Fred Reed: Your rubbing is from a third bronze of Constantine the Great, A. D. 306-37. These old coins of Constantine are quite common and the dealers will sell this same piece for a quarter. Ralph Prior: Your coin is a 50 lepta of 1874. It is worth about twenty cents. Barr K. Parker, Jr.: Your drawing is from a Roman second bronze coin. The head is that of Augustus Caesar. Its poor condition makes it of very little value, notwithstanding its great age. Geo. Kump: The 1827 half dollar is worth about seventy-five cents. The value of paper money depends entirely on condition. Unless your pieces are uncirculated they will not bring a premium. The cut you mention was from an 1827 quarter (which is very rare) and not of the half dollar. Richard Biggar: The cent of 1846 is common. Alan Wilson: Your coin is a common coin of Peru. The animal on the reverse is a llama and not a deer. Will C. Styron: There were no half cents issued in 1823, so you must be mistaken in the date of yours. The quarters of 1819 and 1821 sell for seventy-five cents each. Your "To Hannover" is a common English jeton of no value. Milton Norman: Unless your dollar of 1859 is at least uncirculated it will not bring a premium. A. Nevine: Dealers in coins charge twenty-five cents for a good 1825 dime. Harold Moody: The Columbian half dollar of 1893 sells for fifty-seven cents. J. C. Larson: A very common 1 kreutzer of Austria. D. Watson Bell: The 1825 half dollar sells usually for eighty-five cents when in fine condition. Your other query is answered elsewhere. H. K. Hunter: See answer to J. C. Larson. R. G. C.: Your drawing is from a Chinese cash coin of Hiao Tsung, struck between 1165 and 1174. It is not rare. The "Sainte Genevieve" is a religious medalet. Others common. N. Z.: You should be able to get a 1904 dollar for face value, at least the coin editor had no difficulty in doing it. Howard C. Aldrich: The cent of 1803 is one of the commonest of the old cents. They sell for about fifty cents; when in good condition. Glenn C. Brown: You will not be able to obtain a premium on your pieces. Samuel King: You will hardly be able to get more than face for your $10 gold piece. Willie Tarrant: The half dollar of 1817 sells for eighty-five cents. We know of no copper coin issued in British Guiana in 1747, so you must be mistaken in this. Your other coins have no premium. William McCarns: The dealers charge twenty-five cents for the dime of 1839 O mint. 1859 cent, face only. Leslie Offen: Face value only. Paul Wilson: The 1800 cent is worth a dollar. English half penny 1724 sells for from ten to twenty-five cents, depending upon condition. Oscar L. Lenski: No half dimes were issued in 1823 so you must be in error. 1832 dime, sells for a quarter. Howard Conklin: The dime of 1891 is worth ten cents. Ray H. Johnson: As a rule all the old and modern Spanish silver coins have no value over face, and if in fair or poor condition, worth only bullion value. Your Mexican coin of 1904 is only worth face. Burton Baird: The half dollar of 1854 is worth just fifty cents. Geo. W. Gibson: Your rubbings are all from quite common coins. H. A. Hagood: Your rubbing is from an 1817 cent. The dealers ask fifteen cents for them. Stuart K. Harlow: Your large silver coin is a 2½ gulden of Frankfurt, 1854. Henry A. Wahlborg: The S mint dime 1894 is very rare. This is because very few were issued. The same mint for 1893 and 1895 is very common for the reason that very many were coined. John L. Steffan: There is no such thing as completeness in the collecting of coins; neither is there with the collecting of stamps. The Tapling collection of stamps in the British Museum has some 30,000 specimens, while the numismatic collection there has some over 250,000 specimens. The Bibliotheque National Cabinet of coins at Paris has over 350,000 varieties of coins and medals. None of these collections are complete, and never will be completed. Catalogues make the attempt to cover the ground as far as practicable in both these lines of collecting. The main difference between the two is this: Numismatics presents an unbroken line of issues from at least B. C. 700 down to the present day, and has occupied the attention of collectors from the days and time of Petrarch; while stamps were first used in postage in 1840 and it was about twenty years afterwards when serious attention was first turned to their collecting. Claud E. Gill: The half cent of 1829 sells for fifteen cents. John H. Price: Your $2.00 bill will hardly bring a premium. Stanley D. Johnson: A 5 franc (French) of 1815 is worth $1.75. Roy Kampen: Your rubbings are from small religious medalets of no numismatic value. Lloyd Vest: All gold dollars bring a good premium. That of 1854 (while one of the most common) is worth $1.75. Your rubbing is from a 2 ore of Sweden. It is common. R. S. Mattocks: Gold quarters of 1872 are worth a dollar. A three-cent silver piece of 1853 is worth fifteen cents. Others face only. O. Paul Luther: The 1894 O mint dime is worth only face. The mints now in operation are located at Philadelphia (no mint mark), San Francisco (S), New Orleans (O), and Denver (D). Edward Delaplaine: No premiums on the coins you mention. R. G. C.: England, 1845 3 pence, no premium. John D. McKee: The half dollar of 1823 sells for seventy-five cents. Robert W. Pollard: The three pence bill of 1777 is worth about fifty cents. Carl Ohm: (1) Austrian crown piece of Rudolph II; $2.00. (2) Dollar 1870, face. (3 and 4) Rubbings too indistinct to decipher. (5) Morocco 3 falus, 1299 A. H. (1881 A. D.), ten cents.

Sea Shells and Curios

12 Sea Shells 25 cts. Cluster of Rose Coral 15 cts. Sea Biscuit 15 cts. Tarpon Scale 5 cts. All for 50 cts. postpaid. Catalog. TROPICAL CURIO CO., Dept. 50, Miami, Florida

QUIT and GET BUSY

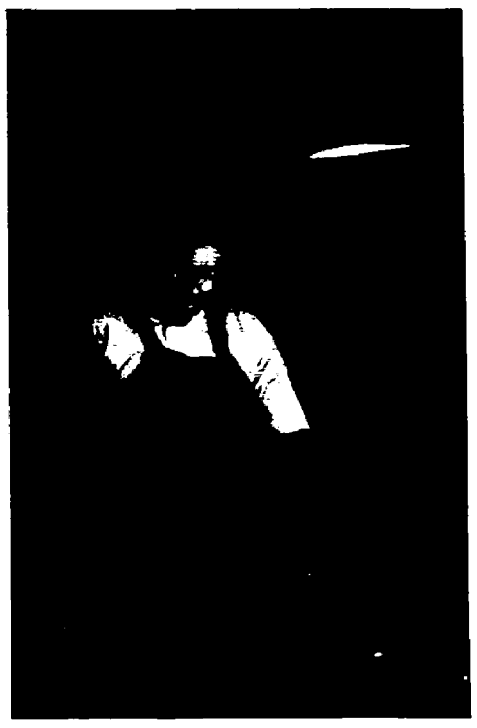
QUIT	GET BUSY
Hoping;	Hustling.
Being thick-headed;	Being broad-minded.
Making confessions;	Making restitution.
Studying your friends' faults;	Studying your own.
Working for mere possessions;	Working for more self-possession.
Thinking so much of where you are;	Thinking what you're doing there.
Dreaming about becoming a star in the sky;	Playing the small lamp right here and now.
Judging yourself by what you have already done;	Judging yourself by what you know you are capable of doing.
Remembering the good turn you did somebody else;	Remembering the good turns others have done for you.
Feeling fretful because you have not all you desire;	Feeling thankful that you have as much as you deserve.
Believing that religion calls you to be better than other men;	Proving your religion by becoming better than yourself.
Paying so much attention to man's opinion of you;	Paying more attention to a proper standard of your own.

—Warwick James Price

THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.



SECOND PRIZE PHOTOGRAPH, BY PAUL FOURNIER, EAST AURORA, ILLINOIS

The Bad Effect of Metol

on the skin may be prevented by plunging the hands into water containing a little sodium bicarbonate after any has got upon them. This acts like an antiseptic.—Etoile Cycliste.

Drying Negatives

According to A. C. Austin, when it is necessary to dry a negative in a hurry the easiest way is to immerse it for five minutes in a solution of formalin, 1 to 16, blot it off with tissue paper and dry in the hottest sunshine, on a hot plate on the top of a stove, or over a gas flame.

The Roll of Honor

Those entitled to Honorable Mention this month are: E. L. Morehead, H. E. Fry, Chester A. Olweiler, R. A. Rogers, S. R. Schulz, Walter E. Berwald, H. T. Cowling, P. E. Watson, Charles Plumb, I. B. Woodworth, W. W. Hubbell, A. M. Browne, H. Trueblood, C. H. Moore, Reuben Lewis, Ben Eddy, A. Allain, L. E. Peterman, and P. J. Wilson.

'Frisco Pluck

Mr. Fayette J. Clute, editor of Camera Craft, has shown genuine San Francisco pluck in getting out two excellent editions of his periodical since the great catastrophe in April, although his entire equipment was destroyed at the time. The June number is an excellent pictorial record of the earthquake and fire and may be obtained from Mr. Clute, 1915 Post street, San Francisco, Cal., at the price of 10 cents.

Our Prize Pictures

"Low Tide," by Harry W. Barton, of Youngsville, Pa., the winner of the First Prize, represents a scene on the shores of Lake Erie near Dunkirk, N. Y. "The Cobbler," by Paul Fournier, to which the second prize was awarded, is an excellent example of splendid light and shade effects. Our readers may recall an earlier illustration of the Rembrandt style, by the same artist, to which first prize was awarded.

FIRST PRIZE PHOTOGRAPH, BY HARRY W. BARTON, YOUNGSVILLE, PENNSYLVANIA

TWO DIFFERENT PERSONS ON THE SAME SPOT. MADE BY A DOUBLE FRAME

A DOUBLE FRAME

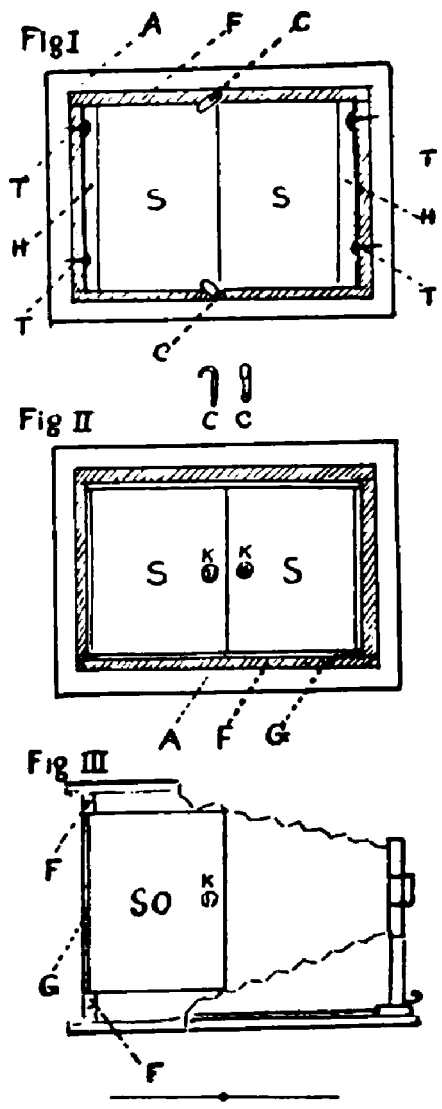
A Camera Arrangement for Making Double : : : Exposures—a Substitute for Kits : : :

ANY AMATEUR photographer can, with a little ingenuity, construct a frame to insert in the rear of a camera to be used for the taking of double exposures and as a substitute for kits. Procure a piece of cigar box wood or the like and make a frame the thickness of which should be the same as that of the cigar box wood, but the depth of the frame should be somewhat greater. The frame should be made to fit neatly in the rear of the camera, the ground glass being temporarily removed. Procure a piece of hard cardboard and cut it of a size to fit within the frame; then cut the cardboard in half with a very sharp knife. These two pieces are to be used as shutters or doors to the frame. Paste four pieces of cardboard (the width of which should be about half the depth of the frame) around the inner sides of the frame. These are to hold the doors in position when they are closed, thin pieces of leather or muslin being used as hinges, which are pasted on the doors and the inner sides of the frame. Two catches of brass or tin are made to keep the doors closed. These are placed on the upper and lower edges of the frame opposite each other by means of small tacks, and are placed so that one door can be opened or closed while the other is held firm by the two catches. The frame is held in position in the camera by means of four very thin tacks which can be readily removed or applied.

The doors are made to open inward into the camera. It would be well to paint the whole a dead black. Probably a good idea of the construction can be best obtained by referring to the figures herewith. A, represents the camera; F, the frame; S, the shutters; C, the catches; SO, shutters opened; T, tacks; H, hinges; G, strips of cardboard to hold shutters in position when closed; K, knobs of flat pieces of cork glued on the shutters. Figure I. represents the frame in the camera in the position it would be seen if the bellows part of the camera could be removed. Figure II. represents the frame in the camera in the same position as one would see it when focusing for a photo, excepting that the doors are closed and, of course, the ground glass removed. Figure III. represents the side view of the frame in the camera with the left door open. In placing the "double frame" in the camera (the ground glass being removed) the doors are left open. The tacks are inserted which hold the frame firm. The one door is closed and held so by the two catches. The other door is opened and held so by the bellows portion of the camera. The plate holder is placed in position and an exposure is made. A second exposure is made after the position of the shutters have been reversed. However, this will necessitate closing the plate holder, removing it, then replacing it after the shutters have been reversed. Care should be taken not to move the camera, and to get the plate holder in exactly the same position in the camera. The same time must be given to both exposures so that the plate may be evenly developed. The most care to be exercised in the construction of the frame is to make the shutters just meet and not overlap each other, otherwise there will be a visible dividing line in the picture.

Contrivances of this kind can be so constructed that in a 4x5 or 5x7 camera, 2x5 and 2½x7 or 4x2½ and 5x3¼ photos, respectively, can be made.

MADE BY USE OF DOUBLE FRAME ON ONE PLATE



How to Copy an Old Faded Picture

Instead of making only one negative, make two. Give one full time and undertime the other just a little. For example: if you give the full-time negative five seconds, give the other one, say, three seconds. Care should be taken not to move the camera between the first and second exposure, as it is necessary that both negatives be of the same size, and occupy exactly the same position on the plates. Now take both negatives and place them together, the face of the under-timed one to the back of the full-timed one; then bind them together so that they will make one negative, as it were. Owing to the intensity which is produced by the combined negatives, the printing will be slow, which will give good contrast, as well as preserve all the fine detail in the original picture.—Photo. Times.

BOYS' BOOKS REVIEWED

NORTHERN TRAILS, by William J. Long. As a writer of animal stories Mr. Long needs no introduction to the reading public, his "Beasts of the Field," "Fowls of the Air," "Wood Folk Series," and others having already been favorably received. "Northern Trails," his latest work, is a book that will fascinate and delight its readers, whether old or young. The scene is laid in Labrador and Newfoundland, the habitat of the white wolf, fisher, salmon, wild goose, polar bear and many others. Of these animals, their ways and peculiarities the author tells out of the fullness of his experience. The reader can here learn why the "big Arctic wolf spares the bull caribou that attacks him wantonly; why the wild goose has no fear at home; why the baby seals are white at birth; how the salmon climb the falls which they cannot jump, and why they hasten back to the sea when they are hurt; how the whale speaks without a voice," and many other things equally interesting and curious. The book has twelve full-page and two hundred smaller illustrations by Charles Copeland, and in the matter of type, paper and mechanical workmanship is excellent. 390 pages. Price, $1.50. Ginn & Co.

THE AMERICAN BOY AND THE SOCIAL EVIL; From a Physician's Standpoint, by Robert N. Wilson, M. D. The writer of this book is lecturer and physician to the University of Pennsylvania, and he knows whereof he writes. It is a book of especial interest to parents, teachers and ministers and those who have the care and instruction of youth. 160 pages. John C. Winston Co.

BOYVILLE, by John E. Gunckel, President, National Newsboys' Association. This is a record of fifteen years' experience among the boys of the street. It is no dry statistical report, but a living, breathing, loving evidence of personal work which will be good for every one interested in the welfare of the "men of tomorrow" to read earnestly. The boy problem—how to save them—is the vital problem of today and this little volume will surely help the earnest ones to an elucidation of it. We cordially commend it to the attention of all thinking men and women. The illustrations are interesting. 219 pages. Price, 75 cents. The Toledo Newsboys' Association.

THE TEETH AND THEIR CARE, by Thaddeus P. Hyatt, D. D. S. In this booklet there is given information and instruction regarding the teeth and their care which it will be well for parents and boys and girls to heed. The six chapter headings are: Structure of the Teeth; Care of the Teeth; Children's Teeth; Relation of the Teeth to the Rest of the Body; General Remarks, and Conclusion. Each chapter is divided into paragraphs in which every phase of the subject from physical structure to the toothbrush and its use is discussed. The language used is simple and free from technicalities, and there are several illustrations. It is a book that ought to be in every home where there are children. 43 pages, nice, clean type and good paper. Price 55 cents, postage paid. Thaddeus P. Hyatt.

HELEN GRANT AT ALDRED HOUSE, by Amanda M. Douglas. This author's books need no introduction to the boys and girls of today, and those who have read the two preceding volumes of the "Helen Grant Series" will cordially welcome the third. We gladly recommend this book as one which ought to be on the special book shelves of the girls. The illustrations by Amy Brooks are good and apt. 339 pages. Price $1.25. Lothrop, Lee & Shepard Co.

Behavior for Boys

That humorous English publication, Judy, gives these rules; of course you see the joke.

At mealtimes it is as well to remember that fingers were made before forks.

Never hit a boy who is smaller than yourself—if he is stronger than you.

If you wear a high collar there is no necessity to wash your neck.

Never tell your master to his face things which it is safer to say of him behind his back.

Be moderate in all things, and remember that half a lie is very often better than the whole truth.

Never interrupt a fight, especially a dog fight. "Let dogs delight to bark and bite."

Be kind to animals and bearing in mind that man is the superior animal, be very good to yourself.

It is important that you should make yourself acquainted with the value of money and this can be easily acquired by starting a weekly allowance of pocket-money from the time you first go to school.

Hard study is apt to overtax the brain; be careful to avoid the possibility of such a calamity.

Never be afraid to own to a fault; at the same time recollecting that silence is golden.

Two wrongs do not make one right, so if another boy has been punished for your transgression, you will merely wrong yourself without benefiting him by raking up the embers of the past.

Be diligent at your meals, attentive to your games, and respectful to those armed with authority.

An Acknowledgment

The editor of THE AMERICAN BOY regrets that he is unable to more than acknowledge receipt in this sort of wholesale way of the many invitations to school commencement exercises that he received during June last. It gave him much pleasure to be remembered by the boys, and much regret that he was unable to spread himself over enough territory to be present at the graduating exercises of all his boy friends.

We Must Save the Bird That Sings

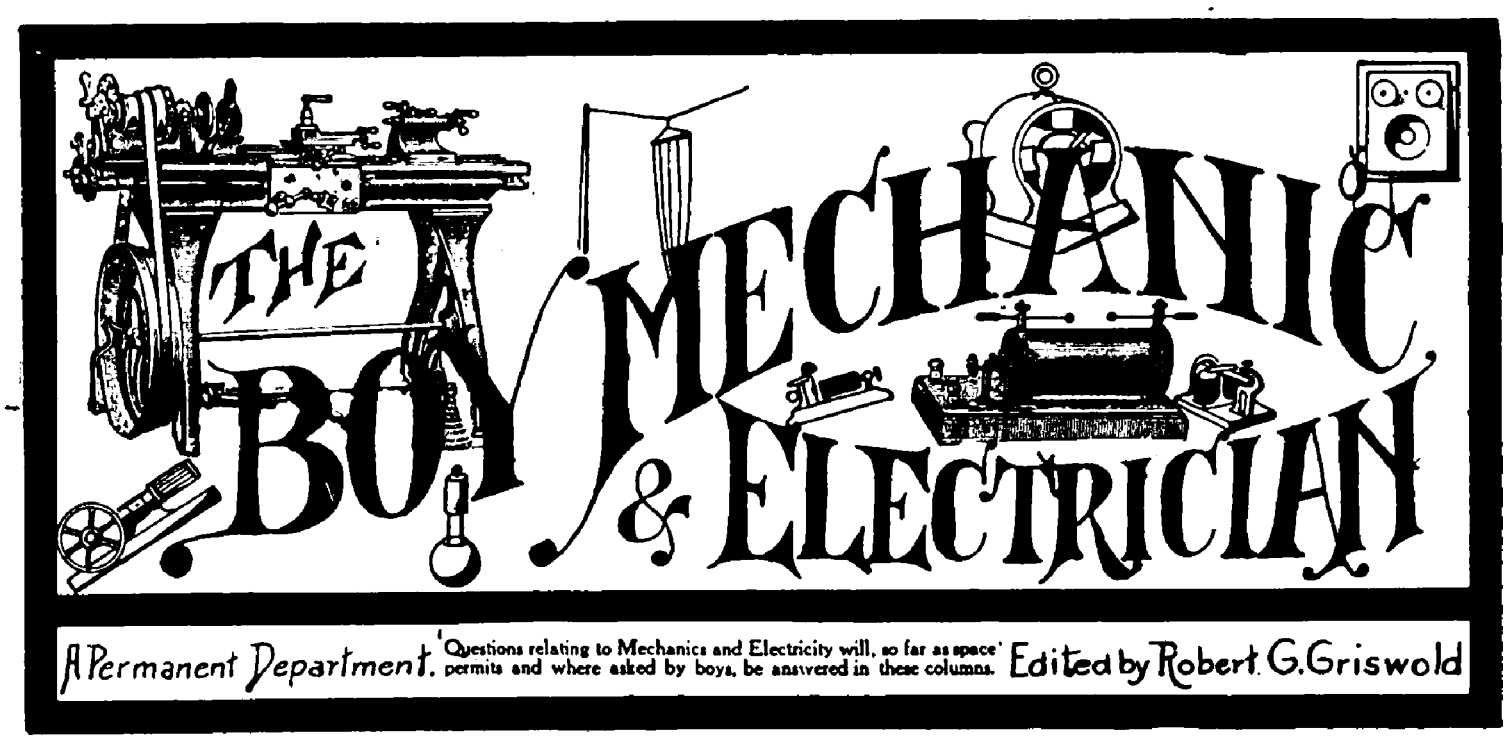
By AMY NICKERSON

A blue bird sang a gala song
And cheered the boys along their way;
Its little heart guessed not the wrong
That one small urchin did that day.

It never dreamed a thoughtless boy
Would steal a helpless blue bird's eggs,
Nor stop a song so full of joy
By breaking a wee bird's small legs.

And yet a bad boy stopped the song
Of one blue bird the other day;
He never can undo the wrong,
And so he's grieving at his play.

He knows how drear the fields can be,
Without the flash of one bird's wings,
And with the world has come to see,
That we must save the bird that sings.



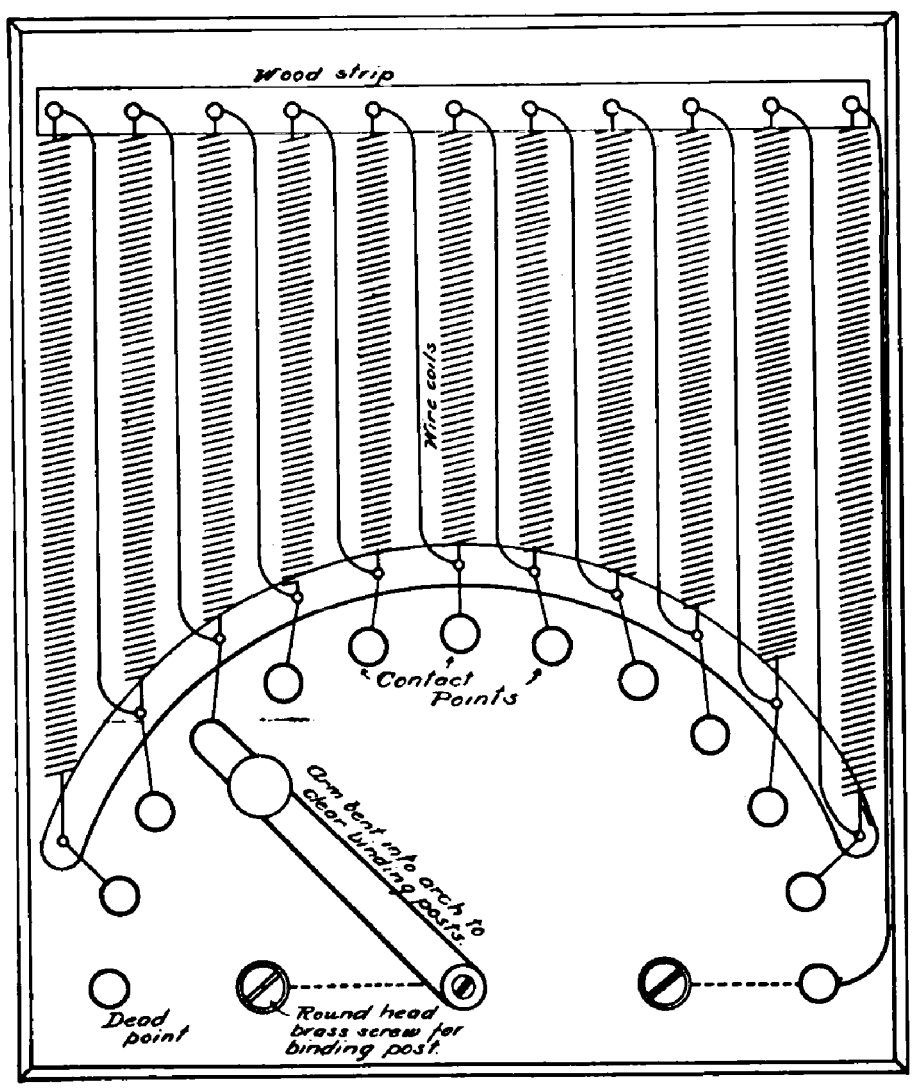
Experimental Lessons in Electricity—Lesson XII.

The Wire Coil Rheostat

Our last lesson dealt with the water-rheostat and we will now take up the more common form using the wire coils for varying the resistance. This is the type almost universally supplied for switchboard use, and in starting electric motors. For heavy currents very large wire is necessary, and a great deal of heat is given off for which provision must be made to prevent accidents from fire.

The principle upon which this form of rheostat is built is the varying of resistance by the introduction of a greater or lesser length of wire, generally of German silver. This is accomplished by having coils of wire so arranged that by moving a switch arm over a number of contact points throws one or more of these coils into the circuit.

The base a is made of hard wood and is 12 inches long, 10 inches wide, and 1 inch thick, well varnished. Upon this base ten coils of No. 18 soft iron wire are mounted as shown in the cut. German silver wire could be used but iron is cheaper and can be obtained at almost any hardware store or tinsmith's. Cut off eleven pieces, 4 feet 11½ inches in length, each of which will have a resistance of about two ohms. This will give a combined resistance of twenty-two ohms, quite sufficient for experimental purposes.



An arc of an 8-inch circle is now laid off on the board, with its center 1 inch from the lower edge and 5 inches from either side. The radius is four inches. This arc is now divided into twelve equal spaces, giving twelve contact points and one blank. These contact points are made by screwing round-headed brass wood-screws into the wood, afterwards filing them flat. The swinging arm is made of a strip of hard sheet brass, one end being free to move over the contact points, while the other is pivoted on a screw. A slight bend in the arm causes it to bend downwards and press firmly on the contact points. A small knob is fastened to the arm by a small screw passing through from underneath—this serves as a ready means for moving this arm.

Now take a lead pencil and wrap the pieces of wire into spirals, leaving about 6 inches of straight wire on one end of each coil for attaching to the next contact point. A row of screws is placed 1½ inches from the top to support the upper ends of the coils. A strip of wood 10 inches long, 1 inch wide, and ¼-inch thick is glued across the top as shown, which raises the wires off the base. At the lower end a piece of wood is cut to the arc of a 10-inch circle, ½-inch wide and ¾-inch thick, and glued in position as shown. When the coils are supported on these bridges they are clear of the wood, and the free circulation of air aids in keeping them cool when heavy currents are passing.

The first contact, 1, is left blank, and the arm always rests on this point when the rheostat is not in use. Point 2 then has the short end of the coil either soldered to it or squeezed beneath the head of the screw. The coil is then stretched until the end of the last turn can be caught under the first screw in the upper strip. Then the long end is bent to the right, fastened under a small tack and then passes down to the third contact as shown; both this end and the end of the second coil are then fastened beneath the third contact point, and so on until the eleven coils are mounted. The last contact point is connected with one of the binding posts and the pivoted arm is connected with the other.

Now when the arm is in contact with point 1, the circuit is broken and no current can flow, but, upon moving the arm to point 2, the circuit is closed and the current may pass through the whole ten coils which present a combined resistance of about 20 ohms. As the arm swings farther to the right, one coil after another is cut out until the last point is reached, when all resistance is cut out and the current travels through the arm only.

This rheostat may be fastened to the wall by screws and used for controlling motors and other experimental apparatus. The rheostat is always connected in series with a motor—that is, the current must pass through the rheostat before it goes to the motor.

QUERY BOX

Q. Can a five-bar telephone generator be converted into a dynamo if the fields are demagnetized and wound with wire, and the armatures re-wound with a larger wire and a commutator placed on the shaft?—C. D., Sutter, Ill.

A. A dynamo could be made in the way you mention, but it would be rather difficult to do and not a very satisfactory job after it was finished. It would be far better to make a dynamo of the regulation type, as the armature of magnetos are generally of the two-pole type, and unless run at a very high speed, the current derived from it would be very small.

Q. What are the elements used in tapperless coherers? If gas, what elements will produce it?—H. H. C., Portsmouth, Iowa.

A. From your question we suppose that you refer to the electrolytic and carbon types of coherer. Two carbon pencils with a super-imposed, steel needle will act as a very sensitive coherer. An electrolytic coherer is composed of a very fine, platinum wire dipped into a solution held in a carbon cup. We would refer you to some work on wireless telegraphy for further details regarding these instruments.

Q. What are the duties of an electrical engineer? An electrician? How much sal-ammoniac is necessary to recharge a dry battery?—M. S. G., Atco, Pa.

A. An electrical engineer is one who designs lighting and power plants, and electrical apparatus, while an electrician is one who carries out mechanical details of such work and does the manual part thereof. He bears somewhat the same relation to an electrical engineer as a machinist bears to a mechanical engineer. Dry batteries may be recharged by saturating the material inside of them with a saturated solution of sal-ammoniac in water.

Q. Could a telephone receiver be used in place of the galvanometer used on the Wheatstone bridge described in THE AMERICAN BOY? Could this bridge be used in testing telephone lines to determine whether the wires were grounded or not? Would the noise on lines affect the telephone receiver, and if so, how could it be remedied? Would not the resistance of a voltmeter to test 110 volts or higher, have to be more than when it was used to measure only small forces? Where could I get some books on Chemistry for home experiments? Will the experiments which are to be in THE AMERICAN BOY take up all the chemistry that a common text-book would? How many pounds of tin foil will it take to make a condenser for a ½ inch and an inch spark coil? What is the difference between "Jump" and "Butt" spark? Will a two-bar telephone generator operate a ½-inch or inch spark coil? What is the size of the enclosed sample of German silver wire? Will it do for the Wheatstone bridge?—S. Y., Damen, N. Y.

A. The telephone receiver might be used in the place of the galvanometer in the Wheatstone bridge, but we doubt if it would be as successful, as the current flowing when the instrument is nearly in balance is extremely small, and without some arrangement for making and breaking the current rapidly, so as to produce a buzz or click in the receiver, we doubt if the results would be as satisfactory as when the galvanometer is used. This bridge can be used to test telephone lines, but, of course, it is not as convenient as the regular bridges that are made for this work, wherein the various resistance coils are so arranged that they may be thrown into the circuit. With the bridge described, you would have to carry quite a quantity of resistance coils, so that they might be substituted when needed. The resistance of a voltmeter for testing high voltages is necessarily higher than that used for low voltages, as high voltages would force such currents through a low resistance as to injure the instrument by burning the coils. We know of very few books that are written for home experiments in chemistry, but you could probably obtain such a list from some publisher of technical books, such as Van Nostrand, of New York. The experiments to be carried out in this series of talks in THE AMERICAN BOY will take up the most of the work that is given in common text books, but, of course, there are many experiments which cannot be performed without the aid of a well equipped laboratory, which most of our readers do not have at their command. One pound of tin foil would be ample to make the condenser for coils of the size you mention. We presume by the word "Butt" that you refer to the "make and break" spark. The "jump" spark is caused by a break in the secondary circuit of an induction coil, where the high tension current jumps from one terminal to the other, which ignites the charge within the gas engine cylinder. The other spark, which is commonly known as the "make and break," and which you have termed the "butt," is made by bringing the two terminals of a gap in a primary line together, and suddenly breaking them apart. The primary line passes around the core of iron which is magnetized. The instant the current is broken this magnetism, in passing from its maximum to a zero condition, creates a current in the circuit which causes a very heavy spark at the terminals. The two-bar telephone generator would not operate a spark coil. The sample of wire enclosed is No. 26, and would do for the Wheatstone bridge.

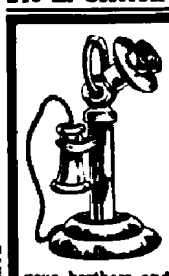
ELECTRIC SCIENTIFIC NOVELTIES

Small Dynamos, Gas Engines and Miniature Electric Railroads and Trolley Cars.

Our Catalogue "B" contains much of interest to young electricians.

THE CARLISLE & FINCH CO.
240 E. Clifton Ave. Cincinnati, O.

BOYS
this is the smallest
Telephone



in the world and is an exact reproduction of the Standard Desk 'Phone. You wear them on your watch chains. They are beautifully finished. Buy one for your brothers and fathers. **Miniature Telephone.** Price complete, 25c; 20c and this "ad" will get one. SMITH & HEMENWAY CO., 108-110 Duane Street, New York.

ENGINEERING

Offers the broadest field of development to the ambitious young man. Our courses in Civil Engineering, Mechanical and Electrical Engineering fit you for the very highest paid positions in the world. Will you take the first step? Simply clip this advertisement, mail it today, and receive FREE our 200 page hand-book describing our 60 courses in Engineering work. It

IS WORTH WHILE.

Do not delay but write now.

American School of Correspondence, Chicago, Ill.
(Am. Boy, Sept.)

Electric Motor 65 Cents

Runs with wet or dry battery; positively the best motor on the market for the price, 65 cents, packing and postage 15 cents.

Reversing Motors, Experimental Dynamos, Telephones, Novelties, Etc. *Catalogue Free.*

ARROW ELECTRIC CO., 105 S. Canal St., Chicago

Every Boy His Own Toymaker

Greatest boys' book ever written. Tells how to make a Steam Engine, a Camera, Windmill, Microscope, an Electric Telegraph, Telephone, Magic Lantern, Boats of every kind, kites, balloons, toys, wagons, bows and arrows, stilts, animal traps, etc., etc. Over 300 pictures. Every boy should have this great book. Price only 10 cents, postpaid, 3 for 25 cents.
W. H. MILLER & CO., St. Paul, Minn.

ELECTRIC SUPPLIES, TELEPHONES, NOVELTIES. Catalog of 200 Free. If it's Electric we have it. Big Catalog 4c
OHIO ELECTRIC WORKS, Cleveland, O.
The World's Headquarters for DYNAMOS, MOTORS FANS, TOYS, BATTERIES, BELTS, BELLS, LAMPS, BOOKS
We Undersell All. Want Agents.

WONDERFUL 10c. WIRELESS TELEGRAPH

With our little outfit you can send messages across a large room or from one room to another complete with Morse Alphabet and full instructions 10 cents.
PEERLESS MFG. CO. Dept. 21, Norwalk, Conn.

Build Mission Furniture

For pleasure and profit. We teach you how by the HOUCK EASY SYSTEM. We furnish plans showing exact size and shape of every piece, give complete directions how to make from start to finish, tell what tools required, etc. So simple anybody can make. Boys and young men acquiring lots of money by making furniture from our designs and selling it. Particulars free.
Houck Furniture Pattern Co., Dept. AB, Dayton, Ohio

ELECTRICAL SUPPLIES

Anything and everything electrical. We make a specialty of Mail Orders. Telegraph instruments $4.25 up. By mail Fifty cents extra. Write for special prices on anything electrical you wish. Address MILLER & SANDS Electrical Co., Agents, Hermitage Road, R. F. D. No. 4, Richmond, Va.

LEARN TELEGRAPHY BY MAIL at Home. Automatic Self-Teaching Instruments send messages while you copy. No charge for tuition until position secured. Write today.
Southwestern Telegraph Institute, Box 281-A, Dallas, Tex.

The Success of One Boy

Louis Benchart is the name of a boy who has learned early to grasp his opportunities and get ahead in the world. He is a good example of not what can be made of a boy, but what a boy can make of himself, for what he has succeeded in doing is largely the result of his own efforts.

Louis is not quite seventeen, but he is drawing a man's wages—$65 a month—as billing clerk for a railroad company at Cincinnati, Ohio.

The young man did not reach this position by simply wanting it, but by patient toil and by looking out for the main chance. After graduating from the grammar grade in the public school he took part of a "paper route" at 75 cents a week. Later he secured a position as messenger boy with the Western Union Telegraph Company at $12 a month, working after school hours. While in this position he kept a sharp eye out for everything about the office, was kind and obliging to every one, and gave a helping hand wherever he saw it needed. Thus it came about that when he graduated from the grammar school he was ready to enter the Normal school at Marion, Ind., where in ten weeks he was ready to take up work as telegraph operator and billing clerk. Then, instead of looking about for a position where a big salary might be earned at the start, he took one without pay in order to gain experience. Soon he found himself called to a higher place, the second highest position in an office of men. It goes without saying that he has no bad habits.

This boy presents a fine example of what prompt and willing attention to duty and an obliging, helpful spirit will do for a boy.

QUERY BOX—Continued.

Q. Can a 500 ohm telephone induction coil be used on a wireless outfit? What is the voltage of a No. 2 Sampson sal-ammoniac cell? Will a three magnet telephone generator light a small lamp? In making the voltammeter described in the November number, can oak be used as the bobbin?—F. W., Eau Claire, Wis.

A. No. About 1.8 to 2 volts. It might if run at sufficiently high speed. Yes.

Q. In performing the experiments with oxygen I have had some difficulty in having my jars broken during the burning of the steel. How can this be prevented.—S. W., Raleigh, N. C.

A. The breaking of the jar is due to the pieces of molten steel falling against the sides or bottom of the glass. If you will place a layer of sand in the bottom of the jar, or a little water, you will not experience this difficulty.

Q. How is a three-pole armature wound and connected in a toy motor? I have had trouble with the way I wound mine, and wish to wind it correctly, so as to have it run as a motor.—N. A., Austin, Texas.

A. The poles are wound in series, each one being wound in the same direction, and the wires passing from the inside layer of one pole to the outside layer of the next pole, connecting with one segment of the three segment armature.

Q. How is a selenium cell, such as is used in wireless telephones, made? Is there a successful telephone relay used on telephone lines that corresponds to that used on telegraph lines?—F. B., Cooksville, Ill.

A. We should advise you to purchase some work on wireless telephony, as this would give you full information regarding the construction of the various selenium cells. We have not space in our columns to take up this description. Selenium, while not exactly a non-conductor of electricity, is not a good conductor, and is used in this work, owing to the fact that its resistance varies with the intensity of light that strikes upon it. In regard to your second question, we would refer you to some electrical paper, such as the "Electrical World and Engineer."

Q. I have an induction coil four inches long and 1½ inches in diameter, but it does not give any spark with three dry batteries. The contact points are of platinum and the vibrator is in good shape. It gives shocks that a person cannot endure. For a condenser I use a pint fruit jar as described in THE AMERICAN BOY. How large a spark should this give?—C. F., Lawrenceburg, Ind.

A. The coil is too small to give any perceptible spark. Your condenser is not large enough and the fact that the coil does give shocks shows that it is in good working condition. You must have a larger coil if you expect to get sparks from it. Three dry batteries will hardly furnish sufficient current for you.

Q. Can a motor be used to run as a dynamo? What is done with the ends of the armature wires? To what are the field wires connected? What is meant by series lighting? What is the black powder inside of dry batteries. What do the initials E. M. F. mean?—A. R. S., West Union, Iowa.

A. Yes. No change in connections need be made. The current is allowed to enter the dynamo in such a manner that it will pass through the field and armature winding in series, or split in entering, part passing through the field and part through the armature. A machine using the former method is known as a series (wound) machine, and the latter, as a shunt-wound machine. Series lighting means that the lamps are all connected in series, and the current that passes through one passes through all. In the event of one being extinguished, they are all extinguished. The black powder inside of dry batteries is a mixture of granular carbon and black oxide of manganese. The initials E. M. F. mean Electro Motive Force.

Q. How many pounds of steam does it take to run a horse power engine?—E. C. K., Elmwood, Ill.

A. While we believe that we understand what you wish to know by your question, it is hardly in the form that it should be. We presume that you wish to know what steam pressure is necessary to operate a 1 H. P. engine. This depends entirely upon the size of the engine, as a small engine with a very high pressure of steam will develop this power and so will a very large engine with a small pressure of steam. On the other hand, if you wish to know what the consumption in steam would be, would state that it is impossible to give any definite figure, but in all probability, a small engine of 1 H. P., of the ordinary construction, would consume from thirty to fifty pounds of steam per hour.

Will a ⅛ H. P. dynamo generate enough electricity to light a 300-candle power lamp? Could the dynamo be connected with a motor so that the motor would operate the dynamo and the dynamo would furnish electricity to the motor? How strong would the motor have to be?—W. C., Traverse City, Mich.

Ans.—No, a ⅛ H.-P. dynamo would not operate a 300-candle power lamp. The general rule is to allow ten 16 power lamps to the horse-power, and this would be an aggregate of 160-candle power, while your lamp would require twice as much current, and would therefore require nearly 3 H.-P. Your question regarding the connection of the dynamo and motor, so that they would run each other, is one that has been asked several times, but this is not possible. This would be a perpetual motion machine and it is impossible to make any machine that will overcome its own frictional losses, and it would always require a little more power to operate the dynamo than the power derived from it in electricity. This is due to certain frictional losses which cannot be overcome. Therefore your scheme would not be practical in any sense.

Q. In winding an induction coil, should the winding be stopped when the outside diameter of the coil becomes three times the diameter of the core? Will it give any more current to wind on more wire? If this is not correct, kindly tell me the proper rule. In a wireless telegraph, how long a spark does it take to send the vibrations a mile? Does a direct current spark of equal length, have the same power to send vibrations as an alternating current spark? Will a static electric machine have the same strength to send vibrations as a spark from an induction coil or direct current generator? Does a fat spark have the same strength for making vibrations as a thin one of the same length?—R. P., Monrovia, Cal.

A. The power of an induction coil lies in the ratio between the primary and secondary windings, and there are different rules followed by different makers. We do not think that the coil, outside diameter of which was only three times that of the core, would be very efficient. We would advise you to purchase some book on coil making which would give you the information you desire. The length of the spark is not what is sought after in sending messages for any distance. In the first place, when these vibrations are once set up, they continue through space indefinitely, but in order to detect the messages at any prescribed distance, the receiving apparatus must be very sensitive, and it will be necessary to have the coil give out vibrations of sufficient strength to affect the receiving apparatus at the terminal station. While a static electric machine will cause these vibrations, the spark is not as readily controlled as in the case of an induction coil, and we do not think, therefore, that it would make such a good generator in wireless work. It is the short, fat spark that is sought after, as the long thin one does not set up such powerful vibrations.

A YOUNG BOAT BUILDER

David Shontze, Jr., Quincy, Ill., age eleven, sends us a picture of a boat that he built. The boat is 6 feet long and 2½ feet wide, and is built on the Brooks system. He thinks it is good for a beginning, and we agree with him.

CLEVER WORK WITH THE POCKET KNIFE

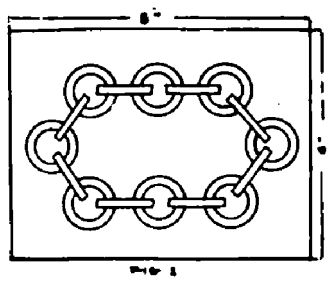
By JOHN L. DOUGHENY

Other articles by Mr. Dougheny have appeared in the July, September, October, November and December numbers of 1904; and in the January, February, August, September, October and December numbers of 1905; and in the July and August numbers of this year.

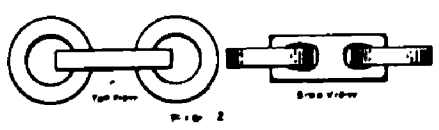
No. 13—The Wooden Necklace

BOYS, WE have whittled many seemingly impossible things in the past year, but never anything so baffling and mysterious as this design which, for want of a better name, we will call "The Wooden Necklace." One glance at the finished article and we are ready to declare that it cannot be whittled out of one solid piece of wood; but upon studying the text and drawings it all becomes surprisingly simple. I want you to read it thoroughly enough to comprehend every step of the work, even if you do not care to do the actual carving. It will benefit you as much as any lesson in arithmetic or algebra.

As usual, our choice of material is basswood, white pine or poplar. The size of the block we begin with is eight inches

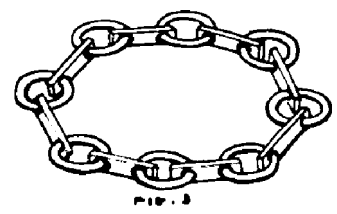


long, six inches wide, one-half inch thick. The first step is to mark out a diagram that will guide us in the cutting. It is a simple series of rings connected by horizontal bars that extend nearly into their centers, as shown in Fig. 1. There are eight rings in all and the size for this job is one inch inside diameter. You can whittle smaller ones when you have more practice. After we have marked the block we can cut out the parts outside the lines. The rings and bars are left intact and all the rest is carved away. Be sure and rest the block on a solid surface while working on it. If you hold it in your hands you will probably break it or cut your thumb. Use the large

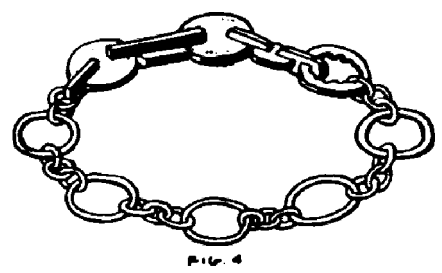


blade of your knife and take out small splinters about the size of a grain of wheat.

The slant bars on each side will require special attention on account of their short grain. Now we will take the central ring or any ring will do for that matter, for all are the same, and whittle away the parts that when removed will free the ring or make it movable like the link of a chain. It is very easy to do this if you only go about it right. Drawing number 2 parts "a" and "b," make the process very plain. This figure shows the two rings detached from the rest. If you are a steady reader and have followed any of our chain designs you will readily grasp the idea. For the benefit of beginners we will describe it in detail beginning where we left off in Fig. 1. The advice given applies with equal force to all the rings and bars. The safest way to work is to lay the block you are whittling on a solid table. I would even recommend that you clamp it or screw it down solid on the table. After cutting the block into the shape of rings and bars we begin to shave down the rings, that is to reduce them in size, till it is cylindrical or round and about as large in diameter as a lead pencil. A small and very sharp blade is required for this purpose. If you cannot obtain one use sandpaper to cut it down. A big piece of sandpaper would be clumsy for this work, so use judgment and cut it into narrow strips. Double one of the strips over the top of the finger and rub lightly. This is a slow method, but it insures neat work. When the rings have been reduced to the proper size, as in Fig. 2, the problem of loosening the bar becomes very simple. It is obvious that all we have to do is to cut away the center, leaving a margin about one-eighth of an inch in width. You cannot do this bit of carving while the piece rests on the table, so you must be very careful. When you have made it free on one side go to the other and repeat the process. It is simply a case of whittling the parts into the shape of a ring and bar respectively. When you have done this they will be interlocked. The other sections are identically the same with the exception of the end rings. These differ only in the fact that there are two links



or bars connected with each of the end rings diagonally. The cutting out, although a little more difficult, is essentially the same. It is well to cut this hard part first, so if you break it you will not have done so much for nothing. Fig. 3 shows the design complete. I wish to impress you with its simplicity. It is intended for the average boy and can easily be whittled out in a few hours. It would be easy for us to draw some complicated and fantastic design that would look very nice on paper and still fail entirely in its purpose. We deal only in things that can be whittled; that we know for sure can be made. We had this idea strongly in view when we designed this and we even carved it out ourselves to make doubly sure. You can do as directed here even if you have never worked with a knife before. Try your hand at this art. It is fascinating and beneficial. The last picture shows how easy it is to elaborate on a simple thing. We close with the oft repeated advice to give the finished article a coat of oil.



A Puzzle in Division

Daniel Brimm, of Rock Hill, South Carolina, sends us the following: A man who had seventeen fine horses left a will on his death giving to his eldest son one-half the horses, to the second son, one-third of them, and to the third son, one-ninth of them. After puzzling over the strange will for a long while and being unable to make the division without cutting three of the horses, the sons took it to the king, who called his wise men. The wise men were also puzzled, but one old fellow asked that the horses be left there over night. When the brothers returned in the morning the horses were standing in a row with one of the king's horses by them. The king told the eldest boy to take one-half, which was nine; the next to take one-third, which was six, and the youngest to take one-ninth, which was two. The king then sent his horse to the stable.

Well—What Are You Going to DO About It

The Coupon Below Has Brought Higher Wages to More Than 75,000 Poorly Paid Men. Why Not to You

Here it is again, this big opportunity. Now, what ARE you going to do about it? If you had filled out the coupon the first time you saw it, it's likely you would be holding a high-class position to-day. Within this past year, a host of people no better educated, no better off than yourself, have started on the road to success by way of that coupon, and many of them are already earning larger salaries.

Are you going to keep putting this off till it's everlastingly too late? Or will you fill out the coupon THIS time and begin getting ahead in the world? If you just make up your mind now that you are going to be better off at this time next year the INTERNATIONAL CORRESPONDENCE SCHOOLS will make the way easy for you, will bring to you by mail the training required to fit you quickly for a responsible position in one of the occupations listed on the coupon. The I. C. S. will **bring** this training **to you**, mind, at your home, in your spare time, without interfering with your present duties.

Just read that coupon again—and DO something about it.

International Correspondence Schools'
Box 1278, SCRANTON, PA.

Please explain, without further obligation on my part, how I can qualify for a larger salary in the position before which I have marked X

THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November (1905) number. No. I of the Series was Ulysses Simpson Grant; No. II, David G. Farragut; No. III, Benjamin Franklin· No. IV, Abraham Lincoln ;No. V, John Adams; No. VI, Thomas Jefferson; No. VII, Ralph Waldo Emerson; No. VIII, Henry Ward Beecher; No. IX, Nathaniel Hawthorne; No. X Robert Edward Lee.

No. XI--Daniel Webster

AMONG those who received grants of land from Governor Wentworth of New Hampshire, when the ceding of Canada to England in 1763 brought an end to the war with France and the depredations of its Indian allies, was Ebenezer Webster, whose descent from Thomas Webster, who came from England in 1636, is traced in the church and town records of Hampton, East Kingston, and Salisbury, now Franklin, in New Hampshire.

Ebenezer had enlisted and served during the French and Indian war, and had marched with the Provincial forces into Canada. Because of his faithfulness and bravery he had been promoted to the rank of captain.

At the conclusion of the war Captain Webster with his wife and children blazed a path deep into the then trackless forests of New Hampshire, and became one of the earliest settlers of Salisbury. Here he built a small, rough, log cabin and began to wring a scanty living from the barren, rocky soil.

During the War of the Revolution, also, Captain Webster distinguished himself as a patriot and gallant soldier. Immdiately on war being declared he called a meeting of his fellow townsmen and obtained eighty-four signatures to the following pledge which he wrote out: "We do solemnly engage and promise that we will, to the utmost of our power, at the risk of our lives and fortunes, with arms, oppose the hostile proceedings of the British fleets and armies against the United American Colonies." Then at the head of the Salisbury militia he marched to join Washington's army before Boston in 1775, and conducted himself as a gallant and efficient soldier throughout the war.

His first wife having died, leaving him with five children, Captain Webster married Abigail Eastman, a native of Salisbury, of Welsh descent. As his financial affairs had somewhat brightened, the captain was able to bring his new bride to a frame house instead of the little log cabin he had hitherto called home. The new house, long since disappeared, was just a sample of the better class of farm houses of that period. From an old print it appears to have been one story in height with the usual attic, having a door and two windows in front and three windows at either end. The kitchen was added to the rear. On the first floor there were four rooms and the attic was divided into bedrooms. Near the house grew a number of large elm trees, from which it was called Elms Farm.

Captain Webster was a man of distinguished appearance, over six feet in height, of stalwart form and erect military bearing. He had large features with black hair and eyes. He was a man of great firmness, energy, and decision of purpose.

It was at Elms Farm, on January 18th, 1782, that Daniel Webster was born. His brothers and sisters numbered nine, he being the youngest son.

Daniel's childhood years would in all likelihood differ in no rspect from that of other children reared in New England farm homes. His earliest recollections would be of horses, cows, and poultry. One place, indeed, that was a never-ending source of delight to him was the old well which his father had digged when he built his home. It was of considerable depth, and for convenience in drawing water was fitted with a long sweep having a bucket attached in which the cool, clear water was drawn.

Captain Webster's poverty was a source of great regret to himself, because, knowing from his own experience how hard it was for boys to attain success in life without schooling, he was anxious that his children should have an education. Especially did he desire that his youngest son, Daniel, who as a boy was anything but robust, often ailing and sickly, should get such instruction as might fit him for easier work than the heavy labor of the farmer. It was due to this delicacy of health that Daniel's chores were lighter than those of his brothers, and that while they were out in the fields his time was spent with his mother, who became his first teacher.

Mrs. Webster was a woman fitted to be the mother of an illustrious son. With a good education, more than ordinary intelligence, and intense pride in her children, she was ever urging them to noble deeds and high aims. Equally with her husband she was willing to make any sacrifice that the boys should have an education. It is certain that Daniel, he being the youngest and brought more under his mother's direction, gained from her teachings and wise counsels that inspiration which made him eager to study and win success in life. The mother, far more than the father or school teacher, exerts a molding influence on the young.

Salisbury possessed three schoolhouses of the usual rude log house type. There was only one teacher for the three schools, so that each was only opened during four months in the year, and pupils who wished to continue their studies had to go from school to school. The teachers were not men of high attainments; the majority, indeed, were only qualified to teach their pupils simple lessons in penmanship, elementary arithmetic, and English.

Daniel was at once enrolled as a pupil in one of the schools and was most regular in attendance. With his books and dinner pail, the little fellow, hardly more than a child, walked two to three miles to the schoolhouse along bad roads, in all kinds of weather, and even in the midst of winter, then home again in the evening. It may be said that if Webster's parents sacrificed to send the boy to school, Daniel made some sacrifice also. What a contrast between the difficulties in obtaining an education then with the facilities of today; and yet even to walk a few blocks to school along good sidewalks is considered by some parents a hardship for their boys.

Daniel's school days began when he was between three and four, but even at that age, thanks to his mother's teaching, he was able to read. Many years after in a letter referring to his education he says, "I have never been able to recollect the time when I could not read the Bible."

Three teachers are mentioned as having had part in the instruction of young Webster, but it does not appear that any one of them exercised much influence upon him. He was passionately fond of reading and eagerly read every book that came into his hands. These were not laid aside after one reading, but were gone over again and again until memorized. The story is told that one day when Daniel was about eight, he was sent with his brother, Ezekiel, to the village store to make a purchase. His attention was attracted to a large cotton handkerchief with words printed on both sides of it. On asking the storekeeper what the printing was he was told that it was the Constitution of the United States. It is probable that the boy knew what government was, but he did not know anything about a constitution. His interest was aroused; it was reading, and reading matter was scarce. He enquired the price and was told twenty-five cents. Although that sum was the total of his savings, gathered together in hardly won pennies, he at once paid it over and became owner of the handkerchief. That evening, sitting by the log fire, Daniel drew forth his purchase. His father saw it and enquired, "What is that you have, Dan?"

"It is a handkerchief with the Constitution of the United States on it," was the reply.

"What did you pay for it?"

"Twenty-five cents, father."

"Well, well," said Captain Webster, "you might have spent your money more foolishly. It will do you no harm to read the Constitution of your country."

The remainder of that evening was spent in the reading of that Constitution of which he was one day to be the greatest upholder.

Mr. Hoyt was the last of the Salisbury schoolmasters under whom young Webster was a pupil. His ability as a teacher did not extend beyond spelling, simple English and the primary rules of arithmetic. He was, however, a fine penman and a good reader, and as Mr. Webster afterward said, "did teach boys that which so few masters can or will do—to read well themselves." In two years the pupil was as far advanced as was his teacher.

The few books in his home or in the little circulating library of the town, to which young Webster had access, would not be of much interest to the average boy of today. The Bible was, of course, read again and again; then came Shakespeare, Pope, the Spectator of Addison and Steele, and others. Before he was fourteen he could repeat the whole of Pope's Essay on Man. If any of my readers thinks this an easy task let him try it. Poetry, especially the Psalms and church hymns, he also delighted to read and memorize. So well did he become acquainted with the contents of these books, and so retentive was his memory, that there is hardly one of his great speeches which does not contain some quotation from them.

Notwithstanding Daniel Webster's fondness for books and reading, he was very much of a boy, and enjoyed everything in the shape of sport or play that other boys enjoyed. He tells about nutting excursions, hunting squirrels, and swimming; of skating, sledding, coasting and ice hockey. So fond was he of coasting that on one occasion he forgot how extremely cold it was, with the result that the toes of both his feet were so badly frozen as to keep him at home for some time. Wholly interested in his boyish fun, he sometimes was late for school, and once or twice played "hookey," thus calling down a stern reproof from his father, which made Daniel afterward remark: "There was great fun in sliding down hill, but there was not much fun in hearing my father scold, when I staid out of school to enjoy it." Fishing was his favorite sport as a boy, and with his special chum, an old soldier who lived in a little cottage on the edge of Elms Farm, and had a boat, would fish in the Merrimac all day long. He never lost his liking for fishing and hunting. Many stories are told of how, when he had become a great statesman, he put on his old clothes and large boots, and with fishing pole and bait can settled down on the bank of some stream and patiently watched the bobbing of his cork as if grave matters of state and government never existed. It was this open-air life and the vigorous, healthful exercises which he enjoyed that gradually turned the puny, sickly, delicate boy into the strong, healthy, robust man.

A young lawyer named Thomas W. Thompson, who had "hung out his shingle" in Salisbury and become acquainted with young Webster and his love of reading, proposed to his father, who was now called Judge Webster, that the boy should come into his office and keep it open for callers while he was out. The chance this opened of going through Mr. Thompson's bookcase caused Daniel to accept. With the assistance of the lawyer Daniel obtained some knowledge of Latin.

At the age of fourteen young Webster was entered as a pupil in Exeter Academy, the president of which was Benjamin Abbott, LL. D., a man highly regarded as an educator. The old gentleman was exceedingly dignified and pompous, so that interviews with parents and scholars were conducted with great ceremony. On Judge Webster appearing before him with Daniel, the principal, putting on his official hat, said: "Well, let the young gentleman be presented for examination."

The raw young country lad was put forward.

"What is your age?" asked the principal.

"Fourteen," was the reply.

"I will examine you first in reading. Take this Bible and read the twenty-second chapter of Luke."

Let my readers look over this chapter and they will find that no better one could be found to test the powers of a reader. Daniel took the book and began to read in clear, sonorous tones with such exact enunciation, perfect emphasis, and reverent feeling that while but a few verses were generally required as a test, the principal was so absorbed in listening that he allowed the boy to finish the chapter; then Dr. Abbott only said: "My lad, you are qualified to enter this institution."

Daniel was only nine months at Exeter Academy, but so well did he employ his time that he gained a thorough knowledge of grammar, arithmetic, geography, and rhetoric, and also made considerable progress in Latin. This was a course of study ordinarily occupying two school years.

It is a curious fact that notwithstanding the world-wide reputation of Daniel Webster as an orator and public speaker, as a boy he could not get up sufficient courage to make a declamation. In one of his writings referring to his stay at Exeter Academy, he says: "I believe I made tolerable progress in most branches which I attended to while in this school; but there was one thing I could not do—I could not make a declamation; I could not speak before the whole school. The kind and excellent Buckminster [an assistant teacher] sought especially to persuade me to perform the exercise of declamation, like other boys; but I could not do it. Many a piece did I commit to memory and recite and rehearse in my own room, over and over again; yet when the day came, when the school collected to hear the declamation, when my name was called, and I saw all eyes turned to my seat, I could not raise myself from it." How well he rid himself of his diffidence or stage-fright, his matchless orations, in the delivering of which he held immense audiences spellbound while he himself was calm and self-reliant, fully tell. It was done simply by application and a strong resolution to conquer; and therein lies the secret of power for boys of today who think because of some slight defect they can never succeed. It is well said that "Nothing can resist a determined spirit."

Young Webster's countrified appearance was the cause of many jibes and sneers from his city schoolfellows, better dressed and more polished in manner, but the ease with which he overtook and passed those ahead of him in his classes speedily turned their ridicule into respect.

Because of poverty Judge Webster took Daniel from Exeter and placed him under the Reverend Samuel Wood of Boscawen, who prepared boys for college, where the charge for fees and board is said to have been as low as one dollar a week. On the way to Boscawen Daniel was told for the first time by his father that he was to go to college. The announcement was so unexpected and so far beyond his hopes that emotion choked him and he could not speak. As he says: "A warm glow ran all over me, and I laid my head on my father's shoulder and wept." Think of it, boys! a poor, country lad so overcome with joy at the prospect of more study that he wept! I am afraid that there are many boys today, indeed, I know some, who would receive such news with altogether different feelings.

While Daniel in gratitude for his father's kindness applied himself with the greatest earnestness to his studies, he found it so easy to learn that he had considerable spare time. This he spent out-of-doors, in the fields, in the woods with his gun, or along the streams with his fishing pole. Dr. Wood thought that such outings caused him to neglect his studies, and one day ordered him to prepare and recite one hundred lines of Virgil as a punishment. The boy sat up nearly all night at his book. Next day he recited his lesson with the utmost correctness. "Very well," said the Doctor.

"But," said Daniel, "I can recite more."

"Go on, then," was the reply.

Another hundred lines was recited, and the master complimented him, but the boy said, "I have not yet done," and still another hundred lines were reeled off. At its conclusion Doctor Wood was about to close the book, when he was told, "I have learned still further."

"Pray," said the astonished master, "how much have you read?"

"I can give you another hundred lines and five hundred after that; I can recite to the end of the twelfth book," said the lad.

"I think that will do for today," replied the Doctor; "and, Daniel, you may have all the rest of the day for shooting."

At Boscawen, Daniel first saw Cervantes's book Don Quixote, and in telling about it says: "I began to read it, and it is literally true that I never closed my eyes till I had finished it." Another author he studied with pleasure was Cicero, the greatest of ancient Rome's great orators. In Greek he went through the grammar and could read the Greek Testament. In addition he acquired a fair knowledge of mathematics.

In August, 1797, Daniel Webster entered Dartmouth College to become her most illustrious son. He was only fifteen years of age, but he had already resolved to make the most of the opportunity which the loving self-sacrifice of his parents had given him. One of his professors writes: "While in college, he was remarkable for his steady habits, his intense application to study, and his punctual attendance upon all the prescribed exercises."

In college, as at Boscawen, Webster's favorite studies were English literature, Greek and Latin. Another branch of study of much interest to him was constitutional history, especially that of the United States. So thoroughly, indeed, did he master this subject that historians call him the Expounder and Defender of the Constitution.

Webster joined "The United Fraternity," the leading college society. In its debates and literary exercises he completely conquered his boyish timidity, distinguishing himself as both a writer and an orator. He was called upon and delivered an oration on The Fourth of July before the members of the college and citizens, which was high honor for a lad of sixteen. It may be of interest to those boys who desire to become public speakers to know how Webster prepared his addresses: "He arranged his thoughts in his mind while in his room or in his private walks, and put them upon paper just before the exercise was called for. He spoke with ease, and his movements were calm and deliberate, except when his feelings were aroused; then his whole soul kindled into flame."

During the winter vacations he taught school in order to defray his own college expenses and assist his brother, Ezekiel, to get an education. He graduated in 1801, being nineteen years of age, and then went to Fryeburg, Maine, to teach school. His salary was only three hundred and fifty dollars, but he saved almost all of it by acting as assistant to the county register of deeds, the money from this work paying his board bill and other expenses.

In September, 1802, Webster re-entered Mr. Thompson's office to study law, remaining there until 1804, when he went to Boston and entered the office of a distinguished lawyer, Honorable Christopher Gore. Here his opportunities for obtaining a wider study of his profession were eagerly seized. Having access to a good library, and being allowed to attend the sessions of the Circuit and Supreme Courts, where he listened to discussions and arguments by the most able counsel, he was in a short time,

DANIEL WERSTER

TWO THOUSAND SHUT-INS TO HAVE THE AMERICAN BOY

The hand of the clock moved between July 9th and August 8th from $166 to $237.18, showing that between these dates a little over $71 was contributed by the readers of THE AMERICAN BOY and by its publishers to provide shut-in boys with annual subscriptions to THE AMERICAN BOY. From June 4th to July 9th the jump was $83, showing that during the month just past the boys have not done quite so well as they did in the month previous. Ninety-six boys contributed for the month ending August 8th, the amount contributed being $35.50. To this we add our own contribution of a like sum, making the total jump for the month $71.

We are wondering if we have made a mistake in estimating the liberality of our boy subscribers. We figured that the boys would contribute by the first of next January $1,000, to which we would add our own one thousand dollars, thus making a total of $2,000 that would supply THE AMERICAN BOY to 2,000 shut-ins for a year. But at the present rate we shall fall far short of the figures set.

We hope that with the coming of cooler weather the boys will become more interested in this laudable project and be a little more liberal. There are nearly 250,000 boys reading THE AMERICAN BOY. It does not seem possible that less than 500 of them—which will be the number if the present rate continues—will contribute to such a fund. Those who have contributed since July 9th are the following:

ABSOLUTE SAFETY

is the first merit of the

Famous H. & R. Revolvers

Price (Nickel) **$6.00**

When selecting a firearm for purposes of defence, for hunting or for target practice—the first consideration should be safety. Harrington & Richardson Revolvers are high grade firearms—made of the very best obtainable materials, in a factory equipped with the most improved machinery operated by skilled mechanics, thoroughly trained in its use. Every part is rigidly inspected and every finished revolver thoroughly tested to insure absolute freedom from flaws of any kind. The construction of H. & R. Revolvers is accurate to the thousandth part of an inch. There is none of the shake or rattle you will notice in cheap revolvers. They are built for business and if properly cared for will last a life time.

The H. & R. Hammerless Revolver shown in the illustration is not only absolutely safe, but it is quick in action and effective. There is no hammer to catch in the pocket; it can be fired only by pulling the trigger and cannot be accidentally discharged. Five shots may be fired as rapidly as the finger can be moved. Automatic ejector makes reloading easy. No other revolver sold for the same price is as good; no revolver at any price is more effective. 32 or 38 caliber, nickel plated, 5 shots, price $6.00. Send for free illustrated catalogue of H. & R. Revolvers and H. & R. Single Guns.

H. & R. Revolvers are sold by all dealers in reliable sporting goods, or will be sent expressage paid on receipt of price.

HARRINGTON & RICHARDSON ARMS CO., 234 Park Ave., Worcester, Mass.

THE

MICHIGAN MILITARY ACADEMY

ORCHARD LAKE, MICHIGAN

A Really Great School for Boys

Prepares for All American Colleges and Scientific Schools and Fits Boys to Become Efficient Business Men.

IDEAL location, 26 miles from Detroit. Beautiful lake region; ample grounds; fine buildings; honest academic work; genuine military instruction and discipline; a strong and well-balanced teaching force; exceptional musical training; a carefully selected and carefully trained body of cadets; abundant opportunity for school sports on land and water; great attention paid to social life and pleasant relaxation—these are some of the advantages that the Michigan Military Academy offers to parents who are looking for a clean, wholesome, efficient school.

¶ No vicious boy is admitted to the school. No boy will be allowed to remain who is hurtful to the moral welfare of the Academy. But a merely mischievous boy whose effervescent animal life makes him a burden to his home or to his city school finds here wholesome employment, firm but sympathetic control, and an inspiration towards sane, decent, symmetrical growth.

¶ The fruitage of the school is a symmetrical boy: a boy who has learned to obey proper authority, to do his duty, to take care of his body, to cultivate self-respect, to use his brain effectively, to aspire for leadership, to lead naturally and courteously, and to live a good and successful life. The school is non-sectarian but thoroughly religious in its tone. No spirit of proselytism is encouraged or tolerated; but parents may rely upon good, wholesome, refined influences being brought to bear upon their sons.

¶ The physical setting of the school begets contentment and happiness. The equipment of the school is complete. The ideals of the school are high. The cadet corps is composed of manly young fellows. The work of the school is honest and thorough. Every cadet in the school is in athletic trim all the time. The fruitage of the school is sound bodies, clear brains, reliable wills, ambitious and manly men.

¶ **The thirtieth school year opens September 13, 1906.** *For information about the Academy address* **LAWRENCE CAMERON HULL, Head Master.**

Why I am Proud of My State

The prize of $5 for the best essay on "Why I Am Proud of Illinois" was won by Arthur Holch, Gilman, Illinois. As close contestants for this honor came Fred Logan McCleneghan, Burton Fuller, Walter J. Tilton, and John McIntosh.

Nor can we forbear mentioning the following boys, whose essays were particularly good: Bryant E. Judson, Noel L. Havermale, Wayne Calhoun, Robert E. Jacobson, Ernest H. Pool, Ralph A. Clark, Warren H. Halle, Charles P. Eck, Frank W. Foster, Howard Hosmer, Smith Walsh, Dannie O'Brien, Robert Fizzell, Frank Lundell, Arthur R. Thompson, Eugene G. Moody, Glenn W. Dresbach, Carl A. Hartmann, Thomas Huffman, Russell Frazee, Wayne B. Mitten, Harlan C. Wilcox, Harry C. Hummel, Earl Comer, Ralph Otwell, J. Frazier Snyder, Jr., Howe Shoemaker, Frank L. Gilliam, Dresser Rice, Clive K. Raffety, Lewis A. Wallace, Homer E. Shelton, Harry C. McKown, Earl S. Garard, Elmer A. Bierbaum, Morton E. Douglas, Myrle Horney, Ben K. Goodman, Ernest W. Seyster, Jay L. Kraus, Frederic M. Isensee, Harlan R. Johnson, Maurice Born, Walter Hunter, Ralph R. Williams, Ray B. Albright, James Woodard, Ralph Watkins, Harlin Little, John Zapf, Harry H. Balch, Roy E. Harker, Virgil M. Armstrong, Leon Hanna, Knox Johnson, Wilbur B. Pritchard, Daniel Collins, Bruce Robinson, Roy E. Kinsey, Wyman Fulton, Milo Rolph, Gerald Carr, Ledru Higginson, Clyde E. Gray, Leon L. Sherman, Willie Lyons, Grover L. Bauer, Jesse Earl Funston, J. A. Brockway, Jr., Ralph Yakel, Walter D. George, Clarence E. Jamison, Willie Price, Jr., Wm. R. Hinds.

It will be seen from the large number of good essays received that Illinois boys responded manfully to our call for essays, eager to express their pride in their state. Many reasons for being proud of Illinois were given, most of them good ones, as are the following:

Illinois has over 15,000 public schools and 113 high schools, two normal schools and four great universities, of which the Chicago and the Northwestern Universities at Chicago are the most prominent. There is a permanent school fund of ten million dollars, and one million is added to this annually by taxation. More than half the population is engaged in farming, and more land is under cultivation than in any other state. In the output of coal Illinois is surpassed by only one state—Pennsylvania. These coal fields underlie about two-thirds of the surface of the state. The state is partly bounded by two of the great rivers of the United States—the Mississippi and the Ohio. The great representative of the volunteer soldiery, General John A. Logan, was a native of Illinois. He is said to have been the originator of Memorial Day.

Illinois ranks second in the production of corn and oats. Along the river bottoms the soil is of vegetable mold, forty feet deep, and the plowing is very shallow, owing to the richness of the soil. A comfortable and beautiful home for old soldiers and sailors is maintained at Quincy. In the last eight years land in Illinois has advanced in value from $75 and $100 an acre to $150 and $200. The Illinois Steel Company of South Chicago and Joliet is the largest firm of its kind in the world. The first steel rails in this coun- were manufactured in Chicago. Aurora was the first city in the world to light its streets by electricity. About one-sixth of the state is forest, the most valuable trees being the oak, elm, ash, walnut, maple, and hickory. Among the productions of the state are clay, salt, zinc, lead, oil, and limestone. There are over 10,988 miles of railroad, being one-sixth of the total mileage of the United States, and more than is contained in any other state. In the early part of 1906 a British commission came to this country to investigate the schools, and they decided that the schools of Evanston were the best in the country. Chicago, the second largest city in the United States, and the greatest railroad center and stock market in the world, is situated in Illinois. Over thirty roads enter this city, and 1,839 trains enter and leave daily. Here are situated the finest retail department stores and the largest mail order business in the world. The population of the city is nearly 2,000,000. The annual product of the meat packing industry is $300,000,000. Great quantities of clothing, machinery, flour, liquor, and iron and steel products are manufactured in Illinois. A very picturesque spot is Starved Rock, where a company of Illini Indians (the state was named from this tribe) died rather than give up their position and surrender to their enemies. Illinois surpasses all inland states in the value of her fisheries. In times of war the state has done more than her share. She took part in the Mexican War, furnished 260,000 men in the Civil War, and also engaged in the Spanish-American War. The world's Columbian Exposition was held at Chicago in 1893. Hull House, the greatest social settlement in the world, with Jane Addams as its founder, is in Chicago. Illinois contains twenty-five cities whose population is over 10,000, and fifty-seven with a population of over 3,000. The city of Elgin has one of the largest watch factories in the world. President Lincoln lived many years in Illinois, and is now buried in Oak Ridge Cemetery at Springfield. General Logan was a native of Illinois, and the great General Grant made the state his home. Among the great names of Illinois are the following: Marshall Field, John Hay, Francis E. Willard, Stephen A. Douglas, Senator Shelby M. Cullom, who has served his state in the senate for thirty years, Chief Justice Fuller, and Speaker Cannon.

Many of the essays contained quotations from the state poem, "Illinois," and several boys closed with this verse:

"Not without thy wondrous story,
Illinois, Illinois,
Can be writ the nation's glory,
Illinois.
On the record of thy years
Abraham Lincoln's name appears,
Grant and Logan, and our tears,
Illinois."

WHY I AM PROUD OF ILLINOIS

Prize Essay by Arthur Holch, Gilman, Illinois

The illustrious history of Illinois, the part she played in the War with Mexico, in the Civil War, and in the Spanish-American War, the great men she has produced, her natural resources, her progress in agriculture, manufacturing and education, her inland and lake commerce, and the prosperity and happiness which she offers to her sons, are enough to make any boy proud to claim her as his native state.

The Indian inhabitants of Illinois welcomed the Jesuit missionaries in 1660. However, they soon became discontented, and then began a fight for life between the Indian and the white settlers. Words cannot express the hardships of the pioneers of the state. With these brave men as founders, Illinois has developed into one of the grandest states of the Union.

Illinois furnished six regiments in the Mexican War, and many soldiers in the Civil War, besides illustrious leaders, among whom were Lincoln, our greatest president; Grant, our greatest general; and Generals Logan, McLernand, Oglesby, Palmer, Pope, and Rawlins.

Two-thirds of the surface of Illinois is underlaid by coal, the mining of which is a great industry. There are also vast deposits of limestone and sandstone. It is estimated that the coal fields of this state would supply England with coal, at the present rate of usage, for a hundred thousand years.

The soil of Illinois is very rich, and this, combined with the honest work of our farmers, has given to the "Prairie State" her exalted position as the first agricultural state in the Union, producing annually great crops of grain and vegetables, and much live stock.

I am proud of Illinois' high position as a manufacturing state. No city in the Union makes as much furniture or as many farming implements as Chicago. The various articles manufactured in this city in a year are worth nearly as much as all the goods imported into the United States in the same length of time.

Illinois has more miles of railroad than any other state, and these, together with Lake Michigan and the rivers, make commerce an important industry.

More money is spent on education in Illinois than in any state except New York. Our State University is one of the best schools of the nation. We have five normal schools, the great University of Chicago, Lake Forest University, and the Northwestern University.

For all these things I am proud of Illinois, and yet there is another and greater reason why I am proud of her: Illinois is a state of the United States. We boys of Illinois should not let state patriotism keep us from feeling proud of our country as a whole. We should also remember that much is expected of those who have such advantages as we have. Illinois stands high in education, first in agriculture, near the top in mining, commerce, and all other great industries. Let us see that we keep on improving our state as it has improved in the past. Illinois is a great state. May her name grow greater in the years to come than it now is!

"23 SKIDOO" BADGE, 2c

You know what Skidoo means. It's the latest joke out, and our badges are all the rage in New York. Get next also, be up-to-date, and join the "Skidoo League." One badge sent post paid with our big Catalogue of Novelties, Jewelry, etc., for only 2c in stamps. Address S. DRAKE, Dept. 65, 359 Van Buren St., CHICAGO, ILL.

IOWA NEXT

¶ To the Iowa boy who sends us before September 10th the best letter of not over 500 words, telling us why he is proud of his state, we will give $3; to the boy sending the next best letter, $1.50; to the boy sending the next best, 50 cents. In addition, we will print the first prize letter in an early number of THE AMERICAN BOY.

The American Boy

Copyright, 1906, by The Sprague Publishing Company

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Important—All subscriptions are discontinued as they expire. Expiration date is shown on address label. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

WILLIAM C. SPRAGUE, - - President and Editor
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only; and in the case of the coins, a rubbing.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

James A. Lynd, 6362 Overbrook avenue, Philadelphia, Pa., wins the prize for the best list of answers to the July Tangles.

J. Cuthbert Long, 42 Lenox road, Brooklyn, N. Y., wins the second prize.

Otis Merlin Sisson, The Wizard, Palouse, Wash., wins the prize for the best original puzzles.

Honorable mention is accorded the following for excellence: Sarah Gilles, Harry Elger, Jr., Robert D. Holmes, Jr., F. C. Millspaugh, Clinton Fisk Elliott, Dudley B. Kimball, Marshall A. Eyster, Grady Peerey, Raymond G. Heim, Elmer S. Ruff, William Jarfoe, Harry W. Krug, Arthur L. Diamond, Veator Mendenhall, Leo E. Bourdon, Lester Flory, John Thoen, Oliver Sigurdson (August puzzles sent too late), Noah S. Guengerich (June answers sent too late), Frank Olds, True Bayley. Our thanks to Allert Brager for his photograph.

A prize of one dollar will be given for the best list of answers to the September Tangles; also, a new book for the second best list; received by September 18.

A prize of one dollar will be given for the best lot of original puzzles received by September 18, to be published in November. Let us make this a Thanksgiving number in real earnest.

New Tangles

28. SHAKESPEAREAN INSECTS.

Part of Banquo's last words.

—The Wizard.

29. SEPTEMBER ACROSTIC.

All words are of uniform length. The initials spell a September holiday; the third letters, a playtime that ends in September.

1. Prodigal. 2. A female warrior. 3. To befit. 4. An eloquent public speaker. 5. To confirm. 6. Fastidious. 7. To apply ointment. 8. At a distance. —Arthur L. Diamond.

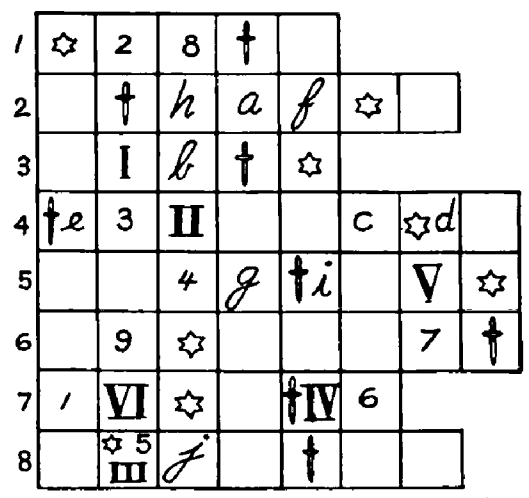
30. STATE INITIALS.

All the words are states. Their initials spell my own state, which is the only one admitted into the union in September.

1. One of the original thirteen states, and the fifth to ratify the constitution. 2. A state admitted in 1819. 3. A state admitted in 1812. 4. A state admitted in 1816. 5. A state admitted in 1845. 6. A state admitted in 1906. 7. The last of the original thirteen states to ratify the constitution. 8. A state admitted in 1867. 9. A state admitted in 1890. 10. A state admitted in 1836. —Elmer S. Ruff.

31. SEPTEMBER HISTORY.

A certain state has given us two martyr presidents, both of whom died in September. Fill the eight horizontal rows of squares with names of certain counties in that state, one letter of each in a square. The star path downward spells the surname of one of these presidents; the dagger path downward spells the surname of the other president. The numbered letters from 1 to 9 in order spell a great naval commander who fought and won a battle on a lake north of the state on a September day, and the name of that lake. The squares lettered a to j in order spell the only state admitted into the union in September. The squares numbered with Roman numerals I to VI in order spell the surname of the only president born in September.



—Dudley B. Kimball.

32. ANAGRAMS.

American cities. 1. Editor T. 2. Know rye. 3. Up last. 4. Rip and drags. 5. Hill had a pipe. 6. A leg lesson. 7. Fringed lips. 8. To Sam Crane. 9. I paid in salon. 10. Aids gone. 11. Grub St. tip. 12. I slip on name. 13. O, to hang a cat. 14. Sit, soul. 15. Omit blare. 16. Say, skin cat. 17. Can is for cans. 18. Moses, dine. 19. Grab on. 20. So pale. 21. Slower, Anne. 22. I wake mule. 23. Nerved. 24. Tan gloves. —Lester Flory.

33. TANGLED TITLES.

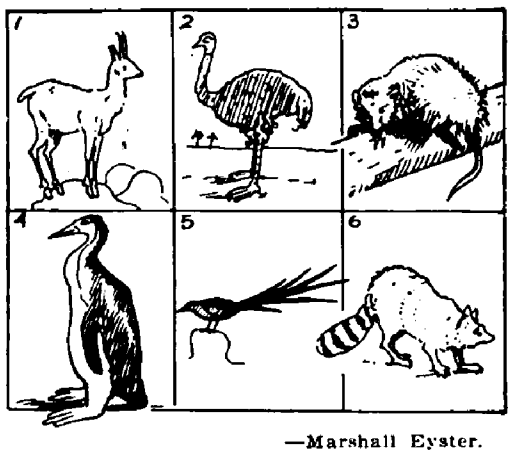
Following are all the words in the titles of eleven stories and articles published in the June, 1906, AMERICAN BOY, but here rearranged into imaginary titles. From these words form the titles correctly as they appeared in the June issue. Then place the eleven titles in such order that one letter from the first word of each will spell the surname of a favorite author for boys, who has a story in the June number.

1. Printer Frank the Jonah. 2. Book Shop Boys. 3. Between Logging Hole an' Iron Camp. 4. The Flag Whale. 5. From My Immortal Uncle. 6. Sportsman Sam's Senate. 7. Premier Young Ran Away. 8. To Camp Ourselves. 9. When de Agent Young. 10. Just in the U. S. 11. From Four to Five.

—John Thoen.

34. MENAGERIE.

The names of the six birds and animals are of uniform length. The initials in the order numbered spell the surname of a famous American author who was born and who died in September.



—Marshall Eyster.

35. NONSENSE HISTORY.

Take one letter from each word in order and obtain an American defeat that occurred in September during the Revolutionary war.

Able armed tattlers tell lately absolutely desultory fictions, brimming over, always elongated, tedious, dry, which ill concern presidents. —Veator Mendenhall.

36. SPORT WITH ADVERTISERS.

Find eight advertisements in the July AMERICAN BOY with the following addresses appended. From the introductory words of each advertisement take the first letter of one, the second of another, and so on, to the eighth letter of the last, and obtain an American outdoor sport played in autumn. The correct order for arranging the advertisements is different from that here given.

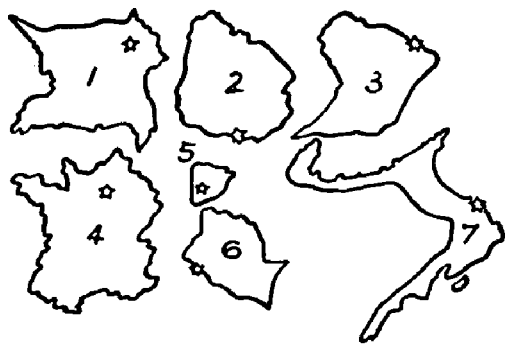
1. C. G. Lloydt, Dept. J, Sayre, Bradford Co., Pa. 2. C. F. Daly, Passenger Traffic Mgr., New York. 3. Cluster Springs Academy, Cluster Springs, Virginia. 4. John McQueen Company, Box 96 B, Mt. Vernon, N. Y. 5. New York Sporting Goods Co., 17 Warren St., New York. 6. Ideal Ink Co., Bridgeport, Conn. 7. Hill-Standard Mfg. Co., 60 Irish Mail Ave., Anderson, Indiana. 8. Fred W. Townsend, Dept. 58 K, Box 305, Rochester, N. Y.

—Raymond G. Heim.

37. HISTORICAL GEOGRAPHY.

```
1. - - 2 - - - - - - - - -   The maps are out-
2. - 5 - - - - -             lines of countries.
3. - - 1 - - - - - - - - -   The position of each
4. - - - - - 4                capital is given.
5. - - - 6 - - -             Write the names of the
6. - - 3 - - - -              countries as in the dia-
7. - - - 7                    gram and their initials
```

will spell the American city where a shocking deed occurred during a September of the present century; the numbered letters, in order, the place where a president died in September.



—The Wizard.

38. NAVAL BATTLE.

```
1. - - - - - - *   The initials read down-
2. - - - - - * -   ward spell a British war-
3. - - - - - - *   ship captured by John Paul
4. - - - - * - - *  Jones, in September, 1779.
5. - - - - - * - -  The star path read upward
6. - - - - - * - -  spells the name of the cap-
7. - - - * - - -    tain of the British ship.
```

1. A secretary of war under President Lincoln. 2. A celebrated American essayist, lecturer and poet. 3. An American general; secretary of war under President Grant. 4. A son of Hamoleketh (I. Chron. VII). 5. The inventor of railway sleeping coaches. 6. Son of Abram and Hagar (Gen. XVI). 7. A king of England; grandson of William the Conqueror. —Marshall Eyster.

39. GEOGRAPHICAL SLIDES.

Slide the horizontal rows right or left and spell ten foreign countries by vertical rows.

U T E S C I J H
U N H P T G A O
N R P Y A D I O
P L N I A M E T
N A I Y I O S T

—Harold Colegrove.

40. WORDS THAT SING.

Let the words in the first clause sing and they will form those in the second clause. Example: Gray, gracing.

1. A drama; setting in order. 2. A support; sharp. 3. The ocean; stopping. 4. A mongrel dog; profanity. 5. A fairy; opposite. 6. A beam of light; a sport. 7. A vegetable; putting together. —Frank C. McMillan.

Tangle Talk

Many of you have a worthy aspiration to secure publication of illustrated Tangles. This we like to encourage. You have noticed that more often than otherwise the prize winner for new Tangles is the author of a picture puzzle.

Some of our contributors draw well, and occasionally a picture puzzle is received that can be reproduced without calling on our own artist.

While it is not requisite that one should be able to draw in order to win our prizes, to those who find a pleasure in preparing their own pictures ready for the engraver we volunteer this helpful word of advice:

Draw in jet black ink on plain white paper, without ruling, using Bristol board if convenient, and for puzzles to be used in single column width, as most of ours are, make your drawings about twice that size, or say four inches wide. One-half reduction is very satisfactory. Write your name and nothing else on the sheet containing your drawing. Don't shade too much. Never roll a drawing, or anything else. Send it sealed with your letter, and pay full postage.

Originality and cleverness of idea are what secure publication and win the prizes, rather than ability to draw. A good subject is the first essential, and that is found only by patient research and careful thought.

Take The Wizard's Shakespearean Insects, in this issue. While not difficult of solution, it is one of the cleverest finds of many months.

Evidently the author, in reading his Shakespeare, saw the puzzle possibilities in the phrase, and thereupon developed it to send in with his next lot of Tangles. That's the way to do. Watch for possibilities whenever you read the great authors, the bible, or any standard work, and jot down at once the good things you find, to be worked out at your leisure.

Always give your authority for any quotation; for instance, book and chapter of Dickens; book, act, scene and line of Shakespeare; book, chapter and verse of scripture; title, verse or canto and line of the poets. Remember that I confirm every word you send me before I give it to the printer, and your being helpful is essential. You see, I am willing to help you Tangle others, providing you will not try to Tangle me!

A boy sends in a puzzle based on an unknown quotation from Sir Walter Scott. No authority, book of quotations or librarian can locate it. Unless I discard the puzzle I must read all of Scott's works in search of its answer, or take the contributor's word for it, and the latter course is not wise, as some boys skip whole words, punctuation and capitals with such reckless abandon! A word sent in with your puzzle would have told me exactly where to look, and your puzzle might have been printed.

The reason we offer our prize for the best "lot" of original puzzles each month, instead of for the best "one," is because several puzzles sent in at one time increases your chances of securing publication. We seek variety, both of theme and handling. If ten send in acrostics, for instance, on the same subject, nine are almost certain to be doomed to disappointment, as we have no intention of filling the Tangles with one kind of puzzle, nor with puzzles having the same answer. We like some of your puzzles to pertain in some way to the month of publication, but it is not necessary to confine yourself to seasonable subjects. The best way is to send in two or three that are seasonable and a few others that are general, but of your very best, original in idea and clever in treatment. If there are one or two picture puzzles in the lot, so much the better.

From your next lot of original contributions selections will be made for our Thanksgiving issue, and a month later for Christmas. Every Tangler should be able to contribute some seasonable puzzles on these popular themes. Our Thanksgiving Tangles of other years have contained a medley of Governor Bradford, Pilgrim Fathers, Plymouth Rock and turkey dinners. I should like this time to be able to publish the best Tangle on Thanksgiving dinner that we have ever had, and also a good historical treatment of the Pilgrim Fathers, or some of them, handled in your own way. This is an American subject and one that American boys should be full of, literally as to the dinner, and metaphorically as to the Pilgrims Let us have your best.

The mention of Christmas is only a warning. You have a long time to gather your wits together on the yuletide topics, as we will want no Christmas puzzles sent in till a month later, when we will duly call on you for them. Meanwhile, read up your bible and Christmas Carol, and consult Santa Claus for the best things to make the December Tangles full of the Spirit of Christmas.

But the turkey dinners and the Pilgrim Fathers are the immediate subjects for your first consideration. —UNCLE TANGLER.

Corrects Mr. Parsons

Rochester, N. Y., July 28, 1906.

Dear Editor,—I would take exception to the derivation of the word "Arkansas," as given by Eugene Parsons under "Nicknames of the States" in the August number.

"Arkansas" is a corruption of "Arcs-en-sang," a term which characterized certain Indians who painted their bows with the blood of their enemies. There are even now a remnant of these "bloody-bows" among the Sioux.

"Kansas" was originally "Escanzas," the name of a tribe.

No kinship exists between these two.

Yours truly,
WILLIAM BROWN.

DANIEL WEBSTER

(*Continued from page 350.*)

on motion of Counselor Gore, admitted to practice. In Mr. Gore's speech introducing Webster to the bench and bar, "he dwelt with emphasis on the remarkable attainments and uncommon promise of his pupil, and closed with a prediction of his future eminence."

Here, at the entrance of Webster's great career we close this sketch, only stating in conclusion that his renown as a great lawyer, great orator, great statesman did not come by accident or luck, but as the result of earnest, persistent, faithful work pursued with a determination and courage that allowed no obstacle to stand in his way.

SYNOPSIS OF SUBSEQUENT CAREER OF DANIEL WEBSTER.

1805 Admitted to Boston Bar.
1813 Entered Congress, serving on Committee of Foreign Relations.
1816 Removed to Boston. Acquired a national reputation as an advocate. One of his greatest speeches was in the Dartmouth College case in which his contention was upheld by the Supreme Court.
1823 Re-entered House of Representatives.
1827 Member of Senate.
1830-1847 Mainly engaged in maintaining the doctrine of federal government sovereignty and supremacy of the Union. Served as Secretary of State under Harrison, Tyler, and Fillmore. Settled question of Maine boundary; British claim of right of impressment, and extradition question.
1852 Failed to receive Presidential nomination from Whig convention.
1852 Died, October 4.

INSCRIPTION ON TABLET IN HALL OF FAME.

DANIEL WEBSTER
1782-1852

I profess, in my career hitherto, to have kept steadily in view the prosperity and honor of the whole country, and the preservation of our Federal Union.

OUR SAFETY RAZOR

OFFER EXTENDED TO OCTOBER 1st, 1906

The offer made in our August issue is taking so well that we have decided to extend it to October 1st.

LEARN TO SHAVE YOURSELF

We believe we are doing you a real service in giving you a First-class Razor for so little effort on your part. Form the life habit of shaving yourself.

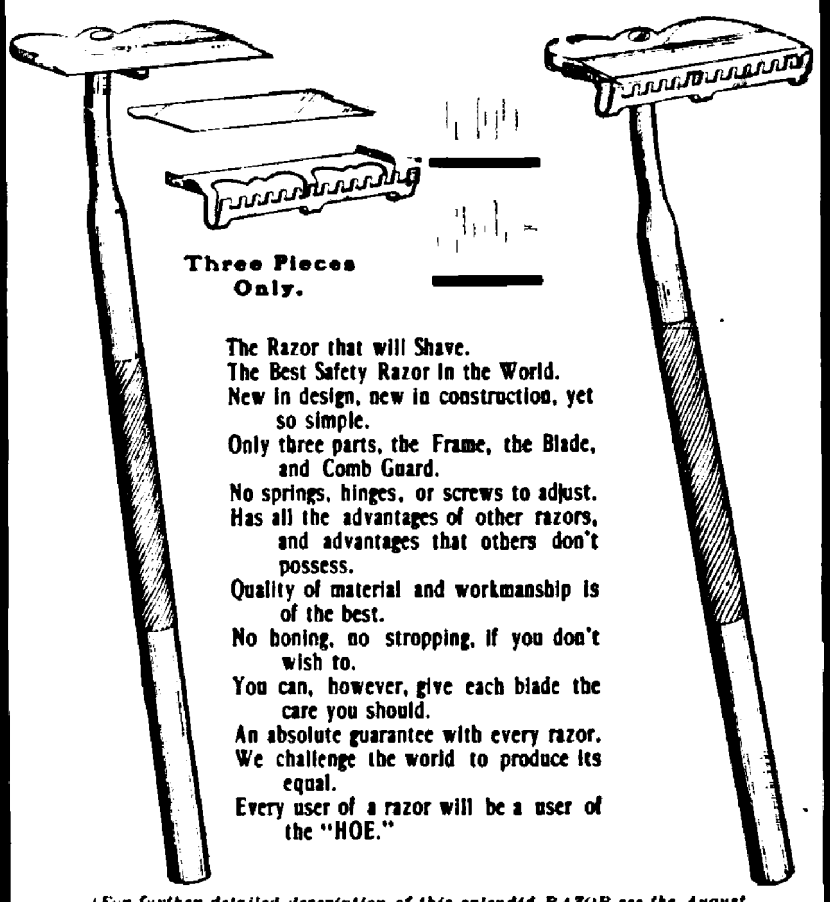
You will save money. Every visit to a barber shop costs 10 to 25 cts.

You will save time—no waiting in stuffy barber shops.

You will not run the risk of contracting dangerous skin diseases.

You will form a habit that is cleanly and one that is a decided luxury.

THE RAZOR WE OFFER YOU IS



Three Pieces Only.

The Razor that will Shave.
The Best Safety Razor in the World.
New in design, new in construction, yet so simple.
Only three parts, the Frame, the Blade, and Comb Guard.
No springs, hinges, or screws to adjust.
Has all the advantages of other razors, and advantages that others don't possess.
Quality of material and workmanship is of the best.
No honing, no stropping, if you don't wish to.
You can, however, give each blade the care you should.
An absolute guarantee with every razor.
We challenge the world to produce its equal.
Every user of a razor will be a user of the "HOE."

(For further detailed description of this splendid RAZOR see the August AMERICAN BOY.)

OUR EXCEPTIONAL OFFER

(GOOD TILL OCTOBER 1st, 1906.)

If you are a subscriber to The American Boy and will send us one NEW Yearly Subscription (not your own or a renewal subscription) with $1.00, we will send you, postpaid,

ONE HOE SAFETY RAZOR
ONE EXTRA BLADE
ONE NEAT BOX WITH RAZOR STROP ATTACHED

If you are not a subscriber and will send us $2.00, ($1.00 for your own subscription and $1.00 for another **new** subscription) we will send you the outfit free of charge.

PRICE. We will send the outfit to any one, postpaid, on receipt of $1.00. If it is not satisfactory it can be returned and money will be refunded.

You may not need this razor now, but you will in a short time. "In time of peace prepare for war."

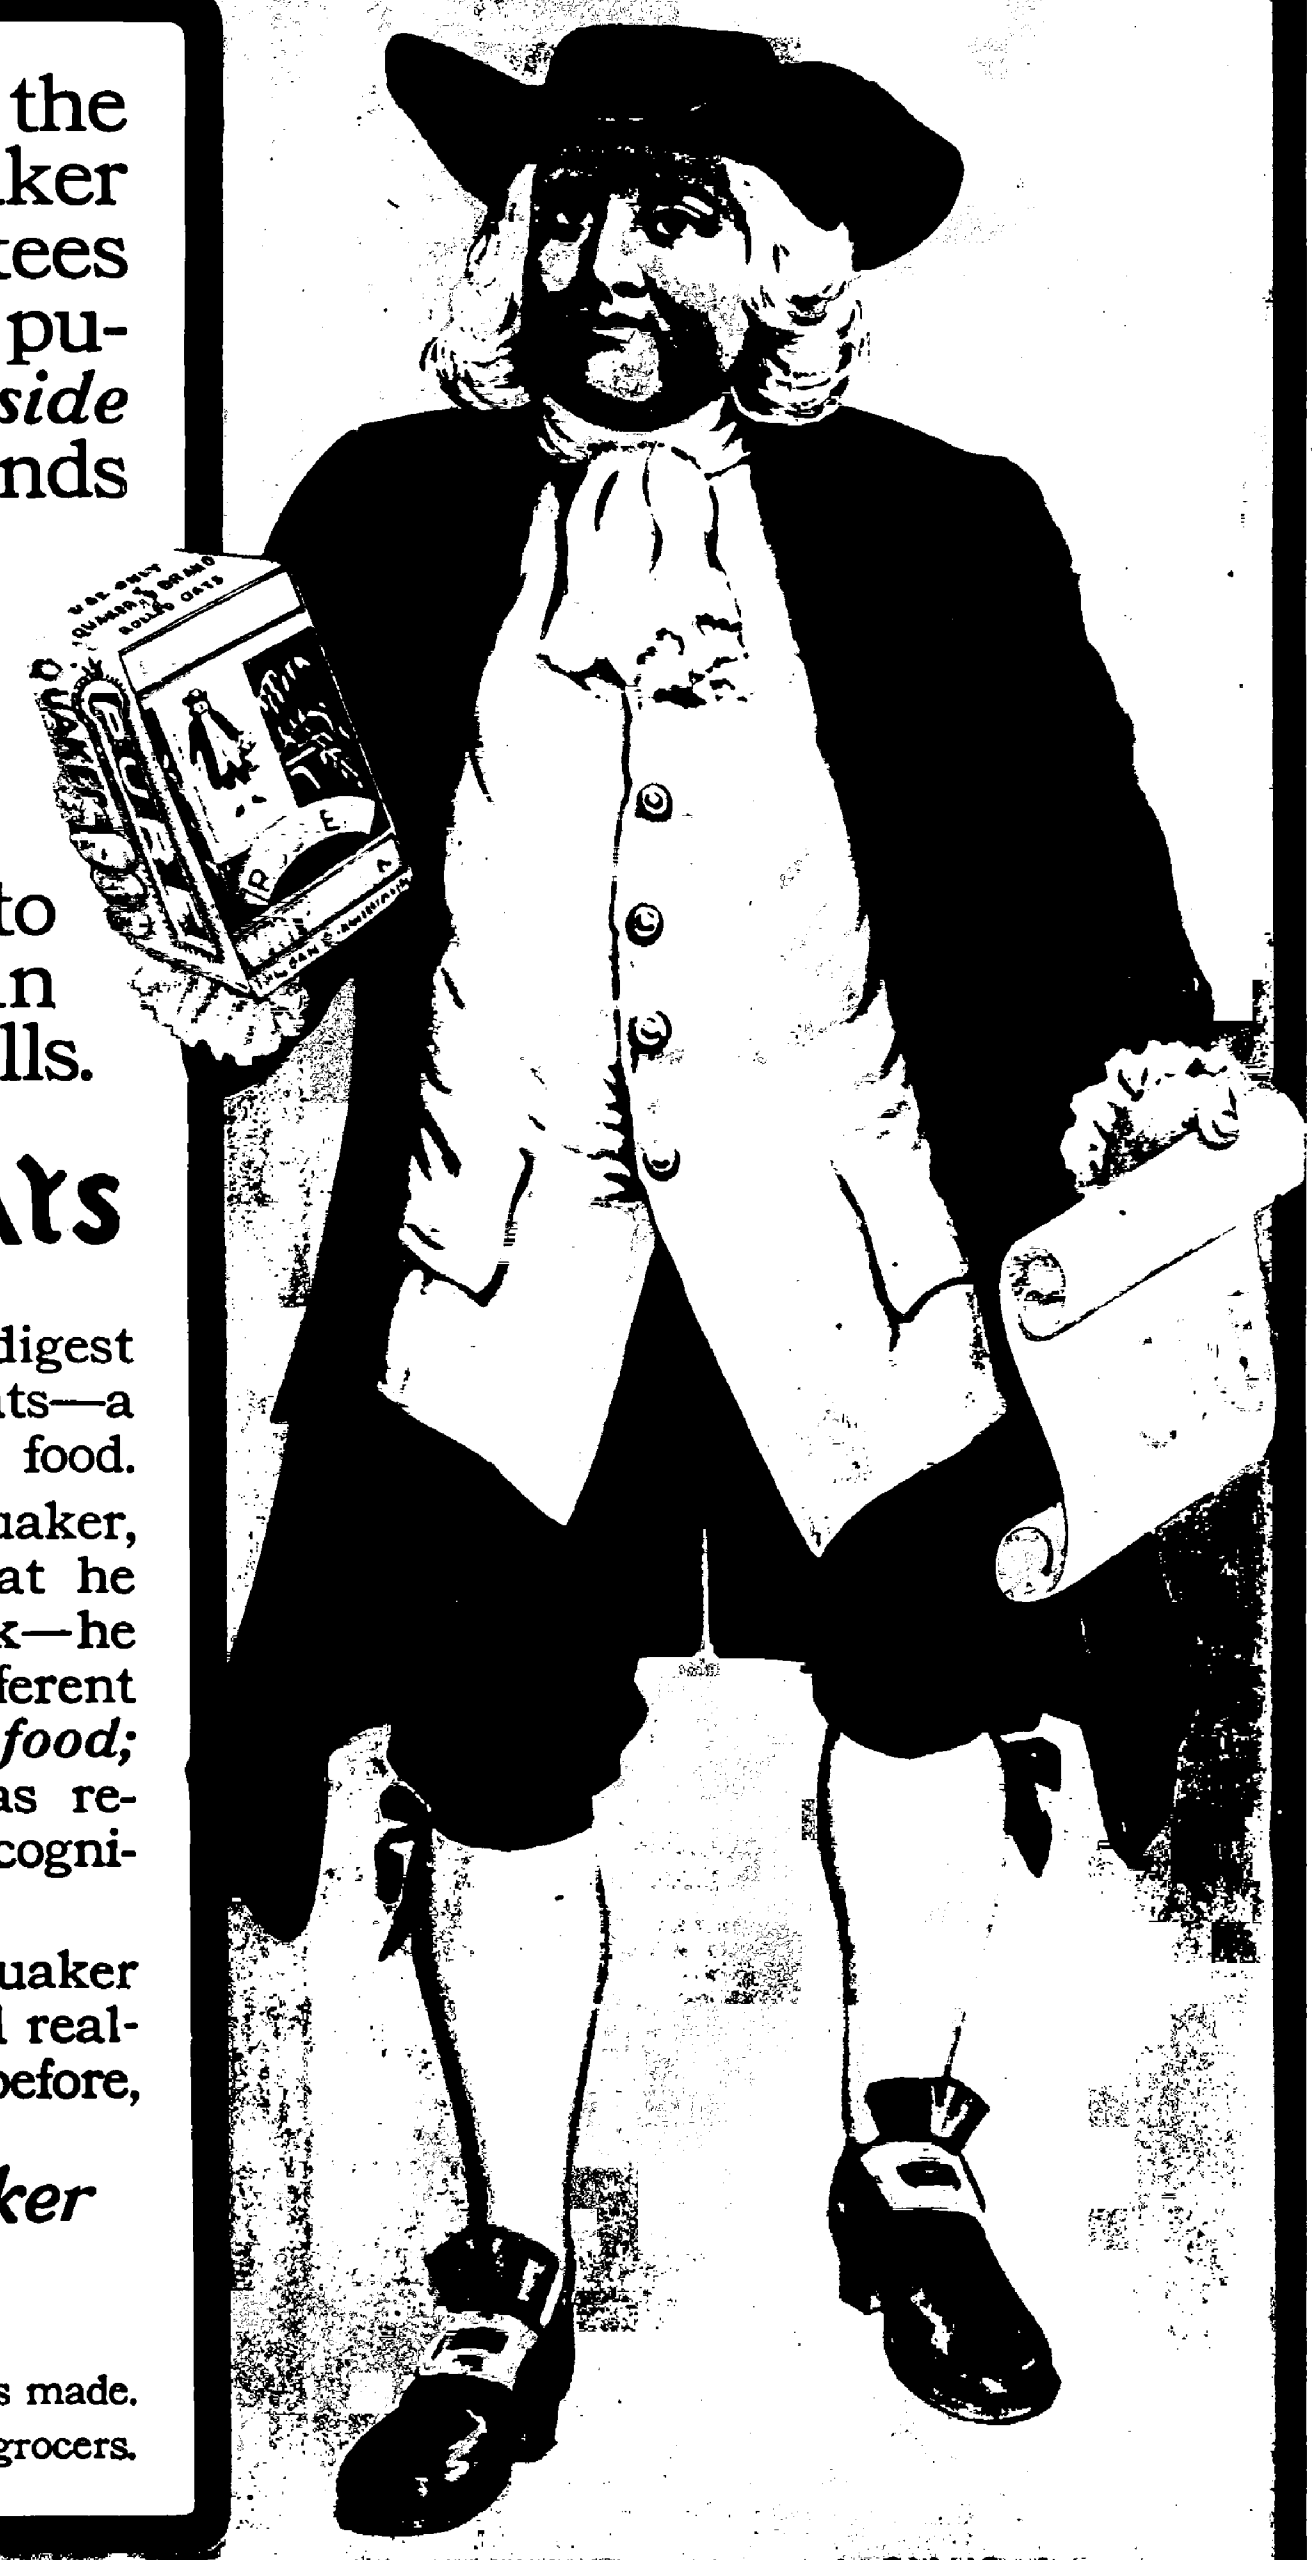
What the Quaker stands for

The Quaker on the *outside* of the Quaker Oats box guarantees the quality and purity of what is *inside* the box. He stands for an *exclusive process*—a different way of selecting and milling the oats—that brings it to your table clean and free from hulls.



Quaker Oats

is easier to eat and to digest than any other rolled oats—a wholesome, satisfying food.

When you see the Quaker, therefore, remember that he is no mere trade-mark—he signifies, not only a different package, but a different *food;* a difference which has received world-wide recognition and approval.

Buy a package of Quaker Oats today, and you will realize if you never have before,

What the Quaker Stands For—

The best and purest rolled oats made.
Large package ten cents at all grocers.

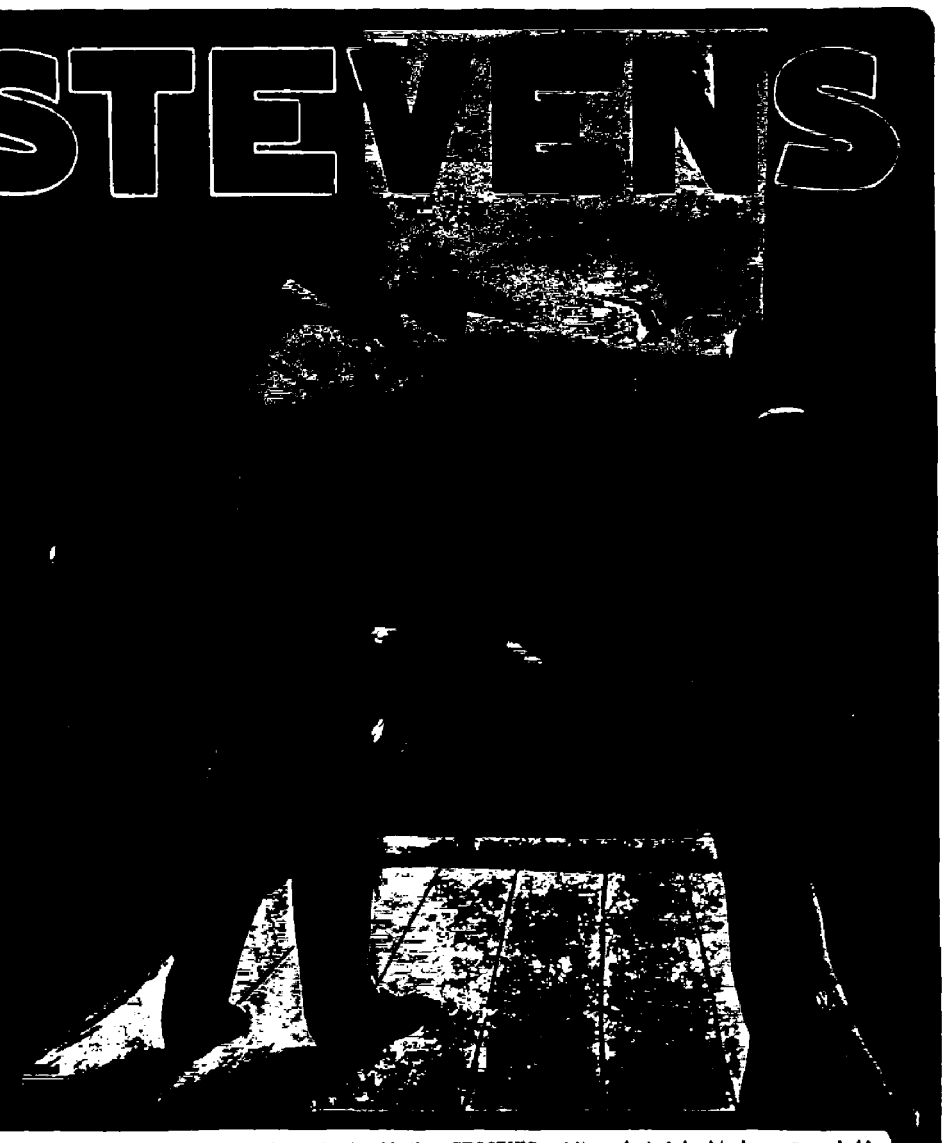
STEVENS



There is no sport more invigorating and enjoyable than SHOOTING and it can be indulged in by young and old of either sex. Your pleasure, however, all depends upon the reliability of the Firearm you carry. All that arms should be is embodied in **THE "STEVENS."**

This means that you need look no further than the product that has been guaranteed for **ACCURACY** and **RELIABILITY** for almost half a century. OUR LINE:

RIFLES, PISTOLS, SHOTGUNS.

Ask your dealer and insist on our popular make. If you cannot obtain, we ship direct, carriage charges prepaid, upon receipt of catalog price.

Send for 140-page illustrated catalog. If interested in **SHOOTING**, you ought to have it. Mailed for four cents in stamps to cover postage.

Have you one of the attractive Stevens Hangers? If not, we would be pleased to send you one upon receipt of six cents in stamps. "Just the thing" for your den.

J. STEVENS ARMS & TOOL CO.,
391 Main Street,
CHICOPEE FALLS, MASS., U. S. A.

Right at Home

THE LAW as a profession, to-day, offers no impossible barriers to the ambitious young man in either city or country. On the other hand it is ever offering greater opportunities for high achievements in fame and fortune. In modern business pursuits the young man with a knowledge of commercial law, rapidly advances to the higher positions, because his mind is broader; his judgment clearer; his decision better.

The Sprague Correspondence School of Law was founded for the young man who cannot afford the time and money necessary to attend a law college. It carries to his home **BY MAIL** all there is to be had at a college. It demands no sacrifice of the student. It does not burden him with expense, requires nothing but honest effort. Thousands of students of

The SPRAGUE CORRESPONDENCE SCHOOL OF LAW

have distinguished themselves by passing the required examinations in every State, and being admitted to the bar without other preparation than the Sprague Course By Mail. The cost is small. The terms are easy. There is no time limit. Write for **FREE** educational literature, and see how great are the possibilities of your success.

VOLUME 7 — DETROIT, MICH., OCTOBER, 1906 — NUMBER 12

PLUPY IN PEACE AND WAR

Or, Chapters From the Lives of Plupy, Beany, Pewt, and Others

A SERIAL STORY BY JUDGE HENRY A. SHUTE

Author of "Real Diary of a Real Boy," "Sequil," "Letters to Beany and Love Letters of Plupy Shute," Etc.

CHAPTER I.

PLUPY was grumpy. There was no doubt of it. Anyone who saw him as he sat on the fence in front of his house, dangling his long legs in the air, or idly drumming his heels on the boards, scowling fiercely at the world, would have known that deep in his heart dwelt a mighty indignation.

The day had begun inauspiciously for him. He had forgotten to split his kindlings the night before, and had incurred condign punishment that seemed to him unjust and wholly out of proportion to the offense.

If his father had whipped him he would have gotten over it long before this. But he had ordered him to stay in the yard all day. And he had promised to go fishing with Pewt and Potter, and Pewt knew where there were some bully perch, old lunkers. He almost wished his father was dead. Anyway his father would be sorry when HE was dead. That was just the way, nothing ever went right. What did he have to split up kindlings for, anyway? Why didn't they come all split?

If people only knew enough to cut down little trees instead of big ones, they would be little enough for kindlings anyway, and it was easier to cut up little ones than big ones. When he was a man he would never make his boy split kindlings, but would buy them all split.

He bet his father would feel bad if he drowned himself. He guessed he would miss him when he was gone. And his mother, too, she might have said something when his father told him to stay in.

He pictured himself lying dead in the river with the boats full of people with boathooks and eel spears, and the banks lined with other pale-faced, scared people, and he pictured himself brought home limp and dripping, and brought into the house amid the cries and groans of his family and the loud self-reproaches of his father, the father that had driven him to this dreadful death.

And he drew so affecting a picture of their unavailing grief, that the tears filled his eyes and a lump arose in his throat as big as the yarn-covered rubber-cored ball in his pocket.

As his swimming eyes roamed wistfully around in search of something to lighten the dreary monotony of staying in the yard all day, they fell on the huge old apple tree whose deep-green leaves stirred slightly in the light breeze, and were dappled all over by flecks of golden sunshine.

Suddenly, a thought struck him, the green apples were just large enough to throw with an elastic switch. "Bully," he would be the first to do it this season. He sprang from the fence and started for the tree. Then a most unusual spasm of obedience struck him. "Mother," he called, "Mother-er-er!" he shrieked, as she did not immediately answer.

"What is it?" a voice replied from the house.

"Kin I plug some green apples with a stick?"

"Why, ye-e-s, I think so," his mother replied, somewhat doubtfully; "only," she continued, "don't throw them at people and don't break any windows."

"All right, mother," he replied, swarming up the tree for a limber switch. The tree, a high old baldwin, was too large for his arms and legs to go around, although they were of abnormal length and thinness for a boy of his age, but as it bent slightly to the east and as there was a cavity about eight feet from the ground, it was climbed in this ingenious manner.

Plupy stepped upon the wooden railing round the currant bushes which was nailed to the tree, from there sprang straddlewise up the trunk until his fingers reached the cavity, where he squirmed and inched and twisted himself along until he reached the bend in the tree whence he could pull himself up by the branches.

When he had selected a suitable withe he found he had left his knife in the house, whereupon he began to yell for someone to bring it out. "Keene, Cele, Georgie," he shouted, until one of the young ladies mentioned, a black-eyed, saucy-looking, round-faced girl, appeared in a blue checkered apron with a dish-cloth and a plate in her hands.

"Whatcher howlin' like that for, Harry?" she asked in a tone of indignant remonstrance. "Whatcher want?"

"Wancher to gwup in my room n' git my jackknife. S'in my linen britches."

"Guess if you want it, you can go 'n get it yerself; I'm washin' dishes."

"Oh, gollong 'n' git it, wontcher, don't be so mean," urged Plupy.

"Go yerself, I won't," said Keene decidedly, turning her back on the suppliant; "I won't."

"Mother-er-er!" shouted Plupy, "can't Keene just gwup and get my knife for me?"

"Why," said that much-wanted woman, "I should think she might."

"Ma, he can go jeswell as I, he hasn't anything to do and I'm jest as busy as I can be," said Keene, attacking a platter with a great splashing of hot water.

"Make her, mother, she jest does it to be mean. I don't believe I can get up here again in a week," said Plupy.

"Come, Keene," said her mother good-naturedly, "run up and get his knife." Whereupon that young lady, with a frown and a defiant swing of her square shoulders, walked upstairs with some rather unnecessary noise, but soon returned saying she couldn't find his old knife.

"T'was right in the pocket of my linen britches," said Plupy; "betcher didn't look."

"Did, too," asserted the young lady.

"Cornelia," said her mother with a warning light in her eyes, "go straight upstairs and bring down Harry's knife."

There was but one reply to this argument, and in a trice "Cornelia" mounted the stairs and returned with the knife, which she tossed indignantly to her grinning brother, who caught it deftly, and jeeringly said, "Ya-ah-ya-ah, had to, didn't yer?"

"Smarty, you wait and see," replied black-eyes, tossing her head and returning to her dishes.

Left alone, Plupy cut a stout but limber switch and carefully trimmed off the twigs and leaves, whistling shrilly a popular band tune. Then he whittled the end to a sharp point on which to impale his projectiles. If he could only harden the end in fire it wouldn't split and would last longer.

There was Sam Dyer's blacksmith shop just across the garden, but then he couldn't go out of the yard. Perhaps, however, Sam would harden it for him. So he dropped his switch to the ground, where he speedily followed it by letting himself down from a bending branch..

Arrived at the boundary fence, he climbed to the top rail and accosted the blacksmith, who was sousing a hot iron in the water trough.

"Mr. Dyer," he said, with more deference than he generally used in accosting that gentleman, "wilyer please hold the end of this stick in your fire a minute, jest to harden it?"

Mr. Dyer looked up with a momentary frown. His experience with Plupy had been somewhat extensive and of such a nature as to put him in a condition of being constantly on guard. But he was an extremely good-natured and simple-hearted man, and his frown was speedily chased away by a cheerful grin.

"Why, in course, in course, sonny, come right over," he said hospitably.

WHAT DID HE HAVE TO SPLIT UP KINDLINGS FOR, ANYWAY?

"No, you do it, I can't come over, gotter stay in th' yard all day," said Plupy, shame-facedly.

"Whatcher bin doin' naow?" queried Sam.

"Didn't split no kindlins las' night."

"H'm, that all?" said the blacksmith, leaning his smutty arms on the fence, "didn't know but yer'd bin breaking winders er ringin' doorbells er suthin like that."

"No, honest now, 'twan't nothin' but jest that," affirmed Plupy; "hope to die and cross my throat," he added, drawing his fingers crosswise over his skinny neck, which with boys was then and may possibly be now the most solemn oath possible.

"Well," said Sam, "gimme yer stick an' I'll singe it for ye," and he obligingly did so, returning it with the point in quite a delightfully adamantine condition.

Plupy, in great elation, thanked him and ran back to the apple tree, where he filled his pockets with hard, green apples of about the size of bantams' eggs. Then choosing one, he tentatively bit it, made a wry face and spat. It was sour and bitter. Then, impaling it on the point of his withe, he lightly swung it into the air to try its temper, then gave it a throwing motion with all the strength of his arm.

"Whoof!" sang the withe as it cut through the air. Away went the apple with an audible hum, leaving the point at just the right moment. Away, away it soared, ascending for an incredible distance, where it passed out of sight among the trees.

Another was tried with equal success. The third left the point too soon and ascended perpendicularly until it was lost to sight, then fell in the next yard. Plupy forgot all his troubles; he was happy. But whenever a boy has anything to throw projectiles with, be it a bean-blower, pop-gun, blow-gun, bow-'narrer, arrow-rifle, or slingshot, some sort of a target is necessary for perfect enjoyment.

And so, after trying long distance shots for awhile, Plupy began to look about for something to hit. He soon found it. Across two gardens, nearly one hundred yards away, sat two men on a fence. They had been hired to work in a neighbor's garden, but in the absence of that neighbor they were improving their time by political discussion. The fact that they were doing wrong by neglecting their employer's work was no reason why Plupy should seek to even up matters by using them as a target.

But so he did, but with poor success for awhile. The shots went like lightning, but wide of the mark. At last Plupy began to get the range, and finally, to his intense delight, a hard, round apple took one of the disputants a prodigious thump on the back of the head.

In an instant he sprang from the fence with a whoop, and came charging toward the place from which the missile had come, pouring out blasphemies and threats. Plupy dodged behind the fence and dived into the barn to a hiding place near a small window, through which he could see Old Seth Tanner's performance, which was that frantic gentleman's name. Across the street came Skinny Bruce and Tady Finton, whistling and wholly unconscious of approaching doom.

Seeing the enraged Tanner charging them with horrid curses, they stopped not to argue the matter or to inquire his intentions. His warlike demonstrations were enough. They fled; he followed. They crawled under the fence; he jumped over. They dived under a big beach wagon standing in front of the blacksmith shop; he was compelled to go around, and fell over the pole, which, while it added fresh fuel to his wrath and fresh fluency to his vocal attainments, gave them a few rods start, and though he rose and followed, cursing, he never had a ghost of a show of overtaking them.

As he passed from sight and his frantic invectives died away in the distance, Plupy came forth from his hiding place, where he had been rolling in convulsions of sinful mirth, hunted up his withe, got a fresh supply of green apples and watched for new game.

An occasional shot at a dog or cat kept time from dragging too heavily, but were barren of result. At last, however, a glorious opportunity came. Old Si Smith's big white dog came trotting along the road. Now, old Shep was a rather savage old brute and the boys gave him a wide berth. But this opportunity was too good to be lost, and Plupy, hastily impaling the hardest and best apple he had, took aim and let drive with all his strength, intending to give the unconscious animal a most tremendous thump.

Alas! the furious energy of the stroke dislodged the apple a thought too soon, and, instead of striking the dog, it flew a bit high, and went through the window of the blacksmith shop like a bullet from a gun, causing in the breast of the honest and well-meaning blacksmith sentiments of keen astonishment, profound sorrow and righteous indignation.

In a trice he had doffed his leather apron, rolled down his sleeves and sallied from his shop to lodge a complaint at the door of Plupy's house, to which citadel that prudent youth promptly retired at the first jingle of flying glass.

"Now, Mrs. Shute," said this much-tried individual, "I don't think it jest right. This tarnal son of yours got me this mawnin' to fix him a stick for firing apples, 'n' what duz he dew but go a-firin' rocks right thro' my winder. Naou, I've got to jes' go 'n hire sum un to mend that winder, 'n' pay 'em fifteen cents, jes' likes not. Naou, whaddier think on't?"

"Well, Mr. Dyer," said that much-enduring matron, kindly, "I am quite sure Harry did not intend to break your window, and especially after your kindness to him. I think if he was intending to break a window he would not do it quite as near home," she added. "Harry," she called, "come down here."

Plupy reappeared, having been leaning over the banisters listening with all his ears, and now began to justify his mother's confidence by vociferous explanations.

"Honest now, mother, I didn't mean to plug his window. I was jest letting ding at old Si Smith's dog, 'n' it slipped, 'n' went through Sam's window."

"Mr. Dyer," she corrected quietly.

"Yess, 'um, Mister Dyer," hastily assented Plupy.

"Wa-a-a-l," said the mollified blacksmith, "I spusso. I seen that air dog, 'n I wuz jes a-goin' to fire a rock at him myself. In course ye'll pay fer my winder, Mrs. Shute, s'longs Herry broke it."

AN OCCASIONAL SHOT AT A DOG OR CAT KEPT TIME FROM DRAGGING TOO HEAVILY

"Oh, yes, of course, Mr. Dyer; how much will it be?"

"Wa-a-a-l," he drawled, making a mental calculation, "seems sough a feller had orter to git 'bout twenty-five cents for gettin mos' scart to death 'n' hevin' a winder broke."

"That is certainly reasonable, Mr. Dyer," said Plupy's mother, handing him a ten and fifteen-cent scrip. It will, of course, Harry, come out of your cornet money, and will, I hope, teach you to be more careful," she continued, whereat Plupy looked very much disgusted, as the accumulation of a fund sufficient to purchase a cornet had been the darling ambition of his young life.

All interest in life had now departed, and he listlessly dragged his shambling length to the front fence and slowly climbed on the top rail, where he sat moodily dangling his legs and musing upon the dreadful accumulation of disappointments and outrages to which he was peculiarly subject. Life was hard indeed. Other fellows had luck; he didn't.

As he sat there in moody silence, Pewt and Potter, returning from their fishing trip, jubilantly hailed him and held up each a string of kivers and small perch, with a few under-sized pickerel.

"Ya-ah, Plupy," roared Pewt derisively, "thotcher was goin' with us."

"Huh, couldn't; father made me stay in 'cause I didn't split my kinlins," said Plupy resentfully, glowering at the remembrance of his wrongs.

"That's too bad, Plupy," said Potter sympathetically.

"That's so, Plupy; your old man's meaner 'n tripe. I heard old man Collins say he cheated him and he had orter be hung."

Now, Plupy, however indignant he might feel with his father in his own small bosom, did not propose to allow his good name to be traduced, and he promptly called Pewt a liar, who instantly retorted that Plupy was another, and that his father was a bigger one. Plupy, although he might have passed over the personal application of the term, could not forgive it as applied to his father, and flopped from his perch and assumed a ludicrous posture of offense, with one arm extended and one crossed over his chin, the middle joints of his third and little fingers projecting beyond the others, which was supposed to give a cutting edge to his fists that nothing but brass knuckles could exceed.

Pewt promptly dropped his pole and string of fish and threw himself into an attitude of defense, doubling his fists more tightly than Plupy, but projecting the middle joint of the second finger, a proceeding which was popularly supposed to be very conducive to black eyes.

At these warlike demonstrations, several stable loafers and hostlers, who had been dozing in the sun in front of the stables, woke up and urged the boys, who were warily circling around each other, to sail in. As this encouragement did not precipitate matters, some one pushed Plupy violently into Pewt, who received him with vigorous punches. The fight was on. Plupy swung his arms like the spokes of a wheel. Pewt delivered side-winders, rib-roasters and semi-circular digs. They clinched, writhed, twisted and fell, Pewt uppermost.

Plupy's legs wildly waved in the air, vainly seeking purchase, then doubled under him. His stomach rose like a bow, there was a violent twist and Pewt was turned. But he squirmed out and they half rose, punching, pulling hair and twisting like eels; down they rolled off the sidewalk, Pewt again underneath, but they were pulled apart by more scientific bystanders and told to stand up like men.

At it they went, each one apparently trying to put in as many blows in a given time as he could, a clinch, a twist and a fall. Again they grovel in the dust. Plupy tries to pull out every spear of Pewt's stringy and copious thatch; Pewt tries to obliterate all signs of humanity from Plupy's freckled countenance.

It looked as if both would be successful, when suddenly there was an abrupt change of sentiment in the crowd, and old Mike Hartnett, who had been the most active in egging on hostilities, tore them apart with stern reproaches, just as Plupy's mother appeared, called from the duty of putting to sleep a wakeful baby by Keene's staccato shrieks of "Harry's a-fightin', Harry's a-fightin'," and took forcible possession of the most demoralized youth imaginable. His jacket was covered with dust and dragged over his head, one leg of his trousers pulled to his knee, his hair standing every way, his mouth swollen and his face scratched.

Pewt was also in the most astonishing condition possible, and looked as if he had been shaken up in a corncracker.

Plupy was hurried to the house by his horrified mother, notwithstanding his protestations and excuses, and sent to his room to spend the rest of the day in solitary confinement. He felt that this was unjust, but he recked not of injustice. He had played the man, and the deep and unspoken satisfaction that comes of a duty well done welled up in his breast and filled him with a sweet elation.

But he soon began to be uneasy. He was imprisoned. The outside world never before seemed so beautiful, so alluring. It seemed as if he must get out. He would. He listened. Everything was quiet about the house. Keene and Cele had gone over to Lucy Watson's, Georgie was in Aunt Clark's side of the house. Frankie and Annie were taking their afternoon naps, and the soft creak of his mother's rocking-chair, as she sung the baby to sleep, was the only sound in the house.

Outside the rhythmic tink-tink of the blacksmith's hammer was heard. He rose and peered out of the window. Nobody in sight. If he could only get down the back way, but his mother would see him. The front stairway led by his aunt's room. If he only had a rope he could let himself out of the window like Tom Bailey in the Story of a Bad Boy. There used to be a clothesline in the back closet. He tiptoed into the entry and back to the closet. "Bully," it was there, two long pieces. He would take both, to be sure. Back he went to the chamber and stealthily let them out of the window. Either was long enough.

CHAPTER XIII.

THE STORY OF A STOLEN HORSE.

By EDWARD STRATEMEYER

Author of the "Old Glory Series," "Soldiers of Fortune Series," "Colonial Series," "Pan-American Series," Etc.

Copyright 1900 by Edward Stratemeyer

FOR a quarter of an hour Andy listened to the shooting in the distance and worked upon his bonds at the same time. No one had remained to watch him, and if there was any way by which he could liberate himself he meant to do it. He had no desire to languish in a Northern prison. He knew well enough how Union soldiers were treated down South and he imagined that Confederates up North fared no better.

"I must get away—that's all there is to it; eh, Firefly?" he muttered between his set teeth, and Firefly shook his wet mane vigorously as if to agree with his master.

The soldier who had bound Andy had done his work in a hurry and in a bungling manner, and soon the young soldier found himself free. But he was still "in the woods," physically and mentally, and to get out was likely to prove a dangerous if not impossible bit of work. He was nearly in the center of the island and surrounded by a guard which was more than ever on the alert.

But there was one thing in his favor: the soldiers who had made him their prisoner were looking away from the island instead of towards the interior. Consequently, no matter how he turned, he was sure to come upon the guards from the rear.

His mind was soon made up as to what course to pursue. He would move to the lower end of the island with Firefly and trust to good luck to reach the water, where the swift current might carry him and his animal out of the reach of the enemy's firearms.

Had it been quiet he would never have proposed to take Firefly along, much as he would have regretted leaving the beast behind. But the rattle of the musketry drowned out all ordinary sounds, so the hoof-strokes through the brush and over the rocks counted for nothing.

In a few minutes he found himself within sight of the rushing and rolling river. Down near the water's edge was a fringe of bushes, and here he saw two soldiers at one point and a single soldier at another. He had picked up a stout club as he moved along, and with this ready for use, he made a short detour and came close to the shore of the island and less than a dozen feet from where the single guard was standing, his body bent forward and his eyes taking in the doings on the bluff beyond.

At that moment Firefly, with his nostrils still trickling from his bath, let out a warlike snort, as though ready to do battle. Instantly the guard straightened up, to see what had caused the disturbance. But before he could turn Andy was upon him. There was a quick shove, the start of an exclamation, and then a heavy splash, as the Union soldier fell headlong into the stream. As he went down he let fall his gun and this the young Confederate saved and appropriated.

Having disposed of the guard thus readily, Andy did not lose a fraction of time. Long before the Union soldier had regained the surface of the river, he was in the saddle and urging Firefly once again into the stream. The brave horse shied at first and Andy's heart leaped into his throat. "Go, Firefly, go!" he cried, and Firefly went with a leap and a splurge which carried him twenty feet from the shore.

As they descended into the water Andy remembered the other guards he had seen and instinctively withdrew behind Firefly that they might not discover him. He heard two shouts.

"What's up, Markham?"

"Hang me if the horse hasn't run away!" came in reply.

"But I heard two splashes."

"So did I, come to think of it. Hullo, Graves!"

To this there was no answer, for Graves was floundering in the water, too bewildered to save himself. He came up with a great splutter.

"Save me!" he gasped, as soon as he could speak. "Save me! I can't swim!"

"Can't you wade ashore?" queried one of his companions.

"No, it's too deep. Save me, Markham! Don't let me drown!"

"I will," was the ready answer, and without hesitation the Union soldier plunged into the cold water and started after his companion.

In the meantime the third soldier had made an important discovery. Andy was trying to swim beside Firefly and keep the gun above water at the same time, and now he exposed his hand and a portion of the stock of the firearm. Instantly the soldier took aim and fired, and the bullet struck the gun squarely, knocking the weapon from the young Confederate's grasp and nearly paralyzing his hand and arm for the time being.

There was now nothing left to do but to get out of range with all possible speed. Andy felt that the guard would reload and would then either fire at himself or the horse. If Firefly was killed he would have to swim along alone, thus exposing himself to an open attack.

"On, Firefly, on!" he cried, and the noble beast seemed to understand. Fortunately, he was used to the water and could swim fully as well as his master. On they went, the swollen stream sending them first towards one shore and then the other.

By this time the battle upon Ball's Bluff was drawing to a close. The gallant but reckless Colonel Baker had been shot and killed, and this, added to the galling fire poured in by the Confederates stationed in the woods upon three sides of the clearing, threw the Union men into confusion. With fearful loss they came tearing down the uneven path leading to the water and shoved off in their flatboats for Harrison Island. The enemy followed them up, and many a poor soul was sent to eternity before the island or the opposite shore could be gained.

The turn of the tide of battle took the attention of all of the guards left on Harrison Island, and from that moment Andy was forgotten by those left behind. But the Confederates on the bluff saw him

ANDY FOLLOWED ON FOOT, LEADING FIREFLY BY THE BRIDLE

and thinking him a Union man fired at him several times—shots that did no damage, but which made him feel very uncomfortable.

In a few minutes more the feet of the horse struck upon a sandy and rocky bar and instinctively Firefly followed the high bottom shoreward. It led to the northern bank of the Potomac to a spot thickly covered with hickory trees.

Feeling himself safe for the time being, Andy dropped upon a rock utterly exhausted. He was chilled to the bone and more than wet, for his cavalry boots were filled with muddy water. Taking off the boots, he emptied them, and then wrung out his coat and cape, and dashed the water from his hat.

"Well, Firefly, what next?" he asked, half aloud, when a crashing in the brush behind him caused him to start. He turned quickly, to find himself face to face with a short, broad-faced, and not unpleasant-looking negro. The darky wore a suit of cast-off army clothing of gray, from which every C. S. A. had been carefully stripped.

"Wh—what—how de do, massa," he stammered, as he came to a sudden halt.

"Are you alone?" queried Andy, quickly.

"Yes, massa."

"What are you doing here, running away?"

"Oh, no, massa," was the quick reply; but by the way the negro's eyes dropped before Andy's sharp gaze the youth knew he was lying.

"Are there any soldiers near here?" was the young Confederate's next question.

"No, massa; leas'wise, I ain't seed none."

"Any house close by?"

At this question the negro hesitated.

"Da is a cabin over yander, massa. But da ain't nobody dar but an ole woman most unable ter do anyt'ing."

"Show me the way and I'll make it right with you. What is your name?"

"Tom, sah, Tom Crosby."

"And where do you belong?"

"About ten miles north o' yere, massa."

"Well, Tom, take me to the cabin at once. And mind, we are not to be surprised by any Union soldiers, do you understand?"

"Yes, massa; ain't no sodgers in dese parts, massa."

The negro moved back, along a well-defined trail, and Andy followed on foot, leading Firefly by the bridle. The young Confederate knew only too well that he was upon the enemy's soil and upon dangerous ground, but for this there was no help. Crossing the river was impossible just now, and he was chilled to the marrow and felt he must have a chance to warm himself and dry his clothing if he wished to avoid a dangerous spell of sickness.

A distance of two hundred yards was covered, and they emerged upon a small clearing, in the center of which stood a log cabin built of wood with the bark left on, and having at one end a broad stone chimney. Smoke was curling from the latter, a most welcome sight to the shivering youth.

Without waiting, the negro led the way inside of the cabin, where a woman who looked to be at least seventy years of age was huddled before the open fireplace, smoking a black-looking clay pipe, filled with "tar heel" tobacco. She looked in amazement at the intruders.

"Thought you wasn't comin' back?" she cried, to the negro.

"Dis gem'man made me come," was the answer.

"What do you want?"

"My horse and I fell into the river, madam," answered Andy, "I wish to warm myself and dry my clothing, that is all. And if you can furnish me with a bowl of hot coffee or something like that, I'll pay you for it."

"Humph!" The old woman took several long puffs at her pipe. "Ain't got no coffee in the house."

"You have tea, then?"

"I reckon I have, but—"

"I'll take a bowl of tea. Anything so long as it's warm. Tom?"

"Yes, massa."

"Will you rub down my horse and see if you can stir up something for him to eat?"

"Yes, massa."

"I see there is a shed over to the left. Put him in there."

"Yes, massa."

The negro hurried out, and watching him, Andy saw him do as directed. The old woman had meanwhile bestirred herself and set her kettle to boiling. She saw that he was a Confederate soldier, but this caused her no anxiety, for she was too old, and lived too near the border line, to take a stand in the great controversy.

It was now growing dark, and the distant firing had almost ceased. Deeming it improbable that any of the Union force would come to that immediate neighborhood, Andy proceeded to make himself as comfortable as possible before the fire, which soon blazed up red-hot from the extra chunks of hickory thrown upon it. In an hour he was fairly dry, and by that time he was served with tea, corn dodgers and some baked sweet potatoes. The old woman also offered him a drink of whisky, probably of the "moonshine" variety, but this he declined.

"Tom is a Virginia nigger, isn't he?" asked Andy, during the process of the meal.

"I reckon he is——" began the old woman, and suddenly stopped. Andy waited for her to go on, but she would say no more. The young Confederate, however, felt that his surmise was correct. Tom was a runaway slave, bound North.

Andy had taken a position near a window overlooking the shed in which Firefly had been placed, that he might make sure his horse was not tampered with, for he did not intend to trust the negro too far. He saw Tom working away vigorously, with the shed door open. Presently he turned away for a moment, and when he looked again the shed door was closed. He thought nothing of this just then, but soon a dim suspicion that all was not as it should be crossed his mind.

He had just been counting out some money for the old woman. Throwing the scrip upon the table, he caught up his hat and darted out of the house. In a minute more he was at the shed door and kicked it open. A groan of dismay escaped him. There was another door on the opposite side of the shed. This door stood wide open, and Firefly and the negro were gone!

CHAPTER XIV.

A CHASE AND A CAPTURE.

"That negro has outwitted me!"

Such were the bitter words which arose to Andy's lips as he burst into the shed. He did not remain in the rickety building long. A single bound took

him to the opposite doorway, and looking along the woody trail beyond, he discerned the shadowy forms of horse and rider not a hundred yards distant.

Andy was a fair runner, and feeling that he must regain his steed at any cost, he ran forth at the top of his speed along the trail, which sloped gradually upward into the state of Maryland. He forgot all about being in the enemy's territory. He was going to have Firefly back, or know the reason why.

At first he had thought to yell to the negro to halt, but prudently remained silent, feeling the thief would only endeavor to increase his speed on discovering that he was being followed. On he went over sticks and stones, until, his foot catching in the exposed root of a pine tree, he fell headlong, with a loud crash.

The noise reached the negro's ears and he swung around in the saddle. Catching sight of Andy, he began to urge Firefly on by words and blows, new to the horse, and which the gentle beast hardly comprehended. In the meantime, Andy scrambled up as quickly as possible.

"Stop!" he called. "Stop, you thief!"

"Yo' go on back!" returned the negro. "Doan yo' know de Yankees is jest above dis yere trail?"

"I don't care—you're not going to steal my mount in this fashion," returned Andy, determinedly. "You're a runaway nigger, and if you don't stop I'll put a bullet through you."

And as he spoke the young Confederate drew his pistol, which he had taken from the holster on turning Firefly over to be fed and rubbed down.

"If yo' shoot de Yankees will be down on yo' afo' yo' kin turn yo'self," answered the negro, but his tones showed that he was much disturbed. Again he urged Firefly forward, and bent low, to escape the expected shot.

The pistol was indeed ready for use, freshly loaded, and Andy would certainly have fired had the chance of hitting his mark been a good one. But the light was uncertain, the rough road made Firefly bob up and down continually, and he was afraid he might wound the very animal he had come to save.

At last a bright idea struck him. Stopping short, he took a deep breath.

"Whoa, Firefly! Whoa, old boy!" he called, with all the strength at his command.

The faithful horse heard and pricked up his ears. Then, when Andy called again, he suddenly came to a dead stop.

"Git on, yo' lazy hoss, git on!" screamed the negro, but in spite of a beating, Firefly refused to budge, for Andy kept calling to him to whoa, and ran up closer and closer. At last, seeing he was beaten in his attempt to steal the animal, the negro slipped from the saddle and darted off among the trees.

"I'll git dem Union sod'gers after yo' in no time!" he sang out as he disappeared. "I dun racken yo' won't nebber see Virginy no mo'!" and then off he crashed; and that was the last Andy saw of him.

Once again in the saddle, Andy did not deem it advisable to remain in the vicinity long. The Union soldiers, if not close at hand, were certainly not far off, and it was barely possible the negro might keep his word and send them down upon him. He turned Firefly on the back trail and urged the faithful beast on as rapidly as the nature of the uncertain ground permitted.

Reaching the cabin again, he found the old woman at the doorway, still smoking her pipe.

"Got back your hoss, eh?" she said. "That nigger is a sly one."

"I want to cross the river," returned the young cavalryman. "If you can furnish me with a flatboat I'll pay you well for its use."

"I ain't got no flatboat. But I'll tell you where to git one—up to Lemming's. There's a flatboat there—up in the creek."

Further conversation revealed the fact that Lemming's was nearly an eighth of a mile down the Potomac. Lemming was a plantation owner, and used the flatboat to ferry hay and other commodities from one shore to the other—or at least he had used it before the war put an end to such usage. The old woman was certain Lemming was off to the war and nobody was home but his wife and her two daughters.

Tipping the elderly female handsomely for her information, Andy continued on his way, feeling that the darkness of the night would greatly aid him in escaping from the enemy's country. A well-defined trail led along the Potomac, and in a short while he found himself at the bank of the creek or inlet where the flatboat was supposed to lie.

For some time he could learn nothing of the craft, and he was thinking seriously of venturing to the distant farmhouse for information, when he caught sight of the flatboat, drawn up among a number of tall bushes. To get the craft afloat was no mean task, but finally it was accomplished, and he moored her where Firefly might readily step on board. The horse was at first unwilling to do this, and it took loud and repeated urging to make the animal budge.

To guide the boat across the stream there was a broad oar to be used as a rudder. Andy had just taken up this oar and was preparing to shove off from the bank of the inlet when the sharp click of a rifle trigger caught his ear.

"Halt there!" came the command, and a short, stout Union soldier stepped into full view from behind a tree. He had a very red face, red hair, and a red beard, and his tone of voice was unmistakably that of an Irishman.

"Sthand where yez are," he went on, as Andy looked at him crestfallenly. "Have yez the countersign?"

"Potomac," said Andy, on a venture.

"Wrong, me laddybuck, it's not Potomac, nor president, nor potatoes, nor nuthin loike it. Yez are my prisoner. Oi was after watchin' yez fer tin minutes an' wondherin' what yez was up to. Sthep ashure now an' kape quoit till Oi call the guard."

"But I'm not an enemy, I'm a friend," began Andy.

"Yez is a Johnny Reb an' nuthin' else; Oi kin see it stickin' out all over yez—not to spake of the uniform yez is afther wearin'. Sthep out, Oi say!" and the rifle was pointed at Andy's head.

There was nothing to do but to obey. As Andy stepped ashore Firefly started to follow, but the young Confederate shoved him back. This caused the flat-bottom boat to wobble, and in a second more she was adrift and heading for the river.

"Sthop that boat!" roared the Irish picket, but when Andy started to obey the Union soldier caught him by the shoulder.

"No, yez don't!" he cried. "You sthay roight here. Corporal of the guard, it's Tim Moriarity wants yez! Picket numbher siven!"

The last words were delivered with all the strength of the Irishman's lungs. He was a new recruit, having been mustered in but a week previous, and he felt he had made a most important capture. He continued to hold Andy, meanwhile leaving his musket fall to the ground.

As soon as the weapon went down, the young Confederate planted his foot upon it. This accomplished, he pulled out his pistol and aimed it at the picket's head.

"Let go—unless you want me to fire," he said, in a low but earnest tone.

"Saints preserve us!" howled Tim Moriarity. "Don't yez shoot me! don't!" and releasing Andy he leaped behind the nearest tree for protection.

The alarm had now sounded, and from across the plantation clearing the young Confederate saw half a dozen Union soldiers approaching on a run. They were all armed and one called to the picket to know what was up.

"It's a Johnny Reb!" yelled the Irishman. "He was afther thryin' to murdher me, so he was!"

"There he is; I see him!" cried the under-officer, who accompanied the squad. "Halt, or we fire!" he commanded.

By this time Andy was in the water of the inlet, wading as rapidly as possible after the fast receding flatboat. He had just clutched the rudder-lock when several reports rang out and he felt himself struck in the shoulder. A pain like that of a thousand needles shot through his body, his grasp relaxed, and then he knew no more.

It was not until several hours later that he came to himself. At first he knew nothing, but that he was lying on a soft and warm couch in a dimly-lit room, and that there was a faint murmur of voices around him. Then he saw the faces of a kindly-looking woman and an elderly man, as both bent over him.

"Will he live, surgeon?" asked the woman.

"I think so. But the poor fellow has had a narrow escape," was the reply of the medical man.

"A narrow escape, indeed, to be shot and then half drowned. And he is so young, too; why nothing but a boy, one might say."

"Certainly young for a cavalryman, Mrs. Lemming. But then, you see, these Southerners are all crazy to fight, boys as well as men. Can I leave him here for the present, or shall I send down a stretcher and have him removed?"

"No, no; leave him here for the present. It might prove fatal to move him. I will do my best for the poor boy."

"I don't doubt but what you will, madam. To be sure, he is an enemy, but in such cases no one with a heart can make any distinction."

"True, sir, and one must remember also, that, at the end, we are all God's creatures," concluded the woman, solemnly. "On the Day of Judgment He will judge us by His rule of conduct, and not by our own."

Andy scarcely heard the last words. But in a dim manner he realized that he was among friends, even though they were of the enemy, and then consciousness again forsook him.

The Camp Fire of Mad Anthony

A Serial Story By EVERETT T. TOMLINSON

Author of "The Rider of the Black Horse," "Winning His W," "Camping on the St. Lawrence," "Three Colonial Boys," Etc., Etc.

CHAPTER VI.

THE RETURN OF THE QUAKER.

"WHAT'S THAT? Do you see it, boys? Do you know what that is?" demanded Noah in a whisper.

Holding his candle high above his head, Noah, who was in advance of his companions and farther down the rude stairway, peered with his friends into the wide cellar. Apparently almost the entire space was filled with small chests, which had been carefully packed in regular rows, and the topmost chests were close to the timbers beneath the floor of the room above. For a moment the excited boys stared in silence at the startling discovery they had made, and then in a low voice Ananias said:

"What do you think it is, Noah?"

"I have eyes and I can see, and I have a nose that can smell. If I was a blind man I'd know this cellar was full of tea."

"Are you sure it's tea, Noah?" whispered Caleb.

"Humph!" retorted Noah. "Here, Cale, you hold the candle and I'll make sure," he added. "We've been fooled by the wench and we don't want to make any mistake about this." Placing the candlestick in his cousin's hand, Noah at once approached the nearest tier of chests, and lifting the topmost box in his hands, said quickly, "It's full, anyway. It smells mightily like tea, too, but I'll find out for certain. Hold your light a bit higher, Caleb."

Obediently, Caleb lifted the candle and in a moment Noah had torn open a corner of the chest he was holding and had thrust in his hand. It's the stuff, boys, and no mistake," he added when he had tasted of the contents. "The cellar is full of it! We've seen it and smelled it and tasted it, too."

"'Touch not, taste not, handle not,'" said Elias solemnly.

The tones of the boy's voice served to relieve the tension of the moment and all the boys laughed. The excitement of each was strong and the meaning of the discovery which they had made was clear to every one. Someone, directly against the command of the assembly, and in opposition to the intense feeling of the loyal Whigs of the colony, had dared to bring tea into Greenwich and store it where it was not likely to be found. What the purpose had been every boy was convinced that he understood, for every one of the four shared in the determination of their elders to have nothing to do with the use of the "accursed stuff."

"What shall we do, Noah?" demanded Elias.

"Nothing now," replied Noah promptly. "The best thing for us is to get out of this house just as soon as we can, and not be seen here, either! Blow out your light, Cale, and we'll all make for the street."

Caleb Davis at once extinguished the light and then the four boys cautiously moved through the darkness toward the front door, which had been left open. No one spoke as they crept forward, and in a brief time they gained the exit.

"Now, Noah, what shall we do next?" whispered Elias as the boys halted on the street in front of the old house, which now seemed doubly somber and forbidding in the dim light. "We've got to decide what——"

"Sh-h!" interrupted Noah warningly. "Somebody's coming."

Instantly the boys turned and looked in the direction in which their friend was peering, and in a moment the forms of two approaching men could be seen.

"Come on! Let's run!" suggested Caleb eagerly.

"Hold on! Don't do that!" whispered Noah quickly. "A follower of Anthony Wayne doesn't want to get shot in the back."

"Never you mind Anthony Wayne," retorted Caleb sharply. "He doesn't run away. It's in the other direction he goes when he runs, I'd have you know. But I don't believe we ought to let anybody see us here. That's what I meant. I'm not afraid."

"We all know that, Cale," whispered Ananias consolingly. "But we've been seen already and it's too late to leave. If we run now it'll just show we don't want anyone to see us. It'll let the cat right out of the bag."

A warning word from Noah caused his friends to

become silent and all turned to await the coming of the two men, who were by this time so near that every one of the four boys could see that it was Elnathan Todd, with Thomas Hull, the owner of the old house, before them. The arrival of the two at such a moment naturally increased the excitement of the boys, and though no one of them made the suggestion, it was by common consent that Noah became the spokesman of the party as Mr. Hull and Elnathan stopped before them. Both the newcomers plainly were somewhat excited, and Noah's suspicions that the young Quaker had gone to warn the owner of the place that the boys were investigating the house, was confirmed, although he did not refer to his conviction in the presence of his companions.

"How is this, Noah?" said Mr. Hull, as he and Elnathan peered into the faces of the four boys. "I hear you have been searching my house."

"Yes, sir," replied Noah, endeavoring to speak in such a manner as not to betray his excitement. "We thought you'd be glad to have us find out what made the shutters slam and the doors open, and what made all those queer noises that have been frightening everybody for the past few nights."

"Elnathan informs me that you found my wench, Dinah, in there."

"Yes, sir."

"She always was a mischievous baggage. Did you send her home?"

"Yes, sir. We told Elnathan we'd let him take her to your house. He wanted to take her and we thought you would be glad to learn what she had been doing."

"Thank you. I am glad. I'll see to it that she plays no more of her pranks in the Elmer house. She's a saucy baggage. Sometimes I don't know what to do with her."

"Did she tell you we were here, Mr. Hull?"

"Why, yes—no—not exactly. It was Friend Elnathan who said to me that you were here and had found the wench. He told me also that you were searching the house to see if you could find any others here. Did you find any?"

"Not a soul," said Noah quickly.

"Ah, I thought she was the only one to try such tricks." Mr. Hull laughed lightly as he spoke, and it was evident to Noah that the man was relieved by the assurance that only Dinah had been found in the house. Noah did not feel called upon to volunteer any explanations concerning the discovery of other things, and it was strictly true that the girl was the only person that had been found in the gloomy old house.

"She won't be likely to try it again," suggested Noah.

"That she won't," laughed Mr. Hull, "for I shall see to it myself. I am sorry she made such a disturbance, but it will not occur again. I was fearful when you first told me of finding her here that the mischievous wench might have done more than just frighten people by her pranks. But you tell me you did not find anything else in the house that was wrong?"

"She was the only one we saw," said Noah quickly, "and she's so black we shouldn't have found her in the dark if I hadn't chanced to run against her in the hallway."

"I am obliged to you, young gentlemen, for what you have done," said Mr. Hull as he turned away. "Now that the cause of all the trouble has been found, I don't think the old house will disturb anyone again very soon. Probably no one will have to disturb it, either," he added casually.

"Good-night, Mr. Hull," called Noah as he and his friends also turned down the street. He was aware that Elnathan, who had not once spoken throughout the interview, was apparently reluctant to depart; but the young Quaker's hesitation did not cause him to delay, and in a brief time he and his companion had disappeared up the street.

"I tell you what it is, boys," declared Noah to his friends, who at his word had halted, "that man ought to have your name, Ananias."

"I wish he had," retorted Ananias so earnestly that the boys laughed.

"He certainly is the biggest liar in Greenwich," said Noah warmly.

"You think he knows all about that tea in the cellar?" inquired Elias.

"I don't 'think'; I know he knows. Didn't the wench tell us that he made her do all those tricks? And didn't she say that Sampson came with her, too? And what do you suppose they rattled those windows and slammed the shutters and did all that groaning for?"

"You think it was all just to scare the Greenwich people and keep them away from the Elmer house? Noah, do you suppose Mr. Hull knew that the tea was in the cellar and had his negroes do all those tricks just to scare folk so that they would keep away from the place?" demanded Ananias excitedly.

Noah laughed lightly as he replied: "You ask too many hard questions, Ananias. How do you suppose I know any more about it than you do?"

"THE CELLAR IS FULL OF IT! WE'VE SEEN IT AND SMELLED IT AND TASTED IT, TOO"

"How long has that tea been there in the cellar, Noah?" said Caleb thoughtfully.

"Nobody knows. It may have been three months," suggested Elias.

"I think I could figure just how many hours it has been there," said Noah.

"'Hours!'" exclaimed Elias. "You don't mean to say——'

"I don't mean to say anything just now; and, boys, that's what every one of us must do. Will you agree not to tell anybody about what we've found out before you see me tomorrow?"

"We can tell our fathers, can't we, Noah?" inquired Elias.

"No. Don't tell anybody till I see you. Good-night," Noah added abruptly.

When Noah and his cousin had proceeded a short distance after the departure of their friends, Noah suddenly stopped and said quickly, "Come on, Cale!"

"Where? What now?"

"Come on! Come on and you'll see," replied Noah.

Puzzled by the unexpected action of his cousin, Caleb nevertheless turned and obediently followed Noah, who was running swiftly back in the direction from which they had just come. However, instead of following the street to the Elmer house, Noah darted into the vacant lots on the opposite side, and then, warning his cousin to follow his example, crept forward through the darkness until he had gained the shelter of the great elms that were growing there.

"Take your place behind that tree, Cale," whispered Noah, pointing, as he spoke, to an elm four or five yards distant from the one that sheltered himself.

"What for?"

"To keep a watch on the front of the house."

"But I don't see——"

"Never mind what you don't see! Just keep your eyes open and wait for what you may see, that's all."

"You think Elnathan and Mr. Hull will come back?" whispered Caleb as a sudden explanation of the strange actions of his cousin presented itself.

Noah, however, did not respond and Caleb at once took the position which had been assigned to him, and in silence the two boys watched the front of the old house across the street. The hour was late for the quiet village of Greenwich, and already most of its inhabitants were in bed long before this time. Not a person could be seen upon the street, and the branches of the great trees as they were swept by the gentle wind that was blowing made the only sound which could be heard. The sound itself was weird and mournful, and aroused in the mind of Caleb, at least, a recollection of the exciting experiences of the night, which, despite his efforts to be brave, were somewhat disquieting. Noah he could see was standing almost as motionless as the great trunk behind which he was concealed. An hour passed before the silent vigil was interrupted, and Noah stealthily crept from his hiding place to the tree where Caleb was maintaining his watch.

CHAPTER VII.

A SUBSTITUTE FOR LIGHTNING.

"No use in staying here any longer," declared Noah in a whisper.

"Let's go home, then," responded Caleb. "I have had all I want."

As the boys stepped forth from behind the great tree, Noah suddenly clutched the arm of his cousin and quickly drew him back into the shelter as he whispered excitedly, "See that, Cale! They're here, as sure's you're born!"

Instantly Caleb again darted behind the tree, and both boys peered across the street at the sight which now could be seen. A man had just emerged from the doorway of the old house, and, standing for a moment there, had gazed first up and then down the street. Apparently satisfied that no one was near, he then turned to some one within the house, and was speedily joined by a second man, who was seen to come out from the hallway, and, taking his stand beside the first man that had been seen, peer eagerly about in every direction. Apparently satisfied by his investigation he had then spoken a few words to his companion in so low a voice that neither Noah nor Caleb could hear what was said, and then both men departed, going swiftly up the rambling street without once glancing behind them.

"Who was that?" whispered Caleb excitedly to his cousin.

"A blind man would know 'twas Elnathan Todd."

"Was it Mr. Hull with him?"

"It wasn't anybody else. I knew they'd both be here, though what I can't understand is how they got into the house. They certainly didn't go in by the front door."

"Maybe they used the back door," suggested Caleb.

"You're a wise man and no mistake, Cale," retorted Noah, laughing lightly as he spoke.

"The main thing, though, is that they have been here, just as I thought they would."

"What shall we do now?"

"Go home," replied Noah abruptly.

The two boys at once started down the street toward Noah's home, walking rapidly, and neither of them referring to the exciting experience of the evening. In a brief time they arrived at the gate into the yard, and as they approached the house Noah stopped abruptly as he said:

"There's a light in my father's room, Cale. Perhaps something is wrong."

"What will he say to you for being out till after eleven o'clock?"

"I don't know. I'm not very badly scared for I reckon he knew a bit about what we were up to. At any rate I told him. Come on, Cale, and we'll find out what he has to say, anyway."

As the boys drew near the piazza they were startled as the door before them opened and Mr. Dare was seen holding a candlestick in his hand to light the way for some one who was standing beside him. Both men evidently were deeply in earnest and were still conversing in low tones. The sound of the approaching footsteps of the boys caused Mr. Dare to lift the light in his hand and gaze sharply at the newcomers, but as soon as he recognized Noah and Caleb he turned again to the man beside him and said, "Well, I bid you good-night. Shall I see you before you return to Philadelphia?"

"I think not, as I shall depart early in the morning."

"I am glad you told me what you did. I shall see that it is looked into and if anything is discovered I'll see, too, that you are informed."

"Thank you, Mr. Dare," replied the stranger. "Good night," he added as he shook hands.

"Good night, sir; good night," responded Mr. Dare.

As soon as the visitor's steps were heard on the gravel walk, Mr. Dare turned to the boys, who now had mounted the steps of the piazza, and said, somewhat sternly, "You are very late, Noah. Where have you been?"

"Come inside, pop! We've something to tell you," replied Noah quietly.

Without another word Mr. Dare closed the door (doors were seldom locked or even bolted in the time of this story) and reentering the room placed the candle upon a table and looked keenly at the two boys standing before him.

"It's all right, pop," began Noah, confidently, "at least it's all right as far as Cale and I are concerned. I don't know what you'll think of some others, though." And then Noah related the story of the exciting events of the evening, not omitting the account of the return of Elnathan Todd and Mr. Thomas Hull to the Elmer house after the departure of the boys from the place.

Mr. Dare listened quietly and without once interrupting Noah until the story had all been told. Then he said quietly, "Sit down, boys." As soon as the boys had seated themselves and Mr. Dare also had taken a chair, he continued, "Did you notice that man who was leaving when you came home?"

"Yes, sir," replied Noah.

"Did you know who he was?"

"No, sir."

He was one of the committee of safety from Philadelphia. He came here to inquire if we had seen anything of a sloop named the Grayhound."

"Did you tell him?" inquired Caleb eagerly.

"I did. He went on to inform me that she had acted in such a strange manner that it was suspected she had a cargo of tea on board."

"She did!" said Caleb quickly.

"It does look like it," acknowledged Mr. Dare. "The rascals ought to know better than to try to land the stuff here," he added.

---

[1] "Pop" and "marm" were the common terms by which parents were addressed in Greenwich in 1775.

"That tea ought to be treated the way the cargoes at Boston and Annapolis were," said Noah warmly.

"I'm not sure you're not right, my boy," responded Mr. Dare.

"And Tom Hull—" began Noah again.

"Who?" interrupted Mr. Dare sharply.

"Mr. Thomas Hull," said Noah, slightly confused by the implied rebuke, "and Elnathan Todd, too, ought to be treated to a coat of tar and feathers. The idea of their daring to bring in a cargo of tea here, right here in Greenwich!"

"I'm not certain they would venture to claim that the tea was theirs," suggested Mr. Dare dryly. "If they did, they would be bolder than the Grayhound, and what the sloop did beats anything within my recollection."

Noah could perceive that his father, in spite of his quiet manner, was angry at the very boldness of the landing of the tea in Greenwich, and his own excitement increased as he became aware of his father's feeling.

"It's all there. It's all stored in the cellar of the old Elmer house," said Noah eagerly. "We saw it. We saw it with our own eyes, didn't we, Cale?"

"We did," responded Caleb promptly.

"Are you positive the men that came out of the house were Thomas Hull and Elnathan?" inquired Mr. Dare quietly.

"We know it!" exclaimed Noah.

"I have had my suspicions of Elnathan's father, but I did not believe Tom Hull would be in such a deal," said Mr. Dare thoughtfully.

"They won't dare come out and claim it, anyway," suggested Caleb.

"They may not have to do that," responded Mr. Dare. "It may be that the cargo doesn't belong to them, anyway. The sloop may have run into the Cohansey and stored the tea in that cellar until such a time as it will be safe for her to come back and get it. Thomas Hull and Elnathan's father may not own a chest of it."

"What are they so interested in it, then, for?" demanded Noah. "What did Tom Hull—"

"Who?" interrupted Mr. Dare quickly.

"I mean Mr. Thomas Hull," laughed Noah. "Why did Mr. Thomas Hull, Esquire, have his negro wench go into the house and do all those pranks for unless he really meant to scare folk and keep them away from the place? And what did he want to keep people away for unless it was that he had or planned to have something there he didn't want anybody to see?"

"I have no doubt that both men are implicated," acknowledged Mr. Dare. "I am not sure, however, that either of them owned any of the tea. I can hardly believe that, in the present state of the feeling of our people. But that does not mean that they may not have been employed by the East India Company and are looking after the tea. It is quite likely, too, that they may have had some understanding with the company and provided a place where all the chests might be stored. That might be the explanation of all these foolish tricks of Tom Hull's negro wench."

"I wish the lightning would strike every chest!" exclaimed Noah fervently.

"So do I," assented Mr. Dare lightly. "In that event no one would have any damages to pay."

"Do you think either Mr. Thomas Hull, Esquire and Tory, or Friend Todd, Quaker and traitor, would dare claim any damages?" demanded Noah warmly.

"I should hardly think they would," laughed Mr. Dare. "Well, boys," he added as he arose, a hint which both boys instantly followed, "we'll have to see what can be done. The tea isn't likely to run away—or be struck by lightning tonight, and the Grayhound is under the suspicion of the committee, so she will not come back for her cargo right away."

"Not unless she runs up the Cohansey in the night—the way she came," suggested Noan as he and his cousin departed from the room. To Noan s suggestion his father made no response and both boys at once withdrew to their room. There Noah was silent until he and Caleb were in bed, and even then he did not speak before a quarter of an hour had elapsed.

"Asleep, Cale?" he called at last.

"Not yet."

"I have it all fixed."

"Have what fixed?"

"That tea."

"What about it? How are you going to 'fix' it?"

"We'll make a bonfire of it."

"What?" demanded Caleb excitedly as he partly rose in his bed and peered across the room at the bed in which his cousin was lying.

"I mean just what I say. If Boston can pitch a cargo of the stuff overboard into Boston harbor, and the men at Annapolis can get rid of the tea that was forced on them, I don't see why Greenwich can't have a bonfire. The tea doesn't belong to anybody," added Noah, dryly. "There isn't a man in the village who would dare say it was his, and if nobody owns it, who's going to make a fuss if the chests all go up in smoke? There isn't a man in Greenwich that will dare say he's anything but glad of it. And Tom Hull will be the noisiest of the crowd, too."

"What'll your father think about it?"

"You heard him say he wished the lightning would strike it, didn't you?"

"Yes," replied Caleb, dubiously. "But a bonfire isn't lightning exactly."

"It's better," said Noah, positively. "It will do the work all right and won't harm a thing except the tea, and lightning might hurt somebody. See?"

"All right," responded Caleb quickly. "I'm ready for it if you are."

"Keep still for a minute and I'll tell you all about it," said Noah glibly, as he began to unfold his plan to his cousin.

(To be continued.)

The boys all say our serial stories are "great," and they get more interesting each month.

In Defense of His Flag

(Continued from page 356.)

It was morning when he opened his eyes once more, and the sunshine was streaming across the plantation fields and into the window of the room he occupied. Feeling a trifle stronger he essayed to sit up. Instantly there was a stir and a girl of fifteen came to him.

"You must remain quiet," she said, sweetly, then turned and called out: "Mamma, he is awake."

Mrs. Lemming came instantly into the room. "You must remain quiet, Mr. Arlington," she said. "It is the doctor's order. You are badly wounded in the shoulder. We will take good care of you."

"Thank you, madam." Andy was surprised how weak his voice was. He tried to say more, but the words would not come, and he felt compelled to close his eyes again. Later in the day he managed to swallow a little nourishment, and from that time on he grew stronger, although his progress was so slow it was scarcely perceptible.

"I suppose you wonder how we know your name," said the daughter, who was assisting her mother in caring for Andy. "I saw it written on a number of letters which were in your pocket. My name is Viola Lemming. Mamma and I and my younger sister Flossie are living here, for papa is off to the war."

"Your father is a Union man, I suppose?" said Andy.

"Yes. We are all Unionists around here. But you mustn't mind that. We will take good care of you."

"You are more than kind. Will you tell me what happened after I was shot?"

"There is not much to tell. You fell back into the water and two of the soldiers fished you out and brought you here, for the nearest hospital service is five miles away."

"And did they catch my horse?"

"No. They tried to stop the flatboat, but it got away in the darkness, and what became of it and the horse none of the men know."

"I hope he got back into Virginia," said Andy, with a little sigh; and then Mrs. Lemming came in and said it would be best for him to remain quiet.

Day after day went by and Andy remained on the couch. The Lemmings were as kind and patient with him as though they were his best friends, and he could not help but reach the conclusion that there were other good people on the side of the North besides the Rockfords. Viola, especially, did all she possibly could for his comfort, and one day he told her about his home and his sister Grace.

"I would like to meet her," said Viola Lemming. "Who knows but what we will when this cruel war is over."

"That when will prove a long one, I am afraid," answered the young Confederate. "We are bound to fight to the last, and I presume folks up North think the same way."

Once or twice, when Andy was well enough to be moved, it was suggested by the surgeon who visited him that he be moved to the regular army quarters. The youth shuddered at this, knowing he would not receive half the care he was now getting.

"If you will have me, I will stay here, Mrs. Lemming," he said. "I know I am a good deal of a burden, but some day I and my family will try to make it up to you."

"I shall be glad to have you remain," said the lady of the house. "But you must give me one promise—that you will not try to escape so long as the Union authorities leave you in our care?"

"I'll promise that," answered the young Confederate, seriously. "You have my word of honor as a Virginian."

(To be continued.)

The Boy Princes of Europe

LITTLE princes lead very simple lives. The American boy, however, is apt to picture a boy prince as very gorgeously attired, surrounded by attendants, given all manner of toys and sweets, and very generally indulged.

But if the truth be known, there are a great many American boys who live amid far more luxury than do royal princes in their youth, for a Spartan simplicity is usually followed in the bringing up of royal boys.

In their feelings and ambitions they are just like any other boys, though it may seem difficult to some not to imagine them of quite a different sort.

A great many royal boys are now brought up in the country and on a farm, where they enter into all manner of simple sports when they are not working. It is not all play-time with princes, for they are made to do all manner of difficult things.

All the German princes are brought up on farms in typical old-fashioned farm houses such as the peasants use, furnished in the simplest fashion. The sons of the emperor of Germany were not allowed any servants in attendance, did their own cooking and cleaning in the old farm house kitchen, and had a gay time over it. These young royal boys even raised the vegetables used on the table at the royal palace at Berlin, and the emperor examined each barrel of vegetables as it arrived to see how his boys were doing their work. These boys planted, weeded, and harvested the vegetables themselves without assistance of any sort.

The royal princes of Sweden are given a thorough course in carpentry and masonry, and when he is seventeen or eighteen years of age each royal boy is capable of building a house all by himself.

Besides this, the Swedish princes are taught to cook, and scrub, and mend and make their clothes, in addition to all their studies, which are far more numerous than those of other boys, for they are obliged to learn many languages.

The two princes of Portugal have always spent six months of the year on a farm, where they are allowed to run about freely with the farm hands, and are not pampered in the least. In winter they are taught engineering and navigation. The older of the two was obliged to earn all of his spending money, and he did this by making small wooden packing boxes, which were sold to a dealer without the latter knowing they were made by a royal prince.

The king of Spain, who is now a man, was a real boy. He always had a great love for outdoor sports like gunning and fishing. Every year he spent a month camping out and roughing it like any boy, helping to cook coarse meals, and sleeping under a lean-to, or rough tent. He had many narrow escapes from accidents, as he was a very daring boy, always wanting to do perilous things.

The two little Italian princes of Aosta and the little royal prince himself, son of the king, are all as yet too young to start out upon the experiences of boy-life, but even as babies they are not at all pampered, their toys being of the simplest kind and very few in number. American boys are allowed to have a great many more playthings than these little royal boys, who, indeed, are not allowed to eat candy even till they are ten years old.

There is probably more curiosity felt about the little Egyptian prince than any other, for his mother is never seen without a veil covering her face, and never attends any public place, for that is against the custom of her country.

Little Prince Mohammed Abdul Monem is a very happy, contented little boy. He walks every day with his father and has a great many playmates among the sons of the English officers who live at Cairo, which is his home. He is a very bright little fellow, and his father, the Khedive, has subscribed to an American boy's magazine, so that his little son may become familiar with the ways of American boys. He speaks English perfectly, as well as German, French, and Italian.

He is shown in the picture in his dress-up suit of velvet, but when he plays he wears overalls of blue jeans, which his father had sent from an American city, because Mohammed Abdul saw that so many American boys wear them.

It is a well-known fact that little English princes lead the simplest lives, having their tasks and duties to perform, and working hard to earn the right to play.

Little Prince Henry of Wales is shown here with his little donkey, which he is patiently training to do tricks. He has doubtless studied and worked hard to gain this privilege, and he is just a healthy, happy boy like good American boys.

Plupy in Peace and War

(Continued from page 354.)

Hastily but quietly he tied one end of the rope to the bed post and tried it. It held. Then he carefully knotted the other end round his waist. He was not going to run the risk of warming his hands the way Tom Bailey did. He knew better than that. You bet he did.

Then he stuck his head out of the window. Nobody in sight. He drew it in and then slowly and carefully a long, thin leg came over the window sill, then another, followed by a lanky body. There was a pause, and then he cautiously grasped the rope and let himself drop. There was a wild clutch for the window, a yell, and a tremendous splash, and the open rain-water hogshead, filled to the brim with tepid water, received him and charitably hid him from sight?

He had tied the wrong rope round his waist.

And when the bewildered mother came rushing to the door with her rudely-awaked and blinking baby in her arms, she beheld her graceless and dripping son climbing out of the rain barrel, his hair plastered down on his scratched face, and his dripping garments clinging close to his skinny limbs and emphasizing the ludicrous lines of his figure.

(To be continued.)

A Strange Custom

By A. B. FOX

A peculiar feature of Holy Week in Mexico, is burning the Judases. Judases are effigies of Judas Iscariot, and are grotesque figures of all sizes and shapes, made of pasteboard, and roughly painted. Some are but a few inches high, while others are as tall as a man. They are exploded by means of a fuse which is lighted from the outside. At ten o'clock on the Saturday before Easter the church bells of the city, which have been silent since Holy Thursday, commence to ring. At the same time, the Judases, which have been strung across the streets on ropes, are fired. The noise of the explosions, together with the clamor of the bells, produces a deafening uproar that is thoroughly enjoyed by the on-gazing multitude. After this celebration is over, the streets present a strange appearance, strewn with the charred remains of the pasteboard figures, while occasional remnants may be seen dangling from the ropes in midair.

The Judases are sold in great numbers at the plaza, or market place, during Easter week; the prices ranging from a few centavos (cents) to a peso (dollar), according to the size.

Rules Worth Observing

Here are some rules made up by Thomas Jefferson which have seldom been seen in print.

You boys and girls will enjoy reading them:

3. Never spend your money before you have it.
4. Never buy what you do not want because it is cheap; it will be dear to you.
5. Pride costs us more than hunger and cold.
6. We never repent of having eaten too little.

THE YOUNG BOOK AGENT

OR, FRANK HARDY'S ROAD TO SUCCESS

By HORATIO ALGER, JR.

Author of "Lost at Sea," "Nelson the Newsboy," "Out for Business," "Young Captain Jack," "Ragged Dick Series," Tattered Tom Series," Etc.

Copyright 1905 by Stitt Publishing Co.

BEGUN IN JUNE

CHAPTER XII.

A BRIGHT BEGINNING.

WHEN FRANK entered Mr. Vincent's store and said he wanted a new copy of each of the three-dollar books, the clerk who filled the order was very much surprised.

"Didn't you get your case?" he asked.

"Yes. The two books are sold, and I want to deliver them."

"Good for you. You haven't wasted any time, I see."

Joel Perkins looked the two books over and then Frank had them wrapped up. With something like a sigh the countryman paid over the six dollars.

"It's a mountain o' money fer jest two books," he said. "But I like you, an' I guess it's all right."

Frank saw him to the corner of the street, and directed him to the Brooklyn Bridge, and so they parted. Then the young book agent hurried back to Philip Vincent's store.

"Let me congratulate you on your first sale," said Mr. Vincent, who had heard of the occurrence through the clerk. "I see you have lost no time. I think you'll make a success of it."

"I'm sure I will," said Frank. "And, Mr. Vincent, I want to take along four copies of the health book and four copies of the cattle book. They won't weigh much and I may be able to sell them on the spot, as they say, where folks won't wait several days or a week for delivery."

"That is a good plan. Some folks get out of the notion of buying books if you keep them waiting too long for the volumes."

"I'll pay you for the books I've sold and also for those I wish to take along," added Frank.

"You can pay for what you've sold, Frank; the balance I'll trust you for," said the book publisher, and so it was settled.

Having made his first sale, the young book agent was anxious to continue, and so he concluded to take the first train he could get for Bardon, a village on the railroad, three miles from Claster. With his case in one hand and his extra books in the other, he hurried to the ferry, and was soon on the train.

"I certainly can't complain of the start I've made," he told himself. "My commission on the two books is a dollar and a half. If I sell four books a day I'll be making three dollars, and three dollars a day is eighteen dollars a week. That is more than many a man earns. But perhaps I won't be able to sell so many books. Yet I'm going to try my best."

It was a ride of nearly two hours to Bardon, and the young book agent spent the time in studying the books he wanted to sell, and also in reading over the hints to agents and the other pamphlets furnished him. He was naturally quick to grasp anything new, and by the time he had finished he felt himself able to talk intelligently about all of his wares.

Having sat in one position for over an hour he felt somewhat cramped, and so moved from one car to the next, just for the exercise.

He was passing through the second car when he came face to face with a gentleman who had once lived in Claster, but who had moved to Newark.

"How do you do, Frank?" said the gentleman, whose name was Robert Begoin. He was a lawyer and had once done a little legal business for Mr. Hardy.

"How are you, Mr. Begoin?" answered our hero, and paused. Then the lawyer held out his hand and they shook hands.

"Sit down. Going home, I suppose?"

"I am going to Bardon first."

"Is that so? So am I. How are your folks these days, Frank?"

"Father is getting along as well as can be expected."

"Why, has he been sick?"

"No, sir, but he met with an accident," and our hero related some of the particulars.

"That is too bad. Well, your father can make the railroad foot the bill."

"So they say."

"To be sure he can. Has he had legal advice yet?"

"I think not."

"Then tell him, for me, that he had better do nothing with the company until he gets advice from a lawyer."

"I'll tell him. But why is that best, if I may ask?"

"If he is not careful they will pay him some small amount, and then get him to sign papers releasing them from further obligations. I know a woman whose husband was killed on the railroad. She accepted five hundred dollars, and released the railroad. If she had brought suit she might have got ten or fifteen thousand dollars."

"I see. Will you be in Claster one of these days?"

"I am going there day after tomorrow."

"Then I wish you'd call on father. I know he'd like to see you, and perhaps he will want to retain you as his lawyer."

"Certainly I'll call on him. But I don't want to force my services on him," answered Robert Begoin.

"I know that, sir. I'll tell him I met you and that I asked you to call."

"What are you doing for a living? I see you have a case of goods with you."

"I am selling books."

"Indeed? What sort of books?"

"I'll show you," answered Frank, and lost no time in bringing out the various volumes. The lawyer was not particularly interested in the health book or the cattle book, but took pleasure in looking over the set of novels by famous authors.

"I have always thought I'd like something like this," he said. "I do not care to have all the works of each author, even if that person happens to be famous. I want the cream of their writings."

"Well, you get the cream, and nothing but the cream in this set," said Frank. "It is certainly a set of books that ought to be in every library. The print is large, the paper first-class, and you can see that the binding is very handsome and durable. The illustrations are by the best artists."

"And what is such a set worth?"

"Twenty dollars, in this binding, and if you want the half-calf binding—the very best—the price is thirty dollars."

"That is certainly a fair value for the money. Can you deliver the books to my residence in Newark?"

"Certainly."

"Then I will take a set in half-calf. When will I get them?"

"I'll send in the order tonight. The books ought to come by the day after tomorrow."

"All right. And how do you want your pay?"

"You can pay when you get the books, Mr. Begoin," answered Frank. He knew the lawyer would not wish to pay in installments, and so said nothing on that point.

"Very well, I'll make note of it," said Robert Begoin, and put it down in a little vest-pocket blank book he carried.

"I am very much obliged to you for the order," went on Frank, as he packed up his books once more, and took the lawyer's home address. "Those are the kind of orders I like to get."

"I hope selling books pays you, Frank."

"I don't know how much it will pay me yet. This is my first day at it."

"Is that so! Why, you talked as if you were an old hand at the business."

"Did I? I am glad to hear it. I was afraid folks would take me for a greeny."

"I didn't take you for one, and I think I can read people pretty well. You evidently like the work."

"I do, Mr. Begoin."

"That is half the battle—to be in love with one's occupation. A man can't be a lawyer unless he likes it, and is cut out for it—and the same with a book agent. Is this your first sale?"

"No, sir," and Frank related how he had fallen in with Joel Perkins and sold him the two volumes. The lawyer from Newark laughed heartily.

"You certainly took time by the forelock," he said.

"I made a dollar and a half on that sale."

"Good! And I presume you will make a little more on the books you have sold me."

"The publisher allows me five dollars on each order in ordinary binding and seven dollars for an order in half-calf."

"Then your sales today will bring you in eight dollars and a half. You'll soon get rich at that rate."

"I don't expect such success every day."

"No, it would be looking for too much. You may have days when you won't sell a volume."

"Perhaps—but I am going to try my best to sell at least one book very day."

The train was now approaching Bardon, and in a few minutes the two alighted and Frank bid the lawyer good-by.

"I'll tell father you'll call," said he.

"Very well," answered Robert Begoin.

Bardon contained only a handful of stores and not over two-score of houses. Anxious to sell all the books he could, Frank visited the first store next to the depot. It was a grocery, and the proprietor was busy over his books.

"What can I do for you, young man?" he asked, abruptly.

"If you have a few minutes to spare, I'd like to show you some books," answered Frank.

"Don't want any books," was the curt reply.

"I have a very fine family doctor book that——"

"Don't want any books."

"It won't cost anything to look at them."

"Yes, it will—it will cost my time. I don't want to be bothered," grumbled the storekeeper, and seeing he could do nothing with the man our hero left the place.

"I TON'D WANT ME DOSE POOKS"

"Failure Number One," he murmured, grimly. "Well, I am not going to let it discourage me."

The next place was a butcher shop, and Frank found the proprietor chopping meat on his block.

"Vot vill you haf?" demanded the butcher, who was a round-faced, jolly fellow.

"I'd like to show you some books."

"Ach, yah, I vos vaiting for you. Vait till I got dis meat chobbed. Den I buy me a pook," said the butcher.

Frank waited for a moment, wondering if the butcher really meant to buy a book, or if he was only fooling.

"I have a family doctor book and one on cattle and poultry, and their diseases," he went on, opening his case.

"Vot is dot?" The butcher stopped chopping meat and stared at him.

Frank repeated what he had said, and showed the books. The fat butcher commenced to laugh.

"I ton't want me dose pooks," he said. "I ton't read English; I read Cherman. I dink me you got some plank pooks to sell. I vant a plank book to write down orders in. See, like dis," and he held up a counter book.

He was so good-natured that Frank had to laugh with him. "I see," he said, and packed up his books again. "When I am selling blank books I'll come around and see you." He walked to the door, and then came back. "What do you pay for such a book as that?"

"Dwenty cents."

"Could you use half a dozen of them if I got them for you?"

"Yah, I dake a dozen, den I got pooks enough for a long dimes."

"All right, I'll get you a dozen next week," and Frank put the order on a blank sheet of paper he carried. At a wholesale stationer's place in New York he had seen such books in the window at a dollar and a quarter a dozen. He knew he could send the money for them and have them shipped to him by freight at a cost of not more than twenty or thirty cents.

From the butcher shop Frank went to the remaining stores, and then to the first of the private dwellings. At the latter place he met a shrewd middle-aged man, who looked his cattle and poultry book over with keen interest.

"That's a pretty good book," he said. "How much?"

"Three dollars."

"It isn't worth it. I'll give you a dollar and a half."

"No, sir, the price is three dollars, and I think you'll find it worth every cent of it."

"I'll give you two dollars."

"Sorry, but I can't do it."

"Then make it two and a half."

"I would if I could, but I am not allowed to cut the price."

At this the man sighed.

"Then I suppose I'll have to pay what you ask. Have you a nice, clean copy with you?"

"Yes, sir."

"All right, hand it over."

"I can get it for you in about fifteen minutes."

"Then do it."

Leaving his case with the man, Frank ran back to the depot, where he had left his package with the ticket seller. He had been cautioned not to sell books right out of hand, for in many places to do that would require a peddler's license. Soon he came back with the volume.

"It didn't take you long," said the would-be purchaser.

"No sir, I ran all the way."

"Humph! So you won't take less than three dollars?"

"I can't. But I tell you what I'll do. I see you have some chickens for sale."

"Yes, all you want."

"What will you charge for a nice chicken, cleaned and dressed? My father is home sick and I'd like to take one to him."

"I'll let you have your pick for sixty cents."

"Then I'll take one," answered Frank.

CHAPTER XIII.

FRANK ON THE ROAD.

Half an hour later found Frank on his way home by way of the stage which ran between Bardon, Claster, and half a dozen other points. He had his books in one hand and a fine, fat chicken, cleaned and dressed, in the other.

"I've certainly had a splendid start," said he to himself. "I've sold thirty-nine dollars' worth of books and made nine dollars and a quarter. If I do as well every day I'll soon be rich."

It was dark when he reached home, and it must be confessed that he was very tired, and his arms ached not a little from carrying the books. Yet he could not help but whistle as he entered the house, so light was his heart. Frisky greeted him with short, sharp barks of delight.

"Glad to see me, aren't you?" cried Frank, and putting his books on the hall rack, he patted the dog.

"You must feel happy, Frank," cried Ruth, who came into the hall to greet him.

"I do feel happy."

"Then you got an agency for those books?"

"I did more, Ruth—I've sold some of the books."

"Good for you!"

The family had already eaten supper, but a generous portion had been saved for our hero.

"Here's a chicken I brought from Bardon," said Frank. "I bought it from a man because he bought a book from me," he explained.

"It is a nice fowl," answered his mother, after an examination. "So you got your books and have begun to sell them? You were fortunate."

"Let's go up to father's room, and I'll tell you all about it, mother."

The whole family gathered in the patient's room to hear what Frank might have to say. Mr. Hardy was now able to move around the room a little bit, but could not go downstairs.

It was a long story, but all listened with deep interest to all our hero had to say.

"And you have really sold thirty-nine dollars worth of books, Frank!" ejaculated his father, in amazement. "It is wonderful. I did not think any agent could do so well."

"And to think his commission is over nine dollars!" put in Ruth. "Oh, Frank, you'll be a millionaire!"

"Hardly," he answered, with a short laugh. "You must remember that Mr. Begoin's order alone amounted to thirty dollars. If it had not been for that my commission would have been only two dollars and twenty-five cents."

"But even that is very good," put in Mrs. Hardy.

"I am glad you spoke to the lawyer," came from Mr. Hardy. "I shall be glad to see him. I want to know how I stand in this matter of damages from the railroad, and also how I stand in this Garrison case. I am not up in legal matters, and need somebody to straighten out the tangle for me."

"I've got to send in that order for the set of books to-night," continued Frank. "And I want to get those blank books too." And he wrote out the necessary orders without delay. For the blank books he obtained a postoffice money order, and sent off the letters before retiring.

It must be admitted that Frank slept

but little that night. His head was filled with schemes for selling books. He felt that, if he had not struck a bonanza, he had at least struck something that promised very well, and he was resolved to work it "for all it was worth," as he expressed it.

Like many another person taking up an agency, Frank had a feeling against working close around home, and so resolved to cover a number of towns and country places to the west of Claster. This would keep him from home perhaps a few nights at a time, and he had his mother put some things in a valise for his personal use.

"You'll be loaded down, with your books and your valise," said Mrs. Hardy.

"Never mind, mother, I'll get used to carrying them," he answered, bravely.

Frank left home at nine o'clock the following morning. He took the stage for Fairport, which was fifteen miles away. Fairport was a center for villages and farms several miles around, and the young book agent felt he could find enough to do in that vicinity for at least a week, if not longer.

He already knew of a cheap but respectable hotel at Fairport, and arriving at the town made his way thither.

"How much will you charge me for a room, with breakfast and supper, for a few days or a week?" he asked of the proprietor.

"Don't want dinner?"

"No, sir! I'll be away during the day."

"A dollar a day as long as you stay."

"All right, sir. Here is my valise, and I'll start from supper to-night."

"Very well. You can register, and your room will be Number 21."

Frank placed his name in the hotel book and then, after brushing up a bit, set out with his case of books in his hand, to see what he could do. The extra volumes he had brought along he left at the hotel.

He had an idea that he could do better just outside of the town than in it, and so took to a road which led to another settlement two miles away.

He soon came to a neat-looking farmhouse, and going up to the front door, rang the bell. A tall, thin woman, with a hard face, came to answer his summons.

"Good-morning, madam," began Frank politely.

"What do you want, young man?" the woman demanded, briefly.

"If you have a few minutes to spare I'd like to call your attention to several books I am selling."

"Books! You get right out of this doorway, or I'll set our dog on you!" she cried, shrilly. "What impudence! To take me from my baking like this!" And she slammed the door in Frank's face.

It was certainly a cold reception, and the young book agent's face grew red with mortification. He was on the point of making an angry retort, but checked himself, and, instead, left the yard whistling merrily.

"That was a flat failure," he reasoned. "But as I am bound to have them I must make the best of them."

He visited three farmhouses in succession, but nobody cared to buy books. Some said they had too many books already, and others said they had no money to spare.

It was now noon, and Frank's face grew sober as he realized that half the day was gone and he had not sold a single volume. Was his bright prospect of the day previous to vanish after all?

"I've got to sell something, that's certain," he muttered, as he set his teeth hard. "Now, the very next call must mean a book sold."

The next farmhouse soon came to view. As he walked up to the door he saw that the woman of the place and two men, evidently a father and son, were eating their dinner.

"Excuse me, madam," said he, struck by a sudden thought. "But would you care to sell me a dinner? I don't care to go away back to the hotel at Fairport."

The farmer's wife looked him over carefuly.

"Who are you?"

"My name is Frank Hardy. I'm selling books for a living."

"What does he want, Martha?" asked the husband.

"Wants to buy his dinner. He's selling books."

"Well, sell him a dinner if he wants it."

"All right, you can come in, Mr. Hardy."

"How much will it be?"

"Oh, I don't know—about twenty cents, I guess."

"Thank you, that's cheap enough."

Frank was soon in the house, and having washed his hands at the kitchen sink, sat down to the table. A really liberal meal for twenty cents was set before him.

"Like to look at some of my books?" he asked of the farmer, who had about finished his repast.

"I dunno."

"It won't cost you anything. Here you are. Look them over all you please," and Frank passed over the health book and the cattle and poultry work. Then, without saying more he continued to eat what was set before him.

"This here cattle book is quite something," said the farmer, after a spell of silence. "I think Bill Judkins has one of 'em."

"This is the latest and best—just issued last fall," returned Frank. "It is thoroughly up-to-date, and tells of the latest methods of treating cattle and poultry for all sorts of diseases."

"Samuel, you ought to have such a book," put in the farmer's wife. "Don't you think so, Hiram?"

"Might be a good idee," responded the son, who was about twenty years of age and six feet two inches in height. "Might be we wouldn't hev lost thet cow last month if we'd known what was the matter of her."

"Here is a chapter on cows," said Frank, turning to it. "Here are the diseases, and here are the remedies."

"By gum! That's what was the matter o' our cow!" exclaimed Hiram, looking into the book. "Here's the medicine to give fer it, too. It's too bad, pop, we didn't have such a book when she tuk sick."

"How much is a book like thet?" questioned the farmer, cautiously. "I can't afford no fancy figure."

"There is the price right on the front page," answered Frank. "Three dollars, no more and no less, and the same price to all."

The way he said this made the farmer's son laugh.

"Reckon you're a book agent right enough," he observed. "Bet you kin talk like one of them patent medicine men as travels around, can't you?"

"I can talk about these books, because I understand them." He turned to the farmer's wife. "It's just like this pie. You know how to make it, and that's why it's good."

She smiled broadly.

"Do you want another piece?"

"Don't know that I am entitled to it, ma'am—but it's mighty good."

"Yes, you can have it," she answered, and got another piece from a side table. Then she turned again to her husband. "You might better take the book, Samuel."

"Guess as how I will." And the farmer went upstairs to get the money.

"You can pay me to-morrow, when I bring the book," said Frank. "This is only my sample. I'll bring you a nice, clean copy."

"Good for you."

"What do you think of the other book?" went on the young book agent. "If you have one book with which to doctor your cattle and poultry, you ought to have another with which to doctor yourself."

"Haw! haw! haw!" roared Hiram. "Thet's a good joke."

"Betty Daws has a family doctor book," said the farmer's wife. "She says it saves her many a spell of sickness."

"Do you ever have much sickness?" asked Frank.

"Sometimes. Father, he had chills and fever, and Hiram had an earache."

"Here is an article on chills and fever, and here is another on earache and how to cure it."

"Gosh, if it tells how to cure earache I want the book," put in Hiram. "Tell you what I'll do, ma. It's your birthday next Tuesday. I'll buy you a book for a present."

"Thank you, Hiram, it will be very nice," answered his mother.

Frank remained at the farmhouse a short while longer, and then started to pay for the dinner he had had.

"Never mind that," said the farmer's wife. "Take it out of the price of the books when you bring them," and so it was settled.

CHAPTER XIV.

A BOY RUNAWAY.

When Frank left the farmhouse he felt in high spirits once more. Stopping there for dinner had helped him to take orders for two books, on which his profit would be a dollar and a half.

"I'd like to stop for dinner every day on such terms," he told himself. "In fact, I think I'd try to eat two dinners a day."

The next place was quite a distance away, and the walk was a hot and dusty one. Yet he did not mind it, and went along whistling as cheerfully as ever.

Presently he came to a bend in the road where there was a big elm tree, and in the shade he paused for a while to rest.

He was about to move on when he saw a lad of twelve or thirteen with a bundle, tied in a blue cloth, approaching. At first he took the stranger to be a peddler, but soon saw that he was a farmer lad. He had evidently traveled far and was tired out and covered with dust.

"Hullo," said Frank. "How far is it to the next house?"

"Hullo," returned the boy, wearily. "The next house is just beyond yonder trees." He paused and threw down his bundle in the shade. "Say, it's hot, ain't it?"

"Pretty warm," answered our hero. "You look as if you had done some traveling to-day."

"Tramped ever since six o'clock this morning."

"Is that so! Then you've covered a good many miles."

"I haven't covered as many as I thought I would. I was going to get to Fairport by dinner time. What time is it now?"

Frank consulted a silver watch he carried.

"Nearly two o'clock."

"I thought so—by the feeling in my stomach."

"Then you haven't had any dinner?"

"Haven't had any breakfast yet, excepting one doughnut."

"Why—er—what's the matter?"

"You won't tell, will you?"

"I don't understand you."

"I suppose it won't make much difference if I do tell you. I'm running away from home."

"Running away? What for?"

"Dad wants me to work all the time. He won't give me no time to play."

"That's too bad."

"I'm going to the city to make my fortune."

"That's uphill work."

"Maybe it is. But I read in a book how a boy went to the city and helped a Wall Street man, and got to be worth three million dollars. I'm going to help a Wall Street man if I can find one."

"I'm afraid you'll never find that kind. What kind of a book did you read that story in?"

"A book they called a five-cent library. It had a colored picture on the cover. The story was called 'Clever Carl; or, From Office Boy to Millionaire.' Say, but Carl was a wonder!"

"He must have been—in the book. Don't you know all such stories are fiction pure and simple."

"Fiction? What do you mean?"

"They are not true. If Carl went to the city it's more than likely he'd have to work as hard as anybody to make a living. Of course, he might, in the end, become a millionaire, but the chances are a million to one against it."

At this announcement the boy's face fell, and he wiped his perspiring and dusty face with a handkerchief.

"Don't you think I can make my fortune in the city?"

"You mean in New York?"

"Yes."

"No, I don't—at least, not for many years. You'll be lucky if you strike any kind of a job. Thousands of boys are looking for work every day without finding it."

"Can't I get in Wall Street?"

"Not any quicker than in any other street. Somebody might hire you to clean the office and run errands, for two or three dollars a week."

"I shouldn't care to do that."

"What would you want to do?"

"I should want to be a cashier. That's what Carl was."

"My advice to you is, to turn around and go home," said Frank, severely. "If you get to New York more than likely, unless you have money, you'll starve to death."

"I've got eighty-seven cents."

"That won't keep you more than a day or two. Don't you go to school?"

"Of course, when it's open."

"How much work do you have to do?"

"More than I want to do. Yesterday I wanted to go fishing, but dad made me stay home and chop wood."

"How much wood?"

"Six basketfuls."

"That isn't so much. One day last week I chopped wood enough to fill a dozen baskets."

"Do you chop wood?"

"Certainly—whenever it is needed."

"Where do you belong?"

"Over to Claster."

"What are you doing out here?"

"I sell books for a living."

"Story books?"

"I sell a set of famous novels, but the other books are not story books."

"And do you have to tramp around from house to house?"

"Yes."

"It must be hard work."

"It is."

The boy heaved a long sigh. Evidently walking such a long distance had taken away some of the romance of leaving home.

"What will your mother say to your running away?" went on Frank, kindly.

"I—I don't know."

"She'll be awfully worried. More than likely she won't sleep a wink to-night, thinking about you."

At this the boy grew very sober.

"What is your name?"

"Bobby Frost."

"Then, Bobby, take my advice, and go straight home. It's the very best thing you can do."

"Dad'll lick me for running away."

"Maybe not, if you promise to behave in the future."

"I'd go back if I was sure he wouldn't lick me."

"Go back by all means."

"I'm awfully hungry and thirsty," said Bobby, after a long pause.

"Maybe they'll let you have a dinner at the next farmhouse, if you'll pay for it."

"I'll pay."

"Then come on with me. And maybe you can get a ride part of the way back."

Frank arose and so did the boy. Soon they were tramping the road side by side, and kept on until the next farmhouse was reached. A tidy-looking young woman came to greet them.

"Good-afternoon," said our hero, politely. "I know it is rather late, but this boy is very hungry, and I would like to know if you cannot fix him up some sort of a dinner. He'll pay you for it, or else I will."

"I'll pay for it," put in Bobby, promptly, and pulled out a handful of cents and nickels.

"Everything is put away," said the young woman, but bent a kindly glance at the dusty and tired youngster. "Didn't I see you pass here a while ago?"

"Yes, ma'am."

"Well, I'll get you what I have. Have you had your dinner?" she asked of Frank.

"Yes, ma'am—I got it at the place below here."

The lady of the house passed into the kitchen and Frank followed her and motioned her to the back door, out of hearing of the boy.

"I picked him up on the road," he whispered. "I talked to him and found he was running away from home. He hasn't had any breakfast or dinner. I talked to him, and he has promised to go back."

"For the land sakes! Did you ever!" murmured the woman, in amazement. "Do you know, when he passed, I thought he might be a runaway. How foolish! And I suppose he left a good home too!"

"More than likely."

"Did he tell his name?"

"Bobby Frost."

"From Oakwood?"

"I don't know. He said he had been walking since six o'clock this morning."

"Then he must belong to the Frosts of Oakwood. I'll ask him."

"Are they nice people?"

"They are good farming folks. Mr. Frost is rather strict, but he is a good man, and they have a lovely home."

Bobby had seated himself on the doorstep, and was waiting as patiently as possible for the dinner to appear.

"Aren't you from Oakwood?" questioned the woman.

"Yes, ma'am."

"I know your folks. Your father is Wilson Frost."

"Yes, ma'am."

"Well, I'll give you your dinner for nothing."

"Thank you, ma'am."

"Can't you get a stage to Oakwood-" put in Frank.

"He can get a mail stage from Barrettsville," said the woman. "That's a mile west of here," and she pointed out the direction. "My son is going to drive to Barrettsville in about an hour."

"Then you had better go with him, Bobby, said Frank.

"I will—if he'll take me," returned the boy, who did not relish the long tramp home. Soon he was eating the meal the woman set before him. While doing so he told his story over again, and the woman gave him some good advice.

"It was nice of you to advise him to go back," she said to our hero.

"I thought it no more than right to do so," answered Frank.

He spoke to her about books, but she did not wish to buy, and he did not press the matter. Soon her son drove up, and Bobby climbed into the carriage with him.

"Thank you both," he cried.

"You're welcome," said the woman.

"Good-by," came from Frank. "Don't ever try to run away again."

"I guess I won't," answered the boy.

(To be continued).

WINCHESTER

MODEL 1906 .22 CALIBER

Extra Light Weight Repeating Rifle

This rifle—the "Boy's Winchester"—sells at a price within reach of almost every boy's pocketbook, but it is made with the same care and exactness as Winchester rifles that cost a great deal more. It is a 15-shot repeater, having the popular sliding forearm action and weighs about 5 pounds. It has a 20-inch round barrel and a handsome straight grip stock finished with a rubber buttplate. If your dealer cannot show you this rifle, let us know.

Send for Circular fully describing this Rifle.

WINCHESTER REPEATING ARMS CO., NEW HAVEN, CONN.

FOXY GRANPA'S LATEST

Here you are, boys. A medallion pin of Foxy Grandpa, beautifully enameled in colors. Everyone will notice it on your lapel and try to get a closer look at it. All you have to do is to press the bulb—Foxy Grandpa will finish the job by squirting a fine stream of water all over the inquisitive one. Will squirt 20 feet. Greatest joke out. Order one today and fool all your friends. Sent postpaid for 15 cents, or Foxy Grandpa&Hooligan both for 25 cts with our catalog

AMERICAN SUPPLY CO.,
526 E. Minnehaha Street, St. Paul, Minn.

AGENTS MAKE MORE MONEY

selling my FAMILY RECORDS than any other; beautiful pictures; background solid gold. Sample, 25c; 52 for $2; 100 for $3.50. Sells on sight at 25c to 50c each.

BIG KONAN.

BY W.H.WOODS.

"HERE'S SOMEBODY comin' out o' the mountain, Dave, and he's goin' to cross the Fork."

"He'll have to swim it, then," said Dave. "It's 'way past fordin'. Who is it, Idy?"

"Some stranger, I reckon," the girl replied. "There! He's hollerin' now. Hear him!"

Dave went to the cabin door. Twilight was coming, but he could still descry the horseman on the far bank of the river, three hundred yards away; and curving his hands about his mouth, the young mountaineer shouted, "Hold on there, stranger! Don't try to cross till I come!" Then, quickly bringing his horse from the stable behind the cabin, he mounted and galloped down the hill.

The stranger had not heard the warning, but had already entered the Fork, now much swollen by late rains. He had gone but a little way into the swift water when his horse blundered and fell, and in the struggle the saddle-pockets hanging across the saddle were loosed, and whirled away. The rider sprang after them, and, bundled though he was in his overcoat, had almost recovered them, when he heard Dave call. He secured the baggage, however, and then turned to see his horse scramble up the bank, shake himself, and make off up the road. Both men shouted after him lustily, and the owner hurried ashore; but the horse was already some distance away and now moving fast.

"He'll go all the way home," said the stranger as he stood dripping on the bank. "And what am I to do!"

That was the question. There was no house for miles on that side of the river, and mountain floods in March are icy cold. Nevertheless, there was but one thing to do; and Dave pulled off his coat and heavy boots and swam his horse across the river.

"Thank you, brother!" was the stranger's greeting. "Good mare you have there," and shivering as he was in his wet clothing, he began to look Kit over admiringly.

But Dave was in haste to go back.

"We'd better be gittin' to the fire," he said, dismounting. "You git up here, mister."

His companion demurred to this, but seeing that he was much the smaller and lighter man, finally got into the saddle, and, with Dave swimming at his stirrup, safely crossed the river.

"My name is Stein," the traveler said, as, after his hearty acknowledgments, they went up the hill. "I'm a circuit-rider back here in the mountain, and am on my way to conference. I tell you, brother, if I could afford to own such a horse as this young beauty, I should certainly try to buy her."

But Miss Kitty was not for sale. She was not only Dave Konan's sole worldly possession, but his pet and constant companion as well; and to have sold her would have been to Dave like selling his best friend.

The Konan children and the widowed aunt with whom they lived found the preacher a delightful guest. He had lived much in the South; and when after supper the storm began again outside and they drew up around the blazing hearth, it was good to hear the traveler tell of the sunny regions he had seen, so different from their own.

"I think you would like it, down there, daughter," he said as he caught Ida's eager look. "If your big brother here would take you behind him on his fine horse and ride away to Florida, you would soon be rid of your cough."

It seemed rather an unfortunate speech. Ida flushed, and her eyes filled with tears, and Dave stirred in his chair uneasily.

Late that night when the two were alone together, Ida said with a wistful face, "Just think of it, Dave, it's warm and nice down there right now!"

Dave looked at her a moment, and then, without a word, got up, and taking her in his arms, began to walk to and fro. He was not yet twenty-one, but the mountaineers already called him "Big Konan."

"Warm and nice," Ida repeated, pressing her cheek against his arm, "and all out o' doors a-bloomin' and a-singin' like 'twas June. But listen at that!"

The lad glanced toward the dark window, rattling now in a fresh assault of sleet.

"Floridy's a fur ways off from here," he said. "A fur ways."

"The preacher's talk put me in mind o' something in the Bible about springtime," said Ida, more cheerfully. "I'll learn it to you, Dave, whilst you are totin' me so good."

It was a pretty habit she had of making him chant after her a bit of a hymn, or a verse from the Bible, in the loneliness of the long winter hours. And now, carried up and down in his arms, as she had been many another night when "the misery in her side" was great, she taught him the oldest and sweetest of all the songs of spring—the song that the Sulemite's lover sang in the vineyards of Judea three thousand years ago.

The logs on the hearth blazed and crackled cheerfully. The firelight flickered against the tall figure moving slowly back and forth, and cast fantastic shadows on the cabin wall. Outside was March, hissing against the window in driving sleet and rain, or raging up and down the narrow valley in great gusts of wind. But Dave Konan, usually as shy and silent as he was strong, still walked to and fro and chanted after his sister the words of Solomon's song:

"Lo, the winter is past, the rain is over and gone; the flowers appear on the earth, and the time of the singing of birds is come."

Soothed by the motion and the mellow voice, the sick girl fell asleep; and Dave, having laid her down with awkward gentleness, stood a long time looking into the fire, in deep and troubled thought. At length he turned toward the couch, and seeing his sister still asleep, quietly went out to find the preacher and talk with him further about Florida.

"It ain't fair, parson," he exclaimed, stirred out of his usual taciturnity, "it ain't fair. Here I am"—glancing down at his huge person in half disgust,—"here I am, strong as any three men ought to be, and my little sister just bodily pinin' away! You reckon 'twould help her, sure 'nough, if I could any ways git her off to Floridy."

That settled satisfactorily, Dave came to the business that had brought him there. Parson Stein was going down into the "Blue-grass"—would he ride Kit down there and sell her and send the money back?

Mr. Stein, in surprise, pointed out that this was a great deal to trust to an utter stranger; but Dave persisted.

"In course," said he, "I want you to git all you can for her, because that money'll have to take us to Floridy and keep us, too, till I can make a start."

The preacher looked hard at him.

"They were teasing you tonight about wanting to ride deputy-sheriff next spring," he said. "What about that?"

"That goes along with the mare," said Dave.

It was the simple truth. Young as he was, Dave Konan had already exhibited qualities which the mountaineers are quick to recognize; and going to Florida meant not only parting with his mare, but also the relinquishment of prospects which might have flattered even an older man.

Finally Mr. Stein got out the saddle-pockets which held his scanty savings.

"You take that, my son," said he, counting out two hundred dollars, the full price Dave had put on Kit, "and if I can sell her for any more, you shall have that too."

He would listen to no refusal, and Dave took the money.

There was one other thing, however. He explained that his sister was very fond of Kit, and he was anxious that the mare should be taken away, if possible, without Ida's knowing it. Mr. Stein readily agreed, therefore, to start early the next morning, and ride ten miles to breakfast in Frostburg, the next town on his route.

Dave promised to have the horse ready but himself professed to have business down the river, and would not see the preacher again; and so with a hearty hand clasp, they parted.

It was still dark the next morning when Ida, hearing a noise outside her window, opened it to find Dave riding up and down. He had made Kit ready as he had promised, and then with a boyish impulse, had led her out for a last ride, and now was talking to her.

"It's you or her, Kit," Ida heard him say. "Nothin' but that would make me do it—nothin'."

Ida called to him, and after a moment's silence, he answered hurriedly, "I got to go look up them stray shoats, Idy, and I won't be back tell towards night."

Then, as she supposed, he rode away. He had, in fact, only ridden around to the stable.

When he came back late that afternoon, Ida met him in great excitement.

"We've got her back!" she cried. "Sam Ransome caught the thief himself."

"What thief?" said Dave staring at her. But at that instant a familiar whinny caught his ear, and without waiting for further explanation, he hurried to the stable. There, soiled and splashed with foam and mud, stood the pet he had expected never to see again.

"Kit!" he cried, "Kit!" and slipping his hand under her mane, Dave turned his face to hide something shining in his eyes.

"We thought you rode Kit yourself this morning," said Ida, who had followed him, "and we didn't know what to make of the sheriff's fetchin' her home and wantin' to know if you had sold her. He says he suspicioned somethin' was wrong soon's ever he laid eyes on the fellow, and he hollered to him. He kept on hollerin', but the man didn't take no notice, so Sam fired off his pistol, just to stop him; and then the fellow lit out, sure 'nough, and Sam says he never would 'a caught him if it hadn't been for a short cut through the woods."

"Where was it?" asked Dave.

"Somewheres about Tampico," Ida answered.

Dave faced about suddenly. "Did the sheriff say what sort o' lookin' fellow it was?"

"Yes; he says 'twas a kind o' light-complected man; and he was deef and dumb."

"Deef and dumb!" Dave repeated wonderingly. "Idy," he said after a pause, "did you tell the sheriff anything about Parson Stein?"

The girl's eyes flashed. "Yes, I did," she said, "and he kept on askin' me questions till I up and told him that preacher want no more deef and dumb than he was." Her voice faltered. "Dave" she pleaded, tearfully, "you don't believe that old man done it, do you?"

"Sho! That man ain't no horse-thief!" he answered. "You go 'long in now, Idy; you'll be ketchin' more cold, next."

He caught up a wisp of hay and almost unconsciously began to rub down the mare. His brain was in a whirl. Could this suspected thief be the preacher? Mr. Stein had not started to Tampico, but to Frostburg, in altogether a different direction. Perhaps he had lost his way in the mountain roads. But then, the preacher was not "deef-and-dumb;" and finally, if this was Mr. Stein, why should he have tried to escape?

These were problems Dave could not solve.

But—the thought flashed into his mind—need he solve them? No one knew that he had sold the mare; why might he not keep her? He need say nothing, do nothing, but simply hold his peace; and if no one came to claim her, by and by he could re-sell her, and make the journey to Florida the more secure.

Satan tears some men only when he comes out of others; others he tears when he enters them, and Dave was of the latter class. The struggle that began in him now was all the more cruel because his temptation, like a weed in a flower-bed, grew out of the best part of him. It was of Ida alone that he was thinking. He thought he had never seen her look so thin and ill as she did that day, and he would do anything, he said within himself, if only he could provide a home for her in some more kindly climate.

And still he could not wholly consent to do this thing, even for Ida's sake. An uncontrollable restlessness possessed him. He could not talk; he could not sit still; he could not stay in the house; and finally, catching up his hat, he went out, and, heedless of the cold, walked out and threw himself down in the darkness at the foot of a tree.

As he lay there, by and by he heard the sound of horses' feet, and two men rode by, a neighbor, as he afterwards learned, fetching the doctor from Frostburg.

"Isn't this where Konan lives?" Dave heard the doctor ask.

"Yes."

"I'm afraid they're going to lynch the fellow who stole his mare."

"Sho, now, Doc! You mean tonight?"

"Yes; I expect they are at it now."

They rode on out of hearing; and a little afterward Dave opened the cabin door.

"I got to go to Frostburg," he said in a strange, hoarse voice. "It's the preacher they've got in jail."

It was a sudden conviction, and Dave could not reconcile it with the sheriff's story even yet; but he believed now that the prisoner who had been taken to the county jail in Frostburg was Parson Stein.

He had already saddled up; and Ida, going to the door to speak to him, heard him gallop away.

He knew that the people of the Cumberland Mountains were prone to summary dealing with horse-thieves; but for some reason he had not thought of that danger until now; and now might be too late.

In all that ten miles of mountain road he did not once slacken speed. His mare half leaped half swam the swollen streams, and went gasping up the hills, only to plunge down the other side in headlong, desperate bounds. There was danger, mortal danger in such blind riding; but the doctor had said the mob might be "at it now!" and the thought drove the boy on. Twice overhanging boughs had nearly torn him from the saddle. A tree-trunk dashed his foot from the stirrup, and for miles his leg dangled numb and useless. Once, indeed, Dave thought it was all over, and caught his breath in a quick, shivering sigh as the mare slipped on the edge of the cliff and hung one moment poised and trembling for the fall. But she recovered herself, and sprang onward, cheered by both hand and voice, until the last hill was climbed, and Dave saw below him the straggling village lights.

Was he too late? He stood up in his stirrups and peered through the darkness with straining eyes. Now the flash of other lights in the grove at the foot of the hill caught his sight. They were the torches of the mob. The race was over. Was it lost, or won!

It was not lost; but Dave had only a confused recollection of what followed. The scene under the trees, he knew, widened and grew more distinct. He saw the crowd; he saw a horse led forward, and a man, standing in the saddle, make something fast overhead; he saw the preacher's face, calm and pale, lifted for an instant above the mob. Then came a shout, a rush, a struggle, and voices about him—his own voice, too, perhaps—were shouting, "It's Konan! It's Big Konan himself!"

Dave did not know what came next. That same moment, as it seemed to him, he himself stood under the tree, battered and breathless, while the crowd slunk away in the dark; and Parson Stein was clutching him with shaking hands and in a broken and sobbing whisper thanking God.

Mr. Stein's explanation of his terrible

"WE'VE GOT HER BACK," SHE CRIED

HE STOOD UP IN HIS STIRRUPS AND PEERED THROUGH THE DARKNESS WITH STRAINING EYES

HAMILTON
22 CAL. RIFLE

Look inside the barrel of a "Take-Down" **Hamilton Rifle**, and you will see that the rifling is deeper than that of the ordinary gun. This rifling makes the gun **extremely accurate.** It is made by a new patent process which allows us to give you a better rifle for less money than you could ever get before. The **Hamilton** is a little giant in hitting power, and you will be surprised to see what long shooting you can do with it. It is the best rifle for small game, for the badger, hawk, grouse, frogs, rabbits, squirrels, etc. The **Hamilton** is made **in three sizes** and

Costs but $1.50, $2.00 or $2.50

and you will admit that the **Hamilton** looks worth three or four times as much. The **Hamilton** is handsomely finished. It is the gun not only for boys, but men, too. It is **absolutely safe.** The longest size weighs only 3½ lbs. It is a quick-loader, has self-ejecting mechanism, and takes 22-cal. long or short cartridges. It outlasts any 22-cal. rifle made. You can take it apart in a few seconds and put it in your grip. Every rifle guaranteed perfect.

If your dealer happens not to have it, remit to us direct, and we will send you a **Hamilton** Rifle by express. Send postal for Gun-talk.

HAMILTON RIFLE CO., **Factory C, Plymouth, Michigan**

YOUR FIRST SHAVE

marks the beginning of a duty which must be continually performed throughout your whole life. Choose then a soap which will always keep your face as it now is. Begin with

Williams' Shaving Soap

and you will never want to change. Its purity guards your face against injury, and its rich, creamy lather prevents irritation and makes shaving a real pleasure.

"The only kind that won't smart or dry on the face."

TO BOYS: Send us your father's name and address and tell us what shaving soap he uses, and we will send you a little combination pocket tool—key ring, screw driver, paper cutter and bottle opener. This offer is good only till November 1.

plight was simple. He had indeed lost his way that morning. Moreover, his wetting in the river had caused an almost total loss of voice, and he had so wrapped up his head and neck that he had not heard the sheriff hail him. Kit had, however, and at the pistol-shot, had promptly run away.

But the most conclusive evidence against the preacher was the sheriff's report that Dave had not sold the mare; and as Ransome, after having secured his prisoner, was called off to another part of the county, only Dave's coming had prevented the mob from perpetrating a fearful crime.

Before they parted that night, Dave made a manful effort to confess the temptation that had seized him; but Parson Stein would not listen.

"Not a word!" he protested while his eyes glistened, "not a word of that to me. My son, I'll pray for you all my life long!"

Dave had already given him the reins, and now the preacher mounted. He leaned down toward the lad.

"God bless you," he whispered, for he could only whisper yet. "Take that!"

He thrust something into Dave's hands and rode away. And the lad, presently bringing his dim eyes back from their last glimpse of Kit, found in his hand a roll of bills.

It was night once more on the North Fork, and the brother and sister sat by the fire, talking of their journey. Their simple preparations were all made, and tomorrow they should set their faces southward.

"It's done me good already, just thinkin' about it," said Ida. "All the same, I'm goin' to miss these old blue hills."

Dave stood up suddenly. Miss them? Nothing on earth but Ida could have torn him from his native mountains. Nevertheless, he stooped to lift her with a great content.

"Folks as is goin' on their journey ought to be gittin' some sleep," he said. "How does it go, Idy?—that song out o' the Bible?"

And so, walking to and fro in the firelight with that same burden in his arms, he took up again the ancient song, still fresh and sweet as the bloom of spring:

"Lo! the winter is past, the flowers appear on the earth, and the vines with the tender grapes give a good smell. Rise up, my love, and come away."

Our Pursuit of Old Golden

By W. G. MOORE

PART II

SEVERAL WEEKS passed before Old Golden was heard of again, and we had begun to think that perhaps he had died of his wounds, when one day while out hunting I met a hunter whom we knew as Indian John. Thinking that perhaps he had seen or heard of the animal, I stopped to talk with him.

"Yes, me see him," said John. "Him most knock John down two days ago."

"Where?" said I. "And how did that happen?"

"Why, I been putting out traps up Tamarac Swamp, and just as I come through thick brush old deer him jump and run right at me; Injun he jump quick behind big tree and deer go right on, but him very ugly."

"Did he seem to be wounded, John?" I asked.

"Him go plenty fast," was the answer, "but there was big bloody place on neck."

"Well," said I, "all my bullets did not miss. I'll get him yet, maybe."

But old John shook his head. "How many times you shoot at him, eh?" he asked.

"Six times, John."

"Huh! How far off he was?"

"Maybe ten steps."

"You shoot good with little gun sometimes?"

"Yes, generally."

"Shoot lots of squirrels, maybe through head?"

"Yes."

"Will you let Injun John tell you let Old Golden be. Him no common deer. No lead bullet ever kill him. You ever hear how him stamp old hunter up on Muskegon till he die in two days?"

Yes! I had heard about it and several other stories of his furious attacks upon hunters who had cornered him, but I was young enough to be conceited and obstinate enough not to give up easily, so I set off at once for the place where the deer had last been seen.

There was snow enough for good tracking and, as none had fallen lately, I easily found an old track of the deer I wanted. Before night I found a fresh track, and when it got so dark I could no longer see to follow it I left the deer in a long narrow swamp where I knew he would likely spend the night. On my way home I stopped at the house of a neighbor, who had two boys about my own age, and during the evening we got up a new plan for the capture of the animal.

During the summer, many cows and other cattle ran at large in the woods and most of them wore bells. These bells were not very musical, but they could be heard a very long distance and helped greatly in finding the milch cows at night or young cattle which had strayed too far away. From constantly hearing these bells the deer became so accustomed to them that they paid no attention to their noise. Indeed, we boys had several times found deer grazing peacefully with our cattle when we went after them at night.

Knowing these facts, we planned to take advantage of them. By daylight next morning Ben and Claud Stafford, another neighbor boy, Vet Kellogg, and I were at the swamp where I had left the big deer the night before. We had left the dogs at home, but I carried a large cow-bell, and we had planned that one of us was to follow the deer's tracks into the swamp while the other three were to follow one on either side of the swamp and another far ahead in case the deer left there. None of us were particularly anxious for the job of "belling," as we knew in case of this particular deer it would be somewhat dangerous, and it was hard work to travel through the swamp. So we drew cuts to see who should do it, and I drew the unlucky short stick.

After waiting for the other boys to get to their places I plunged into the swamp, following Old Golden's tracks. The spruce, tamarac, and other trees grew very close together and were covered with the freshly fallen snow, which, however, was not deep enough to conceal the deer's tracks. The ground was very uneven, hummocky, and full of holes, with a fine undergrowth of shintangle which, with the deep snow, made traveling very difficult and slow work. However, I wallowed along as well as I could, ringing the bell slowly, much as a cow would in walking, to let the boys know where I was.

In about half an hour I came to where the deer had laid down for the night, and shortly after to where he had stopped to browse. The tracks here were very fresh and I knew the deer must be close by, so I rang the bell more loudly to let the boys know it, and pushed cautiously forward. In order to be ready for emergencies I hung the bell upon my right arm by means of a strong strap we used in summer to hang the bell about the cow's neck. The strap was two inches wide, of good thickness and very strong, and was fastened by a strong buckle.

Holding my rifle at the ready and fully cocked, with my finger on the trigger, I pressed forward, looking keenly about me to avoid surprise. Several times I unavoidably touched a heavily laden branch of some evergreen tree. At such a time I had to be careful to keep the snow off my gun, for I was using G. D.'s, a poor grade of percussion caps, which dampness was liable to spoil.

In passing between two particularly thick clumps of cedar I knocked down an unusual amount of snow, and in spite of my precaution some of it lodged upon the lock of my gun. I raised it to blow the snow off, when a slight noise caused me to look quickly around. There was the deer, less than a rod away and coming straight towards me through clouds of snow. I tried to swing quickly about but my feet caught in some way and down I came just as the deer sprang at me. My rifle was knocked from my hands and discharged as it fell, while the deer ran past without hurting me except to knock me heels over head with its shoulder. I was thankful to have escaped his sharp-pointed antlers, and scrambled hastily to my feet. The deer had been alarmed by the discharge of my gun and was standing still, allowing me to rise unharmed; but no sooner had I gotten upon my feet than he rushed at me again. I had no other weapon except a knife, but the cow-bell still hung upon my arm and, grasping the middle of the strap in my hand, I swung the heavy bell and, just as the deer reached me, I brought it down with all my strength upon his head. It stopped his rush for a moment, but he struck at me furiously with his antlers and catching one of them within the strap jerked the bell from my hand. As he did so he reared upon his hind feet and struck me a fearful blow with one of his fore feet, knocking me flat upon my back and cutting a great gash in my shoulder with his sharp hoof.

I expected to be pounded to death now, but instead the deer seemed to be trying to walk off upon his hind feet, while he shook his head and struck frantically at the bell which had caught upon two of his antlers in such a way that he could not get it off. It dangled just in front of his nose and, as he shook his head, pounded him unmercifully, at the same time making a great racket. Seeing his attention was fully occupied, for a moment at least, I rolled quickly over and crawled under the wide-spreading, low-hung branches of a large spruce which grew near by.

I knew he could not get at me here and, being anxious to see the performance, I climbed into the branches where I could get a good view. Such a time as the deer was having with that bell! The heavy strap was caught in such a way that he could not get it off, do what he would, and the pounding he was getting on the end of his nose did my bleeding shoulder good. In spite of my pain I laughed so hard I nearly fell off the branches. Then I began to call loudly for Ben and Claud. Ben answered. "Come quick," I shouted, "I am up a tree."

I could hear the boys come crashing through the thick growth of alders at the edge of the swamp. Old Golden heard them too, and paused a moment to listen. How I wished then for my rifle or even my discarded revolver which I had taken to a repair shop. After listening a moment he gave me a last vindictive look, bounded away, and was soon lost to view, although I could hear the bell for several moments.

How the boys laughed at me when they came up! However, we were all very thankful it had turned out no worse and, having found my wound and bruises not serious, we set out again after the deer with the charmed life.

We followed his tracks for more than a mile. They showed he was traveling at the top of his speed. "We'll never see him again!" said Ben. "He's so scart at that bell he'll run himself to death, if he don't break his old neck." This last remark was caused by a tremendous jump over a wind-fall which we saw the deer had made. A regular swath of fallen trees lay before us and we had considerable difficulty in getting over it.

The deer apparently had gone into the air like a bird and sailed clear over it in spite of its height and its jagged limbs which formed a formidable barrier.

Vet was the first one over the wind-fall and immediately let out a whoop. "That's just what he has done, I'll bet a cookie," said he. "Here he lies, anyhow."

And there he was!

We approached cautiously but found him stone dead, his neck having been broken by his fall.

We found a place where the strap of the bell had caught upon one of the snag-like limbs and thrown him. His magnificent antlers were uninjured, and the other boys having voted that I had earned them, I took them home and have them now mounted with his noble head.

THE FIVE YEAR QUARTER-BACK.

BY

MOTT R. SAWYERS.

THE ONLY secret of success in which Judge Wilson had any confidence was hard work directed with good judgment, so that every moment of his waking time was filled with activity. He was, however, regarded as the most companionable person in his district. The reason for that was he never did anything that he could not do with his whole heart. He lived according to a carefully prepared schedule. Each evening he mapped out his work for the following day, wrote out instructions for his assistants, and informed his secretary where he might be found at any given hour. The plans thus formed were never departed from except for the most urgent considerations. Now and then he included among his arrangements an evening with his friends. At such times he gave himself without reserve to the occasion. He accepted only those invitations which suited him, and when he did go had the free air of a man who is interested and at ease. This evening he was attending the annual Bar banquet. It was a delightfully informal affair and good fellowship reigned supreme. One good story reminded of another and laugh followed laugh in rapid succession. In all of these proceedings the Judge was a valuable factor. He took no part in the narratives but he had the high accomplishment of being a good listener, and often said that it was as good to help someone else tell a story by your attention as it was to tell one yourself.

At last, however, he was appealed to. A story from the Judge was always welcome. His stories were not famous for their wit. They were often long. But they were virile and inspiring and always made a fitting close for an evening of wholesome diversion. "Judge, tell us something about your football experience, I understand you made the Varsity in your Freshman year," said the chairman. "Yes," added another, "I heard you made it in the first big game of the season and held the place as long as the intercollegiate agreement allowed —the whole five years." The Judge modestly admitted the truth of this report. "That beats anything I ever heard of," continued the second speaker. "How did it happen?" Yielding to the importunities of his friends, the Judge gave the following narrative as an answer to the question:

When I landed at college I was about as green a Freshman as the Campus had ever seen, and as for athletics I did not know the difference between a football and a punching bag. An incident which happened about a week after my arrival, however, led me to play, and play in such a way that I kept my position. With a classmate I went to the field to watch the practice. By way of expressing his admiration for a certain play he gave me a thump on the back and said, "Old man, why don't you try for the team?" "Don't have time," I replied, "I came to college to study." "I can't see what subject would pay you better than football," was the rejoinder. Another interesting play attracted our attention and the conversation was not resumed, but an idea had been put into my head that would not let me rest. He was right; no amount of book learning would be worth as much to me as the qualities I could develop on the football field. On our way back I observed a book under his arm and, taking it from him, began turning the pages. It opened to noted sayings by Napoleon Bonaparte. One declared that the factors of success in an enterprise were energy, system, and perseverance; another, that the effective method in warfare is to have a stronger force at the striking point than the enemy, for the less force always yields to the greater. I shut the book with a snap. As if by an instantaneous revelation I perceived that these things applied equally well to football, and I at once decided that if I did try for the Varsity, it would be with energy, system and perseverance, and that all of my football tactics would be based upon that other saying. The desire to play was rapidly growing on me. I would not, however, rush into the matter hastily. Two questions must first be settled; first, "Will it interfere with my studies?" Next, "Is there too great risk of bodily injury or damage to my health?" I wanted time to consider its bearing on my studies, but the physical aspect I would determine at once. I went directly to the office of a prominent physician and explained my purpose to him. "Now," I said, "I want you to give me a rigid examination, as if you thought I was trying to defraud you by concealing my weak points. If my physical make-up is such that I will endanger myself by playing football I want to know it." The examination lasted almost an hour, and at the conclusion I inquired the verdict. "As tough as a boiled owl," was his reply.

After supper I withdrew to my room to think the matter over from all sides. "Would it interfere with my studies?" I thought of some of the players who were worthless in their college work, but I was sure they would be worthless whether they played or not. Then I thought of some players who stood at the head of their classes, and my conclusion was that whether the game was a detriment or a help depended on the player. "Could I spare the time?" My decision was, that football, by calling for so much time, would compel me to make the most of every minute and thereby help me to form the habit of getting the most out of my time. Day was breaking when I went to bed, but the football situation as far as related to myself had been thoroughly discussed. That afternoon I presented myself to the captain as a candidate for quarterback.

I went at the game awkwardly enough and the fellows made much sport of me; but I bided my time, for I was confident that hard and painstaking practice would sooner or later make me all right. I followed the instructions of the coaches to the very letter. I did not like the supercilious way in which they called me "Freshman" and ordered me around, but I was willing for them to do almost anything, provided they taught me the game. My practice was systematic and followed the same general outline every day. On arising I spent ten minutes bounding the ball against the wall, catching it, handing it to imaginary runners, and going through the various plays of my position. I never hurried in these exercises, being anxious to get each motion exactly right, knowing that I could soon develop speed after I had gained accuracy. My studies then claimed my attention and I dismissed football from my mind until the practice hour. Each evening after supper I ran over in my mind the plays which I had made during the day, noted the mistakes, outlined my course for the next day and studied what the papers had to say about our team and others. For each game of the schedule I made laborious preparation. I studied the reports of the opposing team for days in advance, learning their weak and strong points and deciding just what I would do should it fall to me to lead our forces. Yet, in spite of all my efforts, I improved but slowly, and, though game after game was played with minor teams, the coaches never thought it wise to give me a chance.

At last came the contest with our real rival. Every one looked forward to it with anxiety. Our whole season's work

"NOW, WILSON, IT ALL DEPENDS ON YOU"

was arranged for the purpose of winning that game. Two days before the time tickets were selling at two dollars. The seats were all taken and standing room was at a premium. Never in the history of the college had the interest been so great. Our fellows were in the pink of condition. Everything was moving along smoothly, but it looked as if my name would not even be on the list of substitutes. Our coaches were taking no chances with the men. But all precautions seemed to go for naught. The very evening before the game, in light signal practice, Dall, the substitute quarter, twisted his knee and had to be helped from the field. A gloom was cast over the whole school. What if something should happen to Grippen, the regular quarter? I was next in line and few had any faith in my ability to play the position, to say nothing of managing the team.

The day of the game dawned clear and crisp—ideal for football. The rooters for the opposing school began coming in by sunrise, and soon had the streets resounding with their yells and songs. Our fellows were just as loyal and answered song with song and yell with yell. The warfare of noise continued without interruption as the crowd poured through the gates into the grounds. The reverberations reached the dressing rooms and filled us with an indefinable restlessness. To me, as one who might possibly be called on, the coaches paid particular attention. Of all the commands I could remember only this, "Keep cool." I tried to; but the sight that met my eyes as we came on the field was too much. To the left was a huge bank of our colors; to the right, an equally huge bank of the enemy's. In front was a long stretch of mingled hues, while tally-hos and other gorgeously decorated turnouts filled the enclosure. Thousands of throats were fairly splitting themselves with cheers; horns were blowing and multiform instruments of noise were adding to the clamor—fifteen thousand people and not a neutral—all clamorous, all partisan—the most magnificent spectacle I had ever seen. My first sensation was one of astonishment and admiration, then came one of unnamable dread. I seemed to collapse inside like a punctured balloon, and if I had not laid down on my blanket, I believe I would have fallen.

* * * * * *

The goals were chosen. The teams lined up for the struggle. The stillness was appalling; the sense of expectancy, painful. With grim faces our men set themselves in the V and prepared to hurl themselves through the lines of the enemy. The shrill whistle of the referee broke the silence and the game was on. It is unnecessary to describe the play of the first half. The teams were evenly matched and there was no score when the timekeeper's signal sent the men to their dressing rooms. During the ten minutes' intermission, everything was confusion to me. The coaches were assisting in caring for the men and giving advice in jerky, emphatic sentences: "Jones, that was 'punk' when you let that tackle through," "Look out for that," "Pop, take care of that fullback," "Buck, remember what we told you about that center-play." My nerves were at too high a tension to permit me to attach any importance to these remarks, though in subsequent games I learned the value of them.

The time was soon gone and we were on the field again. It was their ball. A desperate rush carried it well into our territory, where it was given to us on a foul. Our full-back made a good kick and the ball was downed near their goal post. Then began some football that was simply magnificent. The determination to win could be seen on the face of each man in their eleven. Steadily they carried the ball down the field—to the twenty-five yard line—to the thirty-five yard line. In vain our fellows tried to stem the tide. They hurled themselves in front of the avalanche, but were either walked over or ploughed aside. The bleachers rose en masse, shouting themselves hoarse and making the air a sea of blue with their banners. At almost every play one of our men would be laid out and it would take the full time to bring him around. The merciless plow plunged on—to the forty-five yard line—to the center. The rooters grew hysterical. On came the team like a lot of inspired demons. Disastrous as it was, I could not withhold my admiration of such strength and fierceness,—on to our forty yard line—to our thirty yard line. Our followers were hushed with a tense anxiety. There was an ominous pause as the referee's whistle blew for time and our medical attendant hurried onto the field. We waited with eagerness to find out who was injured. A feeling of hopelessness came over our crowd as at the end of two minutes we saw the captain and one of the coaches carrying Grippen to the side lines. There was a subdued consultation and I heard one of the coaches say, "That does settle it. But it's the best we can do."

My chance had come. The head coach stepped over to me and said, "Now, Wilson, it all depends on you. Stick to your instructions and, whatever you do, don't get rattled." As I walked out to take my place, that same sickening, dizzy sensation that I had experienced at the beginning of the game came over me and I was far from the confident general I had pictured myself as being. Again the whistle sounded and the deadly avalanche was put in motion. It was the same process. I tried to keep cool as I hurled myself into the plays. Still they ground us down. I glanced back and saw the goal only twenty yards away. Then my wits returned to me. The sight of the posts so near woke me up and I prepared for the first play I had planned. I had read early in the season that the coaches were having trouble with Tass, their left guard, because he played too far from the center. I had calculated that in this his first game he would forget himself and revert to his old fault. I looked. Yes, there he was, and our guard out to match him. I whispered in our center's ear, "Play as far to the left as you dare." "Who's playing this place, Freshman?" was the response. Nevertheless, he obeyed. It made an ideal opening. As soon as the ball was snapped I was through and close upon the runner, but their alert quarter seeing the danger sprang in front of me. Angered at his interference I threw him with all my might against the man with the ball, who tumbled in a heap while the coveted spheroid went rolling beyond his reach. Like a flash one of our fellows was upon it and when the mixup was untangled it was our ball on the twenty-five yard line. The air shook with cheers for the man who had fallen upon the ball. No one had observed my part except the center, but the act had given me new confidence in myself and that was what I needed more than anything else just then. Our instructions were to kick when inside our thirty-five yard line and my plan was to follow instructions as far as advisable. A good punt sent the ball spinning down the field and pandemonium reigned among the bleachers as a fumble gave it to us. Cheer after cheer followed our plays as we drove on to their five yard line. The program prepared for us by the coaches called at that place for a run by the right tackle. It was against my judgment, but I yielded and gave the signal. A plunge, and the ball was in the air. Forty-four hands were grabbing for it, but a pair of blue arms encircled it and our hopes were gone. Then followed a repetition of the terrific onslaught that had wrought such havoc in our ranks before. All the tricks that we had been taught to block plays were tried, but to no purpose. After each untangling they were a little nearer our goal. The white lines moved beneath our feet until there was only one left. Their chief reliance in these gains was their big right guard. With eyes bulging and teeth hard-set, he pushed, pulled, dragged and blocked with every ounce of his two hundred and six pounds. I had a play ready for him, but as it could be used but once I was reserving it for a third down, when his failure to gain would give us the ball. Though he was carrying the ball as much as the rest of the team put together, it had not yet been entrusted to him on a third down, and here they were only five yards from the goal.

It was third down and I observed with satisfaction that he was to make the trial. "Now, fellows, hold 'em and it's our ball," shouted our captain. The teams massed in the center, but I stepped back. I saw the giant twist himself loose from the writhing mass and make a free stride toward the line. It was what I was waiting for. With a plunge I was at him—my head between his legs. Summoning all my strength I straightened up. His feet were in the air above me and he was kicking like a mule. The weight was straining every muscle of my body, but I staggered forward. A confused jumble of cheers came to my ears across the field and I was aware of falling on my face. The next thing I knew the medical attendant was sponging my forehead and saying, "I guess you are all right now." "Time's up," someone announced. The captain thumped me on the back and said, "Good play, old man! You carried him back for yards, but cheer up! The worst is yet to come!" "Twelve minutes to play, one hundred and five yards to gain. Here, let 'Beef' handle the ball till you get your wind." The captain decided not to kick and I mechanically followed the next two plays as we started on the long journey to the other goal. On the third play I resumed my position, boiling with indignation at myself for having been knocked out. The season's instructions and what I had read about this team stood out with wonderful clearness in my mind. I saw that we had failed before by following too closely the program of our coaches, and I determined to take things into my own hands. A tremendous energy seemed to fill me and I felt as if I were being directed by some power outside of myself. "Now steady, fellows, we're going clear through. I know their weak places," I yelled as we lined up. "What's getting into the Freshman," I heard someone say, but I had my mind made up and was not disconcerted. The call was for a smash on their left tackle. "Bang" went the halfback and we made our gain. Same signal, and again! "You're killing me," panted the halfback. "Here, switch over and let 'Beef' take it,' I commanded, indicating the fullback. We pounded onward and I saw by the look of distress on his face that the tackle must soon either give way to an inferior substitute or weaken so that our gains would be greater. That was my object in keeping the attack going at him. Under my direction the other halfback shifted over to relieve the full, and on we went. The enthusiasm of the team spread to the bleachers and the cheering grew in volume as the distance diminished. Changing our men as they grew tired we fought our way to the other twenty-five yard line. The tackle then gave way and the substitute came in. Our merciless battering-ram went at him and he reeled backward before the onslaught. Now and then there was a protest at my actions, but I shouted signals at the top of my voice and ignored all remarks. An oppressive silence settled over the whole assembly as we lined up for a first down on the five yard line. Amid a roar the wedge penetrated the center and made the distance one yard less. Again the smash! Twenty-two men rushed to a common point. The avalanche plunged against the side of a mountain and when the debris was cleared away the ball was where it had started from. Then their crowd took a turn at the cheering, and it must be admitted that they did full justice to their opportunity. "Third down! Four yards to gain! One minute to play," screamed the referee amid the uproar.

The play which I had reserved for such an emergency must now be used. I must follow Napoleon's ideas and make the attack where there was least resistance. Calling the backs around me, I whispered, "'Beef,' you play quarter and you fellows stand one on each side of me and when he gives me the ball throw me over their heads." As the teams lined up, I bawled out so as to be heard above the clamor, "Play low, everybody play low." Down went our men and theirs to meet them. Swift and true the ball came from "Beef's" hands to mine and the next instant I was flying through the air. I barely cleared the men beneath me, but lighted within two yards of the goal. A pair of fierce hands were clutching at me as I began to scramble for the coveted mark. "Pull, pull!" I called as I saw the striped arm of a friendly jersey around me. I felt as if I were being torn to pieces by a pack of wolves as the opposing sides fought and tugged. The last thing I remember is thinking that I was in a great railroad accident and a long freight train was running over me.

The shouts of the rooters were dying away in the distance, when I came to myself and realized that I was on a cot in the club house. The captain was sitting near me, and when he saw me open my eyes he said, "Well, old man, it's a good thing that time was called just then. You wouldn't have come around in two minutes that time. But I guess the victory was worth it."

That night our whole squad celebrated,

(*Continued on page 371.*)

"WELL, OLD MAN, IT'S A GOOD THING THAT TIME WAS CALLED JUST THEN"

Dan Blaney's Awakening

BY NORA L. GRAHAM

DAN BLANEY wriggled out of the crowd that had gathered around the little figure lying prostrate on the sidewalk. Straightening his shoulders as he reached its outer edge, he thrust his hands into his pockets and, in a careless drawl, remarked to the policeman who came running to the spot:

"Aw, it's only a kid that the mail wagon ran over."

The policeman peered through the crowd at the unconscious boy, then ran to the call box, while Dan sauntered down the street. He had reached the end of the block when the loud clanking of a bell caused him to turn, and he hurried back just as the ambulance drew up beside the curb. The crowd had separated, and the tall policeman stooped and gently raised the injured boy in his arms.

"Why, it's Teddy Ward," he said, "poor little fellow, his leg is broken."

The little fellow stirred, opened his eyes, dully gazed at the big, blue-coated officer, and feebly whispered, "Mama."

Dan, who was again edging his way to the center of the crowd, heard and stopped short. The kid had a mother! Dan, himself, could not remember to have ever had such a luxury, and it was the one regret of his idle, heedless, vagabond life. Instantly the injured boy became an important personage in his sight, and he stood and watched while the officer carefully placed the boy in the ambulance. When it had driven off to the hospital, and the crowd had melted, he stepped up to the big policeman.

"Say, officer, do you know that kid?" he asked.

"Why, yes," answered the policeman, "it's little Teddy Ward who's sold papers over on the corner for almost a year."

"Say, he has a mother, hasn't he?" continued Dan, stooping to pick up Teddy's cap which had rolled off the curb.

"Yes, and a baby sister," the policeman replied, as he turned to cross the street and continue on his beat.

Dan stepped along by his side; he was going to find out all that the policeman had to tell.

"Where do they live?" he asked, rolling the cap into a ball and stuffing it into his pocket.

"In a little cottage over there," waving his hand toward that quarter of the city where hundreds of poor families huddled together in every block. "His father died in the hospital about a year ago, and Teddy has been helping the mother. 'Twill be hard for her now, I'm thinking. The baby's sick most of the time and—But why are you so interested, youngster?" he asked, suddenly growing suspicious, "and what have you in your pocket?"

"Nothing, oh, nothing," quickly replied Dan, as he darted away and down a side street. A few minutes race brought him to the tenement district, and he wandered from block to block, asking everyone he met:

"Say, do you know where Teddy Ward lives?"

Again and again he asked the question, and the street lights had begun to twinkle faintly when at last the house was pointed out. He stood on the opposite side of the street, trying to sum up courage enough to cross, ring the bell, present the cap, and so see and speak to Teddy Ward's mother. He watched the window, and, when the curtain was pushed aside and a woman's tear-stained face appeared, he took the cap from his pocket and started forward. But before he had reached the step, a tiny girl crept beside the woman, and again he stopped. For a minute he stood looking at them both, then suddenly turned and was soon lost in the puzzling maze of dimly lighted alleys.

It was late when Dan reached the livery-stable, the only home he had ever known, but he lingered about in the hope of being able to earn enough money for a project he had just conceived. He patiently waited, but the buggies were all washed, the horses all blanketed and the men were beginning to go to their rooms. Dan sighed and was just mounting the ladder to the hay-loft, where he slept in a corner, when a physician came in and hurriedly ordered his horse and trap. Dan jumped to the harness room and worked so busily that not a moment was lost. The doctor thanked him and, as he drove away, put his hand into his pocket and handed him a coin. It was a fifty-cent piece, and Dan shouted just as a tally-ho came in. The night-man tossed him a quarter, and he unharnessed the six sleek beauties and led them to their stalls.

Early the next morning Dan joined the group of eager newsboys about the paper wagon and, after securing a share, marched off to Teddy Ward's corner. With his head held high, he walked to and fro, lustily calling: "Morning papers! Morning papers! All about the railroad wreck!"

Business was brisk and he jingled the nickels as they accumulated in his pocket. The regular newsboys wandered by and audibly jeered at the big boy who had pre-empted poor little Teddy Ward's corner. But Dan continued to call his papers, bravely ignoring their stabs and sneers.

It was the first time in his life that Dan had worked all day, and, when the nickel for the last "Extra" had joined those already in his pocket, he heaved a sigh of relief. Taking a scrap of paper from his pocket, he scribbled: "Teddy Ward's cap and his day's earnings."

A heavy tread sounded on the stone pavement, and the big policeman appeared round the corner.

"Hallo, youngster!" he said, and his tone was not over-cordial. "So you've taken Teddy Ward's corner, have you?"

"Yes," shortly answered Dan as he carefully folded the slip of paper. Taking the cap from one pocket and the money from the other, he wrapped all together and started to walk down the street.

The policeman stared, and, when Dan had turned from the business street and hurried toward Teddy Ward's home, he followed. Dan laid the bundle on the top step of the little cottage and rang the bell. Then he ran to the opposite corner, where he crouched behind the lamp-post and watched until the door was opened, and the parcel was taken inside.

The policeman softly whistled and returned to his post, resolving to check the newsboys' jeerings. An uncomfortable thought came to him that he had been almost abetting it.

After that, Dan, with his bundle of papers was at the corner regularly every morning, and every evening he slipped away to leave the money with its message—"For Teddy Ward's Mother.—his day's earnings." He always waited for a glimpse of the woman's face and then hurried back to the stable in order to earn enough to purchase papers for the following day.

Teddy Ward had been in the hospital about a month when, one morning, the big policeman strolled over to Dan's corner.

"Well, youngster, how's business?" he asked in a surly tone, and Dan failed to notice the kindly gleam in his eyes.

"Pretty good," answered Dan, darting across the street to hand a paper to the gentleman who had beckoned from a doorway. He jumped on to the step of a passing car, shouted "Papers!" sold one, and came back jingling the nickels.

"This is a good corner for a lively newsboy like you," remarked the policeman.

"Yes," thoughtfully answered Dan. He sorted his bundle of papers and slipped them under his arm. "Say, officer, when's Teddy going to get well? 'Cause his place's ready for him."

The policeman smiled but answered in well-feigned surprise, "Really?"

"Why, of course," answered Dan in an injured tone. "Did you think I was mean enough to steal a poor little fellow's place? One that has a mother, too? No, sir!" He savagely shook his head and held out a paper to a passer.

"So you'll go back to loafing around the stables," said the policeman, walking to the corner and anxiously peering down the street.

"Not much," sharply answered Dan. "I'm going to work. The boss says I can have a regular place in the harness room."

"Good for you, Dan," slapping his shoulder. "And here comes Teddy Ward, now. He left the hospital yesterday.

Dan held the papers out to the little fellow who came limping around the corner.

"Here, Teddy, business is great this morning."

But Teddy looked at the policeman, who nodded, and said: "Dan, you're coming to our house to live, and he," pointing to the officer, "is going to buy you some new clothes."

"Because you're going to night school," interposed the policeman, for Teddy was forgetting.

"And mother says she'll be your mother, too," excitedly continued Teddy.

"Honest!" Dan's papers dropped to the ground, and the policeman helped Teddy Ward gather them up.

A curious industry in China is the manufacture of mock money for offering to the dead. The pieces are only half the size of real coins, but the dead are supposed not to know the difference. The dummy coins are made out of tin, hammered to the thinness of paper.

Mrs. Longworth's Pet Dog Starts a Craze for the Rare Royal Dogs of the Orient

Since the present Mrs. Longworth, Jr., made her recent trip to Philadelphia and New York, accompanied by her then future husband and a curious little pet dog whom she called Toodles, envious owners of lap dogs of an inferior breed to the Roosevelt toy have been inquiring from whence comes this prodigy and where a similar pet can be obtained. As a matter of fact, there are but a very few of these little spaniels in this country and their value is in proportion to their scarcity. Miss Roosevelt brought hers from the Orient, but there are a few in the possession of Alfred J. G. Edwards, of Glenolden, near Philadelphia. The photographs accompanying this, show the Glenolden spaniels.

They are known as the Pekinese spaniels, and are the royal dogs of China. They are the rarest dogs in the country. The parents of these Glenolden dogs have an illustrious history. Chutuey, the sire, was brought here from China; he is a descendant of the kennels of Li Ming Ching, a wealthy Chinaman, who in 1871 presented a male and female to Li Hung Chang, the late renowned Chinese statesman. Tai Tai, the dam, has frequently nestled in the lap of her majesty, the Dowager Empress of China. She and two sisters, together with father and mother, were found in the sacred palace at Pekin after the emperor and empress had fled, during the Boxer trouble, and were brought by Lieutenant Wise, son of F. M. Wise, captain in command, to the United States ship Monocacy.

These imperial dogs are believed to be the progenitors of the King Charles spaniels and up to the time of the war they were the exclusive property of royalty in China and were rarely found in the possession of foreigners.

The ears of this pretty dog are of the shape of a butterfly wing. When the dog runs he tosses back his head and the ears, inflated by the wind, look like the spread wings of the butterfly. The body is long and not unlike the body of a tiny lion; in fact these spaniels have been called the lion dogs of China. The legs are short and bowed in front, with long hair on feet and legs, the so-called feathers adding to the length of the feet. The body comes well down on the legs, giving to the animal an appearance of solidness. The heads are broad, especially in the male, and look almost square. The douce of the head is high and full, indicating, according to dog enthusiasts, an uncommon allotment of brain. The eyes are full and brown, rather deeply set and appealingly expressive. The tail is carried well up on the back and is feathered like a plume.

The DAISY Air Rifle

Our beloved President is a man who not only thinks acutely, but acts promptly. He believes thoroughly in rifle practice as an educational training for the young. In a recent book he says: "When able to practice in a rifle range, one can feel that the enjoyment is warranted by considerations of national ethics. . . . We have been able to fix a rifle range at Sagamore. . . . The children take to shooting naturally."

Any healthy boy or girl will get present enjoyment and a splendid training for the future with a DAISY AIR RIFLE. It teaches accuracy, concentration, and develops a cool nerve and a steady eye. Give your boy a "DAISY" and teach him to use it.

The "DAISY" is a real gun modeled after the latest hammerless rifle and shoots accurately, using compressed air instead of powder. No smoke, no noise, and perfectly safe in the hands of any boy.

1,000-Shot Daisy, an automatic magazine rifle, $2.00
Other Daisy models, $1.00 to $1.75

Sold by Hardware and Sporting Goods dealers everywhere, or delivered from factory anywhere in the United States on receipt of price. The "Daisy" book telling all about them free; write for it.

Company News

BULLDOG COMPANY, No. 38, Selma, Ind., has nice club rooms consisting of four rooms on the second floor of a large building, which they have converted into club room, initiation room, library, and reception room. The members entertained their lady friends on July 27th at a party at the home of one of their members and had a most enjoyable time. They have their charter neatly framed. PLEASANT CORNER COMPANY, No. 82, Grove City, Ohio, organized a baseball team and intends to have it give a good account of itself. The members have not been holding meetings during the summer months, but intend to begin with renewed enthusiasm during the fall and winter. QUEEN CITY COMPANY, No. 79, Traverse City, Mich., did not hold any meetings for some time, but started up again the first week in September. The captain, acknowledging receipt of an O. A. B. pennant, thinks it is just fine. During the fall months the members intend to get military suits and form a company. They also are looking out for new members, and we are promised a picture of the company so soon as they get their new suits. FARWELL ATHLETIC COMPANY, No. 74, Farwell, Mich., recently elected the following officers: Wilmot Carpenter, Capt.; Fred McGuire, V. C.; Bernie Wiesman, Sec.; and Willam Fisher, Treas. The band of the company played during a celebration on the Fourth of July, and received great praise. The members have been enjoying outings to various places. CLAN ALPINE COMPANY, No. 19, Boulder, Colo., has elected officers for the ensuing six months as follows: Elbert Bidwell, Capt.; John Beigner, V. C.; Herman Krenger, Sec.; Everett Price, Treas. They recently received two new members, and at a reception which they held during August for their friends had a splendid time. BASIN CITY COMPANY, No. 8, Murfreesboro, Tenn., at a meeting held at the home of one of the members, elected officers as follows: C. G. Bowling, Capt.; G. Harrison, V. C.; W. T. Deadrick, Sec. and Treas.; and Roy Byrn, Lib'n. The club colors are green and white. It is intended that the Tennessee Division of the O. A. B. is to have a state meeting in Nashville sometime in October, and it is particularly requested that any companies of the division wishing information regarding such a meeting will address C. G. Bowling, 408 N. High St., Murfreesboro. SILVER GATE COMPANY, No. 26, San Diego, Cal., recently held a house warming in their new club house. The evening was spent in playing games, dancing, singing, and music. Refreshments were served, and the company had a jolly time. This company has at last obtained a club house. The building cost $55.25. The size of it is 16x20 feet, and the greater part of the work on the house was done by the members. We are promised two pictures of the club house, which will be neatly furnished with lockers, book cases, desks, and athletic apparatus. We are glad to note that this company is in such prosperous working order. MT. LASSEN COMPANY, No. 32, Redding, Cal., has elected the following officers: Clyde Robinson, Capt.; Fred White, V. C.; Earl Behrens, Sec.; Fred Ross, Treas.; and Elton Richardson, Lib'n. This company is prospering finely. It has $5.70 in the treasury and fifty good books in its library. The gymnasium outfit consists of a punching bag, punching gloves, boxing gloves, dumb bells, weights, and a trapeze. The lodge room is decorated with bunting and flags. Meetings are held every Friday evening at which excellent programs are given, consisting of the giving of riddles, the telling of stories, debates, and mock trials. The dues are ten cents a month. DIXIE ATHLETIC COMPANY, No. 12, Montgomery, Ala., sends us its report for the last six months. The members were entertained at quite a number of receptions and suppers during the spring months. When school closed, meetings were adjourned until September 15th. Camping trips were enjoyed by many of the members during the hot weather, and the captain reports that the fishing was excellent. ARTESIA COMPANY, No. 57, Potomac, Ill., has now twenty-five members on its roll and is in better condition than ever, lively interest being taken in all company matters. At a recent entertainment given by the members, notwithstanding a heavy storm, the treasury was benefited to the extent of $8. On July 28th the members gave an ice cream social and had a good time. The uniform rank of the company numbers twenty, and it has received many compliments on its excellent drill. The captain promises us a picture soon. On July 4th the uniform rank gave a dress parade and drill during the day, having its headquarters in a large tent on the grounds. At this time AMERICAN BOY DAY was also celebrated, and the O. A. B. quartette with four additional singers composed a glee club which furnished singing during the day. The quartette also took part in the W. C. T. U. picnic August 2d, rendering some six selections. The captain says that when the quartette is singing in the open air, they often use specially constructed megaphones. The members are getting together instruments in order to organize a brass and stringed quartette, consisting of mandolins, guitars, cornets, and horns. The following officers were recently elected: Rex J. Moon, Capt.; Oliver Leonard, V. C.; Denton McGrauder, Sec.; Bliss Collins, Treas.; Charles Smith, Lib'n; and Ralph Morse, S. A. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its 46th regular report, and we note that during the vacation season all of the members have been having grand times. The Brooklyn Amateur Press Club, consisting of members of the company and others, will be formed during the fall months, which will be of great assistance in publishing the Universal Gazette. To meet additional expenses the dues have been increased to thirty-five cents a month. This company sent fifty cents for THE AMERICAN BOY Shut-in Fund, and hopes to send more later, as it considers this a splendid work. We may state that on account of vacations and companies generally not holding meetings during the summer months, no August letter or program was sent out. TAMPA COMPANY, No. 7, Tampa, Fla., has recently received a new member. This company has started a postal card collection which is being enthusiastically taken up by the members. So many of the members being away on vacations, it has not held any meetings recently, but will start up again in the fall. Its charter has been framed, and there are two candidates for election as soon as a meeting is held. OLD HICKORY COMPANY, No. 5, Nashville, Tenn., has not been holding any meetings during the last few months. Some of the boys have been working during vacation. Meetings will be started up again as soon as school opens. The following officers were elected at the last meeting: William J. Osborn, Jr., Capt.; Anderson Porter, V. C.; Albert White, Sec.; and Mark Osborn, Treas. OJIBWAYS COMPANY, No. 58, Yonkers, N. Y., intends soon to purchase another club house. Most of the members of the company were away during August at the Thousand Islands, Ohio, and other places. This company has opened correspondence with several other companies in the Order and has found it to be of great help in the way of exchanging plans, ideas, etc. If any companies wish to correspond they can address the secretary, T. P. Quaney, 42 North Broadway, Yonkers, N. Y.

The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

Under the Auspices of "The American Boy"

Object:—The Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

Height and Weight of Boys

A writer in an English magazine says, speaking of English boys, "Boys are generally heavier than girls, except at about the age of fourteen, when the girls increase considerably in weight."

Statistics are given to show that athletics are having their effect upon the physique of boys of the English middle classes and that they are becoming stronger and more robust; for instance, he says a boy of eighteen at Marlborough College today is 4½ pounds heavier and 9/10 of an inch taller than his father was at the same age, supposing that the latter was at Marlborough twenty-nine years ago.

Comparing boys of several countries he gives the following figures:

An English (Harrow) boy of eleven averages 4' feet 7 inches in height; an American (Boston) boy at the same age, 4 feet 5 inches; a Belgian (Brussels) boy, 4 feet 4 inches; a French (Bordeaux) boy, 4 feet 4 inches; an Italian (Turin) boy, 4 feet 3 inches. The writer thus puts the English boy at the head of the list, paying tribute to English birth and English breeding.

It Rained Willie

Willie saw some dynamite,
Couldn't understand it quite;
Curiosity never pays;
It rained Willie seven days.
—Princeton Tiger.

A Rising Son of the West

By FREDERIC E. WINSOR

Here is a portrait of Jay Darwin Bacon, fourteen years old, said to be the only boy in the United States who is stenographer in a Juvenile Court. He holds this position under Judge Ben B. Lindsey of Denver, Colorado, whose good work in the Juvenile Court has given him national prominence. He also acts as private secretary to Judge Lindsey.

Young Bacon was born in Tyler, Minnesota. After the death of his father he removed with his mother and brother to Denver, where he was compelled to leave school and seek work at the early age of eleven. He became a telephone boy in a large office building, and won many friends by his frank, open

countenance, pleasing manners, and willingness to serve his employer. With a determination to better his condition in life, he set about learning shorthand under the instruction of H. D. Colburn, his stepfather, and after studying nights for a year and a half, he became proficient in the art.

Then it was that Judge Lindsey, learning of the boy's struggles, gave him work as a stenographer, and later he promoted him to the position of trust and responsibility he now occupies.

The lad is taking up the study of law during his spare time, and already possesses a remarkable understanding of legal questions. He finds Judge Lindsey willing to loan him text-books on law, and to offer him encouragement in many ways. Like many of the great men of past or present time, Jay Bacon is rising above the discouragements and disappointments of life, and pressing forward toward an honorable success.

Advice to a Young Man

Remember, my son, you have to work. Whether you handle a pick or a pen, a wheel barrow or a set of books, digging ditches or editing a paper, ringing an auction bell or writing funny things, you must work. If you look around, you will see that the men who are the most able to live the rest of their days without work are the men who work the hardest. Don't be afraid of killing yourself with overwork. It is beyond your power to do that on the sunny side of thirty. They die sometimes but it is because they quit work at 6 p. m. and don't get home until 2 a. m. It's the interval that kills, my son. The work gives you an appetite for your meals; it lends solidity to your slumbers; it gives you a perfect and grateful appreciation of a holiday.

There are young men who do not work, but the world is not proud of them. It does not know their names even; it simply speaks of them as "old So-and-so's boy," nobody likes them; the great busy world doesn't know they are there. So find out what you want to be and do, and take off your coat and make a dust in the world. The busier you are the less harm you will be likely to get into, the sweeter will be your sleep, the brighter and happier your holidays, and the better satisfied will the world be with you.
—Robert Burdett.

"THE DAILY ECHO"

By RUTH BRADEN

THERE IS only one high school in the world that publishes a daily paper. For eight years The Daily Echo has been so great a factor in the Shortridge High School of Indianapolis that Shortridgers would feel its loss in much the same way that a business man would miss his morning newspaper. This newsy little sheet of four pages is published by the students, printed in the building, and is self-supporting.

The miniature newspaper was established, and maintained for six months, as a private enterprise by a student, Fletcher B. Wagner. His first editorial states that "to publish a daily paper in a high school is a very dangerous undertaking." The new hazard was begun on one leaf, the first page being devoted to Echo matter (chiefly editorial), and the second to solid advertising. In January, 1899, Wagner presented the paper to the student body and it became a school organ. The faculty, and finally the school board, became interested. So good a thing did they consider The Echo they gave it a hand press and permanent quarters in the basement of the building. In its well-equipped printing office The Echo is now turned out upon a three thousand dollar cylinder plant under direction of a regularly hired manager.

FLETCHER B. WAGNER

In the editorial sanctum is an original division of labor, each school day of the week having its own editor-in-chief with his chosen corps of assistants. The leading editors, who are known as the Monday, the Tuesday, or the Wednesday editor, etc., according to the days upon which each serves, are selected by the school. Over all is the censor, a member of the faculty, whose duty it is to pass upon all copy before it is published. In order that there may be much matter to select from, and practice for the greatest possible number of students, the staff of assistants is usually large. The names of all the editors and assistants are printed in each issue.

Although each leading editor has entire charge of his paper and directs its editorial policy, The Echo maintains a uniform plan. The first and fourth pages are reserved for the latest local news and are not printed until the morning of the paper's appearance. The second page is editorial, and to the third belong the literary features and the exchanges. Advertising matter occupies from five to ten columns. Social and athletic events, oratory, the doings of the Senate—a unique institution belonging to the civil government classes—various contests, "locals," all receive crisp and masterly treatment. The editorials, frank, decided, and never arbitrary, are probably more widely and thoroughly read in proportion to their circulation than are those of the city newspapers. The pages are frequently illustrated and there have even been cartoons. One editor included a regular sketch artist upon his staff. Ten-page holiday numbers and picture supplements are of common occurrence. Besides all this, the superintendent of the public schools uses The Echo as his medium of official communication upon two days of the week, when it is sent to every school building in the city.

It was with a good deal of pride that a "staff correspondent" who happened to be in Washington two or three years ago brought The Daily Echo under the notice of President Roosevelt, who took much interest in the paper. Upon the first page he observed the appointment to Annapolis of a former Shortridge student and an account of the laying of the cornerstone of the Indianapolis Federal building.

"And this paper is printed by the high school students every day?" he asked. "Then they should be praised for the highly creditable manner in which it is done. I think you are right in saying that it is the only high school daily in the United States. At least I have heard of no other. Will you be kind enough to express my appreciation of it to your fellow-schoolmates and thank your editor for allowing me to have you here this evening?"

The fourfold object of the Daily Echo is to make the school better acquainted with itself by bringing all classes of students together, to support the organizations of the school, to influence public sentiment, and to raise the general literary standard. Besides this, it interests many in writing in a practical way that no composition course can do. It produces emergency writers by creating the faculty of rapid writing. It advertises the school through the exchange columns of other schools and colleges, and has followed some of its alumni as far as Europe.

These benefits have been so well recognized by the public school authorities that they allow a year's work on the staff as editor to count one full credit in the English course. Their estimate is well founded, for many of the staff members have become famous in college circles. One wrote the song that the seniors at Leland Stanford University sang every morning when they carried flowers to the tombs of the Stanfords. Another became editor-in-chief of The Vassarian. The founder of the paper himself carried off the Carut medal in debate at Leland Stanford, besides a fifty dollar essay prize offered by the alumni association of a prominent fraternity. Many have won scholarships in eastern universities, while at least one graduate, a former Friday editor and writer of a magazine prize essay upon The Daily Echo, is rapdly rising in newspaper work.

Sunday School Teacher—Fighting again, Tommy Tucker! Have you forgotten last Sunday's lesson, that when you are struck on one cheek you should turn the other to the striker?

Tommy—But you see, mum, he hit me on the nose, and I've only got one.—Half-Holiday.

A common source of interest and incentive for every member of the family every week.

The Youth's Companion

52 Issues for $1.75,

and extra free numbers.

Some of the attractions provided for subscribers to the New Volume for 1907 are

250 Capital Stories

—humorous stories, character stories, stories of life in the great cities, on the farm, on the sea, on the frontier. **Five Serial Stories** by five Companion favorites, Hamlin Garland, Adeline Knapp, Ralph Henry Barbour, Grace Richmond and Holman F. Day; and a **Historical Series,** illustrative of life and times in America from the early colonial days to the close of the Civil War.

350 Contributors

giving assurance that every need and every taste among Companion readers will be satisfied. Governor Folk of Missouri, Edward Everett Hale, Margaret Deland, Commander Eva Booth of the Salvation Army, Gen. A. W. Greely and Ion Perdicaris are among them.

The Editorial Page

has words of help or information for every age, and deals not only with the affairs of the nation and the world, but with such more intimate topics as personal conduct, domestic economy, school, church and community.

2000 One-Minute Stories

The Companion is distinguished for the number and excellence of its sketches and stories which take not more than a minute to read. They are always new, always well told.

The Children's Page

for those who wish to read about children, those who read to children, and the young readers who read for themselves.

As much reading in the year as would fill twenty 400-page Novels or Books of Science or History or Travel ordinarily costing $1.50 each.

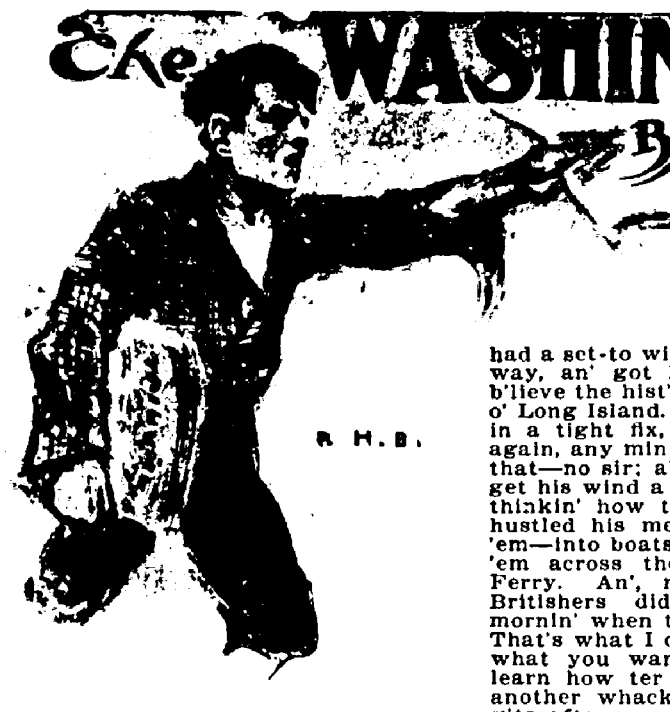
THE YOUTH'S COMPANION, Boston, Mass.

The WASHINGTON BLUES

By WILLIAM



THERE WAS trouble in the camp of the newsboys, down by Fulton Ferry. Although hundreds of customers daily passed that way, to and from New York, the "old timers" were beginning to realize that the field was becoming crowded and competition growing keener every day.

"It's gettin' so's yer can't turn 'round without you're up against a lot o' Huns an' Dagos. I'll soak 'em, every time, if they git in my way," said Shorty Jackson just after he had "polished off" a diminutive son of Italy. "Let 'em stay where they b'long, 'stead o' comin' here to spile business."

"Hey, Shorty!" called Jim Connors, the ferry-house boot-black, his good-natured, lusty voice commanding not only Shorty's attention but that of the others as well. "Let up, now! What yer pickin' on the Dago fer? Ain't the town big enough fer more'n you?"

Jim was an acknowledged autocrat among the newsboys, and arbiter of many a dispute. Though rough with them at times, the real, hearty good-nature of "Big Jim" was proverbial, for he hated bullying, and always championed the weaker side if the altercation seemed other than a "good, even mix-up."

"What are they nosin' 'round here for, an' gettin' a feller stuck on a lot o' papers?" growled Shorty.

"Pooh! Just as if a little half-baked bundle o' bones like him could do you any harm!" exclaimed Jim. "Why, you red-headed anarchist, you orter be ashamed to own up that a dozen such as him could hurt your business any!"

"Ain't they always shovin' papers under my customers' noses?" demanded Shorty.

"What of it? Hustle, same's they do, if yer want ter do business. You don't own the earth."

"I got a better right here than a gang o' Dagos has, anyway," protested Shorty. "They wasn't born here."

"That's nothin'. 'Tain't no special credit to yer 'cause you was. You hadn't nothin' to do with it. Why," exclaimed Jim, who prided himself on his knowledge of American history, "where'd we all be, if Washin'ton hadn't pitched in an' made a free country fer us? You wouldn't be hollerin' 'Extrys', here at the ferry, I'll bet." Then, turning to Shorty's late victim:

"You come here, Italy. What's yer name?"

"Name's Tony," said the boy, still suspicious of possible annoyance.

"Well, what yer down here fer? Ain't yer pretty small ter git out an' hustle?"

"I got to sell-a de pape. My mudder she say I must get-a de mon or she giv-a me de strap," he said.

"Well, I'll be blowed!" eyeing the shrinking figure; "they'll send 'em out afore they're weaned, next thing! But look here, macaroni; the gang's sure to do yer up, down here. Why don't yer try some other place?"

"I did—plenty places; but all de time we get-a de chase, just like-a here. Always dey holler, 'Kill de Dago!', an' we lose-a de papes, or get-a de black eye."

"Yes, they're scrappers, no mistake, but yer want ter be foxy, an' learn when ter run. That's the way we licked them Britishers—just runnin' away half the time, an' peggin' into 'em the other half. Never heard of 'em, though, did yer, Italy?"

"I dunno; I come only 'bout two year in dis-a country," replied Tony, seeming only vaguely to comprehend.

"That's it," asserted Jim, with disdain, "no eddication at all—never heard o' George Washin'ton, or the Revolutionary War, or Fourth o' July, an' yet you kids expect to buck up ag'inst a lot o' 'Merican citizens what knows all the ropes!"

"Who is dis-a Washin'ton?" the boy asked, a faint interest arising from Jim's evident scorn of his ignorance.

"Why, he used ter be the boss o' the hull army. Look here, Italy, I'll tell yer a story about him—a true one, mind yer; yer ain't fit ter live here an' be so ignorant." And Jim settled himself to enlarge upon his favorite subject.

"See that hill with the big buildin's on it?" pointing across the East River to Brooklyn Heights. "Well, our folks 'd had a set-to with the Britishers over that way, an' got licked in great shape. I b'lieve the hist'ry books call it the Battle o' Long Island. Anyway, Washin'ton was in a tight fix, an' liable ter get licked again, any minute; but he didn't wait fer that—no sir; all he wanted was time ter get his wind a little. So while they was thinkin' how they'd do him up, he just hustled his men—near ten thousand of 'em—into boats, one foggy night, an' slid 'em across the river, here, at Fulton Ferry. An', my goodness! how them Britishers did kick themselves next mornin' when they found he'd got away! That's what I call bein' foxy. An' that's what you want ter do, kid—want ter learn how ter save yerself so's ter get another whack at 'em, when the gang gits after you. But see here, Italy," as he noticed that Tony seemed anxious to get away, "I don't b'lieve yer catched on ter half what I've told yer. Don't yer want ter learn nothin'?"

"I can't stay," said Tony uneasily. "Pretty soon I have-a no time to sell."

"Shucks! What's a few papers? Why, it's worth dollars to yer ter git a little United States learnin' pumped inter yer head. Don't yer know it?"

"I dunno," he answered vaguely. "I know I have-a plenty trouble, an' if I no get-a de mon den I catch-a de lickin' when I go home. I have to try, anyhow. I guess you no like-a to catch it both places."

"Well, I guess not; an' I wouldn't, neither. Here, take this nickel; guess it's worth the price of a shine ter have some one ter listen while I shout a little—just so's I won't forgit it, myself."

The boy's face brightened as his fingers eagerly closed upon the coin.

"None o' yer kings on that," said Jim. "Here;" open yer fist a minute. See that head? That's the Goddess o' Liberty; an' she says that wherever this sort o' chink passes one feller's as good as another—got ter give 'em all a fair show. That's the kind of old woman she is."

"Yes, I know; all de same like-a we say 'cinque soldi', in my country," answered Tony to whom it was at least money—what he was most concerned about.

"Don't know nothin' about yer chinkey solder," said Jim with disdain. "Good enough fer Dagos, perhaps, but over here we got ter have the real stuff. Yer see, "If you fellers can stand a nickel apiece you go up there an' you'll find 'em. Comes high, bein' paterotic, but it'll pay yer," he added as the boys appeared rather doubtful.

However, it soon began to dawn on Shorty Jackson and the others that some new move was in progress among their adversaries. Here and there they noticed one wearing the Washington badge, and daily the number increased. Why one should wear any such decoration except on a holiday was a mystery.

Jim, though, seemed to enjoy it as being a huge joke on them, and finally they came to him for explanation.

"What's all the Dagos sportin' badges fer, an' callin' themselves the Wash'n'ton Blues?" Shorty asked. "They ain't got nothin' ter do with Wash'n'ton."

"Oh, they ain't, hey?" said Jim complacently. "Well, I guess they have. Ain't he the Father o' this here country? An' ain't they part o' the fam'ly?"

"Well, people don't go flashin' his mug 'round on their shirts, 'less it's a holiday," asserted Shorty.

"Perhaps folks what ain't paterotic don't," said Jim, with a disparaging look at Shorty, "but these chaps you've been pickin' on has more sense; they knows that what's good fer holidays orter be good any time. I tell yer," with a chuckle of satisfaction, "I should think you'd all feel pretty cheap, lettin' a lot o' macaroni-eaters give you p'ints on bein' good citizens!"

"Wearin' badges ain't much," said Shorty contemptuously.

"Yes, it is; it's a hull lot," maintained Jim, decisively. "It's just like sayin' 'See here, we ain't none o' yer cheap kind what don't know their rights. We got a mortgage on the Star Spangled Banner, an' yer don't want ter fool with us or yer may git hurt! That's what they mean—just givin' you fellers a hint, an' if any of yer gits too fresh with 'em, now they're wearin' the flag, like as not yer Uncle Jim'll take a hand in, too, an' do a little bouncin'."

But it didn't seem just the thing that this show of patriotism should be monopolized by foreigners, and soon the badges began to appear on some of those who had been most active in the former persecution.

"Looks as though you fellers was gettin' respectable," said Jim, slyly, one day. "Had ter come to it, didn't yer, when yer see Italy gettin' ahead of yer?"

"Well," said Shorty, rather sheepishly, "no use lettin' them be the only toads in the puddle. Helps business, too, these badges does. Folks ask about 'em an' I sell 'em a paper ter pay fer the talk; only I had ter give 'em a fairy story, 'cause I wasn't on ter just what it meant, myself. So I says ter that Dago, Tony—that one you was pitchin' inter me about a while back—I says, 'Look h re, what's all this about Wash'n'ton, any way? Tell us what yer mean by it an' we'll try an' git along peaceful.' An' then he give the hull snap away an' said you put 'em up to it."

"Well, what if I did? It's doin' what I said it would, ain't it?" said Jim.

"Well, we're goin' ter take a hand in, too, an' git up a reg'lar comp'ny of Wash'n'ton Blues, so's we can turn out on Wash'n'ton's Birthday an' Fourth of July, same's the other fellers what marches."

"Now yer shoutin'!" exclaimed Jim, delighted with the outcome of his advice and foreseeing great chances for the exploiting of his historical accomplishments. "Now yer talkin' sense, 'stead o' playin' dog-in-the-manger with them Dagos."

And then to Tony, now quite at his ease among his former enemies. "What did I tell yer, Italy? Guess we'll teach these chaps somethin' about war, if we keep on, hey?"

And Tony answered by a broad grin of acquiescence as he looked proudly at the talisman on his shirt and then into Jim's good-natured face.

"An' Jim, I s'pose you'll have ter be Pres'dent of the 'sociation," continued Shorty; to which the others all gave hearty assent.

"Sure," said Jim. "It'll be the only way to keep yer straight. I'll give yer some talks on hist'ry, an' knock a little learnin' inter yer. An' I'll tell yer what, Shorty," he concluded, in a reckless burst of enthusiasm as his eyes took in his entire peaceful family, "the very first time the Washin'ton Blues turns out I'll be blowed if I don't spend a fiver fer a carriage, with a big flag spread all over it, ter ride in at the head of the percession!"

"HEY, SHORTY! LET UP NOW"

"Yes, they're scrappers, no mistake, but yer want ter be foxy, an' learn when ter run. That's the way we licked them Britishers—just runnin' away half the time, an' peggin' into 'em the other half. Never heard of 'em, though, did yer, Italy?"

"I dunno; I come only 'bout two year in dis-a country," replied Tony, seeming only vaguely to comprehend.

"That's it," asserted Jim, with disdain, "no eddication at all—never heard o' George Washin'ton, or the Revolutionary War, or Fourth o' July, an' yet you kids expect to buck up ag'inst a lot o' 'Merican citizens what knows all the ropes!"

"Who is dis-a Washin'ton?" the boy asked, a faint interest arising from Jim's evident scorn of his ignorance.

"Why, he used ter be the boss o' the hull army. Look here, Italy, I'll tell yer a story about him—a true one, mind yer; yer ain't fit ter live here an' be so ignorant." And Jim settled himself to enlarge upon his favorite subject.

"See that hill with the big buildin's on it?" pointing across the East River to Brooklyn Heights. "Well, our folks 'd had a set-to with the Britishers over that way, an' got licked in great shape. I b'lieve the hist'ry books call it the Battle o' Long Island. Anyway, Washin'ton was in a tight fix, an' liable ter get licked again, any minute; but he didn't wait fer that—no sir; all he wanted was time ter get his wind a little. So while they was thinkin' how they'd do him up, he just hustled his men—near ten thousand of 'em—into boats, one foggy night, an' slid 'em across the river, here, at Fulton Ferry. An', my goodness! how them Britishers did kick themselves next mornin' when they found he'd got away! That's what I call bein' foxy. An' that's what you want ter do, kid—want ter learn how ter save yerself so's ter get another whack at 'em, when the gang gits after you. But see here, Italy," as he noticed that Tony seemed anxious to get away, "I don't b'lieve yer catched on ter half what I've told yer. Don't yer want ter learn nothin'?"

"I can't stay," said Tony uneasily. "Pretty soon I have-a no time to sell."

"Shucks! What's a few papers? Why, it's worth dollars to yer ter git a little United States learnin' pumped inter yer head. Don't yer know it?"

"I dunno," he answered vaguely. "I know I have-a plenty trouble, an' if I no get-a de mon den I catch-a de lickin' when I go home. I have to try, anyhow. I guess you no like-a to catch it both places."

"Well, I guess not; an' I wouldn't, neither. Here, take this nickel; guess it's worth the price of a shine ter have some one ter listen while I shout a little—just so's I won't forgit it, myself."

The boy's face brightened as his fingers eagerly closed upon the coin.

"None o' yer kings on that," said Jim. "Here;" open yer fist a minute. See that head? That's the Goddess o' Liberty; an' she says that wherever this sort o' chink passes one feller's as good as another—got ter give 'em all a fair show. That's the kind of old woman she is."

"Yes, I know; all de same like-a we say 'cinque soldi', in my country," answered Tony to whom it was at least money—what he was most concerned about.

"Don't know nothin' about yer chinkey solder," said Jim with disdain. "Good enough fer Dagos, perhaps, but over here we got ter have the real stuff. Yer see, Italy, yer got ter be like other folks if yer want a show. Tell yer what yer do," he continued, seized of an idea that seemed to fit the emergency; "why not give yourselves a good United States name, an' put up a bluff that you're reg'lar good citizens? Might call yourselves the Washin'ton Blues, an' fasten a flag an' a pictur' of Washin'ton onter yer shirts. Then, if these chaps git fresh, you tell 'em George's on deck yet an' has adopted you Dagos, an' if they go walkin' over him an' the flag they're liable fer high treason. Just flash the flag at 'em, an' tell 'em yer 'Merican citizens now, an' they got ter give yer a show," explained Jim, perceiving that as yet parts of his scheme of diplomacy were a little too much for Tony's complete understanding.

"Go 'on, now, an' git rid o' yer papers, an' I'll see yer ag'in to-morrow."

The next day matters were much as usual, but towards evening Tony, with several companions, appeared at Jim's stand, all anxious to sell their papers, and all with the same grievance.

"Where you get-a dem things like you tell me 'bout?" asked Tony as spokesman for the crowd.

"Oh, 'most anywhere where they sell badges—here," giving him an address.

The Magic Tumbler

Fill a saucer with water, place a small coin in it. Then ask someone to take the coin out of the saucer with his fingers without getting them wet. He will, of course, say that it is impossible, and will perhaps ask you to do it.

Take a tumbler and a piece of crumpled paper. Light the paper and place it burning in the tumbler, then immediately invert the later in the saucer. The water is immediately sucked up into the tumbler and the coin can be taken out without wetting the fingers.

BOYS AT THE LAKE CHAUTAUQUA ASSEMBLY

By W. FRANK McCLURE

THE CHAUTAUQUA BOYS' CLUB HOUSE AND SOME OF THE BOYS. THIS PLACE IS THE CENTER OF ACTIVITIES OF THE CHAUTAUQUA BOYS' CLUB

CONTRARY to the supposition of some people who have never been there, the life of a boy at the old original Chautauqua is full of vigor, in fact strenuous. I have recently come from the environment of the Chautauqua Boys' Club and from the annual Chautauqua circus in which boys figure so prominently, and have never seen a healthier and a happier lot of youngsters.

"Chautauqua" is an Indian name used to designate a lake in Western New York, twenty miles long and seven hundred feet above the level of Lake Erie, and also a particular spot on the lake—a beautiful grove on the side of a hill, wonderfully endowed by nature for the uses of a world-famous summer assembly. To this spot annually come many of the most notable personages in the world to participate in the program. President Roosevelt, for example, spoke there last year. It naturally follows that among the ten or twelve thousand people who take up their summer abode at Chautauqua, there are hundreds of boys—boys out for a vacation and a rollicking time.

THE ELEPHANT OF THE ANNUAL CHAUTAUQUA CIRCUS

Early morning finds the really enterprising lads of this summer city lined up in front of the Chautauquan Daily office and up until 9 o'clock at least their voices may be heard crying: "Chautauquan Daily—President Roosevelt's address," or, perhaps, it is "Dr. Gunsaulus' lecture" or "words for the oratorio for tonight." Out from the cottages come a string of men and women, young and old, wending their way to the markets or to the summer schools or may be to an early meeting in the amphitheater. Most of them want the morning paper containing the program for the day.

Ere long the bell in the boathouse tolls out the hour of nine. The doors of the Boys' Clubhouse on the lake front are thrown open and the Chautauqua boys, after two hours of money making and exercise of the lungs, burst into the building and its activities, still aglow with enthusiasm.

The carpenter shop is upstairs. There, an instructor is teaching the boys how to build real boats and numerous other articles in which a boy takes delight. In another room is a whittling class. In the reading room below is THE AMERICAN BOY magazine and a big assortment of other leading publications. The main portion of the building is given up to a gymnasium which is under the direction of a capable instructor. Dumb bells and Indian clubs are within easy reach about the walls. At intervals during the physical culture exercise the boys are all told to yell as loud as they can for a whole minute. The din of so many voices is furious.

Everyone is ready for a swim when the hour arrives for that, and the water is soon alive with youngsters. They are taught the rudiments of swimming. A class in rowing also affords exercise which most healthy boys enjoy.

The greatest diversion of all, however, is camping across the lake. One detachment from the club at a time is taken over to Maple Springs each evening. The distance of some three miles is covered in row boats. At the destination are three tents provided with mattresses on which to sleep. The boys arrive before 6 o'clock in the evening, build a campfire, cook their own potatoes and go to the nearby markets to purchase salt, sugar, and other necessities of the meal.

Circus day this year was on August 9. This event is always the signal for fun indeed. The parade forms and starts from a point near the Hall of Philosophy. The boys dress like Indians. With painted faces and with feathers in their hair, they ride ponies or are collected together upon a hayrack. Members of the Girls' Club and the Athletic Club also participate.

A cow is given an artificial hump to represent a camel. No circus parade is complete without an elephant. The one which participates in the Chautauqua parade is shown in the accompanying photograph. Also, clowns are not lacking and a brass band heads the procession. The route ends at the baseball grounds, where a tent is erected for the performers while the audience sits in the baseball grandstand. A goodly part of the program is made up of gymnastic feats.

In the Chautauqua amphitheater boys are welcome in the junior choir. Not only do they learn to cultivate their voices but they now and then participate in some such musical rendition as "Pinafore" given before an audience of perhaps six or seven thousand people.

Small boys at Chautauqua take a great deal of enjoyment in sailing their toy boats in the waters of the Dead Sea in miniature, which, with its surrounding hills, is built to represent the waters and hills of the Holy Land.

On the Sabbath day, Chautauqua rests. There is no boating, no amusements. There are no meetings except divine service. Boys at Chautauqua awaken Monday morning realizing better than ever the invigoration and reward which come from observing a day of rest.

BOYS AT CHAUTAUQUA SAILING TOY BOATS IN THE "DEAD SEA." THIS SEA AND ITS SURROUNDING HILLS ARE A REPRESENTATION IN MINIATURE OF THE HOLY LAND

Our Funny Little Brothers

Ten-year-old Fred was going to a party for the first time.

"Here's a half-dollar, Fred," said his father; "if it rains, be sure you take a cab home."

But Fred reached home drenched through.

"Why didn't you take a cab?" said his father.

"I did, father," said Fred; "and I sat on the box all the way home. It was glorious."

"Now, Alec, don't be selfish," said his mother; "baby's only going to play with your marbles for a little while."

"No, mother, he's going to keep them always if he can."

"O no, dear."

"I'm sure he is, mother, 'cos he's trying to swallow them."

Teacher—Willie, spell "wrong."
Willie—R-o-n-g.
Teacher—No, that's wrong.
Willie (puzzled)—But that's what you told me to spell, teacher.

THE
Michigan Military Academy
ORCHARD LAKE, MICHIGAN

A Really Great School for Boys

Prepares for All American Colleges and Scientific Schools and Fits Boys to Become Efficient Business Men.

Ideal location, 28 miles from Detroit. Beautiful lake region; ample grounds; fine buildings; honest academic work; genuine military instruction and discipline; a strong and well-balanced teaching force; exceptional musical training; a carefully selected and carefully trained body of cadets; abundant opportunity for school sports on land and water; great attention paid to social life and pleasant relaxation—these are some of the advantages that the Michigan Military Academy offers to parents who are looking for a clean, wholesome, efficient school.

The fruitage of the school is a symmetrical boy; a boy who has learned to obey proper authority, to do his duty, to take care of his body, to cultivate self-respect, to use his brain effectively, to aspire for leadership, to lead naturally and courteously, and to live a good and successful life. The school is non-sectarian but thoroughly religious in its tone. No spirit of proselytism is encouraged or tolerated; but parents may rely upon good, wholesome, refined influences being brought to bear upon their sons.

The thirtieth school year opened Sept. 13th, 1906.

BOY MISCELLANY

Youngest of Travelers.—Charles Clinton Gladwin, of the tender age of two years and eight months, has achieved distinction by crossing the Atlantic in the Cedric from New York, with a label showing his name and destination attached to his overcoat.

To Save the Fines.—The judge of a court, who had to deal with the case of eight children charged with theft, imposed fines, but agreed to remit these if the mothers of the children gave them a good caning. The women agreed to this, and on being provided with canes, plied them so vigorously that the court for some time resounded with the lusty howls of the juvenile culprits. By this means the mothers saved fines amounting to five dollars a child.

Something More About the Swimming Needle.—In our March number we told how to make a needle swim. Laurence Whitman, Pendleton, Oregon, adds a little interest to the matter by suggesting that the experimenter put first a needle in the water, and aferwards a pin, so that they will be about an inch apart. The result will be that the pin will immediately go to the needle and they will float together. Put the tip of your finger into the water about a quarter of an inch from them, push it toward them, and you will find they will all the time keep about an inch away from the finger. If you put your finger under the water about an inch or so, the needle will be attracted by the finger and will immediately come to it.

Don't Loaf Away Your Holidays.—It may be a little late to give advice regarding the summer vacation, but here is what Howard R. Lowery, Biloxi, Mississippi, says: "Don't loaf away your holidays. If every boy who is able to work would do something in his vacation days, instead of loafing, he would find it helpful." Howard himself is something of an electrician. He is particularly interested in our Mechanical and Electrical Department, and says that he has tried all of the experiments in both electricity and chemistry that have been described in our pages. He has telegraph instruments, motors, generators, lamps, batteries, and a sparking coil that he himself made. Working in a drug store, as he does, he gets a great many chemicals, the nature of which he understands. He looks forward to becoming an electrician or a mechanic when he grows up.

A Spit Turned by Water Power.—Hubert Turner, Harrisburg, Illinois, says that he has received so much help from THE AMERICAN BOY that he thinks he ought to do something in return; so he tells us how to make a spit turn by water power, saying that it will be of advantage to boys out camping who do not want to remain about the fire to turn the spit by hand while the meat is cooking, but prefer to be about some other more pleasant occupation. The illustration furnished by Hubert is not so made that we can reproduce it. The scheme, however, is to build the fire near the bank of a stream. Let the one end of the spit having the water wheel attached to it extend out over the bank so the current will turn the spit. He suggests that the apparatus be used where the current is slow, for if the wheel turns too fast, the meat will burn.

A Dangerous Candy Stick.—Arthur Littleton, Island Heights, New Jersey, tells the following story:

A young woman, not an American, seeing the American flag hanging limply about its staff, there being no breeze, said to another,

"Huh, I'd like to see what's pretty in that thing. Why, it looks like a stick of tea-berry candy."

One standing near and overhearing the remark, replied, "Yes, it does look like a stick of tea-berry candy, but it is a stick of tea-berry candy that has made everybody sick that tried to lick it."

Boston's Patriotic Boys.—The boys of the Chickatawbut Boys' Club of Boston at a meeting recently held adopted a protest against the further use of the Old State House in Boston for subway entrances. The protest read as follows:

"We, the members of the Chickatawbut Boys' Club, do unfallingly believe in the preservation of the Old State House. We do hereby protest against any further encroachment upon that edifice, which stands for so much in the life of our nation."

The protest was signed by every boy in the club. Their names show that many of them are Irish, Hebrew, Italian, Portuguese, and German. And what we are glad to add, their protest won out. These boys are the descendants in spirit of the boys that gave so much trouble to General Gage before the Revolutionary days.

Two Boys Direct a Big Store.—William and Keeley Tilson, the former ten years of age, the latter twelve, are members of the firm of Tilson Brothers, Pulaski, Virginia, which conducts one of the largest retail establishments in their native city. Their talent for mercantile business is said to be phenomenal. They buy and sell goods, hire clerks, keep the books of the firm, and conduct the business as their father did before them.

Honest "Dummy."—Morris Miller, a deaf and dumb Boston newsboy, called by his associates "Dummy," has won prominent mention in Boston newspapers through his honesty in returning a five-dollar gold piece to a customer who in his hurry had passed it over for a newspaper, thinking it was a penny. The boy did not discover the customer's mistake until after he had gotten away. It was not until several days afterwards that he saw the customer again. He then explained the circumstances and returned the five-dollar gold piece.

A Peculiarity in 142857.—Chas Zerves, Uniontown, Pa., seeing the peculiarities of the number 9 referred to in our August number, calls attention to the number 142857. He claims to have worked the matter out himself one day while in school.

142857 times 1=142857
142857 times 2=285714
142857 times 3=428571
142857 times 4=571428
142857 times 5=714285
142857 times 6=857142
142857 times 7=999999

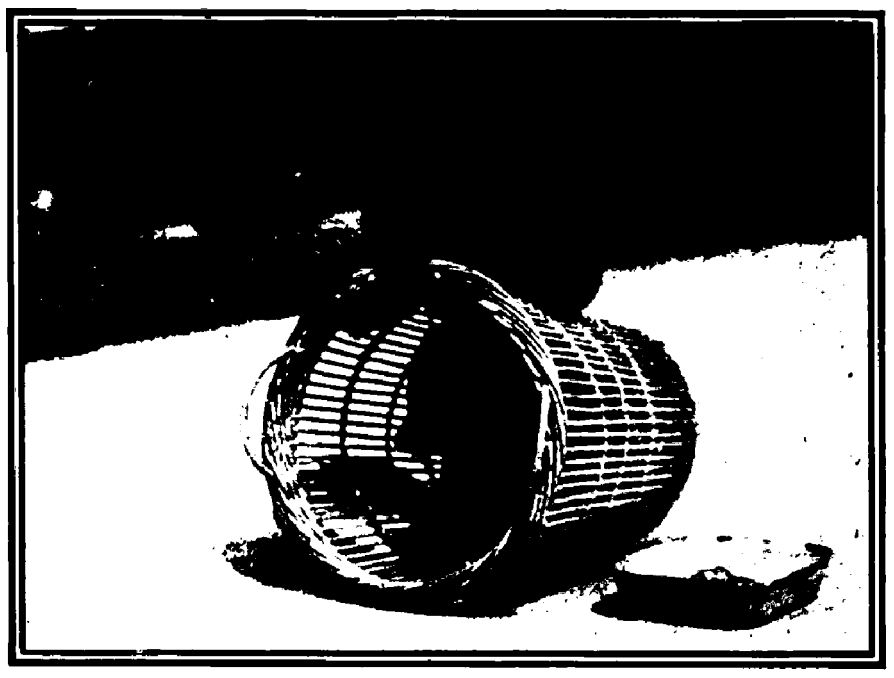
It will be noticed that in the first six products obtained by multiplication, the same figures are used but in different positions; and that seven times the number makes one less than a million.

Boys as "Policemen."—Fifteen hundred school-boys of New York have been appointed "deputy street commissioners." Their duty is to warn, and, if necessary, to cause the arrest of people causing a nuisance by throwing refuse in the streets.

The Roosevelt Bears

The favorite attraction to the young people of New York City are a pair of young bears which were given to the Bronx Park Zoological Department this spring. They are of the kind which easily yield to training and are often seen going about the country doing tricks for the support of their indolent masters.

These two have been named Teddy B. and Teddy G., because they are like the two bears having these names that have made so much fun for the boy readers of the New York Times. They are as tame and as frolicsome as a pair of well-bred kittens. The fact that they are on exhibition seven days a week and are much admired and told how cute and cunning they are at least a thousand times a day, does not make them vain in the least. In the picture given herewith they are shown just as they were having a jolly good time with a stray waste paper basket. Their pranks have often brought smiles where there were tears, and have lightened the hearts of many who came into the park full of the thoughts of their troubles. Teddy B. and Teddy G. Roosevelt I am sure are a happy pair and could they talk would certainly send their best wishes to every reader of the "best boys' paper in America"—THE AMERICAN BOY.



Why Fathers and Their Sons Should be Friends

It is a pretty hard thing for a boy or a young man to realize that his father is his best friend, remarks John Anderson Jayne, in the Philadelphia Bulletin. Especially is this true, says Mr. Jayne, if the young man knows that the father has wasted his life. And yet it is a good thing for boys and young men to remember that, even with all the misunderstandings and faults the father has there is that in him that makes him love his boy and wants him to go in the right path.

"Why must it be that not until the years of manhood have come does a boy realize what his father is to him? Why must he have to wait until the father is sleeping his last sleep, waiting the angel's trump, before he feels as though he would like to shake his father by the hand? Yet too often it is the case. Too often sons and fathers are estranged from each other, when by the tie of blood that binds them they should be the best of friends—the father a guardian to the son, the son to the father. Only occasionally do fathers and sons have mutual love and forbearance one for the other that they should have.

"Whose fault is it?

"Today, father, when you go home you know your boy will not meet you with a smile. You know he is afraid or ashamed of you. By the hopes and sorrows of the years that are to come, search your own heart and life, and if you are at fault make the matter right."

There Should be a Hundred Thousand Business Men Following This Example

"Seattle, Wash., Aug. 10, 1906.

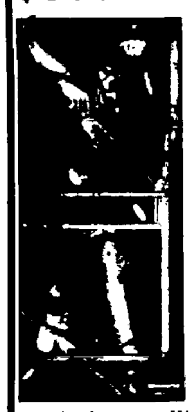
Other Ingersolls, $1.50 and $1.75. Ladies' "Midget" Ingersoll, $2.00.

ROBT. H. INGERSOLL & BRO., 34 Jewelers Court, New York City.

$300.00 Prize Contest



The most unique and fascinating of the century—no element of chance, but an honest, open, fair contest of skill.

The Williams Ventilating Window-Sash Fastener—a new invention—is absolutely the best—affords ventilation; can't be pried off or picked open. To aid us in advertising it most successfully we open this contest that we may get the best answers the whole country can give to the question:

Why Should Every House Have the Williams Ventilating Window-Sash Fastener on its Windows?

Each contestant is to give five intelligent reasons. To make the contest more fascinating, each letter of the alphabet is given a different value. The person sending five reasons where the sum of the values of all the letters used shall be the highest will be given the

GRAND PRIZE OF $100.00

149 others will secure prizes varying in value—$300.00 in all. The prizes will be awarded on Christmas Day.

We want every reader of The American Boy to enter this contest. We want you to try it. Ask your hardware dealer to let you see a set of the Williams Ventilating Window-Sash Fastener and get him to give you a printed set of rules governing the contest. If he has not yet been supplied, send us his name, a postal card will do, and we will mail you a set of these simple rules.

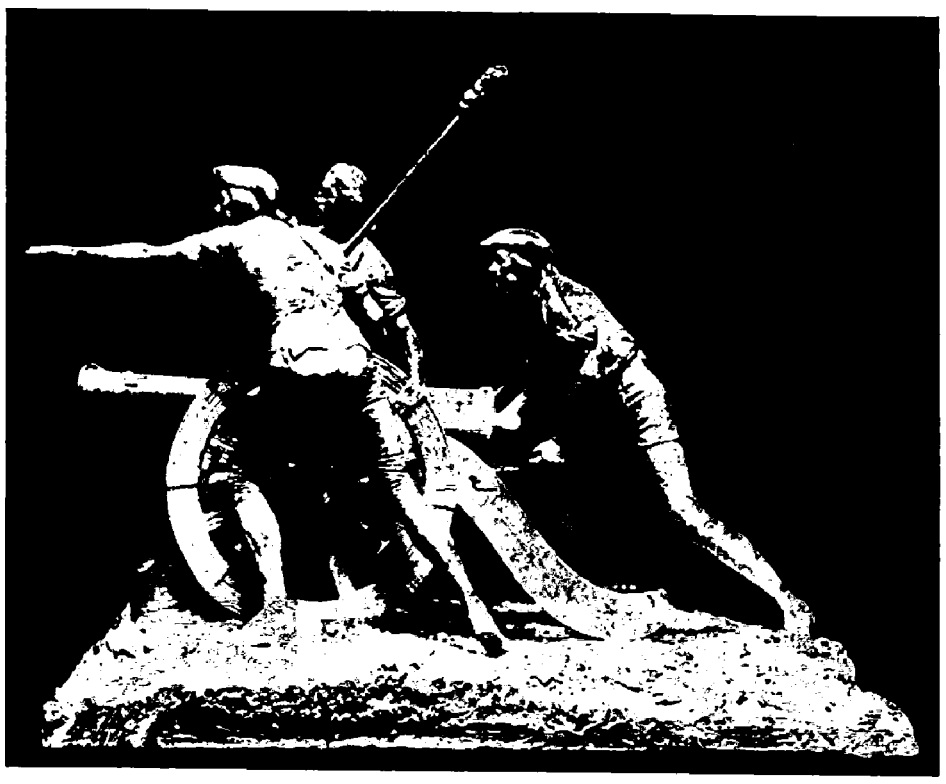
AMERICAN BOY ADVERTISEMENTS ARE READ



To Commemorate the Gallant Actions of Yale College Boys in Revolutionary Days

THE HEROIC DEFENSE of New Haven by the students of Yale College, an almost forgotten page of American history, is to be thrown into the national limelight by the unveiling of a unique piece of statuary. The group is now in process of completion in the studio of James Edward Kelly, New York. The unveiling will take place on July 5th, 1907, the anniversary of the defense of New Haven.

The statue represents three figures, in the costume of the college boys of colonial times, operating a piece of field artillery. The stirring affair that the statue will commemorate occurred on July 5, 1779. The British planned to cause Washington to weaken his forces at West Point in order to defend the Connecticut coast. New Haven, then a town of 1,800 inhabitants was to be the object of the British attack. President Stiles, from the steeple of Yale College, saw the British fleet preparing to sail from West Haven and called out the students for the defense of the town.

Under General Garth the British forced a landing, hotly opposed by the Yale boys and the patriots, and proceeded to plunder and destroy. A pitched battle was fought at the northwest corner of Broadway and the defenders were eventually overwhelmed by superior numbers. Meanwhile the British had landed 1,500 men at Lighthouse Point and advanced from the east, with the intention of forming a junction with those in the town and crushing all opposition, while Sir George Collier bombarded the town from the warships in the harbor.

By this time, however, the entire country side was aroused and the patriots gathered in such numbers that the British withdrew and burned Fairfield. The heroic students of Old Eli were, therefore, left in possession of the college town. It is this fight that the group is to immortalize.

The Five Year Quarter-Back

(*Continued from page 364*)

but the next, there was a conference of the coaches and I was invited to attend. After I had been there a few minutes there was an embarrassing pause, and then the head coach, who, I could see, had been assigned the task by the others, addressed me and said, "See here, Wilson, we are not saying you did not play a good game yesterday. But we want you to understand that our men must play according to instructions. Dall and Gribben are both out or we would drop you at once; as it is, we will leave you for a while, but if you break over again we are through with you, for where you win once you will lose a hundred times." It was no more severe than I expected and I withdrew without a reply.

The next fall, though Gribben and Dall were both candidates, the place was given to me, and it was the head coach who decided the matter.

MY FIRST DAY AT THE OFFICE

Price (Nickel) **$6.00**

Quality Counts First

in the selection of a revolver. In case of emergency your life may depend upon its accuracy and the quickness and certainty of its action.

H. & R. Hammerless Revolvers

are weapons that can always be depended on, no matter how suddenly they may be called upon. Simplicity of construction, perfect safety, absolute reliability in action and superior accuracy are the qualities which characterize them. With proper care they last a life time. *Cannot be fired except by pulling the trigger*, insuring against accidental discharge. Rigid inspection before leaving the factory insures against flaws or defects of any kind. Has independent cylinder stop. The automatic shell-ejecting device makes reloading easy. Don't be tempted by low price into buying a cheap and inferior revolver, when you can buy an "H. & R." Hammerless Revolver, 32 or 38 caliber, 5 shot, 3-inch barrel, nickel-plated, for $6.00. Made also with 4, 5 and 6-inch barrels.

Sold by Dealers in Reliable Sporting Goods.
If your dealer doesn't keep them, we will ship direct prepaid on receipt of price.
Send for catalogue of our Revolvers and Single Guns.

HARRINGTON & RICHARDSON ARMS CO., 234 Park Ave., Worcester, Mass.

A SPLENDID BOOK FOR BOYS

"Three Boys in the Mountains"

The story of Western Adventure—clean and inspiring—that ran in **THE AMERICAN BOY** through the greater part of 1901, has been issued by The Sprague Publishing Company in book form. This story is one of the longest and best stories that has yet appeared in "THE AMERICAN BOY." Its author is the editor of "THE AMERICAN BOY," under the assumed name of Joe Cody. This is sufficient to indicate that it rings true in morals, and that nothing has been allowed to enter the story that will hurt a boy, but that everything is there that will give interest and dash to the narrative. It brings in the pleasures of the hunt, the chase and the camp, and deals with Indians and animals in plains and mountains. It is a good, healthy story that a parent will be glad to have in the hands of his boy.

Handsomely Bound in Cloth and Illustrated

Given to "American Boy" subscribers for 1 new yearly subscription. Price 75c postpaid.

Note that we do not give this book with a renewal subscription or with the sender's own subscription, but to any subscriber who will send us a new subscription and $1.00.

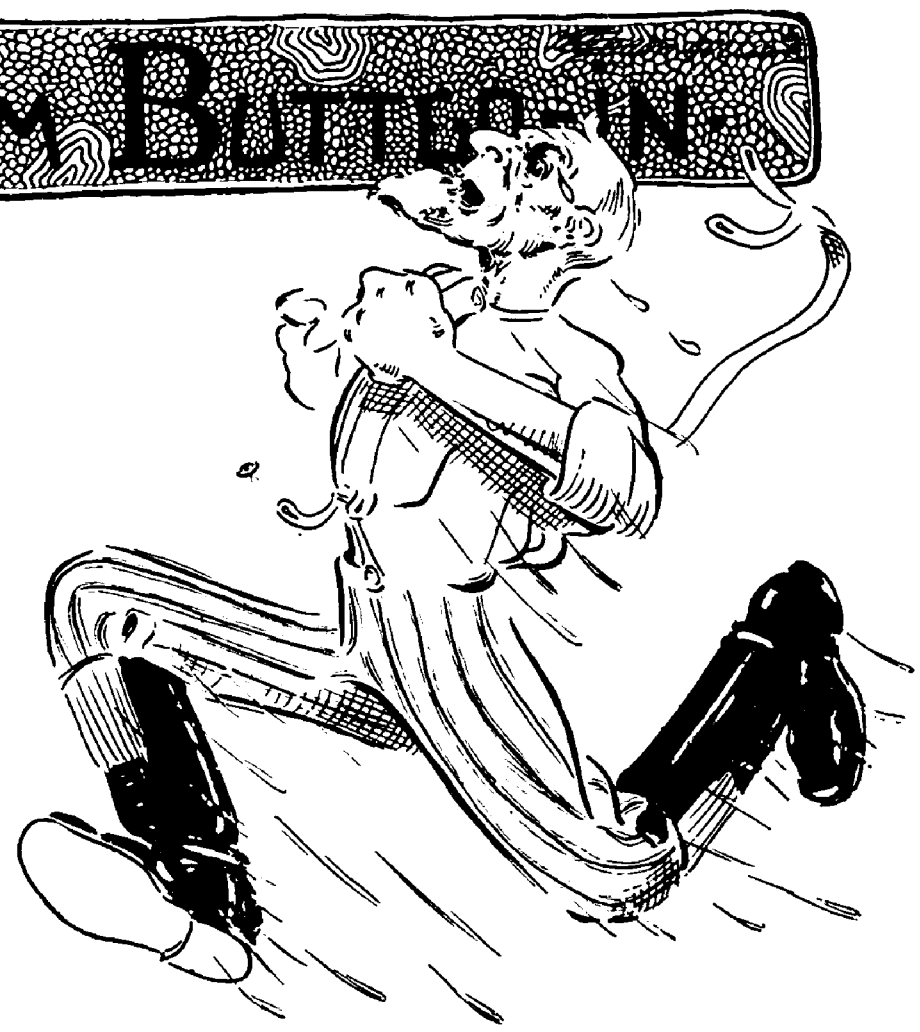
When Jim Butted In

By J. S. Ellis.



"BY GUM!" said Grandfather Tuffts, "you buttin' son-of-a-gun!"

He picked himself up, affectionately feeling a spot on the rear of his trousers. A red calf broke into a wild run just in time to escape a length of stove-wood which came ricochetting his way. "Ikey, the tarnal little whelp, larned him to butt," quoth Grandfather Tuffts. "By gum!"

He took an armload of the wood and strode, dark-browed, toward the house. A bunch of small boys had been watching the performance from reserved seats behind the barn door. When the kitchen door had closed behind the tall form of Grandfather Tuffts they fell into each other's arms and made merry with all the abandon of free and innocent boyhood. Then the leader called a halt.

"Le's have a bull fight, fellers."

"My eye!" chuckled Snoppy Roper, "didn't he swat him!"

"Come on, fellers. Where did Jim go?"

The band, armed with weapons, offensive and defensive, moved on the orchard where Jim, the red calf, was sorting apples. He preferred sweet ones, and a trifle soft.

"I've got him learned," bragged young Ikey, "to butt when I shake my hat at him, this way."

He ran up to the calf and flapped him over the eyes with his hat. But Jim was lazy. The juice of the apple filled him with a comfortable sensation and he was at peace with all the world. Moreover, it was warm. Ikey became insistent.

"Give me that broom, Tim."

He advanced again and thrust the brush into the face of the mild calf. He wanted results and he got them. There was what might safely be called an explosion. Ikey, from experience, saw it headed his way and endeavored to flee. When the smoke cleared the satisfied Ikey lay on the grass and four small boys were making frantic efforts to shin up apple trees. Jim frisked about gaily, tail in air, enjoying the sport immensely. Ikey sat up but made no attempt to rise. He had learned from experience. Jim made it a point never to hit a gentleman after he was down.

Loud and prolonged applause came from the trees as soon as the audience was a safe distance from the ground.

"Do it again, Ikey!"

"Wasn't that a peach!"

"Jump up an' swat him an' then hike for this tree," advised one.

Jim was tip-toeing around the ring, anxious to have time called. Ikey lay back on the grass.

"Come and help me, fellers," he called. "I can't get away."

There was a hurried consultation in the tree-tops. Each presented urgent reasons why the other should go, but none of the inglorious crew ventured down to the aid of their leader. After a while a longing for sweet apples again possessed Jim's soul and he withdrew and went back to apple picking.

Grandmother Tuffts, fat, fifty, and florid, was thumping a heap of dough over the bread-board when Grandfather Tuffts came in with the wood. She was singing "Beulah," and thumping out an accompaniment.

"Is not this the land of Beulah—"

Thump! Thump!

"It may be," Grandfather Tuffts remarked sarcastically, "but if it is there is a blanked calf that won't be in it long."

Grandmother Tuffts looked up from her work but said nothing. She had lived with "Dan'l" for thirty years.

"That whelp of a calf," went on Grandfather Tuffts in injured accents, "came up behind me when I was stoopin' down to git the wood and pushed me over."

"Why didn't you take a stick and knock him?" asked Grandmother Tuffts.

"Knock him? Of course, you'd knock him. Mebbe you'd shoo him with your apron."

"Well, I'd do something."

"You'd do something. I suppose you would. I'll do something, too. I'll shoot the son-of-a-gun, by gum!"

Grandmother Tuffts sniffed. "Let a little red calf like that scare you out."

Grandfather Tuffts plunked the wood into the woodbox and left the room.

"A woman," he remarked to the doorpost in passing, "can always tell what ought to be done when it ain't time to do it."

On Thursday afternoon the members of the Ladies' Aid were the guests of Grandmother Tuffts. To make the event still more eventful, four preachers from a local conference came also to enjoy the good cheer. The table was spread under the trees. Around this festive board the Ladies' Aid was drawn, punctuated at proper intervals with a preacher. Grandmother Tuffts was flurrying about with ready hands and hospitable mien.

"Pa," she called at the last moment, "we need some water. Take the pail and run down to the spring."

The four preachers and the Ladies' Aid looked wistfully across the groaning table and waited. Truly Grandmother Tuffts knew the weakness of the human heart and the way thereto. At the foot of the hill they could see Grandfather Tuffts bending to fill the pail at the spring.

"Mis' Tuffts," Sadie Green was saying, "your sweet pickles— O-o-o-h!!"

The four preachers and the Ladies' Aid started up in alarm at Sadie Green's piercing exclamation. The preacher nearest made haste to hold her from falling. But she motioned them back and pointed excitedly down the hill. Grandfather Tuffts had disappeared and Jim was standing by the spring, gazing regretfully downward. A moment later there was a splash and a yell and Grandfather Tuffts was out of the water looking for weapons. A fence plank was the first object his eager hand found. With this he made a mighty swash at Jim and laid a broadside along his ribs. The sounds of the conflict came by wireless with startling distinctness to the ears of the listeners.

"By gum!"—whack—"you son-of-a-gun"—whack—whelp—whack, whack.

In attempting to land a finishing blow Grandfather Tuffts struck out mightily, and, missing, was whirled around by the force of his own blow. Jim came back with one below the belt and Grandfather Tuffts went down for losses. He arose again and sprinted for the house. Jim gambolled gleefully around him. It was glorious fun! Once Grandfather Tuffts thought of stopping and trying to kick a safety from the field. On second thought he decided it was better to try to make the remaining fifteen yards. The Ladies' Aid and the four preachers arose to receive him. The ladies were worried. The preachers looked sad.

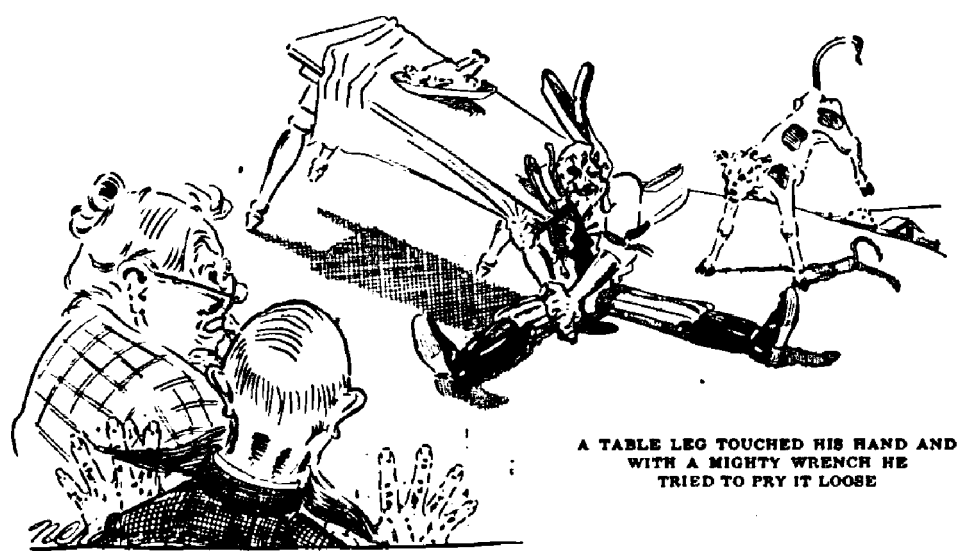
"Shoot him!" yelled Grandfather Tuffts; "shoot the ——"

What he would have said will never be known. Just then happy Jim hit him in the rear and Grandfather Tuffts made a touchdown beneath the table, plowing up a large area of turf without the protection of a nose-guard. Horror blanched the faces of the four preachers. The Ladies' Aid made a record for rooting from the side-lines. Grandfather Tuffts struggled up, striking his head on the edge of the table and grasping wildly for a club. A table leg touched his hand and with a mighty wrench he endeavored to pry it loose. He succeeded beyond expectation. The leg snapped, the table veered toward him and emptied a choice assortment of viands on his inoffensive head. Chicken gravy flowed down his shirt bosom. A little avalanche of dishes coasted over his back. An aureole of custard pie hit him on the head and sagged down to his ears.

The noise frightened Jim and he was safely away before Grandfather Tuffts struggled to his feet, striking out wildly with the table leg. The four preachers laid violent hands on Grandfather Tuffts at this point and wiped the custard from his eyes. Considering what they had lost they were remarkably well sustained. Grandfather Tuffts looked around at the ruin created and then at Jim peacefully eating apples in the orchard.

"By gum!" said Grandfather Tuffts. "I was stoopin' down to git a pail of water and had just got the bucket dipped into the water when that whelp came up behind me when I wasn't lookin' and pushed me over. I didn't have time to say yes ner no. The blamed whelp!"

And the Ladies' Aid reproved not; even the four preachers looked glad.



A TABLE LEG TOUCHED HIS HAND AND WITH A MIGHTY WRENCH HE TRIED TO PRY IT LOOSE

The Cost of a Boy

I read the other day that it cost nearly a thousand pounds to bring up a London boy and educate and dress him well. I thought to myself: "That is because everything in the city has to be bought, and living is high." But I began to study the thing, and I found that even a country boy costs his parents a good deal. When you count what a boy eats and wants to wear, and the school books he must have, the doctor bills which must be paid, when he gets the measles and scarlet fever; he will cost his folks at least a hundred dollars a year. If a boy is given to breaking things, kicking the toes out of his boots and so on, he costs more than that; so when I am twenty-one and old enough to do for myself, I shall have cost father more than two thousand dollars.

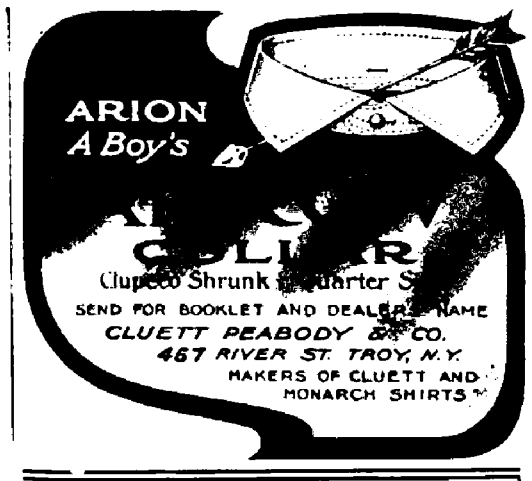
Mother cooked my food and made my clothes, and patched them, and washed and ironed for me, took care of me when I was a little fellow and when I was sick, and she never charged anything for it. If she were dead and father had to pay for all that it would cost another hundred dollars a year more, and that makes two thousand dollars worth of work that mother will have done for me time I am a man.

Four thousand dollars for a boy! What do you think of that? These are hard times, and when parents put four thousand dollars into a boy, what have they a right to expect from him? Is it fair for a boy to play truant at school? Is it fair for him to play ball, go swimming, or hang around all the time, when may be his father's potatoes are not dug, nor the wood brought in for his mother? Is it fair for him to disappoint them by swearing and drinking? Is it fair for him to forget his parents when he has left home, and neglect even to write the letters?

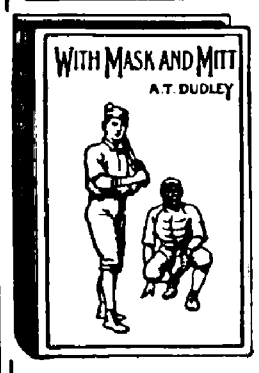
I remember a bright young man saying: "Some of our parents have put about all they have into us boys and girls. If we make whisky decanters of ourselves they are poor indeed; but if we make good citizens and substantial men and women, they will feel as though they had good pay for bringing us up."

Boys, what are you worth to your parents?

The foregoing, which appeared in the "Children's Friend," is said to have been written by a boy.



THE LATEST
Phillips-Exeter Story



With Mask and Mitt

By A. T. DUDLEY

Author of

Following the Ball
Making the Nine
and In the Line

Illustrated **$1.25**

The books of the "Phillips-Exeter Series" have become standard on account of the accurate athletic knowledge presented, the excellent pictures of American boarding-school life that are given, and the thoroughly manly quality everywhere in evidence.

"With Mask and Mitt" continues the subject of baseball, although very much more than merely a baseball story.

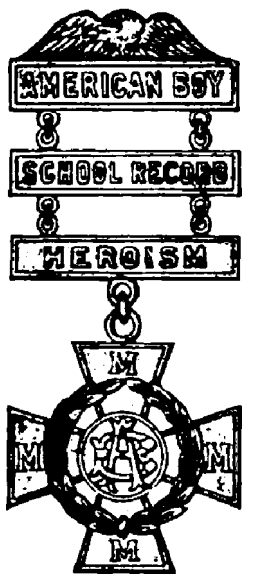
ADVERTISEMENTS HERE PAY

The American Boy Legion of Honor

COMPOSED OF BOYS WHO STAND AT THE HEAD OF THEIR CLASSES IN SCHOOL AND BOYS WHO HAVE DONE CONSPICUOUS ACTS OF HEROISM

Who Are Eligible

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school ending on a date since September 1st, 1905, have stood at the head of their classes, taking the average of all their study grades for the term, and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts. Address all letters relating to the Legion of Honor to Wm. C. Sprague, Chief Counselor, Detroit, Mich.



Division of the Legion Into Chapters

Every two hundred boys in the Legion constitute a chapter at the head of which stands a Counselor. The Counselor will be a prominent educator who agrees to stand as counselor and advisor to the two hundred Legion of Honor boys under him. The first chapter is now forming and will be known as "The Shepardson Chapter."

The Shepardson Chapter (Chapter 1) of The American Boy Legion of Honor

Counselor: Professor Francis W. Shepardson, LL. D., Dean of the Senior Colleges of the University of Chicago

Address (with postage for reply) care of The American Boy, Detroit, Mich.

How They Won

Wells Leib, of Rushville, Illinois, received an average of 96%, the highest in the sixth grade during the school year.

Russell R. Sigler, Hayesville, Ohio, received the average of 96⅓% during the recent term of school, it being the highest in the class.

Leonard Manahan, of Belle Center, Ohio, obtained the highest average grade of any boy in the Junior High School for the term ended May 25th.

Paul Huling, an eighth grade pupil of the Tionesta, Pennsylvania, schools, has been perfect in attendance at school during the last five years.

Eleven-year-old Maurice Wolfers, of Hopkins, Missouri, has the honor of making the highest average in the sixth grade during the term just ended.

Mark Hodgson, a sophomore in the Hobart, Oklahoma, High School, received the highest average for the term ended May 18th. His percentage was 96½.

The highest average in the High sixth grade of the Santa Anna High School during the term of 1905-'06 was made by Jodie Mathews, Santa Anna, Texas, to whom a badge has been sent.

Robert M. Conley has finished the year's work in the freshman class of the Cedarville (Ohio) High School with the highest grade of any pupil in the class, obtaining an average of 94 7-9%.

Elwood Nye, Smith Center, Kansas, won the highest average in the eighth grade during the year 1905-'06, which average was 93 5-9%. Elwood and his brother Willie have taken THE AMERICAN BOY for several years.

Arthur Nigg, of Enterprise, Kansas, took part in a close race for first place in the eighth grade during the term just ended. He obtained an average that was but five-ninths above that of the pupil ranking second in the class.

Noble E. Loyns, who lives in Roseisle, Manitoba, has led his class at the Miami Intermediate School during the last two terms, his percentages ranging between 80% and 100%. His principal writes that Noble is a student of marked ability and merits success.

Joe and Jim Dickson, of Luella, Texas, have received School Record Badges; Joe for obtaining the highest average in his class for the term ended April 20th, and Jim for being perfect in attendance at school for the last five years.

The highest average in the seventh grade of the Athens, Tennessee, city schools was made by Cecil McDowell, who writes: "I have been a subscriber to THE AMERICAN BOY for four years, and like it better than any other paper."

Clive-Ellerbe Chambliss, Bevier, Missouri, has led his classes for the last two years, and for the last six years has not been tardy at school. He is now in the sixth grade. His father writes, "My son has been for two years a subscriber to THE AMERICAN BOY, and is an ardent admirer of the paper."

Earnest West, of Brecksville, Ohio, won a School Record Badge by maintaining the highest average in the sixth grade during the school year. There are three boys in the West family, Harry, Earnest, and Carl, and they have taken THE AMERICAN BOY for five years, using their own money to pay for it.

Alonzo Meek writes from Montgomery, Alabama, to thank us for his School Record Badge. Alonzo, who was born in Battle Creek, Michigan, and is not yet twelve years old, has been president and vice-president of a Junior League, and president of two school clubs. He likes THE AMERICAN BOY so well that he is trying to "pass it along" by speaking to the boys at school about it.

The PROVING of the GIRL-BOY.

By Herbert Walden

IT WAS THE end of the opening week of college. Wilbur Raymond, running lightly down the steps of North Hall, was greeted by a group of his classmates at the foot of the steps.

"Hello, Raymond! Coming out to the rush tonight?"

"Not I," replied Raymond good-naturedly.

"Oh, come, Raymond, you don't mean that!" exclaimed one.

"Yes, I do," said Raymond more seriously. "I have some extra work over at the mining camp this evening. Besides I quite agree with the President that our rushes are nothing but rufflanism, and I believe we ought to uphold him in his effort to put a stop to them."

A brief silence fell upon the group, then Rob Hilton, Raymond's old neighbor and lifelong enemy, burst out. "Oh, let him alone, fellows! He's afraid of getting caught. He always was a girl-boy."

Raymond flushed slightly and, turning walked away, Hilton's words sounding in his ears. Girl-boy, girl-boy. Would he never live it down? Would he never be able to convince them that that appellation given him long ago was wholly undeserved?

Meanwhile the rushers were busy with their plans. From time immemorial it had been the custom for the freshmen class to plant its numbers on the hill behind the university during the opening week of college. To prevent their doing so was considered one of the most sacred obligations that ever fell upon the shoulders of a sophomore class. The juniors were always present to direct the movements of the inexperienced freshmen, while seniors appeared in goodly numbers to aid the sophomores. In short it was the occasion for a fierce contest into which every college man who had any fighting blood in his veins threw himself with all his soul.

The new president, however, had boldly denounced this time-honored ceremonial as "rufflanism." Further, he had decreed that all students found guilty of "rushing" would be expelled from the university. The president was popular and the more conservative element among the students would have respected his mandate. But a tradition so firmly planted was not to be uprooted in a day. From the beginning of the week an atmosphere of unrest pervaded the campus. The students and instructors leaving the University late Thursday evening were not surprised to see little groups of shadowy figures making their way stealthily across the campus toward the hill.

Early the next morning Wilbur Raymond was returning from his mining camp beyond the hill. As he passed the scene of the previous night's encounter, he heard a cry from the brush near him. Pushing aside the thick branches, he came face to face with Rob Hilton lying on the ground bloody and dishevelled. Raymond gave an exclamation of surprise and Hilton answered sulkily. "I hate to ask you for help." Wilbur colored, but said nothing, and Rob hurried on. "The officers pounced down on us just as we were going to finish up the freshies. Lots of the fellows were caught. I succeeded in escaping, but as I was running down this bank my foot caught in a vine. I fell forward, my head struck a rock, and I didn't know anything more till about ten minutes ago. My ankle is pretty badly wrenched, but I think I can walk if you will help me. I'll be caught yet if I don't get off the campus before eight o'clock."

"Let me tie up your head first; it's bleeding badly," said Raymond. He bandaged the wounded head with his own tie, and they began to descend the narrow path. Hilton leaning on the shoulder of his enemy and groaning at every step. It was a long, painful walk and both boys had time for reflection. Wilbur Raymond's thoughts involuntarily went back to the past. He saw himself, a pale, lonely child standing at the fence wistfully watching the Hilton children at their games. What did it matter to him that the Hilton fathers and grandfathers and the Raymond fathers and grandfathers had been enemies as long as anyone could remember? He would gladly have foresworn family prejudices to join in the romps of his boy friends. But they had only called him a "girl-boy" and resumed their play. He saw himself again in high school, still the "girl-boy," still striving unsuccessfully to overcome the hostility which the more popular Rob Hilton had somehow instilled into his associates. Three years of successful college work had almost effaced the bitterness of those old memories, but he had yet to convince Rob Hilton.

Here a startled exclamation from Rob broke upon his thoughts. "There comes Professor Thomas!" he exclaimed. "It's all up with me now."

The professor had not yet seen them. It would take but two or three quick steps to reach an outbuilding of the chemistry department where a small porch thickly covered with vines would furnish concealment for one. But those two or three quick steps Rob Hilton was unable to take. Before he had recovered his breath Wilbur had picked him up in his arms and placed him within the shelter of the friendly vines, saying as he turned quickly away:

"I'll send some of the fellows after you later."

"Too bad there isn't room for you, too," said Hilton more kindly than he had yet spoken.

"Oh, I can pass the professor all right," responded Wilbur. And, indeed, he had all but passed him with a pleasant exchange of greeting, when the keen-eyed instructor noticed that the usually immaculate Raymond was somewhat dusty as to clothing and somewhat bloody as to hands. Professor Thomas was chairman of the "committee on students' affairs." Moreover, he had a perfectly defined conception of his duty.

"Mr. Raymond, pardon me," he said, somewhat coolly. "Of course your conduct in college has always been above reproach. But do you not realize, sir, that a young man who is seen coming from this direction at this hour of the morning after a rush is liable to suspicion?"

"I am just returning from my camp over the hills, professor," said Wilbur. "I'm doing some original work there in mining."

"Does that account for the dust on your clothing and the blood on your hands?"

Wilbur paled as he realized all at once that the evidence against him was great unless he could furnish a satisfactory explanation. And how could he explain? He had never been accustomed to evasions, and none presented itself now. The only explanation which came to his mind was the truth, and should he purchase his own acquittal by fastening blame on another, even though that other was guilty? Should he conceal a man and then betray his hiding place? All this flashed through his mind in the second that the professor waited for an answer.

"Professor, I-I can't explain, I——"

"Then," said Professor Thomas sternly, "I must report you to the president. I am sorry, sir. Have you nothing further to say?"

"Nothing, professor, except that I was not in the rush last night, only—I—I cannot explain."

"Good morning, Mr. Raymond."

Wilbur walked home in a daze, his mind full of conflicting emotions. Surely he would not be expelled. His past record and his present standing would save him from that disgrace. And even if the president were not inclined to be lenient, of course Hilton would be man enough to set matters right. But, if Hilton did not exonerate him, he hardly dared to think of such a possibility, but at least Rob Hilton should see that he was not a coward.

In the afternoon he was summoned to the president's office. An hour later he staggered blindly down the steps of South Hall, the president's last words ringing in his ears.

"Unless you can give a more satisfactory account of your whereabouts last night and of your appearance and conduct this morning when Professor Thomas met you, you are expelled from the university!"

Expelled! He was beginning to appreciate the awfulness of the situation. How could he face his mother! Was it right to bring disgrace upon himself and his parents to shield a guilty comrade? Should he not go back to the president and tell him all? No! Never! Hilton would surely set it right when he heard.

The next morning the university experienced a sensation when Wilbur Raymond's name appeared on the list of students expelled for "rushing." Many were the expressions of surprise and regret that a student of such promise should have brought that humiliation upon himself, and many were the expressions of wonder that Rob Hilton, who had always been known to take a most daring part in the "rushes," should have escaped.

All day Wilbur waited, pacing feverishly up and down in his room, for word to come that Rob Hilton had lifted the heavy burden of disgrace from his shoulders. No word came and Wilbur all at once found himself face to face with his sentence. Expelled! This, then, was the realization of his long cherished ambition to vindicate himself to Rob Hilton, to prove that he was not a coward and a "girl-boy." He had not thought to have to prove it at such a cost. Was it worth while, after all?

The day passed and another day came, and still Hilton was silent. Rob Hilton was lying on his couch enduring the jests of his friends.

"Rob always was a good boy. He's never broken a rule since he's been in college." "And he doesn't even know what a rush is like," said another. "How did he hurt his foot? "Oh, he fell down stairs," added a third. "Say, Rob, have you heard about your old friend, Raymond?" "Fifty times," answered Rob sulkily. "Why, of course, fellows, that's why Bob has been so glum these two days, grieving over Raymond's expulsion."

His companions continued their bantering, and Rob turned his face to the wall without paying them further heed.

Suddenly he started up, and the boys stopped their chattering, astonished at the expression on his face. "Jim," he said to his room-mate, will you get me my cane?"

"Where are you going, Robby?"

"To see the president."

"Going to 'fess up, Robby?"

"Yes."

"What!" shouted half a dozen voices.

"Why, man, you're insane!" exclaimed his chum.

Rob made a painful effort to rise. His companions crowded around him excitedly.

"Come, Robby! Brace up. This is madness. What——"

"There's no use in your talking, fellows. You don't understand. I tell you I'm going to see the president."

His friends would have remonstrated further, but the stern pallor of his face and the unwonted solemnity of his manner awed them into silence.

"Jim, will you help me?"

"All right, old boy, here's your cane."

Wilbur Raymond was mechanically putting his books and pictures into his trunk. Suddenly the door opened and Rob Hilton stood before him, haggard and old. Wilbur's heart gave a great bound. For a moment neither spoke; then Hilton broke the silence.

"Raymond, I've just been to the president and told him everything." Wilbur was still silent and Rob hurried on.

"Why did you do it, Raymond? At first I thought of course you would explain, and when at last I understood that you were just too much of a brick to give me away, well, I simply didn't have the nerve to face the president and own up. Then the longer I waited the harder it was. But, thank heaven, I did get my courage up at last. But, I tell you, Raymond, you're a trump! And I—I have been a cowardly cad!"

"Hilton," broke in Raymond, "I have waited years for the opportunity to convince you that I really am not a coward. It means more to me than you can ever understand."

"And I don't mind telling you now," said Hilton, "that I have often thought with shame of that day at high school——"

"O, let's not talk about that now," interposed Wilbur.

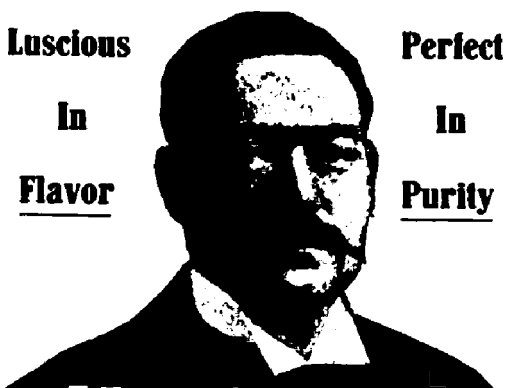
"You know, we kids were always taught to hate you," continued Rob. "But, by George, when I go home, there's going to be a new order of things. The Hilton-Raymond feud is hereby declared off.

"And, by the way, Raymond, the president says he likes your pluck and he wants to shake hands with you. And, if you don't mind, old man, I'd like to shake hands with you, too."

Then Wilbur knew that it had been worth while.

When a fortnight old the oyster is not much larger than the head of a pin. At the end of four years' growth it is fit for the market. Oysters live to the age of from 12 to 15 years.

Luscious In Flavor — Perfect In Purity



Mackintosh's English TOFFEE

Is the only CANDY

with sustaining nourishment for the "Between-Meals-Hunger" felt by all who work or play.

So boxed in caramel form that it is handy to carry when shopping, calling, traveling or working. Put it in the school-bag for recess.

Avoid the dangers of ordinary candy—Mackintosh's English Toffee is good and safe to eat at all times. Try it NOW.

Any dealer can supply you (5c., 10c., or $1.60 tin) or will send out and get it. If not, write to Dept. 43.

Have You an Extra Room to Heat?

Is your bath room, bed room, or spare room always as warm and cozy as you would like it? There need not be a cold room in the house if you own a PERFECTION Oil Heater. This is an oil heater which means what its name implies —PERFECTION. Produces intense heat without smoke or smell because equipped with smokeless device—no trouble, no danger. Easily carried around from room to room. Handle never gets hot. You cannot turn the wick too high or too low. Easy and simple to care for as a lamp. The

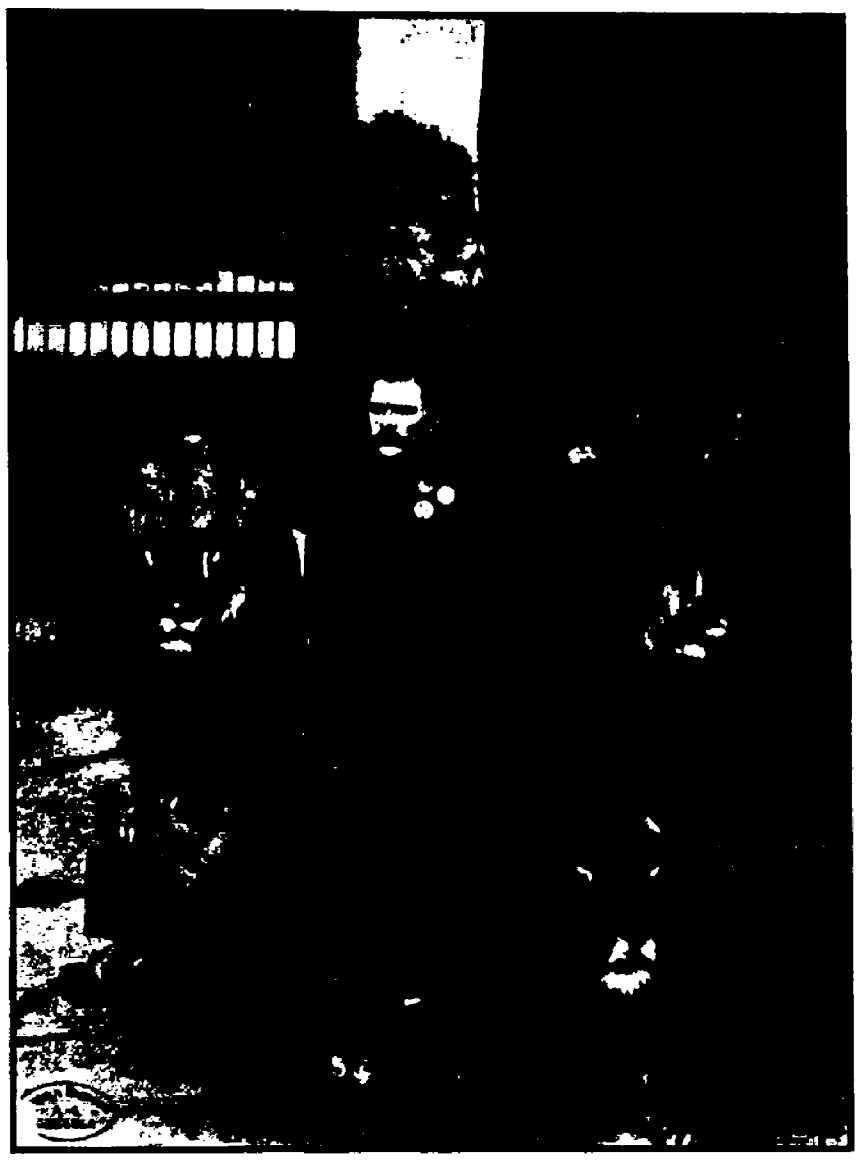
PERFECTION Oil Heater

Equipped with Smokeless Device

is an ornament to the home. It is made in two styles—Nickel and Japan trimmings. Oil fount beautifully embossed. Holds four quarts of oil and burns eight to nine hours. Do not be satisfied with anything but a PERFECTION Oil Heater. If you cannot get heater from your dealer write to nearest agency for descriptive circular.

The Rayo Lamp is the best lamp for all-round household use. It is a lamp of unexcelled light-giving power. Stand and oil fount solid metal nickel plated. No glass except chimney and shade. The safest lamp you can buy. Suitable for library, dining room, parlor or bed room. Latest improved burner. Ask for the RAYO Lamp at your dealers. If you cannot get it from your dealer write to nearest agency.

STANDARD OIL COMPANY



CHAMPION LION TAMER

By HUGO ERICHSEN

For utter fearlessness, for a presence of mind that does not forsake him under any circumstances, and for an exceptional skill in his chosen vocation, Richard List, the great dompteur of Berlin, Germany, possesses a world-wide reputation. "Dompteur," as he styles himself, literally means tamer, and is very suggestive of the patience he displays in making the king of the desert absolutely amenable to his will. Apparently the lions he works with are as tame as kittens, and obey his commands as readily as though they were little felines instead of the bloodthirsty brutes they really are. List, it is said, attached himself to a German traveling menagerie at an early age, and attracted the favorable attention of the director of the same by saving the latter's daughter from the attack of a panther that had escaped. Only armed with a stout whip, the intrepid young man slowly drove the snarling beast back into its cage, thus setting his foot upon the first rung of the ladder to fame.

MY YOUNG SPORTSMAN

A Series of Articles Descriptive of Firearms and Their Use

Written for The American Boy by Edward Van Antwerp

CHAPTER V.

WHEN the amateur sportsman sees for the first time the old and experienced user of the shot gun, bring down bird after bird; or stands near an expert trap shooter and notices how apparently easy he smashes targets; then it is that our youthful friends, and perhaps some older ones, get the impression that shooting is an extremely simple art, and to be learned in a day. Sooner or later they are destined to learn their mistake, for on the contrary, a great deal of skill and experience is necessary to be a successful gunner. Some, upon learning of the difficulties attending the art of shooting, become discouraged and turn their attention to other sports. The writer wishes to say right here, that the difficulties to be encountered along this line are not unlike the obstacles that are to be fairly met and overcome in learning the details of any other business or pastime. The actor, the accomplished musician, the expert billiard player, and the athlete, have all learned to do certain things by constant effort and trial. What reason have we then to be discouraged if we do not prove ourselves to be experts with firearms the first time they are placed in our hands. If we are so unfortunate as to miss our birds and targets on the start, let us learn the cause and strive to find a remedy.

In wing shooting there are a number of things to be considered. Distance is one of the most important, and a gunner must learn to judge distance practically correct or he will be at a serious disadvantage. We are prone to make mistakes, especially where the object is of a large nature such as a swan or a goose, and is rapidly approaching us; indeed it is quite easy under such conditions to imagine seventy yards but forty. No better practice can be indulged in than to fix your eyes on some object; make an estimate of the distance, then pace it, and find how closely you judged. Practice of this kind will prove so beneficial, that within a short time you can form an estimate with surprising correctness. Its advantages will be manifest when you are afield in search of game, for it will enable you to bring down your birds, where without a knowledge of distance, you would certainly miss.

Another material thing of importance, entitled to considerable attention from the devotees of the gun, is the subject of velocity. Velocity means the speed of the projectiles in their flight from the muzzle of the gun. It is practically the same in one sense as penetration. At first thought it might appear to the young sportsman to be a subject without any particular value in the bagging of game, but let him remember that the slower the shot travels after leaving the barrels, the farther ahead he must hold on quartering birds, and then he will understand the object and purpose of knowing whether or not the explosive used gives a high or low velocity. Scientific instruments have been devised for measuring the speed of projectiles, and they perform their work with surprising exactness. For the purpose of the sportsman experimenting on his own hook, these costly outfits are out of the question; but he may resort to a very simple process, that, while not absolutely correct, will give him a reasonable idea regarding the velocity, or more correctly speaking, the penetration of his ammunition. Procure some old book that is of no value as literature. An old catalogue is a good thing, if thick enough. Now, if you are to test, say for instance, three kinds of powder, then cut the catalogue into three different pieces, and fire your shells containing the different explosives at these parts. Now, by counting the number of leaves actually penetrated by the charges, you can make a study of the comparative merits of the different loads.

The ordinary velocity of a load of three and one-fourth drams of black powder and one and one-eighth ounces of shot, is about seven hundred and fifty feet a second. Nitro powder gives a considerable higher velocity. Reducing the shot charge, or the use of larger pellets will add to the penetration.

A correct understanding of distance and velocity prepares the shooter for the field, in so far as calculation is concerned. But be it remembered that there is a vast difference in knowing where to aim, and being able to aim where you would. Both together constitute the fundamentals of good shooting. We said that a correct understanding of distance and velocity prepares the shooter for the field. Now, by the term velocity we mean not only the speed of shot, but what is of more importance, the speed of birds. It is evident that a bird flying fifty miles an hour and one flying one hundred miles an hour are not to receive precisely the same treatment from the gunner's standpoint, assuming that they are equal distances away.

Judging the speed of birds is one of the hardest things to learn, and strictly speaking, it is a knowledge to be acquired by experience only. For the benefit of my young friends who might be interested in comparisons, I have added herewith a table showing the speed of the various wild fowl. It would be impossible to give figures absolutely without error in a case of this kind; however, they are approximately correct.

Black Duck	40	miles	per	hour
Mallard	50	"	"	"
Wood Duck	55	"	"	"
Canada Goose	80	"	"	"

Savage 22 Repeater
Hammerless "Take Down"

The 1903 model contains more points of superiority than any other repeater of like caliber. It is hammerless which practically insures the operator immunity from accidents. The magazine consists of a clip holding seven cartridges which can be quickly removed when fired and a new clip of seven almost instantly inserted. Extra rapid firing is thus made possible. The empty shells are ejected several feet to one side. Enclosed mechanism prevents dirt from interfering with action. Shoots short, long and long rifle cartridges without change of mechanism. 24 inch octagon barrel, pistol grip, weight 5 1-4 lbs. Net price $12.00. If your dealer cannot supply you we will ship it direct.

Savage Arms Company, 3910 Turner St., UTICA, N. Y., U. S. A. All shipments prepaid.

MONEY

May be easily made by boys, who will act as agents for the Ideal House. On every subscription at One Dollar, that a boy gets, he will make thirty cents. The magazine tells all about making the home beautiful. The first boy that writes to us gets exclusive territory to get subscribers. If a boy gets one hundred subscribers, he will make $30.00. This may be done easily; it simply is done by steady work. And, not only that, we will give help to every agent to get subscribers. Every subscription that a boy gets will be credited to him, even though the subscriber sends her money direct. We do this by keyed subscription blanks.

THE IDEAL HOUSE

has 36 big pages in every issue. It has many large, beautiful illustrations. It is full of interesting articles on decorating homes. All women will be interested, and will subscribe as soon as they see the magazine. Soon it will give directions for building things at home. There will be new and artistic chairs and tables, that boys may build and decorate with carpenter's tools and paint brushes. These articles will be fully illustrated. Every boy that is agent for THE IDEAL HOUSE will get these issues free. But, to get the best territory, write today.

T. A. CAWTHRA & CO., 27 East 21st St., New York

BAIRD DOLLAR WATER MOTOR

Not a toy or mechanical novelty, but a real, powerful little motor, sold under an absolute "money-back" guarantee to develop

1-4 ACTUAL HORSE POWER

under 30 lbs. water pressure (the ordinary city pressure.)

Easily and quickly attached to any penstock or faucet, and by simply turning on water will run fan to cool off hot kitchen, emery wheel for sharpening knives and scissors, milk bottle and chimney washer, egg beater, buffing wheel for polishing silverware, also jewelers' and dentists' lathes, small dynamo, sewing machine, washing machine, etc. Simple, strong, reliable. Nothing to break or get out of order. Wears a lifetime. Costs little to buy, nothing to run. Indispensable in every home and shop. Lightens labor, saves time and money. Made from very best material by careful workmen in the same big factory as the famous "LITTLE SKIPPER" marine engines.

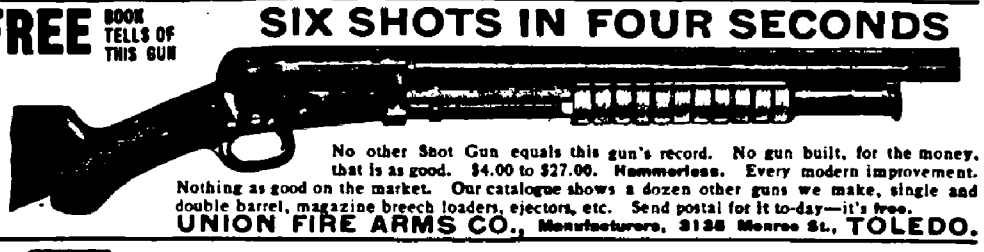
Price of motor ready to attach to faucet, carefully packed in neat box and delivered to express company for shipment, ONLY $1.00

Send money by post office or express money order or registered letter. Immediate shipment guaranteed. Money back if not fully satisfactory and exactly as represented.

REFERENCES—Any bank or trust company, any express company, or any prominent business man or public official in Detroit.

ST. CLAIR MOTOR CO., W. M. Dept., 58 Champlain St., DETROIT, MICH.

FREE BOOK TELLS OF THIS GUN **SIX SHOTS IN FOUR SECONDS**



No other Shot Gun equals this gun's record. No gun built, for the money, that is as good. $4.00 to $27.00. Hammerless. Every modern improvement. Nothing as good on the market. Our catalogue shows a dozen other guns we make, single and double barrel, magazine breech loaders, ejectors, etc. Send postal for it to-day—it's free.

UNION FIRE ARMS CO., Manufacturers, 2138 Monroe St., **TOLEDO.**

ELECTRICAL SCIENTIFIC NOVELTIES. Models of Locomotives, Railways, Dynamos, Water Motor Dynamos, and Gas Engines. Trains and Street Cars operated by dry batteries. Catalogue B, sent free, contains full information. THE CARLISLE & FINCH CO., 240 East Clifton Avenue, CINCINNATI, OHIO.

Leather Watch Fob 12 CENTS IN STAMPS
With your own initial on it

This illustration shows exact size of our Leather Initial Watch Fob. It can be worn as a watch fob or as a chatelain or on the belt as an ornament. You may have any initial you wish. We have sold nearly a hundred thousand of these fobs. We cheerfully send your money back if you are not perfectly satisfied. We sell these fobs so cheap simply as an advertisement. With every fob we send you a sample copy of our splendid illustrated monthly. We put a coupon below so you will not have to write a letter. Simply fill in the blank and enclose 12 cents in stamps. Address and mail the envelope to

THE STAR MONTHLY, Oak Park, Illinois.

MAROONED

"MY, BUT THAT was a hard climb." Jim sat panting on the lowest branch and rested. Farther up Jack was examining the higher branches and making a mental note of the crop.

"Many nuts up there?" shouted the little fellow after catching his breath.

"Yes, lots. More than we can carry this time. We'll have to come back tomorrow. Say! we'll have lots of fun cracking these next winter when the nights are cold."

The smaller boy was in no hurry to get higher. The climb up the trunk of the tree had been a hard struggle. It was not a large tree for a walnut; the boys could not have accomplished their task on a full sized one, but it was quite twenty feet from the ground to the lowest branches, and this distance the boys had to "shin" without assistance, but their bare feet were tough and their arms strong, and the rough bark had scarcely made a scratch on either of the climbers. Once up to the branches it was as easy as climbing a ladder and there was almost no danger of falling.

Directly under them Jim's rifle leaned against a fallen branch and Jack's was a few rods farther away leaning against a small tree. The boys had newer and better rifles at home, but they were a trifle heavy, and when not on any specially dangerous expedition they preferred the older and lighter pieces. Today they were not hunting at all, but carried the guns because it was their habit never to go into the woods unarmed. There was no telling what game might happen along when least expected and they could not afford to lose any opportunities. The boys had come some distance from home in search of walnuts, and as they were a little ahead of the season, the nuts had not fallen. This made climbing necessary.

Jim scrambled a branch higher and paused to look about him. Below, close to the base of the tree was a clear space with a few tufts of grass growing here and there. A little farther away was some underbrush and a few large boulders. They would crack a few nuts on one of those flat stones before returning home. But what was that beside one of the boulders? Jim held his breath and bent forward. His heart almost stood still as he searched the outline among the leaves and grass.

"Jack, Jack," he whispered, but Jack was too far up and too busy to hear. At that moment, quite unconscious of danger, he gave a branch a sharp shake and the large dark-green nuts pelted the ground. Then the thing that had caught Jim's eye raised its shaggy head and looked about. There was no longer a chance for doubt.

"Jack," again whispered the younger boy, "look."

The terror of his tones reached Jack, who looked about him in alarm and quickly dropped a few branches lower.

"Where? What is it?" he whispered.

Jim made no answer, but pointed in the direction of the big boulder. The animal did not take the trouble to get up. It rolled its ugly head from side to side, lazily looking for the noise that had disturbed its sleep. Then it snuffed at a newly fallen nut and probably concluded that there was nothing to get fussy about in the fall of a nut at that time of year, so, after a little more swinging of its head from side to side, looking very silly the while, and the muttering of some sounds that were probably bad words in its language, it again put its nose down on its outstretched forepaws and resumed its interrupted sleep. By this time Jack was at his brother's side moving as noiselessly as a cat.

"Was he there when we came up?" whispered Jack.

"Must have been."

"But we made plenty of noise."

"He was very sleepy I guess. What are we to do?"

"We must stay here and take chances. He would soon get us if we went down. My! if I only had my gun, I mean that new one. He seems to be asleep again."

"We can't get down without waking him. He may go away if we keep quiet."

"Yes—tomorrow, maybe, or next week. Bears sleep a long time when they're not hungry, and when this one gets hungry he is likely to get us if we are up here."

The boys remained silent for some time taking in the situation from all directions, and both failed to see any joke in it.

"There's that gun of mine looking up at me," said Jim, "and she's got a good load in her too. Is there no way to get her?"

"Look here," said Jack. "Can't we drop a noose over the barrel and pull her up? There's plenty of time, if we can only do it without making a noise. That's a basswood tree over there and we can easily get at the tips of the branches and peel them. He may not wake up for a long time."

"Good. Let's get at it."

The basswood referred to grew at a short distance from the one on which the boys were marooned. The bark of the basswood is soft and pliable, easily made into ropes and often used by backwoods people for such purposes as mending harness, and other repair work of a temporary nature. Quietly the boys worked their way upward and outward—outward until the branches bent dangerously near to the breaking point. The lighter boy worked the farther out. He peeled the bark and passed it back to Jack, who separated the soft pliable inside skin from the coarser outside bark and worked it into a stout cord, tying piece to piece until it reached the ground. Then they crept back to the lower and stronger branches, rubbed themselves and stretched their limbs, for they were sore and stiff from long occupying cramped positions.

Then began the most difficult work of all. With a noose on the lower end of the string they began angling for the gun. Time and again they had the noose almost over the barrel, but a pull at the wrong time or a puff of wind would render the work useless. Jim was a trifle nervous and would take glances at their sleeping enemy every few minutes, but Jack paid no attention to anything but the work of the moment. It was past noon and the gnawing of hunger was adding itself to the other discomforts of the situation, when Jack rested the hand in which he held the string by placing it on his knee.

"What's the matter?" whispered Jim anxiously.

"Just a little excited," said Jack. "I'm going to rest a few minutes and cool off. I've had it this way three or four times, and always lost it. Now I'm going to quit being in a hurry."

Down below the noose was hanging on the muzzle of the gun. The slightest move in the right direction and it would drop over, while a move in the other way and all the work must be done again. So Jack rested, cooled off a little and became steadier. Then the move was made and the noose slipped down over the barrel.

"There," said Jack. "That's what you get by keeping cool."

By gentle pulls the noose was tightened. It caught on the ramrod ferrule at last and the gun moved as Jack slowly pulled up on the bark string.

"You've got it," whispered Jim. "Don't be in a hurry, Jack. If she happened to shoot I'm right in line for the bullet."

Jack was in no hurry. The gun swung clear of the branch that had supported it. The string seemed able to carry the weight and the ascent was soon in progress, neither boy daring to breathe. The gun slowly turned once or twice, but when about ten feet from the ground the noose slipped, catching again on the sight at the very end of the barrel. For a moment it trembled in the balance and then concluded to hang on. Hand over hand the string was pulled in, but the hold of the noose was so short that Jack had little hope of success.

"Move down a bit, Jim," he said, "and catch it as soon as you can. "Be careful, Jim, I'm afraid it is going to slip."

Great beads of perspiration were almost blinding him, but he dared not wipe his face for fear of jogging the gun off the string.

"Up a little more," said Jim. "Another foot and I'll have her. Gee cracky! She's gone."

The sharp sight had cut the soft bark, and down went the gun, turning slightly in its descent. There was no more need of quietness. Striking the branch against which it had been leaning, the gun was discharged with a sound that appeared to fill the entire forest. Jack grasped the branch to steady himself and said nothing, but there was woe in every line of his face.

Jim looked up at his brother in pathetic despair.

"I didn't touch it," he almost sobbed. "It didn't get to me."

"I know it didn't. You couldn't help it. Oh, look at the bear."

The animal appeared to jump about ten feet in the air on hearing the report. Then he dashed at the smoking gun, but finding no man there he snuffed along the ground at the foot of the tree and began to climb, grumbling loudly all the time like one suddenly and roughly aroused from a pleasant dream.

"Come here, Jim, and let me go down. I'll fight him with this knife."

"No," replied Jim, who had recovered from his excitement and fear, "You hold me by the belt so I can bend down and fight him as he comes up. You can pull me back if I slip."

"Be careful, Jim. Cut his paws if you can. That may make him turn back. Be careful now."

Bracing himself as best he could Jack took a firm grasp of his brother's belt, while the latter leaned far forward with uplifted knife. The bear evidently thought little of the reception committee. Growling with rage he had almost reached the lowest branches, and it looked like a clash, as Jim carefully measured with his eye the distance between him and the enemy. Every muscle was tense, every energy on edge for the conflict, when suddenly a slight musical sound not unlike that made by the wings of the humming bird, was heard and both boys instantly ducked. They were not cowards but had heard that hum before and for a moment they almost forgot the bear.

Once during the war of the rebellion a general was about to lead some green troops into action. "Now, boys," he said, "go straight in and don't dodge." At that moment a shell shrieked over his head and he ducked. That brought a shout of laughter from the soldiers. The general straightened up and shouted: "Dodge the big ones, boys, but never mind the little ones."

So it was scarcely a wonder that the boys, hearing the sound of an Indian arrow, ducked. At the same moment the bear stopped climbing and angrily clawed at his ear, just behind which a keen flint arrow-head had cut the thick skin, but had not penetrated far. The shaft was broken by the bear's paw, but the head remained buried in the flesh, and every time the enraged animal clawed at it the pain was increased. Jim clambered up beside his brother and both eagerly searched the underwood for the sender of the arrow, but it was only after a second had been sent that they discovered their rescuer. He was no bigger than Jack and stood eagerly watching the effect of his second shot.

"That's the fellow we fought," said Jim, recognizing Eagle Wing.

"Sure. It's the same chap. Hope he doesn't try to get even."

The bear, pierced a second time by the carefully pointed flint, began to descend, evidently intending to make a meal of his tormentor, and the Indian looked about for a means of escape in case of attack.

"I wonder if he can shoot a rifle?" said Jim.

"Of course he can. Every Indian can," replied Jack. "Halloo! See that gun over there." This he shouted to the Indian, who looked anxiously about, but failed to see Jack's gun.

"Over there against the tree," shouted both boys, pointing.

The bear had now reached the ground, but instead of taking after Eagle Wing at once, he sat there pawing at the arrow head, which remained in the flesh of the neck. The Indian's knowledge of the English language was very small, but the signs made by the boys were more easily translated and he quickly reached the gun, which he carefully rested over a log and fired with sufficient accuracy to hit the bear near the heart. But bears are hard to kill and the animal showed no sign of having received a death shot. In the meantime Jack, believing that the bear would take after the Indian, had let himself down below the lowest branches in order to quickly reach the ground and secure Jim's gun. He was correct in his reasoning, for the bear bounded towards Eagle Wing, who quite slowly climbed a small tree. Jack almost fell to the ground in his haste and was pouring powder into Jim's gun by the time the bear reached the Indian's refuge. Jim was down close after his brother and was running to secure the rifle the Indian had dropped, when his brother's voice checked him.

"Lie down flat," yelled Jack. "I'm going to shoot over you."

Down went the little fellow, and a moment later a bullet whistled close over him. Jack had aimed at the head of the bear, believing that a bullet in the brain would be more effective than elsewhere. The bear was standing on its hind legs with its forepaws on the tree, ready to begin the climb, when the bullet caught him between the eyes. He fell with a loud grunt and Jim sprang forward and secured the rifle, which was very close to the fallen animal. The bear attempted to pursue him, but fell again and could not continue the fight. Two more bullets were soon in his head and he quit growling.

"How slow he is," remarked Jim, looking at Eagle Wing descending from the tree.

"Something ails him," said Jack.

"I wonder if he's afraid of us. See, he's going to fall."

Both boys rushed to the tree and assisted the Indian to the ground. It could easily be seen that the boy was ill, but there was some difficulty in communicating owing to his lack of English and the small knowledge the boys had of Indian. They conducted him to a fallen tree, where he sat down, evidently exhausted. Then Jim had a brilliant idea.

"Look at his belt," he shouted. "It's so tight he can scarcely breathe."

"Sure as you live. He's starving."

"That reminds me. We haven't had our lunch."

"Get it quick before he faints."

Jim hurried for his coat and returned with a neat package put up by his sister. In it were some toothsome venison sandwiches and a bottle of milk.

"Gee Cracky," said Jim, "I hate to give this up. I'm hungry enough to eat a bear and I know these are good."

"That's just what we must do," said Jack. "We won't eat all of him, but we'll have some bear meat instead of that stuff."

The Indian took the proffered food eagerly and let out his belt a few notches. The lunch revived him greatly and the three quickly had a fire burning and some choice bear steaks were prepared over it. No meal ever tasted better and Eagle Wing's belt was now let out to the limit. The boys talked little, but as they sat and satisfied their hunger there appeared to grow up between them an understanding that they were friends, an understanding that could not have been improved by words. With halting speech and many signs the Indian explained that he and his people had little food and depended upon game, which was scarce. He wished to know what the boys thought as to the ownership of the bear, as he wished to take home some for his parents. He was promptly assured that the animal was his, that the boys had not wanted it at any time and he was welcome to all he could drag home. They found some difficulty in explaining that they were very thankful to him for saving their lives, for they felt sure the battle should have gone against them but for his timely coming and bravery in attacking their enemy, but he purposely failed to understand that he had done anything of special value, explaining that he had attacked the bear because he was hungry.

The best parts of the bear were tied up in the skin. Eagle Wing then cut a long, slender piece of underwood, tough and supple. A branch near the thick end was cut to form a hook, while the smaller ones at the top were interwoven to form a loop. Attaching the hook to a hole in the bearskin, the Indian placed the loop over his head and, bending forward so that the strain came on his forehead, started for home drawing the dismembered bear along the ground behind him.

"I'd like to do something for him," muttered Jack, as the two boys watched the Indian making his way through the forest.

"He certainly saved us," said Jim.

"Say," an idea suddenly coming to Jack, that new rifle at home is better than this one. It's a little heavier, but I can carry it without any trouble. What do you think?"

"Bully idea," shouted Jim. "Shall I call him?"

"Yes."

Jim turned in the direction of the vanishing Indian, and gave a yell, which he cut into several pieces by bringing his palm smartly against his open mouth. The Indian was startled by the sound, for it was a good imitation of his tribe's war-cry. He disengaged himself from the branch and looked rather anxiously at the two boys who were running in his direction. Without a word of explanation Jack placed the gun in his hand and hung over his shoulder the pouch and horn containing a supply of ammunition.

(*Continued on page 379.*)

JOHN TOWNSEND TROWBRIDGE, WHO HAS BEEN WRITING FOR BOYS FOR FIFTY-THREE YEARS. HE HAS JUST COMPLETED A SERIAL STORY THAT WILL SOON BEGIN IN THE AMERICAN BOY

"SYMPATHY for the sightless is wasted," said the superintendent of one of the institutions for the instruction of the blind. The deprivation of the use of the eyes may seem dreadful to those who can see, but the blind are happy enough.

In proof of this strange statement, he opened a door leading into one of the playgrounds. Disclosed were a half hundred boys playing almost every game that boys with the normal number of senses indulge in, and yet not one of the laughing, jolly crowd could see a ray of light.

Boys were running races, holding in their hands spools strung on taut cords which they reeled along the line to keep them to their course as they ran. Boys were putting the shot—pulling back the weights after the throw by means of stout string attached to them and gauging the distance of their "put" by the length of cord to be hauled in. Boys were playing leap frog, walking on stilts, wrestling, acting in every way like boys who were getting all the fun out of life that accompanied health and abundant animal spirits. It was wonderful and the writer was forced to say so. Immediately, however, he was made to regret the use of the adjective—for the superintendent would have none of it.

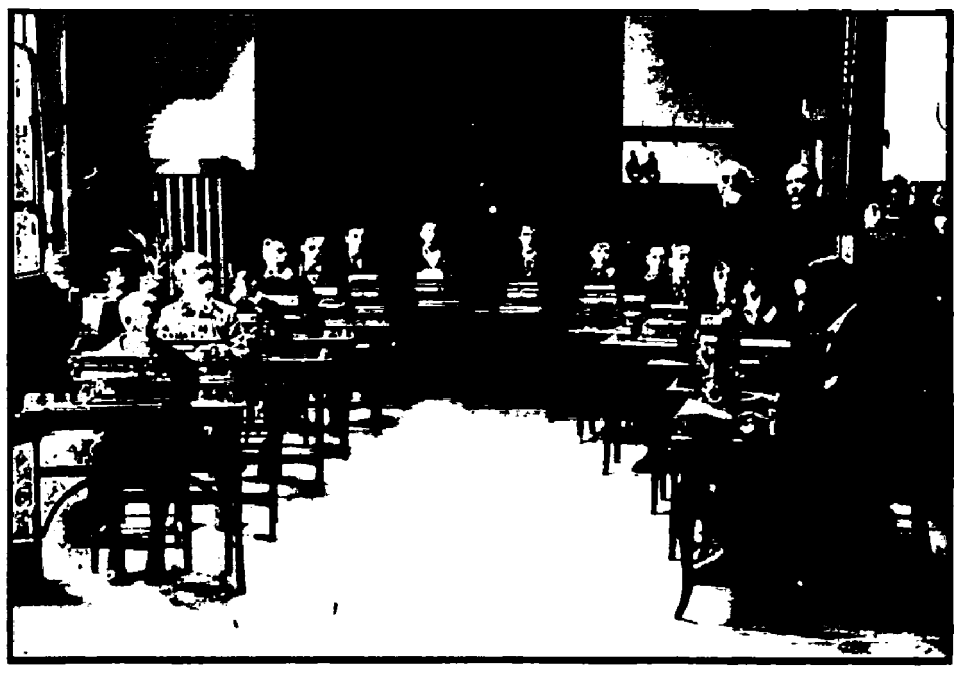
"Not wonderful at all," said this official. "They require no praise for doing what any blind person regards as perfectly natural. Their world is as full of joy as the world of the seeing ones—please don't pity and kindly refrain from praising. If you will consent to regard this institution merely as one in which the boys and girls are receiving their education for life's battle, and not as one in which a company of freaks are gathered I will show you some of the classes assembled."

Perforce the assurance was given. Perhaps the most interesting (will the superintendent permit the mild adjective?) class seen at work was that in the typewriting room. Actually boys and girls were learning to use the machine with all the skill of practiced students at a business college—and with the intention of seeking positions when the time came for earning a living. A shorthand machine that registered the characters in raised letters so that the reading could be done by the tips of the sensitive fingers made the typewriter a stenographer, too. Could there be any objection to employing a stenographer and typewriter, otherwise proficient, merely because the operator of the machine lacked the use of the eyes?

In the girls' department children were learning all about the formation of the creatures of sea and forest by the sense of touch alone—mounted specimens of birds, animals, and fishes were given to the students, and the hands wandered up and down the downy backs while the faces of the girls glowed with intelligent interest as the formation of the feathers, the beaks and limbs were noted.

A more advanced class was studying piano tuning. This is a branch of industry for which the blind are especially adapted. Their keen sense of hearing, rendered doubly acute by the loss of one sense, enables the blind to detect faults in a note that would frequently pass unnoticed by a musician with a less accurate ear. So generally is this fact recognized that few of the large piano firms are without their blind tuner of instruments. They are well paid and sure of their positions, for the demand always exceeds the supply.

It is interesting to see the blind boys out for a ride on their bicycles or enjoying a spin on the river. No joke is intended by this. Photographs printed on this page show just how the boys ride and row. One, that of the bicycle outing, is a unique 'cycling picture. The boys ride with the wheels linked in a long chain. At the head, guiding the machine, is a pilot who can see. He steers, the rest ride and pedal, perfectly satisfied that all is well. The same thing is done in the aquatic exercises. The boat is steered by a man who has the gift of eyesight, the oarsmen row as directed and enjoy themselves quite as much as though their sightless orbs mirrored the beauties of the scenery. As the superintendent explained, knowing nothing about these beauties by actual sight, they are content. Sympathy, as has been said before, is not needed in the institution for the blind. It can be saved for seeing persons who need it. The blind are jolly enough.



BLIND BOYS MASTERS OF THE TYPE WRITER

BLIND BOYS ENJOYING THEIR ROWBOATS

What a Boy Should Know

A boy should intimately know the English Bible. He should know it as literature quite aside from its religious teaching. He should know it from having had it read to him from his earliest years, and from reading and studying it for himself. Under this same kindly home influence, and with the same tactful personal introduction, every boy should have an opportunity to know the world's great stories, such as Robinson Crusoe, Gulliver's Travels, The Swiss Family Robinson, and The Pilgrim's Progress. A mind well stored with poetry and a taste cultivated to the love of the best is a treasure to a boy. To give this seems so easy, if the home influence and interest begin early. It only requires a wide-awake boy to become possessed of these books. The public library is accessible to very many, whether they live in village or city. There are also very cheap editions of most of them which may be gotten. The difficulty, however, is not that boys do not have a chance to secure them, but that they are too often left like rare plants without any attention. No one suggests to them the real pleasure in an occupation which leads to such knowledge as best fits their growth. It is not strange then that in a very important sense the boy is left too often to grow wild. The common sense way is for each boy to keep his eyes wide open and take the chance that brings a suitable book within his reach. Always he may take up the Scripture, and its records have for generations charmed not alone grown people but the children too.—Review of Reviews.

Saw Bright Future for Boy

It so chanced that all the passengers that entered one of the elevators in a tall building were going above the sixth floor, so they had opportunity to glance at the book which the young elevator man had been reading, and which lay face up on his stool. He had been so intently reading it before starting with his passengers as to be almost abstracted, although very lively and handy with the actual work once the start was made.

"I'll bet that book is an Indian fighting blood-and-thunder," whispered one passenger to another he knew.

"No; he's too old for that—I'd say it was a thriller of a love romance."

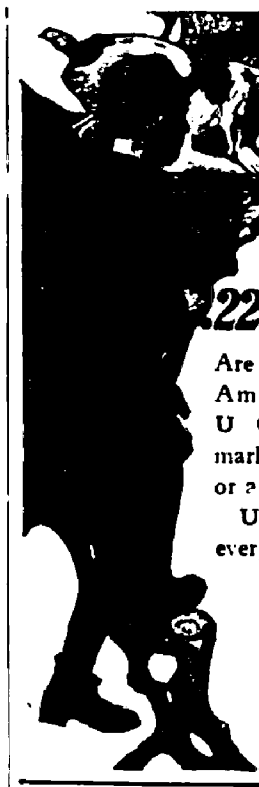
"Or one of the six best sellers of the month," interjected a third.

Everybody was interested. All were "rubbering" at the book and when the group of passengers got out of the cage one deliberately stooped and looked at it.

"Young America forever," he said; "it is a volume of Blackstone. This kid will be sitting on the bench some day."—San Francisco Chronicle.

In all 240,000 different species of insects are known to exist on the earth.

Kangaroos readily leap from sixty to seventy feet. The greatest recorded leap of a horse is thirty-seven feet.



U.M.C. .22 CARTRIDGES

Are demanded by every American boy, because U Cartridges hit the mark—whether it's game or a bull's-eye.

U Cartridges shoot every time you pull the trigger—no annoying misfires.

They are true, sure, and hard shooters.

23 SKIDOO
"23 SKIDOO" BADGE, 2c
You know what Skidoo means. It's the latest joke out, and our badges are all the rage in New York. Get next once, be up-to-date, and join the "Skidoo League." One badge sent post paid with our big Catalogue of Novelties Jewelry, etc., for only 2c in stamps. Address S. DRAKE, Dept. 65 439 Van Buren St., CHICAGO, ILL.

How Some of the Legion of Honor Boys Won

A letter received from Harold Hoover, Abilene, Kansas, under date of June 29th, reads as follows:

"I sincerely thank you for your kindness in rewarding me with a badge for my school record. My parents and sisters thought it was fine; so did I, you can bet.

Miles P. Kelly, Fall River, Massachusetts, passed out of the sixth grade this year with the highest record in his room. Miles is twelve years of age.

Whitfield S. Clary, of Rocky Mount, North Carolina, sends us a statement from his teacher to the effect that he has been perfect in school attendance for the last five years.

Frank Wilburn, Macon, Georgia, made the best record in his grade during the term which ended June 15th. He also had the honor of being valedictorian on the last day of school.

Richard Allen Arms, a member of Class A of the Pottstown, Pennsylvania, High School, obtained an average of 97.77% for the school year ending in June, 1906. This average was the highest received in a school of 250 pupils.

Elliot Jones, a thirteen-year-old boy of Celeste, Texas, completed the eighth grade work at the head of his class with an average of 98½%. He has missed only a half day from school during the last two years, and that absence was on account of sickness.

Elmer H. Dils of Aurora, Indiana, is an eleven-year-old boy who has never had a tardy mark since he began going to school at the age of six. For the term ended May 31st, Elmer made the highest grades of any one in his room.

Pearne Rightmyer, Springfield, Ohio, is the honor pupil of his class, the fifth grade, in the Southern School. The class numbers 49. Pearne has made an excellent record, not only in his studies, but also in school attendance and deportment.

Ernest M. Fernald, a member of the eighth grade of School Number 16, Buffalo, New York, obtained an average of 98.5% on his examinations for the recent school year. This was the highest average in the grade, consisting of 90 pupils.

Walter F. Hays, of Philadelphia, Pennsylvania, has a school record to be proud of. He is twelve years of age, has attended school for five years, and has ranked first in his class each year. Walter writes that he likes THE AMERICAN BOY very much.

One of our subscribers in Marquette, Michigan, Philip W. Kemp, has been neither absent nor tardy during the last five years of school attendance. Philip has not only received our School Record Badge, but a Five-Year Badge from his home schools.

Some time ago Miss Ila Bollick, teacher of the school at Loray, South Carolina, wrote us for a badge to be awarded to the boy receiving the highest average for the term's work. We have now received word from her that the badge we sent was presented to Thomas McLelland Stevenson, on Friday, May 18th, at the close of the school. Miss Bollick writes that young Stevenson is a good student and deserved the medal.

Chauncey Boor, Indianapolis, Indiana, has won a Heroism Badge for saving the life of a child who ran in front of a swiftly approaching trolley car. The motorman gave no warning and the car was within a dozen paces of the child before he was aware of its presence. Too stupefied to run, he stood still on the track. Young Boor, who was standing on the sidewalk, ran to the track, jumped in front of the car and grasped the child just in time to save him from being run down. Chauncey is but fourteen years of age.

Stamps, Coins, and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

The Numismatic Sphinx

Harry Tuller: You can purchase most all of the old copper cents from 1816 down, in fairly good condition, for from five to ten cents each. The V nickel of 1883 is quite common. You do not state on what bank your one dollar bill was issued. The probabilities are that the bank is long since out of existence. Your large rubbing is from an Austrian crown of Francis II., 1800. It is worth $1.50. Clarence Waite: Your coins are all of the commoner sort and none of them will bring over face value. A good half cent of 1804 sells for a quarter. Sidney K. Eastwood: The cent of 1856 (copper) sells for from five to ten cents. J. R. Irion: The half dollars of the twenties and thirties sell at the dealers for from seventy-five to eighty-five cents. That of 1810 is worth about a dollar if in fine condition. The three cent silver coin of 1851 sells for fifteen cents. The Columbian half dollar of 1893 sells for fifty-seven cents. Your other queries are answered elsewhere. F. L. B.: The half dollar of 1808 sells for eighty-five cents. Jos. W. Marr: An 1825 half cent is worth fifteen cents. Your "Hibernia" is evidently a half penny of Ireland. It is common. Your Belgium, German and French coins are very common. The "Millions for Defence" is a Jackson token or cent of 1837 worth about ten cents. Eber Messner: Your rubbings are very nicely done but the coins are quite common. Paul Dowling: The cents of 1903 have no premium. The same may be said of the half dollar 1894 S mint. Glen Unson: Of the silver dimes of 1894 only that of the S mint will bring a premium. Walter Watson: (1) Guernsey 4 doubles of 1864, ten cents. (2) Austria 1 kreutzer, 1818, five cents. (3) Lippe Schaumberg 4 pfennige, 1858, fifteen cents. F. W. Rice: The gold half dollar of 1853 is worth $1.50. There were no nickel cents issued in 1856. To make a pencil rubbing from a coin, place the coin beneath a plain sheet of writing paper, and holding it firmly in place rub over it with the blunt end of a lead pencil. A little practice and one can make a very good reproduction. M. L. E.: The S dime has the letter S on the reverse just beneath the wreath. The Philadelphia dime has no initial letter. Gordon Getchell: Your rubbing is from a common Mexican ¼ real. Your 5 ore is from Denmark, and the other Hannover. All are quite common. Harry Gustzlor: Your 1872 dollar is a nice coin but it is doubtful if you can obtain a premium for it. One satisfaction, however, it will always be worth a dollar, and that wherever you may be. Uncle Sam will guarantee that. M. G. Thompson: Lawrence Brodd: H. A. B., Harold H. Volkhardt and E. L. Gill: Your coins will not bring you sufficient premiums to make it worth your time to bother with them. John Babcock: Your rubbings are all from common coins worth from three to ten cents each. The Portugal V reis 1812 would be worth more if it was not holed. Robert W. Pollard: The old Continental and Colonial bills are mostly quite common. They were issued in enormous quantities and afterwards repudiated. Your Pennsylvania three pence bill 1777 is usually sold for twenty-five cents. R. B. F., Pine Bluff, Ark.: All gold dollars now bring a premium. The ordinary price being $1.75. Your other coins are comparatively common. Russell Byrum: The Trade dollars are really worth only bullion value. If you get face for them you may consider yourself lucky. Deadwood, So. Dak.: Your coin is, as you surmise, a Washington cent of 1783. It sells at the dealers for half a dollar. Bruce Miller: Austria, 1 kreutzer, 1816; very common. There is not a month but what we have several inquiries regarding this very common coin. Cornelia Lyon: A good cent of 1810 is worth thirty cents. Other coins rather common, or queries answered in this column. W. C. Pugh: A common kopeck of Russia (1898). W. D. Woollig: There is no premium on the dollar of 1901. There were just 22,566,813 of them issued that year. Evan W. Holway: Your coin is a French ecu of 1792. It sells at the dealers for about two dollars. John W. Edwards: The cent of 1800 when in good condition is worth a dollar. The head is that of Liberty and not that of Washington. The head of Washington has never appeared on any of the legitimate issues of this country. Walter W. Bettison: The flying eagle cent of 1858 has no premium. Fred Gorse: Your rubbing is from one of the new 5 sen pieces of Japan. It was issued in 1900. There are companion pieces of ½ and 1 sen. Walter Snell: A "Dix cent" or war token of 1863 worth five cents if anything. H. M. M.: A crown piece of Bavaria, 1777, worth $1.75. Ned Ford: A good 1804 half cent is worth a quarter. Your other question is answered in this column. Rex Brown, Harold Holzmann, Percy S. White, Lucius Holt, Jr., Logan C. Smith, Chas. F. Ens, and Nels C. Peterson: Your coins are all quite common, selling for very little if anything above face value. Paul Fortune: "Mind your Business" is a motto or legend on what is called the Franklin cent of 1787. Selmer Swenson: One of your pieces is a half skilling of Denmark, the other impression is so poor that we cannot make it out. Ray Seutch: Your coins are English and Canadian. Five to ten cents each at the dealers. C. Herbert Effert: A good quarter of 1806 is worth a dollar. While the dimes and half dimes of the thirties are quoted for from twenty-five cents upwards, we feel assured that the prices are high. One on the lookout for coins will often pick them up at face value. Only those in good to fine condition are worth preserving with the idea of ever obtaining a premium. J. R. Hoffner: A good 1803 half cent is worth seventy-five cents. A cent of 1796 sells for $1.50. A good 1806 half dollar, eighty-five cents. Your silver coin is a 50 para of Servia.

Stamp Inquiries

T. W. R.: The $1.00 of the current issue catalogues 35c used. Irvin K. S.: The oval design with eagle in the center which you submit is taken from an envelope used for official correspondence by the U. S. Government departments. It is of no value. F. P.: The 2½ penny stamp you describe is English, the head being that of Queen Victoria, and the 3c United States is of the issue of 1851; both of these are of very little value. W. A. H.: The stamps you describe are all United States internal revenue stamps of the issue of 1863 and used until 1872, several of them are common, and the catalogue value of the entire lot is about 75c. George K. F.: The 2c United States stamp of the current issue is found in several different shades, ranging from orange vermilion to deep carmine. The 2c Pan-American is also found in two or three shades, although not as many as the 2c of the current issue. All are printed on the same kind of paper. E. M., Jr.: The 5c playing card internal revenue stamp lists 75c, but they are frequently offered by dealers for one-third of this price. George G. S.: The 3c United States stamp you illustrate was issued in 1861. It is very common. Stamps inscribed Helvetia are from Switzerland. The blue stamp with double headed eagle in the center is from Russia, and the 20 Lepta with head of Mercury in the center is from Greece. N. C. P.: The St. Helena and Cuban postage stamps which you describe are catalogued at about 50c. A. L. S.: Stamps with "Marco de Bollo" are Italian revenues, and those with "Government of India" are India revenues. The Royalty stamp is a private affair. Mr. H. H. Norrington, who is given on the stamp as one of the owners of the patent, is, we believe, a resident of West Bay City, Mich., and may be able to give you some special information regarding its use. The 2c revenues are very common. C. H. C.: Current United States and foreign stamps of such countries as England, France, Germany, etc., are very common, the latter being sold by dealers at about 10c per thousand. Some of the older issues of United States and some of the higher denominations of current issue are saleable. The common 1c and 2c stamps are not worth saving.

Of Interest to Philatelists

The Grecian, Italian, and French governments are issuing new postage stamps, which show a distinct improvement over former achievements in philatelic art. The Greek publication is in the form of a series, with designs intended to symbolize the Olympic games. They display, respectively, a discus thrower; a jumper with jumping weights; Victory with a small caduceus; Atlas, having changed places with Heracles, supporting the heavens, (represented by eight stars and a moon;) Heracles and Antaios wrestling; wrestlers, with a view of the Acropolis; Victory holding a cock, typical of cock fighting; a group of runners; victor of torch race offering a sacrifice. Every stamp of the series bears the words "Olympic Games" and "Athens, 1906," in Greek characters.

An interesting circumstance is connected with the issue of the new Italian stamp. It is the reproduction of the portrait of Victor Emmanuel III., which a canvass of the manufacturers of souvenir postal cards has proved to be the most popular among Italians. With the new 10-centime stamp France for the first time adopts a postage which has long been in vogue in the United States; that is, the rate of 2 cents per half ounce for domestic letters. The new 10-centime red stamp takes the place of the old 15-centime stamp. In regard to the design of the sower upon its face, it is interesting to note that she spreads the seed against the wind and not with it, as was erroneously depicted on the old stamp.

A Ramble in Words

I went to a river and couldn't get across,
I paid five dollars for an old blind hoss;
The hoss wouldn't pull,
I traded for a bull:
The bull wouldn't holler,
And I traded for a dollar;
The dollar wouldn't pay,
And I traded for some hay;
The hay wouldn't grow,
And I traded for a hoe;
The hoe wouldn't dig,
And I traded for a pig;
The pig wouldn't squeal,
And I traded for a wheel;
The wheel wouldn't run,
And I traded for a gun;
The gun wouldn't shoot,
And I traded for a boot;
The boot wouldn't fit,
And so I thought I'd quit.

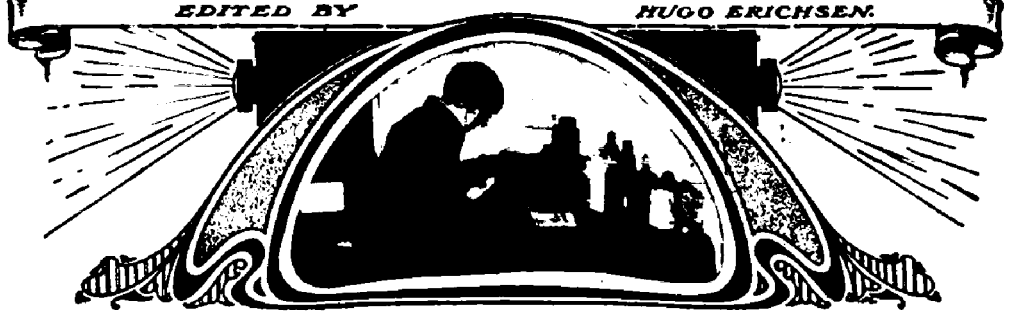
Please Mention The American Boy When Writing

THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.



THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

"THE NEWSBOY"
First prize photograph, by P. H. van Son, Natchitoches, La.

Our Prize Pictures

P. H. van Son, of Natchitoches, La., the winner of the first prize this month, introduces himself with a clever piece of work, entitled "The Newsboy." "A Woodland Path," by Harry H. Phillips, of Pittsburg, Pa., to which we have awarded second prize, was taken with a No. 3 A Kodak, stop 8, 1-5 second exposure, developed with hydrochinone and printed on platinotype paper.

The Golden Book

If we had such a thing as a golden book, the names of the following would surely be inscribed in it, in lieu of Honorable Mention: John E. Wood, Sherman Spurrier, Irving L. Connet, Geo. Howard, Jr., H. E. Fry, William J. Juengert, Vernon Heverly and Warren Van Every.

The Enlargement Contest

which closed September 1st, was not as popular as we expected, probably on account of the difficulty of making an enlarging camera. R. D. Von Nieda, of Ephrata, Pa., won the first prize with his "The Children's Pets." No photograph, worthy of second prize, was received.

Sensitizing Post Cards

Make the following:

Frankincense	60 grains
Mastic	48 grains
Calcium Chloride	30 to 60 grains
Alcohol	6 ounces

Immerse the card for two minutes, avoiding air bells, then withdraw and dry. When dry, it may be sensitized by coating for about a minute on a solution of silver nitrate 60 grains, water one ounce; or the sensitizer may be applied with a pad of cotton wool. Print out rather deeply, tone in a gold bath, and fix as usual.—British-Amateur Photographer.

Answers to Inquiries

Jos. W. Mast: Silver stains upon negatives, which sometimes make their appearance if the negative be damp when printing, are very difficult to remove. Apply: A, Ammonium sulphocyanide ½ drachm and water 1 ounce; B, Nitric acid ½ ounce and water 1 ounce. A freshly mixed solution is used for each negative. Afterwards wash well and immerse in a saturated solution of chrome alum. H. C. Wickliffe: 1. In the studio of a professional photographer; 2. Yes, at Effingham, Ill.; 3. Dust your plates with a soft camel's-hair brush before you put them in the plate-holder; 4. So far as we know, there is no such paper. A. T. Donnell: A 4x5 folding camera is, in our opinion, the best camera for a beginner. There are so many good cheap cameras of this kind, that we are at a loss which one to mention. C. H. Thomson: 1. No; 2. Because we cannot use them for illustration; 3. A tank-developing outfit will give you more comfort and just as good results. E. E.: It would take up too much space to answer your questions in detail, but you will find them fully covered in "Film photography," New York: Tennant & Ward, 25 cts. Leo Kelly: Having had no experience, we are unable to answer your question. Perhaps one of our readers can. It is: "How to make magic lantern slides from films." Walter Schubert: Your bromide paper holder is either too near or not far enough away. You will have to experiment until you obtain the correct focus. Why not put a ground-glass in place of the holder to aid you in finding it? C. W. Chesebro: So-called gas-light papers have to be developed after exposure, very much like a plate or film, whereas printing out papers are toned and fixed. Hervey B. Shoemaker: Descriptions for making enlarging cameras were given in our March and August, 1905, issues. Either of these may be obtained from this office for ten cents.

Yellow Fog

Negatives that have become yellow by too long immersion in the developer may be cleared by being placed in a bath of sodium sulphite, to which sulphuric acid has been added, until the odor of sulphur is apparent.

Toning Bath

When negatives take a long time to print on account of being too yellow, as is sometimes the case when they have been developed with pyro, they can be toned to a suitable color in the following bath. Sulphocyanide of ammonium, 8 grs.; chloride of gold, 1 gr.; water, 2 oz. Mix.

Drying Prints

A good method of drying prints—or, for that matter, negatives—quickly is to expose them to the action of a good current of air, provided that the latter is fairly free from dust particles. A favorite method with some is to slightly raise the lower sash of a window, and then lay the prints or negatives down upon a flat, clean piece of board placed upon the window-sill. In the case of negatives particularly it is surprising how quickly the draught of air sucks up the moisture.

Single Solution Metol Developer

A very useful developer for touring work is made up in the following manner. Take water, 17 ounces, and dissolve in it one at a time:

Metol	¼ ounce.
Sodium sulphite (crystals)	2½ ounces.
Potassium carbonate	1¼ ounces.
Potassium bromide	15 grains.

When about to use, mix one part of this solution with three of water. This is an excellent developer and one specially suitable for snapshot work.

A Lead Intensifier

Intensification by means of lead is not common, mainly because it tends to spoil the finer detail of the negative. Nevertheless, the process is not a difficult one, and may be employed with advantage in some cases. The bath is made up of:

Potassium ferricyanide	3 parts.
Lead nitrate	2 parts.
Glacial acetic acid	5 parts.
Water (distilled)	50 parts.

In this the negative should be immersed till thoroughly bleached. It may then be removed, well washed, and flooded with ammonium sulphydrate. Finally thorough washing is needed.

Ortol Soda as a Developer

This is a very satisfactory and useful developer for several reasons. In the first place it may be used for a number of times without any fear of the plates being discolored. Secondly, it keeps well and the solutions are not affected by light. The two solutions may be made up thus:

No. 1.—Potassium Metabi-sulphite		30 grains.
	Ortol	60 grains.
	Water	8 ounces.
No. 2.—Soda crystals		1 ounce.
	Sodium sulphite	1½ ounces.
	Potassium bromide	7 to 8 grains.
	Water	8 ounces.

For use, take one part of No. 1, one of No. 2, and one of water. The quantity of No. 2 can be modified according to the class of negative.

Starch Hypo Test

A very sensitive test for the presence of hypo in the washing water is that wherein iodide of starch is employed. To make the solution a little starch should be rubbed with water, and some 15 grains of it boiled in half an ounce of water till an almost transparent solution is formed.

When cold, a small drop of iodine saturated solution (in alcohol) should be added, stirring the solution rapidly the while. The result will be an intensely blue solution of iodide of starch. To test the washing water, a quantity, say, nine or ten ounces, should be taken and put into a long glass vessel. One drop of the blue solution should then be added, and if there is any hypo present, the color will be immediately discharged. Otherwise the blue tint will remain and gradually spread through the liquid.

"A WOODLAND PATH"
Second prize photograph, by Harry H. Phillips, Pittsburg, Pa.

Pinhole Photography

It is possible to dispense with a lens altogether, and to make a camera out of a simple cardboard box, using a pinhole as the lens. Pinhole, or "stenopaic" photography would probably be much more popular were it not that long exposures are required, and that, therefore, snapshot work is out of the question. The writer has seen very fair examples of portrait work done with a pinhole camera, and for landscape work it is of course recognized as a method capable of giving good results.

The pinhole is much nearer the plate than a lens would be, so that a box somewhat resembling an envelope-box is generally used. It is an easy matter to make one out of cigar-box wood, or the ordinary kinds used in fretwork, whilst failing these, cardboard itself must be employed.

Take a cardboard box, about 4 by 3 by 2 in. or 7 by 5 by 3 in. in size, and prick a pinhole in the center of the top or lid, cut a square piece out of the bottom and place a piece of ground glass there. On using this like an ordinary camera, a picture will be seen on the ground glass, and it may be sharply focussed by moving the glass nearer to, or further from, the pinhole, as necessary. This experiment will give you the necessary dimensions for making some sort of "camera" which will hold a plate or take an ordinary dark-slide.

A good pinhole may be made by placing a piece of the metallic paper supplied with pearl button over a cork, and pricking it carefully with a sharp needle. The punctured paper should be reversed, laid again on the cork, and pricked again from the other side, and the needle revolved in the hole two or three times to make it circular. The piece of paper can then be gummed over a small hole made in the center of the front of the box or "camera," and round it glued a pill-box, from which the bottom has been removed; the lid then acts as a cap.

With a rapid plate an exposure of from half a minute to two or three minutes may be required for a landscape or outdoor subject; but an experiment or two will be necessary to find out just how long is required.

MAROONED

(*Continued from page 376.*)

Then the boys ran back, leaving the astonished and delighted Eagle Wing to find his way home in the gathering darkness.

"Well, where are the nuts?" Their father had met the boys a short distance from home.

"Nuts?" The two boys stared at each other.

"Yes, weren't you out for nuts today?"

"Well, we forgot all about it. Come into the house, Dad, and we'll tell you why we didn't get any nuts."

This Boy Says:

"My Watch is a man's watch, just like father's. It didn't cost as much but it keeps just as good time.

"I used to have a cheap 'boy's' watch, and it was just like having a toy gun that couldn't shoot. It never could keep the right time.

"So I got this watch—a *NewEngland*. It will last me until I am a man because it is a *man's* watch."

NewEngland

THE MEN'S WATCHES FOR BOYS

NewEngland Watches keep accurate time, stand up under hard wear and are made for men and women—yet their price is low enough for every boy and girl to have one.

NewEngland Watches can be sold at a low price because for 28 years we have been learning how to make good watches cheaply. Because we make so many that each watch costs very little to make. Yet every *NewEngland* Watch is thoroughly tested and is absolutely guaranteed by us.

No. 13803 10 Karat Gold Filled, price - **$7.50**

Sterling Silver, price - - - - - **$5.25**

Ask your jeweler to show you his *NewEngland* Watches. If he doesn't keep them, write us his name and address. We will send you free the Handsome Red Book of Men's Watches for Boys, or Blue Book of Ladies' Watches for Girls. Write us today for the book and tell us your jeweler's name.

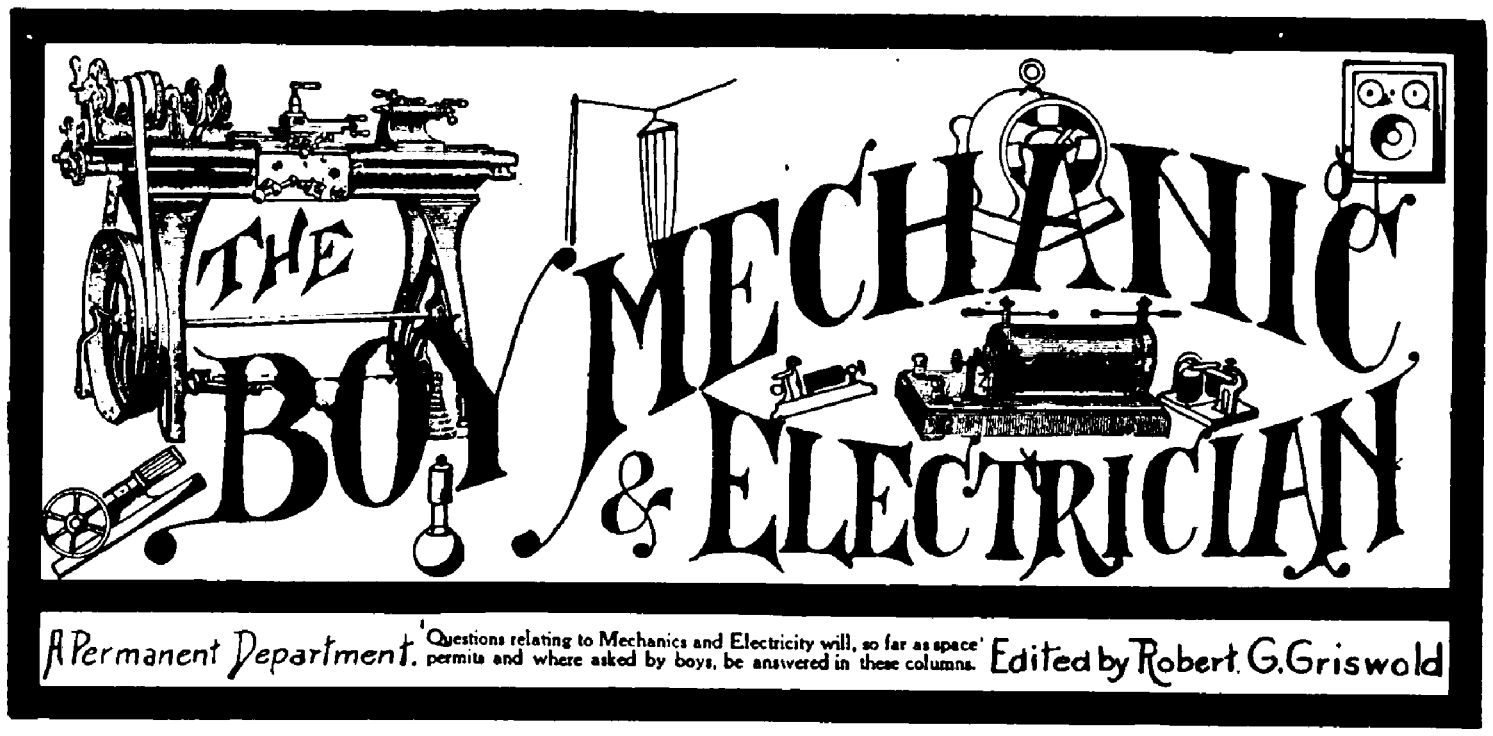
A New Mexico Boy Friend

Andrew Jackson Russell, Reserve, New Mexico, is one of the boys to whom THE AMERICAN BOY comes as a real God-send. Andrew is twelve years old and lives in the heart of the Rockies on a big cattle ranch, his home being at Reserve, New Mexico. His school teacher is his mother. He has learned to ride and rope cows on the ranch. He read an article in our April number, entitled "The Truth About the Cowboy," in which the author says the calves are branded or burned. "In this country," says Andrew, "'burning' has a very bad meaning. No one but a cattle thief burns a calf. It is burned in order to change the brand." "Neither," says he, "do the cowboys ride in races bareback nowadays. In the good old days when my father was young they used to ride bareback, but my father has been a cowboy for more than thirty years."



Experimental Lessons in Electricity—Lesson XIII.

The Induction Coil

Our readers have asked for so much information regarding the "Wireless Telegraph Outfit," published in the January and February issues of THE AMERICAN BOY, 1905, that the editor has thought it well to go into a more detailed description of how to build a good induction coil for general use, wireless telegraphy, or other experimental work.

The construction of an induction coil is a very nice undertaking but if the finished product is well made, it will make the heart of any amateur very proud. There is no single piece of apparatus, perhaps, that possesses so many attractive features, but it must be carefully and thoroughly made, for the high tension spark will not overlook a careless move, and will search out every little air gap or break in the insulation. Therefore, observe these cautions. Do your work well; do not slight some little detail because it seems quite unimportant; it may be the cause of your coil being defective. Work well done once, very seldom has to be done twice.

This coil will be more powerful than the one described before. We will run over a little of the theory of the induction coil before beginning our work in order to understand it better.

An induction coil is a device for generating a current of electricity, by reason of the inductive effect that a current of electricity passing through a wire has upon another wire, lying parallel to it. That is, if we have a wire carrying a current, as in Fig. 1, lying parallel and close to a second wire, the passage of a current in the first wire will set up a similar current in the second wire, although there is absolutely no connection between them.

The current in the second wire is said to be induced by the current in the first. The first wire is said to convey the *primary* current because it is the current generated by some outside source and caused to pass through this wire. The second wire in which the current is set up by induction, is said to carry the *secondary* current.

Now suppose we were to lay two turns of the secondary wire beside the primary, as in Fig. 2. Then the current induced in the secondary would have just twice the pressure of the current generated in the first instance. This is the principle upon which the induction coil is built—one wire is wound many times around a primary wire in a parallel direction. The secondary winding is generally of very fine copper wire, having many thousand turns, and the primary is of much coarser wire wrapped around a core of iron wire.

When a wire is wrapped in the form of a helix (or in a cylinder), as in Fig. 3, and a current is passed through it, magnetic lines of force are set up inside the coil that pass from one end to the other, as shown by dotted lines, and, as we learned in an earlier lesson, if a wire is made to pass in such a direction as to cut these lines of magnetic force, a current will be set up in the wire. But if the current in the primary coil be broken or started suddenly, these magnetic lines will rise and fall every time a change in the current is made. If we place another coil, then, parallel to the first and near it, as in Fig. 4, but one inside the other, and pass a current through the first, an induced current will be set up in the second by reason of these magnetic lines passing or cutting the turns of the secondary coil.

This has the same effect as moving the wire so as to cut the lines of force.

Still another improvement in our crude induction coil can be made. If we place an iron rod in the center of the first coil, Fig. 5, it will increase the magnetic effect of the primary coil greatly, as it causes more of the lines of force to thread through the center of the coils. We now have the simplest form of the induction coil and it shows very clearly the construction upon which all induction coils are based. The current in the primary winding is rapidly interrupted by means of a vibrator operated by the magnetic core of the coil.

The voltage, or pressure, of the secondary current, is increased almost in proportion to the number of turns in the secondary winding. Therefore, within practical limits, the greater the size of the secondary winding, the more powerful the coil. The current passing through the primary winding should be of considerable amperage but of low pressure. The result to be desired is a strong, powerful, magnetic core, without which the coil would be of little use.

The order of work in the construction will follow the actual work and the completed coil will be shown in the next lesson. Our first step is to prepare the primary coil and magnetic core. The best cores are made of a bundle of fine iron wires, thoroughly annealed.

Secure from a hardware store, stoveman, or florist, two-and-one-half (2½) pounds of soft iron wire, the smaller diameters being best,—say about No. 24, although any size under 16 will answer. The wire should be straightened before cutting to length, by the following method. Drive a stout nail into the floor, or a post, to which the wire may be attached at one end. Then fasten the other end of say a twenty or thirty foot piece to a stick, as shown in Fig. 6, one end resting against a block nailed to the floor. Then by pulling on the lever, the wire may be stretched until it is felt to give slightly. Relieve the strain at once and cut the wire near the nail and lever, allowing it to lie on the floor. It will be found to be perfectly straight. After the entire lot has been cut and straightened, cut each length into pieces twelve (12) inches long. Pack them together carefully in a bundle and wrap with a piece of the same wire as in Fig. 7. The above quantity of wire will make a bundle twelve inches long by about one inch in diameter. Place this bundle inside of a piece of 1" or 1¼" iron pipe, 15" long, and plug both ends with clay. Put the pipe in a fire and heat to a red heat, keeping it at this temperature for several hours, finally allowing it to cool off in the hot ashes. The clay plugs are then knocked out and the core taken out. It will be found clean and free from ashes, such as would have adhered to it if heated directly in the coal. The iron pipe prevents the thin wires being burnt away when red hot.

Five sheets of foolscap paper are now cut 11"x8" and wrapped very tightly about the core, one after the other, as shown in Fig. 9, all the tie wires except the two end ones being removed, and these are left until the wrapping is finished. The last sheet is fastened by a little shellac varnish and allowed to dry. When dry the entire paper wrapping is given several coats of shellac and thoroughly dried. A half inch of the core extends out either end of the paper tube. The ends of the wires are now filed smooth and even, and the core is ready for the flanges and primary winding.

The flanges may be prepared first so that they can become perfectly cured before putting on. From a piece of hardwood ¾" thick, cut two 5" circles, boring a 1" hole in the center of each. Bake these blocks in an oven for at least a day to expel all traces of moisture and then give several coats of shellac, rubbing each down well before applying the next. This rubbing is done with fine sandpaper, the last coat being left with a brush finish.

The primary may now be wound on. This will require nearly one pound of No. 16 double, cotton covered, copper magnet wire. Begin the winding just 1" from one end, tying the end turn with a piece of thread, as shown in Fig. 11, leaving about 10" of free end for connections. Then wind closely and evenly until within 1" of the other end, and return to the starting point with the second layer, tying the last turn and leaving a long end. Give the primary a heavy coat of shellac and allow to dry, afterwards applying another. When dry, the wires will be found firmly cemented together.

When the primary winding is dry, one flange may be driven on and cemented with thick shellac, care being taken to see that it is perfectly square with the core, as in Fig. 12.

Wind the primary wire with fifteen sheets of foolscap paper 10" wide. Make this winding very tight, fastening the last layer with a thin coating of shellac. See that there are no air gaps on the corner marked by the arrow. Thoroughly coat this joint with several layers of shellac, allowing each to dry thoroughly, as air gaps at this point often prove fatal.

The primary is now ready to receive the outer layer of its secondary section, the winding of which and place on the coil will be taken up in our next lesson. In making up this coil, exercise the greatest care in every detail, as it will be a powerful coil and one of which you will be justly proud.

Chemistry for Boys

Lesson V.—Nitrogen. (Concluded)

Ammonia, of which we learned in the last lesson, occurs free in nature. Every pile of decaying animal or vegetable matter gives off the gas freely, and very frequently we may see a white mist arising from piles of compost. This mist is caused by the combination of the ammonia with other gases being given off, just as the stick wet with the ammonia and held over the hydrochloric acid bottle in the last lesson gave off such dense white fumes. When you have an opportunity, notice how strong is the pungent odor of ammonia in stables.

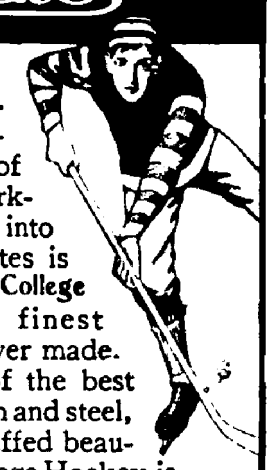
Roll a small ball of hair or wool down to the bottom of a test tube. Then heat cautiously over the alcohol or gas flame. Fumes of ammonia will be given off, but if heated too strongly, other odors may mask that of the ammonia.

Secure a few hoof clippings from a nearby blacksmith shop and carefully heat in a test-tube as in the case of the hair. The same odor will be observed.

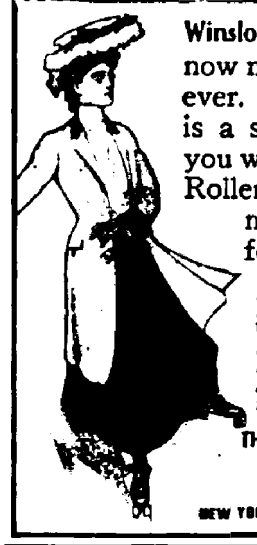
This is what is known as dry distillation, and was the method originally used for the production of ammonia. The fact that horns, as well as bones, were used in its manufacture, gave rise to its common name, "spirits of hartshorn."

The distillation of coal to give illumin-

WINSLOW'S Skates



A splendid example of the superior quality of material and workmanship put into Winslow's Skates is found in the College Hockey—the finest hockey skate ever made. Every part is of the best hand forged iron and steel, nickeled and buffed beautifully. The College Hockey is in truth *"made for the game."*



Winslow Roller Skates are now more popular than ever. Wherever there is a skating rink there you will find Winslow's Rollers. New styles, new models. Ask for them.

All dealers sell the various models and sizes of Winslow Skates. Send for our new illustrated catalogue—it's FREE. Tells all about skates, ice or roller. Write for it to-day.

ANY BOY OR GIRL CAN EASILY EARN SOME MONEY

FOR BOYS AND GIRLS

$500.00

OFFERED BY THE MAKERS OF THE

EVERY BOY OR GIRL WHO ENTERS GETS A REWARD

FLEXIBLE FLYER
The Sled that Steers

The swiftest, safest, strongest sled ever invented. The fastest sled for boys. The only sled girls can properly control. Steering without dragging the feet lets it go full speed—saves its cost in shoes the first season—prevents wet feet, colds, and doctor's bills. Made of second growth white ash and steel—built to last. We want your father, mother and friends to understand all about sled so we offer this money for doing some easy errands. Write to us and say "I want to enter for the prizes" sign your name and address. We will tell you what to do.

MODEL SLED FREE

Our cardboard model sled will show you just how it works, and give you lots of fun. Sent free by mail with illustrated booklet giving full information regarding sizes and prices.

Patentees and Manufacturers.

Earn an Electric Engine

Boys Would you like to OWN an Electric Engine that will run machinery for you? Write today and we'll tell you how you can EARN one. With it we give complete instructions and a practical lesson on electricity that you can understand. A dry battery runs the engine.

Parents Let your boy answer this advertisement. If he wants to, it is an indication that he is inclined toward mechanics. His desire perhaps foreshadows a successful career in this line of work. Our system of instruction is unique and modern. Help the boy develop naturally. Engine, lesson (with diagrams), and complete instructions delivered for $1.25.

THE DIAMOND ELECTRIC COMPANY
600 Forrest Street, Warren, Ohio

WONDERFUL 10c. WIRELESS TELEGRAPH

With our little outfit you can send messages across a large room or from one room to another complete with Morse Alphabet and full instructions 10 cents.
PEERLESS MFG. CO. Dept. 21, Norwalk, Conn.

ELECTRICAL SUPPLIES

Anything and everything electrical. We make a specialty of Mail Orders. Telegraph instruments 75c up. By mail 50c extra. Battery motors $1 up. Write for catalogue and special prices. Address MILLER & SANDS Electrical Co., Agents, Hermitage Road, R. F. D. No. 4, Richmond, Va.

BOYS WANTED TO SELL EVERSWEET PERFUMED LOCKET, also

Agent's Outfit Free.—Delight, Biscuit, Cake and Doughnut Cutter, Apple Corer, and Strainer. 5 articles in one. Sells on sight. Large Catalog free. RICHARDSON MFG. CO., Dept. 12, BATH, N.Y.

Mechanical and Electrical advertisements in this column will bring results.

ating gas, gives off great quantities of ammonia gas and this is the source from which much of the ammonia of commerce is obtained. The nitrogen and part of the hydrogen contained in the coal are driven off. These combine as free ammonia, and when the gas is led through a body of water, it is absorbed exactly as in one of the experiments in our last lesson.

Ammonia gas does not burn under ordinary conditions, but when mixed with oxygen, will burn with a yellowish flame.

Make a spiral coil of a thin, steel wire. Heat to redness and quickly introduce it into the mouth of a bottle containing a strong solution of ammonia. The wire will continue to glow while the ammonia is decomposed.

Place in a large test-tube a dilute solution of nitric acid. Now carefully add ammonia until the solution is neutralized—that is, until the solution does not affect litmus paper when a strip is dipped into it. Then carefully evaporate the solution to dryness when a white salt will remain. This salt is the nitrate of ammonia, formed by the combination of the nitric acid and ammonia.

Since ammonia neutralizes an acid, it is used in cases when acids are spilled on the clothes or flesh. If a drop of acid falls on the clothing, quickly saturate the spot with ammonia. But should the acid be received in the face, it is best to wash it off in water first, then a weak solution of ammonia, and finally, without rubbing, to cover the injured parts with sweet oil.

Ammonia produces a stimulating effect upon the human system when inhaled, and is often employed in cases of fainting, or where over-doses of chloroform, ether, laughing gas, etc., have been taken. It will also neutralize the effects of poisonous gases when inhaled, such as chlorine, bromine, and sulphur vapors.

There are many other compounds of nitrogen, but they must be left until we are more familiar with the other elements.

QUERY BOX

Q. I would like to know how much water and sal-ammoniac should be used in re-charging dry and wet batteries?—D. C., Mondovi, Wash.

A. A saturated solution of sal-ammoniac and water is used in re-charging batteries.

Q. I have a coil giving a one-inch spark and one giving only one-half inch. Can I use them on a wireless telegraph line of one mile?—H. L. C., Springfield, O.

A. We fear that your one-half-inch coil would hardly be sufficient for transmitting a message over the distance you mention. The inch coil should, however, provided your receiving apparatus is very sensitive, and sufficient current is used for operating the coil. It might then create waves sufficiently powerful to carry for the distance you mention.

Q. I have a common toy motor which I wish to use in operating a small car. Will it be necessary to gear it down in order to run same and how can the direction be reversed?—A. R., Chicago.

A. A toy motor can be geared down so as to operate a light model car. A small pinion should be put on the armature shaft, and this in turn geared with another wheel which carries the pinion on its axle, and this in turn engaging with a gear on the car wheel shaft. In order to reverse the direction of motion, the connections between the battery and brushes should be changed, while that in the fields remains constant. This can be done by having a four-pole switch.

Q. I am making the motor described in the December issue. I have used nails instead of screws. I would like to know if I could wind coils upon the nails and have a wound armature? If so, please state the size of the wire and how to make a suitable commutator for the armature?—A. A., Orange, N. J.

A. We know of no reason why nails should not be used in making this armature; although it might not be practicable to wind them with wire, yet it might be done, and a commutator filed out of a copper disc as described in that article. The commutator would have to be so constructed that a connection would be made to magnetize the nail approaching the pole, and then to break the circuit as soon as it is directly in front of the pole. This would permit it to pass on without its being influenced by the field magnets. Then, as soon as another twelfth of a revolution has been made, another contact would be made on the commutator and the magnets energized for another pull. In a later issue a wound armature dynamo will be described.

Q. What is the longest distance that a wireless telegraph message may be sent, and what voltage will be required? My chum and I are building a set of instruments, and the distance will be about half a mile; the resistance about ten ohms.—H. S. C., Reading, Pa.

A. Your question is too vague to receive a very clear answer. It is claimed that wireless telegraph messages have been sent from shore to shore across the Atlantic. It is very certain that messages have been and are being received by steamships hundreds of miles apart on the ocean, and great distances are being covered on land. What the greatest distance is that can be covered is hard to say. The voltage required would vary greatly with different makes of instruments. The sending power of a coil lies more in the fatness of the spark than in anything else, but of course, fatness of spark requires the use of a current of very high voltage. The instruments necessary for sending messages for half a mile need not be so very large, but since you do not give any details as to its construction, we cannot give very satisfactory answers.

Q. A friend and I have decided to make a wireless telegraph instrument as we are both very deeply interested in telegraphy and electricity generally. There are several points which we would like to have you make clear to us if you would be so kind. First, could we use a regular Morse key in sending? How are the jars with the tin foil connected with the coil? What is the distance between the spark gap terminals? Are the aerial wires insulated or bare and from what are they hung?—C. R. O., Palo Alto, Cal.

A. A regular Morse key can be used in sending in wireless outfits. The jars used as condensers are connected in the following manner: All the wires from the top of the jars are connected with one wire leading to one side of the vibrator. The sheet of tin upon which the jars stand is connected with another wire to the other end of the vibrator, say, for instance, to the adjusting screw. The distance between the spark gap terminals for most wireless work need not be over an eighth of an inch. The aerial wires are bare where they emerge from the building to the top support, but those that pass through the building should be heavily insulated and it would be better for them to pass through tubes of vulcanite or stone, such as is used for regular electric light wiring.

Q. How should the coherer be constructed when a telephone receiver is used? Do you need a coherer when you use a telephone receiver? Does mercury evaporate? Would a circuit breaker made of an electric bell, so constructed as to raise or lower a point in a cup of mercury, be sufficient to operate a ½-inch spark coil? Can ordinary miniature incandescent lamps be used on alternating currents? Will the current from an induction coil decompose water? Are platinum plates needed for contact? Is a condenser needed when a mercuric circuit breaker is used?—Darien, N. Y.

A. The coherer is constructed practically the same as when a sounder is used, the telephone receiver being connected in place of the latter instrument. The de-coherer need not be used when the telephone is employed. Mercury does not evaporate under ordinary conditions, although it can be vaporized by heating. Yes, a circuit breaker can be made from an electric bell by the method you describe. Yes, but the current must be small enough, so as not to burn out the lamps. The current from an induction coil, if powerful enough, will decompose water. Platinum plates are used for contacts from the fact that they do not corrode, and consequently the contact points are always bright. A condenser should always be used in any form of circuit breaker.

Q. Can a "Little Hustler" motor be converted into a dynamo; if so, how? Can a dynamo furnishing nine volts charge a storage cell having four positive and three negative plates each 7 in. x 6 in. x 1 in.? Can an induction coil be used as a spark coil and how many volts can be safely carried if the primary is No. 20 and the secondary No. 36? Can gravity (blue stone) cells be used to charge a storage cell of the same dimensions as above mentioned?—J. J. McD., Chicago, Ill.

A. The "Little Hustler" motor cannot well be converted into a dynamo, owing to constructional difficulties. Yes, a dynamo furnishing nine volts should charge at least five cells of the size you mention, but since you do not give the amperage furnished by the dynamo, we cannot tell whether they could be recharged to their full capacity. An induction coil and spark coil are one and the same. If the primary is composed of No. 20 wire, any voltage could be used that the insulation would stand, but if a very heavy amperage was to be carried, No. 20 wire would hardly be sufficient. It is the amperage or quantity of current that causes damage in heating a coil, not the voltage, although a current of high voltage will often pierce insulation and cause short circuits. Probably one hundred and ten volts would be as high as you would want to use with your coil. Blue stone cells may be used to charge storage cells, but the combined voltage of the cells must be greater than that of the storage cells, and owing to the small output of the gravity cells, a great number would be required.

Q. What is a laminated armature? If a dynamo is wound for any voltage up to ten, does that mean that the dynamo will give ten volts? How many volts does the ordinary dry cell give when new? How many amperes? What is a watt? If a dynamo has an output of twelve watts, how many four-volt lamps will it light? What is the gauge of the enclosed wire? How many dry cells will it take to run the motor, cut of which is enclosed?—F. A. M., Chicago, Ill.

A. A laminated armature is one made of a series of discs of thin sheet iron. A dynamo wound for ten volts will give ten volts at a certain speed, but if the speed varies above or below that point, the voltage will vary greatly. The ordinary dry cell will give 1 7/10 to 2 volts when new. The amperage delivered by a cell depends upon the internal resistance and that of the outside circuit. "Watt" is an electrical term used to express the amount of energy delivered by a current of electricity and is equal to one ampere of current at 1 volt pressure; that is, a dynamo delivering 50 amperes of current at 10 volts pressure will be 500 watt machine, or if it delivered 5 amperes of current at 110 volts pressure, it would be 550 watts. You do not state the candle power of the lamp, therefore we cannot say how many amperes of current will be required to light this lamp. We fail to find the wire which you state you enclose, therefore we cannot give you its gauge. It depends on how the armature of the motor, cut of which you enclose, is wound. If it is wound for a comparatively high tension current, say 110 volts, you would require at least 75 cells of battery to run it, but if it is wound for a battery motor requiring only 6 or 7 volts, probably four or five cells would run it satisfactorily.

CLEVER WORK WITH THE POCKET KNIFE

By JOHN L. DOUGHENY

Other articles by Mr. Dougheny have appeared in the July, September, October, November and December numbers of 1904; and in the January, February, August, September, October and December numbers of 1905; and in the July, August and September numbers of this year.

No. 14.—Cupid Arrow and Heart

IN THIS SERIES we have treated many designs of the chain order, that is, we have often whittled a solid block of wood into two or more movable and inseparable parts. In every case heretofore the same common principle governed our work, and the same rules were applied. The boy who succeeded in making the chain we exploited some months ago has mastered the idea which is the basis of nearly all of our kind of wood carving jobs. Just as in the study of arithmetic, when a boy masters, say, decimals, he is able to do any question that involves that principle, so in the art we have attempted to systematize, if you thoroughly learn a basic principle you can apply it intelligently wherever it

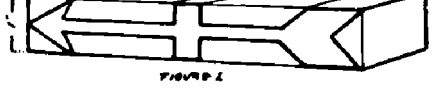

FIGURE 1.

would be advantageous. And it is because this art calls for concentrated mental effort that we dare recommend it as a serious pastime in this day when time is so valuable.

In this article we divide a solid block into two parts in an entirely new way. Being a first article it is necessarily very simple. With a good, sharp knife you should be able to whittle it in a few hours. The size of the piece of pine we begin on is 6 inches by 1 inch by 1 and a half inches. Our design is to be the pro-

FIGURE 2.

verbial "Cupid arrow and heart," so before beginning to cut we will draw those objects with pencil. Exercise great care right at the beginning for the lines we make are to guide the blade. Anyone can make a good enough diagram of those simple objects. Measure the height, width and length of our drawing and have yours proportioned the same. After the first rough draft you can continue to make alterations until you have it perfect. Fig. 1 illustrates the proper way. The next logical step is to cut away all parts not outlined. You need not, at this stage, trim closely to the pencil marks. Allow a comfortable margin for handling. Now we shave the arrow down, reducing its thickness three-quarters of an inch by taking three-eighths of an inch off the front and the same off the back. The purpose of this is very evident, and after it is hewn down to the shape pictured in Fig. 2, the subsequent work becomes very simple. It is easy to shape out the heart but as in many other things the seemingly slowest way may prove the quickest, as it is undoubtedly the safest. Begin by cutting notches at each side of the central section. Extend them around on all four sides, but do not make them very deep until after you shave some of the block off. As you proceed always keep the middle lower or rather thinner than the parts on each side. In cutting off the surplus be careful to draw the knife in the right direction. You know how easy it is to spoil a whittling job if the knife gets between two layers or fibers and starts to follow up a crooked line. As a rule it results in cutting too deep or going beyond the point at which you wish to stop. In the particular cutting we are considering both of these vexatious things are apt to happen. Note the grain and as far as possible cut across it. For one half you will have to draw the knife toward the heart and for the other you will begin at the heart and cut towards the end. This

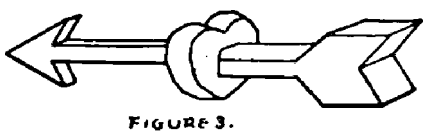

FIGURE 3.

simple advice is intended chiefly for beginners, still no matter who you are, if you fail to obey it you will have an accident. In order to make the text clear we introduce drawing No. 3 which shows the cutting about half done. We wish to say here that the drawings are perhaps a greater aid to good work than the text so don't fail to study them. In the last figure the heart appears to encircle the arrow, but of course, they are not separated. The actual work of loosening the heart is slow but not difficult. Use the small blade of the knife and have it good and sharp. Hold your thumb and forefinger on the reverse side so as to back it up firmly while you are carving. Grasp the knife in one hand in much the same manner as you would hold a lead pencil. Give short, firm jabs

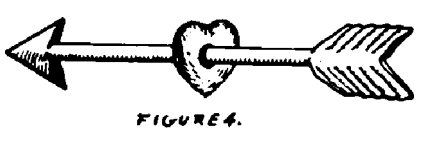

FIGURE 4.

with the blade, and after you have furrowed out a rather shallow ring, turn over and do the same on the other side. Don't try to cut it clear through from one side or disaster may result. The hole in the center of the heart should not be very large. Allow just space enough to enable the arrow to be slid back and forth. The more care you take in finishing the two parts the better they will look. Both objects are easy to shape. Keep Fig. 4 close at hand and by referring to it constantly you can get your wooden image of about the same proportions. The heart bulges a little, its extreme thickness being about one-half inch. Smooth off with sandpaper and give it a coat of paint or oil.

To a Good Salary

There is a direct, easy way for you to help yourself to a good position and good pay in the trade or profession that matches your taste and ambition. All this without leaving home; without losing an hour's work or a dollar of pay; without changing positions until qualified to step into the one you desire. Will you mail the coupon below and find out how the INTERNATIONAL CORRESPONDENCE SCHOOLS will help you to begin helping yourself at once?

This opportunity presented in the coupon is YOUR opportunity. No matter where you live or what you are doing, the coupon will help you to do better. Mailing the coupon puts you to no expense or obligation. It simply gives you a chance to find out all about the wonderful method of money-earning training now within your reach through the I. C. S. No matter if you are poor and lacking in education; no matter what obstacle seems to be in your way, the I. C. S.—a great educational institution with a capital of over $5,000,000—will find a way to help you.

Mail the Coupon To-day

International Correspondence Schools
Box 1278, SCRANTON, PA.

Please explain, without further obligation on my part, how I can qualify for a larger salary in the position before which I have marked X

MAKE TOYS AND MAKE MONEY

Besides having Lots of Fun and Amusement. Our great book, "Every Boy His Own Toy Maker," tells how to make a Steam Engine, Camera, Windmill, Telephone, all kinds of Boats, Kites, and many other things which you can make and sell to other boys. It is sent postpaid for only 10c and we give FREE to every buyer of this book our Unique Collection of Yankee Jokes, Puzzles and Money-Making Secrets. Don't miss this offer. SEND US TEN CENTS TODAY. YOU'LL BE DELIGHTED.
The G. Edw. Harrison Co., Baltimore, Md.

Every Boy His Own Toymaker
Greatest boys' book ever written. Tells how to make a Steam Engine, a Camera, Windmill, Microscope, an Electric Telegraph, Telephone, Magic Lantern, Boats of every kind, kites, balloons, toys, wagons, bows and arrows, stilts, animal traps, etc., etc. Over 200 pictures. Every boy should have this great book. Price only 10 cents, postpaid, 3 for 25 cents.
W. H. MILLER & CO., St. Paul, Minn.

ELECTRIC SUPPLIES, TELEPHONES, NOVELTIES. Catalog of 200 Free. If it's Electric we have it. Big Catalog 4c

THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November (1905) number. No. I of the Series was Ulysses Simpson Grant; No. II, David G. Farragut; No. III, Benjamin Franklin· No. IV, Abraham Lincoln No. V, John Adams; No. VI, Thomas Jefferson; No. VII, Ralph Waldo Emerson; No. VIII, Henry Ward Beecher; No. IX, Nathaniel Hawthorne; No. X Robert Edward Lee; No. XI, Daniel Webster.

No. XII--John Marshall

WHILE THE men of no one section of our country were behind those of another in patriotism, courage, and self-sacrifice, during the days when the infant Republic was struggling for existence, yet there were three of the colonies whose sons by reason of intellect, ability, wisdom, and military genius, placed them foremost during that period: Massachusetts produced the two Adams's, Franklin, Knox, Otis, and Sherman; New York brought forth Schuyler, Livingston, Jay, Hamilton, and Clinton; and Virginia gave birth to Washington, Jefferson, Madison, Henry, Lee, and Marshall. As the boys of today recall the parts these men took in defending and upholding the liberties of their country, they must agree that the "Old Dominion" (as Virginia was called because Charles II. was proclaimed its king two years before he mounted the throne of England and Scotland), is not only the Mother of Presidents, but of the greatest men of our early history.

It will be interesting to the readers of THE AMERICAN BOY to know that on the Restoration of Charles II., coins were minted containing the declaration that the Kingdom should consist of "England, Scotland, Ireland, and Virginia," the Latin inscription on the coins being, "en dat Virginia quartam," meaning, "See, Virginia makes the fourth."

The American ancestry of the family of the "Great Chief Justice" began with his grandfather, John Marshall, who emigrated from Wales and took up a plantation of several hundred acres in Westmoreland County, Virginia, where were located the homes of Washington and Lee. This John Marshall does not appear to have prospered financially, probably because of the poor soil he had to till. When he died his son, Thomas, either gave up or sold the estate and moved to Fauquier county, locating at a little settlement named Germantown, afterwards Midland. This place situated on the frontier of the county and being sparsely populated, was continually agitated by rumors of atrocities perpetrated upon the settlers by the Indian allies of the French, and the inhabitants raised a body of militia for their protection.

Thomas Marshall was just two years older than George Washington and their families were neighbors. The boys were companions at school and play, contending with each other in schoolboy rivalry in both their studies and athletic games. Each in youth became a land surveyor, marching through the wilderness and forests of Virginia, exploring, measuring, staking off, and describing the boundaries of lands for the convenience of intending purchasers. Thomas Marshall also became a soldier, like Washington, fighting with great gallantry during the French and Indian war. Subsequently he became manager of the estates of that Lord Fairfax whom our readers will remember was the great friend of George Washington. A man of unusual natural ability, Thomas Marshall supplied the deficiencies of his early education by diligence and application. In time he became a fine English scholar and possessed a remarkably good library. Indeed, his library and learning were looked upon with astonishment and respect by his less learned neighbors. In his community he was highly esteemed for sound common sense and practical wisdom. His wife was Mary Isham Keith, daughter of a Scotch minister, who was by birth, education, and sweet womanly qualities a devoted wife and loving mother.

To this worthy couple there was born on September 24th, 1755, a son, the eldest of a family of fifteen. In those days, when money and hired help were equally scarce, the boys and girls always found plenty to do in assisting in the work of farm or plantation, and in the home. Boys who know their histories will remember that the year 1755 was also the date of what is known as "Braddock's Defeat," where two thousand British and Virginian troops were sorely defeated by the French and Indians at Fort Duquesne, mainly because of the stubbornness of General Braddock, who paid for his vanity with his life. In this battle Colonel George Washington did his best to avert defeat, having two horses shot under him while rallying his men.

The little son of Thomas Marshall received his grandfather's name and grew up a sturdy, strong-limbed, and strong-lunged youngster. While his parents were poor, so poor, indeed, that it is said Mrs. Marshall and her daughters were obliged to use thorns instead of pins to pin their dresses, yet by strict economy they were enabled to give their children a good education. John's schooling, which was received almost entirely from his parents, was far more thorough than could have been given by the ordinary schoolmasters of that time, who were, as a rule, only able to lead their scholars through a little reading, writing, and arithmetic. Marshall's father, being a fine English scholar himself, was in the habit of saying that no education was complete without a thorough knowledge of English both in prose and verse. Under such instruction we are not surprised to read that the lad at the age of twelve, "had transcribed the whole of Pope's Essay on Man and some of his moral essays, and had committed to memory some of the most interesting passages of that distinguished poet."

Young Marshall and his brothers and sisters were required to study passages from the English poets and prose writers, and to read these passages to their father to show that they understood them. In this practical way the boy was not only thoroughly grounded in English history, literature and poetry, but acquired a fondness and love for the great English writers which showed all through his life. Marshall's friend, the eminent Judge Story, writing of the Chief Justice's boyhood and the effect of such study says: "In the enthusiasm of youth, he often indulged himself in poetical compositions and freely gave up his leisure hours to those dreamings with the muses, which (say what we may) constitute with many the purest source of pleasure in the gayer scenes of life, and the sweetest consolation in the hours of adversity." Of his father, Marshall ever spoke with sincerest love and gratitude for his bringing up. "My father," he would say, "was a far abler man than any of his sons. To him I owe the solid foundation of all my own success in life."

When he was ten years old his parents removed with their family to a higher and more fertile region called Goose's Neck in the western part of Fauquier county.

While his education at home made Marshall to a large extent independent of the ordinary school, his father decided that his education should not be confined to English alone. The boy was, therefore, when about fourteen, sent to Cumberland county to the school where his father and George Washington had themselves been pupils. Here he spent a year engaged principally in the study of Latin and mathematics under the Reverend Mr. Campbell, a Scottish clergyman of considerable ability. One of the boy's schoolmates was James Monroe, who as our readers will remember became the fifth President of the United States.

During his absence his parents had moved again and settled at a place called Oak Hill. It was a wild country, very thinly populated, with great forests where game of all kinds and wild animals abounded. Naturally fond of sport of all kinds and a good shot, the boy was able to enjoy hunting, fishing, and the pleasures of the chase to his heart's content, and the out of doors life which he thus led gave him that strong, robust, vigorous constitution which he possessed throughout his life. In all athletic exercises, too, where quickness and strength were required he was easily the leader among his playmates. In running and jumping there were few who could beat him. One of his biographers states that a famous feat of Marshall's was to place a stick upon the heads of two of his tallest friends and then with a long run clear this at the first take-off. Once while he was in the army the stick used was half an inch thick and the men under it were each over six feet in height, making his jump almost equal to that of the trained athletes of today.

The boys of Marshall's time would look in wonder at a modern gymnasium outfit. Punching bags, exercisers, vaulting horses, dumb-bells, Indian clubs and the countless paraphernalia of college athletics were then undreamed of. The equipment of Marshall and his friends when running and jumping was of the simplest. They generally only laid aside their tunics and tightened their belts. The moccasins which covered their feet were light, but sometimes they took them off. Marshall was in the habit of running and jumping in his stockinged feet. These stockings, knitted by his mother, were generally of blue yarn with white heels and toes, and in his sports the white parts were always conspicuous which gained for him the nickname of "Silver Heels." Another game of which he was very fond was quoits, introduced by some Scottish pioneers. Even when Chief Justice, when court had risen, he would invariably be found enjoying a game of quoits with some friends. He was considered the best pitcher in the quoit club and could throw heavier quoits than any other member.

For another year young Marshall continued the study of Latin with a tutor, making some progress in translating the works of Horace and Livy. These two years completed his classical instruction, and it is not surprising to find very few classical references or quotations in his writings. His sympathy and liking were all for English literature. In speaking of his early education and his father's assistance, he says: "My father superintended the English part of my education, and to his care I am indebted for anything valuable which I may have acquired in my youth. He was my only intelligent companion, and was both a watchful parent, and an affectionate, instructive friend. The young men within my reach were entirely uncultivated; and the time passed with them was devoted to hardy, athletic exercises." This testimony as to what they owe to their parents has ever been characteristic of great men. Washington, Lincoln, Grant, Webster, Marshall, and others whose names are familiar to boys, all gave affectionate witness to the assistance they had received from mother, father, or both. Somehow the boys of today do not show that respect and love to their parents which they ought. Many boys think their fathers and mothers are old-fogyish, and receive their counsel with something very like contempt, until it almost appears that the command "Honor thy father and thy mother" has become a

JOHN MARSHALL

dead letter. Boys, if your ambition is to pattern your lives after the great men of our country, never forget that these men were ever ready to admit that their success in life was in great measure due to the devoted care, tender sympathy, and wise leading of loving parents.

There seems to have been no question as to what John Marshall's life work was to be. He was now about eighteen years old, strong and muscular, good-natured and cheerful in disposition, fond of study and fond of play, able to shoot straight and true, and an expert with the hunting knife. Among the books in his father's library was Blackstone's Commentaries. It was a new book then, but had obtained a wide reputation, and among the names of subscribers to the first American edition are found: "John Adams, barrister at law, Boston," and "Captain Thomas Marshall." Young Marshall began at once to read the Commentaries, but other and more pressing work was at hand and Blackstone was laid again on the book shelf until happier times should arrive for its study.

It was a time of great anxiety in the colonies. The exactions of Great Britain were forcing thinking men of America to the conclusion that continued submission was impossible, and that an appeal to arms must soon be made. In 1774 a large body of militia was enrolled in Massachusetts prepared to take the field at a minute's warning, and this condition of enlistment caused the army thus raised to receive the name of "minute-men," a name which ought to be honored by every American boy. Virginia enlisted a body of minute-men in 1775. Marshall's father assisted in forming a regiment and was made major, while his son John held the rank of lieutenant.

Doing with his might whatever he had to do Lieutenant Marshall at once began to study military tactics and drill. A description of the young officer as he appeared in his uniform is interesting. "He was about twenty years old, six feet tall, slender, straight as an arrow, olive-skinned, dark-eyed, black-haired, and with an expression which fairly beamed with good-nature." His uniform consisted of a pale blue hunting shirt and trousers, the latter trimmed with white, a round black hat, mounted with a buck's tail for a cockade, and moccasins or hunting boots. His arms like those of his men consisted of rifle and hunting knife. He was a strict disciplinarian and spared neither time nor patience to have his company well drilled, both according to regular military rules and the fighting methods of the Indians.

Our space is too limited to follow Marshall's career as a soldier in the Revolution. Enough to say that from the time when Virginia heard the news from Lexington and Concord to the end of the war, he fought bravely and showed military skill of a high order; that he was idolized by his men and honored and respected by his fellow officers; that he was ever cheerful, looking always on the bright side; that even amid the misery, the cold, the hunger, and the suffering of that awful winter at Valley Forge, he was ever ready with words of encouragement, and did more than any other to revive the drooping hearts of his comrades.

In 1779 he was given the rank of captain and ordered to Virginia to enlist troops. His duties being merely nominal, he at once enrolled as a student in William and Mary College, attending the lectures on law and also those on natural philosophy. So well did he make use of his opportunities for study that he was admitted to the Virginia bar immediately after the summer vacation of 1780. During that winter Virginia was invaded by Arnold, the law courts in consequence were suspended, and Marshall had again to take the sword, so that it was not until the defeat and capture of Cornwallis in 1781, that he was able to hang out his shingle.

Notwithstanding that Marshall may be thought to have had very slight training for success in law, his rise in his profession began from the first. After the Revolution the courts were kept busy and Marshall's extraordinary talents, integrity, and goodness were so well and widely known that he was in constant demand as an advocate. It is said that during his practice in Virginia the calendars show him to have been engaged in nearly every important case in both the State and Federal courts. Political honors were showered upon him by his admiring countrymen. Again and again, he was elected to office, even those who were his political opponents voting for him.

In order to touch upon Marshall in his life work at the law we have gone beyond his actual boyhood, and the story of his receiving notice of the nomination to the Chief Justiceship must conclude this sketch. In November, 1800, Marshall was Secretary of War and his nomination for Secretary of State was before Congress. Chief Justice Ellsworth had resigned and Marshall being proud of his profession was anxious that the office should have a worthy occupant. He called upon President Adams to recommend a distinguished jurist. Scarcely had he began to speak when the President said, "Mr. Marshall, you need not give yourself any further trouble about that matter. I have made up my mind about it." "I am happy to hear that you are relieved upon the subject." "May I ask whom you have fixed upon?"

"Certainly," replied the President, speaking very slowly, "I have concluded to nominate a person whom it may surprise you to hear mentioned. It is a Virginia lawyer,—a plain man—by the name of—John Marshall." Thus says Justice Story, "If President Adams had left no other claims on the grateful remembrance of his countrymen than in giving to the public service this great magistrate, so pure and so wise, he would always have lived in that act as a great benefactor of his country."

For thirty-four years John Marshall was the head of the greatest legal body on earth, during which he "taught by his opinions and decisions the supreme power of the nation and the supreme position of the Constitution of the United States as the written law of the land."

SYNOPSIS OF JOHN MARSHALL'S SUBSEQUENT CAREER.

1795 Head of Virginia bar. Declined Attorney-Generalship offered by Washington.
1797 Envoy to France, returned the following year.
1799 Elected to Congress. Defended President John Adams in extradition case. Served as Secretary of State.
1801 Named for Chief Justice of the United States, January 20.
1807 Presided at trial of Aaron Burr.
1835 Died July 6.

INSCRIPTION ON TABLET IN HALL OF FAME.

JOHN MARSHALL
1755-1835.

The Constitution, and the laws made in pursuance thereof, are supreme; they control the constitutions and laws of the respective states and cannot be controlled by them.

TWO THOUSAND SHUT-INS TO HAVE THE AMERICAN BOY

Our readers contributed between August eighth and September eighth, $25.62 toward giving THE AMERICAN BOY to shut-in boys. As we contribute a like amount in value, the hand of the clock has moved to a point representing about $290.00.

We hope every boy will have a part in this praiseworthy undertaking before the first of January. We very earnestly hope we will be able by that date to furnish the paper to 2,000 shut-in boys; this will require our readers to send $1,000 for the fund. Up to date the total sent in by them is $145.01. There remains $855.00 to be contributed if our ambitions are to be realized. About three months remain in which to raise this money. Remember that every boy who contributes 50 cents or more is privileged to know the name of the shut-in who gets the paper through his generosity.

The following are those who have contributed since August 8:

Why I am Proud of My State

Three prizes were awarded California boys for their essays, the first, $3, going to Clarence E. Briggs, of Antioch; the second, $1.50, to Frank D. Conger, 1139 Dewey avenue, Los Angeles; and the third, 50 cents, to Charles Schroeder, of Wilmington. We must also mention particularly the essays of William Burbeck, of Napa, and Herbert Davis, of Salinas.

Good essays were received, too, from the following boys: Joe Franklin Hart, Thomas C. Haven, Willie C. Whitaker, William R. Field, Will F. Parker, R. N. Bennett, Page Austin, Asa V. Call, Elbridge Battelle, Arthur Cuningham, Thomas Connolly, Gerald F. S. Hooper, Lloyd Mitchell, Arthur S. Mason, Peter Leon Taix, Bernard Frisbie, Paul Fleming, Wiley A. Magruder, Stuart A. Queen, Percy E. Ritcha, Leslie Layton, Warren Bradford, True Bayley, Fred Bartholomoe, Irving R. Wills, Frank Neallis, Phil J. Curran, Harold M. Chapman, Frank Latta, Oscar Burton, Harold Wheelock and Arthur Dixon.

A post card giving several views of the San Luis Rey Mission was received, as were also pictures of the state capitol at Sacramento and of Yosemite Falls.

Many essays contained references to the courage and determination shown by the people of California in repairing the damage done by the earthquake which occurred in April.

California ranks second in size among the states, being exceeded only by Texas. It is said that one ranch alone is as large as the whole of Ireland. The state is noted for its beautiful flowers. The poppy, which has been chosen as the state flower, may be seen almost the whole year around. One boy, in speaking of this flower, says that in the months of March, April and May the fields look as if they were clothed in a golden mantle. The discovery of gold by a laborer named Marshal, in 1849, caused so many people to flock to California that in 1850 there was population enough to warrant a state being formed. San Francisco was a town of not over 600 inhabitants in 1848, and in two years it increased in population to 35,000. Mt. Whitney is said to be the highest point in the United States, and Death Valley the lowest. The higher mountains of California are always white with snow, while in the valleys oranges ripen in mid-winter. The climate of this state is famous the world over. On the coast the temperature varies but little the year around, but a few miles inland either warm or cold weather may be found, according to season and locality. California is connected with the Atlantic seaboard by trunk lines, and her railroads have an aggregate length of over 6,000 miles. There is a great variety of beautiful scenery. The Yosemite Valley is world-famous, as are the great redwoods, some of which are between three and four hundred feet high. From one essay we learn that it took five men three weeks to cut down one of these trees. California ranks next to Australia in the production of wool, the annual output being 40,000,000 pounds. The annual output of wine is 20,000,000 gallons, and there are 35,000,000 pounds of raisins produced. The largest wine cellar in the world, holding 2,500,000 gallons, is located in the northern part of the state. Southern California is the only locality in the United States where olives are raised. More gold has been taken from this state than from any other locality of equal area, the value, since 1848, being $1,000,000,000. There are also great quantities of quicksilver, lead, copper, coal, and borax. Agriculture and stock raising are leading industries, and many fruits are produced in abundance. The value of one year's crop of oranges is estimated at $20,000,000. Lemons, apples, pears, peaches, plums, apricots, and figs are also grown. Of late years manufacturing has developed rapidly. A number of battleships have been built. The Oregon, which made the famous run around Cape Horn at the time of the Spanish-American War, was built in California. The state has many good schools and colleges. The University at Berkeley enrolls 4,000 pupils each year, and Stanford University nearly as many. The harbor of San Francisco is one of the best in the world. Los Angeles is a noted resort for invalids, and the city of Fresmo boasts of being the greatest fruit producing city of the world. The Sacramento and San Joaquin Valleys contain some of the richest farming land in the country. One essay contains the interesting statement that the largest grape-vine in the world is in Santa Barbara County. This vine is eight feet three inches in diameter at the base, produces ten tons of grapes a year, and could shelter 800 people. Among the famous Californians named in the different essays are the following: Luther Burbank, the great horticulturist; W. R. Hearst, the newspaper man; Paul de Longpre, the artist; Joaquin Miller, the poet and Robert Louis Stevenson, the writer. These people, while not all native Californians, have made that state their home.

WHY I AM PROUD OF CALIFORNIA

First Prize Essay by Clarence E. Briggs, Antioch, Cal.

First of all, I am proud of the spirit of grit and determination which animates our people in their endeavor to triumph over the great calamity of April 18th and raise our fallen cities to their pristine condition, both commercially and otherwise. I am also proud of the generous, hospitable spirit of the people, their great love for their state and their country, and their deep patriotism.

The climate in most parts of California is very agreeable, and has none of the extremes found in the northern and southern states.

All kinds of cereals are raised except rice. The annual value of the wheat, barley, and hay crops is fifty million dollars. We rank high among the fruit-producing states; our crop includes nine-tenths of the oranges, four-fifths of the figs, one-half of the peaches, prunes, plums, and grapes, and nearly all the lemons, olives, apricots, almonds, raisins and English walnuts raised in the United States. We rank first in the making of wine and second in the production of lumber, and raise one-fourth of the beans produced in the United States.

One-fourth of the gold mined in the country comes from California. Silver, copper, borax, salt, soda, granite, coal, petroleum, and asphaltum are also mined. The silver and copper mines are very valuable, and petroleum will soon be one of our largest assets. In a few years the value of farming and fruit-raising will be greatly enhanced, owing to etxensive irrigation.

The educational system of California is one of the best in the country. There are two universities and five normal schools, besides numerous colleges and high schools, and a grammar school in each district.

I am proud of the history of my state. Discovered by Cabrillo in 1542, no settlements were made until 1769. Its growth, from a few thousands living in the missions along the coast in 1848 to one and a half millions of people in 1900, is most remarkable. I am proud of the builders of the state, from Fathers Serra and Palon to our captains of industry of to-day.

Although California furnished few soldiers to fight for the Union, she sent over a million dollars fresh from her mines, without which our government could hardly have been successful in the end. I am proud of the gallantry of the Californians in the late war with Spain. But above all, I am proud of the hundreds of our people who have done their work well, and have exerted good influences in the more peaceful walks of life.

Yosemite Valley, the Big Trees, and the Geysers are scenic features that cannot be excelled in their beauty.

Condensed into a few words, I am proud of California's past prosperity and of the conditions which point to future prosperity and industrial happiness.

North Carolina Next

¶ To the North Carolina boy who sends us before October 10th the best letter of not over 500 words, telling us why he is proud of his state, we will give $3; to the boy sending the next best letter, $1.50; to the boy sending the next best, 50 cents. In addition, we will print the first prize letter in an early number of THE AMERICAN BOY.

WOULD YOU LIKE TO SECURE AN IMPROVED SINGLE BARREL SHOTGUN For the price of an old-fashioned gun?

$5.50 EXPRESS PAID

This light, well-balanced, serviceable single barrel shotgun---the HOPKINS & ALLEN take-down pattern, automatic shell-ejector---offers exceptionally fine quality and workmanship at the lowest price. Renewals should be prompt so that no numbers may be missed.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

WILLIAM C. SPRAGUE, - - President and Editor
GRIFFITH OGDEN ELLIS, Vice-President and Asst Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only; and in the case of the coins, a rubbing.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

Harry Elger, Jr., Hawthorne Inn, East Gloucester, Mass., wins the prize for the best list of answers to the August Tangles.

Clinton Fisk Elliott, 345 Norton street, New Haven, Conn., wins the second prize.

Raymond F. Katterjohn, Holland, Dubois Co., Indiana, wins the prize for the best original puzzles.

Honorable mention is accorded the following for excellence: George H. Stanbery, J. Horace Trumbull, Kenneth Fullerton, Robert D. Holmes, Jr., Byron J. Bellas, Byron B. Dunklin, R. L. Mattocks, Herbert Collins, Fred Lindenau, George F. Guy, Grady Peerey, J. Glenn Patterson, Veator Mendenhall, Arthur Ahlen, Harmon Boyd, Lloyd Blanton, James A. Lynd, Leo E Bourdon, J. Cuthbert Long, and someone in Milwaukee who forgot to sign any name.

A prize of one dollar will be given for the best list of answers to the October Tangles; also, a new book for the second best list; received by October 18.

A prize of one dollar will be given for the best lot of original puzzles, suitable for Christmas and December, received by October 18.

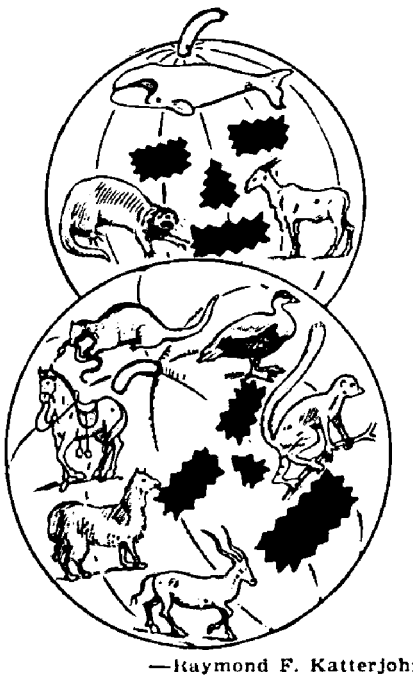
New Tangles

41. JACK O' LANTERNS.

The nine pictures on the jack o' lanterns are to be interpreted by words of uniform length. When arranged in correct order their initials will spell a certain October evening.



—Raymond F. Katterjohn.

42. OCTOBER SLIDE.

Slide the four horizontal rows of letters right and left five times, and obtain the following by vertical rows, using no letter twice:

1. A very important American victory, won in October during the Revolution. 2. The surname of the American commander. 3. The surname of the British commander. 4. A city in Georgia where the Americans were defeated in October during the Revolution. 5. A place on the border between North and South Carolina where the British met defeat in October during the Revolution. 6. The unused letters remaining spell the surname of a great American statesman, orator and lawyer who died in October.

S N W I O Y T C W I K S N N
B A N O A S A N N O O I M T
R N O A S G R W R L V A E W
E K N H T N L A H G U I T S

—Veator Mendenhall.

43. LITERARY RESEARCH.

From the surname of each author of the following titles select the letter indicated by the number in parenthesis, in order, and obtain the name of a great American essayist, lecturer and poet, who was born and who died in Massachusetts:

1. The Faerie Queene (7). 2. Very Hard Cash (3). 3. Arthur Bonnicastle (3). 4. The Rape of the Lock (3). 5. The Scarlet Letter (5). 6. Uncle Tom's Cabin (4). 7. Thanatopsis (4). 8. Sartor Resartus (6). 9. Divina Commedia (1). 10. Paradise Lost (5). 11. The Spy (5). 12. Autocrat of the Breakfast Table (4). 13. Snow Bound (7). 14. Vanity Fair (7). 15. Pickwick Papers (7). 16. Ivanhoe (3). 17. Pilgrim's Progress (6).

—J. Glenn Patterson.

44. OCTOBER ACROSTIC.

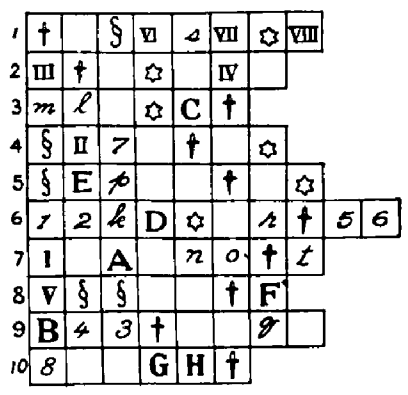
The words are of even length. The second letters in order spell a certain October night.

1. Surname of the principal female character in Vanity Fair. 2. An English philosophical writer of Shakespeare's time. 3. Author of Adam Bede. 4. A bellows-mender in Midsummer Night's Dream. 5. Author of Lalla Rookh. 6. Author of Gulliver's Travels. 7. Author of Robinson Crusoe. 8. Author of Put Yourself in His Place. 9. The hero of Last of the Mohicans.

—Morton L. Mitchell.

45. OCTOBER HISTORY.

Fill the ten horizontal rows of squares with certain capital cities of the U. S., one letter of each in a square. The star path down spells a state admitted in October. The dagger path



down spells its capital. The numbered letters, 1 to 8, in order, spell a Revolutionary battle fought in October. The squares numbered with Roman numerals, I. to VIII., in order, spell the British commander, who surrendered in October as a result of this battle. The lower case letters, k to t, in order, spell a civil war battle fought in October. The capital letters, A to H, in order, spell the federal commander, and the section path, read downward, spells the confederate commander at this battle.

—Robert D. Holmes, Jr.

46. CONNECTED ZIG-ZAGS.

Write in the diagram the surnames of the authors whose works are named below. The star path downward spells the pseudonym of the author of The Adventures of Huckleberry Finn.

THIS LITTLE LAD is a Ralston Boy.

His Mother Feeds Him Ralston Health Food —and his looks prove it.

Boys and girls *thrive* on Ralston. And we'll tell you why.

Ralston consists of tiny almond-colored grains—the heart—the *real life* of the wheat.

It's the Pure food—a chemist's certificate of purity on every package.

And it's the *guaranteed* food—

You can try Ralston, and if you don't like it, take the empty package back to the grocer—he is instructed to refund your money.

RALSTON is the perfectly balanced gluten food, with a body to it.

Every 15c package makes fourteen pounds of delicious food when ready to serve—fifty plates.

Ralston Health Food, sterilized by our new patent process, is always fresh and good.

Ask your grocer for it today—insist on having RALSTON *this time*. If you don't like it your money comes back.

Try Purina Whole Wheat Flour—for sale by all Good grocers.

Ask for the *checkerboard* sack and get the *best*.

Ralston Purina Mills.

Tangle Talk

I have advised you to consult your dictionaries on every provocation.

If you aspire to become a Tangler, to contribute or solve puzzles from month to month, you will need to know what the titles of the puzzles mean. This the dictionary will tell you, in the case of the established puzzles, and the newer ideas we are very careful to describe fully, ourselves, when printed. Any dictionary will tell you what is an acrostic, anagram, rebus, syncopation, palindrome, word square, and many of the common puzzles.

Webster gives the following example and definition of a word square:

H E A R T
E M B E R
A B U S E
R E S I N
T R E N T

"A series of words so arranged that they can be read vertically and horizontally with like results."

The Century, Standard and other authorities also give examples and similar definitions. So when a beginner sends in a series of words of the same length which do not possess the first element of a word square, and yet calls it a word square or a connected word square, we know that he has not consulted the dictionary nor grasped the first principles of our pastime, and has yet to learn the pleasure of making and solving puzzles; for it is no puzzle to write down five words or fifty.

No one may hope to be a Tangler who has not mastered the making or solving of a simple five-word square. Start with the three and four-word squares, if you must, which are the simplest A B C of puzzle knowledge—but don't expect us to print any of them. Fives are our lowest limit, while sixes are preferred, and sevens mighty scarce. We have seen thirty-five of Kosciusko McGinty's eight-word squares, and print one here for your edification. Making word squares of such dimensions is an employment rather than a pastime, taking weeks of research and disappointment to secure one success.

T A C T I C A L
A L I E N A G E
C I V E T T E S
T E E I R O N S
I N T R I N S E
C A T O N I A N
A G E N S A Y E
L E S S E N E D

C A T Quite in contrast are the childhood A T E efforts in three and four-word T E N squares, developed when one's vocabulary was limited and in the forming!

The title of every Tangle means something, and our titles that are not self-explanatory or supplemented by a description or diagram are fully explained by the dictionaries.

Puzzles that are so difficult or intricate as to be almost unsolvable are not welcome to our Tangles. Obsolete words we have never knowingly admitted. On the other hand, such simple affairs as "substitute 1, 2, 3 for a, b, c," etc., and the kindergarten line of alleged puzzles are better fitted to other publications than ours.

It is advisable, in sending in new puzzles to be printed, to follow each puzzle with its answer, on the same sheet if possible.

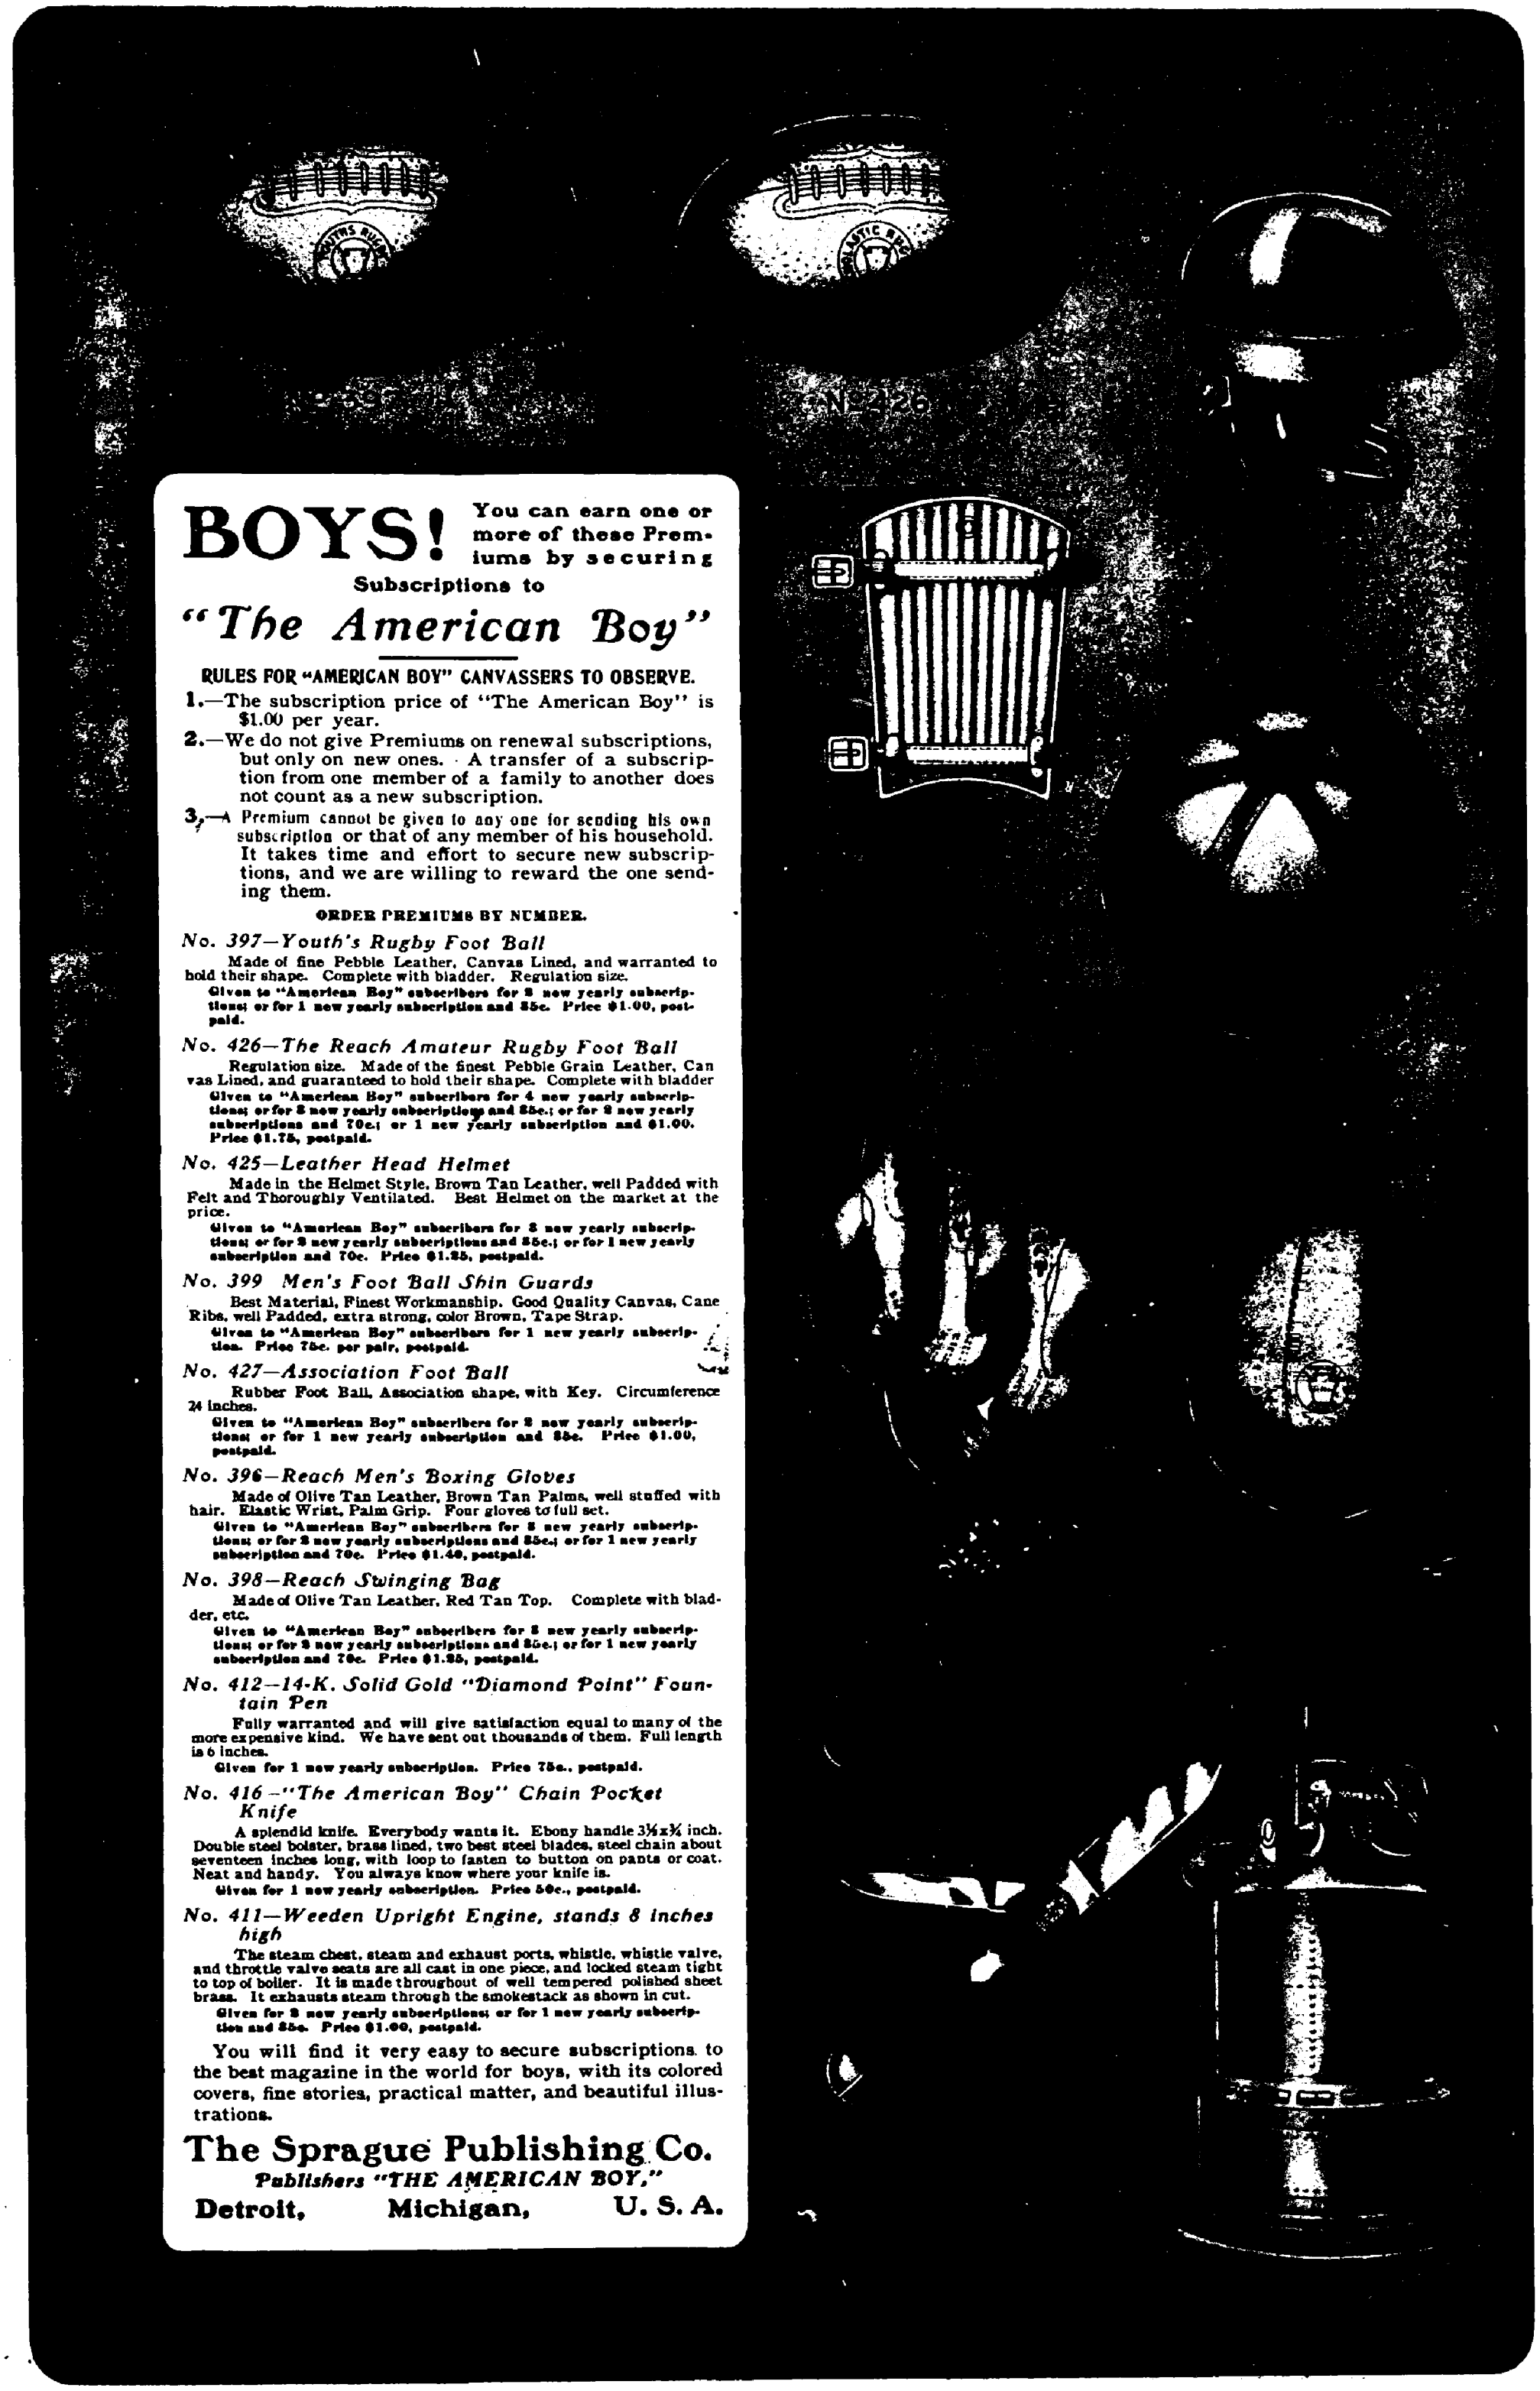
Also, when there is a long list of names or words, either in the answers to printed puzzles or as answers to your own new puzzles, always write the words in alphabetical order, the same as they always appear in the Tangle answers. Remember, I have to check over every word you send me and every word that all the others send me, and to criss-cross over the alphabet for all of you is so discouraging, especially when I keep thinking how much you didn't think when you threw them in any old way. Prizes have been lost through carelessness, many times.

If you have any questions to ask about Tangles or puzzles in general, I will try to answer them in our little talks from month to month.

As we warned you last month, we are ready now for your best efforts at Christmas Tangles. The best of those that reach us by October 18 will be published in December Tangles, and some one of you is going to secure our prize award in addition.

Why not you?

—Uncle Tangler.



BOYS!

You can earn one or more of these Premiums by securing Subscriptions to

"The American Boy"

RULES FOR "AMERICAN BOY" CANVASSERS TO OBSERVE.

1.—The subscription price of "The American Boy" is $1.00 per year.

2.—We do not give Premiums on renewal subscriptions, but only on new ones. A transfer of a subscription from one member of a family to another does not count as a new subscription.

3.—A Premium cannot be given to any one for sending his own subscription or that of any member of his household. It takes time and effort to secure new subscriptions, and we are willing to reward the one sending them.

ORDER PREMIUMS BY NUMBER.

No. 397—Youth's Rugby Foot Ball

Made of fine Pebble Leather, Canvas Lined, and warranted to hold their shape. Complete with bladder. Regulation size.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price $1.00, postpaid.

No. 426—The Reach Amateur Rugby Foot Ball

Regulation size. Made of the finest Pebble Grain Leather, Canvas Lined, and guaranteed to hold their shape. Complete with bladder

Given to "American Boy" subscribers for 4 new yearly subscriptions; or for 3 new yearly subscriptions and 35c.; or for 2 new yearly subscriptions and 70c.; or 1 new yearly subscription and $1.00. Price $1.75, postpaid.

No. 425—Leather Head Helmet

Made in the Helmet Style, Brown Tan Leather, well Padded with Felt and Thoroughly Ventilated. Best Helmet on the market at the price.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 35c.; or for 1 new yearly subscription and 70c. Price $1.25, postpaid.

No. 399 Men's Foot Ball Shin Guards

Best Material, Finest Workmanship. Good Quality Canvas, Cane Ribs, well Padded, extra strong, color Brown, Tape Strap.

Given to "American Boy" subscribers for 1 new yearly subscription. Price 75c. per pair, postpaid.

No. 427—Association Foot Ball

Rubber Foot Ball, Association shape, with Key. Circumference 24 inches.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price $1.00, postpaid.

No. 396—Reach Men's Boxing Gloves

Made of Olive Tan Leather, Brown Tan Palms, well stuffed with hair. Elastic Wrist, Palm Grip. Four gloves to full set.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 35c.; or for 1 new yearly subscription and 70c. Price $1.40, postpaid.

No. 398—Reach Swinging Bag

Made of Olive Tan Leather, Red Tan Top. Complete with bladder, etc.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 35c.; or for 1 new yearly subscription and 70c. Price $1.35, postpaid.

No. 412—14-K. Solid Gold "Diamond Point" Fountain Pen

Fully warranted and will give satisfaction equal to many of the more expensive kind. We have sent out thousands of them. Full length is 6 inches.

Given for 1 new yearly subscription. Price 75c., postpaid.

No. 416—"The American Boy" Chain Pocket Knife

A splendid knife. Everybody wants it. Ebony handle 3½x¾ inch. Double steel bolster, brass lined, two best steel blades, steel chain about seventeen inches long, with loop to fasten to button on pants or coat. Neat and handy. You always know where your knife is.

Given for 1 new yearly subscription. Price 50c., postpaid.

No. 411—Weeden Upright Engine, stands 8 inches high

The steam chest, steam and exhaust ports, whistle, whistle valve, and throttle valve seats are all cast in one piece, and locked steam tight to top of boiler. It is made throughout of well tempered polished sheet brass. It exhausts steam through the smokestack as shown in cut.

Given for 3 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price $1.00, postpaid.

You will find it very easy to secure subscriptions to the best magazine in the world for boys, with its colored covers, fine stories, practical matter, and beautiful illustrations.

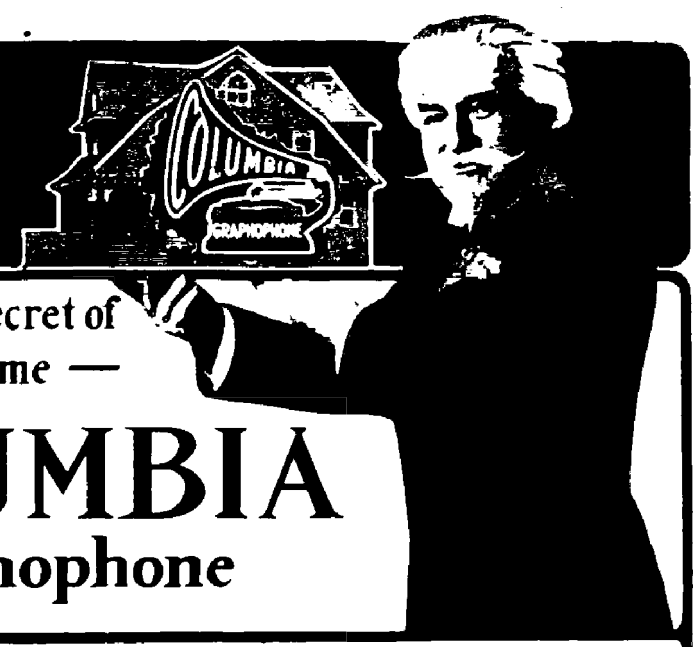
The Music Master



discovers the secret of the Happy Home —

COLUMBIA
Graphophone

"I WHO teach the music have had always much sympathy for those many others who cannot have the music in the home—those who know not to play one single instrument.

"Now I have no more regrets. Every home can have the music—**The Columbia Graphophone** has arrived. I salute him, me.

"I am a music master, Truly. But he is the **Master of Music.** Me, I play but three instruments only. He plays *all* the instruments, *all* the music. I sing nothing. He sings all the songs in all the languages.

"I am astounded, I am charmed. For he makes the real music.

"The sounds of the mouth organ, the jew's harp—I call not that music. And I find these other machines only make a sound like many mouth organs—many jew's harps.

"Listen! I am a critic of the music. I say to those who possess any make of talking machine, use only the Columbia Records—they are the best—they have the soul. They have the real music, of a sound sweet, of a tone pure, of an execution brilliant, that is alone of the Columbia."

Before buying either a talking machine or records, insist on hearing the Columbia, and be convinced, like the Music Master, that they are the best. We are the only Company that gives a written guarantee—perfect goods make this possible. You can buy on easy payments if you desire. Stores in all the principal cities. Dealers everywhere. Write for catalogue and address of nearest dealer.

COLUMBIA PHONOGRAPH CO., GEN'L.

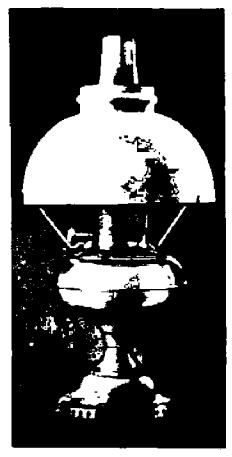
Grand Prix Paris 1900 **Double Grand Prize, St. Louis 1904**

With a Perfection Oil Heater you can heat a cold bedroom, make a sick-room more comfortable, warm a chilly hallway, heat water quickly, and do many things better than can be done with any other stove no matter what fuel it burns. The superiority of the

PERFECTION
Oil Heater
(Equipped with Smokeless Device)

lies in the fact that it generates intense heat without smoke or smell. The oil fount and the wick carrier are made of brass throughout, which insures durability. Gives great heat at small cost. Fount has oil indicator and handle. Heater can be easily carried about. Absolutely safe and simple—wick cannot be turned too high or too low. Operated as easily as a lamp. All parts easily cleaned. Two finishes—nickel and japan. Every heater warranted. If not at your dealer's write nearest agency for descriptive circular.



The **Rayo** **LAMP** can be used in any room and is the safest and best all-round house lamp made. Gives a clear, steady light. Made of brass throughout and nickel-plated. Equipped with the latest improved burner. Handsome—simple—satisfactory. Every lamp warranted. Write to nearest agency if you cannot get it from your dealer.

STANDARD OIL COMPANY

"IT'S ONE ON DAD"

"Every one says that Dad's so bright you can't get around him—but that's because they don't know how.

"I asked Dad to get me a watch. Told him 'twas just what I wanted for Christmas.

"'Can't do it,' he said, 'it's a waste of money to buy watches for boys—they don't make boys' watches that are any good.'

"It's no use trying to argue with Dad, so I just sent his name to the New England Watch Co., and asked them to send him one of their catalogs.

"That got him—and I got the watch, with a Christmas card reading, 'Son from Dad.'

"Dad says he never saw such a watch before at any such price—told Mother he guessed he'd paid too much for his—that a watch like this was good enough for him."

New England
WATCHES

are inexpensive enough for boys and good enough for men. They are ideal Christmas gifts.

They are not toys, but handsome, durable, and accurate watches—watches that will wear for years and, if lost, can be replaced for little money.

Our whole effort is devoted to producing the best watch obtainable for the price—the best value watch made.

There are many designs, suitable for men and women—that's why they are **real** watches to boys and girls.

For 28 years we have been making *New England* watches of a quality and price that suits the whole family. Remember, too, that every watch is backed by our unquestioned guarantee.

$4.00 to $34.00

Most good jewelers sell *New England* watches—find out if your dealer does. If he doesn't, write us—giving his name and address and we'll send you either the Red Book of Men's Watches for Boys or the Blue Book of Ladies' Watches for Girls—whichever you ask for. Write now and don't forget to mention your dealer's name and address.

PLUPY IN PEACE AND WAR

Or, Chapters From the Lives of Plupy, Beany, Pewt, and Others

A SERIAL STORY BY JUDGE HENRY A. SHUTE

Author of "Real Diary of a Real Boy," "Sequil," "Letters to Beany and Love Letters of Plupy Shute," Etc.

CHAPTER II.

JUST WHAT KIND of settlement poor Plupy had with his father on his return from Boston that night is known only to Plupy and his father.

Before pitying the young man too much it would be well to remember that the elder Shute was more than locally famous for a keen sense of humor, and in his boyhood had done perhaps more than his fair share in turning the little village of Exeter upside down. So it is fair to suppose that a graphic description of old Seth Tanner profanely chasing two wholly innocent but active boys, and the further portrayal of his son climbing dripping from the rain-water barrel would tend to put him in so cheerful a humor as to practically disarm hostility to that graceless youth.

Whatever he thought or did in the matter he made no objection when Plupy's mother, according to her custom in such cases, prepared a most appetizing meal and carried it up to the imprisoned youth.

Indeed, Plupy's father, as he sat that evening under the apple tree smoking, laughed heartily now and then, and indulged in sinful delight in reminiscences of his boyhood, which showed him to be in the most cheerful humor.

It was open to suspicion whether or not he was delighted beyond measure at the good account his son had rendered of himself in his fight with Pewt, and was heard to remark that if he would only lick that Watson boy he would be satisfied.

The family of which Plupy was a most prominent if not strictly ornamental member, was the most delightful family imaginable. The father, Mr. George Shute, a tall, handsome, well-built, and athletic man, was a clerk in the Boston Custom House, to which municipality he betook himself at a very early hour, and returned at 5:30 p. m. He knew everyone on the train, had a keen shaft of wit or a jolly laugh for everyone. His duties in the office consisted mainly in telling amusing stories, and making semi-occasional entries in a huge ledger.

That these duties were of a very important nature was evident from the fact that he was a well-paid official. His family was, however, numerous and hearty to such an astonishing degree that his income was barely sufficient for their combined wants.

Mrs. Shute, Joe as he called her, was a rather plump woman, with a strong, handsome, and most kindly face. She was an active, strong, and constant worker, giving her whole time to the care and management of her family, and having no time for outside matters. A fine pianist, she never had time to play. A beautiful alto singer, her voice was seldom heard except in singing cradle songs to the younger children.

Aunt Sarah, a sister of Mr. Shute, was one of those rare examples of an utterly unselfish woman, who gave her entire energies to the welfare of others, and in particular to the swarm of Shute children, every one of whom was in her eyes the most beautiful, the most accomplished, and the most obedient of children.

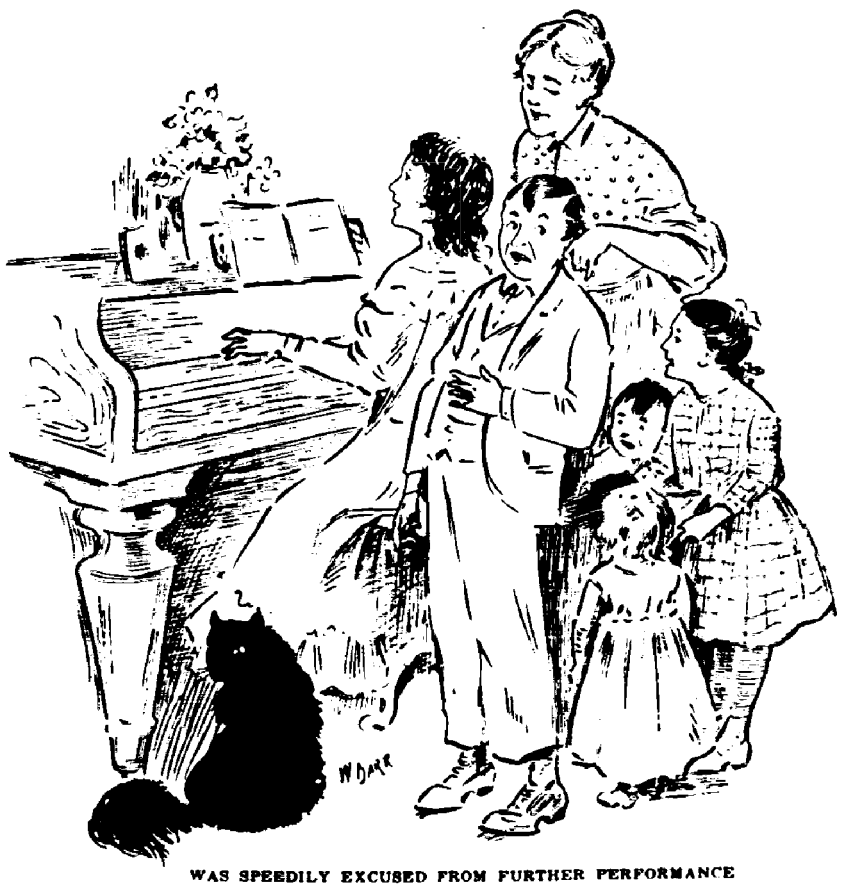
How such an opinion was possible in the mind of any person of good sense is not clear to the unprejudiced mind. Although certainly given to vagaries in relation to these children, in all other respects she was unquestionably of sound mind and memory.

She indulged these children lavishly, which was not good for them, and the only times she lost her temper in the household was on the frequent occasions when the elder Shute accompanied by a strap and the reluctant Plupy, retired to the woodshed for important business transactions, when she retired precipitately and with indignant looks to her chamber and banged the door.

Again she never would believe the complaints of any persons, however irreproachable their character, who reported misdemeanors of her nephews or nieces, and even when subsequent confessions were made by the malefactors, she obstinately maintained that they were wrung from them by threats of torture, and were wholly unfounded.

The oldest daughter, Celia, was a dark-eyed young lady with long black curls—a demure miss, with a mind attuned to music and poetry, but with a most unexpected leaning for Beadle's Dime Novels. The perusal of these highly-flavored frowned-on but delightful books imparted such a style to her own narratives that when, as the oldest girl, she was left in charge of the family, she seldom experienced any difficulty in keeping them quiet, as the announcement that "Cele's goin' to tell a story" brought them about her, respectful and attentive, and kept them there breathless and deliciously horrified until the end.

Although a peaceful damsel, she would in cases of necessity maintain her authority by the sword, even if she had to proceed to extremities and box the



WAS SPEEDILY EXCUSED FROM FURTHER PERFORMANCE

ears of the entire crowd, one after another.

Cornelia, or Keene, the second daughter, was a tornado in short skirts. She could run, climb, quarrel, make up faces, sew, knit, do tatting, or fight with her brother on the slightest cause. She was as lively as her elder sister was quiet, and although most of the time a state of most comical warfare existed between herself and Plupy, she stuck by him in adversity, and on many occasions when he was hard pressed by enemies from without, and the tide of battle was going against him, threw her fighting weight in the balance, and won glorious victories for the family cause.

She and Cele both had clear voices, remarkably true to pitch, and sang the sad ballads of the day most tunefully at church sociables, Sunday school concerts and similar festivities, Cele accompanying jinglingly or droningly upon piano or organ as the case might be. "Now I Lay Me Down to Sleep," "Evangeline," "I Know a Bank," "The Gypsy's Warning" and other cheerful madrigals were more than familiar to audiences at these fascinating functions.

Harry, the oldest boy, familiarly known as Plupy, Skinny, or Pole-legs, on account of the colt-like angularness of his build, perhaps needs no extended description. Nature had evidently made him out of the cast-off and misfit materials. He was of astonishing lankiness, tow-headed, freckled, and homely, bearing not the slightest resemblance to any member of the family. His main object in life, judging by its success, seemed to be getting into scrapes of his own, for which he was thrashed, and taking with raucous protestations, other boys' thrashings which he didn't deserve. His ambition was to be a bandman, and he loved music even better than witnessing fights or riding on hacks, and was gifted with a mellow alto voice. He considered singing with his sisters as beneath the dignity of a soon-to-be cornet player; and when forced by polite invitation or parental command to bear a part in duet, trio or family chorus, purposely and with rare skill sang so much out of tune that he was speedily excused from further performance.

Georgie, the next child, two years younger, was a very demure young lady, somewhat addicted to Sunday school and general goodness. She had a sturdy little backbone, however, and no threats, cajoleries or sophistries could turn her from a course that received her moral sanction. She was not as gifted musically as her brothers and sisters, but could commit to memory with astonishing skill anything that she read.

Annie and Frank, four and five years of age, spent most of their time playing together or fighting, in which they were about equally proficient.

This propensity of theirs was utilized by Plupy, who always took occasion, when no restraining influence was nigh, to set them fighting and doubled himself up with sinful pleasure at the comical contortions of the tiny warriors.

Ned, the baby, was a handsome, fat, and rosy youngster of about eight months of age, just beginning to creep about, and the object of devoted attentions from the entire family.

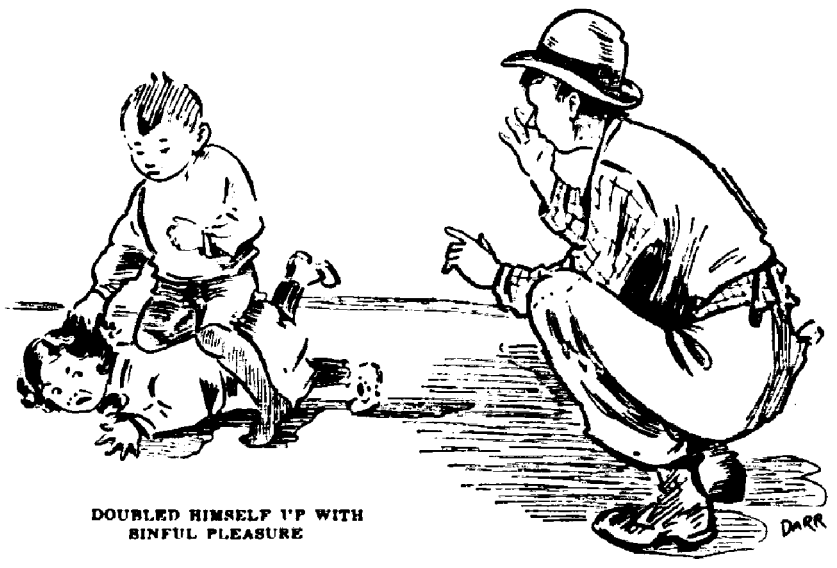
In fact, all the Shute children were good looking except Plupy, who seemed to be a sort of black sheep in various ways, which, while it at times caused him to feel a bit lonesome, afforded him a sort of pride in his peculiar claims to distinction.

That high jinks were the order of the day in that household was not surprising. It was a wonder that the good mother and aunt kept their sanity from day to day. Scarcely a day passed but what a temporary hospital was set up in Aunt Sarah's or mother's room. Plupy had been gashed all over with jackknives, stone-bruised to satiety, and green-appled almost to extinction.

In times of epidemic the house was a sort of insane hospital. Did one child return from school with the seeds of chicken-pox deeply imbedded in its system, every brother and sister straightway contracted the disease. Did one small unfortunate develop measles, the whole seven at once developed sore throats, inflamed eyes, and fretful dispositions, and made life a burden for themselves and their faithful nurses. No child escaped, and the different maladies occasionally claimed an adult Shute as its prey.

Indeed, when mumps came along and took violent possession of the family, the mother had the worst case of all, and the spectacle of seven children and one grown-up sitting in the sick room with their swollen and distorted faces bearing ludicrous resemblance to huge pumpkins, not one of them daring to laugh for fear of cracking their jaws, was a most amusing sight.

The children were generally well, however, and in the opinion of good Doctor Perry the family physician, "as healthy as rats." Plupy, whose feet were wet every day from the first fall of snow in Decem-



DOUBLED HIMSELF UP WITH SINFUL PLEASURE

ber to its disappearance in the ensuing March, had hideous colds and a portentously hollow cough, and added to his peculiarities of appearance by wearing a red flannel rag around his neck, enclosing pork sprinkled with black pepper.

They were indeed an engaging and amusing family.

CHAPTER III.

The morning after Plupy's accident in the rain-water barrel, the family were sitting at breakfast. The father had departed to Boston, and the children were ranged about the table, the baby next to its mother, Plupy and Keene carefully separated from each other by the width of the table, to prevent active hostilities which occasionally arose between them.

A slight cloud was visible on the expressive features of that young man as he was not allowed coffee, and Cele and Keene were permitted twice a week to drink a much-diluted cup of that liquid, and were assuming some airs in consequence. Plupy had also been severely reprimanded by his mother, and had incurred the displeasure of the family by taking advantage of an opportunity when his mother's back was turned to offer the baby a pickle to suck, which evoked hideous faces and loud howls of disgust from that small martyr, and brought the entire family to his chair to soothe and caress him. As a further

"S'CUSE ME, PLEASE"

punishment, poor Plupy was promptly restricted to butter on his fritters, instead of a combination of butter, sugar, and syrup.

Attention was happily diverted from this incident by the arrival of the kind-hearted blacksmith, who, thinking he had been a little severe the day before, entered the dining-room with a neighborly freedom, and handed a beautiful bunch of chrysanthemums with the words, "Here, Mis' Shute, tho't ye'd like some er th' old woman's Christian anthems; they've just begun to bloom. Didn't hev no luck with the tarnation pinks this year."

Plupy's mother thanked the worthy man, and he withdrew and soon the musical tink-tink of his hammer on the anvil broke the summer silence.

Just then Beany's whistle was heard in the street, followed by a mellow "Hoo-ee," and Plupy, hastily wiping his mouth on his napkin and cramming it unfolded in its ring, muttered "S'cuse me, please," and was making for the door, when his mother called him.

"Harry, have you fed the hens?"

"Yessum, 'fore breakfus," said Plupy, nodding violently.

"Have you filled the woodbox?"

"No-o-om," said Plupy, dubiously casting a side glance at that cavernous receptacle, "they is some in it."

"Well, before you go off, I want you to fill the woodbox, and then you must go down-town for some errands."

"Ma, can't Keene 'n Cele go, they don't have nothin' to do?" queried Plupy, with an injured air.

"Yes, we do, too, ma," retorted both young ladies warmly.

"We have to help get breakfast," said Keene.

"'N wash dishes," added Cele.

"'N sweep," said Keene.

"'N take care of the baby, 'n dress Frankie 'n Annie," said Cele.

"'N practice our music lessons," said Keene.

"'N sew 'n do tattin'," said Cele.

"'N go mos' all the errands," summed up Keene, triumphantly.

"Aw," said Plupy, derisively.

"That will do, children," said Plupy's mother; "now, go right off and get in your wood, Harry."

Thus adjured, Plupy went to the door and sent a loud "Hoo-ee" into space, which promptly brought Beany, a plump and wide-awake youngster, from across the road.

"Hi, Beany," said Plupy, "whatcher goin' to do?"

"Less go down to Jim Ellison's blacksmith shop and plug hosses with sling-shots. Yesterday Jim was tryin' to shoe Ed. Towle's father's Silvertail, and me and Fatty Gilman was hid behind Si Smith's fence and jest as soon as Jim would get one of her hoofs up between his legs we would let ding at her, and she would rare up and jump and kick, and Jim would go over backwards, holler and swear and lick her. 'N bimeby he got Bill Hartnett to put a twist on her nose, and then she would jump and they couldn't shoe her, and they told Ed's father never to bring her there ag'in," said Beany, in great glee.

"No, less not do that," demurred Plupy, "got licked like time for that las' Saturday. Old Si told father about it, and he said he would skin me if he ever caught me doin' it ag'in."

"Harry," called his mother, "I am waiting for that wood."

"Yessum," said Plupy. "Come on, Beany, 'n help a feller."

"All right Plupy," said Beany; "betcher I can lug a bigger armful than you."

"Betcher can't," said Plupy.

"Betcher!"

"Betcher!"

So each boy rushed to the shed, loaded himself with huge armfuls of pine wood and staggered groaningly to the kitchen. Now, in their mutual emulation they had piled it up so high that they could not see where they were going, and Plupy, with bulging eyes and contorted countenance, turned by mistake to the left and before his mother could warn him deposited his entire load with a crash in the kitchen sink, much to his amazement and confusion.

While the family, aroused from the breakfast by the unusual noise, were doubling up with laughter over Plupy's misfortune, a most outrageous rattling, bumping, banging, and clashing was heard, followed by protracted howls of anguish from the cellar. Beany had also blindly groped his way with even a larger load than Plupy, had missed the woodbox and had fallen down the cellar stairs, carrying in headlong course tin pans, pails, mops, and dustpans, with which the passage was hung, and landing in the soft soap vat.

In an instant there was a confusion of tongues, and great juvenile excitement, in the midst of which the two much-tried ladies rushed to the rescue and bore the soap-besmeared and luckless youth to the kitchen, where it was found he was not seriously hurt.

The filling of the woodbox was then completed without further accident, and the boys presented themselves to Plupy's mother for further orders.

"Now, Harry, remember, I want you to go to Mr. Haley's and get me three pounds of steak and three pounds of pork sausages, then to Mr. Conner's and get a half-bushel of potatoes and two dozen eggs. Now don't forget, and stop pinching Elbridge."

"All right, ma, I'll remember," said Plupy; "three pounds of steak and pork sausages at old man Haley's, and half a bushel of potatoes and two dozen eggs at old Tom Conner's," he continued glibly; "we can remember, can't we, Beany?"

"You bet," said Beany.

So the two small boys went gaily down town, chasing, pushing, wrestling and tripping each other up.

"Mr. Haley, wanter half bushel er pork sausages and three pounds er steak," piped Plupy, as they entered the market.

"What you mean?" said the amazed dealer, wiping his hands on his rough blue frock. "Your mother never sent you for a half bushel of sausages."

"Yes, she did, too; didn't she, Beany?" affirmed Plupy.

"Yes, she did, honest now," said Beany; "three pounds of steak and a half bushel of pork sausages. Hope to die."

"Well," said the dealer, as he fished several festoons of that dainty from an ice box, "don't believe I have got more'n fifteen pounds in the shop, but I'll take those up, and if she wants some more I can get 'em, but I don't see what she can do with so many."

The boys clattered out of the shop and went down Water street, occasionally stopping to look in store windows. When after an interminable time they arrived at Conner's store, they had forgotten what they wanted. "Whatcher s'pose it was, Beany?" said Plupy.

"I've forgot," said Beany, wrinkling up his brow. "It was three pounds of something and a half bushel or something else."

"I know," said Plupy, "we got the half bushel of sausages at old Haley's, and it was two pounds of potatoes and two dozen clothespins," said Plupy, delightedly. "I tell you, Beany, I don't forget things very easy."

"Umph," growled the old gentleman, on receiving the order, "some folks give mighty small orders."

"P'raps she wanted to see if they was good ones; father said the last potatoes we got here wasn't biggern' birdshot," explained Plupy, pacifically.

"Boy, don't be sassy," said the old gentleman, firing up.

"That's what he said," said Plupy, edging towards the door; "I wasn't sassy."

Their errands finished, they debated what to do. Plupy wanted to go fishing for eels down by the raceway, Beany to see if they couldn't get a ride on a hack. After much argument they compromised matters by going up to Major Blake's stable, where a variety of mishaps befell them.

(To be continued.)

"IT WAS THREE POUNDS OF SOMETHING AND HALF A BUSHEL OF SOMETHING ELSE"

SEVEN AMERICAN BOY BOOKS

Just Published. Twenty-five Cents Each

We are republishing some of the best of the matter that appeared in the early volumes of *The American Boy*. Many of our readers never saw the volumes for 1899, 1900, and 1901. Of course all the copies of these early volumes were disposed of long ago to boys who are now men. These volumes contain much interesting matter that our boys will be glad to read. The only way we have of getting it to them is by putting the matter in book form and selling it to them at a small price. The stories are just as good for the boys of 1906 as they were for the boys of 1899 and 1900. The books are substantially gotten up, bound in strong paper, contain an average of 120 pages each, and are printed in type that is easily read. We hope to sell many thousands of these books and have ordered a first edition that we expect will be exhausted by Christmas. Do you not want one or more of these books? You may remit in stamps. The following are the books by name:

Vol. 1. School Stories from The American Boy.
Vol. 2 Hunting Stories from The American Boy
Vol. 3. War Stories from The American Boy.
Vol. 4. A Boy in the American Congress and Other Stories, by the Editor of The American Boy.
Vol. 5. Turning Points in a Boy's Life, by the Editor of The American Boy.
Vol. 6. Stories Out of My Own Life, by the Editor of The American Boy.
Vol. 7. The Boy Photographer, in the nature of hints to the amateur photographer.

Address THE SPRAGUE PUBLISHING CO., Detroit, Mich.

Bound Volumes of The American Boy

We have for sale 100 copies of *The American Boy* bound handsomely in cloth with title in gilt, including all the numbers of *The American Boy* from November, 1905, to October, 1906, inclusive—the twelve months that make up Volume Seven. Don't you want to make a Christmas present of this big book, containing, as it does, nearly 400 pages, each page the size of a page of *The American Boy*, to some one of your boy friends? The price of the bound volume is $2 delivered. You will be surprised to see what a large, handsome book twelve numbers of *The American Boy* make.

BEGUN IN MAY

CHAPTER XV.

OFF FOR THE PENINSULA.

AS PREVIOUSLY mentioned, General McClellan, on taking charge of the Army of the Potomac and, later on, charge of the whole Federal forces, found affairs in Washington in a truly deplorable condition. The infantry numbered less than fifty thousand, the cavalry about a thousand, and the artillery less than seven hundred, with only thirty field pieces, many of them hardly fit for use. Added to these facts was the still more important one that officers and men were alike slack in military discipline, coming and going very much as suited their convenience.

This was all changed as rapidly as such a huge work could be performed. Officers were made to pass a regular examination to determine their fitness for their positions, men were drilled every day and had regular hours for doing things assigned to them, and each new command as it came in was made to feel that it must live up to the spirit as well as the letter of the military law. Whatever else may be said of General McClellan's fitness for the absolute leadership in a great campaign, the fact must forever remain that he was one of the best army organizers this country, or any other, has ever produced. Firm almost to the point of harshness, he was still a friend to all, and his men understood this so well that they would have followed him anywhere. To thousands he was "Little Mac," and for a long while the very idol of the army.

By February, 1862, General McClellan's forces were ready for an advance upon the Confederates. Over fifty thousand soldiers were stationed in and around Washington, below the city at Alexandria, above upon the Potomac, and at several places to watch the valley of the Shenandoah. Outside of these the great army numbered 158,000 men, of which not quite five thousand were regulars and all of the rest volunteers. By this it will be seen that in less than ten months the Northern states had converted over two hundred thousand men into trained soldiers who had previously been clerks, farmers, mechanics and followers of kindred occupations. During the same time the seceded states had turned out about half that number of soldiers from somewhat similar sources. This work was a wonder in itself and is well worth a moment's contemplation.

It had taken much valuable time to organize the Army of the Potomac, and now more time was lost in perfecting the details of the coming campaign. It was General McClellan's desire to strike "all along the line" at the same time, thus giving the Confederates no opportunity to rally from one point to another. The enemy was to be attacked not only in Virginia, but also in North and South Carolina, in Kentucky and in Tennessee. Had this plan been executed without delay, it is possible the war would have been of short duration. But delay after delay occurred at Washington, and meanwhile battle after battle took place elsewhere. At last, after numerous changes in the plan of campaign, it was decided between the administration and the general-in-chief that the army should be transported by boat to Fortress Monroe, at the extreme point of the Peninsula formed by the York and James Rivers, and then march up past Yorktown, and lay siege to Richmond, if the Confederate Capitol could not be taken in any other way. It was argued that, as the route from the water to Richmond was less than ninety-five miles in length, and as the troops would be perfectly fresh after their sea voyage, they ought to be able to make a steady movement forward, in which case Richmond might be taken with but little trouble.

The anticipated movement of the army was, of course, kept a secret from the public and the privates until the last moment. It was not until the middle of March that word came into camp that the Goreville Volunteers, now regularly attached to a regiment of Pennsylvania Volunteers, were to move two days later.

"Where are we going to move to?" questioned Louis, of Harry Bingham, who had brought the word from Captain Paulding's headquarters.

"We are to cross the Potomac, that's all I know," answered Harry.

"Perhaps we are to follow the rebels from Centerville," said Louis, for he had heard how the Confederate forces had left that vicinity.

"Maybe. We're going somewhere, that's certain."

It was a cool but clear day when the volunteers broke camp and struck out on a march which lasted the best part of ten hours. They went into camp in a sweet potato field, and by sunrise the day following were again on the tramp.

"I guess we are marching around for fun," laughed Harry Bingham. But he soon found out his mistake. That afternoon they reached Alexandria and here were waiting a whole host of vessels to receive them. The regiment to which the Goreville boys belonged was taken on a boat named the Boston Queen.

"Sure and they are going to send us south on a voyage of discovery," said one of the men. "I wonder if they'll land us at Charleston?"

"Charleston!" shrieked Jerry Rowe. "If they do that, we'll all be killed. Why, that is where they bombarded Fort Sumter."

"Never mind, Jerry, if you are killed, remember you died for your country when you didn't want to," put in Moses Blackwell, and a laugh went up, while Jerry groaned dismally.

The harbor was "a sight for to see," as one of the men said. Transports were there without number,

big and small, some filled to overflowing with soldiers, others waiting for their load of human freight. Here and there a band of music was playing and the stars and stripes were everywhere to be seen. The sight was an inspiring one, and Louis and Harry enjoyed it thoroughly.

"Creation, what a lot of us!" cried Harry Bingham. "Hang me if I don't believe half the men in the country have taken up arms."

"We are bound for Fortress Monroe," came the word, a bit later. "The rebels are congregating around Richmond, and we are to wipe 'em out!"

"Hurrah!" went up the cry. "On to Richmond, boys, and no turning back this time. Hurrah for Little Mac!"

"Besser ve valk to Richmond," said Hans Roddmann, one of the new members of the Goreville company. "Wen I come me ofer from Chermany I bes sick more as dree-quarters der dime. I ton't vonts me no more sickness like dot."

"Oh, this is only a little coast trip," said Harry Bingham, lightly—too lightly altogether, as he remembered later on. "We shan't hardly be out of sight of land."

"Vell, I ton't know." Hans Roddmann shook his head meditatively. "Put I vould besser been sick anyhow as let von of dem repel gunpoats come along und plow us up, hey?"

"You're right there, Hans," laughed Louis. "We'll have to keep a sharp watch out for the enemy. Although we are nearly a thousand strong, our rifles would prove a poor defense against a number of ten or twenty-pounders."

* * AND THEN, LOUIS STOPPED SHORT AGAIN, AND CLUTCHED HIS MUSKET TIGHTER

"Maybe de got some twenty ouder dirty pounders on poard dis ship," concluded Hans. Hans had been the village cobbler at Goreville and it had taken a good bit of talking upon Captain Paulding's part to get him to volunteer, and even then it had taken still more talking to get Mrs. Roddmann to consent to the enlistment. The woman was alone in the world, excepting for her husband, and it was only when Mr. Rockford had consented to take her in the house and give her work that she had granted her husband permission to leave at his country's call.

At last the time came to cast off the lines and start on the voyage down the Potomac River and Chesapeake Bay. A final hurrah went up as the Boston Queen swung clear of the dock.

"Good-bye, boys; meet me on the peninsula."

"What's the matter with meeting you at Richmond?" came back the reply.

"Just the thing. I'll make a date of it."

"All right; April first suit?"

"You klown, dot vos Abril fool's tay!" shouted Hans Roddmann, and then those on the boat and those left on the dock passed out of hearing of each other. Soon the voyage southward had began.

The day, which had promised fair, now turned cloudy and soon the Boston Queen was enveloped in one of the dense fogs for which this section of our sea coast is famous. Louis had thought to remain on deck, but now he was glad enough to seek the shelter of the cabin, already crowded to suffocation.

"Not much of a chance to bunk, boys," said Captain Paulding, as he passed among his men. "We'll have to make the best of it. One consolation, the trip won't last forever."

"How long will it last, captain?" queried Blackwell.

"Well, the trip is less than a hundred and fifty miles. We might make it in four days, if we had clear sailing. But we have two enemies to contend with—fog and rebel gunboats—" and the captain passed on.

By night the space on board of the transport had been divided among the different companies as evenly as possible, while the state rooms were reserved for the commanders from second lieutenants up. The Goreville Volunteers found themselves located in the front cabin, where there were six long benches and, as Blackwell declared, "as soft a floor of Georgia pine as could be found anywhere." Louis slept on that floor that same night, with his knapsack for a pillow, and found it anything but soft. Yet even that couch was infinitely better than some of those which he was glad enough to make his own later on.

"Ve vos all chickens in der chicken-coop, hey?" was the way Hans Roddmann expressed himself in the morning. "Blease somepotty fall oferpoard bis I stretch mineselluf!" And the room he required for the stretching process really made it look as if somebody would have to clear the deck.

"This is worse than the camp in Washington," began Jerry Rowe, but just then a shoe, thrown from the other end of the cabin, took him in the back of the neck and caused him to subside with a howl. The owner of the shoe came limping along with the other on a moment later, and when Jerry tried to argue with him, there was a regular pitched battle, in which a number of others joined, in the best of humor, although Jerry, who was at the bottom of the heap during a "pile on," did not see it exactly that way.

"Never mind, Jerry, have a cup of fresh chocolate," exclaimed Harry, a minute later, as the cook passed around with his wash-boiler, "all steaming hot," and again Jerry was disappointed for, as usual, it was black coffee, and particularly bitter at that. Louis was getting used to "hardtack" and coffee, but Jerry grumbled every time it was placed before him.

"I'm sick, tired, and disgusted with pork and beans and strong coffee and pilot bread," he would growl. "Why in the name of creation don't the government give us something else?"

"Never mind, Jerry; there's a sutler along and you can buy what you please from him," said one of the soldiers.

"Barker is a thief!" burst out the discontented one. "Why, he wanted to charge me a quarter for a measly four-cent pie and forty cents for a tiny pot of jam. If I patronized him, he'd draw every cent of my pay when the quartermaster turned up."

The following morning found the Boston Queen well down towards Chesapeake Bay. The fog was as thick as ever, but a wind had sprung up and this caused the ship to roll lazily from side to side as she moved southward. About noon Louis saw Harry drop upon a bench and catch his face in his hands.

"What's the matter, Harry, home-sick?" he asked, lightly.

"No, I'm not *home*-sick," was the short reply, and then Harry added, with a peculiar twitching of his mouth, "but I'm getting awfully sick otherwise."

"He vos sea-sick, py chiminatty!" roared out Hans Roddmann. "Now you vos see how *you* likes him, hey?"

"Oh, it's awful!" was all Harry could answer, and then he made a rush for the outer deck, closely followed by Jerry Rowe, who had been similarly attacked. An hour later Hans Roddmann had joined the pair, and during the remainder of the voyage the trio had plenty of company, for overloaded with men and baggage, the Boston Queen rolled dreadfully as she worked her way slowly along.

Twenty-four hours before they came in sight of Fortress Monroe the fog lifted, and soon after that came a good deal of a scare. Two strange vessels were seen approaching from the eastward and were at once put down as rebel cruisers or gunboats. At once the guns on board of the transport were gotten into readiness for firing and the soldiers were called to arms. In the meantime, the Boston Queen did all possible to increase her speed, in the hope of getting within the protection of the guns of the fortress before she could be run down or sunk.

The excitement lasted for two hours, and more than once the heart of many a soldier was in his throat. Many of the men could not swim and they knew that a single round shot, properly delivered, could put the Boston Queen at the bottom of the Atlantic.

Then came a hurrah from the mast-head, as those on the watch made out that the approaching vessels were friends and not enemies. The boats proved to be two transports which had in some way strayed from the fleet in the fog. They were flying signals to that effect, and soon after they joined in the rear of the vessels behind the Boston Queen, and again the passage to Fortress Monroe was resumed.

CHAPTER XVI.

THE LANDING—ON TO YORKTOWN.

"Well, here we are at last, Harry. Now for Richmond and the capturing of the Confederate Capitol."

It was Louis who spoke. The Goreville Volunteers, after landing at the government wharf at Fortress Monroe, had crossed the bridge leading to Hampton, marched through that semi-deserted and

forlorn looking town, and came to a halt on the highway leading to Yorktown.'

"We are on land, that's a fact," returned Harry Bingham. "But where is another question. What a desolate country!" he added, as his eyes swept a wide range of half-ploughed and neglected corn and tobacco fields. "Is this what we have come to conquer?"

"I was told we were only about eighteen miles from Yorktown," put in Moses Blackwell. "I am very curious to see that place, for, if you will remember, it was there that Lord Cornwallis of the British forces surrendered to Washington eighty years ago."

"That's so!" cried Louis, much interested. "My grandfather was in that war. And come to think of it, they say the breastworks Washington's troops threw up at that seige are still to be seen. I hope we catch sight of them," he added, after a pause, but never dreamt how useful some of those same old breastworks were to become to the Union troops during those stirring battles which made the peninsular campaign so famous in history.

Regiments of infantry, bands of cavalry, and divisions of artillery were everywhere as far as eye could reach, covering not only the roadway, but the fields beyond. The volunteers had fancied they had moved on far enough for that first day, but presently the orders came to move on and another half mile was covered, when the larger portion of their corps and another went into regular camp.

All of the boys in blue were in heavy marching orders, that is, carrying with them everything that belonged to each soldier, his gun, cartridge box, canteen, haversack, knapsack, great coat, blanket and private property, and a march of five or six miles under such conditions is exceedingly fatiguing. To be sure, the route step was given, and everybody marched very much as he pleased in consequence, but even so, when the order to halt came everybody was glad enough to throw down his load and rest himself upon it.

"Ven I march like dis I vos feel me like von pack-mule," remarked Hans Roddmann. "Dot load gits heavier und heavier bis it veighs apout a ton."

"I'm getting used to the load," answered Louis. "But it's no fun, Hans, that's a fact. But you must remember, we didn't enlist for the fun of the thing."

"Oh, no; put too much ist too much," and Hans went off shaking his head. He was extra tired, and suffering from a bunion, and the fact that it was his duty to play cook for the next week did not tend to put him into good humor.

"To the field on the right, boys," came the order from Captain Paulding, and the Goreville Volunteers hopped over a worm-fence located along the roadway. Two days later the fence had disappeared—chopped up for firewood. Firewood was not plentiful in the vicinity, and everything—fences, sheds and trees had to go for fuel. Only the log cabins and houses of the inhabitants were spared.

In going into camp, Louis soon learned that a regular rule was adopted. The four regiments forming a division were first placed in a large square, one regiment to each corner, or quarter, with the tent of the brigadier-general commanding in front of the whole. The grand square thus divided, each regiment was divided into divisions of two companies each, one company placed in a line behind the second company, the two about ten or fifteen yards apart, with each company divided from that next to it by about the same distance. When thus stationed, the soldiers were ordered to stack arms and unsling knapsacks, and then began the work of building up the tents in long rows behind the stacked guns, the officers' quarters being placed on a line with the others, but either on the outside of all or in the "cross streets" between companies.

Before starting out on the campaign each soldier had been supplied with a bit of strong canvas about five feet square, having on the edges rows of strong buttons and button-holes. Usually four of these pieces of canvas were buttoned together, making a sheet ten feet square. This square was now thrown over a ridgepole, sometimes a straight branch of a tree, sometimes a fence-rail and then again nothing but a musket with bayonet attached, the ridgepole held up at each end by a short post driven into the ground. Thus "hoisted," the canvas was stretched out as far as possible upon either side and pinned to the ground with sharpened sticks, after which a fifth patch of cloth was buttoned fast over the back end, when the "dog tent," as all the soldiers called them, was ready for occupancy. Under such a covering would sleep, closely huddled together, the five men who had contributed their patches of cloth. Sometimes a sixth man would join the crowd or mess, when the weather was cold, and then the "dog" would have a "front door."

"Gosh, this ain't no palace, is it?" queried Nathan Hornsby, who was one of the members of the mess to which Louis belonged. "It's all right enough in good weather, but creation help us if it storms."

"I wonder how long we'll stay here?" queried Louis.

"We'll have to stay until all of the troops come down from Alexandria, I suppose," said Harry, who also belonged to the mess, and who now sat on his knapsack in the shelter. "I heard somebody say that the last of the transports wouldn't be in for a week yet."

"If we stay here long the rebs will steal a march on us," put in Moses Blackwell, who was vainly trying to light some green tobacco picked up at a ruined storehouse on the route hither. "Of course, it's only natural they should fight like wildcats to keep us out of Richmond."

"I think myself some of the troops ought to be sent ahead, at least as far as Yorktown," said Louis. "That place ought to make a splendid base for supplies, being right along the York River, where our ships of war could cover it all the time."

"I reckon we're going to have lots o' fightin' afore we see the streets o' Richmond," ventured Bart Callings, who stood by. "We've got Yorktown to pass, an' it's full of rebels, an' Williamsburg, an' the Chickahominy River, where they'll make a stand as sure as eggs is eggs, and then comes a lot of swamp woods, an' I don't know what all—an' they'll have every hole an' corner o' it fortified, mark my words!"

"Oh, we'll get fighting enough," answered another. "The rebs are just as brave as we are, every bit, and we might as well understand it so, first as last."

"I go in for a dash," was the comment of a little wiry man named Fleck. "Start the army on a run for Richmond and let it stop at nothing, and the day will be ours in less than a week."

How long the discussion might have lasted, there is no telling, but just then came the cry: "Company B fall in for supper!" and every man sprang for his cup and dinner plate, for Company B in that regiment meant the Goreville Volunteers.

The cooking was done under a large tent at the end of the division grounds. Here, over a long fire built up of fence rails, tree branches, or any other fuel which came handy, hung a row of smoky kettles, one containing coffee, another soup, another fresh or salt meat, and so on, the diet varying but little from meal to meal and day to day. The men marched up in a row, from kettle to kettle, each getting his cup and plate filled and also his supply of pilot crackers, or "hard tack." This ended, the soldiers would return to their quarters, each crowd of five occupying a tent usually forming a mess of their own.

For over a week the Goreville Volunteers lay in the camp on the road not far from Big Bethel. During that time the weather remained fairly fine and, consequently, all were in the best of spirits, and even Jerry Rowe brightened up, although still grumbling because the fare was so plain and the war was not pushed so "it could be got done with and they could go home."

At last, early in April, came the order to move, "in heavy marching order," and once more the boys in that division found themselves on the way to Yorktown. In the meanwhile, another corps of the Army of the Potomac was pushing forward from Newport News Point, intending to clear the road up past a settlement called Lee's Mills, for it must be remembered that in advancing upon Richmond it was the intention of General McClellan to make a general advance from the York to the James up the peninsula. A glance at a map of this territory will aid my readers greatly in following the movements which ensue.

"Forward, march!" came the command, about the middle of the forenoon, a band ahead struck up the then popular Washington March, and off the columns moved, the men four abreast, every uniform carefully brushed up, each button polished, the bright red blankets carefully rolled, and each musket and bayonet glistening brightly in the morning light. It was a sight to inspire the most listless and Louis felt almost like singing, as he moved away on the long, swinging route step.

Twelve miles were covered that day, and early in the morning the march was again resumed. But now the sun failed to shine and soon there started a light rain which by noon settled into a steady downpour. Louis threw his cape over his head, and shielded himself as much as possible, but the elements could not be fought off, and an hour later he was wet almost to the skin.

"An umbrella wouldn't be a bad thing to have," Harry Bingham started in to say, when the report of a number of firearms cut him short. The sounds of the musketry came from ahead, and a moment later came the command to halt.

The army was still some two miles and a half from Yorktown when the advanced guard had come upon some formidable earthworks stretched across the road and well into the woods beyond. As a matter of fact, the Confederate defences were afterwards found to stretch directly across the peninsula, from in front of Yorktown, as described, to Southall's Landing. A sharp skirmish ensued between the advanced guard of the Union army and the Confederate outposts, and then the former fell back.

"Something is up," said Louis, when the orders finally came to go into camp. "And it's not a battle, either."

He was right. Instead of making another demonstration, all became quiet, saving from the direction of Lee's Mills, where the corps on the road from Newport News Point had also received a check. A regular camp was laid out and the boys in blue proceeded to make themselves as comfortable as the state of the weather permitted.

Early in the morning Benny Bruce, as bright and eager as ever, sounded the reveille, and the soldiers came tumbling out of their tents to listen to a few words from Captain Paulding.

"This regiment is to march to the front, to do picket duty for twenty-four hours, from sunset to sunset. I wish all the men to remember that we are now in the very heart of the enemy's country, and that each man must do his full duty. There must be no shirking from work, no nodding on post. Remember, a picket found asleep on his post is liable to be shot for his offense. Company will get ready to march in fifteen minutes."

"Hurrah, we're going to the front at last!" cried Louis. "I'm glad of it," and he started to pack up with all possible haste. Soon they were on the march, Benny beating his drum louder than ever, until stopped by a general order to keep quiet, as they were now within easy hearing distance of the Confederates.

At the time the sun set, although there was no telling when that was by looking at the sky, for it still rained, Louis found himself on picket duty for almost the first time in his life. He had often stood guard, but picket duty was different, for now it was positively known that the enemy was just ahead. He had been stationed close to the edge of a woods and was given a beat of twenty feet, ending on the right at a big oak and on the left at a sideroad running into the Yorktown highway. Next to him, at the other side of the oak, Harry was stationed, while Callings covered the road. The reserves, or companies sent forward to aid the pickets, if needed, lay in a hollow some distant back, and with these were several cavalrymen detailed for any messenger service which might be deemed necessary.

Up and down his short walk tramped the young Union soldier, his gun loaded and his eyes and ears on the alert for anything which might appear in the least suspicious in the uneven field beyond the woods. He felt that he was now placed upon his mettle, and resolved that nothing should happen which might be put down to the enemy's credit.

Two hours went by, long hours to the youth, for the short beat soon became a wearisome one, and the pickets had been cautioned not to speak to one another unless it became necessary. Stopping now and then, he could hear Harry tramping up and down, and occasionally came a murmur from the roadway, as Callings forgot himself and started to hum some well-known tune.

And then, Louis stopped short again and clutched his musket tighter. What was that out in the field, moving slowly along beside a large, rough rock? With his heart standing fairly still, he dashed the rain from his eyebrows and took a step forward. Beyond a doubt it was the form of a man.

CHAPTER XVII.

THE CAPTURE OF A SPY.

For the instant, after making his important discovery, Louis knew not what to do. That the fellow who was advancing so cautiously was an enemy there could be no doubt. That being so, why was the Confederate taking so much pains in the rain and darkness to enter the Union lines?

There could be but one answer to this question. He must be a spy, bent upon some secret and important mission.

As the truth forced itself home to the young Union soldier's mind, he took a step in the direction of the roadway, feeling that the eyes of the man by the rock were upon him and that if he knew he was discovered it might prove a case of "who shot first" as to who remained alive to tell the story afterward. He must not show his hand until in a position to use his gun with quickness and accuracy.

Turning from the roadway, he walked slowly back toward the big oak. As he did this he noted that the man had shifted his position and was now some six feet closer to the woods, where a low fringe of brush stuck up, and where the rain had formed a pool of shallow water extending a distance of several yards.

Unionist and Confederate were now less than fifty feet apart, and the rain was coming down furiously upon both. Two steps more and Louis was close to the shelter of the tree. He listened intently. The man by the bushes made no sound; Harry's footsteps were some distance away. Something had attracted his attention at the other end of his beat and he remained there.

It must be acknowledged that Louis's heart now beat like a trip-hammer. He felt it his duty to challenge the man, and, if his answer was not satisfactory, and he tried to escape, to shoot him on the spot. On the other hand, he knew that a single word from his lips might be the signal for a shot from the unknown, who would then make a rush for the woods on the opposite side of the little clearing. He was not certain, but he imagined he saw the gleam of a pistol in the right hand of the fellow as he turned from the rock.

Stepping behind the tree for an instant, Louis examined his gun, to see that all was in perfect order for firing. He shuddered as he tried the trigger. In a moment more he might be taking a human life.

Again he stepped forth, but partly behind a bush in front of the oak. He opened his lips to shout out the word halt! when he made a most startling discovery.

The man had disappeared.

In vain he strained his eyes, in this direction, that direction, and beyond. It was useless. The fellow was not at the rock, not on the ground near the pool, nor was he at the fringe of brush to which he had turned. He was as completely gone as though the earth had opened and swallowed him up.

Louis was dumbstruck. What in the world had become of the man? He clutched his gun in nervous perplexity. Had the man made a silent but rapid rush and passed the line? No, such a thing was impossible. He must still be in front.

The young soldier heard Harry returning now and resolved on a new course of action. Waiting for his friend to reach the oak, he caught him by the arm and clapped his hand over his mouth.

"Harry, listen, but don't make any noise," he whispered into the other's ear. "There is a man out there, near the pool. I saw him crawling along a moment ago, but he has now disappeared. Tell the next guard to you, and I'll tell Callings, and we'll round him up."

Harry understood and nodded. Then struck by a sudden idea, he exclaimed aloud: "I ain't got any tobacco. Ask Callings for his plug."

"And you ask Risby," answered Louis, catching the cue, and speaking just as loudly, and then they separated, but each kept an eye on the vicinity of the oak, that the man who had disappeared might not try to break through the picket guard at that point.

"A reb, eh?" whispered Callings, when Louis had called him up. "All right, I'll help you. Wait till I've called the next man to overlook the road. Send the word back, too, Louis; it's ag'in orders to try to do too much without letting the officer of the guard know."

In a moment Louis had glided back and given the necessary order. Then he, Harry, Callings, and Risby moved forward in a semi-circle. They had scarcely advanced five yards, when Callings found himself sinking into a half choked-up rifle-pit.

"Hi! hi! here's the rascal!" he yelled. "Down

with that pistol, you rebel, or I'll finish you in short order."

"Hang the luck!" came in a growl from the bottom of the hole. "Git off of my back, you confounded Yank!"

"I will, when you surrender, Grayback! Throw up that pistol."

By this time not only Louis and Harry, but also some others were at the edge of the hole, which was several feet in diameter and overgrown with grass and weeds. Down at the bottom the water was over a foot deep, and in this a man was crouching, wet to the skin and covered with mud. Callings had landed directly upon the fellow's back with his heavy boots, and it was small wonder the victim yelled with pain.

"This yere is the wust luck I ever struck," muttered the captured one, as with very bad grace he surrendered his pistol, of the old-fashion "hoss" variety and nearly two feet long. "Let me git outer the hole before I sink clear outer sight."

Callings sprang up and a few feet back. Then he and Louis covered the man with their guns, but this was not necessary, for the chap was thoroughly cowed. It was soon found that the clay at the bottom of the hole held him fast, and Harry and Risby had to haul him forth by main strength.

By this time the cry, "Corporal of the guard! Number seven! A prisoner!" had gone down the line, and the corporal was hurrying forward to picket number seven, which was Louis. He was followed by a detachment of others, who marched the prisoner to the guard tent. Louis, relieved from duty by another soldier, following on behind.

When surveyed by the lantern hanging to the rear post of the guard tent, the captured one presented anything but a prepossessing appearance. He was a tall, lank individual, with sallow complexion, high cheek bones, and tangled beard and hair. His tattered clothing hung upon him as garments hang upon a scarecrow. In his left cheek was a large quid of tobacco, which he chewed upon with great vigor, as if to thereby keep up his fading courage. Long and earnestly Louis gazed at the face, wondering if he had not seen the man before.

"Your name?" was the first question put to the stranger.

"My name?" answered the prisoner, slowly. "Er—Tom Johnson."

"Brother to General Johnson, I suppose?" sneered the corporal, satisfied the man was not telling the truth.

"No, sir; I ain't no relation to that measly rebel."

"Well, Johnson, where do you belong?"

"Belong to the Second Maryland Volunteers, Company B."

"Captain's name, please?"

"Captain—er Thompson."

"First cousin to Johnson, I suppose?"

"No, sir; no relation."

"That's too bad. When did you leave your regiment?"

"Right after leaving Fortress Munroe. I wanted to call on an uncle of mine living up around yere, an' the cap'n let me go."

"Why did you try to crawl through the lines?"

"Didn't have no countersign."

"What was the countersign the day you left?"

"It was—" the prisoner pretended to think. "Hang the luck! I've forgot wot it wuz, corporal, upon my honoh."

"When you were off did you see anything of the rebels?"

"Not much, I didn't. I give 'em the biggist go-by I could."

"Supposing we search you? Have you any objections?"

"'Tain't gentlemanly, corporal."

"Oh, yes it is; under certain circumstances."

"But I've gin yer my name an' regiment," pleaded the prisoner, who seemed to be alarmed over the possibility of a search. "Yer moight ez well let me find my quarters."

"You've put your foot into it, my man. The regiment you mentioned is not with us, but is stationed somewhere up in Maryland, in the vicinity of Baltimore."

At this announcement the lower jaw of the prisoner dropped visibly, and he forgot to go on with the chewing process.

"Well—er—we cum down—our company, I mean," he stammered. "It was a mistake, but our company is yere—I'll take my oath to that."

"I'll give you the benefit of the doubt—after I've searched you. Stivers, take off his coat and vest and make him remove his boots. Number Seven, what is it?"

"Can I speak to the prisoner, sir?" asked Louis, who felt he was on the verge of a discovery. "I think I know him and can make him reveal himself," he added, in a whisper.

"Go ahead," answered the corporal, briefly. The other officers had been called away to general headquarters and he was, consequently, in sole charge.

"I want to ask you how you left Sam Jacks, and Hogwell, and the rest," said Louis, aloud, and as he spoke he eyed the prisoner narrowly.

"By gum!" was the ejaculation, and the man fell back a step. Then, by the light of the smoking lantern he surveyed Louis closer. "Ef it hain't the chap we wuz arfter at Lee Run!" he continued, before considering his words.

"Exactly!" burst from the young soldier's lips. "I thought I knew you. Corporal, he is a rebel, and worse."

"What do you mean by worse?"

"He is a thief. He and a gang of others once robbed me of my watch and money. It was up near Deems, and I was trying to get through Maryland to my home in Pennsylvania. Afterwards I met some of the same crowd at Lee Run, and they tried to injure me there."

"It ain't so!" roared the prisoner. "I don't know Sam Jacks, nor Hogwell, nor Ross, nor none of 'em."

"You remember the names right enough," returned Louis, coldly. "And you will note that you add Ross's name, which I didn't mention." He turned to the corporal. "Ross was another of the crowd."

"We'll search him," was the short answer. The work commenced at once. Slipped into one of the man's boots was a slip of paper, which, on being unfolded, was found to be a Confederate pass, signed by General Longstreet. There was also another paper, which the corporal perused with even deeper interest.

"A spy!" he murmured. He turned to Louis. "Your name?"

"Louis Rockford, sir."

The corporal made a note of it. Then Louis was sent back to his regiment, and the spy was taken to general headquarters. Here it was at last ascertained that his name was Caleb Fox. It was surmised that he had been sent over to learn whether the Unionists contemplated an attack, or if they thought of settling down to a siege. He would speak but little, and was placed under heavy guard until some of the higher officers could question him further.

"That's a feather in your cap, Louis!" cried Harry, as they were eating breakfast the next morning. "You'll hear from headquarters about it sooner or later, see if you don't."

"It's odd that we should capture one of Sam Jacks's crowd," mused Louis. "Doesn't it seem to prove that a good part of the rebels who were up around Manasses have moved down here?"

"If they ain't down here now they will be pretty soon," put in Moses Blackwell. "You can bet they won't give up their main stronghold without the toughest kind of a struggle."

"One thing is certain," continued Harry. "This man won't bother you any more."

"Do you think they'll shoot him?" said Louis, with a shudder.

"Of course they'll shoot him. It's the fate of any spy that is captured."

"I shouldn't like to have his blood on my head, Harry."

"He brought his fate on himself, Louis—you had nothing to do with that. He knew just what to expect when he left the rebel breastworks in the rain and darkness and tried to worm his way over here. And more than that, the fact that he had his big pistol ready for use, shows he was prepared to sell his liberty dearly, if given half a chance. If you had advanced upon him openly and alone he would have shot you down and run for it, as sure as fate."

That afternoon Louis was called up before the general of the corps, who questioned him closely. Then the prisoner was brought in, and Louis for the first time learned his name. As Louis went out, he passed close to Caleb Fox, who scowled at him viciously and whispered into his ear:

"You skunk! I'll git squar—ef I live."

To this Louis made no answer. But the words haunted his mind for a long time. The day was destined to come when he would remember them even more vividly.

CHAPTER VIII.

A BAND OF "WARRIORS."

"THERE WILL be four of us to begin with, Ananias and Elias and you and I," explained Noah. "And every one of us can get five fellows to join."

"I don't know about it, Noah," replied Caleb dubiously. "We can—"

"Of course we can," interrupted Noah quickly.

"What will your father say about it?"

"We won't say anything to him. I don't believe he'll care, anyway. You heard what he said tonight?"

"Yes, I heard him. But there's a sight of difference between having the tea struck by lightning and setting fire to it ourselves."

"No difference in the end. It's burned up either way, isn't it?"

"That may all be," responded Caleb, still not entirely convinced. "But I am afraid of trouble. Don't you think it would be better to speak to your father about it first? He doesn't like the tea being here any better than you and I do."

"Oh, I don't want to bother him with it," said Noah lightly. "He has enough to worry about without this. Besides, he won't know that we did it, anyway."

"Yes, he will. Everybody'll know it. There will be a crowd there inside of five minutes if we have a bonfire. I believe if there was a fire right out in the middle of Delaware bay at midnight there'd be a crowd around it before it was fairly started."

"That's all right, Cale," laughed Noah. "I think there would be a crowd on hand, too. But we shan't mind a crowd you see, and the bigger it is the better it will be for us."

"I don't see how it will be. Somebody will be sure to know us."

"No, they won't."

"I don't see how you'll help it."

"Because they won't be able to tell one fellow from another."

"Why, Noah, it'll be as light as day. That tea will burn like old hay and there'll be a blaze that will light up the whole town."

"That's just what we want!" said Noah eagerly. "But the light won't make any difference. Nobody'll know us even if it is as light as day."

"Why not?"

"Because we'll all be dressed up as Indians, that's why."

"'Indians!'" exclaimed Caleb, leaning forward as he spoke and peering excitedly at his friend. "'Indians!' What do you mean?"

"Just what I say. Didn't the Boston men disguise themselves that way? Of course they did, and we can do it, too! Anthony Wayne would do it if he was in our place, Cale, and if he was here you wouldn't draw back a step, you know you wouldn't."

"I don't know what Anthony Wayne would do."

"Well, I do. It would be just the kind of a trick he'd like. And I tell you, Cale, we've just got to do something. The idea of the Grayhound bringing that cargo right in here under our noses! And then think of what Tom Hull has been doing, and Elnathan Todd, too! You heard what my father said and what that man, who's come all the way from Philadelphia just to find out if it was true the sloop had dared to run up the Cohansey and bring her cargo here, said, too; didn't you?"

"Yes, I heard them," replied Caleb, who was now beginning to share in the excitement of his cousin. "How do you propose to do it, Noah?"

"Why, it'll be as easy as running aground in the bay with a lubber at the helm. Tomorrow morning you and I will see Elias and Ananias the first thing we do, and we'll make out a list of the fellows we want to go in with us. Of course we'll have to be careful, for we don't want anyone to join that we can't depend upon. We'll have some one keep watch all day at the Elmer house, to see that no one carries the stuff away, though I'm not very much afraid of that in the daytime—"

"Perhaps they'll get it out of the house tonight, Noah," broke in Caleb, who by this time was as eager for the project as his cousin.

"I've thought of that," responded Noah, "and I think I'll go down there pretty soon myself, and keep a lookout on the old place. But first I'll go on and explain what my plan is. Tomorrow morning, as I said, we'll see Elias and Ananias the first thing and decide on the fellows we want. I'm inclined to think we don't want any one but boys, and those that we know, too, to go in with us. Then we'll appoint different ones of us to see these fellows and tell them what we're going to do. They'll have to get up their disguises during the day and then we'll decide where we are to meet and just what every one is to do. See, Cale?"

"Yes, I see."

"Then I think I'll get up now and go down to the

Elmer house and keep a watch on the place. I think everybody in our house is asleep by this time."

"I'll go with you, Noah!" exclaimed Caleb quickly as he sprang out of bed.

"No, Cale. You stay right here. One can do all that's to be done, and there isn't any use in your going. I'll be back here before anybody is up and you'll be all the better for a good night's sleep. Tomorrow night you may not get very much, you know."

As Noah insisted upon going alone, his cousin agreed to remain where he then was, although he was eager to share the vigil. In a brief time Noah crept noiselessly out of the house and Caleb again sought his bed. It was long, however, before sleep came to the excited boy. Several times he was confident that he heard the returning steps of Noah on the gravel walk in front of the house, but every time he found that he was deceived. The long hours passed slowly for the waiting Caleb, but at last he fell asleep and was not even awakened by the stealthy return of Noah, who crept into the room and hastily climbed into his high "four poster" bed just as the dawn began to appear in the eastern sky.

When Caleb at last awoke it was broad daylight and he could see that his cousin was in the other bed. Hastily dressing, he did not disturb Noah, although he was eager to learn what the results of his vigil had been, and quietly descending the stairs he ate his breakfast with the family, and was not a little relieved when his aunt explained Mr. Dare's absence from the table by saying that he had unexpectedly departed for Philadelphia and might not return to Greenwich until the following day.

The absence of Mr. Dare was somehow a relief to Caleb and as Noah's mother gently said that "Noah was tired" and that "she would not disturb him"—a declaration she would have been less likely to make had the young gentleman's father been present—he departed from the house as soon as he had eaten his breakfast and hastened to the old Elmer house.

Not a person was to be seen near the place when Caleb arrived. The shutters were all closed and there was nothing to indicate that the house was not deserted. Caleb walked up and down the street several times and then returned to his cousin's house, where he discovered Noah seated before the breakfast table. Mrs. Dare, however, was also in the dining room, personally attending to the wants of her boy, who winked solemnly at Caleb as his mother repeatedly expressed her sympathy for him because "he must be tired or he never would have slept so late in the morning." Caleb looked out of the window and laughed, for he was well aware that if Mr. Dare had been at home one sharp call from the foot of the stairway would have banished all of Noah's "weariness" and caused the lad promptly to respond to the summons.

It was not until Noah had finished his breakfast and the two boys had withdrawn to the barn that Caleb was able to satisfy his curiosity.

"Noah, did you see any one? Did you find anything wrong?" he demanded eagerly.

"Not a thing. There wasn't a soul that came near the place all night."

"That's good. Now, what shall we do next?"

"Get Elias and Ananias."

"I'll go and get them," said Caleb quickly. "You're tired. Your mother says you are, and I reckon she knows."

"My mother is a good woman," responded Noah, soberly. "All right, Cale; you go for the boys and I'll rest up here. Come back just as soon as you can, for we'll have plenty to do today."

Caleb at once departed on his errand and fortunately finding each of the two boys he was seeking at home, he speedily returned with them and rejoined Noah, who was found "resting" on the hay beneath the rafters of the barn.

Apparently completely restored Noah hastily arose as his friends appeared and briefly explained his project to them. Startled as both Elias and Ananias were by the plan, it was not long before they were sharing in Noah's enthusiasm and declared themselves ready for the task. A list of their friends upon whom they might rely was carefully made and then the boys separated, each to explain to the list which had been assigned him what the project was to be. Every one was to be pledged to secrecy and was to provide his own disguise, and at three o'clock that afternoon all were to assemble in the woods near the "swimming hole" in the Cohansey, where final arrangements for the night were to be made.

At the appointed time and place every one was present and after a full discussion it was agreed that they should assemble at eight o'clock that evening at Noah's barn and then together advance upon the Elmer house.

Promptly at the hour agreed upon all the boys were on hand, bringing their disguises in bundles which were carried under their arms. There was manifest a feeling of tense excitement and the boys were unusually subdued and quiet as they donned their somewhat startling garbs. Noah, who was the natural leader of the band, quietly gave his directions and frequently made suggestions concerning some changes that to him seemed desirable in the dress of his companions.

At last all declared themselves to be ready, and the dim light of the lantern revealed an assembly that was weird and startling. There were twenty in the band, some with the feather head-dress of the Delawares, some with false scalps into which long feathers had been thrust, while the face of every one was stained a dark red, and brilliant-hued daubs of war paint had been smeared upon cheeks chins, and foreheads. Long leggings also adorned the person of every warrior, and the disguise was declared to be complete when two of the "warriors" were led to the line and expressed their inability to declare who the most of their disguised companions were.

There was a brief delay while Noah selected two of the band, who were to take positions in the street, one above and one below the Elmer house, those who were to heap the chests together on the open ground in front of the house where the bonfire was to be made, and every other member of the party was to assist in bringing forth the tea from the cellar where it had been stored and carry it swiftly to the common pile on the vacant lot.

At last, when every direction had been given, Noah declared the time for action had arrived and quickly the boys fled from the barn and together began to run swiftly toward the Elmer house.

CHAPTER IX.

A BLAZING PILE.

The excitement of the band as it proceeded up the quiet street was intense, although not a word was spoken as the boys followed Noah Dare, who was marching at the head of the line. If any one had misgivings, he endeavored to quiet them by persuading himself that he was doing no more than the men at Boston and Annapolis had already done. The destruction of property which the project involved was justified by the fact that by the expressed sentiments of all the colonies the tea never should have been brought to America, and the very fact that it had been stored secretly in a place where precautions had been taken to frighten any chance visitors, was of itself sufficient to indicate that the owners

were aware of the questionable character of their operations.

The more immediate problem of the young "warriors," however, was that of avoiding all interruption until the bonfire they were planning to make had been accomplished. Accordingly they moved swiftly along the street and not a soul had been seen when the band arrived in front of the house which was to be their destination. Then a halt was made, and at a word from Noah the two guards quickly took the positions to which they had been assigned. It was Noah himself who then mounted the steps and attempted to open the front door. He discovered that it was securely barred and that some other means of entrance must be obtained.

"Come on, Cale," he called eagerly in a low voice. "We'll have to get in by one of the windows."

Caleb quickly responded to the call and as the two boys darted around a corner of the house, he said, "This is almost like housebreaking, Noah."

"Too late to stop for that," replied Noah curtly. "We must have that tea now. Here, give me a lift and I'll try this window."

Caleb at once stooped and grasping his cousin by the knee lifted him until Noah was easily able to test the window from which one of the shutters was blown back. The sash at first resisted his efforts to raise it, but by shaking it sharply he was able to remove the stick which had been placed as a brace, and in a moment he had clambered into the room and dropped upon the floor.

"Go around to the front, Cale, and tell the boys I'll open the door for them," he whispered, and then noiselessly dropped the window into its place and withdrew from the sight of his cousin.

Without delay, Caleb ran swiftly back to rejoin his waiting comrades and just as he ran up the steps of the piazza the door before him was opened and Noah himself appeared.

"Now, boys," began the leader quietly, "every one of you knows just what he has to do, so take your places and we'll begin."

Instantly the boys responded and a line was formed reaching across the street to the lot where the chests were to be placed in a pile. To Noah and Caleb had been assigned the task of entering the cellar and bringing the chests up to that part of the line which extended into the house. A candle had been brought by the leader and this was at once lighted and so placed that its light enabled the boys in the cellar to see about them.

"You stand on the cellar steps, Cale," suggested Noah, "and I'll toss the chests up to you and you can pass them on to Elias, who'll be the first of the line. "He'll stand right at the head of the stairs."

The leader's suggestion was at once acted upon and the work was begun. As fast as Noah passed the chests to Caleb his cousin in turn passed them to Elias, and in this manner there was very little confusion in the work. Not a word was spoken as the boys, all intensely excited now, busied themselves in the task. The chests were comparatively light and the well organized plan by which they were to be taken from the cellar worked admirably.

The guards that had been stationed in the street did not once call during the transferring, and when an hour had elapsed the entire work had been accomplished.

When Noah appeared from the cellar his face was streaming with perspiration but his manner was apparently as calm as if what he had been doing had not in any way violated the law of the land.

"Go out into the street, boys, and wait for me in front of the house. I'll bar the front door and come out through the window. We must leave everything in the house just as we found it."

"Except the tea," suggested Elias dryly.

"Yes, except the tea," said Noah.

As soon as the boys had departed Noah quickly closed and barred the door and then returned to the window, extinguished the light of the candle and slipped to the ground, carefully closing the window behind him. He then ran across the street to the spot where he could see his assembled comrades, and as he joined them, he said:

"'So far, so good,' boys. Come on now and we'll—"

"Hssh!" whispered one of the warriors. "There comes Ananias."

Instantly all became silent and turned to watch their companion, who could be seen running swiftly to join them.

"What is it? What's wrong, Ananias?" demanded Noah quickly.

"There's somebody coming! There he is, right over there, now!" replied Ananias, as excited as his friends.

"Who is it?" said Noah.

"I don't know. There's only one. Shall we drive him away or wait to see if he notices us, first?" responded Ananias.

The boys were all motionless and as they were standing close to the trees they were hoping that the approaching man would pass without observing them. Every eye was fixed upon the man on the opposite side of the street, and the excitement among the watching boys became more intense when the man stopped directly in front of the Elmer house and at first seemed to be about to go up the steps.

"See who it is?" whispered Caleb to Noah, clutching his cousin by the arm as he spoke.

"Yes. It's Elnathan Todd."

Neither spoke again for a moment as all the boys excitedly waited to perceive what the young Quaker would do. It was later than people ordinarily appeared upon the streets of Greenwich and the presence of Elnathan at such a time was consequently the more mysterious. To the consternation of the band Elnathan now turned about and stood peering first up and then down the wide street and just as the boys began to hope that they were to escape his notice the young Quaker spied them.

Startled by the sight he at first seemed to be about to run from the place, but in a moment, apparently thinking better of his plan, he boldly advanced directly across the street and approached the place where the boys were standing.

"Sch! Don't run! Stay right where you are! Don't say a word! Let me do the talking," whispered Noah to his fellows, and then turning sharply he found himself face to face with Elnathan Todd.

The young Quaker was plainly startled as he became aware of the numbers and the garb of the band before him, and apparently he was hesitating as to whether or not it was wise for him to remain there. He glanced nervously up the street, but still did not offer to flee. For a moment no one spoke and then Elnathan said sharply, "Will thee tell me what this means?"

"How-ow-ow-ow-ow!" began Noah suddenly, and instantly the shout was taken up by his comrades. "How-ow-ow-ow-ow-ow-ow!" yelled the boys together, some of them at the same time brandishing the tomahawks they had brought with them and advancing upon the young Quaker. Plainly Elnathan was startled by the unexpected outburst, but he did not retreat from his position.

"I know not what foolishness this is," he said, his voice trembling in spite of his evident attempt to conceal his alarm.

"How-ow-ow-ow-ow-ow!" responded the warriors threateningly.

"I will say to thee one thing," said Elnathan sturdily facing the warrior who was nearest him, "I know that whatever may be the folly or the wickedness thou art plotting, that Noah Dare and Ananias Smalley are in this mischief. There is never a deed of naughtiness done in Greenwich that those two are not concerned in it."

"How-ow-ow-ow-ow-ow!" yelled the warriors, although from one or two there came sounds strongly resembling a snicker.

"What is that yonder?" demanded Elnathan suddenly as in the dim light he perceived the great heap

of the chests of tea. As the young Quaker spoke he turned as if he was about to approach the pile. But as if by one purpose the band instantly began to press upon him and the principle of non-resistance apparently reasserted itself with great vigor, for bestowing one glance of terror upon the threatening actions of the "warriors" he abruptly turned and fled down the street in the direction from which he had come, followed by a wild whoop of derision from the entire band.

Hastily turning to his companions, Noah said, "Come on, boys! We haven't a minute to lose! Elnathan will be back here before we know it, and he won't be alone, either!"

Obediently the whole company ran swiftly to the place where the chests had been piled. There were no directions given now, and none was required, for flint and tinder were quickly produced and in several places at the same time a fire was kindled in the heap. No one knew just who were engaged in this duty nor did any one in the excitement stop to inquire. In a moment the entire mass was in flames and the purpose for which the young warriors had come had been accomplished.

"Hadn't we better leave now, Noah?" whispered Caleb to his cousin.

"No. We might as well be 'hanged for sheep as for lambs.' Besides, we don't want to let the fire scatter any."

"Do you think Elnathan did really know you?"

"I don't know and I don't care," answered Noah recklessly. Then in a louder voice he turned to his comrades and said. "We'll have a war dance. Join hands, all you fellows, and we'll have a ring here."

Instantly the boys obeyed and though the fire was too large to permit of their encircling it, they formed a ring at one side and with wild whoops and yells began their dance. In a moment Noah began to sing and his comrades instantly joined in the song which at the time was popular throughout the colonies:

"Then join hand in hand, brave Americans all,
By uniting we stand, by dividing we fall;
In so righteous a cause let us hope to succeed,
For Heaven approves of each generous deed.
In freedom we're born, and in freedom we'll live;
Our purses are ready,
Steady, friends, steady,
Not as slaves, but as freemen our money we'll give."

Faster and faster still danced the excited "warriors," and louder grew the wild song.

"Another verse, Noah," called some one, and instantly the leader began again, the boys all joining with a louder response.

"All ages shall speak with amaze and applause
Of the courage we'll show in support of our laws;
To die we can bear—but to serve we disdain,
For shame is to freemen more dreadful——"

Suddenly the song was hushed and the startled boys were gazing at the cause of the interruption, which had appeared in the street immediately behind them.

CHAPTER X.

AFTER THE FIRE.

Running swiftly toward the blazing pile came Elnathan Todd and by his side was Thomas Hull, the latter wheezing and puffing from the violence of his exertions and the excitement under which he was laboring. The sight of the two approaching men had been sufficient to check for the moment the wild dance of the "warriors," and the entire band stood silent and motionless as the boys waited for the blast which they were confident would be forthcoming.

"You rascals! You villains!" shouted Thomas Hull as he stopped in front of the band and shook his fist at the assemblage. "What does this mean? You shall pay dearly for this, every one of you! I know you! I know every one of you! Give me your names this instant!"

"There isn't any use in giving you our names," said one of the "warriors," "for you know already who we are." The voice of the speaker sounded very like that of Elias Bacon, but as the disguise was still worn it was difficult even for the excited man to distinguish one of the band from his fellows.

"You broke into my house!" shouted the infuriated man.

"Who did, Mr. Hull?"

"All of you! Every one of you!"

"You are mistaken, Mr. Hull. Only four of us have been inside the house this night," responded another of the "braves" and this time the voice strongly resembled that of Noah Dare.

"You burned all the tea!" again roared the man.

"Was the tea yours, Mr. Hull?" inquired the "warrior" who had last spoken.

"It doesn't make any difference whose it was!" shouted Thomas Hull, now almost beside himself with rage. "You have destroyed property! You have broken into a house! You have—you have——" The man's voice seemed to fail him and he shook both fists at the band in a manner that appeared to delight every member. A shout of derision greeted the response which one of the warriors made as he said, "You are right, Mr. Hull! We have! We have!"

"S-s-s-h!" warned one of the band. "Don't be disrespectful, boys. Here come some more. Look at them! They're coming from every direction!"

For a moment no one spoke and even Thomas Hull and his young Quaker companion turned to perceive who the newcomers were. Across the vacant lots, from up the street, as well as from the opposite direction, men and boys and even a few women could be seen running swiftly toward the blazing tea. The excitement could be plainly discovered on the faces of the approaching people as they came within the circle of light, and in a moment the leader of the band again broke into the song which had been interrupted by the approach of Thomas Hull and Elnathan Todd. Wildly dancing and flinging their arms about as they once more began to leap and shout, the words of the stirring song only added to the excitement.

"This bumper I crown for our sovereign's health,
And this for Britannia's glory and wealth;
That wealth and that glory immortal may be,
If she is but just and we are but free.
In freedom we're born and in freedom we'll live,
Our purses are ready,
Steady, friends, steady,
Not as *slaves* but as *freemen* our money we'll give."

"You'll give your money, and mine, too!" shouted Thomas Hull as there came a momentary break in the song at the end of the stanza.

"You know us, don't you, Mr. Hull?" called one of the band derisively.

"Yes, I do. I know every one of you!"

"Who are we?"

For an instant Thomas Hull turned to Elnathan, and the young Quaker could be plainly seen as he replied to the evident query of his companion. Then once more angrily facing the band, the man said:

"Noah Dare, Caleb Davis, Ananias Smalley, Elias ——" A loud shout interrupted the recital and the "warriors," who again had ceased dancing, stood facing the little assembly and together shouted: "Whose tea is this? Whose tea is this? Whose tea is this?"

As only a loud laugh from the assembly greeted the query, the boys varied their question and again demanded as they shouted together: "Whose tea was this? Whose tea was this? Whose tea was this?"

"It doesn't make any difference whose it was!" shouted Thomas Hull as now, furious with anger, he faced the assembly. "This is an outrage! These lawless persons have destroyed property of the value of many pounds! They have broken into my house——"

"Burn the Tory's house, too!" interrupted some one in the assembly. "'Twould serve him right! Hiding his tea in his own house!"

"Hi Hi-i-i-i!" shouted some of the "warriors" in response to the suggestion, and a rush toward the house across the street was begun. It was checked, however, by the energetic words and actions of the one who appeared to be the leader of the "Indians," and the alarm of Thomas Hull, which under other circumstances might have been amusing, was speedily relieved.

Some of the boys who had been drawn with their elders to the spot where the alarm of fire had first been given were now manifesting their own intention to share in the excitement, and were beginning to cast stones into the burning mass and scatter the glowing embers. Their attempts were promptly checked by the actions of the "warriors" themselves, who seized the culprits and cast them back within the encircling lines of the spectators, whose sympathies were all with the burners of the tea, if their jeers and cries were true manifestations of their feelings.

The shouting, dancing, and singing continued until the fire burned low, as it speedily did, and as if some perverse spirit animated the "warriors," not one fled from the field. Doubtless the friendly expressions of the assembled spectators encouraged them in their mad prank, and as Thomas Hull no longer shouted his protests, his silence was looked upon as the removal of the last vestige of opposition.

At last when the mass of tea chests had all been consumed and only the charred embers remained upon the ground, the "warriors" seized branches of trees and together advanced upon the smoking remains, and fiercely began to beat all about the place. In a brief time the last sparks of fire had been extinguished and the conflagration was ended.

The band of "warriors" then gathered together and turning to the spectators shouted in unison: "This is the way the man who dishonors the colony of the Jerseys and the village of Greenwich shall be treated! Long live the king! Death to the tea drinkers! Down with the Tories! How-ow-ow-ow-ow-ow-ow!"

With a final prolonged yell the "Indians" then turned and together ran swiftly up the street until they disappeared from the sight of the assembly.

On the outskirts of the village the band halted and Noah said: "Now, boys, the best thing for us to do is to scatter and make for our barn."

"Noah," inquired Caleb, "did you see your father there?"

"Where?" demaded Noah quickly. "No, I didn't see him. Where was he?"

"I'm quite sure I saw him in the front row just before we left. Didn't any of you see him?" Caleb demanded of his companions.

Not one of them, however, had perceived Mr. Dare in the assembly, and Noah said: "You must have been mistaken, Cale. My father has gone to Philadelphia."

"That doesn't mean that he can't come back, does it?" demanded Caleb. "Perhaps he wasn't there, though I was sure I saw him. What would he say to you, Noah, if he knew you had a hand in this?"

"What will Thomas Hull say? you'd better ask," spoke up Elias Bacon.

"We know already what he said," suggested Ananias dryly. The boys all laughed at their companion's demure words, but there was evident a feeling of uneasiness. Now that the prank had been performed and the excitement of the moment was gone a reaction had come in the feelings of the "warriors," and the possible consequences which were still to be faced were not to be ignored.

"Can't be helped now," declared Noah stoutly. "We've done it and it can't be undone. The only thing for us to do now is to see to it that Ananias doesn't talk too much——"

"You needn't be afraid of my talking," interrupted Ananias quickly. "It's what the other fellows will say that you need to look out for."

"Tom Hull, for example?" suggested one of the boys.

"Yes, and Elnathan more than any one else," declared Ananias.

"How would it do for us to scare the sneak? We might fix him so that he'd be glad to promise not to open his mouth," suggested Elias.

"Too late now. I don't believe Tom Hull will talk very much," declared Noah positively. "The less he says the better it will be for him. He saw how the men there at the fire took what he did say. No, fellows, the one thing for us to do now is just to do—nothing. If Ananias doesn't talk I don't believe there'll be anything said or done either after a day or two. Of course, for a little while the fire will be the talk of the town, but it won't burn much longer than the tea did if you don't feed it."

"Don't stand here any longer or Elnathan Todd will find us," suggested Elias.

"All right!" replied Noah. "Cale and I'll go ahead, and the rest of you better scatter so that you'll come by twos to our barn."

The two boys instantly turned into the pasture that was near and by a circuitous way arrived at the barn where the disguises had been donned. Then Noah quickly lighted the candles in the lantern he had left there and he and Caleb at once began to remove their savage garb.

In a brief time their companions appeared, coming by twos as Noah had suggested, and when he and his cousin were clothed in the garments in which they were wont to appear, not one of their comrades was missing. Every one declared that he had successfully avoided discovery and had neither seen any one nor been himself seen as he had fled across the lots.

In spite of Noah's words of caution, the boys were not able to dress in entire silence, and when someone would repeat the frequent query as to what was likely to be done by the authorities, there was someone to reply in unnecessary boldness that "nothing would be done and no one need be afraid." In spite of the declaration, however, there was a manifest feeling of anxiety among the boys; and when at last the door of the barn was opened and, after Noah had extinguished the light of the candle, they silently and stealthily departed for their homes, there was not one who was not more fearful than he was willing to acknowledge to his friends, and perhaps even to himself.

In silence, after they had watched the departure of their comrades, and then had carefully fastened the door of the barn, Noah and Caleb quietly walked to the kitchen door. To their surprise they discovered Mrs. Dare there, plainly awaiting their coming, and as soon as the boys entered she said quietly, "Your father is waiting for you and Caleb, Noah. He is in his library, and three men are with him."

"Who are they?" inquired Noah quickly.

"Mr. Thomas Hull and Elnathan Todd and his father."

(To be continued.)

The Boy Who Takes Pride in His Work

By J. L. HARBOUR

"DON'T THAT LOOK just fine?"

It was no vain conceit that made a certain boy say these words one day last summer. His blue eyes were shining with honest pride because of the perfectness and trimness of the small garden he had finished weeding and hoeing. Three days before the garden had been completely overrun with weeds and grass. Some of the grass had been of the variety called "wire-grass," and if you have ever tried to hoe out or pull up grass of this kind you know as well as that boy knew, that it is mighty hard grass to tackle. But this boy had tackled it with his teeth set and a determination to rid that garden of every spear of it, and it had disappeared root and branch. He was a small boy of French Canadian parentage whom the farmer with whom I was spending some weeks had hired for the summer, and only that day the farmer had said to me,

"I never saw a boy take so much pride in his work as Louis does. That boy will get along all right in the world. He is not only so very industrious, but he is so thorough. Everything I give him to do is done just as well as it is possible to do it. He never gives anything a lick and a promise."

Give me a boy noted for being industrious and who takes so much honest and manly pride in his work that nothing but perfection will suit him and I shall feel that I am safe in prophesying a successful future for that boy.

There is something fine and manly in the boy who takes pride in his work, who feels that it is a reflection on his character to be lazy and who likes to put an "A one" mark on all that he does.

I remember that I once happened to be near two boys who had each been given a certain task to do. I do not know how long they had been working on it, but presently I heard one of them say to the other,

"There, Joe, that will do. It looks good enough."

"No, it doesn't," the boy called Joe replied. "I'm not going to leave mine until it looks a good deal better than it looks now. I'm no slouch."

Good for Joe! The boy who sets out in life determined that he will not be a "slouch" is on the right track. Slouchy work will not pass muster in these days. If you have slouchy tendencies, boys, you'd better get rid of them just as soon as possible. Let a man acquire the reputation of being a "slouch" and he is a goner. No man wants a "slouch" around, and no man with a particle of honest, manly pride will be a person of that description. Pride in one's work, no matter what that work may be, is a tremendous help to success in life.

THE YOUNG BOOK AGENT

OR, FRANK HARDY'S ROAD TO SUCCESS

BEGUN IN JUNE

By HORATIO ALGER, JR.

Author of "Lost at Sea," "Nelson the Newsboy," "Out for Business," "Young Captain Jack," "Ragged Dick Series," Tattered Tom Series," Etc.

CHAPTER XV.

CAUGHT IN A STORM.

THE REMAINDER of the afternoon proved uneventful. Frank visited nine farm-houses, and succeeded in selling one more cattle and poultry book. He returned to the hotel at Fairport utterly tired out with his day's tramping.

"Only three sales to-day," was his mental comment. "That is not so good. My commissions amount to two dollars and a quarter, and my expenses will be a dollar and forty-five cents. That leaves a profit of just eighty cents. Well, that is better than nothing. I might have sold more if the houses weren't so far apart."

He found that the hotel keeper had assigned him to a small, but clean and comfortable room. Supper was plain, but substantial, and Frank ate all that was set before him.

"Traveling salesman, I suppose?" remarked the hotel man, when Frank joined him on the hotel stoop, where there were a row of armchairs for guests.

"I sell books," answered the young agent. "Maybe I can sell you some."

"No, I've got about all the books I want. Had any success?"

"I sold three books at three dollars each."

"That's pretty good."

"I might sell more if I could cover more ground."

"Why not hire a horse and bugy? I'll let you have one for two dollars a day."

"Thank you, but my business won't warrant the outlay. But I tell you what I wish I did have," continued Frank, suddenly.

"What is that?"

"A bicycle. The roads around here are pretty fair for wheeling."

"My boy has a wheel. Perhaps he'll rent you that."

"Where is he?"

"Down around the barn, I think."

Frank walked to the barn, and soon found Tom Grandon, the hotel keeper's son. He also saw the wheel, which was in the carriage shed.

"So you'd like to hire my wheel, eh?" said Tom. "I'm willing, if you'll promise to take good care of it."

"I'll do that. I have a wheel at home, but I didn't think to bring it."

"What will you give me for its use?"

"Twenty-five cents a day."

Make it fifty cents and I'll take you up."

"Let us split the price and make it a dollar for three days," went on Frank; and to this Tom Grandon agreed, and the bicycle was turned over to the young book agent. As tired as he was Frank tried the machine, to see that it was in running order, and to adjust the seat and the handle bars to suit him.

"Now I'll be able to visit twice as many places," he told himself.

The following day Frank started away early, with his case of books strapped over his shoulder. In the hotel office he had found a map of the county and had studied the roads carefully, and he had also asked about their condition.

It was a perfect day, and as he was a good wheelman he made rapid progress, so that he reached the first place at which he wished to stop by eight o'clock. He found the lady of the house in the garden cutting a bouquet.

"Books?" she said, in answer to his question. "Oh, dear, no, we have all the books we want. Why, there is a box of books in the garret which we wish to sell."

"What kind of books?" questioned the young agent, for he had heard that some old volumes were rare and valuable.

"Oh, all kinds. Do you buy?"

"I might—or I might make a list of what you have, and get you a price on them."

"Well, you can look at them," said the lady.

The garret was dark and dusty, but taking off his coat and collar, Frank went to work and sorted out the books, about a hundred in number. Many, he could readily see, were of small value, but others looked as if they might be worth considerable money. He made a list of the latter in a blank book he carried.

"What will you take for the lot?" he asked.

"Five dollars," was the reply.

"Will you hold them for one week for me?"

"Yes."

He took down her name and address. "If I don't want them I'll drop you a postal card," he added.

"Very well."

Jumping on the bicycle he pedaled to the next house. Had he walked the distance it would have taken him ten minutes or more. As it was, it took hardly any time at all. Here he met an old man, and after a good deal of talking took an order for one of the health books.

"One order anyway," he thought, grimly. "I won't be whitewashed to-day." He dreaded to put in a day without an order.

He obtained his dinner at another farmhouse. It was a scant meal and cost him twenty-five cents. The folks did not want to talk books, and were so disagreeable that he was glad to leave.

Up to four o'clock he visited sixteen additional places. Although he talked his best he could sell nothing. It was now beginning to cloud up and he knew a storm could not be far off.

"I suppose I ought to be geting back to the hotel," he said to himself. But he hated to think of going back with just one order.

Some distance ahead was the entrance to a very fine grounds. In the midst, between some beautiful trees, a new mansion had been erected. He wondered if he could sell any books there.

"Nothing like trying," he said, half aloud, and wheeled into the grounds with all speed. He left his bicycle under a carriage shed and then walked up the piazza steps and rang the bell.

Nobody answered his summons, and after waiting a few minutes; he rang again, this time as hard as he could. Still nobody came to the door.

"Perhaps they saw me coming and don't want to let me in," he mused.

While he was waiting a sudden gust of wind came up, followed by some big drops of rain. Then came more wind, and a sudden downpour that would have soaked him to the skin had he been out in it.

"Well, I am under cover anyway," he reasoned, and then he rang the bell once more. Still not a soul appeared.

Close at hand were several windows, and all of them were wide open. The wind blew the lace curtains furiously, and soon the rain began to beat into two roms, which Frank could see were handsomely furnished.

"I believe the folks must be out," he said, at last. "And they certainly won't want those windows open in such a storm as this." And then he began to close the openings from the outside. It was rather hard work, and he grew quite wet doing it. All told there were eight windows on the lower floor which were open and three upstairs, but the latter he could not, of course, reach.

Frank had all but two windows on the lower floor shut up when a carriage drove into the grounds at a furious rate. It contained a colored driver, a lady, a maid, and four children.

"Hi, dar, wot you doin'?" demanded the colored coachman.

"I'm closing the windows," answered Frank. "It's raining in."

The carriage came up to the piazza, and the lady and the children leaped out, followed by the maid. All stared at the young book agent inquiringly.

"Excuse me, madam," said Frank, touching his cap. "But I got here just as the storm started. I saw all the lower windows of your house open and thought nobody could be home."

"Where is Sarah?" demanded the lady. "I have seen nobody. I rang the bell several times."

The lady went up and rang the bell just as our hero had done.

"She must have gone out or else she is asleep. Marie, run around and try the back door," this to the maid.

"Ze back door ees locked," said the maid, on returning. "Sarah, she must be at ze next house, madam."

"I told her not to go away while we were on our little picnic. Have you a key, Marie?"

"I haf not, madam."

"I'll climb in a window, mamma," said one of the children, a boy of about seven.

"You can't unlock the door, Freddie."

"Shall I go in and unlock the door for you?" asked Frank, politely.

The lady of the mansion gave him a close look, and was evidently reassured by his gentlemanly appearance.

"If you will be so kind."

Without waiting further, Frank opened the nearest window again and stepped into the house. Then he hurried around to the front door, and threw it open. A fierce gust of wind tore through the mansion, and all who were on the piazza hurried inside.

"Excuse me while I look after the windows," said the lady. "Come, Marie, run to the top of the house, and close everything. The storm is growing very severe."

Frank took a seat in the hallway, and one of the little boys came up to him.

"We were on a picnic in the woods with mamma," said he. "We were just having a beautiful time when it began to rain, and John had to drive us home."

"You were lucky to get home so soon," answered Frank, pleasantly. "See how it is pouring."

"And, oh, how the wind is blowing!" put in one of the little girls. "I'm sure it will blow a tree down if it keeps up like that."

Frank heard a number of windows being shut, and then the lady of the place rejoined him, and invited him into the parlor.

"I left the house in charge of one of my servants," she explained. "I told her not to go away, but she has disobeyed me. She has a cousin living half a mile from here."

"She took a big risk to leave the house wide open," was the young book agent's comment.

"You are right. A thief might have looted the place from end to end. Even as it is, the rain has done quite some damage. I am very thankful to you that you shut down the windows as you did."

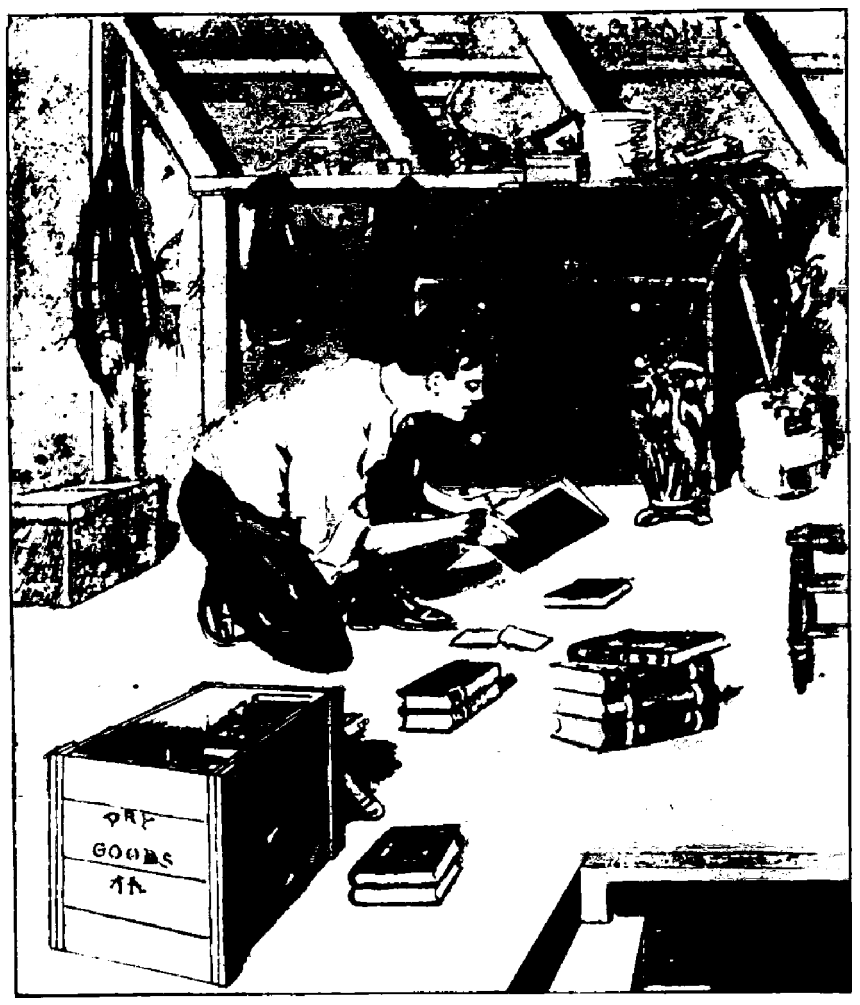
"You are welcome."

"Did you come here to see me, or just to get out of the storm?"

"I came to see you—or somebody living here. I am selling books."

"Oh! What sort of books?"

"I will show you," answered Frank.



FRANK WENT TO WORK AND SORTED OUT THE BOOKS

CHAPTER XVI.

AN IMPORTANT SALE.

Frank found Mrs. Carsdale a very nice lady with whom to deal. She was well educated and rich, and she took him to her library to show him the many volumes she possessed.

"You can see I already have the majority of authors represented in your famous set," said she. "If it were not so, I believe I would give you an order."

"You certainly have a nice collection of books here," was our hero's comment. "That set of Scott must have cost a good bit of money."

"A hundred and twenty dollars."

"I see you have some books here that are quite rare."

"Yes, I like some old books better than the new ones."

"I have a few old books to sell," went on Frank, thinking of the list he had made out earlier in the day.

"Indeed? What books are they?"

The young book agent got out the list, and read off the names of the volumes, with the authors, bindings, and dates of publication.

"What will you take for that volume of Dante you just mentioned?" asked Mrs. Carsdale.

"I haven't set a price on it. I'd like you to make an offer."

"Is it in good condition?"

"Quite fair. It is a bit dingy, and the back cover has some water spots," added our hero, who could recall the volume very well. "It looks about like this book," he went on, picking up one before him.

"If it is in as good condition as that book I'll give you twenty dollars for the volume."

At this answer Frank's heart gave a bound. Twenty dollars, and the other woman had offered him all the books in the garret for five dollars! Here was a chance for business truly.

"Is that the best you can do," he said, cautiously. "The book is quite rare, you know."

"Well, I might give you twenty-five dollars."

"I'll let you have it for that," answered the young book agent.

He remained at the mansion for an hour longer, during which the storm cleared away as rapidly as it had come.

"Thank you for giving me shelter," he said, on leaving. "I'll bring that book to-morrow or the day after."

"There is no especial hurry," answered Mrs. Carsdale. "And it is I must thank you for closing the windows."

As Frank wheeled down the muddy wagonway he met a woman who looked like a cook, coming towards the house. She was out of breath from rapid walking.

"Is Mrs. Carsdale home?" she demanded.

"Yes, long ago," was our hero's answer.

"Oh, pshaw!" came from the cook, and on she went towards the house.

"I guess she'll catch it," thought Frank, and he was right.

"Sarah, why did you go away?" demanded Mrs. Carsdale, as soon as the servant appeared.

"Please, ma'am, I had a—a toothache and I had to get some medicine for it from my cousin."

"This is the second time you have left the house without my permission."

"It shan't happen again, Mrs. Carsdale."

"You left all the windows open. If it hadn't been for an utter stranger who came up and shut them, many things in the house would have been ruined."

"Please, ma'am, the toothache was that dreadful I didn't know what I was doing," pleaded the cook.

"You have been drinking, too," continued the lady of the mansion, as she caught a whiff of the cook's breath.

"It's the toothache cure, ma'am."

"I warned you before about leaving, and about drinking, Sarah. Your month will be up next Wednesday. I think I'll get another cook."

"Oh, ma'am, don't say that! Give me just another chance."

"And if I do, will you promise to obey me after this?"

"I will that."

"Very well then. But if you disobey me once again it will be for the last time," answered Mrs. Carsdale.

Frank had expected to go direct to the hotel, but as it cleared off so nicely he decided to wheel down a side road and purchase the books the lady had offered him early in the day. The highway was rather heavy in spots, and twice he had to dismount to avoid large mud puddles, but with it all he considered traveling on the wheel much better than walking the distance.

"Back already," said the lady. "Have you decided to take those books?"

"Is five dollars the lowest price you will accept?" asked Frank, whose bump of business caution was developing rapidly.

"Yes, I told my husband about them and he said not to sell for a penny less than five dollars."

"Then I'll take them on one condition."

"What is that?"

"That your husband will deliver them for me to the hotel at Fairport. I can't carry them, and I haven't any horse and wagon."

"Very well; he can deliver them to-morrow, when he goes to town for feed. He'll go in the morning."

"That will be satisfactory. I will write out a bill of sale, and you can sign it."

For the purpose of having book orders signed in ink, Frank carried a stylographic pen with him, and soon he had the bill of sale written out in due form. In it he mentioned the most important volumes, and added, "and eighty-four others."

"Now please sign this and I'll pay you," he said, and handed over the money. The receipt was signed, and he placed it away carefully in his pocket. Then he said he would take three or four of the books with him.

"And your husband can leave the rest with the hotel keeper," he added.

When he returned to the hotel he had the precious volume of Dante and two other rare books in his possession. He placed them in his traveling bag and went to bed with a good deal of satisfaction.

"It seems to me, I'm getting along famously," was his thought. "Even if I can't sell any more of that lot of books I'll clear twenty dollars by the transaction."

The next morning was as bright and clear as ever, and, much to the satisfaction of the hotel keeper's son, the young book agent spent half an hour in cleaning and oiling the bicycle.

"You're the kind to rent a wheel to," said Tom Grandon.

"I like to have a bicycle look nice," answered our hero. "Besides, it runs easier if it's clean and well oiled."

"How are you making out?"

"Pretty fair."

"I don't think I'd care to sell books."

"And I shouldn't care to run a hotel," returned Frank. "It's a good thing everbody doesn't want to do the same thing."

By the middle of the forenoon Frank was at Mrs. Carsdale's residence once more. He carried the volume of Dante and also two others he thought she might wish to look over.

"This Dante is certainly just what you said it was," said the lady. "And I will pay you twenty-five dollars, as I promised."

"Here are two other books that may interest you," said Frank, and passed them over.

Mrs. Carsdale gave each a thorough examination.

"I do not think I can use them," she said, "but I know a friend of mine in Trenton who may buy both from you at a fair price. He collects just such books."

"Please give me his address."

"I will."

When Frank left the residence he was just twenty-five dollars richer than he had been. His high spirits made him put on an extra spurt, and his bicycle flashed over the road like a meteor.

"That is what I call doing business," he said to himself. "It beats the old feed store all to pieces. Won't the folks at home stare when they learn how I am getting along!"

The young book agent had his case of samples with him, and also some volumes to be delivered, and put in a full day delivering and collecting, and in trying to get new orders. But new business was slow, and by nightfall he found he had but one extra order for the cattle and poultry work to his credit.

"Never mind; I've got to take matters as they come," he said to himself. "The best of marksmen can't hit the bull's-eye every shot."

He found that the books he had bought had been delivered, and placed in a corner of the bedroom he occupied.

"Buying as well as selling, eh?" said the hotel keeper.

"I buy sometimes," answered our hero, cautiously.

"If you want any more old books, I've got a lot in the back office you can have cheap."

"Let me look at them to-morrow," answered Frank. "I'm too tired to do it to-night."

In the morning the hotel man took him into the office, and pointed to a row of volumes on a top shelf. All were covered with dust and cobwebs.

"Before I look at them I want to know what you want for them," said Frank.

"Make an offer."

"No; I prefer to have you set your own price."

"Then make it ten dollars."

"Why, I only paid five for all those other books."

"Is that so?"

"Yes; and here is the receipt."

"Hum! Then I'll let you have this lot for the same price."

"Make it three dollars and I'll see if I can use them."

The hotel keeper consented after some talking, and Frank dusted off the books, and began to examine them. The majority were of small value, but he saw several he fancied might bring in some money.

"I'll risk taking them," he said, at last. "I'll pay you now, and take them away when I take the others."

"All right, Hardy. But you can't leave them here too long, or I'll make you pay storage," returned the hotel keeper.

CHAPTER XVII.

A CURIOUS HAPPENING.

The following week was a busy one for the young book agent. He spent one day in collecting all the old books he had bought, and sent them to his home, where they were stored in a vacant bedroom, which was thus turned into what the family called "Frank's bookery." He also ordered the new books he wished.

"You are certainly doing remarkably well," was Mr. Hardy's comment, when Frank had told the story of his week's work. "I never dreamed you would do half as well."

"I don't suppose I'll do so well right along," answered the son. "But I'm going to do my best."

Mr. Hardy also had news to tell. Mr. Begoin, the lawyer, had called upon him, and a letter had been sent to the officials of the railroad company, notifying them that damages for the accident would be demanded. As a consequence, a lawyer in the employ of the railroad company had appeared.

"He was a very slick fellow," said Mr. Hardy. "He tried his best to get me to accept two hundred dollars in full for my claim. When he saw that I wouldn't take two hundred, he advanced to three hundred, and then to four hundred. He said I was very foolish not to accept four hundred."

"And what did you tell him, father?" questioned Frank.

"I told him, after he had talked for half an hour, that I meant to leave the matter entirely with my lawyer, Mr. Begoin."

"And what did he say to that?"

"He was much disturbed, and before he went wanted to know if I'd sign off my claim for five hundred dollars. He said if I sued the company they would fight to the bitter end."

"Do you think they will fight?"

"Perhaps; but Mr. Begoin says I have a perfectly clear case and need not be afraid of them."

"How much does he think you ought to have?"

"He says he will sue them for five thousand dollars. I don't think, though, that I'll get more than half that. But if I get only a thousand it will be better than accepting five hundred now."

"You are right, father. I'd let Mr. Begoin go ahead. He must know just what he is doing. What did he say about the Jabez Garrison affair?"

"He cannot help me much in that matter. Our only hope is to find Garrison, and make him give up whatever money he still possesses."

"Do you imagine he took much cash with him?"

"It's more than likely he took some. But you must remember he owes some large amounts. Those would have to be squared up before I could get back the amount of my bond."

"But wouldn't the claim of the benevolent order be a prior claim to ordinary business claims?"

"I think so, since that was actual cash entrusted to him."

"When do you expect to hear from Mr. Begoin again?"

"Not until he hears from the railroad company, or from Philadelphia."

Mr. Hardy could now hobble around the house with the aid of a cane, but it was thought best not to let him go beyond the porch and the back garden.

"I'll tell you what I'll do," he said to Frank. "I'll make out several lists of the books you have."

"Just make out one nice list, father, and that will be enough," returned our hero. "I am going to New York again before long and see some dealers in second-hand books. Perhaps I'll do as well buying up old books as in selling new books."

"Perhaps you can make more sales, Frank, if you'll agree to take old books in part payment."

"I've thought of that."

It rained for two days so hard that to attempt to go out and sell books was out of the question. Frank spent the time around the house, doing whatever came to hand. He also put his bicycle in prime condition, for in the future he intended to ride the wheel as much as possible, and thus save railroad and stage fares.

He received a very complimentary letter from Mr. Vincent, in which the publisher congratulated him on his success.

"You are undoubtedly cut out for this business," wrote Mr. Vincent. "Keep at it by all means, and some day you may become a publisher yourself—provided you don't come to the conclusion that you can make more money by selling alone."

As soon as it cleared off, Frank set out with a large package of books which were to be delivered. He also carried his order case, and a small valise, for he expected this time to remain away from home for some time.

"You are pretty well loaded down," said Mrs. Hardy, who was at the gate to see him off.

"He is a peddler with a pack," said Ruth. "But don't mind that, Frank, so long as you are making money."

"I don't mind it a bit," he answered, cheerfully, and then, with a wave of his hand, he started for Camperville, twenty-two miles distant.

He had three calls to make on the road, and at the last of the three he stopped for dinner. As he was entering the yard, he encountered a small-built, sallow-faced man coming away, valise in hand. The stranger had an air about him that was far from reassuring.

"I am so glad he has gone, ma," Frank heard a girl in the kitchen say.

"So am I glad, Emma. I wonder where the money went to?"

"I'm sure I don't know. We didn't take it, goodness knows."

"He was awfully angry."

So the talk ran on, and Frank soon gathered that the stranger had lost ten dollars while stopping at the house overnight.

"He almost acused us of stealing it," said Mrs. Farley, the lady of the place. "He said he had placed two five-dollar bills on the mantelshelf in his room, and now they were gone. We hunted everywhere, but couldn't find the money."

"What is he going to do about it?"

"Nothing—now. First, he asked where the constable lived, but at last he said if we wouldn't charge him anything for stopping here he wouldn't make any complaint. We didn't want the notoriety, so we let him go."

"Perhaps it was only a game to cheat you out of what was coming to you," suggested the young book agent.

"Oh, ma, maybe that's so," put in Emma.

"It might be," answered Mrs. Farley, doubtfully. "But I shouldn't want to be dragged into the court over the matter."

"He looked like a sharper to me," said Frank. "Still it is possible that he lost the money. Maybe it blew out of the window."

"We looked under the window and all over the dooryard."

All during the meal the strange affair was discussed, but without reaching a satisfactory conclusion. Frank had a health book to deliver, and after collecting for this, and settling for his meal, he went on his way.

About a mile down the road he came across the stranger once more. The fellow was seated on a bridge that crossed a small stream, and was munching an apple.

"You certainly don't look like an honest man to me," was our hero's mental comment. "I believe you've swindled Mrs. Farley out of her board money."

"Hullo there!" called out the man.

"Hullo!" returned Frank, briefly.

"How far is it to Camperville?"

"About two miles, I think," and now Frank came to a stop.

"What are you doing? Peddling?" went on the man in a hard, unpleasant voice.

"Hardly. I'm a book agent."

"Oh! Hard work, isn't it?"

"Rather hard; yes."

"I tried it once, but there wasn't enough money in it to suit me."

"What do you do?" asked our hero curiously.

"Me? Oh, I'm in half a dozen things. What's your name?"

"Frank Hardy. What's yours?"

"Gabe Flecker. I'm buying up butter on commission just now."

"For a New York house?"

"Yes—the Gasson & Flecker Company. Flecker is my uncle. Do you know anybody who has butter to sell?"

"No."

"We'll pay the best price," went on Gabe Flecker, handing out a card. "Tell your friends around here to write to us, and send us their butter on commission."

Frank slipped the card into his pocket and mounted his wheel again.

"Guess I'll have to get a wheel," said Gabe Flecker. "It's better than walking."

"You are right there," answered the young book agent, and in a moment more he was out of hearing.

Frank was more convinced than ever that the fellow was a sharper. His eyes had a look in them that could not be trusted.

"I'd not trust him with a single tub of butter," he told himself. "I don't believe he'd ever send a cent back for it. That company may be nothing but a fake concern." And in that latter surmise the young book agent hit the nail on the head. He was destined to meet Gabe Flecker again, and in a most unexpected manner.

(To be continued).

HAMILTON 22 CAL. RIFLE.

Look at the inside of the barrel of a "Take-Down" **Hamilton** Rifle and you will see the twist rifling is deeper than that of the ordinary gun. It is the depth, hardness and perfect accuracy of this twist rifling that makes

Every Hamilton a Sure Shot

This rifling is made by our new patent process, allowing us to give you a better 22 cal. rifle for less money than you would pay for any other 22-cal. rifle made. The **Hamilton** is a long shooter and hits hard. You can "land" badger, grouse, rabbits, squirrels, prairie hens, ground hogs, birds and other game.

The "Take-Down" **Hamilton** is made in **3 sizes, $1.50, $2.00, and $3.00.** The largest size weighs only 3½ lbs. The **Hamilton** is handsomely finished. It is absolutely safe for both men and boys. It is a quick-loader, has self-ejecting mechanism and takes all 22-cal. long or short cartridges. Every **Hamilton** is guaranteed perfect.

If your dealer hasn't the **Hamilton** in stock, send us your remittance and we will send you your gun by express. Send us your name and address for illustrated circular.

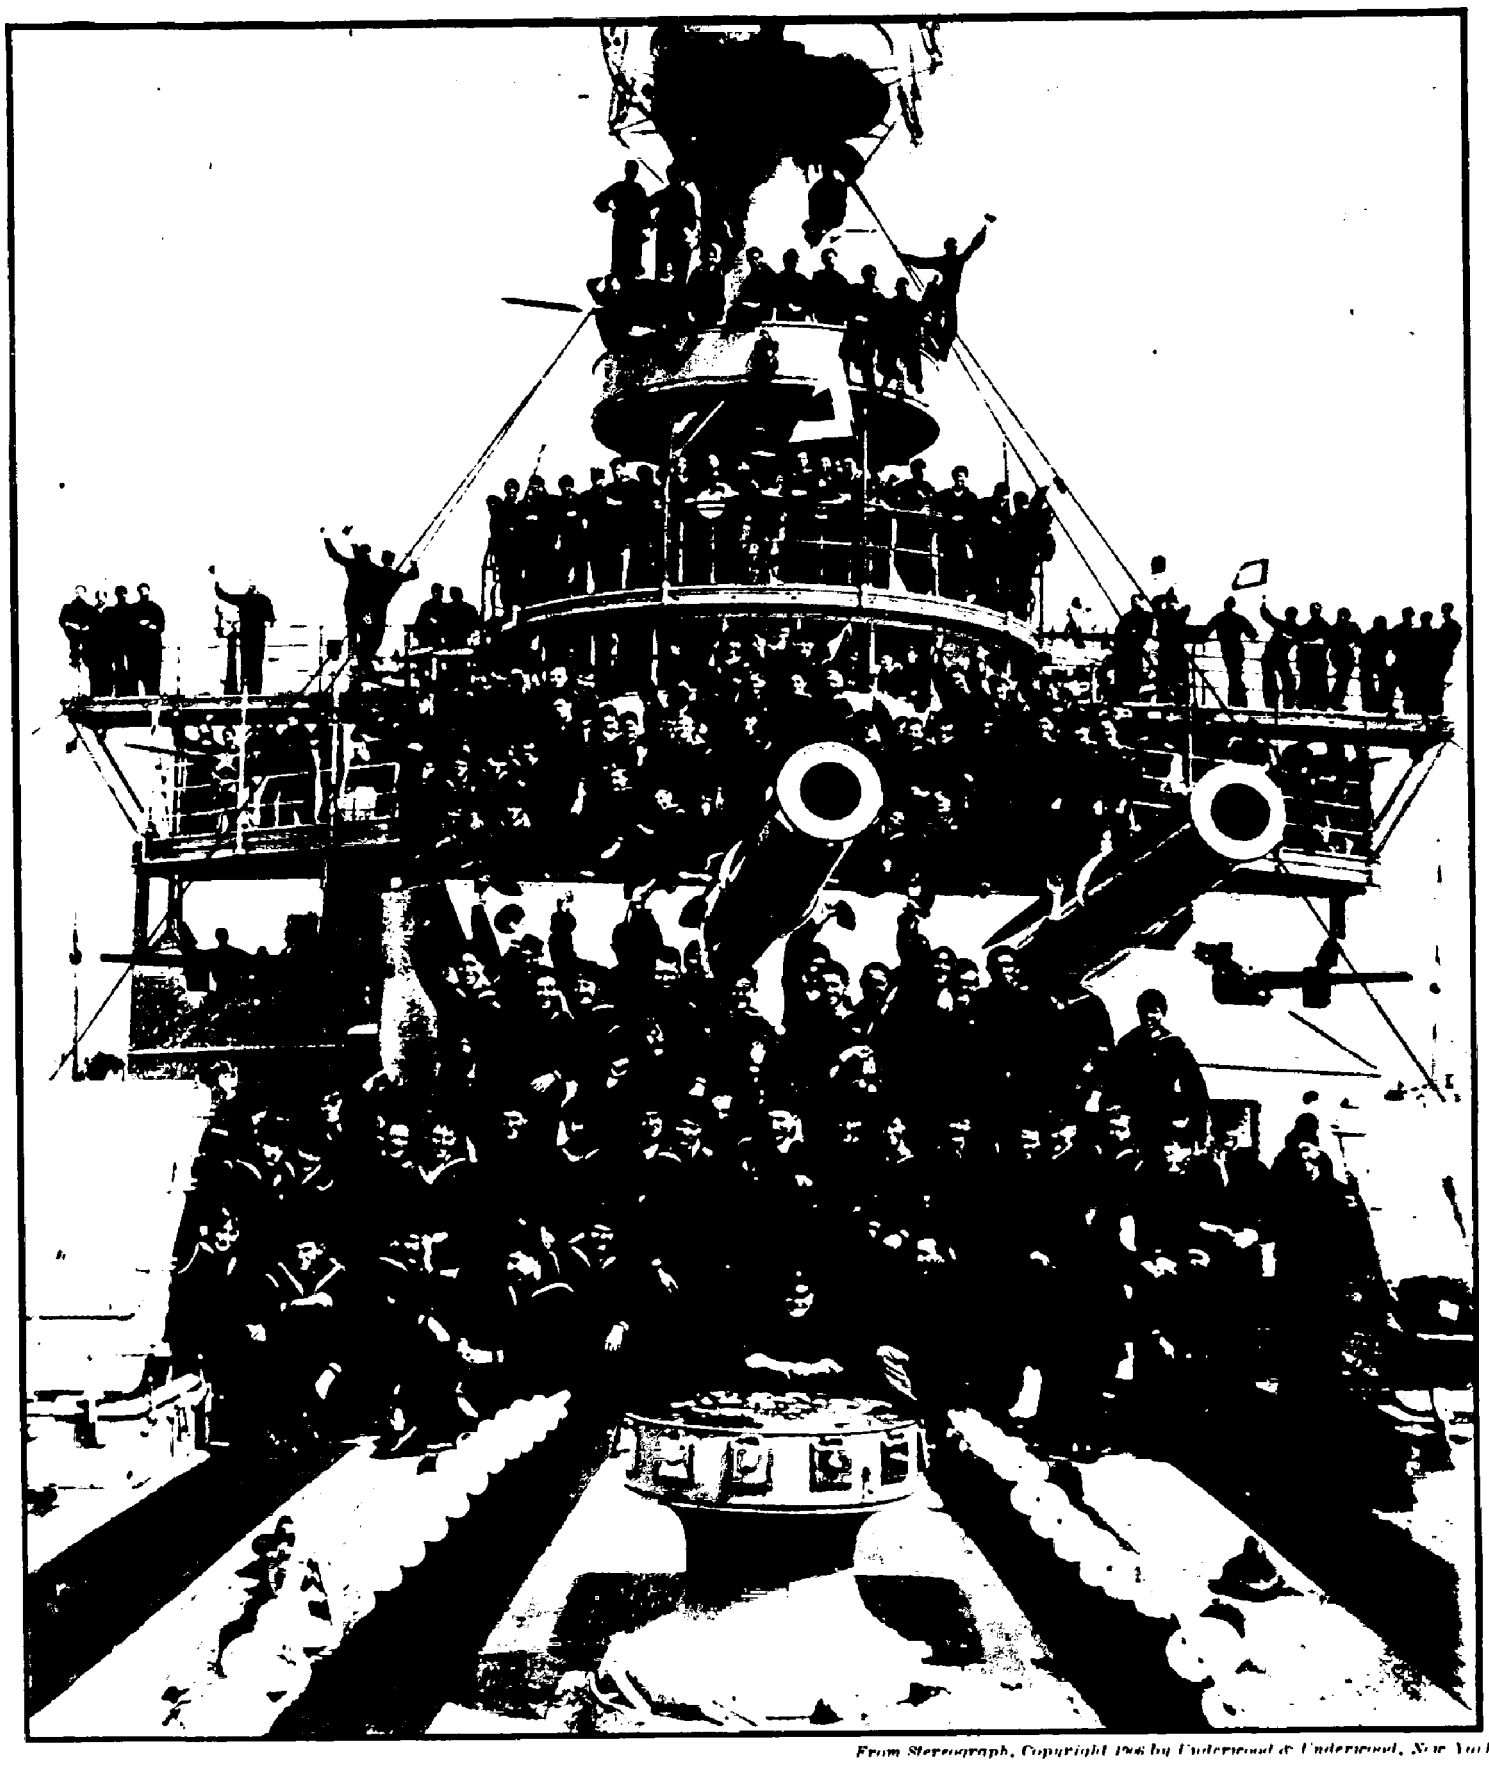
AN EARNEST APPEAL TO OUR READERS

At this time of the year the publishers of THE AMERICAN BOY are flooded with business. Everybody in the office has more than both hands full to do in taking care of new subscriptions and renewals that in the months of November, December, January, and February produce a very avalanche of work. Thousands of subscriptions expire within the next three months, while new subscriptions mounting up into the thousands come in the few weeks prior to Christmas. The result is that the machinery of the office is often clogged and delays follow. In order that you may be sure to receive your Christmas paper on time and that your renewal may come in before the heaviest work sets in, will all the boys whose subscriptions have run out within the last two or three months, or are about to run out, send in their renewals *at once?* Don't even wait to read this number of THE AMERICAN BOY before sending in your dollar. If all the boys whose subscriptions have expired recently, or will expire within the next thirty days, heed this request, it will save a large amount of worry and work, as well as expense, in our office, and it will insure their getting their Christmas papers on time, and make everybody feel good. Don't pass this request by as being intended for some one else. If your subscription should be renewed now, please attend to it. Call the matter to the attention of your elders, if they are to furnish the dollar, and they will appreciate the reason for our request, we are sure. We want to make THE AMERICAN BOY for the coming twelve months even better than it has been for the last twelve, and every one knows that it has within the year just past been a decided improvement on the years that went before. You can help with your dollar more than you know to make THE AMERICAN BOY successful from every standpoint, and that means to make it the best possible magazine for you.



From Stereograph, Copyright 1906 by Underwood & Underwood, New York

CREW AND GREAT 12 INCH GUNS (FORWARD TURRET) OF THE FORMIDABLE FIGHTER, U. S. BATTLESHIP MISSOURI

Working Their Way Through College

It would seem that there is little excuse for an American boy's fighting shy of trying to get a college education. A paper published in New Haven, the home of Yale College, says that the trolley roads in and about New Haven are being manned by college boys, who are finding in this sort of employment a way to earn money during the vacation. They are seeking employment as motormen and conductors, and are getting the jobs.

"There are hundreds of young men," says the paper, "who are struggling for a college education at New Haven with a determination that is simply marvelous. They room away off in the outskirts of the city, and employ every sort of a scheme to make money enough to keep them in school. Many of these boys never see home from the time they enter college until they have graduated. Others, living in some New England village, often hundreds of miles from New Haven, walk home in the spring and return by the same mode of conveyance in the fall. Yet these boys who are finding an education under such unfavorable circumstances are among the happiest students in the college. They are among the fellows who, in after life, will say of their college days, 'Those were the happiest days.'"

Brave Boys

The following is from the Sunday School Visitor:

Once at school two boys were called up after recess to give an account of themselves for fighting on the playground. One of them said the other got mad at him for accidentally hitting him with the bat, and that he called him a coward, and for that reason he was obliged to fight him.

The teacher punished both of the boys. The little talk he gave at that time made such an impression on the minds of some that they have never since forgotten it. The remembrance of what he said has enabled them, in many instances, to control their temper.

The teacher said: "Boys, the man or boy who can hear another call him a coward without getting mad or fighting is much braver than the one who resents it. It requires more courage to control one's self than to strike another. Suppose when you start home this afternoon you were to meet a mad dog in the road. Would it be braver or wiser to stand in the road and snap at the dog or to get out of the way? If a mad boy strikes you, you get mad and strike him unless you get out of his way, which is by far the better plan. Of course, the laws of God and man allow people to protect their own lives; but there is no more foolish sight in the world than two boys with their sleeves rolled up, each daring the other to hit the first lick unless it be the boy who is always looking for someone to call him a coward so he can have a fight. How would a boy look with a card pinned to his coat, and on the card this writing: 'I am a brave boy; if you call me a coward I will fight you.' Boys, if you would be men genuinely brave and courageous, learn to control yourselves."

"George Washington was no Sailor"

A Baltimore school teacher was telling one day of how often the instructor of "the young idea" is astonished by the quickness of wit exhibited by the pupil who is otherwise deficient.

One day, says this teacher, she had encountered such a degree of ignorance and mental obtuseness on the part of one of her boys that she became disheartened. So it was with considerable sarcasm that she said to the youngster:

"I wonder if you could tell me whether George Washington was a soldier or a sailor."

The kid grinned. "He was a soldier, all right," was his reply.

"How do you know?" asked the weary teacher.

"Because I seen a picture of him crossin' the Delaware," explained the boy. "Any sailor'd know enough not to stand up in a boat."

Mother's Advice

Andrew Carnegie is famous for the excellent advice that he gives to poor young men.

"In considerable fear," said a New York millionaire, "I once consulted Mr. Carnegie about a new venture. The business looked as if it ought to be profitable. There seemed to be a public need of it. Still there was some risk involved, and I was afraid.

"But Mr. Carnegie laughed at my fears.

"'If it is a good thing plunge in,' he said. 'Fear is old womanish. Fear is what keeps untold millions from making fortunes. When Benjamin Franklin thought of starting a paper in Philadelphia his mother, greatly alarmed, tried to dissuade him. She pointed out that there were already two newspapers in America.'"

The Man in the Boy

In the acorn is wrapped the forest,
In the little brook the sea;
The twig that will sway with the sparrow today
Is tomorrow's sturdy tree.
There is hope in a mother's joy,
Like a peach in its blossom furled,
And a noble boy, a gentle boy,
A manly boy, is king of the world.

The power that will never fail us
Is the soul of simple truth;
The oak that defies the stormiest skies
Was upright in its youth:
The beauty no time can destroy
In the pure young heart is furled;
And a worthy boy, a tender boy,
A faithful boy, is king of the world.

The cub of the royal lion
Is regal in its play;
The eaglet's pride is as fiery-eyed
As the old bird's bald and gray.
The nerve that heroes employ
In the child's young arm is furled,
And a gallant boy, a truthful boy,
A brave, pure boy, is king of the world.

—Anon.

FORMAL VISIT OF ADMIRAL EVANS AND OFFICERS TO PRESIDENT ROOSEVELT ON THE MAYFLOWER ON THE OCCASION OF THE REVIEW OF THE GREAT AMERICAN ARMADA. READING FROM LEFT TO RIGHT: ADMIRALS BRONSON, DAVIS, EVANS; PRIVATE SEC'Y LOEB; PRESIDENT ROOSEVELT; SEC'Y BONAPARTE

A Scenic Railway Built by Boys

The Boys' Athletic Club has its headquarters at the corner of Cherry and Lilac street in New Britain, Conn., and the charter members, of whom there are eight, have, under the leadership of Henry Swanson and Emil Anderson, constructed a scenic railway on the grounds. They have erected a ticket office, and a sign on this structure advertises the fact that three rides may be had for a cent. The boys contemplate increasing the length of the road and raising the rates, or rather limiting the number of rides for a cent, from three to two.

In the construction of both the railway and the car, the boys have displayed considerable mechanical ability. The rails are composed of 2x3's, and cost the boys eighteen cents apiece. These rails are laid on a steep incline toward the back yard, and are fastened together by cross ties composed of short pieces of wood. At one point the railway spans a gap of fully five feet, and a number of uprights driven in the ground support the aerial structure. The railway is one hundred and twenty-three feet in length and there is a sharp curve at the foot of the incline that is capable of producing thrills.

The car, which was designed and constructed by the boys, deserves a description, as it is skillfully made. It is composed of a body about 5 feet long and 18 inches wide, and is mounted on a pair of trucks. Each of the wheels is made of two solid pieces of wood, one about four inches larger in diameter than the other. These pieces are nailed together forming a car wheel with flange, and were sawed out by the boys with a scroll saw.

The members of the club range in age from eight to sixteen, and their efforts as mechanics does them great credit. Their names are as follows: Henry and Fred Swanson, David Modeen, Howard Bruemmer, Kenneth Relyea, Conrad Lomme, Emil Anderson and Gunner Bruzevig.

The car is registered as C 23.

An Enthusiastic Post Card Collector

Ray D. Boynton, Menasha, Wisconsin, has collected over 3,000 picture postcards, which he has nicely mounted in eighteen albums. He has, also, two pillows covered with leather postcards. His postcards are from all parts of the

United States, as well as from many foreign countries. They are made of wood, leather, aluminum, birch bark, glassene, delft, kodak, and cardboard. The young man is especially proud of his World's Fair series, representing the years 1893, 1898, 1901, 1904 and 1905.

This Will Interest You

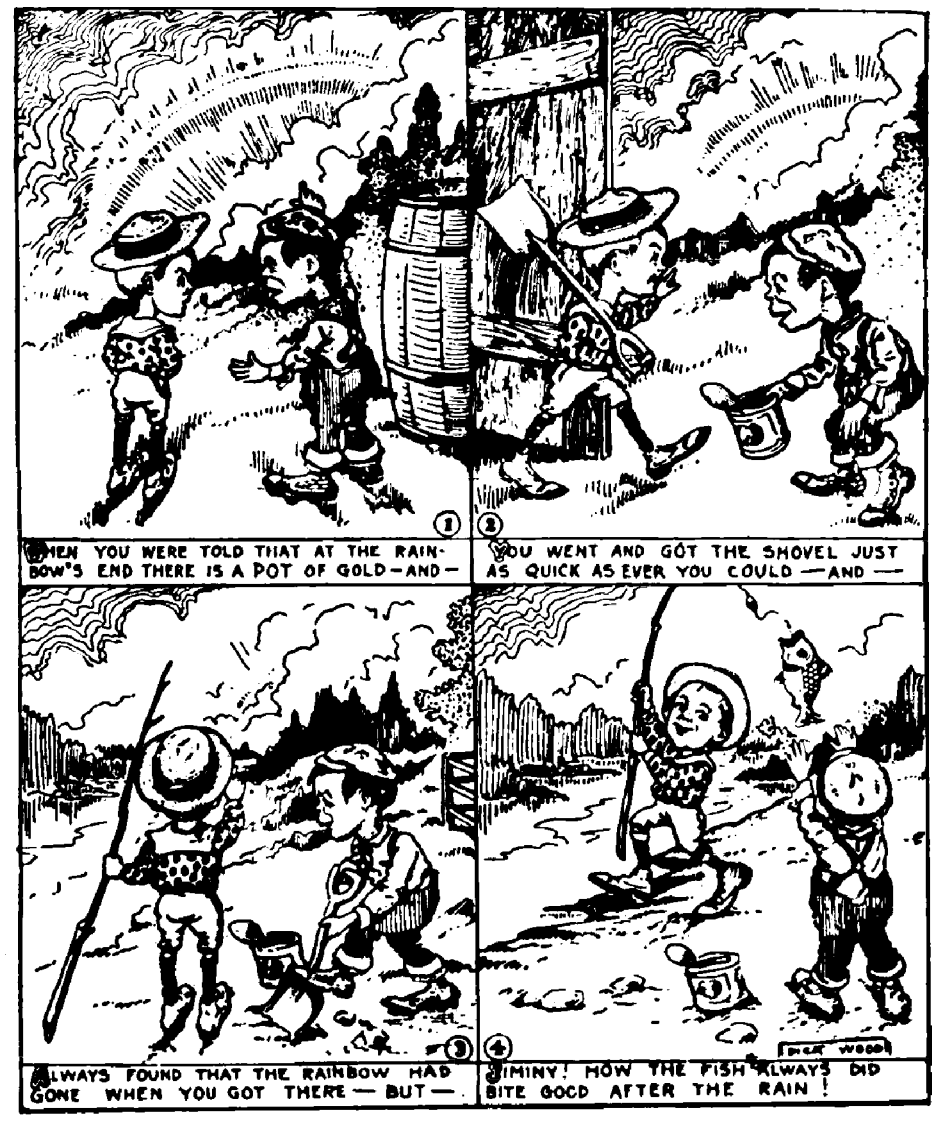
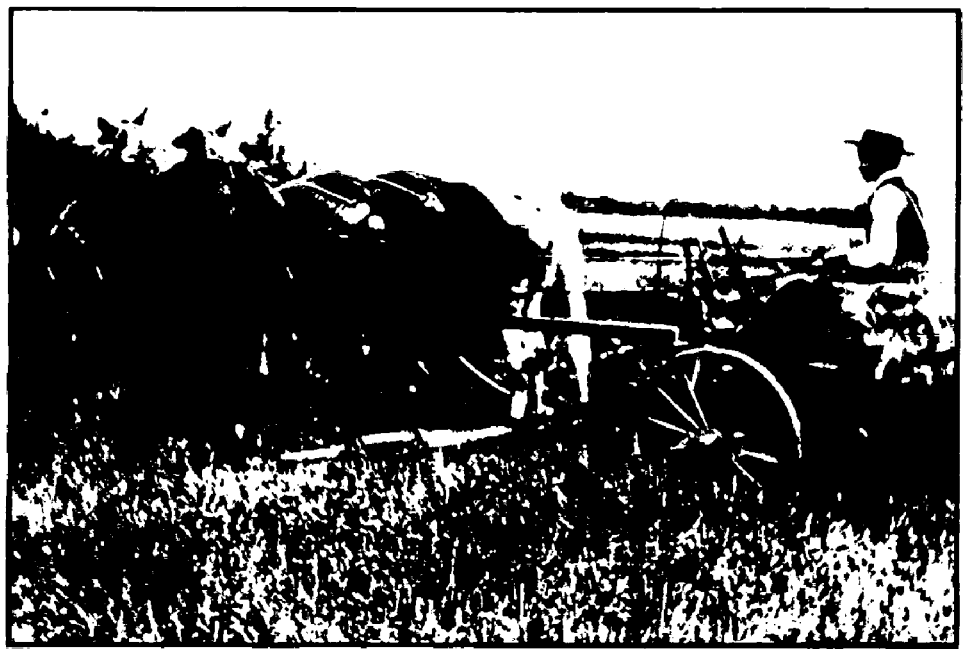
The Good Old Kid Days

They Were All Right, All Right.



A Champion Plow-Boy



HENRY SHOGER, A SEVENTEEN-YEAR-OLD LAD WINNING THE FIRST PRIZE IN THE MEN'S CLASS, WHEATLAND (ILL.) PLOWING MATCH

The foregoing picture represents Henry Shoger, a seventeen-year-old lad plowing in the men's class at the twenty-ninth annual match of the Wheatland Plowing Match Association, of Wheatland Township, Will County, Illinois, on Saturday, September 15 last. There were three other plowers, all men, in the same class, but young Shoger carried off the first prize of $15 cash. It was said that in all the plowing of the contest, in which were fourteen horse plows, gang and walking, and one steam plow that turned ten furrows at a sweep, the boy-plower scored the highest in the matter of high-class plowing which consists of these essentials:

Low back, slightly crowning, all trash covered.
Line of furrow.
Covering trash.
Furrow showing slight ridge and even from end to end.
Appearance of ends.
Uniformity of depth.
Uniformity of width.

The Wheatland Plowing Match Association, established nearly thirty years ago, has had a wonderful influence in all parts of this country. Hundreds of young men have graduated in the art and have gone to other states where they have set up and maintained the art of good plowing, which is the most important thing in farming. The association has awarded prizes amounting in the aggregate to over $3,000 besides a large number of gold medals, silver cups, and fine plowing machines. A large proportion of the contestants have been boys, some of them under seventeen years of age.

ANOTHER YOUNG PRIZEWINNER OF THE WHEATLAND PLOWING MATCH

A Young Editor of a Real Newspaper

Probably the youngest editor of a regularly published newspaper in the world is Herschel Miller, of the Boyd County (Neb.) News. He has two worthy aims in view in thus devoting his youthful energy to the newspaper business. One is to pay off the mortgage upon his mother's home, so that she and the other five children, all younger than himself, will be comfortably settled; the other is to save enough money to go off to school for two or three years and fit himself for a more responsible place in the newspaper world.

The story of young Herschel is one to put to shame many a youth who has started out in life with every advantage. For three years he has been the mainstay of the large family, and for the last year he has been its head, bearing the responsibility and burdens on his younger shoulders with a courage and devotion and cheerfulness that never lagged.

Herschel began his newspaper career when he was seven years old. His father was the owner and editor of the Sun, and the boy would come to the office and help whenever he had the opportunity. He soon became a proficient type setter, and gradually mastered the details of the work.

Three years ago the family was deprived of the father's help. The printing plant as well as the home was heavily mortgaged. Young Herschel stuck bravely to his task, and while one after another acted as editor of the Sun, he set most of the type and looked after the details of the office.

One year ago Herschel's uncle—also a newspaper publisher and editor—came to Lynch to help the struggling boy. The uncle remained for six months, giving the boy the benefit of his own experience. Last summer he left, and young Herschel assumed full charge of the publication.

He made good from the start. Almost immediately he changed the name from the Sun to the News. His mother helped all she could. The paper was enlarged and improved in many ways. Since that time it has never missed an edition, or been late. Every week the News makes its appearance.

Young Herschel gathers the news items, sets some of the type, solicits the advertisements, attends to the business details of the publication, and writes the editorials.

The Crazy Engineer

"I have thrown the throttle open, and am tearing down God's track;
I have thrown it out to full speed, and no hand can hold me back;
'Tis my arm controls the engine, tho' another owns the rail,
But for once I'm in the open, and the yard lights pass and pale!

"So from siding on to junction point, now, I shall have my day;
I have stopped to read no orders, but I take the right of way.
On the down grade I will thunder, and around the curve I swing,
For my hand is on the throttle, and my heart shall have its fling!"

Green lights! Red lights! He has hung his signals out!
Caution here! Danger, ho! And what's the man about!
'Tis true he rules the engine, to do as he has done,
But what about the Final Word—when he ends the run?

Light lost! Life lost! Flag, O flag the others back!
Switch the wreck! Ditch the wreck! Dare any block His track?
There creeps into the Terminal the man who had his day,
But I wonder, O my soul, just what his God will say?

—Arthur Stringer in McClure's Magazine.

What is the Matter With Our Schools?

It has been for some time a notion of ours that our public schools do not give sufficient attention to the "three R's"—reading, writing, and arithmetic. The following statement has back of it the authority of a New England magazine and seems to present evidence that we are correct:

In Cleveland, Ohio, which certainly is a representative American city with a school system quite up to the average, only 3 teachers out of 1,312 reported satisfactory results in reading in grades 5 to 8, inclusive; writing was reported as not quite so bad. A committee selected a representative 8th grade class and gave each pupil a memorandum of purchases of common articles requiring him to make out a receipted bill. It was thought an easy task for 5th grade pupils, but these 8th grade pupils misspelled on an average over 25 per cent of the words, 33 per cent failed to use the debtor's name, only 11 per cent receipted the bill, and but 33 per cent figured the bill correctly. A similar slip was prepared for about 200 representative 5th grade pupils covering four simple rules in arithmetic and percentage. Over one-half failed in addition, and 22 in subtraction; only 22 were correct in multiplication. 86 failed in division, while over one-third failed in percentage. In a spelling contest, with 50 common words, out of 141 pupils who turned in papers, but one was perfect, while in the worst only one-quarter of the words were correct. The errors averaged 13 to a competitor. The teachers attributed this poor showing to excessive time spent in drawing and physical culture, and the undue attention paid to preparation for holiday exercises and public exhibits.

The magazine referred to, in commenting on this state of affairs, says: "It is certainly true that the average high school American boy in New England is not fitted for even ordinary clerkship positions."

The editor of THE AMERICAN BOY receives thousands of letters from boys during the year. These indicate that, generally speaking, the American boy is a poor writer and poor speller, and that these subjects are being slighted in the schools.

A Bad Outlook for Thomas

A regulation of the public school administration of Baltimore requires that notice shall, from time to time, be given the parents of any pupils whose eyesight needs attention.

In one case, the teacher of a primary school, in the poorer quarter of the city, had written the father of one pupil this note:

"Dear Sir: It is my duty, under the regulations, to advise you that your son, Thomas Blank, shows unmistakable signs of astigmatism. The case should receive immediate attention."

In reply the teacher received a note from the father, in these laconic terms:

"Dear Madam:
"Lick it out of him.
"Very truly,
"CHARLES BLANK."
—Success Magazine.

"Bobby, I'm surprised. This note from your schoolmaster says you're the last boy in a class of twenty-five."
"Well, I could be worse."
"I don't see how."
"It might have been a bigger class."

The winner of the prize essay, "Why I AM Proud of Florida," Robert W. Shackleford, of Tallahasse, is the son of Thomas M. Shackleford, Chief Justice of the Supreme Court of the State of Florida.

School for Wireless Telegraphy at Brooklyn Navy Yard

The United States navy, being an up-to-date institution, found the wireless telegraph a very useful instrument. No admiral would now, whether in quest of an enemy or on a peaceful cruise, feel that his squadron was fully equipped if it were not supplied with this wireless means of sending and receiving messages. But this aerial messenger is a comparative stranger even in this land of marvelous progress. Few men, though they have a sort of an idea of what it means to send word by wireless, could give an intelligent explanation of what that really means. True, a number of THE AMERICAN BOY readers understand fully, for they have been told how to make the instrument, and a number of these boys have shown great ingenuity in really making their own outfits. But it must be understood that the readers of this magazine have unusual advantages and they are a very bright set.

Uncle Sam has found it expedient to establish schools in which his sailor boys may learn to operate the wireless telegraph. The picture given here shows one of these schools in session. The blackboard is covered with sketches showing how this new invention works. An instructor is explaining how the currents of electricity behave and how they are generated.

Please Mention The American Boy When Writing

Adna R. Chaffee, Jr.

Among the graduates at the West Point Military Academy last June was Adna R. Chaffee, Jr., son of Gen. Chaffee, who rose from a farmer boy to the highest position in the United States army. Secretary Taft presented the

diplomas to the graduates. When he came to young Chaffee he said: "My young friend, I am going to ask your father to deliver your diploma and hope you will follow in his footsteps." Then General Chaffee presented the diploma to his son.

"I Will Not Say"

The story of a little Boer boy who refused to betray his friends even on the threat of death is told by an English officer as an illustration of deeply rooted love of freedom and of the Boer war.

"I was asked," said Major Seely, "to get some volunteers and try to capture a commandant at a place some twenty miles away. I got the men readily, and we set out. It was a rather desperate enterprise, but we got there all right. I can see the little place yet, the valley and the farmhouse and I can hear the clatter of the horses' hoofs. The Boer general had got away, but where had he gone? It was even a question of the general catching us, and not we catching the general. We rode down to the farmhouse, and there we saw a good-looking Boer boy and some yeomen. I asked the boy if the commandant had been there, and he said in Dutch, taken by surprise, 'Yes.' 'Where has he gone?' I said, and the boy became suspicious. He answered, 'I will not say.'

"I decided to do a thing for which I hope I may be forgiven, because my men's lives were in danger. I threatened the boy with death if he would not disclose the whereabouts of the general. He still refused, and I put him against a wall, and said I would have him shot. At the same time I whispered to my men, 'For heaven's sake, don't shoot.' The boy still refused, although I could see he believed I was going to have him shot. I ordered the men to 'Aim.' Every rifle was leveled at the boy.

"'Now,' I said, before I give the word, which way has the general gone?'

"I remember the look in the boy's face—a look such as I have never seen but once. He was transfigured before me. Something greater almost than anything human shone from his eyes. He threw back his head, and said in Dutch, 'I will not say.' There was nothing for it but to shake hands with the boy and go away."

No Excuse Allowed

We copy from the Christian Uplook a few paragraphs that every boy will be willing to read:

A successful business man told me there were two things which he learned when he was eighteen, which were ever afterwards of great use to him—namely, "Never to lose anything, and never to forget anything." An old lawyer sent him with an important paper, with certain instructions what to do with it.

"But," inquired the young man, "suppose that I should happen to lose it, what shall I do then?"

"You must not lose it," said the lawyer, frowning.

"I don't mean to," said the young man; "but suppose I should happen to?"

"But I say you must not happen to. I shall make no provision for such an occurrence; you must not lose it."

This put a new train of thoughts into the young man's mind, and he found that if he was determined to do a thing he could do it. He made such a provision against every contingency that he never lost anything. He found this equally true about forgetting. If a certain matter of importance was to be remembered he pinned it down on his mind, fastened it there and made it stay. He used to say, "When a man tells me that he forgot to do something, I tell him he might as well have said, 'I do not care enough about your business to take the trouble to think of it again.' I once had an intelligent young man in my employment who deemed it sufficient excuse for neglecting an important task to say, 'I forgot.' I told him that would not answer; if he was sufficiently interested, he would be careful to remember. It was because he did not care enough that he forgot. I drilled him with this truth. He worked for me three years, and during the last of the three he was utterly changed in this respect. He did not forget a thing. His forgetting, he found, was a lazy and careless habit of the mind, which he cured."

Girls Displace "Buttons"

The charity school boy and the boy in buttons were two types of boyhood out of which Dickens contrived to get a great deal of humor. The first named has entirely disappeared, while page boys of the "Joe the Fat Boy" class are almost extinct, and the last specimens are to be found in clubs and hotels.

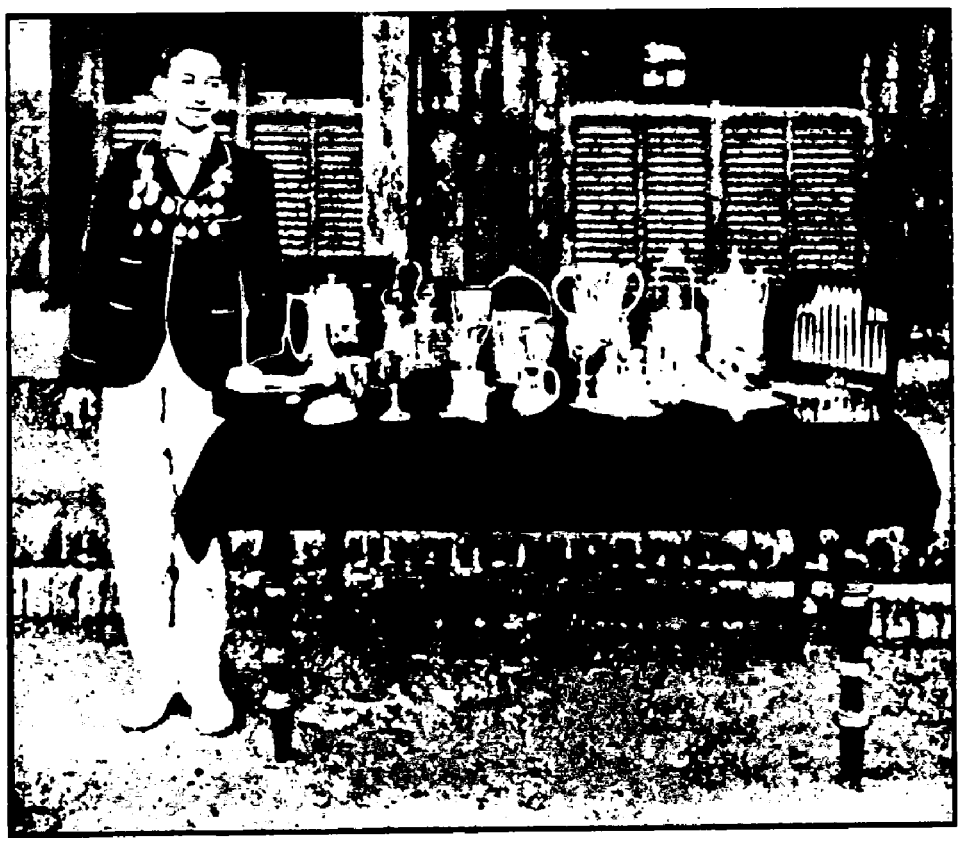
At one time the possession of a bright little boy in buttons was held to indicate that the mistress had risen above the rank of a mere suburbanite and was reaching the fringe of society, but now the parlor maid has taken his place.

Within the past nine or ten years the demand for page boys for private houses has dwindled to almost nil, except in the case of doctors, who combine in them the duties of door opener, medicine carrier, and boot cleaner.

People nowadays prefer to have a smart parlor maid to open the door and receive callers, or to employ a young foreigner of 18 or 20 years of age, who not only acts as footman, but also as window cleaner and general handy man for a trifling wage, leaving after he has learned the language.

In the West End clubs and hotels, however, there is still a demand for the services of the boy in buttons.

What has become, also, of the "tiger," the perky little being in top hat and top boots who sat with folded arms and supercilious air on the back seat of the high dogcarts driven by the young bloods of thirty years ago?—London Daily Mail.



A Champion Boy Athlete

We are sure readers will be pleased to read about the lad shown in the accompanying sketch, with the trophies he has won in the realm of athletics. He is a young Burmese student, named T. Barton. What the native cognomen is we cannot say, but it is certain that young Barton, who is a student at the Government College, Rangoon, is an athlete of more than average proficiency. As a matter of fact, he is the champion of the college, and the Indian Press speaks of him as the "phenomenal schoolboy athlete." Barton recently put up a new Indian record for the broad jump by covering 21 ft. 9 in., and last year he cleared 6 ft. 1 in. in the high jump at the college sports. The trophies shown in the picture, however, prove that he is a smart youngster, and it is not surprising to learn that the college championship medal has been his prerogative for a year or two. Barton, it is also interesting to note, is a color-sergeant of the cadet corps attached to his college.

The Youth's Companion
offers a Harvest of Good Reading for 1907

as always been the purpose of The Companion

As much reading as would fill twenty 400-page Novels or Books of Science or History or Travel ordinarily costing $1.50 each will be given to Companion subscribers in the 52 issues of the 1907 volume. There will be

250 Capital Stories

—humorous stories, character stories, stories of life in the great cities, on the farm, on the sea, on the frontier, including **Six Serial Stories** by six Companion favorites, and a **Historical Series** illustrative of life and times in America from the early colonial days to the close of the Civil War.

Till the Doctor Comes

A series of fifty-two articles on hygiene and emergency treatment, of the utmost service in the household. They tell how ill health may be avoided, suggest simple remedies for simple complaints, and prescribe the measures to be taken in serious cases while waiting for the physician.

100 Inspiring Papers

Officials high in the national service, men and women of prominence at home and abroad, great travellers and authors will contribute articles full of encouragement to all about to begin their life-work, showing the value of wisely directed industry.

Nature and Science

In this department of the paper are noted every week discoveries in natural history, the progress of invention and important experiments in science.

2000 One-Minute Stories

The Companion is distinguished for the number and excellence of its sketches and stories which take not more than a minute to read. They are always new, always well told.

Send for Illustrated Announcement for 1907 and Free Sample Copies of the Paper.

EVERY NEW SUBSCRIBER

Who cuts out and sends at once this slip (or mentions this publication) with $1.75 for The Companion for the 52 weeks of 1907 will receive

FREE

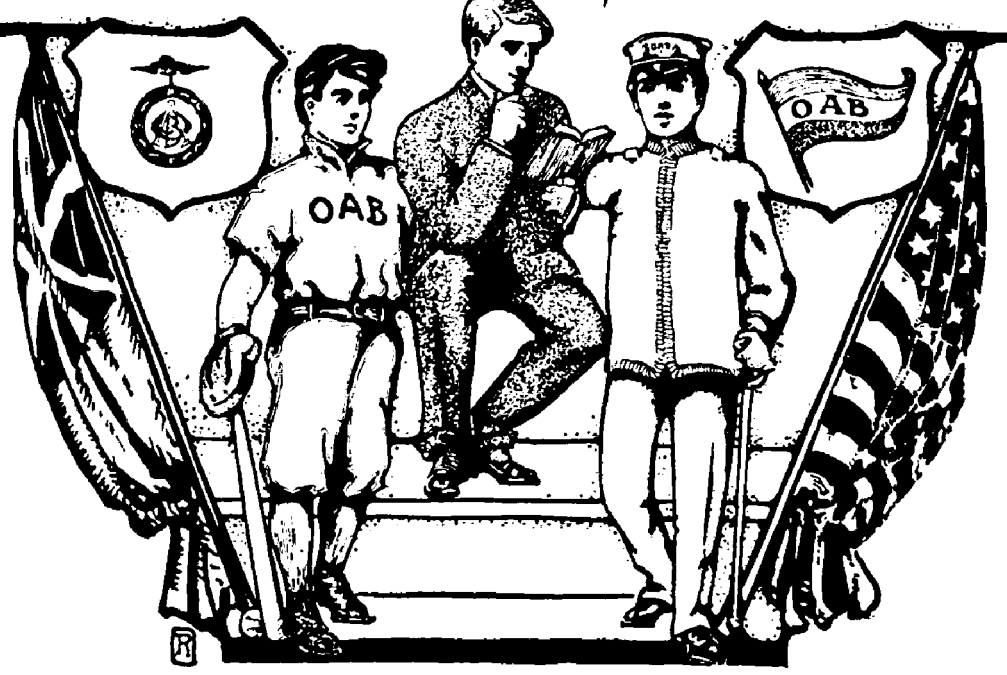
All the issues of The Companion for the remaining weeks of 1906.
The Thanksgiving, Christmas and New Year's Double Numbers.
The Companion's twelve-color Four-Leaf Hanging Calendar for 1907.

$16,290 in cash and many other special awards to subscribers who get new subscriptions. Send for information.

THE YOUTH'S COMPANION, BOSTON, MASS.

The Great American Boy Army.

FOR MANLINESS IN MUSCLE, MIND AND MORALS.



The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS

Under the Auspices of "The American Boy"

Object:—*The* Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

Company News

TIGER ATHLETIC COMPANY, No. 17, Rochester, Wash., is a company that is in a very prosperous condition. It has $75.50 in the treasury and intends to begin building a club house; it will later organize a brass band. UNIVERSITY CITY COMPANY, No. 39, Bloomington, Ind., recently voted in two new members. It also has its charter framed and possesses an O. A. B. pennant and gym outfit. Two of the members are starting a newspaper which will be the organ of the company to give out news concerning its doings. The secretary informs us also that several boys will be taken into the company soon. The members have donated thirty books to the library. TEXAS LONE STAR COMPANY, No. 37, Goldthwaite, Texas, is getting along nicely. It has recently had its charter framed and purchased a carpet for its club room. It has also $2.75 in the treasury. MINNESOTA SKIRMISHERS COMPANY, No. 22, St. Paul, Minn. The secretary writes that during the summer months its members were away on vacation and no meetings were held, but they have started up again for the fall and winter months. They drill every Tuesday and Thursday. It has recently procured a nice American flag which is used during their drills. Officers were recently elected as follows: Paul A. Froehlich, Capt.; N. M. N. Minnes, V. C.; John B. Kagerer, Treas.; Frank E. Mitchell, Libn. It has a military company of thirty-three boys, with a captain, two lieutenants, three sergeants, one color sergeant, seven corporals and a drummer. THE RISING SUN COMPANY, No. 59, Brooklyn, Pa., sends us its report for the six months ending July 31. It has twenty-four members with an average attendance at its meetings of seventeen. It has a library of seventy books and magazines, which is greatly taken advantage of by the members. It has also a well-furnished club room in which meetings are held weekly; it has also $21.25 in the treasury. The present officers are: Myron Tiffany, Capt.; Boyd S. Austin, V. C. and Sec'y; Shirley Stephens, Ass't Sec'y; Myron Craver, Treas.; Charlie Doran, Libn.; Mr. W. A. Stephens, C. C. The secretary will send us a picture of the company in the near future. SPARKS ATHLETIC COMPANY, No. 5, Sparks, Ga., recently elected the following officers: Geo. P. Padrick, Capt.; Archie Williams, V. C.; Lindsay Lovett, Sec'y; Wilmer Shaw, Treas.; Frank Simons, Libn. This company expects to organize a military company in the near future, and perhaps some of the other companies who have organized can help them to find out how they may best be able to obtain uniforms and military equipment. MATTABASSETT MILITARY COMPANY, No. 15, Middletown, Conn., elected the following officers on August 31: Eric Ahlberg, Capt.; Herbert Johnson and Arthur Ganberg, Lieuts. It has $3.20 in the treasury being the proceeds in part of a pillow raffle which the members held. It has eight members and dues are twenty cents a month. Its club room is nearly finished, and the members expect to have a very prosperous company. SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill., gave an all-day picnic August 21, at Fairview and Dreamland parks, to which they invited their friends. The party had a fine time playing baseball, boating, swimming, and other games. The company counsel writes us that he completed his second year's connection with this company September 18. COSMOPOLITAN COMPANY, No. 63, Decatur, Ill., has started in with good prospects and will send for an O. A. B. pennant. The members of this company also held a picnic at Fairview Park and had a most enjoyable time. This picnic marked the close of school vacation. COL. MORGAN COMPANY, No. 14, Fort Morgan, Colo., elected at its last meeting in August: Joseph Hosmer, Capt.; O. M. Simpson, Lieut.; Ralph Crawford, Sec'y; Milton Kimball, Treas.; Earl Ross, S. A. The captain writes us that during the summer months the members were away so much from home that no meetings were held, but now that school is commenced all seem to be expecting, not only a good attendance at its meetings, but increased interest in the work of the company. DELTA MOUNTAIN VIEW COMPANY, No. 17, Delta, Colo., has been getting along very nicely, but hopes to do still better now that school vacation is over and the boys have settled down to their studies. The captain promises a picture very soon. As we mentioned in last month's Company News no August Company Letter was sent out because it was vacation month, and we considered that the boys generally would not be attending meetings. THE SAM HOUSTON COMPANY, No. 38, Oakdale, Texas, reports that it is getting along in good shape. It has its charter framed and possesses a fine American flag. The treasury is rich to the extent of $1.35. Its meetings are taken up with debates, essays, and talks by different members of the company. The captain expects to report several new members in the company very soon. WINDING RIVER COMPANY, No. 63, Monessen, Pa., reports that it is in a flourishing condition, and expected to move into its new, handsomely decorated club rooms October 15. New members are expected to be added to the company at its next meeting. The captain writes that he thinks the September number of THE AMERICAN BOY "is the best yet." THE TREZEVANT ATHLETIC COMPANY, No. 6, Trezevant, Tenn., had a splendid meeting on the evening of September 6, when a debate was held on the question "Whether Washington or Columbus was the greater man." The decision was in favor of Washington. We are sorry to learn that the captain recently sustained a very severe injury from a hard ball accidentally thrown by one of his companions, but as he writes the report, we imagine he has recovered from his injury. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its 17th regular report. The energetic secretary says that the company has very bright prospects for the coming season, and all the present members are going to do their best to bring new members into the company. Their war cry is, "One hundred members by 1907." A yacht club has been organized which has been enthusiastically taken up by many of the members. Very pleasant vacations were spent by all the boys, and some of them have started in their school term with the determination to win a Legion of Honor badge. The officers elected in June are: Freeman H. Smith, Capt.; Leslie H. G. Groser, V. C.; Granville D. Williams, Rec. Sec'y; Harold B. Pratt, Corres. Sec'y; Russell G. Bruce, Treas.; Amos Pascual, Libn.; Robert D. Vanderbilt, S. A. During the winter months the various societies of the company expect to hold many interesting as well as profitable entertainments. TAMPA COMPANY, No. 7, Tampa, Fla., at a recent meeting, discussed the question of having a national emblem for the Order, and writes for our opinion of the matter. We would like to hear what the other companies think about this. We may state that we are very well satisfied with the present badge of the Order. This company seems to be in first class shape. CHEROKEE COMPANY, No. 7, Chattanooga, Tenn., had a balance in the treasury for September of $6.20. The total membership is eleven; monthly dues have been reduced to twenty-five cents. U. S. ARMY COMPANY, No. 42, Ft. Riley, Kans., has the following officers: Arthur Jones, Capt.; Arthur Snow, Sec'y; Harry Ogilvie, Libn. It has nine members and expects to do some good work during the fall and winter months. The captain writes that he will send us a picture soon. WOLVERINE COMPANY, No. 82, Chesaning, Mich., recently elected the following officers: Chas. Walser, Capt.; Dale Parshall, Sec'y; Harley Peet, Treas. A picture of the company will be sent headquarters in the near future. It starts the winter months with nine members with the expectation of having more to report at no distant date. OLYMPIA COMPANY, No. 23, Emporia, Kans., is in first class shape. An election of officers recently resulted as follows: Dono Peters, Capt.; David Bailey, V. C.; Otto Mulvaney, Sec'y; Harry Martin, Treas.; Colvin Lambert, S. A. After the business meeting was over a plentiful supply of watermelon was served to the boys. The company has organized a football team which, it is expected, will give a good account of itself. Dues have been placed at ten cents a month.

BASEBALL TEAM OF THE TIGER ATHLETIC CO., NO. 17, O. A. B., ROCHESTER, WASH.

This team has won four out of five games. The day this picture was taken the team beat its competitors with a score of 10 to 3. One of the boys of the club was hurt during the game, and his face is not in the picture. Reading from left to right, top row: Guy Neeley, Clyde Paton, Frank Tripp, Leo Beebe; middle row: Chester Salmi, Lyle Null; bottom: Elmer Salmi.

Boys Who Have Won Without Pull

By DENNIS J. HERN

To one who for more than twenty years was associated in a supervisory relation with thousands of boys who subsequently won success with nothing but push, the question whether pull, or influence, is necessary to success, must seem a little odd.

There is probably no branch of youthful service in the country that can compare with that of the telegraph messenger service in providing information as to the ability of boys who have to rise without pull.

A good messenger boy, of course, must be a bright boy, must have some measure of common sense, must be alert and active, honest and obliging. These are qualities that usually make for success in any boy, but sometimes we hear of persons claiming to possess these qualities who have not succeeded and who attribute their failure to lack of pull or influence.

I suppose that no boy has less pull than a messenger boy. He is hired on his appearance and such recommendations as any honest, enterprising boy may obtain. No pull will keep in employment a boy who lacks the qualities that a good messenger boy ought to have.

And yet it may truthfully be said that of the thousands and thousands of messenger boys who have graduated from the service here in Boston in the last 25 years, the vast majority of them entered into gainful occupation which has enabled them to become worthy and self-supporting citizens, and a very large proportion of them have already carved for themselves careers which would mark them as picked men in any community.

These were practically all boys without any pull whatever except such as their own good qualities enabled them to exercise. The fact that they were able to leave the messenger service and enter upon promising careers elsewhere was due to their own proved capacity which attracted the attention of their watchful elders always on the lookout for desirable employes.

The stores and offices, the great banking and commercial houses are filled today with young men, and men more mature, embarked safely on successful careers who first went to work as messenger boys, and by push alone—and not by any kind of pull that counted for anything—have won their way.

I think this answer to your question bears on the matter of the relative importance of push and pull in the struggle of life.—Boston Globe.

Says The American Boy is Inspiring

The following from a gentleman connected with the Pennsylvania Railroad Company at Renovo, Pennsylvania, under date of August 30th, may not be uninteresting reading to friends of THE AMERICAN BOY.

Mr. W. C. Sprague,
Editor of THE AMERICAN BOY,
Detroit, Michigan.

Dear Sir:—I have just received my September number of THE AMERICAN BOY and think it is one of the best numbers published. I would like to see it sent to every boy in America, it would inspire them to such an extent that there would be more honest and fair dealing men in the future.

This country today is just awakening from a long sleep of dishonesty and graft, it now needs men of honesty and integrity to place this country in what you could call "the land of the free." President Roosevelt is a shining example for the American boy of today, and a boy will do well if he can follow his footsteps in the right as he sees the right. I am holding a responsible position with the Pennsylvania Railroad Company at this place and owe the greater part of my success and ambition to THE AMERICAN BOY.

Yours sincerely,
W. E. BERRY.

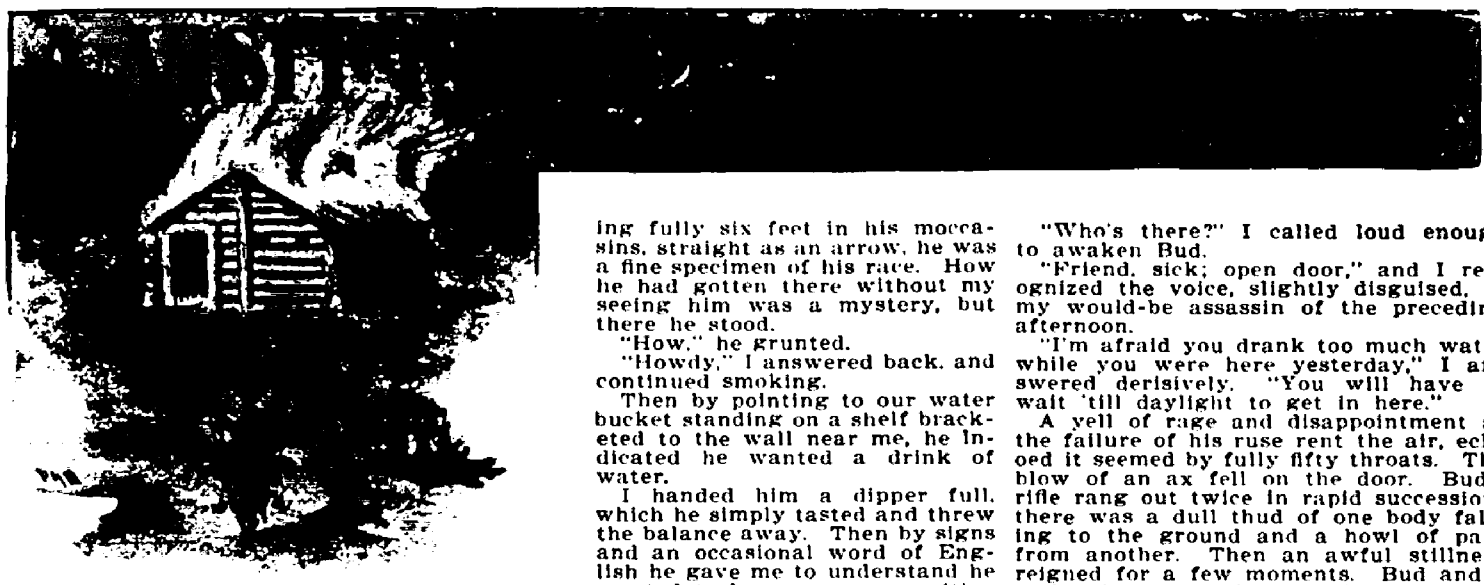
"Moseses Birfday"

A prominent Southern statesman says that last summer he was making a horseback trip through the northern part of Alabama when he came upon a negro cabin, the sounds issuing from which gave evidence of an extraordinary commotion within. Shouts and yells of terror succeeded each other so rapidly that the traveler hastened to ascertain the cause of the trouble.

As the rider drew rein before the door half a dozen ragged pickaninnies ran out. All but one of them were screaming and crying at the tops of their voices, while the odd one, as merry as the others were sad, began tumbling cartwheels and standing on his head. At this moment a man, evidently the head of the household, appeared in the doorway. In answer to the traveler's inquiries the darky vouchsafed the following explanation of the mystery:

"Yo' see, Sah, dis is Moseses birfday," indicating the pickaninny whose joyful antics have been referred to. "Now I'se powerful hard up jes' at present, an' ain't got no money to celebrate. An' it jes' bruk me all up to see de res' habin' jes' as much fun on Moseses birfday as Moses was habin' hisself. Times bein' hard, de only thing I could see was to give all de res' a lickin', an' dat kinder raises Moses up over de others."—N. Y. Times.

The publishers of The American Boy are giving special prizes of good books, pennants, and pictures, in addition to their regular handsome premiums, to companies that show the largest increase in membership each three months.



"WELL, BUD, what is the news over at the post?" I asked.

Bud, whose manner had been preoccupied, since his return late in the afternoon, stirred up the oven fire before which he was broiling some venison, and with an effort answered—

"Old Crazy Horse has broken out again," and relapsed into his study.

I now understood Bud's silence. Usually upon his return from a visit to the trading post he readily told all he had seen and heard without having to be questioned. To-day, however, he had been replying in monosyllables and my curiosity kept getting the better of me. The ride from the trading post was a long and tiresome one to be sure—fully fifty miles—but to a horseman of the plains from sunrise to sunset in the saddle did not tire him so he could not talk.

I had been two whole days alone while Bud rode over to Cheyenne to purchase a supply of ammunition and sufficient groceries to last us through the coming winter. To the one who stayed at home the other's return from this slight contact with the outside world was an event to be looked forward to.

"And the government?" I asked.

"Well, there are a few troops at Laramie and more are coming. But when they'll get there is another question. The outbreak's spreading—Sitting Bull and all the other big chiefs of the Sioux and Cheyennes have left their reservations and gone on the warpath. The government's got its hands full this time, I reckon. The telegraph line to Laramie has been cut and the agent at the post could not give me much information, but advised us to pull out of here 'till it's all over. I don't want to lose my scalp, Jim, but I ain't never been much at runnin'," and Bud, having finally made a clean breast of his mind's burden, looked his inquiry of my opinion.

It was then the early fall of 1876. Since the spring of the year Bud Hardman and I had been busy locating and establishing a ranch in the Tongue River region of Wyoming. Prospecting for gold for three or four years had not proven very profitable and we had concluded we would try cattle raising at the first opportunity. The sale of our last "strike" had placed in our hands sufficient money to make the venture, and after taking a look around the Tongue River region seemed the best suited to our requirements.

There we found an abundance of fine grass for grazing, plenty of fresh water and considerable timber fringing the streams, affording both fuel and building material.

After considerable hard work we had erected a cabin having double walls between which we packed sod and long grass. This was done to make the walls as impervious to the penetrating winds of the severe winters as it was possible for us to do. By the time we had our cabin completed the season was too far advanced to think of buying stock before spring. So we started in to while away the time intervening before cold weather, in hunting, fishing, and in taking a thorough survey of our surroundings.

While we were far from the scene of the outbreak, we knew it was the unprotected and isolated places that were most liable to receive the Indians' visits. We talked the matter over and decided we would risk staying where we were. Then we planned and studied ways and means of defense.

Bud had taken the precaution to bring from the trading post an extra supply of ammunition and with our two Winchesters and revolvers we felt able, if necessity demanded, to give a good account of ourselves.

In the daytime no one could approach our cabin closer than two hundred yards without being seen—so we thought; but when darkness settled down it was a different matter, and we very well knew that an Indian on the warpath preferred to call when the hour was darkest.

The next few days we were busy arranging our cabin for defense. We cut loopholes so as to command all approaches. We built a double door to slip into place in case of necessity. Then we removed the dried grass from around the cabin for quite a distance to guard against fire.

A couple of weeks went by and, having seen no sign of Indians, we commenced to think that all our fears had been needless. Fortunately we never relaxed our vigilance. When riding up or down the valleys or out on the plains we kept our eyes open for signs of the red men. We would occasionally climb up on the mountain side and scan the plains for great distances, but we never saw anything beyond a few buffaloes grazing.

One Sunday afternoon I was sitting just outside the doorway of the cabin enjoying an after dinner pipe and thinking of the folks back home, when there seemingly arose right up out of the ground at my feet the form of a Cheyenne buck Indian. He had on an old blue flannel shirt, and a pair of trousers of Indian manufacture, having a fringe of beads down the outer seam. Standing fully six feet in his moccasins, straight as an arrow, he was a fine specimen of his race. How he had gotten there without my seeing him was a mystery, but there he stood.

"How," he grunted.

"Howdy," I answered back, and continued smoking.

Then by pointing to our water bucket standing on a shelf bracketed to the wall near me, he indicated he wanted a drink of water.

I handed him a dipper full, which he simply tasted and threw the balance away. Then by signs and an occasional word of English he gave me to understand he wanted to buy some ammunition I told him we had nothing to sell, but that if he would sit down I would give him a pipe of tobacco.

Meanwhile he kept trying to peer into the darkness of the interior of our cabin, Bud had not shown himself nor had I heard him move about. I thought he was asleep as that was his announced object after dinner.

The Cheyenne suspected I was not alone and this fact he wanted to determine. Instead of sitting down and smoking the proffered pipe he started to enter the door. Although I was unarmed I stepped before him to bar his entrance. Quick as a flash he whipped out from under his belt a large hunting knife and the next moment I would have been dead had not the cold barrel of Bud's Winchester been shoved past my ear full in the face of my enemy.

"Drop it," was Bud's command, and with a look of baffled rage the Indian sullenly let the knife fall at my feet.

"Now, git," and the Cheyenne needed no second invitation.

We knew instinctively that our visitor was but a spy sent to find out all about us, and that as soon as he reported back to the chief of his tribe something would happen—possibly before morning.

We got in a supply of fresh water and did everything we could to make ready for a siege.

We stowed all our bedding, saddles, and supplies of every kind in a small cave we had dug in the back end of our cabin.

This cave was shaped like a small house, only the entrance was down the chimney instead of through a doorway. The sides of the cave, and the roof, which ran to an apex in order to lessen detection by sounding, were lined with timber to hold the dirt in place. The chimney, which was not larger than a barrel head, was fitted with planks shaped to fit the hole, and covered with about six inches of dirt, tamped so that when fitted in place it looked not unlike the floor of the cabin.

Ventilation was provided by two long hollow poles placed at either end of the cave and running to the surface of the ground outside the cabin in such a way that their presence could not be readily detected.

We had no intention of using this cave ourselves only as a place of last resort, but we had prepared it as well as we could for all contingencies.

We took turns about standing watch that night. About four o'clock the next morning I was aroused from a light doze by a knock on the door.

"Who's there?" I called loud enough to awaken Bud.

"Friend, sick; open door," and I recognized the voice, slightly disguised, of my would-be assassin of the preceding afternoon.

"I'm afraid you drank too much water while you were here yesterday," I answered derisively. "You will have to wait 'till daylight to get in here."

A yell of rage and disappointment at the failure of his ruse rent the air, echoed it seemed by fully fifty throats. The blow of an ax fell on the door. Bud's rifle rang out twice in rapid succession; there was a dull thud of one body falling to the ground and a howl of pain from another. Then an awful stillness reigned for a few moments. Bud and I took advantage of it to slip our extra door into place and then took up our stations on either side of the room to wait developments.

We were not kept in suspense long. A rush was made and something hard hit the door. They were trying this time to crush it in with a log.

Bud's rifle poured out a stream of lead and cries of pain told the result. This method of attack was proving too costly and the door was let alone.

Then my turn came. I heard a stealthy climb on to the roof of the pony shed built at the rear of the cabin. I fired and by the light of the flash I saw my victim, and fired again. A heavy fall and an agonizing groan marked another enemy gone.

Daylight began to break and the Cheyennes withdrew out of rifle shot to hold a council of war. We had not proven to be the easy prey they had expected to find.

The day passed in desultory firing on both sides. We had to be constantly on the alert for sudden attack and the strain was great.

Some of the bucks eager to gain renown in their tribe, took daring risks. For their temerity a number of them paid a severe penalty. Both of us were good shots and no Indian could so cleverly disguise himself in his efforts to get near our cabin but what Bud's lynx eyes would detect him, then a bullet from his unerring rifle would reach its mark.

I saw him break the arm of an Indian at three hundred yards. Nothing but that portion of the Indian's body was visible from behind a small tree. It was difficult for me to even distinguish the outlines of the brown bare arm hanging motionless by his side.

When Bud fired the Indian scampered for better cover, his right arm hanging limp.

Things looked blue for us, but the grim determination to sell ourselves as dearly as possible nerved us to fight it out to the bitter end. As dusk approached we could discern the enemy gathering quantities of dead limbs and dried grass. We knew what that meant. Closer and closer they drew the cordon around us.

When darkness was complete the attack commenced in earnest on all sides. Bud took up his accustomed stand beside the door. As each load of wood was dropped we fired in the direction of the sound. Sometimes we were successful, but more often we were not.

(*Continued on page 17.*)

"DROP IT," WAS BUD'S COMMAND

Ingersoll Watches

are the ideal and favorite Christmas presents for so many American boys—not simply because they stand hard knocks or because they cost only a dollar, but because they are *guaranteed* to and *do* keep *correct* time.

Michigan Military Academy
ORCHARD LAKE, MICHIGAN

Ideal location, 25 miles from Detroit. Beautiful lake region, ample grounds; fine buildings; honest academic work; genuine military instruction and discipline; a strong and well balanced teaching force; exceptional musical training; a carefully selected and carefully trained body of cadets; abundant opportunity for school sports on land and water; great attention paid to social life and pleasant relaxation—these are some of the advantages that the Michigan Military Academy offers to parents who are looking for a clean, wholesome, efficient school.

The fruitage of the school is a symmetrical boy; a boy who has learned to obey proper authority, to do his duty, to take care of his body, to cultivate self-respect, to use his brain effectively, to aspire for leadership, to lead naturally and courteously, and to live a good and successful life.

A FEW OF THE DELEGATES ATTENDING THE INTERSTATE AMATEUR PRESS ASSOCIATION CONVENTION HELD AT BOSTON SEPTEMBER 3D LAST

AMATEUR JOURNALISM DEPARTMENT

Edited by W. R. MURPHY

[The editor will send copies of typical amateur papers to boys interested in the hobby, providing a stamped addressed wrapper is sent.]

Some Conventions

As "Ye Olde Farmer's Almanac" might phrase it, had the maker ever heard of Amateur Journalism, "about this time look out for conventions." That of the N. A. P. A., which was noticed in our last number, having become a matter of the past, so far as the year 1906 is concerned, the other associations compete to complete the cycle. First came that of the United Amateur Press Association, which was held in Philadelphia, July 5 and 6, being the dates. Odd Fellows hall held an interested group of young people. The convention was called to order by J. Ray Spink, chairman of the reception committee. The following officers were elected: President, Dr. E. B. Swift, of New York City; vice-president, Vincent Haggerty; secretary, H. L. Lindquest, of Chicago; treasurer, L. B. Chase, of Chicago; official editor, E. F. Daas. There have, since the convention, been one or two changes in the official board, Paul H. Appleby, of Sedalia, Mo., having become official editor, while others of the official board are historian, W. J. Clemence, Nooseneck Hill, R. I.; Eastern Mss. manager, Bertram Adler, of New York City; Western Mss. manager, A. F. Lockhart, Milbank, S. D.; laureate recorder, Mrs. Flora S. Emory, Woodlawn, Md.; activity recorder, Paul H. Appleby, and directors, A. H. Hutchinson, San Francisco, Cal.; F. D. Murphy, Brantford, Ont., and Geo. J. Boutain, Brooklyn. Laureate winners for work done the past year were Flora Stewart Emory, essay laureateship; honorable mention, John W. Smith; Lloyd B Smith for stories, honorable mention for Ralph C. Purser; Minnie E. Henderson for poems, honorable mention for Margaret Minaker; Paul H. Appleby for editorials, honorable mention for Harry Lindquest. An enjoyable banquet closed the two-day session of this convention. Chicago is the next meeting place.

On July 9th, 10th and 11th the United Amateur Press Association of America held its convention at the St. Charles Hotel in Milwaukee, Wis. The election resulted as follows: President, William C. Ahlhauser; first vice-president, Vincent Haggerty; second vice-president, Ada Parkhurst; secretary, R. G. Ballard; treasurer, Richard R. Kevern; official editor, Louis J. Brechler; historian, A. M. Hamilton; laureate recorder, Vincent Dailey; Eastern Mss. manager, Sophia Baer; Western Mss. manager, A. J. Lockhart; directors, J. F. Roy Erford, Ed. F. Daas, H. Pickerell. Seattle, Wash., was selected as the next convention seat. Miss A. M. Thomas, who has lately become Mrs. C. F. Bretholl, won the story laureateship, and Mrs. Flora S. Emory that for essays. Besides the banquet there were many social features. A visit was made to the home of F. F. Heath, an ex-president of the N. A. P. A., and on the evening of the 9th a performance was given of the fourth act of a drama, "In Love's Captivity," written by Arthur J. Ebert, one of the Milwaukee amateurs.

On July 8th at the Western Amateur Press Association convention, held in the St. Charles Hotel, Milwaukee, C. A. McCormick was made president; E. F. Daas, vice-president; Miss Maisie McLaughlin, corresponding secretary; H. G. Wehking, recording secretary; J. Roy Erford, treasurer; J. Irene Maloney, official editor, and William C. Ahlhauser, L. B. Chase and P. J. Campbell, executive judges.

The fourth annual convention of the Interstate Amateur Press Association was held at the American House, Boston, Labor Day, with a thoroughly representative attendance. It was called to order by the president, Dr. E. B. Swift, of New York City, and these officers were elected: President, Mrs. Edith Miniter, of Boston; vice-president, W. R. Moscow, of Newburgh, N. Y.; secretary, Mrs. Laurie A. Sawyer, of Boston; treasurer, J. Ray Spink, of Philadelphia; and official editor, A. M. Adams, of New York City. The next convention is to be held in Philadelphia. The election of a women to the presidency of an association national in its scope is something of an experiment, this being its first trial, and Mrs. Miniter herself attempted to decline the honor, desiring to see the chief executiveship go to Paul J. Campbell, of Illinois, but despite her objections was elected during her temporary absence from the hotel. Mr. Campbell won the editorial laureateship, honorable mention going to Dr. E. B. Swift for his Weekly Amateur. Mr. W. R. Murphy is the poet laureate, Mrs. Alice Heins having honorable mention. The social features of this convention included a sight-seeing trip about historic Boston, John Leary Peltret, an ex-president, acting as guide. Sunday evening Mrs. Edith Miniter entertained the delegates and visiting amateurs at her home. The banquet, on the evening of the 3d, was held at Mieusset's French restaurant, Dr. E. B. Swift being toastmaster. Mr. N. G. Morton, president of the Hub Amateur Journalists' Club (the local club of Boston), delivered an address of welcome, incidentally presenting a slight token of esteem to Mr. and Mrs. C. A. A. Parker, Mr. Parker being the retiring secretary and Mrs. Parker the "convention bride." W. R. Murphy, an ex-president, spoke for "Interstate Work," James F. Morton, Jr., for "Its Ideals," and Charles W. Heins for "Its Reality." Mrs. Miniter had something to say for the "Literary Politician," and Mr. E. H. Cole responded for "Our Visitors." Miss Eleanor Keating, of New York, making graceful acknowledgment on behalf of "Our Hosts." Mrs. L. A. Sawyer gave "A Voice from New York" in her famous "Mrs. Dooley manner," J. Ray Spink struck a new vein with the hackneyed "The Ladies," and Mrs. Jennie E. T. Dowe noticed "The Men." Ex-President J. L. Peltret was also called on, and Master Jacob Golden said "Good Night." It was notable that at this convention were present all four presidents of the four associations of national scope, and President Swift of the United, President Ahlhauser of the United of America, President Murphy of the National, and President Mrs. Miniter of the Interstate, were photographed in the act of giving what might be called a "quartette handshake," illustrating the harmony now existing in all amateur organizations, and among their principal representatives. The activity report, which is a feature of each Interstate convention, showed a gratifying advance on even the splendid record of last year.

The master had been engaged in telling his pupils about the three kingdoms of Nature—the animal, the vegetable, and the mineral. When he had finished he asked:

"Now, who can tell me what the highest form of animal life is?"

A little lad in the front seat raised his hand.

"The highest form of animal life is a giraffe."

The Boscobel Star

WILLIAM ALBERT FITZGERALD, Publisher.

VOL. 1. NASHVILLE, TENN., APRIL-MAY, 1906. NOS. 4 AND 5.

Vacation next.

This is the last twinkle this term.

Boys don't appreciate invitations to piano recitals. Hand-organ music is good enough for them.

Bill Ogden and Willie Lincoln have decided not to be prize-fighters. Bill wants to be a preacher, and Willie thinks he would like to be a lion-tamer.

Before the next STAR is printed this term of school will be over and the Boscobel family scattered far and wide. All the "irrepressibles" expect to return next September.

The publisher enjoyed a visit from Miss Emma Chambers, of the kindergarten, last week. You may be sure that he didn't give her a chance to talk to his mother privately. It won't do for a teacher to tell all she knows about a boy.

Since the last issue of the STAR post cards have been received from Mrs. S. M. Godbey, literary editor of the Nashville Christian Advocate; Miss Carrie Kennedy, Nashville, Miss Pauline Eberhart, New York, Harold Shallcross and Colbert B. Wynne, Birmingham, Ala.

The "irrepressibles" were treated to a picnic in the country on the 18th of May. Miss Emma Chambers and Miss Nellie Few went with us to keep order and see that we didn't get into trouble. We all had a nice time except Bill Ogden, who fell in a ditch and had to be fished out. It hurt his feelings and spoiled his clothes.

The picture in this issue was taken especially for the STAR, and looks just like the publisher in his every-day clothes. His mother don't like it because his hair isn't combed back; grandma says it is not pretty enough. Uncle Baley thinks it's "bum;" Aunt Bertie pronounces it "rowdy;" grandpa says it looks like he did in 1848 and father says it's all right. A boy can't please everybody when he has a picture taken. This picture was made for publication, not for comment. If you don't like it, say nothing.

Publication Office, 506 South Ninth Street, Nashville, Tenn.

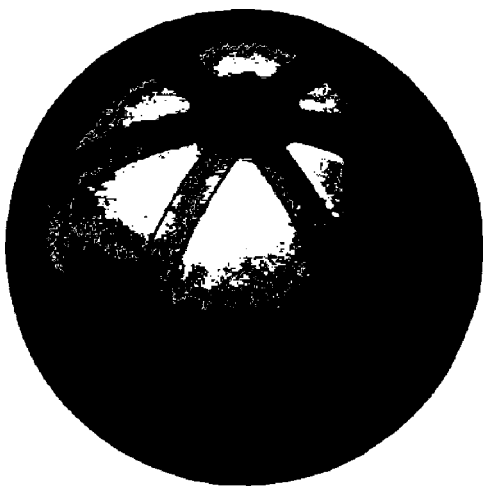
Association Football

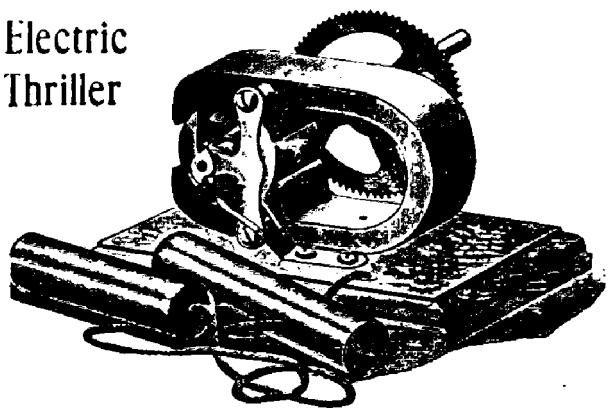


Rubber Foot Ball, Association shape, with Key. Circumference 24 inches.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price $1.00, postpaid.

447

Electric Thriller



MAGNETO.

This machine has recently been improved, mounted on a polished base, brass parts nickeled, and presents a better appearance than when in a Cabinet.

This Little Shocking Machine is a surprise in Mechanical perfection, finish, and cheapness. Can be manipulated to make a giant tremble or not to injure a child.

Every boy wants one for instruction and experiment. It is a veritable Fun Factory and in a group, side splitting laughter is created by the many amusements and tricks the machine is capable of producing.

It strengthens the nervous system, costs nothing to run, can be applied without aid, and supersedes Induction Coils and Medical Batteries.

Furnished complete with Hand Electrodes, Crank, multiplying gear, etc., etc.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price $1.00 postpaid.

448

New Books for Boys

A series of popular paper bound books containing the best of the matter that appeared in the early volumes of

THE AMERICAN BOY

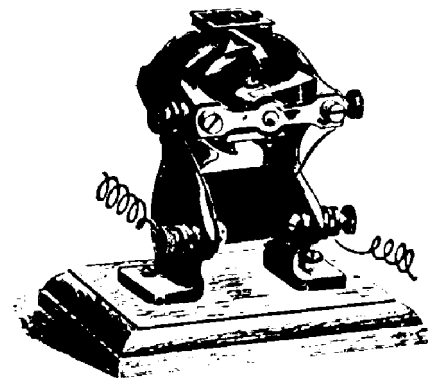
VOL. 1—School Stories from The American Boy.
VOL. 2—Hunting Stories from The American Boy.
VOL. 3—War Stories from The American Boy.
VOL. 4—A Boy in the American Congress, and other Stories, by the Editor of The American Boy.
VOL. 5—Turning Points in a Boy's Life, by the Editor of The American Boy.
VOL. 6—Stories Out of My Own Life, by the Editor of The American Boy.
VOL. 7—The Boy Photographer, giving Hundreds of Hints to the Amateur Photographer.

25 CENTS EACH, POSTPAID.

To American Boy subscribers we will send any two of the above books for 1 new yearly subscription; or any 4 books for 2 new yearly subscriptions; or we will send the entire lot of seven books for 3 new yearly subscriptions.

449

Little Hustler Motor



This well-known motor, ever leading in efficiency and value, is a complete specimen of electrical science and workmanship.

The binding posts are mounted on the field, to avoid disturbing the connections when it is desired to use the motor without the base.

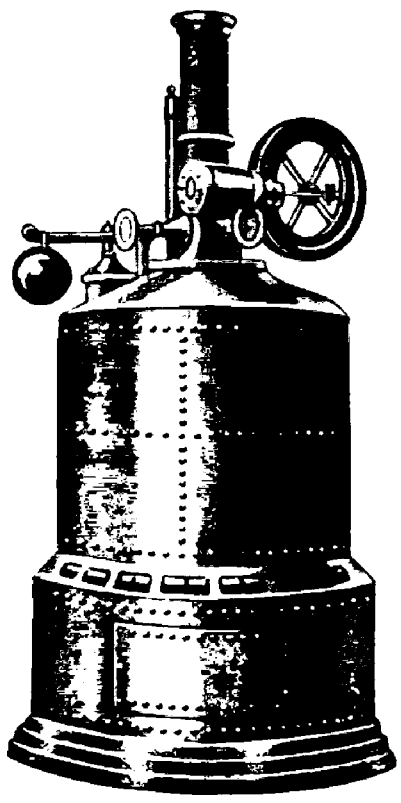
It is 3½ inches high, finished in black enamel with nickel plated trimmings. Has a three-pole armature, causing the motor to start without assistance when the current is applied. It drives a fan at a high rate of speed and is fitted with a pulley for running mechanical toys, models, etc.

One 6x2½" dry cell or any cell that will run any motor will drive the Little Hustler.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 35c; or for 1 new yearly subscription and 70c. Price $1.10 postpaid.

450

Weeden Upright Engine



Actual height 8 inches.

This Engine still retains its popularity, and still continues to be easily the best dollar engine in the market.

In construction it is simple and sensible, and in all its parts strong and durable. Unlike other dollar engines it has no steam pipes to get filled with rust and dirt. The steam chest, steam and exhaust ports, whistle, whistle valve, and throttle valve seats are all cast in one piece, and locked steam tight to top of boiler. It is made throughout of well tempered polished sheet brass. It exhausts steam through the smoke stack as shown in cut; which no other engine does.

The safety valve is the lever and ball pattern. The valve seat is made large in order that the boiler may be easily filled through it.

Every engine is thoroughly tested before packing, and fully warranted.

All parts of the engine are interchangeable, and we have always on hand duplicate parts with which to supply our customers.

Each engine is packed securely in a wooden, locked-corner box suitable for mailing or expressing.

Full directions for running the engine will be found in each box, with the price of duplicate parts.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price $1.00 postpaid.

451

14k Solid Gold
"Diamond Point"

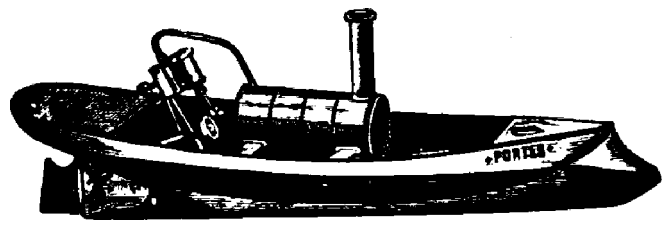
Fountain Pen

These pens are made of the very best quality hard rubber fitted with 14k guaranteed gold "Diamond Point" Pens. They are of the simplest construction and cannot get out of order, overflow, or fail to write, as the feeds are made exactly the same as now used by all the standard Fountain Pen Manufacturers, having a deep ink channel, reinforced by two lateral slots, thereby keeping the ink always in contact with the point of the pen, and always wet and ready to write. This Fountain Pen is fully guaranteed, and in the event of its proving unsatisfactory in any particular, can be returned to the manufacturers and a new one will be sent. A printed guarantee slip will be found in every box. We firmly believe that this Pen will give better satisfaction than most $1.00 and $1.50 Pens now on the market.

Given to "American Boy" subscribers for 1 new yearly subscription. Price, 75c, postpaid.

452

Torpedo Steamboat



This Steamboat has a nicely modeled hull (torpedo type) well put together, and is very attractive in appearance. It has a polished brass boiler firmly secured to the thwarts; steam chest mounted on an inclined frame, to which the cylinder is adjusted.

Length of Hull, 15½ inches; of Boiler, 8¾ inches.

A small balance wheel is connected to the cylinder and propeller shaft, and to the latter is fixed a three-bladed brass propeller.

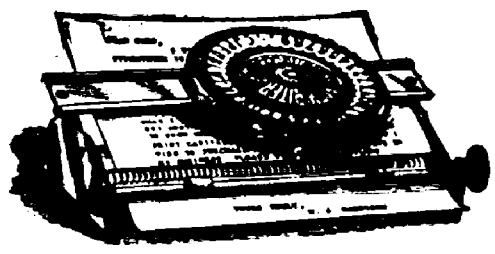
The lamp is securely soldered in the bottom of the boat to prevent it sliding about while the boat is in motion.

The whole is finely decorated in colors, and each one is tested and guaranteed.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 40c; or for 1 new yearly subscription and 80c. Price $1.25 postpaid.

453

The Practical Typewriter---No. 2



This is a very complete machine, having key for each letter, roller feed, automatic inking and spacing, sight writing. Will take a small letter head, and can be easily and rapidly operated. By reversing the carriage the machine can be used for addressing packages or writing in books. Has feed roller as shown.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 45c; or for 1 new yearly subscription and 90c. Price $1.50 postpaid.

454

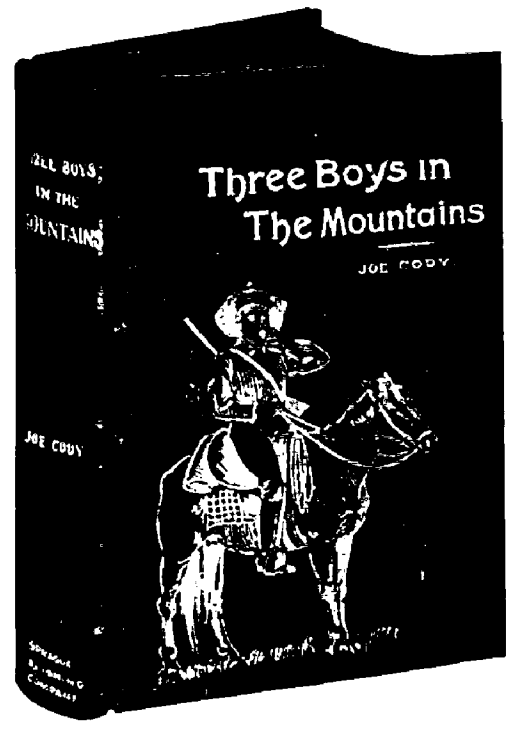
The purchase price is $2.00 and we will send it anywhere in the United States, charges prepaid, on receipt of that amount.

457

A SPLENDID BOOK FOR BOYS

"Three Boys in the Mountains"



The story of Western Adventure—clean and inspiring—that ran in

THE AMERICAN BOY

through the greater part of 1901, has been issued by The Sprague Publishing Company in book form. This story is one of the longest and best stories that has yet appeared in "THE AMERICAN BOY." Its author is the editor of "THE AMERICAN BOY," under the assumed name of Joe Cody. This is sufficient to indicate that it rings true in morals, and that nothing has been allowed to enter the story that will hurt a boy, but that everything is there that will give interest and dash to the narrative. It brings in the pleasures of the hunt, the chase and the camp, and deals with Indians and animals in plains and mountains. It is a good, healthy story that a parent will be glad to have in the hands of his boy.

HANDSOMELY BOUND IN CLOTH AND ILLUSTRATED.

Given to "American Boy" subscribers for 1 new yearly subscription. Price 75c postpaid.

458

Our Special Fishing Outfit

Consists of everything herewith described and illustrated. In adding this Fishing Outfit we felt sure of immediate success, and we have not been disappointed.

The articles in this Outfit were selected with great care and are good for regular fresh water fishing. This is what we supply: A three-piece Natural Wood Rod; 1 All-Brass Reel, strongly riveted; 9 Fishing Lines of assorted sizes; 6 Trout and Bass Flies, popular styles; ½ doz. Snelled Hooks; 2 doz. Kirby Hooks, assorted sizes; 1 Kidney Bait; 3 three-foot Leaders; 1 Float, 1¾ inches; 1 Patent Adjustable Sinker; 2 doz. Split Shot and 3 Swivels.

We send everything herewith set forth. Sent securely packed by mail.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 45c; or for 1 new yearly subscription and 90c. Price $1.50 postpaid.

459

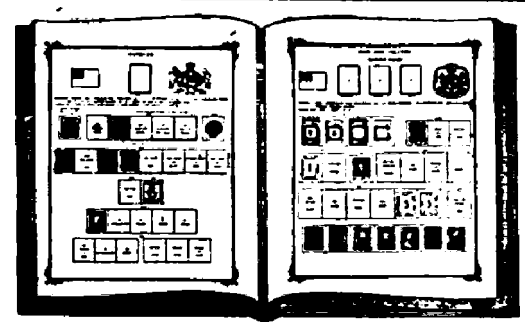
Standard Postage Stamp Catalogue

This is the last edition and gives the date of issue, color, shape and value of every postage stamp that has ever been issued by any Government in the world, with illustrations of nearly every stamp, and giving the prices at which most of them can be purchased used or unused. It is the 82d edition and thoroughly revised and corrected, and fully brought up to the day of going to press. It has 729 pages and is nicely bound in cloth.

Given to "American Boy" subscribers for 1 new yearly subscription. Price, 50 cents, postpaid.

460

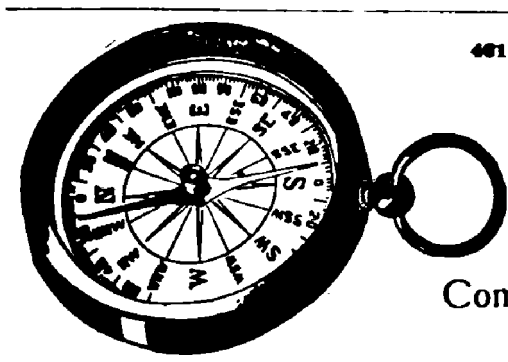
International Postage Stamp Album



This is the large 19th Century edition. Measures 9½x12 inches, and has 680 pages. It contains spaces for all varieties of postage stamps issued in any country of the world during the 19th Century, also Portraits of the Rulers, Flags and Arms of every Nation, together with full statistical information regarding their size, population, capitals, etc., etc. Illustrated with over 4,000 engravings and with maps of all countries of the world.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 50 cents; or for 1 new yearly subscription and $1.00. Price, $1.50, postpaid.

461



Compass

This Compass is open face, nickeled back with ring handle. Dial is 1¾ inches and very fine. Needle very sensitive, and it is guaranteed to be first-class in every particular.

Given to "American Boy" subscribers for 1 new yearly subscription. Price 50c postpaid.

HOW TO SEND MONEY There are four ways in which money can be sent at our risk—by Postoffice Money Order, Express Money Order, or by Bank Check or Draft; and, when none of these can be procured, send Registered Letter. If you send money by mail in any other way, it must be at your own risk.

ORDER PREMIUMS BY NUMBER. Any article can be purchased at the selling price as given above. We wish our friends "hustling American Boys" success.

REMEMBER, WE DO NOT GIVE PREMIUMS ON YOUR OWN SUBSCRIPTION.

The Sprague Publishing Company, Publishers of "THE AMERICAN BOY" Detroit, Mich.

PASSING THE MEDICINE BALL. SCENE IN THE GYMNASIUM OF THE UNIVERSITY OF PENNSYLVANIA

working our way backward, we finally landed him. Making our way to the shore some two miles distant, we broke into a run, for, to use an old expression, "our hearts were way up in our mouths."

When we reached DeGraw's house, the icy water dripping from us and hatless, Will's wife fainted away at the sight of us. It was not long, however, before we had changed our clothes and were sitting before a roaring hot log fire.

A little later, on looking into a mirror, I discovered that my hair was turning white; indeed it was not long before it was completely white; and it has remained so ever since.

In closing I would say that had we each relied on himself that night and been "game" to the last, none of us would have escaped, and I would not now be alive to tell you this story. I close by giving you the first verse of the poet John G. Saxe's lines entitled

"GO IT ALONE."

In the struggle for power, or scramble for pelf,
Let this be your motto, "Rely on yourself."
For, whether the prize be a ribbon or throne,
The winner is he who can "Go it alone."

A Visit From the Cheyennes

(*Continued from page 15.*)

Then came a digging on the roof. A couple of poles were lifted and the sod resting on top came tumbling through the opening.

Silhouetted against the sky were two heads seeking to penetrate the interior darkness. Two shots rang out simultaneously and the body of one came tumbling into the cabin; the other remained motionless.

No more heads showed above the opening, but it served another purpose. Burning brands were flung through that not only partially lighted up the interior but filled the cabin with suffocating smoke. Burning brands were also flung down the chimney and the top covered over to prevent the smoke's egress. Things were growing unbearable. The flames outside commenced to crackle and roar ominously.

In a short time the whole outside was one mass of flames and the heat grew stifling. Another blazing fagot fell through the roof. Bud dashed over it a bucket of water and in the succeeding momentary darkness we entered the cave.

We were not a moment too soon. Hardly had we gotten the entrance closed when a portion of the roof fell in directly over us. A minute later and our retreat would have been cut off. We each took up a station at one of the hollow poles. The air was close and warm. We could hear distinctly above the roar of the flames the Indians shouting their war-cry and impatiently waiting the final scene in their deadly work.

As time passed by and we did not put in an appearance they could not imagine what was wrong. Their war-cry ceased and we could hear them holding consultations. They were nonplussed. No shots had been fired at them for some time and they knew we could not live in that fire. Yet it was seldom their victims deliberately roasted to death.

Towards morning there was a stir of excitement among them. Though we were half dead from fatigue and our cave was as hot as an oven, our sense of self-preservation sprang to duty again. We feared they had discovered our hiding place.

But we were happily disappointed. They made a hurried examination of the smoking ruins and then dashed rapidly away on their ponies.

The reason for their sudden departure was to us of course shrouded in mystery. For fear they were trying to set some sort of trap for us we remained for some hours where we were. Then we heard the trample of horses and all our fears returned. The trampling drew nearer; then we head the sound of voices, not the guttural of the red man but our own mother tongue. It had never before sounded so sweet to our ears.

We let out such a cry of joy and thankfulness that we almost threw the soldiers—for such they proved to be—into a panic by its suddenness and mysterious source.

"Howly Mither av Hivin!" we heard an Irish Sergeant say. "Halt and find the divil if ye kin," was his order.

Willing hands soon made an opening for us and into the fresh air we were drawn, scalps intact, but almost dead from suffocation and exhaustion.

Our rescuers were a detachment of the regular army under the command of General Crook, out scouting and following the recent Indian signs.

In the course of a few weeks General Crook administered to the redskins such a punishment that we were never again molested by them.

HOW PLACE THE NEW STARS?

NOW THAT Oklahoma and Indian Territory are to become a State it is necessary to place a new star on the flag. But how to place it is the problem that must be solved within the next few months. It has become evident that the time has arrived for a definite settlement of the pattern of the flag of the future. It it realized that the next half century may see twice as many States in the Union as comprise it now, for not only will other territories be admitted, but the vast lands of the Western States may have to be divided into separate Commonwealths, each entitled to a star on the flag. This has brought home to the government officials the unsatisfactory situation with regard to our national emblem and it is probable that steps will be taken to settle once for all the matter of the flag's shape and pattern.

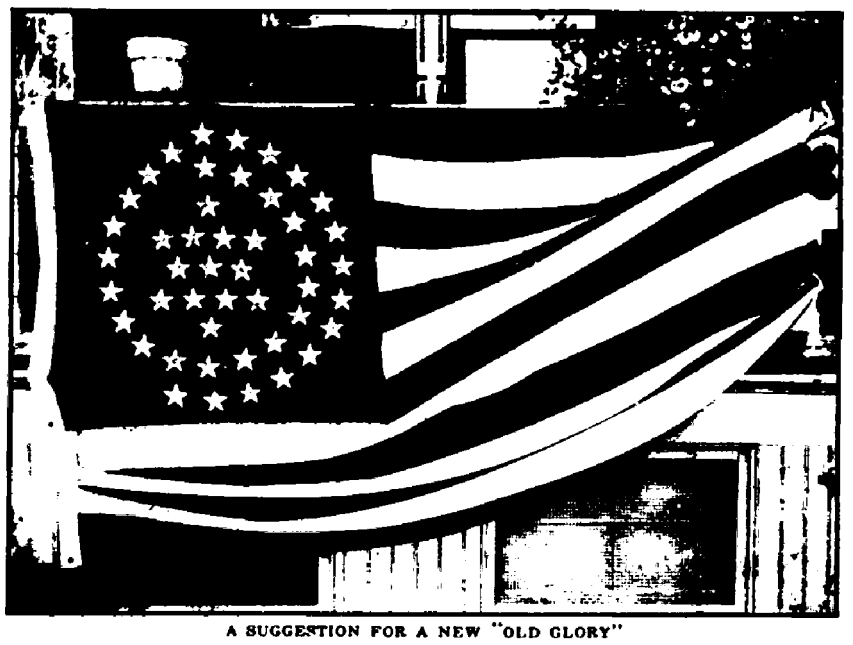
It will shock methodical Americans to know that there is no very definite authority to guide the makers of the flag. On June 14, 1777, this resolution was adopted:

Resolved, That the flag of the Thirteen United States be thirteen stripes, alternate red and white, that the union be thirteen stars, white on a blue field."

It was further enacted that: "On the admission of every new State into the Union one star be added to the union of the flag and that such addition shall take effect on the 4th of July next succeeding such admission."

Nothing has ever been settled as to the shape in which the stars are to be placed. The flags of the United States army are made by order of the War Department. When a new star is added the department must issue new flags. It has been customary for the Secretary of the Navy and the Secretary of War to get together and arrange how the flag shall be made. This, it is declared, is not sufficiently dignified for the American naton. It is contended that in a matter so momentous the nation should be consulted, and with the necessity for arranging a place for the new star there has arisen a growing sentiment in favor of an appeal to the people for a consensus of opinion, to be followed by a special discussion in Congress and a final settlement, with the approval of the President.

One patriotic citizen, Mr. Henry Vogt, of 5168 Viola street, Philadelphia, has prepared a design and forwarded it to the War Department, receiving in return a letter of thanks for what is considered to be a very sensible suggestion concerning the flag. Mr. Vogt's design is shown herewith. He would place the stars in a circle, with a keystone design in the centre, leaving room for the addition of stars around the circle. Mr. Vogt had a large flag made to show his idea and this flag was draped on his porch last Independence Day, attracting much attention.



A SUGGESTION FOR A NEW "OLD GLORY"

Hammer the Hammer

Accidental Discharge Impossible

Every owner of an Iver Johnson has a double feeling of safety—safety as to protection of life and property, and absolute safety as to accidental discharge; for there is but one way to discharge the

Please Mention *The* American Boy When Writing

THE "LARD EATERS"

MARTIN M. FOSS

"LARD EATER," the worst taunt in all Boothby, sprung from a fallacy. To the popular mind of the boys in that town, every French Canadian who worked in the mills across the river ate lard on his bread, from necessity perhaps, or maybe economy. It mattered not. To be a "lard eater" was a shame, almost a sin. To have that name applied to you was a brand of disgrace. The eternal enmity of the village boys for those men and their families who had succeeded the natives in the mills, coined that phrase, and from what was supposed to be a mere statement of disgraceful fact it grew to be the most odious term in the vocabulary of Boothby boys.

Francois LaFontaine was a "lard eater." The bare fact that his father bought a farm from the careful savings of his years of mill toil, that cows abounded at the neat and prosperous LaFontaine home, made not one whit of difference. Francois was a French Canadian and an enemy, and of necessity a "lard eater."

He could not join in the games, he could not play in the school yard, he could not find a companion in all Boothby; for he belonged, by race, across the river where the "lard eaters" lived. Yet the heartlessness of Boothby boys, and the race prejudice, more marked than any color line, was not shared by one, or perhaps more truly he had a prejudice of his own as marked as that of the village boys; for he loved this little "lard eater." Wherever Francois went this faithful friend followed. He protected him from attacks, hovered about him in the school yard, followed him in the streets. Only the fact that he was a dog, a splendid collie, protected Boothby boys when they taunted Francois from afar; for he did not know the hated phrase, and resented it only when the speaker was too near.

Yet of all dogs, Pete was the most kindly. He had an absolutely clean record. He had never bitten a man, woman, or child; he had never even growled at them when Francois was away. From his corner just inside the school house door he waited, as patient and kindly a servant as ever lived. Boys would go to him freely, pat him and play with him as if he were their own. But when Francois came to the head of the steps, he rose, a new dog, conscious of his responsibilities. The boys who had patted him a minute before knew that it was unsafe to go near him now.

Thus guarded, Francois left the school one late May day, and toiled up the long hill road toward his home. He walked slowly, looking back now and then, half-longingly, to the noisy groups of scatterings boys and girls. Pete trotted at his heels, stopping to look back when Francois did, as if there was something he must not miss.

A crowd of boys, breaking the bonds of long distance conversations, hurried up the hill which Francois had just climbed. Francois was only a boy. He longed for the companionship of these lads, longed for it frankly, with a face that would have touched older hearts. But these boys, strangers to grief and pain, only scoffed at the feeling they could not understand. They would have passed him without speaking, but Francois stepped to the roadside, as they came up, with Pete in front of him.

"Goin' swimmin'?" he asked feebly.

"Hello, Frenchy," shouted Reddie Dow. "Have lard on your bread today?"

The boys joined in a wild shout. Francois turned his head away. Pete stolidly held his ground.

So, with Francois loitering behind them, they marched for a mile to where Deep Brook dipped under the road, through a dark granite culvert. From here they had but to drop over the fence and follow the stream for a hundred yards to come suddenly upon a clump of alders, behind which the brook bowed into a big pool. This had been the swimming pool for a hundred years in Boothby. It was eminently safe, yet there was a place "over" every boy's head, not very wide, but deep enough so that one had to swim to get across and to do this marked one as a swimmer.

High above it on the hill to the west the roof of the LaFontaine house just showed above the trees. Francois crossed the brook, following through the pasture, wonderfully green on this May day, with here and there clumps of juniper, darker green against the grass. He went along the low valley and up the side of the hill, which to him marked the bank of what was once a great river, now reduced to a brook rambling in the bed.

There was no bitterness in his heart. All of his life he had looked on longingly, hoping against hope, that one day these boys would know that he was no different. Yet he was. The very loneliness of his life, cut off from the boys of his race by choice and the boys of his choice by race, had shut him up in a little world of his own. He did not know yet that he was undignified, tagging where he was not wanted. He had not learned the hard lesson of life, that few men who seek friendships find them. He was simply a boy, with only his thoughts for companionship and only a dog for a playmate.

He threw himself down on the grass, high above the pool, on the banks of this river of his imagination. Pete sat down beside him. They gazed down the hill, unobserved, to where the boys were swimming.

"Reddie Dow is in first," muttered Francois. Pete wagged his tail. The excitement of swimming always seemed to fascinate Pete.

Reddie Dow had won out that day, perhaps because his thin body usually bore less clothes than the others. But somehow he was one of the round, slender fellows whose clothes never stuck when he was peeling them off. Fred Bean was second. He had never been so near to honor before, Francois knew. But the cause was evident. He had not taken off all his clothes. He came up, dripping, his trousers dragging at his suspenders with the load of water they had absorbed. Reddie Dow promptly jumped on his shoulders and forced him under again. Harry Bowen, Ben Cole and John Haines jumped into the melee.

Francois stood up in his excitement. Later, when the boys had gone, he would slip down to the pool and swim alone. He could dive better and swim farther than any of them. He knew because he had watched them, but they had never seen him. How he longed to join them now! Pete barked in his excitement.

But Fred did not reappear, when out of the tangled mass the boys stood up, one by one, dripping, sputtering and yelling. They rubbed the water from their eyes, they collected their bearings, and then they joined in a splashing contest. The surface of the water was lashed by the constant slapping of brown hands and the air was rent with the noise and the shouts. Nobody missed Fred Bean.

Francois looked for him. He saw at once that he was gone. He looked again, and then raced down the hill shouting. The boys did not hear him. Almost at the bank he stopped. Perhaps Fred was playing a trick. How they would laugh! But Francois could see the whole pool. Fred was not in sight.

He threw off his jacket as he ran, Pete bounding beside him. From the westerly bank, where Francois had been, it was a long shallow reach to the depths of the pool. Francois would have waded in had there been time, but there was not. He took a long, scooping dive, and not a boy saw him until the splash came, and then they stood up in amazement. They saw Pete jump in, barking, and swim rapidly toward them.

It seemed like an hour, they said afterward, before they saw Francois. Pete swam to the center of the pool, and nosed about, sticking his head far down into the water. The boys stood as if petrified. But it was probably only a minute before Francois came up, puffing and blowing. Pete swam to him. The water was over Francois's head, but he struck out strongly. He caught Pete by the collar presently, and with this help dragged Fred Bean above the water. The body was limp, but Francois did not try to lift the head clear. Instead he struggled toward the shore. Pete understood. He bore more than his share of the weight over the short space to the shoal water. When Francois's feet touched, he let go of the collar. Pete swam back as if to help carry Fred's body.

The boys had come to their senses now. Quickly they took the long dive across the pool. Splashing and sputtering they came up to Francois and helped him to drag Fred ashore. Then they stood about helpless.

"Quick, run up to the house and get father!"

The boys, naked, hung back. Francois turned to them in despair.

"Roll him, roll him hard! Hold him up and let the water run out! Quick! I'll go for father."

He sped up the long, grassy hill to his father's house at the top. Pete raced ahead, seeming to understand. It was a long pull, but Francois knew only that he was going slowly and wished that he could run faster. They found Mr. LaFontaine by the barn door. Pete was there far ahead, his wild barking having brought Mr. LaFontaine out.

"Come, quick, father! Fred Bean is drowned!"

Together the three raced down the hill. But Fred was not drowned. The boys had rolled him well, had held him so that the water would run out, and when Mr. LaFontaine got there it was but the work of a minute for him, trained in his boyhod to the hardships and tricks of a river driver, to lay Fred on his back, to stretch both the boy's arms above his head, to drive the air from his lungs by kneeling on his chest, and then, to bring the arms slowly downward, until, with this artificial breathing, Fred slowly came back to life.

They bore him slowly up the hill, the boys following as fast as they could dress. They took him into the long, low dining-room, with its dark polished floor, and stretched him on the lounge. Mrs. LaFontaine brought him medicine, and the boys, hovering about the door, were hushed with the awe of death's presence and the strangeness of a house which they had only seen from afar. Then Mr. LaFontaine sent them away. Fred was saved. He must stay there that night; would they tell his mother? But she could come, of course, and stay with him.

Far into the evening Francois sat by Fred's bed, with Pete on the floor at his feet. Fred slept, unconscious still of Francois's act. He waked at last slowly.

"Where am I?" he asked.

His mother came forward.

"You are all right, dear. I am here. You will be well tomorrow."

And Fred slept again. To Francois it was a night of joy. It was not that he had saved a life. That meant nothing to him. It was that Fred was there, and the other boys had come to the door. They would come again tomorrow, perhaps.

And they did.

But the miracle of Francois's installation in the most exclusive Boothby "crowd" was not his rescue, though the boys talked about that dive for years, and do yet when they go by the pool, though they are grown men now. Such acts do not change boys. The fact was that Fred reported enthusiastically of the splendid things he had to eat at Francois's house, cookies and cake, jelly and tarts and pies, and the funniest dark-colored bread, almost as sweet as gingerbread, with butter on it, real butter, and Francois became a Yankee.

PETE UNDERSTOOD. HE BORE MORE THAN HIS SHARE OF THE WEIGHT

ATTEND TO THIS, BOYS

How Ralston Health Food (The Pure Food) Grows Strong Children

Meat, Potatoes and Sweet Things, Tea and Coffee, are too strong for children under Fifteen. What they need is something to make them GROW.

Phosphorus makes *all* living things GROW. The "Heart" of Wheat has Phosphorus in it, to put Life into it when a little Natural heat is added by the warm earth.

This Phosphorus, in the "Heart" of Wheat, is what makes Children grow up strong and straight and Brainy.

Now this Ralston Health Food of ours has all the "Heart" of Wheat preserved in it, sterilized by our new patent process. So it is always fresh and good.

And, as we told you before, this "Heart" of Wheat is full of the right kind of Phosphorus that makes things Grow like Magic.

Parents should give their children this wonderful RALSTON instead of Meat for Breakfast and Supper.

* * *

You can almost SEE Boys and Girls grow when they eat Ralston. They get plump, and lively, and cheerful, and "bright," and look as young as their years.

RALSTON HEALTH FOOD costs only *15 Cents* for a package that makes *14 pounds of delicious Cereal*, when cooked Five minutes, ready to eat. Get it today from your grocer. Made by the

STUDEBAKER JR.

King of Little Wagons

Every healthy child is full of energy and go—every Studebaker Junior is strong and built to go.

Can't you imagine what joy there would be if your child and a Studebaker Junior got together?

This splendid wagon is fashioned in style after the celebrated Studebaker farm wagon. Its likeness to the "grown-up" wagons tickles the pride of its juvenile owners. Built with the idea of strength and endurance, it has a sturdy oak frame, farm wagon gearing with bent hounds and adjustable reach, parts strongly ironed and braced. We believe it the most attractive and durable child's play wagon ever put together.

The SOCIETY of the F.F.F.

A Tale of the Doings of Some Buckeye Boys

By Vaughn Ely Wyman

"SAY, ARTIE! you'll find the potato-masher on the shelf in the butt'ry, if you want to make lemonade."

Absolute silence reigned in Grandma Graham's clean, white-floored kitchen and the spell was only broken when Petie Spriggins tittered "She's been lis'nen."

The lodge fever had recently struck the staid old Western Reserve with a vengeance, and fathers, brothers, and uncles were at this time making their weekly visits to Monroe, the county seat, six miles away, with much regularity.

It was on the occasion of one of these visits that "Shine" Spriggins, whose father had just been elected Chief Grand Bushwhacker of the Monroe Lodge, Drones of the Honeybees, was inspired with the idea of starting a lodge of neighboring boys.

His chum, Ned Riley, lived on the adjoining farm, and it did not take the two boys long to put their ideas into execution.

"Just the thing," said Ned, when the subject was mentioned. "Let's get Joe and Petie and go over to Arthur's and talk it over."

And talking it over they were, indeed, when Grandma Graham made her suggestion of refreshments.

Ned, with his characteristic promptness, drawled, "I second the motion," which was carried, unanimously, all members bolting for the butt'ry forthwith.

Arthur, in his haste, succeeded in knocking down a pile of milk pans, while Peter promptly cut his finger with the butcher-knife and squirted lemon-juice into Joe Liebenhart's eye.

After eating and drinking everything in sight, Jack, or "Shine," Spriggins, as he was usually named, called the meeting to order in his most official manner, and stated that Mr. Edward Riley had the floor and would present to them for their careful consideration, the constitution which had been drawn up for their approval.

Mr. Riley, having the floor, proceeded in his most dignified manner to read the proposed constitution, which was as follows:

"Constitution of the Society of the F. F. F. Lodge.

"Be it enacted, that we, the undersigned, desiring to establish a lodge of our own, have hereto signed our names and affixed our seals at Ladue, Leroy County, Ohio, this 30th day of March, A. D. 1886.

"Article 1. The name of this lodge shall be the Society of the Five Funny Fellows, which shall never be revealed under penalty of death.

"Article II. The objects of this lodge shall be to disseminate the teachings of the Grand Mogul throughout the civilized world, and to promote the welfare of the youth of the glorious United States.

"Article III. The officers of this lodge shall be a Regal Grand Mogul, a Noble Vice-Mogul, a Knight of the Round Table, a Chancellor of the Exchequer and a Captain of Marines.

"Article IV. All officers shall serve for the term of one month.

"Article V. The regular meetings of this lodge shall be held every Monday evening, beginning with the first Monday of April, 1886.

"Article VI. Members revealing secrets of this society shall be fined for the first offense, and for each offense thereafter shall be expelled.

The constitution as read was then adopted by a unanimous vote, and was signed with many flourishes by Arthur M. Graham, John Spriggins, Donald Peter Spriggins, Edward Riley and Joe Liebenhart.

The first election of officers being next in order, Ned found an empty cigar box and cut a slit in the top, for a ballot box, and the polls were declared open.

Jack, Joe, and Arthur acted as judges of election, while Ned and Petie kept the poll-book and tally-sheet.

After much writing, erasing, counting and re-counting the judges announced the following result.

For Royal Grand Mogul each member received one vote on the first ballot, but on the second ballot, John Sherman Spriggins was elected by a majority of one vote over Edward Riley.

For Noble Vice-Mogul, Ned Riley was elected unanimously.

For Knight of the Round Table, Joe Liebenhart received three votes, Arthur Graham one, and Petie Spriggins one, Liebenhart elected.

For Chancellor of the Exchequer, Arthur Graham four, Peter Sprigigns one.

For Captain of Marines Donald P. Spriggins was choesn without opposition, and the meeting adjourned to meet with the Spriggins boys the following week.

What with going to school and doing chores, the week passed quickly enough, and before the boys fairly knew it, it was lodge night again.

All members were on hand bright and early, and what was done at this meeting is best shown by the minutes of the society, which I will reproduce verbatim.

"Minutes of the Meeting of the F. F. F. held at the residence of the Spriggins brothers, on the East Ridge, April 5, 1886.

"The meeting was called to order by the ch'man, Shine Spriggins. Minutes of the last meeting were read by the Secretary. Mr. Ned Riley had a very fine essay on "How to plant potatoes," which was very interesting. After a spirited discussion it was decided to have each member pay the sum of three (3) cents into the treasury to buy badges, the color to be pink. A motion was made and carried, that Joe Liebenhart have a essay on "China" at the next meeting. Refreshments were had, consisting of warm maple sugar and biscuits, contributed by Pete and Shine's mother. Pink Spriggins peeked through the key-hole and we had to stuff it up with cotton batting. The treasurer reported the sum of nine cents in the treasury, and said that Arthur and Petie had not paid yet. Peter Spriggins was fined one cent for telling secrets. Petie said he didn't tell any but one of the girls twitted him with belonging to the Five Feeble Fools, and he just said that that wasn't its name. All members were present. A good time was had. The meeting adjourned at 9:30 p. m. to meet at the residence of E. S. Riley, Esq., April 12. J. Liebenhart, Sec'y of the Round Table."

At the next meeting, at Ned Riley's, they met in the harness-room of the new horse barn, as Mrs. Riley had heard of the condition of Grandma Graham's butt'ry after the "meetin."

Ned's older brother, Will, had decorated the room for the occasion, and it certainly was decorated—with chalk.

The walls were covered with inscriptions of a highly complimentary character, and one in particular, a representation of five youngsters sporting in the water, was labeled "The Nymps," and was accompanied by the following verse:

"There was Phive Pheeble Phools
Who ran away from School
To go swimmin in the River,
But they all got licked togither,
Did these Phive Phoolish and Pheeble little Phools."

It fell to Joe to have the next meeting, but as he was an orphan and lived with Mr. Marshall's folks, his entertainment was of his own making, and proved to be the undoing of the club.

Mr. Woodbridge, a neighbor, was the possessor of both a duck pond and a row boat, and these Joe promptly borrowed for the occasion, proposing to entertain his guests in the middle of the pond where secrets would not have to be spoken in whispers.

However, the best laid plans of mice and men, to say nothing of boys, aft gang contrawise, and Joe little thought that just as he was about to pull his boat-load of guests out into the pond, Peter, the irrepressible, would fall into the water and overturn the boat in his struggles, but that is exactly what he did, and that is the real reason the lodge fever so suddenly abated with five dripping and bedraggled young gentlemen.

Studied Music When Only Three

Senor Albeniz, latest to "arrive" of present-day musicians of first rank, having disproved the proverb about a prophet lacking honor in his own land, and leaving his native Spain ringing with his praises; is soon coming over to

SENOR ALBENIZ

play in America. Composer, orchestral conductor, and pianist, and not yet fifty, the man promises to write his name large upon the world's scroll.

It is a checkered career he has had. As a mere babe his genius asserted itself. He took music lessons before he was three. As a mite of four he was suffered to give a public concert. But his parents, who were poor, seem to have forced his talent purely for their gain, and the result so acted upon the lad's high-strung make-up that twice before he was ten, he tried to run away from home.

Succeeding on the second attempt, there began for him years of privation, food coming by chance, as he played his way from one cafe to another, traveling from Spain to Puerto Rico, thence to Mexico, Buenos Ayres, Cuba, and so back to the Continent. But there was help as well as hardship in this freer life. When he had again landed in Europe he found himself with enough money to study at Leipsic, and there it was he met Count Morphi, secretary to the father of Spain's present monarch. From that moment life ran easily. As a royal protege he won the first of that applause which has since been greeting him everywhere.

Renew your subscription or you will not get the handsome Christmas American Boy.

Description: Nothing old fashioned or out of date about this splendid single barrel shotgun. It has all the late improvements—automatic shell ejection, rebounding safety hammer, top snap lock arrangement, etc. *Ejector throws out shells the instant the gun is opened; makes quick reloading easy, and renders gun almost as quick shooting as a double barrel.* **Barrel** is of tough decarbonized blued steel, full choke bored. **Stock** is of fine select hard Walnut, has thick rubber butt plate and and pistol grip. Fore-end is also of Walnut fitted with screw key—easily removed for taking gun apart. **Frame and Lock-Work** are beautifully case hardened, parts drop forged.

A Finely Balanced Sportsmanlike Gun—Very Quick, Safe and Dependable—Good for Quail, Snipe, Rabbits, and all Field Game—A Splendid Gun for Boys.

Gauges and Barrel Lengths — No. 712—12 Gauge, 30 or 32 inch barrel, weighs 6¾ lbs. ; No. 716—16 " 30 or 32 " " " 6½ " ; No. 720—20 " 30 or 32 " " " 6¼ "

PRICE $5.50

For $1.00 extra we will furnish a gun with a fine twist barrel—28, 30, or 32 inches long.

If not kept by nearest dealer, send the money to us by mail and we will ship you the gun, guaranteeing safe delivery and complete satisfaction when received. We pay all charges in the U.S.

Free to Boys who are Interested in Guns—Two delightful shooting stories "My First Rifle" (by one of Buffalo Bill's experts) and "William Tell, Jr."—a new shooting story for boys; will also send our complete catalogue of firearms. Write for these. Let us know the kind of gun you are interested in.

Hopkins & Allen Arms Co., 118 Franklin St., Norwich, Conn. Largest firearm manufacturers in the world. Makers of H. & A. Schuetzen Rifle.

You Can Get This Modern, Automatic Shotgun For $5.50

It's Just What You Want

All the World Wants a Lawyer

Court records in every State and County show that never before was there so great a demand for men learned in the law as there is to-day—everyone, everywhere, at some time needs the counsel of a lawyer. Educational authorities agree that never before was there so great an opportunity to acquire a thorough legal education as to-day. **The Sprague School of Law,** under the direction of the most able practitioners, has perfected a method at once practical and efficient, by which any young man may

A NIGHT WITH A PANTHER

By An English Cavalry Officer

THE PAGES of literature devoted to sport and the hunting of wild game teem with stories and instances of occasions when the hunted, driven to desperation and enraged to ferocity by wounds, turns, and itself becomes the hunter and the avenger of its own hurts.

Of all wild animals perhaps the most vindictive, the most cunning, and the most dangerous to hunt is the panther (Felis panthera); indeed, nine out of ten who have had experience of shooting in all parts of the world will concede that the pursuit of these animals is really more fraught with danger and hazard than that of even the tiger, lion, and elephant; and the following is one of many instances, of yearly occurrence, of the man behind the rifle not having it all his own way when drawn in actual combat against the denizens of the jungles.

It was drawing on towards the hot weather when a friend, whom we can call B, who had been very seedy, thought that I might try and get a few days' leave and join him in a small shooting expedition into the jungles of Southern India, where he was sure he would recover his lost strength and vitality, and so face the coming hot weather with a fair amount of equanimity.

The necessary leave being forthcoming, we consulted maps, arranged ways and means for a fortnight's camp—always a considerable thing in India—and, accompanied by two Sikhs and a Rajput orderly, with horses, guns, rifles, and dogs galore, after a day's journey in the train reached the place from where the remainder of our journey was to be done by road.

Our destination was a place called Bokeir, and constituted what is known in India as a jargir, that is, a tract of land which, together with the rent-roll and tribute of the villages therein comprised, is given to men whose services have deserved well of their State. Such are known as jargirdars, and enjoy almost sovereign state in their little domains, receiving absolutely feudal devotion from their tenantry and dependents.

We pitched our camp in the midst of a magnificent grove of mango-trees, which at this time of the year were covered with the green fruit. I was told that before the famine of 1898-99 the grove comprised over two thousand trees; but at present there are about half that number.

We then received and returned visits with the jargirdar, a Mahratta, and an exceedingly courteous and dignified man. We asked for and received permission to shoot in his country, and in addition everything possible was done for our comfort, supplies of every description being at once forthcoming. So tenacious were the people of the villages in their devotion to their chief that not a hand would have been raised to help us nor a blade of grass given without an order from the head of this tiny State.

Then we commenced our jungle campaign. The footmarks of a tiger and tigress, of a very large panther, of bear, sambar, and blue bull abounded in a wooded valley some six miles from the camp. We tied up helas, or young buffalo-calves, to attract the large Felidæ, and ultimately met with success, for one morning we were having breakfast early when in trotted one of our Sikhs who had gone before the pegp of dawn to look at the "kills." He reported that one of the helas had been killed at five that morning; so, putting a hasty conclusion to our breakfast, we called for horses, saw to our rifles and cartridges, and rode away to the scene of the early morning tragedy.

Arrived at a village called Sirpalli, we left our horses and proceeded on foot up a lovely wooded valley filled with the bastard teak, the strong-smelling moha-tree (from which the bears of these parts receive their chief sustenance), the giant mango, pipal, and banyan.

The awesome silence of the dense forest reigned supreme in the noonday heat. The whispered consultations and the occasional footfall of some one of the party on a dry teak-leaf seemed to echo for miles and to rudely break the well-nigh appalling quiet of the jungle. Here and there, sometimes traversing, sometimes crossing, our path, were the fresh footprints of deer and of antelope, of pig and the lordly sambar stag that had passed this way last night to drink at a time when the presence of man does not disturb the domain of the beasts of the forest. Here was a tree with deep, clean marks all the way up its trunk, from which the sap was still oozing, showing us that for some purpose a bear had climbed up it in the early morning, though why, we could not tell, as there was neither fruit nor leaf on its bare branches.

And then a turn in the path brought us to the kill, to the tragedy of a few hours ago. Surely this is the work of a tiger—the broken neck, the tail bitten off and flung aside, the hind-quarters partly consumed? No, for there are only the marks of a panther's pads and none of any tiger. They lead away into some dense jungle in front, and from here we decide to work.

Leaving the beaters here, we went by a circuitous way until we arrived two or three hundred yards ahead of the direction the beat would take. Here we were nonplussed, for the jungle was so dense and the configuration of the ground such that there were many chances in favor of any animal that might be before the beat being able to make a very good bid for eluding the enemy.

However, we came to a place which appeared as good as any, and, as each of us seemed to think that it would suit himself exceedingly well, we drew lots, and, contrary to my usual luck, I drew the longer of the two pieces of grass and decided to remain, while B took up his position about fifty yards to my left.

When shooting in the jungle, it is the practice of most to shoot from a tree not so much from a sense of added security—as both bears and panthers think little of running up a tree and mauling you there—but from the better field of view you get. Accordingly, as there was a small tree near, I ascended, and, because the footing was precarious and the position unfavorable for a good shot I buckled myself to a bough by means of one of my stirrup-leathers. This is a device, by the way, which I can most thoroughly recommend to all, for it as often as not gives you free use of your arms, and even enables you to swing right round to score a shot at a running object.

"CAN I HIT IT WITHOUT KILLING B?"

I had not long disposed myself thus, when the beat sprang into life with a suddenness and intensity which made me pretty sure that they had disturbed some animal. The shouting, cat-calling, and tom-tomming increased in violence, when all at once I heard a quick and rather hurried tread, tread, tread over the dry teak-leaves, and looking that way, out of the dense jungle into the sunlit glade before me came a large panther.

I put up my rifle. It saw me, and crouched head on in some long, dry grass. It was a difficult shot, but I hazarded it.

The beast turned and went up the bank to my right. "Missed," thought I, and let it have my left barrel as it was moving past. "Missed again," I thought, and growled inwardly.

I caught another glimpse of the brute as it went behind me, and to my relief a crimson patch had appeared on its right side. I howled to the beaters, who had now approached, to be careful, as a wounded panther was in front of them, and, B joining me, we made them all sit down to keep them out of harm's way.

Accompanied by the two Sikhs, B and I began to stalk the wounded animal. Where had it gone? Into that dense bit of jungle in front, apparently. So we began to cast around among the leaves. They at first yielded no betraying footmarks, but at last a leaf was found with a large spot of frothy blood, showing the animal's injury to have been through the lungs.

"Put a man up that tree," quoth I: "the animal is badly hit and cannot have gone far." But my advice was ignored.

Then from a spot over which I had walked not a minute before there came a rush and a roar. Swinging round, I saw ten paces off B raise his rifle and fire two barrels, but, alas! apparently without result. Down he went before the savage rush of the beast, which began to worry him.

B had fallen back on his elbows, and in the curve of his neck and right shoulder I could just see, though so near the dark-spotted body of the panther. There was no time to lose. "Can I hit it without killing B?" I thought in an agony of uncertainty, but the hazard followed quick upon the thought, and bang bang, went my two barrels. At the same time the Sikh dafadar, Gopal Singh, with all the characteristic bravery of this magnificent race, ran in and beat the animal about the head with the butt-end of B's shot-gun, which he was carrying at the time.

All this was too much for the panther who then left B and shambled away. I threw down my own rifle and ran to B's assistance, when the panther stopped and half turned towards us. B called out "He's coming at me again," and covered his face with his hands. We were all unarmed; like a fool I had left my rifle ten paces behind me, the Sikh's shot-gun was smashed to splinters, and B's rifle had fallen nobody knew where during the melee. But, fortunately for us, and more especially for me, who was then nearest her, the panther seemed to think better of it, and tumbled off into the jungle, as far as I could see, very badly knocked about.

Then we attended to B's injuries, which consisted of a large piece torn from his left fore-arm, three great teeth marks in his left thigh, and claw-marks all over his left calf. He was very brave, though bleeding a lot, and walked with our assistance towards the village until one of the orderlies galloped up with the "charpai," or native bed I had sent for immediately the accident had occurred. Then on to camp, where I redressed his wounds, sprinkled them with boracic acid, which was, foolishly, all we had provided in the way of antiseptics. Then a "palki" or palankin arrived, lent by the jargirdar, who had also sent his ten private carriers, and, accompanied by the dafardar, we started for the railway, the nearest point of which was forty miles away, and reached it at five the next morning, having experienced thirteen hours of anxiety, dead weariness, exhausted palankin men, bad and in some places roads non-existent, and, to crown all, one river to ford.

B had happily survived his injuries—always severe when inflicted by panthers as these animals' teeth and claws, from their habit of killing their prey and leaving it exposed for a day to the Indian sun, seldom fail to induce blood-poisoning, which few, if any, have been known to survive.

The panther was found next day, quite dead, with three bullet-wounds in her—one in the chest, one through the ribs, and one through the body from the front left ribs to the left haunch; and that she was able to do all the damage she did testifies to the proverbial tenacity of life and ferocity of these animals. The native of India will tell you, "The tiger is a janwar (animal), but the panther he is a shaitan (devil)."

Puzzle Verse

Here is some puzzle verse sent us by one of our boy subscribers, W. S. Ashland, Burlington, Vt. You will notice that the lines are not complete. There are seven words missing and the trick is to find the seven words. Those seven words are each composed of six letters and the six letters in each word are the same, but arranged differently. In order that you may supply the words without much study we will give them to you: Sutler, ulster, luster, rustle, lurest, rulest and result. The verse is as follows, and you may work the puzzle on your friends:

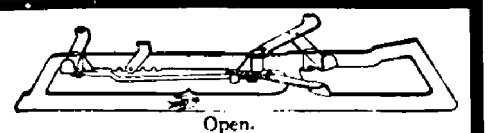
A ——— sat in his ——— gray,
Watching the moonbeams ——— play
On a keg that in the bushes lay.
And the leaves with their ——— took up the song,
Thou ——— the brave; thou ——— the strong.
To thee doth the ——— of great battles belong.

A Queer Epitaph

Donald Asselstine, one of our boy readers at Litle Falls, Minnesota, sends us the following, which he says is the epitaph on the tombstone of the woman who sold earthenware:

Beneath this stone lies Katharine Gray,
Changed from a busy life to lifeless clay:
By earth and clay she got her pelf,
And now she's turned to earth herself.
Ye weeping friends: Let me advise,
Abate your grief and dry your eyes;
For what avails a flood of tears?
Who knows but in a run of years,
In some tall pitcher or broad pan,
She, in her shop, may be again?

MARTIN
FOLDING ICE SKATES



Open.

Closed.

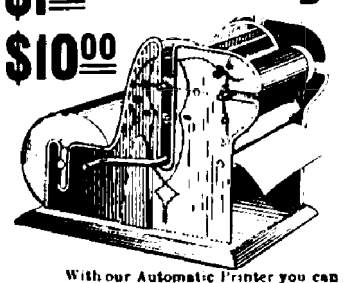
FOLD TO SLIP INTO POCKET OR MUFF

Fit better, grip tighter, and are lighter, stronger and easier to put on than the ordinary kinds. No keys — no heel plates — no screws — no bulk — no bother, **and no higher in price.** All sizes and styles.

A pair in a wallet an ideal Xmas gift; your dealer has them. If not, write us. Catalogue D, free.

MARTIN SKATE CO., Boston, Mass.

CYLINDER Printing Presses
$100 to $1000



Self-inking, clean, durable, practical. Built like the big newspaper cylinder presses. Big improvement over old-styles. Eight to 25 lines of type, one impression. Prints circulars, price lists, letter heads, programs, cards, bills of fare, paper bags, etc.

With our Automatic Printer you can run a business at home. Complete outfit in handsome cabinet. Write for free catalogue of presses and type.

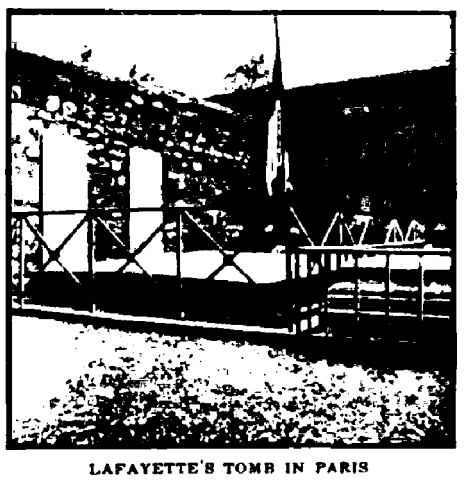
A Vermont Winner

Charles Sykes, Richford, Vt., has won the Vermont prize essay. According to a letter from his mother, addressed to the editor of THE AMERICAN BOY, he is a genuine Vermont farmer boy, sixteen years of age, and was born on the farm once owned by his great-grandfather, later by his grandfather, and now by his father. In taking his high school course, he had to travel three miles in going to and from home. He is not a grind, as he is fond of baseball and fun. He expects to go to college, having recently taken the college entrance examination in English at Burlington. He has a brother, twelve years of age, who expects to go into high school this fall. Both are good, clean boys, and will make the right kind of men.

The Flag on La Fayette's Grave

Every year the American ambassador to France places a fresh flag on the grave of Marquis de La Fayette in an isolated convent cemetery in Paris. The ceremony is usually performed in the



LAFAYETTE'S TOMB IN PARIS

presence of many American tourists then in the city. It is probably the only place in the world, outside of our country, where Uncle Sam so decorates a grave.

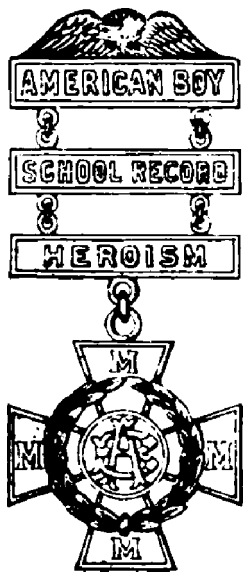
A well-known professor asserts that the smallest interval of sound can be better distinguished with one ear than it can with both.

The American Boy Legion of Honor

COMPOSED OF BOYS WHO STAND AT THE HEAD OF THEIR CLASSES IN SCHOOL AND BOYS WHO HAVE DONE CONSPICUOUS ACTS OF HEROISM

Who Are Eligible

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school ending on a date since September 1st, 1905, have stood at the head of their classes, taking the average of all their study grades for the term, and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts. Address all letters relating to the Legion of Honor to Wm. C. Sprague, Chief Counselor, Detroit, Mich.



Division of the Legion Into Chapters

Every two hundred boys in the Legion constitute a chapter at the head of which stands a Counselor. The Counselor will be a prominent educator who agrees to stand as counselor and advisor to the two hundred Legion of Honor boys under him. The first chapter is now forming and will be known as "The Shepardson Chapter."

The Shepardson Chapter (Chapter 1) of The American Boy Legion of Honor

Counselor: Professor Francis W. Shepardson, LL. D., Dean of the Senior Colleges of the University of Chicago

Address (with postage for reply) care of The American Boy, Detroit, Mich.

COUNSELOR WALTER L. HERVEY OF CHAPTER 2 OF THE AMERICAN BOY LEGION OF HONOR.

The editor of THE AMERICAN BOY has asked Professor Walter L. Hervey of New York City to act as counselor of Chapter 2 of THE AMERICAN BOY LEGION OF HONOR, and he has accepted the appointment in the following letter:

"Board of Education.

"New York, Sept. 7, 1906.

"My Dear Mr. Sprague:

"I appreciate the honor conferred by your requesting me to serve as counselor of Chapter 2 of THE AMERICAN BOY LEGION OF HONOR, and I shall be happy to serve.

"With kind regards, I am

"Yours truly,

"Walter L. Hervey."

As the boys of this Chapter will want to know something of the man who stands ready to advise them on matters relating to their course in life, we have to say that Mr. Hervey is now one of the Board of Examiners of the Department of Education of New York. He was born at Mt. Vernon, Ohio, September 28, 1862. In 1886 he graduated from Princeton, receiving from that institution the degree of A. M. in 1889, and that of Ph. D. in 1892. From 1886 to 1889 he was teacher of Latin and Greek in secondary schools; in 1889-91 he was professor of history and dean of faculty in the New York College for Training of Teachers; in 1891-2 he was acting president of that college, and in 1892-97 was president. From 1894 to 1899 he was dean of the Chautauqua School of Pedagogy, a member of the National Council of Education, and a member of the executive board of the Religious Education Association. He is the author of several books and is a lecturer on educational topics. Letters by boys belonging to this Chapter should be addressed to him in our care at the office of THE AMERICAN BOY, Detroit, Michigan.

It Made Him Sick

Willie—Was you the one I heard making love to my sister last night?

Fiddleback—I was here. Why?

Willie—I didn't suppose anyone living could make me feel so sick as that.—Scraps.

Made for the Game

For fifty years Winslow's Skates have enjoyed a high reputation for safety, durability, speed, superior material and workmanship.

The ***Winslow College Hockey Skate*** exemplifies the perfection attained by

WINSLOW'S Skates

—made of selected steel, especially hardened and tempered and beautifully finished, it stands as the finest hockey skate ever made—it is in truth—"*made for the game.*"

Winslow Roller Skates are also more popular than ever. Thousands of pairs in daily use—hundreds of rinks will have no other make.

Sold by nearly all dealers. If not at yours, we will supply you direct. Ask for free illustrated catalogues.

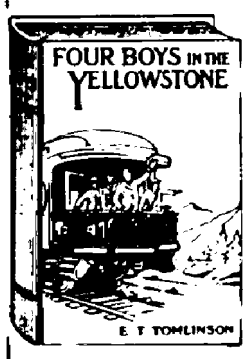
FOUR BOYS IN THE YELLOWSTONE



How They Went and What They Did

By E. T. Tomlinson

First Volume "OUR OWN LAND SERIES"

Illustrated by H. C. Edwards $1.25

Mr. Tomlinson has fairly out-done all previous work in value in planning a series which shall acquaint our young people with the beauties and wonders of their own country, and he knows well how to do this by giving his characters an uniquely good time while acquiring the knowledge which comes from intelligent travel. The book opens an entirely new field in juvenile literature and will be welcomed accordingly.

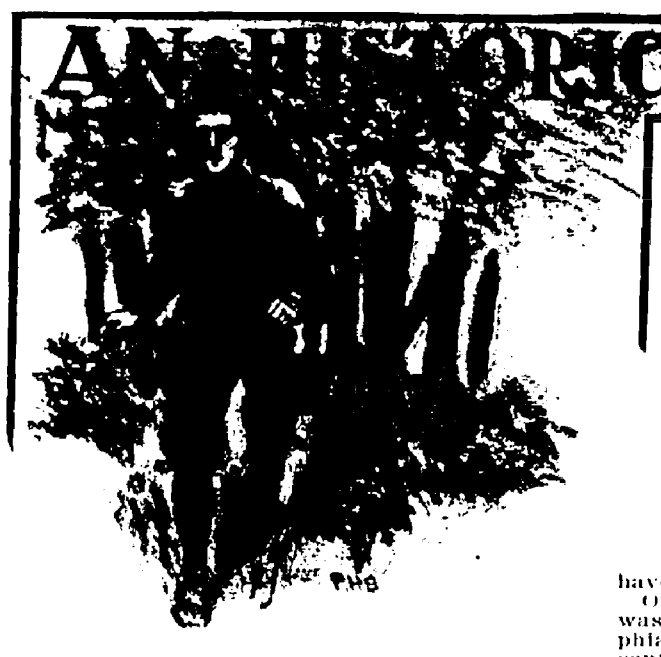
AN HISTORIC WALKING MATCH



CHAMPION WALKERS and runners of today are inclined to think that they have made more marvelous records in their numerous contests of the twentieth century than any that have been made during the previous centuries. Surprising records are frequently compared to the contests of the old days of Grecian sports; but there is a far more interesting contest for comparison, that was made in our own country over a century and a half ago, by which the Indians were cheated out of hundreds of thousands of acres of land.

Many boys of today would delight in a walking match in which they might have an opportunity of outwitting the Indians, and also of winning a prize of land and money; but there are few who would be willing to submit to the trials and disaster which overtook the contestants of the famous "Walking Purchase"—or "the Indian Walk," as it is sometimes known—of 1737.

Of all the records of trickery against the Indians made in almost every state in our union, there are few that depended upon the championship of a walking match for a successful issue; and probably no walking match was ever recorded in which the contestants fared so badly as in that which gained a great extent of Pennsylvania lands for white settlers, and drove out the Indians from their favorite hunting grounds along the Delaware river. Not one of the three contestants in the walking match secured a prize, and all met with adverse fate. The boys who will follow the outline of the famous walk on their maps, after reading the story of the contest, will not be surprised that one of the walkers died within three days after the trial, and that another was a physical wreck from his efforts and lived only three years. This is the story of the famous "Walking Purchase," as recently given by a noted lecturer before a gathering of schoolboys who had visited the Wrightstown monument:

In a corner of the old Friends graveyard, at Wrightstown, Pa., there stands the rough stone monument where once stood a wide-spreading chestnut tree that 169 years ago sheltered a remarkable company of white men and Indians.

" " THEN THREW HIMSELF AT FULL LENGTH AND GRASPED A SAPLING

They had assembled there for the start on the historic walk which had been agreed upon to determine the extent of the purchase made by William Penn of the Lenni-Lenape, or Delaware, Indians fifty years before.

After standing for a century and a half as a landmark of that historic region, the old chestnut fell a victim to time; then the Bucks County Historical Society placed on the spot a time-enduring monument, inscribing on the large boulder which forms part of the pedestal these words:

To the Memory of
The
Lenni-Lenape Indians,
Ancient Owners of This Region,
These Stones Are
Placed at This Spot,
The Starting Point of the
"Indian Walk,"
September 19, 1737.

The monument commemorates one of the most interesting incidents of the early civil history of this country, and also one of the first departures from that policy of strict honesty and fairness which distinguished the dealings of William Penn with the Indians.

It is noteworthy that in this bit of sharp practice, by which the Indians were deprived of thousands of acres of land they had never intended to cede away, the most conspicuous figure was Thomas Penn, a son of William Penn, who succeeded to his father's rights.

It was in 1686 that William Penn bought from the Lenni-Lenape Indians a section of land bounded on the east by the Delaware River, on the west by Nashaminy Creek, and extending to the north from its previous purchases "as far as a man can go in a day and a half."

William Penn never took any steps toward fixing the northern boundary of this purchase, nor did his son after his death, until the Indians, disturbed by the steady encroachments of the white settlers, asked to have the line fixed.

On August 25, 1737, there was a meeting in Philadelphia, at which the Indians confirmed the purchase of 1686, and September 19 was agreed upon as the day for the beginning of the day and a half walk.

Thomas Penn had offered five pounds in money and five hundred acres of land to the man who would make the greatest distance, and there were three contestants: James Yeates, Solomon Jennings and Edward Marshall.

It was very early dawn when the signal to start was given, and it was not long afterward when the Indians who were appointed by the Lenni-Lenape chiefs to accompany the walkers discovered the trick by which the white men meant to place the northern boundary of the purchase as far north as possible.

Thomas Penn had secretly sent out a party of experienced hunters to select the best and most direct route, and to blaze the trees along the way, so that the walkers would lose no time unnecessarily. The Indians noticed the blazed trees as quickly as the white men for whose benefit the guides had been placed, and they had also noted the unusual speed at which the "walk" was being pushed.

They protested that the treaty contemplated walking, not running, but were reminded that the wording of the treaty was "as far as a man can go." Their protests proving of no avail; they tried to delay the progress by stopping to rest, but the white men who had accompanied the walkers on horseback compelled the tired Indians to mount with them and ride.

At last the Indians refused to go any farther, and the whites pushed on alone One old Indian who represented his people in a subsequent protest, said:

"White man too much hurry; him no walk; him no sit down to rest and smoke; him no stop to shoot squirrel for dinner; him lun, lun, lun, all day long."

Before the Lehigh River was reached Jennings dropped out of the contest exhausted. Yeates was unable to take up the last half day's walk, and died three days afterwards.

Marshall, more experienced in such travel, remained comparatively fresh, and thus won the contest. Tradition has it that, the contest over, the prize being decided, nothing remaining but to determine how far north Marshall could get before the end of the day and a half, Marshall was carried the greater part of the time on the horses with other riders.

After having gone far beyond the blazed trees, and the halt being called, Marshall threw himself at full length and grasped a sapling, which became the point of the northern boundary of the purchase of 1686. This point was near where Mauch Chunk stands, and is twice as far north as the Indians expected it to be.

There yet remained to be determined the direction in which the northern line should extend to the Neshaminy and the Delaware, and here the Indians were again the victims of a trick.

They claimed that the lines should be drawn direct to the nearest points on the two streams, which would strike the Delaware at a point on a line direct from Mauch Chunk to New York City. But Penn claimed that the line should be drawn at right angles to the direction of his walk, which had been northwest, according to which the line would touch the Delaware where the borders of Pennsylvania, New York and New Jersey meet, and Surveyor-General Eastburn so decided.

Thus the Indians, after seeing the starting point of the northern boundary fixed twice as far north as they expected, were obliged to concede two hundred thousand acres more, owing to the direction of the line.

The Indians never recovered any of the land of which they were thus deprived, and it ended their proprietorship along the river from which they took their name. But there was a sort of poetic justice in the subsequent experiences of the white men who were the principals in the fraud.

Marshall never was able to secure from Penn the land he won, and his wife was butchered by the Indians. Surveyor-General Eastburn was repudiated by Penn, and in the end Penn himself was called to account by the king and forced to disown many of his acts and agents in the most humiliating manner.

Cried Himself to Liberty

Hans Guyine, a tow-headed boy, 16 years old and small for his age, accompanied by his mother, Theresa, came to this country two years ago from Germany. Hans's father had died a few months before, and the two had barely enough money left to squeeze through Ellis Island after paying their passage. The mother went to work diligently. She baked little German cakes and cookies besides making lace; Hans was put in school, and soon their little flat in Willett street became known for its thriftiness and its goodies.

In the vacation months Hans picked up odd jobs. One day last June he happened to be near the Barge Office when some immigrants asked to be directed to a place in the city, and the boy politely volunteered to take them to their destination. When he arrived there the head of the party pressed a silver piece into his hand. Hans after that stood at the South Ferry entrance to the subway. He steered numerous parties to places they were seeking and soon his mother started a bank account for him.

In the crowd of immigrants that landed from the North German Lloyd steamship Main recently was a man who later gave his name as Eugene Tenney, of Bremen. He became confused in the swarm of bustling people and the noise of traffic and turned to the boy for assistance. He said he wanted to go to East Ninth street. Hans and the stranger boarded a Broadway car and transferred at Park row to the Third avenue line. When the pair reached Delancey street the stranger suddenly let out a cry that he had been robbed.

On second thought he grabbed Hans and became so excited that the conductor stopped the car and called Policeman Crimmins of the Delancey street station, who was on post near by. Tenney then told the cop, through a passenger on the car who spoke German, that the boy had taken his wallet containing $45. Hans burst into tears, indignantly denying any knowledge of the missing money, but nevertheless was haled before Magistrate Finelite in the Essex Market police court by the big policeman.

The more the magistrate questioned the louder the boy howled. Finally the case was adjourned to allow the complainant to get witnesses. The boy was then taken to jail, crying and protesting his innocence. His mother was notified, but she could not scrape up enough ready coin to get Hans out. Instead of sleeping Hans cried all night long.

Prison Keeper Whalen and the matron did their best to comfort Hans, and finally a collection of nickels and coppers amounting to several dollars was taken up and given to him. But it did not check his tears, and he was still crying when brought before Magistrate Breen in the morning.

"What evidence have you against this poor lad?" asked the magistrate. "He looks honest and cries as if he were honest."

"I felt somebody going through my pockets and I think it was him," said Tenney through the interpreter, in a hesitating way.

"You didn't tell this boy to cry, did you?" asked Magistrate Breen of the lawyer appearing for the prisoner.

"No, your honor."

"In that case I think it an outrage to hold him a minute longer. This immigrant is a greenhorn and some professional sharper got him. The boy, I'm positive, is innocent," concluded the magistrate.

The prisoner was discharged. Hardly had he been informed of the fact than he made a dive for his mother and brother, who were seated among the spectators. He did not wait for the policeman to open the gate, but vaulted over the four foot railing and hugged both at once.

"That boy wouldn't steal in a thousand years," commented Magistrate Breen, as he watched the greeting.—New York Sun.

A Word to the Boy Who Smokes Cigarettes

A word to you, sonny—you little twelve or thirteen year old boy who is smoking cigarettes on the sly. What do you want to be when you grow up—a stalwart, healthy, vigorous, broad-shouldered man, or a little, puny, measly, no-count, weak-minded dude? If you want to be a man, strong like a man, with hair on your face, brains in your head, and muscles in your limbs you just let those cigarettes alone. If you want to be a thing pitied by your folks, despised by the girls, held in contempt by the fellows, keep right on smoking.—Seneca (Mo.) Hustler.

Robert W. Brain

One of the most remarkable instances of musical ability possessed by a boy of tender age is that of Robert W. Brain, of Springfield, Ohio, aged ten years. His father is conductor of music in the Grand Opera House at Springfield and his mother is also a musician.

Several years ago Robert began to show a wonderful sensitiveness to sound and to accurately imitate the notes of animals, birds, whistles, and other sounds with which we are familiar. At the age of six years he composed a polka, playing it upon a toy piano. The melody and musical form were excellent. As a violinist and pianist he has played solos of his own composition in public many times. Among these are "The Mill," and an intermezzo, "The Robin." He has also played in public The First Fantasie by Mozart.

Next he took up the art of writing music from sound, and for nearly two years now has been able to write down his own compositions. He prefers classical music. At a concert he can always tell the key in which each selection he hears is being sung.

Robert has written an operetta in three acts entitled, "The Land of Flowers," which he looks forward to seeing staged. Musicians are amazed at its beauty and freshness. He has taught the different parts to his schoolmates and is arranging some of the music for the use of orchestras.

The boy is to be given every opportunity for the development of his talent and will eventually be sent to Europe to complete his musical education.

Americans Honored by King George of Greece

The King of Greece bestows upon American Commissioner, James E. Sullivan, Golden Cross, and Upon Manager Halpin, Silver Cross.

Hon. D. N. Botassi, Greek Consul in New York, has received official information to the effect that the King of Greece had conferred upon the American Commissioner to the recent Olympic games, Mr. James E. Sullivan, a golden cross.

The Decoration of the Kingdom of Greece is called The Royal Order of the Saviour, and is divided into five classes, namely: First, the Silver Cross; second, the Golden Cross; third, the Order of the Commander; fourth, the Order of High Commander; and fifth, the Order of the Great Cross, which is given only to Sovereigns, Ambassadors, Ministers and Commanding Generals. This last decoration is considered the highest honor that can be bestowed upon an individual. To foreign sovereigns and ambassadors the number is not limited, but among Greeks only twelve individuals can have it, and some one of the twelve shall have died before another cross is given.

The bestowal of such decorations is an exclusive privilege of the king, and the fact that upon Mr. Sullivan has been bestowed the Decoration of the Golden Cross, for the distinguished services rendered by him towards the success of the Olympian games at Athens, is considered a high honor for the reason that Mr. Sullivan does not hold an official position in Greece.

Jealous of the Reputation of His State

Robert E. Power, of St. Paul, seeing that a Minnesota boy had taken exception to the statement of the Michigan boy in the Michigan prize essay to the effect that Michigan was the chief state in the matter of its iron production, adds a criticism to the effect that the Michigan boy is wrong in claiming that the scenes of Hiawatha were laid in Michigan. "I have looked up the question," says he, "in Redway and Hinman's Geography of the United States, published by The American Book Company of Chicago, and it says that it was in Minnesota. Minnehaha Falls are between Minneapolis and St. Paul. In Hiawatha it reads like this, 'Heard the falls of Minnehaha calling to them from the distance'." The boy also sends us a clipping from the St. Paul Dispatch which contains a picture of the falls at Pipestone, Minnesota, made famous by Longfellow's Hiawatha. He also calls attention to the fact that the Michigan boy is wrong in saying that Michigan produces more lumber than any other state.

Without settling the controversy between these boys, we want to express the pleasure that we feel over the fact that these essays are encouraging the boys to investigate. It is almost worth while to have a boy make a mistake in his essay if it sets other boys to studying.

MR. AND MRS. PATRICK ROONEY lived in an old ramshackle of a house in Poverty Lane on the edge of "Nowhere." If Pat had been less fond of whiskey and Mrs. Pat had been less shiftless, they might have lived somewhere else. If Pat had been different, Mrs. Pat might have had her ambitions, but as it was these were conspicuous by their absence.

"What's the use tryin' to fix things up?" she would say. "Pat makes everything fly when he's drunk?"

A time came, however, when Pat kept on the safe side of whiskey. A letter had come from his brother Mike who lived in Nebraska. Mike wrote that he was "coming on for a visit." Pat had not heard from Mike for many years. During that long interval Mike had made money steadily and was now a rich man. He wrote that he would be glad to take one of Pat's boys home with him, if he could have his choice.

Pat suddenly grew some inches taller after reading the letter, but his height diminished rapidly when Mrs. Pat remarked:

"'Taint likely Mike'll stay here long when he sees how we look and live. And like enough he won't want any of our boys when he sees how they are neglected, a runnin' the streets day and night."

"What makes you let 'em run the streets?" Pat demanded. "You're their mother."

"What makes you let 'em?" was her rejoinder, "You're their father."

"Well, I'll show 'em I am, that's what I'll do," Pat said with determination, "I'll make 'em stay at home or know the reason why."

He struck the table with his fist to add strength to his resolution.

It was on Tuesday the letter came and on Thursday, Thanksgiving day, Uncle Mike would arrive.

"Shure we'd ought to hev a toorkey in honor of Mike," said Pat wistfully.

He tried in vain to get trusted for a turkey. He had been "trusted" too frequently in other days.

"'Twouldn't be nice to hev bacon or codfish for Thanksgivin' when Mike's here," Mrs. Pat observed deprecatingly.

"No," agreed Pat, "An' we ain't goin' to hev it," he spoke irritably, and then, suddenly, a broad grin overspread his face.

He gave the table a resounding whack.

"I hev it," he exclaimed joyfully. "Shure and we'll hev Tim's pig fer Thanksgivin'."

Tim was the youngest boy, only eight years old, a little fellow with big blue eyes and red hair curling all over his head.

His brother Pat was ten years old. Next came Mike (named for the rich "Uncle Mike"), who was twelve.

Little Tim's face grew pale at the allusion of his father's.

"You can't take my pig," he cried out in great distress.

His brothers laughed mockingly.

"Can't take yer pig?" exclaimed his father. "An' why not?"

"It's mine."

"An shure ye'll let yer mother roast your pig fer yer Uncle Mike—an' on Thanksgivin' too?" coaxed Pat Rooney.

"No, I won't hev it roasted for nobody."

The contention was quick and sharp. Pat was determined to have the pig and little Tim determined that he shouldn't. To the child the pig meant much. Mrs. Murphy, a neighbor, had intended drowning it when it was a little bit of a thing.

"Taint wuth it's keep," she had said as she looked with disgust at the miserable grunting creature.

But Tim had pleaded "not to drown the poor thing" and then she had given it to him. From that moment the pig became Tim's pet. He did everything he could for its welfare and his efforts were crowned with success. Many a day when provisions were low Tim had divided his meals with the pig. But he felt rewarded for all his efforts and sacrifices. There was not a healthier or cunninger pig anywhere and it manifested a wonderful fondness for Tim. The boy had taught it a number of tricks, such as jumping through a hoop, standing on its hind legs and begging.

"Oh, dear me!" Tim thought, "I'd as soon think of roasting myself as of roasting my pig."

On Thanksgiving morning there was no discussion in regard to the pig. Pat Rooney had decided that it must be roasted and that—he thought—ended the matter.

"Now, Tim," said he, "no more nonsense. You've got ter obey yer father. What's yours is mine—d'ye hear? Git thet pig right off. Wash it clane an' bring it to yer mother. Whativer ye forgit—ye must remimber that it's right to always obey yer parents."

After Pat had delivered his speech in his most impressive way he went out, fully believing that his mandate would be obeyed. He would be gone several hours and when he returned Uncle Mike would accompany him.

These were sorrowful hours to poor little Tim. He had cried so much during the past twenty-four hours that he felt dazed. A question kept ringing through his aching head—was it always right to obey his parents? Was it? His father had declared that it was. Oh, dear! Oh, dear. It did not seem as if it could be right. He trembled from head to feet as he went out of the house.

"Hurry up, Tim, thet's a good boy," called his mother, "give the pig a good scurrin'—it's time it was gettin' ready fer the oven."

Oh, horror! Mrs. Pat was sharpening the butcher knife on the stove.

"Oh, she means to cut and gash my dear little pig," was the unhappy child's thought, "she shan't do it—she shan't."

He hurried to the shed. As he opened the door the pig ran to meet him. He sank down on his knees—crooning over his pet, while the tears rolled down his cheeks.

"Poor little piggie! Dear little piggie!" he said tenderly. "Oh, I wish Uncle Mike had stayed where he belongs!"

But Tim was a hero. Having made up his mind at last that it would be wrong not to obey his parents, he lifted the pig in his arms and carried him to the lean-to kitchen where there was a tub of warm water waiting. Piggie enjoyed his bath, which was prolonged on account of what must come after. There was an old rusty stove in the lean-to, his mother had been doing all her cooking there. Tim supposed that she intended getting the Thanksgiving dinner there, too. He opened the oven door, finding the oven just milk warm. In another minute the pig was in the oven and Tim was out in the shed on the hay crying his heart out. His head was hot, his brain confused, but one thought brought him a ray of comfort.

"Ma didn't get her knife in him any way—she didn't cut an' gash poor little piggie."

He had not slept at all the previous night, so it was no wonder that he fell asleep almost as soon as his head touched the hay. Presently he had a beautiful dream to comfort him—piggie was in his arms; he held him close.

But it was no dream, or at least if it were, no one could tell dream from reality. For piggie was there on the hay beside him. Tim slept for hours.

Meanwhile at the house Mrs. Pat was working harder than she had worked for years before. She was cooking on the kitchen stove—something she had not done before during the fall. She heard Tim scrubbing the pig in the lean-to but just then she was mixing some biscuit. As soon as her hands were out of the dough she started for the lean-to. As she opened the door she heard a splash behind the stove and suddenly a little dripping form raced across the floor and disappeared. It was Tim's pig. The oven door had not been tightly closed on the side toward the wall.

"Well," said she, "ef thet don't beat the Jews. The poor boy is daft—he must ha' put the pig in the oven alive to roast. I wish Pat had let him alone, so I do. I s'pose I'll hev to go an' get thet pig and kill him myself."

Mike and Pat, junior, had gone off—a habit of theirs when there was anything particular to do. Mrs. Pat proceeded hastily to the shed—the sharpened knife in her hand. But the scene that met her gaze was too much for her mother heart. Tim fast asleep with one arm thrown over his pet protectingly. The tears were dried on the round face—there was a smile on his lips.

"There'll be no roast pig in our house this day," she said to herself. Then hurrying back to the house she brought out a blanket—throwing it over the sleeping boy, gently.

"Shure," said she, as she went back to her work, "instead of roast pig we'll have codfish. That's what they call the 'Irishman's Toorkey,'" and she laughed light-heartedly. She was glad, after all, that Tim's pig had been spared.

Mike and Pat, junior, returned from their wanderings in time to "fix up" in their "best bib and tucker" for Uncle Mike. They were two absurd looking chaps when they were "fixed," the crowning touch of the "fixing" being hair plastered down with ill smelling bear's oil. Then Pat Rooney and Uncle Mike arrived, the latter a big, jolly looking man who greeted every one pleasantly and made himself at home.

"Where's the other boy?" he questioned. "You said there were three."

"Where's little Tim?" asked Pat, senior.

"I dunno," said Mike.

"I dunno," echoed Pat, junior.

All eyes were turned on Mrs. Pat, who answered, "He's asleep. He cried himself to sleep and nobody's goin' to wake him till he wakes himself."

"Poor little chap!" said Uncle Mike kindly, "I hope he isn't sick."

Mrs. Pat did not say whether he was or not, but instead she remarked that "dinner was ready."

The table was neatly set with the best the house afforded (which was not saying much) and there were cranberries, a dish of sweet pickles, some cheese and jelly. They were indebted to little Tim for these luxuries. He had done some chores and errands for a grocer in Poverty Lane and in the goodness of his heart taken these things in payment "so's to help along."

Ah, poor little Tim! His was one of the sweet, helpful natures ever ready to do what he could.

As Mrs. Pat invited them to sit down at the table she first served soup. Before marriage she had been cook in a nice family, consequently could do things in first-class style when she had the material.

The soup was excellent. Uncle Mike ate his in a well-bred way that quite charmed Mrs. Pat. Pat and the boys fairly gulped down their portion, almost blistering their mouths and throats in their haste for the second course.

"Shure, Mike, an' you'll taste a roast pig as is a pig, the nicest, plumpest pig ye ever saw, an' roasted to a turn," declared Pat senior in a jubilant tone, smacking his lips in anticipation of the great treat.

"An' 'twill have a lemon in its mouth," said Mike.

"An' a wreath of parsley 'round its neck," Pat, Jr., put in with a broad grin.

Mrs. Pat said nothing, but there was

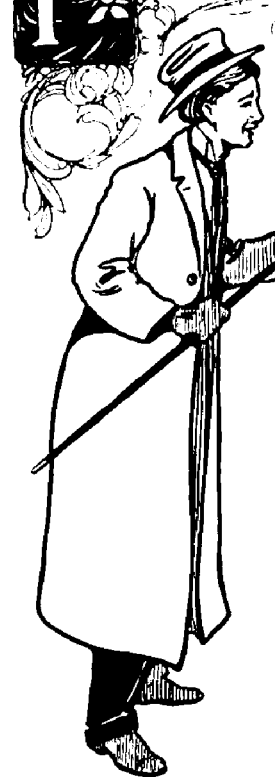
Mention The American Boy When Answering Advertisements

FOR THE GLORY OF ST. MARY'S.

BY WM. HEYLIGER.



THERE are some things that people take a long time to forget. The students of St. Mary's whose fathers had fought the last of the Indian tribes, could not forget the many unmarked graves out on the prairies, nor the many burned cabins that dotted the wilderness. That was the reason also why Oscar Bender, big, strong, and brawny, stood on the side lines, while substitutes, weaker and with less knowledge of football than he, were sent out to take the places of players carried limply from the field.

It had been a fiercely played game, and the second half was drawing to a close. At the finish, the score board would tell whether Kingston or St. Mary's had carried off the championship of the college world. Neither side had pushed the ball between the goal posts, and St. Mary's was weakening. The blue and gold still waved from the stands, but not as gayly as it had shook earlier in the day. The blood red of Kingston showed everywhere and as the game dragged on, a constant series of scrimmages on the chalk-lined field, the sharp rattle of the Kingston cheer floated out on the field to encourage the tired wearers of the red.

Yard by yard, St. Mary's was being pounded back, and on the sidelines, big Dan Carroll, the coach, raged in his heart at the fate that had crippled his best and heaviest men. Of the substitutes left, only Bender was silent.

"Johnson," he thought to himself, "is weakening. They'll send me in now." But a moment later, when the full-back was carried from the field, and even while Kingston was shrieking its joy, Davis was sent into the game—Davis, a 120-pounder, to buck the heavy Kingston line.

"O—oh," groaned Bender. It was the first sound the Indian had made since the game began.

The first rush bowled Davis over as though he were a reed. After that Kingston sent man after man toward him, until staggering as though drunk, Davis cried with the rage of his weakness. Despair settled over St. Mary's, and the blue and gold hung limply from the stand. Carroll stalked the chalk lines begging his boys to stay the wild plunges that were carrying them toward their own goal line. Bender, standing beside him, saw Davis go down again, and as they lifted the little fellow from the ground, the Indian slipped on a nose guard and went out on the field.

Carroll ran after him and caught his arm.

"Where are you going? he demanded.

"To play," answered Bender, doggedly.

The coach's glance rested on the students in the stands.

"After the way they turned you down?"

"This isn't for them," said the Indian; "it's for St. Mary's," and then all the manhood that was in big Dan Carroll came to the surface.

"Go in," he said, huskily; "you're a brick. I told them you were the best man we had. Hold them, Bender, hold them."

Those were the first coaxing words the Indian had heard since he joined the training squad, and they sent the blood tingling in his veins. He felt, rather than heard, the awed whisper that ran the length of the Kingston stands. Over where the blue and gold of St. Mary's made a sea of color, the students, as a matter of college loyalty, broke into a steady, ponderous rah, rah, rah, and tacked his name to the end of the cheer. The sound went to the Indian's head like wine.

Jones, the little quarter-back, was going to pieces as the teams lined up again, and Bender fresh and confident, caressed him gently.

"Steady," he whispered, "steady," and the quiver left the boy's body, and he laid his hand on the crouching center in front of him.

"Steady," he whispered, and the word ran down past the guards, the tackles and the ends.

The autumn sun, sinking in the west, flared up the faces of the straining athletes. Kingston would try the new man first. They went at the center in a wedge, but even as they rushed, a suddenly stiffened wall of bone and flesh arose to meet them, a form flashed through their interferers, and the runner dropped in his tracks for a loss of a yard.

A yell of sudden hope burst from the blue and gold. As Bender rose from the dust, the stand recognized him and stampeded to their feet to once more cheer his name. People to whom sport is sport and Indian blood as nothing, asked each other why he had not been put in the game before, while off on the side lines, Carroll hugged himself in glee.

"Oh, Bender man, Bender," he crooned, "you're a peach."

The Indian was speaking rapidly.

"Go at them," he urged. "They're easy. Tackle low." But in his own mind he was whispering that he would have to play the game alone until St. Mary's got back her nerve.

But nerve was not all St. Mary's needed then. Her strength was gone. Battered and bruised, the eleven was pushed back sullenly yard by yard, and Carroll's joy died even as it was born. The time-keeper's whistle sounded five minutes more of play. St. Mary's was fighting her last fight on her ten yard line, and the Kingston cheer was flinging defiance at the weary blue and gold.

They crouched again. St. Mary's hopeless but still fighting; Kingston eager and anxious. They sang their battle songs as they bent over the ball, and one stand answered back another. Up they rose at last, and St. Mary's defense fell like a giant tree before the woodman's ax. Bender alone stood firm, and as Kingston tore a hole between center and the guard, the Indian bent slowly forward and met the runner headlong.

The shock jarred the ball from the runner's hand, and Bender was up and after it. He took it on the bound. Two of St. Mary's men, tired but willing, tried to break through before him, only to stumble and fall with the shock of collision. With almost the entire Kingston eleven before him, Bender was left to fight alone.

He went at the right wing of the Kingston line. There seemed to be a larger opening there, but before he got fairly started a tackle made a flying clutch and caught him. He shook the fellow off, though not before the greater part of the enemy were before him and around him.

The blue and gold had awakened. The Indian heard the college cheer, and the next man to tackle him went backwards like a bent spring, clutching wildly at the air. From some place on the field little Jones dived past him and opened a hole through which he plowed. He seemed scarcely to have moved; in reality he had gone almost ten yards.

Then they got him—three of them. Bender saw men jumping up and down and waving flags, flags, flags—flags everywhere. He wrenched himself violently and sent one of those holding him sprawling. That left only two.

He wondered vaguely, as he dragged one foot after the other, why the rest of the Kingston men did not pile on and pull him down; he did not know that behind him St. Mary's was holding Kingston as they had not held them all that day. Five yards farther he shook himself free from another of his captives, as a tree might shed its dead leaves. He still had a wearer of the red clinging to his thighs, and he began to go forward with bounds and jerks. Twice he shook himself free, only to be caught again. The third time the Kingston man let go with a sigh and lay white and still. The Indian had a clear field before him.

He ran, not as he had seen the track team run, but as his forefathers ran. He saw somebody waving an excited pair of arms on the side lines, and after a while decided it was Carroll. The roaring of many voices was in his ears, and he knew they were shouting Bender, Bender—Why, he was Bender, and then suddenly his brain cleared and he heard the quick patter of feet behind him.

He shut his teeth hard. The white chalk of the five yard lines danced before his eyes, and the patter of feet came nearer. He tried to run faster, but the struggle down the field, with men clinging like flies to his back and feet had sapped much of his strength. He began to count the patter of feet behind him. One, two, three, four—He shook himself again with the realization that he was beginning to lag.

Why did everybody shout at him? He heard a gasping breath, and something closed about his knees like a vice. He pitched sideways, struggled to save his balance, reeled another yard and then crashed against a goal post, to double up like a jack knife and cough harshly as he fell.

He was still coughing weakly when somebody ripped open his jersey and dashed cold water on his chest. He looked up into rows upon rows of faces. The world seemed to have turned to blue and gold. Carroll was bending over him.

"Hurt?" asked the coach.

"No." The Indian sat up. "What's that."

"That's you," said Carroll, grinning "Listen."

Five thousand throats were singing. The words came booming across the field:

"Bender, Bender, Big Chief Bender."

"And St. Mary's," said Bender, smiling.

FIVE YARDS FARTHER HE SHOOK HIMSELF FREE FROM ANOTHER OF HIS CAPTORS

Sent a God Bless You After Him

The following is an extract from the address of O. M. Spencer, St. Louis, one of Missouri's most successful lawyers, delivered to the newsboys:

"Every man was a boy—it seems strange, but it is really so. Wouldn't you like to turn time backward and see Abraham Lincoln at twelve, when he had never worn boots—the lank, lean, yellow, hungry boy, hungry for love, hungry for learning, tramping through the woods for twenty miles to borrow a book, and spelling it out crouched before the glare of the burning logs.

"Distinctly and vividly, I remember a squat, freckled boy who was born in the 'Patch,' and used to pick up coal alongside railroad tracks in Buffalo. A few months ago I had a motion to make before the Court of Appeals at Rochester. That boy from the 'Patch' was the judge who wrote the opinion granting my petition.

"Yesterday, I rode horseback past a field where a boy was plowing. The lad's hair stuck out through the top of his hat, one suspender held his trousers in place, his form was bony and awkward, his bare legs and arms were brown and scratched and briar-scarred. He turned his horses just as I passed by, and from under the flopping brim of his hat he cast a quick glance out of dark, half-bashful eyes, and modestly returned my salute. When his back was turned I took off my hat and sent a God bless you down the furrow after him. Who knows! I may yet go to that boy to borrow money, or to hear him preach, or to beg him to defend me in a law suit; or he may stand with pulse unmoved, bare of arm, in white apron, ready to do his duty, while the cone is placed over my face and night and death come creeping into my veins.

"Be patient with the boys—you are dealing with soul stuff."

Why Some Boys are Bad

The following are words of wisdom from Chas. O. Krauskopf, Secretary of the Illinois Society for Child Study:

"There is in the present day city life absolutely no place in the economic community for the man-child between four and fourteen years of age. There is no place or condition where he becomes a natural, essential factor of the social body. Nobody really needs him or wants him. His mother may ask him to run a few errands, but there is rarely any attempt to require of him the performance of regular daily duties. He has nothing to do, and is forced to play or loaf.

"His father's place of business is usually far from home, frequently behind walls and fences with "No admittance" over doors or gates. Even if the boy can visit his father and see him at work, the differentiation of labor is so great that the purpose of the father's task is often incomprehensible to the child.

"After a few minutes the novelty of watching the wheels go round wears away, and his naturally active mind and body carry him to where he will again be kicked off the neighbor's lawn, ordered from vacant lots or streets because of his noise, until finally, an outcast and a wanderer on the face of the earth, in self-defense he forms a band or gang to fight for or to gain secretly his rightful share of innocent pleasure, and then, by an always easy road, he usually passes to a more questionable occupation."

College Fraternities

In August, 1826, William Morgan, a Royal Arch Mason, who had threatened to expose the secrets of Freemasonry, was abducted from Canandaigua, N. Y. Vigilance committees traced him and his abductors to Fort Niagara, and thence in a boat to Lake Ontario, where he finally disappeared, his body never being found.

Amid the most intense excitement the ani-Masonry party was formed. It was dominant in New York for twenty years, and effected national elections, even preventing Henry Clay's nomination for the Presidency, because he was a Mason. The feeling against secret societies ran so high that more than 3,000 Masonic lodges gave up their charters.

Yet it was during this very time and in the New York colleges, says the Outlook, that the older college secret societies (excepting Phi Beta Kappa, which till then had been a secret society, and Kappa Alpha) were founded, as follows: In Union College, Sigma Phi, 1827; Delta Phi, 1827; Psi Upsilon, 1833; Chi Psi, 1841; in Hamilton College, Alpha Delta Phi, 1832.

These societies were at first strictly forbidden and known members were expelled from college or lost college honors. Pins were usually worn inside the vest pocket, and meetings were held in secret.

In 1832 Phi Beta Kappa was forced by Harvard's president to relinquish its secret features. Yet it was during this period that the fraternities adopted the constitutions, policies of administration, and traditions which have snce largely governed and hampered them.

After some years the secret societies were tolerated and even recognized, although earnestly opposed by many who believed that they were inherently wrong or that their growth would kill the college debating societies. During this second period simple lodge rooms were hired in some business block, or even in the attic of a hotel.

Their infrequent conventions consisted of a public address, and probably a poem, by prominent alumni, and a private banquet. The active members met as a body only once a week—on lodge nights. Although the colleges were constantly asking for large sums to build dormitories, no one dreamed that the fraternities would largely solve this problem by housing their own members.

About twenty-five years ago the fraternities entered their third or present stage. Their position in college life is now recognized and influential. They own many fine chapter houses and maintain close relations between their graduates and undergraduates, and between their various chapters. Most of their members room and often eat in the fraternity houses, which are sometimes built on land leased from the college. Some colleges in which the fraternities are strong have ceased to build new dormitories.

Reminders of the Little One

A man from Denver is in New York on business. On the bureau in his room in the hotel rests a tiny pair of shoes. Every night, before he retires, he unbutons the little shoes. In the morning, so soon as he arises, he buttons the little shoes again.

There is a very tender light in the man's eyes when he handles the little shoes, for he is thinking of the toddler 2,000 miles away who is just beginning to say "papa."—New York Press.

Japan's chrysanthemum flag is probably the oldest national banner in existence. That of Denmark is the oldest among European nations.

The School Football Team

Some Practical Suggestions on Important Points

: : : By WALTER B. NORRIS : : :

I. THE QUARTER BACK.

NO ONE is more important on a football team than the quarter back. In his selection of plays he should look carefully for weak spots in his opponents' line, and then hammer them often. While in his own half of the field, he should play cautiously, kicking the ball away when he cannot gain ground with it, and so getting his goal out of danger. Trick plays should be played in one's opponents' half of the field and generally on a first down.

II. RULES WORTH KNOWING.

When a team is on the defensive, it is very important that they do not commit fouls, such as off-side play, as a single foul by them gives to the opposing team a first down. Thus, if a team with the ball has second down and fifteen yards to gain, and their opponents are penalized five yards, the ball is moved up five yards and the down is a first down.

At the kick-off all of the kicking team are on-side and may secure the ball as soon as it has gone ten yards. If they drop on it behind their opponents' goal line it is a touchdown.

The question of when a touchback has been made is a puzzling one, and this year it will frequently arise. This year any punt or forward pass that goes over the goal line, or any ball that bounds or rolls over the line, before being touched by a player of either side, must be declared a touchback. This does not apply to kicks from a kick-off or a free kick, which may be run back.

When a touchback is made, the defending side kick out from in front of their goal line. The other team may line up on the twenty-five yard line or nearer their own goal. They generally arrange themselves as at a kick-off, but putting the first man on the twenty-five yard line.

The ball is "out of bounds" as soon as it or any part of the player carrying it touches the side line or the ground outside it. If the ball goes out before being touched by a person on-side, it belongs to the opponents at the spot where it crossed the side line. If, however, it was touched by a person on-side, it belongs to the first one getting it. Thus, to avoid a kick being run back, kick across the side line.

Another point that might be overlooked is that a captain may not call for "time out" just when he pleases. He may ask for two minutes any time he wishes to put a player out of the game, but he cannot ask for time for other reasons, such as resting a player who is hurt, more than three times in a half. If he does his team must lose two yards each time, the number of the down being unchanged, and, unlike a foul, the distance (not the point) to be gained remaining the same.

Such points as these, and in fact all the rules, should be clear in the mind of the captain, or he will be unable to avoid penalties or secure fair play for his team-mates. In all disputes and protests, however, he should be courteous, and never interfere unless the rules are violated.

A FEW GOOD PLAYS.

The two plays illustrated here are merely types of many others that can be run off in similar fashion. The first shows a half back run around the end, the second a trick play from a punting formation, where the left half carries the ball through the opposing left tackle.

The diagrams show the positions of the players when the ball is snapped and the directions they travel in, but not the distances.

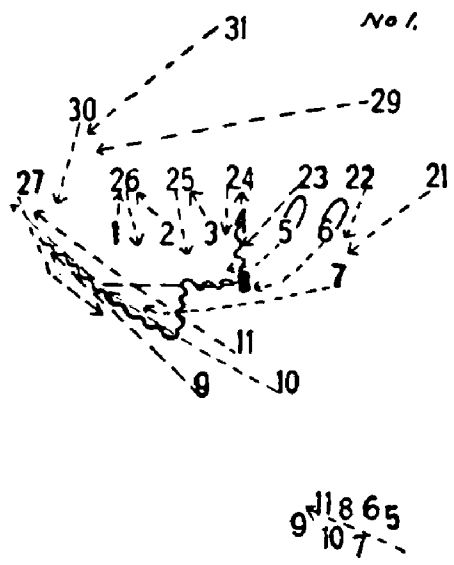
The numbers 1 to 11 are the team with the ball and those 21 to 31 the defending team. The numbers correspond to the positions, the left ends being 1 and 21, left tackles 2 and 22, left guards 3 and 23, centers 4 and 24, right guards 5 and 25, right tackles 6 and 26, right ends 7 and 27, quarters 8 and 28, left halves 9 and 29, right halves 10 and 30, and full backs 11 and 31. The waving line shows the course of the ball as it is passed and carried.

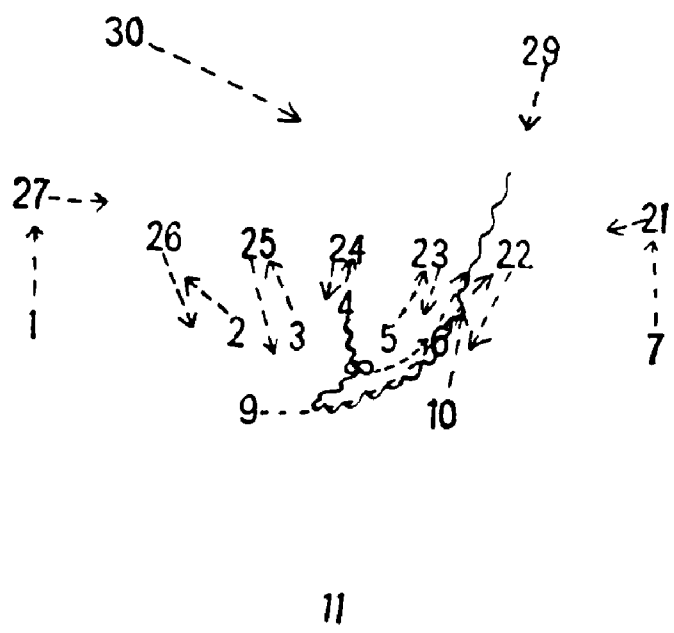
In the first diagram, illustrating an end run, the quarter back on the defense is about fifteen yards behind the full back. The side having the ball line up with the right end playing a few feet back of the line in order to get into the interference more easily.

As the ball is snapped, the interference led by the full back and left half run straight for the opposing right end. If the latter dodges out, the left half takes care to block him and keep him from breaking up the interference or tackling the runner with the ball. If he comes inside, or if the tackle breaks through, the full back takes them. The quarter back throws the ball to the right half about back of tackle and then falls in behind the full back. The half back runs beside him. Their formation is now as shown in the small plan in the lower right hand corner of the diagram.

The right end follows the man with the ball, to protect him from behind, and the right guard and tackle, as soon as they have held their opponents for a moment, as shown by the curved lines, fall in behind the quarter back. The other members of the team with the ball block their opponents. Notice that both left end and left tackle attack the opposing tackle as he must not be allowed to break through.

The other diagram illustrates a trick play. The formation is as for a punt. Notice that the ends are spread out from their tackles, and that the quarter (8) stands just behind the center's right foot, facing toward left end. The halves are behind the tackles to protect the full back when he kicks. This time, however, the center does not pass the ball to the full back but to the quarter. As soon as the ball is snapped, the left half starts straight for his own right tackle and receives the ball from the quarter, who turns, passes it to him, and goes with him. The right tackle pushes his opponent outward, and is helped by the right half, who plunges in as the play begins. The right guard pushes his opposite inward and so opens up a hole for the left half, who, if he gets through, goes down the field. The other men block their opponents from getting to the spot of the play.





Some harps have been discovered in Egyptian tombs the strings of which, in several instances, were intact, and gave forth distinct sounds after an estimated silence of 3,000 years.

Self-Reliance Better Than Money

Nothing better could happen to the young man, who has the right kind of spirit, than to be thrown upon the world and his own resources, Dr. Samuel Smiles has written. A well-to-do judge once gave his son $1,000 and told him to go to college and graduate. The son returned at the end of the first year, his money all gone, and with several extravagant habits. At the close of the vacation the judge said to his son:

"Well, William, are you going to college this year?"

"I have no money, father."

"But I gave you $1,000 to graduate on."

"It is all gone, father."

"Very well, my son, it is all I could give you; you can't stay here; you must now pay your own way in the world."

A new light broke in upon the vision of the young man. He accommodated himself to the situation; again leaving home, he worked his way through college, graduated at the head of his class, studied law, became governor of the State of New York, entered the Cabinet of the President of the United States and has made a record that will not soon die, for he was none other than William H. Seward.

A Brave Boy

When Coley Patterson was a boy at Eton he was popular with all his schoolmates. He studied well, and, besides, he was "captain of the boats," and on the cricket eleven. At a certain gathering coarse songs were started. They were part of the traditions of the school, and had been sung for years. But Coley was as brave morally as he was physically. He declared that those songs should not be sung in his presence. When one was started he left the room—something few boys would have dared to do—under the circumstances. Then and there, however, the custom stopped.

That brave boy at Eton who courageously stood up for his principles, even at the risk of being described as "tied to his mother's apron-strings," became a famous missionary in the South Seas. As Bishop Coleridge Patterson, he fearlessly faced the Melanesians with their clubs and arrows, and daily risked his life for the cause of Christ. Physical courage has a moral foundation. Dare to do right, boys, and nothing of physical danger then can daunt you.—New York Observer.

MY YOUNG SPORTSMAN

A Series of Articles Descriptive of Firearms and Their Use

Written for The American Boy by Edward Van Antwerp

CHAPTER VI.

PRECEDING THIS we have directed our attention wholly towards those things that would enable us to determine where to aim. How to aim is the problem that now confronts us, for as we said before, these two essentials are so bound together, and in such close relation that we can hardly think of one without remembering the other.

Having selected the proper gun, one should become familiar with the handling of it. If you have spare time, take the gun and repeatedly throw it to your shoulder, striving to cover some particular object. Do this constantly, day after day, and soon you will find yourself able to cover instantly any object your eye chances to rest upon. When you have accomplished this, try swinging the gun as you would in following a bird in its flight. By practice of this kind you will be very materially benefitted, and when afield or attending a shoot, you will fully grasp the meaning and purpose of this preliminary practice.

The beginner in wing shooting almost invariably misses, from shooting under or behind his birds. Most of guns are constructed with an elevated rib, so that in use they will shoot a little high. This is essential, for at anything but long range the arm need not be held above the object fired at. Not shooting far enough ahead is a common fault. It is far better to hold a little too far in the lead, than a trifle behind. In the first case the charge of shot traveling as it does in the form of a long oval, twelve feet or more in length, is so drawn out that the stray pellets following in the rear are quite liable to kill the bird, although you really held too far ahead to center the game. In the second instance, shooting behind, although but a trifle, causes the loss of your meat.

How far ahead of a bird should one shoot in order that the game may be centered? This is a question involving so many things that no fixed rule is possible. As we have previously seen the velocity of the shot and the velocity of the bird have a direct bearing upon this question, as does also the direction of the bird, and its distance from the gunner. We purpose giving herewith a table showing aproximately the distance one should hold ahead of a bird, flying forty miles an hour, and at right angles to the shooter. It is assumed that a medium charge is used, and that the sportsman is fairly quick in pressing the trigger. If, however, a light load is used, or the gunner is slow in firing; in that instance, the distance must be increased accordingly.

Distance of bird from gun.	Feet one should hold ahead of bird.
20 yards	4½ feet
30 "	6¾ feet
40 "	9⅛ feet
50 "	12½ feet
60 "	17½ feet

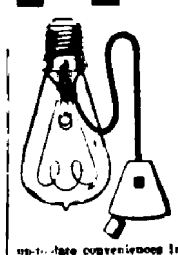
Mathematicians might object to these figures, forgetting that a momentary pause exists after the mind of the shooter has reached a decision, and the actual discharge of the gun. This time is almost one second, and is practically the same, whether the object shot at is twenty or sixty yards distance.

At one time there seems to have been considerable discussion as to the advisability of shooting with one, or both, eyes open. It is purely a matter of individual preference, although our best gunners are inclined to take the advice of the poetical Watts, who says:

Close neither eye; some good shots say
Shut up your left; that's not my way;
But still a man may take his oath,
He'd better shut one eye than both.
I've heard of men (it may amaze)
Who never care their guns to raise,
But fire them from the hip as true
As we can from the shoulder do;
I mention this that you may see
How motion doth with sight agree:
If you're collected, I believe,
Your eye will ne'er your hand deceive.

HYLO

THIS IS WORTH 26 CENTS.



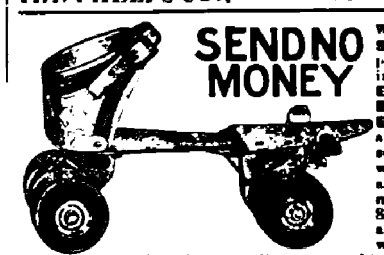
That you may know from personal experience the enjoyment of modulated electric light and the economy which HYLO Bulbs give, we make this advertisement worth 26 cents to you as follows

Long Distance HYLO Bulb is worth $1.25. Write name and address on this advertisement and take to your electrician and he will sell you one Long Distance HYLO Bulb for 99c

HYLO Bulbs are the "turn down" "turn up" in electric lighting. With a Long Distance HYLO you can put the switch under your pillow and turn on the light any time. It's great. Let your electrician show you.

ALL HYLO Bulbs are sold on the "money back" plan. You take no chances. Now, why not enjoy the up-to-date conveniences in life and home luxury, especially when they bring you economy. Do not order just one. Get a dozen and give the HYLO a fair trial. One lamp in every room, even if you sent back 11 lamps when the trial is up. If your electrician will not sell you HYLO write to us.

THE PHELPS CO., 18 State St., Detroit, Mich.



SEND NO MONEY

Stamps, Coins, and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

The Numismatic Sphinx

F. W. Kolbe: The California gold quarters and half dollars of 1883 sell for about $1.50 each. Wm. M. Johnson: Your rubbing is from a 1 real of Honduras and sells at the dealers for half a dollar. Francis Knight: A $20.00 Confederate bill has no value only as a souvenir and very little for that. A. Chormba: (1) Army and Navy token, 1863, five cents. (2) Nickle three cent, 1865; face value only. (3) Central American 5 centavos, nickel, five cents. (4) 1827 half dollar, seventy-five cents. Roy Plasket: The 1894 dime of the S mint is worth at least $50.00. There are two of the English copper coins of the date 1797, 1 and 2 pence. The first is worth a quarter and the last about seventy-five cents providing they are in good condition. 1835 cents, ten cents. There is no premium on the ordinary Canadian copper and silver coins. E. R. Armstroff: The dealers charge 25 cents for a good half dime of 1837. I. J. C. Hamilton: See answer to F. W. Kolbe. Eugene Chandler: 1818 cent, ten cents. 8 soldi, 1811, is an Italian copper coin issued under Napoleon at the Milan mint. It is worth fifteen cents. The simple fact that one of the 1878 dollars has eight feathers in the eagle's tail instead of seven does not give it added value. Feathers are cheap you know. David Evans: (1) Greece 10 lepta, fifteen cents. (2) Mexico 1 centavo nickel, five cents. (3) Mexican State, Chihuahua, ¼ real, twenty-five cents. Ed. C. Weadman: (1) 1826 half cent, fifteen cents. (2) 1850 cent, five to ten cents. Colin Herrle. Old Austrian crown piece struck for the Tyrol in 1620, $2.50. The dealers charge about sixty-five cents for a good dime of 1838 of the New Orleans mint. Spencer Lucas: The dollars of 1798 and 1799 sell for about $2.50 each. The half dollar of 1830 for seventy-five cents. Your other rubbing is from a common 10 (diez) centavo of Spain. Asa V. Call: There is no premium on the dollar of 1903. Paul S. Dard: Your coins are from Spain and Brunswick. The former will not bring a premium. The latter sells for about fifteen cents. Carl G. Blochwitz: Your "Millions for Defence and Not one cent for Tribute" is a "Hard Times" of the Jackson period. It is quite common. I. P. Laltue: An English "quarter" (shilling) of 1829 is worth face value if in good condition. Don Thompson: As your bills or currency are worn we presume you will not be able to get a premium on any of them. Collectors of currency are very particular as to the conditions of their specimens. John W. Foster: Your 1863 cent is a nickel coin. It has no value over face. Maurice Babcock: The small silver three cent pieces usually bring from ten to fifteen cents each at the dealers, depending upon the condition of the pieces. Harry Schmid: The cent of 1818 sells for ten cents each. Your others are common. James J. Jolly Jr.: Your rubbing is from a quarter kopeck of Russia of the current issue. There is no premium on them. Edyund B. Williams: You will hardly be able to get a premium on your $5 gold piece of 1845; the same may be said of your D mint piece of 1838. See answer to F. W. Kolbe. R. M. Stevens: The quarter eagle of 1853. Hugh Zelgler: The quarter eagle of 1836 has no premium. Ralph Forester and Hugh Brinker: The half dollar of 1806 sells at the dealers for eighty-five cents. Harold J. Danelson: The 1829 half dollar is worth to collectors seventy-five cents. This will answer a correspondent from Cleveland, O., also. Frank Crockett, C. R. C., Luther Connell, Fred Franklin, and Willie Russell: Your coins will not bring over face value unless perchance they should be in uncirculated or proof condition. Edwin Perkins: The half dollars of 1826, 1828, 1831, and 1834 sell for about seventy-five cents each at the dealers. Trade dollars, unless in proof condition, will hardly bring face value. Your Italian coin is very common. R. L. Mattocks: Your rubbings are from very common Austrian and Turkish coins. J. Potter Stewart: The dealers charge twenty-five cents for a fine half dime of 1832. Shembeck and several others: The Columbian half dollars of 1892 and 1893, while nominally at a slight premium, it will be difficult to sell them above face value because of so many of them having been issued. Elwin Little: The best way to obtain coins for a collection is to keep in touch with those who handle money and engage their interests in your behalf. The quarter of 1856 is common. Lewis B. Foster: The cents of 1800 and 1812, when in good condition, sell for one dollar, and fifty cents each, respectively. Your others face value only. Henry P. Greer: See answer to Edwin Perkins. Chas. F. End: The half cent of 1853 is worth fifteen cents. Others common. Albert Holmes: (1) Austria, 15 kreutzer of 1807, twenty-five cents. (2) and (3) common German and Austrian coppers. (4) Corean cash coin which sells for about fifteen cents. Zenos M. Laws, Roy A. Smith, and Roy Wolfe: These have very nice selections of coins judging from their lists sent in, and seem to be quite interested in numismatics. It would take too much of our space to answer each one fully as much as we should be glad to. While we notice no particularly valuable coins from a premium point of view, they have coins that any collector might be proud to own.

Stamp Inquiries

Edw. B.: Magyar Kir Tavarda is found on Hungarian telegraph stamps. CPENJA means Servia. Edison E.: No. 1, Mexican revenue; No. 2, French revenue; No. 3, French military stamp; No. 4, a private express stamp—is not catalogued. Harold B. S.: Cannot locate your Mexican stamp. It may be a revenue. Geo. O. H.: Your 3c U. S. 1856 is probably No. 44 in Scott's catalogue, not No. 56. The latter is a very rare stamp. The 1 real red Mexico 1864 lists 3c unused. These are remainders that were not surcharged and are common. Ralph S. M.: "Bayern" means Bavaria; so many stamps have eagles on them that it is difficult to tell which you mean. Send a drawing of the stamp. Stamps you enclose are common French stamps. Spencer L.: Centennial envelopes catalogue, 3c green, 10c new and 20c used; 3c red, 30c new or used. They are worthless if torn. L. W. D.: "Grande Cormore" is an island belonging to France, lying north of Madagascar. Your other stamps are from Bavaria and Russia. Neal J. H.: Your red stamp is a one penny Great Britain. "Segnatasse" is found on Italian postage due stamps. Your other stamp is an Italian revenue. J. I. D.: Your 2c Canal Zone is surcharged on a 1 peso Panama and was issued this year. The 6 pence Prince Edw. Isld. lists $2.50 new and $2.00 used. L. N. C.: Your stamps are Hamburg envelopes. They are reprints and worth very little. See answer to Spencer L. about Centennial envelopes. Your drawing is of a Mexican Officially Sealed stamp. Your "Eine Krone" (one crown) Austrian stamp lists 3c. L. F. C.: 1c Proprietary U. S. revenue issued 1883 catalogues 5c perforated. It is not listed imperforate. James B.: See answer to Edw. THE BOY PHOTOGRAPHER.

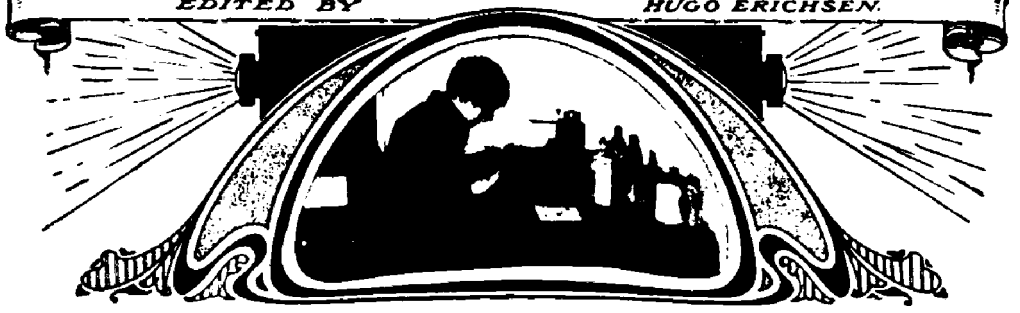
EDITED BY HUGO ERICHSEN.



THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

"BY THE BROOK"
First prize photo, by E. E. Trumbull, Plattsburg, N. Y.

To Prevent Hypo Stains

If a thin coat of grease is put on the fingers, they will not be stained by using pyro. Care must be taken not to touch the film with them, or undeveloped patches will result.—C. P. in "The Photographer."

The Smallest Ever

If THE AMERICAN BOY had such a thing as a cake, Raymond Baker, of Middletown, Pa., would take it this month with a landscape photograph about half the size of a postage stamp. It was taken with a watch-camera and represents a road, with a lake in the distance. The trees at the side of the highway are quite plainly indicated.

Our Prize Pictures

Plattsburg, N. Y., captures the honors of our photographic contest this month, both prizes being awarded to inhabitants of that city. The "By the Brook" of E. E. Trumbull, the first prize winner, is an excellent example of what can be done in the way of artistic landscape photography. "You Can't Have My Lunch," by S. Weaver, is a bit of everyday life caught by the camera that could not have been posed more successfully.

Honorable Mention

A very large number of photographs that are decidedly above the average and an unusually large mail, account for the fact that our roll of honor is a rather long one this month. It includes: Paul Fournier (whose address, by the way, is East Aurora, N. Y., and not Illinois as announced in our June issue), Eddie Goring, G. E. Allen, Angie Boughner, Ali Haidar (a youthful reader of THE AMERICAN BOY in the Turkish legation at Washington), V. Lathrop, W. S. Howell Jr., V. W. Hutchins, Claire Swan, Fred. A. Marx, Fred. Potter, H. E. Fry, R. D. Von Nieda, R. Faulkner, R. Laib, F. Meader Jones Jr., O. E Fyffe, F. R. Benson, Arthur Wilcox, M. Engler, R. C. Line, C. J. Corlett, Vernon Heverly, Alvin Knudtson, and H. C. Simonin.

Our New Contest

In order to stimulate the interest of our readers in artistic composition by means of the camera, a new contest is herewith announced for a heading of this department, similar to those we have used in the past. Entries will be received up to but not later than March 1, 1907. It is not necessary to put in the title "The Boy Photographer," but room should be left for the lettering. For subjects we would suggest: Boys photographing out of doors, boys developing, or examining negatives, etc. Two prizes will be awarded: a first prize consisting of a copy of "Why My Photographs Are Bad," by Chas. M. Taylor, a useful work that relates to the most glaring defects with which amateurs have to contend, and contains methods by which they may be prevented. It is bound in cloth and copiously illustrated. The second prize will consist of a copy of the gleanings from this department, which will be published in the near future under the title of "The Boy Photographer," as announced elsewhere in this issue.

Questions and Answers

W. W. Kimmell—Your suggestion is a good one, but we tried the plan years ago and it proved a failure. Harland E. Smith—1. 4x5. 2. Stanley. 3. Bulb. 4. Yes. 5. Plates. 6. Kloro. C. W. Chesebro—No, you will require a regular reflecting mirror. Willard Hillman—It is impossible to tell, from the appearance of your film, what caused your trouble. We do not believe, however, it is a defect in the film. If you make your own developer, the trouble may be due to that or, perhaps, the film was not perfectly covered when first placed in the developing solution. We would advise you to write to the Eastman Kodak Co., Rochester, N. Y.; they are film experts and will be able to tell you exactly what to do in order to avoid future disappointment. If you had no trouble with your films before and this occurs only in a certain lot, it would indicate that that particular lot is defective. In writing to the above named firm, give them full particulars and enclose stamp for reply. Henry Wislander—The formula desired is as follows: Distilled water, 10 parts; silver nitrate, 3 parts; uranium nitrate, 30 parts; and absolute alcohol to 100 parts. Apply solution with brush. Allow to dry in dark. Expose in contact with negative. Fix by immersion in two or three baths of water, acidulated with nitric acid, and then rinse in plain water and dry. Elmer Fridell—So far as we know, there's only one: The Amateur Photographer, of New York. C. M. Carson—Tennant & Ward, 287 Fourth Ave., New York. 25 cents. E. A. Brainerd—Moonlight effects in a landscape can best be secured by photographing against the sun when it is obscured by a cloud. Real moonlight photographs require very long exposures. Robert Hill—Yes; let us see what you can do.

The A. B. C. of Development

The development of a plate means simply the making visible of the invisible image produced by light. If we examine a plate after it has been exposed in the camera, no sign of a picture can be seen; yet we know that it is there, because on putting the plate into a developing solution it gradually appears, and continues to gain strength and intensity until we take it out and fix it.

If all plates developed had been correctly exposed, it would only be necessary to leave them in a known developing solution for a definite length of time; but the plates one has to develop may be under-exposed, correctly or over-exposed, and unfortunately all developers work differently with each of these three classes of plates. Thus, an under-exposed plate, when developed, is generally very harsh, because the well-lighted parts of the picture "come up," whilst the darker portions are very backward, and seem almost like clear glass in the negative when fixed. Over-exposed plates, on the other hand, look what is called flat; there is very little contrast between the bright and dark portions of the picture. The brightest parts of a picture, by-the-way, such as the sky in a landscape, the white collar in a man's portrait, etc., are termed the highlights, whilst the darkest portions, such as shadows or shaded parts, are termed the shadows. We shall refer to them as such in this article.

Now all developers will give the same result in the long run, but some work more rapidly than others. Some are more inclined to give fog than others; and so on. The two most popular developers of all are metol-hydroquinone and pyro-soda; the former is generally made up in one solution, whilst the latter is prepared in two. It is, of course, very convenient to have to use only one solution, but there are great advantages

"YOU CAN'T HAVE MY LUNCH"
Second prize photo, by S. Weaver, Plattsburg, N. Y.

in working with two. Every developer consists of three essential parts; one is the developer itself, such as, for example, pyrogallol or hydroquinone; another is the preservative, to keep the developer in good condition, such as sulphite of soda; the third component is what is termed the accelerator, such as carbonate of soda—the more we use of it the more rapid will development be. As the preservative is always mixed with the pyro or metol, etc., the developer is resolved into two parts, developer proper and accelerator, or more generally "A" and "B."

The advantage lies, then, in the fact that with a two-solution developer we can rectify any mistakes made in exposure, by varying the proportions of A and B. Thus, an under-exposed plate can be made more often than not to yield a good negative by using more B than A, whilst a much over-exposed plate can be saved by using more A than B, and so on. Most two solution developers are so made up that we shall require equal parts of A and B for correctly exposed plates.

How can we tell during development whether a plate has been correctly exposed or not?—This is a question which is easily answered, as everything about a plate can be ascertained during the first minute or two of development. Let us assume first that the reader prefers to use a one-solution metol-hydroquinone developer, which is nowadays so extremely popular. The following is an excellent formula:

Water	10 ounces.
Metol	5 grains.
Dissolve and add	
Potassium metabisulphite	5 grains.
Sodium sulphite	½ ounce.
Hydroquinone	20 grains.
Sodium carbonate	¾ ounce.

You may either add to this solution four grains of potassium bromide, or add it separately as required, that is to say, before use add three drops per ounce of a ten per cent. solution of potassium bromide. Much is gained by having at hand in the dark-room a ten per cent. solution of potassium bromide, which can be made by putting ninety-six grains of this substance in a two-ounce bottle and filling it up with water. This solution is called the restrainer, as it slows development if a few extra drops be added to the solution. A ten per cent. solution of sodium carbonate, similarly prepared, cannot be too strongly recommended; its use and power we shall now see.

The plate, when taken out of the sheath or dark slide, is laid film upwards in a clean developing dish; two quarter-plates can always be developed together in a half-plate dish, and so on, but the beginner should always develop one plate at a time, so that his whole thought can be concentrated on it. Sufficient developer having been put into a clean glass measure before the room was made dark, it is now poured in one "sweep" over the whole plate, the dish being rocked at the same time. In this way one ensures the whole film being covered with solution uniformly at once, and it also prevents air-bells or small bubbles coming on the surface.

If, in about fifteen seconds, the picture flashes up, and the whole film becomes discolored, it may be taken for granted that the plate has been over-exposed; the developer should be poured back into the measure, and the dish temporarily filled with water. Next add four or five drops of ten per cent. bromide solution to the developer, pour away the water from the dish, and again put the restrained developer over the plate, and continue the work; rock the dish gently the whole time, and look occasionally to see whether the film is thoroughly wet all over. Patches of irregular shape come in the film owing to uneven development, if too little solution be used; an ounce for a quarter-plate, two ounces for a half-plate, is about the right thing.

Now for under-exposure. Suppose you find that after a whole minute or even longer the brightest highlights begin to show, but nothing else comes out; this will indicate under-exposure. This can often be set right by adding some carbonate of soda solution to the developer, but it must never be put straight into the dish, or patches and stains will result. In fact, take it as a general rule that if ever you want to add either restrainer (i.e., bromide) or accelerator to the developer, first pour it off the plate into your measure, then make the addition in the measure, then flood it again over the plate. As a rule, you should never add more than half an ounce of carbonate solution to one ounce of metol-hydroquinone developer, and with pyro-soda never use more than two ounces of B with one of A.

If the picture seems to be coming up fairly evenly all over, and looks contrasty, but as if possessing the details in the shadows, continue developing in the ordinary way without any alteration in the solution. Above all, never be in a hurry! Take out the plate every now and then and look at it from the glass side; when a plate is properly developed it should seem to have the image through to the back; as it lies in the dish, it should appear almost black when finished. Six to ten minutes is the usual time with pyro-soda, and three to five minutes with metol-hydroquinone. An ounce of the latter can be safely used over and over again for six quarter-plates; pyro-soda does not keep when once mixed.

Development finished, give the plates one rinse in water, then place them in the fixing bath for at least ten minutes. Do not take them out of the ruby light until this ten minutes is up, or they may strain yellow.—Hobbies.

Marking the Santa Fe Trail

School Children of Kansas Contributed 369,166 Pennies for This Purpose.

The famous old Santa Fe trail is to be marked so that its location will not be forgotten. The school children of Kansas were asked to contribute a penny each to secure suitable markers for this pioneer highway of progress, and 369,166 responded. With this fund the trail will be outlined in an enduring manner from Kansas City to Santa Fe, 800 miles as the caravans made it, the time consumed for the round trip being 110 days.

It is believed the trail dates back to 1540, when a Spanish adventurer led an expedition from Mexico as far north as Kansas. But it was not until the beginning of the last century that the American trader and pioneer utilized the long trail that stretched out into the wilderness of the new El Dorado.

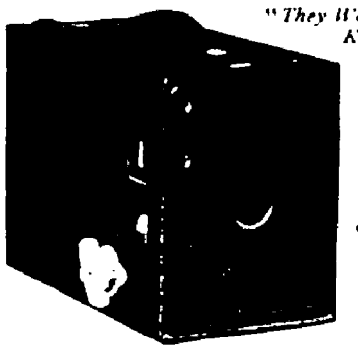
No highway in the country has been marked with as many dramatic episodes as this same Santa Fe trail. Almost every mile of the way was at some time the scene of a thrilling incident. For the caravans of the earlier day there was no haven of safety after leaving Kansas City. Even when military escorts were provided, the Indians were at times sufficiently strong to hazard an attack, and these attacks always added to the long roll of tragedies that can be charged against this historical pathway, marked as it was by the bones of the dauntless pioneers who dared its terrors.

The last caravan sent out was in 1865, and since that year the trail has fallen into disuse. Consequently, the project of marking it so that its course, as well as its lessons of courage, and perseverance, and indomitable will, may be preserved to an appreciative people, is an admirable one.—Cleveland Plain Dealer.

The Secret of Success

The chief factor in a success of any kind is work; and if you add to that the next essential, which is to work for the work's sake and not for the money it may bring, you have covered the ground. —Edward Bok, Editor of the Ladies' Home Journal.

"INDUSTRIOUS"
Photo by G. R. Schulz, 740 Adams St. N. E., Minneapolis, Minn.



"They Work like Kodaks."

$2

BROWNIE CAMERAS

Made by Kodak workmen in the Kodak factory. Like the Kodak they load and unload in daylight with film cartridges and the *films can be developed in daylight*. No dark-room is necessary and the merest beginner can do every step of the work from pressing the button to finishing prints.

The No. 2 Brownie makes pictures 2¼ x 3¼ inches, has a carefully tested Meniscus achromatic lens, Eastman Kotary shutter for snap shots and time exposures, is fitted with set of three stops and has two finders, one for upright and one for horizontal pictures. Well made in every particular, covered with fine imitation leather and has handsome nickel fittings.

No. 2 Brownie, 2¼ x 3¼ pictures, $2.00
Film Cartridge for 6 exposures, .20

Experimental Lessons in Electricity—Lesson XIV.

The Induction Coil (Continued.)

WE WILL wind this coil in sections, which is the most approved method and the one employed by all large coil makers. At first sight it seems like a great deal of work, but the subsequent operations and the assurance of greater security against short circuits render it the shortest method in the end. Bare wire cannot be used, however, and single cotton covered magnet wire, No. 36 B. & S., can be used instead of the more expensive silk insulation.

The winding is done on a form, making a number of rings which are threaded on over the primary winding. The connections between the various sections

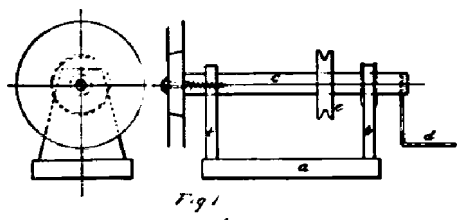

Fig 1

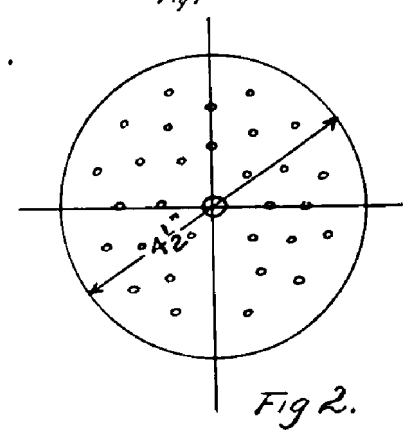

Fig 2.

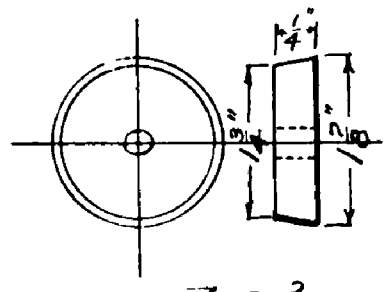

Fig 3.

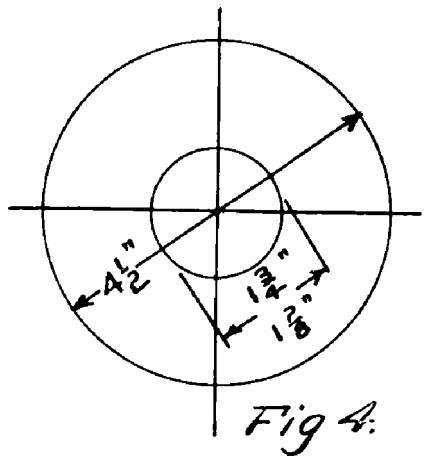

Fig 4.

are easily made, and, in the event of a chance short circuit or a break in the winding, it is only necessary to rewind that particular section in which the break occurs. A repair can be made very easily without rewinding the entire coil, a task not to be envied.

The first thing to be made is a form winder shown in Figure 1, a very simple fixture to construct. A bent wire handle serves to turn while winding, but if a sewing machine or scroll saw is handy, a grooved pulley may be driven on the spindle for turning it rapidly. This will save a great deal of time, as when a number of sections are to be wound the work when done by hand becomes very tiresome.

To a base *a* 12 inches long by 6 inches wide are fixed two standards *b*, each having a hole bored in the top to carry a broomstick or piece of curtain roller *c*. A piece of heavy wire is bent for a handle *d* and driven into the end. A small grooved pulley *e* may be driven on for use with a belt for power. The end *f* of the shaft *c* is made perfectly square with the axis, and a small hole is drilled exactly in the center for a screw.

Two circular plates are then cut out of sheet iron or brass, 4½ inches in diameter. A lot of small holes are drilled in each piece as shown in Fig. 2. A hole in the center just fits the screw fastening the plates to the end of the shaft *c*. A washer is now made of a piece of hard wood, ¼" thick, 1⅞" in largest diameter, tapering to 1¾" on the smaller end. This washer goes between the iron plates and determines the size of the coil.

Fig 5.

This coil will require thirty sections, ¼" thick. Each section has a paper lining on the sides. These washers are cut out of stout brown paper as in Fig. 4, 4½" in diameter, and half of them have a 1¾" hole cut in them, the others 1⅞". A small shallow pan is provided for melting paraffine and this may be kept on a small oil stove to keep it hot.

We are now ready to wind the sections. A paper ring is soaked in the paraffine and then pressed flat on one of the metal disks, another ring (having the smaller hole) being applied to the remaining disk. They are then ready to thread on the screw and fasten to the shaft *c*. First a disk is put on with the paper side facing in, then the wooden washer is placed so that either the larger or smaller diameter just fits the hole in the paper ring, and last, the remaining ring with its paper lining facing that of the first. The screw is then driven tightly into the shaft *c* and the winding may be started. A hole should be provided in one of the plates just at the edge of the wooden washer so that the end of the wire may be led through it.

Passing one end of the wire through this hole, the wire may be wound on, guiding it with one hand while turning with the other. No attempt need be made to keep the winding smooth as it cannot be done readily with such small wire. Half of the sections, or fifteen of them, are wound in one direction, and the remaining half in the opposite direction. It is a good plan to mark one of the outside papers of each section with a small red ink mark (a pencil mark is a good conductor) so that they may be put on the coil all facing one way.

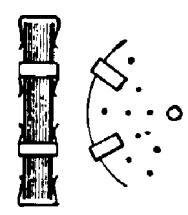

Fig 6.

When wound completely full, a number of small clips made of sheet iron as shown in Fig. 5 are slipped over the edges of the plates as in Fig. 6 to hold them firmly together. The screw is then taken out of the center and the form is dropped in the pan of melted paraffine and left until all air bubbles cease to be driven off by the hot liquid. This bath will cause the melted paraffine to permeate the entire winding, thoroughly insulating it. The form is then removed and allowed to cool. When cool the little clips are removed. The side plates are easily removed by laying the form for just a moment on a hot plate; as soon as the plate is warm enough to melt the wax it may be picked off the paper quite easily. The other plate is then removed in a similar manner. The coil of wire is now firmly bound together in a solid mass which will never come apart and may be handled with ease. The block in the center can be removed in exactly the same manner, using the end of a heated rod to melt the wax around the edges. It may be pushed through from the smaller end so that it will not injure the insulation of the inside layer of wire. A metal block, made of cast lead, would be better as it would heat more readily and uniformly. It would also be well to have two or three sets of these form plates as it takes some little time for one to cool, and another may be wound in the meantime.

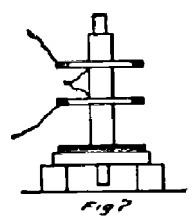

Fig 7

When the thirty sections are finished, you will have fifteen wound in one direction and fifteen in the opposite direction, all having a red mark on one side. They could have been wound the same way and turned afterwards, but this method is more likely to prevent errors in assembling the coil.

The primary winding is now placed on end, resting on two blocks as shown in Fig. 7. This raises the end of the core off the bench. Five or six washers of heavy cardboard, thoroughly soaked in paraffine, are placed in position first so that the first section is well insulated from the wooden end.

The end of the outer layer of wire is drawn out for several inches as shown. Then the inside end is also drawn out and the insulation scraped off. Three or four paper washers are then placed on top, the inside end of wire passing through the hole.

The ends of the wire of the next section, which is one wound in the opposite direction, are bared and this section placed over the core. Before it rests on the first section the two inside ends are twisted together and soldered. The two

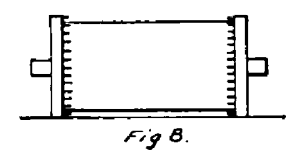

Fig 8.

sections are then laid together and the upper one turned until the wire straightens out and lays evenly between the sections. Then the third section and its intervening paper washers are put in place, and when the third section is in place the two outside ends are twisted together, and so on until the last section is in place.

Here is the place where the greatest care must be exercised and for this reason the red ink mark was placed on the side of the paper disks, so that when properly assembled all the red marks will be facing upwards. Owing to the method of connecting the inside ends of one pair and the outside ends of the next, it is necessary to have the winding alternate in direction as the current will then travel from one end of the winding to the other in one continuous course. If the outside turn of one layer was connected to the inside layer of the next, a short circuit would very likely occur where the connecting wire passed down between the section. This is prevented in the method adopted for the coil described.

When the last section is in place, a space will be left between the sections and the primary winding. This is filled with melted paraffine and allowed to become cool, fresh paraffine being added at the top as shrinkage occurs. The sections should be pressed together firmly and a heavy weight placed on top to prevent the liquid paraffine running out between the sections.

When the paraffine has hardened the weights may be removed and the sections will be found firmly cemented together. The other flange may now be placed in position, the intervening space between it and the top section being filled with paper washers soaked in paraffine. This flange should fit very snugly over the end of the core of iron wires so

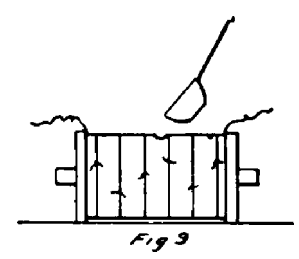

Fig 9

that it may be driven on. The ends of the terminal wires should come out on the same side of the coil, which is now ready for its jacket.

The jacket is formed by covering the entire winding with a layer of paraffine which will prevent short circuiting from the spark-gap to the winding. A row of small wire brads is driven into the flanges on the inside, as shown in Fig. 8. These brads are placed about ½ inch apart and in a row ¼ inch from the outside edge of the flange. A piece of cardboard is now cut to just fit between the flanges—very tight—and of such length that it will wrap entirely around the coil and overlap at least an inch. This is then tied on with string, a hole having been left in the lap for pouring the paraffine. To make the joint between the flanges and cardboard very tight and secure, sealing wax may be run around it, as this can be scraped off readily when finished. The coil is now leveled on two blocks and melted paraffine poured in at the top as in Fig. 9. As the paraffine cools it will shrink away and the shrinkage must be made up by pouring in fresh paraffine. When thoroughly cool, which should be in about twelve hours, the cardboard may be removed and a smooth, even shell of paraffine will remain. The terminal wires should be passed out under the lap in the cardboard.

The coil may now be covered with a sheet of silk sewn tightly together, which will make a good finish and at the same time an insulator. The coil is now ready for the secondary terminal posts and mounting; this work will be taken up in our next lesson.

AMERICAN BOY ADVERTISEMENTS ARE READ

QUERY BOX

Q. Could a larger rheostat be made after the same plan as the one described in the July issue, to reduce the strength of a 110-volt circuit, and if so, how large should it be made?—H. B., Wapakoneta, O.

A. This form of rheostat is very frequently used on heavy currents for experimental work, and you could probably get satisfactory services from one made of an ordinary wooden bucket.

Q. What is the best size wire to use on a common spark coil for igniting gasoline engines, etc., and how much should be used? 2. What is a jump spark coil and what is it used for? 3. What is a transformer?—H. F., Platteville, Wis.

A. It would be difficult to state just what would be the best size spark coil for igniting gasoline engines, as almost any winding could be used at will. Probably one pound of No. 20 wire wrapped around a core of fine iron wires, 10 inches in length, would make a satisfactory coil. A jump spark coil is one which is composed of a primary and secondary winding, the induced secondary current being of very high tension and sufficient to jump the air gap in its circuit. It is this fact which has given this form of induction coil the name of jump spark coil, to distinguish it from the ordinary igniting coil used with gasoline engines as mentioned in your first question. A transformer is nothing more or less than an induction coil wound in a special manner, so that every line of magnetic force is utilized.

Workshop Notes

9. **To Make Shellac for Electrical Purposes.**

Ordinary shellac purchased at stores is not always of the best quality. It is frequently made with wood alcohol which contains a considerable portion of water, and this takes a long while to dry up thoroughly. All shellac should be made by dissolving the gum in pure grain alcohol. The gum shellac may be purchased from dealers in paints or at druggists. Cut this into small pieces and place in a bottle with a sufficient quantity of alcohol to dissolve same. Allow this to stand and shake frequently, until the entire mass is rendered liquid. It may then be strained through a fine piece of muslin, and the resulting varnish will be of the best quality that can be secured. The bleached shellac is not so good as the yellow.

10. **Cement for Electrical Work.**

It very frequently occurs that small pieces of metal or wire must be attached to other portions of apparatus, where a screw or other form of fastener can not be readily used. This may be easily overcome, as will be found by using the following cement:

At the bottom of a can of shellac, especially if not thoroughly dissolved, will be found a thick, viscus mass. This should be put in an air-tight bottle. When needed, a small portion is dropped on the two pieces and allowed to stand. When dry it will be found to form a very strong bond. This is used very frequently in instruments for attaching vanes and other light attachments to movable parts of the apparatus.

11. **Renewing Screwdriver Edge.**

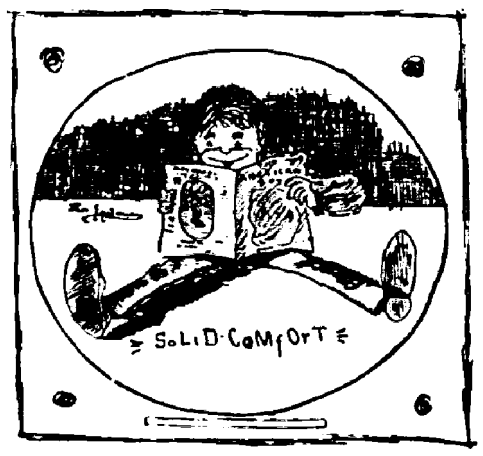
When the point of a screwdriver is worn away so that it jumps the nick in the screw, the edge can be renewed as follows: Hold the screwdriver in the vise with the bevel of the point lying horizontal and projecting above the surface of the vise jaws; then use a medium flat file on it, giving a forward thrust only, and keeping a horizontal position throughout, directs the "British Optical Journal." Turn the driver over and repeat the operation until the edge becomes very thin. Then file it down to a perfectly straight margin, and regulate its width for the size required. This method is more satisfactory than truing up the point on a grindstone.

How Much Shall Boys be Paid

"It is not a good thing for boys to have much money to spend," says the Chief Examiner of the New York State Civil Service Commission, and he gives this as his reason for saying so: "In the past, pages and office boys at Albany—the State Capitol—were paid salaries ranging from $6 per week to $750 per year. In New York City—and in other cities, too—the usual pay for this kind of service is from $3 to $5 per week. That does little more than pay for car fare and lunch—and it leaves very little to tempt the boy into habits of extravagance. This scale of remuneration has existed for many years and many of the men who started in that way are now successful business men or leading men in the professions.

What has been the result of paying such princely salaries as was the custom at Albany? The examiner says that it demoralized the boys. It was a case of "money easily earned, easily goes." Instead of thrift it cultivated extravagance. Men's vices were copied in the belief that such things gave the appearance of being manly.

The salaries at Albany are now to be reduced so that $9 per week is the maximum.



THOMAS E. EASTMAN'S CONCEPTION OF A BOY'S DELIGHT IN HIS AMERICAN BOY

THE TRUE EDUCATION OF BOYS

A PHILOSOPHER has said that true education for boys is "to teach them what they ought to know when they become men." What is it they ought to know then?

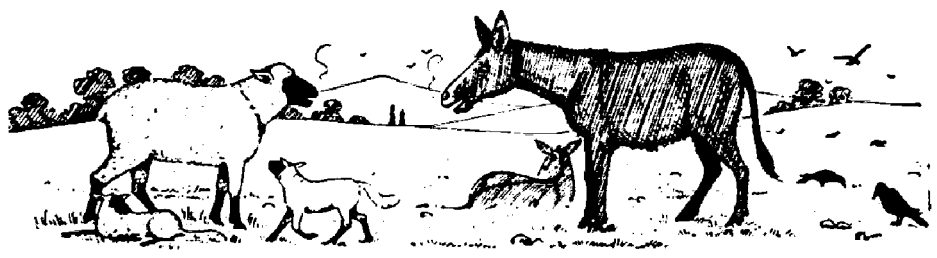
FIRST—To be true, to be genuine. No education is worth anything that does not include this. A man had better not know how to read, he had better never learn a letter in the alphabet, and be true and genuine in action, rather than being learned in all sciences and languages to be at the same time false in the heart and counterfeit in life. Above all things, teach them that truth is more than riches, more than earthly power or position.

SECOND—To be pure in thought, language, life—pure in mind and body. An impure man—young or old, poisoning the society where he lives with smutty stories and impure example, is a moral ulcer, who ought to be treated as the lepers of old who were banished from society and compelled to cry "unclean!" as a warning to save others from pestilence.

THIRD—To be self-reliant and self-helpful even from early childhood; to be industrious always, and self-supporting at the earliest proper age. Teach them that all honest work is honorable, and that an idle, useless life, dependent on other, is a disgrace.

When a boy has learned all these three things, when he has made these ideas a part of his being, however young he may be, however poor, however rich, he has learned some of the most important things he ought to know when he becomes a man.

A Beautiful Flower



TIM'S PIG

(*Continued from page 23.*)

a peculiar smile on her face as she took off the soup plates and put on the vegetables.

"An' now the pig's coming," said Pat, his spirits rising still further when the critical moment had actually come.

He flourished the sharpened butcher knife in preparation for the fray, but it dropped suddenly as Mrs. Pat put down right before him a big platter of creamed codfish. It was a scene for a caricaturist—Pat's face and the boys'. On Uncle Mike's face, however, there was not the least disappointment; instead there was increased good humor.

"Well," said he, laughing heartily, "that's the queerest roast pig I ever saw. Seems to me we used to call that dish the 'Irishman's Turkey,' didn't we, Pat?"

In his vexation and disappointment Pat forgot his resolution to "behave himself" while his brother was his guest. Giving the table a tremendous blow he answered,

"Be jabbers, I dunno what we used to

A PLATE OF "IRISHMAN'S TURKEY"

call the plagued codfish, but I know what I call it now, a darned impersination! Where's the roast pig?" he demanded of Mrs. Pat, looking at her with a cannibalistic expression. It was time for the explanation. Mrs. Pat gave it in a few words. Uncle Mike laughed until he choked. His laugh was contagious. Presently they were all laughing and eating the "Irishman's turkey" with a great relish. In the midst of the excitement, little Tim walked in. Some wisps of hay clung to his red curly head—his face was still grimy with the dried tears, but his countenance was radiant. The other boys, with their company airs and plastered hair had not appealed to "Uncle Mike," but his heart went right out to the little fellow who had not been willing to sacrifice his pet even for "Uncle Mike," and had only brought him after the fierce battle, as a lamb to the slaughter—because he thought it must be right to mind his father.

Uncle Mike never stood on ceremony when his feelings were touched. He sprang from his chair and lifted Tim in his arms, after which he kissed him on both cheeks, not minding the dirt. Then, putting him down, he called three cheers and a tiger for little Tim, which were given.

"Now," said he laughing, "three more for Tim's pig!"

These, too, were given, after which Tim was sent to the kitchen to wash up and brush his hair. When he came back, Uncle Mike made room for him beside himself.

Soon after dinner Pat took his brother out for a stroll. As soon as they were out of sight young Mike and Pat, Jr., cleared out. Little Tim went to the shed to feed and pet his pig. When he returned to the house he heard his mother sigh. "What's the matter, mother?" he asked.

"Oh, such a pile of clearin' up to do!" she said, "I ain't had such a lot o' dishes to wash up since I was out to service."

"Lemme help you," offered Tim, "lemme wipe the dishes an' put 'em away. I can."

And he did.

"What's for supper?" he asked during his work of wiping and putting away.

"Goodness knows—I'm sure I don't," was her answer, "an' yer Uncle Mike is goin' ter stay a week."

Just at this point a delivery wagon stopped outside. Mrs. Pat opened the door.

"You've made a mistake," she said as a colored man held out a big basket with the request that she should empty it.

"No mistake, ma'am," he answered, "Mr. Mike Rooney said he sent the things with his compliments."

I will not weary you with a recital of all the good things which came out of that basket, but there was a big hot roasted turkey for one thing. So the supper was provided. The next day Pat obtained work. Not a drop of liquor passed his lips during his brother's visit.

"That shows that you can keep from drinking if you will," Mike told him after he had made a confession of his shortcomings. "If you stick to your family faithfully for a year and leave liquor alone, I'll pay the expenses of you and all your family to join me out West and you and I will be partners."

One morning Uncle Mike told his choice—he had made it really on Thanksgiving.

"It is little Tim I want," he said, "he's a boy after my own heart."

That night Uncle Mike and little Tim were on the sleeper and Tim's pig was grunting contentedly in a snug box in the freight car. The trio were bound for Nebraska.

"Uncle Mike," said Tim, "did you ever have any little boys?"

"Yes, I had two, but they died long ago."

The voice was very sad. It hardly sounded like Uncle Mike's. A little hand reached out and stroked the large hand in quick and tender sympathy.

Presently Tim spoke again—

"Uncle Mike?"

"Well, my boy?"

"Do you think Aunt Katie'll be glad to see me?"

The big hand grasped the little one in a close clasp.

"I know Aunt Katie will be glad to see you; she'll love you as if you were her very own."

When the boy's pretty blue sailor suit (a gift from Uncle Mike) was taken off and he was ready for bed, he said,

"Good night, Uncle Mike!"

"Good night, laddie!"

The boy was very tired. He was just falling off to sleep when he aroused to remark,

"Uncle Mike?"

"Yes, laddie."

"Will Aunt Katie be glad to see my pig?"

"She surely will, laddie."

In another minute little Tim was sleeping peacefully, but Uncle Mike was nearly smothered with repressed laughter under the bedclothes.

Speed of the Stars

One of the most remarkable features of the universe is that every so-called fixed star is moving forward on an undeviating path which, so far as we can yet determine, is a straight line. Nothing is better calculated to give us an idea of the extent of the universe than the contrast between the speeds as we observe them from the earth. The actual speed is enormous when compared with any that we can produce by artificial means. The speed of a shot from the most powerful gun can scarcely, if at all, exceed half-a-mile per second. But if the motion of any star is as slow as one mile a second, it is only in very rare and extraordinary cases.

The average speed of the stars, says the "Mining World," is about 20 miles a second; and this motion, it must be remembered, is not, so far as determined, motion round and round in an orbit, but a straight ahead motion, never relaxing and never swerving. Almost every star, therefore, travels hundreds of millions of miles every year, century after century. And yet so slow do the motions appear to us that the naked eye can see no change in the configuration of the constellations during a period of thousands of years.

A remarkable instance of this kind is afforded by Arcturus, which is, so far as we know, one of the swiftest moving stars in the heavens. It seems quite certain that its speed exceeds a hundred miles each second of time and it may be much greater. And yet if Job could come again to life and study the constellation Bootis, in which Arcturus is situated, he would scarcely notice any change in its appearance. There is not a star in the constellation Orion moving so fast that any change would be noticed by the naked eye in 100,000 years. Every star in the heavens apears in the same position when observed night after night. There are very few in which the astronomer can detect any motion by one year of observations.

Accurate determinations of position commenced with the observations of Bradley in the eighteenth century, who determined the position of more than 3,000 of the brighter stars. Since his time the position of several hundred thousand stars have been accurately fixed. Yet so small is the apparent proper motion in most cases that it has been actually detected in the case of only a few thousand stars. Even now there are scarcely a hundred stars of which the motions are known to exceed one second in a year. To understand what this means we must reflect that it would take a good eye to see that two stars in the sky, 200 seconds apart, were not a single object.

Had it not been for the great precision of the telescopic determination, astronomers would not have known to this day that any star in the heavens had moved from the place which it occupied in the time of Ptolemy, 1800 years ago. The star, Z. C. 5243, if it were to continue its course round the sky without ever stopping, would take more than 140,000 years to make the circuit of the heavens and the actual speed of this star is known to be about 100 miles per second.

The Victor

Though one may win the goal by luck.
And one by chance be hero hailed,
The palm is for the man of pluck
Who conquers where he once had failed!

THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE—For purpose and plan of this series, see our November (1905) number. No. I of the Series was Ulysses Simpson Grant; No. II, David G. Farragut; No. III, Benjamin Franklin· No. IV, Abraham Lincoln No. V, John Adams; No. VI, Thomas Jefferson; No. VII, Ralph Waldo Emerson; No. VIII, Henry Ward Beecher; No. IX, Nathaniel Hawthorne; No. X Robert Edward Lee; No. XI, Daniel Webster; No. XII, John Marshall.

No. XIII--Eli Whitney

IT HAS BEEN truly said that the man who makes two blades of grass grow where only one grew before is a benefactor to his race. How great a benefactor, then, must he be who has by his genius given employment to tens of thousands, trebled the value of land, and covered the waste places with plenty.

Perhaps there has been no established industry in America which has produced such large results, financial and national, as the cotton industry; and these were the result of a simple invention by the man of whose boyhood we shall try to give some account.

Both the paternal and maternal ancestors of Eli Whitney emigrated from England and were among the earliest settlers of Massachusetts. They were of the number of these English yeomen who brought to their new homes all the grit, courage, honesty, and sturdy manhood for which their class was noted. They worked early and late striving to bring up their families in the fear of God, to the accompaniment of hard, continuous labor.

Eli Whitney was born on the ancestral farm in the village of Westborough, Worcester County, Massachusetts, on December 8th, 1765, just ten years before Thomas Jefferson wrote the Declaration of Independence. His father and mother were highly respected by their neighbors.

The father of Eli Whitney was a man of great firmness of purpose, just and honorable in his dealings with others, and somewhat strict in the regulation of his household. He believed in the Solomonic injunction that "sparing the rod spoiled the child," and that in the society of their elders, boys and girls should be seen and not heard. Notwithstanding his sternness, however, he was kind and considerate, sparing no pains to give his children all the advantages possible. The boy's mother was an invalid for many years, and he and a sister next to him in age, probably learned their first lessons beside her chair.

As we read the various accounts of Eli Whitney's boyhood, we find that his fondness for doing things began almost as soon as he could grasp a tool.

Farmers in New England in those early days required to have a considerable knowledge of carpentering, blacksmithing and tinsmithing. Their means were limited and the expense of hiring a carpenter to repair the house or barn, or a blacksmith to put a tire on a wagon wheel, or a tinsmith to solder a leaky kettle or pan, was altogether out of the question. They were thus forced to make such repairs themselves, so there was usually a small shed alongside the house or barn where were kept a variety of tools for making such repairs. The elder Mr. Whitney, who never liked to be idle, had just such a little workshop, and on days when outside work was suspended by rain or snow, was accustomed to gather all the broken articles of the farm and house together and with hammer, chisel, saw, and soldering iron spend the time in repairing. A lathe was among his appliances, and with it he made wheels for his wagons, and chairs and other articles of furniture for the house.

This little shop had the greatest fascination for young Eli. It was a source of never ending delight to be allowed here to watch his father at work. He never showed much liking for the things a farmer's boy usually cares for, and was very willing to allow his brothers to gather the eggs, feed the pigs and poultry, ride the horses, and have all the pets they wanted. When almost a child Eli Whitney became familiar with the contents of this little workshop. We can imagine the fingers of the little fellow just itching to touch the tools long before permission was given. Having himself a liking for the work of the mechanic, the father somewhat sympathized with his son's eagerness to use the hammer and saw, and soon gave his consent, not without many warnings about his being very careful with them.

The mechanical genius of the boy soon began to show itself. He was always asking questions, especially about machinery, and was never satisfied until he had found out all that was to be known. There were no such books of instruction on tools and their uses in those days as the boys of the present time enjoy, and the tools which his father possessed were few in number and roughly made. But the young lad speedily began to make things, useful or otherwise, and to become intensely interested in everything relating to mechanics. For a mere boy his observation was deep and accurate, and that strict attention to the slightest detail in his work which made him so successful in after life was noted in the simple things he did when very young. He had long observed with eager eyes the big silver watch which his father possessed. He wanted to know what made the tick, tick that he heard, and what made the hands go round, and why the big hand went round faster than the small one. How he longed to peep underneath the case; but his longing had to go unanswered for he knew he could never obtain his father's consent. But the longing grew until one Sunday morning, finding that his father was not to take his watch with him to church, he pleaded illness and was permitted to stay at home. Scarcely had the others of the family gone, when he was in his father's room with the coveted article pressed to his ear. His curiosity increasing, he soon had the back of the watch taken off. But this did not satisfy him; he could see some of the wheels, but others were hidden by the metal plate, and he could not make out where the little mainspring did its work. The little screws were found and taken off and then, of course, the whole mechanism of the watch came apart. So much interested was he in his work that not until he had the watch in pieces did he think how angry his father would be, and of the sure punishment he would receive. Fortunately for the youthful investigator a minister's sermon in those days lasted much longer than the usual twenty minutes of the present time, and he was able to thoroughly examine the watch. But now he was confronted with the task of replacing all the small pieces—the wheels, spring, screws, and hands—and began to realize his wrong-doing. He had, however, been so careful in noting how the different parts acted upon and worked with one another, that he was able to put the whole delicate machinery perfectly together. We can imagine the great relief of the lad when he heard again the familiar tick, tick, and knew that no damage had been done. His father never found out that his timepiece had been tampered with until Eli told him, many years after.

While the elder Whitney was pleased at his son's fondness for tools, he considered that they should only be used by him as a means of recreation, and that the work of the farm should have the boy's first attention. On one occasion Mr. Whitney had been away from home for some days, and on his return inquired how the boys had been working during his absence. One had been weeding and digging, and another had been repairing fences. "And what has Eli been doing," he asked. "He has been busy making a fiddle," was the answer. "Ah," said Mr. Whitney, as he shook his head, "I very much fear that Eli will have to take his portion in fiddles," showing that the father had no very high opinion of a boy who preferred to make fiddles to working on the farm. But the fiddle Eli made was a good one and tuneful, so the boy soon had more to do in repairing the fiddles of his neighbors that he could attend to.

New England fathers and mothers, while generally strict in the rearing of their children, were yet fully aware of the value of education, so every township in the colonies had its school. The knowledge to be got at these little log schools was not, perhaps, as the boys of today would think, very extensive; but it was the foundation upon which all of the greatest men in our nation's history built their success. Young Eli attended the village school at Westborough and there learned to read, write, and cipher. He became particularly fond of arithmetic, being always found at the head of his class in that branch of study. While he did not show any great liking for his other school work, it is to be noted that when scarcely in his teens his fund of general information and his skill in the use of tools made him regarded in the neighborhood as an uncommonly clever lad.

His mother, long an invalid, died while he was very young, and his father married again. His stepmother brought to the home many articles of household use, among these a very fine set of dinner knives of which she was very proud. One day she uncovered the cloth in which they were kept from rust and scratches, and showed the knives to Eli and his sister. The little boy (he was then about 13) examined them very carefully, much to the enjoyment of his stepmother, who remarked: "These knives came all the way from England. They could not be made in America." The future inventor replied instantly, "I could make as good ones if I had the tools, and I could make the tools, if I had some common tools to work with." Mrs. Whitney was very much offended at what she thought the boy's boasting, and at once showed her displeasure by scolding him. However, Eli had not long to wait to make his words good. Some weeks after the scolding one of the knives was accidentally broken, to the great grief of Mrs. Whitney. The young mechanic took the broken parts to his shop, where, using the pieces as a model, he made a knife so exactly like the broken one that his stepmother could only detect the difference by the absence of the manufacturer's stamp on the blade.

That young Whitney, for all his fondness for mechanics, was no foolish dreamer, but was in every way a shrewd, wide-awake New England boy, is shown in his first business venture. The war of the Revolution, which was at its height when Eli was about sixteen, had put a complete stop to all trade between the two countries; and as America, having few manufactories, depended almost wholly upon the mother country for manufactured goods, the sudden scarcity caused a great increase in prices. One of the articles which the colonies imported in great quantities was nails, and when the scarcity was felt and prices rose, young Whitney, who had already made nails in small quantities, saw his opportunity to go into business and make money. He told his father of his scheme, and the latter at once advanced him the money to buy the necessary tools. These obtained, the boy at once went to work. During the remaining years of the war young Eli put in all his spare time at nail making with such success that he enlarged his workshop and employed an assistant.

As soon as the Revolution was ended and trade resumed between the two countries, the price of nails fell and Eli gave up their manufacture. Unwilling, however, to allow his shop to stand idle, he began to make the long pins with which women fastened their bonnets, and in this he soon had a monopoly. Another business which he carried on successfully was the making of walkng sticks. It may be somewhat surprising to read of such success coming to a mere boy. You will find the secret in his determining that what he made should be the very best. He never went ahead until he had thoroughly examined every detail, but once satisfied, he spared neither time nor effort to bring about a successful result. His favorite motto was: "Whatever is worth doing at all, is worth doing well," one which it would be well for the boys of today to take as their own.

ELI WHITNEY

Eli Whitney was now nineteen years old and an expert mechanic with a wide reputation for the good quality of his work. It was naturally expected that he had chosen his life work. But the boy had been thinking, with the result that he informed his father that the trade of a country blacksmith and life in Westborough was not to his liking. He had resolved to make his life count for something more than ordinary success, and in order to do this he must have an education. His father was considerably surprised and somewhat pleased that one of his sons should go to college. Mrs. Whitney, however, was decidedly against it, saying that Eli was unfit for college by reason of his lack of education, and that he had no money to support himself while there. This also was the advice of friends, so the boy was compelled to wait. But his determination to go to college never wavering, he set himself to do two things: To prepare himself to pass the examination necessary to enter Yale, and to earn enough money to keep him there. For four years, or until he was twenty-three, he stuck to his self-imposed task in spite of the discouraging advice of friends. While he worked he had his books beside him. He was also always on the lookout to meet people who could by their knowledge help him. To get money he worked on the farm, in his shop, and teaching school; no job, however small, was refused if it would add to his savings. A serious illness threatened to put an end to his hopes, but in the end he overcame all difficulties, passed the examination, and entered the Freshman class of Yale in May, 1789.

Eli Whitney, on his entrance to college life, was older than most students and with less of an education than many of them. But these drawbacks did not daunt him. To make his money go as far as possible and to escape the rough treatment with which the Seniors of those days treated the Freshmen, Eli boarded with a private family. Greek and Latin were the principal studies during the first year, and, as he had the uncommon faculty of being able to put all his mind upon whatever subject he was engaged upon, his lessons were quickly learned. He had thus considerable extra time and at once proceeded to find some work. A carpenter whom he asked to be allowed to use his tools, hesitated, thinking that in the ignorant hands of a college boy they would be damaged. The student's landlord spoke for him and the carpenter consented. He watched the boy, and so astonished was he at the knowledge of tools that the boy displayed, he remarked: "There was one good mechanic spoiled when you went to college."

Of all the subjects which made up the Yale curriculum, Whitney liked most trigonometry and natural philosophy, perhaps, on account of the instruments used in class experiments. One day the professor of natural philosophy during his lecture expressed regret that he was unable to make an experiment, as the instrument was broken and it would have to be sent to Europe to be repaired. Young Whitney took up the instrument and studied it for a moment, then said to the professor: "I believe I can mend it, as I can see just where the trouble is." The professor knew and appreciated the young student's ability, but he thought this was a task beyond his powers. However, he allowed him to do what he could, and to the surprise and delight of professor and classmates the instrument was soon in as good shape as ever.

When Whitney entered college he was, of course, a raw country lad unused to society, and his bashfulness combined with his determination to succeed, kept him somewhat apart from the other students; but in his junior and final years he joined the literary society and came more in touch with the social life of Yale, making many good and lasting friendships. Graduating in 1792, he left Yale carrying with him the respect and good will of both teachers and students.

Eli Whitney had determined to become a lawyer, but having no money to support him through a law course, he had to find some means of earning funds for his purpose. A position as teacher in a school in Georgia was accepted and he made the journey by sea. On board the vessel he made the acquaintance of Mrs. Greene, widow of the celebrated Revolutionary soldier, General Nathaniel Greene, who was, with her children going to her home, Mulberry Grove, near Savannah.

Mrs. Greene took quite an interest in the young man, and when on reaching Savannah, Whitney found to his disappointment that the promised position was lost to him, she invited him to her home until a better situation could be secured. This kind offer was at once accepted, and the young man lost no opportunity of showing his gratitude. He heard Mrs. Greene one day complain that her embroidery frame was continually breaking the threads, and he at once proceeded to make her a new frame. When he helped her adjust the threads on the new frame she found that no threads were broken and asked, "Where did you get it?"

"I made it," was the reply.

"It is a splendid idea," she said delightedly, "where did you get the idea?"

"Oh, I made that, too," he replied, laughing.

As we have already sketched the life of Eli Whitney beyond his boyhood, a very short account of how he came to invent the cotton gin must close this article.

While he was staying at Mulberry Grove, a large party of old comrades of General Greene called upon Mrs. Greene. In conversation the difficulty of quickly separating cotton from the seed was much discussed and the opinion was generally expressed that if a machine to do this could be invented it would bring new life and prosperity to the South. Mrs. Greene after asking some questions told her guests about Eli Whitney, showed the embroidery frame and other things he had done, and concluded by saying she believed the young man could help them, as "he could do anything."

Young Whitney was called in and the matter broached. At once he became much interested in the subject. He had never seen cotton in the seed so he went to Savannah and procured a small quantity. He found that there were two kinds of cotton; one, the black-seed, long-staple or sea-island cotton, the seeds of which were removed easily, and the green-seed, short-staple variety whose seeds stuck to each other so closely that it was the hardest kind of labor to part them. Indeed, the picking of a pound of cotton was considered a day's work for a woman. As this latter variety of cotton could be raised on inland plantations, it was of much more commercial importance than the long-staple which grows well only near salt water.

Whitney gave the matter considerable thought, but at first decided not to pursue the matter further as it would be an expensive undertaking and would interfere with his law studies. Mr. Phineas Miller, who was a man of means and had faith in Whitney, proposed that he should furnish the money required and become his partner in the undertaking. At once Whitney shut himself up in his shop and went to work. We cannot here enter into a description of the inven-

TWO THOUSAND SHUT-INS TO HAVE THE AMERICAN BOY

Our readers contributed, between September 8 and October 11, $19.90 to help us send free subscriptions to shut-in-boys. The total amount contributed by our readers up to date is $164.91; to this we add a like sum, making a total available for sending subscriptions of $329.82. The following sent in money between September 8 and October 11: Tom Hannon, .10; Raymond Evans, .25; Bennie Elliott, .50; Eustace Hutchens, .20; Jay Maynard, .35; Charles H. Benton, .15; M. J. Gaffegan, $1.00; Arthur Baseley, $1.00; Everett Spencer, .25; Fred Chiddle, .10; Maxie Crans, .20; Harland Ragle, .50; Harry S. Walters, .50; Elwood Long, .50; Harold R. Jenne, .10; D. Franklin Wallace, .50; J. L. Roseberry, .25; Forrest Limbocker, .15; Earl Turner, .50; A. Lloyd Shultz, $1.00; Mrs. J. F. Dearing, .50; Harold Lane, .25; Kenneth A. Matol, .10; Douglas Miller, .10; Phillip Dix, .25; Edward S. Dieckman, .10; Edson K. Smith, .50; Edith Bales, .25; Will R. Burkhardt, .50; J. D. Caman, .50; Horton Pownall, .10; Glenn Stevens, .10; Gilbert Knipmeyer, .50; Grady Peerey, .10; W. L. Chambers, .25; S. A. Townsend, .50; Albert E. Neale, .25; Ellery and Elmer Reed, .50; Robert M. French, .15; Floyd Moss, .25; Lyle B. Rich, $1.00; Randolph Rector, .25; H. C. Schuyler, $1.00; Fred Gerlach, .25; Ernest Hake, .25; Hiram K. King, $1.00; Lawrence L. Wigell, .50; Willie Cornwell, .50; Iowa Rough Riders, .50; Mrs. M. Franz, .25; Charles Seeley, .25; Wm. Jarboe, .30. There is now left but fifty-one days in which to raise enough money to send THE AMERICAN BOY to two thousand shut-ins. Are we going to be able to do it? Our subscribers will have to send us in these fifty-one days a total of $836.09. Can we hope that any large part of this amount will reach us? We hope that every boy who reads THE AMERICAN BOY will have some part in this good enterprise that many more poor, sick boys may have the pleasure of reading THE AMERICAN BOY. Remember that for every cent sent in we contribute a cent, so that your money does double work. Send in any amount from five cents up. It may be that some good hearted boy can induce a worthy friend or relative to make some big contribution. What better could a man do for a Christmas present to a worthy object than send $100.00, and thus enable 200 shut-in boys during 1907 to read THE AMERICAN BOY? Every one who sends 50 cents or more will receive the name of the shut-in to whom the paper is sent in return for his money. Let every boy help in this good cause.

Why I am Proud of My State

In the essay contest, "Why I Am Proud of Iowa," the first prize, $3, was won by Merl W. Reese, 225 East Twelfth street, Davenport; the second prize, $1.50, by W. Lee Stairs, who moved from Des Moines to North Waco, Texas, after he had writen his essay, and who writes us that he is an Iowan "all the same;" and the third prize, fifty cents, by Freddie Slob, Orange City. We accord honorable mention to Frank E. Gibson of Emerson and Carleton W. Waters of Fairfield.

We wish also to name the following boys, whose essays were especially interesting: Ellery F. Reed, Ernest Miller, Arthur Baumgart, Clifford W. Michaels, Kyle Pierce, Roy Jeffries, Chester Harlan, Floyd W. Paul, Charles Tainter, Joe B. Kingsbury, Frank Rusk, Howard S. Noble, Wesley G. Henke, Roy Fisher, Earnest Kirkpatrick (whose essay was easily read in spite of the fact that he was obliged to write it with his left hand because of an abscess upon his right), Joe O. Lowrey, Wilbur Pressley, Granger Mitchell, H. C. Mycum, Noah S. Guengerich, Burleigh C. Fordyce, Ralph Pringle, and Vine Stoddard.

The word "Iowa" is an Indian name meaning "The Beautiful Land," and Iowa boys agree that the state was properly named.

Iowa contains 35,228,200 acres, of which 95 per cent is tillable. The soil is a rich, black, sandy loam. From twenty to forty inches of rain fall each year. Six trunk lines of railroad cross the state, giving direct communication with Chicago, the great market for farm products, and connecting with lines which extend to the Pacific Coast. Iowa is noted for her activity in the cause of temperance, there being but one distillery within her borders. It is said that her watchword is "A schoolhouse on every hill-top and no saloon in the valley." A natural curiosity situated in the bluffs above the river near Decorah is an ice cave; in midwinter water trickles forth, but in the hot summer months ice forms. This cave is visited by hundreds of people annually. Iowa is noted for the raising of stock, her horses rivalling those of the famous Blue Grass region in Kentucky. The cows number about 1,500,000 and are worth about $45,000,000. They furnish cream for 150,000,000 pounds of butter a year. The largest oatmeal mill in the world is located at Cedar Rapids. Among the foremost educational institutions are Drake University at Des Moines, Iowa Wesleyan University at Mt. Pleasant, Parson College at Fairfield, and Elliott's Business College at Burlington. Tuition is free to all students in the State Agricultural College. There are over 14,000 schoolhouses, employing over 28,000 teachers at a yearly expenditure of $10,000,000. Tuition is also free in the State Normal School. Coal fields are said to underlie one-third of Iowa's total area, and the lead district in the northeastern part covers 700 miles. It was an Iowa boy who first scaled the wall at Pekin during the Boxer uprising. No place in Iowa is situated more than twelve miles from a railway. Among the manufactures are flour, packed meats to the value of $20,000,000, furniture, and carriages, also bricks and tiles to the value of $2,000,000 annually. The Mississippi and Missouri rivers bound the state on the east and west, and the Des Moines drains an area of 10,000 square miles. There are over 230,000 farms and the value of their products for a year is about $365,000,000. Iowa's population is 2,231,853.

WHY I AM PROUD OF IOWA

First Prize Essay by Merl W. Reese, 225 East Twelfth Street, Davenport.

I am proud of Iowa, the first free state in the Louisiana Purchase, because of her great progress in agriculture, manufacturing, and education; because she thought no sacrifice too great whether of blood or treasure, in helping to maintain the integrity of the Nation in the war with Mexico, the great Rebellion, and the war with Spain; and because of the rank she has gained among the states for the intelligence of her people and their moral and social order. Her progress has been rapid, sure, and unfaltering from the little Zion Church at Burlington to the magnificent $3,000,000 capitol at Des Moines.

Covering but an eighteenth part of the Louisiana Purchase, Iowa now possesses one-sixth of the population and one-third of the taxable property of the thirteen states and territories into which the purchase has been divided, and she has a more general and even distribution of wealth than exists elsewhere in the United States.

In the Mexican War Company K, Fifteenth United States Infantry, proved of what stuff Iowa men are made.

When the call for troops came in the Civil War Iowa sent 80,000 of her sons to do battle for the nation, and we have every reason to be proud of their record.

Those of Iowa's men who fought in the war with Spain sustained our reputation as one of the grandest states in the Union.

The fertility of the soil and the ease with which it may be worked present special advantages for agricultural pursuits. In the census of 1900 Iowa exceeded every other state in the value of farm products. There are only two or three states which rival her in the production of cereals, nearly one-half of the land being devoted to them. Corn, oats, and wheat are raised in abundance, and in the production of barley Iowa ranks second. Less important cereals are flaxseed, rye, and buckwheat.

Among native fruits are the plum, crab-apple, grape, cherry, blackberry, gooseberry, strawberry, and raspberry.

There is but one state west of the Mississippi that exceeds Iowa in the value of the coal output, that being Colorado. Other minerals are lead, limestone, gypsum, clay, pyrite, iron, and building sand.

Many noted Indians lived in Iowa, the most prominent being Black Hawk, Mahaska, Keokuk, and Tama.

In 1900 there were reported by the United States Census to be 14,819 manufacturing establishments in Iowa, thus proving our worth as a manufacturing state. Since then the number has greatly increased.

Iowa's total banking capital is $24,545,845, contained in 222 National banks and 214 State banks.

Iowa has twenty-five universities and colleges; eighteen private normal schools; thirty-five private secondary schools; and 334 high schools. Her school regulations are rigidly enforced and she has one of the finest systems in the world.

When everything is considered Iowa is a grand state, and I say with every other loyal Iowa boy: "Our liberties we prize, and our rights we will maintain."

KANSAS NEXT

¶ To the Kansas boy who sends us before November 10th the best letter of not over 500 words, telling us why he is proud of his state, we will give $3; to the boy sending the next best letter, $1.50; to the boy sending the next best, 50 cents. In addition, we will print the first prize letter in an early numberof THE AMERICAN BOY.

ELI WHITNEY

(*Continued from page 30*)

tion, which revolutionized not only the cotton industry but brought prosperity to the south. Enough to say that he was completely successful and patented his invention in 1793. It is a curious fact that cotton was so little thought of as an American product during the latter part of the eighteenth century that when John Jay drew up the treaty of commerce with Great Britain in 1794, he did not know that any cotton was produced in the United States, and it was omitted from the schedules.

What effect Eli Whitney's invention of the cotton gin has had upon the production of cotton may be understood when it is mentioned that the production in 1791 was less than 2,000,000 pounds, while in 1902 it was 10,827,168 bales, each bale weighing 500 pounds. America now produces four-fifths of the world's crop of cotton and the machinery used for separating the cotton from the seed is substantially the same as that invented by Eli Whitney.

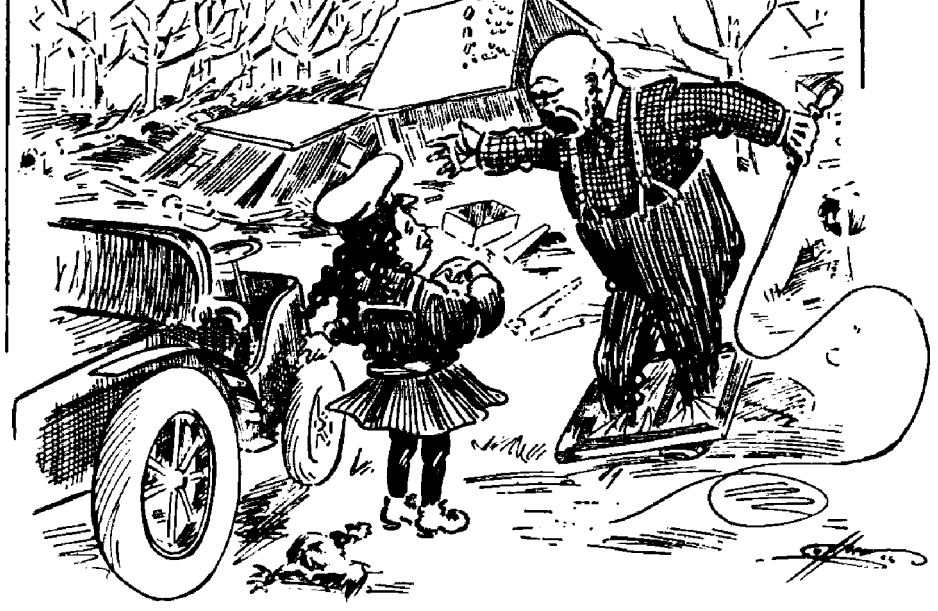
SYNOPSIS OF ELI WHITNEY'S SUBSEQUENT CAREER.

1793 Invented and patented the cotton gin.
1798 Commenced manufacture of firearms, from which he gained a fortune.
1817 Married daughter of Judge Edwards, of Connecticut.
1825 Died January 8th.

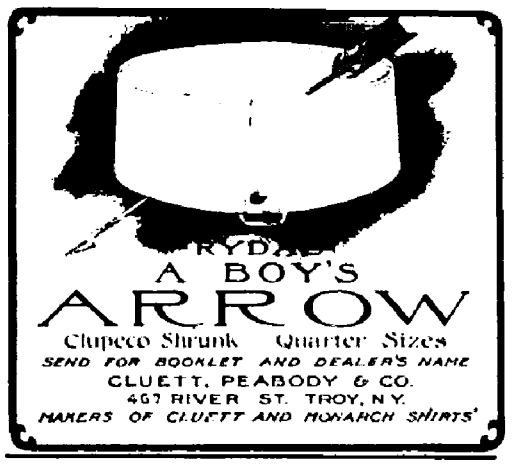
INSCRIPTION ON TABLET IN HALL OF FAME.

ELI WHITNEY,
1765-1825.

The machine, it is true, operates, in the first instance, on mere physical elements, to produce an accumulation and distribution of property. But do not all the arts of civilization follow in its train?



Enraged Parent—"My son, what is the cause of this havoc?"
Truthful Georgie—"Father, I cannot tell a lie. I did it with my little auto."



The
Baltimorean Printing Press
is selling better than ever. Why don't you buy one, do your own Printing, and act as our agent? There is money in it for you. If interested send for catalog.
The J. F. W. Dorman Co., Baltimore, Md.

COMBINATION PRAIRIE WHISTLE
You can imitate any bird or animal. Astonish your friends by making them believe you are a Ventriloquist. The instrument is concealed in the roof of the mouth and detection is impossible. If ladies are near imitate a mouse and see them grab their skirts and climb a chair. Boys, if you like fun, get one. Price 10 cts., or 4 for 25 cts., with full directions and our big bargain catalog FREE. Address AMERICAN SUPPLY CO., 589 Minnehaha Street, St. Paul, Minn

STAMMER

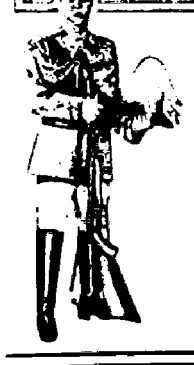
selling my FAMILY RECORDS than any other; beautiful pictures; background solid gold. Sample, 25c; 62 for $2; 100 for $3.50. Sells on sight at 25c to 50c each.
CAMPBELL & CO., 34 "A" St., Elgin, Ill.

The DAISY Air Rifle



Lord Roberts, the celebrated "Bobs," Commander-in-Chief of the Army of Great Britain, has expressed high admiration of American marksmanship and urges his fellow countrymen to follow American methods by teaching their boys **when young** to practice target shooting. He said: "Rifle shooting is a sport—a game attractive in itself—a national pastime and a patriotic duty."

If you want to give your boy an all round training, not merely a one-sided education, give him a DAISY AIR RIFLE, and teach him to use it. The "Daisy" is a real gun modeled after the latest hammerless rifle, and shoots accurately, using compressed air instead of powder. No smoke, no noise and perfectly safe in the hands of any boy.

1,000-Shot Daisy, an automatic magazine rifle, $2.00
Other Daisy Models, ... $1.00 to $1.75

Sold by Hardware and Sporting Goods dealers everywhere, or delivered from factory anywhere in the United States on receipt of price. The "Daisy" book telling all about them free, write for it.

DAISY MFG. CO., 286 UNION ST., PLYMOUTH, MICH.

"THE FIRE-PEN" 50¢
Complete Wood Burning Outfit
With the "Fire Pen" you can do the most artistic pyrographic work easily and with least expense. Complete outfit costs only 50 cents, and can be operated for one-tenth of a cent per hour. No spirit lamp, benzine bottle or bulb required. Simply attach the rubber tubing to gas jet. Thousands in use by expert wood burners—not an experiment. Satisfaction guaranteed. "Fire Pen" outfit, postpaid to any address upon receipt of price, 50c. LATEST DESIGNS IN STAMPED WOOD—Write for our profusely illustrated Catalogue of Stamped Wood for pyrographic work. Latest designs in Plaques, Boxes, Pipe Racks, etc. Best quality, lowest prices, prompt shipment. Write for the Catalogue today—it's free.

The American Boy

Copyright, 1906, by The Sprague Publishing Company

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Important—All subscriptions are discontinued as they expire. Expiration date is shown on address label. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

WILLIAM C. SPRAGUE, - - President and Editor
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., - - Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only; and in the case of the coins, a rubbing.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

Ozmun Wyckoff, Cornell Heights, Ithaca, N. Y., wins the prize for the best list of answers to the September Tangles.

Arthur McCain, Jonesboro, Ark., wins the second prize.

Thomas Devlin, "Crescent," 3535 St. Charles Ave., New Orleans, La., wins the prize for the best original puzzles.

Honorable mention is accorded the following for excellence: Ernest A Stifel, Carl N. Austin, Claud E. Gill, Frank von Tobel, James A. Lynd, Raymond Dupuy, F. C. Millspaugh, Harry Elger, Jr., J. Horace Trumbull, Wallace A. Philgreen, Russell L. Proctor, Chas. S. Gerrish, Ray Nichols, Archie Reynolds, Geo. Frary Hutchison, Archie N. Kesterson, Elmer Swartzendruber, Clarkson P. Stelle, O. D. Wetherell, Jr., Malvin Johnson, R. L. Mattocks, Lewis Alway Smith, George H. Stanbery, Clarence L. Wells, Frank M. Walling, Harry J. Button, John H. Seamans, Gilbert Freeman, Kyle Pierce, Robert D. Holmes, Jr., Osborn J. Dunn, Alexander W. Limont, Cortlandt R. Sweet, Clinton Fisk Elliott, Frank Bolton, H. D. Seeley, George Brodthage, Walter J. Tilton, Arthur H. Alexander, William P. Channon, Ora King, Vinton E. McVicker, Emerson Grant Sutcliffe, Claude Coon, Feodore Edenborg, Wm. Fink, Ralph W. Westcott, Fred W. Hanson, Harold Prime, J. Cuthbert Long, Joseph Loth, Lewis Wm. Lacey, Marietta C. Gardiner, Stephen E. Connor, Carl G. Blochurtz, Ralph S. Howell, Paul C. Hassler, Philo Hall, Jr., Everett L. Woodworth, Clarence Gull, Adam G. Quandt, Marshall A. Eyster, Percy C. King, Arthur B. Hussey, Linden L. R. Jones, Joseph Rosecrans, Fred Meinhardt, Ralph Laushey, Grady Peerey, G. H. and Karl Wills, Noah S. Guengerich, Raymond F. Katterjohn, Moxie Craus, Norman Miles, Charles S. Stewart, Geo. J. Rhein.

A prize of one dollar will be given for the best list of answers to the November Tangles; also, a new book for the second best list; received by November 18.

A prize of one dollar will be given for the best lot of original puzzles, suitable for New Years and January, received by November 18.

Answers to October Tangles

41. The following is the correct order. The initials spell Halloween.

Horse, Addax, Llama, Lemur, Otter, Whale, Eland, Elder, Nyula.

42. 1. Yorktown. 2. Washington. 3. Cornwallis. 4. Savannah. 5. King's Mountain. 6. Webster.

43. 1. SpenseR. 2. ReAde. 3. HoLland. 4. PoPe. 5. HawtHorne. 6. StoWe. 7. Bry-Ant. 8. CarlyLe. 9. Dante. 10. MiltOn. 11. CoopEr. 12. HolMes. 13. WhittIEr. 14. ThackeRay. 15. DickenS. 16. ScOtt. 17. BunyaN. Selected letters, Ralph Waldo Emerson.

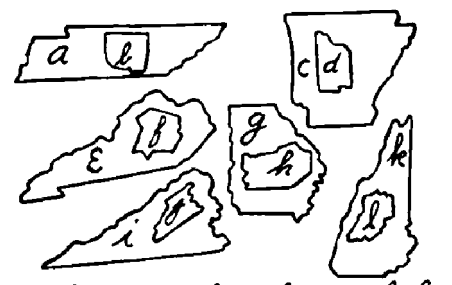
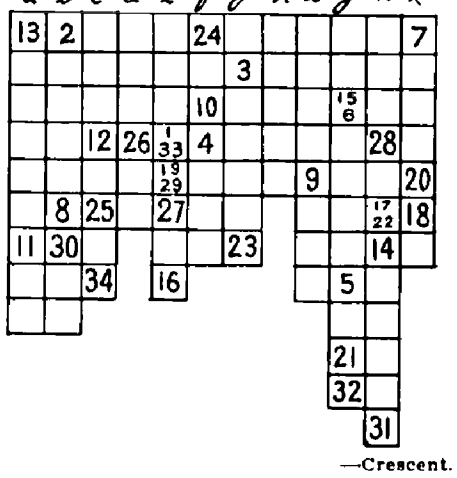
New Tangles

52. THANKSGIVING GEOGRAPHY.

Here are the outline maps of six states, each enclosing the outline map of one of its counties. In the diagram write the name of each state and county vertically under the corresponding letters, one letter of each name in a square. The upper row of letters, a to l, spells a November holiday. The numbered squares, in numerical order, 1 to 31, spell by whom and where this holiday was first celebrated.





—Crescent.

53. THANKSGIVING TEXT.

One word from each of the following verses in Psalms in order will spell a verse in Psalms that is a fitting text for a Thanksgiving discourse.

(1) CIV. 17. (2) CXXIX. 2. (3) XXXV. 9. (4) LV. 2. (5) LXVIII. 29. (6) XI. 7. (7) CV. 1. (8) X. 4. (9) VII. 7. (10) XC. 2. (11) XXXVIII. 22. (12) XXIII. 5. (13) XXXIII. 3. (14) C. 1. (15) CXIX. 105. (16) XXI. 1. (17) LXI. 7. (18) XIII. 6. (19) XXVIII. 7. —Fred E. Day.

54. NOVEMBER SLIDE.

Slide the five horizontal rows of letters right or left until the following appear in vertical rows, using no letter twice:

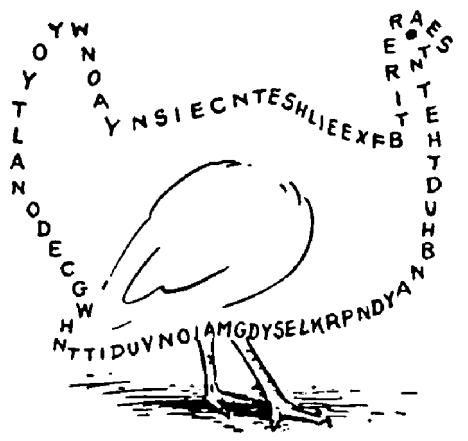
1. A federal general, born Nov. 18, 1824.
2. A confederate general, born Nov. 9, 1825.
3. A federal general, born Nov. 5, 1818.
4. A federal general who became president, born Nov. 19, 1831.
5. A confederate general, born Nov. 3, 1816.
6. The remaining letters will spell a celebrated Rock, remembered at Thanksgiving time.

F S A S L B M U J A I J A Y
M E L R I E I T A G E U E P
M A L B P A G N N I L B A Y L
R H J F E E R D N E A R O M
S F O I A B R Z L L L H T I'

—Fred Domino.

55. TURKEY SKIP.

An historical fact regarding the first Thanksgiving day will be found by commencing at a certain letter, proceeding in a certain direction, skipping a uniform number of letters each time until all are used once, going round and round the turkey.



—Arthur B. Hussey.

56. STATE ACROSTICS.

All the words are of uniform length. The initials down and the finals up each spell a state admitted into the union in November.

1. A large lake bordering on the state of East Africa. 2. A county seat of South Dakota. 3. The province in the "toe" of Italy. 4. A river of eastern Afghanistan. 5. A county seat of Arkansas and Montana. 6. A county seat of Florida. 7. A county and town of northern Ireland. 8. An island in Lake Champlain. 9. The largest town between Christchurch and Dunedin, New Zealand. 10. A city and province of central Spain, after which is named a city of Ohio. 11. An island and town of Greece.

—Moxie Craus.

57. POET'S LABYRINTH.

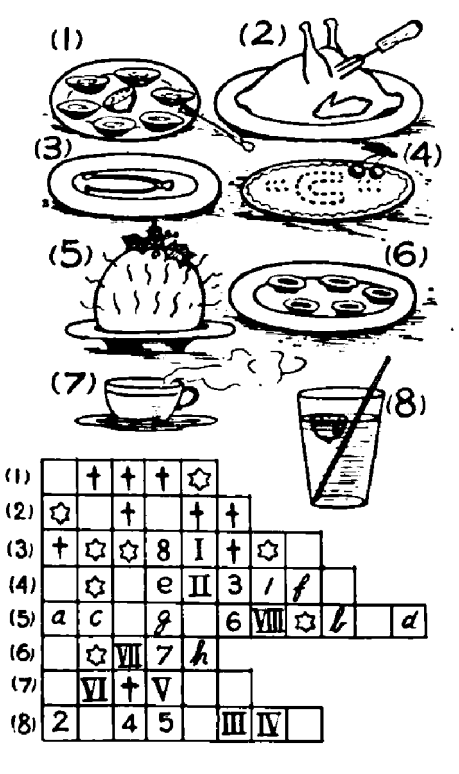
Starting with a corner letter and continuing by single squares, using each letter once only, find a celebrated English dramatist and five of his tragedies.

L	T	H	C	S	K	A	W
L	E	O	A	E	U	I	H
O	T	H	E	S	I	L	S
E	C	S	P	L	A	M	L
B	A	E	A	R	U	I	T
M	E	A	M	A	H	J	E
T	R	L	M	A	N	D	I
E	R	O	E	O	J	U	L

—Lee and Cleary Bullard.

58. THANKSGIVING DINNER.

Here are eight articles frequently seen at Thanksgiving dinners. Write their names from left to right in the diagram, in order as numbered, one letter of each name in a square. The letter path, in alphabetical order, spells the people with whom Thanksgiving day originated. The dagger letters, when correctly arranged, spell the ship that brought them to America. The number path, in order, spells where they landed. The Roman path, in order, spells their second governor. The star letters, when correctly arranged, spell their military captain.



—Raymond F. Katterjohn.

59. CONNECTED WORD SQUARES.

Read the same across and down.

1. Failure to win. 2. Pertaining to vision. 3. Relates. 4. To place or locate. 5. Stopped. 6. A spirited horse. 7. A circular motion in the water. —The Sphinx.

61. UNIFORM TERMINATIONS.

Prefix the following letters, one at a time, to the same four letters and form eight common words of one syllable.

B, F, H, M, P, R, S, W.

—Grady Peerey.

Tangle Talk

Had there been a hundred prizes to distribute for excellence of answers to September Tangles and for new Thanksgiving Tangles, this month, my task of making the awards would have been easier. To select but three and omit the many others who were nearly or quite as deserving of the honor of the award is rendered most difficult by reason of the universal excellence of your work. Many of you are entitled to greater encouragement for your efforts than is permitted me to give you, with so few awards available for so many deserving contestants.

I want to thank you all for your hearty response to my Thanksgiving suggestions.

Following is a brief, personal review of some of the Tangle mail received by September 18.

George H. Stanbery quotes the World Almanac as authority for President Taylor's birth occurring in November, 1784. He might also have quoted the Encyclopedia Brittanica to confirm that date. On the other hand, Century Book of Proper Names gives September, and so does Benson J. Lossing's Cyclopedia of U. S. History. Hellprin's Historical Reference Book says 1784, no month; Phillip's Dictionary of Biographical Reference says 1786, no month. "Who shall decide when doctors disagree?"

Percy C. King failed to name one of his birds and we could not find in any bird book anything like it that fitted into his puzzle. We like Mr. King's ideas and he draws well.

O. D. Wetherell, Jr., omitted Liberia from number 37, probably by accident. Every other word was perfect. By the way, two other splendid lists came from far away Tampa, Florida, this month, besides Mr. Wetherell's. Evidently somebody in the land of flowers is bent on capturing an award.

C. G. Blochurtz wishes to know if typewritten work will be accepted. Certainly it will, and most welcome. We receive lots of it. Did you ever see a typewriter that did not "write in ink?"

M. S. McGowan does not tell us the names of his flags and fails to observe our printed rules, writing on both sides and omitting any address. Another good effort with a little care as to such important details may secure publication.

Linden L. R. Jones, Noah S. Guengerich and Lewis Alway Smith were a month late with their October puzzles, while their August answers, and those from Frank C. McMillan, Ralph H. Wirt, Clarence L. Wells and Walter J. Tilton, were also tardy a whole month. We know how disappointed you are at being left out of the contests after your splendid efforts, and advise being a day earlier at the mail box.

President Roosevelt has not authorized any "deformed" spelling of proper names. There were some "bad spells" reached us this month, especially in geographical names. Here are some of the funny ones: Missuri, Nebrasca, South Dacota, Pencilvania, Lousiana, Sacremento, Deleware, Colombus, Bismark, Connecticutt, James J. Polk, Jubal A. Earley. As a rule our Tanglers are accurate spellers, as they should be. Ours would be "tangles" indeed did we base them on misspelled words!

Several boys write us, "If I win the prize I would like you to send me a year's subscription instead of the dollar." You may not understand just why we cannot do this, but take our word for it, we cannot, so please do not ask it. Send your subscriptions to the Sprague Publishing Co. and your Tangle mail to Uncle Tangler, just as directed in the editorial column every issue. It may be a coincidence, but no boy who has written such a request has ever won a prize for that month. We appreciate your intended compliment to THE AMERICAN BOY and your desire to possess it, but the direct and business-like way is the better way.

From the new and original puzzles sent in by November 18 will be selected the assortment to appear in this department in January, 1907. The new year, winter, and January should suggest many themes for our boys' ingenuity in Tangle making. As the New Year is always a time for making good resolutions, suppose you make up some Tangles based on appropriate quotations from the poets or the bible or elsewhere, expressive of your intentions and mine to be better and do better in every way possible during 1907.

—Uncle Tangler.

BAIRD DOLLAR WATER MOTOR

Not a toy or mechanical novelty, but a real, powerful little motor, sold under an absolute "money-back" guarantee to develop

1-4 ACTUAL HORSE POWER

under 30 lbs. water pressure (the ordinary city pressure.)

Easily and quickly attached to any penstock or faucet, and by simply turning on water will run fan to cool off hot kitchen, emery wheel for sharpening knives and scissors, milk bottle and chimney washer, egg beater, buffing wheel for polishing silverware, also jewelers' and dentists' lathes, small dynamo, sewing machine, washing machine, etc. Simple, strong, reliable. Nothing to break or get out of order. Wears a lifetime. Costs little to buy, nothing to run. Indispensable in every home and shop. Lightens labor, saves time and money. Made from very best material by careful workmen in the same big factory as the famous "LITTLE SKIPPER" marine engines.

Price of motor ready to attach to faucet, carefully packed in neat box and delivered to express company for shipment, ONLY $1.00

Send money by post office or express money order or registered letter. Immediate shipment guaranteed. Money back if not fully satisfactory and exactly as represented.

REFERENCES—Any bank or trust company, any express company, or any prominent business man or public official in Detroit.

STEVENS

Just what he's been ardently wishing for—

one of those celebrated **STEVENS FIREARMS** that have instructed and delighted generations of wide-awake boys the world over.

THEY HIT THE BULL'S EYE AS A XMAS GIFT FOR MAN OR BOY.

WE MANUFACTURE

RIFLES	from	$2.25	to	$150.00
SHOTGUNS	from	7.50	to	35.00
PISTOLS	from	2.50	to	50.00
RIFLE TELESCOPES	from	8.00	to	42.00

Ask your Hardware or Sporting Goods Merchant for the STEVENS. If you cannot obtain, we ship direct, *express prepaid*, upon receipt of catalog price.

Our 140 page illustrated catalog embodies the most complete and varied number of Christmas suggestions in the firearm line. Mailed for four cents in stamps.

BEAUTIFUL HANGER FORWARDED FOR 6 CENTS IN STAMPS.

J. STEVENS ARMS & TOOL CO.
391 MAIN STREET,
CHICOPEE FALLS, MASS., U. S. A.

Have You a Cold Room?

Heat it with a PERFECTION Oil Heater. If your regular heating apparatus is deficient, if it fails to heat all parts of the house evenly, supplement it with a PERFECTION Oil Heater. If you have a prejudice against oil stoves, remember that the

PERFECTION Oil Heater

(Equipped with Smokeless Device)

is not of the ordinary kind. The smokeless device prevents all smoke and smell. Wick cannot be turned too high or too low. Holds four quarts of oil and burns nine hours. Easily carried about—something that cannot be done with the other stoves. Two finishes—nickel and japan. Every heater warranted. if not at your dealer's write to our nearest agency for descriptive circular.

The *Rayo* LAMP gives a bright steady light at least cost, and is unequalled for general household use. Perfectly constructed, absolutely safe, an ornament to any room. Made of brass throughout and nickel plated. Every lamp warranted If not at your dealer's write to our nearest agency.

Standard Oil Company.

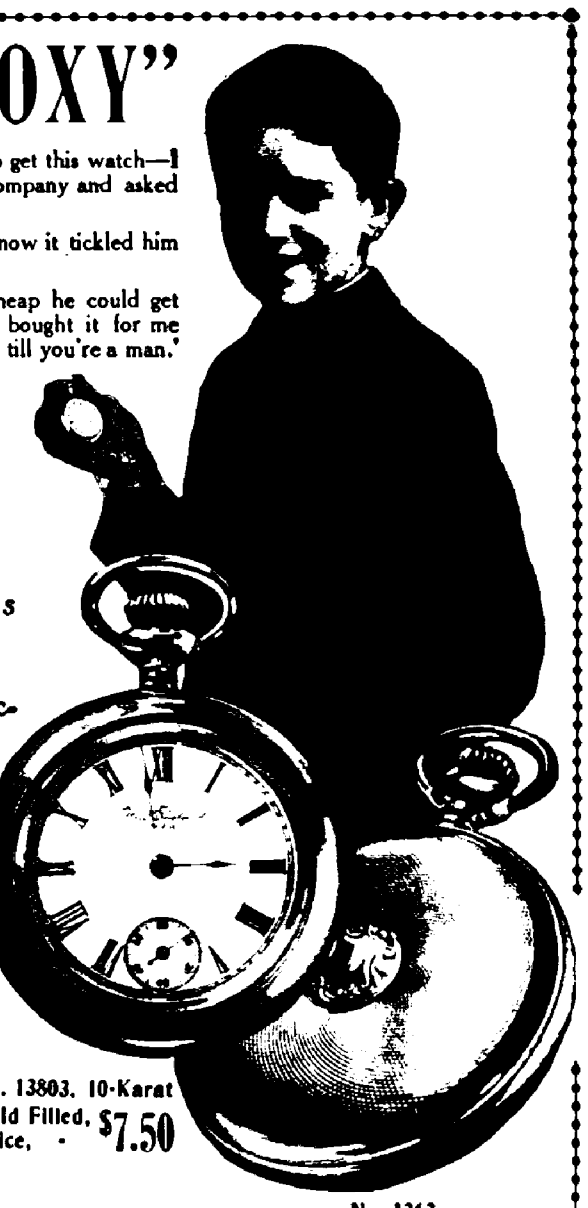
"I WAS FOXY"

"I didn't write to 'Santa Claus' to get this watch—I wrote to the New England Watch Company and asked them to send their catalog to Dad.

"Dad said I was too foxy, but I know it tickled him just the same.

"Anyway, when he saw how cheap he could get me a man's *New England* Watch he bought it for me because, he said, 'That watch will last till you're a man.'

"I'd advise you to write and ask them to send a catalog to your Dad - but you'd better do it now, before Christmas."



New England

The Men's Watches FOR BOYS

New England Watches keep accurate time, stand up under hard wear and are made for men and women—yet their price is low enough for every boy and girl to have one.

New England Watches can be sold at a low price because for 28 years we have been learning how to make good watches cheaply. Because we make so many that each watch costs very little to make. Yet every *New England* Watch is thoroughly tested and is absolutely guaranteed by us.

No. 13803, 10-Karat Gold Filled, Price, $7.50

No. 1363, Nickel, Price, $3.75

Ask your jeweler to show you his *New England* Watches. If he doesn't keep them, write us his name and address. We will send you free the Handsome Red Book of Men's Watches for Boys, or Blue Book of Ladies' Watches for Girls. Write us to-day for the book and tell us your jeweler's name.

PLUPY IN PEACE AND WAR

Or, Chapters From the Lives of Plupy, Beany, Pewt, and Others

A SERIAL STORY BY JUDGE HENRY A. SHUTE

Author of "Real Diary of a Real Boy," "Sequil," "Letters to Beany and Love Letters of Plupy Shute," Etc.

CHAPTER IV.

THE SQUAMSCOTT House Stables were on Court Street in Exeter and well in the rear of that flourishing hotel. It was a most interesting and lively place at all times, but not exactly the sort of a place in which one would like to bring up children.

The class of assistants in the stable was somewhat given to liquor and low language, but were in the main hearty, good-natured fellows, who were nobody's enemies but their own. They were perfectly willing to let other people do their work, and particularly civil to Plupy and Beany, who were only too delighted to do any work, except at home, from washing carriages to rubbing down horses and running errands for them.

Adjoining the stable was the harness shop of old Mr. Kellogg, a very worthy and decidedly grumpy old gentleman, who passed his waking hours in alternately straddling a wooden horse and drawing waxed thread through harness leather, and chasing disrespectful urchins with a strap.

He glared at the world through horn spectacles and was the most formidable looking old chap imaginable.

As the boys arrived at the stable, a loud and profane altercation was heard inside, followed by a noisy scuffle, as the head hostler, old Mike, came out of the broad door backward, dragging after him the reluctant and writhing figure of Dinky Nealey, who was in a condition of intoxication frightful to behold. After old Mike had kicked him into the street he beckoned to the two boys, who approached much refreshed in mind by the not unusual but intensely interesting spectacle.

"Coom in, bhoys," said Mike, who had kissed the blarney stone in early life. "Oi've been lukin' for two schmart foine yoong felleys to do jist a wee bit o' wurrk. Dinky's droonk and th' Cate mare 'n pianny box boogy's ordhered fur noine o'clock. Jist ta-a-ke hoold noo 'en wash the boogy, 'n help a mon."

Willingly the boys complied and while one squirted water from a small foot pump, the other whirled the jacked-up wheels and plied the sponges. But, as is usual in such cases, the possession of any sort of an engine for throwing water, from a rubber ball with a hole in it to a force pump, induces in the mind of a small boy an unconquerable desire to wet someone down.

So Plupy and Beany had only been engaged in their delightful pastime but a few minutes when Beany improved the occasion by turning the hose on Plupy and thoroughly wetting his paper collar and false bosom. Plupy promptly dodged behind a partition and retaliated by taking Beany in the small of the back with a full stable sponge, and then from his comparatively safe position he alternately peeped and dodged, jeering at Beany, who let fly at him whenever his head appeared.

Now, old Mike, seeing Plupy apparently loafing, tiptoed softly along with the stable broom, a most formidable instrument made of birch withes, with the praiseworthy intention of giving him a fraternal welt, as a mild incentive to renewed exertion.

Arrived within reach he sprang from his concealment with a "Whirroo!" of triumph, just as Plupy poked out his head and Beany sent the stream hissing in his direction. Back dodged Plupy just in time to receive the broom across his back, while the stream of water struck old Mike fairly in his broad and hitherto unwashed face, sending him staggering backwards coughing and strangling.

"Aaugh-aaugh, ye murdherin' rascals, augh-aa-augh," he coughed, doubling himself up, while Beany and Plupy, having rapidly put the roadway between them and their convulsed victim, awaited his recovery in some trepidation.

Mike was not long in recovering his breath, and grasping his broom looked about balefully for the boys, muttering threats. Becoming aware of their escape he began to wheedle, "Arrah, now, byes, Oi doant ta-a-ke me wather jist thot wa-a-y or so mooch av it. Coom over, noo," crooking his huge forefinger at the boys.

"Guess not," said Beany, "ye want to lam us."

"Nary a bit," said the bland Michael. "Come on, noo, auld Moike wo-o-nt hur-rt the loikes o' ye."

"Cross yer throat," said Plupy.

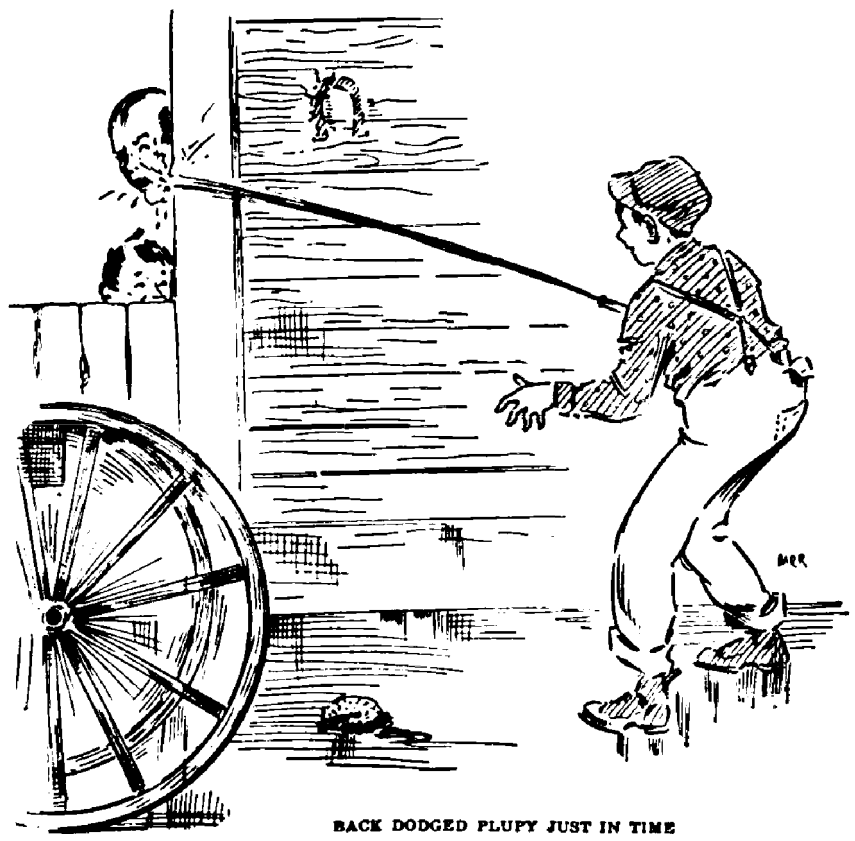
Mike gave an exaggerated swoop across his windpipe.

"Say, 'Hope to die,'" insisted Beany.

Mike raised his horny hands aloft and called down upon his head the most terrific penalties, at the conclusion of which impressive ceremonies the boys, reassured, approached the restored Milesian, and resumed operation on the buggy with the sponges and chamois, Mike having laid an embargo on the force pump, occasionally breaking into spasms of laughter over Mike's mishap.

"Be gob, byes," said Mike, smiling broadly, "'f ye'd squir-r-ted some of th' rale auld sthuff at me, Oi wouldn't ha moinded it, but wather from an auld poomp, aaugh!" he finished expressively, and he betook himself gruntingly to his work of rubbing down the Cate mare, a shapely, long-bodied bay.

For a while nothing was heard but the soothing grunts of Mike as he rubbed and curried and smoothed the mare, and the subdued giggles of the two boys as they polished the buggy.



BACK DODGED PLUPY JUST IN TIME

"Now, byes," said Mike, having harnessed the mare, "wad ye be ta-a-kin' all da-a-y for a tin minits' jhob? Rhun out th' boogy," and they held up the shafts while Mike backed the mare between them and stood while they fastened the traces and breeching. This done they were allowed to climb into the buggy and were told to drive the mare around to the hotel where the gentleman who had ordered her was waiting.

Some dispute arose as to who should drive, but this was cut short by Mike, who promptly decided in favor of Beany, promising Plupy next chance. "Shure, now, Polelegs, let little Fat Belly dhrive this woonst, an' yez can dhrive the nixt out."

So Beany gleefully seizing the reins, clucked to the mare and she obediently trotted out of the stable yard. Drawing up in front of the hotel Plupy got out and made the announcement at the office that the team was ready, and the sporty-looking man, who was waiting, at once retired to the barroom for another bracer, telling the boys to trot her round the square.

This was a most delightful surprise to the boys and away they went. The Cate mare was a well-broken animal, but high-spirited and fast, and in a brush down the street could hold her own with any stable crack in the town not excepting Levi Towle's "Johnny Roach."

Now everything would have gone smoothly had not the boys overtaken Fatty Gilman and Billy Swett, who were driving "Old Chub," Fatty's family horse, which, although old and fat, was quite fast, and as Fatty at once pulled out the whip and began to lambaste his old plug, emphasizing his desire by loud yells of encouragement, our friends could not resist the temptation to go down the stretch with them.

A word was enough for the mare at any time, but a yell such as the boys at once let out, and a cut with the whip was more than sufficient. It wasn't safe to whip the Cate mare. She went into the collar with a jump that nearly jerked the boys' heads off, passed the other horse as if he had been hitched to a post and disappeared up the street in a cloud of dust.

It was nearly a mile from town before the frightened boys managed to pull the excited mare down sufficiently to turn her into a yard and stop her.

Then they got out and petted and soothed her, fed her with grass and dusted the buggy with their handkerchiefs, and then carefully drove back. When they arrived at the hotel they found the sporty-looking man and his friend very much excited and indignant, and arguing the matter loudly and profanely with old Major Blake, the proprietor, who in turn was berating the innocent Michael for having let the boys drive the mare.

A general shout greeted their appearance, and as they drove up Mike seized the horse, and the major dragged the boys from the buggy and held them firmly by the collar.

"Lemme be," said Plupy indignantly; "I didn't do nothin'."

"Me neither," said Beany, with his head drawn about a foot out of plumb by the strong grip of the burly major.

"You infernal scoundrels," roared the major," what did you drive that mare that way for?"

"Well," said Beany, "that man told us to drive her round till he got ready, 'n—'n——"

"'N me 'n Beany started her 'n Fatty 'n Billy Swett come along with a trotter, 'n they yelled and went by us, 'n—n," chimed in Plupy, "'n——"

"'N first we knowed," said Beany, "she started 'n passed them jest flukin' 'n we both pulled 'n pullel 'n we got way up t' old man Giddinses 'fore we could stop her, 'n—'n——"

"'N you sh'd seen us pass Fatty's hoss; gorry, we went so fast t' I couldn't see the telegraph poles mos'," said Beany, smiling expansively and conscious that he touched a responsive chord in the breast of the old major.

"Oi guess, major, ye'd bether lit the byes go," said Mike; "shure tain't ivery bye thot w'd bring her back without sma-a-shin th' boogy. It's too good horses ye hav, ontoirely. Wun av Char-r-less Toales harses woodent ron awaa, 'f ye hit 'im with a goon."

At this the major, much mollified, let go the boys' collars, and withdrew to the porch, where he seated himself ponderously, and smoked contemplatively, while Mike, accompanied by the boys, returned to the stable, old Mike taking much credit to himself for the adroit way in which he extricated them from what he termed "a divil av a schrape."

"Shure, byes," he said, confidentially, "'twas auld Moike thot sa-a-ved yer loife this toime. Auld Moike hez a wa-a-y with th' auld majo: He'd a kilt ye shure. An' ye wouldn't be aboove hilpin a mon with jist a bit av work?"

Both boys assured him of their willingness to do anything in reason, and shortly found themselves with jack and grease-pot, greasing axles, and their own hands and clothes rather indiscriminately, while Mike rubbed down the horses and wheedled the boys, stimulating them to further exertions by jovial and uproarious Hibernian songs, occasionally stopping to apostrophize the horses somewhat profanely, when they cringed and winced under his vigorous hands.

"'Twas in th' moonth av Joon,
From me ho-o-me Oi sthar-r-r-ted."

"Say, Mike," said Beany, "do you know what old Seth Turner said about ye?"

"Noa, Oi doant, 'n Oi doant care a rap fhwat he says," said Mike, stopping his song a moment and then resuming.

"Ahl th' byes 'n gals wuz narely bhroken hear-rted,
Kissed me sishter dear-r, 'n——"

"He says he can lick ye, Mike," said Plupy in a tentative manner.

"Oho," said Mike, suspending operations again; "he sid thot, dud he? Th' auld droonken bhum; auld

Mike cud lick tin of th' loikes av him, till him thot!"

"'N then Oi kissed me mither,
Dhrank a pint av bheer, me faleins for to smither."

"Mike, why didn't you go to war? Old Seth did," inquired Beany again.

"Faith," said Mike, "'twud be gude riddance t' auld Seth 'f he'd sthaid awa-a."

"But why didn't you go, Mike?" insisted Beany.

"Wull," said Mike with a complaisant smile, "th' bist min av th' toon had to sthay t' hoom with th' la-a-idies, an' th' bist lukin' wans, too."

"Aw now," said Plupy, disgustedly, "that ain't th' reason."

"Arrah, now, whot a bye yez be for knowin' fule things. Well, Oi alwuz think th' bhut ind av a goon th' sa-a-ifest ind, av yez kape away from both inds, 'n th' sa-a-ifest ind of a swoord is th' handle, excipt for th' other felly. But th' bist wa-a-y t' fight is with a wee sthick av blackthorn, or with a mon's two fhists, begob."

"Was you a good fighter, Mike?" queried Beany.

"Oi wuz thot," said Mike.

"Could you lick Fuzzy Thurston?" said Plupy in turn.

"WE DIDN'T DO IT, MIKE"

"Oi cud that, aisy," said Mike.

"Why didn't you las' Saturday night, when he called you a broad-faced Mick?" persisted Plupy, somewhat impolitely.

"He was droonk, 'n a rale Oirishman niver hits a mon whin he is droonk."

"Sposin they is both drunk?" asked Beany.

"Wull," said Mike, with a reminiscent grin, "th' has been toimes whin Oi wuz a bit myshtified wid th' dhrink moisilf, 'n things wuz a bit loively." He leaned against the door of the barn, filled his pipe with black plug, put on the cover, tipped it upside down, and began to puff loudly. A terrific odor of burning tobacco arose. Mike puffed and sniffed ecstatically, and closed his eyes.

"Mike," said Plupy, "whatcher smoking, rope?"

"No," said Mike, dreamily; "th' bist of auld nagurhid."

Suddenly there was a flash and an explosion, lighting up Mike's face as with a halo, and the bowl of the pipe disappeared as if by enchantment, leaving Mike holding about an inch of the stem in his teeth, and with a look of complete bewilderment on his honest countenance.

"Be jabers," he ejaculated at length, "Oi thot someone had foired a goon at me."

"Did it hurt ye, Mike?" asked the two boys, who although entirely innocent of complicity in the trick, were so full of laughter that they could scarcely speak.

"Hur-r-t, is ut?" said Mike, eyeing the boys furtively as they approached; "ho-ho, it s not hur-r-t thot Oi am ot-ahl-at-ahl. Auld Mike niver moinds a jhoke. Oho," he continued, pointing at something on the ground near, "luk at th' auld poipe."

As the boys approached to look, Mike made a sudden spring, his long arms reached out like fish poles, his huge hands grasped each a collar and in a second the astonished boys were making their rapid but unwilling way towards the huge watering trough.

"We didn't do it, Mike; honest now, hope to die, cross our throats," they yelled in terror.

"Ye yoong spalpeens, Oi'll tache ye to play jhokes on an auld mon. First yez squir-r-t me full of wather, 'n thin ye thry to blow me oop with poodher. Oi can't sit foire to yez for yez be too grane to burn, bhut Oi'll give yez ahl th' wather yez want."

In vain they twisted, writhed, and struggled. In vain they protested. In they went all over, and as two dripping, bedraggled, and indignant boys legged it for home, they solemnly promised to keep out of low company for the future, a promise, which I regret to say, they broke the next day.

The thorough drenching Plupy had received made it incumbent on that unfortunate youth to go to bed until his clothes dried. To speak more accurately, he did not go to bed, but retired to his room, and, attired in garments insufficient for public appearance, but quite appropriate for a hot day, leaned from the window and viewed the outer world with bitterness and repining in his heart.

He was a little more afflicted by his banishment on seeing Beany, whose wardrobe was more extensive than his, restricted to the paternal yard; but not immured in a dungeon. And he had promised to go in swimming with the Chadwick boys that afternoon at the "eddy"!

If Cele would only come up and read "Billy Bowlegs" or "Nat Tood" to him there would be some fun. But Cele was mad because he had written a letter to Billy Swett and signed Cele's name to it. Father said they sent people to jail sometimes for that. He said it was, he couldn't remember the name, but it sounded like fudging. It couldn't be that, because fudging was cheating in playing marbles when you got up nearer than you ought to. Anyway, he said it was something pretty tough.

It was just like Cele to be mad at such a little thing as that. Anyway, she might at least have sent up the book. Girls were mean things anyway. If he had a brother penned up in a room, you bet he would plug something up into his window. A book, or some juju paste or a picture paper or some green apples or something.

As Plupy thus gloomily meditated he saw a farmer's team coming down the street, followed by a savage-looking bulldog, a strange dog, and his thoughts took a sudden turn into more exciting channels.

"Gosh," he bet there would be a dog fight when that dog went by old Si Smith's store. His dog always came out at strange dogs. There would be a fight sure and he wouldn't see it. That was just his luck. If it was anyone else there would be a dog fight right in front of his window, but he never had any luck, not he. He bet it would be a good one and he wouldn't see it. Beany could, but Beany always had good luck, but he didn't. Beany's folks weren't as mean as his. They let Beany go out in his yard, where he could see dog fights and lots of things.

All at once there was a sound like pulling a board fastened with rusty nails from a dry goods box, again repeated, the opening snarl of a dog fight. Plupy leaned from the window; he could see Beany in great excitement looking down the street. The sounds grew more confused, snarls, short-muffled growls, the voices of excited bystanders. Plupy projected a yell of inquiry to Beany.

"It's a buster," said Beany, jumping up and down; "they has got right hold of each others gozzles and won't let go. Now the old man's layin' onto 'em with his whip," said Beany, jumping up and down in his excitement; "now old Si is shaking his fist at him, now Squawboo Bowley is a kicking of the old man's dog. Hi! Hi! Hi!" said Beany, in great excitement; "the old man is lacing Squawboo with the whip and Squawboo's"—

Plupy could stand it no longer. He must see it, notwithstanding his slightly informal costume. He opened his chamber door and listened. He could hear nothing of the family. They were probably out on the front steps looking at the fight. He bolted for the front chamber and rushed in. Horrors, what did he see? His sister Celia, dressed in her mother's long flounced silk, with lace collar and black half-mitts was gracefully presiding at a tea table, while Keene, sporting an immense waterfall and garbed in her aunt's best black silk, was handing round tea and cakes to Lady Genevieve McAllister (Lucy Watson), Countess Hildegarde Buckingham (Jennie Morrison), and Princess Cassenova (Bessie Tilton).

The effect of this skinny apparition, clad only in a night shirt, was marvellous. The ladies recoiled in horror. The Countess Hildegarde gave a loud shriek; Lady Genevieve covered her charming face with her bejewelled hands; Princess Cassenova laid her regal head on the table and covered it with her arms. But the hostesses were of sterner stuff, and after a pause of amazement Keene seized the pitcher and Cele an umbrella and rushed to repel boarders.

They were too late, however, for Plupy, who was standing in a sort of saucer-eyed paralysis at the unexpected vision, let out a yell of abject surprise and mortification, and fled to his room, while the outraged hostesses marched straight to their mother's room to lodge a complaint to the effect that "Harry had come right into their party without any clothes on, boo-hoo! boo-hoo! and he done it a purpose, boo-hoo! boo-hoo!"

They were pacified by further and unprecedented indulgence in seed cookies, and molasses and water (best Hyson) and a promise of a searching investigation of the affair, whereupon they returned to their titled guests, and their mother proceeded to her son's room, where she found that youth cowering under the bedclothes in a state of mortification impossible to describe, which convinced her that his uninvited presence at the party was wholly innocent.

Indeed, his distress was so great that although by this time his clothes were so thoroughly dried, and he was given permission to dress and go out, he declined utterly, and reclined gloomily in bed, declaring that he would never go out of his room again as long as he lived. Nor did he recover his cheerfulness in the slightest degree until after supper, which was brought to him on a tray by a scornful sister, when he was allowed the rare luxury of reading in bed, and plunged so deep into the fascinating adventures of "Midshipman Easy," that he resolved to go to sea the next day, and not spend the rest of his young life in a chamber, and he fell asleep, devising plans to pack his few treasures in a handkerchief, steal out at midnight, cut a trusty stick, and strike for the nearest coast-town to take ship.

As, however, he slept profoundly until the next morning, his journey was indefinitely postponed and his cheerfulness restored.

And as he blithely split his kindlings in advance, and filled the woodbox to the brim, he joyously planned making up for two days enforced abstinence from voluntary baths, by going in swimming at least ten times that day.

(To be continued.)

LET OUT A YELL OF ABJECT SURPRISE AND MORTIFICATION

Rare Presence of Mind Shown by an Eight-Year-Old

The two children of Rev. Mr. Hightower, of near Millsap's College, Mississippi, boy and girl, were out at play when the little girl, who was barefooted, stepped on a large moccasin snake that bit her on the heel. The little brother, although but eight years old, with rare presence of mind secured a stout twine and tied it tightly around the litle girl's leg just above the knee, and then, placing his lips to the wound, proceeded to suck the poison from the blood. Where the boy got his knowledge of this treatment for snake bites is not known, but he displayed more common sense than most grownups would display under the circumstances. We got our information from Mr. L. P. Yerger, a prominent lawyer of Greenwood, Mississippi.

Beamed Too Soon

It fell to the lot of five-year-old Wallace Stewart, being the third son in rapid succession, to sift the family ashes, as his brothers had done before him. One morning the boy was told by his beaming father that a baby had arrived the night before. Wallace also beamed, much to his parent's gratification.

"And just think! It is our first little girl!"

Wallace's smile vanished and he scowled like a pirate.

"A girl!" as if it were the synohym for all that was opprobrious. "Gee! must I always sift ashes?"—R. B. Sweezey, in Lippincot's Magazine.

Bad Boy May Be Good Man

By FRANK H. BEEDE, Superintendent of Schools, New Haven, Conn.

LET us not pass too lightly over the incorrigible boy. Often he is incorrigible because he is a boy of such buoyant life and SUCH TREMENDOUS ENERGY that the teacher is without the ability to reduce him to school terms. He laughs in scorn at the rules of the school. He will not be run into the same mold that holds all the other tallow candles.

He may have more of human power than the teacher himself. RIGHTLY TRAINED he may be the very one—he often is to lead in momentous political battles, to superintend gigantic commercial enterprises, to build great railroads, to construct massive bridges and rear skyward city blocks. What we call incorrigible boys MAY afterward become criminals. More often they grow up into respectable men and useful and public spirited citizens.

THERE SHOULD BE IN EVERY LARGE CITY IN CONNECTION WITH THE SCHOOL SYSTEM AT LEAST ONE DISCIPLINARY SCHOOL FOR TRUANTS AND INCORRIGIBLE BOYS. BOYS WHO DO NOT YIELD TO THE MILDER MEASURES SHOULD BE PLACED IN ONE OF THESE.—Exchange.

Too Small to Divide

An exchange tells a story of a bright-faced lad who, having applied for the position of office boy, stood anxiously waiting while the proprietor pondered. The latter surveyed the young applicant with a gaze half humorous, half doubtful; he had had much experience, and was not very hopeful of really valuable service.

"I wonder whether you expect to engage as a whole boy or half a boy—half a boy, most likely," he said, musingly. The gray eyes in the freckled face flashed inquiringly wide, and he explained, "Oh, I don't mean to question your having the requisite number of arms and legs; your body's all right; it is your mind I am talking about—your thoughts, wits, memory. I suppose you have a host of schemes and employments of your own that will be a great deal more important than anything here. You are interested in ball games and—"

"Yes, sir, I like ball first rate; but when I am here, I'll be all here, and when I am through here, I'll be all there. I'll do my best in both places, but I ain't big enough to divide."

He gained his place, and he is true to his word; but his opinion of himself is one that might well be widely adopted. Few of us are "big enough to divide" in the sense of giving only half our mind to the duty in hand.—Young People's Weekly.

IN DEFENSE OF HIS FLAG

OR, A BOY IN BLUE AND A BOY IN GRAY

CHAPTER XVIII.

ANDY CROSSES THE POTOMAC ONCE MORE.

By EDWARD STRATEMEYER

Author of the "Old Glory Series," "Soldiers of Fortune Series," "Colonial Series," "Pan-American Series," Etc.

Copyright 1906 by Edward Stratemeyer

TO GO BACK to Andy at the time he was slowly recovering from a bullet wound in his shoulder, inflicted by a Union soldier at the time of his capture during the battle of Ball's Bluff.

The pain had now left him entirely, and although he was still weak from what he had experienced, still he was able to sit up, and that was a great comfort. Every warm day a chair was placed for him upon the piazza of the Lemming homestead and here he would read, or watch the river, or play checkers and dominoes with Viola Lemming.

So the golden Virginia summer passed. In the meantime Andy heard how the great army of the north was assembling at Washington, and of what that patriotic body was expected to do. But from home, from his parents, his company, or the rebel cause, he heard nothing.

The late autumn found him walking about the plantation. Viola Lemming often accompanied him. She noticed how strong he was getting.

"I presume you will want to leave us soon," she said, with half a smile.

"I was thinking I would go away next week," he answered. "I have ventured on your hospitality too long already."

"You are welcome to stay as long as you please," she returned, quickly. "You—you seem like one of the family."

His thin face flushed with pleasure at this. "You are very, very kind—you and your mother and your little sister," he said, taking her hand. "As long as I live I will never forget you, and I do trust that some day I will be able to repay you, at least in part." And then he turned away as he saw how red in the face Viola became. The two young folks had grown to think a great deal of each other.

That night he told Mrs. Lemming of his intention. "I will not outstay my welcome, warm as it has been," he said. "Tomorrow you can notify the army authorities, if you will. As soon as they come for me, you will no longer be responsible for my keeping."

"But they will put you in prison!" shuddered Viola. "I didn't think of that when you spoke. I thought——" she did not finish.

"Did you think I would break my word of honor?" he questioned, seriously.

"No—but—but! Oh, to go to prison! It is horrible!" She tried to speak on, but the words stuck in her throat and she rushed from the room. Her mother was scarcely less affected.

"It is terrible, this change you think of making," said Mrs. Lemming. "Better stay here, while you can. Perhaps the war will soon be over, and then you can cross the river to your folks."

But he was obdurate. He did not intend to go to a Union prison if it could be avoided, but at the same time he would not break his word to them and get them into trouble with the army authorities.

That afternoon a slave carried a note from Mrs. Lemming to the nearest Union camp. In this she stated that the prisoner left at her house was now almost well and had desired to be turned over to the proper authorities. She added that he was not much more than a boy, and she trusted that the commandant would treat him with as little harshness as possible, and that if he could have him exchanged for a Union prisoner in the near future, she would consider it a special favor, for the prisoner had acted so gentlemanly during his illness that he had quite won her heart.

On receiving this note the captain in charge smiled grimly. "All woman's bosh," he muttered. "We'll soon have the young rebel behind the bars and give him a taste of how Union men are treated in their own foul prisons."

It was not yet sundown when he detailed a guard of three soldiers to bring Andy to the camp. The soldiers started off on foot, and having to tramp a distance of three miles over rather rough roads, reached Mrs. Lemming's place an hour later.

"So this is the young rebel, eh," said the sergeant in charge. "All right, we have a description of him on file. Come on."

"In a moment," answered Andy, and shook hands with Mrs. Lemming, Viola, and the younger girl. "Good-bye, and remember, I shall never forget your kindness. You'll have a little more ease, I fancy, now you are no longer responsible for my safekeeping," he added, with peculiar emphasis, which, however, no one but Viola noticed.

"I shall regret having you go," answered Mrs. Lemming. Viola said nothing more just then, but turned and re-entered the house. In a second more Andy was off, with the sergeant ahead and a soldier upon each side of him.

"I guess you'll remember the sweet time you had there when you're in a regular prison," remarked one of the soldiers, in an effort to twit the lad. "You won't have no sech soft bits of calico to look after you, I'll warrant you that!"

The end of the plantation grounds had hardly been reached when Viola came rushing along the path, calling to Andy to stop. He halted, turned and took several steps towards her.

"Here is a silk neckerchief for you," she said, handing over the gift, and then she added in a whisper, while her face was crimson: "You are no longer responsible to us—the neckerchief contains a pistol—*escape if you can!*" Before the astonished young Confederate could reply, she was speeding back to the house.

"HERE IS A SILK NECKERCHIEF FOR YOU"

Although nearly dumfounded, Andy did not lose his wits. He turned his back to the soldiers, slipped the little silver-mounted weapon, which had belonged to Mrs. Lemming, in his bosom, and waved the silk cloth in the air. "Thank you, and good-bye for the last!" he cried, and gave himself up once more, and again the march forward proceeded. One of the soldiers would have taken the neckerchief away from him, but the sergeant, though rough, was too fair-minded to allow anything of such a nature to take place.

On they went along a road bounded on one side by an open tobacco field and on the other by a spare growth of wood, with here and there a patch of brush. Andy noted with satisfaction that it was growing dark rapidly and that the timber was between himself and the river.

He understood thoroughly what a risk he would run in trying to escape—that his captors would first try to catch him, and failing in this, would do their best to shoot him down. But, on the other hand, what was he to expect? A journey to a Northern prison, where perhaps he would be made to pass months, and it might be years, in some loathsome cell, crowded in with others, poorly fed, and made to suffer all sorts of indignities. He imagined things worse than they were, but the effect upon his actions was the same as though it were all true.

A mile had been covered, when they reached a bend in the road, which now turned away from the Potomac. Here stood a deserted farmhouse, set in a wilderness of pear trees.

"Great smoke, look!" yelled Andy, shoving the soldiers away from him and pointing towards the house. "Look out, they are going to shoot us! Look out!" And with a quick dash he gained the side of the highway and leaped the worm fence. As was natural, all three of the Union soldiers ducked their heads and strove in vain to ascertain what Andy meant. By the time they had recovered and comprehended the trick that had been played, the young Confederate was out of sight behind the trees.

"Fools! After him!" shrieked the sergeant, and clambered over the fence as rapidly as his somewhat dumpy form would permit. At the same time one of the soldiers, seeing a quiver among the trees, fired, but the bullet did not touch Andy. In a moment more all three of the Union soldiers were in full pursuit.

In the meantime, the young Confederate was making his way through the tangled undergrowth and over jagged rocks and exposed tree roots with all the speed at his command. There was no mistaking the direction of the river, for the whole neighborhood sloped in that direction, so all he had to do was to keep on going down hill until the water was gained.

It was perilous moving, too, for the undergrowth was thick with briar bushes, which scratched his face and his hands, and caught his clothing so tightly that often it was impossible to move until the offending branch had been torn completely from its bush.

"I'm bound to get away somehow," he muttered, as he flung aside a briar which left a scratch from nose to ear. "There is one consolation, they are all larger than me, especially that sergeant, and traveling down here will be just that much more difficult for them. If only they don't send word along the river front to watch out for me."

The last thought gave him a chill. But he did not waste time upon it. He heard his pursuers crashing along, a hundred feet behind him. They seemed to be getting closer, or else it was only his imagination. Coming to a clear spot, he crossed it like a deer chased by dogs and hunters.

Bang! bang! He was seen, and the sergeant and one of the privates had fired. He felt one bullet clip his shoulder, directly over the spot where he had been wounded before. It was agony to think of this. What if he had to suffer the awful pain of being shot again? He was almost tempted to give up.

But before he could reach such a conclusion he was safe among the trees again. He was now descending into a hollow, thick with undergrowth, and here it was as dark as though the time was midnight instead of eight o'clock of a summer evening.

At the bottom of the hollow he paused, and at a spring that was handy, procured a drink. On the opposite side of the hollow was another clearing. Should he attempt to cross it at once, or wait until a more favorable opportunity presented itself? While he pondered the situation, the voices of the three soldiers broke upon his ear.

"See anything of him, sergeant?"

"No, Fosdick, do you?"

"Nary a hair."

"How about it, Cramer?"

"He came down into the hollow, I'm sure of it," replied the third soldier. "But I guess he's up the other side now."

"We'll go around and see."

The trio moved off, one to one side, the remaining two to the other. Andy, fairly holding his breath, crouched low behind a brush overlooking the spring. What if they should surround him and call upon him to give himself up.

"I'll sell my life as dearly as I can," he thought, and drew forth the silver-mounted pistol Viola Lemming had given him. It was a six-barrelled affair, in those days something quite up to date, and every barrel was loaded. With great caution he raised the trigger.

An anxious ten minutes passed. The men had gone beyond sight and hearing, and he was beginning to think they would not return, when he again heard the voice of the sergeant.

"Fosdick! Cramer! Where are you?" was the cry. "Confound the luck, where can that young fellow be? I'll take a look into the hollow on my own account." And the sergeant began to descend.

He was almost upon the young Confederate when Andy thought it time to act. Leaping to his feet with marvelous swiftness, he thrust his pistol into the sergeant's face.

"Throw down your gun, quick!" he commanded, in a whisper. "Down—or I fire!"

The words and the flash of the silver-mounted pistol took the Union soldier by surprise and he started back with lowered gun. Then Andy sprang upon him, and with a shove and a twist of the foot sent the dumpy figure headfirst into the spring.

"Wough!" came in a splutter from the sergeant, but the youth did not hear him. With nimble steps he made his way up the hollow's side, and once more began the race for the river bank.

Andy now felt that he must be alert for the enemy in front as well as behind, for the two soldiers not having come back, must have gone forward. He strained his eyes to their utmost and clutched his pistol tighter. A half-articulated prayer for deliverance arose to his lips. Oh, if only he was safe in Virginia again.

Presently a welcome sound broke upon his ears. It was the murmur of the swollen river, as it rushed over the rocks in the shallows and made a bend southward. Soon he parted the final line of brush and saw the dancing water before him. Catching the trigger of the pistol in his hat, so as to hold the weapon dry, he jammed the headgear down tightly and waded into the stream.

He advanced with extreme caution, knowing how treacherous the Potomac is at certain times of the year, and aware that the whole northern side was picketed by Union soldiers, while the southern shore was guarded by men of his own stamp. To be shot by one or the other of the military guards would be equally unpleasant and, perhaps, equally fatal.

"If I only had some way of letting our men know that I am all right," he thought, as he paused when about one-fourth of the stream had been passed. He knew they could not see his uniform in the gloom, and, having lost his cavalry hat, he was now wearing one which had formerly belonged to Mr. Lemming, and which Mrs. Lemming had kindly given him.

A few steps farther and he suddenly went down almost to his armpits. The current now took him off his feet and sent a shiver over him. He felt very cold, and realized that he was not yet half as strong as he had imagined. But turning back was out of the question, and he struck out boldly for the opposite bank, a distance of over a hundred and fifty feet.

The middle of the stream had been gained and he was congratulating himself on the fine progress

made, when suddenly a challenge rang out from a point some distance below him.

"Hullo, there, in the river! Who are you?"

"A friend!" cried Andy, but instead of halting, he swam on faster than ever.

"If you are a friend, turn in here and give the countersign."

"I can't turn in—I'm bound for the other shore," answered Andy, but the last words were so low the picket did not hear them—nor did the young Confederate intend that he should.

"Can't turn in?" queried the guard. "Yes, you can. Come now, or I'll fire."

"Don't fire!" yelled back Andy, and then having swam a few more strokes he clutched his pistol and dove out of sight.

He was none too soon, for feeling he was being duped, the Union picket brought his gun into range and pulled the trigger. From under the surface of the stream Andy heard a muffled report, but the bullet passed wide of its mark.

The young Confederate remained under as long as possible, at the same time reaching out with desperate efforts for the southern shore. He felt himself carried downward by the current and this in itself tended to bring him closer to the picket than ever. At last, unable to hold his breath a second longer, he came up and gave a gasp.

The firing of the gun had aroused the picket line for several hundreds of feet up and down the river and on both sides. A rush was made on the Union side, and the picket was asked to explain matters, which he did as well as he could.

"We'll have him yet," cried the officer, in command. "Bring out the flat-boat, Carriwell, quick!"

His order was obeyed, and the officer and two men entered. But all this had taken time and now Andy was once more where he could touch bottom. He looked back and saw the boat put out.

"Save me, brother Confederates!" he cried. "Save me! Shoot the Yankees!"

"We will!" came an answer from almost in front of him, and then two guns spoke up spitefully. A groan came from the flat-boat, which was immediately turned back. The pursuit was over. Several shots were fired, but in the gloom they went wild, and then the shooting came to an end.

Not until it was all over did Andy fully realize what a tremendous strain he had been under. He waded out of the water and up the muddy bank, to find himself confronted by half a dozen anxious men in gray.

"What does this mean? Who are you?" demanded one of the number.

"I am a Confederate, like yourselves. I have been a prisoner and I just escaped," answered Andy. "My name is Andy Arlington, and I belong to the Montgomery Grays, cavalry, of Lee Run. If some of you will help—"

He could get no further. Everything danced before his eyes, trees, soldiers, and guns, and he fell back into a pair of outstretched arms, utterly exhausted.

"A brave youngster, I'll wager a fortune," was the comment of the Confederate who held him. "Come, men, let us take him to camp and do the best we can for him."

CHAPTER XIX.

ANDY GOES TO YORKTOWN.

When Andy came to his senses, he found himself lying on a cot in a farmhouse, quarter of a mile from where he had crossed the Potomac. The farmhouse was being used as a rebel headquarters, and half a dozen Confederate officers were present, making out various reports and attending to other duties of a military nature.

As soon as he felt strong enough, he told his story in detail, to which those present listened with lively interest. An officer knew of the advance to Ball's Bluff of the Montgomery Grays and what the youth had to say was readily believed.

"I suppose you would like to go home as soon as possible," said one of the officers. "We are going to send some army wagons southward tomorrow, and one of them can go down by the Lee Run road and you can ride with the teamster, if you wish."

Andy gladly accepted the offer, and six o'clock in the morning found him homeward bound at the rate of four miles an hour, for the canvas-covered vehicle was loaded to the ash bows and the recent rains had rendered the roads almost impassable. Ordinarily the time would have dragged heavily, but the teamster was a jolly fellow, full of jokes and war stories, and he made Andy forget his troubles in spite of himself. They had their army rations with them and only stopped long enough to feed the horses. The teamster intimated several times that they might stop at a roadhouse, "to become better acquainted," but as neither he nor Andy had money to spend this was not done.

Andy's heart beat quickly as they approached the familiar surroundings of Lee Run. What a long while it seemed since he had gone away! He wondered how his father and the rest of the family were.

"Andy, my son! God be praised!" came from the stoop of the country store, and the next minute the young soldier was in his mother's arms, while Grace was bobbing around, this side and that, looking for a chance to get at him.

"You have been shot and a prisoner!" gasped Grace. "Oh, Andy!"

"We thought you had been killed," put in the mother, with her eyes full of tears. "Captain Montgomery sent us word of how you had gone over the bluff while on horseback, and when Firefly came back alone—"

"Firefly!" burst out Andy, his face beaming more brightly than ever. "Is he really back?"

"Why, yes, he came back the next day. A man caught him who knew him and turned him over to Captain Montgomery. He is at home in the stable now."

"I'm awfully glad, mother. I was afraid I would never see the dear old fellow again. And how is father?"

"As well as can be expected. The war has upset him completely, and he cannot settle down to work as he used to do. But how pale and thin you are!"

"He's only a ghost of himself," added Grace. "But never mind, Andy," she went on, warmly, "we'll fatten you up again, and make you strong, and I'm proud to know what a hero I have for a brother!" and then he gave her such a hug and a kiss as only Andy could give—he was so whole-souled in everything he did.

Mrs. Arlington and Grace had been down to the store to do some trading and to hear the latest news from the seat of war. Around Washington, as we know, all was quiet, but in the west, especially in Missouri, matters were getting livelier every day. The news from this district did not arrive until three or four days old, there being no telegraph lines in use south of Cairo, but when it did come, how eagerly every line was perused, and what a running fire of comment ensued.

Soon the three were on their way to the dairy farm. As the old horse jogged along over the stony road, Andy related the particulars of his experience at Ball's Bluff.

"I don't mind telling you that I was scared," he said to mother and sister, frankly, "but I wouldn't have let the enemy know that for the world!"

"You're your father over again," smiled Mrs. Arlington. "He was captured by the Mexicans at the time he was wounded, and they took off his leg very roughly, but he never winced—so some other soldiers told me."

"Oh, I hope Andy never loses a leg," cried Grace.

"If I do I'll try to be as heroic as father was," said the youth, gravely.

Mr. Arlington was as well pleased as the others had been to see his son once more. "I was afraid you had been shot and your body had drifted down into Chesapeake Bay," he said, as he took both of Andy's hands. "Tell me all about it," and again the tale was told, the others as eager to hear as though not a word had been said before.

Christmas came and went and by that time Andy felt as well and strong as ever. Sometimes, when the weather was particularly raw, the place where the bullet wound had left a scar hurt him, "itched" he said—a feeling plenty of old veterans know only too well. But he never complained, being fearful it might hinder him from going to the front again.

In the meantime he had written to Captain Montgomery. The Grays were in winter quarters several miles back of the bank of the Potomac, and an equal distance south of Alexandria. To join them at this time would have been useless, and Andy received word that he might stay home and "get braced up" until the army moved again in the spring.

Now that he felt able to do so, the youth worked around the dairy as before, superintending the women and men and giving his father a much-needed holiday. But Andy's heart was not in the task—it was with the Grays. He was impatient to rejoin them.

"A letter fo' you, Massa Andrew," said one of the slaves, one day in the spring.

Andy took the communication quickly. It was from the army, as the stamp in the corner of the envelope showed. He tore it open hastily, then rushed off to find his folks.

"I've got an order to join our cavalry at once! The Federals are getting ready for a move from Washington!" he cried, and then followed two hours of hustling, as he arranged his clothing, packed his saddlebags and had Firefly groomed his very best. Firefly seemed to understand the order, too, for his brown eyes brightened and he snorted in approval.

"Take care of yourself, my boy," said the fond mother. "Write as often as you can," added the father. "Don't let the Yankees catch you again," chimed in Grace, and then all kissed him affectionately and followed him out on the verandah. Soon he was in the saddle, and with a last wave of the hand he galloped off and was lost to view among the trees.

The day was bright and warm. Andy was in the best of spirits, so was Firefly, and mile after mile was paced off in the charger's best style. At noon Andy stopped at a little tavern at a cross-roads for dinner, and here two other cavalrymen joined him, neither belonging to the Grays, but both bound southward. For the rest of the day the trio remained together, and this made the journey even more pleasant than before.

"The Yankees are going to give us a shake-up at Richmond, to my way of thinking," said one of the cavalrymen. "I received a letter from a friend who lives down there last week, and he says the authorities are certain that Yankee spies are around sizing up the defenses."

"Well, I reckon we have spies in Washington, too," said Andy, and in this he was right. Long afterwards it was found that a spy occupying a confidential government position had given to the Confederates the first intimation that the Army of the Potomac was about leaving for an attack upon Richmond by way of the peninsula. It was such spy work which gave the Confederates time to throw up their defenses at Yorktown and elsewhere and thus hold General McClellan's forces in check until further re-enforcements for the Confederate Capitol could arrive.

"They won't gain a thing by another attack out here," put in the second cavalryman. "Why, companies of soldiers and bands of cavalry are springing up like mushrooms. We're bound to wipe 'em out by mere force of numbers."

"That may be true—just now," returned Andy, seriously. "But what worries me is, sooner or later, they'll be able to put more men in the field than ourselves. Why, the northern states have four times as many citizens as we have."

"Yes, but they won't fight like our boys will, Arlington. We are fighting not only for state rights but for our homes. A man can stay at home and fight for it better than he can go off and fight."

"Another thing to remember," put in the other horseman. "They are blockading our ports so that we can't send our cotton to the foreign countries that want it. It won't be long before these foreign countries begin to kick, and if we put up our cotton they'll furnish us with both money and men to show the Yankees their places. Cotton is king in America, and don't forget it."

And so the talk went on. The remark about cotton was one heard everywhere, having even been mentioned in Congress before the Southern representatives and senators took leave of the Capitol. Cotton and tobacco did play a prominent part in the war, but they were not as powerful as some of the Confederate leaders imagined.

On the third day of his journey, Andy reached Camp Lee, as the spot where the Grays had gone into quarters was designated, out of honor to the illustrious line of Lees which have ever been prominent in Virginia chronicles from Revolutionary days on. The first person to rush up and shake him by the hand was Leroy Wellington, and Captain Montgomery and a dozen others followed.

"By jinks! but I thought you were done for when I saw you fall into the Potomac and float down to Harrison Island!" exclaimed Leroy. "You are a sight for sore eyes!" and he fairly hugged his friend. Andy had to tell his story twice, once to the officers and again to the mess he had joined.

The winter quarters of the Grays had been close to the shelter of a belt of timber land. Here the cavalrymen had built up houses of logs and mud, covered over in many cases with bits of canvas and whatever of boards came handy. The floors were strewn with pine brush, the brush, covered with rubber cloths, serving also for beds. Some of the houses had little ovens built of sun-dried bricks, and two had sheet-iron wood stoves. All told, the boys in gray had passed a fairly comfortable winter.

"The worst part was when we went out with the pickets," said Leroy. "That week was a corker, and I was detailed up at the top of yonder hill, to carry the news back in case there was an alarm. It rained and snowed nearly all the time, and one night I was nearly blown away, and an old tree came down within ten yards of me and the horse. That was a close call, I can tell you, and I didn't get over it for hours. You can thank your stars and bars you were at home in a warm bed."

The orders to move came that night, at nine o'clock. "Roll call at five o'clock, boys; half an hour for breakfast, and the column moves at six sharp. Heavy marching orders. We are not coming back, but the general's order is not to carry any more than necessary."

"Heavy marching order, but don't carry more than what is necessary," mused Andy. "That looks as if we were going to get along as fast as possible. Where are we going, Bosdell?"

"Don't know, but I heard something said about crossing the Rappahannock. My opinion is the Yankees are going to leave Washington by boat and land at Urbanna, and then try to march overland to Richmond."

"We can get to Urbanna in one day, if we ride hard," said Leroy. "But can enough of our troops get there?"

"We might stop them at the York River," said Andy, "that is, if we could hurry and steal a march around their right flank."

History has shown how near Bosdell's guess was to being right. One of the first plans of the campaign was to land at Urbanna, situated some fifty miles above Fortress Monroe, but delays and military operations in the interior of Virginia made a change necessary, and the Union forces went clear down to the end of the peninsula, as previously described.

By five o'clock in the morning the camp was astir. The cavalrymen were having their horses and trappings looked after, the artillery were testing wheels, carriages, and harnesses, everybody was packing knapsacks and saddle-bags and rolling up blankets. The day was foggy and cold, more than half the soldiers were out of humor, and grumblings were frequent. It was, "Where's that strap?" "Who took my cake of soap?" "Did you see anything of my gun?" "Have I got to leave this folding chair behind, or can I tote it along?" "Have we got to move before the mail comes in?" Then came the call to fall in for breakfast; hot coffee, really fresh bread, and some fresh meat and beans were served out, and everyone felt better. It was the best meal Andy saw for many a weary day. The news had spread throughout the district that the "sod'gers" were to move, and crowds came down to see them off, many bringing with them some dainties, in the shape of chicken, jam, hoecakes and the like.

Promptly at six o'clock the bugles sounded, and the head of the column moved off. First came the advance guard, then the pioneers—men with heavy axes to clear the way—then a detachment of cavalry, and then the regular troops. After the troops and artillery came a small detachment of cavalry, detailed to "whip up" the stragglers, who, if they would not obey orders to "march on, and get where you belong," were pitched into one of the guard wagons which followed for such purposes. Last of all came the wagon train, covered by another band of cavalry and by a small battery. On each side of this long column moved a line of skirmishers, keeping from two to five hundred feet from the road, to prevent any possible surprise from the right or the left, although, just then, no surprise was anticipated.

By a quarter to seven the Montgomery Grays fell into their proper place, and then ensued a long march lasting until nightfall, with half an hour's rest at one o'clock for dinner. Three days' rations had been served out, to be eaten directly from the knapsack, with possibly a chance to kindle a brush fire and heat some coffee. The food was hardtack, coffee,

pork and beans, nothing else. Regular army fare had again begun.

On the following day, in the middle of the afternoon, it began to rain. At first many thought it would be but a shower, but by the time a camp was selected, it was pouring down in torrents. The Grays found themselves booked for an eighth section of an open field, a portion of which had already been plowed for spring planting.

"Here's a picnic!" grumbled Leroy, as he dismounted, to find himself in water several inches deep. "How under the sun are we to pitch tents out here?"

"We are not going to do it under the sun, Leroy; we're going to do it under the dripping clouds. Come on, pitch in. Ask Groman for a spade and we'll soon have a trench dug in which the water can run off."

Leroy went off, and Andy took charge of his horse. By the time he had seen that animal and Firefly cared for, Leroy was back and digging a trench about six inches deep. He cut it in the form of a square just a trifle larger than what the tent would cover. The others of the mess had gone foraging for tent poles. These were easily procured, and fifteen minutes later the canvas was up. It shed the rain into the trenches, and soon the water inside also found its way down into the hollow, and then the ground became fairly dry. But a night there, even with a rubber cloth and blankets, was far from home-like, and many a poor chap caught his death of cold. Andy was glad when morning came and the sun shone brightly through the flying clouds.

Four days later found the Montgomery Grays detached from the main body of the troops and on their way to Yorktown. Everything was bustle and excitement, and the youth felt that something was up. Soon the news came that the Union troops had landed at Fortress Monroe and were on their way up the peninsula. By the time Yorktown was reached the Confederates there had already thrown up a long line of breastworks which practically extended across the whole peninsula.

On the second day in camp on the outskirts of Yorktown, Captain Montgomery came to Andy with a folded paper.

"Arlington, here is an order I wish carried to General Magruder or his representative in the field. The orderlies are all away on other business. You will find Magruder's command somewhere near Lee's Mill. Make the most of your time," and off Captain Montgomery dashed again.

Without losing a moment Andy placed the folded paper in his pocket and urged Firefly down the muddy road leading along the rear line of the confederate forces. His progress was soon barred by a breakdown on the highway and he was compelled to make a detour through a woods. Thinking to gain the point he was seeking sooner, he kept on along the woods until he reached a small clearing, not far from the Warwick River and at a point known as Garrow's Chimneys, because of three tall, burnt-out chimneys standing there. Just below him were located a long line of rifle pits belonging to the Confederate troops.

As he approached the spot, half a dozen rifle shots sounded out from the river, and then came the sudden booming of a cannon.

"The Yankees are fording the river!" was the cry. "They are just below Dam No. 1. They are going to break through the line if they can! We're going to have hot work now!"

The remainder of the talk was cut short by a volley from the Warwick. The Union troops were coming true enough. Unable to restrain his curiosity, Andy rode forward to where a slight hill overlooked the stream. Hardly had he shown himself, when spat! a minie ball hit the tree beside him and clipped off a bit of bark. The young Confederate lost no time in returning to cover.

(To be continued.)

TAD: The Story of a Boy who had no Chance

By WILLIAM C. SPRAGUE

: : Editor of The American Boy : :

Copyright, 1906, by William C. Sprague

IN SEVENTEEN CHAPTERS.

CHAPTER I.

HE WAS just a plain, ordinary boy. Nothing distinguished him from the general run of his fellows, unless it was the abnormal crop of hair that adorned his head, the quantity and quality of his freckles, the obtrusiveness of his feet, and the brevity of his name—Tad.

Thaddeus Chapman, which was the name his parents first gave him, was neither a very good boy nor a very bad boy; indeed, no one ever thought it of sufficient importance to determine in which of the two classes he belonged. No one ever accused him of being a bright or an energetic boy, and yet he was neither dull nor lazy. He was rather of the sort that makes people say, "He will never set the world on fire."

More specifically, it may be said that Tad Chapman was quiet, peaceable, bashful, and retiring—this last to the point dangerously near that of vanishing entirely.

He never played games with other boys, because no one ever thought of asking him. Like the cipher after the decimal point, he seemed merely fit to occupy vacant places. He never took a prize in school, because no one ever expected him to, and it never seemed to him worth while. He was not much of a worker in vacation time, mostly because when the job needed him he was seldom on hand to meet it. He was one of those boys who never know that anything has happened until the day after and never expect anything in the day yet to come.

Tad never did a heroic thing because he never saw a chance, though there was nothing really the matter with his eyes. He never whistled, though he seldom was in mischief. He never grew angry; never was really clean; and he never missed a meal. Nobody companioned with him—yes, his father did.

Tad's father, Eben Chapman by name, was the author and finisher of Tad's father's son. "Like begets like" never had a better illustration than in these two. And something more than sameness of blood made Tad a miniature Eben. Association, they say, breeds likeness, and Tad and his father were the closest of associates. If Tad's father and Tad had wintered, springed, summered, and autumned together for an hundred years instead of fifteen they could not have been more like the proverbial peas in a pod. Tad's long, straight hair that bulged over his ears, his dreamy eyes, his loose joints, and his lack of self-assertion were none of his fault. His father and mother had unconsciously plotted together against him before he was born, so what could Tad do about it? Nothing, to be sure; and he didn't bother his head to try. He was the most satisfied boy in the town of Bellmont. Indeed, "What's done's done" might have been well written on his family escutcheon.

Nobody loved Tad—but his father; and Tad's father—well, that's my story.

One Sunday Tad came home from a mission Sunday school. His father stood at the front door impatiently awaiting him. It was the boy's first visit to the school. The approach of Christmas, the hint of the doings in prospect at the mission, dropped temptingly by a zealous young Christian in Tad's ear, and the suggestion by the young man that he would call for Tad, and this followed by a long argument between Tad and his father, resulted in the experiment—but experiment it was understood to be.

Christmas in the air was about the only thing that could set Tad's nerves a-tingling, though Christmas never, in reality, was a whole heap of fun to him. He had no brothers and sisters with whom to share his pleasures; no troops of uncles and aunts and cousins to remember him; nobody to visit, and nobody to visit him. But Eben Chapman always did something for Tad at Christmas, though Eben's "something" was never much. The prospect of something a little extra from the mission outweighed Eben's arguments against mixing with the mission folks, and so Tad won his father's half-hearted approval of his going "just this once."

Tad came home from the mission school with a peculiar light in his eye and a small Testament in his pocket. His father met him at the door with some commonplace remark that had nothing to do with the school, for Eben Chapman saw in the boy's face a new expression, and he hesitated to say what was in his mind.

A little later the two sat eating their supper, each watching the other furtively across the table and sparring for an opening.

"Ain't yuh got anythin' to tell me about it, Tad?" Eben Chapman's dreamy eyes sought his son's in a way you may have seen a pet dog's eyes look up into yours for recognition and sympathy.

"Nothing much to tell, dad," replied the boy. "There was singing and praying, and then a bell rang and everybody talked, and then a bell rang again and there was more singing and praying, and that's about the whole of it."

"Huh," grunted Eben. A moment later he asked, "How d' yuh like it, Tad?" The question came slowly.

"Oh, it's all right, I guess," answered the boy with seeming indifference; "I don't see nothing much for it and nothing much against it. I suppose I learned something, though I don't know as it'll do me any good. They were very good to me, but I didn't feel comfortable like. But I suppose I can get used to that."

"Goin' agin, Tad?"

"I'm going up till Christmas, anyhow—may be longer." This was about as near to a positive assertion looking to the future as Thaddeus had ever made, and it startled his father.

"S'pose, Tad, I'd say yuh can't go agin?"

"Suppose," replied Tad, with a suspicion of a smile, "I should say I'd go anyway, dad?"

The eyes of Eben Chapman opened wide. He laid down his knife, the blade of which, heaped high with beans, had stopped halfway between his plate and his mouth, and he leaned far over the table.

"Thaddeus, boy, ye never talked like that to me afore. That's somethin' yuh learned at the mission. I tell yuh now, Thaddeus Chapman," and the big fist of the man was lifted above his head and in imminent danger of coming down upon the table, "yuh can't never go there agin. D'yuh hear me? That's settled."

Tad had but few times in his life seen his father angry. It would not be true to say that he was not frightened. For a moment he wondered what answer to make; then slowly rising from the table, he took out of his pocket his Testament, wet his thumb on the end of his tongue, and began slowly and laboriously turning its pages. Backward, forward, backward again he turned its leaves till his eye lit on a page that looked familiar. Running his index finger up and down the page from verse to verse, he suddenly stopped, and, approaching his father, bade him read where his finger pointed.

"Read it out loud, dad."

Eben was not without curiosity, and this overcame to some extent his angry mood. Taking the book for a moment, with some difficulty he read:

"He that loveth father and mother more than Me is not worthy of Me."

Eben stopped and looked up puzzled into the eyes of his boy, who was standing directly over him and following the words of the printed page as the man read.

"That was our lesson today, dad."

And still Eben Chapman was silent, but all the time a storm was gathering within. 'With knitted brow and trembling hands, he turned again to the page and read the verse—this time to himself.

"And the man said it was this way," said Tad. "If a fellow's conscience told him to do anything or not to do anything, it was God talking to him, and he'd better listen to God than listen to anyone else—even father or mother."

"He told yuh that? That smooth-faced upstart come into my house and set my boy agin me and his mother? Who is he? Where is he?"

Eben rose from the table and looked wildly about as if expecting the mild-mannered young missionary to suddenly appear before him.

"I'll thrash him, Tad," he went on; "I'll clean out that hull mission, I will. Eben Chapman's no fighter. He's a peaceable man, but Tad, Tad, my boy, yuh're all I've got on earth, and they ain't goin' to take yuh away from me."

The man threw the book upon the floor as though it were a thing of evil, and reaching out his two hands toward the lad who stood awkwardly irresolute before him, he continued pleadingly, "It don't mean that, Tad; it don't. Yer mother loved that book, an', if she was here, she'd say, 'Tad, obey yer parents.' It says somethin' like that some'eres in the book. I'm no scholar, an' I can't find it, but it's there. And I reckon it says, too, that when yer mother is dead, yuh most obey yer father. That there," he pointed to the book under the table, "ain't like yer mother's. I've heerd of folks makin' their own Bibles. This is one of 'em. They've doctored it up to suit theirselves. Come here, Tad, an' let me tell yuh somethin'. I've never said much about it 'cause I didn't want to trouble yuh. Come in the other room where we can look at her pictur."

The two went together into the only other room of the cottage and took seats facing each other.

"Years ago," began Eben, "an' next month's the month, yer mother an' me was married. It was in a little church down East a ways. I've never heerd anyone call yer mother purty, but to me she was allers the purtiest woman in all the world. That's her pictur on the wall there. It's faded some an' don't look like her, but anyone can see, Tad, she was worth doin' anythin' for, an' what Eben Chapman did fer her didn't begin to be enough. For five or six years we worked together; yer mother worked harder than I did, an' besides she helped along by prayin' an' readin' that book. Then when we got our little home all paid fer, she began prayin' fer yuh—before yuh was born, Tad. Then yuh came an' we was rich. I hate to tell yuh the rest, Tad. I thought I never would, but what yuh read in that book makes me change my mind. When yuh began to live, Tad, yer mother began to die. It seemed like every breath yuh drew came out o' her. As yuh got bigger an' stronger, she pined away an' got smaller an' weaker. Fact was, Tad, the minute they put yuh in her arms that first day, she was as good as lost to me. She used to say to me, 'Eben, I'm goin' to die, but our little Thaddeus will take my place.'"

There was a long silence, in which the man struggled with his emotions. Tad did not move or utter a word.

"The doctor came every day," Eben went on. "I had to give up work an' take care of yuh. Then they told me I must go away with her, that we were too near the sea; the air wasn't good fer her. It was purty hard to sell the place after workin' so long fer it, but I didn't have any money to take her away an' I had already borrowed some, so I had to sell it. After payin' my debts I didn't have much left. Then we went up into New Hampshire where her folks lived an' I got a few acres of hardscrabble on the sunny side of a hill an' grubbed away fer a livin', an' all the time yuh kep' on a-growin' big an' hearty, an' she kep' on a-dyin'. I saw she was a-goin' an' I couldn't help it. They kep' tellin' me it was the climate she wanted, so I sold the new place an' borrowed some money from her folks an' we moved a'gin. I thought she couldn't live to git there, but she was a plucky woman, Tad, yer mother was. An' all the time she was tryin' to encourage me an' tellin' me not to worry. She didn't want me to do what I did, but what could a fellow do as long's he had a dollar in his pocket or two hands to work with? I couldn't help it, Tad, fer she was yer mother. I couldn't help thinkin' she was givin' her life fer yuh an' fer me, an' I thought turn about was fair play,

an' I'd give mine fer her. I allers thought, Tad, maybe when yuh growed up yuh'd do somethin' fer me, so's to sort of even things up."

Then there was another pause. Perhaps Eben Chapman thought his boy would say something. Tad, indeed was gathering himself to speak, but somehow he couldn't. So Eben went on:

"It wasn't any better in Virginny. So she said one day it wan't no use tryin'. Then I knew if she had giv'n up it wan't no use fer me to hope. I knew then she was really goin' to die. I didn't want her to die there among strangers. This time there wasn't much to sell, but it give me enough money to get her back to Connecticut and to the old town where we was married, and where I could lay her among friends."

The tears were now running down the man's cheeks, the first wetting those furrowed cheeks had had in many a year.

"Just before she died she didn't say much, but she just took one of your little hands and put it in mine an' says, 'Tad, my little son, be good to yer daddy.' She allers called me daddy in talkin' to ye. I allers thought that when she said that, she knew everythin' was gone with me, an' that some day I'd need somebody to look after me. I allers tried to keep it from her that we'd lost everythin' huntin' health fer her, an' I never complained. But somehow, she had a way of knowin' everythin' that was goin' on. I guess she knew I wouldn't ever amount to much ag'in, an' was just thinkin' that some day somethin' might come between you and me—somethin', maybe, like a—mission. Yer mother gave her life for yuh, Tad; an' I——" The man could go no further. His frame shook like a great tree in a storm. He reached out both hands towards his big, awkward, freckle-faced boy. Both stood up, and then for the first time Tad spoke:

"I'll not go to the mission again, dad. I'll do what you tell me." Then for a moment the two stood locked in each other's arms—a homely picture, unless viewed from heaven.

That night after Tad had gone to bed, Eben Chapman hunted up his dead wife's Bible and spent hours by the dim light of a candle hunting the key to the meaning of the strange verse he had read.

(To be continued.)

THE TEARS WERE NOW RUNNING DOWN THE MAN'S CHEEKS

In Your Own Home

If a boy should speak to his friend's mother as he does to his mother, or if he should be as surly and unkind to his friend's sister as he is to his own sister, we do not think he would be asked to visit that friend's house more than once. It is a shame for anybody to behave better away from home than he does at home. Let the boys know that bad manners at home will soon be known to all the neighbors and friends.

CHAPTER XI.

AN INTERVIEW.

STARTLED as the boys were by the announcement of Noah's mother, they nevertheless went at once to Mr. Dare's library. There their misgivings were in nowise lightened when they perceived the three visitors. In the dim light Noah could see the expression of triumph on the face of the young Quaker, but he himself in a measure succeeded in controlling his own surprise, and his face betrayed neither alarm nor consternation at the discovery of the presence of the men whom of all the Greenwich people it is certain he was least desirous of seeing at that time.

A brief silence followed the entrance of Noah and Caleb and then Mr. Dare said quietly, "Mr. Hull, here are the boys. You may ask them what you please." "I'd like to know," began Mr. Hull promptly, his anger betraying itself in the loudness of his tones, "by what right a parcel of vagabonds set fire to the property of other people."

As Noah appeared to be the one to whom he addressed himself that young gentleman at once responded, speaking in a low voice as he said, "I think that is perfectly natural, Mr. Hull. Nobody will blame you."

"'Blame!' 'Blame' me!" retorted Thomas Hull sharply. "I should say not! I am not the one to be blamed."

"Then you didn't know anything about the tea after all?" said Noah demurely. "That's about all one can tell by what people say. I'm glad to hear that you didn't have anything to do with the stuff that was hidden in the old Elmer house. Some people were unkind enough to say, just because it had been stored in the cellar of a house which you happened to own, that the tea must be yours or that you knew all about it. That's just about as much as you can tell from the speech o' people." Noah had glanced at his father while he was speaking and the smile he had seen in the corners of his father's mouth had encouraged him to assume a bolder manner than otherwise he would have dared, and perhaps his manner was bolder than the true feeling in his heart at the time.

"I didn't come here to discuss the ownership of that tea. I came to talk about the vagabonds who burned it."

"Yes, sir," responded Noah demurely.

"What have you to say for yourself?"

"'What have I to say?' Why, Mr. Hull, I haven't anything to say."

"That's just what I thought!" retorted the man triumphantly. "You own up to the part you took, do you?"

"Why, Mr. Hull, I don't own up to anything."

"You set fire to that tea!"

"Did I?" inquired Noah so innocently that Caleb laughed.

"Yes, you did! First you stole it and then you burned it."

"Did the man that owned the tea say that?"

"It doesn't make any difference who owned it!" declared Mr. Hull angrily. "I am not talking about that. You set it on fire, now didn't you? You and the nineteen others that were with you."

"I'll tell you what I'll do, Mr. Hull," said Noah quickly. "If the man or the men;" he added, as he glanced significantly at the two Quakers in the room, "who owned that tea will come to me, I'm perfectly willing to tell them all I know about it. I don't say that I know very much, but what little I may happen to know I don't intend to tell to everybody—not even to you, Mr. Thomas Hull, unless you are the one who had the Greyhound bring her cargo up the Cohansey. Are you?"

"I know who owned it."

"Who are they?"

"I'm not at liberty to state."

"Nor am I at liberty to state what little I may know except to the responsible parties."

"You were seen in the Elmer house—more than once, too," said Mr. Hull loudly.

"Who saw me?" demanded Noah sharply.

"Elnathan."

"Did you see me in the house, Elnathan?" demanded Noah of the young Quaker.

"Yea, I saw thee; and I saw others also," responded Elnathan viciously.

"Yes, I was in the house," acknowledged Noah slowly. "There were several others in there too at the same time."

"Who?" demanded Mr. Hull eagerly.

"Let me see, I was there, that's one; Elnathan Todd was there—he makes two."

"Thou knowest I was there to spy thee out," broke in Elnathan angrily. "I had nothing to do with thy thievish designs."

"Why, Elnathan!" said Noah so demurely that Caleb laughed again and Mr. Dare turned his head away quickly as if he was trying to hide the expression on his face. "You don't mean to say that you were just a sneaking spy, do you? Weren't you as much afraid of the witches as we were, and didn't you go in just to find out what it was that was taking place in the old house? I'm sure that's what we went in for; didn't we, Cale?" he added turning to his cousin.

"That's right!" responded Caleb promptly, "and that's what Elnathan said he went in for, too."

"So I did," retorted Elnathan quickly, "but—

"You hear what he says, Mr. Hull. Elnathan declares that he was one of the band," Noah hastily declared. "Why don't you ask him all about it? He owns up to what he's done. As far as I know he's the only one that has."

"Thou knowest as well as I that my son Elnathan had no part nor lot in this matter," said Friend Todd in his deepest tones.

"Why, Mr. Todd, he just said he did," replied Noah simply.

"I can tell thee, Noah Dare, I know the name of every one," said Elnathan.

"Do you, indeed?" answered Noah," who were they?"

"I have no need to tell thee!" responded Elnathan glumly.

"But I'd like to know. And, say, Elnathan, did you find out who owned the tea? I fancy there are men here in Greenwich who would like better to have you find that out for them than they would even to know who set it on fire or who drove the wenches—witches I mean—out of Mr. Thomas Hull's house. From what some of them said to-night I have an idea there would be livelier doings than a bonfire of tea chests could ever bring."

"I did not own the tea, Friend Noah," declared the young Quaker.

"I never thought you did, Elnathan," laughed Noah. "You're not old enough to 'own' anything in your own name. How about your father and Mr. Thomas Hull here? Did they own any of it?"

There was a brief and awkward silence for a moment, and then Mr. Hull said. "It matters little who the owners of the cargo were. The thing that interests you most, young man, is who the incendiaries are. As far as I am concerned I don't mind telling you that I didn't own the tea."

"Not any of it, Mr. Hull?" interrupted Noah quickly.

"You heard what I said," retorted the angry man.

"Yes, sir, I heard what you said. Did you or Friend Simeon Todd own anything in the cargo? Did either of you know the Greyhound was to come here? Did you tell anyone that the tea could be hidden in the cellar of a house you owned? Did you or Friend Simeon Todd enter into any agreement about that cargo of tea? Were you to be paid——"

"You are an impudent young puppy!" broke in Mr. Hull, no longer able to restrain his feeling of anger. "If you were my boy I would take a strap to you. And what is more I cannot understand how your father is able to sit quietly by and let you be so disrespectful to your elders and he not even making a single protest. In my day young puppies were taught better!"

"I didn't know you ever were a young puppy, Mr. Hull," said Noah dryly.

"Noah!" said Mr. Dare sternly, speaking for the first time during the interview.

"Sir?" responded Noah.

"You must beg Mr. Hull's pardon instantly."

"Yes, sir. Mr. Hull," said Noah turning and bowing to the offended man, "I said you were a young puppy. I am sorry for it."

A snicker from Caleb caused Mr. Hull to turn angrily upon Mr. Dare, and in tones that could have been heard throughout the house (and doubtless were heard, for Noah's mother and his sisters were not far away from the room, we may be sure) said, "Joe Dare, this is the first time I ever have been insulted in your house! And you sit calmly by and let this—this—young—young—" another snicker from Caleb caused the excited man to change abruptly the word he was about to use—"this young man to be disrespectful to his elders."

"Did he not say to you he was sorry?" inquired Mr. Dare gently.

"Sorry for what? Sorry for what?"

"For what he said."

"No, sir! That is not what he said! He said he was sorry that I was a young puppy."

"Mr. Hull, what did you want me to say?" inquired Noah. "You wouldn't want me to say I was glad, would you? You tell me just what you want me to say and I'll say it." Noah's manner was so thoroughly respectful that Mr. Hull could only glare at him in response.

"Come, Friend Thomas," suggested Simeon Todd. "We will go to thy home. It is evident that Friend Joseph is upholding his own son in his naughtiness. These are evil days that have fallen upon us."

"Stop a moment, my friends," said Mr. Dare. "What I told you was that I would call the boys and you could question them yourselves. Have I not done so? Have you asked all the questions you desire?"

"Humph!" retorted Mr. Hull, as he turned toward the door, followed at once by the two Quakers.

As soon as the owners were gone Mr. Dare turned to the boys and said, "This is a serious matter, Noah."

"Yes, sir."

"Why did you do it?"

"Why did they bring the tea up the Cohansey and land it right here under our very noses?" responded Noah earnestly.

"Two wrongs have never yet made a right."

"Do you think the Boston men did wrong? Was it wrong for the men at Annapolis to do what they did? I have heard you say you didn't think it was," urged Noah.

"It seems to be a different matter when it happens right at home," replied Mr. Dare quietly, though there were traces of a smile to be seen in his face. "Right or wrong I am confident we have not seen the end of it. Good night to you, boys."

As Noah and Caleb lighted a candle and climbed the stairway to their room, neither spoke, although both were aware that a new aspect of the escapade was now certain to appear.

CHAPTER XII.

A REFRESHING SUGGESTION.

On the morning following the burning of the tea when Noah and his cousin took their seats at the breakfast table, both boys were made aware of the feeling of anxiety that was manifest. Throughout the meal it was seldom that any one spoke, and then it was only in few words.

"Caleb, did you say you were going home to-morrow morning?" inquired Mr. Dare, when at last his wife and daughters departed from the room. "Why, no, Uncle Joseph!" replied Caleb in surprise. "Do you want me to go home?"

Ignoring the manner of his nephew, which seemed to imply that Caleb was confused by the implied suggestion, Mr. Dare said, "And did you say, Caleb, that you wanted Noah to go back with you?"

"You know I'd like to have him go with me," responded Caleb as he perceived that Noah was winking at him.

"Very well, then. I give my consent, Noah may go with you, since you are so eager to have him."

"How long am I to stay?" inquired Noah.

"That depends," replied Mr. Dare. "If I shall need you here at any time I can send you word. Ordinarily you are in no haste to come back to Greenwich. I do not think you will be needed at home right away. I think I may say to you that you can stay as long as you desire unless you receive word to the contrary."

"That is just what I want."

"Did you say you planned to sail directly after breakfast to-morrow morning, Caleb?" inquired Mr. Dare as he arose from his chair and started from the room.

"Yes, sir, that's just when we'll start," said Noah quickly.

"Very well, then, I'll not say goodby to you till then. I shall doubtless be busy to-day, and I may not see you before to-morrow morning."

"What does it mean, Noah?" demanded Caleb when the two boys were left to themselves. Caleb plainly showed that he felt hurt by the evident purpose of his uncle to cut short his visit at Greenwich.

"'Mean,' Cale?" laughed Noah. "Can't you see?"

"No, I can't see, unless he is tired of having me here and thinks it would be better for me to go home. Maybe he doesn't think my influence is good on you, Noah."

"You're as blind as a bat," laughed Noah. "Why, all my father wants is to get us both out of town for a few days till this affair has blown over. I know he isn't worried about you having a bad influence on me. If it was your father, Cale, who was worrying there might be some reason in it."

"I believe you are right, Noah," said Caleb quickly, the expression of his face lighting up instantly. "He is afraid of what may be done here in Greenwich and he wants us both out of the way."

"You can see through a barn door if there is a hole in it."

"Yes, but I hadn't once thought Uncle Joseph could be scared and would want us to run away."

"You don't call going home 'running away,' do you? My father isn't afraid of Tom Hull or those sneaking Quakers either. I have an idea though that he is a bit fearful of what we might do. You know, Cale, how easily I am influenced and you might get me into another scrape if we don't get out of Greenwich pretty soon."

"Uncle Joseph ought to have asked me if I wasn't going home to-day, then," remarked Caleb as he and his cousin departed from the dining room.

"Noah," called Mr. Dare as the boys stepped out upon the piazza, "I want you to go out to the farm and take a message to Dan."

"Yes, sir," replied Noah respectfully at the same time bestowing a glance full of meaning upon Caleb. The "farm" was nearly five miles from Greenwich and Dan" was the negro who was in charge.

"Tell Dan that I have changed my mind and that he need not drive any of the stock into town to-day," continued Mr. Dare.

"Yes, sir."

"And, Noah, if Caleb wants to go with you he may do so. You can use any of the horses you wish."

"All right. Do you want us to start now?"

"Yes, I think so. There is no need of haste, still it would be better to tell Dan now so that he won't be making any mistake."

"Was he to drive the cattle in to-day?" inquired Noah innocently.

"He was told to bring them in," replied Mr. Dare quietly, a faint trace of a smile appearing upon his face as he spoke.

Without any further delay the boys at once proceeded to the barn where two horses were saddled, and the young riders prepared at once to depart.

"I tell you, Cale, my father knows a thing or two," laughed Noah as he and Caleb turned into the street. "He didn't want to tell us to keep out of the way, but he let us know what he wanted just the same."

"That's just what I'm willing to do, too."

"Cale, if I go home with you I'll see Anthony Wayne, won't I?"

"That's what you will, Noah!" responded Caleb eagerly. "He's worth seeing, too, let me tell you."

"What does he look like?"

"He's tall and straight as a pine tree. He has black hair and a pair of eyes that can look right into the marrow in your bones. He's as quick as a flash and there isn't a man in our company that he can't throw. You ought to see him when some fellow doesn't do what he has told him to do. Not much like your Tom Hull or your Quaker Todds, Noah."

"Why? What does he do?"

"He just makes the man do what he's been told and he doesn't beat about the bush any, either."

"Does the gentle Anthony lay hands on the man?"

"He does that, and if his hands aren't enough he'll lay anything he can grab, too."

"I don't think I should like to be in his company."

"Yes, you would, Noah; yes you would. Everybody likes him."

"Does the man that Anthony grabs like him, too?"

"Yes, sir. He likes him best of all."

"That may do for your Pennsylvania men, but I don't believe the Jerseymen would stand for a thing like that."

"Yes, they would, Noah! You would anyway. You couldn't help liking him. His voice is pitched high and when he calls on his men for something it just makes you tingle all over. You think that's the very thing you'd rather do than anything else in the whole world."

"That's the way you may feel about it, Cale; but it doesn't strike me that I'd have any such feeling."

"Oh, but you would, Noah; you couldn't help yourself," protested Caleb eagerly, for, as we know, he never tired of singing the praises of the man who was destined to become one of the most dashing of all the American leaders.

INSTANTLY THE TWO BOYS DREW REIN

"Tell me more about him, Cale."

"Why, you know already what there is to tell, or if you don't I'm sure the fault is not mine. When he left school, or soon after, he started out with a surveying party for the wilderness—"

"What wilderness?" interrupted Noah as demurely as if he never before had heard the story.

"Why, Pennsylvania of course."

"That's so, I might have known. Pennsylvania is a wilderness, isn't it?"

"It isn't so bad as Jersey," protested Caleb quickly. "You know that as well as I."

"Go on with your story, Cale," interrrupted Noah laughingly, for his cousin never failed to respond to his prodding.

"I've heard him tell a great many times about his experiences in the woods—how he had to fight Indians and shoot the painters and bears and wild cats—"

"I thought you said he went out there to survey," broke in Noah.

"So he did. He did that and all these other things too."

"Smart man," remarked Noah soberly.

"He is that. He was only twenty years old when Ben Franklin sent him up to Nova Scotia to survey the land his company had bought there, and he had to keep the settlers in order, too. And he did it."

"So I have heard you say. What does this paragon of all the virtues do now?"

"He does most everything. He's a member of the county assembly for one thing, and since the meeting of the Continental Congress there is plenty to be done. Then he has his company to drill—"

"That's enough to keep him busy," broke in Noah with a laugh.

"He's been simply fierce ever since the Polly tried to land her cargo of tea last year. She didn't land it though. The Greyhound did, you'll have to acknowledge that. The Jerseymen weren't smart enough to head her off."

"Never you mind that. It would have been easy to drive her off, but when she lost all her cargo—why that puts the Jersey men ahead doesn't it?"

"How does it?"

"Why, that tea has gone up in smoke, that's all. Your Polly could take her cargo off to some other port, but the Greyhound won't ever bother anybody again with the stuff she had on board. The Jersey men fixed that for her."

"And got themselves in a fix too at the same time."

"That remains to be seen. Look behind you, Cale, and see who that is that is following us."

Startled by the unexpected request Caleb glanced quickly behind him, and in a moment exclaimed, "There are three of them."

"Who's in the middle?"

"It's Elnathan Todd!" exclaimed Caleb, "and that's Ananias and Elias with him! What do you suppose it means?"

"You know as much about it as I do. Shall we pull up and wait for them?"

"Yes! Yes!" said Caleb eagerly.

Instantly the two boys drew rein on their horses and turning about peered at the approaching party. All three were on horseback, and it was manifest that Caleb had spoken truly when he had declared that the young Quaker was in the center, and on either side of him were the two friends of Noah and Caleb. The surprise of the latter was increased when it was seen that Elnathan's bridle was being held by Ananias, and when the trio halted before their friends the expression upon their faces clearly betrayed that something was wrong.

CHAPTER XIII.

A LIST OF NAMES.

"Why didn't you stop, Noah, when we called to you?" demanded Elias when the five young men were together in the road.

"Didn't hear you," retorted Noah. "Why, Elnathan, what's the trouble?" he added demurely as he faced the young Quaker. "Lost some more tea?"

Elnathan scowled as he replied: "The tea concerns thee more than it does me."

"Oh, I'm not concerned, not in the least," said Noah lightly. "My father did not lose any money in that bonfire."

"I tell thee, though, he may lose something more than tea."

"What's that?"

"He may lose his son."

"I'm not lost if you mean me, Elnathan," laughed Noah. "You can see for yourself that I'm not lost. I'm right here."

"What made thee run away?"

"I didn't run away. I've nothing to run from."

"Did not the sheriff come for thee this morning?" demanded Elnathan in evident surprise.

"He did not," replied Noah slowly. The words of the young Quaker were startling and despite his apparent indifference Noah was made somewhat uneasy by them, as well as by Elnathan's manner.

"Why didst thou ride away directly after breakfast?"

"How did you know I did?"

"I saw thee."

"Ah, still playing the spy! Boys, how is it that a spy is treated? Have any of you a strap with you?" demanded Noah quickly of his companions. The face of Elnathan instantly became pale and in evident alarm he glanced at the boys. His bridle, however, was still held by Elias and escape was apparently impossible.

"We found him out on the road," broke in Ananias. "We went up to your house and your mother told us that you and Cale had started for the farm. We overtook Elnathan back here about a mile and he said he was looking for you. We told him he wouldn't find you where he was, but that he would if he would come with us, for we were looking for you, too. He didn't seem to want to come a bit; but we persuaded him," Ananias added demurely, glancing amusingly at the rein in the hand of Elias as he spoke.

"Friend Ananias, thee made me come. Thou knowest thee didst," said Elnathan solemnly.

"Did we?" replied Ananias soberly.

"Elnathan, did you come out here just to tell me the sheriff wanted to see me?" inquired Noah.

"He does want thee. I advise thee to go back."

"I'm going back—when I'm done my errand here."

"I advise thee not to delay."

"That's good of you, Elnathan. I don't think I ever saw a more thoughtful fellow than you are. You are thinking of us most of the time, aren't you?"

The young Quaker scowled but made no reply.

"Come on, boys," called Noah. "We'll make a break of it for the farm and then we'll go back, so that if the sheriff wants to ask us just what it was Elnathan was doing in the old Elmer house the other night, we'll be on hand to tell him all about it."

"I shall not go with thee," said Elnathan angrily.

"Oh, yes, you will. You just can't tear yourself away from us, Elnathan," laughed Elias as his own horse started forward, and at the same time the young rider yanked the bridle of the horse which the young Quaker was riding.

"I tell thee to let go!" shouted Elnathan fiercely. "I will not go with thee! It would shame my father's good name for his son to be seen in thy company. Jail——"

Whatever it was that Elnathan was about to declare he abruptly ceased, for Ananias had suddenly given the young Quaker's horse a vicious cut from behind and the startled animal leaped forward so quickly and the bridle-rein was lost by Elias.

"Take after him!" called Ananias sharply. "Get him! Chase him! Don't let him get away! We mustn't lose him!"

Instantly the four boys started their horses into a swift run and began the pursuit of the fleeing Quaker.

THE YOUNG BOOK AGENT

OR, FRANK HARDY'S ROAD TO SUCCESS

BEGUN IN JUNE

By HORATIO ALGER, JR.

Author of "Lost at Sea," "Nelson the Newsboy," "Out for Business," "Young Captain Jack," "Ragged Dick Series," Tattered Tom Series," Etc.

Copyright 1905 by Stitt Publishing Co.

CHAPTER XVIII.

THE WOULD-BE ACTOR.

THE REMAINDER of the day proved uneventful. Frank collected for all of the books sold, and took two orders. He also left his card with a druggist who was very much interested in the set of famous novels, and who promised to write to the young book agent later on the subject.

Business proved to be far from encouraging in Camperville, and after one day spent in the village, the young book agent took again to the farms lying for a distance of five miles on all sides. Here in the first day he sold four books, and once more his spirits arose.

"It's a sort of see-saw game—first up and then down," he thought "But as long as I can make ten dollars or more a week at it I'll stick to it."

On Wednesday afternoon our hero had a rather amusing experience. As he was passing a brook he discovered a boy who was fishing and talking loudly to himself.

"I'd not do it for all the gold in the world! Stand back, I tell you, stand back!" came from the youth, who was seated on a rock.

"Hullo! that fellow must be crazy," murmured Frank.

"Stand back, I say!" went on the youth, "or with my trusty blade I will slay you!"

"Crazy as a loon," thought Frank, when of a sudden the boy looked up at him and turned red in the face.

"What yer want?" asked the boy surlily.

"Nothing," answered our hero. He knew that crazy folks were ofttimes dangerous.

"Was you listening to my talk?"

"I was."

"Thought it funny, didn't you?"

"Well, rather,' and now Frank began to smile, for he saw that the youth was not crazy at all.

"That's in a book I'm studyin'," went on the lad. "It's a play."

"Then you are studying to be an actor?"

"That's it."

"What is the play?"

"It's a three-act melodrama called 'The Lost Pot of Diamonds; or, Adrift on the Streets of London.' I'm studying the part of Jack Merridale, the hero. It's a corker."

"What are you going to do when you know the part?"

"Oh, I'm going to study up a whole lot of parts from different plays, and then I'm going to New York to be an actor."

"How much do you know of the play?"

"About half. It's puty hard to learn, but I'll have it in another week."

"Better give up acting and take to minding the cows," said Frank, and started to ride off.

"Ah, you go on!" growled the boy, and made as if to throw a stone after the young book agent. But Frank was too quick for him and was soon out of sight.

"He's worse off for notions than Bobby Frost was," thought Frank, as he wheeled along. "One wanted to make a fortune in Wall Street, and the other wants to become a famous actor. What notions some boys do get!"

Frank worked on a country road that was rather winding, and the next morning found him not over half a mile from where he had met the boy. A good-sized farmhouse was in sight and he rode up to this to see if the folks there would purchase any of his wares.

He was just talking to the lady of the place when a small boy came rushing up, his face full of terror.

"Mother, Jack's crazy!" he screamed.

"Crazy?" queried the lady.

"Yes, crazy. He's out in the barn, throwing around the pitchfork and screaming like thunder!"

Alarmed by this statement, the lady of the house ran out to the barn, with Frank at her heels, and the little lad following.

"Villain, beware of my wrath!" came from the barn, which declaration was accompanied by a violent thrust of the pitchfork into a neighboring pile of hay.

"Oh!" whispered the mother. "Yes, he is certainly crazy!"

"I shall kill you, base rascal that you are!" went on the boy in the barn, and again he thrust out wildly with the pitchfork.

"Oh, Jack! that I should see you crazy!" went on the lady.

"He isn't crazy," put in Frank. "He is stage-struck; that's all."

"The pot of gold is mine!" went on the stage-struck Jack. "It is mine, I tell you, all mine! And Lady Leonora shall be my bride!" And throwing down the pitchfork, he stooped and caught up a bushel basket filled with blocks of wood and hugged it to his breast.

"Jack, what is the matter!" cried his mother, and caught him from behind.

"Wha—wnat's up?" stammered the would-be actor, and he dropped the bushel basket like a hot potato. "I ain't doin' nothin', ma!"

"What do you mean by carring on so?" she asked severely.

"Ain't carryin' on. I'm speakin' a piece."

"A what?"

"A piece."

"It didn't sound much like a piece to me. What reader did you get it from?"

"Didn't git it from no reader."

"Then you made it up."

"Didn't nuther. I bought the book from Tom Johnson for ten cents. It's a great theater piece."

"Let me see the book."

It was lying on a feed box, and before the luckless Jack could get it, his mother snatched it up and began to peruse it.

"What worthless trash!" she cried, and tore it into a dozen pieces.

"Oh, ma! Don't tear it up."

"Don't you talk to me," said the lady, severely. "I don't want any more such goings-on around here. You march yourself to the corn patch, and be quick about it. If I hear of any more theater pieces, I'll send you to bed without your supper."

"It didn't do no hurt to learn the piece," whined Jack, with a dark look at Frank.

"Yes, it did. If you want to learn anything, you learn your history and geography and spelling," answered the lady of the house.

Jack procured a hoe and walked off to a distant cornfield. But when his mother and his little brother were not looking he shook his fist at Frank.

The young book agent had been amused by the scene. Now, however, he grew serious.

"That boy thinks I am responsible for this," he thought. "And he will get square if he can."

"Such tomfoolery I never saw in my life," said the lady to Frank. "Stage-struck indeed! I'll have to watch him."

She was so out of patience that she scarcely paid any attention to what the young book agent had to say.

"No, I don't want any books," she said. "We have more now than we can read."

"Have you any to sell?" asked Frank. "Do you buy old books?"

"Sometimes."

"I'll sell you these," she went on, and after a few minutes' search brought out half a dozen cheap cloth-covered novels.

"HE ISN'T CRAZY. HE IS STAGE-STRUCK"

"I don't buy that kind of books," said Frank.

"I'll let you have the lot for a dollar"

"They would not be worth twenty-five cents to me, madam."

"Oh, you book agents want to make all you can," she sniffed, and shut the door in his face.

"What a family to deal with," thought Frank, as he rode away. "I declare, I'm almost glad I didn't sell her a book."

Close at hand was a small side road where were located two other farmhouses. To these places, our hero next made his way. One place was closed up, but at the other he met a young couple who treated him cordially.

"I'd like to have both of those books," said the young husband, referring to the health and the cattle and poultry works. "But to tell the truth I can't afford them. Just now, six dollars is a heap of money to me."

"I can deliver the books whenever you say," returned Frank. "Perhaps you'll be able to take them next week."

"No; I don't want to give an order for them unless I am sure I can pay. 'Pay as you go' is my motto."

"And a good motto it is," said Frank. Then he continued: "Perhaps you have some old books you'd like to exchange for these new ones."

"I've got a box full of old books that were left to my wife by her Uncle Alexander. Millie, do you want to make a trade?"

"I might," answered the wife.

"Let me see the books," said the young book agent.

He spent a few minutes in looking the volumes over. They were not of great value, to his manner of thinking, yet he thought they might bring him six dollars or more.

"If you wish it, I'll give you the two new books for those old ones," he said. "I am not particular about it, but I'd like to do a little to-day before stopping work."

"Don't you think the books are worth more?" asked the young wife.

"Honestly, I do not."

"Then take them and give us the new books."

"It's hard luck, Millie," said the young husband. "You didn't get much out of your Uncle Alexander after all."

"No, Samuel," and the young wife heaved a deep sigh.

"You see, it was this way," explained Samuel Windham. "My wife nursed her uncle for over two years. He promised to leave her a thousand dollars or more when he died. But when he did die he didn't leave anything but some old furniture and these books and just enough to pay for his funeral."

"That was hard luck," said Frank.

"I didn't nurse him for the money," said Mrs. Windham. "I nursed him because I thought it was my duty."

"All the same you should have had something," answered her husband.

"Did he leave anything to anybody else?"

"No, he left what he had to me. But we thought it might be more than it was."

"It was certainly hard." Frank paused after a moment. "I'll leave the two new books now and make a package of the old ones and take them to the Camperville hotel with me."

"Are you stopping there?"

"I'm going to stop."

The old books were done up in some newspapers and Frank put a strap around them. Then he passed over the two new volumes, and bid the young couple good-by. Soon he was wheeling up the side road into the main road once more.

He had passed less than half a mile when he came to a bend. Here the highway was narrow, and on either side were masses of trees and bushes.

"Here he comes now!" he heard a voice shout, and a moment later found himself confronted by three farmer boys, all armed with clubs. They compelled him to halt and then surrounded him.

CHAPTER XIX.

GIVING AN AUTOGRAPH.

The farmer lads had cloths tied over the lower parts of their faces, and had their hats pulled far down over their foreheads, so as to conceal their features as much as posible. One, the smaller of the trio, had his jacket turned inside out.

"What do you want?" demanded Frank, as he leaped to the ground.

"We want to speak to you," said one of the big boys, in a rough voice.

"What about?"

"You'll soon see."

"Make him a prisoner, fellers," cried the lad who had his coat turned inside out.

The voice appeared familiar to Frank, but he could not, for the moment, place it.

"You can't make me a prisoner," said the young book agent, and tried to back out with his bicycle.

Cant' we, though?" came from the lad who had not yet spoken. "Don't you try to run. If you do, you'll get a taste of this." And he brandished his club.

"We're goin' to give you a good lickin'!" came from the boy with the turned jacket.

"Oh, so it's you!" ejaculated Frank, for he now placed the speaker as the stage-struck farm boy.

"You don't know me," said the boy in quick alarm.

"Yes, I do."

"You don't."

"You're the boy that wanted to become an actor."

"It ain't so. I'm Joe Small."

"Your name is Jack, and you live in the yellow house over yonder hill."

"Don't talk to him," put in the biggest of the trio, who had been offered five cents to help "polish off" the young book agent. "Give him what he deserves and let him go."

"He'll tell on me," whispered Jack.

"No, he won't. Just help make him a prisoner and leave the rest to Ollie and me."

Watching their chance, the three boys crowded in on Frank, and overturned both him and his wheel. Then, despite the fact that he hit out vigorously, they sat down on him. Jack tried to kick him, but our hero pulled him down by the leg, and gave him a severe blow in the nose that drew blood.

"Oh! oh! my nose!" roared the would-be actor, and clapped a hand to that organ.

Frank had been hit several times, but at last he managed to throw off his assailants, and then he struck out in a lively fashion. Yet, with their clubs, they were at an advantage, and he was speedily getting the worst of the encounter when a man appeared in the distance, carrying a basket of eggs in his hand. It was Samuel Windham.

"Hi! hi! What does this mean?" cried the young farmer, in amazement.

"Help me, please!" gasped Frank, who was almost out of wind from his exertions.

"Highway robbers, eh?" cried the young farmer, and setting down his basket he leaped forward, and threw one of the masked youths headlong.

"Don't!" screamed the other. "We ain't no robbers. We're only havin' a bit of fun."

"Pretty rough fun," came from Samuel Windham, and he made after the lad, who took to his heels, and disappeared behind the trees. Seeing this the others also ran off at top speed, leaving the field to Frank and his friend.

"Thank you; you came in the nick of time," said our hero, as he brushed off his clothing.

"Hurt much?"

"Not very much. I got a nasty crack in the shoulder and one on the left hand, but I'll soon get over them."

"What made 'em atack you, I wonder."

"It was on account of the smallest boy," said Frank, and then told of the lad's stage tendencies. Samuel Windham laughed uproariously at the story.

"Just like him," he said. "That boy always was a queer stick. His folks had better take him in hand. Will you make a complaint?"

"I guess not. I don't expect to visit this neighborhood again in a hurry. They got about as good as they gave."

"Wonder who the other boys were?"

"I'm sure I don't know."

As he was in no hurry, Frank pushed his wheel along, and walked into Camperville with Samuel Windham.

"I shall not forget you," said our hero, on parting with the young farmer. "If you hadn't come up I don't know what I should have done."

"Oh, that's all right." And then they shook hands, and Samuel Windham walked on to a grocery store, where he traded his eggs for table commodities.

Reaching his room at the hotel, Frank placed the books he had purchased in the closet. He had expected to look them over before retiring, but felt too tired to do so. He procured his supper, and after a glance at a local weekly paper, returned to his apartment and went to bed.

Business around Camperville continued rather poor, and by the end of the week, Frank moved on to the next town six miles westward. He crossed the Delaware River, and now found himself in Pennsylvania. Here business was a little better, and he took up his quarters at a hotel called the Grandmore House, which was partly filled with summer boarders.

At the hotel Frank fell in with rather a pleasant man by the name of Sinclair Basswood, who had at one time been the mayor of a New Jersey town. Mr. Basswood had a great idea of his own importance, and never grew tired of speaking of his rise in life.

"Stick to your work, my lad," said Sinclair Basswood to Frank, graciously, and some day you may become a mayor, as I did."

"I don't know as I want to become a mayor," answered our hero. "I'd rather become a book publisher. Not but what it's a great thing to be a mayor," he added hastily.

"A very responsible position, I assure you," responded the ex-mayor.

"A mayor must have his hands full?"

"Quite true, my lad; the duties are arduous enough. But I felt that I owed something to the town in which I was born and raised, so I consented to run on the ticket when they asked me, and I was elected by two hundred and six majority," responded Sinclair Basswood.

One day the ex-mayor was sitting on a side veranda, smoking a cigar, when a small-built, shrewd-looking individual approached him.

"Excuse me, but is this Mr. Sinclair Basswood," said the newcomer, politely, after making certain that the ex-mayor was alone.

"I am that individual."

"I mean the ex-mayor."

"The same."

"Very glad to meet you, Mr. Basswood; very glad, indeed." The newcomer shook hands warmly. "Excuse me, but do you know I have desired to know you for a long time."

"Really you flatter me," said the gratified Mr. Basswood.

"Not in the least, my dear sir—not in the least. And now let me tell you what motive has prompted me—a stranger—to intrude myself upon you."

"Oh, no intrusion, sir."

"Thank you—thank you a thousand times for saying so. But in a word, I wish to obtain your autograph."

"I fear," replied the ex-mayor, "that it is scarcely worth the giving."

"Let me judge of that, Mr. Basswood. I have already secured the autographs of some of the most distinguished men of our country, including the President and his Cabinet. I wish to place your autograph in that collection of celebrities."

"Well, you are welcome," said the ex-mayor, secretly tickled to be thought of such importance.

"Please write your name here," went on the stranger, and produced a stylographic pen and a small sheet of paper, and, without hesitation, Sinclair Basswood complied with the request. In finishing up with a flourish he made a small blot on the edge of the sheet.

"That's too bad," he said, in a disappointed tone.

"Oh, I can easily remove that, sir," said the stranger. "Very much obliged, sir, for your kindness. I shall prize the autograph exceedingly." And then, before Sinclair Basswood could question him regarding his name, he bowed and withdrew.

The man who had obtained the autograph was just passing through the hotel when he met Frank.

"Hullo, are you stop ing here?" exclaimed our hero, as he recognized the slick features of Gabe Flecker.

"No, I am not," was the quick reply, and then the dapper young man lost no time in leaving the hotel and disappearing.

"Do you know that young man?" demanded Sinclair Basswood, who had seen Frank address the dapper individual.

"Not very well. I met him once on the road.'

"He asked me for my autograph."

"Is that so? What did he want to do with it?"

"Said he wished to put it in a collection he owns. He has that of our President, his Cabinet, and other celebrities."

"He told me he was buying butter from the farmers," said Frank, bluntly. "But, even so, he may be an autograph collector."

"Well, the autograph didn't cost me anything," responded Sinclair Basswood, loftily. "He supplied the pen, and the paper too."

"Are you sure it wasn't an order you signed?"

"An order?"

"Yes. I once heard of a good-for-nothing book agent who used to collect autographs. After that he would write out an order for books over each signature."

"Good heavens! Perhaps that chap is a swindler!" ejaculated the ex-mayor, turning pale. "Where is he?"

"He has left the grounds."

A search was made, but Gabe Flecker had disappeared and could not be traced.

"I'd give five dollars to have that autograph back," groaned Sinclair Basswood. "How foolish to give it to an utter stranger."

"Let us hope that it is all right," replied Frank. "Remember, there are many honest autograph hunters in this world, and Mr. Flecker may be one of them. But I must admit I do not like his looks."

(To be continued.)

STARTING IN LIFE

A Series of Papers by NATHANIEL C. FOWLER, JR., Lecturer on Publicity and Business Methods, Author of "Business Building," "The Boy—How to Help Him Succeed," "Gumption," "Opportunity," and other books

The Physician

TO BECOME a physician, one must pass through the longest and hardest courses of study, where favoritism is unknown, and where each student must depend upon himself or fall by the wayside.

Not one boy in ten thousand has the natural abilities to make him fitted for the medical profession, no matter how many there may be who think they want to become doctors, and the parent who pushes his son in this direction, unless the boy shows marked characteristics which point to this profession, not only wrongs the boy, but the community as well.

The boy most likely to succeed as a doctor is one who takes life seriously, and yet is not morose; for successful seriousness sees the bright side of life as often as it does the cloudy side.

While it is true that some frivolous boys have later acquired great sobriety of demeanor and thought, and have become eminent physicians, yet the majority of good physicians have developed from thoughtful and serious lads, who early realized that life had its responsibilities, and that there was something in it besides chance and pleasure.

The embryo physician is likely to be a student, almost always an experimenter, an early seeker after truth, a natural reasoner, and one who does not readily accept any statement unless it is backed by probability. He is seldom, if ever, superstitious. The miraculous is to him the natural law of God, and the working of God's Nature.

Such a boy loves Nature, and in his crude way is an evolutionist and a believer in cause and effect. He feels the growth of life, and becomes familiar with its different forms. Physiology is his favorite study, and he may even acquire a fair knowledge of anatomy. He may faint at the first sight of blood, and become unnerved in the presence of suffering, so that his parents may conclude that, because the boy does not seem to have the strongest of nerves, therefore, he is unfitted for the medical profession. The physician has nerves. No man without nerves, and no man without feeling is fitted to be a physician. The greater the physician the greater the amount of feeling he possesses. But he also has the power of nerve concentration, which allows him to cut in mercy and to seem not to care while in action; but no man of fine intellect, no man of consummate skill, can idly stand unmoved beside the bed of suffering. Good butchers are not good doctors, and the man without tender feeling never made a good surgeon.

The wild boy, the thoughtless boy, the boy who does not possess the characteristics of manliness, and who is not willingly a student, will never become more than a mediocre doctor.

One of the first indications of ability in this direction is the perceptible enjoyment which the boy shows at the visits of the family physician and the earnestness with which he listens to all the doctor says. As he grows older he associates with medical men, and probably borrows medical books, and studies them earnestly. The chances are that he does not display marked money-making ability, and he probably thinks more about becoming a man, and a useful member of society, than of being a mere money-getter. He does not necessarily despise money, but his inner thoughts, his higher ideas, are along the ethical, scientific, and professional sides of life. His first aim, his first ambition, is to become proficient in some special line of work, to actually do something worth the doing, something for the benefit of humanity. His secondary aim may be to make money, but he does not allow money-getting to interfere with the development of his better talents.

The ordinary boy, the boy who has no particular ambition, who does not know what he wants to do, and does not seem to care what he does, is not fit to enter the medical profession, and any attempt to force him in that direction is criminal. Thus it is the exceptional boy, not the average boy, who is fit to become a doctor.

Adaptability is absolutely essential to any kind of medical success. Any one can learn the elements of the technique of medicine and surgery, almost any one can become a "book doctor," and any well-read book doctor can successfully treat a case when he knows exactly what is the matter with the patient and what the patient's constitution requires. In the skill at diagnosing lies the physician's real success and his real value. Without this proficiency he is little better than a medical book.

Unless the boy, some time during his common school career, shows indications of a diagnostic instinct he is not likely to become a good physician, and should not be allowed to enter the profession.

Mere scholarship is not an indication of adaptability. The successful physician is more than a scholar. While he must have a fundamental education, and must have passed through the courses of medical study and have answered questions put to him by the severest examiners, he must also have had actual experience, hospital and laboratory practice, and know from observation and from feeling much that no book, or any amount of theory can teach him.

It is impossible to state with any degree of accuracy the proportion of college-educated physicians and those whose higher education began with the medical school, but it is said, at a venture, that probably sixty per cent of our leading physicians are college graduates and that about half, or a little more, of the rank and file of doctors are college-bred.

A college education will prove of great value to the physician, not because he will practice the classics, but because he needs the discipline, and the more general knowledge which is not obtainable in the common schools. It is true that many of our most successful practitioners never entered college; but few, if any, of them would refuse a college education if they could start again.

The discipline of the higher education, with its environment, fits a man the better to grasp the perplexities of life.

Jay W. Seaver, A. M., M. D., of New Haven, for twenty years at Yale University, and president of the Chautauqua School of Physical Education, in a letter to the author, says:

"If I advised a young man to study medicine it would be because I found that he was a man of sympathetic nature, and had a mind that was quick and resourceful in meeting the emergencies of life, and a body that was strong and able to bear all the possible hardships, and that was under such control that it could be depended on to do the bidding of the mind in the most exact and easy manner.

"He must possess both mental and physical accuracy, and a fund of patience and optimism that will carry him through all the experiences of a physician's life without letting him drop into pessimism or cynicism, for the physician must believe in man as well as in God and have an enthusiasm for service.

"If I advised a man not to study medicine, it would be because I knew him to be unhealthy morally, mentally, or physically.

"If a man has an ambition to gain wealth, or notoriety, or influence, or social prestige I would advise him to seek some other avenue to his goal.

"The lack of certain necessary qualities, such as have been indicated above, would also lead me to advise a young man not to become a physician."

FREE!

We want to give you some foreign postage stamps. We have a packet for you. Send a one-cent stamp. That is all. Address, The American Boy, Detroit, Mich.

The HAMILTON is the safest 22-caliber rifle to entrust to any boy. It is the most accurate rifle of its class made because of the depth, hardness and perfect accuracy of its new patent twist rifling. It makes hunting a real pleasure when you know you can hit everything you aim at.

Get the Boy a Hamilton for Christmas

It will give him great winter sport. It is very simple to handle, can be loaded easily and rapidly, has self-ejecting mechanism, and can be taken apart in a few seconds. It is the best gun for small game. It is a long-shooter and hits hard. A reliable family rifle for house protection. Outlasts any 22-cal. rifle made. **Hamiltons** are made in three sizes, **$1.50. $2.00** and **$3.00**, weighing from 2 to 3½ pounds and are elegantly finished. Takes all forms of 22-cal. long or short cartridges. Your dealer sells the **Hamilton Rifle**, if not; send us your remittance and we will ship your gun by express at once. Send for our gun circular.

The Hamilton Rifle Co., Factory C, Plymouth, Michigan

FREE BOOK TELLS OF THIS GUN

SIX SHOTS IN FOUR SECONDS

No other Shot Gun equals this gun's record. No gun built, for the money, that is as good. $4.00 to $27.00. Hammerless. Every modern improvement. Nothing as good on the market. Our catalogue shows a dozen other guns we make, single and double barrel, magazine breech loaders, ejectors, etc. Send postal for it to-day—it's free.

UNION FIRE ARMS CO., Manufacturers, 3138 Monroe St., **TOLEDO.**

BOYS  **FOR XMAS**

Don't forget to ask your father for a Gas Cannon. Fires 500 shots for 1 cent—loud reports but absolutely safe; fires in the house. No powder, no smoke, no flame, ignites electrically. The most fun you ever had. Great for sham battles. **$5 complete or $3.50 and this ad gets it today.** Free booklet on request. Satisfaction guaranteed or money refunded.

WARNER MOTOR COMPANY, Inc., DEPT. A. B., FLAT IRON BUILDING, NEW YORK CITY

The best book to assist *you* in selecting a successful career.

STARTING IN LIFE

What Each Calling Offers Ambitious Boys and Young Men

By NATHANIEL C. FOWLER, JR.,

Assisted by nearly 100 representative men in all walks of life.

An intensely practical book that not only tells the advantages and disadvantages of the leading trades, businesses, and professions but helps each boy to choose a life work in which he will succeed and tells him how to prepare himself to enter that calling. The following are the lines of work discussed:

The Physician	The Railroad	The Journalist
The Department Store	The Artist	The Advertising Man
The Architect	The Banker	Public Service
The Manufacturer	The Musician	Civil Service Examinations
The Agriculturalist	The Merchant	The Sailor
The Salesman	The Army	The Inventor
The Litterateur	The Navy	The Skilled Mechanic
The Bookkeeper	The Clergyman	Experts and Specialists
The Lawyer	The Street Railroad	Business vs. Profession
The Stenographer	The Teacher	Wholesale vs. Retail
The Stage	The Storekeeper	Education of Boys

At the close of each chapter two or more eminent men who have made a success in the vocation discussed tell why or why not they would advise a boy to enter their occupation.

With 33 illustrations by Charles Copeland. Over 460 pages. Handsomely bound in cloth. Price $1.50 net. Sent postpaid for $1.66

by **LITTLE, BROWN & CO., Publishers, 254 Washington St., Boston, Mass.**

How Tony Proved Himself

By Winifred A. Cheaney

"IF I only had a home of my own," sighed Mrs. Smith.

Tony looked around the one bare room that they two, for only a few short weeks, had been allowed undisturbed to call home; and, as he looked, he tried with all his simple heart to give due sympathy to his mother's regret that on the morrow even this poor dwelling place must be given up.

Mrs. Smith reached out her hand, with an almost pathetic helplessness, to feel the warmth that radiated from the little cracked stove. "It's awful hard on a woman of my age to be dragged around from pillar to post in the middle of the winter," she bemoaned. "Your father warn't much account, Tony, with his drinking and gambling and carryings on; or he might have left me a little cabin to rest my head in. But I guess I orten ter growl, Tony; for I've got you, and you ain't a bit trifling like your daddy. You've done a good part by your old mother, ever since the first day when you got your job. If it warn't for being drove around by landlords and living in a rented room all my life, I'm thinking I could die plum happy."

"But I ain't looking forward to your dying happy nor unhappy, nor no other way, mammy," declared Tony, having finished his inspection of the room, and giving expression to his thoughts by a nervous clasping and unclasping of his rough, coarse fingers.

"If I had a home of my own, Tony,—even if 'twarn't nothing but a one-roomed shanty, I'd have a flower in a pot in a window; and I could make a curtain out of the embroidered frill of my old wedding dress. I've been saving it all these years, Tony, for a window of my own. And, of course, if we had our own home, we'd have a little strip of ground somewheres around it; and I could raise my own herbs for winter. There ain't nothing like home-raised herbs for curing a cold, Tony. But, lawsakes, a woman can't take no pride in fixing up other people's rooms with flowers and curtains and herbs and such!"

"I think—the room—I found for you to move into tomorrow is—is quite as comfortable as this," stammered Tony, with another criticising stare around.

"I ain't a-doubting it," cried Mrs. Smith hastily. "You've allers done well about finding rooms, Tony. Notwithstanding," she was impelled to add, with a choking attempt at cheerfulness, "notwithstanding, Tony, chances are we won't no more than get settled comfortable for the rest of the winter before the landlord's aunt or cousin or sister'll happen to want the room, and we'll have to move on again."

"It's been that way considerable," acknowledged Tony. "But, I say, mammy," he asked uneasily, "I ain't letting you really want for nothing since I've been putting my dimes away in the bank, have I?"

Mrs. Smith shook her head decidedly. "I tell you I ain't needing of nothing but what you ain't got money enough to buy and ain't likely to get no time soon," she said. "I ain't needing of nothing but a home of my own to die in; so don't you go to feeling bad about them few dimes you're a-hiding away. 'Tain't no more than right that a young fellow should provide a little ag'in the future; and if you're going to buy that interest in old Dinky's cobbler shop, like you're saying, you'll have to take to being savinger than you are now. You ain't needing to be considering of me; for if your daddy had a-had a little of your foresight, I'd not be knocking around like I am in my old age. Don't you go to reproaching yourself for nothing; for you're a man, every inch of you, and your mammy's looking to you for every bit of good she's ever expecting in her life."

Tony wrung his fingers until they cracked. "I ain't done nothing to prove myself yet," he said. "But I'm wanting to be a man; and I'm wanting to make you happy."

Mrs. Smith held out her other hand to the stove, and rubbed the heat between her palms. Her thoughts now lay too deep for words; and, the silence becoming oppressive, Tony pushed back his chair, leaped to his feet, and reached for his hat that hung on a peg behind the door.

"I'll go on down to the shop," he mumbled. "There's a pair of shoes or two that old Dinky warn't willing to handle; saying they was too far gone. But he says they ain't impossible, and that, if I'm a-mind to tackle 'em, I can work in the shop after night and take the pay myself. These little extrys help out, mammy; and you won't be troubling?"

"I ain't troubling," said Mrs. Smith gently. "'Tain't like when your daddy went out o' nights. Then I knowed there was something happening to trouble about. But you—why, I ain't got nothing to trouble about you, only for the cold and the overwork."

Tony, stout, broad-shouldered Tony, gave a sneerful shrug at the thought of overwork; and gloveless and overcoatless, swung himself out through the door into the bitter, blustery night. It may have been a single drop of sleet, or it may have been a frost-nipped tear that slid down his cheek as he hurried shopward. But, whatever it was, he did not brush it off; and it was not until he had entered the half-warm shop, lighted a smoky lamp, and raked together the dying embers in the stove, that the little drop slid off his chin and glistened on the back of his hand. With a start he noticed it there; and, giving his hand a scornful fling, he shook it off into the fire. Then he muttered under his breath, "It sure is hard for an old lady not to have a roof of her own over her head, and four walls, and a bit of floor to stand on that she won't be ordered off of whenever somebody takes a notion. When one moves off the floor these cold days, it's often to step down hard on mighty slippery ground. I've knowed it when it was stepping off into the grave. It ain't fitting weather for even a dog to change his kennel."

Now, busy with his hands, yet busier with his thoughts, Tony threw an extra shovelful of coals on the embers, sought out the old shoes, drew out his tools and his stool, and set himself to work. He had no watch by which to tell the time, his ears were too full of listening to his own plans to hear the striking of the town clock, and the shoes were hard to mend. So the fire burned low and the smoky lamp flickered and went out, and the daylight peeped in at the dusty little window before he threw aside the shoes, quite finished, and, with a half-doubtful smile curving his lips, arose, shook himself, and looked out.

"I must be going home to mammy," he said. "She'll have breakfast ready."

Breakfast was indeed ready and smoking hot on the table when he stepped into the little home room. Mrs. Smith looked anxiously into his face, when he greeted her with a gruffly cheerful good-morning, for signs of special weariness. But finding none, she ventured to remark,

"It was bitter cold last night; and it's well you didn't try to come home. But I hope you have cover enough when you sleep at the shop; and I hope you didn't work too late."

"It was uncommon early when I stopped work," answered Tony vaguely. Then he drew up a chair, seated himself at the table with no little confusion, and fell to eating in a manner that left small opportunity for further conversation. However, he paused near the end of the meal to make the remark,

"I've tried to fix it so as little of the burden of moving as possible shall fall on you, mammy. But I can't be with you no more before night; for I've got particular business to attend to during the noon hour."

Mrs. Smith glanced up from her plate, a quiver of disappointment in the corners of her mouth. "I had thought we could eat a cold lunch together for the first meal in our new home," she said. "Notwithstanding, Tony,—notwithstanding, I say, business is business!"

Business was indeed business with Tony that day. For, when the noon hour had come, scarcely waiting for more than a word in old Dinky's ear, he hurried out to the street and turned his face in the direction of the opposite outskirts of the city.

"A hundred dollars ain't much," he muttered, as he hasted; "but it was almost enough to buy that interest in old Dinky's shop. But mammy's getting old; and there's more ways than one for a fellow to prove himself a man; and —life is before me yet!"

His long steps took him rapidly over the two or three miles between the little shop and the tiny plat of ground before which he came to a halt at last. Eagerly, with his eyes, he measured the tiny plat in length and breadth, and devoured the announcement on the great board sign that stretched quite across its front: "This lot for sail cheep. ask nex dore."

He needed not a moment in which to make up his mind. Into the next yard he stepped promptly, and on the "nex dore" he knocked. After some delay a woman answered his knock; and from her he inquired the price of the pigmy lot.

"The old man hate to gif it up. But times be hart, and it is but a gorner. He gif it up for fifty dollar, spot gash," she replied.

So Tony inquired when he could see the old man; and being informed that he was then within, he accepted the woman's invitation and followed her into the presence of the old man himself. Without more ado he stated his errand; which was to buy the baby lot for fifty dollars "spot cash," and to arrange to bring old Dinky with him that very night to witness the paying of the money and the transfer of the papers.

"You be a quick business youth," said the old man.

So Tony hurried shopward again to finish his afternoon's work, and afterwards to go home to supper in the new room and make peace with Mrs. Smith for this second night's absence.

"It's mighty lonesome in a strange house," she protested. "But—I suppose you've got to prove yourself; and—I ain't troubling."

But for all her sly coaxings, Tony would not reveal the secret of this evening's business.

He did not reveal the secret even after the papers were all drawn up and his name was recorded on the city book as a landowner; for, he confided to old Dinky, "A woman can't live on a lot without any house."

"I'm feared it'll take more to build a house than it did to buy the lot; and the cobbling business don't lay a fortune in a fellow's hand every day. Howsomever, I've knowed people to live in a tent," suggested Dinky.

"A tent wouldn't do nohow this kind of weather," objected Tony; "and this is just the kind of weather when a woman wants a home worst."

"You're right," agreed Dinky. "But you've had one inspiration; and may be, if you'll mend another pair or two of shoes after night, you'll get another."

So Tony mended shoes at night; but nothing came of it but the extra dimes. His second inspiration was not to come that way.

Then the landlord served Mrs. Smith with a ten-days' notice. "'Taint like you ain't good tenants," he apologized; "but my married daughter's come."

"A woman might as well live on the street, and be done with it," wailed Mrs. Smith; and the wail sent Tony rushing out to give his Saturday afternoon off to the search for new quarters. And here it was, on the blustery street, in the midst of his troubled search, that he met his inspiration.

It was late in the afternoon, and his search had been in vain, when he passed an old street-car barn and saw the dummy cars of a former period tumbling to pieces on a rusty side-track. His inspiration transfixed him for a moment, then sent him hurrying into the barn.

There were men present, tearing away parts of the barn; and a particular man, giving orders, who appeared to be the manager. To him Tony appealed.

"Will you sell those cars?" he asked.

The man scratched his head. "We've sold a number of them for chicken-coops and store-rooms," he answered. "Are you wanting to buy?"

"What's your price?" asked Tony, in a businesslike manner.

"Well, now," answered the man reflectively; "we've never sold any of them as cheap as twenty-five dollars aplece. That's giving them away; but it beats making a bonfire of them."

So Tony agreed to take two of the best at the named price, and he had a mark put upon his choice. Then he arranged to bring old Dinky around to serve as witness and adviser. This he brought to pass; and old Dinky performed his part so well that three instead of two of the cars were transferred to the ownership of Tony Smith and hauled around on the street-car track as near to the baby lot as possible. Through his good services, too, they were put into comfortable repair and arranged so that two of them faced the street, with their back ends joining the third car placed crosswise, and leaving a narrow strip of lot between them for Mrs. Smith's herb garden.

But all this took time, and the ten days were quite up and Mrs. Smith was in despair before Tony was ready to take her home.

Even then she did not know she was going home indeed. The things were all moved and set in place when Tony led her across the threshold and explained, as best he could, that she need never move again.

"'Tain't much of a house," he said: "but——"

Then Mrs. Smith comprehended. "But what about your interest in old Dinky's shop?" she cried.

"Old Dinky and me are standing in the best of friends together," answered Tony proudly. "He's going to get another apprentice and help me to set up a shop of my own in one of them front rooms. He says all the shoes to be cobbled ain't in his end of the town. Which is very kind of Dinky; but 'twill make the house smaller for you, mammy."

"Don't you dare talk about small!" cried Mrs. Smith, in tearful indignation. "Why, bless your heart, Tony, don't you know there's plenty of room for all the flowers and curtains I can get? To think—to think I've really got a home of my own to die in at last! You needn't ever say again that you ain't proved yourself, Tony. You're the best son in the world, and every inch a man!"

"But the proving ain't finished yet," said Tony demurely. "I've got a whole lifetime before me yet; and—and it seems like a fellow ought to make up to his mammy something of what his daddy lacked in sense and care and—love."

THE CAMP FIRE OF MAD ANTHONY

(*Continued from page 39.*)

Elnathan had not been able to grasp the rein when his horse had plunged forward and now he was lying low on the horse's neck, frantically endeavoring to regain his lost control and at the same time retain his seat on the back of his own horse. His broad-brimmed hat had been lost, the long tails of his coat were flapping like wings and if his pursuers had not been so eager to overtake him the ludicrous sight would have sent them into roars of laughter

As it was, however, every boy was riding swiftly, and in a brief time Noah and Ananias had gained on Elnathan and passed him in the road. As soon as this had been accomplished both boys turned their horses about, and with Elnathan between them and their friends it was an easy matter to check the speed of his horse, and Ananias soon was holding the Quaker's bridle again and Elnathan was riding in the midst of the little band. His face, however, did not indicate that he was enjoying either the position or the experience, for he was angry and like some angry persons he had lost control of himself.

"I will have the law on thee, Noah Dare!" Elnathan shouted. "Thou art a highway robber! 'Tis bad enough for thee to set fire to property, but I tell thee this will be the worse for thee! Thou hast held me up in broad daylight! Thou art——"

"That's all right, Elnathan," interrupted Noah smoothly. "I know just how you feel. I've often felt that way myself. Now, you sneaking spy, if you'll give me that list of names you have in your pocket, we'll let you go!"

For an instant Elnathan stared blankly at Noah and then the flush slowly faded from his face.

"W-w-what list does thee mean?" he stammered at last.

"You know what I mean," retorted Noah sternly. "Let me have it."

"I will not let thee have it!" shouted the young Quaker. "Thee does not know that I have any list. Thou art—art a-a-son of Belial——"

"Hold his horse's head, Elias," said Noah calmly as he leaped for the ground.

"Hold my horse, too," he added, as he tossed his bridle to his friend. "Now then, my gentle, inoffensive, peaceful Quaker spy, will you give me that list or shall I take it from you?" said Noah, turning firmly upon Elnathan. "I know your creed is for you to give me the list when I ask for it, and some other things, too, that probably are in those pockets of yours, just the same as you do when your 'enemy compels you to go with him a mile and you go with him twain.' Let me have it!"

For a moment the young Quaker gazed wildly about him, seeking some way of escape, but apparently finding none he said tremblingly: "Thou wilt give it back to me, Friend Noah?"

"Let me have it!"

Elnathan slowly drew a paper from his inner pocket and handed it to Noah, who took it and after carefully scanning its contents began to read aloud to his companions: "Ebenezer Elmer, Richard Howell, Joel Fithian, James Ewing, Andrew Hunter, Philip Fithian, John Hunt, Clarence Parvin, Henry Stacks*—"

The reading was suddenly interrupted by an exclamation of rage from Elnathan, who suddenly leaned low and snatched the paper from Noah's hand. At the same moment he yanked the bridle from the grasp of Ananias and with a savage call to his horse instantly started up the road at his swiftest pace.

"Stop! Stop! Elnathan——," began Elias, as he instantly prepared to start in pursuit of the fleeing Quaker.

"No! No, Elias! Let him go," called Noah, who had not even made a movement toward his own horse. "We don't want him any more."

"Why not?" demanded Elias, nevertheless stopping his horse. "Are you afraid?"

"Not a bit," responded Noah. "But the fellow is no good to us."

"He had that list all right," suggested Ananias. "How did you know he had it, Noah?"

"I didn't know. I only guessed at it."

"'Twas a good guess."

Noah laughed as he said, "I'm sorry for you, boys."

"You're in the same box," retorted Elias.

"No, I'm not. I'm going to leave."

"'Going to leave!' Where are you going?"

"Caleb is very anxious to have me go home with him and my father at last has very reluctantly consented to my going," said Noah demurely.

"So you're going to let the rest of us stay to face the music, are you?" demanded Ananias half-angrily.

"No music to face, Ananias," laughed Noah confidently "If there was, you don't think I'd leave, do you?"

"No, I don't think you would, Noah," acknowledged Ananias. "But for my part, I don't agree with you about one thing. I think there will be something done about that tea burning."

"If there is, I'll come back," said Noah quickly. "I shan't run from Tom Hull or Elnathan Todd. Here we are at the farm," he added, for the boys had been riding slowly forward during this conversation.

Leaving his companions at the entrance of the lane, Noah rode swiftly to the barn, where he discovered Dan and delivered his father's message. Then hastily returning to his friends, all four started back toward Greenwich. Throughout the ride they were silent for the most part, and it was evident that despite Noah's confident assertion all four, including even Noah himself, were not without certain misgivings.

"Why don't you come with us tomorrow?" suggested Caleb to Ananias and Elias when the boys had entered the village and were preparing to separate. "You know I'd be glad to have you."

"Have to stay and face the music," replied Elias demurely. "If you and Noah leave it will be all the more reason for Ananias and me not running away."

Noah laughed, but made no reply, and in a brief time he and Caleb arrived at Mr. Dare's house. To the surprise of the boys they found Mr. Dare in the barn, apparently awaiting their coming. Noah was aware that his father was troubled, for without inquiring whether his message had been delivered or not, Mr. Dare said, "Caleb, did you say you and Noah preferred going today? Very well, then," continued Mr. Dare without waiting for a response, "I am willing, and as soon as you boys have had your dinner you may start. The catboat is all ready, for I have been down to the dock and looked after it myself."

*The list of the names of the twenty young tea burners is remarkable for the number of those who afterward became prominent. One became a governor of the state, several were well known clergymen, others became prominent as physicians, one was father of the chief justice of New Jersey, and indeed all the members of the young band were sterling and true-hearted.

(*To be continued*).

Life Among the Lowly East Side Boys

Most of the readers of THE AMERICAN BOY live where green fields are not far away, where pleasant scenes greet the eye in many directions, and they are often more fortunate than they know to be so pleasantly located. If by some magic they were to be brought to the city of New York and had their home fixed in one of the lower east side streets theirs would certainly be a life of misery.

Yet here on these very streets are plenty of boys who would find life in any other locality dreadfully dull. What care they for green fields? Cement sidewalks serve their purpose much better. On these they can play their games. The noise and excitement of the street is as sweet to them as is the song of birds to the boy in the country.

The picture given above shows a group of these young street arabs at a game of which they never tire—shooting pennies.

A Nine-Year-Old Orchestra Leader

Boys have heard of Mozart's wonderful ability as a musician at the age of twelve, of Josef Hoffman entrancing audiences at thirteen and fourteen, and of Kubelik doing marvels when but a boy. Now we have little nine-year-old Michael Di Vito, of Waterbury, Connecticut, who successfully leads and manages an orchestra that plays the most severely classical music. Michael began to study music at the age of four. His father before him was a musician. At seven and eight the boy could play well on the violin, the mandolin, and the piano. Early he began to show ability in directing other musicians, often showing marked talent in the way of criticising the work of his elders. Young Di Vito is now an orchestra director, having an orchestra of his own. He has given concerts in New Haven, Bridgeport, and other New England cities. He has something of the mannerisms of Creatore, sometimes jumping from his platform and running among the musicians encouraging, threatening, and begging. His gestures are often such as result from great excitement. He seems to forget everything but the beauty of the music. His favorite, he says, is Verdi. Hans Saro, conductor of the Connecticut State Sangerbund, says of young Di Vito:

"To say that he is a genius hardly expresses it. He is the incarnation of musical enthusiasm and temperament. To my surprise, when I went first to witness his work, I found that he conducted with great technique and feeling, with all the skill of a seasoned leader. I expect that the world will hear a great deal of him and his work. Spoil him? Impossible! He is not swayed by flattery. He thinks only of the music, and not of himself or the praise that is showered upon him."

DI VITO AS SEEN IN LEADING HIS ORCHESTRA

A splendid continued story of Old Geronimo, by Edward S. Ellis, begins soon.

DI VITO AND HIS BOY ORCHESTRA

BARNEY & BERRY
SKATES

Hockey Players know that a broken skate is pretty sure to mean an injury. They cannot afford to take chances. Only skates of known worth and of the highest reputation are used. That is the reason

BARNEY & BERRY SKATES

are always selected by the experienced skater. Expert designing, high grade material, and careful construction place them high above all other makes.

Send for complete illustrated catalog containing Hockey Rules and directions for building an ice rink.

BARNEY & BERRY, 83 Broad St., SPRINGFIELD, MASS.

Our Roller Skate Catalog mailed to those interested.

THE GROWING BOY should be interested in Shaving Soap as the time will come when he will begin to use a shaving soap for the rest of his life

What shaving soap does your father use? If it is

Williams' Shaving Soap

then you may know that you are wise in following his selection. If not, let us help you convince your father that he is not using the best soap and is not taking the best care of his face.

"The only kind that won't smart or dry on the face."

Williams' Shaving Sticks and Shaving Cakes sold everywhere. Send 4 cents in stamps for a Williams' Shaving Stick or a cake of Luxury Shaving Soap, trial size. (Enough for 50 shaves.)

The Shah of Persia, His Two Sons, and Their Tutor

The Shah recently suffered an apoplectic shock, and recent political events have seriously aggravated his malady to an extent which has caused serious alarm in diplomatic circles

The photographer who took this picture did not provide any further information about the interesting group he shows. He shows the quartet in a very serious state of mind. It is said that the Shah has lately been in no other than such a state of mind. He has not been well and the troubles of his position are weighing heavily upon him. The two sons reflect the seriousness of their father in their joyless faces, and the tutor must, of course, enter into the mood of his royal charges.

To give the readers of The American Boy an idea of the relation between the children of the royal families in Persia and their tutors, I will quote a few excerpts of an account given by one of these tutors.

In the family of the senior brother of the reigning Shah there are five sons. The oldest of these is, of course, in line for the throne. The tutor to these five boys was a Mr. Spry, of England.

"Speaking of discipline," says Mr. Spry, "I am free to say that there was nothing of the sort. If the young princes wished to work, you will work, if to play you will play. When they weep you weep, and when they laugh you join in their merriment.

"All Persian boys are dressed from early childhood as full grown men. The imperial dress was, of course, worn by my young charges.

"The ever present overcoat is buttoned at the neck, has a straight military collar, fits tight at the waist, whence it falls in plaits innumerable to the shins. Save the button at the neck the coat is left open in front so as to display the gaudy undercoat of silk or velvet. The color of both coats, is a matter of choice, except in the month of Moharrem, when black is the only wear. * * *

"We were in the middle of the lesson one day when Akbar Mirza the Magnificent, the oldest of the five sons, laying down his pen, complained about the heat (it was 108° in the shade), saying: It is too hot—yes, ser.'

"Receiving no reply he renewed his work. Soon he lifted up his voice once more. This time his tone was loud and imperious.

"'Bach-ah'" (child) he cried—Persian servants being always summoned and addressed as their master's children. To my surprise in stepped a stately general and stood at a respectful distance, his head bowed and hands folded on his breast.

"'Ab-i-Khwardan'" (drinking water) was Akbar's word and smart the sartip's action. Back he came with a silver teapot in his hand, very solemnly and slowly he went the rounds of the class (of five) and raising the spout to each thirsty little mouth in turn waited in patient silence until the imperial thirst had been quenched.

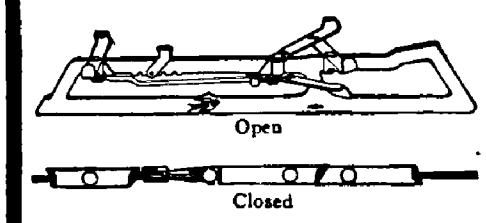
* * *

"The climax of the ludicrous was however attained when Feridum Mirza having to leave the room in a hurry, was escorted by the general, the major, a black eunuch and another servant."

In America the boy who requires an escort at any time is looked upon as a mamma's boy—and is promptly nicknamed "Mary"—but Persian boys have not been taught even the first principles of self-reliance or self-help.

MARTIN

FOLDING ICE SKATES



FOLD TO SLIP INTO POCKET OR MUFF

Fit better, grip tighter, and are lighter, stronger and easier to put on than the ordinary kinds. No keys—no heel plates—no screws—no bulk—no bother, and no higher in price. All sizes and styles.

A pair in a wallet an ideal Xmas gift; your dealer has them. If not, write us. Catalogue D, free

TOMMY'S GOOSE-NEST

By E. A. CHILD

A STORY FOR LITTLE BOYS.

TOMMY lived on a farm, where he had all kinds of pets and fun, and where quite often his city cousins and other acquaintances came to visit him. He always took keen delight in showing them all about the "ranch" and telling them of the habits and ways of everything that was so familiar to him. It added to his delight to see how little many of his friends really knew of these country things, and to have them see that he knew so much.

One spring a boy from the city came to see Tommy and they went the rounds as usual. When they came to the goose pasture, Tommy explained that the geese were hunting for nests and that they were about to begin to lay eggs. "Let us help them," said he, and then they hastened off to the barn for some straw.

After scooping out the leaves from the fence corner and placing the straw in a circular form, who should appear and look over the fence but Mike Fagan, a neighbor's boy, who remarked that the nest was in a good place for he could reach in and take the eggs from his side.

"See," said Mike, as he reached through and began to claw in the straw, "I shall want some aigs to sit under me ould hin this spring."

Tommy shook his head warningly and reminded Mike that if he did not want to get into trouble he had better leave his goose-nest alone. Mike laughed loud defiance at him as he watched the boys disappear around the barn.

That night Tommy got to thinking what he could do to get even with Mike for his threats. Finally he decided that Mike would surely put his hand into the nest the next morning, if for nothing more than curiosity, so he would just slip down and set the steel trap and hide it in the nest the same as the old goose would hide her egg. The trap thus set and secreted, Tommy slipped away to bed without telling any one of his plan, and soon was dreaming of a goose-nest as large as a straw-stack with hundreds of eggs in it, and his old pied goose the proud possessor of the whole thing. It seemed to him that he had just got to sleep when he heard his mother calling: "Tommy, Tommy, get up and go down to the geese. One seems to be caught down there in the fence corner. Hurry up, it is late, and your little friend must take the 8:30 trolley for home, you know."

Tommy turned over and opened his eyes. Sure enough, the sun was high up in the sky. He could smell the breakfast and hear the dishes rattle, and down in the goose pasture he could hear the geese honking and quacking as if they had gone wild.

"Wonder what has got into them," thought he, as he drew on his clothes and started down to see. Just then his little friend came running half out of breath to meet him. "Oh, Tom, someone has set a trap in the nest you made and your old pied goose has got her leg caught and broken in it."

Just then Mike Fagan came along from the opposite side of the fence and burst out in a loud laugh as he saw how Tom's trick had resulted; but, being a boy of more feeling than Tom had given him credit for, Mike sprang over the fence and helped Tom liberate the poor goose, which went flopping off on one foot, while Tom hung his head and did not speak but went straight to the house and to mother, who always was ready to put the best construction on all of Tom's motives.

Poor Tom could expect nothing but censure from everyone and a severe punishment besides. But mother decided that Tom's punishment was sufficient, since his old pied goose would have to be killed and Mike Fagan would always twit him of it, and then the little city friend would probably tell it to all of his cousins.

Tommy never made any more nests for his old pied goose, for she had to be killed that morning, and the trap was put away never to be used for such tricks again.

Breaking News of the Lynching

From the Kansas City Journal.

"Alaska is a land of adventure and romance," said Raymond Brumbaugh, a gold miner. "Many queer things have happened in Alaska," said Mr. Brumbaugh, smiling. "Many wretched things. Sometimes it has been necessary to break sad news to mothers at home. And sometimes this news has been broken with wonderful skill.

"An Alaskan called on a woman in New Hampshire to tell her of her son's death in the Klondike.

"Yes, lady," he said to the weeping mother, 'I was with him to the end. I seen him die. And I tell ye, ma'am, as he wuz dyin' he looked just like an angel.'"

"'Did he?' the mother sobbed.

"'He certainly did, ma'am,' said the Klondiker. 'Swingin' back'ards and for'ards in the air thar, ye'd 'a' thought he had wings.'"

HOW CURIOSITY KILLED A BEAR

By DAN PEARSALL

"YES, I RECKON that was about the cutest trick I ever turned on a bear," said Hank, the old Olympic guide, "and I have always felt sort of ashamed of myself ever since for taking advantage of the crittur when she was simply acting accordin' to the dictates of her motherly instincts.

"You see, it was like this. Back in the early eighties Ben Arnot and me were prospectin' over in the Cascades. We had struck pretty fair pay dirt and were buildin' a flume from a little creek up the gulch a ways to our claim. One afternoon I was busy makin' a clearin' through some underbrush, when Ben, who was a few hundred feet higher up, yells, 'Hi, Hank, take a look across the gulch on that hogback.' I glanced over to the place he pointed out, and what did I see but two half-grown cubs not over two hundred yards away. They acted as unconcerned as if they were right at home in their den with their old mother nigh to protect them from any critturs that might be prowlin' around.

"'Ben,' says I, 'them critturs have pretty fine lookin' fur on them and I am goin' to have their hides.'

"'How're you goin' to get the pesky critturs?' says Ben. 'You can't go back for your rifle, as they are bound to see you and vamoose.'

"You see in them days one didn't tote any shootin' irons around with him, for when you had been swingin' a miner's pick all day, you didn't feel like draggin' along a few extra pounds of steel and lead. I reckoned that I could get them by doin' a little shenanigan around the hogback, so I says to Ben, 'You take a good sized club and sneak around the other side of the hogback. Climb up and hide yourself behind a boulder. Then when you see me wave my hand let a yell out of you that would put a coyote to shame, and rush at them cubs, swattin' the first one you come to, and I will take the other one.'

"He did as I told him, and when I gave the signal we both let a yell out of us that would make a wall-eyed cougar scratch gravel for the tall timber. The cubs, poor little fellows, were scared almost to death, and fell all over each other in their efforts to climb a small fir, but finally succeeded in escapin' us for the moment as we could not reach them.

"'Now, Ben,' says I, 'you just plank yourself right down at the foot of that tree, while I run back to the cabin and get my rifle,' which he did, and in a few minutes we had them cubs up to the cabin, skinned and with their pelts stretched out to dry.

"Soon afterwards we had supper and turned in for the night, thinkin' nothin' more about the cubs, for it was no unusual thing to rub elbows with bears in that neighborhood.

"I TOOK CAREFUL AIM AND FIRED"

"I reckon that it was about midnight when I was awakened by some crittur prowlin' around the camp. I calculated as how it was some beast out foragin', but as it was makin' such an all-fired racket crashin' and plowin' through the underbrush I became sort of curious and, nudgin' Ben, woke him up. He lay listenin' for a while, then he said, 'Hank, that is the old she bear lookin' for her cubs. She has followed the trail we made draggin' them up this afternoon. I allow that she will nose around for a while, and when she finds that they have gone to the happy huntin' grounds she will be so tarnal mad that she will roar loud enough to raise the dead and simply tear them pelts to pieces. I wouldn't care to meet the old lady unless my decks were cleared for action.'

"'Ben,' says I, 'I'm goin' to capture her. Reckon she will be in just about as good a condition as the cubs, and then I don't want her prowlin' around here for the next six months.'

"'How're you goin' to do it?' says he. 'You can't see to shoot, for it is pitch dark, and she is not big fool enough to come out in the open if you show a light.'

"'Ben,' says I, 'did you ever hear of that trait common to females, known as curiosity? Well, a bear, 'specially a she bear, has women folks skinned hands down, and just as sure as curiosity killed a cat, it is goin' to be the death of that bear.'

"I took down my rifle, looked to see if it was loaded, and placed it where it would be handy. Then I took a candle, fastened it to a board, and lightin' it, went out and set the board on a log about thirty feet from the door. Goin' back to the cabin, I crouched in the doorway with my rifle to await developments. I could hear the crittur crashin' around in the underbrush, for she had chased back into the timber when I had showed a light.

"I reckon I sat there almost an hour before she came any nearer; but finally she seemed to have recovered her nerve and commenced circlin' the cabin, each time gettin' a little nearer, till she was not more than fifty feet away, then she stopped right beyond the candle. I could hear her sniffin' the air and imagined she was eyein' the light and wonderin' what it might be. Soon she began to advance towards it, takin' a couple of steps then stoppin' to listen. Once a badger started some small pebbles rattlin' down the mountain side as it ran to its lair, and she rushed back into the brush, only to come creepin' forward as soon as all was still. This time she seemed less nervous, and soon I could see her eyes flashin' in the darkness, but I waited, for I knew she would come closer."

"Well, she stood lookin' at the light and snuffin' the air for a few minutes, then walked boldly towards it, stoppin' only when she came to the log, and throwin' her paws upon it, almost put out the candle.

"Now was my time. I had a good view of her head and shoulders, and I feared if I waited any longer she would fool around until she doused the light and I never would get a shot at her, though I was mighty curious to see what the crittur would do next, but I didn't dare. So raisin' my rifle I took careful aim and fired. She just gave one big 'woof-woof' and fell back over the log and in a few minutes was stone dead.

"Ben, who had been lyin' before the door wrapped up in his blankets watchin' the performance, remarked: 'Jimminny-crickets, Hank, I always knew that women folks had a powerful big bump of curiosity, but I never reckoned that it extended to the whole blamed female tribe.'"

RENEW!

THE HUNTING DOWN OF DERELICTS

The most curious warfare waged by the battleships of the United States is the ceaseless hunting down of the most dangerous enemy known to mariners—the wandering derelict. So serious a menace to shipping is this terror of the seas that Congress has been asked to make an appropriation for the express purpose of building a ship to be set apart for the hunting down and destruction of derelicts. Until this ship is built the work will be done as well as it can by cruisers of the navy despatched on this particular mission. At this time of the year, when the ocean is being crossed and recrossed by passenger boats crowded with tourists, the danger from the derelict is especially great, and many a navigator spends sleepless nights lest in the darkness this uncharted demon of the deep should cross his path.

The ocean is never free from this terror. A vessel is abandoned by a frightened crew and, instead of foundering decently as expected to, it remains afloat and thenceforth wanders from sea to sea at the will of the currents, the sport of the winds and waves, unpiloted, unlighted, a mass of dead wood and iron, but terribly alive so far as its dangerous qualities are concerned, for the sharpest eyes cannot see the dark mass at night until too late to avoid a collision and the waterlogged bulk of the derelict sends to the bottom any ship that strikes it as sure as fate.

That is why every skipper is alive to the danger and not a derelict escapes his keen sight if it looms in range during daylight. Promptly the latitude and longitude of the spot where the derelict is sighted is logged and a report is made to the government as soon as land is reached. When the report is received a ship is at once despatched to the spot where the dangerous wreckage was sighted and the waters searched day and night for it. When found it is promptly treated as any other maritime enemy is—a well aimed shot sends the wreck to the bottom of the sea.

Sometimes these derelicts wander around for years before they are finally rounded up and destroyed. How many of the "never heard of again" ships may be accounted for by these derelict wanderers cannot be told, but the abandoned ships and the floating icebergs probably divide the larger part between them.

THE LATEST
Phillips-Exeter Story

With Mask and Mitt

By A. T. DUDLEY

Author of

Following the Ball
Making the Nine
and In the Line

Illustrated $1.25

The books of the "Phillips-Exeter-Series" have become standard on account of the accurate athletic knowledge presented, the excellent pictures of American boarding-school life that are given, and the thoroughly manly quality everywhere in evidence.

"With Mask and Mitt" continues the subject of baseball, although very much more than merely a baseball story.

Company News

SILVER STATE COMPANY, No. 26, San Diego, Cal., recently elected the following officers after a warm contest: Will Cralle, Capt.; John Lydick, V. C.; R. S. Porter, Sec.; E. A. Cheney, Treas.; Forest Johnson, Libn. MIDWAY CITY COMPANY, No. 19, Kearney, Neb., reports that it is starting in for real business during the fall and winter months. Its new officers are John Freeman, Capt.; Donald Gregg, V. C.; Philip Brodie, Treas.; Claire Sheahan, Sec.; Arthur Robinson, Libn. It has a baseball team and played seven games during the season out of which it was successful in winning six. MOUNTAIN VIEW COMPANY, No. 59, Altamont, N. Y., has not been holding meetings during the summer months, but intends to do so with renewed enthusiasm during the fall and winter months. ABRAHAM LINCOLN COMPANY, No. 41, Peru, Ill., recently elected the following officers: Ernest Roth, Jr., Capt.; Lewis Ream, V. C.; Benjamin Linnig, Sec.; Arthur Zimmerman, Treas.; A. Nadler, Libn. The meetings of this company have now been resumed for the fall and winter months and intends to do good work on behalf of the order. WEBB FOOTERS COMPANY, No. 21, Roseburg, Ore., has the following officers: Fairfax Parrish, Capt.; Ben Eddy, V. C. and Sec.; Wallace Benson, Libn. and Treas. IOWA ROUGH RIDERS COMPANY, No. 62, Sheldon, Iowa, has, at the present writing, 19 members. Its officers are: Chas. Stoker, Capt.; Will Royce, Lieut.; Clifford Jory, Sec.; Victor Button, Treas. Meetings of this company are held every Friday evening in itis own club room where it has fitted up a gymnasium. It has, also, nearly $5.00 in the treasury. RUSSELL'S BEST COMPANY, No. 64, Russell, Iowa, reports that it is getting along nicely, and that the boys are considerably interested in company doings. This is a new company and seems to have the necessary enthusiasm to make it a prosperous and successful one. WM. C. C. CLAIBORNE COMPANY, No. 7, Moorfield, Ark., has 18 members and expects to enroll more within a short time. Its dues are ten cents a month, and it has $10.00 in the treasury out of which the members intend to purchase a number of new books for the company library. The officers of this company are: Ed Goodwin, Capt.; Elvis Monnings, V. C.; Dan Crownoner, Sec.; B. Conine, Treas.; Ned Hamm, Libn. LAKE ERIE COMPANY, No. 92, Ashtabula, Ohio, held its election of officers on September 25, with the following result: C. H. Davis, Capt.; W. C. Harvey, Treas.; N. F. Elliot, Sec.; W. M. Elliot, S. A. OLD GLORY COMPANY, No. 16, E. Rutherford, N. J., has the following officers: Louis Kunz, Capt.; Victor Schoeller, V. C.; Andre Jeanneret, Sec.; Russell Binning, Treas.; Frank Baker, Libn. TIGER ATHLETIC COMPANY, No. 17, Rochester, Wash., held its election of officers Sept. 1, and the following were elected: C. Paton, Capt.; Lyle Null, V. C.; Frank Tripp, Sec.; Guy Neeley, Treas.; Walter Mills, Libn. Vern Ratcliff was appointed to a new office with title of yell-master. This company has at present 13 members, and there are some more to come in. It has been giving a number of socials, having had one on the Fourth of July, August 4, and September 29, which enriched the treasury to the extent of $78.90. FOREST CITY COMPANY, No. 13, Portland, Me. This company meets every Thursday evening, excepting during the summer months, at the homes of the members. It recently added one new member. Dues are five cents a week, and the company has $1.78 in the treasury and all bills paid. This company recently held a debate on whether the United States government or the Spanish government would be better for the people of Panama. Its club colors are crimson and white. The company has also a small library which is gradually being increased. EDWARD STRATEMEYER COMPANY, No. 11, Guthrie, Okla., is getting along nicely, and is expecting some new members to be enrolled very soon. Dues are ten cents a month. Its club room is fitted up with nice furniture, and decorated with flags. Their athletic apparatus consists of trapeze, rings, dumb bells, and Indian clubs. During the summer months the members have been meeting only once a month. During the fall and winter they will meet every two weeks. A football team is expected to be organized during the fall months which will, no doubt, give a good account of itself. The captain concludes his report by saying: "I hope that the O. A. B. will last as long as the sun, moon, and stars shine." WOLVERINE COMPANY, No. 82, Chesaning, Mich., is a company that seems to be equipped for splendid work. It has two company counsels in the persons of Mr. Jos. Devereaux, a prominent lawyer, and Mr. Wm. Lutz, a druggist. They have a nice hall as a club room, 40 feet by 20 feet, which they have rented for $5.00 a month. It has a library of 35 books, by such authors as Henty, Alger, etc., and their friends have promised to make additions to it. It is also interested in basketball, football, and has a rifle team. It recently held a social which increased the treasury to the amount of $5.00. Its captain writes that he will be glad to correspond with other companies for the good of the order. WADE HAMPTON COMPANY, No. 4, Gaffney, S. C., has held its election of officers which resulted in A. F. Littlejohn being captain. The secretary and treasurer is to be elected at its next meeting. HAWK EYE COMPANY, No. 63, Guthrie Center, Iowa, is interested in baseball, and has had quite a successful season. They are planning to go out camping next summer and take a large tent with them. GARDEN STATE COMPANY, No. 15, Mt. Holly, N. J., has now 9 members, and has $2.00 in the treasury. Meetings are held every Thursday evening, and weekly dues are five cents. It occupies a club house which is becoming too small for its meetings, and the members hope to have a much larger one at no distant date. We are promised a picture of the members soon. KIT CARSON COMPANY, No. 13, Bolckow, Mo. No meetings of this company were held during the summer months, but were resumed September 28. Its meetings are held every Friday evening, and the captain wishes advice as to some plan that will be of interest to the members at the meetings. We have already spoken regarding this matter. A nice program for a literary or social meeting consists of games, recitations, essays, short talks on great events that are happening in our country. Occasional light refreshments would be a great inducement for a large attendance. We are, however, hardly in a position to state what kind of a program the members would like. OLYMPIA COMPANY, No. 35, Emporia, Kans., writes that the company is now in fine condition, having nine members, and three candidates for membership. Its meetings are held every Friday evening from 7 to 9 o'clock. All the members will attend a banquet at the home of the captain, and they expect to have a splendid time. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its 48th regular report, from which we note that very pleasant social times are held at its meetings which, of course, attract a large number of members. The secretary is in favor of celebrating AMERICAN BOY DAY at the Jamestown Exposition in 1907. THORSBY NATURALIST AND ATHLETIC COMPANY, No. 4, Thorsby, Ala., has a new company counsel and expects to have a prosperous season during the fall and winter months. The members gave an entertainment at the home of Private Norton, Oct. 31, and had a most enjoyable time. It has 11 members and $4.00 in the treasury. UNIVERSITY CITY COMPANY, No. 39, Bloomington, Ind., recently elected the following officers: Darby Scott, Capt.; Humphrey Barber, V. C.; Bert Beldon, Sec.; Carrol Oakes, Treas.; Day Robertson, Libn. Three new members were recently added, and the company is the possessor of a football and boxing gloves. U. S. ARMY COMPANY, No. 42, Ft. Riley, Kans., will have athletic suits for a basket ball team and for field days. They also expect to have a larger club room than they occupy at present, which would enable them to give entertainments. Its present club house is nicely furnished and holds a library of 57 books. W. J. BRYAN COMPANY, No. 39, Commerce, Texas, has at present 55 cents in the treasury, and expects to have four new members within a short time. The captain promises us a picture of the members. He wishes that other companies would write to him regarding what they are doing and accomplishing. OJIBWAYS COMPANY, No. 58, Yonkers, N. Y. This company is much interested in boating, and intends building a large float upon which to erect a club house. It possesses the best fleet of small boats in Yonkers. Its fleet numbers 10, with sloops and cat boats. The members are looking forward to having a bicycle tour to New York City. They expect to have 25 bicyclists in line. The address of the secretary of the Stephen Decatur Company is: Harold B. Pratt, 569-a Halsey street, Brooklyn, N. Y. The secretary sends us a picture which shows the Yonkers Canoe Club and a number of the company's boats. We are sorry we cannot reproduce it in THE AMERICAN BOY.

—The Editor.

Senator Atkinson's Telegram

By F. B. Linton.

HIS telegram must be delivered before eight," said the delivery clerk, firmly.

"Well, I can't find Senator Atkinson and there ain't no use lookin' any more," replied messenger Number Ten, wrinkling his brow into a frown. "Number Eight couldn't find him neither."

"Charley Brown could find him," said the delivery clerk, confidently, noting that it was six-thirty by the clock. "But he is off at six."

Number Ten looked sullen.

"Were you up at the Senate?"

"Yep."

"And to the Arlington?"

"Yep."

"No one knows where he is?"

"Nope."

"Did you leave a notice?"

"Yep."

"Say," spoke up messenger Number Twelve, "Charley Brown is in the back of the office practising telegraphy. He does that every evening."

"Gee!" exclaimed Number Ten with disgust. "Catch me loafin' around here when my time is up!"

"Well, I should say!" put in Number Eight.

The delivery clerk rang Number Five's bell.

Charley Brown appeared from the rear of the office.

"Here, Charley," said the delivery clerk, "I've a rush message for Senator Atkinson. It must be delivered to him personally and to no one else—not even his secretary."

Charley looked significantly at the clock.

"Yes, I know, Charley, you're off; but the Senator must have this message before eight. It is very important. None of the other boys can find him."

"All right; I'll take it."

"Don't come back until you find him, and get it to him quick."

Charley took the message and hurried out.

Two minutes later he leaned his wheel against the curbing and entered the Arlington Hotel where he knew Senator Atkinson lived while in Washington.

"The Senator has not been in this afternoon," said the hotel clerk. "His secretary is not here either. The senate has adjourned, but he may be in his committee room at the Capitol."

Charley nodded and turned to go.

"You can leave his message here. I will sign for it," volunteered the clerk.

"No, I can't. Good-bye."

As Charley wheeled along broad Pennsylvania avenue, he defied speed limit laws and in an incredible short time covered the mile and a half between the Arlington Hotel and the Capitol. Through the long halls of the Capitol he hastened. He had carried hundreds of messages to Senator Atkinson and he went directly to his committee room. Charley was informed that the Senator left ten minutes ago. No one knew certainly, but the committee clerk supposed he had gone to his hotel.

"Back to the Arlington," said Charley, hurrying to his wheel.

Six minutes later he again accosted the Arlington Hotel clerk.

"The Senator has not come in yet," said the clerk, "but his secretary is here now."

"Which room?"

"Number 405. Take the elevator."

Charley was in the elevator before the clerk finished speaking. "Fourth floor, quick," he said.

The elevator boy looked at him contemptuously. "What's the rush?"

"I'm in a hurry."

"I'm not."

"Good-bye." Before the astonished elevator boy could answer, Charley was half way up the first flight of stairs.

All out of breath, he knocked at the door of 405.

"An important message for Senator Atkinson," he explained to the secretary who opened the door.

"All right. Leave it with me."

"No; I must deliver it to him."

"But I receive all his messages; you ought to know that."

"This is different. I must give it to him and to no one else—not even his secretary," replied Charley, repeating the instructions of the delivery clerk.

"Well, he is not here."

"Where's is he?"

"I don't know. You are crazy, boy. Give me that message. I must have it. I can attend to it or give it to the Senator when he returns. Give it to me, I say," and he advanced towards Charley as though to take it by force.

Charley backed out the door. "I can't do it. I must find him."

"You cannot get to him. He is having a conference with the President. He will not be here for some time."

"Then I will give it to him there." Charley did not wait for the elevator but went down three stairs at a time.

He mounted his wheel, sped past Lafayette Park, across Pennsylvania avenue, and into the driveway that leads to the White House. He entered the executive offices which are on the west side.

"I want to give a message to Senator Atkinson," he said to the doorkeeper.

"See the clerk," replied the doorkeeper motioning for him to enter.

Charley repeated his business to the clerk.

"The President cannot be interrupted," replied that dignitary, coldly. "Take the message to the Senator's hotel."

"I have been to the hotel. The message is important and must be delivered quick."

"The Senator will soon be through talking with the President."

"He may not go directly to the hotel, and he must have the telegram before eight," Charley edged towards the door leading to the President's office.

"Boy, you cannot go in there," said the clerk, sternly.

"This message may be about what the Senator and the President are talking about," suggested Charley.

The clerk had not thought of that.

"Well, give me the message and I will see what I can do."

Charley hesitated. "I'd rather take it to him myself."

"I tell you once again and for all that you cannot go into that office."

"Take it then." Charley handed him the telegram with reluctance.

The clerk held a short conference with one of the President's secretaries in an adjoining office. The secretary after some protest took the message into the President's office. A moment later he came out and returned the message to the clerk.

"The Senator left by the other door about ten minutes ago," he reported.

The clerk handed the message to Charley.

"Great Scott!" exclaimed Charley. It is only twenty minutes until eight! I wonder where he went."

The clerk smiled at his perplexity. "I dont' know. Chase after him," he replied, laughing.

"Say," said Charley, eagerly, "please ask the President where the Senator went; maybe he knows."

The clerk looked at him in amazement. "Get out of here!" he exclaimed.

"Please ask the President," pleaded Charley.

"Ask the President what?" inquired a hearty voice, as the door of the private office opened. Charley, looking that way, saw the broad smile of the President.

The clerk made a deprecating gesture disclaiming all responsibility for the situation.

The President gave Charley a kindly slap on the back. "What is it, my boy? What can I do for you?"

"I want to find Senator Atkinson, quick. I've a rush message for him. Can you tell me where he went from here?" Charley looked up at him eagerly.

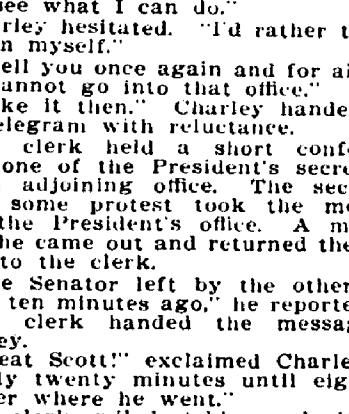
"Certainly, my boy; he went from here directly to the residence of the Speaker of the House of Representatives. Do you know where that is?"

"Sure." And Charley rushed for his wheel so quickly he did not see the approving smile that followed him.

When Charley arrived at the Speaker's house on Vermont avenue, he was again too late. The Senator had driven away a few minutes before. Charley could not learn where he had gone.

"This is the worst luck I ever had," muttered Charley, with a wry face. "This message's got to be delivered by eight. It's ten minutes to eight now, and no tellin' where he's gone."

The Arlington Hotel was only a block away and he hastened there. The Senator had not come in. As Charley was



walking disconsolately to the door, he met a newspaper correspondent who knew him well.

"Why so blue, my messenger boy? You are usually too gay," said the newspaper man.

"I've got to find Senator Atkinson in six minutes and I don't know where to look for him," replied Charley, from the door.

"One good turn deserves another. You have helped me many times; now I will help you. I saw the Senator at the Speaker's house a few minutes ago. He told me confidentially that he will leave for New York over the P. R. R. at eight o'clock—remember, my boy, confidential—I know I can trust you."

Charley did not hear the last remark. He was spinning down Pennsylvania avenue as fast as he could make his wheel go. It was fully a mile to the station and he had only five minutes. The station was crowded and it seemed an age to Charley before he could squirm into the line near the gate leading to the train shed. When at last he was through, he made a dash for the New York train which stood on a nearby track. In the second Pullman, as the train started, he found the Senator.

The Senator hastily tore open the envelope and read the telegram.

His face whitened. "I was walking right into their trap!" he exclaimed. "I must not leave Washington now."

"Hurry then, Senator," said Charley. "She's going."

Charley grabbed the Senator's satchel and they rushed to the door.

When they were safe in the station, Charley handed the Senator his satchel. The Senator handed him a five-dollar bill.

"How did you find me, boy?"

Briefly Charley told him, leaving out his meeting with the newspaper correspondent.

The Senator took out his note book and recorded Charley's name and address.

"You will hear from me again, my boy," he said. "Good night."

Charley wheeled back to the office, reported the delivery of the message, and took up his telegraph practice.

Taft Wins Prizes

Robert Alphonso Taft, of Washington, D. C., the son of Secretary of War Taft, was awarded two of the prizes for entrance examinations at Yale.

Young Taft prepared for college at Taft school in Watertown, which is owned by Horace D. Taft, a brother of the secretary. The official announcement of the awards was published in the Yale Bulletin, and is as follows:

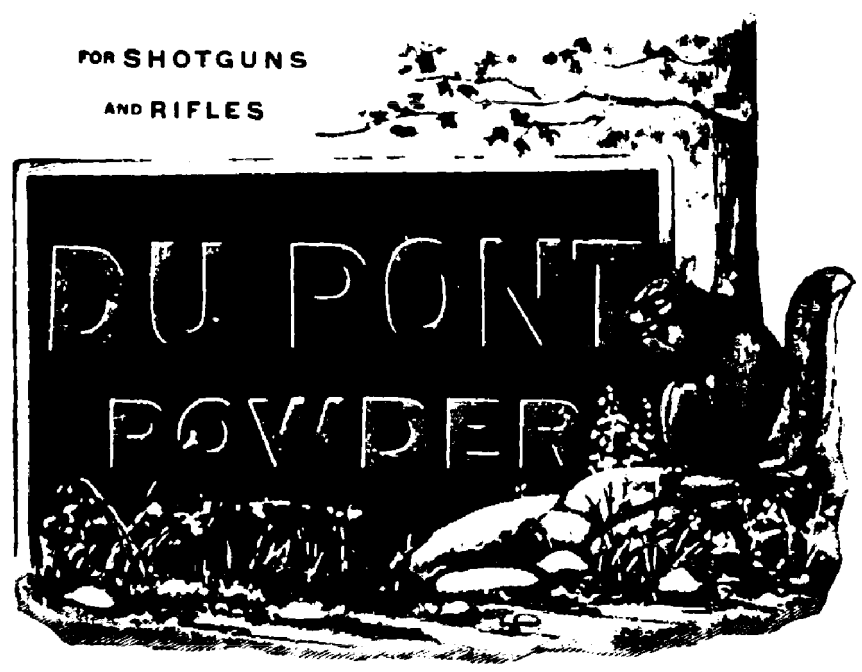
The Hugh Chamberlain prize for the best entrance examination in Greek has been divided between Robert Alphonso Taft of Washington, D. C., and Thomas Lason Riggs of Washington, D. C., who prepared at the Westminster school of Simsbury, Conn.

Honorable mention is made of Charles Raymond Bentley of Rochester, N. Y., who prepared at the Rochester high school.

The Samuel Henry Galpin Latin prize for best examination in Latin for admission to Yale college is divided between Samuel Michael Cohen of Hartford, Conn., who prepared at the Hartford high school, and Robert A. Taft of Washington.

In the list of honors for the class of 1908, which have been given out at Yale Charles Seymour, the son of Professor T. D. Seymour, received a philosophical oration, the highest rank awarded to the members of the junior class.

Seymour was manager of his freshman crew and in line to manage his varsity in his senior year. L. W. Perrin, son of Professor Bernadotte Perrin, received an appointment of first disputant as did Dray, the pole vaulter. Riglow the tackle, Overall the end and Ide the oarsman received first colloquy appointments.



Boys! Saw Wood

Employ your spare moments in useful play. Earn money and pleasure.

We will send you postpaid, a scroll saw outfit, which will do the work of any five to eight dollar outfit on the market. Packed complete, either nickle plate or black enamel, with full instructions, Pattern chart and ½ doz. saws. Upon receipt of **$1.00**, cash or money order.

Mention The American Boy When Answering Advertisements

In the Black Growth.

By Agnes Barden.

"WHAT happened to him?" queried Rand curiously, as the half-breed silently received his ammunition and left the trading post.

"That's Ba'tiste," volunteered the agent. "He hasn't been here for months, and we had about concluded that he had hit the long trail with the others. It's been a bad thing for the post," he reflected gloomily, blocking the doorway with his burly form to watch the half-breed out of sight. "He's headed again for the Black Growth. I hope he'll get his vengeance this time," and the vindictiveness of the agent's growl awakened the boys' liveliest interest.

Rand and Bob McGonagle, two young but successful Scotch trappers, had reached the trading post the night before, purposing to set out from there with fresh supplies and work their way into the richer fur region north of the post for the fall catch. Scenting an incident out of "the usual from the scarred face" of the half-breed and the allusions of the agent, they questioned him and learned the chapter of accidents with which every hunter, trapper, and settler of the region was familiar, and which had caused a serious loss of pelts to the post.

It seems that the former agent of the trading post had kept a tame bear which had been brought in when a cub, and had grown up amid the frontier life playful and full of mischief, but with never a hint of viciousness till after she was full grown, when she had suddenly "gone bad," and that without a sign of warning.

Late one afternoon some fur traders had come in to find the agent unconscious on the floor with his gun beside him. He was terribly mauled and died two days afterwards, but not before making known how the bear had suddenly set upon him from behind with cunning malice. He had managed to reach his gun and had shot the beast, breaking her foreleg and inflicting several flesh wounds which but added to her fury, but in his crippled condition he had been unable to withstand her repeated attacks and had been beaten down, the bear escaping to the woods.

That had been two years ago, and soon after stories were adrift of a bear-devil, as the superstitious Frenchmen termed it, a huge creature that looked as no other bear had ever looked, that was abroad all winter, that habitually walked upright like a man, and possessed a malicious cunning which bordered on the supernatural.

Hunters and trappers had strange tales to tell when they met at the post—tales of narrow escapes, of robbed traps and loss of furs, of many an accident or the death of a comrade, received in ominous silence by the little company of hardy men, for a veritable reign of fear had settled down over this broad tract of the northern wilderness.

For was there not something diabolical in the great hulking beast which was proof against the combined arts and strategies of the long experienced hunters of the post?

Jaques, the best hunter north of the Mirimichi, was on the bear's trail. He sat down to eat his spare meal of jerked meat in broad daylight when "it" had stolen noiselessly up behind the tree against which the hunter had set his back, and with one blow had broken his neck.

Two trappers had been talking beside their blazing camp-fire, when the bear had charged into the circle of light and only their agility had saved them; they fled in frantic terror, spending the cold night in violent exercise or miserably huddled among the thick branches of a pine, leaving the bear in possession of their camp and supper.

Jo Brissette, the bear hunter, whose score had tallied into the nineties, had crawled into the post with a broken arm and marks of the brute's savageness deep upon him which he would bear throughout his life.

By the second season the bear had taken up her range among the low, rocky hills and the beaver meadows covered with spruce and hemlock, known as the Black Growth, a tract lying off to the far northwest of the post, and accounted the richest fur belt of the region.

Here the bear had proved a scourge—and the agent's wrath waxed hot as he told of the brute's depredations and how the superstitious Frenchmen had avoided the region as they would a pestilence, believing that certain death awaited any who should brave those solitudes. Ba'tiste and his brother Michel had been the last to enter there. Within a month Ba'tiste had staggered back alone, his scalp and one side of his face torn to shreds, the price of fearlessness and dogged courage. Always taciturn, a brooding silence now pervaded the half-breed, and no one dared to question him. Michel was dead, he had told them with a sullen fire in his eye, and he had waited with the patience of the Indian till his wounds had healed, and now for seven long months he had hunted in the Black Growth for his enemy.

"Tomorrow," said Rand, when the agent was fastening up for the night, "we set out for the Black Growth."

"Just what I was going to propose," acquiesced Bob heartily. "If superstition has driven the French trappers out of the region—why, it's pure luck, Rand!"

"And so," said Rand, as they were hard at work cutting logs for their winter camp, "here we are in the Black Growth. Have you seen anything that resembled a bear-devil, Bob?"

"Not I," grunted Bob. "Don't believe there's any such thing!"

"Nor I," acceded Rand cheerfully. "'Twas kind of queer, though, what did chew up those men," he added thoughtfully. "But if I was going to select a haunt for such a creature I'd take this, every time. The everlasting gloom and green-blackness of these firs plays the deuce with your eyesight, and kind of gets on your nerves when you are alone. Yesterday when I was over in the crooked beaver meadow setting traps I felt queer all the time I was there, just as though something was watching."

"Probably there was," interposed Bob. "Maybe a wild-cat; their green eyes bore into you the hardest of anything I know."

"Yes," assented Rand, "probably it was. But honestly, Bob, I glanced up once and I thought I saw just such a bear as the agent described, walking erect among the spruces on the ridge. That's what imagination and the dim light of this woods does for you!"

"Didn't find any tracks?" questioned Bob, interestedly. "If we could trap a few bears their pelts would count up."

"Huh! I was too busy to fool round up on that ridge," declared Rand with hasty conviction.

Within a fortnight the young trappers were well settled; their snug log camp was finished and banked and chinked against the cold; their traps were all out, and as the season advanced they had cause to be well content with the unusual number and prime quality of the pelts taken.

It was with the first light fall of snow that one night as they were cooking their supper the camp door was pushed open and the half-breed Ba'tiste entered silently, and without a word crouched down beside the fire.

The boys glanced uneasily at each other. There was something sinister in the coming of their stealthy visitor, inevitably as they knew his presence to presage that of the rogue bear. Had he tracked the beast hither? Was it somewhere outside in the blackness and the falling snow? With the evidence of its uncanny ferocity in the scarred face of the half-breed before them, the supposition was gruesome in the extreme.

Bob essayed to talk with the hunter, but as his friendly advances were met by an unbroken silence he was forced to give up the attempt. When supper was ready they placed a generous portion before their strange guest, who ate as though famishing, and then wrapping himself in his blanket he lay down beside the fire, and when the boys awoke in the gray light of the following morning he had disappeared, as unexpectedly as he had come.

"Well, if I was in that bear's place I'd be mighty uncomfortable with that Indian dogging my tracks!" Rand exclaimed, as he rolled out from under the furs of his bunk.

"She seems capable of taking care of herself," observed Bob, dryly, as he heaped the fire. "It's a grand day for a hunt with this light snow on the ground. We'll get the trap round out of the way this morning," and in the strenuous daylight their half-defined fears of the night were forgotten.

The clouds hung low and it snowed in spits all day and late in the afternoon the wind arose and the threatened storm set in in earnest. Darkness descended on the thick spruces before the boys reached camp, and Rand shut and barred the door behind them with a great breath of relief, while Bob shook himself impatiently, as if to throw off a disagreeable impression.

"There is no use in keeping such a tight mouth; you might just as well speak out what we both know," Rand said deliberately, watching his brother light the fire. "If I ever was glad to reach shelter it was tonight! You know that we have been trailed all day, Bob; but by what, that's the question. I never heard a sound nor saw a thing, did you? But something was there, following, just the same; and in the dark out there by the big hemlocks it got pretty near, Bob."

Bob's only reply was a grunt.

"By Jove," cried Rand impatiently, "you're growing about as sociable as Ba'tiste! Are you afraid 'it' will hear your remarks and lay them up against you?" tauntingly.

Bob shivered and glanced at the door as a blast of wind shook the cabin and fled shrieking through the forest.

"Something rubbed against the back of the cabin, then," Rand observed calmly, as a piece of clay fell from a chink to the floor. "Is that a star or an eye that is peering in at the crack, Bob?"

"Hold your yap! You talk like an old woman," growled Bob, impatiently. "Let's have some of that venison, for I am as hungry as a wolf. You fix that.

Please Mention The American Boy When Writing

THE BOYS KNEW THAT THE LONG WEARY VENGEANCE TRAIL OF THE HALF-BREED WAS ENDED

and I'll get in the wood," and seeing that his brother was really growing angry at his half-joking remarks, Rand willingly set about cooking their evening meal, while Bob unbarred the door and stepped out into the night to fill his arms from the woodpile close by.

Suddenly Rand heard a shriek of fear, and Bob dashed in and threw his weight against the door, shouting wildly.

"Hold it! Fasten it!" trying frantically to adjust the bar with shaking hands.

Rand dropped the meat he held, but before he could spring to his brother's assistance the door was sent spinning with one powerful blow from without, landing on the top of Bob at the other side of the camp; and there in the narrow doorway upreared the terror of the Black Growth.

Rand gave one look and with a leap headed for the rude log chimney as the only accessible place of concealment, scrambling high up out of reach as he heard the bear shamble forward into the cabin.

Seeing that the coast was clean of hated human beings the hungry bear, attracted by the smell of the meat, made towards the haunch of fresh venison from which Rand had been cutting steaks, and began to devour it eagerly, with hoarse gutturals of satisfaction.

Bob peered out from beneath the fallen door in consternation at the predicament in which he found himself.

"I've got to get out of here before she's through eating," he thought, "or I'll be smashed flat. I know now that the stories about her are no myths," bitterly; watching in fascination as the bear pricked up her ears at a sound from without and her wicked little red eyes roamed around the cabin.

"I don't dare to make a dash for it. If I could only edge along under cover," and hoping that the bear's scrunchings would drown any noise made, Bob ventured to crawl slowly and cautiously, inch by inch, over the hard earth-trodden floor, bearing the door along on top of him.

Twice the great beast stopped her hasty gluttoning to turn towards the scraping sound, but Bob had his eye on her and lay motionless till the meat again engrossed her attention, and then moved forward with redoubled caution.

He was within a few feet of the door and had just decided to hurl off the planks and make a desperate attempt to escape in the darkness, when he heard a whispered "Bob," and knew that Rand was standing just outside, watching his progress.

"We'll pen him in, Bob, pen-him-in," he hissed under his breath.

Bob understood the plan, and a thrill of exultation swept over him at the thought of foiling the great, hulking beast, which else would be certain to drive them out of the forest.

He crawled as far as the plank door would let him go.

"When I say h'ist, jump up and I'll grab hold," came the whispered order, excitedly.

Bob raised himself a trifle and gathered his muscles for a leap.

"H'ist!"

There was a wild scramble. Bob sprang upright, clutching the door; Rand caught at one side and they hauled it quickly into place, grasping the stout cross-piece on its outer side to hold it there, just as the bear hurtled across the cabin, roaring with rage at being trapped, and clawing to get out.

"Let her ramp! We've got her!" shouted Rand exultingly, carried away by his excitement. "The door opens inward and she can't get out."

"We've got her," echoed Bob, with immense relief.

But the boys had miscalculated the bear's strength and cunning.

The angry mutterings had now ceased and they could hear her moving investigatingly around inside.

"She's planning mischief," Bob said uneasily. "If we only had our guns out here!"

Suddenly the whole front side of the cabin shook with the force of the bear's exerted strength. There was a mighty uplift at one corner; a log was forced upward from its joint and fell outward, swinging loose; another followed, and the savage head appeared in the aperture.

"Run! A tree!" yelled Rand, aghast.

A grunt of intense satisfaction sounded behind them, and both of the young trappers whirled to face this new invader of their solitude.

There stood scarred Ba'tiste, his rifle at his shoulder, and as the echo of his shot died away, the boys knew that the long, weary vengeance trail of the half-breed was ended.

The Power of Industry

By Maj.-Gen. William A. Bancroft, President of the Boston Elevated.

Nothing succeeds like industry, joined with honesty. That may be accepted as a rule to which there are few exceptions.

It is true, of course, that a young man may have powerful relatives or friends who can place him in an advantageous position, who can hold him there, or obtain for him promotion involving increased advantage and income, and who under ordinary circumstances may insure him a high degree of prosperity while they live or their influence survives.

But if the extraordinary condition arises, if that influence be withdrawn, and the young man be thrown suddenly upon his own mental and moral resources, he may or may not fall. If he has been supported entirely by the influence to which he owed his original good fortune, if he has not developed qualities of decision, self-reliance, and industry, he is likely to go to pieces.

The cases are not numerous in which influence alone has been able to insure a successful career for any man to the very end, and the power of influence, or pull, so called, bears no comparison with that of push.

The young man with honesty, capability, and industry enjoys power of his own, power that is developed and strengthened with use or exercise. It is impossible for any great enterprise to exist without that kind of man, and such a person always is in demand.

He may have some difficulty in obtaining the necessary start; he may have to do much toward creating his own opportunity.

The young man who has opportunity provided for him enjoys that much advantage; other things being equal, he may be said to enjoy a permanent opportunity. Influence is, therefore, a consideration of value not to be under-estimated. But it is unreasonable to think that it can ever take the place of industry and enterprise.

The old Roman proverb had it that "labor conquers all things," labor being another name for industry. That is as true now as it ever was, and in a society like ours, under the institutions that we enjoy, it is truer than it ever was.

A man may "enjoy" a great deal of prosperity through "pull" alone; but through that alone he can accomplish little or nothing for his own real permanent good or for the good of the community. Push, or industry, is indispensable to progress. It is essential to the accomplishment of great and useful things.

If a young man contemplates a career in which he aspires to be useful, push, that is to say, industry, is the quality, along with honesty, which he must cultivate with the most earnest devotion. "Pull" is at best a precarious support to lean on.—Boston Globe.

Boys' Books Reviewed

THE OLYMPIC GAMES OF 1906 AT ATHENS, edited by J. E. Sullivan. Mr. Sullivan was U. S. Commissioner to the Olympic Games, and his book is filled with most interesting matter concerning these celebrated contests. In addition to giving complete records of the games held this year, it contains over 100 pictures, including the various events, scenes in Athens, portraits of members of the Greek royal family, officials, and the contestants from America and other countries. There is also a record of the games of 1896, 1900 and 1904, a history of the Olympic games, and a description of the Stadum, said to be the most remarkable athletic structure ever built. Paper cover. Price 10 cents. American Sports Publishing Co.

THE MOST POPULAR HOME SONGS, selected and arranged by Gilbert Clifford Noble. The songs here given are those which are familiar to everyone. The compiler has in addition given some familiar hymns, as well as a few old songs of other nations. In all there are about 140 songs from which old and young can spend many delightful evenings. The cover page has a fine picture of a cosy fireside, just the place for the singing of these old favorites. Paper cover. Price 50 cts. Hinds, Noble & Eldridge.

SPALDING'S OFFICIAL FOOTBALL GUIDE FOR 1906, edited by Walter Camp. Football enthusiasts will find this book a regular encyclopedia. There are reviews of the past season from all important sections of the country; list of All-American teams for the last seventeen years; scores made by all leading colleges and athletic teams, and schedules and list of captains for 1906. The alterations in the rules of the game recently made by the Football Rules Committee, as well as the complete laws of the game, are fully set forth. In addition there are illustrations showing almost every important team in the country. Price 10 cts. postpaid. The American Sports Publishing Co.

RED CAP TALES, stolen from the Treasure Chest of the Wizard of the North, which theft is humbly acknowledged by S. R. Crockett. The reason or excuse for the theft was as the author explains: "Four children would not read Scott, so I told them these stories—and others—to lure them to the printed book, much as carrots are dangled before the nose of the reluctant donkey." The result was that Scott was read with enthusiasm. This book consists of stories told from Waverly, Guy Mannering, Rob Roy and The Antiquary, with frequent stops while the children discuss and comment on what has been read. It is a delightful volume for both old and young and the splendid illustrations in color by S. H. Vedder bring out the spirit of the tales and add to the book's attractiveness. In neat covers, good paper and clean type. Over 400 pages. Price $2.00 net. The Macmillan Co.

The
Pure Food Man

Congress didn't have to pass Pure Food Laws for "The Ralston Miller." He has *always* made Pure Food.

Ralston Health Food *is* absolutely *pure*—a chemist's certificate of purity on every package.

RALSTON is a guaranteed, standard food—a *staple*—not a fad or fancy.

It has stood the test of time.

People eat RALSTON because it's wholesome, nutritious—good—and *they like it.*

It's made from the hearts of selected wheat—the brain-building, muscle-forming part of the grain—rich in gluten—a food for every hungry cell of the human body. It retains the natural nut-brown color of the grain.

Ralston is *guaranteed.* Buy a package—if you don't like it your grocer is instructed to pay you your money back.

Ralston Health Food, sterilized by our new patent process, is always fresh and good.

Ask for RALSTON this time—and *insist on getting it.* Take no substitute—no other breakfast is as good.

Try Purina Whole Wheat Flour—For Sale by All Good Grocers.

Get the *checkerboard* sack and you get the *best.*

IKEY ROSENSTEIN'S CHRISTMAS

By CHARLES ROGERS BOURNE

'TWAS the night before Christmas. The streets were filled with people hurrying homeward with their bundles of presents, as Ikey wandered slowly up Broadway, gazing with longing eyes at the display in the brilliantly lighted shops. Finally, he reached Macy's corner and stood spellbound looking at the moving panorama in the windows. Hour after hour he stood there; unheeded by the passing throng; unmindful of cold or hunger—fascinated—entranced; his eyes lighted up with rapture at the wonderful sight, as he muttered to himself: "I'd like ter buy der horses fer brudder Jakey, und der dolls fer little sister Rosey. Mein gootness; vould n't dey be happy. Und somet'ings fer fader und mudder, but, I got no monies. Vell, ain't id nice? Ikey, youse has had a fine time."

The snow began to fall softly but steadily; enveloping in a mantle of white roofs, sidewalks and street pavements. The little boy took no heed; he was in a fairyland of delight; no such sight had ever come before his vision; he was oblivious to his surroundings. Just as the Christmas chimes were ringing, and the clock was striking the hour of midnight from a distant church, the lights in the windows went out, the curtains were drawn down and fairyland vanished.

THE LITTLE FELLOW DREAMED OF THE WONDERFUL THINGS HE HAD SEEN

Then, Ikey began to feel cold and hungry; he was lonesome, and looking around was frightened; he was in a strange part of the city, and knew that he was lost. He burst into tears, sobbing for his mother, and walked along 'till he came to the stairway of the "L" station; then, overcome by sleep sought shelter from the wind and snow. He sank wearily down on the lower step and fell asleep; and as the little fellow dreamed of the wonderful things he had seen, he smiled.

Patrolman Patrick Rooney, just off duty, on his way home from the station house, was walking rapidly to keep warm, and, as he passed the "L" station glanced casually in that direction and saw a bundle lying at the foot of the steps. He stepped forward and stooping lifted it from the ground and discovered a little boy, stiff and cold, half covered with drifting snow, but sleeping tranquilly.

Rooney unbuttoned his great coat, covered the inanimate form, then went on his way carrying Ikey, and soliloquizing: "Shure, Ol'll take th' kid to me home an' let Bridget an' th' childer give him a bit uv Christmus; that Oi will. Thin O'll take him to th' station an' thry an find his fr'en's. 'T is too late to take him there, now, if Oi want anny Christmus meself."

When he reached his flat in West Thirty-third street, he found his wife busily engaged trimming a small tree which stood in the parlor, and arranging the presents for the children. She looked up as he entered, and exclaimed: "Eh, Pat, dear, w'at have ye got there?

"Shure, 't is a little lad Oi found slapin' in th' snow, Biddy."

"Och, th' poor darlin'," said Bridget, taking Ikey in her arms, and coddling him. Shure, its a Sheeny bye, Pat?"

"Is thot so?" answered her husband. "Sheeny or not, we'll give him a good Christmus annyway. 'T is th' fust one he iver had, Ol'll bet me boots."

Just then, Ikey opened his eyes and gazed sleepily at Bridget, and muttered: "Mudder, Ikey's hungry," then, seeing the two strange faces, began to cry. Bridget snuggled him up to her motherly bosom soothingly, and patting him, said: "Hush, me little bye, we'll not hurt ye, Ol'll get ye both somethin' to ate. Come to th' kitchen, Pat."

When Ikey had satisfied his hunger, with two large bowls of bread and milk, Bridget asked him his name.

"Ikey Rosenstein," he replied.

"W'at strate do ye live in?"

"In Ludlow street. Me an' fader an' mudder, Rosey, Rebecca, an' Jakey, lives dere," he answered.

"Be th' powers, 't is a long way ye've wandered, me little man," Pat remarked. "Wull, Biddy put him to bed wit' Patsey an' little Moike. Oi'll find his folks this day an' give thim a Christmus prisint uv th' lad."

Ikey fell at once into a sound sleep. Pat and Bridget hung up an extra stocking at the foot of the bed, filled with candies, cakes, nuts, a banana and a big orange, and Bridget remarked: "Pat, darlin'," we'll be afther givin' th' little bye a prisint or two on th' three. Shure, 't is th' fust Christmus th' poor child iver had."

"All right, Biddy, mavourneen, do as ye wish."

At six o'clock the Rooney children woke up: Patsey, aged twelve; Mary Ann, ten; Mike, eight, and Katie, six. They scrambled out of bed to get the stockings of goodies that Santa Claus had brought, shouting: "Merry Christmas," to each other.

As Patsey and Mike climbed back into bed, Patsey discovered their bedfellow, and exclaimed: "Hey, kids, ther's a bye in me bed!"

"Patsey, d'yer t'ink Santy Claus bro't him?" said Mary Ann.

"Oi dunno," answered her brother. "Oi'll wake him up an' find out w'ere he come from."

He yelled in Ikey's ear: "Merry Christmus," and shook him, hard. Ikey sat up; looked around the room, rubbing his eyes, then at the four children, an' cried: "Mudder, mudder. I vant me mudder. Come to Ikey, mudder!"

"Shut up yer mout'," said Patsey, "Nobody'll hurt ye. W'ere'd ye come from annyway? Did Santy Claus bring ye?"

Ikey stopped crying and answered: "Me dunno 'bout no Santy Klos, vat is idt? Me name's Ikey Rosenstein, und me vants me mudder und me fader. Boo-hoo-boo-hoo-hoo-hoo."

"Kids, dis here bye's a Sheeney. Ikey, Ikey, yer a sheeney. Sheeney Ike," yelled Patsey.

"Me ain't no sheeney. Me's a Jew, no sheeney. A sheeney's a tief, me no tief. Mudder, oh, mudder!" Ikey answered, between his sobs.

Bridget, wakened by the hubbub, came running in; slapped Patsey over the head, saying, "Patsey, stop yer n'ise, an' stop callin' th' bye names, or, Ol'll have yer fayther give ye a lickin'. Shure, it is Christmus marnin'. Yer popper bro't th' little lad home, to spend th' day wit' yez, now, be good. Give Ikey his stockin', an' wish him a Merry Christmus, childer."

"All right, mudder," said Pat, Jr., as he handed the other boy the stocking of goodies. "Ol'll be nice to him. Merry Christmus, Ikey."

The other children also, wished him "A Merry Christmus." And as he viewed the contents of the stocking, he asked: "Am all dese fer me?"

"Yis," answered Bridget, "they're all fer ye. Its Christmus marnin' an' Santy Claus lef' a lot uv t'ings to all ther' childer in th' city."

"T'ank yer, ma'am. Dese am lofely, und me t'anks Santy Klos, too," said Ikey, munching the candy.

After breakfast, Bridget, followed by Pat and the children, went to the parlor, where the Christmas tree was ablaze with lighted candles, and the tinsel trimmings shone like silver. The Rooney's, to whom the sight was familiar, went looking for their presents at the foot of the tree; but little Ikey Rosenstein stood in the doorway, transfixed with amazement; delight depicted on his face; his eyes shone like diamonds, and he exclaimed, rapturously: "Oh, my, how pritty! Did Santy Klos bring dot dree? Me vishes dot mein mudder und fader, und mein bruder und sisters vos here. Mein gootness, ain't id nice?"

"Yis, Ikey," Bridget replied, "Santy Claus bro't that tree, an' here's a bundle marked wit' yer name. See w'at's in it?"

Ikey unwrapped the package and disclosed a woolly sheep: "Baa-baa, ba-a, ba-a, ba-a, ba-a," it bleated, when a string was pulled.

"Ach," said the boy, "look adt mein scheeps?" and handed it to Mary Ann and Katie to admire; while he admired their dolls.

"Nother prisint for ye, Ikey," said Patsey, holding up a pair of warm woolen mittens.

"A Kissmus card fer yer," Katie announced.

"An' here's a little gun," said Mary Ann; while Mickey gave him a tin horse and wagon.

"T'anks to yer, mein fr'ents," returned Ikey, as he accepted his good fortune, smilingly. "Me'll always t'ink uv dis day."

But the little nine-year-old Jew could not understand what all the celebration was for, and turning to Bridget asked: "W'y fer hafe yer drees and bresents und sooch t'ings? Is idt Santy Klos's birt'day, ma'am?"

"Shure, me little bye, come set on me lap an' Ol'll tell ye th' story."

So, Ikey climbed up on her knee, and she told him the wondrous, old, old story of the Christ-Child.—the Babe born in a manger, in Bethlehem of Judea, nineteen hundred years ago.

With mouth and ears open, and with eyes distended he gazed at Bridget; then when she had finished, said: "Missus, den dis Krismus is Jesus Christ's birt'day. Vell, me mus' tell mein mudder und mein fader, 'bout dis t'ing,—und den us'll have Krismus, too."

"Bless th' lad," exclaimed Bridget, "D'ye hear th' bye, Pat, dear? Shure, he'll be a bit uv a Christian yit, instid uv a haythan Jew. Be th' Saints, Ol'll pray thot th' Holy Mother Church, will receive him very soon."

"But, missus, vat is Santy Klos?" the boy inquired.

"Come to me, me lad," said Rooney, "an' Ol'll till ye 'bout ould Santy Claus an' th' reindeer," and as the other children gathered around him, he continued: "Shure, Santy Claus is an ould, ould man, 'bout five fut tall, fat an' jolly, wit' a long w'ite beard r'achin' to his knees. He goes all over th' worl' Christmus Eve, drivin' eight reindeer before a big sled loaded wit' threes an' prisints fer th' good little byes an' gurls. Whin he gits to a house w'ere ther' are childer, he drives his sleigh up on th' roof, an' thin climbs down th' chimbly. If ther' ain't no fireplace in th' house he goes thro' a winder. He thin fills all th' stockins' an' fixes th' three an' l'aves th' prisints. Whin 't is all done, thin he drives away to his home at th' North Pole, an' stays ther' makin' up his manny prisints, until th' nex' Christmus comes 'long. So, yes see, me childer, thot's th' sthory uv our ould fri'nd, Santy Claus."

"T'ank yer, Mr. Pat," said Ikey. "But, if dere is nodt anny ice or schnow, vat dos Santy Klos ride in den, ven he cooms to der kinders houses?"

"Och, shure, he thin comes in a ortymobile, an' goes in thro' th' front door, instid uv th' chimbly, or winder."

"Ven me gets home, Mr. Pat, me'll tol' dot Santy Klos story to mein schwesters, Rosey und Rebecca und to mein brudder Jakey. Me vish Krismus coom ev'ry week in de year."

At noon, Patrolman Patrick Rooney walked into the station house of the Tenderloin district leading Ikey Rosenstein by the hand; in his other hand he carried the presents which Ikey had received, but the boy carried the precious sheep.

The policeman stated the case of his finding the boy, and about the Christmas tree. Captain O'Brien said, at the conclusion of the report: "Ye done just right, Rooney, to give th' kid a good time; but, there's a crazy lot of Sheenies been pesterin' th' detectives at headquarters, to know th' whereabouts of a little Jew, name of Ikey Rosenstein. Is this kid th' boy?"

"Yis, sor, it is," answered Rooney. "An' he wants his mother, poor bye, don't ye sonny?"

"Ach, yah, Mr. Pat," Ikey replied, "me vants mein mudder."

"Hello, hello, this is O'Brien," said the captain, as he picked up the receiver of the 'phone and called up Headquarters: "The Rosenstein boy is here; found by one of my men. Send his folks after him. Notify them at once, as th' kid wants to go home."

"All right, Captain," responded the Mulberry street man, "we'll attend to the matter. Good-bye."

A short time elapsed, then the door opened, and Abraham Rosenstein and wife entered the room. The boy saw them, and dropping his toys on the floor, ran to his mother, crying: "mudder, oh, mudder!" she gathered him up in her arms, and kissed him, murmuring: "Oh, Ikey, meine liebchen, let mudder hold you. Meine liebchen kinde," then, between her sobs of joy, said: "T'anks, shentlemen."

The father meanwhile, after kissing his child, gathered up the toys, then thanked the captain and Rooney for their kindness.

"Rachel," he said to his wife, "ve mus' be gettin' home."

"Manny t'anks, Mr. Pat, said Ikey, as he bid him good-bye. "Tell de kids dat Ikey had a lofely dime," then, turning to his parents continued: "Mudder and fader, see der scheeps und de odder t'ings dat Santy Klos bringed me, und lef' fer me at Jesus' Birt'day Party."

"Good-bye, Captain and Mister," said the Rosensteins.

As the three Jews walked out of the station house door, Pat Rooney turned to Captain O'Brien and remarked:

"Shure, Capt'n, th' little bye, do be afther inj'yin' his fust Christmus Day."

"LOOK ADT MEIN SCHEEPS"

Wronged

"Now, look here," said Mr. Woppsleigh addressing his ten-year-old son. "I'm going to make a few remarks to you and I want you to remember them. You're spending altogether too much money for candy and such trash and you've got to stop it.

"Look at your cousin Harry. There's a boy who is going to amount to something some day. He knows better than to hurry to the candy store or the ice cream works every time he gets a dime. He has learned the value of money. Do you know how much he has in the bank? His father told me this morning that he had saved up sixty-five dollars.

"And what have you done? By George, it's a shame! Here I've been paying you fifty cents a week for mowing the lawn, and I've given you money for pulling weeds and running errands, and I have no doubt that if we counted it up we'd find that you've been getting four dollars or five dollars a month all summer. If you had saved your money as Harry has saved his, you'd have a bigger bank account than he has. But what have you done? Spent every cent! You seem to be afraid that it'll burn a hole in your pocket if you don't rush away and squander it the minute you get a nickel. It's a shame the way you—"

"I don't, either, spend every cent I get," little Edward indignantly replied, "and I can't see why you always have to go and scold me the way you do for nothing. I guess Harry isn't the only one that saves money. Mother gave me a quarter for taking some cloth to the dressmaker yesterday afternoon and I've got four cents of it left! Blame it, you're always pickin' on me!"—Chicago Record-Herald.

Little Eric's Troubles

There was something strange about Eric's actions. He had been out most of the day and looked tired. He ate very little supper, and was ready to go to bed early. All these things were noticed by his mother, who wondered what could be wrong.

"Are you sick, darling?" she asked, after a long silence.

"No."

"What?"

"No, ma'am; I ain't sick."

"Are you feeling a little bad, my boy?"

A long silence.

"Did anything go wrong with you today, pet?"

Perhaps it was the tender tone of her voice, or maybe the divining mother had hit upon the magic sesame that opens the secret doors to a heart full of woe. Whatever it was, a great big tear rose in his eye, that overflowed and ran down his cheek. Quickly brushing it away, as if ashamed, he knit his brows and glared. Presently, with an expression of a different sort upon his face, he said:

"I gave him a swipe in the nose I bet he will remember."

"Who?"

"Tommy Hardnut."

"Why did you do that?"

"Well, you see, mamma, we wuz comin' down the road together on a run, an' Tommy Hardnut tripped me up. I didn't fall very hard, though—only skinned my knee a little—an' then I made for him. 'Fore I caught up he wuz 'way down the road, an' as I kem on him he turned roun' an' I gev him a roaster in the nose jes' like that—biff!" And Eric caught the blow in his left hand.

"What did he do then?" queried his mother.

But silence fell on the little fellow, and the tears were beginning to flow once more, when all of a sudden, with the courage of a true warrior, he straightened up and answered:

"He licked me."—Boston Globe.

The Cigarette Habit

The teacher of a public school in Chicago found that eighty of her scholars smoked from two to twenty cigarettes a day. Six only of these boys were able to do good work in their classes. The victims of the cigarette habit confessed that they were suffering constantly from headache, drowsiness and dizziness.

Many declared they could not write well because their hands trembled. A number were "shaky" when they walked, and unable to run for any distance. They could not rouse themselves to meet the examination test. The teacher reported that they were sure to fail if asked to memorize anything. Several of the smokers were from four to five years too old for their grade, and it was found that after they began to smoke their progress ceased.

Except in three instances, the scholars hardest to discipline were smokers. Truancy and theft were directly traced to indulgence in the habit. Boys who had reformed and joined the Anti-Cigarette Society said they "felt like different boys." The power and perniciousness of the cigarette habit are revealed by this fresh testimony from a competent and careful observer.—Youth's Companion.

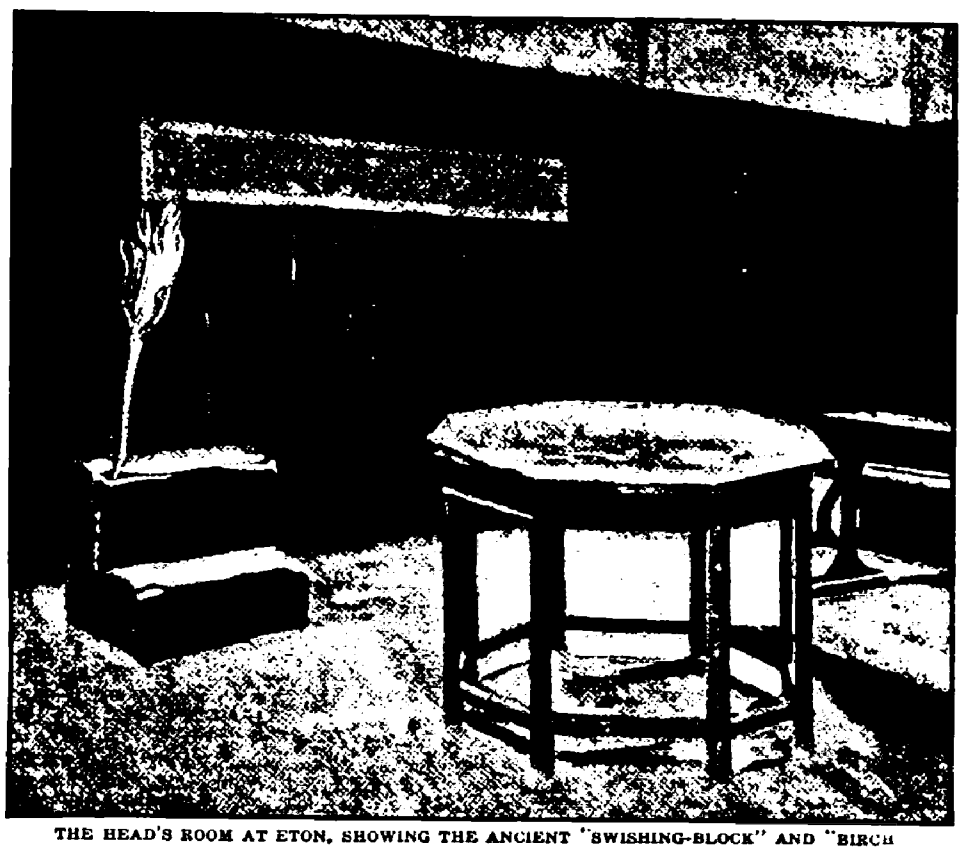
"Father, won't you buy me a watch?"

"What do you want a watch for, my boy?"

"I want to swop it with Billy Wiggins for one of his pups."

How Boys are Punished at the Chief Schools in England

By YORK HOPEWELL, B. A.



THE HEAD'S ROOM AT ETON, SHOWING THE ANCIENT "SWISHING-BLOCK" AND "BIRCH

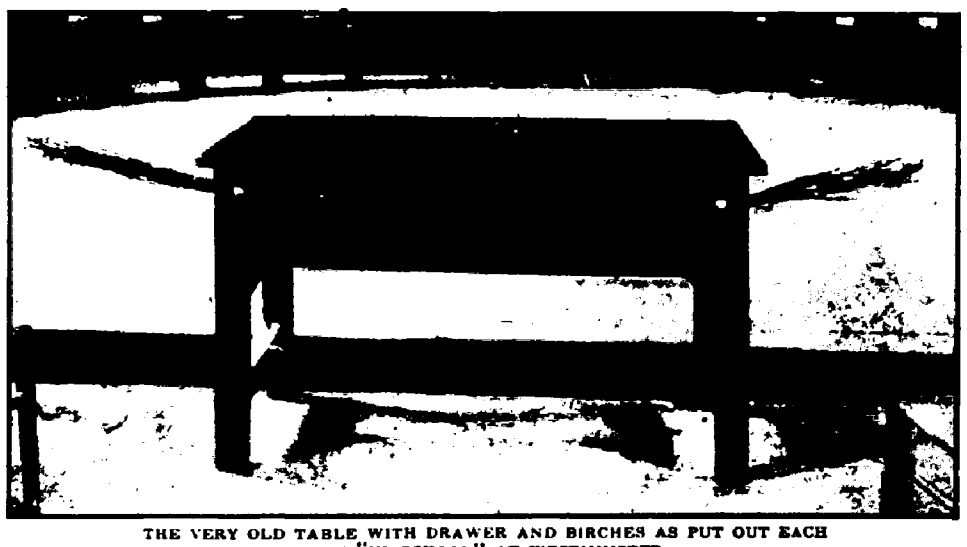
EVER SINCE the time when the renowned Jewish king laid down his celebrated maxim about "Sparing the rod," etc., there has always been a great and fascinating interest shown by the average boy as to what methods of punishment were in vogue at the seat of learning to which he was in due course to become attached. In English schools there has been no exception to this, though perhaps the thousands of youths who attend the elementary schools—whose mothers are so careful of the tender skins of their offspring as to absolutely object to any corporal punishment whatever, and to go with threatening voice and fist to attack the master who uses it to reform the hooligan instincts of certain juveniles!—may be allowed to constitute a class to themselves in the matter, even if a very large one.

It is quite true what one well-known authority recently said: "You may see the heir to a dukedom, or actually a duke himself, well thrashed at Eton by an annoyed monitor, who is only a schoolfellow after all, and nobody ever thinks of making the slightest remonstrance; but you must not expect to see the son of the village cobbler given even one stroke by the headmaster of the village school for outrageous conduct without also seeing enough stir made in the village to incline one to think that the Constitution had come to an end."

It cannot fail, then, to be interesting to learn how the various famous schools of our land punish their refractory or lazy boys, and so we propose to look into this matter for a little while. Turning first to Eton, we find that the ancient "swishing-block" and "birch" are still in use when needed. It is a curious fact that, barring the Headmaster and the Lower Master, certain boys have much greater power at Eton in ordering and administering corporal punishment than have masters themselves. A boy of the Sixth form may set a junior youth "lines" for minor offenses, and fag-masters can cane their fags for neglect of duty. When any boy, however, is recommended for severe punishment, to be given by the Head or the Master of the Lower School, he is brought forward to the particular master by two præposters, or monitors, who explain the offense. Two small boys are always "fagged" to hold the culprit down on the swishing-block, lest he may struggle, and one præposter stops to see the sentence carried out. The Head usually makes the boy—duke or commoner—undo his trousers, kneel down on the step of the block, bend forward, and ——! A desire on the culprit's part not to sit down for some time afterwards is the ordinary result.

Before the war of 1834 the usual method of flogging at Eton used to be on the bare back, which was often made to bleed, but the punishment just described is the one now always given for serious offenses. It is a sort of unwritten law in the Eton code that the culprit shall not struggle nor cry out, and this rule is rarely broken, so that the work of the two fags who are brought in to "hold down" is mostly nominal. The famous block and birch stand in the Lower School, in the chief room, and are often shown to visitors. How much they are used, when necessary, may be judged from the remark of one former Headmaster that he believed he "had flogged nearly the whole bench of bishops!"

At Harrow there is one material difference from Eton's traditions. Any master can punish boys for minor misdoings or laziness. This is, it must be confessed, an unusual thing in most of our great schools. There are several methods the lower masters can adopt in this punishment, according to the offense.



THE VERY OLD TABLE WITH DRAWER AND BIRCHES AS PUT OUT EACH DAY "UP-SCHOOL" AT WESTMINSTER

They often give "lines," which have to be done on special paper fetched from the tutors. If a boy persists in being lazy, careless, or otherwise troublesome, the master sends a weekly report of him to the Head, and the resulting punishment is the rod, somewhat strongly applied.

The major portion of punishment, however, lies in the hands of the boys who have been appointed monitors, if they like to use it, and in the cricket captain. The monitors have the power to "whop" a boy—that is, to cane him across the shoulders—for what they deem offenses against the laws and traditions of the school. Any four monitors may consider a complaint made by one monitor against any boy below the first Fifth Form, and may decree a caning, with any number of strokes up to ten, on the bare shoulders. The cricket captain can give one or two cuts with the cane to any boy who has not "fagged" properly during cricket practice, and the football captain can similarly punish his delinquents.

Perhaps no school, unless it be Eton, so hates any innovation with regard to its ancient forms of punishment as does Charterhouse. One of the most amusing anecdotes connected with school punishments belongs to the Carthusian foundation, and will well show this. A new master, to whom the boys did not take at all kindly, conceived the notion of making the Wednesday afternoon penalty extremely annoying to them. He lodged at some distance from the school, and he ordered seven boys whom he sent down for "extra school" to bring him a number of lines of Virgil every hour during detention, thinking that they would be so irritated by the journey each way to and from his house that it would have a very salutary effect on their future behavior.

They were irritated, it is true, and they resolved to get the better of the master. So they engaged a cab, and one of them procured a cornet, another a posthorn, another a bugle; and they all set out, amid tremendous shouts of delight from the assembled school—with much "playing" by the band — to the lodgings of the master. The commotion was great; the effect ditto. When at the end of the second hour similar scenes were enacted, and the whole neighborhood in an uproar, either with delight or annoyance, the landlady had had enough of it, and gave the master notice to quit! This further improved the occasion, greatly to the pleasure of about three score representatives of "Jones minor," who had not had so much genuine and effective fun since they had entered Charterhouse.

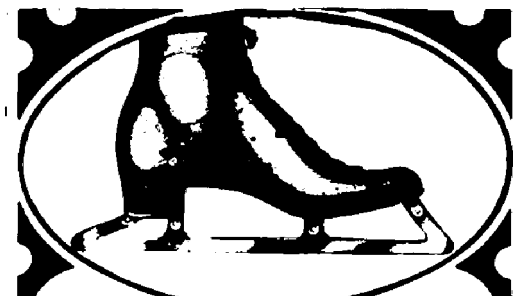
At Westminster the four monitors have the right of punishment vested in them, and anything deemd too much for them is sent on to the Head. When some unfortunate successor of Gibbon, Warren Hastings, or Robert Southey is judged worthy of summary correction corporally, the four monitors hold what they call a "case"—that is, an inquiry according to prescribed form into the affair, at which witnesses for the prosecution and defense can be heard. It is seldom the offender gets off if a monitor is the complainant, for these boy-leaders of the school have great powers, and their colleagues hardly ever place them in an invidious position in such circumstances. If the culprit is found guilty, he is "tanned" by the monitors—that is, four severe strokes are given him in a very feeling part by one of the four judges, and he knows about it for some time afterwards.

Should the monitors deem the "case" too serious for them to punish, they remit it to the Head, who orders an assembly "Up-school." All the boys have to attend in the great hall of the Upper School, where they sit in due order. The Head sits behind an ancient table, scored with names and dates of pupils of long years ago, and the four monitors sit with him, two on each side. The "first election" scholar on duty for the day—i. e. one of the junior "King's Scholars"—comes up and opens the drawer of this old table, takes out the two ancient, but effective, birches, and hands them to the Headmaster. Then the complaining monitor goes down the central gangway, and, without a word, touches the culprit in question, who follows him to the table.

The offense having been detailed to the Head, the boy has to put out the *back* of his hand, and he receives four sharp strokes with the birch across it. The actual cuts do not, perhaps, hurt him very much—not nearly so much as the "tanning" he would have got from the monitors themselves. But the disgrace of being "handed" by the Head is so keenly felt at Westminster that there is no boy who would not choose half a dozen "tannings" before undergoing the cold shoulder from his fellows that always accompanies a "handing." The Westminster boys have for generations felt a "handing" to be the greatest disgrace that could attach itself to their school career, hence "handings" are extremely rare events.

Strange to say, it is always the boys themselves who resent most strongly any attempt to change the order of punishment that has obtained, sometimes for centuries, at the various schools. They are proud of Harrow, of Haileybury, of Fettes, of Wellington, of whatever school they belong to, and they stick up through thick and thin for all that their alma mater has adopted, punishments included. This is as it should be, and this is what will make the strong, healthy-minded, gallant, and true men of the future.

PUNISHMENT DRILL AS IN VOGUE AT SOME ENGLISH SCHOOLS



Best Fifty Years Ago—Best To-day

When you buy a pair of skates—ice or roller—be sure that they are Winslow's. No other make of skates has behind it such a reputation for quality. That's why

WINSLOW'S Skates

have been the standard of America for fifty years.

The Winslow College Hockey Skate is without an equal. Runners are hand-forged, selected welded iron and steel, especially hardened and tempered—nickeled and buffed. Endorsed by experts throughout the United States and Canada.

Winslow Roller Skates are known wherever roller skates are used. Thousands of rinks use them exclusively. Our new models combine the latest and best ideas. Made in many styles and sizes. For sale by all dealers.

Send for new catalogues containing illustrations and descriptions of the different styles and models of ice and roller skates—they are free.

BOYS WANTED TO SELL EVERSWEET PERFUMED LOCKET, also

Strainer Spoon. Rapid seller. Large catalog free. $3 to $5 a day. RICHARDSON MFG. CO., Dept. 12, BATH, N. Y.

The HIGHTON CADETS

By

George Wetherill Earl Jr.

"GENTLEMEN," said Captain Bart, a retired army officer with a brilliant record, the new commandant and physical instructor of the Highton Cadets, the first day he appeared on the athletic field, "we will practice athletic sports this fall. But not a game will be played until you are perfect in military discipline and drill. Discipline will win on the athletic field as well as on the field of battle."

The spring of 1898 brought forth the regular Highton unbeatable baseball nine—but military subjects were not neglected. On learning of the destruction of the Maine in Havana Harbor, and a possible war with Spain, the cadets became serious, and put heart and soul into their drill. Word had reached the academy of several of its graduates who were nobly battling in the tropic swamps and mountains under the Star of Cuban Liberty.

The following fall but repeated the successes of the cadet football eleven. Their flying wedge, which originated in the fertile brain of Buckie Wiltbank, the academy's justly celebrated half-back, placed many a touch-down to their credit. But drill and military tactics had not been lost sight of. Four of the year's graduating class had secured commissions in the regular army, and were with their regiments upholding Old Glory in the Far East.

In February, 1899, news came of the uprising under Aguinaldo in the Philippines, and a rumor that the President was to make a call for volunteers.

One beautiful spring day, during the last drill of the regiment, preparatory to the June examinations, the battalions were drawn up in a hollow square, and their commandant, with a martial glitter in his eyes, read to the assembled cadets an order from the War Department appointing him a captain of volunteers.

"Young gentlemen," he said, "in temporarily severing my connection with Highton and its student-cadets, I desire to thank you, one and all, for your prompt obedience to discipline and soldierly courtesy. My one regret is that I cannot lead a company of Highton Cadets into battle under the flag—Old Glory—we all love so well—I know you would win—or die in the cause. I love Highton well—but love of country is supreme.

"In the coming years, in your professional or business careers, show the same gentlemanly spirit of forbearance, discipline, and indomitable courage you have shown on gridiron and diamond, and in all your other athletic games and sports, and success will be yours. Before I dismiss you, gentlemen—some of you for the last time—I would like to hear our grand old academy yell. Now, boys—all together!" he shouted, waving his sword on high.

"Highton! Highton! High! High! High! Highton! Highton! Do or die!" rang out over the campus, and echoed back from the surrounding hills!

When the regiment passed in review to the strains of "A Hot Time in the Old Town To-night!" played as it had never been played before by the academy fife and drum corps, there were tears streaming down the stern face of Commandant Bart.

Commencement Day came, with all its attendant excitement—flowers—parents and friends, and many pretty girls. As the exercises, which were held in the chapel, came to an end, Dr. Green, the aged and scholarly principal of the academy, addressed the cadets:

"Gentlemen, I have a communication from the War Department which will interest you—greatly—yet it is with extreme reluctance that I make it public—but I feel I am in honor bound to do so. Your parents must be the judges." Then he read the letter. The War Department had granted special permission to Captain Bart, of the Fifty-sixth Volunteer Infantry, to enlist as many of the students of the Highton Academy as could pass the phyhical examination—but only with the express permission in writing of parents or guardians.

A mighty roar burst from the cadets, followed by the academy yell! The chapel rang again and again with the wild, tumultuous cheers!

As the chapel emptied itself on to the campus, the audience split up into little groups composed of tearful mothers and sisters, and fathers who tried to be stern, notwithstanding their aroused latent patriotic enthusiasm—and pleading sons.

Before 6 o'clock that evening Captain Bart wired the War Department that he had recruited his full company from the Highton Cadets, with all necessary permission from parents or guardians. Ending his message: "I have the best physiqued and drilled company of men in the service—they will show their worth on any field of battle."

Captain Bart's company joined the regiment but a few days before their long journey across the continent. An order had been issued granting the cadets a furlough until the regiment left for San Francisco, they thus avoided the trying details of the regiment whipping into shape.

At the Presidio of San Francisco, Company "G," such was the designation of the Highton Cadets, became the color company, and Buckie Wiltbank, the old half-back, was made the color sergeant. Proudly the company marched across the city with flying colors to the transport which was to carry them to the Philippines and war!

The life of the company for the first few weeks after landing at Manila was one of excitement. They, together with the balance of the regiment, were assigned to the outer line of the defenses of the city.

The insurgents made nightly attacks. Our troops simply returned their fire, but made no effort to chastise them—the plan of campaign had not as yet been completed.

A skillfully placed earthwork which the insurgents had recently thrown up, began to worry our troops by day. The natives would fire through cleverly concealed loopholes every time a soldier unduly exposed himself. Although but few of our men were hit, it became so annoying, the commanding general decided to capture or destroy it.

In the assault it would be necessary to cross at least 800 yards in the open, which was strewn with wire entanglements and other obstacles to retard an advance. The Fifty-sixth was the regiment selected for this arduous and dangerous duty.

The morning of the day decided upon for this work came into being hot and humid. The sun hid behind darkening clouds which foretold the coming of a storm. The regiment lined up with "G," the cadet company, in the center, with the flag hanging limply in the damp, still air.

The bugles sounded the advance—First, slowly, deploying as they went—then as skirmishers, advancing by rushes—lying down, firing—forward to again lie down and fire. These tactics were repeated until the line arrived within 200 yards of the earthwork. The insurgents now sprang a surprise on our troops: They opened on them with "lead squirts" and rapid-fire machine guns. The small, shrieking, and nerve-racking shells bursting over the prostrate men became most disconcerting. The colonel of the regiment did not care to assume the responsibility of continuing the advance under these new conditions until he had communicated with the general.

"Capture the earthwork at any cost!" was the order transmitted through an aide-de-camp.

"Forward!" sounded the bugles! The line arose as one man and rushed forward but to throw themselves to the ground! The fire was murderous—almost too much for the green troops to stand. The cries of the wounded shook the nerves of many of the untried men.

"Forward, men! Forward!" madly shouted the colonel, running up to the center of his long strung out regiment, where Company "G" lay under Captain Bart, in the thickest of the fire. The insurgents had espied the flag and were concentrating their efforts upon it. The colonel stepped in front of the reclining line of cadets.

"Forward!" he cried; "Forward!" He did not continue, but fell plunging to the ground.

Captain Bart, on seeing his colonel fall, jumped in front of his company: "Come, Highton!" he quietly said, as he drew his sword. "Sergeant, the colors!" he cried.

Buckie Wiltbank sprang to his feet and waved the flag over his head. "Come on, Highton!" he shouted and rushed forward.

With a yell, the company of cadets followed, fixing their bayonets as they went—only to throw themselves down as the captain and several of their comrades fell wounded.

"Come, men! Come, Highton! Come—The flying wedge!" shrieked Buckie, above the din of battle. The cadets faltered but an instant. Forming themselves into such a wedge as had always won on the gridiron, with Buckie and the flag in the center, they went dashing forward, stumbling over and through all obstructions. With a wild "huzza," they scrambled across an abatis and over the steep earthwork into the midst of the astonished natives, who had ceased to fire in their surprise at the audacity of the cadets, and fled on every side before the flashing bayonets.

Buckie planted Old Glory on the earthwork just as the sun burst through the rift of clouds, and the flag waved gloriously in the rising wind.

"Now, boys— all together!" shouted Buckie.

"HIGHTON! HIGHTON! HIGH! HIGH! HIGH! HIGHTON! HIGHTON! DO OR DIE!" burst above the cheers of the entire line, now advancing on the enemy.

The general rode furiously up to the captured earthwork. "Whose company carried this position?" he asked.

"Captain Bart's Cadets, sir," proudly answered Buckie, saluting as he stood beside the flag they had so gloriously planted.

"If I had a brigade of such true American grit," he said, turning to his chief of staff, as he doffed his hat to the colors. "I'd march anywhere on the island with them—capture Aguinaldo and end the war."

"COME, MEN! COME, HIGHTON! COME—THE FLYING WEDGE!" SHOUTED BUCKIE

Michigan Military Academy

ORCHARD LAKE, MICHIGAN

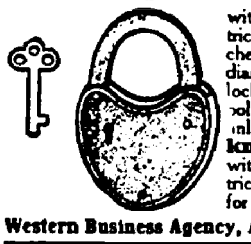
Ideal location, 26 miles from Detroit. Beautiful lake region; ample grounds; fine buildings; honest academic work; genuine military instruction and discipline; a strong and well balanced teaching force; exceptional musical training; a carefully selected and carefully trained body of cadets; abundant opportunity for school sports on land and water; great attention paid to social life and pleasant relaxation—these are some of the advantages that the Michigan Military Academy offers to parents who are looking for a clean, wholesome, efficient school.

The fruitage of the school is a symmetrical boy; a boy who has learned to obey proper authority, to do his duty, to take care of his body, to cultivate self-respect, to use his brain effectively, to aspire for leadership, to lead naturally and courteously, and to live a good and successful life.

For information about the Academy address

LAWRENCE CAMERON HULL, Pres. and Supt.

Lock Up Your Treasures



with the "KANGAROO" trick lock. Your trunk, your tool chest, your desk, dispatch box, diary, and all your secrets. Padlock and puzzle combined, made of polished steel, fastens by a spring, unlocks with a key **when you know how.** Mailed postpaid with our 36-page catalogue of tricks and novelties for only . . . **10 Cents**

Western Business Agency, American Bldg., Chester, Ill.

I Want a Boy

Must have quickly a bright business boy (not too young) to assist conducting local affairs of reliable house dealing with stores in your neighborhood—to consign goods, settle accounts, report conditions, etc. Takes but little time; any bright boy will do—right one gets **Good Weekly Salary** after showing fitness. You sell nothing; no canvassing. A genuine, permanent, high-class business position following out a new and wonderful business system. Wherever you live, you have a chance. Reply own handwriting, giving age and particulars. Carew Merchandising Co., 875 Drexel Bldg., Phila., Pa.

Music We offer you an exceptional opportunity to obtain all the Highest Priced Sheet Music at the low cost of

15c a Copy

REMEMBER this music can not be purchased in stores for less than 50 and 75c a copy. Send us 15c for a trial order and our big lists of the latest Popular Vocal and Instrumental Music. *Agents Wanted Everywhere.* GORDON MUSIC LIBRARY, 207 W. 24th St., New York City.

JOURNALISM

Bright young men and women, with a taste for writing, should cultivate it. The field of Journalism offers to ambitious students, money, fame, power. We train *by mail* to do every branch of literary work for newspaper and magazine. Write for "The How of It." Free.

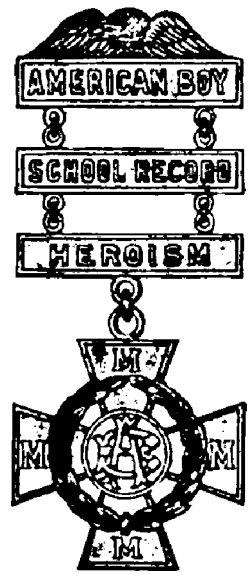
The American Boy Legion of Honor

COMPOSED OF BOYS WHO STAND AT THE HEAD OF THEIR CLASSES IN SCHOOL AND BOYS WHO HAVE DONE CONSPICUOUS ACTS OF HEROISM

Who Are Eligible

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school ending on a date since September 1st, 1905, have stood at the head of their classes, taking the average of all their study grades for the term, and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years. No attention will be paid to letters from boys who claim the badge for school record unless their letters are accompanied by corroborative statements from their teachers who know the facts. Address all letters relating to the Legion of Honor to Wm. C. Sprague, Chief Counselor, Detroit, Mich.



Division of the Legion Into Chapters

Every two hundred boys in the Legion constitute a chapter at the head of which stands a Counselor. The Counselor will be a prominent educator who agrees to stand as counselor and advisor to the two hundred Legion of Honor boys under him. The first chapter is now forming and will be known as "The Shepardson Chapter."

The Shepardson Chapter (Chapter 1) of The American Boy Legion of Honor

Counselor: Professor Francis W. Shepardson, LL. D., Dean of the Senior Colleges of the University of Chicago

Address (with postage for reply) care of The American Boy, Detroit, Mich.

BOYS

Light The Xmas Tree by Electricity

We have a complete line of supplies for Christmas decorating, at very attractive prices. We make a specialty of supplies used by boys in experimental work, and have the most complete line on the market.

Send for our free catalogue

Our free advice department offers the services of an experienced electrical engineer, without charge, to boys who have knotty problems to solve. You don't have to buy to try us. Just enclose a stamped envelope.

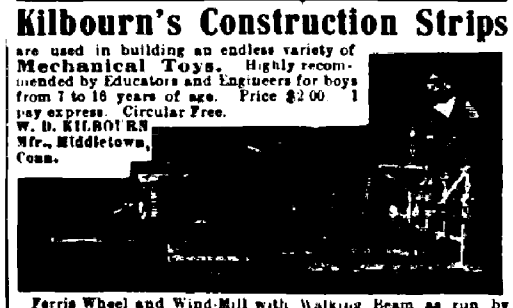
"Everything Electrical"

References—Any boy in Evanston.

THE ELECTRIC SHOP
1516 Sherman Ave. Evanston, Illinois

Kilbourn's Construction Strips

are used in building an endless variety of **Mechanical Toys.** Highly recommended by Educators and Engineers for boys from 7 to 16 years of age. Price $2.00 I pay express. Circular Free.
W. D. KILBOURN
Mfr., Middletown, Conn.



Ferris Wheel and Wind-Mill with Walking Beam as run by Toy Engine. Bridge, Car, and Track in Background.

YOUR GIFT

Manufacturer's Brokers have lot of beautiful, high-grade, Solid Gold, full jeweled, ladies' watches, fresh from the factory. Useful, dainty, aristocratic Material, workmanship, and finish, best. Positively the biggest $12 value a jeweler can offer. While they last **$6.85**

Unquestionably the greatest opportunity ever offered you. Send money-order at once. If don't suit, price cheerfully refunded. A rare assn'e, new thin model, gold filled. Same price. Illu. on request.

HUNT & MacCRA,
Brokers, 160 Nassau St., New York

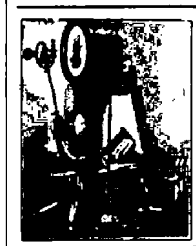
STAMMERERS

The ARNOTT METHOD is the only logical method for the cure of stammering. It treats the CAUSE, not merely the HABIT, and insures natural speech. Pamphlet, particulars, and references sent on request.

THE ARNOTT INSTITUTE
BERLIN, ONT. CAN.

SPENCERIAN STEEL PENS

Sample card containing 12 pens, different patterns, sent to any address upon receipt of six cents in postage.
Spencerian Pen Co., 349 Broadway, New York



Be Wise and Save Your Eyes

Send for catalogue and full particulars. BOYS, here is your opportunity to make money. Six (6) orders per week will earn you $30.00 per week clear profit. Makes a splendid Christmas present. Write us now in time to take Christmas orders.

The PROFESSOR'S STRANGE CROP

AMELIA H. BOTSFORD

WALTER had been urging upon his parents his plans for his own future. With all the eloquence he could command he had stated the advantages of the correspondence course which he desired to take, and how sure of returns the money invested in his education would be. He looked very gloomy when at last his father gave an adverse decision. The fact that a lack of money compelled the decision did not make it the easier to bear. Without his father's assistance he could not expect to carry the undertaking through, of that he was sure. He listened in silence as his father said:

"No, my boy, I do not see any way to help you. I am willing you should take the course since you can do so without leaving the farm. I could not spare you until we get this year's crop off. But if you could prepare yourself so as to be ready to take the position Senator Brown would secure you in the winter, I could probably spare you then. You know I have been far from well this spring, but in a few months I hope to be strong and able to do more farm work. I am willing you should go ahead, but I cannot spare a dollar toward the expense. Cannot you earn it in some way?"

"I don't see how I could," returned the boy, moodily. "I will be kept too busy with our work to do anything outside, and there is no way to make an extra dollar on this old farm."

"Seems as though there ought to be some way to get the cash right here," interposed his younger brother.

"O, you think so, do you?" returned Walter, scornfully. "Let's have your advice, Professor. I suppose you will suggest raising ginseng or Belgian hares, or some such fool notion. But I haven't a dollar to start with, and couldn't earn the money in any such way if I had, for those things don't really pay half the time.

"I wasn't going to suggest either of them, nor silkworms either," answered Carl, flushing angrily.

He tried not to mind the nickname Professor, and the chaffing he usually got for his ideas, but he was naturally sensitive, and the remarks of his brothers and sisters often hurt a little. Of the two boys, Walter and Carl, it was the elder who got the praise at school and at home. Walter had a good memory, and learned rapidly; he had the reputation of being the best scholar, for parents and teachers did not yet realize that he simply learned by rote what was printed in his school books, while Carl, who could not commit to memory rapidly, thought things out for himself.

"Well, what is it?" continued Walter. "Not rabbits, ginseng, frogs' legs, raising silk worms or tea?"

"I haven't any suggestion ready," returned Carl, uneasy under this banter. "I know there ought to be a way, and I mean to study one out. Let me think about it for a few days. You haven't any faith in my schemes anyway, and if I found a way to earn money I don't think I would tell you."

"Think away all you want to, but I know there is no chance here without a bit of capital. I'd borrow a few dollars if I could, but I don't know who would lend me anything." With this Walter flung himself moodily out of the room.

For several days Carl went around the house in a brown study. His wits were wool-gathering, said his mother, when instead of a basket of chips he poured a bucket of water into the woodbox. The family were accustomed to these spells of abstraction, but this one lasted longer than usual.

The case had begun to seem hopeless even to Carl. All of his hours of thought had produced no marketable idea. As a last resort, he turned over his collections. Was there anything he could sell to help Walter? His birds' eggs, or his butterflies? He knew there were moths and butterflies so valuable that a few lucky finds would net a nice sum, but no such prizes had come his way. He had studied the subject, and could recognize many insects of other kinds. He was turning over the pages of one of the books on insects, looking for some suggestions, when one sentence attracted his attention. He looked again, then read the whole article carefully, considering at the same time what he had heard the boys say at school a few days before.

After pondering for a few minutes, by a curious sequence he put the book away and went out to the barn. Here he poked about in the corn-crib and barn chamber and other dusty corners, and then emerged, powdered with meal and cobwebs, but wearing an air of triumph quite in contrast to his abstraction of the previous weeks.

"Hello, Al," he said, overtaking a schoolmate on the road ahead of him a few days later. "Didn't you say that Lawyer Graves has a mocking-bird?"

"To be sure I did. You ought to go over and see it. 'Twas sent him from the south. He said it was a fine singer and a wonderful mimic, but he was afraid he couldn't raise it. Guess you had better go over soon, for I heard it was sick and he didn't know what to do for it."

"I'm going over tonight after the chores are done," returned Carl.

That night, when Carl and his father were at the barn together, the boy asked a queer favor.

"Say, father," he began, "can I have the bran that is in the corner bin and the lot of old meal that is in a sack in the loft?"

"What in the world do you want of that nasty stuff?" returned his father in surprise. "It isn't fit to use for anything. It ought not to have been left to get musty and full of worms. I wonder what sort of a scheme you have on hand now?"

"I'd rather not tell you, father," answered the boy. "I am not going to sell the stuff, and I am sure you would not object to my plan if you knew. But I would like to keep still about it. You know how the boys make fun of my ideas. I hoped you would let me have the stuff and not say a word."

"And so I will, Carl. The bran and meal are worth nothing; you are welcome to use it, and I will be glad to have the place cleared out. There's no harm in your keeping your plan to yourself till you see how it turns out. I know the boys do tease you. Take the stuff and welcome, but I hope you will tell me how the scheme works."

That night Carl went over to the home of Lawyer Graves. "How are you, Carl?" said the big man of the village in a friendly manner. "Come to see my new pet, eh? I'll be glad to show you the bird, but I'm afraid he will not show off much tonight. He's homesick, I guess. Won't eat, and I don't know what to do for him. I don't know much about birds, anyway. Wonder if you can give me any information? You are the boy they call 'Professor,' aren't you? You ought to know something about the case."

"Why, Mr. Graves," returned Carl, a little embarrassed, but holding his ground bravely, "I did see something a few days ago about the best food for mocking-birds. It was an item in a reliable book, and maybe you could help your bird if you fed him on this diet."

"Glad you know what is needed. What was it the book suggested?"

"The larvae of certain beetles, either of Tenebrio Molitor or Tenebrio Obscurus. These are the best possible food for any soft-billed birds."

Mr. Graves looked amused and puzzled. "Thank you, Professor, the information is doubtless valuable, but I fear it is no use to me. I never studied up such subjects, and wouldn't know Tenebrio Molitor, or the other fellow, either, if I should happen to meet them. Are you acquainted with the creatures, Carl?"

"I heard you were having trouble in feeding the bird, so I brought some along for you to see if he relished them."

Carl produced a box from his pocket, and opening it, displayed a mass of fat, soft, white worms. He offered one to the mocking-bird, who surveyed it critically for a second, and then devoured it with much satisfaction. A second and third met the same fate, and Carl looked up at Mr. Graves in trimuph.

"It fills the bill, doesn't it?" said that gentleman, with a twinkle in his eye over the slang phrase. "What disgusting creatures they are! But Monsieur Mocking-Bird does not indorse my opinion! Evidently the new food suits his taste, but the question is, how am I to get enough to satisfy him. Do you think you can keep me supplied? And what would you charge?"

"But I ought to explain," said Carl, "that these are only common meal-worms, grubs hatched in bran, shorts or flour from the eggs laid by the beetles I spoke of; they are nothing rare, though they are valuable as bird food. Perhaps you could get some yourself."

"So that's what they are. I have heard of meal-worms, but I'm sure I would not know where to get a supply. My wife is too good a housekeeper to raise them in our flour, and I could not expect a grain dealer to confess he had them in stock. I must depend on you—if you really have any way of getting them."

"I could furnish enough for awhile, anyway," said Carl. "As to price, I wrote to several firms in the city, places where birds and bird supplies are sold. I received word they had none just now, but thought they could get them for me at twenty-five cents a dozen. That seems a big price."

"Well, I will pay you that till the bird can pick up an appetite, or maybe your supply will not hold out. Bring over some more right away, please."

Carl left the lawyer's house that night a very well satisfied boy. His next step was to take measures to supply the demand that had been created. He went around to several of the neighboring farms, and obtained all the old, spoiled bran and meal he could find. The farmers were glad to be rid of the stuff that he carried away in triumph. Little he minded the fun they made of him.

He knew that for Lawyer Graves' bird he must get full-grown worms, but he was looking forward to raising a crop for sale to the dealers, and for this he made preparations. A quantity of bran was placed in a heap, some pieces of cut raw potatoes mixed with it to furnish moisture, a few beetles caught and introduced to their new home, and the whole covered with old carpet. By fall he would have a crop of worms to sell to city dealers at the low wholesale price, probably getting about two dollars a thousand. But Carl estimated that even at one dollar and fifty cents a thousand he could make a fair sum when added to what he would receive from Lawyer Graves.

Some weeks later his father's attention was atracted to the piles in the barn chamber. "How is this, Carl?" he questioned, "I thought you were going to get rid of this musty stuff, and now there is twice as much as when I gave you permission to use it. I think it is time you explained, young man."

"I have been using it, father," returned Carl. "I have been raising crops in it, a new kind of crop, but it pays pretty well. See here," and Carl drew out his purse, and counted out dollar after dollar before the eyes of the astonished farmer.

"Whew!" exclaimed his father in surprise. "Do you mean to say you have earned all that this summer? Why, you haven't been away from the farm a day, and you have attended to your chores regular. I don't see when you earned it or what the bran had to with it."

Then Carl told the whole story, and showed his strange crop to his perplexed father, who could scarcely believe that there could be a market for "vermin." There was a new note of respect for his boy in the tone in which he addressed him.

"Well, I must say, Carl, there is no other boy who would have known enough to take advantage of such a chance. And you say Lawyer Graves is glad to get them at that big price? Strange cattle you have been raising here without my knowing! And you expect to be able to sell all you can raise in the city? It's the queerest thing I have heard of for many a day. When they hear of this the boys won't make fun of you any longer."

"I reckon they'll call me 'meal-worm' instead of 'Professor,'" returned Carl. "Please don't tell them yet."

But it was hard work for the father to kep still on the subject. When a few days later Walter was complaining that he had not been able to earn but a dollar or two all summer, the father could not resist saying:

"Maybe the Professor could help you out. Eh, Carl? Couldn't you do something for Walter?"

"Carl!" returned Walter, scornfully. "Yes, to be sure. How about the wonderful schemes he was going to invent for getting money out of nothing on this old farm? I'd just like to see how much money he has earned this summer."

Carl pulled a pocketbook out of his pocket and handed it over to his brother without a word. Walter took it in astonishment, whistled at its bulky appearance, and, slowly opening it, drew out bills and silver.

"Do you mean to say, Carl, that you have earned this money?" he asked, incredulously.

"I earned it myself, on this farm and without capital," replied Carl. "Come out to the barn with me and I will show you what I have been raising."

Walter, his mother and the two little brothers all followed to the barn. When the strange crop was seen and the business fully explained, Carl gained a new station in the family esteem. "The Professor" became a title of honor instead of a teasing nickname. And in the future Carl will have a chance to become a trained scientist, for he has proved his ability, and his queer ways are now set down to genius, not stupidity.

This picture represents two of our subscribers: Maurice Stimson and Wilber K. Miller, Owensboro, Ky., engaged in their favorite pastime.

The boy who is thoughtful and considerate of his mother, and his brothers and sisters, is a gentleman, and everybody who knows him will find it out; while the selfish boy will sooner or later reveal his character, and everybody will dislike him. And, again, the boy whose manners are good at home is sure to have good manners everywhere.—Record.

WALTER TOOK IT IN ASTONISHMENT

THE ANTEDILUVIAN

By ANNA D. PATTEN

PROFESSOR BISBEE was sometimes called an old fogy. Perhaps the title was justly given. Never having been a dozen miles from his native town in New England, he was naturally biased a trifle in his method of formulating the youthful mind. He did not believe in innovations. Other schools might adopt new methods and up-to-date text books; Professor Bisbee still clung to the old regime. Heretofore, it had borne good fruit, for Oak Hill Academy had the reputation of being one of the best managed schools in the country. The roll of the institution included names from every state in the Union, but the last few years had shown a noticeable falling off in the list.

Although the Professor was getting along in years, he was as strict in the solution of an algebraic problem as in his palmiest days, and his wife, in spite of slight rheumatic touches, was as careful as to the regularity of meal times as she had been in the past. It was the Professor's queer notions as to holidays that caused the trouble. He thought these national observances a sheer waste of time; they broke in on the trend of daily duties and served to distract the juvenile mind. The trustees argued with him in vain. They had even talked of deposing him, but at every session there was always a dissenting vote. He was as much a part of the institution as the old desks, disfigured by long usage. The boys were not so sentimentally inclined. They held an indignation meeting on the night of April 19th. All that day, while they had been penned up in the chapel, the boys at Braddock Hall were marching through the streets to the sound of fife and drum, and indulging in patriotic speeches on the historic ride of Paul Revere.

"We will write a petition," said Bob Rivers, the spokesman of the party, when they had all assembled that night to take action. "Word it nicely, you know. State how much we appreciate his services, etc., but we think a younger man might fill the place to better advantage. I tell you, if we take every boy after a holiday in school we won't find one but will sign it."

There were none present who objected: The thought of the day's injustice rankled deeply, and each one stepped forward briskly to put his name to the important document.

"There!" said Bob, when the last signature had been appended, "I rather think 'The Antediluvian' will have to change his ways when he sees this or quit the service!"

He was shaking it gleefully in the air when the door opened a crack and a curly head appeared in the aperture.

"What are you boys up to? Did you know it was half past eight? Lights out at nine, you remember."

Bob tried to slip the paper out of sight, but his sister Rosalie's sharp eyes were too quick for him.

"What's that, Bob? Come, tell me, that's a good boy!"

Bob folded it up hastily.

"It's—it's—only our base ball score." His eyes evaded his sister's searching gaze. "Now, do go off, Rosalie. We don't want girls around!" Bob tried to hide his sense of wrong-doing by a show of bravado.

"Those boys are up to some mischief, I know," said Rosalie, when she joined her roommate a moment later. "I think it is something about Professor Bisbee. I do hope they will not do anything to hurt his feelings. I never shall forget when we had the malignant typhoid, how the Bisbees nursed us, night and day, and Miss Sophy took it and died! I don't think we could ever make it up to them for losing her, do you?" and Rosalie winked away a sympathetic tear or two.

"No, but I think we ought to try," answered Jess, softly, "for, do you know, I think they are having a pretty hard time. The Professor hasn't had a new suit since I can remember, and Mrs. Bisbee really looks a trifle shabby, although she tries to hide it all she can. You know they have so few pupils now, and the expenses are about as heavy."

"I tell you, Jess! I have a plan," and Rosalie clasped her hands around her knees and looked at her friend reflectively, "let's give them a testimonial—a token of our esteem, you know; get every girl to give as much as she feels able—and then write the nicest kind of a letter to send with it—"

"Just the thing," said Jess delightedly, "and I will head it with the ten dollars papa sent for my month's allowance!"

"I've only got five left of mine! Well, that will make fifteen. We will canvass the school tomorrow. Isn't it lovely, Jess?" and Rosalie caught her friend by the waist and waltzed her around the room.

The next day passed like every other day at school. Desks were opened and lessons droned off monotonously. An outsider would have noticed nothing unusual, but to those familiar with the drift of things there was an unmistakable change in the atmosphere—an oppressive quiet—the calm before the storm. The boys wore a strangely subdued air and kept their eyes steadily turned away from the girls' corner, while the latter seemed to be secretly elated and keeping a steady rein over their spirits, lest they give way.

The Professor was blind to it all as he leaned back in his chair, poring over his book through his large spectacles, or inclining his head to either side to catch the low replies. He had been growing more feeble of late, and today it was very marked, as he climbed to the platform and sank wearily into his chair. Impulsive Bob, who was inclined to regret his rash deed, seemed to notice this for the first time. Those forty years of faithful service stabbed him to the heart, but it was too late to retract; the others would ridicule him if he held back. He was too confused to look up when Rosalie rallied him on his sober looks as she passed him when the class was filing out at recess.

"Over one hundred dollars," she confided gleefully to Jess, when she joined her in the cloak room. I never thought of asking the teachers, but Mr. Mead heard about it and said he would like to add twenty to the fund, and he had no doubt the other instructors would like to show their appreciation also; and we have not been around to half the girls yet," and Rosalie's eyes were round with anticipation.

Jess clapped her hands gleefully.

"Isn't it a grand success? All the girls have been just lovely! Why, even Maggie Brent, the charity pupil, brought one dollar to me today that she had earned by selling matches at odd moments."

"But how shall we present it to him?" queried Rosalie, as she bit her pencil point reflectively. "I think the best way would be to place it in a sealed envelope and lay it on his desk tomorrow morning. Those boys are to hold another indignation meeting tonight, but I can't find out what it is about. Well, whatever it is, they will be ashamed to do anything hateful after we have set them so good an example!" and Rosalie placed the precious testimonial in her pocket and started out on her canvassing tour of the school.

The next morning, when the rest of the scholars were giving a last hurried glance at their lessons before the bell rang, Rosalie stole down the stairway on her way to the schoolroom. She met Johnny Somers coming out of the upper recitation room with a large envelope in his hand. Rosalie's suspicions were immediately aroused.

"What have you there, Johnny?" she asked, stepping quickly in front of him

Johnny looked at her timidly.

"Your brother Bob—" he began hesitatingly. "He said I was to put this on the Professor's desk before school began—"

"Oh, yes, I know." Rosalie had made a sudden resolve. "Give it to me, Johnny. I have something for the Professor, too. I will take them together."

Johnny gave it up a little reluctantly.

"He said I was to be sure and let no one see it, but you're his sister. I s'pose it's all right."

"Yes, of course it is. Now, Johnny, I'll give you ten cents if you'll go down to the stationer's and get me a blank book. I want one for my examples. You will have plenty of time before the bell rings."

Johnny was only too eager to earn additional change, and started off at full speed. That would keep him out of the way till school time. Hadn't her mother cautioned her, the last thing, to see that Bob did not get into mischief. If he was not doing anything wrong, why was he so careful to keep the whole affair secret? She darted into a window recess and tore open the envelope with trem-

HOW MY HAIR TURNED WHITE

By Ex-Judge J. C. Julius Langbein

"THE MEDAL of Honor Legion of the United States of America" is composed of regular and volunteer officers, soldiers, and marines who have received a medal of honor from the Congress of the United States for conspicuous gallantry and bravery upon the field of battle above and beyond their line of duty. It may not be known to my readers that I am its commander in chief. But it is not my purpose at this time to tell you about this order, but to tell you of something that happened to me once.

It is not often that a young man, or a man of middle age, has his hair turn prematurely white in one night by a natural process and without the use of chemicals, but I can assure you that mine did, and it has been white ever since. The incident will never fade from my memory. I had gone through the Civil War as a drummer boy in a gallant fighting regiment known as the Ninth New York Volunteers (Hawkins's Zouaves) and come out unscathed. I had several narrow escapes, such as having a horse shot under me, the tassel of my fez or zouave cap shot away, and my drum riddled with bullets, but I can assure you that none of these happenings were as harrowing or hair-raising as what I am now about to relate.

At that time, I was about thirty-four years of age and a judge of a civil court in the city of New York. It was the day before Thanksgiving in the fall of the year 1880 and George A. Moulton was my stenographer. We had always been on intimate terms and frequently went out with our guns for a day's shooting. I had not been in very good health for some time, having overworked, and on the day in question, the court having adjourned, George said to me, "Judge, you haven't been looking well the past few days. You are overworked. Come up to Greenwood Lake with me for a few days and have a shoot and a rest. You need it." I accepted the offer, and that night off we went with our guns and outfit.

Greenwood Lake is in the State of New Jersey and I should say was about six miles long and three wide. It was then and still is a favorite summer resort. On the side of the lake opposite the railway station, which, by the way, is called Hewitt's (after ex-Mayor Hewitt of New York), lived Will DeGraw, the mail carrier for that settlement, whose father kept a well-known road house or inn known as DeGraw's. Will was as fine a specimen of manhood as I ever saw. He was not only an expert boat-puller, but an athlete as well. His physique was splendid, and had been developed to the highest point of perfection by his daily work, which, in summer, was pulling a boat over the lake and, in winter, skating and other outdoor exercises. The weather was exceedingly cold and the lake was frozen over solid, except in the center, where it was open. Will met us at the station, gave us a good rousing welcome, and promised us a good time—how good it was will appear later on; if it was not hospitable, it was icy, to say the least. After he had obtained the mail we started for his house, talking and laughing all the way. Will had only been married the week before so we were welcomed not only by his father and mother, but also by his young and admirable wife.

A WILD TRIP ON A DARK AND STORMY NIGHT.

We spent that evening telling stories and in having a good time generally, and the next day was given up to rabbit shooting. About nine o'clock that night, Will said he would get out his sled and go after the mail. He asked George and me to go with him, which invitation we at once accepted, George taking his skates with him. DeGraw's house was about three miles from the station up the lake shore, and in the summer time Will was accustomed to drive to the station, while in the winter time, the lower end of the lake being frozen up to nearly opposite the house, he crossed on his sled, which he hid in the bushes on the shore of the lake.

When we started out the night was very dark, the wind was fiercely blowing and howling like a demon, and a fine, thin, cutting sleet of snow rapidly falling, at times making it impossible to see your hand before your face. We were wrapped up in overcoats and wore thick gloves, and I carried the mailbag on my arm. We found the sled, which was an ordinary schoolboy's sled. I sat on the sled in front with the bag and lantern, Will sat behind me, while George skated and pushed us along. Will had cut a broom handle in halves and on each side he had fastened a sharp nail or spike, by means of which he helped to push the sled along. The only object we had to guide us was the light at Hewitt's, about three miles away, which was our destination.

Off we started in high glee and at an exceedingly swift pace. At times we were compelled to stop talking and laughing for fear of losing our breath altogether. Thus we sped along in the silence of the night, and in the face of the driving sleet and snow. It was not long before we lost sight of the light, the station master having put it out and gone home thinking that Will was not coming. We kept on our course, however, as we thought. Soon we saw the light again, as we supposed, but later learned, to our horror and surprise, that we had been going towards a farmhouse light more toward the middle and toward the open part of the lake.

On we sped, joking and laughing, totally unconscious of our impending danger. At times I heard the ice cracking and remarked about it, but so swift were we going that it scarcely could be heard before we were over and past the danger. At one time Will asked George if he was not steering us too far to the left, but George answered, "No, there is the light straight ahead of us. Don't you see it? We are making a bee-line straight for it." His answer was reassuring, for, sure enough, there was a light straight ahead of us; and so on we sped.

INTO THE ICY WATER.

Finally Will excitedly and emphatically declared that we were going too far to the left. Then all of a sudden the sled disappeared from under us, the light of the lantern I was carrying went out, the mailbag disappeared, and we found ourselves floundering in the cold and icy water. We were going along so swiftly that I, being ahead on the sled, was carried under a cake of ice and had my chin and forehead cut, but, fortunately for me, the cake was thin and I managed to push my head through it and come to the surface. George being on skates and pushing, was thrown almost over both of us. No one of us knew whether the others could swim, but we were "game." Floundering in the water among the broken cakes of ice, we each determined not to catch hold of the others. We each had on overcoat and gloves, and must have weighed at least three hundred pounds.

As illustrating how entirely unconscious we were of our danger, just before and at the time this sudden plunge and stoppage happened, I was telling Will and George a story about an Irish superintendent of a gold mine out in Colorado who at noontime had shouted down the shaft, "Hello, there, how many of yez are down there?" The answer came back, "Seven, sir." "All right," he replied, "let the half of yez come up for dinner." We were laughing at this story and at the idea of three and one-half men coming up, when down we three went and our laughter was suddenly silenced.

Fortunately I was a good swimmer and notwithstanding the cold, I struck out and soon had hold of the ragged edge of the ice and was endeavoring to raise myself. My weight, however, was too great, and every time I tried to raise myself the ice broke and I was floundering in the water again. This was the way with all of us. It must be remembered that all this time it was pitch dark. We could scarcely see each other. The wind kept on howling and blowing the sleet and snow in our faces.

Finally I reached some ice that seemed to be firm enough to hold me, but by that time I was so stiff and frozen with the cold and the icy water that I found it utterly impossible to lift myself up. In fact I could only move my arms and that only with the greatest difficulty and with exceeding pain and suffering. My hat was off, and, feeling of my hair, I found that it was a mass of icicles. I made a number of efforts to hold on to the ice, but all in vain. Hope and "grit" were fast vanishing, and I began to feel that languor which I knew well was the forerunner of death. It began to creep all over me, beginning with my feet and working its way up along my body. I realized what it meant, but seemed indifferent to it. I felt it extend to my hip and loins, but rather relished the idea of its progress to my heart and other vital organs. The fact is I was fast becoming like the man who is gradually freezing to death, to whom at the end comes a beautiful dream, the dream of death. I could feel its grasp gradually circling round my heart, and I began almost insensibly counting the seconds to see if I could be able to count the next five, then the next five, and so on until at the last came oblivion. Suddenly the green blinds on my father's house appeared before me in fancy's vision, and dreamingly or unconsciously brushing my hand across my face to clear my vision, I realized that I had my gloves on. I don't know what put the idea into my head, but it suddenly occurred to me that if I could get at my knife from the pocket of my pants, I could open the blade, stick that into the ice, and thus hold on, and may be draw myself up on to the ice. It was a hope suddenly acquired but soon dispelled and lost, for after great efforts to get my knife out, I found that my fingers were frozen stiff, so that it was impossible to open the blade. But this operation, together with the vision of the green shutters of my father's house, seemed to have given me new life and new hope. I suddenly remembered how in crossing ice or in skating in my boyhood days I had frequently attempted to kick a piece of wood or a cigar imbedded or frozen in the ice, and how obstinately it resisted my effort. This gave me a new idea. I made a desperate effort to pull off my gloves, intending to throw them on the ice just within my grasp, and after they had frozen on, pull myself up and out by means of them, but my gloves would not come off; they were frozen tight to my fingers. I then put one of them into my mouth, treading water all this time to keep my body straight and my head up. After thus heating it a little, I finally managed to bite it off with my teeth. Then I threw it on the ice. How long it was before it froze I don't know, but it did, and this gave me new hope. I fought the feeling of numbness that was again gradually coming over me by treading water violently. At last I ventured to feel the glove, and great was my joy when I found that it was frozen fast. I slowly put my weight on it, and gradually got the upper part of my body on the ice, but farther than this I could not get, no matter how hard I tried. I was about to give up in despair.

HELP COMES AT LAST.

Just then I heard George call out, "Hold on, judge, I guess I'm out." Turning my head I could just see the dark form of a man within a few feet of and evidently endeavoring to reach me. But you will wonder how George got out. It was by means of his skates. They were of the old fashioned kind with sharp points on the heels. He had managed to float on his back and work his feet over on an ice cake of jagged form, and, striking his skates in the ice, had gradually but surely drawn himself out. Then he began his search for me and found me in the position I have just described. He reached out his hand to me, but in my eagerness to grasp it the cake of ice broke under me and I was again soused into the freezing water. I, however, soon managed to get within his reach again, and this time was hauled out to a place of comparative safety.

It was at this juncture that we heard Will cry out, "I'm going, boys, I can't hold out any longer. I'm losing my grip." "Hold on a minute, Will, I'm out," I cried, "and we'll help you." In my eagerness to get to where the voice came from—for it was too dark to see—I did not consider the danger I was running, and before I knew it the ice cracked and broke and I found myself soused in the water again, but this time where it was not so hard with George's help to get out. Then we hit upon a plan to get Will out. Being the lighter man of the two, I was to slide out on my stomach at full length along the ice to the icy hole where Will was battling for life, while George was to lie at full length on his stomach behind me, holding on to my feet. In this manner I reached the dark spot where Will was still struggling in the water, grabbed hold of his hands, and then, by carefully working our way backward, we finally landed him. Making our way to the shore some two miles distant, we broke into a run, for, to use an old expression, "our hearts were way up in our mouths."

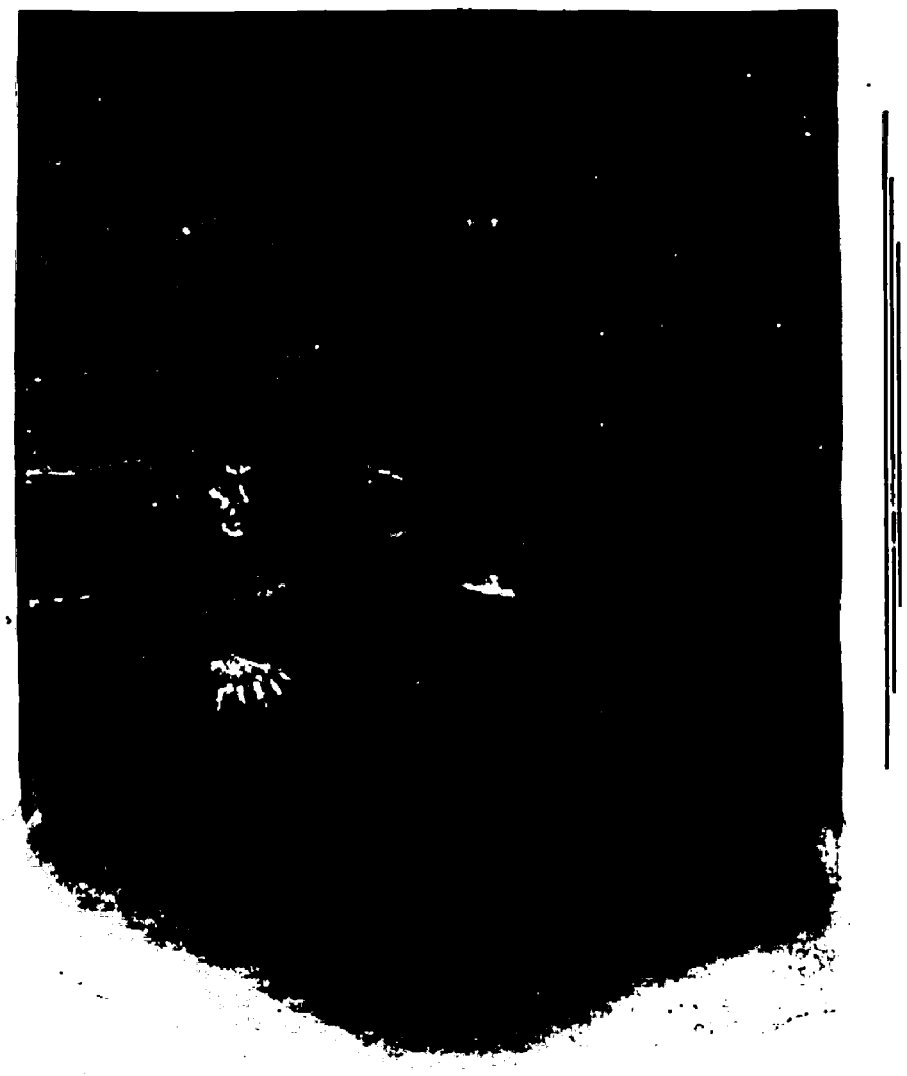
When we reached DeGraw's house, the icy water dripping from us and hatless, Will's wife fainted away at the sight of us. It was not long, however, before we had changed our clothes and were sitting before a roaring hot log fire.

A little later, on looking into a mirror, I discovered that my hair was turning white; indeed it was not long before it was completely white; and it has remained so ever since.

In closing I would say that had we each relied on himself that night and been "game" to the last, none of us would have escaped, and I would not now be alive to tell you this story. I close by giving you the first verse of the poet John G. Saxe's lines entitled

"GO IT ALONE."

In the struggle for power, or scramble for pelf,
Let this be your motto, "Rely on yourself."
For, whether the prize be a ribbon or throne,
The winner is he who can "Go it alone."



"I FOUND THAT IT WAS FROZEN FAST"

AFTER CHRISTMAS TREES

By FRANK H. SWEET

TOM MARSHALL and Fred Alwood had jumped to the bank of the Maine river, and were now waiting for their friend, Win Dubbs, to join them. The slope above, as far up and down as they could see, was covered with a thick growth of young balsam firs. The boys' eyes glistened.

"No trouble getting a cargo of Christmas trees here," said Tom emphatically.

"That's so," agreed Fred, "provided the owner hasn't already leased them and will make reasonable terms."

"Well, we'll soon find out," cried Tom. "Come, hurry up there, Win!"

But Win Dubbs shook his head.

"Wait a minute, fellows," he said. "I must confess something before you go up yonder. It—it didn't seem necessary to tell before, though I suppose it was cowardly. Afterwards I will leave you."

"What are you driving at?" interrupted Tom scornfully. "Of course, we understood about your working all the time out of school hours, and not taking time to join in our fun. But we respected you all the more for that."

"Yes, I supose so," a little drearily. "But that isn't what I mean. I am not merely a poor boy working for his schooling. It's worse than that. I—I didn't mean you to know—I am an impostor."

Tom looked at him curiously.

"Well, what was the matter, then?" he asked. "You certainly didn't want to come up this stream, though its mouth looked just as promising as the one you did want to come up. What was the trouble?"

"I was a coward," Win answered calmly. "I was trying to avoid telling what I ought to have told years ago. See that house yonder?"

They followed the direction of his fingers, but shook their heads.

"Only firs," Tom declared.

"Just near the top of the slope there, where the firs are a little thinner. Only a small bit of the roof shows. I believe there is some smoke rising above the trees now."

"Y—es," I think I do see it," hesitated Tom, "the smoke anyway. But it must be a pretty small sort of house to be hidden by those trees. How'd you ever happen to notice it, Win?"

"I knew it was there, and saw it even before we cast anchor. It is a pretty small sort of house, scarcely higher than one's head, and only two rooms with dirt floor; but it's plenty good for the people who live in it. It's my home."

PART II.

What the Cruise Brought Win.

They looked at him incredulously, then laughed.

"Oh, come, come, Win," Bert protested; "don't get off any of your jokes now. You never saw the Maine coast before this trip. You'd have betrayed some knowledge of it if you had."

"It's my home," Win repeated. "I ran away from there when I was only nine years old. And I did it in the very dread of my life, and to get something to eat. Afterwards, when I found there were schools and a different way of living, I worked to reach them. One of my vivid recollections of the house up yonder is of frequent skurryings among the firs to escape a dreadful visitor who was seeking to carry one of us off. Later, I found the man was a sheriff, and that he was after my father or uncle or one of my older brothers. My uncle's house was just over the ridge, and I suppose it is still. At that time he owned the land along here, although it was too poor and valueless to sell. He was like the rest, and it was chiefly owing to him that I ran away. A few weeks before, in a fit of rage, he broke one of my arms, and before it fully healed I left home. You boys can have no conception of what that home was like. You have read about criminals, I suppose; but not of a whole household, like mine. I—I can hardly believe it myself. It seems more like a horrible dream."

The boys were gazing at him strangely, with the horror of the recital showing plainly in their faces. Win saw, and his own face paled a little more.

"Now, you understand why I was so insistent about the other stream," he said in a low voice. "When you first spoke of the Maine coast I did not suppose there was one chance in a million of meeting my people; and when we reached it, you remember, I proposed stream after stream, but for some reason none of them seemed quite what we wanted. I suppose I was getting desperate when we came to the last stream before this, and advocated it more strongly than I ought. I had a feeling that my family was something horrible, something I must avoid more persistently than I would death; and that if by chance I should meet them all I had done or hoped to do would be lost. It was cowardly, of course, and was owing to my leaving them when so small, when the full, unreasoning terror of them possessed me. I can never get away from that feeling, and it is always in my dreams. But you fellows must excuse me," with a shiver. "If you don't mind I'd rather go up to the house alone; then I'll cut across the hills toward some other part of the world and try again. I'll say good-bye to you now."

At this they all sprang upon him, Tom with an arm across his shoulders, Bert patting him hysterically upon the back, and Fred pumping his hand up and down without any appearance of stopping. There were tears in Fred's eyes.

"Of course you ought to have told us years ago," he cried gruffly. "It wouldn't have made a bit of difference—at least, I think it wouldn't. Anyway, I'm glad you've told us now. And every one of us think a whole lot of you, more than we ever did. You've had a tough time of it, old fellow, and had to show grit, but now you've got to let us in and share a little. You're going back with us, and to college just as we've planned, and you're not going up to see your—those people alone. We understand now, and maybe the whole crowd of us can make it easier. Anyhow, we're going. What do you say, boys?"

"That's right," cried Bert and Tom in a breath.

"Of course it is," declared Fred, still winking the moisture from his eyes. "And we'll do the thing right up now. The quicker it's over the better Win will feel. Then we'll look up the owner of the land and arrange for the trees. Come."

He started briskly up the slope, still grasping Win's hand; and Win, his lips again quivering, allowed himself to be drawn on with them.

As they approached the house—which was little more than a hovel, with the roof beginning to fall in, there was at first no signs of life; then a harsh-featured woman hobbled to the door with a pipe in her mouth. The boys looked at Win with inquiring sympathy in their faces. He understood, and shook his head.

"No, it isn't my mother," he answered in a low voice. "I do not remember her. This is my step-mother, and, if possible, she was even more cruel than the others."

The old woman had turned and was speaking with some one inside; but as they stopped in front of the hut she suddenly closed the door behind her and came to meet them, her face suspicious, defiant, alert.

"What d'ye want?" she demanded fiercely.

"Does Mr. Dubbs live here?"

"No, an' if he does he ain't to home. What d'ye want?"

"We want to see the owner of this land," spoke up Tom. "That's our schooner down in the river. We came after a load of Christmas trees."

Instantly the old woman's manner changed. A sheriff would not come on a schooner; and, besides, these four were scarcely more than boys.

"Pete! Jimmy!" she called shrilly. "Come out here. It's nobody but tree buyers."

The door opened cautiously and a young man a few years older than Win appeared. Behind him skulked an old man. Both were brutal-looking and disreputable in the extreme.

"I'm the owner," rasped the old man. "How many trees d'ye want? Show the color o' your money fust."

"We want proof of your ownership first," said Win, stepping to Tom's side. "If that's all right we'll want a schooner load."

He tried to speak quietly, but there was an odd, apprehensive quiver in his voice. The old terror was still influencing him. They looked at him curiously, but without recognition. The old man shuffled inside, presently returning with a folded paper, which he handed to Win.

"There's proof, drat ye," he snarled. "Look at it an' see for yourself."

Win glanced at the paper and started.

"Why, this is made out to Winfield Dubbs," he exclaimed wonderingly.

"What o' that?" aggressively. "Win's my son, an' he's dead, an' this here's his brother. Of co'se the prop'ty comes to us. If ye've got any money, buy the trees an' stop fussin'; if ye ain't, say so."

"How did the land come into your son's possession?"

"An old fool uncle willed it to him. Seemed to think he'd done harm to the boy by breakin' his arm, an' when he died he give Win his land. But what ye doin'? angrily, "hand me back that paper." For Win was slipping it into his pocket.

"No, thank you, father. Don't you know me?" and Win took off his hat and stood before them, his face pale but calm.

They stared at him a moment, their faces growing dark.

"'Tis Win," the old man muttered, scowlingly. Then his voice suddenly became whining.

"Ye'd ought to be sendin' us more money'n ye've been doin', Win," he complained. "Eight dollars a month ain't hardly 'nough for one, let alone a big fambly like ours. Now ye've got the deed ye'd ought to sell the land an' share round with us equal. The old woman an' Jimmy an' me have tried to sell lots o' times, but nobody'd buy 'cept we could prove ye was dead. Ye'll share now, Win, won't ye? Ye allers was a good boy."

"No, I shall not share," coldly. "The money would do you no good. It would all go in a month. But I will continue to send you a little from time to time. Come, boys."

They followed him silently, having no words for the suffering they saw in his face. But before they entered the firs Fred turned.

"If you three will come down to the schooner," he called, "we'll give you all the provisions you can back up the hill. And I think we can find some better clothes you can have, and perhaps a few household utensils for Mrs. ——" He paused abruptly, for the old woman was not there, she had slipped away.

They found her halfway down the slope, appearing suddenly in front of them from the firs. Her face was wrinkled into a conciliating smirk.

Stamps, Coins, and Curios

INQUIRERS MUST NOT SEND STAMPS, COINS OR CURIOS FOR EXAMINATION AS WE CANNOT BE RESPONSIBLE FOR THEIR SAFETY. A CAREFUL DESCRIPTION OF THE STAMP OR RUBBING OF THE COIN ON WHICH INFORMATION IS DESIRED WILL BE SUFFICIENT.

Stamp Notes

After February 1 next the American Bank Note Co. will manufacture all United States postage stamps. Under a contract the concern must deliver 27,000,000 stamps daily. The American Bank Note Co., formerly the Continental Bank Note Co., made the postage stamps used by the government from 1873 to 1894, since which time the Bureau of Engraving and Printing at Washington has turned out all the adhesive stamps. According to Warren L. Green, president of the bank note company, the government decided to again employ a private institution because it can do the work cheaper. What will the friends of municipal ownership say to this?

At the Universal postal congress recently held in Rome, it was decided that after October 1, 1907, the rate for foreign mail matter would be 5 cents for each ounce and 3 cents for each additional ounce. The present rate is 5 cents per half ounce.

Personal fees in the U. S. consular service have been abolished and now every consular certificate must be stamped. The State Department has furnished all of our consuls abroad with the stamps, which consist of seven denominations, viz: 25c, 50c, $1, $2, $2.50, $5 and $10. The stamps are oblong and bear the inscription "American Consular Service," "Fee Stamp."

The 16 centavos stamp recently issued for the Philippines bears the portrait of Admiral Sampson, who commanded the American squadron at Santiago in 1898.

Be particular about the condition of the stamps which you place in your collection. Torn, heavily cancelled or badly off centre stamps should not be admitted unless very rare. The wisdom of this course will be found in after years, when, if you desire to realize on your collection it will not be subject to a heavy discount by reason of its containing a lot of stamps listing high in the catalogue, but of very little value.

The Numismatic Sphinx

McCulloh Zimmerman: The half dollars of the twenties and thirties sell for seventy-five cents at the dealers. The old copper cents from 1816 sell for from five to ten cents each. When in fine condition they will often bring a higher price. Your others are quite common. Donald Harkins: Your rubbings are from the common 2 heller and 2 fillers of Austria and Hungary. Fred Gerlach, Edw. Biele, and Karl Oleson: Your coins are all very common and will bring only face value. Walter Hinker: Your coin is a three-cent nickel piece of 1865. It is very common. Percy C. King: Your English and U. S. coins are all very common. The Indian coins sell for ten cents each. Thomas Sandham, Jr.: The five dollar gold piece of 1834 will not bring a premium. E. C. Rein: The coins of France, Canada, Belgium and U. S. that you send rubbings of are all comparatively common, none selling for over five cents each. Emmett M. Reed: The gold dollar of 1856 is worth at least $1.75. Dime of 1853 common. John A. Heberling: Your rubbing is from an 8 real piece of Spain (Charles IIII, 1792). It was struck at the Mexican mint and has only a face value. The same may be said of most all of the old Spanish and Mexican silver. A. B. Dover, N. Y., can obtain all the information he desires if he will address any of the dealers in coins. Joseph Wolongevig: (1) Thaler of Bavaria worth about a dollar. (2) The 1865 nickel five cent piece has no premium. (3) The cent of 1877, in fine condition, is worth about ten cents. J. E. Ward: The half cent of 1834 is worth fifteen cents. Your spielmarke or spielmunze has no value. Roland Lacey: Your coins are quite common, selling at from five to ten cents each at the dealers. Sidney Southmayd: No premium on the dime of 1854. Herman Leichsenring, Jr.: There is no premium on the 1883 V nickel without the word "Cents." Mrs. H. T. Kirkland: All of the gold dollars now bring a premium of from $1.75 upwards. Your 1795 dollar loses much of its numismatic value owing to its being holed. Only the half dollar of 1853 without the rays and arrow points will bring a premium. Your other coins, face value only. Geo. D. King: The half-dollar of 1818 sells for eighty-five cents. Others are quite common.

THE AMERICAN BOY, Detroit, Mich.

The Story of the Spanish Coinage

Europe has undergone many changes in its divisions, and has been ruled over by many dynasties during its historic period; and Spain was ravaged in turn by Norsemen, Vandals, and Visigoths. These latter held sway over Spain and Portugal, but they were in course of time destroyed by the Moorish conquerors from African shores. The coinage circulating in the Spanish peninsula at that period was barbarous, and it is said to have consisted chiefly of gold trentes, issued from mints at Barcelona, Toulouse, and Toledo. Some small silver coins also of this period—the sixth to the eighth century—exist. It must be remembered that Spain, as well as the greater part of Europe, was dominated by the power of Rome during the first three or four centuries of the Christian era. The small silver denarii, as well as the fine series of bronze sestertii, dupondii and smaller "third brass," then circulated in large quantities throughout the Empire. It is therefore conjectured that the moneys bearing the well-executed portraits of the Roman emperors of the latter days of the Western Empire continued to be the chief coins employed by the scattered settlers in Spain for many centuries after the Empire of Rome had fallen.

The Moorish rule seems to have largely formed the habits and customs of the people of Castile, Arragon and Province, and was not without its influence upon the types of coins struck in Spain long after the foundation of its kingdom. Several authorities concur in affirming that the coins of Arragon in the latter part of the fourteenth century were

FIG. 1.

all modeled upon the English groat. This was probably the case, for the close alliance and the interchange between the two powers during times of peace was considerable. The marriage bonds have oftentimes effected an influence upon the destinies of Spain, and several times have been the means adopted whereby the extension of the Kingdom and its consolidation has been brought about.

The marriage of Ferdinand and Isabella in 1479 is an important illustration of the fact just related. The position of the House of Castile, which was then in the ascendancy, was largely under British influence, the bonds between the two countries having been forged two centuries before, when Edward I. of England made Eleonora of Castile his bride.

THE BOY PHOTOGRAPHER.

EDITED BY HUGO ERICHSEN.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

FIRST PRIZE PHOTO, BY LELAND THOMPSON, LIGONIER, IND.

Same Old Excuse

Judge—"Well, my boy, what excuse have you for taking the picture when you were forbidden to do it?"

Small Boy—"Your honor, I didn't know my camera was loaded."—Ex.

The Prize Winners

"Nuts to Crack," by Leland Thompson, of Ligonier, Ind., the winner of the first prize, represents a scene with which every boy is familiar. It is well-posed. In fact, it looks entirely natural and not posed at all, an effect that our readers should always try to obtain in photographing similar scenes. The same remarks apply to the portrait, to which the second prize was awarded. It was taken by Elwood C. Howell, Liberty Center, Ohio, with a No. 2 Brownie, stop 3, exposure 2 seconds.

A Hint on Blocking Out

Blocking out figures, trees, etc., is often resorted to by many in order to separate from their surroundings such objects as the above. There are several preparations sold for the purpose, but for cheapness and efficiency there is nothing to beat a penny stick of Indian ink. This is applied with a fine brush to the gelatine surface of the negative and will be found to answer excellently. If surface of negative is "greasy" and paint refuses to stay on properly, give the negative a rub over with a swab of cotton wool, made slightly damp with ether. The gelatine surface will be found after such treatment to be in a perfect condition to receive the ink, and to retain it wherever applied.—The Amateur Photographer (British).

Our Roll of Honor

Beginning with this issue, THE AMERICAN BOY will confer a certificate of Honorable Mention upon all competitors in our photographic contests, except the prize-winners, whose work is decidedly above the average and merits the distinction. The first to receive this reward of proficiency are: Chas. S. Burlingham Jr., H. Edward Fry, Elmer W. Lyon, Harry R. McMillan, Victor E. G. Emery, Austin L. Moore, Ernest L. Hardy, Robert Lafean, James A. Nisbet, S. Ward Seeley, W. J. Burnside, Chas. J. Corlett, Raymond M. King, W. Earl Berry, S. E. Overly, Harry H. Phillips, Henry Enz, Robert Faige, J. H. Randolph, Willis Haskell Jr., Angie Boughner, E. L. Morehead, E. V. Hefner, J. S. Reynolds, Vernon W. Hutchins, Geo. Yerger, Kenneth Weagant, Edwin M. Jones Jr., and Leroy W. Blaker.

The Letter Box

Vernon W. Hutchins: 1. Yes, it will lessen it to some extent. 2. Yes, the prints will be just as permanent. Cliff Brown: We prefer unmounted prints. Particulars of contest are given on this page. Clarence M. Carson: In order to have prints criticized request should be made at time they are submitted. So many prints are received each month that it is impossible for the editor to remember individual ones. Of the two pictures you sent us this month that of the trapeze act is satisfactory but your lens was not fast enough for the racing scene. E. W. Slocum: Blue-prints are the only photographs that are barred from our competitions. Any size, from a Brownie to an 8x10, is acceptable. Prints on glossy printing-out paper are preferred, because they make better half-tones. In selecting a subject, kindly bear in mind that our periodical is intended for boys. Anything that will interest a good healthy clean-minded American boy will be particularly welcome. Justin L. Patterson: Please note what we say in regard to blue prints. Oscar Anderson: The reply to Clarence M. Carson will answer one of your questions. In regard to the second would say that you probably take your plates out of the developer too soon, assuming that the exposure is correct. Todd C. Robins: You appear to have focused upon the cloth instead of the birds, for most of the latter are out of focus. If the cloth had been much further back, it would not have been noticed at all and the background would have been uniformly dark. Try it!

AFTER CHRISTMAS TREES

(*Continued from page 67.*)

"What'll ye give for a secret, Win?" she demanded.

"Nothing. I don't wish to buy any."

"But if 'twas 'bout you," she persisted; "if—if 'twould prove ye ain't no kin to Pete nor none of us?"

Fred turned to her quickly, before Win could speak.

"If you'll prove that," he cried eagerly, "I'll give you ten dollars myself."

"Show your money."

Fred drew it out, holding it before her eyes.

"There it is," he promised, "and it's yours for the proof."

"D'ye know where old Bill, the trapper, used to live?" she asked of Win.

"Yes."

"Well, he lives there now. You go an' ask him. He helped Pete get ye off a wrecked boat when ye wa'n't nothin' but a baby. Ye had on some good clothes an' pins an' things, an' Pete sold them. He'd likely a-throwed ye into the water then, only he hoped to make some more money from your people, if ye had any. When he didn't he commenced to 'buse ye. There," vindictively, "that's every word true, an' I've said it more to git even with Pete an' Jimmy than for the money! When they got the eight dollars they allers spent it for drink an' tobaccer, an' never give me a cent. If I asked for any they beat me. Now I'm even. You go to old Bill," to Fred, "I'll be down to the boat to-morrer, and if he says yes ye can let me have the money.

Fred slipped the ten dollars into her hand.

"No, I'll let you have it now," he said, "for I believe you've told us the truth. And I'm much obliged."

Win had listened with a great light coming to his face. His hand was in his pocket, drawing out all the money he had in the world, twenty-five dollars.

"Here, Liza," he said, with a quavering laugh that made the other boys turn away suddenly to hide the mistiness it brought to their eyes, "put this in your pocket. It's all I have, but I wish it were a hundred times as much. I don't believe in this sort of thing, and I know you're doing it all through spite; but I—I can't explain what it means to me. Was there any—any name or mark on the clothing—the baby's, I mean?"

"Baby Gifford on some, an' on others jest Winfield. That's why we called ye Win."

"Thank you. I—I—" He swung round suddenly. "Come, boys, let's race to the schooner," he cried. "I've got to run, or—or break."

At the schooner he met them with a bow. They had never seen that look on his face before.

"Come, fellows," he said, "let me introduce myself, Winfield Gifford, at your service."

Then they all laughed and shook hands.

ALL GOING TO BE CHAMPIONS NEXT YEAR

From Boston Globe

Seven American Boy Books

JUST PUBLISHED TWENTY-FIVE CENTS EACH

WE are publishing some of the best of the matter that appeared in the early volumes of THE AMERICAN BOY. Many of our readers never saw the volumes for 1899, 1900, and 1901. Of course all the copies of these early volumes were disposed of long ago to boys who are now men. These volumes contain much interesting matter that our boys will be glad to read. The only way we have of getting it to them is by putting the matter in book form and selling it to them at a small price. The stories are just as good for the boys of 1906 as they were for the boys of 1899 and 1900. The books are substantially gotten up, bound in strong paper, contain an average of 100 pages each, and are printed in type that is easily read. We hope to sell many thousands of these books and have ordered a first edition that we expect will be exhausted by Christmas. Do you not want one or more of these books? You may remit in stamps. The following are the books by name:

Vol. 1. SCHOOL STORIES FROM THE AMERICAN BOY
Vol. 2. HUNTING STORIES FROM THE AMERICAN BOY
Vol. 3. WAR STORIES FROM THE AMERICAN BOY
Vol. 4. A BOY IN THE AMERICAN CONGRESS AND OTHER STORIES, by the Editor of The American Boy
Vol. 5. TURNING POINTS IN A BOY'S LIFE, by the Editor of The American Boy
Vol. 6. STORIES OUT OF MY OWN LIFE, by the Editor of The American Boy
Vol. 7. THE BOY PHOTOGRAPHER, in the nature of hints to the amateur photographer

ADDRESS THE SPRAGUE PUBLISHING CO., DETROIT, MICHIGAN.

Are You DEAF?

I was deaf myself for 25 years. I perfected and patented a small, invisible ear drum in order to help my own hearing. It is called "The Way Ear Drum," and by the use of these drums I can NOW HEAR WHISPERS. I want all deaf people to write me. I do not claim to "cure" all cases of deafness, neither can I benefit those who were born deaf. But I CAN HELP 90 per cent. of those whose hearing is defective.

Won't you take the trouble to write and find out all about me and my invention? Tell me the cause of your deafness. Geo. P. Way, 1220 Majestic Bldg., Detroit, Mich.

PHOTOS 30 for 25 cts. The latest novelty in Photos, 30 miniature photographs, size of a stamp, copied from any picture or tin type. Just the pictures for lockets, watch charms, railroad tickets, etc. Original picture returned in good order. Pictures post paid on receipt of 25 cts., in silver or P. O. money order. We make copies and enlargements of all kinds from any negative, film, or picture. Send for our price list. HERBICK STUDIO, 40 N. 8th St., Phila, Pa.

A Perfect Camera for 50c

To introduce our PHOTO SUPPLIES we will send you on receipt of 50c, coin or money order, this wonderful Camera with outfit and full directions for making pictures 2x2 inches. Has genuine lens and shutter for time and snapshots. Just the thing with which to learn photography. KAPLAN MFG. CO., Dept. 15, 710 W. Polk St., Chicago

CAMERA NOTES

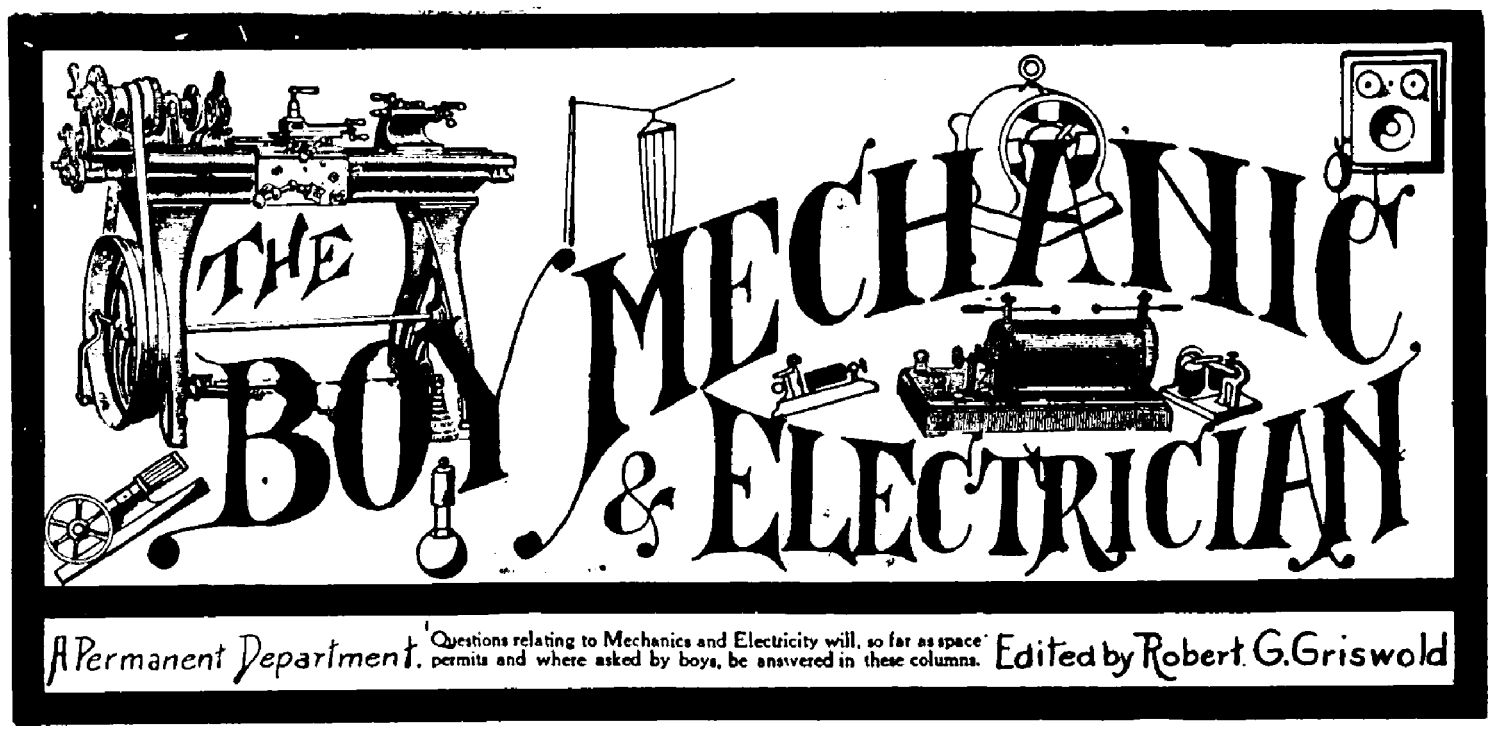
Magazine of Pictorial Photography. $30 in monthly prizes for your best work. Try it **three months** at our expense. Send stamp for current number and particulars. CAMERA NOTES, 373 Lumb. Ex., Minneapolis, Minn.

The Letter Box

Gilbert Pettit—Use a pane of glass instead of the usual ferrotype plate. Clean it thoroughly and dust it over with French chalk. Lay your gelatine prints face downward upon the glass, press into contact with a squeegee and when dry they will leave the glass with a brilliant surface. O. B. Cardwell—There are so many good 4x5 cameras in the market, at

TWO OF OUR ADMIRERS
Photo by Sara Weaver, Plattsburg, N. Y.

the price you mention, that it is difficult to single one out as the best. You will have to make your own choice. Yes, the camera you mention is all right and generally gives satisfaction. A double extension camera is only required when a number of lenses of varying foci are employed. For an amateur, requiring a good all around lens, the double combination rapid rectilinear is undoubtedly the most suitable. Very rapid plates are required for snap-shot work; there are many excellent brands. I have never tried a film-pack, so cannot give an opinion in regard to it. E. Claire Swan—If your camera is not entirely satisfactory, write to the manufacturers about it; a letter addressed to the Rochester Optical Company, Rochester, N. Y., will reach them. Willie Caldwell—The method of recovering silver from undeveloped negatives is a long-winded chemical process. We cannot waste space by giving it here. Moreover, in the ordinary work of an amateur, the amount of silver contained in the waste negatives is so small that its recovery would not repay the time and trouble required. Kurt Stolberg—Development with pyro sometimes causes a general yellow stain over the whole negative. This may be generally removed by a clearing solution of alum and hydrochloric acid. Elmer S. Ruff—The picture, to which you refer, was made with a cap that fits over the lens and may be obtained from any dealer in photo supplies. W. W. Hubbell—There is no limit.



Experimental Lessons in Electricity—Lesson XV.

The Induction Coil (Continued.)

Having finished the winding and insulating of our coil we are now ready to attach the secondary terminals and mount it upon its base. The base in this case we will make hollow for receiving the condenser, instead of using the jar form as mentioned in our previous coil (January, 1905).

The base, Fig. 1, is sixteen inches long by twelve inches wide and contains a hollow space two inches deep. The top

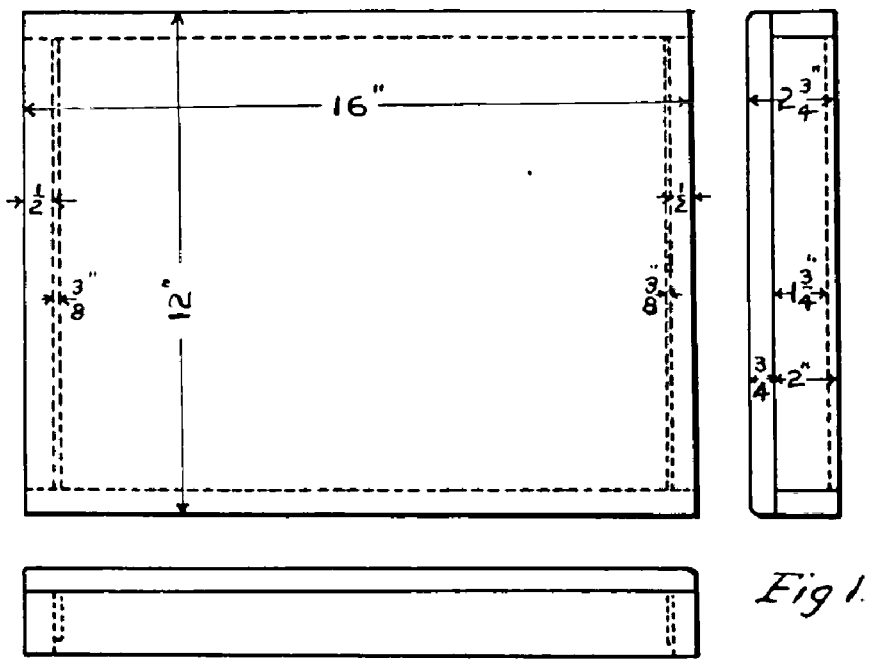


Fig 1.

is made of ¾" mahogany or cherry, the sides being of ½" stuff. A strip 1¾" wide and ½" thick is glued to the inside of the ends as shown at *a*. These serve to fasten the bottom to by screws, holding the condenser firmly in place. The bottom is made of ¼" pine 15"x11" fitting snugly between the sides and ends of the base.

Before any holes are drilled for screws or any of the apparatus is mounted thereon, the base is finished by staining and varnishing, as this cannot be done conveniently after pieces have been secured thereto. For the benefit of those who do not understand the finishing of wood we will describe the process in detail.

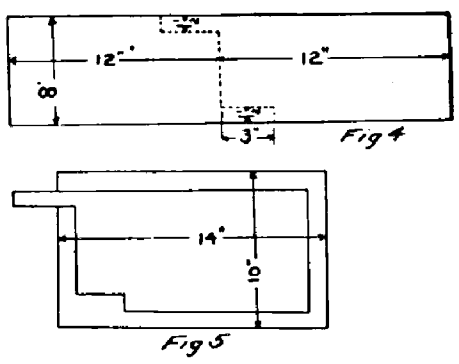
The wood is carefully sandpapered so that all scratches and tool marks are taken off the surface. Always rub the sandpaper with the grain of the wood and never across the grain. It is almost impossible to remove scratches crossing the grain and although they appear to be very small and hardly noticeable to the eye, they will show up on the finished surface with alarming vividness. If there are any small nail or screw holes, fill them with putty of the same color as the finish (made by mixing a little of the stain with the putty) and allow it to dry before rubbing with sandpaper. The final rubbing should be done with the finest sandpaper.

Now pass over the wood with a filler, allowing it to become almost dry. Then rub off the surplus with a piece of burlap or a handful of excelsior.

The work is now ready for staining. If mahogany or cherry is used, a dark red flat stain, called "mahogany flat stain," is laid on with a brush. Do not put on too much and the thin liquor at the top of the can is much better than the bottom, as the latter is likely to be muddy. The upper liquor gives a fine transparent color to the wood, through which the beautiful grain of the wood appears.

When the stain has dried, give a coat of clear white shellac varnish made rather thin with alcohol. When dry and hard, apply another thin coat, allowing it to get bone dry. Then with a piece of very fine sandpaper, previously rubbed on a board until all the sharpness has been worn off, go over the surface until it is perfectly smooth and every little roughness or air-bubble removed. Then apply the last two coats of the same varnish, allowing the first to dry thoroughly before the last is put on. The last coat is applied by what is known as the "floating" method. A soft brush is well filled with the varnish and then passed over the work in one direction only, and never passing over the previous stroke, but each stroke should join the previous one exactly. If this is well done a beautiful finish will be the result.

A flat is now cut on the lower side of the coil flanges as shown in Fig. 2, upon which the coil may rest. The position of the coil is laid out in Fig. 3. Two small holes are drilled through the base to receive screws from the underside, passing through into the coil flanges; these screws will draw the flats firmly down against the base and fasten the coil securely in place.



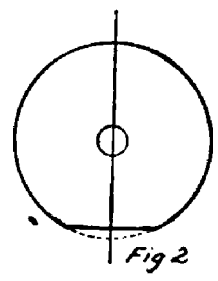


Fig 2

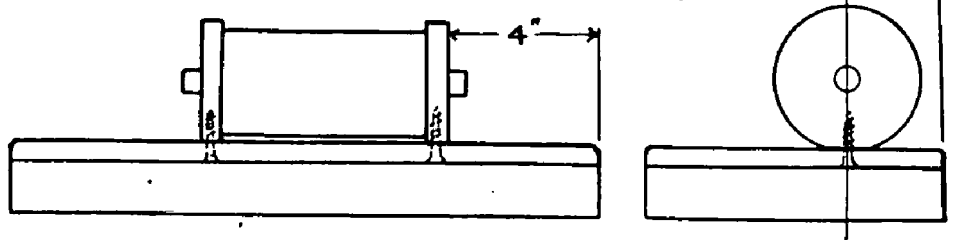
Fig 3.



Before giving the wiring diagram for the connections we will take up the construction of the condenser. The Leyden jar form was described in our early lessons because it was very simple and cheap, but one of large capacity would be very awkward and cumbersome. The type to be used with this coil is the flat built-up form, made of alternate layers of paraffined paper and tin-foil.

Tin-foil comes in sheets about four feet long by eight inches wide, rolled into a small roll, and may be had by applying to any electric dealer. Unroll the sheets, smooth them out and cut into halves, 24" long. Then place one pile on top of the other and cut as shown by the dotted line in Fig. 4. The finished sheets will then have the appearance as in Fig. 4*a* with a tongue extending from one corner. To make a condenser of sufficient size for this coil will require about four (4) pounds of foil. A pound contains about twenty long sheets or eighty sheets when cut size, giving 320 sheets in the four pounds.

Now have about 700 sheets of a good white paper cut 10"x14". This paper may be quite thin, provided it is free from holes. Each sheet is dipped into melted paraffin and hung over a string stretched across the room. They dry almost instantly. When the entire pile has been dipped, the condenser may be started.

Two sheets of the paraffined paper are first laid on a board, all air bubbles being squeezed out with an ivory paper knife or strip of soft wood. Then a single sheet of the foil is laid on with an edge of paper of equal width extending completely around the edge as shown in Fig. 5. The tongue protrudes over the edge two inches.

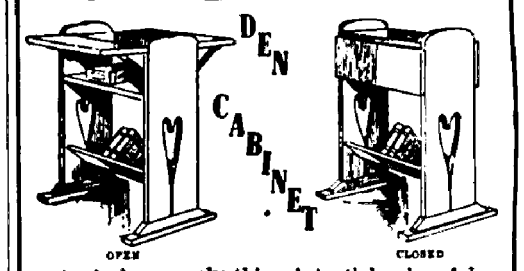
Then two more sheets of paper are laid over this foil and smoothed, another sheet of foil being laid on top, but with the tongue on the opposite end as in Fig. 6. Thus the pile is built up until all the papers and sheets of foil have been used, leaving three or four sheets of paper on either side as an additional protection. The pile is then placed in a letter press or beneath a heavy weight to press out all air bubbles. Strings may then be passed around the pile to bind the sheets securely together. If the edges of the sheets are held for a moment against a hot plate, they will be cemented firmly together.

The condenser is now completed and ready for placing in its case and connecting to terminals. We will take up this work in our next lesson.

"Strong and Soaring Wings"

A Chinese boy, Sam Hoc Kee, so distanced his American companions in the graduating class at the Albuquerque (N. M.) high school that he was made valedictorian. He is only sixteen years old, but in his essay he said things that older boys may well heed. Here is one of his sentences: "There is no effort of science or art that may not be excelled, no depth of philosophy that may not be deeper sounded, no flight of imagination that may not be passed by strong and soaring wings."

Make It Yourself



Anybody can make this substantial and useful **CHRISTMAS GIFT** at home. Only ordinary home-tools required. We furnish material ready to be put together. Full instructions and particulars FREE. Address HANDICRAFT FURNITURE CO., Grand Rapids, Michigan

FUN AND INSTRUCTION for BIG and LITTLE BOYS

"This Is The Electrical Age."

Boys are taught its mystic powers in school and out of it. Pleasing, entertaining, instructive. No end of harmless fun. Dealers everywhere sell Voltamp Electrical Products. THE ANTEDILUVIAN

(*Continued from page 55.*)

bling hands. As her eyes ran over the contents she saw that her worst fears were confirmed.

A petition to the Professor to resign, headed by Bob's name! Quick as a flash, she tore away the upper part of the petition and enclosed the boys' names with her own testimonial. Then she hurried to the schoolroom and laid the envelope in a conspicuous spot on the Professor's desk. She was just in time, for the great bell pealed out its summons and she had only a second to get out into the hall and take her place in the opening march. There was a look of expectancy on every face. The girls exchanged glances of mutual intelligence, while the boys glanced sheepishly at each other and then dropped their eyes on their books.

After the scriptural exercises the Professor rose slowly to his feet and gazed fixedly at the faces before him. As he stood thus, there was something pathetic in the bowed form and the face, so lined with care.

Twice he essayed to speak, but the words failed him, and the scholars felt there was something terrible impending. At last he began in a low, hesitating voice:

"My dear pupils, I have a few words to say to you this morning. I have heard on several sides that there is some dissatisfaction at the lack of holidays in this school. I have lived so long in one groove it is hard to get out of it, but I will try to put myself out of the question, or, perhaps, I am beginning to need the rest of a holiday, myself. At any rate, the school is dismissed for the balance of the day—the time is at your own disposal," and, with a feeble wave of his hand, he sat down.

Twenty-four hours' waste of time! Every scholar realized what a concession this was on the part of the master. As for the boys, there was not one of them but longed to slink out of the door and creep out of sight. If only they had waited one day longer, or if the school would be dismissed before the Professor caught sight of the envelope no one would be any the wiser, but just then the Professor's eyes fell on the document in question and he picked it up, glancing curiously at the address.

Bob trembled and felt his cheeks flush with shame. He could almost hear his own heart beat in the awful silence that followed. When he summoned courage enough to steal a glance at the Professor's face he was startled at its pallor. Would the shock kill him? Something rose in Bob's throat and choked him as he saw the feeble old gentleman struggle to his feet and cling to the desk in front of him for support.

"My dear young pupils—" the words came in faint gasps of breath—"you have made me very happy—today—"

Bob's eyes opened wide in fright—the Professor must have gone mad. What else could it mean?

"I have—not—words to thank—you—I—" He did not finish the sentence. Before anyone could rush to his assistance he staggered, caught hold of the railing, slipped and fell to the floor.

The poor Professor had earned his long holiday of rest.

In the confusion that followed Rosalie forgot Bob entirely. When something like quiet had been restored she looked around for him, but he was not in sight. She hunted over the building but could find no trace of him. At last, in searching the grounds, she heard the sound of sobbing as she drew near the summer house. Peering into the gloom, she saw a figure crouched in the corner. It was Bob! Rosalie entered softly and laid her hand on the bowed head comfortingly.

"Don't cry, Bob. It was dreadful, but Mrs. Bisbee says she was expecting it. The doctor had warned her. It was his dearest wish she said, that he might die in harness, and he did, you know—"

"Don't, don't, Rosalie," and Bob choked back a sob. "You don't know what killed him. We boys did it. We sent him a petition asking him to resign—and—I signed it!" Bob raised his head and stole a glance at his sister's face, expecting to see a look of horror supersede its usual expression, but Rosalie only smiled gravely.

"I know all about it, dear. I suspected something of the kind and I got the girls to subscribe to a testimonial for the dear old Professor, and we raised quite a sum for him. Perhaps you will not like it when I tell you that I stopped Johnny this morning and opened your envelope and tore up the petition. So the Professor never saw it. I added the boys' names to ours, and he thought the gift came from the whole school. Why! what is the matter, Bob?" for Bob sprang suddenly to his feet and caught his sister round the waist.

'Oh, Rosie, what a trump you are! I did not dare to back out for fear of the boys, but you don't know how mean I felt this morning. You will not tell father will you? I'll promise to be a first rate boy all the rest of the term."

And Bob kept his word. When they got up the fair in the spring for the benefit of the Professor's widow he was a host in himself, and Mrs. Bisbee always found him at her right hand, ready to do some service.

"I had no idea Robert was such a helpful lad," she said to Rosalie one day. "I am afraid I used to misjudge him."

And Rosalie kept her own counsel as to what had changed her brother in one day into a thoughtful, manly boy.

Among the boys who are particularly interested in our Mechanical and Electrical Department is Harold S. Chandler, of Rutland, Vermont. He sends us a picture of an electric car which he constructed. It is a large, substantial car and will make about two hundred feet a minute. We are sorry that the photograph cannot be reproduced. Harold has been taking THE AMERICAN BOY for three years.

What do YOU do after School Hours

Every boy can turn his spare time after school hours on Friday and on Saturday into money. Some boys are earning $15.00 a week or more in this way. The work is easy. No capital required to start—we supply everything necessary to make money right from the start SELLING

THE SATURDAY EVENING POST

If you wish to try it all that is necessary is to write us a letter and we will furnish ten copies of magazines free of charge, to be sold at 5 cents each. After that whatever you require at wholesale price. We will also send you a booklet written by some of the boys telling how they work.

$300 in cash, besides watches, tool-kits, rain-capes, etc., as extra prizes, to boys who do good work each month. A part reserved for those who start next week.

Farragut; No. III, Benjamin Franklin· No. IV, Abraham Lincoln No. V, John Adams; No. VI, Thomas Jefferson; No. VII, Ralph Waldo Emerson; No. VIII Henry Ward Beecher; No. IX, Nathaniel Hawthorne; No. X, Robert Edward Lee; No. XI, Daniel Webster; No. XII John Marshall; No. XIII, Eli Whitney.

No. XIV--Peter Cooper

NOWADAYS the advice generally given a boy who is about to take up his life-work is, find out what you like best, what you are particularly fitted for, and then bend all your energies in that one direction. The boy is advised that the greatest success comes through being able to do some one thing better than others can do it. This is sound advice and we are not finding fault with it, but we are going to tell our readers something about a boy who became successful and great by applying his abilities in many directions.

Peter Cooper, merchant and philanthropist, was born in Little Dock street, near what is now Water street, New York City, on February 12th, 1791. It is worth noting, perhaps, that February has been the birth month of many of America's most famous men, among them George Washington, Abraham Lincoln, Alexander H. Stephens and Thomas A. Edison.

The ancestors of Peter Cooper were staunch Revolutionary patriots. His maternal grandfather, John Campbell, gave his life freely to aid the thirteen colonies, while his paternal grandfather and his father served gallantly in the Continental army, the latter retiring from the army, on peace being declared, with the rank of lieutenant.

At the time of Peter's birth his father was engaged in the business of hat making, and the family were in quite well-to-do circumstances. When Peter was about three years of age, his father removed from New York, then a city of less than thirty thousand people, to Peekskill, in the same state, believing that a successful business could be carried on better in the country than in a large city. At Peekskill he built a small hat factory and also opened a general store. But he speedily found that doing business in the country was altogether different from doing it in the city. He had enough customers, but, ready money being scarce, there were very few cash sales, almost everything being sold on credit. Mr. Cooper was a good man, but he had not the ability to deal rightly with such conditions. Kind-hearted, generous, and hospitable, he trusted his customers right and left. Of course, no business could stand such loose management; his own bills had to be paid as they became due, and, as his distinguished son was accustomed to say, "he soon found all his property in the hands of other people, and he was unable to get any of it back."

In the effort to keep out of bankruptcy Mr. and Mrs. Cooper exerted themselves to the utmost, even little Peter, then only eight years old, was forced to work. As there was no law in those days prohibiting the employment of children of such tender years, the little fellow was engaged day after day drawing the hair out of the rabbit skins to make the pulp of which hats were made. Young as he was, the boy was observant, quick with his hands, and eager to learn, so that in a very short time he could make a hat in as workmanlike a manner as could any of the older men. But in spite of all their efforts the fortunes of the Cooper family did not improve.

Thinking that a change of business might meet with success, Mr. Cooper started a small brewing establishment and Peter gave up the hat making to become a brewer of ale. This business also failed to prove successful, and again there was a change. This time it was brickmaking; and to Peter was given the duty of carrying and turning the bricks. This business likewise failing, the Cooper family was now in great distress. But through the aid given them by Peter's grandmother, their debts were paid and the family moved to Brooklyn, then a small town of scarcely two thousand inhabitants. But the elder Cooper's ill-success still followed him and the family once more moved, this time to Newburg-on-the-Hudson, where a brewery was again set up. This time, mainly through the work of Peter, the business yielded a fair return with a promise of continued success.

Peter now at the age of sixteen was a pale, sickly, stoop-shouldered lad, looking older than his years by reason of his hard, knockabout life. All the schooling he had received was two quarters, hardly sufficient to allow him to know more than the simplest words. The laws now restrict the number of working hours in a day, but when Peter Cooper was a lad the day's work began at sunrise and ended only when it was too dark to do any more. Peter never knew what it was to have a holiday. Little wonder that he looked old for his years, and little wonder, also, that the poverty and ill-success of his father made him believe that to get money and keep it was of greater importance than anything else. Many years after, when speaking about his boyhood and of his taking care of what he had, he told how one day he, with several other children, were busily engaged in an alley scraping the brown mortar from between the bricks of a building, pretending it was snuff and intending to use it in the play of "keeping shop." While thus employed a large black dog sprang through the fence and with loud barks ran at the boys. Peter's companions at once dropped their snuff and fled in terror, but young Peter, although badly frightened, held in his hand his dish of snuff and resolutely faced the furious animal, which after a moment turned and went away. The boy immediately hurried after his companions with his snuff still held tightly in his hands. As we read the story of Peter Cooper's life we can see that this characteristic of boldly facing difficulties and dangers contributed in no small degree to his success.

Another story is told of a money investment he made, the result of which taught him a lesson he never forgot. Early he began to save up all the pennies he could call his own, and at length had gathered together ten dollars. He was much troubled as to how to invest such a big sum. A relative advised him to buy lottery tickets. This he did, but he drew only blanks, and the whole of his fortune was gone. During his whole after life, speculation on chance and get-rich-quick schemes received no encouragement from Peter Cooper.

Having now seen his father's business in a fairly prosperous way, young Peter made up his mind that if he wished ever to amount to anything, he must strike out for himself, so he made his way back to New York where, unlike his father, he believed there were better opportunities for a boy. His intention was to continue in the brewery business, having already had experience in it. He had picked up a few good business ideas with which he hoped to make a successful career. One of these was that the public would be always ready to pay a good price for a superior article, an idea which he carried out in after years and which was a pronounced factor in placing him among the wealthy merchants of his day. However good his plans and ideas, Peter had to wait before putting them to practical use. The little money he had was gradually disappearing and something had to be done, as he was not one to eat the bread of idleness. He decided to become an apprentice to a coachmaker, who had quite an extensive business, so he bound himself to serve his master at his trade for four years, and to take as his pay board and lodging and the sum of twenty-five dollars at the end of each year. Boy apprentices in those days were required to work hard and for long hours, their masters being the sole judges of what constituted a day's work. They had only a very few hours in the evening which they could call their own, and as there were no opportunities in the form of night schools or reading rooms where they could improve their minds, these hours were generally spent in low pleasures, the frequenting of drinking places, and dance halls. When young Cooper came to New York he was strongly tempted to join his fellow apprentices in their so-called fun and dissipation, but life to Cooper was a serious thing and he had made up his mind that his future success in life depended upon his learning and doing as much as he could, and, besides, he was of a shy and retiring disposition and weak physically. For these reasons he persistently refused to join the boys.

Left to himself, Peter Cooper made good use of the few hours at his disposal, causing every moment to count in his efforts at self-improvement, whether it was in studying books or working after hours in the shop carving out new designs in coach panels. Incidentally this and other work which he did in his spare moments brought him considerable money. He proved himself by his intelligence, faithfulness, and painstaking care to be a valuable apprentice. He devised quicker methods of work and invented a machine which would mortise the spoke holes in carriage hubs in far less time than by hand and at much less expense.

So passed the four years of Peter Cooper's apprenticeship, years of hard work and little play. But these four years meant much in trying and testing. While he was shy and diffident, he was quick to observe, and the hard lot of the working lads among whom he lived appealed to him very strongly. He saw that many of them sought the drinking dens and low places of amusement because there was nothing to attract them elsewhere, and that their masters cared nothing for their well-being beyond getting as much work out of them as possible. There and then the germ of a great thought took root in young Cooper's heart and mind, which, years after, was to take form and substance in that magnificent expression of Christian helpfulness—the Cooper Institute.

With the arrival of his twenty-first year, Peter Cooper's apprenticeship ended and he was free to leave his master and seek employment where he pleased. His few belongings were packed up ready for departure and he went to bid his master good-bye. That master seems to have been one who appreciated faithfulness and good workmanship, and both of these qualities he had found in his apprentice. As the boy held out his hand in farewell he was startled by his master saying: "Peter, you have done good work for me. I will build you a shop and set you up in business for yourself. You may pay me when you can." It was an offer which reflected credit upon the man's head and heart; it was a disinterested offer, the acceptance of which could benefit Peter alone; it was an offer which would at once place the boy in the position which he longed for—that of an employer; it was an offer which not one in ten thousand of the apprentices he knew would refuse; and yet Peter Cooper, with nothing apparently before him but a workman's daily wage, refused it. With deep emotion he expressed his gratitude for his master's kindness, but he had no money, his only capital being his two willing hands and his head. Further he had seen in his own home life the misery of the debtor and he had resolved that, however hard his lot might be, he would not begin his life under a burden of debt. It was a noble resolution for a boy under such circumstances to make, but his subsequent career shows that he never had the slightest cause to regret his resolution.

Here, properly, the boyhood of Peter Cooper ends, but we are unable to close this sketch without touching, at least slightly, upon some of the notable acts of his life which have amply justified his right to occupy an honored place in the Hall of Fame.

Summing up his equipment for the battle of life we may say, Peter Cooper had a knowledge of four trades—coachmaking, hatmaking, brewing, and brickmaking, a liking for tools and machinery, very little schooling, and no money.

PETER COOPER

It was as a workman at one of his trades that he expected to make his living, but curiously enough he never afterwards worked at any one of them.

During the war of 1812 America had to depend upon her own few mills and factories, and the cloth mills among the rest were extremely busy. Peter's brother lived in Hempstead, Long Island, where there was a cloth mill, and Peter was invited to go there and work in the mill. His duty was to shear cloth, that is, snip off the fuzz which covered the cloth as it left the loom. His wages were one dollar and fifty cents a day, then considered good pay. He worked in this mill for three years, during which time he married.

While working at his bench he saw that shearing the cloth by hand was a slow process and pondered upon whether a machine could not be constructed which would do it more rapidly. After various experiments he invented a machine which not only did the work quicker but at far less expense than when done by hand. Having saved his money, he at once began the manufacture of these machines. In a short time the profits from their sales gave him a capital of five hundred dollars. While considering whether to extend his business he paid a visit to his parents and found that his father had become so deeply involved in debt that even the home was about to be sold to satisfy his creditors. At once his affection for his parents overcoming all his ambitious hopes, Peter gave up his little fortune to help pay the most pressing debts, and made himself responsible also for the remainder. It may here be said that he subsequently paid every one of his father's creditors in full.

With barely enough money to buy material, young Cooper went to work again manuacturing cloth shearing machines. The business paid so well that when the war with England closed he sold out and engaged in the grocery business. This also made money for him. Then he extended his interests by becoming the proprietor of a glue factory in which he made glue, isinglass, oil and other products. This business he greatly extended and continued until his death. Money was now coming in to him rapidly and, altho' he well knew its value and looked shrewdly after every detail, he was always liberal in every good cause; his purse was ever open to assist true worth, and his advice and encouragement freely given. He always counseled young men to save something out of their earnings, saying that from the time he became his own master, he never failed to save at least one dollar every day, and it was to these savings and the opportunities for investing them that he owed his fortune. Here is a lesson which the boys of today should learn, for there are many chances in business life for the young man or boy who has saved his money.

The Baltimore & Ohio Railway, in which Mr. Cooper later became financially interested, found that there were so many sharp curves and steep grades in the making of the road into Baltimore that the amount estimated for the work would not be sufficient. Also it was found that the engines which were to come from England, where the roads were straight and level, would be useless on the quick turns and heavy grades. Many of the stockholders were for throwing up the road in disgust. Mr. Cooper at once went to work and himself built an engine which successfully overcame all the difficulties and saved the great railroad from bankruptcy. To describe the many other enterprises in which Peter Cooper was financially interested and to tell how he came to be a millionaire many times over, cannot form part of this sketch. We must skip even that part of his career in which he was President of the first Atlantic Cable Company, an organization which after twelve years of disappointments and discouragements was finally successful.

It was now thirty years since the idea of helping in some way his fellow workmen had taken hold of Peter Cooper's heart, and during these years it had never left him. He had determined that his wealth should not be hoarded up until his death, but that he should see, while alive, some of the good it should accomplish. Ever interested in education, he was a member of New York's school board when a friend who had visited Europe told him of the great work being done by the Polytechnic Institute of Paris for young men desirous of an education, but unable to get it by reason of poverty. Here was the solution of the problem which Peter Cooper had long pondered over. At once he conceived the idea of establishing such an institution in New York, for the benefit of young people whose days were filled with hard work and whose desire for wider knowledge could not be gratified. With all his accustomed energy he at once went to work, with the result that the great Cooper Institute was completed and presented to the people of New York in 1859. The amount of money which Mr. Cooper spent upon its erection was $750,000. His descendants have added to this other large sums.

The scope and purpose of the institution was thus spoken of by Mr. Cooper in a speech made at one of the annual meetings of trustees: "Feeling, as I always have, my own want of education, and more especially my want of scientific knowledge, as applicable to the various callings in which I had been engaged, it was this want of my own which I felt so keenly that led me, in deep sympathy for those whom I knew would be subject to the same wants and inconveniences that I had encountered—it was this feeling which led me to provide an institution where a course of instruction would be open and free to all who felt a want of scientific knowledge, as applicable to any of the useful purposes of life. Having started in life with naked hands and an honest purpose, I persevered through long years of trial and effort to obtain the means to erect this building which is now devoted, with all its rents and revenues of every name and nature, to the advancement of science and art."

From Maine to California there are men and women who have been successful in life only because of the start given them by the Cooper Union. Its influence is as wide as the United States. Instruction is given in the arts and sciences. Thousands every year take advantage of the great reading room and library, while in the winter months other thousands fill the great auditorium listening to the popular course of lectures delivered by men famed in their several departments of knowledge and research.

When Peter Cooper died he left an estate of $2,000,000. It is said that during his long life his philanthropies amounted to over $4,000,000. His splendid life is an example, and an encouraging one, to the boy who thinks he has no chance. From it can be learned that successful men are developed from the boys who make the fullest use of the chances they have.

SYNOPSIS OF PETER COOPER'S CAREER.

1828	Bought 3,000 acres of land in Baltimore and established the Canton iron works.
1830	Built first locomotive engine in America.
1845	Established the largest blast furnaces in America.
1854	Became first President of the first Atlantic Cable Company.
1854	Laid cornerstone of the Cooper Union.
1876	Nominated for Presidency of the United States.
1883	Died April 4, aged 92.

INSCRIPTION ON TABLET IN HALL OF FAME.

PETER COOPER
1791-1883

The great object I desire to accomplish is to open the avenues of scientific knowledge to youth (and so unfold the volume of nature), so that the young may see the beauties of Creation, enjoy its blessings, and learn to love the Author.

THIS CLOCK FACE WILL APPEAR JUST ONCE MORE

Our Last Appeal

Some six months ago we expressed the hope that our subscribers would send us a total of $1,000 before the first of January, 1907, to enable us to send THE AMERICAN BOY for one year to two thousand shut-in boys. While the response up to date (November 9th) has been generous, it has not been generous enough. We find that unless our readers come immediately to the rescue, we will fall far short of doing what we hoped to do. Few things perhaps could come into the life of a shut-in boy to give him more real pleasure than THE AMERICAN BOY. Surely every boy that reads this paper will want to see it in the hands of every shut-in boy. Up to November 9th, the amount contributed by our readers is $195.69, about one-fifth of what we planned to raise by the first of January next. There are some seven or eight weeks left in which to move the hands of the clock entirely around the circle. We had hopes that some one or more good Samaritans would appear with large subscriptions, and that no boy would permit the enterprise to fall without at least doing his share. The following contributed between October 9th and November 9th the sums set opposite their names: W. A. Beckman, .10; Rainbow Falls Co., .53; Oliver B. Cardwell, .10; Neil B Gregory, $1.00; Floyd Case, .50; Lewis S. Gibbs, .25; C. Fay Sarle, $1.00; Albert Berlin, .10; Lester C. Daniels, .25; Lester Galley, .25; Wm. Ankeney, .15; Gilbert Hedman, $1.00; F. C. S., $1.00; Willie Koch, .50; Stanley G. Chilson, .25; Alvah and Harold Starkey, .50; C. B Case, $1.00; Bruce Casbere, .50; W. I. Hackett, .25; Robert Trew, .15; Jno. R. Brown, .50; Wesley Richards, .50; Arthur F. Hagar, $1.00; Harold M Pavey, .50; E. E Cobleigh, .10; Floyd McKevitt, .25; Thorsby Naturalist and Athletic Company, $1.00; Walker Hooper, $3.00; Geo. E. Kennam, $1.00; F. Chester Farr, .25; P. Hayden Davenport, .50; Mrs. S. E. Davenport, .50; Victor P. Morris, .50; Chris R. Ingall, .50; Ralph A. Sherwood, .10; George S. Montgomery, Jr., .10; Vance S. Utz, .10; Harry F. Lett, .50; A friend from Old Cape Codd, .50; Chas. S. Gerrish, .15; Robert Berkman, $1.50; Chas. Montgomery, .25; Geo. E. Back, .50; Ralph B. Lindsey, .25; Clifford Miller, .25; A. S. Breninger, .50; Hugh C. Gruwell, .25; Abraham Lincoln Co., $1.00; Ray L. L. Holt, $2.00; Harry B. Humphrey, .25; J. Fred Wright, $1.00; Orel E. Young, .10; Paul E. Thomas, .25; Karl Wells, $1.00; John C. McNary, .25; Elmer Hooton, .50. Total $30.78.

WILL YOU NOT HELP?

Why I am Proud of My State

The first prize, $3, in the North Carolina essay contest, was won by Jarrette M. Tyler, Whitakers; the second prize, $1.50, by T. P. Byrum, Edenton; and the third prize, fifty cents, by Percy S. White, 132 Price street, Greensboro. Honorable mention is due D. Franklin Wallace, of Statesville, and Leslie G. Bullard, of Fayetteville.

The following boys wrote pleasing essays: Francis B. Brown, Samuel B. Turrentine, Jr., Linwood C. Fink, N. Hunt Gwyn, Paul Hendren, John W. Harris, E. Oscar Leach, Geo. Howard, Jr., Yates Clarkson, Charles W. Haskett, Joseph W. Holford, Douglas L. Rights, Norman Scharth, Theodore S. James, Bryan C. Murchison, Charles Bagley, R. Grady White, Watson W. Sherrod, Stuart W. Cramer, Jr., Joe J. Thaxton, Gordon M. Carver, Tom Blackburn, G. Wilder Fort, Braxton Jones, Jim Pate, Titus E. Chappell, and James Crawford.

North Carolina is about the size of England, having an area of 52,286 square miles. A vast amount of water-power is furnished by the 3,500 miles of rivers. The climate is mild and agreeable, and the state contains many health resorts. The highest mountains east of the Mississippi are to be found in North Carolina. Mount Mitchell reaches a height of 6,688 feet. The state has a large and growing foreign commerce, besides an enormous coasting trade. Virginia Dare, the first white child born in America, was born on Roanoke Island, in the eastern part of the state. It is stated that out of every two hundred people in North Carolina, only one is a foreigner. The peanut crop exceeds 100,111 bushels annually. In the raising of tobacco North Carolina ranks second. In the year 1905, 98,618,080 pounds were raised. The capital invested in the fishing industry amounts to more than a million dollars, and over 10,000 men are employed in the fisheries during the season. Fruits of all kinds are plentiful. It is said that one variety of apples grown in North Carolina was used exclusively by Queen Victoria. This was the Albemarle pippin. There are many fine granite quarries, and a variety of jewels, including the diamond, garnet, sapphire, opal, ruby, and emerald, are found. The "Hiddenite," a valuable species of emerald, was first found in North Carolina. The manufacture of cotton is a great industry, giving employment to 40,000 people, and enough cotton is raised in the state to supply the mills. Fifty thousand persons are employed in the manufacture of tobacco. Wilmington, the metropolis of North Carolina, is one of the greatest ports for the exportation of cotton and naval stores; Charlotte, the next city in size, is noted for the number of textile mills; and Raleigh, the capital, has many fine colleges. The first officer killed in the Spanish-American War was Worth Bagley, of Raleigh. His remains lie in Oakwood Cemetery in that city, and funds have been collected for a splendid monument in his memory. North Carolina has furnished three presidents: Jackson, who won the battle of New Orleans in the second war with Great Britain, Polk and Johnson. The Biltmore estate, owned by George W. Vanderbilt and valued at more than ten million dollars, is located at Asheville. The forests of the state are especially valuable. Oak and pine are exported in large quantities.

One essay states that North Carolinans are especially proud of their reputation for true Southern hospitality.

The opinion of North Carolina boys is summed up at the close of one essay as follows:

"And I believe that happy land
The Lord prepared for mortal man
Is built exactly on the plan
Of old North Carolina."

WHY I AM PROUD OF NORTH CAROLINA

First Prize Essay by Jarrette M. Tyler, Whitakers

I am proud of my native state because of her glorious history and her rich endowment of climate and natural resources.

On Roanoke Island was planted the first English colony in the New World. Here was born the first white child and here celebrated the first baptism in America.

The fisheries of North Carolina are the greatest in the world, and her corn lands make her the Egypt of the South. In the production of tobacco she stands first in quality, though second in quantity. The annual crops of cotton, peanuts, rice, wheat, oats, rye, Irish and sweet potatoes, are enormous.

Along the Atlantic coast are many fine truck farms, and in the western part of the state are belts where frost is unknown. Here flourish all the fruits of the temperate zone. The grape-vine grows in every section. Among the varieties are the Lincoln, Isabella, Catawba, and Scuppernong. The wines made are noted for their richness and flavor.

The forests of North Carolina are very valuable. The long-leaf pine furnishes immense quantities of lumber and naval stores. In the eastern section are found the live oak, the magnolia, and the palmetto. The gold medal for forestry was awarded to North Carolina at the World's Fair.

The hills and mountains of this state contain nearly two hundred useful minerals. Gold is found in twenty-nine counties.

The state possesses unsurpassed facilities for manufacturing and commerce. Her water power is unlimited.

North Carolina was one of the first of the Southern states to encourage education.

The climate of certain sections is very beneficial to those suffering from throat and lung troubles, and winter resorts are numerous. The mountain region contains some of the grandest scenery in the world. Here is Mount Mitchell, the highest peak east of the Rockies. No section presents greater attractions for sportsmen.

The sons of the "Old North State" have ever been ready to shed their blood at honor's bidding. On the "Blood-stained Field of Alamance" was made the first armed resistance to British tyranny. At King's Mountain, Moore's Creek, and Guilford Court House stubborn resistance was made to the British. In Mecklenburg County, called the "Hornet's Nest" by Cornwallis, was drawn up the first declaration of independence in the colonies. This was thirteen months before the Declaration of Independence was issued by the Continental Congress.

In the Civil War North Carolinins were "First at Bethel, foremost at Gettysburg, furthest at Chickamauga, and last at Appomattox."

The first officer killed in the Spanish-American War was a "Tar Heel."

Is not this a glorious record?

In the words of one of her gifted sons I join:

"North Carolina, great, glorious, and free,
The joy of thy children shall thou ever be;
In storm and in sunshine around thee we'll stand,
And may God bless thee with most bounteous hand."

Company News

(*Continued from page 46*)

COSMOPOLITAN COMPANY, No. 63, Decatur, Ill., gave a Hallowe'en party October 29, at which the members present were dressed in costume, and masked. The following are the company's officers: Robert Jackson, Pres.; Helmer Landholt, V. P.; Clarence Heinds, Sec.; Neal Sine, Treas. The company's charter has been framed, and the members are taking active interest along literary lines. A series of interesting programs is expected to be held during the winter months. This company altogether seems to have a bright future before it. We trust that all its hopes and ambitions may be realized. SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill. The members are planning to have a reception soon to which the public will be invited. This company is one of the most energetic in the order, and we trust that the good work it has done in the past in showing sympathy and helpfulness towards those who need it may be continued. We are sure that the consciousness of being able to assist will encourage them in further efforts along these lines. THE AMERICAN BOY CHEMICAL COMPANY, No. 24, Fairbury, Neb., went camping during September, and had a most enjoyable time. They also celebrated Hallowe'en with a party. Meetings are held in the basement of one of the boys' homes every Friday evening, where the members engage in different athletic stunts, having two trapezes, dumb bells, Indian clubs, etc. There is also a laboratory in which chemical experiments are made.

The Music Master Plans a Christmas Surprise

COLUMBIA Graphophone

As the pleasure grows upon the Music Master, so it grows upon the whole family.

CHRISTMAS! It is in the air. My friends, they demand of me, "What shall I give to the children for the fete of Christmas?"

On the instant there comes to me the great idea, "Attend! We are all children at the Christmas. You will make one gift for them all, the big ones and the little."

"One gift for all! Impossible. How then?"

"I tell you. It is this way: One gift, **A Columbia Graphophone,** with those **Columbia Records** which make the so perfect music,—songs of Christmas, of the Opera, of the Vaudeville—music of all instruments. Stories that make the entertainment, the drollery. Me! I laugh with pleasure at the thought. It is an idea of the greatest—One gift for the whole family—**The Columbia Graphophone.**"

If you have no talking machine buy a **Columbia,** if you have another make, buy **Columbia Records.**

We don't ask you to pay cash for your Holiday purchases. Buy your **Columbia** outfit from any dealer or at our stores in all the large cities and pay when the burdens of your Christmas expenses are past.

COLUMBIA PHONOGRAPH COMPANY, Gen'l
353 Broadway, New York

Grand Prix Paris, 1900 Double Grand Prize St. Louis, 1904 Grand Prize Milan, 1906

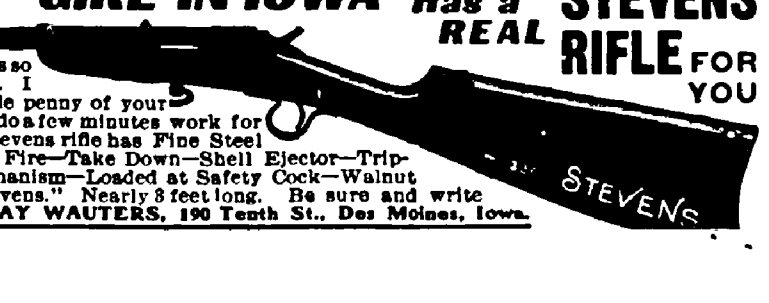
The Taylor-Woolfenden Co., Detroit, Mich.

Will bring you description or samples and prices of **Dry Goods, Furnishings, Linens, Ready-to-Wear Goods, Draperies and Bedding. OUR MAIL ORDER SYSTEM** insures perfect satisfaction.

AGENTS MAKE GOOD MONEY BY TAKING SUBSCRIPTIONS TO THE AMERICAN BOY AT THIS SEASON

THE SWEETEST GIRL IN IOWA Has a REAL STEVENS RIFLE FOR YOU



SEND NO MONEY—just your name and address so I can tell you how to get this rifle absolutely free. I mean just what I say—it will not cost you a single penny of your money. All I want is one honest boy in each town to do a few minutes work for me which is very easy and pleasant. This real Stevens rifle has Fine Steel Rifled Barrel—Breech Loader.—½ Cock Lock—Pin Fire—Take Down—Shell Ejector—Triple Reinforced Breech—Patent Drop Breech Mechanism—Loaded at Safety Cock—Walnut Stock—V Sights—Each rifle stamped genuine "Stevens." Nearly 8 feet long. Be sure and write today for particulars.

MAY WAUTERS, 190 Tenth St., Des Moines, Iowa.

The American Boy

Copyright, 1906, by The Sprague Publishing Company

THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is $1.00 a year, payable in advance. Foreign subscriptions, $1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Important—All subscriptions are discontinued as they expire. Expiration date is shown on address label. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed.

Letters should be addressed and drafts made payable to **The Sprague Publishing Co.**, Majestic Building, **Detroit, Mich.**

WILLIAM C. SPRAGUE, . . President and Editor
GRIFFITH OGDEN ELLIS, Vice-President and Ass't Editor.
J. COTNER, Jr., . . Secretary and Treasurer.

SOME DON'TS THAT BOYS SHOULD BEAR IN MIND

Don't expect our department editors to write you direct. All questions asked will so far as possible, be answered in the paper.

Don't send us stories and poems. We have not sufficient room to print the many contributions that come from boys.

Don't ask us for the Legion of Honor Badge without furnishing a letter from some adult certifying to the facts upon which you base your claim.

Don't send in coins or stamps and ask to know their value; send a description only; and in the case of the coins, a rubbing.

Don't ask questions on two or more subjects on one sheet of paper. Where you have several questions to ask the editor, write them on separate sheets, signing each.

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich.

Rules to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

Albert B. Ellard, 1124 Bedford Ave., Brooklyn, N. Y., wins the prize for the best list of answers to the October Tangles.

B. Frank Sterling, 1819 Avenue F, Galveston, Texas, wins the second prize.

Moxie Craus, McKinney, Texas, wins the prize for the best original Christmas puzzles.

Honorable mention is accorded the following for excellence: Ralph A. Clark, J. Horace Trumbull, Amy von Tobel, Arthur Townsend, Harry J. Button, Clarkson P. Stelle, Henry Hansen, Noah S. Guengerich, Claud Gill, James A. Lynd, D. Waldo Brown, Elliott P. Ross, F. C. Millspaugh, Wycliffe C. Burgess, Carleton W. Adams, Kenneth M. Gould, Robert D. Holmes, Jr., Clinton Fisk Elliott, George Brodthage, Jr., Elmer Rodgers, J. Glenn Patterson, William Jarboe, John Thoen, Emerson Grant Sutcliffe, Raymond F. Katterjohn, Wm. McGum, Harold Podhasky, Grady Peerey, I. Lewis Mills, Clarence Argabute, Elmer W. Backus, Louise Ayres Garnett.

Answers to September Tangles were received too late for acknowledgment in the November issue from Veator Mendenhall, Eric Verrill, Gordon T. Cloyd, Albert B. Ellard.

A prize of one dollar will be given for the best list of answers to the December Tangles; also, a new book for the second best list; received by December 18.

A prize of one dollar will be given for the best lot of original puzzles, suitable for February, received by December 18.

Answers to November Tangles

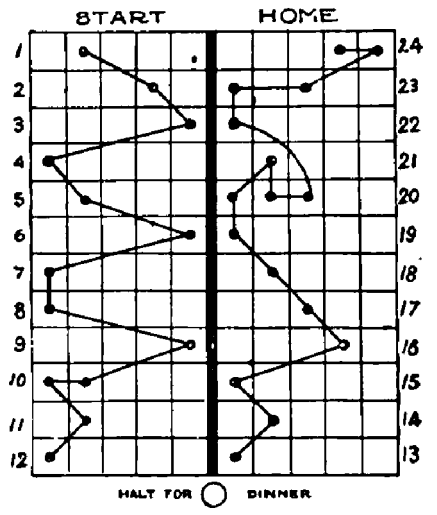
New Tangles

62. XMAS CROSS-COUNTRY RUN.

Fill each numbered set of five squares with the surnames of the required authors, each of which contains five letters, writing one letter of each name in a square, from left to right. Take letters in order as indicated by the dots on the path of the cross-country run, from start to dinner and from dinner to home, and obtain a well-known quotation from Saint Luke pertaining to the first Christmas.



The required names to fill the squares are the authors of the following works, in order: 1. The Iliad. 2. For A' That and A' That. 3. Robinson Crusoe. 4. Ragged Dick. 5. For Love of Country. 6. Gulliver's Travels. 7. With Lee in Virginia. 8. Two epistles in the new testament. 9. Lalla Rookh. 10. The Manxman. 11. Fables. 12. Household Fairy Tales. 13. The Boat Club. 14. Night Thoughts. 15. The Psalms. 16. Dred. 17. Under Two Flags. 18. The Mill on the Floss. 19. Handy Andy. 20. Pudd'nhead Wilson. 21. The Pentateuch. 22. It's Never Too Late to Mend. 23. The Count of Monte-Cristo. 24. The Age of Reason. —Moxie Craus.

63. CHRISTMAS C.

Write the defined words on the big C as indicated. All the numbered letters, only, in numerical order, spell the first four lines of a well-known poem concerning Christmas time. The words which make up the C may be thus defined:

From 38 to 84, to unpack. 80 to 5, of a combative disposition. 16 to 25, looking on the bright side of things. 4 to 65, sluggish. 19 to 7, to interpret. 17 to 54, to allude. 10 to 77, an open passage through a wood. 64 to 29, a glistening brightness. 11 to 57, courage. 46 to 14, improper. 1 to c, a path. 70 to b, bare. 40 to a, a dog used in the chase. 12 to 79, a diadem. 79 to 14, to muddle. 2 to 49, to rouse. 15 to 42, to bring. 62 to 35, to confound. 39 to 47, a conjecture. 45 to 67, a king of Sweden. 83 to 48, to accumulate. 50 to 56, a lyric drama. 66 to 27, a river of India. 37 to 21, not the same. 37 to 78, a great body of water. x to 20, the working part of a saw. y to 6, to tie. z to 34, a bird of the heron family. 21 to 51, to correct. 60 to 32, to praise highly. 52 to 44, the Moslem's God. 9 to 55, conclusion. 71 to 23, a dozen dozen. 24 to 43, a tenth part. 31 to 63, faulty. 81 to 41, the path of a heavenly body. 22 to 73, a western state. 61 to 68, to fluctuate.

—Albert B. Ellard.

64. CHRISTMAS TREE.

All the World Wants a Lawyer

Court records in every State and County show that never before was there so great a demand for men learned in the law as there is to-day—everyone, everywhere, at some time needs the counsel of a lawyer. Educational authorities agree that never before was there so great an opportunity to acquire a thorough legal education as to-day. **The Sprague School of Law,** under the direction of the most able practitioners, has perfected a method at once practical and efficient, by which any young man may

Learn Law at Home

and qualify himself to pass State examinations for admission to the bar. If you are ambitious—if you would win name and fame in a pleasant and lucrative profession—write to-day, let us take up your case personally, and show you how thousands have succeeded, and how *you* may succeed, by taking up our Home Correspondence Course in Law. Advice costs nothing. *This* is your opportunity. Fortune may knock but once. *Write to-day.*

THE SPRAGUE CORRESPONDENCE SCHOOL OF LAW, 579 Majestic Building, Detroit, Mich.

Interpret the gifts by words of uniform length. The primals in order spell a most desirable Christmas gift for boys. Rearrange the finals, omitting number 8, and obtain a famous Scotch essayist and historian, born in December.

—Grady Peerey.

65. CHRISTMAS DESSERTS.

On our chess-board, by the king's move, one square only in either direction, find fifty or more desserts, pies, cakes, confections, fruits, nuts, etc., using every letter at least once and as often as needed, but repeating no letter till after moving from its square.

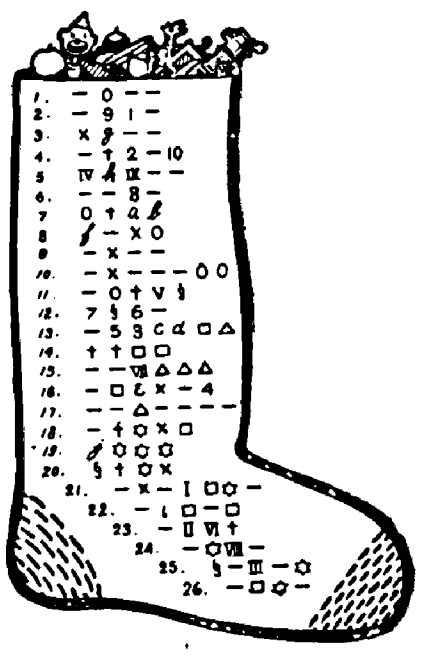
—Fred E. Day.

66. CHRISTMAS STOCKING.

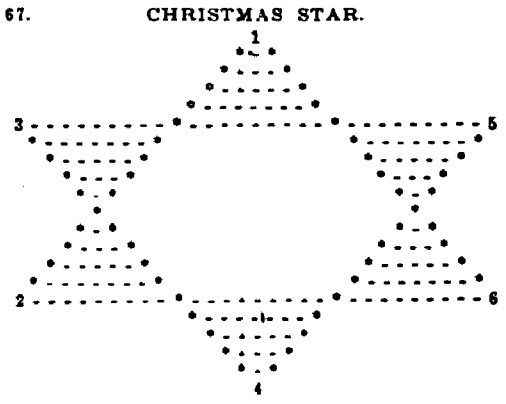
Fill the diagram on the stocking with twenty-six words as here defined, in their numbered order.

1. The eleventh king of Judah. 2. Employed. 3. Cajole. 4. Portrays. 5. A pupil. 6. The Dutchman's wife. 7. The main point. 8. Head coverings. 9. Munich's river. 10. The narcissus. 11. Retains. 12. The crazy-weed. 13. Aping manhood. 14. The margosa tree of East India. 15. Vocally. 16. A sentinel. 17. "By what right," in Latin; a common legal term. 18. To send in return. 19. An ornamental belt. 20. Neat. 21. Alike. 22. A male body-servant. 23. Untamed. 24. One way of writing 290 in Roman numerals. 25. A dialectical form of the word "herbs." 26. The Greek letter corresponding to our Z.



The initials read downward spell the alphabet, in order; the fourth letters read upward also spell the alphabet, in order. The star letters when rightly arranged spell a December holiday. The number path in numerical order and the letter path in alphabetical order each spell a name of the patron saint of this holiday. The Roman numeral path, in order, and, when correctly arranged, the dagger, section, cross, circle, square and triangle groups of letters, each spell an adjunct of this holiday. —Raymond F. Katterjohn.

67. CHRISTMAS STAR.



Upper triangle: A letter in Christmas box; a "ville" that is a county seat of Cal.; even; unlawful; an address book; annual.

Left hour-glass: The ancient name of Norway, Sweden and Denmark; enmity; the goddess of retribution or vengeance; a river in Scotland and England; one of the stages of life; a letter in Christmas box; a measure for cloth, now rarely used; an island in the Mediterranean; the capital of Silesia, Prussia; frugalities in expenditure; pertaining to a ritual.

Right hour-glass: A national park of the U. S.; a subordinate; a county and county seat of Pa.; a county seat of northern Mo.; a city of southern Persia; a letter in Christmas box; a "Harbor" of Long Island; a representative; tanned skin; to found or begin; a vine bearing beautiful and fragrant flowers.

Lower triangle: Pertaining to Canaan; mechanical; a county of Montana; a common vegetable; to allow; a letter in Christmas box.

The starred letters from 1 to 2 spell what occur at Christmas time and the month; from 3 to 4, a Christmas saint and what are sung at Christmas; from 4 to 5, a Christmas saint and a fruit enjoyed at Christmas; from 1 to 6, three products of the forest, seen at Christmas. —Emerson Grant Sutcliffe.

Tangle Talk

You are advised to observe the answers closely each month, and compare them word by word with the originals of the month preceding.

Any definition or device that was found unmasterable as you went over the originals, seeking out the answers, becomes simplified and wonderfully easy of solution under the light of publicity.

It is by such a comparison that vocabularies are enlarged, exact definitions unconsciously memorized, and easier and better work made possible in our Tangles from month to month for all who keep their weather eye open.

If there was one or more "hard" words that challenged you last month in the Tangles, look up the printed answer in this issue, and that simple action will serve to store up both the definition and the answer in one of those brain cells of yours, for future use.

From the new contributions that reach us by December 18 will be selected those to appear in the February issue. George Washington, Abraham Lincoln and Saint Valentine usually divide honors among our boys on that month, and very properly so, but you need not feel limited to these subjects.

We would all enjoy it very much if our many old-time Tanglers would take a "post graduate" course by again contributing some of their best ideas to the Tangles.

Our newcomers, new subscribers, readers and contributors, are not familiar with a long list of names that once frequently graced our department.

How many there are, now interested in the Tangles, who never have had the opportunity to enjoy the brilliant work that bore the following and many other names of those that have helped to make the Tangles famous:

Lot Armin, Kenneth Trainer, Kent Brooklyn Stiles, Russell G. Davidson, T. Lynn Chase, G. W. Hodgkins, Frank M. Field, Viking, Mary Elizabeth Stone, Eugene Marius Stewart, Page Alden Perry, Edward Langdon Fernald, Vattel Elbert Daniel, Nels W. Kindgren, Sherman Spurrier, Virgil S. Schory, Joseph Phillip Smith, The Oracle, The Idiot, Clement Barnes, Litta Voelchert, William Felder Howell, J. Klahr Huddle, Charles Stewart, Leonard M. Steberg, Katherine Haren, Ray Blore, William B. Kirk, Willie R. Schoenberger, S. Ward Seeley, John W. Dulaney, Jr., Vernor Lovett, Harry Dinges, Emmons Emerson, S. John McCarthy, James Edward Shields, J. Horace Trumbull, Cleary Bullard, Hugh V. Harlan, Richard Rundell, Ross Richtmyer, Hubert Fentress, and so many others we would like to name did space permit.

The following and several others of the "Old Guard" are entitled to be numbered among the stragglers, for their work still appears at rare intervals, with far too great infrequency to suit the editor and all of the Tanglers:

Morton L. Mitchell, The Gopher, Frank C. McMillan, Benjamin L. Miller, Otis Merlin Sisson, Osborn J. Dunn, Allert Brager, George Harrison Stanbery, Ralph Williams, Russell B. Smith, Kenneth Fullerton, etc.

Then again there are some of the faithful whose contributions continue to come with a regularity that is most gratifying.

Could we but have a revival of interest among all the Old Guard, a post graduate series, an alumni reunion in these columns, what a feast it would be for all of us!

Why cannot we have it?

Some of you, I know, have taken up studies and lines of work that allow little time or opportunity for the preparation of Tangles. The greater tangles of life are now before many of you.

We would greatly enjoy a letter from all such, telling of their present occupations and successes, and a photograph, if it may be.

We never forget the boys. "Once a Tangler, always a Tangler," at least in the heart of your —Uncle Tangler.

A CHRISTMAS GIFT

THAT LASTS THE WHOLE YEAR 'ROUND

Everyone remembers some boy at Christmas. If it isn t a son, a brother, a nephew, a cousin, it's an acquaintance, an employee, a friend, a chum; or maybe some poor boy known only by name and address.

Where in all the world can you find a better Christmas Gift for a boy than a year's subscription to The American Boy? He gets it every month. It isn't something to give joy today and be forgotten tomorrow. We furnish on request, a handsome Christmas Card which tells the boy who gave him The American Boy. If the request too is made, we can mail the Christmas number so that it will reach him on or near Christmas morning.

The American Boy Equals a Dozen Story Books

Look over this copy and think of twelve such—nearly 400 pages in all, crammed full of the very best matter for boys anywhere to be found. And this carried directly into the home of your boy or your friend, and all for $1.00.

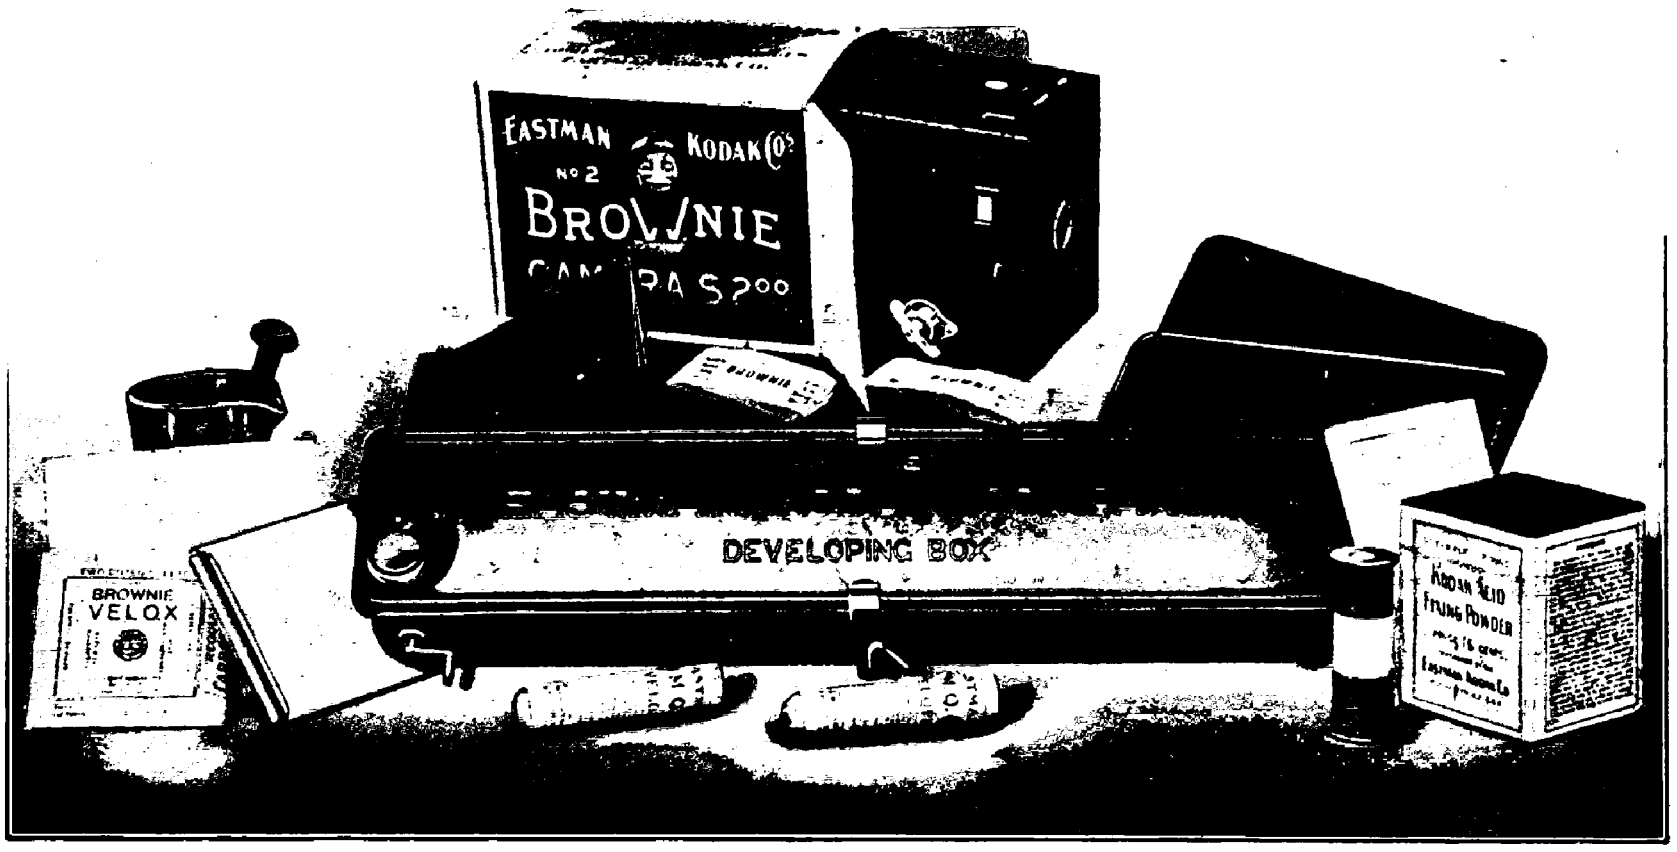
The Old Time Boy Had Nothing Like It

We Have hundreds of letters from men saying in effect, "When I was a boy I would have given anything to have had such a paper. Nothing so good for boys was even imagined then." You recognize the names of our writers—we have had Henty, Alger, Butterworth, Tomlinson, Stratemeyer, Munroe, and Shute, and during the coming year we shall print stories by Trowbridge and Ellis and many other noted writers for boys.

The Biggest Possible Christmas Present

Give that Boy something that will both please and instruct him—something he will be grateful for every day of the year. Give us that boy's name and address and send us $1.00. We will do the rest. Address

THE SPRAGUE PUBLISHING CO., Detroit, Mich.



For every boy or girl there's a
Merry Christmas in the

Kodak Box

A No. 2 Brownie Camera for taking 2¼ x 3¼ pictures, a Brownie Developing Box for developing the negatives *in daylight*, Film, Velox paper, Chemicals, Trays, Mounts—Everything needed for making pictures is included in this complete little outfit.

And the working of it is so simple that anybody can get good results from the start. No dark-room is needed and every step is explained in the illustrated instruction book that accompanies every outfit.

Made by Kodak workmen in the Kodak factory—that tells the story of the quality.
