ball. I knew what had happened to me, however, even before I fell. I had blundered into a python, hanging head downward full length from a tree, and the creature had done what these great snakes do almost always under such circumstances—it had rammed its long, hard head at me with the force of a hammer.

All the wind was knocked out of me, and I was half stunned. But I retained consciousness enough to reach out for my gun as soon as I got over the first shock. And the next move was to roll away to avoid a second attack.

In this, however, I was too late; before my hand had closed on my gun, I felt the cold body of the serpent, and then a suffocating weight as coil after coil of the monster fell slowly upon me.

In another moment one of the thick coils was thrown around me and began to constrict until I could hardly breathe. Tighter and tighter the terrible thing wreathed itself. Then, when I thought that the next tightening would surely crush all my bones into splinters, the snake ceased and began to pull itself up into the tree, to which it still clung with its tail.

My weight did not seem to bother it in the least. Up I went, as if I were being raised in an elevator, till I was dangling just above the lower limbs of the tree.

I knew then what was in store for me. The serpent intended to throw another coil around both me and the big branch, and with the purchase thus obtained to crush me at its leisure.

I had my big revolver in my holster, but it was pressed close to my side as my arms were. I found, however, that I could move one finger enough to get it into the trigger guard. Unfortunately the muzzle was pointed so that there was no chance to hit the monster that had me; but I hoped that the shots might bring help, though it looked desperately unlikely that help could reach me in time.

However, I fired all the five shots as quickly as I could, and the explosions had the good effect of startling the serpent so that it uncoiled itself partially at the first shock, and I slipped out and dropped to the ground, so badly squeezed that I could not move, but lay in a heap where I tumbled.

Within five minutes, while the great snake was still quivering and alternately expanding and contracting its huge body in evident fright, my men came hurrying to the scene.

When they caught sight of me they set up a great shout and the big snake tried to crawl up into the tree and get away. But I saw its retreat in time and ordered the men to get into the tree after it, while others hurried back to the camp for ropes and machetes.

The ropes were passed to the men in the tree and they went boldly at the python. It struck at them and when they dodged it opened its vast jaws with a frightening gape and hissed like a steam engine. But soon it was beset by more than thirty natives, each of whom had hold of some part of its body, despite all its wriggling and twisting. They broke its hold on the branches by cutting them off with their machetes, and all at once the big snake began to come down, a prisoner.

In the meantime other men had cut down a young tree and trimmed all its branches off. As soon as the big snake was on the ground, the sapling was held alongside of it and ropes were quickly wound around both from one end to the other. Thus stretched out the big snake was carried in triumph to camp, and in the same manner it finally went to the coast.

It reached Europe in good condition, and is alive still. It is one of the really big snakes in captivity, for it measures fourteen feet.

FOUR BOYS IN CAMP

By J. L. HARBOUR

BEGUN IN MAY
PART IV

OUR GUIDE went on ahead for a few feet and then stopped. We heard a sound like a key turning in a lock and the clank of a chain, which was really a few links of chain attached to a padlock. The padlock made fast a door of a small, hut-like house of stones and logs built against the face of the mountain. A sudden flash of "sheet" lightning revealed to us the cabin and quite an open space before it.

The man entered the cabin and a moment later we heard a match scratched against some rough surface. The old man lighted a candle and came to the open door with it shielding the small flame with one hand.

"Come on," he said tersely.

We entered the cabin and found it to be a very rough, crude hut of a single room smoke-begrimed and with no furnishings other than such as the old man had made of rough boards. There was a bunk filled with hemlock boughs in one corner, and it was evident that the old man did his cooking in a large fireplace at one end of the room. The cabin had no floor other than that supplied by mother Earth. The place was smoke-begrimed; it had a smoky smell and it was littered with tin cans that had once contained food. A large bearskin was spread in front of the fireplace, and skins of other animals were piled on the bunk. Thrusting the candle into an empty green bottle the old man set it on the rough shelf above the fireplace and said,

"Had any supper?"

"No, sir," I said.

"Want any?"

The prospect of anything at all eatable in the hut was so doubtful that it was nothing but gnawing hunger that caused me to say,

"We are very hungry, sir."

"I reckon I'll have to feed ye then," he retorted so ungraciously that I said,

"No, sir; you don't have to feed us. We can wait until daylight and then go to our own camp."

"If you'd had any sense you'd be there now," he replied.

I now noticed part of a smoked ham hanging from a nail in the wall. The hermit, for hermit he was, took the ham from the nail and then took a long, keen-bladed knife from a box on a shelf. Then he seemed to remember that he had no fire, and he knelt before the fireplace in which there was a pile of ashes. Pushing the top of the ashes aside he stooped and blew until a smouldering ember began to glow. Then he laid on some light twigs and some dry wood, of which there was an abundance by the fire. In a very few minutes the room was aglow and it seemed far more cheerful. We stood before the fire and dried our wet garments while the hermit sliced a generous supply of the ham into a frying-pan. When there was a bed of red coals he set the frying-pan on them, covered it with a tin cover and brought forth a tin coffee-pot, black with smoke. The odor of the frying ham and the boiling coffee was really very agreeable, and when the hermit had drawn his rude little board table up before the fireplace, spread newspapers over it, and set thereon a tin pan piled high with crackers and cold biscuits, and had set a small earthen bowl filled with butter and a can of baked beans before us we felt that we were to fare very well, and were inclined to forgive our host for his ungraciousness. Taking the well-browned ham from the frying-pan and putting it into a tin plate he poured the beans into the frying-pan and made them piping hot. Then he set the frying-pan in the middle of the table and, turning to us, said quite civilly,

"Pitch in, youngsters."

He did not eat with us, but sat by the fireplace smoking a long, black pipe in silence, apparently oblivious to our presence. I felt that it would be common courtesy to express some appreciation of our gratitude when we had eaten everything there was on the table, and I said,

"You have given us a good supper, and——"

"Better'n ye deserve," he said tartly, with the pipestem still between his teeth. "Where you campin'?"

"In the old engine-house on the bank of Scott's Pond," I replied.

"You a passel o' runaways?"

"No, sir; our parents know where we are!"

"Bet they don't know where ye are just at present."

Then he lapsed into silence until his pipe was empty. After knocking the ashes out against a stone in the fireplace he rose, stretched his long arms above his head in a mighty yawn, and said:

"Time to turn in."

Spreading skins on the cabin floor he told us that we were to sleep on them, and within ten minutes he had blown out his candle and was in his bunk, while we were stretched out on the skins with the dying fire filling the room with a soft yellow light. I think that all of us were asleep within five minutes, and I for one did not know anything until I heard the hermit chopping wood just outside the open door the next morning.

The sun had risen in a cloudless sky as I discovered when I went to the open door. The hermit made no reply to my nod and my "good morning."

The other boys now got up. We asked our strange host if there was anything we could do to assist him, and he said:

"Yes—keep out o' my way."

We thought that we would be quite out of his way if we left the cabin, so we stepped outside and looked around us. The cabin stood in a little clearing the hermit had made in a perfect wilderness of pines so tall that we could not see above them into the valley below. He could not have chosen a lonelier place for his abode. There was a little spring of clear, icy water bubbling from a crevice in the rocks near the cabin. We washed our dirty hands and faces as best we could in the cold water, and our host came to the door and flung us a very dirty towel without a word. Presently he came to the door and said:

"Breakfast."

The breakfast was like the supper of the night before, with the addition of a plate of remarkably good hot biscuits baked in a Dutch oven. Again the hermit kept from the table while we ate, and smoked his pipe by the fire in gloomy silence.

The moment we had eaten our breakfast he took his old hat from its peg on the wall, put it on, and said:

"Now I'll show ye the way out o' here."

Each of us had a little money, and I said:

"We will pay you for our entertainment if you will allow us to do so, sir."

The reply to this was more embarrasing than any of his other infrequent utterances had been, for he turned sharply on me with the frown on his face deepening, and said acridly:

"Shet your mouth, boy!"

I "shet" it, while the other boys opened theirs in a grin at my apparent discomfiture. Not a word spoke the hermit as he led the way through the woods for more than an hour. Then we struck a trail quite clearly defined. We followed this trail for another hour, walking in Indian file behind the hermit. Suddenly we came to a large open space, from which we could see Scott's Pond far below us.

"Foller this trail right on and you'll be there in half an hour," said our guide. He turned abruptly and made no reply whatever to our profuse thanks as he walked away.

"Queer old duffer," said Tad.

"But with a good-sized streak of human kindness in him," I said.

"Like most folks when you strike them in time of trouble," said Simmy.

We followed the trail down the mountain side, our tongues running far more glibly than they had run at any time while we were with the hermit. Our guide had walked so fast that we had been compelled to almost run to keep up with him, and we were so tired that when we came to a small, slightly grassy open place on the trail, we sat down and rested so long that it was almost noon

HE SAT BY THE FIRE SMOKING A LONG, BLACK CLAY PIPE

when we reached the old engine-house, or, rather, the ruins of the house, for we found that it had fallen flat to the ground during the severe storm of the night before.

"Our getting lost was a special providence, after all," said Simmy. "If we hadn't got lost we would certainly have slept in the old engine-house last night, and it would surely have been the last sleep for some if not all of us with those heavy timbers coming down upon us."

We were still some distance from it when we discovered that the building had fallen, and we made eager haste to reach it and discover the condition of our belongings left in the house the day before. We found that some of the heavy overhead timbers had fallen in such a way as to protect our baggage, which was injured very little. Indeed, it was piled in a heap at one side of the fallen building, and Benny said:

"I guess that the men from the other camp have been over here."

This was a correct surmise. The men had not only been over to our camp, but when they found certain proof that we had not been there during the night and we had not returned at ten in the morning, they had grown uneasy and had gone in different directions in search of us. One of them returned a few minutes after we reached the pond, and he at once fired his gun three times at intervals of a quarter of a minute, this signal having been agreed upon in case any of them found us. Presently all of the men returned, and they very kindly helped us to carry our belongings over to their own camp.

They also helped us to put up our tent near their own, and we remained three days with them. They were very kind to us, and we found big Jim Peters a very entertaining man indeed. We shall never forget the thrilling stories he told as we sat around the campfire. He was a born hunter, and perhaps the most thrilling episode of our entire camping-out experience occurred the second day of our stay with the men when Jim Peters took us on a long tramp with him, and we saw him shoot and kill a bear feeding in the middle of a wonderful patch of "low bush" blueberries. The berries were so thick that at a little distance the patch gave one the impression of being a great bed of dark blue flowering shrubs. Jim had been to the spot a few days before, and had found proof of the presence of the bear, therefore we approached the patch very cautiously. Jim had made us tarry in the woods just before we reached the patch while he went on to reconnoiter. Presently he waved his hand toward us and then laid his fingers on his lips as a signal of silence. We stole forward with wildly beating hearts, for none of us had ever seen a bear at large. Our hearts beat still more quickly when we saw the bear lift his head suddenly with a sniff or two and come straight toward us. There was a loud report from Jim's gun, the bear reared to its hind feet and plunged forward dead.

Our new friends went with us when we went out of the wilderness by a route known to Jim, and our next camp was on the bank of a beautiful little stream not far from a little village where we could purchase needed supplies and where it was safer and better for us to be. We returned home in safety, to the relief of our parents, and after having what Tad called "oceans of fun."

Two Simple Problems

John R. Springer, of Camden, N. J., tells us how to add 1, 2, 3, 4, 5, 6, 7, 8 and 9, so as to make 100, without using fractions, nor using any one figure more than once. Here is his solution: 17 plus 36 plus 45 equals 98, plus 2 equals 100.

The same boy sends in a query as to where a verse may be found in the Bible containing the words "red," "white" and "blue." He answers it by referring to the sixth verse of the first chapter of Esther.

Follow Your Leader

(*Continued from page 297.*)

took two steps towards Czar, who condescended to look straight at him now.

Bob's face paled, and he hesitated. Then he made as if to follow Tom, but again hesitated. Czar was quiet, observing things curiously. "Come on, Bobbie!" Tom said, "Follow your leader."

Still Bob hesitated. "You're not afraid, are you?" Tom inquired blandly.

At that Bob jumped, and stood, shaking a little, with Tom between him and Czar. The boy next to Bob muttered, "I'm not going to be a fool, if they are," and sat down on the fence, with both legs on the outside. The boy behind followed his example.

"Well, Bobbie, there are only two of us to fight him," remarked Tom. There was an unusual brightness and excitement in Tom's eyes. "Come on," he said and took a step or two towards the mastiff. Bob stood still. Tom walked up to within a foot of Czar and reaching out his hand tapped the beast lightly on his jaw. Czar stared at him in amazement. Then Tom deliberately passed across the enclosure and climbed out on the other side, while Bob, with considerable alacrity, turned and scrambled back the way he had come.

"Does anybody else want to be leader?" Tom asked.

Late that afternoon, Bob and Sam Berkely were walking up the street together. Bob had been telling Sam all about it, except that he passed lightly over the fact of not following Tom's example in slapping Czar's jaw.

"There he comes now," he said, as Tom and a lady came down the walk to the street.

"Gee! Is that the feller?" exclaimed Sam.

"Yes; why?" Bob asked.

"That's the fellow that licked me the other day," Sam said.

After this Bob and Tom were good friends. "But why wouldn't you fight?" Bob asked one day when their intimacy had reached a stage that would warrant it. "You knew you could lick me."

"I wanted to fight bad enough," admitted Tom, "but my mother caught me fighting Sam Berkely that day and she made me promise I would not fight again. I had to keep my promise to her."

Peculiarities of Number 9

Harvey Guetzloe, Kiel, Wisconsin, gives the following, showing the many peculiarities of the number 9:

Every multiple of 9 makes a number the sum of whose digits is either 9 or 18, and 1 plus 8, again, is 9.

The following is a peculiar table:

1 times 9 plus 2 is 11.
12 times 9 plus 3 is 111.
123 times 9 plus 4 is 1111.
1234 times 9 plus 5 is 11111.
12345 times 9 plus 6 is 111111.
123456 times 9 plus 7 is 1111111.
1234567 times 9 plus 8 is 11111111.
12345678 times 9 plus 9 is 111111111.

RENEW PROMPTLY

Boys are asked to send the renewals of their subscriptions promptly. Don't miss any of our interesting numbers.

H.&R. Famous Safety REVOLVERS

Price (Nickel) $6.00

ARE BUILT FOR BUSINESS

The Harrington & Hammerless Richardson Revolver is not a toy intended for children, but a safe, durable and accurate weapon for the man or woman who needs a revolver for purposes of offense or defense, or for the huntsman, army officer or policeman. In the H. & R. Hammerless Revolver there is no hammer to catch in the clothing and cause accidental discharge in drawing it from the pocket. The only way possible to discharge it, is to pull the trigger. All H. & R. Revolvers are made of the very best obtainable materials in a factory equipped with the most improved machinery operated by skilled mechanics. It is a marvel. Small and light in proportion to its effectiveness. Perfect in balance and finish, and extremely durable. The automatic device for ejecting the empty shells, makes reloading easy. The handle is so shaped as to insure a firm grip. Every revolver bearing our name passes the most rigid inspection and is thoroughly tested before leaving the factory. We could not afford to risk our reputation by permitting an H. & R. Revolver to be sold unless it is without a single flaw. Our guarantee goes with every one.

H. & R. Revolvers are made in many styles and sizes. Blue and nickel finish. Prices from $3.50 to $8.00. The Hammerless illustrated in this ad., finest nickel finish, is $6.00. Our catalogue gives full particulars. A postal card will bring it. H. & R. Revolvers are sold by all dealers in reliable sporting goods. If not sold in your town, we will ship direct prepaid on receipt of price.

CHAPTER VII.

A FOURTH OF JULY CELEBRATION.

THE PEOPLE of Claster had arranged for a Fourth of July celebration, and early in the morning folks began to pour in from the surrounding farms until the place took on the liveliness of a fair-sized city.

Knowing that some folks would take the opportunity to order or buy supplies, Frank kept the store open until noon and did quite a fair business. When he closed up he had twenty-six dollars on hand, which he took home for safe keeping.

There was a short parade in the afternoon and all of the young folks went to see this. Little Georgie was particularly enthusiastic and wanted to follow the brass band all over the line of march.

"I'd like Fourth of July to come every day," he told his brother and sister.

"I fancy you'd get tired of it soon enough," said Ruth.

"I'd never get tired of it," answered the little fellow, positively. "When I grow up I want to be a drummer in the band."

"Do you think you want to carry around the bass-drum, Georgie?" questioned Frank, with a smile.

"No, I want the little drum—the one that rattles and has two little sticks," returned Georgie.

The town people had collected almost a hundred dollars which a committee had expended in fireworks. These were to be set off at the public square, only a short distance from Mr. Hardy's store. At the appointed time the square was crowded, and the display of fireworks was begun amid great enthusiasm.

"I love those rockets and Roman candles," said Ruth, enthusiastically.

"And I like the big pin-wheels," answered Frank.

With Georgie they had taken a place in front of the store. But they could not see extra well, on account of a wagon being in the way, and so moved on to another part of the square.

A flight of rockets was followed by some colored fire and a very handsome set piece. Then came triangles and flower pots, and another set piece, and then some of the largest rockets the committee had purchased. The latter went up with a rush and a roar that made Ruth shrink back in momentary alarm.

"I don't like that—it looks dangerous," said she.

"It is not as dangerous as it is for those boys to be running around with blazing brushwood," answered her brother.

"The constable ought to stop them. They may set something or somebody on fire."

"Wouldn't one of those rockets set something on fire if it came down while it was still burning, Frank?"

"To be sure. We haven't had rain in so long all the roofs around here are pretty dry."

For the end of the celebration there was a set piece of the President of the United States, and as this lit up there was a wild cheering and hurrahing, which was changed to a sudden cry of alarm as a man yelled "Fire!" at the top of his lungs.

"Fire? Where is the fire?" asked several.

"He means the fireworks," said one onlooker, and several laughed at the joke.

"Fire! fire!" continued the other man. "The feed store is on fire!"

"The feed store?" repeated Frank, with a start. "Can he mean our place?"

"He does!" shrieked Ruth. "See, the smoke is coming out of the upper window!"

"It is our place, true enough!" groaned Frank. "Here, Ruth, take care of Georgie. Don't you come over to the fire."

"Oh, what are you going to do, Frank? Don't go into the place, please! You'll be burnt up!"

"I'll take care of myself. Now, keep back as I told you."

Thus speaking Frank darted into the crowd and made his way to the front of the store, which was located in a small two-story frame structure, having a flat roof. The upper floor was filled with feed and grain, and through the front window the flames could readily be seen. As Frank drew closer there was a crash of glass, and then the flames shot out of the window, and began to lap the roof.

"Don't go in there, Frank!" cried several. "The place is a goner. You can't save anything."

"I'm going to save the papers," answered our hero, determinedly. "Why don't you call out the fire department?"

"Bill Wilson did that already."

Unlocking the front door, Frank made his way inside. All was dark and filled with smoke. He felt his way to his father's safe and desk. Soon he had some papers from the desk in his pocket, and then he knelt down to open the safe.

The strong box had a combination lock, and as yet Frank was hardly accustomed to it. In his excitement it was not easy to remember the proper numbers, and the first time he tried the knob the safe refused to come open. Then he tried to work the combination again.

By this time the entire lower floor of the building was thick with smoke, and the flames were already beginning to show themselves in the vicinity of the back stairway. Frank's eyes were swimming in tears, and it was all he could do to get his breath.

"I certainly can't stand this any longer," he thought, and gave the knob of the safe a final turn. Then the door came open and he pulled out the account books and some private papers in all haste. He had heard his father say that the safe was worn out, and in no condition to stand the test of a hot fire.

Scarcely able to stand, Frank felt his way toward the front door. The entire back and upper part of the building were now ablaze and he could plainly hear the crackling of the flames above him.

"Frank Hardy, where are you?" called a voice through the smoke.

Frank did not answer, but staggered toward the sound, for the smoke was so thick he could not see where he was going. Then, just as he felt he must drop, he received a dash of water in the face, thrown by a member of the local bucket brigade, for as yet the town boasted of nothing better than one engine and a company of men, who possessed sixty leather fire buckets.

The water did much toward reviving our hero and in a second more he almost fell through the front door and out on the stoop of the store. As he came into view a shout went up.

"There he is!"

"He has had a narrow escape!"

"Did he get burnt?"

"No, he is all right."

Assisted by willing hands, Frank made his way to a bench in the public square. Close at hand was a town pump, where men and boys were filling the leather buckets. Down the square was the hand engine, drawing water from a nearby cistern. As weak as he was our hero had brought his books and papers with him, and these he now placed at his side.

HE GAVE THE KNOB OF THE SAFE A FINAL TURN

"Oh, Frank, are you hurt?" It was Ruth who asked the question, as she came up with little Georgie.

"No, I'm all right," Frank answered. "But I guess I'm pretty well smoked," he added, coughing and wiping his eyes.

"You should not have gone in such a place."

"I wanted to save father's books and papers. The desk will be burnt, I know, and the old safe isn't of any account."

"Do you think they'll put the fire out?"

"It doesn't look like it now."

"It must have been set on fire by the fireworks," went on Ruth.

"More than likely."

The firemen were working with a will, and before long Frank started in to aid them, telling Ruth and Georgie to take the books and papers home.

"Tell mother not to worry about me—that I'll keep out of danger," said our hero.

He had scarcely spoken when Mrs. Hardy rushed up, all out of breath and with her face full of fear.

"They told me you had gone into the store," she gasped. "Are you unharmed?"

"Ys, I'm all right, mother."

"Thank Heaven for that!"

"Here are father's papers and account books. I'm afraid the whole place is doomed."

"Yes, it looks like it—and the next place, too," answered Mrs. Hardy.

She remained at the fire for only a few minutes and then returned home, to tell her husband that Frank was safe. Georgie went with her, but Ruth stayed to see the end of the conflagration.

It was a full hour before the fire was under control. By that time not only the feed store was gone, but also the butcher shop next door, and a barn in the rear. Yet many felt that the firemen had done well to save the surrounding property, considering how dry everything was and what a breeze was blowing.

"That's the end of the feed business," thought Frank. "I hope father is insured. If he isn't, the loss will be a heavy one for him—especially after this Garrison disaster."

CHAPTER VIII.

FRANK LOOKS FOR WORK.

When Frank arrived home he found that his father had been given all the particulars of the conflagration by the other members of the family and by several neighbors who had dropped in to tell him the news and sympathize with him.

The exact origin of the fire was a mystery, but it was generally accepted as being due to the Fourth of July celebration.

"I hope you are insured, father," said Frank, after the last of the neighbors had departed.

"I am insured, Frank, but I have forgotten the exact amount," was the reply. "I want you to look over the papers for me."

"The papers call for twenty-five hundred dollars on stock and two hundred dollars on fixtures," said our hero, after a careful reading of the insurance papers, three in number.

"Then I am fully covered. The stock on hand did not amount to over eighteen hundred dollars."

"Then for stock and fixtures you ought to get two thousand dollars."

"Yes—if I can make the insurance companies toe the mark."

"That is more than you would have gotten from Mr. Benning or Mr. Peterson."

"Yes, Frank; I doubt if they would have given me over twelve hundred dollars—perhaps not over a thousand."

"In that case—if you can make the insurance companies pay up—the fire won't have been such a bad happening after all."

"No, it will be quite a good thing for us."

Early on the following morning two insurance men put in an appearance, and surveyed the ruins carefully. Nothing had been saved of Mr. Hardy's belongings, even the safe having been rendered absolutely worthless by the intense heat. After looking around, the insurance men called upon the sufferer at his home.

"Well, Mr. Hardy, you seem to be suffering in more ways than one," said one of the men.

"That is true, Mr. Lane. The town celebrated yesterday at my expense."

"I should say at our expense," put in the second insurance man, with a grim smile. "We are the ones to foot the bill."

"Well, I am glad, Mr. Watson, that the loss does not fall on me, for it would ruin me utterly."

"What do you figure your loss at?"

"I have been looking over the accounts with my son, Frank, who has been running the store lately, and we figure the stock at eighteen hundred and forty dollars and the fixtures at the figure in the papers."

"Then you claim two thousand and forty dollars?"

"Isn't that fair?"

"Will you let us go over the stock sheet with you?"

"Certainly."

This was done, and at the end of an hour the insurance men said they would recommend that the company pay Mr. Hardy nineteen hundred dollars in full for his claims. As this was not such a big cut as he had feared, Frank's father said he would accept the amount if the sum was forthcoming inside of thirty days.

"I am sure I have made a good bargain with the insurance people," said Mr. Hardy to his wife, when they were alone. "I have done much better than if I had sold out to any of my rivals."

"Yes, and the best of it is, you are now under no obligations to your rivals," returned Mrs. Hardy.

"I did not get exactly what I think the stock was worth, but one cannot expect to get that when one is burnt out."

"What will you do, Thomas, when they pay the money?"

"Settle the Garrison matter first of all, and then put the balance of the money in the bank."

"And after that?"

"I'll have to get well before I make up my mind. I can do nothing so long as I am tied down to the house."

With the store burnt out, Frank scarcely knew what to do with himself. When the debris was cleared away by the owner of the property, he went around to hunt for anything of value, but nothing was forthcoming.

Frank was very thoughtful when he

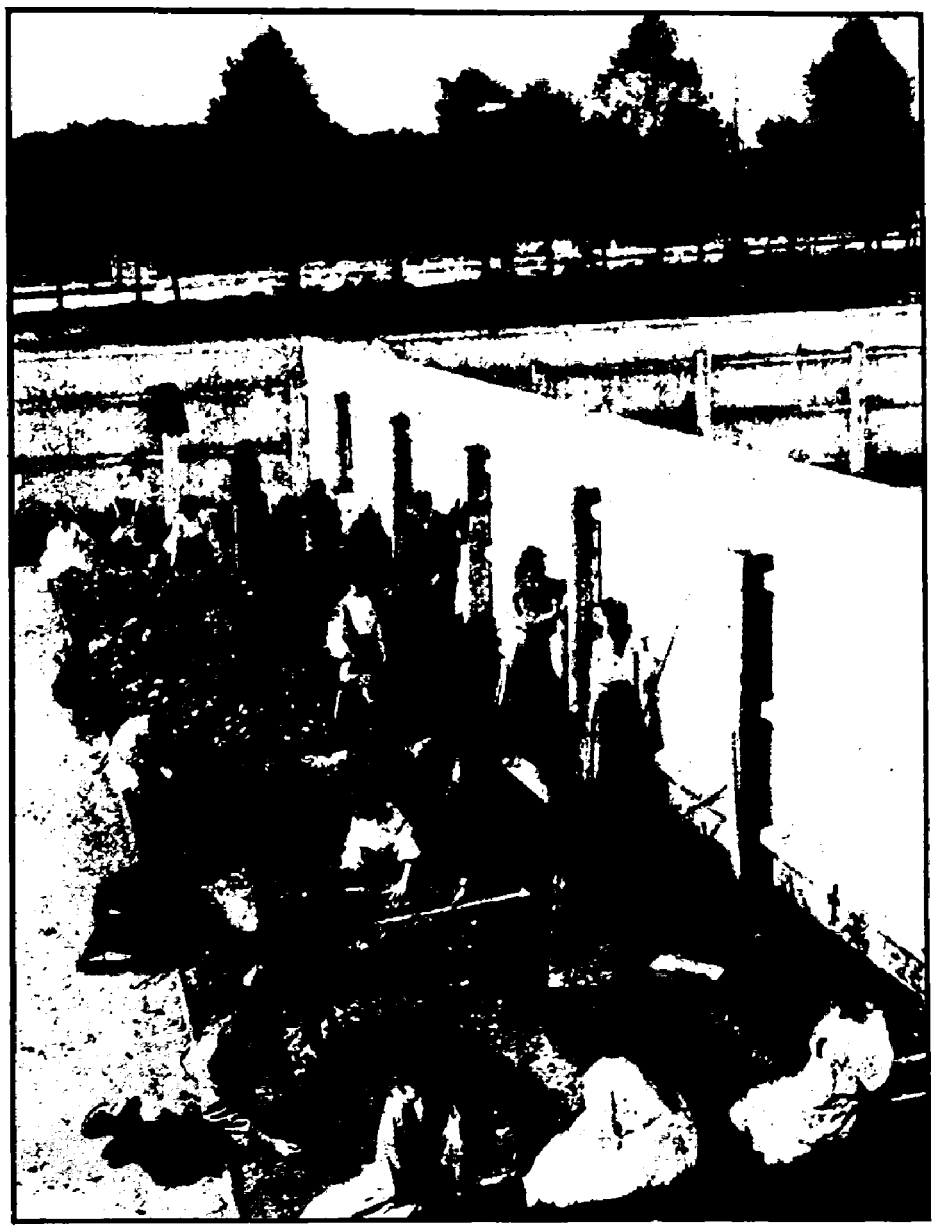
Salubrious climate, absolutely healthy. Moral town, home influences. Rates moderate. For catalogue, address D. J. BRIMM, Rock Hill, S. C.



A BALTIMORE SCHOOL GARDEN

NICKNAMES OF THE STATES

Written for The American Boy by Eugene Parsons, Ex-Editor The World Today, Author of "Through the Rockies."

The nicknames of the states are oftentimes more appropriate than the original names. What they lack in dignity they make up in expressiveness—they suggest some striking characteristic of the region or of the people. In a number of instances it is hard to account for their origin, and whatever fitness some of them once had is gone. In such cases it would be better for them to be dropped and another name adopted.

Alabama (derived from an Indian word meaning "here we rest") is popularly known as the Cotton State, for here cotton is king. The natives of the state are nicknamed "Lizards."

Arkansas (arc, a bow, prefixed to Kansas) is called the Bear State. The natives have been dubbed "Toothpicks."

California (Spanish, "hot furnace") is called the Golden State, and the Californians are often referred to as "Goldhunters." El Dorado is another appellation of this state.

Colorado (Spanish, "colored" or "red") is the Centennial State, because it was admitted into the Union in 1876. From the unsettled habits of the Coloradoans they have been named "Rovers."

Connecticut (Indian, "long river") has the nickname, the Nutmeg State, and its residents have been called "Wooden Nutmegs." This is not due to the shape of the state, as is sometimes supposed, but to the alleged practice of its merchants of making nutmegs of wood. It is also called the Freestone State and the Blue Laws State.

Delaware (named after Lord De la Warr) is sometimes referred to as the Diamond State and the Blue Hen State. Its inhabitants have been nicknamed "Muskrats."

Florida (Spanish, "flowery") is the Peninsular State, for it is mostly a peninsula. Its natives are dubbed "Fly-up the Creeks."

Georgia (named after King George II.) is the Cracker State, from the poor class of whites called "Crackers." The Georgians have in some mysterious way acquired the nickname of "Buzzards."

Idaho (Indian, "gem of the mountains") has no nickname that is in general use. Its inhabitants are often called "Fortune-seekers."

Illinois (Indian, "tribe of men") is the Prairie State and the Sucker State, and its people are called "Suckers." There are various explanations as to the origin of the term. By some it is said that the early settlers on the dry prairies of this state used to insert straws in crab-holes and suck up the water. Egypt is a name often applied to southern Illinois.

Indiana is everywhere known as the Hoosier State and its people as Hoosiers. The origin of the name is veiled in obscurity.

Iowa (Indian tribal name) was long ago dubbed the Hawkeye State and the Iowans "Hawkeyes." The story goes that a Burlington editor somehow got the name of "Old Hawkeye," and in time "Hawkeye" was tagged to the state and people.

Kansas (Indian tribal name) is the Sunflower State, that being the state flower. It is also known as the Jayhawker State, and the people are called "Jayhawkers," a name that arose in the troublous days before the Civil War.

Kentucky (Indian, "at the head of the river") is the Blue Grass State. The allusion, "Dark and Bloody Ground," grew out of the frequent desperate encounters between Indians and whites in this territory. The Kentuckians are sometimes called "Corncrackers."

Louisiana (named after Louis XIV., King of France) is the Creole State, and many of its inhabitants (of French and Spanish descent) are called Creoles. It is also known as the Pelican State, from the fact that this bird appears on the state seal.

Maine (so named in the charter granted by Charles I.) is the Pine Tree State, from the device on its seal. It is also named the Lumber State, because of its great forests. Its sons are called "Foxes."

Maryland (named after Henrietta Maria, wife of Charles I.) is called the Old Line State, a name that probably came from the "Maryland Line," a famous regiment that fought valiantly in several battles of the Revolutionary War. The Marylanders are sometimes called "Clam-Humpers."

Massachusetts (Indian tribal name, "at the great hills") is the Bay State, from Boston harbor. From time immemorial its people have been known as "Yankees."

Michigan (Algonquin word meaning "great lake," referring to Lake Michigan) is popularly known as the Wolverine State, and less often as the Lake State. The Michiganders are dubbed "Wolverines."

Minnesota (Indian, "sky-tinted water") is called the Bread and Butter State, from its farm products. Its inhabitants are nicknamed "Gophers."

Mississippi (Indian, "father of waters") is the Bayou State, and its people are "Tadpoles."

Missouri (Indian tribal name, meaning "muddy water") is the Bullion State, a name associated with the career of Thomas H. Benton, who made many speeches favoring a gold and silver currency.

Montana (Spanish, "Mountain land") is the Treasure State, referring to its mineral wealth.

Nebraska (Indian, "water valley") is the Black Water State, from the dark color of the Platte and other rivers. The inhabitants are called "Bug-eaters."

Nevada (Spanish, "snowy") got the name of the Silver State in the flush days of the Comstock boom. It is also called the Sagebrush State, and its people "Sage Hens."

New Hampshire (named after Hampshire in England) is the Granite State. It is sometimes called the "Switzerland of America." Its sons have long been known as "Granite Boys."

New Jersey (named for the Isle of Jersey) is the Sharp Backs State. Its inhabitants are called "Clam-catchers."

New York (named after the Duke of York) is the Empire State. The name is peculiarly fitting, for it ranks first among the states in wealth and population. It is also called the Excelsior State. The New Yorkers are familiarly spoken of as Knickerbockers, a name borrowed from Irving.

North Carolina (named for Charles II.) is variously named the Old North State, the Turpentine State, and the Tar State. Its people are called "Tarheels."

North Dakota (named after the Indian tribe) is the Sioux State and the Flickertail State. The Dakotans are called "Squatters."

Ohio (Indian, "beautiful") is the Buckeye State, from the abundance of trees so called. The inhabitants are "Buckeyes."

Oregon (Indian, "wild thyme") is the Sunset State. It is less frequently called the Beaver or Web-foot State. Its people are "Hard Cases."

Pennsylvania (Penn prefixed to the Latin word "silva") is the Keystone State. The Pennsylvanians are popularly known as "Pennamites" and "Leatherheads."

Rhode Island (named after the Isle of Rhodes in Narragansett Bay) is Little Rhody. The natives are "Gunflints."

South Carolina (named in honor of Charles II.) is the Palmetto State, from the palmetto tree on its seal. The people are "Weasels."

South Dakota (Dakota meaning "leagued") is the Coyote or the Swiftcat State. It is sometimes called the Blizzard State.

Tennessee (Indian, "river of big bend") is the Volunteer State. The inhabitants are called "Whelps."

Texas (Indian word "Tachies," "friends") is the Lone Star State, from the single star on the flag of the Republic of Texas (1836-45). The Texans are familiarly referred to as "Beefheads."

Utah (Indian tribal name) is the Mormon State, and the people are dubbed "Polygamists."

Vermont (French, "green mountain") is the Green Mountain State. Its sons are "Green Mountain Boys."

Virginia (named for Elizabeth, the "Virgin Queen") has for two hundred years been known to history as the Old Dominion. This commonwealth is sometimes called the Mother of States and the Mother of Presidents. The Virginians are occasionally nicknamed "Beagles."

Washington (named after George Washington) is the Chinook State. It is also called the Evergreen State. The former term comes from the Chinook Indians, and the latter from the forest tree.

West Virginia (so named because it was formerly a part of old Virginia) is the Panhandle State. It was at one time known as the State of Kanawha.

Wisconsin (Indian, "Wild rushing river") is the Badger State, and the people are "Badgers."

Wyoming has no generally recognized nickname. It is somewhat remarkable that its cowpunchers, with their wealth of slang, have never coined one.

Caoch O'Leary

We do not often print poetry in THE AMERICAN BOY, but here are some stanzas of the olden time that not only the boys, but their parents, will be glad to read. The author is J. Keegan, who was born of lowly parents in an Irish village in 1809, and lived but forty years. The word caoch means blind.

One winter's day, long, long ago
When I was a little fellow,
A piper wandered to our door,
Greyheaded, blind and yellow.
And oh how glad was my young heart
Though earth and sky looked dreary
To see the stranger and his dog—
Poor Pinch and Caoch O'Leary.

And when he stowed away his "bag,"
Crossbarred with green and yellow,
I thought and said "in Ireland's ground
There's not so fine a fellow."
And Fineen Burke and Shane Magee
And Elly, Kate and Mary
Rushed in with panting haste to see
And welcome Caoch O'Leary.

Oh! God be with those happy times!
Oh! God be with my childhood!
When I bareheaded roamed all day
Bird-nesting in the wildwood
I'll not forget those sunny hours
However years may vary;
I'll not forget my early friends
Nor honest Caoch O'Leary.

Poor Caoch and Pinch slept well that night
And in the morning early
He called me up to hear him play
"The wind that shakes the barley."
And then he stroked my flaxen hair
And cried "God mark my deary."
And how I wept when he said "Farewell
And think of Caoch O'Learly."

And seasons came and went, and still
Old Caoch was not forgotten,
Although I thought him dead and gone
And in the cold clay rotten.
And often when I walked and danced
With Elly, Kate and Mary
We spoke of childhood's rosy hours
And prayed for Caoch O'Leary.

Well, twenty summers had gone past
And June's red sun was sinking
When I, a man, sat by my door
Of twenty sad things thinking.
A little dog came up the way,
His gait was slow and weary,
And at his tail a lame man limped;
'Twas Pinch and Caoch O'Leary.

Old Caoch, but ah! how woebegone!
His form is bowed and bending,
His fleshless hands are stiff and wan.
Aye—Time is even blending
The colors on his threadbare "bag,"
And Pinch is twice as hairy
And thin-spare as when first I saw
Himself and Caoch O'Leary.

"God's blessing here!" the wanderer cried,
"Far, far be hell's black viper;
Does anybody hereabouts
Remember Caoch, the piper?"
With swelling heart I grasped his hand,
The old man murmured "Deary
Are you the silky headed child
That loved poor Caoch O'Leary?"
"Yes, yes!" I said. The wanderer wept
As if his heart were breaking—
"And where, a vhic machree," he sobbed,
"Is all the merrymaking
I found here twenty years ago?"
"My tale," I sighed, "might weary;
Enough to say there's none but me
To welcome Caoch O'Leary."
"Vo, vo, vo!" the old man cried
And wrung his hands in sorrow.
"Pray lead me in, asthore machree,
And I'll go home to-morrow.
My peace is made, I'll calmly leave
This world so cold and dreary,
And you shall keep my pipes and dog;
And pray for Caoch O'Leary."
With Pinch I watched his bed that night;
Next day his wish was granted;
He died—and Father James was brought
And the requiem mass was chanted.
The neighbors came, we dug his grave
Near Elly, Kate and Mary,
And there he sleeps his last sweet sleep;
God rest you! Caoch O'Leary.

ROCK RIDGE SCHOOL
Wellesley Hills, Mass.

Characterized by Strength of Teachers.

The many considerations of a boy's life at school form the text of a pamphlet that has been written about this school. Though it may not influence a selection in favor of this school, it will be read with interest by all who are impressed with the equipment and methods that are essential for a thoroughly modern preparatory school.

This pamphlet, which has been prepared with care and illustrated with numerous photographic reproductions, describes both by word and picture many details of the school life as well as the advantages, natural beauty and historic interest of the school's surroundings. Sent without charge on request by postal card or otherwise. Please address

DR. F. G. WHITE, ROCK RIDGE HALL, WELLESLEY HILLS, MASS.

Company News

ARTESIA COMPANY No. 57, Potomac, Ill., has a membership of twenty-one with more coming in; the meetings are interesting and the attendance is exceptionally good. The company recently held an open meeting at which was debated the question, "Resolved, that the bowling alley will be a detriment to Potomac as a town and community." The decision was gained by the negative. There was a large attendance at this meeting. This company has also a uniformed rank numbering sixteen privates and three officers; the uniforms are khaki, and with hats, leggings, belts, etc., they have quite a military appearance. On Memorial Day the uniformed rank had charge of the decorations and gave exhibition drills. They intended to take quite a large part in the Fourth of July celebration, as well as on AMERICAN BOY DAY, which they intend to celebrate. In their gymnasium they have a punching bag, Indian clubs and other athletic apparatus. CLAN ALPINE COMPANY No. 19, Boulder, Colo., enjoys quite a good attendance at its meetings. It has organized a baseball team which is expected to give a good account of itself, and the company generally is in a flourishing condition. MT. PHACATHIT COMPANY No. 39, Arroyo Grande, Calif., has the following officers: Henry Royal, Capt.; Looman Noble, V. C.; Fred Hischler, Secy.; Homer Woods, Treas. CHAIRTOWN COMPANY No. 23, Gardner, Mass., recently elected the following officers: Albert Lovejoy, Capt.; James Hoskins, V. C.; Philip Marion, Secy.; Alan Moore, Treas.; Roger Woodbury, Libn. The company has six members and hopes to have more at an early date. It will be unable to celebrate AMERICAN BOY DAY until September, but expects then to have a great time. The meetings are held at members' houses every Thursday, and after business is over, refreshments are served. It has a library of thirty-two books. Dues are ten cents a month. We are promised a picture soon. The company contributed 25 cents to the local San Francisco relief fund. It also recently held a crokinole tournament. MT. LASSEN COMPANY No. 32, Redding, Calif., recently elected the following officers: Lester Kohle, Capt.; Elton Richards, V. C.; Clyde Robinson, Secy.; Roy Leech, Treas.; Fred White, Libn. A military company has been organized among the members and bids fair to be successful; it marched in the parade at the recent G. A. R. encampment. KEEWADIN COMPANY No. 80, Port Huron, Mich., has the following officers: Harold Wright, Capt.; Norman Jones, Sec'y and Treas. The members seem to have taken up the idea of the O. A. B with enthusiasm. We are looking forward to receiving splendid reports. OLYMPIA COMPANY No. 35, Emporia, Kans., still has its "head above water." It has a baseball team which has succeeded in winning three games out of four played. The officers are: Otto Mulvaney, Capt.; Geo. Culbertson, V. C.; Donald Peters, Secy.; Calvin Lambert, Treas.; Harry Martin, S. A.; David Bailey, Libn. VOLUSIA COMPANY No. 8, Deland, Fla., has the following officers: Cyril Happersett, Sec'y; Jos. Allen, V. C.; Thomas Hayes, Treas.; Chas. Allen, Capt. of Athletics. LIBERTY BOYS COMPANY No. 4, Lenoir, La., recently elected the following officers: Jessie Butler, Capt.; Bert V. Lenoir, V. C. It expects five or six new members before its next meeting. MEN OF TO-MORROW COMPANY No. 40, Wichita, Kans., has the following officers: Earl Selphrey, Capt.; Lynn Waggoner, V. C.; Howard Freeman, Sec'y-Treas. SALEM ATHLETIC COMPANY No. 30, Salem, Ind., at its meeting recently, elected the folowing officers: Paul Faulkner, Capt.; Thomas Cook, V. C.; Seward Snyder, Sec'y; Emmett Warriner, Treas. Its baseball team has just closed a most successful season, winning five out of six games by good margins against larger and older teams. As most of the members will be away from home during vacation, no meetings will be held until fall. THEODORE ROOSEVELT COMPANY No. 51, Nashville, Ill., has officers as follows: J. Bertram Reuter, Capt.; Edwin E. Finke, V. C.; C. P. Reither, Sec'y.; R. N. Fredeking, Treas.; Oliver R. Schuerer, Libn.; Howard Hosmer, S. A. It has recently taken in one new member and expects to have more within a short time. SILVER GATE COMPANY No. 26, San Diego, Calif., sends us a clipping from a local paper containing an account of a dance given by the members which was both enjoyable and successful, and which netted the treasury nearly $25.00. The members have received from a contractor and builder a donation of labor and lumber, and work upon the new club house will start immediately. SAM HOUSTON COMPANY No. 38, Oakdale, Texas, recently held its May field day, program and report of which we have at hand. This company has its charter framed, and has begun to put some money in the treasury. GENESEE VALLEY COMPANY No. 53, Wellsville, N. Y., recently elected Harley Wight, Capt.; Herbert Pitt, V. C.; Wm. McEwen, Sec'y. and Treas.; H. Forry, S. A. It has fifteen members and a nice club room, a library of books and $4 in the treasury. It publishes a boys' paper, called "The Boys' Era." SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill., sends us a clipping from a local newspaper containing an account of the athletic meet of the ward schools of Decatur, at which we note one of the members figured in the relay race. We, of course, are always glad to see any member of the companies mentioned as doing something requiring effort, and doing it better than others. This company recently elected the following officers for the ensuing six months: Kenneth Montgomery, Prest.; Glenn Porter, V. P.; Chester Stafford, Sec'y.; J. A. Brockway, Jr., C. C.; J. K. Marshall, Treas.; Donald Wood, Libn. We are reminded by the company counsel that the company was two years old June 25, and we congratulate the members upon their loyalty to the Order, and for their enthusiasm. GEORGE A. CUSTER COMPANY No. 68, Detroit, Mich., intended to celebrate June field day according to the program sent them in our company letter. We hope to have a full report of the meeting. D. E. GIRARDOT COMPANY No. 23, Cape Girardeau, Mo., recently elected: Vergil Wilson, Capt.; Werner Mueller, Sec'y.; Ed. L. Culler, Treas.; P. Wilson, Libn. At its meeting in July there will be a musical and literary program rendered, and refreshments will be served. COYOTES COMPANY, No. 3, DeSmet, S. D., sends in its report on a very neatly gotten up letter head, having printed upon it the names of the officers, and name and number of the company. Its officers are: Reginald Sherwood, Capt.; Lloyd Courtney, V. C.; Edmund Dawley, Sec'y.; Court Krumveida, Treas. It has recently taken in three new members and expects more soon. The members are planning for a picnic to be held some time during the summer months. THE NEOSHA HUSTLERS COMPANY No. 41, Iola, Kans., intends to have an ice cream social soon and expects to have a baseball team equipped. GLENWOOD COMPANY No. 55, Medina, N. Y., makes its report very short, but to the point. From it we learn that during April and May ten new members were added to the company, making the membership at the present time nineteen. KNIGHTS OF JEWELL COMPANY No. 34, Cuba, Kans., sends us a clipping from a local paper giving an account of a ball game in which the company's team won, the score being four to eleven in favor of the O. A. B.'s. OJIBWAY COMPANY No. 58, Yonkers, N. Y., recently elected T. P. Quany, Capt.; Walter Mitchell, Sec'y.; Robert Thew, Treas. The members expect to have a good time this season camping and yachting. Their camping ground is at the foot of the Palisades, and a trip up the Hudson in small boats is being planned. This company would like to correspond with other companies who are interested in camping or boating. SPRAGUE COMPANY No., 71, Alliance, Ohio, recently took in five new members, which makes its total enrollment now twenty-two. Its officers are: Floy Randall, Capt.; Lanson Miller, V. C.; John Coates, Sec'y. THE WINDING RIVER COMPANY No. 62, Monessen, Pa., met June 7 at the home of one of its members and elected Walter H. Bambaugh, Capt.; Carl Warner, V. C.; L. Smith, Sec'y.; T. Plummer Todd, Treas. Meetings are held at the members' homes in alphabetical order of their names, during the summer months, and dues are 25 cents a month. SEMINOLE COMPANY No. 56, Rockford, Ill., has a library of eighty of the best boys' books, the authors being Henty, Optic, Alger and others. It has recently moved into its new club room, especially fixed up for its convenience. The rooms are decorated with red, white and blue bunting and pictures. Each member has a key to enable him to go in and out when he pleases, and amuse himself with games and magazines. The members held a picnic the beginning of April which was greatly enjoyed. We are promised a picture of the company soon. The officers are: Ralph H. Woolsey, Capt.; Roy E. Davis, V. C.; Harry Stibb, Sec'y.; Howie Reid, Treas.; Wm. Kellberg, Libn. The Company has ordered a special pin consisting of an Indian head with scroll, on which will be the letters O. A. B., and the company number, 56. The meetings will be discontinued until the fall. TAMPA COMPANY No. 7, Tampa, Fla., has $1 in its treasury, and will strive to get a gymnasium. June 27 it intended to hold a picnic and field day exercises. We hope to receive a report of same at an early date. YELLOW BREECHES COMPANY No. 60, Mechanicsburg, Pa., recently elected Geo. Dietz, Capt.; Geo. Fiskel, Sec'y.; Richard Biddle, V. C.; Everett Echols, Treas.; Roy Mounts, Libn. We are promised a picture of the members soon. RAINBOW COMPANY No. 3, Great Falls, Mont., recently elected Wm. Bondy, Capt.; Donald Suhr, V. C.; Donald Hoffman, Sec. and Treas. This is a new company but we hope to have good reports from it. THORSBY NATURALIST AND ATHLETIC COMPANY No. 11, Thorsby, Ala., recently elected Carl Soberg, Capt.; Arthur Peterson, V. C. and Libn.; Laurence Gerald, Sec'y; Justin Hillard, Treas. It has $2 in its treasury and a membership of twelve. OLD NORTH STATE COMPANY No. 7, Washington, N. C., Will C. Styron, Capt., Sec'y. and Treas.; David L. Gallegher, V. C. This company has enlarged its club room and has $2.40 in the treasury. It is getting along very nicely. STEPHEN DECATUR COMPANY No. 28, Brooklyn, N. Y., sends us, with its usual regularity, its forty-fourth report. We note that four meetings were held during May and that the several branches of this society have had enjoyable outings and sociables. The members are busy training for an athletic meeting to be held in Brooklyn. There are twelve branch societies connected with this company, and all are in prosperous condition. The secretary asks that any company requiring assistance in the way of getting up programs, etc., will write him and he will be glad to help. MARK TWAIN COMPANY No. 27, Warrensburg, Mo., sends us its list of officers as follows: Kenneth Robinson, Capt.; Maurice Duncan, Sec'y.; P. Anderson, Treas. This new company begins work with good prospects for success. GLEN ROCK COMPANY No. 62, Glen Rock, Pa., has a nice club room with a large gymnasium attached. It has also a library. Dues are 5 cents a month, and we are promised a picture of the Company very soon. The officers are: Curtis Moody, Capt.; Ervin Dise, V. C.; Sherman Seitz, Sec'y.; Murrell Hiteshue, Treas.

The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

Under the Auspices of "The American Boy"

Object:—*The* Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

LOWVILLE, N. Y.

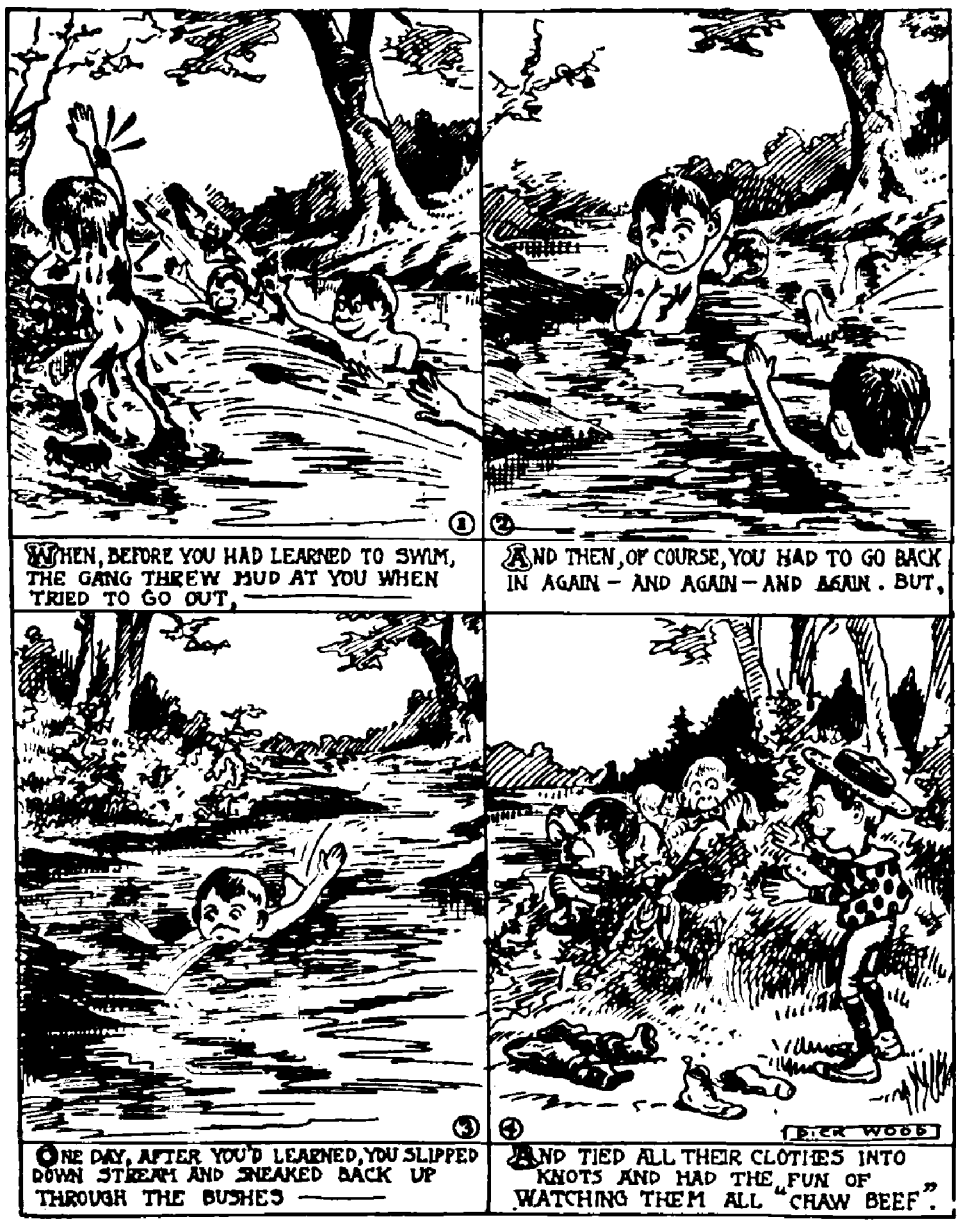
LOWVILLE ACADEMY

(Both Sexes)

Healthful location near the Adirondacks. Certificate accepted by leading colleges and technical schools. Hot water heat. Electric lights. Pure spring water on each floor. Home and tuition, $156 per year; $41.50 per quarter. Ninety-ninth year begins September 4th. Address

WM. H. PERRY, PH. D., Principal

THE GOOD OLD KID DAYS



My Young Sportsman

A Series of Articles Descriptive of Firearms and Their Use

Written for The American Boy by Edward Van Antwerp

CHAPTER III.

IT IS PROBABLY needless to say that the early history of gunpowder does not concern the ordinary sportsman. In the days before the advent of our modern explosives, the individual manufacturers all claimed to have some particular trade secret that enabled them to produce an article superior to their competitors. In all probability one powder was not materially different from another in the quantity and kind of ingredients used, although there may have been a very noticeable difference in the finished product, owing to defective manufacture.

Since black powder was our first available explosive for firearms, it should receive our first consideration. It is composed of sulphur, charcoal and nitre. It is supposed to be so thoroughly incorporated in the powder mill that each atom of sulphur and coal is brought into immediate contact with the proper proportion of nitre. If the mixing has been carelessly done the result will be a powder of poor grain. It will be soft, and when loaded into a shell will cake into a hardened mass. When fired it is sure to leave a large residuum, and if kept for any great period of time the particles of nitre will separate from the other ingredients, leaving the powder practically worthless. Good powder is of a hard, glistening nature. It does not soil the hands, and if a small portion is burned in the open air on a piece of white paper only a trace of residue will remain. After being fired in a gun the dirt in the barrels should be of a soft, oily nature, instead of dry and caked.

After black powder came the smokeless explosive. A complete discussion of this would involve too much scientific matter for general reading; however, most of the sporting fraternity may find a short description, of at least passing interest. Most of the compounds now on the market are made from a nitrate base. The raw material, either wood pulp, cotton rags or paper, is treated to a chemical bath that frees it from all natural oils and resins, after which it is run through machinery that grinds it into an even and finely divided mass. It is then placed in a bath of nitric acid, of the proper specific gravity, to which has been added a quantity of sulphuric acid for the purpose of absorbing the water produced by the process of nitration. Here it is left for a period of 48 hours. The nitrated mass is then washed in boiling water for several days for the purpose of freeing it from all traces of acid. The product has now reached the stage where it is scientifically and commercially known as gun-cotton. The transition of this raw product to the finished product of which the sporting world is so familiar is mainly a process of cutting, grinding, rolling, granulating and hardening, after which it is dried and packed in metallic canisters ready for the market.

Mention should be made of the fact, that not all smokeless powders, even when nitric acid is the basis, are made in accordance with the method outlined; indeed many of them are not, but instead are manufactured from nitro-glycerine, that explosive answering the purpose of the gun-cotton in the former. There is a very good powder on the market said to be made from wheat straw, that has been nitrated without any grinding whatever. Then we have picrate powder, which is made from picric acid, but this can hardly be classed as a smokeless powder, although when pure it is in reality such. To render picric powder available for use in firearms other ingredients are added, which, when burned, leave a trace of smoke and ash. It should probably be classified as a semi-smokeless. If picric acid is poured into ammonia, the resulting product of crystallization is ammonium-picrate This by itself is a powerful explosive, and it is altogether too sensitive to friction for military or sporting purposes. But it has been combined with sulphur and various other chemicals for the purpose of adapting it to the requirements of firearms, although it has never shown itself to be a very satisfactory form of ammunition.

In concluding this subject, let me advise the young sportsman who has read this information to never under any circumstances attempt to manufacture your own powder. The process is dangerous under the best of conditions, and explosives should never be made except under the skilled supervision of an expert chemist.

The writer, when younger than now, made a quantity of gunpowder, and used a block of grandfather's stove wood as a mixing table. The powder proved to be explosive, for a few days later when the wood was placed in the heater, it spread itself and spread the stove doors at the same time.

It was customary in "ye olden time" of black powder and muzzle loaders, for the sportsman to cut his shot just before he directed his steps afield. Sheet lead was the material used, and the little cubes thus whittled out were thought to be unequaled by many, even after the drop shot came into general use. But like all improvements the latter at last gained full sway.

It is a principle of natural science that a fluid substance falling through the air assumes a spherical form. This principle is turned into practical use in the manufacture of shot. A tower is built high in the air. At the top is located a screen, together with a complete arrangement for melting the lead. As the lead becomes fluid it is made to pass through the screen, and rapidly falls in small drops, assuming the forms of spheres, not unlike the rain-drops from a passing cloud. The size of shot is regulated by the size of screen used. In falling the pellets harden, and they are practically solid by the time they strike the water below, which is the medium used to catch them, thus avoiding the bruised and distorted shapes that would otherwise result. Good shot is completely coated with graphite for the purpose of preventing oxidation. Lead, if not protected, rapidly becomes coated with a filthy deposit of oxide to its positive detriment. There are, generally speaking, but two kinds of shot used by the American sportsman—the common drop shot, and the chilled shot. The latter is a shot possessing an extremely hard surface, and it is used principally in combination with nitro powders.

The next question to be considered is that of shells. Under this head reference is had to the cases used for shotguns exclusively. American manufacturers are to be congratulated on their success in the making of this important article. I think I am safe in saying that almost any of the shells designed for black powder, when used with that, will give complete satisfaction. To be sure, some are stronger than others and will last longer where reloading is an object; but most of the sportsmen, especially during the last few years, have made a practice of throwing away their empty cases after they have been once fired, and for that reason durability is not an object to be considered. If smokeless powders are to be considered, the subject assumes an altogether different aspect, for it is of the utmost importance that a shell be used suited to the explosive. Since these modern powders are of different densities, it is evident that they demand a different shaped chamber for the purpose of retarding or accelerating combustion, and so we find on the market today an almost endless variety of smokeless shells. A general rule cannot be laid down to be blindly followed, but if the user of some particular brand of powder will carefully follow the manufacturer's directions regarding the matter, he will probably have no cause for complaint respecting the shells used.

The primers used for the ignition of gunpowder are of two separate and distinct classes. The one in its chemical make-up is not unlike the old gun caps used in the days of the muzzle loaders. The other kind, made in a great variety of lengths and shapes, and containing powerful fulminates, is used exclusively for firing nitro powders. A primer of the first class is entirely unsuited for shells in which smokeless powder is used.

The next chapter will be a continuation of this same subject of ammunition and its preparation, after which, I am pleased to assure my young friends, we will take up the much more interesting subject, namely, the art of shooting.

What is the difference between a Dutch dude and a piece of stovepipe?

One is a silly Hollander and the other is a hollow cylinder.

Why can the devil never be impolite?

Because the imp'o'darkness can never be imp-o-lite.

The *Marlin* Baby Featherweight Repeater. A new high-grade .22 caliber repeating rifle which weighs only 3 pounds 10 ounces!

But this gun is no toy. It is a new and business-like rifle. It combines all the good old *Marlin* features—solid top, side ejection and simple mechanism—with the newer sliding forearm action which is so easy to work without spoiling the aim.

The reduction of cost and weight is positively not at the expense of *Marlin* quality. The high standard *Marlin* drop forgings are used in the breech block, frame and inside working parts. The rifle has the pleasant *Marlin* balance. Both .22 short and .22 long-rifle cartridges can, by means of an extra carrier, be used in the same gun—a *Marlin* feature which all rifle shooters greatly enjoy.

The *Marlin* standard of accuracy is maintained in the highest degree by the most careful boring and the deepest grooving, which last care gives the barrel about double the life of the product of other rifle makers.

Take a *Marlin* Featherweight on your fishing trip or to the summer camp. Take one home to the farm or wherever your vacation finds you, and see what pleasure a good, light .22 caliber repeater can add to your outing.

It is an ideal squirrel rifle and can be relied upon to get all the killing power there is out of any .22 cartridge in hunting any sort of small game.

If your dealer cannot supply you write us direct. A complete description of this little rifle is given in our 1906 Catalogue. Sent FREE for six cents postage.

The Marlin Firearms Co., 97 Willow St., New Haven, Ct.

Do You Want a Reliable, Accurate Revolver

AT HALF THE COST OTHER REVOLVERS SELL FOR?

The HOPKINS & ALLEN Safety-Double Action, Self Cocking solid frame revolver is a dependable and well-made arm. It has a rebounding hammer which is always on the safety or rebounding notch when not being fired.

Price $2.50

The hammer cannot touch or reach the cartridge unless the trigger is pulled. It can be used as a single action or target revolver by pulling the hammer back with the finger to full cock, and then pulling the trigger. The frame is of solid steel beautifully nickeled with a rubber stock or handle of neat design.

The cylinder and barrel are drilled out of solid drop forged steel of the highest known tensile strength, and the cylinder has a safety device to prevent it from turning or revolving backward. The barrel is octagon in shape, is well sighted for quick aim, and in every respect a thoroughly reliable revolver for pocket or home protection. It is also made in long barrel for target shooting.

DESCRIPTION OF SIZES:

22 and 32 calibre for Rim Fire Cartridge.
32 and 38 Smith and Wesson Calibre Centre Fire.

Regular length of barrel 2½ inches, price $2.50
" " 4½ " " $3.00
" " 6 " " $3.50

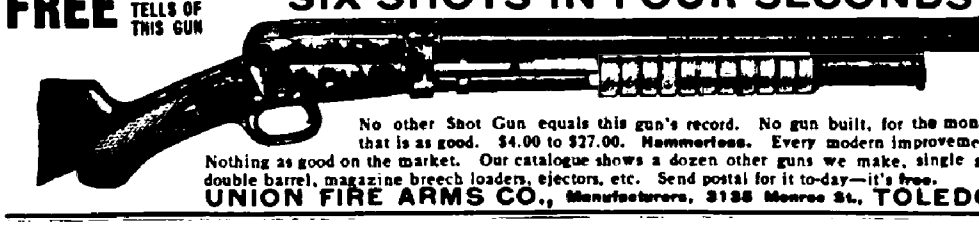
For sale by dealers. If your dealer does not handle them, we will send the model desired, on receipt of price, postpaid.

We publish two delightful stories—"William Tell," the experience of an expert with his first Junior rifle, and "My First Rifle," by the famous marksman, Capt. Jack O'Connell, which we will send free, and our illustrated catalogue of rifles, revolvers, and shotguns. We make the largest and finest general line of firearms in the world.

Hopkins & Allen Arms Co., 118 Franklin St., Norwich, Conn.

FREE BOOK TELLS OF THIS GUN

SIX SHOTS IN FOUR SECONDS



No other Shot Gun equals this gun's record. No gun built, for the money, that is as good. $4.00 to $27.00. Hammerless. Every modern improvement. Nothing as good on the market. Our catalogue shows a dozen other guns we make, single and double barrel, magazine breech loaders, ejectors, etc. Send postal for it to-day—it's free.

UNION FIRE ARMS CO., Manufacturers, 2138 Monroe St., **TOLEDO.**

A Puzzle

Walter Trout, Brazil, Indiana, sends the following as a puzzle:

wood
John
New Hampshire

The puzzle consists in finding out the name of the man and his post-office address, all of which is contained in the three lines. For fear it may trouble you too much to think it out, we give the solution: John Underwood, Andover, New Hampshire.

THE BOY'S FRIEND

DRUMS AND DRUMMERS

By J. C. JULIUS LANGBEIN

IN TWO PARTS
PART II

THERE is an art in beating a drum properly and correctly; indeed it is said to be as difficult as playing properly and correctly on a piano or any other instrument. However, simple as it may appear, it is, nevertheless, only by long and constant practice that perfection can be attained, and then the student must possess a quick ear and a nimble wrist. Every beat should be perfectly regular in the number and division of the strokes from the two sticks, of which that in the right hand is slightly grasped, while that in the left is held firmly in an oblique position, passing between the middle and third fingers, and being held by the two first fingers and the thumb, the two lower fingers crossing under it and the palm being turned upward, and so from "Mammy Daddy" to the "Double Drag," there must be such a symmetry and evenness that one stick beats alternately as much but no more than the other; in other words, in order to drum properly and correctly, one must beat from hand to hand, as it is called, viz.: one stick must beat or strike alternately the same as the other. It is not quite as easy as one may think, certainly not as easy as the old darky's favorite musical instrument, of which he says:

"Talk about yoh fiddle, an' yoh banjo, an' yoh harp,
An' yoh baby gran' piano, playin' flat an' playin' shahp;
W'en de bird is on de table and de dinner's under way,
De drumstick is de instrument dat I prefer to play."

It is said that the peacock and the rooster are, by all odds, the proudest things on earth, and this with no exception, but the saying goes for naught, when we see the drum major dressed in his best at the head of a band or drum corps or both. That magnificent giant in scarlet and gold, with his chest padded out with layers of cotton batting, his towering bearskin shako with a brass chain festooning his lower lip and a superfluous fatigue cap pendent from the button of his coat tail. No major-general approaches him in splendor. His baton is not a mere toy, but a staff five or more feet long, with a ferrule at one end and a silver globe at the other bedecked with fancy ribbons. What marvels of manual dexterity can he not perform with this implement when he chooses to display his skill! With what lofty condescension does he acknowledge the plaudits of the crowd when, having shot his twirling baton in a rocket flight skyward, he catches it as it descends, and resumes the rhythmic calisthenics supposed to give his band the tempo which, in marching, they could not very well lose.

"Who is it always leads the band,
The pride and glory of a land,
That finds delight in all things grand?
The Drum Major.

Who is it gleams in brilliant light,
A glittering, resplendent sight,
A dazzling meteor in flight?
The Drum Major.

Who is it swings his baton high,
A magic wand that sweeps the sky,
And spellbinds every passer-by?
The Drum Major.

Who twirls the stick in fine display,
High up, low down, and every way,
And marches on in bright array?
The Drum Major.

Who wears a shako like a crown,
That from its loftiness looks down
On every other thing in town?
The Drum Major.

Who sticks his brass-trimmed bosom out
Into the circumnambient air about
Two feet, unheeding cheer and shout?
The Drum Major.

Who thinks he holds supreme command?
Who thinks he's everybody and
The whole procession and the band?
The Drum Major.

Who seems to be, to all small boys,
The sum and substance of their joys,
The shining, central star of noise?
The Drum Major.

Who strides along on sturdy limb,
His well trained face unmoved and grim,
And everybody's eyes on him?
The Drum Major.

Who is the biggest man on earth,
The one that does not feel the dearth
Of education, wealth or birth?
The Drum Major."

The darkys during the Civil War always mistook the drum major for General McClellan, or the Commander of the Army. To them he was "de big man."

Like poets, drum majors are born, not made. One man may become a drum major in a week, while you can't make one of another in a lifetime. Without the knack of handling the stick he will never be an artist, and will, probably at the very moment when he should look his jauntiest, commit the crime, unpardonable in a drum major, of dropping his left hand to his side. For the left hand should always, except in two-handed movements with the staff, rest, knuckles up, on the hip. Thus the drum major's pose, when not marching or giving a command, is to stand with his left hand on his hip, his right hand grasping his stick just below the head, the point of the stick resting on the ground. He presents a fine, imposing figure as he stands there, erect and tall, two paces in front of the band.

Now comes the moment so glorious to the small boy, when the commands "Play" and "Forward—March!" are to be given. Facing the band, the drum major, with a quick turn of the wrist, points the ferrule upward, letting it slant a little to the right. Then, raising his staff to the height of his chin, he thrusts it the full length of his arm to the right, and draws it back again. This is the signal to play.

Commander Medal of Honor Legion, United States of America, who served as a drummer boy in the famous fighting regiment known as the Ninth New York Volunteers (Hawkins's Zouaves)

J. C. J. LANGBEIN, AS A DRUMMER BOY AT THE OUTBREAK OF THE CIVIL WAR

Then turning, he points the staff to the front, thrusts it the full length of his arm forward, and music and march begin.

In the old days, the drum major then brought the "cane," as the staff was called in the tactics to the position of "carry sword." Now the drum major beats time, setting the "cadence"—the number of steps to a minute—of the march. As a rule he simply repeats again and again the thrust and recover, through which he gives the command to play.

Boy heroes who served as drummer's were not rare during the Civil War, and in many cases the boy proved the flower of the regiment and many of them won the congressional "Medal of Honor" for conspicuous gallantry and bravery in battle beyond the line of duty. The pages of history are filled with examples of the bravery of "little drummer boys," but space will only permit the mention of a few.

Hidden in a dense growth of wild shrubbery on a little knoll near the United States government post cemetery at Willett's Point, Long Island, is the lost grave of "Jimmie, the Drummer Boy." James Hamilton, which was his real name, was a patriotic youth, who entered the army when little more than a child, and served with honor in the war of the rebellion of 1861 to 1865.

Together with nearly all the other old records of the Engineer battalion, those of the enlistment, career, discharge, and death of the little drummer were destroyed in the fire in 1897. All that can now be learned of the boy is what is recalled to the minds of a few engineers still on the post, who served with him, and one-half of the headboard which marked his grave. This can be found among the sumac bushes near where the boy's remains were interred. It is not known now which of the many unmarked mounds on the little hill is the grave of "Jimmy" Hamilton.

The half of the headboard found bears one-half of the inscription that is weather-worn and almost illegible. The paint which formed the inscription somewhat preserved the wood against decay, and the letters are raised above the ground of the board. They are very indistinct, but with difficulty are interpreted as follows:

..... Hamilton, ... Nov. 25, 1868, ... 19 years, ... consumption, ... Out of Service, ... 1865, in Co. D, Battalion of Engineers; ..... discharged drummer, 1867; .....erved his country; ... Battle; ... In Peace.

In 1862 James Hamilton, who was a native of some small town in Connecticut, enlisted at the age of fourteen years in the First Connecticut Heavy Artillery, with which he served as a drummer boy during the war. After three years' service on the field in the West he was discharged, and returning East, enlisted in the Engineer Battalion in 1865.

Hamilton was discharged on account of disability from consumption in 1867, at the age of nineteen. Shortly after his discharge he grew rapidly worse, and Gen. Abbott, who was then commandant of the post, admitted the boy to the post hospital, where he died in November, 1868, and was buried on the reservation, although not in the service at the time. There was mourning among the soldiers when "Jimmy's" remains were conveyed to their last resting place, and especially among those who occupied the barrack room with him. He was much loved by his comrades in arms, and it is said that none felt the bereavement more keenly than Gen. Abbott, who was interested in the brave little lad, and felt pride in his army record.

It was Gen. Abbott who wrote the inscription for the drummer boy's headboard, part of which was:

"As a child he served his country."

Joseph H. White, of New Britain, Conn., enlisted January 5, 1864, at the early age of eleven years and six months as a drummer boy in the Second New Hampshire Volunteers.

George W. Brintnall died at Lancaster, Penn., February 15, 1901. He was one of the famous soldiers of the rebellion. When scarcely more than fifteen years of age he enlisted as a drummer boy. At the battle of Shiloh he displayed remarkable coolness and bravery, and was afterward known by the sobriquet of "The Drummer of Shiloh," a title perpetuated in song and drama. In this engagement he was blinded by powder in both eyes, but his sight was restored by a surgical operation.

Brintnall enlisted three times, and as a scout discharged most valuable services for the Northern cause. He was noted for his shrewdness and dauntless courage, and received a promotion for standing at his post, when all his comrades had fled, against sixty of Mosby's guerrillas.

On one occasion, when hard pressed by the enemy, young Brintnall swam his horse across the Potomac at Clear Spring, Md. When the opposite bank was reached the faithful beast dropped dead. Brintnall figured in numerous thrilling adventures and had many narrow escapes from death.

Johnny Clem, the "drummer boy of Chickamauga," was born in 1851. In 1861, when he was ten years old, he offered his services as drummer boy to the Third Ohio Regiment. He was rejected because of his youth. While the regiment was on its way to the front he installed himself on the train, and on its arrival in Cincinnati repeated his offer to the Twenty-third Michigan. His pertinacity was at last rewarded. He was enrolled as drummer boy and later as a "marker."

At the battle of Pittsburg Landing his drum was smashed by a shell, but it was at Chickamauga that he performed the act of valor which won him his sobriquet. At the close of that memorable day the Union Army fell back to Chattanooga, the brigade to which Johnny belonged being left behind to guard the position. They were soon surrounded by the troops in gray, and a colonel on horseback dashed forward and ordered the little fellow to surrender, accompanying the command by an opprobrious epithet. Instead of obeying the boy raised his musket, and as the colonel bore down upon him sword in hand, fired, and the officer fell dead from his horse. A fierce onslaught of the Confederate troops followed. Three balls pierced Johnny's cap on that day, Lossing, the historian, tells us he lay as if dead, and not until the Confederates had ceased their firing and night had fallen did he venture forth, making his way to the Union headquarters at Chattanooga. For this act of gallantry he was created a sergeant by Gen. Rosecrans.

On his return to the Union lines he went through other battles in which the Army of the Cumberland was engaged. When he was mustered out in 1865 he went to Indianapolis to attend school. Gen. Grant made him a second lieutenant of the Twenty-fourth Infantry in 1871, and in 1874 he was graduated from the Artillery School at Fortress Monroe, and subsequently acted, by appointment of the Secretary of War, as Professor of Military Science and Tactics at the Galesburg University. He was created Major and Quartermaster in 1895, and in Manila in 1903 he was Chief Quartermaster of the Division of the Philippines.

The Legislature of Wisconsin awarded a medal to J. E. Francisco as the youngest soldier of the Union Army. He was born November 25, 1849. At the breaking out of the war his three brothers enlisted and went to the front. During the first three years of the war Francisco was too young to be accepted as a soldier, but in 1864 he had attained a stature and developed a physique which were the envy of boys several years his senior. He yearned to go to the war. Life on the farm had become unbearable. So young Francisco ran away to Madison, only to be brought back by the constable. Defeated in the second attempt, the third was successful, though the surgeon expressed his doubts whether the boy could successfully withstand the hardships of a soldier's life. Whereupon John promptly offered to satisfy them as to his soldierly qualities by whipping the surgeon or any officer present.

On his enrollment, the captain, thinking to relieve him of many trials and hardships, offered to attach John to himself as his servant, an offer which, made in all kindness, was hotly resented.

There are other "youngest soldiers of the war." "Little Gib" is known far and wide in army circles. Gilbert Van Zandt, the well known cashier of the Sherman House, in Chicago, enlisted August 6, 1862, with the Seventy-ninth Ohio Volunteer Infantry. He was then aged ten years and seven months. He soon became the pet of his regiment, and was in all the engagements that occurred during Sherman's famous march to the sea. At Nashville his colonel had a small sword made especially for him, and the gift was accompanied by another from the members of his regiment in the shape of a handsome drum and shield.

At Milledgeville, Ga., a pony was captured, and by the General's orders turned over to "Little Gib." Mounted on his pony he acted as one of the general's orderlies.

When the pony was confiscated on the muster out in Washington, in June, 1865, Gilbert who was then only thirteen years and six months old, went to President Johnson and asked permission to take his pony home with him. "Which would you rather have, the pony or an officer's commission?" asked the President. "The pony," promptly responded the boy, true to his equine friend; and so the pony was given him and taken to his Ohio home.

Who has not read the story of the child hero Joseph Bara, to whose memory a statue is erected in the Church Square at Palaiseau, a little town about eleven miles from Paris. He enrolled as volunteer at the age of 12, and was one day surprised by a band of peasants. He was told that if he cried "Vive le Roi" they would let him go. He answered by beating his drum. "Are you deaf?" roared a brutal peasant, taking aim at him. "I am a Republican," cried the boy. "You young brigand, have a care; give up your drumming and, like us, cry 'Vive le Roi.'" "Vive le Republique," cried Bara. Twenty muskets were discharged at him and he fell dead. Horrified at their rash act, the Vendeans fled, but some of them afterwards returned, picked up the corpse, and respectfully bore it to the camp of the Republican troops. The Convention decreed a pension to his mother, and ordered that an engraving of the little drummer's execution should be made and hung up in every primary school to show what a child can do when inspired by a noble sentiment. The statue represents the young hero in the uniform of a hussar; a drumstick has fallen from one of his hands, while the other he still holds. The boy has been struck by twenty bullets, but the expression of heroic exaltation still lingers in the delicate young face.

Pierre Tournee, known as the drummer who won the battle of Kehl, won a great reputation for gallantry. During this engagement the French troops were endeavoring to force a passage across a bridge, the head of which was obstinately defended by the Austrians. For a long time the issue of the conflict was doubtful. At length Pierre, seized with a brilliant idea, managed to ferry himself with his drum across the stream on a stray plank, and in a few minutes later there rang out from a wood on the enemy's flank the hoarse rattle of the "pas de charge." Believing themselves to be outflanked, the Austrians became panic-stricken and broke in confusion; the French rushed over the bridge and the battle was won. For this exploit he received from Emperor Napoleon, the Cross of the Legion of Honor.

It is said that the First Napoleon, who cared little for music, nevertheless held the drum in high esteem, while history records that the "Tambours" of the "Old Guard" all perished on the fatal field of Waterloo. Who of us has not heard of the old German poem entitled "The Midnight Reveille," which describes the vast army of Napoleon rising from the grave and forming into ghostly battalions in the gloom, while the shade or ghost of the "Man of Destiny" reviews them; the first lines of which are:

"When the midnight hour has come,
The drummer forsakes his tomb;
And marches, beating his phantom drum,
To and fro in the gloom."

It is related that on the memorable morning of June 17, 1775, when Generals Putnam, Prescott, Warren and their embattled "farmers" were still working upon the unfinished redoubt on "Breed's Hill" under a heavy fire from the British men-of-war in the harbor and from the battery on "Copp's Hill," that Robert Steele, of Dedham, drummer, and Parks, of Cambridge, fifer, boldly mounted the parapet in full view of the enemy, and played that famous national air, "Yankee Doodle."

On the 28th day of July, 1886, there died at South Boston, Daniel Simpson, the veteran drummer of the Ancient and Honorable Artillery Company for sixty-six years, at the ripe old age of ninety-six. Drummer Simpson was quite a local celebrity in his way and had wielded the drumsticks on many memorable occasions for a period of eighty-six years, including the war of 1812. His first appearance as a drummer was at a muster in 1800. In 1812 he was with the New England Guards when they started for Marblehead to defend the coast, and he was the only drummer at the Broad Street riots. The major was a striking figure at the parades of the Ancient and Honorable Artillery Company until within the past few years, and as a testimonial to his long and faithful service his coat sleeve was decorated with sixteen stripes, representing eighty years of service. On extraordinary occasions Dan carried a drum used by John Robbins at the battle of Bunker Hill, and a short time ago he presented this to the Bostonian Society. He came of good Revolutionary stock, for his paternal grandfather was a piper in Gen. Washington's guard, and his father distinguished himself by capturing a British soldier on the famous retreat from Concord, and also was present at the battle of Bunker Hill.

Who of us has not heard of the gallant little drummer boy Clarence D. McKenzie, in whose honor Post No. 399, of Kings County, in the Grand Army of the Republic is named.

The following account of the dedication of a monument to the memory of this gallant little hero is taken from the New York Times of November 26th, 1886:

"A procession of soldiers, citizens, and veterans passed out of the Thirteenth Regiment Armory, on Flatbush avenue, Brooklyn, yesterday afternoon and proceeded to the soldiers' plot in Greenwood Cemetery, where a monument representing a drummer boy had been erected a few days before in honor of Clarence D. McKenzie, the brave little fellow who went out as a drummer boy in Company D, Thirteenth Regiment, on April 23, 1861, and was accidentally killed at Annapolis on June 11 following. Companies B, D, E and K of the Thirteenth, with the Veteran Association of the Regiment and the members of Clarence D. McKenzie and Rankin Posts, Grand Army of the Republic, stood about in the heavy rain while the monument was unveiled. The Rev. C. W. Millen prayed, after which Gen. John B. Woodward unveiled the monument and Postmaster Hendrix delivered an oration, reviewing the life of young McKenzie. The statue is of bronze, nine feet in height, and rests on a stone pedestal five feet high. On the front panel is the inscription, 'Our Drummer Boy,' and on the rear the words: 'His was the first life offering from Kings County in the War of the Rebellion.' The cost of the memorial was about $600 and was collected by the efforts of the drum and bugle corps of the Thirteenth Regiment."

At the battle of Champion Hill, a regiment holding an important position had ceased firing, being out of ammunition; a little drummer boy came galloping down, urging the horse to its utmost speed and inquiring for General Grant;

(*Continued on page 306.*)

RIGA and the BUTTERFLY.

BY CHAS. McILVAINE.

IT WAS "little noon," as the boys and girls at Potato Valley school called "recess." Old Hanus, the Pennsylvania Dutch schoolmaster, was sitting under a big walnut tree with the children playing about him. Stuffy Stauffer shouted, "Dere cooms a putterfly. I catch him." He grabbed his hat from his head and started to run.

"Hold on once, Stuffy. Coom pack! Und I vill tell you all a story. Dot putterfly moost haf his "little noon" joost so vell as you poys und girls."

Stuffy came back, for there was nothing the boys and girls loved as much as one of the old schoolmaster's stories, excepting the old schoolmaster himself.

"Dere was once a leetle girl dot was a great hand at baintin' pictures, already. She hat a baint box what her pappy gave her for Christmas, und brushes, und baper, und a leetle tumbler to hold water in, und lead pencils to draw mit, und India rubber for to rub out vat she drawed, ven it did not look vot she drawed, still. She drew de cats, und de dogs, und de geeses, und de pump, und de leetle birdts, joost like dem, so goot as neffer was. She dit dot pump so well dat water was runnin' out de spout, und her leetle brudder got hit on de head mit de handle. Py geeminycrooks but dat hittin' on de head mit de pump handle does hurt some. I haf been hit mit dem pump handles when I was a poy, yet.

"One bright day in de spring ven de posies was bloomin', und de sun was coaxin' eberyting to grow, und de birdts to sing, und de bees to go after honey, und was makin' shadows under de trees for de lambs to play in, dat leetle girl—Riga was her name—Riga went de house out to baint sometings. She saw sooch a great lot uf pretty tings dot she couldn't choosin, so she bainted notings. After a while she coom to a meadow down, und dere she saw a peautiful putterfly flyin' de flowers among. Riga saidt to herself 'I will take my hat, und catch him, und baint him, once!'"

"Baint him? Vat she want to baint him for? All de putterflies is pooty 'nough mitout baintin' dem, still," asked Stuffy Stauffer, with a perfectly straight face. Christopher Stauffer—Chris—Stuffy, as he was called—was the brightest boy in the school, and as full of mischief as he could be. He enjoyed the fun of catching the old master when he got his speech mixed up, as he sometimes did.

"Stuffy Stauffer, you make a nuisance mit askin' dem questions," answered Hanus, good-humoredly, knowing very well that Stuffy was not in earnest. "You are making mischief. Friga," Hanus asked one of the little girls sitting on his knee, "what was Riga goin' to baint, once?"

"Vy, Riga was goin' to baint dot putterfly on de baper vot she hat in her handt."

"Dere, Stuffy Stauffer, don't I told you so, already, joost so plain as de nose on my face. Dot leetlest girl in de school fersteh (understands) me, joost so goot as neffer was, all de time, already. Tomorrow morning, ven you come to school, I guess I will put you to sit on de girl's side, und let leetle Friga teach you how to versteh goot English."

The whole party laughed at Stuffy, and one of the big girls crossed her forefingers at him. Stuffy looked ashamed. He kept quiet until the story was finished.

Hanus, after all were done laughing and looking at Stuffy, went on with his story:

"Now den, let me see, vere was I? Oh, yes! Riga saidt to herself, once, 'I will take my hat und catch dot putterfly, und baint him, but I don't hurt him.' She took her hat her headt off, und she slip up behindt dot putterfly where he sittin' on a posie. Und, whack! she hat him, under dot hat. Den she reach under, carefully, und she catch him py de legs. Den she laughed, und saidt: 'Joost keep quiet, butterfly. Stop flappin' mit your wings, und kickin' mit your feet. I won't hurt you.'

"Den de putterfly, when he heardt her speak dem kind wordts, he saidt 'Blease, madschen (maiden), let me go. I was shut up in my silk cocoon all winter, und I joost come out dis mornin', und I was dot hungry dot I spreadt my wings und driedt dem in de sunshine, und as soon as dey was dry, I tried dem, und got rit uf dem cramps wot was in dem from being foldedt up so long in dot cocoon; den I started right away, quick, once, to get sometings to eat from dem flowers. I haf not done my breakfast yet awhile. Blease let me go.'

"Riga, she hat a goot heart. She was kind und goot to eberyting. But dot putterfly's wings was so pooty, so yellow mit goldt, so green mit spots like in de tails uf dem peacocks, so striped mit colors, dot Riga want to baint him badt. So she saidt: 'I vill help you get dot breakfast. If you vill gif me a promise, once, dot you vill not fly away, und vill hold still 'till I done baintin' you. (Dot putterfly didn't ask dem mischief questions like Stuffy Stauffer), I vill pick a big handful uf flowers, und you can sit on dem down, eatin' breakfast, while I baint you. Dot vill make a pooty picture—you sittin' on dem posies.'

"'Tank you very much, madschen,' de butterfly saidt. 'I vill make you dot promise, right away, quick. Blease let go my legs. I haf only two or tree days to lif, und I moost be flyin. I want to do all de flyin I can, still, while I am lifin, yet.'

"'Dot is all right, putterfly,' Riga saidt. 'I am sorry dot you haf so few days to lif. You are so beautiful.'

"'I didn't make myself, madschen," de putterfly saidt. 'God made me. I know I am beautiful, but I am not proudt. You haf a good heart, already, but you do not needt to pity me for being so short lifed. De work dot I was sent into de big worldt to do, will be done. Den I will be happy und ready.'

"'Well,' said Riga, 'if you won't let me pity you, I will haf to cry.'

"Blease don't,' de putterfly saidt. 'I don't know how to cry, und I don't want to learn. I haf not time to spare for cryin'.'

"'Den,' Riga saidt, 'if I can't pity you, und I moosent cry, dere is nothin' for me to do but to laugh.'

"'Dot is right. It is petter to be laughin' dan cryin',' de putterfly saidt. 'I haf had tree lives, already, before this one—one as an egg; one as a caterpillar—dot was fine! I joost eat und eat all de time, und efery time when I got too fat for my skin, I joost crawled out uf it, und den I was in a brandt new skin dot would stretch some more; den when I was done eatin' de lofely green leafs, und hadt hadt no more new skins as a caterpillar, I spun me a fine house of silk aroundt, dot I hung to a bush und fastened it mit strong silk cordts to keep de windt from blowin' me away, und den I lifed snug, (as a pupa or chrysalis, dot is dem Latin names what de men dot knows so much, calls dem) while I change into a putterfly. Dot was funny—feelin' myself changin' und tradin' about twenty legs for six, und gettin' vings und scale fedders instead of pristles, und two feelers (antennae) on my headt mit nobs on de endts. Dem knobs makes de difference between putterflies und dem moths. Dem moths don't hab dem knobs on dere feelers. Vhen I was done changin' und de warm wedder coom, I cut open de endt uf my silk house, und pushed myself troo de hole, und crawled out uf my skin, und den I—I was gladt to get some fresh air. Now my work is to lay eggs. I go lay dem. I don't die all. I goes on lifin' in dem eggs. Dem eggs is my children. Joost like your pappy und mammy, I lifs in my children; und I vill haf so many, dot I lif a great deal. You are so pig, dot it takes a pig year for you; I am leetle, und it takes a leetle year for me. Putterfly years is only an hour long. In tree days I shall be tree times four and twenty, dot is seventy-two years old. See? Dot is genug (enough).

"'Now, blease let go my legs. I haf six uf dem, und you are holdin' dem crossed. Dot hurts tree times as mooch as if I heldt you by your two, only.'

"Riga saidt, 'My, Oh, my! Dot is wonderful. Now, go. Flop your beautiful wings, fly aheadt uf me, und ven you see a honey flower, mit honey in for your breakfast, joost flap your wings over it, und I will pick it.' De putterfly saidt, 'I versteh,' und off it flew. Riga followed it. Ven it flapped its wings over a posy, she picked dot posy. She picked und laughed, und laughed und picked, until she hat her handt full uf posies. Den de putterfly saidt 'Sel is genug (That is enough). Tankee. I vill haf a goot breakfast. Now I vill fly to dem shatows under dot tree yonder, und I vill sit down, standin' oop on my legs, und eat it once while you baints me.'

"Riga sat down in dem shatows, und made her baint box open, und got her baper ready, und de putterfly he sat down, standin' oop, und, my gracious! How he dit eat honey mit his long mout. Dem putterflies don't pring tings to dere mouts, dey sents dere mouts to de tings. Dot safes troubles. Riga bainted und bainted. She put down de goldt, und de peacock spots, und dem stripes, und de headt, und dem six legs, und de pody mit velvet all ofer it, und de posies, mit de putterfly sittin' on dem und sendin' his mout for honey. Eberyting was joost so right put down as nefer was. Und so pooty! Oh, but dem was pooty!

"Ven Riga was done dot bainting, she saidt. 'Now, putterfly, I am done, already. You haf held so still as a putterfly can. Tankee. Now you can fly away to your work, und go to eggs layin'. I would like to keep you all de time, once, but I always keep my promises.'

"De putterfly flew from dem poisies to her handt und he said: 'Blease, madschen, I want to haf a goot look at myself once.' Und he looked und looked. Den he saidt: 'Goot-pye, madschen,' and flew away.

"But Riga dit not hear him say 'Goot-pye,' und she did not see him fly away. She was lookin' at dot picture, too, und it was so like dot putterfly dot she tought it was dot putterfly on dem posies, yet. Und she was gladt it stayed mit her, und she saidt, 'Tankee. I am gladt you stay mit me. I vill gather posies for you ebery day, und you can come lif mit me, und I vill go to your funeral, und cry like eberytings." De bainted putterfly on de posies on de paper, said notings. Den Riga tought maybe he was cryin' at his own funeral. He was so still. He was not sendin' his mout to get more honey, anymore.

"Joost while Riga was thinkin', here coom de putterfly flappin' his wings, coomin' back. He sat mit his six legs down, standin' oop, und he saidt: 'Madschen, I coom pack after myself. I tought I was flyin' avay to do my work, when I remembered dot I left myself standin' on de bunch uf posies, here mit you. Den I coom flyin' pack after myself. I want to pring myself along.' He looked at himself in the picture, und he saidt: 'I am gladt to see myself again. I tought myself, maybe, was lost. Now I vill take myself und fly avay again.'

"'But you cannot,' Riga saidt to him. 'You are fast on dot paper, where I bainted you.'

"'Dot makes no difference,' he saidt. 'You gif me your promise to let me go as soon as you hadt bainted me. Now dot you haf bainted me, you moost keep your promise und let me go. How is dot?'

"Riga was dot puzzled dot she scratch her headt. Den she say 'I am very sorry not to keep my promise, but I don't can. You are bainted fast to dot paper.'

"'You moost,' he say.

"Den Riga scratch her headt again in dem curls uf her hair, und a pright idea coom to her. Her plue eyes snapped, und twinkled, und her dimples put dem pooty places in her cheeks, und she laughed right out, und she say, 'I tell you what it is, already. You don't understand. I bainted you on dot baper. You not lifin' on dot baper, you are deadt on dot baper. You don't want yourself deadt. I take dot baper home mit me, und make a funeral for dot putterfly in my book vere I keep my baintings, und I laugh at dot funeral. But you are a lifin' putterfly. I keep my promise. I let you go. Good-pye.'

"Und she trew up her handt, und de putterfly flapped his wings und flew away, joost so mooch alive und gay as nefer vas."

"RIGA BAINTED UND BAINTED"

A Bright Boy

A telegraph messenger boy, Chas. F. Fielding, living at Newport, R. I., recently rigged up a wireless telegraph instrument of his own, in his father's attic, with an old automobile coil, a cut-off electric light lamp, some acid and a Morse sending key. With this simple contrivance he was able to send messages which completely interfered with the working of elaborate apparatus of the United States Government, and made it impossible to send messages from a distance at the torpedo station. The boy attracted the attention of the commandant of the station and has been enlisted in Government service as third-class electrician, which will enable him to take a thorough course in electricity at the Government school, while he draws $35 a month besides his board. Before that he was getting $14 a month and board at home. 'Rah for the boy!

Not Room Enough

Jesse Holdeman, Fairfield, Nebraska, wants to see a shorthand department in THE AMERICAN BOY. Lessons in shorthand were published in THE AMERICAN BOY, from September, 1902, to June, 1903. There is not room to continue these lessons nor many other good things.

For "Play-time" at all ages.

Please Mention The American Boy When Writing

DRUMS AND DRUMMERS

(*Continued from page 304*)

he looked pale and weak and appeared to reel in the saddle. He soon found the general, and straightening himself he said quickly, "General, our regiment is out of ammunition and must have some at once." The general, telling the boy he would attend to it, rode off, but had gone but a short distance, when he was overtaken by the little fellow, who cried out, "The calibre is 58." None but a soldier can realize the importance of this information, for without it the ammunition would be useless. Returning some two hours afterwards to the spot where he had left the boy, he found him dead by the roadside; he had been wounded when he brought the important message to the general, but, forgetful of himself, the lad thought of nothing but his comrades who were holding the enemy at the point of the bayonet. Having executed his duty, he fell from his horse and died. He was certainly "faithful unto death." One may turn over the pages of history, but nowhere can be found a nobler example of faithfulness and devotion to duty than this noble act of the drummer boy of Champion Hill.

Who that has read Thackeray does not remember Old Pierre who was the fourth of a generation of drummers? His ancestors drummed for King Harry of Navarre:

"While Conde was waving the baton,
My grandsire was trolling the sticks."
It was his daddy who drummed the English
"From the meadows of famed Fontenoy * *

"So well did he drum at that battle
That the enemy showed us their backs;
Corbleu! It was pleasant to rattle
The sticks, and to follow old Saxe."

It was old Pierre himself who rattled the drumsticks at Yorktown, and caused the British to lay down their arms. It was the same drum that drummed for Louis XVI. and the lovely court ladies at Versailles and for the fair Antoinette, and which drummed their heads off afterward in the Place de la Concorde. It was all the same to the drum—it was monarchical, republican, imperial.
"One day I drummed down the Bastile * * *

"At midnight I beat the tattoo,"
And woke up the pikemen of Paris
To follow the bold Barbaroux."

With equal fervor it followed the fortunes of the gallant young captain, Bonaparte.

"In the glorious year ninety-six
We marched to the banks of the Po;
I carried my drum and my sticks,
And we laid the proud Austrian low.

"This cross—'twas the Emperor gave it
(God bless him); it covers a blow—
I had it at Austerlitz fight,
As I beat on my drum in the snow."

Perhaps Thackeray invented his hero in "The Chronicle of the Drum"; but if he had gone to New Orleans he might have found his counterpart in the person of "Old Jordan," a man of color, to whom this government owes what success it has had anywhere in the field of war since it won its independence. Everybody in New Orleans knows Old Jordan, General Jackson's drummer, the most prominent figure in all martial processions, riding in a carriage with his historic drum, since age has enfeebled him; for Old Jordan came in with the century, and has drummed it up to its present brilliant achievement.

A venerable figure and a sturdy relic of our historic past, Old Jordan has been the intimate friend of all our military heroes, whom he always addressed by their first names, and who perfectly well knew that their success was due to his rattling sticks. This drum—the slightest tap upon it awakens the echoes of many wars—was first beaten to any purpose in the war of 1812. It was upon this drum that Jackson depended. Jordan was only a lad then, but his drum was full of war, and he handled the sticks in such a manner as to attract the attention of Old Hickory, who, in his perplexity, called upon him to repel the invaders. Nothing loath, Jordan came to the front, and it was his drum—this same battered old instrument of noise and glory—that beat the long roll that called the American soldiers to arms on the approach of the British in December, 1814; and it was his drum, on the 8th day of January, 1815, on the plain of Chalmette, that struck terror into the British host.

During the years of peace he kept alive the martial spirit in his drum, and when the Civil War broke out it was this drum which drilled and inspired the forming squads of Confederate soldiers. It was this impartial and patriotic drum that performed the same service for the Union companies which drilled in the Crescent City after its capture by Farragut; and it was this drum which inspired the Seventh Louisiana Volunteers, colored troops, "raised for the defense of New Orleans in 1863," so that Old Jordan performed his last warlike drumming for a troop of his own emancipated people. Since the war the historic drum continues to furnish "field music" for entertainments, and the old drummer of many wars is held in affectionate esteem by all classes in the city of his birth.

Probably the most peculiar musical organization in the country is the Continental Drum Corps, a group of old-time musicians living in and near the little village of Sardinia, New York. The costumes and music of this corps date back to the time of the Revolution, and some of the members of the company can remember the events of the early years of the century.

Thre are eleven men in the organization, and their aggregate age is about 750 years, making an average of nearly 70 years each. All the men are descendents of Revolutionary soldiers, and their uniforms, instruments and tunes are the same as those of the Continentals of 1776. One who sees them on the march might almost believe that a company of the minute men of Concord and Lexington had come to life, or that the figures in the historic picture of the musicians of Bunker Hill had stepped from their frame for a little outing.

This drum corps was organized nearly twenty years ago. According to the statement of Edwin Rice, one of the founders of the company, the project was born of the old custom of general training, at which every man of voting age turned out for military drill. The general training was abolished nearly a generation ago, but for some years afterwards the musicians who had served at those gatherings were in the habit of holding annual meetings to renew old acquaintances. A few of these musicians, who were of Revolutionary ancestry, decided to form a company of fifers and drummers. This idea was carried out to the letter.

The uniform of the Continental Drum Corps consists of a three-cornered felt hat, surmounted with a white plume, a long coat of blue with yellow facings, blue trousers with red stripes down the side, and yellow leggings. The fifes are of ancient style and some of them are of interesting history. The drums are the long barrel drums of the Revolutionary period.

The patriarch of this patriarchal organization is Edwin Rawley, who has passed ninety. Next to him comes Nathan Humphrey, who is nearly ninety. Edwin Rice, S. H. Uott, Chester Fisk and Fowler Munger are all on the shady side of seventy-five. One might think that men of such advanced ages would be unable to endure long journeys and marches, but they are tough old campaigners and can stand as much as anybody.

Although not talkative men, these Continentals have a great fund of stories, and any question about one of their cherished instruments is likely to bring a personal reminiscence of the days of '61 or '48.

"Tell ye when this old fife spoke the loudest," said Nathan Humphrey, the crack fifer of the company. "It was at the surrender of Gen. Lee. We had been all through the Wilderness campaign, and was most worn out, but when we see the white flag run up to the top of the pole we forgot all about that. Every man in the army knew that meant the end of Jeff Davis and his crew, and all along the line the bands broke into 'Yankee Doodle.' It was instinct, I guess, that made 'em all pick out that one tune, and I tell ye it sounded mighty fine as it came booming along the line. This old feller seemed to a'most play himself."

The faces of the drums used by the company have many dates and names written on them, giving an interesting record of the organization's activity.

The corps cannot be said to be unknown to fame. Its members have traveled all along the country and they attend the G. A. R. encampments every year.

The well-known story of the silent drum, told of Col. Bugbie, of the British army, has often happened in our own. He was more fond of the "old stuff" than for severity or discipline in drill. One day the colonel noticed that one of the drums gave forth no sound. He expressed his anger to the drum-major, who whispered in the ear of his superior officer that the drummer had a couple of roasted chickens and two bottles of whiskey in his drum for him. "Why didn't the poor fellow let me know that his legs had given out," cried the colonel; "put him in the ambulance immediately. The colonel soon after took particular pains to inquire after the little drummer's condition.

A celebrated general was taunted with having been nothing but a drummer boy. "That's true," said the general, "but didn't I drum well?" The general certainly gave a good answer; he went upon the principle of whatever is worth doing at all is worth doing well. Certainly a good motto for all of us to follow.

Colonel Morrow of Michigan, possesses a curiosity in the shape of a couple of drum sticks, that certainly have a wonderful history; they were found by the side of a British drummer at the battle of Saratoga in 1777; a drummer in the Continental army used them during the remainder of the Revolutionary War; they were used when General Jackson fought the battle of New Orleans, January 8, 1815; a grandson of this drummer used the sticks in the Mexican War, and a great-grandson carried them through the Civil War of 1861 to 1865 at the head of the famous Michigan Iron Brigade, and used them in the grand review at Washington at the close of the war.

It is related of John Ziska, the military leader of the Taborites in the early part of the fifteenth century, that he directed, at his death, that his skin should be made into a drum, and the instrument beaten at the head of his army at the funeral.

If the drum is to be allowed a patron saint, then none other than St. Patrick himself can lay claim to the distinction; for it is related by Colgan, that when St. Patrick drove the snakes out of Ireland, he accomplished this feat by beating a drum, which he struck with such fervor that he knocked a hole in it, thereby endangering the success of the miracle; but, an angel appearing, mended the drum, and the patched instrument was long exhibited as a holy relic.

The following drummer boys were awarded "medals of honor" by Congress. The names are taken from the official circular issued by the War Department up to and including October 31st, 1897:

JOHN BAKER, 5th U. S. Infantry—For gallantry in engagements.

WILLIAM J. CARSON, Co. E, 1st Battalion, 15th U. S. Infantry—For most distinguished gallantry in battle.

JOHN CLANCY, 1st U. S. Artillery—For twice voluntarily rescuing wounded comrades under fire of the enemy.

RICHARD ENDERLIN, 73d Ohio Infantry—Voluntarily took a rifle and served as a soldier in the ranks during the first and second days of the battle. Voluntarily, and at his own imminent peril, went into the enemy's lines at night and, under a sharp fire, rescued a wounded comrade.

WILLIAM H. HORSFALL, 1st Kentucky Infantry—Saved the life of a wounded officer lying between the lines.

ORION P. HOWE, 55th Illinois Infantry—Severely wounded and exposed to a heavy fire from the enemy, he persistently remained upon the field until he had reported the necessity of supplying cartridges for the use of troops.

WILLIE JOHNSTON, 3rd Vermont Infantry—No ground is stated for which the Medal was awarded, but the reader is referred to pages 140 and 141 of Volume 1 of a book written by Mr. G. G. Benedict, and published by "The Free Press Association," of Burlington, Vermont, entitled "Vermont in the Civil War."

JOHN S. KOUNTZ, 37th Ohio Infantry—Seized a musket and joined in the charge at Missionary Ridge; afterwards Commander-in-Chief of the Grand Army of the Republic.

J. C. JULIUS LANGBEIN, 9th New York Volunteers (Hawkins's Zouaves)—For most distinguished gallantry, in voluntarily, under a heavy fire, going to the aid of a wounded officer and saving his life, at the battle of Camden, or South Mills, April 19, 1862. Afterwards Judge and Commander of the "Medal of Honor" Legion of the United States.

BENJAMIN B. LEVY, 40th New York Infantry—Saved the Regiment colors at Glendale, Virginia.

WILLIAM LORD—Saved an officer's life at Drury's Bluff, Virginia.

JOHN McLENNON, 7th U. S. Infantry—For gallantry in action.

WILLIAM MEGEE, 33rd New Jersey Infantry—Among the first to capture two of the enemy's guns.

ROBINSON B. MURPHY, 127th Illinois Infantry—Being orderly to the Brigade Commander, he voluntarily led two regiments as re-inforcements, into line of battle, where he had his horse shot under him, at Atlanta, Georgia.

GEORGE H. PALMER, First Illinois Cavalry—Volunteered to fight in the trenches, and also led a charge which resulted in the recapture of a Union Hospital, together with Confederate sharpshooters, then accompanying the same.

JULIAN A. SCOTT, 3rd Vermont Infantry—Crossed a creek under a terrific fire of musketry several times, to assist in bringing off the wounded.

JAMES SNEDDEN, 54th Pennsylvania Infantry—Left his place, took the rifle of a disabled soldier, and fought through the remainder of the action, at Piedmont, Virginia.

ALANSON P. WEBBER, 86th Illinois Infantry—Voluntarily joined in a charge against the enemy which was repulsed, and by his rapid firing in the face of the enemy, enabled many of the wounded to return to the Federal lines; with others, held the advance of the enemy while temporary works were being constructed.

There were, no doubt, many gallant drummer boys in the Confederate service who also distinguished themselves in battle, but of whom, unfortunately, no record can be obtained.

Photograph, Underwood & Underwood, N. Y.

Daniel Cortain, Hero

Daniel J. Cortain, age 14, has just received from the Carnegie Hero Fund Committee, $2,000 to enable him to take a course of Civil Engineering at the Stevens Institute. The same committee awarded Daniel a silver medal. This hero has often done very brave acts, but the most recent was the rescue from drowning of two young New York girls.

Boys' Books Reviewed

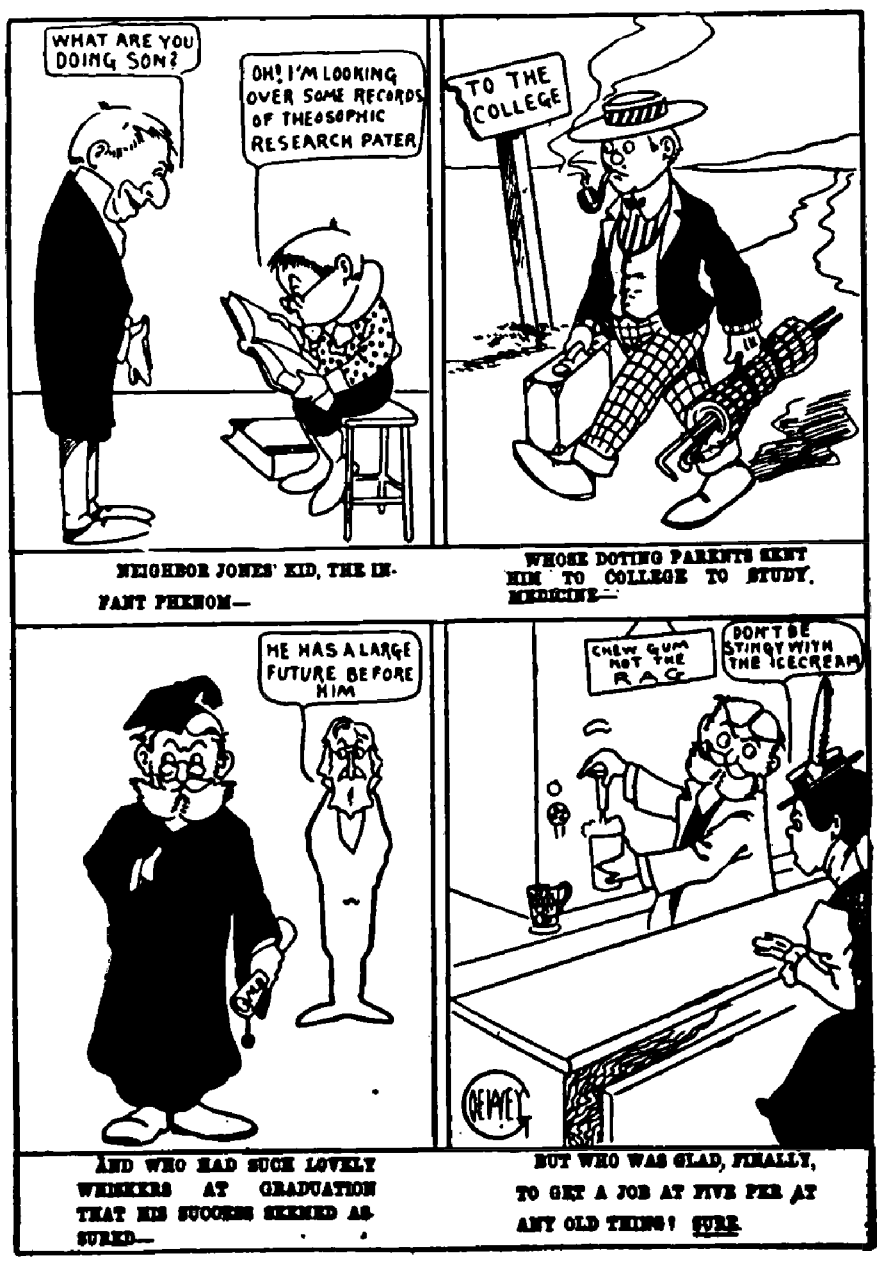
UNDER TOGO FOR JAPAN, or Three Young Americans on Land and Sea, by Edward Stratemeyer. This is the fourth volume of the "Soldiers of Fortune Series," and the boys will find it every whit as interesting as its predecessors. The exciting adventures of the two brothers Ben and Larry Russell, Gilbert Pennington and Gunner Luke Striker in their service with Japan against Russia, and the final surrender of Mukden and the great sea fight under Admiral Togo are described most graphically. The information the book furnishes will also be found exceedingly valuable to the young readers. A. B. Shute has happily caught the spirit of the book in his fine illustrations. 309 pages. Price $1.25. Lothrop, Lee & Shepard Co.

THE MAKING OF A MAN, by Orison Swett Marden. This book is made up of helpful talks for boys. There is nothing of the humbug or clap-trap order about them, but a good deal of that valuable commodity, common sense. Some of the titles are: One's Vision of Life, Self-Honor, Getting the Whip Hand of Yourself, Money, Means, and Content, The Price of Success, Ruskin's Motto, The Man of Force, Courage at the Sticking Point, A Complete and Generous Education, and Moral Daring. These will show the scope of the work, and boys and their elders as well will be benefited in the reading. 307 pages. Price $1.25. Lothrop Publishing Co.

THE MAKING OF THE AMERICAN NATION, A History for Elementary Schools, by Jacques Wardlaw Redway, F. R. G. S. From the necessarily hasty perusal of the contents of this book we believe it must form a valuable aid in history study in the schools. The mass of historical facts, beginning a thousand years before the voyage of Columbus and continued down to 1905, showing the greatest painstaking care and accuracy, together with the topical analyses, summaries, data, finely colored maps and illustrations, make this volume one of the best text-books that could be placed in the hands of the school-children. In the book shelves of the home, also, it ought to find a prominent place. 476 pages. Price $1.00 Silver, Burdett & Co.

Publishers are invited to send books to the review editor of The American Boy.

DO YOU REMEMBER



The Return of the Coyote

By Effie W. Thoms.

A SAD little coyote lay stretched on the ground in front of an old dog kennel, to which he was securely chained. He seemed to be asleep, but now and then his bright eyes opened just enough to enable him to see that the chickens were gradually moving in his direction, and they were among the few things that made life interesting to him. Only two days before he had caught a particularly stupid old hen that had chosen the bare spot on one side of his kennel as a good spot for a dust bath. The joy of that sudden leap and clutch more than compensated for the few blows he received.

The coyote did not often lie quietly in the sun with nose stretched out on the ground; he was more likely to be found moving restlessly back and forth the length of his chain, and was always delighted to frolic with any one of the family who would stop to pet him. He played with the children like an unusually lively and mischievous dog, jumping up like a puppy, and delighting to get a grip of their clothing in his teeth. He was particularly fond of the children's mother, and would stand up on his hind legs to lean against her while she rubbed his neck.

He had been named Goldie, though his coat was a grayish-yellow, with here and there a few black hairs, while his bushy tail was tipped with black.

In the last few weeks, since the snow melted and the air grew warmer every day, a strange feeling had come over the young coyote; a feeling that he was just going to remember something very beautiful that happened a long time ago, a memory that seemed to call him to some far-off land, yet was so indistinct as to be almost maddening. The night before, when the moon came up, the wild ducks, as they flew towards the river calling to each other, almost told him the elusive secret, and he had called back in long, wailing howls,—his first weird night song.

His friend, the black cat, sauntered along the walk and stopped for a morning chat. He liked the cat much better that the fat dog next door, for few cats are so tame and respectable as they look, and the black cat understood his restlessness, while he felt that resentment towards the dog that one feels towards him who ought to understand but does not.

So that morning Goldie told the cat how disturbed and unhappy he felt about that long-ago life which he could not quite remember, except that he was sure that then he did not wear a chain, and that he ran very fast and far. The first things he plainly remembered was, that once he was very little and lived in a cave in the side of a hill with six other little coyotes. At night it grew chilly and they all snuggled close together to keep warm, for their mother always went out in the evening to hunt food, and sometimes did not return until the door of the den began to grow light. One morning she did not come back at all. They waited a long time, and grew very, very hungry. At last there came loud noises and some men with spades began to dig off the top of their home. Soon there was no roof at all, and a man threw a coat over the shivering little bunch of coyotes and gathered them all up and carried them a long way to a place where there was a large, yellow house and many barns. Here they were put into a big basket and given plenty to eat. The food was not rabbit, nor field mice, nor prairie chicken, to which they were accustomed. It was altogether new, such as Goldie and the cat now had every day; but the little coyotes were very hungry and ate all that was given them, for their mother had often told them to always eat all they could get, as one never knew when the hunting might be poor.

Goldie did not stay long with his brothers, for in a few days he was placed in a box by himself, and brought a long way in a wagon, until he reached the place where he now lived. He had often been hungry in the old days, for his mother did not always bring home food; but now the little boy and girl gave him plenty to eat, so that his yellow-gray coat was thick and sleek with good living. Yet he was very unhappy; and just now there was a special reason for being more dissatisfied than ever. The day before, when the children had taken off his chain, and they were having a great frolic chasing each other, Goldie had suddenly darted through the gate and run into a large cottonwood grove. Though the children followed him, he, with all the cunning of his race, kept just out of sight, dodging behind trees and hillocks until, discouraged and sad, his little owners were compelled to return home without him.

That night he had a glorious time. He caught his first rabbit, and hunted joyously till morning. When the sun rose he crawled in between two fallen tree trunks and went to sleep. Very early in the morning his anxious and almost despairing young owners renewed their search, and at last by merest chance found him, his sleek coat disheveled, and his fine, bushy tail matted with burrs.

It was all very well to have the little boy and girl scream with joy to see him again, but they at once put on his chain, and said they would never take it off any more, lest he run away again.

All this, Goldie told the old cat, who heartily sympathized, saying that he himself would never be able to sit so quietly in the sun all day, were it not for the long prowls he had at night clear to the other end of the town.

But the cat could give him no help, and Goldie could only lie in the sun and try to recall that old free life that seemed hovering just on the brink of his memory.

He was almost asleep when up the street and streaming into the yard came a crowd of young men clad in clothes Goldie thought exceeding strange. They were members of the football team of the university, whose buildings could be seen not far away on the edge of the little western town. They called themselves the Coyotes, and were on their way to the photographers to have their annual picture taken. A brilliant thought had struck one of their number. A live coyote would give just the finishing touch to the picture of the invincible Coyote football eleven. One of the boys was sent to persuade Goldie's mistress to lend her pet, and in a few minutes the boys were again moving down the street with Goldie in front, jumping and tugging at his chain. It took some time to pose the eleven young giants, and especially to compose Goldie in his honorable position in front of the team; but at last all was successfully concluded, and the team, assisted by numerous interested students, started to escort Goldie home.

ONCE HE WAS VERY LITTLE

"Let's go around by the way of the campus," said one. "Some of those Eastern profs never saw a coyote, and they are always anxious for what they call 'local color,' you know."

So among the buildings of the university strode the darlings of the athletic field; only now three or four boys marched in close rank ahead of Goldie, so that he could not be seen. The last classes of the day had just been dismissed, and a group of four professors stood on the edge of the athletic field watching some students training for the spring track meet. With indulgent smiles they turned to greet the stalwart Coyote football team, who the autumn before had won the state championship, and much resultant glory for their Alma Mater.

Quickly one of the boys stooped, slipped off Goldie's collar, the vanguard separated, and he rushed forward in a wild dash for freedom, straight towards the amazed professors. With most undignified haste they gave the fleeing coyote the right of way as he shot out on to race track, passing in a flash the star sprinter, and scattering panic among groups of students on the opposite side of the field.

Goldie only had to run a few miles before coming to the rough, rolling land of a great cattle ranch that stretched along the Missouri River. On the side of one of the hills he sat down to rest. In a flash it came to him that this was what he had been trying to remember—these half-bare, rounded hills covered with short, curly Buffalo grass; the woolly pasque-flowers hugging the northern slopes in the chilly April wind; and the broad expanse of rough land with the river shimmering through a few scrub oaks and cottonwoods.

What mattered it that the coyote had been a captive from his babyhood? Generations of cunning wild ancestors had made the memory for him. He knew that out in the shadows crept small, timid animals, which henceforth would be his prey; that in the side of one of these gravely knolls would be his burrow, and that he should run over miles of prairie with no one to check him again.

The rosy glow of the setting sun gleamed across the river and flickered among the thin fringe of trees. The light gradually faded; ere long the moon rose over the eastern prairies, and a chilly wind began to blow. Yet, with ecstatic joy in his heart the coyote lifted up his voice in the weird, whining song of his race. Back from a ridge far towards the north came an answering, uncanny howl, like the very echo of his own. Cry answered cry, and the rabbit hurriedly sought his burrow, while prairie chicken and quail crouched close to the ground, as over the bare hills two stealthily trotting forms sought each other.

BUT THE CAT COULD GIVE HIM NO HELP

BOYS, GET INTERESTED

WE WARN our readers against neglecting to read the first chapters of Mr. Tomlinson's story, "The Camp Fire of Mad Anthony." Mr. Tomlinson is one of the best known writers for boys. He is of the sort that not only please the boys, but meet with the approval of their parents and friends. His books for boys are among the most popular on the market. The story, "The Camp Fire of Mad Anthony," we believe will prove one of his best. He has written it especially for THE AMERICAN BOY, with the needs of our paper in view. Don't miss the first chapters, for if you do, you may later want to look back and find them, and not be able to do so. The story will run through many months.

Jimmie's Compensation

Jim, with freckled face and hair that would never yield to a comb or brush, did not show the slightest inclination to hurry, until the diplomatic girl of twelve reminded him that they were to get candy with "what was left over" after they had purchased the scant supply of groceries.

Tilly carried a small basket filled with eggs to be sold to the grocer, and in exchange was to get the necessities carefully written down by her mother.

Jimmie was the smallest and the hardest of the four smaller children to manage at home. In one chubby hand he carried a small pail which was to be filled at the store with sorghum molasses, in the other a willow stick, with which he knocked off all the sun flowers along the dusty road.

"Say, sis," he said, "I want a red stick—a blue un—and—green one." Tillie shifted the basket of eggs from one tired little arm to the other, saying: "Hurry up, Jimmie, the candy might all be sold before we get there."

The little dusty brown feet shuffled a trifle faster and at nine o'clock the pair stood before the tall grocer, and Tillie was asking how much he was paying for eggs today.

"Twelve cents a dozen for good fresh eggs," said he, counting the eggs and carefully figuring the amount. Tillie handed him the slip of paper.

The next moment there was a splash, and a shriek from Tilly. Jimmy had lost his balance while trying to get a better view of a French harp in the show case and had fallen into an open cod fish kit.

"Don't firgit the candy, sis," he called from the briny bath. "I want a yallar stick."

"You'll get a different kind of a stick," yelled the grocer in a rage.

The frightened little girl pulled him out by one bare leg and tried to wipe the salt water out of his eyes with her little calico dress.

"There's fourteen sticks in this jar and ten in this jar, sis," he whispered, none the worse for his unexpected bath. Tilly forgot to dry her own hands in stopping to gaze at the longed-for candy.

"Well, kids, there's nothing left over," came in a high nasal voice, as the grocer placed the purchase within easy reach of the little woman.

The little freckled face turned toward Tilly would be hard to describe. The thought of being disappointed had never occurred to him. Tears were forming in two pair of blue eyes, and as they walked slowly out of the door the stingy grocer wondered what ailed the kids.

"Let's sit down on this little hill and rest, Jimmie," said she, gathering the tearful little boy in her arms. He sat very quiet, with only an occasional sob to show how the little heart was aching.

The mind of the self-sacrificing little girl was working hard. "If I could only get him one stick, I'd be willing to do without one myself, 'cause he's so little," thought she.

A big lump rose in her throat, and a tear trickled down each wan little cheek; but with one great effort she choked them back and, giving Jimmie an affectionate hug, exclaimed: "Won't you be glad when father gets home? Only four more days. He is going to quit working away off there in the mountains, 'cause mamma says she knows there is no use, and father is going to stay at home and work at the saw mill. He ain't going to go away to try to find a mine any more. Oh, Jimmie, there comes the train. I heard it whistle."

Jimmie in his excitement jumped up in such haste that he stumbled, and down he went, taking the bucket of molasses with him. Down the hill they rolled, now the bucket, now Jimmie. When they stopped at the foot of the hill it would have been hard to separate Jimmie and the molasses, to say nothing of the dust and the brine from the codfish kit.

Tilly stood horrified, the train whistled, slowed and stopped. A big, strong miner in a blue shirt and slouch hat stepped off, and hurried toward the store.

"Hello, there, big Jim," called the grocer, "how's everything up in the hills?"

He did not need to ask. Big Jim Watson's happy face told the good news.

"I've struck the shining gold at last, Hodges, and I've struck it rich. I don't know how I can get home fast enough to tell Mary. Give me five pounds of candy to carry home to the youngsters, and put in that French harp for little Jim, and——" but two happy cries of "father" and two happy faces made him pause.

Tilly carried the candy home, but father carried a sweeter burden—a very sticky, dirty, little boy.

Hubert Turner, Harrisburg, Illinois, tells us how to take 45 from 45 and leave 45:

9+8+7+6+5+4+3+2+1=45
1+2+3+4+5+6+7+8+9=45

8+6+4+1+9+7+5+3+2=45

HENNIPIN FIELDS SENSATIONALISTS

By John J. Eddish

"I DON'T like nobody.
And nobody don't like me;
If you don't like the way I snore,
Why you don't have to sleep with me,"

sang young Tommy Hennipin in a high treble voice from the very top of the hay loft, where his head bumped against the rafters at every sudden release of a forkfull of hay from the compact mass beneath. Alternately he hummed it, whistled it, shouted it, and sang it through his nose—the same stanza over and over, and all he knew of the song.

There was a row of ten hungry farm horses down below, and it was a part of Tommy's duty to keep them supplied with the necessities of life. But Tommy wasn't thinking of hay or horses or pitchforks, or even the song he was singing; for hadn't he made an invention, and didn't he have a right to be proud and gay? He could afford thus to slap the world in the face.

He heard his father come into the stable below, and stopped work to call down.

"Paw; oh, paw!"

"Well?"

"Paw, won't you give me my fifty cents for the circus and let me go in with Jim Fields, instead of goin' in with the rest of you?"

"Paw" didn't want to very badly, for he had known Tommy quite a while, and besides, it deprived him of his own excuse for going; but he finally consented, on receiving a promise that Tom would turn up immediately at the close of the performance ready to go home with the family; and the boy closed the deal by getting his money immediately, before the wind changed.

His haying over, Tom climbed out of the loft window and squirmed his way over the edge of the roof and up to the ridgepole of the barn. Only flies and barefooted boys can perform this feat with any degree of safety to themselves.

From this vantage point, Tommy directed his gaze to another red-painted barn a quarter of a mile away. Presently on that barn also there apneared a tow-headed youth from some similar source. Tommy stood up and waved a dirty red handkerchief three times from right to left after the manner of the army wig-waggers. The sign was repeated by the other boy and then the boys disappeared. Jimmy Fields knew that he was to meet Tommy Hennipin at the circus.

After an early supper Tom "hitched up," and the Hennipin family piled into the spring wagon and drove to Shelbyville to see Barnum, Sells and Ringlings' Combined, Consolidated and Amalgamated Circus and Menagerie.

When they arrived Jim immediately appeared and the "folks" disappeared under the big tent.

Tommy kept his promise; in fact, an observer might have seen the wagon occupied within less than half an hour afterwards, and by two instead of one—also, a big bundle containing one dollar and fifteen cents' worth of good cotton twine was securely tied underneath the wagon.

When two American boys with money in their pockets don't go to a circus that's in town, something is going to happen. These two boys didn't go—and something did happen.

The circus over, Jim retired from the scene, and Tom was "too sleepy" to talk very intelligently about what had happened under the canvas roof.

* * * * * *

Shelbyville, Iowa, is an enterprising town that can get up a county fair on a week's notice and get a "stick-full" in the Des Moines daily because of it without getting flurried in the least. In fact, it has its own little Daily Telegraph that gets its news dispatches in plate form direct from Chicago, and has two reporters busy most of the time collecting the news of the town and sending in accounts of the more important happenings to the metropolitan papers.

It is but natural then that the staid and sober population of tradesmen and artisans should greet with some disdain the announcement in the Evening Telegraph on the 20th of June, 1896, that "an airship or dirigible balloon of some kind was seen last night between the hours of eleven and one o'clock. Its light was distinctly seen. It floated across the city from the south almost due north, then turned on its course and disappeared in the direction from whence it came."

The town was acquainted with these reporters and knew their sensational proclivities; so Mr. Bob Hughes and Mr. Willie Thompson were considerably joshed, as they put it.

"That's all right," said Mr. Willie, brought to bay finally by the good-natured taunts he received; "I saw that airship myself, and I wrote the story myself, and I back it up myself. Lights aren't in the habit of flying through the air unattended and just for fun."

"Saw a firefly, bet ye a quarter," suggested Sawdon, the undertaker, whose business wasn't rushing just then. But Mr. Willie never deigned to answer. Instead, he stayed up that night.

The next evening there was a big black headline on the first page of the Telegraph announcing to Shelbyville:

"Airship Seen Again—the sound of propellers distinctly heard," and then a column of how the night reporter had watched especially for signs to substantiate his previous announcement, and had seen the phantom repeat its performance of the night before. The details were given in full.

That night, a few curious ones also watched, and, the following day, corroborated Thompson's story in the daily. One man even made out the form of the ship—cigar-shaped, with a square hanging basket, from whence came the light.

Then Shelbyville got interested—and skeptical. Sawdon had started the ball rolling and felt it his duty now to stand by his original opinion.

"I'll bet you a fifty-dollar coffin with sterling silver nameplate, against twenty-five dollars, that thisthere spook of yours isn't any airship, dirigible balloon, flying machine, or anything of the sort," was his final reply to the insistence of Mr. Willie.

Thompson said he wasn't in the undertaking business, so his spending money was somewhat limited, and for the same reason he didn't care about investing in the coffin that his survivors ought to furnish to bury him in, but still he was standing for a principle.

THEN SHELBYVILLE GOT INTERESTED AND SKEPTICAL

"I've only got ten dollars to put in," he said, "but if you fellows around here that saw the thing will lend me the rest until the first, I'll take that bet."

The necessary fifteen soon made its appearance in dollar bills, quarters and such small change, and the whole was left with the newsdealer at the postoffice, together with a due-bill from Sawdon for "one man's casket in black walnut, with sterling silver engraved nameplate."

The town heard about it and turned out in force at eleven o'clock. They saw the light travel from the southern horizon north across the city, heard the rhythm of the propellers, and saw the unknown thing return as it had come. Shelbyville was converted, and the Telegraph man felt justified in sending a modest account of the affair to the Chicago papers.

The regular appearance of the flying machine was becoming monotonous, when suddenly the metropolitan dailies flared up with a story to this effect:

"Shelbyville's Airship Real—a hat is dropped as the mysterious machine passes over the town."

The Telegraph had a photograph of the hat and a long article which even ventured to voice the suspicion current among the townspeople that George Swift was experimenting in flying machines. Swift was a carriage-maker and machinist well-known for his ingenuity. Before dark Swift was a caller at the Telegraph office and informed the management in no uncertain language that he wasn't no fool if he could use tools, and that he went to bed nights instead of lookin' fer lightnin' bugs. That bubble had burst ere it could soar away.

The next night the watchers heard something drop on the roof of a house just under the machine, and in the morning a bag of pebbles was found with a paper attached, bearing the following information:

"We are coming down tomorrow. Look out."

Sawdon began to look worried and finally consulted his pastor to see if he had done right in making such a wager. His conscience smote him considerably. That reverend man was indignant that one of his flock, and especially one of the dignity and standing in the community of the undertaker, should thus demean himself.

"There are only two alternatives open to you," the pastor told him; "cancel the bet if you can, or, if you can't refuse the winnings."

"But I'm afraid I won't win," complained the undertaker.

"Well, then, cancel it."

So Sawdon went to the postoffice, called in Willie and his supporters, and poured out his tale of contrition and repentance, ending with the exhortation:

"Now, Mr. Thompson, let's call off the bet and never venture into gambling again."

But Mr. Willie had backers.

"No, sir-ee," broke in Joe Trembly. (Joe had three dollars and twenty-five cents invested in this transaction.) "Willie's promised us all a ride around the court house square in that coffin when he wins, and we're goin' to have it."

The remainder of the crowd agreed—including Willie; so the contrite Mr. Sawdon went away sorrowing and gloomy.

Meanwhile business had almost ceased, and people flocked into the office of the Telegraph to view the "evidence of things not unseen," and the moneyed men of the community began to figure how much they could invest in a company to manufacture machines to navigate the air, the factory to be located at Shelbyville. Miss Mollie Turner, the seventh grade school teacher, who had happened in, looked at the message from the mysterious aeronauts, and then she had an idea.

"I've seen that writing before," she said to herself, and hurried out.

Presently Mr. John Hennipin, farmer, came into town and made for the Telegraph office.

"I'd like to see that hat," he announced as he entered; and the crowd hovered around in awed silence as it was handed to him. He examined it.

"That is my hat," he said finally, and left the room, followed by Willie. Miss Turner at the same time entered with a school examination paper, picked up the note, and showed the two to Bob Hughes, the other reporter.

"Why, they are the same handwriting exactly!" he exclaimed.

"Yes," she added, "see these flourishes on his down strokes."

"Step out here, please," he said, and they joined Thompson and Hennipin outside. The sheet was silently handed to the latter.

"Whose paper is that?" Hennepin asked after he had inspected both of them.

"Jimmy Fields, one of my last year's pupils, wrote it."

"Can you gentlemen come out to my house with me?" suddenly inquired the farmer of the two newspaper men.

They agreed, and fifteen minutes later they were riding in the spring wagon to the Hennipin farm a mile south of town.

* * * * * *

"I don't like nobody,
And nobody don't like me;
If you don't like the way I snore,
Why you don't have to sleep with me."

Thus sang Tommy Hennipin from the hay loft about six o'clock a certain evening late in June, while he threw the usual ration of hay to the mangers below. He finished his work and "shinned" up the roof to the ridge-pole to wait, as he had done many times before. A figure appeared on the red barn across the fields, and one flutter of a handkerchief passed from the first to the second boy—the signal of safety, apparently.

O, guileless boyhood! Less than five feet below Tom Hennipin, his father stood with two news reporters, waiting for Tommy to come down and explain. He was not long in coming.

"Tom," began his father, "I have noticed how unusually sleepy you have been the last week or ten days, and I know how pre-occupied you have been; now I want to know something else—I want to know how my hat mysteriously dropped out of the air into the middle of Shelbyville?"

Tom was visibly surprised and hesitated. Then courage came—the courage of resignation.

"Say, paw, how big a lickin' will I get if I 'fess up?" he asked.

The reporters roared.

"You give us the story, boy; it's worth money," said Bob, "and if you get a thrashing we'll pay the damages."

Thus reassured, Tommy led the way to a corner of the loft, pulled away the hay and disclosed a big box kite, cloth covered, with an old lantern hung in the middle of it.

"There's your airship," he said shortly.

Willie looked foolish and muttered something about "twenty-five dollars gone glimmerin'."

"But how in the name of sense did you make the thing travel?" he asked, "and where does the hat and the note come in?"

For reply the boy led them to another corner and disclosed a big dilapidated weight clock.

"That's a clock paw has had on a shelf in the woodshed since it quit keepin' time three years ago. Jim Fields and me fixed it up so it would run and we put this wheel on it to wind the string on."

He indicated a frame wheel at the back of the clock where the casing had been torn away. The wheel was about two feet in diameter and was attached by a stem to a square shaft at the other end of which was the big second hand. It had a very wide rim deeply grooved, and the groove was filled with closely wound cotton string. Evidently a great deal of time and ingenuity had been expended in making the wheel and perfecting the mechanism.

"You see," he continued, "Jim and me would slip out of bed about half past ten and come down here and start the kite. Then we would connect it with the string on the wheel and the pull would help make the clock go and let out the kite over the town. We would just go to sleep in the hay, and when the clock struck twelve we would turn the wheel around on the shaft, so that it went the opposite way, and pile a lot of these scale weights on the regular weights to make the clock stronger. That pulled in the kite. Of course the clock wasn't very regular, but it would strike within half an hour of twelve. Jimmy had a watch that we set it by every night. We would sleep until the kite came in, and then put away our stuff and go to bed. D'ye see that knife fastened at the lower end of the kite? We hung our hat and note by strings down over the edge of the knife, and then, when we wanted to drop them, we jerked the kite until the string was cut."

Tom paused to see how his auditors were taking it.

"Now, don't you feel cheap?" he asked. Then, without waiting for a reply: "We didn't mean anything but a good time when we began, but when you got it in the papers, we just tried to guy you. I hate to break our promise, though," he added, "for we told 'em we'd come down tonight, and we were goin' to cut it loose. I just signalled Jimmy that it was all right; paw never comes up here, and I thought it was safe."

"Tell me just one thing more," said Willie. "What made the sound of the propellers?"

Tom showed him a big pasteboard whirligig fastened at the top of the kite.

"The wind run it," he said.

The air-ship didn't appear that night, and people wondered why. One reason was that Tom Hennipin slept all night under the watchful care of "Paw," and Jimmy Fields waited in vain in the hayloft for assistance in launching the aerial spirit. He learned it all, the next day.

Willie Thompson and Bob Hughes worked late that night writing the story of the phantom airship for the Telegraph and the city papers, while Willie gave vent to many an idle sigh over the loss of his "beautiful twenty-five plunks, borrowed."

The reporters kept their news a secret until the evening paper came out; then Willie called in the newsdealer and instructed him to pay over the cash to Sawdon; after which he directed his attention to his creditors, who were beginning to arrive and offer their condolence.

"You boys will have to wait until my check comes in from the city papers," he told them. "I haven't lost everything in this deal by considerable, but I guess I'll have to cut out some extras next month if I come out even."

The next morning, however, there came a letter to "Mr. William Thompson," with an offer from the very biggest of the Chicago dailies of a position on the reportorial staff. "An opportunity to display your excellent originality," it read. He left that day, and as he said good-bye to his friends on the depot platform, he remarked casually:

"I'll pay that debt out of the difference between last week's and next week's salaries."

But the preacher kept the undertaker in the beaten path of virtue.

And Tom and Jim got their pictures side by side in the paper, with a double column head above and a "write-up" of each below. And they succeeded to their fathers' estates and took the prizes at the county fair for the biggest roasting ears in the State of Iowa.

Among the Boys

An interesting letter from Jesse L. Yelvington, Nordheim, Texas, tells the editor that the writer is a true "American Boy," his ancestors having come to America before the time of the Revolution. His grandfathers went to Texas in 1850. Jesse is a telegraph operator, being night operator and clerk for the S. A. & A. P. Railway Company. He says he has a good deal of spare time for reading and studying, as there are only four trains a night and his sole work is the taking of train orders and selling of tickets. He is but a few weeks over fourteen years of age. Quite a responsible position for so young a boy.

Paul Huling, Tionesta, Pennsylvania, secured his AMERICAN BOY for one year as a prize given by his teacher for receiving the best average grade for the term. In a letter to us he says, "My mother says THE AMERICAN BOY is the best boys' paper she ever read. I am twelve years of age, and have found that being in school every day pays."

Eddie Knoche, Stafford, Kansas, receives his AMERICAN BOY through the kindness of his teacher, Miss May Ball, who presented Eddie his subscription as a prize for head marks and for regular attendance at school for six months.

The daily News-Herald, Peru, Illinois, publishes the fact that the Abraham Lincoln Company, number 41, of the O. A. B., contributed $5 to the San Francisco relief fund. The paper speaks of the club as one "made up of young boys banded together for charitable purposes and mutual improvement."

Ralph R. Williams, Warsaw, Ill., one of our boy friends, suggests a department heading to be entitled Spice, to which the boys may contribute bright things. As a starter he sends the following, though he claims no originality for it:

All the world loves a lover—except his rival.

Said Nicholas to Rojestvensky, "Go now, son and wipe those Japs off the earthski."
"Yes," said Rojestvensky, "but I don't want To-go."

OUR AUGUST CALENDAR

The Young Book Agent

(Continued from page 300)

came home the following Saturday. He chopped a big pile of wood, and cleaned up the garden and the cellar.

"I'm going to find something to do next week," he told his mother. "With father laid up and the store gone, it won't do for me to remain idle."

"I am afraid you'll not find it easy to get a position in Claster," answered Mrs. Hardy, as she placed an affectionate hand on his shoulder.

"I was thinking of looking for a place in Philadelphia, mother."

"What, away from home!"

"I've got to strike out for myself some day."

"But I hadn't thought of your leaving home yet, Frank," his mother went on, in dismay.

"Well, I'll look around in Claster first."

"I wish you would, and in Porthaven, too."

Frank was enthusiastic about doing something, and that very Saturday night he asked half a dozen persons he knew for a situation.

But as his mother had intimated, it was next to impossible to find an opening. Only at one store was anything offered, and the pay there was but two dollars a week.

"I cannot afford to work for such an amount, Mr. Grimes," said Frank.

"Well, that's all I am willing to pay," returned the storekeeper. "Plenty of boys would jump at the chance. I thought I'd give you a trial on your father's account."

"Thank you, but I'll look further."

Early Monday morning Frank went to Porthaven. As he did not want to pay the stage fare, which was twenty cents each way, he determined to walk the distance. But he was scarcely out of town when a boy in a grocery wagon came up behind him.

"Hullo, Frank!" called out the boy. "If you are going my way jump in."

"I am bound for Porthaven, Joe."

"So am I. Glad I met you," replied Joe Franklin, who worked for a local grocer. "I hate to travel such a distance all alone. Where are you going?"

"I am going to look for work," answered Frank, as he took a seat beside the grocer's boy.

"Can't you get anything to do in Claster?"

"Yes, one job. Mr. Grimes wants me to work for him for two dollars a week."

"Don't you work for him, Frank."

"I don't intend to. I must earn more."

"Old Grimes is the hardest man in town to get along with. All of his clerks are in hot water with him every day."

"Mr. Wilkins must pay you more than two dollars, Joe?"

"He pays me three and a half, and I am to have four after New Year's."

"That is something like. But I want to earn even more—if I can."

"I suppose you've got to do it, now your dad is out of work and laid up."

"Yes."

"Somebody told my dad you folks had lost a lot of money on some rascal in Philadelphia."

"It is true, and that's all the more reason I want to earn something."

"Can't your father get anything out of the railroad company for the accident?"

"I trust so. But it is pretty hard to fight a big railroad company."

"Will your father start in the feed business again?"

"I don't think so. Still, he doesn't know what he will do. He wants to get well first."

So the talk ran until the outskirts of Porthaven were reached. Then Frank left the wagon and thanked his comrade for the ride.

"When are you going back?" asked Joe.

"I can't tell you."

"I'm going back in half an hour. You can ride with me if you will."

"Thank you, Joe, but I guess I'll have to stay a little longer," answered Frank; and then the two boys separated.

Porthaven was a town considerably larger than Claster and consequently Frank had a great many more stores and offices to visit But his quest for employment here was even less encouraging than at home. Not a single opening of any kind presented itself.

"This is certainly hard luck," he thought, as he found himself at the end of the main street. "I did think there would be at least one opening."

He had brought a lunch with him, and now walked down to the edge of the small river which ran through Porthaven.

At a beautiful spot bordering the river somebody had placed a bench, and here he sat down to enjoy the sandwiches and piece of pie his mother had thoughtfully provided for him.

Frank's appetite, like that of most growing boys, was good, and it did not take him long to dispose of his meal.

"Wish I had another sandwich," he thought, after it was gone. "Tramping around gives one a very hungry feeling, especially if he doesn't get any work."

Not knowing what to do next, Frank remained where he was, and presently a young man, carrying a small, square hand-bag of black leather, came strolling towards him.

"Can you tell me how much further it is to Porthaven?" the young man asked, as he came to a halt, and rested his bag on the end of the bench.

"You are on the outskirts of the town now," was our hero's reply.

"Good! I was afraid I had still a mile or so to go. I missed the stage from River Bend, and I did not want to waste the time, so I walked over. It's pretty hot, isn't it?"

"Yes." And now Frank made room so the stranger could sit down, which he did.

"Are you acquainted in Porthaven?"

"Pretty well."

"Then perhaps you won't mind telling me where some of these folks live," and the young man brought out a notebook from his pocket.

"I'll tell you what I know willingly."

"Live around here, I suppose?"

"No, sir; I come from Claster. I'm looking for work."

"Oh!" The young man gazed at Frank curiously. "Hard job, isn't it?"

"It is."

"Struck anything yet?"

"Nothing."

"I can sympathize with you. I was out looking for work, myself, last summer, and I couldn't get a single thing that was worth anything."

"But you are working now?"

"Well, yes; but I haven't got anything steady. I'm a book agent, and I get paid for what orders I get, that's all."

(To be continued.)

Minnesota Claims First Place in Iron Production

A Minnesota boy files an exception to the statement made by the Michigan boy who won the prize for Michigan essay, to the effect that Michigan is first in the production of iron ore. "Formerly," says our Minnesota friend, "Michigan did lead in this, but of late years Minnesota has taken first place."

TOM'S COMMISSION HOUSES

By

FRANK H. SWEET

"FRUIT in bad condition and market glutted. But try us again, sending only prime stock, carefully packed. There is a good market for such fruit, and we can obtain for you top prices. Notify us of shipment."

This was the substance of the letter, and accompanying it was a check for seventy dollars.

Tom Phillip read the letter with perplexed face, and scowled a little as he thrust the check into his pocket. The oranges had been sent away in the very best condition, he was sure of that; and they had been carefully packed and prime stock, fifty boxes each of mandarins and tangerines, and a hundred and fifty of Mediterranean sweets—the very pick of the whole grove. And as payment for the entire carload they had sent him seventy dollars. Even the freight had cost him fifty, paid in advance; and if he added to the freight, the cost of picking and packing, he would be out of pocket, with nothing at all for the fruit. And worse yet, he had sent two more carloads to the same house only a few days before, relying on the first letter they had written him.

He drew this letter from his pocket now and went over it carefully, word by word, although he knew every one of them by heart.

"Mr. Thomas Phillips," they ran, "We are informed that you have some choice fruit ready for market. Can you not send us a carload of your best at once? We can quote you $4 a box for prime tangerines and mandarins, and $3.50 to $4 for other varieties of good Floridas. Do not confine yourself to a single carload if you can send more. The market is firm now and good Indian River oranges are scarce.

Cordially yours,
GOODMAN & SAFE, Hustlers."

Tom went straight to his grove, where he had four negroes at work, the first help he had ever hired. Two of them were in the top of an eight-year-old Satsuma, stripping it of fruit; one was in the packing house separating the sizes through a "sorter;" the fourth was packing. There was nearly another carload boxed and nailed, ready for the stencil.

Tom threw off his coat and went to work. Goodman & Safe's stencil was on a cross beam near the entrance, where it had been left after marking the boxes shipped a few days before. Over in a back corner of the packing house, and almost forgotten, were a number of other stencils which had been left by drummers passing through the country soliciting consignments of fruit for their houses. Tom had shipped to Goodman & Safe because their letter had quoted the highest prices. Now he took their stencil and carried it to the back corner, where he selected one of the others. From most of the houses he received quotations from time to time; the stencil he selected represented the lowest. Perhaps he had been wrong. Possibly alluring quotations indicated unreliable commission houses.

As he stenciled the name and address of the new firm upon the boxes, his thoughts were busy, reviewing his work and making new plans. He had looked forward to this year's fruit getting him out of debt and building a small house, to which he could bring down his people from Michigan. But the letter had already dissipated that hope, and the house would probably have to remain until another year.

But Tom Phillips was not a young man to give way to hardships or disappointments. Such things only seemed to make him stronger and more determined. He had come to Florida eleven years before, a boy obliged to leave school in search of health, and had started a small orange grove in the pine woods north of Orlando. Two years later his young trees had been frozen, and he had gone on south to the extreme end of Merritt's Island and started again. He had worked a year at anything he could get to do, and then bought more wild land, paying what money he had down and giving a mortgage for the rest. Since then he had worked early and late, determinedly, obstinately, it almost seemed, raising a few vegetables for a living and for ready money to keep up the interest on his mortgage; but putting most of his time and energy into clearing land and setting orange trees. Now he had as fine a young grove of twenty-five acres as there was in the neighborhood. The previous season he had picked a carload, sending it to Jacksonville to be sold to the local state trade. This year he estimated his grove would yield between four and five carloads. The first had been shipped and failed to pay expenses; two more had gone to the same commission house, and might do no better. The fourth he would try at another place; and what was left he would sell to local trade for what it would bring. It might not be much, but it would be sure and would go a little way on the mortgage. The house must wait.

During all these years he had lived in a cabin which he built himself out of logs, scarcely more than large enough to hold his bunk and a rude stool and the few school books he had brought with him. His cooking was done out of doors, at a campfire. When it was too stormy for that, he ate what he had ahead, or things that needed no cooking.

During the past season he had raised several acres of tomatoes and other truck, shipping them north, and had looked after the grove of a non-resident. The money received he kept for the expenses of marketing his oranges, to pay for picking and packing and for the advance freight required on them as perishable commodity. He had still thirty-five dollars of the money left, and the check. But the twelve hundred and fifty orange crates, and the paper for wrapping the fruit in, were not yet paid for. They were to wait until the oranges were sold.

They worked until ten o'clock that night, until the last of the two hundred and fifty boxes that were to make the carload had been picked and packed and stenciled. And by that time a daring plan had formed in Tom's mind. He would go on to New York and be there when the carload arrived—perhaps when the two others arrived. It might do no good; but at least he could study the fruit market and be better prepared for another season, and if Goodman & Safe had not—but, of course, that idea was absurd. Only he would be better satisfied if he could see and know for himself.

The next day he and his packer took the oranges to the station and loaded them in a car; then he left the packer, whom he had found to be hard working and reliable, in charge of the grove. They would pick the remainder of the fruit after his return from New York.

On his way up he perfected his plans. Instead of going straight to the commission houses in his own character, as he had thought, he would go as a stranger, a prospective purchaser, and see how the business was conducted from that point of view.

He had never been to New York, and after attending to his business he determined to remain a few days longer and see the city. He might never come again.

The morning after his arrival he sought out the commission houses that dealt in Florida oranges, and familiarized himself as well as he could with the supply and demand before going to the firms he had shipped to. But along in the afternoon, as he was making his way slowly among the boxes of oranges that were liberally displayed upon the sidewalk, examining this variety and that and inquiring prices, he suddenly found himself in front of the familiar name of "Goodman & Safe, Hustlers."

Here were displayed great piles of fruit upon the sidewalk, pyramids of opened boxes upon each side of the entrance, and long tiers of them within the store. A number of salesmen were bustling about waiting upon customers, and presently one of them hurried to him as he was bending over a box of tangerines.

"Anything I can do for you, sir?" the man inquired briskly. "A few boxes of those tangerines, for instance? They're fancy stock, and will sell anywhere."

Tom shook his head. "I'm afraid I'll have to differ with you," he answered smilingly. "These are not fancy stock. They would hardly pass as seconds according to my idea. I've seen better grades in most of the commission houses I've been in."

The other's manner changed instantly.

"So you understand fruit and have been looking around," he said blandly. "Well, I'll admit these few boxes don't quite come up to the scratch. But you mustn't judge our house by this. We carry the best fruit in the city, as you can see by looking over our other varieties. Where do you keep store?"

"Oh, my place is pretty well back in the country," answered Tom vaguely.

"Then these tangerines will be all right for you," emphatically. "They'll be hustlers in the country; and you can have them for three twenty-five a box."

"Three twenty-five," said Tom, looking at the oranges thoughtfully. "And how much for really fancy stock—if you ever have it."

"Ever have it," with some indignation in the voice. "Why, I tell you we always carry fancy—the very best. Tangerines are the only variety we are a little short of now, and we haven't been out of them two hours. There's been a great demand for them in the last few days. But we've got a whole half-carload that's just arrived, and a half-carload of mandarins, and from the same Indian River grove a full carload of Mediterranean sweets and satsumas and other choice varieties. They'll be open tomorrow morning early. If these don't suit you come in again—say at nine o'clock in the morning. You won't find any choicer fruit in the city than comes from the Phillips' grove."

Tom started, and bent lower over the tangerines to hide the color he knew was coming to his face.

"What will they be worth?" he asked, wondering if his voice trembled any.

"Four dollars and fifty, straight, for tangerines and mandarins, and four for the others. Buyers are beginning to discriminate between strictly fancy stock and merely good."

"Couldn't you cut a little if I took a number of boxes?"

"Not a cent," decidedly. "I wish Phillips had sent us four carloads instead of two, for we'll be running short of some varieties within a week. The last lot of tangerines and mandarins that he sent us we sold for four dollars, but the demand is better now. I wouldn't be surprised if we get as high as five for some of these. But can't I show you some other varieties?"

"No, I think not today; though I would like to know the price of Mediterranean sweets."

"Three and a half and four—four straight from the Phillips' grove. We got that for the last shipment, and fruit is going up now."

"Thank you," and Tom turned away.

"Well, be in at nine or as soon after as you can," cordially. "Ask for me, Mr. Safe."

A man had been following them about for some minutes, evidently waiting to speak with Mr. Safe; and evidently Mr. Safe had been trying not to see him. The man carried some papers, and had heard the whole conversation. He now stepped forward.

"Can you pay this little bill today, Mr. Safe?" he asked.

"How much?" gruffly.

"Ten eighty," Tom heard the man say.

"That all," with surprised relief in the voice. "Yes, I'll let you have the money. Receipt the bill."

Tom was walking up the sidewalk when the man passed him; and something in the brisk manner and frank face of the young fellow—for he was scarcely more than a boy—gave him a new idea. He followed him quickly, touching him lightly on the shoulder.

"I beg your pardon, sir," he said, "but I saw you in that commission house just now, and overheard something. Would you mind telling me what their—well, their standing is in the city?"

The young man looked at him keenly.

"Yes, and I overheard something, too," he answered. "I don't want to hurt the firm's business. You are a customer, I think—a prospective one?"

"Not in exactly the way you imagine, though," said Tom. "I am more interested in the house than that would make me. I don't want to hurt them, either, but I thought you might give me a few points. You are a bill collector?"

"Yes," good-naturedly, "and a lawyer and a lot of other things. You see, I've just hung out my shingle, and am doing the side jobs to help me keep my head above water."

"A lawyer!" ejaculated Tom. "Look here, can't I have a few words with you in private?"

TOM STARTED AND BENT LOWER OVER THE TANGERINES

"All you want," smilingly. "My time isn't very valuable as yet. Suppose we walk down this alley here; it seems about as secluded as any place we can find."

Ten minutes later the young lawyer was possessed of all the facts in Tom's case. He gave a low, expressive whistle.

"You've got a clear case," he declared, "one they cannot possibly get around. But it's fortunate I happened to be in there to overhear what Mr. Safe said."

"The firm is all right then—sound, I mean?" asked Tom.

"As far as responsibility goes, yes. But that's all. They've got plenty of money behind; but they're unscrupulous, and never pay out anything unless they're obliged to; and they haven't any qualms of conscience about how they accumulate. That shows in your case and mine. I hold a bill of sixty dollars against them for a client. It is good, but I never like to force a claim so long as I can obtain it by persuasion. Today I thought it wise to present a small bill; tomorrow I will try the larger one. Perhaps you noticed Mr. Safe's relief?"

"Yes," Tom replied, "he evidently expected the larger one. But what do you advise in my case?"

The lawyer was silent for some minutes.

"Well," he said at length, thoughtfully. "The best thing will be for you to remain in New York for a week or ten days. Tomorrow your two carloads will be opened, and we will make frequent visits to Goodman & Safe, on one pretext and another, and keep a close watch of how the fruit sells. Of course we must not let it appear that we know each other, and perhaps you might purchase two or three boxes of your fruit. That would be additional proof. When it is sold, go back to Florida and wait until you get a statement from Goodman & Safe. Send that to me. If it tallies with what we see, there will be only the first carload to demand accounting of. But in any case, we will have proof positive, and you may expect a fair settlement."

That night Tom left his hotel and went to a cheap lodging house. His scanty hoard must be economized if he remained in New York ten days.

The next morning he sought the commission house to which he had shipped the last carload of oranges. A little inquiry showed the fruit had not arrived.

This house did not make the display of Goodman & Safe, and there was little opened fruit in sight, only just enough to show as samples. But before he left Tom discovered that there were long, dark corridors and vault-like rooms which led from the store, which were piled up with fruit, and where it would keep much better than in open, light rooms. The whole appearance of the place, as well as the grave, elderly proprietor, gave Tom an impression of substantiality and soundness.

Ten days later he returned to Florida.

One week after he got back he received this letter from the house to which he had made the last consignment:

"Mr. Thomas Phillips:

"Dear Sir:—We enclose our check for carload of oranges, and trust that you will favor us with more at your convenience. The market is good now, and your fruit has sold well. It was owing to both your excellent packing and to the choiceness of the fruit. We like to handle such consignments. The tangerines were especially good, bringing easily $4.50 a box. Yours,

"BLAKE & CO."

That afternoon Tom sent for the other three negroes. He would pick the rest of his grove at once and ship to Blake & Co.

It was two weeks after this when Goodman & Safe's letter came. Its tenor was apologetic.

"We are sorry you did not take our advice about careful packing. It is the great secret of getting fruit to market. Do not be disappointed about your poor success, this time, however. We can see improvement in your packing over previous carload, and no doubt you will soon get to where you can command top prices. Send us more fruit at once—all you have. This time we have no doubt you will cull the fancy price which the market is now offering.

"Cordially yours,
"GOODMAN & SAFE."

Accompanying the letter was a check for two hundred dollars, an average of forty cents a box for the oranges. Tom sent the letter and statement to the lawyer.

If he anticipated any trouble he was agreeably disappointed. Goodman & Safe knew which side of the law it was best to remain on. Inside of a week a letter came from the lawyer, with a check which covered the difference for the three carloads of oranges, and an intimation that his fee would be fifty dollars.

When he saw the figures on the check Tom's eager eyes grew big, and he immediately sat down and wrote the name of the lawyer on another check for a hundred dollars, and then wrote to his people in Michigan to come on at once. The house would be ready for them as soon as carpenters could put it up.

Boy Wisdom

Bad habits grow without cultivation.

A good purpose leads to a good position in life.

Live each hour as though there were only thirty minutes in it.

The word "can't" sounds all right when it refers to telling a lie.

The fellow who does nothing always gets tired the quickest.

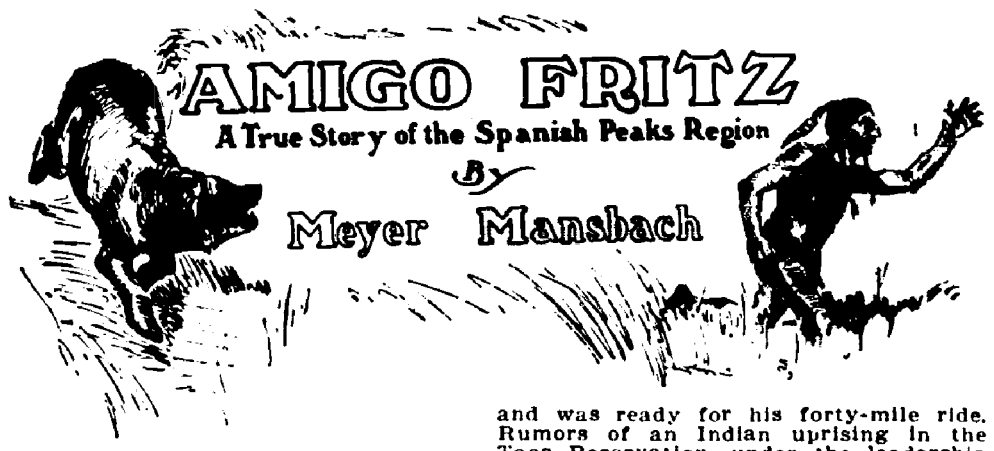
The cock crows early in the morning because he goes to roost early.

Every boy should post himself—but not against a street corner.

Practice makes perfect, except the practice of sin, which makes im-perfect.

A boy is never too young to begin to think of what he will do when a man.

The telling of one lie is all that is necessary to make you a liar. Likewise the stealing of one apple will make you a thief.



THE elements were against me. It had been raining for three consecutive days and the prospects for its clearing up within the next twenty-four hours were poor; so the hunting expedition to the Spanish Peaks country, which I had looked forward to with so much pleasure, had to be abandoned.

I was stopping with my old friend, Carl Keller, familiarly called Dutch Carl by the people of the surrounding country. We had just finished a breakfast, consisting principally of a dish called "Chili con Carne," which Mrs. Keller, a native Mexican woman knew well how to prepare. For some reason Dutch Carl, or Uncle Carl, as I called him, was in a very talkative mood. This gave me an opportunity I had long sought, and I took advantage of it.

In a corner of the room under a well-made glass case, hung the skin of a magnificent brown bear. During former visits I had noticed that this skin was regarded with a sort of religious veneration by the entire family, while offers by myself and others of comparatively large sums for it, had been declined. The storm had increased in its fury; to venture out of doors would be a foolhardy undertaking. So I asked Uncle Carl, as I had often done, to tell me some stories of his first adventures in the western country, and why the skin of the brown bear was valued so highly. After leisurely filling his pipe with home-grown tobacco and tilting his chair back against the wall to add to his comfort, he willingly began to relate the story of Amigo Fritz, an incident connected with his first fifteen years' experience in this country.

Uncle Carl came to the United States in a big sailing vessel. After spending a few weeks in New York, he concluded to go West and try his luck in a new country, and accordingly went to Saint Louis and joined an overland Santa Fe trail expedition. Nothing of interest, except a few Indian scares, occurred on the trip. He became thoroughly accustomed to the life and was considered by his traveling companions a good western scout; but he tired of the overland journey and when he reached the Raton Mountains decided to sever his connection with the expedition and take up a government claim near the settlement called Madrid, about forty miles from the trading post El Moro. His claim was situated in the Rocky Mountain district known as Stonewall. The country was fertile, the climate agreed with him, and here he settled at the age of twenty-one, in a log cabin built on the site of the present home.

The neighborhood was sparsely inhabited by a good class of Mexican people, who looked upon this invasion of the country they called their own, as an encroachment upon their rights. But Uncle Carl was a man of genial temperament and perfect integrity, and soon became friendly with these people. He was a miller by trade, and as the most needed enterprise in the neighborhood was a flour mill, he built a rather primitive affair operated by water.

Uncle Carl was now very prosperous, but found his life lonesome, so it was not surprising that a young and pretty senorita, living about ten miles from his humble cottage, captivated his heart, and that their courtship ended shortly in marriage. The young people were very happy and their union was blessed with two healthy boys, Henry and August, and one sweet little girl, Juanita, the image of her mother. As time went on the herd of cattle and sheep greatly increased, and as they required a bigger range than his present location could supply, Uncle Carl purchased a large tract of grazing land in the valley, about forty miles from his home, and selected a trustworthy major domo to manage the ranch.

The twelfth of December was an eventful day. Henry, the oldest boy, was celebrating his tenth birthday. His most appreciated present was a fine Indian pony called Pinto, the swiftest and prettiest animal on the ranch.

As the family were sitting at the breakfast table a great commotion was heard back of the house. Carl went quickly to investigate, and when he reached the yard saw a plump looking cinnamon bear cub about three months old, surrounded by the dogs, cats and all the other animals. Carl's first instinct was to kill the little intruder, but the children's pleadings saved his life. The children named the cub Amigo Fritz, and in a short time he became so domesticated and affectionate that he was the pet of the family and roamed freely all over the premises. Sultan, the hound, and Amigo Fritz became fast friends, and shared in watching and guarding the house.

Four prosperous and happy years passed. Henry was fourteen, August twelve, and little Juanita six years of age. Amigo Fritz had grown to be a large, powerful bear. Henry had taught him many tricks, and his devotion to the family was unusual for an animal. He protected the children and was a terror to all tramps and strangers, especially to the Indians, who frequently visited the ranches to sell furs and blankets. He seemed to take a particular dislike to them and they were all afraid of him.

On the morning of May 10th, 1861, Uncle Carl had completed preparations for visiting his ranch in the lower valley and was ready for his forty-mile ride. Rumors of an Indian uprising in the Taos Reservation, under the leadership of Nez Peres, a bloodthirsty Indian Chief of the Navajo, were afloat, but these reports had been heard so often that no one gave credence to them. Carl bade his wife and children an affectionate farewell, cautioning them to be watchful, not to leave the stockade, and to keep a good lookout. Amigo Fritz and Sultan licked their master's hand, and as he looked into their faithful eyes and stroked their heads, he said. "Amigo Fritz, and you, Sultan, keep a strict watch and guard my wife and children against danger from the Indians." He then mounted his horse, and, waving his hand, rode slowly down the beautiful mountain road.

The morning and afternoon passed uneventfully. The boys worked in the yard until Mrs. Keller and Juanita had prepared the evening meal and called them in. They were sitting quietly around the table when a terrible outcry, accompanied by a growl from Amigo Fritz, broke the silence. Henry rose quickly, and, reaching for his rifle, rushed outside, followed by Mrs. Keller, August, and Juanita.

A terrible scene met their eyes. Amigo Fritz, whose mouth was dripping with blood, stood over the prostrate form of a dying Indian who had crawled on hands and knees to the stockade and climbed over it, and who would have murdered the entire family but for the watchful bear. Mrs. Keller and the boys at once realized the danger that surrounded them. The alarming stories were true; the Indians were on their terrible warpath.

Hastily the little family set about making preparations to defend themselves against the bloodthirsty red men, who, they concluded, were hiding in the forest about two miles from the house. They called Amigo Fritz and Sultan from the body of the dead Indian, and gave them instructions to watch, which both animals, as though possessing human intelligence, seemed to understand. Then the doors of the house, which, like most houses in the western country, was built for defense, were securely locked, and Mrs. Keller and the children, armed with good rifles, went to the second story. Each of the boys guarded a corner, while, placing little Juanita in a safe place, Mrs. Keller, watchful of every movement the Indians might make, walked from one to the other like an experienced general. They concluded that the Indians were waiting for a signal from their scout before making an attack on the place, and as no signal could come from their dead comrade, the real danger would not begin before daybreak, for Navajos do not care to fight at night.

The long, anxious night had nearly passed. But little sleep had come to the brave defenders. Slowly the gray light of morning came stealing o'er the hilltops, when Henry, who with his finger resting on the trigger of his rifle, was looking through a loop-hole at the little creek over which the Indians must pass, detected a young buck, a little less cautious than the older warriors, crossing the creek only three hundred feet from the house. A quick, but careful, aim, the report of Henry's rifle, and an Indian was sent to the happy hunting grounds. A second Indian rushed to the rescue of his comrade, but the unerring rifle of Mrs. Keller brought him down. The real war had now begun. God have mercy on those lonely settlers!

Mrs. Keller knew the Indians well, and was aware of their cruelty and the horrible torture inflicted on their captives. She feared a combined attack. How long could she and the two boys hold out against their besiegers? Then she thought of her husband. Could he have reached the ranch safely? The boys did not realize the danger as did their mother; the excitement of the fight was new to them.

Amigo Fritz and Sultan were faithfully walking around inside the stockade. There seemed to be only a small band of Indians hidden in the woods, and the death of their two comrades had made them more careful. In spite of this, two more Indians were shot during the day. As evening drew on and the Indians began to build their camp fires, Mrs. Keller, looking anxiously through the loop-holes, saw they were becoming more numerous, and she prayed to God to save her children.

Henry had been for some time in deep thought. Suddenly he arose and came over to his mother.

"Mother," he said, "I have a plan which may bring us relief. Let me saddle my pony and lead him quietly out of the east gate over the bluff. Then I will mount and ride as fast as I can to Fort Catskill."

Fort Catskill, about thirty-five miles away, was the nearest military post. It was commanded by Captain Crawford and was occupied by about one hundred and fifty troopers. They were evidently ignorant of the Indian outbreak.

Mrs. Keller listened attentively to Henry's suggestion. She thought for a few moments and then said:

"Henry, go, and may God be with you."

While Henry saddled his pony, Mrs. Keller prepared a rifle and knife and took them to the gate where the brave boy was waiting for her farewell kiss. She then walked rapidly to the north gate, calling Amigo Fritz and Sultan to her side. She opened the gate and the animals, seeming to understand her movements, walked through and started toward the Indians. Locking the gate, Mrs. Keller rushed to the east gate and bade Henry God-speed as he led his pony out toward the bluff.

The plan worked perfectly. The bear, with Sultan following, ran directly toward the Indians. Mrs. Keller fired two shots in quick succession through different loop holes, and these maneuvers kept the Indians in ignorance of the boy's departure.

After safely reaching the other side of the bluff, Henry mounted his faithful horse and rushed like the wind down the rocky valley toward Fort Catskill. He knew that the lives of his mother, sister, and brother depended upon his success. He also knew that he must save the strength of his horse if he wished to reach the fort. The moon was shining brightly, and the horse kept a steady gait over the familiar road. Mile after mile, hour after hour passed, until Henry was within six miles of his destination. Then the long ride began to tell, and the faithful pony showed signs of fatigue. With burning eyes and trembling lips, Henry cried.

"Keep up, dear old Pinto, keep up. We must save them. A few more miles and we will be there."

It seemed hours before he rode around the last hill and came upon the fort. The sleepy sentinel, aroused by the gallop of the horse, looked up and saw them. The boy shouted frantically and waved his arms. The sentinel understood. A

STANDING OVER THE PROSTRATE FORM OF AN INDIAN

STEVENS

IF YOU intend to camp or go on a Vacation trip, remember that the accurate and reliable STEVENS RIFLES, PISTOLS and SHOTGUNS are specially made in styles and models suitable to every requirement of the Man and Boy Shooter. Our Rifles and Shotguns also possess the "Take Down" feature which means that the STEVENS can be carried in a trunk, grip or small package.

Where not sold by local merchants, we ship direct, EXPRESS PREPAID, upon receipt of Catalog Price.

Send for STEVENS Catalog: A 140 Page Book of Ready Reference for Shooters. Profusely illustrated and full of firearm information. Mailed for 4 cents in stamps.

Send six cents in stamps for the beautiful Stevens Hanger. "Just the thing" for your den.

CHICOPEE FALLS, MASS.

THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November (1905) number. No. I of the Series was Ulysses Simpson Grant; No. II, David G. Farragut; No. III, Benjamin Franklin; No. IV, Abraham Lincoln; No. V, John Adams; No. VI, Thomas Jefferson; No. VII, Ralph Waldo Emerson; No. VIII, Henry Ward Beecher; No. IX, Nathaniel Hawthorne.

No. X--Robert Edward Lee

"The bravest are the tenderest,
"The loving are the daring."

THE WRITER is not aware that these words of Bayard Taylor's have ever been applied to the subject of this sketch, but to few other men are they so appropriate.

Away back during the reign of the ill-advised, ill-fated king, Charles I, one Colonel Richard Lee left his home at Stafford Laughton in the county of Essex, England, and sailed for America, where he settled in Westmoreland county, Virginia, building a large manor house, acquiring a large estate and maintaining all the dignity and hospitality of an English squire. We are told that he was a loyal supporter of his king, yet the reason for his leaving England is hardly clear. It may have been with him as with many others; he heard the muttered rumblings of an oppressed people, and saw the vision of Cromwell and his Ironsides looming up in the distance. Being a member of the English landed gentry Colonel Lee was warmly welcomed by Sir William Berkeley, Virginia's governor, and was made state secretary for the colony.

When England was made a commonwealth, Colonel Lee was instrumental in having Virginia treated as an independent state, but on the Restoration, Charles II, with the consent of the colonists, had himself proclaimed King of Virginia.

Throughout the history of America the Lees of Virginia have been conspicuous in its legislative halls and on its battle fields. The descendants of old Richard Lee, as well as many others of the ancient royalist families who had emigrated during the English Civil War period, became among the most loyal defenders of the colonies in their struggle for liberty.

Two of the Lees (cousins) especially distinguished themselves during the Revolution when the fortunes of the colonies for weal or woe were trembling in the balance.

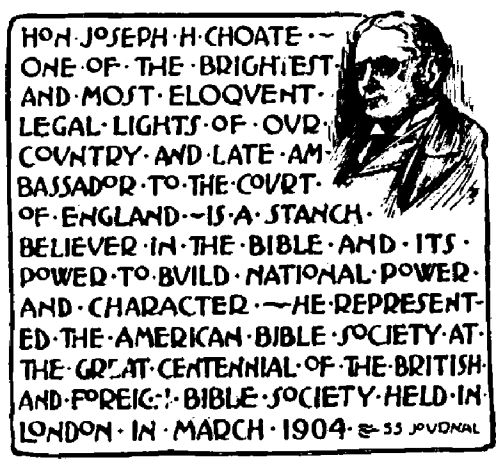
Richard Henry Lee was the member of the Continental Congress who on June 10, 1776, moved the immortal resolution that "these United Colonies are, and of right ought to be free and independent States." Afterwards with his brother, Francis Lightfoot Lee, he signed the Declaration of Independence. Previously he had been one of the most bitter opponents of the infamous Stamp Act. It is said that had it not been for his wife's illness, which compelled his absence, he and not Thomas Jefferson might have been the writer of the Declaration. "He was a great orator, an accomplished scholar, a learned debater, and a renowned statesman," being often called "the American Cicero."

The other of the two cousins was Henry Lee, the commander of "Lee's Legion" during the war of the Revolution, who lives in American history as "Light Horse Harry" Lee. The war had just opened when he graduated from Princeton College. His intention had been to be a lawyer, but the call of his country made him exchange Blackstone and Chitty for the sword and the saddle. In 1776, Patrick Henry was Governor of Virginia, and to him young Lee applied for service. He was at once appointed a captain of Virginia cavalry. From the first, he showed a genius for military affairs. His troop became the finest disciplined and he himself was one of the boldest and most dashing of soldiers. Washington early became warmly attached to him, an attachment that lasted until the death of the President. One of Lee's early exploits took place in 1778 when with only ten men he withstood the attack of two hundred British dragoons. Rising to the rank of major and given an independent force, he undertook and successfully executed the capture of the enemy's garrison at Paulus Hook, New Jersey, in face of the British army and navy, bringing one hundred and sixty prisoners safely within the Continental lines. This act of daring and courage not only astonished the British but put new hope and new vigor into the colonies. In recognition of "the remarkable prudence, address, and bravery displayed in the attack on the enemy's fort and works at Paulus Hook," Major Lee received the thanks of Congress along with a special gold medal.

Promoted to the rank of Lieutenant Colonel, Lee was sent to the Carolinas to aid General Greene who was then fighting Lord Cornwallis. There his daring, activity, and strategy found a foeman in every way worthy of his steel in Colonel Tarleton, the famous or infamous British cavalry commander; but history records that "Light Horse Harry" more than held his own with the Britisher. His work in the Carolinas commanded the warm testimony from General Greene, who said, "no man, in the progress of the campaign, had equal merit with yourself." The war ended with the surrender of Cornwallis. Lee resigned from the army, but before being discharged he was promoted to the rank of major-general.

In retiring from army life General Lee only changed from one form of public service to another. His admiring countrymen sent him to Congress, which he left to become governor of his native state for three years. Returning to Congress, he was, on receipt of the news of Washington's death, appointed to deliver an oration, which he did on December 26th, 1799, in the German Lutheran church, the largest in the city of Philadelphia. It was in this oration that he used the words which have become immortal, "First in war, first in peace, and first in the hearts of his fellow-countrymen."

After the war General Lee married his second cousin, Matilda Lee, daughter and



heiress of Philip Ludlow Lee, to whom had come the old family estate of Stratford. She died in 1790, leaving four children. Three years afterward he became the husband of Anne Hill Carter, daughter of Charles Carter, whose estate of Shirley was on the James River. Six children were born of this marriage—four sons and two daughters. Of these Robert Edward Lee, the youngest son, was born at the family residence of Stratford on January 19th, 1807. When Robert was four years old, the family moved to Alexandria, about six miles south of the city of Washington, in order to have better facilities for the education of the children.

At the Alexandria Academy young Lee received his early education, his first teacher being an Irishman named Leary, described as a fine scholar and an excellent teacher. Under that gentleman's instruction the boy was ably grounded not only in the ordinary branches of the school course, but acquired a good knowledge of the classics for which he showed considerable aptitude. Many years after, General Lee wrote a letter to his old schoolmaster in which he said, "I beg to express the gratitude I have felt all my life for the affectionate fidelity which characterized your teaching and conduct towards me."

When Robert was about seven, his father was forced, on account of ill-health, brought on by injuries he had received while attempting to put down a political riot in Baltimore, to proceed to the West Indies. He stayed there nearly five years, but receiving no permanent benefit, he sailed for America. The shores of America were reached, but increasing illness made him stop at the home of his old commander, General Greene, on Cumberland Island, Georgia. Here he was tenderly and lovingly cared for, but his sufferings were so intense that death soon came to relieve him. His body was laid away in the little cemetery of the Greene family. A headstone of marble marks his grave, on which there is the simple inscription: "Sacred to the memory of Gen. Henry Lee, of Virginia. Obit 25 March, 1818, aetat 63."

While General Lee was in the West Indies, he wrote many letters to his eldest son, Carter, which show how great was his desire that his children should become men of courage and goodness. In one he says: "You know my abhorrence of lying, and you have been often told by me that it led to every vice and cancelled every tendency to virtue. Never forget this truth and disdain this mean and infamous practice. Above all things earthly, even love to the best of mothers and your ever-devoted father, I entreat you to cherish truth and abhor deception." Such counsel and advice are worthy the consideration and practice of every American boy, for it is only by speaking and acting the truth at all times and in every circumstance that true success is attained. The liar and the cheat may escape detection for a short time, but they are bound to be found out and their downfall is sure.

Robert Edward Lee had reached the age of twelve when his father died. His mother was a great sufferer from rheumatism, being forced to give up almost all household duties; his elder brothers were away from home, one at Cambridge University, England, the other in the United States navy; his eldest sister had to live in Philadelphia for many years under a physician's care; and his younger sister was only a child. Robert, therefore, was the only one who could render any help at home. His father in one of his letters says, "Robert, who was always good, will be confirmed in his happy turn of mind by his ever-watchful and affectionate mother." The boy's naturally good and amiable disposition was strengthened by the watchful, tender care and wise counsel of this devoted mother. Indeed it has been said that, "if General Lee owed his greatness to his father's blood, he owed his goodness to his mother's; for through many generations the Carters have been noted for purity and nobility of character."

This portion of the boyhood of the future Confederate General presents an object lesson to all American boys. The boy of today has as a rule little inclination to help his mother or sister in her domestic duties. House chores are looked upon as not suited to his dignity, and the necessary work of the kitchen is only fit for girls. When asked to do some of the things required about the home he grumbles, and feels ashamed to be caught by his companions at what he calls girls' work, and he is too selfish often to give a little time from his play to offer to bring in an extra armful of wood. Young Lee had an altogether different idea of his duty to his parents. He considered nothing that he could do to help his mother was in any way beneath his dignity. We are told that this boy, young as he was, became his mother's housekeeper, carried the pantry and storeroom keys, went to market and bought the supplies for the family table, superintended the outside work, and cared for his mother's horses. As soon as he was free from school, instead of joining his schoolfellows in their games, he would hurry home to get everything ready for his mother's daily drive. It was his delight to carry her out to the family carriage and arrange her footstool and the cushions for her comfort. During these drives he was always trying to amuse and entertain her, and if he could bring a smile or a laugh by his efforts he was happy. No wonder that when the boy left home for West Point, his mother was heard to say, "How can I live without Robert? He is both son and daughter to me." It must be remembered, too, that the family was a comparatively wealthy one, having enough servants to perform the duties of the household.

These traits of kindness, modesty, and self-sacrifice for others, as well as a high sense of duty, were marked characteristics of this great man's whole life. Some time after the Civil War, which left him broken in health and in poor circumstances, rich friends offered him at various times homes and comforts. Admirers in England wrote him that $100,000 lay in the Bank of England to his credit if he would go and live in that country. All of these offers he unhesitatingly refused; he would accept nothing that looked like charity. One day his daughter in the presence of a gentleman connected with Washington College, Lexington, said: "Why don't they propose to my father some place in which he can work. He never will accept the gratuity of a home." The suggestion was at once taken up and the presidency of the college was offered to the general. He hesitated some time before accepting it, but finally did so, in the hope as he expressed it, "I may thus influence my young countrymen."

While as a boy Lee loved to attend upon and help his mother, it must not be thought that he never had any fun or good times. On the contrary, he tells how fond he was of all kinds of sport, of hunting, fishing, swimming, and following the hounds on foot, and we know that he was a splendid horseman.

Coming from a long line of ancestors who had borne noble parts in the great struggles of their country, we can readily see that the blood of the soldier ran through Lee's veins. On being confronted with the question as to what was to be his life's work, there was not the slightest hesitation. Remembering the brilliant fame of "Light Horse Harry" Lee, sturdy old President Jackson, who loved and honored brave men, most willingly gave the boy an appointment to West Point, probably little thinking that another "Light Horse Harry" would bring glory and fame to American arms.

As soon as his career was decided upon Robert prepared himself for examination by a course of study, especially in mathematics, under Benjamin Hallowell, a famous teacher in Alexandria. Mr. Hallowell in his testimony concerning his pupil wrote: "He was a most exemplary student in every respect. He was never behind time at his studies, never failed in a single recitation, was perfectly observant of the rules and regulations of the institution; was gentlemanly, unobtrusive, and respectful in all his deportment to teachers and fellow-students. His specialty was finishing up. He imparted a neatness and finish to everything he undertook. One of the branches of mathematics he studied with me was conic sections, in which some of the diagrams were very complicated. He drew the diagrams on a slate, and although he well knew that the one he was drawing would have to be removed to make room for the next, he drew each one with as much accuracy and finish, lettering and all, as if it were to be engraved and printed."

Even if we allow for some slight partiality of the teacher for a favorite pupil, we must admit that this was high praise; but throughout Lee's career this habit of "finishing up" and having everything down to the smallest detail just right was part of himself.

In 1825 young Lee began his apprenticeship as a soldier at West Point. In personal appearance he seemed to be cut out for a soldier. He was six feet in height, strong and vigorous, perfect in health, with a finely-shaped head. In his dress he was always particularly neat, and he neither used tobacco nor drank liquor. The four years at the Military Academy were spent by Lee in hard study of everything necessary for future success in his chosen profession. By his obedience, good habits, strict attention to every duty, and scrupulous honor, he won rapid promotion. He became a cadet officer of his class and in his fourth and last year was promoted to the highest position in the life of a cadet, that of adjutant. It may be said, indeed, that his whole course at West Point was that of a young man, who, having high aims and an earnest purpose in life, determined that his preparation should be thorough in every respect. No demerit mark was ever placed against his name. His personal appearance was never called in question by an officer. A writer has said of his cadet days: "He never 'ran the sentinel post,' did not go off the limits to the Benny Havens of his day or put 'dummies' in his bed to deceive the officer in charge as he made his inspection after taps, and at the parades stood steady in line."

Lee graduated in 1829, second in a class of forty-six. On account of his high standing he was at once commissioned as a second lieutenant in the Engineer Corps, the most desirable branch of the military service.

Two years after graduation Lieutenant Lee married Mary Anne Randolph Custis, the only daughter of George Washington Parke Custis, and the great-granddaughter of Martha Washington, wife of our beloved first President. Through this marriage also General Lee and his wife afterwards became proprietors of the historic estate and mansion of Arlington, where in 1759 George Washington was married to the "Widow Custis."

During the four years after his marriage Lieutenant Lee was on duty as assistant engineer in the erection of harbor defenses at Hampton Roads. From there he was transferred to Washington as assistant to the chief government engineer.

The nature and scope of this series forbids the writer from further following General Lee's career, but it would seem to him that he has written enough to cause the boys of America to study his life and convince themselves that he was a gallant soldier, a great general, a man of tenderest heart and largest sympathy.

SYNOPSIS OF SUBSEQUENT CAREER OF ROBERT EDWARD LEE.

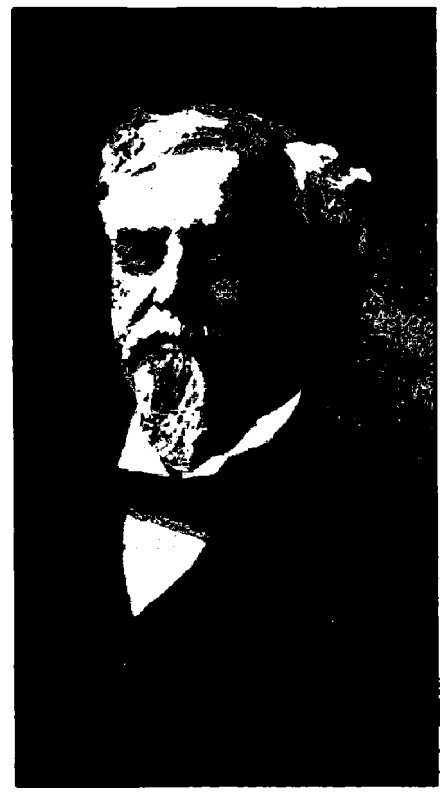
1838 Promoted to the rank of captain. Served with great gallantry in the Mexican War.
1852 Appointed Commander of West Point.
1855 Stationed on the Texas frontier as Lieutenant Colonel.
1859 Sent against John Brown at Harper's Ferry.
1861 Resigned his commission in U. S. Army on secession of Virginia.
1862 Appointed Commander in Chief of the Confederate forces.
1865 April 9. Surrendered to General Grant at Appomattox.
1865 Accepted Presidency of Washington College.
1870 Died, October 12. Buried beneath chapel of College. Name of institution changed to Washington and Lee University.

INSCRIPTION ON TABLET IN HALL OF FAME.

ROBERT EDWARD LEE

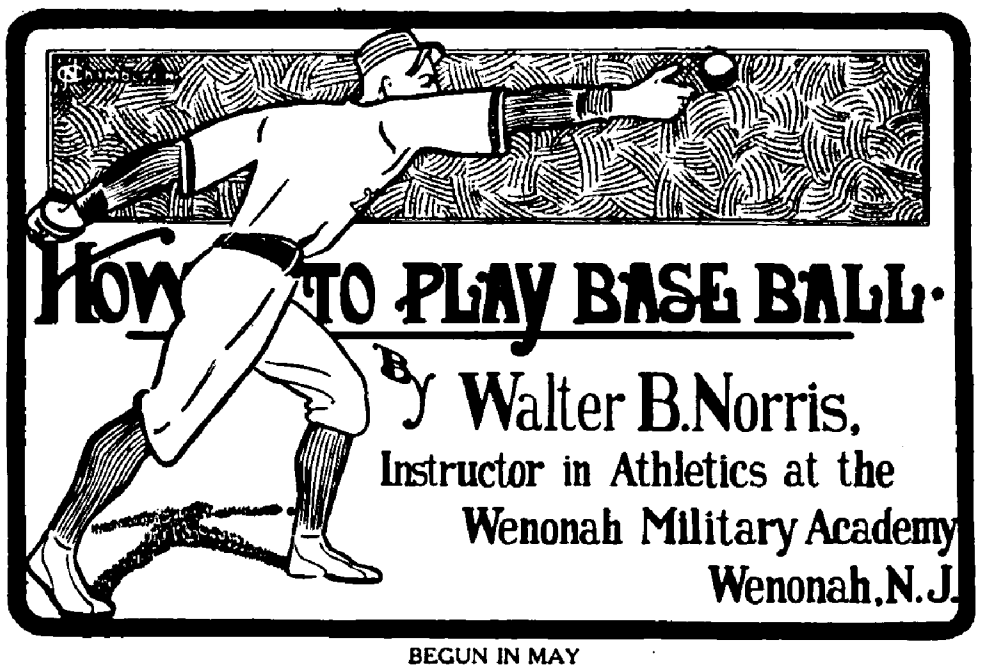
1807-1870

Duty then is the sublimest word in our language. Do your duty in all things. You cannot do more. You should never wish to do less.



EDWARD S. ELLIS

Whose fine serial story of Geronimo, the well-known Indian character, entitled, "Off the Reservation," will soon begin in these pages.



BEGUN IN MAY

PART IV

TEAM BATTING AND BASE RUNNING.

IN BASE BALL, runs win the game, and team batting and base running produce runs. After the player has learned to hit the ball with some certainty, he has yet to learn when to hit, when to bunt, where to hit, and when to let the ball go by.

Generally it is better for the batter to let the first ball go by in order to get the eye on the ball before striking at it. If a batter has no strikes and three balls called on him, he should always let the next ball go by. With three balls and one strike, a poor batter should wait, a good batter should hit any ball he can. If a batter has one ball and no strikes, he should hit a good ball; also if he has one strike and one ball or one ball and two strikes. A batter with two balls and no strikes should let the next ball go unless there are men on bases. As soon as a man has two strikes he must be ready to hit the next good ball.

"PLAY BALL!"

Photograph by F. E. Duffy, 1417 Globe Street, Fall River, Mass.

Batters should be told when base runners are to steal, and, in order to hinder the catcher's throw, should strike at the ball unless they have two strikes.

When a man is on first and none are out, the batter should make a sacrifice hit, bunting the ball that the base runner may reach second. If, however, he can steal to second let him do so, and then let the batter try to hit the ball. Whenever men are on first, or first and second, and the batter has two strikes and three balls, the runners should start for the next base the moment the pitcher draws back his arm. If two men are out and such a situation occurs, and a hit is made into the air, a man on third comes straight home without holding his base.

On other occasions when a high fly is knocked to the outfield, the base runners should run about ten feet off the base till they see whether it will be caught or not. If it is, they must get back to their bases before the ball does. If it is missed, they may go on to the next base. Being between the bases they are able to do either. Do not stay on the base unless you are sure it will be caught, particularly when forced. A man on third base, however, holds his base that he may run in as soon as the ball is caught or missed. As the ball has to come some distance, he has a chance to make home in either case.

The batter should be careful to run every hit out. He should not follow the ball with his eye but should sprint at full speed to first. On a short hit, turn to the right; on a longer hit that may be good for more than one base, turn to the left and advance about ten feet beyond the base. From there he can tell just what to do and take advantage of slow fielding or anything else. In turning bases make the turn before reaching the base.

When a man is on first and another on third, the man on first should start for second while the man on third, as soon as the catcher has the ball, starts as if for home. This will draw the short throw and then if the man misses the ball the man on third can go home. If the ball goes clear to second, the man on third should try for home. If you discover that the opposing team does not use the short throw, let the man on first go to second every time on the first ball. When two are out, however, look out for the catcher throwing to second to catch you. In that case start back for first to allow the man on third to score.

When a man is on third, less than two out, and an infield hit is made, the man on third runs up a little and then waits till the throw is made to first, and then watches for a chance to get home on a muff. If a run is badly needed, he should run up a little and dig for home as soon as the fielder throws to first. A skillful method of run-getting with a man on third and less than two out is for the batter to signal that he will hit the next ball, and for the base runner to run home as the ball goes to the batter. If the batter makes any kind of a hit, the man on third ought to score.

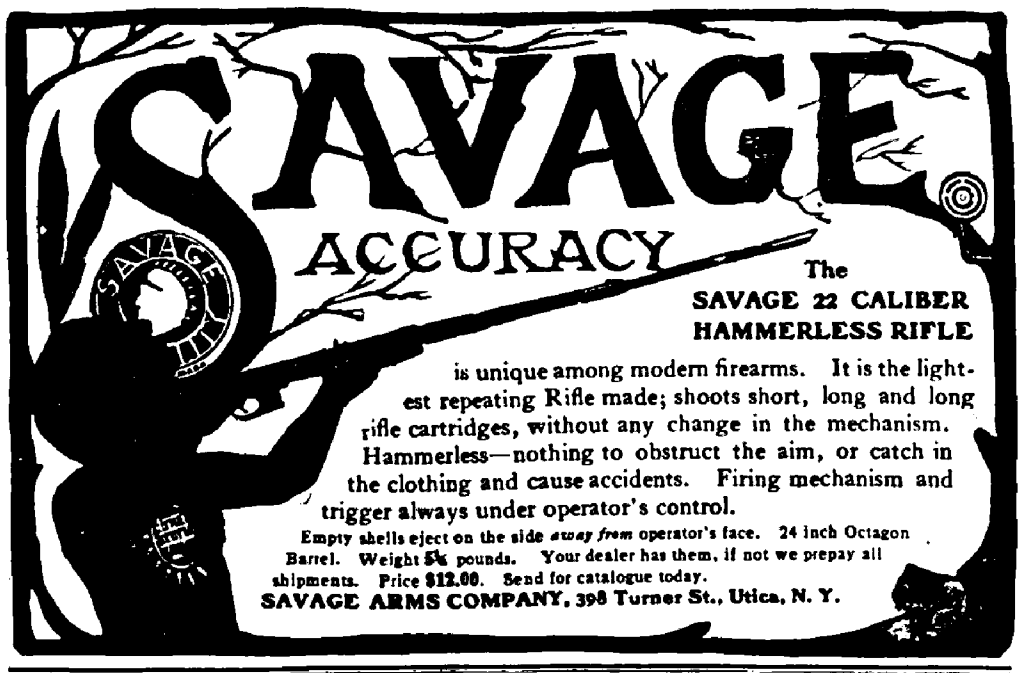
A man who is on second when a base hit is made should make third and then run ahead a few feet to take advantage of any error in throwing to first. If the ball is thrown home to catch him, the batter should go to second on the throw. Many an extra base will be gained if the base runners take a good lead from the base. At second take a good lead with a man on third, and, in all cases, increase it as the pitcher draws back his arm. If the ball is thrown to catch you, slide in to the back of the base.

The last essential in good base running is a properly framed batting list. This is the order in which the men go to the bat. It should be changed as men develop in batting. In general, the best batters go in the first part of the list. We do not put the best batter first as he can be of more service later. The first man up must expect to do a good deal of base running by himself, and so first should be put the man who is the quickest and fastest base runner on the team but who is also a good batter. If he bats left-handed, so much the better.

Second we should put another fairly fast man, and one who can bunt well. His chief business is to advance the first man even if unable to get to first himself. Third we should put the second heaviest batter on the team, who ought also to be fast on the bases. Fourth goes the heaviest and surest hitter on the team. One of the first three men will almost surely make his base, and perhaps all three. This will give the fourth man a time at bat in the first inning, and just when men are on bases. He is expected to send them home.

After the fourth man put the men in the order of their ability to bat. Ability to run bases should also be considered. If in any game you have the last of the ninth at the bat, and you have a substitute who is a better batter than one of the regular team, put him in place of a weaker hitter, as he may help you to win.

Finally, be as careful in your choice of an umpire as you are of the players, and then trust him implicitly. Do not "kick" at decisions, but play the game itself for all it is worth, never despairing till the last out has been called by the umpire. If your team has done its best, it need not be discouraged, even by defeat.



"NEW IDEA" BASE BALL CURVER

Greatest invention in base ball since the discovery of the curve. Get one now if you want to be the best pitcher of your team. It is so small the batsmen cannot see it, and they all wonder where those awful curves come from. It imparts a rapid whirling motion to the ball thus causing a wide curve. Fits either hand and does not interfere with catching or throwing. SPECIAL OFFER. Send us 25 cents and we will send you post paid, the New Idea Curver, with full directions, also a large 64 page book of "OUT DOOR SPORTS," containing latest playing rules for base ball. It gives illustrations showing how the ball should be held for throwing all the different curves. Special chapters on batting, base-running, fielding, etc. Also contains playing rules for foot ball, lawn tennis, polo, cricket, croquet, etc. Don't wait, be the first in your town to have one. Send a silver quarter today and we will send you the Curver and book by return mail. Address, THE CURVER CO., Box 184, Brady, Neb.

AMIGO FRITZ

(*Continued from page 311.*)

shot rang out, followed by a bugle call, and Captain Crawford appeared on the scene just as the pony with its little rider reached the gate of the fort.

"Captain, the Indians are attacking mother," gasped Henry, and, unable to utter more, he sank to the ground exhausted. He was quickly revived and able to tell his story.

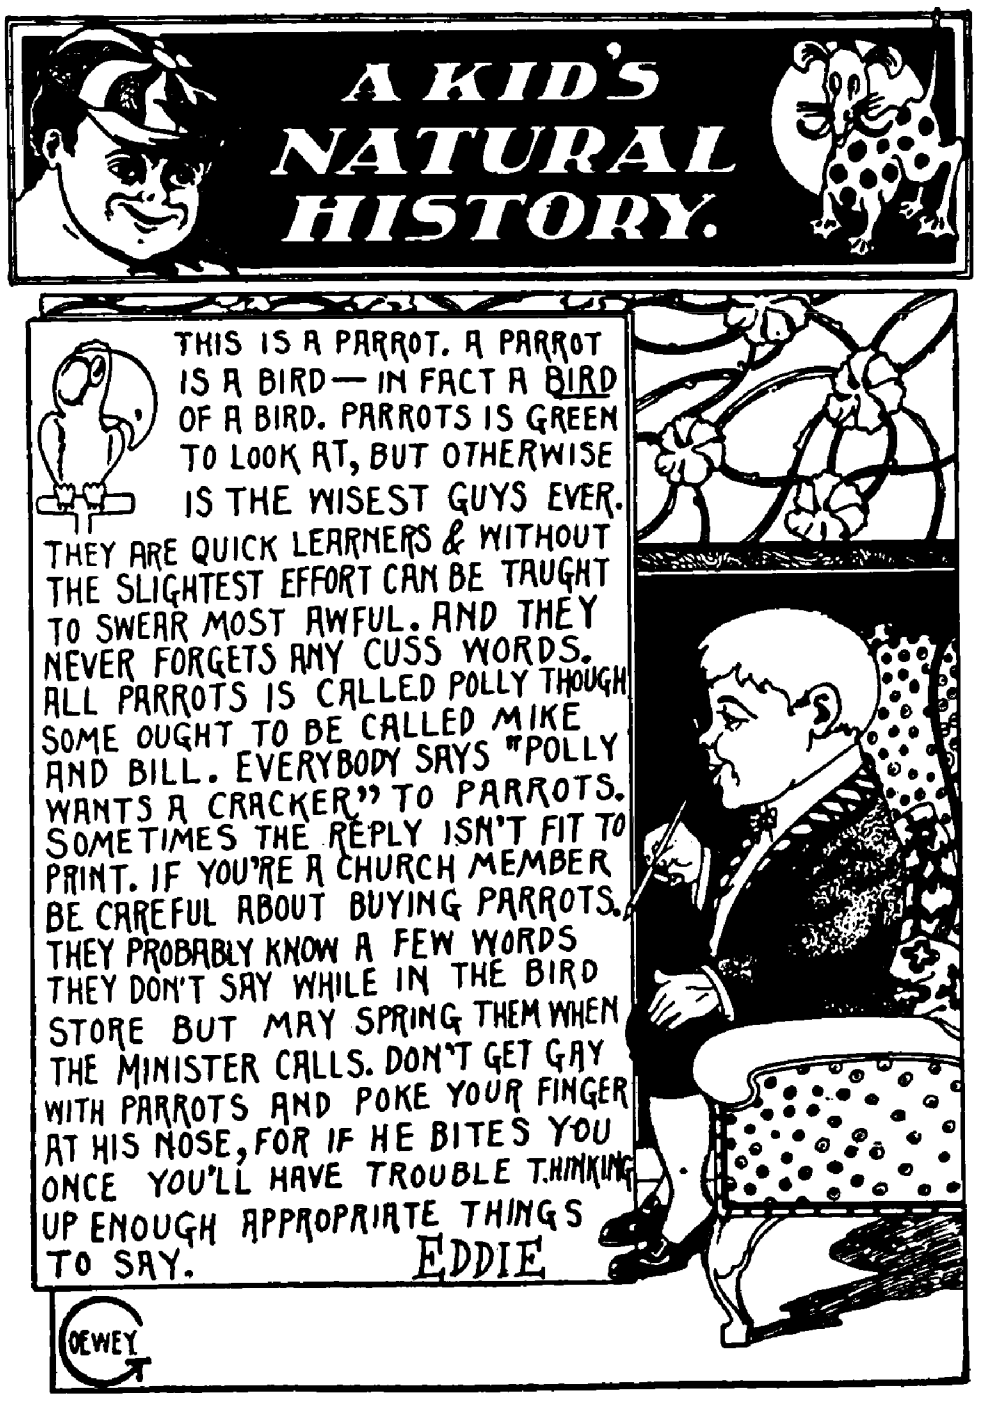
Captain Crawford's commands brought prompt obedience. Being an old Indian fighter, he divided his troopers into three commands, fifty men to stay at the fort, fifty men under the leadership of Lieutenant Nelson to take the north road in order to cut off the retreat of the Indians; and the best men and the swiftest horses, under his own command, to take the shortest road. Henry was provided with a good horse in order that he might accompany the rescuing party. Pinto was left at the fort and was well taken care of.

Meanwhile the anxious hours dragged by at the little cabin where Mrs. Keller and her children were left to hold off the Indians, now wild over the death of their comrades. As the time went on, Mrs. Keller could see that the besiegers were organizing to make a combined attack. She knew that she could not hold out very long against this, but so long a time had passed since Henry rode away over the hills toward the fort, that she hoped and prayed that the rescuing party might soon arrive.

Finally the Indians left the woods, mounted their ponies and made ready for the final attack. Just as they were dashing madly toward the stockade, like a sound from heaven came the bugle call, and with a glad cry, Mrs. Keller drew her children to her, knowing that they were saved. Then they watched the fifty brave troopers, who, with their captain ahead, swept down upon the unsuspecting Indians like a terrific thunderstorm. Crack! Crack! went the rifles, and Indian after Indian fell from his pony, while those who were not shot fled wildly down the road, only to be met by a volley from Lieutenant Nelson's troopers, who arrived just in time to head them off.

Uncle Carl, returning from the ranch, had overtaken the troopers a few miles from the camp, and the mother was overjoyed when she saw the father come toward the house with Henry, the young hero, both safe and unharmed.

A short distance from the Indian camp another hero was found. Amigo Fritz, his own body pierced by a dozen arrows, lay over the body of an Indian. He had sacrificed his life for his benefactors.



Boys' Books Reviewed

BROWN OF MOUKDEN. A Story of the Russo-Japanese War by Herbert Strang, a noted English author of boys' books. The boy who loves adventure and excitement will be fully satisfied with this book. Mr. Brown, an English merchant doing business in Moukden, is arrested by the Russians as a spy of Japan, and secretly sent to Sakhalien. His son, Jack, proceeds to find out and rescue his parent. In his quest he disguises himself as a Chinaman, joins a force of Chinese bandits and becomes an officer, fights and defeats a force of Cossacks, is present in Moukden when the city is captured by the Japanese, and after a multitude of thrilling adventures and many narrow escapes he at length succeeds in finding and rescuing his father. The reader will get considerable information regarding Chinese customs, and the rigorous rule of Russia in Manchuria is well brought out. The maps and glossary giving translations of Chinese and Russian words will be found useful. There are many fine illustrations. 370 pages. Price, $1.50. G. P. Putnam's Sons.

SLICES FROM A LONG LOAF, by H. C. Stiefel, Ph. D. The book—or loaf, is divided into fourteen slices, each containing something good in the way of history, geography and, best of all—humor, and that of the genuine sort. A party of five make the trip from Oil City to Pittsburg by boat, camping at various places on the way. The record of the trip is made up of the histories of Pittsburg and the various towns and villages they touch on their voyage down the Allegheny, told in most entertaining fashion. Indeed, while the book is of value on account of the information, statistical and historical, that it conveys, we believe its pleasant wit and cheerful, spontaneous, happy humor constitute its chief charm. There are 30 full-page illustrations by well-known artists. 221 pages. Price, $1.00. Bissell Block Publishing Co.

THE GIRL FROM TIM'S PLACE, by Charles Clark Munn. This is a story that one can't help liking. Poor "Chip!" Her life with the rough, brutalizing men in the woods rouses the reader's indignation, and he is glad when she escapes and is received so kindly by the Frisbees. There is very little sympathy with the tragedy of her father's death. Ray is a nice boy and, of course, can not help falling in love with Chip. She, in her new surroundings, becomes a changed creature and, of course, everything ends happily. There are some nice, lovable characters in this delightful book, that of "Old Cy," who ultimately is the means of Chip becoming an heiress, is the best. There is pathos and humor and tragedy in the book, and we believe the author has written a story that will be a success. The illustrations are good and apt. 426 pages. Price, $1.50. Lothrop, Lee & Shepard.

Stamps, Coins, and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

The Numismatic Sphinx

Henry Grapengiser: The nickel 5 cents of 1868 is worth only face value. Leland De Vore: The dime of 1851 has no premium. J. B. McKelvey: Your rubbing is from a second bronze of the Roman Emperor, Maximianus (surnamed Hercules), A. D. 288-310. This coin though very old is not rare by any means, usually selling for about fifty cents at the dealers. William Green: Your "Upper Canada, Commercial Change" with shovels and anvil, 1820 is a common Canadian half-penny token. Herbert M. Grigg: The cents of 1817, 1837, and 1850 sell for ten cents each in ordinary good condition. Your 1798 is poor which impairs its value very much. The others are common European coins of no particular value over face. Edward Pinckney: You will hardly be able to get over face for your 1895 dollar, notwithstanding the stories that you have heard. Earnest Paine: Your coin is a silver piece of Spain but issued from the mint at Mexico in 1799. We take it to be a 1 real, but unless it is in fine condition will not bring a premium. John H. Alsop, Jr.: Your rubbings are very poor and we cannot decipher only in a general way your last three. These are common coins of Spain, China and Mexico. Sam Lewers: The quarter of 1877 CC mint has no premium. Earl Ruhlman: The flying eagle cents of 1856 and 1858 are alike excepting the date. The former is worth about $5.00 and the latter only face. W. H., Uniontown, Pa.: The quarter of 1854 is common. Aubrey C. Brown: A fine 1835 half-dime sells for a quarter at the dealers. Your book published in London in 1800 on the subject mentioned we believe will not repay your efforts to find a sale. Forest Limbacker: The silver three cent piece of 1852 sells for fifteen cents. E. Bertolf: It is safe to say that most all the old Spanish silver has little value above bullion. Yours of Philip V, 1757, seems to be in excellent condition, which is a one redeeming trait with this country's silver and might bring a premium if you knew just where to place it. Norman J. Batts: Your rubbing is from a 10 filler of Hungary. The letters K. B. are the mint mark of the city of Kremnitz where the coin was struck. The piece is common. In this connection, what you take to be a castle on the reverse, represents the "iron crown." This is a golden crown set with precious stones, with which anciently the kings of Italy and later the German emperors were crowned. It received the name "iron" from the tradition that a nail from the cross of Christ was forged into it. Carter Halbert: The quarter of 1837 sells for half a dollar. The cent of 1860 only face. Paul Dowling: The coins you mention are tolerably common. Mason Scudder: Your rubbing is from a German medal. When we get into the world of medals we are lost and without a guide to help us out. Marshall Carder: 1854 half dollars or 1873 quarters will not bring a premium unless in unexceptional condition. Gilbert Williams: The 1846 half dollar will hardly command a premium. We do not know just what you mean by "dollar of 1776." We are not aware of any such coin. The first dollar was issued in 1794. Ted Lyon: The cent of 1857 (nickel) is only worth face. Bill Mc: 1855 cent, ten cents; 1864 2 cents, face; Cuban peso of 1898 paper currency, doubtful. William G. Wilson: The German pfennige of 1876 is hardly worth a cent of our money. Herman Hart: The half dollar of 1843 is only worth face. "San Francisco": The dime of 1894 minted in your city is very rare. The dimes of 1827 and 1837 sell for a quarter each when in fine condition. Your others very common. Fletcher Floyd, Jr.: 1853 three-cent silver, fifteen cents. 1843 half-dime, twenty-five cents. Others face only. Allen Owens: (1) Indo-China 10 cent. (2) Siam 1-8 tical. (3) Singapore, 1 cent. (4) China, common cash. These pieces are worth 25, 40, 10 and 0 cents respectively.

There are two classes of queries that come to the Coin Editor that he feels he cannot do justice to in these columns. First are those who send long lists of coins, often from twenty-five to fifty, asking for the premiums on each to which our limited space forbids an answer; and, second, those queries to which no names are signed and often no postmark or address to help us out in the matter.

The Harlan P. Smith collection of coins, a large portion of which were sold last May in Philadelphia, was one of the most important sales ever held in this country. The sale occupied four days. 2,416 lots were offered, the total receipts being $22,615.10. At this sale a half eagle of 1822 in very fine condition sold for $2,165.00. Only two others of this date are known, one being in the U. S. mint at Philadelphia and the other owned by a prominent collector in Chicago.

The London Philatelic Exposition

From May 23d to June 1st an International Philatelic Exposition was held in the City of London at the Royal Horticultural Society's hall in Vincent's Square, near Westminster Abbey, and was by far the largest and most successful both in character of exhibits and attendance ever held.

The exposition was opened by the Earl of Crawford, who had been commissioned by His Royal Highness the Prince of Wales to perform that ceremony. Nearly four thousand persons visited the exposition, which contained the most valuable lot of stamps ever brought together under one roof. An approximate estimate of their value is difficult to make, but would undoubtedly run into the millions.

The Prince of Wales and his two sons, Prince George and Prince Albert of Wales, spent some time at the exposition, these members of the royal family being ardent stamp collectors and each having exhibits; the Prince of Wales's collection of Great Britain being awarded a bronze medal. The Prince also exhibited his magnificent collection of Mauritius, containing the one and two penny "Post Office," for the latter of which he is said to have paid the sum of $7,600.

The matchless collection of Hawaiians, exhibited by Henry J. Crocker, of San Francisco, was awarded a championship cup. This collection, which was shipped from San Francisco only a few days before the earthquake, contains a two cent "Missionary," one of the rarest stamps in the world. Mr. Crocker is said to have lost nearly $75,000 worth of stamps in the San Francisco disaster.

The collection of Great Britain, exhibited by the Earl of Crawford, was probably the finest shown from a philatelic standpoint, being marvelously complete and was awarded a championship cup.

Mr. John N. Luff, of New York, represented the United States on the Board of Judges of Awards.

Space will not permit us to go into further details regarding the wonderful exhibits, but the exposition was a splendid success, and the public attention directed to our hobby through the interest displayed by members of the royal family cannot fail to stimulate stamp collecting all over the world.

Stamp Inquiries

G. T. S.—All of the stamps you list are common and catalogue 1 and 2c except $5 Conveyance which lists 15c, 3c Telegraph 25c, and 2c black Jackson 6c. The last stamp you describe is from Bulgaria, issued in 1882 and is worth 2c. J. C. L.—Both your "stamps" are labels used to advertise expositions and have no value. J. G. T.—The "Basle" stamp is a Swiss revenue. The other two stamps are worth 2c each. W. R. T.—We are unable to identify your stamps from description. Send a drawing of it. H. K. P. Jr.—The three stamps are worth 5c. Ernest S.—U. S. stamps printed by the Continental Bank Note Co. from 1873 to 1879 are on hard, crisp paper; those printed by the American Bank Note Co. from 1879 to 1890 are on soft, porous paper. In 1882 the 1c, 3c, 6c and 10c stamps were re-engraved, which can readily be told by the lines of color of the background being almost solid; a stamp catalogue will also explain other differences. The 25c France surch. 1 piastre lists 2c.

Coin and Stamp Notes

A gold half dollar dated 1851 is worth $1.

A 50 cent piece coined in 1836, if it bears a milled edge, is worth from $2 upward.

If genuine, California gold half dollars dated 1854 are worth $1, and quarters, 75 cents.

A copper fifty-dollar gold pattern which sold at a sale in 1890 for $10.50, brought $50.

The second highest price of the sale, $1,050, was paid for an 1815 half eagle, which sold in 1883 for $54.

French five-franc pieces, Prussian reichthaler, and Swiss five-franc pieces are worth only face value.

Copper cents dated 1827, 1832, 1839, 1840, 1852, and 1854, and three-cent pieces dated 1853 are worth but face value.

An 1808 half cent is worth from 10 to 20 cents, and a half cent of 1807, if in very good condition, is worth about 50 cents.

For a quarter dollar of 1823, the rarest of coins of this denomination, $360 was paid. A specimen in fine condition sold in 1876 for $55.

A 15 cent black stamp, bearing Lincoln's picture, is worth $10 if unused; if canceled, it is worth but 50 cents. These stamps are of the 1862-66 issue.

It was not customary in the early days to put the value on United States gold coins, and many of these coins turned out from the mint up to 1840 bore no value.

A half-dollar of 1797, in good condition, was sold for $45 at the Davis sale. One of the same date brought $120 at the Smith sale; 3,918 of these were coined.

A 25-cent paper bill of the series of 1874, if in crisp condition, is worth from 50 to 75 cents. A fractional currency 50 cents of 1864 is worth only about 55 cents.

At the same sale in 1851 the buyer of the cent was laughed at for paying $5 for a proof 1838 pattern dollar. At a recent sale $205 was paid for an 1838 pattern dollar.

A cent of 1810 is worth from 5 to 25 cents, according to its condition. Coins from which the dates have been worn are rarely held at a premium, no matter what their variety.

A quarter of 1853 without arrow points is worth up to $4, depending upon how much it is worn; if it bears arrow points at either side of the date, it is worth just face value.

Gold dollars dated 1851, 1852, 1853 and 1855 are worth $1.75 each. $2.50 gold pieces dated 1836, 1845, and 1878 are worth just their face value, while those dated 1838 are worth $2.75. A $3 gold piece dated 1854 is worth $3.25.

One hundred and fifty dollars was paid for an 1879 twenty-dollar "goloid" pattern piece, of which it is said only three were struck. This coin brought $43 at the Davis sale in 1890.

The record figure of the Harlan P. Smith sale, which was held in Philadelphia not long ago, was $2,165, paid for a five dollar gold piece of 1822. This same coin sold for $900 at a sale in 1890.

In 1876 a half dime of 1802 in fine condition, of which there are only sixteen known, sold for $70. In 1890 this coin brought $170, while a specimen at the Smith sale of the same date brought $290.

At an auction of old coins in 1851 10 cents was paid for a 1793 chain cent. A cent of the same variety of the same year, but not in as good condition, sold two years ago at the Mills sale for $225.

A sharp and perfect specimen of the silver dollar of 1851, which sold in 1890 for $48, recently brought $85. There were 1,300 of these coins struck. A proof coin dated 1852, of which 1,100 were issued, sold for $75.

At the end of the Revolutionary War Continental currency bills were worth very little, one dollar in coin being worth 75 in paper. To a curiosity collector at the present time these bills are worth from 25 to 50 cents.

The flying eagle cent dated 1856 is held at a high premium because only a limited number were issued, but of those bearing the dates of 1857 and 1858 many thousands were put into circulation, and there is no premium on them.

A pattern cent dated 1853 is worth $8, and one dated 1851 is worth $5. The ordinary copper cent pieces of these dates are very common and are held at no premium. The pattern cents differ from those of regular issue.

It is supposed that there are in existence seven Confederate cents, struck in gold and inscribed "Confederate States of America," dated 1861. One recently brought $50. There are also fifty-five struck in copper, twelve in silver, and twelve in nickel.

A 30 cent brown stamp, representing Columbus at La Rabino, is worth 40 cents; a 15 cent green stamp of the same set, with Columbus announcing his discovery, is worth 30 cents, and a 10 cent gray stamp, with Columbus presenting natives, is worth 4 cents.

Several years ago there was quite a demand for Mexican Maximilian dollars and a good specimen was worth from $3 to $4. This demand on the part of coin collectors seems to have subsided, and the present value of this coin is about $1.25.

Gold pieces of the $2.50 denomination dated 1826, if in uncirculated condition, are worth about $100, and those dated 1863 are worth about $50; but the majority of the coins of this denomination are worth just a few cents more than face value.

A four-dollar gold piece of 1879 was disposed of at the Davis sale for $5.60. At a recent sale $255 was paid for one variety, while another fetched $55. Still another pattern four-dollar, or "Stella" gold piece, dated 1880, which differed but a trifle from the 1879 variety, brought $370, and another $280.

In no series of coins have there been more rapid or greater advances in value than in the list of half cents. A specimen of any one of the proof half cents dated from 1840 to 1849 could be bought as low as $4.50 in 1876. At the Smith sale they sold at prices ranging from $36 to $80, which was paid for a coin dated 1842, the rarest of this period.

Stamps, Coins, and Curios
The American Boy reaches easily 250,000 boys, every one of whom is or might become interested in stamp, coin, or curio collecting. What a field!

THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

FIRST PRIZE PHOTOGRAPH, BY PAUL FOURNIER, E. AURORA, N. Y.

Numbering Prints

To number albumen prints or entitle them effectually and distinctly write upon a dark part of the print with a steel pen and ink composed as follows: Iodide of Potassium 1 part; water, 2 parts. A short time after writing, the letters appear white and are permanent.—Ex.

Likes the Boy Photographer

Mrs. Verona E. Toman, of Lake City, Mich., pays us the following compliment: "I subscribed for THE AMERICAN BOY because I wanted the help I got out of the photographic department. Although it is intended for amateurs, those further advanced get a great many new and helpful ideas."

Preserving Chemicals

The following photographic chemicals should be kept in glass-stoppered bottles only: Ammonium bromide, carbonate and sulphocyanide, calcium chloride, ferric chloride, gold terchloride, potassium carbonate and hydrate, sodium carbonate, chloride, hydrate and sulphite. Sodium hyposulphite should never be kept in paper, but in covered jars in a dry place or in solution.—Ex.

Ventilation of Dark Rooms

It would seem a very simple and necessary precaution to provide a dark room with a ventilator, which can easily be done with an upright box about a foot deep and six inches square, having projecting on the inside thin pieces of tin or wood, these stopping the light, although admitting the air freely. If blackened inside, no light to hurt will enter the dark room.—Photographic Chronicle.

Our Prize Pictures

The late fall or early spring landscape by Paul Fournier, of East Aurora, to which this month's first prize was awarded, speaks for itself. It is not only excellent from a technical point of view, but shows great artistic ability. "Four of a Kind," by Joe Harbison, of Dayton, Ohio, appeals to us principally on account of its subject. What boy does not love kittens, even if he hates cats?

Printing From Broken Negatives

The broken negative has first fastened to it on the glass side, with adhesive strips around the edges, a clean piece of glass. This is done to keep the parts of the negative in place and prevent further injury. To print, simply place in contact with the front three or four thicknesses of onion-skin paper and print as usual. The number of thicknesses of paper necessary may be judged by placing in front of negative and looking through it. When the break is no longer visible, it is sufficient.—Am. Amateur Photographer.

Honorable Mention

The mail of this department was unusually large this month, for this time of the year, and contained many good photographs. The distinction conferred upon the following therefore, is an evidence of particular merit that should be accordingly appreciated: J. J. Hollis Abbot, J. A. Dupree, Jr., Robert Falge (for photo. entitled "Two Friends"), Robert C. Line, V. Lathrop, Arlington P. Gray, Harry F. Blanchard, M. H. Tardy, H. E. Greiner, Ashby A. Streeter, Nick Bruehl, H. W. Rockwood, Arthur A. Smock and Roy J. Conklin.

Current Comments

Geo. L. Detwiler—You would have received an honorable mention, if it had not been for a fault of your photograph that has been repeatedly pointed out in these columns. The forepart of your horse is larger than the hindpart, because it was nearer to the camera, whereas both parts should have been at the same distance from the apparatus. Wilbert Wenger—For a first attempt, your photograph is very good. Ernest A. Stifel—Your print of "The Bridge" lacks contrast and is rather flat; otherwise it is commendable. Perhaps Velox paper would enable you to obtain a better result. Harold C. Tuttle—Your photo. lacks detail.

Developing Formula

Solution No. 1—Water, 20 ounces; carbonate of soda, 2 ounces, and carbonate of potassium, 2 ounces. Solution No. 2—Water, 32 ounces, and sulphite of soda, 6 ounces. Solution No. 3—Water, 10 ounces, and potassium bromide, 1 ounce. For a properly exposed 4x5 plate, take: No. 1, ½-ounce; No. 2, 1½ ounces; water, 2 ounces, and pyro (dry), 4 grains. If overtimed, add a few drops of No. 3; if undertimed, increase the quantity of No. 1, but not to more than an ounce to this quantity of developer. If uncertain as to the timing, start with only a few drops of No. 1, adding by degrees as much as may be required. Should there be an apparent want of density, add more pyro.—Am. Amateur Phitographer.

SECOND PRIZE PHOTOGRAPH, BY JOE HARBISON, 209 GROSVENOR AV., DAYTON, O.

Intensifiers

There are some people who object to using the mercurous chloride intensifier on account of its exceedingly poisonous character. Intensification with copper is equally satisfactory, and the solutions used, though poisonous, are not quite as violent as the mercurous salts. The plate has first to be bleached in a solution made up of:

Copper sulphate	400 grs.
Potassium bromide	400 grs.
Hot water	4 oz.

This is allowed to cool before immersing the negative. When bleached, the plate is rinsed, and put in:

Silver nitrate	88 grs.
Water	2 oz.

Finally, it is thoroughly washed in running water.

Tinted Mounts

Instead of using various colored papers for margins in mounting prints, mounts themselves may be tinted by a very simple process by which any desired tint can be obtained. A mat is cut from any thin paper the size of the desired margin and placed in position on the mount. A solution of water-color of the tint required is prepared, and this is applied to the mount along the edge of the mat by means of a small pad of cotton. This pad should, however, be simply moist and not wet with the water-color. It is very rapidly and gently patted along the edge, and by going over the edge about three times the color will be found to be very evenly laid on. Of course it is only necessary to tint along the edge, as the rest will be covered by the print.—Camera Notes.

Queries and Answers

R. H. Stickney, Jr.—Prints from films you speak of are admissible in our contests. Julius F. Kotchever—Our contests are open to subscribers only. Henry Wislander—The Photographic Times is published in New York. The addresses of the other periodicals you mention are unknown to the editor. A formula for sensitizing solution you want was published in the June, 1905, issue; we cannot waste space by repeating it. Albert Wallace—Tank development is entirely satisfactory when the exposure is correct. Karl E. Miller—Personally the editor prefers a plate camera. The film camera presents some advantages, however, such as lightness and the fact that it can be loaded in broad daylight.

'Twasn't Running

Estella Best, Hurdsfield, North Dakota, sends THE AMERICAN BOY the following amusing anecdote: A certain gentleman took pleasure in springing questions on children he met and noting their answers, which sometimes were very funny. On the street one morning he met a small, freckle-faced, squint-eyed newsboy, and adressed him as follows:

"Say, sonny, can you tell me what time it is by your nose?"

Turning his squint eyes up at his questioner, without the least hesitation, he replied:

"No, sir, can't. 'Tain't running today."

How to Make Dry Batteries

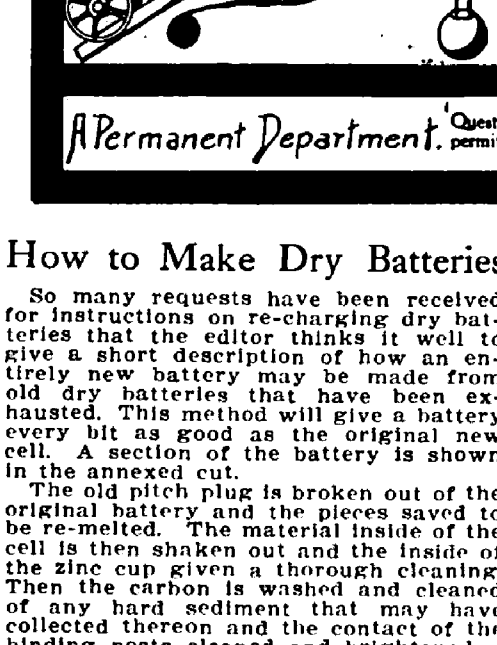
So many requests have been received for instructions on re-charging dry batteries that the editor thinks it well to give a short description of how an entirely new battery may be made from old dry batteries that have been exhausted. This method will give a battery every bit as good as the original new cell. A section of the battery is shown in the annexed cut.

The old pitch plug is broken out of the original battery and the pieces saved to be re-melted. The material inside of the cell is then shaken out and the inside of the zinc cup given a thorough cleaning. Then the carbon is washed and cleaned of any hard sediment that may have collected thereon and the contact of the binding posts cleaned and brightened.

A paste is then made up according to the following formula:

1 part of sal ammoniac,
1 part of chloride of zinc,
3 parts plaster of Paris,
87 hundredths parts wheat flour,
2 parts water.

A wooden plug or cylinder somewhat larger in diameter than the width of the carbon is then inserted in the center of the zinc shell and the above paste firmly packed in about it. While the above solution can be poured in readily, it sets very quickly, becoming stiff enough to stand while the plunger is being withdrawn. This leaves a space inside of the dry cell a little larger in diameter than the carbon. The carbon is now inserted



in this hole and the surrounding space is filled with another mixture composed of the following:

Sal ammoniac,	1 part
Chloride of Zinc,	1 part
Peroxide of Manganese,	1 part
Granular Carbon,	1 part
Plaster of Paris,	3 parts
Flour,	1 part
Water,	2 parts

These are thoroughly mixed and poured into the space about the carbon. The pitch which was taken off of the original cell is then melted and poured back over the top, thoroughly sealing it and preventing evaporation.

A very small piece of rye straw may be inserted in the top of the mixture before the pitch is poured in. This straw could then be withdrawn, leaving a very small vent for the escape of gases which are generated within the cell during action. This will give a new battery with an E. M. F. of about 1.4 volts and an internal resistance of .3 of an ohm.

One advantage of this type of cell is that it gives practically a constant output throughout its life. The mixture with which these cells are filled is inexpensive and quite a number can be refilled at will.

The granular carbon spoken of may be had by crushing up some old electric light or battery carbons. The pieces should be about the size of kernels of corn, so that they will lie as closely together as possible. Dry batteries made according to this formula will give the very best of service, and they may be recharged from time to time, until the zinc shell is completely worn away.

CLEVER WORK WITH THE POCKET KNIFE

By JOHN L. DOUGHENY

Other articles by Mr. Dougheny have appeared in the July, September, October, November and December numbers of 1904; and in the January, February, August, September, October and December numbers of 1905.

No. 12—The Ball Charm

I DO NOT believe in whittling work which puts an extraordinary strain on one's eyes or patience, and for that reason have never exploited designs of that character. I am against the idea of spending six months or a year in carving out a trinket which has little if any intrinsic value. In a Chinese museum there is a curio that shows the marvelous ingenuity of human fingers. It looks like a wooden sphere the size of a baseball. On each end or pole there is a hole in which a pencil would snugly fit. Inside the wooden ball was another, inside that was a third ball and inside the third was a fourth, all perfectly fashioned. It is the work of a man who had been sentenced to prison for life and represents forty years of constant, tedious labor. He had tried to make a thousand before he succeeded in making one. I would call his life a lost one because the thing he produced did the world no good. I want to show you the difference between this kind of effort and the kind I have advocated in this department for the last year. I believe strongly in problem whittling, the kind that starts out as difficult as a Chinese puzzle and ends up as plain as "A B C." For a shut-in day when you are tired of reading and crave for action nothing can take the place of wood carving.

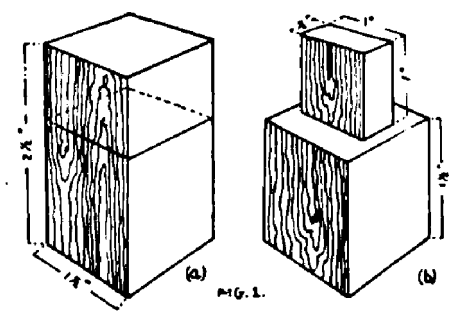


FIG. 1.

The job we will discuss today is one that you can carry around in your pocket and work on whenever the fancy strikes you. It looks really impossible at first glance, but if you study the drawings and text it all becomes surprisingly simple.

We will begin work on a piece of soft pine one and a half inches square and two and a half inches long. Our first duty is to divide it into two parts by drawing a line across the grain on the four sides one inch from the end, as shown in part "a," Fig. 1. After having carefully marked it out cut the top or smaller division down till the end is a rectangle one-half inch by one inch.

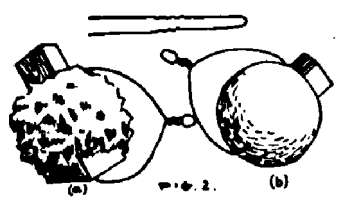

FIG. 2.

This means that you will shave off the front face and back to a depth of three-fourths of an inch and the sides only one-half inch. Part "b," Fig. 1, clearly illustrates the appearance of the block after this first cutting is done. We will now devote our attention to the lower or larger section. We know that it is to be a ball, so we will proceed to make it spherical. This sounds easy, but in reality it is the most difficult part of the whole job. We must go about it slowly, cutting off small splinters and measuring every minute or so. The tool used to measure spheres resembles ice tongs and is called calipers. We can bend the ever useful hairpin into shape to do for this occasion. Fig. 2 shows the home-made calipers and the method of measuring with them. Gauge the end one inch apart and pass the ball between them, turning it slowly as you do so. If while passing through it just barely touches the ends of the hairpin it is right size, but if it has to be forced through, it of course, must be reduced in size. When we have gotten it fairly round we can finish neatly with sandpaper. Now out of the flat pieces on top we will make a ring and more than that we will have the ring connected inseparably with the ball. Begin by boring a hole through the very center of the flat piece, gradually making it larger until only a margin one-quarter of an inch wide remains. Now for the ticklish part. With a small blade or sharp file point dig right through the ball, going round and round that section of the

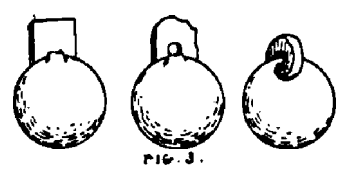

FIG. 3.

ring which passes through it (the ball). When the tool emerges out of the other side the ring will be free to move like the link of a chain. It is slow work, the splinters removed being like sawdust. When you have loosened the ring or swivel you can count yourself a whittler of the very first water. Pull the rough part through till you can get at it and smooth with a file or sandpaper. Avoid the temptation of making it too slender and delicate. Fig. 3 pictures this process of making the ring and ball which we have been describing. Note the way the grain of the wood runs. After finishing, it is a good idea to soak the wood in oil or turpentine. This piece should not be handled too frequently, for it is fragile. Fig. 4 shows the complete design. Any boy who tries can whittle it out in say a week, working an hour or two every day. It is a pretty ornament, a good test of your skill and patience and involves an important principle of this kind of work. I would advise you to try it even if you have never been interested in whittling before. Surprise your friends and perhaps yourself with ability you never knew you had.

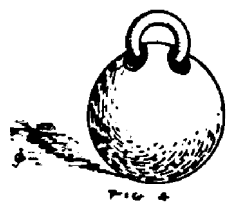

FIG. 4.

QUERY BOX

Q. What is the best kind of a lightning arrester for a telegraph key that runs between my chum's house and mine? The power is furnished by sixteen dry batteries and one Le Clanche cell. It refuses to operate. Why? Is not the power of about four volts sufficient?—L. L. W., Iowa Falls, Iowa.

A. The best lightning arrester is a small gap between your line wire and the ground wire, which is connected with a water pipe, or else a large plate. We do not understand why sixteen dry batteries should not operate the line, without there is some very high resistance through which you are working. You do not give us the length of the line, but sixteen dry batteries should furnish at least twenty-five volts, and that would be more than sufficient to operate the ordinary telegraph line. Are you sure that your batteries are connected properly?

Q. One of my friends and I are going to put up a wireless telegraph following the directions given by you in the January number of THE AMERICAN BOY, 1905, and would like to ask you a few questions about it. 1. If No. 36 insulated copper wire is used for the secondary of the induction coil, would it be necessary, or if not, would it help, to wrap each layer with paper? 2. Would filings from a silver coin, as dime, dollar, or a nickel, work all right on a line a quarter of a mile long, instead of filings from nickel and silver wire, as you suggest, all else being made the same? 3. How long a spark should the induction coil give, under favorable conditions, with four or five dry batteries?—E. G. A., Rockwell City, Iowa.

A. If No. 36 insulated copper wire is used it will be necessary to either wind the coil in sections or use paper between each layer, as described for the bare wire. Yes. In regard to the last question, there are so many conditions arising from the construction of the coil that it is almost impossible to predict what any coil will do with four or five dry batteries. It would be better to try it out, as one set of dry batteries may be much stronger than another, and two coils made from the same description may vary so much in workmanship that it would materially affect the spark.

WORKSHOP NOTES

Under This Heading Will be Given Various Useful Schemes and Formulas That Will Materially Assist the Amateur in his Experimental Work

6. **To drill holes in glass.**—Glass plates and bottles may be drilled quite easily in the following manner: The drill to be used should first be hardened by heating the point to a bright cherry-red and suddenly plunging it into a basin of cold salt water. This will render the drill extremely hard. While drilling keep the drill moist with a solution of camphor dissolved in turpentine. With an ordinary breast drill a hole may be cut in a glass plate in a very short time. When drilling, however, always have a block of hard wood directly under the point of the drill, and before breaking through, turn the plate over and drill from the opposite side. A flat drill is better for this work than a twist drill. Grind the drill frequently as much of its cutting ability depends on a keen edge.

7. **To cut glass or trim the edges of a plate.**—When only a very narrow strip is to be cut off the edge of a sheet or pane, this may frequently be accomplished by cutting with a pair of ordinary shears, the glass being held beneath a tub of water. The water serves to act as a cushion to prevent cracks starting across the plate. An old three-cornered file, hardened as described in note 6 and ground to a keen edge, will cut glass very well when held as any glass cutter and guided by a straight edge. It is a keen edge that cuts and the tool must be so held that a clean, "singing" cut is made and not a mere scratch.

8. **Varnish for preventing rust on tools.**—Melt 2 ounces of tallow and 1 ounce of resin together, strain thoroughly while hot to remove specks. Apply a slight coat to your tools with a brush and it will keep off rust for any length of time.

QUERY BOX—Continued.

Q. I have been reading THE AMERICAN BOY with much interest for the past three years, and was very much pleased when the electrical department was added. I have gotten more practical information from the electrical pages of THE AMERICAN BOY since January, 1905, than from any other source. The construction of the apparatus has been very interesting and I would like to ask a few questions, as follows: 1. Please send me the gauges of the enclosed wires. 2. Will a given current at a given voltage operate a motor as well as the same current at a higher voltage? 3. What is the correct "set" of the needle of an astatic galvanometer, parallel with or at right angles to the wire on the coils? 4. I have made the plunge battery, using three carbons from Columbia Dry cells and two amalgamated Le Clanche stick zincs to each cell, using rectangular jars 6½"x5" x2½", with twenty-five ounces of solution to each cell. When fresh, two cells operate Mr. Crowell's motor finely, giving an E. M. F. of four volts, but the electrolyte gradually becomes lifeless, the cell polarizes rapidly, and in ten days after charging the cells are useless. Can you suggest any remedy? I use the battery but very little. 5. The needle of a voltmeter swings a certain distance with an E. M. F. of one volt. Will it swing just twice as far with a current of two volts? If not, why? 6. Will it injure a 3½ volt lamp to use it on an eight-volt current? 7. In the last issue of THE AMERICAN BOY you stated that a current of six amperes would melt No. 36 wire. I have had my voltmeter on a seven ampere circuit at 1½ volts without injury. Please explain. 8. How can a motor be reversed and what style of switch must be used? 9. Could I build a dynamo which could be operated by a small water-wheel and furnish enough current for experimental purposes? The current would have to be carried about three hundred yards. What size line wire should be used? I would use a water pipe line for the return. 10. On a five ohm telegraph instrument is each magnet wound to five ohms or are both taken together?—D. S. K., Winona, Ohio.

Ans. The size of the wires enclosed were 15, 21 and 36-gauge. The power derived from any current is the product of the current in amperes multiplied by the pressure in volts; therefore, if you had a given current, the higher the voltage, the greater would be the power delivered. The needle is an astatic galvanometer should always be parallel when at rest to the wire in the coils. As stated in the September issue, the electrolyte of the bichromate cells will gradually wear out, but we cannot understand why the cells should polarize, as the presence of the bichromate of potash tends to prevent this. Without you have some short circuit or leave your elements in the cells, we cannot see why they should be run out in ten days, if you do not use them in the meantime. It is only the fact that the acid has all been neutralized that causes the cell to become lifeless. If you will add more sulphuric acid to the solution you will find that the cell will again take up its work, but owing to the fact that the products of decomposition are still in the solution, it will not work as well or give as high an E. M. F. as a fresh solution. Always lift the elements from the cells after you are through using them. The needle of a voltmeter will not necessarily swing twice as far with a current of two volts, owing to peculiarities in construction. It is for this reason that the scale for these instruments must always be calibrated from standard instruments. If a 3½-volt lamp was put on an 8-volt circuit, in all probability the filiment would be burned out. You have evidently had your voltmeter parallel with your 7-ampere circuit at 1½ volts. You cannot force 6 amperes of current through a No. 36 wire with 1½ volts pressure. If your instrument had been connected in series with this circuit, it would have allowed only a small section of the current to pass through it. In order that a motor may be reversed by a switch, it is necessary to have the connections so arranged that it will reverse the direction of the current flow, in the armature, while that in the field remains constant. Yes, a small dynamo could be built to be operated by a water wheel, which would furnish enough current for experimental purposes, but you do not state the amount of water power that you have. In transmitting current for any great distance it is always wise to use as large wire as possible, as the resistance is then cut down and consequently the loss of current is less. The amount of power that you could get from your dynamo would depend entirely on the amount of water you have to run it. When a telegraph instrument is spoken of as having a resistance of five ohms, it refers to the resistance of the magnets taken together.

Q. I have six carbon posts of which three are 5/16" thick and 5½" long by 1½" wide. The others are from old dry batteries. Do you think I could use them in the plunge battery described in September's issue? How could I bore four holes in a piece of slate? Could the motor described in December's issue be made into a dynamo? If so, how? Will you give me an illustration showing how to connect twenty batteries in such manner as to give any voltage?—E. G. B., Hackensack, N. Y.

A. The old posts that you have could be used in the plunge battery described in the September issue. You can bore holes through a piece of slate with an ordinary twist drill, wet with turpentine. The drill should be hardened by heating red hot and dipping the point into water. The motor described in the December issue cannot be made into a dynamo. Your question regarding the connection of twenty batteries, so as to give any voltage, is rather ambiguous. The greatest voltage that you could get would be to connect them in series, which would give you in the neighborhood of thirty to forty volts. If you connect them in parallel, you will get only the voltage of one, but with the output of the entire twenty, which might amount, with fresh cells, and a low resistance, to about twenty amperes.

Chemistry for Boys

Lesson IV.—Nitrogen

THE STUDY of the element nitrogen is rendered difficult owing to the comparatively few experiments that may be performed by the amateur. In the first place, phosphorus, the substance usually used for generating nitrogen, is extremely poisonous and should never be touched with the fingers but rather with a pair of tweezers. Always keep any phosphorus you may have under water—fill a wide mouth bottle with water and keep tightly corked. If these instructions are followed no danger need be feared.

Nitrogen is a gas, like oxygen and hydrogen, but it is very inert, and remains in the free or uncombined state with great persistency. It occurs free in the atmosphere of which it forms about four-fifths by volume, and 77 per cent by weight. The balance consists of oxygen, the life-giving element; were it not for the fact that the oxygen is diluted with nitrogen, it (the oxygen) would soon consume our bodies and cause violent conflagration. We saw how readily a fine steel wire burned in pure oxygen,—imagine then, how readily houses would burn.

It cannot be distinguished by sight, smell or taste. It possesses no poisonous properties and the atmosphere is simply a mechanical mixture of oxygen and nitrogen gases. It does combine indirectly with many other substances to form valuable compounds. With hydrogen it forms ammonia, or what is commonly known as "hartshorn." With potassium and oxygen it forms saltpetre, or nitre, from which we get our "sweet spirits of nitre."

If you can get a small piece of phosphorus at the druggist's, the following experiment can be tried. Fill a deep dish or bowl with water. Fasten to the top of a small piece of cork or wood a piece of tin—the whole piece need not be over one inch square. Place this in the water, wood down, and on the top place a small piece of phosphorus about the size of a pea. Have a dry glass jar ready, and, after touching the phosphorus with a red-hot wire, invert the jar over the burning lump and lower it into the water. The jar will be quickly filled with dense white fumes, caused by the combination of the phosphorus with the oxygen of the air. These will settle in a few minutes and the jar will then contain nearly pure nitrogen.

Now slip a piece of glass over the mouth of the jar while still under water, and carefully removing the jar, stand upright on the table.

Fasten a match to a wire, ignite the match and quickly lower it into the jar, moving the glass cover slightly to one side. Notice that the match is extinguished almost instantly. Notice that the gas neither burns itself nor supports combustion.

While there are very few experiments with pure nitrogen, when combined with other elements, some very interesting results are obtained. Nitrogen and hydrogen combine to form

AMMONIA.

Perhaps you have noticed the strong, pungent odor given off by stables and manure piles—this is ammonia formed by decaying vegetable and animal matter. The clear, white liquid that we buy in the stores under the name of "aqua ammonia" or just "ammonia," is simply this gas dissolved in water.

Place a piece of lime (or better, powdered lime) in one hand, and a similar quantity of sal-ammoniac in the other; rub the two together and notice the strong odor of ammonia given off. Sal-ammoniac is the chloride of ammonia and when the two are rubbed together as above, the lime combines with the chlorine, setting free the ammonia in the form of a gas which gives rise to the odor.

If you have none already, procure some hydrochloric (muriatic) acid (should be kept in a rubber stoppered bottle). Dip a small stick into a solution of ammonia and hold over the mouth of the hydrochloric acid bottle—notice the dense white fumes that are given off. The fumes are ammonium chloride, or in other words, sal-ammoniac. You will frequently notice that the necks of the ammonia and hydrochloric acid bottles are covered with a white coating. This is caused by the union of traces of ammonia or chlorine present in the air.

Prepare the apparatus shown in Fig. 4. In the test-tube over the alcohol lamp place a paste made of two parts chloride of ammonium and one part of quick-lime, with sufficient water to make a thin paste. Lead a bent glass tube down into a second tube of clear water as shown. Now heat the first tube very slowly so that the gas may not be given off too rapidly. When all the gas has been driven off and bubbles cease to come over into the second tube, lift the first test-tube with its glass tube attached clear of the water in the second tube, and also the flame.

Now smell the solution in the second tube—you will find it a strong solution of ammonia, exactly what you purchase at the stores in large bottles. The ammonia of the ammonium chloride has been driven off and dissolved in the water. The solution remaining in the first tube is chloride of lime.

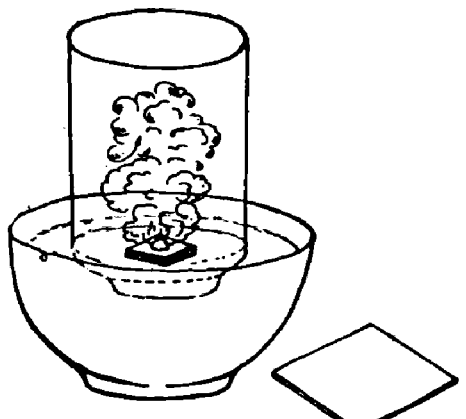

Fig 1. Preparing nitrogen by burning phosphorus

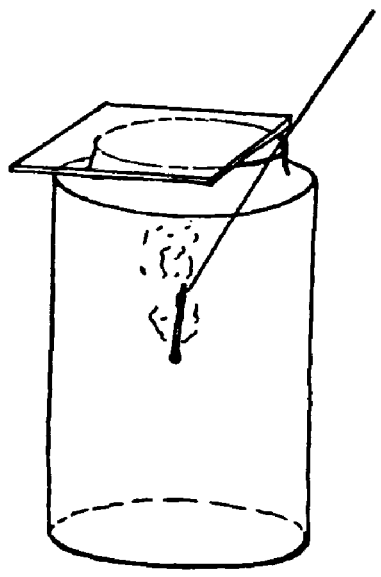

Fig 2. Nitrogen is not a supporter of combustion.

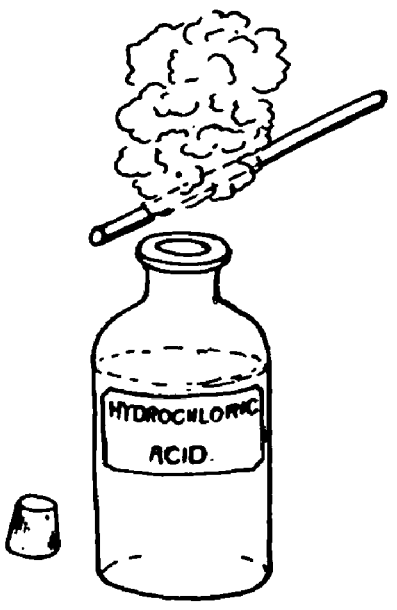

Fig 3. Combination of chlorine and ammonia.

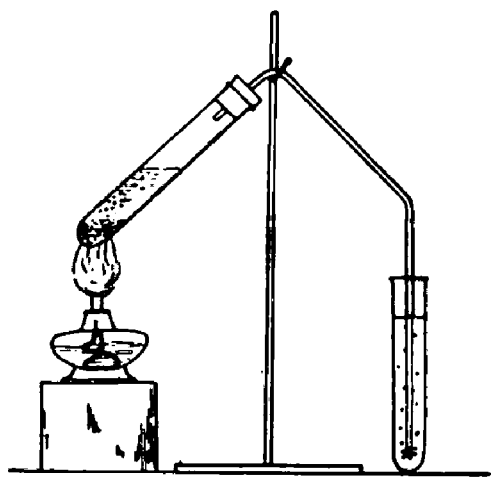

Fig 4 Making Aqua Ammonia

He Never Had YOUR Chance

In this man's day there was little chance for the chap who started out in life as a workman with no special education. He was foredoomed to work for small wages until finally disqualified by old age.

With you it is different. If you are not getting ahead as you should in your chosen occupation, the INTERNATIONAL CORRESPONDENCE SCHOOLS, with their modern system of training by mail, will qualify you in the higher branches of that occupation. The coupon below—the sending of which costs but a two-cent stamp—is the first step toward making

YOUR Success Certain

If you are just about to enter an occupation, I. C. S. training will ground you thoroughly in every principle of it. If you have been unfortunate in choosing a calling that is uncongenial, the I. C. S. will qualify you for one suited to your tastes and ability.

You do not leave home to grasp this opportunity. You do not leave your present employment, unless you leave it for something better. **You do not make any sacrifice whatever.** To learn how this can be done in YOUR case, fill out the coupon and mail it to-day.

Can You Draw This?

Copy it as well as you can, send to us, and we will give you a handsome portfolio of drawings by the noted artist, Charles Lederer. A course of lessons by mail, at home, may qualify you to earn a good salary as an artist and cartoonist. Instruction individual and exactly adapted to your talent.

The LEDERER SCHOOL OF DRAWING
Chattanooga, Tenn.

JOURNALISM

Bright young men and women, with a taste for writing, should cultivate it. The field of Journalism offers to ambitious students, money, fame, power. We train *by mail* to do every branch of literary work for newspaper and magazine. Write for "The How of It." Free.

SPRAGUE CORRESPONDENCE SCHOOL OF JOURNALISM,
503 Majestic Building, Detroit, Mich.

Is Doing Some Experimenting

Soddy, Tenn., May 26th, 1906.

Dear Editor: I have been noticing the experiments that the readers of THE AMERICAN BOY have been doing, and have been doing some of it myself, as follows:

I have taken a pocket flash light and connected copper wire from the battery under my bed to the small bulb of the flash light in such a way that by putting in a switch at my bed and the bulb in front of the clock on a stationary stand, that I am able at any time of the night to tell what time it is by cutting in the switch.

As this may interest some of my boy readers I would like for you to publish this account of my arrangement and let them try their hand at it if they want to.

I am getting some good advice as well as good points on many things that are interesting to me, and I wish to thank you for the good things that you say in the paper for us boys.

I can hardly wait for my paper to come, and wish they came oftener than they do.

Yours truly,
EDDIE E. COBLEIGH.

NOTICE

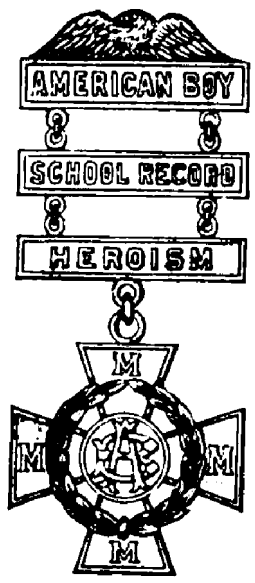
As many requests are being made for the January and February (1905) numbers of THE AMERICAN BOY, which contained articles on "How Two Boys Built a Wireless Telegraph," we have to announce that the February number is exhausted, and that but a few copies of the January number remain on hand.

The American Boy Legion of Honor

COMPOSED OF BOYS WHO STAND AT THE HEAD OF THEIR CLASSES IN SCHOOL AND BOYS WHO HAVE DONE CONSPICUOUS ACTS OF HEROISM

Who Are Eligible

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school ending on a date since September 1st, 1905, have stood at the head of their classes, taking the average of all their study grades for the term, and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts. Address all letters relating to the Legion of Honor to Wm. C. Sprague, Chief Counselor, Detroit, Mich.



Division of the Legion Into Chapters

Every two hundred boys in the Legion constitute a chapter at the head of which stands a Counselor. The Counselor will be a prominent educator who agrees to stand as counselor and advisor to the two hundred Legion of Honor boys under him. The first chapter is now forming and will be known as "The Shepardson Chapter."

The Shepardson Chapter (Chapter 1) of The American Boy Legion of Honor

Counselor: Professor Francis W. Shepardson, LL.D., Dean of the Senior Colleges of the University of Chicago

Address (with postage for reply) care of The American Boy, Detroit, Mich.

Note: S. R. means school record; H. means heroism.

How They Won the Badge

John Breene, Oil City, Pennsylvania, received the highest average in the fifth grade for the school year just ended.

John Wentworth, a nine-year-old boy living in Pacific Grove, California, stood at the head of his class for the year ended June 1st.

Harry Butcher, an eighth grade pupil of the Solomon, Kansas, schools, has been neither absent nor tardy since February 1, 1901.

Philip A. Hayden, Milford, New Hampshire, stood at the head of his class in the Federal Hill School for the term ended June 15th.

Row Binns, West Olive, Michigan, received the highest average of any boy in the eighth grade during the term of school just ended.

Wilbur K. Miller, a thirteen-year-old boy of Owensboro, Kentucky, won an average of 98% during the nine months' school term ended May 25th. Wilbur is in the seventh grade.

Coy Bour, a pupil in the A fifth grade of the Broadway School, Sedalia, Missouri, won first rank in his class for the term ended June 1st.

Walter Fesler, of Riverside, Iowa, has been neither absent nor tardy for the last five years, and his work has been excellent during that time.

Reed Garman, a sophomore in the High School of Kewanna, Indiana, has won first rank in his class, receiving a yearly average of 99⅛% in all studies.

Carl J. Lord, of Randolph, Nebraska, has not been absent or tardy for the last five years, including his eighth grade year and the four years of high school.

Thaddeus Jones, Trenton, Missouri, received the highest average in his class (98 2-10%) for the year 1905-'06. Thaddeus is eleven years old, and is in the seventh grade.

Vern Snyder, Waco, Ohio, has done good work throughout the school year from September 5th to June 6th, having stood at the head of his class the entire time.

A term average of 99.7% is very nearly "the limit." This was secured by Reuben Horchow, of Portsmouth, Ohio, who has just been promoted from the fifth to the sixth grade.

Reuben Ransom, of Atkinson, Illinois, received the highest average in the seventh grade for the year ended June 11th. He has not been absent or tardy during the school year.

Just Between Ourselves

Dear Boys:

I wish this month to call your attention to something of considerable importance in connection with one of our regular departments—that devoted to THE AMERICAN BOY LEGION OF HONOR.

About a year ago we decided to confer on boys who stood, for a term, at the head of their classes and such as proved themselves by some act of heroism to be worthy of distinction, a badge to be known as the Legion of Honor Badge. A design for the badge was selected, a small stock of badges was laid in, and the plan introduced to our readers by a few paragraphs in one of our last summer numbers.

The plan further included the enrollment of the boys who had won badges in what was to be known as THE AMERICAN BOY LEGION OF HONOR, a sort of organization without constitution and without officers, and further, the publishing in these pages of the names of the Legion of Honor boys, in each case for twelve numbers, or a year.

At first, few applications for badges came in, either through indifference or modesty on the part of teachers, parents, or the boys themselves; a little later, the applications became more frequent, until now, not a day passes but one, two, three, and often as many as five applications come from boys, accompanied by certificates from teachers, claiming the Legion of Honor badge.

At this writing the names appearing in this number of the paper and those that have come in since it went to press number about 200. We now confidently expect that, with the exception of the summer months when schools are not in session, we shall receive from 100 to 200 names a month.

Soon the question arose, what about this Legion of Honor. Are we going to award badges and publish the names and there let it end? Is there not something more we can do for these fine young fellows, each of whom has been a top-notcher in his class or has shown himself brave and self-sacrificing?

Here, for instance, are 200 boys, each a prizewinner, each a boy with something good in him to distinguish him above his fellows. Are we going to confer on these boys a mere badge and public mention and then lose sight of them? Many of them are poor boys to whom this distinction means much in their lives of want and self-sacrifice; many of them are backwoods, country boys who in their simple, homely surroundings find little opportunity to make themselves known and felt; many of them, may be, are rich boys, city boys, hampered by the unfavorable surroundings that city life and riches bring to a boy. These boys are making a fine, manly start in life. But a start is not all. Many a first boy in his class has turned out to be a last man in the race for honors in after life. Many a boy, for lack of encouragement, counsel, example, has seen the only proud day of his life when in school he took first honors.

Then the thought came, may we not do something to help these boys remain prizewinners right through. Many of them, if this is to be so, will need advice, counsel, wise direction. Scores of these boys have good mothers and fathers, but every good mother and father knows that there are times when his counsel needs to be supplemented by that of another. You boys know, too, that you are slower sometimes to take the advice of father and mother than of some one else. Then there are scores of these honor boys whose fathers and mothers do not feel competent to advise, and in some cases they are right in so feeling. There are other cases where parents are too lazy, or too busy, or too ignorant, or too indifferent, or too vicious—shall we say it?—to even try to advise in right directions. Nothing is more common than the sight of an Honor boy emerging from surroundings most unwholesome, where everything tends to discourage and weaken him. It may be from a home of luxury and ease, or a home of abject poverty and grinding toil.

Well, what of it all? What could we do? One thing was certain, we could not get the time, even if we were wise enough and good enough, to act as guide and counselor to 200 boys, not to speak of the hundreds that will be coming in as the months go by. If the task is to be undertaken, we must find others to do it, and these others must be good men and true; and they must have the spirit of helpfulness and the willingness to assist these boys without expectation of reward save in the pleasure that always comes from helping others. They must be, themselves, successful men, and they must know enough of boys and of life to be able to advise safely. They must above all be men whom parents and teachers can respect and rely on. This much settled, we set about finding the men.

In the nature of things one man cannot be expected to give the time necessary to counseling many boys. Any one who knows boys knows that they can ask more questions in a minute than a man can answer in a week. It is therefore necessary to divide the Legion of Honor into sections, with a counselor for each section. In doing this we have decided to call the sections "chapters," and name each chapter after its counselor. At first thought it might seem that 200 boys are a good many for one chapter, and for one counselor to look after. Perhaps this will prove true in fact. Nevertheless, we have thought best at the beginning to divide the Legion into chapters of 200 boys each. The first chapter is now forming, and with the publication of the September number of THE AMERICAN BOY it will have been completed, for if you will count the number of boys in the chapter as named on another page of this paper, you will find that already nearly 200 boys are enrolled.

I feel that we have been particularly fortunate in obtaining as counselor for the first chapter Professor Francis W. Shepardson, LL. D., Dean of the Senior Colleges of the University of Chicago. When I called upon him to act in this capacity, he expressed fear that it would entail too much of a drain upon his time and strength. We assured him that we knew the boys would not ask him trivial questions, and we appealed to his well-known interest in boys and his friendship for us, urging that he could do no greater service to his fellowmen than in standing thus as the counselor of 200 fine, ambitious boys who have proven that they deserve somebody's best service in their behalf. And so he consented.

To introduce you to Professor Shepardson, let us tell you what we know of him personally. When we first became acquainted with him he was a student in the Preparatory Department of Denison University at Granville, Ohio, under the instruction of the late William R. Harper, then dean of that department; afterwards professor at Yale, and still later, president of the University of Chicago—one of the greatest educators that ever lived. He was then a good student, a good ball player, and a good fellow. I knew him for four years intimately, being associated with him in the literary society, the college fraternity, and the social and intellectual life of the college. After graduating with high honors at Denison, he was called to the University of Chicago, where he soon rose to the position of secretary to the president—perhaps the closest and most intimate relationship with the eminent Dr. Harper that any one in the university held. Afterwards he was given a professorship and made dean of the Senior Colleges. Only recently his Alma Mater, Denison University, conferred upon him the degree of LL. D. Professor Shepardson is the son of Rev. Daniel Shepardson, whose name is known and honored throughout the entire state of Ohio as that of the founder and president of a school for girls at Granville, Ohio, which on his death he willed to the Baptist denomination of that state, and which later became a component part of Denison University. We can imagine for a boy no better adviser than Francis W. Shepardson, who, although now a man of years and honors, is still a boy in heart. The first chapter then will be known as the SHEPARDSON CHAPTER OF THE AMERICAN BOY LEGION OF HONOR. Only such boys as are named in that chapter will be privileged to consult with Professor Shepardson.

Beginning with the October number we shall doubtless have the first names for the second chapter, whose adviser and counselor we have not yet selected. We have in mind, however, the name of a good man, an educator, who will fill the bill in every particular.

We congratulate ourselves upon inaugurating a scheme that will meet with the approval of every reader of THE AMERICAN BOY and will find hearty support, particularly with the boys who are fortunate enough to become members of the Legion.

It is not every boy who is an honor boy in his school. But every boy can try to be. This enterprise of ours ought to inspire every boy reader of the paper with a desire to stand at the head of his class during the coming term of school, and thus become a member of the Legion of Honor, and entitled to the privileges we have outlined. We ask the co-operation of parents and teachers in this effort we are making to better the scholarship of the boys and reward them with something more than mere praise.

Very sincerely,

WM. C. SPRAGUE, Editor.

WHY I AM PROUD OF MY STATE

Robert W. Shackleford, Tallahassee, Florida, wins the $5 prize for the best essay on Florida, and we are pleased to give honorable mention to the following boys: Church Anderson, Jr., Jacksonville; L. Sydnor Laffitte, Lloyd; and Guy Ragan, Laurel.

Very good essays were received from Elon A. Rood, Max M. Fishel, Beverley Blake, H. C. Whiteman, Jr., Guilford C. Taylor, Paul Rader, O. D. Wetherell, Jr., R. Lee Goulding, W. Stanton Walker, M. C. Cooper, Theo. H. Demro, Woodward F. Barnwell, Edward F. De Cottes, Bennett King, Lorenzo D. Futch, Eric Reid, T. D. Lancaster, Jr., Fred Revels, Harlan G. Tracy, Goodwin P. Graham, Floyd E. Griner, Philip S. May, Ray Dobarganes, Malvern McArthur, Lloyd Blanton, L. Walter Benjamin, and Louis Snedigar.

First as a subject of pride with many of the boys came Florida's climate, which is described as being a delight to all who visit "the land of flowers" and a source of health to many invalids. Many essays contain a reference to the Spanish soldier, Ponce de Leon, who started out to find the Fountain of Youth and found instead the beautiful land of Florida on Easter Sunday, givivng it the name "Pascua Florida," which means "Flowery Easter." Florida contains the oldest city in the United States, St. Augustine, founded in 1565. There are more than 1,200 lakes, the largest being Lake Okechobee, which covers an area of over 1,000 square miles. There are great forests of pine, cypress, cedar, live oak and magnolia. The foremost educational institutions are the State University, the State College for Women, the Normal College, Rollins College, South Florida Military and Educational Institute, and Stetson University. Tampa, Pensacola, Jacksonville, and Key West are important shipping ports. Florida has 1,350 miles of seacoast, 3,000 miles of railroads, and a population of about 600,000. The water of the Silver Spring, five miles from Ocala, is said to be the clearest in the world. A small coin dropped into the spring to a depth of from sixty to eighty feet, can be seen as it rests on the bottom. Pineapples, bananas, guavas, avacadas, mangoes and other tropical fruits are raised in large quantities in the southern part of the state, and during the whole year vegetables of all kinds are raised and shipped by train-loads to the important markets of the North. Each year Florida produces $800,000 worth of sponges, $360,000 worth of fish and oysters, $4,000,000 worth of oranges, lemons, limes and pineapples, and $200,000 worth of rice. Famous automobile races are held annually on the broad beaches of hard, white sand at Ormond-Daytona. An effort is being made to drain the Everglades, in the southern part of the state, and when this is done it will almost double the resources of Florida. The mineral water found at Orange City took the first premium at the World's Fair at St. Louis, as being the best in the world. Many people go to Florida each winter for the fishing and hunting found in the rivers and forests. Florida contains a large part of the world's supply of phosphate; its other minerals are kaolin and marl. The Hotel Royal Ponciana, at Palm Beach, is the largest hotel in the world. Florida is the largest peninsula belonging to the United States, excepting Alaska. Stock-raising is an important industry. Florida produces nearly one-third of the world's supply of sea-island cotton; tobacco, corn and sugar are also principal productions. Kirk Munroe, the famous writer of boys' stories, lives in Florida.

One boy is sure that a mere description cannot do Florida justice; it must be seen to be appreciated. Another thinks that any one who could lie under the pines on a moonlit night and listen to the whip-poor-will sing would be delighted with the state. A kind-hearted boy wishes that all the shut-ins could be placed in some of the beautiful winter gardens or orange groves so that they might enjoy the months when their Northern homes are banked with snow. An enthusiastic lover of his state assures us that "as a tourist state, Florida has no equal; the famous east coast with its Jacksonville, Saint Augustine, Daytona, Palm Beach and Miami, and the west coast with its Pensacola, Clearwater, Saint Petersburg and Tampa help to form the unbroken chain of a paradise." Another boy calls Florida "the land of fruit and flowers, and the home of the magnolia and the mocking-bird."

One essay was accompanied by colored postcards of the cocoanut trees on the Craignan Place near Palm Beach and the Hotel Royal Ponciana at Palm Beach.

WHY I AM PROUD OF FLORIDA

Prize Essay by Robert W. Shackle- : : : ford, Tallahassee, Florida : : :

The resources of Florida are great beyond comparison; her history is filled with thrilling events; her climate gives life and health to thousands of visitors annually.

Florida is first among the orange growing countries of the world, and orange culture was its chief industry until after the disastrous freeze in 1895. The people turned from that misfortune with true courage and persistency to another and perhaps more lucrative employment, that of truck farming. Now, Florida's vegetables are found in the markets of all northern cities throughout the winter months. In 1903 the farmers realized about $3,000,000 on their vegetables.

Next comes tobacco growing and the manufacture of cigars. Most of the best cigars, however, are made from Cuban tobacco, and Tampa is the largest clear Havana cigar manufacturing city in the world.

Florida ranks second in area among the states east of the Mississippi River and has a greater coast line than any other state in the Union, possessing a number of fine harbors; so that her products can easily be transported anywhere.

There are 6,600 square miles of pine trees in the state, and from these are manufactured rosin, tar and turpentine.

I am proud of Florida's history, for is she not the oldest and most noted state of the Union? Discovered in 1512 by Ponce de Leon, she passed from the hands of Spain to France, then back to Spain, then by the Treaty of Paris to England, back to Spain again, and finally, in 1821, into the control of the United States. I am intensely proud of being a native of such a state.

Almost every fruit, vegetable, or farm product that grows anywhere can be grown in Florida, so varied is her soil and so perfect her climate. In middle and western Florida there are cotton, corn, tobacco, hay, sugarcane and peaches. In the south are oranges, pineapples, strawberries, tropical fruits, and vegetables.

Florida is not very resourceful in minerals. Her most valuable one is phosphate, which was discovered in 1888, and the mining of which soon grew into a great industry. The greatest output for one year was in 1899, and amounted to $2,500,000. Fuller's earth and kaolin are also found.

The fisheries of Florida are more important than those of any other Gulf State and, although not fully developed, amount to more than $2,000,000 annualy. She has a monopoly in sponge and oyster fisheries.

The population of Florida is almost doubled in winter, when visitors from all over the country pour in on every train. As a place for recreation and amusement no state can excel Florida at that time, for her climate is always balmy and mild. She may also justly claim to have the best appointed winter-resort hotels in this country, among these being the Ponce de Leon at St. Augustine, which, by the way, is the oldest city in the United States, and the Tampa Bay at Tampa.

I am also proud of Florida's bright prospects for the future. As soon as the Everglades are drained, and they soon will be, her present prosperity will be doubled.

A Word to Boys About Shaving

IT IS IMPORTANT in beginning to shave, that you get the best shaving soap. It has much to do with the appearance of the face, the health of the skin and the cleanness and comfort of the shave. There are many old men today who have used nothing but

Williams' Shaving Soap

all their lives, and their faces are smooth, soft and comfortable. Every boy should know before he begins to shave that Williams' Shaving Soap is considered by discriminating men to be the best shaving soap made. The reason is simple. It makes a rich, creamy, antiseptic lather and does not smart or dry on the face.

To Boys: Send us your father's name and address and tell us what shaving soap he uses, and we will send you a little combination pocket tool—key ring, screw driver, paper cutter and bottle opener. This offer is good only till September 1.

THE J. B. WILLIAMS COMPANY
DEPARTMENT A, GLASTONBURY, CONN.

Solutions of the Puzzles in the July American Boy

The following are the solutions to the puzzles on page 280 of the July number of THE AMERICAN BOY:

"What Am I?" a cutter—a ship, a sleigh, wood-cutter, stone-cutter, etc. The knife gives the clue.

Postal card puzzle: "We shall hope to see you for a few days this summer—you have often promised to come, but have never yet done so. Detroit contains much of interest to the visitor—few cities possess more. Now don't hesitate, but come. When may we expect you? Yours, Tom."

Picture Proverb: "He who hides can find."

CALIFORNIA NEXT

¶ To the California boy who sends us before August 10th the best letter of not over 500 words, telling us why he is proud of his state, we will give $3; to the boy sending the next best letter, $1.50; to the boy sending the next best, 50 cents. In addition, we will print the first prize letter in an early number of THE AMERICAN BOY.

TWO THOUSAND SHUT-INS TO HAVE THE AMERICAN BOY

The hand of the clock moved, from June 4 to July 9, from $83 to $166, which shows that between these dates $83 was contributed by the readers of THE AMERICAN BOY and by its publishers, to provide shut-in boys with annual subscriptions to THE AMERICAN BOY. This is not what we hoped for and expected. One hundred and eleven boys—but that is not the way to put it, for there were some girls in this number—sent us money between the dates mentioned and permitted us to shove the minute hand about 1-24th of the way around the dial.

At this rate the 2,000 shut-ins will not receive subscriptions between now and the first of January next as we had planned; at this rate between 600 and 700 will be the number. Our readers will have to make a little greater effort if they want to join with us in the pleasure of knowing that 2,000 shut-in boys will receive THE AMERICAN BOY in the coming year. You want to help in this, we know. Now, don't feel bashful about sending your money if you have only a few cents to contribute. It is not by large gifts we expect to carry out our project; it is by the sum total of many little gifts. Remember that to every boy who sends 50 cents or more, we will send the name and address of some one shut-in to whom the paper goes, so that he may feel a special interest in some one case that his money has helped us to favor.

Now, let us see if during August we cannot swing this minute hand round to $415.00, or even 1-4 of the way round the circle—to $498.00. For the few days prior to May 1 that the plan was in operation 30 boys sent in money. Between that date and June 4, 87 boys contributed, and from June 4 to July 9, inclusive, 111 chipped in. This shows a growing interest. There is a noticeable increase, too, in the average amount sent by the contributors, as you will see by comparing the figures credited to the boys named in the July number with the figures credited to those named in this number.

A little later we are going to print the names, possibly the addresses, of the shut-ins to whom the paper is being sent. Remember that for every cent sent in by contributors, the publishers of THE AMERICAN BOY donate a cent; so that if $1,000 is sent by the first of January, the publishers will send the paper to 2,000 shut-in boys. Remember, too, we want you to send us in, where you can, the names and addresses of poor, deserving boys who are confined to their homes by permanent illness or infirmity, and are too poor to buy the paper for themselves. In other words, we want you to help us in two ways: one by sending in money; the other by sending in names of shut-ins.

We regret we haven't the space in which to print the many interesting letters received from contributors to this fund and from shut-ins themselves, expressing their approval of the plan and their gratitude.

Boys, send in your mites and watch the clock.

Amount contributed by our readers to June 4 ..... $41.79

Some Things Good to Remember

The boy who will not take advice may have to take something worse.

When a boy had rather see his teacher sick than go to school something is sure to happen to that boy.

It is the object of good books for boys to make it easy for them to do right and hard for them to do wrong. That's why every boy should read good books.

A man never regrets the spankings he received when a boy, because he sees that he needed them and appreciates the part they played in making of him a real man.

The American Boy

Copyright, 1906, by The Sprague Publishing Company

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, Detroit, Mich.

WILLIAM C. SPRAGUE, - - President and Editor
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only; and in the case of the coins, a rubbing.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

Tangle Talk

Lucky is the Tangler who has a public library in his town—and knows how to make use of it.

Libraries, whether public or private, are there for just such research as the Tangles encourage, and librarians are the guide posts to direct you to the right books from which to dig out the facts. Questions that your home library or authority cannot answer should be written out as you come to them and taken to the greater authority, the larger library, and there mastered. Tell the librarian or his assistants, if you choose to, that you are after information to enable you to solve the Tangles in THE AMERICAN BOY. It's nothing to be bashful about or ashamed of. Don't expect the librarian to do your research or solving for you, but you will find him ready, willing and competent to tell you what books will post you on each individual question. That is part of his business.

While every Tangler cannot live within reach of a big library, most of us, whether on a farm or in the smaller communities, can add a reference book or two to our own home libraries every year, that will be of much real value all through life.

First of all, a good, big dictionary of the English language should be in every civilized home. It doesn't make much difference whose make of dictionary it is. Century is the best, but its price is prohibitive in some cases. Uncle Tangler paid $96 for his set and bookcase. The Century Atlas and the Book of Proper Names are invaluable authorities. Webster's International, or even Webster's Unabridged dictionary, Merriam editions, are excellent, and can be bought for $8.50 and $2.00 respectively. The Standard dictionary, Funk & Wagnalls, has been adopted as authority by several puzzle leagues and societies. The Twentieth Century edition of this great work can be purchased for $8.75.

A good, large, recent atlas, a book of synonyms, a dictionary of poetical quotations, a large United States history, all have their place at the Tanglers' elbow. So also has the large Family Bible, with its list of bible names and its concordance. Other desirable works of reference are Smith's Bible Dictionary, Smith's Smaller Classical Dictionary, any good history of England, a dictionary of biographical reference, Lippincott's (new) Gazetteer, the U. S. Postal Guide, the (N. Y.) World Almanac, Professor F. A. March's Thesaurus,—and I am going to stop here before I discourage you. A good library catalogue, or any classified list of books and authors, is excellent material for Tangles on literary subjects.

Lay by a little money every year for books, and let your selection be a wise one. Some good stories, of course, for sauce, but also some of the reference books I have named for the real staff of life, books that are full of meat for the student and Tangler.

Reference books are not only available for solving or making puzzles, but for answering questions on the many topics that arise every day, in reading the papers or in the course of conversation, at school or at church—anywhere and any time. Learn to use your reference books, and especially your dictionaries, on every and all occasions and on the least provocation. If you read or hear anything you fail to understand, or if the spelling of a word looks doubtful or unusual, look it up then and there.

Never attempt to make up a puzzle without you go to the proper printed authority for your definitions. It indicates paucity of idea to wind up your puzzle with "my whole is something every American boy likes!" That might be pumpkin pie or mother, firecrackers or fried sausages!

Be definite and exact in your definitions, if you want your contributions published or wish to win prizes. The number of misstatements, historical, geographical and otherwise, that are sent in to be printed for all the world to see and criticize are, out of the kindness of the editorial heart and for the credit of your reputation and for your peace of mind, carefully dropped into the waste basket and permitted to pass into oblivion.

Use your dictionaries. Look up your references, of every nature; look to your spelling, and look to your definitions when you make puzzles to be printed. —Uncle Tangler.

Tangles

Burton F. Jennings, 32 Finch St., Rochester, N. Y., wins the prize for the best list of answers to the June Tangles.

J. Horace Trumbull, Box 54, Petersburg, Mich., wins the second prize.

Percy C. King, Rex, 5204 Sweeney Ave., S. E., Cleveland, Ohio, wins the prize for the best original puzzles.

Honorable mention is accorded the following for excellence: Paul K. Brandt, Lewis Alway Smith, George H. Stanbery, Sarah Gilles, Osborn J. Dunn, Clinton Fisk Elliott, Homer C. Au, William Schenk and sister, Archie Reynolds, J. Cuthbert Long, Harold E. Rose, Lloyd Edward Owens, J. Ray Mekeel, Geo. and Karl Wills, John Wanamaker, Arthur Westergard, Walter H. Scott, Clinton M. Story, Robert Holmes, Jr., Rollin J. Smith, Hazel Gifford, Winfred Peckham, J. Milton Boyer, Roland Faulkner, Earl R. Best, M. H. Reuben, Grady Peerey, Leo E. Bourdon, Ralph R. Williams, Almon W. Bushnell (letter delayed).

A prize of one dollar will be given for the best list of answers to the August Tangles; also, a new book for the second best list of answers; received by August 18.

A prize of one dollar will be given for the best lot of original puzzles received by August 18; to be published in October.

Answers to July Tangles

1. The illustrated words in order are: Heart, Adder, Roach, Roman, India, Soles, Omega, Notes, Horns, Ammon, Roast, Tongs, Physa, Alley, Clown, Apron, Whips, Ousel, Libra, Corea, Onion, Tulip, Tisri, Hooks, Ounce, Ouray, Peony, Easel, Rungs, Bream, Armor, Rhomb, Tusks, Lasts, Ethyl, Teeth, Trout, Songs, Totem, Omaha, Names, Evora, Horse, Arrow, Lilac, Leech, Swell, Mower, Idaho, Texas, Hitch, Clock, Abner, Ropes, Reams, Olive, Lasso, Lemon, Nails, Elder, Loris, Satan, Ovoid, Nines.

Their initials spell: Harrison, Hart, Paca, Wolcott, Hooper, Bartlett, Stone, Hall, Smith, Carroll, Nelson.

Divide the large bunch into four square bunches of sixteen firecrackers each. Leaving the upper left and lower right bunches in their original positions, change places with the lower left and upper right bunches. Now the third letters of the entire sixty-four names in order will spell: Adams, Sherman, Morris, Braxton, Ross, Middleton, Taylor, Lee, Wilson, Paine, Morton.

2. 1775, Lexington. 1776, Independence. 1777, Burgoyne. 1778, Evacuation. 1779, Recaptured. 1780, Treason. 1781, Yorktown. Initials, Liberty.

3. 1st, Declaration of Independence. 2d, Thomas Jefferson. 3rd, Vicksburg. 4th, Destruction of Cervera's fleet. 5th, R., for Roosevelt.

4.
Ulysses S Grant
Henry Ward Beecher
George Washington
George Peabody
Thomas Jefferson
Robert E Lee
James Russell Lowell
Benjamin Franklin
Peter Cooper
John Marshall
Robert Fulton
John Fitch
John James Audubon
Edmund Randolph
Lewis Cass
d Yol Fmall lw

(The last being William Floyd, backwards.)

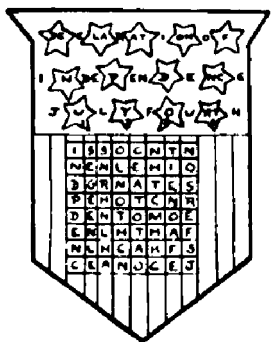
Left side of firecracker, down, Fourth of July; right side, up, Firecrackers. Letter path, Parades.

5. 1. Beauregard. 2. Ellery. 3. New Orleans. 4. New York. 5. Iowa. 6. Nevada. 7. Greeley. 8. Taylor. 9. Old Ironsides. 10. Northmen. Initials, Bennington.

6. 1. A. 2. M. 3. E. 4. M. 5. O. 6. R. 7. A. 8. B. 9. L. 10. E. 11. D. 12. A. 13. Y. A memorable day.

7. From the stars: Declaration of Independence, July Fourth, 1776.

From the chess board: The Continental Congress, Independence Hall, John Hancock, Thomas Jefferson.



8.

7. M y r i a D
8. K i m o n O
9. E n s i g N
10. A s l e e P
11. N e b u l A

Initials, Thomas M'Kean; finals, New London, Pa.

9. 1st. 1. Sleepy. 2. Tough. 3. Attain. 4. Reason. 5. Settle. 6. Acute. 7. Niles. 8. Detect. 9. Saving. 10. Tender. 11. Regard. 12. Integrity. 13. Pompous. 14. Evident. 15. Saint Paul. Initials, Stars and Stripes.

2d. 1. Torpid. 2. Hardy. 3. Obtain. 4. Motive. 5. Adjust. 6. Sharp. 7. James. 8. Expose. 9. Frugal. 10. Feeble. 11. Esteem. 12. Rectitude. 13. Stately. 14. Obvious. 15. Nashville. Initials, Thomas Jefferson.

10.
1. P o I
2. H l N
3. I n D
4. L e E
5. A s P
6. D e E
7. E o N
8. L l D
9. P l E
10. H u N
11. I n C
12. A w E

Initials, Philadelphia; finals, Independence.

11. Lyre, Yule, Ogee, Mask, Swan, Rake, Urns, Jack, Nine, Nail, Oars, Ears, Neck, Tent, Rail, Oval, Flag, Foil, Arch, Ruff, Gate, Ewer, Eyes, Junk, Begin with Junk: Jefferson, Monroe, Grant, July.

12. Remove the twenty-five letters that spell Declaration of Independence, and the chess board when formed will look thus:

T G E O M Y L C
S H U R L E E D
L S O N R L A H
E N T P Y I T Y
G O I K R S M W
T R C A E Y E H
L A O P L N W R
D W M S C N D A

The 27 signers' names: Adams, Clark, Clymer, Ellery, Gerry, Hall, Hewes, Heyward, Hopkins, Hopkinson, Huntington, Lee, Morris, Morton, Nelson, Paca, Paine, Penn, Read, Ross, Rush, Smith, Stockton, Stone, Thornton, Walton, Wythe.

13. Thomas Jefferson, born April second, seventeen-hundred forty-three.

14. 1. N e l s o n
2. A r n o l d
3. P o r t e r
4. O l d P u t
5. L a w t o n
6. E u s t i s
7. O'M e a r a
8. N a s e b y

Initials, Napoleon.

New Tangles

15. AUGUST TARGET.

See how good a score you can make. Note that on our target there are 16 animals, birds and fishes. The weapon is number one. The entire 17 are to be interpreted by words of equal length. Hit the bull's eye by taking the central letter from each word in numerical order, and obtain (1st) the surname of a great American admiral, who died in August; (2d) the scene of a great naval battle, which he fought and won in August.

—Percy C. King.

16. TANGLERS' ZIG-ZAG.

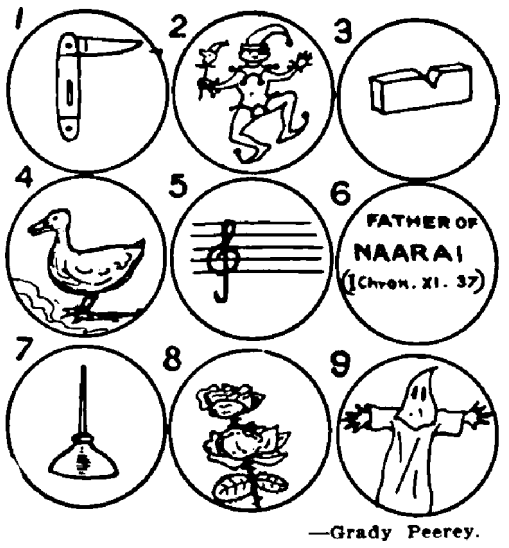
13. * - - - - - -
14. - * - - - - -

The star path reading downward spells the honorary title and name of a great Scottish novelist and poet born in August.

1. Defamation. 2. Freedom. 3. Concord. 4. A county seat of Minnesota. 5. A precious stone. 6. To comfort. 7. Pungent. 8. A musical instrument mentioned in scripture. 9. To withhold. 10. A message. 11. A kind of varnish. 12. Jocose. 13. An ancient Roman magistrate. 14. To allure. —Frank C. McMillan.

18. ENGLISH HISTORY.

Interpret the nine circles by words of uniform length. The initials in numerical order and then the finals in the same order, will spell the title and name of an English monarch who succeeded a queen that died in August.



—Grady Peerey.

19. AUGUST ACROSTIC.

The words contain six letters. The initials spell the surname of a president born in August; the finals, the christian name of his wife.

1. A tunnel of Massachusetts. 2. A city of Illinois. 3. A county of Wales. 4. A Florida cape. 5. A city of Bessarabia, Russia. 6. The largest of the Samoan islands. 7. A town of Winneshiek county, Iowa. 8. A lake in the northwesternmost county of Ohio.

—Leo E. Bourdon.

20. KANSAS HAPPENINGS.

The words are unequal in length. The initials spell the surname of a confederate guerrilla who led a raid on a Kansas town, in August, 1863. The name of this town is spelled by the finals of the first eight words.

1. The furthest north and the highest of the seven hills of ancient Rome. 2. The muse of astronomy. 3. An apostle of Christ's who was also a brother of Simon Peter. 4. The inventor of logarithms. 5. Muse of the dance. 6. President Grant's secretary of the navy. 7. A king of Sweden who sought to wed Queen Elizabeth of England and Mary Queen of Scots. 8. The French explorer who discovered the Ohio river. 9. An American poet, author of Tales of a Wayside Inn. —Earl R. Best.

21. NEW JERSEY ACROSTIC.

All words of equal length. The initials spell the present-day name of a prominent city near New York, and the finals, the former name of the same place, the scene of a British surprise by Lee, in August, one hundred and twenty-seven years ago.

1. A Georgia county seat. 2. A town and district of Portugal. 3. A town in the northeast corner of Bavaria. 4. A city of Corea. 5. A city of Hungary, capital of the county of Heves. 6. A county in New York. 7. A gulf and state of British India. 8. A county of Michigan. 9. A city of Japan. 10. A port on the sea of Azov. —J. Milton Boyer.

22. ESSAYISTS' CHESS.

By the king's move, which is one square only in either direction, using every letter at least once and as often as needed, but repeating no letter till after moving from its square, find the surnames of 42 or more boys who wrote essays on the subject, "Why I Am Proud of My State," and who either won prizes or were commended for excellence.

T	I	S	O	M	A	T	T

H	O	R	A	E	N	O	S
L	R	W	L	Y	J	I	D
B	A	N	O	K	C	A	R

—Kenneth Fullerton.

23. SEASONABLE INITIALS.

All words have seven letters. The initials spell a playtime that is now in full swing with most American boys.

1. The pope's palace. 2. A state admitted during President Monroe's administration. 3. The largest lake port in the world. 4. A county and county seat of Michigan. 5. A city of Canada, on Lake Ontario. 6. The state in which Benjamin Harrison died. 7. A lake between Canada and the United States. 8. Relating to marriage. —Herman H. Voelker.

24. UNITED STATES HISTORY.

Fill the nine horizontal rows of squares with certain capital cities of the United States, one letter of the names to a square. The star path from the top down spells a memorable July battle of the civil war. The numbered letters from 1 to 10 in numerical order spell another July battle. The squares lettered A to E in order, and the squares numbered with Roman numerals from I to VII, each spell a surname of a president who died in July.

THE LAW as a profession, to-day, offers no impossible barriers to the ambitious young man in either city or country. On the other hand it is ever offering greater opportunities for high achievements in fame and fortune. In modern business pursuits the young man with a knowledge of commercial law, rapidly advances to the higher positions, because his mind is broader; his judgment clearer; his decision better.

The Sprague Correspondence School of Law was founded for the young man who cannot afford the time and money necessary to attend a law college. It carries to his home **BY MAIL** all there is to be had at a college. It demands no sacrifice of the student. It does not burden him with expense, requires nothing but honest effort. Thousands of students of

The SPRAGUE CORRESPONDENCE SCHOOL OF LAW

have distinguished themselves by passing the required examinations in every State, and being admitted to the bar without other preparation than the Sprague Course By Mail. The cost is small. The terms are easy. There is no time limit. Write for **FREE** educational literature, and see how great are the possibilities of your success.

CHAPTER III.

THE MEETING AT THE ELMER HOUSE.

THE FOUR BOYS were all gazing in astonishment at the young Quaker, and for a moment there was a tense silence while the face of Elnathan became even redder than before.

"Did you see her sail?" inquired Noah, again sharply.

"I know the Greyhound is not here," said Elnathan sullenly. "That is no news to thee."

"That is not what I asked you," retorted Noah, winking at Caleb as he spoke.

"I am no early riser," said Elnathan. "It is only by chance that I am here at the dock now. My father is waiting for me and I must go."

As the young Quaker passed up the street the smile of amusement on the face of Noah became broader and turning to his companions he said: "'Skin a Quaker and you will find a Jew.' That fellow knows more than he is willing to tell."

"But what about this Greyhound?" demanded Elias. "I don't know anything about her."

"Didn't you see her last night when you came in from Philadelphia?" said Noah.

"Not a sign of her. What was she, anyway?"

"She's the trimmest sloop I ever saw in my life. Cale and I sa her down the bay last nigl and she was waiting for Sam McGear to come aboard and pilot her up the creek."

"She had to put up with Noah, thoug laughed Caleb.

"Yes," acknowledged Noah dryly, "that's exactly what she had to do. I brought her up to the dock last night about ten o'clock, and you can all see for yourselves that she is not here now."

"Was she loaded?" inquired Ananias.

"I think she was, but her cargo wasn't very heavy, whatever it was. I don't see anything of it hereabout, and it may be she didn't land anything, anyway."

"What do you think she was?" inquired Elias. "We didn't see her, but we got in before sundown, so, of course, we missed her."

"I think she's the best and the fastest sloop I ever saw. That's all I know."

"What made you ask Elnathan if he knew anything about her?" said Ananias.

"Because I wanted to find out, and I did," Noah added, demurely. "You all know that Elnathan's father, in spite of his smooth ways, has been the bitterest man in Greenwich against the congress that met last fall in Philadelphia, and when a year ago the committee of the Philadelphia people told Captain Ayres to take his ship Polly and his cargo of tea and sail straight back to England—"

"But Captain Ayres was scared and did just what the committee told him to do," interrupted Caleb. "I know, for Anthony Wayne told me all about it. You know he was one of the 'Representatives of the Freemen' of Chester County."

"So I have heard you remark some score of times. You drag in your Anthony Wayne every time you get a chance," said Noah. "He must be a wonderful man."

"He is," declared Caleb promptly, ignoring the laughter of his friends. "He's the best looking man you ever saw. He's as straight as an arrow and the muscles in his arms are like hickory."

"How do you know?" said Noah, with a twinkle of his eyes.

"I know, for he used them on me once. I'm a member of his company in Chester and you ought to see us on general training days. Anthony Wayne never lets a man do anything halfway in his company, let me tell you. I've seen him take a man by the shoulders and shake him, as a dog does a rat, if the fellow doesn't pay attention. That was the trouble with me," Caleb added, demurely.

"He does worse than that, so I have heard," said Elias. "They tell me there are as many bloody noses and black eyes in his company, when he gets through with his drill, as you could find in a regular battle. And Anthony Wayne is the one who does it, too, I understand."

"He is a bit fiery," Caleb acknowledged, "but he doesn't ask a man to do anything he won't do himself. There isn't a man in the company that doesn't swear by him, too."

"Do they ever swear at him, Cale?" inquired Noah.

"I think not," said Caleb, so solemnly that his friends all laughed.

"What has Friend Todd to do with Anthony Wayne I'd like to know," suggested Elias.

"Oh, nothing, nothing at all," said Noah quickly. "The trouble is that whatever you begin to talk about Cale always winds up with Anthony Wayne."

"I don't, either!" retorted Caleb. "But, Noah," he added, "if you could just meet him once—"

A shout of laughter interrupted Caleb, who, in his surprise, turned and stared at the boys, which served to increase their delight.

"Go on with your story about Elnathan's father, Noah," suggested Ananias.

"There's nothing to say, except that he opposed resisting Captain Ayres when he wanted to land his cargo of tea, and he's been on that side ever since. Do you know," Noah added, impressively, "I've heard it reported that they drink tea every day at the Todds!"

"We'd dump their tea and the whole family, too, into the Cohancey if we knew that was true, Noah," said Elias, angrily.

"Oh, I don't know it's true," said Noah, slowly. "I'm just telling you what I've heard. Then the way the Greyhound crept up here in the night and—"

"You don't think she dared bring any tea in here, do you?" demanded Ananias.

"No, I don't know anything about it," said Noah. "I just thought I'd try a word on Elnathan, that's all. Ananias," he added abruptly, "what's that story you were telling about the Elmer house? Cale and I almost stopped there last night to—"

"'Almost' is all right," interrupted Ananias. "I can't imagine you, Noah, as ever doing more than 'almost.' But what I told you is true, for I've seen it myself."

"Seen what?" demanded Caleb.

"Seen the doors open and shut, and heard the windows rattle and not a soul in the house, either."

"How do you know there wasn't?" inquired Noah, soberly.

"Because when the men went in they found the house empty."

"Did you go in?"

"No; I was there, though—"

"You 'almost' went in, you mean, I suppose," said Noah dryly.

"That's about it," acknowledged Ananias, as the boys laughed.

"'Now Barabbas was a robber and Ananias was the chief of l——"

"Quit that!" interrupted Ananias. "You've told that so many times you 'almost' believe what you're saying."

"No 'almost' about it at all, Ananias. I believe every word you say," declared Noah, "and what's more if you fellows will meet Cale and me tonight we'll go down to the Elmer house and catch the witches at their tricks. What time does the performance begin, Ananias?"

"About nine of the clock. At least that was the time night before last."

"All right. Will you both stop for us tonight? I'd really like to find out if this Ananias is as good as his predecessor. As far as I'm concerned, I think he is, but I'd like to make sure of it," said Noah dryly.

"We'll meet you," said Elias quickly. "We'll stop at your house for you. I want to see the performance myself."

"I'm agreed," said Ananias. "All I want is to be sure that Noah won't go 'almost' into the Elmer house and then pull back. I tell you it just makes the shivers creep up and down your back," he added.

"It's your conscience that does that, Ananias," declared Noah solemnly. "That isn't the witches or whatever it is that opens the doors and windows in the old house."

"You wait," said Ananias, meaningly. "There are a good many who know more about this than you do and there isn't a man that can explain it."

Promptly at nine o'clock that evening the four boys departed from Noah's house without explaining to any of the family what it was they were about to try. When they entered the street that led to the Elmer house, which was located not far from the dock at which they had assembled that morning, they could see that not a star was visible in the heavens. The wind, too, which had risen was chill and there were promises of snow in the heavy clouds that hid the face of the sky.

"Good night for the witches," suggested Caleb, in a low voice.

"Good night for Ananias, too," said Noah.

"You wait! You just wait, that's all!" retorted Ananias, and in silence the boys advanced until they had taken a position near the house they were seeking. Not a person besides themselves could be seen on the street and the house, which for some time had not been occupied, loomed dark and mysterious before them. If any of the boys was fearful he was careful to conceal his feelings, although the manner of all except Noah betrayed the excitement under which they were laboring.

"What are we to do now, Ananias?" inquired Noah, in a low voice.

"Go up and knock on the front door," replied Ananias.

"All right; come along. No, I'll go alone. I know how you feel." And Noah at once advanced to the door, and lifting the heavy iron knocker announced his presence so noisily that the sound was plainly heard by his companions who had remained standing in the street.

Noah waited a brief time, but no response was given to his noisy summons. He could see as he glanced behind him that his friends were excitedly watching him. The whistling of the wind was the only sound to be heard.

Again Noah lifted the knocker and more loudly repeated his efforts to announce his presence, and before the last sound had been heard the creaking door opened slowly before him. Noah shivered slightly, as he was aware that no person was to be seen—only the dim outline of the wide hall appeared before him.

Summoning all his courage, Noah stepped within and as he did so the heavy door was closed with a resounding bang that could be heard far down the street. The three boys that had excitedly watched the disappearance of their friend turned eagerly to one another, as Ananias whispered, "There! I reckon Noah almost believes me now."

"We mustn't leave him alone in that house," said Caleb excitedly. "Come on! We must go in, too."

"Hold on a bit," suggested Elias hastily as the form of someone approaching down the street could be seen. Intensely excited now, the boys waited for the newcomer to draw near, and their surprise was great when they perceived Elnathan Todd, the young Quaker, stopping before them, his own astonishment apparently as great as their own.

"Noah Dare is in that house all alone, Elnathan," said Elias in a whisper. It was too dark to enable the boys to perceive the expression of anger or dismay on the face of Elnathan, but he said, quietly, "Why has Friend Noah gone in there?"

"To see the witches," began Caleb. "We're going in, too—"

Caleb stopped abruptly as the sound of opening windows and rattling shutters could be heard. There was a sound as of a person crying, as if in pain or distress, and the sound seemed to be heard first at one window and then at another near it. It was too dark to permit the boys to perceive how blanched became the faces of their companions, but in a moment Caleb in a low voice exclaimed, "Come on, boys; I'm going in there."

Without hesitation Elias and Ananias followed him and together they ran up the steps of the low piazza.

CHAPTER IV.

IN THE DARKNESS.

The eager boys were so excited that they failed to observe how their sudden advance affected their young Quaker companion. Elnathan had watched his friends as they noiselessly mounted the steps of the low piazza, and for a moment an expression of dismay spread over his countenance. He acted as if he was about to follow them and even moved forward toward the house; then abruptly turning about he fled back up the street. He had not gone far, however, before again he stopped, and after he had listened intently for any sound that might come from the old house, he began to creep stealthily back to the place from which he had fled. Moving quickly across the street, he took a position directly in front of the opened door, and concealing himself behind a huge elm tree peered anxiously out at the scene before him. If the boys had been able to see him they could have perceived that he was intensely excited and that an element of fear was mingled with his interest as he watched and listened for the outcome of his recent companions' entrance into the Elmer house.

Meanwhile the three boys had passed into the wide hall and there all stopped and listened again. It was too dark to enable anyone to see his friends' faces, but the excitement of the moment was so intense that other things were ignored.

"I've never been in this house before," whispered Caleb. "You lead the way, Ananias, and we'll go with you."

"I don't know the place very well, either," responded Ananias in a hoarse whisper. "We'd better call to Noah and then we can go where he is."

"Don't you know the way, Elias?" inquired Caleb.

"I have been here, but not lately. I shouldn't want to fall down any stairs. Ananias is right. We'd better call Noah," replied Elias.

"Elias, you go out and get a candle somewhere," suggested Caleb, unaware that his voice was trembling. "Ananias and I'll look up Noah while you're gone."

"I'll do it," responded Elias so promptly that he was gone almost before his two friends were aware of his abrupt flight from the house.

"Now, then, I'll call," whispered Caleb to his remaining companion. "You listen and stand ready to do whatever has to be done. Hi! Noah! Noa-a-h!" he called, his voice rising as he repeated the summons.

Both boys stood listening for their friend's response, but aside from the loud beating of their hearts and the whistling of the wind under the eaves not a sound could be heard by them.

"Call again, Cale!" whispered Ananias.

"Hi-i! Noah! Noah! Where are you?" called Caleb obediently.

Suddenly from above the stairway before them there came a loud laugh, shrill, prolonged, and repeated before the boys could recover from the alarm which the unexpected and startling outburst had aroused. Instantly both Caleb and Ananias fled through the open door to the piazza, their faces wet with perspiration and their teeth chattering. Unaware of Elnathan's hiding place they were ignorant of the grim smile that appeared on the young Quaker's face as he observed their precipitate departure from the house.

In a moment, however, both boys had in a measure recovered from their alarm, and stopping on the street and gazing fearfully at the place from which they had fled, Caleb said, "What was that anyway, Ananias?"

"I don't know. I haven't the least idea. It sounded like——"

"Come on! Let's go back there! I'm mighty glad no one saw us. We've just got to find Noah. I don't believe in witches and such things, anyway."

"I don't either," responded Ananias tremblingly. "Jersey people aren't such fools as they had in Salem. Come on! I'll go back with you. Wait a minute, though. I'll cut a club here first." Eagerly and with trembling hands Ananias cut a sapling that was growing in the yard, and then with his weapon—a stout stick a yard or more in length—they returned together to the door, which had not been closed after their abrupt flight, and once more they stood together in the hall.

Again they listened for any sound that might be heard, but the silence of the night was unbroken. The darkness within the house was all about them, and the fear which formerly held the boys once more returned upon them.

"Call again, Cale," whispered Ananias.

"You call this time, Ananias," responded Caleb hoarsely. "I couldn't make anyone hear."

Ananias, recalling the response which had greeted his friend's shout, did not share in Caleb's feeling, but he quickly responded, peering up into the darkness of the hallway above him as he shouted:

"Hi there, Noah! Where are you?"

"Here I am," came an answering word from the head of the stairs. "I'll be with you——"

There was no mistaking the voice of Noah in the response, but there was a quick interruption that caused the boys in the hall below to dash trembling for the door. Again the weird laughter was heard and the sound appeared to come from the upper hall, too, though manifestly it was nearer the front of the house than the place where their friend had been standing. Someone, too, was descending the stairs, the boards creaking loudly beneath the feet of the fugitive as he leaped down the steps. Precipitately Caleb and Ananias fled to the piazza, but fear for their friend caused them to stop there and turn about to perceive what or who it was that apparently was in pursuit of them.

In a moment Noah joined them, and as both boys became aware that it was he who had rushed so noisily down the stairway they turned excitedly to him and Ananias said in a whisper:

"What was that, Noah? What is it?"

"If I knew I shouldn't be standing here with you fellows," said Noah, grimly.

"There is something in the old house after all, Noah," said Ananias, unable to refrain from rejoicing over his friend in spite of his own alarm.

"There surely is," admitted Noah.

"But *what* is it? Did you see anything? Could you hear?" demanded Caleb.

"I could hear and I'm going to see," replied Noah sturdily. "I'm not afraid." Noah spoke confidently, but neither of the boys was persuaded that their companion was less fearful than were they themselves.

"Elias has gone for a light," suggested Ananias. "We'll find out when he comes back."

"I'm going up there now," responded Noah sturdily.

"Wait, wait till Elias comes," said Caleb eagerly.

"I'm not going to wait; I'm not afraid. This is Jersey and not Salem, I'd have you know."

Before either of the boys could protest Noah proceeded up the stairs, his footsteps sounding noisily through the house, almost as if he was striving to maintain his courage by giving warning of his coming.

"Come on, Ananias," whispered Caleb. "We can't let Noah go up there alone."

"I'm with you," responded Ananias feebly.

"No, you stay here," suggested Caleb quickly. "You stay and tell Elias where we are when he comes back. Give me your club and I'll go up there, too." Taking the weapon from his friend's hand, Caleb began to climb the stairway.

"I'm coming, Noah," he called. "I'll be with you in a minute."

"Come on, Cale!" responded Noah. "I'll wait for you. We'll find——"

Noah's words were interrupted by a screech such as Caleb had never before heard. Shrill and prolonged, it seemed at first to Caleb as if it caused his very heart to cease beating. Almost instinctively he leaped back two or three steps and then the thought of his cousin's peril recalled him to the necessity of going to his aid.

Turning sharply about he grasped the rail and bounded up the stairway into the darkness. The shrill screech had ceased and in its place came a voice that manifestly was human, and, if its tones were to be trusted, there was an element of rage and terror as well in the mind of the speaker.

"Yo' le' go me! I done tell Mas' Tom! Yo' hear me! Yo' le' me go! Ah gwine tell Mas' Tom! Yo' le' go me! Le' me go, ah tole yo'!" The shrill demands were followed by screams that were shriller still, and Caleb, assured now that he was to deal with flesh and blood, leaped eagerly forward.

"Noah! Noah!" he shouted, "where are you?"

"Here I am, Cale."

"Where? I can't see you."

"Feel me, then. I'm right by the rail. I've got him now as sure as you are born. No witch about this. Quit your kicking! Hold still now and I won't hurt you. Ah, none of that! You can't get away."

Aware that part of his cousin's words were spoken to him and part to someone whom he could not see, Caleb rushed forward, guided by the sounds in the darkness.

"Hold on, Noah; I'll be with you in a minute," he called.

"Yo' le' me go, I'se tellin' you'! Yo' le' me go! E-e-e-e! Mas' Tom'll——"

Caleb was aware that the shrill voice certainly was not Noah's, and the appeal or demand for release indicated that its owner was in someone's grasp. In a moment he felt the arm of Noah before him and then his hand rested upon a head so woolly that he knew a negro was there. Instantly, despite the kicks which he received in his legs, Caleb reached forth and grasped the struggling, writhing body which Noah was striving to hold firmly, and as he did so the screeching was renewed.

"Yo' le' me go! Yo' le' me go! Ah ain't done nothin'! Yo' le' me go! Ah gwine t' tell Mas' Tom, ah sho'ly is! Don yo' fin' out! Yo' le' go!"

"Come up here, Ananias!" called Caleb. "We've got our hands full."

As Ananias instantly came running up the stairway the prisoner once more endeavored to escape. Writhing, twisting, kicking, butting, the effort of the unseen negro almost succeeded, but as the third member of the party now joined in the contest the captive was speedily subdued.

"Any more of you here?" demanded Noah of the prisoner.

"Ah ain't gwine tell. Yo' le' me go! Yo' le' me go!"

"There's Elias," said Ananias quickly, as a step was heard in the lower hall. "Come up here, Elias!" he called. "Got your candle?"

"Yes, I've got one," responded Elias. "Where are you?"

"Right up here in the hall. Come up. Be quick, too!"

In a brief time Elias had a light, and then he hastily ran up the stairway, but he stopped when he approached his friends and stared at the sight before him. Held firmly in the grasp of his friends was a negro girl, apparently about twelve years of age.

"What you doing with that wench?" demanded Elias in astonishment.

"Bring your candle here," said Noah.

Elias at once came nearer, and as the light of his candle fell upon the face of the negro girl, now grinning broadly, he said quickly, "Why, that's Tom Hull's wench!"

"Ah shore is!" said the girl, laughing loudly.

Before anyone could speak, the sound of footsteps in the hall below caused every one to turn sharply and peer at the intruder.

CHAPTER V.

A RENEWED SEARCH.

The light of the candle which Elias had placed upon the floor, when he threw himself into the struggle, revealed now a breathless, excited little group that stood waiting for the approach of the one whose footsteps had been heard on the stairway. Even the negro girl had ceased her efforts to free herself, and she apparently was as eager to learn who the approaching man was as were her captors. The newcomer did not falter and as he came to the top of the stairs the boys beheld Elnathan staring at them.

"Come on, Elnathan," called Noah, plainly relieved by the sight. "We've found the witch. It's Tom Hull's wench, that's all." Thomas Hull was known in the village as a prosperous man, an outspoken foe to the colonists who were remonstrating against the severe measures the mother country was adopting to repress the rebellious people of the colonies. His home was in the village of Greenwich and his position there had been one of influence before he had incurred the opposition of his neighbors by his Tory sentiments.

"What is she doing here?" demanded Elnathan slowly, as he gazed first at the grinning girl and then at the boys.

"She can tell you that better than I can," responded Noah. "Tell him what it is you are doing here," he added, turning to the prisoner as he spoke.

"Ah ain't doin' nothin'," said the girl, grinning broadly.

"What *were* you doing here?" demanded Noah sternly.

"Ah ain't doin' nothin', suh," she repeated.

"Did you open the door?"

"Ah shore did. Ah done open de do'."

"Did you rattle the windows?"

"Yaas, suh. Ah shore did."

"Did you slam the shutters?"

"Yaas, suh." As she spoke the grin on the prisoner's face broadened.

"Did you do all that screeching and screaming?"

"Ah done tole yo'."

"Have you been here before?"

"Ah shore has, suh."

"And you were the one that has been frightening the people by doing all those tricks in this house?" demanded Elias angrily.

The girl laughed aloud as if the suggestion was highly pleasing to her, and bobbed her woolly head vigorously.

"What did you do it for?"

"Let the wench go," suggested Elnathan quickly. "She has not harmed thee by her silly pranks. Thee knows she is only silly."

"Ah is no' silly, suh!" retorted the girl sharply. "Ah jes' done what Mas' Tom done tole me."

It was manifest even in the dim light that the young Quaker was eager to have the prisoner released, and his very eagerness served to increase the determination of Noah to learn more if possible before he permitted the girl to go free. He did not explain what his suspicions were, however, even to his friends, and as he turned once more to the girl, he said sharply: "What did Tom—what did Mr. Hull tell you to do all these foolish things for?"

"Ah don' know, suh. Mas' Tom jus' tole me."

"And you don't know why he told you to come here every night and rattle the shutters and slam the doors?"

"Ah specs, suh, he jes' want to scare de folks. An' ah shore did, suh! De way de folks jes' cotch der bref an' run——" The girl broke into a peal of noisy laughter at the recollection, and her young captors looked foolishly into one another's faces as the truth of her charge became evident even in their own recollections.

"Why did he want to frighten people?" demanded Noah.

"Ah don' know, suh, 'less 'twas what I tole yo'."

"Weren't you afraid to stay here all alone?" inquired Ananias shrewdly.

"Ah wasn't afraid," laughed the girl. "'Twas de folks what come here was afraid. Dey sho'ly was."

"Did you come every night?" said Elias.

"Ah done come las' night, an' Sampson he done come, too, suh," she added, referring to one of Thomas Hull's black men whom the boys well knew.

"Why did he come? Was that the only night when he came?" demanded Noah.

"Yaas, suh. Las' night de only night what Sampson come."

"Why was he here last night?" persisted Noah.

"Ah don' know, suh. Ah spects it was 'cause de men——." The negro girl checked herself abruptly and left the sentence uncompleted.

"The men came last night, did they?" inquired Noah quietly.

"Why doth thee not let the wench go?" broke in Elnathan. "Doth thee not see that she is telling thee what is not true?"

"We'll let her go in good time," replied Noah quietly. "Now, then," he added, turning once more to the prisoner, "did those men meet Mr. Hull here?"

"Ah don' know, suh," responded the girl, turning her eyes upon Noah so that the whites seemed to glisten unnaturally in the dim light.

"Did you see Mr. Hull here?"

"No, suh."

"Did you see Mr. Todd here? Was this fellow here, too?" demanded Noah, placing his hand on Elnathan's shoulder as he spoke.

"Dost thou not see for thyself that I am here now, Friend Noah?" said Elnathan hastily.

"Did you see him here?" demanded Noah again of the girl, ignoring the question of the young Quaker.

"No, suh. Ah can't see in de dark."

"Did you hear him?"

"No, suh."

Did you stay here all night?"

"No, suh."

"Did Sampson stay?"

IN DEFENSE OF HIS FLAG

OR, A BOY IN BLUE AND A BOY IN GRAY

BEGUN IN MAY

CHAPTER X.

A MEETING AND A RETREAT.

By EDWARD STRATEMEYER

Author of the "Old Glory Series," "Soldiers of Fortune Series," "Colonial Series," "Pan-American Series," Etc.

Copyright 1906 by Edward Stratemeyer

THE FORCES under General Beauregard at the battle of Bull Run consisted of some twenty regiments of infantry and a number of cavalry companies and sections of light artillery. It was a regiment of South Carolina men that had defended the earthworks attacked by the Goreville Volunteers and others, and they fought bravely for many hours after the scene recorded in the last chapter. The battery was one from North Carolina and retreated from its first position only to take a second halfway up the side of a hill, at the top of which stood a single house. It was around the vicinity of this house that the main onslaughts of the day occurred.

In the meantime, however, what of the cavalry to which Andy was attached? The Montgomery Grays were located along the Warrenton turnpike, and it was their honor to capture one of the first cannons taken from the Union army. The capture took place at a bend in the road, and was followed by a fierce attack by the boys in blue, which nearly demoralized the Montgomery Grays.

"Forward! Forward!" cried Captain Montgomery again and again, but when Andy and the others attempted to move on they found they were literally urging their steeds upon a bed of bayonets. They fired their pistols and slashed with their sabers, and the din and shock were terrific.

"Down you come, grayback!" Andy heard yelled into his ear, and a bayonet was thrust up against his side. He pulled back, escaping the steel point by only a few inches and cut his assailant heavily on the arm. The next moment other cavalrymen pushed on behind, and then there was nothing to do but to go on, cutting a path right and left as the Montgomery Grays advanced.

Yet when the Confederate cavalry had thus hewn a path for itself along the turnpike for a distance of several hundred feet, it found the advantage of position a doubtful one. From the woods poured a regiment of New York militia, and the fire was so hot from these well-trained soldiers that the cavalry was forced to move rapidly towards another defense of the Confederates, dragging the captured cannon with them. As they were ploughing on, in the dust and dirt, a volley of minie balls whistled around them and one clipped Andy on the leg, leaving a stinging pain behind it.

"Are you struck, Andy?" cried Leroy Wellington, who rode near to his friend.

"Yes, in the leg; but I reckon it's not much," was Andy's reply, as he brushed the perspiration and dirt from his face with his coat sleeve. "Gosh! but this is more than warm work!"

"Never mind; we have one of their cannons!" returned Leroy. It filled his heart with martial joy to think that he had been one of the first to lay hands on the piece after cutting down the gunner.

"Don't crow until we are out of the woods, Leroy. Here come more of the Yankee boys."

"Pennsylvania men!" cried somebody in advance. "Load, boys, and be quick about it!"

"Pennsylvania men!" repeated Andy. "What if it should be Louis's company? I couldn't fire on him!" he thought. Then he began to load with all possible speed.

The Pennsylvania company, however, belonged to the regular militia. They were an excellently drilled body of men, and came forward in a solid mass that nothing could stay. They had heard about the capture of the cannon and were determined, if possible, to regain the piece. They fired at close range, then began to use their bayonets, and soon the cannon was reached, and here cutting, thrusting, and clubbing became the order of the day.

Never had Andy thought to be in such a stubborn conflict. He cut, thrust, and charged on all sides of him. Once the butt of a musket hit him in the back and unseated him. There was a yell of triumph as he went down. Before the yell came to an end he was up again and charged straight for his adversary, a tall militiaman, who dodged out of the way in double-quick order. Andy wanted to fire at him, but before he could bring his pistol into play the tide of battle had swept man and boy fifty feet apart.

And so the fray went on, until, Confederate re-enforcements coming on, the Union soldiers were forced to retreat, and the Montgomery Grays returned in triumph to their own division, dragging the cannon after them. As they moved on General Longstreet swept by them on his charger.

"Good, boys; good!" he cried, waving his sword. "Keep it up and the day is ours!"

"Carry the news to Jefferson Davis!" yelled Leroy, after him, and the Confederate general turned in his saddle and smiled. An instant later the smoke of battle swallowed him up.

But now even the horses were beginning to show signs of fatigue, and the greater part of the company were compelled to fall back several hundred feet farther, where there was a small stream flowing into Bull Run. Here men and beasts procured much-needed drink and stopped to get their "second wind."

Hardly was Andy again in the saddle when the bugle called him and his fellow-cavalrymen to a new position along the side of the hill before mentioned. To gain this new position the Montgomery Grays had to cross an open space probably three hundred feet in diameter—a clearing well covered by the batteries of the Union army.

"Forward, and lose no time!" cried Captain Montgomery, and led the way, followed almost immediately by a score of his men, with Andy and Leroy in the number. The captain had scarcely covered a quarter of the distance when, suddenly, his horse, a powerful gray stallion, was seen to rear up viciously and take the bit between his teeth.

"Whoa!" roared the Confederate commander, but instead of obeying the stallion reared again, then dropped like a flash and shot off on a mad gallop, directly for the Union lines!

"The captain's horse is running away!" cried Leroy. "Whoa! whoa!"

"He'll be carried into the enemy's lines!" yelled another of the men. "Turn him to yer right, cap'n! To the right!"

"Whoa, Harry!" cried the captain, tugging in vain at the reins. Harry would not whoa, but with blazing eyes kept straight on, until the ranks of the enemy could be plainly seen.

But now came rapid hoofstrokes from behind. From the start Andy had realized his captain's danger and wondered how it could be averted. He knew that trying to stop Harry by pulling on the reins or calling to him was out of the question. The horse had lost his head and would not obey until exhausted.

"Forward, Firefly!" he called to his own animal, and, trained to obey on the moment, brave Firefly flew out of the line and in full pursuit of the runaway.

"Come back! It's certain death!" yelled Leroy, in horror; but if Andy heard he paid no attention. On and on he went, until the very side of the runaway was gained. The advance line of the enemy was now less than a hundred feet away. Several rifles rang out and the bullets whistled on every side.

As Andy ranged up alongside he crowded Harry on the left. The stallion did not like this and turned to bite Firefly. But Andy was ready for him and struck the runaway on the nose. At once Harry sheered off as desired, and away went both horses at right angles to the course previously pursued. Again the rifles from the Union side rang out and Captain Montgomery was slightly wounded in the arm, and Andy had his plumed hat ventilated much against his desires.

"I owe you one for that, Arlington," said the captain, when both were safe for the time being. "I'll not forget you."

"I think you had better get a more manageable horse after this, sir," returned the youth, with a smile. "He's too willing to go over to the enemy."

"I'll give him another trial. If he runs away again I'll shoot him," replied Captain Montgomery, and having once more gotten his stallion under control, he galloped off to obtain further orders from the general in charge.

"We are ordered to the breastworks below here," said the officer, a few minutes later. "A South Carolina regiment has been holding the defense, but matters are getting too hot for them. Forward, boys, and show them what our Grays can do. Hurrah for the Stars and Bars!" and away went the troop of cavalry, flinging up the sod of the cut-up field behind them. In two minutes more they were again in the thick of the fray.

"The cavalry is coming!" Andy heard one of the Union soldiers ejaculate. "Never mind, Blackwell. Show 'em what sort of stuff the Goreville Volunteers are made of," added another. "Now we have this ground, let us hold it. Hurrah! for McDowell and General Scott!"

"The Goreville Volunteers," thought Andy, and the hot blood rushed to his face. It was Louis' company! Supposing he should——"

"Andy!" It was a yell from his left. He turned swiftly. Sure enough, there was Louis, battling bravely in the midst of half a dozen of the South Carolina men, one of whom was about to stick his bayonet into the Union boy's breast. "Don't kill him! Don't, please!" were the words which rose to his lips, but in the din of battle no one heard him. Then he saw Louis catch hold of the bayonet and thrust it aside. In another moment the two chums found themselves face to face.

"Louis! To think we should meet like this!" came from Andy's white lips. "You must go back! You will be killed, or captured!"

"I am fighting as I was told to fight, Andy," was the determined reply. "Good-bye, and take care of yourself!" and away sped Louis, knocking headlong a Confederate soldier who sought to detain him. Andy had now all he could do to look out for his own welfare; and thus the former chums parted, not to meet again until the Army of the Potomac marched against Richmond, the Confederate capital.

To follow for the time being the fortunes of Andy. With Louis's disappearance the Southern youth discovered that a fresh body of Union soldiers had come up to re-enforce the Goreville Volunteers, who were now all but exhausted to a man. He was pleased to note this, as the idea of fighting even against the company to which his chum belonged was distasteful to him.

The Grays were ordered

"LOUIS! TO THINK WE SHOULD MEET LIKE THIS!"

to charge the men who were holding the defense, and away they dashed, with two other cavalry companies beside them. This charge was bravely met, and once again Andy found himself in a hand-to-hand fight. This did not last more than five minutes, when the Union soldiers were seen to part, to let through a battery of two cannons, both twelve-pounders. As quickly as possible the battery was placed in position, the rear guard of the Union men meanwhile protecting the pieces. Then away went the Northern troops to the right and left, and the order was given for the Grays to retreat. The order came none too soon, for when the cannons blazed forth the aims of the gunners were found so correct that eight horsemen and six animals were laid low. The Union battery remained where it was for over an hour, when the general retreat of the Union troops began.

The line of battle had originally been nearly eight miles long, but now it was so broken and disorganized that the fighting became general upon all sides, although the heaviest attacks were still made in the vicinity of the hill before mentioned. The exhaustion in the hot sun was terrible, and many of the soldiers had not had time to eat a mouthful since early morning. Some of the poor fellows, unable to carry the load, had thrown away their knapsacks, and they now ran around begging for a mouthful of something with which to brace themselves up. It was their first awakening to the stern reality of grim war.

"If ever I git back to Noo York ag'in," wailed a Bowery boy, who had enlisted for three months with the idea that going down South to whip the "rebs" would be "nothin' but sport, boys, nothin' but sport." He wanted to see no more of the war,—and he had his counterpart everywhere, on both sides. One dandy from Richmond who had enlisted also for "sport" was heard to exclaim that henceforth "the big guns can fight for themselves. I'll be jiggered if I'll do it for them," meaning that, as far as he was concerned, the politicians and others who had precipitated the conflict could end it among themselves.

But there were others, and they numbered thousands upon both sides, who fought bravely to the very last, realizing that the eyes of the whole world were upon them in this initial conflict. They were fighting to uphold a principle, not fighting against a Northern or a Southern brother. To these the horrors of carnage were as appalling as they could well be, but they had steeled their hearts for the inevitable, and they went on, to live or die in the defense of what they thought right. These, and these only, are the true heroes of the great war, and there is no dividing line, and there never could be, to separate them.

The booming of cannons and the shrieking of shells still went on as the Goreville Volunteers gathered together in a little clump of trees and snatched a hasty biscuit and a drink of water. Each man and boy was begrimed with sweat, dirt, and powder, and each was more than half exhausted from his exertions.

"Oh, but ain't this simply dreadful!" moaned Jerry Rowe, for at least the fiftieth time. "Captain Paulding never told me of it when he got me to enlist."

"The captain wanted to make a man of you, Jerry," replied Nathan Hornsby. "What are you kicking about? See, I'm clipped with a bullet wound in my left fore-arm, but I'm not complaining."

"The cap'n will make a man of Jerry if his knees hold out," put in another of the men. "But, Jerry, don't shake so bad or your knees will cut through your trousers," and a short laugh went up, even in that perilous position—a laugh which was cut short by the passage of a cannon ball through the trees. Everybody ducked, and Jerry fell flat, although the ball was ten feet up in the air.

General McDowell, now seeing the tide of battle turning against his troops, sought by every means in his power to recuperate his forces. But when several attacks had been led forward without avail, it was determined to fall back, in the hope of taking a fresh stand in the vicinity of Centerville. In the meantime, however, the troops of General Johnson, which had escaped from the Union General Patterson at Charlestown, in West Virginia, miles away, had come in on railroad trains to Manassas Junction, and these fresh Confederate soldiers, appearing suddenly on the field, started a panic among the Northern companies, a panic which it was impossible, in the mixed-up condition of affairs, to stay.

"General Johnson has come on with twenty thousand fresh troops! We must fly for it," was the cry which was taken up from company to company. Johnson had come up with no such magnificent number of men, but he had come up with enough to make a good showing, and, utterly worn out from marching and fighting in the hot sun, the Union troops commenced the retreat in the direction of Washington.

The blow to all was a bitter one, but now was no time to think about it. "We can weep afterwards," said one of the older men of the Goreville Volunteers. "Now it is use your legs or go to a rebel prison," and off he stalked, with Captain Paulding, Louis, Harry Bingham, Moses Blackwell and a dozen others beside him. The captain tried to preserve order, but this was impossible, for men on foot and men on horseback were rushing hither and thither, trying to find their commands or, at least, a friend or two.

Less than half a mile had been covered, when a firing upon the road caused the volunteers to halt. Then came a rush, and a band of the Confederate cavalry swept by. As they did so the volunteers stepped into the shelter of the woods beside the turnpike. They were about to emerge when Louis felt himself jerked violently to the ground. He had been pulled down by a Confederate concealed in the long grass. As he tumbled headlong he caught sight of the man's face. It was Sam Jacks!

CHAPTER XI.

LOUIS'S PERILOUS ESCAPE.

To be pulled down in such an unceremonious fashion was a surprise in itself, but to find himself face to face with his enemy, the mountaineer, astonished Louis beyond measure. For the instant he could do nothing but stare at his assailant.

Then came the realization of his position—that Jacks was not only his personal enemy, but that the man likewise belonged to the Confederate forces, and as Captain Paulding and the others moved off on the double-quick he endeavored to pull himself away to go with him.

"No, yer don't!" hissed rather than exclaimed the mountaineer. "I've got yer an' I'm goin' ter hold yer!"

His face, generally far from clean, was now covered with thick dirt, and over one cheek flowed a small stream of blood, for he had been wounded, not by a shot from the enemy, but from a tumble in the woods in which he had been hiding. As he spoke so vindictively he hauled Louis closely to him.

"Let me go!" panted the young Union soldier, and struggled to free himself. "Captain Paulding! Harry! Hel——"

The words died upon his lips as Sam Jacks clapped a dirty hand over his mouth. Then commenced a fierce struggle, and both rolled over and over in the tall grass, until, coming to the edge of a gully, both dropped a distance of six or eight feet, to bring up on a pile of damp leaves and dead tree branches.

Louis came down on top, and with such force that the mountaineer's wind was for the moment knocked completely out of him. He uttered a grunt and a gasp, and ere he could recover Louis was on his feet and making for a spot where the side of the gully sloped upward.

"Stop him, Hogwell!" roared Jacks, and as he spoke another form loomed up before the young soldier. The man was the same who had assisted at making him a prisoner at the old mill, before the opening of the war. Hogwell had been in hiding with Sam Jacks for several hours, their intention being to see what they could steal after the battle should come to an end. Unfortunately, throughout the war both sides were afflicted with such terrible criminals, who had no respect for either dead or dying, their sole object being plunder.

"Who is it?" queried Hogwell, as he blocked Louis's passage.

"Can't yer see—it's the rat we had the trouble with up near Deems," growled Jacks. "Stop him. I allers calkerlated ter git squar with him."

Hogwell grabbed Louis by the collar. Had the young soldier had his gun with him he would have either fired or used the bayonet. But the weapon had been lost at the first moment of Sam Jacks's attack and now he had only his hands.

"Let go!" he commanded, and hauling back, he hit Hogwell squarely in the lower jaw. It was a heavy blow, delivered with all of Louis's youthful strength and determination, and Hogwell went back as though struck with a club. Ere he could recover the young Union soldier was past him and speeding up the gully side with the speed of lightning.

"Stop, or I'll fire!" he heard Hogwell yell, a moment later. But he kept on. Then came the report of the mountaineer's long pistol and a bullet whizzed close to his head. Soon the trees had taken him out of range.

The tussle in the gully had somewhat upset Louis's mind, and when he started in search of the turnpike again he turned in exactly the opposite direction to that which he should have taken. On and on he went, through the brush and over trunks of decaying trees. More than once he stumbled, but picked himself up hastily and continued on his way, until suddenly he found himself ascending a hill where the thickness of the trees made further progress almost impossible.

"I've made a mistake," he thought, much dismayed. "There is no road in this direction."

Forced to halt, he listened intently. From several points around him came the distant sounds of musketry and occasionally the booming of a cannon. But to locate any of the sounds in particular was impossible. Indeed, the firing of the day had half deafened him.

"I'm in a pickle, with all the others gone," he thought, dismally. "Even if I do find the road I'll not know where to look for our company. However, I won't be any worse off than lots more of our poor fellows. If only I can get among friends somebody in command will set me right. Perhaps this defeat will only be temporary."

It was deliciously cool in the depths of the woods and this refreshed him. Having regained his breath, he retraced his steps as well as he was able. Ten minutes later he recrossed the gully, but at a point some distance above where the encounter with Jacks had occurred. He had gone on but a few feet farther when he almost stumbled over the body of a dead Union soldier. A little startled, he was about to go on, when a sudden thought seized him and he retraced his steps.

The poor fellow had belonged to a volunteer command. He was past middle age and cold, showing he had been dead several hours. Beside him lay his gun and cap, and his cartridge box was still strapped around his waist.

"He'll never want his gun again, poor fellow," thought Louis, and kneeling down he unfastened the flap of the cartridge box and took out the supplies. This done, he picked up the gun and hurried on as before. Having a weapon made him feel much more like himself.

A short while later the road was gained. Here a scene of indescribable confusion met his gaze. Union troops of all kinds were rushing along, many of the men capless and gunless, having thrown all away in their anxiety to escape. On the ground lay the guns, with here and there a knapsack, and over all tramped men and horses. Cannon after cannon followed, the drivers of the horses beating their animals mercilessly in their endeavor to escape capture by the pursuing enemy; and mixed up with these were the provision turnouts and occasionally the carriage of some politician or member of congress, whose curiosity had brought him hither from Washington to see how this fight with the Confederates should end. It was a most humiliating spectacle; yet such was needed at that time to wake the North up to the true condition of affairs.

Presently a Pennsylvania company swept by, not over twenty-five strong. Louis ran to join them.

"Where from?" he asked of one of the soldiers, a young fellow scarcely older than himself.

"Harrisburg," was the puffing reply. "Lost your company?"

"Yes—the Goreville Volunteers. Have you seen anything of them?"

"No; haven't seen anything but a lot of rebs at our heels. Better come along if you want to save your skin. They've got a large reinforcement after us."

On went the Harrisburg soldier, and Louis concluded he could do nothing better than keep at his side. Several miles were covered, and the few houses which composed Centerville were passed, when the road became blocked up in front. Presently half a dozen generals and their aides came dashing from one side and another.

"Face about, boys! We can whip them yet! Face about and form the line! Face about!"

The cry, well meant, was utterly useless. The soldiers were exhausted, having been on their feet since two o'clock that morning, and it was now after sundown. All but a few scattered regiments were thrown in hopeless confusion. Colonels could not find their companies, captains and lieutenants looked in vain for their men. Nine out of ten had still to learn what war and military organization really meant.

"This is Andy's day and no mistake," Louis half murmured to himself. He could imagine Andy, in his lusty, Southern way, throwing up his plumed cavalry hat and shouting for the Confederacy. Well, there was one consolation—the war was not yet over.

Finding the men could not be organized for a stand at Centerville Ridge, General McDowell allowed them to continue the retreat and at the same time sent Blenker's brigade to cover the retreat. The troops which reached Fairfax Court House immediately took cars for Washington, and they carried with them as much of the arms and stores as was possible.

But it was only a small portion that got away thus easily. The vast majority of the Union soldiers, worn-out, heart-sick, and hungry enough to eat almost anything, had to tramp the remaining distance to the capital. They took various roads, and most of them did not come in until the next day, when it began to rain in torrents, causing the dusty roads to turn into rivers of mud. With the rain came a heavy fog from the bay, as if to add to the already

THE GOOD OLD KID DAYS

accumulated misery, and in this fog and downpour those who had gone forth so full of hope, dragged back, to find a shelter wherever they could lay their heads, devour what was given them, and drop asleep before swallowing the last mouthful. Such is an actual picture of those days of awful gloom, when the fate of the nation hung in the balance. Had the Confederates followed up the victory gained at Bull Run, or rather, had their troops been in a condition to do so, it is more than likely Washington would have fallen. But the majority of the Southern soldiers were no better off than their Northern antagonists, and so, with the heavy rain coming on, nothing further was done.

It was not until twenty-four hours later that Louis found himself again in Washington. He had tramped in a roundabout way from Centerville, became lost, along with several thousands of other soldiers, and in all that time had had nothing to eat but three or four hard-tacks he had picked up on the road beside a half-smashed haversack. He and the young soldier from Harrisburg, named Clarence Woolley, had kept together, and now they approached the grounds around the Capitol side by side, both limping painfully, for their feet were more than sore.

The generous ladies of Washington had arisen to the emergency. Tented booths had been erected, and hot coffee and sandwiches could be had for the asking. Louis was standing up against a tent pole, with a cup in one hand and a corned-beef sandwich in the other, when he was tapped on the shoulder, and turning saw Harry Bingham.

"Harry!" he exclaimed, joyfully. 'Well, I'm glad to see somebody of our company. Where are the rest?"

"Captain Paulding and a dozen others are over in a corner of the White House grounds. I don't know where the others are. I was much worried about you. Are you O. K.?"

"Yes, excepting that I am dead for sleep. Here's a fellow who lost his command, too," and Louis introduced Woolley. The meal finished, the three walked over to the spot Harry Bingham had mentioned. Pennsylvania troops were gathering there, and soon Woolley found several men he knew and went off with them.

The meeting between the Goreville volunteers was rather a silent one. Captain Paulding and the other officers did what they could to cheer the men up, but all were too tired to listen; and quarters having been secured in a warehouse on a back street, the little band of thirty-one marched there and "turned in," to sleep the sleep of the over-weary for many hours to come. Of the company, three had been killed outright, four were slightly wounded and two were still missing. The missing ones turned up the next day.

Such, in brief, were the experiences of the young soldiers at the memorable battle of Bull Run, called by Confederate historians the battles of Bull Run and Manassas. To Louis it was decidedly depressing, to Andy it was full of hope for the future. Many of those in the South imagined that the end of the conflict was now close at hand and that it would not be long before the North would call a truce and recognize the new Confederacy. But these people were sadly mistaken; the North had not yet been fairly aroused, and the Civil War, instead of being nearly ended, had but begun.

CHAPTER XII.

ANDY IS TAKEN PRISONER.

"We're done for, and we might as well go straight home."

It was Jerry Rowe who spoke. Jerry sat on the top of a nail keg in the warehouse. He had been sleeping for a matter of ten hours, and his dreams, resulting from the shocks of the battle and an unusually large supper of pork and beans, had been far from lulling to his senses. He had groaned so dismally that Benny Bruce, already awake and as chipper as ever, had playfully poked him in the ribs with a drum-stick and thus aroused him.

"Yes, sir, we're done for. The Union is licked for good, and I'm for going home."

"Jerry Rowe, you're a croaker and a rebel!" burst from Benny's lips. "Done for? Not much! Why, we've only been through the first round of this fight."

"I don't care—I don't want any more such fighting. Why, I—I got near shot a hundred times!"

"And what did you come for, if not to be shot at?" went on Benny, witheringly, only Jerry did not wither. "Of all the cowards I ever saw, I think you're the worst."

"Hi! don't you call me no coward!" snorted Jerry, and leaping from the nail keg he made after Benny. Catching the drummer by the collar, he was on the point of bumping Benny's head against the warehouse wall, when Louis sprang up from his corner and interfered.

"Let Benny alone, Jerry," cried the young soldier. "Let him alone, I say, or you'll have me to deal with," and he advanced with clenched fists and flashing eyes.

"He called me a coward," muttered Jerry, but the look in Louis's eyes caused him to drop his hold and Benny retreated.

"I heard what you said about being done for, and only a coward would talk in that fashion. We are not done for, and I'll wager that the next time we meet the Confederates we'll not show 'em our heels in such a lively fashion."

"Right you are, Louis!" came from Moses Blackwell, who had just arisen and was stretching himself.

A SCRIMMAGE, UNIVERSITY OF PENNSYLVANIA BOYS AT PRACTICE ON FRANKLIN FIELD, PHILADELPHIA

"We went in without knowing what war was, that's all. We'll know better next time."

"It wouldn't be a bad idea for the captain to send Jerry home," came from another of the company. "He's of no earthly use to anybody."

At this Jerry grew very red. He wanted to "talk back," but feeling himself too well known, muttered something under his breath, and a moment later strode out of hearing.

The immediate days which followed the return to Washington were gloomy enough, in spite of all that was done to put a bright face on the matter. A good many felt as Jerry did, that they were "done for" and might as well go home, and they walked dismally around in the rain trying to communicate this feeling to others. Some thought Washington might be captured by the enemy before the week was out.

But those in authority did not remain idle long. As soon as possible after the disaster at Bull Run, Congress met and passed resolutions authorizing the President to call upon volunteers to enlist to the number of five hundred thousand, if so many were necessary. The call for additional troops was telegraphed to all of the Northern states. Four days after Bull Run, ten full regiments of infantry from Pennsylvania arrived at Washington to guard the capital from possible invasion. As at the time of the attack upon Fort Sumter, volunteer companies sprang up everywhere, faster than ever before, while many of the old commands were greatly reinforced. Nor was this all. General George B. McClellan, who had been highly successful in putting down the spirit of rebellion in West Virginia, was sent for to take command of the army in and about Washington, and he came on immediately and settled down to restore order and bring up the command to the high order of military excellence for which he was famous.

The Goreville Volunteers now found themselves supplied again with tents and camping in true military style near the banks of the Potomac. As soon as everything was in running order, Captain Paulding made a four days' trip to Goreville, returning with twenty-two new volunteers and several packing cases filled with articles sent to the soldiers from home. Louis received an extra supply of clothing from his father and a small box of dainties from his mother and sisters. There was also a small pocket Bible, to replace one which had been lost on the field of Bull Run, and on the fly-leaf of this his mother had written a loving dedication, admonishing him to peruse the good Book daily and to live according to its precepts.

Month after month went by after this and the army in and about the capital lay inactive. There were small fights here and there along the river and some miles in the interior of Virginia, but they did not amount to much. In the meantime operations in the West went on spiritedly. In Tennessee, Grant had taken Fort Henry and Fort Donelson, and this cheering news caused much enthusiasm throughout the Union.

Louis had hoped to go home on furlough throughout Christmas week, but the permit could not be obtained, and he made the most of the holidays in camp, in company with Harry and the rest of his friends. Again the ladies of Washington showed their goodness of heart by sending out Christmas pies and other goodies, and never were gifts more appreciated by the waiting boys in blue.

In the meantime, however, Andy was far from idle. From Manassas the Montgomery Grays moved to Centerville and went into temporary camp. Everyone was in the best of spirits throughout the Confederate army and Andy and the others thought the orders to advance upon Washington might come at any moment. Recruits were coming in rapidly, and soon over fifty thousand men lay scattered within two days' march of our capital.

"We ought to do something," said Andy to Leroy Wellington, on a crisp, cool day in October. "It's a shame to keep us idle when all of the fellows are so anxious to fight."

"I am with you, Andy; I'd be willing to risk most anything for some sort of an encounter."

The wishes of the pair were gratified a few days later. General McClellan, in order to learn how close the Confederates were, and what their actual numbers were, ordered several thousands of the Union troops to Drainesville. This done, others were ordered to Ball's Bluff, a rocky plateau overlooking the Potomac. Word of this was received by the Confederate leaders, and a counter demonstration ensued, with the result that the Union forces were caught on the Bluff to the number of nearly two thousand, one-half of whom were either killed or wounded.

The Montgomery Grays participated in this fight, and during this Andy had an experience which he was not likely to forget for many long days to come. The cavalry were moving slowly through the woods when the command came to turn to the right and take a narrow path leading close up to the river bank.

"Be careful, men," cautioned Captain Montgomery. "This would be a hard road on foot and on horseback it is ten times worse. Look out that you don't have a tumble into the river."

The command was still an eighth of a mile from the bluff, and the horsemen were moving along silently, when suddenly from the opposite shore there rang out half a dozen rifle shots in quick succession. Two of the cavalrymen were wounded and the horse immediately in front of Andy's animal fell headlong, shot through the knee.

The fall of this horse caused Firefly to balk and rear. Andy caught him tightly by the reins, but this was useless, and a second later boy and animal were plunging through the brush to the river below!

"Andy Arlington has fallen overboard!" sang out Leroy, in consternation. There followed a great splash and two more rifle shots, and boy and horse disappeared from view.

But not for long. In a moment Firefly reappeared, snorting and blowing the water from his mouth and nostrils, and Andy came up shaking his head like a water spaniel. Both struck out for the shore, but the current was too strong for each, and they were swept onward and out of sight of those above.

"They are lost!" groaned Leroy, and the others thought he must be right, for going forward meant to move into the very teeth of the enemy.

Crack! Another rifle rang out, followed by the puff of smoke from a screen of green leaves. A Union sharpshooter had taken close aim and the bullet clipped one of Andy's wet locks. But now he had gained Firefly's side and he crouched down beside the faithful steed for protection.

Here and there in the stream were spots where the bottom could be touched. But the current would not let them stand still, even had they been so inclined, and Andy certainly was not. They were hurled forward until under the very edge of the bluff.

At that time the fighting upon Ball's Bluff was at its highest pitch. Colonel Baker of the Union forces was making a desperate endeavor to retreat to the flatboats which had brought him across the river and the Confederate forces, posted in the woods surrounding the bluff, were pouring in their deadly fire with fearful effect. The cracking of firearms was incessant and reached Andy's ears plainly, yet he hardly paid attention, for his one thought was to save himself and his faithful Firefly from drowning.

Opposite to Ball's Bluff is a place called Conrad's Ferry, and in the middle of the river between these two points lies a long, low, rocky bit of soil called Harrison's Island. Some of the Federal troops were stationed on this island and it was to this Andy found himself drifting.

He had just waded out of the water and Firefly had done the same when he heard the sounds of voices just ahead of him. Then he saw the gleam of several rifle barrels.

"Halt! Throw up your hands!" came the command, and taken completely by surprise, and being in no condition, with water-soaked firearms, to defend himself, Andy complied.

"I guess you're our prisoner, Grayback," muttered a tall Union soldier as he strode forward. "What do you think about it?"

"It certainly looks that way," replied Andy, trying to smile, although deeply chagrined over the turn affairs had taken.

"Do you take it quietly, Reb?"

"I reckon I'll have to, Yank."

"There's where you show your sense. How did you get in the river?"

"My horse tumbled over the bank."

"And like lots of you Southerners you couldn't bear to think of separating from your hossflesh, eh? All right, if you're shot we'll see to it that the hoss is buried with you. March!"

"Where to?"

"Straight ahead."

"What place is this?"

"We ain't in school now, Grayback. March!"

And as there was no help for it, Andy marched forward, with a soldier at each side of him and one in the rear, while a fourth led the dripping Firefly.

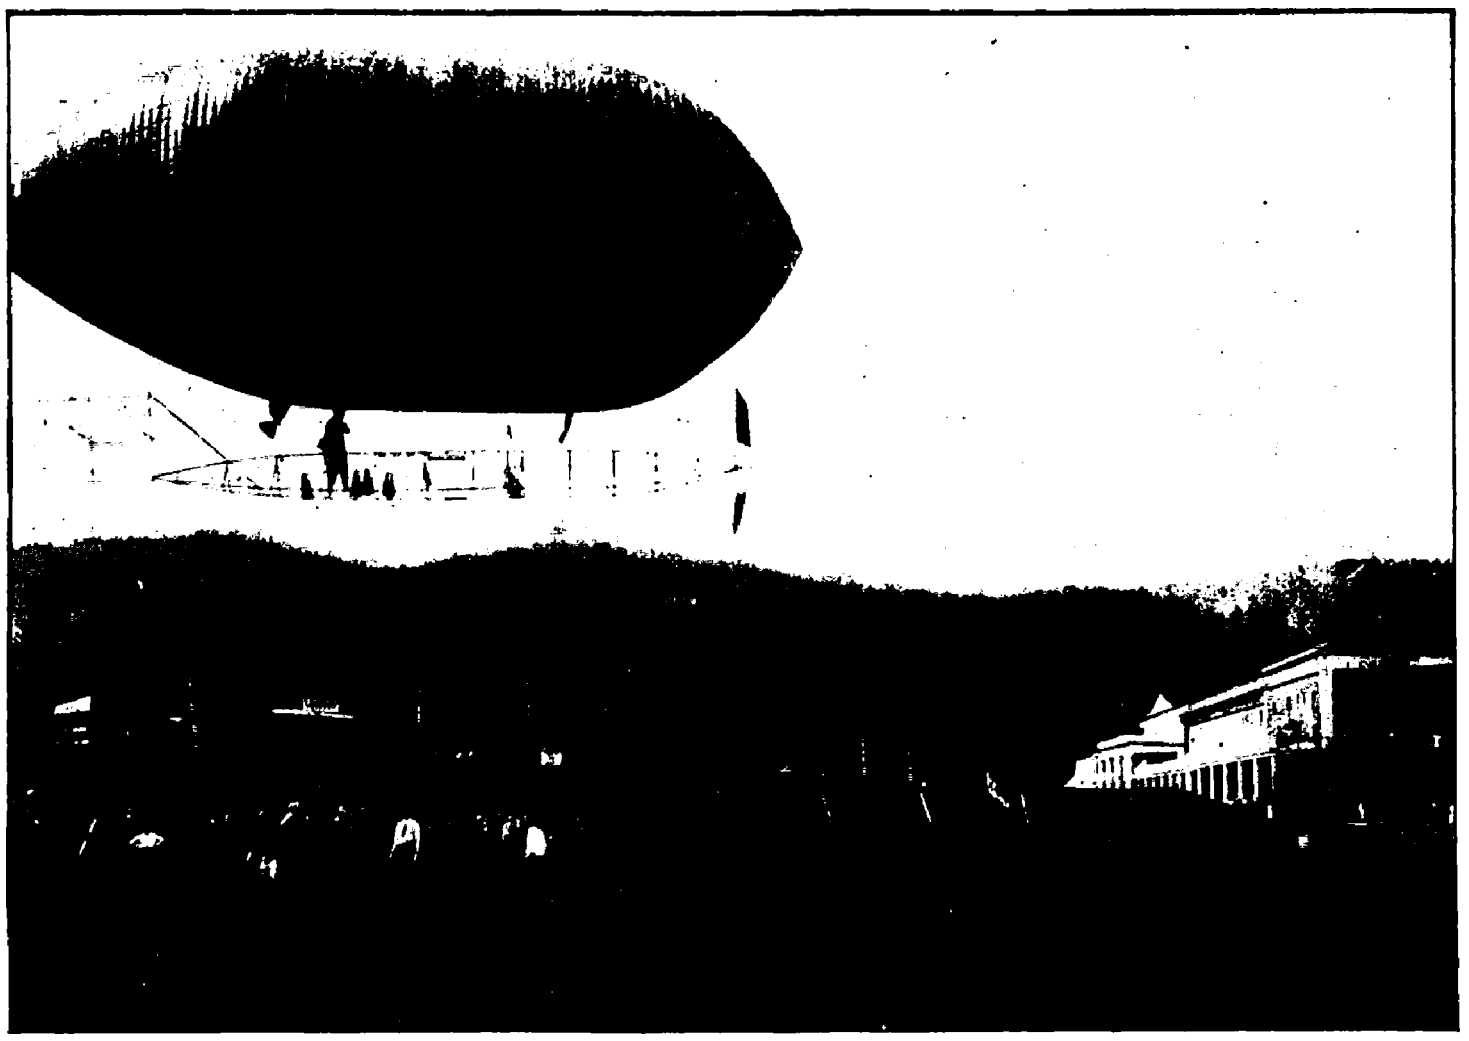
A BOY AERONAUT



LINCOLN BEACHEY IN HIS AIR-SHIP AT THE PORTLAND EXPOSITION.

HOW MANY BOYS of eighteen would have what a boy would call the "nerve" to undertake the sailing of an air-ship all by themselves? That was what Lincoln Beachey, a boy of eighteen years, did at the Portland Exposition. Of course he had a steady head and was free from the great American disorder called nervousness. Any mistake, any confusion caused by fright would have resulted in disaster and almost certain death.

The interesting problem of aerial navigation is absorbing the minds of inventors today as never before. Some of them are confident that air-ships will in time come to be as common as automobiles, but they can never be as troublesome to the general public as that hustling vehicle is. Air-ships, should they become common, will at least be out of the way, and the only human lives endangered will be of those who risk themselves in these lofty vehicles. Ever since Santos-Dumont went sailing around the Eiffel Tower at the Paris Exposition inventors have been trying to "go him one better," and some of them seem to have done so. Captain T. S. Baldwin, an American, has long been an enthusiast regarding the practicability of air-ships as a method of sailing through the clouds, and his air-ship, called the California Arrow, was one of the wonders of the St. Louis Exposition, but, interesting and successful as were the ascents made by young Roy Knabenshue, who now has an air-ship of his own, they failed to establish the fact that air-ship navigation is entirely practicable as a common method of travel. The most successful of the air-ships yet invented cannot carry passengers, the aeronaut himself requiring all the space there is while navigating the ship.

It is hoped, however, to make the air-ship of real value in times of war, and that by its use the position and strength of armies can be discovered. On October 28th the Lebaudy air-ship made its seventy-sixth successful ascent, and the highest military authorities regard it as of very great value in securing military information. This wonderful air-ship is so protected by cells that two hundred bullets would have to perforate it before rendering it helpless, thereby causing it to fall to the ground. Experts declare that the recent experiments near Toul show that the Lebaudy air-ship can be destroyed only by artillery fire, but owing to the difficulty of discharging an explosive projectile at an almost vertical axis there is really no danger of its being hit by a shell. Engineer officers state that the air-ship is perfectly safe at a height of nine hundred yards above the enemy, if kept constantly moving, and this is amply sufficient for working a new special photographic apparatus used on such excursions. A Colonel Strauss, who made an ascent in the Lebaudy air-ship at Toul, said that he was able to take in every detail of Fort St. Michel, and expressed the opinion that every army corps should be supplied with an air-ship as soon as possible. Captain Voyer, who was detailed by the Minister of War to investigate with the utmost care the air-ship experiments, declared that in his opinion these experiments were entirely satisfactory and convincing, so it seems that the air-ship may in time come to have a place in what we call the "implements of war." It is to be hoped, however, that we will never have any need of them in this capacity in our own country.

LINCOLN BEACHEY.

On September 14th last young Beachey made one of the most satisfactory ascents ever made in our country. On this occasion he went sailing away into the air and after going in a circle around the twin towers of the government building, at the Portland Exposition, he made a tour of the entire exposition grounds, and then went beyond them and over a lofty elevation near the grounds called Willamette Heights. He was in the air nearly an hour before returning to the exact spot from which he had ascended, and he landed the air-ship on the saw-horses from which it had taken its flight. At no time was the air-ship at any very great height in the air, and at times during its course it just skimmed over the tops of the buildings on the ground.

The air-ship in which young Lincoln Beachey made this interesting trip and others is called the Angelus, and it is a good deal larger than the California Arrow, seen at the St. Louis Exposition. It is made of pongee silk and suggests a potato more than anything else in shape. It is sixty-nine feet long and twenty-two feet in diameter. It has a little engine of seven and a half horse-power weighing two hundred and fifteen pounds. This engine uses gasoline for fuel and the great potato-shaped bag holds sixten thousand cubic feet of hydrogen gas. The little woodwork there is about the air-ship is of Oregon spruce, which is the lightest wood known.

Young Beachey has had several thrilling experiences while navigating air-ships, but he did not "lose his head" in any of them, else this article about him would never have been written. He is an air-ship enthusiast and one of the ambitions of his life is to some day become the proud possessor of an air-ship of his own. He has been in the employ of air-ship builders ever since he was thirteen years old, when he forsook the schools of San Francisco to work on air-ships. Not a wise course, perhaps, and one that gives him a notoriety that no boy should envy, since navigating air-ships is an extremely dangerous occupation and should be cried down were it not that the interests of science are concerned in the experiments now being made with air-ships in our country, and the ordinary man is too large and not agile enough to navigate an air-ship. The air-ship must be navigated with the least weight possible and the operator must be "as quick as a cat." It requires youth for this service, but it is not often that youths of eighteen have the "cool-headedness" young Lincoln Beachey seems to have.

Sketch by Edwin Waldorkin, Public School, 188, New York City

PATRIOTISM AND Punctuality. That is the motto of an organization of wide-awake New York City boys. There is a little history connected with the forming of this organization which shows that the American boy is not lacking in initiative; that he is not blind to his shortcomings; that he is willing, yes anxious, to apply a remedy when he learns of his weakness.

A school principal in one of the large city schools told his assembled boys one morning that an association of prominent city merchants had found serious fault with the city boys for their lack of punctuality. These merchants had said that they had often found boys who had been employed to come to their offices at seven o'clock, coming in any time between seven and eight o'clock. To these boys they said time seemed to be divided into no smaller period than hours. To a merchant one minute is often of great value, and the fact that these boys had no correct idea of the value of these small periods of time was a source of much inconvenience and often a money loss to them.

This fault-finding on the part of the merchants—and the merchant is a very important member of the community—touched the pride of many of the New York boys. The boys to whom the school principal spoke were so affected that they at once organized with a view to applying a remedy for this undesirable state of affairs. At one of the meetings it was decided to make punctuality a matter of patriotism. Several speakers—boys from twelve to fourteen years old—pointed out in eloquent speeches, that had it not been for the minute-men of Revolutionary days, this grand and glorious land might yet be under the yoke of a monarchy. These men, it was shown, were ready to not only sacrifice their sleep and food to be promptly on hand when wanted, but would turn from their business at a moment's notice. Patriotism and punctuality, it was decided, must go together. One without the other is as soup without salt—an insipid, tasteless thing.

A large flag of thirteen stripes and forty-five stars was bought, with money assessed against each member. This flag, by agreement, was to be flung to the breeze each morning of the school week and was to wave over all who came to school on time. Those who read and studied late into the night—as it were, burned their candles to the socket—left but little of the sand in the hour-glass to flow while they refreshed themselves with sleep, had always that flag to remind them that they must be punctual.

The organization has an artist among its membership; his name is Edwin Waldecker, fifteen years of age. His pen sketches, one of which heads this article, are copied on the blackboards and are an inspiration to patriotism and punctuality. The coupling of these two qualities is a novel thing, but it has borne excellent fruit. Not nearly so many boys come late to school in this one school. Possibly when it becomes known, as it will, when published in THE AMERICAN BOY, other boys in other schools will form similar organizations. The motto is not copyrighted.

IN DEFENSE OF HIS FLAG

(*Continued from page 325.*)

The march did not last over two minutes, when Andy found himself in the middle of a growth of trees. Here was stationed a detachment of Union soldiers, to cover any retreat from the bluff, should such a thing become necessary. Most of the soldiers were on the alert, watching the battle above them and guarding the flatboats, and they paid but scant attention to the arrival.

"It's going tough with somebody," Andy heard an under officer say, and then he was taken to one side and bound fast to a tree, while Firefly was tethered but a few feet away. (*To be continued.*)

A Youthful Ruler

YOUNG PEOPLE who think that the Emperor William is absolute ruler over all Germany are mistaken regarding the emperor's authority. Germany is not an absolute empire but a confederation of a large number of sovereign states which have combined on the basis of a common nationality to present a united front to foreign countries. The German emperor, unlike the emperors of Russia and Austria, is nothing more than the hereditary president of the confederation of German states. The German emperor, as such, is a strictly constitutional monarch, and it is as king of Prussia that he enjoys such extensive personal power over his subjects. Emperor William, it is said, has an ambition to do away with these smaller German states, thereby forming himself into an imperial monopoly, but this plan does not meet with popular approval. Perhaps the plan would meet with more favor were the emperor a little less arrogant than he is. Some of his people feel that in view of his temperament he has all the authority he should have.

GRAND DUKE OF SAXE-COBURG-GOTHA

He has made himself so prominent a figure since he came to the throne of Germany that the rulers of the many principalities in his kingdom have been lost sight of.

Apart from the kaiser there are no less than twenty independent monarchs in Germany. There are three kings, six grand dukes, four dukes and seven reigning princes in Germany. Some of these German states are so small that one might call them toy states, but they are pretty expensive states and it would really be a piece of economy on the part of Germany to do away with them.

The smallest of these German states is in the principality of Schaumburg-Lippe, which contains a total population of but forty thousand. Its capital is the town of Buckeberg, with a population of but five thousand. This little German state controls its own affairs as independently of the other German states and the Emperor William as our own state of Iowa controls its affairs independently of the other states and the seat of government in Washington. Then there is the principality of Waldeck with a population of but sixty thousand, while its capital is a little town of but three thousand inhabitants.

The rulers of some of these German principalities are very young. The youngest is the Grand Duke of Saxe-Coburg-Gotha, who is now but twenty-one years old and who has already become involved in a dispute with his subjects that has made him very unpopular among them. Saxe-Coburg-Gotha is one of the largest and most important of the minor German states and its young ruler has been having rather a lively time of it since he came into authority. He is said to be a favorite of the Emperor William, and he and one of the emperor's sons are as "chummy" as it is possible for them to be.

Germany has no less than one hundred and fifty royal palaces to keep up. Some of these palaces belonging to different German rulers have as many as twenty-five thousand acres in parks around them and some of these German rulers receive twenty times the salary we pay our president. Indeed the King of Bavaria receives a million and a half per year and the King of Saxony a million. The young Grand Duke of Saxe-Coburg-Gotha receives two hundred thousand dollars per year and does not find it easy to maintain his royal state even on that generous sum. It costs Germany about seven millions per year to maintain all these monarchs, and it must be confessed that most of them are very useless ornaments and some have been fruitful of much that is bad in the way of court intrigues and scandals. The throne of Bavaria has for years been occupied by the unfortunate King Otto, who has long been a maniac who crawls about on his hands and knees and who barks like a dog. The king before him was also a maniac who committed suicide by drowning, but Otto is still king by divine right and will be until he dies, although it is of course impossible for him to have anything to do with the affairs of the kingdom. When he dies the throne will fall to Prince Rupprecht, who is far from being a good man.

There are, it must be admitted, many reasons to support Emperor William's theory that it would be well to do away with these useless German monarchies that are purely ornamental, and not very pretty ornaments at that. Some of them have been productive of a great deal of trouble to the Emperor William, and the people justly complain a good deal about the great expense of maintaining so many utterly useless monarchs. Writing of the things to be said in favor of these German principalities one familiar with them and their uses says: "The little German courts perform one service, however, which should not be overlooked. When the princes of the great reigning families of Europe are short of wives they can always find ladies of birth equal to their own among the minor German royal families, while the princesses of great imperial and royal houses can marry occupants of the little German thrones and their relatives without sacrificing their royal rank and dignity."

The young Grand Duke of Saxe-Coburg was married not long ago to the Princess Victoria of Schleswig-Holstein, another of the German principalities it costs a large sum to maintain. Those who think that ours is an extravagant nation in paying those in authority over us will find that in no country of our wealth does the chief executive receive so small a salary as that paid to the President of the United States.

Still Room at the Top

BOYS AND young men looking to the future with fears and doubts regarding the possibility of success in the business or other undertakings they have in mind for their life work, would do well to bear in mind these absolutely true words, written by one who has made a careful and most intelligent study of the business situation of the present day, and who says:

"Never in the world's history has there been such a demand for ability as there is to-day, and no employee has reason to complain of the opportunities in the business world. His advancement is limited only by his ambition and ability."

That's a fact, boys. When any growler or fault-finder declares in your presence that there is "no chance for a fellow nowadays" you let that statement go in at one ear and out at the other. The chances were never better for the fellow of real ability and real ambition combined with a willingness to work his way up to the top where there was never so much room as there is to-day. Never in the history of our country were there such salaries paid to men in responsible positions as are paid to-day, and never was young blood and young brains in such demand. In fact, some of us old "boys" of thirty-five and forty are inclined to resent the tendency to set us aside in order that the young fellows may have our places.

But bear this also in mind: The exactions in the great world of commerce, of medicine, of law, of science, are greater than ever before. The demand, you must remember, is for real ability, for usefulness that has a cash value to the employer. He will not pay "fancy prices" for anything else. Do you know that there are now in the United States several men receiving salaries of $100,000 a year, and a great many more men who are paid $50,000 per year? I have personal knowledge of a man of thirty years who is receiving $20,000 a year from a great corporation and five years ago he was receiving but five thousand a year from a Boston bank. He has developed into what they call a "high-grade man" in the world of business, and it is the high-grade men who are in eager demand. The writer to whom I have reference tells the simple truth when he says: "Never in the world's history was the condition of the employee who works with his hand or automatically with his pen equaled in grade of living, pleasure or opportunities for education and improvement. The skilled laborer to-day receives more than his superintendent of the seventies."

No such salaries were paid when your fathers were boys as are paid today. Ten thousand dollars a year was a phenomenal salary thirty or forty years ago. The skilled worker, the man of keen business instinct, the worker who devotes himself faithfully to his business and makes himself master of his position—these men are being paid larger sums to-day than men ever were paid before, and they are in greater demand. To-day is the age of the young man; and it therefore behooves the young fellows to make the most of their young manhood, for youth is a fleeting thing. You have no time to "fool away" if you are well along in your 'teens. A man in our day should be well along toward the top by the time he is thirty years old, and he will surely be there by the time he is forty if he is likely to get there at all in the world of business. His progress may be a little slower in the world of science and medicine and law and letters, but youth is the time of opportunity in every avocation in life. Still room at the top, boys, room at the top for the boy who has the energy and the ambition to "get there."

SON AND DAUGHTER OF COMMANDER BOUTAKOFF, THE RUSSIAN NAVAL REPRESENTATIVE IN THE UNITED STATES

The Camp Fire of Mad Anthony

(*Continued from page 322*)

"Ah don' know, suh. Ah wasn't here, as I done tole yo'. How can ah tell you' 'bout Sampson when ah wasn't here myse'f?" demanded the prisoner as her noisy laughter broke forth afresh.

"Friend Noah, I will take her to Friend Thomas and I will tell him of her pranks," suggested Elnathan. "Doubtless he hath no knowledge of her doings and will be grateful when he hath been informed."

"Doubtless, Friend Elnathan," said Noah dryly.

"Do then as I suggest," persisted Elnathan eagerly.

"All right. You take her home," said Noah quickly, greatly to the surprise of his friends.

"It will please me to do so," replied the young Quaker eagerly.

"You go with him," said Noah to the prisoner.

"Yaas, suh."

The girl at once moved toward Elnathan, but the young Quaker still hesitated. "Thou art coming also, Friend Noah?" he inquired.

"Why, you are the one who asked leave to take the wench to Mr. Hull," responded Noah in pretended surprise. "What do you want me to go, too, for?"

"I do not desire thee to go with me to Friend Thomas," said Elnathan quickly. "I thought thou wert also to depart from the house."

"Oh, we're going pretty soon," replied Noah carelessly. "We may take another look about the place before we leave. We may find another wench hidden somewhere in the house and Mr. Hull will be glad if we find her for him." As he spoke Noah glanced shrewdly at Elnathan, and the effect which his words produced apparently pleased him, for a smile appeared in the corners of his mouth, but he did not look at his companions to see if they also shared in his feeling.

"I will stay and assist thee," said Elnathan quickly.

"No. You take the wench back home. If you stay she will stay, too, and we may hear the doors and windows rattling again. You go right on, Elnathan, and we'll just take a look around the house, and if we don't find any more wenches we'll go home, too."

Noah could see that the young Quaker was seriously perplexed. It was evident he did not wish to depart and leave the boys in the house, and yet it was at his own request that the black girl had been delivered to him to take home to her owner. Hesitating a moment, Elnathan then said, "I am sure thou wilt not find any more——"

"Probably we shan't," interrupted Noah indifferently.

"I do not think Friend Thomas will be pleased to learn that his house here is open and that thou art—"

"Just tell him," interrupted Noah once more, "that we will see to it that every door and window is shut and everything will be all right. I give you my word for it."

For a moment longer Elnathan still hesitated and then, unable to think of any reason for a longer delay, he bade the black girl follow him and at once departed from the house.

Waiting until he was convinced that the young Quaker was really gone, Noah then turned quickly to his friends and said eagerly, "Now we'll search the house."

"Haven't you had enough for one night, Noah?" demanded Caleb. "I am sure I have."

"Afraid, Cale?" laughed Noah. "That isn't the way for a member of Anthony Wayne's Chester county company to talk."

"Anthony Wayne isn't afraid of anyone or anything," retorted Caleb warmly, quick to respond to any apparent slight upon his hero.

"Neither are you, Cale. Come on, boys. Unless I'm mistaken we'll find something in this house that will be worth finding. And it won't be such foolishness as witches, either."

"Have we any right to do that?" inquired Elias doubtingly.

"Of course we have," responded Noah with all confidence. "No one lives in the house. People have been afraid of it and we were scared, too, tonight by what we saw and heard. Oh, I cannot tell a lie," he added with a laugh as his companions began to protest. "I was scared and so were you, and you know it, every one of you."

"Speak for yourself, Noah," suggested Ananias tartly.

"So I am and for you, too," retorted Noah. "Now, boys, we'll all keep together, but we'll search the old house from garret to cellar. Come on. Bring your candle, Elias, and we'll begin with the attic."

Obediently the boys followed and up the creaking stairway they made their way to the garret. They seldom spoke as they peered into every closet and continued their search on each floor of the old house. Their efforts to discover anything suspicious were not successful, and at last they came to the door that opened into the cellar. There was a momentary hesitation when they found this door fastened, but at Noah's word it was broken loose and then the boys silently stepped upon the stairs leading to the cellar below. They had not, however, gone far before a low exclamation from Noah, who was leading the way, caused every one to stop, and one quick look revealed to them that their search had now been rewarded. THE YOUNG BOOK AGENT

OR, FRANK HARDY'S ROAD TO SUCCESS

BEGUN IN JUNE

By HORATIO ALGER, JR.

Author of "Lost at Sea," "Nelson the Newsboy," "Out for Business," "Young Captain Jack," "Ragged Dick Series," Tattered Tom Series," Etc.

CHAPTER IX.

FRANK MEETS A BOOK AGENT.

"SO YOU are a book agent?" said Frank, and now looked at the young man with increased interest. "May I ask what books you sell?"

"I am taking orders for three works—a new and beautifully illustrated set of Cooper's works, an Illustrated History of the United States, and a new cook-book. Here are some samples," and the young man brought them forth from his bag.

"They certainly look very fine," answered Frank, after inspecting the volumes.

"Perhaps I can sell you a set of the Cooper."

"Thank you; I can't afford them."

"Or a cook-book for your wife," and the book agent laughed. "Get her a cook-book and she won't kill you off when she cooks for you."

"I'll have to get the wife first—and means to support her," and now Frank laughed, too. "May I ask if there is much money in selling books? If I can't get a steady job I might take it up," he went on, seriously.

"Selling books is a great speculation, my friend. You might make fifty dollars a week at it, and you might not make a dollar. It all depends on what you have to sell, what territory you cover, and what your abilities as a salesman are."

"Yes, that must be true. But, somehow, I think I could sell books, if I had the right kind."

"Many think they can do the same, but out of a hundred who try, not a dozen succeed. It's very discouraging at the start. To make a success you've got to have lots of 'stick-to-it' in you."

"May I ask what firm you represent? Or, perhaps you don't care to tell?"

"Oh, I'm perfectly willing to tell you, and if you want to try your luck with them go ahead. My name is Oscar Klemner, and I represent the Barry Marden Publishing Company, of Philadelphia—one of the largest publishing houses in the subscription book business. Here is their card," and Oscar Klemner handed it over.

"Thank you. My name is Frank Hardy, and I come from Claster."

"Glad to know you, Hardy, and if you take up books I hope you will make a big success of it."

"Will you tell me how they pay for the work?"

"Certainly. An agent gets twenty per cent. for geting an order, and twenty per cent. more if he delivers and collects."

"Do you do both?"

"Sometimes; but at other times I merely take orders, and when I can't get orders I take to delivering the orders some fellow more lucky than myself has obtained."

"You wanted me to tell you about some folks here."

"Yes. Here is a list of names. I want to visit the people in regular order, according to where they live, if I can. I don't want to waste my time skipping from one end of the town to the other and back."

Frank looked over the list carefully.

"I know all these people, and if you wish it, I'll go around with you."

"Won't it be too much trouble?"

"No. And besides, it will give me a little insight into the business."

"All right, then. Come ahead, Hardy. I'll give you a practical lesson in both the art of delivering books and in taking new orders. You see, some of these people have merely asked about the books, not ordered them."

Having rested himself, Oscar Klemner said he was ready to start, and Frank offered to carry the leather handbag for him.

"Never mind; I'll carry it myself. I'm so used to it, I'd feel lost without it."

They were soon at the first house, where the book agent delivered a cook-book and collected three dollars for it. The transaction was quickly over, and they passed on to the next place.

"That was certainly a quick way to make sixty cents," thought our hero.

"We don't always have it so easy," said the agent, as if reading what was in Frank's mind. "Sometimes folks won't take the books they have ordered."

"What do you do then?"

"It depends. If it's a written order, we show it, and demand that it be honored."

The next place to stop at was one where a minister had written that he wished to look at the illustrated history. The book agent showed the history and dilated eloquently on its worth and cheapness, but the man of the church refused to order just then, although he said he might do so later.

"That was a disappointment," said Frank, as they hurried off, after half an hour had been wasted in the effort.

"Oh, you'll get used to them, if you ever get into this business," answered Oscar Klemner, cheerfully.

Frank remained with the agent until dark, visiting twelve homes and three places of business. He took note of the fact that Oscar Klemner collected eight dollars, and took orders for twenty-eight dollars' worth of books. This made thirty-six dollars in all, upon which the agent's commission, at twenty per cent., was $7.20.

"That is certainly a good day's wages," thought our hero. "I'd like to do half as well."

"How do you like it?" asked the book agent, when the work was over.

"I like it first-rate," answered Frank. "I'm going to try it, if they'll let me."

"If you do, I wish you luck. But I wouldn't work around here. Our men have been through this territory pretty thoroughly."

On parting with Frank, Oscar Klemner offered our hero a fifty-cent piece.

"You've earned it," he said.

"I don't want the money. I am glad I got the experience," said Frank, and refused to accept the coin. Soon they parted; and it was many a day before our hero saw Oscar Klemner again.

Frank did not relish the walk back to Claster, after his tramp all over Porthaven. But there seemed no help for it, and he struck out as swiftly as his tired limbs would permit.

"If I'm going to be a book agent, I may as well get used to walking first as last," he told himself. Yet, when a lumber wagon bound for Claster came along, he was glad enough to hop up beside the driver and ride the last half of the journey. Even then, it was nearly ten o'clock when he got to his home.

"So you've had no luck, Frank?" said Mrs. Hardy. "I am sorry for you. Have you had any supper?"

"No, mother. But don't worry; I'll find a couple of slices of bread or so."

"There is some tea on the stove, and some beans and rice pudding in the pantry, and some cake and berries. You must be very hungry."

"I've got a plan," said Frank, when he was eating. "I'll tell you about it in the morning. It's too late now." And as soon as he had satisfied his hunger he went to bed.

When our hero told his father and his mother of his plan, on the following morning, both were much surprised.

"A book agent!" cried Mr. Hardy. "I don't think they earn their salt."

"Father, you are mistaken," Frank answered, and then told of his experience of the day previous. Both of his parents listened with keen interest.

"That agent must be a remarkable man to earn so much," said Mrs. Hardy. "I knew a man here who tried it once, old Randolph Winter. He earned only a few dollars a week."

"I guess he wasn't cut out for an agent," answered Frank, who knew the man mentioned to be very lazy and shiftless.

"And so you think you are cut out for an agent, Frank?" demanded his father.

"Oh, I wouldn't say that. But I thought it might be worth trying—more especially as I can't get anything else to do."

"Oh, it won't do any harm to try. But don't fill your head with any false hopes, for you may be sadly disappointed."

"If I try it, I'll make up my mind to do my level best, and then take what comes. But I'd like to go to Philadelphia and see those book publishers first."

"Very well; I'll give you the necessary money."

While Frank was talking the matter over with his parents, Ruth came in with several letters, and a big package from the post office.

"Here are some books for Frank!" she called out. "And a letter, too."

"The package is from Mr. Philip Vincent, the gentleman whose spectacles I picked up at the wreck," said Frank. "And one of the letters is from him, too."

"What does he say, Frank?"

"I'll read his letter out loud, mother," answered our hero, and proceeded to do so.

"My Dear Young Friend [so ran the communication]: I must ask you to pardon me for the delay in sending you the story book I promised. The fact of the matter is, I had a sudden call to Chicago on business, and just arrived in New York again yesterday.

"By this same mail I send you two illustrated story books, which I trust will please you in every way. Later on I shall send you a new book I am about to issue, called the Illustrated Lives of Our Presidents, which should prove an inspiration to all young Americans like yourself.

"If you ever come to New York, I shall be glad to see you.

"Yours very truly,

"PHILIP VINCENT."

"What beautiful books!" cried Ruth, as she and Frank looked them over. "I'm sure they'll be interesting."

"Hullo! I've made a discovery!" ejaculated Frank, who was reading the printed matter at the head of the letter sheet. "Mr. Vincent is in the subscription book business besides running a book store."

"If that is so, you had better apply to him for a position," put in his father.

"I don't know but what I will, father. But it might look forward."

"Not if you explained matters. Tell him how you met that young fellow, and how you were on the point of applying to that Philadelphia house for an opening when his books and the letter came."

"All right; I'll do it, and at once."

CHAPTER X.

FRANK GOES TO NEW YORK.

Without delay Frank sat down and wrote a long letter to Philip Vincent, telling that gentleman of all that had occurred, and thanking him for the beautiful books he had forwarded. He added that he wished very much to try his luck at selling books, and asked if Mr. Vincent could make an opening for him. This communication he mailed before going to bed.

The next day Frank was busy helping his mother and Ruth around the house. The servant had been allowed to leave, for Mrs. Hardy did not wish to pay her wages any longer. As there was no school, Ruth could now help her mother a great deal, and did so willingly, and Georgie promised, if Frank went away, to keep the garden in order.

Nothing more had been heard of Jabez Garrison, and Mr. Hardy received word that he would ere long be called upon to make good the amount for which he had stood security.

"It's hard to part with so much money," said he to his wife. "But there seems no help for it."

The crushed foot was mending slowly, but it was evident that it would be many days before the sufferer would be able to walk upon it once more.

"You will have to give it time," said the physician. "If you do not you may be a cripple for life." And a specialist who was called in gave the same advice.

Two days after mailing his letter, Frank received a reply from Philip Vincent. It was short and to the point. In it the book publisher said:

FRANK MEETS A BOOK AGENT

"I am perfectly willing to give you all the chance possible if you wish to make the trial. But let me remind you that you can only win out by doing your very best and sticking at it. It is bound to be more or less discouraging at the start. If you wish to take hold, come to New York soon, for I leave for Boston before long."

"I like that letter," was Mr. Hardy's comment. "There is no nonsense about it. Some publishers would make an agent believe that all he had to do was to go out and coin money."

"Can I go to New York to-morrow, father?" asked Frank, anxiously.

"If you wish."

"Yes, I want to get at work just as soon as I can."

"Very well. I will give you the necessary money."

"It won't be necessary, father," answered Frank, with just a little pride. He had a few dollars of his own, which he had been a good while in saving.

"You will need money, Frank."

"I have fourteen dollars."

"You have? Where did you get so much?"

"I've been saving all I could for two or three years."

"It is very creditable to you, Frank. I am proud of you. If you need more let me know. You may have to leave a deposit for the books you take out."

"That is true, although I fancy Mr. Vincent will trust me."

Frank's preparations for leaving home were very simple. He did what he could around the house, and the next day he dressed himself in his best, and put his money in his pocket. There was a train for New York at eight o'clock, and he was at the station at least fifteen minutes before that time. He bought his ticket, and was the first to board the train when it arrived.

The ride was something of a novelty, for our hero had not been to the metropolis before. But he had studied a map of New York diligently, and he had little difficulty in finding Mr. Vincent's place of business, which was located on Nassau Street.

"What can I do for you?" asked one of the clerks as he came forward.

"I would like to see Mr. Vincent," replied Frank.

"He is busy just now."

"Then I will wait."

"Can't I attend to the business?"

"I think not. I wrote to him, and he sent word for me to come and see him."

"What name, please?"

"Frank Hardy."

The clerk walked to an office in the rear and presently came back.

"Mr. Vincent will see you now," he said, and showed Frank the way.

"Well, my young friend, I am glad to see you again," said Philip Vincent, as he arose from in front of a large roller-top desk and shook hands. "Take a seat, and I'll be at liberty in a few minutes." And then he turned to his desk again and began to sign some letters.

During the wait Frank glanced around the office curiously. It was handsomely furnished, with drawings and engravings on the walls. In one corner, at a typewriter, a private secretary was at work.

"Now, then, I'm at liberty," said Mr. Vincent, after five minutes had passed. "How have you been, and how is your father?"

"I've been well," answered Frank, "and my father is doing as well as can be expected, so far as his foot is concerned. But he has had great misfortunes otherwise," and our hero mentioned the Jabez Garrison loss and the fire.

"That certainly is hard luck," said Philip Vincent, sympathetically. "He must be greatly worried."

"Yes, sir."

"And that is why you want to try your luck at selling books?"

"Yes, sir. I've tried to get something else to do—I mean a regular situation—but I can't find anything that will pay."

"I see. Yes, regular positions on a stipulated salary are scarce."

"I think I can sell books—anyway, I would like to try. I suppose you don't object to employing boys."

"Oh, no. A book sold by a boy will yield us as much profit as one sold by a man. But it requires talking, and I am afraid a boy could hardly set forth the merits of the works we offer to induce subscriptions."

"I can talk pretty well," said Frank, smiling.

"Yes; but can you talk to the point?" asked Mr. Vincent, shrewdly.

"After I have had a chance to examine the books and understand their strong points."

"Yes; it is absolutely necessary to become acquainted with the works one wants to sell. I have a clerk who knows our books thoroughly. If you take hold, I'll have him give you a regular lesson, and also give you a pamphlet I issue, called: 'Aids to Successful Book Selling.'"

"I suppose you issue a great number of books for agents?"

"I have issued a great many during the past fourteen years. But at present I have only four books which I would advise you to try to handle. The first question is, do you want to work in the big cities or in small towns and country places?"

"What is the difference?"

"In the big cities you can take orders for very fine books at high prices. In country towns and villages you can sell good-looking books that are cheaper."

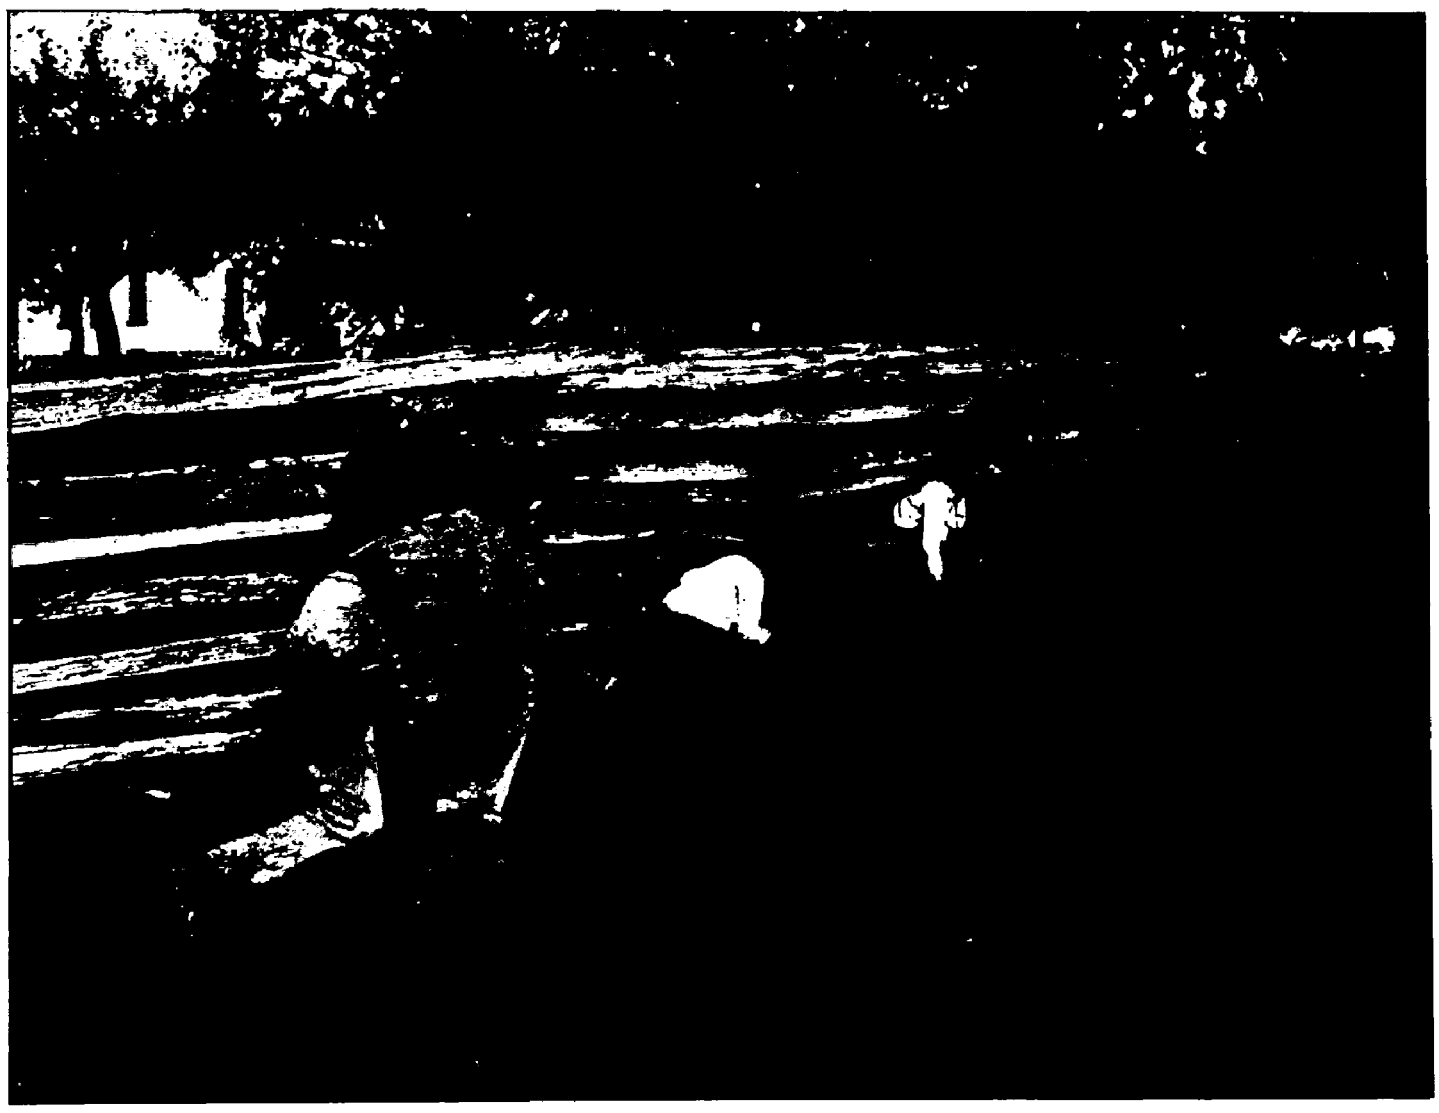
"What would you advise me to do, Mr. Vincent?"

"I think you'll make more of a success of it selling in small places first. After you have some experience you can try your luck in one of the big cities."

This advice seemed sensible, and our hero determined to follow it.

"If I try my luck in smaller places what would you advise me to try to sell?"

"I have three works which usually ap-



WILL THEY GET THE APPLES OR WILL THEY GET——?

peal strongly to people in small places and in farming communities. One is a Guide to Health, a sort of family doctor book; another is a book on the diseases of all kinds of cattle and poultry, and the third is a set of thirty world-famous novels. The first two books sell at three dollars each, and are well worth it, for they are finely illustrated and contain much valuable information. The set of famous novels, which represent the best book of each of thirty famous novelists, sells for twenty dollars, four dollars when books are delivered, and two dollars per month until the entire amount is paid."

"And what commission do you allow agents?"

"On the health book and the cattle book, twenty-five per cent, and on the famous novels, five dollars for each order which we accept and on which we obtain at least ten dollars."

"Then you make an agent wait for his commission on the novels?"

"He has to wait for part of it. He can have two dollars of the commission as soon as we deliver the books and get our first payment."

"Does an agent deliver the single books himself and collect?"

"Yes; we collect only on sets."

"Do you think the center of New Jersey and eastern part of Pennsylvania good ground to work?"

"Very good, and you might try the interior of New York as well—if you stick at it long enough."

"How many books would you advise my taking along?"

"Take one each of the health and cattle books, and one of the famous novels, with a list of the rest. When you take orders, get the folks to sign a regular order blank, stipulating when the books are to be delivered and paid for. Set the delivery so you can deliver books in a bunch. We can send them to you by express whenever and wherever you wish."

"I understand."

"We have some neat carrying cases for our agents, and I will lend you one of them, and also furnish you with the necessary pamphlets, describing the books, and also order blanks."

"I will pay you for what books I take out, Mr. Vincent."

"I don't want you to do that. You can consider the books as samples and return them to me if you give up the work later. Usually I make an agent leave a deposit for the books and the case, but I feel I can trust you."

"Thank you very much. I'll take good care of the books and the case too."

"Usually agents are also required to pay for books they order while on the road. I shall instruct my clerk to give you credit up to fifty dollars' worth of goods so you need not pay for books until after you deliver them and get your money. Of course, if you buy books and then cannot make folks take them you can return them to me at full value."

"You are very kind, sir. I'll do my best to sell books, Mr. Vincent, not only for my own sake, but also for yours."

"I sincerely trust you'll succeed. But it is hard work, my young friend; remember that. When I first went to work I received more hard knocks than dollars."

"Were you an agent?" questioned Frank, in amazement.

"Yes. I started twenty-six years ago, selling dictionaries and atlases, and wall maps. My whole capital was exactly seven dollars and a half."

"You must have been what they call a hustler."

"I was." Philip Vincent smiled. "I worked about sixteen hours out of twenty-four, and I never lost a chance to sell a book or a map if I could help it. If I stopped at a hotel I did my best to sell the proprietor a map for his office, and if I was in a small town I would try to stop over-night at the home of a teacher or minister and sell him a dictionary or atlas."

"And did you work from that to this great business?"

"I did. I earned almost every dollar myself. I was alone in the world, outside of an old aunt, who, when she died, left me exactly a hundred and ten dollars, and some old furniture that I sold for fifteen dollars."

"You ought to be proud of your success."

"I am proud, in a way. But you can do as well if you will only hustle. I can see that you are naturally bright, and have a winning way with you. A winning way counts for a great deal when selling books."

CHAPTER XI.

FRANK AS AN AGENT.

Frank remained with Mr. Philip Vincent the best part of half an hour, and then excused himself, for he realized that the book publisher's time was valuable. After the interview he was introduced to a clerk, who gave him his samples with the case, and also the pamphlet on selling, order blanks, and circulars advertising the books. The clerk also went over the volumes with our hero, pointing out the good points and the best illustrations.

"Don't be discouraged if you don't get an order the first day you are out," said the clerk, on parting. "One of our best agents was out two days before he received an order."

"I'll give it a week's trial and stick to it like a bulldog to a man's leg," answered Frank, and this raised a laugh, in which he joined.

Now he was in New York, Frank could not resist the temptation to look around a little. Saying he would call for his sample case later, he left Mr. Vincent's store and strolled up Nassau street until he reached City Hall Park, and crossing the Park back of the postoffice, came out on Broadway.

"New York is certainly a busy place," was his mental comment, as he gazed at the crowds of people, and the broad highway filled with trucks and surface cars. "It's a regular bee-hive for business."

Having ample time to spare, he determined to ride uptown as far as Forty-second street and take a look at the shops and the Grand Central Depot.

He was soon on the car, and took a seat near the front door. Scarcely had he got settled when the door opened and a tall, slab-sided individual, on whose calculating features "Yankee" was plainly written, stepped into the car.

"Extry fine day this is," he remarked to Frank.

"It certainly is," was our hero's polite reply.

"Been a fine summer right along."

"That is true."

At that moment the conductor came up and Frank handed him a nickel, which was promptly rung up on the register.

"Fare, please?" said the conductor to the down-east countryman.

"How much'll it be?" asked the individual addressed, as he pulled out his wallet.

"Five cents."

"Five cents! Why, that's what you charge fer going the hull trip, don't you?"

"Yes."

"And you carry a feller five miles fer five cents?"

"We do," and now the conductor, a bright young man, began to smile.

"That's just a cent a mile. Well, now, I ain't going but a mile—little short if anything. Thet'll be just a cent. Here's the copper."

So speaking, the countryman drew out a dingy copper cent which had evidently been stored away for some years. He tried to pass it over, but the conductor shook his head, while several began to laugh.

"What's the matter, mister?" asked the individual from down east.

"Can't take that, Mr. Smith. Our charge is five cents without regard to distance."

"Gee shoo! Say, my name ain't Smith. It's Perkins—Joel Perkins."

"All right, Mr. Perkins. We charge five cents no matter how far you go."

"And do you count that fair?" demanded Joel Perkins. "I'd like to argy the p'int a little with you. Just supposin' you was a trader an' kept flour to sell, and I and another man came to buy flour. Now, if I took one barrel and tudder man took five would you think it fair to charge me jest as much as the other man; come now, answer me fair and square?"

"I can't stop to argue," answered the conductor, who was in a hurry to collect other fares. "Just you pay your five cents, or I'll call the police."

"Gee shoo! I don't want no police, nohow!" cried Joel Perkins, in alarm.

"Then pay up, and do it right away."

"Here's your money," groaned the countryman, and passed over five cents. "But it's a swindle just the same," he added defiantly.

Frank had been much amused, and it was all he could do to keep from laughing outright. "I'm glad I'm not so jolly green as all that," he thought.

"Bound to get your money away from you somehow," remarked the countryman to him, after a pause.

"I know how you can get square," answered our hero.

"How's thet?"

"Ride your five miles, and more."

"By gosh! Thet's an idee."

"You can ride more than five miles if you wish."

"Yes, but if I go too far, I'll have to pay another five cents to git back, won't I?"

"Yes."

"Then I ain't goin' to do it," answered Joel Perkins. "Where be you a-going?" he asked, after another pause.

"I'm going up to the Grand Central Depot."

"Thet's where I cum in yesterday. I'm from Stoneville, Vermont. Ever been up that way?"

"No, sir."

"'Tain't much of a place. Squire Rasperwick owns almost the hull of it. His daughter is engaged to marry my nephew, Joe Swallowtail."

"Is that so?"

"I come down to the city to buy my nephew something nice fer the wedding. But they ask a pile fer nice things down here. I priced a rug an' they wanted twenty-eight dollars fer it. 'Say, mister,' sez I, 'I don't want the hull dozen, I only want one.' And then he told me to git out o' the shop."

"Perhaps you'll find a cheaper rug somewhere else?"

"Sumboddy told me to go to the Bowery, but I ain't going. I know a feller that went there onct, an' he got drugged an' robbed o' nine dollars and thirty-four cents. They ain't going to rob me, not much they ain't."

"I hope not."

"Do you belong in New York?"

"No; I come from New Jersey."

"Gosh! Ain't you afraid to travel around here alone?"

"No."

"Maybe you work here?"

"No."

"Where do you work?"

"I am going to start out to-morrow as a book agent."

"Gee shoo! A book agent. I thought most o' them fellers was swindlers."

"Do I look like a swindler?"

"Can't say as you do, but a feller has to be careful. Wot books do you sell?"

As well as he was able, Frank described the various volumes to Joel Perkins. The countryman grew very much interested.

"I'd like to see thet family doctor book, an' the cattle book," he remarked. "Perhaps they would make good wedding presents."

"You certainly ought to have those books on the farm," returned Frank, quickly, and then, seized with a sudden idea, he went on: "Why not come back with me and let me show you the books? It won't cost you a cent."

"But we've got to ride back, ain't we?"

"Yes, but I'll pay your fare. I know you'll think the books a bargain when

THE RUNAWAY PUP

Written and Illustrated by GEORGE REITER BRILL

THAT LONG tawny symbol of human progress, the Los Gatos stage road, lay coiled about the base of Red Rock range like a great, Titanic serpent, stretching afar over ridge and plain 'till lost in a soft purple curtain of haze.

The last eddies of dust, from the Eagle Peak stage, were settling upon leaf and twig when a tiny yellow speck hove into view. He had bravely followed the lumbering coach for many, many miles but, now, his tired legs would carry him no farther and he staggered to the side of the road panting in the shade.

He was just a little mite of a pup, too, and probably started out to play with those big, round wheels as many of his elders did. But the fascinating sport had lured him beyond his reckoning and so, from very lonesomeness, he followed on. In the early stages of the frolic he had barked and barked and barked 'till his little throat was sore and now, he couldn't even whine, he was so awfully tired. He saw his big playfellow jolt over the brow of a hill, leaving him hopelessly behind, but, just at the point, however, where a thin trail led up the precipitous flank of the mountain's side.

After regaining, to some extent, his spirits and his strength, he, dog-wise, nosed about until that blessed sense of smell warned him of companionship. So, with easy assurance he waddled awkwardly into the narrow tortuous path and disappeared beneath the overhanging tangle.

Buck Henderson sat peeling potatoes in the doorway of his little cabin 'way up on Red Rock range and he whistled a tune about someone called Nellie Gray.

Buck was one of the hopeful kind. A tall, thin New Hampshire lad, kicked west by dire necessity and landing in this grassy cup three miles above the plain. His faith in surface indications, had kept him delving here, year after year, even against the rough jests of local experts.

His daily yield of gold, though meager, had kept him from starvation; but, for the last few months, things looked most dubious indeed. There were many nooks and crannies unexplored as yet, and so, today, he lightly whistled "Nellie Gray," for he had made up his mind to stay another fortnight or two and then, well, he guessed he could git a job somewhere.

Buck's domicile offered small attraction to the outside world, and many weeks elapsed before he saw a living thing; a hawk, perhaps, or frightened hare; but, as for men, the nearest ranch was four long miles away. Under these circumstances, then, it was no wonder that he dropped the pan of potatoes and stared immoderately at a tired, bedraggled beast which toddled up to him from out the silent woods.

Was it a bear? a wolf? a coyote? No! Just a little dog, and Buck's eyes gleamed a welcome.

"Pore little feller! Wot brings ye 'way up here to this forsaken place?"

And Buck leaned over to pat his woolly back.

"Maybe ye got lost, huh? An' maybe yer purty thirsty an' hungry after that three-mile trail? Well, come along an' have a dust chaser then you'n me 'll git some grub together. How'll that suit ye?"

The puppy wagged his tail and, looking up as if he understood each word, followed his friend into the cabin.

The crystal water proved most beneficent to the thirsty wayfarer and the lap, lap of his little pink tongue amused the man immensely.

Having gorged to repletion, the pup sat looking up at his benefactor with all the gratitude he was able to express and won Buck's heart completely.

"Wall, stranger," said he, "ef no one comes to claim ye, me an' you might hit it up right well. An' ef ye will jes' look around a bit, I'll poke up somethin' to fill that leetle round stummick o' yours."

The big man bustled about with new vigor, whistling "Old Dog Tray," to variations, as something quite appropriate to the feelings of his visitor and when, at last, the meal was ready, he and the puppy did full justice to it; at the end of which, like all good dogs, the little fellow curled up into a yellow ball and went to sleep.

Although Buck's knowledge was small concerning dogs he was sure, after a careful survey of this one, that he would grow up to be a fine collie; and he discovered also, nestling amongst the long hair of his neck, a small brass tag, attached to a thong of buckskin, on which was stamped the letters "E. Z. 69," indicating that some one had prized the pup and for whom Buck felt downright sorry in a way.

As weeks slipped by without a claimant for the dog, Buck's ease of mind grew measurably. He felt that, now, if any one should come he might be tempted to contest its ownership. He named him, too, and smiled with venial pride when E. Z. came bouncing to his call.

The new life pleased them both. The master seemed less moody and "E. Z." grew wiser day by day. He begged; said his prayers like a Christian; and carried his master's luncheon pail long distances without rebellion.

One sultry evening, as they dozed in the cadmium haze, a faint, dry crackle was heard in the trail below. E. Z. pricked up his ears and growled.

"That sounds like company, E. Z., said his yawning master, "suppose ye go an' investigate."

The dog ran off at a bound. And, while his bark was not ferocious it was sharp, snappy and denoted courage; enough fierceness in it, at any rate, to bring back an appeal to "Call off that dorg, will you!"

Buck at once complied, much to the dog's disgust, who couldn't quite understand why the company was not to be devoured.

A man broke into the clearing, booted and spurred; short and thick set and bronzed from long exposure. He wore two pistols at his belt, a slouch hat, buckskin suit, and red shirt after the fashion of the West. Striding forward a few paces he stopped:

"Mr. Henderson," said he, "I've come to take away that there pup. Ain't you got better sense than to steal a registered dog?"

Buck reddened at the implication and grew faint at the thought of losing his companion.

"Who are you, anyway, an' what rights have ye got to call me a thief? If ye take that pup it'll be over my dead body, see?"

The man's hand went to his pistol, but before he could answer, E. Z. had jumped for him like a streak of yellow light; there was a flash, a loud report and the dog lay bleeding on the turf. Another simultaneous flash and report and the sheriff lay prone beside him.

Buck, putting up his smoking pistol, strode over to the prostrate officer and found, as he intended, that the man was

HIS TIRED LEGS WOULD CARRY HIM NO FARTHER

merely stunned; the bullet had gone true, disabling the right arm. Picking him up carefully, he carried the wounded fellow into the cabin and laid him upon his bed when, after thoroughly washing and dressing the injury, he went out to look after his dog. And, to his relief, found him sitting up calmly licking the hurt.

"That was a close call E. Z. Came near puttin' ye out o' business. I guess, if ye never get wuss than that, you'll be mighty lucky, though."

The dog wagged his tail, as much as to say "that's so," and limped in after his master, where he, too, was laved and bandaged.

"Now, Mr. Sheriff," said Buck as the man opened his eyes. "Ye done a fool thing to shoot at a innocent pup an' ye have made a lot o' trouble. Him and me is goin' down to Star Corner to surrender an' we'll send up a Saw Bones an' some friends. If ye don't mind I'll use yer hoss sos' as to make faster time. He's hitched down in the trail, ain't he?"

The sheriff nodded.

"Come on, E. Z., we got to hustle to git there before dark."

Then, placing a few necessaries within reach of the man's left hand, he and the dog went forward on their errand.

There was great agitation at Star Corner that night when Buck Henderson gave himself up to the authorities; and considerable excitement in the Zorne household from which the pup had eloped. A crowd gathered to see the doctor and his helpers off while the dog received no less distinction for his share in the affair. The Zornes proudly led their errant captive home; the doctor and his men wheeled from the courthouse square, then Star Corner went to bed.

Twelve months crept by with the culprit still in jail. The sheriff, in the meantime, found his strength again, and discontented "E. Z." ran away from home the second time. A traveler, coming in from Eagle Peak, had seen a yellow dog turn off Los Gatos road into a path which led up Red Rock range; so the Zornes gave up the search and let him go.

Ten weeks before his term expired Buck Henderson was freed. Some said that Zorne had brought the thing about; but, be that as it may, the prison stricken man slunk back to his old retreat crestfallen and sick at heart. Weak from long confinement, he climbed the entangled trail with sodden feet, reaching his neglected cabin weary and exhausted.

A thin, lank shadow of a dog crawled toward him and then Buck wept in pity for them both.

Time moved on apace and, through the long October days E. Z. and his master worked and thrived. As the master dug so did the dog, for he had learned that a buried bone was treasure indeed; and just as good as gold when hunger came. Buck often laughed to see him at his work; sicking him on to do his level best. One night as they returned from a rather hard day's labor and the master felt disheartened with the poor result, he noticed that the clay on E. Z.'s feet held little mites of sparkle in its grasp.

"Come here, boy," said he, "shake hands. That's right; now, why didn't ye tell your master that ye struck it rich today?"

He patted the dog enthusiastically and almost danced for joy.

"Don't ye know that yer friend's been seekin' dirt like this for four mortal years? Don't ye see that ye've made us rich?"

The dog barked happily and wagged his tail, for he knew his master praised him.

* * * * * *

A well-dressed gentleman walked leisurely up the principal street in San Francisco one day, followed by a fine, yellow collie dog carrying proudly in his mouth a fat, official-looking grip. A man on the other side, who looked very much like the sheriff of Star Corner, nudged his companion and said: "There goes Buck Henderson and his dog."

"You don't mean to say that that is the fellow who hung around Red Rock range for five years?"

"Yep, that's him, an' he's worth more'n a cool hundred thousan'. It seems onreasonable how some o' these scallywags git along in this world."

Catching a Crocodile

An Experience in the Straits Settlements

By CAPTAIN A. B. HAWSER

AFTER an unsuccessful rhinoceros hunt in the interior of French Indo-China, I drifted down to the end of the Malay Peninsula, more for the sake of studying the natives than for hunting, because there were few large animals in that swampy territory.

One day the headman of the village came to me and reported that a great old crocodile which had infested the river for many years, had just taken down a man from a neighboring village and that it had been decided to kill the brute, which up to that time had been the object of superstitious fear.

NO WONDER HE DROPPED THE PAN OF POTATOES

I went down to the river where the man had been taken. It was a forbidding spot, with the deep water running close to a shelving bank that was kept in perpetual twilight by huge trees that hung over the black, treacherous, oily current. The victim had been paddling along close to the bank when suddenly the crocodile's snout had appeared over the low side of the crazy craft and the next moment the man was swept overboard.

The natives set to work at once on their apparatus for catching the reptile. They cut young bamboos and lashed them together till they had a square raft about six feet each way. In the middle of this they planted an upright bamboo, which was lashed strongly so that it could not possibly be torn from its support.

To this stake they fastened a strong chain about ten feet long. At its outer end was a big hand-forged hook, very keen and very strong.

The peculiar contrivance was carried to the river's edge and then came a great squawking and cackling as a Malay woman appeared with a lusty young rooster under her arm. The luckless bird was held fast by one of the men while another adjusted the big hook along its body till it was completely hidden by the feathers. As soon as this was done to their satisfaction, the Malays fastened the rooster and the hook together with many neat whippings of stout brass wire, till it was quite impossible that the bird should escape.

It may be imagined that the poor rooster objected mightily to these indignities. He made the silent, primeval swamp forests echo and re-echo, and when the raft was finally pushed out into the stream he seemed to go mad, if one were to judge by his noise. He fluttered and hopped and screamed.

Slowly the current took the raft. It drifted a hundred feet, two hundred, five hundred, a thousand. There it was caught by a current that swirled against a hidden sandbar, well in the middle of the river.

"Look! Look!" said a Malay to me in a low voice.

Out of the swirl there came a lean black thing that looked exactly like a rotten limb up-ended in the current. But it went faster than the current—so fast as to leave a little wake behind it. It went straight toward the raft. Then something huge and fearful rose dripping from the water and the next moment the rooster had disappeared while the raft heeled away over to one side where the taut chain pulled it.

For a minute or so that was all we could see. "He is gorging the chicken," said the Malay. "In a little while you will see sport."

Suddenly the raft began to bob up and down a little as if something were tugging gently. The next instant it heeled into the water with a rush that made the spray fly, and out of the turmoil shot the crocodile, showing forepaws and shoulders clear of the river so that we could see the chain hanging from the angle of his jaws.

He dived and off went the raft, speeding down the current and churning the water like a ferryboat, till it made a bow wave a couple of feet high. It went a mile, and there was no visible diminution of its speed when it disappeared beyond a bend in the stream.

The Malays chuckled and sat down to one of their long smokes. "He has gone for the deep water," said one of them to me, "and he will tire himself out in time. But they are strong, these old river kings. We may as well wait an hour, maybe two hours, before we go after him. Even then we will have more work than we care for, perhaps."

It was more nearly three hours before the Malays finally got into their canoes to follow the hooked monster. And it was only after we had paddled more than four miles that we sighted the raft. It was lying motionless in the middle of the river, with one side completely submerged where the reptile was hanging to the chain.

Then men paddled to within fifty feet of the raft and threw stones into the water where the chain showed the crocodile to be. There was not a single movement in reply. After a few minutes they darted swiftly at the raft, took the chain off the stake and made a long line fast to it, and began to tow it ashore.

The crocodile did not make any noticeable resistance, but that he was resisting passively and effectually was shown by the fact that the men could move the beast only inch by inch, so that it required nearly an hour to reach shore.

Then they leaped to land, and while some armed themselves with spears and clubs, the rest hauled. As soon as the beast was pulled into shoal water he seemed to awake and for a quarter of an hour the mud and water flew as if that part of the river was being torn up by one explosion after another. At last the ugly black snout appeared above the water and immediately a huge club crashed down on it. That was the signal for the others to make a desperate pull, and they tugged the beast up so far that his shoulders came clear. His huge tail swept around and around and his jaws snapped incessantly, but every time his tail had made a sweep the Malays jumped in and pounded him with their clubs till he lay still at last. They hauled him all the way to shore then and gave him another clubbing to make sure he was really dead.

He measured fourteen feet from the tip of his snout to the tip of his fringed tail, and was as ugly a thing as I have ever seen. I was very anxious to save the hide for a museum, but the damp heat of those Malaysian forests spoiled the carcass before my men could finish the long and difficult job of skinning the brute, so we left him to the carrion crows and the vultures which made such clean work of it that in three days there was nothing left except a pile of polished white bones.

WILL YOU HELP?

Boys, send us the names and street addresses of all your boy friends who do not receive The American Boy regularly.

"WELL, DAN, I guess you are glad you are only staying with us for a short time. It is dull enough here. No excitement of any kind. You won't catch me spending my vacation away from the mountains again," and Will Brown yawned dismally.

"Oh, shut up, Will, you are always croaking," replied Harold Southwick, who thought there was no place to pass the summer like the seashore. The boys were lounging in the shadow of a boathouse belonging to Harold's father.

"I do like the mountains best," said Dan Hurley, "but the seashore is all right, too."

It was an extremely warm afternoon, the breeze, such as it was, being off shore, and the water of the bay on which the boathouse was situated reflected the sunlight, though it was growing late.

"Now, if it was only two years ago when that piratical sloop was sneaking along shore, and the crew landing here and there, stealing chickens and odds and ends from the farmers and residents, there would be some fun. This brave band could swoop down and capture them," said Will Brown, who was not to be suppressed.

"Good land! What an idea," said Dan; "besides, I think two years ago you might have been taken for a chick and placed on the boat by mistake."

"One would suppose you were a grandfather to hear you talk," retorted Will.

"Oh, shut up, fellows. It is too hot to argue," said Harold, who had in the meantime been industriously filling Brown's pocket with sand while his attention was diverted.

"Well, I must be getting along," said Dan, "if I want to reach 'Smalley's' tonight. I guess I will take my bathing suit, too, as I may have use for it."

Harold went to the boathouse and tossed the suit to him. "See you tomorrow, then," he said.

"All right," Dan answered, and started on his walk up the beach. It was a long one and the sun was hot, so when at last Dan came to a grove of trees that stood close to the end of a point of land around which he had to pass, he sat down for a few moments' rest.

The water never looked cooler or more inviting. "I guess I will take a dip and cool off a little before I tackle the rest of the walk," he said to himself.

The beach at this place was lonely. The dense bushes at a little distance from the shore would make a good bath-house, and he had his bathing suit under his arm.

A little later he was in the water enjoying it thoroughly. He swam away from shore and toward the point of land that jutted out on his right. Though a good swimmer his progress was slow and difficult, the waves beating against him. With dogged determination he kept on, for Dan hated to be opposed even by water.

As he came almost clear of the point of land a sudden change took place. It was as if a huge octopus had reached up from the depths and seized his body. He was drawn downward and then hurried seaward. Good swimmer as he was, Dan was frightened, for he knew he was in the grasp of the undertow.

That ally of the undertow, panic, did not seize him, however; instead, he fought off the feeling of fear and, using his will and strength, bent all his energies to keep his head above water.

He tried to reason out some plan to save himself; then he noticed, as he fought his way to the surface, that which the point of land had at first hidden from view and his efforts later against the undertow had caused him to overlook, a lead-colored sloop at anchor, quite near him.

To return to land against the fierce current was impossible; he must reach the sloop; so toward this he bent all his remaining energies.

In a last desperate effort he managed to get in a measure free from the undertow, but it exhausted him greatly, and when he came to the surface again under the boat's stern and seized a rope that hung there, he had to wait to get breath before he called for help.

As he waited he heard something that drove any such idea from his mind.

"It is a big risk to rob him of that amount," a hoarse voice said.

"What of it?" a higher pitched voice answered. "You know we will have to have it. Even if caught we may as well be ruined all at once as by piecemeal, and this affair offers us a way out for good."

"Don't talk so loud," rejoined the other. "You don't suppose anyone could hear us, anchored in this place close to the undertow, with no boat near us?"

But, nevertheless, the speaker dropped his voice, and after that Dan could catch only a sentence here and there.

From these fragments of conversation Dan gathered the fact that the men contemplated robbing an eccentric man who lived alone in a retired locality, and who had the name of having a good deal of money concealed in his big, dilapidated house.

Here, indeed, was a nice situation, thought Dan. To swim back to shore was impossible, while, if he called for help or tried to enter the boat, he dreaded to think what might happen, when two such characters as these men seemed to be, realized they had been overheard.

The only thing to do was to remain where he was until darkness set in, and, in the meantime, keep his eyes and mind busy for some way to escape from this fearful dilemma.

The water was warm and he was getting over his exhaustion, but he was in constant dread of being discovered. From this, however, he was comparatively safe, for the men were arguing so excitedly they paid little attention to anything else.

Twilight was deepening when suddenly the conversation ceased. Dan looked about him and then saw the cause. A rowboat had rounded the point of land and was approaching, but at such an angle as to pass the sloop at some little distance.

In a moment Dan had made up his mind. His only hope was to reach this boat, as she passed, by swimming out to her. It was a risk to trust himself again to the water with its treacherous currents, but Dan hoped he could keep away from the undertow, which would not be possible if he attempted to return to shore. There was also danger that the men might notice him as he left the sloop. He trusted, however, that their attention would be directed to the boat and as he was pretty well rested he hoped by careful swimming to escape observation in the partial darkness. So he let go the rope and sank silently into the water.

"KEEP ON ROWING, BUT ROW SLOWLY AND DON'T SPEAK"

* * * * * *

"Keep on rowing, but row slowly and don't speak," a faint voice said, coming as it seemed from the water, and the gathering darkness.

Harold Southwick nearly dropped the oars in his surprise and astonishment, but he kept on rowing nevertheless, for he recognized the voice faint as it was and obeyed it, as he had often done before on the baseball and football field.

A hand had reached up and grasped the stern of the boat. For a time there was no sound but the dull, low, regular thud of the oars in the rowlocks.

Then again came Dan Hurley's voice, "Stop rowing."

Harold obeyed without a question. As quickly as his exhausted condition would permit, Dan Hurley hauled himself along the opposite side of the boat to that of the sloop, which was now rather indistinct in the dark and the mist that was blowing in from the sea, and at last managed with Harold's assistance to get in the boat.

"Now, row for all you are worth," he said, and fell back exhausted.

Before reaching shore, however, he had revived sufficiently to tell all that had occurred.

"We must stop this robbery. But how?" asked Harold as Dan finished.

"By going at once to the authorities and stating what we know," replied Dan. "And then I mean to be there myself, if I possibly can," he added.

The night was intensely black as the town officers, accompanied by Dan Hurley and Harold Southwick, advanced toward the house, the robbery of which had been planned by the men in the sloop the night before. At first they were inclined to ridicule Dan Hurley's story, but his earnestness and his clear, convincing statements had caused them to change their opinion.

Dan and Harold had insisted upon going part way with them, at least, and after some reluctance were permitted to do so, the understanding being that they were to remain at some distance while the officers closed in on the house. When the criminals were secured they were to come on a signal and see if Dan could recognize the robbers.

It was not long before the house rose dark and forbidding from the surrounding gloom. The officers talked in whispers for a moment or two, then told the boys to stay where they were.

No sooner had they disappeared in the darkness than Dan said in a low voice, "Come on, Harold, I am going to be in this."

"That's where you are right," Harold whispered back.

Led by Harold, who knew the locality thoroughly, the boys made a detour and approached the house from the rear. The owner's bedroom was on the ground floor, so they advanced as near the window as they dared and hid themselves in a tangle of underbrush.

Waiting in the darkness was a great strain upon their nerves. The minutes seemed hours, the hours, days. Dan was almost sure it was time for daylight to appear when suddenly a bright light shown through the room.

The boys went up close to the window. Looking in under the partially lowered shade they saw the glare of a dark lantern resting upon a man who had sprung up in bed to a half-sitting posture.

On this man's face was an expression of terror. Voices were heard, but through the closed window the boys could not make out the words. The terror-stricken man seemed to be protesting vigorously.

Then things seemed to happen all at once. There came a crash. The bedroom door was thrown open, and from it another line of light lit up the room. A man turned quickly and sprang for the window. The man in the doorway rushed for him, but too late.

"Tackle low and hard," Dan yelled to Harold. And as they had done on the football field when a halfback was rushed toward them, they crouched low and waited.

The next moment there came the crash of breaking glass and wood as the rotten sash of the old window gave way. The next instant the boys sprang forward and so fierce was their onslaught the burglar was thrown over backward and pinned firmly to the ground, the two boys on top.

* * * * * * * * *

"Dan, if your stay here has been a short one, it has been a pretty lively one, hasn't it?" said Harold as Dan was about to leave for home two or three days after the capture of the burglars.

"I should say so," replied Dan. "I feel as if I had been hammered for a week."

"Any time we have burglars to catch we will send for you. The police say they want you on the force."

"Once is enough for me," replied Dan with a laugh. "I am not so anxious to get excitement as Will seems to be, and I must say the undertow has given me enough to last for some time to come."

WINCHESTER

MODEL 1906 .22 CALIBER
Extra Light Weight Repeating Rifle

This new rifle might properly be called the "Boy's Winchester," because it was designed to suit young sportsmen. It shoots the accurate but inexpensive .22 Short Rim Fire cartridge, and, although a first-class rifle in every way, it's price is not beyond a boy's pocketbook. This rifle is made with a 20-inch round barrel fitted with a sporting front sight and an adjustable open rear sight. It has a handsome straight grip stock finished with a rubber butt plate and weighs about 5 pounds. The magazine holds 15 cartridges. If your dealer cannot show you this model rifle, let us know.

FREE: Send for circular fully describing this rifle.

WINCHESTER REPEATING ARMS CO., NEW HAVEN, CONN.

Legion of Honor Boys

How They Won

Robert H. Holmes, Chicago, Illinois, who graduates from the eighth grade this month, has not been tardy during his eight years of attendance at school. He has been a subscriber to THE AMERICAN BOY for five years, and is much interested in the material it contains.

Chester B. Huffman, whose home address is Mingo Junction, Ohio, but who is at present a pupil in the eleventh grade of the Ohio Institution for the Education of the Deaf and Dumb at Columbus, stood at the head of his class for the entire school year, receiving 9% more than his closest competitor.

A petition from Gilson, Illinois, informs us of the heroic action performed by Arthur Scott on May 26th in saving the life of a playmate. A younger boy, Cyril Wyman, got beyond his depth in the water and was rescued after going down twice by fourteen-year-old Arthur. The petition was drawn up by the witnesses to the affair, who were boys and girls attending a school picnic.

Walter R. Smith, Milford Center, Ohio, stood at the head of his class during the recent school term, receiving an average of 97%. He belongs to the O. A. B., and says that he has taken THE AMERICAN BOY for five years and could not get along without it.

Howard Harvey, Ohiowa, Nebraska, received the highest general average in the eighth grade for the year commencing in September, 1905, and ending June, 1906. He writes: "I have taken THE AMERICAN BOY for three years and would not be without it. I like the stories very much, but the mechanical department strikes my eye."

Chester Farnsworth, a member of the tenth grade of the Oxford High School, Oxford, Kansas, made an average of 97 1-6% for the term just ended, this being the highest average made in the school. He writes: "As to my attendance record, I have never been tardy, and have been absent but once—a half day. During these years, I have been awarded two certificates for scholarship and deportment. I like THE AMERICAN BOY very much, and think it is constantly growing better."

Ten-year-old Erwin Walker, of Champlin, Minnesota, showed himself a hero at the picnic held by the lower grades of the Champlin Schools to celebrate their last day. Tommy Gibson, also aged ten, while wading in Elm creek in what he supposed to be shallow water, stepped over the bank into seven feet of water. He was saved from drowning by Erwin Walker, who at the risk of his own life, plunged into the swollen stream and with skill possessed by few boys of his age, towed his schoolmate ashore.

The Heroism Badge has been awarded Harry Riegger, an eight-year-old boy of Medina, Ohio, for prompt and heroic action on two occasions. While skating on a pond, a girl companion somewhat older and heavier than Harry fell through a hole in the ice, and was rescued with great difficulty by the brave boy. A short time ago the house of a neighbor caught fire, and Harry, who was the only one attracted by the cries for help, finally succeeded in extinguishing the flames.

Howard Kershner, Marionville, Missouri, made the highest average in his room during the recent term of school. Howard writes: "I have been a constant reader of THE AMERICAN BOY, which comes in my brother's name, and have helped pay for it for the last three or four years. As long as I can earn an honest dollar I will not do without THE AMERICAN BOY. I like the talks to boys very much. I am fourteen years old, and am a good sprinter and baseball player, but I like my violin best of all. I play it either by ear or by note."

Leo Hyde, of Lynn, Mass., to whom we give the Heroism Badge, has the enviable record of saving three lives in the fourteen years of his life. The last rescue was made on January 26th, while skating on a pond near his home. Bertha Kimball, a fourteen-year-old girl, broke through thin ice so near the channel that she was in great danger of drowning. Several men who were near saw the girl's plight, but made no effort to save her, and it remained for young Hyde to prove himself equal to the occasion. Plunging into the water, he made his way to the girl, grasped her by the dress, and struck out for thick ice. Owing to the weight of his burden, it was only with great difficulty that he succeeded in reaching safe ice, where he was assisted by those anxiously awaiting him.

FROM A PHOTOGRAPH OF 3,500 SHEEP, TAKEN BY HENRY INGRAHAM OF WAITSBURG, WASHINGTON

THE CAPTAIN'S GRIT

A BASEBALL STORY, BY ARTHUR B. SLADE

"WHY DO you suppose Allen worked Boyd in the practice game?" That was the one and unanswerable question which flew from mouth to mouth among little groups of students huddled together here and there over the campus. It seemed to every one that the captain had acted unwisely, yet no reason was apparent.

Captain Allen was the star pitcher in the Howell Military Academy baseball team, and was relied on to win the game scheduled for the following afternoon. During the practice game he had sent Ralph Boyd into the pitcher's box.

Boyd had shown some cleverness as a pitcher, yet his utter lack of control had stamped him as a player who could not be depended on in a close game.

"Can't be Allen is going to work Boyd in the game tomorrow?" Paul White asked.

"Of course not," Art Gibson promptly answered. "You must be losing your mind. Don't you suppose the captain knows that if we lose the game tomorrow, we will also lose the championship? He's too wise to put a pitcher like Boyd into the box."

Indeed it did seem that Gibson had spoken the truth. Neardale and Howell had each won the same number of games, and neither had lost any during the entire season. This made the teams tied for the first position in the little "Inter-Academy" league, and the game to be played was the final and deciding one. Not one of the students was ready to believe that Captain Allen would take a chance of losing the game by using a pitcher of known inability.

The captain had called for a meeting of the players on the evening before the game, and they were all anxious to hear what he had to say. Allen did not talk long, however, dealing mostly with the importance of the game and the weak points in the Neardale team.

"Now, boys," he said in conclusion, "this game must be played for everything there is in it. A victory means much to Old Howell, so every member of the team must do his best to win. Ralph Boyd will do the pitching, for I do not feel that I am in condition to pitch a winning game. The other men will play their regular positions. I have no more to say, except that every one of you must be in bed and sound asleep within the next thirty minutes."

The boys looked from one to another in bewildered astonishment. What could be the trouble with Captain Allen? They filed out of the hall and into their rooms, shaking their heads gravely and muttering about certain defeat.

Shortly after the meeting, Captain Allen was in his room awkwardly bandaging his right hand, when he heard a soft knock on the door.

"Who's there?" he asked.

"Gibson."

"I thought I told you to go to bed?"

"Just let me come in for one minute," Gibson begged.

The captain opened the door and Gibson slipped in.

"Now see here, cap," began the sturdy little catcher, "I want to tell you that I can't catch a left-handed pitcher. Boyd hasn't any more control than the man in the moon."

Allen smiled.

"You little sinner," he said, "you could catch any pitcher in the big leagues."

"Perhaps I could and perhaps I couldn't," Gibson answered. "Just the same, I'd much rather catch your pitching tomorrow."

"I'll tell you the truth, Gibson," Allen earnestly said, "I am not in shape to pitch that game tomorrow."

"Great stacks," exclaimed the little catcher, "What has gone wrong with you?"

"Then there is another condition. I've heard that the Neardale players could not hit a left-handed pitcher."

"Boyd won't get the ball near enough for them to strike at," Gibson asserted. "He's the wildest pitcher I ever saw."

"You go to your room and get some sleep," Allen replied, unlocking the door and pushing the little fellow into the hall. "You will need all your strength tomorrow."

As the time for the game drew near, the ball park rapidly filled with spectators. A large body of Neardale rooters were present to encourage their team on to victory, while the Howell students were lined up on the opposite side of the field. The rivalry was intense when time was called for the game to begin.

Howell started with a rush. Singles by Blass and White and a long outfield hit by Gibson brought in one run in the first inning. In the second inning a hit by Randall and two errors by the Neardale shortstop let another Howell player across the plate. In the fifth inning Howell scored again on a single by White and a three-base hit by Gibson.

In the meantime, Boyd had been doing marvelous work in the pitcher's box, shooting in an assortment of benders which held the opposing batsman helpless. But for his wildness, not a man would have reached first base. Twice he gave three bases on balls in succession, filling the bases, then retired the side on strikeouts.

However, the young "southpaw" seemed to completely lose control of the situation in the last inning. The score stood 3 to 0 in favor of Howell when Neardale again filled the bases with no one out.

Captain Allen called the pitcher to the bench.

"You're all right," he said, "Just cool down a little and you can beat them. Shoot that dandy inshoot of yours right up close to the neck. You're the boy who can do it."

Boyd smiled and went back to his work greatly encouraged. Three times the ball sped across the plate and lodged in Gibson's mitt after the batsman had struck at it.

"Three strikes and out," announced the umpire.

"That's the way," Allen called to the pitcher. "It's all over now."

But the captain's prediction proved untrue, for the next man up secured a hit to right field and Neardale's first run was scored. Ewing, the heaviest batter on the opposing team, took his position at the plate and gripped the bat firmly. Bang! The ball sailed over the Howell shortstop's head and rolled into left field, scoring Neardale's second run. A few minutes later a high fly was sent out into center field. Davis made a beautiful running catch, but the Neardale runner on third base scooted for the plate the instant the ball hit the fielder's glove, and slid across before Gibson could "tag" him.

The score was tied, with runners on second and third bases. The Neardale rooters threw their hats into the air and howled themselves hoarse. Boyd walked over to where Captain Allen was standing.

"I'm up in the air for sure this time!" he exclaimed. "If I pitch another ball the game will be lost."

"All right," Allen answered, peeling off his sweater. "I'll have to do the best I can."

Cheer after cheer went up as the young leader of the Howell team walked to the center of the diamond. He stood for a moment turning the ball over and over as if examining it closely, then threw it quick as a flash across the plate.

"One strike," came from the umpire.

Gibson caught the ball, but instead of throwing it, carried it back to the pitcher.

"Don't do it, Ben," he advised. "Let Boyd finish the game even if we do lose. That must have hurt you terribly. Your face is as white as death."

"You go back there and catch them," Allen commanded.

Then he doubled himself up in a manner which indicated he intended using his best speed. The batsman swung with all his strength, but the ball seemed to drag through the air and he missed it a foot. The ball was returned and Allen assumed exactly the same attitude. The batsman grinned and stepped close to the plate to meet the slow ball he thought was coming. Whiz! the ball shot across the plate with terrific speed before he could swing at it.

"Three strikes and out," the umpire announced.

The rooters for Old Howell nearly went wild with joy. Caps and canes were thrown into the air, students in their bright cadet uniforms rolled upon the ground, while some hugged each other frantically. Then they gave a long cheer for Captain Allen. He had thrown the ball three times and retired the side when the game seemed to be hopelessly lost.

The contest was not won, however, Howell was at the bat in the last half of the ninth inning, and if they could not score the game would have to go into extra innings. Possibly Neardale might win.

Button did his best, but was caught out on a long fly to right field. Gates was badly frightened, proving an easy victim for the Neardale pitcher. Allen walked to the plate.

The first ball pitched did not suit him and he let it pass, preferring to have a strike called on him, rather than to take a poor chance. Then the Neardale pitcher began throwing slow "coaxers" just outside the plate, but the Howell captain let them pass until three balls had been called. The next ball pitched, he purposely missed.

Allen believed this would put the pitcher in a "hole," for he now had two strikes and three balls called on him. That he had played the trick right was proven a moment later when the Neardale pitcher doubled into a knot and hurled the ball with all his strength directly across the plate.

Allen's bat met the ball with a crack and it shot out into left field, going on and on until it finally dropped over the fence. The Howell captain circled the bases with remarkable speed, but staggered and fell headlong after he had crossed the plate with the winning run.

Gibson turned a handspring and ran toward Allen.

"Cap, you've won the game," he cried. "That was the best hit ever made on the grounds. No one else on the team could do—why—what's gone wrong with you, old man."

Allen lay motionless, his face as white as chalk and his eyes closed. Gibson kneeled down beside him and tenderly raised his head.

"Ben, old chap, wake up," he sobbed, tears rolling down his cheeks.

The spectators suddenly ceased their cheering and crowded toward the injured player. Dr. Cosgrave, the school's physician, elbowed his way through the throng and bent over Allen.

"Get back," he commanded. "Get back and give him air. He has fainted and it's no wonder. Look at that," he added holding up Allen's right hand.

"A felon!" cried Gibson. "On the first finger of his pitching hand at that. What do you think of that for grit? He certainly had a good reason for sending Boyd into the box."

Boys' Books Reviewed

ESSENTIALS OF UNITED STATES HISTORY, by William A. Mowry, Ph. D., and Blanche S. Mowry. From a necessary hasty reading of this book we find that the authors' use of the word "Essentials" in the title is most appropriate. Text-books of history with their bare facts and dates are apt to be dry and uninteresting to the average boy; this, however, can not be said of the book before us. Everything of a dry-as-dust, technical nature has been excluded and the pupil will find it as interesting as any story. The authors have carefully planned so as to help the teacher make the history hour a veritable delight to the class. Personalities of great men, anecdotes, manners, and customs of various periods, prominent events, discoveries, inventions, progress of art and science, are all set forth simply, concisely, and in a way that must not only interest the class but impress themselves permanently upon the minds of the scholars. The maps, illustrations, and the many interesting books, chronology, and tables listed in the Appendix will also be found of great value. The book is adapted to the sixth, seventh and eighth grades. 434 pages. Introductory list price 90 cents. Silver, Burdett & Co.

THE PHANTOM OF THE POLES, by William Reed. While this book can hardly be called a boys' book, many boys may find it interesting reading. The book is a discussion of the author's theory that the earth is hollow, that there are openings at the north and south extremities, and that what our geographies have taught as North and South poles are but phantoms. He reasons most sensibly from the record of the experiences of Arctic explorers, citing Kane, Greeley, Nansen and others, pointing out also the unsatisfactory explanations of our school-books, which declare "that the earth is round and flattened at the poles," without telling us why. There is an earnestness and sincerity about the book showing that the author is at least himself satisfied of the logical correctness of his theories, and to that extent the book is worth reading. There are many illustrations and maps which will greatly aid the reader in following the writer's arguments. The book is printed on good paper in large, clean type. 281 pages. Price $1.50. Walter S. Rockey Co.

THE BOY CRAFTSMAN, by A. Neely Hall. To the boy who likes to do things, and what American boy at least does not, this book will be invaluable. It gives the boy information in buying, handling, and keeping tools; how to make different houses; furniture for a boy's room; how to fit out a boy's printing shop and print amateur papers; how to make a dark-room, drying rack, washing box, plate lifter, negative case; how to make a snow plough; a scraper; a snow shovel. In Outdoor Pastimes it tells: How to build a back-yard club house, a log-cabin, a canvas canoe, traps, toy guns, targets, bows and arrows, gymnasium, toboggan slide, and others. In Indoor Pastimes it tells: How to make a theatre, with scenery, properties and mechanical effects; a toy railway, clockwork automobiles; work done with a knife; and cork toys. As the author realizes that a boy's spending money is generally limited, the suggestions and plans can be carried out with material, of which much lies around an ordinary back-yard. Parents who while glad to see their boys engaged in doing something useful, but cannot spare much money for apparatus, will appreciate the book, while the boys will pronounce it "the best ever." The illustrations, half-tones and text, number over 400. 393 pages. Price $2.00. Lothrop, Lee & Shepard Co.

HEROES OF DISCOVERY IN AMERICA, by Charles Morris. The stories of the discoverers of new lands have always appealed to the average boy, because they are generally full of daring and courage, and the results have only been attained through stirring adventures, battles, and perils of flood and field. The author of this work has given his readers the facts and dates of history in such pleasing form as to instruct as well as delight. Starting with the discovery of America by Leif the Lucky in 1000, the book contains the explorations, discoveries and adventures of such men as: Christopher Columbus, John and Sebastian Cabot, Balboa, Ponce De Leon, Magellan, Cortes, Pizarro, De Soto, Jacques Cartier, Frobisher, Drake, Sir Walter Raleigh, Hudson, De Champlain, Marquette, Daniel Boone, Carver, Lewis and Clark, John C. Fremont, Zebulon M. Pike, Sir John Franklin, Greeley, Peary, and many others. The fine half-tone pictures will enhance the reader's enjoyment. 344 pages. Price $1.25 net. J. B. Lippincott Co.

WHAT A YOUNG GIRL OUGHT TO KNOW, Self and Sex Series, by Mary Wood-Allen, M. D. As to the purpose and scope of this book, we cannot do better than quote the words of an eminent American educator: "Its aim and spirit are admirable, and it will be a practical demonstration to many of the possibility of treating the sanctities of our being in a worthy manner. Parents and teachers will find here suggestions which will give them the confidence in giving instructions which they have desired to impart, but been deterred from undertaking for lack of a model or precedent." While the book is more especially intended for the mother and the teacher, it may be read with benefit by the girl of ten. 194 pages. Price $1.00 net. Vir Publishing Co.

THE RIVAL CAMPERS, by Ruel P. Smith. A boy's book indeed; one that will rouse and start, and make the blood course faster in the reading. A story of boats and boating, of camping in the woods, of going in for all the fun and sport of the glorious out-of-doors. And as if that were not enough, there is the capture of noted burglars with their booty, with all the attendant excitement. The boys are healthy, happy, typical American boys, and their enjoyment of their camp is so real that we feel in the reading that we also are enjoying the fun. The lesson also that the book teaches in the development of uprightness, honesty, and true manly character is sure to appeal to the reader. We know the boys will like it. A. B. Shute is responsible for the fine illustrations. 388 pages. Price $1.50. L. C. Page & Co.

A Book for 10 Names

Send us the names and addresses (street addresses if in a city) of ten boys who do not subscribe for THE AMERICAN BOY and we will send you a book of stories selected from the early numbers of THE AMERICAN BOY—and they will be good ones. Address

BOYS AS POETS

By JAMES BUCKHAM

WHEN A BOY sits down to write a poem he doesn't bother his head about rules of rhyme or metre, but just lets himself out with a refreshing freedom and naturalness that is worth a great deal more than the most studied and correct writing, if it lacks heart and enthusiasm. The boy-poet, we might say, goes at it with a rush and a whoop, just as he goes at his play; and his poems, while they may not be works of art, are always lively and interesting. I never saw a boy's poem that I did not want to read right through from beginning to end, and that is more than I can say for a great many poems written by older people who have quite a reputation as poets. There is a swing and dash and vigor about genuine boys' poetry that carries me away and makes me want to shout "Hurrah!" Here, for instance, is a sample of the way a boy feels, and makes me feel, when the fire of patriotism burns up in his heart and has to come out.

AN AMERICAN.

I am an American!
And when I am a man,
I expect to be a soldier bold,
With a musket for to hold.

I would fight for my country's cause,
And never would I pause
In all the battle's strife,
No, not even for my life!

I love the land of the free,
And I need never flee
From the wrath of any king.
So I will the praise of America sing.

Oh! do you remember the act on tea!
And the soldiers who dumped it in the sea?
Hurrah! for General Washington
Who drove the British from Boston!

And didn't the English General Gage
Fall in an awful rage,
Because the English ships
Were burned to their very tips!

There is a poem that makes me tingle all over. It expresses the genuine American boy's feeling of unbounded enthusiasm for the Stars and Stripes. To me, that poem is worth a dozen polished Odes on American Freedom. It makes me burn to be a soldier with a Krag-Jorgensen (if I can't have a flint-lock musket), just pouring lead into the enemy for all I am worth. The enthusiasm of the young poet is so real and so catching!

Here is another boy's poem, that celebrates the Father of His Country in a more subdued tone, befitting the associations of Mount Vernon, but with the real ring of patriotism in it too. This poem is so genuine that one scorns to notice the little grammatical errors that creep into it here and there:

WASHINGTON.

Up on Mount Vernon
  Under an old elm tree
Lies a soul a-dreaming
  Of sweet liberty.
He was a hero
  Brave as one could be,
He fought many battles,
  Made the country free.
If you want to know him—
  It was Washington,
But you'll never see him,
  For he's dead and gone.

There he lies, our father,
  Underneath the tree,
But he shall be honored
  Man of liberty.
He was first in peace
  And also first in war;
But, alas! this great man
  Does not live no more.

Sacred to memory
  Washington will stay,
People now are joyous
  On his great birthday.
Angels are guarding
  This great hero's grave.
While he was a-living
  Liberty was save.

Another boy lets his muse loose on the subject of "Teachers." He evidently speaks from the heart, but his experience must have been singularly unfortunate, for I do not believe there are many such teachers as he describes in these days. Perhaps he was a bad boy, in spite of his devotion to poetry, and his teachers had to treat him as he deserved.

OUR TEACHERS.

Some was loving, kind and true,
And would win your heart from you.

Our teacher is severe, with dark brown hair,
And you'd wish to heaven you'd never been there.
Some has hair as dark as night,
And all they do is fight! fight! fight!

And now we leave them all aghast,
And hope to heaven they'll be the last.

And now I am going to copy a ringing poem, one of the best boys' poems I ever read. It sounds the note that we all need, in order to keep up courage for the battle of life. Any boy who could write such a poem must have the stuff in him that ensures success:

BUT DON'T GIVE UP.

If your goin' to be a preacher when your a man,
And goin' to preach to every lan',
Just keep a-tryin, and a-tryin' and a-tryin'
  But
    Don't
      Give
        Up.

If you want to be a poet when you're a man,
Don't say you can't, but say you can,
And keep a-tryin' and a-tryin' and a-tryin'
  But
    Don't
      Give
        Up.

If you wish to be a politician when you're a man,
To govern all the people as best you can,
Just keep a-tryin' and a-tryin' and a-tryin'
  But
    Don't
      Give
        Up.

Whatever you want to be when you're a man,
Don't say you can't, but say you can,
And keep a-tryin and a-tryin' and a-tryin'
  But
    Don't
      Give
        Up.

These poems were all written by school-boys between twelve and fifteen years of age, and they have never appeared in print before.

I will close with Longfellow's first poem, written when he was nine years old. His schoolmaster asked him to write a composition, but little Henry tried to beg off. "No," said the master, "but you may take your slate and go out behind the schoolhouse, and there perhaps you will find something that you can write about. Tell what it is and what it is used for, and that will be a composition. The result was the following poem:

MR. FINNEY'S TURNIP.

Mr. Finney had a turnip,
  And it grew, and it grew,
And it grew behind the barn,
  And the turnip did no harm.

And it grew, and it grew,
  Till it could grow no taller;
Then Mr. Finney took it up
  And put it in the cellar.

There it lay, there it lay,
  Till it began to rot,
When his daughter Susie washed it,
  And she put it in a pot.

Then she boiled it, and boiled it,
  As long as she was able;
Then his daughter Lizzie took it,
  And she put it on the table.

Mr. Finney and his wife
  Both sat down to sup,
And they ate, and they ate,
  Until they ate the turnip up.

THE YOUNG BOOK AGENT

(*Continued from page 329.*)

you see them. Every family ought to have a good doctor's book, and every farmer ought to have a good cattle book."

"Has thet doctor's book got in it about rheumatism and liver trouble?"

"To be sure it has."

"And does the cattle book tell about sheep and sech?"

"Yes, sir; and both books have hundreds of pictures, too."

"Then I'll look at 'em, an' if they are good fer anything, I'll buy 'em," concluded Joel Perkins.

Frank at once stopped the car and he and the coutryman alighted. Then a car going in the other direction was hailed, and both got on board, and Frank paid the fare as he had agreed.

"You must be rich?" remarked the countryman.

"No, Mr. Perkins; if I was I wouldn't be selling books for a living."

"I suppose thet's so. You look like a smart, clever boy."

"Thank you."

"I like to see a feller strikin' out fer himself. It shows he's got backbone in him. Now, I had to strike out fer myself when I was twelve years old."

"Is it possible?"

"Worked on old Jed Scudder's farm fer a dollar a month an' found—and Jed didn't find me none too good nuther. Sometimes I didn't git half enough to eat. But I watched my chances an' saved every cent, an' now I got a farm o' my own."

"I am sure you deserve it."

"I do. I work hard yet—gittin up at five every morning, winter an' summer, and milkin' twelve to sixteen keows."

So the talk ran on until the postoffice was reached, when both left the car.

"Now, if you will wait here a minute, I'll get my case of books," said Frank. "I left them in a store a short distance away."

"Wot place is this?"

"This is the New York postoffice."

"Thought it might be, but I wasn't sure. It's about the biggest-postoffice I ever see. Wonder if there's a letter fer me?"

"You can easily find out, Mr. Perkins. Wait till I find the proper window for you."

"Can't a feller go to any winder?"

"No."

"To hum, there ain't but one winder. The postoffice is in Si Hopper's grocery store," and Joel Perkins chuckled.

Frank found the proper window of the general delivery, and leaving the countryman to ask for letters, he ran off down Nassau street to get his case of sample goods.

When he got back he found Joel Perkins reading a letter he had received from one of his daughters. He was greatly pleased over the communication, and doubly pleased to think it had reached him through such a big establishment as the New York postoffice.

"It beats all how they kin keep track o' a feller," he remarked. "I didn't no more than ask fer a letter than the fellow inside handed it over. He seemed to be a-waiting fer me to call."

Having finished his letter, Joel Perkins looked at the two books which Frank had brought forth for his inspection. Frank showed him the most important illustrations, and pointed out the chapter on rheumatism in one volume, and the chapter on sheep and their diseases in the other.

"Wot about liver complaints?" questioned the countryman. "I allow as how there's some o' thet in our family."

"Here is a whole chapter on liver troubles, with eight pictures of the liver," answered our hero.

"Putty good books, ain't they?"

"Yes, sir. If you buy them you'll never regret it."

"And how much did you say they were?"

"Six dollars for the two. They ought to bring five dollars each, but the publishers want to make them popular, so they put the price at three dollars per volume."

"All right, I'll take 'em."

"Thank you, Mr. Perkins. If you'll come with me I'll get you two copies that have never been handled."

"Yes, I want brand-new ones—in case I give 'em to my nephew. But maybe I'll keep 'em," concluded the countryman.

(*To be continued*)

JASPER STREET BASEBALL TEAM, DECATUR, ILL.

We present a picture of the Jasper Street Baseball Team that won the ward school championship game at Decatur, May 26. The average age of the boys is 13¾ years. They won four out of five of the matched games played by them. The players are all fine young fellows. They do not believe in Sunday ball playing; do not use tobacco, and all in all are a manly "bunch." The picture was sent by J. A. Brockway, Jr., Company Counsel, of the Sangamon Bay Leaf Company, Order of THE AMERICAN BOY.

"NEW IDEA" BASE BALL CURVER

Greatest invention in base ball since the discovery of the curve. Get one now if you want to be the best pitcher of your team. It is so small the batsmen cannot see it, and they all wonder where those awful curves come from. It imparts a rapid whirling motion to the ball thus causing a wide curve. Fits either hand and does not interfere with catching or throwing. SPECIAL OFFER. Send us 25 cents and we will send you post paid, the New Idea Curver, with full directions, also a large 64 page book of "OUT DOOR SPORTS," containing latest playing rules for base ball. It gives illustrations showing how the ball should be held for throwing all the different curves. Special chapters on batting, base-running, fielding, etc. Also contains playing rules for foot ball, lawn tennis, polo, cricket, croquet, etc. Don't wait, be the first in your town to have one. Send a silver quarter today and we will send you the Curver and book by return mail. Address, THE CURVER CO., Box 164, Brady, Neb.

FOOTBALL GIVEN

BOYS, send to us for 20 packages of Bluine which you can easily sell at ten cents each. Return us the $2.00 received, and we will at once send free postpaid, a Regulation-size Rugby Football, consisting of a tested bladder made of the best rubber and a strongly sewed leather cover. It is warranted to stand rough work. Send your address. We trust you with the Bluine. Satisfaction guaranteed. We also give other athletic goods.

Company News

PILOT ROCK COMPANY, No. 19, Ashland, Ore., has not been holding meetings during the summer months, but intends to begin again in the fall. A picture of the company was taken, but it was not considered good enough for THE AMERICAN BOY. We are promised another at an early date. This company sent $5 to the San Francisco relief fund, and it celebrated AMERICAN BOY DAY on July 29th. FOUNTAIN CITY COMPANY, No. 33, Flora, Ind., expects to have quite a number of additional members soon, and also to take up its meetings as soon as school opens again in September. TREZEVANT ATHLETIC COMPANY, No. 6, Trezevant, Tenn., recently elected the following officers: Paul M. Ware, Capt.; J. D. Walker, V. C.; Carleton T. Ray, Sec'y; C. A. Lindewood, Treas., and James E. Walker, Lib'n. The members of this company are all temperance boys. Its meetings are held each week and it expects to add three new members at its next meeting. The captain promises us a picture of the company. CUYAHOGA AGASSIZ COMPANY, No. 88, Cuyahoga Falls, Ohio, recently held its field day contest, a report of which, along with others received, will be published in an early number of THE AMERICAN BOY. COYOTES COMPANY, No. 3, DeSmet, S. D., sends us a report of its June field day contest, which we will publish soon. Any boy who is a yearly subscriber to THE AMERICAN BOY can become a member of the company, but of course his joining the company will not entitle such company to his degrees. Degrees are counted only for obtaining new members. ELKHORN VALLEY COMPANY, No. 21, Wisner, Nebr., recently held a camping excursion for a week near a river and lake. The members caught quite a number of fish and sold them, putting the money in the company treasury, which was benefited to the extent of $4. WILD ROSE COMPANY, No. 12, Doland, S. D., held a basket social on June 5th, and after paying expenses, placed $12.25 in the treasury. The members' dues are ten cents a month, and this company is in a very prosperous condition. HENRY CLAY COMPANY, No. 7, Wickliffe, Ky., sends us its report for the last six months. It celebrated Washington's birthday and had a right royal time. The most of the company funds have been expended in purchasing books, and it has now a very good library. The officers for the ensuing six months are Naylor B. Humphrey, Capt.; Wm. R. Poore, V. C.; Miller Hughes, Sec'y; C. H. Schwartz, Treas., and Lennis E. A. Nance, S. A. It now has seven members and expects to add three within the next month. Its club room is nicely fitted up, and meetings are held every Thursday afternoon. THE LIBERTY BOYS' COMPANY, No. 4, Lenoir, La., holds its meetings every two weeks and has fixed the members' dues at ten cents a month. It held an ice cream supper on June 30th, the proceeds of which were placed in the treasury. THE SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill.: The energetic Company Counsel of this company is doing what he can to spread the influence of the O. A. B. in his city. Having already been the means of organizing one company, he is now trying to organize a second. This company expects to become a subscriber to the Shut-in Fund, as it has always been helpful in such cases. It recently held a birthday party for one of its members, and had a first-class time. WILLOW BROOK ATHLETIC COMPANY, No. 37, Petaluma, Cal., is getting along nicely. Two games of baseball have been played and the company team has won both. Some of the members were in Santa Rosa on the date of the earthquake and saw a good deal of damage done. Petaluma, however, was not damaged. The Captain reports that both of the companies in his city are doing very well. LAKESIDE COMPANY, No. 90, Conneaut Harbor, O., recently added three new members to the company. CAPTAIN M. F. BRANNAN COMPANY, No. 5, Magazine, Ark., reports its officers to be Daly McInturf, Capt.; Bohne Powell, V. C.; Louis Crom, Sec'y and Treas., and Herbert Davies, Lib'n. The dues are twenty cents a month, and it has $4.50 in the treasury. This company is planning to publish a small paper for the benefit of the company. Its baseball team has won all of the four games it has played this season. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its forty-fifth regular report, from which we note that it held five meetings in June, and a very enjoyable social. The members held a camping outing at Tottenville, S. I., and had a royal time. The company colors are blue and white, and the members have been divided into two sections, known as the Blues and the Whites. These sections compete in athletics, debating, literary work, chess, music, etc. We find that this company has held altogether 160 regular meetings, or one meeting each week since the date of its organization. Its official organ, the Universal Gazette, is doing good work in aiding the company. If at all possible, it is better that a company should stand by itself, but of course circumstances may arise in which consolidation would be the best plan, and as to this the members of the companies are the best judges. OJIBWAYS COMPANY, No. 58, Yonkers, N. Y., is getting along nicely. It has two club houses and goes in for yachting, having been second in a regatta recently held on the Hudson. The captain desires to hear from other companies who are interested in the same sport. It has also a new sail boat and intends to have two more soon. The officers are A. Dixon, Capt., and T. P. Quaney, Sec'y. HAMLIN GARLAND COMPANY, No. 21, Osage, Iowa, held its semi-annual election on July 5th, which resulted as follows: James Barrett, Capt.; Eugene Cromer, V. C.; Chas. Kearney, Sec'y, and Patsy Lapham, Treas. This company is in good shape, having a total membership of twenty-three. MOUNTAIN VIEW COMPANY, No. 17, Delta, Colo., is getting along nicely. It celebrated AMERICAN BOY DAY, and used the suggested program we gave in our company letter. The music was the only hard part, but all difficulties were successfully overcome. It has had a picture taken, and we will receive a copy within a short time. This company has recently altered its constitution and by-laws to insure a better system of government. At its AMERICAN BOY DAY celebration, in addition to the literary and musical program, refreshments were served, and there was a great display of fireworks in the evening. The decorations of flags and bunting were fine, and the boys intend to make such a celebration an annual affair. It has started a company paper, called "The Pennant," to be issued every two weeks. We are delighted to have such a good report of this company, and trust that its influence may be of benefit not only to the members, but to the whole town. GLEN ROCK COMPANY, No. 62, Glen Rock, Pa., at its meeting on July 2d took in two new members. It celebrated AMERICAN BOY DAY on July 14. This company is much interested in military and gymnastic drills. The members intend to start the work of canvassing the town for subscribers to THE AMERICAN BOY. It has $2 in the treasury. ZEB VANCE COMPANY, No. 9, Concord, N. C., has the following officers: Clarence E. Norman, Capt.; Wm. R. Moody, V. C.; Theo. B. Harris, Sec'y; Lynwood C. Fink, Treas.; John J. Boger, Lib'n, and Rev. J. E. Shink, C. C. Company meetings are held every Tuesday evening. The dues are fifty cents initiation fee, and thirty cents per month. It has rented a club room, has a nice library, and is busy organizing a ball team. ROBERT DALE OWEN COMPANY, No. 4, Stewartsville, Ind., recently elected the following officers: Louis J. Demberger, Capt.; Julius Kincheloe, V. C.; Jacob Schetler, Sec'y; Wm. K. Gardner, Treas., and Burnell Welborn, Lib'n. This company has twenty-five members, $67.50 in the treasury, and a library of fifty-three books. MUSKINGUM VALLEY COMPANY, No. 49, Zanesville, O., has eight members. The company treasury was made rich to the extent of $5.25, being the proceeds of a lawn fete recently given. It has subscribed $1 to the Shut-in Fund. A few nights ago it held a most enjoyable wagon ride and spent a very pleasant evening. The members are fixing up the club room and purchasing a gymnastic outfit. THE GEN'L STEADMAN COMPANY, No. 84, Toledo, O., on June 4th elected the following officers: John Cameron, Capt.; Donald Trowbridge, Sec'y; Walter Bunce, Treas.; David Robinson, Lib'n, and Chas. Rosendale, S. A. We regret to learn of the death of Errett Felldach, one of the members, and our sympathy is extended to the company in its loss. WM. J. BRYAN COMPANY, No. 39, Commerce, Texas, has the following officers: Carl Carlton, Capt.; Cecil De Jernett, V. C.; Eugene De Jernett, Sec'y; Erskine Wheeler, Treas., and Wade Debenport, Lib'n. GLENWOOD COMPANY, No. 51, Medina, O., has now twenty-three members. The dues are twenty-five cents a month, and a fine of five cents is imposed for various offenses. The company colors are black and yellow. This company has increased in number very rapidly of late, as four months ago it had only nine members. It has three fine, large rooms, consisting of a reading room, a meeting room, and a room that can be used for social meetings. It has recently formed a baseball team, which is expected to be invincible. The members of the team have white suits trimmed with black, the ten suits costing over $40. The members intend to go camping near Lake Ontario for a week. The local papers are very generous to the company in the matter of space, which we are glad to see.

The Order of The American Boy

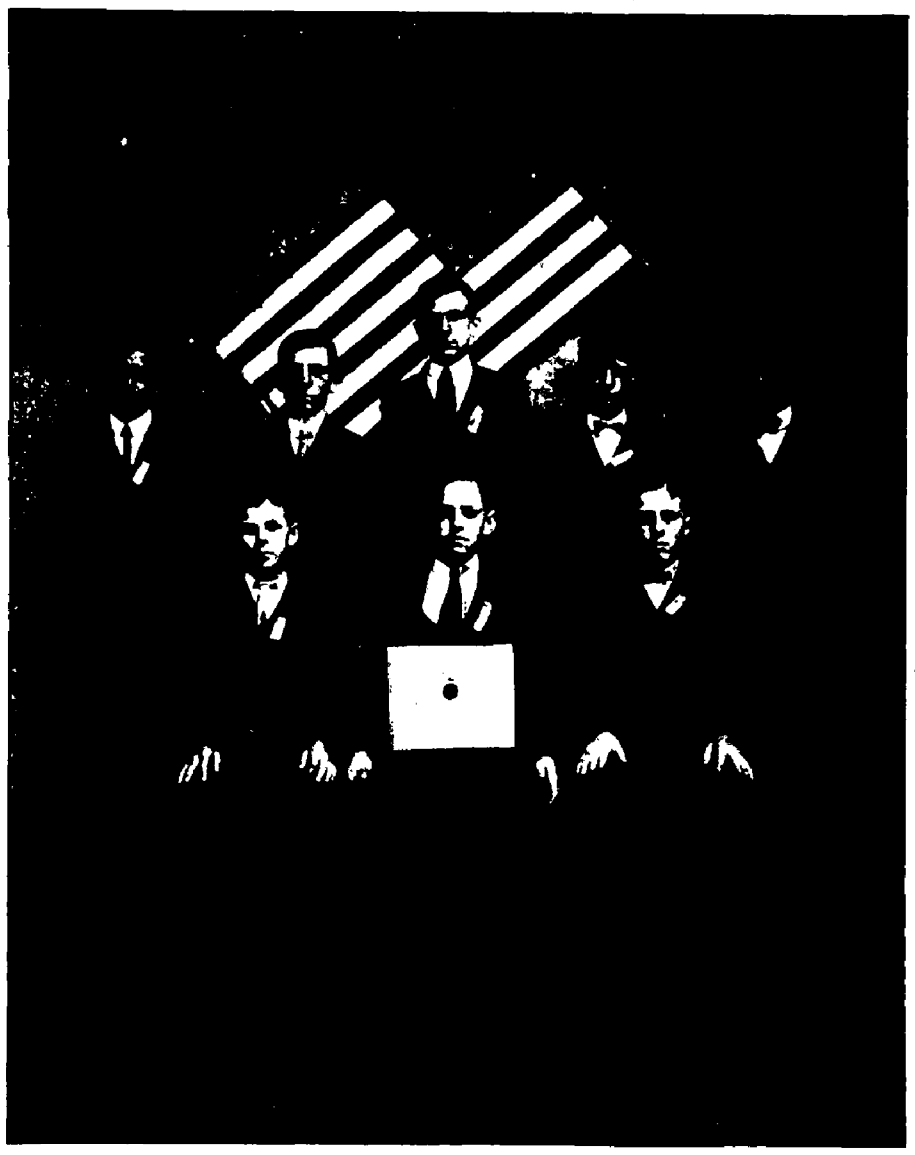
A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

Under the Auspices of "The American Boy"

Object:—*The* Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.



GLEN ROCK COMPANY, NO. 42, O. A. B., GLEN ROCK, PA.; CAPT., CURTIS MOODY

Legion of Honor Boys

How They Won

"I read your magazine every month and like it immensely. I think the advice, the helpful hints, and the stories it contains make it the best boys' paper ever published," writes Erban Beck, of Fostoria, Ohio, who obtained the highest average in the eighth grade, and was neither absent nor tardy during the year.

"Axel A. Anderson, who is a pupil in my seventh grade, has had the highest rank in his class every term since the beginning of the school year in September, 1905. His averages have all been between 90 and 100, and most of them above 95," writes Axel's teacher from Woburn, Massachusetts.

Herbert Busse, Omro, Wisconsin, took first honors during the last term of school. In his letter to us he writes: "I have read THE AMERICAN BOY for two years and am very well pleased with it. Every month it is brim full of good stories. I do love to read the page called "Just Between Ourselves."

L. Fowle, a ten-year-old boy living in Woburn, Massachusetts, saved his little brother from drowning. The boys were rowing when the younger slipped from the boat into the water, and was saved from death only by the bravery of his brother, who jumped after him and succeeded in effecting a rescue.

Walter Scales, of Ft. Worth, Texas, won his School Record Badge by a very narrow margin, it being the difference between his grade of 96 13-30% and the next highest grade, 96 19-192%. Walter writes: "I am glad to see several new serials starting in THE AMERICAN BOY. I have read many stories written by these authors and have enjoyed them, so I know that the new stories will be fine."

Robert W. McDowell, Blackwell, Oklahoma, made the highest average for the school year of 1905-1906, this average being 97%. Robert made an excellent record in spelling, failing to make 100% but twice during the term. We are told that Robert "is punctual and studious, and next to school work, likes best to spend his time reading THE AMERICAN BOY."

Stanley Schnetzler, Beaver Dam, Wisconsin, received one of our School Record Badges. The following paragraph is from his letter of acknowledgment: "I received the badge a few days ago and I wish to thank you for it very many times. I surprised my mother with it one evening, and she was very happy. I told her that I thought my name would appear next month in the best boys' paper printed."

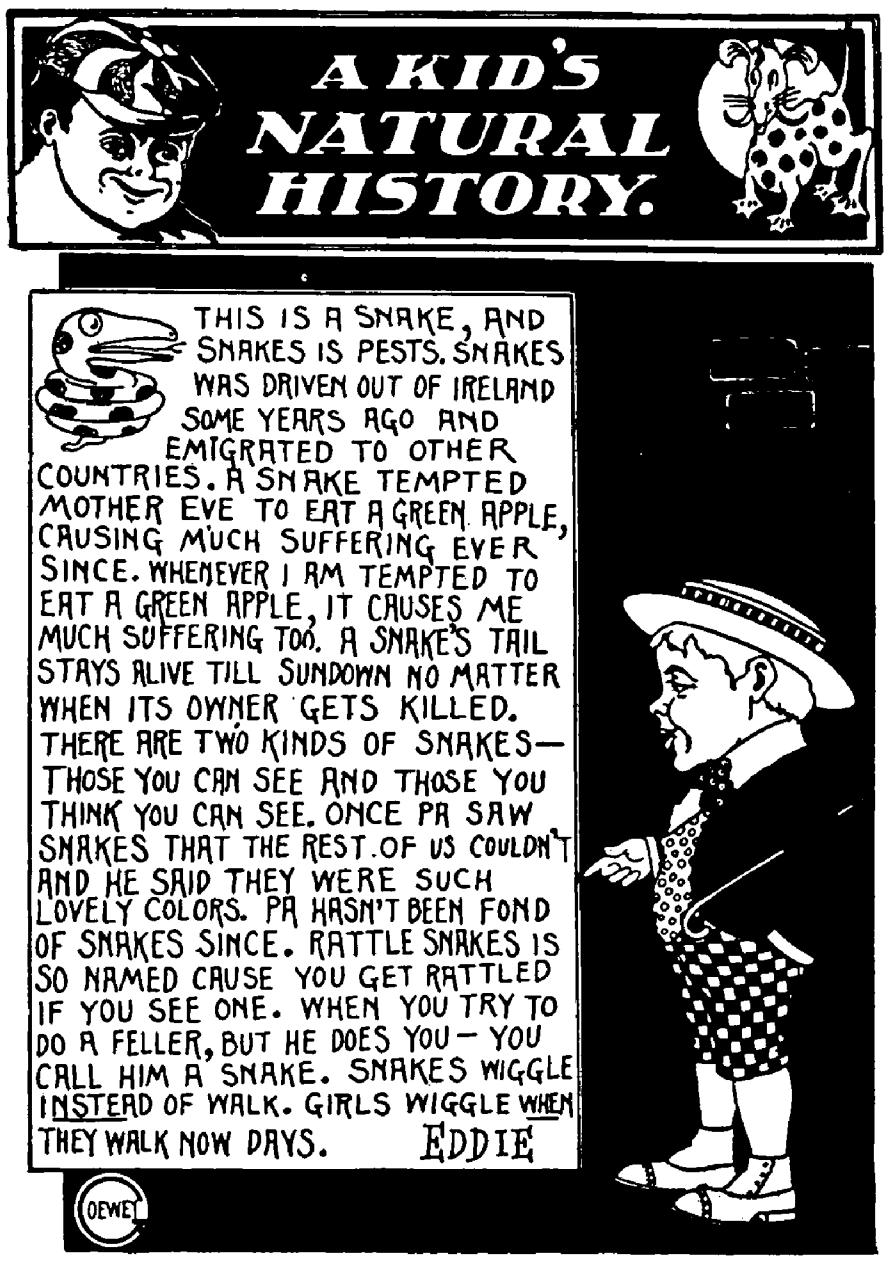
Bernard Kyle Bright, Abingdon, Virginia, ranked first during the half session of school just closed. Bernard is thirteen years old. At the age of twelve he won a gold medal in an oratorical contest given at the close of school. He is interested in mechanical and electrical experiments, and is a baseball enthusiast. He thinks there is no other paper which is comparable to THE AMERICAN BOY.

Tallman H. Trask, of Clovis, California, who received the highest average in the boys' department of the Clovis Grammar School for the school year, has had the unique experience of attending sixteen different schools in his ten years of schooling. He has just passed from the eighth into the ninth grade with an average of 92 5-9%. Tallman congratulates THE AMERICAN BOY upon the fine stories and good reading it affords.

Elmer Williams writes us from Hailey, Idaho, that he has received the highest average in all his studies for the last three years. This year he stood 95%, 6% higher than any other member of his grade, the eighth. Elmer is thirteen years old, and will enter high school next September. He says: "I gave my brother THE AMERICAN BOY as a Christmas present, and we all think it is the finest paper for boys in the United States."

While little Carlton Potter was swimming in Oneida Creek, near Oneida, New York, he was caught in the swift current in one part of the swimming hole, and would have drowned had not Robert Harding breasted the swift water and brought him to a place of safety. The boy had gone under the second time before his rescuer reached the spot. We have sent a Heroism Badge to Robert in consideration of his bravery.

Charles Drach, Jr., Jeannette, Pennsylvania, has received a School Record Badge for perfect attendance at school for the last five years. During this time Charles has had many experiences, going to school with headaches, toothaches, with the end of his thumb cut off, and, crowning misfortune, with a broken arm. He has not stopped with a good record for day school attendance, but is proud to say that he has not missed Sunday school for three years.



My Young Sportsman

A Series of Articles Descriptive of Firearms and Their Use

Written for The American Boy by Edward Van Antwerp

CHAPTER IV.

IT WAS formerly customary for every sportsman to possess a wad cutter. He manufactured his own wadding from pieces of felt or pasteboard, or, if nothing of the kind was available, was content to confine the powder in his eight-gauge with a few pages of the weekly newspaper. Now, modern machinery has changed all that, and the wads are made in such vast quantities, and are sold so cheap, that the busy sportsman satisfies his requirements at the gun store.

Wads are of almost every description. There are thick felt wads for nitro powders, and there are thin felt wads for black powder, together with the thin pasteboard wads for use over the shot.

The right proportion of powder and shot to be used in a gun of known gauge and weight, is one of the most important questions to be considered by the sportsman. No two guns are exactly alike, although they may appear similar to the eye, having come from the same factory, and having been made upon the same machinery. The measurements may be the same, and to all appearances they are the same, yet when the guns are brought into use a difference in pattern and "general behavior" is almost sure to be noticed. Every gun should be humored in this one particular, if in nothing else; it should be loaded with the charge of ammunition suited to its peculiar make-up. That is, it should have the charge that will give the greatest penetration, and the best pattern, together with a minimum of recoil.

Experiments alone can determine the proper load for a gun, and for that reason the directions given here are only general in their nature. Most of the 12-gauges will do good work with three drams of black powder, or three and one-half at most. Three drams of nitro is a powerful load, and we cannot advise the use of any more, under any conditions. One and one-eighth ounces of shot is an ordinary load, although in many instances better results are obtained by using one ounce. I am fully aware that this advice regarding the proper load will not meet with universal approval by the sporting fraternity. Many sportsmen use heavy charges, consisting of as high as four drams of powder, and one and one-fourth ounces of shot. From the recoil they imagine the penetration of the load to be greater than can be obtained from a lighter load. In this they are mistaken, for there is a certain limit of effectiveness in firearms as in everything else, and when the limit is reached all attempts at improvement are futile. Overloading causes the shot to scatter, increases the recoil, adds to the bursting strain; and all this without producing results in any way superior to that obtained by using the lighter load. The most careful scientific experiments have shown conclusively that increasing the charge of nitro powder above three drams, instead of increasing the velocity, a synonym of penetration, on the contrary actually reduces it.

In loading, the powder should be lightly pressed in the shell; but by no means should it be packed so as to break the grain. Plenty of wads should be used, especially where nitro powder is the explosive. Use a card wad over the powder, and on top of that two or three felt wads. If only two felt wads are used have the first one one-fourth inch in thickness. Use a thin but firm wad over shot and crimp shell tightly. In case your gun has not been bored for nitro powders, use wads one size larger than the gun. In using brass shells and black powder you can resort to the same practice. It is impossible to use nitro powders in brass shells, for it will not explode properly unless the shell containing it is crimped tightly. Occasionally we hear of poor results from users of nitro, but when the trouble is actually located, it is in nine cases out of ten, not a defect of the powder but a defect of loading instead. Details must be looked after, for it is only by so doing that the best qualites of any gun can be brought out.

We must now briefly turn our attention to the ammunition used by riflemen. Many prefer to load their own shells, claiming that they get better results in so doing. Others buy the factory product and preserve their shells after firing them, and then reload them on the grounds of economy.

The requisites to success in reloading are, clean shells, good powder, and well made bullets. The best time to clean shells is immediately after they have been shot, for the residue is then soft and can be easily wiped from the shells with a scratch brush and a cleaning rag. Of course the primers should be removed as soon as possible after the shells have been fired, and before corrosion has commenced, for nothing will prove so detrimental to good results as rifle shells eaten away by the green corrosion that attacks them as soon as they have been used. They will wrinkle down in loading; break down in a gun, and do a thousand other things that a shell ought not to do. The powder to use in rifle shells is to be governed by the caliber. For a small shell use a fine grained powder, and a coarser one just in proportion as the shell increases in size. When you buy a certain brand of powder follow the maker's directions, for the scientific experiments conducted by the big powder companies enable them to advise correctly in this, as in other matters pertaining to their products.

Assuming that the rifleman has obtained a set of reloading implements, the first thing in order will be the manufacture of bullets. Obtain a quantity of bar lead, a melting pot, and a dipper such as usually goes with an outfit of this kind. In using these convenient implements see that you have a good hot fire under the melting pot. See that the lead is approaching but not quite red hot. Add a small piece of tallow to the lead and stir it a trifle. Do not be alarmed if it catches fire and burns, for the fire will soon disappear. If your moulds and dipper are good and hot you are now ready to commence the manufacture of bullets. With the small dipper lift a small portion of the lead from the pot and proceed to fill your moulds. If your lead is hot and your moulds are in the same condition you will have no difficulty in getting good bullets. After moulding they should be lubricated by setting them up endwise in a shallow pan and pouring over them a preparation composed of three parts beeswax, and one part cylinder oil. Press the lubricated bullets through a sizing die and they are ready for use. Prime your empty shells and carefully fill them with the exact amount of powder required, seeing that they are all filled the same, otherwise they will prove disappointing at the target. Insert your bullets and press them into position by using your set of implements designed for this purpose. Shells properly taken care of may be reloaded many times, and for one using a large amount of ammunition for practice shooting the plan is an admirable one.

SAVAGE
JUNIOR
TEACH THE YOUNG HOW TO SHOOT.
They will learn to shoot accurately if supplied with a
SAVAGE "JUNIOR" SINGLE SHOT RIFLE, 22 Caliber.
It is different from all other rifles of this class, in that it is modeled after the best military rifles—each part finished and assembled with the same care and exactness used in the manufacture of our high priced guns. The quickest and easiest single shot to load. Shoots short, long and long rifle cartridges—18 inch, round barrel. Stock of American Walnut. Weight about 3 lbs.
Price $4.00
First ask your dealer. If he hasn't it, write us and we will furnish you direct.
SAVAGE ARMS COMPANY,
299 Turner Street, UTICA, NEW YORK, U. S. A.
All shipments prepaid.

The DAISY Air Rifle
"The Shots that Hit are the Shots that Count."—*Theodore Roosevelt.*
Roosevelt is right! The men who made this country great were the hardy, rugged pioneers who were taught by their fathers, not only to shoot, but to hit the mark.
The future of our country depends on the boy of today. Is your boy getting the correct training? Books won't do it all. Give him a Daisy Air Rifle, and teach him to use it. The Daisy is a real gun modeled after the latest hammerless rifle and shoots accurately, using compressed air instead of powder. 1,000 shots for 10 cents. No smoke, no noise, and perfectly safe in the hands of any boy.
1,000-Shot Daisy, an Automatic Magazine Rifle - $2.00
Other Daisy Models - - - - - - - $1.00 to $1.75
Sold by Hardware and Sporting Goods dealers everywhere, or delivered from factory anywhere in the United States on receipt of price. The "Daisy" book telling all about them free; write for it.
DAISY MFG. CO., 286 UNION ST., PLYMOUTH, MICH.

FREE BOOK TELLS OF THIS GUN
SIX SHOTS IN FOUR SECONDS
No other Shot Gun equals this gun's record. No gun built, for the money, that is as good. $4.00 to $27.00. Hammerless. Every modern improvement. Nothing as good on the market. Our catalogue shows a dozen other guns we make, single and double barrel, magazine breech loaders, ejectors, etc. Send postal for it to-day—it's free.
UNION FIRE ARMS CO., Manufacturers, 3135 Monroe St., TOLEDO.

Why The Graphophone is the best
The Music Master Visits the Factory
I, WHO teach the music, can with the eyes closed distinguish the great Columbia Graphophone from all other machines that speak. The others, they squeak, they sing through the nose. But I am curious. Why is the Columbia the best? "Visit the factory," they say, "and see him in all processes of constructing himself."
I go. They conduct me through seven acres of floors. I lose myself among three thousand workman; an establishment of a vastness worthy of its $10,000,000 of capital. I see everywhere the password is "*Perfection.*" Here, there, everywhere, come the inspectors. They examine, they cast aside. I say "Such very little defect, monsieur."
"Yes," they say, "But one little defect spoils all."
Pouf! I have found the secret of the perfect Graphophone.
I now understand why a *Written Guarantee* is given with the Columbia machines.
It now explains why they are ready to sell on the *Easy Payments*, when desired.
I make my acknowledgments to the genius in the patents, and the genius in the construction, which gives to the Columbia the perfect voice.
It is marvelous as a story of Jules Verne.
A Miracle—This Columbia Graphophone.
Before buying a Talking Machine insist on hearing the Columbia and be convinced, like the music master, that it is the best. Dealers everywhere. Stores in all the principal cities.
Write for catalog and address of nearest dealers.

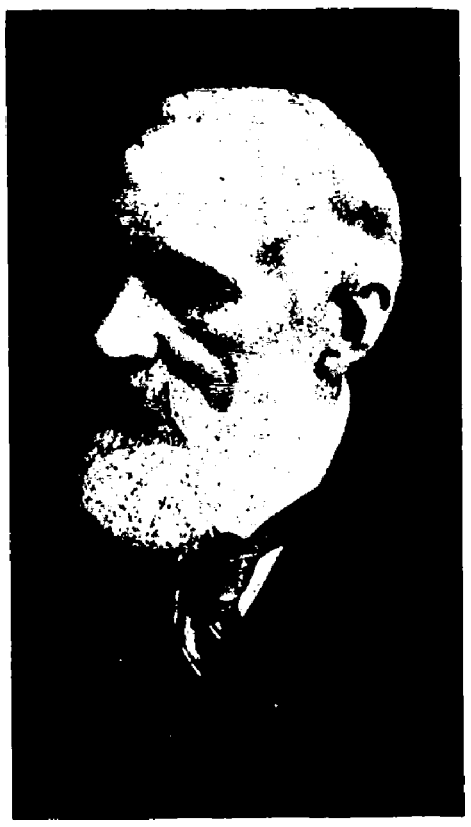
Grand Prix Paris 1900. Double Grand Prize St. Louis 1904



LORD KELVIN

A Baron Scientist, far From Barren

One of the grandest of all "Grand Old Men"—if by "grand" one means that greatness which devotes itself to furthering the world's work—is William Thompson, Baron Kelvin, who, on the 26th of June, celebrated his 82d birthday at his Ayrshire home. When a man may write after his name more honorary degrees than any other worker living, it means achievement. In Lord Kelvin's case it means achievement spelt with a capital "A."

An Irish boy, and the son of a professor of mathematics, he early turned to that study of the sciences through which he has accomplished so much. Not a great scientific event for half a century but he has figured in it. He was electrician for the Atlantic Cable both in '57 and '65; he invented the galvanometer and recorder for submarine telegraphy; he acted as electrical engineer for the French Cable in '69; for the West India Cable, six years later; and again for the Mackay-Bennett Cable in '79. It was his genius which overcame the difficulties threatening the splendid scheme of Cyrus Field to join Europe with America by wire, while, on the other hand, it was his most practical knowledge which perfected the simple water-tap now universally in use over kitchen sinks.

If there is any secret to such success it is only the simple one of constant work. Lord Kelvin says so himself—and still exemplifies it. This octogenarian author of a score of immensely valuable books, labors each day as though he were still in his forties. Take one as a sample; the record comes from his diary:

"Rose early and read a couple of hours before breakfast. At nine lectured on Kepler's Laws, then drove to White's to make final tests of an electrical meter. Then a lecture on higher mathematics and luncheon. All the afternoon busy with experts on Edinburgh's new lighting scheme. From dinner till bedtime studied crystals. Early tomorrow to London for a meeting of the Royal Society."

The president of that world-famous body sets his confreres an example of energy and application worth attention.

M. ASAKAWA KANICHI

A Jap to Teach Young America

Nothing shows more clearly the changed view the western world is taking of the Japanese than the recent announcement from Yale University that Asakawa Kanichi will hereafter teach there the history of the civilization of the "Flowery Kingdom." Yesterday "The little brown Yankees of the East" were held almost as barbarians; today young America is being instructed in their "civilization." It is a wise move, however, for Asiatic subjects are daily assuming more importance to the Occident, commercially and politically.

Kanichi is only thirty-two, but already has he proved himself an exact thinker and a thorough student. From Japan's public schools he went to the Waseda College, and then came here to study at Dartmouth and Yale. It was at the latter university that he wrote an essay upon the old-time feudalism of his native land, comparing that period with the same era in Europe so ably as to earn for his work the praise of being "the most important contribution of modern scholarship to the understanding of Japanese history," and for himself the name of "perhaps the most meritorious student of his years now living."

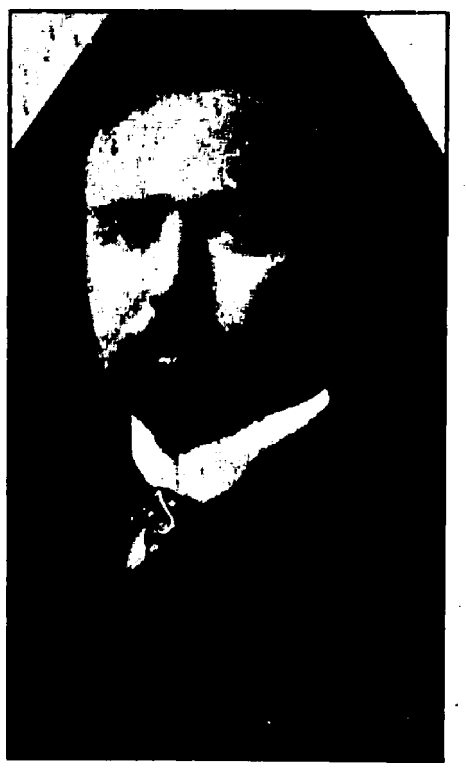
In speaking of this young man, President Hadley said recently: "His career shows we are living in 'the young man's day.' Any boy of good mind and earnest application can master thoroughly some one important topic, and so place himself in a secure position, not only of self-support but of wide usefulness."

"The Right Sort of American"

That is the characterization of Brigadier General Funston which the newspapers reached in describing the tact, firmness, and wisdom with which the man met and fought the fearful results of the recent San Francisco earthquake. Greely put it: "Due largely to his energy and judgment, there was a minimum of violence under most distressing conditions."

Shaken out of bed by the first tremor, this born but modest hero took in at a glance the necessities of the moment, and, without warrant of law, jumped forward to act as conditions demanded, "The Constitution was not framed," said he, "with earthquakes in view."

The army of any country welcomes the Funston kind. He is naturally one of those to whom discipline and responsibility come as matters of course. The forty-one years of his life are full of texts



BRIG. GEN'L F. W. FUNSTON

for the American boy to ponder—and a lively career it has been!

Born in Ohio (November 9th, 1865), his solid "Buckeye State" parentage was promptly reinforced by Kansas grit, for the Funstons moved to the younger state when "Fred" was two. From the grammar schools he went to the State University, from there to a reporter's desk, and then out into the world. He was then twenty-six, and in the seven years before he went to the Philippines, as colonel of the 20th Kansan Volunteers, he saw Death Valley, Alaska, and Cuba, spending a winter in the Klondyke and floating down the Yukon with the spring—alone in his canoe! In Cuba he first saw fighting, serving under the veteran Gomez against the Spanish oppressors.

Twice during the guerilla warfare in the Philippines Funston distinguished himself; in 1899, when his famous river exploit, under fire from the opposite bank, brought him a Brigadier Generalship of Volunteers, and again, two years later, when he planned and successfully carried through the capture of Aguinaldo. For this he was breveted to the regulars, and then came the command of the Department of the Lakes, and then the Pacific Coast post, in which he so distinctly "made good."

"Make good," by the by, seems the criterion by which this "right sort of American" governs himself.

TWO SOLDIERS OF THE SEA

A RECENT student of literature who has been investigating the popular tastes of the reading public says that there is an increasing demand for books of biography and autobiography, and that boys and young men in particular manifest a liking for this kind of reading. It is a helpful and often inspiring kind of literature. Every boy of spirit feels his pulses thrill when he reads of men who have "done things," and all the world admires a man who has brought things to pass. Every story of human achievement in the face of great odds has a certain value in that it helps others to have confidence in their ability to overcome obstacles, for what has been done can be done. Books of biography should form a large part of every boy's library, for these true stories of real life and of real achievement are worth so much more than many of the stories that are the outgrowth of the imagination and that give one false standards of life.

Stories of the sea have a great charm for many of us, and if a boy likes to read of naval life and naval heroes he will find much to interest him in the books written by Captain Alfred T. Mahan. Boys who are fond of the books of Captain Mahan may like to know that he is a retired captain of the United States Navy and that he "comes honestly" by his love of the military life, for he was born into the military atmosphere of West Point about sixty-six years ago. He graduated from the United States Naval Academy when he was nineteen years old, and few Americans have had a wider military experience. He served through all of the Civil War and later in South Atlantic, Pacific, Asiatic, and European squadrons. He was president of the Naval War College at Newport for several years and he was one of our delegates to the great Peace Conference at The Hague in 1899.

His education both at school and in that larger school we sometimes call the school of life have fitted Captain Mahan for the writing of the many books he has added to our American literature. Of these books his Life of Admiral Farragut and Life of Nelson would be most likely to interest boys.

Lord Nelson was born in the year 1758 and he was one of eleven children, only two of whom lived to grow old. His father was an English rector and his mother was a grandniece of Sir Robert Walpole. In his childhood and early youth he gave but little promise of developing into one of the greatest of English admirals. He was smaller than most boys of his age and inclined to be sickly, but time revealed the fact that there was a strong and high spirit within his small and apparently feeble body. He entered the royal navy when he was but thirteen years old. His uncle, Captain Maurice Suckling, was commander of the British ship Raisonnable and it was

CAPT. ALFRED T. MAHAN

chiefly for the purpose of lightening the burdens of his brother-in-law, the father of young Horatio Nelson, that he agreed to take his young nephew on board his ship. He said when doing so:

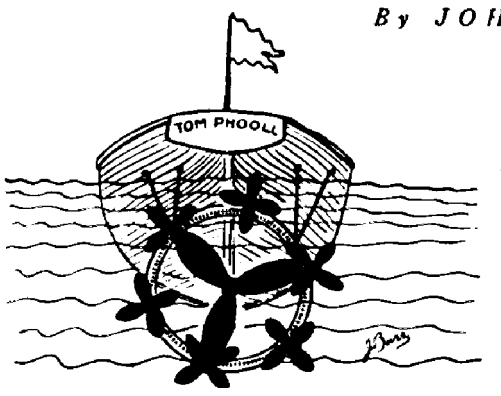
"What has poor little Horatio done that he, being so weak, should be sent to rough it at sea? But let him come, and if a cannon ball takes off his head, he will at least be provided for."

"Under such gloomy forebodings," says Captain Mahan, "began the most dazzling

(*Continued on page 339.*)

SORROWS OF AN INVENTOR

By JOHN BARR



FRANK SAW for himself a great future as an inventor, but nothing worthy of mention in the ordinary walks of life. Inventors made lots of money and were not long about it, while ordinary business was long and exacting, fit only for plodders. Therefore why not invent and be happy? He had studied carefully an esteemed and authentic volume called:

> JACK
> The Boy Inventor
> By
> The Author of
> "Perpetual Motion Made Easy."

But his father had caught him with it and the valued book, the outside cover of which bore a fine colored picture of a splendid airship guided by the hand of a small boy, went up in flames.

"There goes your hot air," gleefully remarked his father as the book burned. The old man evidently misunderstood the title of the book, for he muttered that the inventor of such boys as Frank ought to have been shot.

"Now, take your school book," he thundered, "and try to get a little sense into your head."

Poor Frank! He had a common, hard-headed business man for a father, a man who could not even invent an excuse for staying out late at night. He believed that boys ought to have a good schooling and he could never work up any interest in any of Frank's wonderful machines. Frank took the despised school book, went to sleep over it, was spanked, and sent to bed.

But the leading characteristic of the successful inventor is stick-to-it-iveness and Frank had it in plenty. He was working on plans for a new power boat, after which the flying machine was to receive his attention. Diligently he perfected each detail of his plan and stealthily put it into operation. He realized that much power was lost in the ordinary form of propeller, and to husband this and to put it where it would do the most good he invented a new arrangement. By placing a cogged band around the propeller, fastened to the tips of the blades, and by having a stationary band to correspond, bearing a number of smaller propellers the shafts of which bore cogged wheels to fit the cogs of the band attached to the central propeller, he sought to utilize all the power there was, and perhaps create a little more. The force required to turn the central propeller would also turn all the others, and turn them much faster than the speed of the central one.

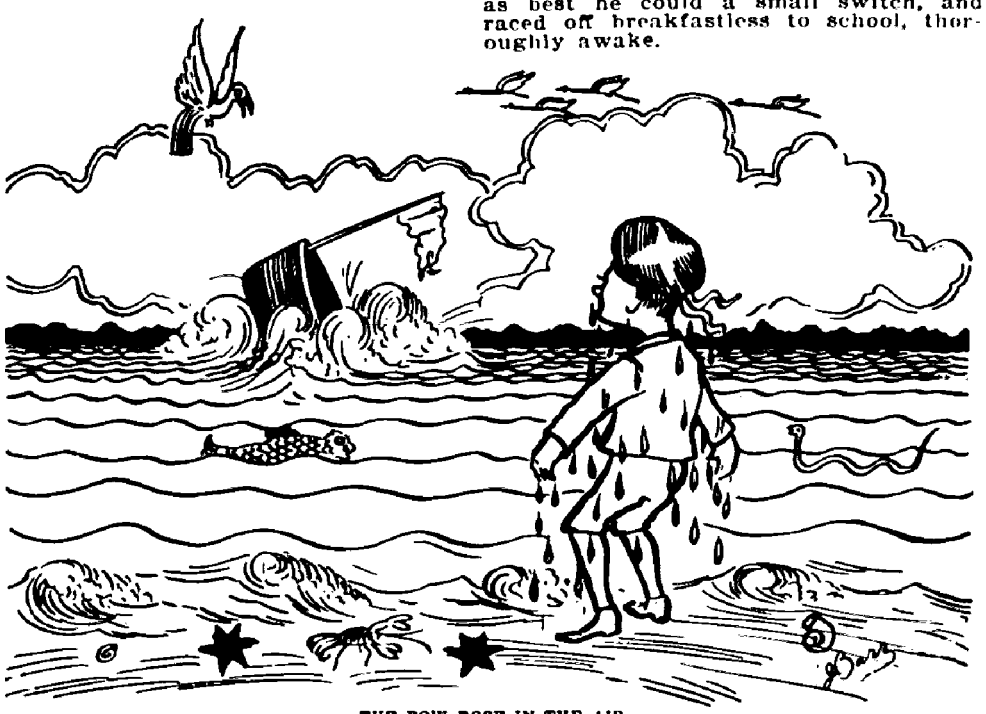
He completed these arrangements more easily than he had hoped and launched his boat on a small lake near his father's house. As he did not wish to injure the shore by the wash from the multiple propeller, he poled the boat out some distance before starting the engine. Then he turned on the gasoline and the machinery began to throb, but the peculiar vibration and unearthly noises alarmed him and he jumped overboard to swim ashore. It was a difficult swim, for he appeared to work very hard and make no progress, but he finally stood on dry land, the water having receded. He was dripping, but he did not feel wet. Turning to see his pilotless boat speeding over the lake at express speed, he was surprised to see her standing still. The propellers were going so fast that they simply cut the water and no more could flow into the vacuum. Slowly the bow rose in the air as the boat slipped sternforemost into the hole in the water made by the propellers. Then Frank remembered that he had made a fatal mistake, or oversight. There was a matter of detail that in his hurry he had overlooked. The big central propeller was working ahead all right, but the others were reversed by the gear wheels. That accounted for the failure of the boat to go ahead; it could easily be remedied in the next one.

A little later the boat disappeared, but the propellers continued to work, and finally he was horrified to see the water all running out. The boat had bored a hole in the bottom of the lake. As the water receded several large ships were uncovered, the existence of which had been unknown to Frank. They had evidently gone down with all on board and been forgotten. There were several Russian battleships and two or three transatlantic liners. Frank walked out to examine one of the latter, on which several ladies and gentlemen were dancing, but just as he was stepping on board someone grabbed him roughly by the shoulder.

"Lemme go," said Frank.

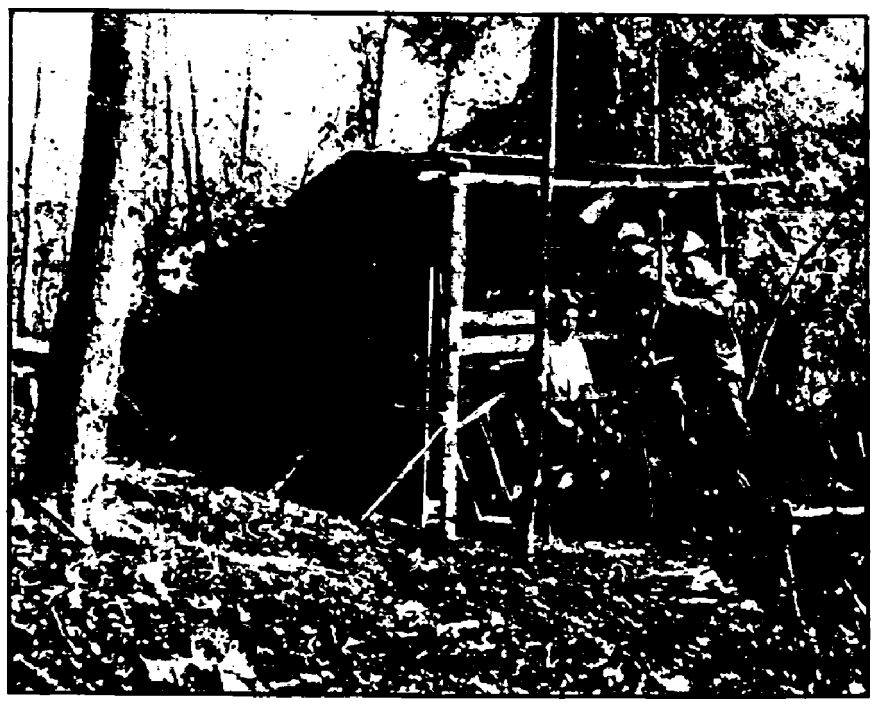
"No. I'll not let you go. Get up, you young rascal and go to school. You've no time for breakfast. Come, move now," and a slap helped him out of bed. The voice belonged to his father.

Frank hustled into his clothes, dodging as best he could a small switch, and raced off breakfastless to school, thoroughly awake.



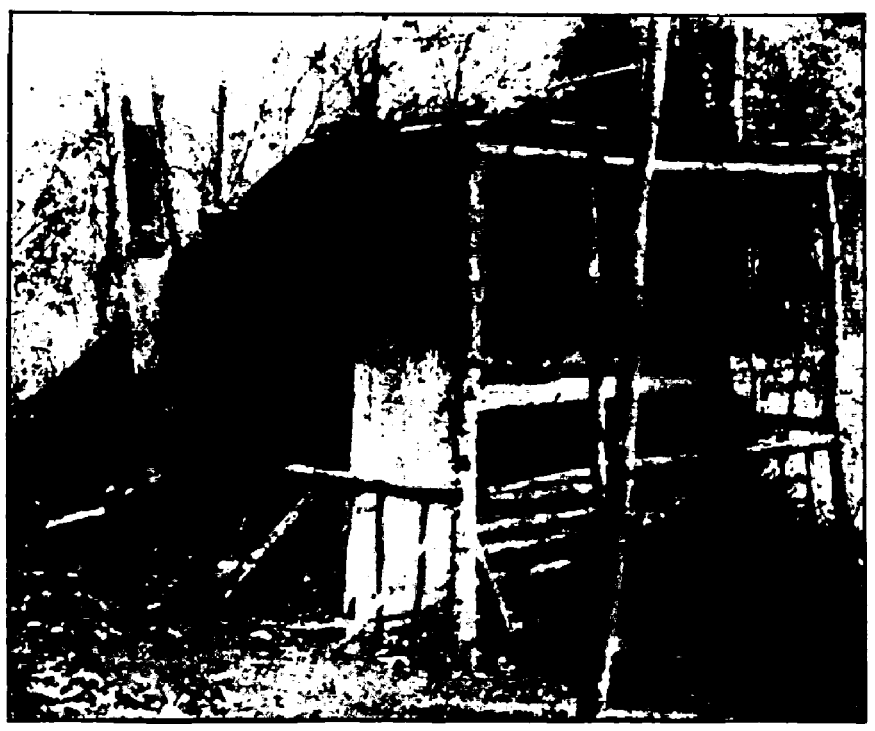
THE BOW ROSE IN THE AIR

A SHACK IN THE WOODS



THE BOYS AT WORK

Boys will be interested in the pictures of a hut built by three boys during their spare time, in a little tract of woodland near their home at West Roxbury, Massachusetts. The pictures speak for themselves and need no explanation. Any boy with muscles tough enough to hew a few hemlock logs can easily put up a similar shack. The roof is shingled. A little cement was used in building a fireplace, but aside from this, the materials were found in the woods. The hut is fitted up inside with three bunks, a table, two stools, and a fireplace. Here the three boys spend many pleasant Saturdays fishing and roaming in the woods, and cooking their own meals. The photographs were furnished by Roy Conklin, 26 Hastings street, West Roxbury, Massacusetts.



THE SHACK COMPLETE

WOULD YOU LIKE TO SECURE

AN IMPROVED SINGLE BARREL SHOTGUN

For the price of an old-fashioned gun?

$5.50 EXPRESS PAID

This light, well-balanced, serviceable single barrel shotgun---the HOPKINS & ALLEN take-down pattern, automatic shell-ejector---offers exceptionally fine quality and workmanship at the lowest price. The automatic shell ejection makes it possible to reload with surprising rapidity; and for this reason the gun is almost as effective as a double-barrel. **For quail, snipe, ducks, and other quick birds---this shotgun is ideal.**

DESCRIPTION: No. 712—12 gauge, 30 or 32 inch barrel—weight 6⅝ lbs.
" 716—16 " 30 or 32 " " " 6¼ lbs.
" 720—20 " 28 or 30 " " " 6¼ lbs.
34 inch barrel, 50 cents extra—36 inch barrel, $1 extra.

Take-down pattern; top snap action; automatic shell ejector; decarbonized blued steel barrel, choke bored; case-hardened frame, rebounding hammer, selected Walnut stock with pistol grip, and has hardened rubber butt plate. **A well-balanced, accurate, sportsmanlike shotgun, wonderfully safe, quick and certain in the hands of either the boy beginner or the experienced sportman.**

Sent express paid for the above price—if not found in the store of your nearest dealer. Safe delivery guaranteed.

We publish two delightful stories—"William Tell," the experience of an expert with his first Junior Rifle, and "My First Rifle," by the famous marksman, Capt. Jack O'Connel, which we will send free, with our illustrated catalogue of rifles, revolvers, and shotguns. We make the largest and finest general line of firearms in the world.

HOPKINS & ALLEN ARMS CO., 118 Franklin Street, **Norwich, Conn.**

Makers of the Celebrated H. & A. Schuetzen Rifle.

A Boy Hero and His Medal

AT THE BATTLE of Missionary Ridge a boy of seventeen years of age displayed such heroism amid the thousands of brave men that he was awarded the congressional medal of honor, on which was engraved:

"Drummer John S. Kountz, company G, Thirty-Seventh Ohio volunteers, for gallantry at Missionary Ridge, Nov. 25, 1863."

In September, 1861, a schoolboy presented himself before the recruiting officer in the town of Maumee, in Ohio, with the request that he be allowed to enlist. Because he was but fifteen years of age he was denied the privilege of signing the rolls; but by dint of perseverance he succeeded in convincing the officers of company G that he was well qualified to act the part of drummer, and exceeding proud was he when his mother cut down to fit his diminutive body the regulation suit of blue which had been issued to him.

In course of time the Thirty-Seventh Ohio formed a portion of the force with which Sherman assaulted Missionary Ridge, and on the 25th day of November, 1863, the regiment was ordered to advance from the temporary works which had been taken from the enemy early that morning, and attack the men in gray, who were strongly intrenched on the hill.

Major Hipp, seeing Johnny Kountz making ready to march with his company, ordered him to the rear; but when the line of dusty blue moved out from the works, slowly at first, and faster and faster as the rain of iron and lead increased, Johnny Kountz dropped his drum. Seizing a musket which had fallen from the lifeless hands of its owner an hour before, the lad ran with all speed to join company G.

The zip, zip, zipping of bullets could be heard even while the shells screamed overhead. At short intervals great gaps appeared in the lines, and on the slope, here, there—everywhere, as it seemed—Johnny saw, lying still in death, or writhing with pain, comrades who a few moments previous had given him a kindly word.

THE DRUMMER TO THE FRONT.

He was afraid; but because the drummer's place was in the front of the company, he pressed forward to gain what he considered his rightful position. The men, animated by his example, advanced yet more rapidly, leaving the hill side behind them dotted thickly with forms in blue, on each of which could be seen great blotches of crimson.

Johnny Kountz was among the foremost who literally hurled themselves against the intrenchments at the top of the hill, and with the hindermost when the Thirty-Seventh Ohio sullenly fell back before the deadly fire of Bragg's forces.

Once more came the command to advance, and again the Thirty-Seventh Ohio, its ranks sadly depleted and with Johnny Kountz in front of company G, went up, up into the very midst of the death dealing shower of missiles. Then it was to Johnny as if he stumbled—perhaps over the lifeless body of a comrade, and as he fell the order to retreat was given. He would have scrambled to his feet, fearful lest he lose his position in the line; but one leg appeared suddenly to have been benumbed. In vain he tried to raise himself; then came a sharp, burning sensation. He was assailed by nausea and it seemed as if consciousness was deserting him. An ominous looking blotch on his blue trousers grew larger each instant, and the boy knew he had been wounded. Above him on the mountain side the lines of gray poured volley after volley into the valley beneath, mowing down by the score those who would ascend. Below him Johnny could see company G in the position it had occupied before the first assault was made. He was between the lines; alone save for the dead and the dying.

A man near him moaned and then cried for water, whereupon Johnny was reminded that his own throat was parched, and he raised his canteen to drink just as the sufferer cried out again in his agony.

JOHNNY GIVES UP CANTEEN.

Johnny lowered the canteen from his lips, and looking across the blood stained ground, saw a soldier whose shoulder had been shattered, while a smear of blood across his eyes told of yet more serious injury.

"I reckon what's in this canteen belongs to you," Johnny shouted, putting the vessel from him as if fearing the temptation to drink might become too strong to be resisted. "Can't you crawl this way? My leg is hurt, or I'd make out to get over there."

"Water! I'm dying!" the man moaned.

Johnny looked about him in perplexity. He had fallen into a depression on the mountain side where he was in a measure protected from the enemy's fire, but to move in either direction would be to expose himself to the full blast of the leaden storm. If he made no effort to relieve the suffering of this stranger he might remain in comparative safety, with the means of quenching his own rapidly increasing thirst.

Tne temptation was strong. He needed tne contents of his canteen as sorely as did the semi-conscious man, and no one, not even the sufferer himself, would ever know that the little drummer might have afforded relief. Again Johnny raised the vessel to his lips and again the wounded soldier moaned.

"It would choke me if I tried to drink it," the boy muttered, and without further delay he began to work his way slowly but painfully, dragging his shattered limb at the expense of additional loss of blood, across the mountain side amid the storm of bullets.

RELIEVES THE SUFFERER.

The boy's tongue was by this time literally swollen because of the thirst which assailed him; but he put his own suffering aside in order to minister to the dying man's wants.

"Drink this, an' I reckon you'll feel better," Johnny said, in what he intended should be a cheery tone, as he raised his canteen to the man's lips.

Eagerly the soldier seized it, draining every drop before releasing his hold, and then, at the very moment Johnny flung the empty canteen aside, his head dropped back, his jaw fell—he was dead.

"Perhaps it didn't do any good, but, all the same, I'm glad you got it," the drummer boy said, half to himself, and as he turned to decide if he might be able to gain his former position, he saw a member of company G coming toward him on the double quick. It was William Schmidt who was risking his own life in the effort to save the little drummer, and he shouted while advancing:

"Make ready, Johnny, for I'm going to pull you out of that!"

"Go back! Go back!" the boy shouted. "Take care of yourself, Bill; there's no reason why you should run all this risk to get me out of here, for I won't be alive a great while longer."

"I allow the surgeons will fix you up, Johnny, if you don't lose your pluck. Keep a stiff upper lip, my boy, and we'll soon be in different quarters."

"You'll never get through if you try to carry me, an' I can't walk. I'm doin' my best to keep my upper lip stiff, Bill; but it's gettin' to be mighty hard—hard—"

The brave little lad had come to an end of endurance. He sank across the body of the soldier whom he had tried to aid, as consciousness deserted him.

That evening the drummer boy was laid on the operating table in the field hospital at Chattanooga, and when the wounded limb had been amputated he looked at Schmidt, who had held his hand during the ordeal, as he said with a pitiful attempt at a smile:

"I'm trying hard to keep my upper lip stiff, Bill; but it comes mighty tough once in a while."

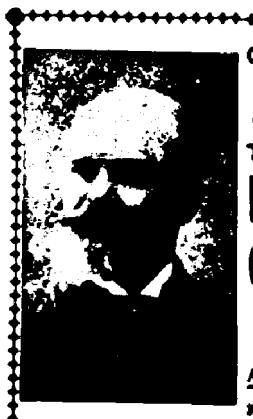
"You're what they call a hero, Johnny, that's what you are, and company G is proud of having had you in its ranks!"

"It's because you think I'll feel better that you say such things, Bill, an' you're mighty good. Do you reckon I can stay with you fellows now I've only got one leg?"

"I'm afraid your soldiering days are over, my boy; but you may be certain that we of company G will never forget you so long as one of us is alive."—Exchange.

A Miniature Automobile

Our readers will be interested in the picture of an automobile built for a little girl. Yota A. Lott, the daughter of Dr. Frank Lott, of Columbus, Ohio. This is a real electric touring car, capable of a speed of fifteen miles an hour and of running thirty-five miles with one charging. It is forty inches high and five and one-half feet long. Doesn't this make your mouth water? If I were in that automobile and were a boy, I am sure I would have a happier expression on my face than the three children who are in the picture have. But, perhaps, they are a little out of humor because they have had to stop and have their picture taken.



CHEW... **Beeman's** THE ORIGINAL **Pepsin Gum**

Cures Indigestion and Sea-sickness.

All Others are Imitations.

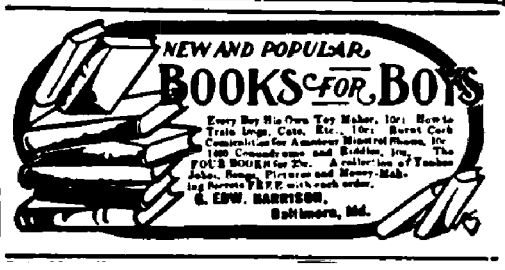
For Sale at Every Drug Store

MENNEN'S BORATED TALCUM **TOILET POWDER**

A Positive Relief for PRICKLY HEAT, CHAFING, and SUNBURN, and all affections of the skin.

Removes all odor of perspiration. Delightful after Shaving. Sold everywhere, or mailed on receipt of 25c. Get Mennen's (the original). *Sample Free.*

GERHARD MENNEN COMPANY, Newark, N.J.



Hunting His First Job

By ANTHONY J. HENSON

SAYS MANY a boy well started in his teens to his father about this time of year:

"I don't want to go back to school."

"What!" exclaimed the parent. "Well, I just guess you will, and you'll be there the first day and on time, too."

"But I tell you, I'm tired of school."

"Think you know more now than the teachers can ever tell you, eh? Feel that you've got all the education you'll need, eh?" Then, playing the sly dog: "Why don't you want to go back to school this year?"

"Because I want to go to work."

"Oh, that's it, eh? Got an idea that you'll make a fortune the first year or two, I suppose. Um-m! Wants to go to work. Well, if he's got that idea as strong as his daddy had it once upon a time, it'll be a waste of time to send him back. Um-m!—— See here, young man, are you in earnest about wanting to go to work? You are, eh? Well, you can go to work—but understand, you've got to get a job yourself. I'll not lift a finger to help you. And if you can't get work in mighty short order, back to school you go!"

Or perhaps the family finances are such that the boy must be kept out of school this year and started at work, that he may live. Or the college graduate, his summer's frolic at an end, realizes with a sigh that it's high time for him to begin turning his higher learning into good golden dollars. At any rate, this is the month of the year, more than any other, when thousands of persons who have never before taken an active and steady part in the world's work, seek for their first jobs. Perhaps in this very month, years ago, you yourself started out to look for your first job, and, what's more, landed it. Were your experiences anything like these which befel real flesh and blood boys and young men known to the writer?

HOW CANDOR WON A BOY HIS START.

Billy Jones was fifteen when he set about his first job. Previous to that time he had earned several dollars a week by selling copies of his town's evening newspaper after school. But not in the usual way, on the streets. When he learned that a newsboy had got a leg cut off by "hopping" on a moving train at the town depot, in order to make a sale, and that as a result all newsboys had been forbidden to enter station or trains thereafter, he sought out the road's superintendent.

"Mr. Johnson," he said, "I want to sell papers to passengers here in the station and on the trains."

"No, sir, you can't," was the official's brief and energetic reply. "Don't you know I've just kicked out all newsboys on account of the accident?"

"Yes, but see here; I'll give you my word of honor that I'll not hop on or off a moving train if you'll let me sell. And, Mr. Johnson, people when they travel want to read; they've got to pass the time some way. You'll make a lot of your passengers mad by shutting off their papers."

The superintendent looked at the boy—he was then twelve—in astonishment.

"I guess you're right, sonny. Well, go ahead and sell—on your honor not to get on or off a moving train."

For three years Billy Jones enjoyed a monopoly by reason of his ever constant solicitude for his word of honor. Then, tiring of school and having won his parents' permission to go to work in earnest he gave up selling papers.

But he did not straightway go into the first store before his nose and strike the "boss" for work. His idea was to start for himself in New York. He went to the leading physician of the town, who was also something of a local politician and had been a delegate to several state conventions.

"Doctor," he asked, "you know some of those Tammany fellows in New York, don't you?"

The doctor nodded.

"Well, I'm going to look for a job in New York and I want you to give me a letter of introduction to a Tammany man."

"Thought you were a Republican, young man?"

"I am; but, doctor, Tammany's the thing in New York, isn't it? And won't a Tammany man know where jobs are waiting for energetic chaps?"

The boy got his letter. A day or two later he placed it in the hands of the man to whom it was addressed. When the latter had finished reading it, the boy spoke up, by way of appendix.

"I don't want you to make a job for me or hunt me a job. Just tell me where you think a job may be found, and I'll go after it."

The Tammany man thought awhile and gave the boy the names of two or three firms. One chanced to be that of a publishing house, and as it was nearest at hand, the boy soon presented himself before the manager.

"I am looking for a job with you," he said politely.

"Well, we're in need of just the right sort of boy," was the reply. "Perhaps you're he. By the way, what do you know about the sort of work we do here?"

For an instant it was in the boy's mind to engage in some skillful equivocating; but something inside of him checked him, and looking into the man's face, he said earnestly.

"Not a thing."

And the next minutes he felt his knees shaking under him, though his ears told him that the man was saying:

"You're hired. Start to work tomorrow morning."

Three months later, when the boy received his first summons to the manager's office and stood before that worthy with his heart suspiciously near his mouth, he was asked:

"Do you remember what you said to me when you came here looking for work, and I asked you what you knew about the business?"

"Y'yes, sir," was the reply, somewhat shamefacedly.

"Well, I took you because you were candor itself," went on the manager. "Every boy who had come to me before had sworn that he knew a whole lot about the business, but not one of them did. They lied to get work. You didn't. A business man hates a lie almost as much as the Lord does. During the three months you've been here you've continued to be candid. And, by the way, you move up a peg next Monday, and so does your salary."

TEMERITY THAT SUCCEEDED.

Temerity sometimes succeeds, as well as candor, in landing the first job.

It was into a Providence (R. I.) wholesale house that a boy of about thirteen or fourteen walked one day and asked, in a bright, cheery voice, of the manager,

"Have you got a job for me, sir?"

Just then someone walked up to the manager, and shoved a paper under his nose.

"Take a seat, boy," he said, "and I'll see you in about half an hour, when I'm through with this."

"Beg your pardon," was the reply, "but my time is valuable. I'll wait if you think there's a chance that you'll employ me, but if you don't want a boy, please tell me and I'll look somewhere else."

The manager was nonplused for a moment; then, laughing heartily, he called to one of his assistants:

"Here, Bond, take this young man and start him at work. And don't waste any time about it, please—his time is valuable."

AN "AD" THAT LANDED A FIRST JOB.

Thousands of city boys and young men, when they set about to look for their first job, put their trust in the want "ads" of the daily newspapers. A few days' experience at answering "ads" showed a particularly keen Jewish boy of an eastern city that he stood little chance of getting a job in this way. Everywhere he went, no matter how early, he found scores of boys ahead of him, and, in some places, literally hundreds. So he decided that he would do a little advertising on his own hook.

But he had no money—at least, not enough to advertise simultaneously in all the leading papers—and as his parents were none too well off, he did not feel like appealing to them for assistance. Therefore, instead of looking for work for the next few days, he hung around a ferry slip, and picked up quite a deal of change each day helping women across the wide, truck-crowded street with their baggage to and from the station. Then, when he had sufficient money to purchase a boldface "ad" in five papers for insertion on a Sunday—he had previously learned the rates—he handed this in at the various offices:

"A Hebrew boy, 16, who intends to win out, wants to start at bottom and learn business with good firm."

That was all, besides his address. But before night of the day of publication three men had hunted up the boy in his tenement home. He took a job as office boy with the second, a Gentile; and a part of his first week's wages of five dollars went for postage for the nearly one hundred answers that he wrote to letters from firms asking him to call around, he saying in effect that he had a position, but he thanked them just the same.

Rather unusual thing for a boy to do, wasn't it? But he is an unusual boy, which is proved by the fact that today at the age of twenty-two, he is head of one of the departments of the firm with which he began at the bottom.

GETTING STARTED THROUGH EMPLOYMENT AGENCIES.

In the course of a year thousands of city boys get started in life's serious work through the medium of employment agencies. The more responsible of these agencies guarantee to land a client in a position satisfactory to him within a prescribed time. But before they will set about doing this, the client is required to make a deposit, generally five dollars, and when he secures work the first week's wages or salary, or a percentage of it, is to be paid to the agency. This method is costly; on the other hand, it frequently lands a young fellow in a job that he might spend months looking for with no success, because of lack of knowledge of just where to apply.

A certain employment agency, to illustrate the efficacy of its methods, tells, among other cases, of a young man who tramped the streets of a middle western city hunting his first job until all but six dollars of his money was gone. Then, having seen the agency's sign, he sought its aid, deposited five of his dollars with it, and, after living on crusts for three days, was sent to see a big manufacturer, who took him into his office as private secretary at fifteen hundred dollars a year, the letters of recommendation from home folks that the young man showed playing an important part in bringing him this piece of good luck.

WHAT PERSISTENCE DID FOR ONE MAN.

Persistence is a virtue that must be displayed by the average first job seeker; and if it is exercised judiciously it will ultimately land a job, in spite of numerous difficulties.

A certain farmer's boy in Indiana had developed a knack for drawing in his spare time, and on a venture sent several of his drawings to a then famous pictorial publication in New York. In a week he was more then surprised to receive a reply stating that a position was awaiting him on the staff of the periodical when he felt like applying for it in person.

Now, it was some time before the boy could scrape sufficient money to take him East; his father was none too well off, and, anyway, he didn't think much of his son's ambition to make his living by drawing lines on pieces of paper; so the boy would not deign to ask financial help of his father. In time, however, he found himself in possession of the necessary railroad fare and twenty dollars in addition, and in a few days later presented himself at the office of the periodical, stating that he had come to take that job.

The manager of the art department asked, "What job?" as he gazed with unfeigned interest at the boy's Buffalo Bill hair and altogeher queer makeup.

The boy explained. The manager smiled. "But we have no place now," he said.

The boy went away, dazed. But he collected his thoughts over night, and the next morning found him facing the art manager.

"I have come for that job," reiterated.

"But I have no place for you," was the reply.

Again the boy took his departure; again he was back the next morning, with the same announcement, and again he was informed that there was no place for him.

This little performance went on daily for over a week. Then the boy took an inventory of his funds, and when next he caught the art manager, as he was endeavoring to sneak away, announced:

"See here, I've got just enough money left to last me till next Saturday. You've got to give me a job by that time."

"What?" gasped the manager, astonished at the boy's commanding tone.

"I said, you've got to give me work by next Saturday, when all my money will be gone. You wrote me to come on and you'd give me work. Your explanation that that was months ago won't go with me. If my work was good then, it is good now, and you're going to place me."

It was the longest speech that the boy had ever delivered, but it was effective.

"What will you go to work for?" asked the manager, after a brief pause.

"Anything," was the reply.

"Anything?"

"Yes, so I can prove myself to you again."

"All right, take this portrait home with you and bring me in a sketch of it day after tomorrow."

For the next thirty-six hours the boy "sweat blood," as the saying is, over his task; but when he handed it in, he was as calm as on the day he made the manager give it to him. That executive looked at the sketch a moment, then passed it about the room. But the boy did not hear the expressions of praise of the work—his ears rang with the art manager's words for many days after:

"You start in tomorrow at seven dollars a week."

At the end of his first year with the periodical, the boy was making four thousand dollars a year.

Nobody Looking

By REV. CHAS. T. WHITE

A SMALL BOY, with a freckled face, and a torn hat-brim, was cautiously dropping a line into the stream through a close-set hedge of alder bushes. There was a field of growing corn behind him; and a much-neglected hoe, lying, where he had thrown it among the weeds and brambles in a convenient fence-corner, told its own story.

"My boy," said a gentleman, who happened to be passing at the moment, "did your father send you down here to catch a mess of fish for dinner?"

The boy started at the sound of a strange voice, then a broad grin overspread his freckled face, as he replied: "Naw! Pa's gone to town to-day. I'm hoein' corn, but," with a reassuring glance toward the chimneys of a nearby farmhouse, which just showed above the crest of a neighboring hill, "there ain't nobody lookin'."

There is no sequel to the incident, so far as I know, and I do not propose to discuss the subtle nature of the temptation thrown in the way of a small boy with a fishline in his pocket by a promising trout-brook so near at hand. But, I can't help wondering if the boy himself realized how extremely popular his philosophy of practical conduct has grown in these later days, and how many adopt it to the exclusion of any higher or worthier motive.

There are boys in our high-schools and young men in our colleges, who, at a convenient moment, when nobody is looking, con their Latin lessons with the aid of a "literal translation" or "interlinear," which is kept carefully concealed in some convenient drawer or pigeon-hole for ready reference. There are young men in almost every department of business, who habitually grade their diligence and industry by no higher standard than the eye of their employer.

"Oh, yes! He can do a fair amount of work," said a farmer recently of a boy, who had been in his employ the previous season, "but you've got to be right with him. If you go away, and leave a job of work for him to do—" He dismissed the subject with a significant gesture.

I wish that everyone of my young readers would consider for just a moment how fatally this time-serving spirit must react upon a boy's character, and hamper his chances of success in life. Success is always the result of independent action, and a boy, who falls into the habit of acting only under the impulse of something outside himself, becomes in time a mere machine, which goes only when somebody turns it. The moral nature degenerates, too, by living constantly in an atmosphere of deception. The sense of right, which ought to forbid this and command that, becomes a dead letter. And, lastly, there can be little real happiness in a life, which drags out its weary round of service, without finding either interest or enjoyment in the doing of it.

LISTEN, BOYS

By Winifred B. Blake

The other day I spoke to a college sophomore about some important affair that had been described in the newspapers, and found, to my surprise, that he knew nothing about it.

"Don't you take advantage of the reading-rooms at college," I inquired, "to learn about what is going on in the world?"

"Why, I go in quite often to get the football and baseball news," was his reply.

Just think of it! The football and baseball news is all right, but think of stopping there!

I know that the many wrongs in politics and finance, in church and state and home, that are aired in the papers, are enough to give any one the blues, and so might seem to justify skipping all such reading. But there is another side to the shield. It is true that these last few years, especially the year passed, have seen wonderful exposures of "graft," of municipal and state and national corruption, of robbery and fraud in great corporations, and of evils in private life. But with these exposures has also come a demand for a better state of things in all these directions, and a determination to have it.

The ground is being cleared. The ploughing is being done for a better sowing of better seed. Upon the young manhood of the nation will soon rest the responsibility of seeing to it that this better seed shall be sown and a better harvest reaped. It is a great inspiration and opportunity which boys and young men should heed more than they do. Heed it now, boys, by obtaining a real working knowledge and grasp of the world's affairs, so that later you can put into practice for the betterment of the world the practical knowledge and wisdom attained.

Read, think, discuss about all these big questions. While you are training for athletics, train also for citizenship.

I overheard one young man say to another the other day: "We don't need Republicans and we don't need Democrats to run this village. What we need is men!" He had evidently thought out for himself the difference between politics and statesmanship, and discerned that less politics and more statesmanship is what is needed in town, state and nation.

Begin now, boys, and grow to be, not only trained athletes, but the wise and righteous men this nation needs.

THIS PICTURE SHOWS SOME OF THE MEMBERS OF THE NATIONAL AMATEUR PRESS ASSOCIATION RECENTLY ASSEMBLED IN CONVENTION

AMATEUR JOURNALISM DEPARTMENT

Edited by W. R. MURPHY

Thirty-First Convention of the National Amateur Press Association

What has been described by those who attended it as the greatest all-round convention of the National Amateur Press Association was held in Philadelphia on July 1, 2, 3 and 4. The association returned to the city of its birth in order to hold the thirty-first annual meeting. This was the fourth convention to be held in Philadelphia and the first one for fifteen years.

Harmony was the prevalent spirit. The convention will be epoch-making in many regards, but chiefly because it inaugurated an "era of good feeling."

The attendance was highly representative of amateur journalism, both in the number and standing of the delegates. Amateur journalists from California to New England, and from the Gulf to the Lakes participated in the various sessions which were held in the Bellevue-Stratford Hotel. Of course active amateur journalists were in the majority, but there was a goodly proportion of "old-timers" as well as many newcomers, including a large number who made their acquaintance with amateur journalism through THE AMERICAN BOY. Close to one hundred delegates were present.

The annual election of officers is of course the exciting and notable feature of conventions. The amateur journalism editor of THE AMERICAN BOY was honored with the presidency for the coming year, and a capable and well-selected board of officers was chosen to carry on the administration. The official board for 1906-1907 is as follows:

President, W. R. Murphy (Pioneer), Philadelphia; First Vice-President, A. M. Hamilton (The Southerner), Newport News, Va.; Second Vice-President, Edward H. Cole (The Olympian), Somerville, Mass.; Recording Secretary, Louis H. Kerber (The Roamer), Chicago, Ill.; Corresponding Secretary, M. B. Ferguson (The Searchlight), Baltimore, Md.; Treasurer, Wm. R. Moscow (The East), Newburgh, N. Y.; Official Editor, Charles W. Heins (Arrows), New York, N. Y.; Secretary of Credentials, Charles H. Russell (Good Things), Philadelphia; Alumni Secretary, Harry Myron Konwiser (Bomb), Newark, N. J.; Secretary of Publicity, J. Ray Spink (Pioneer), Philadelphia; Secretary of Activity, Chester A. McCormick (The Owl), Knox, Ind.; Historian, Jas. F. Morton, Jr. (Mortonia), New York, N. Y. Executive Judges: Dr. E. B. Swift (Weekly Amateur), New York, N. Y.; Paul J. Campbell (Scotchman), Georgetown, Ill.; Charles A. A. Parker (Literary Gem), Boston, Mass. The next convention will be held in Boston, Mass., about the middle of July, 1907.

The Philadelphia amateurs set out to give the association a convention clean politically and entertaining socially. In the first instance there was a Rooseveltian "square deal" for all. There was almost unanimous choice in the selections for office. For the second every attendant averred that he or she was having a splendid time. Hon. John Weaver, the "reform mayor," extended freedom of the city to the delegates, and they enjoyed it thoroughly. Independence Hall, the Liberty Bell, the seat of the first continental congress, the Betsy Ross house, birthplace of "Old Glory," and the tomb of Franklin, amateur journalism's patron saint, were visited by interested pilgrims. The $27,000,000 city hall and the many mercantile and industrial plants were also viewed. An evening trip to Willow Grove, a pleasant park fifteen miles out, gave an opportunity to shoot the chutes, ride in the air-ship, mount the Alps, etc. Fairmount Park, the largest in the world, was visited on a chartered automobile.

The supreme social feature of a convention is the banquet. This was held in the splendid Red Room of the hotel and was the occasion of some of the finest oratory ever heard at an amateur journalists' banquet. The toasts were as follows: "The National Amateur Press Association—Its Past," Jas. F. Morton, Jr.; "Its Present," Timothy B. Thrift; "Its Future," W. R. Murphy; "Amateur Journalism: Its Ideals, Its Realities, Its Results, John T. Nixon, C. Fred Crosby and E. Hadley Smith; "The Younger Generation—by One of It," Edward H. Cole; "Its Politics: The Breath of the Life of Amateur Journalism," Dr. Edwin Booth Swift; "Literature: Its Heart and Soul," Will R. Antisdel; "Woman's Sphere in the Journalistic World," Edith Miniter. The toastmaster was Harry C. Hochstadter.

The pleasure side was not cultivated at the expense of business. A number of important measures were settled at the convention. It was decided to have an exhibit devoted to amateur journalism at the Jamestown Tercentennial Exposition in 1907. First Vice-President A. M. Hamilton, of Newport News; John W. Smith, and C. F. Bretholl were appointed as committee in charge and an appropriation was made to defray expenses. An appropriation of $50 was made additional to the constitutional sum of $150 for publication expenses of the official organ. A subscription was made to purchase a loving cup in token of esteem for retiring Official Editor Paul J. Campbell and appreciation for his fine volume of "The National Amateur." A committee was appointed to place a suitable commemorative tablet in the association's birthplace, the City Institute Library, to which a pilgrimage was made. Provision was made by constitutional amendment for a Secretary of Activity to record the accomplishment of each member during the year. A large amount of routine and miscellaneous business was also transacted.

An important part of the proceedings was the award of the laureateships to those who had distinguished themselves in literary pursuits during the year. The results of these annual literary competitions was as follows: Poem—Laureate, A. H. Goodenough, Brattleboro, Vt., for The Iconoclast; Honorable Mention, L. A. Willenborg, Massillon, O., for The Corn. Sketch—Earle A. Rowell, Ballard, Wash., for The New Member; Honorable Mention, N. G. Morton, W. Somerville, Mass., for On the Summit of Mount Pisgah. Essay—Brainerd P. Emery, Newburyport, Mass., for Rossetti and the Pre-Raphaelite School. History of Amateur Journalism—J. I. Maloney, Chicago, Ill., for The Vegetarian Dinner; Honorable Mention, I. Burr Thrift, Cleveland, O., for The Cleveland Convention.

Someone has wisely said, "Amateurs exist fifty-one weeks of the year to live one at convention time." They lived a glorious red-letter week at "Philadelphia 1906"!

W. R. MURPHY, PHILADELPHIA, EDITOR OF THE AMATEUR JOURNALISM DEPARTMENT OF THIS PAPER AND PRESIDENT-ELECT OF THE NATIONAL AMATEUR PRESS ASS'N

Other Conventions

In far away Seattle the lively Washington State Amateur Press Association held its third annual convention on May 26. The name was changed to Pacific Coast Amateur Press Association and members will now be admitted from Vancouver Sound to the Gulf of California. The present membership is about forty. The next convention will probably be held in Oakland, Cal. Officers for the year were elected as follows: President, Harry Shepherd, Washington; Vice-Presidents, H. R. Fuller, Seattle, Wash.; J. J. Hall, Trail, Ore.; Pearl Brace, Seattle, Wash.; Secretary, Frieda Clark, Seattle, Wash.; Treasurer, A. H. Jacobson, Woodenville, Wash.; Historian, F. Roy Davidson, Seattle, Wash.; Laureate Recorder, R. P. Reid, Oakland, Cal.; Official Editor, Thomas R. Ford, Oakland, Cal.; Directors, Chester O. Harrington, Harrington, Wash., and S. Parker Rowell, Seattle, Wash. Here's good luck to the Pacific Coast Amateur Press Association. It has an important field to cover, and it should enjoy a long and prosperous career.

The Pinetree Amateur Press Association also held its third annual convention, on June 8th, at Ellsworth, Me. The morning was devoted to sight-seeing and in the evening a jollification was held at the home of President-elect Bellatty. The following board of officers was elected: President, Harry M. Bellatty; Vice-Presidents, R. M. Brooks and Earle M. S. Palmer; Secretary-Treasurer, Wm. B. Tracy; Official Editor, Marie Lord; Historian, Lee W. Templeton. The Pinetree Association is one of the oldest and most consistent of the State organizations and is doing good work for amateur journalism.

TWO SOLDIERS OF THE SEA

(*Continued from page 336.*)

career that the sea, the mother of so many heroes, has ever seen."

There is much in the life of Horatio Nelson, who became Lord Nelson, to stimulate the ambition of boys who feel that they are handicapped because of bodily weakness and lack of education. He had a deal of that admirable quality we call "pluck." This was made manifest in his childhood. One day he and an older brother were riding to school on their ponies when they came to snowdrifts so deep that it seemed impossible to get through them, and they went back home reporting the cause of their return to their father, who said:

"If that be so, I have of course nothing to say; but I wish you to try again, and I leave it to your honor not to turn back, unless necessary."

They set forth again and the elder brother was more than once in favor of returning home, but little Horatio said, "No; remember it was left to our honor," and he pushed on regardless of the deep snow. His life-story is a story of wonderful achievement because of a strong will power that would not allow him to fear any obstacle that presented itself. Some of his naval victories are without parallel, and he became the idol of the British people. Unfailing courage and enthusiasm combined with an indomitable will were the ruling forces in his life.

Captain Mahan has given us the most interesting life of this great naval hero ever published, and boys who are fond of well written biography will like to read an American naval officer's tributes to, perhaps, the greatest of England's naval heroes.

The New Football Rules

By WALTER B. NORRIS

Instructor in Athletics at the Wenonah Military Academy

Not every boy, probably, will play football this autumn, but very few will miss a single game that is played in their town or vicinity. They will all take some interest, therefore, in the changes in the game this year.

As most boys know, the football rules have been until this year made by a committee representing several of the larger universities, chiefly Yale, Princeton, Harvard, Philadelphia, and Chicago. This year a larger committee representing many more colleges have done the work. The result has been a number of changes that every boy should know if he does not wish to be considered a back number in athletics.

For the first time in football, a forward pass is allowed. This must be made, however, by one of the backs and must be to either a back or an end. It will not be used much, as, if the ball touches the ground, it goes at once to the opponents.

Instead of a team being obliged to gain five yards in three downs, it must make ten yards in the same number of attempts. The result will be that the ball will be punted much more than before.

Another change will be that there will be no more such plays as one often saw last year, when a tackle, for instance, came back of his position and then was given the ball to carry. Such plays as tackle-back are prohibited by a rule that, if a tackle, guard, or center is brought back of the line, he must go five yards back and another man must take his place in the line.

The new rules also change the line-up of the teams on the field. Now, instead of two lines of men bending down close to each other, the two teams, except the centers, are separated by a space as wide as the ball is long.

Changes that will save some injuries,

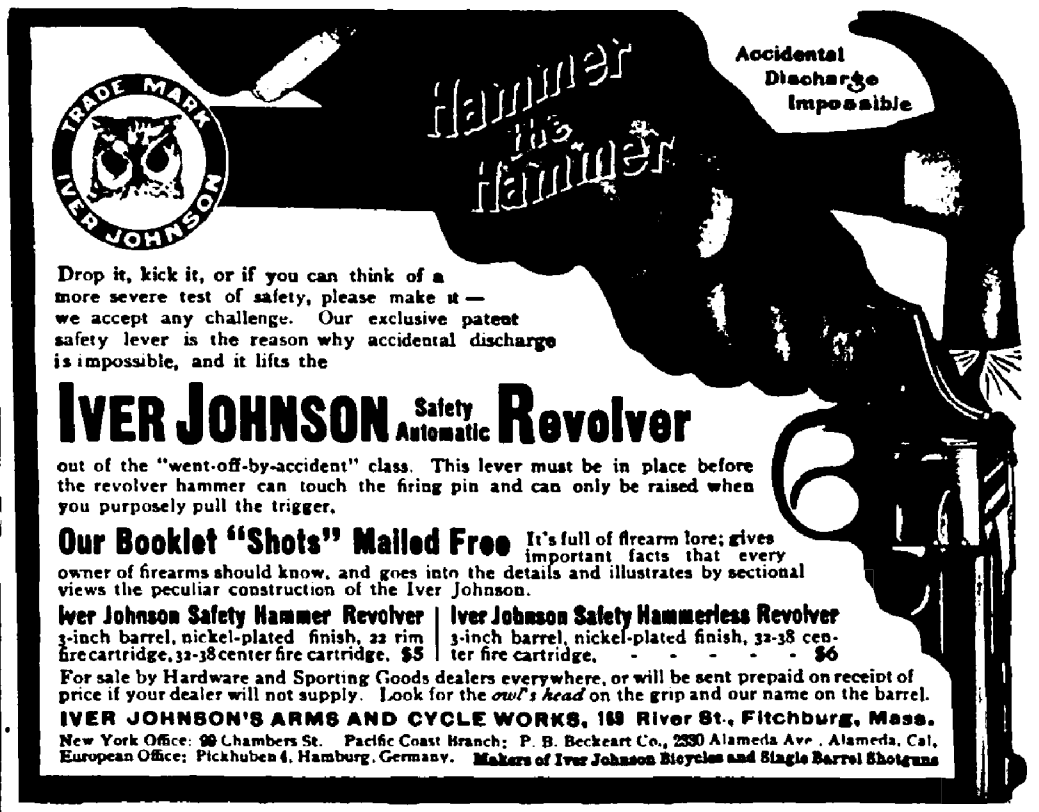
possible otherwise, are the new rules forbidding hurdling, that is jumping over a player in one's endeavor to avoid being tackled, and the one forbidding tackling below the knees.

Another commendable change is making the ball down as soon as any part of the player with the ball, except his hands or feet, touches the ground in the grasp of an opponent.

When a ball is punted by one team, this year's rules say that the team may recover the ball as soon as it has touched either an opponent or the ground. This obliges a team punted against to catch the ball, and gives the punting team a chance to get down the field and perhaps get the ball themselves. This is a great advantage to a team on the offense, and partially makes up for the handicap they are put under in being obliged to gain ten yards in three downs.

One of the most frequent occurrences in a football game is for one side to be calling for the game to be stopped a few minutes, or "time" as it is called. The game is often delayed unnecessarily to the great annoyance of spectators and players. The new rules say that a captain may call for time three times in a half. After that, if he calls for time, he must either remove a player from the game or lose two yards.

In general, the rules are made clearer, especially in forbidding methods that are likely to injure an opponent, and in making the penalties heavier. For the graver offenses, such as striking an opponent with the closed fist, a player is removed from the game, and his team loses half the distance to its own goal line. Just what the effect of the changes on the game will be is still hard to say, but it seems likely that the playing will be more open, with fewer mass plays, and the conduct of the players toward their opponents much fairer and more easily seen.



Drop it, kick it, or if you can think of a more severe test of safety, please make it — we accept any challenge. Our exclusive patent safety lever is the reason why accidental discharge is impossible, and it lifts the

IVER JOHNSON Safety Automatic Revolver

out of the "went-off-by-accident" class. This lever must be in place before the revolver hammer can touch the firing pin and can only be raised when you purposely pull the trigger.

Our Booklet "Shots" Mailed Free It's full of firearm lore; gives important facts that every owner of firearms should know, and goes into the details and illustrates by sectional views the peculiar construction of the Iver Johnson.

Iver Johnson Safety Hammer Revolver 3-inch barrel, nickel-plated finish, 22 rim fire cartridge, 32-38 center fire cartridge, $5

Iver Johnson Safety Hammerless Revolver 3-inch barrel, nickel-plated finish, 32-38 center fire cartridge, - - - - - - $6

For sale by Hardware and Sporting Goods dealers everywhere, or will be sent prepaid on receipt of price if your dealer will not supply. Look for the *owl's head* on the grip and our name on the barrel.

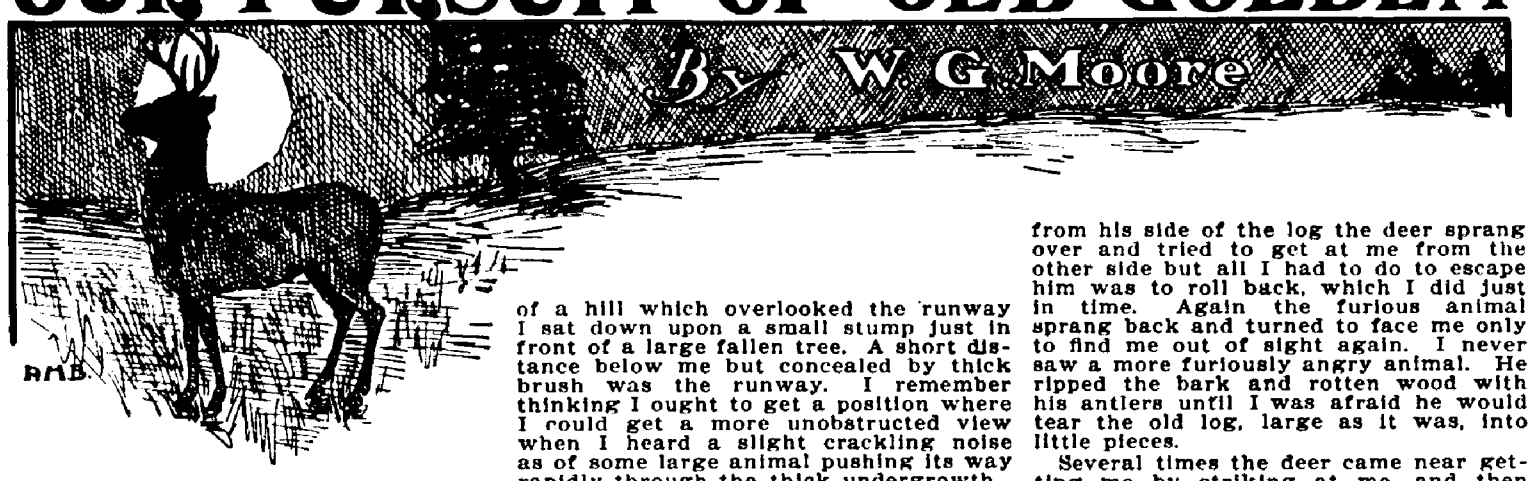
OUR PURSUIT OF OLD GOLDEN



OLD GOLDEN was the name given by the hunters to a large deer that for many years made its home along the head waters of the Little Muskegon river in Michigan. He was a very large animal with a huge pair of wide spreading antlers, and a peculiar reddish or golden colored coat. Although shot at scores of times, and several times badly wounded, he seemed to bear a charmed life. The Indians and some of the white hunters, at last became so superstitious that they would no longer hunt him.

When a boy of seventeen I had my first sight of the famous animal. I was watching a wheat field at night to keep the deer off. All the farmers had to do this at that time, otherwise the animals during the late fall, before the snow came, would graze the wheat close to the ground. To enable us to watch the whole field at once, and be where the deer could not readily see or scent us, we had built a small platform between two tall pine girdlings that stood side by side just within the edge of the wheat field. This platform was about fifty feet from the ground and was reached by means of a ladder formed by nailing strips of boards or poles from one tree to the other.

One bright, moonlight night I went down to the wheat field and climbed to my lofty perch. Everything was quiet around me, only the occasional hoot of an owl or the short, sharp bark of a fox was to be heard. The moon was full, and as the sky was cloudless it was almost as light as day. Being late in the fall it was quite cold, but I was warmly dressed. For over an hour I watched patiently. After a while I began to get quite chilly and thought I would soon have to get down and walk around to get warm when a peculiar snort or whistle sounded in the edge of the woods. I knew what that meant; the deer were at hand. There was a moment or two of silence and then three deer walked out of the woods and sprang over the fence into the wheat field.

Two of them were does but the other was the largest buck I ever saw. He was nearly as large again as the other deer and his splendid antlers swept far out on either side. As he stood with his head held proudly erect he looked a very forest king. From the description I had heard I knew it could be none other than Old Golden himself. He was not more than fifty yards away and standing broadside to me. I had a good rifle and was considered a fair shot, but when I tried to bring my gun to bear upon the animal it shook like a reed. I was cold and hot by turns and do what I would I could not steady my hand.

The does began to eat the wheat, but the old buck stood there and watched while I fought with the worst attack of buck fever I ever had. At last in desperation I brought my gun to bear as well as I could and pulled the trigger. A gush of smoke obscured my sight for a moment and when it cleared away I had a parting glimpse of a pair of heels disappearing over the log fence. There was no use trying to follow them and as no more deer were liable to enter the field that night I climbed down and went home to bed.

Two of father's brothers were visiting us at the time and as they were both enthusiastic sportsmen we decided to organize a regular hunt for the big deer the next day.

By daylight we had the hounds on track. We took our positions upon some of the runways which we thought the deer would be likely to take.

I had loaned my rifle to one of my uncles and was armed with a large old-fashioned Colt's navy revolver which father had carried during the war. It was a good, accurate, strong shooting weapon and I had hunted with it before I was large enough to handle a gun. At close range I considered it a better weapon than a rifle, or equally as good.

For some time father and I kept together but, at length, after listening intently to the cry of the hounds father turned to me and said: "Tom, you had better skip up to the head of Loon Lake. The dogs are circling in that direction and maybe you'll head the deer off. Keep cool now and, if you see him, shoot as if he was nothing more than a rabbit."

I hastened away in the direction indicated and in about half an hour found myself two miles away from the rest of the party and entirely out of hearing of the dogs. I had run the most of the way and as the going was very bad I was tired and out of patience with my position thinking the dogs had circled in some other direction and I had lost my chance for any sport that day.

Descending about halfway the side of a hill which overlooked the runway I sat down upon a small stump just in front of a large fallen tree. A short distance below me but concealed by thick brush was the runway. I remember thinking I ought to get a position where I could get a more unobstructed view when I heard a slight crackling noise as of some large animal pushing its way rapidly through the thick undergrowth.

Getting my revolver in readiness I waited quietly and in a moment a large deer came into view only a few rods away and, turning around, stood watching its back tracks. It was Old Golden again and the cunning old rascal having thrown the dogs off the scent by walking a long way in the edge of the lake or swimming across, was preparing to lie down where he could watch his trail.

So long as I remained perfectly still he did not seem to notice me, but I had to turn slightly to get a good aim at him. As I did so he made a quick movement as if he had seen me. Fearing he would bound into the underbrush and be lost to sight I fired quickly, but to my astonishment the deer only stamped his foot, shook his head, and remained standing. He was evidently confused by the echo and did not know in which direction danger lay. Cocking my weapon I took more careful aim and fired again but with no better success than before, so far as I could see. By this time I was so excited that I could no longer hold a steady hand and the remaining four bullets whistled harmlessly by the animal.

As I fired the last shot he began to advance slowly toward me looking keenly about for his invisible enemy. I could see that he was wounded for the blood was dropping to the ground from a hole in the fleshy part of his neck. Wounded bucks I remembered were sometimes very dangerous and as I saw no chance to escape I was careful to keep very still in hope that the deer would not see me.

SO LONG AS I REMAINED PERFECTLY STILL HE DID NOT SEEM TO NOTICE ME

He advanced to within about thirty feet of me and stopped. Still he did not see me although he was looking straight toward me and there was nothing now to obstruct his view. Deer are singularly blind in this respect for while they will instantly detect the slightest sound or movement they do not seem to notice stationary objects though very near. Stamping his foot angrily the animal gazed around while I knelt impotently before him with my now useless weapon in my hand.

When the buck looked toward me he evidently smelt me for he seemed to become furiously angry, his long, coarse hair pointed straight ahead. His magnificent antlers, which I had been so anxious to see, were pointing toward me and their keen points m[illegible]p and down as if he were anxious to toss someone upon them. If I could have been safely at home then I would have gladly relinquished all idea of ever possessing them.

For several moments, which seemed like hours, the deer remained before me. At last, appearing satisfied that there was no further danger, he turned around and walked slowly away. As he did so I must have made some slight movement which he observed for he wheeled about and in a moment was upon me.

I sprang to my feet and turned to run. Just before me was the huge log which I have mentioned. It was at least four feet in diameter and, owing to a depression in the ground just at this place, there was an opening under it large enough to admit my body. With the quick instinct of self preservation I threw myself flat on the ground and rolled under the log, just in time to escape the deer's murderous hoofs and horns.

Seeing that he could not get at me from his side of the log the deer sprang over and tried to get at me from the other side but all I had to do to escape him was to roll back, which I did just in time. Again the furious animal sprang back and turned to face me only to find me out of sight again. I never saw a more furiously angry animal. He ripped the bark and rotten wood with his antlers until I was afraid he would tear the old log, large as it was, into little pieces.

Several times the deer came near getting me by striking at me, and then springing quickly over, but I was always a little too quick for him. How long he would have kept this up I do not know but suddenly he sprang off and stood listening intently for a moment.

Then, like a shot, he was off while full and clear on the morning air rang the welcome voices of the hounds.

(To be continued).

Merely Being Kind

It was eight in the evening, the theater car swung along toward the city, full to overflowing with its crush of humanity. The greater number of these were women richly gowned, and with their escorts in immaculate evening attire.

Many a matron and maid entered the crowded car; there was the rustle and swish of silken skirts, and the air was heavy with the scent from sachet and fresh violets.

On the platform stood a lad of 12. Strapped across his shoulder was a square leather knapsack of a large drug firm; the boy had been delivering medicines.

Maybe this small man-boy had eaten supper, maybe he had eaten merely a sandwich, possibly his evening meal was yet to come.

Anyway, he was a round-faced, pale-lipped little toiler, whose wide brown eyes were shot with the imperative lassitude of fatigue and sleeplessness.

He watched stolidly the pretty women and the well-fed men, while, all unconsciously, the question of countless ages spoke from his languorous eyes.

That he was some mother's baby was attested by the carefully mended clothes and clean collar; that he was some loving mother's wage-earner was writ on the strong, sweet little face, with its brave, unafraid eyes, looking forward unflinchingly to meet the issue of their daily bread.

And then—the "angel-lady" came, and in soft cream laces, and heavy cream broadcloth—with fragrant, cream-colored roses—maybe not a pretty lady, but with the most beautiful eyes in the world.

The boy basked in the graciousness of her smile—and then the miracle happened. The "angel-lady" saw the tired lad, and with swift comprehension she chose from her dress a choice rose. Smiling, she pressed the stem into his empty hand.

"For your mother, little boy," whispered the "angel-lady," and she slipped her slender fingers against the man-boy's mouth, that he might not give her thanks and nodded a smiling goodby.

But the man-boy went on his way infused with a new and delicious joy; was it not worth while to live? His own pleasure was to be shared by the patient mother at home, and the face of the whole world had changed.

School has Begun

They cut the pants of brother Jim
To fit the legs of little Tim.
Ah me! 'twas years ago when Bill
And I would chase and race and run
To reach the schoolhouse 'neath the hill
To pick out seats ere school begun.

Poor little Tim! he had to pose
Upon the low front seat; his toes
Were then two inches from the floor.
His brother Jim and Bill and I
Picked out our seats behind the door—
For reasons that were smooth and sly.

I see her yet, a prim, sedate,
Staid personage, who sat in state
Upon the little platform where
She ruled with ruler, and with grim
Determination she would stare
Into the eyes of little Tim.

Poor little Tim! he seemed to grow
In wisdom on the front seat row;
But us big fellows by the door
Were satisfied to peg away
And learn a little, or no more
Than just enough to keep from play.

Upon the farm is brother Jim—
He wears the castoff pants of Tim.
Bill runs a rural barter store,
Yours truly's on a sal'ry small—
The chap who couldn't reach the floor
Will run for county judge this fall.

—Horace Seymour Keller, in N. Y. Sun.

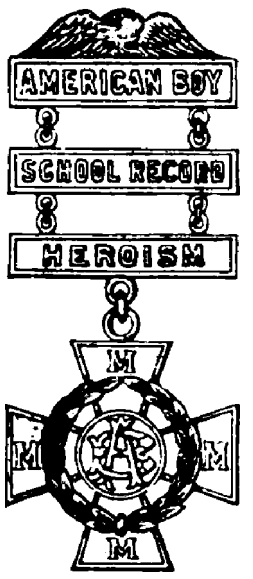
AMERICAN BOY ADVERTISEMENTS ARE READ

The American Boy Legion of Honor

COMPOSED OF BOYS WHO STAND AT THE HEAD OF THEIR CLASSES IN SCHOOL AND BOYS WHO HAVE DONE CONSPICUOUS ACTS OF HEROISM

Who Are Eligible

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school ending on a date since September 1st, 1905, have stood at the head of their classes, taking the average of all their study grades for the term, and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts. Address all letters relating to the Legion of Honor to Wm. C. Sprague, Chief Counselor, Detroit, Mich.



Division of the Legion Into Chapters

Every two hundred boys in the Legion constitute a chapter at the head of which stands a Counselor. The Counselor will be a prominent educator who agrees to stand as counselor and advisor to the two hundred Legion of Honor boys under him. The first chapter is now forming and will be known as "The Shepardson Chapter."

The Shepardson Chapter (Chapter 1) of The American Boy Legion of Honor

Counselor: Professor Francis W. Shepardson, LL.D., Dean of the Senior Colleges of the University of Chicago

Address (with postage for reply) care of The American Boy, Detroit, Mich.

Note: S. R. means school record; H. means heroism.

The foregoing list numbers 200 and closes the Shepardson Chapter. Next month we begin a new Chapter.

How They Won

Veator Mendenhall, Clemmons, North Carolina, stood at the head of the sophomore class during the school year of 1905-'06, making a general average of 96 57-70%.

"I take THE AMERICAN BOY and think it is fine," writes Ruby Travis, who made the highest average in the sixth grade of the Chrisman, Illinois, schools, during a recent term.

Paul J. Thomas, of La Grange, Indiana, ranked first in grade seven during the entire year. Paul is thirteen years old, and "an admiring and enthusiastic subscriber of THE AMERICAN BOY."

Russell L. Hamilton, Mannington, West Virginia, has been perfect in attendance at school for the last five years. Russell and his brother have been subscribers to THE AMERICAN BOY for five years.

Eugene Oster and Elmer Wamboldt, both of Cincinnati, Ohio, are eighth grade pupils of the Fourth Intermediate School who have won School Record Badges by reason of high standing in their classes.

Joseph H. Robb, Jr., Greenville, Mississippi, led his classes in every study during the term just ended. Joseph is in the seventh grade.

Michael Meisel, of Brooklyn, New York, has made the best record in the 5B class of his school, during the term just past.

Hunly Gover won the scholarship prize in the Hendersonville, North Carolina, schools for the year 1905-1906. He was in the ninth grade. The superintendent of schools writes that Hunly has marked ability in history and mathematics especially.

One of our Legion of Honor boys, B. F. Madden, of Fayetteville, Tennessee, writes: "I received the badge and am very proud of it. I am much interested in the story, 'In Defense of His Flag,' in THE AMERICAN BOY."

Harold Bensinger, a pupil in the fifth grade of the Benjamin Harrison School in Terre Haunte, Indiana, received the highest average in his class during the term just ended. Harold is especially well informed on the current news pertaining to geography and history.

"I always look with pleasure for the coming of THE AMERICAN BOY," writes Bert F. Madden in a letter accompanying his grade card, which shows that he took first honors for the year in the public schools of Fayetteville, Tennessee.

Tom Arnold, Jr., Henderson, Texas, made the best average in the seventh grade during the school year ended May 15th, and in addition won the medal offered to the seventh grade in arithmetic. Tom has been a subscriber to THE AMERICAN BOY for nearly two years.

Sprague Drenan, of Barre, Vermont, received the best average in every study in a class of forty-eight, during the four terms that made up the year of school just ended. His general averages for these terms were 93%, 94%, 97%, and 97¼.

Paul Blaine Stanley, Lonerock, Oregon, graduated from the eighth grade at the head of his class with an average of 94%. He is now studying wireless telegraphy, and has a line nearly completed from his home to his father's store.

J. F. Wagner, a pupil in the eighth grade of the Warsaw, Ohio, schools, according to a statement from one of his instructors, "led his classes in deportment, punctuality, and average grade for the entire year, his standing for the school year being 94%."

Harold Hoover, of Abilene, Kansas, stood at the head of his class of forty-five and did not miss a day during the term of school. He also took the county high school examination, and passed it, receiving his diploma. His general average in school was 95%.

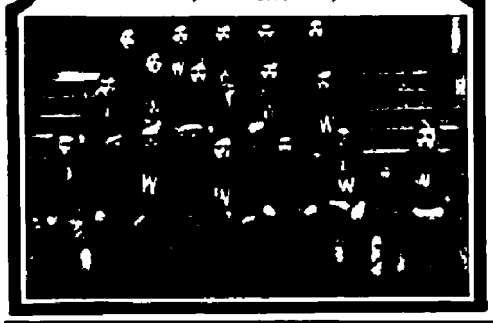
Lyle Abbott, Albuquerque, New Mexico, has won the highest average in his grade, the eighth. He says that reading a great deal was of use to him in history and like subjects, and so helped him to secure his standing. He is working hard for and hopes to get some subscriptions to THE AMERICAN BOY.

Marion G. Davidson, a twelve-year-old boy of Whitesville, Indiana, received the highest average in the sixth grade during the school year just ended, and was neither absent nor tardy during the year. In the letter to us Marion's teacher says: "I found him to be honest, upright, and industrious, and these qualities have placed him at the head of his class. I wish that every American boy might wear one of your badges of honor."

Wenonah Military Academy

A Science, Classical, English and Military School of the highest class. College Preparatory. Spacious modern buildings, perfect sanitation. Gymnasium, Bowling, Billiards, Shuffle Boards. Athletic Field, Quarter Mile Cinder Track. **Strong Teachers.** Vigorous School-life. Military Discipline and Training. Eleven miles from Philadelphia. No saloons or factories in the town. Catalogue on application.

MAJOR JOHN R. JONES, Superintendent. Wenonah, Gloucester Co., N. J.



HOWE SCHOOL

Lima, Indiana

A TEACHER FOR EVERY TEN BOYS

Every Boy Recites Every Lesson Every Day

Graduates admitted to leading colleges on certificate.

Modified military system. Estate of 160 acres. Fine Buildings. Thorough sanitation.

Healthful country life. All athletic sports. Beautiful lakes.

Separate School for Younger Boys

Remote from city temptations.

Catalogue and Portfolio of Views sent free.

THE REV. J. H. McKENZIE, Rector, Box 205

Cadets from Nineteen States at the

Fishburne Military School

Waynesboro, Va. Beautiful for situation. Splendid campus. Latest equipment. Able faculty. Gentlemanly pupils, who claim to make double progress here. If looking for a first-class school, write for illustrated catalogue.

JAS. A. FISHBURNE, A. B., Principal.

OHIO MILITARY INSTITUTE

::: COLLEGE HILL, OHIO :::

10 miles from Cincinnati in a cultured community. Military training, individual attention, thorough academic work. Large gymnasium, swimming pool, and athletic field. Lower School for young boys. Catalogue on application. A. M. HENSHAW, Comdt.

MIAMI UNIVERSITY

The Old Historic College of the Middle West. Write for beautiful Souvenir Booklet to the President, GUY POTTER BENTON, LL. D., Oxford, Ohio.

What School? WE CAN HELP YOU DECIDE

Catalogues and reliable information concerning all schools and colleges furnished without charge. (State kind of school.) American School & College Agency 852-41 Park Row, New York, or, 1052 Tribune Bldg., Chicago

OHIO, Germantown, (near Dayton.)

Miami Military Institute. Is a home school for the sons of most particular parents. Capacity 52 Cadets. Parental care, supervision and discipline. Exceptional grounds, buildings, and equipment. Gymnasium. Athletic Field. ORVON GRAFF BROWN, M. A., President.

ROCK RIDGE SCHOOL FOR BOYS. Location high and dry. Laboratories. Shop for mechanic arts. *Strong teachers.* High ideals. A new gymnasium with swimming pool. Fits for college, scientific school and business. Illustrated pamphlet sent free Address Dr. F. G. WHITE, Rock Ridge Hall, Wellesley Hills, Mass

Waban School A Home School for Boys. Box 14B WABAN, MASS.

Physical, Athletic and Manual training. Prepares for any college, advanced standing if desired. Location ideal. $550 to $700. J. H. PILLSBURY, A. M., Principal.

Tennessee, Sweetwater. Founded in 1874

TENNESSEE MILITARY INSTITUTE

On Main Line of Southern Ry., in mountains of East Tenn., THE SWITZERLAND OF AMERICA. Most charming climate, due to Southern location and Northern elevation. Boys from 14 states, N. Y. to Texas, and Mich. to Fla. Illustrated catalogue.

MAJOR O. C. HULVEY, Supt.

Todd Seminary for Boys

68th year. An ideal school near Chicago, where the American boy is taught how to become a good American citizen. We educate the whole boy. Send for prospectus, and come and see us.

NOBLE HILL, Prin., WOODSTOCK, ILL.

Cluster Springs Academy

A school that Pleases its Patrons and is Attractive to its BOYS, In Piedmont, Southern Va. Fine shady lawn, unexcelled mineral springs, well kept table. Hot and cold shower baths, gymnasium, five acre athletic field, outdoor life all winter. EVERY boy recites EVERY lesson EVERY day—Result: Rapid progress and thorough work. Limited to fifty. References required. Rates $300. Illustrated Catalog.

HAMPDEN WILSON, HEADMASTER, BOX 100, CLUSTER SPRINGS, VIRGINIA

1793 1907 114th Year

THE BINGHAM SCHOOL

MILITARY. Area of patronage **widest** in the south. Boys **expelled** from other schools **not received.** On the **Asheville Plateau.** Rates reasonable. COL. R. BINGHAM, Supt., R. F. D. No. 4, ASHEVILLE, N. C.

ST. CHARLES MILITARY COLLEGE

ST. CHARLES, MO. 22 miles west of St. Louis. Buildings modern and newly equipped. Improvements being made. Extraordinary advantages in Special, Graduate and Business Courses. Manual Training Faculty of 10 experienced men. Careful moral training. Oldest college west of Mississippi River. Number limited. Prepares for active life as well as for West Point, Annapolis, or any college or university. Illustrated catalogue free. Col. Geo. W. Bruce, A.M., Pres.

The TWO ADMIRALS

By BIRDSALL JACKSON

IT IS TWENTY years, or more, since Joe and I decided to be admirals. To that end, we had agreed that no sacrifice would be too great. But after Joe had been willing that my fishing pole and catcher's glove should be offered up, and I to concede his new top and bean-shooter, alas, we were still sixty-five cents short of the amount necessary to our faring forth. I was in despair, but Joe soon had an inspiration which carried him over the fence and halfway up the big cherry tree.

"I've got it, Jim! I've got it!" he cried, swinging his cap.

"Got what?" I queried cautiously, for I was somewhat suspicious of Joe's inspirations.

"Ole Redcomb!" said he. "We'll ketch ole Redcomb an' sell him."

"But he ain't mine, Joe. He ain't all mine. He b'longs half to me an' half to little Willie."

"What of it?" he rejoined, climbing down. "S'pose you was a little kid like him, which'd you rather do, have your brother an admiral in the navy or own half a rooster?"

"Le's go an' tell him first, then."

"Tell him!" said Joe, in a hoarse stage whisper, "Tell that little kid an' have all our deep-laid plans revealed, our secrets laid bare to the bone!"

Joe thrust his fists deeply into his pockets and looked askance.

"Huh!" said he, superciliously, "Wouldn't you make a fine admiral, though? Aw—gee!"

"But you ain't runnin' no risk, Joe. S'pose he squorks too loud, I'm the one to git licked."

"Huh!" sneered Joe. "Ain't I been licked more times this year than you? 'Fraid of a little lickin' an' wants to be an admiral. Gee! Goin' to chase pirates an' dassn't ketch a rooster. Ain't got sand 'nuff to kill one ole rooster."

Joe turned his back on me in disgust and was about to leave for home, unmindful that he had the whole contents of our treasury in his pocket. There are some crises in which the path is marked out inevitably for poor human nature, boy nature at any rate. Old Redcomb's days were numbered.

"Joe, come back! Joe, I'll do it!"

When the deed had been done and I stood holding the rooster guiltily in my hands, a wave of remorse swept over us both and we looked at each other with the consciousness of mutual apprehension.

"Jim," said he, "we've forgot somethin'. Who'll ever buy him of us? The butcher'd tell on us an' so will everybody. You'll be licked sure as we try it."

"An' I will if we don't," I answered in desperation. "Mebbe they'll take him in part payment for our tickets?"

Joe shook his head.

"They don't take roosters," said he.

We then lapsed into brooding melancholy. The fame and fate of two of the world's greatest, hung trembling in the balance. Finally, a light broke in upon me.

"Joe," I whispered, "didn't your mother say she was goin' to have chicken for dinner tomorrow?"

"Ye—es."

"An' she al'us sends you to the butcher's with the money, don't she?"

"Ye—es," said Joe, fingering the rooster, doubtfully, "but he ain't a chicken an' she'd know him, anyway."

"Not if we picked him, she wouldn't."

"Yes, she would, too. An' wouldn't she give it to me, though?"

"Aw—'Fraid cat! 'Fraid cat!"

"Who is?"

"Joe's a 'fraid cat! Wants to be an admiral an' 'fraid of his mother. Dassn't sell his mother a rooster. Dassn't carry home one ole dead rooster."

"I ain't half as 'fraid as you was of killin' him."

"Yes you are, too, twice as 'fraid, 'cause I done it, an' you dassn't; an' I dare you to, an' double-dare you, an' I—"

"Gimme your rooster!" said Joe, majestically. "Now, come on up into the mow an' help pick him."

Early the next morning, we went joyously through the main street of the village to the public wharf whence a small steamboat made semi-weekly trips to the metropolis. Uncle Selah, a retired sailor, who sold tickets for the company, was on hand and fortunately, no one else in sight.

"Wall, boys," said he, opening the ticket window and thrusting forth a head like a sea-turtle's and following it up with an appropriate leathery neck that seemed capable of indefinite extension, accordion-like. "Wall, boys, goin' to take a little trip, eh?"

"Yes, sir."

"That's right, boys. See some of the world while you kin, like I done. Return tickets, I s'pose."

"No, sir, single."

We rattled our money upon the shelf proudly and confidently. Uncle Selah looked at it and at us several times with bright eyes unblinking, turtle-wise; then snapped his beak close; drew his neck back within itself and closed the window. In a moment, he reappeared behind us around the corner of the building and beckoned us to an adjacent pile of lumber. We gathered up our money and followed him.

"Set down there, boys, I want to talk to you a minute."

We sat down in some trepidation. Uncle Selah made himself comfortable, facing us.

"Naow, boys," said he, "I know what you're a-doin' jest as well as if you'd told me, 'cause I done it myself, once. You're a-tryin' to run away an' go to sea. Ain't that so?"

He thrust forth his head so menacingly at this and snapped at us so upon the question, that we both jumped about four inches.

"Ye—es," we faltered tremblingly.

"An' glad I am to hear you say so," said he, withdrawing partly into his shell again. "Boys, I'm proud of you. There ain't no better callin' on the hull green earth. 'A life on the ocean wave' —that's your idee, of course. Thought it all out, yourselves, didn't you?"

"Yes, sir," we responded, gratified at this sympathetic and kindred interest.

"An' naow, boys," he went on, "what kind of sailors was you a-countin' on bein'?"

"Admirals!" we exclaimed in a breath.

"Oh, admirals, eh? Yes, of course, of course. Ain't no other kind you'd like better?"

"No, sir."

"'Course there ain't. Boys, I admire your ch'ice. Admirals is the best. Them that has studied it for years, couldn't 'a' got it any nigher right than what you have?"

We were astonished and delighted to find Uncle Selah so communicative and appreciative.

"Did you ever know, boys, that there is several kinds of admirals an' a good many ways of tryin' to be 'em? No? Wall, I've been a sailor myself an' I can't bear to see a shipmate go wrong. Leastwise, if you ain't been exac'ly shipmates of mine, it's only 'cause you wasn't born soon enough, which wasn't your fault. Boys, I know the best an' surest way of all, and by Jimminetty! I'm a-goin' to tell you."

At this moment we would have fallen upon Uncle Selah's neck in gratitude, had not that leathery member been telescoped into invisibility.

"The surest way is to begin—by bein' captains! Some don't never think of that an' goes on without it an' gits left all the way through 'cause they didn't start right. Naow, remember what I tell you, boys, begin by bein' a captain. Work at that a spell an' shift things 'round little by little till you're a commydoor, an' 'en keep shiftin' of 'em 'round more an' more, till all to once, you're an admiral, almost 'fore you know it."

Uncle Selah noticed, doubtless, that we were somewhat crestfallen at this, for he grew more sympathetic than ever.

"Naow, boys, don't be so ready to give up. I ain't through yit, an' wouldn't feel I'd treated you right 'nless I told you how to be a captain. Most folks misses that clean by tryin' to be one for somebody else. But the quickest an' best way is to start right in for yourselves. Be your own captain! Git a vessel of your own an' sail her an' watch your chance to swap her for two or three others, or buy 'em, an' keep it up till you're commandin' a hull fleet an' don't ask odds of nobody."

"Aw, we couldn't buy any boat," said Joe gloomily.

"Boats is goin' mighty cheap, lately," suggested Uncle Selah, "an I'm willin' to help you boys if there's any chance, 'cause I see you're made of the right stuff. I know where one kin be bought for almost nothin.'"

"How much?" said we sceptically.

Our counselor got out a pencil, made a few figures on a plank and studied them carefully for some time.

"Spot cash, rock bottom price, four fifty," said he.

Joe and I fairly bounded from the lumber pile in our enthusiasm.

"Jest what we was goin' to pay for our tickets!" we cried.

"Ree—markable!" exclaimed Uncle Selah, thrusting his neck out farther than ever and striking his knee with his hand. "Reemarkable! An' means good luck. I've been a sailor many a long year, boys, an' read the signs; but I never see one that pinted straighter to good luck than what this does."

"Where is she?" we asked.

"Right here handy," he rejoined, leading the way to the end of the wharf.

"Looks kinder small," said Joe.

"Small beginnin's makes big endin's."

"Who owns her?" I asked.

"I used to," said he, "an' I'm lookin' after her for the present owner, who's had some trouble an' wants to sell cheap."

Uncle Selah clambered down into the boat and began to bail out some water.

"Al'us b'lieve in keepin' water in boats when you ain't usin' 'em," said he in explanation. "If you don't, the outside bein' wet swells up, an' the inside bein' dry don't swell correspondin'ly, an' so they have to shed their skins every year, like snakes, which is awful bad for 'em. Naow this here vessel is what they call a scooter, on account of her speed. You boys kin both swim, I take it."

"Yes, sir."

"I wouldn't dare let you have her if you couldn't, 'cause she goes so fast sometimes, she'll run right out from under you, if you ain't careful, an' leave you behind settin' on top of a wave."

He climbed out, and pulling her nose up to the wharf, raised her until her bottom was partly visible.

"You see them sled runners? Wall, they're for ice sailin'. She goes faster on that than what she does on water, an' jumps from one to the other quicker'n a seal. Yes, boys, she's a good sealer an' a good whaler, fit to be the flagship of any squadron, an' I wouldn't sell her—for the man, of course—to anybody else for three times the money."

Fair was the wind that swelled the Scooter's sail and bright the sky above, and bright the smile of our disinterested adviser, as he stood on the wharf with our money in his pocket, waving a parting salute and calling us Captain Joseph and Captain James, respectively. And bright was the prospect before us, a career of maritime success, of peace and plenteousness.

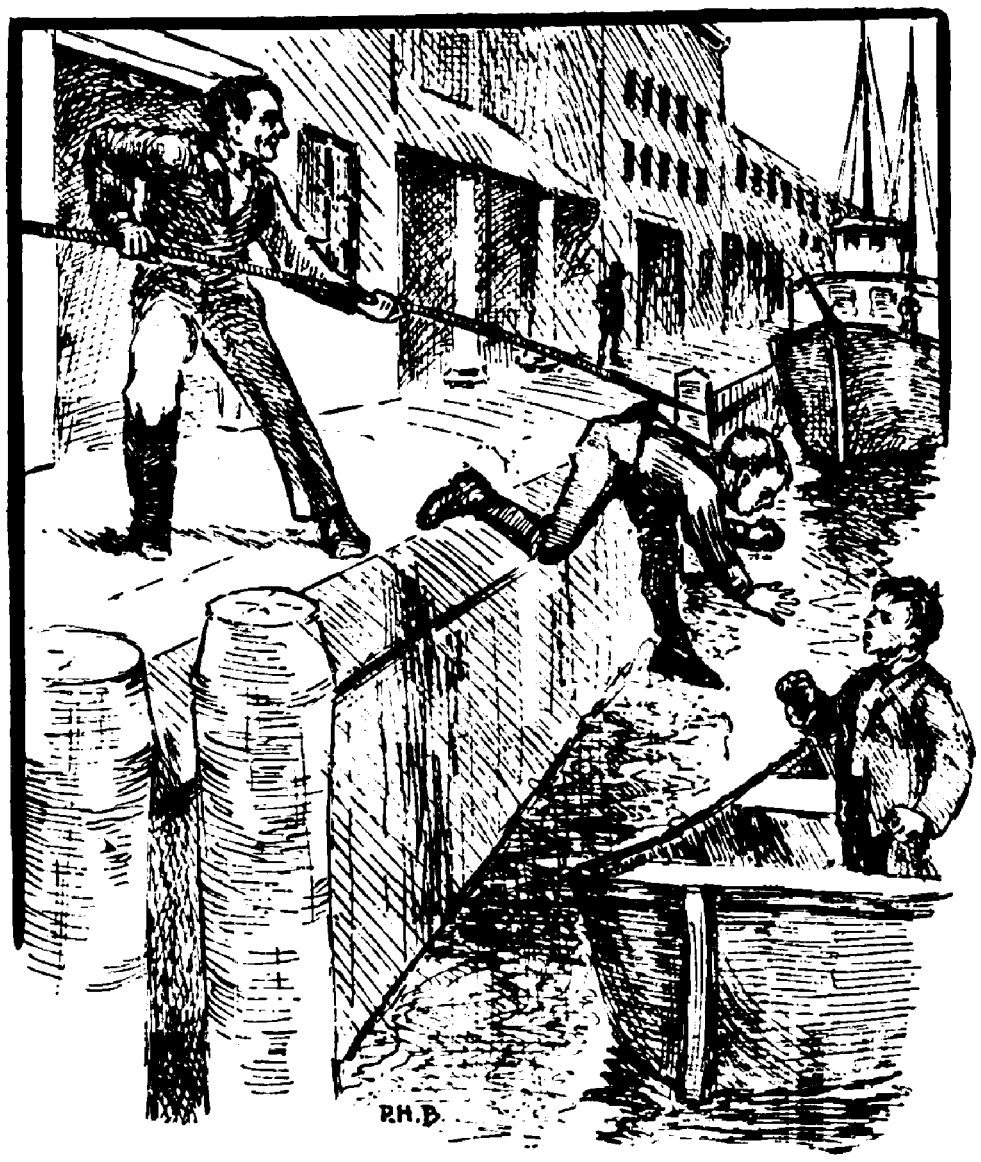
I, the helmsman, sat aft; and Joe, the pilot, was on the forward deck; at least, as much of him as the forward deck would hold. She was decidedly a one-man craft, which, we agreed, was the equivalent of a two-boy rating. Oh, the joy of our first command and our first business enterprise—a two-fold source of delight!

"Gee!" said Joe, as the Scooter plowed her course through the waves of the little land-locked haven, "Gee! This is bully. Better'n the way we was goin' to do it, ain't it?"

"Betcher life! Wonder how much we'll make on her when we git ready to swap or sell out?"

"Dunno," said Joe. "I ain't a-goin' to sell my half, whether you do yourn or not. She's a beauty."

(*Continued on next page.*)



JOE'S UNEXPECTED AERIAL FLIGHT SHOREWARD

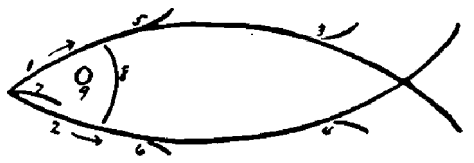
How to Draw

By W. N. HULL

BEGUN IN MAY

How to Draw a Fish

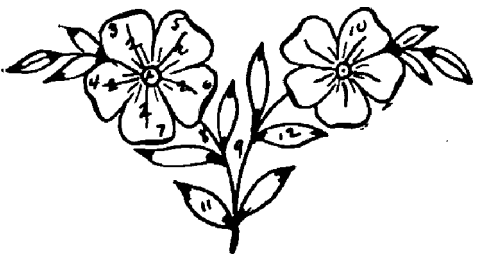
Commence where you see the figure 1 and draw the upper line a long, sweeping curve. Then start back at 2 and draw the under side, a long, sweeping, single curve. Now short, single curves for the fins, 3, 4, 5 and 6, curving outward slightly. Now draw the line for the mouth, 7, then the gills, 8, and the eye, 9. It is all free hand, and cultivates the fine muscles of the hand and arm and puts them



under the control of the will. Make the two outside lines alike with opposite curve. You may draw in the scales if you wish. Why do fishes have scales? Do they sleep?

How to Draw a Flower

Make a little ring with a dot inside, then from this ring draw the lines 2, 2, 2, 2, 2, five of them, straight out and as nearly distant from each other as possible. Now draw petal 3 around this straight line, then petal 4. Now back to 5, then 6 and 7. Now draw other short lines inside. Carry the stem 8 from the flower any length. Draw stem 9 and put on it another flower drawn in the same manner. Try to avoid stiffness in the lines. You cannot make flowers by measure. Lay mechanical drawing aside. Watch the graceful lines of the leaves and the drop of



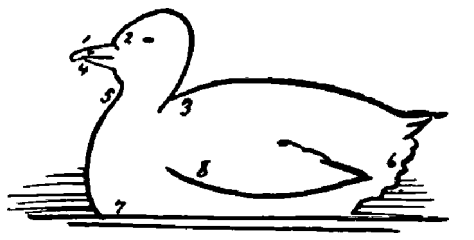
the stems. Let this flower drop down behind one of the scroll forms that you have learned.

This flower is pentapetalous. It is the flax. Color light blue.

How to Draw a Duck

Look for figure 1 and draw the bill, then a peculiar sloping curve of the head 2 and around, then on from 3 on the upper side of the body.

Now start back at 4 and draw the under side of bill, then the breast 5, the back part of the body 6, and the water line 7. Put in several lines for water. Finish with the wing 8.



You may color it all yellow with common blackboard chalk, and afterwards work it over around the outside with short, light ink lines. Fix the yellow color by throwing on a spray of white shellac with an atomizer.

How to Draw a Cornucopia

Watch for figure 1 and draw that curve. Then see figure 2 and draw the curve around to meet the close of 1. Now, 3 and 4 quite close together with the short cross lines. Let curves 5, 6, 7 and 8 be parallel to 3 and 4. They show the roundness of the cornu. Fill it with fruit, apples, pears, oranges, plums, grapes, with a nice sprinkling of green leaves. You may make any little ornament like 9 along lines 5, 6, 7 and 8.

You may color the cornu a light blue, and the fruit in natural colors with blackboard chalk, spraying with white shellac to fix the colors so that they will not rub or soil.

The Cornucopia (Horn of Plenty) is a beautiful object and may be made any size. On blackboard it may be drawn two feet in

length with fruit natural size. Draw it in colors on a sheet of card board 22x28 inches which you can get at any printing office. Fix the colors with shellac.

How to Draw a Flying Fish

The live flying fish is only about eight or ten inches long, is very light and frail. Draw line 1 an easy curve, then 2 from left to right. Put on the tail 3 and 4. Now draw the upper wing or fin line 5 and make it look as thin as possible by light lines. Now the other wing or fin line 6. Then put on the other fins 7, 8, 9 and 10. Seven is called the dorsal fin, 8 the anal fin, and 9 and 10 are the

pectoral fins. Then put in the gill 11 and the eye 12.

The flying fish jumps out of the water and skims along in the air for a few feet, then drops into the water.

AN IMPATIENT LOT OF YOUNG CONTESTANTS.

A corps of about ten thousand teachers are engaged by the great city of New York to give its boys and girls a sound mental training. Every boy and girl is entitled to and must have this training. This has always been so. The minds of the young have always been nourished and developed, and the idea of both parents and teachers seems to have been that the more this nourishing and developing of the mind was carried on the better would the result be. Often this method has resulted in one-sided boys and girls. It has many times made brilliant young men and women who had no physical strength to stand the strain. The brain is but one of the bodily organs and one, it should be understood, that depends much on the strength of the others with which it is closely allied. The brain needs plenty of good, clean blood and the heart must pump it there if it is to go there at all. I might go on and make this a lecture on physiology, but that was far from my purpose when I began to write. I merely wanted to tell the many readers of THE AMERICAN BOY that while there are ten thousand teachers who look after the mental development of the New York City boys and girls, there are now also a nearly equally large force of teachers who make it their work to train the body. These teachers see the need of a sound body for the sound mind, and they are meeting with great success. The picture given here shows a lot of boys waiting—impatiently—to get a chance in the public school athletic contests that were held during June. Some were contending for honors as runners, others as jumpers, and others as players in the various outdoor games. I am glad to say that nearly every boy in the large schools of this very large city has become interested in athletics. It shows that boys quickly see the value of this kind of school work. I say school work because I think it the business of every school to make athletics a prominent part of its course of study. I hope every reader of THE AMERICAN BOY will enlist in an organization which shall have for its object the making of physical training compulsory in every American school.

THE TWO ADMIRALS

(Continued from preceding page.)

The Scooter acknowledged this by bowing gracefully in the freshening breeze, sticking her nose into a wave and throwing most of it upon the pilot.

"Oh!—Ow! That went down my neck. You ain't sailin' her right. You can't steer good, anyway."

"Yes I can steer all right, too. 'Tain't my fault. Her head's too low."

"It is your fault, too. You're no good. Aw—gee! That went all over me. What's the matter with the old boat? You're no good. I'm comin' back to steer, I'm comin' right back there now."

"You ain't."

"I am so, I tell you; an' you can't stop me. There comes another one! Turn her, Jim! Quick—swing her round! I'm—"

I swung her just as Joe was getting up and the lug sail came over and wrapped itself about his head and shoulders. Joe rose, lifting the mast out of its step and the sail wholly clear from the boat; poised with it for an instant like a huge white-winged bird; and then, in a puff of wind, flew out over the water, looking back at me with a pained expression and clutching inconsistently at invisible things.

He alighted in an original way, his feet plumping into the middle of the sail as it struck the water, causing it to fold up and envelop him to the chin. This seemed to me very interesting and funny.

"Help! Help!" sputtered Joe. "Aw—whatcher laffin' at? You're a nice one. You wait till I git in there. Aw—pull her in, Jim. Yes, you kin sail a boat. You kin sail a boat, fine."

"I couldn't help it, could I?"

"Course you could. You done it a-purpose, 'cause I wanted to sail. You wait till I git in. I'll show you. I'll fix you for doin' that."

But he didn't; for Joe was too tired to be pugnacious just then. We drew the sail on board. It had large holes in it where Joe's feet and arms had stuck through, and it tore in several places as we lifted it, for the extra weight of the water was too much for that old sail. We made a rowing bench of it, the only one to be had.

Joe took the tiller and I the oars. He turned the Scooter's nose into the wind and steered for the shore and I pulled. The rowing bench was wet and Joe was wet and the spray that came over the bow was wet. That Scooter could throw more water than a fire-engine, and she wanted to stand still and throw it just as though she were one. This desire made her obstinate, and the harder I pulled, the more obstinate she got.

"You ain't any good," said Joe. "You row worse'n you steer."

"Well, you row then, an' I'll steer."

"Aw—gee! Want to steer both ways. You're a nice one. She don't go any 'tall."

Joe looked disgustedly at the bottom of the boat. Then he said irrelevantly, "My shoes are all wet."

"Think likely," said I.

He looked at the bottom of the boat again.

"Pull!" he cried. "Pull for all you're worth, Jim! This ole boat's leakin'! She's leakin' like a sieve!"

For awhile I pulled harder. Then we stopped and looked for ballers. There was an abundance of them on board. Wherever we felt for one, we found it. Uncle Selah hadn't taken any chances of being unable to get one in a hurry.

Joe bailed with one hand and steered for the wharf with the other; and I pulled harder than ever. The water crept up around our ankles. Joe stopped steering and bailed with both hands.

"Pull!" cried he, working desperately with his head down and his arms flying around like a windmill. "She's headed straight 'nuff. Pull for all you're worth, Jim. She'll fetch it."

About that, Joe was right. And when she had fetched it, I rose and stood on one shoulder in the bottom of the boat and saluted the zenith with my feet; while Joe, being no longer needed in the stern, came forward and thrust his head into the rowing bench and planted his feet caressingly upon the back of my neck. And all the water in the bottom of the boat came to sympathize with us.

Then I got up with the water dripping from me and said things to Joe. And Joe, who didn't drip any more than before because he couldn't, said other things to me. Whereat my gorge rose; and I smote Joe. And Joe's gorge rose just as high as mine, if not higher; and he smote me. And our eyes flashed fire. At least, mine both did, and one of Joe's.

And there is no telling how long our first naval engagement would have lasted, but for Joe's unexpected aerial flight shoreward at the end of a boat-hook that had suddenly attached itself to the most attachable part of his trousers. The other end of said boat-hook adhered to one named Uncle Selah, who stood on the wharf. I had scarce recovered from my astonishment at this, when I found myself disembarking in the same dignified manner.

Then Uncle Selah turned his attention to securing the boat. Joe and I began all over again, and there is no telling how long our land engagement would have lasted, but for unseen forces which caused us to fly quickly apart.

"Oh! Oh! Ow, Ow!" we exclaimed in unison.

"You will run away and steal chickens and try to cheat your parents, will you?"

"You will sneak out of weeding the garden, and hide in the barn, and take things that you and Willie own together and sell them and keep your little brother's money, will you?"

"Oh—Ow! Oh—Ow!" we suggested again, these being the only remarks that occurred to us as at all appropriate.

"Now, you march yourself straight home to your mother, young man!"

"And you, too!"

"Please, oh, please, can't we see to our boat first?" we asked, seeking some respite.

"Boat! What boat?"

"Why, our boat, the Scooter," said we in all innocence, pointing to her as though we had owned her from infancy.

"Oho! So that's what you did it for, was it? Well, you can't keep her, if you have bought her. Uncle Selah, will you kindly take that boat and dispose of her in some way?"

"Yes, sir," said he. "Thank you. Thank you, sir."

"And on no account allow those boys to come near her."

"No, sir. Of course not, sir," answered Uncle Selah, touching his cap with due solemnity.

Forces beyond our control then propelled us rapidly homeward. The sea, the fresh, green, glorious sea, faded from our vision and the maritime career of two of the world's greatest came to an untimely end. We never again saw our first command, the good ship Scooter, and strangely enough, we shed no tears for her.

Oh, youth, youth—so responsive, so elastic, so quick to reconcile itself to changes, to forget the past, and to upear new and more splendid castles on the ashes of its dreams.

Yes, it's twenty years, or more, since Joe and I decided to be admirals. And the last time I saw Joe he was a pack peddler.

We always fancied that our careers might run in parallel grooves. Probably our digestion is better than that of most admirals.

SEPTEMBER IN THE ADIRONDACKS

No finer place can be found than the Adirondacks in September.

The air is cool and bracing, the scenery beautiful and the sense of perfect rest that comes with the night is delightful.

This wonderful region is reached from all directions by the

NEW YORK CENTRAL LINES

"America's Greatest Railroad."

The Delights of Happy Childhood.

Wouldn't you be happy if you could have all you wanted of the daintiest and most delicious "goodie" you ever tasted, without having someone tell you, you musn't eat any more of it? That's exactly what you can have when you eat

Quaker Rice
(Puffed)

There is something about Quaker Rice that makes it decidedly different from the ordinary cereal—the more you eat of it, the more you want. Its dainty lightness, delicate flavor, and delicious crispness make you marvel at the ingenuity that has transformed common rice into such a wholesome and appetizing food.

Quaker Rice retains all of the goodness of the rice kernel, and by a special patented puffing process, cooks it thoroughly and adds to its palatableness, making it truly the delight of happy childhood.

Quaker Rice should be heated for a minute in a hot oven, and then served with milk, cream or sugar. Or, you will find recipes on the package for making dainty Quaker Rice confections. Quaker Rice is so easily digested and so pure and wholesome, that the children can eat all of it they want.

Quaker Rice is sold by grocers everywhere at 10 cents the package.

Made by the Manufacturers of Quaker Oats.
Address, Chicago, U. S. A.

THE RAMBLER was speeding over the blue waters of the Mediterranean toward the Atlantic and home. Along her deck paced eighteen-year-old Phil Kirk, full of pride that, at last, he was in command of his father's yacht under orders to bring her safely across the ocean to a home port. Phil had a passion for the sea, and from his earliest recollection had spent most of his hours upon its surface in one kind of a craft or another. It had been his ambition to enter Annapolis, but a slight physical disability had barred him from this goal. However, he gained a wide experience of nautical life aboard the Rambler, and finally his dream of commanding her proved a reality.

He was on a cruise with his father in Mediterranean waters, when Mr. Kirk received a cablegram calling him home in great haste on account of a crisis in his business affairs. At first thought, he planned to take Phil with him and place the yacht out of commission abroad, but he concluded that it was better to bring her home. He could not wait to sail in her, but, as he had a growing confidence and pride in Phil's seamanship, enforced by the fact that he had an able crew, it seemed to him a good opportunity to test the boy's knowledge and give him a wider experience of the sea. It was in this manner that Phil became Captain Philip Kirk of the American yacht Rambler, and the sound of his title sent a thrill through him, as a note of martial music stirs the soldier.

There was serious business, however, before the lad. War between the United States and Spain had broken out two days after Mr. Kirk was upon the high seas, and, in order to reach his destination Phil must guide his vessel through the waters of the enemy. Every member of the crew knew that great chances were being taken, but they were heartily devoted to their young master, with full confidence in his seamanship and in the enduring speed of their vessel. So it was with stout hearts that, one afternoon, they sailed from Algiers, the port where Mr. Kirk had left the yacht.

"She will never be taken by the enemy," exultantly cried Phil on the bridge. "For speed, she can outclass any old tub of the Dons, and her crew—they are all Americans, Tom, the finest men afloat," and he enthusiastically slapped the old sailor on the shoulder. Tom shook his head and declared it rash to run such risks, but deep down in his heart he admired Phil, and loved him all the more for his audacity.

Everyone who saw the yacht as she steamed away from Algiers admired her trim appearance. Her white sides glistened in the sunlight, her brasswork shot forth dazzling rays, her spars stood up tall and graceful, and the Stars and Stripes waved proudly above her in the soft, southern breeze. No fairer picture was ever presented in the harbor, but danger was lurking near. At the end of the quay, a dark, swarthy-looking man turned to his companion and said: "Before another night, Carlos, we shall pull that flag down. I have cabled to the Madrid government and the Los Gatos is under way."

That night, the Rambler steamed along the African coast. The great continent rose dimly out of the sea, while here and there the outline was broken by the indenting of some small harbor which, a hundred years before, had sheltered pirate craft. It was a clear night, and the Rambler sailed on without adventure. Toward morning, a light fog enveloped her. This made slow steaming and careful navigation necessary. That day passed without unusual incident, and before the close of the next, Phil hoped to reach Gibraltar. On his arrival there he was planning to cable to his father for advice, because he had begun to think he was doing a rash thing to take the Rambler out of neutral waters into the open sea where she might fall into the hands of the enemy.

Now it happened that the unknown man on the quay at Algiers was not the only watchful foe of the Rambler. During the hottest part of this day, a Spanish torpedo-boat destroyer, the San Blas, had dropped anchor behind one of the headlands of that coast. As the day cooled into evening, her captain, Verramil by name, with another officer, for the sake of passing a dull hour, had climbed the hill which overlooked the sea. They saw many ships pass, mostly Italian merchantmen, with now and then an English tramp steamer, but lastly came the Rambler.

The Spaniards could scarcely believe their eyes. The flag of their despised enemy betrayed the nationality of the yacht. They knew that there were several American yachts in European waters, but it was almost too good to be true that one of the finest of them was sailing straight into their power. Soon with one shot from the San Blas they would bring her to, haul down the Yankee flag, raise their own in its stead, and, putting a prize crew aboard, sail for a Spanish port. O, the glory that awaited them!

Rushing down the hill, Captain Verramil and his companion were soon on board the San Blas. He immediately ordered steam up, but night had settled before his vessel turned her smutty nose to the westward around the headland and got under way. The Rambler could not be seen in the gathering darkness, but her pursuer was confident of soon overtaking her.

An hour or two before midnight, scudding clouds covered the face of the moon, and a slight mist hung over the water. The mist thickened and settled into a fog. If this continued, the San Blas might lose her prey. Ordinary caution would have bade Captain Verramil steam at slower speed; but he had no ordinary caution that night. He had started out to capture this yacht, and although he might run down forty vessels in the fog, yet he was determined to seize the Rambler.

All night he paced back and forth, now examining a bit of machinery, now inspecting some gun, and again watching the engines drive his boat through the water. Then he would go out in the bow far forward and peer into the sheet of fog. Finally, he was forced to give the order to slow down somewhat, but he did it as an unwilling slave is forced to obey the distasteful command of a hated master. So he impatiently waited for daybreak with the hope that the sun would burn away the fog. This hope was not in vain, for as the night wore away, and the eastern sky grew lighter the sun rose, lifting the fog and scattering the clouds. In this early hour, the dim shape of a vessel was made out to starboard.

"We have them," exclaimed Captain Verramil, and he ordered a shot to be fired at the stranger. She obeyed this warning to heave to, but when the San Blas came up to her, the stranger proved to be an Italian bark lazily drifting in the calm. Captain Verramil apologized for his blunder, and the captain of the bark, whose anger was appeased with due explanation, gave him the pleasing information that an American yacht had passed him only a short time before.

Captain Verramil's blood thrilled as he ordered full steam ahead. Success in the chase was now surely his! A little after this the Rambler was sighted by her enemy, and she soon saw the San Blas.

"That looks like business for us," exclaimed Phil. "I'm ready for the chase, though, and we'll make her hum for it."

His thought was echoed in the hearts of the whole crew. Soon her boilers were under high pressure, and the Rambler forged through the water at full speed. As her enemy saw her increasing speed he likewise put on greater effort.

A shot was sent after the Rambler, but it fell wide of the mark.

"They're wasting powder," muttered old Tom. Another shot struck the water near them and sent spray aboard the yacht.

"O, for a cannon, guns, anything," broke out Phil. "Here we have only a saluting cannon."

"I doubt if that would help us much," ventured Tom.

"Yes, but we would make them pay for taking us," cried Phil. "Why, this is my chance of a lifetime."

The perils of the situation did not dawn upon Phil. It was certain capture or destruction, for the yacht could not stand the fire of hostile guns, nor in the end would she be likely to outspeed her enemy. The sure and certain fate of a Spanish prison and the loss of the Rambler awaited them. In that moment, however, when so great danger was imminent, Phil Kirk only exulted in the excitement and thrill of danger. No coward blood was in his veins. He longed to have a share in the war, and here was his only opportunity, but for lack of means, it was fast slipping away from him.

The Rambler flew ahead, the destroyer after. But try as best she might, the San Blas could not decrease the distance between them.

"We may win out yet," said Phil.

"Yes, but—" old Tom shook his head doubtfully.

Aboard his vessel, Captain Verramil paced in angry impatience. It almost seemed as if the Yankee yacht was getting the better of the chase. "There is only one way," muttered the Spaniard. "If we cannot catch up with her, we must bring her to, and if we cannot bring her to—" he clenched his hand and scowled—"I'll blow her out of the water."

So he sent shot after shot toward the yacht. At first they fell wide of the mark, but as the Spaniard got the range, they came nearer.

"Perhaps we had better pull to," ventured someone on the Rambler.

"Never," shouted Phil. "Not while we live and breathe."

Time for words had ceased for they were in the face of death. A shot hit a spar and knocked it off. Another entered the captain's cabin and wrecked that place.

"Speed, more speed," ordered Phil, and the Rambler jumped ahead as if conscious of the need. The San Blas spurted forward faster than ever. She was gaining! But as yet it was scarcely noticeable. The shots flew fast. Through the air they came, hitting all about the Rambler. On she sped like a living, hunted quarry. The last pull had come.

"Will nothing make those Yankees stop?" shouted Captain Verramil with an oath. "There's one thing more, I'll torpedo them."

And he ordered a torpedo fired. It fell wide of the mark. In his rage, he struck the gunner to the deck, and himself prepared to send the next one. That was his last act. A loud explosion, which even shook the Rambler, a cloud of choking, blinding smoke, a terrific roar, then all was still. When the smoke lifted, the San Blas lay a helpless hulk upon the water. The pursuit had ended. Her forward torpedo-gun had exploded, killing the captain and part of her crew, and wrecking the entire boat.

Those of the crew who still lived were taken off by the Rambler and carried to Gibraltar. Here the yacht received orders from her owner to lay by until the war was over, and Phil and his men came home in one of the liners.

The Great American Office Boy

ARTHUR WARREN in "Success" Magazine

A most difficult person to "organize" is the office boy. We hear so much about the bright American boy, and the achievements of the public schools, that the wonder is where the office boys come from. They bring certificates of some sort from their teachers, but—! Every big concern has a procession of boys trooping through its offices and works, day after day. But the boys, for the most part, are obstinate and incompetent. When a bright boy appears he finds his opportunity quickly enough, and if he has staying powers he will get on. But the majority of youngsters that apply for jobs have no manners, they can't spell, and they are always watching the clock. They don't know whether San Francisco is in Cuba or the Philippines, or whether Los Angeles is in Spain or the Sandwich Islands, and discrimination in the matter of foreign postage is beyond them. Discipline they object to, and they abhor taking orders. When it comes to that, the average young American of today does not take orders easily. He seems to suspect some hideous design upon his freedom and equality. After all, rudimentary information in geography, orthography, the wearing of hats and the omission of coats in offices, and certain glimmerings of politeness are not without importance in business. The average applicant for office-boydom has no notion of responsibility. He will take a job today and abandon it tomorrow, on any pretext, or on none at all.

But in capacity for vexation the average stenographer can give him points. Most stenographers are good laundresses or baseball pitchers spoiled. Polysyllables try their souls; the uncommon word fuddles their keys; language is, in their minds, a device by which intelligent communication can be prevented, and initiative is a term without meaning. They believe that punctuation is given only to the gods, for they themselves know nothing of it. On the other hand really capable stenographers are among the most helpful equipments of a business office, but their rarity is beyond belief.

Boys can help us greatly by sending us the names and addresses of boys who do not subscribe for this paper.

MIKE'S LUCKY SEASON.

By Geo. Henry Swift.

IN ALL THE year, there was only one event of real importance to Mike, and that was the opening of the hunting season. Aside from this, few things ever happened to relieve the monotony of his daily routine of work on the little farm in Michigan's North woods.

But the fall Mike was fourteen years old, the season opened in a way that was far from satisfactory, and as the first few days slipped by, his anxiety steadily increased until his enthusiasm for hunting had reached a low ebb. Soon after supper one night he climbed up the ladder into the attic of the little one-story log house and began to get ready for bed.

"Well," he said to his younger brother, "I guess de fellers aint comin' up dis year. De season is more dan half gone now and if dey was comin', dey would be here before dis. I wouldn't give a nickel for de hull season unless dey come out here to hunt again."

Mike was thinking of the two young men who came out from the city every fall and camped in that vicinity during the hunting season, and his chief pleasure during those seasons was his visits to their camp. There were the beautiful Marlin repeaters with pistol grips and half octagon barrels; the belts full of shining brass cartridges; the hunting knives and axes; the funny sheet iron stove set in a box of sand. In fact the whole outfit was to Mike a veritable entrancement. But better still, these hunters often invited him to go out with them for a day's hunt, and on these trips they taught him how to handle his new shotgun, how to track the big white rabbits and a score of other delightful woodcraft lessons.

The failure of his friends to appear, then, was the secret of Mike's gloomy outlook when he crawled under the rafters to his bed on that November night. But the very next day things began to happen. As Mike sat on a block of wood in the back yard dressing a partridge he had shot in the morning, he was surprised and delighted to see his friend, Mr. Morris, crawling through the bars into the door yard.

"Why, hello, George!" Mike called out with genuine cordiality, "Gee! I was afraid you wasn't comin' up dis year at all. Where's Ralph?"

"Hello, Mickie," answered Mr. Morris, "Pretty good luck, eh? Oh, yes; we thought we would run away for a few days' outing anyway. Ralph couldn't get away from the store till tomorrow, but I got too anxious to wait any longer. I've got the tent and whole outfit down here at the little lakes and the rig has gone back to town. How would you like to go over and help me fix up the camp and then stay with me till Ralph comes out?"

"Gee!" Mike exclaimed, and without another word he ran to the back door with the partridge dangling by one wing. He jabbered something to his mother in Polish, for they were Polish people, and as soon as he could get a pail of milk for the camp he came out with his shotgun ready to start.

Mike had never enjoyed an afternoon as he did that one. He cut balsam boughs and carried them up to the camp for beds; carried water from the spring, chopped wood and made himself generally useful. He kept busy every minute except when he stopped long enough to shoot two red squirrels which, he said, were a-gittin' too sassy, and then dressed them nicely for supper.

By dark the tent was well secured and banked up around the bottom with leaves and dirt, a fire built in the stove and everything made comfortable for the night. Then Mike lay down on the pile of balsam to rest while George "dug up" stuff for supper. And oh, what a supper that was! The smell of the frying squirrels and bacon, the steaming coffee, the big brown flapjacks, the flickering candle and the sweet scent of the balsam carried Mike for a few minutes into dreamland. But he was roused by the rattling of the tin dishes on the big wooden chest when George spread out the supper and quickly jumped up, for, besides being tired, he was also hungry.

"Say, Mike," said George, "if you could have your choice of living in the best house in Chicago or here in this tent, which would you choose?"

"Oh, gee! I'd rather live here any day," Mike replied. I didn't know dere was so much fun in campin' out."

When Ralph Mitchell arrived at the camp the next day it was nearly noon, and he and Mike lay down on the balsam beds and visited till dinner was ready. But as soon as dinner was over, Mike put on his cap and picked up his gun. "Well," he said, "I must go. I told my mother I would come right home after dinner." So with his "huntin' sack" dangling clear to his knees and his gun nearly as long as himself, he went trudging down the logging road towards home.

In the early twilight when the hunters returned to camp after a little reconnoitering, looking for "deer sign," they found Mike at the tent again in waiting for them.

"Here's some milk for you," he said, as he handed Ralph a pail. "Where was you fellers dis afternoon? I was up here lookin' for you to go an' shoot de big buck."

"Did you see one?" Ralph asked.

"Sure I did. When I was goin' home from here after dinner, just as I got to dat runway dis side of our house I seen a dandy big buck walkin' along in de shintangle right close to de road. Just as quick as I seen him I whistled sharp at him like you fellers told me and he stopped right by dat old tree top —you know where it is?"

"Why didn't you shoot him?" asked George.

"Well, I was goin' to, an' I put in my buckshot shell an' when I snapped de gun shut it scart de deer and he run to beat de band, and he was quite a ways away from me so I t'ought I hadn't better shoot 'cause prob'ly I would only wound him in de hind quarters and den he would go off in de brushes somewhere and die after he suffered a long time. If you fellers had been dere you could got him easy. He was a big one just de same. I'll bet if you would go up dere tomorrow you could git dat old beggar. He's up dere in de hills somewhere all right enough, jus' de same."

"Well, Mike," said George, "you can bet we would like to get that deer; but I'm sorry you have gone to so much trouble to help us. I don't see how we can ever get even with you. But you see the chances are that the deer is back in the swamp before this, and no telling where he will be by morning."

"That's the trouble," Ralph added. "It's pretty uncertain work trying to find a deer on bare ground when he has fifteen or twenty hours the start of you. Of course he might come back in the morning; nobody can tell. Oh, say, Mikie, why don't you slip out to the runway in the morning early and watch awhile? You might possibly get a shot at that old rascal."

"Oh, I couldn't get him; I've only got one buckshot load," Mike replied.

"Well, sir," said Ralph, "you can take my rifle home with you tonight and use it all the forenoon tomorrow if you want to. We are going to cut up a lot of wood in the forenoon and shall not hunt at all."

"Yes, or mine either," exclaimed George, "and all the ammunition you want, besides."

Mike looked up in astonishment at such a prospect and at first took the offer as a joke.

"Oh, yes," he said incredulously, "you fellers would be apt to lend such guns as dem to a kid to——," but Ralph interrupted him.

"No joking, Mike," he assured him as he laid both rifles on the table, "there they both are and you can take your choice."

When Mike was fully convinced that the men were in earnest his joy knew no bounds, and without further hesitation, he stepped to the table and picked up Ralph's rifle. "Well, then," he said with a grin, "I guess I'll take dis one; it killed a big buck last fall and so prob'ly it ain't forgot how to do it yet, eh?"

"All right," George responded, "then I'll furnish the ammunition," and he laid a dozen or so of the long tapering cartridges on the table and, with them, his brand new hunting knife.

Mike picked up one of the cartridges and read on the head of it: "32-40 H. P. "High pressures, eh?" Gee! dem's de kind. If I get a poke at de old buck wid one o' dem, I bet he'll be my meat jus' de same, unless I get de 'fever' like old trapper Dan did de other day."

"Mike, I suppose if you were back in Poland with a rifle like that, you would be fighting for Russia," Ralph remarked.

"Yes, like de dickens I would. I'd help de Japs," and Mike poked the cartridges securely into his pocket. He had now reached a place where he must have some sort of excuse for giving vent to his pent-up elation, for his grin was already beyond his control. "Oh, gee!" he said, laughing so hard the men could hardly understand what he said, "I wish I was over dere where dem old Russians is, wid my shot gun; I'd sprinkle deir old breeches full of bird shot and tell 'em to go back home and mind deir own business."

Before the men could stop laughing at this characteristic speech, Mike shouldered the rifle and started out on the logging road, hurrying along in the gathering darkness to tell his good news to the folks at home.

It was long before daylight the next morning when Mike scrambled down the ladder into the kitchen and kindled the fire. As soon as his mother could get him some breakfast he swallowed a few mouthfuls, grabbed the rifle and as fast as his short legs would allow, he hustled across the field and out on the road. He was not long in reaching the runway and crawled into a pile of old tree tops where he was hidden from view but where he could see out between the limbs and watch the trail. His rifle was ready and he waited quietly. In an hour it was broad daylight, but the deer had not appeared. He waited another hour, but still no deer. By this time Mike was nearly frozen and his hopes had fallen to about the same temperature as his body. Could it be possible that he must go home disappointed and no chance to use that rifle after all? But he would not go just yet; he could stand the cold awhile longer and then—snap! Mike's quick ear caught the sound of breaking twig. In an instant all thought of the cold vanished, for just over on the ridge, came a magnificent great buck walking proudly down the runway. Without thinking, Mike quickly raised the rifle and fired with scarcely any aim. The deer stopped short and threw up his head. He did not know where the shot had come from. He sniffed the air, then gave a loud snort, threw up his flag and began to jump, first one way then another, not knowing which way to run. Mike had made a clean miss, and trembling like a leaf, he tried to catch sight for another shot; but for some reason which he would not care to own, the rifle would persist in wobbling and the sights refused to come into line. But Mike was determined to be game this time and not shoot again till sure of his aim. He knew he was not yet discovered, for now the deer was coming nearer. Then Mike remembered and gave a shrill whistle. The deer turned broadside and stopped again. Now was the hunter's chance; so steadying himself as best he could against a log he carefully rested the little blue rifle barrel over a limb and covered the deer's shoulder with the ivory bead sight. There was a sharp crack and the big buck dropped in his tracks without a struggle or a pain.

Mike tumbled out of the brush pile and ran through the shintangle to his game. For a few minutes he made the woods fairly ring with his shouts. He threw up his cap and yelled; he whistled and danced around the deer, and then as fast as he could pump the lever of the rifle, he fired three shots into the air as a final salute. He tried the new hunting knife on the deer's throat the best he knew how, and after taking one more long admiring look at his big trophy, he started on the run for the camp. As he went hustling around a bend in the road, he nearly ran into his friends who had heard the shooting and had started out to see what it all meant. Mike wiped the sweat from his forehead and yelled out in his boyish glee:

"Hi! yi! yi, yi-i-i-i! I got de old Russian jus' de same. Oh, gee! he's a big one."

"Good for you, Mike," Ralph answered, "we'd rather see you get him than to get him ourselves."

"Well," declared Mike, "you fellers is goin' to have one o' de hind quarters jus' de same, 'cause I never'd a-got him if it hadn't been for you."

At Mike's home his father hitched a horse to the stone-boat and then, with the younger boys, they all started for the woods to bring in the game. Even Mike's mother threw a shawl over her head and joined the procession.

When they reached the runway and saw the big deer lying on the ground, there was genuine rejoicing by the whole family, and the two city hunters joined heartily with them.

"Mike," said Mr. Mitchell, "did you have the 'buck fever' when you saw him coming?"

"No," Mike replied, with a hearty chuckle, "I didn't have de fever very bad, but I guess I acted kind o' crazy when I was sure I had him."

The men laughed and slapped Mike on the back.

"Oh!" said George, "we know how that goes, and if we should find out that you didn't act like a wild man, we would have you sent back to Poland on the next boat, for any boy that wouldn't go crazy over a deer like that would be too dead to live in America. But I guess you're qualified to stay here all right enough."

Mike grinned again and as he stuck both hands into his coat pockets, he said simply: "Well, dis is de best huntin' season I ever had jus' de same, and you fellers is to blame for it, too. Oh, say! dat little Marlin's a good one, ain't it?"

THE "PLUPY" STORY.

Are you anxious to read Judge Shute's "Plupy" story? Well, it begins next month.

Ingersoll

Stem Wind, Stem Set, $1.00

The Dollar Watch is now wound and set by the stem.

It has always been like high-priced watches in its timekeeping qualities.

Now it is like them also in convenience, size and appearance. As a matter of fact there isn't one man in a thousand who could make use of any greater accuracy than is to be had in the Ingersoll.

Only the Ingersoll patents, the largest output in the world (over 6,000 daily) and 14 years of experience make a stem-wind watch of the Ingersoll quality possible at $1.

Imitations can look like the Ingersoll, but they can't have the Ingersoll works.

Sold by dealers everywhere or post-paid for $1.00.

Legion of Honor Boys

How They Won

Robert Krohn, Jr., has just graduated from the Hawthorne School in Portland, Oregon, with a record of eight years' perfect attendance. He hopes to increase this showing by four years when he finishes high school.

The Heroism Badge sent to Raymond Virnstein was presented by a representative of the Washington Times. When the reporter visited the little fellow's home and gave him the medal, he colored to the hair and declared that he "did nothing mor'n the other fellow would have done for him." We are in receipt of the following letter from H. A. Dobson, M. D., at whose suggestion the badge was sent to young Virnstein:

"Please accept my thanks for your confidence in me, your promptness, and for the nice little medal, which I have turned over to the Times.

"I remarked to a friend that the world progresses. I have saved 13 lives from drowning since the age of fourteen, and never thought of a medal. Most were schoolmates, but the last was fifteen years ago, when I dropped from the upper deck of a steamer to rescue a six-year-old girl who had fallen from the pier. Not until I had swum to shore and asked some one to bring my crutches did those on the pier know I had but one leg. I am still a fine swimmer, though not fast."

Dr. Dobson signs himself "An American Boy aged sixty-four."

James Hoskins, Gardner, Massachusetts, received the highest average in the seventh grade for the term ended June 15th. He also took the eighth grade final examinations and passed them, giving him permission to enter the preparatory school this fall, if he so desires. James is an O. A. B. member.

Harold F. Slade, of White Hall, Maryland, received an average of 98% for the summer term of school. This was the highest average in the seventh grade, of which Harold is a member, and also the highest average in the school. Harold was awarded a medal for perfect lessons and good deportment.

Herman O. Ingalls, who lives in Honolulu, Hawaii, sends us a statement to the effect that he has stood at the head of the freshman class of the Honolulu High School for the last two terms. From his letter we take the following:

"I think THE AMERICAN BOY is the best boys' paper I have ever read, although I have traveled around the globe. The stories are fascinating, and I can never wait for the next issue with patience.

"I am fifteen years old and was born in the South Sea Islands. I lived nine years of my life on or near the equator, and never knew the blessing of that art, reading. It has been only five years that I have known the English language. After attending school here I have risen very rapidly, and have just completed my freshman year. Although born a South Sea Islander, nevertheless I consider myself a true American Boy."

William C. Sherwood, Black River Falls, Wisconsin, made the highest record in his class during the term of school just past.

A School Record Badge was recently sent to Sedalia, Missouri, to be presented to Coy Bour. We have received a letter from Coy and one from his teacher, thanking us for the badge. In his letter Coy says: "I certainly prize the medal highly and shall endeavor to attain this honor each year. I enjoy reading THE AMERICAN BOY very much, as there are so many helpful suggestions and encouraging words for boys."

Cyrus Truitt, Novinger, Missouri, led his classes in the eigth grade during the school year just past. Cyrus has also been especially good in deportment and in school attendance.

Donald Joseph, a member of grade seven of the Whitewater, Kansas, Public Schools, received the highest average in his class. His average was 98%.

T. B. Korony, of New York City, stood at the head of his class during the term commencing in September last and ending in February, 1906. He also led his class during the term just previous to this one.

Wells Leib, of Rushville, Illinois, writes: "The badge was given to me the other day. I am very proud of it. I can hardly wait for the next number of THE AMERICAN BOY to see my name on the roll."

John Wesley Farr, Lowell, Massachusetts, led his class in the Green School during the school year just ended, securing an average of 94.6%. John is fourteen years of age.

The Washington Times, under date of July 3d, prints a lengthy account of the heroism of Raymond Virnstein in saving the life of a comrade who was drowning in the Potomac River. Raymond plunged into the water, clothes, shoes, and all, and struck out for the place where his friend had gone down. When the drowning boy appeared, Raymond grabbed him by the back of the neck with his left hand while with his right he struck out for land. Three times the two boys went down together, and when they were finally hauled out of the water, young Virnstein was the more exhausted of the two. Last year the boy, who was then only twelve years old, plunged into the river and dragged a young man out of the water when every chance for his life seemed to have been lost. Young Virnstein is very modest about his bravery, and seems to think he has done nothing deserving unusual credit.

Stamps, Coins, and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

Stamp Inquiries

Walter S.: 2c black envelope stamp issued 1863, worth about 25c; 3c adhesive 1856, worth 1c. Richard B.: 5c express lists 8c; 2c proprietary, 10c; others 1c each. R. M.: On some of the 2c U. S. stamps issued in 1890 a white spot appears on top of the figures 2. This is called a "cap" from its appearance. The variety with cap on right 2 is rare. Lewis B.: The letters in the corners of the English stamps indicate the position of the stamp in the sheet. The first stamp in the upper left hand corner being lettered A A, the next A B, the next A C, and so on. The different letters are only collected by those engaged in reconstructing sheets. James L. M.: "Hansa" is found on a German local stamp. Your Hamburg is probably a reprint. Claude S.: Your stamps are all very common. Henry V. N.: 50c Entry of Goods and $2 Conveyance, 10c each; $1 In. Exch., 5c; 25c Certificate, 1c. John E. C.: 1. French revenue; 2. Mexican revenues; 3. "U. S. Army Franks" are fakes gotten up by an army officer in California to sell. The War Department stopped their use as soon as discovered. 4. Hungarian Telegraphs; 5. Wurtemburg official; 6. Liberian Hippopotamus, 2c; 1896 lists 4c. Paul J.: 1. 6 filler Hungary; 2. Austria newspaper; 3. 10 pf. Germany; 4. 7 kopek Russia; 5. 10 heller Austria. These stamps are all current and very common. John T. P.: The only one of the stamps you name, of any value, is the $50 revenue issued in 1863, lists $2.50. It retails at about half this price. Wm. J. K.: The 3c blue like 3c green of 1870 has had color changed by chemicals. It has no value. Neither have bisected stamps, unless on the original cover and covered by the postmark. These are very easily faked. G. H. N.: The Mexican and English are worth from 1 to 2c each. St. 10c each; officially sealed, 5c. "Bayern" is Louis stamps: 1c-2c; 2c-1c; 3c, 5c and 10c, for Bavaria and "Wurtt" for Wurtemburg.
