SPECIAL NOTICES.

TERMS: *Not cash in advance.* Our prices are put as low as it is possible to sell genuine stamps, and we cannot allow any discounts. We cannot hold ourselves responsible for letters lost in transit.

All orders will be filled, as far as possible, on the day of receipt.

We are prepared to send selections of rare stamps and novelties on approval to parties furnishing satisfactory references.

Purchasers are particularly requested to give full name and address with every order.

Orders for less than twenty-five cents, except for millimeter scales and gummed paper, are respectfully declined.

Orders for less than \$1.00 must contain return postage.

GUARANTEE. Every stamp sold by us is guaranteed as a genuine original, with the exception noted below, and when required a written guarantee will be given.

REPRINTS. All consideration of these articles has been omitted from the present edition of the catalogue. At the same time, advanced collectors frequently add sets of reprints to their collections of different countries in order to fully represent everything in any way connected with postal issues. Therefore in our books of special countries reprints will be offered; but every specimen will be stamped "reprint" on the reverse. However, in no case must reprints be confounded with re-issues, as the latter are understood to be stamps which are still receivable for postage, although printed at a later date than that at which the particular issue was regularly sold at the post office.

PRICES. The prices quoted for rare stamps are for specimens in good condition, but in many instances extra fine copies bring far higher prices, and selections will be sent on request. This is especially the case with such stamps as those of Mauritius, Philippine Islands, New South Wales etc., where early impressions are of a much higher order of rarity than later ones made from worn plates.

Also in many instances, unused stamps with original gum are worth more than the quotations given by us for ordinary unused specimens in good condition.

The quotations given in this catalogue reflect the actual present condition of the market as gathered from all parts of the world; but the prices of stamps are subject to the general laws of supply and demand and, therefore, are apt to rise or fall. As a general rule, the quotations given herein will be maintained until the appearance of our next edition, but special altered conditions may make it necessary to raise or reduce our selling prices without further notice. The appearance of new issues naturally send up the prices of the obsolete stamps.

Although our stock is larger than that of any other dealer in the world, it is still impossible to keep on hand at all times a full supply of even the medium priced stamps. Therefore, in making remittances, orders should be sent to us for at least twice the amount remitted, so that the customer may be reasonably sure of receiving goods to the full value of the remittance made. We never substitute stamps not ordered for others which may not be in stock. In the line of rarities, the proportion that could be supplied out of any list of wants would of course be smaller than in the case of medium priced stamps; but if such lists are filed with

us, special attention will be paid thereto whenever the specimens required fall into our hands. As to the great rarities, the prices are merely for the information of collectors, although specimens of almost every stamp pass through our hands at some time.

REMITTANCES. Please make all remittances by check, money order, postal note or express order to the *Scott Stamp & Coin Co., Ltd.*, or else in unused two cent stamps in strips of ten or more. With the exception of those countries whose currency is worth less than 100 cents U. S. currency to the dollar, unused stamps up to the value of \$1.00 will be taken at face value in payment for orders from this catalogue.

NOVELTIES. For the convenience of those of our customers who wish to obtain novelties as soon as they appear, we shall, upon application, set apart a series of boxes in which we shall place on receipt one of each kind of new stamp as received, and forward them as soon as a sufficient amount is reached, or else on request. Parties not known to us who desire to take advantage of this system must deposit \$10.00 before any stamps can be sent.

CORRESPONDENCE. In English, French, German and Spanish.

NEW AND PROVISIONAL ISSUES. Correspondents in Africa, Asia, Australia, South America and the West India Islands are requested to send us stamps to the value of \$5 or \$10 of any new or provisional issues which may appear in their country, and we shall remit the amount by return mail, allowing 15 per cent, commission on ordinary issues and 30 per cent, commission on provisional issues, such commission to be taken in stamps, etc., selected from our lists, in case the stamps are sent within fifteen days of their issue. We would also appreciate early information of any projected new issue or change, as we are especially desirous to procure early supplies of anything new that may appear in the line of adhesives, stamped envelopes, newsbands and postal cards. Prompt cash and postage charges incurred are guaranteed.

AUCTION SALES. We are prepared to dispose of large collections of postage stamps at auction at a reasonable rate of commission. Small lots are not accepted by us for disposal in this way. The success of this system of disposing of fine collections has been fully demonstrated during past seasons.

PURCHASE AND EXCHANGE. We are prepared to purchase or exchange against all kinds of rarities, and will pay the highest prices. It is useless to offer us small lots of common stamps.

EXAMINATION OF STAMPS. We are prepared to examine and classify stamps in accordance with our catalogue at the rate of 50 cents for ten stamps or 1 ss. 5 cents additional for every stamp above 10. Postage and registration are additional in every instance. The stamps should be sent hinged on sheets, with sufficient space below each specimen for the insertion of the information desired. Entire collections will be examined for forgeries at the rate of \$2.00 per thousand stamps, the minimum fee being \$2.00.

ABBREVIATIONS. A.—Asia; AE.—Africa; CA.—Central America; E.—Europe; NA.—North America; O.—Oceanica; SA.—South America; WI.—West Indian Islands.

Where no special color is given, it is understood that the paper is white in the case of stamps and buff in the case of postal cards. Where the color of a surcharge is omitted, it is understood to be black.

Whenever a stamp is printed in black on colored paper, the color of the paper alone is given, in italics.

HINTS FOR COLLECTORS.

TO the novice in philately many terms and expressions used in this catalogue may be difficult of comprehension, and, while to the more advanced collector they have become like household words, a little explanation to the beginner will no doubt be welcome. The principal characteristics of a stamp can always be divided into well defined heads: paper, watermark, separation, impression, design and gum. We will take these seriatim and explain the meaning of the terms used in describing each characteristic.

PAPER. French, Papier; German, Papier; is a material composed of a compacted web or felting of vegetable fibre, in thin sheets. Formerly made altogether by hand, it is now almost always made by machinery. The fibres most used for paper on which stamps are printed are linen and cotton rags, straw, wood and certain grasses. These fibres are prepared by grinding, bleaching, beating and boiling until they are reduced to a fluid pulp. Thin coatings of this pulp are then placed on sieve-like frames which allow the water to run off and retain the matted pulp. Size, or weak glue, and coloring matter may be added to the pulp, and after drying, the paper may be subjected to mechanical processes, such as passing it between smooth or engraved rolls, subjecting it to great pressure, heat, etc., and its appearance and properties are thus modified. The frame in which the pulp is first caught or the surface on which the pulp is fed determines the texture of the paper. If this surface is smooth and even, composed of felt or blanket, the paper will be of uniform texture throughout, showing no light and dark figures when held against the light. This is called *Wove Paper*. If the frame is of fine wire netting, the paper will show little light dots or points, very close together, and is called *wire wove*. Wire wove paper to-day being the common form, is known generally as *wove paper*.

If the frame has parallel wires it is evident that a greater thickness of pulp will settle between these wires, and that the paper when held to the light will show alternate light and dark lines. This is known as *laid paper*. The distance apart and the thickness of the lines vary, but on any one piece of paper they are all alike. If there are only a few light lines in the substance of the paper at a considerable distance apart, like the ruling on writing paper, it is called *bâtonné* from the French "Baton," a staff. *Batonné* paper may be either wove or laid; in the latter case the fine laid lines show between the "bâtons." The laid lines may form geometrical figures, such as squares, rectangles, diamonds, or may be wavy. When the lines form squares the paper is called "*quadrille carré*," a French term which seems to have no equivalent in English, although the term *quadrille* paper is sometimes used. When the lines form rectangles instead of squares, the paper is called "*oblong quadrillé*," also a French term. Paper is also distinguished as thick or thin, hard or soft, and by its color, as bluish, yellowish, greenish, etc. *Pelure paper* is a very thin, semi-transparent paper, which may be either wove or laid. *Native papers* of India, Japan, and China are made of silk or rice fibre, and present a distinctive appearance and feel. The paper in which the little Japanese toys are wrapped is *native paper*. *Manila paper* is a coarse paper made of manila or hemp fibre. It is used for cheaper grades of envelopes and newspaper wrappers. It is usually of a light brown color, sometimes it is colored, as in the United States amber manila envelopes. It may be wove or laid. *Silk paper* in philately is of two kinds; first, that in which one or more threads of silk embedded in the substance of the paper extend across the stamp. Switzerland and Wurtemberg are good examples, and the first 10p. and 1s. Great Britain were on Dickinson safety paper, which shows these silk threads. In the catalogues this style of paper is usually designated as "with silk threads." Many United States revenues are on paper which has short silk fibres strewn over it and impressed into it, during manufacture. This is called simply, silk paper. Where the fibres are so small as to be scarcely distinguishable by the eye and worked into the substance of the paper, it is called *granite paper*, or *silurian paper*. Some of the Swiss stamps show the granite paper well. As a protection against counterfeiting the paper may be colored through and through with a sensitive color as seen in the current 2½p 3p. and 6p. of Great Britain, or it may receive a coating of some soluble substance which readily washes off, carrying the design of the stamp with it, as in the case of the early issues of Russia, some of Italy, etc. Double paper has been experimentally used,

consisting of a very thin sheet pasted to a thicker one. Any attempt to wash the stamp separates the two sheets. Gold-beater's skin was used for the 1866 issue of Prussia and the design printed on the back of the transparent surface. Some of the German issues have an invisible network printed on the paper before printing the stamps. This may be made visible by exposing to sulphuretted hydrogen. The present German issue has the imperial eagle, crown and post horn printed in Phenolphthaleine, which is rendered visible by ammonia fumes. *Ribbed* paper presents rough parallel lines on both front and back, and is usually made by passing it through rolls which have fine corrugations cut upon them. Paper having very heavy laid lines may sometimes present the characteristics of ribbed paper.

WATERMARKS are closely allied to the paper, as they are usually formed in the process of manufacturing the paper. Watermarks consist of small designs such as crowns, stars, anchors, etc., which are formed of wire or cut from metal and soldered to the frame or roll on which the pulp is caught. The action of these is precisely similar to that of the wires causing the laid lines, and the designs form thin places in the paper and show by transmitted light. The best method to detect them is to lay the stamp face down on a bit of ferrotype plate and wet it freely with refined decolorized benzine, which brings up the watermark in dark lines against a lighter background. In the second issue of Russia the watermark (large numerals 1, 2, 3) is thicker than the body of the paper and appears light on a dark background when thus treated. Watermarks thus formed in the substance of the paper are called natural watermarks. Artificial watermarks are impressed on the paper after it is made, as in the stamps of Switzerland from 1862 to 1878, or are printed in some fatty substance which makes the paper translucent on the printed lines. The latter process is used by counterfeiters for imitating rare watermarks. *Inverted watermarks*, as the name implies, are watermarks turned upside down. While it is of course possible that one or more of the bits (as the wire or sheet metal designs on the frame or roll are called) might by accident be soldered on in a wrong position and thus form an inverted watermark in a sheet of upright watermarks, an inverted watermark is usually caused by feeding the watermarked sheet into the printing press upside down. For example, the penny stamp of Great Britain is watermarked with a crown, the top of which normally points to the top of the stamp. If the sheets were printed upside down the top of the crown watermark would point towards the bottom of the stamp. The only genuinely inverted watermark known is the heraldic emblem watermark of Great Britain, in which the roses should always show two petals at top and three below, but which sometimes show three petals at top and two below.

Reversed watermarks occur in such watermarks as are not alike on both sides of the center, such as the single and double lined numerals, the star and N, Z., etc. Normally these should read backwards when the back of the stamp is examined with benzine as described above, but if the sheet of paper is fed to the press wrong side up, the watermark will read forwards and is thus reversed from its normal position. A watermark may be both inverted and reversed, caused by feeding the sheet to the press both upside down and wrong side up. In the 4d. orange of the 1867 issue of Great Britain the garter watermark was intentionally used with the buckle at top instead of at bottom. This was done by feeding all of the sheets to the press upside down. In this instance an inverted watermark would show the garter buckle down, i. e., in the usual position. On some stamps (Queensland 1882 issue for example) the watermark is placed sideways. In many stamps the watermark forms a large design covering several stamps. Tuscany and Russia are good examples, and it is interesting to try to reconstruct the entire watermark with a number of stamps each showing only a portion of it. On many if not most sheets of watermarked paper for printing stamps, there are lines forming a border and dividing the sheets into halves or quarters, called panes. Outside of the border the name of the country is often formed in large letters, and if the sheet is carelessly fed to the press, parts of these lines and letters will show as watermarks on the stamps of the outer rows. These often puzzle beginners, but the stamps have no special interest. Some stamps are printed on paper bought from the paper makers' stock instead of being specially made, and such paper may have the monogram or design of the maker watermarked on a portion of it. The stamps printed on such paper would some of them show a watermark, while others would show none. The stamp collector should accustom himself from the very beginning to study the watermarks of his stamps. In explanation of individual watermarks a few words may be of help. In the first and second issues of Bel-

gium the watermark is described as "framed" and "without frame." The monogram, two L's interlaced, is the same in both, but in the first issue the monogram is surrounded by a line forming a square frame. The stamps of Great Britain show three styles of crown watermark, the small crown used from 1840 to 1855, which is quite small and simple; the large crown, used from 1855 to 1880, which is very large and ornate; and the new crown, used from 1880 to date. The new crown is frequently called "large crown" without any distinction being made between it and the real large crown of 1855. The common red penny of Great Britain with four corner letters shows the large crown, while the current issue shows the new crown. The orb watermark is a figure of a globe containing a straight armed cross and surmounted by a Maltese cross. The emblems watermark has two roses above (York and Lancaster) and shamrock and thistle below. The anchor watermark is, as its name applies, a plain anchor, which is found in various sizes, and the "foul anchor" is an anchor with a rope attached. The curious watermark of Travancore is said to represent the deadly cobra di capella.

SEPARATION is the general term applied to the means provided for separating the stamps. The earliest issues did not have any means provided for separating, and the stamps were usually cut apart with scissors. Such stamps are called *imperforate* or unperforated. As many stamps at first issued imperforate were afterwards issued perforated, care must be observed in buying the imperforate stamps to see that they are really imperforate and not trimmed stamps. The margins on all four sides should be wide and the total width of the stamp greater than the distance from hole to hole of the perforated ones. An unsevered pair showing the paper between the two stamps intact is of course indisputable evidence of their imperforate character. The inconvenience of cutting the stamps apart led Henry Archer of London to experiment in 1848 upon a method of reducing the strength of the paper between the stamps so that they could be torn apart without injury to the stamps. His first attempt resulted in irregular, jagged cuts of varying lengths; his second, in 1849, of regular incisions; and the final one, in 1850, in regular rows of small holes punched out in straight lines. Separations are effected by two general methods, *rouletting* and *perforating*. In rouletting the paper is cut partly or wholly through but no paper is removed; in perforating a part of the paper is removed. Rouletting derives its name from the French roulette, a small wheel, like the rowel of a spur, which is passed over the paper, causing each point of the roulette to cut a short incision through the paper. The French expression for this separation is *percage* and the German, *durchstich*. It is obvious that if the points of the wheel are not straight lines the cuts will correspond to their shape, and this gives rise to a variety of roulettes known generally by their French names. The following are the most common ones:

Percé en lignes: German, *in Linien durchstochen*; English, rouletted, or rouletted in lines. In this style of rouletting the paper receives short straight cuts in lines. The number of cuts in two centimeters determines the gauge of the roulette. This is fully explained under "Perforation." A method of rouletting in lines which is practiced when stamps are printed from electrotypes consists in using a printers' rule between the stamps. This rule has a sharp edge divided into short lines, and stands a trifle higher than the electrotypes of the stamps. When the form is inked the rules also receive ink, and when the impression is made the rules are deeply imbedded in the paper, almost cutting it through and of course imprinting the color in the cuts. This is called rouletting in colored lines, and examples of it may easily be found in the issues of Luxemburg and Thurn and Taxis.

Percé en points: German, *in Punkten durchstochen*; English, pin perforated. In this case round, equidistant holes are pricked through the paper, but no paper is removed, and this distinguishes it from a small perforation. The English term, "pin perforation," is not a happy one, as this separation is a roulette and not a perforation.

Percé en arc: German, *bogenförmige Durchstich*. There is no English equivalent for this style of roulette, and the French "percé en arc" is used. In this case a row of small semi-circles is cut which do not quite touch at the ends of the curved lines. When two stamps, percé en arc, are separated, one shows an edge with rounded projections and the other with rounded depressions.

Percé en scie: German, *sägenartiger Durchstich*; English, sawtooth roulette, or sawtooth perforation, but frequently the French term is used. In this style of roulette the cuts resemble sawteeth, forming small triangles instead of half circles, as in the *percage en arc*.

Percé en serpentín: German, *schlangenartiger Durchstich*: English, serpentine perforation. In this style the cuts form a serpentine or wavy line.

Percé en losanges: German, *Rautendurchstich*: English, lozenge perforation. In this style the teeth of the roulette are diamond shaped and partly cut and partly punched small diamond shaped holes. In heraldry this shape is known as a lozenge.

Perforations. The second chief style of separation of stamps, and the one which to-day is in nearly universal use, is called perforating. By this process the paper between the stamps is cut away in a line of holes, usually round, leaving little bridges of paper between the stamps to hold them together until they are to be separated. These little bridges are called the teeth of the perforation, and of course project from the stamp when it is torn from the sheet. The width of the teeth and the diameter of the holes between are usually equal. As the size of the perforation is often a guide to the date of issue of the stamp, it is necessary to measure them and describe them by a gauge number. Thus we say a stamp is perforated 12 or 13½. This does not mean that there are 12 or 13½ perforations on the side or end of the stamp, but that 12 or 13½ perforations can be counted in the space of two centimeters. A centimeter is the one hundredth part of the French meter, or unit of measure of length, and is very nearly equal to two-fifths of an English inch. More exactly it is equal to 0.3937x of an inch. Each centimeter is divided into ten millimeters, so that two centimeters equal 20 millimeters. This space has been arbitrarily adopted by collectors the world over as the length in which perforations shall be measured, and the number of perforations (each one consisting of a depression and a projection) in two centimeters is called the gauge of that perforation. Thus a stamp perforated 12 would have perforations of such size that twelve of them would measure exactly two centimeters. The current United States stamps are perforated 12, and give a readily obtained material for testing the above rule. The surest way to measure perforations is to draw or paste on a white card a black band exactly two centimeters wide and lay the stamp on it so that the center of a tooth coincides with the edge of the black band; then count the perforations to the other edge of the band, and the number thus obtained is the gauge of that perforation. If the center of a tooth falls on the other edge the perforation is an even gauge, such as 13, 16, etc., but if a hollow falls on the edge it is a half gauge such as 13½, etc. The publishers of this catalogue sell accurately printed gauges for measuring perforations. A perforation with small holes and teeth far apart is called a *coarse perforation*; and one in which the holes are not clean cut, but jagged, is called a *rough perforation*. In some cases the gauge of the perforations on the side of a stamp differs from that of the top and bottom, and such stamps are said to have *compound perforations*. In measuring compound perforations the gauge of the top is usually given first and then the gauge of the sides of the stamp.

IMPRESSION The methods employed in printing stamps are five in number; engraving, surface printing, type printing, lithographing and embossing.

Engraving. In engraving the plates for stamps the design is first cut on a matrix or hub of soft steel, which is then hardened and transferred by pressure to either copper or steel plates. The expressions, engraved in *taille douce*, *line engraved* and *steel plate*, all designate substantially the same processes for producing an engraved stamp. In these processes the ink is received and held in lines depressed below the surface of the plate, and in printing from these plates the damp paper is forced down into the depressed lines and absorbs the color. In consequence the lines on the face of the stamp are slightly raised, and seen from the back of the stamp are slightly depressed. When the ornamental work is engraved by a machine, it is called *engine turned* or *lathe work* engraving. The common 3c U. S. of 1861 is a good example of lathe work background, and frequently shows very clearly the depression of the lines of the design when the back of the stamp is examined.

Surface Printing or Typography is the exact reverse of engraved plate printing. In this process the parts of the design which are to show in color are left at the original level of the plate and the spaces between are cut away. The ink is applied to the raised lines on the plate and the pressure of printing forces these lines more or less into the paper, impressing the colored lines on the face of the stamp and slightly raising them on the back of the stamp. Any of the unused current stamps of Great Britain, Germany or France will show this characteristic very distinctly. In practice a large number of electrotypes of

the original are made and soldered together into a plate with the requisite number of designs for printing a sheet of stamps. Surface printed stamps show great uniformity, and the process is cheaper than engraving and plate printing.

Type set stamps are printed from ordinary printer's type, just as a book or newspaper is printed. Sometimes electrotype or stereotype plates are made, but as such stamps are usually printed only in small quantities for temporary use, movable type is often used for the purpose. This method of printing is apt to show great lack of uniformity and many broken type.

Embossed printing is a method in which the design is sunk in the metal of the die and the printing is done against a yielding platen such as leather, which is forced up into the depressions of the die thus forming the design on the paper in relief. Embossing may be done without color, as in the second issue of Italy, or with part color and part colorless, as the U. S. current envelopes and the stamps of Bavaria.

Lithography is a common process for printing stamps. In this method the design is drawn by hand or transferred from an original engraving to the surface of a lithographic stone, in greasy ink. The stone is wet with an acid fluid which causes it to repel the printing ink except on the greasy lines of the design. A fine lithographic print closely resembles an engraving, but the lines are not raised on the face or depressed on the back, and there is usually a duller appearance in the lithograph than in the engraving. A comparison of the 5kr rose of Hungary issued in 1871, with the same stamp issued in 1872, will show the difference clearly; the first is lithographed and the second is engraved. The 1886 issue of Guatemala compared with the 1887 issue will also show the difference well. Passing the edge of the finger nail lightly over the lines of the design will sometimes assist in distinguishing a lithographed from an engraved stamp.

When a plate or die is worn it is sometimes retouched by hand and the worn lines deepened and strengthened. The plate is then known as a re-engraved or retouched plate. Some governments have printed stamps which are no longer current from the old plates and sold them to collectors. These impressions are called *government reprints* or *official reprints*. In some cases the plates have passed into the hands of private persons who make and sell impressions from them; these are known as *private reprints*. Such reprints are comparatively worthless to the collector, and the beginner especially is warned against them. Their price as a rule is only a fraction of the price of originals. When a stamp remains current for a long time and is printed in large quantities, a number of plates are prepared, and these usually show on the margin or somewhere on the stamp a designating number. Such numbers are called *plate numbers*. In the earlier stamps of Great Britain these plate numbers show on the face of the stamp and the value of the stamp varies according to the plate number. In the stamps of the United States the plate numbers are on the margin of the sheet, and within the past year or two many collectors have begun to collect the stamps which show these numbers on the margin. Engravers, in making a die, often place little marks on them by which they can identify their work. Such marks are known as *engravers' marks* or *secret marks*. Much interest has been aroused recently by the discovery that the 1873 issues of United States stamps show secret marks which distinguish them from the issues of 1870 and 1872. These and other intentional or unintentional differences in stamps which are in general alike are called *varieties*, and are much sought after by advanced collectors and specialists. When a government for any reason wishes to reprint an obsolete issue, and for some reason cannot obtain the original plates or die, a fac simile imitation is sometimes made, and the prints from these new plates are called *government counterfeits*. *Fac similes* and imitations of stamps made and sold by private individuals are called *counterfeits*, and are of course utterly worthless, being made only to get money out of unwary collectors. Many of them are made with such consummate skill that their detection is difficult, so that until the young collector has learned to trust his own powers of observation and comparison, he should purchase stamps only from a well-known and reliable dealer who guarantees their genuineness and will refund the price paid in cases where, through mistake, a counterfeit has been sold without its true character being detected.

SPECULATIVE STAMPS are stamps whose primary or even secondary object is their sale to collectors. They are issued by existing governments, but with unnecessary frequency and of unnecessarily high values. Such stamps are not worth the prices asked for them, and have little or no real value. The Society for the

Suppression of Speculative Stamps publishes from time to time in the Philatelic Journals a list of stamps which they condemn as speculative and unnecessary.

BI-COLORED STAMPS are those printed in two colors, in which a central picture in one color is surrounded by ornamental inscriptions or framing of another color. The high values of the 1869 United States issue, the current Congo Free State, Liberia and Borneo issues are examples of bi-colored stamps. In bi-colored stamps two printings are required, and if the sheet is fed to the press upside down after one color has been printed, the part printed in the second color will of course be upside down and the stamps will have *inverted centers*. If in making up a plate of electrotypes one or more single electrotypes are put in upside down, they will give rise to what are known as *tête bêche* pairs, in which the top of one stamp will be where the bottom should be. Of course if the inverted stamp is by itself it cannot be distinguished from any other stamp of the sheet. In many issues of Great Britain the location of each stamp in the sheet is shown by the letters in the corners, and it is possible to get a stamp of each of the 240 varieties in the sheet and thus reconstruct it. In many other stamps such as the one penny 1830 of New South Wales (known as *Sydney Views* because they represent a view of the town of Sydney) there are small differences of engraving in each stamp, which render the making of such *reconstructed sheets* possible. *Double impressions* are stamps showing all the lines printed twice, and are caused by an oversight in the printing by which the sheet receives two impressions. Sometimes stamps are found printed with the design on both sides of the paper, although it seems impossible for a printer to make such an error, and they are probably due to waste proof sheets accidentally finding their way into circulation. Sometimes a stamp is printed in the wrong color, or one or more electrotypes of the wrong stamp are put into a plate by mistake, as was done in the case of the 1p. and 4p. triangular Cape of Good Hope 1861 issue, where each stamp is found in the color of the other. Sometimes the lithographer makes a mistake and shows two values on the same stamp, as in the case in the 5 centavo 1886 of Santander, on which the value is given in figures as 10 centavos and in words as five centavos. Stamps may be printed on paper with the wrong watermark or on the wrong colored paper. All such mistakes produce stamps which are called *errors*, and an error is a stamp containing some unintentional peculiarity and issued for use in that condition.

SURCHARGED STAMPS, or SURCHARGES, as they are called "for short," are stamps on which a new value or a new name has been printed to render them available for some purpose not originally intended. Surcharges are usually type set and printed in black. The most prolific source of surcharges is the French Colonies, but many other countries have used this means of producing new values. "Cyprus" is printed on stamps of Great Britain used in Cyprus. Salvador has hidden a mistake of the engraver by a surcharge. Spain put a fantastic ornamental surcharge on her colonial stamps to confine their use to a certain colony, and recently Peru has surcharged her stamps with a portrait of General Bermudez. The postal officials of many countries distribute sample sets of their stamps, and to prevent their use in the mails these stamps are surcharged "*Specimen*," "*Cancelled*," &c. Some countries sell off their stock of old stamps when a new issue takes their place and cancel the stamps with a punch hole or by printing a heavy line or bar across the face. Stamps which are prepared and printed as experiments are called *proofs*, and stamps left over and sold after they are no longer available for postage are called *remainders*. Designs submitted but not used are called *essays*. The colors in which stamps are printed are usually of mineral origin, and any color may occur in a variety of *shades*. Some shades are much rarer than the others. The collecting of these shades of color of the same stamp is much followed by advanced collectors. Some colors are permanent; that is, they are not affected seriously by light or water, while others fade or change tone from either or both. Such colors are known as *fugitive colors*. A color chart is a book of plates showing the possible shades of each color, and is useful in accurately determining the exact color values. The gum on the back of a stamp is for affixing it to the letters, and is distinguished as dark gum, white gum, colored gum, smooth gum and crinkly gum. Stamps having full *original gum* are worth more than those from which the gum has been removed. Some countries color the gum red, &c., and reprints are very apt to have the gum differing from that of the originals. In envelopes the gum on the flap is of importance, as it serves sometimes to distinguish issues. *Long gum* and *short gum* are expressions used to indicate the greater or lesser length of the gummed space on the flap. The ornament on the point of the flap of an envelope is called a *tress*. The steel punch for cutting out the shape

of an envelope before putting it in the folding machine is called the *knife*, and where the shape of the knife varies it is usually numbered, as knife No. 1, &c. The shape of the flap is described as straight, rounded, &c., the terms being self-explanatory. When the printed stamp is cut from the envelope on a square piece of the paper, it is known as a *cut square*, but when the contour of the stamp is followed in cutting it out, it is known as *cut to shape*. The same expression applies to certain stamps from which the margin is cut away to the contour of the engraved part of the stamp. Formerly a great many stamps were cut to shape and some of the earlier albums contained spaces which compelled this mutilation to make the stamp fit the space. It is needless to say that the value of the stamps is thus totally destroyed. The tendency now is to collect the entire envelope, postal card, &c., and they are known by the very awkward name of *entires*: French, *entiers*; German, *Ganzsachen*.

The various classes of stamps are indicated by their names, as postage stamps, revenue or fiscal stamps, telegraph stamps, *postage due stamps*, (French, *timbres taxe*; German, *Portomarken*) for indicating unpaid postage to be collected before the letter is delivered; *too late stamps*, for paying a special fee for forwarding a letter after the regular mail has closed; *registration stamps*, for paying the fee for keeping a special record of the letter or ensuring its delivery; *special delivery stamps*, for ensuring delivery of the letter in advance of the regular delivery; *postal packet stamps*, for packages sent by railroad train under postal supervision; *express stamps*, which are substantially the same as special delivery stamps. Revenue stamps are sometimes permitted to do duty as postage stamps and then described as *postally used*, and the stamps of a mother country are sometimes used in a colony without any designating mark other than the cancellation, which is called a *colonial cancellation*. Some countries have permitted a stamp to be cut in two or more parts and to pass at the fraction of their original value. Thus half of a six penny stamp would pass for three pence. Such stamps are called *split or bisected stamps*. Stamps issued by a city for circulation within city limits are called *municipal stamps*. Stamps issued by a chartered or private company or individual, for paying postage within circumscribed limits, are called *local stamps*, or *locals*. Stamps intended for temporary use pending the arrival of others, are called *provisionals*. In the early days of postage in the United States and in the early days of existence of the Confederate States, the Postmasters issued stamps good only at their offices, for transporting mail to its destination. These stamps are called *Postmasters' provisionals*. In Russia the districts or county governments have been given the right to establish post-offices and routes where the Imperial Russian Post does not operate. They issue stamps which are called *Russian rural stamps*, or *Semstvo stamps*. Under revenue or fiscal stamps we find the general issues, and stamps prepared specially for business houses, known as *match or medicine stamps*, according to the class of product on which they paid the revenue. The general issues for paying revenue on such articles were called *proprietary stamps*. *Playing card and Perfumery stamps* come under the same class.

The mark or obliteration put on a stamp by the post-office to denote that it has done service and is no longer available for payments, is called a *cancellation*. If it is made with a pen it is called a *pen cancellation*. In some cases a stamp with a pen cancellation is not as valuable as one with a regular hand stamp cancellation. Thurn and Taxis used a cancelling stamp of concentric rings, which has grown to be distinguished as a *ring cancellation*. Great Britain used a *Maltese cross cancellation*, and stamps thus cancelled belong to the earliest period. Where the name of the post-office shows in the cancellation, it is called an *office cancellation*. A peculiarity of the United States issues from 1868 to 1870 is the grill or embossing, which consisted of small square pyramids in parallel rows impressed or embossed on the stamp. The object was to break the fibre of the paper so that the ink of the cancelling stamp would soak in and make washing for a second using impossible. Peru has also used the same process on many of her stamps. On some stamps of Japan *syllabic characters* are found. These characters are the letters of the Kana-Kana alphabet, and serve the same purpose as the plate numbers of Great Britain.

On the stamps of the British Colonies the watermarks Crown and C.C. and Crown and C.A. constantly recur. The letters C.C. stand for Crown Colony, and this watermark was used down to about 1882, at which time it was changed to C.A., which stands for Crown Agents for the Colonies. The Crown Agents are the persons through whom stamps are supplied to the colonies.

Certain abbreviations are used frequently in this catalogue, the principal ones being Imperf., for imperforate; Perf., for perforated; Wmkd., for watermarked. The word Philately was suggested by Mons. Herpin of Paris, and is derived from the Greek *philos* "fond of" and *atelia* "exempt from tax." As stamps denote the prepayment of postage or the tax, they are symbolic of exemption from taxes, hence the word secondarily means a fondness for stamps. The Century dictionary defines it "the fancy for collecting and classifying postage stamps and revenue stamps as objects of curiosity; also the occupation of making such collections." The same dictionary also gives the adjective "philatelic" and the noun "philatelist." It indicates the pronunciation to be "fi-lat' e-li," "fil-a-tel 'ik," and "fi-lat-e-list."

It is hoped that the information contained in this introduction and the accompanying tables will enable even a beginner to use the catalogue to advantage and will help him over the many difficulties which beset him at the start, and that it will lead him to *study his stamps* and thus derive real benefit and knowledge from his collection.

Alphabetically Arranged Tables

OF THE

Technical Terms used in Philatelic Catalogues.

Tables alphabétiques des expressions

employées dans les catalogues de Timbres Poste.

Alphabetisch geordnete Tabellen der in Briefmarken-Katalogen gebrauchten Ausdrücke.

Recognizing the fact that the collector of to-day no longer confines himself to the catalogue of a single firm or even of a single country and language, we have prepared the following tables, which constitute a condensed philatelic dictionary in English, French and German. By their use it is hoped that profitable study of the leading catalogues of the world may be rendered more easy. The French and German tables are based upon a careful examination of the latest catalogues of Moens and Senf. The repetition of the terms in each language arranged alphabetically is an innovation which we hope will meet with approbation sufficient to compensate us for the great amount of space devoted to the tables.

COIN TABLE.

The value of each coin is given at the approximate actual value in United States gold. In countries having a gold standard this will vary very little from the rate of exchange, but in countries having a silver standard the variation may still be considerable. In calculating remittances to be made in foreign money, the rate of exchange should be ascertained from a reliable broker. Values carried to two decimal places.

AND GIVING THE PRICES, USED AND UNUSED, AT WHICH THEY CAN BE OBTAINED OF THE PUBLISHERS BEING A USEFUL GUIDE FOR ARRANGING STAMPS IN THE INTERNATIONAL POSTAGE STAMP ALBUM.

THOROUGHLY REVISED AND CORRECTED.

The numbers in the first column will serve to facilitate ordering from the Catalogue; thus, if you wish to order a used United States, 1851 issue, 10c green, imperforate, your order may read as follows:

The second column indicates the number of the illustration in the Catalogue; the third the nominal or face value, and the fourth the color of the stamp; the fifth, our price for an uncancelled specimen, and the sixth, our price for a cancelled or used one.

When the color of a stamp is expressed in italics it indicates that it is printed in black on colored paper. The color of the paper is always indicated in italics.

1c. The vertical lines in the upper part of the stamp have been so deepened that the background often appears to be solid. Lines of shading have been added to the upper arabesques.

3c. The shading at the sides of the central oval appears only about one-half the previous width. A short horizontal dash has been cut about 1mm. below the "TS" of "CENTS."

5c. On the original stamps four vertical lines can be counted from the edge of the panel to the outside of the stamp. On the re-engraved stamps there are but three lines in the same place.

10c. On the original stamps there are five vertical lines between the left side of the oval and the edge of the shield. There are only four lines on the re-engraved stamps. In the lower part of the latter, also, the horizontal lines of the background have been strengthened.

The reprints may be distinguished from the originals by the shades and the whiteness of the paper and gum.

In 1899 the government sold 50,000 sets of these stamps but, as the stock of the high values was not sufficient to make up the required number, the \$5.00, \$10.00, \$20.00, \$50.00 and \$100.00 were reprinted.

REPRINTS.

 $\frac{1}{2}$ SCHILLING.

There is a dot in the upper part of the right branch of N of EIN. The upper part of the shield is blank or almost blank. The horizontal bar of H in HALBER is generally defective.

SCHILLING.

The "1" in the corners is generally with foot. The central horizontal bar of the E of EIN is separated from the vertical branch by a black line. The A of POSTMARKE has the horizontal bar incomplete or missing. The horizontal bar of the H of SCHILLING is separated from the vertical branches by a dark line at each side, sometimes this bar is missing.

 $1\frac{1}{2}$ SCHILLINGE.

There is a small triangle under the right side of the tower, exactly over the R of POSTMARKE.

All reprints are spelt SCHILLINGE.

3 SCHILLINGE.

The head of the eagle is not shaded. The horizontal bar of the second E of BERGEDORF is separated from the vertical branch by a thin line. There is generally a colored dot in the lower half of the S of POSTMARKE.

4 SCHILLINGE.

The upper part of the shield is blank or has two or three small dashes. In most of the reprints there is a diagonal dash across the wavy lines of the groundwork at the right of "1" and "E" of VIER.

The differences between the stamps of the 1882 issue and the two re-engraved ones are as follows:

The oval frame surrounding the head of Alfonso, in the issue of 1882, is of equal thickness and touches the horizontal line below "Cuba;" the opening formed by the hair above the temples ends almost in a point. In the first re-engraved type the oval surrounding the head is thin, except in the upper right part where it is thicker, and does not touch the horizontal line under "Cuba;" the opening in the hair above the temples is more rounded. The principal difference between the first and second re-engraved types is that in the latter the opening in the hair is larger and still more rounded. Our illustrations give a pretty good idea of the three types.

Reprints:

$\frac{1}{4}$ s: The 4 rosettes between the words of the inscription have a well defined open circle in the centre of the originals, while in the reprints this circle is all filled up.

In the upper part of the top of the "g" of "Schilling," there is a thin vertical line which is missing in the reprints.

The two lower lines of the triangle in the upper left corner are of different thicknesses in the originals while in the reprints they are of equal thickness.

The labels at the right and left containing the inscriptions are $2\frac{3}{4}$ mm. in width in the originals while they are $2\frac{1}{2}$ mm. in the reprints.

$\frac{1}{2}$ s: The originals are printed on thinner paper than the reprints. This is easily seen by turning the stamps over, when on the originals the color and impression will clearly show through, which is not the case in the reprints.

The vertical stroke of the upper part of the "g" in Schilling is very short on the originals, scarcely crossing the top line, while in the reprints it almost touches the centre of the "g."

The lower part of the "g" of Schilling, in the originals, barely touches the inner line of the frame, on some stamps it does not touch it at all, while in the reprints the whole stroke runs into the inner line of the frame.

All values may be found with the scroll inverted and with the long end of the scroll pointing to the right or left.

Nos. 1 and 2 have been reprinted in blocks of eight and Nos. 1 to 6 in blocks of twenty. In the reprints the fourth character of the native inscription often has the curved upper line broken at the left. But in many instances comparison with photographic reproductions of the original settings is the only certain test.

It is probable that the issues of 1876, 1877 and the re-issues of the circular stamps were made to supply the demands of philatelists more than for postal needs. They were, however, available for postage. There exist also reprints, printed in a variety of colors, on native and European laid and thin wove paper, Collectors are warned against official imitations, which are very numerous. They are printed on several kinds of paper and in a great variety of colors.

The ½, 1 and 2r have been reprinted in colors other than those of the original issue and possibly in the correct colors also. The reprints of the 4r and 8r have a smudgy appearance. The color of the 4r is too vermilion and that of the 8r too red. The reprints all show signs of wear. They are found unsurcharged, with the district name surcharged by means of the old dies, with forged gothic "Mexico" and with various cancellations.

Nos. 6, 9, 10, 11 and 12 have been reprinted. The reprints of the ½ and 4r have the head of the long shape, the originals have the short head. The original ½r stamps are much worn but the reprints are unworn. The paper of the 4r is too deep and rich in color and No. 11 is printed in too bright red. The reprints of the 8r can only be told by experts. All these reprints are found in fancy colors and with surcharges and cancellations as in the 1856 issue.

Reprints:

1875 and 1876 issues.

The reprints of the 1sh and 1kr stamps are readily told; the pearls of the circle are heavier, the borders of the circles containing the Persian numeral of value are wider and the figure "1" below the lion is always Roman.

The reprints of the 2 shahi have the outer line of the frame at the left and at the bottom broken and on some specimens entirely missing.

The only distinguishing mark by which to tell the 4 shahi and 4 kran stamps is the frame, the outer line of which is of the same thickness as the inner line, while on the originals the inner line is very thin and the outer line thick; another feature of some of the reprints is a break in the ornament in the lower part of the circle below the figure "4."

In the reprints of the 8 shahi stamps the small scroll nearest to the circles with Persian numerals at the bottom of the stamp touches the frame below it; the inner and outer lines of the frame are of equal thickness, while in the originals the outer line is much heavier than the inner one.

All reprints are found cancelled to order.

5 reis: There is a defect in the neck, which makes the Adam's apple appear very large.

25 reis: The burelage of the ground work in the original is sharp and clear, while in the reprints it is blurred in several places; the upper and lower right hand corners are very thick and blurred.

50 reis: The color of the reprint is yellow green, while the original is blue green; there is a small break in the upper right hand diagonal line of the frame of the reprint; the initials of the engraver (A. B. F.), which in the originals are plainly discernable in the lower part of the bust, do not show in the reprints.

100 reis: The small vertical lines at top and bottom at each side of the frame are heavier in the reprints.

These stamps have also been reprinted on thick smooth chalky white wove paper, un gummed.

Reprints:

In the originals the hair of the head and the beard is sharp and clear, and in the white spot at the top of the head there is a small dot, plainly discernible. On the cheek, between the eye and the left whisker, there are a number of minute dots. The bottom of the neck is shaded with diagonal lines. The thin line of the groundwork at the top of the E of FRANQUEO is generally broken at the left side, the eighteenth line of shading at the top of the right side generally runs beyond the outer frame in the curved line above ESPAÑA there is generally a break at the left of the E.

In the reprints the hair is blurred and indistinct. The dot in the white space at the top of the head is generally invisible, and when it shows, looks more like a colon or a small dash and generally touches the hair above or below it. The line above ESPAÑA is unbroken.

 α. 1r deep blue 50 1.00

Reprints:

These are exactly the same as the reprints of the stamps of the preceding issue, with the exception of the line above ESPAÑA, which has been replaced by a tilde over the N; this tilde is the same in all the reprints, is placed rather close to the N and is of the same width as that letter.

Nos. 1 to 3 were never in use.

The so-called reprints, which are virtually counterfeits, can be distinguished from the genuine as follows:

In the genuine, the flagstaff at the right of the eagle consists of a single thick line, whereas in the forgery it is formed of two thin lines. In the genuine, the flagstaff never touches the oval containing the arms; in the counterfeits it usually touches. In the genuine,

neither of the staves crossing the band-rol inscribed "Eendragt maakt Magt" touches the oval containing the arms, except in very blurred specimens. In the counterfeits, at least one of these staves always touches the oval. In the genuine, the outside of the staves form a continuous line with the arms of the anchor, while in the counterfeits they are arrow shaped.

THE ADVANCED ALBUM FOR SPECIALISTS

This is the very latest improvement in blank albums for advance collectors and is far superior to any other now on the market. The leaves are firmly held in position by a very simple device and injury to the stamps is impossible. Any leaf can be removed, or new ones inserted, without any trouble, and this insures the absolute permanency of each volume.

Each leaf has a double linen joint, and, to facilitate a tasty arrangement of the stamps, it is covered with a fine quadrille ground-work. Each album contains 100 leaves of the very finest card-board, and each leaf has an inside measurement of $10\frac{1}{2} \times 7\frac{1}{4}$ inches.

PRICES:

No. 1. Strongly bound in Half Morocco, gilt,	\$ 9.00; postage extra.
No. 2. Elegantly bound in Full Morocco, gilt, bevelled boards, expanding lock with key,	15.00; " "
Blank pages for No. 1,	4 50 per 100
Blank pages for No. 2,	5.50 " "

For the benefit of those desiring a smaller book, the same album may be had, in a reduced size, the inside measurement of the leaves being $9\frac{1}{2} \times 6\frac{3}{4}$ inches.

PRICE:

No. 5. Strongly bound in Half Morocco, gilt,	\$7.50; postage extra.
Blank pages for No. 5,	4 00 per 100

THE ADVANCED ALBUM WITH SUNK MOUNTS.....

The leaves of this book are especially arranged to prevent all abrasion or rubbing of the stamps, and they have been adopted by some of the leading collectors. The leaves are made of the finest cardboard and have a raised marginal border, the central or sunken portion having a faint quadrille groundwork, as in Nos. 1 and 2. Each album contains 30 leaves.

PRICE:

No. 4. Elegantly bound in Full Russia leather, bevelled boards, gilt, expanding lock with key. \$37.50; postage extra.
Blank pages for No. 4. 25.00 per 100

SPECIAL PORTABLE EDITION

To meet the demand of collectors who desire to carry their stamps, or a portion of them, while travelling, we offer a special edition of the Advanced Album, exactly like No. 4, with sunk mounts, but reduced in size. The inside measurement of the leaves is $8\frac{1}{2}$ x 6 inches, and the back of each leaf has a sheet of tissue paper fastened over it to prevent friction with the stamps on the next leaf. Each volume contains 30 leaves.

PRICE:

No. 3. Bound in Half Morocco, with cloth protecting case, \$15.00; postage extra.
Blank pages for No. 3. 15.00 per 100

THE MERCHANT FLAGS OF THE WORLD.

AUSTRIAN-ITALY.

BRAZIL.

FINLAND.

Uncolored reduced fac-similes, showing style.

"These brilliant colored Flags faithfully represent the emblems of the different nations of the earth, and as such are a great acquisition to any Album, while the exceedingly low price (25 cents) at which they are published, places them within the reach of all."

"This chart, containing many Flags never before published, has been collected with great care, and can be relied upon as being strictly accurate, and by its aid the nationality of any ship may be easily determined, as it gives the Flag of the NATION instead of the gorgeous piece of hunting which simply belongs to one family, and is seldom, if ever, seen out of their country."

"These sheets possess three great advantages, (to the Collector) over any other we are acquainted with, which consists in the facts that there is only one Flag to each country, more nations represented than have heretofore been given, and only flags of those countries which issue postage stamps. These we consider of great importance to those who buy them to put in Albums, as they can use them instead of having to throw away half the purchase. The colors are very brilliant, and without correct, and being printed on very thin paper the book is not swelled to an inordinate thickness."

Beautifully and correctly printed in five colors on very thin paper for Albums.

PRICE ONLY 25 CENTS.

THE COATS OF ARMS OF THE WORLD.

This magnificent chart contains accurate representations of the armorial bearings of the nations of the world, all of which are beautifully and correctly embazoned in gold and silver and their true colors.

As a sheet for framing, it is an acquisition to any drawing room and is indispensable in the library or study.

As a guide to determine the nationality of foreign coins or postage stamps [most of which bear the issuing countries' arms], it will be found of great service. When cut up and inserted in stamp albums, they will be found to add much to the appearance of the page.

The cut herewith shows an uncolored reduced fac-simile of the Coat of Arms of Hayti.

Printed on fine thin paper for albums.

Approval Sheet Department.

JOHN N. LUFF, Manager.

The many advantages offered by approval sheets are well known to most collectors. By means of well arranged sheets specialists and general collectors may supply the wants of their collections in the most satisfactory manner. We believe we have the best and most systematically arranged approval department of any firm in the stamp business. Our enormous stock enables us to make up an extensive line of sheets and books and to offer to collectors a far greater selection of stamps of every grade than is usually found on approval sheets. We have recently purchased a number of high grade collections which have added to our stock many stamps which dealers seldom hold in sufficient quantity to offer on sheets. We have arranged our sheets and books in a number of classes:

33 1-3 and 50 per cent. discount. These sheets contain the lower priced stamps and are adapted to the wants of beginners, enabling them to secure a good showing in their albums by a small outlay.

25 per cent. discount. Sheets of stamps of better grade, well suited to the needs of general collectors and excellent for filling in. About 5,000 varieties are offered on these sheets.

10 per cent. discount. Sheets and books of the best class of stamps, intended for specialists and advanced collectors. These sheets and books are made up by countries and groups of countries. They include rarities, shades, perforations and minor varieties, all carefully arranged in the most convenient shape for the collector. Some of the books are composed exclusively of rare stamps.

We shall be pleased to have you give our approval department a trial, and feel sure we can satisfy you.

Our approval sheets will be sent to all responsible parties who are known to us or who may send references or a deposit. All minors, or persons under age, must furnish a guarantee from their parents or guardians.

THE DISCOUNTS QUOTED HEREIN DO NOT APPLY TO ORDERS FROM OUR CATALOGUES.

THE SCOTT STAMP & COIN CO., Ltd.,

Examination of Stamps.

We are prepared to examine stamps for Collectors, as to genuineness, etc., on the following terms :

50 cents for 10 stamps or less, postage and registration extra. **5 cents additional** for every stamp above 10. These charges do not, however, apply to stamps which must be plated, such as Swiss Cantonals, Philippine Islands, Japan, Sydney Views, U. S. Carriers, etc.

The charges on such stamps will be 25 cents for each specimen examined.

The above charges do not include the classification of the stamps by issues or catalogue numbers, for which an extra charge of 2 cents per stamp will be made in every case.

We do not pass upon the genuineness of cancellations.

We are also prepared to examine collections for forgeries at the rate of \$2.00 per each thousand stamps contained in the collection, the minimum fee being \$2.00.

A CATALOGUE FOR
ADVANCED COLLECTORS
OF

Postage Stamps, Stamped Envelopes and Wrappers.

COMPILED FROM THE

MOST RECENT AUTHORITIES AND INDIVIDUAL
RESEARCH BY

HENRY COLLIN AND HENRY L. CALMAN.

THIS WORK, as presented in the *American Journal of Philately*, was the most complete of its kind that had ever been published, and after the *Journal* had appeared each month, we were enabled, through the kindness of collectors, to make many corrections and additions.

By these means it has been possible to make the Catalogue almost perfect, and realizing, also, that it would be a great inconvenience for collectors to be forced to have ten or eleven volumes of the *Journal* constantly at hand, in order to use the

Catalogue for Advanced Collectors,

we began some time ago to print the revised and corrected matter in book form. It is now complete. We are prepared to receive subscriptions for the entire work, to be delivered in parts, for

\$25.00 PAYABLE IN ADVANCE.

It is printed in quarto form with large margins for additions and annotations.

We have made a special feature of the engravings of plates of stamps containing varieties and our productions in this direction are unequalled.

 **Sample pages may be had on application.**

AUTOTYPE PLATES OF STAMPS.

Many plates have been produced by making separate engravings of each individual stamp, resulting in as many different varieties as there are stamps on the sheet.

Advanced Collectors re-compose these plates and to make the undertaking possible, illustrations of the sheets are absolutely essential.

Tongs for Handling Stamps.

These are invaluable to collectors for handling rare stamps; the old practice of picking up stamps with the fingers is very apt to soil or tear them, and has resulted in the loss of many a fine specimen. As they are made of the best nickel plated steel, they can be put into water without rusting and can thus be used when soaking stamps.
