Of this I have only the DOS REALES. The design is extremely poor. It is lithographed, on coarse, white wove paper, thinner than the genuine. The inscription in the upper label is CORREOS MEJICO, like the genuine. The groundwork behind the bust is nearly all solid, but here and there it shows horizontal lines, crossed by oblique ones, running down from right to left. There are no studs in the shirt-front, and no pleats in it; the upper part being one plain, unbroken expanse of white. The shading between the central oval and the outer scroll-work runs obliquely down from right to left, as in the genuine; but it is very coarse and irregular, and some of the lines are drawn *over* (i.e., across) the scroll-work. The upper label has no forked ends, and no outline to it at all. There is a thick, coloured line round the whole stamp, which does not exist in the genuine. The background of the upper label is absolutely solid, as is also that of the lower label. In the face, the lower part of the forehead, between the eyes, the centres of the cheeks and the parts round the mouth are all destitute of shading.

Second Forgery.

Of this I have only the $\frac{1}{2}$ REAL, which has the inscription MEDIO REAL, as in the genuine. Lithographed, on thick, hard, *very* white wove paper. The inscription in the upper label is CORREOS MEJIOS, which is an easy test for this counterfeit. The groundwork behind the bust, in the oval, is formed by crossed, horizontal and vertical lines. There is *one* very small stud or button in the shirt-front, and a button-hole, where the upper stud ought to be. The said shirt-front only shows one central pleat or fold, instead of three. I need not describe this forgery further, as MEJIOS is quite sufficient to condemn it instantly.

Third Forgery.

Of this I have a full set. Lithographed, on thick, hard, *very* white wove paper. The upper inscription, in all the values, is CORREOS MEDICO; the lower inscription in the $\frac{1}{2}$ REAL is MEDIO REALES, in the 1 REAL is UN REALES, and that in the 2 REALES reads DOS. REALES, with a stop after DOS, and the R of REALES a long way from the other letters of the word. The groundwork behind the bust, in the oval, is solid (i.e., it is of uniform colour, without lines); and there are no studs and no pleats in the shirt-front. The shading between the central oval and the outer scroll-work consists of oblique lines, running down from left to right. The lettering of the upper inscription is much too small. Both labels have solid backgrounds. The front of the nose is quite unshaded. The mouth wears a most fatuous grin, very unlike the sad and slightly sneering expression of the genuine.

Fourth Forgery.

Of this I have only the 2 REALES. Very nicely lithographed, on thick, rather hard, yellowish-white wove paper. The inscriptions are the same as in the genuine. The groundwork behind the bust, which is the principal test for this counterfeit, is formed of horizontal lines, crossed by very fine oblique lines, running down from right to left, and from left to right. The shirt-studs are very dark and prominent, but shapeless. There is only one central pleat; the rest of the shirt-front having a little shading just at the top, and a line or two at the bottom, on the left side of the bosom (right side of the stamp). Below the lower stud there is a long, dark mark, like a button-hole, which is not shown in the genuine. The lines in the background of the upper label are coarse, and easily seen. Counted in the space between CORREOS MEJICO, there are eight of these horizontal lines, not including the outer outlines of the label. The crossed, oblique lines of the background of the lower label are easily seen. One cheek, the nose, and the centre of the upper lip are entirely bare of shading. The lower inscription is in letters hardly any larger than those of the upper one, though they are twice as large in the genuine. This is not at all a bad forgery, and is likely to deceive. The chief points of difference are in the scroll-work, but it is impossible to describe them without diagrams.

Fifth Forgery.

Poorly lithographed, on very stout, tinted, and also on thinner, white wove paper. The C of MEJICO is very like a G, otherwise the inscription is the same as in the genuine. The horizontal lines of the background behind the bust are very coarse, and are crossed by oblique lines, running down from left to right. The shirt-front is divided into three, by a very broad, middle pleat. The upper shirt-stud is much larger than the lower one. There is no shading on the shirt. The background of the upper label is perfectly solid, and the lower outline of the said upper label ends between the C and O of MEJICO. The lower label has a background of crossed, oblique lines, but they are blotched together into a solid mass of colour, at each end of the label. The nose, centres of the cheeks, upper lip, and most of the lower part of the face are destitute of shading; but the shading on the side of the cheek looks like whiskers.

Sixth Forgery.

Coarsely lithographed, on medium, greyish wove paper. The upper inscription is the same as the genuine; but it is in coloured letters on a white ground, the letters being ordinary, Roman capitals. This is a very easy test. The groundwork behind the bust is the same as in the fifth forgery, which this present counterfeit very greatly resembles. All the other tests are the same as for the fifth forgery, except that the lower label is completely solid.

Seventh Forgery.

This is the last and best, and the large majority of collectors would accept it as genuine without a moment's hesitation. Finely engraved in *taille-douce*, on medium to thinnish wove paper. The horizontal lines behind the bust are a very little too thick and heavy. The shirt-studs are as in the genuine; but the shirt-front is divided merely into three by a central pleat. This pleat is narrow, as in the genuine. There are a few very fine lines of shading on the shirt-front, which are, however, quite invisible, except through a good microscope. The background of the upper label is formed by nine distinct, horizontal lines, not counting the outer outlines of the label. The lowest of these nine lines does not run

across, below the bottoms of the letters, so that the feet of the RR of CORREOS, and of the M of MEJICO are open. The front of the nose is unshaded for its whole length, and the outlines of the lower eyelids are too strongly shaded, making them look thick and Chinese-like. The horizontal lines forming the black stock, under the chin, are rather too dark and thick. Besides the ridge of the nose, there is another unshaded place, under the left eye (right side of the stamp). The general appearance of the design is rather faint, as though from a somewhat worn plate, but the central oval is unduly dark and prominent. I call this a decidedly dangerous forgery.

POSTMARKS.

Genuine.—1; also one somewhat like 29, but larger, with name and FRANCO between the circles; also one similar to 26, but with name above, FRANCO below, and date in the centre; also 74; also name of town in large capitals, larger than those of the largest surcharge. I have a specimen surcharged, vertically, ZACATECAS, in large letters, and post-marked, horizontally, ZACATECAS, in similar, but still larger letters, which has a peculiar effect.

First Forgery.—Uncancelled, or pen-stroked.

Second Forgery.—Similar to 26, but with inscription CORREO DEL MEJICO; also 1.

Third Forgery.—Part of a large oval; also 98.

Fourth Forgery.—Same as second.

Fifth Forgery.—76.

Sixth Forgery.—76.

Seventh Forgery.—Uncancelled. I suppose the counterfeiters were too proud of their excellent production to spoil it with a cancellation.

Issue of 1861.

½ Real, 1, 2, 4, 8 Reales. Black on coloured paper.

Genuine.

These are exactly the same type as the first issue, except that they are printed in black on colour, instead of colour on white. The tests are therefore the same as before.

First Forgery.

Poorly lithographed, in black, on medium to thin, hard, coloured wove paper. The tests are the same as for the third forgery of the first issue.

Second Forgery.

Fairly well lithographed, in black, on thick, rather hard, coloured wove paper. The tests are the same as for the fourth forgery of the first issue.

Third Forgery.

Finely engraved in *taille-douce*, on thin, and also on thick, coloured wove paper. The tests are the same as in the seventh forgery of the first issue.

POSTMARKS.

Genuine.—As before.

First Forgery.—A pen-stroke; a red pencil-mark; a black blotch; also uncancelled.

Second Forgery.—98, 100.

Third Forgery.—Uncancelled.

Same Issue. 4 Reales, red on yellow; 8 Reales, green on brown.

Genuine.

The tests are the same as before, but the stamps are printed in coloured ink on coloured paper, as above.

First Forgery.

Lithographed, on thin, coloured wove paper. The tests are the same as for the third forgery of the first issue.

Second Forgery.

I have only the 8 reales. It is finely engraved in *taille-douce*, on thinnish, soft, coloured wove paper. The tests are the same as for the (dangerous) seventh forgery of the first issue.

POSTMARKS.

Genuine.—As before.

First Forgery.—A blotch; also 76.

Second Forgery.—Uncancelled.

Issue of 1864. 1, 2, 4 Reales; 1 Peso.

These stamps are very rare *used*. I only remember having one specimen, which was given to me by a friend in Monterey, and bore the surcharge MONTERREY. I believe they are also known with the surcharge of PASO DEL NORTE. The ordinary, unsurcharged, unused specimens, now so common, are remainders. The issue was, practically, a still-born one.

Issue of 1863. 1, 2, 4 Reales; 1 Peso.

Genuine.

Finely engraved in *taille-douce*, on thick, white or yellowish-white wove paper, perforated 12. In the word CORREOS, two vertical lines of shading pass through the middle of the C, one through the first O, and one through the first R; the latter two being very faint. There are also two vertical lines of shading through the O of MEJICO. The tail of the C of CORREOS nearly touches the O. The value-label at the bottom of the stamp is solid. The central medallion has a ground of horizontal lines, easy to be seen, and these lines are rather thicker near the Padre's right shoulder (left side of the stamp), making a shadow there. There are nine of these horizontal lines above the top of the head, the ninth touching the head. The dark ribbon or stock, under the chin, is formed by five lines, the first four very thick, and the lowest one somewhat thinner. The shirt-front is very like that of the first issue, except that only four of the five divisions can be made out, and the lines are very faint. Some of the diagonal shading touches the bottom stud, but does not hide it in the least. The ear is shaded with dots. The left eyebrow (right side of the stamp) is rather short, and does not extend to the outer corner of the eye. Each of the upper eyelids is shaded by a curved row of dots, just above its dark, upper outline. There is a thin, almost vertical line, running down the front of the upper lip. The ink stands out boldly from the surface of the paper.

First Forgery.

Nicely engraved in *épargne*, on medium, white wove paper; perforated 11. There is one very thin, vertical line almost centrally through the C of CORREOS, but no line through any other letter of either of the words. The tail of the C of CORREOS is no nearer to the O than its head is. The value-label at the bottom of the stamp has a background of very closely-set, fine oblique lines, crossing each other from left to right, and from right to left. In the central medallion, there are ten horizontal lines to be seen, above the head of the Padre; and there is no shadow in the background, near his right shoulder. The dark ribbon or stock, under the chin, is formed by six thick, dark lines. The shirt-front does not show any pleat down its centre, nor any other division except a little shading. The lower stud is a good deal hidden by the shading. The ear is shaded by lines and dashes, but not by dots. The left eyebrow extends far beyond the outer corner of the eye. The curved rows of dots on the upper eyelids are absent. There is no thin, vertical line, running down the front of the upper lip. The ink does not stand out at all from the surface of the paper.

Second Forgery.

I think this must be a lithographic transfer from the last. Lithographed, on rather stout, white wove paper, nicely perforated 11. The sheets of this forgery are in four panes, of twenty-five stamps in each pane, one pair of panes being *tête-bêche* to the other pair. The line in the C of CORREOS has almost disappeared. The value-label at the bottom of the stamp is solid in most specimens. There are a few dots along the upper eyelids, but they are almost invisible. The rest of the tests are the same as in the first forgery.

Third Forgery.

This is either a second and worse transfer, from the first forgery, or, more probably, a later printing from the stone of the second forgery, after it got more or less used up. The design is very blotchy. Badly lithographed, on thick, yellowish-white wove paper, perforated 11. There is not the slightest trace of any lines through any of the letters. The value-label is quite solid. There are ten horizontal lines, as in the first forgery, above the Padre's head, but they are much blotched. There is a slight trace of shadow in the lines near his right shoulder. One pleat, to the left of the upper stud (right side of the stamp), is visible part of the way. The rest of the tests are as in the first forgery.

Fourth Forgery.

This is new to me (1905), and is evidently of German origin. It bears the word FALSCH, in small, black, sans-serif letters, across the upper label, but even without this, it is not very likely to deceive. I have only the 4 reales. Fairly well lithographed, in dull yellow-brown, instead of sepia-brown, on thick, hard, very white wove paper, ungummed, unperforated. There are traces of one line in the C of CORREOS, and of two lines in the M of MEXICO. I do not think there is any line in the first R, but the word FALSCH hides this letter in my specimen. The central medallion is of solid colour, instead of lines, and this is an easy test. It is uniform all over, and the outline of the right side of the face (left side of the stamp) merges into this solid background, instead of being sharply defined. The dark ribbon or stock, under the chin, is solid. There is no sign of any pleats in the shirt-front. There is a large

patch of white on the ear. The left eyebrow (right side of the stamp) is much too long, and extends beyond the outer corner of the eye. The upper eyelids are almost hidden by heavy shading, so that the curved line of dots along the rim of each cannot be made out. From the corner of the nose to the corner of the mouth there is a strong, dark line of shading, which does not show in the genuine, the latter having only dots. The ink does not stand out from the paper.

POSTMARKS.

Genuine.—The only used specimen that I ever had was postmarked (and surcharged) MONTERREY. Evans says that they may be found with forged cancellations, but I have not seen any.

First Forgery.—Uncancelled.

Second Forgery.—Uncancelled.

Third Forgery.—Uncancelled.

Fourth Forgery.—Overprinted FALSCH.

NOTE.—I have one of the genuine remainders, with a forged surcharge of MONTERREY.

Issue of 1864. 3 Centavos; $\frac{1}{2}$, 1, 2, 4, 8 Reales.

As specimens of *taille-douce* engraving, these stamps certainly do not shine; for though the engraving may be all right, the printing is usually very bad, so that a really clear and distinct set of all the values is hard to find. There are two distinct surcharges: the earlier one has the district name only, or with consignment-number and date in large figures; the later surcharge has the consignment-number and date in smaller figures, with or without name.

Genuine.

Engraved in *taille-douce*, on white wove paper, which seems to vary a good deal in thickness; impression generally more or less smeared, as above-mentioned. The C of MEXICO has a head at each end, making it look like a G; this is also the case with the C of CORREOS, but not to so great an extent. In the X of MEXICO, the limb which points downwards, towards the bottom of the stamp, is five or six times broader than the other limb. The circlet at the bottom of the crown bears three jewels. The serpent has a distinct head, and an eye; the head points to the E of MEXICO. The outer frame of the stamps shows zigzag white lines, on a coloured background, but the white lines are not at all conspicuous. The eagle's neck is only outlined one side (left side of the stamp), the other side is bounded by the ends of the horizontal lines which form the background of the central oval; and no feathers show down this unoutlined half of the neck; while the other half, on the left side of the stamp, is feathered, from the head downwards. The left wing (right side of the stamp) does not touch the outline of the oval near to it.

First Forgery.

Coarsely lithographed, on stout, white wove paper. The impression is not smeared. The C of MEXICO is an ordinary C, but is rather top-heavy, the C of CORREOS is also an ordinary C. Both limbs of the X are of equal thickness; this is an easy test. There are no jewels in the circlet

at the base of the crown. The serpent has not the faintest vestige of a head, and the stump, where the head ought to be, points straight upwards, towards the centre of the M. The zigzag white lines round the frame of the stamp are very much too prominent. The eagle's neck is outlined down both sides; and the white patch, down the front of the throat, is much too conspicuous. There is a dark spot on the side of that toe which points towards the right bottom corner of the stamp; this spot is not visible in the genuine.

Second Forgery.

Lithographed, on stout, hard, white wove paper, ungummed, impression not smeared. The C of CORREOS is an ordinary capital C, as is also the C of MEXICO. The downward-pointing limb of the X is broader than the other limb, but nothing like so broad as in the genuine. There are two very tiny dots near the front of the circlet, at the bottom of the crown, but they are not large enough for jewels. The serpent has an eye, but it is circular, while that in the genuine is oblong; and the head simply tapers to a point, instead of enlarging and then tapering. The flowers in the four corners of the stamp are quite different from those of the genuine, and of all the other counterfeits. In the genuine, the two vertical petals, which point, respectively, towards the top and bottom of the containing-squares, are, practically, as large as the petals which point towards the corners. In this forgery, while the petals which point towards the corners are of equal size, with those of the genuine, the top and bottom petals are merely small white dots. Thus each ornament looks like a floral St. Andrew's cross, with four white dots in the angles. The eagle's neck is outlined both sides, and, from what I can see under the postmark of my solitary specimen, the feathers cover more than half the width of the neck. The lower portion of the wing, on the right side of the stamp, comes so close to the boundary of the oval that none of the horizontal lines of the background can be seen, between the outline of the oval and the lowest part of the wing. In the genuine, these lines can be seen the whole way down. In this forgery the eagle's left foot (right side of the stamp) looks like a sort of badly-made trefoil, standing on nothing; while, in the genuine, the foot is properly shaped, and is grasping a branch of the cactus.

Third Forgery.

This is a German production, and has *FALSCH* printed in black *sans-serif* letters near the top. Fairly well lithographed, on thick, hard, very white wove paper, ungummed, and not smeared. The back of the circlet, at the base of the crown, is shaded, and there are two very small dots, by way of jewels. There is a small white blotch in front of the serpent's mouth, so that at first sight the reptile might be taken for a cobra, with the blotch as its head, and the real head of the serpent standing for the expanded hood of the cobra. This blotch, however, is an accidental blemish in the background. The real head shows a long faint line, by way of eye. The tail very nearly touches the outline of the oval, though, as far as I can make out, the end of the tail does not go near the outline of the oval in the genuine. The bottom frame contains numerous white scratches and blotches, without any particular zigzag pattern. The eagle's neck is feathered all over, not showing any white patch down the front of the throat; this is an easy test. The white edge of the left wing (right side of the stamp) is very broad and clumsy; it touches the dark outline of the oval for some distance. The foot on which the eagle is standing is very clumsily drawn, no separate toes being visible.

Fourth Forgery.

Poorly lithographed, on thinnish, very yellowish-white wove paper, not smeared, ungummed. The C of MEXICO is an ordinary capital, that of CORREOS ditto. There is a white stop after MEXICO, which does not exist in the genuine, or in any of the other forgeries. The downward-pointing limb of the X is only about twice as broad as the other limb. The circlet at the base of the crown is darkly shaded all over. The serpent has a most peculiarly-shaped head. The mouth is open, the upper jaw a mere stump, pointing towards the right foot of the M, and the lower jaw very long, and pointing towards the foot of the E. There is no eye. The eagle's neck is strongly outlined down both sides; it is perfectly white, except a narrow band of shading or feathers down the back of the neck. The wing on the right side of the stamp is a long way from the outline of the oval. In the genuine, the tip is about $\frac{1}{3}$ mm. from the outline; in this forgery, it is $\frac{3}{4}$ mm. from it. The corner-ornaments are more like eight-pointed stars than florets; as the two horizontal petals are drawn to the edges of the square; whereas, in the genuine, these two petals are shorter than the other six, and do not touch the edges of the square. The lettered oval is perfectly solid. In the genuine, it is filled with lines of shading, following the curve of the oval.

Fifth Forgery.

I got this, I think, very soon after the publication of my second edition. I have only the 4 reales, which is printed in bright ultramarine (bogus colour). Clearly lithographed, on stout, very white wove paper, ungummed, not smeared. The C of CORREOS and the C of MEXICO are both ordinary capital letters. There are two dots for jewels on the base of the crown. The serpent has a head, but the *top* of the head, instead of the side, appears to face the spectator, and there are two short streaks or lines of shading on it. It points towards the left bottom corner of the X of MEXICO. The tail is very short, and does not reach so far to the left as the top of the eagle's wing, though the genuine goes under and beyond the tip of the wing. The feathers on the eagle's neck make a triangular patch, having the face and front of the throat white, nearly down to where the serpent crosses the throat. Thus there is more shading than in the genuine, for, in the genuine, there is no shading at the lower part of the front of the throat. The large feathers in the wings are perfectly distinct, and can be counted easily. In the genuine, they are mostly masses of dark shadows. The horizontal lines of shading in the central oval are too far apart. In the genuine, the seventh line from the top touches the cross or knob, at the top of the crown, and the eighth line from the top touches the serpent's head. In this forgery, the fifth line from the top touches the knob of the crown, and the sixth line touches the serpent's head. There are only two claws, instead of three, on the foot which grasps the branch of cactus. The corner-ornaments are eight-pointed stars, rather than florets.

POSTMARKS.

Genuine.—1, 27, 29; also an oblong, like 72, but with the outline much thicker; also a pen-stroke.

First Forgery.—10, 29, 42 (without numerals), 100, 101.

Second Forgery.—29.

Third Forgery.—Uncancelled, except with FALSCH.

Fourth Forgery.—79 (without numerals) and the dots *very* small.

Fifth Forgery.—Uncancelled.

Issue of 1866-7. Lithographed. 7, 13, 25, 50 c.

These stamps were surcharged with name only, or with number and date only, or with both combined. The unsurcharged, unused specimens frequently met with are remainders.

Genuine.

Lithographed, on stout, yellowish-white wove paper. The frame of the stamp is formed by a series of little dark oblongs, each in its own little frame. The oblongs are upright at the top and bottom of the stamp, and horizontal down the sides. The outline of the lettered oval touches some of these oblongs, and cuts into others, as hereafter described; and the reader must understand that, when I speak of the outline touching or cutting an oblong, I mean the oblong itself, and not its little frame. At the top of the stamp, the outline cuts into the fifth oblong from the left, and the fifth oblong from the right. At the bottom of the stamp, the outline of the oval touches the corner of the fifth oblong from the left, and the fifth oblong from the right. Down the left side of the stamp, the outline of the oval touches the corner of the sixth oblong from the top, and cuts into the sixth oblong from the bottom. Down the right side of the stamp, the outline of the oval cuts into the sixth oblong from the top, and also cuts into the sixth oblong from the bottom. The Emperor's hair commences about under the M of MEXICANO; it is brushed very neatly back, and comes forward into a stiff and very distinct curl, behind the ear. The nose is nicely shaped, with no abnormal distance between its front and the upward curl of the nostril. The profile of the moustache projects well beyond the profile of the beard, and the end of it stands out plainly from the surface of the beard. A line drawn down the front of the beard would pass very close to the C of CORREOS; and the beard itself ends in two points or forks. Between the point of the beard and the neck, the space is 1 mm wide. The shading at the cut-off base of the neck tapers to nothing on the left side, so that the front of the neck ends in a sharp point. The letters of the inscription are well done for a lithograph, with square-cut ends. The stops are rectangular. The C of MEXICANO is a distinct C. The face is pleasing, and reminds one very much of the portrait of the King of the Belgians. Many of the stamps are very poorly printed, and I do not suppose that the whole of the tests here given will be visible on any one particular specimen.

**First Forgery.**

Lithographed, on rather thin, white wove paper. At the top of the stamp, the outer outline of the lettered oval touches the third oblong from the left, and the fourth (very nearly) from the right. At the bottom of the stamp, the outline cuts into the fourth oblong from the left, and nearly touches the fourth from the right. Down the left side of the stamp, the outline of the oval cuts into the fifth oblong from the top, and touches the fifth from the bottom. Down the right side of the stamp the outline of the oval cuts into the fourth oblong from the top, and the fifth from the bottom. In this forgery, there is a vertical white bar at the left-hand end of the bottom frame, and a dark bar at the right-hand end; these do not exist in the genuine. The Emperor is very bald, the hair only commencing somewhere between the E and X of MEXICANO, and also at the side of the temple. The stiff and formal, forward curl, behind the ear, is not visible. The distance between the point of the nose

and the upward curl of the nostril is far too great,—2 mm., instead of $1\frac{1}{2}$ mm. The moustache does not droop enough. In the genuine, a line drawn through the centre of the length of the moustache would pass along the right-hand v-stroke of the M of IMPERIO, while, in this forgery, a line drawn along the centre of its length would pass almost clear to the left of the M. A line drawn down the front of the beard would cut almost centrally through the first O of CORREOS, and the fork of the beard is hardly noticeable. Between the neck and the nearest part of the point of the beard, the distance is only $\frac{1}{2}$ mm. The lettering is rather ragged, and some of the ends of the letters are rounded. The stops are circular. In the 7 c., the 7 on the right-hand side has its head turned the wrong way; and the C of the right-hand value is a distinct G, in all the stamps of the set. The Emperor's expression is idiotic, and he is not in the least like the King of the Belgians.

Second Forgery.

Very poorly lithographed, on thin, soft, or fairly stout, hard, very yellowish wove paper. At the top of the stamp, the outline of the lettered oval cuts into the sixth oblong from the left, and touches the fifth from the right. At the bottom of the stamp, the outline touches the fifth oblong from the left, and, as far as I can make out, the fourth from the right, though this latter is partly hidden by the postmark in my solitary specimen. Down the left side of the stamp, the outline of the oval cuts into the seventh oblong from the top, and touches the sixth from the bottom. Down the right side of the stamp, the outline of the oval cuts into the sixth from the top, and, I think, touches the fifth from the bottom, though this last is hidden by the postmark in my specimen. The hair is formed by short scratches; it is brushed back like a German's, without any curl behind the ear. The nose is strongly hooked, instead of being straight. The under lip is visible in this forgery, though it cannot be seen in the genuine. The end of the moustache is short and stumpy, and it turns up slightly, instead of drooping. The beard ends in a point, instead of a fork, and a line drawn down the front of it would pass through the centre of the first O of CORREOS. This O, by the way, is broken, so that it looks like a C. The distance between the point of the beard and the neck is about $\frac{3}{4}$ mm. The letters of the inscription are thin, scratchy, and almost unreadable, and several of the stops are missing. The face, in this forgery, is very like that of our own King.

Third Forgery.

This is dangerous. Very nicely lithographed, on medium, hard, white wove paper. The places where the outline of the lettered oval cuts the little oblongs are all like the genuine, except down the right side, where the outline of the oval cuts into the seventh oblong from the bottom, instead of the sixth. The profile of the nose has a marked bridge to it, instead of being straight. A line drawn down the front of the beard would touch the left side of the first O of CORREOS, and the front fork of the beard is about $\frac{1}{2}$ mm. from the edge of the oval, instead of *almost* touching it. The O of MEXICANO is very square, instead of being oval. The stops are round. A peculiarity of this forgery is the entire absence of the under lip. There is really no under lip in the genuine, but we are left to infer that it is hidden under the moustache. In this forgery, the moustache is drawn in such a way that the lip would show if there were one. There are about fourteen curved, horizontal, dotted lines of shading at the back of the neck, counting from the bottom of the ear to where the neck is cut off at the back. In the genuine, there are twenty of these dotted lines.

POSTMARKS.

Genuine.—29.

First Forgery.—42, 54, both without numerals; 62, 76; also an oval of thick, dotted lines.

Second Forgery.—Something like 33.

Third Forgery.—Uncancelled.

Same issue. Engraved. 7, 13, 25, 50 c.

These are the same type as the stamps just described, but are, of course, very much clearer. The forgeries are lithographed, but I describe them here because they are evidently imitated from the engraved set, and not from the lithographed ones.

Genuine.

Finely engraved, in *taille-douce*, on stout, white wove paper, the front of which is almost invariably tinted the same colour as the stamp, in consequence of imperfect wiping of the plate. At the top of the stamp, the coloured outline of the lettered oval cuts into the fifth oblong from the left, and nearly touches the fifth oblong from the right. At the bottom of the stamp, the outline of the oval cuts deeply into the sixth oblong from the left, and nearly touches the fifth from the right. Down the left side of the stamp, the outline of the oval touches the sixth from the top, and nearly touches the sixth from the bottom. Down the right side of the stamp, the outline of the oval cuts into the sixth from the top, and nearly touches the sixth from the bottom. The lettered oval itself is shaded by dark lines, following the curve of the oval. The background to the portrait is composed of fine, crossed, horizontal and vertical lines. The little oblongs, with the aid of a strong microscope, can be seen to be also composed of crossed lines. (In the lithographed set, the oblongs, lettered oval, and central medallion are all solid.) The beginning of the hair can generally be traced to below the middle of the space between the O and the M; its arrangement is the same as in the lithographed set. The nose is also the same. The profile of the moustache projects well beyond the profile of the beard, and the end of it stands out plainly from the surface of the beard. There is no white curl from the corner of the eye to the ear. The beard is forked, as before, and the space between the point and the neck is 1 mm. wide. The shading at the cut-off base of the neck tapers to nothing on the left side, so that the front of the neck ends in a sharp point, the same as in the lithographed set. This cut-off part of the neck is shaded by four curved, horizontal lines, crossed by a number of oblique lines. The shading on the back of the neck, from the bottom of the ear down to the back tip of the neck, is composed of twenty-two rows of dotted lines. The letters are very clearly cut, with square ends. The stops are large and rectangular: they are just $\frac{1}{2}$ mm. high, and nearly $\frac{1}{2}$ mm. wide. The C of MEXICANO is a distinct C.

First Forgery.

I have noted this as a very excellent counterfeit, but I do not possess it now, so must transcribe the description from my second edition. I only had the 50 c. It is very well lithographed, on *very* thick, white wove paper. The hair and nose are like the genuine. The profile of the moustache is level with that of the beard, *i.e.*, it does not project beyond it, and the end of it is lost in the beard. There is a very distinct, white curl,

from the corner of the eyebrow to the front of the ear. The end of the beard is single, and there is hardly any space visible, between it and the neck. The shading at the base of the neck is broad, quite to the front, *i.e.*, it (the shading) does not end in a sharp point. All the stops are very small; two of them are round, and two square. The C of MEXICANO is an O, so that the word reads MEXIOANO.

Second Forgery.

For a lithograph, this is very good and deceptive. Very well lithographed, on stout, white wove paper, the front tinted the colour of the impression. I have only the 13 c. At the top of the stamp, the coloured outline of the lettered oval nearly touches the fourth oblong from the left, and cuts into the fifth oblong from the right. At the bottom of the stamp, it nearly touches the fourth from the left, and cuts deeply into the fifth from the right. Down the left side of the stamp, the outline of the oval *very* nearly touches the fifth oblong from the top, and cuts into the fifth from the bottom. Down the right side of the stamp, the outline cuts into the sixth oblong from the top, like the genuine, and touches the fifth oblong from the bottom. The hair apparently begins under the E of MEXICANO; on the temple, the front of it is partly composed of dotted lines. In the genuine, there is only one dotted line on the temple, all the others being complete. The profile of the nose points more downward than the genuine. If a line were drawn down the front outline of the nose, it would only touch the right-hand side of the 3 of 13; in the genuine a similar line would touch the top of the 1. The point of the moustache is rather lost in the beard. The background of the central medallion is solid, as is also that of the lettered oval; and the little oblongs are also solid. The cut-off part of the neck seems to show only two curved, horizontal lines, crossing the oblique ones. The shading on the back of the neck shows only about ten rows of dotted lines, from the back point to the bottom of the ear. The lettering is nicely done, but some of the stops are square and others oblong.

POSTMARKS.

Genuine.—As before.

First Forgery.—Uncancelled.

Second Forgery.—Uncancelled.

Provisional Issues of 1867, for the City of Mexico.

Surcharged "Mexico" in Gothic type.

These are the same type as the first issue, and were used when the Republicans got possession of the capital. The following are the varieties:—

$\frac{1}{2}$ rl., blue on white; 4 rs., red on white; $\frac{1}{2}$ rl., black on brown; 1 rl., black on green; 2 rs., black on rose; 4 rs., black on yellow; 4 rs., red on yellow; 8 rs., black on brown; 8 rs., black on green. Also on thin, blue-grey, wove paper: $\frac{1}{2}$ rl., grey-green; 1 rl., blue; 2 rs., blue-green; 4 rs., rose.

Genuine.

The tests for the stamps themselves are, of course, the same as in the first issue; it is only the Gothic surcharge which has been forged. The Gothic M is composed of three thick, vertical lines, and between the second and the third there is another thin, vertical line.

Forged.

In the M, the thin, vertical line, between the two right-hand, thick ones, is absent.

POSTMARKS.

Genuine.—29.

Forged.—Uncancelled ; also one like 27.

NOTE.—The reprints of these stamps are to be found surcharged by the original, genuine Gothic hand-stamp, and also with forged surcharge. I have not seen these latter reprints, therefore cannot say whether the forged surcharge on them has the faulty M, described above.

Issue of 1868. 6, 12, 25, 50, 100 Centavos.

The following are the varieties of these stamps :—

Thin figures of value, unperforated. Thin figures of value, perforated. Thick figures of value, unperforated. Thick figures of value, perforated. According to Evans, the stamps with MEXICO surcharge, both in this and in the next issue, are always perforated in some manner, while the unperforated ones always bear the name of some other province. The surcharge includes name, number, and date.

Genuine.

Engraved in *épargne*, in black (except the 25 c., which is in blue), on medium to thick, coloured wove paper, *perçé en arc*, 19 ; or pin-perforated 12½ (to 16 ?) ; or unperforated ; varieties as above. The stamps with thick numerals have a stop ; those with thin numerals have no stop after the figures. The upper half of the X of MEXICO is distinctly larger than the lower half ; the I is much thicker than any of the other letters, and is almost invariably sunk into the paper ; and the O is very much thinner than the I. The C of CENT is slightly, but plainly, taller than the E. There are three horizontal lines of shading, showing between the top of the head and the outline of the circle ; but the uppermost of the three lines is always blotched into the outline of the said circle, so as to form merely a sort of thickening of it at that point. The face is that of a benevolent old man, with large, dark eyes, a *very* high left cheek-bone (*i.e.*, on the right of the stamp), and no symptom of a squint. The left half of the nose (right side of the stamp), from the eyebrow down to the point, is darkly shaded, with no white line down the shading. The background of the central circle contains forty-one horizontal lines, counting from above the head to where the shoulder ends, on the right side of the stamp.

**Forged.**

Lithographed, in black (except the 25 c.), on *very* thin, coloured wove paper ; unperforated. The 6 c. and the 100 c. have no stop after the numeral ; the 12, 25, and 50 c. all have a stop after the numerals. The upper half of the X of MEXICO is exactly the same size as the lower half ; the I and the O are no thicker than the other letters ; and the I is not at all sunk into the paper. The C of CENT is rather smaller than the E, instead of being taller. There are only *two* horizontal lines of shading, between the top of the head and the outline of the circle, without any sign of a third line. The expression of the face is sour and disagreeable ; the left

cheek-bone is not particularly projecting ; and the eyes have a decided squint. The left side of the nose (right side of the stamp) shows a distinct white line, running down the middle of the shaded part. The background of the central circle, counting as before, shows only thirty-nine horizontal lines of shading.

POSTMARKS.

Genuine.—1, 26, 29, 74.

Forged.—Uncancelled ; also 29 ; 37, 42, both without numerals ; also an oval like 27, but smaller, and much more pointed.

Issues of 1872-4. 6, 12, 25, 50, 100 Centavos.

(*With or without black surcharge. The latter is not common, except as a reprint.*)

The following are the varieties :—

Unperforated, beginning of 1872.

Perçé en pointes, April, 1872.

Perçé en arc, 1874.

Pin-perforated 13, 1874.

Genuine.

Poorly lithographed (?), on medium, white wove paper, ornamented at the back with a blue, *moiré* pattern. The outer line of the stamp is *very* thin in the spaces *between* the four labels and the four corner-squares, but when it reaches any one of the said labels or corner-squares, it is blotched into one thick line with the outline of the square or label. This is, perhaps, the easiest test. The top of the left-hand value-label is decidedly rounded. Above this label there are $3\frac{1}{2}$ large curls in the 6 (SEIS) centavos, $3\frac{1}{4}$ in the 12 (DOCE) centavos, $3\frac{1}{2}$ in the 25 (VIENTICINCO) centavos, $3\frac{1}{4}$ in the 50 (CINCUENTA) centavos, and 3 in the 100 (CIEN) centavos. The beaded oval, round the portrait, is formed by 130 square dots, alternately white and coloured. The *moiré* pattern at the back is formed by fine blue lines ; there are, on an average, 50 parallel lines in the pattern. In the 6 c., the value SEIS reads downwards.

Forged.

Lithographed, on stout wove paper, with a coarse *moiré* pattern at the back ; unperforated ; no black surcharge. The outer line or frame of the stamp is of one uniform thickness all the way round, showing no thin line between the various labels and corner-squares. The top of the left-hand label is cut off *almost* square, instead of being rounded. Above the said label, there are two large curls and two small ones, in all the values ; the lowest being the largest, and the uppermost being the smallest of the four.

POSTMARKS.

Genuine.—1, 29 ; also one something like 27, only smaller.

Forged.—29 (not common), 37 (without numerals), 41, 62.

Issue of 1874-83. 4, 5, 10, 20, 25, 50, 100 Centavos.

The stamps of this issue are all of different designs. I have only one very poor forgery of the 100 c., and have not seen counterfeits of any of the other values. All the above were used for inland postage only. They are surcharged with name, and with consignment-number, and abbreviated date.

100 Centavos. Genuine.

Engraved in *taille-douce*, on thick, hard, laid and wove, and on very thin, wove paper, perforated 12. The face and head are shaded all over, except a small patch, above the ear. The outlines of the chest, shoulder, and hair hanging down to the shoulder, are perfectly distinct from the background; the background itself is formed by very fine, crossed, vertical and horizontal lines. The white stock or collar is only about $\frac{1}{2}$ mm. high. All the thick, wavy, dark lines of shading of the coat, waistcoat, and cravat are quite distinct, and can be counted. There are thirty-one little vertical lines, of varying lengths, below the CORREOS label. The letters RRE are all joined at the bottom. The four oblique labels, containing the figures 100, are shaded with straight lines. Down each side of the stamp, between the corner value-labels, there is a curved piece of beautiful engine-turning, and outside the edge of this is a solid, curved strip, the outside edge of which is wavy. The left-hand strip shows 11 $\frac{1}{2}$ outward-pointing dark waves, the half-wave at the bottom. The similar right-hand strip shows 11 complete outward-pointing dark waves, with a small portion of an extra wave at the top end, and a similar portion at the bottom. In the bottom label, the IE of CIEN and the TA of CENTAVOS are joined at the bottom; the CE of CIEN and the TA of CENTAVOS are also joined at the top. The colour is a brownish-crimson.

Forged.

Very badly lithographed, on thick, yellowish-white wove paper, unperforated. There are a few indistinct dots, high up on the forehead; except for this, the front of the face, forehead, and head are perfectly white. The background is of solid colour, and the outlines of the chest, shoulder, and hair hanging down to the shoulder, are entirely invisible. The white stock or collar is 1 mm. high. The coat and waistcoat are, practically, one solid blotch. There are thirty-two vertical lines of shading below the CORREOS label. None of the letters of any of the inscriptions touch each other; the labels containing the numerals are all solid. The engine-turning down the sides is very badly done; the solid wavy strip down the left side shows nine outward-pointing waves, and the similar strip down the right side shows eight. The colour is bright aniline-rose.

POSTMARKS.

Genuine.—29; also a large blotchy oval; also a printed bar; also a pen-and-ink cross. These last two may be cancellations on remainders.

Forged.—42, without numerals; but the dots are triangular instead of diamond-shaped.

PORTE DE MAR STAMPS.

Issue of 1875. 2, 10, 12, 20, 25, 35, 50, 60, 75, 85,
100 Centavos, black on white.

Genuine.

Typographed (?), in black, on white or yellowish-white wove paper. Most of the numerals are evidently on movable plugs, as a rectangular piece, enclosing the numeral, can generally be plainly seen; because its own horizontal lines, and those of the rest of the background, do not join accurately. Taking the values in order, my specimens show movable plugs where I have put the brackets: [2], 10, 1[2], [2]0, [25], [35], [50], [60], [85], [100]. Thus it would appear that the 10 c. alone is normal, that the 12 and 20 c. are made from the 10 c., and that all the rest are movable. The central oval is filled with fine, horizontal lines, a hundred and one in number, the top one being no thicker than the rest, and the bottom one running clear below the lowest letters (NTAV) of CENTAVOS. In the 2 c., the numeral is enclosed within thirty-five of these horizontal lines; the 0 of the 10 c. within thirty-five; the 1 of the 12 c. within thirty-four; the 0 of the 20 c. within thirty-four; the 2 of the 25 c. within thirty-five; the 3 of the 35 c. within thirty-four; the 0 of the 50 c. within thirty-five; the 0 of the 60 c. within thirty-six; the 8 of the 85 c. within thirty-six; and the last 0 of the 100 c. within thirty-five lines. In the word CORREOS, the middle tongue of the E is quite central, and the second O is as square as the first. None of the letters of CENTAVOS touch each other, and the horizontal lines of the background are as regular behind this word as elsewhere, while the highest point of the S touches the thirteenth line from the bottom. The middle tongue of the E of PORTE is a little above the centre; that of the E of DE is a little below the centre; and the top of the A of MAR is cut off square. The dot in the left top corner of the stamp is enclosed between the second and third horizontal lines from the top; the dot in the right top corner is also between the second and third lines, though it trespasses slightly above the second line; the dot in the left bottom corner has the second line from the bottom running centrally through it; and the dot in the right bottom corner is enclosed between the second and third lines from the bottom. There are seventy-three horizontal lines outside the oval, counting down the left side of the stamp, the lowest line being *very* close to the bottom frame. The floral ornaments in the corners would be good tests, but I cannot describe them without diagrams.

First Forgery.

Nicely lithographed, on white wove paper, yellowish gum. There is no mark of any movable plugs for the numerals. There are a hundred and eight horizontal lines in the central oval, and the A of CENTAVOS stands on the bottom line, being placed one line lower than the T and the V. In the 2 c., the numeral is enclosed between thirty-eight of these lines; in the 10 c., the 0 is enclosed between thirty-seven; in the 12 c., the 1 is enclosed between thirty-seven; in the 20 c., the 0 is enclosed between thirty-eight; in the 25 c., the 2 is enclosed between thirty-eight; in the 35 c., the 3 is enclosed between thirty-eight; in the 50 c., the 0 is enclosed between thirty-eight; in the 60 c., the 0 is enclosed between

thirty-eight; in the 75 c., the 5 is enclosed between forty-one; in the 85 c., the 8 is enclosed between thirty-eight; in the 100 c., the last o is enclosed between forty-three. In the word CORREOS, the middle tongue of the E is rather above the centre, and the bottom of the second O is much rounder than the first. The letters NT of CENTAVOS are joined together at the top, and the highest point of the S touches the fourteenth line from the bottom. The middle tongue of the E of PORTE is central, while that of the E of DE is slightly above the centre, and the top of the A of MAR is widened out into a sort of semicircle. The dot in the left top corner of the stamp is cut through, centrally, by the second horizontal line from the top; the dot in the right-hand top corner lies partly between the first and second horizontal lines, but trespasses below the second line; the dot in the left bottom corner is enclosed between the first and second lines from the bottom; the dot in the right bottom corner is double, part of it lying between the second and third lines from the bottom, and the extra portion exactly on the third line. There are seventy-eight horizontal lines outside the oval, counting down the left side.

Second Forgery.

Lithographed, very much darker than the genuine or the first forgery, on thick, hard, yellowish-white wove paper. There are no marks of movable plugs. The central background contains a hundred and three horizontal lines, and the top line is decidedly thicker than the rest, while there are two lines below the A of CENTAVOS (this is the lowest of the letters). In the 2 c., the numeral is enclosed between thirty-four of these lines; the o of the 10 c. between thirty-five; the 1 of the 12 c. between thirty-seven; the o of the 20 c. between thirty-three; the 3 of the 35 c. between thirty-four; the o of the 50 c. between thirty-four; the o of the 60 c. between thirty-four; the 8 of the 85 c. between thirty-seven; and the last o of the 100 c. between thirty-four. This set contains two bogus values—the 30 c. and the 70 c. In the word CORREOS, the middle tongue of the E is decidedly below the centre. Some of the letters of CENTAVOS touch each other, in most of the values. In my 2 c., the C and E are joined at the top, and the letters AVOS are all joined together at the top. In the 10 c., the tops of the v and O touch; in the 12 c., the bottoms of the E and N touch, and the O is a U; in the 20 c., the tops of the v and O seem to touch; in the 35 c., the letters are better done, and do not touch; in the 50 c., the tops of the O and v very nearly touch; in the 60 c., the value in my specimen is damaged, so that I cannot see whether any of the letters touch; in the 85 c., the letters do not touch; and in the 100 c., the top of the C touches the E. In all the values, the horizontal lines of the background are more or less broken behind CENTAVOS, to admit the letters; whereas, in the genuine, the whole background has been engraved first, and then the word CENTAVOS placed on the top of the said lines, so that they are as regular behind that word as anywhere else. The dot in the left top corner is cut through, centrally, by the third line from the top; the dot in the right top corner is cut through, centrally, by the second line from the top; the dot in the left bottom corner is cut through, centrally, by the second line from the bottom; and the dot in the right bottom corner is the same as the genuine. There are seventy-six horizontal lines outside the oval, counting down the left side of the stamp; the lowest line, as before, being very close to the bottom frame. I have a 5 c. of this set, which is bogus.

POSTMARKS.

Genuine.—I have no cancelled copies, but I fancy I have seen 1, in red, and a large double oval, also in red, or in black. I have one with the small, PULA surcharge.

First Forgery.—Uncancelled.

Second Forgery.—Pencil-lines, in red or blue; also a large double oval in red or blue.

Same Issue. Larger numerals. 5, 25, 30, 50, 60, 100 c.

Genuine.

I have only the 5, 25, 50, and 100 c., so cannot give any detailed description of the 35 and 60 c. Lithographed(?), on moderately thick, white wove paper, like the small-figure issue. There are, of course, no marks of movable numerals. The central oval contains a hundred and one horizontal lines as before, the top one being no thicker than the rest, the NTA of CENTAVOS resting on the fourth line from the bottom. In the 5 c., the numeral is enclosed between forty of these lines; in the 25 c., the 2 is also between forty lines; in the 50 c., the 0 is between forty; and in the 100 c., the last 0 is between forty lines. It will thus be seen that the numerals are decidedly taller than in the first set. The letters of CENTAVOS are farther apart than before; the C is rounder, and the top of the S touches the nineteenth line from the bottom. The rest of the tests are the same as in the first issue.

Forged.

Of the large-numeral set, I have only the 5 and 100 c. They are very similar to the first forgery of the small-numeral set. Nicely lithographed, on yellowish-white wove paper, rather softer than the genuine; yellowish gum. There are, of course, no signs of any plugs. The horizontal lines in the central oval are a hundred and eight in number, the same as in the first forgery of the small-numeral set. The T and A of CENTAVOS stand on the bottom line. In the 5 c., the numeral is enclosed between forty-five of these lines; and in the 100 c., the last 0 is enclosed between forty-four lines. In the word CORREOS, the middle tongue of the E is above the centre. The letters of CENTAVOS are much too close together, and the N and T *almost* touch at the top, while the highest part of the S touches the fourteenth line from the bottom. The whole word is in ordinary capitals, but the genuine, large-numeral set have it in block letters. The middle tongue of the E of DE is a little above the centre. The top of the A of MAR is hollowed out into a sort of semicircle. The dot in the left top corner is in the space between the second and third lines from the top, as in the genuine; but it is a good deal too large, so that it extends slightly above and below the enclosing lines. The dot in the right top corner is in the same position as the genuine, but is also too large, so that part of it stands considerably above the second line from the top. The dot in the left bottom corner is enclosed between the first and second lines from the bottom. The dot in the right bottom corner is double, both being enclosed between the second and third lines from the bottom. There are seventy-seven horizontal lines outside the oval, counting down the left side of the stamp, the lowest not being at all close to the bottom of the frame.

POSTMARKS.

Genuine.—As before.

Forged.—Uncancelled.

MODENA.

Issue of 1852. 5, 9, 10, 15, 25, 40 c.; 1 Lira.

Genuine.

Engraved in *épargne*, on rough, unsurfaced, coloured wove paper, moderately stout. The 1 lira is watermarked with a large letter; the

others are unwatermarked. The value 9 cent., without the letters B.G., was never issued to the public. All the values have a stop after CENT., or CEN. The easiest test for the genuine is the line at the bottom of the stamp, which does not go right across; *i.e.*, it does not touch the frame on either side of the stamp. The line under POSTE

ESTENSI also does not touch the frame on the right-hand side. The crown is tolerably well drawn, and shows three white pearls on each arch; the eagle has three spreading claws on each foot. The outer frame of the stamp is single, but there is a line separating each stamp from its neighbours, which can be seen on the whole sheet, or on a stamp having a very broad margin. The outline of the frame is neither very thick nor very thin. The cross on the top of the crown points to the right-hand edge of the vertical stroke of the first E of ESTENSI. There are four long feathers in each of the eagle's wings. There is a good space between the bottom of the crown and the top of the eagle's head. In the centre of each of the side-frames, there is a dark ball, surrounded by a ring. Each ball shows a clear spot in the centre, and each ring touches the scroll-work both above and below it. The feathers on the eagle's breast are only indicated by short lines; there are no outlined feathers there.

First Forgery.

Lithographed, on thin, hard, smooth, coloured wove paper. The 1 lira is unwatermarked. There is no stop after CENT., but there is a small stop after CEN. in the "B.G. 9 CEN." value. The line at the bottom of the stamp, below the value, goes right across, and joins both sides of the frame. The line under POSTE ESTENSI also goes right across, joining both sides of the stamp. The crown has a very skeleton-like appearance, with four or five indistinct, dark pearls on each of the outer branches. The outer line of the frame, all round the stamp, is very thin, much thinner than in the genuine. The cross on the crown points towards the very centre of the first E of ESTENSI. The left wing of the eagle (right side of the stamp) is very sharply pointed; much more so than the other. The lower mandible is nearly as long as the upper, but is much shorter in the genuine. The ball in each of the side-frames is solid, and the left-hand ball *barely* touches the scroll below it.

Second Forgery.

Lithographed, on thin, coloured wove paper. There is a stop after CENT., but it is smaller than in the genuine. The bottom line of the frame, and the line under POSTE ESTENSI, go right across the stamp, joining both sides of the frame. The crown is skeleton-like, and is formed by lines only, without any pearls on the arches at all. The eagle has four drooping claws on the foot at the right-hand side of the stamp, and three drooping claws on the other foot. All the lines of both inner and outer

frame are very thick—much thicker than in the genuine. The ornaments in the side-frames are not nearly so curly as in the genuine, being almost straight. The cross on the top of the crown points to the right-hand edge of the E of ESTENSI, and the arch on which the cross and orb stand is shaded by vertical lines, instead of having three pearls on it. The right wing of the eagle (left side of the stamp) has three lower points, very sharp, and the left wing shows four or five. Each point ought to denote a separate feather; but, according to the shading, the right wing has five long feathers, and the left also five. The eagle has a very disdainful appearance, and the highest part of the beak is nearly level with the top of the head. The balls in the side-frames are much thinner than in the genuine, being reduced to rather thin rings, and the outer rings do not touch any of the scrolls. Many of the feathers on the eagle's breast are represented by parallel pairs of short lines; (they are mostly v-shaped in the genuine).

Third Forgery.

Lithographed, on stout, coloured wove paper, far too smooth. The impression is always very dark and heavy in this forgery, but it looks fairly good. There is no stop after CENT. I have not seen the 1 lira of this type, but it would be unwatermarked. The line below the value, at the bottom of the stamp, goes right across, joining both sides of the inner frame, as also does the line below POSTE ESTENSI. The crown is too thick, and some of the arches show only two pearls, though the third pearl may be only blotched by the heavy printing. The eagle's claws point too much downwards; *i.e.*, they do not spread out enough. The outer frame of the stamp is double, there being a thick outline round the whole stamp, $\frac{3}{4}$ mm. from the outer frame, evidently intended to be a part of the stamp itself, instead of being merely a division between the stamps. This outline, together with all the other lines of the stamp, is much too thick. The end of the crest of the eagle is somewhat curved upwards, like that of a cockatoo. The beak is almost shut. The ring round the ball in the right-hand frame touches the scroll above it, and the ring round the ball in the left-hand frame just touches both scrolls. The eagle's breast shows eight outlined feathers, in three rows, arranged, two, three, and three. These are very prominent, and are an easy test. The long feathers of the left wing (right side of the stamp) are much blotched together, and cannot be counted.

Fourth Forgery.

Lithographed, on stout, hard, *laid* paper. The line at the bottom of the stamp and the one under POSTE ESTENSI both join the right side of the frame, as in the other forgeries. There are no pearls at all on the crown, and the cross points to the beginning of the first S of ESTENSI. The eagle's claws all point too much downwards. The side-outlines of the stamp are too thick. The eagle is very like a dove, and it has no lower mandible. There seem to be five long feathers in the right wing (on the left side of the stamp). The top of the head of the eagle has some irregularities on it, something like the comb of a cock. I do not possess this forgery now, and cannot give any further details.

Fifth Forgery.

Rather nicely lithographed, on very brightly-coloured wove paper, rather thin. The bottom line of the stamp joins the frame both sides; but the line under POSTE ESTENSI does not join either side. There are three pearls on each of the arches of the crown, except on the one to the extreme left, which has four. The claws of the eagle droop too

much. The crown touches the eagle's head ; this is an easy test. The beak is closed, and hardly hooked at all. The cross on the crown leans over very slightly to the right, and points to the middle of the first E of ESTENSI. The rest of the stamp is a good imitation of the genuine. There is an extra line round each stamp, as in the third forgery. This stamp also is no longer in my possession.

Sixth Forgery.

Lithographed, on *very* thick, smooth wove paper, almost as thick as thin card. Both the bottom line and the line under POSTE ESTENSI run right across, unbroken. The crown is fairly well done, but the orb and cross are set too much to the left, instead of being exactly above the centre of the middle arch. The base of the crown, in the genuine, shows four oblong jewels ; but in this forgery, there are four distinct, circular black dots. There seem to be six long feathers in the eagle's right wing (left side of the stamp). The ball in the centre of the right-hand frame is an upright oval, the ring round it is also oval, and is firmly joined to the scroll-work above and below it, instead of just touching it. The eagle has no crest, the beak is only slightly hooked, and the expression is very tame and sheepish, instead of fierce and haughty.

Seventh Forgery.

Typographed (?), on thinnish wove paper, not quite so rough as the genuine. The line under POSTE ESTENSI touches the frame both sides, but the line at the bottom of the stamp, in this counterfeit, is like the genuine, and does not touch either side. The crown shows too many pearls ; there seem to be four on each of the side-arches, and hardly any of them are round. The centre arch shows not only the three pearls in a straight line, which the genuine has, but also an extra pearl to the left of the central one. Between the arches, there are four tall, dark spikes; reaching nearly half-way up, in the spaces between the arches. In the genuine, these are *very* short and stumpy. I have a specimen of the 25 c. with a broad margin on three sides, but there is no sign of any division-line between the stamp and its neighbours. The side-arms of the cross on the crown are much longer than the top arm in this forgery, and the top arm points to the very centre of the first E of ESTENSI. The balls in the side-frames are fairly like the genuine, but the rings surrounding the balls are a long way from the ends of the scrolls above and below them, and the left-hand ring has part of a second ring inside it, round the left side of the ball. This is an easy test. *All* the lines on the eagle's breast are vertical, and straight ; but some of them are wavy and crooked in the genuine. The eagle's eye is much too small, being merely a tiny dot.

Eighth Forgery.

Of this I have only the 1 lira. It is typographed (?), on thinnish, white wove paper, smoother than the genuine, no watermark. The stop after the 1 is only about $\frac{1}{2}$ mm. from the right-hand edge of the 1. The line at the bottom of the stamp and the line under POSTE ESTENSI both join the side-frames, and there is an extra line all round the stamp, as in the third forgery. The spikes sticking up inside the two inner arches of the crown are far too long and prominent. The cross on the top of the crown is too large, being quite $\frac{3}{4}$ mm. wide, instead of less than $\frac{1}{2}$ mm. The orb on which the cross rests is far larger than the genuine, and shows an oblique black line across its centre. In the genuine, the orb is only a black, solid dot. The wing on the right side of the stamp shows only three large feathers. The head *almost* touches the

base of the crown. The rings round the balls in the side-frames do not touch the scroll-work, either above or below them. There are three rows of nicely-drawn feathers on the breast of the eagle; indeed, the bird is better drawn than the genuine.

Ninth Forgery.

Typographed (?), on paper exactly like that of the genuine. I have only the 1 lira. There seem to be some indications of lines in the paper, but I cannot make out any regular watermark. With the exception of the following points, all the tests are the same as in the genuine. The bottom line seems to join the frame on the left side, but not on the right. The line under POSTE ESTENSI joins the frame both sides. The orb on the crown is very shapeless, and not solid; and there is a transverse oval ball above it (also not solid), where the cross ought to be, and this ball does not touch the orb. The ring round the ball in the centre of the left-hand frame has a wide break in it on the right side. The corresponding ring round the ball in the right-hand frame is covered by the postmark in my specimen, but, as far as I can make out, it is malformed, and not circular. This is certainly the most dangerous of the forgeries.

POSTMARKS.

Genuine.—95. Nos. 41 and 42 (without numerals) and 100 are also found, but are said to be spurious postmarks, applied to the genuine stamps.

First Forgery.—41, 42 (no numerals), 72.

Second Forgery.—What appears to be part of an oblong of oblong dots, with blank centre.

Third Forgery.—Uncancelled. Also P. D., 9 mm. high.

Fourth Forgery.—I do not remember the postmark.

Fifth Forgery.—I do not remember the postmark.

Sixth Forgery.—Some shapeless blotches.

Seventh Forgery.—41.

Eighth Forgery.—10.

Ninth Forgery.—41 (in blue).

Provisional Issue of 1859. 5, 15, 20, 40, 80 Cent.

Genuine.

Engraved in *tpargne*, on thin, yellowish-white wove paper, yellowish-white gum. There is a stop after CENT., and another after the numeral of value; each stop is large, and sunk into the paper. The centre of the stop after CENT. is exactly 1 mm. from the right-hand edge of the vertical stroke of the T. The shield leans over a little to the right, and the cross leans still more to the right, so that a card, laid along the bottom white edge of the horizontal bar of the cross, would just graze the serifs of the N of MODONESI, and also the serifs of the N of PROVINCIE, on the other side of the stamp. There are five vertical lines of shading in each of the top quarters of the shield, between the outline of the shield and the outline of the cross; and there are six similar lines in the right-hand bottom quarter, and five lines and part of a sixth in the left-hand bottom quarter. The arches of the crown rest upon strawberry-leaves. There are three entire ones, and parts of two others. These are quite distinct,

and not at all like trefoils. The line below the value, at the bottom of the stamp, does not go anywhere near the sides, being drawn much too short, and a great deal thinner than the other lines of the stamp. The cross on the top of the crown is usually a mere solid knob, but very clear copies sometimes show it distinctly, and sunk into the paper. The orb under the cross is all white, except for a blotch of shading on its left-hand side. The crosses, in the four corners of the stamp, do not nearly fill up the little squares provided for them. Each cross measures just 2 mm. from corner to corner, each way. Inside the frame, below the F of FRANCO and the last O of BOLLO, there is a floral ornament. The left-hand ornament is $3\frac{1}{4}$ mm. wide from tip to tip, the centre-piece measures 2 mm., and the top end of the centre-piece is 1 mm. from the left top corner of the inner frame.

First Forgery.

Blotchily lithographed, on medium, white or bluish-white wove paper, ungummed. The centre of the stop after CENT. is only about $\frac{1}{2}$ mm. from the right-hand edge of the vertical stroke of the T. There is usually no stop after the numeral of value, but my specimens of the 40 c. are provided with a stop after the 40. No part of the impression is sunk into the paper. The shield and cross are upright, so that a card, laid along the bottom white edge of the horizontal bar of the cross, would cut into the second O of MODONESI, and graze the first I of PROVINCIE. The four dark quarters of the shield, between the arms of the cross, are usually blotched into solid masses of colour, but, by examining a good number of specimens, I have made out six vertical lines of shading in the left top corner, five lines in the left bottom corner, and five in the right bottom corner. The right top corner is hopelessly blotched, in all my specimens. The arches of the crown appear to rest upon trefoils, but they are too much blotched for me to be certain of this. The line below the value, at the bottom of the stamp, is quite as thick as any of the other lines, and it goes right across, unbroken, the whole way along the bottom of the stamp. The cross at the top of the crown is rather more distinct than the genuine, but it points to the left of the centre of the O of FRANCO, whereas, in the genuine, it points decidedly to the right of the O. The orb, under the cross, is generally solid, but sometimes shows a little spot of white, slightly to the left of its centre. The floral crosses in the corners of the stamp are much too large, and fill up the little square frames from corner to corner. The one in the left top corner measures 3 mm. obliquely down from left to right, and about $3\frac{1}{4}$ mm. obliquely from right to left. The floral ornament under the F of FRANCO is 4 mm. wide, from tip to tip; the centre-piece is 2 mm. long, and the outer end of the centre-piece is $\frac{1}{2}$ mm. from the corner of the frame. In the genuine, the head and tail of the C of FRANCO are alike, and the I of MODONESI is a badly-formed T. In this forgery, the C is an ordinary letter, without any knob to the tail, and the I is an ordinary capital I.

Second Forgery.

Nicely lithographed, on thick, white wove paper. There is a stop after CENT., and another after the numeral of value, as in the genuine, but too close to the word and figure. The centre of the stop after CENT. is barely $\frac{1}{2}$ mm. from the right-hand vertical edge of the T. The shield and cross are quite upright, so that a card, laid along the lower white edge of the horizontal bar of the cross, would cut well into the N of MODONESI. (The other side is postmarked in my solitary specimen.) There are six vertical lines of shading in the left-hand upper quarter of the shield, between the outline of the shield and that of the cross. There are six similar

lines in the lower left-hand quarter, four and part of a fifth in the upper right-hand quarter, and four in the lower right-hand quarter. The arches of the crown rest upon trefoils, which cannot be mistaken for strawberry-leaves. The line below the value, at the bottom of the stamp, joins the frame at the right-hand side, but does not join it on the left-hand side. It is thinner than the other lines, like the genuine. The cross on the crown is exceedingly small, but fairly distinct. The orb is too large. It looks like an upright oval egg, dipping into the central circle of the crown, as an egg does into an egg-cup; the whole of its left side is shaded. The floral crosses in the corners of the stamp are too large; the one in the left top corner measures, obliquely, $2\frac{1}{2} \times 2\frac{1}{3}$ mm. The floral ornament, under the F of FRANCO, is $3\frac{3}{4}$ mm. wide, the central piece is 2 mm. long, and the top of the centre-piece is $\frac{3}{4}$ mm. from the corner of the frame. The C of FRANCO looks hump-shouldered. The serifs of the I of MODONESI are badly drawn, but the letter looks more like an I than the immature T of the genuine. This forgery is fairly dangerous, being, in some respects, better than the genuine. The 20 c. is found in bogus colours, bright blue and pink. The genuine 20 c. is in lilac and in bluish-violet.

Third Forgery.

Clearly lithographed, on fairly thick, yellowish-white wove paper. I have only the 80 c., which is printed in red-brown. The centre of the stop after CENT. is 1 mm. from the right-hand edge of the T of CENT., as in the genuine. The shield and cross are fairly upright. A card laid along the white lower edge of the horizontal bar of the cross would graze the second O of MODONESI, and cut along the centre of the first I of PROVINCIE. There are six vertical lines in the left top corner of the shield, the outer line slanting a good deal; four in the right upper quarter; five in the left lower quarter; and three in the right lower quarter. The arches of the crown rest upon rather splayed trefoils. The two outer ones, in profile, are blotched into the arches, so that they are invisible. The line below the value goes right across the bottom of the stamp, unbroken. It is very little thinner than the line above it. The little cross on the crown is quite distinct, and it points almost clear to the right of the O of FRANCO. The orb on which it stands is all white, except the outline, and is egg-shaped, instead of round. The floral crosses in the corners of the stamp are a shade smaller than the genuine; the one in the left top corner measures hardly 2 mm., obliquely, down from left to right, and decidedly less than 2 mm., obliquely, down from right to left. The floral ornament below the F of FRANCO is $3\frac{1}{4}$ mm. wide, the centre-piece is $1\frac{3}{4}$ mm. long, and the top of the centre-piece is 1 mm. from the inner corner of the frame. The I of MODONESI is a perfect I, and not a badly formed T.

Fourth Forgery.

Very nicely lithographed, much clearer than the genuine, on thick, hard, yellowish-white wove paper. The centre of the stop after CENT. is decidedly less than 1 mm. from the vertical edge of the T. The forgers have made a grand mistake, by which the counterfeit can be easily identified, that is to say, they have spelt the name MODENESI, instead of MODONESI. The cross on the shield leans just a shade to the right. A card laid along the white bottom edge of its horizontal bar would very nearly graze the first of E of MODENESI on the one side, and pass clear between the letters IN of PROVINCIE on the other side. There are seven long lines of shading in the left upper quarter of the shield, eight long lines in the right upper quarter, eight in the left lower quarter, the outside one almost touching the outside of the shield, and

eight in the right lower quarter. The strawberry-leaves on which the arches of the crown rest are all of different shapes; the middle one looks like the triple plume of the Prince of Wales. The jewels in the circlet at the base of the crown are very large in this forgery; the central one is diamond-shaped, those on each side of it are oblong, and there are two, in profile, sticking out from the end outlines of the circlet. (In the genuine, there is a small central diamond, with a little dash or hyphen to right of it, and a blotch to right of that. To left of the central diamond, the genuine only shows some blotches.) The line below the value goes, unbroken, right across the bottom of the stamp, and it is very little thinner than the line above it. The cross on the crown is a cross *pattée* with a white centre, instead of being plain and solid like the genuine; the orb appears to be a large, transverse oval, with shading scattered all over it; the centre of the cross points slightly to one side of the centre of the O of FRANCO. The crosses in the four corners of the stamp are rather too large; the one in the left upper corner measures about $2\frac{1}{2}$ mm. each way. The floral ornament below the F of FRANCO is much too long, measuring $4\frac{1}{2}$ mm. from tip to tip. The centre-piece is only $1\frac{1}{2}$ mm. long, and the top of the centre-piece is 1 mm. from the corner of the stamp. The C of FRANCO is an ordinary capital C, without a knob to the tail. The C of PROVINCIE also has no knob to the tail, though it has in the genuine. The I of the misspelt word MODENESI is a properly-shaped I, instead of a malformed T.

POSTMARKS.

Genuine.—I think I have seen 41, 42, without numerals, and 95. As this issue was superseded by the stamps of Sardinia in 1860 (*i.e.*, after only a few months' currency), genuinely-used specimens are very scarce, and worth a great deal more than unused ones. Thus fakers have procured many varieties of genuinely-used envelopes, bearing postmarks of 1859, and have put unused specimens of the above provisionals upon them. Among the many specimens before me, the envelopes bear 1, with MODENA; 29, very large, with CARRARA; and a curious one like 29 without the outer line. This last cancellation is struck upon the stamps themselves, but usually they are obliterated with a cancellation like 80, but with the lines thinner, six in number, and 35 mm. long. I have seen this same postmark on many genuine stamps of the first issue, similarly faked-up on old envelopes, to look like genuinely-used stamps.

First Forgery.—51.

Second Forgery.—P.D., in letters $9\frac{1}{2}$ mm. high.

Third Forgery.—42, without numerals.

Fourth Forgery.—42, without numerals.

Issue of 1859. Newspaper Stamp. 10 Cent., black on white.

Genuine.

Engraved in *épargne* (?), on moderately stout, very yellowish-white wove paper, with regular graining, something like that of our own old green newsbands. I have not seen a gummed specimen. The base of the crown, above the eagle's head, slopes decidedly down to the left; the central arch goes right up to the top of the crown; and the side-arches join the central one. The white spaces left by the two outer arches are fairly alike; and the spaces left by the two inner arches are also fairly alike. As far as I can make out, the eagle's beak is closed, and his eye is in a normal

position, rather near the beak. There is a crest of two feathers (short black lines) at the back of the head, sloping down to the right; and the upper one is twice as long as the lower one. The thighs give one the idea of having a good deal of shading on them; but it is only that the outlines are rather thick and ragged. The shading on the breast does not form any particular pattern. There are decided indications of a cross on the top of the crown, below the left foot of the A of GAZETTE. The black ink shows little white patches all over it. My specimen has a black blotch in the right top corner, which joins the outer and inner lines of the frame together, just to the left of the corner; but I cannot say whether this is always the case, or not. The 1 of 10 is decidedly shorter than the o. The last stroke of the N of CENT is quite upright, and it points directly towards the central feather of the eagle's tail. There are only three long feathers in the left wing of the eagle, on the right side of the stamp.

Forged.

Lithographed, on bluish-white wove paper, of no particular grain; about the same substance as that of the genuine. My specimen is ungummed. The base of the crown is horizontal; the central arch stops short before it gets to the top; the side-arches do not touch it; and there is not the slightest indication of a cross on the top of it. All four of the white spaces between the arches are very different in shape and size. The eagle's beak is wide open; the eye a good deal too far back, and too conspicuous; and the two stumpy feathers, forming the crest, project horizontally out from the back of the head; the lower one being the longer of the two. The thighs look very white; whiter than the shoulders of the wings; one of them is entirely unshaded, and the other, on the right side of the stamp, has one short, oblique dash in it. The shading on the lower part of the breast makes a sort of pear-shaped pattern, which is formed by eight long dots, and a very long dash. The ink of the stamp is *perfectly* black, with no little white patches in it. There is no black blotch between the outlines, in the right top corner. There are a good many little discrepancies in the frame and spandrels; but I cannot describe them without diagrams. The 1 of 10 is taller than the o. The last stroke of the N of CENT slopes very much down to the left, and a card laid along it would pass to the right of the central feather of the eagle's tail. There are four long feathers in the eagle's left wing. One very easy test for this forgery is, that the lower outline of the upper mandible of the eagle's beak is prolonged, in a long, curved line, down to the right, so that, if the eagle were to open its beak, the mouth would gape very nearly to the back of the neck.

POSTMARKS.

Genuine.—I have never seen a postmarked specimen.

Forged.—Uncancelled.

MONACO.

Issue of 1885.

The forgeries now to be described were kindly sent to me by Mr. de Grave Selis; I think they are not likely to be very dangerous.

Genuine.

Engraved in *épargne*, perf. $14 \times 13\frac{1}{2}$. The tops of the letters of the words PRINCIPAUTÉ MONACO are not joined together, and the said letters are set equidistant from the top and bottom of the containing-label. The ornamental scroll in the left top corner, just before the P of PRINCIPAUTÉ, is like a tall, reversed S, and not in the least like a "2." The ring round the central medallion bears 31 dark balls, alternating with dark dashes, and the balls are all equally spaced, and of equal size. The S of POSTES is nearer to its end of the containing-label than the P is to the other end; and the T comes under a dash in the ornamental ring, and not under a ball. The names of the artist and engraver are printed at the bottom of the stamp, outside it, and below the value-labels—D. Dupuis, to left; E. Mouchon, to right.

Forged.

Lithographed, perf. $11\frac{1}{2}$. This, of course, is a very much larger perforation than that of the genuine stamps, and is an easy test. There is a distinct line, joining together the tops of all the letters of PRINCIPAUTÉ and MONACO, and some of the letters almost rest on the dark part of the stamp below them. The ornamental scroll in the left top corner, before the P of PRINCIPAUTÉ, is a "2," or a very good imitation of one. The ring round the central medallion contains only 30 dark balls, instead of 31, alternating with dashes; and they are not all of equal size, the three in front of the nose being only about half the size of the rest. The position of the word POSTES is just the opposite of the genuine, as the P is too near the beginning of the containing-label, and the S much too far from the end of it. The T of this word comes exactly under a ball in the ring, instead of under a dash. The names of the artist and engraver are conspicuous by their absence.

POSTMARKS.

Genuine.—Something like 29.

Forged.—Ditto; my specimens are dated "21/22 Jano. 87" in the centre.

I have made the above description from specimens of the 40 c. and 75 c., and my counterfeits of these values are both exactly the same colour, *i.e.*, black on rose; though, of course, the genuine 40 c. is indigo on rose.

MONTENEGRO.

Issue of 1873-4. 2, 3, 5, 7, 10, 15, 25 Soldi.

Genuine.

Printed on thick, white wove paper; perforated 10½, 12, 12½, 13. A very easy instant test, but one rather difficult to describe, is the first letter at the top of the right-hand label. It is the Russ TS, which is like two 11's, joined both at the top and bottom, and with a little wedge-shaped, white tail to the right of the bottom cross-stroke. In these stamps the said tail looks more like a flaw in the plate than anything else. The stops after the first word in the right-hand label, and the word in the bottom label, are large and distinct. The ear is large and very prominent, showing a good deal of white; the shading on it shows very few signs of any oblique lines. The shading on the side of the nose consists of six nearly horizontal lines, from the inner corner of the eye to the front of the nostril, some of which join the shading on the cheek. In the very centre of the forehead, from the hair to the top of the nose, there are eleven horizontal lines of shading of different lengths, the first of them touching the hair, and the eleventh crossing the top of the nose. While the left point of the moustache projects clearly out into the white background of the right side of the stamp, the other point appears, at first sight, to run right down into the whisker; and it requires close examination to see that the point is really level with the other one. The front of the hair, on the temple, above the space between the ear and the corner of the eye, runs forward into three radiating dark peaks. The bottom one, which is the bluntest, points towards the corner of the eye, the middle one points nearly towards the centre of the forehead, and the upper one points towards the right top corner of the stamp. In the centre of the chin there is a very strong cleft or dimple. This is very noticeable. Just below this cleft there is a dark lump (probably the Adam's apple), which makes the profile of the neck curved there.

Forged.

Lithographed, on thin, white wove paper; perforated 12½ very badly. The first letter at the top of the right-hand label is like two 11's, *not* joined at the top, but sometimes at the bottom, and without any white tail. The stops are *very* small. There is hardly any white on the ear, which is shaded almost all over, except just the very tip, with oblique lines, running down from right to left. The shading on the side of the nose shows six *extremely* short lines, which are clear of the eye, and they do not join the shading on the side of the cheek, as they do in the genuine, in which the greater portion of the cheek is heavily shaded, from the nose to the whisker. The shading on the front of the forehead is chiefly composed of short, faint lines, too indistinct to be counted, and they do not reach up to the hair. The moustache is very much darker than the whisker, and both points stand out with equal distinctness. The three dark points of hair on the temple are absent. The cleft in the chin is hardly noticeable, and there is no Adam's apple, so that the profile of the front of the neck goes straight up, instead of being bowed outwards.

POSTMARKS.

Genuine.—I have no cancelled copies.

Forged.—38, without numerals, 101; also one like 101, but much larger, and with four circles.

MONTSERRAT.

Issue of 1876. One Penny, red; Sixpence, green.

Genuine.

These are merely the 1873 issue of Antigua; perforated 13; water-marked CC and crown; surcharged MONTSERRAT, in black, printed capitals. For the tests of the genuine the reader will please refer to the description of the Antigua stamps on pp. 15, 16 of Vol. I.

Forged.

These are the Antigua forgeries already described (p. 16), with surcharge MONTSERRAT, in lithographed, black capitals. They are very poorly done, and not likely to deceive.

MONTSERRAT

POSTMARKS.

Genuine.—54, with Ao8.

Forged.—The same as the Antigua forgeries.

NOTE.—I have not, as yet, seen any genuine Antiguas with forged MONTSERRAT surcharge; but it is possible that such may exist.

BOGUS $\frac{1}{2}$ d. STAMP.

The genuine 1d., above described, was bisected vertically, and employed as a $\frac{1}{2}$ d. stamp in 1883. This bisected stamp is often seen with a black surcharge " $\frac{1}{2}$ ". This surcharge is bogus; I have it, varying from $3\frac{1}{2}$ to $4\frac{1}{2}$ mm. high. I have also seen it on the 1d., CA, perforated 12, of 1884. These bogus stamps are postmarked with 54.

NAPLES.

Issue of 1858. $\frac{1}{2}$, 1, 2, 5, 10, 20, 50 Grana, lake.

I shall have to take each stamp separately, as all the values are different. The engraver has put a tiny letter (secret mark?) on each of the stamps; and, given good specimens, and a good microscope, it is sometimes possible to see them. In the $\frac{1}{2}$ grano (and also, of course, in the two blue $\frac{1}{2}$ tornese stamps) there is a c, near the pointed, left-hand end of the right-hand half of the white line at the bottom of the stamp, below, and to the right of the 2 of $\frac{1}{2}$. In the 1 grano, it is an inverted R, in the left bottom corner of the white label, containing GRA. 1. In the 2 grana, it is an A, in the same place as the little c of the $\frac{1}{2}$ grano. In the 5 grana, it is an s, in the left bottom corner of the value-label. In the 10 grana, it is an l, in the left-hand end of the white line on the right-hand side of the bottom of the stamp. In the 20 grana, there is an N, in the same place as in the $\frac{1}{2}$ grano. In the 50 grana, there is said to be a c, but I have never been able to make it out. The extremely

rough paper does not lend itself to the reproduction of very tiny lettering, but the G on the $\frac{1}{2}$ grano is generally pretty plainly visible.

To avoid unnecessary repetition, I may say here that the stamps of this issue were all engraved in *taille-douce*, on thick, hard, extremely rough, white or yellowish-white wove paper, watermarked with forty *fleurs-de-lys* in the sheet of two hundred stamps, so that most of them show a portion of a watermark. The colour is called "lake" in the catalogues, but it reminds me most of the old-fashioned red blotting-paper.

$\frac{1}{2}$ Grano. Genuine.

Engraving, paper and watermark as above. The right compartment, containing the three legs, is shaded by thirty-one vertical lines, not including the dividing-line; the left compartment contains twenty-eight similar lines; the bottom compartment has forty-seven distinct lines, but there may possibly be a short line at each outer corner, in addition. It is difficult to count the vertical lines in the corners of the stamp, on account of their diminishing to a point, so I will adopt the plan of measuring the number of lines in a given width.

Measuring, then, from the outside edge, there are exactly six vertical lines in a space of 1 mm. This measurement holds good for each of the four triangular blocks of lines. The white line surrounding the whole stamp, inside the coloured boundary-line, is just $\frac{1}{2}$ mm. wide all round. All the letters of the inscription, except the large G, are exactly the same height, and none of them touch each other anywhere. The large G is nicely shaped. There are two parallel, vertical lines in the upper leaf of each *fleur-de-lys*, one of the lines being usually stronger than the other. In the left compartment of the shield, the last vertical line of shading, which also forms the outer outline of the horse's tail, is not carried up to join the outline of the circle, but ends with the bend of the horse's tail, leaving a tiny blank in the background there. The horse's nose touches the eighth vertical line from the centre, including the thick centre-line. In the right compartment of the shield, the toe of the uppermost foot touches the fourth vertical line from the centre, including the centre-line. The hair of the female head is parted slightly on one side, and is shaded with a number of dots. The side nearest the centre of the stamp is very short, and does not reach down so low as the chin. On the side nearest to NAPOLETANA, it is very long, and reaches far below the chin. The three dividing-lines of the shield meet accurately in the centre of the stamp, without a blotch at the junction. There is a colon after the large G. The $\frac{1}{2}$ leans over to the left, so as to point very nearly to the centre of the stamp.

$\frac{1}{2}$ Grano. First Forgery.

Lithographed, in pale rose or pink, on very thin, smooth, white wove paper, unwatermarked. There are twenty-seven vertical lines in the right-hand compartment of the shield, not counting the central line; twenty-six lines in the left compartment, not including the central line; and forty-three in the bottom compartment. In the triangular block of shading in the left top corner, there is a little white line, between the outline of the block and the next line to it; this line is very nearly wide enough to allow another line to be drawn between them; and if 1 mm. be measured from the outside line, there are six vertical lines in this space; but if the second line be taken as the commencement, there are seven lines in the space of 1 mm. These measurements also hold good for the

block in the left lower corner. In the right top corner, and in the right bottom corner, there are seven lines in the space of 1 mm. The white line surrounding the whole stamp, inside the coloured boundary-line, is fully $\frac{3}{4}$ mm. wide down each side and at the top, and a shade over $\frac{1}{2}$ mm. wide at the bottom. The straight stroke of the P of POSTA comes far below the level of the O, and the letters TA touch at the foot. The O of NAPOLETANA does not reach down to the levels of the P and L, and the letters LE touch at the bottom. The $\frac{1}{2}$ leans over very much to the left, so as to point somewhat to the left of the centre of the stamp. The G is of an ugly shape, having its lower portion protruding too far. There is one vertical line in the upper leaf of each *fleur-de-lys*, and the left-hand one shows an oblique line as well. The outline of the horse's tail is very wavy, instead of straight, and it touches the last line of shading, which runs up beyond it, to join the outline of the circle, leaving no blank. The nose of the animal touches the seventh vertical line from the centre, including the thick centre-line. In the right compartment, the toe of the uppermost foot comes between the third and fourth lines from the centre, including the centre-line. The hair is parted exactly in the centre, and hangs down level on both sides, to rather lower than the chin. There are no dots of shading on the hair. The three division-lines of the shield run into a circular, coloured blotch, in the centre of the stamp. There is no stop after the G.

$\frac{1}{2}$ Grano. Second Forgery.

Lithographed, on thin, smooth, rather hard white wove paper, and also on slightly thicker, smooth, very yellowish-white wove paper, both unwatermarked. Those on the white paper are a sort of rose-pink, and those on the yellowish paper, a brownish-rose. All the tests for the first forgery will serve for this, which seems to be simply a new edition of the first, with the exception that the $\frac{1}{2}$ appears to be redrawn, and points quite to the right of the centre of the stamp. I may add that, in both forgeries, the O of POSTA leans over considerably to the left, so that the central line of the shield below it would pass considerably to the right of the centre of the O, if prolonged upwards. In both these forgeries, the ink does not stand out from the surface of the paper.

$\frac{1}{2}$ Grano. Third Forgery.

This is a much more ambitious production, at first sight, but the details are very faulty. Engraved in *taille-douce*, on thinnish, smooth, very yellowish-white wove paper, no watermark. The colour is a sort of brownish-vermilion, unlike any shade of the genuine. The right compartment of the shield is shaded by thirty-seven vertical lines, not including the central line; the left compartment has thirty-three; the lowest compartment about fifty-five. The triangular blocks of shading in the corners of the stamp show six vertical lines of shading in the space of 1 mm., like the genuine. The letters LL of BOLLO are rather taller, or rather come down lower, than the B. There is no shading at all in any of the leaves of the *fleurs-de-lys*, which, consequently, look much too white. The outline of the tail of the horse is wavy, and the top bend does not go beyond the second line of shading, the first line passing clear to the left of it, and joining the circle. The end of the horse's nose is square, being quite $\frac{1}{2}$ mm. wide from the top outline to the lip. In the genuine, this part of the nose does not measure $\frac{1}{4}$ mm. It touches the tenth vertical line from the centre, including the thick centre-line. In the right compartment of the shield, the toe of the uppermost foot comes between the third and fourth vertical lines from the centre, including the

centre-line. The face is sour-looking, and leans over to the left, instead of being upright. The hair is divided in the centre, with a wide, white parting. On the right side of the head it hangs down level with the chin, and on the left side a good deal below the chin. There is no shading on it. There is no stop after the G, which leans a little over to the right, instead of being upright. The $\frac{1}{2}$ leans very much over to the left, so as to point to the left of the centre of the stamp. The ink stands out in thick ridges from the surface of the paper. Most of the letters have their thick lines much narrower than the genuine; for instance, in the genuine, the oblique stroke of the N of *NAPOLETANA* is not far short of $\frac{1}{2}$ mm. wide; while, in this forgery, it is barely $\frac{1}{4}$ mm. wide.

1 Grano. Genuine.

Engraving, paper, and watermark as before. The vertical shading, in all three compartments of the shield, contains seven lines in the space of 1 mm. The three dividing-lines of the shield are thick, as in the $\frac{1}{2}$ grano; but the vertical one is not quite so thick, though perfectly distinguishable from the finer lines each side of it. The inscription in the left-hand label is, as nearly as possible, *BOLLO DELLA*; i.e., there is hardly the slightest separation between the two words. The G of *GRA* is the same shape as the G in the genuine $\frac{1}{2}$ grano, and the A is taller than

the other letters. There are, as before, two parallel, vertical lines in the upper leaf of each *fleur-de-lys*. The last line but one of the shading, in the left-hand compartment, forms the outline of the tail of the horse, which is thus not wavy. The horse's nose touches the twenty-eighth vertical line from the left; its mouth is small, and the eye is a small, circular dot. The part of the mane nearest to the edge of the stamp touches the thirteenth vertical line from the left. The mane is very lightly shaded, and the only shading on the whole animal is a faint line down the neck, and a stronger one on the leg. The toe of the middle leg in the right compartment touches the last line but one of the shading. The hair is distinctly parted in the centre, and there is very little shading on it. The foot-stroke of the last A of *NAPOLETANA* almost touches the end of the frame. The little florets in the top corners of the stamp are drawn on a ground of seventeen vertical lines, and each side-petal touches the third line from the outside. The florets in the lower corners are on a ground of eighteen lines; the right-hand petal of the right floret touches the second line, and its left-hand petal comes between the second and third lines; the right-hand petal of the left floret seems to come between the second and third lines, and the left-hand petal seems to touch the third line, but none of my specimens are very clear just there. The boundary-line of the stamp is *very* thick down the right side and along the bottom.

1 Grano. First Forgery.

Lithographed, in bright rose, on medium, smooth, hard, slightly yellowish-white wove paper, no watermark. The vertical shading in the shield is wider apart than the genuine, and contains only five lines in the space of 1 mm. The two oblique dividing-lines of the shield are distinct, but the vertical one is represented by two thin ones, with a little wider space just to the left of them. The words *BOLLO DELLA*, in the left-hand frame, are widely separated from one another, and the foot of the last A of *NAPOLETANA* is $\frac{1}{2}$ mm. from the end of the label. The G of *GRA* has its lower corner rounded upwards, and there is hardly any serif to the head,

so that it looks very like a broken O, with a cross-bar across the break. The A is no taller than the R, and the top is wide, and cut off square, instead of being pointed. The colon after GRA is very distinct, and about equidistant between the A and the I, instead of being decidedly near to the I. The upper leaves of the *fleurs-de-lys* have no lines of shading in them. The outline of the horse's tail is very wavy; the bend of its tail touches the last line of the shading, and another bend, lower down in the tail, touches the thick outline of the stamp, opposite the last L of BOLLO. Its nose touches the eighteenth line of shading from the left: its mouth is large, and it appears to be laughing heartily. The eye is a dark crescent, with the cusps downwards. The part of the mane nearest to the edge of the stamp touches the eighth line from the left; there is a good deal of shading on it. The front of the breast, from the head to the legs, is shaded with a dark mass of colour; there are a number of lines of shading under the body, and three strong lines on the legs, but there is no line down the neck. The toe of the middle leg, in the right compartment, trespasses beyond the last line of shading, so as nearly to touch the outline under NAPOLETANA. This outline is composed of two thin lines, *very* close together, and quite distinct from the lines of the shading. In the genuine, there is no separate outline, the last fine line of shading forming the boundary of the side-label. The hair is parted *very* much on one side, and hangs down on the opposite side just to the level of the chin, which is rounded, instead of pointed. The said hair is shaded by long, wavy lines. The floret in the left top corner is on a ground of fifteen vertical lines, and the dark outline of each of the side-petals touches the second line from the outside. The floret in the right top corner is on a ground of twelve lines; the dark outline of the left-hand petal comes between the second and third lines, and that of the right-hand petal touches the last thin line. The floret in the left lower corner is on a ground of fourteen vertical lines; the dark outline of each side-petal touches the second line from the outside. The floret in the right lower corner is on a ground of ten vertical lines; the left-hand side-petal touches the last one, and the right-hand side-petal trespasses over the last one, so as to nearly touch the thick outline of the stamp. This particular corner-square has a thick outline down its left side, formed by two thin lines, *very* close together, which I have not reckoned. The bottom boundary-line of the stamp is decidedly thinner than the one down the right-hand side.

1 Grano. Second Forgery.

This is a ridiculous thing, and hardly worth mentioning. The horse has only three legs. The three-legged female in the right half of the shield is represented by a single leg, apparently that of a ballet-dancer, which issues from a balloon of white drapery. The lowest compartment contains three fat, pointed white crosses, instead of *fleurs-de-lys*. There are no inscriptions at all, each of the four labels being filled with a long, wavy line. The whole thing is lithographed, in a shade fairly like the genuine, on thin, smooth, hard, yellowish-white wove paper. I have put this abortion here, but, of course, it may be intended for a 5 grana stamp.

2 Grana. Genuine.

Engraving, paper, and watermark as before. The three dividing-lines of the shield are not quite so prominent in this value. The vertical lines of shading, in all three compartments, gauge six to 1 mm. The white end of the horse's nose touches the fourteenth vertical line, from and including the central dividing-line. In all my specimens, the outermost vertical line in this compartment, near LO DELLA, is missing, or only

very faintly visible, so that there seems to be a space between the line against the outside of the horse's tail, and the thick outline of the compartment itself.

The horse has hardly any shading on it. In the right-hand compartment, the three feet are tolerably fat; the point of the toe of the uppermost foot can be traced to the first vertical line, to right of the central dividing-line, and the foot points straight towards the middle of the P of POSTA. The right foot is almost horizontal, and points towards the left-hand edge of the O of NAPOLETANA. The lowest foot points directly downwards, towards the last A of this word. The hair is parted on

one side, with a *dark* parting, and does not reach to the chin. There are usually three vertical lines of shading to be seen, in the head of each *fleur-de-lys*. The vertical lines in the triangular corner-blocks gauge five to 1 mm. The upper ends of these lines, in the top corners of the stamp, are not connected together by any boundary-line. The second L of BOLLO does not lie horizontally, but inclines very decidedly down to the left. There is an upright colon after the G, and that letter is nicely shaped, and appears to lean *very* slightly to the left. The serif of the head points accurately towards the centre of the bottom, cross-barred part; and the bottom of the tail is blunt, or points directly downwards. All the lettering is thick, and stands out from the surface of the paper.

2 Grana. First Forgery.

Lithographed, in a sort of dull pink, on rather thin, hard, smooth, yellowish-white wove paper, unwatermarked. The lines in the three compartments of the shield gauge $5\frac{1}{2}$ to 1 mm. The horse's nose touches the twelfth line, from, and including, the central dividing-line. The outermost line in this compartment is not missing, so that there is no extra space between it and the boundary-line, near to LO DELLA. The horse has a number of distinct, short lines of shading under the body, and some lines down the front of the neck. In the right-hand compartment, the point of the toe of the uppermost foot touches the second vertical line to right of the central dividing-line, and the foot seems to point to the bottom of the P of POSTA. The right foot points to the space between the P and O of NAPOLETANA. The hair is parted in the centre, and one side reaches the level of the chin. There is no shading in the heads of the *fleurs-de-lys*. The vertical lines in the triangular corner-blocks gauge $5\frac{1}{2}$ to 1 mm., and there is a strong outline along the tops of those in the upper corners, as well as along the bottoms of those in the lower corners. The second L of BOLLO lies horizontally. The colon after the G leans over to the right; the G is upright, but ugly. The serif of the head, if prolonged downwards, would not go to the centre of the cross-barred tail, but too much to the left, and the bottom of the tail is bent into a sharp, rather forward-pointing hook. The lettering is quite flat on the paper. The numeral is a good deal too large.

2 Grana. Second Forgery.

This is very much better, in some respects, and might be decidedly dangerous, but for the colour, which is a very deep shade of what philatelists usually denominate "lilac-rose." It is, in other words, a lake, with a shade of blue in it. Engraved in *taille-douce*, on thick, hard, very rough, yellowish-white wove paper. Some specimens show traces of a watermark, but I have not been able to see what it is; possibly it may be part of the maker's mark. The lines of the impression are much blotched; but then they are also very frequently blotched in the

genuine stamps. The vertical dividing-line of the shield is not distinguishable, neither can the left oblique one be seen. The lines in all three compartments gauge six to 1 mm., like the genuine. There is no missing line near LO DELLA. The horse's ear sticks up in a sharp, white peak, which is not noticeable in the genuine. The three legs in the right-hand compartment are *very* skinny, and the feet unnaturally long and slim. The uppermost foot points to the centre of the O of POSTA; the right foot points to the middle of the O of NAPOLETANA; and the lowest foot points almost between the final NA of that word. I have one specimen in which the feet show rather swollen and gouty, but I think this is only in the printing; probably the paper was too wet. The hair is parted rather on one side, with a white parting. There is usually a pair of very short lines in the head of each *fleur-de-lys*. The vertical lines of the triangular block, in the right top corner, gauge $6\frac{1}{2}$ to 1 mm. Those in the right bottom corner gauge $5\frac{1}{2}$. Those in the left bottom corner gauge about $5\frac{1}{2}$. Those in the left top corner are blotched in my specimens. All four have their ends outlined. The second L of BOLLO is horizontal, and there is a dot to the left of its head in all my specimens, which does not exist in the genuine. The colon after the G leans over to the right; the tail of the G has a large, thick, forward-pointing hook.

5 Grana. Genuine.

Except for being taller, this is just like the 1 grano. Engraving, paper, and watermark as before. The vertical lines of shading in all the compartments of the shield gauge six to 1 mm. The central dividing-line is one thick line, and not two thin ones. The head of the 5 is not so wide as the body of the figure, and is very much curved. There are, as before, two parallel, vertical lines, in the upper leaf of each *fleur-de-lys*. The toe of the upper leg, in the right-hand compartment, touches the first line to right of the central dividing-line of the shield; the toe of the middle leg does not touch the right-hand boundary of the shield. The lowest foot points almost perpendicularly downwards, towards the end of the 5. The first upright stroke of the N of NAPOLETANA is 1 mm. from the end of the label. All the lettering is, as in the other values, thick, and rather stumpy. The height of the said lettering, except the GRA, is $1\frac{1}{2}$ mm. The space between BOLLO DELLA is very nearly $1\frac{1}{2}$ mm. wide in this value. The 5 is very narrow, being only about $1\frac{1}{4}$ mm. across in its widest part.

5 Grana. Forged.

Lithographed, in dull pink, on fairly smooth, medium, white wove paper, no watermark. The vertical lines in the three compartments of the shield mostly gauge five to 1 mm. The central dividing-line is really two very thin lines, set very close together. The head of the 5 is very nearly as wide as the body of the numeral, and the numeral itself is very nearly $1\frac{1}{2}$ mm. broad in its widest part. The measurement is, apparently, not greatly different from that of the genuine; but, to the eye, the forged 5 looks quite double the width and size of the genuine. There are no lines of shading in the heads of the *fleurs-de-lys*, and the said heads look much more like aces of diamonds than the genuine do. The toe of the upper leg, in the right-hand compartment, touches the third line to right of the double central line; the dark outline of the toe of the middle foot touches the right-hand boundary of the shield; the toe of the lowest foot is dark and sharply pointed, and it points between the colon and the 5. The

first upright stroke of the N of *NAPOLETANA* is only $\frac{3}{4}$ mm. from the end of the label. The lettering looks tall and thin, though the difference, by measure, is not much,— $1\frac{1}{2}$ instead of $1\frac{3}{4}$ mm. The space between the words *BOLLO DELLA* is only a shade more than 1 mm.

10 Grana. Genuine.

Engraving, paper, watermark, etc., as before. The lines in the shield gauge six to 1 mm., and those in the corner-triangles five to 1 mm. The dark outline of the horse's nose touches the eleventh line to the left of the central dividing-line, and its ear points backwards. The upper leaf of each *fleur-de-lys* is a very rounded diamond, containing two vertical lines of shading, as before. The broad white lines between the dark triangles and the outline of the whole stamp are very regular, being a little over $\frac{1}{2}$ mm. wide down each side of the stamp. The toe of the upper foot touches the first line to right of the central dividing-line. The legs are well developed, and not at all skinny. The white centre of each O of *BOLLO* is fully $\frac{1}{2}$ mm. wide; the A of *DELLA* is sharp at the top, and it does not lean over towards the L. The white centre of the O of *POSTA* is very nearly $\frac{1}{2}$ mm. wide, and the A is sharp at the top. The white centre of the O of *NAPOLETANA* is also $\frac{1}{2}$ mm. wide, and there is no stop after the word.

10 Grana. Forged.

Engraved in *taille-douce*, on rough, yellowish-white wove paper, very like the genuine, but without watermark. I have one specimen in which the colour is extremely like that of dark copies of the genuine; but all the rest in my possession have just that very slight shade of blue in the red, though not nearly so markedly so as in the engraved forgeries of the 2 grana. The lines in the shield gauge mostly $5\frac{1}{4}$ to 1 mm., but they are not always uniform; those in the corner-triangles gauge from $5\frac{1}{2}$ to 6 in 1 mm. The dark outline of the horse's nose touches the twelfth line, to left of the central dividing-line, and the ear points towards the left top corner of the stamp. The upper leaf of each *fleur-de-lys* is shaped very like a candle-flame. The broad white lines down the side of the stamp, inside the outline, are too narrow; the one down the right side is less than $\frac{1}{2}$ mm. wide at the top corner, and gradually diminishes to less than $\frac{1}{4}$ mm. wide, to right of the O of *NAPOLI*. The one to left of *DELLA* also diminishes in the same way, but not to so great an extent. The toe of the upper foot touches the second line, to right of the central dividing-line. The legs are skinny. The white centre of each O of *BOLLO* is less than $\frac{1}{2}$ mm. wide. The A of *DELLA* is wide at the top, and the letter appears rather to slope to the left. The white centre of the O of *POSTA* is about the same width as the genuine, but the A is very blunt. The white centre of the O of *NAPOLETANA* is very narrow, being only about $\frac{1}{4}$ mm. wide. There is a small stop after this word.

20 Grana. Genuine.

Engraving, paper, and watermark as before. The point where the three dividing-lines of the shield meet is the exact centre of the diamond; and the perpendicular one of these three lines is straight, not *very* much thicker than the lines of shading, and truly vertical. If prolonged upwards, it would cut centrally through the S of *POSTA*. The lines of shading in all three compartments gauge six to 1 mm. The horse's nose touches the sixth vertical line, to left of the thick, central line; and the point of the upper foot, in the right-hand compartment, touches

the fourth line to right of the central line. The ornaments in the upper corners of the stamp are alike, each being a large, very floreated *fleur-de-lys*. The A of GRA is blunt at the top, and has a cross-bar.

20 Grana. First Forgery.

Engraved in *taille-douce*; paper very similar to the genuine, but thinner, and without watermark; bright yellow gum, also very like the genuine. The central dividing-line of the shield is composed of two thin lines, close together, and running into one another for part of the way, instead of one thick line. If prolonged upwards, they would pass a shade to the left of the centre of the S of POSTA. The vertical lines of shading in the shield gauge a little more than five to 1 mm., but they are too thick and coarse, and not very regular. The horse's nose appears to touch the fourth line to left of the (double) central dividing-line, and the point of the upper foot, in the right-hand compartment, touches the first line to right of the (double) central dividing-line. The head of the *fleur-de-lys* in the right top corner is properly shaped, but that of the one in the left top corner looks much more like a simple leaf. The A of GRA is very nearly invisible; but as far as I can make out, it is sharp at the top, and the left side is as thick as the other; though, in the genuine, the right side is very thick, and the left side is a hair-line. There is no cross-bar to it. The A of NAPOLETANA has an absurd slope to the left, and the B of BOLLO comes much lower than the following O. The colour is darker than the genuine.

20 Grana. Second Forgery.

Engraved in *taille-douce*; paper *very* like the genuine, but without watermark. The point where the three lines of the shield meet is a little below the centre of the diamond; and the perpendicular line is *very* much thicker than the shading-lines each side of it. If prolonged upwards, it would pass a little to the right of the centre of the S of POSTA. The lines of shading in all three compartments are very indistinct in my solitary specimen, but they seem to gauge $5\frac{1}{2}$ to 1 mm. I cannot make out the horse's nose, but the point of the upper foot in the right-hand compartment touches the second line, to right of the dividing-line. The *fleur-de-lys* in the left top corner has its head more like a leaf than the head of the other *fleur-de-lys*. The A of GRA is *very* sharp at the top, and it has no cross-bar. The D of DELLA leans over considerably to the left. The colour is a very fair imitation of the blotting-paper tint of the genuine.

20 Grana. Third Forgery.

Engraved in *taille-douce*, on rather thin, hard, white wove paper, not quite so rough as the genuine; no watermark. The point where the three dividing-lines of the shield meet is a good deal below the centre of the diamond, and the perpendicular line is very wavy and crooked. The upper half of this line is *very* much thicker than the shading-lines each side of it, but the lower half is not so thick as the upper. If prolonged upwards, it would pass to the right of the centre of the S of POSTA. The shading-lines are very irregular, gauging from $5\frac{1}{2}$ to 8 to 1 mm.; and some of them, in the left and lower compartments, are very crookedly drawn. The horse has a large, backward-pointing ear. I cannot see the end of the nose. The point of the uppermost foot in the right-hand compartment touches the third line, to right of the central dividing-line. The A of GRA is *very* sharp at the top; it has no cross-bar, and its left-hand limb is bowed outwards. The D of DELLA leans over very much to the left, and the A of this word has no cross-bar. The A of POSTA, and the first A of NAPOLETANA, are also both destitute of

cross-bar. The colour of this forgery is very different from that of the genuine, being a sort of bright crimson-lake.

It will be seen that there are three separate *taille-douce* forgeries of this value; they are all deceptive, and I should call the second forgery dangerous.

20 Grana. Fourth Forgery.

This was my only counterfeit of the 20 gr. value, when the second edition of my work appeared, and I do not possess it any longer, so I cannot give tests uniform with those of the other three counterfeits, but must transcribe from the old edition. It is badly lithographed, in black ink, on dull, yellowish-pink paper; no watermark. The shading behind the *fleurs-de-lys* in the top corners is coarse and horizontal, instead of fine and vertical. The vertical lines in the shield are very coarse, so that there are only three of them, instead of seven, to the left of the horse's tail. The left-hand point of the diamond does not touch the outline of the stamp; though, in the genuine, it actually cuts right through the outline. The top of the diamond is cut off square, instead of being pointed. The inner outline of the diamond, above the inverted word BOLLO, if prolonged to the left, would pass through the thick stroke of the E of DELLA, instead of through the centre of the D, and, if prolonged downward to the right, it would cut through the foot-stroke of the last A of NAPOLETANA, instead of far below the A. The thin line, under TA NAPO, if prolonged both ways, would pass, respectively, through the tail of the S of POSTA, and towards the end of the tail of the L of NAPOLETANA. In the genuine, it would pass centrally between the OS, and would graze the thick stroke of the L.

50 Grana. Genuine.

Engraving, paper, and watermark as before. The lines in the shield gauge 6 to 1 mm., and those in the corner-triangles $5\frac{1}{2}$ to 1 mm.

The central dividing-line of the shield is *very* little more prominent than the lines each side of it. The horse's lower lip touches the twelfth line, to left of the central one; and the point of the uppermost foot in the opposite compartment touches the second line, to right of the central one. The upper leaves of the *fleurs-de-lys* are blunted diamonds, as before, showing two vertical lines of shading in each. None of the vertical lines in the shield trespass above or below the boundary-line of the oval; the said boundary-line being very thick on the left side, near BOLLO DELLA, and very thin on the right side, near NAPOLETANA. The lines in the shield do not cut into the three legs, or into the outline of the horse. The upper ends of the lines, in the triangles in the top corners of the stamp, and the lower ends of the lines, in the triangles in the bottom corners, do not trespass beyond their own immediate boundary-line. The outer outline of the lettered oval is very thick on the right side, and thin on the left. The B of BOLLO is of normal shape. The D of DELLA leans *very* much away from the E; and the A has its top cut square. The O of POSTA is upright, and there is a faint vertical line through its centre. The A of this word has a square top. The foot of the P of NAPOLETANA points almost directly to the centre of the oval, and each A has a square top. The large G is nicely shaped, and there is a colon between it and 50. The central dividing-line of the shield, if prolonged upwards, would pass almost centrally through the O of POSTA; and, if prolonged downwards, it would pass centrally through the middle leaf of the *fleur-de-lys* beneath it.

50 Grana. First Forgery.

Lithographed, in brown-red, very much the colour of the first id. of the Orange Free State, on medium, smooth, very yellowish-white wove paper; no watermark. The ends of the vertical lines in the corner-triangles, in many places, trespass beyond their own immediate boundary-lines, so as to touch, and even go beyond the next boundary-line. For instance, in the left top corner, four lines project, at the left-hand end of the triangle, two of them quite crossing the boundary; and, at the right-hand point of this same triangle, there is one line which projects still farther upwards. In the bottom triangles, the end of almost every line trespasses across the boundary. None of these lines trespass in the genuine. The lines in the shield and those in the triangles gauge $5\frac{1}{2}$ to 1 mm. The central dividing-line of the shield is thick, and the shading-line to left of it is *very* close to it, so as to make it look thicker still. The horse's lower lip touches the twelfth line, to the left of the central one, as in the genuine; while the point of the foot in the opposite compartment touches the third line, to right of the central one. The upper leaves of the three *fleurs-de-lys* are the shape of a candle-flame, the *one* vertical line of shading being the wick of the candle. Many of the lines in the shield are drawn too far, and project above or below the outline of the central oval, so that there is a fringe of them under STA, and by the side of NAP, and another fringe of them above 50, and near ANA. The boundary-line of the inner oval is the same thickness all the way round; the outer boundary-line of the said oval is also the same thickness all the way round. The lines in the shield cut into the outline of the horse in many places, and also into the three legs and the face in the opposite compartment. The B of BOLLO has a curious hook, connecting the front of its foot with the outline of the oval beneath it. The D of DELLA does not lean particularly away from the E, and the A is sharply pointed. There is no line through the O of POSTA, and the A is pointed. The P of NAPOLETANA is too long; its foot points above the centre of the stamp; the O is much too short, and each A is pointed. The large G leans over very much to the right, and there is no colon after it. If the central dividing-line of the shield were prolonged upwards, it would pass rather to the left of the centre of the O of POSTA; and, if prolonged downwards, it would pass considerably to the right of the middle of the *fleur-de-lys*.

50 Grana. Second Forgery.

Lithographed, in brown-red, rather darker than the first forgery, on very thin, soft, smooth, yellowish-white wove paper; no watermark. Also on *very* thick, rough, yellowish-white laid paper, as thick as thin card. This is exceedingly like the first forgery. The ends of the lines of the triangles in the top corners show hardly any signs of trespassing too far, but those of the triangles in the bottom corners are the same as in the first forgery. The lines in the shield and those in the corner-triangles all gauge $5\frac{1}{2}$ to 1 mm. The central dividing-line of the shield is *very* thick, thicker than two of the other lines would be, if blotched together. The horse's lower lip touches the eleventh line, to left of the central one, and the point of the uppermost foot in the opposite compartment touches the third line, to right of the central one. The upper leaves of the *fleurs-de-lys* are shaped like a candle-flame, as in the first forgery, with one line of shading by way of wick. A few lines of the central shading have been drawn too far, near the ANA. The outer outline of the lettered oval is nearly the same thickness all the way round. The inner outline is far too thick on the right side, which is a mere hair-line in the genuine. The B of BOLLO is like the genuine. The A of DELLA is sharply pointed, and

it slopes too much away from the L. There is no line through the O of POSTA, which leans rather to the right, and the A is sharply pointed. The P of NAPOLETANA is too long, and the O too short, and the final A is sharply pointed. The large G leans over very much to the right, and is of an ugly, sprawling shape; there is no colon after it. If the central line of the shield were prolonged upwards, it would pass decidedly to the left of the centre of the O of POSTA; and, if prolonged downwards, it would pass to the right of the centre of the *fleur-de-lys* below it.

50 Grana. Third Forgery.

Engraved in *taille-douce*, in a sort of dull brownish-vermilion, on thin, smooth, yellowish-white wove paper. The lines in the shield are not all regular; they gauge from six to seven to 1 mm.; those in the corner-triangles gauge five to 1 mm. The lines immediately to right and left of the central line are closer to it than to their neighbours. The horse has a snout rather like that of a pig; he wears an extremely disdainful expression, and his lower lip touches the thirteenth line, to left of the central one. The point of the uppermost foot in the opposite compartment is split, and it touches the third line, to right of the central one. The upper leaves of the *fleurs-de-lys* are rather like candle-flames, but not so much so as in the other forgeries. I cannot make out any shading in the top leaf of the upper *fleur-de-lys*, but each of the others has one line of shading in its top leaf. In the triangle in the right top corner, a few of the lines have been drawn a little too long, and show above the boundary-line. The central line of the shield has also been drawn too long, and shows beyond the outline, under the O of POSTA. The A of DELLA and the A of POSTA are both quite sharp at the top. The large G has a *very* prominent, forward curl at the bottom of the tail, and there is no colon after it. If the central line of the shield were prolonged upwards, it would pass very considerably to the left of the O of POSTA, which has no line through it; and, if prolonged downwards, it would pass to the left of the centre of the *fleur-de-lys* below it. The ink, especially in the lettered oval, stands out in thick ridges from the surface of the paper. The outline of the stamp is about equally thick all round. In the genuine, it is extremely thick at the right side and the bottom, and *very* thin at the left side and the top. I should say this counterfeit is evidently by the same hand as the third forgery of the $\frac{1}{2}$ grano.

POSTMARKS.

Genuine.—73; also the same word in a curve, without frame.

Forged.—All the forgeries may be found with 73, like the genuine; but the lithographed counterfeits also bear, occasionally, a pen-stroke, and 1, and 38 without numerals, and 98, and ANNULATO in large lower-case letters, without a capital.

Issue of September, 1860. Provisional. $\frac{1}{2}$ Tornese, blue.

Genuine.

Exactly the same as the red $\frac{1}{2}$ grano described above, but printed in Prussian-blue, and with the large G partially erased and altered to a large T. The blotch caused by the tongue of the G can still be seen very plainly after the T. Watermark, *fleurs-de-lys*, as before. Each stamp was altered by hand, so there are probably two hundred varieties of the alteration. The rest of the tests are the same as for the genuine $\frac{1}{2}$ grano.

First Forgery.

Lithographed, in pale, dull blue, on thin, smooth, white wove paper, and also on medium, soft, very yellowish-white wove paper, both without watermark. This is the second forgery of the $\frac{1}{2}$ grano. Instead of a large G, there is now a large T, but the blotch of the tongue of the G has been turned by the artist into a very distinct E. The rest of the tests are the same as for the first and second forgeries of the $\frac{1}{2}$ grano.

Second Forgery.

Poorly lithographed, in pale sky-blue, on thin, smooth, very white wove paper, no watermark. There are only twenty-five lines in the right-hand compartment of the shield, to right of the central line. In the left-hand compartment there are twenty-five lines to left of the central line. The bottom compartment contains forty lines. These lines, and those in the corner-triangles, gauge five to 1 mm. The white line round the whole stamp, inside the thin, coloured boundary-line, is 1 mm. wide at the bottom of the stamp, nearly 1 mm. wide at the top, $\frac{3}{4}$ mm. wide down the right side, and $\frac{1}{2}$ mm. wide down the left side. The letters LL of BOLLO, and the AN of NAPOLETANA, touch at the bottom. The vertical lines in the triangle in the left lower corner have been drawn too long, and they cut through the outline of the oval, and form a fringe, which touches several of the letters of BOLLO. Some of the lines in the left top triangle are also too long, and touch the tops of several of the letters of DELLA. The large letter at the bottom of the stamp is a combination of T and G, and the tail of the G is turned into a distinct E, though not so large as in the first forgery. There is a small colon after this letter. The top leaf of the upper *fleur-de-lys* has one vertical line of shading in it; in the top leaf of each of the others there is one vertical line, and one oblique line to left of it. The vertical line behind the horse's tail is perfect. The dark end of the horse's nose touches the fourth line, to left of the central one. The toe of the uppermost foot in the opposite compartment touches the central line, and four of the lines of shading are drawn across the foot. The hair is parted in the centre, and the face is that of a three-year-old child, instead of a full-grown woman's face. Neither side of the hair reaches below the level of the chin. There is a small blotch at the point where the three lines of the shield meet.

Third Forgery.

Lithographed, in pale blue, on thick, smooth, yellowish-white wove paper; no watermark. The central line of the shield is very little thicker than those each side of it. The right-hand compartment contains twenty-eight lines, to right of the central one; the left-hand compartment contains about twenty-eight, to left of the central one, but I am not quite sure of this, as my specimen is blotched. There are forty-eight lines in the bottom compartment. These lines are not regular; they gauge from $4\frac{1}{2}$ to $5\frac{1}{2}$ in 1 mm. In the corner-triangles, they gauge from $4\frac{1}{2}$ to 5 in 1 mm. The lettering round the circle is not in the centre of the white circular band, but too near to the centre of the stamp, so that the white space above the letters is wider than the space below them. The letter at the bottom of the stamp is a large T, with a smudgy blotch attached to its foot, and there is no colon after it. I have one specimen of the genuine which has the letter very similar to this, but usually more distinct remains of the G can be seen. The *fleurs-de-lys* are very different in shape from the genuine; the upper leaf of each is a transverse diamond, with sharp side-points, and the side-leaves are very large and prominent. Each of the upper leaves contains two vertical lines of shading, like the genuine.

The profile of the horse's head has a deep hollow between the eye and the nose, and the nose touches the eighth line, to left of the central one. The three legs in the opposite compartment have a very solid and rounded appearance; the point of the uppermost foot touches the second line, to right of the central one. My copy is rather heavily postmarked, but I cannot see any sign of a face in the centre of the three legs. The $\frac{1}{2}$ slopes a good deal, so as to point rather to the left of the centre of the stamp.

Fourth Forgery.

Lithographed, in dull blue, on rather thick, fairly rough, very yellowish-white wove paper; no watermark. The right compartment of the shield contains twenty-nine lines, to right of the central line. This central line is very thick, and in one part of it shows that it is really composed of three very thin lines, blotched together for almost their whole length. The left-hand compartment contains either twenty-eight or twenty-nine lines, to left of the central one; the bottom compartment contains fifty-four lines. The lines in the shield and those in the corner-triangles gauge five to 1 mm. The white line round the whole stamp is $\frac{3}{4}$ mm. wide, except down the left side, which is a little wider. The letters of the inscription are much too large, being fully $1\frac{3}{4}$ mm. high, instead of less than $1\frac{1}{2}$ mm. The oblique line under the horse, if prolonged down to the left, would pass through the first O of BOLLO; in the genuine, it would pass through the first L. The letter at the bottom is a large T, which has a very distinct E after it. The head of the T touches the E, but there is no symptom of any G, and no colon after it. The P of NAPOLETANA has a broken head in my specimen. The *fleurs-de-lys* are very unlike the genuine; the top leaf of each is a badly-shaped diamond, without any lines in it; and the side-leaves, which, in the genuine, very nearly touch the top leaf, are, in this forgery, widely separated from it. In the left-hand compartment, the line which should form both the outline of the horse's tail and the last line of the shading is wavy, instead of straight. The horse's nose touches the seventh line, to left of the central one. In the opposite compartment, the point of the uppermost foot touches the second line, to right of the central one, which shows triple just there. The face in the three-legged figure has very hollow cheeks, and a sad expression, one eyebrow being raised. The hair is parted exactly in the centre, and has no shading on it, except one short line, near the left cheek. The hair, this side, hangs down just level with the chin. One very easy test for this forgery is that the $\frac{1}{2}$ is altogether wanting.

POSTMARKS.

Genuine.—As before.

First Forgery.—73, like the genuine.

Second Forgery.—Uncancelled.

Third Forgery.—A frame like 73, but with different letters. I can only read the last portion of the word, which is LASTO.

Fourth Forgery.—29.

Issue of October, 1860. $\frac{1}{2}$ Tornese, blue.

Genuine.

Engraving, paper, and watermark as before. For this stamp, the plate of the $\frac{1}{2}$ *tornese* just described was taken, the arms scraped out from the central circle, and the white cross of Savoy substituted, with a background of vertical lines. The scraping-out has not been perfectly accomplished, so that many lines of the old design can be seen, especially in the

white cross. The circle and the corners of the stamp remain unaltered, so that the large T, with the blotch close to it, is exactly the same as in the first provisional of 1860. The ink stands up high from the surface of the paper. As these stamps were all altered by hand, there are, as before, two hundred varieties; and therefore the otherwise easy tests afforded by the coarse lines of the cross and its shading are of no use; and I shall have to take what is left of the original design, *i.e.*, the lettering, and the corners of the stamp. The inner outline of the central circle is very thin on the right side, and very thick on the left; the outer outline is just the opposite, being very thin on the left side, and very thick on the right. The letters of the inscription do not touch each other anywhere, and the name is spelt *NAPOLETANA*. The fraction is nicely formed; the 1 has a serif, and the 2 an absolutely straight foot, with the end turning up squarely into a serif. The lines in the corner-triangles, outside the lettered circle, gauge six to 1 mm., as before stated.

First Forgery.

Poorly lithographed, on rather thin, smooth, yellowish-white wove paper; no watermark. There is no trace of any half-effaced design in the cross or elsewhere. The large T has no blotch after it, but there is a stop or dot between it and the $\frac{1}{2}$, rather higher than the level of the fraction-line. Both inner and outer outlines of the lettered circle are the same thickness all the way round. The name is spelt *NAPOLITANA*. The little 2 touches the fraction-line. In the genuine, neither figure touches the fraction-line. The lines in the corner-triangles are extremely blotchy and irregular; some of them gauge only four to 1 mm., others five, and some are run together into one solid mass. The letters *ELL* of *DELLA* are all joined together at the bottom; *OS* of *POSTA* touch near the bottom, and *TA* at the bottom; *NAP* and *TANA* of *NAPOLITANA* touch at the bottom; the letters *AP* are joined by a strong line at the top, and the second *A* has no cross-bar.

Second Forgery.

This is much more like the genuine. Lithographed, in pale or medium Prussian-blue, on fairly stout, pretty smooth, very white wove paper; no watermark. The forgers have imitated rather well the traces of the half-effaced design in the cross. The large T is, in most copies, a sort of monogram of *TG*, though the rounded back of the *G* does not always project beyond the straight outline of the *T*. The tail of the *G* is a round ball; there is no stop after it. In some of my specimens, the 1 of the $\frac{1}{2}$ is tall, with a faint serif; in others, the top half of the 1 has entirely disappeared. It is possible that these varying specimens may be two separate drawings of the value; but they are alike in all other respects. In the white line, below and to the right of the $\frac{1}{2}$, there is a little semi-circular mark, doubtless intended to represent the tiny *G*, which was, as before stated, the engraver's secret mark on this value. The lines in the corner-triangles are much more regular than in the first forgery. In the left top and bottom corners, they gauge six to 1 mm., but in the right top and bottom corners, they only gauge five to 1 mm. The letters *TA* of *POSTA* touch each other, but none of the others. There is a scratch which comes from the central circle into the lettered circle, cutting through the right foot of the last *A* of *NAPOLETANA*. In some specimens, there are two little dots, like a sort of oblique semicolon, near the point of this line.

Third Forgery.

Engraved in *taille-douce*, on medium, smooth, very yellowish-white wove paper; no watermark. There are a few traces of the old design in the cross. The mark at the bottom of the large T is the same shape as the top half, so that the right side of the letter is exactly like an E without the central tongue. There is one small stop after it, above the level of the bottom of the letter, about where the upper stop of a colon would come. The 1 of the $\frac{1}{2}$ is very small, with an extra big serif; the 2 is much larger, and a long way below the fraction-line. The lines in the corner-triangles are not very regular; in the left top corner of the stamp, they gauge six to 1 mm., like the genuine; in the right top corner, they vary from five to six in 1 mm.; in the left bottom corner, some of them are blotchy, and not straight, they gauge from five to six in 1 mm.; in the right bottom corner, they gauge $5\frac{1}{2}$ to 1 mm., and one of them is wavy, and another crooked. The final letters NA of NAPOLETANA touch at the bottom. The central tongue of the E of DELLA very nearly touches the inside of the top of the letter, but does not go near the bottom of it. There is a dot under the second L of this word, and another dot high up, after the A of POSTA, but I cannot say whether these are to be found in all copies. The ink stands out somewhat from the paper in this forgery.

Fourth Forgery.

This is a very poor affair, and is, I fancy, an illustration from a German dealer's catalogue. Lithographed, in milky-blue, on medium, smooth, very white wove paper; no watermark. The marks of the supposed half-effaced design in the cross are as distinct as the rest of the impression, and are, therefore, absurdly prominent. The large T has a large, round ball joined to its foot. There is no colon. The 1 of the $\frac{1}{2}$ slopes backwards, and its (very thick) foot stands on the fraction-line. The head of the 2 has a projection in front, which touches the fraction-line, and the tail curls up and touches the back of the head. The outer outline of the lettered circle is thinnest at the bottom; beyond this there is no very great difference in the thickness of the lines all the way round. The lines in the triangle, in the left bottom corner of the stamp, gauge six to 1 mm., like the genuine; in the other corners they are so blotched that I have not been able to count them. The central tongue of the E of DELLA touches the inside of the top of the letter, and very nearly touches the inside of the bottom as well. The P of POSTA has an abnormally long foot-stroke, and the T and A touch at the bottom. The central tongue of the E of NAPOLETANA touches the inside of the top of the letter, and the TANA all join together at the bottom.

Fifth Forgery.

Lithographed, usually in very pale blue, on medium, smooth, yellowish-white wove paper; no watermark. There is no trace of any design in the cross. The large T is a perfect letter, without any blotch to it, and there is no stop. The foot of the 2 of $\frac{1}{2}$ is straight, but it does not turn up at the end. The inner outline of the lettered circle is thickened at the left side, like the genuine, but the outer outline is thick all the way round. This is an easy test. The lines in the corner-triangles are *very* fine, gauging from $6\frac{1}{2}$ to 7 in 1 mm. The letters EL of DELLA, and TANA of NAPOLETANA, are joined at the bottom, and the ET of this word joined at the top. All the lettering is too tall, being fully $1\frac{1}{2}$ mm. high, instead of rather less than $1\frac{1}{2}$ mm.

Sixth Forgery.

Lithographed, in pale Prussian-blue, on fairly stout, smooth, yellowish-white wove paper; no watermark. There is no trace of any design in the cross. The large T is a perfect letter, and is placed too high. There is a single stop after it, placed a good deal above the level of the foot of the letter, and at some distance from it. In the fraction, both figures touch the fraction-line, and the 2 has a twist, and leans over to the left, making the fraction look crooked. The inner outline of the lettered circle is thickest opposite to the LLA of DELLA, instead of opposite to the left arm of the cross; and the outer outline is thickest near the ANA of NAPOLETANA, instead of opposite to the middle of the word. The lines in the corner-triangles are regularly drawn, but they are too wide apart, gauging only five to 1 mm. The lettering looks much too large, though there is not much difference in the measurements. In this forgery, the two outer outlines of the stamp are fully $\frac{3}{4}$ mm. apart, instead of barely $\frac{1}{2}$ mm.

Seventh Forgery.

My specimen of this is affixed to a piece of an old Neapolitan newspaper, to make it look more genuine. Lithographed, on rather thin, rough, white wove paper; no watermark. The large letter is a sort of monogram of TG, the tail of the G being perfect, but its back absorbed into the shaft of the T. There is no stop after it, and no trace of a design in the cross, except one little dot in its centre. The 1 of the fraction touches the fraction-line, and the end of the tail of the 2 does not turn up. The lines in the corner-triangles gauge $5\frac{1}{2}$ to 1 mm., and those in the right-hand corners are not so regular as those in the other corners. The last two letters of NAPOLETANA touch at the bottom. The outline of the stamp is *very* close to it; down the right side there is hardly $\frac{1}{3}$ mm. space.

Eighth Forgery.

I have not seen this, which is described by the *London Philatelist*. The forgery is on the genuine, original paper, with authentic postmark. The makers took genuine, used specimens of the common values of the red Naples stamps, discharged the coloured design by chemicals, and then printed their forged blue $\frac{1}{2}$ tornese, cross, on the postmarked blanks thus obtained. I understand that there are several fatal mistakes in the forged design, and that traces of the original red impression can be seen. The journal does not say whether the counterfeit is engraved or lithographed.

POSTMARKS.

Genuine.—As before.

First Forgery.—34; 38, without numerals; 42, ditto; 73.

Second Forgery.—73; also part of a large postmark that I cannot make out.

Third Forgery.—73.

Fourth Forgery.—Uncancelled.

Fifth Forgery.—73.

Sixth Forgery.—37, with "223" in the centre.

Seventh Forgery.—ANNU LLATO, each half of the word bent up, in a hollow curve, without frame.

Eighth Forgery.—73 (genuine postmark).

**Issue of 1861. For Naples and Sicily. $\frac{1}{2}$ Tornese ;
 $\frac{1}{2}$, 1, 2, 5, 10, 20, 50 Grana.**

This was a provisional issue, taking the place of the Neapolitan and Sicilian stamps, afterwards superseded by the issues for the kingdom of Italy. As they had but a brief life, used specimens (except of the 1 and 2 gr.) are a good deal scarcer than the unused remainders. I have a mass of these remainders, on old letter-sheets of 1862, with various forged Naples cancellations. The following are some of the postmarks:—1, with NAPOLI AL PORTO; various dates in 1862. A mark something like 29, but the inscription, PARTENZA DA NAPOLI, has horse-shoe ends; various dates. 1, with NAPOLI; various dates. Most of these have the London postmark, 1, various dates, and the Gibraltar postmark, 1, six days later.

Genuine.

Engraved in *épargne* (?), centre embossed, on rather thin, white wove paper. There are twenty-four white dots, in pairs, along the top of the stamp, twenty-four along the bottom, thirty down the left-hand side, and twenty-eight down the right-hand side. The white lines, forming the little crosses in the corners of the stamp, are rather more than a quarter of a millimetre thick. I do not speak of the length of the arms of the crosses, but simply of the thickness of the white lines forming them. The inscription up the left side is FRANCO; and the three words, FRANCO, POSTE, and BOLLO, have the letters composing them so tall that they almost touch the boundaries of the containing-labels with their heads and feet. The embossed head is the usual portrait of the first King of Italy, with the rounded nose. There are about nineteen vertical lines in the left upper spandrel, seventeen in the left lower spandrel, twenty-one in the right upper spandrel, and twenty in the right lower spandrel; *not* including the two outlines of the inscribed label in any case. These numbers are only approximate, as the lines gradually shorten off to nothing, and so are difficult to count; at any rate, there are not *fewer* than I have here noted, though there may be one or two more. The thick outline of the central oval touches the thick, inner outline of the frame above, below, to right, and to left.

First Forgery.

Not particularly well done. Lithographed, on medium, common, white wove paper. There are twenty white dots along the top of the stamp, twenty-four along the bottom, twenty-six down the left side, and twenty-four down the right side. The thickness of the white lines which form the crosses in the corners of the stamp is about three-quarters of a millimetre. The inscription up the left side of the frame is FRANCG, instead of FRANCO. The letters of the words FRANCG, POSTE, and BOLLO are not tall enough to stretch across the width of the containing-labels, but there is a good space between the outlines of the frames and the tops and bottoms of the letters. The embossed head is much more like that of the late Emperor of the French than of the King of Italy, having quite a sharp nose, with a straight outline. The vertical lines in the corner spandrels are as follows: left top corner, sixteen; left bottom corner, sixteen; right top corner, fifteen; right bottom corner, fourteen;

not counting the two outlines of the inscribed label in any case. The thick outline of the central oval not only touches the thick line above the value at the bottom of the stamp, but is actually cut off by it, so as to be flat at the bottom.

Second Forgery.

Poorly lithographed, on thin, common, greyish-white wove paper. The dots, crosses, height of letters, and portrait are the same as in the first forgery. FRANCO is correctly written. The vertical lines in the spandrels are as follows: left top corner, twenty; left bottom corner, nineteen; right top corner, twenty-one; right bottom corner, twenty-three. The thick outline of the central oval only touches at the top, and not at the bottom or sides.

POSTMARKS.

Genuine.—1, 29.

Forged.—1.

NATAL.

Issue of 1858. One Penny, rose, buff, blue.

The higher values of this set were, I believe, issued in June, 1857, but the 1d. did not appear until 1858. I do not know why it was printed on paper of various colours; but possibly Messrs. Davis and Son, of Pietermaritzburg, had to use such paper as they had in stock. All the values, except the 3d., are decidedly rare. I have not seen any forgeries of the higher values.

Genuine.

Embossed, on coloured wove paper. The paper is coloured right through. The O of ONE is a transverse oval; the N is $2\frac{1}{2}$ mm. wide, and the lowest limb of the E is much longer than the top limb. The lowest limb of the E of PENNY is also much longer than the top limb, and the head of the Y is absurdly splayed out, so that it is nearly 3 mm. wide from the outside of one arm to the outside of the other. The head of the T of NATAL is abnormally wide, measuring about $2\frac{1}{4}$ mm. across. The orb on which the cross rests, at the top of the crown, is a transverse oval, wider than the width of the cross. Each side-arch of the crown is one single, embossed line, and from the edge of each of these arches project four pearls. These side-arches do not bend down to the centre of the circlet at the base of the crown, but they go in, under a v-shaped piece, which comes down to the centre. (The v-shaped piece is shown in our illustration, but the crown is not in the least like that of the illustration in any other respect.) The ornaments embossed along the top of the circlet, at the base of the crown, are indecipherable, except that they are *not* strawberry-leaves; the middle one, at the base of the v-shaped piece, looks like a small cross *pattée*. The circlet bears five jewels—a long, transverse diamond in the centre, a very small diamond each side of this, and half of a large diamond at each outside edge. The cap, inside the side-arches, is embossed plain, without lines,

except that the ornaments resting on the circlet show in front of the lower part of the cap. In each corner of the stamp there is a four-petalled flower, each petal being plain and pointed, like a lance-head or a candle-flame. The side-frames are composed of interlacing semi-circular arches. There are seven complete semicircles down the left side of the stamp, and six down the right side. I have multiplied details as much as possible, for the reader will be very lucky if he possesses a specimen clear and perfect enough to show all the above details. As a matter of fact, the majority of used specimens show the word NATAL, and more or less of the crown, the rest being illegible.

First Forgery.

Embossed, on fairly stout, buff wove paper. The O of ONE is an upright oval, the N is only 2 mm. wide, and the lowest limb of the E is hardly any longer than the top limb. In the word PENNY, the lowest limb of the E is, if anything, shorter than the top limb. The head of the Y is nicely shaped, the splay of the arms being only about $2\frac{1}{4}$ mm., instead of nearly 3 mm. The head of the T of NATAL is 2 mm. across. The orb is a small circle, instead of a wide oval; it is decidedly narrower than the width of the cross above it. Each side-arch of the crown appears to be formed by two parallel, embossed lines; but closer examination shows that the outer line, in each case, is a row of nine pearls, all touching, and resting on the inner line of the arch. The ornaments along the top of the circlet are those of a marquis, *i.e.*, three strawberry-leaves, alternating with two pearls. The circlet bears seven rather oval pearls, instead of the five diamonds. The part of the cap seen inside the left arch is embossed with oblique lines, running down from left to right; and the corresponding part in the right arch has similar, oblique lines, but running down from right to left. The ornament in each corner of the frame looks something like four strawberry-leaves, arranged in the form of a St. Andrew's cross. The left side-frame shows five complete, interlacing semicircles, with parts of two others at the top end of the frame, and parts of two others at the bottom. The right-hand frame also shows five complete, interlacing semicircles, with parts of two others at the top end, and parts of two others at the bottom end.

Second Forgery.

Embossed, on very stout, pinkish-buff wove paper. The top inscription is entirely flattened out in my specimen, so that I am unable to describe it. As far as I can make out, the top and bottom of the E of PENNY are of equal length, and the Y is not too widely splayed out, the spread of the arms not being more than 2 mm. The orb, in my specimen, is not visible. Each side-arch of the crown is composed of two parallel, embossed lines, and there are no pearls projecting from the arches. The inner ends of these arches bend down to join the circlet, near the centre; and, where the v-shaped central piece ought to be, there are three curved, horizontal lines. I have not been able to make out whether there are any ornaments along the top of the circlet. The circlet bears eight jewels, but I cannot see whether they are pearls, or stumpy diamonds. The ornaments in the corners of the stamp appear to be eight-pointed asterisks. The left side-frame shows seven complete, interlacing semicircles, with parts of others at the ends; and the right side-frame shows the same number as the left.

Third Forgery.

Embossed, on very thick, hard, blue wove paper. The O of ONE is a circle, the N is very little more than 2 mm. wide, and the top and bottom of the E are of equal length. The top and bottom of the E of PENNY are also of equal length, and the arms of the Y are only about 2 mm. across. The crown is very like that of the second forgery; the orb is not visible; each side-arch is formed by two lines, instead of one, and there are no pearls projecting from the arches. The said arches bend down to meet the circlet, near its centre. There is no v-shaped piece in the centre, but only some curved, horizontal lines, as in the second forgery. There is some embossing along the top of the circlet, but I cannot say what it is. There are seven jewels in the circlet; they seem to be long and short diamonds alternately. The ornaments in the corners of the stamp are four-petalled flowers, like the genuine, except that there is a sunken line, by way of veining, right along the centre of each petal. In each side-frame, there are seven complete semi-circles, with parts of others, at the top and bottom of each.

POSTMARKS.

Genuine.—1.

First Forgery.—Uncancelled.

Second Forgery.—10.

Third Forgery.—41, but with thicker lines.

NOTE.—Amateurs are sometimes puzzled with stamps like the above, but embossed on paper which is coloured only on the surface, instead of all through, and usually perforated $12\frac{1}{2}$. These are fiscals.

One Penny, red. Threepence, blue.

Issue of 1859-60. Perf. 14; no wmk.

Issue of 1861. Clean-cut perf. 14 to 16; no wmk. (3d. only).

Issue of 1862. Rough perf. 14 to 16; no wmk. (3d. only).

Issue of 1862. Imperf.; no wmk. (3d. only).

Issue of 1862. Rough perf. 14 to 16; Star wmk. (1d. only).

Issue of 1863. Thick paper, perf. 12; no wmk. (1d. only).

Issue of 1864. Perf. 12; CC wmk. (1d. only).

Genuine.

Engraved in *taille-douce*; varieties as above. The crossed lines of shading in the central oval are very close together; on the right side

of the stamp the vertical ones gauge six to 1 mm. The three rows of jewels on the base of the coronet are not all alike; the top row is of pearls, the middle row of more or less shapeless jewels, and the bottom row of pearls. They are difficult to count, as the end ones are indistinct; but there seem to be twenty-five in the top row, about twenty-two in the middle row, and

twenty-six or twenty-seven in the bottom row. The central cross *pattée*, under the T of NATAL, has its top arm shaded with five short, vertical lines, and the left side-arm does not nearly reach up to the level of the

upper edge of the top arm. The right arm reaches up just about to the level of the top edge of the upper arm. The little circle or pearl in the centre of this cross is, if anything, a shade larger than the pearls below it. The eyes are very large and very dark. There is no blotch above either eyebrow. The necklace appears to contain seventeen jewels; the front one has two short, horizontal strokes in it, the lower one being thicker than the other. They are regularly graduated in size, from the front to the back. The strips of engine-turning (five each side of the oval) are finely executed, and appear like white lines scratched out of a dark background. The outer strip each side is not nearly as wide as the corner-square, either at the top or at the bottom. The said corner-squares are all the same size. Each A of NATAL has its cross-bar very low down, and the bottom limb of the L looks unnaturally long. The lettering is all very clearly cut. The white oval hardly encroaches at all into the second strip of engine-turning, on the right side of the stamp.

Forged.

Poorly lithographed; the 1d. on thick, almost buff wove paper, imperforate, or perforated $11\frac{1}{2}$; the 3d. on medium, yellowish-white wove, and also on azure-faced white wove paper, imperforate, or perforated $11\frac{1}{2}$; no watermark in any case. The crossed lines of shading in the background of the central oval are coarse, and not very regular; they gauge from 4 to $4\frac{1}{2}$ to 1 mm., but one of my specimens of the 1d. has the central oval solid, though the same as the rest of the forgeries in other respects. The middle row of jewels on the coronet is like the others; I think all three are intended to represent pearls, though they are not absolutely circular. As far as I can make out, the following are the numbers: top row, twenty pearls; middle row, seventeen pearls; bottom row, eighteen pearls. The side-arms of the cross *patée*, at the top of the coronet, are larger than the top arm, and their ends stand up higher than the level of the top arm. The said top arm is perfectly blank, without any lines of shading in it; and the little ball or pearl in the centre of this cross is decidedly smaller than the pearls below it. The eyes are quite light, the iris inside the ring being altogether uncoloured. In nearly all my specimens of both values there is a strong, dark blotch above the eyebrow, and a blotch at the outer corner of the eye, on the right side of the stamp; and many of them also show two prominent dots under the chin, in the front of the throat. There are fourteen jewels in the necklace; they are easy to count, and some of them are quite shapeless. The front jewel has a large, dark dot in the centre of it, instead of the two short lines of shading. The vertical strips of engine-turning are very coarse, and have the appearance of coloured dots and lines on a light background. In the genuine stamps, the width of the outer strip each side is $1\frac{1}{4}$ mm., while each of the little corner-squares is $1\frac{3}{4}$ mm. wide. In the forged 1d., the outer strip on the right side is fully $1\frac{1}{2}$ mm. wide, and the bottom corner-square that side is rather less than $1\frac{3}{4}$ mm. wide, so that the side-strip and bottom corner-ornament are very nearly equal in width. In the 3d. (for the counterfeits are not identical), the square in the left top corner is very nearly 2 mm. wide, and in the left bottom corner, the square is only about $1\frac{1}{4}$ mm. wide, and the strip of engine-turned pattern is *very* nearly the same width as the bottom square. On the right-hand side, in the 3d., the outer strip of engine-turning is exactly the same width as the bottom corner-square. The cross-bar to each A of NATAL is pretty well in the centre of the letter. The bottom limb of the L is not unnaturally long. The white outline of the central oval encroaches deeply into the second strip of

engine-turning on the right side, but very little on the left side. The colour of the 1d. is usually exactly the shade of the early 6d. of Grenada, and that of the 3d. is more or less ultramarine. I have never seen these colours in the genuine.

POSTMARKS.

Genuine.—54; also frequently pen-stroked.

Forged.—54 (with the numerals 102); also a cancellation something like 33; also (rarely) 1.

Issue of August, 1869. The 6d., lilac or violet;

CC, perforated $12\frac{1}{2}$, surcharged "Postage."

Genuine Surcharge.

Postage.

$12\frac{1}{2}$ mm.
TYPE I.

Postage.

$13\frac{1}{2}$ mm.
TYPE II.

Postage.

$14\frac{1}{2}$ to $15\frac{1}{2}$ mm.
TYPE III.

This is the surcharge with a capital P, and the other letters in lower-case. There are three varieties, according to the spacing of the letters. The O is very oval, thin at the top and bottom, and thicker at the sides. The thickest parts of the lower-case letters are decidedly thinner than the shaft of the P.

Forged Surcharge.

This is printed on the stamps of the proper issue (CC, perforated $12\frac{1}{2}$). The O is a block letter, nearly circular, and the same thickness all the way round. The thickest parts of all the lower-case are as thick as the shaft of the P.

POSTMARKS.

Genuine.—54.

Forged.—The surcharge has been placed on stamps bearing genuine postmarks. I have not seen any unused forgeries.

Issue of 1870. 1s., green, with curved surcharge

"POSTAGE" in carmine.

Genuine.

The head of the A of POSTAGE is wide (almost $\frac{1}{2}$ mm.), the cross-bar is thin, and in the centre of the letter; the spread of the feet is less than $1\frac{1}{2}$ mm. The tongue of the E is short, being only about $\frac{3}{4}$ mm. long, measured from the tip to the back edge of the letter; the top and bottom limbs are 1 mm. long, similarly measured.

POSTAGE

Forged.

The head of the A is somewhat rounded, and is only about $\frac{1}{4}$ mm. broad; the cross-bar is as thick as the other parts, and is below the centre of the letter; the spread of the feet is over $1\frac{1}{2}$ mm. The tongue of the E, measured as before, is over 1 mm. long; and the top and bottom limbs are $1\frac{1}{4}$ mm. long.

POSTMARKS.

Genuine.—1, 29, 54, 100.

Forged.—These have genuine postmarks.

Issue of 26 January, 1885. One Penny, CA,
perforated 14, surcharged **ONE HALF**
PENNY.

Genuine Surcharge.

There is a distance of *very* nearly 2 mm. between the two lines of lettering; and the upper edge of the obliterating-bar is 14 mm. from the upper edge of the top line of lettering. In the word **PENNY**, the left-hand edge of the shaft of the P is almost exactly under the centre of the N of **ONE**; and the left-hand edge of the back of the E of **PENNY**, if prolonged upwards, would graze the right-hand edge of the same part of the E of **ONE**. The H of **HALF** stands centrally above the space between NN of **PENNY**. There is a stop after **PENNY**. As far as I can learn, no errors of the surcharge exist.

ONE HALF
PENNY

First Forgery.

The distance between the two lines of lettering is only 1 mm., and the upper edge of the obliterating-bar is only 12½ mm. from the upper edge of the top line of lettering. The left-hand edge of the shaft of the P of **PENNY** is far to the right of the centre of the N of **ONE**—in fact, it is almost exactly under the right-hand edge of the N. The back of the E of **PENNY** is under the centre of the E of **ONE**. The centre of the H of **HALF** is above the end of the first N of **PENNY**. There is no stop after this word. My single specimen of this forgery has the surcharge inverted.

Second Forgery.

The upper edge of the obliterating-bar is 14½ mm. from the upper edge of the top line of lettering. The left-hand edge of the shaft of the P is very nearly under the end of the N of **ONE**; and the left-hand edge of the back of the E of **PENNY** is under the very centre of the E of **ONE**. The H of **HALF** is *very* nearly over the first N of **PENNY**. There is a stop after **PENNY**, as in the genuine. This forgery is found both inverted and sideways; also with double surcharge, both upright.

Third Forgery.

In this, the lettering is thicker than the genuine. The E of **PENNY** is exactly under the E of **ONE**. The centre of the H of **HALF** is very nearly above the end of the first N of **PENNY**. The vertical shaft of the L of **HALF** is almost above the centre of the Y of **PENNY**, instead of being far to the right of the centre of the Y. I have this with double surcharge, one inverted.

Fourth Forgery.

The upper edge of the obliterating-bar is 15 mm. from the upper edge of the top line of lettering. The left-hand edge of the vertical shaft of the P of **PENNY** is only a shade to the right of the first stroke of the N of **ONE** (which stroke, in my single specimen, has partly failed to print). The E of **PENNY** is exactly under the E of **ONE**. The centre of the H of **HALF** is almost exactly above the first stroke of the *second* N of **PENNY**. The shaft of the L of **HALF** is far to the right of the

V of PENNY. My specimen is partially double-printed, *i.e.*, there is an obliterating-bar through PENNY, and there is a second ONE HALF, at the bottom of the stamp, printed through the normal obliterating-bar.

POSTMARKS.

Genuine.—1, 29.

Forged.—These are printed on stamps with genuine cancellations.

6d., Fiscal, with forged postmark.

The 6d., pink, same type as the 1d. and 3d. postals of 1859-74, is often found in collections, both used and unused. It is a fiscal, and, as such, is genuine enough. But I have seen it with a *soi-disant* postal cancellation (54, without numerals). So far as I am aware, this stamp was never allowed to do postal duty, so that a postal cancellation must either be the work of some too-obliging official, or else is a forgery.

NEVIS.

One Penny, red.

Issue of 1861. Engraved, in dull rose, on blued paper; also in dull rose and deep rose, on greyish paper; perforated 13.

Issue of 1867. Engraved, in pale or deep red, on white paper; perforated 15.

Issue of 1878. Lithographed, in red, rose-red, dull red, and bright red, on white paper, perforated 15. Also lithographed, in bright red, on white paper; perforated 11½.

Genuine.

Varieties as above. There are twelve types on the sheet. I cannot go into the differences in the central picture, which would be difficult to explain; but in the accompanying diagram, I give the different numbers of white diamonds, down the sides of each stamp on the sheet. In each square, representing a stamp, four numbers will be found. The first number gives the long white diamonds, down the left-hand edge of the stamp; the second number is that of the row of stumpy white diamonds, by the side of the long ones; the third number is that of the stumpy diamonds, down the right side of the stamp; and the fourth number is that of the long diamonds, down the right-hand edge of the stamp. The corner-squares are nearly 2½ mm. square, while the top and bottom frames are only 2 mm. high, so that the corner-squares, though flush with the outsides of the said frames, stand out beyond them, on the insides. The lady who is pouring out the water wears a white apron, hanging down in three very distinct, strong folds. The eye of the collapsed young woman is large, and there are no horizontal lines across her face. The bodice of her dress goes obliquely across, over the right shoulder, and under the left arm, leaving the left shoulder bare.

12	12 $\frac{1}{4}$ (T)	12

NOTE.—“B”=fraction of diamond at the bottom of the stamp.

“T”=fraction of diamond at the top.

“ $\frac{1}{2}$ (B) 11 $\frac{1}{2}$ (T)”=11 diamonds, with a half-diamond at the bottom, and a half-diamond at the top.**First Forgery.**

Lithographed, on thin, soft, white wove paper. I fancy the perforation is 12, or even larger, but my single specimen is cut close. The side-frames are composed of intersecting, sharp-pointed, upright ovals, formed of single lines. In the genuine, the pattern is of horizontal, intersecting half-ovals, each composed of four lines. The white spaces are very much too large, forming triangles and diamonds. The corner-squares are about the same size as the genuine, but the four long points of the star, in the centre of each, do not go near the corners of the square; though, in the genuine, most of the long points go nearly, if not quite, to the very corners of the square. The jug from which the water is being poured looks very like a legless baby, which the lady is holding by one arm, the other arm being a stump. The hand of the seated lady touches the jug, though it is far from the jug in all types of the genuine. I have only one specimen of this forgery, and in it, the face of the collapsed young woman is quite covered by the postmark, but her dress is put on exactly the opposite way to the genuine, *i.e.*, it goes over the left shoulder,

and under the right arm, leaving her right shoulder bare instead of the left. The background is nearly all white, as the rocks are represented by a few light, vertical, wavy lines, and the waterfall or spring is entirely absent.

Second Forgery.

Roughly lithographed, in vermilion, and also in a colour very like that of the New South Wales 1d. "Sydney Views," on thin, and also on thick, rather hard, white and very yellowish-white wove paper; perforated 13. The diamonds in the side-frames are so very irregular, in size, shape, and position, that it is quite impossible to make out two vertical rows of them in each frame. The top frame is $2\frac{1}{2}$ mm. high, and the top corner-squares are fully $2\frac{1}{2}$ mm. high, and project both above and below the width of the top frame. The white apron of the standing lady has four folds, and hangs down very limply. The article in her left hand cannot possibly be recognised as a cup, though it is pretty plain in the genuine.

Third Forgery.

This is a very much more pretentious affair, and is new to me (1905). Engraved in *taille-douce*, on thick, hard, azure wove paper; also on thinner, hard, very transparent, bluish-white and yellowish-white wove paper, all very cleanly perforated $11\frac{1}{2}$. Of course the perforation alone is sufficient to condemn this counterfeit, as the genuine stamps perforated $11\frac{1}{2}$ are lithographed, and not engraved. The vertical rows of diamonds in the side-frames are too large; the numbers are 12, 11, $11\frac{1}{2}$ (B), 12; that is to say, the left-hand frame has twelve long diamonds down the outside edge, and eleven stumpy diamonds, by the side of them; the right-hand frame has $11\frac{1}{2}$ stumpy diamonds, the half being at the bottom, and twelve down the outside edge. The top and bottom frames are formed by five vertical lines, very close together, with traces of some horizontal lines. In the genuine, they are of solid colour. In the left bottom corner-square, the four long lines of the star all run quite to the corners of the square, while none of the long lines in any of the other three squares go quite into the corners. The white apron of the standing lady has a good many lines of shading down it, but they do not make the strong folds of the genuine. The profile of the collapsed young lady is formed by four oblique lines, which would be horizontal lines if she held her head up. The first line, short and thick, does duty for the eyebrow; the second line is short and faint, and is intended to represent the eye; the third line usually goes across the face, from the point of the nose nearly to the ear, and there is usually a fourth short line, to represent the mouth. I have not been able to discover which stamp on the plate has been used as the model for this forgery, for the lines of engine-turning in the side-frames do not correspond with any one of the twelve types. In the genuine, the distance between the vertical rows of stamps is a shade over 1 mm.; and, between the horizontal rows, $1\frac{1}{2}$ mm. The forgeries often have a margin of over 2 mm., vertically and horizontally.

POSTMARKS.

Genuine.—54.

First Forgery.—23.

Second Forgery.—1, 62; also uncanceled.

Third Forgery.—54, much larger, with three curved lines each side, instead of two, and the numeral 1 in the centre; also uncanceled. This last forgery is often found cancelled, on pieces of paper.

Four Pence, rose, orange.

Issue of 1861. Engraved, in rose, on blued wove paper; also in dull rose and deep rose, on greyish paper; perforated 13.

Issue of 1867. Engraved, in orange and deep orange, on white paper; perforated 15.

Issue of 1878. Lithographed, in orange and orange-yellow, on white paper; perforated 15.

Genuine.

☞ Printing, paper, and perforation as above; twelve varieties on the sheet. I have only four of the varieties from which to describe. The central

picture is the same as in the ONE PENNY; but, in all my copies, the hand of the goddess holding the jug is more distinct than the hand which holds the cup. In each corner of the stamp there is a small white St. Andrew's cross, each arm ending in a sort of trefoil. The white outline of the central circle, in all my specimens, touches the white outline of the frame, each side of the stamp; there being merely a hair-line dividing them. The top and bottom of the said circle seem to vary considerably in their distance from the top and bottom borders of the stamp, according to the type. A good portion of the groundwork to the left of the sick woman and her supporter consists of crossed, vertical, and horizontal lines. The horizontal lines can be traced up as far as the shoulder of the kneeling woman, and higher in some types. The colour of the earlier issue is called "rose" in the catalogues; but it is usually almost exactly like that shade of the ONE PENNY which is called "lake-rose," with, perhaps, just a shade more brown about it. The sick woman has her right hand on the ground, palm downwards, as in the ONE PENNY; and her left hand lies flat and spread out on her knee.

First Forgery.

Lithographed, in very pale pink, rather bright rose, and also orange, on thinnish to medium, white wove paper, very badly perforated about 12, also pin-perforated some uncountable number. The thing from which the goddess is pouring appears to be a sort of mug, with a handle reaching from the top to the bottom; though, in some copies, the neck part of the jug can be seen. The cup is fairly visible. The sick woman has no top to her head. Her right hand shows three clumsy fingers, splayed out upon the ground; and with her left hand she is playing five-finger exercises upon her knee. The corners of the stamp bear St. Andrew's crosses; but the trefoil-ends are only decipherable in the cross in the right bottom corner. The white outline of the central circle does not touch the white outline of the frame on the right side; and on the left side, the outline of the circle is so far from the frame, that parts of the pairs of white horizontal lines, forming the outer border, can plainly be seen, just as at the top and bottom of the stamp. The groundwork to the left of the sick woman and her supporter is entirely composed of rows of vertical lines; a row of long lines, and a row of short ones, alternately, without any horizontal lines being visible.

Second Forgery.

Lithographed, in a sort of coarse, staring carmine, on rather thick, white wove paper, very badly perforated about 12. The tests given for the first forgery will serve also for this; except as follows: the head of the sick woman has a top to it, showing a white patch. Her hand, which is on the ground, is better drawn, but, nevertheless, it is not flat, palm downwards, but shows the thumb. The *whole* of the rocks behind the three figures are entirely shaded with crossed, vertical, and horizontal lines. The jug is better drawn than in the first forgery.

Third Forgery.

Nicely engraved in *taille-douce*, in dull vermilion and pale red, on azure wove and on bluish wove; also in orange, on greenish wove paper; perforated 11½. This counterfeit is new to me (1905), and is evidently by the same maker as the third forgery of the 1d. The lower corners of the stamp afford an easy test, as the ornament in each has the four square, coloured dots, between the arms of the cross, so very highly in relief, (due to the ink standing out so much from the paper,) that the St. Andrew's cross itself is not noticeable at first. The outer outline of the central circle is rather ragged and uneven, where it touches the frame, on the right side of the stamp. The whole of the rock, to the left of, and behind, the sick woman and her supporter, is formed by vertical lines; there are no horizontal lines on it at all. The sick woman's left hand shows the thumb and one finger, but it does not lie flat, or spread out on the knee. The ink stands out in very distinct ridges from the surface of the paper. As I have not been able to obtain the twelve types, it is useless to give further details, which might be misleading.

POSTMARKS.

Genuine.—54.

First Forgery.—1.

Second Forgery.—62.

Third Forgery.—The same as the third forgery of the 1d.; also uncanceled.

Six Pence, grey-lilac, grey, grey-black.

Issue of 1861. Engraved, in grey-lilac, on blued paper; perforated 13; also in grey-lilac, on greyish wove paper; perforated 13.

Issue of 1878. Lithographed, in grey and in grey-black, on white wove paper; perforated 15.

Genuine.

Engraved in *taille-douce*, paper and perforation as above. There are twelve types on the sheet, of which I have, unfortunately, only three, from which to describe. The central picture is as in the ONE PENNY and FOUR PENCE. In all my specimens, the outline of the central circle is distinctly nearer to the frame at the top and bottom than at the sides. The engine-turning in the spandrels, between the circle and the corners of the stamp, shows vertical rows of white, diamond-shaped dots. The right hand of the sick woman shows no thumb or fingers. The leaf-ornaments in the four corners of the stamp are alike, each showing seven lobes.

First Forgery.

Lithographed, of a paler shade than the genuine, on thin, greyish wove paper, badly perforated 12½. Most of the background in the left side of the central circle shows crossed, vertical, and horizontal lines. This said circle is equally close to the frame on all four sides. The imitation engine-turning in the spandrels does not show the white, diamond-shaped dots. The thumb and three of the fingers of the sick woman's right hand are quite distinct. The wavy lines in the side-frames are not nearly close enough together; so that the said frames, at a little distance, look quite as light as the name and value-labels; whereas, in the genuine, the lines are close enough together to make the side-frames, at a little distance, look a good deal darker than the top and bottom labels.

Second Forgery.

This is new to me (1905), and is evidently by the same maker as the third forgeries of the 1d. and 4d. Engraved in *taille-douce*, on azure and on bluish wove paper; perforated 11½. The colour is a brownish-grey. The apron, instead of falling in four heavy, vertical folds, looks quite flat, and has two vertical lines down it, dividing it into three portions. The outer, coloured outline of the central circle touches the outline under NEVIS, the outline above SIX PENCE, and the inner outline each side of the stamp; i.e., it is equally near to the boundary on all four sides. Most of the white dots in the spandrels (below the N of NEVIS, for instance) are triangles, instead of diamonds. Each hand of the sick woman shows the thumb and first finger. An easy test is the leaf-ornament in the left top corner of the stamp, which is unlike the rest, having only five lobes, instead of seven. The ink stands out from the surface of the paper, though not quite so much as in the third forgery of the 4d.

Genuine.—54.

POSTMARKS.

First Forgery.—1, 62.

Second Forgery.—The same as in the third forgery of the 1d.; also uncanceled.

One Shilling, blue-green, yellow-green.

Issue of 1861. Engraved, in blue-green, on blued, wove paper; perforated 13. Also on greyish paper; perforated 13.

Issue of 1867. Engraved, in blue-green and in yellow-green, on white wove paper; perforated 15. Also in yellow-green, on laid paper; perforated 15.

Issue of 1878. Lithographed, in pale green and deep green, on white wove paper; perforated 15.

Genuine.

Printing, paper, and perforation as above. There are twelve types on the sheet, of which I have only seven. The stamps vary so extremely, that it is utterly impossible for me to give more than one or two reliable tests, in the absence of an entire sheet from which to describe. There is, however, one thing in which the genuine are all alike, and which the forgers have missed, but I am afraid it is rather difficult to make clear. I refer to the lattice-work in the corners of the stamp. This lattice-work, in the genuine, is formed by vertical rows of double-lined lozenges, each enclosing a white diamond, and the right and left corners of each

lozenge touch the corners of the similar lozenges to right and left of them. Owing to the shape of these lozenges, there are, of course, vertical rows of white diamonds between the vertical chains of lozenges; and these white diamonds are considerably larger than the diamonds in the lozenges. From this description, it will be understood that the effect produced differs considerably from that produced by a lattice-work of continuous, crossed oblique lines, such as I shall hereafter describe. The lettering is thin, and, in the lithographed stamps, rather ragged. There is a sort of chain, connecting each end of the NEVIS label with each end of the ONE SHILLING label; the centre of each chain shows seven complete diamonds, with usually a portion of another diamond above and below the seven. The central picture varies with each type; but in no case does the sick woman seem to have any veil over her face.

First Forgery.

I take this first, because it is intended to imitate the issues of 1861-7; but as a matter of fact, it is a comparatively new forgery, which first came to my notice in 1904. Engraved in *taille-douce*, in blue-green and yellow-green, on azure and on very slightly-greenish wove paper; nicely perforated 11½. This counterfeit is evidently by the same maker as the third forgery of the 1d., already described. The lattice-work in the corners of the stamp is formed by pairs of straight, oblique, crossed lines, running down from right to left, and from left to right; the white diamonds are, therefore, all much about the same size. The lettering is not particularly thin, and there is a flaw or dark mark in the left side of the O of ONE, which is not visible in the genuine. There are eight complete, long diamonds along the centre of the chain, connecting the left-hand ends of the top and bottom labels, and eight also along the centre of the similar chain, connecting the right-hand ends of the said labels. The face of the sick woman appears to be hidden by a tight veil, formed by lines drawn right across the face, which lines would be horizontal, if her head were upright.

Second Forgery.

This is old, and purports to represent the 1878 issue. Lithographed, in blue-green and yellow-green, on white or very yellowish-white wove paper; perforated 12½. As in the first forgery, the lattice-work in the corners is formed by pairs of continuous, crossed lines, running down obliquely, from right to left, and from left to right, and the white diamonds between the crossed lines are all much about the same size. The lettering is too thick, and the lowest limb of the E of ONE is not absurdly long, though it is very much too long both in the genuine and in the first forgery. The dark shading on the arm of the sick woman makes the body of the dress appear as though it went over both shoulders, with a v-shaped front; but, in the genuine, and in the first forgery, the dress plainly goes over the right shoulder, and under the left, leaving the left shoulder bare.

Third Forgery.

I transcribe the description from my second edition, as I do not possess this counterfeit any longer. Poorly lithographed, on stout, yellowish-white wove paper, very badly pin-perforated some totally uncountable number. The ends of the NEVIS label, and the left-hand end of the ONE SHILLING label, are bluntly pointed, instead of rounded. The lattice-work in the spandrels is not nearly so regular as in the first forgery; and the white diamonds in it are all of tolerably equal size. I do not think this counterfeit is likely to deceive.

POSTMARKS.

Genuine.—54, lettered A 09 in all my copies.

First Forgery.—The same as in the third forgery of the 1d.; also uncanceled.

Second Forgery.—1, 62.

Third Forgery.—1.

FISCAL STAMPS, WITH FORGED POSTMARKS.

Revenue

REVENUE

TYPE I.

TYPE II.

I have the following varieties :—

1d., 1878, lithographed, perforated 15, surcharged as Type I., with forged cancellation 54 (A 09).

1s., 1878, lithographed, perforated 15, same surcharge, with an upright cancellation like 55, but only three bars top and bottom, and one thickish, curved bar, or two thin ones, each side, with A 12 in the centre, which is a St. Christopher colony-number.

6d., green, 1883, Queen's head, CA watermark, surcharged as Type II.; same cancellation as the 1s. above.

1s., lilac, 1890, Queen's head, CA watermark, surcharged as Type II., same cancellation as the 6d.

NEW BRUNSWICK.

Issue of 1857. 3d., red; 6d., yellow; 1s., violet.

Genuine.

Engraved in *taille-douce*, on thick, very blue-tinted, white wove paper. The stamp measures $22\frac{1}{2}$ mm. square. If it be placed diamond-wise (its proper position), with the crown upright, then all the four corner-numerals will be upright also. The face of the orb on the top of the crown bears an inverted **L**. The crown is very nicely drawn, with its middle arch standing on a cross *pattée*; the said cross *pattée* shows three wedge-shaped white arms, there being no bottom arm. There is a *fleur-de-lys* on each side of the cross. The eight-pointed star to the left of the crown bears a spray of three shamrock-leaves, which can hardly be said to overlap one another at all. The octagonal outline round the central space is single. The lowest point of the top numeral-compartment touches the point of the arch-shaped white line below it. The four flower-stems, if prolonged, would pass centrally through the inward-pointing rays of the eight-pointed white stars in which they are drawn. The general background of the stamp is formed by engine-turning, finely executed, being apparently white lines cut out of a dark background. The background of the frame is of dark lines on a white ground. All the dark lines of the design stand up well from the surface of the paper, so that the thickness of the ink can be felt as well as seen.

First Forgery.

Lithographed, on thin, white wove paper, without any blue tint ; also on medium, bluish-white wove. If the stamp be placed diamond-wise, with the central crown upright, the upper figure is upright also ; but the right-hand one is lying on its back, the left-hand one on its face, and the bottom one is upside-down. The crown is ragged, unfinished-looking, and badly drawn ; its middle arch stands on a white trefoil, and there is a similar trefoil, instead of a *fleur-de-lys*, each side of it. The octagonal outline round the central space is double. The lowest point of the top numeral-compartment does not meet the point of the white, outlined arch below it, the arch being too much to the right. The stems of the top and right-hand flowers are as in the genuine ; but the stems of the bottom and left-hand flowers would, if prolonged, go through the sides, instead of the points, of the inmost rays of the white stars. The whole of the background of the stamp is formed by coloured lines upon white, and none of the dark lines are at all in relief.

Second Forgery.

Lithographed, on medium, wove paper, distinctly blued. If the stamp be placed diamond-wise, with the crown upright, the four corner-numerals are upright also, as in the genuine. The crown is much better than in the first forgery ; but its middle arch stands upon a curly ornament, difficult to describe, but not in the least like a cross *pattée* ; and each side of the said ornament, there is a sort of white crescent, instead of a *fleur-de-lys*. The left lower point of the octagon containing the crown is too long, so that the space between it and the base of the crown is wider than the space between the right lower point and the crown. The lowest point of the top numeral-square does not touch the point of the arch-shaped white line below it. None of the four flower-stems are drawn accurately ; if prolonged, they would all pass through the *side*, instead of the point, of the inner rays of their containing-stars. The imitation engine-turning of the general background is very poor, being apparently dark lines drawn on a white background. The background behind BRUNSWICK is almost perfectly solid. The ink does not stand up at all from the paper. The ONE SHILLING value of this set is printed in a very cold slate-colour or neutral tint, quite unlike the reddish-violet of the genuine.

Third Forgery.

Of this I have only the 3d., and it is very much better than the other two. I got it at the end of 1897. Engraved in *taille-douce*, in pale brownish-red, very different from the rather bright red of the genuine. The stamp is not square, and is decidedly larger than the genuine, measuring $23\frac{3}{4} \times 23\frac{1}{2}$ mm. The orb on the top of the crown has a *four-armed* white cross on its face. The cross at the base of the crown, below the centre arch, has four rectangular white arms. The shamrock-leaf at the end of the spray overlaps the leaf to the left of it very distinctly. The engine-turning is unlike that of the genuine in several places, but a verbal description is difficult.

POSTMARKS.

Genuine.—An outlined oval, filled with thin, parallel lines, usually struck in blue ; also 33 ; and I think I have seen 45.

First Forgery.—1, 21, 23, 51, 54.

Second Forgery.—54, 100.

Third Forgery.—My specimen is not cancelled, but it is surcharged FACSIMILE in small capitals.

Issues of 1860-3. 1 Cent, brown, brown-violet.

Genuine.

Engraved in *taille-douce*, on thick, white wove paper, of a yellowish-grey tint; perforated 12. The funnel of the locomotive is decidedly wedge-shaped, getting smallest where it joins the body; and the smoke comes out in sufficient volume to cover three-quarters of the top of it, the front of the smoke being level with the end of the tail of the K of BRUNSWICK. The foreground of the landscape, below the engine, bears very light lines of shading; and there is a small white rock above the N of ONE, and another above the E of CENT. There is no shading at all (except a few faint lines) in the space between the end of the smoke and the top of the last car; and the other side of the oval, level with OSTAG of POSTAGE, is almost entirely destitute of shading. Outside the oval, the groundwork of the stamp consists of *very* fine horizontal lines, crossed by similar lines, running down obliquely from right to left.

Forged.

Coarsely lithographed, on rather thin, soft, very white wove paper; perforated 13. The funnel of the locomotive is like the genuine at the top, but it gets thicker again where it joins the body, and the smoke comes out in a thin stream from the left-hand edge of the funnel, so that the front of it is nearly level with the middle of the K of BRUNSWICK, showing three-fourths of the top of the funnel uncovered. The foreground of the landscape, below the engine, is darkly shaded on the left side, from below the end of the last car, to above the N of ONE. Above that letter there is a shapeless white patch, and there is a dark blotch running along from above the E of ONE to above the N of CENT. In the space between the end of the smoke and the top of the last car, there is a great deal of dark shading, almost joining the smoke and the top of the car together. There is also a great deal of dark shading in front of the engine, to the right of the oval, quite up to the level of the A of POSTAGE, and with a few lighter lines above this, to level with the S of that word. Outside the oval, the groundwork consists of coarse, horizontal lines, crossed by other coarse lines, running down obliquely from left to right. These said lines are very easily seen, though they require a microscope in the genuine.

POSTMARKS.

Genuine.—As before.

Forged.—22, 33.

2 Cents, golden-orange.

Genuine.

Finely engraved, in *taille-douce*, on thick, hard, yellowish-white wove paper; perforated 12. There is a large white stop before the T of TWO, like the one after S of CENTS. A distinct hyphen is visible, between the words NEW BRUNSWICK. The background, behind the corner-figures, is formed of horizontal lines. The face and neck, etc., are shaded all over, except the bridge of the nose, and above the left eyebrow. The necklace is composed of trefoils, *not* pearls. The central ornament at the top of the coronet is a cross *paltée*. The ink stands out well

from the surface of the paper.

First Forgery.

Badly lithographed, in light vermilion, on soft wove paper, rather thin, and very white; perforated 13. The stop before the T of TWO is *very* small, almost invisible. There is no hyphen between the words NEW BRUNSWICK. The background is solid, behind the corner-numerals. The upper part of the face and the front of the neck are quite white, except above the right eyebrow. There is a distinct *pearl* necklace. Instead of a cross *paillée* at the top of the coronet, there is a partly-shaded white square. The ink does not stand out in relief from the surface of the paper.

Second Forgery.

This is the same as the first forgery, except that the stop before the T of TWO is almost as large as in the genuine, and the numerals are on a horizontally-lined ground. The other tests remain the same.

POSTMARKS.

Genuine.—As before.

First Forgery.—A cancellation of dots, but, as there is only a part of the postmark on my specimen, I do not know the shape of the entire postmark, but fancy it is either oval or circular.

Second Forgery.—62 (a New South Wales obliteration).

5 Cents, olive-green, grass-green.

Genuine.

Engraved in *taille-douce*. Paper as in the 2 cents, but rather whiter; perforated 12. The bust, necklace, coronet, and central oval are exactly the same as in the genuine 2 cents. There is a hyphen between the words NEW BRUNSWICK. The iris of each eye is perfectly circular, with a circular dark pupil in the centre of each. The ovals round the corner-numerals are nicely drawn. The corners of the small oblong CENTS label, at the bottom of the stamp, are hollowed in; and the word CENTS is placed centrally in the label. The outline of the Queen's shoulder, if prolonged, would graze the stop before FIVE. There is a thin, dark outline surrounding the stamp, and this line is exactly the same distance from the stamp, all the way round.

First Forgery.

Poorly lithographed, in dirty green, on thin, very white wove paper; perforated 13. The bust, necklace, and coronet are the same as in the first forgery of the 2 cents. There is no hyphen between the words NEW BRUNSWICK. The iris and pupil of each eye are one solid dark ball. The word CENTS is rather too far to the left, so that the C is nearer to the left-hand end of the label than the S is to the right-hand end. The Queen's shoulder, if prolonged, would graze the F of FIVE. The position of the thin outline, round the stamp, seems to vary; as I have one copy in which the outline down the left side of the stamp is much further away than any of the rest; while, in another copy, the top outline is most distant.

Second Forgery.

Poorly lithographed, in very pale whitish-green, on thin, white paper; perforated 13½, better than usual. Bust, necklace, and coronet are the same as in the first forgery of the 2 cents. In this forgery, there is a hyphen

between the words NEW BRUNSWICK. The eyes are two upright oval, dark dots, which seem to trespass beyond the edges of the lower eyelids. The ovals round the corner-numerals are badly drawn and ragged. The corners of the oblong CENTS label are merely cut off obliquely, instead of being hollowed in; and the word CENTS is placed far too much to the left in the label. The outline of the Queen's shoulder, if prolonged downwards, would pass along the F of FIVE. The thin outline surrounding the stamp is too near, down the left side, and too far off, along the top.

POSTMARKS.

Genuine.—As before.

First Forgery.—62; also diamond-shaped dots, arranged in an oval (or circle?).

Second Forgery.—22, 62.

10 Cents, vermilion.

Genuine.

Engraved in *taille-douce*; paper the same as in the genuine 2 cents; perforated 12. The bust, necklace, coronet, central oval, etc., are the same as in the genuine 2 cents. There is a hyphen between the words NEW-BRUNSWICK. The C of CENTS at the same distance from the left-hand end of bottom label as the S is from the right-hand end. The outline of oval surrounding each X consists of a dark line, between two white ones.

Forged.

Poorly lithographed, in rose-red, on rather thick, white wove paper; perforated 13. The bust, necklace, coronet, central oval, etc., are the same as in the genuine 2 cents. There is no hyphen between the words NEW BRUNSWICK. In the bottom label, the C of CENTS is too near the left-hand end of the label, as compared with the S. The outline of the oval surrounding each X consists of a dark line, round a white one. The iris and pupil of each eye are merged into one dot. The corners of the CENTS label, at the bottom of the stamp, are cut off obliquely, as in the forgeries before-described; the label itself is badly drawn, being too tall on the right side, and the word CENTS is placed much too far to the left in it.

POSTMARKS.

Genuine.—As before.

Forged.—1, 62; also a number of diamond-shaped, black dots, forming a circle or an oval.

12½ Cents, blue.

Genuine.

Engraved in *taille-douce*, on thick, hard, greyish-white wove paper; perforated 12. The hull of the steamer is all dark. The smoke from the funnel passes in front of the masts, and behind the flag. There are only two ropes visible below the flag, to left of the last mast. There is no "dolphin-striker" on the bowsprit. The letters W1 of BRUNSWICK are joined together at the top. The fraction-lines, dividing the ½ of each bottom 12½, are as broad as the white rings round them.

Forged.

Lithographed, on rather thin wove paper, very white ; perforated 13. There is a white streak drawn along the whole length of the hull. The smoke from the funnel passes behind both masts and flag. There are three ropes visible below the flag. There is a distinct "dolphin-striker" on the bowsprit. The letters WI of BRUNSWICK are *not* joined at the top. The fraction-lines of each bottom 12½ are much thinner than the white rings round them.

Genuine.—As before. **POSTMARKS.**

Forged.—10 ; also some blotches.

17 Cents, black.**Genuine.**

Engraved in *taille-douce*, on thick, yellowish-white wove paper ; perforated 12. In each corner there is an oval ring, containing the numerals 17, and each ring is composed of a thin black line between two white ones. The spandrels, each side of these ovals, are shaded by horizontal lines, crossed by right and left oblique ones, but no vertical ones. None of the letters of the inscriptions touch each other, except the TA of POSTAGE, which touch at the bottom, and the EV of SEVENTEEN, which touch very slightly at the top. The background, behind the portrait, is shaded by horizontal lines, crossed by oblique lines, running down from left to right. The face of the Prince of Wales is shaded all over with dotted lines ; each eye shows both iris and pupil, both quite distinctly. The feather in the cap shows up very well from the background. There is a small, diamond-shaped button, just below the necktie. The plaid shows a brooch on the shoulder. Two of the white lines in the plaid run down towards the middle of the broad stroke of the second E of SEVENTEEN, and two more run down towards the following N. There are in all, on the plaid, five horizontal white lines, and five nearly vertical ones ; the one coming down from the brooch being apparently single, though broad. There is a white mark, like a circumflex accent, in the plaid, at the left bottom corner, just above the V of SEVENTEEN. The corners of the CENTS labels are deeply hollowed in.

**First Forgery.**

Lithographed, on rather thin, white wove paper ; perforated 13. The oval in the left top corner and the one in the left bottom corner show no black line in the centre of the white ; the oval in the right top corner shows some indications of a black line in the upper part only ; the one in the right bottom corner has the black outline between the two white ones, as in the genuine, but not nearly so nicely drawn. The spandrels show oblique lines, crossed by vertical ones. None of the letters touch each other anywhere. The shading behind the portrait, in its upper part, is of horizontal lines, crossed by oblique lines, running down both to the left and to the right. There is a space without any shading on it, just above the Prince's right eyebrow (left side of the stamp). The iris and pupil of each eye form a solid black ball, the pupil being invisible. The feather in the cap is apparently split in two by a white mark ; it does not look at all like a feather. There is no button under the necktie. The profile of the plaid on the top of the shoulder makes a sort of lump, but there is no brooch. Two of the white lines in the plaid run vertically down towards the beginning of the first N, and two others run vertically down towards the middle of the T of SEVENTEEN. The horizontal white

lines of the plaid are not to be counted ; there are three very distinct ones, and about three more very indistinct ones. The vertical lines are very easy to see ; there are six of them, together with a mark over the VE of SEVENTEEN, which is, of course, the beginning of another one. The lower left corner of the CENTS label is hollowed in, something like the genuine, but all the other corners are simply cut off obliquely.

Second Forgery.

Poorly lithographed, on stout, very white wove paper ; pin-perforated 12. The black lines show in the two lower value-ovals, but can only be traced a portion of the way round in the upper ovals. The shading of the spandrels is very blotchy, but shows vertical lines, crossed by oblique lines. The inscriptions are in very ragged letters. The TA and the GE of POSTAGE touch at the bottom, and the last E but one of SEVENTEEN is of most extraordinary shape in my specimen, as though the engraver had drawn a U, and then tried to make an E of it. The foot of this letter touches the r before it. The background, behind the portrait, is something like the genuine, but shows some lines of shading, running down obliquely, from right to left. Part of the forehead, nose, and right cheek are entirely destitute of shading. The eyes show some indication of pupils in this forgery, and the feather in the cap is much better done than in the first counterfeit. There is no diamond-shaped button below the necktie. There is a brooch on the shoulder. The vertical white lines on the plaid (which, by the way, are very sloping in this forgery) are as follows : one line runs down towards the space between VE of SEVENTEEN, two lines towards the beginning of the N, and two lines towards the space between the TE. All the white lines in the plaid are easy to be seen ; there are five vertical and four horizontal ones. Three out of the four corners of the CENTS label are cut off obliquely.

Third Forgery.

The ovals, in this counterfeit, are like the genuine. The spandrels are shaded by horizontal lines only. None of the letters touch each other anywhere, except the TE of SEVENTEEN, which touch at the top. The chief part of the background behind the head is composed of wavy, horizontal black lines ; and towards the bottom, these are crossed by oblique *white* lines. The face is shaded by lines, as well as dots, and there are a number of black, horizontal lines on the forehead. The nose, chief part of the mouth and chin, part of the right cheek, and part of the right temple (left side of the stamp) are not shaded at all. The pupil is not to be distinguished from the iris in either eye. The feather in the cap does not show any indication of the central white vein, which can be seen in the genuine. There is a little white button, with a black dot in it, below the necktie, but it is round, instead of being diamond-shaped. The brooch on the shoulder is like a white crescent, with a round white dot in the centre of the hollow. There are only four vertical white lines in the plaid ; two of them run down towards the broad stroke of the second E of SEVENTEEN, and the other two towards the beginning and end, respectively, of the first N of that word. The horizontal lines are five in number. The corners of the CENTS label are hollowed in, like the genuine.

POSTMARKS.

Genuine.—Frequently only pen-stroked ; also an outlined oval, containing parallel bars ; also the same, with numerals in the centre, struck in blue ; also 100 ; also an outlined oval, containing unreadable letters.

First Forgery.—A number of dots ; also 10, 22, 54, 62.

Second Forgery.—51.

Third Forgery.—Uncancelled.

5 Cents, chocolate (Connell), 1861.**Genuine.**

Engraved in *taille-douce*, on thick, yellowish-white wove paper; perforated 12.

Forged.

Photographed, on thin wove paper. Unperforated, but with the perforation of the original photographed instead of being perforated. I have seen no lithographed forgery.

**POSTMARKS.**

Genuine.—Cancelled copies of the genuine are exceedingly rare; I have never seen one.

Forged.—The photograph is not postmarked.

**NEW CALEDONIA.****Issue of 1858. 10 Centimes, grey-black.****Genuine.**

Lithographed, on fairly stout, yellowish-white wove paper; ungummed. I do not like to omit all mention of this stamp, as there are many forgeries, but there are fifty types on the sheet, of which I have only nine, so that anything I can say about them will be of very little use. The one single point in which all my nine specimens agree is, that the inner edge of the dark octagon round the portrait is ornamented by a number of dots, or dark pearls, the whole of the way round.

**Forged.**

Of these I have ten, all differing greatly in almost every point; and besides these, I have two photos, both from the same original stamp. The forgeries are lithographed; some on common, grey-white wove, with FACSIMILE at the back; others on rather soft, very yellowish-white wove. Those labelled FACSIMILE at the back are rather lighter in shade than the genuine; the others are a good deal darker than the genuine. In all but one of these counterfeits, two, and sometimes three, of the sides of the octagon (the ones behind the head) show no dark dots along their edges; and the one which has them all round shows a sort of scalloped edging, each scallop having a dark dot in its centre.

POSTMARKS.

Genuine.—I have never seen a cancelled specimen.

Forged.—Mostly uncanceled, but I have two with 82, containing "Ed." and something unreadable. I fancy I have also seen an octagonal cancellation, something like 32.

SOI-DISANT REPRINTS.

The so-called reprints are simply forgeries, having been made from a photographic transfer. Bacon says they are in black, instead of grey-black, with the impression thicker than in the originals, and not so distinct.

NEWFOUNDLAND.

1d., reddish-purple, purple-brown; 5d., reddish-purple, purple-brown, red-brown, brown.

Issue of January, 1857. Thick paper.

Issue of 1860-2. Thinner paper.

The stamps (all values) of the 1860-62 issue are occasionally to be found with a watermark, a portion of the maker's trade-mark, STACEY WISE, 1858.

Genuine.

Engraved in *taille-douce*, paper and colours as above. In each corner of the stamp there is a little square, containing the figure of value; and the inner corner of each square touches, and corresponds with, the point of a sort of arch, which surrounds a white star. The stop under the T of S^t is large and round; the apostrophe of JOHN'S has a large, round head. The crown is surmounted by a very distinct orb; the ornaments below the arches are a cross *paltée*, between two *fleurs-de-lys*, all very distinct; and the ermine ring at the bottom of the crown has five dark, oblong patches upon it. The base of the crown does not touch the outline of the octagon containing it. All the details of the design are formed by very fine, white, engine-turned lines, apparently scratched out of a dark background.

First Forgery.

Lithographed, more or less badly, on very white, and bluish-white wove paper, generally a good deal thinner and softer than that of the genuine. The inner points of the bottom squares correspond, as in the genuine, with the points of the arches near them; but the inner corners of the upper squares do *not* correspond with the points of the upper arches. This is an easy test. The stop under the T of S^t is very small, and of an irregular shape; the apostrophe of JOHN'S has much too small a head for a true comma. The orb is rather indistinct in the 1d., and totally undecipherable in the 5d. The ornaments below the arches are three *fleurs-de-lys*. The ermine ring at the bottom of the crown has four dark, oblong patches, with a shapeless lump of shading at the right-hand end, where the fifth oblong patch ought to show. The right-hand end of the base of the crown touches the sides of the containing-octagon. All the details of the design are formed by coloured lines on a white background.

Second Forgery.

Lithographed, on stout, very yellowish-white wove paper. The points of the four arches all end some little distance from the inner points of the white corner-squares, instead of touching them. The stop under the T of S^t is obliquely oval, and too small; and the neck of the apostrophe in JOHN'S is disproportionately thick. A pen-stroke in my specimen rather hides the ermine band at the base of the crown; but I *think* there are only four dark oblong patches on it, instead of five. With these exceptions, this forgery is fairly like the genuine; the crown being not at all badly done.

Third Forgery.

This is very poor and blotchy, and printed in a bright red-violet, quite unlike the more sober tints of the genuine. Lithographed, on thin to medium, very white wove paper. The point of the right lower arch corresponds with, and touches, the inner corner of the white numeral-square; but the other three arches touch the sides, instead of the corners, of the white squares. The lettering is all *very* ragged and blotchy, as, indeed, is the whole stamp. The apostrophe of JOHN'S is merely a rather thin, curved line, without any round ball for a head. The orb on the crown is all broken up, and there is a small, straight piece sticking up from the left side of the orb, instead of the distinct cross *pattée* which ought to stand centrally upon the top of it. The white ornaments on the crown seem to be three crosses *pattée*, or clumsy shamrocks. The ermine band at the base of the crown bears four dark dashes. The right side of the base of the crown touches the outline of the containing-octagon. This is the poorest counterfeit of the three, and not likely to deceive. I have only seen the FIVEPENCE in this forgery; but most probably the ONE PENNY also exists.

POSTMARKS.

Genuine.—76, 100.

First Forgery.—1; also something like 30, without the numeral.

Second Forgery.—Pen-stroked.

Third Forgery.—6, but rather smaller: 98, with bars closer together.

Threepence, green.

Issue of January, 1857. Thick paper.

Issue of 1860. Thinner paper.

Genuine.

Engraved in *taille-douce*, in deep yellow-green; paper as above, which usually has the face tinted very faintly greenish, owing, probably, to imperfect wiping of the plate. The groundwork of the central triangle, behind the large trefoil, is engine-turned all over, but there are three places where the engine-turning consists of simple network, instead of a more complicated pattern, making the groundwork appear to be divided into four horizontal strips. It must, however, be remembered that the four strips are not really separated from each other, but joined by a plain network. The white network forms a pattern of horizontal, coloured diamonds, arranged in groups of four. The free part of the stem of the rose, in the central trefoil, leans strongly to the left, where it issues from between the two leaves, then takes a bend to the right, and the top bit, where it joins the flower, is vertical. The very centre of the flower contains a tiny, dark crescent, lying on its back, with both points upwards, the right-hand point being a little higher than the other. The right-hand leaf is distinctly outlined all round, and two of its serrations touch the flower, while three serrations of the left-hand leaf touch the flower. The head of the thistle only leans very slightly to the left, and the bottom of its stem projects well below the junction of the two leaves. The top leaf of the shamrock shows at least four long lines of shading. The name, NEWFOUNDLAND, is in one word; the

O is a somewhat pointed oval ; the U is rounded at the bottom ; the A is crossed almost in the very centre, and the feet of the AN do not touch. The O of JOHN'S is rounded at the bottom, and the apostrophe is a nicely-shaped comma. The O of POSTAGE is nicely shaped, and similar to that in NEWFOUNDLAND ; the A is crossed low down ; and the lowest limb of the E projects further than the top limb. The dark ring round the 3, in each lower corner of the stamp, is a perfect circle, and the head of each 3 is perfectly horizontal.

First Forgery.

Lithographed, in blue-green and yellow-green, on fairly thin, very white wove paper. The groundwork of the central triangle is formed by four separate strips of imitation engine-turning. There are some white markings between the first and second strips, and also a few white scratches, above the right side of the lowest strip, but they do not form any clear network pattern, nor are there any signs of the horizontal diamonds in the network, or rather, where the network ought to be. The free part of the stem of the rose, in the central trefoil, bends to the right on issuing from between the leaves, then joins the flower by a bend to the left. In the genuine, the stem goes into the centre of the V, formed by the two leaf-stalks, but in this forgery, the stem appears to be coming out of the upper part of the stalk of the left-hand leaf. The tiny crescent in the centre of the rose is thick and clumsy on the right side. The right-hand leaf of the rose seems to have no inner outline, the serrations being invisible. The left-hand leaf touches the rose in one place only, the said place being a dark blotch. The head of the thistle leans over considerably to the left, and the bottom of the stem hardly projects at all below the junction of the two leaves. The top leaf of the shamrock only shows three long lines of shading. The name is written NEWFOUND LAND, with a distinct separation between the D and the L ; the O is quite square at the top and bottom ; the U is also absurdly square at the bottom ; the A is crossed low down, and the feet of the letters AN are joined. The O of JOHN'S is quite flat at the bottom, and the apostrophe is pear-shaped, with the small end of the pear having a twist to the left. The O of POSTAGE is quite flat at the bottom, and too broad and clumsy in shape ; the A is crossed high up, and the lowest limb of the E is the same length as the top limb. The dark ring round each 3 is not circular, as the diamond-shaped frame encroaches on the ring in each case. The head of the left-hand 3 is not truly horizontal, but slopes down slightly to the right.

Second Forgery.

Lithographed, on medium, very yellowish-white wove paper. I have only recently seen this counterfeit (1906), yet it looks a very old forgery. There is a decided network between the upper two strips of engine-turning, and coarser network between the other strips, but the horizontal, dark diamonds, formed by the network in the genuine, cannot be made out. The other tests are the same as in the first forgery, which makes me believe that this is simply a first state of the said first forgery, before the attempts at network between the strips of engine-turning became obliterated.

POSTMARKS.

Genuine.—I have no postmarked specimen.

First Forgery.—1, 62, 98, with bars close together.

Second Forgery.—98, ditto.

2d., 4d., 6d., 6½d., 8d., 1s.

Issue of 1857. Scarlet-vermilion; thick paper.

Issue of 1860. Thinner paper; orange-vermilion.

(There is no 8d. in this set, and the 6½d. is a still-born stamp, which was never sent out to the colony.)

Issue of 1861-2. Lake.

(Stamps occasionally show part of the paper-maker's watermark, STACEY WISE 1858, as already mentioned.)

The catalogues only give the three shades above described, but I fancy four separate shades can be made of most of the values; for, besides the dull lake stamps, so commonly found unused, the red stamps which have passed the post are generally of what I call a dull rose-red, reminding one of the shade of some of the early Antigua 1d. stamps. I have only once seen a postmarked copy of the 1s. in dull lake-red, which, I see, is marked at 30s. in the catalogues, in this condition. The orange-vermilion stamps are extremely liable to oxidation, which darkens them, wholly or partially, to brown-red, or even black. As the design differs for each value, I shall have to take them separately.

Twopence. Genuine.

Finely engraved in *taille-douce*, in orange-red, scarlet-vermilion, dull rose-red, or dull lake-red, on thick, or thinnish, rough, grey-white, white, or yellowish-white wove paper. The bouquet of floral emblems in the centre does not touch the outline of the white containing-circle anywhere. Four out of the five rays of the dark star in the centre of the rose are prolonged till they touch the dark outlines of the turned-over petals outside them, but the upper ray only touches the shading of the turned-over petal above it. The six shamrock-leaves are all light, with very little shading on them. The crescent-shaped piece of engine-turning, just above the flowers, contains *very* light, interlaced lines, above which, at the bow of the crescent, are three curved lines. This engine-turning does not show any chain-pattern of dark diamonds. The crescent below the flowers is very like the other, but the bowed part shows only two curved lines below the engine-turning. The engraver's tool has not slipped anywhere, so that there are no flaws or scratches in any part of the design. There is a fat-headed apostrophe in JOHN'S. The scalloped outlines of the engine-turning in the oval ring containing the name do not touch either outer or inner outline of the oval anywhere. The lower half of this engine-turned oval, *i.e.*, between ST JOHN'S NEWFOUNDLAND and POSTAGE, shows seventeen transverse rows of white diamonds, three in each row. They are all, as nearly as possible, of equal shape and size. The pearls which separate the 2 in each of the upper corners from the rest of the design are very regular, and *very* lightly shaded by a faint, semicircular line in each pearl.

First Forgery.

Engraved in *taille-douce*, in scarlet-vermilion, on thick, hard, smooth, very yellowish-white wove paper. The third shamrock from the left *very*

nearly touches a small dark lump, which projects from the outline of the oval near it. One of the points of the thistle-leaf, to the left of the left-hand shamrock, touches the outline of the oval; and another leaf also touches the outline to the left of the last N of NEWFOUNDLAND. The shamrock-leaves are all too darkly shaded; and the one at the bottom, which nearly touches the dark lump of which I have spoken, is shaded nearly all over. The inverted crescent, above the flowers, shows a chain of seven very distinct, dark diamonds. This is the easiest test for this forgery. The crescent below the flowers shows eight dark diamonds, but they are not quite so distinct as those of the upper crescent. The second of the two lines below these diamonds, in the lower crescent, is blotched into the outline of the oval below it, though it is not so in the genuine. The engraver's tool has slipped in many places, making flaws and scratches, which do not exist in the genuine. For instance, there is a scratch across NE of NEWFOUNDLAND; another in the border, to the left of the S of ST; another by the top pearl, below the said ST; another to the left of the left lower 2; another in the central circle, by the right top corner of the rose, etc. The apostrophe in JOHN'S has no tail, so that it appears as a white full-stop, instead of a comma. The scalloped outlines of the ST JOHN'S NEWFOUNDLAND oval touch both inner and outer outlines of the oval in many places; and the rows of white, diamond-shaped spots in the lower half of this oval are not nearly so regular as in the genuine; two of the centre ones running together, above the T and also above the G of POSTAGE, and after the last letter of NEWFOUNDLAND. The shading in the pearls round each upper 2 is *much* too thick, making them look very irregular. There seem to be very many faults in this forgery; but, as a matter of fact, it is an excellent and dangerous counterfeit, every principal line of the original being copied with the utmost accuracy; hence the very laborious description with which I have had to trouble my readers, for safety's sake! The ink stands out from the paper even more than in the genuine. There is a full set by the same hand. I do not know anything of their origin.

Second Forgery.

Lithographed, in scarlet, on thick, rough, very white wove paper, or in a sort of lilac-rose, on thinner, smooth, very yellowish-white wove paper. Only the top ray of the dark star in the centre of the rose touches the petal above it: the others are all drawn too short. Two of the lower shamrock-leaves are darkly shaded all over with oblique lines, and on badly-printed copies they are quite solid. The engine-turning in the crescent, above the bouquet, shows a chain of about seven largish, outlined diamonds. They are only very slightly darker than the rest of the lines, and not prominent like they are in the first forgery. The lower crescent shows a chain of nine smaller and longer diamonds, with four lines below them. The apostrophe in JOHN'S is too slim. The scallops of the ST JOHN'S NEWFOUNDLAND oval touch both outer and inner line of the oval, nearly all the way round. The lower half of this oval has the pattern very poorly done. There are only two diamonds in each transverse row, the central row being absent, and the outer ones ceasing above POSTAGE; whereas, in the genuine, they are carried on above POSTAGE, as well as elsewhere. The whole of this lower half of the oval has a very speckled or mottled appearance. The letters of TWO-PENCE are *very* tall, almost as tall as the 2 each side. In the genuine, they are short, fat letters, not much more than half the height of either 2. The lilac-rose forgeries are usually *very* badly executed; but I have a scarlet one which might deceive many an amateur.

Fourpence. Genuine.

Engraved in *taille-douce*; varieties of colour and paper as in the genuine TWOPENCE value. There is no flaw or scratch in any part of the design. The floral emblems do not touch the outline of the containing-circle anywhere. The body of the thistle (from which the tuft springs) is like a sort of dahlia, with sixteen petals. The five shamrock-leaves are very lightly shaded. The stop under the little T of ST is round; and the apostrophe in JOHN'S is a nice, fat-headed comma. The scalloped outer and inner edges of the oval containing the name do not touch the outlines near them anywhere. Of course, a small portion of the bottom of the oval is hidden by the FOURPENCE label. The solid band on which the name is written is very dark, in comparison with the engine-turned lines, out of which it is cut.

First Forgery.

Engraved in *taille-douce*, in scarlet-vermilion, on paper like that of the first forgery of the TWOPENCE. There are many flaws in the plate. One cuts through the base of the 4 in the left top corner, and the scroll-work near it; another cuts into the O, and through the S and E of POSTAGE; another breaks through the top of JOHN'S; another damages the N of that word; another goes obliquely through the second N of NEWFOUNDLAND; another damages the P, and another the N of PENCE; one runs into the central circle, near the last letter of NEWFOUNDLAND, etc., etc. All these "flaws," as I have called them, are dark lines, which look exactly as though caused by accidental slips of the graver. The top of the rose is so *very* near the outline above it, that it requires a microscope to see that they do not really touch. The body of the thistle, from which the tuft springs, is very like a prickly horse-chestnut pod, and not at all like a flower. All the shamrock-leaves have far too much shading upon them. The stop under the little T of ST is square; and the apostrophe in JOHN'S is destitute of any tail, and looks like a slightly oval, white full-stop. The scalloped outer and inner edges of the ST JOHN'S NEWFOUNDLAND oval touch the outlines near them in many places. The engine-turning of this oval is so very dark, that the solid label on which the name is cut does not look any darker than the rest of it. This, like the twopence, is a very handsome forgery, and likely to be dangerous.

Second Forgery.

Poorly lithographed, in rose or lilac-rose, on medium, yellowish-white, to thick, almost yellow paper. The rose in the bouquet is jammed up against the top of the containing-circle. The body of the thistle is somewhat like a rather ragged bunch of moss. Three of the five shamrock-leaves are perfectly white, though all of them show light shading in the genuine. The stop under the little T of ST is square, and the apostrophe in JOHN'S is wedge-shaped. The scalloped, outer and inner edges of the ST JOHN'S NEWFOUNDLAND oval touch the outlines near them in several places. The solid band containing the above words is very little darker than the engine-turning round it.

Sixpence. Genuine.

Engraved in *taille-douce*; paper and varieties of colour the same as in the genuine TWOPENCE. There are no flaws or scratches anywhere in the

design. The stop under the little T of ST is large and round. The scalloped, inner outline of the name-oval is extremely (and equally) close to the outline of the bouquet-oval all the way round; so that, without the aid of the microscope, all the scallops seem to touch the outline. The two shamrocks are very lightly shaded. The solid label containing the name is very dark, in comparison with the engine-turning surrounding it. The apostrophe in JOHN'S is a fat-headed comma. There is a distinct and broad white ring round each 6. What looked like the body of the thistle in the other values appears here to be the tuft of another thistle, facing the spectator. In the lower half of the name-oval there are seventeen pairs of white dashes, with a white dot each side of each pair, between the S of ST and the last letter of NEWFOUNDLAND.

First Forgery.

Engraved in *taille-douce*, in scarlet-vernillion; paper the same as in the first forgery of the TWOPENCE. The flaws in this counterfeit are not many. There is a scratch across the top of the E of NEW, another, splitting the top of the A of LAND; and a deep one, cutting into the frame of the stamp, to the left of the H of JOHN'S. The white rings round the corner-numerals are not equally wide all the way round, and there is a break in the ring, in the right top corner. The stop under the little T of ST is very faint: as far as I can make out it is round, but heavily shaded. The scallops do not come equally near to the outline of the central oval all round; but show more white under EWF of NEWFOUNDLAND, and also to the left of the bottom of the oval. There is a good deal of dark shading on the two shamrock-leaves. The name is not on any label at all, but is simply cut out of the engine-turning. The pairs of dashes in the lower half of the name-oval are not all equally prominent, and the white dots each side of them are sometimes quite invisible. I think this is as good a forgery as any of the set, and certainly dangerous.

Second Forgery.

Lithographed, on medium to stout, yellowish-white or yellow wove paper. The stamps are found in scarlet-vernillion, dull rose, and lilac-rose. The stop under the T of ST is oblong. The inner edge of the name-oval touches the outline of the bouquet-oval all round, so that the inner scallops are invisible. The outer scallops of the said oval touch the outline outside them in several places. The two shamrock-leaves are shaded in patches, but they have no veins in them, like the genuine have. The name seems to be on the engine-turning, and not on a solid label. The head of the apostrophe in JOHN'S is too small, and not round enough. The white ring round the 6 in the corners is hardly visible in some copies; and in others, the right side of each ring is slightly broader than the left side. What appeared to be the front view of a second thistle in the genuine is here plainly the body of the single thistle. The pairs of dashes in the lower half of the name-oval are generally imperfect; that is to say, most of them lack the accompanying white dots, and one of the dashes is wanting in several of the pairs. Some copies show a dark spot in the middle of the unshaded part of the thistle. The rays of the star in the centre of the rose do not all extend far enough to touch the turned-over petals.

Sixpence-halfpenny. Genuine.

Engraved in *taille-douce*; paper and colour-varieties the same as above. What appeared to be the body of the thistle in the genuine TWOPENCE

looks, in this value, like a front view of a second thistle, with fourteen points round it. The front shamrock has three light veins, one going up each lobe of the leaf. The stem of the thistle and the stem of the rose are quite distinct, side by side, at the bottom of the bouquet. The A of POSTAGE is no taller than the T. The apostrophe in JOHN'S is a fat-headed comma, as before. There are no flaws or scratches anywhere in the design.

Forged.

Engraved in *taille-douce*, in scarlet-vermilion; paper the same as in the first forgery of the TWOPENCE. There is only one thistle, the body of which seems to be composed of ragged moss. The front shamrock has shading in it, but no veins. The stems of the rose and of the thistle are merged into one. The A of POSTAGE is taller than the T. The head of the apostrophe in JOHN'S is oval, instead of round. There is a scratch across the F of NEWFOUNDLAND, and another across the last stroke of the first N of HALFPENNY. The two sides of the dark arabesque in the crescent under the bouquet are exactly alike in the genuine, except that they are right and left-handed. In the forgery, the curls do not correspond. I have seen no other counterfeit of this value.

Eightpence. Genuine.

Engraved in *taille-douce*; paper and colour-varieties as above. The right lower ray of the dark star in the rose is too short, so that it does not touch the turned-over outline of the petal. The front-view thistle shows twenty points. The apostrophe in JOHN'S is a fat-headed comma, as before. The inner scallops of the name-oval, under the letters NEW, are no further off the outline of the bouquet-oval than any of the others are. There are no faults or flaws in the design anywhere.

Forged.

Engraved in *taille-douce*, in scarlet-vermilion; paper the same as in the first forgery of the TWOPENCE. All the rays of the dark star in the rose touch the turned-over outlines of the petals. The body of the thistle looks like a prickly horse-chestnut pod. The head of the apostrophe in JOHN'S is too oval. The inner scallops of the name-oval under NEW are much further off the outline below them than the others are. There are not many flaws in this forgery. They are as follows: a dot in the lower part of the left side of the O of POSTAGE; a scratch across the middle of the E of that word; a small dot in the upper part of each limb of the U; a small flaw in the top edge of the last D of NEWFOUNDLAND; and a small scratch going outside the frame, below and to the left of the S of ST. This is a very dangerous forgery.

One Shilling. Genuine.

Engraved in *taille-douce*; paper and colour-varieties as above. The front-view thistle shows twenty-two points or petals, and its stem is darkly shaded, where it passes behind the stems of the rose and rose-leaf. There is a semicircular row of diamond-shaped white spots, not very prominent, in the engine-turning above the bouquet-circle; and between and above the last two diamonds to the right, under the OU of NEWFOUNDLAND, there is a *tiny*, triangular white spot, caused by the leaving out of one of the little lines of the engine-turning. This spot would not be noticed without the microscope. The apostrophe in JOHN'S is a fat-headed comma, as before. Each side of the 1 in each of the upper

corners there is a two-leaved ornament, with a small, almost invisible *dark* ball at the stem end. The shamrock-leaves have a good deal of shading in them in the orange-vermilion issue ; but in the later ones, especially the lake-red, the shading has almost entirely disappeared. There is a thin, dark line in each of the letters of POSTAGE, following its curves. These lines, by the way, are *very* faint in the lake-red issue, though visible in the microscope. All the rays of the dark star in the centre of the rose touch the turned-over outlines of the petals. There are no flaws anywhere in the design, except the tiny white spot before-mentioned.

First Forgery.

Engraved in *taille-douce*, in scarlet-vermilion ; paper the same as in the first forgery of the TWOPENCE. The points or petals of the front-view thistle are some of them light, and some dark, so that they cannot be counted with any certainty. Its stem is only outlined, not shaded, where it passes behind the stems of the rose and rose-leaf. The white triangle, above and between the two right-hand white diamonds, under the OU of NEWFOUNDLAND, is very prominent, and quite half as large as one of the diamonds. The head of the apostrophe in JOHN'S is small and oval. The ball below the left-hand I, at the apex of the two-leaved ornament, is large, white, and with a sort of comma of shading in it. The similar ball to the left of the right-hand I is also large and white, without shading. The other two balls are smaller and less prominent. The shamrock-leaves have a good deal of shading in them, like the orange-vermilion issue of the genuine ; but there is not the *slightest* trace of any lines in the letters of POSTAGE. The absence of these lines is the easiest test for this counterfeit. There are not many flaws in the design : a *tiny* dark dot in the foot of the little T of ST ; a scratch near the lower bend of the S of JOHN'S ; a distinct dot in the E of POSTAGE ; a dot in the white ground, below the right-hand shamrock-leaf ; a dark blotch in the lower scalloped edge of the engine-turning, under EW of NEWFOUNDLAND ; and a dot outside the frame, touching its outline, near the bottom of the right-hand side.

Second Forgery.

Typographed, in light vermilion, on very white wove, enamelled paper, rather stout. The bouquet is very poorly done, many parts of the outlines of the flowers, stems, and leaves being absent, as though they had failed to print. The stems of the rose and rose-leaf are almost entirely white, instead of darkly shaded. The thin, inner outline of the central circle is broken in many places. The stamp has the word "FALSCH !" printed in block capitals near the top, and the word hides the upper row of diamonds, so that I am unable to say whether the tiny white triangle is exaggerated, but I fancy it is even larger than in the first forgery. There is a large white spot at the apex of each of the two-leaved ornaments by the right-hand I, and a *tiny* white dash at the apex of the upper, two-leaved ornament of the left-hand I. The shamrock-leaves are perfectly white, and half the outline of the central one is missing. There is no trace of any dark line in any of the letters of POSTAGE. Only *one* of the rays of the dark star in the rose touches the turned-over outline of the petal. The top outline of the frame is irregular. The dark parts of the stamp, as is usual in a typograph, are *slightly sunk into* the paper, instead of standing up from it. Though not a bad counterfeit, this will not bear comparison, for a moment, with the first forgery. The surcharge would denote a German origin for this stamp. I have not seen any other value by the same hand.

POSTMARKS.

Genuine.—100.

Forged.—First set. Uncancelled.

Forged.—Second set. 1, 51, 54 (without numerals), 62, 100 (without the two short lines); also a pen-stroke.

The typographed counterfeit of the one shilling has the surcharge "FALSCH!" in block letters, but is otherwise uncancelled.

2 Cents, green.

Issue of 1866. Thin yellowish, or medium white wove paper; perforated 12.

Issue of 1876-9. Rouletted.

Genuine.

Nicely engraved in *taille-douce*; varieties as above. The labels bearing the inscriptions NEWFOUNDLAND and TWO CENTS are solid. All the others have a ground of fine lines. The figures and words in the side-labels are shaded at the edges with dark colour, which makes them stand out from the background, as though they were solid. The "white" of the fish's eye is oval, and the white spot in the pupil is to the left. There is a little ornamental curl, projecting into the central oval, from the outline of the frame round the figure 2 in the left-hand lower corner.

(None of the other frames show this curl.) There are about six very fine horizontal lines of shading in the loop, between the back and the end of the tail.

First Forgery.

Lithographed, on poor, thinnish, very white wove paper; badly perforated 12½. All the labels are solid, and the letters and figures look perfectly flat. The whole stamp is very coarsely executed. The white of the fish's eye is very staring, with the white spot in the pupil to the right. The spines in the fins are very irregular. There is no ornamental curl projecting into the central oval, from the outline of the frame of the lower left-hand 2.

Second Forgery.

Lithographed, on rather thin, hard, white, and yellowish-white wove paper; unperforated; also very badly pin-perforated 11½. There is a straight line running almost all round, outside the stamp, which is not found in the genuine. The right-hand label, containing the word TWO, is often solid (with traces of lines just at one end), and all the others have a background of lines, as in the genuine. The white of the fish's eye is round and staring, and the white spot in the pupil is to the right. There is no ornamental curl projecting into the central oval, from the frame of the lower left-hand 2. There are only three lines of shading in the loop, between the back and the end of the tail of the fish; and the whole of the lines in the central oval are drawn much wider apart than in the genuine and in the first forgery. This is a much better counterfeit than the other. It is printed in pale green, whilst the first forgery seems to be always in dark green.

POSTMARKS.

Genuine.—76, 100.

First Forgery.—62.

Second Forgery.—1, 100 (lines much thicker); also a blotch.

5 Cents, brown, black, blue.

Issue of 1866. 5 Cents, brown. Thin, yellowish paper; perforated 12.

Issue of 1868-73. 5 Cents, black. Thick, white paper; perforated 12.

Issue of 1876-9. 5 Cents, blue. Paper as above; rouletted.

Genuine.

Finely engraved in *taille-douce*; varieties as above. The seal has seventeen hairs in its whiskers; the uppermost one points towards the right top corner of the central picture. They are distinct, and look light, in comparison with the general hue of the body. The head is rather like that of a pug-dog, and the mouth and eye are visible. The tail is forked. There are five claws on the right foot, and three on the left. The icebergs on the horizon are clearly defined, and there are three very sharp peaks or pinnacles of ice, of graduated heights, under the OU and the beginning of the N of NEWFOUNDLAND. The one under the O does not actually touch the black outline above it, but comes very close to it. The last iceberg to the right is under the A, and to the right of this there is open sea, with faint clouds, and two flying sea-birds. There is a thin, coloured line along the bottom of the stamp, which is a continuation of the thin line down the sides of the stamp. This must be remembered, as being the test for the best forgeries. All the lettering is clear, and nicely drawn. The vertical lines of shading in the ovals containing the numerals, in the upper corners of the stamp, are thick, and very clear and distinct. Of the two sea-birds, the upper one is considerably to the left of the other.

First Forgery.

Poorly lithographed, in red-brown, black, or blue, on thin, poor, very white, and also on medium, very yellow wove paper; badly perforated 13½. The seal has about twelve hairs in its whiskers, which are too dark. The head is like that of a water-rat; the mouth is not visible, and the eye barely distinguishable. At a first glance, the icebergs seem to run all across the horizon, but there is really some open sea, under the space from the A to the middle of the D of NEWFOUNDLAND. The outline of this open sea is wavy, though it is an absolutely straight line in the genuine. The outer line of the stamp is thin and broken down the left side, but decidedly thicker than in the genuine, down the right side and along the bottom. The ovals containing the numerals, in the top corners, are solid, or nearly so, instead of being vertically shaded.

Second Forgery.

This counterfeit is no longer in my possession, and I transcribe the description from my second edition. Lithographed, on soft, thin, and also on thick, hard, yellowish-white wove paper; perforated 12½. The seal shows eleven hairs in his whiskers; one or two of them not touching his snout. The head is tolerably like that of the genuine; but there is a broad white ring round the eye, which is not seen in the genuine. The icebergs are very coarsely done. The sharp peak under the first D of NEWFOUNDLAND touches the thin outline above it, though it does not touch in the genuine. One of the sea-birds is directly above the other;

whereas, in the genuine, the higher one is considerably to the left of the lower one. The seal's tail is not forked. He shows four claws on the right foot, and one on the left. The letters and numerals are better done than in the first forgery, but still blotchy and ragged. The vertical lines in the ovals containing the numerals, in the upper corners of the stamp, are blotchy and indistinct.

Third Forgery.

Poorly lithographed, in black, on medium, soft, very yellowish wove paper; perforated 13. The seal has about fifteen hairs in its whiskers; the uppermost three point to the right top corner of the picture. The mouth is difficult to distinguish. The eye is horizontally pear-shaped, with a white ring round it. The profile of the nose is somewhat Roman, instead of puggy. I cannot make out any fork in the tail. The icebergs are better done than in the forgeries hitherto described, but the shading on them is much too dark; it is very faint in the genuine. The peak under the O of NEWFOUNDLAND seems to touch the line above it; it is very slightly bent to the right, and points almost to the centre of the O. In the genuine it is slightly bent to the left, and points far to the left of the centre of the O. The open sea is like the genuine in this forgery. The coloured outline round the sides and bottom of the stamp is rather too thick. The lettering is not very clear. In my specimen, the bottom of the U of NEWFOUNDLAND is damaged, as though the letter were too large, and had been cut off. In the genuine it is perfect. The vertical lines of shading in the ovals containing the numerals, in the upper corners of the stamp, are thin, and more or less blotched together.

Fourth Forgery.

This is a very different affair, being decidedly deceptive. Very nicely lithographed, in brown or black, on medium, hard, white wove paper; nicely perforated 14 (nearly). I can only make out sixteen hairs in the seal's whiskers; they are not quite so well defined as the genuine. The eye looks like a dark hole, instead of a shiny, dark bead; and the light-coloured ring round it is too prominent. There is really only one distinct claw on the left foot, with indications of a second; and the outer claw on the right foot is not clearly defined. The icebergs on the horizon are so faint, that it is almost impossible to make out their shapes; and the separate iceberg under the A of NEWFOUNDLAND is quite invisible. There is no line along the bottom of the stamp. Except for these differences, this is an excellent and dangerous forgery.

Reprint (?).

I have a specimen of the 5 cents, blue, from the genuine die, but perforated 14 (nearly). I do not know anything about it, but conclude that it must be a reprint, as the genuine blue stamps are, of course, all rouletted.

POSTMARKS.

Genuine.—Similar to 93; also 98, with lines closer together; also 100.

First Forgery.—62.

Second Forgery.—1 (but larger); 62; also a blotch.

Third Forgery.—62.

Fourth Forgery.—100; also uncanceled.

Reprint (?).—This is cancelled with a shapeless blotch in my specimen.

10 Cents, black.

Issues of 1866. Thin yellowish, or medium white wove paper; perforated 12.

Genuine.

Engraved in *taille-douce*; varieties as above. There are two rows of jewels or braid, on which the small crown rests, at the bottom of the left side of the Prince's collar. The white lines on the right shoulder are very fine, and are properly curved, so as to make the chest appear in relief.

Forged.

Nicely lithographed, in very pale, instead of dark black, on poor, very yellowish wove paper; perforated 13. On the left side of the collar, at the bottom, there is a single row of very distinct *pearls*. The white lines on the right shoulder are very coarse, and are simply drawn obliquely, without any curve. The rest of the stamp has been copied, almost line for line, from the genuine.

POSTMARKS.

Genuine.—Similar to 45, but with bars horizontal, instead of oblique.

Forged.—62.

12 Cents, orange-brown.

Issues of 1866. Thin yellowish, or medium white wove paper; perforated 12.

Genuine.

Engraved in *taille-douce*; varieties as above. There are five pearls visible on the coronet, the last pearl just peeping out from where the coronet buries itself in the hair, above the ear. The stop after NEWFOUNDLAND touches the back of the final D. The tongue of the buckle is lightly and partially shaded. The hole in the garter, between the buckle and the inverted N of NEWFOUNDLAND, does not touch the foot of the N, and the said foot is straight. There is no cross-shading in the horizontal lines, above the top of the head. The outer line of the stamp is not broken or double anywhere.

**First Forgery.**

Lithographed, on medium, very white or yellow wove paper; badly perforated 13. There are only three pearls visible in the coronet, the two at the front being absent, while the last pearl is not at all hidden by the hair. The stop after NEWFOUNDLAND does not touch the shaded back of the final D. The background, behind the top and back of the head, is cross-shaded. The tongue of the buckle is dark, and shaded all over.

Second Forgery.

Lithographed, on stout, hard, yellow-faced, yellowish-white wove paper; perforated 12½, in rather oval holes. There are five pearls on the coronet, but the front one is small, not very distinct, and bent backwards towards the second one. The last pearl is not at all hidden by the hair. The stop after NEWFOUNDLAND is a long way from the D. The tongue of the buckle has no trace of shading on it. The hole in the garter, between the buckle and the N of NEWFOUNDLAND, touches the foot of the N, which is curled up into a sort of hook, instead of being straight. The

shading is very coarse and blotchy, above the top of the head. The outer line of the stamp, in this forgery, is double, from above the last N of NEWFOUNDLAND to above the end of the W of TWELVE. There is a dark outline to part of the profile of the face, which does not exist in the genuine. This is evidently an old forgery, but I have only come across it lately (1906).

POSTMARKS.

Genuine.—1, 93, 100.

First Forgery.—1, 5, 54, 62.

Second Forgery.—10, 54.

13 Cents, orange-yellow.

Issues of 1866. Thin yellowish, or medium white wove paper; perforated 12.

Genuine.

Engraved in *taille-douce*; varieties as above. The background of the name-label is shaded all over with vertical lines. Nearly all the letters of the name touch each other, and the letters HIR of THIRTEEN are so joined together as to appear like one letter. There are some rocks to be seen in the left-hand corner of the landscape. The clouds are formed by horizontal lines, with oblique cross-shading. The hull of the vessel is very dark, compared with the waves. Over the letters UN of the name there is an egg-shaped dot, lightly shaded, with a dark dot on each side of it.

Forged.

Lithographed, on thinnish, very white wove paper; perforated 13. The background of the name-label is solid. The W and F of the name are the only ones which really touch each other. The letters HIR of THIRTEEN are set at some distance from each other. In the left-hand bottom corner there are some indistinct white blotches, instead of rocks. The clouds are very heavy, and composed of horizontal lines only. The hull of the vessel is no darker than the waves. There are no dots over the letters UN of the name.

POSTMARKS.

Genuine.—93.

Forged.—1, 5, 62.

24 Cents, blue.

Issue of 1866. Thin yellowish paper; perforated 12.

Genuine.

Engraved in *taille-douce*; paper and perforation as above. The groundwork of the frame at the bottom, behind the figures and words of value, is composed of horizontal lines, partially cross-shaded with *vertical* lines. The hair is much darker than any other portion of the stamp. The groundwork of the name-scroll is formed of vertical lines, cross-shaded round the letters with *horizontal* lines. The background, behind the portrait, is cross-shaded from the top, to level with the eyes. At the bottom of the stamp, where the value-label joins the figure-circles on each side, there is a dot, which does not touch either the figure-circle or

value-label. The whole stamp is very finely done.

Forged.

Lithographed, on rather thin, common, very yellowish-white wove paper; unperforated, or badly perforated 12½. The groundwork of the frame, at the bottom, behind the figures and words of value, is cross-shaded with *oblique* lines. The Queen's hair is much lighter than the background. The groundwork of the name-scroll is cross-shaded, behind the letters, with *oblique* lines. The background of the portrait is cross-shaded nearly to the bottom, and there is a space left almost unshaded, just above each shoulder. The dots on each side, at the bottom, touch the figure-circles. The whole stamp is very poor, compared with the fine original.

POSTMARKS.

Genuine.—1, 93.

Forged.—5, 62.

1 Cent, purple, brown-lilac.

Issue of 1868-73; perforated 12.

Issue of 1876-9; rouletted.

Genuine.

Engraved in *taille-douce*; varieties as above. The oval frame which contains the name ends in a point at the top, like a pear with the point uppermost. The letters N and F at the top *almost* touch the outer frame of the oval, and the stops are large and round. The name is in one word, and all the letters of it touch each other, except the O. There are fourteen white lines in the plaid, counting them all, both vertical and oblique. The rays in the oval frame are composed of alternate sets of deep and faint lines, but without any cross-shading. The eyes are clear and intelligent, and apparently light.

**Forged.**

Lithographed, on thinnish, white wove paper; badly perforated 12½. The oval frame is rounded, over the words ONE CENT, instead of coming to a point. The letters N and F are small, and do not come near either the outer or inner lines of the frame. The stops are small, and badly shaped. The name is in two perfectly distinct words, and there is a good space between all the letters. There are only ten white lines in the plaid. The rays in the frame are far too distinct, and the light ones are cross-shaded. The eyes in the portrait are very black and staring.

POSTMARKS.

Genuine.—None of my copies are cancelled.

Forged.—5, 62.

3 Cents, vermillion, blue.

6 Cents, rose.

Issue 1868-73. Perforated 12.

Issue of 1876-9 (3 Cents, blue, only). Rouletted.

Genuine.

These stamps are exactly alike in type, except as regards the value. Engraved in *taille-douce*, on stout, hard, yellowish-white wove paper;

varieties as above. The Queen's eyebrows turn down at the outer ends. The two stars in the bottom corners are on a ground of vertical and horizontal cross-shading. The cap is scarcely shaded at all, on the top of the head. The separation between the cap-strings and the back of the neck is very distinctly marked by a strong line of colour. The background of the upper value-label is shaded with curved lines, which are parallel with the curved lines of the frame.

Forged.

Lithographed, on thinnish, white wove paper; perforated 13. The eyebrows turn up at the ends. The stars in the bottom corners are on a solid ground. There is a strong wavy line of shading on the cap, at the top. The cap-strings are very indistinct at the back of the neck, so that it is not easy to decide which is cap-string, and which is neck. The background of the upper value-label is solid, except behind the figures on each side. These forgeries are flat, and very poorly printed, whereas the originals are beautifully executed, and the ink stands out from the surface of the paper so that it can almost be felt with the finger.

POSTMARKS.

Genuine.—I have no postmarked copies.

Forged.—62.

It will be remembered that, in 1890-7, the colour of the 6 cents was changed to crimson-lake, and that of the 12 cents to brown-lake, but the forgers have not yet imitated these colours.

Issue of 1897. Provisional.

1 Cent, surcharged on 3 c., lilac-brown, slate-brown.

There are three types of surcharge, as here illustrated. The

forgers have imitated the rare surcharge (Type 3), with sans-serif letters. It will be understood that the stamp is genuine, the surcharge forged.

Genuine.

The words ONE CENT are $2\frac{1}{2}$ mm. from the top edge of the lower bar. The surcharge is heavily done, in glossy black ink. This surcharge is only found on the lilac-brown shade of the 3 c.

Forged.

The words ONE CENT are $4\frac{1}{2}$ mm. from the top edge of the lower bar. The ink is a dull grey-black. In all the forgeries that I have seen, the surcharge was applied to the slate-brown 3 c. I received the counterfeits

from Messrs. Whitfield King about September, 1898, when they informed me that the forger had been arrested, and was to be prosecuted by the Government.

POSTMARKS.

Genuine.—As before.

Forged.—My specimen is uncanceled.

NEW SOUTH WALES.

There are not many good counterfeits of the stamps of this colony, but the coarse, lithographed forgeries of the "Sydney Views" are exceedingly common, and invariably to be found in every schoolboy's collection, so that there must be millions of them in existence.

Issues of 1850. One Penny, red.

(25 types.)

The stamps were engraved in five rows, five stamps in a row. There are two "states" of the plate, as in our own early 1d. stamps—plate 1, and plate 1 retouched; and, as the stamps were all separately engraved by hand, the "thorough" collector places before himself the difficult (and expensive) task of getting together the fifty varieties, besides the different papers; and, as the stamps range from £2 to £5 each, a fairly deep purse is needful for the man who goes plating among the Sydney Views!

PLATE 1.

Finely engraved (as compared with the retouch) on soft, yellowish, on bluish, and on closely-ribbed, white or bluish wove paper; unperforated.

There are sometimes portions of the paper-maker's watermark to be seen. The sky is a blank; *i.e.*, there are no horizontal lines to represent clouds. The oblique white lines in the side-frames are fairly thin, and not at all wedge-shaped. Down each side of the stamp, inside the strips with oblique white lines (wrongly shown as zig-zags in the annexed illustration), there is a strip with white lattice-work, interrupted by the central circle. It will be noticed in the illustration that the top of the lattice, in the right

upper corner, is an almost perfect diamond, while the corresponding top of the lattice-work on the left side shows a diamond, with the half of another diamond side by side with it. All the types of the genuine which have a perfect diamond at the top of the right-hand slip show portions of *two* diamonds at the top of the left-hand slip. The spire of the church points either exactly to the centre, or more or less to the left of the centre, of the T of POSTAGE, according to the type, but never to the *right* of the centre of the T. This must be particularly noted as an easy test. There is a star or asterisk at the top of the lettered circle, and this star, in all the types, is exactly under the T of POSTAGE. In the star in the left bottom corner, the long ray pointing to the centre of the stamp is not double in any type.

Forged.

This is a fairly modern production, probably of the same date as the engraved forgeries of the retouched plate, hereafter described. Engraved in *taille-douce*, on thick, very yellowish wove paper; no watermark. The sky is a blank, like the genuine. The upper portion of the left-hand strip of lattice-work is a single perfect diamond, like the one on the right-hand side. The spire of the church points to the right of the centre of the T of POSTAGE. The asterisk in the top of the lettered circle is exactly under the space between the letters T and A of POSTAGE, instead of under the centre of the T. This is an easy test. In the star in the left bottom corner of the stamp, there are two long rays, side by side, pointing to the centre. The point of the v of NOV. is under the end of the A of ETRURIA. In the genuine, this is only the case in Nos. 7, 17, and 23 on the sheet. The stop after NOV. is above the space between the letters NN of PENNY. In the genuine, this is only the case with Nos. 7, 17, and 23. The C of CAMB. is under the S of SIC, but this is the case with a good many of the genuine, viz., Nos. 7, 10, 13, 16, 17, 18, 19, and 23. The stop after CAMB. is level with the horizontal cord, across the bale on which the lady is seated. In the genuine, this is only the case with Nos. 7, 10, and 18.

POSTMARKS.

Genuine.—62; also occasionally one like 54, but a good deal larger, with four lines at the top and bottom.

Forged.—An imitation of the one like 54, just described. My single specimen is numbered 63 in the centre.

PLATE 1, retouched (July, 1850).

This is the issue whose counterfeits are so very numerous. The engraving has become much coarser, by the thickening and deepening of the lines, etc., and the horizontal lines of clouds and the flag on the steeple easily distinguish it from the first issue.

Genuine.

Coarsely engraved in *taille-douce*, on hard white or yellowish, hard bluish, wide-ribbed yellowish, wide-ribbed *bleuté*, and on blue laid paper. No. 15 on the sheet has no clouds, but all the rest have distinct lines of clouds in the sky. There is a small, dark flag sticking out horizontally to the left, near the top of the steeple, which is very plain in all the types, except No. 10. Most of the oblique white lines in the side-frames are wedge-shaped, and broader than in the original state of the plate. The lattice-work lines inside the side-frames are as before, except that they are wider and coarser. The spire points as before, and the star or asterisk has not been altered.

First Forgery.

This is modern, but I take it first, as being the best. I have some recollection of a strip of five types being counterfeited, but I have only the single specimen now to be described, and cannot say whether it is one of the five or not. Engraved in *taille-douce*, on thick, rather soft, yellowish-white wove paper. There are clouds in the sky, like the genuine. Both strips of lattice-work, inside the side-frames, begin with a perfect diamond at the top, and both end with the upper half of a diamond at the bottom, like the forgery of the original plate. The spire of the church is not quite upright, and it points decidedly to the *right* of the foot of the T of POSTAGE. The asterisk, at the top of the lettered circle,

is exactly under the space between the letters TA of POSTAGE. This is, as before, an easy test. The stop after NOV. is exactly above the space between the letters NN of PENNY; and the C of CAMB., and the stop after it, are the same as in the forgery of the original plate, so that, in all these points, the forgeries are very much alike. The spire is very sharp-pointed, and there is no flag on it. The bale is not dated, but this is not much of a test, as many of the types of the retouch show no date. The lower inscription is ONEPENNY, with hardly any division at all between the words, and the V has a strong, white cross-bar, joining the two arms together, which is not the case with any type of the genuine. The G of SIGILLUM looks like an O, with a cross-bar through the middle of its right side. The colour is brownish-lake.

Second Forgery.

This seems to be simply a lithographic transfer of the forgery just described. Lithographed, in rose-red, on thick, hard, white wove paper. The tests are as before, except that the G of SIGILLUM is open. All the details of the impression are more or less blurred; and the words SIC FORTIS ETRURIA are almost obliterated.

Third Forgery.

This is the one which is so common. Lithographed, in scarlet or vermilion, on thin, very white wove paper. The oblique white lines in the side-frames are fairly like the genuine. There is a single diamond at the top of each strip of lattice-work, and the right side of the diamond at the top of the right-hand strip is broken, or incomplete. The bottom end of the left-hand strip is a perfect diamond, and the bottom end of the right-hand strip is badly and irregularly drawn. The spire of the church has no flag, and it points to the centre of the asterisk, which is a shade to the right of the T of POSTAGE. The point of the V of NOV. is under the end of the A of ETRURIA; the stop after NOV. is above the beginning of the second N of PENNY (like Nos. 5, 8, 16, 20 of the genuine); and the stop after CAMB. is level with the horizontal cord of the bale, which has no sign of a date. The standing lady is holding a closed parasol, by its point, obliquely across her dress, the handle resting on the ground. The parasol is quite distinct, and has been drawn, evidently by mistake, instead of the oblique folds of the dress of the genuine. The word SIGILLUM is spelt SICILLUM, and the ET of ETRURIA is decidedly separated from the rest of the word.

Fourth Forgery.

This is a very poor thing, and is quite new to me (1906). Coarsely lithographed, in aniline rose, on very thick, white wove paper. My single specimen is printed on the flap side of an envelope, partly on the flap, and partly on the body of the envelope. There are only twelve oblique white lines in the right-hand frame of the stamp, though no type of the genuine has fewer than fourteen lines here. There is a perfect diamond at the top and at the bottom of each of the two strips of lattice-work. The spire of the church is blunt, and rather like a factory chimney; it has no flag. The stop after NOV. is above the middle of the second N of PENNY, and the stop after CAMB. is level with the horizontal cord of the (undated) bale. The standing lady holds a closed parasol, like the one in the third forgery, and the G of SIGILLUM is a C. The seated lady has been converted into a Chinaman. CREVIT may be read, but SIC FORTIS ETRURIA is blotched and illegible, though the ET is evidently a separate word. The crossed pick and shovel which should show at the feet of the standing lady are absent. I don't think this forgery is at all likely to deceive.

Fifth Forgery.

Lithographed, on very yellowish, medium to thin wove paper. The colour is always either pink or vermillion. I may dismiss this forgery in a few words, as there is a view of a fine city, with a gate, and no figures at all in the foreground. There is only a single strip of border (instead of two different strips) down each side of the stamp, the pattern on each strip being formed by interlacing circles, instead of the coarse rope-pattern of the outside strips of the genuine. The legend round the circle is SIECILLUM. NOV. CAMB. AUSTR., instead of SIGILLUM. NOV. CAMB. AUST. The motto, SIC FORTIS ETRURIA CREVIT, is absent. The value is in dark letters on a white ground, instead of white letters on a dark ground.

Sixth Forgery.

I first met with this stamp in 1891; it is not at all common. Engraved in *taille-douce*, on stout, hard, *bleuté* wove paper. It is not in the least like the genuine. There is a view of a fine city; with a *sea* and ships in the foreground, instead of the figures. SIC FORTIS, etc., is absent, and the legend which ought to go round the central circle is placed in the side-borders; SIGILLUM in the left, and NOV. CAMB. AUST. in the right. The upper corners have badly-shaped white flowers on a dark ground, and the lower corners have small dark asterisks in a white circle, in the centre of a dark square. The colour is chestnut.

POSTMARKS.

Genuine.—As before.

First Forgery.—62.

Second Forgery.—The large cancellation like 54, as in the forgery of the untouched plate, but the lines seem rather thinner.

Third Forgery.—23, 62.

Fourth Forgery.—1, containing CIU. DO VE, whatever that may mean. There are no traces of other letters.

Fifth Forgery.—62.

Sixth Forgery.—85. This is a reminder of one of the old Queensland cancellations.

Same Issues. 2d., blue.

(24 types on each plate.)

As far as my small knowledge extends, there are no *good* forgeries of the 2d., though two of the counterfeits are exceedingly common. The following are the varieties of the genuine:—

Plate I.—Vertically-lined spandrels. January 1, 1850. On soft, yellowish wove paper; sometimes tinged with blue.

Plate I.—Retouched. February, 1850. Paper as before.

Plate II.—Horizontally-lined spandrels. Bale dated. April, 1850. On soft yellowish, hard bluish, hard grey, or dirty white wove paper.

Plate III.—Bale not dated. September, 1850. On hard, grey wove paper.

Plate III.—First retouch. January or February, 1851. On hard, bluish, or hard grey wove, or on paper ribbed or laid vertically.

Plate III.—Second retouch. Fan with pearl. May, 1850. On hard grey wove, or vertically-laid paper.

PLATE I. Genuine.

Engraved in *taille-douce*, paper as above. The colour varies, in shades of pearl-grey, dull blue, indigo-blue, pale blue. The spandrels, or

corners, between the frame and the central circle are, in this plate, formed by straight vertical lines, drawn over wavy vertical lines, so that they have a sort of *moiré* appearance. In the retouch the straight lines are made deeper, so that the wavy lines are hardly visible. The inscription, SIGILLUM NOV CAMB AUST, is in small Roman capitals. The ornaments in the four corners of the frame (commonly called "stars") are crosses *pattée*, just like those in the upper corners of the old English id., red. The bale is dated 1789. The seated figure (Hope) has a whip or fishing-rod in her hand.

PLATE I. Forged.

Lithographed, in pale Prussian-blue, on thinnish, hard, yellowish-white wove paper. The spandrels, with their vertical, straight, and wavy lines are a fair imitation of Plate I., before the retouch. The inscription round the central circle is in block lettering, and the G of SIGILLUM is a C. The easiest test is afforded by the corner-ornaments, which are dark, eight-pointed stars, instead of white crosses *pattée*. The bale is blotched in my solitary specimen, so that I am unable to say whether it is dated or not. The seated figure has no whip or fishing-rod, or whatever it is, in her hand.

POSTMARKS.

Genuine.—54 (large), 62.

Forged.—100.

PLATE II. Genuine.

Engraved in *taille-douce*; paper as described. In this and all later varieties, the spandrels are filled with horizontal, straight and wavy lines, and the corners contain dark stars on a white ground. The bale is dated, and on it, behind the seated figure, there is a beehive. The pick and shovel at the feet of the said figure are distinct enough for one to distinguish what they are intended for. The crossed cords, tying up the bale, are single in most types, though types 1-4, 13-16 show them double. The third letter of SIGILLUM is decidedly a G. The

motto reads, SIC FORTIS ETRURIA CREVIT. In nearly all

the types, the fan-ornament at the base of the inscribed ring has the long lines of shading running up to the *points* of the segments. In front of the base of the fan, where the handle might be supposed to end, is a three-lobed ornament, like a sort of smaller fan of three segments; and there are a number of short, radiating lines of shading above the top of the three-lobed ornament.

PLATE III. Genuine.

Engraved in *taille-douce*; paper as described. The bale is not dated, and the cords are single in almost all the types. The bee-hive, pick and shovel are much as in Plate II. Inscription and motto also as in Plate II. In this plate, the long lines of shading on the fan go to the spaces between the points of the segments. There is no shading above the tops of the three-lobed ornament, at the base of the fan.

PLATE III. ; First Retouch. Genuine.

(24 types.)

Engraving and paper as before. The cords on the bale are double in all the types, and an outlined circle is inserted in the centre of each of the four stars in the corners. The wavy lines in the spandrels seem now to be stronger than the straight ones.

PLATE III. ; Second Retouch. Genuine.

(24 types.)

Engraving and paper as before. In this, the three-lobed ornament disappears from the base of the fan, and its place is supplied by a small outlined circle, or "pearl," as it is usually called.

First Forgery.

(Probably intended for Plate II.)

Lithographed, on thin, hard, white, or greyish-white wove paper, the face of which is often toned by a yellowish wash. The bale has some markings on it, which under a pretty strong microscope resolve them-

selves into

to	IV
71	RI

 The "to" in the left top corner of the bale is

in script characters. There is no beehive. The handle of the shovel ends in a ring, and it (the handle) joins the *corner* (instead of the middle) of the top edge of the broad, iron part of the shovel, making it look rather like a chopper. The pick is represented by an arrow, with an absurdly large point. The cords in the bale are decidedly double, lying a good distance apart. The G of SIGILLUM is *very* like a C. The motto reads, SIC FORTIS ET RURA CREVIT.

The long lines of shading in the fan-ornament run up to the spaces between the points (as in Plate III.), and the small ornament at the base of the fan has, in good copies, *six* segments, though in fainter copies the line dividing the first and second segments to the left is obliterated, making only *five*, but with the left-hand one twice the size of the others. There are short lines of shading above this ornament on the fan, as in Plate II. In the circular inscription, there is generally a line scratched through the letters CAMB.

Second Forgery.

(Probably intended for Plate III.)

Lithographed, in violet-blue and slate-blue, on thin, white wove paper, which is usually coloured almost buff, by some dirty wash, to represent age. The bale has no date, and the cords are single (as in Plate III.). The shovel is replaced by a gun, with a very thin barrel, and the pick is a large-headed arrow, as in the first forgery. In the fan, the line dividing the second and third segments (from the right hand) is *double*. In the word ETRURIA the tops of the U are joined, making it read ETRORIA. The stars in the corners are *very* thin, all the rays being almost exactly equal in thickness, and not joined together at their bases. In the genuine Plate III. the rays are thick, clumsy, and wedge-shaped, and all joined together at their bases. This is a very old forgery, and is to be found in the albums of all young collectors. The colour is peculiar, being exactly like one of the shades (generally called "slate") of the rouletted 6d. South Australia.

Third Forgery.

Lithographed, on very yellowish wove paper, thick, medium, or thin and soft. This is the same as the fifth forgery of the ONE PENNY, having a view of a fine large city, with gate, etc., and no figures in the foreground. The inscription, as in the second forgery of the ONE PENNY, is SIECILLUM. NOV. CAMB. AUSTR., and the motto is absent. The fan-ornament is replaced by a semicircle, curved part downwards, with a star in the centre. The lettering—POSTAGE, TWOPENCE—is in coloured block letters on a white ground, instead of white Roman letters on a coloured ground.

Fourth Forgery.

Engraved in *taille-douce*, in dark, rich green, on medium, greenish-white, hard, wove paper. This is the same as the sixth forgery of the ONE PENNY, with a city in the background, and a sea with ships in the foreground, instead of the figures. The motto, SIC FORTIS, etc., is absent; and the Latin inscription, which ought to go round the central circle, is placed in the side-frames, as in the said forgery of the ONE PENNY.

Fifth Forgery.

This is very like the fourth forgery, and apparently by the same hand. Engraved in *taille-douce*, in Prussian blue, on thin, hard, yellowish-white wove paper. There is a city in the background, and a sea, with ships in the foreground, instead of the figures. There is no fan-ornament; its place being occupied by the NOV of SIGILLUM NOV CAMB AUST; these words filling up only half (instead of the whole) of the circle. The w-shaped division, at the top of the said circle, which is to be found in all the genuine, is absent in this forgery. There is no motto.

POSTMARKS.

Genuine.—As in plate I.

First Forgery.—1, 23, 62.

Second Forgery.—1, 23, 62 (reduced in size), also uncanceled.

Third Forgery.—1, 62, reduced in size.

Fourth Forgery.—85.

Fifth Forgery.—85.

NOTE.—I hope the reader will not cavil at the arrangement of the forgeries of the twopence. As Plate I. has the spandrels of vertical lines, I have placed it, and its solitary counterfeit, apart from the rest. As to the fourth and fifth forgeries, these might almost have been placed apart, as bogus; for they do not in the least resemble the genuine of any plate. The first forgery of the horizontal-lined ones I take to be an imitation of Plate II.; and the second forgery appears to be an imitation of Plate III. I have given the distinguishing marks of the various plates and "states," to enable the reader to identify them.

Same Issue. Threepence, green.

On soft yellowish, or hard bluish wove, and on horizontally-laid paper. January 1, 1850. Only one plate.

Genuine.

(25 types.)

Engraved in *taille-douce*, paper as above. The corner-ornaments are crosses *pattée*, as in Plate I. of the TWOPENCE. The bale is dated, and

the crossed cords double. The beehive, pick and shovel are visible. Some types show a ground of wavy, horizontal lines below the words POSTAGE THREEPENCE; but they are very faint, and most types seem to have a plain white ground. At the bottom of the central circle there is a three-lobed ornament, shaded by tiny, horizontal lines. At the top of the said circle, between AUST and SIGILLUM, there is an eight-pointed star, with the two side-rays enormously prolonged, almost to the width of the letters STA of POSTAGE, above the star.

First Forgery.

Lithographed, on thinnish, very hard, *very* yellowish wove paper, probably steeped in some mixture, to give age. The corner-ornaments are colourable imitations of crosses *paillée*; but each has in its centre a blunt-ended cross, instead of the four-pointed star of the genuine. There are some markings on the bale, and the cords appear to be single; but there is a big blotch where the cords cross, which hides all the centre of the bale. The beehive, pick and shovel, are absent. There are seven very distinct, straight, horizontal lines of shading, behind the words POSTAGE and THREEPENCE. The three-lobed ornament at the bottom of the central circle is of solid colour. At the top of the circle, between AUST and SIGILLUM, there is a dark ball, with two branches proceeding from it to right and left. This looks a very old forgery; but I have never met with any but the one solitary specimen from which I have described.

Second Forgery.

This is a companion to the fifth forgery of the ONE PENNY, and the third forgery of the TWOPENCE. Lithographed, in pale yellow-green, on thin, hard, yellowish-white wove paper. There are only straight, horizontal lines in the spandrels; the wavy ones are not visible. In the centre is a fine city, with gate, etc., but no figures in the foreground. The inscription round the circle is SIECILLUM NOV. CAMB AUSTR., and the motto is absent. The bottom of the central circle has a semicircle, curved part downwards, with a dark star in it.

Third Forgery.

Engraved in *taille-douce*, on rather thin, hard, *bleuté*, wove paper. This is uniform with the sixth forgery of the ONE PENNY, and the fourth forgery of the TWOPENCE, so I need not repeat the tests. The colour is a sort of yellow-brown, instead of green.

Fourth Forgery.

Engraved in *taille-douce*, on thin, hard, bluish-white wove paper. This is uniform with the fifth forgery of the TWOPENCE. The colour of the impression is a moderately dark *bistre*, instead of green.

POSTMARKS.

Genuine.—54, 62.

First Forgery.—88.

Second Forgery.—1.

Third Forgery.—85.

Fourth Forgery.—85.

Issues of 1852-4. One Penny, red.

(50 types.)

The following are the varieties, according to the Philatelic Society's *Oceania*:—

1. 1 January, 1852. Shades of orange-red and lake, etc., on bluish wove paper.
2. 1852. Shades of vermilion and lake-red, on white wove paper.
3. 1853. Vermilion-red, lake-red, brownish-lake, on vertically-laid, bluish paper.
4. Orange-vermilion, on white wove paper, watermarked with numeral, as here illustrated.

Genuine.

There is only one plate of this value (50 types, in 5 rows of 10). Engraved in *taille-douce*; paper, etc., as above. Below the word POSTAGE, a white line runs right across; but the white line above that word only extends over the PO and GE. The engine-turning of the side-frames shows twelve very distinct, very narrow white lozenges or ovals, three in a line above, and three below NEW; and three similar ones above, and three below WALES. These white lozenges run down the very centres of the side-frames. The background, behind the portrait, is formed by straight vertical lines, crossed by oblique wavy ones, running down from left to right. I do not think there are fewer than sixteen rays to the little stars in the crosses *patée* in the corners of any of the types, and some types seem to have twenty and more rays. The neck is shaded all over to the very front with dots, or lines, or both. The stamps vary exceedingly in colour, from brownish-lake to orange-vermilion.

**Forged.**

There are two, if not three, forgeries; but the following description covers them all. Lithographed, generally in carmine-vermilion, on rather thick, hard, white wove paper, with a bluish wash on the face; also on medium, yellowish-white wove; no watermark in either case. There is a white arched line all the way across, above POSTAGE, similar to the one below it. The imitation engine-turning of the side-frames shows many white lozenges (there are six, for instance, below WALES in two lines); but none of these lozenges are placed centrally down the frames, and they are not at all prominent. The background, behind the portrait, is formed by crossed, diagonal, more or less straight lines, instead of the straight, vertical lines, crossed by wavy, diagonal ones of the genuine. The dark rays to the stars, in the centres of the crosses *patée* in the corners, never exceed twelve in number, and one forgery has only eight rays to each star. This latter forgery has the front half of the neck entirely white. The others have the lines and dots of shading extending nearly to the front edge or profile of the neck. I do not think these forgeries are likely to be dangerous. They are all very much the same shade, which I have called "carmine-vermilion."

POSTMARKS.

Genuine.—54, 62.

Forged.—54, 62, 100.

Same Issues. Twopence, blue.

(Three plates.)

The following are the varieties:—

1. Plate I. July 24, 1851. Greyish-blue, dark blue, greenish-blue, ultramarine, on bluish or greyish paper.

2. The same, rouletted 11½.

3. 1852. Greyish-blue, on white or toned paper.

4. Plate II. December 23, 1851. Pale to deep blue, on blue wove paper.

5. February 1, 1854. Pale to deep blue, on white wove paper, watermarked with numeral, as in the illustration.

6. Plate III. August or September, 1853. Dull blue, greenish-blue, ultramarine, on blue wove paper, no watermark.

**Genuine. PLATE I.**

(50 types.)

Engraved in *taille-douce*, paper as above. The background, behind the bust, is composed of thin, straight vertical lines, crossed by wavy, oblique lines, running down from left to right, as in the genuine ONE PENNY. There is no complete white line along the top of the POSTAGE label. The engine-turning of the side-frames shows the four sets of three white lozenges, as in the ONE PENNY; but they are wider, yet hardly so prominent in this first plate of the TWOPENCE. In the white side-labels, containing NEW and WALES, the inner outline of each (*i.e.*, perpendicularly to the right of NEW, and to the left of WALES) has a set of six, and sometimes seven, small semicircles, besides the inner boundary-line. These are easily seen. The corner-ornaments are crosses *pattée*, each containing an asterisk with a large number of points or rays.

Genuine. PLATE II.

(50 types.)

Engraved in *taille-douce*; paper as above. The background, behind the bust, frequently appears to be solid; but good specimens show straight, crossed, vertical and horizontal lines. The other tests are the same as for Plate I.

Genuine. PLATE III.

(50 types.)

Engraved in *taille-douce*; paper as above. The background, behind the bust, has lines, the same as in Plate I, but much coarser. The asterisks in the crosses *pattée* in the corners are replaced by six-pointed stars. The white circle in the centre of each star is much larger than in the other two plates, and has no coloured dot in it. Other tests the same as before.

Forged.

Lithographed, on thin, blue wove paper; no watermark. This is merely the ONE PENNY forgery, before described, with value altered to TWOPENCE. The labels containing NEW and WALES have no semicircles along their inner outlines. This is an easy test. I do not know which plate of the genuine this is supposed to represent.

POSTMARKS.

Genuine.—54, 62.

Forged.—100; also a blotch.

Same Issue. Threepence, green.

(One plate.)

The following are the varieties :

1. August or September, 1853. Emerald-green, dark yellow-green, etc., on blue wove paper.
2. February 1, 1854. Shades of yellow-green, on white wove paper, watermarked with numeral, as in the illustration.

Genuine.

(50 types.)

Engraved in *taille-douce*; paper as above. In this value there is a white line, bounded by a coloured one, all the way along the top rim of the POSTAGE label; so the forgeries of the other values have probably been imitated from it. The white lozenges are very irregular and variable on this sheet, so as to be useless for detection of counterfeits. There are from fourteen to sixteen laurel-leaves on the wreath, usually sixteen. The midrib is white, and very plainly marked in almost all the types. There are sixteen to twenty rays to the asterisks, in each of the crosses *pattée*, in the corners of the stamp; but they are often blotched, and difficult to count. The easiest test is the Queen's chignon, the profile of which is white, and folded so as to form a large clumsy white letter S, with the top larger than the bottom. This will strike the eye at once.

Forged.

Lithographed, on stout, rather hard, *very* yellowish-white wove paper, almost buff. There are twelve laurel-leaves in the wreath, and the midrib is rather faint. There are only twelve rays to the asterisks in the crosses *pattée* in the corners. They are tolerably distinct. The edge of the Queen's chignon is white, but it is in the shape of a very rough, crooked 3, instead of an S.

POSTMARKS.**Genuine.**—54, 62.**Forged.**—54.**Same Issue. Sixpence, brown.**

(Two plates.)

The following are the varieties :—

1. Plate I. April 30, 1852. Brown, dark brown, yellowish-brown, on blue wove paper.
2. Plate II. January, 1853. The same shades, on blue wove paper.
3. Brown, on white wove paper.

PLATE I. Genuine.

(25 types.)

Engraved in *taille-douce*; paper as above. The background, behind the portrait, is formed by fine straight, vertical lines, crossed by equally fine wavy, oblique lines, running down from left to right. The Queen has the same S-chignon as in the genuine THREEPENCE. The forgers have not imitated this type; so I only give the above details to enable the collector to know one plate from the other.

PLATE II. Genuine.

(25 types.)

Engraved in *taille-douce*; paper as above. The background, behind the portrait, is formed by much coarser lines, and the wavy lines run down vertically, instead of obliquely. A few of the types have the S-chignon; but most of them show a sort of 8, instead of the S. There is a very strong and decided white stem, bounded by coloured lines, running the whole length of the laurel-wreath, from end to end. The vertical lines in the background, behind the portrait, are not more prominent than the oblique wavy ones. The top limb of the E and the left top corner of the W of NEW do not anything like touch each other, though they are rather close together in some of the types. The top of the O of SOUTH is rounded. The little oblong labels, containing NEW and WALES, are bounded, to right and left, by a thick, vertical scalloped line. These scallops are rounded, not hollow, *i.e.*, what the heralds would call "invected," not "engrailed" (The line to right of WALES is missing on five of the genuine types.) The dark dots in the centres of the corner-stars are all of good size. The second lock of hair behind the ear is more or less normally shaped. The bottom boundary of the central medallion, parallel with the upper outline of the SIXPENCE label, is a fine horizontal line, in all the types but two, these two having a somewhat thick line. There is no second, external boundary-line, on the left side of the stamp.

First Forgery.

Engraved in *taille-douce*, on blue wove paper. The top edge of the stamp, in my specimen, is bluer than the rest. The colour is reddish-brown. The stem of the laurel-wreath is almost invisible. The vertical lines in the background are decidedly stronger than the wavy ones. The tops of the E and W of NEW are so exceedingly close together, that there is hardly room to put a hair between them; indeed, I should imagine that they would certainly run together in a heavily-printed copy. The top of the O of SOUTH is very flat, almost cut off square. The boundary-lines to right and left of NEW and WALES afford the easiest test. They are hollow scallops, with sharp points, just like the edge of a perforated stamp. The dark dots in the centres of the corner-stars are exceedingly small, mere points, in fact. (I have called these ornaments "stars," as they are so named in the Catalogue of the London Philatelic Society; but, as a matter of fact, both in genuine and forged, they are more like crosses *pattée*.) The second lock of hair behind the ear is exactly like a second ear, only with a sharply-pointed lobe. The bottom boundary of the central medallion, parallel with the upper boundary-line of the SIXPENCE label, is particularly strong and thick, much thicker than the line above SIXPENCE, and thickest of all just above the final E of that word. Outside the stamp, on the left side, from the top of the NEW label down to the very bottom of the stamp, there is a thin but distinct, second boundary-line. The forgery is very nicely got up in all points, stuck on an old piece of letter, the postmark showing both on the stamp and on the letter. I believe that nine out of ten collectors, on seeing this forgery, would accept it as genuine without a moment's doubt.

Second Forgery.

Lithographed, in yellowish chestnut-brown, on thin, buff-faced, white wove paper. This is a poor production, the same as the forged THREE-PENCE, with value altered. The line to right of NEW and that to left of WALES are both straight, instead of being scalloped. The background,

behind the portrait, is composed of crossed diagonal lines. The chignon, as in the forgeries of the other three values, represents a crooked 3.

This second forgery is not at all likely to deceive; but the first forgery of this value is one of the best imitations that I have ever had through my hands.

POSTMARKS.

Genuine.—54. The oval is about 27 mm. wide, by 22 mm. high. The lines forming this postmark are often as much as 2 mm. thick.

First Forgery.—54, but smaller, being only 23 mm. wide, by about 20 mm. high. The lines are very thin, less than half a millimetre in breadth. My specimen has the number 32 in the centre.

Second Forgery.—A small single circle, the size of the inner circle of 101, with a square blotch in the centre.

Issues of 1854-78. Fivepence, green.

The varieties are:—

1. 1854-6. Bluish-green, dark yellow-green, on white wove paper, watermarked with a numeral, as in the illustration, unperforated.

2. February 1, 1860. The same paper and watermark, perforated 12.

3. The same, perforated 12½, 13.

4. 1878. Dark yellow-green, myrtle-green, on white wove paper, watermarked Crown and N.S.W. Perforated 11½, 12.

5. The same, perforated 11.

6. The same, perforated 10.

7. The same, perforated 11½ × 12, and 11½ × 10.

8. The same, perforated 11 × 10.

9. The same, perforated 11½ × 11, and 12 × 11.

Genuine.

Engraved in *taille-douce*; paper, etc., as above. The background in the central circle is composed of engine-turned lines, set very close together. The thick lines of shading on the back of the neck are continued to the front of the neck by dots; i.e., each line begins plain, and ends as a row of dots. The T of SOUTH is not exactly under the T of POSTAGE, but is slightly to the left. Just above the T of POSTAGE there is a white ornament, something like the upper half of a laurel-leaf, with a dark line down its centre; and the point of this ornament only reaches just half-way between the T and the angle of the hexagonal frame above it. The garter has a diagonal line in it, just above PENCE; and this diagonal line runs out, or ends, above the beginning of the last E of PENCE.

There are two isolated groups of three lines of shading drawn across the garter, below **NEW**, between that word and the buckle, and two similar groups of three lines on the corresponding, opposite side. I think these tests will be found sufficient.

Forged.

Lithographed, on medium to stout, soft, yellowish-white wove paper, with a smooth, shiny face; no watermark; unperforated. The background in the central circle is perfectly solid. There are no dots continuing the thick lines of shading on the neck. The **T** of **SOUTH** is exactly under the **T** of **POSTAGE**. The ornament above the **T** of **POSTAGE** goes almost close to the angle of the hexagon above it. The diagonal line in the garter above **PENCE** ends, or runs out, just above the **N** of that word. The two isolated groups of lines of shading across the garter, below **NEW**, have four lines in each, instead of three; and the upper one of the two groups on the opposite side of the garter has four lines also. The engine-turning is poorly imitated.

POSTMARKS.

Genuine.—54, 82 (with **N S W** in the centre).

Forged.—82, ditto.

Same Issues. Sixpence, green, brown, violet, etc.

The Society's book already mentioned remarks that there are probably imore shades of this value than of any other stamp ever issued; and certainly the tints of the earlier ones are exceedingly varied.

The following are the varieties:—

1. 1854-6. Sage-green, pale brown, umber, grey-lilac, etc., on white wove paper, watermarked with a numeral, as illustrated, unperforated.

2. 1 February, 1860. Olive-brown, brown, violet, purple, etc., same watermark, perforated 12.

3. The same, perforated 12½, 13.

Genuine.

Engraved in *taille-douce*; paper, etc., as above. There is no dark line running along the centre of the white line forming the hexagon. The position of the **T** of **SOUTH**, the length of the ornament above the **T** of **POSTAGE**, and the engine-turned lines of the background, behind the bust, are exactly the same as in the genuine **FIVEPENCE**. There are four and a half very distinct trilobed ornaments, like the top halves of *fleurs-de-lys*, respectively to right and left of the central circle, and apparently issuing from the outer edge of it. The oblique line at the bottom of the garter ends, as in the **FIVEPENCE**, above the last **E** of **PENCE**. The colours of this stamp are legion. Besides those mentioned above, there are cinnamon, neutral-tint, and others without a name.

Forged.

Coarsely lithographed, on stout, hard yellowish-faced white and greyish-white wove paper; no watermark; unperforated, and pin-perforated 13, or 13½. The white line forming the central hexagon has a dark line running all along its centre, as in the genuine and forged **FIVEPENCE**. The **T** of **SOUTH** is exactly below the **T** of **POSTAGE**, and the white ornament above the **T** of **POSTAGE** reaches very nearly to the angle of

the hexagon above it. The ground of the central circle is perfectly solid. The trilobed ornaments on the left of the central circle are pretty correct. as to number, though poorly done; but those on the right are all broken and imperfect. The oblique line across the lower part of the garter ends above the N of PENCE. I have this forgery in a very dull, cold violet, and also in a bright burnt sienna, and in chestnut.

POSTMARKS.

Genuine.—Same as on the genuine FIVEPENCE.

Forged.—82, with N.S.W. in the centre; also a set of undecipherable blotches.

Same Issues. Eightpence, orange, yellow.

The varieties are:—

1. January 8, 1855. Orange-yellow, on a white wove paper, watermarked with numeral, as in the illustration, unperforated.

2. February 1, 1860. Orange, and yellow, same paper and watermark, perforated 12.

3. The same, perforated 12½, 13.

4. 1879. Yellow, on paper watermarked Crown and N.S.W., perforated 11½, 12.

5. Yellow. The same, perforated 12½, 13.

6. Yellow. The same, perforated 11.

7. Yellow. The same, perforated 10.

8. Yellow. The same, perforated 11½ × 10 and 12 × 10.

The early shades of this value are usually very deep.

Genuine.

Engraved in *taille-douce*; paper and watermark, etc., as above. The letters of POSTAGE are quite solid, but those of NEW SOUTH WALES are shaded. The T of POSTAGE and the T of SOUTH are very nearly upright, and both set at almost exactly the same slope. Above the top edge of the EIGHTPENCE scroll there are five coloured, bent lines (—), one above E, G, and T of EIGHT, and one above PE and NC of PENCE, respectively. The groundwork of the central circle is composed of finely reticulated engine-turning. The oblique line at the bottom of the garter can be traced to above the very end of the E of PENCE. The holes in the garter, to the right of the buckle, are indistinct, and I am not sure how many there are, but there are two distinct holes to the left of the buckle, which do not appear in the forgery. The ends of the buckle are slightly concave, or hollowed. The long, dark crescent, immediately below the GHTPEN of EIGHTPENCE, is not solid, but formed by three lines. The pattern formed by the horizontal strips of engine-turning, at the very top and very bottom of the stamp, is light; and the similar vertical strips down the right and left edges of the stamp are also not at all prominent.

Forged.

I have only seen this lately (1905). Coarsely lithographed, in dull, rather dark orange, on fairly stout, yellowish-white wove paper, no watermark, unperforated. The letters of NEW SOUTH WALES are solid, just like those of POSTAGE. The T of SOUTH slopes to the right more than the T of POSTAGE. Between the top edge of the EIGHTPENCE scroll and the outline of the circle above it there is one single, long

line, which can be traced above 1GHTPEN, with no sign of the short (—)-shaped lines. The ground of the central circle, behind the portrait, is perfectly solid. The oblique line at the bottom of the garter begins above the H instead of the I of EIGHT, and only reaches as far as above the end of the N of PENCE. There are seven very distinct holes in the garter, to the right of the buckle, and no holes at all to the left of the buckle. The ends of the buckle are cut off quite square. There is a perfectly solid dark crescent, below GHTPENCE of EIGHTPENCE. At the top and also at the bottom of the stamp, there is a narrow, wavy, horizontal, light-coloured ribbon, on a solid ground; the ribbons have small, dark dots on them. Down the right and left sides of the stamp, there are also somewhat similar, light ribbons, but they are arrayed in a sort of chain-pattern. These ribbons are all very prominent.

POSTMARKS.

Genuine.—Usually 24; also the same, larger, with four lines to the oval.

Forged.—24, smaller.

Same Issue. One Shilling, red.

The following are the varieties :—

1. 1854–6. Red, vermilion, brick, on white wove paper, water-marked with numerals, unperforated.

2. 1 February, 1860. Pale red, rose, carmine, same paper and watermark, perforated 12.

3. The same, perforated 12½, 13.

Genuine.

Engraved in *taille-douce*; paper, etc., as above. The background, behind the portrait, is composed of crossed, engine-turned lines, as in the other values. In this value, the T of SOUTH is almost exactly under the T of POSTAGE. The front point of the coronet comes midway between the S and O of SOUTH. There is, as before, a small white ornament above the T of POSTAGE; but it is much smaller than in the other values, though quite distinct. The ornaments on the coronet are two crosses *paltée*, and two *fleurs-de-lys*, placed alternately, beginning with a cross in front, and ending with a *fleur-de-lys* behind, or rather at the side, as the back of the coronet is buried in the hair. The upper lip is very long and very ugly; the profile of it being bowed outwards in the centre, like the caricatures of Irish lips in the comic papers. The oblique line near the bottom of the garter ends, or runs out, above the very end of the G of SHILLING; and the buckle with its tongue is quite distinct. The colour varies from reddish-buff to deep carmine. The letters of POSTAGE and ONE SHILLING are of equal size.

Forged.

Lithographed, on rather stout, yellowish-white wove paper; no watermark; unperforated, or pin-perforated 13. The background, behind the portrait, is perfectly solid. The T of SOUTH is placed very decidedly to the left of the T of POSTAGE. The front point of the coronet is almost under the centre of the O of SOUTH. There is no white ornament above the T of POSTAGE. There are *five* ornaments on the coronet. The front one is mutilated; then comes a badly-shaped trefoil; then two things which are something like crosses, and something like trefoils; then the back of the coronet ends with a half-trefoil, instead of being buried in

the hair. The upper lip is of a much nicer shape than that of the genuine, the profile of it being hollowed in the middle. The oblique line across the lower part of the garter ends above the beginning of the N of SHILLING. The buckle and tongue are not decipherable, being covered over with heavy lines of shading. The forgeries are printed in dull carmine, also in vermilion, scarlet, and a sort of lilac-rose.

POSTMARKS.

Genuine.—1, 2, 24, 29.

Forged.—24, small ; 54, very large.

Issues of 1860. Five Shillings, lilac, mauve.

The following are the varieties :—

1. 1860. Greyish-lilac, on white wove paper, watermarked with value, as in the illustration, unperforated. (I have never seen this

stamp, but give it on the authority of the Philatelic Society's book.)

2. 1 February, 1860. Violet, same paper and watermark, perforated 12.

3. Violet, purple. The same, perforated $12\frac{1}{2}$, 13.

4. Purple. The same, perforated $11\frac{1}{2}$, 12.

5. Violet, purple. The same, perforated 11.

6. Violet, purple. The same, perforated 10.

7. Purple. The same, perforated $11\frac{1}{2} \times 10$, and 12×10 .

8. Purple. The same, perforated $11\frac{1}{2} \times 11$, and 12×11 .

Genuine.

Engraved in *taille-douce*; paper, etc., as above. Looking on the stamp as a coin, there is a portion of the left rim, opposite the face, and near the beginning of the N of NEW, which has no shading on it. In front of the chin there is a bunch of three flowers. The middle one is a rose ; so it is possible that the left-hand one is intended for a thistle, and the right-hand one for a shamrock ; but they only distantly resemble these national emblems. There are two rows of pearls on the neck, the rows being far apart. The profile of the face is not outlined, as it is formed simply by the stopping short of the horizontal lines of the background. The whole of the face is shaded all over. The lower two points of the star under UT of SOUTH are jammed against the crown. The band of the crown bears two *fleurs-de-lys*, between three crosses *pattée*. On the very top of the crown there is a tolerably distinct cross *pattée*, jammed against the W of WALES. The ear is shaded all over.

Forged.

Poorly lithographed, on stout, yellowish-white, or greyish-white, wove paper ; unwatermarked ; unperforated. The left side of the rim or edge

of the stamp, opposite the middle of the face, is shaded ; and another part, by the F of FIVE, is not shaded, though it is in the genuine. In front of the chin there are two roses. This is a very easy test. There is only one row of pearls for the necklace. The profile of the face is outlined, and the whole of the front of the face is perfectly white and free from shading. Only one point of the star under UT of SOUTH touches the crown. The band of the crown bears three whole *fleurs-de-lys*, and halves of two others. The thing on the very top of the crown looks more like a heraldic rose than a cross *pattée*, and it does not touch the W of WALES. The ear is white, except the central portion. This is a very poor counterfeit, and not likely to deceive. I have not seen it perforated.

POSTMARKS.

Genuine.—24, 54.

Forged.—1, 24, 54.

Issue of 1891. Provisional.

One Penny, grey, surcharged ~~Halfpenny~~ in black.

Genuine.

The black surcharge is placed upon the ONE PENNY, which is printed in grey.

Forged.

I have not seen this, but the *Briefmarken-Journal* says that the surcharge differs slightly from the genuine. It may, however, be immediately detected, as the forger has placed the surcharge, not upon the 1d., grey, but upon the permanent issue which succeeded it ; *i.e.*, upon the $\frac{1}{2}$ d., grey, itself. I am sorry that no other details are given.

REGISTRATION STAMPS.

Issues of 1853-62 (6d.), red and blue.

The varieties are :—

1. 1853. Red and blue, orange and blue, on white wove paper, no watermark ; unperforated.
2. 1860. The same, perforated 12.
3. The same, perforated $12\frac{1}{2}$.
4. 1862. Rose-red and sky-blue ; rose-red and indigo. The same, watermarked double-lined 6, perforated $12\frac{1}{2}$.

Genuine.

(50 types.)

Engraved in *taille-douce* ; paper, etc., as above. The central ground, behind the portrait, is composed of thin, straight, vertical lines, crossed by somewhat oblique, wavy lines, running down from left to right. The lines, however, often run together, so that they are not at all easy to see. On each side of the stamp there is a sort of chain-pattern, formed by the engine-turning—five complete links, with a half-link at the top and bottom. Running along the centre of this chain-pattern there are six long white lozenges each side. The top and bottom ends of each strip of engine-turning are cut off from the top and bottom lettered labels by convex lines, going right across. In 49 out of the 50 types, the Queen's chignon forms a very distinct S, with the top

larger than the bottom. The outline of the oval is perfectly regular. The T of SOUTH is perpendicular; and the letters of REGISTERED are all equidistant from the upper and lower outlines of the containing-label. The red varies from almost carmine to reddish-orange. The blue is mostly in shades of Prussian-blue.

First Forgery.

Lithographed, on rather thin, bluish-faced, greyish-white wove paper; no watermark; unperforated, and pin-perforated very nicely 13½. The background, behind the bust, is composed of distinct, crossed, straight, oblique lines, running down from left to right, and from right to left. The chain-pattern at the sides is a very easy test; it is very clumsy, and has no boundary-lines to divide it from the top and bottom labels; the left side is composed of seven complete links, and the right side of five and a half links; while only three white lozenges can be made out each side. The Queen's chignon is something like a right ear, not like an S. The T of SOUTH leans over decidedly to the right, and the last three letters of REGISTERED very nearly touch the bottom of the containing-label. The colours are sky-blue and dull vermilion or brick-red; also a sort of ultramarine and greenish-yellow. (This latter is never found in the genuine.) I do not fancy that this counterfeit is likely to be dangerous.

Second Forgery.

This is new to me (1905) and is, in some respects, much better than the one just described. Lithographed, in bright blue and carmine-vermilion, on rather thick, hard, very white wove paper, no watermark, unperforated, but with a wavy, rectangular outline, to represent perforations. The groundwork, below the portrait, is absolutely solid. The chain-pattern on the left side has only three complete links, with a half-link at the top and bottom. The chain-pattern on the right side has four complete links, with a half-link at the top and bottom. There are two prominent, dark lines drawn right along the whole length of each chain, which are not to be seen either in the genuine, or in the first forgery. The white lozenges down the centre of each chain-pattern are of various shapes and sizes; there are seven along the right-hand chain, and about six in the left-hand one. The Queen's chignon is rather like a 3. The T of SOUTH slopes over to the right. The words NEW SOUTH WALES are decidedly nearer to the outer than to the inner, blue outline of the containing-label. The face, in the genuine, is shaded almost entirely by lines of dots, but this forgery has only lines, and no dots at all. The portrait is not outlined, though it is outlined all round in the genuine, and the nose is very large, straight, long, and masculine, instead of being small and rather hooked.

POSTMARKS.

Genuine.—54, 62, 65.

First Forgery.—1, 24, 29.

Second Forgery.—Uncancelled.

SERVICE STAMPS.

I do not know whether many of the surcharges have been counterfeited. The only ones which I possess and which came to me quite lately (1905), are the 9d. on 10d., with red surcharge, and the 2d., centennial, with black surcharge. It will be understood that the stamps themselves are genuine.

Genuine Surcharge.

There are two varieties of the surcharge, which may be found side by side on the sheet. The narrow surcharge measures 7 mm. from the right-hand outer edge of the broadest part of the O, to the edge of the tail of the S. The wide surcharge has a distance of $8\frac{1}{2}$ mm. between these two points. (My publisher's catalogue gives $8\frac{1}{2}$ mm. and $9\frac{1}{2}$ mm. as the measurements of the two surcharges, but this is a mistake.) The height of the surcharge is 4 mm. in each case. The inside width of the O, at its broadest part, is $2\frac{3}{4}$ mm., and the black line, forming the letter, is $\frac{1}{2}$ mm. wide.

First Forgery.

I have this in red, on the ninepence on 10d., red-brown, of 1871-3. There is a distance of very nearly 8 mm. between the O and the S, measured as before, and the height of the surcharge is only $3\frac{3}{4}$ mm. The inside width of the O is $2\frac{1}{2}$ mm., and the red line, forming the letter, is about $\frac{3}{4}$ mm. wide.

Second Forgery.

I have this in black, on the blue 2d., centennial. It is not so good as the red forgery. The measurements, taken as before, are :—

O to S, $6\frac{1}{2}$ mm.; height of letters, $4\frac{1}{2}$ mm.; inside width of O, very nearly 3 mm.; width of black line, forming the letter, $\frac{3}{4}$ mm. Thus the overprint is taller than the genuine, and the letters are thicker, and closer together.

POSTMARKS.

Genuine.—As before.

Forged.—These have genuine cancellations.

NEW ZEALAND.

The old forgeries, usually to be met with, are very poor; but I have lately (1905) come across some rather good *taille-douce* counterfeits, which are certainly dangerous to the average amateur; and there are also some forged perforations which are worthy of notice.

One Penny, red.

The varieties are very numerous; the following list includes most of them :—

1. 1855. London print; white wove paper, imperforate, star watermark.
2. 1856. Colonial print; blue wove paper, imperforate, no watermark.
3. 1856. Hard or soft white wove paper, imperforate, no watermark.
4. Ditto, pin-perforated 10.
5. Ditto, serrated perforation, 16.
6. Ditto, rouletted 7.
7. 1860-2. Pelure paper, imperforate, no watermark.

8. 1860-2. Ditto, rouletted.
9. „ Ditto, perforated 13.
10. 1862. White wove paper, imperforate, watermark star.
11. Ditto, rouletted.
12. Ditto, serrated perforation.
13. 1864. White wove paper, imperforate, watermark N Z.
14. „ Ditto, perforated $12\frac{1}{2}$, watermark N Z.
15. „ Ditto, rouletted, watermark N Z.
16. 1863-6. White wove paper, perforated $12\frac{1}{2}$, 13, watermark star.

One Penny, brown.

17. 1871. White wove paper, perforated 10, watermark star.
18. „ Ditto, compound perforation, $12\frac{1}{2} \times 10$, watermark star.
19. 1871. Ditto, perforated $12\frac{1}{2}$ to 13, watermark star.
20. 1872. White wove paper, perforated $12\frac{1}{2}$ to 13, no watermark.
21. „ Ditto, perforated $12\frac{1}{2}$ to 13, watermark N Z.

Genuine.

Engraved in *taille-douce*; varieties as above. There is a curved white line, with its outer edge scalloped, extending from each ear to the upper part of each shoulder. This is evidently part of a central circle in the background. In each scallop of this line there is a white dot, more or less oblong or diamond-shaped. The sixteen jewels of the necklace are all fairly distinct. The head is thrown rather back, and the face is inclined very decidedly towards the left side of the stamp. There is a good deal of shading, in regular rows of dotted lines, from the beginning of the right shoulder (left side of the stamp) to the top of the forehead. The dotted lines on the left shoulder are also regular, but not so dark. The eyes are clearly drawn, so that even the rims of the eyelids are visible. The ornament in the centre of the top of the coronet is a distinct cross *pattée*. There are seven dark dots in the ermine on the left shoulder, above the NY of PENNY, and ten similar dots on the other shoulder, above the word ONE. The broad ribbon of the Garter, running down from the left shoulder to the TAGE of POSTAGE, is shaded by rather wavy lines, all of them running down obliquely from left to right, and not crossed by any other lines. The edges of this ribbon are not at all wavy. In the word POSTAGE, the tops of the letters do not touch the upper outline of the containing-label, but the head- and foot-strokes of the P both touch the left-hand vertical outline of the label. The P of PENNY is close to the E, and the arms of the Y are wide apart, so that there is a good dark space between them, shaped almost like a diamond. There is no sign of any scratch or flaw, connecting the end of the POSTAGE-label with the top of the Y of PENNY. The ornaments in the bottom corners are four white diamonds, joined to a central white dot; and each diamond has a fine, dark line drawn obliquely through it, towards the central dot. The chief part of the groundwork, outside the central circle, is composed of white ovals, each containing a long, dark line, with two faint lines each side of it, making it look almost like a cross, with faint arms. The whole stamp is a very good example of well-executed *taille-douce* engraving.

First Forgery.

Poorly lithographed, on stout, rather soft, white wove paper, the face of which is coloured with a yellowish wash; no watermark, unperforated, (representing variety 3 of the genuine), or badly perforated $12\frac{1}{2}$. The

curved, white lines, forming parts of a circle, which ought to extend from each ear to the upper part of each shoulder, are not visible ; but there is a *very* slight trace of part of one of them on the right-hand side of the stamp. I cannot make out more than fourteen jewels in the necklace. The head is perfectly upright, the face almost fronts the spectator, though the eyes are looking towards the left side of the stamp. The face, neck, and bust show hardly any shading, except at the edges. The eyes are dark blotches, and the rims of the eyelids cannot be seen. The cross *pallée* at the top of the coronet might almost stand for any thing, it is so indistinctly drawn. It is, in fact, simply a shapeless white blotch, with a dark dot in the centre of it. There are only four dark dots in the ermine on the left shoulder, above the Y of PENNY, and nine similar dots on the right shoulder, above ONE. The dark sash or ribbon is shaded with *crossed*, oblique lines, running down from left to right, and from right to left. The P and T of POSTAGE are blotched into the dark outline of the label above them ; but the head and foot-strokes of the P do not touch the vertical, left-hand end of the containing-label. The P of PENNY is at some distance from the E, and the arms of the Y are squeezed together, so that there is only a small dark space between them, which is often shaped more like a triangle than a diamond. The ornaments in the bottom corners are dark, upright crosses, with dark, triangular blotches between the arms. The white dot in the centre of each cross is almost square, instead of round. The white ovals of the groundwork, outside the central circle, are filled with distinct crosses and shapeless blotches, alternately. The whole stamp is a poor lithograph, but yet most of the details of the genuine have been pretty correctly copied.

Second Forgery.

Nicely engraved in *taille-douce*, in carmine, and in vermilion, on stout, blue wove paper, no watermark, unperforated (to represent variety 2 of the genuine), or in orange, on stout, hard, white wove paper, no watermark, unperforated (to represent variety 3). The curved line from ear to shoulder is very faint, especially on the left side of the stamp ; the edge does not appear to be scalloped, and hardly any of the white dots are visible along it. In the necklace, beginning on the right side of the stamp, about nine jewels can be counted, and then the rest appear to be all run together in an irregular line. The head is perfectly upright, instead of being thrown slightly back. The shading up the edge of the right shoulder (left side of the stamp) is very light, and the rows of dotted lines are not all parallel with one another. There is no shading at all on the forehead. What little shading there is on the other shoulder, etc., is in irregular dots. The ornament in the centre of the top of the coronet is a cross, but not a real cross *pallée* ; it looks more like a four-leaved primrose. The lines of shading on the ribbon of the Garter are not all parallel with each other, and one of them, about the centre of the top edge, is usually drawn too far, and projects above the rest, pointing towards the centre of the stamp. The lower edge of the ribbon is very wavy, instead of perfectly even. The head-stroke of the P of POSTAGE runs up to the left top corner of the containing-label. The best test for this forgery is a flaw, or scratch of the engraver's tool, which shows as a thin, coloured line, beginning in the centre of the right-hand end of the POSTAGE-label, and going obliquely to the right till it touches the left top angle of the corner-square after the Y of PENNY. Some of the little dark ornaments of the groundwork, outside the central circle, are more like daggers than crosses. The ink generally stands up *too* highly above the surface of the paper. The colour of the ink, in all my specimens, is orange-red ; I have seen no carmine-red impressions.

Twopence, blue.

The following are the varieties, as compared with the numbered list of those of the ONE PENNY:—

1 (also 1 on blued paper), 2, 3, 4, 5, 6 (also 1863, thick paper, no watermark, perforated 13), 7, 9, 10, 11, 12, 13, 14, 15, 16.

Twopence, vermilion.

Varieties 18, 19, 20, 21. Also 1872, white wove paper, perforated 12½ to 13, watermark of lozenges and part of the word INVICTA.

Genuine.

Engraved in *taille-douce*, varieties as above. The tests are the same as for the ONE PENNY, with the following additions: The left-hand end of the POSTAGE-label begins just above the centre of the W of TWO, and the right-hand end reaches almost to the middle of the C of PENCE. The letters of TWO PENCE are nicely drawn, with a good space between the words, but the letters of each word are very close together. The dark outlines of the squares in the bottom corners are distinctly higher than the dark background, behind TWO PENCE.

Forged.

Lithographed, on thin, blue wove paper; no watermark; unperforated; and also on rather thin, bluish-white wove paper; no watermark; perforated apparently about 18, but so badly that it is very difficult to say positively. There are only nine dark spots in the ermine on the right shoulder, over the T of TWO. The POSTAGE-label begins above the commencement of the W of TWO, and ends above the end of the N of PENCE. The letters of TWO PENCE are *very* badly drawn, far apart, and thus showing very little extra space between the two words. The dark outlines of the squares in the lower corners are almost exactly the same height as the dark background, behind TWO PENCE. The corner-ornaments are not placed in the centres of their containing-squares.

Fourpence, rose-carmine, yellow, orange.

The following are the varieties, as compared with the numbered list of the varieties of the ONE PENNY.

16, 1863-6; 20, orange only, 1872.

Genuine.

Engraved in *taille-douce*. The tests are exactly the same as for the genuine ONE PENNY, with the following in addition: The vertical, dark line, forming the right-hand end of the POSTAGE-label, if prolonged downwards, would exactly coincide with the right-hand edge of the N of PENCE. The top limb of the F of FOUR very nearly touches the O; and the middle tongue of the said F, which is very little shorter than the top limb, comes also very near to the O.

Forged.

Badly lithographed, on rather stout, very yellowish-white wove paper, unwatermarked, and very badly pin-perforated about 13. The tests are

the same as for the first forgery of the ONE PENNY, with the following in addition: The vertical, dark line, forming the right-hand end of the POSTAGE-label, if prolonged downwards, would touch the back of the C of PENCE. The top of the F of FOUR is some distance from the O; and the middle tongue of the F is very short, and still further from the O.

One Shilling, green.

The varieties, as compared with the numbered list of the varieties of the ONE PENNY, are the following:—

1 (but on blued wove paper), 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 13, 14, 15, 16.

Genuine.

Engraved in *taille-douce*; varieties as above. The tests are the same as for the genuine ONE PENNY, with the following additions: The POSTAGE-label begins above the commencement of the last stroke of the N of ONE, and ends above the space between the letters IN of SHILLING. The dark outlines of the corner-squares stand up very much higher than the dark background, behind ONE SHILLING.

First Forgery.

Very badly lithographed, on stout, greenish-faced, white wove paper; no watermark; unperforated, or pin-perforated 11½, in oval holes. The POSTAGE-label begins over the middle of the N of ONE, and ends over the middle of the second I of SHILLING. The dark outlines of the corner-squares are very little higher than the dark background to the words ONE SHILLING, and are much too light. The right-hand half of the white line above ONE SHILLING is usually broken, and the top of the square in the right lower corner, in most specimens, seems to be printed twice, as though the stamp had moved in the press. There is no sign of any curved line, between the ear and shoulder, either side of the head. The jewels of the necklace are very dark, and it is quite impossible to count them. The head is perfectly upright. There is no shading on the edge of the right shoulder (left side of the stamp), and there is none at all on the forehead. The ornament in the centre of the coronet looks like a four-leaved primrose. The shading on the ribbon of the Garter is composed of crossed, oblique lines. There is no foot-stroke on the left side of the bottom of the P of POSTAGE. Some of the little dark ornaments of the background, outside the central circle, are more like daggers than crosses. The colour of the stamp is a pale, washed-out blue-green tint, and the ink does not stand out at all from the face of the paper.

Second Forgery.

A very nice-looking stamp, but I have never seen it in any shade but yellow-green. It is well engraved in *taille-douce*, like the second forgery of the ONE PENNY, on fairly thick, white wove paper, unperforated, to represent variety 3. The curved, scalloped line over the right shoulder (left side side of the stamp) is fainter than the one over the left shoulder, though it is the stronger of the two in the genuine. Fifteen jewels can be made out in the necklace. The head is upright. The dotted lines of shading on the edge of the right shoulder are irregular, and not all parallel with one another, while they are all parallel in the genuine. The right-hand arm of the cross *pattée* on the coronet is badly drawn, and not the same shape as the left-hand one. The lower edge of the ribbon of the Garter, across the breast, is scalloped, or wavy, instead of being straight. At the right-hand end of the POSTAGE-label there is an

oblique dark line or scratch, sloping down, and reaching nearly as far as the middle of the top of the G of SHILLING. Most of the dark spots in the groundwork, outside the central circle, look like little daggers. The ink stands out from the surface of the paper, even more than the genuine. I think this counterfeit would deceive any youthful amateur, and possibly some of the older ones!

POSTMARKS.

Genuine.—1, 46, 56, 67 (this latter is only found on the latest specimens), also one something like 1, but with name in a straight line in the centre.

First Forgery.—One like 30, but without numeral; 34, with blank centre; 62. This No. 62 is a New South Wales postmark; and it is quite possible that the forgers may have seen a New Zealand stamp showing it; having been obliterated on entrance into that colony.

Second Forgery.—1, with name in a straight line in the centre; 41, 46 (with lines much thinner); also one that seems to be a portion of 55.

Forged Perforations.

I have the 2d., vermilion, of 1871, perforated 10 all round, which is bogus; and the same stamp perforated 10 × 12½, the latter being difficult to distinguish from the genuine.

Fiscals with Forged Postmarks.

I possess the 2d. of 1882, pale sky-blue and red (instead of green and red) with the fiscal cancellation obliterated, and postmarked with 67, containing "Christchurch 23 JL 91." The blue colour is probably due to the chemical which has removed the fiscal cancellation. I have also the 3s., same issue, pale slate and red, with a postmark something like 46, with C in the centre, and still showing the fiscal cancellation.

Chemical Changeling.

I have lately (1905) come across the 1s. of 1863-6, star, perforated 12½, of a pale bistre-brown colour, instead of green. I do not know how the change has been effected. The colour is, of course, bogus.

NICARAGUA.

I don't think the forgeries now to be described are likely to be at all dangerous, as they are very second-rate lithographs, while the genuine are finely-executed engravings. I take them in the order of value, rather than of issue, to simplify matters.

1 Centavo, bistre.

Issue of 1869-71. Yellowish wove paper; perforated 12

Issue of 1877-80. White or greyish-white wove paper; rouletted.

Genuine.

Finely engraved in *taille-douce*. There are two little trees in the left lower corner of the landscape, above the U of UN. The cap of Liberty

is very faint, so that it would hardly be noticed at a first glance. The tree in the right upper corner does not touch the outline of the frame above it. The rays of the sun are faint, and delicately drawn; there are seven of them, but two of the seven are split. There is a dark object in the very foreground, which reaches from above the beginning of the N of CENTAVO to a little beyond the commencement of the T of that word. The left-hand peak, behind which the sun is rising, is lightly shaded, and only a *very* little darker than the two peaks to the right of it. The point of the V of CENTAVO comes slightly lower than the bottom of the A which precedes it.

Forged.

Lithographed, on thin, white wove paper; pin-perforated 12½ (generally very badly); also on thick, hard paper, unperforated. There are no trees in the left lower corner of the landscape. The cap of Liberty is quite distinct, and a good deal darker than the background. The tree in the right upper corner touches the frame above it, just under the middle of the U of NICARAGUA. The rays of the sun are very coarse; there seem to be about ten of them. The dark object in the foreground of the landscape is much too wide, and extends from above the middle of the E to the middle of the T of CENTAVO; and it is triangular in shape, instead of being rounded. The left-hand peak is a good deal darker than the two peaks to the right of it. The point of the V of CENTAVO is level with the bottom of the A which precedes it.

POSTMARKS.

Genuine.—I have only seen the genuine pen-stroked.

Forged.—The forgery is cancelled with 54, with blank centre.

2 Centavos, blue.

Issue of 1862. Deep blue, on yellowish wove paper; perforated 11½.

Issue of 1869-76. Bright blue, on white or greyish-white wove paper; perforated 12.

Issue of 1877-80. Blue, on white or greyish-white wove paper; rouletted.

Genuine.

Beautifully engraved in *taille-douce*. The horizontal lines of shading in the sky are straight, close together, parallel to each other, and nicely drawn. There are seven long rays to the sun; the first ray runs up to below the serif to the foot of the N of NICARAGUA; the second runs up quite vertically, to under the last part of the N; the third runs up obliquely to the centre of the foot of the I; the fourth, to the space between C and A; the fifth, which is split for half its length, to the tail of the K; the sixth to the last A; and the seventh is rather faint, and disappears behind the mountain in the right upper corner of the stamp. All the volcanic peaks are very sharp; the one to the left is not much darker than the others, though it is shaded all over with rather wavy, horizontal lines, and the others are not. This left-hand peak is the tallest of the three. The third peak from the left has a cap of Liberty on a pole; the cap is exactly like a leg of mutton. There is a white patch in the very centre of the foreground, possibly part of a river; this patch begins almost over the middle of the

S of DOS, and the white part of it ends over the middle of the T of CENTAVOS. The tree in the right-hand background, under the GU of NICARAGUA shows two of the horizontal lines of the background above its top. All the lettering is beautifully cut. The letters ARA of NICARAGUA are all joined at the foot, and the letters TA of CENTAVOS, are similarly joined. The corner-circles are very nicely done, and each touches a corner of the central frame very nearly in the same way, though the upper ones are rather more firmly joined to the corners than the lower ones are.

First Forgery.

Rather coarsely lithographed, on very white wove paper, decidedly thinner than the genuine, badly pin-perforated 12½. The horizontal lines of shading in the sky are coarse, and do not always run horizontally ; *i.e.*, some of the patches between the rays are quite oblique. The first long ray of the sun runs up very nearly into the left upper corner of the stamp ; the second ray points to the middle of the N of NICARAGUA. The third is like the genuine ; the fourth is also like the genuine ; the fifth shows a slight split, and points to the middle of the R. The sixth gets very broad behind the tree, so that its width, at the top, is from almost the end of the G to the middle of the last A. The seventh is as bright as the rest, and shows off the trunk of the tree, even more than the genuine. The dark volcanic peak to the left is quite blunt, and cut off rather obliquely ; it is very much darker than the peak to right of it. The shading on it is slightly oblique, instead of horizontal. The cap of Liberty on the third peak from the left has some resemblance to a bird, standing with its breast to the left, and its head looking over its shoulder downwards to the right. The white patch in the foreground can be traced from over the very end of the S of DOS, to considerably beyond the middle of the T of CENTAVOS. The horizontal lines of the background are broken above the top of the tree, under the GU of NICARAGUA, so that only one complete line of shading can be seen above it. The lettering is very poor and ragged. There is a white patch before the beginning of the P of PORTE, in the left-hand label ; the dark centre of the P is an upright oval, instead of being shaped like a D, and the white, rounded part of the head has a coloured line in it ; there is also a white patch to the right of the head of the E of this word. None of the letters of NICARAGUA and CENTAVOS touch each other. The corner-figures are very ragged ; the tail of the 2 in the left bottom corner touches its containing-circle, and this circle is not very firmly joined to the corner of the central frame.

Second Forgery.

Lithographed, in blue-black, on medium, white wove paper, perforated 12. The lines of shading in the background are rather coarse, and not all truly horizontal. There are eight long rays to the sun. The first ray touches the left-hand border, a little after the E of PORTE ; the second points to the beginning of the N of NICARAGUA ; the third, to the end of the I ; the fourth to the middle of the first A ; the fifth is not split, and points to the beginning of the third A ; the sixth is too short, but if prolonged, it would touch the centre of the bottom of the U ; the seventh ends behind the tree, and does not go any further ; the eighth is a mere illumination behind the outline of the mountain on which the tree stands. The left-hand peak is very blunt, being cut off rather obliquely, and both the other peaks are blunter than the genuine. This left-hand peak is extremely dark, looking like an almost solid, blue mass with short, white horizontal lines on it. The third peak from the left, under the R of NICARAGUA, is decidedly the tallest of the three, and there is no cap of

Liberty on it. The white patch in the foreground can be traced from over the end of the E of CENTAVOS, to above the space between the letters AV. The top of the tree, above GU of NICARAGUA, runs up to the very top line of shading in the background. The lettering is rather better done in this forgery, but the rounded part of the head of the P in the left-hand PORTE touches the O. None of the letters of NICARAGUA touch each other, but the T and A of CENTAVOS appear to be joined. The white circle in the left top corner *barely* touches the corner of the central picture, and the circle in the right bottom corner does not touch the corner of the picture at all.

I have a specimen, evidently from the same stone, but with some of the finer lines absent. It is printed on very yellowish wove paper, thinner than before, but harder and less absorbent. It is perforated 12.

POSTMARKS.

Genuine.—Usually a circle, containing a large numeral.

First Forgery.—54, with blank centre.

Second Forgery.—38, without numerals.

5 Centavos, black.

Issue of 1862. Yellowish wove paper; perforated 11½.

Issue of 1869-71. White or greyish-white wove paper; perforated 12.

Issue of 1877-80. White, or greyish-white wove paper; rouletted.

Genuine.

Beautifully engraved in *taille-douce*. The landscape-tests are the same as in the genuine 2 centavos, except that the white part of the lake or river in the foreground can be traced from above the end of the second C of CINCO to above the middle of the T of CENTAVOS. The short pole on which the cap of Liberty is placed can be distinctly seen, and the trunks of the two trees above the CI of CINCO are also plainly visible. The ball of the tail of each 5 is very large and round, and pretty nearly fills up the hollow of the numeral. In this value, the word in the left-hand label is CORREOS instead of PORTE. The letters RRE of CORREOS touch each other at the bottom, as also do the letters RA of NICARAGUA.

First Forgery.

Poorly lithographed, on white wove paper, perforated 13. The landscape-tests are the same as in the first forgery of the 2 centavos. The white part of the lake or river in the foreground extends as far as in the genuine. Of the two trees in the left-hand corner, above the CI of CINCO, the one nearest to the P of PORTE has no trunk at all. The ball of the tail of each 5 is very small, and does not nearly fill up the hollow of the numeral. The word in the left-hand label is PORTE, instead of CORREOS, which is a very easy test for this forgery. The letters TA of CENTAVOS touch each other at the bottom, but none of the others touch anywhere.

Second Forgery.

Lithographed, in greasy-looking black, on very yellowish-white wove paper, perforated 12. The landscape-tests are the same as in the second forgery of the 2 centavos. The right-hand end of the white part of the lake or river in the foreground is above the beginning of the V of

CENTAVOS ; the left-hand end can be dimly traced to above the middle of the C. The two trees in the left lower corner are undecipherable. As in the second forgery of the 2 centavos, there is no cap of Liberty on the central peak, which is an easy test. The ball of the tail of each 5 is extremely small, and does not nearly fill up the hollow of the numeral. Down the right-hand edge of the picture there is a white line, as in the genuine ; but, down the left-hand edge there are two white lines. This is another easy test. None of the letters of any of the inscriptions touch each other anywhere.

Third Forgery.

I have only come across this lately (1905), but it looks like an old counterfeit, and is very poor. Very darkly typographed (?), in greasy, brownish-black ink, on pale yellow *pelure* wove paper, so thin that the design is almost as visible at the back as in front. It is unperforated. There are thirteen rays to the sun, and they are short, sharp spikes, not going near the top of the picture. The left-hand mountain is a solid mass of black, as is, indeed, most of the rest of the landscape. The shape of the top of the cap of Liberty cannot be made out, as it does not stand out distinctly from the very dark background. The white patch in the foreground is in two portions ; the one is over the O of CINCO, and the other over the C of CENTAVOS. The tree in the right-hand background is represented by a very dim, triangular blotch, which goes right up to the top outline of the picture. It is not visible without careful examination. The inscriptions are thin, and parts of many of the letters have disappeared, in consequence of the extremely heavy inking of the impression. The trees in the left bottom corner are absolutely invisible. The ball of the tail of each 5 is extremely small, and does not nearly fill up the hollow of the numeral.

Fourth Forgery.

I do not possess this forgery any longer, so transcribe the description from my second edition, of which it is the "second forgery."

Coarsely lithographed, on very yellowish-white wove paper ; perforated 12. There are about nineteen rays to the sun, very thin. Two of them seem to go up into the left top corner of the landscape. I cannot see the pole of the cap of Liberty, as there is a postmark just over it ; but the cap itself is tumbling over to the right. The part which, in the genuine and in the first forgery, forms the lake in the foreground is, in this counterfeit, darkly shaded, nearly all over ; though the beginning of it can be seen over the commencement of the o of CINCO. The left-hand peak is very much darker than the peak to the right of it, and the lines of shading on this left-hand peak are extremely coarse. The two trees in the left lower corner are like palm-trees in the genuine ; but, in this forgery, they are more like half-oranges, stuck on poles. The word in the left-hand label is CORREOS, like the genuine ; but there is a distinct, large white patch, hanging from the tail of the C, and touching the outline under that letter. The corner-numerals are fairly alike, and the lettering is a little larger than in the first forgery ; but it is still very ragged. The G of NICARAGUA has a very ugly, projecting lower limb ; and the IN of CINCO and the CENT of CENTAVOS all touch each other at their tops.

Fifth Forgery.

This is the "third forgery" of my second edition, from which I transcribe the description.

Nicely lithographed, on yellowish-white wove paper. The perforations are cut off in my specimen. There are nine rays to the sun, several of

them being split. The pole on which the cap of Liberty is placed is dark black, and the peak or point of the cap is doubled closely down on to the body of it; whereas, in the genuine, the peak hangs well out to the right; so that it extends really farther to the right than the widest part of the bottom of the cap does. The front part of the lake in the foreground reaches to the right, almost to the very end of the T of CENTAVOS. The trees in the left foreground are excessively indistinct. The word in the left-hand label is CORREOS, as in the genuine. An easy test for this forgery is, that each C of CINCO has its head projecting very notably above the tops of the letters of that word; while, in the genuine, each C of CINCO is the same as the C of CENTAVOS in this counterfeit. The lettering is very much better done than in any of the forgeries just described, and the face of the stamp is very shiny.

Sixth Forgery.

This is the "fourth forgery" of my second edition.

Apparently typographed from a *cliche*, in very greasy black, on greyish-white wove paper; very badly perforated 13. This is very like the forgery just described, but the execution of the printing is very much worse. When the face of the stamp is turned so that the light falls upon it in a particular way, there are numbers of little glittering or sparkling points in it. This is, of course, due to something in the ink; but I am unable to say whether every copy will show this peculiarity or not. There are nine rays to the sun; all but the first four to the left being broken and irregular. The cap of Liberty is shaped as in the last forgery; but the pole, while still dark black, is very much thicker; so that part of the cap seems to be touching the mountain-peak. Both in this and the last forgery the tree in the right top corner touches the outline above it, just under the beginning of the U of the name. The lake is as in the last forgery, except that it seems to be broken up into several portions. The trees in the left foreground are invisible. Each C of CINCO has its head projecting upwards, as in the last forgery, and the O of that word is distinctly larger and taller than the rest of the letters. The lettering is not nearly so clear as in the last forgery, and the stamp has a very dull look. All the outlines are thick and blotched, especially the left side of the frame.

POSTMARKS.

Genuine.—As in the genuine 2 centavos.

First Forgery.—10, without the central strokes.

Second Forgery.—38, without numerals.

Third Forgery.—Uncancelled.

Fourth Forgery.—A number of enormous, diamond-shaped dots.

Fifth Forgery.—Uncancelled.

Sixth Forgery.—Uncancelled.

10 Centavos, vermillion.

Issue of 1869-71. Yellowish-white wove paper; perforated 12.

Issue of 1877-80. White or greyish-white wove paper; rouletted.

Genuine.

Finely engraved in *taille-douce* as before. There seem to be nine rays to the sun, but they are not so distinct as in the darker stamps. The

first ray goes into the angle formed by the left-hand label and the numeral-label ; the second ray goes to the centre of the end of the numeral-label ; the third goes nearly into the angle formed by the numeral-label and the top label ; the fourth points between NI of NICARAGUA ; the fifth to the bottom of the C ; the sixth (split) to the R and the A ; the seventh to the top of the tree ; the eighth to the middle of the tree ; the ninth to the profile of the mountain, lower than the root of the tree. The white part of the lake in the foreground extends from the E of DIEZ to the centre of the T of CENTAVOS. The dark shadow-peak to the right (the shadow of the brightly-illuminated peak in the right foreground) reaches a little above the level of the O of PORTE. The rest of the landscape is the same as in the genuine 2 centavos. All the lettering is very clearly cut. The letters ARA of NICARAGUA, RE of CORREOS, IE of DIEZ, and TA of CENTAVOS all touch at the bottom, and the NI of NICARAGUA, TE of PORTE, IE of DIEZ, and NT of CENTAVOS touch at the top. The top of the I of each 10 is divided into three white teeth or projections, and the dark centre of each o can be seen by the microscope to be not a solid mass of colour, but formed by short lines, *very* close together.

Forged.

Coarsely lithographed, in rosy vermillion, on white wove paper, or in orange-vermilion, on thick, yellowish-white wove paper ; the former badly perforated 12½, the latter also perforated 12½, but very nicely. There are about twelve rays to the sun, some of them very much more prominent than the genuine. The first points to the middle of the S of CORREOS ; the second to the end of the said S ; the third to the angle between the side-frame and the numeral-label ; the fourth to the left side of the end of the numeral-label ; the fifth to the middle of the end of the said label ; the sixth goes into the angle between this label and the top label ; the seventh points to the NI of NICARAGUA ; the eighth to the bottom of the C ; the ninth (which is clearly split for its whole length) to the R and A ; the tenth to the UA ; the eleventh goes past the foot of the tree, along the profile of the mountain ; the twelfth goes to the foot of the pole of the cap of Liberty. The right-hand end of the white part of the lake in the foreground reaches quite to the end of the T of CENTAVOS. The left-hand volcanic peak is very much darker than the two to the right of it. The cap of Liberty is much more like the genuine than any of the counterfeits hitherto described, but the turned-over part at the top lies closer to the body of the cap than in the genuine, which shows it clearly projecting. The shadow-peak at the right edge of the stamp is almost a solid blotch of colour, while the genuine is shaded by wavy, oblique lines ; its top reaches up high above the level of the O of PORTE, almost to the level of the P. All the lettering is ragged. The letters of DIEZ and of CENTAVOS and PORTE do not touch each other anywhere, but the other places which touch in the genuine also touch in this forgery. The top of the I of 10 in the right upper corner generally shows only two white teeth ; and that of the I in the left lower corner also only two teeth. The dark centre of the o of each 10 is usually a solid mass.

POSTMARKS.

Genuine.—As before. Also 93.

Forged.—54, with blank centre. (This is really a Mauritius cancellation.) Also 38, without numerals.

25 Centavos, green.

Issue of 1869-71. Yellowish-white wove paper;
perforated 12.

Issue of 1877-80. White or greyish-white wove paper;
rouletted.

Genuine.

Engraved in *taille-douce*, as before. The lake in the foreground has dried up and disappeared altogether, otherwise the central landscape is the same as in the 10 centavos. The rays of the sun are so very faint, that it is difficult to tell how many there are. Two rays point towards the 25 in the left top corner; one ray points to the right of the centre of the V of VEINTE; one split ray points to the 1, between VEINTE and CENTAVOS; and two rays point, respectively, to the top and bottom of the tree in the right top corner; these are the only ones that can be clearly made out. The shadow-peak on the right-hand edge of the landscape has a very sharp point, and this point is level with the very middle of the C of NICARAGUA. The outlines of the dark peak on the left side of the stamp are not straight, so as to form a pyramid, but bent and irregular, as in all the other values, showing a hollow in the outline each side. This peak is equally dark all over. The letters EIN and TE of VEINTE, IN of CINCO, RRE of CORREOS, RA of NICARAGUA, and TA of CENTAVOS are all joined at the bottom, and the IN of VEINTE, IN of CINCO, and NI of NICARAGUA are joined at the top. The numerals in the corner-labels are large, and well fill up the width of the containing-labels: from the front of the foot of the 2 to the back of the 5, the distance is fully 3 mm. The head of each 2, and the tail of each 5 ends in a large, nicely-formed white ball.

**Forged.**

Poorly lithographed, on stout, hard white wove paper, badly perforated 12½. The sun has an extra number of rays; I can make out about nineteen of them, and they are much more distinct than in the genuine. Seven of these rays point towards the CORREOS-label; one to the left of the centre of the left top numeral-label; one to the vertical white line to the left of VEINTE; one between the VE; one between EI; one between IN; one to the bottom of the N; one to the T; one to the I; one to the C of CINCO; one to the top of the tree; one to the middle of the tree; and one to the profile of the mountain. The outlines of the left-hand peak are perfectly straight, so that it is a pyramid, and not a mountain. The shading on this pyramid gets much fainter towards the base, so that it looks patchy there. The cap of Liberty is fairly like the genuine. The tree in the right top corner spreads from under the beginning of the N to under the middle of the O of CINCO, in the genuine; but in this forgery it spreads from under the end of the I to under the middle of the O. The shadow-peak at the right edge of the stamp is rather blunt, and its point does not come up quite to the middle of the C of NICARAGUA. The letters ARA of NICARAGUA touch each other at the bottom; the tail of the G of this word touches the U; and the NI touch the top, while the foot of the last A touches the white outline of the label in the right lower corner. None of the other letters touch each other anywhere. The numerals are too thin, and do not nearly fill up the width of the containing-labels. The distance from the front of the 2 to the back of the

5 is only $2\frac{1}{2}$ mm., and the little balls at the head of each 2 and the tail of each 5 are very small, and not truly circular.

I have a specimen of this same forgery printed, apparently, when the stone was nearly worn out. In this counterfeit, all parts shaded with lines, such as the left-hand peak, and the corner-labels, are perfectly solid, and parts of many of the letters are wanting. The colour of the genuine stamp is a rich yellow-green; these forgeries are all of a chalky blue-green.

POSTMARKS.

Genuine.—As before. Also 93 without the black outline.

Forged.—54, without numerals.

BOGUS STAMPS.

I must mention here a 5 centavos, of the type of the fifth forgery, printed in *green*, on rose-coloured paper. Also the genuine 25 centavos, with the colour chemically changed to *blue*.

NORTH BORNEO.

So far as I know, the forgers have not troubled this country much, but I have counterfeits of three rather scarce surcharges.

Issue of 1883. 8 Cents, surcharged vertically on 2 c., red-brown.

Genuine.

The surcharge is only found on the stamp of 1883, perforated 12. This must be remembered, as most of the forgeries are on the 2 c. of

8 Cents

1886, perforated 14. I have only one specimen of this stamp, and cannot say whether there are any varieties of type. In my specimen the left lower corner of the 8 is somewhat defective, as though there were a tiny piece out of it. The tail of the C is very thick; decidedly thicker than the point of the head, opposite to it. The E is $1\frac{1}{2}$ mm. high, and the T is $2\frac{1}{4}$ mm. high.

First Forgery.

The type is exceedingly like the genuine, but it is surcharged on the 2 c., 1886, perforated 14—at least, I have no specimens perforated 12. The 8 is perfect. The tail of the C is nearly as thin as the point of the head opposite to it; and, instead of being rounded upwards, there is a slight corner at the bottom of the letter, level with the bottom of the E. The top point of the head of the C is cut off obliquely up to the left,

instead of pointing directly upwards. The E is fully $1\frac{3}{4}$ mm. high. Notwithstanding these differences, this is a surprisingly good imitation, and might well deceive any but a careful observer. Of course the gauge of the perforation at once condemns the copies which I have seen, but most probably it will be also found perforated 12, and will then be dangerous.

Second Forgery.

This is surcharged on the 1883 issue, perforated 12, but it is not so good an imitation as the one just described. The top point of the head of the C is very short, instead of standing well up; and the lower point of the head leans very slightly forward, instead of being directed perpendicularly downwards. The end of the tail is about the same thickness as the lower point of the head, and it is directed slightly forwards, instead of perpendicularly upwards. The 8 is a block figure, being of the same thickness all over; but, in the genuine, and in the first forgery, that part of the numeral which goes obliquely down from left to right is considerably thicker than the rest of the numeral. The E is 2 mm. high, and the T is 3 mm. high.

POSTMARKS.

Genuine.—Similar to 100, but of an oval shape.

First Forgery.—Uncancelled.

Second Forgery.—29, very large. I am not sure that this is a genuine cancellation, as I never remember seeing it on a genuine stamp.

Same Issue. Eight Cents, surcharged in words on the 2c., red-brown, of 1883, perforated 12.

Genuine.

The letters of the surcharge are quite $2\frac{1}{4}$ mm. high. In my single specimen, the I of EIGHT stands almost above the upright stroke of the E of CENTS; the feet of the H are joined together, and the last upright of this letter is exactly above the very centre of **EIGHT** the T, while the T of EIGHT is above the centre of the S, **CENTS** which leans over very slightly to the right. The bottom half of the S is considerably bigger than the top half. I shall take the forgeries separately, but it will be understood that they are all on the same sheet.

First Forgery.

Surcharged on the 1886 issue, perforated 14. The letters are only 2 mm. high. The feet of the H are wide apart. The S is perfectly upright, and the top half looks as large as the bottom half, unless it is looked at upside down.

Second Forgery.

Surcharged on the 1886 issue, perforated 14. The letters are the same height as the genuine. The I of EIGHT stands almost above the very centre of the E below it. The feet of the H are not joined, and the second upright of this letter is clear to the right of the shaft of the T below it. The shaft of the T is far to the right of the centre of the S below it. The S is upright, and the top half of it looks as large as the bottom half.

Third Forgery.

Surcharged on the 1886 issue, perforated 14. The I of EIGHT is well to the right of the centre of the E below it. The feet of the H are very close together, but do not touch, and the second upright of this letter stands above the right-hand end of the T of CENTS. The T of EIGHT stands above the very end of the S, which is perfectly upright, and the top half of the said S looks, if anything, larger than the bottom half.

The perforation instantly condemns all the three forgeries just described; but if copies should exist perforated 12, I trust the above tests will be found sufficient for their detection.

POSTMARKS.

Genuine.—As before.

First Forgery.—A very small copy of 100.

Second Forgery.—Uncancelled.

Third Forgery.—An undecipherable blotch.

POSTAL FISCAL.

Three Cents Revenue, surcharged on 4 c., rose, of 1884, perforated 12.

Genuine.

The surcharge is rather unevenly printed, some of the letters being ragged. I have only one specimen, and do not know whether there are any varieties of setting. In my specimen, the R of THREE is above the last stroke of the N of CENTS, and the S is below the middle of the space between the first and second E of THREE. The stop after CENTS is *very* small, and placed considerably above the level of the bottom of the S. The shaft of the T of CENTS is almost above the centre of the N of REVENUE.

**Three
Cents
Revenue**

Forged.

Surcharged on the 4 c., rose, of 1884, perforated 12, like the genuine. It is very clearly printed, and the letters look larger than the genuine, but the actual difference is only some small fraction of a millimetre. The R of THREE is above the centre of the N of CENTS, and the middle of the S is below the commencement of the last E of THREE. The stop after CENTS is large, and level with the bottom of the S. The shaft of the T of CENTS is above the last stroke of the N of REVENUE. In the specimen before me, the first stroke of the N of CENTS has failed to print, but I conclude that this is not always the case. Being surcharged on the proper issue, this forgery is more dangerous than those hitherto described.

POSTMARKS.

Genuine.—I have not seen a cancelled copy.

Forged.—My specimen is uncanceled.

NORWAY.

Issue of January, 1885. 4 Skilling, blue.

Genuine.

Lithographed (?) in chalky blue, generally rather pale, on rather hard, yellowish-white wove paper, watermarked with a rampant lion, holding an axe. The horizontal lines in the circle round the shield are thin, with wide, white spaces between them. Counting them on the left side of the circle, there are thirty-nine of the said lines. The vertical lines in the shield are also thin, with wide, white spaces between them; there are twenty-four of these lines, counting at the top of the shield, and not reckoning the outlines. The bottom corner of the blade of the axe comes between the sixth and seventh lines from the left. The lower end of the handle touches the third line from the left, and, in some copies, trespasses very slightly over it. There are four lines visible to the right of the hind leg of the lion. His head is properly shaped, the mouth closed, and the eye placed well to the front. His crown is very small, and perched on the point of the back of the head. There are five horizontal dashes along the base of the large crown, above the shield, and there is a small, but distinct pearl above the second dash from the right.

First Forgery.

Lithographed, in a most blotchy manner, on thick, white wove paper, unwatermarked. The colour is a peculiar shade of neutral-tint, very like what is commonly called "slate-colour." The horizontal lines of shading in the circle round the shield are very thick, so that the white spaces between the lines are thinner than the lines themselves. There seem to be only thirty-seven of these lines, but the bottom ones are so blotched that it is not easy to count them. The vertical lines in the shield are also thick and coarse, though the white spaces between them are somewhat wider than those in the circle; they are only twenty-one in number. The bottom corner of the head of the axe touches the sixth line from the left, and the said head is so blotched as to be utterly shapeless. The lower end of the handle comes between the second and third lines from the left. There are only three vertical lines visible, to the right of the lion's hind leg. His head is very badly shaped, being like that of a cock, with the mouth wide open, and the tongue sticking out. The eye is abnormally large, and placed quite at the back of the head. The crown looks several sizes too large for him. There are only four horizontal dashes at the base of the large crown, together with three vertical dashes, which do not exist in the genuine. The little pearl above the second dash from the right is not visible.

Second Forgery.

Very nicely lithographed, on thin, yellowish-white wove paper, rather softer than that of the genuine; unwatermarked. I first saw this counterfeit in 1891, but it looks like an old forgery. The blue is not quite the peculiar, chalky tint of the genuine, but sufficiently near it to pass muster; and an ordinary collector would probably accept the stamp as genuine, without hesitation. The horizontal lines in the circle are thin,

nicely drawn, and even further apart than the genuine. There are thirty-five of them, counting down the left side, as before. They are easy to count, except just where the rounded part of the left bottom corner of the shield approaches the edge of the circle. The shield itself contains twenty-two vertical lines, nicely drawn; but, in my specimen, two of them are broken, just near the end of the handle of the axe, and three more behind the hind leg of the lion. The easiest test for this forgery is the axe itself (or what *ought* to be the axe), which is represented as a simple stick or pole, without any axe-head at all. The lower end of this stick comes between the first and second of the vertical lines, not counting the outline of the shield. (N.B.—The left-hand, vertical outline of the shield, both in the genuine, and in the forgeries, is exactly the same thickness as the vertical lines in the shield; but the right-hand outline is an extremely thick line.) The right-hand top corner of the shield is rounded off in the genuine, and in the first forgery; but it is square in this second counterfeit. There are five vertical lines visible, to the right of the lion's hind leg. His head is more lion-like than in the genuine; but his crown is represented by what looks exactly like the comb of a cock. The mouth is open. The ornaments along the base of the crown are as follows: A large half-diamond, a very small diamond, a large diamond, a very small diamond, a large half-diamond. The genuine crown has a distinct, white cross on the top of it; but there is no cross in this forgery; nothing but the ball or orb on which the cross ought to rest. The numeral of value is, in the genuine, an open 4; but in this forgery the numeral is closed at the top.

POSTMARKS.

Genuine.—1, with name in large capitals, and date, etc., at the bottom and in the centre; also 4.

First Forgery.—A few undecipherable blotches.

Second Forgery.—4.

Issue of 1867. 2 Skilling, orange.

NOTE.—I have, in my forgery-book, a 2 SKILLING of the above issue, but printed in *brown*, instead of orange; very nearly the shade of the 24 SKILLING of 1863. I cannot say whether it is an error, or has been doctored; but think it well to mention it here. It has passed the post, and bears postmark 1.

NOVA SCOTIA.

One Penny, red-brown.

Issue of 12 May, 1853; blue paper. Also on bluish, or almost white paper.

Genuine.

Engraved in *taille-douce*; paper as above. The backgrounds of the four outer frames, containing the name and value, are composed of

crossed, oblique engine-turned lines, so that none of the said backgrounds are solid in any part. The points of the central diamond, which contains the portrait, are all perfect; the top point comes very much nearer to the O than to the V of NOVA; the right-hand point is just a shade to the left of the T of POSTAGE; the bottom point is much nearer to the O than to the T of SCOTIA; and the left-hand point comes midway between the P and E of PENNY. The background behind the portrait is entirely formed of engine-turned lines. The ink stands out from the paper.

Forged.

Lithographed, on medium, wove paper, not so blue as the first issue of the genuine. The background of the label containing POSTAGE is quite solid and uniform, except after the E. The other three labels show lines, but so close together and so blotched, that they appear solid at a little distance. The top point of the central diamond is not perfect; but if complete, it would come exactly midway between the O and V of NOVA. The right-hand point is exactly under the centre of the T of POSTAGE; the bottom point is exactly midway between the O and T of SCOTIA; and the left-hand one is over the second half of the P of PENNY. Most of the background of the central diamond is of solid colour, showing traces of lines here and there. The ink does not stand out from the paper.

POSTMARKS.

Genuine.—22, with much thinner outer line. I think I have also seen parallel lines, with numeral in the centre.

Forged.—54.

Sixpence, green.

Issue of 1 September, 1851; blue paper. Also on bluish or almost white paper.

Genuine.

Nicely engraved, in *taille-douce*, on tolerably thick, wove paper, varieties as above.

There are small, dark lines, in each of the letters of SIXPENCE and POSTAGE, following the curves of the said letters; for instance, the S shows a small, dark S, in the centre of the larger one. In the X, the limb that runs down from right to left has a long, dark line in it, while the limb that runs down from left to right has two short, dark lines in it (X). This must be noted, as a test for the dangerous forgery, hereafter described. In the N of this word, the dark line in the oblique limb is drawn rather short,

and the one in the last upright limb is drawn long (N). Some of the points of the leaves of the thistle run well up into four of the points of the white star in which the thistle is drawn. The two leaves of the rose are shaded nearly all over, and there is a distinct, y-shaped vein in the left-hand leaf. The white centre of the rose itself has four very tiny dark dots in it. From this centre radiate five dark lines, each having an end something like the zodiacal sign of Aries (♈). The left-hand leaf of the rose runs partly up into one of the rays of the containing-star. The orb and cross, on the top of the crown, are quite distinct, and the

two *fleurs-de-lys*, below the arches, are decidedly prominent ; the central peak of each of them showing well against the dark background of the middle of the crown. Each arm of each *fleur-de-lys* has a distinct line of shading in it. The stars, flowers, crown, etc., are all enclosed in a large quatrefoil ; and the points of this quatrefoil exactly meet the points of the four corner-diamonds, which contain the figures of value. The general background, inside this quatrefoil, is composed of engine-turning, too elaborate to describe without diagrams.

First Forgery.

I take this first because it is by far the best, and really very dangerous. I have only lately seen it (1905), and it would deceive any average collector. Finely engraved, in *taille-douce*, on stout, pale blue wove paper. The colour is a much more yellow-green than the majority of the genuine stamps. The dark lines in the X of SIXPENCE are just the opposite of the genuine, as the long, single line runs down from left to right, and the two short lines are in the limb that runs down from right to left (X). In the N of PENCE, the oblique line is longer than the one in the last upright limb (N), which is again the reverse of the genuine. The Y-shaped vein in the left-hand rose-leaf is not visible. There is one dark dot in the middle of the white centre of the rose. Each of the dark lines radiating from the centre of the rose has a plain crescent-shaped end (N). The two *fleurs-de-lys*, below the arches of the crown, are not at all prominent, the central points being hardly visible ; and I cannot see any line of shading in any of the arms ; but my specimen is postmarked just there, so that I am not certain on this point. There are many slight differences in the engine-turned background, which I cannot describe.

Second Forgery.

This, and the third forgery are no longer in my possession, so I transcribe the description of them from my second edition.

Poorly lithographed, on thinner and harder paper than the genuine. The little dark lines before-mentioned are visible in the word SIXPENCE, as in the genuine ; but there are none in the word POSTAGE, whose letters are plain white. The leaves of the thistle run not only into all the three upper rays of the containing-star, but also into all three lower rays as well. The points of the large quatrefoil do not meet the points of the diamonds containing the figures of value ; the one at the bottom, especially, coming much too far to the right. The orb and cross at the top of the crown are very indistinct, and seem to be, as it were, somewhat crushed down into the crown. The leaves of the rose are very white, and neither of them runs into the star-points.

Third Forgery.

Poorly lithographed, on rather stout, yellowish-white wove paper. The tests for the second forgery will serve for this also, with the following additions : The white corner-diamonds, containing the numerals, are drawn too small, so that, in three out of the four, the 6 touches the side of the diamond ; the dark lines in the second E of PENCE are imperfect, only showing in the top limb and the tongue of that letter ; the left-hand leaf of the rose is very much darker than the right-hand one. This counterfeit looks like an inferior reprint of the second forgery.

POSTMARKS.

Genuine.—As in the genuine 1d., but frequently obliterated with pen-strokes.

First Forgery.—Similar to 22, as in the genuine.

Second Forgery.—54.

Third Forgery.—54.

NOTE.—The stamps of this issue are not unfrequently found divided, to serve for the moiety of their value ; and collectors are sometimes puzzled to account for the curious sums thus indicated ($7\frac{1}{2}$ d., for instance). New Brunswick shows the same peculiarity. The reason is simple. The currency money was not equal to our sterling coin ; and, while Canada and Prince Edward Island issued stamps with both denominations expressed on them, New Brunswick and Nova Scotia did not. An envelope franked for $7\frac{1}{2}$ d., with a 6d. and a half 3d. New Brunswick, passed from my collection into that of my late friend, Señor de Ysasi, and I have seen others of both countries.

Issue of 1860-3. 1, 2, 5 Cents. Yellowish wove paper, perforated 12. Also white wove paper, perforated 12.

Genuine.

Beautifully engraved in *taille-douce* ; paper and perforation as above. The lines forming the background of the central circle are very fine, and they are a good deal darker behind the head than in front of it. There is no outline touching the shaded circle ; but the lines break off in such a manner as to leave a broad, white ring, equally wide in every part, between the shading and the thick outline. The front of the base of the neck does not come to the edge of the shaded circle, though tolerably close to it. The front of the neck and the base of the chin are shaded by a double set of lines—one set being merely the continuation of those running forward from the cheek, etc., and the other set being short, horizontal lines, running backwards from the front of the neck. The unbroken lines of shading on the front of the cheek and chin are exact continuations of the dotted lines ; *i.e.*, the dotted lines become continuous lines towards the front. The profile of the forehead is a smoothly-rounded curve, from where the hair begins, to the top of the nose ; and the front of the eyebrow bends slightly downwards. The band of the coronet, under the hair, at the back of the neck, is more than $\frac{1}{2}$ mm. broad, and is in three strips, lengthways,—a flat, middle portion, with a thickened, rounded edge each side. The band which ties the chignon is the same, only a shade narrower. At the top of the stamp, above SC OF SCOTIA, there are two large, distinct apples. On the top of the coronet there are five pearls ; the front one being very small, but distinct, the last one being half hidden in the hair. Below each of these large pearls, except the front and the last ones, there are two more, placed rather obliquely on the body of the coronet. There is no dark outline to the front of the nose. The mouth is open, with a pleasing, almost smiling expression, and the lower lip does not project nearly so far as the upper one. The forward curl of the side of the nostril is not formed by a single, hooked line, but by almost invisible shading. The lowest value is labelled ONE CENT, with a large white star.

First Forgery.

This is quite new to me (1905), but I take it first as being the best. Engraved in *taille-douce*; on thick buff, and also on medium greyish-white wove paper, perforated 10 (a rather unusual gauge for a counterfeit). The lines of shading in the background, at the back of the head, are all horizontal, like those in front of the face; whereas, in the genuine, only those in front are horizontal, and those at the back are crossed by oblique lines. There is an outline all round the shaded circle, inside the white ring. The front of the base of the neck is cut right off by the edge of the shaded circle. There are a number of strong, scratchy, oblique lines of shading on the forehead, cheek-bone, chin, and front of the neck, and most of these are drawn quite independently of the dotted lines, instead of being continuations of them. They quite spoil the face. The profile of the forehead shows a strongly-marked projecting angle, at the front of the eyebrow, instead of a smooth, rounded curve, and the front of the eyebrow turns upwards. The band of the coronet, at the back of the neck, is hardly $\frac{1}{4}$ mm. wide. It is a plain, single band, with dots along it, and no raised, rounded edges. The band which ties the chignon is also single, with some small lines of shading across it; it is broader than the band of the coronet. At the top of the stamp, above the SC of SCOTIA, the two apples are so curiously drawn, that they closely resemble the numerals 106, in rustic type. The first two pearls on the top of the coronet are practically invisible, and the third from the front is very shadowy. The other pearls, in the body of the coronet, are not to be seen. There is an outline all round the portrait, both front and back. The mouth is shut, and has a sneering expression; the lower lip is pointed, instead of rounded, and projects as far as the upper lip. The forward curl of the side of the nostril is a single, hooked line. There is a very easy test for the lowest value, as it is labelled ONE CENTS, without any stop. The following are the colours of the different values: 1 c., grey-black, instead of richer full black; 2 c., very bright lilac-rose, instead of a rather cold red-lilac; 5 c., nearer to indigo than to Prussian blue, with the face of the paper strongly blued.

Second Forgery.

This does not need an elaborate description, as it is decidedly poor, and not likely to deceive. Very coarsely lithographed, on stout, very yellowish-white wove paper; perforated 13. The lines of the shading in the central circle, like all the other lines, are coarse, and very little darker in one part than in another. These said lines are not properly graduated in length, so that the white ring round the circle is not equally wide all the way round. The front of the base of the neck comes to the very edge of the shaded lines. The front of the neck and base of the chin are very darkly shaded, but the lines all run the same way; the horizontal lines which ought to cross the others being absent. The mouth is *almost* shut, the lips level with each other, and the expression rather contemptuous. The forward curl of the side of the nostril is formed by one line or hook. The front pearl on the top of the coronet is invisible, and the three sets of two pearls on the body of the coronet cannot be distinguished. There is a distinct, dark outline to the front of the nose and forehead.

Third Forgery.

Lithographed, rather better than the last, on *very* white paper, wove, thin, and rather hard; perforated 12 $\frac{3}{4}$. The lines of shading in the central circle are more like the genuine, and darker at the back than in the front; but there is a thin outline joining all their ends together. The

mouth is shut, and the corner pointing downwards. The forward curl of the side of the nostril is a hooked line, as in the other forgeries. The front pearl on the coronet is almost invisible, but the last one is not at all hidden by the hair, and the three sets of two pearls on the body of the coronet cannot be distinguished. There is a dark outline to the front of the nose and forehead. The lines are tolerably well copied as to position, though the execution is execrable.

POSTMARKS.

Genuine.—A large oval, formed by parallel bars, containing numerals. Sometimes only a pen-stroke is found.

First Forgery.—Uncancelled. Also an imitation of the genuine postmark.

Second Forgery.—62.

Third Forgery.—42, without numerals.

Same Issue. 8½, 10, 12½ Cents.

Yellowish wove paper, perforated 12.

White wove paper, perforated 12.

Genuine.

Beautifully engraved in *taille-douce*; two varieties of paper, perforated 12, as above. The pupils of the eyes can be distinctly seen, as still darker spots upon the dark iris of each eye. The eyebrows curve well down, and their outer ends are rather light. The dots forming the shading on the forehead, one cheek, half the neck, and one shoulder, if examined through the microscope, will be seen to be almost all slightly oblong, and not circular. There is a test in the necklace, in which the genuine differs from all the forgeries, but it is not very easy to see. On the right side of the neck [left side of the stamp] there appear, at first sight, to be two parallel rows of pearls; but when closely examined, it will be seen that, rather more than half-way along it, between the back of the neck and the breast, there is a slightly oval ornament, consisting of one pearl, surrounded by seven others. The eighth pearl from the back, in the top row, and the tenth in the bottom row, both form parts of this ornament. The inner edge of the white oval ring which surrounds the portrait is not outlined in any way, and the lowest part of the inner edge of this white ring is simply defined by the dots which form the shading of the breast and shoulders. In this white ring there are two parallel dark lines, running along the upper half of the ring. The parting of the hair is very distinct, and the sharp point of it comes up exactly to the centre of one of the pearls on the coronet. There are about twenty-nine of these pearls in the upper row of the coronet, and the same number in the lower row. The vertical lines of shading on the NOVA SCOTIA label in the lower values, and above and below the said label in the 12½ cents, gauge seven to the millimetre. The groundwork of the central medallion, behind the portrait, is composed of very fine horizontal lines, crossed by oblique lines, running down from right to left. The ink stands out very slightly from the surface of the paper.

First Forgery.

Rather poorly lithographed, on fairly stout, very yellowish wove paper, pin-perforated 12½ and 13. The pupil of each eye cannot be distinguished from the iris. The dots on the forehead, one cheek and shoulder, are nearly all circular and irregular. The necklace is badly drawn, and the

pearls are hardly distinguishable from one another; there is no oval pearl-ornament in it. There is *one* dark line along the upper half of the white oval ring, surrounding the portrait. The parting of the hair is not very distinct; the point of it appears to come to the right of the centre of the pearl above it in the coronet. There are about twenty-six pearls in the upper row, and the same number in the lower row. The vertical lines of shading in the NOVA SCOTIA label are irregular, gauging from six to eight in the millimetre, according to where they are measured. The groundwork of the central medallion is coarse, and is formed by horizontal lines, crossed by oblique lines, running down from left to right, and from right to left. The ink does not, of course, stand out at all from the surface of the paper.

Second Forgery.

This is exceedingly good. Finely engraved in *taille-douce*, on rather thin, yellowish wove paper, nicely perforated 14. The iris of each eye, in this counterfeit, is very light, making the pupils *too* prominent. There are hardly any dots at all on the portrait, except a few on one part of the forehead, the shading consisting partly of unbroken lines, and partly of rows of hyphens, or short dashes. There is no pearl ornament half-way along the side of the necklace, and the upper row, on the left side of the neck (right side of the stamp) shows only four pearls. The parting of the hair is indistinct, and quite on one side, instead of being central. There are about twenty-three pearls in the upper row, on the coronet, and seventeen, with dim indications of several others, in the lower row. The vertical lines of shading on the NOVA SCOTIA label gauge $6\frac{1}{2}$ to the millimetre. There are only horizontal lines in the background, behind the portrait. I have only the $8\frac{1}{2}$ cents of this counterfeit.

Third Forgery.

This is not so good as the last. Engraved in *taille-douce*, on stout, white and greyish-white wove paper, nicely perforated 11 $\frac{1}{2}$. The pupil of the right eye (left side of the stamp) is not very distinct, and the iris of the left eye is part of an *oval*, instead of part of a circle. The outer end of the left eyebrow is too thick and heavy. The dots of shading on the portrait are very small and circular. There is no pearl-ornament in the side of the necklace. The easiest test for this counterfeit is the bottom of the white oval ring. Its inner edge is outlined, by two parallel dark lines, from above the G of EIGHT, to above the N of CENTS, and above this double outline there is a curved white band, across the bust, from shoulder to shoulder. Along the upper part of the white oval ring there is *one* dark line; it is much too short, and does not extend much further than the length of the name-label. The parting of the hair is very like the genuine, but the sharp point of it comes between two pearls, instead of to the centre of a pearl. There are about twenty-three pearls in the upper row, on the coronet, and about twenty in the lower row. The vertical lines of shading in the NOVA SCOTIA label are coarse, and only gauge about five to the millimetre. The groundwork of the central medallion is of horizontal lines only. The ink stands out too prominently from the surface of the paper, especially in the name. I have all three values of this counterfeit.

Fourth Forgery.

Finely engraved in *taille-douce*, on stout, yellowish wove paper, nicely perforated 14. I think this counterfeit is the best of the lot. I have only the 12 $\frac{1}{2}$ cents. The eyebrows are thickest and darkest in the centre, instead of at the inner ends. The shading of the portrait has all the

dotted parts composed of distinct hyphens or dashes, much longer than those of the genuine. There is no pearl-ornament in the side of the necklace. The parting of the hair is very like the genuine, but its sharp point comes exactly between two pearls. There are twenty-two pearls in the top row, on the coronet, and nineteen in the lower row. The seventh pearl from the right, in the top row, is hardly visible. The vertical lines of shading, above and below the NOVA SCOTIA label, are very fine, and gauge eight to the millimetre. The value-label, at the bottom of the stamp, is not solid, but composed of crossed, vertical and horizontal lines. The ink stands out more than in the genuine, and is a very intense black.

POSTMARKS.

Genuine.—As before.

First Forgery.—62. Also an oval of parallel lines, containing something unreadable.

Second Forgery.—An imitation of the genuine cancellation, struck *very faintly*.

Third Forgery.—Uncancelled.

Fourth Forgery.—Uncancelled.

The first forgery is very old; the second came to me shortly before the publication of my second edition; and the third and fourth forgeries are new to me (1905).

OLDENBURG.

I take the values in ascending order, though the $\frac{1}{3}$ silbergroschen was not issued until some three years after the $\frac{1}{10}$ thaler, etc.

Issue of February 1, 1853. $\frac{1}{3}$ Silbergroschen (4 Schwaren), black on green.

Genuine.

(1 type.)

This is the square stamp, of similar design to the $\frac{1}{30}$, $\frac{1}{15}$, and $\frac{1}{10}$ thaler, hereafter described.

Engraved on stone, in black, on soft, green wove paper, tolerably thick. There is only one type of this value. The mantle behind the arms is knotted up without tassels. The cross on the top of the crown is partly obliterated by the thin, inner line of the top frame, which passes right across it. The pointed bottom of the central shield cuts into the name-scroll below it, exactly over the centre of the N of OLDENBURG. There is no stop after this word. The colour is yellow-green.

First Forgery.

Lithographed, on thin, rather hard wove paper. The cords which knot up the mantle show two tassels each side. The thin, inner line of the top frame passes quite clear of the cross on the top of the crown. The pointed bottom of the central shield does not cut into the upper outline of the name-scroll at all. There is a stop after OLDENBURG. The colour is a very blue-green.

Second Forgery.

Electrotyped, on medium, rather hard, *very* coarsely-wove green paper, very much the same yellow-green tint as that of the genuine. The whole impression is very heavy, thick, and fat. The mantle is knotted up without tassels, and the cross on the crown is partly obliterated by the outline above it, as in the genuine. The pointed bottom of the central shield does *not* cut into the name-scroll below it. There is no stop after OLDENBURG. If it were not for the coarseness of the impression, this would be a very much more dangerous counterfeit than the one just described.

Third Forgery.

This looks excellent. Very nicely lithographed, on medium, rather hard, yellow-green wove paper. There are two short lines close to each of the knots in the mantle, probably representing ends of cords. The pointed bottom of the central shield does not touch the OLDENBURG scroll, and is exactly above the *last* stroke of the N. The OLDENBURG scroll is straight. I think this forgery might easily take in an ordinary amateur.

POSTMARKS.

Genuine.—29, 71.

First Forgery.—71.

Second Forgery.—A pen-and-ink cross; also a ruled black bar; also uncanceled.

Third Forgery.—A ruled black bar.

Issue of January 5, 1852. $\frac{1}{2}$ Thaler, blue.

Of this stamp there are three types:—

In type I., the bottom point of the central shield is above the first stroke of the N of OLDENBURG, and the hollow place in the left lower corner of the shield is about $\frac{1}{2}$ mm. from the bottom of the H of THALER.

In type II., the hollow place in the shield is pointed, and touches the H.

In type III., the bottom point of the shield comes down to, and touches the centre of the N of OLDENBURG. The letters of THALER are thicker, and there is a cross-bar on the top of the A. This type is rather wider than the first two; measuring $20\frac{1}{4} \times 18$ mm., instead of $20\frac{1}{4} \times 17\frac{1}{2}$ mm.

Genuine.

(3 types.)

Engraved on stone, in black, on blue wove paper, rather thicker than that of the $\frac{1}{2}$ SGR. In types I. and II., the bottom point of the central shield only *just* cuts into the outline of the name-label, above the first stroke of the N of OLDENBURG, and does not touch the U. In type III., the bottom point of the shield cuts far into the outline of the name-label below it, exactly over the centre of the N of OLDENBURG, and touches the N. The cross on the top of the crown is a good deal nearer to the inner line of the top frame in types I. and II., than in type III., but not so near as in

the forgeries. The following points are common to all the types: There is no stop after OLDENBURG; there is a hollowed-out portion of the

shield coming just under the beginning of the R of THALER; the I of I SGR. is almost exactly horizontal; the name-scroll is at some considerable distance from the thin, inner outline of the bottom frame, showing some distinct scroll-work between the label and the frame.

First Forgery.

Lithographed, on thin, hard wove paper. There is a very thin stroke across the top of the A of THALER, very different from the short, fat stroke of the genuine first type. The point of the central shield does not cut into, or even touch, the top outline of the name-scroll, and is above the centre of the N of OLDENBURG. There is a stop after this word. The cross on the crown is *very* close to the thin outline of the frame above it. The hollowed-out portion of the central shield comes exactly between the E and R of THALER. The I of I SGR. stands upwards to the left, so as almost to point to the o of $\frac{1}{30}$. The name-scroll is very close to the bottom of the stamp, so that only some very indistinct marks and blotches are to be seen between it and the bottom frame.

Second Forgery.

Typographed (?), on thick, very rough wove paper. The A of THALER has a very broad, flat head, without cross-stroke. The bottom point of the central shield does not touch the OLDENBURG scroll, and the said point is above the *centre* of the N. The hollowed-out portion of the shield comes between the E and R of THALER; rather nearer to the E. The I of I SGR., as the stamp stands upright, slopes *very* much down to the left. The OLDENBURG scroll seems to very nearly touch the outline of the frame below it. This forgery is rather indistinct; and the black ink hardly shows on the *very* dark blue paper.

POSTMARKS.

Genuine.—As in the $\frac{1}{2}$ groschen.

First Forgery.—Ditto.

Second Forgery.—29.

Same Issue. $\frac{1}{2}$ Thaler, rose.

(3 (4?) types.)

Westoby's book, *The Adhesive Stamps of Europe*, gives four types of this stamp, two of them being retouches. My publisher's catalogue gives three types, his third type being one of Westoby's retouches. The following are the three types of the catalogue:—

Type I. The H of THALER is well above the indentation in the shield.

Type II. The H of THALER almost touches the indentation in the shield.

Type III. Like Type II., but the bottom of the mantle, below the shield of arms, which, in the other types, shows the four black spots of ermine on an unshaded ground, has tiny, short vertical lines of shading above, below, and between the said spots.

I do not possess Type I., but the following description, from Types II. and III., will probably suffice for the detection of any forgeries.

Genuine.

Engraved on stone, in black, on soft, rose wove paper. There is no stop after OLDENBURG; the 1 of $\frac{1}{2}$ touches the bottom edge of the mantle above it; the letters GR. of the inscription $4\frac{1}{2}$ GR. do not touch each other. The fraction-line of $\frac{1}{2}$ is very short, so that its ends do not anything like touch either boundary-line of the containing-scroll. The orb, at the top of the crown, on which the little cross stands, is very small, with a little shading on it; but the shading does not form a cross on the face of the orb itself. The letters of THALER are particularly fat. The scroll containing OLDENBURG curves downwards in the centre, so as to go tolerably near the bottom line. The colour is a chalky, dull pink.

First Forgery.

Lithographed, on thin, poor paper. The tops of the letters HAL of THALER do not show any cross-strokes. There is a stop after OLDENBURG; the 1 of $\frac{1}{2}$ is some little distance below the bottom of the mantle; the letters GR. of the left-hand inscription touch each other at the bottom. The fraction-line of $\frac{1}{2}$ is so long as to go completely across the label, and touches the outline on both sides. The orb on the crown is much larger than in the genuine, and is so shaded as to show on its face a light cross on a dark ground. (Of course it will be understood that this is in addition to the cross which stands on the top of the orb.) The colour of the paper is a pale, washed-out sort of pink, with a bluish tinge.

Second Forgery.

This is an abominable production, but I thought I might as well mention it. Very badly lithographed, on pink wove paper, much the same shade as the genuine, but of a very coarse grain. The letters of THALER are tall and thin; the 1 of $\frac{1}{2}$ does not touch the mantle above it; the cross on the top of the crown is of solid black, instead of having merely a black outline. The scroll containing OLDENBURG is straight, instead of curving downwards in the middle.

POSTMARKS.

Genuine.—As in the $\frac{1}{2}$ groschen.

First Forgery.—Ditto.

Second Forgery.—1.

Same Issue. $\frac{1}{16}$ Thaler, black on yellow.

(1 type.)

Genuine.

Engraved on stone, in black, on yellow wove paper. There is a stroke across the A of THALER. There is a very fine point to the bottom of the large shield, and it touches the outline of the scroll, just above the centre of the N of OLDENBURG. The fraction-line of $\frac{1}{16}$, in the left-hand inscription, touches the 1, but not the 5; the top of this line touches the border, but the bottom of it is at some little distance from the opposite border of the scroll. The head of the 1 of this fraction does not touch the border of the scroll. The letters GR of this same inscription do not touch each other. The hollowed-out portion of the shield, under the letters ER of THALER, is *very* much wider than the similar, hollowed-out portion under the beginning of the H of that word. There is no shading at the top of the scroll containing 3 SGR. The letters of THALER do not touch each other at the bottom. The shading in the background, behind the

whole design, is very light ; it does not reach up to the tops of the side value-labels ; and under the OLDENBURG label there is no shading, but only some very finely-outlined scrolls. There is a stop after the name in this value.

First Forgery.

Lithographed, on thin, yellow wove paper. The bottom point of the central shield is rather blunt. In most copies the fraction-line of $\frac{1}{2}$ touches both the 1 and the 5, and the top and bottom of this line are at equal distances from the outlines of the containing-scroll. The head of the 1 of $\frac{1}{2}$ touches the outline of the scroll, and the letters GR in the same scroll touch each other at the bottom. The hollowed-out part of the shield, under the letters ER or THALER, is only a *very* little wider than the similar, hollowed-out part, under the beginning of the H of that word. The top end of the 3 SGR. scroll is lightly shaded. Most of the letters of THALER touch each other at the bottom. The shading in the background, behind the whole design, is much too dark ; it reaches up almost as high as the level of the centre of the crown. Under the OLDENBURG label there is a good deal of dark shading.

Second Forgery.

Rather coarsely lithographed, on thin, primrose-yellow wove paper. There is no stroke across the top of the A of THALER. The bottom point of the large shield is fairly sharp, but it does not anything like touch the upper outline of the OLDENBURG scroll. The fraction-line of $\frac{1}{2}$ is very short ; it does not touch either the 1 or the 5, or the top or bottom outline of the label. Both hollowed-out portions of the base of the shield are of the same size. The letters HAL of THALER are joined together at the bottom. There is no stop after OLDENBURG, and the G is jammed close against the right-hand end of the label, touching it with its tail.

POSTMARKS.

Genuine.—As in the $\frac{1}{3}$ groschen.

First Forgery.—Ditto.

Second Forgery.—29.

Issue of July, 1859. $\frac{1}{2}$ Groschen, black on green.

This is the same type as the 1 groschen, illustrated below.

Genuine.

Engraved on stone, as before, in black, on green paper, wove and stout. The tail of the G does not touch the R of GROSCHEN, the L of DRITTEL is almost upright, and the ends of the label are shaded, so as to partly cover the E of EIN, and the EN of GROSCHEN. The lion in the shield has four legs, a long, upward-curling tail, and a peculiar, square face, without any features. There is a small spot at the left edge of the right-hand oval, and another at the right edge of the left-hand oval ; but these are not always visible. The two hanging forks of the left-hand end of the OLDENBURG scroll are a good distance above the left-hand oval. The two ends of the top part of this scroll are shaded as far as the L of OLDENBURG on the left, and as far as the R on the right. The fraction-line of the $\frac{1}{2}$ on each side is nearly as thick as the 1, and does not touch either the 1 or the 3. Each little 3 of the fractions is very like an 8, with a portion of the left side removed. The thin, inner line of the label, below EIN DRITTEL GROSCHEN, extends right across the label ;

and the last pearl on the left side is exactly below the R of DRITTEL. There are thirteen vertical lines of shading at the left-hand end of the OLDENBURG scroll, as far as the O; the thirteenth line touches the O. There are twelve similar lines at the right-hand end of the scroll, as far as the G; the twelfth line does not touch the G. There are eight pearls along the profile of each of the outer arches of the crown; those nearest to the orb are very difficult to make out. The orb itself is a transverse oval, with a sort of three-armed, inverted cross on its face, like a \perp . The centre of the cross on the top of the orb (not to be confounded with the cross on the *face* of the orb) comes exactly under the first stroke of the N of OLDENBURG; *i.e.*, if this stroke were prolonged downwards, it would pass through the centre of the cross. The bottom point of the central shield, if prolonged downwards, would cut into the centre of the top of the L of DRITTEL. The right upper compartment of the shield contains nineteen horizontal lines of shading, counting on the right; and the uppermost line is very short, not extending more than a quarter of the way across. The colour is a well-marked yellow-green. There are seven pearls along the bottom of the stamp, graduated in size, and arranged in a curve.

First Forgery.

Lithographed, on thin, coarsely-wove green paper. The tail of the G touches the R of GROSCHEN. The L of DRITTEL is *very* much sloped over to the right. There are only a few lines of shading at the ends of the bottom label, not covering any of the letters of the inscription. The lion's right fore-leg is a mere stump, his tail is simply a black lump on his back, and his face is oval, with a large and distinct black dot for features. There are no black spots in the side-ovals. The left fork of the left-hand end of the OLDENBURG scroll *almost* touches the outline of the oval beneath it. The two ends of the top part of this scroll are not much shaded, so that the shading does not trespass, at either end, on the letters of the name. The fraction-line of each $\frac{1}{3}$ is very thin, and touches the 3 in each case. The thin, inner line of the bottom scroll is broken away for a good part of its length, only showing under TTEL GRO of DRITTEL GROSCHEN. The last pearl on the left-hand side is exactly under the D of DRITTEL. There are parts of six vertical lines at the left-hand end of the OLDENBURG scroll, the nearest one being far from the O; and there are parts of nine similar lines at the other end of the label. The lower end of the tail of the G curls forward ridiculously to the right. The pearls along the top of the crown are the same in number as in the genuine, but much more distinct, and not graduated in size, as the genuine are. The orb is circular, and the upper arm of the cross on its face (which, as before, is like a block-letter \perp , placed upside-down) forms the lowest arm of the cross on the top of the orb. In the genuine there is a line of separation between them. The centre of this cross is under the *centre* of the N. The right upper compartment of the shield has either twenty or twenty-one horizontal lines in it. The top edge of the shield, which is almost straight in the genuine, is here *very* much curved or hollowed out. The colour is a very bluish green. There are seven complete pearls along the bottom of the stamp, with indications of four others.

Second Forgery.

Coarsely lithographed, in dark, greasy black, on dull, yellow-green wove paper, thick and hard. There are no dots in the side-ovals. The lion is like a giraffe, standing on his hind legs, with a star for a head. The 1 of each fraction touches the fraction-line, and the 3 does not look like an 8. The fraction-line on each side is placed too low down in the

oval. There are ten lines of shading in the left-hand end of the OLDENBURG scroll, as far as the O, and the tenth touches the O. There are seven similar lines at the other end of the scroll, as far as the G; and the seventh line touches the G. There is one very easy test, which will render further description unnecessary. There are *ten* pearls, of equal size, in a perfectly straight line, at the bottom of the stamp, instead of the seven graduated pearls, in a curved line, shown by the genuine.

Third Forgery.

Nicely lithographed, on medium, yellow-green wove paper, showing very coarse graining in its substance, when held up to the light. The 1. of DRITTEL is absolutely upright. The lion is nicely done; but the vertical line, which in the genuine and the other forgeries simply divides the two top compartments of the shield, is, in this counterfeit, continued down to the bottom point of the shield, thus passing centrally through the diamond-shaped compartment, and cutting the lion in two. The dots in the ovals are absent. The fraction-lines are nicely done, but much thinner than the 1. The foot of the right-hand 1 *just* touches the fraction-line. Both fractions are considerably larger than the genuine, and there is no mistaking either 3 for an 8. There are only eleven vertical lines of shading in the left side of the OLDENBURG scroll, as far as the O, and the eleventh line hardly touches the O. There are nine similar lines on the other side, as far as the G, the ninth line being at some distance to the right of the G. There are nine distinct pearls along the profile of the left-hand arch of the crown, and seven similar ones along the profile of the right-hand arch. The orb and cross are fairly copied; but a line drawn down through the first stroke of the N of OLDENBURG would pass to the left of the centre of the cross on the orb. There are about twenty-one horizontal lines of shading in the upper, right-hand compartment of the shield; but they are very fine and faint, so that it is almost impossible to count them. There are seven pearls at the bottom of the stamp, arranged in a curve, and graduated in size; but they are much too distinct, especially the central one, which is almost invisible in the genuine. The easiest test for this stamp is the vertical line cutting through the lion. It is not at all a bad-looking forgery, and much better than any of the counterfeits already described.

Fourth Forgery.

Typographed, in greyish-black, on dull, coarse-grained, yellow-green wove paper. The typographic mode of printing has sunk all the black lines distinctly into the paper. The left-hand end of the lower label has parts of two vertical lines before the E of EIN; and at the right-hand end, there is only one line after the N of GROSCHEN. There are no others besides these. The lion's face looks like the head of a cock, with an Indian's feather-crown on his head. There are only three legs: they are enormously thick, and one of the hind legs seems to be jointed *forwards*, like an elephant's. The longer of the two forked ends of the left, hanging end of the OLDENBURG scroll *almost* touches the outline of the oval containing $\frac{1}{3}$; and the similar end of the right-hand scroll almost touches the right-hand oval in the same way. There are no dots in the ovals. No part of the word OLDENBURG is shaded. The fraction-line of the 1 of $\frac{1}{3}$ on each side is much thinner than the 1, and each 3 is an unmistakeable 3. There are thirteen lines of shading at the left-hand end of the OLDENBURG-scroll, but they do not go near the O, and the three inner ones are all too short. There are sixteen similar lines at the right-hand end of the said scroll, the nearest being a long way to the

right of the G. The pearls on the outer arches of the crown are merged into the outline ; so that only five can be made out on the left-hand arch, and four on the other. The orb, and the lowest arm of the cross resting on it, form together an inverted peg-top ; and there is merely a broad, horizontal band across the centre of the face of the orb, instead of the sort of three-armed cross of the genuine, which is like a **1**, placed upside down. The centre of the cross on the top of the orb is under the *centre* of the N of OLDENBURG. The bottom point of the shield, if prolonged downwards, would cut into the E of DRITTEL, instead of the head of the L. The right upper compartment of the shield contains sixteen horizontal lines, counting on the right side. There are seven pearls at the bottom of the stamp, but they are all almost exactly the same size.

POSTMARKS.

Genuine.—As in the first issue.

First Forgery.—71.

Second Forgery.—1, 29.

Third Forgery.—71.

Fourth Forgery.—29.

Same Issue. 1 Groschen, black on blue.

Genuine.

Engraved as before, in black, on stout, dull blue wove paper. The letters GR of GROSCHEN do not touch each other at the bottom, and the O is small, and very nearly upright. The lion in the shield has four legs, a long, upward-curling tail, a peculiar, square face, without any features at all, and his crown appears not to touch his head, but to be suspended above it. There is a small black spot in each of the little side-ovals, containing the figure of value ; the right-hand oval has the spot in the centre of its left-hand rim, and the left-hand oval has the spot in the centre of its right-hand rim. These two spots are probably the engraver's secret marks. The two points of the left-hand end of the OLDENBURG scroll are a good distance above the little oval which contains the figure of value. The orb and cross stand out well above the outline of the crown ; and the top of the cross is cut off obliquely, sloping irregularly down from left to right, the left top corner being longer and sharper than the other. The rounded sides and lower point of the shield are a good distance from the outline of the central oval. This said lower point is very sharp ; and, if prolonged downwards, it would pass almost centrally through the O of GROSCHEN. There are twelve vertical lines of shading in the left-hand end of the OLDENBURG-scroll as far as the O, the twelfth line touching the O. There are ten lines at the other end of the scroll, as far as the G ; and the tenth line *just* touches the top corner of that letter. (It will be understood that both in this and the other values, there are many more lines, besides those enumerated ; but I have only counted those between the name and the ends of the scroll, and not those which are drawn among the letters of the name.) There are eight pearls on each of the outer arches of the crown, as in the $\frac{1}{2}$ groschen. The centre of the cross on the orb comes under the last stroke of the N of OLDENBURG. The right upper compartment of the shield contains seventeen horizontal lines of shading, counting on the right side. The colour is a peculiar, pale, dead blue. There are six graduated pearls in a curve, below the value-scroll, with indications of five others.

First Forgery.

Lithographed on thin, hard, chalky, greenish-blue wove paper. The end of the tail of the G of GROSCHEN curls out so as to touch the bottom of the R, and the O leans over considerably to the right. The lion has only three legs; his tail is a misshapen bunch upon his back, not extending higher up than level with the shoulders; the face is oval, with a large black spot in the very centre of it; his crown rests on his head. The little side-ovals containing the figures of value do not show the black spots of the genuine. The two points of the hanging end, at the left-hand side of the OLDENBURG scroll, are very close to the outline of the small oval beneath; indeed, the outer point *almost* touches the oval. The orb does not stand out well from the crown; quite half of it being below the outline of the crown. The top of the cross on the orb is cut off level. The rounded sides and lower point of the shield very nearly touch the outline of the central oval. The point is not particularly sharp, and if prolonged downwards, it would cut into the left side of the O of GROSCHEN, instead of centrally through it. There are only six broken, vertical lines before the O of OLDENBURG, the nearest being a long way from the O; and there are eight lines, most of them broken, at the other end of the scroll, the nearest being a long way from the G. There are no other lines across the letters. There are nine pearls along the top of the left arch of the crown, and eight along the right arch; they are easy to see. The cross on the top of the orb is under the *centre* of the N of OLDENBURG. The right top compartment of the shield contains twenty-one horizontal lines of shading. There are seven graduated pearls, in a curve, below the value-label, with indications of three others.

Second Forgery.

Coarsely lithographed, on thin, *very* dark blue paper, even darker than that of the Brunswick 2 sgr., black on blue. The blue is so deep, that it is impossible to make out the details of the design, especially as the surface of the paper is very rough. The cross-bar of the tail of the G of GROSCHEN is placed much too high up, giving the letter a very absurd look. The O slopes over to the *left*. The details of the shield are entirely undecipherable. There are no dots in the side-ovals. The lower point of the shield (which is blunt), if prolonged downwards, would pass almost clear to the left of the R of GROSCHEN, instead of through the O. This can be clearly seen, and is an easy test. I cannot count the vertical lines of shading at the two ends of the OLDENBURG scroll; but they do not come near to the O or the G, and there are no lines across any of the letters. The pearls on the arches of the crown are undecipherable. The cross on the orb, the arms of which seem to be very narrow, instead of splayed, comes rather to the right of the first stroke of the N of OLDENBURG. There *seem* to be about six pearls below the value-label, and they are in a straight line, and appear to be equal in size. It will be noticed, from the description, that this forgery is very inferior, by reason of its illegibility. The *very* dark blue paper will also condemn it at once.

POSTMARKS.

Genuine.—As in the $\frac{1}{3}$ groschen.

First Forgery.—71.

Second Forgery.—1, 29.

Same Issue. 2 Groschen, black on pink, black on rose.

Genuine.

Engraved as before, in black, on stout, dull pink or rose wove paper. The letters GR of GROSCHEN do not touch each other at the bottom, and the O is small, and slopes a very little over to the left. The lion in the shield has four distinct legs; his face is in profile to the left, showing mouth and tiny eye. There is, as before, a black spot in each of the little side-ovals; but, in this value, the dots are *inside* the ovals, instead of being just on the outline. The forked, left-hand hanging end of the OLDENBURG scroll is a *long* way above the top of the left-hand oval. The orb stands well above the crown, hardly touching it; and the cross is *very* small, compared with the size of the orb on which it rests. A straight-edge, laid along the centre of the oblique stroke of the Z of ZWEI, would pass through the U of OLDENBURG. There are twelve lines of shading at the left-hand end of the OLDENBURG scroll as far as the O; and the twelfth does not touch the O. There are ten similar lines at the other end of the oval as far as the G; and the tenth does not touch the G, except in heavily-printed copies, when the said line *just* grazes the end of the cross-bar on the tail of the G. I can only discern six graduated pearls along the top of each of the side-arches of the crown. The centre of the cross on the top of the orb is slightly to the left of the centre of the N of OLDENBURG. The arms of the cross are wedge-shaped, as in all the other genuine stamps; and the outer end of the left-hand arm, in all my copies, is incomplete, *i.e.*, the little vertical line which ought to form the left-hand end is absent. The rather blunt bottom point of the shield, if prolonged downwards, would pass centrally through the thick, vertical stroke of the R of GROSCHEN. The right upper compartment of the shield contains about twenty-two horizontal lines, but they are difficult to count. There are eight graduated pearls, in a curve, below the value-label; but the one under the G of GROSCHEN is often *very* difficult to see.

First Forgery.

Lithographed, on bluish-pink wove paper, thin, and hard. The tail of the G of GROSCHEN curls down and forward, so as to touch the bottom of the R; and the O is large, and slants slightly to the right. The lion has three stumpy legs, and the very indistinct remains of a fourth; he has an oval full-face, with a large, distinct black dot in the very centre of it, as in the forged 1 groschen. There is no black spot in either of the side-ovals. The hanging end of the OLDENBURG scroll *almost* touches the top of the left-hand side-oval. The orb does not stand out well from the crown, more than half of it being below the top outline of the crown; and the cross looks considerably bigger than the orb upon which it stands. A straight-edge, laid along the centre of the oblique stroke of the Z of ZWEI, would cut into the D of OLDENBURG. There are two complete lines and three broken ones at the left-hand end of the OLDENBURG scroll, far from the O; and four complete lines and three broken ones at the other end of the scroll, far from the G, which has a tail just like that of the G of GROSCHEN. There are nine pearls along the left-hand arch of the crown, and about ten on the right-hand arch; all being about the same size. The centre of the cross on the top of the crown is slightly to the *right* of the centre of the N of OLDENBURG; the outline of the left-hand arm of the cross is complete, and the top of the cross, which, in the genuine, slopes very slightly down to the right, is, in this forgery, cut off sloping decidedly down to the left. The bottom point of the shield, if prolonged downwards, would pass centrally through the O of GROSCHEN,

instead of through the R. The right upper compartment of the shield contains twenty-two horizontal lines of shading ; and they are coarser than in the genuine. There are six perfect, graduated pearls, in a curve, below the value-label, with parts or indications of about four others ; the one under the G of GROSCHEN is quite distinct.

Second Forgery.

This is not at all a bad-looking forgery. Lithographed, on wove paper, exactly the colour of some of the genuine ; but *very* thin and soft. In the word GROSCHEN, the top and bottom strokes of the R touch the G. The lion appears to have the (full) face of a woman, set in a large, light mane, with something like the Russian Imperial Crown on his head. There are no dots in the side-ovals. The orb has a black, horizontal line, and two square dots in it, instead of the **1**-shaped cross. The cross on the top of the orb comes under the first stroke of the N of OLDENBURG. It is a fair copy of the genuine, but too small. There are fifteen vertical lines at the left-hand end of the scroll, as far as the O of that word ; the fifteenth touches the O. There are eleven lines at the other end of the scroll, as far as the G ; the cross-stroke to the tail of the G just touches the eleventh line. There are about nine pearls along the left-hand arch of the crown, and seven along the right-hand arch, all of equal size. The right upper compartment of the shield contains nineteen horizontal lines, tolerably easy to count. There are six pearls, of almost equal size, in a straight line, under the value-label ; with what appears to be a black one, under the G of GROSCHEN.

Third Forgery.

Nicely lithographed, on medium, hard wove paper, the colour inclining very slightly towards magenta. The lion has a crown of three triangular points, very different from the genuine ; and his face is a human one, with three distinct dots to represent eyes and mouth. There are no dots in the side-ovals. The cross on the top of the orb is too large, the stretch of the arms being even wider than the diameter of the orb. There are eleven vertical lines in the left-hand end of the OLDENBURG scroll, as far as the O ; the eleventh touches the O. There are nine similar lines at the other end of the label ; the ninth touches the head and tail of the G. There are seven pearls along the top of the left-hand arch of the crown, and eight along the top of the right-hand arch ; all very nearly equal in size. The centre of the cross on the top of the orb is above the first stroke of the N of OLDENBURG. The upper outline of the top arm slopes down decidedly to the *left*. The outline of the left-hand end of the left arm is complete. The right upper compartment of the shield contains eighteen horizontal lines. There are eight very distinct pearls, all of very nearly the same size, below the value-label, and *almost* in a straight line.

Fourth Forgery.

Coarsely typographed, on thick, porous, exceedingly rough *granité* wove paper, full of coloured red fibres, like red blotting-paper. The lion has only one paw raised, instead of two, and the background behind him appears to be plain, instead of having horizontal lines of shading. In my single specimen he is nearly hidden by the postmark. There are no dots in the side-ovals. The cross on the top of the orb is set too much to the right, and the arms are straight, instead of wedge-shaped ; the right arm of the cross being too long, and extending far beyond the width of the orb. A straight-edge, laid along the centre of the oblique stroke

of the Z of ZWEI, would cut through the B of OLDENBURG. There are fourteen complete vertical lines, and one broken one, before the O of OLDENBURG; and about seven very imperfect ones at the other end of the scroll, after the G. The pearls on the arches of the crown are utterly undecipherable. The bottom point of the shield is very round, and, if prolonged downwards, it would pass *just* to the left of the R of GROSCHEN. There are *no* horizontal lines of shading in the right upper compartment of the shield. There are eight graduated pearls, in a curve, at the bottom of the stamp; the central ones are very much more easy to see than they are in the genuine. This is a very coarse forgery, and not likely to deceive.

POSTMARKS.

Genuine.—As before.

First Forgery.—71.

Second Forgery.—1.

Third Forgery.—71.

Fourth Forgery.—71.

Same Issue. 3 Groschen, yellow.

Genuine.

Engraved as before, in black, on stout, yellow wove paper. The letter D of DREI is curiously sloped at the bottom, and the I leans over *very* much to the right, so that it points directly towards the centre of the large shield. The letters GR of GROSCHEN do not touch each other at the bottom. The lion is the same as in the genuine 2 GROSCHEN. There is a small black dot in the centre of the left-hand edge of the right-hand oval, and another similar dot in the centre of the right-hand edge of the left-hand oval. The 3 in each oval is much more like an 8 than a 3. There are only seven pearls, in a curve, below the bottom label. The shading on the right-hand end of the said label covers the N and part of the E of GROSCHEN. The centre of the OLDENBURG scroll goes right up to the top of the stamp. The point at the bottom of the large shield is a long way from the bottom of the containing-oval. The second pearl from the left comes exactly under the I of DREI, and there is no pearl under the G of GROSCHEN. There are about thirteen vertical lines at the left-hand of the OLDENBURG scroll, as far as the O; but the lines at the outer end are very badly drawn, jumbled together, and difficult to count. There are eleven lines at the other end of the scroll, the eleventh line touching the top corner of the G. There are seven graduated pearls along the top of the left-hand arch of the crown, and six along the right-hand arch. The **L**-shaped mark on the face of the orb is imperfect in this stamp, as its upper transverse outline is absent. The lower arm of the cross appears to be almost entirely sunk into the substance of the orb. The left arm is wider than the width of the orb, but the right arm is not so wide as the width of the orb. The top arm is slightly to the left of the centre of the N of OLDENBURG. The bottom point of the shield is sharp; and, if prolonged downwards, it would pass between the letters GR of GROSCHEN. The right upper compartment of the shield contains nineteen exceedingly fine horizontal lines. The pearl below the R of GROSCHEN is faint. The seven pearls are graduated, and in a curve, as before.

First Forgery.

Lithographed, in very dark black, on thin, yellow wove paper. The D of DREI is of the usual shape, and the I is almost upright, and points to the cross in the left-hand bottom corner of the shield. The letters GR of

GROSCHEN touch each other at the bottom. The lion is the same as in the forged 2 GROSCHEN, with the large black spot in the centre of his face. There is no black spot in either of the side-ovals, and neither 3 could possibly be mistaken for an 8. There are six distinct, graduated pearls, and portions or indications of three others, below the bottom label. The shading in the right-hand end of this label does not come anywhere near the word GROSCHEN. The OLDENBURG scroll shows a wide space between its centre and the top of the stamp. The point at the bottom of the large shield *almost* touches the outline of the oval beneath it. The second pearl from the left comes under the space between DREI and GROSCHEN, and the third pearl comes exactly under the G of this latter word. There are parts of six broken lines at the left-hand end of the OLDENBURG scroll, a long way from the O; and four perfect lines, with four or five broken ones, at the other end of the scroll, a long way from the G. The tail of the said G curls forwards, like that of the G of GROSCHEN. There are nine pearls along the left-hand arch of the crown, and eight along the right-hand arch; they are all of equal size, and easy to count. The **L**-shaped mark on the face of the orb is complete. The shortness of the lower arm of the cross is here even exaggerated; so that the whole of the right arm rests absolutely upon the orb, and the left arm very nearly so. Both arms are free of the orb in the genuine. In this forgery, both arms are somewhat wider than the width of the orb. The top arm is slightly, but distinctly, to the *right* of the centre of the N of OLDENBURG. The bottom point of the shield *almost* touches the outline of the oval below it; and, if prolonged downwards, it would pass through the O of GROSCHEN. The right upper compartment of the shield contains twenty-one rather coarse, horizontal lines of shading. The pearl below the R of GROSCHEN is unshaded, but easy to see.

Second Forgery.

Very coarsely lithographed, on very thin wove paper, of a bright canary-yellow. The D of DREI is normal in shape; but my specimen lacks the top and bottom-strokes. The I of this word is almost upright, sloping over very slightly to the right. The lion appears to be the same as in the fourth forgery of the 2 GROSCHEN; indeed, this stamp closely resembles the said forgery in general appearance. There are no spots in the side-ovals. Each 3 is like a 3, and not an 8; the left-hand one leans over to the left, and seems to be larger than the other. There are eight pearls, in a straight line, below the bottom label, all unshaded, all distinct, and all nearly the same size. The shading in the upper and lower labels does not cover any of the letters. The point of the shield is rather blunt. There are two pearls under the G of GROSCHEN. There are fourteen lines to the left of the O of OLDENBURG, most of them broken; and eight lines to the right of the G, also partly broken, and none touching the G. The pearls along the arches of the crown are utterly undecipherable. The **L**-shaped mark on the face of the orb is entire; the cross has straight side-arms, and a stumpy, wedge-shaped top arm; and the right arm is wider than the width of the orb. The cross is set slightly to the left of the centre of the N of OLDENBURG. The right upper compartment of the shield is so very blotchy, that no lines can be counted in it. The pearl below the R of GROSCHEN is as distinct as all the rest. This counterfeit is not at all likely to deceive; it has a coarse, greasy look.

POSTMARKS.

Genuine.—As before.

First Forgery.—71.

Second Forgery.—1.

Issue of January, 1861.

The stamps of this issue are printed in colour, on white wove paper. The engravings of the $\frac{1}{4}$, 1, 2, and 3 silbergroschen of the last issue were made use of for this one, though, as Mr. Westoby points out, new transfers of some of the values must have been laid down, because there are some errors, which do not exist in the 1859 issue. For the new values of $\frac{1}{4}$ and $\frac{1}{2}$ sgr., new engravings, of course, were made. Westoby truly says: "The whole issue shows bad workmanship, both in laying down the transfers on the stones, and in the printing."

$\frac{1}{4}$ Groschen, orange-buff on white.

Genuine.

Lithographed in colour, on stout, hard, white wove paper. There are eight pearls on the left-hand arch of the crown, and apparently the same number on the right-hand arch. Each of the other arches rests upon a transverse row of three pearls. The lower inscription reads EIN VIERTEL GROSCHEN, and all the small letters of it are of the same size and height. The shading on the scrolls is generally faint; but it can be seen easily on the upper scroll as far as the space between OL, and on the other side as far as the B of OLDENBURG. The lower scroll shows some shading all over the EIN, and at the other end, as far as the C of GROSCHEN. The right-hand fork of the right-hand end of the lower scroll is a good deal broader than the left-hand fork of the same end; and this said right-hand fork *almost* touches the right-hand border of the stamp. The point at the bottom of the large shield is not *very* sharp, and it points towards the top of the L of VIERTEL, which is *very* much sloped over to the right. The O of OLDENBURG is quite upright. The right arm of the cross extends far beyond the width of the orb. The orb itself has quite three-quarters of its bulk above the top outline of the crown, and the cross stands almost centrally under the N of OLDENBURG. There are eight vertical lines at the left-hand of the OLDENBURG scroll, as far as the O, and eight also at the other end of the scroll, as far as the G, neither letter touching any one of these lines. Each of the letters O, B, U, R, and G has a vertical line cutting centrally through it. There are about sixteen horizontal lines in the right upper compartment of the shield, but they are very indistinct. The cross does not touch the white oval ring which surrounds the shield, crown, etc. All the values of this issue are *very* badly lithographed, and it is exceedingly difficult to make out the details.

First Forgery.

Lithographed; paper very much thinner than that of the genuine. There are only seven pearls on each of the outer arches of the crown, and the other two arches on each side of the central one have distinct pearls along them. The lower inscription reads EIN VIERTEL GROSCHEN, the letters ROSCHEN gradually increasing in height to the end of the word. The shading of the upper scroll is much too dark, and extends too far, leaving only the N of OLDENBURG free. The same is the case with the shading on the lower scroll, which leaves free only the letters TEL GR. The left-hand fork of the right-hand end of the lower scroll is a good deal broader than its fellow; and the said fellow is a long way from the right-hand edge of the stamp. The cross is exactly the width of the orb on which it rests. Almost the whole of the orb is included in

the outline of the crown, and the cross stands to the right of the centre of the N of OLDENBURG. There are only five vertical lines at the left-hand end of the OLDENBURG scroll, as far as the O, and seven at the other end of the scroll, after the G. There is *no* line passing through the centre of any of the letters of the above word, though one line passes a little to the right of the centre of the U. As to the other letters mentioned in the description of the genuine, two lines in this forgery pass through the sides of the O, one line through the right side of the B, with another cutting, but not passing through, the left side, two lines through the sides of the R, and one line through the right side of the G, with another cutting the top of it, and another grazing its left side. There are fourteen horizontal lines in the right top compartment of the shield, fairly distinct; indeed, all the details are clearer than in the genuine.

Second Forgery.

Very much better than the last, and decidedly dangerous. Lithographed; paper like that of the genuine. The arches of the crown are white, and do not show any pearls at all anywhere. The R of VIERTEL is malformed. The shading on the left-hand end of the OLDENBURG scroll hardly extends as far as the O; and there seems to be no shading at all at the other end of the scroll, which makes it look much too white. The shading at the right-hand end of the lower scroll only extends as far as the N, and the E before it is ridiculously too small. The point at the bottom of the shield is very sharp, and it points exactly centrally between the two words VIERTEL GROSCHEN. The L of VIERTEL is upright, and the O of OLDENBURG is very much sloped over to the right. I have lost the above forgery since the first edition of this book appeared, and consequently can give no further details of it.

Third Forgery.

Fairly lithographed, on mediuni, very yellowish-white wove paper. The colour is more an ochre than the genuine shade, which I have called "orange-buff." There are about five pearls on each of the side-arches of the crown; and each of the other arches (which also have pearls along them) rests, apparently, on *two* pearls, placed transversely, instead of three. The T of VIERTEL is too short at the bottom. The shading on the upper scroll does not extend beyond the O on the one side, and the space between RG on the other. In the lower scroll, the shading does not reach beyond the E of EIN and the end of the E of GROSCHEN. Both forks of both ends of the lower scroll are very sharp, instead of rounded. The bottom point of the shield is very blunt, almost in shadow, and if prolonged downwards, it would pass between VIERTEL and GROSCHEN, touching the G. The O of OLDENBURG slopes over very much to the left. The right arm of the cross is very short, so as to reach only half-way between the centre and right-hand outline of the orb; the left arm ends just level with the left-hand outline of the orb. The orb itself is dark nearly all over, instead of being very light; and the stem of the 1-shaped mark on it appears to be part of the lower arm of the cross, making the said lower arm look far too long. The arms are not wedge-shaped. The cross stands decidedly to the left of the centre of the N of OLDENBURG. There are nine lines before the O of this word, and seven at the other end of the scroll, after the G; the seventh line touches the tail of the G. From the O to the space between RG there are no lines whatever. This is an easy test. There are about fourteen horizontal lines in the right upper compartment of the shield, but they are very difficult to see. The top of the cross touches the inner

edge of the white oval ring, though there is a dark line separating them in the genuine. In each of the side-ovals, the fraction-line touches the 1, and the 4 has a closed top. In the genuine, the fraction-line does not touch the 1, and the 4 has an open top. The lion looks like a rampant giraffe, with a sort of star for a head. The easiest test for this forgery is that there are ten flattened pearls, in a straight line, at the bottom of the stamp. The genuine has *no* pearls.

Fourth Forgery.

Badly typographed, in very yellow buff, on medium, very hard, very rough white or greyish-white wove paper, showing coarse meshes. The details of the crown are totally undecipherable; all I can make out is that the three central arches rest on three white pearls, arranged in a *trefoil*-shape, instead of a straight, horizontal row. The tail of the N of EIN is much too long, and hangs down below the level of the other letters. The shading on the upper scroll is only at the two ends, leaving the whole of the name uncovered. In the lower scroll, the shading covers the whole of EIN, and the N of GROSCHEN. The outer forks of the said lower scroll are at some distance from the sides of the stamp. The point of the shield is tolerably sharp, and somewhat blurred; if prolonged downwards, it would pass between the E and L of VIERTEL. The L is perfectly upright. The O of OLDENBURG has an oblique line running through it, which is not in the genuine, or in any of the other forgeries. The orb appears to be a white blotch, and the cross is enormously large, in comparison with it. The said cross stands below the first stroke of the N of OLDENBURG. There are ten lines before the O, and six after the G. The lines in the right upper compartment of the shield are undecipherable. The lion looks like a leaping horse, with a circle, edge-wise, on the top of his head.

POSTMARKS.

Genuine.—As before.

First Forgery.—71.

Second Forgery.—71.

Third Forgery.—29.

Fourth Forgery.—1.

Same Issue. $\frac{1}{2}$ Groschen, yellow-brown.

Genuine.

Lithographed; paper as before. There are eight pearls on the left-hand arch of the crown, and ten pearls on the right-hand arch. The other three arches have no pearls along them, but each of them rests upon a transverse row of three pearls. The lion seems to have only three legs, but they are of the proper length. There is no white patch at the bottom point of the shield. The little white patches containing the figure of value, $\frac{1}{2}$, are slightly oval in shape; the fraction-line of the right-hand $\frac{1}{2}$ extends, in most copies, to the bottom of the oval. The right-hand half of the forked end of the bottom scroll, above the N of GROSCHEN, is much more sharply pointed than its fellow; and, in the forked end of the upper scroll above it, the half below G of OLDENBURG hangs a good deal lower than its fellow. There is a good space between the end of HALBER and the beginning of GROSCHEN. The side-arms of the cross extend only *very* slightly wider than the orb; and the orb itself has more than three-fourths of its body above the outline of the crown. The cross is

exactly central under the N of OLDENBURG. There are six lines before the O, and seven lines after the G, of this word. Of the other lines in the scroll, one cuts centrally through the L, two lines cut through the E, and one through the N. There are about fifteen horizontal lines in the right upper compartment of the shield. The bottom point of the shield is not very sharp; and, if prolonged downwards, it would pass through the R of HALBER. The whole of the lower label is covered with vertical lines, except the portion behind BER GR of EIN HALBER GROSCHEN. The left upper compartment of the shield contains two horizontal bars, shaded with vertical lines; these bars are on a dotted groundwork, and the dots can be seen between, above, and below the bars.

First Forgery.

Lithographed, on white wove paper, a good deal thinner than that of the genuine. There are only seven pearls on each of the outer arches of the crown; the centre arch is badly drawn, with a sort of shield-shaped thing in it; and the other two remaining arches have pearls on them, instead of jewels. The lion shows the stumps of four legs. There is a white patch, in most of the forgeries, at the bottom point of the shield. The white patches, containing the fraction-value, $\frac{1}{2}$, are almost circular; the fraction-line of the right-hand $\frac{1}{2}$ does not touch the bottom of the circle. Both forks of the right-hand end of the bottom scroll are rounded, and both forks of the right-hand end of the top scroll hang quite level. The R of HALBER *almost* touches the G of GROSCHEN. The final letters, EN, of GROSCHEN are quite illegible. The cross is very like the genuine in this forgery; but it stands to the right of the centre of the N of OLDENBURG, and the orb hardly shows above the outline of the top of the crown. There are four coarse lines before the O, and seven after the G. The tail of the G curls forwards, and touches the seventh line. Of the other lines in the scroll, two cut through the L, one through the E, and none through the N. There are fifteen lines in the right upper compartment of the shield. The bottom point of the shield is *very* sharp. The whole of the lower label is covered with lines, except the letters BER G; that is to say, one more letter is covered here than in the genuine. The dots in the groundwork of the left upper compartment of the shield are visible above the top horizontal bar, and sometimes below the lower bar; but there are none between the bars.

Second Forgery.

Lithographed, on medium, hard, very white wove paper. I think I may dismiss this with a short description, as it is very poor. The upper and lower scrolls are free from shading, except at their ends. The lion is on a white ground, instead of a shaded one. The bars in the left top compartment are solid, instead of being shaded with vertical lines; and the groundwork behind them is white, instead of dotted. The left fraction-line is absent, and the right one a mere stump. The 2 of each fraction is much larger than the 1. The arches of the crown rest on strawberry-leaves or trefoils, instead of pearls. There are five pearls along the left-hand arch, and six on the right-hand one.

POSTMARKS.

Genuine.—As before.

First Forgery.—71.

Second Forgery.—29 (struck in blue, like the genuine).

Same Issue. $\frac{1}{4}$ Groschen, green on white.

Genuine.

Lithographed, in yellow-green, on rather stout, white, or yellowish-white wove paper. The tests are the same as for the $\frac{1}{4}$ groschen, black on green, of the 1858 issue, except that the cross seems to come centrally under the N of OLDENBURG.

First Forgery.

Fairly lithographed, on rather thin, hard, yellowish-white wove paper, coarsely-grained. The G of GROSCHEN, which is upright in the genuine, leans over to the left. The E of this word has no line of shading through it. The lion is a totally indescribable monster. There are no dots in the side-ovals. In the hanging, right-hand end of the OLDENBURG scroll, the right-hand fork is much longer than the other; though, if anything, the *left*-hand fork is the longer in the genuine. There is no shading over any of the letters of OLDENBURG. The fraction-line of the $\frac{1}{4}$ on each side is excessively thin—a mere hair-stroke; and the one in the left-hand oval touches the 1. The little 3 of each of the fractions could not possibly be mistaken for an 8. There seem to be only eight lines before the O of OLDENBURG, far from the O, and six at the other end of the scroll, after the G, and very far from it; but my copy is postmarked just there, and it is possible that there may be more lines each side. However, in that case the extra lines, if any, must be much fainter and thinner than the rest. By reason of the said postmark, I can give no details as to the crown, except that the cross seems to come between E and N of OLDENBURG. The bottom point of the shield, if prolonged downwards, would pass between the words DRITTEL GROSCHEN. The right upper compartment of the shield contains about twelve horizontal lines of shading; and the left upper compartment seems to have no dots whatever, in the space above the upper transverse bar; though the genuine shows dots there, as well as between and below the bars. An easy test for this forgery is, that the thin green lines, running near the top and bottom edges of the lower scroll, are altogether absent, thus making the scroll too tall, or rather, making the words EIN DRITTEL GROSCHEN look too small for the scroll. In the genuine, the E of EIN rests on the lower line; and the taller letters—L, G, H—reach up very close to the upper line. The tops of the letters UR of OLDENBURG touch each other.

Second Forgery.

Poorly lithographed, in bright apple-green, on very thick, very hard, white wove paper. The G of GROSCHEN leans over to the left. The lion is a shapeless, white blotch, on a ground of *vertical*, instead of horizontal lines. There are no dots in the ovals. In the hanging, right-hand forked end of the OLDENBURG scroll, the left fork is *very* much longer than the other. In the side-ovals, the fraction-lines are too thin, and the line in the left-hand oval touches the 1. The whole of this fraction is placed too low in the oval. The thin green line, near the edge of the lower scroll, can only be traced below EIN DRITTE. It seems, for the rest of the way, to be merged into the lower edge of the scroll. There are ten almost equal-sized pearls, in a straight line, at the bottom of the stamp. The upper scroll shows eight lines before the O, and six after the G. I can only make out five pearls along the left arch of the crown, and seven along the right arch, but my copy is very faint there. The *whole* of the orb stands above the crown; and the cross has *very* short arms, which makes it only half the width of the orb. They are not wedge-shaped;

and the top arm touches the dark outline of the oval above it. This is easily seen. The lines in the right upper compartment of the shield are altogether too faint to be counted; and the left upper compartment shows no dots whatever, above and between the two horizontal bars. The ten pearls in a straight line are the easiest test of this forgery.

Third Forgery.

Typographed, in the same shade as the genuine, on very thick, very hard, white wove paper. This is exactly the same as the fourth forgery of the $\frac{1}{2}$ groschen of 1858, except, of course, that it is in green on white. The peg-top orb is an easy test.

Fourth Forgery.

This is exactly the same as the first forgery of the $\frac{1}{2}$ groschen, yellow-brown on white. Poorly lithographed, in a sort of Prussian-green, on thin or medium, very white wove paper. There are no pearls below the lower label. This is a very easy test. The others are, of course, the same as for the above-named forgery of the $\frac{1}{2}$ groschen, except that the value is DRITTEL instead of HALBER.

POSTMARKS.

Genuine.—As before.

First Forgery.—71.

Second Forgery.—1.

Third Forgery.—Uncancelled.

Fourth Forgery.—71.

Same Issue. 1 Groschen, blue on white.

Genuine.

Lithographed, in blue, on thick, white wove paper. The tests are exactly the same as those for the genuine 1 groschen, black on blue paper, of the 1858 issue. The colour is a sort of milky, sky-blue.

First Forgery.

Lithographed, in Prussian-blue, on rather thin, hard, very white wove paper. The tests are the same as those for the first forgery of the 1 groschen, black on blue, of the 1858 issue.

Second Forgery.

Lithographed, in much the same colour as the genuine, on thin, very white wove paper. The lion in the shield is like a rampant giraffe, with a thick hind leg, and a sort of star for a head. There are no dots in the side-ovals. The cross on the crown, in my specimen, is postmarked, but it appears to be narrower than the width of the orb, instead of wider. The shield is placed too much to the right, and the bottom point is a *long* way from the bottom of the oval, so that there is quite room enough to place a letter, the size of the O of GROSCHEN, between the point of the shield and the bottom of the oval. The said point, though sharp, is very short. If prolonged downwards, it would pass through the left side of the O of GROSCHEN. There are ten very distinct lines before the O of OLDENBURG, the tenth touching the O. The right side of my specimen is clipped, so that I cannot see how many lines there are after the G; though one cuts through the tail of the G, which is not the case with the

genuine. The left upper compartment of the shield has no dots above and between the two horizontal bars; and the five horizontal lines of shading in the left lower compartment are continued right up to the lower of the two bars above-mentioned, instead of leaving a dotted white space between the bottom of the bar and the lower compartment. This and the giraffe-lion will be sufficient tests for this forgery. There are ten pearls, of equal size, in a straight line at the bottom of the stamp.

Third Forgery.

Typographed, in extremely pale, milky, sky-blue, on very thick, very hard, white wove paper. The O of GROSCHEN slopes over very strongly to the left. The lion is quite undecipherable. There are no dots in the side-ovals. The forked points of the left-hand end of the OLDENBURG scroll *almost* touch the oval below them. The orb is a transverse oval, and the arms of the cross are straight, instead of wedge-shaped; the top arm being *very* stumpy, and exactly centrally under the N of OLDENBURG. There are no lines at all in the right-hand end of the OLDENBURG scroll; and those in the left-hand end are so broken and incomplete, that it is impossible to count them. There are no dots above, between, or below the two horizontal bars, in the left upper corner of the shield; and the lines of shading on the bars appear to be horizontal, instead of vertical. All the rest of the shield is undecipherable. There are eight graduated pearls at the bottom of the stamp, the central ones being quite distinct. This is a poor forgery, and not likely to deceive. The straight-armed cross is perhaps the easiest test.

POSTMARKS.

Genuine.—As before.

First Forgery.—71.

Second Forgery.—1.

Third Forgery.—71, in *blue*.

Same Issue. 2 Groschen, red on white.

Genuine.

Lithographed, in rose, on thick, white wove paper. Tests the same as in the genuine 2 groschen, black on red paper, of the 1858 issue.

First Forgery.

Lithographed, in scarlet, on thin, white wove paper. Tests the same as for the first forgery of the 2 groschen, black on red, of the 1858 issue.

Second Forgery.

Lithographed, in brick-red, on thin, white wove paper. The G of GROSCHEN is very like an O, with a piece cut out of the right side of it. (In the genuine it is a properly-shaped Roman G.) The O is smaller than the R before it, and slopes a good deal over to the left. The lion is the rampant giraffe, with a sort of star for a head, before described. There is a coloured dot inside the right-hand oval, but none in the other. A straight-edge, laid along the centre of the oblique stroke of the Z of ZWEI, would pass through the L of OLDENBURG. This is an easy test. There are ten lines before the O of OLDENBURG, and six after the G. There is a stop after the G, which is not found in the genuine, or any other of the forgeries. The bottom point of the shield is *very* sharp; and, if prolonged downwards, it would touch the left side of the O of GROSCHEN, instead

of cutting through the centre of the R. There are thirteen horizontal lines in the right upper compartment of the shield. There are no dots above or between the bars in the left upper compartment; and the five horizontal lines of the left lower compartment are drawn right up to the lower bar, instead of leaving a dotted space. There are ten equal-sized pearls, in a straight line, at the bottom of the stamp.

Third Forgery.

Very nicely lithographed, in rosy-vermilion, on very white wove paper, *very* thin to moderately stout. The letters GR of GROSCHEN touch each other at the bottom, and the O slants over a good deal to the left. The side-ovals contain the coloured dots like the genuine, but they are very small, and too high up. The hanging ends of the OLDENBURG scroll, which ought to be almost as wide as the scroll itself, are *very* much narrower; and the left-hand fork of the left-hand end of the said scroll hangs much lower than its fellow, instead of being level with it. A straight-edge, laid along the centre of the oblique stroke of the Z of ZWEI, would pass through the B of OLDENBURG. The tops of the side-ovals, which ought to be considerably above the level of the top of the shield, are only just about level with it. There ought to be eight pearls visible below ZWEI GROSCHEN; but there are only seven in this forgery, as the one under the space between RO of GROSCHEN is missing. There are thirteen lines before the O of OLDENBURG, and eleven after the G. There seem to be eight pearls along the left arch of the crown, and about six on the right arch. The bottom point of the shield is *very* sharp; and, if prolonged downwards, it would pass *almost* clear between the letters GR of GROSCHEN. The right upper compartment of the shield contains eighteen horizontal lines. The lion has a small female (full) face, in the centre of a large mane. This forgery is infinitely better than any of the others, and decidedly dangerous.

Fourth Forgery.

Typographed, in dull vermilion, on thick, *very* yellowish-white wove paper. The G of GROSCHEN has an absurdly tall, sloping tail, taller than the R, instead of being about half the height. The O slants over *very* much to the left. There are no dots in the side-ovals, and the left one is decidedly higher than the right. The hanging ends of the OLDENBURG scroll are narrow, as in the third forgery. A straight-edge laid along the Z of ZWEI, would pass through the B of OLDENBURG. There are eight very distinct pearls at the bottom of the stamp, far more distinct than the genuine. There are fourteen lines before the O of OLDENBURG, and eight very imperfect and broken ones after the G. There appear to be seven pearls on the left arch of the crown, and five very dark ones on the right arch. The cross is not placed centrally on the orb, but too much to the right; its arms are very nearly straight, and wider than the orb, and it stands to the left of the centre of the N of OLDENBURG, instead of under the first stroke of the N. The bottom point of the shield is *very* sharp, and, if prolonged downwards, it would pass almost clear to the left of the R of GROSCHEN. The right upper compartment of the shield contains about fifteen horizontal lines. There are no dots above the top horizontal bar, in the left upper compartment. The lion has a sort of pug-dog's face, looking back over his shoulder. His hind leg is *very* thick. There are three white pearls along each of the three central arches of the crown. The genuine has pearls also; but they are dark, on a dark background, so as to be almost invisible. This forgery has also a white band, containing pearls, and a few shaded lines, along the

front lower edge of the crown, which cannot be made out in the genuine. Portions of the design and lettering are, by the typographic manner of printing, rather deeply sunk into the paper, both in this and the other typographed forgeries. The genuine stamps do not show this, being lithographs.

POSTMARKS.

Genuine.—As before.

First Forgery.—71.

Second Forgery.—29.

Third Forgery.—Uncancelled.

Fourth Forgery.—29, in blue.

Same Issue. 3 Groschen, yellow on white.

Genuine.

Lithographed, in yellow, on thick, white wove paper. Tests the same as in the genuine 3 groschen of the 1858 issue, when they can be made out; but, as a matter of fact, this stamp is about the most difficult of all the Oldenburg stamps to decipher, as the colour (which is an ochre-yellow to olive-yellow) is faint, and the printing very poor and blotchy. I wish my readers joy in their work of detection of the forgeries which they may happen to possess. Personally, I have more difficulty with yellow, than with any other colour in the spectrum.

First Forgery.

Lithographed, in yellow, on thin, white wove paper. Tests the same as for the first forgery of the 3 groschen of the 1858 issue.

Second Forgery.

Lithographed, in almost lemon-yellow, on thick, hard, coarse-grained white, or greyish-white wove paper. The D of DREI is of normal shape. The 1 slopes over only far enough to point to the centre of the crown. The lion is the rampant giraffe, with a sort of star for a head, described in several of the other values. There are no dots in the side-ovals. Neither 3 could be mistaken for an 8. There are ten equal-sized pearls below the value-label. The bottom point of the shield, if prolonged downwards, would cut into the O of GROSCHEN. There are ten lines before the O of OLDENBURG, and two whole lines, and several broken ones, after the G. There is a stop after the G, which is not found in the genuine. The pearls along the outer arches of the crown, are quite uncountable; but I do not think that there are more than five pearls on either arch. The cross on the orb has straight arms, and it stands high above the orb. I think the ten pearls, in a straight row, at the bottom of the stamp will be found a quite sufficient test for this forgery.

Third Forgery.

This is the best of the lot, and very dangerous. Lithographed; colour and paper like the genuine. The bottom of the D of DREI is slightly sloped. The 1 is not so much sloped as in the genuine, and points to the centre of the crown. As far as I can make out, the lion seems to have the female (full) face, in the centre of a large mane, as described before. There are no dots in the side-ovals. The left-hand 3 is like an 8; but the right-hand 3 is not. Nine pearls can be made out, at the bottom of the stamp; those under RO of GROSCHEN being *very* faint, and heavily

shaded. There is a good dark space between the middle of the Oldenburg scroll, and the outline of the frame above it. The point at the bottom of the shield, if prolonged downwards, would cut almost centrally through the R of GROSCHEN. The four left-hand pearls lie along the bottom of the stamp in a straight line ; but those on the right side are in a slight curve, like the genuine. The pearl under the G of GROSCHEN is moderately distinct. There are seven complete lines, and several broken ones, before the O of OLDENBURG, and nine after the G ; but of these nine, only five reach from the top to the bottom of the label. There are eight pearls along the right arch of the crown ; but those on the left arch are not decipherable. There are no dots above, below, or between the two horizontal bars in the left upper compartment of the shield. The cross on the orb is not so wide as the width of the orb, though it is in the genuine ; the arms are wedge-shaped, like the genuine, but are *dark*. An easy test for this forgery is to be found in the lines before the D of DREI, at the left-hand end of the lower label. In the genuine, these lines are rather coarse, and perfectly perpendicular and straight ; but in this forgery, they are very fine, and strongly curved, following the curve of the end of the label.

Fourth Forgery.

Lithographed, in bright canary-yellow, on rather thick, white wove paper, the graining of which appears very mottled, when held up to the light. The D of DREI is of normal shape, and leans a little over to the right. The lion, so far as can be made out, is a fine rampant fellow, seemingly too large for the compartment containing him. There are no dots in the side-ovals. Each 3 has a large knob at each of its ends, and is not like an 8. My copy is so very faint, that I cannot see how many pearls there are at the bottom of the stamp. The point at the bottom of the shield is exceedingly sharp ; and, if prolonged downwards, it would just graze the left side of the R of GROSCHEN. The easiest test for this stamp is, that there is no shading whatever in either upper or lower scroll. However blotched the genuine may be, the shading at the ends of both scrolls is always visible, though it may not be possible to count the lines composing it ; but in this forgery, both ends of both labels are perfectly white.

Fifth Forgery.

Typographed, in slightly olive-yellow, on thick, hard, apparently *laid* paper. The D of DREI is of normal shape, and the I is very nearly upright. Only a dim outline of the lion can be seen ; but he seems to be walking, with one foot raised rather high in the air. There are no dots in the side-ovals. Each 3 is an unmistakable 3, and not like an 8. There are eight very distinct pearls, almost in a straight line, at the bottom of the stamp. There is no shading over the D of DREI, or the EN of GROSCHEN. The centre of the OLDENBURG scroll does not reach up to the top of the stamp. The bottom point of the shield, if prolonged downwards, would almost touch the G of GROSCHEN. I can only make out six very broken lines after the G of OLDENBURG. The crown is much too circular in form. In the genuine, it is nearly as wide as the shield, and flattened ; but in this forgery, it is high, and much less wide than the shield. The pearls are undecipherable. There are no dots above, between, or below the two horizontal bars in the left top compartment of the shield ; and the shading on the said bars seems to be composed of *dots*, instead of the perpendicular lines of the genuine. The impression is more or less sunk into the paper. I do not think this forgery very likely to deceive.

POSTMARKS.

Genuine.—As before.

First Forgery.—71.

Second Forgery.—A large oval, with lettering.

Third Forgery.—Uncancelled.

Fourth Forgery.—A line of print, like 71 without frame.

Fifth Forgery.—71, in *blue*.

NOTE.—The genuine postmark 71 is usually $1\frac{1}{8}$ inch wide, and $\frac{1}{2}$ inch high, always in blue, (so far as I have seen). 29 is also always in blue. The frame of 71 in the forgeries is the same width as the genuine, but $\frac{5}{8}$ of an inch high, with the inscription, in two lines,
 OLDENBURG.
 IMGROSSHERZOGTHUM.

ORANGE FREE STATE.

Issue of 1868. 1d., 6d., 1s.

Genuine.

Engraved in *épargne*, on medium, slightly surfaced, white wove paper; perforated 14. There are seventy-nine horizontal lines of shading behind the tree, etc., and, though the uppermost line is rather close to the thick outline above it, the lowest line is so far from the thick outline below it that there is almost room to add another line at the bottom. The top of the tree touches the top line of shading, but not the thick outline above it. The loops or rings at the top of the cords from which the post-horns hang are large enough to show a line of the background through each of them. The ring from which the lowest post-horn hangs is exactly beneath the centre of the trunk of the tree. The knot at the left side of the trunk occupies the space of three of the horizontal lines. The N and J of ORANJE do not touch each other, and the stop after STAAT is large. There is an equal breadth of white space between the horizontal lines and each of the side-frames; *i.e.*, the central lines do not reach entirely from side to side of the central rectangle, but leave a white band of equal breadth down both right and left sides of the rectangle.

**Forged.**

Lithographed, on ordinary, very white wove paper, rather thick; unperforated, or perforated 12 or $12\frac{1}{2}$. There are only seventy-four horizontal lines of shading in the central rectangle, and they come quite close up to the thick outline of the frame at the bottom, but leave almost space enough for another line at the top; this is exactly the reverse of the genuine. The top of the tree touches the thick outline of the frame above it. The loops or rings at the top of the post-horn cords are very small, and the left-hand one is the only one which usually shows a line of the horizontal shading through it. The ring from which the lowest post-horn hangs is not exactly under the centre of the tree, but too far to the right. The knot at the left side of the trunk of the tree is too large, and

occupies the space of four of the horizontal lines. The tails of the N and J of ORANJE generally touch each other, and the stop after STAAT is very small. The ends of the horizontal lines of shading in the central rectangle come too near to the left side of the frame, leaving a broader space of white down the right side than down the left. The lettering of the forgeries is all in thinner type than that of the genuine.

POSTMARKS.

Genuine.—I, 29, 70.

Forged.—I, 22, 62.

Issue of 1891. Postage Stamps surcharged for telegraphic use, but available as postals.

1d., brown; 6d., rose; 1s., orange.

In December, 1900, Mr. Walter Morley sent me specimens of these stamps with forged TF overprint; and as these surcharged labels were allowed to be used as postals, in spite of the surcharge, I give a description here. Mr. Morley says that he believes the counterfeits were imitated from an illustration in his work on telegraph stamps; but that the forgers, fortunately, omitted to notice that the photograph in his book was reduced in size; consequently, all the measurements of the forgeries are smaller than those of the genuine.

Genuine.

There are about eight different types of surcharge, but I only give the points of the one imitated. Both letters are on one level. They are both as nearly as possible $3\frac{3}{4}$ mm. high. The stem of the T is 3 mm. long, and the head of it $3\frac{3}{4}$ mm. wide. The head of the F is 3 mm. wide; the central tongue projects $1\frac{1}{2}$ mm., and the stem, up to where it joins the head, is $2\frac{3}{4}$ mm. high. The F is $2\frac{1}{4}$ mm. distant from the nearest part of the head of the T.

Forged.

These were made on the Continent, towards the end of 1900, and sent over here by Messrs. N. Yaer and Co., of Amsterdam. The T is on a higher level than the F, and both are just a shade over 3 mm. high. The stem of the T is $2\frac{3}{4}$ mm. long, and the head of it is just a shade over 3 mm. wide. The head of the F is $2\frac{1}{2}$ mm. wide, the central tongue projects $1\frac{1}{2}$ mm., and the stem, up to where it joins the head, is $2\frac{1}{2}$ mm. high. The F is a trifle more than 2 mm. from the nearest part of the head of the T.

Genuine.—As before.

Forged.—1.

PACIFIC STEAM NAVIGATION COMPANY.

I really think that the forgeries of these stamps are more abundant than any other counterfeit described in this book. I have three types of the forged 1 real, and five of the 2 reales; and some of these must have been sold by millions, to make them as common as they are; indeed, I never, by any chance, get an ordinary collection for examination which does not contain at least one of these counterfeits. The genuine stamps were handed over to the Peruvian Government by the Company, for provisional use, before the regular Peruvian stamps were issued. Major Evans says: "The 1 real, on blued paper, was employed by the Peruvian Government, experimentally, for the prepayment of postage between Lima and Chorillos. Some of the others were, I believe, employed by the Company, but used specimens are of the greatest rarity, and some of the varieties on white wove paper are not improbably proofs, essays, or fancy impressions of some kind."

Issue of December 1st, 1857. Thick, rough blued wove paper. 1 Real, blue.

Issue of 1859. White laid paper. 1 Real, carmine.

Issue? White wove paper. 1 Real, blue.

Genuine.

■ Nicely engraved in *taille-douce*; paper as above. The serif, or projecting part, to the left of the head of the P, is nearly twice as wide as the similar projection, to the left of the foot of that letter; the upper projection touches the third vertical line from the left, but the shaded end of the lower projection comes between the second and third vertical lines. There is one clear vertical line to be seen through the hollow of the head of the P, and the shading at the right-hand edge of the head of this letter touches the sixteenth vertical line from the left. The shading to the top also touches both this sixteenth line and the outer outline of the oval; while the left side of the stop touches the twelfth vertical line from the left. The shading to the head of the S *nearly* touches the fifth vertical line from the right; the tail of the said S touches the outer outline of the oval, and comes between the fourteenth and fifteenth vertical lines from the right. The stop touches the shadow of the S, and its own shadow touches the right-hand outline of the stamp. The head and foot of the N both touch the second vertical line from the left, and the right-hand vertical edge of the shadow of the N nearly touches the thirteenth vertical line from the left. The left side of the stop after the N touches the fourteenth vertical line, and the shadow of the stop reaches to between the eighteenth and nineteenth vertical lines from the left. The rounded back of the C touches the sixteenth vertical line from the right, and the shadow of its head comes between the fifth and sixth vertical lines from the right. The stop is jammed right into the shadow of the tail of the C, and the shadow of the stop touches the second vertical line from the right. The shadow inside the hollow of the C is thickest, rather above the centre. The outer edge

of the engine-turned oval is a sort of chain-pattern of white links ; and there are forty-nine of these white links, one of them being partly hidden by the head of the little *I* of $\frac{1}{2}$. There is a large white stop after *OZ.*, and another, almost as large, under the *L* of *R!*. The steamer, in the central picture, is sailing to the left, both in the genuine and in all the forgeries of this value ; her stern is cut off square (vertically), and the point of the bowsprit distinctly touches the left-hand edge of the containing-oval. The ratlines (?) or rope-ladders are very plain ; there are two of them to each mast, each composed of three parallel ropes. There are some ropes (I don't know the technical names of them) running from the bowsprit to the foremast, etc. ; the second and third from the left are so close together as to appear like one rope, unless looked at through the microscope, and the fifth and sixth from the left are nearly as close together. The dolphin-striker reaches just to the upper outline of the sea. The large flag above the smoke of the steamer is almost straight, and is shaded with horizontal lines. The little pennant, at the top of the fore-royal mast, is nearly horizontal. The paddle-box is shaded with seven vertical lines, and part of an eighth. The funnel is shaded with vertical lines, but looks solid at a first glance ; it is set decidedly to the right of the centre of the paddle-box. There are three men visible on deck ; one at the heel of the bowsprit, one to right of the foremast, and one near the stern. The smoke from the funnel is wavy, very nicely drawn, and gets lighter towards the end, though the lines can be traced almost to the very edge of the oval. All the lines of the design stand out well from the surface of the paper, as is usual with *taille-douce* engravings.

First Forgery.

Lithographed, on thick, yellowish or greyish wove paper, the face of which is covered with a greenish wash, to represent the *bleutt*, in the blue stamp, and with a yellow wash in the others, for this counterfeit is not only printed in blue, but also in green, yellow, orange, vermilion, red, red-brown, and brown as well. The head- and foot-strokes of the *P* are about equal in width, and both touch the third vertical line from the left. The shading at the right-hand edge of the head of the *P* nearly touches the fourteenth vertical line from the left. The shading to the stop after the *P* touches the twelfth vertical line from the left, and also touches the outer outline of the oval, while the left side of the stop touches the tenth line. The shadow of the head of the *S* just touches the sixth vertical line from the right ; while the shadow of the tail of the said *S* cuts slightly into the outer outline of the oval. The fourteenth line from the right forms the boundary of the tail of the *S*. The stop does not touch the shadow of the *S* ; its left-hand edge touches the fifth line from the right, and its shadow touches the second line from the right. The head of the *N* touches the second vertical line from the left, and the foot touches the third line from the left. The shadow of the stop after the *N* touches the seventeenth line from the left. The rounded back of the *C* touches the fourteenth line from the right, and the shadow of its head comes between the fourth and fifth lines from the right. The stop only just touches the shadow of the tail of the *C*. The shadow inside the hollow of the *C* is quite vertical, instead of being slightly curved, and is equally thick all the way. The upper outline of this *C* shows a deep cleft or depression, where the little wedge-shaped head joins the neck : this is not visible in the genuine. The two parallel lines, forming the outer outline of the oval, are so far apart, that there is room to draw a fine line between them. In the genuine, the two lines are so extremely close together that it would be quite impossible to draw another line between

them. The chain-pattern, forming the outer edge of the engine-turned oval, shows fifty-one complete white links, with parts of two others, hidden by the little $\frac{1}{2}$ of the fraction. The stern of the steamer slopes off obliquely up to the right, and the point of the bowsprit does not touch the outline of the oval. Only one set of ratlines can be made out—those to right of the mainmast. The second and third ropes on the bowsprit are very far apart, and the fourth and fifth are rather close together and far from the sixth. The dolphin-striker is not visible, though one of the stays which should support it is shown. The large flag above the smoke is bent to an absurd shape, and shaded with blotches. The little pennant on the fore-royal mast slopes down obliquely to the right. The vertical lines on the upper half of the paddle-box are hardly visible; but, on the other hand, there are four white spokes of the wheel showing in the lower half, which are not to be seen in the genuine. The funnel is too light, showing one vertical line down its centre, and some thick shading at the top, and down the right-hand edge. It is set almost in the very centre of the paddle-box. There are, apparently, three men on deck, two to left of the foremast and one to right of it; but they may be merely the thickened lower parts of ropes, while in the genuine they are evidently men. The smoke from the funnel is very stiff and straight, and does not spread out or get lighter towards the end. It does not reach very much further than the end of the flag, and is thus a long way from the edge of the oval. The design is, of course, quite flat on the paper.

Second Forgery.

Lithographed, on thick, greyish wove paper. In this counterfeit, the vertical lines in the corners are fine and close together, so that the engine-turned oval hardly seems to stand out from them at all. I have this forgery in blue, pale rose, vermilion, ochre-yellow, green, and brown. The serif to the head of the P is pointed, and both it and the foot touch the fourth vertical line from the left. The shadow of the right-hand bend of the head of the P touches the seventeenth line from the left. The stop after the P does not go anywhere near the outer outline of the oval; it is decidedly above the level of the foot of the P; its left-hand edge touches the twelfth, and its shadow the sixteenth line from the left. The shadow of the head of the S touches the sixth line from the right, and the tail of the said S is some distance above the outline of the oval, and touches the fifteenth line from the right. The stop, which is very small, just touches the shadow of the S, and its own shadow touches the second line from the right. The head and foot of the N both come between the third and fourth lines from the left, and the right-hand vertical edge of the shadow of the N touches the fourteenth line from the left. The stop after the N, like the other three, is too small; its left side touches the fifteenth line from the left, and its shadow touches the nineteenth line from the left. The rounded back of the C touches the fifteenth line from the right, and the shadow of its head touches the fourth line from the right. The stop only just touches the shadow of the tail of the C. The shadow inside the hollow of the C is fairly like the genuine. There are fifty-seven links in the chain-pattern, at the outside edge of the engine-turned oval, the link over the little $\frac{1}{2}$ of the fraction being usually solid. The stop after OZ. is very small, and hardly noticeable, and there seem to be *two* stops under the L of R¹, placed like a colon, but with the under stop considerably larger than the upper one. The bowsprit of the steamer is tilted up at a much greater angle than the genuine. There is no dolphin-striker, but the upper stay to it, from the point of the bowsprit, is shown, and is thicker than the bowsprit itself. The stern of the vessel slopes upwards,

obliquely to the right. The three parallel ropes of the ratlines to the mainmast are fairly like the genuine; but those of the foremast show only two ropes each side, instead of three. There are only five ropes fastened to the bowsprit—three very far apart, and then two, close together. If there were a dolphin-striker, it would be buried deeply in the water. The large flag looks like a mere blotch in the clouds; it is shaped somewhat like a bowl, with the upper part dark, and the lower part light. I cannot make out any pennant on the mast. The paddle-box shows six vertical lines of shading, but they are generally broken and incomplete. The funnel seems to be solid, and is set over the centre of the paddle-box. There are no men on the deck. The smoke is very blotchy and much too short; it does not reach even to the middle of the flag, nor does it get lighter towards the end. The ink does not stand out from the surface of the paper. There is a coloured line all round the stamp in this forgery, 1 mm. from the edge, which does not exist in the genuine, or in any other counterfeit.

Third Forgery.

In general appearance, this is very like the first forgery. I have it in almost all the various colours mentioned above. Lithographed, on white or yellowish-white wove paper, a good deal thinner than the genuine. The projecting part, to the left of the head of the P, is not so thick as the similar projection, to the left of the foot of that letter, and both of them touch the third line from the left. Two vertical lines are visible in the hollow of the head of the P. The shadow of the right side of the stop after the P touches the outline of the oval, the shaded foot of the P, and the fourteenth line from the left. (The stop does not touch the P in the genuine, or in either of the other forgeries.) The shadow of the head of the S touches the sixth line from the right; the tail of the S is partly cut off by the outer outline of the oval, and it crosses between the fifteenth and sixteenth lines from the right. The top of the S is very flat. The stop touches the shadow of the S, like the genuine, and its own shadow touches the second line from the right. The right-hand, vertical edge of the shadow of the N crosses between the twelfth and thirteenth lines from the left. The shadow of the stop after the N touches the seventeenth line from the left. The rounded back of the C touches the fourteenth line from the right, and the shadow of its head touches the fifth line from the right. The stop only just touches the shadow of the C, and its own shadow touches the third line from the right. The shadow inside the hollow of the C is almost exactly like the first forgery. There are forty-nine links in the chain-pattern, as in the genuine. The stop after OZ is larger than that under the L of R^L. The stern of the vessel is cut off obliquely, pointing up to the right. The point of the bowsprit is very sharp, and very nearly touches the outline of the oval. The ratlines are like the genuine, but coarsely drawn. There seem to be nine ropes from the bowsprit,—a single one, and four double ones. The dolphin-striker is not visible, but its upper stay is very distinct, and runs down right into the water. The large flag is fairly like the genuine, but it is of solid colour. The little pennant on the fore-royal is almost invisible; it seems to slope upwards to the right. The vertical lines on the paddle-box are very indistinct, but there seem to be seven, if not eight of them. The funnel appears to have one vertical line of shading in it, but it is blotched nearly solid. There is a man near the heel of the bowsprit, and another behind the foremast, but none near the stern. The smoke is wavy, but much too solid; it does not reach much beyond the end of the flag above it. The design is quite flat on the paper.

POSTMARKS.

Genuine.—These are very rare. My publishers' catalogue says: "There are three kinds of cancellation known. One with a numeral, in an oval, formed of horizontal lines at top and bottom, and curved lines at the sides (similar to my Fig. 54). The second has LIMA, in an oval, or CALLAO, without the oval, surrounded by dots. The third has LIMA and date in a circle (my Fig. 1?). The first is generally supposed to have been used by the Company, and the others by the Peruvian Government." I may add that the only undoubtedly used copy that ever came into my hands had a cancellation similar to 54, with a large "6" in the centre.

First Forgery.—1; 6, without numerals; 42, ditto; 62.

Second Forgery.—Uncancelled. Also an enormously enlarged copy of 101, large enough to cover two stamps.

Third Forgery.—6, without numerals.

Issue of December 1st, 1857. Thick, rough, blued wove paper. 2 Reales, red-brown.

Issue of 1859. White laid paper. 2 Reales, dark blue.

Issue of (?). White wove paper. 2 Reales, blue.

Genuine.

Nicely engraved in *taille-douce*; paper as above. I must note here, first of all, the fact that the steamer is sailing to the *right*, instead of to the left; as three out of the five forgeries before me have the steamer sailing to left, like the 1 real. The projections to the head and foot of the P are about equal in width, and they are square-ended, as in the 1 REAL. The shadow of the stop after the P touches the fifteenth vertical line from the left, and the left side of the stop touches the eleventh line from the left. The shadow of the head of the S touches the fifth line from the right; the shadow of the stop ends between the first and second lines from the right. The right-hand, vertical edge of the shadow of the N comes midway between the twelfth and thirteenth lines from the left; and the shadow of the stop ends just touching the eighteenth line from the left. The rounded back of the C comes between the fifteenth and sixteenth lines from the right; and the shadow of its head touches the fifth line from the right. The two stops to R^{ls} are distinct, and the same size as the stop after OZ. With these exceptions, all the tests for the corner-letters, stops, and chain-pattern are exactly the same as in the genuine 1 REAL. The steamer, as already stated, is sailing to the *right*. The ratlines are the same as in the 1 REAL, also the ropes on the bowsprit, the dolphin-striker, and the large flag, but, of course, all reversed. The pennant on the foremast is visible, but not very distinct. I cannot make out more than six vertical lines of shading on the paddle-box, besides the curved line which forms the right-hand end of the box. The three men on deck are in the same position as those in the 1 REAL. The smoke is also the same. The ink stands out from the paper, but not absurdly so.

**First Forgery.**

Lithographed, paper the same as in the first forgery of the 1 REAL. I have it in blue, yellow, orange, vermilion, red, red-brown, and brown. This counterfeit is simply the first forgery of the 1 REAL, with value altered, so I need not repeat the tests. As the large 1 of 1 OZ. does not come so high up as the small 1 of the fraction in the lower value, the

fifty-three links of the chain-pattern are all complete. The steamer is sailing to the left, instead of to the right, and this test will instantly condemn the forgery.

Second Forgery.

This is the same as the second forgery of the 1 REAL, with value altered. The steamer is sailing to the left, as in the 1 REAL. I have it in the six colours already mentioned.

Third Forgery.

This is the third forgery of the 1 REAL, with value altered. I have it in the various colours already mentioned. The steamer is sailing to the left, as in the 1 REAL.

Fourth Forgery.

This is a dreadful thing, and new to me (1905), though it looks very old. Very coarsely lithographed in blue, on thick, white wove paper. The steamer is sailing to the right, but this is about the only point in which this counterfeit corresponds with the genuine 2 REALES. The vertical lines in the corners are irregularly drawn, and the corner-letters are very badly done. The outline of the central oval does not touch the outline of the stamp either side, though it touches both right and left in the genuine. The chain-pattern is represented by sixty-nine white dashes or hyphens; and the inner edge of the engine-turned oval, nearest to the steamer, which ought to show another chain-pattern of forty-nine links, has only twenty-nine coarse and irregular scallops. The vessel is a mere caricature, and there is no smoke. The stops to R^{ls} are very much smaller than the stop after OZ. I do not think any further details will be needed to condemn this counterfeit.

Fifth Forgery.

This is a much more pretentious affair. Well engraved, in *taille-douce*, in *lilac*, on rather thin, very white wove paper, rather softer than the genuine. The projecting head and foot of the P both touch the fourth line from the left (the first, or left-hand outline, is a mere hair-stroke in this forgery). The shadow of the right-hand side of the head of the P nearly touches the fourteenth line from the left, counting the hair-line as one. The right side of the foot of the P is malformed, being cut in two by one of the vertical lines. The left side of the stop touches the eleventh line from the left, and its shadow touches the fourteenth line, and also the outer outline of the oval. In this forgery, the fourteenth and fifteenth lines from the left are drawn too long, and cut right through both outer outlines of the oval, showing in the white space within the oval. The shadow of the head of the S touches the seventh line from the right. The two outer lines in this right top corner are mere hair-lines, down to the level of the stop after the S; below this, the lines merge into one thin one. The tail of the S does not touch the outline of the oval, and it comes between the thirteenth and the fourteenth lines from the right. The stop barely touches the shadow of the S, and its own shadow touches the fourth line from the right, the double outer line ends just there. The white part of the stop is semicircular in my specimen. The head and foot of the N both touch the second line from the left, as in the genuine, but an extra hair-line begins up the left side of the stamp, just at the top of the N, and I have not reckoned this. The right-hand, vertical edge of the shadow of the N touches the twelfth line from the left. The left side of the stop after the N just touches the thirteenth line from the left, and the shadow of the stop touches the

sixteenth line from the left. The rounded back of the C touches the fifteenth line from the right, and the shadow of its head comes between the fifth and sixth lines from the right, as the genuine does, but the right outline of the stamp is some little distance from the rest of the lines. The stop barely touches the shadow of the C, and its own shadow comes between the second and third lines from the right. The white part of this stop is distinctly oval, and much smaller than the genuine. The chain-pattern at the outside edge of the oval is small, irregular, and inconspicuous. It is very difficult to count, but there seem to be about seventy-five links. It only makes a real chain-pattern in the right top corner, under the S, for about six links; the rest are of all shapes and sizes. The stop after OZ. is rather shapeless. The steamer is sailing to the right, as in the genuine. The ratlines are absurdly broad, and are formed by two parallel lines, instead of three. There is no dolphin-striker. The large flag above the stern is almost entirely white: the few lines of shading upon it are vertical. There is no pennant on the foremast, the top of which is not shown. There are two vertical lines on the paddle-box. The funnel appears to be solid; the top of it is bent over into an absurd hook. I can only make out one man on deck; he is standing somewhat near the stern, just below a ridiculous dip in the smoke. The said smoke is too straight, and does not reach to the outline of the oval. The ink stands up from the surface of the paper in an exaggerated manner.

POSTMARKS.

Genuine.—As before.

First Forgery.—6, without numerals; 62; 76, but with the lines running obliquely. Also one somewhat like 57, but apparently circular, and with some unreadable letters in the centre.

Second Forgery.—A very much enlarged copy of 101; also 6 without numerals.

Fourth Forgery.—Uncancelled.

Fifth Forgery.—Uncancelled.

PARAGUAY.

Issue of 1870. 1 Real, rose-pink.

Genuine.

Engraved in *épargne*, on very slightly yellowish-white wove paper, tolerably thick and hard, with white gum. The lion is standing upon a piece of ground, the boundary-line of which is about level with the stops before and after UN REAL. His feet barely touch the outline of the shaded circle; the one over the R of REAL rests on the lowest horizontal line of shading (*not* on the outline of the circle), and the one over the E of REAL is level with the second horizontal line. The rest of the shading of the central circle, above the boundary-line already mentioned, is composed of fine, horizontal lines, without any dark bands across the circle. Counting at the left side of the circle, there are fifty-eight of these horizontal lines, from the top, under the D of DEL, to the dark horizontal outline, above the U of UN. The cap of

Liberty is shaded by wavy, horizontal lines, but the part for the head, where the pole goes in, is dark and solid. The top of this cap projects a little above the topmost, horizontal line of shading, but does not touch the outline of the circle, under the E of DEL. The lines of shading of the central circle have been drawn right across the pole, both above and below where the lion is holding it. Except for a white patch on the thigh, the body of the lion is practically shaded all over, and his mane is about the darkest part of the central picture. The curve of the tail does not touch the mane. Round the 1, in each corner of the stamp, there is (reckoning from the outside), first of all, the dark outer line of the circle, then a tolerably broad, white ring, then an inner, dark ring, then a very narrow white ring, then another thin, dark ring, which forms the outline of the shaded background to the numeral. The serif at the left side of the top of each numeral is an ornamental curl, ending in a sort of knob. Each numeral has in its centre a vertical row of three coloured dots, not blotched, the middle dot of each three, in the lower numerals, being a short hyphen. The E of REPUBLICA is properly drawn, and the L, in my specimen, has an oblique, coloured line drawn across the centre of it, but I do not know whether this is always the case.

Forged.

Poorly lithographed, on very white, or on yellowish-white wove paper, thinner than the genuine, but quite as hard. My specimens are un-gummed. The artist has evidently failed to see that the lion is standing on the ground; for he has made him stand with both feet upon the inner outline of the circle, and has drawn six thick, dark, horizontal bands across the circle at equal distances, to make them uniform with the *one* thick band, which represents the horizon in the genuine. There are about seventy-two lines in the circle, reckoning each of the dark bands as equal to three lines. The cap of Liberty is shaded with blotches, and the part for the head, where the pole goes in, is nearly all white. The top of the said cap touches the dark outline of the circle, under the E of DEL. The lines of shading of the central circle have been drawn across the lower part of the pole, as in the genuine; but the upper part of the pole, between the cap and the lion's upper paw, is quite white, without any lines across it. The unshaded part of the lion's body extends from the shoulder, right down to the foot, above the R of REAL; the mane, also, has many white patches on it. The mouth is rounded, as though the animal were whistling; but in the genuine, the mouth is a straight line. The curve of the tail appears to be blotched against the mane, in one part. The circles round the corner-numerals are badly copied. There is the outer, dark ring, then a *narrow* white ring, often blotched, and the rest is very blotchy, only showing parts of the other lines and spaces. The serif to the left side of the top of each 1 is a plain, oblique line, without any curl or knob. The central dot of the three in the centre of the 1, in the right top corner looks like a blotched cluster of three dots, instead of a short hyphen; and the central dot in the 1, in the left lower corner is circular. The E of REPUBLICA is broken, and there is no hair-line across the L.

POSTMARKS.

Genuine.—29, in blue, with name between the circles, and date in the centre.

Forged.—62, with five curved lines each side.

The forgeries are separated from each other by lines, and the colour is a more chalky rose than that of the genuine.

Issue of 1878. Surcharged stamps.

These are the 1 rl. and 2 rs. of the 1870 issue, surcharged with a large 5 in black, and the 3 rs., similarly surcharged, in blue. The

surcharge, as will be seen from the illustration, has a curious, broken appearance, as though made with a stencil-plate.

Genuine.

I have only one specimen, surcharged on the 2 rs., blue, and do not know whether there is any variation in the numeral. The 5 is upright. It is 15 mm. high; the extreme width of the head is $6\frac{1}{2}$ mm.; the height of the head, 5 mm. The tail is also 5 mm. high, and the thickest part of the back is fully 3 mm. wide.

Forged.

I only have this on the 2 rs., and it is placed horizontally, and face downwards, on the stamp. The numeral is very nearly 16 mm. high; the extreme width of the head, 7 mm.; the height of the head, $5\frac{1}{2}$ mm. The tail is $5\frac{1}{2}$ mm. high, and the thickest part of the back of the body is $2\frac{3}{4}$ mm. wide.

POSTMARKS.

Genuine.—29.

Forged.—The surcharge has been placed on a genuine stamp, with genuine cancellation.

Same Issue, second type of surcharge.

I have not been able to obtain a specimen of this type, and cannot say whether the illustration correctly represents it. It is catalogued as being found in black, on the 2 and 3 rs., and in blue, on the 3 rs.

**Genuine.**

According to the illustration, taken from my publishers' catalogue, the surcharge is unbroken, and is placed horizontally, lying face upwards.

Forged.

I have this in black, on the 2 rs. It is placed upright on the stamp, and is in three pieces, one being the head, neck, and shoulder, the second being the back, and the third, the tail. It is 15 mm. high; the extreme width of the head is 6 mm.; height of the head, 5 mm.; height of the tail, 5 mm. The thin neck, joining the head and body, which is not visible in the first type, is very distinct, and 4 mm. long. The thickest part of the back of the body is nearly 3 mm. wide. I am sorry that I have not been able to procure a genuine specimen, but I hope the above description of the forgery will suffice for its detection.

POSTMARKS.

Genuine.—Probably as before.

Forged.—This is on a genuine stamp, cancelled with 29.

Issue of 1881. New values surcharged on the 10 centavos, green.

**1 Centavo. Genuine.**

I have not got this stamp, but the numeral (in dull, pale black) is about $10\frac{1}{2}$ mm. high, by $2\frac{1}{2}$ mm. broad, and it has a rather short, thick serif.

1 Centavo. Forged.

This is altogether bogus, as it is printed on the orange 5 *reales*, and on the red-brown 10 *reales*, essays, hereafter described, instead of on the 10 centavos, green. The numeral is $9\frac{1}{2}$ mm. high, by about $1\frac{3}{4}$ mm. wide. It has a very long serif, three-quarters of the length of the numeral itself, and there is a large C below it, 5 mm. high, which is not found in the genuine.

POSTMARKS.

Genuine.—29.

Forged.—A faint mark, which may be a numeral.

2 Centavos. Genuine.

This is also printed on the 10 centavos, green. The head of the numeral, as will be seen by the illustration, ends in a point, which curls well inwards and upwards. The body of the numeral, just where it joins the foot, is very thin. The back of the foot points perpendicularly upwards, like the illustration. The head comes well forward, so as to be level with the front part of the foot.

2 Centavos. Forged.

This is on the genuine 10 centavos, green. It is printed in deep black, instead of the pale black of the genuine. The head hardly makes any spiral curl at all, but stops short almost before it begins to curl upwards. The body, where it joins the foot, is much too thick, measuring 2 mm., instead of $\frac{1}{2}$ mm. The back of the foot is bluntly rounded, instead of ending in an upward point. The head does not come forward; so that, if a perpendicular line were drawn upwards, from the front end of the foot, it would pass nearly 1 mm. to the left of the head, instead of touching it.

POSTMARKS.

Genuine.—I have not seen a cancelled copy.

Forged.—My specimen is uncanceled.

ESSAYS.

1. Two well-known stamps, the 5 *reales*, orange, and 10 *reales*, red-brown, perf. $12\frac{1}{2}$, and very like the chestnut 5 centavos, and the green 10 centavos, were drawn and prepared; but as the value was put in *reales*, by mistake for *centavos*, the Government refused to accept them. They are to be found in most school-boy collections, so I expect the makers did not lose very much by them!

2. A very old essay, which must be familiar to most of my readers. The lion is sitting, in an oval, with his tail straight up in the air, and the cap on a pole behind him. The stamp is inscribed RE DEL PARAGUAY-CORREO, and there is a square, for the insertion of a value-numeral, in each corner. I really do not know whether the stamps in blue, green, vermillion, lilac, etc., so often seen, are the essays themselves, or forgeries of them.

3. A steamer, sailing to right, in a transverse oval. The stamp is inscribed REPUBLICA DEL PARAGUAY, CINCO CENT⁵, and there is a shield in each corner, containing a 5. The shape is a transverse oblong, and the perforation $12\frac{1}{2}$. The specimens are usually cancelled with 22. They are printed in many colours, and they may, very possibly, be forgeries of a real essay.

PARMA.

Issue of 1st June, 1852. 5, 10, 15, 25, 40 Centesimi,
black on colour.

Genuine.

Engraved in *épargne*, on medium, wove paper. The point of the *fleur-de-lys* does not touch the outline of the circle above it; indeed, there are two lines of the shading of the central circle to be seen, between the point of the *fleur-de-lys* and the top of the circle. Each of the three tails of the *fleur-de-lys* bears a line of shading in it. The little cross on the top of the crown touches the border above it, exactly between the two words STATI-PARM. The groundwork behind the *fleur-de-lys* is formed by fifty-seven fine lines, set very close together; and the groundwork behind the crown is formed by very tiny, square, black dots. There

is a round, white stop between the words STATI-PARM, and it is level with the centre of the M. The broad, white circle, surrounding the *fleur-de-lys*, goes as near to the white lines of the frame to right and left of it as it does to the white line of the frame below it. Each of the two outer arches of the crown bears four good-sized pearls, and each of the inner arches bears three similar pearls.

First Forgery.

Lithographed, on thin, very coarsely-wove paper. The point of the *fleur-de-lys* touches the outline of the circle above it. The right-hand tail of the *fleur-de-lys* has no line of shading in it. The little cross on

the top of the crown comes under the I of STATI. There are two stops, like a colon, after PARM. The groundwork behind the *fleur-de-lys* is formed by thirty-eight lines of shading, far apart; and the groundwork behind the crown is formed by crossed, vertical, and horizontal lines of colour. The white circle round the *fleur-de-lys* is nearer the frame at the left-hand side and bottom, than it is at the right-hand side.

Second Forgery.

Lithographed, on coarse wove paper, rather thicker than in the last forgery. There is only one line of shading to be seen, between the point of the *fleur-de-lys* and the outline of the circle above it. The little cross on the top of the crown is nearer to the I than to the P. The groundwork behind the *fleur-de-lys* is formed by forty-one lines of shading; and the groundwork behind the crown is formed by short, crooked, irregular lines, making a sort of "crinkly" pattern. There is a large hyphen, instead of a stop, between the words STATI PARM. The broad, white circle, surrounding the *fleur-de-lys*, is at some little distance from the side-frames, allowing a portion of the groundwork to be seen, between the frame and the nearest portions of the circle. Each of the outer arches of the crown bears five pearls, and each of the inner arches has four pearls.

Third Forgery.

Lithographed, on medium wove paper, not so coarsely made as in the other forgeries. The little cross on the top of the crown is under the I of STATI. The groundwork behind the *fleur-de-lys* is formed by fifty-four horizontal lines of shading, and the groundwork behind the crown is formed by vertical rows of oblong dots. There is no stop at all between the words STATI PARM. The white circle round the *fleur-de-lys* is slightly nearer to the left-hand than to the right-hand frame. The left-hand arch of the crown bears seven pearls; the right-hand arch has five; and the inner arches four each.

Fourth Forgery.

Very coarsely lithographed, on thick wove paper. There seems to be only one line of shading between the point of the *fleur-de-lys* and the top of the outline above it. The middle tail of the *fleur-de-lys* has no line of shading in it, but a blotch instead. The cross on the top of the crown appears to be under the I of STATI. There is no stop after PARM, and none before STATI; and the one between STATI PARM is level with the bottoms of the letters, instead of level with their centres. The groundwork behind the *fleur-de-lys* is formed by about twenty-six lines of shading, very thick and coarse; and the groundwork behind the crown is composed of a blotchy pattern, which cannot be made out. The circle round the *fleur-de-lys* is a *very* long way from the side-frames, instead of touching them; and it does not touch the bottom frame either, though it is nearer to this latter than to the others. This is an easy test. The stamp is so blotched, that the pearls on the crown cannot be seen at all, much less counted.

Fifth Forgery.

Nicely lithographed, on rather thin, yellowish-white wove paper. There is one line to be seen, between the point of the *fleur-de-lys*, and the outline of the circle above it; and the tail of the said *fleur-de-lys* touches the bottom outline of the circle. On the top of the crown, there is a little white diamond with an upright dark dash in it, instead of the

small cross of the genuine ; and this diamond is under the end of the I of STATI. There is no stop, either before or after any of the words. The groundwork behind the *fleur-de-lys* contains fifty-one horizontal lines ; and the groundwork behind the crown is formed by crossed, horizontal, and vertical coloured lines. The central circle is nearer to the bottom frame than to the side-frames. The crown is not the least like the genuine ; having six small arches, instead of four large ones. The 25 centesimi, which is the value most often met with in this fifth forgery, is printed in a very peculiar, yellowish-chestnut colour, not known to me in any stamp of any country.

Sixth Forgery.

Tolerably well lithographed, on medium, hard, yellowish-white wove paper. There is one line of shading between the point of the *fleur-de-lys* and the outline of the circle above it. The postmark rather covers part of my single specimen ; but, as far as I can make out, there is a thing like the flame of a candle, instead of a little cross, on the top of the crown, and slightly nearer to the I than to the P. There is a *very* small, oblong stop after STATI, but none anywhere else. The groundwork behind the *fleur-de-lys* contains fifty-three lines ; the top one cutting through the white outline of the circle to the right, and the bottom ones being closer together than the others. The groundwork behind the crown is formed, as in the fifth forgery, of crossed, horizontal, and vertical lines. The crown is not at all like the genuine ; as the arches are much too small, and *too* much arched. There seem to be three pearls on each arch, but they are not easily made out. The central part of the crown is a sort of blunt cone.

POSTMARKS.

Genuine.—I ; also a similar one, but much larger ; also name and date in large capitals, without frame ; also the same in two lines ; also a small rectangular frame, not a quarter the size of the stamp, containing a lattice-work of crossed, oblique bars.

First Forgery.—The small, lattice-work rectangle.

Second Forgery.—Uncancelled ; also name, etc., in one line, without frame ; also 5, without numerals ; 10 ; 23.

Third Forgery.—10 ; 23 ; also name, etc., in one line, without frame.

Fourth Forgery.—5, without numerals ; 23 ; also a blotch.

Fifth Forgery.—Name, etc., in two lines, without frame ; also part of an enormous circle.

Sixth Forgery.—100.

Issue of 1854. 5, 15, 25 Centes., colour on white.

Genuine.

Apparently engraved in *épargne* ; paper rather thinner than that of the first issue. The type is exactly the same as that of the first issue, so that the tests of the genuine already given will serve for the genuine of this issue, except that the stamps are printed in colour, on white paper, instead of in black, on coloured paper.

Forged.

I cannot say whether all the forgeries exist which I have described in the first issue ; but it is very probable. I possess the second, fourth, and

sixth forgeries. The tests are, of course, the same as for the corresponding forgeries of the first issue; except that the stamps are printed in colour, on white wove paper.

POSTMARKS.

Genuine and Forged.—The same as in the first issue.

Issue of 1857-9. 15, 25, 40 Centes.

Genuine.

Engraved in *épargne*, on stout, yellowish-white wove paper. There are twenty-nine horizontal lines of shading in the oval, counting down the left-hand side. The three lower limbs or branches of the *fleur-de-lys* are of a good size, about half as large as the corresponding upper limbs, and each of the six limbs has a line of shading in it. The tail of the C of CENT is made exactly like the head. The left-hand branch, outside the shield, bears six oak-leaves, and only two acorns; the right-hand branch bears one olive-berry on the inner side of the double stem, to the left of the lowest bunch of leaves. Three of the horizontal lines of shading can be seen, between the top of the *fleur-de-lys* and the outline of the oval above it. The stop after ECC is small and round. All the arches of the crown are equally well-made and distinct. The two branches do not touch the frame or the shield anywhere.

First Forgery.

Lithographed, on stout, coarsely-wove, very white paper. There are only twenty-seven horizontal lines of shading in the oval, counting down the left side. The three lower limbs of the *fleur-de-lys* are very much smaller than the corresponding upper limbs, and the right and left lower limbs have mere traces of the line of shading in them. The C of CENT has a head, but no tail, just like an ordinary English capital C. The left-hand branch bears seven oak-leaves, and three acorns; the right-hand branch has no olive-berry on it. Five of the lines of shading can be seen between the top of the *fleur-de-lys* and the outline of the oval above it; and there is a small, dark point, rather to the left of the point of the *fleur-de-lys*, in some specimens. The second arch of the crown, counting from the left, is smaller than the rest, and badly drawn. The left-hand branch touches the frame in one place, and almost touches it in another.

Second Forgery.

Lithographed, on soft, thick, very yellowish-white wove paper, so coarsely made that it might be mistaken for laid. There are only about twenty-five lines of shading in the shield, counting down the left side; but they are so very irregular and broken, that it is almost utterly impossible to count them with any certainty. The right and left lower limbs of the *fleur-de-lys* have no line of shading in them. The head and tail of the C of CENT are pretty much alike, but without the knobs or points of the genuine. The right-hand branch shows the stem where the olive-berry ought to be, but the berry itself is not there. Only two lines of shading can be seen between the top of the *fleur-de-lys* and the outline of the oval above it. The stop after ECC is a more or less rounded dash, which is the easiest test for this counterfeit. The middle arch of the crown is crooked, and the arch to the left

of it is very indistinctly drawn. The olive-branch touches the shield in one place.

This forgery is blotchy, but it has a deceptive look, much more so than the first forgery.

POSTMARKS.

Genuine.—1; 29 (generally struck in red); also a small rectangle, containing a lattice-work of crossed, oblique lines.

First Forgery.—Uncancelled; also 51.

Second Forgery.—The rectangle of lattice-work, but with the corners rounded; also 51.

Issue of 1853-7. 6, 9 Cent., black on colour.

Issue of 1859. Same type. 5, 10, 20, 40, 80 Cent., colour on white.

Genuine.

Engraved in *épargne*, on stout wove paper. The frame of the stamp is composed of three lines, the middle one of the three being considerably nearer to the outside than to the inside line; indeed the outer and middle lines are frequently found blotched together. All the lines of the outer octagon are distinctly hollowed inwards, or concave, as in our illustration, but of course the shorter sides are not so much hollowed as the longer ones. The I of STATI has no cross-stroke at the top, and the I of PARMENSI often wants part of its bottom-stroke. The C of CENTESIMI has a tail *exactly* like its head, after the manner of the foreign capital C. The last I of this word has hardly any top-stroke, except in the 6 c. and 9 c. None of the letters of the inscription touch the frame anywhere. The letters of CENTESIMI are much smaller than those of PARMENSI, and the figures of value are exactly the same height as the letters of CENTESIMI. The outer line of the frame is not very much thicker than the other two. The middle, v-part of the M of PARMENSI does not come nearly down to the bottom of the letter; indeed, it does not come much lower than the tongue of the E which follows it. The S and I of STATI stand, respectively, above the space between the PA and the end of the S of PARMENSI. The stroke under the latter word extends from the middle of the A to nearly the middle of the S.

First Forgery.

Besides the values given above, this set contains an altogether imaginary value—"60 centesimi." Lithographed, on thick, hard, fine-grained, white wove paper. The outer line of the frame is absurdly thick, being eight or ten times thicker than the other two; and the middle line is, if anything, rather nearer to the inner than to the outer one. The short outlines of the octagon are *perfectly* straight; and the base of the stamp is considerably more concave than the top. The stroke under PARMENSI reaches from the middle of the A to nearly the middle of the S. Every I of the inscription has a large top-stroke and a large bottom-stroke. The C of CENTESIMI has no tail, and is exactly like the ordinary English capital C. The bottom of the P of PARMENSI touches the frame to the left of it. The letters of CENTESIMI are *too* small, and the figures of value are *very* much taller than the letters of this latter word. The middle, v-part of the M of CENTESIMI comes quite down to the bottom of the letter. The point of the A of PARMENSI

is almost exactly under the centre of the S of STATI; and a line drawn down through the centre of the I of the latter word would cut centrally through the little knob on the head of the S of PARMENSI. There is no stroke at all under PARMENSI.

Second Forgery.

Lithographed, on moderately stout wove paper. The middle line of the three composing the octagonal frame is exactly central between the other two lines. The short sides of the octagon are *very* nearly straight. The I of STATI has a very distinct cross-stroke at the top. The tail of the C of CENTESIMI is rather like the head, but not exactly like it. The last I of this word has a large cross-stroke at the top of it. The letters of CENTESIMI are very nearly as large as those of PARMENSI, and the figures of value are distinctly taller than the letters of PARMENSI. The outer line of the frame is a good deal thicker than the other two lines. The middle, v-part of the M of PARMENSI comes down almost to the very bottom of the letter. The S of STATI is centrally above the space between PA of PARMENSI, as in the genuine; and the I of STATI is in the same position as in the first forgery. The line under PARMENSI is *very* thin; not half the thickness of the genuine.

Third Forgery.

Lithographed, on rather stout, soft, very white wove paper. The execution is not so clear as in the first two forgeries; but this counterfeit is by far the best and most deceptive of the lot. The middle line of the frame is nearer to the outer than to the inner line, as in the genuine, and is generally blotched together with the outer line, for a good part of the way round; indeed, sometimes *all three* lines are blotched into one, especially at the bottom. All the sides of the octagon frame are more or less hollowed, as in the genuine. There is a cross-stroke at the top of the I of STATI, though it is not very large in some specimens. The I of PARMENSI sometimes lacks its bottom-stroke, as in the genuine. The tail of the C of CENTESIMI is *larger* than the head. The top-stroke to the last I of this latter word is fairly visible. The figures of value, especially in the 40 c., are slightly taller than the letters of CENTESIMI. The outer line of the frame is about the same thickness as in the genuine; and the middle v-part of the M of CENTESIMI is also about the same as in the genuine. The S of STATI is decidedly more above the P than the A of PARMENSI; and the I of the former word is a little to the right of the centre of the S of PARMENSI. The stroke under the latter word extends from the beginning of the right foot of the A to the beginning of the tail of the S; but all the values are not exactly alike in this point.

POSTMARKS.

Genuine.—1, 29, in black or red.

First Forgery.—Uncancelled. Also 38, without numerals.

Second Forgery.—As in the first forgery. Also 51. Also a shapeless blotch.

Third Forgery.—Uncancelled.

NOTE.—The *épargne* engraving of the genuine stamps shows evident signs of being sunk into the paper, this being especially noticeable in

the numerals. All the forgeries, being lithographed, show the design perfectly smooth on the surface of the paper.

The first forgery of this latest set is exceedingly common. I hardly ever have an album through my hands without one or more specimens. The third forgery seems to be comparatively new. I have only seen it (in large quantities, by the way) lately, within the last few years.

PERAK.

Issue of 1878. Straits Settlements, 2 c., brown, CC, surcharged with an oval containing crescent and star over P.

Genuine.

The oval is 15 mm. high, by 13 mm. wide, and the line which forms it is $\frac{3}{4}$ mm. thick. The points of the crescent are $5\frac{1}{2}$ mm. apart. The head of the P is perfectly flat.

Forged.

The oval is 15 mm. high, by 13 mm. wide, as in the genuine, but the line which forms it is only $\frac{1}{2}$ mm. thick on the left side, and 1 mm. thick on the right side. The top of the crescent is splayed or split into two points, in my specimen, the inner point being 4 mm., and the outer point $4\frac{1}{2}$ mm. from the bottom point. The outline of the head of the P is wavy, being lowest just over the vertical stroke, and higher to right and left of this.

Issues of 1880-2. Straits stamps, surcharged with name, as in the illustration.

Genuine.

This type of surcharge is only found on the 2 c., brown, CC ; 2 c., brown, and 2 c., rose, CA.

PERAK

BOGUS VALUES.

I have the 4 c., brown, and the 8 c., CA, with the above surcharge. No such values were ever issued.

POSTMARKS.

Genuine.—I have no cancelled specimens.

Forged.—The surcharge has been printed on used Straits stamps, with various genuine Straits postmarks.

PERSIA.

1, 2, 4, 8 Shahi.

Issue of 1875. Stout, white wove paper, rouletted, *percés en pointes*, or unperforated.

Issue of 1876. Thin, greyish wove paper, or laid paper, unperforated.

Genuine.

Lithographed (?), varieties as above. The lion is full-faced, and his tail is thin and tapering, with a distinct, dark blot in the centre of the tassel of it. The white line on which the lion stands does not touch the circle of pearls either side. The pearls are small and regular. The lion has a very full beard.

Forged.

Very nicely lithographed, on thick, white wove paper; unperforated, or perforated 13. The lion is only three-quarter faced; his tail is thick for its whole length, and the tassel is quite white, with no dot in the centre of it. The white line on which the lion stands touches the circle of pearls on the right, and almost touches it on the left. The pearls are rather large, and vary in size. The lion's mane is very white, and there seems to be no beard at all just under the chin. As a rule these forgeries are much better-looking than the genuine.

POSTMARKS.

Genuine.—1, but larger, containing name, etc., in English and Persian characters.

Forged.—Usually uncanceled, but occasionally with a few shapeless blotches.

Issues of 1876. 1, 2, 5, 10 Shahi.

Perf. 10½: 1, 5, 10 Shahi. Perf. 12 to 13: 1, 2, 5, 10 Shahi.

Perf. 10½×12 to 13: 1, 5, 10 Shahi.

Genuine.

Printed in two colours, on moderately stout, white wove paper; varieties as above. The face of the Shah is entirely covered with dark lines. The cap comes down somewhat lower over the right eye (on the left side of the stamp) than it does over the left eye (on the right side of the stamp). There are sixteen pearls visible in the fastening of the aigrette in the cap. The lion has two horizontal lines across his forehead, his tail tapers slightly to the end, and the tassel is plainly forked. He holds a sword in his *right* paw; and the little black line on which he stands touches the border on the right side of the stamp, but not on the left.

Forged.

I have only seen the 10 shahi, but I believe the full set exists. The tests will serve for the other values.

Lithographed, on white wove paper, rather thin; pin-perf. 13. The

face of the Shah is very little shaded, and looks more like that of a white man. The cap is put on very nearly level; or, if at all sloped, it comes down slightly further over the left eye (to the right of the stamp). The aigrette only shows nine pearls. There are no horizontal lines across the forehead of the lion; his tail is about the same thickness for its whole length, and the tassel at the end of it seems to be very little forked in some copies, but not decidedly, as in the genuine. The sword seems to be in the left paw, but it is not easy to say, for certain, which paw holds it. The little black line on which the lion stands touches the black border on both sides.

POSTMARKS.

Genuine.—The same cancellation as in the issue just described.

Forged.—A large rectangle of square dots.

Issue of 1879-80. 1, 2, 5, 10 Shahi; perf. 12, 13, and also, occasionally, 12×13 and $10\frac{1}{2} \times 12$.

Genuine.

Printed in two colours, with a coloured border; varieties of perforation as above. The lowest part of the aigrette on the front of the fez shows a large pearl, surrounded by a ring of very small ones. Five of these very small pearls can be counted, on the left side of the stamp, but the right side shows only part of a white ring. Above this pearl ornament, or brooch, there are twelve pearls, larger than those round the centre pearl of the brooch, but smaller than the one in the brooch; they are scattered in no regular order, and the topmost one is a white comma, and one below it has an oblique line across it. The feathers of the aigrette do not go up to the top of the containing-oval, but two lines of the shading of the oval can be seen above the top of the plume. The white space enclosed by the knot and ends of the cravat on the breast is pear-shaped, and regular. The front corner of the embroidered collar of the coat is cut off by the outline of the oval, just over the bend of the lion's tail. This is a very easy test. The nose is only outlined on the left side (right side of the stamp).

Forged.

This was made in 1885. Bacon says: "The so-called reprints are sometimes described as having been printed from the die of the 5 shahi envelope stamp; but, as the central portion of the stamp has been entirely re-engraved, this is not the case." Printed in two colours, with coloured border, like the genuine, on similar paper, perf. 12, 13, and 12×13 . The large pearl at the bottom of the aigrette has a plain, white circle round it, showing no pearls. The topmost pearl of the aigrette is circular, and not like a comma; and the one below it does not show any line across it. The feathers go up to the top of the oval, and touch the outline, inside the white ring, so that no line of the shading of the background can be seen above the feathers. The white space on the breast is something like a pear, with a piece bitten out near the top on the left side of the stamp. Both front corners of the embroidered collar of the coat are perfect, right and left, and are not even touched by the outline of the oval. There is shading from the curl of the nostril, to the inner corner of the right eyebrow (left side of the stamp), so that both sides of the nose seem outlined.

POSTMARKS.

Genuine.—As before.

Forged.—My specimens are uncanceled.

Issue of 1882-4. 10 Francs, buff, red, and black;
perf. 12 or 13.

Genuine.

Printed in black, buff, and red, on stout, white wove paper, perforation as above. The Shah has a *very* thick outline to his left shoulder (right side of the stamp); this outline is equally thick for its whole length, and it does not travel round the lower edge and corner of the collar. The 1 of the inscription (1 TOMÂN) in the white circle in the left top corner is a short, straight, thick stroke, running down somewhat obliquely from left to right. This 1 does not touch the upper outline of the containing-circle. The word TOMÂN beneath the 1 is in three parts; reading, is, of course, from right to left, TO MÂ N. The TO is like a double-tailed comma, with one tail pointing almost vertically upwards, and the other downwards, with two very distinct diamond-shaped dots above it. The word for "one" in the right top circle (EK, I think it is, though I am not sure of the vowel), is something like a very slanting figure 5, without the head-stroke, with a short projection from the right side of the rounded part; two diamond-shaped dots below it, and a mark like a *very* small 5 inside the hollow of the curve. In the French inscription, POSTE PERSANE, the head of each P, the tongue of each E, and the cross-bar of the A, all join the bodies of the respective letters. The outline of the o of 10 is perfectly smooth and regular; the foot of the F below it is plainly visible; and the stop after the F is nicely rounded and shaded, with no ring round it. There are thirty-three horizontal lines of shading in the circle containing the 10 F.; and the forty teeth of the cog-wheel surrounding it are all perfectly uniform in size and shape. Just above the 10 F. circle there is a small, but nicely-drawn, four-petalled flower, with a ball in the centre of it. There are twenty-seven laurel (?) leaves in the wreath, to left of the portrait, and four large acorns in the oak-wreath on the other side. Immediately before the P of POSTE there are ten fine, horizontal lines of shading; and there are eight similar lines, at the other end of the scroll, after the last E of PERSANE. Down the left outline of the Shah's face (right side of the stamp) there is a sort of whitish halo or fringe, like the ill-shaven stubble of snow-white beard and whiskers, showing up from the dark background. The crown at the top of the stamp shows a row of five large, very distinct, light-coloured pearls along its base, and two rows of small pearls, also distinct, and ten in each row, across the centre. The two slanting or overhanging feathers, which issue from the top of the crown, do not touch the outline of the stamp above them.

**First Forgery.**

Lithographed, in black, ochre-yellow, and carmine, on stout, hard, very white wove paper; unperforated, but with the (white) perforations *printed* along the edge of the stamp. The thick black outline along the top of the left shoulder of the Shah (right side of the stamp) is not so wide where it touches the outline of the oval as it is near the collar; and

it is continued round the edge and corner of the collar to the front of the throat. The 1 in the circle in the left top corner touches the upper outline of the circle. The first character below it to the right (the 10 of TOMÂN) has a small figure 2 laid on its side (ۛ) above it, in place of the two diamond-shaped dots of the genuine. The large character in the right-hand white circle has two dots and an angular mark (all jumbled together) inside the hollow of the curve, instead of the thing like a little 5, which, by the way, always accompanies the final K in Arabic, Persian, etc. In the inscription, POSTE PERSANE, the bottom of the head of each P, the tongues of the first and second E, and the cross-bar of the A, do not touch the bodies of those letters, but show a space between. The left outline of the O of 10 is ragged, and somewhat uneven. The foot of the F below it is not to be seen; and the stop after it is *very* badly done, with a semicircular ring round its upper half. There are only twenty-three horizontal lines in the circle containing 10 F.; and the cog-wheel ornament has several of the cogs very different from the rest. The flower just above the 10 F. circle has only three petals, the upper petal being absent, and the ball in it is very defective and flat. There are about twenty-two laurel-leaves to left of the portrait; and the oak-wreath to right of the portrait shows only one acorn. There are seven rather thick, horizontal lines of shading in the scroll, immediately to the left of the P of PERSANE; and five lines at the other end of the scroll, after the last E of PERSANE. There is no white halo along the outline of the Shah's face on either side. The crown at the top of the stamp is so dark that it appears to be a solid, dark mass, without any visible pearls; and the two feathers are dark, instead of light, and the left-hand one touches the upper outline of the frame of the stamp. I conclude this forgery is of German origin, as the word "FALSCH" is printed in white letters in the red border, at the bottom of the stamp.

Second Forgery.

This looks much older than the one just described, but I have only lately come across it (1905). Rather coarsely lithographed, in dull vermilion, ochre-yellow and black, on medium, greyish-white wove paper perforated 11½. The thick outline to the left shoulder (right side of the stamp) gets thicker as it descends, and is thickest where it joins the outline of the oval. The outline of the O of 10 is rather ragged, and the stop after the F below the 10 is a rather oval ring. There are only about twenty-three horizontal lines of shading in this value-circle; and only thirty-one white teeth in the cog-wheel surrounding the numerals. This is an easy test. The thing above the 10 F. circle is quite shapeless, and not like a flower and ball. The leaves in the left-hand wreath are difficult to count, there are about thirty-two of them, large and small. I can only see one acorn in the oak-wreath; but the postmark of my specimen covers most of the wreath, so that possibly there may be more than one. There are eleven horizontal lines of shading before the P of POSTE, and about five at the other end of the scroll, after the last E of PERSANE. In the crown, at the top of the stamp, there are five large pearls in the bottom row, as in the genuine, but, of the small pearls, the middle row only has eight, and the top row nine.

POSTMARKS.

Genuine.—1; usually with lettering partly in Roman, and partly in Persian characters.

First Forgery.—Uncancelled.

Second Forgery.—1.

OFFICIAL STAMPS.

3, 6, 8, 12, 18 Shahi; 1 Tomân.
Issue of 1886. New values, like the illustration,
surcharged in black.

The 3 is surcharged on the 5 shahi, green, of 1882; the 6, on the same, and also on the 10 shahi, black, buff and orange; the 8, on the 5 shahi, and 10 shahi; the 12, on the 50 c., grey-black, of 1884, and also on the 5 and 10 shahi, already mentioned; the 18, on the 10 shahi, and the 1 T., on the 5 francs.

OFFICIEL
۳ ۳ ۳

Genuine.

The surcharge is in black, and generally looks very rough. The word OFFICIEL measures $3\frac{1}{2}$ to $3\frac{3}{4}$ mm. high, by 17 to 18 mm. long. The C is decidedly shorter than the rest of the letters, but not so absurdly so as in the illustration. In the 18 shahi, the 8 is fully as tall as the 1; and, in the 1 tomân, the 1 and the T are in thick, fat characters, a good deal thicker than those of OFFICIEL.

Forged.

Of these I have only the 18 shahi, on the 10 shahi, and the 1 tomân, on the 5 fr. They are printed in aniline violet, instead of black, which is an easy test for these particular counterfeits; but, if printed in black, they would be dangerous. The letters are thinner than the genuine, and OFFICIEL is 3 to $3\frac{1}{4}$ mm. high, by $15\frac{1}{2}$ to $16\frac{1}{2}$ mm. long. The C is *slightly* lower than the rest of the letters. In the 18 sh., the 1 is a good deal taller than the 8; and, in the 1t., the 1 and the T are in thin characters, the same as those of OFFICIEL.

POSTMARKS.

Genuine.—1.

Forged.—The forged surcharge is on genuine stamps, with genuine cancellations.

STILL-BORN OFFICIALS.

A set of stamps, like the annexed illustration, may be found in most albums:—1 shahi, rose and green; 2 shahi, green and rose; 5 shahi, blue and orange, and 10 shahi, violet and blue. They are not forgeries, but were prepared in 1881 or 1882, and never issued for use. I fancy the dealers must have bought up the stock, as they are very common, costing only about 9d. the set.

BOGUS UNPAID STAMPS.

1, 2, 5, 10 Chahi; 1, 2, 5 Kran; 1 Tomân; blue on white.

These stamps are apparently typographed, in a sort of bright indigo-blue, on very white wove paper, perf. $13\frac{1}{2}$. The design shows PERSE at the top; the value, in white, in a blue circle, in the right bottom corner, and A PERCEVOIR, in blue, in a white label, which extends obliquely, from the left bottom corner, to the right

top corner. The rest of the stamp is filled in with arabesque and floral designs. I do not know where the stamps were made; they are new to me (1905) and are altogether bogus. They look very clean, bright, and fresh, and are uncanceled.

PERU.

Issue of 1858. Medio Peso, ó 50 Centimos; yellow, rose.

This is a very scarce stamp; the rose is an error.

Genuine.

I am sorry to say that I have no specimen of this issue. All I know is, that the bottom label bears the word *CORREOS*; the left-hand label has *MEDIO PESO*, and the right-hand label has *ó 50 CENTIMOS*. The groundwork of the spandrels consists of wavy vertical lines.

First Forgery.

Lithographed, on stout, yellowish-white wove paper. The design is the same as that of the "*UN PESETO*" forgery described below. The right-hand and left-hand labels both bear the word *CORREOS*, and the bottom label has *MEDIO PESO*. The groundwork of the spandrels consists of short, oblique lines, pointing different ways, in alternate rows, as in the said "*UN PESETO*" forgery.

Second Forgery.

Very nicely lithographed, in greenish-yellow, on very thick, very white wove paper. The inscriptions are correctly placed, and the spandrels are composed of wavy vertical lines. The central circle is surrounded by pearls and white oblongs, placed alternately. The top frame has twelve lines, the right-hand one eleven, the bottom one twelve, and the left-hand one also twelve. There is a large wreath, partly surrounding the shield, and large white banners are placed behind the shield and wreath. The compartment containing the llama bears fourteen vertical lines of shading, and the lowest compartment has twenty-two similar lines. The word "*FALSCH!*" is struck in green letters, near the top of the stamp.

Third Forgery.

Lithographed, in brownish-yellow, and also in lilac-rose, on thin, white wove paper. The inscriptions are correctly placed; but the spandrels are composed of zigzag vertical lines. The central circle is surrounded by white pearls and oblongs; sometimes alternately, and sometimes several pearls together. The top frame contains eleven lines, the right-hand one twelve, the bottom one eleven, and the left-hand one thirteen. The banners and wreath are much the same as in the second forgery. There are twelve horizontal lines in the compartment of the shield, which contains the llama, and twenty-two in the lowest compartment.

POSTMARKS.

Genuine.—Unknown to me.

First Forgery.—1; also a number of fine dots.

Second Forgery.—Uncanceled, except for the surcharge, "*FALSCH!*"

Third Forgery.—1.

Issue of 1860. 1 Dinero, blue.

This is the type with frame composed of eleven lines at the top, bottom, and right side, and ten lines at the left side, the outer and inner lines rather separated from the rest, but no thicker, and the ground in the inner corners formed by rows of short, oblique lines, each row pointing alternately to right and left, so as to appear almost like vertical zigzags.

**Genuine.**

Lithographed, on medium, white wove paper. There are ninety-seven pearls round the central circle. The O of PORTE is much too tall, reaching up to the next line above the one touched by all the other letters of the word; and the O of FRANCO is a little taller than the other letters of that word. The letters R, C, and O of this latter word rest upon the same bottom-line as all the letters of PORTE; but the letters F, A, and N rest upon the next line above. In the left-hand CORREOS, the first two and last two letters reach above the rest, and the first O reaches below the rest. In the right-hand CORREOS, the S and each O reach below the other letters, and the last O reaches above them. There are fifteen horizontal lines of shading in the compartment of the shield which contains the llama, counting down the right-hand side of it, and thirty-two vertical lines in the lowest compartment. There are fifteen short strokes in the top row of the groundwork, to the left-hand side of the circle, and sixteen in the top row, on the right-hand side. The bottom row on the left-hand side contains sixteen short strokes, and the bottom row on the right-hand side contains thirteen. The right-hand branch of the large wreath shows twenty-two leaves, and the left-hand branch, twenty-one. In some copies, the horn is on a white ground, instead of a ground of vertical lines.

Forged.

Lithographed, on thickish, white wove paper. There are only seventy-two pearls round the central circle. The words PORTE-FRANCO are in letters of equal height, all bounded by the same lines, top and bottom. In the left-hand CORREOS, the last letters, OS, stand rather higher than the rest, and the first O and the S reach lower than the other letters. In the right-hand CORREOS, the letters are all bounded by the same two lines except the S, which is rather taller than the rest. There are only thirteen horizontal lines of shading in the compartment of the shield which contains the llama, counting from the right-hand side; and the head and neck of the llama are rounded just like those of a goose. In the genuine, the head and neck of the llama are like those of a greyhound. There are only eleven short, oblique strokes in the left-hand top row of the ground behind the circle; eleven or twelve in the right-hand top row; thirteen in the left-hand bottom row; and eleven in the right-hand bottom row. The right-hand branch of the large wreath bears twenty leaves, and the left-hand branch has about seventeen. The ribbon which ties the branches of the large wreath together is merely a white blotch. In the genuine, it is plainly a ribbon.

POSTMARKS.

Genuine.—1; 29; also a set of small, round dots, with or without name of town in the centre; also a lattice-work frame, something like 40, but square or rectangular, and with the lines twice as far apart; also the

name of town, in very large letters, without frame, or in a very large oval frame; also 82, with LIMA in the centre, and a number of small, round dots outside the outer oval; also a plain, oblong frame, with inscription in two lines, like 74, but not so long.

Forged.—1.

Issue of 1860. Una Peseta, rose.

Genuine.

There is *no* UNA PESETA of the type described above. The nearest approach to it is the issue of 1860, which has the short lines of the background in the corners joined end to end, instead of being separate from each other, thus making real rows of vertical zigzags; and the circle round the central shield, etc., is composed of a zigzag line, instead of the ninety-six white pearls. The value is written as above, "UNA PESETA." The frame has ten lines at the top and right-hand side, eleven at the bottom, and twelve at the left-hand side. The shield is the same as before, but the lower wreath is replaced by a pair of large banners.

Forged.

Lithographed, on stout, very yellowish-white wove paper. There are eighty-eight white pearls round the central circle, instead of the zigzag line. There are fourteen horizontal lines of shading in the compartment of the shield which bears the llama, counting on the right-hand side of it, and the llama has an absurd, dark blot on its shoulder. The shield is surrounded by a large wreath, as in the 1 DINERO, instead of the large banners of the 1 PESETA; and there are nineteen leaves in the right-hand branch of the large wreath, and about eighteen in the left-hand branch. The letters of PORTE-FRANCO are all the same height, top and bottom. The value is written "UN PESETO," which is an easy, instant test. The frame has ten lines at the top, eleven at the bottom, eleven on the right side, and ten on the left side. In all cases, I have included the lines which touch the zigzag groundwork.

POSTMARKS.

Genuine.—As in the genuine 1 DINERO.

Forged.—1.

Issue of 1866. 5 Centavos, green.

Genuine.

Engraved in *taille-douce*, on thick, yellowish-white wove paper; perforated 12. The front foot of the white llama, above the aloe or agave-plant, is absurdly large; and a straight-edge laid along the front or profile of its face would just cut into the tail of the R of FRANCO. This said white llama has a cloth or saddle under the pack on its back, and the corner of the cloth can be plainly distinguished under the pack. The back leg of the llama is darkly shaded, but it is quite distinct, and slim like the other legs. There is a small ball or fruit amongst the leaves, over the beginning of the V of CENTAVOS, and this ball is dark, and shaded all over. The U of PERU is not joined at the top. The left-hand leaf of the aloe is rather stumpy, as though it had been broken off; but it is only very little shorter than the right-hand leaf. The ends of the label containing CORREOS PERU do not touch the ends of the label which contains PORTE FRANCO.

Forged.

Lithographed, on stout, and also on rather thin, white wove paper; badly perforated 13. The front foot of the white llama is small and pointed, like its fellow. A straight-edge laid along the profile of the face of the llama would cut through the C of FRANCO. The pack on its back does not show any saddle underneath it. The back leg of this llama is thick and clumsy, and very indistinct. The ball among the leaves, over the beginning of the V of CENTAVOS, is perfectly white. The U of PERU is joined at the top. The left-hand leaf of the aloe-plant is very sharp, and *very* much shorter than any of the other leaves. The ends of the two upper labels touch each other at both ends.

Same Issue. 10 Centavos, red.

Genuine.

Engraved in *taille-douce*; paper and perforation the same as in the genuine 5 centavos. The front white llama has some dark shading on the back of the head, and a dark patch on its back; but the two masses of shading are not joined by shading down the back of its neck. The cactus, or prickly pear, in the foreground, has eight leaves. The llama in the background has a head, neck, and ears exactly like those of a greyhound, and the eyes are well marked. The head and tail of the C of CENTAVOS *almost* touch. The mountain-peaks in the background are so lightly drawn that they are hardly visible at a first glance.

**Forged.**

Lithographed, on thick, white wove paper; perforated 13. The dark shading on the back of the head of the front llama goes down the neck, and joins the patch of shading on its back. The cactus seems to have about eleven leaves, but they are very blotchy. The head, neck, and ears of the llama in the background are like those of a wolf, and there is only one eye visible. The head and tail of the C of CENTAVOS are a good distance apart. The mountain-peaks in the background are much too distinct, so that they can be plainly seen at a glance.

Same Issue. 20 Centavos, brown.

Genuine.

Engraved in *taille-douce*; paper and perforation the same as in the genuine 5 centavos. The background of the scroll, behind the words CORREOS DEL PERU, is shaded with crossed lines. The central picture is exactly the same as that on the genuine 10 centavos, except that not quite so much of it is visible; so that the tests for that portion of the genuine 10 centavos will hold good for the genuine 20 centavos.

First Forgery.

Lithographed, on rather thin, and also on stout, very white wove paper; perforated 13. There are two dark, oblique lines of shading on the mountain, which come between the heads of the two llamas, the right-hand line touching the nose of the llama in the background. The rest of the picture is the same as in the *forged* 10 centavos. The background

of the scroll, behind the words CORREOS DEL PERU, is of solid colour. The 2 in the left top corner, and the 2 in the right bottom corner, both appear to be in two pieces, as though the tail of each figure could "take off." The white llama's face is rather like that of a *very* sharp-nosed pig.

Second Forgery.

Lithographed, on stout, hard, white wove paper, with a brownish-yellow wash on the face; pin-perf. 13, in oval holes. The background of the CORREOS DEL PERU scroll is solid. The shading on the head of the front llama joins that on the back. The leaves of the cactus are not countable. There appear to be about four; but it looks like irregular blotches of shading, rather than a plant. The white llama has a head like that of a rather blunt-nosed, white terrier, and the llama in the background has no visible eyes. The tail of the C of CENTAVOS curls inwards, so that the head overhangs it. The mountain-peaks are much darker than in the first forgery; but the sky is also darker, so that they are not much plainer.

POSTMARKS.

Genuine.—29. Also a very long oval, containing seven very thick, parallel bars, running across the short side of the oval. Also a shapeless blotch.

First Forgery.—22.

Second Forgery.—54, without numerals. 62.

Issue of 1879. 2 Centavos, violet.

Genuine.

Engraved in *taille-douce*, on stout, greyish-white, wove paper; perforated 12, and embossed at the back with a "*grille*," or sort of grating of crossed lines. There is a very distinct, wedge-shaped accent over the U of PERU. Each lower figure 2 is surrounded by a white oval, and each oval is exactly the same width all the way round. The letters NT of CENTAVOS touch each other at the top, and the letters TA touch each other at the bottom. There are seven cannon-balls, in a heap, below the mouth of the left-hand cannon. The two rammers, or flag-staves, or whatever they are, beside the heap of cannon-balls, are white, and hardly shaded at all. The compartments of the shield are very light, showing off the llama, tree, and cornucopia very distinctly. Below the mouth of the right-hand cannon there are three rounded things, which it is impossible to decipher. They look like the heads and trunks of three babies, placed side by side, as much as anything, but they are not in the least like cannon-balls. The inner edge of the large white oval, round the central design, is only outlined at the top and the bottom, and the outer edge of the oval is not outlined at all.

Forged.

Very well lithographed, though too darkly printed, on thinnish, very white wove paper; unperforated, or perforated 13, and without any embossed "*grille*" at the back. There is no accent over the U of PERU. The white oval surrounding the lower right-hand figure 2 is very irregularly drawn, and very much wider in some parts than in others. The oval round the lower left-hand 2 is wider at the sides than at the top and bottom. None of the letters of CENTAVOS touch each other

anywhere. There are only three cannon-balls in the heap below the mouth of the left-hand cannon. The two rammers beside this heap of cannon-balls are shaded all over. The compartments of the shield are very dark, so that the llama, etc., can hardly be seen in some copies, and the cornucopia looks exactly like a big German pipe turned upside-down. There are six distinct cannon-balls below the mouth of the right-hand cannon. The large white oval surrounding the central design is outlined all round, both inside and outside.

This is an exceedingly exact forgery; having apparently been transferred in some manner from the genuine, instead of being merely imitated. It is always printed much too heavily.

POSTMARKS.

Genuine.—29.

Forged.—5, without numerals.

Fiscal Stamp of 1883-84, employed postally.
10 Cent., slate-blue.

Genuine.

I do not know the date at which this stamp was first employed for the prepayment of letters, but fancy it was about 1888. It is very badly engraved in *épargne* (looks like a woodcut), on rather thin, greasy-looking, transparent, yellowish-white wove paper. The ink is so very oily, that the design of the stamp is nearly as distinct at the back as it is on the face. There are nine dark, curved strokes each side of DIEZ; but all but about three of the strokes each side are not much more than mere dots in my specimen. The scroll containing DIEZ has a dark outline, with a very thin, white outline outside it. The lower part of this white outline almost touches the letters of CENTAVOS. The dark lines in the two side-labels, containing 1883 and 1884, are shamefully irregular. The 4 has a pointed head, and its foot touches the outline of the label to right of it. It is almost impossible to count the rays of the sun with any certainty, as many of them have subsidiary strokes or dots, which may or may not be defects in printing. My specimen shows eighteen, some of them being nothing but dots. The upper corners have a pattern which reminds one exceedingly of the "linen" of our registered envelopes. It appears as crossed, irregular, thin white lines on a dark background. One of the white pearls along the top of the stamp stands exactly above the centre of the vertical stroke of the P of PERU. There is *no* pearl exactly above the first stroke of the U of that word. The top of the last stroke of the N of CENTAVOS has a funny, curly tail, which touches the following T; and there is a white flaw at the end of the v, which cuts through the thin white lower outline of the DIEZ scroll. The lower corners of the stamp (each containing a 10) are almost entirely white. All the dark parts of the stamp are strongly indented into the paper.

Forged.

Very nicely typographed, in pale sky-blue, on stout, very white (not transparent) wove paper. There is not a trace of the design to be seen through the back of the stamp, unless it is held up to the light. There are seven nicely-graduated, curved strokes each side of DIEZ. The scroll has no outline at all; so that the letters of CENTAVOS are some distance below it. The date-labels each side of the stamp are neat, with the dark

lines truly drawn. The head of the 4 is cut off broad and square, and the foot does not touch the outline of the label. The sun has ten distinct rays, with no trace of any extra strokes or dots. The pattern of the upper corners consists of regular rows of five dark dots, on a white ground. This same pattern appears also in the lower corners, behind each 10. There is no white pearl exactly above the vertical stroke of the P of PERU; but there is one *very* nearly above the first stroke of the U. The letters of CENTAVOS are nicely shaped, with no curly tail to the N and no flaw to the V. Except round the border, the stamp shows scarcely any sign of being indented into the paper. I conclude that this forgery is "made in Germany," as the word "FALSCH" is printed across the centre of the shield, in small, red capital letters. I hope I have made plain, in the above description, the fact that this forgery is infinitely better in appearance than the genuine. The colour, of course, is entirely different. I have called that of the counterfeit "sky-blue"; but it is really a sort of lavender-blue, mixed with a good deal of white.

POSTMARKS.

Genuine.—I have no cancelled copy.

Forged.—Uncancelled, except for the word "FALSCH," as above-stated.

PHILIPPINE ISLANDS.

Issue of 1854. 5 Cuartos, orange-red.

This is the stamp of the type of the 10 cuartos, illustrated on page 207. It was engraved locally, as one might suppose, from the appearance of it; and there are two plates, with forty varieties on each plate. The first plate shows the head on a ground of fine lines; the second plate has coarse lines, farther apart. I cannot give very many tests, as I have only two or three genuine specimens from which to describe; but I hope that the description below will be found sufficient.

Genuine.

Roughly engraved in *taille-douce*, on medium, hard, very yellowish-white wove paper. The 8 and 4 of 1854 are as tall as CORREOS Y; but the 1 and the 5 are sometimes not so tall. The numerals 55 are upright. The value is usually written C.^s, but I have a copy without the stop. The coronet shows six ornaments; each being like a sort of trefoil, with a ring in its centre. The back of the head shows three to four distinct coils of plaits. There are from nine to twelve horizontal lines in each corner of the stamp, including, in each case, the outline of the label. The pearls each side of the central circle vary in number, but all my specimens show at least twenty-eight each side; they are round, and fairly regular. The ink stands out, but not absurdly so, from the surface of the paper. I cannot give more tests than the above as the stamps vary, and I have not been able to get the whole plate.

First Forgery.

Engraved in *taille-douce*, on stout, moderately soft, buff wove paper. The colour of the stamp is brownish-yellow, or dead gold-yellow. The

whole of the date-numerals are as tall as CORREOS Y. The numerals 55 are *very* sloping. The little s of C.^s is like an 8. The coronet shows six trefoils; but the front one is not in profile, as it ought to be. There are only seven horizontal lines in three of the spandrels, and five in the one in the left lower corner; counting, in each case, the outline of the label. There are twenty pearls to the left of the head, and twenty (including two half-pearls) to the right of it. Many of the pearls are anything but round; and one or two of those below the Y are shaped like a D. The ink stands out in ridges from the surface of the paper, the depth of the lines being much exaggerated.

Second Forgery.

Lithographed, in orange-red, much the colour of the genuine, on rather stout, very hard, yellowish-white wove paper. The figures 185 of the date are all barely half the height of CORREOS Y, and the 4 is still smaller; so that the whole date seems to be sloping down to the right, instead of level. The little s of the value C.^s is like a 5. The trefoil-shaped ornaments on the coronet are very small, and only two of them show the ring in the centre. The coils of hair at the back of the head are extremely faint and indistinct; there seem to be three of them. There are nine horizontal lines in the left top spandrel; ten in the left bottom one; eleven in the right top one, and twelve in the right bottom one, including, in each case, the outline of the label. There are twenty pearls to left of the head, and twenty-two to right of it. The ink, of course, does not stand out at all from the surface of the paper.

POSTMARKS.

Genuine.—A number of small square dots, forming a large circle, the size of a shilling; also the same with larger dots.

First Forgery.—22.

Second Forgery.—Pen-stroke.

Same Issue. 10 Cuartos, deep carmine, pale red.

Genuine.

Roughly engraved in *taille-douce*, on medium, hard, very yellowish-white wove paper. The back of the head, in all my specimens, shows four smooth and tightly-braided coils of hair. There are from seven to nine horizontal lines in each spandrel, including, in each case, the outline of the label. In my specimens, the pearls on the left side of the head vary from twenty-nine to thirty-one; and, on the right side of the head, they vary from twenty-one to twenty-seven. The stop after the 10 is *much* nearer to the 10 than to the following C. The C of FRANCO is an ordinary capital C, with a thin tail. All the other tests are the same as in the genuine 5 cuartos, above described.

Forged.

Roughly engraved in *taille-douce*, on thick, very hard, buff wove paper. The coils of hair are so shaded, as to appear like two wide, double plaits, instead of four narrow, single ones; they remind one very much of two ears of wheat, placed head downwards. There are only seven horizontal lines in three of the spandrels, and six in the one in the left lower corner. There are eighteen pearls to left of the head, with a half-pearl at the top

and bottom ; and the same number to right of the head. The stop after the 10 is a little nearer to the C than to the 10. The C of FRANCO has a thick end to its tail, which makes it look like a G. The other tests are the same as in the first forgery of the 5 cuartos. The colour is a *pale* carmine ; not like the pale red of some of the genuine.

POSTMARKS.

Genuine.—1 ; 77 ; also the same as the 5 c.

Forged.—Uncancelled.

Same Issue. 1 Real, blue.

Genuine.

Roughly engraved in *taille-douce*, on medium, very yellowish-white wove paper. The colour varies most extraordinarily, including slate, indigo, greenish-blue, a sort of grey, yellow-brown, etc. Out of forty-four specimens before me, as I write, all but two have a head to each 5 of the date, though the heads are *very* short in some types. There is a stop after FRANCO, another under the L of R^L, and another after the F of F^{TE}. The coronet and coils of hair are the same as in the genuine 10 CUARTOS. There are from nine to twelve horizontal lines in each spandrel, including, in each case, the outline of the label. There are from twenty-five to thirty-one pearls to left of the head, and from twenty-eight to thirty-one to right of the head. Most of them are fairly round. The ink stands up well from the surface of the stamp.

First Forgery.

Roughly engraved in *taille-douce*, on medium, very yellowish-white to almost buff wove paper. The colour is a dark, greenish-blue. The inscription, CORREOS 1854 Y 55 is at the *top* of the stamp, instead of at the bottom ; and the lower inscription is FRANCO. 1. R^L, with a stop after FRANCO, another after 1, and another (small and faint) under the little L of R^L. All the other tests are exactly the same as for the forged 2 reales described below, the engraver having simply put a 1 in place of the 2.

Second Forgery.

Lithographed, in a sort of ultramarine-blue, on medium, very white wove paper, with a very smooth, almost *glacé* face. The inscriptions are placed correctly, in this forgery. Only one 5 of the date has any sign of a head. There is no stop after FRANCO, and none after the F of F^{TE}. The ornaments on the coronet (six in number, as in the genuine) are quite shapeless, so that the trefoil design cannot be distinguished ; and there are no rings in the centres of them. The coils or plaits of hair, at the back of the head, are the same as in the before-described 10 CUARTOS. There are fourteen horizontal lines in the left top spandrel, eleven in the left bottom one, seventeen in the right top one, and fourteen in the right bottom one ; including, in each case, the outline of the label. By the way, the outline under FRANCO is *much* thicker than the horizontal lines below it ; though, in the genuine, the outline there and the lines below it are of equal thickness. The numbers given above will show how much nearer together the lines are in this counterfeit than in the genuine. There are twenty-seven and a half pearls to left of the head, and twenty-eight pearls to right of it. Two of these pearls, opposite to the back of

the neck, are very nearly square, and one opposite the top of the forehead is almost a triangle. The ink does not stand up from the surface of the paper.

POSTMARKS.

Genuine.—29; 77; also the dots of the genuine 5 CUARTOS; also a pen-stroke.

First Forgery.—Uncancelled.

Second Forgery.—Uncancelled.

Same Issue. 2 Reales, green.

Genuine.

Roughly engraved in *taille-douce*, on medium, very yellowish-white wove paper. The colour of the stamp varies from yellow-green to almost yellow-brown, or a sort of olive. The inscription, CORREOS 1854 Y 55, is at the *bottom* of the stamp, as in the genuine 1 real. The upper inscription is FRANCO 2 RS FTH, some types showing a stop after FRANCO, another after the R, and another after the F; but some types have no visible stops. The coronet and coils of hair are the same as in the genuine 10 CUARTOS. There are from nine to twelve horizontal lines in the spandrels; including, in each case, the outline of the label. There are from twenty-four to thirty-one pearls to left of the head, and from twenty-six to thirty to right of it. None of the types in my possession have the hair carried quite up to the outline of the top of the head; so that there is always a white space, more or less wide, right along the top of the head. The white patch at the front of the base of the neck does not touch the outline of the central circle. The ink stands up well from the surface of the paper.

Forged.

Roughly engraved in *taille-douce*, on stout, almost buff wove paper. The colour is a sort of blue-green. The inscription, CORREOS 1854 Y 55, is at the *top* of the stamp, instead of at the bottom. This is, of course, a very easy test. The lower inscription is FRANCO. 2. R^t, with a stop after FRANCO, another after 2, and another (small and faint) under the little L of R^t. The coronet is a fair imitation of the genuine, but the front trefoil is not sufficiently in profile. The coils of hair are the same as in the forged 10 CUARTOS. There are six horizontal lines in the left lower spandrel, eight in the right lower spandrel, and seven in each of the upper ones; including, in each case, the outline of the label. There are eighteen pearls and two half-pearls to left of the head, and the same number to right of it. Most of these pearls are drawn separate from each other; though they all touch in the genuine, and in all the forgeries hitherto described. The lines forming the hair are carried right up to the outline of the top of the head, so that there is no white space there. The white patch at the front of the base of the neck touches the outline of the central circle. The ink stands up in ridges from the surface of the paper, being an exaggeration of the genuine. If it were not for the very careless and absurd mistakes in the inscriptions, this would be a very deceptive forgery. Its chief fault, at a first glance, is its too great clearness and freshness. The originals are usually very dim and faded-looking.

POSTMARKS.

Genuine.—As in the genuine 1 REAL.

Forged.—Uncancelled.

Issue of 1855. 5 Cuartos, vermillion.

This is the type with the short neck and tiny oval pearls, and the nose not in a line with the forehead. It is lithographed, instead of engraved. I have seen no forgeries of this stamp, and only mention it here lest any young reader should confound it with the first issue.

Issue of 1859. 5 Cuartos, vermillion, scarlet, orange.

This is the type with distinct, large, white pearls, a large head, and the inscriptions in thin, light-coloured letters. It was lithographed locally, and there are four varieties of type, as shown in the illustration.

Genuine.

Lithographed, on thick wove, thin wove, and thick rough, ribbed paper. There is a full-stop after CORREOS, and the upper inscription is in block letters. The lower outline of the upper label forms the upper outline of the rest of the stamp. There are two bell-shaped ornaments, and part of a third (all very distinct), in each half of both side-frames. They are all alike in shape, though the upper ones point downwards and the lower ones point upwards. There are sixty-five largish white pearls round the head, many of them being decidedly oval in shape. The "fish-scale" ornamentation, or network, in the four spandrels is composed of *curved* lines. There are nine leaves in the wreath; five of them having a dark vein up the centre. The shading on the hair is very light, being composed of thin lines, far apart. Three leaves of the wreath can be seen, at the back of the neck, where the two ribbons come out from the hair. The lower inscription is in block letters, considerably taller than those of the upper inscription. There is a small, round stop under the little s of C^s. The end of the ribbon which comes across the neck is *very* wavy.

Forged.

Lithographed, in vermillion, on thick, hard, *very* white wove paper. There is a colon after CORREOS. Both upper and lower inscriptions are in ordinary, Roman capitals. There is a very thin, broken outline under CORREOS INTERIOR, which is some little distance from the upper outline of the rest of the stamp. There are three bell-shaped ornaments, and part of a fourth, in each half of both side-frames. Some of them are very indistinctly drawn, and they vary much in shape. There are seventy-five very small white pearls round the head, none of them being oval, and some of them being mere dots. The fish-scale ornamentation in the spandrels is very poorly imitated by a lattice-work of crossed, *straight*, oblique lines; the whole being much too dark, almost as dark as the side-frames, instead of quite light. The wreath is very blotchy. There seem to be six leaves, without veining. The shading of the hair is in dark, solid patches, instead of lines. There are no visible leaves at the back of the neck, where the ribbons come out of the hair. The

letters of the lower inscription touch the outline of the label above them; but they are no taller than those of the upper inscription. There is a dash, instead of a stop, under the little s of *CS*. The end of the ribbon which comes across the neck is not at all wavy.

POSTMARKS.

Genuine.—I have no postmarked copy, but I fancy I have seen 77.

Forged.—6, with something like a large, faint A in the centre.

Issue of 1861. 5 Cuartos, vermilion.

This is the type with *very* small faint pearls, a small head, placed high up in the circle, and the inscriptions in thick, dark letters.

Genuine.

Lithographed (?), on thinnish to medium, greyish-white wove paper. I have seen no forgery of this stamp; but I fancy the forgery just described is intended to do duty for this type, as well as for the issue of 1859. I may mention that there are seventy-nine pearls round the head, many of them being so small and faint as to be almost invisible.

Issue of 1862. 5 Cuartos, dull red.

This is the stamp with a full-stop after *CORREOS*, all the lettering in Roman capitals, and a thick line below the thin line under *CORREOS. INTERIOR*, etc.

Genuine.

Lithographed, on stout, white, or yellowish-white wove paper. The full-stop between *CORREOS. INTERIOR* is much nearer to the S than to the I; and the top of the frame, above this inscription, is composed of two thin, coloured lines. There is a colon after *INTERIOR*. There is a white stop, above the top bell-shaped ornament, in the upper half of each of the side-frames, and a similar stop, below the bottom of the lowest, bell-shaped ornament, in the lower half of each of the said frames, besides the white stops between the ornaments. There are sixty-three pearls round the head. Two horizontal rows of the fish-scale network can be seen, between the outline of the central circle and the outline of the upper frame; and the same number between it and the outline of the lower frame. There is some shading on the throat and under the chin; the whole occupying about the central third of the length, from the point of the chin to the front of the base of the neck. The front end of the ribbon, which comes across the neck, trespasses a long way to the right of the shading on the back of the neck. There is a dark spot on the neck, close to the base of it, above the space between *CO* of *FRANCO*. There are two or three indistinct lines of shading (not dotted) on the neck, below the ribbon. The colour is a dull red.

Forged.

Typographed (?), in brownish-carmine, on thin, *pale green*, surfaced wove paper, apparently enamelled. The full-stop in the upper inscription is equidistant between the two words, and there is no colon after *INTERIOR*. The outline of the top of the frame, above this inscription, is composed of a very thick line, with a very thin line outside it. The upper, bell-

shaped ornaments have no white dots above them; and the lower ones have no white dots below them. There are seventy-five pearls round the central circle. Only one row of the network can be seen, both above and below the central circle, between it and the frame. There is no shading on the throat, under the chin, and there is no spot on the neck, near the base. The front end of the ribbon, which comes across the neck, is level with the shading at the back of the neck. There are two *dotted* lines of shading on the neck, below the ribbon.

POSTMARKS.

Genuine.—1, 77.

Forged.—Uncancelled.

Issue of 1863. 5 c., scarlet; 10 c., carmine.

This is the type with the fish-scale network finer, and a colon after CORREOS (not shown in the illustration), but otherwise very similar to the stamp of 1862. It is very doubtful whether these two stamps, and the 1 and 2 reales described below, were ever put in circulation, without the HABILITADO surcharge, in 1869.

Genuine.

Lithographed (?), on medium to thick, slightly yellowish-white wove paper. The colon between CORREOS: INTERIOR is a *little* nearer to the S than to the I; and the top of the frame above this is composed of two thinnish lines, with a third, *very* thin line, outside them, and slightly nearer to the centre line than the centre line is to the bottom one of the three. There are ninety-four pearls round the central circle. Indications of three horizontal rows of the fish-scale network can be seen, outside the top and bottom of the central circle, between it and the nearest points of the top and bottom frames. The Queen's lower lip is splayed downwards a little. There is a faint line under FRANCO 5 (10) CS., on which the inscription stands. (In the 10 CS. the 10 is apparently printed over a partially-erased 5.) There is a stop after (not under) the little s of CS., and level with the middle of the c. The F of FRANCO is a good distance from the end of the label. There are ten leaves, all veined, in the wreath; but they are generally *very* difficult to make out in these two values, though plain enough in the REALES pair. A dark line goes across the top of the head, with a white space each side of it; and there are seven almost horizontal lines of shading, each side of this dark line, of tolerably equal lengths. (Good copies show an eighth line, much shorter than the others, at the bottom, each side.) The thin line, on which the lettering of the lower inscription stands, can generally be traced quite to the right-hand edge of the stamp, cutting through the lower part of the white ring, in the right bottom corner.

Forged.

Very fairly lithographed, on moderately thick, white, or yellowish-white wove paper, somewhat thinner than the genuine. The colon between CORREOS: INTERIOR is *much* nearer to the S than to the I. The top of the frame, above this inscription, is formed by a thick line, between two thin ones; the outside line being some little distance from the other two. There are only ninety-two pearls round the central circle, and they are

all distinctly separate from each other, except two near the chignon; whereas, in the genuine, some of them run together. Only one row of the fish-scale network can be seen above the top of the central circle, and two below the bottom of it. The Queen's lower lip is pointed somewhat upwards. The lower inscription does not rest on a line. There is a large, indistinct stop *under* the little s of *CS*, and it is placed in between the lines of the frame, altogether below the inscription. This is an easy test. There are eight leaves on the wreath; the three at the top of the head being merely indistinct, white blotches. There are eleven lines, of very varying lengths, to the right of the dark line which runs across the head; and the lines to left of this dark line (also very varying in length) are so blotched together that they cannot be counted.

Genuine.—1.

POSTMARKS.

Forged.—1.

Same Issue. 1 Real, violet; 2 Reales, blue.

Genuine.

The stamps of this pair are almost exactly the same type as the pair just described, except that the inscriptions are in larger type, and there is a strong, horizontal line of shading in the fish-scale network, just below the upper label, and a similar line just above the lower label. It will therefore be understood that the tests for the genuine are the same as in the CUARTOS pair, except in the points now to be described. The words *CORREOS: INTERIOR* are very close together, and the colon between them has its upper stop level with the *centres* of the letters. The stop after the value comes *after* (not below) the little L of *R^L*, and the little s of *R^S*, and it is level with the bottom of the R. The F of *FRANCO* is a long way from the end of the label; and this word is in letters as large as those of *INTERIOR*, and larger than those of *CORREOS*. The line on which the letters of the lower inscription stood, in the CUARTOS pair, has been erased in this pair; but the remains of it are visible, cutting through the white ring in the left lower corner, and sometimes also through the corresponding ring in the right lower corner. The other tests, as I have already said, are the same as in the CUARTOS pair.

First Forgery.

This is the newest counterfeit, and is, I believe, of German origin. I have only the 1 REAL, which is printed in absolutely the exact shade of the genuine. Typographed, on stout, extremely white wove paper. The lower stop of the colon between *CORREOS: INTERIOR* is large and *square*; and the upper stop is a small, oblique diamond, level with the *top* of the letters. (Both stops are round and of equal size in the genuine.) The letters of *CORREOS* get larger from the C to the end, so that the s is almost twice as large as the C. This is a great exaggeration of the genuine. The letters *NT* of *INTERIOR* are considerably larger than the rest. There is no stop after *R^L*. The C of *FRANCO* is badly shaped. There is no indication of any line through the white rings in the bottom corners. The top of the stamp is formed by a very thick line between two very thin ones, but the outermost line is broken, and only runs partly across. There are only ninety-three pearls round the central circle, and they are far apart, and most of them *very* small. The easiest test for this forgery is the fish-scale network, which is represented by oblique rows of tiny, oblong dark dots on a white ground. I need not give any further points of difference, as the dots in place of the network cannot be disguised by any postmark. My specimen has the word "*FALSCH*" printed on it, in small blue letters, just above the lower label.

Second Forgery.

This is the same type as the forgery of the CUARTOS pair above described, with the necessary alteration in the value. I have only the 2 REALES. It is lithographed, on thick, yellowish-white wove paper. The blue is generally a Prussian, rather than a sky-blue. The stop after R^s is level with the bottom of the R, but *under* (not after) the little s. There is no stop after INTERIOR, and this word is at a good distance from CORREOS; whilst the colon is too near to this latter word. The F of FRANCO almost touches the end of the label; and the letters of this word are *smaller* than those of INTERIOR. There is no sign of any line cutting through either of the white rings in the lower corners. There is a thin, vertical line, cutting off the CO from the other letters of CORREOS; and a similar but more distinct line, cutting off the last letter of INTERIOR. The other tests are the same as those for the forgeries of the CUARTOS pair.

Third Forgery.

Of this I have only the 2 REALES. Lithographed, in a duller blue than that of the second forgery, on rather thin, white wove paper. The stop after R^s is under the little s. The words CORREOS: INTERIOR are far apart, and the colon is much nearer to the S than to the I. There is no stop after INTERIOR. The F of FRANCO very nearly touches the end of the label (its foot *does* touch). There is no trace of any line, cutting through the white rings in the lower corners. The top of the stamp is formed by one single line, instead of two. There are only seventy-five pearls, instead of ninety-four, round the central circle, and they are small, and far apart. The fish-scale network is represented by crossed, dark, oblique lines. The line across the head does not reach down to the side-wave of the hair; and the horizontal lines each side of it are all so much blotched as to be perfectly uncountable. There are eight leaves in the wreath, tolerably distinct.

Fourth Forgery.

Of this also I have only the 2 REALES. Lithographed, on thick, hard, white wove paper. The stop after R^s is *under* the little s, and touching it. The words CORREOS: INTERIOR are far apart, and the colon is too close to the I, while the C almost touches the beginning of the label, instead of being at some distance from it. There is no stop after INTERIOR. The lower inscription is in *very* small letters, much smaller than those of the upper one, and they stand upon the line beneath them. The bottom of the frame is formed by *three* lines, more or less blotched together, though there are only two in the genuine. The F of FRANCO is much further from the beginning of the label than the s of R^s is from the end of it, though both are equidistant in the genuine. The white rings in the lower corners of the stamp are both broken, so that each looks like a roughly-made C. The top of the stamp is formed by one very thick line, between two thin ones. There seem to be about ninety-five pearls round the central circle; but several of them are missing above the A and the C of FRANCO, so I cannot be certain. They are small, and rather far apart. The fish-scale network is very blotchy, and only one row of it can be traced, above the top and below the bottom of the central circle. There are nine horizontal lines to the right of the dark line across the head, and the lines to the left of this dark line are all entirely blotched together. The wreath shows five leaves, with two small white patches at the top of the head, in place of the other leaves. The *small*, lower inscription, standing on a blotched line, is the easiest test for this forgery.

POSTMARKS.

Genuine.—I have no cancelled copies.

First Forgery.—Uncancelled, except for the word "FALSCH" in blue letters printed on it.

Second Forgery.—An undecipherable blotch.

Third Forgery.—22.

Fourth Forgery.—1.

Issue of 1864. 3½, 6½, 12½, 25 Cent.

These stamps were typographed in Madrid. The genuine ones are very clearly printed, as a rule, but the forgeries are always rather blotched

Genuine.

Engraved in *épargne*, on medium, tinted wove paper. None of the pearls on stalks, at the sides of the stamp, touch the curved lines of the border anywhere, either on the inside or the outside. This is a very easy test. The thin, inner line of the label, below the value, runs unbroken quite from end to end of the label. The T of CENT has a distinct bottom-stroke. The lines which mark the red parts of the Queen's lips reach quite to the edge of the profile. The stops before and after CORREOS are exactly midway between the letter and the end of the label. There is a light, chain-work pattern, running all round the outer edge of the dark, central oval.

**First Forgery.**

Lithographed, on strongly-coloured wove paper, rather thinner than that of the genuine. Most of the stalked pearls in the side-frames touch either the inner or outer curved lines of the frame. The thin, inner line of the frame, below the value, is incomplete, and only shows a short piece under CENT, and another short piece under Pº Fº. The T of CENT has no bottom-stroke. The line which marks the red part of the upper lip is too short, and does not go to the end of the profile. The stop before CORREOS is a good deal nearer to the C than to the end of the label; and the stop after CORREOS is rather nearer to the S than to the end of the label.

Second Forgery.

Lithographed, on thin, face-tinted white wove paper. The two outer lines of the frame of the stamp are of almost equal thickness all the way round, though one is *much* thicker than the other (on alternate sides) in the genuine and in the first forgery. There is also an extra line, dividing the stamps from each other, in this counterfeit. Most of the stalked pearls in the side-frames touch the inner or outer curved lines of the frame. There is no thin, inner line to the upper edge of the value-label; and the thin, inner line at its lower edge is blotched into the outer line, below the figures of value. There is no stop after CENT; and the stops under the O and E of Pº Fº are represented by dashes, or hyphens, level with the *bottoms* of the large capitals, instead of being level with their centres. There is no stop before CORREOS. All the lettering is very blotchy. There are no curved lines of shading round the star-ornaments in the corners of the stamp. The chain-pattern, round the outer edge of the dark central oval, is altogether absent. I do not think this counterfeit is likely to deceive.

PORTO RICO.

BOGUS SURCHARGES.

FIG. 1.

FIG. 2.

FIG. 3.

FIG. 4.

FIG. 5.

The stamps of 1890 and 1896, with head to right (Fig. 1), may be found bearing the surcharges, Fig. 3 and Fig. 4. I have Fig. 3 on the 2 mils., lake-rose, 8 c., sepia, 10 c., rosine, 10 c., lilac-rose, and 20 c., red. Fig. 4 I possess only on the 2 mils., green. This latter surcharge is in red-violet, the others in black. 17 October, 1898, was the date on which the United States formally took over the island. Fig. 5 (in aniline violet) I have only on the 5 mils., chestnut, of 1898 (Fig. 2). It will be observed that this surcharge ostensibly increases the value of the stamp from 5 milésimas to 4 centavos.

All these surcharges are merely a private speculation.

PORTUGAL.

The reprints of the early issues of Portugal are, of course, well known, but of forgeries there are very few. I have only specimens of the issue of 1870, and a very poor imitation of the 25 reis of 1862.

Issue of 1862-64. Head to left. 25 Reis, rose.

Genuine.

Engraved in *épargne*, and embossed, on rather thick, white wove paper. The design in the corners, etc., is an embossed, engine-turned

network of pairs of wavy white lines on a coloured ground. CORREIO is in sunken letters 2 mm. high, with thin, vertical strokes nearly $\frac{1}{2}$ mm. thick. 25 REIS is in similar letters, and there is no accent over the E of REIS. The hair, whiskers, and moustache are embossed, without colour. The letters F.B.F., or F.R.F., may be seen, in sunken, white letters, of microscopic size, on the base of the neck. The point of the nose is rounded, and the two labels are not outlined.

Forged.

This is an absurd thing. It is lithographed, in *yellow-green*, on white wove paper, about as thick as the genuine. No part of it is embossed. The design of the corners is a plain lattice-work, of straight, oblique, coloured lines, not very regularly drawn. CORREIO and 25 REIS are in thin (not sunken) letters, 1 mm. high, with thin vertical strokes hardly $\frac{1}{4}$ mm. thick, and there is a coloured accent over the É of REIS. The hair and whiskers are made by coloured lines, instead of white embossing, and there is no moustache. The base of the neck shows a broad, dark band of shading, and the engraver's initials are absent. The nose is sharply pointed; and, as far as I can see through the postmark, the profile shows a perfectly straight outline, from the forehead to the tip of the nose (classical?), instead of an ordinary, human profile. The two labels are outlined all round.

POSTMARKS.

Genuine.—38, 42.

Forged.—29, with PORTUGAL between the circles, and a blank centre.

Issue of 1870-80. 5, 10, 15, 20, 25, 50, 80, 100, 120, 150, 240 Reis; perf. 12½.

5, 10, 15, 20, 25, 50, 80, 100, 150, 240 (?), 300, 100 Reis; perf. 13½.

Genuine.

Engraved and embossed, in *épargne*, on stout, white wove paper; perforated 12½ or 13½, as above. There are sixty-one white pearls embossed in the oval round the head, and none of them touch either the outer or inner outline of the oval. The "imperial" forms a little rounded lump in the hollow, below the under lip, but the bottom end of it does not project. The top of the stamp, above the left-hand side of the upper REIS, contains twenty-seven vertical, coloured lines, the inner ones being mere dots; and there are the same number of lines above the right-hand end of the said REIS, the inner ones being mere dots. At the bottom of the stamp, below the left-hand end of the lower REIS, there are twenty-eight vertical lines, the inner ones being mere dots; and the REIS label *just* touches the bottom line of the frame, so that this set of lines is completely separated from the corresponding set, below the right-hand end of this bottom REIS label, which contains twenty-six lines. The triangular piece, to the left of GAL, contains eight vertical, coloured lines; the similar triangle, to the right of COR, contains seven lines; the one to the left of POR contains nine lines, and the one to the right of EIO also contains nine lines. The profile of the nose is perfectly straight.

Forged.

This is a most excellent forgery, and I have only known it about ten years. Nicely embossed, probably an electrotype, on white wove paper, thinner and softer than that of the genuine, and perforated 11½, very badly. There are only fifty-seven white, embossed pearls round the central oval; and some of them just touch the inner, and some of them the outer, outline of the oval. The imperial on the chin sticks out too much, looking rather like a comma, the bottom end of it projecting. Above the left-hand side of the upper REIS, there are twenty-four vertical lines of shading, and above the right-hand end of it, there are twenty-five. Below the bottom REIS, there are fifty-seven lines of shading; the REIS label does not touch the bottom frame, so that the lines can be counted all along the bottom of the stamp. The triangular piece, to the left of GAL, contains seven lines; the similar piece, to the right of COR, contains nine lines; the piece to the left of POR contains eight lines, and the piece to the right of EIO contains seven. The profile of the nose is rather hollowed out in the centre, but not very much so.

I do not know how many of the values have been imitated, but there is probably a full set of them. I have the counterfeits of the 5, 10, 50, and 100 reis.

POSTMARKS.

Genuine.—8, 42, 46, 55, 56.

The native-printed stamps are legion. I will try to condense the varieties as much as possible.

1871. Die I. REIS in thin, Roman capitals. SERVIÇO has s and r smaller than the rest of the letters, and e larger. Thirty-three vertical lines in oval. The side-ornaments are four dashes.

Fig. 1. Thin, hard yellowish paper; 10, 20, 40, 100, 200 reis.

Also stout white or yellowish paper, 10, 20, 200, 300, 600 reis.

1872. Die II. REIS in block capitals; all letters of SERVIÇO of the same size; forty-four vertical lines in oval; side-ornaments, five dots. Large figures of value.

Fig. 2. Stout white or yellowish wove paper; 10, 20, 40, 100, 200, 300, 600, 900 reis.

Also laid paper; 10, 20, 40, 100, 200 reis.

1873-5. Reissue of both dies; thin, soft, bluish-white wove paper, large figures; Die I., Fig. 3; 10, 20, 200, 600, 900 reis.

The same, with small figures, Fig. 4; 10, 20 reis.

Die II., large figures, Fig. 5; 20 reis.

Die II., small figures, Fig. 6; 10, 15, 20 reis.

1876. Die II., first recut. Forty-one lines above, forty-three lines below, in oval. REIS recut. v of SERVIÇO barred. Small figures, thin, bluish paper, Fig. 7; 10, 15, 20, 40, 100, 200, 300, 600 reis.

1876. Die I., first recut. Thirty-three vertical lines, but redrawn. Lettering larger, v barred; REIS in thick, Roman capitals; side-ornaments, five dots; small figures. On thin, bluish paper, Fig. 8; 10, 20, 40 reis.

1877. Die I., second recut; star added above value, and bar below; small figures; thin, bluish paper, Fig. 9; 10 reis.

1877. Die II., second recut; forty-one lines in oval; star above, and bar below value; small figures; thin, bluish paper, Fig. 10; 10 reis.

1877. Die II., third recut; forty-one lines above, and thirty-eight lines below, in oval; white oval round REIS; star above, and bar below; small figures, thin, bluish paper, Fig. 11; 10, 15, 20, 40, 100, 200, 300, 600, 900 reis.

The perforations of these stamps are rough (pin-perf.), very irregular, gauging from 12 to 18.

Genuine.

Engraved in *tpargne*, varieties as above. I do not possess either genuine or forged any more, but the following description, transcribed

from my second edition, was taken, as far as I remember, from the stamps of 1872, Die II.

The letters round the oval are much smaller than those of the word REIS. There is a very distinct, round white dot under the ç of SERVIÇO, which is intended to represent the *cedilla* under that letter. Before SERVIÇO there is a little cross, formed of five very distinct, round white dots (1872, etc.), the central one being as large as the rest. There is a similar cross after POSTAL. The oval is too large for the rectangular frame containing it, so that it touches the frame at the top, bottom, and the left-hand side, in all the types, and also at the right-hand side in most of the types. The vertical lines in the oval are, in all the types, very irregularly drawn, and some of them are always more or less crooked.

First Forgery.

Lithographed, on medium, white wove paper; pin-perforated 12½, but with *round* perforations, instead of the rectangular perforations of the genuine. There is no dot under the ç of SERVIÇO. The five white dots before SERVIÇO and those after POSTAL are so *very* small as to be almost invisible, and the central dot is even smaller than the others. The central oval does not touch the *outer* line of the frame, either at the top or at the left-hand side. There seem to be about forty-two lines in the oval, but they are always so light on the right-hand side as to be almost impossible to count; and they are very regularly drawn, all parallel, and not one of them crooked. This is not at all a bad-looking forgery, and it is better than the genuine in many respects.

Second Forgery.

Lithographed, on stout, white wove paper, of a very particularly coarse make, showing the marks of the wire meshes on which it was made; pin-perforated 11½. The letters round the oval are very much too large, being quite as tall as those of REIS. There is no dot under the ç of SERVIÇO. There is no cross of dots either before SERVIÇO or after POSTAL, their places being supplied by large white dashes or hyphens, after the style of Die I., but too large. The oval appears to be so large as to be absolutely cut off by the frame at the top and bottom and left side. This is an exaggeration of the genuine. The vertical lines in the oval are only twenty-eight in number, thus failing to agree with any of the types; they are, of course, much too far apart. It will be seen that this forgery is not at all a good one; but it has a very fair appearance, and is likely to deceive many. I have not troubled to describe the various types very minutely, as the forgeries do not correspond with any one of them.

POSTMARKS.

Genuine.—A very large, unoutlined oval, formed of fourteen parallel bars, sufficient to cover two stamps, with a large numeral in the centre.

First Forgery.—A large, outlined circle, with unreadable marks in it.

Second Forgery.—Uncancelled.

BOGUS STAMPS.

I have the 20 reis, vermilion, of 1877, type of Fig. 11, surcharged with a *very* large 5, in black, filling up almost the whole of the central oval, and another much smaller 5 below it. This is

altogether bogus. I have also the 5 reis, black, of the 1877 issue, with crown in centre, surcharged with a large 1½, in dull red. This is also a bogus variety. Of this same type I possess the 1 T, black surcharge, on the 10 reis, orange-buff, and the 2 T surcharge, also in black, on the 20 reis, bistre. I conclude the fakers desired to fill up blanks in the list of surcharges, for all those mentioned above are non-existent.

PRINCE EDWARD ISLAND.

Threepence, blue.

Issue of 1 Jan., 1861. Yellowish-white wove paper; perf. 9.

Issue of 1864-5. Yellowish-white wove paper; perf. 11 to 12.

Issue of 1870. White or bluish-white wove paper; perf. 11 to 12.

Genuine.

Engraved in *épargne*; paper and perforation as above. The groundwork, outside the oval, is composed of horizontal rows of pointed, upright oblongs, alternating with rows of dots. There are nineteen horizontal rows of oblongs. The ornaments on the Queen's coronet are crosses *pattée* and four-petalled flowers, alternately. The base, or lower band of the coronet contains about twenty-two dark, horizontal dashes along it; but some of them often run together, so that they are difficult to count. The outline of the profile of the face is thickest on the upper lip. The whole of the shading on the face is composed of dotted lines. The dotted shading on the cheek is quite distinct from the lines of shading on the ear. There is a horizontal white line, forming the upper boundary of the THREE PENCE label, and a dark line above the white one. The pattern of the groundwork above does not trespass at all into the said dark line.

Forged.

I first saw this in 1891, and it is a poor imitation. Blotchily lithographed, on stout, very white wove paper, badly pin-perforated 12½, in small oval holes, far apart. There are only seventeen complete, horizontal rows of the upright oblongs outside the oval, and they are extremely irregular in shape and size. The flowers in the coronet are mere shapeless white blotches, with a dark ring in the centre of each. The twenty-two dark dashes along the band of the coronet are absent. The outline along the profile of the face is thickest opposite to the eyebrow and lower part of the forehead. The shading on the face is composed of lines which are not dotted, and some of these lines are carried on to the ear without a break; thus the ear is not nearly so distinct as it is in the genuine. There is a horizontal white line, forming the upper boundary of the THREE PENCE label, with a dark line above it, as in the genuine; but the dark, upright oblongs of the lowest row run into this dark line.

POSTMARKS.

Genuine.—33, 100. Often with pen-stroke added.

Forged.—A few faint, undecipherable blotches.

Issue of 4 Jan., 1872. 4 Cents, green.

Genuine.

Engraved in *épargne*, on stout, rather yellowish-white wove paper; perforated 11 to 12. The letters of the inscription, PRINCE EDWARD ISLAND, are all exactly the same height, and quite level. The numerals in the upper corners do not touch their containing-squares anywhere. The white, inner outline of the central frame has eight re-entering points; each of these points is quite sharp, and they are all alike. The bottom of the neck just touches one of these points, above the O of FOUR. The frame of the stamp, on the right-hand side, consists of one dark line; and inside this line there is a vertical row of fine dots, then a vertical row of horizontal dashes or short lines, and then another row of dots. The Queen's eyeball is perfectly white. The wavy outline of the central frame comes down equally above the O of FOUR and the N of CENTS; and the S of CENTS is at some little distance from the end of the containing-label. The squares which contain the bottom numerals are considerably taller than the height of the label containing FOUR CENTS.

**Forged.**

Very nicely lithographed, on moderately stout, white wove paper; perforated 13, rather badly. The letters of the inscription, PRINCE EDWARD ISLAND, are *very* irregular in height, and the C of PRINCE and the S of ISLAND are a good deal taller than the other letters; the E of PRINCE touches the O of POSTAGE above it, though they are distinctly separate in the genuine. The cross-stroke of each upper 4 touches the right-hand side of its containing-square. The white, inner outline of the central frame has eight re-entering points like the genuine, but they are not all alike, and the one under the N of PRINCE, and the one above the O of FOUR, are very much blunter than the others. This latter point goes to the left of the point of the Queen's neck, instead of touching it. The frame of the stamp, on the right-hand side, consists of *two* dark lines, then a vertical row of horizontal dashes, then a vertical row of small dots, which all run together into one vertical line, about level with the centre of the stamp. The Queen's eyeball is shaded all over. The wavy outline of the central frame comes down very much lower on the left-hand side, above the O of FOUR, than it does on the right-hand side, above the N of CENTS; indeed, the U of FOUR is partly cut away at the top by it. The S of CENTS is as close to the right-hand end of the label as it can be, without absolutely touching it. The squares which contain the bottom numerals are exactly the same height as the ends of the label containing the inscription, FOUR CENTS.

POSTMARKS.

Genuine.—33, 100.

Forged.—A diamond of oblong dots, something like 42, but short and long alternately, and without central numerals.

The forgery above described was made in Birmingham, many years ago, and is certainly deceptive. It was briefly mentioned in the *Philatelic Journal*.

BOGUS STAMPS.

Of these I have the 10 cents, lilac, type of the 3d., and the 15 c., bright ultramarine, type of the 9d. They are both perforated 11½. I need not describe them further, as no such stamps were ever

issued. Evans says, "A 10 cent stamp, of the same type as the 3d., was issued by an American dealer at the same time as the last series, of which it was at first supposed to form a part. It was, however, entirely fictitious." He does not mention the colour, but I conclude it is the one described above, and I fancy the 15 c. is by the same hand, and very likely made at the same time. My 10 c. is uncanceled, and the 15 c. bears ... LOTTE-TOWN, in a circle, without outline.

PRUSSIA.

Issue of 1866. 30 Silb. Groschen, blue.

This is the only Prussian adhesive of which I possess a counterfeit. I suppose that the fact of most of the issues being so very common has caused the forgers to refrain. There is a 10 sgr., rose, of a similar type, but I have no forgery of it. The catalogues usually give these stamps as being printed on gold-beater's skin, but it is really a peculiar, extremely transparent paper, specially prepared for those high values. The design is printed in reverse, and the printed side is gummed; thus, when stuck down, on the letter or packet, the said design shows, the right way, *through* the transparent paper. The idea of the authorities probably was, that, if any attempt were made to remove the stamps for fraudulent purposes, most, if not all, of the design would be left behind. The careless collector will find that this really happens very easily. *Verb. sap.* Evans's catalogue says, "These stamps were not sold to the public, but were affixed by the officials to heavy packets, on which the postage was paid in cash." My own experience of the Prussian post-offices, during my long residence in Berlin, was, that the officials always affix the registration stamp or stamps themselves, together with the little oblong adhesive "registration-label," which almost every country has now adopted, to mark registered letters. I possess some proofs of the 10 and 30 sgr., on medium, white wove paper, unperforated, which were given to me in Berlin, many years ago.

Genuine.

Engraved in reverse, on thin, patent, transparent paper, the invention of an American; rouletted. The letters of PREUSSEN are very nice and regular; the middle tongue of each E being very distinct, and nearly as long as the top limb in each case. There is a wing of the Prussian eagle sticking out distinctly from behind each end of the PREUSSEN label. The stop after GR. in the bottom label is very close to the R, and at some distance from the end of the label. The central tongue of the large 3 comes to a blunt point; and to the left of it are the letters DREISSIGSI, with the following I partially obliterated by the said tongue. The whole central rectangle is covered with twenty lines of inscription, each line, so

far as not covered by the large 30, containing, without any stops or spaces, the combination, DREISSIGSILBERGROSCHENDREISSIGSILBERGROSCHEN. This is a medium-sized word, even for Germany; but, of course, I hardly need say that it is simply the words DREISSIG SILBERGROSCHEN twice repeated. Each of the balls, forming the head and tail of the large 3, contains a six-pointed asterisk; and the top limb has POST, and the lower limb MARKE engraved on it; while each side of the large O has POSTMARKE, in graduated letters. I think the above tests will be found sufficient.

Forged.

Badly lithographed, on what is, apparently, varnished tissue-paper, unperforated. The letters of PREUSSEN are abominably irregular; the first E having hardly vestige of any central tongue, and the second E having it far too short and thin. There are some scratchy ornaments at each end of the PREUSSEN label, but they are not a bit like the eagles' wings of the genuine. The stop after the GR in the lower label is a long way from the R, and very nearly touches the outline of the label. The central tongue of the large 3 is cut off square, but in a ragged manner. To the left of it are the letters DREISSIGR, in two lines, as the tongue really comes exactly along between the two lines of inscription, instead of along the centre of one of them. The whole central rectangle is covered by nineteen lines of inscription, the lowest being much squeezed in. The letters of these inscriptions are, for the most part, quite unreadable; and there are thirty-one letters in each line, instead of the forty-four of the genuine. There are some scratchy marks in the balls forming the head and tail of the 3; but they are not in the least like asterisks. The inscriptions on the numerals themselves are readable, but very ragged and irregular.

POSTMARKS.

Genuine.—My copies are uncanceled.

Forged.—Some illegible and undecipherable blotches.

ENVELOPE STAMP.

7 Silbergroschen, red on white.

Issue of 1851-2. With silk threads in the paper.

Issue of 1853. No silk threads, but oblique inscription above the stamp.

Genuine.

Engraved in *épargne* and embossed, on yellowish-white wove paper, either with two silk threads running obliquely through the paper (and stamp), or with an oblique inscription, in two lines, above the stamp, of the words SIEBEN SILBERGROSCHEN POST-COUVERT, many times repeated. The said inscription does not cross the face of the stamp, so a cut specimen does not show it. The profile of the top of the head projects upwards, in a sort of lump, under the beginning of the B of SILBER, with a depression or hollow each side of the lump. The profile of the under side of the lower lip slants upwards, obliquely, towards the S of GROSCHEN. The inner outline of the central medallion is a white oval line, inscribed in a white octagonal line (the two run together, on each of the flat sides), and both lines are of equal thickness, where they are separate. In the word SIEBEN, the bottom half of the S is the same size as the top half; the I is nearly $\frac{3}{4}$ mm. wide; and there is no white line across the bottom limb

of the E. In the word SILBER, there is no white line across the I. In the word GROSCHEN, the head of the G points forwards, almost towards the middle of the R; the O slants away from the R; the bottom of the S is as large as the top; the upper end of the C is cut off obliquely; there is a space of quite $\frac{1}{2}$ mm. between the two uprights of the H; and the bottom limb of the E is slightly longer than the top limb. Many tests are afforded by the serrated or zigzag inner and outer outlines of the white, engine-turned lattice-work, bearing the words of value. I will call them "triangles," for simplicity. Holding the stamp with the SIEBEN uppermost, the S comes under the space between two triangles; the I, ditto; the first E, ditto; the first stroke of the B, ditto; there is a triangle above the middle of the second E, and another above the middle of the N. Holding the stamp with SILBER uppermost, there is a triangle above the S, and another above the I; the beginning of the L is under the space between two triangles; there is a triangle above the B; a space between two triangles is above the centre of the E, and a similar space is above the beginning of the R. With GROSCHEN uppermost, there is a space above the C. Similar tests might be given for the triangles under the feet of the letters; but I think the tests already given will be found sufficient. The lowest point of the white outline of the diamond, containing the 7, does not touch the white outline of the frame below it.

Forged.

Engraved in *épargne*, and embossed, on very slightly yellowish-white wove paper, no silk threads. My specimen is cut to shape, so I cannot say whether there is any oblique inscription, as in the 1853 issue. The profile at the top of the head shows the lump (under the *middle*, instead of under the beginning, of the B of SILBER), but there is no depression either side of the lump. The profile of the under side of the lower lip is almost exactly horizontal, pointing towards the E of GROSCHEN. The octagonal line round the central medallion is considerably thicker than the oval line, where the two are separate. In the word SIEBEN, the bottom half of the S is very much smaller than the top half; the I is less than $\frac{1}{2}$ mm. wide; an oblique white line crosses the end of the lower limb of the E. In the word SILBER, there is a similar, white line across the lower part of the I. In the word GROSCHEN, the head of the G points vertically down, towards the tail; the O is parallel with the R; the bottom of the S is very much smaller than the top; the upper end of the C comes to a blunt point; the two uprights of the H are only about $\frac{1}{4}$ mm. apart, and the bottom limb of the E is the same length as the top limb. In the word SIEBEN, there is a triangle over the S, another over the I, another over the centre of the B; the centre of the second E is under the space between two triangles, and there is a triangle over the beginning of the N. In the word SILBER, the beginning of the S is under a space; the beginning of the I is also under a space; the L is under a badly-drawn triangle; the centre of the B is under a space; the E is under a triangle, and there is a space above the centre of the R. In the word GROSCHEN, there is a triangle above the C. The lowest point of the outline of the diamond which contains the numeral is joined to the white outline below it.

POSTMARKS.

Genuine.—71. I have also often seen a pencil-stroke in blue.

Forged.—A pen-stroke.

QUEENSLAND.

The varieties of stamps, with the design illustrated below, are very numerous. Here is the list of them:—

Issue of 1 November, 1860. Fairly stout, white wove paper, large star watermark, 16 mm. long, unperforated; 1d., 2d., 6d.

Large star.

Small star.

First issue of 1861. Same watermark, perforated 14 to 16; 1d., 2d., 6d.

Second issue of 1861. Small star, 13 mm. long; clean-cut perforation 14 to 16; 2d., 3d., 6d., 1s., "Registered."

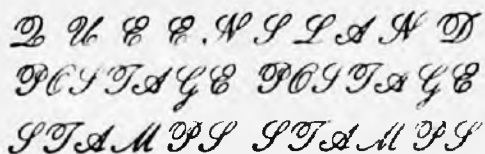

Issue of July, 1861. Same watermark; clean-cut perforation 14; 1d., 2d.

Issue of September, 1861. Same watermark; rough perforation 14 to 16; 1d., 2d., 3d., 6d., 1s., "Registered."

Issue of 1862. Thick, yellowish paper, no watermark, perforated 12½ to 13, in square holes; 1d., 2d., 3d., 6d., 1s.

Issue of 1867. Same paper, no watermark, perforated 13, in round holes; 1d., 2d., 6d., "Registered."

Issue of 1864-5. Small star, perforated 12½ to 13, in square holes; 1d., 2d., 6d.

Script watermark in sheet.

Truncated star.

Issue of January, 1866. Watermark of script letters, as in the illustration, portions of one or more letters on each stamp, perforated 12½ to 13, in square holes; 1d., 2d.

Issue of September, 1866. Thick, yellowish paper, no watermark, *lithographed*; perforated 13, in round holes; 4d., 5s.

Issue of 1868. Small truncated star, as illustrated, 11 mm. long, and part of the word QUEENSLAND, perforated 13; 1d., 2d., 3d., 6d., 1s.

Issue of 1874. The same, but perforated 12; 1d., 2d., 3d., 6d., 1s.

Same issue, perforated 13 × 12; 2d.

Genuine.

Engraved in *taille-douce*, or lithographed, according to the list of varieties given above. The Queen's coronet is very distinct, the top row showing three crosses *pattée*, alternating with three jumbled masses of jewels, intended, no doubt, for *fleurs-de-lys* in diamonds. Below this there are two rows of pearls, with a row of jewels (*i.e.*, not so circular as the pearls) between them. In the top row, there are about twenty-six pearls, and twenty-seven in the bottom row, but it is impossible to count the jewels in the middle row. The background of the central oval is formed by fine, crossed, vertical and horizontal lines. The Queen's eyes are small, but not at all blotched, and the pupil and ring of the iris of each eye can be easily seen. The earring slants rather away from the head. The hair is dark all over, without any white patch on it. The last pearl of the necklace, on the right side of the stamp, comes exactly at the junction of the neck and left shoulder. There is no dark spot, or mole, above the corner of the mouth.

First Forgery.

Of this type I have the 1d., rose-carmine, vermilion; 2d., bright blue; 3d., deep yellow-brown; 4d., dull, dark lilac; 6d., yellow-green; 1s., dark purple; 5s., dull rose, and "Registered," golden-yellow, all unperforated, or perforated 11, 11½, 13, very badly. They are lithographed, on medium, to stout, hard, yellowish-white wove paper. The face of the paper is tinted a pale buff (1d.), lemon (2d.), brownish-buff (3d.), neutral tint (4d.), yellow (6d.), dirty buff (1s.), rose (5s.), or yellow (Registered). The Queen's coronet is extremely blotched and indistinct; the top showing six jumbled masses of jewels, and no distinct crosses *pattée*. Below this are parts of three rows of pearls, but it is impossible to trace any one of the rows from beginning to end, as they are so blotched. The background of the central oval is usually quite solid, though well-printed specimens show the crossed lines. The Queen's eyes are large, with pupil and iris blotched into one solid, dark mass. The earring, except in the 1s. value, hangs perpendicularly downwards. There is a prominent white patch on the hair, under the SL of QUEENSLAND. The last pearl of the necklace is at the middle of the shoulder, between the edge of the oval, and the beginning of the neck. There is a dark spot or mole, above the corner of the mouth, on the right side of the stamp. The different values are not exactly alike, but the above description will be sufficient for them all.

Second Forgery.

Of this I have only the 1d. Lithographed, on rather spongy, greyish-white wove paper, in pink, unperforated; also on hard, white wove paper, in orange-vermilion, perforated 11. The three crosses *pattée*, between the three clusters of jewels on the coronet, are as distinct as the genuine in this forgery, but the oblique lines of division in the centre cross *pattée* are unequal, two being thick, and the other two thin and pointed. In the genuine, all four oblique lines are of equal thickness. Below the crosses, etc., there are three rows of pearls: the top row shows about twenty, the second row shows fifteen, the rest being blotched into a white line; the bottom row has twenty-one, several of them having dark dots in the centre. The crossed lines in the background are very much coarser than in the genuine, and the inner outline of the oval, between the bust and the words of value, is broken in several places. The Queen's eyes are not alike; the pupil of the left eye being an upright oblong, and the ring of

the iris not complete. The earring hangs perpendicularly downwards. The hair is too light below SLA of QUEENSLAND. The necklace contains fourteen pearls; they are larger, more sketchy, and less shaded than in the genuine necklace, though easier to count. The tail of the Q of QUEENSLAND is almost straight, instead of slanting very much to the right. There are some dark blotches, sticking out of the O of ONE, and the Y of PENNY, which do not exist in the genuine. The imitation engine-turned network in the corners of the stamp is very coarsely done. I don't think this forgery is very likely to deceive.

POSTMARKS.

Genuine.—65, with Q.L. in the centre; 82; also a number of small square dots, with a numeral in the centre; also an oval of four concentric rows of oblong dots, with numeral in the centre; also the same, with Q.L. in the centre.

First Forgery.—51; 54; 62; 100.

Second Forgery.—1; 10.

RÉUNION.

In these stamps I have nothing to describe from, except an autotype sheet, sent to me by Sig. F. Brocchi, of Genoa; so, except in a general way, the tests cannot be very reliable.

Issue of 1852. 15 Centimes, black on blue.

Genuine.

Type-set in black, on thin, grey-blue wove paper. There are three types, which may be distinguished by the position of the little dark crescents in the eight balls, somewhat as below, omitting the rest of

TYPE I.

TYPE II.

TYPE III.

the design. Four points of the central flower come rather near to four of the balls, but do not touch them. The frame of the stamp is composed of two lines, a thin, inner one, and a thick, outer one; but the thick, outer one seems, here and there, as though it were composed of two thin ones, so close together that, for most of the way round, they print as one. These lead-lines, of course, do not absolutely touch at the corners. The gaps (or places where the lines are widest apart) are as follows: Thick, outer line; type I., left bottom corner; type II., all four corners; type III., left bottom corner. Thin, inner line; type I., all corners; type II., all four corners (the right top corner and left bottom corner twice as far apart as the other two); type III., all but the

left bottom corner, which seems joined, while the left top corner is very wide apart. None of the balls or chains touch the inner outline of the frame anywhere.

First Forgery.

Apparently electrotyped, on thin, cold reddish-violet wove paper. The thick, sharp-pointed little crescents in the balls in the genuine are here represented by two thin, concentric lines; their position is as in the illustration, it being remembered that each crescent in the illustration stands for *two* lines in the forgery. The hollow portion of each pair of semicircles points towards the *centre* of the stamp, unlike any type of the genuine. The balls and chains do not form a true square, so that the side-petals of the central flower do not come nearly so close to the balls as the upper and lower petals do. The genuine stamps show eight large petals, all the rest being much smaller. In this forgery, sixteen petals are about the same size. The frame of the stamp is composed of *three* lines;—a thick, outer one, and two thin, inner ones. All the corners of the three lines are perfect; *i.e.*, joined without break. The middle ball of the left side, and the two chains and two lower balls down the right side, all touch the inmost line of the frame.

Second Forgery.

Apparently electrotyped; paper as in the first forgery, but of a cold, pale violet. The crescents in the balls are more like the genuine in shape; their position is as in the accompanying cut. The four petals of the flower actually touch the four balls. The frame of the stamp is composed of three lines; a thick, outer line, and two thin ones. All the corners of these lines are perfect, without gaps or breaks. Down the right side, the three balls and two chains all touch the inner line of the frame to the right of them.

Third Forgery.

My own specimen is a photograph; but the original forgery is given in Sig. Brocchi's autotype sheet of genuine, reprints, and forgeries, though I do not know the paper or colour of the said forgery. The crescents in the balls are smaller and thinner than in the genuine; their position is as in the cut. There are three outlines to the frame, as in the other forgeries; and all the balls and chains, down both sides of the stamp, touch the inner side-outlines of the frame. This forgery is very like the illustration of the 15 c. at the head of this article.

Fourth Forgery.

This is a miserable German counterfeit, not in the least resembling the genuine. I have known it for, I should say, quite thirty years, and it used to be so common, that no schoolboy's collection was complete without it. It is coarsely lithographed in black, on thick, dark grey wove paper. The design consists of a rose, surrounded by scroll-work, proceeding out of the rose, in a white circle, surrounded by a square (or rather in the centre of a square) of solid colour, with white floriated scrolls in the spandrels, and lettered REUNION JSLE, with a small flower in each corner of the stamp, and scroll-work down the right and left sides of the frame.

POSTMARKS.

Genuine.—My first edition gave 1 as the postmark (I do not remember where I got it from); but Evans says that the Réunion stamps are not known obliterated, except by pen-strokes.

First, Second, and Third Forgeries.—Uncancelled.

Fourth Forgery.—51; 98; also a set of largish dots, forming a square or diamond.

Same Issue. 30 c., black on blue.

Genuine.

Type-set, in black, on thin, greyish-blue wove paper, as in the 15 c. There are three types, which may be distinguished as follows:—

Type I., the thin, inner line of the left-hand frame is *very* thin, and broken in many places; and, if a line be drawn down through the points of the upright oval, above the 3 of 30, it will, if prolonged, *just* graze the tail of the 3.

Type II., a line drawn through the points of the oval will, if prolonged downwards, cut well into the 3.

Type III., a line drawn through the points of the oval will pass clear to the left of the 3.

There are only two outlines to the stamp, in all the types, but the thick,

outer line shows signs of being double in several places. The gaps or breaks in the corner of the frames are as follows: Type I., outer frame, left top corner, wide gap; right top corner, very narrow gap; left bottom corner, and right bottom corner, medium-sized gap. Inner frame, left top corner, very wide gap; right top corner, wide gap; left bottom corner, apparently joined; right bottom corner, moderately wide gap. Type II., outer frame, left top corner, extremely narrow gap; right top corner, apparently joined; left bottom corner, apparently joined; right bottom corner, moderately wide gap. Inner frame, top corners, *very* nearly joined; left bottom corner, very narrow gap; right bottom corner, somewhat wider gap. Type III., outer frame, both left corners apparently joined; right top corner, ditto; right bottom corner, moderately wide gap. Inner frame, narrow gap at left bottom corner; all the other corners have a fairly wide gap. In this type, the inner frame on the right side is too long at the top, so that its upper end is a little higher than the level of the thin, inner line of the top frame. In all the types, the stop after TIMB. is considerably to the left of the hyphen before POSTE; so that even if the stop were turned into a colon, it would not touch the hyphen.

First Forgery.

This will not need a very lengthy description. Lithographed, in deep *ultramarine*, on pale *blue* wove paper, fairly stout. The outer line of the frame is enormously thick, compared with the inner one. Both are complete and perfect at the corners. There is no hyphen before POSTE, and the 3 of 30 has a square head, instead of a round one with a ball. There is no stop after RÉUNION; though there is a very distinct one in all types of the genuine.

Second Forgery.

My own specimen is a photograph (evidently a pair with the third forgery of the 15 c.); but the original forgery is given in Sig. Brocchi's autotype sheet. I do not know the paper or colour of the said forgery. The

stamp is very like the illustration of the 30 c. given on page 230 ; and the position of the 3 of 30 is about that of Type I. of the genuine. The outer line of the frame is much too thick, and both frames are complete or joined at all corners, except the right top corner of the inner frame, which shows a very small gap. There is no stop after RÉUNION ; but the tail of the final N curls up, covering the place where the stop ought to be. The beginning of the hyphen after TIMB. is over the stop after that word, so that, supposing the stop were a colon, the upper stop would be joined to the hyphen. The C. of the value is, or appears to be, a small capital, instead of a lower-case letter.

Third Forgery.

Of this I have only Sig. Brocchi's autotype. The outer frame is enormously thick, and the inner one *very* close to it. Both are perfect at all corners. There is no stop after RÉUNION, and no hyphen before POSTE. The last E of this word appears to be a C.

Fourth Forgery.

Of this also I have only Sig. Brocchi's autotype. The outer frame is not quite so thick as in the third forgery. All corners of both frames are perfect, without gap ; and the left upper corner of the outer frame is somewhat rounded. There is no accent over the E of RÉUNION, and the first stroke of the final N is drawn too low, below the level of the rest of the word. There is no hyphen before POSTE. The P of that word and the B of TIMB. have absurdly long top-strokes, reaching far to the left.

Fifth Forgery.

Coarsely lithographed, in black, on very dark grey wove paper. This is exactly like the fourth forgery of the 15 c., with the value altered.

REPRINTS.

Evans says, "Reprints have been made from the original types, and are hardly to be distinguished, except by actual comparison with original impressions. The latter, as a rule, are clearer and blacker than the reprints."

This is, as far as I can make out, perfectly correct for all, except the reprint of the first type of the 15 c., which is totally different from the first type of the original, as regards the position of the crescents in the balls. In the said first type of reprint (? forgery) the crescents are placed as in the accompanying cut, which, as will be seen, does not correspond with any type of the original. Now a perfectly new setting of a typograph can hardly be dignified with the name of "reprint," by which I understand an impression taken from the *original*, after it is obsolete.

BOGUS STAMPS.

These are the same type as the fourth forgery of the 15 c., and the fifth forgery of the 30 c. They are 1 c., grey on grey; 5 c., green on yellowish; 10 c., bistre; 30 c., blue; 40 c., vermillion on yellowish; 80 c., rose on yellowish.

POSTMARKS.

The same as on the fourth forgery of the 15 c.

ROMAN STATES.

Issue of January 1, 1852. $\frac{1}{2}$ Bajoccho.

This stamp is found in many shades. My publishers catalogue it in drab, bluish-grey, greenish-grey, lilac-grey, dull lilac, and dull mauve, and even this list hardly exhausts all the different tints of paper employed by the printers.

Genuine.

Typographed in black, on coloured wove paper, varying in substance. The rectangular frame is composed of double lines, and, in all my specimens, the frame is at an equal distance of about $\frac{1}{4}$ mm. from the top, bottom, and two ends of the oval. The tongue of the F of FRANCO is usually separate from the vertical stroke, and the right-hand end of the foot of that letter projects as far as the tongue does. The C has its head and tail exactly alike, so that it is a little like a G, but there is, of course, no cross-bar. The O is very square at the top

and bottom. Each O of BOLLO is also very square at the top and bottom. The top of the A of BAJ. is imperfect, as though a tiny piece had been bitten out of it. The J points almost towards the centre of the tiara. The point of the V-shaped centre of the M of MEZZO is equidistant from the two upright strokes of that letter, and the O is very square at the top and bottom. The leaf-ornament, separating FRANCO and BAJ., touches the outline of the oval, and shows three very distinct, upward-pointing serrations or teeth. The similar leaf, separating POSTALE and MEZZO, also touches the outline of the oval, and shows the three teeth, and a blotch besides. The lump (intended for a cross?) on the top of the tiara *almost* touches the pearl under the first L of BOLLO. The lines on the tiara are disposed in the following manner: first there is an oval ring, where the head goes in (this is seldom blotched); then above this there is a wavy line, showing three distinct waves, with a half-wave at each end; above this, a curved line, not waved; above this, a wavy line, showing five waves, with a half-wave at the left-hand end; above this, another curved line, not waved; and, above this, a curved line of dots. Six dots can be seen on some of my specimens, and only five on others. The split ribbon which points obliquely down from the tiara to the left-hand key does not *quite* touch the shaft of the key. The lower part of the shaft of each key, below where they cross, is not solid, but shows a line down the centre. The outline of the ward-part of each key is formed by a single line, nearest the point of the key, and a double line the other two sides (a thick, outer line, and a thin, inner one). The double lines are

usually not blotched together. Most of the lines of the whole stamp are slightly sunk into the paper, as is usual with typographic impressions.

First Forgery.

Lithographed (?), on dark, violet wove paper. The rectangular frame is a single line, joined at all the four corners (the corners of the genuine are not joined). The oval is very much nearer to the frame at the top and on the left side, than it is at the bottom and the right side. The tongue of the F of FRANCO is firmly joined to the body of the letter, and the right-hand end of the foot does not project nearly so far as the tongue does. The C of this word is a real G, with a well-marked cross-bar. This is, of course, an easy test. Each O of the whole inscription is somewhat pointed at the top and bottom, instead of being flattened. There is a tiny ring, joining the B of BAJ. to the pearl above it; this is not the case with the genuine. The top of the A of this word is somewhat pointed, and perfect. If the J were prolonged upwards, it would pass well to the left of the tiara. The point of the V-shaped centre of the M of MEZZO touches the left foot, and is decidedly nearer to the left-hand, upright stroke than to the right-hand one. The left-hand leaf-ornament, between FRANCO and BAJ., does not touch the outline of the oval, but it touches the pearled oval, which the genuine does not. The similar leaf-ornament on the right side, between POSTALE and MEZZO, does not touch the outer oval. The left-hand leaf is blotched almost solid, and both leaves show some slight waves in the upper outline, instead of the well-marked teeth of the genuine. The lump on the top of the tiara is *very* small; it is some distance from the pearled oval, and comes under the space between the LL of BOLLO, instead of under the first L. The oval ring at the bottom of the tiara is a solid blotch; above this is a wavy line of three waves; above this is a curved line, not waved; above this is a waved line, which is blotched into the curved line above it, so that the waves are difficult to make out. The dotted line at the top shows five dots. The split ribbon which, in the genuine, points obliquely down from the left side of the tiara to the shaft of the left-hand key is, in this forgery, represented by a sort of inverted comma, which is firmly joined to the shaft of the key. The lower part of the shaft of each key, below where they cross, is absolutely solid. The outline of the ward-part of each key is single all round, thin near the point of the key, and thick on the other two sides. The design is not at all sunk into the paper.

Second Forgery.

This might easily be mistaken for a very blotched and badly-printed genuine stamp, for most of the design is as close a copy as a lithographic transfer. It is lithographed, on olive, wove paper. The frame is a single line, joined at the corners, and it is nearer to the left-hand end of the oval than to either of the other three sides. The tongue of the F of FRANCO is firmly joined to the body of the letter, and the right side of the foot does not project *quite* so far as the tongue. The first O of BOLLO is not so square at the top as the second O. The E of POSTALE is badly drawn, and its tongue touches the inside of the top limb. In the word BAJ., the foot of the A just touches the J, though they are quite separate in the genuine, and in the first forgery. The lump at the top of the tiara is divided into two points, the left one (which is longer than the other) *just* touches the pearl, under the first L. of BOLLO. The two curved lines across the tiara, separating the wavy lines, are themselves rather wavy, and ragged. The outline of the wards of the right-hand key is like the genuine; but, in the left-hand key, the double lines of the genuine are blotched together. The

handle of the left-hand key, below where they cross, is solid; the right-hand one is not solid, but it does not show any central line. No part of the sunk design is sunk into the paper.

Third Forgery.

Lithographed, on rather thin, dark, dull violet, wove paper. The rectangular frame is single, and joined at the corners. In the genuine, the top, bottom, and two ends of the oval come so near to the frame, that there is only about $\frac{1}{4}$ mm. between them. In this counterfeit, the frame is very much further from the oval (top, $1\frac{1}{2}$ mm.; bottom, $1\frac{3}{4}$ mm.; right side, over 2 mm.; left side, nearly 2 mm.). This is an easy test. The tongue of the F of FRANCO is firmly joined to the body of the letter, which does not appear to have any foot. The head of the C ends in a lump, while the tail is a hair-stroke. This is another easy test. The O is pointed at the top and bottom. The first O of BOLLO is quite flat at the top, much more so than the genuine, and the second O is not square, either at the top or the bottom. The top of the A of BAJ. is quite square, with a little projection from the left top corner. The J seems to point rather to the right of the centre of the tiara. There is a black dot in the centre of the O of MEZZO, and the said O is very circular, and not square at the top. The leaf-ornament, before FRANCO, is fairly like the genuine, but the one after POSTALE does not touch the outline of the oval, and only shows the three teeth, the inner one being very shapeless. There is a distinct ball on the top of the tiara, which touches the pearl under the first L of BOLLO. The oval ring at the bottom of the tiara, where the head would go in, is a solid black blotch, and the various lines across the tiara are irregular, and very badly done, the two curved lines being much thicker at the right side than at the left. The sloping ribbon, which goes from the middle of the tiara down to the shaft of the left-hand key, is not split, but is formed by two, almost parallel lines, with a blotch near the centre. It is firmly joined to the shaft of the key. The top edge (nearest the point) of the wards of the left-hand key is a single line, like the genuine; the edge nearest the B of BOLLO is one thick, solid line; the edge nearest the handle of the key is composed of two lines, the thicker of the two being inside, instead of outside. The outline of the wards of the right-hand key is thick all round, instead of being double at the right-hand edge and bottom. The lower part of the shaft of the key on the left side, below where they cross, has a line in it, like the genuine, but that of the other key shows two lines, instead of one. In the genuine, and the other two forgeries, there are fifty-one pearls in the inner oval; this counterfeit has fifty-two, and some of them are very irregularly drawn. No part of the design is sunk into the paper. I have found some difficulty in giving the above details, as the paper of this forgery is so very dark, that the design is hard to see. I must add that the paper itself is *blue*; the violet colouring is only on the face. It is much smoother and more shiny than the genuine.

POSTMARKS.

Genuine.—51. I think I have also seen 29, smaller. 73 is sometimes found. Occasionally, specimens may be seen with a large St. Andrew's cross, 20 mm. long, with the arms $1\frac{1}{2}$ mm. thick, and with one of the above-described cancellations struck over the cross, but I do not know anything about the said cross.

First Forgery.—Uncancelled.

Second Forgery.—Uncancelled.

Third Forgery.—10.

Same Issue. 4 Bajocchi.**Genuine.**

Typographed, as before, in black, on buff, lemon, or yellow paper, varying in substance. The rectangular frame of the stamp, as in the $\frac{1}{2}$ baj., is double-lined, and comes within $\frac{3}{4}$ mm. of the stamp itself at the top, bottom, and sides. In my specimen, the serif to the top of the R of FRANCO nearly touches the preceding F, and the head and tail of the C are both alike, while the O is very square at the top and bottom. An elaborate description of the design is unnecessary, as the tiara will furnish enough tests. The said tiara is much wider at the top than at the bottom. Each of the three wavy lines across it shows three complete, upward-pointing waves, with a half-wave at each end. On the top of the tiara there is a solid black ball, flattened at the top; and above the ball, not touching either the ball or the outline of the inner circle, there are three blotches, probably the remains of a cross. The tassel, hanging down, above the J of BAJ., if prolonged downwards, would pass almost clear to the left of the vertical stroke of the J.

**Forged.**

Lithographed, on white wove paper, coloured on the face a pale, dead-looking yellow. My copy is cut rather close, but I believe the frame is only a single line, 1 mm. from the stamp at the top, and $1\frac{1}{4}$ mm. at the left side. (The other sides of my specimen are cut off.) In the word FRANCO, the serif at the top of the R does not go near the F, the tail of the C is only a hair-stroke, instead of being like the head, and the O is not at all square at the top or bottom. The top of the tiara is not splayed out at all, but is quite a pointed oval. The bottom, wavy line, across the tiara, shows two waves, with part of another at the right-hand end; the middle, wavy line shows two waves, with three-quarters of a third wave at the right-hand end; the top, wavy line shows two waves, with a half-wave at the right-hand end. On the top of the tiara there is a ring, or ball, with a blank centre, and, on the top of this ring, there is a very distinct black cross, which touches the outline above it. The tassel hangs down very nearly over the centre of the vertical stroke of the J of BAJ.

POSTMARKS.

Genuine.—As in the $\frac{1}{2}$ baj.

Forged.—Uncancelled.

Same Issue. 6 Bajocchi.**Genuine.**

Typographed, in black, as before, on drab, greenish-grey, greyish, or pale azure paper. The tail of the C of FRANCO is exactly like the head. The first O of BOLLO is at some distance ($\frac{3}{4}$ mm.) from the B, and the second L of that word does not touch the following O, and is $\frac{1}{2}$ mm. from the frame above it. The feet of the letters TALE are usually all firmly joined together. In the word BAJ., the cross-bar to the A is below the level of the centre of the ball at the end of the J. There are eight large pearls in the handle-
ring of each key. The bottom wavy line, across the tiara, shows two complete, tall, upward-pointing waves, with a half-wave at each end; and the upper wavy line shows three waves, with a half-

wave at each end. At the top of the tiara, there is a solid, or partly-shaded ball, and, above this, there is a neat, distinct cross, which does not touch the outline above it.

Forged.

Lithographed, on white wove paper, coloured a sort of bluish-drab on the face. The tail of the C of FRANCO is a hair-stroke, instead of being like the head. The first O of BOLLO *just* touches the B, and the second O touches the second L. This L *very* nearly touches the outline above it. The E of POSTALE is not joined to the L. In the word BAJ., the cross-bar to the A is above the level of the centre of the ball at the end of the tail of the J. There are twelve large pearls in the handle-ring of the key on the left side, and ten pearls in the ring of the other key. This is a very easy test. The lower, wavy line, across the tiara, shows three waves, with a half-wave at the right-hand end; and the upper, wavy line shows four waves. There is a ring, or white-centred ball, on the top of the tiara, and, above the ball, but not touching it, may be seen the fragmentary remains of a cross.

Genuine.—29, 51.

POSTMARKS.

Forged.—Uncancelled.

Same Issue. 7 Bajocchi.

Genuine.

Typographed, in black, as before, on blue wove paper. The F of FRANCO is quite clear of the frame, and it does not touch the R. The head and tail of the C are alike. BOLLO is placed in such a position, that the space between the letters LL is exactly above the point of the shield. In the word POSTALE, the letters TALE are all joined together at the foot. The top of the A of BAJ. is rounded, and the cross-bar is exactly level with the centre of the ball of the J. There is no stop after the 7. The cross on the top of the tiara is placed on the centre of the ball. The shafts of the keys have their lower ends enlarged, as in all the other genuine values, and there is a line down the centre of each shaft. The central tassel, above BAJ., hangs above the right side of the A. I fancy these tests will suffice, but there are plenty of others.

Forged.

Lithographed, *in ultramarine*, on white wove paper. This, of course, renders the stamp harmless, but it may very likely also exist on coloured paper. The head of the F of FRANCO is jammed into the frame, so that part of it is cut off; and the front of the head is joined to the R. The tail of the C is not like the head. BOLLO is placed much too far to the left, so that the final O comes above the point of the shield. The letters of POSTALE are all separate from each other. The top of the A of BAJ. is quite square, and broad, and the cross-bar is far above the level of the ball of the J. There is a stop after the 7. The cross on the top of the tiara is over the right side of the ball, instead of being central. The shafts of the keys are straight lines, not enlarged anywhere, and each has a thin line down it, *close* to the left-hand edge of the shaft, instead of along the centre of it. The central tassel, above BAJ., hangs above the left-hand edge of the vertical stroke of the J.

Genuine.—As before.

POSTMARKS.

Forged.—29.

Issue of October 1, 1852. 50 Bajocchi.

Genuine.

Typographed, in dull blue, or ultramarine, on thick, hard, white or yellowish-white wove paper. The F of FRANCO is very clear and distinct, and its bottom-stroke projects to the right, very nearly as far as the head does. The letters RAN of this word are all joined together at the bottom, and the white, inside part of the O is $\frac{3}{4}$ mm. wide at its broadest part. The tail of the second L of BOLLO turns up considerably higher than that of the first L. In the word POSTALE, the foot of the P is thicker than the serif of the head, but does not project so far to the left as the said serif does. The bottom of the S is

decidedly flat, and the letters TAL (and often TALE) are all joined together at the bottom. The A of BAJ. has a fairly sharp point; its two feet are of nearly equal width, and the cross-bar is as thin as the cross-bar in the B. The head of the j is so wide, that it projects further to the left than the tail does. The o of 50 is very square at the top and bottom. The three wavy lines on the tiara (intended for the tops of the three crowns) are not particularly distinct, but there appear to be five waves in the lowest one, four waves, with a half-wave to the right, in the middle one, and four waves, with a half-wave to the left, in the top one. On the top of the tiara, there is a small, solid ball, with a very tiny, almost microscopic cross, on the top of the ball, leaning over to the right. The cross is nearly under the centre of the vertical stroke of the first L of BOLLO. The two ribbons under BOLLO end in long fringes, the left one solid, the right one nearly so; and these fringes are cut off vertically, and not forked. The crosses in the wards of the keys do not, as a rule, touch the outer edge of the wards, and never touch the shafts of the keys. There is a ball at the point of each key, and a sort of white cog-wheel, on a coloured ground, in the handle. The cog-wheel of the left-hand key has ten white teeth; that of the right-hand key has nine teeth. The four tassels, hanging from the keys, are not forked, though there is a slight division in the one nearest to BAJ., and in the one nearest to 50. Outside the scalloped line of the inner frame, above RAN of FRANCO, there is a curved line of the next frame. This curved line has a very distinct break in it, nearly $\frac{1}{2}$ mm. wide, above the R. In each corner of the stamp, there is an oak-leaf; the central vein of each leaf is not one continuous line, but in two parts. Taking the leaf in the left, bottom corner, the part of the central vein nearest to the point of the leaf is a little less than 2 mm. long, while the part of the vein nearest to the base of the leaf is a mere stump, hardly $\frac{1}{2}$ mm. long. There is a sort of fringe of short lines, of varying lengths, above the FR of FRANCO, another similar fringe above CO BO, another above LO POS, another above TALE, another below FR, another below BAJ., another (this is divided into two portions) below 50, and another below E. To save space, and needless repetition, I have made a table, showing the number of lines in the various fringes, in the genuine stamps, and the six forgeries. The said table will be found on page 240, after the description of the sixth forgery. I do not think it will require much explanation, but I ought to say that, in the number of lines in the fringe below 50, the *two* numbers ("11 + 8," for instance, in the genuine) signify that the fringe is divided into two portions, with 11 lines to left, and 8 lines to right of the break. Also I must note here that, in the genuine, the lines of the fringe over LO POS do *not* slope the same way as those over CO BOL, but are drawn down from right to left. The best of the counterfeits (fourth forgery) errs in this point.

First Forgery.

Lithographed, in pale blue, on very yellowish-white *laid* paper. There is a very tiny line, cutting through the head of the F of FRANCO, but it almost requires a microscope to see it. The foot of this letter is short, not nearly so long as the head. None of the letters of this word touch each other. The tail of the second L of BOLLO is the same height as that of the first L. The cross-bar to the foot of the P of POSTALE is so thin that it is almost invisible; the base of the S is nicely rounded, and only the letters AL are joined at the foot. The cross-bar at the head of the J of BAJ. does not project to the left, half as far as the tail does. The o of 50 is pointed at the top and bottom. The lines on the tiara give a very easy test for this forgery. There are *no* wavy lines, but two bands, each shaded by perpendicular lines, go right across the tiara, with a dotted line above the upper band. Above this dotted line is a large semicircle, supporting a tall and distinct cross, which leans slightly to the left. This cross is almost under the tail of the first L of BOLLO. There is a short, forked, pointed fringe at the end of each of the ribbons under BOLLO. At the point of the left-hand key there is a large ball, but the other key has a plain point, without any ball. The handle of each key has a scalloped outline, very different from the white cog-wheel on a blue ground of the genuine: as far as I can make out, each handle shows twelve scallops. The four tassels are deeply forked. There is no break in the coloured line next but one above the RAN of FRANCO. The central vein in each of the four oak-leaves is continuous, from the base of the leaf to within about 1 mm. of the point. Thus the vein in the leaf in the left bottom corner is a very thin, unbroken line, nearly 3 mm. long. For the number of fringing-lines, see table on page 240.

Second Forgery.

This is a very blotchy production, yet it is much more like the genuine than the first forgery is. Lithographed, in dark blue, on thick, hard, very rough, yellowish-white wove paper. There is a coloured line, easy to see, joining the central tongue of the F of FRANCO to the right-hand corner of the foot of the letter. The white, inside part of the O of this word is not more than $\frac{1}{2}$ mm. across, in its widest part. The P of POSTALE has hardly any foot; the S is of rather a sprawling shape, and the right side of the T is imperfect. The cross-stroke to the foot of the right leg of the A of BAJ. is longer than the other; the cross-bar of the letter is thicker than that in the centre of the B, and its point is usually blunt and rounded. The wavy lines on the tiara are so much blotched, that I am not sure of the details; but I fancy there are three waves in the lower line, and five in the middle one; the top one is quite undecipherable. The ball and cross on the top of the tiara are blotched into a sort of rough cone, which leans to the right, so as to point to the centre of the horizontal limb of the first L of BOLLO. The fringe of the left-hand ribbon is much more rounded than the other. The cross in the wards of the left-hand key usually touches both the shaft of the key, and the outline of the wards. The white cog-wheel in each key shows ten teeth, but those in the right-hand one are very difficult to make out. This forgery, like the genuine, shows the break in the line, next but one, outside the R of FRANCO. The vein of the oak-leaf in the left lower corner is in three pieces, instead of two; and the same is the case with the leaf in the right upper corner. As to the fringing-lines, the column devoted to this forgery in the table on page 240 will be found to be very imperfect, as most of the little lines and dots forming the fringes are blotched together, into a mass of colour, so that they cannot be counted.

Third Forgery.

Lithographed, in rather greenish-blue, on medium, white wove paper. The R of FRANCO is not joined to the A, but the A and N are joined together at the foot. The O is very narrow, so that the white, inside part is not more than about $\frac{1}{4}$ mm. wide at its broadest part. The tail of the second L of BOLLO is very little higher than that of the first L. The cross-bar to the foot of the P of POSTALE does not project on the right side at all; the head of the S is more squeezed-in than the tail; the T and A are joined, but not the L. The point of the A of BAJ. is broad and rounded. The head of the J does not project to the left so far as the tail does. The o of so is fairly square at the bottom, but more pointed at the top. There are only two wavy lines decipherable on the tiara: the lower one shows four waves, with a half-wave at the left-hand end; the upper one has five waves. The ball on the top of the tiara is *very* small, and the cross on it is more distinct than in the genuine. The fringe of the right-hand ribbon is hardly shaded at all, and there is no vertical line to show where it joins the ribbon. In both keys, the cross in the wards touches the shaft of the key. The white cog-wheels in the handles of the keys have an equal number of teeth—ten in each. They are easy to count. The ends of the four tassels are too round. There is no break in the coloured line, next but one above the R of FRANCO. The fringing-lines are enumerated in the table on page 240. The lines of the fringe above LO POS are *vertical* in this forgery, and those below so are not divided into two portions.

Fourth Forgery.

This is much the best of the lot; indeed, one was sent to me, as genuine, by a first-class dealer, a short time ago. Typographed, like the genuine, in pale blue, on *very* thick, yellowish-white wove paper. None of the letters of the inscription touch each other, except the AL of POSTALE, which are joined at the foot. The white, inside part of the O of FRANCO is not more than $\frac{1}{4}$ mm. wide, at its broadest part. The middle of the B of BOLLO is slightly blotched, and the tail of the second L of that word does not turn up any higher than the tail of the first L. The foot of the P of POSTALE is long on the right side, and very short on the left side, though there is not much difference between them in the genuine. The right foot of the A of BAJ. is more than twice the width of the left foot. The cross-bar at the top of the J does not project so far to the left as the tail does. The o of so is not at all square at the top and bottom. The tiara affords an easy test, as there are *no* wavy lines on it, and the two pairs of lines across it look, at first sight, like two bands of colour. The fringe of the ribbon under the O of BOLLO is forked, showing two points; and the similar fringe under the B of BOLLO shows three points in good copies. The cross in the wards of the right-hand key touches the shaft of the key. The teeth in the white cog-wheels in the handles of the keys are imperfect; in the one on the right side there are usually not more than five distinct teeth; and, in the one on the left side, four to eight may be discerned, according to the way in which the stamp is printed. The curved line, next but one outside the RAN of FRANCO, shows a tiny break in it; but it is much smaller than that in the genuine, and is exactly opposite the point of the A, instead of nearly opposite the R. The fringing-lines are given in the table on page 240; those below so are not separated into two lots, and those above LO POS slope down from left to right, the same as those above CO BOL. This is an easy test. The design is indented into the paper, just like the genuine.

Fifth Forgery.

Typographed, in dark blue, on thick, hard, white wove paper. The front of the head of the F of FRANCO hangs down below the level of the centre of the letter; the R is blotched in the centre, and the O is battered and misshapen, the white, inside part being pear-shaped. The tail of the second L of BOLLO is no higher than that of the first L. The P of POSTALE has no trace of any foot, and the tongue of the E is badly formed. The A of BAJ. is rather flat at the top, and the cross-bar, in my single specimen, only goes half-way across the letter. The tail of the J is sloping, rather than rounded. The tiara is very much blotched in my specimen, and no details can be made out; there seem to be only *two* irregular lines across it. The dark lump on the top of it, indented to represent the ball and cross, is almost upright. The cross in the wards of the key on the left side touches the outline of the wards, and the cross in the wards of the other key touches the shaft of the key. The white cog-wheels in the handles of the keys are so blotched, that the teeth cannot be counted. The fringing-lines, as far as decipherable, will be found in the table below; those above LO POS are vertical, instead of sloping down from right to left. The design is slightly indented into the paper.

Sixth Forgery.

Lithographed, in dark blue, on thin, *very* transparent, greyish-white wove paper. The design is almost as distinct at the back as on the front. The B of BOLLO has no foot, and there is no serif to the left of the head of the P of POSTALE, and the tail of the S touches the O. The white centre of the O of FRANCO is only about $\frac{1}{4}$ mm. wide. The left foot of the A of BAJ. is rather wider than the right one, and the cross-stroke of the head of the J is *very* short, so that it does not project to the left nearly so far as the tail does. The o of so is rather pointed at the top and bottom. The tiara, in my single specimen, is covered by the postmark, so that I cannot give details, but, as far as I can see, the lines across it are broken. The ball and cross, on the top of it, are under the space between the OL of BOLLO. The cross in the wards of the key on the right side touches the shaft of the key; the other one, in my specimen, is hidden by the postmark. There seem to be nine white teeth in each cog-wheel. The tassel below the E of POSTALE is slightly forked. As far as I can make out, there is no break in the curved line, next but one outside the RAN of FRANCO. The basal part of the vein in the oak-leaf in the left lower corner is too long, measuring over 1 mm., while the rest of the vein is too short, measuring only about $1\frac{1}{2}$ mm. The fringing-lines are enumerated in the table below. Those below BAJ. are in two lots in this counterfeit, and they are all easier to count than even the genuine. The design is not indented into the paper. Unlike the genuine, or any of the other forgeries, this counterfeit has a rectangular, coloured line or frame round the stamp. I think the extremely transparent paper is one of the easiest tests.

The first vertical column gives the number of lines in the genuine, the other columns give those of the six forgeries, respectively.

POSTMARKS.

Genuine.—As before.

First Forgery.—51.

Second Forgery.—51.

Third Forgery.—37 (without numerals).

Fourth Forgery.—Uncancelled.

Fifth Forgery.—Uncancelled.

Sixth Forgery.—30 (with the numeral, "8," in the centre).

Same Issue. 1 Scudo, rose, flesh.

Genuine.

Typographed, in rose, on thick, hard, white, or yellowish-white wove paper. The foot of the F of FRANCO projects to the right, *very* nearly as far as the head does; the letters RAN are joined together at the bottom; the head-stroke at the left top corner of the N is broken, so that it shows as a tiny, separate dot, to left of the head of the N. The O is quite flat at the top.

In the word BOLLO, the first O is rather flatter at the top than the second O; the letters LL are joined at the bottom, and the tail of the second L is taller than that of the first L, as in the 50 BAJ. There is a dot before the head of the P of POSTALE, like that before the N of FRANCO, but rather larger. In this case, it is not a broken-off head-stroke, as the head-stroke is perfect. The letters TAL are joined at the bottom, and the turned-up tail of the L is more than $\frac{1}{2}$ mm. from the left-hand edge of the *body* of the E (not the foot-stroke). In the word SCUDO, the serif to the top of the S does not go near the ball at the end of the handle of the key above it; the tail of the C is too thick to be called a "hair-stroke"; the D is nicely shaped, and perfectly flat at the bottom, while its head is often joined to the head of the U; the O is very flat at the bottom, and rather flat at the top. The foot-stroke of the numeral, 1, is 2 mm. wide, and the sloping serif to the head hangs down to the level of the centre of the figure. The oval ring, at the bottom of the tiara, where the head would go in, is dotted, instead of being formed by two continuous lines. Above this oval, there is a rather ragged line across the tiara; then a thick, wavy line, of about five waves; then another rather ragged line; then another wavy line, of five waves; then another fairly well-drawn line. The solid lump at the top of the tiara is vertical, and comes under the tail of the first L of BOLLO. Above the lump, not joined to it, but very near the bottom of the said L, there is a small, horizontal stroke, or hyphen, probably the remains of the cross. In lightly-printed specimens, the fringes of the ribbons, each side of the tiara, are disconnected from the ribbons, with a vertical stroke between the ribbon and the fringe. These ribbons are seldom joined to the shafts of the keys, and the upper outline of the shaft on the right side is broken, where the ribbon would join it. The cross in the wards of the key on the right-hand side touches the shaft of the key. The centre of the circular handle of each key forms a sort of very blunt, white star; the right-hand star shows seven points, the left-hand one only six points. There are two vertical lines in the frame, to the right of the E of POSTALE (a thick one, and a thinner one), and neither of these lines touches any portion of the rest of the frame. At the other side of the stamp, to the left of the F of FRANCO, there are two similar, vertical lines, but, in this case, the bottom end of the thin, outer line is joined to one of the curved lines of the frame. At the right and left ends of the stamp, outside the frame, there is a coloured ring, and each of these rings has a solid semi-circle, or half-ball, hanging down it, from the top, inside.

First Forgery.

Lithographed, in scarlet, or vermillion, on medium, white wove paper. The foot of the F of FRANCO is *very* short, and does not project to the right even so far as the tongue of the letter. The left, top corner of the N is sharp, and the right, bottom corner is blunt, *i.e.*, the letter is upside down. There is no dot before the left top corner of the N. The O is badly shaped, the right bottom corner being sloped too much, and its top is not flat. The letters LL of BOLLO are not joined at the bottom, and the tail of the *first* L is taller than that of the second. There is no dot before the head of the P of POSTALE; there is a cross-stroke to the top of the A, which does not exist in the genuine; the letters TAL are not joined at the bottom, but the foot of the L *very* nearly touches the left-hand, vertical edge of the body of the E. The serif to the head of the S of SCUDO nearly touches the ball, at the end of the handle of the key above it. The tail of the C is a mere hair-line; the D is badly shaped, as the base of it slopes strongly up to the right, instead of being flat. Its head does not touch the head of the U. The O is of a nice oval shape, not flat either top or bottom. The foot-stroke of the numeral, 1, is only about $1\frac{1}{2}$ mm. wide, and the sloping serif does not hang down anything like as low as the level of the centre of the figure. The two lines forming the oval ring at the bottom of the tiara are both continuous, the bottom one being much the thicker of the two, though they are of equal thickness in the genuine. Above this oval, there is a wavy line, of four waves; then there is a wide space; then another thick, wavy line, of about four waves; then a very thin line; then a rather thicker, irregular line; then another thin line, at the top. On the summit of the tiara, there is a large, easily-seen cross, with the right arm imperfect. The cross leans over to the right, and its top joins the tail of the first L of BOLLO. The fringes are firmly joined to the ends of the ribbons, each side of the tiara, but the left-hand one shows a vertical stroke, rather like the genuine. The right-hand ribbon is joined to the tiara, by a coloured dot, and both ribbons are joined to the shafts of the keys. The white centres of the circular handles of the keys cannot be likened to stars; they are merely irregularly-scalloped white discs. The thick, vertical line, near the E of POSTALE, does not touch any part of the frame; but the thin line, parallel with it, is joined to the right-hand ornament, so as to form part of it. The thin, vertical line, at the left side of the stamp, near the F of FRANCO, is also similarly joined to the ornament to left of it.

Second Forgery.

Nicely lithographed, in vermillion, on very thick, yellowish-white wove paper. I shall not be able to give very many details of this forgery, as I only possess one specimen, and it is obliterated with a heavy, black cross, which hides most of the centre. The left top corner of the N of FRANCO is perfect, and does not show any dot; and, so far as I can make out, it is not joined to the foot of the A. The O is not at all flat at the top. The right bottom corner of the B of BOLLO is cut off rather slopingly, instead of being rounded, and the first O is not flat at the top. (The rest of the word is obliterated in my specimen.) I do not think there is any dot before the head of the P of POSTALE; the O is not flat at the top; and the T is not joined to the A. The S of SCUDO is a long way from the ball at the end of the handle of the key, and is too far to the left. In the genuine, the ball is over the middle of the head of the S, and only $\frac{1}{2}$ mm. distant from it. In this forgery, the ball is over the middle of the space between SC, and is very nearly 1 mm. from the nearest

part of the S. The O is not flat, either at the top or at the bottom. The I has a *very* short serif, which hardly hangs down at all. Its foot-stroke is barely $1\frac{1}{2}$ mm. wide. The details of the tiara are obliterated in my copy, but I think there is a good-sized ball on the top of it, surmounted by a fairly distinct cross. The fringes of the ribbons, each side of the tiara, are widely separated from the ends of the ribbons. The ball, at the point of the right-hand key, is not complete, and does not touch the point of the key. The left-hand ribbon is joined to the shaft of the key; the other is covered by the cancellation. The cross in the wards of the right-hand key is far too small, and touches the outline of the wards, furthest from the shaft. The stumpy, white star, in the circular handle of the left-hand key, shows nine points; the other is covered by the obliteration. The right top corner of the E of POSTALE touches the thick, vertical line to right of it; and the thin, vertical line, parallel with the thick one, is joined to the ornament to right of it. The thin, vertical line, on the left side of the stamp, is similarly joined to the ornament to left of it. The coloured ring, at the right-hand end of the stamp, has *two* semicircular dots in it; one hanging from the top of the ring, and the other rising from the bottom. This is an easy test. The ring at the left-hand end of the stamp is like the genuine.

Third Forgery.

Lithographed, in *very* pale vermillion, on thin, yellowish-white wove paper, not half so thick as the genuine. I have several specimens, and they all look as though not half enough ink had been used by the printer. There is hardly any foot visible to the right side of the F of FRANCO; there is no head-stroke or dot to the N; the tail of the C is a fine hair-stroke, and the top of the O is not flat. The tail of the second L of BOLLO is, if anything, lower than that of the L, and there is no serif at the left bottom corner of the second L, so that the two letters are a long way apart, instead of being joined. There is no dot before the head of the P of POSTALE, and it does not seem to have any projection or serif to left of the head. The foot of the numeral, I, is only $1\frac{1}{2}$ mm. wide. The details of the tiara are very indistinct. The oval ring at the bottom, where the head goes in, is undecipherable; there seem to be four waves in the bottom, wavy line, and three in the upper one. The lump on the top inclines to the right, and is nearly under the *centre* of the bottom of the first L of BOLLO. There is no horizontal line above the said lump. The ribbons are firmly joined to the shafts of the keys. The white centres of the circular handles of the keys are too indistinct for the points to be counted with any certainty. Of the two vertical lines to the right of the E of POSTALE, the thin one is joined at both ends to the rest of the ornament; but the similar line, to the left of the F of FRANCO, seems to be joined to the ornament only at the bottom end, like the genuine. The ring or ball at the left-hand end of the stamp has the solid half-ball hanging down, not from the centre of the top of the ring, as in the genuine, but from the right side of the top; so that the half-ball is, as it were, in the north-east quarter of the ring, instead of in the north.

Fourth Forgery.

This is very like the last, in its pale, washed-out appearance. Lithographed, in very pale vermillion, on rather thin, hard, greyish-white wove paper. The F of FRANCO has no foot-stroke, and the head seems to touch the tongue, making it into a P. There is no dot in front of the head of the N. The C is a regular, Roman C, with a big head, and a hair-stroke for a tail, instead of being almost equally thick through-

out. The O seems to be broken at the top. The tail of the first L of BOLLO is as tall as that of the second L. There is no dot before the serif to the head of the P of POSTALE. I do not think any of the letters of this word are joined together at the bottom, but I cannot be certain. The right top corner of the E is sloped, parallel to the oblique line of the frame, to right of it. The foot of the numeral, 1, is $1\frac{3}{4}$ mm. wide. It is fairly like the genuine, but the serif is not sloped down enough, and points to the right bottom corner of the O of SCUDO; whereas, in the genuine, the serif points to the space, midway between the O and the 1. The O is broken at the bottom, in my specimen. I cannot make out the details of the tiara. The lump on the top of it is a good deal larger and more rounded than the genuine, and has a smaller lump on it, which touches the very centre of the foot of the first L of BOLLO. The ribbons are joined to the shafts of the keys. The cross in the wards of the left-hand key is very small, with hardly any sign of the transverse arm. The stumpy white star in the circular handle of the key, on the right side of the stamp, has six points; the other star is imperfect, and I cannot count the points. In my specimen, both the vertical lines, to the right of the E of POSTALE, are joined to the rest of the frame; and the same is the case with the similar, vertical lines, to left of the F of FRANCO. As in the third forgery, the solid, half-ball, in the ring at the left-hand end of the stamp, hangs from the north-east corner of the ring.

Fifth Forgery.

This is the "Second Forgery" of the last edition. I do not possess it now, and give the former description of it. Hand-stamped, from a die. I have only seen it struck in black on a card, so cannot tell what sort of paper is used for the real counterfeits. It hails from Breslau, and, I believe, as the die is exceedingly well done, its productions will probably be offered as reprints. The tests are as follows: the crowns on the tiara slant downwards to the left (this is more especially clear with the upper-most crown); the bottom of the oblique stroke of the N of FRANCO is quite sharp. In the word POSTALE, the bottom-stroke of the P is *very* short, not anything like so long as the width of the projecting, upper part of the letter; the bottom-stroke of the T is also very short, especially upon the left-hand side; the thick, first stroke of the E is curved, as though it had a bend in its back; the tongue is a little too low, and the top limb projects slightly more than the bottom one. In the word SCUDO, the tail of the C does not curve outward at all, and it appears to point towards the top of the following U; the O is of a nice oval shape. There appears to be a fringe to the end of each of the ribbons, but the fringes are not dark. The lower tassels are darker than the upper ones; the right-hand upper tassel appears to be pointing upwards, directly at the E of POSTALE, and the left-hand upper one appears to be pointing just below the F of FRANCO. The key and handle over the C of SCUDO are only very slightly joined together, but the key and handle over the O of SCUDO scarcely touch each other at all. With these exceptions, this forgery corresponds very closely with the genuine, in all points of the design.

POSTMARKS.

Genuine.—As before.

First Forgery.—Sometimes 51, but usually uncanceled.

Second Forgery.—A large, black cross.

Third Forgery.—51.

Fourth Forgery.—51.

Fifth Forgery.—My proof was not cancelled.

Issue of 1867. 2 Centesimi, green.

I no longer possess this stamp, and must transcribe the description from my second edition.

Genuine.

Typographed, in black, on medium, *glacé* wove paper, white at the back, but coloured green on the face; unperforated. The F of FRANCO does not touch the inner line of the frame, and the N has a cross-stroke to each of its vertical lines. The cross on the tiara comes under the middle of the first L of BOLLO. The two ribbons are at equal distances from the tiara, and neither of them touches it. The ribbons or cords hanging between the keys, below the tiara, are formed by dotted lines. The C of CENT is a good distance above the bottom outline of the frame.

**Forged.**

Lithographed, in blue, on very thick, hard, white wove paper, not *glacé*, and not coloured green on the face. The F of FRANCO touches the outline of the frame to the left of it; the N has no cross-stroke at the top of its last upright line. The cross on the tiara comes exactly under the space between the LL of BOLLO. The right-hand ribbon *almost* touches the tiara, whilst the left-hand ribbon is at a considerable distance from it. The ribbons or cords below the tiara, between the keys, are formed by unbroken lines, instead of dotted ones. The C of CENT touches the outline of the frame below it.

POSTMARKS.

Genuine.—38, 42, without numerals. Also 51.

Forged.—My single specimen was uncanceled.

Same Issue. 80 c., rose.**Genuine.**

Typographed, like the 2 c., above described, on rose-faced, *glacé*, white wove paper. The catalogues call the colour "rose," but really it is a duller colour than the perforated stamp which followed it, and I believe the paper is sometimes not *glacé*. A very elaborate description will be unnecessary, as the forgeries are poor. There is no cross-bar over the A of FRANCO; the heads of the S and T of POSTALE are not joined together; the o of 80 has a tiny, horizontal stroke above it, and there are *two* stops after the number—a large one, followed by a small one. The head and tail of the C of CENT are exactly alike, and the stop after the word is particularly large, and placed a little too high up. The bottom end of the tassel, above the C, comes down half-way between the curved, dotted line, joining the key-handles, and the curved, top outline of the bottom label, and the said tassel shows a distinct fringe, of four lines. The two wavy lines on the tiara are very distinct; there are three waves, with a half-wave at each end, in the lower one, and the same, but drawn rather larger, in the upper one. The ball, on the top of the tiara, is not solid, and the cross on the ball is quite distinct, and does not touch anything above it. The bottom of the upper label, below the words FRANCO BOLLO POSTALE, is formed by a number of V's, laid on their sides, the point of one V going into the open part of the next one. They are largest each side of the tiara, and diminish to a mere line, at the right and left-hand ends. The top V, on the left side, is under the O of BOLLO, and the top V, on the right side, is under the second L; so that there is a wide, open space, above and on each side of the cross on the tiara.

Each circular key-handle contains seven more or less oblong dots. There are many more tests, but the above will be sufficient.

Forged.

Coarsely lithographed, on unsurfaced, white wove paper, coloured rose, or almost Indian-red, on the face. There is a large cross-bar to the head of the A of FRANCO, joining it to the top of the N. The heads of the S and T of POSTALE are joined together. There is no horizontal stroke above the o of 80, and no stop after that number. The tail of the C of CENT is not exactly like the head, but has a small projection, pointing towards the E. The stop after this word is small, and level with the bottom of the T. The tassel above the C is merely a round ball, without a fringe, and only just breaks the line (*not* dotted) joining the key-handles. The centre of the tiara shows a black object, something like a bird, and there are no wavy lines. The outline, under FRANCO, etc., is formed by two feathers or palm-branches, joining each other under BOLLO; and the cross on the tiara touches them where they join. The ball on which the cross stands, is quite solid. The right key-handle contains ten circular dots, some being blotched together, and the left one contains nine similar dots.

POSTMARKS.

Genuine.—As in the 2 c.

Forged.—10, 51.

REPRINTS.

I must say a few words about these, as every ordinary collection is well furnished with them. Mr. Westoby's book says: "Some of the type-cast blocks of the centesimi series found their way to Florence, in an unaccountable manner, and there fell into hands that reprinted them in shoals, perforated and unperforated, gummed and ungummed, coloured paper of all shades, glazed and unglazed; so that it is difficult, at times, to distinguish between the reprints and the originals. Those of the reprints that are perforated, do *not* gauge that of the originals, which is 13 on *all* four sides, except in one solitary case: for, out of fourteen varieties of perforations of the reprints, only one gauges 13 all round."

ROUMANIA.

Issue of 1856. 27 Paras, black on rose laid.

This is a very scarce stamp, present value about £50. I have only been able to obtain one copy to describe from; but there was only one type. Evans says, "There is one, and only one, genuine type for each value." This remark has led some collectors to believe that all the stamps of the set are of one and the same type; but, as a matter of fact, there is a different type for each value.

Genuine.

Hand-struck in black, on transversely-laid, pale rose paper. The inscription, ПОРТО СКРИСОРІ (PORTO SKRISORI, in English letters), is the same in all the values. I am rather hampered in my description, by the fact that the printers have not been able to procure a suitable fount of Russian characters, so that I am compelled to use the English letters most resembling them in shape. Thus, in place of the first letter of the

first word (a thing like two I's with a cross-bar at the top) I shall put the letter H; and, in place of the fourth and eighth letters of the second word (a thing like an N, with the oblique stroke slanting the other way), I shall put the letter N. Thus the two words in full will be HOPTO CKPNCOPN. The right side of the top bar of the H projects a good deal more than the left side. The O is broken at the top and bottom. The curve of the P runs into the upright stroke, level with its middle. The T is perfectly well-shaped. The final O is very thin at the top and bottom. The tail of the first C in the second word is just like the head, except that the lower point is slightly sharper than the upper. The foot-stroke to the upright part of the K is large and long; the cross-stroke to the top oblique stroke extends far too much to the right, and the tail of the letter does not touch the P. The P is properly shaped, like the first one. The first N has well-marked head and foot-strokes, and the oblique line is very thin. The C would make a very good G, the tail being a good deal blunter and fatter than the head. The O is very thin at the top and bottom, and almost touches the outline above it. The second P is like that in the first word, except that the foot-stroke is a little thicker, and the top of the letter almost touches the outline of the stamp. The final N is a good deal wider than the first, and its oblique stroke is very thin. The ring of the post-horn is composed of two lines, not touching each other. The base of the 2 is perfectly flat; it is a very thin line, terminated, on the right, by a triangular, black tail. The 7 is of a very extraordinary shape, the head is slightly hollowed out, with the left-hand stroke hanging down to below the centre of the numeral; the whole head is absurdly wide, and the tail ends in a hook, bending up to the right, though this hook may be a malformed stop after the 7, touching, or nearly touching, the tail. The wide mouth, or bell of the horn, shows six rows of square dots in it; there seem to be sixteen dots. The thick part of the horn, next to the bell, is shaded with five lines, with indications of a sixth at the bottom. The thinner part of the horn, to the right of the ring, has two lines of shading in it, running half-way to the mouthpiece; the other half, from there to the mouthpiece, is of solid black. The mouthpiece itself is curved very decidedly round again, so that, supposing it were a gun, the bullet fired from it would hit the bull's eye. (N.B. This is not a "goak.") The top ray of the star points between the legs of the K, somewhat to the left of the centre, and the left upper ray points above the top of the horn of the bull. The rays are very sharp. There are lines of shading, to indicate the hair between the horns, at their base. The white line along each horn extends almost to its tip. The bull's right horn (left side of the stamp) points midway between the last letter of HOPTO and the first letter of CKPNCOPN; the left horn (right side of the stamp) points to the very middle of the P. The right ear (left side of the stamp) is much lower than the other, its top is much straighter, and it points to the T of HOPTO; the other ear points to the centre of the first N. The eyebrows are thin, but distinct and semicircular; the lower lip touches the ring of the post-horn, but the nostrils, which are shaped like a bracket (—), are high above it. The shading in the right ear (left side of stamp) is a slightly curved, horizontal line. There are two very short lines of shading on the right cheek (left side of stamp), touching the outline of the face, and three similar, but even shorter lines on the other cheek. These lines almost require a microscope to render them visible.

First Forgery.

I have only one specimen, and that not likely to deceive. Hand-struck (from an electrotpe *cliché*?) in black, on thick, rather soft blue

wove paper. The cross-stroke to the H is broken in the middle, so that it appears like the letters II, close together. The top and bottom of the O are almost as thick as the sides. The curve of the P joins the vertical stroke far too far down, making the foot of the letter much too short. The top of the T is not straight, but follows the curve of the outline of the stamp. The top and bottom of the final O are almost as thick as the sides. Each C of CKPNCOPN is like an ordinary English C. The foot-stroke to the upright limb of the K does not jut out at all to the left, but juts out a great deal too far to the right, so that it very nearly touches the tail of that letter; the cross-stroke to the oblique part of the head extends too much to the left, and the tail of the letter runs into the foot of the P which follows it. The curve of the P runs into the upright stroke much too low, and the left side of the foot of it is absent. The first N has very short foot-strokes, and has a very heavy, clumsy look. The second C is like the first. The O is nearly as thick at the top and bottom as it is at the sides, and it is at a good distance from the outline above it. The second N is so blotched, that the oblique line is not visible. It is no wider than the first. The ring of the post-horn is composed of two thick lines, which are blotched together for most of the way round. The 2 is an old-fashioned figure, with the base of the tail rounded, and the whole tail almost equally thick all the way along. The 7 is of normal shape, except that the head is too thick and clumsy, and only the little hook at the end hangs down. The outline of the head is slightly convex. There is no hook to the end of the tail of the 7. The opening end, or bell, of the horn is one thick, black blotch; and there are six lines of shading in the thick part of the horn, near the mouth, but the said lines are a good deal blotched together. These lines run towards the small end of the horn. In the genuine, the ring goes in front of them, but, in this forgery, behind them. The mouthpiece is thick and clumsy, and, supposing it a gun, a bullet shot from it would pass far to the right of the bull's head. The top ray of the star points between the C and the K, and the left upper ray points towards the tip of the horn of the bull. The star is coarse, with short, stumpy rays, the top ray being broader than the others. Between the horns, at the base of them, is an almost solid, black mass. The white line along the centre of the right horn (left side of the stamp) runs about half-way up; and the similar line in the left horn (right side of the stamp) only reaches one-third of the way to the top. The bull's right horn, on the left side of the stamp, points towards the upper shoulder of the first C; and the left horn, on the right side of the stamp, points midway between the letters PN. The right ear (left side of the stamp) is about as high as the other, but sharper at the tip; it points to the middle of the bottom of the second O of HOITO; the other ear, which is much blunter, points between the letters NC. There are no eyebrows, though a very short line juts out into the forehead, below the right horn. The mouth and nostrils are pressed against the ring of the post-horn, so that the lower lip is not visible. The line of shading in the right ear (left side of the stamp) is oblique, and, if prolonged, it would pass through the foot of the T upwards, and through the right eye downwards. There is no sign of shading on the cheeks.

Second Forgery.

This is evidently an illustration from a catalogue. Typographed, on thick, white wove paper, which has been coloured a pale rose on the face. The feet, as well as the head, of the H are joined by a cross-bar, and the cross-bar of the head does not actually touch the left upright. The first O is thick at the bottom, and thinner at the top, neither top nor

bottom being broken. Like the **H**, the vertical stroke of the **P** is not carried high enough to be entirely joined to the head-stroke; it only joins by a tiny dot. The right arm of the **T** hangs down very much lower than the left arm. The final **O** is a good deal smaller than the other, and not broken either at the bottom or the top. In the second word, the foot-stroke to the upright of the **K** only projects on the right side; the foot-stroke to the tail of this letter is absurdly long, and firmly joined to the foot-stroke of the **P**. The second **E** of this word is an English capital **C**, the tail being plain and not like the head. This is a very easy test. The **O** is further from the outline than the other letters are. There is very little sign of any head-stroke to the second **P**. The head-stroke to the final **N** does not touch the upright, and there is a short dash above the middle of the top of this letter, which is really a broken continuation of the head-stroke. This final **N** is no wider than the other. The base of the **2** is flat, like the genuine, but much thicker, while the head ends in a sharp point, which is directed towards the left bottom corner of the stamp. In the genuine, the head widens out to a sort of club-shape, which is blunt, and turns inward a little, so as to point almost directly downwards. The head of the **7** is too thick; the serif hangs down only to level with the shoulder of the **2**, and the bottom is cut off square without any hook or stop. There are seven rows of rather diamond-shaped dots in the open end of the post-horn. I can make out twenty-two dots. The thick part of the horn, near the wide end, is shaded by three thick lines and a triangular black mass. The mouthpiece, which ends in a blunt point in the genuine, is widened out, in this forgery, into a cup, as in a real instrument. The thin part of the tube, between the mouthpiece and the ring, contains three thin lines of shading, instead of two. Imagining the mouthpiece to be a gun, a bullet fired from it would hit the right bottom corner of the final **N**; *i.e.*, it hardly curls inwards at all. The left upper ray of the star is a long way below the level of the right horn of the bull; and the left lower ray, which ought to point directly towards the place where the horn joins the head, points downwards, far to the right of the join. The right horn of the bull points to the right bottom corner of the **O** above it; while his left horn, which is very much thinner and straighter than the other, points to the **P**, like the genuine. The right ear is only about one-third the size of the left. The face of the bull is altogether unlike the genuine; it reminds one of a thin-faced, hollow-cheeked old lady, in spectacles, with an Ally Sloper nose, and a very curved, toothless mouth, touching the nose. The real mouth of the bull forms, in this forgery, the bottom outline of the jaw of the old lady; and the two vertical lines of the genuine, representing the lower lip, form the old lady's neck. The outline of the stamp is much thicker than the genuine, and it is very irregular, just above the **PT** of the first word, and the first **C** of the other word.

Third Forgery.

Of this I have only one specimen, which has been in my forgery-book for some years.

Lithographed, in black, on stout, very yellowish-white wove paper. The cross-stroke to the head of the **H** hardly projects at all to the left. The right side of the **O** is badly shaped. The left arm of the **T** hangs down a little lower than the right. In the second word, the tail of the **C** is not so large as the head. The head-stroke to the vertical stroke of the **K** does not quite touch the said vertical stroke. The **P** has no sign of a foot-stroke on the left side, and there is hardly any head-stroke to the first limb of the **N**. The next letter is plainly a **G**, instead of a **C**. The **O** is quite flat at the bottom. The second **P**, like the first, has no foot-

stroke on the left side, and it is as far from the outline of the stamp as the other letters are. About eleven dots can be counted in the bell-mouth of the post-horn. The small end of the said post-horn curves round so very much, that a bullet, fired from it, would probably strike somewhere about the corner of the lip, instead of the eye. The top ray of the star points to the very centre of the K above it. There is a white patch in the dark shading of the hair, between the horns; this white patch is like an irregular, eight-pointed star, with long rays. The rest of the design is tolerably well imitated.

POSTMARKS.

Genuine.—29, usually in red.

First Forgery.—29, in blue.

Second Forgery.—Uncancelled.

Third Forgery.—Uncancelled.

Same Issue. 54 Paras, blue on green.

This is probably the commonest of the set, yet I have seen it fetch £16; so it may be supposed that its commonness is only a relative term. The specimen before me as I write was signed by my friend, the late E. L. Pemberton.

Genuine.

(Dots in mouth of post-horn.)

Hand-struck in pale blue, on rather thick, transversely-laid, very pale green paper. The right side of the top bar of the H projects a good deal more than the left side, just as in the genuine 27 paras. The first O is very thin at the top and bottom. The P is nicely shaped, except that the foot-stroke is not quite parallel with the head. The arms of the T hang down just about one-third of the length of the entire letter. The final O is very thin at the bottom, and broken at the top. The first C of the second word is very like a G, with the end of the tail formed like the end of the head, the lower portion being rather thick and clumsy. The tail of the K is curved, as well as oblique, and it very nearly touches the foot of the following P. The foot-stroke of this P is parallel with the line of the head, but the left side of the said foot-stroke is shorter and thicker than the right side.

The top of the N in my copy is blotched into the outline above it, so that the right head-stroke cannot be seen; the left foot-stroke seems to be too thin and indistinct, and the right foot-stroke projects to the right, but not to the left. The oblique line goes down to the bottom of the letter. The tail of the next C is rather like the head, but not so thick and heavy. The O is very thin at the top and the bottom. In my copy it touches the outline above it. The next P is very nicely shaped, with a long, thin, equal foot-stroke. The final N in my copy is blotched into the line above it, but it seems to have very long head and foot-strokes, and the oblique line is rather thick. The ring of the post-horn is composed of two lines, as in the genuine 27 paras, but they are partially blotched together in the specimen before me. This ring, as in the 27 paras, goes over on the right, and under on the left. The vertical part of the 5, if prolonged downwards, would pass just to the left of the little ball forming the end of the tail of that numeral. The head of the 5 is decidedly hollowed, and rather wider than the rest of the numeral; that is to say, it projects a little too much to the right. The 4 has a very distinctly open top, and

the vertical stroke is much too thick, the cross-bar, in my copy, only extending very slightly to the right of the said stroke. The bell or open end of the horn is shaded with about seven oblique rows of rectangular dots. The thick part of the horn, nearest to the bell, bears five lines of shading; and the thinner part of the horn seems to be of solid colour for its whole length. The mouthpiece of the horn is curved round and inwards, just as in the genuine 27 paras. The top ray of the star points to the first stroke of the K. Both the upper, lateral rays point about to the tips of the horns of the bull. The left lateral ray droops too much to the left. The two lower rays are particularly sharp, the other three not quite so sharp. The hair between the bases of the horns is nicely represented. Both horns are not merely outlined, but also shaded; indeed, there is very little white on the left horn at all. The right horn points exactly midway between the two words of the inscription, and the left horn, if prolonged, would just touch the very tip of the right side of the foot-stroke to the first P of CKPNCOPN. The ears are triangular; the right one pointing to the final O of HOPTO, and the left one pointing to the first stroke of the first N of CKPNCOPN. The right ear (left side of stamp) is considerably lower than the other, and its point is blunter. The eyebrows are the same as in the genuine 27 paras; and so are the lips and nostrils. The two lines forming the nose are parallel in this value; but, in the 27 paras, they diverge, almost like an A. The curve of the right horn (left side of stamp) is more pronounced and more serpentine than that of the left (right side of stamp). The base of the right horn seems also to be thicker than that of the other.

First Forgery.

(Dots in mouth of post-horn.)

Apparently hand-struck, in green, on very stout, green wove paper, much darker than any yet described. The cross-bar to the H is bent up in the middle, quite convex, and with no head-strokes. The top of the first O slants to the left. The P is clumsy, and there is hardly any foot-stroke to the left side. The arms of the T only hang down for about one quarter the height of the letter, which makes the stem look too long. The top of the second O is broken. Each C of the second word is like the genuine. The tail of the K is oblique, but not curved; it does not touch the bottom of the following P. The left side of the foot-stroke of the said P is as long as the right side. The first limb of the N is too tall; the right foot-stroke projects equally right and left. The O is too thick at the bottom, and it is very much squeezed together at the sides, making it much narrower than the rest of the lettering. The bottom of the next P, in my specimen, has not printed, so that it does not join the body of the letter. The two limbs of the final N are not parallel, being further apart at the top than at the bottom. There is no head-stroke to the right limb, and that of the left limb is very indistinct. The ring of the post-horn is broken towards the left, it is not blotched. The 5 is very like the genuine, the 4 also, except that the cross-bar projects rather too much to the right of the figure. The bell of the post-horn is shaded by dots; there are about sixteen of them, but they are not very plain. There are four very thick lines of shading in the wide part of the horn, nearest to the bell. If the die were heavily inked, these would probably run together, as they are very close. The thin part of the post-horn has one line of shading running up it, almost to the mouthpiece. The latter points towards the ear of the bull. The top ray of the star points to the left side of the K, where the foot-stroke ought to be. The upper, lateral rays point decidedly above the level of the tips of the horns of the bull.

All the rays are too blunt, but the left lower ray is the sharpest. The head seems to be partly bald, exactly as though the bull had a tonsure. The left horn is a little shaded near the tip (right side of the stamp); it points midway between the letters PN; the right horn (left side of stamp) points to the centre of the bottom of the last O of HOPTO. The serpentine curve of the horns is very pronounced, and they are of a nicer shape than those in the genuine. The ears are rather like the genuine; but the right ear points to the P of HOPTO, and the left ear points to the second C of CKPNCOPN. The left eyebrow (right side of the stamp) is very strong, and joins the line forming the left side of the nose. There is no under-lip, so that the mouth is far above the post-horn, instead of touching the ring, as it ought to do. In the forgeries hitherto described, the lettering is a good distance from the outline of the stamp; in this present forgery the lettering is nearly as close to the outline as in the genuine, and in heavily-printed copies, many of the letters would blotch into the outline, as my specimen does at the top of the K.

Second Forgery.

(Dots in mouth of post-horn.)

Typographed (?), in green, on stout, hard, pale green wove paper. The cross-bar of the H projects equally to right and left. The left top corner of the first O is cut off slopingly, and the right bottom corner is broken in my specimen. The right arm of the T hangs down *very* much lower than the left, which is an easy test for this forgery. The final o is broken at the top, and bulges out too much, in the thin part, at the bottom. The head of the first C of the second word is entirely broken away from the body of the letter. The tail of the K is very thick and clumsy; it does not touch the foot of the following P, but, on the other hand, my specimen shows a blotch, very nearly joining the said tail to its own vertical stroke. The head-stroke to the left top corner of the P is abnormally long, so as to go tolerably near the head of the K. The foot-stroke of the P projects equally, right and left. The foot-stroke to the second limb of the first N also projects equally, right and left. The oblique line of this N is joined to the *outer end* of the foot-stroke to the first limb, but, in the genuine, it goes to the corner, where the foot-stroke and the vertical stroke meet. The second C has a square top, and a ridiculous, hump-shouldered appearance. The O is all out of shape; the bottom slopes, and so does the right top corner. The foot of the P shows no proper foot-stroke at all, but on the left, in my specimen, there is a thin, *curved* line, and, on the right, there is a thin, short dash, level with the foot, but not touching it. I cannot say whether these faint marks are to be found always, as I have never had more than the one copy, from which I am describing. There is a cross-bar right across the bottom of the final N, and the oblique line of this letter is broken, and only runs half-way down. The vertical stroke of the 5 is thicker than the genuine; and, if prolonged downwards, it would cut into the ball of the tail. The head of the 5 extends to the right, about as far as the genuine, but its top is almost perfectly straight, instead of hollowed. The open mouth of the post-horn contains five horizontal rows of rectangular dots; there are about eighteen dots altogether. There are only four lines of shading in the thick part of the horn, nearest to the mouth; the thin part of the horn is unshaded, but the lower outline is rather blotched. The top ray and the left lower ray of the star are both very blunt; the left upper ray points far above the tip of the bull's right horn. The hair between the bases of the bull's horns shows a sort of tonsure, and is flat on the head, instead of curly. The thick outlines of both the horns are on the out-

side ; but, in the genuine, the thicker outline of the right horn is on the outside, and the thicker outline of the left horn is on the inside. The right horn points up towards the C above it ; the left horn points to the *left* side of the foot of the P, instead of to the right side of it. The right ear points to the P of HOΠTO, and the left ear points to the second C of CKPCOPN. They are fairly level with one another.

Third Forgery.

(Horizontal lines in mouth of post-horn.)

Hand-struck in pale blue, on thin, hard, and also on rather stout, pale green wove paper. The bottom of the first O is faulty, and seems to slope down to the left. The top outline of the P is not truly straight, and the rounded part joins the vertical part a little below the level of the centre of the letter. The left arm of the T hangs down even beyond the level of the centre of the letter, but the right arm is slightly shorter. The right side of the final O is thicker than the left side. The first C of the second word has its tail somewhat like its head, but the whole bottom part of the letter is too small, so that the top part seems to overhang. The tail of the K is oblique, of course, but not curved in the least. In my specimens of this forgery, the said tail does not touch the foot-stroke of the following P ; but this is merely because the left side of the foot-stroke of the P is too short ; they would touch if the said foot-stroke were of the proper length. In this forgery, the lettering is placed so far within the outline, that it would be impossible for the heads of the letters to touch that outline, however carelessly struck. The first N has its oblique stroke wavy. The lower portion or tail of the last C is quite as heavy as the head. The right side of the O is thicker than the left, and the bottom of the said O is too flat. The sides of it are so much squeezed together, that they make the following P look disproportionally wide. The foot-stroke of this P is longer on the right side than on the left. The head and foot-strokes to the right limb of the final N are long, but those of the left limb are faulty ; the oblique line of this second N is no thicker than that of the first. The ring of the post-horn is composed of two lines, which are not in the least blotched together in any part. This is also the case with the thin part of the horn, from the ring to the mouthpiece. The straight part of the 5, if prolonged downwards, would cut through the centre of the little ball at the end of the tail of the 5, and the head of the said 5 does not project at all too far to the right. The top of the 4 is closed, it has a very distinct foot-stroke, and the cross-bar projects some distance to the right, even further than the foot-stroke to that numeral. The bell of the horn is shaded with five distinct, horizontal lines of shading. Three of these lines are long, the fourth half the length of the three, and the fifth again only half as long as the fourth. There are three distinct lines of shading in the wide part of the horn nearest to the bell end, but none anywhere else in the horn. The curve of the mouthpiece of the post-horn is not so pronounced as in the genuine ; so that a bullet fired from it would pass above the bull's eye. The top ray of the star points decidedly to the left of the centre of the first stroke of the K. If the upper, lateral rays were prolonged, they would pass slightly above the tips of the horns of the bull. The star is too wide for its height, as though it had been squeezed top and bottom. The top ray is blunt, the rest are sharp. Between the bases of the horns there is some shading to represent the hair ; but it must be smoothly brushed hair, apparently parted in the middle. The right horn (left side of the stamp) is slightly shaded by means of a blotched outline, but the other horn is merely outlined. The left horn (right side of stamp), if prolonged, would pass

midway between the letters PN. The ears are long, especially the right, which points to the P of HOPTO, while the left ear points to the centre of the O of CKPNCOPN. Both ears are about level. The left eyebrow is simply a continuation of the strong line forming one side of the nose; the right eyebrow is a continuation similarly of the line forming the other side of the nose (left side of stamp); but this latter line does not run down further than about the corner of the eye; whereas in the genuine, it runs right down to the nostril, the same as the other. The horns are about equal in thickness.

Fourth Forgery.

(Vertical lines in mouth of post-horn.)

Hand-struck in greenish-blue, on stout, transversely-laid, greenish paper. There is no foot-stroke to the right side of the first limb of the H. The first O is too square at the top, and is nearly as thick top and bottom as it is at the sides. The rounded part of the P joins the vertical stroke too low down. The second O is exactly like the first. The first C happens to have the postmark just over it, so that I do not know whether head and tail are alike. The tail of the K is slightly curved, as well as oblique, but it has no foot-stroke at all. The following P has no foot-stroke to its left side. The first limb of the N has no foot-stroke. The C is like the genuine. The next O is much too thick at the top and the bottom. The final N has no foot-stroke to its first limb. The ring of the post-horn goes in front, both right and left; the right side is somewhat blotched. The head of the 5 is like the genuine, but the vertical stroke, if prolonged downward, would cut through the middle of the little ball, forming the tail of the numeral. The top of the 4 seems to be open; the cross-bar is very thick and clumsy, and there is a well-marked foot-stroke to the left, but not to the right. The vertical stroke is not very thick; indeed, it is not much thicker than the other strokes composing the figure. The cross-bar runs almost as far to the right as it does to the left. The bell of the post-horn is postmarked in my specimen, but it seems to have three very thick, vertical lines of shading in it. There are five lines of shading in the thick part of the horn, nearest to the bell. There is one line, running along the thin part of the horn, almost to the mouthpiece, which points rather higher than the left eye of the bull. The top ray of the star points somewhat to the right of the first limb of the K, and the lateral, top rays point above the tips of the horns of the bull; the left top ray pointing or sloping distinctly upwards, instead of downwards. The right top ray is the sharpest. The hair is in two masses or lumps. The left horn (right side of stamp) is shaded. The right horn is postmarked in my copy, but the left horn (right side of stamp) points exactly to the first limb of the first N. The right ear is distinctly higher than the left, and it points between the letters TO of HOPTO; the left ear seems to point to the second C of CKPNCOPN. There is only one line (right side of stamp) to form the nose; and it not only runs up, to form the eyebrow on that side, but, as eyebrow, it is continued into the base of the left horn. The other eyebrow is exceedingly heavy, and is blotched into the rest of the eye. The lower lip is all lop-sided, the part over the 5 being much further from the ring of the post-horn than the part over the 4 is.

Fifth Forgery.

(Oblique lines in mouth of post-horn.)

Lithographed, in pale blue, on pale, greenish-blue, transversely-laid paper. The two foot-strokes of the H are joined together into one line; and the cross-bar in some copies is broken in the middle, so as merely to

form two head-strokes. The two sides of the O are not the same shape, the right one being thicker than the other. The curved part of the P joins the body a shade too high up; and the lower part of the curve is slightly slanting, instead of being parallel with the top part. The second O has a slight malformation at the top of the left-hand limb. The first C of the second word has a very square head; and the tail is like the tail of an ordinary capital C, and not like the head at all. This, of course, is an easy instant test. The tail of the K is oblique, but not curved, and it distinctly joins the foot of the following P. The P has hardly any foot-stroke on the left side. The first limb of the N has no foot-stroke at all, though there is one in the genuine. The right foot-stroke to this letter projects a little to the left, but not so far as to the right. The next C has the tail like the head, as in the genuine. The top of the O is too square and too thick. The top of the next P is very slightly sloped down to the right. There is no foot-stroke to the bottom of the first limb of the final N. The ring of the post-horn is not at all blotched. The head of the 5 ends in a little ball; so that if the stamp be laid with the bull's horns pointing to the left, the said head of the 5 makes a very nicely-shaped comma; whereas in the genuine, the head of the 5 is thick where it joins the vertical stroke, and thin and pointed at the end, just the very opposite to this. The head is also not so wide as that of the genuine. The 4 is closed at the top; it has a very thick, vertical stroke; and the cross-bar is much thicker on the right than on the left, and the right portion of it turns up, as though it had had a knock. This right portion widens out, like a little arrow-head. The bell or wide end of the post-horn has very little shading in it. I have only been able to make out four lines, which run obliquely down from right to left, two of them being blotched into the outline of the horn, and the other two being very faint. The wide part of the horn, nearest to the bell, is shaded with three lines, and indications of the commencement of two others. The rest of the horn is merely outlined, without any shading at all. A bullet fired from the mouthpiece would pass through the centre of the first N; i.e., the mouthpiece does not curl in towards the left at all. The top ray of the star points to the middle of the K. The upper, lateral rays are distinctly lower than the tips of the horns. The left lower ray is sharp; all the others are blunter. The hair between the horns seems to be combed down on the forehead, the lines being nearly vertical. (In the genuine they appear to be curly.) The horns are merely outlined, without any shading. The right horn points almost to the beginning of the first C of CKPNCOPN, the left horn points between the letters PN. The right ear is longer than the left, and points to the base of the T of HOPTO. The left ear points up to the base of the second C of CKPNCOPN, the tip of it being much blunter than the tip of the right ear. There is only one line down the face, to form the nose. Both horns are of nearly the same thickness. The under lip is much too small, and does not touch the outline of the ring below it.

Sixth Forgery.

(Oblique lines in mouth of post-horn.)

Lithographed, in pale blue, on very pale yellow-green, vertically-laid paper, very stout. The right side of the top bar of the H does not project more than the left side, and the foot-strokes are joined together, making the bottom the same as the top. The O is too square at the top, and the right side is very slightly thicker than the left. The head of the P is too small, and joins the body too high up, and too slopingly. The next O is too square at the top. The first C of the next word has an

ordinary tail; *i.e.*, not like the head. (Easy test.) The tail of the K is oblique, but not curved, and it joins the foot of the following P. The first limb of the N has no foot-stroke at all, and the head-stroke only shows on the left side. The second C is like the genuine, with head and tail alike. The O is very square at the top, and malformed at the bottom. The final N has no foot-stroke to its first limb. The ring of the post-horn is not blotched at all. The head of the 5 is the same as in the second forgery, and the vertical stroke, if prolonged downwards, would cut into the middle of the little ball, forming the tail of the numeral. The 4 has a closed top, and is very like that of the second forgery, except that the right side of the cross-bar is not like an arrow-head. There are four distinct lines of shading in the open mouth or bell of the horn, sloping obliquely down from right to left. None of the rest of the horn is shaded, except just close to the thin mouthpiece. The mouthpiece itself is a distinct ring, and looks something like a button mushroom. A bullet fired from it would touch the bottom of the second C. The top ray of the star points to the right foot-stroke of the K. The upper, lateral rays are distinctly below the level of the tips of the horns of the bull. The left lower ray is the sharpest. The hair is combed into a fringe, as in the second forgery. The right horn points to the bottom of the first C, and the left horn points midway between the letters PN. There is no shading on the horns. The ears are the same as in the second forgery. The eyebrows, as in the second forgery, slant obliquely outwards. There is only one line to form the nose. The lower lip hardly touches the ring of the post-horn. As will be seen, this forgery is exceedingly like the fifth forgery. It looks to me like a later reprint from the design of the fifth forgery.

Seventh Forgery.

(Oblique lines in mouth of post-horn.)

Typographed (hand-struck?), in blue-green, on stout, hard, pale green wove paper. The right-hand end of the cross-bar to the H is *very* thin, much thinner than the rest of the line. The first O, in my single specimen, has a slight break in the right bottom corner, but this may not always be the case. The second O is absolutely square at the top, and the right bottom corner has a small, misshapen bulge in it. In the second word, the tail of each C is only a thin line, in the English fashion, instead of having a knob, just like the head. This is an easy test. The tail of the K is thick and clumsy; it does not touch the foot of the P. The vertical stroke of the said P is bent to the left in the middle, so that the head leans backward, giving the letter a broken-backed appearance. It has no head-stroke, and the foot-stroke is longer on the left side than on the right, just the opposite of the genuine. The oblique line of the N is not visible in my specimen; its first upright seems to have no head-stroke, and the foot-stroke bends down to the left. The O is square at the top, and has a wide break at the bottom. The head of the second P is broken, and the foot-stroke *very* short, especially on the left side. The first upright of the final N is poorly printed, without any head-stroke to the left, and the foot cut off obliquely. The outer outline of the ring of the post-horn is broken in several places. The neck of the 5 is oblique, instead of vertical; and, if prolonged downwards, it would pass considerably to the left of the ball, at the end of the tail. The head, or "flag" of the said 5 is thick at the left-hand end, and sharply pointed at the other; it is very slightly hollowed, and does not extend so far to the right as the body of the numeral does. The 4 has a *very* widely-open top, and the cross-bar is bent, instead of straight, with a blotch or dot, just below the right-hand end of it, which does not exist in the genuine,

or any of the other six counterfeits. The wide mouth of the post-horn is shaded by three short, oblique lines, running down from right to left. The thick part of the post-horn, nearest to the mouth, contains six moderately thin lines; they are the same thickness all the way along. The thin part of the horn has no shading in it; it is much about the same thickness as the ring. The star is an easy test; it is almost shapeless, the rays (about seven) being mere stumps. The hair, between the bull's horns, is a light, semicircular, unobtrusive patch, and not curly. The two horns are of very different shapes; the right horn points to the middle of the first C of CKPNCOPN, and the left horn to the middle of the foot of the first P of that word. The left ear is almost horizontal, and points to the O of this word, while the right ear droops considerably, and points to the first O of HOPTO. The nose is extremely like a pig's snout, with a flat end, and two *circular* holes for nostrils. The lower lip crosses the outer line of the ring of the post-horn, and rests on the inner outline of it. The left horn is longer, thicker, more shaded, and more sharply-pointed than the other. I think the pig's snout, and the oblique lines in the mouth of the post-horn, will be amply sufficient to identify this counterfeit.

POSTMARKS.

Genuine.—29, usually in red.

First Forgery.—Uncancelled.

Second Forgery.—Uncancelled.

Third Forgery.—Uncancelled.

Fourth Forgery.—A portion of a very large ring, much larger than the stamp.

Fifth Forgery.—A diamond of rectangular dots, like 42, without numerals; but the dots are much smaller than those in 42.

Sixth Forgery.—A pen-and-ink flourish.

Seventh Forgery.—Uncancelled.

Same Issue. 81 Paras, blue, on blue wove.

I have not been able to procure a specimen of this very scarce stamp, and must do the best I can with three or four photographs of the genuine. It is catalogued at £300, unused.

Genuine.

(About ten oblique rows of dots in mouth of post-horn.)

Hand-struck, in blue, on blue wove paper, which is, I conclude, the same substance as in the rest of the set. The head-stroke of the H of HOPTO projects a little further to the right than it does to the left. The bottom of each O of this word is flat, and very thin. The foot-stroke of the P projects much further to the right than it does to the left, and it is parallel with the head-stroke. The left arm of the T hangs down a *little* lower than the right; and the foot-stroke projects equally to right and left. In the word CKPNCOPN, the tail of the first C is like the head, but a little sharper. The foot-stroke of the first limb of the K projects further to the left than to the right, and the oblique stroke of the tail gets thinner, where it joins the oblique stroke of the head. The tail does not touch the foot of the P. The foot-stroke of the said P projects a long way to the right, but hardly at all to the left. Each upright of the first N has well-defined and equal foot-strokes. The tail of the C is

a good deal longer and sharper than the head, but it is, nevertheless, a Continental C, and not an English one. The O is thicker and more oval, at the top and bottom, than either O of the first word. The foot-stroke of the P projects well to the right, but hardly at all to the left. The final N is like the other, except that the foot-stroke of the second upright projects very little to the left. The two outlines of the ring of the post-horn are not broken anywhere, and the curved lines of shading, proceeding from the thick part of the horn, can be traced, in the lower part of the ring, to about the level of the right bottom corner of the numeral 1. The top of the said 1 is quite flat, and the foot-stroke, in my photographs, is longer on the right, than on the left. The wide mouth of the horn is almost completely filled with oblique rows of rectangular dots. The rows run down slantingly, from left to right; there are ten rows, and there seem to be about thirty-eight dots altogether. The thick part of the horn, nearest to the wide mouth, contains six curved lines of shading. The mouthpiece of the horn is curved round so much that a bullet fired out of it would hit the bull's cheek, well below the eye. The top ray of the star is very sharp, and if prolonged, it would pass through the left foot-stroke of the K above it, without touching the left bottom corner of the vertical stroke of the K. The points of the two side-rays are far below the level of the tips of the bull's horns; the two lower rays point, respectively, to where the horns are joined to the top of the head. The hair, between the bases of the horns, is indicated by lines, radiating from the centre. The right horn points to the centre of the last O of HOPTO; the left horn points to the right-hand corner of the foot of the first P. The ears are triangular; the tip of the right ear points to the space between TO; and the left ear, which is rather blunter, points to the centre of the first N. The bull seems to be wearing a pair of spectacles, which arch over the nose, in the usual fashion. Both sides of the nose are outlined, and there is a distinct, V-shaped wart on the front of it, below the bridge of the spectacles. The left nostril ends in a fairly circular dot; the right nostril is wedge-shaped.

First Forgery.

(Four vertical rows of dots in mouth of post-horn.)

Lithographed, in sky-blue, on fairly stout, blue wove paper. The outline of the stamp is very thin, and broken in several places. The head-stroke of the H is thin in the middle, instead of being equally thick all the way across; and it projects no further to the right than to the left. The foot-stroke to the P projects to the right, even more than the genuine; the whole stroke is somewhat wedge-shaped, being very sharp to the right of the P, and blunt to the left of it: this foot-stroke is not truly parallel with the head of the letter. The left arm of the T hangs down less than the right arm, instead of more. The foot-stroke to the vertical limb of the K of the second word is equal right and left; the oblique stroke of the tail of this letter gets wider where it joins the oblique stroke of the head, which is just the opposite of the genuine. The lower ends of the uprights of the first N, as a rule, show very small foot-strokes. The tail of the second C is thicker and clumsier than the head. The O is flat at the top. The foot-stroke of the second P projects equally right and left; there is a very tiny stop, between the foot of the P and that of the final N. The first limb of the said N has no foot-strokes. The inner outline of the ring of the post-horn is broken above the 8. The top of the 1 is obliquely pointed; the foot-stroke is about equal, right and left. The wide mouth of the post-horn contains four vertical rows of rather shapeless dots; the two rows to the left are long, the two to the right are very short; there are about fifteen dots altogether. The thick part of the horn,

nearest to the wide mouth, contains four curved lines of shading. There is a dot at the point of the mouthpiece of the horn which is not shown in the genuine, and there is one clear line of shading, running up the thin part of the horn, very nearly to the mouthpiece. The top ray of the star points to the *right*-hand corner of the foot of the first limb of the K. The right lower ray of the star points to half-way between the middle of the top of the head and the place where the left horn joins it. The hair between the bases of the horns is wider near the right horn than it is near the left; in the genuine, it is widest in the middle. The right horn points to the first C, and the left horn to the space between PN of CKPNCOPN. The left ear is triangular, fairly like the genuine, but it grows out of the outer corner of the eye, instead of immediately below the base of the horn. The right ear is oval, and sharply pointed. The bull has no spectacles; the nose is outlined on the left side only. There are three vertical lines of shading between the eyebrows, with a dot below them: these are in place of the bridge of the spectacles, and the V-shaped mark of the genuine. The left nostril ends in a horizontal stroke; the right nostril ends in a shapeless dot.

Second Forgery.

(No dots or lines in mouth of post-horn.)

Lithographed, in rather an ultramarine-blue, on fairly stout, blue wove paper. The cross-bar of the H of HOPTO extends far to the right, and hardly at all to the left, and the foot-stroke of the right limb is so long to the right, that it almost touches the O. The right bottom corner of the said O is cut off rather slopingly. The foot-stroke of the P is a little longer on the right than on the left, and the head *almost* touches the T. The *right* arm of the T hangs down lower than the left—just the opposite of the genuine. The final O is oval and thick at the top, and there is a small bulge at the right bottom corner. In the second word, the first C is fairly like the genuine. The K is an easy test, as there is a very distinct bar, right across the top of it. The foot-stroke of the vertical limb is equal, right and left. The first P has no foot-stroke to the left. The first limb of the first N has no foot-stroke at all. The tail of the second C is almost exactly like the head. The O is very irregularly drawn on the right side; the top slopes to the left a little, and the bottom is irregular. The next P has no head-stroke. The final N has a very slight foot-stroke on the left side of the first circle. The portion of the tube of the post-horn, just below the numerals of value, has an oblong, white patch in it. (In the genuine, this part is filled with lines.) The 8 is a good deal taller than the 1, and seems to stand on a slightly higher level. The wide mouth of the horn contains no dotted shading, but the left side of the outline of the said mouth is very thick and irregular. (This is an easy test.) The thick part of the post-horn, nearest to the mouth, shows four curved lines of shading, instead of six. A bullet fired from the small end would very nearly hit the bull's eye. The rays of the star are all rather blunt: the top ray points to the very centre of the K. Each of the two lower rays points to the top of the head, half-way between the centre and the place where the horn joins it. The hair is a shapeless, dark patch, without any lines. The right horn points between the two words, but much nearer to the C than to the O; the left horn points to the beginning of the bottom of the first N. The ears are oval, instead of triangular; the right one points to the foot of the T, and the left one to the space between NC. There is no spectacle-arch over the bridge of the nose; and there is a single, comma-shaped mark, between the eyes. Only the left side of the nose is outlined. The nostrils are like two inverted commas, pointing opposite ways.

Third Forgery.

(Eight horizontal rows of dots in mouth of post-horn.)

Typographed, or hand-struck, in a sort of indigo-blue, on medium, blue wove paper. The first O of HOPTO is round at the bottom, and flat (slightly sloping) at the top. The foot-stroke of the P is equal, right and left. The arms of the T hang down equally, and there is no foot-stroke on the left side. The head and tail of each C in the second word are exactly alike. There is a strong cross-bar right across the top of the K, and there is the merest trace of a division between the foot-strokes of the two limbs, so that a heavily-printed copy would probably show a cross-bar right across the bottom. The tail is thick all the way, and it touches the vertical stroke, as well as the oblique one. It leans so far away from the next letter, that the CK looks like a separate word. The P has a short, equal foot-stroke left and right. The first upright of the N has a foot-stroke to the left only, and the second upright has a foot-stroke to the right only, and there is a tiny dot between the two feet. The head and tail of the second C very nearly touch. The next O is rather flatter at the top than the genuine. The foot-stroke of the next P is longer on the left than on the right. In the final N, the head-stroke of the second limb projects a good deal to the right, and not at all to the left—just the opposite of the genuine. The ring of the post-horn has a tiny break in the inner outline, below the centre of the bull's mouth. The I of SI has a sloping point at the top; and the foot-stroke is longer on the right than on the left. The wide mouth of the horn contains eight horizontal rows of dots; there are about twenty-nine of them. The thick part of the horn, nearest to this, appears to contain three curved lines of shading, but they are much blotched, and difficult to make out. The small end of the horn does not curve inwards so much as the genuine, so that a bullet fired from it would strike the place where the ear joins the head. All the rays of the star are extremely sharp; the top ray points to (and very nearly touches) the right bottom corner of the first limb of the K. The right side-ray, if prolonged, would pass clear above the tip of the bull's left horn, which is lower than the other. The hair is shaded by almost vertical lines, and it is smooth and not curly, and looks rather as though wrapped round the base of the horns. The right horn points between the two words, but much nearer to the C; the left horn points to the space between PN. The ears are of a nondescript shape; the right ear curves up, and points to the right bottom corner of the O; the left ear also curves up, and points to the second limb of the N. The bull has no spectacles, and there are three very thin, vertical lines between the eyes. The nose is only outlined on the left side, and there is no V-shaped mark on it. The nostrils both end in circular dots.

Fourth Forgery.

(Twenty-six irregular, circular dots in mouth of post-horn.)

This is a very poor thing, and I have a notion that it may be by the same hand as the Finland "KOIL" forgeries, described in vol. i. p. 373. Lithographed, in a sort of sky-blue, on thick, very pale blue wove paper. The lettering is all very clean, thin, and regular in this counterfeit. The head-stroke of the H projects to the right, more than twice as far as to the left; and the foot-strokes are joined, making a cross-bar across the bottom of the letter, the same as at the top. Each O is nicely shaped, and oval, instead of flat, at the top and bottom. The foot-stroke of the P projects equally, right and left. Both arms of the T hang down equally. Each C of the next word is an ordinary English C, with no knob to the

tail. There is a cross-bar to the foot of the K, which not only runs right along the base of the letter, but joins it to the foot of the following P. The right foot-stroke of the said P is very short. There are no foot-strokes to the first limb of either N. The O is the same shape as in the first word, and the foot-stroke of the P projects equally, left and right. The same is the case with the foot-stroke of the second upright of the final N. The 1 in the ring of the post-horn has a sharp, oblique point at the top, and the foot-stroke is equal, left and right. In the centre of the post-horn, just below the numerals, there is a small, oblong, white label, with pointed ends, containing two coloured dots. This label does not exist in the genuine, as the curved lines of shading, proceeding from the wide end of the horn, fill in this part entirely. The wide mouth of the horn contains twenty-six small, rounded dots. There are nine horizontal rows of them, with a single dot below the bottom row, but they are very irregular. The thick part of the horn shows five curved lines of shading. They are regular, and the same thickness all along, instead of being thickest at the wide end. A bullet, fired from the mouthpiece, would probably hit the centre of the left ear of the bull. The left side-ray of the star, if prolonged, would pass above the tip of the right horn; and the right side-ray points upwards, towards the first P of CKPNCOPN. The left lower ray points to the bull's right eye, and the right lower ray, like the genuine, points to the join of head and horn. The hair between the horns is a solid, semicircular patch, the darkest part of the whole stamp. The right horn points to the space between the two words, but nearer to the O than to the C; the left horn points to the foot of the first upright of the N above it. The ears are long and narrow; the left one is acutely pointed, and the point is directed upwards, towards the first stroke of the N. The tip of the right ear is covered by the postmark in my specimen. The nose is only outlined on the left side; it is rather a human nose, and the nostrils look like a short, drooping moustache, touching the nose. There is no sign of any spectacles, and there is one comma-shaped dot between the eyes. The lower lip is a semicircle.

Fifth Forgery.

(Horizontal lines and dots in mouth of post-horn.)

Hand-struck (?), in somewhat ultramarine-blue, on stout, pale blue wove paper. The H is simply the two letters, II, placed close together, and their head-strokes do not touch. Each O of the inscription is nicely shaped, and not flat either at the top or bottom. The foot-stroke to the P projects absurdly to the right, and not at all to the left; this foot-stroke is not parallel with the head. The right arm of the T hangs down lower than the left, and there is a blotch, which joins the left arm to the head of the P. The lower part of the first P of CKPNCOPN widens out to the bottom, and so do both limbs of the N, though not so much. The next C is *very* like a G, and its tail touches the O. There is a dot between the last two letters of the word, close to the base of the N. The final foot-stroke of this N goes very near to the mouthpiece of the post-horn. The 1 of 81 has a fairly square top, but its foot-stroke projects equally, right and left. The wide mouth of the horn contains about four horizontal lines (very blotchy) and about eight dots below the lines. The thick part of the horn shows only three curved lines of shading. The top ray of the star is rather blunt, and it points to the right corner of the foot of the first limb of the K. The left lower ray points to the join of head and horn, as in the genuine; but the right lower ray points far to the left of the join of the left horn and the head. The right horn points to the space between the two words, but much nearer to the C; the left

horn points to the left corner of the foot of the first limb of the **N**. The left ear is triangular, but the right ear is a long oval. On the bridge of the nose, between the eyes, there is an inverted Δ , with a dot to the left of it, and another dot below it. There are no spectacles, and the nose is only completely outlined on the left side.

Sixth Forgery.

(Horizontal lines, dots, and a curved line in mouth of post-horn.)

I have this forgery in two different styles ; the first is apparently typographed, in pale blue, on rather thick pale blue wove paper ; and the second seems to be a lithographic transfer from it, blotchily lithographed, in darker blue, on rather darker and thinner blue wove paper. The tests to be given will serve for both, bearing in mind that all the details are much clearer in the typograph. The cross-bar of the **H** is very slightly arched, to follow the curve of the frame of the stamp ; it projects equally right and left. Each **O** of the inscription is nicely shaped, and not flat at the top or bottom. The foot-stroke of the **P** projects equally, right and left. Both arms of the **T** hang down equally. The head and tail of each **C** are alike. The foot-stroke of the vertical limb of the **K** projects equally, left and right ; the upper oblique limb is nearly as thick as the lower one, instead of being a hair-line, and the tail *almost* touches the foot of the **P**. The first limb of the **N** has a foot-stroke to the left only ; the second limb has a long foot-stroke to the right, and a short one to the left. The next **P** has a short foot-stroke, equal left and right, and the foot-stroke of the first limb of the final **N** projects well to the left. The two outlines of the ring of the post-horn are far apart in this forgery, making the ring look too thick. The curved lines of shading in the thick part of the horn (there are only three of them) end below the beginning of the 8 of 81, leaving a blank space below the numerals. The **I** is like the genuine, except that the foot-stroke projects equally on both sides. The wide mouth of the post-horn shows four horizontal lines, then two horizontal lines of dots, then a single dot, then one curved line at the bottom. A bullet, fired from the mouthpiece, would probably strike where the ear joins the head. The left upper ray of the star, which is very sharp, points exactly to the tip of the right horn ; the right upper ray points above the tip of the left horn ; the lower rays both point half-way between the centre of the head and the places where the two horns, respectively, join the head. The hair is indicated by lines, converging towards the centre of the forehead. The right horn points almost to the beginning of the **C**, and the left horn to the right corner of the foot of the **P**. The ears are not triangular, and they point, respectively, to the space between **PT** and the space between **CO**. The bull has no sign of spectacles ; the nose is completely outlined only on the left side ; and there are three dots, in a vertical row, on the bridge of the nose. No other forgery possesses these three dots, which are very distinct.

Seventh Forgery.

(Four oblique lines in mouth of post-horn.)

This is decidedly poor. Lithographed, in a sort of sky-blue, on medium, blue wove paper. The stamps on the sheet are evidently more or less separated by lines, as my specimen shows two lines down the right side, a horizontal line part of the way along the top, and a horizontal line all along the bottom of the stamp. The **H** is a very easy test, as there is a cross-bar right along the bottom, which is continued to touch the wide mouth of the horn. Each **O** of the inscription is rather flat at the top, and oval at the bottom, both top and bottom being too

thick. The foot-stroke of the P projects equally, left and right. The left arm of the T hangs down *much* further than the right. The first C is an ordinary English C, but the second C has the head and tail alike. The foot of the K is firmly joined to that of the P, and the tail of the said K is equally thick all the way. In each N, the first limb has no foot-strokes at all. The last P has equal foot-strokes, left and right. There are four curved lines in the thick part of the horn, with a space between the first and second, amply wide enough to allow another line to drawn there. These lines are much too short, and even the longest of them ends some distance before the bottom of the 8, leaving a perfectly blank space in the horn, below 8r. The foot-stroke to the r projects equally, right and left. The wide mouth of the horn shows four oblique lines of shading. The mouthpiece of the horn ends in a white ring, and a bullet, fired from it, would probably pass clear to the right of the bull's left ear. The top ray of the star points to the right side of the foot of the first limb of the K; the two lower rays point, respectively, half-way between the centre of the head, and the places where the horns join it. The hair is indicated by vertical lines, of graduated lengths. The right horn points nearly to the C; the left horn points to the space between PN. The left ear is much lower than the right; it is rounded, and points to the second C. The right horn points a little to the left of the first C. The bull has no spectacles; his eyes are rather of a Chinese shape; the nose is outlined on the left side only, and there is an oblique mark on the bridge coming from the inner corner of the left eye. The lower lip does not touch the ring of the post-horn except by a tiny blotch in the centre. The upper lip is long and Irish-looking.

Same Issue. 108 Paras, blue on rose.

This is another very scarce stamp, catalogued at £50, used.

Genuine.

(About eight horizontal rows of dots in mouth of post-horn.)

Hand-struck, as before, in pale blue, on very pale, transversely-laid rose paper. The inner foot-strokes of the H are shorter than the outer ones, and they do not touch each other. The foot-stroke to the P is so very long that it generally runs into the O before it. The head and tail of each C are formed alike. The first C is very square at the bottom. The tail of the K is curved as well as oblique; it gets very thin where it joins the oblique stroke, and it does not touch the following P. The foot-stroke of the said P is very short on the left side. There is a foot-stroke to the left side of the first limb of the N. The O in my specimen is broken at the bottom. The foot-stroke to the following P is long, and both sides of it are equal. Both limbs of the final N have head- and foot-strokes. The ring of the post-horn is blotched, to the right the bottom of the 8. It goes before on the right and behind on the left, like the other genuine stamps. The r has no foot-stroke to the left side; it has an extraordinarily long, oblique side-stroke, which thins down to a sharp point. The o slopes very slightly over to the left; the very top of it is flat, and the right shoulder is oblique, instead of rounded. The 8 is clumsy, and too thick in the middle; the top half is smaller than the bottom half. The open mouth of the horn is shaded with about eight horizontal rows of more or less square dots; I have counted twenty-seven dots, but there may be more. There are seven lines of shading in the thick part of the horn, near the bell or mouth. These lines, as in the other

horn points to the left corner of the foot of the first limb of the N. The left ear is triangular, but the right ear is a long oval. On the bridge of the nose, between the eyes, there is an inverted A, with a dot to the left of it, and another dot below it. There are no spectacles, and the nose is only completely outlined on the left side.

Sixth Forgery.

(Horizontal lines, dots, and a curved line in mouth of post-horn.)

I have this forgery in two different styles ; the first is apparently typographed, in pale blue, on rather thick pale blue wove paper ; and the second seems to be a lithographic transfer from it, blotchily lithographed, in darker blue, on rather darker and thinner blue wove paper. The tests to be given will serve for both, bearing in mind that all the details are much clearer in the typograph. The cross-bar of the H is very slightly arched, to follow the curve of the frame of the stamp ; it projects equally right and left. Each O of the inscription is nicely shaped, and not flat at the top or bottom. The foot-stroke of the P projects equally, right and left. Both arms of the T hang down equally. The head and tail of each C are alike. The foot-stroke of the vertical limb of the K projects equally, left and right ; the upper oblique limb is nearly as thick as the lower one, instead of being a hair-line, and the tail *almost* touches the foot of the P. The first limb of the N has a foot-stroke to the left only ; the second limb has a long foot-stroke to the right, and a short one to the left. The next P has a short foot-stroke, equal left and right, and the foot-stroke of the first limb of the final N projects well to the left. The two outlines of the ring of the post-horn are far apart in this forgery, making the ring look too thick. The curved lines of shading in the thick part of the horn (there are only three of them) end below the beginning of the 8 of 81, leaving a blank space below the numerals. The I is like the genuine, except that the foot-stroke projects equally on both sides. The wide mouth of the post-horn shows four horizontal lines, then two horizontal lines of dots, then a single dot, then one curved line at the bottom. A bullet, fired from the mouthpiece, would probably strike where the ear joins the head. The left upper ray of the star, which is very sharp, points exactly to the tip of the right horn ; the right upper ray points above the tip of the left horn ; the lower rays both point halfway between the centre of the head and the places where the two horns, respectively, join the head. The hair is indicated by lines, converging towards the centre of the forehead. The right horn points almost to the beginning of the C, and the left horn to the right corner of the foot of the P. The ears are not triangular, and they point, respectively, to the space between PT and the space between CO. The bull has no sign of spectacles ; the nose is completely outlined only on the left side ; and there are three dots, in a vertical row, on the bridge of the nose. No other forgery possesses these three dots, which are very distinct.

Seventh Forgery.

(Four oblique lines in mouth of post-horn.)

This is decidedly poor. Lithographed, in a sort of sky-blue, on medium, blue wove paper. The stamps on the sheet are evidently more or less separated by lines, as my specimen shows two lines down the right side, a horizontal line part of the way along the top, and a horizontal line all along the bottom of the stamp. The H is a very easy test, as there is a cross-bar right along the bottom, which is continued to touch the wide mouth of the horn. Each O of the inscription is rather flat at the top, and oval at the bottom, both top and bottom being too

thick. The foot-stroke of the P projects equally, left and right. The left arm of the T hangs down *much* further than the right. The first C is an ordinary English C, but the second C has the head and tail alike. The foot of the K is firmly joined to that of the P, and the tail of the said K is equally thick all the way. In each N, the first limb has no foot-strokes at all. The last P has equal foot-strokes, left and right. There are four curved lines in the thick part of the horn, with a space between the first and second, amply wide enough to allow another line to drawn there. These lines are much too short, and even the longest of them ends some distance before the bottom of the 8, leaving a perfectly blank space in the horn, below 81. The foot-stroke to the I projects equally, right and left. The wide mouth of the horn shows four oblique lines of shading. The mouthpiece of the horn ends in a white ring, and a bullet, fired from it, would probably pass clear to the right of the bull's left ear. The top ray of the star points to the right side of the foot of the first limb of the K; the two lower rays point, respectively, half-way between the centre of the head, and the places where the horns join it. The hair is indicated by vertical lines, of graduated lengths. The right horn points nearly to the C; the left horn points to the space between PN. The left ear is much lower than the right; it is rounded, and points to the second C. The right horn points a little to the left of the first C. The bull has no spectacles; his eyes are rather of a Chinese shape; the nose is outlined on the left side only, and there is an oblique mark on the bridge coming from the inner corner of the left eye. The lower lip does not touch the ring of the post-horn except by a tiny blotch in the centre. The upper lip is long and Irish-looking.

Same Issue. 108 Paras, blue on rose.

This is another very scarce stamp, catalogued at £50, used.

Genuine.

(About eight horizontal rows of dots in mouth of post-horn.)

Hand-struck, as before, in pale blue, on very pale, transversely-laid rose paper. The inner foot-strokes of the H are shorter than the outer ones, and they do not touch each other. The foot-stroke to the P is so very long that it generally runs into the O before it. The head and tail of each C are formed alike. The first c is very square at the bottom. The tail of the K is curved as well as oblique; it gets very thin where it joins the oblique stroke, and it does not touch the following P. The foot-stroke of the said P is very short on the left side. There is a foot-stroke to the left side of the first limb of the N. The O in my specimen is broken at the bottom. The foot-stroke to the following P is long, and both sides of it are equal. Both limbs of the final N have head- and foot-strokes. The ring of the post-horn is blotched, to the right the bottom of the 8. It goes before on the right and behind on the left, like the other genuine stamps. The I has no foot-stroke to the left side; it has an extraordinarily long, oblique side-stroke, which thins down to a sharp point. The o slopes very slightly over to the left; the very top of it is flat, and the right shoulder is oblique, instead of rounded. The 8 is clumsy, and too thick in the middle; the top half is smaller than the bottom half. The open mouth of the horn is shaded with about eight horizontal rows of more or less square dots; I have counted twenty-seven dots, but there may be more. There are seven lines of shading in the thick part of the horn, near the bell or mouth. These lines, as in the other

genuine stamps, are continued (blotched together) into the lower part of the ring of the horn, so that there is no blank space in the ring, below the numerals. There seems to be one line of shading in the thin part of the horn, but this thin part is blotched into a mass of solid colour most of the way. It seems to point below the eye of the bull. The top ray of the star points to the middle of the K. The other top lateral rays point above the tips of the horns. The right horn (left side of stamp) points to the last O of HOPTO; the other points up midway between the letters PN. The right ear points up to the last O of HOPTO, and the left ear points between the letters NC. The hair is very much as in the other genuine stamps. Both sides of the nose are outlined, and both the outlines very nearly join the eyebrows, which are both tolerably distinct and sloping upwards. There is a mass of dark shading between the eyebrows. The lower lip is often so faint, that it might easily be overlooked altogether.

First Forgery.

(Seven horizontal rows of oblong dots in mouth of post-horn.)

Lithographed, in pale blue, on rose wove paper, of medium thickness, and rather rough. The two uprights of the H are not parallel, but converge slightly at the bottom; each of them has a fairly long foot-stroke on the right, and scarcely any on the left. The O is exceedingly flat at the top and bottom; much more so than the genuine. The P has no foot-stroke to the left, but an absurdly long one to the right. The last O is very flat at the top, but not at the bottom. Each C of CKPNCOFN is an ordinary, English C, with no knob to the tail, and rounded at the bottom. The head of the K touches the head of the P. The foot of the P is hidden by the postmark in my specimen, as is also the foot of the first N. The second P is like the P of HOPTO, with no foot-stroke to the left, and an absurdly long one to the right. The first limb of the final N has no foot-strokes. The ring of the post-horn appears to go behind the main tube both sides. Of the numerals in the ring, the 1 is acutely pointed at the top, instead of being quite flat, and it has no foot-strokes; the 0 is flat at the bottom, instead of rounded; and the blank spaces, inside the two halves of the 8, are almost circular, instead of being narrow ovals. The open mouth of the horn contains seven horizontal rows of mostly oblong dots (only two dots in the bottom row), about twenty-five in number. The thick part of the horn shows one line of shading, then a space, then (apparently) four lines, all blotched together. A bullet, fired from the mouthpiece of the post-horn, would about strike the middle of the left ear of the bull. The top ray of the star points slightly to the left of the left lower corner of the K. The bull's left ear is far above the level of the right ear, instead of being at the same height; it is also a good deal smaller than the right, and neither of them shows the triangular shape of the genuine. The hair between the horns is hidden by the postmark in my specimen, but there seems to be very little of it. The two outlines of the nose are strongly bowed outwards in the middle, instead of being nearly parallel. There seems to be nothing but a V-shaped mark between the eyebrows. There is a wide break in the circular outline of the stamp, above the letters CK.

Second Forgery.

(Nine horizontal lines in mouth of post-horn.)

Lithographed, in grey-black, on pale rose wove paper, much paler than that of the first forgery. The cross-bar at the top of the H is decidedly thicker in the middle than it is at the ends. The P has hardly any foot-stroke to the left, but an extremely long one to the right, which very

nearly joins the foot of the T. In the second word, each C is an ordinary, English one, with no knob to the tail. The oblique tail of the K is perfectly straight, and about the same width all the way. The P has no foot-stroke to the right, and merely a trace of one to the left. The left side of the ring of the post-horn narrows to a single line, where it joins the body of the horn. The 1 of 108 has a longer foot-stroke to the left, than to the right, and the side-stroke is very short; the top half of the 8 is very nearly as large as the bottom half, and the blank spaces, inside the numeral, are wider than the widest part of the space inside the o, instead of much narrower. The o is nicely shaped, better than the genuine. The open mouth of the post-horn contains nine horizontal lines (not dotted), and the lowest line is somewhat curved. I think there are four curved lines of shading in the thick part of the horn, but they are all blotched together, almost in a solid mass. The mouthpiece of the horn turns over to the left, at the very end, so that a bullet fired from it would probably hit the bull's mouth. The top ray of the star points between the letters CK. The acute tip of the left horn points to the left bottom corner of the N. The right ear is oval, and points to the bottom of the P of HOPTO; the left ear is curved, and points to the middle of the N. The two outlines of the nose are widely splayed out at the bottom. The hair is very like that of a real animal, but it is widest near the left horn, instead of in the centre. There are indications of two excessively faint, vertical lines between the eyebrows. The bull wears a cheerful grin, and his lower lip is very nearly as wide as the upper one, though it is very much narrower in the genuine.

Third Forgery.

(Six horizontal lines in mouth of post-horn.)

Hand-struck, or typographed, also lithographed (from a transfer?) in ultramarine-blue, on rose wove paper, pale to deep, and moderately stout. The lithographs are decidedly blotchy, but the typographs are nice and clear. The right limb of the H has no inner foot-stroke. The K and P of CKPNCOPN are firmly joined at the bottom, and the inner foot-strokes of the K generally touch each other. Its oblique tail is perfectly straight, and the same thickness for its whole length. The foot of the second P generally touches the O before it. The ring of the post-horn is not blotched, to the right of the bottom of the 8. The foot-strokes of the 1 are equal, right and left; its oblique stroke is not abnormally long, and the right side of the foot touches the O, in the lithographs. The top half of the 8 looks quite as large as the bottom half. The open mouth of the post-horn contains six horizontal lines. The thin part of the horn has no shading in it, in this forgery. There are four curved lines of shading (the lowest one *very* short) in the thick part of the horn, and the longest of them only reaches to below the middle of the o of 108, leaving the rest of the ring blank. The mouth-piece of the horn points upwards, towards the bull's left ear. The top ray of the star points to the space between CK. The right horn points to the space between the two words; the left horn to the space between the first PN. The ears are leaf-shaped; the right one points to the left bottom corner of the T, and the left one points to the centre of the second C. The hair is in four prominent locks, pointing vertically downwards. The nose is only completely outlined on the left side, and there are three curved, more or less horizontal lines, between the eyes. The lower lip is not very much narrower than the upper one.

Fourth Forgery.

(Five oblique lines in mouth of post-horn.)

This is very like the fourth forgery of the 81 paras, and probably by the same hand. Clearly lithographed, in a sort of sky-blue, on fairly stout, hard, *white* wove paper. The inner foot-strokes of the H are joined, so that there is a cross-bar at the bottom, as well as at the top. The foot-stroke to the P is short; it projects equally to right and left, and does not go near the O. Each C of CKPNCOPN is an ordinary English C, instead of having a tail just like the head. There is a cross-bar, right across the bottom of the K, which also joins the foot of the P. The oblique tail of the K is equally thick for its whole length. There is no sign of any foot-stroke to the right side of the P, and none at the bottom of the first limb of the N. The O is not broken at the bottom. The foot-stroke of the following P is short both sides. The first limb of the final N has no foot-stroke either side. The whole ring and thin end of the post-horn are quite free from any sign of blotch or shading. The 1 of 108 has an equal foot-stroke each side, and a very short serif; the o slopes slightly to the right, and is well-shaped, and not at all flat at the top; the 8 is nicely drawn, and slopes more to the right than the o does; its two halves are equal. The open mouth of the horn contains five clear and distinct, oblique lines, slanting down to the left. The thick part of the horn also contains five lines. They are scarcely at all blotched together, and the longest of them (two) stop short just below the beginning of the 1, so that the part of the ring below the numerals is quite blank. The thin part of the horn has no line of shading in it. A bullet fired from it would probably strike the second C of CKPNCOPN. The top ray of the star points to the left lower corner of the K, and the right upper ray points to the bottom of the P. The bull's left horn also points to the bottom of the said P. The ears are long and sharp, like willow-leaves; the right ear points between the PT of HOPTO, and the left ear points to the bottom of the second C of CKPNCOPN. The hair between the horns is formed by short, oblique lines, slanting down to the right, and there is a distinct gash at the top of the head, as though it had been cleft by an axe. The left eyebrow has been drawn too long, and projects slantingly on to the bridge of the nose. Just above this place, there is one short, almost crescent-shaped mark. I do not think this counterfeit is likely to deceive.

Fifth Forgery.

(Four blotchy, oblique lines in mouth of post-horn.)

Hand-struck, in pale sky-blue, on thick, hard, very slightly pinkish-white wove paper. The cross-bar at the top of the H is not equally thick all along, and the left foot has no inner foot-stroke. The P has a very short foot-stroke to the left, and a very long one to the right. The whole right side of the O is very badly shaped. In the second word, the tail of each c is *not* like the head, and neither of them is square at the bottom. There is a thick cross-bar along the bottom of the K, which joins the foot of the P. The said P, as in the last-described forgery, has no foot-stroke on its left side. There is a large break in the right bottom corner of the O. The foot-stroke of the second P is very short on the left side, and shorter still on the right. There is a foot-stroke on the left side only of each limb of the final N. The outer outline of the ring of the post-horn is thicker on the right side than elsewhere. The said ring seems to go in front on the left side as well as on the right. The 1 of 108 is quite flat at the top, and has a very faint and short serif. There is a flat or hollow place in the left top corner of the O, and it is decidedly taller than the 1 or the 8. The 8 is better shaped than the genuine, and its two halves

are about equal. The open mouth of the post-horn shows four blotchy, oblique lines, which slope down to the left, but are nearly horizontal. The lines in the thick part of the horn are uncountable, as they are broken in the middle, leaving a triangular patch of white in the centre of the widest part. (This should be an easy test.) The tube is blank below the numerals. The thin part of the tube has no line of shading in it, and it gets thinner, where it joins the ring. A bullet fired from it would pass well to the right of the bull's left ear. The top ray of the star points to the left bottom corner of the K, and the left upper ray points below the level of the tip of the bull's right horn. The right horn points to the right of the final O of HOPTO; the left horn is bent out a little, so that it almost points to the left bottom corner of the N. The right ear points directly to the P of HOPTO, and the left ear to the second C of CKPNCOPN. The hair is woolly, like that of a negro. On the bridge of the nose there are two faint, horizontal scratches, and an oblique line shows below them, coming from the inner corner of the left eye.

Sixth Forgery.

(Four oblique lines in mouth of post-horn.)

Typographed, in rather bright greenish-blue, on medium, fairly soft, pale rose wove paper. The foot-strokes to the M are joined, so that there is a cross-bar along the bottom, as well as along the top of the letter. The right limb is much splayed out at the top. The bottom of the first O is faulty in my specimen, as the thick sides stop short before reaching the bottom, leaving only a thin outline there. The right foot-stroke of the P is longer than the left, and the left arm of the T hangs down a good deal lower than the right. The last O is very badly shaped, especially in the right bottom corner. The tail of each C of CKPNCOPN is fairly like the head, but that of the first C is too small, and that of the second too long and sharp. The whole base of the K and the foot of the P are all joined together by a cross-bar. The O has a large break at the top. The ring of the post-horn has no shading below the numerals. The i of 108 has a large foot-stroke, which is rather longer on the left side; the o is not nicely shaped at the left lower corner, and is rounded at the top; there is a wide break at the top of the 8, and both halves of this numeral are about equal. The open mouth of the horn contains four distinct, oblique lines, sloping down to the left. There are three badly-drawn lines of shading, with indications of a fourth, in the thick part of the horn; the longest of these lines stops short below the beginning of the 1. There is no line of shading in the thin part of the tube, which gets thinner, where it joins the ring. A bullet fired from it would hit the centre of the bull's left ear. Four out of the five rays of the star are very blunt, and the top ray, which is the bluntest of all, points to the bottom left-hand corner of the K. The right horn points to the space between the two words, and the left points straight up to the centre of the first P of the second word. The right ear is cut off almost square, and is level with the space between OP; the left ear is sharper, and points to the second C of CKPNCOPN. On the bridge of the nose there is a slanting row of four dots (one of them above the inner corner of the left eye) with a single dot below, and an oblique line below the dot. The lower lip is on one side, as though the bull were chewing, and it breaks through the outer outline of the ring of the post-horn, and rests on the inner outline.

Seventh Forgery.

(Four very oblique lines in mouth of post-horn.)

This is the same as the seventh forgery of the 81 paras, with the necessary alteration in the numerals. Lithographed, in bright ultramarine-

blue, on very thick, hard, pinkish-buff *granité* paper. The little threads in the paper are scarlet. The long cross-bar at the *bottom* of the *M*, running into the wide mouth of the horn, will easily identify this counterfeit. As to the numerals in the ring; the 1 splays out at the bottom, into the (very short) foot-strokes; the serif is short, and not clear of the body; the 0 is not so tall as the 1, and is defective at the right top corner; the 1 and the 8 very nearly touch the outline of the ring above them. All the other tests are the same as in the seventh forgery of the 81 paras.

Eighth Forgery.

(Three oblique lines in mouth of post-horn.)

Lithographed, in pale blue, on medium, very pale lilac-rose wove paper. The lettering, in this counterfeit, is thin and tall. The cross-bar at the top of the *M* is broken, near the centre. The inner foot-strokes are faint, but they seem fully as long as the outer ones. The foot-strokes to the *P* are equal, right and left, and the left one does not go near the *O*. The left arm of the *T* does not hang down so perpendicularly as the right. The last *O* is absolutely flat at the top. In the second word, neither *C* has any knob to its tail, and the tail of the first *C* bends distinctly *inwards*. The *K* has absurdly long, but very faint head-strokes, and its sloping tail joins the *centre* of the thin, oblique stroke, and is of equal thickness all its length. The *P* does not seem to have any foot-stroke on the right side. The oblique stroke of each *N* does not go down to the bottom of the letter, but joins the left-hand limb some distance above the bottom. This and the English *C*'s ought to be easy tests. The *O*, like the second *O* of *HOPTO*, is absolutely flat at the top. The foot-stroke of the second *P* is longest on the left side, and there is no foot-stroke on the right side of the last limb of the final *N*. The ring of the post-horn is blank, below the numerals, and its outer outline is blotchy, on the right side. The numerals are fairly like the genuine, but the *o* is quite upright, and the 8 is very thin in the middle, both halves being about equal in size. There are three oblique lines in the wide mouth of the post-horn, sloping down to the left. The thick part of the horn shows six lines of shading; the place where the central line ought to be is a wide blank. The longest line stops before it reaches the foot of the 1, leaving, as I said before, the bottom of the ring blank. There is no line of shading up the thin tube of the horn, and the said tube gets thinner, where it joins the ring. A bullet fired from it would miss the bull altogether, and possibly graze the right lower corner of the final *N*. The top ray of the star points to the centre of the foot-stroke to the left of the *K*. Both the upper side-rays point below the level of the tips of the horn. The right horn is as sharp as a needle, and points exactly between the two words. The left horn is blunter, and points to the foot of the *P*. The hair is formed by short, oblique lines, sloping down to the right. There are three faint, vertical lines between the eyebrows. The nose is an unmistakable, flat-ended, pig's snout. The lower lip seems to be a projection from the ring, rather than as belonging to the bull.

Ninth Forgery.

(Dark blotch in mouth of post-horn.)

Coarsely and blotchily lithographed, in bright blue, on medium, almost white wove paper. The cross-bar at the top of the *M* is broken in the centre, and the foot-strokes join, making a cross-bar along the bottom. The left arm of the *T* just touches the *P*, and the said *P* has no foot-stroke to the right. The final *O* is thick at the top and thin at the bottom. I believe

the first C has no knob to its tail, but my specimen is postmarked just there. The second C *has* a knob to the tail, but it is smaller than that of the head. There is a cross-bar right along the bottom of the K, joining the foot of the P. The oblique stroke of the first N joins the first limb high up instead of at the bottom. The 1 of 108 has a wide, flat head; there is a rounded hollow below where the serif joins it, and the left foot-stroke touches the horn. The o leans to the right a little, and its right lower corner is very sloping. The 8 is far too large; its right top corner touches the ring, and the bottom of it goes considerably below the level of the other numerals. The open mouth of the post-horn shows a blotch and a dot. There have probably been four oblique lines originally, but three are blotched into one mass, and the fourth has been reduced to the said dot. The thick part of the horn shows the remains of four lines of shading, leaving a large, blank space. The broken, bottom end of *one* of the lines is continued into the ring below the numerals. The outline of the thin tube of the horn is irregular, almost wavy, and with no line up its centre. As far as I can see through the postmark, a bullet fired from it would almost graze the right lower corner of the final N. The top ray of the star points to the left of the centre of the K. The horns of the bull point, respectively, to the first C and P of CKPNCOPN. The left ear points to the second C of this word, and the right ear to the T of HOPTO. The postmark covers the details of the face.

POSTMARKS.

Genuine.—As before.

First Forgery.—^{ROMA}
5 DEC in blue.

Second Forgery.—Uncancelled.

Third Forgery.—Uncancelled.

Fourth Forgery.—A curved line, probably part of 1.

Fifth Forgery.—Uncancelled.

Sixth Forgery.—Uncancelled.

Seventh Forgery.—A pen-and-ink flourish.

Eight Forgery.—Uncancelled.

Ninth Forgery.—A small copy of 101.

BOGUS STAMP.

Type of the above issue. 120 Paras, gold on white.

There was, of course, no stamp ever issued of this value, or in this colour. It is lithographed, in gold, on thick, hard, yellowish-white wove paper. I first saw the stamp in 1891. As the value is bogus, there is no need for a detailed description. My specimen is not cancelled, and looks very new.

5 Paras, black.

(*Six horizontal rows of dots in mouth of post-horn.*)

Issue of 1858. Bluish wove paper.

Issue of 1859. White wove paper.

Genuine.

Hand-struck, in black, on very transparent, bluish, and on yellowish-white wove *pelure* paper, without any graining, backed with very crinkly,

yellow gum. In all my specimens, the head of the P of PORTO shows a gap at the top, and the foot-stroke is longer on the left side than on the right. The first O generally shows a similar gap at the top. The vertical limb of the R has no foot-stroke on the left side. The left arm of the T is not joined to the vertical stroke like the right arm is, but there is a slight gap. In the word GAZETEI, the tail of the G curls forward, so as very nearly to touch the left foot of the A. The right leg of the A has a long foot-stroke on the right side, going very near to the Z, but none on the left side. The head of the final I generally fails to print altogether. In the top inscription, the head, or "flag" of the 5 is *very* nearly as wide as the body of the letter; it has a somewhat inward-curving tail, ending in a good large ball, as in the illustration above. Usually there is no stop after the said 5, but I have a specimen with a small oblong stop, which may, however, be a broken portion of the foot-stroke of the H. The cross-bar of the H is absurdly long on the right side, extending almost to the top of the A. The foot-strokes of the A do not join to form a cross-bar at the base of the letter, but the outer foot-stroke of the right limb touches the foot-stroke of the P. The foot-stroke of the P extends to the right as far as half the width of the rounded head, and there is no stop after it. In the lower inscription, the 5 is very similar to the other, with its "flag" extending to the right as far as the width of the body. There is no sign of any stop after it. The cross-bar to the H is so very thin in the middle that it usually fails to print there, making the letter look like II. The foot-strokes to the feet do not touch each other. The final P has an extremely long foot-stroke on the right side, but a shorter one on the left. There is no stop after the letter. The bull's horns are lyre-shaped, not crescent-shaped; the right horn points obliquely to the centre of the 5, and the left horn points between the letters AP. The hair between the horns is formed by lines, radiating, star-like, from a blank centre. The bottom point of the six-rayed star between the horns is broken and open. On the bridge of the nose there are two nearly vertical lines, with a slanting line below them, then another vertical line below this, and sometimes a dot below this lowest vertical line. The mouth is nicely shaped, not at all like a pig's snout, and the lower lip does not touch the ring of the post-horn. The wide mouth of the post-horn contains six horizontal rows of dots, about twenty in all. The thick part of the horn contains three lines of shading; the central line is *very* thick, and runs, unbroken, right round the ring of the horn. There is a single line along the thin tube, which runs right up to the mouthpiece. A bullet fired from the said mouthpiece would pass through the centre of the bull's left ear. There is a large black patch or blotch, in the white background, each side of the bull's head, level with the cheeks. These blotches are evidently caused by the metal of the die, in the blank parts, not being scooped out enough, or being too full of ink. The tips of the ears are sharp, and they point upwards, respectively towards the centre of the last O of PORTO, and the curly foot of the G of GAZETEI.

First Forgery.

(Three oblique rows of dots in mouth of post-horn.)

Typographed, on thin, but not *pelure*, pale blue wove paper. There is no gap in any of the letters of PORTO; and the foot-stroke of the P is longest on the right side. The vertical limb of the R has a thick foot-stroke right and left. The left arm of the T is firmly joined to the body, and the whole letter seems to lean over slightly towards the R. The tail

of the G of GAZETEI is joined to the left foot of the A. The right foot has its foot-stroke projecting equally, right and left, and not going particularly near to the Z. The front of the head of the Z, which is a small triangle in the genuine, is very thick and heavy, with a blunt point. The right arm of the T hangs down *very* much lower than the left, instead of only slightly lower. The head of the I is more perfect than in the genuine, but the foot is broken off slantingly on the right side. If the said foot were perfect, the foot-stroke would actually touch the H of the lower HAP, which projects to the right much more than the genuine does. In the upper inscription, the 5 is very like the genuine, except that the neck is too long. There is no stop after the 5. In the lower inscription, the tail of the 5 is thick and clumsy; it extends too far to the left, so that if the neck were prolonged downwards, it would pass almost through the centre of the ball. In the genuine, the neck, if prolonged, would pass almost clear to the left of the ball. The cross-bar to the H is not thin in the middle. The bull's left horn points to the left lower corner of the upper P, and goes very much closer to it than the genuine. The postmark covers the hair between the horns; but, as far as I can make out, the lines of the hair are vertical, instead of radiating. The bottom ray of the star seems to be absent, or only a mere stump; but the postmark covers it. On the bridge of the nose, there are four vertical lines, with a wedge-shaped line below them. The wide mouth of the post-horn contains three oblique lines of more or less oblong dots. There are no blotches in the blank spaces, each side of the head. The ears point, respectively, between the TO of PORTO and the GA of GAZETEI.

Second Forgery.

(*Three nearly vertical rows of dots in mouth of post-horn.*)

Apparently lithographed, on yellowish-white wove *pelure* paper, un-gummed. In the word PORTO, there is a mark like a comma, joining the rounded part of the head of the P to the frame; the head is not broken at the top, and the right side of the foot-stroke is longer than the left. The first O is very badly shaped, but has no gap at the top. The vertical limb of the R has a foot-stroke both sides, and there is a dot or stop, level with the left side of the said foot-stroke. The final O is broken at the top. The top of the G of GAZETEI is perfectly square, and the lower half comes up higher than the level of the centre of the letter. The A leans towards the G instead of away from it, and the foot-stroke of its left leg is almost a semicircle, instead of being horizontal. There is a stop before the first E and a similar one before the T, but these may be only broken foot-strokes. The left arm of the said T hangs down lower than the right. The I is quite perfect, with thick strokes top and bottom. In the top inscription, the 5 is very like the genuine, except that the tail comes forward, instead of curling inwards, and if the neck were prolonged downwards, it would cut through the centre of the very small ball. There is a large, oval stop, which is much nearer to the H than to the 5. The head-stroke to the said H is short, both right and left, but does not go near the top of the A. The foot of the A does not touch the P. There is a large stop after this P. In the lower inscription, the 5 is rather square-shouldered, and there is a large stop after it. The A leans very much away from the H, and the final P has its rounded head joining the vertical stroke far below the centre. There is a large stop after this word. The bull's horns are crescent-shaped, and point, respectively, to the left lower corner of the H, and the centre of the A. This, of course, is a very easy test, and is common to all the forgeries but two. The hair between the horns is formed by semicircular lines,

yellow gum. In all my specimens, the head of the P of PORTO shows a gap at the top, and the foot-stroke is longer on the left side than on the right. The first O generally shows a similar gap at the top. The vertical limb of the R has no foot-stroke on the left side. The left arm of the T is not joined to the vertical stroke like the right arm is, but there is a slight gap. In the word GAZETEI, the tail of the G curls forward, so as very nearly to touch the left foot of the A. The right leg of the A has a long foot-stroke on the right side, going very near to the Z, but none on the left side. The head of the final I generally fails to print altogether. In the top inscription, the head, or "flag" of the 5 is *very* nearly as wide as the body of the letter; it has a somewhat inward-curving tail, ending in a good large ball, as in the illustration above. Usually there is no stop after the said 5, but I have a specimen with a small oblong stop, which may, however, be a broken portion of the foot-stroke of the H. The cross-bar of the H is absurdly long on the right side, extending almost to the top of the A. The foot-strokes of the A do not join to form a cross-bar at the base of the letter, but the outer foot-stroke of the right limb touches the foot-stroke of the P. The foot-stroke of the P extends to the right as far as half the width of the rounded head, and there is no stop after it. In the lower inscription, the 5 is very similar to the other, with its "flag" extending to the right as far as the width of the body. There is no sign of any stop after it. The cross-bar to the H is so very thin in the middle that it usually fails to print there, making the letter look like II. The foot-strokes to the feet do not touch each other. The final P has an extremely long foot-stroke on the right side, but a shorter one on the left. There is no stop after the letter. The bull's horns are lyre-shaped, not crescent-shaped; the right horn points obliquely to the centre of the 5, and the left horn points between the letters AP. The hair between the horns is formed by lines, radiating, star-like, from a blank centre. The bottom point of the six-rayed star between the horns is broken and open. On the bridge of the nose there are two nearly vertical lines, with a slanting line below them, then another vertical line below this, and sometimes a dot below this lowest vertical line. The mouth is nicely shaped, not at all like a pig's snout, and the lower lip does not touch the ring of the post-horn. The wide mouth of the post-horn contains six horizontal rows of dots, about twenty in all. The thick part of the horn contains three lines of shading; the central line is *very* thick, and runs, unbroken, right round the ring of the horn. There is a single line along the thin tube, which runs right up to the mouthpiece. A bullet fired from the said mouthpiece would pass through the centre of the bull's left ear. There is a large black patch or blotch, in the white background, each side of the bull's head, level with the cheeks. These blotches are evidently caused by the metal of the die, in the blank parts, not being scooped out enough, or being too full of ink. The tips of the ears are sharp, and they point upwards, respectively towards the centre of the last O of PORTO, and the curly foot of the G of GAZETEI.

First Forgery.

(Three oblique rows of dots in mouth of post-horn.)

Typographed, on thin, but not *pelure*, pale blue wove paper. There is no gap in any of the letters of PORTO; and the foot-stroke of the P is longest on the right side. The vertical limb of the R has a thick foot-stroke right and left. The left arm of the T is firmly joined to the body, and the whole letter seems to lean over slightly towards the R. The tail

of the G of GAZETEI is joined to the left foot of the A. The right foot has its foot-stroke projecting equally, right and left, and not going particularly near to the Z. The front of the head of the Z, which is a small triangle in the genuine, is very thick and heavy, with a blunt point. The right arm of the T hangs down *very* much lower than the left, instead of only slightly lower. The head of the I is more perfect than in the genuine, but the foot is broken off slantingly on the right side. If the said foot were perfect, the foot-stroke would actually touch the H of the lower MAP, which projects to the right much more than the genuine does. In the upper inscription, the 5 is very like the genuine, except that the neck is too long. There is no stop after the 5. In the lower inscription, the tail of the 5 is thick and clumsy; it extends too far to the left, so that if the neck were prolonged downwards, it would pass almost through the centre of the ball. In the genuine, the neck, if prolonged, would pass almost clear to the left of the ball. The cross-bar to the H is not thin in the middle. The bull's left horn points to the left lower corner of the upper P, and goes very much closer to it than the genuine. The postmark covers the hair between the horns; but, as far as I can make out, the lines of the hair are vertical, instead of radiating. The bottom ray of the star seems to be absent, or only a mere stump; but the postmark covers it. On the bridge of the nose, there are four vertical lines, with a wedge-shaped line below them. The wide mouth of the post-horn contains three oblique lines of more or less oblong dots. There are no blotches in the blank spaces, each side of the head. The ears point, respectively, between the TO of PORTO and the GA of GAZETEI.

Second Forgery.

(Three nearly vertical rows of dots in mouth of post-horn.)

Apparently lithographed, on yellowish-white wove *pelure* paper, un-gummed. In the word PORTO, there is a mark like a comma, joining the rounded part of the head of the P to the frame; the head is not broken at the top, and the right side of the foot-stroke is longer than the left. The first O is very badly shaped, but has no gap at the top. The vertical limb of the R has a foot-stroke both sides, and there is a dot or stop, level with the left side of the said foot-stroke. The final O is broken at the top. The top of the G of GAZETEI is perfectly square, and the lower half comes up higher than the level of the centre of the letter. The A leans towards the G instead of away from it, and the foot-stroke of its left leg is almost a semicircle, instead of being horizontal. There is a stop before the first E and a similar one before the T, but these may be only broken foot-strokes. The left arm of the said T hangs down lower than the right. The I is quite perfect, with thick strokes top and bottom. In the top inscription, the 5 is very like the genuine, except that the tail comes forward, instead of curling inwards, and if the neck were prolonged downwards, it would cut through the centre of the very small ball. There is a large, oval stop, which is much nearer to the H than to the 5. The head-stroke to the said H is short, both right and left, but does not go near the top of the A. The foot of the A does not touch the P. There is a large stop after this P. In the lower inscription, the 5 is rather square-shouldered, and there is a large stop after it. The A leans very much away from the H, and the final P has its rounded head joining the vertical stroke far below the centre. There is a large stop after this word. The bull's horns are crescent-shaped, and point, respectively, to the left lower corner of the H, and the centre of the A. This, of course, is a very easy test, and is common to all the forgeries but two. The hair between the horns is formed by semicircular lines,

half of them facing to right, and the other half to left. The bottom ray of the star is not broken, and it does not join the left lower ray. On the bridge of the nose there are two small vertical lines. The mouth is like a pig's snout. The wide mouth of the post-horn contains three nearly vertical lines of dots, twelve in all. The thick part of the horn shows three rather thin lines, and a blotch above them. The upper line is broken, and the middle line does not go completely round the ring of the horn, as there is a wide break on the right side. The line along the centre of the thin tube does not reach the mouthpiece, which has a concave outline, instead of being rounded. A bullet fired from the said mouthpiece would pass quite to the right of the bull's ear. There are no blotches in the background, either side of the bull's head. The right ear points between the letters TO, and the left ear, which is blunter than the other, points about to the centre of the A.

Third Forgery.

I think this is merely a later state of the stone of the second forgery. Lithographed, paper as before. All the details are the same as in the second forgery, except for the following tests. There is a long line, drawn obliquely through the P of PORTO, and joining the following O; and there is another oblique line, coming from the head of the T, and cutting obliquely through the final O. There is a large dot above the space between the EI of GAZETEI, and the top of the I is bent over to the right. There is an oblique line drawn through the body of the lower 5, reaching to beyond the stop after that numeral. The lower outline of the bull's left ear is broken at the bend.

Fourth Forgery.

This is still another state of the stone of the second forgery. Paper and printing as before. There is an oblique line cutting through the first O of PORTO, and there is a dot under the first limb of the upper H.

Fifth Forgery.

(Mouth of post-horn nearly blank.)

Lithographed, on white wove, *pelure* paper, no gum. There is no gap in the top of the P or either O of PORTO. The foot-stroke of the P is longer and thinner on the right than on the left. The vertical stroke of the R has a very long foot-stroke on the left, and none on the right. Both arms of the T are joined to the body. The left lower corner of the final O is cut off slopingly. In the word GAZETEI, there is a wedge-shaped, horizontal mark above the G, and a dot in the centre of the letter, while the tail joins the A. The right limb of the A has hardly any sign of a foot-stroke. There is a triangular dot between the head of the Z and that of the following E, which very nearly joins the two letters together. The left arm of the T hangs down lower than the right, and the right arm does not join the body of the letter. The I is wedge-shaped at the top. The upper 5 has hardly any trace of a ball to its tail, and the flag is much too long, extending to the right, well beyond the width of the letter. There is a stop close to the H, which letter has no foot-stroke that side, and its cross-bar extends equally, right and left, not going near the A. The foot-strokes of the A are joined, so as to form a cross-bar to the base of it. The cross-bar does not touch the P, which has no foot-strokes. There is a break at the top of the head of the P, and a dot to the left of the top of the head. There is a stop after this letter. In the lower inscription, the tail of the 5 comes forward

to the left, so that, if the neck were prolonged downwards, it would cut through the ball. There is a cross-bar right across the foot of the H, and joining the A. The cross-bar in the centre of the A slopes down to the left, instead of being horizontal, and the head of this letter is absurdly square. The lower end of the rounded part of the P joins the upright slopingly, instead of horizontally. The foot-strokes to this letter are equal, right and left, both being short; and there is a stop after it. The bull's horns are crescent-shaped, and point, respectively, to the left lower corner of the H, and the centre of the A. The hair between the horns does not radiate from the centre, but is formed by curved lines. The star is very badly shaped; the side-rays are rather squeezed together, and the bottom ray touches the bull's hair. There are two very short vertical lines on the bridge of the nose. The wide mouth of the post-horn is almost entirely blank; there are just the beginnings of four lines at the top edge. The thick part of the horn shows a large, triangular blotch, which gradually narrows into one line of shading. This line goes round the ring, but is broken near the top. The upper outline of the ring itself is broken, most of the way along the top. The line in the centre of the thin part of the tube bends to the left, near the mouth-piece. The said mouthpiece only reaches as high as the centre of the space between the letters TE; in the genuine, it reaches up as high as the level of the centre of the T. A bullet, fired from the said mouth-piece, would just hit the tip of the ear. There is no blotch either side of the bull's head, in the background. The tip of the right ear is sharp, and points to the centre of the O, and the other ear is blunt, and points to the space between AZ.

Sixth Forgery.

(Irregularly scattered dots in mouth of post-horn.)

Apparently typographed, on greyish-white, wove *pelure* paper, ungummed. This forgery has a much better appearance than the genuine, and I call it decidedly deceptive. There is no gap in the head of the P of PORTO, and the foot-stroke is longer on the right side than on the left. There is no gap in the head of either O. The vertical limb of the R has a distinct foot-stroke, right and left. The left arm of the T is joined to the body, but not the right arm. In the word GAZETEL, the G has a thick, inward-pointing cross-bar along the top of the tail, which does not exist in the genuine; and the tail itself points straight downwards, instead of curling forwards, towards the A. The right leg of the A has a short, equal foot-stroke, right and left. The head of the Z hangs down too far, and is too blunt. The left arm of the T slopes towards the E, instead of hanging straight down; it is longer than the other arm. The I is perfect, but the head-stroke is longer on the left side than on the right. In the top inscription, the ball of the 5 projects too far to the left, so that, if the neck were prolonged downwards, it would cut through the centre of the ball. There is no stop anywhere in the design. The cross-bar to the H is no longer on the right than on the left. Each leg of the A shows a small foot-stroke on the right side only, and that of the right leg does not touch the P, which has no foot-stroke that side. In the lower inscription the tail of the 5 projects too far, like that of the upper 5; but the ball is almost pear-shaped, instead of circular, and it is broken away from the tail. The bull's horns are lyre-shaped, but they are wider than the genuine. They point, respectively, to the 5 and to the left lower corner of the P. The hair between the horns is formed by oblique lines which, if prolonged, would converge to a point, to the left of the centre of the forehead. The top ray of the star is broken and imperfect; the bottom ray is short, and comes to a very sharp point.

On the front of the nose there are five dots; one slanting down to the left, on the bridge of the nose, another, immediately below it, slanting the same way, and then a group of three shorter lines, in an oblique row, lower down. The wide mouth of the post-horn contains a blotch on the side nearest to the O, and some scattered, oblong dots, irregularly placed. The thick line, running round the ring of the post-horn, is broken at the top. There is no blotch either side of the bull's head.

Seventh Forgery.

(Seven oblique lines in mouth of post-horn.)

Lithographed, in deep black, on greyish-white wove, *pelure* paper, un-gummed. There is no gap in any of the letters. The foot-strokes of the P of PORTO are about equal; the O is quite flat at the top; there is very little separation between the head and tail of the R, and the foot-strokes are equal; the left arm of the T hangs down lower than the right, and it joins the vertical limb. In the word GAZETEI, the knob at the head of the G is much clumsier and heavier than in the genuine; the foot-stroke of the left leg of the A turns up where it joins the tail of the G, and it is very faint there; the bottom of the Z very nearly touches the bottom of the A, although the said A has no foot-stroke that side; and the final I is perfect. In the top inscription, the ball of the 5 is much too large, and practically fills up the hollow of the figure. There is a large stop after it. The cross-bar of the H is thick, and hardly extends at all, on the right side. There is no foot-stroke to the right bottom corner of the A, and the left bottom corner of the P has no foot-stroke, so that the letters do not touch. The bull's horns are crescent-shaped, and they seem to spring from *below* the level of the hair, instead of out of it: they point, respectively, to the left lower corner of the H, and to the middle of the A. The hair is simply a white mass, with a jagged outline on the forehead. The star is oblong, rather than circular; the points are all perfect. There is one very tiny dot on the bridge of the nose, and the mouth is a regular pig's snout. The wide mouth of the post-horn is shaded by seven oblique lines (not dotted), which slope down to the left. The thick part of the horn is solid black, except for one white line. The line round the centre of the ring in dotted, and nearly all the thin tube is solid black. The said tube is much thinner than the genuine, and a bullet fired from it would graze the tip of the ear. There is no blotch, either side of the bull's head, in the background. The left ear points to the centre of the A of GAZETEI.

POSTMARKS.

Genuine.—As in the first issue.

Forged.—All the forgeries are uncanceled, except the first, which bears a transverse, double oval, something like 26, but much smaller, and with pointed ends, inscribed FRANCO JASSY, struck in blue.

40 Paras, blue.

Issue of 1858. Bluish wove *pelure* paper.

Issue of 1859. White wove *pelure* paper.

Genuine.

(Four vertical rows of dots in post-horn. Star with six rays.)

Hand-struck, as before, paper as above, with the same crinkly gum as the 5 paras. There is a gap at the top of the P and of each O of PORTO,

and the two arms of the T do not join the body, the right arm hanging down lower than the left. In the word SCRISOREI, there is usually a gap at the top of each S and the C, so that the heads of these letters do not join the bodies. The final I leans over very distinctly, away from the E; this is easily seen, and is a good test. The said I has no foot-stroke on the right side, and hardly any trace of head-strokes. In the top inscription, the head of the 4 is open, and the top of the O shows a small gap. The cross-bar at the top of the H is usually entirely absent, so that it looks like the letters II, placed near to one another. The upper half of the thin stroke of the A almost always fails to print; and the cross-bar is barely visible. None of the letters of this or any of the other inscriptions touch each other anywhere. In the lower inscription, the top of the 4 is even more widely open than the other. The cross-bar of the H is usually absent, but I have one specimen in which it shows pretty distinctly. The cross-bar of the A is exceedingly faint, and the P shows hardly any sign of foot-strokes. The star has six rays, and the top ray has its point broken off, so that it is open. The bull's horns have not the nice, lyre-shaped curve of the 5 paras; they point, respectively, between the numerals 40, and between the letters AP. The hair covers pretty well the whole of the forehead; it gives one the idea of being short and bristly, and is formed by a number of dots. One dot can usually be seen in the very centre of it, with a white space all round the dot. The inner corner of the left eyebrow ends with a large dot. The nose is only outlined on the right side of the face, and there is a vertical line about the centre of it, near to the outline, and two short, horizontal lines further down, near to the right nostril. The mouth is nicely shaped, and not at all like a pig's snout. The outline of the lower lip is broken in the middle, and it does not touch the ring of the post-horn. The wide mouth of the post-horn shows portions of about four vertical rows of dots, but they are very faint. The thick part of the horn contains three curved lines of shading; the central line runs round the middle of the ring. The thin tube of the horn has a line of shading, which runs right up to the mouthpiece, but the lower end stops short to the right of the A of HAP, instead of joining the ring. A bullet fired from it might just graze the tip of the bull's left ear.

First Forgery.

(Six vertical rows of dots in mouth of post-horn. Six-rayed star.)

Lithographed, on very yellowish-white wove paper, ungummed. There is a slight gap at the top of the P of PORTO, but each O has a closed top, and the top of the final O is perfectly square. There are no gaps in any of the letters of the word SCRISOREI, and the foot of the first R touches the foot of the I. The last I has a well-defined head-stroke, and the foot-stroke on the right side is very thick, and curves or slopes down to the right. In the upper inscription, the H has a well defined cross-bar at the top, which extends further on the right side than on the left. The thin stroke of the A is not broken, and the cross-bar is distinct. In the lower inscription, the O has no gap either top or bottom, and it looks decidedly taller than the 4. In the genuine, the O is broken at the top and usually at the bottom as well. The H is covered by the postmark, but I fancy the centre of the cross-bar is absent. The cross-bar of the A looks like a dot, placed very low down, and both the H and A are blotched into the outline below them. The P has a well-defined foot-stroke each side. The star, in this forgery, is just like the genuine, the bull's horns ditto. The

hair is also very like the genuine, only it is mostly formed by lines instead of dots. The dot in the centre of the hair, with the white space round it, is like the genuine. The nose is outlined on both sides; the line about the centre of it is very much longer than the genuine; it is curved, and reaches from the level of the eyebrow, quite to the centre of the nose. There is one dot below this line, close to the horizontal end of the nose. The outline of the lower lip is not broken. The wide mouth of the post-horn contains six vertical rows of dots; they are much more prominent than in the genuine. The thick part of the horn shows five curved lines of shading; the lowest line is very short, and close to the outline; the next line above this is very thin. The central line is continued right round the centre of the ring, till it joins the outline of the horn again. There seem to be two lines of shading in the thin tube of the horn; but I am not quite sure of this, on account of the postmark. There is a blotch in the blank space, each side of the bull's head, as in the genuine 5 paras. The genuine 40 paras does not show any blotches. I think this is the most deceptive of the forgeries.

Second Forgery.

(Six oblique rows of dots in mouth of post-horn. Six-rayed star.)

Lithographed, in very pale blue, on white wove, *pelure* paper. There is no gap in any of the letters. Both arms of the T of PORTO join the body. In the word SCRISOREI, the final I does not lean away from the E. The letters of this word are all too large, and if a straight-edge were placed along the bottom of the upper inscription, 40 HAP, it would cut almost centrally through the S; and if a straight-edge were placed along the top of the lower 40 HAP, it would cut centrally through the final I. In the genuine, the straight-edge, similarly used, would pass clear of these letters. The head and foot-strokes of the final I are large and distinct, and the foot-stroke very nearly touches the P of the bottom inscription. In the top inscription, the H has a strong cross-bar. The A is perfect, and its foot touches the foot of the P. In the lower inscription, the top of the 4 is *very* nearly closed. The cross-bar of the H is distinct. The A is very widely splayed out, with a strong cross-bar, and the P has a foot-stroke on the right side. The star has six rays, but it is of a different shape from the genuine, being like the broad-pointed star of the South Australian watermark, whereas the genuine is more like the small star watermark of some of our colonies. The top ray is perfect. The bull's horns are much more lyre-shaped than the genuine; they point, respectively, to the left of the 4, and to the centre of the first S of SCRISOREI. The hair is formed by vertical lines, without any dot or white space in the centre. The nose is outlined both sides, and there is a row of three vertical lines, just on the bridge. The nose has a very strong, horizontal upper outline, making it look rather like a pig's snout. The lower lip rests on the ring of the post-horn. The wide mouth of the post-horn contains six oblique rows of oblong dots, slanting down to the right. The thick part of the horn seems to contain three curved lines of shading, but they are blotched. The upper line is thin and runs along the centre of the bottom of the ring, and about to the middle of the right-hand bend, but no further, leaving the rest blank. The line up the thin part of the tube is blotched into the bottom outline, instead of being central; its lowest end can be traced to the bottom of the horn. The mouthpiece is enlarged, and looks like a button mushroom, instead of being the same thickness as the rest of the tube. A bullet fired from it would pass to the right of the bull's ear.

Third Forgery.

(Seven slightly oblique lines in mouth of post-horn. Six-rayed star.)

This is a very blotchy affair. Hand-struck, or typographed, in a sort of milky sky-blue, on yellowish-white wove, *pelure* paper. There is a gap or break in the top of the second o of PORTO, in the top of the c of SCRISOREI, and in the top of the o of the lower 40. There is a hyphen between the letters RT of PORTO, and the right arm of the T is defective. A number of dots can be seen, above and below some of the letters of SCRISOREI in my specimen, but these may have been caused by the movement of the die in printing. The final I is very nearly upright, and its head-stroke is very thick. In the upper inscription, the top of the 4 is nearly closed, and the o has a perfectly flat top. The cross-bar to the H is extremely thick and heavy, and it just touches the head of the A. The left foot of the said A, which is oblique, instead of horizontal, touches the foot of the H. In the lower inscription, the 4 seems to be widely open, but is much blotched, and the top of the o is also widely open. The H is a distinct N, and there is a stop between the A and the P. The star is six-rayed; the left upper ray has a broken, open point. The bull's hair is very blotchy, and looks like the wool of a negro. The face, as far as I can see through the postmark, is covered with an eruption of spots and blotches. Between the lower lip and the top of the ring of the post-horn, there is a thing like a flattened ball, which joins the lip and the ring together. The wide mouth of the horn contains seven nearly horizontal lines, which slope slightly down to the right. The thin tube of the horn is solid, and much blotched. I do not think this counterfeit is likely to deceive.

Fourth Forgery.

(Five horizontal lines in mouth of horn. Six-rayed star.)

Typographed, or hand-struck, in pale, greenish-blue, sky-blue, and almost Prussian blue, on white wove, *pelure* paper. There is no break in any of the letters. Both arms of the T of PORTO join the body, and the left arm is a trifle lower than the right. In the word SCRISOREI, the tail of the c has a knob like the head, but in the genuine, the tail is like that of an ordinary, English c. The final I is absolutely parallel with the E, and has very distinct head- and foot-strokes. In the top inscription, the cross-bar of the H is distinct, and the A is perfect. In the lower inscription, the top of the 4 is nearly closed; the H has a long and strong cross-bar, and its foot touches the foot of the A, while the P has a very long foot-stroke on the right side. The star is six-rayed, like the genuine. The bull's horns are lyre-shaped; but they point the same way as the genuine. The hair shows a parting in the centre, and it does not come down so low as the genuine. There is no dot in the centre of it. The nose is outlined on both sides, and there is a row of three vertical lines on the bridge of it. The mouth is lop-sided, and rather like a pig's snout. The outline of the lower lip is not broken, and it rests on the ring of the post-horn. The wide mouth of the horn contains five horizontal lines. There are three lines in the thick part of the horn, but the longest of these only extends to above the first stroke of the H. There are portions of a line in the ring, but only at the bends. The line up the thin tube does not go as far as the mouthpiece, and the end of the said mouthpiece is a sort of ball. A bullet, fired from it, would hit the bull's ear near the centre.

Fifth Forgery.

(Four oblique rows of dots in mouth of horn. Five-rayed star.)

Typographed, or hand-struck, in very pale blue, on white wove, *pelure* paper, un gummed. The head and tail of the c of SCRISOREI are not

joined to the body ; otherwise there are no gaps in any of the letters. There is a cross-stroke along the bottom of the R of PORTO, and the left arm of the T hangs down far lower than the right. The top of the first R of SCRISOREI touches the C, and its tail touches the I. The final I is quite upright, and it has a thick foot-stroke right and left. In the upper inscription, the projecting cross-bar of the 4 looks like a dot instead of a stroke, and it *very* nearly touches the o. The right foot of the H touches the A, and the cross-bar of the said A is oblique, and slants down to the right. The bottoms of the letters are level with the centre of the first S of SCRISOREI, instead of being above the level of the s altogether. In the lower inscription, there is a long cross-stroke, joining both feet of the H, and touching the left foot of the A. The P touches the foot of the last I of SCRISOREI, though they are very far apart in the genuine. The star has only five rays, and this, of course, is a very easy test. Its upper ray is very blunt. The bull's right horn points to the 4, and the left horn to the right foot of the A. The hair is only a small central fringe, not touching the horns ; it is composed of six irregular lines ; there is no dot in the centre of it. There are three small, blotched dots on the bridge of the nose, and a faint, short, vertical line and a dot below them. The whole head leans over slightly to the left, instead of being upright. The lower lip rests on the ring of the post-horn. The wide mouth of the horn contains four oblique rows of dots, eight in all. The thick part of the horn shows two lines of shading and a blotch. The line which ought to run round the upper part of the ring seems to be blotched into the upper outline of the ring. The line running up the centre of the thin tube stops short, long before it reaches the mouthpiece, which points outwards, so that a bullet fired from it would about hit the first R of SCRISOREI. The C of this word has a knob to the tail as well as to the head.

Sixth Forgery.

(Six short, oblique lines in mouth of post-horn. Five-rayed star.)

This is the counterfeit usually seen in youthful collections. Lithographed, in fairly dark blue, on white wove, *pelure* paper, and also on somewhat stouter, yellowish-white paper, ungummed. I think the following tests will be quite sufficient for this forgery. The star has only five rays instead of six. The bull has apparently a man's nose, with two slanting lines coming from it, and a long, Irish upper lip. The mouth of the post-horn shows six short, oblique lines slanting down to the right ; the ring of the horn has no line at all along it, and the mouthpiece is a white ball. The 4 of each 40 is a closed figure, each H has a strong cross-bar, and the feet of the lower MAP are all joined together. The bull's mouth rests on the ring of the horn, and his right eye appears to be closed.

POSTMARKS.

Genuine.—As before.

First Forgery.—29, with JASSY, in blue.

Second Forgery.—Uncancelled.

Third Forgery.—A peculiarly-shaped frame, something like a scroll, containing, in two lines, FRANCO.
GALATZ.

Fourth Forgery.—Uncancelled, or 29.

Fifth Forgery.—Uncancelled.

Sixth Forgery.—Three or four very thin parallel bars.

80 Paras, red.**Issue of 1858. Bluish wove, pelure paper.****Issue of 1859. White wove, pelure paper.****Genuine.***(Mouth of horn nearly blank. Six-rayed star.)*

Hand-struck as before, paper as above; crinkly gum. The last O of PORTO leans over, slightly, away from the T, and the right arm of the T hangs down a little lower than the left. The C of SCRISOREI is an English C, but the tail is very short. The tail of the first R is joined to the foot of the following I, and the last I leans away from the E. In the upper inscription, a line drawn along the feet of the letters would pass clear above the S of SCRISOREI. The H of the lower MAP is open at the top, and it leans over to the right. The star is six-rayed, and the top ray, and the left upper ray, are generally open at the points. The bull's horns point, respectively, between the numerals 80, and to the left lower corner of the P. The hair between the horns is like that of the genuine 40 paras, except that the central dot is more blotchy. The nose is partly outlined both sides, and there is a broken, oblique line running from the bridge, almost to the nostril. The lower lip is a long way above the ring of the post-horn. The wide mouth of the horn is blank, except for one or two indistinct blotches, and the thick part of the tube shows four very distinct lines of shading, one of which runs into the ring, but only as far as the right-hand bend, the rest of the ring being white, with one or two faint, scattered dots. The thin tube has no line of shading in it, and it turns inwards, so that a bullet fired from it would hit the bull's eye. In all my specimens, there is a tiny dot before the foot of the P of PORTO, but I do not know whether this is always visible. The colour of the stamp is a sort of pale carmine-vermilion.

First Forgery.*(Six horizontal rows of dots in mouth of post-horn. Six-rayed star.)*

Hand-struck, in rather deep carmine, on bluish wove, pelure paper, crinkly gum. I cannot give many details, as the impression, in my single specimen, is deeply sunk in the paper, a good deal blotched, and heavily postmarked. The last O of PORTO is perfectly upright, and it is broken at the top. I think the arms of the T are level. The last I of SCRISOREI does not lean away from the E. A line drawn along the feet of the letters of the upper inscription would graze the side of the S. The H of the lower inscription is upright. The star is six-rayed, and all the rays are extremely blunt. The hair between the horns is hidden by the postmark in my specimen. The right side of the nose (left side of the stamp) is strongly outlined, all the way, and I think the left side is also completely outlined by a thinner line. On the bridge of the nose, there is a long, thick, vertical line, with a dot below it, and I think there are some small dots to the right of the said vertical line. The lower lip of the bull is broken near the centre. The wide mouth of the post-horn contains about six horizontal rows or parts of rows of dots. The thick part of the tube is filled with solid colour in my specimen, and there is a line all round the centre of the ring. A bullet fired from the mouthpiece would hit the cheek, below the eye. There is a large rectangular blotch before the foot of the P of PORTO, and a large stop after this word, level with the centre of the O. There are also a number of scattered blotches after the final I of SCRISOREI.

Second Forgery.*(Mouth of horn nearly blank. Six-rayed star.)*

I consider this a very dangerous forgery, though my single specimen has slightly moved in the stamping, which has made some of the lettering print double. Hand-struck, in a dull scarlet, on white wove, *pelure* paper, ungummed. The foot-stroke of the T of PORTO extends to the right, quite as far as the width of the head, and the last O is quite upright. The last I of SCRISOREI does not lean away from the E. A line drawn along the feet of the letters of the upper inscription would graze the side of the S. The cross-bar of the H of the lower inscription can be traced all across the letter, and the said letter does not lean over to the right. The star is six-rayed; all the points are blunt, and the left upper ray is rather crooked. The lower lip of the bull is broken, near the centre. The wide mouth of the horn is nearly a blank, like the genuine. There seems to be a line of shading in the thin tube, but it is so blotched, that I cannot be certain. There is a short hyphen between the R and T of PORTO, level with the feet of the letters, and a longer and more distinct hyphen between the T and the O, at the same level as the other. All the other tests are the same as the genuine.

Third Forgery.*(Mouth of horn blank. Six-rayed star.)*

Hand-struck, in vermilion, on azure, *pelure* wove paper. The P of PORTO is widely broken at the top; the rest of this word is quite hidden by the postmark. The top of the C of SCRISOREI appears to be an oval ball, and it is taller than the other letters. The last I of this word does not lean away from the E. A line drawn along the feet of the letters of the upper inscription would cut well into the S, while the feet of the H and A are firmly joined together. The H of the lower inscription is upright; it has a closed top, and the left limb is thinner than the right. My specimen shows a dot, joining the right limb to the frame below it. The star is six-rayed; its shape reminds one of the truncated star watermark of Queensland, but it is too much blotched for any details to be made out. The hair is a large, indistinct blotch; the nose is strongly outlined both sides, with one small, dim blotch on the bridge. There is no under-lip. The mouth of the post-horn appears to be entirely blank; the thick tube is hidden by the postmark; the mouthpiece points directly upwards, so that a bullet fired from it would pass through the centre of the bull's ear. I am sorry the postmark prevents my giving further details, but I hope that the above will be sufficient.

Fourth Forgery.*(Six horizontal lines in mouth of horn. Six-rayed star.)*

Hand-struck, or typographed, in vermilion-red, on thick, very yellowish wove paper. The first O of PORTO leans slightly over towards the P, and the second O is upright. The first S of SCRISOREI leans away from the C; the first R is not joined to the I; and the last I leans away *very* slightly from the E, but not so much as the genuine. The whole word is not parallel with the side-frame, but each letter, from the first S to the final I, gets gradually nearer to the frame. A line drawn along the feet of the letters of the upper inscription would graze the side of the S. The cross-bar of the lower H is perfect, and the letter is upright. The star is six-rayed; the left upper ray is longer than the rest, and the left lower ray is much shorter. The points are all perfect. The bull's left horn is much thinner and straighter than the right one. The hair is

formed by an irregular, outlined ring, and there is a horizontal line, right across the centre of it, nearly joining the two horns together. The nose is only outlined on the right side of the face, and there is a long, vertical line, parallel with the outline, extending from the corner of the eye, to the centre of the nose. There are no dots for nostrils, and the left side of the upper lip has a swelling on it. The lower lip is rather close to the ring of the post-horn. The wide mouth of the horn contains the beginnings of six horizontal lines. The thick part of the horn shows four lines of shading, like the genuine, and there seem to be two dotted lines, running round the ring. The thin tube is blotched, and the mouthpiece points very much inwards, so that a bullet fired from it would hit the face, below the eye. The left lower corner of the frame has rather a large gap in it. There are no dots anywhere, except one, which touches the bottom of the wide end of the post-horn.

Fifth Forgery.

(Mouth of horn quite blank. Six-rayed star.)

Hand-struck, in pale vermillion, on yellowish wove, *pelure* paper, smooth gum. The last O of PORTO is upright, and its hollow centre is much wider than that of the first O. Both arms of the T hang down level. The C of SCRISOREI leans slightly towards the R, which does not touch the foot of the I. The serif to the foot of the second S is very much larger than the serif of the head, and of quite a different shape. The O is flat at the top; the foot of the next R is joined to the E, which leans decidedly away from the R, and the final I is parallel with the E. A line drawn along the feet of the letters of the upper inscription would graze the side of the S. In this upper inscription, the 8 is a distinct S, and the O is an inverted D; while all the letters, MAP, are joined together by their feet. In the lower inscription, the top of the 8 is malformed and broken, and the H has a strong cross-bar, and is upright. The star is six-rayed, of a very ugly shape, with the top ray much wider than the others. The bull's horns are very long and thin; their points go very close to the upper inscription. The upper outlines of the ears are very nearly horizontal, instead of being curved upwards, and the outline of the right ear has a gap in the centre. The hair is blank in the centre, the front outline being like four rays of a star. The nose is completely outlined both sides, with two vertical lines and a dot at the bridge, and another nearly vertical line above the right nostril. There is no horizontal line, joining the nostrils, though there is in the genuine. The face is much more like that of a sheep than that of a bull, and the lower lip goes rather near to the ring of the post-horn. The wide mouth of the horn is quite blank, without dots or lines; the thick tube contains three lines of shading; the ring has no line along its centre, and the thin tube is blotched solid. A bullet fired from the mouthpiece would hit the ear, near the tip. There are no dots among the letters, except one, touching the lower part of the rounded head of the lower P.

Sixth Forgery.

(Six short, oblique lines in mouth of post-horn. Five-rayed star.)

Hand-struck, or typographed, in pale red, on white, wove *pelure* paper; also lithographed (a transfer from the typograph) in a sort of chalky-pink, on the same paper, both ungummed. The last O of PORTO leans away from the T, like the genuine, but is flatter at the top. The second S of SCRISOREI, in the typograph, does not come down so low as the I and the O each side of it. The feet of the K and the E are firmly joined together, and the final I is upright. In the upper inscription, the feet of

the H and A are joined ; the H has a strong cross-bar at the top, and a line drawn along the feet of these letters would just graze the S. The H of the lower inscription also has a strong cross-bar at the top, and is upright. In the lithograph, the feet of all three letters are joined together, but in the typograph, only the H and A seem to be joined. The star is five-rayed, which is an easy test. The bull's right horn points straight to the centre of the o of 80. His nose is a human nose, outlined on one side only. The lower lip touches the ring of the post-horn. The wide mouth of the horn shows six short, oblique lines ; the thick tube has parts of four lines of shading ; the ring of the horn has no line along it, except a short piece at the left side. There is a line along the centre of the thin tube. The mouthpiece ends with a ring, and a bullet fired from it would pass almost through the centre of the ear. There are many other differences, but the five-rayed star is an instant test.

Seventh Forgery.

(Five horizontal lines in mouth of post-horn. Five-rayed star.)

Typographed, in bright red, almost scarlet, on fairly thick, white wove paper. The last O of PORTO is upright, and its right upper corner is cut off rather slopingly. The tail of the C of SCRISOREI has a knob, exactly the same as the head ; the tail of the first R does not touch the I, which leans over towards it. The final i is upright, and the last three letters of this word are taller than the rest. The H of the upper inscription has a distinct cross-bar at the top, and a line drawn along the feet of the letters of this upper inscription would cut almost through the very centre of the S. The H of the lower inscription has an unbroken cross-bar at the top, and it is upright. The star is five-rayed, with all the points perfect. The bull's hair is formed by about eight curved, vertical lines. The nose is outlined both sides, and there are three parallel, vertical lines on the bridge. The mouth rests on the ring of the post-horn. The wide mouth of the horn contains five nearly horizontal lines, and the thick tube shows only three lines of shading. There is a short line in the centre of each bend of the ring. The thin tube has a line running up its centre ; the mouthpiece is rather splayed out, and a bullet fired from it would hit the centre of the bull's ear.

Eighth Forgery.

(Four oblique lines in mouth of post-horn. Five-rayed star.)

Lithographed, in dull vermilion, on yellowish-white *pelure* paper, un-gummed. The first O of PORTO is badly shaped, and the second O is upright. The arms of the T hang down level, and there is hardly any foot-stroke. The letters of SCRISOREI are very tall and thin ; none of them touch each other, and the lower limb of the E projects further forward than the upper limb. The i leans slightly away from it, but not so much as in the genuine. In the upper inscription, the O is broken at the top. The H is also open at the top. A line drawn along the foot of these letters would just graze the S. The O of the lower inscription is broken at the top ; the H is upright, and its cross-bar is visible all the way. The star is five-rayed, and somewhat truncated. The points of the bull's horns bend outwards more than the genuine, and they point, respectively, to the bottom of the 8 and the centre of the bottom of the P. The hair is an indistinct blotch. The nose is outlined on one side only, with a blotch in the centre of the line. There are no dots anywhere on the face. There is no horizontal line, joining the nostrils, but the line which should join them make a spiral curve with the left nostril. The lower lip has a gap in its centre, and it very nearly touches the ring of the post-horn. The

wide mouth of the horn contains two long, and two short, oblique lines. The thick part of the tube shows three lines; the top line begins thick, and ends in a sharp point; the middle line is short and very thin; the bottom line is extremely thick, it is joined to the lower outline of the horn, and ends above the first stroke of the H. The ring of the horn has no dots on it anywhere. The thin tube is very thin, with a little knob at the end. A bullet fired from it would probably miss the bull's ear altogether.

POSTMARKS.

Genuine.—As before.

First Forgery.—A scroll-shaped frame, like that of the third forgery of the 40 paras, and with the same inscription (but with the inscription inverted) in the frame.

Second Forgery.—Uncancelled.

Third Forgery.—29. The top half is missing, but the centre contains the numeral 4, and the bottom bears MOLDOVA.

Fourth Forgery.—Uncancelled.

Fifth Forgery.—Uncancelled.

Sixth Forgery.—Uncancelled. Also what is probably part of 1, but much larger.

Seventh Forgery.—Uncancelled. Also 29 with the numeral 4 in the centre, and JASSY MOLDOVA between the circles. This is struck in blue.

Eighth Forgery.—Uncancelled.

Issues of 1862-4.

3 Paras, yellow, orange-yellow, orange-red.

1. Hand-struck from single dies, two varieties; horizontally laid, or wove, *pelure* paper.

2. Typographed from plates, forty varieties; horizontally and vertically laid, and white wove, *pelure* paper.

Westoby says that these stamps were hand-struck until 1864, but my publishers' catalogue gives 1863 as the date of the typographs; I do not know which is the correct date. The hand-struck stamps are unevenly printed; indeed, I have two specimens, where the one actually overlaps the other considerably. The hand-struck 3 and 6 paras are in rather bright colours, with a greasy appearance; and all values are more or less blotched. The typographs are much better and clearer, and, of course, never overlap.

Genuine.

Paper, impression, etc., as above. The octagonal frame is double, the outer line thick, and the inner one thin; but in the hand-struck ones, the two lines are frequently blotched into one, on one or more sides, though the double lines can always be seen somewhere. Where the two lines are visible, the width across the two together is not more than $\frac{7}{8}$ mm. The word FRANCO, from the left-hand upright edge of the F, to the furthest right-hand edge of the O, measures *almost* 14 mm., and the letters are not more than $1\frac{1}{2}$ mm. high. In the word SCRISOREI, the distance between the left-hand, rounded edge of the C and the right-hand, vertical edge of the final I is $12\frac{1}{2}$ mm.; the letters being 2 mm. high. There is a distinct white patch at the top of each wing of the eagle. The lower PAR. is equidistant between the lowest part of the post-horn and the bottom of the frame.

First Forgery.

Lithographed, in sulphur-yellow, lemon-yellow, or ochre-yellow, on white wove, *pelure* paper. The octagonal frame is composed of one single, thick line all round, without any trace of the thin, inner line; this single line is 1 mm. broad in its thickest part. The top of the eagle's right wing, near the C of FRANCO, is usually solid, without any white patch; and the top of the left wing shows a narrow strip of white, reaching to the shoulder, in place of the triangular, white patch. The lower PAR. is nearer to the post-horn than to the frame below it.

Second Forgery.

Lithographed, in dull orange, on thin, but not *pelure*, white wove paper. The octagonal frame is double, like the genuine, but too thick; the two lines together being very nearly $1\frac{1}{2}$ mm. across. The letters of FRANCO are a shade over 2 mm. high, and the feet of the R and of the A very nearly touch. The distance between the C and last I of SCRISOREI, measured as before, is $12\frac{3}{4}$ mm. The white patches at the tops of the wings of the eagle are too prominent. The lower PAR. is set very slightly slanting, so that the P is nearer to the bottom of the frame than the R is.

Third Forgery.

Lithographed, in orange-brown, on grey-white wove, *pelure* paper, with crinkly gum, like the genuine. The long sides of the frame are double, but the short corners show only one thick line. The word FRANCO, measured as before, is only $13\frac{1}{4}$ to $13\frac{1}{2}$ mm. long, by a shade over 2 mm. high. In the word SCRISOREI, the distance between the C and the final I, measured as in the genuine, is about 13 mm., and most of the letters are $2\frac{1}{4}$ mm. high. This word is not parallel with the right-hand frame, but the letters get gradually nearer to it, so that the S is a good deal further off than the final I. The white patch on the upper part of each wing of the eagle is far too large and prominent, and the top of the right wing points towards the O of FRANCO, instead of upwards, towards the 3. The lower PAR. is decidedly closer to the post-horn than to the lower frame. The colour and the slanting SCRISOREI ought to condemn this forgery, though it is a great deal more distinct than the other counterfeits.

Fourth Forgery.

This stamp is no longer in my possession, so I must take the details from the notes which I gave of it in the *Bazaar* newspaper.

Very nicely lithographed, in yellow, on very slightly yellowish-white, wove *pelure* paper. The top of the wing nearest the FRANCO is very much higher than the other, and reaches to the level of the beginning of the O. (In the genuine, it reaches little, if anything, above the level of the end of the C.) The frame of the stamp is composed of *three* lines; a thin one, then a very thick one, close to it, then an outer, thin line, a good distance from the other two. The thin, inner line is not blotched into the one outside it anywhere, except at two of the corners. In this forgery, the star over the bull's head has *six* points, while the genuine and the other forgeries show a five-pointed star. This star is, of course, an easy test.

POSTMARKS.

Genuine.—I have no cancelled specimens.

Forged.—All four counterfeits are uncanceled.

NOTE.—Some copies of the genuine stamps show a round stop, under the beginning of the upper 3; others have a stop before the first S of

SCRISOREI; and one of my specimens shows a large, round stop, above the eagle's right wing, between it and the upper 3. None of my counterfeits show any of these abnormal stops.

Same Issue. 6 Paras, vermilion, carmine, rose.

Genuine.

The varieties of impression and paper are the same as in the 3 paras. The octagonal frame is double, as in the 3 paras, and of the same width. There is a stop after each 6, and each PAR., and some copies show a stop after FRANCO. SCRISOREI is in letters $2\frac{1}{2}$ mm. high, but the other three words are in letters only 2 mm. high. The star has five rays, as before. The bottom of the bull's head and the feet of the eagle are on the same level. There are two fringes of short, oblique lines in the wide mouth of the post-horn; seven in the upper fringe, and six in the lower one. The thick part of the horn contains five curved lines of shading; the ring has two lines of shading, and the thin tube two also. All these lines follow the curves of the horn. The ring of the mouthpiece is of a good size, decidedly broader than the thin tube to which it is attached. The eagle's left wing, near the bull's right ear, has its top very much more pointed than the other, and the bull's left ear has its upper outline as nearly as possible horizontal, and level with the outside edge of the first stroke of the R of SCRISOREI. The tips of the horns are very sharp.

First Forgery.

Typographed, in vermilion, on yellowish-white wove, *pelure* paper, ungunmed. The octagonal frame is double, most of the way round, like the genuine. The letters of each PAR., and of FRANCO, are a shade under 2 mm. high. The star is like the genuine. The feet of the eagle come a little lower than the bottom level of the bull's head. About four lines can be made out, in each of the fringes, in the mouth of the post-horn. The thick part of the horn, the ring, and the thin tube, are all shaded by thick, almost vertical lines, sloping down a little to the left, *across* the horn. The left wing of the eagle has its top narrower than the other, but very little sharper. The fringing-hairs, at the top of the bull's left ear, near the R of SCRISOREI, are blotched, so that the ear looks nearly circular. The lower PAR. is decidedly nearer to the horn, than to the bottom of the frame. There is an oblique line, reaching from the centre of the upper outline of the bull's head, between the horns, to far below the level of the eyes. In the genuine, the line down the nose does not go up higher than the eyebrows. I think the shading of the horn is the best test for this forgery.

Second Forgery.

I have only lately come across this (1905). It is blotchily hand-struck, or typographed, in carmine-vermilion, on white wove, *pelure* paper, which has had a bluish wash applied to the face, to make it appear *bleuté*, though this value does not exist on bluish paper. The frame is double, as in the genuine, but its thickest part is fully 1 mm. wide. The letters of SCRISOREI are $2\frac{1}{2}$ mm. high, and those of the upper PAR. a shade over 2 mm. high. The star has five rays. The eagle's feet come down slightly lower than the head of the bull does. There are four long, oblique lines of shading in the mouth of the post-horn, going nearly across. The horn is all of solid colour, except a small white patch, below the ring, and a white spot on the right side of the ring. The top

of the eagle's right wing, near the C of FRANCO, is more sharply pointed than the other. The bull's left ear is an almost circular blotch, and the part nearest to the head is higher than the level of the R of SCRISOREI.

Third Forgery.

Lithographed, in dull vermilion, and in orange-red, on very yellowish wove paper, thick and hard, ungummed. The frame is composed of *three* lines, the outer one $\frac{3}{4}$ mm. from the middle one. This is an easy test. The whole three, in the widest part, measure more than $1\frac{1}{2}$ mm. across. There is no stop after either 6. The letters of SCRISOREI are $2\frac{1}{2}$ mm. high; the upper PAR. is also $2\frac{1}{2}$ mm. high. The star is a stumpy one, with six rays, instead of five, which is an easy test. The base of the bull's head comes down far below the level of the eagle's feet. There are no fringes in the mouth of the post-horn, but the lower portion of the said mouth contains a large, solid blotch. In the thick part of the horn, the upper half is a solid mass of colour, and the lower half is blank. More than half of the ring is solid, and half of the thin tube. The mouth-piece of the tube is very small, no wider than the rest of the tube. Both of the eagle's wings are rounded and blunt at the top; the right wing, near the CO of FRANCO, is much higher than the other. The bull's ears are like short, blunt horns, and they both curve upwards. The horns are quite blunt at the tips; and, along the top of the forehead, between the bases of the horns, there are three transverse links of a chain-pattern, quite different from the hair of the genuine. The eagle's body is rounded in perspective, instead of being quite flat. The P of the lower PAR. almost touches the post-horn above it.

Fourth Forgery.

Lithographed, in bright rose, on greyish-white wove, *pelure* paper, ungummed. This is the same as the third forgery except for the following tests:—There is a stop after the lower 6. The wide mouth of the post-horn shows a double ring, much more distinctly than the third forgery. The thick part of the horn has crossed lines of shading along its upper half, and three curved lines (two of them very short) along its lower half. Part of the ring shows two lines of shading in it, and there is one line of shading in the thin tube. The mouthpiece is a tiny button, very little wider than the rest of the tube. There is hair between the horns. The other tests are the same as in the third forgery.

POSTMARKS.

Genuine.—I have no cancelled specimens.

First Forgery.—Uncancelled.

Second Forgery.—The scroll-shaped frame of the third forgery of the 40 paras, already described, containing FRANCO and an illegible name, struck in violet.

Third Forgery.—A small copy of 100. Also a pen-and-ink line.

Fourth Forgery.—A pen-and-ink flourish.

Same Issues. 30 Paras, shades of blue.

The varieties of impression and paper are the same as in the 3 paras, except that this value, in the typographed issue, may also be found on bluish wove *pelure* paper.

Genuine.

The octagonal frame is double, as before. There is a stop after each 30, and after each PAR.; and some copies show a stop after the post-horn, and a stop under the upper 30. The letters of FRANCO and SCRISOREI are about $2\frac{1}{2}$ mm. high, and those of each PAR. about 2 mm. high. The star has five rays. The eagle's feet and the bottom of the bull's head are about the same level. The upper fringe in the mouth of the post-horn has seven lines; the lower fringe, six. There are four lines of shading in the thick part of the horn, following the curve of it. The left side of the ring shows two lines of shading; the right side is solid. There are two lines of shading up the thin tube. The eagle's left wing touches the bull's right ear. The upper outlines of the ears are horizontal. The horns are very sharp, and are shaded by short, oblique lines.

First Forgery.

This is new to me (1905), and is the best of the counterfeits of this value, though the colour is quite wrong. Hand-struck, in a peculiar slate-blue, or violet-blue, on yellowish-white wove, *pelure* paper, ungummed. The octagonal frame is double, as in the genuine. The letters of FRANCO are only 2 mm. high. The fringe of hair, below the bull's head, hangs down a good deal lower than the level of the eagle's feet. The upper fringe in the mouth of the post-horn shows five lines, one very short, and one very long; the lower fringe slants in the opposite direction, instead of the same way as the upper one, and has about ten lines, though some of them are blotched, so I cannot be certain. The thick part of the horn has only two lines of shading, instead of four. The left side of the ring is broken and imperfect in my specimen; the right side of the ring is blank. The eagle's wing does not touch the bull's right ear, which slopes downwards. The left ear is only one single drooping line. The horns are even sharper than the genuine, and they have no oblique lines of shading on them; the right horn points to the left foot of the A of PAR., instead of curving outwards, towards the foot of the P.

Second Forgery.

This is very like the third forgery of the 6 paras, except that the bull's head is shorn of its whiskers, and so looks much narrower. Badly lithographed, in a sort of Prussian-blue, on greyish-white wove, *pelure* paper, ungummed. There is no stop after either 30, and the stop after each PAR., is very small. The upper PAR. is fully $2\frac{1}{2}$ mm. high, instead of 2 mm., and the lower PAR. is $2\frac{1}{2}$ mm. high. These letters, in the genuine, show large foot-strokes, which are almost entirely absent in this counterfeit. The star is stumpy, with six rays, instead of five. The bottom of the bull's head comes a long way below the level of the eagle's feet. The left foot has one long toe, but the other toes are all mere stumps, though each foot shows three long toes in the genuine. The other details are the same as in the third forgery of the 6 paras.

Third Forgery.

This is very similar to the fourth forgery of the 6 paras. Lithographed, in ultramarine, on greyish-white wove, *pelure* paper, ungummed. The frame is composed of three lines. There is no stop after either 30. The letters of FRANCO are rather less than 2 mm. high; the upper PAR. is $2\frac{1}{2}$ mm. high, and the lower PAR. about $2\frac{1}{2}$ mm. high. The star has six rays, instead of five. The bull's head comes down far below the level of the eagle's feet, and the claws of the said feet are curved, instead of straight.

The eagle's right wing is very much higher than the left ; and the left wing does not touch the bull's ear. The rest of the tests are the same as in the fourth forgery of the 6 paras.

POSTMARKS.

Genuine.—I have no postmarked copy.

First Forgery.—Uncancelled.

Second Forgery.—29.

Third Forgery.—A pen-and-ink flourish.

NOTE.—I have a number of apparently genuine specimens of the 6 paras, with different postmarks, but which do not appear to have ever been through the post. Mr. Bacon seems to be doubtful as to whether these stamps have ever been reprinted ; so I conclude that my stamps are remainders, with forged or bogus cancellations. I have 29, with ROMAN, MOLDOVA, struck in black ; also an oblong frame, with rounded corners, in blue, with FRANCO and an illegible word ; also a very sharply-pointed, transverse double oval, with FRANCO, GALATZ, between the ovals, struck in black ; also a transverse, octagonal frame, with FRANCO, KARUL, in black ; also a portion of what look like two interlacing diamonds, in black, etc.

Issue of 1865. 2 Parale, yellow, orange, ochre-yellow.

1. White wove paper, yellow, orange.
2. White laid paper, orange, ochre-yellow.

Genuine.

Lithographed, paper and colour as above, yellowish gum. The head is of a good size, so as to pretty well fill up the central oval ; the top of the head coming very near to the outline of the oval, and the point of the beard coming almost as close to the outline, near the bottom. The upper inscription is DOUA PARALE, which can be easily read, and is not to be mistaken for anything else. There is a round dot under the S of POSTA, (which makes it sound like "sh," I believe) ; an acute accent above the A ; a circumflex accent over the first A of ROMANA, and a sort of inverted circumflex over the second A. The lattice-work pattern in the four frames is very faint in the yellow stamps, but more distinct in the darker ones, and there is a dot, or coloured gap, in the centre of the top and bottom ends of the side-labels. The left side of the central, coloured medallion, near OST of POSTA, is not flattened at all. The bottoms of the F and R of FRANCO come down lower than the level of the rest of the word, and the O is small and oval, with a rounded base. The end of the tail of each 2 is cut off vertically.

Forged.

Lithographed, in yellow or orange, on medium, white wove paper. The head is a good deal too small, so that it does not anything like fill up the oval ; the top of the head and the point of the beard being, respectively, a long way from the outline of the oval. The upper inscription reads BODAPIOME, apparently in one word. The lattice-work in the four frames is too prominent, and strikes the eye at once. There are *four* dots (formed by the intersections of the diamonds) below the STA of POSTA. There is no accent to the A of this word, or to either A of ROMANA. The lattice-work side-frames are square-ended, without the dots or gaps of the genuine. The left side of the solid, central medal-

lion is cut off, or flattened, near the OST of POSTA. All the letters of the word FRANCO stand on the same level, and the O is clumsy, and its base is cut off quite flat. The end of the tail of each 2 slants up to the right.

POSTMARKS.

Genuine.—I have no cancelled copy, but I have seen 29 (large), 71, also a curious, large lattice-work, forming a sort of double diamond.

Forged.—1 ; 37, 38, both without numerals.

Same Issue. 5 Parale, shades of blue.

Genuine.

The varieties of paper are the same as in the genuine 2 parale. Lithographed. The head is large, as in the genuine 2 PARALE, and pretty well fills up the oval. The C of CINCI is the same distance from the left-hand end of the label as the E of PARALE is from the right-hand end of it. The lattice-work of the various labels is faint, with a short, horizontal dash, where every two lines intersect, and a tiny ring, with a white centre, in the middle of each diamond. The dot and accents to the S and A of POSTA and each A of ROMANA, are the same as in the 2 parale, and the coloured gap in the centre of each end of the side-labels is also the same. The O of FRANCO is oval.

Forged.

Lithographed, on stout, yellowish-white wove paper, thicker than the genuine. The head is small, the same as in the forged 2 PARALE. The C of CINCI almost touches the left-hand end of the label ; whilst the E of PARALE is a good distance from the right-hand end of it. The lattice-work of the various labels is far too prominent and dark, without any short lines or dashes across the intersections of the diamonds of the lattice-work, and with a solid, dark dot in the centre of each diamond, instead of the rings with white centres of the genuine. There are six dots, from under the S of POSTA to the right-hand end of the label, formed by the intersections of the diamonds, and there is no accent over the A of this word or over either A of ROMANA. The tops and bottoms of the side-labels are square-ended, without gaps. The O of FRANCO is flat at the bottom. The outer edge of the solid, central medallion, near POSTA, is not so nicely rounded as the side near ROMANA.

POSTMARKS.

Genuine.—As before.

Forged.—1 ; 37, without numerals.

Same Issue. 20 Parale, rose-red, deep red.

(Two types.)

1. White wove paper, both types, red, rose-red.
2. Bluish wove paper, both types, deep red.

The first type has the central oval not touching the inner frame anywhere, and the 1 of DECI is too long downwards. The second type has the central oval touching the frame at the bottom, and the 1 is not too long.

Genuine.

Lithographed, paper, type, etc., as above. The upper inscription is DOUA DECI PAR, which is perfectly legible. The ends of all the lattice-work frames are rounded, and the lattice-work is faint, allowing the

inscriptions to be easily read. There are no dots in the centres of the diamonds of the lattice-work, but there is a short, horizontal line at the intersections of all the diamonds. The dot under the *s* of *POSTA* is not so conspicuous as in the other values, and there is no accent over the *A*, though the circumflex accent over the first *A* of *ROMANA* is plainly visible. The 2 of each 20 is very close to the left side of its containing-label.

First Forgery.

I think this is imitated from the second type. Lithographed, on stout white, or yellowish-white wove paper. The first word of the top inscription is utterly unreadable; it looks something like *OONA*. All the ends of the lattice-work patterns are cut off square, instead of being rounded. The lattice-work is too dark and prominent, with a distinct dot in the centre of each diamond, and no horizontal lines at the intersections. There is a row of five dots under the *STA* of *POSTA*, and they rest on the frame, and are formed by the intersections of the diamonds. There is no accent on any *A*. The 2 in the left bottom corner leans over to the left, making its head come rather near the left side of the containing-square, but the 2 in each of the other corners is at a fair distance from the outline.

Second Forgery.

I don't think this is very likely to deceive, as the upper inscription is in two words only, which appear to be *UNDA* (or *BODA*?) *PIOME*. I conclude it was imitated from the 2 parale, with the numerals altered; as the *UNDA* (or *BODA*) is evidently meant for *DOUA*. The ends of the lattice-work labels are cut off square, as in the first forgery, and each diamond has a dot in its centre; but there are no horizontal lines at the intersections of the diamonds. As in the first forgery, there are five dots under the *STA* of *POSTA* resting on the frame-line, and there are no accents. The 2 of each 20 is a good distance from the left side of its containing-square.

POSTMARKS.

Genuine.—As in the 2 parale.

First Forgery.—37, 38, both without numerals.

Second Forgery.—1; also a portion of what seems to be 100.

Issues of 1866-7. 2 Parale, yellow; 5 Parale, blue.

August, 1866. Thick, coloured wove paper.

February, 1867. Thin to medium, coloured wove paper.

The head is identical for all the values of this issue; but the frame was drawn separately for each value.

Genuine.

Lithographed in black, on coloured wove paper, varieties as above. The moustache is very slight; it is composed of very short, vertical lines, placed close together, and showing the bottom outline of the top lip underneath it. The shading just under the chin appears to be formed by one line, slanting somewhat obliquely down to the right. The shading on the under lip consists of a few separate dots. Only a portion of the ear is outlined; the part near the lower lobe being perfectly blank.

The lower lip projects level with the upper one. The neck is a good

length, with the front end pointing downwards. The accent over the first A of ROMANA is distinctly a circumflex; the one over the second A is a sort of dash, the two not being at all alike. The bottom limb of the L of PARALE is *very* short, and does not touch the following E. The outer line of the frame runs, unbroken, right round the stamp. The width of the lines forming the Etruscan pattern, down the sides of the stamp, is just about equal to the width of the first stroke of the P of PARALE.

Forged.

Lithographed, on coarse, stout, coloured wove paper. The moustache is formed by *one* thick, wavy line, running right up to the nose, and showing an absurdly large portion of the upper lip below it. The shading under the chin is formed by one thick line, crossed by a number of oblique lines. The shading on the lower lip consists of one line or blotch. The whole of the ear is very plain, the lower portion being darkly outlined. The lower lip does not project nearly so far forward as the upper one. The neck is cut off very short, the front portion of the base curving slightly forwards. The accent over each A of ROMANA is a straight dash, both being alike. The bottom limb of the L of PARALE is long, and it touches the E which follows it. The outer line of the frame is broken at the top corner of the little square in the left lower corner of the stamp. The lines forming the Etruscan pattern are much too wide; being, especially on the right side, nearly twice as wide as the straight stroke of the P of PARALE.

POSTMARKS.

Genuine.—I have no cancelled copies.

Forged.—37, 38, both without numerals; also 100.

Same Issues. 20 Parale, shades of rose.

(*Two types.*)

August, 1866. Thick, coloured wove paper.

February, 1867. Thin, coloured wove paper.

There are said to be four types of this stamp, varying, principally, in the position of the Etruscan bordering, under the 20, in the right top corner. I illustrate three of the types from my publishers' catalogue. The fourth is not given. I have only the first two types.

TYPE I.

TYPE II.

TYPE III.

In the first type, the top point of the Etruscan pattern commences under the middle of the o of 20; and the R of PAR has a tail which spreads out to the right, in the usual manner. In the second type, the point of the Etruscan pattern commences under the 2 (to the left of its centre), and the R of PAR has its tail squeezed in, almost parallel with the first stroke of the letter. In the third type, the Etruscan pattern begins under the o, as in Type I., but has a white dot to the left of it. I do not know anything about the fourth type.

The forgers have imitated the second type, so far as the Etruscan pattern is concerned ; and it is this second type of the genuine that I will describe.

Genuine.

Lithographed in black, on coloured wove paper, moderately stout, and also on thinner paper. The head is exactly the same as in the genuine 2 and 5 parale, so that I need not repeat the description of it. The letters of ROMANA are all of the same height. The P of POSTA is at a good distance from the side of the frame to the left of it, but the last A of ROMANA almost touches the frame to the right of it. The brickwork in the upper corners consists of seven horizontal lines ; that in the lower corners of six horizontal lines.

Forged.

Lithographed, on stout wove paper. The head is exactly the same as in the forged 2 and 5 parale. The first A of ROMANA is *very* much shorter than the other letters, and the second A is also short, but not quite so short as the other. The P of POSTA is *very* close to the left-hand end of the frame, and the last A of ROMANA is a long way from the right-hand end of it. The brickwork in the right upper corner consists of five horizontal lines ; that in the left upper corner of four ; that in the right lower corner of five ; and that in the left lower corner of five horizontal lines. The whole impression is very rough, and not particularly likely to deceive. All the forgeries of this issue are very common, and one or more will be found in the albums of all our youthful friends.

POSTMARKS.

Genuine.—I have no cancelled specimens.

Forged.—37, 38, both without numerals ; also 100.

Issue of 1868. 2, 3, 4, 18 Bani.

Genuine.

Lithographed, on stout, white wove paper. There are two varieties of the 2 bani, one having the top of the head closer to the pearly circle than the other. The bottom of the ear is only outlined by a few dots. The front end of the moustache goes to the outline of the middle of the lip. The shading on the front of the base of the neck is chiefly composed of dots. The head of the T of POSTA is *very* short, without any downward bends at the ends of it, and there is a dot under the s of that word. There is a distinct accent over each A of ROMANA. The I of BANI is dotted. The two thin, coloured lines which form the inner outlines of the side-frames are *very* close together, so that it would be impossible to draw another line between them. There are sixty-nine white pearls round the head ; they are regular, a good distance apart, and do not touch the white, circular line outside them.

First Forgery.

Lithographed, on thinnish, white, or yellowish-white paper. The bottom of the ear has a heavy, single line for outline, instead of the dots of the genuine. The front end of the moustache goes upwards, to where the nose and lip join ; thus showing far too much of the front of the lip,

below the moustache. The shading on the front of the base of the neck is formed by thick, oblique lines. There is no dot under the S of POSTA, and the head of the T is not too short; the ends hang down, as in an ordinary capital T, except that the right-hand end hangs down lower than the left. There is no accent over either A of ROMANA. There is no dot to the I of BANI. The two thin, coloured lines, forming the inner boundary of each of the side-frames, are so wide apart, that it would be quite possible to draw another line between them. There are sixty-six white pearls round the central circle; they are pretty well done.

Second Forgery.

Lithographed, on thick, white wove paper. This counterfeit is new to me (1905), and is decidedly poor. The bottom of the ear is formed by two parallel lines, and it does not reach down below the hair. The front end of the moustache bends *downwards*, to the front, bottom point of the lip, so that the whole profile of the lip appears *above* the moustache. There is hardly any shading on the front of the neck; it is composed of about nine, very short lines. There is no dot under the S of POSTA, and the head of the T is not abnormally short. There is no accent over either A of ROMANA. The I of BANI is covered by the postmark, but I don't think it is dotted. The Etruscan pattern in the right top corner is very badly drawn and irregular. The easiest test is in the pearly circle. There are about eighty-two pearls; they are of all shapes and sizes, and those at the sides are joined to the white circle by stalks, making them look like the teeth of a cog-wheel. The circle itself is broken and crooked, opposite to the mouth. The whisker is a circular ball, but it is pear-shaped in the genuine. I don't fancy this counterfeit will prove at all dangerous.

POSTMARKS.

Genuine.—I have no cancelled specimens.

First Forgery.—1, 100.

Second Forgery.—29, 62, 100.

Issue of 1869. 5, 10, 15, 25, 50 Bani.

1. White wove paper. All values.
2. White laid paper. 15 Bani, rose-red.
3. Yellowish toned paper. 10 Bani, blue; 15 Bani, vermilion.
4. Bluish wove paper. 15 Bani, vermilion.

Genuine.

Lithographed, on medium paper, varieties as above. There is a dot over the I of BANI, in all the values, except the 5 b., the dot being generally joined to the line above it. An easy test will be found in the word POSTA, which is set centrally in the containing-scroll, so that the heads of the letters are as far from the outer outline of the scroll, as the feet are from the inner outline. The shading on the chin and front of the neck comes close up to the outline, so that there is no white line or border to be seen, between the shading and the outline.

The following are the particular tests for each value :—

5 BANI.—Each C of CINCI has a head like an ordinary, Roman capital C, and the last I of this word is almost touched by the little, sharp ornament to the right of it.

10 BANI.—The ends of the C of DECE are not at all squeezed towards each other, as they are in an ordinary, capital C, but the whole letter is more the shape of half a transverse oval. The inner outline of the label containing BANI is indented inwards at regular intervals, the indents above and below the word corresponding with each other.

15 BANI.—The value reads CINCISPREDECE, all in one word, and there is a dot over the second I.

25 BANI.—There is a sort of small blotch, or break, in the line, above the space between the letters CI of DOUEDECI.

50 BANI.—The thin, inner outline of the top label is broken, above and below the last I of CINCI, but the broken ends of the lines do not end in knobs.

Forged.

Lithographed, on medium, very white wove paper. The head is like that of the forgeries of the last issue. There is no dot over the I of BANI in any of the values. The word POSTA is not set centrally in the scroll, but too near to the outside; so that the heads of the letters are very much nearer the outer outline of it, than the feet are to the inner outline. The shading on the chin and front of the neck is not drawn close to the outline, so that there is a white line showing all the way, between the shading and the profile of the chin and neck.

The following are the particular tests for the different values :—

5 BANI.—Each C of CINCI is a plain, block capital, and the last I is a long way from the sharp ornament to right of it.

10 BANI.—The ends of the C of DECE point towards each other, as in an ordinary capital C, and the indentations of the thin, inner line, above and below DECE, are very irregular, and do not correspond with each other.

15 BANI.—The value reads CINCIS PRE DECE, in three distinct words, and there is no dot over the second I of CINCIS.

25 BANI.—There is a large and dark, wedge-shaped blotch, both above and below the space, between the letters CI of DOUEDECI.

50 BANI.—The thin, inner outline of the frame at the top is broken, both above and below the last I of CINCI; and each broken line ends in a knob.

POSTMARKS.

Genuine.—I, 29.

Forged.—37, 38, without numerals; 100.

Issues of 1871-2. Bearded portrait; 5, 10, 25, 50 Bani.

1871. (1) White wove paper, unperforated 5, 10, 15, 25 Bani.

(2) Rose-tinted wove paper; 5 Bani.

(3) Laid paper; 10 Bani.

January, 1872. Same as (1), but perf. 12½; 5, 10, 25 Bani.

1872. From worn stones: wove paper, imperf.; 10, 50 Bani.

Ditto; laid paper, imperf.; 10 Bani.

Ditto; yellowish wove paper, imperf.; 10 Bani.

Genuine.

Lithographed, varieties as above. The eye is small, but not abnormally so. The eyebrow does not come *quite* to the edge of the profile; its upper edge is irregular, and shows three upward projections. It does not reach nearly so far to the right, as the outer corner of the eye does. The moustache appears to point about to the N of BANI. There are

twelve horizontal lines of shading on the back of the neck, from the base to where the hair begins. The perspective end of the cut-off base of the neck is visible below the end of the neck all the way, from front to back, and it is shaded by either twelve or thirteen thick, oblique lines, slanting down from left to right. The letters of the word POSTA are an easy test. They are placed as in the last issue, so that the heads of the letters are no nearer the left side of the scroll than the feet of them are to the right side. A dot is generally visible over the I of BANI, joined to the outline above it.

Forged.

Lithographed, on white wove paper, a shade thinner than the genuine. All my specimens are unperforated. The eye is ridiculously small; it is nearly closed, and the lower eyelid has an outline, which is not visible in the genuine. The eyebrow comes to the very edge of the profile; its upper edge is a nice arch, with four upward teeth, or projections, at regular intervals. It reaches to the right, nearly as far as the outer corner of the eye. The moustache curves down much more than the genuine, and points about to the beginning of the A of BANI. There are only two horizontal lines of shading on the back of the neck. The perspective end of the base of the neck only shows from the back to the centre of the bottom of the neck, and is shaded by six oblique lines. The tops of the letters of POSTA are much nearer to the left side of the containing-scroll, than their feet are to the right side. There is no dot over the I of BANI.

Genuine.—1, 29.

Forged.—1, 100.

POSTMARKS.

BOGUS STAMP.

I have the 5 parale of 1866 in black, on pale rose paper, very thin. It is a different forgery from the one already described in that issue, and may be easily known by the whisker, which is very large and bushy, and runs up into the hair, in front of the ear, and down into the shading under the chin. It is uncanceled.

BOGUS PERFORATIONS.

I have lately (1905) come across the 3 bani of 1870, perforated $13\frac{1}{2}$ and also 14; and I have the 5 bani of 1869, perforated 14, and the 15 bani, perforated $11\frac{1}{2}$, also $13\frac{1}{2}$. These issues were, of course, never perforated, and the above stamps are bogus.

BOGUS HALVED STAMP.

For many years I have had in my forgery-book sundry specimens of the 3 bani, green, of 1872, type of the accompanying illustration, perforated $14 \times 13\frac{1}{2}$. They are cut in halves, diagonally, ostensibly to serve as $1\frac{1}{2}$ bani stamps, and are gummed on pieces of Roumanian newspaper, and postmarked with 1, containing JASSY 13 DEC 73. These provisional $1\frac{1}{2}$ b. stamps are, I believe, entirely bogus. I should be glad to know whether any reader possesses this fake with any other date, as *all* my specimens bear the date given above.

ROMAGNA.

Issue of 1859. $\frac{1}{2}$, 1, 2, 3, 4, 5, 6, 8, 20 Bai.

Genuine.

Engraved in *épargne*, on fairly stout, very rough, coloured wove paper. The cross-bar of the A of BAI is higher than the level of the upper stop after the word. The two stops after BAI are square. The top of the A of this word is cut off perfectly square. In the word FRANCO, the overhanging stroke of the F hangs down below the middle of the central tongue of the letter. None of the letters of the word touch each other, though the foot of the R is rather close to that of the A. The thick back of the C is rather pointed behind, and the bottom limb of the C is usually not quite joined to the body of the letter. The top and bottom of the O are flat, and the thick sides are rather pointed, like the back of the C. In the word BOLLO, the B has the two thick, right-hand parts rather pointed; each O is exactly like the O of FRANCO; and the end-stroke of each L reaches above the level of the middle of the letter. In the word POSTALE, the O is like the O of FRANCO; the side-strokes of the T hang down to the level of the middle of the letter; the A is crossed *very* low down; the L is like each L of BOLLO; and the right-hand projecting arms of the E almost join each other. In the word ROMAGNE the R, the O, and the G have, apparently, little semicircles bitten out of their thickest parts in several places; the top and central arms of the E are of equal length, and the bottom arm is longer than the other two. The tail of the G of this word has a very peculiar, inward bend, projecting right into the interior space of the letter. The ornament in each corner of the stamp consists of a small ring, between four similar rings, each of the four touching the central one, and with a little V-shaped ornament between every two rings of the square, and a small dot outside each of the outer rings. These ornaments are all alike in the left top corner, and both lower corners; but the one in the right top corner has the two little right-hand circles joining the central circle, without an outline at the place where they touch; and the upper one of the two is not level with its left-hand neighbour, but placed too low down. The line of the inner frame is very nearly as thick as the thinnest part of the N of ROMAGNE.

First Forgery.

This is really the latest forgery; but I take it first, as it is really the best, and very likely to deceive any but a good collector. It is lithographed, on paper very similar to that of the genuine, but a trifle smoother. The cross-bar of the A of BAI is not quite straight, but it is in the proper place. The lower stop after BAI, which ought to be level with the very bottom of the I, is very slightly higher, making the two stops appear rather too near together. The overhanging end of the F of FRANCO comes down just about to the centre of the letter, and the letters RAN touch each other at the bottom. The thick back of the C of this word is perfectly rounded, and the O is rounded both at the top, bottom, and sides. In the word BOLLO, the letters are of the ordinary rounded shape, except that the right-hand side of the last O is very slightly pointed, in the centre of the thick part. The end-stroke of each L of this word does not reach higher than level with the middle of the letter. In the word POSTALE, the O is rounded like an ordinary O; the side-strokes of the T do not hang quite down to the level of the middle of the letter;

the A is crossed rather low down, but not absurdly so, as in the genuine; the end-stroke of the L does not come nearly up to the level of the middle of the letter; and the two arms of the E are at a good distance from each other, instead of nearly touching. In the word ROMAGNE, the letters are a very close imitation of those of the genuine, but the lowest arm of the E is only very slightly longer than the other two arms. The corner-ornaments of the stamp are well imitated; but each of the V-shaped things, dividing the little rings from each other, is more like a tiny, capital Y; and the ornament in the right-hand top corner of the stamp has its lower right-hand ring too high, rather than its upper right-hand ring too low. The outline of the inner frame is far too thin, being only as thick as the thinnest part of the N of FRANCO, instead of that of the N of ROMAGNE.

Second Forgery.

Lithographed on thin, smooth wove paper. The $\frac{1}{2}$ BAI of this set is printed on white paper, instead of yellow. The cross-bar of the A of BAI is level with the very centre of the upper stop after the word, and both stops are very large and round. In the word FRANCO, the overhanging end of the letter does not come down to the level of the centre of the letter; the letters RAN touch each other at the bottom, and the O is an ordinary capital O; the back of the C is rounded, the tail of it is joined to the body, and the tongue at the end of the tail is actually larger than the corresponding tongue of the upper limb. In the word BOLLO, the B is simply an ordinary capital B; each O is an ordinary capital O; and the end-stroke of the right-hand L is considerably higher than that of the left-hand L. In the word POSTALE, the O is an ordinary capital O; the side-strokes of the T are short, the left-hand one being shorter than the other; the A is crossed *very* high up; the L has its end-stroke barely reaching up to the level of the middle of the letter; and the two arms of the E do not anything like touch each other. In the word ROMAGNE, the O is the only letter which has the little semicircular pieces taken out of it. Each of the corner-ornaments forms a tolerably correct square; the right-hand top corner one being like the others. The one in the left-hand bottom corner of the stamp has no dots outside the little rings; but the dots outside the rings of the ornaments in the other three corners of the stamp are actually *joined* to the said rings, looking like projections from them. This test, of course, is enough to condemn the forgeries in a moment. The outline of the inner frame is even thinner than in the first forgery.

Third Forgery.

I think a few words will be enough to dispose of this counterfeit. It is lithographed, on very thin, very coarse wove paper. The A of FRANCO, the A of POSTALE, and the A of BAI are all pointed at the top, instead of being cut off square. The stops after BAI are small and round, the upper one being the larger, and high above the level of the centre of the L of POSTALE; whereas, in the genuine, a line drawn through the centre of the said L will pass centrally through the upper stop. All the letters, except those of ROMAGNE, are ordinary capitals; and none of the letters of ROMAGNE have the semicircles taken out of them. The ornament in the *left* top corner is the defective one in this forgery, and none of the ornaments show the four dots of the genuine, outside the rings.

Fourth Forgery.

Coarsely lithographed, on rather thin, coloured wove paper. The cross-bar to the A of BAI is considerably lower than the level of the

upper stop after the word. The two stops are large and round, and the top of the A is rounded. In the word FRANCO, the overhanging stroke of the F does not come nearly so low as the centre of the tongue; the letters have hardly any foot-strokes; and the C has a head and no tail, while there is a *sudden* lump, projecting from the thickest part of the back of it. The O is rather pointed at the top, and has an oblique piece taken out at the bottom, the sides not being pointed. In the word BOLLO, the head and foot-strokes of the B are joined to the ornament in the left top corner; the first O is pointed at the bottom; and the end-stroke of each L is *very* short and stumpy. In the word POSTALE, the P touches the O, which is pointed at the bottom; the overhanging ends of the T are short and thick; the A is crossed in the middle, and touches the L; the said L is distinctly in two separate parts; and the tongue of the E touches both upper and lower limbs of the letter. ROMAGNE is in thick, clumsy, block type, with all the ends and corners much rounded, and no pieces bitten out of any of the letters; while the tongue of the G projects *outwards* instead of inwards, and touches the following N. Each of the corner-ornaments has all its details blotched together, so that they look somewhat like heraldic roses, with slight, *pointed* projections where the little v-shaped pieces ought to be. The inner frame is as thin as in the first forgery. The outer frame of the stamp, which ought to be composed of a very thick outer line, with a very thin, inner line close to it, is, in this forgery, formed by two *almost* equally thick lines.

Fifth Forgery.

Nicely lithographed, on rather thin, smooth, coloured wove paper. This is very like the first forgery. None of the letters have their thick parts pointed; the stops after BAI are small and round; the ornament in the right top corner is perfect; and the G of ROMAGNE has no inward bend, the tail being straight up and down. Each L of BOLLO has the upward-pointing portion of the tail *very* short. There are no pieces bitten out of the G of ROMAGNE.

POSTMARKS.

Genuine.—29; also one similar to 51, but with much thicker lines.

First Forgery.—51.

Second Forgery.—22, 80.

Third Forgery.—98.

Fourth Forgery.—Uncancelled, or a blotch.

Fifth Forgery.—98.

REPRINTS, WITH FORGED CANCELLATIONS.

I must warn my readers against these, which are largely offered as genuine, used originals. They are got up very nicely and carefully, on old Italian letters of the proper date, and the stamps are cancelled with imitations of the genuine postmarks, 29, and the diamond-shaped grid-iron, something like 51, but with thicker lines.

RUSSIA.

The forgers do not seem to have tackled Russia at all; probably because most of the stamps are common, and require two printings. I have only one miserable counterfeit, which would hardly deceive a blind man.

Issues of 1858-71. 20 Kop., blue and orange.

Genuine.

I need not give the various issues. The perforation is 15, 15 by 14½, and 12½, according to the date; and the type which the forgers have imitated is like our illustration; *i.e.*, with the value in a curve, below the central shield. Finely engraved in *épargne*. The ends of the two ribbons, issuing from the base of the crown above the eagle in the central oval, reach *very* nearly to the right and left edges of the said oval. If a line were drawn down through the centre of the large crown at the top of the stamp, it would pass through the left side of the letter, like a reversed R, at the top of the oval. The

groundwork of the stamp is composed of horizontal rows of small, upright, diamond-shaped dots, alternating with horizontal rows of upright dashes, each dot coming below the space between two dashes.

Forged.

Badly lithographed, all in *green*, on yellowish-white wove paper. The ends of the two white ribbons, issuing from the base of the small crown above the eagle in the central oval, are a long way from their respective sides of the oval. If a line be drawn down through the centre of the large crown at the top of the stamp, it will pass through the right-hand edge of the letter, like a reversed R, at the top of the oval. The main groundwork of the stamp is composed of horizontal rows of upright dashes, without the alternate rows of dots. These dashes are very poorly done, and the rows are not truly horizontal, but slope somewhat down to the right. My specimen is clipped rather close, but I think it is not perforated.

POSTMARKS.

Genuine.—1, 28, 38 (also as a circle and as a square, as well as a diamond).

Forged.—29. The name in my specimen is written MSCOU.

SAINT CHRISTOPHER.

One Penny, rose, lilac-rose; Sixpence, green.

Issue of 1 April, 1870, Crown and CC, perf. 12½.

Issue Crown and CC, perf. 14.

Issue of 1882-90. One Penny, Crown and CA, perf. 14.

Genuine.

Engraved in *épargne*, on thin, white wove paper, slightly *glacé*; watermark and perforation as above. The monetary value is not always placed at an equal distance from the top and bottom of the contain-

ing-label. In my collection, I have some in which it is printed too near the top of the label, and some in which it is too near the bottom. The PENNY value varies in this respect more than the SIXPENCE. There are three jewels, in separate compartments, on the band of the coronet, the one over the ear being rather indistinct. The forehead is lightly shaded. One of the waves of the hair comes down so low as to cover the corner of the eyebrow. The front pearl of the coronet touches the white edge of the circle, a little before the beginning of the first H of CHRISTOPHER. A line dropped perpendicularly down from the end of the right arm of the T in the same word would cut into the bunch of curls at the back of the head. The ear is shaded all over, but very lightly at the bottom; indeed, the *whole* of the portrait is shaded all over, except a small part of the front of the forehead.

First Forgery.

Lithographed, on rather thick, unsurfaced paper; no watermark; badly perforated 12½. The value is always placed in the centre of the containing-label, neither too low nor too high. There are indistinct blotches, instead of jewels, in the three compartments of the lower band of the coronet. The forehead has no shading on it, and is therefore much too white. The base of the neck is also unshaded. The hair sweeps clear of the eyebrow. The front pearl of the coronet comes almost under the middle of the first H of CHRISTOPHER. A perpendicular line, let fall from the right-hand arm of the T of this word, would cut off the back of the head, without touching the chignon. The rim of the ear is not shaded until it is covered by the hair. The *fleur-de-lys* in the right-hand bottom spandrel is imperfect.

Second Forgery.

Lithographed, on thick, unsurfaced, very white wove paper; pin-perforated 13, in oval holes; no watermark. The value is always placed in the centre of the containing-label, neither too high nor too low. The front jewel on the band of the coronet is usually a mere blotch; the other two are fairly distinct. The forehead has no shading on it, except a dark dot nearly in the middle of it. The hair sweeps clear of the eyebrow. The front pearl of the coronet touches the white edge of the circle, almost centrally under the first H of CHRISTOPHER. The T of this word is placed the same as in the first forgery. The lobe of the ear is very fat, with a patch of white on it; the rim is not distinguishable. The nose is very markedly Roman, and the upper lip projects absurdly beyond the lower one. There is some dark, blotchy shading on the background, close to the lips, point of the nose, and under the chin; and there is also a *very* strong, dark outline to the back of the neck. The white edge of the central medallion is not the same width all the way round. This is a much poorer-looking counterfeit than the one just described, and not likely to deceive.

Second Forgery.—1, 29, 62.

ST. HELENA.

1d., 2d., 3d., 4d., 6d., 1s., 5s.

As the stamps are all from the die of the 6d., I shall save time and trouble, both to my readers and myself, by taking no notice of the value-surcharges, and confining myself to the details of the 6d. stamp itself, together with the watermark and perforations.

The following are the varieties, omitting the types of surcharge:—

January, 1856. Star watermark; unperforated; 6d.

April, 1861. Same watermark; clean-cut perforation 14 to 16; 6d.

January, 1863. Star watermark; rough perforation 14 to 16; 6d.

1863. Crown and CC; unperforated; 1d., 4d.

1864-74. Crown and CC; perforated 12½; 1d., 2d., 3d., 4d., 6d., 1s., 5s.

Same issue. Crown and CC; perforated 14 × 12½; 1d., 2d., 3d., 4d., 6d.

Same issue. Crown and CC; perforated 14; 1d., 2d., 6d., 1s.

1884-95. Crown and CA; perforated 14; ½d., 1d., 2d., 2½d., 3d., 4d., 6d., 1s.

Genuine.

Engraved in *taille-douce*, the first issue on paper apparently *bleuté* by the ink, the others on white wove paper; watermarks and perforations according to the above list, varying with date of issue. The ends of the label bearing ST. HELENA are not cut off square, but are encroached upon by the engine-turning of the background, so that three small scallops are cut out of each end. The stop under the little T of ST is circular, and the cross-bar of the H and the middle tongue of each E of HELENA are all of the same width as the upper and lower limbs of each E. The S and E of SIXPENCE are each not more than ¼ mm. from their respective ends of the label. The ornaments in the lower corners are what may be called wheel-flowers, each containing eight pear-shaped, coloured dots, surrounding a central, circular dot. In the right-hand flower, the point of the dot to the right of the top one generally touches the central dot, and the one to the right of the bottom dot also often touches the central one. Outside each end of the POSTAGE-label, above the S and final E of SIXPENCE, may be seen a distinct white M, formed by the lower ends of two strips of the pattern of the background. There is no stop after POSTAGE, and no inward bend or curl to the tail of the G of that word; while the P and the E are each 1 mm. from the end of the label. The ornaments on the top of the coronet are four crosses *pattée*, alternating with four tiny bouquets of shamrock, rose, and thistle, arranged in the shape of a trefoil, for which they might easily be mistaken without a microscope. The band of the coronet contains four oblong jewels (the front one considerably foreshortened), alternating with four things like pearls, which are, however, only the rounded ends of some hook-shaped ornaments, proceeding from the base of the coronet, as may be well seen in the stamps of St. Lucia, etc. The earring has one dark spot of shading in it, exactly

like a comma ; and there is a tiny fringe of dark lines of shading, behind the right-hand edge of the earring, on the side of the neck. The rim of the ear is shaded all over with fine dots, and the eyeball is shaded with dotted lines. There is a ring of thirty-nine, triangular white dots, immediately inside the white, circular ring enclosing the bust. These dots form the spaces between the thirty-nine scallops, into which the edge of the shading of the central medallion is divided. Next inside this comes a ring of thirty-seven long, diamond-shaped, white dots. There ought to be thirty-nine here also ; but one of them is hidden by the front point of the coronet, and another is hidden by the front point of the base of the neck. Inside this again, there is another ring, showing twelve similar white dots, immediately in front of the face, the whole of the rest of the ring being hidden by the bust. The nose is very slightly aquiline. The mouth is a little open, with a small dent of shading in the centre of the side of the upper lip. The whole bust is shaded all over with dotted lines, except the front of the forehead and the front of the nose ; but the dots run into lines at the back of the neck ; and the base of the neck, where it is supposed to be cut off, is shaded with thick lines. There are two distinct curls, hanging from the chignon.

First Forgery.

This is a very excellent and dangerous counterfeit. Finely engraved in *taille-douce*, on very thick, white wove paper ; perforated 12, or unperforated ; no watermark. The ends of the ST. HELENA label are cut off perfectly straight, without any of the engine-turning encroaching on them. The cross-bar of the H and the middle tongue of each E of the name are both somewhat thinner than the upper and lower limbs of each E. The S and E of SIXPENCE are fully $\frac{1}{2}$ mm. from their respective ends of the containing-label. In the wheel-flowers in the bottom corners, none of the pear-shaped dots touch the central one. The P and E of POSTAGE are both $1\frac{1}{2}$ mm. from their respective ends of the label. The ornaments between the crosses *pattée*, on the top of the coronet, are three-lobed leaves of some kind, something like trefoils. The front jewel on the band of the coronet is a semicircle, instead of a semi-oblong. There are only thirty-six triangular, white dots immediately inside the white ring, and they are very inconspicuous. There are also only thirty-six scallops, instead of thirty-nine. Inside this again is a ring of thirty-four oblong, white dots ; a thirty-fifth being only partially hidden by the point of the coronet, and the thirty-sixth entirely hidden by the point of the base of the neck. These dots are a good test, even without counting them, as they are not in the least diamond-shaped. The innermost ring contains twelve blunt, oblong dots in front of the face ; but the top one very nearly touches the forehead, and is smaller and thinner than the rest ; whereas in the genuine, there is plenty of room to put another dot between the topmost dot and the forehead. In this forgery also, there are two dots, evidently part of this ring, just behind the middle of the curls hanging from the chignon, and which are not visible in the genuine stamps. The nose is almost perfectly straight. The mouth is sneering, with no dent in the middle of the side of the upper lip. The shading on the forehead comes to the very front.

Of this counterfeit I have the 3d., perforated 12, printed in a very cold, greyish-violet, lighter than any copy of the genuine that I have ever seen. I have also the 4d., unperforated, and perforated 12, and the 1s., perforated 11 x 12. The surcharge is type-printed in all my specimens. This forgery might deceive almost anybody ; but I hope that the tests here given will be sufficient to identify it.

Second Forgery.

Of this I have only the 1s. Lithographed, on hard, thick, yellowish-white wove paper; unperforated. The ends of the name-label are cut off square. The nearest part of the S of SIXPENCE is a full millimetre from the left-hand end of the label, and the E is three-quarters of a millimetre from the right-hand end of the label. None of the pear-shaped dots in the wheels in the lower corners touch the central dots; but in the right-hand wheel-flower, the points of two of the left-hand dots touch each other. The engine-turning does not make any M-shaped figure to right and left of the POSTAGE-label. The E of POSTAGE is nearly two millimetres from the end of the label, and the P is a shade over one millimetre from the other end. I fancy there is a stop after POSTAGE, but I am not sure, as it is partly covered by the (lithographed) surcharge. The ornaments on the top of the coronet are trefoils, between crosses *pattee*, and the fourth trefoil at the back is not visible. Below the crosses, etc., there is a row of 21 pearls, the 14th from the front has a coloured hair-line across it, and the right-hand edge of the last cross *pattee* comes above the space between the 18th and 19th pearls. (In the genuine, there are 22 pearls visible, the 22nd pearl coming just to the right-hand edge of the last cross *pattee*.) Below this row of pearls, there is a row of alternate jewels and pearls, placed in the following manner:—First, over the forehead, a small, square, unshaded jewel; then a large, dark, oval pearl, higher up than the jewel; then a large, oblong, unshaded jewel, with the left-hand end cut off obliquely; then a light pearl; then another jewel, exactly like the last; then another light pearl; then another jewel, also like the last two; then a small, almost square jewel; then a dark, oblong jewel, partly hidden by the hair. The pearl earring seems to be little better than a dark blotch. There are 40 scallops at the outer edge of the dark background, alternating with 40 triangular, white dots. But these dots are of different sizes, and many of them run together at their bases. Perhaps it is as well to say here that these dots, in the genuine, are formed where the spaces come, between the scallops of engine-turning, touching the white ring. The second ring consists of 40 white dots, or rather dashes, very few of them being diamond-shaped. None of these dashes are hidden by the bust. Inside this again there are 13 white dots and dashes, of various shapes, in front of the face; and there may be a 14th, as my specimen has a postmark just here. The nose is vulgar, having a depression near the point. There is no dent in the side of the upper lip, and the lip is slanted forward in an ugly manner, instead of being nicely curved outwards. The two curls hanging from the chignon seem to be somewhat twisted round each other near their ends, instead of hanging almost straight down.

Third Forgery.

Of this I have the 1d., brownish-carmine; 3d., brown-violet; and 6d., bright ultramarine. Lithographed, on very white, and on almost buff wove paper, rather stout, and perforated 12½, or unperforated. The left top corner of the name-labels seems to be split partly away, and the right-hand end of the label is scalloped like the genuine. The cross-bar of the H of HELENA is much thinner than the upper and lower limbs of the following E, and the central tongue of the said E is placed much too high up. The S of SIXPENCE is about one millimetre from the end of the label, and the E is about half a millimetre from the other end. Four of the pear-shaped dots in the ornament in the left lower corner of the stamp touch the central, circular dot; and two of those in the right lower corner also touch the central dot. I do not fancy, however, that this is much of

a test, as heavy printing might make the whole of the radiating dots touch the central one. The P of POSTAGE is just one millimetre and a quarter from its end of the label; and the final E of that word is also one millimetre and a quarter from the other end. The ornaments on the top of the coronet are three crosses *pattée*, between three trefoils and a ball. Below this are 22 pearls, as far as the centre of the last cross *pattée*, and below the pearls three oblong jewels, and a pearl, set between the hooked ornaments. The rim of the ear is shaded by transverse lines, giving it a serrated appearance; and the pearl earring has no shading in it, but a blotch of shading to the right of it. There is a dark dot in front of the ear. The eyeball is altogether unshaded. It is quite impossible to count the ring of white, triangular dots, inside the white ring, as most of them are filled up with colour, and none of them are at all conspicuous: I think there are about 40 of them, and 40 scallops, surrounded by an outline. There are about 36 dots and dashes in the next inner row; but some of these again are filled up, and none of them are at all clear, except those at the back of the bust. There are 12 dashes in the inner ring, close to the face. The upper dash is too small, and too close to the forehead. The nose is rather more pointed than in the genuine. The opening of the mouth slants down to the right, instead of being about horizontal. The whole of the face and the front of the neck are quite devoid of shading. The right-hand curl is much more prominent than the left. This forgery, though a lithograph, is not bad-looking. The surcharge seems to be lithographed.

Fourth Forgery.

Of this I have the 4d. in bright rose, and the 5s. in lemon, and ochre-yellow. It is, in many respects, exceedingly like the one just described. It is lithographed, on medium, very white wove paper, and perforated 13. The left top corner of the name-label is split away, and the right end of the label is scalloped. The H and E of HELENA are the same as in the third forgery. The S of SIXPENCE is half a millimetre from the right-hand end of the label, and the final E is a quarter of a millimetre from the other end. The wheel-ornaments in the lower corners are the same as in the third forgery. The P and E of POSTAGE are each one millimetre distant from their respective ends of the containing-label. There are two trefoils, a half-trefoil, and a ball, between the crosses on the top of the coronet, and there is a row of 22 pearls below the said crosses, etc. The right-hand edge of the last cross *pattée* comes above the space between the 21st and 22nd pearls. There seem to be only three oblong jewels, but my specimen is damaged just here. The serrated rim of the ear is the same as in the last-described forgery, the earring ditto. There ought to be 40 triangular, white dots just inside the white ring; but many of them are filled up, and I can only judge by the scallops. (It will be remembered that, in the genuine, there are 39 distinct dots here.) The next ring has either 35 or 36 oblong dots, of all shapes and sizes. The inner ring contains 12 dots, as in the genuine, but they are oblong. The nose is covered by the postmark in my specimen, but it seems to be aquiline. The mouth is very like the genuine.

Fifth Forgery.

This is a frightful abortion, and need not detain us long. It is lithographed, on very thick, very yellowish-white wove paper; unperforated. The ends of the name-label are cut off square, and there is a thin white line all round the said label. The ornaments on the top of the crown seem

to be all crosses; or, at any rate, the things purporting to be the shamrock, rose, and thistle are as much like crosses as they are like anything. The pearls run into one another, and are quite uncountable; and below the pearls, there is a row of eight oblong jewels. The white ring divides into two, above the GE of POSTAGE. The nose is very hooked. There is a stop after POSTAGE. The surcharge is printed at the same time as the stamp, and in the same colour, which will be quite enough to condemn this miserable counterfeit at once.

Sixth Forgery.

This is quite new to me (1905). I have the 1d. in chestnut-brown, perforated 10½ (nearly); the 6d., indigo and dark Prussian-blue, unperforated, or perforated 11½; and the 6d. in pale chestnut (bogus colour), unperforated. Fairly well engraved, in *taille-douce*, on medium, white wove paper, generally with *impressed* watermark of crown and CC (too small), white gum, or ungummed; perforation as above. The right-hand end of the name-label is cut off square, and the left-hand end has one tiny projection, which would hardly be noticed. The stop under the little T of ST is a transverse oblong, instead of being round. This is very easily seen, and is a good test. The S and E of SIXPENCE are a little further from the ends of the label than the genuine—say ⅓ mm., instead of ¼ mm. One, at least, of the pear-shaped dots of each wheel-flower touches the central dot. The white M, at the left-hand end of the POSTAGE-label, above the S, is not at all distinct; and the ornament at the other end of the label, above the E of SIXPENCE, is plainly a W. The G of POSTAGE has the tail bent inwards, in a horizontal line (G). The P and E are distant 1¼ mm. from their respective ends of the containing-label. The ornaments on the top of the coronet are crosses *pattée* and trefoils, and only two of the trefoils are perfect, the front one having no top lobe, and the back one being a mere stump. There are no curly ornaments along the base of the coronet, but merely seven rather shapeless jewels—a more or less circular one, alternating with a more or less oblong one. The earring is very inconspicuous; it has no comma-shaped dot in it, and there is no tiny fringe of shading-lines to it. The rim of the ear does not show any dots, and the eyebrow and shading of the eyelid are formed by continuous lines, instead of dotted lines. There is no dotted shading on the eyeball. The scalloped outline of the central medallion shows thirty-nine scallops, and thirty-nine white, triangular spaces, as in the genuine; but each scallop, in the genuine, is formed by four curved lines, easy to count; many of them show only three curved lines in this counterfeit. It is difficult to trace the ring of (thirty-eight) white dots, which comes next after the scallops, as some of the dots are rendered invisible by the running or smearing of the ink, and the dots are very short, stumpy diamonds, instead of long, pointed ones. The inner ring of twelve dots is quite invisible. The nose has a perfectly straight outline. There is no dent in the side of the upper lip. The dotted shading on the portrait is faint, and irregular, and looks as though the ink had run. The oblique lines of shading on the cut-off base of the neck do not run down to join the bottom of the neck, and their upper ends are joined by an outline. In the genuine, there is no upper outline, and the lines run down to join the outline of the bottom of the neck. The surcharge is printed, as in the genuine. This counterfeit is not so good as the first forgery.

Among the fifty or sixty St. Helena counterfeits in my possession, there seem to be some forgeries slightly varying from the six types described above, but chiefly in such very small details, that I have not thought it worth while to take up the reader's time and patience in

cataloguing them. I believe that the tests given for the genuine will be found sufficient to detect any of the counterfeits, including the dangerous No. 1.

POSTMARKS.

Genuine.—1; 43; 80; 88; also an unoutlined oval of six thick, graduated, parallel bars; also pen-stroked.

First Forgery.—All my specimens are cancelled with a blue pencil-stroke.

Second Forgery.—10; 22; 51.

Third Forgery.—A set of small dots, irregularly placed.

Fourth Forgery.—10; also dots like 42, without numerals, but I can't see whether the whole postmark forms a diamond. Also a set of nineteen thin bars, something like 76.

Fifth Forgery.—A pen-stroke.

Sixth Forgery.—Uncancelled.

Besides all these, I have seen the following, but do not remember which particular forgeries have them: 1, 23, 54, with blank centre; also five concentric circles, with blank centre.

SAINT LUCIA.

No value. Red, blue, green, rose, slate-blue, emerald, black, yellow, violet, mauve, orange.

18 December, 1860. Star watermark; perforated 14 to 16; red, blue, green.

1863. Crown and CC watermark; perforated 12½; rose, slate-blue, emerald-green.

1865. Crown and CC watermark; perforated 12½; black, yellow, violet, mauve, orange.

1880 (?). The same; perforated 14; grey-black, pale yellow, mauve, deep orange.

Genuine.

Engraved in *taille-douce*, on moderately stout, yellowish-white wove paper; watermark, perforation, and colour as in the list above, according to the date of issue. The letters of the inscription, ST. LUCIA POSTAGE, are *very* nearly tall enough to touch both inner and outer outlines of the containing-oval. The top of the head is perfectly distinct from the background, and is shaded all over with somewhat radiating lines. The top of the coronet is ornamented with a row of four crosses *pattée*, between four shamrocks (intended for *fleurs-de-lys*?), and the upper lobe of each shamrock has a little dark spot in it; whilst the front cross *pattée*, which is seen in profile, shows a distinct jewel in its centre, the same as the others. The two front shamrocks are decidedly taller than the crosses *pattée*, each side of them. There are fourteen easily-counted pearls, with indications of a fifteenth, in a row below the crosses and shamrocks; and, below the pearls, a row of oblong jewels. There are four of these jewels;

the front one is smaller than the rest, being foreshortened, but all are quite easily seen. The ear is particularly distinct. The eye is wide open, but there is no pupil; and the eyeball is shaded with three very fine, curved lines. The nose is slightly aquiline, the nostril plainly delineated; the mouth is open, and the expression of the face is pleasant. With the exception of a tiny white space, just below the eye, on the cheek-bone, the whole of the face is shaded all over, with lines of dots, which run from front to back without break. The curl hanging down from the back of the chignon is very dark and inconspicuous, and hangs down to about level with the middle of the space between the mouth and the chin. There is a very strong, dark outline, running from the front point of the base of the neck to where the hair begins, under the chignon. The band of the coronet, containing the pearls, etc., is shaded with vertical lines, rather far apart, from the middle to where it is lost in the hair. The oval containing the bust, and the corners outside the oval, are filled in with beautiful engine-turning. The design is very handsome, and the black stamp, especially, looks almost like a cameo.

First Forgery.

Lithographed, on rather stout, white and yellowish-white wove paper, perf. 13; also on very thin, very white wove paper, unperforated. There is, of course, no watermark. The letters of ST. LUCIA are too short; they come almost as near the upper outline of the containing-oval as in the genuine, but they are much further away from the lower outline. The top of the head does not show out well from the background; indeed, the lines of shading in the background are simply continued over the top of the head, and they are very nearly parallel. The jewels in the centres of the crosses *pattée* are not visible; there is no spot in the upper lobe of the front shamrock, and both this, and the next one to it, are taller than the crosses each side of them. There are eleven easily-counted pearls in the band of the coronet, and there may be two more; but the shading makes it impossible to say for certain whether there are really eleven or thirteen of them. There seem to be only three oblong jewels beneath the pearls. The ear is not at all distinct, and would be overlooked at a first glance. The eye has a distinct pupil, and the eyeball is shaded with some very fine dots. The nose is somewhat more "Roman" than that of the genuine. The mouth is closed, slightly pursed up, and the lower lip pressed in. The expression of the face is slightly vixenish. From the level of the eyebrow to that of the mouth, there is not a single line of shading which runs quite across, from front to back, so that the patch of white between the nose and the cheek is much too large and conspicuous. The curl hanging down from the chignon is too short, and too light in colour. In the genuine, it is three and a half millimetres long, but in this forgery it is only three millimetres; that is to say, it hangs down only to about level with the mouth. The dark outline running round, under the base of the neck, up the back of the neck, to the hair, is not nearly so conspicuous in this counterfeit as in the genuine. In the genuine, the first vertical line of shading across the band of the coronet comes exactly half-way between the second cross and the second shamrock, counting from the front. In this forgery, it begins under the second shamrock. The forgers have tried to imitate the beautiful engine-turning of the genuine, but the attempt has failed lamentably. The bust does not stand out from the rest of the oval in cameo-fashion, like the original does. This is an excessively common forgery, and no schoolboy's album lacks a specimen or two.

Second Forgery.

Lithographed, on stout, hard, white or yellowish-white wove paper, unperforated, rather nicely perforated 13, or very badly pin-perforated to some gauge that I have not been able to count. The S of ST. very nearly touches the outline below it, but is at some distance from the outline above it; the letters of LUCIA are some distance from the outline below them. The top of the head, above the coronet, is rather strongly outlined; which is not the case either with the genuine or with the first forgery. The very top of the head is quite white, as the lines of shading, which ought to go right to the top, stop short half-way, leaving a white space. There are no dark spots in the upper lobes of the shamrocks. The front cross, seen in profile, has no jewel in its centre, and the two front shamrocks (which, by the way, are common trefoils in this forgery) are higher than the cross between them, thus imitating the genuine in this one point. Only eleven pearls can be seen with any certainty on the band of the coronet; and the oblong jewels (which in the genuine, are placed between three ornaments with hook-shaped ends, springing from the base of the band) are, in this forgery, so mixed up with the hooks, that it is quite impossible to say how many jewels there are. There is hardly any indication of the ear. The front of the ball of the eye is darkly outlined, so that it looks almost as though there were a pupil. The eyeball is not shaded at all. The nose is, as nearly as possible, straight in outline. The mouth is open, but not so much so as it is in the genuine; and the lower lip projects rather more than the upper, which is just the opposite of the genuine. The whole front of the portrait, from the forehead to the base of the neck, is absolutely devoid of shading. The curl at the back of the chignon hangs down much too low; it seems to be about four millimetres in length, and is far lighter than the background, instead of being darker. There are no vertical lines of shading on the band of the coronet. The imitation of the engine-turning, in this forgery, is done by dots and blotches; that in the first forgery chiefly by lines.

Third Forgery.

Lithographed, on stout, yellowish-white wove paper, unperforated. This forgery is exceedingly like the one just described; all the tests for the second forgery holding good for this one, except as follows: The letters of LUCIA are almost equidistant from the top and the bottom of the band, but are too far from both. In the genuine, they are as near, or almost as near, to both top and bottom outline as the S of ST. in this forgery is from the bottom outline. Three of the oblong jewels on the band of the coronet can be plainly seen, but the foreshortened front one is absent. The chief difference between this forgery and the one just described is, that, from the ear to the point of intersection of the jaw and the neck, there is a damaged place, as though a terrible gash had been badly sewn up. The curl is more shaded than in the previous counterfeit. With these exceptions, this forgery is exactly like the previous one; and I fancy it may be a later and worse state of the stone.

Fourth Forgery.

Poorly lithographed, on stout, yellowish-white wove paper, unperforated. The S of ST. touches the outline below it, and the C and A of LUCIA touch the outline above them; besides which, the I and A of this latter word touch each other by their foot-strokes. The top of the head is darkly shaded with blotchy lines, and it is outlined as in the other forgeries. There are no dark spots in the upper lobes of the shamrocks. The two front shamrocks are just about level with the cross between them. About

fourteen very small pearls can be made out along the band of the coronet. There are no oblong jewels at all, below the pearls. The back of the ear is well marked, but not the front. The eye is a fair imitation of the genuine, but the eyeball is not shaded at all, and there is a line, apparently one of the upper eyelashes, which goes right across the bridge of the nose, to the front edge of the face. There is a strong line of shading outside the outline of the nose, and the shading to the outline of the base and back of the neck is as strong as in the genuine. The nose is absolutely straight in outline. The mouth is almost shut, and the expression of the face is rather dreamy. The front of the face has no shading on it, except at the chin. There are two curls hanging down from the back of the chignon, the inner one is about four millimetres long, while the outer one hangs down till it nearly touches the bottom of the oval. The forgers have evidently taken for a curl the dark, zigzag line in the engine-turning, just behind the curl, in the genuine. Most of the profile is outlined. There are no vertical lines of shading on the band of the coronet. The engine-turning is composed of dots and blotches.

Fifth Forgery.

This is dreadfully poor and blotchy. Badly lithographed, on stout, very yellowish-white wove paper, perforated 13. The S of ST. touches the outline below it, and there is a great blotch of colour, which breaks into the oval band, just under the little T, from the inner oval. The I of LUCIA has no top and bottom strokes. The top of the head is outlined, and is more than half white, as in the second forgery. The front cross *pattée* has no jewel in it; the shamrocks have no dark spots in their upper lobes, and the left-hand shamrock is tall, and pointed at the top, like a *fleur-de-lys*. It is taller even than the front profile cross, and much taller than the cross and shamrock to right of it. There seem to be about eleven pearls along the band, but they are very blotchy; and there is a zigzag white line below the pearls, the whole way along the band, in place of the four oblong jewels. The ear is blotchy and indistinct; the eye ditto, so that one cannot say whether it is shut or open. The nose is straight. There is a rather strong line of shading outside the front of the face, all the way down. None of the lines of shading run across the face, so that the front of it is quite white. The outline of the forehead is very ragged, and a great piece seems to be taken out of the front of the neck, just below the Adam's apple. The front of the neck is not shaded. I think I need not waste any more time on this very poor counterfeit.

Sixth Forgery.

Lithographed, on medium, very white wove paper, unperforated. The S of ST. very nearly touches the outline below it, while the letters of LUCIA are nearer to the top, than to the bottom outline of the oval band. The I has only a foot-stroke to the right, and the said foot-stroke very nearly joins that of the following A. The top of the head is outlined, and it is shaded, very nearly all over, by almost parallel lines. A straight-edge, laid along the tops of the first and last crosses, would pretty well touch the top of every cross and every shamrock; the shamrocks being distinct trefoils. There are no dark spots in the lobes of the shamrocks. There are twelve round pearls along the band of the coronet, with one more tiny, oblong one to the left, and two shapeless dots or blotches to the right of the row, all of which may be intended for other pearls. There is no real pupil to the eye, but the front outline is rather thick. There are no lines of shading on the ball. The outline of the nose is

straight, except for a slight depression near the point. The mouth is shut, with the lower lip decidedly projecting. The front of the face is not shaded at all, except just at the bottom of the chin. The front of the neck is also destitute of shading. There are a couple of dark, wavy curls hanging from the chignon, as in the fourth forgery. The front of the face is outlined. The thick outline to the back of the neck, etc., is as prominent as in the genuine, in consequence of the whole of the background being very light. There are no vertical lines of shading on the band of the coronet. The engine-turning of the background, etc., is represented by blotches and dots, but no lines.

Seventh Forgery.

I never saw this until lately (1904), and fancy it is quite new. It was probably made by the forgers of the latest Barbados and Trinidad counterfeits. I have the unsurcharged stamps in scarlet, deep blue, and emerald-green; also HALFPENNY, in black, on yellow-green; ONE PENNY, in dull red, on grey-black; and 2½ PENCE, in black, on vermillion. I take them all here without separating the surcharged ones, as the design is the same in all. Engraved, in *taille-douce*, with the ink standing out in positive ridges, on thick, white wove paper, "watermarked" with *impressed* crown and CA, perforated variously, 10½, 11½, 12, and 12½. The lines on the top of the head are not curved, as they are in the genuine, but perfectly straight; and they are all drawn down obliquely from left to right. The first five ornaments on the coronet are decidedly taller than those towards the back of the head; these latter being lower, and more faintly drawn. There is no spot in the upper lobe of any of the shamrocks, which, by the way, are much more like *fleurs-de-lys* in this counterfeit than they are in the genuine. I can only make out fourteen pearls below these ornaments. As to the jewels, below the row of pearls, two are circular, and the other three are oval. The lines of shading above the eye are continuous, instead of being dotted. The outline of the upper lip slopes towards the chin, instead of curving outwards; and the lower lip is sharply pointed, instead of being rounded. The dark outline of the back of the neck is very thin, hardly one-fifth of the thickness of the genuine. This is an easy test. The beautiful, engine-turned patterns of the corners and of the central medallion is represented by scratchy, wavy vertical lines, of no particular pattern. The oblique lines of shading in the cut-off base of the neck are very coarse. In the genuine, there are about twenty-nine of them, but there are only about twenty-six in this forgery. The outline round the whole stamp is quite visible in the genuine, but, in this forgery, it can only be made out at the base of the stamp.

POSTMARKS.

Genuine.—1; 54.

First Forgery.—22; also a set of eight parallel bars, placed very close together; also 54, something like the genuine, but smaller, and with a blank centre.

Second Forgery.—The eight parallel bars; also 100.

Third Forgery.—Pen-stroke, or uncanceled.

Fourth Forgery.—Pen-stroke.

Fifth Forgery.—The parallel bars; also 100.

Sixth Forgery.—Pen-stroke.

Seventh Forgery.—Uncanceled.

ST. PIERRE AND MIQUELON.

Issue of 1885. Commerce type of French Colonies. 4 c., purple on lilac, surcharged "5 SPM," as in the illustration.

Genuine.

I have only one specimen, and do not know whether the surcharge is always the same or not. The centre of the 5 is rather to the right of the centre of the P. The head of the 5 is just 5 mm. wide. The bottom of the 5 is $3\frac{1}{2}$ mm. above the level of the top of the lower inscription. The ends of the head and tail of the S are cut off straight and obliquely, with no trace of rounding. The ink is dull and dry-looking.

5

S P M

Forged.

The size and shape of the letters have been very accurately copied. I have only one specimen, which I have only lately seen (1905). The 5 is exactly above the S, and its head is about $5\frac{1}{2}$ mm. wide. The bottom of the 5 is $8\frac{3}{4}$ mm. above the top of the lower letters. If this is always the case, it will be an easy test. The ends of the head and tail of the S are cut off rounded. The ink is more greasy-looking than the genuine.

POSTMARKS.

Genuine.—29, with inner circle dotted.

Forged.—The surcharge is on a stamp with genuine cancellation.

SAINT THOMAS AND PRINCE ISLANDS.

Issue of 1869.

Thick white wove, enamelled paper; perf. $12\frac{1}{2}$.

5, 10, 20, 25, 50, 100 Reis.

Issue of 1870-85.

Ordinary white wove paper, varying in thickness; perf. $12\frac{1}{2}$, $13\frac{1}{2}$.

5, 10, 20, 25, 40, 40, 50, 50, 100, 200, 300 Reis.

Genuine.

Engraved in *épargne*, on moderately thick, yellowish-white wove paper; perforated $12\frac{1}{2}$. There is an accent to the E of THOMÉ, but none to the following E. The central jewel in the band or circlet of the coronet is diamond-shaped; the others, on each side of it, are oblong. The letter (and word) E, between THOMÉ and PRINCE, has its bottom half considerably larger than the top half. The E of THOMÉ is similarly shaped. The line under CORREIO, and the line above REIS, are drawn right across, from one outer boundary-line to the other, touching both. The arches of the crown bear a number of pearls—nine on the left-hand arch, eleven on the next, five on the centre arch, eleven on the

next, and nine on the right-hand arch. The corner-ornaments are of a peculiar shape, rather difficult to describe (see illustration of the 20 reis, page 311). Imagine two capital E's, placed face to face, a little distance apart, with the central tongue of each lengthened, until they join the two letters together, and with a vertical cross-bar where the two tongues join. This is the shape of the ornaments in the corner-squares as nearly as I can describe it.

First Forgery.

Lithographed, on soft, thin, very white wove paper; badly perforated 12½. The E of THOME is not accented. The jewels in the circlet of the crown are all diamond-shaped. The E between THOME and PRINCIPE is very nearly the same size, both at the top and the bottom; the E of THOME is also the same size, both top and bottom. The line under CORREIO, and the line above REIS, only reach as far as the inner boundary-line, and they do not touch the outer line at all. The first arch of the crown on the left-hand side has six pearls, the next arch has seven, the central arch has four, the next has seven, and the right-hand arch has five. The dots surrounding the central design are separate, and of various shapes and sizes; whereas, in the genuine, they seem to be touching each other, and are all more or less diamond-shaped.

Second Forgery.

Lithographed, on the same paper as that of the first forgery; perforated 12½. The E of THOMÉ is properly accented, like the genuine; and the line below CORREIO, and the line above REIS, go right across, from one outer boundary-line to the other, touching both, as in the genuine. The chief difference is in the corner-ornaments. In this forgery they are not in the least like two E's joined face to face. To describe them I should say: Imagine a cross, with the arms proceeding in the usual manner for a little distance, and then each arm being bent three times to the left, the bends being rectangular, in the Etruscan style. Only three of the corner-ornaments are of this shape; the fourth is a sort of compromise between the shape of the genuine and that of the forged. The left-hand arch of the crown bears nine pearls, the next has ten, the central arch has four, the next has eleven, and the right-hand arch has nine. The letters of the word CORREIO touch the boundary-line above them, and the word REIS only occupies about half of the label containing it, leaving the other half for the numeral of value; whereas, in the genuine, the word and the numeral are equally spread out. The dots in the circle round the crown are nearly all oblong, instead of being diamond-shaped.

Third Forgery.

This is new. Fairly lithographed, on rather stout, very white wove paper; very badly perforated 13. There is no accent to the E of THOME, but, on the other hand, there is a very distinct accent to the following letter (and word) E, which is not found in the genuine, or in the other forgeries just described. The letters of the name, though tolerably like the genuine in shape, are too thick. The bottom half of the accented E, between THOME and PRINCIPE, is the same length as the top limb, instead of being longer; and it is not of the same shape. The horizontal line below CORREIO and the line above REIS do not go right across, from outer boundary-line to outer boundary-line, but simply end at the inner boundary-line on each side, as in the first forgery. The pearls are also the same as in the first forgery. The ornaments in the corners are very like the genuine, but the one in the left lower corner is frequently rather blotched: and they give one the idea of being smaller than the

genuine, and do not fill up the corner-square so well. The dots in the circle round the crown are almost all oblong, instead of diamond-shaped. The white place inside the last O of CORREIO is rectangular, instead of oval, *i.e.*, it has the ends cut off quite square. There is a fault in the Etruscan pattern, above the first stroke of the R of REIS, which does not appear in the genuine, or in any of the other counterfeits.

POSTMARKS.

Genuine.—The genuine, especially the enamelled paper series, are not very commonly found postmarked. I have one which bears a very large, long oval, containing some undecipherable characters; and another, consisting of an oblong frame, containing name, etc., and with the corners of the said frame squared off.

First Forgery.—A small, oval gridiron, like 22, containing six parallel bars. Also 54, with blank centre.

Second Forgery.—A set of six long, thick, parallel bars like 80. Also 54, with blank centre.

Third Forgery.—54, with blank centre.

SAINT VINCENT.

Issue of July, 1877. Perforated 11 to 12½; 4d.

Issue of Oct., 1878. Clean-cut perforation, 15; 6d.

Issue of June, 1880. Perforated 11 to 12½; 1d., 6d., 1s.

Genuine.

Engraved in *taille-douce*, on stout, yellowish-white wove paper; perforation, etc., as in the above list, according to the date of issue.

The head is beautifully engraved, the expression being rather solemn. There is a *very* thick and heavy, dark outline behind the neck, running down below the base of it to the front, and a similar line behind the back of the head and curl. The nose is slightly aquiline, and the face and bust are shaded all over, except a small portion, below the eye. The lines of shading on the top part of the head, which shows above the coronet, are not parallel, but radiating. The oval frame each

side of the bust is composed of very fine white lines, forming a sort of lattice-work ; and the diamond-shaped spaces between the white lines of this lattice-work are not solid, but filled up with crossed, oblique, dark lines of shading. The groundwork, outside this lattice-work oval, is formed by numbers of interlacing, white, semicircular lines, scratched out of a dark background. Five oblong jewels can be made out at the base of the coronet, and fifteen pearls above the oblong jewels. The T of ST. has its vertical stroke very nearly as wide as those of any of the other letters ; and the stop below it is square, and quite as wide as the vertical stroke of the said T. The long curl which hangs down behind the head is particularly clear and distinct.

First Forgery.

Lithographed, on rather stout, very white wove paper ; no watermark ; perforated 13. The head is very poorly printed, and the expression of the face bad-tempered and sour. The thick outline behind the neck, below the neck, and behind the head, is hardly visible. The nose is straight. There are several white, unshaded patches on the face and neck. The lines of shading on the top of the head, above the coronet, are all parallel. The frame of the oval, each side of the bust, forms a very coarse lattice-work ; and the spaces between the lines of this lattice-work are filled up with solid colour, instead of crossed, dark lines. The groundwork of the spandrels, outside this lattice-work oval, is composed of coloured dots, on a white ground, without any particular design or pattern. The row of jewels cannot be made out, and there are thirteen pearls above where the oblong jewels ought to be. The T of ST. has its vertical stroke *very* much thinner than those of the other letters of the inscriptions ; and the stop below it is an upright oblong, and sometimes is almost oval or rounded, the same width as the vertical stroke of the T. The long curl which hangs down behind the head is hardly visible at all, at first sight.

Second Forgery.

Lithographed, on extremely stout, buff wove paper, tinted greenish on the face ; no watermark ; unperforated. Of this forgery I have only the SIXPENCE, and it looks a very old counterfeit, though I have but lately come across it (1892). The thick line of shading which runs down the back of the neck and under the base of the neck is fairly well imitated ; but it vanishes off to nothing before reaching the very front, bottom point of the neck ; whereas the said thick line, in the genuine, is blunt at the front end, and reaches slightly beyond the front peak of the bottom of the neck. The whole portrait is almost entirely destitute of shading, except for a sort of very faint whisker. The expression of the face is truculently sulky. This is a curious combination, but it exactly expresses the look on the face. The eye is exceedingly small, and apparently shut, with heavy eyelashes ; and there is a very dark and heavy, forked eyebrow. In the genuine, the eye is wide open, and the eyebrow very slightly marked. The top of the head, above the coronet, does not seem to have any lines upon it at all. The oval frame, round the portrait, is very badly done ; the lines are very much too thick, and on the right side very irregular and confused in the pattern ; though the said pattern is, in the genuine, exactly the same on both sides. The diamond-shaped spaces, between the lines of this lattice-work, are perfectly solid on the left side, though those on the right side show some scratchy lines in them. No jewels can be discerned, with any certainty, at the base of the coronet, and there are only eleven pearls above where the jewels ought

to be. In my specimen, the name is hidden by the postmark; but, as far as I can make out, there is a tiny, dark and roundish stop under the small *t* of *ST*. The long curl, pendant from the back of the head, has rather an *S*-form, and the bottom end points out to the right, instead of hanging straight down. I do not think this forgery is at all likely to deceive any but the very ignorant or careless.

POSTMARKS.

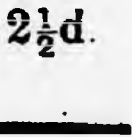

Genuine.—1; also 54, containing the colony-letter and number, "A 10."

Forged.—54, with a blank centre; also 62.

Issue of 1890. 2½d., surcharged on 4d., lake-brown.

This is rather a scarce stamp. The forgers have imitated the surcharge fairly well, except in one particular. The counterfeit surcharge is, of course, placed on genuine stamps.

Genuine Surcharge.

The large 2 is fully 4¾ mm. high, and its tail, which is not *very* sharp, points directly upwards, so that, if prolonged, it would just graze the outside of the thickest part of the back of the numeral. The fraction-line is 3 mm. long. The head of the little 2 does not curl inwards nearly so much as the head of the large 2, and the foot of the said little 2 is as thin as the rest of the numeral, and perfectly straight, without any turned-up end. This is the easiest test.  The whole fraction is 5¾ mm. high. The illustration gives a very good idea of the surcharge.

Forged Surcharge.

The large 2 is 4½ mm. high, and its tail is *very* sharp, and curls inwards, so that, if prolonged, it would cut into the centre of the numeral. The fraction-line, as far as I can make out through the postmark, is 2½ mm. long. The head of the little 2 of the fraction curls inwards like that of the large 2, and the foot is much thicker than the rest of the numeral, and turns up at the end, with a wedge-shaped point. The fraction is 6¼ mm. high.

POSTMARKS.

Genuine.—1.

Forged.—This bears a genuine postmark.

SALVADOR.

Issue of 1867. $\frac{1}{2}$, 1, 2, 4 Reales.

Genuine.

Finely engraved in *taille-douce*, on stout, white wove paper, the face of which usually appears to be slightly smeared with the same tint as the design.

In the $\frac{1}{2}$ REAL, the background, outside the central oval, is entirely filled up with vertical rows of the fraction " $\frac{1}{2}$ " very often repeated.

In the 1 REAL, the said background is composed of repetitions of the word "UN."

In the 2 REALES, the background is formed by repetitions of the word "DOS."

In the 4 REALES, the background is filled up with repetitions of the figure "4."

I only give this single test, as it will be found amply sufficient for the detection of the counterfeits, which are very poor.

Forged.

Poorly lithographed, on thinnish, white wove paper; unperforated, and also perforated 12. In all the values, the background, outside the central oval, is composed of a sort of plaid or tartan pattern of wavy, crossed, vertical and horizontal lines, not in the least like the figures and words of the genuine.

POSTMARKS.

Genuine.—A number of black dots, apparently intended for *fleurs-de-l'ys*; also a thick circle, containing a monogram of the letters SS, in large, ornamental characters; also a set of initials, in pen-and-ink; also a plain pen-stroke; also 16 and 90.

Forged.—10; also a circle, containing unreadable letters; also 54 (centre blank).

NOTE.—These forgeries are extremely common, and yet one would think that the youngest collector could not possibly be deceived by them, especially if he had ever seen one of the beautifully-executed originals.

I have never met with any forgeries of the surcharged stamps.

SAMOA.

I had some counterfeits in my forgery-album when the second edition of this book appeared, but could not describe them, for lack of undoubtedly genuine originals to compare with them. Possibly some of my readers may not be aware that these stamps were not a Government issue, but were used as a private post, for the conveyance of letters between Apia and the neighbouring islands and New Zealand. The dates of issue are: 1d., blue; 3d., vermilion; 6d.,

mauve, all December, 1877; 9d., red-brown, May, 1881; 1s., ochre-yellow; 2s., chocolate-brown; 5s., emerald-green; all July, 1878. The 1d. was issued in sheets of twenty stamps, and the other values in sheets of ten, as in the cuts:—

1	2	3	4	5
6	7	8	9	10
11	12	13	14	15
16	17	18	19	20

1d. values.

1	2	3	4	5
6	7	8	9	10

Higher values.

As the outsides of the sheets were not perforated, it will be seen from the above that, in the 1d. value, Nos. 1 and 5 have the top and one side imperforate; 16 and 20 have the bottom and one side imperforate; 2, 3, 4, are imperforate at the top; 17, 18, 19, are imperforate at the bottom; 6, 11, 10, 15, are imperforate on one side; while 7, 8, 9, 12, 13, 14, are *perforated all round*, being in the middle of the sheet. As there are only ten stamps on the sheets of the other values, it is evident that every stamp must show at least *one* of the four sides imperforate, *i.e.*, 1 and 5 are imperforate at the top and one side; 6 and 10, imperforate at the bottom and one side; 2, 3, 4, imperforate at the top; and 7, 8, 9, imperforate at the bottom. With regard to several original sheets, now before me as I write, and purchased at Apia, at face-value, while current, some of them have the perforations cleanly cut, though with holes missing here and there. These have evidently been gummed first, and perforated afterwards. The other sheets have the perforations very rough and ragged, though of the same gauge, and have been perforated first and gummed afterwards. As to these latter ones, I fancy their roughness has been aggravated by their being dry-pressed in numbers, after they were perforated and gummed, the perforating-needles having left a "burr" round each hole. These burrs have, as it were, embossed themselves from one sheet to another, making some of the sheets look as though the needles had come down once and failed to penetrate, and had then perforated the stamps in a slightly different place.

Issue of 1877-81. 1d., 3d., 6d., 9d., 1s., 2s., 5s.

Genuine.

Lithographed, on medium, white wove paper, perforated 12 and 12½ (not 13, as stated in the Philatelic Society's Catalogue) on two or three sides only (except, as stated, Nos. 7, 8, 9, 12, 13, 14 of the 1d. value), the other side or sides being unperforated, in consequence of the sheets not being perforated round the edges. The stamps are just 20 mm. wide, from outline to outline. The dots in the arch above SAMOA are very small, the eleventh from the left is decidedly to the left of the first A of that word; so that, if the point of the A were supposed to be prolonged upwards, it would pass to the right of the said eleventh dot.

The head-stroke at the right top corner of the M is thin, bent obliquely downwards, and does not touch the dot above it. The curly, tendril-like ornaments, at the ends of the SAMOA label, are thick and clumsy, being considerably thicker than the thickest part of the S of SAMOA. The dark balls on the white arch below SAMOA, and in the similar, inverted white arch below EXPRESS, are small, so that most of them show a good space of white above and below them; *i.e.*, they are not nearly so wide as the width of the arched bands containing them. The ball under the centre of the M of SAMOA and the two immediately to the right of it are decidedly closer together than any of the other balls. The ball under the EX of EXPRESS does not touch the dark line which crosses the end of the containing-band; and the ball under the SS of that word only just touches the dark line across the end of the band. The word EXPRESS is on a ground of parallel, horizontal lines; and there are thirteen of these lines, counting at the left-hand end of the label, between the border and the first E, reckoning all the lines. The lowest line, on which the E stands, is drawn short, in all my copies except one, so that it does not touch the inner, left-hand outline of the stamp. There are fourteen of these horizontal lines, if counted between the ES of EXPRESS. The X of this word has the limb which runs down from right to left, slightly broader than the other. The curly ornaments above and below EXPRESS are very thick, almost as thick as the upright stroke of the P. There is a very decided white ball at the left-hand end of the upper ornament, above XP; but the five other curls of this ornament end in balls and not in hooks, though the balls are not so decided as the one mentioned. In the centre of this ornament, above the R of EXPRESS, there is a white dot of a more or less *triangular* shape. There are three graduated white dots in the dark background above the STA of POSTAGE, the outer one being much the largest; and there are three larger white dots, not graduated, in the dark space above the ENN of PENNY (or the PEN of PENCE, or the LIN of SHILLING, etc.). These dots are so distinct that I can see them plainly when I hold the stamp at the full reach of my arm. The outline of the stamp is thicker on the right side than on the left. There is a white ornament, like an S, in the dark background, above the PO of POSTAGE; the tail goes off to a blunt point, just above the O, and there are four white dots from the end of the tail to the top corner of the said label, above the P, forming a sort of continuation to the tail.

First Forgery.

Lithographed, on medium, white wove paper, perforated 11. There is a 2d., dull rose, in this set, which is imitated from a still-born stamp of that value, prepared for issue. The said 2d. did not exist in the original set. The gum is very shiny and glistening on these forgeries, much more so than on the originals or reprints; it looks almost like white varnish. The stamps are perforated on all four sides. I do not know how many stamps there are on the sheet. The stamps are only 19½ millimetres wide, instead of 20 millimetres. The dots above the letters of SAMOA are very much more distinct than in the genuine; the eleventh from the left is very nearly above the point of the A of SAMOA, so that if the said A were prolonged upwards it would touch the dot. The head-stroke at the right top corner of the M is thick, and not bent downwards at all; in some copies, it touches one of the dots above it. The tendril-ornaments at the ends of the SAMOA-label are very thin, being thinner than the thickest part of the S of SAMOA. The dark balls on the white arch, below SAMOA, and on the inverted white arch, below EXPRESS, are all *too large*, almost filling up the width of the said arches. There is no particular crowding together of the balls under the M of SAMOA.

The ball under the EX of EXPRESS touches the dark outline of the end of the arched band containing it ; and the other end of the arch, under the SS of EXPRESS, shows only about half a ball, instead of a whole one. There are only twelve horizontal lines before the E of EXPRESS, the lowest of them being drawn to touch the outline like the rest. There are only thirteen, instead of fourteen, of these lines between the ES of EXPRESS, as the two upper lines are blotched together into one single, thick line. Both limbs of the X are of exactly the same width. The curly ornaments, near the centre of the stamp, above and below EXPRESS, are very much thinner than the width of the upright stroke of the P. There is a white ball at the left-hand end of the upper ornament, above XP, and the other five curls of this ornament seem to end in hooks, instead of balls. The white dot in the centre of the ornament, above the R of EXPRESS, is *very* small, and quite round. The three white dots in the dark background, above STA of POSTAGE, are *very* small and faint, so that, at the distance of a foot, they are well-nigh invisible ; the left-hand one is slightly larger than the other two. One of my specimens (the 2s.) shows *four* dots instead of three. The three similar white dots (above the ENN of PENNY, etc.) are very small also, the two end ones being larger than the central one. The outline of the stamp is equally thick all round.

Second Forgery.

Lithographed, on thick, rather hard, white wove paper, backed with smooth white gum, perforated $11\frac{1}{2}$ (nearly). The stamps are generally perforated all round, but one or two of my specimens show a side, or two sides, unperforated. They measure $19\frac{3}{4}$ mm., or sometimes very nearly 20 mm. across, from outline to outline. The dots in the arch above SAMOA are more distinct than in the genuine, and the point of the A runs right into the eleventh dot, which is exactly above it. The head-stroke at the right top corner of the M is thick, stumpy, and straight. The curly, tendril-like ornaments at the ends of the SAMOA label are a little thicker than the genuine, and the white projections in their centres, instead of being something like commas, as in the genuine, are balls. The dark balls on the white arch below SAMOA, and on the similar inverted white arch below EXPRESS, are small, even smaller than the genuine, though one or two in the lower arch are larger than the rest. The balls under the M of SAMOA are no closer together than any of the others ; this is a good test, because the crowding together of the two balls under the M is a striking characteristic of the genuine. The ball under the EX of EXPRESS is further away from the outline above it than the genuine : and the ball under the SS, at the other end of the arch, does not touch the outline above it. There are thirteen parallel, horizontal lines before the E of EXPRESS, and the second line from the top, *i.e.*, the first short line, has been drawn too long, and cuts slightly but distinctly into the E. This is another easy test, but for those who have not very good eyes, it requires a microscope to see it. The lowest line, on which the E stands, joins the edge of the stamp, as in the first forgery. There are only thirteen horizontal lines to be counted, between ES of EXPRESS. Both limbs of the X are about the same width. The curly ornaments, above and below EXPRESS, are very much thicker even than the genuine, and the white dot in the centre of the ornament, above the R of EXPRESS, is large, prominent, and quite round ; indeed, it is just about the size of one of the dark balls in the arch above it. The three white dots in the dark background, above the STA of POSTAGE, are very nearly the same size ; and the outer dot on the other side is rather like a comma, upside down. In the dark background, just above the PO of POSTAGE, the S-shaped ornament has a thick, stumpy, square-ended tail, which reaches just to the level of the begin-

ning of the POSTAGE label, and there are, of course, no dots to the left of the tail. Both in the genuine and the first forgery, there are two little dark dots below the value-label, at the inner point of each of the dark triangles, at the bottom of the stamp. These four dots are absent in this forgery. The general appearance of this second counterfeit is really better than the genuine, and much better than the first forgery. I do not fancy this counterfeit has ever been described before.

POSTMARKS.

Genuine.—The only cancellation which I possess is the date in pen-and-ink ; but I believe 29 exists.

First Forgery.—All my specimens are uncanceled.

Second Forgery.—I have a specimen which bears 1, but this forgery is seldom found postmarked.

REPRINTS.

This book does not, of course, profess to deal with reprints, but I think no article on Samoa would be complete, without a reference to them. I do not know how many different times they have been reprinted, but I fancy at least four times ; the last in 1892, when 100,000 sets (800,000 stamps) were struck off. Of the reprints now before me, some are perforated 12½, on rather thin, somewhat transparent paper, and others perforated 12, on stouter paper, not so transparent. In both lots, some are perforated all round, and others on two or three sides only. These reprints have destroyed almost all philatelic interest in the Samoan stamps, just as was the case with the Heligolands. A full account of the reprints will be found in Mr. Bacon's excellent work.

SAMOS.

BOGUS STAMPS.

5, 10, 20, 40 Paras ; (1 Piastre ?) 2, 5, 25 Piastres.

I mention these, lest anybody should be taken in by them. The design is a coarse copy of the current Turkish, with the back of an envelope (*à la* Hungary) inside the crescent, bearing the value, SAMOS, at the top of the stamp, and EMP. OTTOMAN, in large letters, in the band below the crescent, and PARAS or PIASTRES, in equally large letters, at the bottom. They are typographed (*electro-clichés* ?), on medium, white wove, and also on white laid paper. The design is the same for all, and the value is printed in black for the paras, and in red for the piastres, on the little envelope. In the set before me (which are stuck on a piece of paper bearing the printed address, N. THALLASINOS, Carlovassi, Ille [*sic*] de Samos) the lower values are uncanceled ; but all the piastres are cancelled with postmark 58, in blue.

SARAWAK.

BOGUS VALUE.

Three Cents, brown on yellow, of 1871 (type of the illustration), surcharged **TWO CENTS**

This stamp, 2 c. on 3 c., has been listed in the catalogues, but the surcharge is now admitted to be bogus.

POSTMARKS.

All my specimens have a diagonal cancellation, of SARAWAK P.O., in thin, block capitals, in an oblong frame, struck in black, together with the London postmark, 1, struck in red, and inscribed LONDON, or LONDON. P.O., with various dates in '76.

SAXONY.

Issue of 1850. 3 Pfennige, red.

In the second edition of this work, there were only four forgeries of the 3 pfennige enumerated. In the time that has since elapsed, no fewer than eleven different counterfeits have found their way into my forgery-book. As only half a million copies were printed, and 463,078 of these sold (the rest being burnt at Leipzig, in December, 1851, by order of the government), the stamp has always been scarce, and is now worth about £10 unused, and £6 to £7 used.

Genuine.

Engraved in *épargne*, on thinnish, white wove paper, yellowish gum. There is a stop after FRANCO, but none anywhere else. In each corner, there is a white, four-petalled flower, containing a sort of St. Andrew's cross. In each petal of the flower in the left top corner there is a curved, coloured line, opposite to that point of the cross which runs into the petal, and the right, lower arm of the cross is shorter than the other three. In the other three corners of the stamp, only three of the arms of each cross have the curved line opposite to them,—the curved line which ought to be opposite to the left upper arm of each cross being absent. I must note here that, in all the specimens that I have examined, the curved line opposite to the right upper arm of the cross in the right top corner of the stamp is very imperfect, being not much more than a mere dot. The feet of the R and E of DREI almost touch, and there is a little break in the thin, inner outline of the side-frame, exactly opposite the foot of the I. In the word SACHSEN, the foot of the A almost touches the S; it is crossed rather low down, and has its head cut off square. The head- and foot-strokes of the H do not touch each other, and the S and N are equidistant from their respective ends of the label. None of the letters

of PFENNIGE touch each other anywhere, the G is of the usual shape, and the final E leans perceptibly over to the left. In the word FRANCO, the feet of the R and A are joined; the A is cut off very square at the top, and is crossed very low down; the feet of the A and N are also nearly or quite joined. The outer line of the stamp, all round, is very much thicker than the thin, inner line, which runs parallel with it. The lettering is slightly sunk into the paper. The ornamentation in the large central numeral consists of numerous repetitions of a tiny 3; these are often placed face to face, with the stop between (ε·3). For instance, in the thin tail of the numeral, over the letters RA of FRANCO, may be seen ·ε·3·ε·3. These may be easily seen with the microscope. The end of the central tongue of the large 3 is about $1\frac{1}{2}$ mm. wide. It is cut off rather obliquely, so that a card, laid along the edge of the said end, would graze the top and bottom of the H of SACHSEN, and the left foot of the A of FRANCO. The background, behind the large 3, is formed by horizontal, wavy lines. At first sight, there does not seem to be any particular pattern in these lines; but when closely examined, they will be seen to form numberless transverse ovals, each oval containing either one or two short, horizontal lines. At the very top edge of this background, there is a small white oval, or diamond, under the C, and a similar one under the S of SACHSEN, each side of the head of the large 3; these ovals have no lines in them.

First Forgery.

In many respects, this is the best-looking of all the counterfeits in my book. Nicely lithographed, in rather bright rose-red, on stout, yellowish-white wove and on thinnish, yellowish-white laid paper. The crosses in the corner-flowers have no curved lines opposite to *any* of their points. (This is a very easy test.) The feet of the R and I of DREI do not touch, and there is no break in the inner frame-line, opposite to the foot of the I. The foot of the A of SACHSEN is not near the S, and the inner feet of the said A appear to be joined. The foot-strokes of the H are joined into one line. The letters NI of PFENNIGE are firmly joined together at the top, and the final E is quite upright. The top of the A of FRANCO slopes obliquely down to the left, instead of being cut off squarely; and the cross-bar also slopes down to the left, instead of being horizontal. The feet of the A and N are not joined. The outer frame-line of the stamp is no thicker than the inner one, parallel with it. The lettering is not at all sunk into the paper. The tiny numerals, filling up the large 3, are fairly like the genuine, but those in the thin tail of it, above the RA of FRANCO, are '3333, instead of ·ε·3·ε·3. The front end of the central tongue of the 3 is obtusely pointed, as the terminating line slopes down to the left, as far as the centre of the tongue, and then slopes down to the right, for the rest of the way (<). None of the little transverse ovals in the pattern of the background have any horizontal lines in them. The two ovals at the top edge, above the head of the 3, are so very small as to be undistinguishable.

Second Forgery.

Lithographed, in orange-red, on very stout, *very* yellowish-white wove paper. In some specimens, the curved line opposite the left upper ray of the St. Andrew's cross in the left lower corner of the stamp is absent, or incomplete, and the right upper ray and the line opposite to it, of the cross in the right top corner of the stamp, are also absent; but usually the crosses and lines are the same as in the genuine. The feet of the R and E of DREI are far apart, and there is no break in the line, opposite

to the foot of the 1. The foot of the A of SACHSEN does not go near the S, and it is crossed rather high up. There is a stop after PFENNIGE, which is an easy test. The cross-bar of the G very nearly touches the final E, which is quite upright. The A of FRANCO is very sharply pointed, and it is crossed in the centre. The A and N are not joined. The outer line of the stamp is not more than twice as thick as the inner line, instead of being three or four times as thick. The little numerals filling up the 3 are very small. As far as I can make out, those in the tail are 3E3E, but they are difficult to see. The end of the central tongue of the 3 is about $1\frac{1}{2}$ mm. wide; it is cut off squarely, and a card laid along the front edge of it would cut centrally through the C of SACHSEN and the A of FRANCO. The wavy lines of the background are much finer than in the genuine; the pattern is not decided enough to allow of details being given.

Third Forgery.

Lithographed, in dull scarlet, on rather stout, yellowish-white wove paper. The St. Andrew's crosses are the same as the genuine. The feet of the R and E of DREI are far apart, and there is no break in the line, opposite to the foot of the 1. The A of SACHSEN is crossed rather high up, and its foot is not near the S. The final E of PFENNIGE is upright. The F of FRANCO leans over very slightly towards the R, and the A is crossed in the centre, and rather rounded at the top. None of the lettering is sunk into the paper. The small numerals in the thin part of the tail of the 3, over the RA of FRANCO, are illegible. The end of the central tongue of the 3 is cut off vertically; and a card, laid along it, would cut centrally through the C of SACHSEN and the A of FRANCO. The wavy lines of the background are fine, and blotched in many places. No ovals can be traced in the pattern; and the two oval spaces, or diamonds, each side of the head of the 3, in the upper edge of the background, are too small to be noticeable.

Fourth Forgery.

Lithographed, in dull rose, on rather stout, hard, yellowish-white wove paper. There is a misshapen blotch after FRANCO, many times larger than a normal stop. Each St. Andrew's cross has a curved line opposite to all its four corners, and most of the arms of the said cross are very stumpy. The I of DREI has a foot-stroke on the right side only, instead of both sides, and there is a *large* break in the thin, inner outline, not opposite to the centre of the foot of the 1, but too much to the right. The A of SACHSEN is crossed ridiculously too high up, and its left foot runs right into the bottom of the S. The N is rather too far from the end of the label. The P of PFENNIGE leans over very decidedly, away from the F; a test by which this particular forgery may be easily identified. The G is of a very ugly shape, the tail being clumsy, and curving somewhat inwards. The final E is upright. The top of the A of FRANCO is slightly oblique, and it is crossed in the centre. The lettering is not sunk into the paper. The ornamentation in the thin tail of the 3 is not sufficiently distinct for description. The end of the central tongue of the said 3 is far too thin; it is only about $\frac{1}{2}$ mm. wide where it is cut off, and the cut-off end is slightly rounded. The background is an easy test; it is a network of distinct, large, outlined lozenges, or diamonds, with three or more horizontal lines in each lozenge. A vertical row of seven lozenges can be counted, at the left-hand edge, opposite to DREI. A more or less distinct network of diamonds is also to be found in several of the other forgeries, to be hereafter described, but they are more distinct in this present counterfeit than in any of the others.

Fifth Forgery.

Lithographed, in a rosy vermillion, on rather thin white wove paper, which has the face coloured with an almost buff wash. There is no stop after FRANCO. All the St. Andrew's crosses have lines opposite to *all* their arms, and almost all of the said lines are straight, instead of curved. The right upper arm of the cross in the right top corner of the stamp is joined to the line opposite to it, and so is the right upper arm of the cross in the right bottom corner of the stamp. (This is not the case with the genuine.) The feet of the R and E of DREI do not go near each other, and in my single specimen, there is a round dot, issuing from the centre of the base of the I. There is no break in the line, opposite to the base of the I. The top of the A of SACHSEN is bent over a little to the right. There is an oblique line, joining the A to the back of the E. The N is too far from the end of the label. The F and E of PFENNIGE touch each other, and there is a semicircular line, joining the tops of the G and the final E. (This last test will easily identify this present forgery.) The tail of the C of FRANCO appears to be split, and the feet of the A and N do not touch. The outer and inner lines of the frame are exceedingly close together, though, in the genuine, there is plenty of room to draw another line between them. The lettering is not sunk into the paper. In the large numeral, the ornamentation is very different from the genuine, as the head of each little 3 is mostly joined to the tail of the next, making a sort of leafage. The central tongue is very narrow, the point being less than $\frac{1}{2}$ mm. wide. It is cut off rather obliquely, but sloping down to the right, instead of to the left. The background shows a lattice-work of diamonds, each containing from two to four horizontal lines, much as in the fourth forgery, but they are not quite so prominent, and the vertical row at the left side, near DREI, shows five of these diamonds, with part of a sixth at the top.

Sixth Forgery.

Lithographed, in light orange-red, on rather thick, white wove paper. There is an extremely faint stop after FRANCO, which might be easily overlooked. The St. Andrew's cross in the right top corner of the stamp has no curved lines opposite to its two upper rays, but all the rays of all the other crosses have the lines. The R and E of DREI do not touch each other, and there is no break in the line, opposite to the foot of the I. The foot of the A of SACHSEN does not go very near the S; it is crossed above the centre, and is not broad enough at the top. Both head and feet of the H appear to be joined, and the N is much too far from the end of the label. The final E of PFENNIGE is upright. None of the letters of FRANCO touch each other in my specimen, and the N has a line across its base, joining the feet together. The lettering is not sunk into the paper. The ornamentation of the central numeral will identify this counterfeit at once, as it chiefly consists of little commas. The end of the tongue of the 3 is about $\frac{3}{4}$ mm. wide, and it is cut off, as nearly as possible, vertically. The horizontal lines, forming the background, are nearly straight, instead of very wavy, and they are very much closer together than the genuine. There is no pattern in these lines.

Seventh Forgery.

Lithographed, in a sort of rosy pink, on very stout, rough, white wove paper. There is no stop after FRANCO. *All* the rays of all four crosses have curved lines opposite to them, and all the said lines are so much

curved as to be almost semicircles. None of the letters of DREI touch each other, and there is no break in the line, opposite to the foot of the I. The A of SACHSEN is very sharply pointed at the top; the foot of the H very nearly touches the S, and the N is much too far from the end of the label. My specimen is rather damaged in the word PFENNIGE, but I don't think any of the letters of the said word touch each other, and the G has an ugly and clumsy tail, bending rather inwards, as in the fourth forgery. The top of the A of FRANCO is sharp, and its right foot does not go very near the N. The two outlines of the frame are closer together at the top and bottom, than they are at the sides. The lettering is not sunk into the paper. The ornamentation of the central numeral will identify this counterfeit, as it apparently consists of a number of wriggling eels. The tongue of the 3 is less than $\frac{3}{4}$ mm. wide at the end, and the said end is rounded. The background is composed of rather large, outlined, horizontal ovals, each oval having a smaller and similar oval in its centre.

Eighth Forgery.

Lithographed, in rose-red and dull red, on medium, white wove paper, which sometimes has its face coloured by a buff or a pinkish wash. There is no stop after FRANCO. There are lines opposite to all the arms of all the crosses, and most of the said lines are nearly straight. The feet of the R and E of DREI are far apart, the I has no head-stroke either side, and there is no break in the line opposite the foot of it. The A of SACHSEN is crossed in the centre, and the H is crossed above the centre. The N is slightly too far from the end of the label. The G of PFENNIGE has the same ugly tail, already described in several of the forgeries, and it leans backwards a little. The feet of the R and A of FRANCO do not usually touch, and the A is not nearly square enough at the top, and it is crossed in the centre. The lettering is not sunk into the paper. That portion of the ornamentation of the large 3, which is contained in the thin part of the tail, next to the ball, seems to be £££. The cut off end of the central tongue of the 3 is $\frac{3}{4}$ mm. wide, and vertical. The background is a lattice-work of outlined diamonds, each diamond containing three almost straight, horizontal lines. There is a vertical row of $7\frac{1}{2}$ diamonds at the left-hand edge, opposite DREI, the half-diamond being at the bottom. There is no trace of any white diamonds under the C and S of SACHSEN.

Ninth Forgery.

Engraved in *taille-douce*, in a sort of lake-red, on medium, very hard, yellowish-white wove paper. There is a stop after FRANCO, with signs of several other, smaller and fainter ones, round it. All the arms of all the crosses have lines opposite to them. These lines are nearly straight. The feet of the R and E of DREI do not touch; the E has no foot-stroke, and there are several breaks in the line under this word, but none under the foot of the I. There is a tiny cross-bar on the top of the A of SACHSEN, and this letter is crossed rather high up. There is a curious, curved line, joining the tops of the H and S. The central tongue of the F of PFENNIGE is very much above the centre of the letter, and the tongue of the first E is also placed too high. The tail of the G is of the same ugly, incurving shape, already described in several of the other forgeries. There is a tiny cross-bar, projecting from the left side of the top of the A of FRANCO, and the foot of the A is a good distance from the top of the N. All the dark parts of the design stand up slightly from the surface of the paper, in the usual manner of *taille-douce* engravings. The little figures in the central numeral are large, and very thin. The end of the central tongue

of the said numeral is vertical, and $\frac{3}{4}$ mm. wide. The background shows a trellis-work of not very prominent, outlined diamonds, each diamond containing four nearly straight, horizontal lines. The vertical row, touching the left side of the 3, shows $6\frac{3}{4}$ diamonds, the incomplete diamond being at the bottom.

Tenth Forgery.

This is also engraved in *taille-douce*, on thick, hard, white wove paper. In general appearance, it is much better than the last. There is a stop after FRANCO. The lines opposite to the St. Andrew's crosses are the same as in the genuine. The feet of R and E of DREI are far apart, and there is no break in the line opposite to the foot of the I. The A of SACHSEN is rather pointed, its foot does not go near the S. The top of the H seems to be joined, and the E leans over, towards the left. The G of PFENNIGE has its tail very low, and the lowest part of the tail curls forwards, and joins the foot of the E. The feet of the A and N of FRANCO are not joined. The outer frame of the stamp is very little thicker than the inner one, parallel with it. The dark parts of the design stand out from the surface of the paper. The little numerals, filling the central 3, are very like the genuine. Those in the thin part of the tail, above the RA of FRANCO, are .E·3·E. The end of the tongue of the 3 is $1\frac{1}{4}$ mm. wide; it is cut off somewhat obliquely, like the genuine. The background is also a very fair imitation of the genuine. Perhaps the easiest test for this forgery is in the thick shadow of the lower half of the 3. In the genuine, the right-hand edge of the bottom of this shadow touches the bottom edge of the containing-square, exactly above the last vertical stroke of the N of FRANCO. In this forgery, the right-hand edge of the shadow touches the bottom edge of the square exactly above the centre of the C of FRANCO.

POSTMARKS.

Genuine.—7 (rare), 29.

Sixth Forgery.—1, 7.

Seventh Forgery.—29.

Eighth Forgery.—1, 7 (without any circle in the centre), 71 with rounded corners.

Ninth Forgery.—1 (large).

Tenth Forgery.—7.

Issue of 1851. 3 Pfennige, green.

I have three counterfeits of this issue, but none of them are in the proper colour.

Genuine.

Engraved in *épargne*, in green, on rather stout, white wove paper, yellowish gum. There is a large stop after SACHSEN, and the H of that

word leans over to the left. The D of DREI also leans over to the left. The F of PFENNIGE usually shows hardly any trace of the cross-bar, and it does not go near the top outline of the containing-scroll. The I is parallel with the N before it. The tail of the G is an unbroken, transverse oval, and the "kern" on the right side of the head is a little ball, level with the top of the head, and joined to the head by a thin line. The cross-bar of the final E is in the centre of the letter. There are some thin lines and dots of shading in each of the four pieces of scroll-work, above and below each 3. The value-scroll, at the bottom of the stamp, has a semicircular projection in its centre, below the FE of PFENNIGE; this projection comes to the very bottom edge of the stamp, inside the thin outline, and the right-hand end of the curved, coloured line inside this projection goes very near to the left foot of the first N of PFENNIGE. There are two regular rows of coloured dots in each of the white, horizontal bars across the stamp, and each dot of the lower row comes between two dots of the upper row ('::'). These dots are far apart. Taking the half of the shield to left of the oblique bar across it, there are three dots in the first bar, five in the second, and seven in the third. The plain, central portion of the oblique band across the shield has five oblique lines of shading in its upper part, and about fifteen similar ones at the lower end. The central tongue of each 3 projects to the left, quite as far as the centre of the ball of the head. I think these tests will be found quite sufficient, though I could give many others.

First Forgery.

Typographed, in *black*, on very thick, buff wove paper. The head of the second S of SACHSEN is much too small, and the stop after the word is too near to the N, instead of being equidistant between the N and the end of the label. The D of DREI leans to the right, and touches the top of the R, though it is far away from the R in the genuine. The F of PFENNIGE has a distinct cross-stroke on its right side, but has hardly any foot-stroke; it goes very near to the top outline of the containing-scroll. The tail of the G is like a sort of S, lying on its back, and the kern, or ball, is not actually joined to the head. There are no lines of shading after the R, at the end of the scroll; but, in the genuine, there are two coloured lines at the end of the scroll, parallel with it. The piece of scroll-work, below the right-hand 3, has no lines of shading in it; but there are lines in the other three pieces. The projecting part of the lower outline of the bottom scroll, below FE of PFENNIGE, is cut off square, instead of being rounded. It does not reach the bottom edge of the stamp, and there is no line in it. The dots in the white, horizontal bars, across the shield, are absurdly irregular. Counting them in the left half of the shield as before, there are four dots in the first bar, six in the second, five in the third, and five in the fourth. The fourth bar is like the rest in this forgery, but in the genuine, it is the broad base of the shield. The central portion of the band across the shield has seven thick, oblique lines of shading in the top portion, and seven shorter ones in the bottom portion.

Second Forgery.

Lithographed, in *Prussian-blue*, on medium, white wove paper. There is no stop after SACHSEN, and the H is upright. The D of DREI leans over very much to the right, so as to be parallel with the sloping, left-hand edge of the label. The P of PFENNIGE goes very near the top outline of the label, and the F actually touches the said outline. There

is a distinct cross-bar to the F, showing on both sides. The E is crossed very high up; the I leans away from the N, and its dot touches the top outline of the scroll. The kern of the G is attached to the lower portion of the head, instead of to its top; it is like a thin comma, with hardly any ball to the head, and it curves upwards, instead of downwards. The tail is open, that is to say, the bottom curls round without joining again. The cross-bar of the final E is far too high up. The stop after this word is much too far from the E. In the genuine, it is equidistant between the E and the double line of shading at the end of the scroll. The piece of scroll-work between each 3 shows some lines of shading; but there is no shading in the scroll-work above each 3. The projection of the scroll below FE of PFENNIGE is like the genuine, but it does not reach down to the very bottom of the stamp, and the curved line of it does not go near the foot of the N. The dots in the white horizontal bands are regular, but there are far too many of them. The first band contains eight dots, the second band, fifteen, the third band, nineteen, and the fourth band, which is narrower than the others, contains nine. The spaces between these horizontal bands are filled with coloured, horizontal lines. In the genuine, there are hardly any lines in these spaces, and what there are are vertical. The central portion of the oblique bar across the shield has six horizontal lines of shading in the upper part, and thirteen horizontal lines at the lower end. The central tongue of each 3 does not project nearly so far as the centre of the ball of the head, and the balls are extremely small.

Third Forgery.

This is a curious production, and not likely to deceive in the state here described, being unfinished. Lithographed, in *yellow-brown*, on thin, yellowish wove paper. The two scrolls are quite blank, except that there is a dot in the projection of the middle of the lower scroll. Each scroll is barred, by three horizontal black lines. The design, except for the absence of all lettering, is the same as the second forgery just described; so I suppose we may call this a sort of "proof before letters" of the second forgery.

Second Forgery.—29.

Third Forgery.—Two sets of three bars, as already described.

Issue of April, 1856. 5 Neugroschen, rose-red, brown-red, vermilion.

(*Type of the accompanying illustration.*)

Genuine.

Engraved in *taille-douce*, on thick, yellowish-white, and also on thin, bluish-white wove paper. The king's face is rather stern and melancholy, with a drooping corner to the mouth, and no trace of a smile. There is no eyelash projecting from the upper eyelid. In the white, oval ring, surrounding the central medallion, there are two lines of shading, which begin above the U of NEU, run round the bottom of the oval, and end above the back of the head, below the end of the E of SACHSEN. The top of the left-hand end of the SACHSEN-scroll *very* nearly touches the inner outline of the top of the stamp, but the top of the right-hand end of the scroll is decidedly further off from the outline above it.

The last, vertical stroke of the N of SACHSEN is very nearly parallel with the rectangular end of the frame surrounding the word. In the lower scroll, there are five almost vertical lines of shading before the N of NEU, and at the other end of the scroll, there is a vertical line of shading, passing between the C and H of GROSCH, and cutting into the serif at the top of the H. The white oval containing the 5, opposite to the king's face, is perfect in shape, but the similar oval, opposite to the back of his neck, is partly cut off on its right-hand side, by the inner, vertical outline of the frame, so that it is flat on the right side. The outer outline of the stamp is double down the right side, and the inner outline is double down the left side; but in each case, the double lines are extremely close together, and might pass as single ones without a microscope.

Forged.

Engraved in *taille-douce*, in scarlet, and also in orange, on thick, white wove paper. The king's face is bright, and the mouth is straight, with a distinct smile. There is a trace of eyelash projecting from the upper eyelid. The two lines of shading in the white oval ring begin almost above the E of NEU, and end below the centre of the N of SACHSEN. The top of the left-hand end of the SACHSEN-scroll is no nearer to the top outline of the stamp than the right-hand end. The last stroke of the N is nothing like parallel with the right-hand end of the frame round the word. If prolonged upwards, the two lines would meet before reaching the top of the stamp. In the lower scroll, there are six vertical lines of shading before the N of NEU, and there is no line between the C and H of GROSCH. The white oval containing the left-hand 5 has its left side partly cut away by the frame, and the oval containing the right-hand 5 has a *very* small portion of its right side cut away. The outer outline of the right side of the frame appears to be one solid line, while the inner outline is partly double. The inner outline down the left side of the stamp appears to be single, though it is much thicker than the outer line. Except for the above tests, this is an excellent imitation.

Forged.—7.

Same Issue. 10 Neugroschen, blue.

Genuine.

Engraved in *taille-douce*; varieties of paper the same as in the 5 ngr. The portrait is the same as in the said 5 ngr. The outer rim of the ear has no shading across it. There are only two thick, oblique lines of shading, joining the eyebrows to the upper eyelid. Some of the vertical lines of the background have been drawn a little too far, and cut into the front of the base of the neck, and into the jaw, under the chin. There are sixteen horizontal lines of shading on the back of the neck, from the bottom of the neck to the tip of the ear, and the sixteenth line touches the tip of the ear. Of the thin, vertical lines in the right side of the oval, the third from the right touches the back of the king's head. The thicker, vertical lines, in the left side of the oval, are slightly wavy. The two lines of shading in the white oval ring round the portrait end above the back of the head, below the end of the E of SACHSEN, the same as in the 5 ngr. The top of the left-hand end of the SACHSEN-label is, as before, nearer to the top of the frame than the corresponding right-hand end of the scroll is. The last stroke of the N of SACHSEN is nearly parallel with the right-hand end of the little frame surrounding the word. The right and left top corners of the lower scroll are both *rounded*.

There are, as before, five nearly vertical lines at the left-hand end of the scroll, before the N of NEU, and only the outermost line is thickened. The vertical line, between the C and H of GROSCH, is the same as in the 5 ngr. The points of the two leaves below the bottom scroll both almost touch the semicircular enlargement under the 10. All the letters and numerals are perfectly solid. Outside each end of the SACHSEN-scroll, there is a leaf-ornament, shaped something like a hand, seen edgewise, in profile, with a finger pointing into the corner of the stamp. Each of these "hands" is holding four balls or pearls, and the lowest ball in the one in the right top corner of the stamp curves inwards, into the hand, and not outwards, towards the right-hand frame. None of the balls in either hand touch the frame. There is a three-lobed leaf, above the N of NEU; the middle lobe points towards the join of the king's neck and chin, and the lowest lobe *almost* touches the outline of the scroll, above the beginning of the N. The inner curl of the end of the scroll, under the N, has a prominent white patch along its lowest edge, reaching from under the beginning of the N to the beginning of the E. There is a similar white patch in the inner curl of the other end of the scroll, under the OS of GROSCH, but not so prominent. The line of the king's mouth is very faintly indicated. The inner and outer frame-lines of the stamp are the same as in the 5 ngr.

First Forgery.

This is a very nice counterfeit, and dangerous, though the impression is usually too heavy. Engraved in *taille-douce*, on very thick, hard, white wove paper. The line of the mouth is too strong, and gives the king a rather sneering expression. The outer rim of the ear is shaded with short, oblique lines, almost like dots, for nearly all the way round, leaving only the lobe white. There are about seven oblique lines, between the eyebrow and the upper eyelid. The back of the neck shows nineteen horizontal lines, from the base of the neck to the bottom of the ear. (In both genuine and forged there are oblique lines, crossing the horizontal ones, but I have only reckoned the latter.) The vertical lines of the background do not cut into the base of the neck or the chin. There are nineteen horizontal lines at the back of the neck from the base of the neck to the lobe of the ear, and the nineteenth does not touch the ear. The third vertical line in the right side of the oval does not touch the back of the head. The thicker, vertical lines, in the left side of the oval, are almost all perfectly straight. The two lines of shading, running round the white oval ring, finish about level with the centre of the back of the head, far below the N of SACHSEN. The last stroke of the said N is nearly vertical, while the right-hand end of the little rectangular frame which contains SACHSEN slopes down to the right, so that the N is not anything like parallel with the end of the frame. The left top corner of the NEUGROSCHEN-scroll is square, or pointed; but the right top corner is rounded, like the genuine. Of the five vertical lines at the left-hand end of the lower scroll, before the N of NEU, the inner one alone is thin, and the other four are thick. There is no vertical line between the C and H of GROSCH. The points of the two leaves at the bottom of the stamp (especially the left-hand one) do not touch the semicircular projection below the 10. Some of the letters and numerals, when not too heavily printed, are composed of double, or even of treble lines, instead of being quite solid. The ornament like a hand, in the right top corner of the stamp, holds four balls, a good deal larger than the genuine; and the fourth or lowest ball projects out from the hand and touches the inner line of the frame. The hand in the left top corner holds three

balls, also much larger than the genuine. (This is a fairly easy test.) The bottom point of the three-lobed leaf, above the N of NEU, does not touch the outline of the scroll above the N. The dark, inner curve of the end of the scroll, below the N, has no white patch on its lower edge; and the white patch on the similar curl at the other end of the scroll, below the SC of GROSCH, is not at all prominent. The thick, outer line of the frame, down the right side of the stamp, and the thick, inner line of the frame, down the left side, are usually single, instead of double.

Second Forgery.

This is poor, compared with the counterfeit just described. Lithographed, in light blue, on medium, to stout, very white wove paper, ungummed. The line of the mouth is very strong; it slants a little, but does not droop; and the expression of the face is rather self-satisfied. The eyebrow is too dark, and is formed by vertical, oblong dots. One short, thick line connects the front of the eyebrow with the upper eyelid. The eyelashes are very marked, and the iris of the eye is very dark; these points are hardly visible at all in the genuine. The vertical lines of the background do not cut into the portrait anywhere. The thick, vertical lines in the left side of the medallion, in front of the portrait, are not at all wavy. In the lower scroll, the left top corner, above the N, is more rounded than the right top corner, above the H. The point of the leaf, below the o of 10, goes rather close to the outline of the semicircular projection under the 10; but the point of the leaf near the base of the 1 is a long way from the said projection. The hand-ornament in the right top corner of the stamp holds only three pearls, and the uppermost pearl touches the inner outline of the right-hand frame. The hand in the left top corner also holds only three pearls. The bottom point of the three-lobed leaf above the N of NEU is a very long way from the outline of the scroll, above the N. The *whole* of the lower edge of the inner curl of the scroll, below NE of NEU, shows a white line; and there is a similar white line along the whole of the lower edge of the inner curl of the scroll, below OSC of GROSCH. The thick, outer outline of the right side of the stamp, and the thick, inner outline of the left side of the stamp, are both single and solid. An easy test for this counterfeit is in the outer outline of the left side of the stamp. This line is split and double for a part of the way, between the left-hand 10, and the level of the lower scroll.

BOGUS ERRORS.

In August, 1851, a sheet of the $\frac{1}{2}$ ngr. of the annexed type was sent to a Leipzig office, printed, by mistake, on the blue paper of the 2 ngr. Of the hundred and twenty stamps, sixty-three were used by the purchasers as 2 ngr. stamps, and the other fifty-seven were returned to the head office. To imitate this error, the fakers have dyed the genuine $\frac{1}{2}$ ngr. blue; but, though the face looks very well, the back is stained and mottled, so the fake is not very dangerous.

Another fake is the 2 ngr., *rose*, instead of blue. In this, the blue paper of the genuine stamp has been bleached, and then dyed rose, to the colour of the 1 ngr. The paper feels greasy to the touch, and is almost *pelure*, while the genuine is much thicker and opaque.

ENVELOPE STAMPS.

5 Neugroschen, lilac.

(Type of the accompanying illustration.)

Issue of 1859. Inscription to left.

Issue of 1862. Inscription to right.

Genuine.

Engraved in *épargne*, and embossed, on white wove paper; size 149 × 115 mm., and 147 × 84 mm.; short gum; flap-ornament, six sets of interlacing loops. The lace-work pattern is strongly embossed in white, and the letters and numerals are sunk. The top half of the lace-work, from 5 to 5, has twenty-six white loops on its outer edge, above SACHSEN, and twenty-six also on its lower edge, below SACHSEN. The bottom half, from 5 to 5, has forty-two loops on its upper edge, above FUENF NEUGROSCHEN, and forty-three loops on its lower edge, below those words. Each 5-circle has its outer edge perfectly smooth and regular. The highly-embossed, white oval line round the centre

medallion is not in the least ragged. Outside the lace-work pattern, there are two other embossed, white oval lines, very close together, the inner one about twice as thick as the outer one, and these lines are also regular and smooth, like the one round the portrait. The bottom outline of the king's neck is almost a straight line, and is not hollowed anywhere. The upper lip projects beyond the lower one. A card, laid along the *front edge* of the vertical neck of each 5, would pass almost centrally through the ball of the tail. The inscription is typographed, in two lines of green letters, FUENF NEUGROSCHEN FRANCO-COUVERT, several times repeated.

First Forgery.

Typographed (?) and slightly embossed, on fairly stout, white wove paper. I have only a cut specimen, and do not know whether entire envelopes are made up. The lace-work pattern shows no sign of embossing, and is rather ragged. There seem to be twenty-six loops, as in the genuine, from 5 to 5, above SACHSEN, but only about twenty-three below that word; about forty above FUENF NEUGROSCHEN, and about forty-four below; but they are very difficult to count, being irregular and ragged. For instance, there is a large, triangular loop under the space between UG of NEUGROSCHEN, and a very curiously-shaped one above the space between SC of that word, which are not found in the genuine. The circle containing the right-hand 5 has its right top corner (if I may so call it) irregular, and the circle containing the left-hand 5 has an irregular outline on the left side. The oval line, outside the medallion, is badly drawn and thickened, near the left-hand 5, and above the E of FUENF; and it is not embossed. Both the white, outer lines of the stamp are badly drawn, ragged, and not embossed; the outer one looking as though it had been drawn with a very unsteady hand. As far as I can see through the postmark of my specimen, the king's upper lip does not project at all beyond the lower one. A card, laid along the front edge of the vertical neck of the right-hand 5, would pass to the *right* of the centre of the ball of the tail; and if laid along the front edge of the neck of the left-hand 5, it would pass almost clear to the *left* of the ball of the tail. My specimen is cut tolerably closely, and only shows part of one line of the green inscription (. . . CO-COUVERT FUENF), and it is printed across the right top corner of the face of the stamp itself. There is a crooked green line, joining

the T of COUVERT and the F of FUENF together ; but of course I do not know whether the counterfeits are all alike in this respect. Notwithstanding all the differences given above, this forgery does not look at all bad, and might easily deceive.

Second Forgery.

Typographed (?) and embossed, on medium, white wove paper. My specimen is cut round, so I cannot say whether it was made up as an envelope, or whether there was any green inscription. The lace-work pattern has very little sign of embossing. Above SACHSEN, and below FUENF NEUG, the colour of the background encroaches into the lace-work pattern, as far as the edges of the letters ; so that no white loops at all are visible in those places. Below SACHSEN, from 5 to 5, there seem to be about twenty-four white loops ; and, above FUENF NEUGROSCHEN, about thirty-seven ; but there are no loops above the R of NEUGROSCHEN, and the others are thin and faint. The 5-circles and the numerals are nicely done, except that the ball of each 5 is rather too wedge-shaped. The thin, white, outside oval ring is very irregular, most of it being quite invisible on the left side. The bottom outline of the king's neck is distinctly hollowed out, above the RO of NEUGROSCHEN. There is a small depression in the face, between the ear and the eye ; but I do not know whether this is always the case.

POSTMARKS.

Genuine.—My envelopes are all uncanceled, but I believe the postmark is generally 7.

First Forgery.—29.

Second Forgery.—Uncanceled.

Issue of 1859. 10 Neugroschen, green.

Genuine.

This is only found with inscription to left. My specimen is cut, and I do not know the size or sizes. It is engraved in *épargne*, and strongly embossed, on medium, white wove paper. The lace-work pattern is simpler than in the 5 ngr., and it does not look particularly crowded together, round and between the letters. There are, as before, twenty-six white loops, from 10 to 10, in the outer edge of the lace-work, above SACHSEN, and twenty-six in the inner edge, below that word. There are forty-one white loops, from 10 to 10, above ZEHN NEUGROSCHEN, and forty-two below those words. The lace-work does not touch the white 10-circles anywhere, and the 1 of the right-hand 10 has its foot-stroke equally long to left and right. The thin, outermost white oval ring, surrounding the stamp, is smooth and even all the way round, and so very close to the thicker white ring inside it, that it would not be possible to draw a line between them. The projecting part of the bottom of the hair, at the back of the king's neck, is rounded. In the word SACHSEN, the middle of the S is wider, or fatter, than the ends ; both limbs of the A are of equal width ; the second S is like the first ; the central tongue of the E is much shorter than the top and bottom limbs. In the word ZEHN, the central tongue of the E is much shorter than the top and bottom limbs ; and the cross-bar of the H joins the two upright strokes. In the word NEUGROSCHEN, the oblique stroke of each N is much wider than the vertical strokes ; the central tongue of each E is shorter than the top and bottom limbs ; the right lower corner of the G is square ; the O is a nice oval ; the back of the C is rounded ; the cross-bar of the H joins both uprights ; the green inscription (ZEHN NEUGROSCHEN FRANCO-COUVERT) comes close enough to the stamp to be seen, when it is cut square.

Forged.

Apparently engraved in *épargne*, and nicely embossed, on *very* thick, yellowish-white wove paper, almost as thick as thin cardboard. My single specimen is cut square, and there is no green inscription. The lace-work pattern is more intricate than the genuine, and more like that of the 5 ngr. It is very much crowded, round the letters. There are about thirty-three white loops above SACHSEN, from 10 to 10, many of them touching the white, oval ring, outside them, and about twenty-four loops below that word. There are about forty loops above ZEHN NEUGROSCHEN, and about fifty-four loops below. Many of the loops are irregular, and unequal in size. The ends of the lace-work pattern are joined to the white 10-circles, and the 1 of the right-hand 10 has no foot-stroke on its left side. The thin, white outer ring of the stamp is irregular, especially the SAC of SACHSEN, and there is almost room enough for another line to be drawn, between it and the thicker line, parallel with it. The projecting part of the hair, at the back of the neck, is somewhat pointed, instead of rounded. In the word SACHSEN, the middle of the S is rather thinner than the ends; the left limb of the A is thinner than the right; the second S is like the first, and all three limbs of the E project equally. In the word ZEHN, all three limbs of the E project equally; the cross-bar of the H is too short, and does not touch either of the uprights. In the word NEUGROSCHEN, the oblique stroke of each N is no wider than the uprights; and each E has a short, central tongue, like the E of ZEHN. The right lower corner of the G is rounded. The O is thicker on the right side than on the left, and its right top corner is cut off slopingly. The back of the C is flat. The cross-bar of the H is much too low down, and does not touch the left upright.

Forged.—7 without central numeral.

**SCHLESWIG.**

Issue of 1864. 1½ Schilling, green; rouletted 11½.

Issue of 1865. 1½ Schilling, yellow-green, red-lilac, grey-lilac; rouletted 11½.

Issue of 1867. 1½ Schilling, red-lilac, lilac, grey; rouletted 10.

Genuine.

Engraved in *épargne*, and embossed, in colour, on white wove paper, rouletted as above. These are tests enough for the miserable thing now to be described.

Forged.

I fancy this must have been from a *cliché*, used to (Type of accompanying illustration.) illustrate some dealer's catalogue. Typographed, in black, on white wove paper, coloured pink on the face, no embossing, unperforated.

POSTMARKS.

Genuine.—I have no postmarked copy.

Forged.—1, small, containing DR. . . .

SCHLESWIG-HOLSTEIN.

Issue of 15 November, 1850. 1 Schilling, blue.

The stamps of this issue are rather scarce. Westoby says that the supply printed was to the value of 125,000 marks; of these only about 1,600 marks' worth were sold, and the rest sent to Copenhagen. We may conclude, therefore, that the specimens now in collections are remainders.

Genuine.

Apparently lithographed (though Westoby says they were typographed), with a white, embossed centre, on medium, very white or yellowish-white "Dickinson" paper, which has a blue silk thread, running vertically down the stamp, in the substance of the paper. As this thread is incorporated with the paper during the process of manufacture, soaking the stamp in water will not, of course, bring the thread away. The embossed shield is divided down its centre by a single, strong line; the left side bears two well-shaped lions, on a ground of embossed dots; the right side shows a spread eagle, on a ground of vertical lines. There is a very distinct crown above the shield, and resting on it; the inside of the base of the crown is formed by three concave, embossed lines, which follow the curve of the top of the shield. The coloured horizontal lines which form the background are rather coarse, gauging five to 1 mm. The fifth of these lines from the top, inside the thick, top outline, touches the top of the left head of the eagle; and this same fifth line from the top *almost* touches the top of the right head. The fourth line from the bottom, inside the lower boundary-line, touches the tip of the tail. The white corner-ovals are not outlined, but the lines of the background merely stop short, so as to form these ovals: all four are about the same size, but the one in the right bottom corner is not so truly oval as the other three. A solid design of the eagle, in pale blue, appears to have been printed first, and the lined design on the top of it. In consequence of this, the letters OS of POST are almost entirely blue, and there are blue marks in various parts of *all* the letters of SCHILLING. The S of SCHILLING touches the bottom two feathers of the eagle's wing, and the shadow of its head appears to break into the C which follows it. The letters HI of this same word are joined together at the top. The eagle's leg, on the right side of the stamp, passes almost exactly between the letters IN of this same word. The O of POST is placed almost centrally on the eagle's neck, so as hardly to show any of the neck to the left of it. The lowest feather but one on the right-hand side appears to go quite behind the top of the C of SCHILLING. The corner-ovals do not touch the outline of the stamp in any case.

First Forgery.

Rather well lithographed, on what appears to be very stout, bluish-white wove paper, with a silk thread running down in the paper. The stamp, however, is really composed of very thin paper, with the thread laid on the back of it, and then another piece of very thin paper pasted over this, so as to enclose the silk thread between the two sheets of paper. If the stamp be placed in water for a short time, the backing can be removed, and the silk thread will come with it, thus exposing the fraud.

The embossed shield is divided down its centre simply by the last of the vertical lines of the right-hand half, which is no thicker and no more prominent than the rest. The lions and spread eagle on the embossed shield are quite undecipherable, and the thing at the top of the shield looks more like a cup and saucer than a crown. The background of the stamp is composed of *very* fine horizontal lines, gauging eight to 1 mm. There are six of these lines above the eagle's left head, the sixth line *not* touching the head, and seven above the right head, the seventh not touching the head. The eagle's tail touches (as near as I can make out) the twelfth line from the bottom, but all my specimens are so heavily postmarked that I am not sure of the exact number. The white ovals in the corners are outlined, for about half the way round. They are irregular, and vary in shape, in different specimens; but the one in the right bottom corner usually has a pointed top, and is cut away slantingly to right of the top of it. The right foot of the H, in the right upper oval, is thickened, and projects slantingly downwards, so as to very nearly touch the edge of the containing-oval. All the lettering is perfectly white, without any blue marks in any of the letters. The S of SCHILLING does not touch any of the eagle's feathers, and it does not come at all close to the C which follows it. The letters HI are not joined together at their tops, and the H has its central cross-bar much too distinct. The eagle's leg, on the right side of the stamp, cuts into the first stroke of the N of SCHILLING. The O of POST is placed a good deal too far to the right, so that part of the eagle's neck can be plainly seen to the left of the letter. The lowest feather but one of the wing, on the right side of the stamp, does not seem to touch the G of SCHILLING. In some of my specimens, the tops of the upper white ovals are so blotched, that they touch the thick outline of the frame above them.

Second Forgery.

Lithographed, on thin, yellowish-white wove paper, with a false back of tissue-paper, and a silk thread between the stamp and the backing, as before. The white, embossed shield is exceedingly well done in this forgery, but the crown has five ornaments on the top: a trefoil in the centre, a pearl each side of this, and a trefoil, seen edgeways, outside the pearl. (In the genuine, the three trefoils are separated merely by two spikes, without anything on them.) Also, in this counterfeit, the curved lines, forming the inside of the base of the crown, are absent. The coloured horizontal lines of the background gauge $4\frac{1}{2}$ to 1 mm. Four of these lines can be seen above the top of the eagle's head on the left side, the first being *very* close to the thick outline of the top of the stamp, and the fourth touching the head. There are five lines above the head on the right side, the fifth not touching the head. The oval in the left bottom corner is only slightly outlined, but all the other three ovals have a strong outline. The one in the right bottom corner has its base somewhat broken. There are no blue marks across any of the letters. The S of SCHILLING is at a considerable distance from the C. The letters HI of this word are not joined together at the top. The eyes of the eagle, invisible in the genuine, are large and glaring in this forgery, with large pupils. The letters IN of SCHILLING are joined together at the top; they are separate in the genuine. The claw of the eagle does not show below the N of this word.

Third Forgery.

This is not at all a bad-looking counterfeit, though my specimens are *very* pale. Lithographed, in very pale blue, on white wove paper, double,

as before, with a thick thread between the two sheets. The lions in the left half of the embossed shield are on a ground of *sunken* (instead of raised) dots, closely set, in oblique rows. The spread eagle in the other half of the shield is very faint, and the vertical, embossed lines on which it stands, are too fine. There is a distinct pearl on each of the spikes, between the trefoils, on the top of the crown. The horizontal, coloured lines of the background of the stamp gauge about $4\frac{1}{2}$ to 1 mm.; the sixth line from the top touches the head on the left side, and the same sixth line touches the top of the other head. The fifth line from the bottom touches the tip of the eagle's tail. The corner-ovals, just as in the genuine, are not outlined, but those on the left side are badly shaped. There are no blue marks in any of the letters. The top of the H and I of SCHILLING are not joined. The eagle's leg, on the right side of the stamp, passes behind the beginning of the N. The lowest feather but one, on the right side, seems to go between the G and the stop.

Fourth Forgery.

Nicely lithographed, on *very* yellowish wove paper, double, with a thread between the sheets, as in the other counterfeits. I think I need only give one test for this counterfeit, which will be found quite sufficient, and save labour for me, and time and patience for my readers. In the genuine, each of the lower corner-ovals contains a distinct numeral, 1. In this forgery, the 1 has been turned into a distinct L. There is no mistaking the L, only it has a small, slanting serif at the top, instead of the usual cross-stroke.

Fifth Forgery.

This, also, need not detain us long. I think it must be an illustration from some catalogue. It is typographed, in *black*, on thick, white wove paper, no thread, no embossing. The shield and crown are printed in black and white, instead of being embossed. The eagle's tail comes to a sharp point, and touches the lowest of the horizontal lines of the background. Further details are unnecessary.

POSTMARKS.

Genuine.—I have no postmarked copies, but Westoby says that the obliteration usually consists of a circle, containing seventeen parallel bars, with the index-number of the office in a rectangular space in the centre. Others, he says, are found with a dated stamp (1?)

First Forgery.—Nineteen straight, parallel bars, of varying lengths, forming a sort of shield-shaped design, with blank centre.

Second Forgery.—About sixteen straight, parallel bars, very much thicker than those of the first forgery, forming an unoutlined circle, with rectangular space in the centre, containing numerals. One of my specimens has the numerals 21, the others are unreadable.

Third Forgery.—Uncancelled; also a postmark similar to that of the second forgery.

Fourth Forgery.—The same as the first forgery.

Fifth Forgery.—Uncancelled.

Same Issue. 2 Schilling, rose.

Genuine.

Printing, paper, etc., the same as in the 1 schilling; embossed shield and crown, ditto. The tests of the horizontal lines of the background

are exactly the same as before. The corner-ovals are not outlined; in my specimens, they are more irregularly shaped than those of the 1 schilling, but I don't know whether this is always the case. The two uprights of the H, in the right top corner-oval, are joined together across the bottom, and the foot of the right upright does not slant downwards, and does not go near the edge of the oval. There is the same solid design behind the lined design of the eagle, as in the 1 schilling. It is printed in a very pale, dull red, quite different from the tint of the stamp itself; it discolours the OS of POST, and is traceable in one part or another of nearly every letter of SCHILLING. The S of SCHILLING touches the bottom two wing-feathers on the left-hand side, and the shadow of its head touches the back of the C which follows it. The letters HI of this word are joined together by a white bar—across their tops. The C looks quite as big as the S. The bottom wing-feather but one on the right-hand side appears to go behind the top of the G. The leg on the right-hand side touches both the I and N of SCHILLING. One of the eagle's claws shows below the bottom of the first stroke of the N of SCHILLING. No part of the neck of the eagle can be seen to the left of the O of POST. The eagle is set equidistant from the two sides of the frame of the stamp.

First Forgery.

Lithographed, with embossed centre; the paper, printing, silk thread, and false back are the same as in the first forgery of the 1 SCHILLING. The embossed shield and crown are also the same as in the said forgery. The coloured, horizontal lines of the background gauge eight to 1 mm., instead of five. The corner-ovals are partly outlined, and the H in the right upper oval has the right foot thickened, and projecting slantingly downwards, so as to nearly touch the outline of the oval, as already described in the first forgery of the 1 schilling. All the letters are quite white, showing no trace of a coloured design behind them. The S of SCHILLING touches neither of the wing-feathers of the left-hand side, and the shadow of its head does not touch the back of the C which follows it. The letters HI of this word are not joined together at the top. The C of this word is particularly small, and looks much smaller than the S. The G hardly touches the wing-feather. The leg of the eagle, on the right-hand side, goes through the first stroke of the N of SCHILLING. There is no claw showing, below the bottom of the N. Part of the eagle's neck can be distinctly seen, to the left of the O of POST.

Second Forgery.

This is very similar to the second forgery of the 1 schilling. Lithographed; paper, printing, false back, etc., the same as in the second forgery of the 1 schilling. The colour is an extremely pale pink, which makes the design very hard to decipher. The embossed shield is a very good imitation of the genuine, but the crown does not show any of the inside hollowed part. The coloured, horizontal lines of shading of the background gauge four to 1 mm., instead of five. The fourth of these lines from the top touches the eagle's head on the left side, and the sixth line touches the top of the other head. The corner-ovals are outlined, for about three-fourths of the way round. Both feet of the H in the right top corner touch the outline of the oval, and the said feet do not touch each other. The letters of the two inscriptions are all quite white, showing no trace of any coloured design behind them. The S of SCHILLING is at some distance from the C which follows it. The letters HI of SCHILLING

are not joined together at the top. I have had great difficulty in deciphering the 2 SCHILLING of this last forgery, the colour being so very faint.

Third Forgery.

This is like the third forgery of the 1 schilling. Lithographed, in pale rose; paper, false back, etc., as in the third forgery of the 1 schilling. The shield and crown are the same as in the said counterfeit; horizontal, coloured lines, ditto. The corner-ovals and the H are the same as the genuine. The letters of POST and SCHILLING are quite white, without any trace of a coloured design behind them. The H and I of SCHILLING are not joined at the top. The bottom wing-feather but one, on the right side, does not go behind any part of the G. The leg on this side goes behind the first stroke of the N, and the claw does not show below the bottom of the said stroke. The centre of the O of POST, which is solid in my specimens of the genuine, shows a white stroke in it. The eagle is set too near the left side of the frame.

POSTMARKS.

Genuine.—As before.

First Forgery.—As in the first forgery of the 1 schilling.

Second Forgery.—As in the second forgery of the 1 schilling.

Third Forgery.—Uncancelled.

Issues of 1864, for Holstein and Lauenburg.

1½ Schilling, blue.

Of this stamp, there are three types, as here described:—

Type I. Wavy lines in spandrels close, gauging five to 1 mm. Letters in side and bottom-frames thin, with a white stop after each letter; SCHILLING 9½ mm. long, with a dot over each i.

TYPE I.

TYPE II.

TYPE III.

Type II. Wavy lines coarser, gauging about four to 1 mm. The lettering is larger, but with stops as before.

Type III. Wavy lines coarse, as in type II. Lettering of frames still thicker, without stops between the letters. SCHILLING is only 8½ mm. long, and there is no dot after either i. The forgers have imitated type I.

Genuine.

Lithographed, on thick, white wove paper, imperforate; sometimes found (types I. and III.) unofficially rouletted. The face of the paper is covered with a pale grey *burelé*, which leaves a large P, in white, in the centre. The P is about 5½ mm. high. In the left side-label, the R is of a very peculiar shape, looking like a B with half of the lower portion erased. The upper, horizontal stroke of the Z is shorter than the lower one. The G has a curious, slanting tail, which runs forward into the stop after the letter. The stop after the L is distinct. In the bottom

label, the oblique stroke of the head of the 4 is very small and inconspicuous, and the top of the numeral is decidedly less than $\frac{1}{2}$ mm. wide. The left upright of the M is as thick as the right-hand one, and the bottom point of the V-shaped middle of that letter is very blunt. The wreath touches the lower label, but none of the others. The crossed ribbons at the top extend from below the middle of the O to below the end of the S; the similar, crossed ribbons at the bottom of the wreath extend from almost the middle of the S to the end of the R. There is a large serif to the large 1 of $1\frac{1}{4}$; the small 1 of the fraction has a distinct foot-stroke, very nearly as long as the fraction-line. The little 4 has a closed top. SCHILLING, as before stated, is $9\frac{1}{2}$ mm. long. The letters RT of CRT. touch each other at the bottom.

First Forgery.

Lithographed, on medium, white wove paper, with a pinkish-grey wash to represent the *burelé*. The white P is about $5\frac{1}{4}$ mm. high. The legs of the K in the left side-label are a little longer than the genuine, so that it looks like a B with merely the bottom-stroke removed. The head of the Z looks rather longer than the foot. The G has no tail, and looks like an O, with a portion of the right side removed. There is no stop after the L. In the bottom label, the oblique stroke of the head of the 4 is large and bold, and the top of this numeral is $\frac{3}{4}$ mm. wide. The left upright of the M is very much thinner than the right one, and the V-shaped centre of the letter is acutely pointed. The wreath touches the right-hand label, as well as the bottom one. The crossed ribbons at the top of the wreath extend from below the middle of the O of POST to well under the T; and the front one of the similar, crossed ribbons at the bottom of the wreath extends from above the end of the S to above the beginning of the M. The serif to the large 1 of $1\frac{1}{2}$ is so thin, as to be practically invisible; the small 1 has hardly any sign of a foot-stroke, and the small 4 has an open top. The letters RT of CRT. do not touch each other at the bottom.

Second Forgery.

I have not seen this in blue, but it may, perhaps, exist in that colour. Lithographed, in *chestnut-brown*, on very thick, tinted wove paper, no *burelé*, and, of course, no P. There is no stop after the H, in the left side-label; the R is of a fairly normal shape; the head and tail of the Z are equal, and the tail of the G is square-ended, without the slanting stroke of the genuine. In the bottom label, the oblique stroke of the 4 is bold and conspicuous, and the top of the numeral is rounded, instead of being cut off squarely. The bottom of the V-shaped centre of the M is sharp. The crossed ribbons at the top of the wreath are hidden by the postmark, in my specimen; but the front ribbon, at the bottom of the wreath, extends from above the middle of the S, to above the middle of the R. The small 1 of the fraction is covered by the postmark; the foot of the 4 extends to the right, fully as far as the cross-bar does; but in the genuine, the right side of the foot is not visible at all. SCHILLING is only a shade over 9 mm. long. The tail of the C of CRT. touches the head. The wavy lines in the spandrels gauge five to 1 mm.

POSTMARKS.

Genuine.—4, 29.

First Forgery.—4.

Second Forgery.—Two concentric circles. I do not know whether there was a numeral in the centre, as my specimen only shows a portion of the postmark.

SELANGOR.

Issue of 1882. Name in thin block capitals, surcharged on Straits stamp, 2 c., rose, C.A.

Genuine.

The genuine surcharge is in fairly thin, block capitals, like **SELANGOR** the illustration.

Forged.

The letters are *excessively* thin, about half the thickness of those in the illustration, except the O, which is decidedly thicker than the rest, and they are further apart.

POSTMARKS.

Genuine.—I have no postmarked copy.

Forged.—Uncancelled.

SERVIA.

Issue of May, 1866. Newspaper-tax stamps. 1, 2 Paras.

I put these stamps first, as they were issued first; but they were, I believe, solely used as a tax on foreign journals, like the Austriar journal stamps. According to Westoby, there were two printings. the first (a very small supply) on thick paper, and the second on thinner paper, with the gum not so brown. Owing to the wear and tear of the casts, the impressions of the second printing are often blotchy, and the horizontal lines in the corners are broken, instead of continuous. The following are the varieties:—

1. Paper coloured only on the surface; 1 para, deep green, olive-green, on rose; 2 paras, red on lavender.
2. Paper coloured all through; thick or thin; 1 para, deep green on brown-rose or on rose.

Genuine.

(*First printing.*)

Typographed, from casts made from a wood-engraving; varieties as above. There are seventy-seven pearls round the central circle. Each

of the four quarters of the shield, as divided by the cross, contains a light object, like a 3, correctly placed in the left-hand quarters, and reversed in the right-hand quarters. The shading on the mantle, when visible, consists of fine, slightly concave, horizontal lines. The large knobs, or corners, where the mantle

is looped up, seem to have merely blotches, by way of shading, and not lines, upon them. There are two tassels on each side, hanging from the places where the mantle is looped up. The upper spandrels contain eleven thick, horizontal lines, deeply indented into the paper, the lowest two being not much more than dots. The lower spandrels contain thirteen similar, horizontal lines. There are nine pearls, in a bow, or

arch, along the top of the crown, and the cross above the pearls is very nearly upright, and points to the right-hand vertical stroke of the letter above it. The top horizontal line of the background cuts through the letters of the upper inscription, rather above their centres; and the said letters stand upon the second horizontal line.

Genuine.

(*Second printing.*)

Typographed, as before, but the printing is very blotchy, and the horizontal lines in the corners are more or less broken into hyphens and dots. The other tests are the same as before, when they can be seen.

Forged.

Lithographed, the 1 PARA in greenish-gold, on medium, somewhat ribbed, very pale rose paper (coloured all through); and the 2 PARAS in reddish-brown, on rather thicker, smooth, very pale lilac-faced, white wove paper. There are seventy-two large pearls round the circle, very much blotched together, and almost twice the size of the genuine. The cross on the shield is short and fat, instead of tall and slim, so that the 3 in each of the quarters is much dwarfed, and not at all easy to make out. The mantle is shaded by broken, vertical lines, somewhat wavy; and the knobs, where the mantle is looped up, are shaded by slightly oblique, horizontal lines. There are no tassels to be seen, where the mantle is looped up. The upper spandrels contain twelve to thirteen horizontal rows of dashes; the lower spandrels the same. These are, of course, not at all indented into the paper. The crown is so blotched that the pearls are all run together, and cannot possibly be counted; and the cross leans *very* much to the right, so that it points between the first two letters of the word above it. The top horizontal row of dashes in the background touches the tops of the letters of the upper inscription, and the said letters stand upon the *third* row of dashes.

POSTMARKS.

Genuine.—I have never seen any postmarked specimens; indeed, Westoby says the stamps are not found obliterated, as they were solely used by the post office officials, and were of no value in the hands of the public.

Forged.—My 1 para is postmarked with 100; my 2 paras appears to have a portion of the same cancellation.

Issues of 1866-8. 1, 2, 10, 20, 40 Paras.

The 1 and 2 paras of this issue, according to Westoby, were primarily intended, as before, for journal-tax stamps, but were also issued to the public. These two values were only printed at Belgrade, but the first supply of the 10, 20, and 40 paras was printed in Vienna, and sent to Belgrade with the plates of all the values. With regard to the journal-tax stamps, Westoby says that obliterated copies are known, but it is doubtful how far they may be genuine. The following are the varieties:—

1. Plain, white wove paper, perforated 12. Vienna print; 10, 20, 40 paras. July 1, 1866.
2. Plain, white wove paper, perforated 9½. Belgrade print; 20, 40 paras. October, 1866.

3. Very thin, white wove paper, perforated $9\frac{1}{2}$. Belgrade print ; 10, 20, 40 paras.

4. Yellowish wove paper, perforated $9\frac{1}{2}$. Belgrade print ; 20 paras. End of 1868.

5. Plain, white wove paper, perforated $9\frac{1}{2}$. Belgrade print ; 1, 2 paras.

6. Plain, white wove paper, unperforated. Belgrade print ; 1, 2 paras. 1868.

Plain, yellowish wove paper, unperforated. Belgrade print ; 1, 2 paras. End of 1868. (These stamps are olive-green and bistre, respectively, in place of the former green and brown.)

Genuine.

Engraved in *épargne* ; paper, etc., as above. There are seventy-seven pearls round the head ; they are all circular, but not always exactly the same size. In the central circle, there are sixteen horizontal white lines to the right of the head, and nineteen to the left, counting from the bottom of the circle, beneath the neck. Below the head, there are forty-nine coloured, wavy lines. The hair is short, and rather curly. The P of POSHTA (a thing like two capital P's close together) has a distinct bar across the top of it, and so has the P of PARA. In each of the side-labels, there is a sort of white leaf-ornament, at the top and bottom of each label, below the upper numerals, and above the lower numerals. Each of the upper ornaments contains a thing rather like an altar-candlestick, with a tall candle in it ; the left lower ornament contains a long, thin cross ; and the right lower ornament has a shorter cross, with the arms reduced to a sort of lump.

First Forgery.

Of this I have all the values. It is by no means a dangerous forgery. Lithographed, on thin to medium, white and yellowish-white wove paper. I have one specimen of the 40 paras, which is perforated $12\frac{1}{2}$, but all the rest of my numerous specimens of all the values are unperforated. There are only fifty-nine pearls round the head, but they are all fairly round. In the central circle, there are sixteen horizontal white lines on the right of the head, and seventeen lines on the left ; counting from below the neck, as before. All these lines, except three or four at the top, are *very* much too thick and prominent. Below the head, there are only forty-one wavy, vertical lines. The hair and beard are cropped very closely, making the Prince look like a convict. The P of POSHTA has no bar across the top, neither has the P of PARA. The white leaf-ornament in the bottom end of the left side-frame has an arrow in it ; the corresponding one in the bottom end of the right side-frame contains a vertical line, with a lump near its centre.

Second Forgery.

This, I believe, is Fohl's production. It is, at first sight, very good ; indeed, happening to call on a London dealer a few weeks ago, I found a lot of specimens of this counterfeit in his stock-book. I have the 1 para, very pale yellow-green, and sage-green, perforated $11\frac{1}{2}$; 1 para, more of a blue-green, unperforated ; 2 paras, bistre, perforated $11\frac{1}{2}$; and 2 paras, almost chestnut-brown, unperforated. Rather nicely lithographed, on thin to medium, yellowish-white wove paper. There are seventy-four

pearls round the head, and some of them, especially near to POSHTA, are oblong, like dashes, instead of circular. Of the horizontal, white lines in the central circle, there are fifteen to right of the head, and seventeen to left of it, counted as before. Below the circle, there are forty-eight wavy, vertical coloured lines, many of them being much straighter than the genuine. The eye is curiously drawn. Although the face is in profile, the eye shows a front view, both corners being visible, which gives it a most curious effect. The P of POSHTA has no bar across the top, and the P of PARA has none either. In all varieties but the 1 para, yellow-green, there is a cross-bar in the *centre* of this last-named letter, making it an H. The white leaf-ornament at the bottom of each side-label shows an arrow, the head of each arrow being almost hidden in the vertical shading above it. A feature (or want of feature?) of this counterfeit is the hopelessly retreating chin.

Third Forgery.

Of this I have only the 1 para, in rather bluish-green. It is also Fohl's manufacture, and looks very good. Nicely lithographed, on medium, yellowish-white wove paper, unperforated, and perforated 11½. There are eighty pearls round the head, and some of them are oblong. There are forty-two wavy, vertical coloured lines below the central circle. In the central circle, there are sixteen white, horizontal lines to right of the head, and seventeen to left of it, counting as before. Both in this and in the second forgery there are three curved lines of shading near the "Adam's apple," on the throat, but in the genuine, and in the first forgery, there are only two lines. There is no bar across the top of the P of POSHTA, or the top of the P of PARA. The "candlestick" in the white leaf-ornament, in the top of the left-hand side-frame, has only the stump of a candle in it; and there is an arrow in each of the white leaves in the lower ends of the two side-frames, the head of each arrow being buried in the vertical shading above it.

POSTMARKS.

Genuine.—(Except in the 1 and 2 paras) a frame, like 72, with name of office; also 29.

First Forgery.—1; 22, without outline; 38, without numerals; 98.

Second Forgery.—Uncancelled.

Third Forgery.—Uncancelled.

Issues of 1869-71. 1, 10, 15, 20, 25, 35, 40, 50 Paras.

Westoby says that the perforation of these stamps was probably done by two single-line machines, one gauging 9½, and the other 12; thus either the one gauge, or the other, or both, may be found on the stamps. The following are the varieties:—

1. July, 1869. Perforated 9½. 10, 15, 20, 25, 35, 40, 50 paras.
2. Perforated 12. 1, 10, 15, 20, 25, 35, 40, 50 paras.
3. Perforated 12 × 9½. 1, 10, 15, 20, 25, 35, 40, 50 paras.
4. August, 1872. 1 para, unperforated.
5. 1879. New plates, stamps further apart, so that they have larger margins. 1 para, unperforated.
6. Ditto. Perforated 9½. 10, 20, 25 paras.
7. Ditto. Perforated 12. 1, 10, 20, 25 paras.
8. Ditto. Perforated 12 × 9½. 1, 10, 20, 25 paras.

Genuine.

Engraved in *épargne*, on stout, white wove paper, yellow gum; varieties as above. Many specimens may be found, printed in very greasy ink, so that the paper becomes almost transparent. The cable-pattern in the top frame contains fourteen white twists; the similar pattern in the bottom frame also contains fourteen twists; each of the cables in the side-frames contains twenty twists. The white line which marks the back of the neck is faint, and the continuation of it, below the bottom of the neck, is almost invisible. The three upright strokes of the character for SH, in the middle of the upper word, are equidistant, and their feet are strongly and equally joined together. The horizontal shading at the back of the neck, from the hair to the bottom, contains twenty-one coloured lines, and there are thirty-six short, horizontal lines of shading from under the chin, round the cheek, to the front of the parting of the hair.

**Forged.**

The counterfeits are very plentiful, but, so far as I know, there is only the one set. Lithographed, on poor, thin, very white wove paper, badly perforated 12½. The cable-pattern in the top frame shows fourteen twists, like the genuine; but the pattern in the bottom frame has only thirteen twists. There are eighteen twists in the left side-frame, and seventeen in the right side-frame. The white line which marks the back of the head and neck is very strong and prominent, and the continuation of it below the neck is also very strong and prominent. In the character for SH, at the top of the stamp, the left upright stroke leans slightly away from the other two, and its foot is not so strongly joined as the other two are. The horizontal shading, at the back of the neck, from the hair to the bottom, contains eighteen lines; and there are thirty-two short, horizontal lines of shading from under the chin, to the front of the parting of the hair.

POSTMARKS.

Genuine.—As in the last issue.

Forged.—1; 22; 23, with closer lines; 38, without numerals; 100, larger.

**SHANGHAI.**

Of the earliest stamps of Shanghai, I only knew of four counterfeits, when the second edition of this work appeared, and now I have twenty different forgeries in my album, and there are sundry others that I have not seen!

Before I begin my dissection of the stamps and their forgeries, I should like to make a few remarks for the sake of young collectors. It will be noticed that the catalogues speak of "antique numerals" and "ordinary numerals" being found on the stamps. This refers, not to the Chinese, but to the English numerals, in the bottom label. Here is a set of "antique" numerals: 1, 2, 3, 4, 5, 6, 7, 8, 9, 0, and here are the ordinary ones for comparison: 1, 2, 3, 4, 5, 6, 7, 8, 9, 0; though only the 1, 2, and 3 candareens are found with the

modern, as well as the antique numerals, all the other values having only the antique ones. The Chinese numerals will be found in the left side-label. 1 is a horizontal stroke; 2 is a pair of horizontal strokes; "two" (for some varieties have the word, instead of the numeral) is something like an E, lying face downwards, transfixd by a T; 3 is represented by three horizontal strokes; 4 is a roughly-drawn square frame, containing two commas, back to back, which hang down inside, from the top outline; 6 is like a child's first attempt to draw a man, with arms extended horizontally, and legs wide apart; 8 is like a rough v, upside down, and very flat at the apex; 12 is not given, the value being written, "1 mace, 2 candareens"; 16 also is written as "1 mace, 6 candareens." The character for "candareen" (or "cent"), when turned upside down, somewhat resembles a splay-sided flower-pot, with two curved stems or horns growing out of it. "Mace" is a thing like a badly-made 1, with a roof over it, side by side with an x, on the top of another x, and various dots and dashes freely scattered about the hieroglyphic. The lowest character in the left side-label, I fancy, means "sterling."

Issue of 1865. 1, 2, 4, 8, 16 Candareens.

The following are the principal varieties:—

1. Antique numerals, "candareen" in singular; thin wove paper. 1 c., blue; 2 c., black; "two" c., black; 4 c., yellow; 8 c., green; 16 c., orange-vermilion.
2. Thin laid paper. 1, 2, 4 c.
3. "Candareens" in plural, in all values except the 1 c.; thin wove or *pelure* paper. 1 c.; 2 c.; "two" c.; 3 c., red-brown;

2 candareens. 2 candareens. 4 candareens. 4 mace (error). 8 candareens. 8 mace (error).

4 c., 6 c., red, red-brown; 8 c., yellow-green, olive-green; 12 c., red-brown; 16 c., brick-red, scarlet; errors, 4, 8 "mace."

4. Roman numeral I; same paper. 1 c.; 12 c., deep brown, Venetian red; 16 c.

5. Roman numeral I; laid paper. 1 c.

6. Thin laid paper. 2 c., 3 c.

Issues of 1866. 1, 2, 3 Candareens.

1. Ordinary numerals; thin wove paper; "candareen" in singular. 1 c., 3 c.
2. "Candareens" in plural. 2 c., 3 c.
3. Thicker, yellow-toned paper. 1, 2,* 3 c.

Genuine.*(Seven bristles in beard.)*

Typographed; varieties as above. The central design is, I believe, in one piece, but the framework is composed of twelve separate lines, which as a rule do not touch each other anywhere. Of these twelve lines, four thick ones form the four sides of the outer frame (showing a break at each corner); the two thin lines form the two inner sides of the side-frames; then three similar lines, end to end, form the bottom outline of the top labels, and three others form the top outline of the bottom labels. The line under SHANGHAI L.P.O. is generally bent downwards at its right-hand end. There is a stop after CANDAREEN, or CANDAREENS, in all the values, and the stop after the L in the top label is *very* close to the L, so as to almost touch it. The inner, vertical lines of the side-labels (to right and left of the central picture) are $18\frac{1}{2}$ mm. apart, except in the few specimens of the "8 mace" error which I have examined, and which all measure only 18 mm. The dragon has seven bristles in his beard, and three curved hairs in each half of his moustache. The outer hair each side is much longer than the other two. There are four spikes sticking out of the top of his head, the two inner ones being probably ears, and the two longer, outer ones probably representing horns. All four touch the top outline of the central picture, but do not trespass beyond it. The seven bristles of the beard are vertical, and their points are level, so that if a horizontal line were drawn below them, it would touch every point. The "points," by the way, are very blunt. Below the dragon, there is a little sentry-box, and each side of the sentry-box, there are two almost semicircular lines, drawn from its sides to the ground. A hooked line stands on the upper semicircular line each side, but does not go through the line. The character in the right top corner of the stamp is something like a roughly-made E, with the top removed, so that only the (very long) foot, the vertical stroke, and the central tongue remain. The foot is very nearly parallel with the line below it, and its right-hand end has a little lump on it; the tongue projects horizontally, but not so far as the foot, and has also a little lump on it. The left side-label is $4\frac{1}{2}$ mm. across, measured to the outside edge of the thick, outer line, down the left side of the stamp. The central picture has an outline of its own (distinct from any of the frame-lines); but it very rarely goes unbroken all the way round, and some specimens only show the top line.

First Forgery.*(Five bristles in beard.)*

Of this I have only the 8 candareens. Lithographed, on medium, white wove paper, often showing a few tiny pin-holes, when held up to the light. The corners of the outer frame of the stamp are not broken. There is a break in the thin outline, under the character in the left top corner; but, with this exception, all the thin frame-lines run, unbroken, from top to bottom, and from side to side of the stamp respectively, so as to form a continuous "Oxford frame." There is a hair-line in the G of SHANGHAI,

* This 2 c. has an antique numeral.

and another joining the HA together. The stop after the L is fully $\frac{1}{2}$ mm. from that letter. The inner, vertical lines of the side-frames are only 18 mm. apart, and the left-hand frame is $5\frac{1}{2}$ mm. wide, instead of $4\frac{1}{2}$ mm. The dragon has only five bristles in his beard; his horn, on the left side of the stamp, does not touch the outline above it, and the ear, this same side, is much more sharply-pointed than the other. There are three curved lines supporting the left side of the sentry-box, and two the other side. The character in the right top corner of the stamp has a slight projection at the top of the vertical stroke, as though part of the head of the E had been left. The outline of the central picture is complete, except at the bottom corners.

Second Forgery.

(Five bristles in beard.)

Of this I have only the 6 candareens. It is lithographed, on medium, white wove paper, showing a few pin-holes. The inner frame-lines have no breaks, but run from top to bottom, and from side to side of the stamp. The stop is more than $\frac{1}{2}$ mm. from the L. The inner lines of the side-frames are $17\frac{1}{2}$ mm. apart, and the left side-label is $5\frac{1}{2}$ mm. wide. The dragon has only five bristles in his beard, and the inner one of the three hairs in his moustache, on the left side of the stamp, is hardly any longer than the bristle to right of it. His horn, on this same left side of the stamp, does not go near the outline above it. The sentry-box has two curved lines supporting it each side, as in the genuine, but the two on the left side are blotched together, and the tail of the hook this side passes through them to the ground. The vertical stroke of the character in the right top corner has its top bent over to the right, almost into a short hook. The outline of the central picture is nearly complete, except near the right top corner.

Third Forgery.

(Seven bristles in beard.)

Of this I have the 1, 2, 3, 4, 6, 8, 12, and 16 "candareens" (even the 1 c. is in the plural), all with modern numerals. It is typographed, on medium, white wove paper, showing a few pin-holes, and is gummed. An easy test is that the Chinese value is the character for "TWO," in *all* the values. It will be remembered that this said character is a sort of monogram of the letters TE, but, in this forgery, there is an oblique line drawn down, from left to right, through the character. The outline of the stamp shows no breaks at the corners, and the inner, vertical line down the left side touches the top of the stamp, while the line under SHANGHAI L.P.O. joins the line under the character in the top right corner. The other lines are broken, as in the genuine. The stop after the L is fairly close to that letter, but not so close as the genuine. The inner, vertical lines of the side-frames are only 18 mm. apart, but the left side-frame is the same width as the genuine. The dragon's beard contains seven bristles, but they are too thin. The central tongue of the character in the right top corner projects too far—quite as far as the foot does. There is a strong, unbroken frame-line, all round the central picture.

Fourth Forgery.

(Seven bristles in beard.)

Of this, like the last, I have all the values, but they all bear the Chinese character for "TWO"—the monogram of TE, already described. (This is an easy test.) Typographed, on fairly stout, very white wove paper. The corners of the outer frame are joined on the right side, but are slightly broken on the left side. The thin, inner frame-lines are separate,

like the genuine. The line under SHANGHAI L.P.O. is not bent downwards at its right-hand end. The 1 c. has the value in the singular, the others in the plural, and there is no stop after the word in any of the values. The inner, vertical lines of the side-frames are only $17\frac{3}{4}$ mm. apart, and the left side-label is only 4 mm. wide. The dragon's beard contains seven bristles, but the first and the seventh are twice as thick as the others. The two inner hairs of the moustache, on the right side of the stamp, are very nearly as long as the outer hair. The central projection of the character in the right top corner of the stamp sticks out as far as the foot does. There is a distinct outline all round the central picture. The 2 and 6 c. have antique numerals; all the other values have modern ones.

Fifth Forgery.

(Seven bristles in beard.)

Of this I have only the 2 "candareens," with antique numerals, and the Chinese "TWO." It is typographed, on thick, yellowish-white, and also on thin, greyish-white wove paper, gummed. It is a very good counterfeit. The outer frame and the inner frame-lines are broken, as in the genuine. The stop after the L is not nearly so close to the letter as it is in the genuine, and the line under SHANGHAI L.P.O. does not bend downward at the right-hand end. The value is in the plural. The inner, vertical side-frames are $18\frac{1}{4}$ mm. apart, and the left side-label is $4\frac{3}{4}$ mm. broad. The dragon's beard contains seven bristles. His right horn and left ear do not touch the outline above them, though they go very near to it. There is a thick outline, all round the central picture, and it is slightly wavy down the left side.

Sixth Forgery.

(Seven bristles in beard.)

Typographed, on rather thin, white wove paper. Of this counterfeit, I have a full set, except the 1 c.; they all have the modern numerals, the value is in the plural, and there is no stop after CANDAREENS. The outer and inner frame-lines are broken, as in the genuine, and the right-hand end of the line under SHANGHAI L.P.O. bends down. The stop is very close to the L in this counterfeit. The inner, vertical lines of the side-frames are $18\frac{1}{4}$ mm. apart, and the left side-label is the same width as the genuine. The dragon's beard shows seven bristles, but their points are not truly in one horizontal line, the end ones being too long. The tops of the horns are rather cut off by the outline above them.

Seventh Forgery.

(Eight bristles in beard.)

This is very much poorer than the counterfeits already described. I have only the 12 c. (*blue*) with value in the plural. Lithographed, in blue, on thick, yellowish-white wove paper. The Chinese value is "TWO"—the TE monogram, already described. The outer frame is *very* thick, with no breaks at the corners; the inner frame-lines are broken, as in the genuine, but they are also far too thick. The English lettering is $1\frac{1}{2}$ instead of 1 mm. high; the H and A of SHANGHAI are joined at the bottom, in both cases, and the inscription reads SHANGHAI L.F.O., with a comma and a large stop after the O. The A and R of CANDAREENS are joined at the bottom. The inner, vertical side-frames are $18\frac{1}{4}$ mm. apart, and the left side-label is the same width as the genuine. The dragon's beard shows eight bristles; they are of *irregular* lengths, so that the points are not level, and the outer hair of the moustache on the right side of the stamp is *shorter* than the second hair. The sentry-box has two

curved lines supporting it on the left side, as in the genuine, but there are three similar lines on the right side. The central projection of the character in the right top corner sticks out quite as far as the foot does, and it slants upwards, instead of being horizontal. There is a strong, unbroken outline, all round the central picture.

Eighth Forgery.

(Eight bristles in beard.)

Of this, I have only the 2 "candareens," with modern numeral, and the Chinese numeral of two horizontal strokes. It looks very well, at a first glance. Lithographed, on thin, white wove paper. The right top corner of the outer frame is slightly broken; but none of the others. The horizontal line above 2 CANDAREENS is drawn right across the stamp, from side to side, and the line under SHANGHAI L.P.O. is also drawn right across, though it does not quite touch the right-hand outline of the stamp. Both the inner, vertical lines are drawn right down the stamp, from top to bottom, touching both top and bottom outlines. The letters HAN of SHANGHAI are all joined together at the bottom, and the stop after the L is $\frac{3}{4}$ mm. from it. The stop after CANDAREENS is *very* small. The inner, vertical lines of the side-frames are 19 mm. apart, but the left-hand label is $4\frac{1}{2}$ mm. wide, the same as the genuine. The dragon's beard shows eight bristles; the two at the right-hand end are almost blotched into one. There are only two hairs in the moustache on the left side of the stamp; the end of the shorter hair is joined to the side of the longer one by an oblique line. The longest hair on the right side of the stamp is growing out of the throat, or front of the chest, instead of out of the upper lip. The horn, on the left side of the stamp, does not touch the outline above it, and the other horn trespasses slightly above the outline. The outline of the row of bristles in the beard is slightly convex, instead of level. The hooked lines, each side of the sentry-box, pass right through the curved, supporting-lines, to the ground. The foot of the character in the right top corner slopes somewhat down to the right; but in the genuine, it slopes *very* slightly the other way. The central picture is only very partially outlined.

Ninth Forgery.

(Eight bristles in beard.)

Typographed, on grey-white, *pelure* wove paper, gummed. The outer frame is broken at all the corners, and the inner frame is in eight separate pieces, like the genuine. I have only the 2 "candareen," with modern numeral, and with the Chinese numeral of two horizontal strokes. The stop is $\frac{1}{2}$ mm. from the L. The inner, vertical lines of the side-frames are $19\frac{3}{4}$ mm. apart, but the left side-frame is the same width as the genuine. The dragon's beard shows eight bristles; the last three to the right do not touch the chin, and the last one touches the inner hair of the moustache. The outer ones radiate slightly each side, instead of being all vertical, and their outline is convex, instead of horizontal. The ears do not touch the boundary-line above them. The sentry-box is supported by three curved lines each side, instead of two. The foot of the character in the right top corner slopes very much down to the left. There is a strong, unbroken outline all round the central picture.

Tenth Forgery.

(Eight bristles in beard.)

Of this I have only the 1 "candareen," with very large, antique numeral, and a very tiny stop, some distance from the N. Lithographed,

on medium, white wove paper, usually showing a few pin-holes. The outer frame has no breaks at the corners, and the thin, inner lines are drawn, without break, from top to bottom, and from side to side of the stamp, respectively, touching the frame in every case. The stop after the L is more than $\frac{1}{2}$ mm. from that letter. The inner, vertical lines of the side-frames are $18\frac{1}{2}$ mm. apart, and the left side-frame is 5 mm. broad. The dragon's beard shows eight bristles; they are too long, and their lower outline is rather convex. The two outer hairs of the moustache on the left side of the stamp are blotched into one solid mass, and the two inner hairs on the other side of the moustache, which are *very* short, are also blotched together into one. The ear under the G of SHANGHAI is very much blunter than the other. The vertical stroke of the character in the right top corner is too thick and clumsy. The central picture is not outlined at the top and the right, upper corner.

Eleventh Forgery.

(*Eight bristles in beard.*)

Of this I have only the 16 "candareens," with antique numerals. It is lithographed, on fairly stout, yellowish-white wove paper. The outer frame of the stamp is not broken at the corner, but the inner frame is in eight separate pieces, like the genuine, though the left vertical line touches the top of the stamp, which is not the case with the genuine. The lettering is all very small, and the stop is $\frac{1}{2}$ mm. from the L. The inner, vertical lines of the side-frames are $18\frac{1}{2}$ mm. apart, and the left side-frame is the same width as the genuine. The dragon's beard shows eight bristles; they are short, and the outline of them is *very* convex, or rounded. A straight-edge, laid at their points, would hardly touch more than two of them at a time. The moustache, on the left side of the stamp, shows three hairs of equal length, and the moustache on the other side has only two hairs and a little scratch. The projecting, central tongue of the character in the right top corner slants very obliquely upwards, instead of being horizontal; the foot is a straight, thick stroke, without any knob at the end. The central picture has an outline all the way round, with a small break near the left top corner.

Twelfth Forgery.

(*Eight bristles in beard.*)

Of this I have only the 4 "candareens," with antique numeral. It is lithographed, on medium, white wove paper. The outer frame has no breaks at the corners, but the inner frames are composed of eight pieces, like the genuine. The right-hand end of the line under SHANGHAI L.P.O. is not bent down. The stop after the L is almost invisible, and fully $\frac{1}{2}$ mm. from the letter. The inner, vertical lines of the side-frames are 19 mm. apart, and the left side-frame is $4\frac{1}{2}$ mm. broad. The dragon's beard shows eight bristles, and they are in a *very* convex curve, instead of level. There are only two hairs in the moustache, on the left side of the stamp, and the inner one is split. The three hairs on the other side are very nearly equal in length. The horn, on the left side of the stamp, does not touch the outline above it. There are two curved supporting-lines each side of the sentry-box, as in the genuine, but the tail of the hooked line on the right side seems to touch both lines, instead of only standing on the outer one. The projecting, central tongue of the character in the right top corner slants obliquely up to the right, instead of being horizontal, and the foot is a rather wavy line. The central picture is outlined all the way round, except at the four corners.

Thirteenth Forgery.*(Eight bristles in beard.)*

Of this I have only the 2 "candareens" in *rose*, with the Chinese TE monogram for TWO, and modern numeral. It is almost identical with the seventh forgery of the 12 cs. Lithographed, in *rose*, on thick yellowish-white wove paper. The tests are the same as for the seventh forgery, except the following:—There is a dot over the left side of the 1 of SHANGHAI, and another dot projecting from the outer edge of the top frame, above the F. of L.F.O. The left side-frame is $4\frac{3}{4}$ mm. broad. There are two dots, like a faint colon, before the 2, and another dot above the 2.

Fourteenth Forgery.*(Eight bristles and a dot in beard.)*

Of this I have the 12 "candareen" and the 12 "candareens," both with modern numerals. Lithographed, on medium, yellowish-white wove paper. The outer and inner frames are broken, as in the genuine, but the line under SHANGHAI L.P.O. is not bent at the right-hand end. The stop is fairly near to the L. The inner, vertical lines of the side-frames are 19 mm. apart, but the left side-frame is the same width as the genuine. The dragon's beard shows eight bristles, with a dot to the right of the last bristle. Each side of the moustache is composed of two hairs only, and the hairs converge to a point, making each half into an outlined, white spike. (This is a very easy test.) The bristles of the beard are a good deal too long. The sentry-box is badly drawn, the doorway is not of solid, dark colour, like the genuine, but white, with a vertical line in it. There are three lines supporting the left side of the said sentry-box, but the inner one is really the tail of the (*very* large) hook, which curves through, to the ground. The support on the right side shows an outer, curved line, and within this, the space is filled in with solid colour. The central projection of the character in the right top corner *curves* slightly upwards. There is a very thick outline round the central picture. In this counterfeit, the dragon's tail is spread out, with six spikes (instead of five), and the topmost spike has its point broken open.

Fifteenth Forgery.*(Nine bristles in beard.)*

Of this I have only the 3 "candareens," with large modern numerals. It is lithographed, on medium, yellowish-white wove paper. There is no break anywhere, either in the outer or the inner frames. The S of SHANGHAI is very badly drawn, and the stop after the L is less than $\frac{1}{2}$ mm. from it. The inner, vertical side-labels are 18 mm. apart, and the left side-label is $5\frac{1}{2}$ mm. broad. The dragon's beard shows nine bristles, in a convex curve, and each side of the moustache has only two hairs. The ears and one horn trespass not only above the outline of the central picture, but even into the frame-line under SHANGHAI. The sentry-box is very badly drawn, but the supporting-lines are the same as in the genuine. The outline of the central picture is complete, except for a small portion, in the centre of the right-hand edge. The middle spike of the dragon's tail does not touch the outline to right of it.

Sixteenth Forgery.*(Nine bristles in beard.)*

Of this I have the 1 "candareen," with antique, and also with modern, numerals, and the 2, 3, 4, 6, and 16 "candareens," with modern numerals.

It is lithographed, on thin, grey-white wove paper. There are no breaks at the corners of the outer frame; the inner frame-lines are separate, like the genuine, but the vertical ones touch the top of the stamp. The right-hand end of the line under SHANGHAI L.P.O. is not bent down at all. The stop is almost as close to the L as it is in the genuine. The inner, vertical lines of the side-frames are $18\frac{1}{2}$ mm. apart, and the left side-frame is $4\frac{1}{4}$ mm. broad. The dragon's beard shows nine bristles, and they radiate, instead of being vertical. The three hairs of the moustache, on the right side of the stamp, are about equal in length; the centre hair is very thin, and the outer hairs very thick. There are three curved lines, each side of the sentry-box, supporting it. There is a strong outline round the central picture.

Seventeenth Forgery.

(*Nine bristles in beard.*)

Of this I have only the 6 "candareens," with modern numeral. Apparently engraved in *taille-douce*, on medium, very hard wove paper. It is probably yellowish-white, but my single specimen has been greased or oiled all over, so that I am not sure. There is no break at any of the corners of the outer frame. The inner lines are separate, as in the genuine, except that the one above the character in the left bottom corner touches the left-hand frame. The line under SHANGHAI L.P.O. is not bent at the right-hand end; the stop is fairly close to the L. The inner, vertical lines of the side-frames are $18\frac{1}{2}$ mm. apart, like the genuine; the left side-frame is $4\frac{1}{4}$ mm. broad. The dragon has nine radiating bristles in his beard. The moustache, on the right side of the stamp, is almost exactly the same as in the sixteenth forgery. The tip of the horn which touches the line under the I of SHANGHAI is open, instead of closed to a sharp point. The sentry-box is supported by three curved lines each side, instead of two. There is a strong, unbroken outline all round the central picture.

Eighteenth Forgery.

(*Nine bristles in beard.*)

Of this I have the 6, 8, and 16 "candareens," with modern numerals, and the 12cs. with a Roman I, and an antique 2. Lithographed, on medium, soft, white wove paper. The outer frame has no breaks at the corners; the inner frame-lines are in eight separate pieces, like the genuine. The right-hand end of the line under SHANGHAI L.P.O. does not bend down. The stop is fairly close to the L. The inner, vertical side-lines are 18 mm. apart, and the left side-frame is $5\frac{1}{2}$ mm. broad. There are nine radiating bristles in the dragon's beard. The three hairs of the moustache, on the right side of the stamp, are the same as in the sixteenth and seventeenth forgeries. There are three curved lines supporting the sentry-box each side, but the uppermost one on the right side is not joined to the sentry-box. There is a strong, unbroken outline, all round the central picture.

Nineteenth Forgery.

(*Nine bristles in beard.*)

Of this I have the 1 "candareen" with antique numeral, and the 2 and 3 "candareens" with modern numerals. Typographed, on thin, almost *pelure*, white wove paper. The outer frame is broken at the corners, and the inner lines are in eight pieces, like the genuine, but the inner vertical line on the right side runs down quite to the bottom of the

stamp. The line under SHANGHAI L.P.O. is not bent ; the stop is fairly close to the L. The inner, vertical lines of the side-frames are $19\frac{3}{8}$ mm. apart, and the left side-frame is the same width as the genuine. The dragon has nine radiating bristles in his beard. The horn under the 1 of SHANGHAI reaches the line above it, without closing to a point. There are three curved lines supporting the sentry-box, each side. There is a strong outline round the central picture, having only a slight break just at the left bottom corner.

Twentieth Forgery.

(Ten bristles in beard.)

Of this, I have only the 12 "candareens," with modern 1, and antique 2. Lithographed, on medium, yellowish-white wove paper. The outer frame has no break at any of the corners ; the inner lines are in eight pieces, like the genuine, but the right vertical one is drawn down to the very bottom of the stamp. The line under SHANGHAI L.P.O. is not bent at the end. The stop is about $\frac{3}{4}$ mm. from the L. The stop after CANDAREENS is *very* faint as a rule. The dragon's beard shows ten bristles, and they form a very rounded curve, and are too short. There are only two hairs in the moustache, on the left side of the stamp. Only one ear touches the outline above it. The central projection of the character in the right top corner of the stamp slants upwards, very decidedly, to the right. The outline of the central picture is a good deal broken.

OFFICIAL IMITATION.

Bacon's *Reprints* says : "In 1874, official imitations of the 1, 2, and 3 candareens were printed on surfaced, white *pelure* paper. Entirely new engraved centre-blocks were used, and the dragon has nine, instead of seven bristles to the beard. There are two distinct types, printed side by side. In one type, the moustaches are formed of three lines ; in the other, of only two long lines, which terminate in a point. The impression is very clear, and the numerals of value are small modern. These imitations are stated to have been available for postage." 1 c., ultramarine ; 2 c., black ; 3 c., brown. Two types of each. My nineteenth forgery is evidently the first type of the above-described counterfeit, but I have not seen the other.

POSTMARKS.

Genuine.—The obliteration (scarce) is like 29, but having a tongue hanging from it, forming a garter.

Forged.—My seventh forgery has some pencil-strokes on it ; otherwise all the counterfeits are uncanceled.

NOTE.—The arrangement which I have made of the twenty counterfeits is, of course, purely arbitrary, as I have no means of knowing the order of their appearance. To facilitate recognition of the various forgeries, I have taken them according to the number of bristles in the beard, beginning with the smallest number.

REPRINTS.

Antique numeral : 6 cs., brown ; 8 cs., deep olive-green. Modern numeral : 1 c., blue ; 2 cs., greyish-black ; 3 cs., brown ; 4 cs., chrome-yellow ; 6 cs., olive-green ; 8 cs., emerald-green ; 12 cs., orange-vermilion ; 16 cs., reddish-brown. Bacon says that they were made on coarse, white wove paper, which, on being held up to the light, shows white specks in

it. The outline of the central picture is partly or entirely absent. The value is in the plural, except in the 1 c. Readers will please remember that, in the genuine, only the 1, 2, and 3 c. have modern numerals, and that there was no 6 c., *brown*, in the originals. Bacon says: "These reprints were available for postal purposes, but very few indeed could have been so used."

Issue of 1866. 2 Cents, rose.

There are, of course, other values (4, 8, 16 cents) in this set, all differing in type, but the 2 cents is the only value that has been forged, so far as I know.

Genuine.

Engraved in *épargne*, on thick, yellowish-white wove paper, perforated 12 (1866) or perforated 15 (1872). The sloping line of the character for CENTS at the bottom of the left side-label (I do not speak of the bottom corner) touches, or very nearly touches, the vertical frame-line to right of it, as in the annexed illustration. This character is the same as was used for CANDAREEN in the first issue. The top hieroglyphic in the right side-label is in two parts; the lower portion is a badly-made oblong figure, with a coloured line running horizontally nearly across its centre. The L of L.P.O. is the same height as the 1 of SHANGHAI; it is upright, and has no sign of any head-stroke. The P. is the same height as the L. In the lower label, the 2 has a straight foot with a turned-up end; it is taller than CENTS, and the bottom limb of the E is decidedly longer than the top limb. There is no stop after cents. Where the white ring of the central oval touches the side-frames, there are only two vertical lines to be seen, the inner one each side being a mere hair-line, and the outer one much thicker. The dark, inner outline of the said oval is of regular thickness all the way round, and it is not blotched into the chain-pattern groundwork inside the oval. The vertical rows of chain-pattern, though very small, are neatly and clearly done. The dragon has a face something like that of a wild boar. He has two very large, curved horns, with two smaller and lighter horns (or ears?) below them, and a bunch of three projections on the top of his head, distinct from the horns. The claw of the right hind foot *nearly* touches the dark outline of the oval, on the left side of the stamp. In the very centre of the stamp, there is a circular object; a dark dot, with a dark ring round it.

First Forgery.

Lithographed, paper similar to the genuine, nicely perforated 12. The sloping stroke of the character at the bottom end of the left side-label does not go near the inner frame-line of the said label. The bottom half of the character at the top of the right side-label is a rough square, like the genuine, but there is no coloured line across its centre. The L of SHANGHAI L.P.O. is shorter than the 1 before it, and much shorter than the P after it; it seems to lean slightly away from the 1, and many copies show a small head-stroke on the left side. The 2 in the lower label has a rather curly foot; it is the same height as CENTS; the head of the E is longer than the foot, and there is a stop after the word. Where the white ring of the central oval touches the side-frames, the inner, vertical line is almost as thick as the outer one. The dark, inner ring of the said oval is very blotchy on the left side. The chain-pattern is poor, and only distinct below the dragon. The dragon has a very fiendish face, and he has an arrangement of about seven large horns on the top of his head,

most of them being of a sugar-loaf shape. The only horn like the genuine is the one under the I of SHANGHAI, and its point trespasses quite across the white oval ring. None of the claws of the hind feet go anywhere near the outline of the oval. The circular object in the centre of the stamp is absent.

Second Forgery.

This is new to me (1906), but it looks like an old counterfeit. Lithographed, on rather thin, yellowish-white wove paper, perforated $11\frac{1}{2}$, very badly. The character at the bottom of the left side-label does not touch the frame to right of it. The rough square of the character at the top of the right side-label has no bottom outline, but, *per contra*, there are two coloured lines across it, instead of one. The letters of the top inscription are not very regular; the right limb of the first H of SHANGHAI is too tall; the following A leans towards it; the tail of the G has an attempt at a cross-bar (the genuine G is just like a C); the second A has its left leg too short, and its top too square, and it leans towards the I, which is too tall. The O is also too tall. The top and bottom limbs of the E of CENTS are of equal length, and the bottom of the T is cut off slopingly. Where the white ring of the central oval touches the side-frames, each side, there are *three* vertical lines, instead of two, and the central line is slightly thicker than the other two. The vertical rows of chain-work in the oval are very faint, and not particularly regular. The dragon has a cat's face, ornamented with the large, projecting ears of a cow; and the (very faint) object on the top of his head looks like a volcanic peak, surrounded by three lower peaks. These are almost white. None of the claws touch the outline of the oval. The object in the very centre of the stamp is a white circle, surrounded by a dark ring; there is no dot in the centre of the circle.

POSTMARKS.

Genuine.—1. Also 29, with a tongue like a garter, as before.

First Forgery.—54, with blank centre.

Second Forgery.—Similar to 54, but more circular, with . . . 53 in the centre of it. There is probably a Colony-letter before the numerals, but my single specimen only shows part of the postmark.

Issue of 1867. 1 Candareen, brown.

Genuine.

Engraved in *épargne*, on stout, yellowish-white wove paper, perforated 15. The character for candareens (or cents) in the centre of the left-hand side-label does not touch the outline to left of it, though in some specimens it is very close. The English inscriptions are: SHANGHAI L.P.O., and 1 CAND. Almost all my specimens (I have seventeen before me as I write) show a tiny dot between the NG of SHANGHAI, another in the G, another between AI, and another between I L. The O is the same height as the other letters. There is a stop after CAND. If the horizontal stroke at the top end of the left-hand side-label (Chinese numeral 1) were prolonged to the right, it would pass through a place in the pearled frame round the dragon, where one of the pearls is missing. There are 114 pearls in this frame, and they are *very small*, gauging four to 1 mm. The dragon has five toes on each foot, most of them showing hooked claws. There is a curious ornament in the very centre of the stamp. It is a ring, with what look like the necks and

widely open-mouthed heads of two serpents, one each side, projecting slantingly outwards and upwards, from near the base of the ring.* The 1 in the bottom label has no head or foot-strokes.

First Forgery.

Lithographed, in blackish-brown, on medium, hard, toned wove paper, unperforated; also in the yellowish-brown of the genuine, on medium, yellowish-white wove paper, perforated 12½. The character for CANDAREEN, in the centre of the left side-label, is joined to the frame to left of it. The English inscriptions read: SHANGHAI L.P.O., and 1 GAND. This is an easy test, as the letters cannot be mistaken. The O is decidedly taller than the P. There are no dots between the letters. There are only ninety-eight pearls in the frame round the dragon, and there is no pearl missing, opposite the Chinese numeral. The pearls gauge about three to 1 mm. The dragon has six toes on his right fore-foot, and six on the left hind foot. The feet look like asterisks, or six-petalled flowers, and have no hooked claws. The ornament in the centre of the stamp is just like a four-legged crab or spider. In the genuine, the dragon's body gives a twist to the right, so that this ornament is in a lined space outside (to the left of) the body. In this forgery, it seems to be in the centre of the dragon's stomach! The 1 in the bottom label has small cross-strokes, both top and bottom.

Second Forgery.

Lithographed, the same colour as the genuine, on rather thick, soft, yellowish-white wove paper, perforated 12½. This is a much better-looking production than the other. The O is much too far away from the P. There is no stop after CAND, and there are no dots between the letters of SHANGHAI, etc. There are about 104 pearls in the frame round the dragon, and there is no pearl missing, opposite to the end of the horizontal, Chinese numeral. There seem to be only four toes on the dragon's hind feet. The outlines of the corner-circles, and the rounded parts of the top, bottom and side-labels, in the genuine, all touch, or *almost* touch, the coloured outline that goes all round the stamp; but, in this forgery, none of them touch the frame-line, except the bottom parts of the rounded ends of the 1 CAND label.

POSTMARKS.

Genuine.—29, made into a garter, with hanging tongue, as before described.

First Forgery.—54, with blank centre. Also pen-stroked.

Second Forgery.—98, but I do not know how many bars there are.

Same Issue. 6 Candareens, slate-grey.

Genuine.

Engraved in *épargne*; paper and perforation as in the 1 c. The middle left corner or projection of the character for CANDAREENS, in the centre of the left side-label, does not touch the frame-line to left of it, though it is rather close. The G of SHANGHAI is rather like a C, and the top of the second A is almost invariably filled up with colour to the cross-bar, which is thus obliterated. In the frame, under the NGHAI L., of SHANGHAI L.P.O., there are five four-petalled florets, each like a St. Andrew's cross; and there are five similar ones in the frame, above the CAND of 6 CANDS. In each side-frame, there are nine of

* This is possibly intended for the winged wheel, which forms part of the design of the 1893 issue.

these florets. The dragon and the central ornament are the same as in the 1 candareen, but he is on a ground of very fine, oblique lines, running down from right to left.

First Forgery.

Lithographed, in pale French-grey, greenish-grey, or sage-green, on medium, to thick, white and yellowish-white wove paper, perforated 12½. The Chinese character for CANDAREENS, in the centre of the left side-label, just touches the frame-outline, to left of it. The G of SHANGHAI is an unmistakable C, and the top half of each A is not blotched-in with colour. In the genuine, the five St. Andrew's crosses, above and below the dragon, all have a white dot in the centre, with a coloured ring round the dot, and a coloured line along each arm of the cross. In this forgery, all ten crosses appear to be plain, without dots, rings, or lines. Each side of the dragon, there are ten of these crosses, instead of nine, and they also show no lines, etc. (This is an easy test.) The dragon is on a perfectly white ground, without any lines. His fore-foot, on the left side of the stamp, is a six-petalled flower; the other fore-foot has five petals; the hind foot, on the left side of the stamp, has five, and the other hind foot, seven petals. The face, when it can be made out, is that of a very chubby-cheeked boy, with wildly-upstanding hair, and one eye lower than the other. The details of the body are too confused to allow of description.

Second Forgery.

Lithographed, in rather dark grey-green, on thick, very yellowish-white wove paper, perforated 14½. The character for CANDAREENS does not go near the frame-line to left of it, being very much further off than the genuine. The first A of SHANGHAI is considerably taller than the rest of the letters. The A of CAND is also taller than the other letters, and sharply pointed, instead of being cut off squarely. None of these letters have their tops filled in with colour. There are seven St. Andrew's crosses in the frame above the dragon, and seven below him. On the right side, there are nine crosses, as in the genuine; but, on the left side, there are eight perfect crosses, with a portion of a ninth at the top of the row, and a portion of a tenth at the bottom of the row. These crosses have the dots, rings, and lines, like the genuine. The shading behind the dragon is like the genuine, but darker. His fore-foot, on the left side of the stamp, has five claws, and the hind foot, on the right side of the stamp, has four claws; the other feet are hidden by the postmark, in my single specimen. The ornament in the centre of his body has an open-mouthed, serpent's head on the right side, like the genuine, but only a serpent's tail on the left side. Most of the body is covered by the postmark, so that I can give no further details.

POSTMARKS.

Genuine.—29, with a tail, as before, in blue, or red.

First Forgery.—1. Also 54, with blank centre.

Second Forgery.—Similar to 33.

SICILY.

Issue of 1859. $\frac{1}{2}$, 1, 2, 5, 10, 20, 50 Grani.

Genuine.

Engraved in *taille-douce*, on stout, yellowish-white wove paper. The groundwork of the central rectangle is, to all appearances, solid, but it is really composed of crossed, vertical, and horizontal lines, placed so very close together as to touch, and showing no white at all. The lines can hardly be seen without a microscope, and many specimens only show them at the top right-hand corner of the rectangle, behind the head. The lips are not level or equal, the upper one being much thicker than the lower one, and projecting a good deal more. The stop after SICILIA is *very* small; and, looking at the stamp with the head upwards, the said stop is higher than the level of the white line under the head; *i.e.*, if the white line of the inner rectangle, below the head, were produced to the right, it would pass almost clear below the stop after SICILIA. The head- and foot-strokes to all the letters of the various inscriptions are broad, well-defined, and with square ends. The line below the head, if produced to the left, would pass *just* below the first stroke of the B of BOLLO, but would cut into the head- and foot-strokes of it. The A of POSTA is *very* broad and square at the top. The outline of the nose is nearly straight, and a ruler or card, laid along the edge of the outline, would cut through the left side of the foot of the second L of BOLLO, and the right side of the foot of the T of POSTA. The ear is shaded all over with oblique lines, running down from right to left. The upper eyelid is wide open, but there is no eyeball, and no lower eyelid. There is no dark outline at the back of the head. The stops after SICILIA, GR., and the numeral or numerals of value are perfectly round. Their size is no very certain guide, as I find them large in some copies, and very small in others. As a rule, however, the stop after SICILIA is very much smaller than the two others.

First Forgery.

Poorly lithographed, on rather thin, white wove paper. The ground of the central rectangle is composed of very distinct, crossed, vertical, and horizontal lines, showing the white background between them. There is no difficulty in seeing the lines, as they are quite far apart; they show over the whole of the central rectangle, behind the bust. Similar lines, but not so far apart, may be seen in the outer portion, containing the lettering. The lips are both of the same thickness, and the under lip projects forward, level with the upper one. The stop after SICILIA is large and distinct, and, if the whole line below the portrait were prolonged to the right, it would obliterate the stop altogether. The head- and foot-strokes to all the letters are not particularly broad, and almost all of them are pointed at the ends. The white line below the bust, if prolonged to the left, would cut into the first stroke of the B of BOLLO. The nose is very snub or blunt at the end, and the top of the A of POSTA is not quite so square as in the genuine. If a ruler or card be laid along the upper outline of the nose, it will cut into the foot of the first L of BOLLO, and into the lower part of the S of POSTA. The shading of the ear in this forgery is like the genuine. The eye is not very wide open, but eyeball, pupil, and both eyelids can be seen. The stops vary in shape, being sometimes round, and sometimes quite square. The whole design of this forgery is very poor, and there is not much likelihood of its taking in any but the youngest of our philatelic brethren.

Second Forgery.

I don't think this is very common, as I have only seen one specimen. Lithographed, on paper nearly as stout as that of the genuine. The background of the central rectangle is quite solid, not bearing the slightest vestige of crossed lines. The lips come to a sort of point, quite different from the well-marked lips of the genuine, and both are about the same thickness, and project equally. There is no stop at all after SICILIA. The head- and foot-strokes to the letters are very thin and pointed, instead of square, at the ends; and several of them are missing. The B of BOLLO is very badly made, the lower half being much larger than the upper one. The A of POSTA is pointed at the top. The nose is hollowed in the outline, near the point, making it look very vulgar and common. The top of the head appears to be quite bald, like a monk's tonsure, though it is all covered with hair in the genuine. A card, laid along the outline of the nose (this is not very easy with such a "tip-tilted" affair), cuts through the centre of the second L of BOLLO, and the right foot of the A of POSTA. What shading there is on the ear is of vertical lines; but the whole of the rim of the ear is quite white. The eye is plainly visible, with a large dark pupil.

Third Forgery.

Lithographed, on thick, rather hard, white wove paper. The background of the central rectangle is absolutely solid, without any trace of crossed lines. The lips are very similar to those of the genuine. The stop after SICILIA is far too large and distinct, and, if the white line below the portrait were prolonged to the right, it would altogether obliterate the said stop. The head- and foot-strokes to all the letters are of a good length, but most of them are pointed, and too thin. The line below the portrait, if prolonged to the left, would cut not only into the first stroke of the B of BOLLO, but also almost into the body of that letter; the B being placed a good deal too low down. The cross-bar of the A of POSTA is not in the middle of the letter, as it ought to be, but placed too near the bottom of it. The nose is tolerably like that of the genuine, but it has a sort of knob at the point. In the genuine stamps, the nose is quite pointed. A card, laid along the outline of the nose, cuts into the bottom of the thick stroke of the second L of BOLLO, and just grazes the right lower corner of the S of POSTA. The ear is shaded with oblique lines, running down from left to right; that is to say, exactly the opposite of the genuine. There are indications of an eye, but the dark part may be either a pupil, or the shading to the corner of the eye, it is impossible to say which. There is a thin, white outline to part of the back of the head, just opposite to the S of SICILIA. The stops are all small and shapeless. This is a much better forgery than any of those yet described, and has probably deceived many.

Fourth Forgery.

Lithographed, on stout, hard, white wove paper. The groundwork of the central rectangle is absolutely solid, without any trace of crossed lines. The under lip is, if anything, rather thicker than the upper one. The stop after SICILIA is large and distinct; and the white line under the portrait (which in this forgery is very thin, instead of being extremely broad) would pass *above* the stop. The head- and foot-strokes to all the letters are too thin, many of them defective, and some of them pointed. The line below the portrait, if prolonged to the left, would run right through the centre of the first stroke of the B of BOLLO. The A of

POSTA is somewhat rounded at the top. The nose, though pointed, has an upward tilt. The front of the base of the neck, which ought to appear to be almost resting on the white line under the portrait, is clear above it, showing the background, between the front point of the neck and the said white line. All the shading on the head, face, and neck is too coarse, and the beard is much too pointed. A card laid along the upper outline of the nose very nearly grazes the bottom of the last O of BOLLO, and cuts into the right side of the foot of the T of POSTA. There are four oblique lines of shading, running down from right to left, on the middle of the ear; but the top is unshaded, and the rest of the lines are irregular. The upper and lower lids and eyeball are all distinct, and there is no pupil.

This is not so good a forgery as the one last described.

Fifth Forgery.

Lithographed, on very stout, very hard, very yellowish-white wove paper. The crossed lines are plainly to be seen in the groundwork of the rectangle, though they are much finer than in the first forgery; and the groundwork of the outer portions, containing the lettering, is quite solid. The lips come to a sort of point, being very nearly level with each other; but the lower lip would hardly be seen at a first glance, as the right corner has a good deal of shading in it. There is no stop after SICILIA. Most of the head- and foot-strokes to the letters are too pointed, and the right foot-stroke of the second I of SICILIA is very short and imperfect. The four white lines, forming the inner frame, are all of the same width in the genuine; but, in this forgery, the top line under POSTA and the bottom line above the denomination of value are twice as broad as the side-lines. The A of POSTA is pointed at the top. The shape of the nose is rather like that in the second forgery. A card laid along it passes right through the centre of the second L of BOLLO, and clear to the right of the bottom of the T of POSTA. The pendent lobe of the ear is shaded with rows of dots, running down obliquely, from right to left, and the whole of the rim of the ear is quite white. The eyeball, upper and lower eyelids, are all visible, and there is no pupil.

Sixth Forgery.

Lithographed, on stout, very yellowish-white wove paper. The groundwork of the central rectangle is solid, but that of the frames shows crossed lines, very close together. The upper lip is long, and presses the lower lip down; so that the expression of the face is decidedly and aggravatingly "smug." There is no stop after SICILIA. The head- and foot-strokes to the letters are tolerably square. The line below the head, if prolonged to the left, would only just graze the head- and foot-strokes of the B of BOLLO. The top of the A of POSTA is somewhat rounded. The nose is like the genuine. There is a little dark, blotchy shading in the middle of the ear, but the rim and the lobe are perfectly white. The eyelid is tolerably like the genuine. The stop after GR. is very faint, and decidedly lower than the level of the letters. The forehead is very retreating, so that a card, laid along the outline, passes to the right of the O of POSTA; whereas, in the genuine, it would cut well into the said O.

Seventh Forgery.

This is about the worst of the lot. Very coarsely lithographed, on thin, greyish-white wove paper. The crossed lines, with white inter-spaces, in the central rectangle, are even coarser than in the first forgery;

and similar lines show in the top frame, but scarcely at all in any of the others. The lips are pursed up, the lower lip being plainly thicker than the upper. The line below the head, if prolonged to the right, would entirely obliterate the stop after SICILIA, which is decidedly square; and the same line, if prolonged to the left, would cut into the first stroke of the B of BOLLO, as well as into the head- and foot-strokes of that letter. The top of the A of POSTA slopes down a little to the right. The outline of the nose is straight, and a card laid along it cuts well into the first L of BOLLO and the S of POSTA. The lines of shading on the ear run in the same direction as the genuine, but they are very few and very faint; besides which, there is a dark line running round, near the outline of the lobe and part of the rest of the ear. The eye is small, but visible, with upper and lower lids, and a small, dark pupil. There is a distinct, dark outline round the back of the head and neck. The stop after SICILIA is square, and about the same size as the rest. The beard is short, and rounded at the end, which is light in colour; whereas the genuine has the beard tapering off almost to a point, and losing itself insensibly in the dark background.

POSTMARKS.

Genuine.—83. This is perhaps one of the most ornamental of all the cancellations employed in Europe. It is said that the king did not like to have his portrait obscured by unsightly blotches of ink, as is the manner of most countries; so the postmark is something like the frame of an old mirror or picture, with the top side taken away, and all the rest formed by bold and handsome curls. This obliteration leaves the face quite clear, when it happens to be struck in the right place.

First Forgery.—84. (This same cancellation is found on two of the forgeries of the Costa Rica stamps.)

Second Forgery.—A colourable imitation of the genuine postmark, but a good deal smaller.

Third Forgery.—A full-sized imitation of the genuine cancellation.

Fourth Forgery.—A rather poor and small imitation of the genuine.

Fifth Forgery.—The same as the third.

Sixth Forgery.—Uncancelled.

Seventh Forgery.—The same as the first.

Among the scores of forged Sicilians in my possession there seem to be a few more types, besides the seven described above; but I hope the tests given for the genuine will suffice for their detection. Sicily seems to have been a favourite country for the forgers, judging from the quantities of counterfeits which I find in the albums submitted to me for inspection.

BOGUS VALUE.

120 Grana (bluish-slate?).

In the plate of the 20 grana, there is a retouched stamp, where the engraver has (I think) begun a Roman I after GR. The head is more or less visible, and the stop after GR. is beneath the blotch.

In the bogus stamp, there is no stop, but there is a very plain, ordinary "1," with sloping serif; so that the lower inscription reads GR 120. I have only seen a photograph of the base of this stamp, so can give no other particulars.

NOTE.—There are two plates of the $\frac{1}{2}$ grano, three of the 1 gr., three of the 2 gr., two of the 5 gr., and one each of the 10, 20, and 50 gr.

SIERRA LEONE.

Sixpence, lilac, mauve, etc.

Issue of 1862. Perforated 14, bluish paper, no watermark.
Also on white paper.

Issue of 1872. Perforated 12½, bluish paper, no watermark.

Also on white paper.

Issue of 1876-7. Perforated 14, CC watermark.

Issue of 1896. Perforated 14, same watermark, white or bluish paper, colour changed to brown-purple.

Genuine.

Engraved in *épargne*, varieties as above. The coronet bears three ornaments: a cross *pattée* (almost in profile), a *fleur-de-lys*, and a trefoil. The cross is a good deal higher in level than the top of the *fleur-de-lys*, and higher than the top outline of the front of the head. There is a jewel (almost in profile) exactly under the cross, another under the *fleur-de-lys*, and another under the trefoil; all being in the lower band of the coronet. The lobe of the ear is shaded all over. The top of the cross *pattée* touches the eighth horizontal line of the background, not counting the two outlines of the central octagon.

The lines are thin, but not very regularly drawn; as the first and second from the top are too close together, and the sixth and seventh run together into one, at their left-hand ends. The pieces of network, under SIX and above PENCE, are not like the rest of the background. The said pieces are formed by two horizontal rows of oval dots, with a row of small, almost diamond-shaped dots between them. In the rest of the background, the small diamond-shaped dots are not in uninterrupted horizontal rows; but, between every pair of dots, there is a much larger, diamond-shaped dot, separating the pairs of smaller dots from each other. The inscriptions are in *very* thin, clean-cut letters; and the words SIERRA LEONE are so far apart that there is *almost* room to put another letter between them. There is no outline to the front of the Queen's nose, and no dark line to divide the stamps on the sheet from each other.

Forged.

Poorly lithographed, on *very* yellowish, or on very white wove paper, stout, and rough-faced; unperforated, or badly pin-perforated 11½, in oval holes. The cross *pattée* on the coronet cannot be made out; it looks almost exactly like the *fleur-de-lys* which follows it, and which has no cross-bar, and stands on a very blunt pyramid, instead of a sharp one. Neither of the said ornaments comes above the top outline of the head. The veins of the two side-leaves of the trefoil join each other in the centre, though they are separate in the genuine. The point of the *fleur-de-lys* is higher than the top of the cross. There is no jewel in the band, under the cross; and the other jewels are not under the centre, either of the *fleur-de-lys*, or of the trefoil; both being far too much to the left. Part of the lobe of the ear is quite white. The top of the cross *pattée* touches the seventh horizontal line from the top, not counting the two outlines of the octagon. The lines are thicker than in the genuine; more regularly drawn, yet not so clearly-cut and distinct. The pieces of network, under the SIX and above PENCE, are almost the same pattern as

the rest of the groundwork ; the large and small diamonds of the latter being very irregular. The letters of the inscriptions are a good deal thicker than in the genuine, and ragged-looking ; while the words SIERRA LEONE are so close together that there is nothing like room enough to put another letter between them. The point of the Queen's nose shows a distinct outline, in most copies. My unperforated specimens have a line surrounding each stamp on the sheet, separating it from its neighbours ; but the perforated ones (which are on the *white* paper) do not show the line, and look to me like a reprint from the design of the unperforated ones (which are on the *very* yellowish-white paper).

POSTMARKS.

Genuine.—I have no cancelled copies, but fancy I have seen 54.

Forged.—1 (very blotchy) ; 54 ; 100.

1d., 2d., 3d, 4d., 1s.

Issue of 1872-3. Crown and CC, often placed sideways ; perforated 12½.

Issue 1876-7. Crown and CC ; perforated 14.

Issues of 1883-95. Crown and CA ; perforated 14.

Genuine.

Engraved in *épargne*, on medium, white wove paper. The value appears to be struck after the rest of the design has been printed, so that

it is often of a slightly different colour from the rest of the stamp, and is not always in its exact place. The face and neck are entirely covered with lines, except a very small part of the top of the forehead. The outlined diamonds in the four corners of the stamp are perfectly true, and all four exactly alike. The letters

of POSTAGE do not touch each other anywhere. The lines of the central rectangle do not touch the outline round them ; so that there is a white line to the right of SIERRA, another below POSTAGE, another to the left of LEONE, and another above the value. All these white lines (or rather, white spaces) are of equal width. The ornaments on the coronet are a pearl, a thistle, another pearl, a shamrock or trefoil, another pearl, another thistle, another pearl. These are all well drawn, and perfectly distinct.

First Forgery.

Poorly lithographed, on thin, very white wove paper ; no watermark ; very badly perforated 13. The value is, of course, lithographed at the same time as the rest of the stamp, so that it is always in exactly the same shade of colour. The face and neck have large white patches on them—one patch runs down from the top of the front pearl to the tip of the nose, utterly unlike the original. The outlined diamonds in the corner-squares are very poorly done ; the drawing is untrue, and they are all different from each other, and blotchy and indistinct. The letters TA of POSTAGE touch each other at the bottom. The central rectangle shows a tolerably broad white space, to the right of SIERRA, and a similar one to the left of LEONE ; but the one above the value is narrower than the

others, and the one below POSTAGE is very narrow indeed. The ornaments on the coronet are the same as in the genuine, but very indistinctly drawn.

Second Forgery.

Very coarsely lithographed, on very white wove paper, rather thick ; no watermark ; unperforated. The value is in the same colour as the rest of the stamp. The front of the face and the front of the neck are entirely white, and the cheek and part of the base of the neck are shaded with dots, instead of lines. The outlined, diamond-shaped ornaments, in the corners of the stamp, are drawn too large for the containing-squares, so that the points are not all complete, and the diamonds are not alike, and are poorly drawn. The central rectangle hardly shows any white line below POSTAGE, or above the value ; though the side-lines are moderately broad. The ornaments on the coronet are coarsely drawn, very different from the genuine, and a great deal too white and patchy. The outline of the hair, where it comes over the cheek and forehead, has a thick, dark outline, which is absent in the genuine. This forgery is much worse than the one just described, and not likely to deceive.

POSTMARKS.

Genuine.—54.

First Forgery.—10 ; 51 ; 54 (without numerals).

Second Forgery.—My specimens are uncanceled.

NOTE.—I have seen no forgeries of any other values besides those given above ; nor of any of the changed colours of the 1883 issue. The forgeries of the first set are very common. Of the second set, I have only the THREEPENCE, which is printed in vermillion, instead of orange-yellow.

SLAVONIA.

Bogus Stamp. 9 kr., brownish-orange.

I unearthed this stamp from a forgery-book some few years ago, but know nothing of its history.

Engraved in *taille-douce*, in brownish-orange, on rather thin, hard greyish paper, unperforated. The design is a colourable imitation of the Zürich stamps. At the top, is SLAVONIA ; at the bottom, FRANCO. In the centre is a large 9, on a background of very wavy, horizontal lines. The right side of the head of the 9 bears KR. ; the shoulder has, in three lines, KK., OEST, S., and the ball at the end of the tail bears F.J. The sides of the stamp bear a pattern of curly tendrils, running round to meet the beginning and ending of the top and bottom inscriptions. The stamp is cancelled with part of an outlined crescent. The ink stands out well from the paper, but the execution is rough.

SOUTH AUSTRALIA.

Issues of 1855-77.

1d., green; 2d., red, vermilion; 1s., orange, yellow-brown.

These stamps may be found in the following and other varieties.

WATERMARK, LONG, SLIM STAR, TYPE 1.

1d. Unperforated; rouletted 9; perforated 10, $10 \times 11\frac{1}{2}$; $10 \times 12\frac{1}{2}$; $11\frac{1}{2}$; $11\frac{1}{2} \times 12\frac{1}{2}$; $12\frac{1}{2}$.2d. Unperforated; rouletted 9; perforated $11\frac{1}{2}$; $11\frac{1}{2} \times 12\frac{1}{2}$.1s. Unperforated, orange; rouletted 9, orange, yellow, grey-brown, red-brown, chestnut; perforated $11\frac{1}{2} \times$ rouletted 9, dark brown,

TYPE 1.

TYPE 2.

chestnut; perforated $12\frac{1}{2} \times$ rouletted 9, dark brown; perforated 10, $10 \times 11\frac{1}{2}$; $10 \times 12\frac{1}{2}$; $11\frac{1}{2}$; $12\frac{1}{2}$, chestnut.

WATERMARK, BROAD STAR, TYPE 2.

1s. variously perforated, as above, dark brown, sepia, red-brown, grey-brown, black-brown.

Genuine.

Engraved in *taille-douce*, on stout, white wove paper, varieties of perforation as above. There is a space of $\frac{3}{4}$ mm. between the bottom outline of the SOUTH AUSTRALIA label and the outline of the central arch below it; and the bottom of the said circle does not touch the top edge of the value-label below it. There are two diamond-shaped dark dots in the spandrel, just over the S of SOUTH, and two similar ones over the last A of AUSTRALIA. In the lower spandrels, there is a vertical row of four of these dots, in the left bottom corner, and four also in the right bottom corner. Each corner-square contains an eight-pointed star, with its four diagonal rays a great deal thicker than the other rays. Each star is surrounded by two concentric, outlined squares, the outer square touching all the points of the star. The Queen has no earring, and the upper lip projects considerably further forward than the lower one. Almost the whole of the face and neck are covered by dotted lines of shading. In the lower band of the coronet, there are four pearls, one below each of the crosses and *fleurs-de-lys*. The curl at the back of the head does not hang down so low as the level of the chin; and there is a distinct chignon, from which the curl hangs. The eye is very nicely drawn, and not blotched. The pupil and iris are both visible. The ink stands out from the paper.

First Forgery.

Of this, I have only the 1d., in bright yellow-green. It is poorly lithographed, on smooth, rather thin, white wove paper, perforated $12\frac{1}{2}$ (nearly), in oval holes, no watermark. The space between the bottom of the SOUTH AUSTRALIA label, and the outline of the central circle is exceedingly small, not nearly $\frac{1}{4}$ mm.; and the bottom of the said central circle is blotched into the top of the dark value-label below it. One of the two diamond-shaped dark dots over the S of SOUTH is tolerably distinct, but not the other. Neither of the two dots over the last A of AUSTRALIA can be made out. The vertical row of four dots, above the centre of each of the lower corner-squares, is not visible. The square in the left upper corner seems to have only four thick, clumsy, diagonal rays, with only one outlined square outside the star. The star in the right upper corner has only seven rays, the central ray at the bottom being absent; and this star has only one outlined square round it. The square in the left lower corner contains a cross, instead of a star, and the square in the right lower corner has a similar cross. There is an indistinct earring, but no ear can be seen; and the lower lip is very pointed, instead of rounded, and comes forward about as far as the upper one. There is no shading, except at the outline of the cheek, and the back of the neck. The first and last of the four pearls on the base of the coronet can be made out, but the others are invisible. The long curl hangs directly down from the back of the head, and there is no chignon; the point of the said curl is rather lower than the level of the chin. There is a blotch above the eye, as though the pupil had run into the upper eyelid. The paper is perfectly smooth, and the ink does not stand out from the surface of it.

Second Forgery.

Of this, I have the 2d., orange, vermilion, and scarlet, unperforated, or badly perforated to some uncountable gauge; also the 1s., orange, and orange-red, unperforated, and dark red-brown, perforated $11\frac{1}{2}$. Lithographed, on medium, smooth wove paper, the face tinted almost buff; no watermark. The bottom outline of the SOUTH AUSTRALIA label seems to rest upon the upper part of the central circle, as in the first forgery; for there is only, in either case, a small, light-coloured line separating them, whereas in the genuine, the space between the two shows the general pattern of the background between them, quite distinctly. The upper edge of the bottom label is blotched below the central circle, as in the first forgery. This is caused by that part of the general background being of solid colour, instead of like the rest. The diamond-shaped dots cannot be made out, except one in the left top corner, above the SO. The lower corner-squares are very blotchy. The star in the left lower corner has usually lost most of its rays, and the rays of the stars in the upper corners cannot be counted with any certainty. There is, as before, an earring, but no ear, and the lower lip projects rather beyond the upper one, which often appears sucked in. There is dark shading from under the jaw to where the ear should be, and also down the back of the neck, sometimes a little on the front of the neck, but the rest of the neck and face are unshaded. The fourth pearl on the band of the coronet can sometimes be seen, but not the other three. As before, there is no chignon, and the curl hangs down lower than the level of the chin. The eye is an upright, oval, shapeless blotch, with no details. The ink does not stand out from the paper.

POSTMARKS.

Genuine.—1, 2, 56, 69 (also with diamond, instead of circle, in the centre).

First Forgery.—Uncancelled.

Second Forgery.—2, 62, 69.

It will be remembered that 62 is a cancellation belonging to New South Wales, and 69 is often found on West Australia.

Issues of 1860-85. 9d., shades of lilac, mauve.

This stamp is found in the following varieties :—

WATERMARK, TYPE 1.

Grey-lilac, rouletted 9; ditto, perforated $11\frac{1}{2} \times$ rouletted 9; perforated $12\frac{1}{2} \times$ rouletted 9; red-lilac, mauve, violet, perforated $11\frac{1}{2}$ and $11\frac{1}{2} \times 12\frac{1}{2}$.

WATERMARK, TYPE 2.

Lilac-rose, perforated $11\frac{1}{2}$ and $11\frac{1}{2} \times 12\frac{1}{2}$.

Genuine.

Engraved in *épargne*, on stout to thin, white wove paper; varieties as above. The outer line of the large oval touches the thin, outside line of the stamp, at the top, the bottom, and each side. The left side of the oval, between NINE and SOUTH, contains sixteen pairs of fine, dark lines, including the two lines at the end of the top label, and the two at the end of the bottom label. The right side of the oval, between AUSTRALIA and PENCE, contains sixteen similar pairs of lines, including the pair at the other end of each label. The corners of the stamp and the ground of the central oval are formed of a network of engine-turned lines. The whole stamp has two outlines—an inner one, rather thick, and a very thin, outer one. There is a very strong and dark line of shading, running from below the front of the base of the neck, right round to where the hair springs, at the back of the head. A similar, strong line of shading runs round the back of the chignon. The chignon itself comes very close to the outline of the oval, below the last A of AUSTRALIA. The ornaments on the coronet are crosses *pattée* and *fleurs-de-lys*, alternately.

**First Forgery.**

Lithographed, on rather thick, very hard, very transparent, smooth, white wove paper, unperforated and perforated 12, no watermark. I have never seen this forgery in any but a sort of lavender hue. The outer line of the large oval does not touch the thin, outer line of the stamp, either at the top or the bottom. The left side of the oval, between NINE and SOUTH, contains fourteen pairs of parallel lines; and the right side of the oval, between AUSTRALIA and PENCE, contains fourteen pairs of lines, and one single line. The corners of the stamp, and the ground of the central oval, are of solid colour, without any trace of lines. The whole stamp has only one outline, the thick, inner line being absent. There is no dark line of shading below the neck, or at the back of the neck. The chignon is a long way from the outline of the oval, and there is no dark line along the back of it. The ornaments

on the top of the coronet seem to be all strawberry-leaves, but they are indistinct, and I am not certain. There is a dark spot on the cheek, below the eye, which is not found in the genuine. This counterfeit ought not to deceive; the solid corners and centre are an easy test.

Second Forgery.

Lithographed, in grey-lilac, very much the same as the earliest stamps, on thick, fairly smooth, white wove paper, no watermark, unperforated. The outer line of the large oval does not touch the thin, inner line of the frame, either at the top or the bottom. There appear to be thirteen pairs of lines in the left side of the white oval ring, and fifteen pairs in the right side; but the upper ones both sides are very faint, and difficult to see. The corners of the stamp, and the ground of the central oval, are formed by a network of wavy lines, but they are crossed obliquely, instead of being chiefly vertical. There is a large blotch of dark colour behind the curl. The ornaments on the coronet are strawberry-leaves. The thick, dark outer outline of the white oval, in the upper corner, above TRALIA, and in the lower corner, below NCE, cannot be seen in this forgery, though it is very prominent in the genuine.

POSTMARKS.

Genuine.—2.

First Forgery.—2, 54, without numerals; 100.

Second Forgery.—100.

Issues of 1860-70. 10d., surcharged on 9d.

Blue surcharge, on orange-red, or yellow, rouletted; black surcharge, on yellow, rouletted; blue surcharge, on yellow, perforated $11\frac{1}{2} \times$ rouletted 9; blue surcharge, on yellow, perforated $11\frac{1}{2}$, and $11\frac{1}{2} \times 12\frac{1}{2}$; black surcharge, on yellow, perforated $10 \times 11\frac{1}{2}$, $10 \times 12\frac{1}{2}$, $11\frac{1}{2} \times 12\frac{1}{2}$; all with watermark, type 1.

Genuine.

Engraved in *taille-douce*, paper as in the 9d.; varieties as above. The stamp is merely the die of the 9d. just described, with the surcharge TEN PENCE, printed in a curve over the old value, as in the illustration. The tests are the same as in the 9d.

Forged.

Very coarsely lithographed, in vermilion-red, with lithographed, blue surcharge, perforated $11\frac{1}{2}$, 12; or in yellow and orange, with black lithographed surcharge; perforated 12, 13. The central oval has a background of plain, crossed, oblique lines, instead of the wavy, lace-work pattern of the genuine. The spandrels, or corners of the stamp, have a groundwork of plain, horizontal lines of shading, and each spandrel bears an ornament like a couple of worms, struggling together. This is utterly imaginary, as the genuine stamp has nothing in the corners, except the ornamental engine-turning. The back of the head is a very long way from the outline of the oval. Above the coronet, there are six twisted rolls of hair, like obliquely-placed sausages, which are not visible in the genuine. The ornaments on the coronet are entirely different

from the genuine ; in front there is a very large, cleft ornament, and the rest look like three tiny pearls on stalks. There is some curious shading on the forehead and upper half of the nose. Right down the centre of the side of the neck, from a little below the ear, there is a sort of channel, with a dark spot near the top of it. This forgery is not at all likely to deceive.

POSTMARKS.

Genuine.—2.

Forged.—A coarse imitation of 2.

OFFICIAL SURCHARGES.

I have a number of these, of all sorts, on various issues, which are said to be forged, but I have never had an opportunity of studying them, so do not venture to describe them.

REPRINTS.

Many of the issues were reprinted, in 1884, and later. They are *all* watermarked with wide SA, and all those that I have seen have either REPRINT or SPECIMEN printed on them. These tests will be found quite sufficient for their detection.

SOUTH BULGARIA.

FIG. 1.

FIG. 2.

FIG. 3.

FIG. 4.

Issues of September, 1885. Various stamps of Eastern Roumelia, surcharged with one or other of the types above illustrated, struck in black or blue.

UNFRAMED LION SURCHARGE.

(FIGS. 1 and 2.)

Of the unframed lion, I came across sundry decidedly doubtful specimens, some years ago ; but I had no opportunity of dissecting them, and do not even remember which of the two types they bore.

FRAMED LION SURCHARGE.

(FIGS. 3 and 4.)

There are two types of this surcharge, as illustrated above. In the first type, Fig. 3, the first letter at the top, which resembles the

letters *ι* and *ο*, joined by a hyphen (*ι-ο*), has the *ο* *circular*; while, in the second type, Fig. 4, the said *ο* is distinctly *oval*. I possess one solitary specimen of the second type, Fig. 4, struck in black on the 5 piastres, red and blue, of 1881, which I now describe.

FRAMED LION, FIG. 4.

Genuine.

A line drawn across the frame, near the top, to the angles formed where the vertical sides join the short, sloping ones, would cut deeply into the lower part of the *ο* of *ι-ο*. The hyphen joins the *ι*, slightly above its centre. The sides of the *η* are parallel with each other, and the top of the *Α* is usually very broad, and cut off square. The fourth letter of the lower inscription (a Greek *Γ*, which is a character like an *L*, upside down and reversed) does not go particularly near to the following *Α*; and the last letter but one (which is like an *N*, with the oblique stroke drawn down from right to left, instead of from left to right) has the said oblique stroke a shade thinner than the other two strokes. The lion's claws, and the tip of his tail, are *very* sharp; and there are at least three dots in the hind quarter, near the tail. The shafts of all the letters of the inscriptions are thin—not more than $\frac{1}{2}$ mm. across. I fear I cannot give any more prominent tests than these; for of course hand-stamps inevitably vary, according to the pressure, the amount of ink used, etc.

FRAMED LION, FIG. 4.

Forged.

A line drawn across, near the top of the frame, from angle to angle, as before described, would not much more than graze the bottom of the *ο* of *ι-ο*. The hyphen joins the centre of the *ι*. The right side of the *η* is curved slightly outwards at the top and bottom, instead of being parallel with the left side. The head of the fourth letter in the bottom inscription *almost* touches the head of the following *Α*; and the oblique stroke of the last letter but one is decidedly thicker than the other two strokes, which it connects. Most of the lion's claws are quite blunt, especially the one immediately above the *Ρ* of the lower inscription: the tip of the tail, also, is blunt. There is only one dot, shaped like a comma, on the hind quarter, near the insertion of the tail. The shafts of the letters are too thick, most of them being quite $\frac{1}{2}$ mm. across. As before stated, my single specimen is struck in black, on the 5 piastres, red and blue, of 1881.

Genuine.—76.

Forged.—My specimen is uncanceled.

SPAIN.

Westoby remarks that there is no country in Europe, in which so many forgeries of stamps have been made to defraud the post office, as in Spain. As regards counterfeits made to deceive collectors, there are some very admirable ones of the older and scarcer stamps, some of which I shall endeavour to describe. According to Westoby, these dangerous counterfeits "have probably been done by photogravure; as the designs have been reproduced so accurately, and the imitation is so perfect, as, at first sight, to deceive the most wary."

Issue of 1850. 6 Cuartos, black.

Genuine.

Lithographed, from transfers of a *taille-douce* engraving, on thick or thin, white wove paper, yellowish gum. The crossed, vertical and horizontal lines in the background of the central rectangle gauge five to 1 mm. Some of the vertical lines have been drawn too high, so as to trespass across the top, horizontal white line, below the 6 C of 6 CUARTOS. The ornament in each corner of the stamp is a thin, black St. Andrew's cross, on a much broader, white one, and the arms of each black cross meet, accurately, in the centre of the white one. The 6 is wide, and the head, which ends in a ball, is low.

The tail of the C of CUARTOS points upwards, so that it would join the head if continued; the U is nicely drawn, with the right limb very much thinner than the left; the O is upright; and the 6 and the S are equidistant from their respective ends of the label. The left-hand, upright edge of the F of FRANCO is nearly $3\frac{1}{2}$ mm. from the beginning of the label, and the right-hand edge of the O is $3\frac{1}{2}$ mm. from the end of it. There is a white *fleur-de-lys* in each of the curly ornaments, to right and left of 1850, and the outer end of the right-hand ornament is only $\frac{1}{2}$ mm. from the end of the label. There is no projection to the right side of the head of the 1; the top half of the 8 is *very* nearly as large as the bottom half; the head or "flag" of the 5 does not extend to the right, nearly so much as the body does; and the o is a nice, oval shape, with the central, dark stroke reaching as close to the bottom, as to the top of the letter. The tip of the queen's nose touches the fourth vertical line from the left, reckoning the inner outline of the rectangle as one line. The back of the chignon touches the second vertical line from the right. The back of the hair is coiled three times round, to form the chignon, and the coils do not look at all like drapery. The front of the base of the neck is rounded off, and it ends above the space between the curly ornament and the 1 of 1850. The back of the base of the neck is fairly blunt.

First Forgery.

Lithographed, on thin, grey wove paper. The crossed lines of the background to the portrait gauge four to 1 mm. None of these lines trespass into the white line, below 6 CUARTOS. The little black St. Andrew's cross in the right bottom corner is badly drawn, with the intersection too far to the left, so that it looks very like a Y, lying on its side (<). The 6 is clumsy; its head is concave, like the head of a 5, and has no ball.

The C of CUARTOS is of a very ugly shape ; it is rather like a G, and its tail points forwards, towards the centre of the U. Both limbs of the said U are equally thick. The S is twice as far from the end of the label as the 6 is from the beginning of it. The F of FRANCO is 4 mm. from the beginning of the containing-label, and the O is over 4 mm. from the end of it. The curly ornaments, each side of 1850, are very thick and clumsy, and I cannot make out any sign of a *fleur-de-lys* in either of them. The outer end of the right-hand ornament is $1\frac{1}{2}$ mm. from the end of the label. The head of the 1 has a white, wedge-shaped projection from its right side ; the top half of the 8 is much smaller than the bottom half ; the head of the 5 extends to the right, nearly as far as the body of the numeral does ; the 0 is very circular, and its black, central stroke is too short, and goes nearer the top than to the bottom of it. As far as I can make out, through the postmark, the tip of the queen's nose goes between the fourth and fifth vertical lines from the left, but I am not sure of this, as I have only one specimen. The back of the chignon seems to touch the third line from the right. The front of the base of the neck is pointed, and it ends above the beginning of the 1. The back of the base of the neck is pointed.

Second Forgery.

This is no longer in my possession, so I give the details from my second edition. Typographed (?) on yellowish-white wove paper, stout, but not quite so hard as the genuine. The 6 is tall and thin, and the bottom part does not show the fat, rounded curve of the genuine. The upper half of the 8 of 1850 is very much smaller than the lower half ; and the top of the 5 projects backwards, level with the rounded back of the figure. The ends of the two curly ornaments, each side of the date, are equidistant from their respective ends of the bottom label. The vertical lines of shading in the background do not, in any case, trespass into the white line under 6 CUARTOS. The tip of the queen's nose goes between the fourth and fifth vertical lines, from the left side ; and the back of the head goes quite against the right-hand outline of the background, so that no line can be seen between the head and the border. The back of the hair looks like folds of drapery, hanging from the back of the coronet ; and there is a very distinct, white curved spike, sticking out at the top of the middle coil of the back-hair, which points to the F of FRANCO. This spike is absent in the genuine. The pupil of the eye is very plain, and the eye is evidently wide open. The front of the base of the neck is very sharply pointed, and it only reaches forward as far as the space between the 1 and 8 of 1850. The back of the base of the neck is also pointed. The outline of the profile of the upper lip, goes inwards, as though the Queen had lost all her front teeth ; but, in the genuine, the upper lip projects beyond the under one.

POSTMARKS.

Genuine.—21. I think I have also seen a very large circle, usually in red, containing name and date.

First Forgery.—Like 21, but the arrows have no heads, and are merely straight strokes.

Second Forgery.—21, without heads to the arrows ; also 22.

Same Issue. 5 Reales, dull red.

Genuine.

Printing and paper as in the 6 cuartos. The crossed, horizontal, and oblique lines in the central background gauge five to 1 mm. In the white line under 5 REALES, there are several coloured dots, caused by some of the lines of the central background having been drawn too high up. There is one dot to the left of the 5, another under the centre of the 5, two or three under EA, six or seven under LE, and one under the beginning, and one under the end of the S. Each corner of the stamp shows a sort of four-leaved primrose; the petals are joined to a central ring, but are, otherwise, quite separate from each other. The cross of dark lines, marking the separation between the petals, has its arms vertical and horizontal, so that they point to the middle of the four sides of the containing-square. The bottom of the C of CORREOS is nicely rounded; the foot of the A of REALES does not touch the E; the tail of the first C of CERTIFICADO points upwards, to meet the head; and the tops of the letters TIF do not touch; the 8 of 1850 is *very* little contracted in the centre, and looks more like an O, with a white bar across the centre; the lower part of the 5 does not come far enough to the left, making the numeral look as though it were leaning over to the left. The front of the base of the queen's neck is nearly over the end of the O of 1850.

First Forgery.

Lithographed, in a more vermilion shade than the genuine, on thin, white wove paper. The crossed lines of the central background gauge about $4\frac{1}{2}$ to 1 mm., but they look a good deal coarser than the genuine. The white line under 5 REALES shows one coloured dot under the L. The ornament in each corner of the stamp is a sort of white St. Andrew's cross, with a coloured St. Andrew's cross in the centre of it. The arms of these crosses point, of course, to the corners of the containing-squares. The bottom of the C of CORREOS is very flat, and its tail points forwards, rather than upwards, giving the letter an ugly shape. The foot of the A of REALES is firmly joined to the E. The tail of the first C of CERTIFICADO points towards the E. The 8 of 1850 is strongly contracted in the centre, so that it is not at all like an O; the lower part of the 5 comes well forward to the left. The front of the base of the neck is too sharp, and it projects beyond the end of the O of 1850. This is not at all a deceptive counterfeit, and was the only one that I had seen, when the second edition of this work appeared.

Second Forgery.

This is a very different affair, and decidedly dangerous. It was given to me, about two years ago, together with other fine Spanish counterfeits (hereafter described), by Messrs. Whitfield King. Lithographed, on thick, yellowish-white wove paper. The colour is exactly the normal shade of the genuine. The white line under 5 REALES shows a coloured dot under the middle of the 5, and another under the end of the S. The right arm of the T of CERTIFICADO is broken away from the T, and joined to the following I, so that, when turned upside down, the two letters are seen to be LL. I have only one specimen, but I trust that this defect

appears in all copies, as it is the only test of any importance. In the genuine, there is a dotted line, which can be traced from the corner of the mouth to the back of the neck; in this forgery, this dotted line is not visible. My specimen shows a not very conspicuous, horizontal, white flaw, opposite the mouth, coming from the inner outline of the side-frame, half-way to the mouth; this flaw (caused by a crooked line in the background) is not visible in the genuine stamps.

POSTMARKS.

Genuine.—As before.

First Forgery.—21, without arrow-heads; also 22.

Second Forgery.—21, *with* arrow-heads, like the genuine.

Same Issue. 6 Reales, blue.

Genuine.

Printing and paper as in the genuine 6 cuartos. The crossed, horizontal and vertical lines of the background gauge five to 1 mm. In the white line, under 6 REALES, there are three or more coloured dots under the 6, three under the R, and two strong ones under the A. The tail of the first R of CORREOS joins the vertical shaft, higher up than the tail of the second R does. This is easily seen. In the upper inscription, there is very little indication of a ball to the head of the 6, and the dark centre of the bottom half of the said 6 is a narrow oval. The tail of the R of REALES is rather small, but not ridiculously so; the lower limb of the first E projects a good deal further than the upper limb; the foot of the A does not join the L; and the top of the S is much smaller than the bottom. The cross-bar to the A of CERTIFICADO is not at all conspicuous. The serif to the 1 of 1850 is almost invisible, and it does not touch the curly ornament to left of it. The 5 is a hump-shouldered, cramped numeral, with a very short flag, and an upward-curling tail; it is very little over 1 mm. high. The left-hand edge of the central background is perfect, so that the vertical, inner, white outline of the frame is the same width, all the way down. The dotted lines of shading on the cheek and chin are nearly horizontal, except the four upper rows.

Forged.

This is a very nice-looking production, though not, perhaps, so dangerous as the second forgery of the 5 reales. Lithographed, on thick, hard, yellowish-white wove paper. The crossed lines of the background mostly gauge six to 1 mm. There are two dots under the beginning of the S, in the white line under 6 REALES, and one or two indications of dots under the 6. The tail of the first R of CORREOS joins the shaft of that letter, exactly level with the join of the second R. There is a good ball to the head of the 6, and the dark centre of the bottom half of the said 6 is a very round oval. The tail of the R of REALES is a mere caricature; the lower limb of the first E only projects very slightly further than the upper limb; the foot of the A is firmly joined to the L; and the top of the S looks larger than the bottom. The cross-bar to the A of CERTIFICADO is very distinct. The serif to the 1 of 1850 is large and conspicuous, and it touches the curly ornament to left of it. The 5 is a nice, bold figure, with a fairly long flag, and a tail projecting forwards rather than upwards; it is $1\frac{1}{4}$ mm. high. The upper half of the

left-hand edge of the central background is imperfect, so that the white outline is decidedly broader from the top, down to level with the middle of the first R of CORREOS. The rows of dotted lines on the cheek and chin all slope very much down to the right.

POSTMARKS.

Genuine.—21, as before.

Forged.—21, like the genuine.

Issue of 1851. 6 Cuartos, black.

Genuine.

Engraved in *épargne*, on white wove paper, thin or thick. There are three short, graduated dotted lines on the cheek, then six long ones, which run from the chin to the back of the neck, the sixth line forming the lower outline of the chin. At the back of the neck, below the said sixth line, there are fourteen short lines. All these lines are dotted. The profile of the nose is a straight line, to near the end, where it becomes decidedly "tip-tilted." The eye shows a great deal of white, and very little pupil; it appears to be looking at the tail of the R of CUARTOS. The oblique line at the corner of the nose is almost exactly like the oblique line at the corner of the mouth. The ornament on the head is a chain of pearl rosettes. The front one, which is in profile, shows only four pearls, but each of the other four rosettes shows seven pearls (a circle of six, surrounding the central seventh); the last rosette has a dot in the centre of each pearl. There are six oblique black lines (the right-hand one very difficult to make out) across the cut-off base of the neck. The lettering is nice and clear, and all the letters are equidistant from the outer and inner boundary-lines of the containing-oval. The feet of the letters RAN of FRANCO are joined in heavily-printed copies, but are separate in those more carefully printed. The tail of the C of this word is exactly like the head. In each corner of the stamp, there is a white ornament, shaped like a horseshoe-magnet, with curls each side of it. The inner end of each magnet is open.

First Forgery.

Apparently typographed, in blackish *bronze*, on thick, white wove paper. There are only twelve dotted lines on the back of the neck, below the long line that comes from the chin. The profile of the nose is slightly Roman, instead of straight, till it gets to the turned-up part. The eye shows as much pupil as white, and seems to be looking somewhat upwards, towards the beginning of the R of CUARTOS. The oblique line at the corner of the nose is a good deal more curved (and longer) than the line at the corner of the mouth. The first rosette on the head, over the forehead, shows only three pearls, and there are no dots in the pearls of the last rosette. The cut-off base of the neck is almost solid, so that the lines are practically invisible. The letters ARTOS of CUARTOS are decidedly too near to the outer edge of the containing-oval, and all the letters of CORREOS are also too near the outer edge. The letters RAN of FRANCO are not joined. The ends of the white horseshoe in the right bottom corner are joined.

Second Forgery.

Lithographed, on medium, greyish-white wove paper. Underneath the three short, dotted lines on the cheek, there are ten long ones, reaching from the chin to the hair. Below these, there are twelve lines, the upper ones not at all parallel with the lower ones. The profile of the nose varies in my specimens, probably from the spreading of the ink of the background. In one specimen, a card, laid along the profile (neglecting the turned-up part), *just* grazes the bottom of the S of CUARTOS; while, in another specimen, the card cuts through the centre of the final I of 1851. In the genuine, the card cuts well into the S of CUARTOS. The eye shows more pupil than white, and seems to be staring up at the centre of the R of CUARTOS. There is no oblique line at the corner of the nose. There seem to be five pearls in the rosette on the forehead, and nearly all the pearls of the other rosettes show black dots in their centres. There are about ten oblique lines across the cut-off base of the neck. The lettering is decidedly poor, and too small; the C and U of CUARTOS are much smaller than the rest of the letters. The C of FRANCO has a small knob at the head, but none at all at the tail. SEIS is too near the inner boundary of the containing-oval. The inner ends of all four horseshoe-ornaments in the corners are closed, and sometimes the *outer* end of one or other of them is open. The queen has a most ridiculous double chin. This is not at all a dangerous forgery.

Third Forgery.

Lithographed, in a much greyer black than the counterfeit just described, on thick, hard, very white, or on medium, soft, very yellowish-white wove paper. There are four short, dotted lines on the cheek, then six long ones, then thirteen at the back of the neck. The straight part of the nose is *very* short in this counterfeit. There is no really well-defined pupil to the eye, and there is a dark patch in the corner, which makes the queen appear to be slyly looking round at the spectator. There seems to be a faint line *below* the nose, instead of at the corner, and I cannot make out any line at the corner of the mouth; but all my specimens happen to have this part rather hidden by the postmark. The front rosette is nearly complete, showing about six pearls. Most of the pearls of all the rosettes are badly shaped. There are about five oblique lines across the cut-off base of the neck, and they are by no means all parallel. The lettering is better than the last forgery, but the F of FRANCO leans towards the R, and the tail of the C is even bigger than the head, so that it looks very like a G. The letters RAN are firmly joined together, and the A is a good deal taller than the R. SEIS is too near the inner outline of the containing-oval. The C of CUARTOS is very like a G. The horseshoe-ornaments are all closed.

Fourth Forgery.

This is no longer in my possession, so I reproduce the description from my second edition. It is an extremely dangerous forgery, and must have been reproduced by photogravure. It is on thin, white wove paper, very like the thin paper of the genuine. The letters AN of FRANCO are joined together at the bottom by a *very* distinct line. This is positively the only difference between this excellent imitation and the genuine.

left-hand edge of the central background is imperfect, so that the white outline is decidedly broader from the top, down to level with the middle of the first R of CORREOS. The rows of dotted lines on the cheek and chin all slope very much down to the right.

POSTMARKS.

Genuine.—21, as before.

Forged.—21, like the genuine.

Issue of 1851. 6 Cuartos, black.

Genuine.

Engraved in *épargne*, on white wove paper, thin or thick. There are three short, graduated dotted lines on the cheek, then six long ones, which run from the chin to the back of the neck, the sixth line forming the lower outline of the chin. At the back of the neck, below the said sixth line, there are fourteen short lines. All these lines are dotted. The profile of the nose is a straight line, to near the end, where it becomes decidedly "tip-tilted." The eye shows a great deal of white, and very little pupil; it appears to be looking at the tail of the R of CUARTOS. The oblique line at the corner of the nose is almost exactly like the oblique line at the corner of the mouth. The ornament on the head is a chain of pearl rosettes. The front one, which is in profile, shows only four pearls, but each of the other four rosettes shows seven pearls (a circle of six, surrounding the central seventh); the last rosette has a dot in the centre of each pearl. There are six oblique black lines (the right-hand one very difficult to make out) across the cut-off base of the neck. The lettering is nice and clear, and all the letters are equidistant from the outer and inner boundary-lines of the containing-oval. The feet of the letters RAN of FRANCO are joined in heavily-printed copies, but are separate in those more carefully printed. The tail of the C of this word is exactly like the head. In each corner of the stamp, there is a white ornament, shaped like a horseshoe-magnet, with curls each side of it. The inner end of each magnet is open.

First Forgery.

Apparently typographed, in blackish *bronze*, on thick, white wove paper. There are only twelve dotted lines on the back of the neck, below the long line that comes from the chin. The profile of the nose is slightly Roman, instead of straight, till it gets to the turned-up part. The eye shows as much pupil as white, and seems to be looking somewhat upwards, towards the beginning of the R of CUARTOS. The oblique line at the corner of the nose is a good deal more curved (and longer) than the line at the corner of the mouth. The first rosette on the head, over the forehead, shows only three pearls, and there are no dots in the pearls of the last rosette. The cut-off base of the neck is almost solid, so that the lines are practically invisible. The letters ARTOS of CUARTOS are decidedly too near to the outer edge of the containing-oval, and all the letters of CORREOS are also too near the outer edge. The letters RAN of FRANCO are not joined. The ends of the white horseshoe in the right bottom corner are joined.

Second Forgery.

Lithographed, on medium, greyish-white wove paper. Underneath the three short, dotted lines on the cheek, there are ten long ones, reaching from the chin to the hair. Below these, there are twelve lines, the upper ones not at all parallel with the lower ones. The profile of the nose varies in my specimens, probably from the spreading of the ink of the background. In one specimen, a card, laid along the profile (neglecting the turned-up part), *just* grazes the bottom of the S of CUARTOS; while, in another specimen, the card cuts through the centre of the final I of 1851. In the genuine, the card cuts well into the S of CUARTOS. The eye shows more pupil than white, and seems to be staring up at the centre of the R of CUARTOS. There is no oblique line at the corner of the nose. There seem to be five pearls in the rosette on the forehead, and nearly all the pearls of the other rosettes show black dots in their centres. There are about ten oblique lines across the cut-off base of the neck. The lettering is decidedly poor, and too small; the C and U of CUARTOS are much smaller than the rest of the letters. The C of FRANCO has a small knob at the head, but none at all at the tail. SEIS is too near the inner boundary of the containing-oval. The inner ends of all four horseshoe-ornaments in the corners are closed, and sometimes the *outer* end of one or other of them is open. The queen has a most ridiculous double chin. This is not at all a dangerous forgery.

Third Forgery.

Lithographed, in a much greyer black than the counterfeit just described, on thick, hard, very white, or on medium, soft, very yellowish-white wove paper. There are four short, dotted lines on the cheek, then six long ones, then thirteen at the back of the neck. The straight part of the nose is *very* short in this counterfeit. There is no really well-defined pupil to the eye, and there is a dark patch in the corner, which makes the queen appear to be slyly looking round at the spectator. There seems to be a faint line *below* the nose, instead of at the corner, and I cannot make out any line at the corner of the mouth; but all my specimens happen to have this part rather hidden by the postmark. The front rosette is nearly complete, showing about six pearls. Most of the pearls of all the rosettes are badly shaped. There are about five oblique lines across the cut-off base of the neck, and they are by no means all parallel. The lettering is better than the last forgery, but the F of FRANCO leans towards the R, and the tail of the C is even bigger than the head, so that it looks very like a G. The letters RAN are firmly joined together, and the A is a good deal taller than the R. SEIS is too near the inner outline of the containing-oval. The C of CUARTOS is very like a G. The horseshoe-ornaments are all closed.

Fourth Forgery.

This is no longer in my possession, so I reproduce the description from my second edition. It is an extremely dangerous forgery, and must have been reproduced by photogravure. It is on thin, white wove paper, very like the thin paper of the genuine. The letters AN of FRANCO are joined together at the bottom by a *very* distinct line. This is positively the only difference between this excellent imitation and the genuine.

POSTMARKS.

Genuine.—21, 22. One of my specimens has 22, struck in blue.

First Forgery.—21, with arrow-heads, like the genuine.

Second Forgery.—21, without arrow-heads. Also 23.

Third Forgery.—23, 80.

Fourth Forgery.—I do not know how this was cancelled.

Same Issue. 12 Cuartos, lilac.**Genuine.**

Engraved in *épargne*, like the 6 cuartos, on thick or thin, white wove paper. The design is just the same as in the 6 cuartos, except that it is lettered DOCE (12), instead of SEIS (6). The large, middle pearl of each of the three central rosettes contains a distinct, crescent-shaped, coloured line. In the 6 cuartos, these crescents are only visible in very clear copies, but I have six specimens of the 12 cuartos before me, which all show the crescents very plainly. The C of DOCE is the same shape as the C of FRANCO, with head and tail alike. The other tests are the same as in the 6 cuartos.

Forged.

Poorly lithographed, on stout, yellowish-white, or on medium, white wove paper, ungummed. Below the three short, graduated lines on the cheek, there are seven long lines, the seventh forming the bottom outline of the chin. At the back of the neck, below the said seventh line, there are thirteen faint lines. In my specimen, the colour of the background has encroached upon the lower part of the profile of the nose, making it a very decided "pug"; but I do not know whether this is always the case. There is no oblique line at the corner of the nose, and hardly any sign of any line at the corner of the mouth. The front rosette shows five pearls. All the pearls of all the rosettes are badly drawn and indistinct. The last rosette contains only four pearls, instead of seven, and only two of them are dotted. Of the three central rosettes, the left-hand one has a crescent in the central pearl, but the central pearls of the other two rosettes only seem to have blotches in them. There are five blotched, oblique coloured lines across the cut-off base of the neck. The F of FRANCO leans towards the R, instead of being parallel with it; the R is joined to the A, and the A is firmly joined to the N; the tail of the C is slightly bigger than the head, making it look like a G; the O very nearly touches the outline above it. The top of the O of DOCE is badly drawn, and the tail of the C hangs down considerably below the level of the letter. The tail of the C of CUARTOS is not quite like the head; the head-stroke to the left limb of the U is not horizontal, but slopes up to the left. The letters COK of CORREOS are too near to the lower boundary of the containing-oval. The corner-ornaments are not all alike, and the white horseshoes are all closed into pointed ovals. This is not at all a dangerous forgery, and its faint and indistinct look ought to condemn it at once.

POSTMARKS.

Genuine.—As before.

Forged.—An oval of six parallel bars without outline. Also a few indistinct blotches.

Same Issue. 2 Reales, red, rose.**Genuine.**

Engraved in *épargne*, like the 6 cuartos. I have only seen it on thin, white wove paper. The upper inscription is CERTIF^o DOS REALES, and all the lettering is set midway between the outer and inner outlines of the containing-oval. The head and tail of the C of CERTIF^o are both alike; none of the letters of the word touch each other, and the little o does not touch the stop beneath it. The O of DOS is quite upright. The other tests are the same as before.

First Forgery.

This is very poor, and not likely to deceive. Lithographed, in scarlet and scarlet-vermilion, on fairly thick, yellowish-white, and very white wove paper. There are four short, graduated, dotted lines on the cheek, then five long lines from chin to hair, the fifth forming the lower outline of the chin. At the back of the neck, there are sixteen lines, up to the hair. The eye shows very little white, and a very large pupil or iris. There is hardly any sign of a line at the corner of the mouth. The rosettes are very roughly done, and none of the pearls have any dots or marks in them. There are eight oblique, coloured lines across the cut-off base of the neck, the front one being difficult to make out. The lettering is rather ragged-looking; the letters IF of CERTIF^o are joined together, both top and bottom, and the stop under the little O touches the O. The O of DOS slopes to the left, and the REA of REALES are all firmly joined together at the bottom. The C of CORREOS is too near the inner outline of the containing-oval, and the first R almost touches the outer outline. The horseshoe-shaped, white ornaments in the corners are usually all closed into pointed ovals, but I have a specimen which shows the one in the left bottom corner open. In the genuine, the white outlines of the corner-triangles are broad, and beautifully clear; in this counterfeit, they are thin, ragged, and sometimes broken at one or more of the corners.

Second Forgery.

Typographed, in dull vermilion, on medium, yellowish-white wove paper. The word DOS is deeply sunk into the paper, much more so than the rest of the stamp; so I expect it is movable, and that other values of this counterfeit probably exist. There are only two short lines on the cheek, then eight long lines from chin to hair, the seventh and eighth, which merge into one, forming the lower outline of the chin and jaw. Below this eighth line, at the back of the neck, there are only twelve lines. All these lines, here mentioned, are practically continuous, instead of being dotted. The profile of the nose is only very slightly *retroussé*. The line at the corner of the nose joins the line at the corner of the mouth, making one long, thick line, instead of two very short ones. (This is an easy test.) The front rosette on the forehead is hidden by the postmark, in my specimen, and the last two rosettes are faulty, each having only six pearls. None of the pearls, except in the last rosette, have any dots or marks in them. The C of CERTIF^o is a distinct G. The white horseshoe-ornaments in the corners are all different; the one in the left bottom corner being the only one which resembles the genuine.

Third Forgery.

This is very different from the two counterfeits just described, and is decidedly dangerous. Very nicely lithographed, in dull red, on very thin, white wove paper; very yellowish gum. The lines at the back of

the neck are the same in number as the genuine, but they are nearly all continuous, instead of dotted. The topmost one is the only dotted line. (This will have to be noted, as a safe test.) The rosettes are nicely done, but the coloured crescents in the centre pearls, when visible, are blotched into the outline. The O of DOS slopes very slightly over to the left. As far as I can see, the profile of the nose is straight all the way, without the familiar turn-up at the end; but my specimen is damaged just there, so I cannot be certain.

Fourth Forgery.

This is very like the last, but not quite so good. It is, however, good enough to be dangerous. Lithographed, in dull red, on very thin, yellowish-white or tinted wove paper. Both in this, and in the last-described forgery, the paper may be called *pelure*. There are three graduated lines on the cheek; then seven long lines; and the three lowest lines do not join those at the back of the neck, for there is a separation in the middle. The two bottom lines are solid, instead of dotted. At the back of the neck, there are fourteen lines, up to the hair. (In the genuine, there are sixteen lines altogether, up to the hair.) The nose is quite covered by the postmark. The central pearl of the left-hand rosette has no dot in it, and several of the pearls in the next rosette have dots in them, and two of the lower pearls are badly drawn, and almost invisible. In this rosette, and the one to the right of it, the central pearl shows a coloured crescent in it; but the crescents face to the *left*, instead of to the right. The base of the neck is covered by the postmark, so I cannot say how many lines there are across it. The O of DOS slopes slightly to the left. The letters REA of REALES are strongly joined together at the base, and the bottom of the S is quite flat, instead of rounded. All four of the horseshoe-ornaments in the corners are unbroken, pointed ovals, and all the curly ornaments differ more or less from each other, instead of being exactly alike.

Fifth Forgery.

This is one of the most dangerous forgeries that I have ever seen, and might deceive anybody. Finely lithographed (photogravure?), in brownish-red, on thin, yellowish-white wove paper. The colour is decidedly duller than the genuine, being something between salmon and terracotta. Almost every line and dot has been reproduced with the greatest exactness. The pear-shaped ornament in the left top corner, and the similar one in the left bottom corner, both have their points closed, instead of open. The curl to right of the pear-shaped ornament in the left lower corner has its right side split into two tendrils, like the genuine, but the upper tendril curls over and *touches* the lower one. In the genuine, the end of the upper tendril does *not* touch the lower one. These small discrepancies, and the peculiar colour of the stamp, are really the only tests.

POSTMARKS.

Genuine.—As before.

First Forgery.—1, 54 (without numerals).

Second Forgery.—21, like the genuine.

Third Forgery.—21, like the genuine.

Fourth Forgery.—21, but the lines are thinner than the genuine.

Fifth Forgery.—Uncancelled.

Same Issue. 5 Reales, rose.**Genuine.**

Engraved in *épargne*, on thin, white wove paper. The upper inscription is CERTIF^o CINCO REALES. Except the REA of REALES, none of the letters touch each other anywhere, and the stop does not touch the little O of CERTIF^o. The N of CINCO leans slightly to the left. All the other tests are the same as before.

First Forgery.

This appears to be the same as the first forgery of the 2 reales. Lithographed, in almost a salmon-red, on thick, very yellowish-white wove paper. The letters IF of CERTIF^o are joined together, top and bottom, and the stop *very* nearly touches the O. The N of CINCO is as nearly as possible upright. As far as I can make out through the postmark, the letters REALE are *all* joined together at the bottom. There are, I think, three short, graduated lines on the cheek; then six long lines, the lowest of the six (which, by the way, is solid, instead of dotted) forms the lower outline of the chin, etc. There are seventeen lines at the back of the neck, up to the hair, and the back of the neck cannot be distinguished from the background, though it is very clear in the genuine. The eye shows a very full, large iris, a good deal larger than the genuine. On account of the postmark, I cannot see whether the line at the corner of the nose joins that at the corner of the mouth. The last rosette, at the back of the head, seems to have only three pearls, instead of seven, and the rosette next to it has only six. None of the pearls have any dots or marks in them. There seem to be about seven coloured, oblique lines across the cut-off base of the neck, six of them being very broad. The first R of CORREOS rests upon the outline of the oval. The ornaments in the corners are all closed into pointed ovals, and the white lines, enclosing the corner-triangles, are thin and ragged, instead of broad and very clear.

Second Forgery.

This is a fairly good imitation. Lithographed, in deep carmine, on thinnish, very yellowish-white wove paper. There are three short, graduated lines on the cheek; then seven long lines from front to back. Below the seventh line, there are sixteen short lines down the back of the neck. The *whole* of the eyeball is dark, except one tiny speck of light. The rosettes are very coarsely done, and the back one is imperfect, without dots in the pearls. There is a blotchy dot in the centre pearl of each of the other rosettes. There are ten oblique lines across the cut-off base of the neck. (This is rather a good test, as the lines are fairly plain.) The I of CINCO is very thick, and I think it touches the foot of the N, which slopes a good deal over to the left. The letters COR of CORREOS are too near the outer boundary of the containing-oval. The little horseshoe-ornaments are open, like the genuine, but no two of them are quite alike in shape. The profile of the nose is a better shape than the genuine, the "turn-up" being absent.

Third Forgery.

This is dangerous. Nicely lithographed, in a sort of rose-pink, on very thin, yellowish-white wove paper. There are three graduated, short lines on the cheek; then seven long lines below. The lowest but one is solid, instead of dotted, and the lowest three lines do not go from front to back, as there is a break in the centre of all three. At the back of the neck, from the hair to the bottom, there are fifteen lines, the bottom one only

consisting of three or four dots. The profile of the nose is straight, without the turned-up knob. All the pearls of the last three rosettes have small dots in them. I cannot see the base of the neck, on account of the postmark. The I and N of CINCO are joined at the base, and the head of the second C is badly shaped, and not like the tail. The letters REAL are all firmly joined together at the base. The 5 of 1851 is quite flat at the bottom, instead of being nicely rounded. The ornaments in the corners are all closed, pointed ovals. In the genuine, the lines on the neck go to the extreme back edge; in this forgery they do not go quite to the back, so that there is a white line all down the back outline of the neck. There is another test, rather difficult to describe. In the genuine, between the broad band of hair which runs down from the top of the head, and the chignon at the back, there is a space where the hair is brushed into horizontal lines. The upper part of this space, at the top of the back of the head, shows six horizontal, coloured lines; the sixth line touches the top pearl of the last rosette but one. Below this sixth line, there is one very short one, which touches the base of this said top pearl. Below the last two rosettes, there are twenty-one coloured lines, mostly in pairs, the top line touching the base of the bottom pearl in the last rosette but one. Above this top line there is one very short one, touching another pearl. In this forgery, the lines above the rosettes are hidden by the postmark, but, below the rosette, there are only eighteen lines, up to the bottom pearl.

Fourth Forgery.

This is *very* dangerous. Nicely lithographed, in deep carmine, on thin, white wove paper. There are two short lines on the cheek; then seven long ones, from the chin to the hair. At the back of the neck, there are eighteen lines, up to the hair. The line at the corner of the mouth is more curved and oblique than the line at the corner of the nose. The pearl rosettes are covered by the postmark, but I can make out a dot in one of the pearls of the front rosette on the forehead, and a dot in the central pearl of the next rosette, while the pearls of the last rosette, except the central one, do not appear to be dotted. There are at least ten oblique lines, and possibly more, across the cut-off base of the neck. The one to the left is small and faint, but the others are distinct. The I and F of CERTIF? are *almost* joined at the base. The I of CINCO is thicker at the top than at the bottom, the N slopes decidedly to the left, and the O very nearly touches the outline above it. The letters of REALES are all separate, except the AL, which are joined at the base. In my specimen, there is a white stroke across the first I of 1851, and the top and bottom halves of the 8 do not touch each other. There are only seventeen horizontal lines, instead of twenty-one, at the side of the head, up to the bottom pearl of the last rosette but one. The postmark covers the lines above the rosette at the back of the head, so I cannot say how many there are. I can make out the six of the genuine, but there may be a seventh. The horseshoes in the corners are all open, but they are not alike.

POSTMARKS.

Genuine.--As before.

First Forgery.—100.

Second Forgery.—62.

Third Forgery.—21, like the genuine.

Fourth Forgery.—21, without the arrow-heads.

Same Issue. 6 Reales, blue.**Genuine.**

Engraved in *épargne*, on thin, white wove paper. The upper inscription is CERTIF^o SEIS REALES. The letters REAL are all joined together at the bottom. The bottom half of the E of SEIS is the same size and shape as the top half. The other tests are the same as in the 2 and 5 reales.

First Forgery.

Poorly lithographed, in bright Prussian-blue, on thick, white, and on yellowish-white wove paper. This is the same as the first forgery of the 2 reales, but all the letters REALE are joined together at the base. The serif to the last 1 of 1851 touches the back of the 5, and the 8 is flat at the bottom. The other tests are the same as in the first forgery of the 2 reales.

Second Forgery.

This is a very good counterfeit, and dangerous, but not so good as the one next to be described. Nicely lithographed, in pale, dull blue, on medium, very soft and spongy, yellowish wove paper. The three short lines on the cheek are absent in my specimen, and none of the longer ones below the chin run to the back. On the back of the neck, there are fifteen dotted lines; the nine uppermost of these lines do not go quite to the back of the neck, leaving a white line there. The rosette at the back has a dot in each pearl; none of the other pearls show any dots or marks. There are only five oblique lines across the cut-off base of the neck, and they are wide apart and easily seen. In my specimen, the bottom of the C, the top of the E, the top of the F, and the top of the O of CERTIF^o are all broken; the serif to the head of each S of SEIS is smaller than the serif of the tail, though they are the same shape and size in the genuine. None of the letters of REALES touch each other at the bottom, and the stop after the S is oval, instead of round. The second O of CORREOS is quite upright, but in the genuine, it slopes a good deal over to the right. The top of the head of the 5 is at a very oblique angle to the outline above it; in the genuine, the top of the 5 is very nearly parallel with the outline above it. The horseshoe-ornament in the left bottom corner is slightly open, as in the genuine, but all the other three are closed.

Third Forgery.

This is a very dangerous counterfeit. Finely lithographed (photogravure?), in rather lighter blue than the genuine, on very thin, white wove paper. It is evidently a companion to the fine, fifth forgery of the 2 reales. The split, upper tendril of the ornament under the RR in the left lower corner curls over, and touches the lower tendril. The end of the similar tendril in the left upper corner, to left of the F^o of CERTIF^o, is firmly joined to its fellow. In the genuine, the one in the lower corner does not touch, and the one in the upper corner barely grazes its fellow. With these exceptions, the forgery is an exact reproduction of the genuine.

POSTMARKS.

Genuine.—As before.

First Forgery.—54, without numerals.

Second Forgery.—Some indistinct blotches.

Third Forgery.—21.

Same Issue. 10 Reales, green.**Genuine.**

Paper and printing as before. The tests are the same as in the 2 reales, etc.

First Forgery.

Coarsely lithographed, on thick, rather spongy, yellowish-white wove paper. This, except for the altered value, is the same as the first forgery of the 2 reales.

Second Forgery.

This is another exceedingly dangerous companion to the fifth forgery of the 2 reales. Lithographed (photogravure?), on thin, white wove paper. The pear-shaped ornament in the left upper corner has its points firmly closed, instead of open, and the similar ornament in the left lower corner is *almost* closed, *i.e.*, only a hair-line divides the points. As in the fifth forgery of the 2 reales, the end of the upper of the two tendrils below the first R of CORREOS is firmly joined to the side of the lower tendril, though they do not touch in the genuine. The rest of the stamp is almost an exact reproduction of the genuine.

POSTMARKS.

Genuine.—As before.

First Forgery.—54, without numerals.

Second Forgery.—21.

Issue of 1852. 6 Cuartos, dull rose.

I had no forgeries of this issue when the second edition of this work appeared. I have not seen any dangerous counterfeits of the lower value.

Genuine.

Engraved, as before, on thick, and on thin, white wove paper. The lettering is all the same size, *i.e.*, about $1\frac{1}{2}$ mm. high. The little s of *CS* leans over to the right; but all the other letters are upright, and equidistant from the upper and lower outlines of the containing-labels. The C of *FRANCO*, that of *CS*, and that of *CORREOS* are all exactly alike, and the tail of each has the same knob as the head. In each corner of the stamp there is an ornamental white M. The V-shaped centre of this ornament is swollen, and rounded into a sort of bulb, which contains two sharp, white teeth. (These are perfectly distinct.) In each of the four corners, above the head of each M, there is a white pearl, with a dark dot in the centre of it; but the one in the right top corner is defective, as there are dots at the *edge* of the pearl, making it a white crescent. There is a curved line at the corner of the nose, marking the contour of the cheekbone, and a short, straight, oblique line at the corner of the mouth. The white line under *FRANCO*, which forms the top boundary of the left, upper spandrel, extends only as far as the right foot of the N. It is perfectly distinct, and unbroken. At the back of the Queen's head, between the vertically-falling hair and the chignon, the rest of the hair is brushed almost horizontally. In this part, above the tiara, there are eleven coloured, horizontal lines; and, below the tiara, about seventeen similar lines. The hair at the top of the head is divided into six portions by five long, sloping lines, which run from the top of the head down to the tiara. Between these long lines, there are shorter ones, which do not come

down to the tiara : four in the first space, under the N of FRANCO ; two in the second space ; three in the third space ; two in the fourth space ; two in the fifth space ; and one rather long one in the last space ; this last line being near the bottom, instead of the top of the space. The chignon is formed by two coils of plaited hair, and the vertical space between the two coils is shaded by oblique lines, running down from left to right.

Forged.

Lithographed, on stout, white and yellowish-white wove paper. The letters of FRANCO are irregular in height ; the tallest letter, A, being $1\frac{1}{2}$ mm. high, and the shortest, N, not much over 1 mm. high. The F leans very much over to the left, and the C is of a very ugly shape, the bottom half being larger than the upper, and there is no knob to the tail, like there is to the head. The body of the 6 is too large for the head, but the figure is nicely proportioned in the genuine. The little s of CS is perfectly upright, and very nearly touches the outline above it, while the C nearly touches the outline below it. The tail of the C of CORREOS is too short, and not exactly like the head. The first three letters of this word are smaller than the rest, and the E is so very tall, that it very nearly touches the top and bottom outlines of the label. (This irregular lettering ought to be an easy test.) The ornamental M in each corner of the stamp is not nearly so distinct as in the genuine, and the V-shaped centre of each is a white crescent, without the two white teeth of the genuine. The pearl in the right top corner is quite invisible in my specimen ; those in the other corners are dimly visible. There is no cheek-line at the corner of the nose—nothing but the usual curl of the nostril. There is also no oblique line at the corner of the mouth. The white line under FRANCO is merely a faint, broken hair-line, and reaches as far as under the middle of the C. The more or less horizontal part of the hair that runs into the chignon shows only six lines, instead of eleven, above the tiara, and nine or ten, instead of seventeen, below the tiara. Of the long lines on the top of the head, the fifth from the front is broken in the middle. The short lines in the spaces formed by these long ones are : one in the front space, which reaches very nearly down to the tiara ; an extremely faint one in the second space ; two in the third space ; two in the fourth space ; two in the fifth space ; there seem to be three in this fifth space, but the third short line is really only the top half of the broken, long one. After this last, at the very back, there is a prominent, long, oblique line, separate from the back outline of the hair ; in the genuine, this last line joins the back outline of the hair at the top. The back plait of hair in the chignon is almost invisible ; and there is no space between it and the other plait.

POSTMARKS.

Genuine.—22.

Forged.—22, but a rounded oval. Also the same, without outline. Also 54, without numerals.

Same Issue. 12 Cuartos, dull lilac, brown-violet.

Genuine.

Paper and engraving as before. The lettering of FRANCO 12 CS is, as before, all nearly $1\frac{1}{2}$ mm. high. Each C has a knob to the tail, exactly like that to the head, and the small s of CS leans over to the right. The 1 of 12 is taller than the 2, and the right-hand end of the foot of the 2 has a tiny, vertical point, sticking up from it. The other tests are the same as in the genuine 6 cuartos.

Same Issue. 10 Reales, green.**Genuine.**

Paper and printing as before. The tests are the same as in the 2 reales, etc.

First Forgery.

Coarsely lithographed, on thick, rather spongy, yellowish-white wove paper. This, except for the altered value, is the same as the first forgery of the 2 reales.

Second Forgery.

This is another exceedingly dangerous companion to the fifth forgery of the 2 reales. Lithographed (photogravure?), on thin, white wove paper. The pear-shaped ornament in the left upper corner has its points firmly closed, instead of open, and the similar ornament in the left lower corner is *almost* closed, *i.e.*, only a hair-line divides the points. As in the fifth forgery of the 2 reales, the end of the upper of the two tendrils below the first R of CORREOS is firmly joined to the side of the lower tendril, though they do not touch in the genuine. The rest of the stamp is almost an exact reproduction of the genuine.

POSTMARKS.

Genuine.—As before.

First Forgery.—54, without numerals.

Second Forgery.—21.

Issue of 1852. 6 Cuartos, dull rose.

I had no forgeries of this issue when the second edition of this work appeared. I have not seen any dangerous counterfeits of the lower value.

Genuine.

Engraved, as before, on thick, and on thin, white wove paper. The lettering is all the same size, *i.e.*, about $1\frac{1}{2}$ mm. high. The little s of CS leans over to the right; but all the other letters are upright, and equidistant from the upper and lower outlines of the containing-labels. The C of FRANCO, that of CS, and that of CORREOS are all exactly alike, and the tail of each has the same knob as the head. In each corner of the stamp there is an ornamental white M. The V-shaped centre of this ornament is swollen, and rounded into a sort of bulb, which contains two sharp, white teeth. (These are perfectly distinct.) In each of the four corners,

above the head of each M, there is a white pearl, with a dark dot in the centre of it; but the one in the right top corner is defective, as there are dots at the *edge* of the pearl, making it a white crescent. There is a curved line at the corner of the nose, marking the contour of the cheekbone, and a short, straight, oblique line at the corner of the mouth. The white line under FRANCO, which forms the top boundary of the left, upper spandrel, extends only as far as the right foot of the N. It is perfectly distinct, and unbroken. At the back of the Queen's head, between the vertically-falling hair and the chignon, the rest of the hair is brushed almost horizontally. In this part, above the tiara, there are eleven coloured, horizontal lines; and, below the tiara, about seventeen similar lines. The hair at the top of the head is divided into six portions by five long, sloping lines, which run from the top of the head down to the tiara. Between these long lines, there are shorter ones, which do not come

down to the tiara : four in the first space, under the N of FRANCO ; two in the second space ; three in the third space ; two in the fourth space ; two in the fifth space ; and one rather long one in the last space ; this last line being near the bottom, instead of the top of the space. The chignon is formed by two coils of plaited hair, and the vertical space between the two coils is shaded by oblique lines, running down from left to right.

Forged.

Lithographed, on stout, white and yellowish-white wove paper. The letters of FRANCO are irregular in height ; the tallest letter, A, being $1\frac{1}{2}$ mm. high, and the shortest, N, not much over 1 mm. high. The F leans very much over to the left, and the C is of a very ugly shape, the bottom half being larger than the upper, and there is no knob to the tail, like there is to the head. The body of the 6 is too large for the head, but the figure is nicely proportioned in the genuine. The little s of CS is perfectly upright, and very nearly touches the outline above it, while the C nearly touches the outline below it. The tail of the C of CORREOS is too short, and not exactly like the head. The first three letters of this word are smaller than the rest, and the E is so very tall, that it very nearly touches the top and bottom outlines of the label. (This irregular lettering ought to be an easy test.) The ornamental M in each corner of the stamp is not nearly so distinct as in the genuine, and the V-shaped centre of each is a white crescent, without the two white teeth of the genuine. The pearl in the right top corner is quite invisible in my specimen ; those in the other corners are dimly visible. There is no cheek-line at the corner of the nose—nothing but the usual curl of the nostril. There is also no oblique line at the corner of the mouth. The white line under FRANCO is merely a faint, broken hair-line, and reaches as far as under the middle of the C. The more or less horizontal part of the hair that runs into the chignon shows only six lines, instead of eleven, above the tiara, and nine or ten, instead of seventeen, below the tiara. Of the long lines on the top of the head, the fifth from the front is broken in the middle. The short lines in the spaces formed by these long ones are: one in the front space, which reaches very nearly down to the tiara ; an extremely faint one in the second space ; two in the third space ; two in the fourth space ; two in the fifth space ; there seem to be three in this fifth space, but the third short line is really only the top half of the broken, long one. After this last, at the very back, there is a prominent, long, oblique line, separate from the back outline of the hair ; in the genuine, this last line joins the back outline of the hair at the top. The back plait of hair in the chignon is almost invisible ; and there is no space between it and the other plait.

POSTMARKS.

Genuine.—22.

Forged.—22, but a rounded oval. Also the same, without outline. Also 54, without numerals.

Same Issue. 12 Cuartos, dull lilac, brown-violet.

Genuine.

Paper and engraving as before. The lettering of FRANCO 12 CS is, as before, all nearly $1\frac{1}{2}$ mm. high. Each C has a knob to the tail, exactly like that to the head, and the small s of CS leans over to the right. The 1 of 12 is taller than the 2, and the right-hand end of the foot of the 2 has a tiny, vertical point, sticking up from it. The other tests are the same as in the genuine 6 cuartos.

Forged.

Lithographed, in mauve, on thick, hard, white wove paper. The letters of FRANCO are irregular, mostly too near the top outline of the label. The A is very short, much shorter than the R or N; the C has no knob to the tail; and the O just touches the outline above it. The 1 of 12 is not so tall as the 2, and the 2 has no turned-up point at the end of the tail. The tail of the C of C^s has a knob larger than the head, and the little S is perfectly upright, with its upper half considerably larger than the lower. The V-shaped portion of the centre of the M, in the right bottom corner of the stamp, shows two white teeth; the one in the left bottom corner shows one; those in the top corners have none. The rest of the tests are the same as in the forged 6 cuartos.

POSTMARKS.

Genuine.—As before.

Forged.—54, without numerals.

Same Issue. 2 Reales, vermilion; 5 Reales, green;
6 Reales, blue.

Genuine.

Engraving and paper as before. The design is the same as in the 6 cuartos, except that the movable, upper inscription is now CERT^{DO} 2 (5, 6) R^s. The letters of CERT^{DO} are a shade over 1½ mm. high. The stop under DO is not exactly under the space between the two letters, but slightly to the left of the centre. The R of R^s is upright, with an extremely stumpy tail, and the stop is equidistant between the bottom of the S and the outline of the label below it. The white line under CERT^{DO}, which forms the top outline of the left upper spandrel, reaches as far as the middle of the T; and the similar white line, above CORREOS, extends to above the beginning of the E. The other tests are the same as in the 6 cuartos.

First Forgery.

Lithographed, the 2rs. in light scarlet, the 5rs. in yellow-green, and the 6rs. in dull, greenish-blue, on fairly thick, white wove paper. The letters of CERT^{DO} are 1½ mm. high. The C and T of CERT^{DO} are closer to the outline beneath them than the other letters. The D of DO leans over to the left; the O leans over to the right; and the stop is exactly under the space between DO. The R of R^s slants very much over to the left. The white line under CERT^{DO} can usually be traced to almost as far as under the D; and the similar line above CORREOS reaches to above the centre of the E. The first three letters of CORREOS are smaller than the rest; the E is the tallest, and reaches almost to the top and bottom of the label. The figures 185 of the date are much nearer to the bottom than to the top of the label; the flag of the 5 is *very* short, reaching only to above the centre of the numeral, instead of to considerably beyond the centre. In the genuine, the stop after 1852 is as large as that after CORREOS; in this forgery, it is either very small, or altogether absent. The ornamental M in each upper corner is the same as in the forged 6 cuartos, but the M in the left lower corner shows one white tooth in the V-shaped part, and the one in the right lower corner shows two teeth, like the genuine. There is no line at the corner of the nose, or at the corner of the mouth. The horizontally-brushed hair, to left of the chignon, shows six lines above the tiara, and either nine or ten below it. The vertical lines on the top of the head are the same as in the forged 6 cuartos. There is only a dark line,

instead of a long, triangular space, separating the two coils or plaits of the chignon. It will be seen that, except for the altered values, these counterfeits are practically identical with the forgery of the 6 cuartos.

Second Forgery.

Of this I have only the 2 reales. Typographed, in dull, orange-vermilion, on thin, hard, yellowish-white *laid* paper. The letters CERT are nearly 2 mm. high, so that they almost touch the outlines, above and below them. The D of DO leans over to the left, and the O to the right; there is a dot between them, which joins their bases together; and there is a very blotchy dot, like a flattened-out comma, lying on its back, below the centre of the two letters, and almost touching the outline of the label below them. The footstroke to the first limb of the R of R^s is very much too long on the right side, and the top half of the little S is larger than the bottom half. The white line above CORREOS very nearly, if not quite, joins the white ring round the portrait. The letters CO of CORREOS are smaller than the rest. The 8 of 1852 is shorter than the 1, and very much lower than the 5, which goes very close to the outline above it. The stop after the 2 is enormous, and is blotched into the lower corner of the label. The curved cheek-line at the corner of the nose is *very* prominent in this forgery. The horizontally-brushed hair, to left of the chignon, shows eight lines above the tiara, and about ten below it. I think one of the easiest tests for this forgery is in the shading on the back of the neck. In the genuine, there are two ribbons, hanging down from the chignon, parallel with the back of the neck, and the inner one close to it; the outer ribbon turns round at the bottom, and lies along the base of the neck, reaching nearly to the centre of it; while the back of the neck is shaded by nineteen *horizontal* rows of dots. In this forgery, the dots are so disposed as to look like *vertical* rows, instead of horizontal ones, giving the neck a vertically-striped appearance. The laid paper will also, of course, instantly condemn this counterfeit.

Third Forgery.

Lithographed, on thick, white wove paper. I have only the 2 reales, and the colour is very peculiar, something like the shade of the "mustard" 5 c. United States, with a little red in it. The letters CERT are only about 1½ mm. high; there is an oblong dot under the very beginning of the little D, and usually a smaller, circular dot, to right of the oblong one. The tail of the R of R^s has the usual curl, and is not like the abbreviated limb of the genuine. The white line under CERT^{do} only reaches as far as the tail of the R; and, in some copies, it very nearly or quite touches the white ring round the portrait. The similar white line above CORREOS only reaches to the beginning of the second R. The ornamental M in the right lower corner shows two white teeth in the V-shaped part, but the others only show white crescents or blotches. The dotted ball or pearl in the right top corner is quite invisible. The line forming the curl of the nostril points almost vertically upwards, instead of curling round to the left. There is no curved cheek-line, and only an extremely short line at the corner of the mouth. In the horizontally-brushed hair, to left of the chignon, there are ten lines above the tiara, and about fifteen below it. The hair at the top of the head is divided into four broad spaces, by long lines, coming down to the tiara: the first space contains one rather long line, and two shorter ones; the second, two lines; the third, three lines; the fourth, four lines. (This is an easy test.) The two plaits or coils of the chignon are separated by a broad, vertical coloured line. There seem to be only nine horizontal rows of dots on the back of the neck.

Fourth Forgery.

Of this I have only the 2 reales. Lithographed, in the same peculiar colour as the third forgery, on fairly thick, yellowish-white wove paper. The E of CERT^{DO} leans away from the C, and the dot is under the rounded part of the D. The R of R^s is fully $1\frac{1}{4}$ mm. high; its foot-stroke extends much too far to the right, and the tail is not abbreviated. The white line under CERT^{DO} reaches very little beyond the R, and the similar white line above CORREOS only reaches as far as the middle of the second R, instead of to the beginning of the T. (This is an easy test.) The V-shaped centre of each ornamental M is simply a large, white blotch. The white balls in the four corners are all perfect, and each contains a very small, coloured dot. There is no curved cheek-line at the corner of the nose, and only an extremely short line at the corner of the mouth. There are nine lines in the horizontal part of the hair, to left of the chignon, above the tiara, and about ten below the tiara. The hair at the top of the head, in my specimen, is so covered by the postmark, that I cannot give details. The chignon is also covered. The bottom lettering is too tall, being not far short of 2 mm. high. The lower knob of the C of CORREOS is not so large as the upper one. The flag of the 5 is perfectly horizontal, and equally thick for its whole length; but in the genuine, it is wedge-shaped, ending in a sharp point. There is hardly any sign of the vertical stroke at the end of the tail of the 2, and the stop after the 2 is much larger than that after CORREOS.

Fifth Forgery.

This is very like the last. I have only the 6 reales. Lithographed, on thin, yellowish-white wove paper. The colour is a very greenish-blue. The letters CERT are $1\frac{1}{2}$ mm. high; the stop under DO is very shapeless, though about in the proper position. The R of R^s leans very much over to the left, and the tail is not abbreviated. There is a hollow at the right bottom corner of the containing-label, and the stop under the little s just touches this place. The white line under CERT^{DO} does not reach as far as the T, and the similar white line above CORREOS only reaches about to the middle of the second R. A very easy test for this forgery is, that most of the letters of CORREOS are joined together, either at the top or at the bottom, by a coloured line. A line also joins together the tops and the bottoms of the 18 of 1852. The stop after the date is much larger than the stop after CORREOS. The ornamental M in the right top corner shows two white teeth, like the genuine, and so does the one in the right bottom corner, but neither of the others. The white ball in the left top corner is very shapeless. There is a curved cheek-line at the corner of the nose, in this forgery, and a very short line at the corner of the mouth. On the side of the cheek, level with the corner of the mouth, there is a small, coloured dot in my specimen, but I do not know whether this is always visible. The horizontal hair, to left of the chignon, shows nine lines above the tiara, and about thirteen below it. The hair at the top of the head is covered by the postmark, so I cannot give details. There are only fourteen horizontal rows of dots on the back of the neck.

Sixth Forgery.

Of this I have only the 5 reales. Lithographed, in rather shiny, yellow-green ink, on thick, yellowish-white wove paper. In the genuine, and all the forgeries hitherto described, the queen's expression has been quite pleasant; this counterfeit may be easily distinguished from all the rest by a thin, very much pursed-up lower lip, which gives her a sour and bad-tempered expression. The letters CERT are barely $1\frac{1}{2}$ mm. high;

DO is too near the upper outline of the label; and the stop, which is small, and almost centrally between the letters, is too near the bottom of the label, so that letters and stop look very far apart. The R of R^s leans a shade over to the left, and its vertical limb looks too long for the tail. The stop is nearer to the bottom of the label than to the S. A very easy test for this counterfeit is, that the white line under CERT^{no} is continued right along the top of the stamp, from one side to the other. There is no stop after CORREOS, and the stop after 1852 touches the lower corner of the oval. The second R of CORREOS leans over to the left. Another easy test is, that the horizontal lines of shading in the right-hand half of the tiara are only three in number, whereas the genuine and all the other forgeries have four lines of shading in the tiara. I don't think I need trouble the reader with any further test for this counterfeit.

Seventh Forgery.

Of this I have only the 6 reales. Lithographed, in extremely greenish-blue, on thick, hard white wove paper. The letters CERT are decidedly under 1½ mm. high. The R has a curious, long tail, stretching out far too much to the right; and the foot-stroke on the right side of the T ends with a blotch, that looks like a little stop. There is a large oblong, or shapeless stop, under the first stroke of the D. The white line under CERT^{no} does not reach even so far as the end of the tail of the R; and the white line above CORREOS cannot be traced further than above the second R. The M in the right bottom corner is the only one that shows the white teeth. The curl of the nostril goes vertically upwards, and there is no curved check-line, and only a very short line at the corner of the mouth. The horizontal hair, to left of the chignon, shows ten lines above the tiara, and fifteen below it. The top of the head is divided into five portions by four long lines, three of them thick. The front portion contains three short lines; the second, three lines; the third, three lines; the fourth, one line; and the fifth, two lines. The coils of hair are arranged in such a way that they look like a ring, seen rather edgeways. The 5 of 1852 is shorter than the 8, and the 2 has a curly foot, instead of a straight one.

Eighth Forgery.

This is a marvellous production, and might deceive anybody. I have only the 5 reales. Probably printed by photogravure, the same colour as the genuine, on thick, hard, yellowish-white wove paper. The dotted ball in the left bottom corner is perfect, but all the other three are white crescents. The horizontally-brushed hair, below the tiara, shows only fourteen lines, the crest, at the bottom, being all merged into a solid blotch. There is no cheek-line at the corner of the nose; but this is no particular test, as the genuine stamps do not always show it. I have spent a very long time studying the stamp, line by line, but the above are really the only differences that I can see. Unfortunately, my single specimen is rather heavily postmarked, so I may have missed some defects.

POSTMARKS.

Genuine.—22.

First Forgery.—29, small; 54, without numerals; 100.

Second Forgery.—Uncancelled.

Third Forgery.—22.

Fourth Forgery.—22.

Fifth Forgery.—22.

Sixth Forgery.—23.

Seventh Forgery.—22, with *very* thick frame; 100.

Eighth Forgery.—22.

Issue of 1853. 6 Cuartos, rose, carmine.

Genuine.

Engraved in *épargne*, on thick or thin, white wove, and also on bluish wove paper. The lettering is all level, and equidistant from the upper

and lower outlines of the containing-labels. The c and o of CORREOS are tall, narrow letters. The stop after the s is about equidistant between the end of the s and the projecting foot-stroke of the r. The thick, vertical outline of the triangular spandrel in the right top corner, if prolonged upwards, would pass just clear to the right of the stop after 1853. None of the letters of either inscription touch each other anywhere. There is no flaw in the F of FRANCO, and its foot-stroke is equal, right and left. The 6 has no stop after it. The corner-spandrrels are formed by graduated, coloured, horizontal lines. Of these coloured lines, there are eleven in the left top corner; eleven in the right top corner; ten in the left bottom corner; and ten in the right bottom corner. The pearls round the head cannot be traced all round, but the upper and lower ones are cut off or hidden by the top and bottom labels. On each side of the head there are twenty-eight perfect pearls, with parts of two other pearls at the top, and parts of two at the bottom also. The pearls are round and regular. There is an oblique, straight line at the corner of the nose, and a similar one at the corner of the mouth. The tip of the nose is rounded, and it is decidedly *retroussé*. The front of the hair just hides the outer corner of the eye. There are eight dotted lines of shading under the chin; they are not horizontal, but curve upwards, towards the face; and the three uppermost lines are continued to the back of the neck. There are thirteen dotted lines of shading at the back of the neck; the second from the top is the first of the three that run from front to back. On the coronet, there are six ornaments; first, part of a large trefoil, seen in profile, which does *not* touch the bearded circle; then a small trefoil; then a large trefoil; then a small trefoil; then another large trefoil; and then a very small *fleur-de-lys*. The white line of the base of the coronet tapers very much at the back, from under the last trefoil to the end. The ear is a white, outlined crescent, which does not touch the thick outline of the hair to right of it, and it contains three thick, horizontal lines of shading. The hair at the top of the head shows eighteen lines; and the horizontally-brushed portion, between this and the chignon, shows six lines above the coronet, and eight below it; the eighth line is difficult to make out. Below the bottom edge of the front of the coronet, under the first two trefoils, and touching the edge, there are six *very* short, vertical lines, some of them mere stumps. The chignon is composed of two coils of broad plaits; and the end of the front hair is twisted into a rope, which runs into the middle of the front edge of the chignon. This rope has four oblique, coloured lines across it. It gets gradually thinner towards the chignon, is perfectly distinct, and there are three coloured lines below it, and parallel with it, running into the chignon.

First Forgery.

Rather coarsely lithographed, in bright rose, on medium, very white wove paper. The c and o of CORREOS are rather wide and rounded letters, and the second r is rather lower than the first. The stop after this word is much nearer to the s than to the r. The thick, vertical outline of the right upper spandrel is drawn too high, and touches the lower outline of the top label. If this line were prolonged still further upwards, it would nearly blot out the stop after 1853; and if any portion of the stop should

still be visible, it would be at the *right* side of the said line. The 8 touches the bottom outline of the containing-label; the 1 and 3 are rather close to the bottom, but the 5 is high above it. In my specimen, the left side of the foot of the F of FRANCO is a thick blotch; and the letters RAN are all joined together at the bottom, as are also the RRE of CORREOS. There is a distinct stop after the 6, level with the bottom of the little s of c^s. There are fourteen horizontal, coloured lines in the left top spandrel; twelve in the right top spandrel; thirteen in the left bottom spandrel; and eleven in the right bottom spandrel. The topmost line in each of the upper spandrels is very much thicker than the rest. The pearls round the head can be traced all round the bottom of the circle, and they are of irregular sizes and shapes, some being oval. From the one under the second R of CORREOS, to the one above the C of FRANCO, there are thirty-one pearls down the left side; and, from the stop after CORREOS to above the 6, there are twenty-seven pearls. The eleventh pearl down the left side is badly made, with a line through it; and there is also a line, partly through the twenty-first pearl on the right side. There is a line at the corner of the mouth, but none at the corner of the nose. The tip of the nose is sharp, and it is not *retroussé*. The front of the hair does not touch or hide the corner of the eye. There are seven dotted lines of shading under the chin; and, in several of them, the dots are joined by thin lines, so as to be like pearls on a string; these lines are very nearly horizontal, instead of curving up towards the face. The fourth, fifth, and sixth of these lines seem to be the ones which are continued to the back of the neck. There are eleven lines at the back of the neck, counting from the first that goes across; and these lines are of dots, connected by lines, like pearls on a string. The first two ornaments on the coronet look like widely-open poppy-flowers as much as anything; the third ornament is a large trefoil; the fourth is like some sort of a flower, with all the petals, except one, pulled off, and only the stumps left, round the central portion; the fifth ornament is somewhat of a trefoil-shape, but each of the three leaves is partly split, or double. The sixth ornament—the little *fleur-de-lys*—is absent. The base or band of the coronet is the same width from front to back. The white crescent which does duty for an ear goes against the thick outline of the hair, to right of it, and its centre is solid. As far as I can make out, under the postmark, there are about twenty-two lines on the top of the head, many of them very scratchy, double, or otherwise irregular. The horizontally-brushed part of the hair shows five thick lines above the coronet, and about thirteen below it. There are no short lines under the front edge of the coronet. The chignon looks like a broad, circular plait, seen almost edgewise. There are four irregular, coloured lines running into the bottom of it, from the end of the front hair, and the back of the neck; but the rope of twisted hair is not visible. I have one specimen of this forgery which shows no foot-stroke at all on the left side of the foot of the F of FRANCO, and no stop after the 6; but it is the same as the counterfeit just described in all other respects.

Second Forgery.

This is a ridiculous affair. Lithographed, in bright red, on thick, hard, white wove paper. The stop after CORREOS is very close to the S. The thick, vertical line of the spandrel in the right top corner, if prolonged upwards, would pass *far* to the right of the stop after 1853. The 5 leans over to the right, instead of very slightly to the left. The tail of the R of FRANCO curls upwards, into a hook. The lines in the spandrels are: left upper spandrel, fifteen; right upper spandrel, sixteen; left lower spandrel, sixteen; right lower spandrel, nineteen. There are thirty-six pearls on the left side,

and thirty-eight or thirty-nine on the right ; I am not sure of these latter, as my stamp is damaged on the right side. The expression of the face is an easy test, as it is most sanctimonious and prudish, with a straight mouth, and a drooping, Jewish nose, with a slanting nostril that has no curl in it. There is no line at the corner of the nose or mouth. No shading is visible under the chin ; and the shading at the back of the neck consists of twelve faint, dotted lines. There is no trefoil at the front of the coronet, and no *fleur-de-lys* at the back of it ; the ornaments being five very stiff-looking trefoils, alternately small and large. The hair at the top of the head shows twenty-four lines, instead of eighteen ; and the horizontally-brushed hair at the back of the head shows ten lines above the coronet, and eighteen below it, to the bottom. The chignon is formed by three narrow coils ; and the twist of the ends of the front hair, going into the chignon, cannot be seen. Further details are unnecessary. I think the downward-drooping nose is enough to condemn this counterfeit instantly.

Genuine.—22.

First Forgery.—10.

Second Forgery.—A large, very thin, curved line, probably part of a very large copy of 1.

POSTMARKS.

Same Issue. 12 Cuartos, reddish-purple.

Genuine.

Engraved, like the 6 cuartos, on thin, white wove paper. The letters RAN of FRANCO are not joined at the bottom, and the foot of the 2 of 12 is a horizontal stroke, with a little, vertical point at the end. The other tests are the same as for the genuine 6 cuartos.

Forged.

Poorly lithographed, on rather thick, very white wove paper. The letters RAN of FRANCO are all joined at the bottom, and the tail of the 2 of 12 does not turn up at the end. The other tests are the same as for the first forgery of the 6 cuartos.

POSTMARKS.

Genuine.—22.

Forged.—10.

Same Issue. 2 Reales, scarlet.

Genuine.

Engraved as before, on thin, white wove paper. The lower inscription is CERT^{DO} 2 R^S, and the letters CERT are far apart, and equidistant between the upper and lower outlines of the label. The stop under the little DO is nearer to the D than to the O ; and the straight foot of the 2 turns up into a little point at the end, as in the 12 cuartos. The S of R^S seems to lean *very* slightly away from the R. The other tests are the same as in the genuine 6 cuartos.

First Forgery.

Poorly lithographed, on thick, very white paper ; wove, or vertically laid. The lower inscription is a very easy test, as it is FRANCO 2 R^S. The letters RAN are joined at the bottom, and the 2 has a curly foot. The little S is upright, and is larger at the top than the bottom ; while the stop under it is much nearer to the bottom outline than to the S. The other tests are the same as in the first forgery of the 6 cuartos.

Second Forgery.

Lithographed, in scarlet-vermilion, on *very* thin, bluish-white wove paper. CORREOS is in thick, rather blotchy letters, almost standing on the outline below them. The RR are joined together, top and bottom, and the stop is oval, and rests on the outline below it. The 1 and the 8 of 1853 touch the outline above them; the 8 is broken at the top; and the front of the head of the 3 points slantingly forward, towards the middle of the 5, instead of straight downwards. CERT^{DO} is in the same large, clumsy letters as the upper inscription, and the C, E, and first stroke of the R rest on the lower outline of the label, while the 2 touches both top and bottom of the label. The stop under the little DO is placed very nearly centrally between the letters, and *almost* touches the bottom outline of the label. The S of R^S is upright, and the R leans slightly over to the right. The spandrels are a fairly easy test; there are only eight horizontal lines in each of the upper ones, ten in the left lower one, and nine in the right lower one. There are twenty-nine pearls to left of the head, and twenty-nine and part of another to right of it; they are fairly regular. There is no oblique line at the corner of the nose or of the mouth. The eye is looking decidedly down, instead of straight forwards. There are seven dotted lines of shading on the chin, the two at the top going to the back of the neck. At the back of the neck there are eleven lines of shading. The trefoil in profile on the front of the coronet is very poor. Next to it is what looks like a small, badly-made *fleur-de-lys*; then comes a large, floral thing, more like a cross than a trefoil; then a small, white cross; then a small edition of the large, white cross; then a small, plain cross, the left arm of which is almost invisible. The band of the coronet is the same width from front to back. The ear touches the thick outline of the hair, and its centre appears to be solid. There are eighteen lines in the hair, at the top of the head; six lines in the horizontally-brushed part, at the back of the head, above the coronet, and nine or ten below the coronet. Below the front edge of the coronet there are six *very* short, vertical lines.

Third Forgery.

Lithographed, in bright rose, on *very* thin (*pelure*), white wove paper. This is very much more deceptive than either of the forgeries just described. The stop after CORREOS is far nearer to the S than to the 1, and the front of the head of the 3 points forwards, towards the 5, instead of downwards. The stop under the little DO of CERT^{DO} is exactly under the centre of the two letters. The S of R^S is upright, and the stop is not under the centre of the S, but too much to the right. Each of the upper spandrels contains eleven horizontal, coloured lines; the left lower one probably also contains eleven, but the postmark covers some of them in my specimen; the right lower one has nine. There are twenty-nine pearls to left of the head, the top and bottom ones being partly cut off by the labels, and thirty-two to right of the head; three at the top and two at the bottom being also partly cut off by the labels. The oblique line at the corner of the nose is very short. The hair reaches to the corner of the eye, but does not hide or cover any part of it. There are seven lines of shading on the chin; three at the top go to the back of the neck, as in the genuine. At the back of the neck there are ten lines of shading. The front trefoil on the coronet is poorly drawn, and the last ornament looks like a cross, rather than a *fleur-de-lys*. The ear touches the outline of the hair in front of it, and is solid in the centre, except for a horizontal, white mark. There are sixteen lines, instead of eighteen, in the hair, at the top of the head; and, as far as I can see through the postmark, there are five above the coronet, and six below the coronet, in

the horizontally-brushed part. The postmark covers the rest of the details, but those already given will probably be sufficient. There are eight very short lines below the front of the coronet.

Fourth Forgery.

Engraved in *taille-douce* (?), in a sort of brick-red, on thin, white wove paper. There is no line at the corner of the nose. In the horizontally-brushed hair, at the back of the ear, below the coronet, there are only six lines to be seen. The twist of hair which goes from under the ear to the chignon has its lower edge defined by a white hair-line in the genuine; but there is no hair-line under the twist in this forgery. Except for these small discrepancies, this forgery is an accurate copy of the genuine, and may be labelled "very dangerous."

Fifth Forgery.

This is a good-looking counterfeit, but not so deceptive as the one just described. Lithographed, in dull red, on thick, white wove paper. In the word CORREOS, the second R is the tallest letter, and the second O the shortest. (In the genuine, the letters are, of course, all equal in height.) An easy test is the stop after 1853, which is so extremely small, that it can only be seen with the microscope. The C of CERT^{do} is a very round-looking letter, and the stop under the little DO is *much* nearer to the O than to the D. The left upper spandrel contains eleven horizontal lines, with a thin, white line of separation between the top line and the label above it. The right upper spandrel has twelve lines; the top line being joined to the label above it. The lower spandrels contain twelve lines each. There are thirty pearls to left of the head, and thirty-one to right of it, with one imperfect pearl at the top, and two at the bottom, on the right side. There is no sign of any oblique line at the corner of the nose, and very little at the corner of the mouth. The front of the hair *barely* touches the corner of the eye. There are, as in the genuine, eight curved, dotted lines under the chin, but only thirteen at the back of the neck; and the two upper ones are solid, instead of dotted. The ornaments on the coronet are fairly imitated, except that the last one is a small trefoil, instead of a sort of *fleur-de-lys*. The hollow of the ear is perfectly solid. The lines on the head are like the genuine; the centre of the ear is solid; and the twist of hair is represented by a thin, white line, all the rest of it being lost in the shading.

POSTMARKS.

Genuine.—22.

First Forgery.—10; 54, without numerals.

Second Forgery.—Uncancelled.

Third Forgery.—22.

Fourth Forgery.—Uncancelled.

Fifth Forgery.—22.

Same Issue. 5 Reales, green.

Genuine.

Engraving and paper the same as in the 2 reales, and the tests are the same, except for the alteration in the numeral of value. The tail of the 5 is curved inwards; and if the neck were prolonged downwards, it would pass well to the *left* of the ball of the tail.

First Forgery.

Poorly lithographed, in light yellow-green, on thick, white wove paper. The tail of the 5 projects to the left, instead of curling inwards; and, if the neck were prolonged downwards, it would pass very nearly clear to the *right* of the ball of the tail. The C of CERT^{DO} looks like a G; the right arm of the T hangs down a good deal lower than the left; the stop under the little DO is exactly central, between the letters; there is a thin hyphen, or scratch, before the R of R^S; and the S is upright, and at some distance from the R. The rest of the tests are the same as for the first forgery of the 6 cuartos.

Second Forgery.

Lithographed, in light green, on rather thin, white wove paper. The C of CORREOS touches the outline below it, and the letters RE are joined at the foot. The tail of the 5 at the bottom of the stamp projects rather to the left, so that, if the neck were prolonged downwards, it would cut through the centre of the ball of the tail. The letters of CERT are much nearer the lower outline of the frame than they are to the upper outline, and the stop after R^S almost touches the lower outline. There are twelve horizontal lines in the left upper spandrel, and thirteen in the right one; twelve in the left lower spandrel, and thirteen in the right one. The pearls can be traced, nearly round the bottom of the circle; there are thirty-one on the left side, including three imperfect ones at the top, and three at the bottom. On the right side, there are thirty-two pearls, including two imperfect ones at the top, and three at the bottom. There is no oblique line at the corner of the nose, and none at the corner of the mouth. Under the chin, there are seven horizontal, dotted lines of shading, and the back of the neck shows twelve dotted lines. The coronet is almost covered by the postmark, but the last ornament is a distinct trefoil. The ear is a dark line, instead of a white one, bounded by two dark ones; and its centre seems to have four or five coloured lines across it, as far as I can make out, through the postmark. The hair on the top of the head only shows fourteen lines; and there are eight lines in the portion behind the ear, below the coronet. The twist of hair, from the ear to the chignon, is very white, and shows ten oblique lines, instead of four, and these lines only go partly across it.

Third Forgery.

This is very dangerous. Probably printed by photogravure, on rather thin, white wove paper. I have gone carefully over the whole stamp, almost line by line, and cannot find one single point in which it differs from the genuine, and anybody would accept it as genuine, without hesitation.

POSTMARKS.

Genuine.—22.

First Forgery.—10, 100.

Second Forgery.—23.

Third Forgery.—22.

Same Issue. 6 Reales, blue.

Genuine.

Paper and engraving the same as in the genuine 2 reales. The design is the same as in the other higher values, with the exception of the altered numeral.

First Forgery.

Lithographed, in bright blue, on thick, very white wove paper. The letters CER of CERT^{DO} are all joined at the bottom, and the stop under the DO is exactly central between the letters. The other tests are the same as for the first forgery of the 6 cuartos.

Second Forgery.

Lithographed, in deep blue, on thin, yellowish-white wove paper. The letters of CERT^{DO} are too near the top outline of the containing-label, and the stop under the DO is very slightly nearer to the O than to the D; just the opposite of the genuine. The front of the top of the 3 of 1853 points towards the 5, instead of straight downwards. There are eleven lines in the left upper spandrel; twelve in the right upper one; ten in the left lower one; and nine in the right lower one. There are thirty pearls to left of the head, including two imperfect ones at the top; and thirty-one on the right side, including two imperfect ones at the top, and one at the bottom. There is a fairly large line at the corner of the nose, and another at the corner of the mouth. The hair does not touch the corner of the eye. There are eight oblique, but hardly curved, dotted lines under the chin, and twelve lines at the back of the neck. The large trefoil on the centre of the coronet is crooked and badly drawn, and the last ornament is more like a cross than a *fleur-de-lys*. The back of the band of the coronet tapers very little. The ear touches the hair in front of it. There are sixteen lines on the top of the head, five lines at the back, above the coronet, and about twelve irregular lines at the back, below the coronet.

POSTMARKS.

Genuine.—22.

First Forgery.—10.

Second Forgery.—23.

Issue for Madrid, 1853. 1, 2, 3 Cuartos, bronze.

The 3 cuartos was issued on April 10th, 1853, and the 1 cuarto on October 15th, 1853. The 2 cuartos was a stillborn stamp, prepared and printed, but never issued.

Genuine.

Engraved in *épargne*, on thin, white wove paper. None of the letters touch each other anywhere, except the R and A of FRANCO; and each C has its head and tail alike. The upright stroke of the F of FRANCO is fully $\frac{1}{2}$ mm. from the side of the stamp. The cross on the crown is exactly under the centre of the first I of INTERIOR, and the crown has five arches, resting on trefoils; the two right-hand arches are not so distinct from one another as the two left-hand ones are. Each side of the wreath round the arms contains five bunches of leaves, each bunch separated from the next by two berries on stalks. The lowest bunch on the right side contains four leaves; the second, three; the third, four; the fourth, four; and the top bunch, three. The lowest bunch on the left side has three leaves; the second, three; the third, four; the fourth, four; and the top bunch, three leaves and a white line. There are seven six-pointed, fat stars on the shaded ring. The bear has a distinct mouth and eye. He has a crown of three points on his head, and his hind

quarters do not touch the ring, so that a stumpy tail is visible. There is a line round his neck. The leaves of the tree do not touch the ring anywhere. The coloured, horizontal lines in the spandrels are not drawn far enough to touch the solid background, behind the arms, but leave a white line, completing the white outline of the octagon. Counting the *white* lines (*not* the coloured ones) in the spandrels, there are nine in each of the four corners. The coloured outline of the stamp is about $\frac{1}{4}$ mm. thick.

First Forgery.

Of this I have only the 1 cuarto. Lithographed, in blackish-bronze, and red-bronze, on thin, white wove paper. Each C in the inscriptions has a tail without any knob. (This is an easy test.) The first R of CORREO is taller than the C and the O. The left arm of the T of INTERIOR is very much shorter than the right arm; there is no head-stroke to the first I; and the O and final R are broken at the top. The letters FRAN of FRANCO are all joined at the bottom, and the F is very close to the side of the frame, so that the foot-stroke touches it. The foot of the first stroke of the N is a blotch. The U of CUARTO is of an ugly shape, and it leans towards the C; the left arm of the T is longer and larger than the right arm. The crown has no cross on it, but the front of the crown has a sort of five-leaved flower, with a dark, oval dot in the centre of it. There are no arches on the crown, but each side of the flower before-mentioned there are five tapering white objects, something like a row of parsnips, standing side by side. The circlet of the crown, which ought to show three jewels, and three half-jewels, has two plain dark lines drawn across it, from side to side. The bunches of leaves on the wreath, counting from the bottom, contain: right hand, 4, 3, 3, 4, 3; left-hand, 2, 3, 3, 3, 3. The berries are not at all distinct, as many of the stalks are much too thick; below the second bunch from the top, on the left side, there is only one berry. The shaded ring contains five white balls, each with a more or less crescent-shaped mark in the centre of it. The bear's eye is visible, but not his mouth. He has only one front paw, instead of two, and he is sitting on the ring, so that his hind legs and stumpy tail cannot be seen. He has no crown on, and there is no cord or line round his neck. The leaves of the tree touch the ring, to the left of the top. The coloured lines in the spandrels run right into the solid octagon, so that the white line surrounding the octagon is only visible at the top, bottom, and sides. There are eight horizontal, *white* lines in each of the upper spandrels, eight in the left lower spandrel, and seven in the right lower spandrel. The frame of the stamp is much thicker than the genuine; in its thickest part, near the right top corner, it is quite $\frac{3}{4}$ mm. high.

Second Forgery.

Of this I have only the 1 cuarto. Lithographed, in golden-bronze, on fairly thick, white wove paper, very different from the transparent, almost *pelure* paper of the genuine and of the first forgery. The lettering is very irregular. The first R of CORREO is so tall, that it touches the outline above it, and the second O is much too small. The letters OR of INTERIOR also touch the outline above them. Each C has a tail without a knob, and the C of FRANCO is far too small, but has a sort of hook coming from its head, and touching the outline above it. There is no stop after CUARTO. The cross on the crown is to the left of the first I of INTERIOR. The crown itself is the most extraordinary object, being formed by white crescents, shaded with horizontal lines. It doesn't seem to have any base, except a sloping, shapeless white line. There are three leaves in each of the bunches on the right side, and three also in each of the

bunches on the left side, except the middle one, which has four. There are no berries, and each bunch is separated from its neighbour by a ball. There are seven circular objects on the shaded ring, but they are not stars. The bear has a large, conical lump on his head, instead of a crown. He has only one front paw. He seems to be sitting on the ring, but my specimen is postmarked just there. There is no cord round his neck. The leaves of the tree are very straggling, and touch the ring, to the right of the top. There are nine horizontal white lines in each of the upper spandrels; eight in the left lower spandrel; and nine in the right lower spandrel. The frame is too thick, measuring fully $\frac{1}{2}$ mm. broad.

Third Forgery.

Of this I have the 1 and 3 cuartos. Lithographed, in dark bronze, or red-bronze, on very thin, greyish-white wove paper. The serifs to the letters are very long, so that the ERI of INTERIOR, the RAN of FRANCO, the UAR of CUARTO, and the UART of CUARTOS, are all joined together at the foot. The cross on the crown is under the beginning, instead of under the centre, of the shaft of the first I of INTERIOR. The hollow place in the arch of the crown, under the T of INTERIOR, contains four curved lines of shading, instead of the two lines of the genuine, and the hollow in the arch under the N contains four long lines, and one very short one, instead of three lines. The bunches of leaves in the wreaths, counting from the bottom, are: right hand, 4, 3, 5, 4, 3; left hand, 3, 4, 4, 4, 4. There are seven stars on the shaded ring, but the top one seems to be double, and the rays of the others are difficult to count. The bear is very like the genuine, but there is only a lump at the back of his neck, to do duty for the crown. There is no line or cord round the neck. There are ten horizontal, white lines in each of the triangular spandrels. In the 3 cuartos, the stop after FRANCO touches the outline below it, and the left foot of the A of CUARTOS ends in a blotch.

Fourth Forgery.

Of this I have only the 2 cuartos. Lithographed, in a cold bronze, on medium, white wove paper, much thicker than the almost *pelure* paper of the genuine, and of the first and third forgeries. The upper lettering is tolerably regular; but the tail of the C of CORREO has no knob. The lower lettering is not so good; the F of FRANCO is *too* far ($\frac{3}{4}$ mm.) from the beginning of the label; the RAN are all joined at the bottom; the tail of the C has no knob. There is a stop after the 2; the A of CUARTOS is taller than the U, and sharp at the top; and the A and R are joined. The cross on the crown is to the right of the shaft of the first I of INTERIOR. The hollow in the arch under the N contains two lines, instead of three; and there are three lines, very much blotched, in the arch under the T. The wreaths are hidden by the postmark, so I can give no details of them. The middle star on the right-hand side of the shaded ring is considerably smaller than the rest. The bear's mouth and eye are quite distinct; but, instead of a crown, he has a rabbit's ear sticking up almost perpendicularly, from the back of his head. His hind quarters are against the edge of the ring, so that the tail is not visible. There is no cord round his neck. The tree seems to touch the ring, in the upper right-hand corner. There are eleven horizontal white lines in the left top spandrel, and about ten in the right top spandrel; ten in each of the lower spandrels. The cross on the crown, in this forgery, goes through the white line above it, and touches the coloured line, under INTERIOR.

Fifth Forgery.

This is a very poor affair. I have only the 3 cuartos. Lithographed, in golden-bronze, on medium, very white wove paper. The lettering is very ragged and irregular; the C of CORREO has no knob to the tail, the O is too short, the first R too long, the RRE are joined at the base, the E leans to the right, and the O is too far off. The I and N of INTERIOR are joined at the base, the I leans over to the left, and the final R touches the right-hand frame with its foot. The head and foot of the F of FRANCO both touch the left-hand frame, and the shaft of the F is only a hair's-breadth from the edge. I think the C has no knob to the tail, but the postmark renders this doubtful. The C of CUARTOS has no knob to the tail, the R and T very nearly touch each other both top and bottom, and the serif of the s touches the frame below it. In my specimen, this frame is broken at the right bottom corner. The orb on which the cross stands is much too large, being fully 1 mm. wide, instead of $\frac{1}{2}$ mm., and the cross is under the first vertical stroke of N of INTERIOR. The two left-hand arches of the crown are jumbled together, so that there is no white space between them, and none of the other three white spaces have any lines in them. The arches rest upon balls, instead of trefoils. The bunches of leaves in the right-hand wreath, counting from the bottom, are: 3, 3, 3, 4, 4. Those in the left-hand wreath are: 3, 3, 3, 3, 3. There are no berries between the bunches. The stars are very large, with circular, white centres, and seven to eight dark rays in each. The bear looks like a water-rat, with a rat's ear, and no mouth, eye, or crown. He has no cord round his neck, and only one front paw. The hind leg that shows appears to be the right, instead of the left, and the tail touches the ring. The leaves of the tree are firmly joined to the ring, both on the right side and on the left. There are only five white, horizontal lines in the right, upper spandrel, and four in the left; and there are six white lines in each of the lower spandrels. The bottom two on the right side are really one single, broad white line, divided into two by a very thin, coloured one. The frame of the stamp is very thin, being only about half the thickness of the broad, coloured lines of the spandrels.

Sixth Forgery.

Of this I have only the 2 cuartos. Nicely lithographed, in rather red-bronze, on fairly thick, rough, somewhat ribbed paper. The I and N of INTERIOR touch at the top and bottom, and the TE at the bottom, while the left foot-stroke of the final R is ridiculously long, and nearly touches the base of the O. The F of FRANCO touches the R at the top and bottom, and the letters FRAN are all joined at the bottom, while the left-hand stroke of the N very nearly touches the top of the A. The U of CUARTOS is an extremely narrow letter, and the stop after this word touches the frame to right of it. The cross on the crown is under the first stroke of the N of INTERIOR, and the little dark crescent in the orb is in the bottom of the orb, instead of the right-hand side. In the genuine, the three lines in the hollow of the arch under the N are all the same height; in this forgery, the left-hand line is much shorter than the other two. The berries on the wreaths have no shading in them, but in the genuine, each contains a crescent-shaped, dark line. Four of the berries in the left-hand wreath have no stalks. The top star and the one to the right of it have only five rays, instead of six. The bear is very fairly imitated, but the profile of the nose shows a step in front of the eye, instead of being all in one line to the crown. His tail touches the ring. There is no cord round his neck. There are nine horizontal

white lines in each of the spandrels. The frame of the stamp is too wide, being over $\frac{1}{2}$ mm. broad in the thickest part. Despite all these differences, this is not at all a bad-looking forgery.

Seventh Forgery.

Of this I have only the 3 cuartos. Nicely lithographed, in red-bronze, on very thin, yellowish-white wove paper. The C of CORREO touches the side of the frame, and the R and E are joined at the bottom. The top of the F of FRANCO very nearly touches the frame to left of it, and the R and A are firmly joined at the bottom. The stop after CUARTOS touches the side of the frame. The cross on the crown bends over to the right. If it were perfectly upright, it would be under the left-hand edge of the first I of INTERIOR. The stars are very well imitated, and so is the bear, which shows mouth, eye, crown, tail, and cord, like the genuine. There are nine horizontal, white lines in each of the spandrels. The frame of the stamp is more than $\frac{1}{2}$ mm. wide in the thickest part. This is decidedly a deceptive counterfeit.

POSTMARKS.

Genuine.—My only used specimen bears nothing but an indistinguishable blotch.

First Forgery.—Uncancelled.

Second Forgery.—42.

Third Forgery.—37, without numerals.

Fourth Forgery.—9.

Fifth Forgery.—10.

Sixth Forgery.—Uncancelled.

Seventh Forgery.—Uncancelled.

Issue of 1854. 2 Cuartos, green.

My readers are probably aware that the stamps with shield on white ground, as shown in my illustration of the 4 cuartos (2, 4 cuartos, 1 real), were not issued till November, 1854; while those with shield on coloured ground, as shown in the illustration of the 6 cuartos (6 c., 2, 5, 6 rs.) were issued on January 1, 1854. I take them in the order of their values, for the sake of simplicity.

Genuine.

Engraved in *épargne*, on thin white, or thick, bluish wove paper. It is also found on the paper of the 1855 issue, with watermark of loops, but this was a stillborn stamp, never issued. All the lettering is regular, and of the same height, and none of the letters touch each other anywhere, except the R and A of FRANCO, which touch in heavily-printed specimens. Each C of the inscriptions has a serif to the tail, exactly like that of the head. The stars, before and after CORREOS, have eight distinct points. The foot-stroke to the F of FRANCO is almost as long on the left side as on the right. The 2 has a straight foot, with turned-up end, and there is a stop after it. The little S of C^s is three times as wide as the stop under it. Both ends of both labels are similarly rounded. The thin, coloured line down the right side of the stamp, inside the frame, does not usually touch the lower outline of the CORREOS-label; and there is no second horizontal line under the said label, above the floral ornament in the right top corner. The cross on the crown is *very* small, and is on a blotch of colour, which touches the outline under the second R of CORREOS. The orb on which the cross stands is hardly $\frac{1}{2}$ mm. wide. The centre arch of the crown has three pearls on it; the arch each side of it, seven; and

the outside arches, four each. There are sixteen vertical lines behind each of the castles in the shield; but, in the compartment containing the lower castle, one line is missing (the last but one to the left), leaving a blank. The top of each castle bears what look like three chimney-pots, with flat tops; and the outline is a little indented, below the battlements, forming a slight "waist." There are two windows above the door of each castle, below the battlements. The lions, in the other quarters of the shield, are darkly shaded; they do not touch the outline anywhere, and their mouths are shut. The ornament at the base of the collar of the Golden Fleece, over the O of FRANCO, is like a toy spaniel, slightly constricted about the waist, with the feet hanging down. The shadow behind it touches the outline above the O.

Forged.

Lithographed, in pale green, on medium, very white wove paper. The second O of CORREOS is much taller than the letters each side of it. There seems to be a slight attempt at a serif to the tail of the C of C^s, but neither of the others has any serif to the tail. The letters of FRANCO are taller than those of CORREOS; and there is a line drawn from the left foot of the R, to the right foot of the N, joining the RAN together. The cross-bar of the A is *far* below the level of the central bar of the R; but it is only very slightly lower in the genuine. The z has a curly foot. The little S of C^s is exceedingly small, so that it is not twice as wide as the stop below it. The foot-stroke of the F of FRANCO is very long on the right side, but there is hardly any on the left side. The ends of the two labels are all rounded differently. Below the CORREOS-label, there is a short, horizontal line, beginning under the S, which joins the right side of the frame. The thin, inner vertical line of this right side of the frame is joined to this horizontal line, forming a rectangular corner round the floral ornament. The spread of the arms of the cross is 1 mm., instead of about $\frac{1}{3}$ mm., and it is quite $\frac{1}{4}$ mm. from the outline above it. The orb is rather over 1 mm. wide. The pearls on the crown are very difficult to make out: there seem to be three (placed crookedly, instead of in a vertical line) in the central arch; and four in all the other arches, except the right-hand one, which has five. There are about nineteen vertical lines behind the upper castle, as far as I can make out, and nineteen behind the lower castle, with no line missing in this latter quarter. The castles are of a very singular shape. Two of the turrets of the upper castle, and one of the lower castle, have pointed roofs, and each castle is strongly constricted in the middle, to a rectangular "waist." The upper castle has a window in the central turret, and three little dots above the door; the lower castle has two small windows in the "waist." The lions are very lightly shaded; their mouths are open, and the tail and hind foot of the upper lion appear to touch the outlines. The little flower, with leaves and stem, in the triangular compartment at the base of the shield (which is fairly distinct in the genuine) is merely an irregular blotch in this counterfeit. The hanging ornament of the Golden Fleece, above the O of FRANCO, is a distinct *pig*, shaded with vertical lines, and not touching the outline below it.

Genuine.—22.

POSTMARKS.

Forged.—Similar to 100.

Same Issue. 4 Cuartos, carmine.

Genuine.

Engraved as before, on thin, white or yellowish-white, thick bluish, or hick, white wove paper. All the lettering is of the same height, and

none of the letters touch each other anywhere. Each C of the inscriptions has a serif to the tail, exactly like that of the head. There is a stop after CORREOS. All the figures of 1854 are of the same height. If the white, vertical line, down the right side of the stamp, were prolonged upwards, it would entirely cover over, and hide, the stop after 1854. The top of the A of FRANCO is cut off square. The stop after C^s is not under the little s, but altogether to the right of it. Both ends of the FRANCO-label are rounded, and the white line down the left side of the stamp does not touch the lower label: if prolonged upwards, it would graze the back of the C of CORREOS. The top arm of the cross on the crown is somewhat wedge-shaped. There are only five pearls on the left arch of the crown; seven on the next arch; three on the central arch; seven on the next arch; and five on the right-hand arch. The four uppermost pearls on the arches with seven pearls are not dotted. There are, as before, sixteen vertical lines behind the upper castle in the shield, and sixteen behind the lower castle, with the same missing line on the left side. Both the lions are crowned. The ornament at the bottom of the collar of the Golden Fleece, above the O of FRANCO, is the same tightly tied-up spaniel as in the 2 cs. The curly outline of the shield, over the NC of FRANCO, touches the outline below it, just like the similar curl above the 4. The said 4 is crossed *very* low down. The floral ornaments in the spandrels do not touch the inner frame-lines anywhere.

Forged.

Lithographed, on medium, very white wove paper. The colour is slightly lighter than that of the genuine. There is no serif to the tail of any C in the inscriptions. (This is a very easy test.) The 5 of 1854 is much taller than the 8, and the stop after C^s is exactly under the little s. If the vertical, white line, at the right-hand edge of the stamp, were prolonged upwards, it would pass almost clear to the right of the stop after 1854. The A of FRANCO is not cut off square at the top. The left-hand end of the bottom label is quite square, instead of rounded. The vertical, white line at the left-hand end of the stamp joins this bottom label; and, if prolonged upwards, it would pass clear to the left of the C of CORREOS. The top arm of the cross on the crown is not wedge-shaped. There are seven pearls on the left arch of the crown, one of them being broken; four pearls on the next arch; three on the centre arch, like the genuine; three on the next arch; and about eight on the right-hand arch. All these pearls are dotted, except the bottom pearl in the central arch. There are sixteen vertical lines in the left top corner of the shield, like the genuine, but the last one to the left is joined, for most of the way, to the edge of the shield. There are only fourteen lines in the right lower corner of the shield. The lion in the left lower corner has no crown. The ornament at the bottom of the collar of the Golden Fleece is like a corded, Russian spaniel, and is not tied up in the middle. The curly ornament above the NC of FRANCO does not touch the line below it, and the ornament above the 4 hardly touches the line. The said 4 is crossed exactly in the centre. The floral ornament in the spandrel above C^s, just touches the corner of the inner frame.

POSTMARKS.

Genuine.—22.

Forged.—My single specimen is cancelled with a horizontal, black bar, in imitation of the "barred" remainders.

Same Issue. 6 Cuartos, carmine.
Genuine.

Engraved, as before, on thin white, thick bluish, or thick, white wove paper. The tests for the 4 cuartos will serve for this.

Forged.

This is no longer in my possession, so I transcribe the description from the second edition of this work. Lithographed, on rather thin, very white wove paper. There is no serif to the tail of the C of CORREOS, and the word is spaced C ORRE OS. The letters RE touch at the bottom, and there is no stop after the word. The crown is very poor; the lower part of the right side looks as though a piece had been gnawed out of it. The pearls on the arches, counting from the left, are respectively 6, 6, 2, 6, 7. The dark line which divides the upper part of the shield into two parts, if prolonged upwards, would cut through the left side of the central arch of the crown, and pass clear to the left of the cross on the top of it. The white line down the left side of the stamp, if prolonged upwards, would pass quite clear to the left of the C of CORREOS; and the similar white line down the right side of the stamp, if prolonged upwards, would not touch the stop after 1854, which is exceedingly small, and touches the 4. The lions in the shield are not crowned, and neither of them is provided with an eye. The windows of the castles are circular dots, so small that the two put together would not equal the size of the door. The door is tall and thin, and comes up very close to the windows. The Golden Fleece is not like any animal; the legs are not visible, and part of the fleece seems to rest upon the outline of the label below it. The end of the scroll-work, to the left of the fleece, is a long way from it, and is bent into a plain hook; the end at the other side of the fleece almost touches it, and is bent into a complete ring. In the genuine, both are at equal distances from the fleece. The white line down the left side of the stamp touches the white bottom label.

POSTMARKS.

Genuine.—22.

Forged.—I think this was 100, but I am not quite sure.

Same Issue. 1 Real, indigo, light blue.

Genuine.

Engraved, as before, on thin, white paper (indigo), and on thick, bluish paper (light blue). The tests are the same as in the 4 cuartos, except for the alteration in value.

Forged.

Lithographed, on rather thin, very white wove paper. The O of FRANCO leans over to the left, and is not centrally under the poodle-shaped object, but too much to the right. The rest of the tests are the same as for the forged 4 cuartos.

POSTMARKS.

Genuine.—22.

Forged.—My only specimen has two horizontal bars, like some of the genuine remainders.

Same Issue. 2 Reales, vermilion.

Genuine.

Engraved, as before, on thin white, or on thick, bluish wove paper. The letters of CERT are level, and equidistant from the top and bottom

outlines of the label; the C having a serif at the tail like that of the head. The little O of DO is to the right of the centre of the Golden Fleece, and the stop is nearly centrally under the two letters, but slightly nearer to the D. The stop under the S of R^s is just a shade to the left of the centre of the S. There is no missing vertical line behind the lower castle on the shield, so that there are seventeen of them. The curls at the bottom of the shield, above the T and 2, of CERT^{DO} 2 R^s, rest on the top of the label. The rest of the tests are the same as in the 4 cuartos.

First Forgery.

Lithographed, in very orange-vermilion, on rather thin, very white wove paper. There is no serif to the tail of the C of CORREOS or of CERT^{DO}; the letters RE of CORREOS are joined together at the base; the word is spaced C O R R E O S, and there is no stop after it. The 1 of 1854 has hardly any sign of a serif to its head; the top edge of the flag of the 5 is parallel with the outline above it, and it extends to the right for the full width of the numeral. In the genuine, the flag has a slightly concave upper outline, it is shorter than the width of the numeral, and ends in a sharp point. There is no stop after the 4, but there is a knob, or thickening, at the right-hand end of the very long foot-stroke, which may be intended for it. The letters of CERT increase in size, from the C to the T; the C being high above the outline below it, and the T nearly touching the outline. This is a very easy test. The little D of DO leans over to the left; the stop is under the end of the D, and almost resting on the bottom label; while the O is almost centrally under the Golden Fleece. The stop under the little S of R^s is just a shade to the *right* of the centre of the S. If the white line down the left-hand edge of the stamp were prolonged upwards, it would pass quite clear to the left of the C of CORREOS. There are six pearls on the left arch of the crown; six on the next; three on the central arch; seven on the next; and seven on the right arch. Only three or four of them are dotted. There are sixteen vertical lines behind each of the castles, and only eight horizontal lines in the little, oval central shield of the Bourbons, though, in the genuine, there are ten lines in the said shield. The head of the upper lion is hidden by the cancellation in my specimen, but the lower lion has, apparently, two tiny ears on the top of his head, by way of crown. There is not much sign of a central constriction in the Golden Fleece, and the hind legs are thick and clumsy. The two curls at the bottom of the shield, each side of the Golden Fleece, do not reach to the edge of the label below them.

Second Forgery.

Lithographed, in a sort of rose-pink, or lilac-rose, on medium, white wove paper. In the date, the figures 54 are taller than the 18, the flag of the 5 is parallel with the outline of the label, and there is no stop after the 4. The stop under the DO is central; the stop under the S is also central; and the foot of the 2 is curly, instead of straight. If the white line at the left-hand edge of the stamp were prolonged upwards, it would pass considerably to the left of the C of CORREOS. There are seven pearls on the left arch of the crown; about seven on the next arch; none at all on the central arch; six on the next; and seven or eight on the right arch. None of these pearls are dotted. There are about eighteen vertical lines behind the upper castle; seventeen behind the lower one; and eight horizontal ones in the Bourbon shield of pretence. The crown of the upper lion touches the outline above it, and the lower lion has a beak, rather like a bird of prey. The Golden Fleece ornament is partly covered by the postmark, but it appears to be not much more

than a white blotch, and it is high above the top of the lower label, instead of almost resting upon it. The two curls at the bottom of the shield are shapeless, white blotches, and they do not touch the edge of the label below them.

POSTMARKS.

Genuine.—22.

First Forgery.—This is cancelled with a horizontal, black bar.

Second Forgery.—Similar to 100.

Same Issue. 5 Reales, green.

Genuine.

Engraved as before, on thin, white wove paper. In the lower inscription, the 5 is quite upright; its flag is concave, ending in a sharp point, and extending to almost the full width of the body. If the neck were prolonged downwards, it would just graze the left edge of the ball of the tail. The other tests are the same as in the 2 reales.

First Forgery.

Lithographed, on rather thin, very white wove paper. The flag of the 5 is exceedingly short and blunt; and, if the extremely short neck were prolonged downwards, it would about cut into the centre of the ball of the tail. The other tests are the same as for the first forgery of the 2 reales.

Second Forgery.

Lithographed, on medium white wove paper. There is one marked peculiarity about this counterfeit, which will serve for its instant detection. In the genuine, and all other forgeries of this value, the large, ornamental shield, in which the coat of arms is placed, is of solid colour, behind the collar or chain of the Golden Fleece. In this forgery, the sides of this shield are filled up with *vertical white lines*, so that there are three white lines, each side, between the collar and the side of the coat of arms, and two similar lines each side, between the collar and the side of the ornamental shield. Further description is unnecessary.

Third Forgery.

Lithographed, on medium, very yellowish-white wove paper. The ball of the 5 of 1854 projects too much, so that, if the neck were prolonged downwards, it would cut the right-hand edge of the ball, instead of cutting through its very centre. The stop after 1854 is very small, and far to the left of the top of the white line down the edge of the stamp. In the bottom inscription, the stops are centrally under the DO and the S; the 5 is large, with a very short flag, and a long neck. The R of RS has a long, hooked tail, which curls up towards the S, but there is no hook in the genuine. The pearls on the arches of the crown, counting from the left, are 5, 7, 3, 6, 5, and nearly all of them are dotted. There are fifteen vertical lines behind each of the castles. The ornament of the Golden Fleece is fairly like the genuine, but the head is long and pointed, instead of almost round. All these tests will also be found in the second forgery, and the two appear to be alike, except for the white lines each side of the shield, which are reversed in this counterfeit.

POSTMARKS.

Genuine.—22.

First Forgery.—Two black bars.

Second Forgery.—22.

Third Forgery.—23.

Same Issue. 6 Reales, blue.**Genuine.**

Engraved, as before, on thin, white wove paper. The R of R^s is usually equidistant between the top and bottom outlines of the containing-label, but I have a specimen in which it is just a shade too near the bottom outline. The other tests are as before.

Forged.

Lithographed, on thin, rather yellowish-white wove paper. Most of the letters of CORREOS are too near the top of the label, and the serif to the tail of the C is decidedly smaller than that of the head. The flag of the 5 of 1854 is too short and too blunt, and the 4 is too far from it. There is a large, shapeless stop after the 4, and the cross-bar of the numeral runs into the stop. If the white line down the right-hand edge of the stamp were prolonged upwards, it would touch the stop, but not by any means hide it. The similar line, down the left side of the stamp, if prolonged upwards, would hardly graze the end of the CORREOS-label. The cross on the crown is extremely small, and a long way below the top label. The pearls on the arches, counting from the left, are 5, 7, 3, 8, 5; they are all very badly drawn and shapeless, and the lower ones in the right-hand arch are not dotted. The vertical lines behind the castles are covered by the postmark in my specimen; I think there are fifteen behind the lower castle. The upper lion has a white patch on his shoulder, which does not appear in the genuine. The ornament of the Golden Fleece seems to have its head at the right-hand end, instead of the left. The curls at the bottom of the shield are some distance from the outline below them. In the bottom label, the D and O lean over to the right, the R of R^s is *much* too near the top outline of the label, and the stop under the S is central.

POSTMARKS.

Genuine.—22.

Forged.—22.

Issue of 1855-7. 2 c., 4 c., 1 rl., 2 rs.

I take these together, as the issues only differ in the paper. The 1855 paper was bluish, and watermarked with loops, as illustrated

above; the 1856 paper was white, watermarked with a lattice-work; and the 1856 issue may be found on thin white wove, or thick white wove, both without any watermark. There is a 12 cuartos, orange, of this type, but it was stillborn, and the copies are usually found barred, like the other remainders.

Genuine.

Engraved in *épargne*, paper as above. There are seventy-three pearls round the head, but, unfortunately, my counterfeits all have the same.

In front of the Queen's neck, there are thirteen short, horizontal lines of shading, up to the point where the slope under the chin joins the upright profile of the neck. There are other lines above these, but they slant, and I have not taken them into account. At the back of the neck, below the ribbon, there are six slanting lines, practically filling up the whole of the triangular space, below the ribbon. Above the ribbon, between it and the roots of the hair, there are thirteen slanting lines, at the back of the neck. The cut-off base of the neck is generally almost solid, but where any lines are visible, it will be seen that they are nearly vertical, sloping slightly down from right to left. There are eight horizontal rows of large, white dots in the left upper spandrel; the same number in the left lower spandrel; and seven rows in each of the right-hand spandrels; the rows decreasing to a single dot. There are two distinct olive-berries in the wreath, above the first bunch of four leaves; and the leaves are in three bunches or sets—4, 3, 3. The three in the top row, over the forehead, are as distinct as the rest. The eye has a distinct pupil. There are four oblique lines of shading on the nose, near the eye, and there is a strong, oblique line at the corner of the mouth. The front peak of the bottom of the neck is *very* sharp. The ornament in each corner of the stamp is a cluster of five white circles, round a solid, central one. The C of CORREOS and the C of CUARTOS have their heads and tails both alike, and the word REAL or REALES is not blotched.

Forged.

Poorly lithographed, on medium, thick, very white (2 cuartos), grey-white (4 cuartos), blue-faced white (1 real), white, or toned (2 reales) wove paper, no watermark. There are seventy-three pearls round the head, as in the genuine. The front of the neck shows from seven to ten horizontal lines, up to where the chin joins it. At the back of the neck, in the triangular space, below the ribbon, there are only four oblique lines, and these are often altogether missing. Above the ribbon, specimens sometimes show the thirteen lines at the back of the neck; but they are often too faint and irregular to be counted. The cut-off base of the neck is shaded by oblique lines, running down from left to right. (This is a fairly easy test.) There are only six horizontal rows of dots in the left-hand lower spandrel; and the rows are irregular in most of the corners. One of the olive-berries can be seen in the wreath, but it is only an irregular, white spot. In most specimens, especially the 2 reales, the three front leaves of the wreath are very indistinct. The eye is blind, without any pupil. There is a blotch on the side of the nose, near the hair, but no lines. The front peak of the bottom of the neck is fairly blunt. The ornaments in the corners of the stamp are usually mere blotches. There is no serif to the tail of the C of CORREOS, or of CUARTOS, and the bottom lettering of the 1 and 2 reales is thick and blotched.

POSTMARKS.

Genuine.—The early ones always seem to bear 22; but on the later ones may be found 1, 9, 29, 100.

Forged.—10.

Westoby enumerates one forgery of the 2 cuartos, four of the 4 cuartos, one of the 1 real, and two of the 2 reales, all used postally. He does not describe them, and I have never seen them, so can give no details.

Issue of 1860-1. 2, 4, 12, 19 Cuartos, 1, 2 Reales.

Genuine.

Engraved in *épargne*, on stout, wove paper, tinted all through. There are five oblique lines immediately to the left of CORREOS, besides a sixth, which is partly hidden by a fold of the scroll. To the left of these again, on the next fold, there are six similar lines. After the S there are seven lines, the sixth partly, and the seventh almost entirely hidden by the bend in the scroll. This next bend to the right contains six similar lines. The scroll does not touch the central circle or the frame either side. The frame itself is composed of pearls, each with a little, dark crescent for shading.

There are forty-three pearls down the right side, forty-four down the left side, thirty-six along the top, and thirty-six along the bottom, reckoning the corner-pearls in each case. The background, outside the central ring, contains sixty-seven horizontal lines, counting down the right-hand edge. There is a dark line down the centre of the anchor in the right lower corner, and a similar line down the centre of the caduceus, or winged rod, in the opposite corner; and the ball at the end of the said rod has a crescent-shaped line in its centre. There are seven feathers in each of the wings on the rod. The ornamental ring round the portrait is composed of three parallel lines—two plain and one dotted. The dotted line is the inside one, along the right side of the ring, but is the middle one on the left side. There is a stop after the numeral in all the values. CUARTOS, in the lower values, is in ordinary type, and the tail of the C has a serif, the same as the head. None of the letters touch each other.

First Forgery.

Of this I have all but the 2 reales. Lithographed, on medium, very slightly tinted wove paper. There are five lines to the left of the C of CORREOS, with the ends of two others showing from under the fold of the scroll. In the bend to left of this, there are six lines, the outer one being imperfect or broken. After the S, there are four lines, with the ends of two others showing under the fold; and in the bend to right of this, there are six lines, two of them being shorter than the others. The inner fork of the right-hand end of this scroll touches the ring round the portrait, and the outer fork of the left-hand end goes very near to the frame. There are twenty-nine pearls down the right-hand edge of the stamp, twenty-seven down the left-hand edge, twenty-seven along the top, and thirty-one along the bottom, counting the corner-pearls in each case. There are only fifty-two horizontal lines in the background, counting down the right-hand edge as before. The shaft of the anchor has no line down its centre, and there is also no line down the centre of the caduceus, and no shading in the ball at the end of it. There seem to be only five feathers in each of the wings on the rod. The dotted ring round the head, is between the two plain rings, both right and left. In the 2 cuartos, there is no stop after the 2, and the stop after the word of value is almost touching the side of the frame, instead of being $\frac{3}{4}$ mm. from it. There is no serif to the tail of the C, and the A and R touch at the bottom. In the 4 cuartos, the tail of the C has no serif, the A and R touch at the bottom, and there is no stop after the word. In the genuine 19 cuartos, the letters of CUARTOS are in tall, thin block type. In this forgery, they are in fat ordinary letters. The UAR all touch at the bottom, and the OS are smaller than the rest of the letters. In the 1 real, there is no stop after the 1, and the stop after the L is very small, though

the stop in the genuine is almost $\frac{1}{2}$ mm. wide. There is one thing which should prove an easy test for this forgery. In the genuine, the bottom curl of the chignon, which curves outwards from the back of the tiara, is shaded, and looks quite natural, as part of the hair. In all the values of this forgery, the curl is a white hook, unshaded, which looks as if it had nothing to do with the hair, appearing more like a flaw.

Second Forgery.

Lithographed, on thinnish, tinted wove paper. I have only the 12 cuartos and the 2 reales. There are four lines to left of CORREOS, besides two, partly hidden by the fold of the scroll, and seven lines in the bend to the left of this. There are six lines after CORREOS, and seven in the bend to right of it. The corner of this last bend just touches the frame. There are forty-three pearls down the right-hand edge of the stamp, forty-two down the left-hand edge, thirty-six along the top, and thirty-six along the bottom, counting the corner-pearls in each case. There are about sixty horizontal lines in the background. There is a line along the middle of the stem of the anchor in this counterfeit, and another along the stem of the caduceus; while the ball at the end of the rod has a crescent-shaped line of shading in it. The anchor just touches the side of the frame, and the ball of the caduceus is jammed right into the corner of the frame; but in the genuine, the anchor does not touch the side of the frame, and the caduceus does not go into the corner. There seem to be seven feathers in the upper wing, and six in the lower one. In the 12 cuartos, the word CUARTOS is in thick block type. In the 2 reales the R and E touch at the bottom.

POSTMARKS.

Genuine.—1, 9, 29.

First Forgery.—1, 22, 29.

Second Forgery.—9.

Westoby says that four forgeries of the 4 cuartos, two of the 2 reales, and one each of the 1 real and 12 cuartos have been found, all used postally. He does not describe them, so I cannot say whether my two forgeries are some of those of which he speaks; but the postmark 9 on my second forgeries of the 12 cuartos and 2 reales certainly looks genuine.

Issue of 1862. 2, 4, 12, 19 Cuartos; 1, 2 Reales.

I have seen no forgeries of this issue, but Westoby says that a forgery of the 4 cuartos was discovered, which hurried on the issue of the 1864 type, now to be described.

Issue of 1864. 2 Cuartos, blue on lilac.

With the exception of the different values, all the stamps of this issue are the same in design; but I am obliged to take them separately, as the (exceedingly bad) forgeries all seem to be separately drawn.

Genuine.

Engraved in *épargne*, on thick, tinted wove paper. I shall not trouble the reader with any elaborate description, as the forgery is exceedingly

poor. There are 115 links in the white chain-pattern round the head, and these links are perfectly distinct. The scroll is bent into a circle, in each corner of the stamp; and each circle contains a three-pointed star, and four balls or berries on stalks. The upper portion of each of the upper circles is shaded with curved lines, and the lower portion of each of the lower circles is similarly shaded. There are two rows of pearls or berries on stalks, in the zigzag pattern of the side-scrolls; and the pearls or berries do not, in any case, touch the outline of the containing-scroll. The queen's chin comes well forward, to about the level of the centre of the nostril, and the nose is blunt. The line under TOS of CTOS is thin, and not broken. There is no stop after 1864.

Forged.

Very badly lithographed, on thick, *rose* wove paper. It is absolutely impossible to count the links in the chain round the portrait; it is broken in many places, and a solid, uncoloured line in others. The corner-circles, containing the stars, etc., are not shaded. Many of the pearls or stalked berries in the side-scrolls touch the outline of the containing-label. The queen has a most absurdly retreating chin, which does not come forward further than the level of the pupil of the eye. The nose is sharp. The line under the TOS of CTOS is thick and broken, and there is a stop after 1864.

Same Issue. 4 Cuartos, carmine on pale red.

Genuine.

Engraved as before, paper as above. Except for the value, the design is exactly the same as in the 2 c. There are nine pearls on stalks on the coronet, each shaded by a little coloured crescent. The 4 of the value and the 4 of the date are both closed figures, and the line of CTOS extends under the whole of TOS.

Forged.

Very badly lithographed, on orange-faced, white wove paper, rather thinner than the genuine. The links of the chain are, as in the forged 2 c., utterly uncountable. The corner-circles are not shaded, and some of the berries both in them, and in the zigzag ornaments of the side-scrolls, touch the outline near them. The sharp nose and retreating chin are the same as in the forged 2 c. The pearls on the coronet are represented by eight large, misty-looking balls, of solid colour. Each 4 is open at the top, and the short line extends only under the TO of TOS.

Same Issue. 12 Cuartos, green, on pale rose.

Genuine.

Engraving as in the 2 c.; paper as above. The lower inscription is clear and distinct, and none of the letters touch each other, neither does the line under TOS touch the C. The other tests are the same as before.

Forged.

Very badly lithographed, on medium, reddish, buff-faced, white wove paper. The lower inscription is excessively blotchy. The figures 12 touch each other; the head and tail of the C touch each other; and the line under TOS is joined to the C. There is a large stop after 1864. The chain-pattern is, if anything, worse than in the counterfeits already described. Some of the pearls or berries, especially on the right side,

touch the outline of the containing-scroll. There are eight pearls and a blotch on the coronet; they have no shading in them. The nose is aquiline, with a sharp point. The outer outline of the stamp is broken down the left side.

Same Issue. 19 Cuartos, lilac on lilac.

Genuine.

Engraved as before; paper as above. The 1 of 19 has a long serif to the head, and a wide foot-stroke. The stop after the 9 is midway between the 9 and the C. The small letters TOS are the shape of ordinary Roman capitals, and the line under them extends under all the letters. There is, as in all the other values, a vertical line with a dot in it (|.) separating CTOS from 1864. The other tests are as before.

Forged.

Poorly lithographed, on white wove paper, the front *very* slightly tinted. The 1 of 19 has hardly any serif, and no foot-stroke; the stop is nearer to the C than to the 9. TOS is in block letters, and the line only extends from under the T to partly under the O. There is no vertical ornament separating CTOS and 1864, and the 1 of 1864 is *far* too tall, and tapers to a point at the top. I can only make out seven dark pearls, of solid colour, on the coronet. The other tests are the same as in the forged 2 cuartos.

Same Issue. 1 Real, brown or green.

Genuine.

Engraved as before; paper as above. In this stamp the ornament dividing value and date is horizontal (—) instead of vertical, and there is a stop after 1, R^t and 1864. The 1 has a long serif, and a wide foot-stroke. The rest of the design is the same as in the genuine 2 cuartos.

Forged.

Poorly lithographed, on green-faced, white wove paper. The lower inscription is very much hidden by the postmark in my specimen; but the 1 seems to have hardly any serif, and no foot-stroke. I cannot see whether there is a stop under the little L of R^t. There are two horizontal lines separating the value and date (—), and no stop after 1864. There seem to be eight large, dark pearls on the coronet; some of them of solid colour. The nose is almost a Wellingtonian beak, and very sharp; the chin is very pointed, instead of rounded, and comes fairly well forwards. The rest of the tests are as in the forged 2 cuartos.

POSTMARKS.

Genuine.—9; 29; 46, with the oval either upright or transverse.

2 cuartos, forged.—33.

4 c., forged.—Part of either 1 or 29.

12 c., forged.—1, very large.

19 c., forged.—1.

1 real, forged.—10.

Issue of 1866. 2, 4, 12, 19 Cuartos, 10, 20 Cent.

Genuine.

Engraved in *épargne*, on thinnish, white wove paper, perforated 14. There are sixty-five horizontal lines of shading in the central medallion,

counting down the left side. The top of the front *fleur-de-lys* in the coronet touches the fourth line from the top, and the lowest part of the front of the neck rests on the fourth line from the bottom. The bottom of the cut-off base of the neck is of solid colour, without any lines. The space between the eyebrow and the upper eyelid is lightly shaded with fine horizontal lines. The crowns over the shields are both alike, and nicely made; the upper portion of each rests naturally upon its circlet or base. The lion in the right-hand shield is striding boldly along, with his two front paws raised. He has a crown of two points on his head, and his tail just touches his back, but not the edge of the shield. Each of the turrets of the castle in the other shield has a cross-bar at the top, so that each looks like a block-letter **T**. Along the centre of the white line under **CORREOS**, there are ten coloured dashes. The profile of the bottom of the queen's nose is an upward slant; and her chignon consists of five coils of plaits. The coil nearest to the head shows five white patches; the next coil, four white patches, with a tiny patch or dot at the top; the third coil has four patches; the fourth coil, four patches, the lowest patch being sometimes small; the last coil has one patch and a dot. There are twenty-five lines of shading and a dot, from the cheek to the bottom of the throat, and twenty-five also, beginning at the same place, but counting to the bottom of the back of the neck.

First Forgery.

Of this I have the 4, 12, and 19 cuartos. Coarsely lithographed, on thin, white, or yellowish-white wove paper, unperforated. There are only forty-seven horizontal lines in the central medallion, counting on the left side. The top of the front ornament on the coronet touches the third line from the top, and the lowest part of the base of the neck touches the fourth from the bottom. The cut-off part of the base of the neck is shaded with oblique lines, running down from left to right. The crowns above the shields do not rest upon their circlets or bases at all, but show a wide space between. The dark marks in the arches of the right-hand crown look something like *sw.*, and they are quite different from the markings in the other crown. The lion is an impossible sort of beast, with three front legs. His tail touches the side of the shield, and does not touch his back. The cross-bars on the turrets of the castle are generally only very slightly indicated. In the genuine, there is a horizontal line across the castle, rather above the middle of the door. In this forgery, the said line is at the bottom of the door. There are only eight coloured dashes in the white line, below **CORREOS**. The profile of the upper lip is not hollowed, like the genuine, but is a straight line, sloping down from left to right. The coil of hair, in the chignon, nearest to the head, has five white patches; the second coil, four patches; the third, three large patches, with one small one at the top, and either one or two at the bottom; the fourth, four patches, or four and a dot; the last, three patches. There are seventeen lines of shading from the side of the cheek, down the front of the throat, and seventeen also, counted from the same place, down the back of the neck.

Second Forgery.

Of this I have only the 10 c. de escudo. Lithographed, on thinnish, soft, yellowish-white wove paper, perforated 12, or pin-perforated about 13. There are either sixty-three or sixty-four lines in the central medallion, and they are decidedly faint. The highest point of the

ornament in the front of the coronet touches either the second or third line from the top (I am not sure which, as the postmark covers it in my specimen); and the lowest part of the neck touches, and rather encroaches over, the fifth line from the bottom. Part of the cut-off base of the neck is shaded with perpendicular lines. The crowns are not quite alike, and the left one is not so firmly attached to its base as the right one is. The lion's hind leg is a straight stump; the fore paws nearly touch the outline of the shield; his crown is a little knob, and his tail is very badly drawn. The left turret of the castle, instead of the central one, is the tallest; all the turrets seem to have lumps or knobs on them, and there is a horizontal stroke above the top of the central turret, touching the top of the shield. The dashes or hyphens under CORREOS are merged into one continuous line for most of the way. The patches of white on the coils of the chignon are: Coil nearest to the head, five patches; second coil, three large ones and a small one; third coil, three; fourth coil, three. The fifth coil is only a dark lump, containing two specks of white. There are no horizontal lines of shading between the eyebrow and the eyelid. The lines of shading on the cheek and neck are covered by the postmark, but I do not think there are anything like twenty-five of them.

Third Forgery.

I have only the 12 cuartos, and it is a very good imitation. Nicely lithographed, on medium, white wove paper, very well perforated 15. There are sixty-three lines in the central medallion, instead of sixty-five. The top of the front ornament on the coronet touches the fifth line from the top; and the base of the neck touches the fifth line from the bottom. One of the crowns is covered by the postmark, so I cannot say whether they are alike. The lion has five legs, the two hind ones very close together; his tail does not touch his back. The turrets on the castle have no cross-strokes on them, and the centre one touches the top of the shield. As far as I can make out through the postmark, there are only nine dashes below CORREOS. The profile of the bottom of the nose is almost horizontal, and the nose is not at all a pug. The white patches on the coils of the chignon are:—Coil nearest to the head, five patches and a dot; second coil, six patches; third coil, five patches. The last two coils are partly covered by the postmark, but there seems to be very little white upon them. The lines on the throat and neck are the same as the genuine.

Fourth Forgery.

This is the best of the lot. I have only the 12 cuartos. Lithographed(?), on medium, white wove paper, perforated 14. There are only sixty-four lines in the central medallion; the highest part of the coronet is the least shade above the fourth line from the top, and the bottom line of the neck is a shade below the fourth line from the bottom. I cannot make out any horizontal lines of shading, in the space between the eyebrow and eyelid. The inner coil of the chignon shows four white patches, with an indistinct one at the bottom; the second coil shows four, with a white dot at the top; the third, two long ones, with a smaller one at the top and a dot at the bottom; the fourth, three, with a dot at the bottom, the fifth, one. Beyond these differences, this is an excellent copy.

POSTMARKS.

Genuine.—29, 46, etc.

First Forgery.—23.

Second Forgery.—1, large.

Third Forgery.—What appears to be part of 46.

Fourth Forgery.—1.

Issue of 1867. 20 c. de Escudo, lilac.**Genuine.**

This set, of course, includes other values, but I only have the 20 c., type of the annexed illustration. Lithographed, on thickish, white wove

paper, perforated 14. The front of the base of the queen's neck rests on the eighth line from the bottom. There are about six jewels on the circlet, at the base of the coronet. Two locks of hair hang down from the chignon. There are twenty-three lines of shading from above the ear to the front of the throat; and twenty from the same place to the bottom of the back of the neck. The expression of the face is rather smiling. There are five lines of shading on the back of the forehead, over the eyebrow. The front peak of the bottom of the neck is very pointed. The outer outline of the lettered oval touches the inner outline of the left side-frame, near the C of CORREOS; but does not touch the outline of the side-frame near the last A of ESPAÑA.

Forged.

Lithographed, on medium, white wove paper, perforated 15 nearly. The front of the base of the queen's neck rests on the seventh line from the bottom. The band at the base of the coronet has no jewels on it; nothing but short lines. There are three locks of hair hanging down from the chignon. There are twenty-four lines of shading from in front of the ear, to the front of the throat; and I can only see eighteen to the back of the neck, counting from the same place; but there may be more, as my specimen is damaged. The expression of the face is extremely discontented, and this alone would serve as a good test. There are only four lines on the forehead above the eyebrow. The front peak of the bottom of the neck is fairly rounded. The outer outline of the lettered oval does not quite touch the outline of the side-frame near the C of CORREOS, but it does touch on the other side, near the last A of ESPAÑA.

Genuine.—29, etc.

POSTMARKS.

Forged.—A few blotches, apparently part of 46.

Issue of 1867. 5 Milésimas, green.**Genuine.**

Engraved in *épargne*, on white wove paper, perforated 14. The head of the large central 5 touches the shading inside the ring under the RA, and also under the U of FRANQUEO. There are eight horizontal lines of the background to be seen in the hollow, circular middle of the 5. The inner outline that runs all round the 5 is not broken anywhere. The front corner of the tail of the 5 just touches the fourth line of the eight that are inside the hollow of the 5. The outer ring, surrounding the 5, does not touch the frame either side. The top of the V in the left upper corner is $1\frac{1}{2}$ mm. wide, measured from outside to outside of the head-strokes, and the thickness of the left-hand limb is about $\frac{1}{2}$ mm. The same measurements will do for the similar letters in the other three corners. The cross-bar of the A of FRANQUEO joins the letter both sides, and the Q might be imitated by bending a flexible cane into a circle, and letting the ends cross a little, the right-hand one considerably longer than the left. The M of MILS is very narrow, being only a shade over 1 mm. wide.

Forged.

Lithographed, in *lavender-blue*, on very thick, white wove paper. The perforation (about 8) is printed in, and my specimen has had this cut out with scissors. The back of the head of the large central 5 does not touch the shading, inside the circle. There are nine horizontal lines inside the hollow of the 5, and the *inside* corner of the tail touches the sixth of these lines. In the genuine, the inside corner is lower than the outside corner, instead of higher. The coloured line running round the inside of the 5 is broken at the right-hand corner of the head, in the middle of the rounded back, and the inner corner of the tail. The outline of the central circle touches the right-hand frame, by the s of ESCUDO. The Roman numerals in the corners of the stamp are very much thinner and wider than the genuine; the one in the left top corner, for instance, is over 2 mm. wide at the top, and its thick limb is only about $\frac{1}{2}$ mm. wide. The cross-bar of the A of FRANQUEO is a very short dash, which does not touch the letter either side; the Q is simply an O with a nearly straight, horizontal line drawn underneath it, and touching it. The M of MILS is fully $\frac{1}{2}$ mm. wide.

POSTMARKS.

Genuine.—29, etc.

Forged.—Uncancelled.

Issue of 1874. 10 Pesetas, black.

(*Type of the annexed illustration.*)

I only know of a forgery of the above value, but there was a forgery of the 10 c., which, as my readers are probably aware, caused the suppression of that value, and the issue of a 10 c. with arms. I have never come across the said forgery, which, like so many other Spanish counterfeits, was made to defraud the Government.

Genuine.

Engraved in *épargne*, on medium, white wove paper, perforated 14. There are eight vertical lines on the side of the chair, to left of the blade of the sword, and thirteen to right of the sword. The base of the chair to right of the very point of the sword is shaded by thirteen very short, vertical lines. The last three to the left are much shorter than the rest, and do not touch the outline below them, but all thirteen are joined to the outline *above* them. The serif to the head of the 7 of 1874 hangs down quite vertically, and reaches as low as the level of the central division of the 8. Where the profile of the back of the neck joins the dress, it hardly bends in at all. In the s of PESETAS, the back of the upper half, and the front of the lower half (places that are rounded in an ordinary s) are flattened into straight lines. The tongue of the E of ESPAÑA joins the vertical stroke. There are many little differences between the genuine and the forged, in the number of lines of shading in various parts of the drapery, but it is very difficult to describe them.

**Forged.**

Engraved in *épargne*, on white wove paper, slightly thinner than the genuine, perforated 14. There are seven clear, vertical lines on the chair, to left of the blade of the sword; and, to the right of these lines, there are three vertical links of chain, not shown in the genuine. The shading

on the base of the chair, to right of the very point of the sword, shows thirteen short, vertical lines, like the genuine; but none of these lines actually touch the outline above them, and the shortest one does not touch the sword, though it does in the genuine. The serif to the head of the 7 slopes slightly down to the left, and it does not hang down to the level of the central division of the 8. The profile-line of the back of the neck bends sharply inwards, where it joins the dress, and thus gives the impression that the cord (with brooch) on the shoulder is fastened so tightly, that it cuts into the flesh. The S of PESETAS is rounded, front and back, in the usual way. The tongue of the E of ESPAÑA does not touch the vertical stroke.

POSTMARKS.

Genuine.—35.

Forged.—29. Also uncanceled.

STAMPS FOR THE USE OF THE ARMY IN MELILLA, 1874.

These gaudy labels are, I believe, entirely bogus.

OFFICIAL STAMPS.

Issue of 1854. $\frac{1}{2}$, 1, 2, 4 Onzas, 1 Libra.

The denominations expressed on these stamps are, of course, not values, but the *weights* which they would frank.

Genuine.

Engraved in *épargne*, in black, on fairly stout, coloured wove paper. All the letters of the two inscriptions are level with each other. The tail of the C of CORREOS has a serif, exactly like the head, and there is a large stop after this word, decidedly nearer to the S, than to the foot-stroke of the following 1. In the 1 onza, there is a nicely-made, six-pointed star before and after UNA ONZA. The $\frac{1}{2}$ and 4 onzas have a stop after the weight, but the 1 libra has not. The bottom corners of the lower label are nicely rounded, like the top corner of the upper label. The uncoloured, vertical line, down the right side of the stamp, between the outer and inner frame-lines, if prolonged upwards, would very nearly, if not quite, obliterate the stop after 1854. (This is a very easy test, as all my forgeries fail here.) The cross on the crown does not touch the outline above it. The pearls on the arches of the crown, counting from the left, are: 5, 7, 3, 7, 5, and they all have dots in them, except the four upper ones of the two arches each side of the central one. There are sixteen vertical lines behind the upper castle, and seventeen behind the lower one. Both lions are crowned, and the right front paw of the upper lion does not reach out any further than the left paw. The little Bourbon shield is a true oval, and contains eight horizontal lines. The ornament of the Golden Fleece, below the shield, is the same tied-up spaniel as in the postals of this date; and its feet rest on the outline below it.

First Forgery.

Lithographed, on coloured wove paper, thinner than the genuine. The C of CORREOS is too low, and it has no serif to its tail; while the word increases slightly in size to the middle, and then diminishes to the end. There is no stop after CORREOS, which is an easy test for this forgery. The $\frac{1}{2}$ onza has a stop after the weight; the 1 onza has a seven-pointed star before UNA, and an eight-pointed star after ONZA; the 4 onzas has no stop after the weight; the 1 libra has a stop after the weight. The

bottom corners of the lower label are nearly square. If the uncoloured, vertical line down the right side of the stamp were prolonged upwards, it would pass almost clear to the right of the stop after 1854. The pearls on the arches of the crown, counting from the left, are : 7, 5, 3, 4, 8, and they are *all* dotted. There are sixteen vertical lines behind the upper castle, but the last one to the left is jammed against the side of the frame, and broken in several places. Behind the lower castle, there are also sixteen lines, instead of seventeen ; and the right and left ones are broken, and very close to the sides of the shield. The lower lion has no crown ; and the upper one stretches out his right paw further than the left. The Bourbon shield is too pointed at the top and bottom, and generally shows nine or ten horizontal lines. The ornament to the Golden Fleece is the sort of corded, Russian spaniel (*not* tied up in the middle) already described in the forgery of the 4 cuartos of 1854. The cross-bar to the 4 is a simple, straight line, instead of turning up at the end.

Second Forgery.

Lithographed, on medium, and thick, coloured wove paper. The 1 libra is quite bogus ; as it is printed on mauve, and on violet paper, instead of blue. The letters RRE of CORREOS are all joined at the bottom. There is a stop after LIBRA. The ends of the bottom label are only slightly rounded. If the vertical line, down the right side of the stamp, were prolonged upwards, it would miss the stop after 1854 entirely, passing clear to the right of it. The cross on the crown is firmly joined to the outline above it. The pearls are the same as the genuine, in this forgery. There are only fifteen vertical lines behind the upper castle, and sixteen behind the lower one. Both lions are crowned, as in the genuine ; but the upper one has his right paw stretching decidedly further forward than the left one. There are ten horizontal lines in the little Bourbon shield. The ornament of the golden fleece below the shield is fairly like the genuine, but it has a tail at each end.

Third Forgery.

Of this I have only the 1 onza. Badly lithographed, on rather thin, very pale rose wove paper. The C of CORREOS has a sort of rounded knob at the head, and no knob at all at the tail ; the S is lower than the O before it, and there is no stop after the word. The bottom corners of the lower labels are only slightly rounded, or rather, truncated. If the vertical line, down the right side of the stamp, were prolonged upwards, it would only graze the right side of the stop after 1854. The cross on the crown touches the line above it, and it is exactly under the centre of the second O of CORREOS ; but in the genuine, the cross is under the right-hand edge of the O. The pearls on the arches are too badly done to be countable ; and the back of the crown rests upon the shield, though it does not touch it in the genuine. There are about thirteen vertical lines behind each of the castles. The upper lion has his head thrown far back ; he is exceedingly bow-legged, and the right paw stretches further forward than the left. The little Bourbon shield has no horizontal lines on it, and shows eyes, nose, and mouth, like a face, instead of the three *fleurs-de-lys* of the genuine. The ornament of the Golden Fleece is an absolutely formless blotch. It will be gathered from the above description, that this forgery is not at all dangerous.

POSTMARKS.

Genuine.—22.

First Forgery.—Uncancelled.

Second Forgery.—23.

Third Forgery.—Uncancelled.

Issue of 1855. $\frac{1}{2}$, 1, 2, 4 Onzas; 1 Libra.

Genuine.

Engraved in *épargne*, in black, on thin, and on thicker, coloured wove paper. The C of CORREO, and the C of OFICIAL both have a serif to the tail, the same as the head. The pearls on the crown are nicely made, and distinct; counting from the left, the numbers are: 5, 7, 3, 6, 5. The stop after OFICIAL is level with the join between two links, of the chain to left of it. Each link of the chain has a straight line in each of its sides. There are fifteen lines behind the upper castle, and about thirteen behind the lower one. Both lions are crowned; the crown of the upper lion touches the outline of the shield, and the crown of the lower lion touches the edge of the little central Bourbon shield. The right paw of the lower lion is stretched out further than the left one. There are fifteen horizontal lines in the Bourbon shield. The small triangular compartment, at the bottom of the big shield, contains what is said to be a pomegranate, for the province of Granada; but it looks like the seed-head of a poppy, with stem and two leaves. Readers will kindly remember this test, because all my forgeries have this compartment of the shield *quite blank*.

Forged.

Lithographed, in black, on medium to thick, coloured wove paper. The C of CORREO has hardly any knob to the head, and none at all to the tail; there is also no knob to the tail of the C of OFICIAL. The stop after this latter word is much below the level of the join between two links of the chain, and it looks like a comma more than a full-stop. Each link of the chain is formed simply by two outlines, without a line between the outlines. There are about thirteen vertical lines behind the upper castle, and fourteen behind the lower castle. Perhaps I ought to mention that these lines do not run from top to bottom of the shield, either in the genuine or the forged; but the lines behind the upper castle in the genuine almost touch the outline above them, while, in the forgeries, many of these lines are a long way from the outline above them. Neither of the lions is crowned, and the lower one has a very much smaller head than the upper one. The head of the upper lion does not touch the shield; there is no tassel at the end of his tail, and his left paw rests on the Bourbon shield. The lower lion, also, has no tassel at the end of his tail, and both his front paws stretch out about equally far. There are seventeen very short lines in the Bourbon shield. As before stated, the triangular compartment at the bottom of the shield is quite blank. In the $\frac{1}{2}$ onza, there is a blotch to the right of the ornament of the Golden Fleece, which is not found in the genuine. There are many other tests, but I think these will be found quite sufficient.

POSTMARKS.

Genuine.—1; 9; 29, small; 46.

Forged.—The forgeries are usually uncanceled, but I have a few specimens obliterated with 100.

Concerning the above officials, a writer in the *Bazaar* says: "These stamps were typographed; but from the earliest times, *lithographed* specimens, differing in minor details, have been known to collectors. These lithographs are rare, and were regarded by such authorities as Legrand and Pemberton as genuine varieties. Of late

years, they have been excluded from the catalogues, being regarded as forgeries—made to defraud, not collectors, but the Post Office. As, however, these stamps could only be used on letters addressed from one Government official to another, and never to private individuals, the 'forgery' hypothesis is difficult to establish. The only lithographed specimens known with a town postmark bear that of Sta. Cruz (l'eneriffe), for which reason Mahé inclines to attribute them as an issue peculiar to the Canary Islands.

"In the lithographed stamps, the words *CORREO OFICIAL* are very close to the collar of the Order of the Golden Fleece—in fact, the c of the former word touches the chain. There exist, however, ordinary lithographed forgeries, made to deceive collectors; they are bad imitations, and quite unlike the specimens just mentioned."

The ordinary, lithographed forgeries are the ones which I have described above; I have never seen any of the lithographs spoken of in the paragraph which I have quoted. Westoby makes no mention of any lithographs; he simply says that the die was engraved by Varela, and that the stamps were in use for about eleven years. I can't help believing that he would have known if any lithographic transfers had been made by the Government.

CARLIST STAMPS.

(*For Biscay, Navarre, Guipuzcoa, and Alava.*)

Issue of 1873. 1 Real, blue.

The first issue, July, 1873, was in sheets of 121 stamps, and there was no "tilde" over the N of *ESPAÑA* (Fig. 1). There was another transfer in September, 1873, with 84 stamps on the sheet, and the "tilde" to the N was added (Fig. 2). Still later, there was another transfer, of 180 stamps to the sheet.

Genuine.

The forgers have imitated the September issue, with the "tilde"; so I describe from that stamp. Lithographed, on thick, smooth, white wove paper, that looks almost as if it were enamelled. The forehead goes up into a sharp peak, showing that the hair is parted in the centre. The highest part of the hair touches the third line from the top of the lined background, and the front point of the base of the neck touches the sixth line at the bottom. The lines in this background do not go much nearer to the outline of the oval on the

FIG. 1.

FIG. 2.

left than they do on the right, leaving a fair margin of white. The point of the nose is rounded, and shaded with small dots. Only three lines of the background touch the beard; the others stop short, leaving a white line outside the profile of the rest of the beard. In the left upper spandrel, the eleventh horizontal line touches the back of the F, just opposite to the tongue. The stop after RL, in the left bottom corner, is a long way, both from the L, and from the edge of the contain-

ing-tablet. The truncated, right top corner of the said tablet very nearly touches the dark outline of the central oval. The "tilde" over the N of ESPAÑA slopes *very* much up to the right.

Forged.

Lithographed, on medium, rather rough, yellowish-white wove paper. The hair is not parted, and the forehead does not go up into a peak. The highest part of the hair touches the second line from the top, and the front of the base of the neck touches the fifth line from the bottom. The lines in the upper and lower parts of the left side of the oval go *very* close to the outline, almost touching it. The point of the nose is rather sharp, and has no dotted shading on it. All the lines in the background, opposite to the beard, except one, run right up to the beard. In the left upper spandrel, the seventh and ninth lines touch the F, but the eleventh does not quite touch. The stop after RL., in the left lower corner, touches, or *almost* touches, both the I., and the outline of the containing-tablet; and there is a broad space of white between the truncated corner of the said tablet and the oval. The tilde over the N of ESPAÑA is almost horizontal.

POSTMARKS.

Genuine.—The genuine postmarks are very numerous. 1; also a rectangle of seven thick, parallel bars; also the same, with eleven bars; also 36; also a five-pointed star, as large as 92, with or without numeral in the centre; also one or more numerals, with or without "No." above; also a numeral and letter together; also two letters; also a sort of cog-wheel, without nave or spokes, something like 14; also 29, with CORREOS in the centre, and name of province and of town between the circles. I copy this list from the Philatelic Society's *Catalogue*, but I have all but three of these postmarks in my own possession.

Forged.—A large rectangle, the size of the stamp, composed of square dots, something like 42.

REPRINTS.

Both types of the above stamp were reprinted in Paris, in August, 1881, on white wove paper. As far as I remember, the face of the paper is dull, instead of smooth. The whole impression is more blurred, and the lines of hair, under the N of FRANQUEO, are a shapeless blot, though each line is distinct and separate in the originals. I have also seen some fancy reprints in black.

Issue of 1874, for the same Provinces. 1 Real, lilac, reddish-lilac, grey-lilac.

Genuine.

Lithographed, on thinnish, white wove paper. The central tongue of the E of ESPAÑA is too high up, and the tilde is thickest in the middle, and exactly over the centre of the N. It does not absolutely touch the outline above it. The upper, forked point of the left-hand end of the ESPAÑA-scroll touches the left-hand outline of the spandrel; and the similar point at the right-hand end of the scroll touches the right-hand outline of the spandrel. The serif of the I in the left lower corner touches the shading inside the label, and there is no stop after the I, but the foot of the R of RL touches it. There is a stop after the RL, in the right lower corner. The F of FRANQUEO is a shade lower than the R. The

coloured line round the central circle touches the frame on the left side, as well as on the right. The front of the beard stands out fairly well from the background.

Forged.

Lithographed, in bright mauve, on medium, yellowish-white wove paper. The tongue of the E of ESPAÑA is exactly central, and the tilde over the N is a perfectly straight line or dash, placed too much to the left, and touching the outline above it. The upper, forked ends of the scroll do not touch the outlines of the spandrels. The serif of the I in the left lower corner does not touch the side of the label, and there appears to be a small colon between the I and the R. There is no stop after the RL in the right lower corner. The F of FRANQUEO is decidedly above the level of the R. The coloured line round the central circle does not touch the frame on the left side. The front of the beard is quite lost in the background.

POSTMARKS.

Genuine.—The only postmark that I have seen is a large, handsome five-pointed star, composed of dashes or hyphens. Inside this star there is a smaller one; and in the centre a bold *fleur-de-lys*.

Forged.—A square of square dots, something like 42, but without numerals.

Issue of 1874. 16 Maravedis, rose.

(For the Province of Catalonia.)

There are one hundred stamps on the sheet, all slightly varying, and I have, unfortunately, only one specimen from which to describe, and cannot say that the tests given are the same in every type.

Genuine.

Lithographed (?), in bright rose, on medium, rather surfaced, very white wove paper. There is a tilde over the N of AÑO, and the O is as tall as the N. The letters of DE are thinner than those of AÑO. The comma after PATRIA is not near the foot of the R of REY. There is a tilde over the N of CATALUÑA, and the C is a very round-looking letter. The last two words in the bottom label are M^o V^o, and the little N is quite distinct. Don Carlos seems to be looking upwards, towards the C of CATALUÑA; there is no comma above his eyebrow, and the whisker runs right up into the hair. I dare not give further tests, for fear of misleading.

Forged.

Lithographed, on medium, ordinary white wove paper. There is no tilde over the N of AÑO, and the O is not so tall as the N. The letters of DE are about the same size as those of AÑO. My single specimen is torn at the top, but there seems to be a stop, instead of a comma, after PATRIA, which almost touches the R of REY. The C of CATALUÑA is a narrow letter, and there is no tilde over the N. The last two words in the bottom label are M^o V^o, instead of M^o V^o. Don Carlos seems to be looking rather down towards the T of CATALUÑA; there is a large comma above his eyebrow, and there is a separation between the top of the whisker and the hair.

POSTMARKS.

Genuine.—I have never seen a cancelled copy.

Forged.—A square of square dots, something like 42, without numerals.

Issue of September, 1874. $\frac{1}{2}$ Real, rose.*(For the Province of Valencia.)*

There are two acknowledged types of this "object," which are in alternate rows on the sheet. In type I, the top of the ESPAÑA VALENCIA label touches the top outline of the frame, and the $\frac{1}{2}$ in the lower label is equidistant between CORREOS and REAL. In type II, the middle of the upper label is some distance from the top of the frame, and the $\frac{1}{2}$ is much nearer to REAL than to CORREOS. My forgeries are all from the second type, which I here describe.

Genuine. TYPE II.

Lithographed, in rose, on rather thick, yellowish-white wove paper. There are thirty-two horizontal lines in the central oval, to right of the head, and thirty-four to left of it. There are seventy-two radiating lines outside the central oval, counting their inner ends, where they touch the oval. Each side of the stamp, there is a large *fleur-de-lys*, drawn on the radiating lines. There is one clear line between the top of the right-hand *fleur-de-lys* and the end of the upper scroll; and two clear lines between the bottom of this *fleur-de-lys* and the end of the lower scroll. On the left side of the stamp, there are two clear lines, between the top of the *fleur-de-lys* and the beginning of the upper scroll, and three clear lines, between the bottom of the *fleur-de-lys* and the beginning of the lower scroll. The back outline of the neck, between the hair and the base, is hollowed out a good deal. If the fraction-line of $\frac{1}{2}$ were prolonged upwards, it would pass far to the right of the nose. The tilde over the N of ESPAÑA is straight, too much to the left, and does not touch the N. The second A of this word has a *very* much squarer and broader head than the first A.

Forged.

Lithographed, in dull rose, on thick, yellowish-white wove paper; also in bright rose-carmine, on medium, white wove paper. There are thirty-two horizontal lines to right of the head, and thirty-three to left of it. There are eighty radiating lines outside the oval, counting them as before, where their inner ends touch the oval. There is one clear line between the top of the right-hand *fleur-de-lys* and the scroll above it, and there are two clear lines, between the bottom of the *fleur-de-lys* and the scroll below it. On the left side, there is one clear line, between the top of the *fleur-de-lys* and the scroll above it, and two clear lines, between the bottom of the *fleur-de-lys* and the scroll below it. The back outline of the neck is very nearly straight. If the fraction-line of $\frac{1}{2}$ were prolonged upwards, it would cut into the nose. The tilde over the N of ESPAÑA is curly, placed centrally, and touches the N. The second A of this word is only slightly broader at the top than the first A.

POSTMARKS.

Genuine.—The only cancellation that I have seen is 29, *very* large, struck in blue, with COMANDANCIA GENERAL DE VALENCIA, round the circle, and EJERCITO REAL, in two straight lines, in the centre. The postmark is large enough to cover two stamps.

Forged.—Uncancelled; also a square of small square dots.

NOTE.—The catalogues give, for 1875, some vermilion stamps of similar type, but "from a newly-engraved die"; also some in violet-rose, "similar, but from a third die." My publishers' catalogue says: "It is

doubtful whether these varieties were issued for postal use." Westoby says, evidently speaking of these labels: "After the war was concluded, some stamps very similar (to the two undoubtedly genuine types) came into the hands of dealers, from Carlist sources, but they seem to be only imitations, and they are therefore only referred to. One lot, which came in 1875, was printed in vermilion, and a second lot was in lilac-rose."

SPANISH AFRICA.

I have the 5, 10, and 15 centimos of the 1879 issue, here illustrated, surcharged, in three lines, AFRICA, RIO DE ORO ESPAÑA, the top and bottom lines curved into a circle, with the central line, RIO DE ORO, across it. The 5 c. is surcharged in red, the others in violet. I know nothing of these stamps, but conclude they were simply made for collectors.

SPITZBERGEN.

The character and status of these "stamps" are, I think, sufficiently explained in the following extract from the *Deutsche Verkehrszeitung*: "At the landing-place, in Advent Bay, a small wooden shelter-house has been built this year (1897), with verandah and sundry chambers, for the benefit of summer visitors, especially the Nimrods of all nations. In this house, there is an office for the sale of postage stamps, and a post-box. A regular business is done in so-called 'Spitzbergen stamps.' The stamps have no value, either artistically or postally; they are merely curiosities, though in the form of postage stamps, and even perforated; but only intended for the amiable deception of our relations and friends at home. The design on the stamp shows a polar bear, rampant, which has just been struck by the hunter's deadly ball. The price is high—no less than 1 krona each. The stamps, when bought, are affixed to Norwegian post cards; they are cancelled with a rubber date-stamp, 'Spitzbergen,' and are then put into the post-box, in case the writer does not prefer the quicker way of taking the cards with him to Tromsø, and putting them into the post there himself. The post-box at Advent Bay is emptied about once a week, by the crew of the steamer which runs in the summer months, between Tromsø and Advent Bay."

STELLALAND.

Issue of 1884. 1d., 3d., 4d., 6d., 1s.

I have to thank Messrs. Whitfield King for the counterfeits described below.

Genuine.

Lithographed, on white wove paper, perforated 12. Each E of REPUBLIEK has its lowest limb decidedly longer than the top limb. The S of STELLALAND is no taller than the T. The G of ZEGEL seems to lean slightly backwards. The four-winged bird in the left upper corner of the shield has no tongue. There are nineteen horizontal lines in the right upper corner of the shield, twenty-one vertical lines in the left lower corner, and seventeen vertical lines in the right lower corner. The lowest point of the shield *almost* touches the centre of the leaf-ornament below it, and none of the points of the left-hand leaf touch the scroll. If the central, vertical line of the shield were prolonged downwards, it would pass almost clear to the left of the Z of ZEGEL. In the right lower compartment of the shield, the seventh line from the left has been drawn too long, and cuts into the compartment above it. Some of the values show other lines also drawn too long; but this particular seventh line is too long in all the values.

Forged.

Lithographed, on white wove paper, very like the genuine, but perforated 13, instead of 12. The second E of REPUBLIEK has its lowest limb almost exactly the same length as the top limb. The S of STELLALAND is slightly taller than the T. The G of ZEGEL is quite upright. In the left upper compartment, one of the dots of the background touches the lower mandible of the beak of the four-winged fowl, so that it looks rather like a long tongue, hanging out. There are eighteen horizontal lines in the right upper corner of the shield; about twenty-one vertical lines in the left lower compartment; and eighteen vertical lines in the right lower compartment. The lowest point of the shield does not nearly touch the leaf-ornament below it, and two of the points of the left-hand leaf touch the scroll. If the central, vertical line of the shield were prolonged downwards, it would cut almost through the centre of the Z of ZEGEL. None of the lines of the right lower compartment of the shield trespass over the boundary-line into the upper compartment.

POSTMARKS.

Genuine.—I have never seen a used specimen.

Forged.—The forgeries are uncanceled.

STRAITS SETTLEMENTS.

Issue of 1867. Crown, and value in Cents, surcharged on Indian stamps.

12 Cents, in red, on 4 Annas, green.

This is the only value of which I have seen a forgery, and, as it fails in a very important particular, a few words of description will be sufficient.

Genuine.

Below the crown, 17 mm. from the cross on the top of it, or 13 mm. from the middle of the concave base of the crown, are the words TWELVE CENTS, in Roman capitals, $2\frac{1}{4}$ mm. high, the whole measuring 17 mm. from the left-hand edge of the head of the T, to the outside of the top of the S.

Forged.

As far as I can see, in my single, very heavily-postmarked specimen, the crown is copied very well, but the surcharge, TWELVE CENTS, is absent.

POSTMARKS.

Genuine.—Usually a set of concentric octagons, something like the hexagons of 32, but with numerals in the centre. (This is also an Indian postmark.) Also one like 100, but much smaller.

Forged.—This has the octagonal postmark (genuine Indian), and also PAID and initials written across it. In India, Ceylon, Straits Settlements, etc., the word PAID, or a name or initials, either written or done with a stamp, may be frequently found, as the Asiatic clerks or servants had a playful habit of removing uncanceled stamps to sell again!

Issue of 1868. 2, 4, 6, 8, 12, 24 Cents.

Genuine.

Engraved in *épargne*, on medium, yellowish-white wove paper; water-marked Crown and CC; perforated 14. The central part of the

design is the same in all the values, but the corners differ for each value. The 2 CENTS has a sort of *fleur-de-llys* ornament in each corner; the 4 cents has a triangle; the 6 CENTS has a rose; the 8 CENTS has a bell-shaped leaf-ornament; the 12 CENTS has a triangular leaf; and the 24 CENTS has a sort of ace of spades

ornament. The dark, horizontal lines of shading in the central oval do not quite reach to the inner, dark outline of the name-oval; so that there is a distinct, white ring all the way round, between the name-oval and the central oval. The face is shaded all over. The chignon goes right up to the very edge of the background of horizontal lines. The

ornaments on the top of the coronet are, counting from the front, a pearl, a thistle, a pearl, a shamrock, a pearl, another thistle, a pearl—all being perfectly distinct, so that there is no fear of mistaking them for anything else; and the first pearl goes quite up to the edge of the horizontal lines of shading of the background.

Forged.

Poorly lithographed, on rather thin, very white wove paper, no watermark, perforated 13, very badly. All the values are from the design of the 2 cents, so that each one has a sort of *fleur-de-lys* ornament in the corners, instead of a different ornament for each value. The dark, horizontal lines of shading in the central oval go *quite* up to the inner outline of the name-oval, so that there is no white line between the shading and the name-oval. The whole of the front of the face and cheek is white, without shading. The chignon *hardly* touches the dark, inner outline of the name-oval. The ornaments on the top of the coronet are not clearly done, and each thistle is represented by two balls, one on the top of the other. The first pearl of the coronet does not go to the edge of the shaded lines of the background. It will be seen that the 2 CENTS is the only one at all like the genuine, all the others having the same ornament as the said 2 CENTS; whereas each value ought to have different corner-ornaments.

POSTMARKS.

Genuine.—1; also the octagon of the first issue; 29; 35, without numerals; 42, ditto; 43; 55.

Forged.—1; 38, 42, both without numerals; 62; 76; 98; 100, larger.

30 Cents, claret.

Issue of 1872. Crown and CC, perforated 14.

Issue of 1891. Crown and CA, perforated 14.

Genuine.

Engraved in *épargne*, on rather hard, fairly smooth, white wove paper, varieties as above. The horizontal lines of shading in the central hexagon do not run into the outline of the hexagon anywhere, either to right or left, but their ends stop short, leaving an equal, white space, both opposite to STRAITS and opposite to SETTLEMENTS. The Queen's nose and forehead are not outlined. The ornaments on the coronet are the same as in the 1868 set, and the front pearl points to the P of

POSTAGE. None of the letters of the inscriptions touch each other anywhere.

Forged.

This is new to me (1905). Lithographed, on rough-faced, pale lemon-coloured wove paper, rather thick, perforated 11½, no watermark. The paper and perforation alone are quite enough to condemn this counterfeit. The horizontal lines of the central background are drawn too far on the right side, opposite to the TS of SETTLEMENTS, so that they touch the frame by those letters. The whole front of the profile is distinctly outlined. Of the ornaments on the coronet, the front pearl is upright, instead of slanting, and points to the O of POSTAGE, while the first thistle

is a pineapple, the shamrock is a *fleur-de-lys*, and the second thistle is a ball, with a spike on the top of it. The R and A of STRAITS are joined at the foot, the letters of POSTAGE are irregular in height, and there is a hair-line, joining the tops of the M and E of SETTLEMENTS.

POSTMARKS.

Genuine.—As before.

Forged.—Uncancelled.

32 Cents, pale red, vermillion.

Issue of 1868. Crown and CC, perforated 14.

Issue of 1883-91. Crown and CA, perforated 14.

Genuine.

(Like the accompanying illustration, but without the surcharge.)

Engraved in *épargne*, varieties as above. The horizontal lines of shading in the central rectangle do not come quite to the edge of the frame; so that there is a white line, of equal width on all the four sides, running all round the said central rectangle. The ornaments on the top of the crown are the same as in the genuine stamps just described, and equally distinct. The chignon does not trespass into the white line to the right of it. Each corner of the stamp contains an ornament, composed of four trefoil-looking things, joined into a sort of St. Andrew's cross, with a diamond-shaped white dot in the centre. Four of the horizontal lines of the background can be seen at the bottom of the central rectangle, below the front of the base of the neck, where it comes nearest to the bottom of the frame. The nose is Grecian.

Forged.

Lithographed, on very white wove paper, rather thin, no watermark, badly perforated 13. The white line round the central rectangle is very broad at the sides, much narrower at the bottom, and *very* narrow at the top, instead of being equally wide all the way round. The ornament to the left of the right-hand pearl is apparently a shamrock, so that there are two shamrocks, instead of two thistles, amongst the ornaments. They are all poorly drawn. The back of the chignon trespasses distinctly into the white line, running down at the right-hand side of the central rectangle. The corner-ornaments are tolerably like those of the genuine, except that they are not so distinct; and the diamond-shaped white dot in the centre of each ornament appears to be sometimes square, and sometimes almost circular. Only two of the horizontal lines of shading of the background can be seen below the front of the base of the neck. The nose is decidedly Roman.

POSTMARKS.

Genuine.—As before.

Forged.—42, without numerals, but the cancellation appears to be oval, instead of diamond-shaped. Also 76.

96 Cents, grey.

Issue of 1868. Crown and CC, perforated 14.

Ditto, perforated 12½.

Issue of 1883-91. Crown and CA, perforated 14.

Genuine.

Engraved in *épargne*, varieties as above. The ornaments on the crown, the white line round the central rectangle, and the chignon, are *exactly* the same as in the genuine 32 CENTS. The ornaments in the four corners of the stamp are, however, quite different; each being composed of two interlacing, white oblongs, with pointed ends, like the illustration, but not in the least resembling the ornaments of the 32 CENTS.

Forged.

Lithographed, on very white wove paper, rather thin; no watermark; badly perforated 13, also nicely perforated 11½. The ornaments on the crown, the white line round the central rectangle, the chignon, and the corner-ornaments, of the stamp, are exactly like those of the forged 32 CENTS; so that there will be no difficulty in telling this forgery, which is merely the 32 CENTS with the value changed.

POSTMARKS.

Genuine.—As before.

Forged.—76, 98.

Issue of 1899. 4 Cents, surcharged on 5 Cents, blue.

Genuine.

4 cents. The head of the 4 is cut off square, and the cross-bar is a plain, horizontal stroke, without any serif at the end of it. The right-hand end of the foot of the numeral reaches *quite* as far to the right as the cross-bar does. CENTS is in Roman, lower-case letters, without a capital, and there is a stop after the word. The foot of the 4 is rather more than 1½ mm. above the level of the top edge of the CEN of CENTS.

Forged.

The head of the 4 is cut off slightly at a slope, instead of being quite square. The cross-bar is an easy test, as it has a double serif at the right-hand end. The foot of the numeral is too short, and does not extend as far to the right as the cross-bar does. CENTS is in italic letters with a capital C, and there is no stop after the word. The foot of the 4 is 2½ mm. above the top of CENTS. It will be seen that this is not a dangerous forgery. It will be understood that only the surcharge is forged; the stamp is genuine.

POSTMARKS.

Genuine.—1, 29.

Forged.—My specimen is surcharged on a genuinely-cancelled 5 cents, and bears 29.

SUDAN.

Issue of 1897. Surcharged on Egyptian stamps as illustrated.

1, 2, 3, 5 Mils., 1, 2, 5, 10 Piastres.

The Arabic surcharge on these stamps is **AL SUDÂN**, and reads, of course, from right to left. The **A** is the vertical stroke at the right-hand end; the **L** and **s** are joined, the **s** being a slight waviness in the tail of the **L**; the **U** is the fat comma, above the **D** of the French surcharge; the **D** is a thinner comma; the **Â** is the same as the first character; and the **N** is a sort of crescent, containing a dot.

Genuine.

The Arabic surcharge is $10\frac{1}{2}$ mm. long. The **U** is, as already stated, a fat comma; the **D** is a slimmer comma; the tail of the **N** (the left-hand character) curls upwards and inwards, till it is quite three-quarters of the height of the other side of the letter. The lowest part of the bottom of this Arabic **N** is fully $\frac{3}{4}$ mm. from the **s** below it. The French inscription, **SOUDAN**, is 10 mm. long; the letters are regular, all the same height, and all perfectly upright; the **O** is very round. The first **A** of the Arabic inscription is over the **N** of the French one.

السودان
SOUDAN

Forged.

The Arabic surcharge is rather more than 12 mm. long. The character for **LS**, instead of showing a rounded curve, is bent sharply at right angles; the **U** is represented by a large, diamond-shaped dot; the **D** is an extremely round-backed comma; the second **A** slopes greatly to the left, instead of being vertical. The dot in the **N** is distinctly diamond-shaped, instead of circular, and the tail of this letter turns upwards, but not inwards, to about the level of the centre of the dot, instead of reaching high above the dot. The lowest part of the bottom of this Arabic **N** is not more than $\frac{1}{2}$ mm. from the **s** below it. The French inscription, **SOUDAN**, is barely $9\frac{1}{2}$ mm. long. The letters are ragged; the **s** leans over to the right; the **O** is oval with its right side too thick; the **U** leans to the left, and its right-hand limb is usually higher than the other; the **D** and **A** also lean over to the left, and hardly any two of the letters are of the same height. The first **A** of the Arabic inscription is far to the right of the **N** of **SOUDAN**.

My publishers' catalogue warns collectors against forgeries with inverted surcharge, made in Egypt. I have not seen any of these, but should judge from the warning, that these forgeries of the errors are quite different from the counterfeits described above, which I do not consider to be by any means dangerous forgeries.

POSTMARKS.

Genuine.—1, large; also one like 3, also large.

Forged.—3, 29, both large.

SUEZ CANAL.

Issue of 1868. 1, 5, 20, 40 c.

These stamps are generally chronicled as dating from 1870; but the *Philatelist* for 1872, p. 86, says: "Late in 1868, M. Maury, in his *Collectionneur*, first made mention of a set of stamps having been issued by this company, for the use of persons in their employ."

For my own part I do not much care for these stamps. A friend in Berlin, a great collector, told me that M. Lesseps informed him that only the 20 c. had ever been issued. My publishers tell me that they have had the 20 c. used on three occasions, but never any of the others; so this looks as though the statement of my Berlin friend was correct; yet, on the other hand, I believe the late Mr. Tapling had all four values postmarked, having paid some £70 for them.

Genuine.

In the following description I take my own specimens as genuine. I have had them, as far as I remember, since 1870, and I believe I got them from Mr. Atlee. All the same, they are not exactly like those now sold as genuine, being almost entirely without clouds; those now sold have a heavier look, so they may very likely be reprints.

Lithographed, on moderately stout, white wove paper, the gum, in my specimens, being very crinkly and yellowish. The clouds are very light, there being hardly the faintest indication of any to the left of the central or main-mast. There is no passenger to be seen to the left of the funnel. The left-hand end of the smoke from the funnel is very faint, and in most copies, does not come within 2 mm. of the left side of the oval, though I have a 40 c. in which the smoke is only about 1 mm. from the side. The upper outline of the smoke reaches very nearly to the top of the left-hand, or mizzen-mast. The letters DE SUEZ are equidistant from the upper and lower outlines of the oval band. The spandrels are all filled with vertical lines of shading; but just under DE SUEZ, and between it and POSTES, the narrow space shows not only vertical lines, but also *crossed, oblique lines as well*. There is no scratch through the D of DE.

Forged.

Lithographed, on rather stout, smooth, white wove paper, sometimes quite shiny; with smooth white gum. Some copies are very badly pin-perforated 13. (Of course, the genuine are not perforated.) The clouds are very heavy; those under CANAL (where the genuine shows no clouds) are chiefly composed of dots and dashes. There is a passenger, or standing figure, plainly to be seen, between the funnel and the left-hand mast. The left-hand end of the smoke is heavy, and usually comes to within $\frac{1}{4}$ mm. of the side of the oval; *i.e.*, almost touching it. The top of the smoke is much too low, being a full millimetre lower than the top of the left-hand, or mizzen-mast. The letters DE SUEZ *almost* touch the lower outline of the band, but are more distant from the upper outline. The short lines between DE SUEZ and POSTES are all vertical, showing no crossed, oblique lines. There is an oblique, coloured scratch in most copies, passing from the top of the D of DE, and cutting through the outline above it, right into the sea.

POSTMARKS.

Genuine.—Postmarked copies are extremely rare ; they bear a transverse oval, with SUEZ in large capitals.

Forged.—A set of small square dots ; but most of my specimens are uncanceled.

I possess a 40 c., in which all the red parts of the stamp are changed to black, and all the white parts are crimson. This was marked by an expert as "genuine, changed"; but it was a forgery, nevertheless, having the passenger, and only vertical lines between DE SUEZ and POSTES. I do not suppose that anyone is likely to be deceived by it, as the genuine are in colour on white paper.

NOTE.—I no longer possess any genuine Suez Canal stamps, and have not been able to procure specimens, though I have applied to several dealers ; I am thus compelled to let the above description stand as it was in the second edition, without revision.

SUNGEI UJONG.

Issue of 1878. Blue $\frac{1}{2}$ Anna India, surcharged as in the illustration.

Genuine.

The oval is 18 mm. high by 15 mm. wide. The line forming the oval is not more than 1 mm. thick in its thickest part. The crescent is quite upright, and $5\frac{1}{2}$ mm. high. In the five-pointed star, the distance along the two horizontal points is a little under 5 mm. The letters SU are 6 mm. high, and the centre of the star is above the left leg of the U.

**Forged.**

The oval is 19 mm. high by 16 mm. wide, and the line forming it is decidedly broader than the genuine, measuring almost $1\frac{1}{2}$ mm. in its thickest part. The top part of the crescent leans over considerably to the right, and it measures $4\frac{1}{2}$ mm. between the points. The star is $5\frac{1}{2}$ mm. across from point to point. The letters SU are $5\frac{1}{2}$ mm. high, and the centre of the star is nearly above the centre of the U.

POSTMARKS.

Genuine.—I have not seen a cancelled specimen.

Forged.—My specimen is not postmarked.

Issue of 1881-3. The same surcharge on the brown
2 Cents of Straits Settlements, Crown and CC,
perforated 14.

Genuine.

The surcharge is the same as before.

Forged.

The oval is the same height and width as the genuine, but it is too thick, being nearly $1\frac{1}{2}$ mm. broad in the thickest parts. The crescent is the same height as the genuine, but more than $1\frac{1}{2}$ mm. broad in its

thickest part, while the thickest part of the genuine is only 1 mm. broad. The star is, fortunately, an easy test, as it has six points, instead of five. Were it not for this mistake, the forgery would be dangerous.

POSTMARKS.

Genuine.—29, in red or black.

Forged.—My specimen is uncanceled.

Issue of 1883. S.U., surcharged on the Straits Settlements 2 c., brown, of 1883, Crown and CA, perforated 14.

Genuine.

I have only the variety *without* stops, and must needs describe from that, but I don't know whether the letters and their spacing are the same as in the variety *with* stops, which has been imitated. The letters are 6 mm. high, and very slim. The head and tail serifs of the s are very sharply pointed at each end, and the front edge of the one at the head points perpendicularly downwards, and is $2\frac{3}{4}$ mm. from the left-hand, vertical edge of the U. This surcharge is only found on the 2 c., brown, Crown and CA.

Forged.

This is the variety with stops. I have only seen it on the Straits Settlements 4 cents, rose, Crown and CA, which is, of course, bogus. The U is a little less than 6 mm. high. The serifs to the head and tail of the s are blunt, and the front edge of the word slopes obliquely down to the right, instead of being quite perpendicular. The slope is not excessive, but it is easily seen. The nearest part of this head is 4 mm. from the left-hand, vertical edge of the U. The stops are 7 mm. apart, from centre to centre.

Genuine.—29.

POSTMARKS.

Forged.—My specimen is uncanceled.

Issues of 1883. Full name, surcharged on the Straits Settlements stamps of 1868, Crown and CC, perforated 14, and 1883-91, Crown and CA, perforated 14.

Genuine.

Fig. 1 is found on the 2 c., brown, and 4 c., rose, CC; and also on the 2 c., brown, 2 c., rose, 8 c., and 10 c., CA. Fig. 2 is found on the 2 c.,

UJONG**

FIG. 3.

brown, CC, and 10 c., CA. Fig. 3 is found on the 2 c., rose, 2 c., brown, and 4 c., brown, CA.

Forged.

I have only the 8 c., CA, with surcharges resembling Fig. 1 and Fig 3. As will be seen by the list of the genuine, the 8 c. value with surcharge of Fig. 3 is bogus. With regard to the forgery of Fig. 1, there are some seven varieties of spacing (wide and narrow letters) in the genuine, and only possess one of them, so that I can give no reliable tests. The ink, however, in this forgery, is decidedly grey-looking, instead of deep black.

POSTMARKS.

Genuine.—I have no cancelled copies.

Forged.—Uncanceled; also 29 (genuine Straits cancellation).

SURINAM.

Issue of 1873. 2 gl. 50 c., orange-brown and green.

Genuine.

Engraved in *épargne*, on medium, white wove paper, perforated 14. The king's ear is shaded all over, with horizontal lines. The lines of shading on the forehead, counting from the one which goes distinctly above the eyebrow, right to the top of the head, are eighteen in number. The sixth horizontal line of shading in the background rests on the top of the head. The white pearls round the portrait are of fair size, and regular. At the point where the green ring round the medallion comes nearest to the right side of the stamp, there are five thin, vertical green lines of shading, between the said ring and the outer frame; but in the similar place on the left side of the stamp, there are only four thin, green lines. Above the solid, SURINAME-label, there are about sixty-nine very short, vertical, coloured lines, counting from one extreme point of the label to the other. The central, white spot of the flower in the right top corner contains a coloured, crescent-shaped line; and the centre of the similar flower, in the left top corner, has a crescent of the same size, but more upright. The tail of the G of G¹ points downwards, and the end of the head points directly downwards, to the cross-bar. In my specimen, the inside end of the said cross-bar bends downwards. There is a distinct serif to the left of the head of the little L, making it look rather like a T, at a first glance. The tail of the C of C¹ points straight up to the head.

Forged.

Rather nicely typographed (engraved in *épargne*), in almost the exact colours of the genuine, and on white wove paper, of about the same substance, nicely perforated 13. There are no horizontal lines at all on the ear, and only twelve lines on the forehead, as these latter are placed much further apart than the genuine. The white pearls round the central medallion are extremely small—far too small for the ring in which they are placed—and those on the left side are irregular, and almost at the edge of the ring. At the centre of the right-hand edge of the stamp, where the green ring comes nearest to the frame, there are only three vertical lines, between the ring and the frame. In the corresponding place on the left side of the stamp, there are only two vertical lines, between ring and frame. There are about fifty very short, vertical, coloured lines, above the top of the SURINAME-label, counted as before. The central, white spot of the flower in the right top corner shows a coloured dot, and the similar part of the flower in the left top corner shows a very tiny, coloured crescent, but it slopes very much, instead of being upright. The tail of the G points obliquely forwards, to the right, and the head seems to point forwards, towards the L, instead of downwards. The cross-bar is straight, and very thin and inconspicuous. The little L has no serif. The tail of the C of C¹ points forwards, towards the T.

POSTMARKS.

Genuine.—I have no postmarked specimens.

Forged.—My forgery is uncanceled.

SWAZIELAND.

I have not, as yet, seen any forgeries of the Swazieland stamps, but the *South African Philatelist*, in an article on the stamps of Swazieland, mentions several forgeries and bogus stamps. They are:—

1. Surcharge "Swasieland" (with "s," instead of "z"). No such surcharge ever existed on any of the genuine.

2. Surcharge on the 3d. Transvaal of 1885. No such value was ever issued; so this stamp is altogether bogus.

3. Surcharge on the 6d. of 1885. The type is somewhat larger, and the S is of a fancy type, though it is an ordinary S in the genuine.

4. 2d. Swazieland, surcharged "4," in violet, in the corners of the stamp, on each numeral 2, and once again in the centre. This surcharge is, of course, bogus.

5. Transvaal post card, surcharged SWAZIELAND. This is a bogus card, not authorised by the Government.

6. The writer warns collectors against Swazieland stamps with a full-stop after the surcharge. He says that he has seen a large quantity of them on the $\frac{1}{2}$ d., 1d., 2d., and 10s. Transvaal; but, while strongly recommending amateurs not to purchase them, he states that he is unable to absolutely designate them as forgeries, until he has made further inquiries at headquarters.

SWEDEN.

This country has been, so far, singularly free from the attentions of the forger; but the *Monthly Journal* translates from the *Svensk Filatelistisk Tidskrift* a notice concerning a number of unused counterfeits, which had been sent to the Swedish Philatelic Society, for opinion as to whether they were originals or reprints. Not having been able to procure any of the stamps for dissection, I reproduce a portion of the article, to put my readers on their guard. The stamps sent to the above-named society were:—

Issue of 1858.

- 5 öre, yellow-green; a block of four.
- 9 " dark blue, two shades; four separate copies of each.
- 9 " violet; three copies, a pair and one single.
- 12 " Prussian-blue; a block of four.
- 12 " ultramarine; two blocks of four.
- 24 " orange; two blocks four and three.
- 24 " yellow; a pair.
- 24 " brown "
- 30 " red-brown "
- 50 " pink "
- 50 " carmine "

LOCAL STAMPS.

Issue 1856, grey-black; a block of four and a pair.

" " black; a pair.

" 1862, brown; a block of six.

" " yellow-brown; a block of ten.

"The first thing that attracted attention was the existence of single copies and blocks of stamps in such rare shades as the 12 öre, Prussian-blue, 12 öre ultramarine, 50 öre, carmine, etc., and on a closer inspection, it was soon seen that the lot consisted of a number of extremely cleverly-made forgeries.

"The size of these forged stamps differs only very slightly from that of the originals; but the dimensions of the printed surface are not identical with those of the original stamp. The latter have a printed surface of 17 by 20 mm., while the printed surface of the forged stamps measures, on an average, $17\frac{1}{2}$ by $20\frac{1}{2}$ to $20\frac{1}{2}$ mm. The difference of size is thus only very small, and by itself could scarcely have been decisive as a test of the genuineness of the stamps. The chief points for distinguishing the forgeries are the paper and perforation. The various stamps submitted, with the exception of the black Local stamps, are really printed on laid paper. But as the black Local sent for examination is printed on ordinary paper, it does not seem unlikely that the brown Local stamp and the stamps of the Arms series exist also on ordinary paper. The perforation is extremely cleverly imitated, but it differs from that of the originals in being irregular and defective, also the holes made by the perforating-machine are smaller than those of the original perforation. The colours are well matched, with the exception of that of the three specimens of the 9 öre, violet, which are in a bright violet tint, a colour that is not known to exist. We find here dark lilac (dark blue?), ultramarine, and brown, in shades which are deceptively like the originals; and since, in addition, we can discover no difference in the engraving, the forgeries are likely to be very dangerous."

REPRINTS.

Though, until now, forgeries have been few, I cannot say this of the reprints. There are three different reprints of the 1855 set (1868, 1872, and 1885), the first two with the same perforations as the genuine (14, or $14 \times 13\frac{1}{2}$), and the third, perforated 13. The 1858 set was reprinted in 1885, perforated 13, instead of 14. The brown 3 öre of 1862 was also reprinted in 1885, perforated 13, instead of 14. The 17 and 20 öre of 1866 were included in the 1885 reprints, perforated 13. The 1 riksdaler of 1872 was also included in the above set, perforated 13. Of the black and brown Locals of 1856-62, there was a reprint in 1872, perforated 14, like the originals, and another in 1885, perforated 13. The black reprint of 1872 is easily detected, as there are two broken and defective pearls above the last stroke of the M of FRIMÄRKE.

SWITZERLAND.

The various old issues of the Swiss stamps have been extensively forged, the latest forgeries being very dangerous. So many have failed in their efforts to describe, intelligibly and satisfactorily, the counterfeits of this country, that I enter, with some diffidence, upon the very laborious task of dissecting the Swiss forgeries, and must apologise, beforehand, for mistakes and omissions. In describing the Cantonal stamps, I keep to the old names, to avoid any chance of confusion.

BASLE.

Issue of July 1, 1845. 2½ Rappen.

Genuine.

Engraved in *épargne*, tricoloured impression, in pale greenish-blue, dull crimson, and black, on very stout, yellowish-white wove paper. The dove, carrying a letter, is strongly embossed. There is a short, stumpy hyphen between each of the words STADT-POST-BASEL. In each corner of the stamp there is a *burelé*, or network, of crossing and interlacing, vertical white lines, on a ground of greenish-blue. The O of POST is *very* nearly perpendicular, with the merest trace of a slope to the right. The L of BASEL slopes down to the left; so that, if a flat ruler or card be laid along the *centre* of its shank, it will just graze the side of the S of STADT, nearest to the T. In the figures of value, in the left-hand bottom corner of the stamp, the foot of the large 2 is somewhat arched, and it does not touch the black, inner outline of the frame; the small 1 does not touch either the curved name-label above it, or the fraction-line below it; and the little 2 does not touch the fraction-line. If the fraction-line were prolonged to the right, it would pass clear below the outline of the whole stamp, before reaching the centre of the bottom of it. Particular attention must be paid to these points, as most of the forgeries vary from the genuine here. The inner black line of the frame is thicker than the outer, at the top and on the left side, while the outer line is thicker than the inner one, on the right and at the bottom. The R of RP does not touch the inner outline of the frame below it, and the stop after the P is level with the centre of the head of the P, and midway between the P and the outline of the frame to the right of it. The shield above the dove's head (which really runs up to the top of the stamp), has been rendered unnecessarily complicated, by the outlines of the red shield;—three horizontal lines, and two curly ones being drawn into, or across it. Disregarding these lines, it will be seen that the arms of Basle are, a black crozier, on a white ground. The central division of the crozier shows four horizontal, white lines, and it is wider or thicker just above the division than it is just below it. The vertical white line, in the upper half of the crozier, runs up to the bend, where the head curls over to the left. This white line is sharply pointed at the top. The curled top of the crozier is nearly $\frac{1}{2}$ mm. from the inner, black outline of the top of the stamp; and its bottom point is about the same distance from the inner outline of the bottom of the little white shield. The lateral points of the bottom of the crozier usually both touch the sides of the shield, but I have a specimen in which the left-hand point does not quite touch the outline. The red frame-line ought to come

between the two black ones, but it seldom does, owing to the difficulty of making the two printings "register" exactly. Near the top corners of the stamp, there are two leaf-ornaments, one each side, standing on the horizontal line, above the large shield. Neither of these leaf-ornaments touches the side of the frame. Two other leaf-ornaments hang down, below the two just described; the outer curl of the one above the S of STADT touches the frame, but the outer curl of the one above the L of BASEL does not touch the frame. There is no stop after BASEL. I have before me a copy with rather a deep margin at the bottom, showing the top of the next stamp; and in this it is evident that each stamp was only about three-fourths of a millimetre separate from the one next below it. I do not know how near the vertical rows were to each other.

First Forgery.

Lithographed, on medium, to thick, yellowish-white wove paper. The corners of the stamp are in plain, solid colour, though I have one specimen that shows some very faint, curly, white lines in the top corners. The L of BASEL is quite horizontal, so that a line drawn through the centre of its shank would cut fairly deeply into the S of STADT. The foot of the large 2, in the left bottom corner of the stamp, is perfectly straight, instead of slightly arched; the fraction-line is joined to the foot of the 2; the little 1 touches the outline above it. If the fraction-line were produced to the right, it would graze the left side of the foot of the P, and cut into the O and S of POST; that is to say, instead of sloping strongly down to the right, it is very nearly horizontal. (This is an easy test for this forgery.) The said O leans considerably over to the right, and there is a slight break in the curved outline, above and between the letters OS. The P of RP in the right lower corner has hardly any foot-stroke on its right side. The central division of the crozier in the little shield shows only two horizontal white lines across it, and it is much wider below the division than above it. The vertical, white line in the upper half of the crozier ends level with the centre of the ball of the head, but the white line in the genuine runs up a good deal higher than even the level of the top of the ball. The curled top of the crozier is only about $\frac{1}{4}$ mm. from the outline above it, while its bottom point is very nearly 1 mm. from the bottom of the little shield. The left lateral point touches the side of the shield, but the right point does not. The red frame round the stamp is much too thick, so that it would overlap the two black lines, if placed centrally between them. The upper leaf-ornament in the left top corner touches the outline of the frame, and the leaf-ornament hanging below it also touches the outline. Neither of the leaves in the right top corner touches the outline. This appears to be identical with the first forgery in Baron A. de Reuterskiöld's pamphlet on *Les timbres cantonaux de la Suisse, et leurs falsifications*.

Second Forgery.

This is the same as Reuterskiöld's second forgery. The dove is not embossed at all, and has no letter in its beak. Lithographed, on stout, white wove paper. The corners of the stamp are of solid blue-green, without any white network. There is no hyphen between POST and BASEL, and there is a stop after BASEL. The lettering is thinner than in the genuine, or any other of the forgeries that I have seen. The O of POST leans over very much to the right; the A of BASEL is very sharply pointed, instead of being blunt; and the L slopes down very much to the left, so that a line along the centre of its shaft would graze the head of the T of STADT. Like the genuine, there are two thin, black outlines

round the red shield. In the centre of the rounded bottom of the outer outline, there will, in this forgery, be found a black dot, above the space between the OS of POST. (This is an easy test.) The head of the large 2, in the left bottom corner, very nearly touches the outline above it; the foot is quite straight, and the front of the foot is very close to the inner, black outline of the frame. The head of the little 1 touches the outline above it, its foot touches the fraction-line, and it has a long serif to the head, which is not in the genuine. The fraction-line is almost horizontal, and parallel with the bottom frame; so that, if prolonged to the right, it would cut deeply into the OS of POST. The end of the foot of the little 2 *almost* touches the inner, black line of the bottom frame. The inner, black line is thicker than the outer one, all the way round; and the outer line down the right side has been drawn too long, so that it projects beyond the bottom of the stamp, in the right lower corner. The red outline is fully $\frac{3}{4}$ mm. broad in this forgery. The foot of the R of RP., in the right lower corner, just touches the black outline below it; the top of the shank of the P is very little above the level of the central division of the R, instead of being level with the centre of the rounded part of the head; the stop is merely a projection from the inner, black outline of the right side of the frame, and is considerably below the level of the centre of the head of the P. The centre boss of the crozier has only three white, horizontal lines in it. The crozier is much wider below the boss than it is above it. The bottom point of the crozier is just about $\frac{1}{2}$ mm. from the bottom of the little shield, and the side-points do not touch the sides of the shield. The points of the upper leaf-ornaments in the corners both touch the frame, and the outer curls of the lower, hanging leaf-ornaments also both touch the frame. The stamps on the sheet are 4 mm. apart vertically, and $3\frac{1}{2}$ mm. horizontally.

Third Forgery.

This is the same as Reuterskiöld's third forgery. I must give my former notes, as I no longer possess it. Nicely lithographed, on white wove paper, considerably thinner than the genuine. The dove is only very slightly embossed. The hyphens are too long, too thick, and too conspicuous. The network in the corners is decidedly green, instead of blue, and much coarser than the genuine; the white lines in it are slanting, instead of almost vertical. The O of POST leans over *very* much to the right, and the L of BASEL also leans somewhat to the right, so that a line through the centre of its shank would cut well into the S of STADT. There is a little line or flaw, which joins this L to the outline of the name-label. The large 2 touches the inner, black outline of the frame; the fraction-line, if prolonged, would just touch the bottom of the name-label. The little 2 is much too large; being more than half the height of the large 2, and nearly as wide. The inner, black line of the frame is much thicker (all round?) than the outer line. The R and the P of RP. just touch the outline of the frame below them, and the stop is nearer to the side of the frame than to the P. The red outline of the frame is far too thick, being nearly 1 mm. broad, instead of only about as thick as the thicker, black one. The leaf-ornaments in the top corners both touch the sides of the frame. The curled top of the crozier *almost* touches the inner, black outline of the top of the stamp. The bottom point of the crozier is $\frac{1}{2}$ mm. from the bottom of the shield; the side-points touch the sides of the shield, like the genuine.

Fourth Forgery.

This is the same as Reuterskiöld's fourth forgery. It is lithographed, on medium, white wove paper. The dove is pretty highly embossed. The

network in the corners is fairly like the genuine. The O of POST leans over *very* much to the right; the L of BASEL also slopes down to the right, so that a line along the upper edge of its shaft would pass clear *above* the S of STADT. The fraction-line of $2\frac{1}{2}$ slopes very much down to the right, so that, if prolonged, it would cut through the outer frame of the stamp, below the S of POST. This said fraction-line is joined to the foot of the large 2. The foot of the R touches the bottom of the frame; the top of the shaft of the P is level with the central division of the R; and the stop is level with the very top of the P, and nearer to the P than to the side-frames. The centre boss of the crozier shows four horizontal white lines, like the genuine, and it is about equally wide, above and below the boss. The curled top of the crozier is only about $\frac{1}{2}$ mm. from the outline of the frame above it. The side-points of the crozier do not touch the sides of the shield, and the bottom point is more than $\frac{1}{2}$ mm. from the bottom of the shield. The point of the leaf-ornament in the left top corner touches the side-frame, and the curl of the hanging leaf-ornament below it also touches the frame. The two leaves in the right top corner do not touch the frame.

Fifth Forgery.

This is the same as Reuterskiöld's fifth forgery. Lithographed, on very stout, white wove paper. The dove is fairly embossed, and one of my specimens has a thin black line round the dove, but this line has been removed in all my other specimens. There is a short hyphen after STADT, and a much longer one after POST. An easy test for this forgery is, that there is a sort of double outline to the back of the S of POST, and the E of BASEL. The network is coarse and patchy, and the colour is greenish-blue. The O of POST leans *very* much over to the right. There is a very distinct, black dot close to the outer outline of the red shield, just above the beginning of the S of POST. The L of BASEL slopes slightly down to the right, so that a line along the upper edge of its shank would pass through the centre of the S of STADT. The small 1 of the fraction touches the fraction-line; and the said fraction-line slopes sharply down to the right; so that, if prolonged, it would cut through the bottom of the stamp under the O of POST. The two outlines of the stamp are too far apart, in this counterfeit; so that, even when the red frame happens to be in its proper place, it does not fill up the space between the two lines. The shaft of the P does not reach up so far as the level of the centre of the upper half of the R; but the top is like the genuine. There are four horizontal, white lines in the central boss of the crozier, like the genuine. The crozier is *very* much wider below the boss than it is above it. The white line up the top half goes too high; almost to the very top of the head. The curled top of the crozier is rather less than $\frac{1}{2}$ mm. from the top frame. The bottom point of the crozier is nearly 1 mm. from the bottom of the little shield. The side-points do not touch the sides of the shield, but the right-hand point goes nearer to the side than the left-hand one does. The upper leaf-ornaments in the top corners both touch the frame, and the hanging leaf-ornament on the left side also touches the frame, but the right-hand hanging leaf-ornament is more than $\frac{1}{2}$ mm. from the frame.

Sixth Forgery.

Lithographed, on rather thick, white wove paper. The dove is fairly well embossed. The hyphen after STADT is shorter than the one after POST. The network is very green, and the oblique, crossed white lines in it are very nearly straight. The O of POST leans over very much to

the right. The L of BASEL is about horizontal; a line along the lower edge of its shank would cut into the lower part of the S of STADT. The little 1 of $\frac{1}{2}$ touches the fraction-line, and if the fraction-line were prolonged, it would cut through the bottom frame of the stamp, between O and S of POST. There are, as in the genuine, four horizontal white lines in the boss, at the centre of the crozier; but the third from the top is as wide as the second, while, in the genuine, the second from the top is the widest of them all. The crozier is narrower above the boss, than it is below it. The white line in the upper half is too long, and runs up a little way into the bend. The bottom point of the crozier is nearly 1 mm. from the bottom of the shield; the side-points do not touch the shield. The hanging leaf-ornament, above the L of BASEL, is more than $\frac{1}{2}$ mm. from the side of the frame, but the other three leaf-ornaments all touch the frame. The lettering is rather ragged in this forgery, and the foot of the A of STADT is joined to the D.

Seventh Forgery.

Lithographed, better than the last, on thick, white wove paper. The dove is very slightly embossed. There is no hyphen after POST, and there is a stop after BASEL. (These, of course, are very easy tests.) There is no network; only a plain ground of greenish-blue. The O of POST leans very much over to the right, and there is a dot in the inner black outline of the red shield, over the space of OS of POST. (This must not be confounded with the second forgery, in which the dot is in the *outer* outline of the red shield.) The L of BASEL slopes a shade to the right; and a line drawn along its lower edge would cut through the centre of the S of STADT. The head of the large 2 is too big for the foot, which is short, and perfectly straight. The little 1 *just* touches the fraction-line. The said fraction-line is nearly horizontal; if produced, it would cut through the bottom of the right-hand frame. The inner, black outline of the frame is thick all the way round, and the outer outline is thin all the way round. Beside these, when there is margin enough, a third black outline may be seen, $\frac{1}{2}$ mm. from the second outline. The red outline is too wide for the space between the two black ones. The foot of the R of RP touches the bottom frame; the top of the P is exactly level with the central division of the R; and the stop is merely a projection from the side of the frame. In the genuine, the P is of a peculiar shape, having its vertical shaft coming up above the level of the head. In this forgery, the top of the head is exactly level with the top of the shaft, and in one unbroken line with the serif. There are four horizontal, white lines in the boss of the crozier, but the top one is the thickest, and some distance above the others. In the genuine, the widest space is between the second and third lines. All four leaf-ornaments touch the frames. The curled top of the crozier is fully $\frac{3}{4}$ mm. from the outline above it, and the side-points do not touch the sides of the little shield. The left foot of the A of BASEL has a clumsy blotch on it, and it is so long, that it almost, or quite touches the base of the B. The S of this word leans *very* much over towards the E, but in the genuine it hardly leans at all towards the E.

Eighth Forgery.

Lithographed, on medium, white wove paper. There is very little trace of embossing in the dove, and it has no letter in its beak. The hyphen after STADT is long and slanting, and there is no hyphen after POST. There is a large stop after BASEL, and some copies show a small black dot just before the B, rather lower than the level of its centre. The corners are solid, of a dull olive-green, without any network. The lower outline of the lettered label does not touch the inner outline of

the bottom frame in this forgery, though it touches in the genuine, and in all the other counterfeits. The O of POST leans very much over to the right. There is a little dot or flaw in the inner outline of the red shield above the T of POST, and a longer and larger one in the same line, above the B of BASEL. The L slopes down to the right, so that a line along its lower edge would pass very nearly clear above the S of STADT. The foot of the large 2 is quite straight. The little 1 just touches the fraction-line. The said fraction-line slopes considerably up to the right; so that, if prolonged, it would graze the foot of the P, cut through the OST of POST, touch the foot of the B of BASEL, and pass through the right-hand frame, clear above the RP. The head of the little 2 touches this fraction-line. The inner, black line of the frame is thicker than the outer one, all the way round. The red frame is very badly done, being in some parts only $\frac{1}{2}$ mm. wide, increasing to as much as $1\frac{1}{2}$ mm. The foot of the R is firmly joined to the bottom frame; its tail very nearly touches the P; the head of the P is very little above the level of the central division of the R, and its foot is joined to the right-hand frame; while the stop is simply a projection from the said right-hand frame. There are only three horizontal lines in the central boss of the crozier, the uppermost one being some distance from the other two. The crozier, below the boss, is even wider than the boss itself. In the genuine, the boss is a great deal wider than the crozier is, either above or below it. The side-points of the crozier are not alike; the right-hand one touches the side of the shield, while the left-hand one curls much more upwards, so that its point is turned away from the side of the shield. The lowest point is only about $\frac{1}{3}$ mm. from the bottom of the shield. The leaf-ornament in the left top corner does not quite touch the side of the frame, but all the other three leaves touch the frame. The foot of the A of STADT is joined to the D.

Ninth Forgery.

Lithographed, on rather thick, white wove paper. The dove, and the letter in its beak, are surrounded by a thin, black outline in this counterfeit. The hyphen after STADT is very short, and looks rather like an oval stop; the hyphen after BASEL is a little longer, but rather wedge-shaped. The network is extremely coarse. There is a little line, joining the P of POST to the outline above it, and the O leans over very much to the right. There is a prominent black dot, touching the inner outline of the red shield, above the B of BASEL; the head of the S looks bigger than the tail; and the L slopes slightly to the right, so that a line along its lower edge would pass clear above the S of STADT. The large 2 has a very curly foot, the front of which touches the left-hand frame. The fraction-line slopes sharply down to the right; so that, if prolonged, it would cut through the bottom of the stamp, under the beginning of the O of POST. The foot of the R of RP touches the bottom frame; the top of the shaft of the P is about level with the central division of the R; and the stop is level with the top of the head of the P, and nearer to it than to the frame. The central boss of the crozier contains four horizontal, white lines, but the lowest line is only half the length of the one above it. The white line in the top half of the crozier is too long, and turns partly over into the bend. The two side-points of the crozier do not touch the sides of the little shield. The two leaves on the left side touch the frame, but the two on the right side do not.

Tenth Forgery.

Lithographed, on rather thick, white wove paper. The colour of the shield is orange-red, very different from the sort of crimson-red of the genuine. The dove is very slightly embossed. There is no hyphen after

POST. The network is fairly like the genuine. The O of POST is nearly upright. The L of BASEL slopes very much down to the left; so that a line drawn along its lower edge would pass very nearly clear *under* the S of STADT. The large 2 has a perfectly straight foot; the little 1 and 2 both touch the fraction-line; the said fraction-line slopes a good deal, so that, if prolonged, it would cut through the bottom of the stamp, below the space between the OS of POST. The foot of the R of RP very nearly touches the bottom frame; the P and the stop are like the genuine. The central boss of the crozier contains four horizontal, white lines; but the top line extends further to the left than the second one; whereas the second one extends furthest of all to the left, in the genuine. The two halves of the crozier are not in one line, the upper half and the boss being set too much to the left. The curled top is only about $\frac{1}{2}$ mm. from the top of the frame, and the white line is too long, and goes up into the bend. The two side-points *just* touch the sides of the little shield. The hanging leaf-ornament, over the S of STADT, just touches the frame, but none of the other three leaves touch the frame.

Eleventh Forgery.

Lithographed, on thick, white wove paper. The shield is in brilliant scarlet. The dove shows hardly any trace of embossing. The network is an easy test, for it is merely a lot of small, irregular dots, on a white ground. The O of POST is nearly upright, but it is of a clumsy shape. There is a dot in the outer outline of the red shield, between the O and S of POST, in my single specimen; but I cannot say whether this is always there. The L of BASEL slopes greatly to the left, so that (as far as I can make out through the postmark) if a line were drawn along its lower edge, it would graze the T of STADT. The fraction-line in the left lower corner is about horizontal; and if prolonged, it would cut through all the letters of POST, and also through the RP, in the other corner. The head of this P is too large and round, and the shank does not project above it. The stop very nearly touches the head. The boss in the centre of the crozier is small and inconspicuous, but I think there are four horizontal, white lines in it. The crozier is quite as wide above, as it is below the base. The curled top of the crozier is about $\frac{1}{2}$ mm. from the frame above it; the bottom point is blunt in my specimen, and $\frac{1}{4}$ mm. from the base of the little shield; the right side-point touches the side of the shield, but the left point does not touch. The upper leaf-ornament on the left side touches the frame, and the hanging leaf-ornament below it *almost* touches the frame. The upper leaf on the right side is at some little distance from the frame, and the hanging leaf below it does not touch the frame, though it is rather close.

The following forgeries I have not seen, and I am unable to identify them with any of the eleven counterfeits described above, though some of them may be the same as mine.

Twelfth Forgery.

Mr. Pemberton says that this is a very poor production, with the dove *printed*, instead of embossed. The corners are of blue dots on a white ground, instead of a network. The $\frac{1}{2}$ of $2\frac{1}{2}$ is so smudged that there is no space between the fraction-line and the numerals.

Thirteenth Forgery.

Mr. Pemberton says that this is the commonest of the falsifications, and has deceived many young philatelists. The bottom point of the crozier is a long way above the bottom of the little shield. The O of POST slants (to the right?).

Fourteenth Forgery.

Pemberton says this is very like the counterfeit just described, but better done. The bottom point of the crozier is a very long way above the bottom of the shield.

Fifteenth Forgery.

This is the sixth forgery in M. de Reuterskiöld's book. He says that it belongs to a set of Swiss stamps, sold at Geneva, with *facsimile* printed in violet, on the upper part of the stamp. The corners are composed of blue dots on a white ground, instead of a network. The O of POST is vertical, but it is taller than the other letters. The L of BASEL is horizontal. The dove is not embossed at all. The fraction-line in the left lower corner, if prolonged, would cut into the O and S of POST, and touch the feet of the P and T.

Sixteenth Forgery.

I received the notes of this from M. de Reuterskiöld. It is the production of Messrs. Senf, of Leipzig. The corners have blue dots on a white ground, instead of a network. The dove is very slightly embossed, and it has a black outline round it, which should be an easy test. As in the fifteenth forgery, the fraction-line, if prolonged, would cut into the O and S of POST, and touch the feet of the P and T.

Seventeenth Forgery.

I had the notes of this also from M. de Reuterskiöld. The dove is not embossed. The network of the corners is formed by crossed, oblique white lines, on a blue ground. There is a large, round black dot or stop between STADT and POST. The O of POST is vertical, and exactly in the centre of the label. In the genuine, and all the other forgeries that I have seen, the space between OS is the centre of the label.

POSTMARKS.

Genuine.—29, always in red. Also FRANCO, in a rectangle, with truncated corners. Also the Federal obliteration of PD in an oval.

Also

L	B
P	H

. Also, for those which were used after the post office passed into the control of the Confederation, the Federal *grille* something like 34 was used.

First Forgery.—1, large, in black, also in red.

Second Forgery.—1, small, in black.

Third Forgery.—Uncancelled.

Fourth Forgery.—1, large, in red.

Fifth Forgery.—Uncancelled.

Sixth Forgery.—1, large, in red.

Seventh Forgery.—1, large, in red, also in brown.

Eighth Forgery.—Uncancelled.

Ninth Forgery.—1, large, in red.

Tenth Forgery.—Two concentric circles, about the size of 4, with a cross in the centre, all in red.

Eleventh Forgery.—My specimen has some words written on it, with pen and ink.

I can give no details concerning the cancellations of the other forgeries.

ESSAY.

This is printed with the corner-network in light green, and the shield in brick-red. These were the first stamps sent to Basle by the Frankfort engraver, but the postal authorities decided to have the colours altered. Messrs. Mirabaud and de Reuterskiöld, in their fine work on *The Postage Stamps of Switzerland*, say that they have several times met with the above stamps, with the green network chemically changed to blue.

GENEVA.

The following are the varieties issued :—

1. Double stamp ; 5 c. + 5 c., black on light green wove paper ; October 1, 1843.
2. Small eagle ; 5 c., black on light green ; April 1, 1845.
3. Large eagle ; 5 c., black on yellowish-green ; beginning of 1847.
4. Large eagle ; 5 c., black on dark green ; August 22, 1848.
5. Cut envelope ; 5 c., green on white wove ; 1849-50.

Issue of Oct., 1843. Double Stamp ; 10 c., black on green.

This stamp consists of two "Port Local" labels, joined together, side by side, with the words 10. | PORT CANTONAL. | CENT. above the top of the conjoined stamps. The stamp, in its entirety, is very scarce, as the two labels are usually found divided, each half having served as a 5 cent. stamp. As each side of the twin impression is of a different type, it will be necessary to describe each separately. The reader will please note that there never was a "Port Local" stamp issued *singly* ; so that any genuine, single stamp, with this inscription, is merely the right or left-hand half, as the case may be, of the double stamp, with the top inscription cut off. The stamp is lithographed, on stout, wove paper, of an apple-green, or yellow-green colour.

Genuine.*Top of the stamp.*

The 1 of 10 has a very distinct and longish, oblique side-stroke, and it slopes up to a sharp point. There is a very distinct stop after the 10, another after CANTONAL, and another after CENT.

The first A of CANTONAL has no cross-stroke, being simply an inverted V ; the first N is badly formed, having its first vertical stroke too far to the right. The second A, in the few specimens that I have examined, has invariably had the inside of the upper half filled up solid, to the cross-bar. The foot-stroke of the P of PORT goes very close to the vertical line to left of it, but does not touch. The stop after CENT is $\frac{1}{2}$ mm. from the vertical line to right of it, but is *very* close to the tail of the T. The two thin, vertical lines enclosing the 10 are $5\frac{1}{2}$ mm. apart ; those enclosing CENT are also $5\frac{1}{2}$ mm. apart ; while those enclosing PORT CANTONAL are $20\frac{1}{2}$ mm. apart. The upright stroke of the T of PORT is 3 mm. distant from the beginning of the C of CANTONAL.

Left-hand half.

The stamp is 14½ mm. wide,* by 15½ mm. high. The thin, inner, vertical line of the frame, on the left-hand side, is drawn too long, so that it touches the centre frame, both at the top and bottom of the stamp. The P of POSTE has no head-stroke, but the left upper corner of its head touches the thin line of the frame to left of it. The S slants over towards the T, and the said T has a head-stroke at the back. There is a similar head-stroke at the back of the D of DE, and the D does not touch the outline of the frame above it. The upright shaft of the D is under the left-hand half of the O of PORT. There are about thirty-four lines, of various thicknesses, in the glory; and eight of these lines touch the joined bases of the DE. The G of GENÈVE does not touch the outline above it, and the cross-stroke to this letter extends inwards, into the hollow of it, but not outwards. There is no stop after GENÈVE. The 5 has a very peculiar head or flag, as the thin neck joins it halfway between the beginning and the middle, instead of at the beginning. The thin neck is nearly vertical. There is a largish stop after the 5, midway between it and the side of the shield. There is a stop after the C, and it is nearer to the frame than to the C. There is hardly any head-stroke, and very little foot-stroke, to the P of PORT. It is a tall, lanky letter, with a shaft decidedly too long, below the head. The T has a marked head-stroke at the back, and the tail curls up. The first L of LOCAL has a foot-stroke both sides, and a very short head-stroke on the left side. It does not touch the shield, and is not under the central dividing-line of the shield, but considerably to the left of the said line. The final L of this word is taller than the first; it has a long, horizontal head-stroke on the left side, and a long foot-stroke on the right side.

Right-hand half.

The stamp is 15½ mm. wide, and about 15½ mm. high. The thin, inner frame has a distinct break in the left top corner, and the right-hand vertical line of it is drawn too high, so that it joins the top of the stamp. The P of POSTE has no head-stroke, and the left corner of its head, apparently, does not *quite* touch the thin line of the frame, to left of it. The S slants over towards the T, which has a head-stroke projecting not only backwards, but slightly forwards as well. The D of DE has a head-stroke, like the left-hand half of the stamp, and it does not touch the frame above it. The upright shaft of the D of DE is exactly under the shaft of the L of CANTONAL. Two or three lines of the glory cut through the E of DE; they do not cut through the letter in the other half. There are about thirty-one lines in the glory; they are more irregular than in the left-hand half; about eight of them touch the DE. The G of GENÈVE just touches the outline above it; the tail is of a very ugly, irregular shape. There is a distinct stop after GENÈVE. The neck of the 5 slopes a good deal, instead of being vertical, and it joins the beginning of the flag or head in the usual manner. There is a stop after the 5, midway between it and the shield; there is also a stop after the C, midway between it and the frame. The P of POST has a fairly long head-stroke, and a tolerably wide foot-stroke, wider on the right side than on the left. The T is like that of the left-hand stamp. The first L of LOCAL has a long head-stroke on the right side, but none on the left; it has a short foot-stroke on the right side, but hardly any on the left, and it stands exactly under the central dividing-line of the shield. The position of this L is an easy test for deciding which half one is dealing with, in the case of a cut stamp. The final L is rather shorter than the

* This is given wrongly as "13½" in M. de Reuterskiöld's book.

ESSAY.

Genuine.*Top of the stamp.*

The 1 of 10 has a very distinct and longish, oblique side-stroke, and it slopes up to a sharp point. There is a very distinct stop after the 10, another after CANTONAL, and another after CENT.

The first A of CANTONAL has no cross-stroke, being simply an inverted v ; the first N is badly formed, having its first vertical stroke too far to the right. The second A, in the few specimens that I have examined, has invariably had the inside of the upper half filled up solid, to the cross-bar. The foot-stroke of the P of PORT

goes very close to the vertical line to left of it, but does not touch. The stop after CENT is $\frac{1}{2}$ mm. from the vertical line to right of it, but is *very* close to the tail of the T. The two thin, vertical lines enclosing the 10 are $5\frac{1}{2}$ mm. apart ; those enclosing CENT are also $5\frac{1}{2}$ mm. apart ; while those enclosing PORT CANTONAL are $20\frac{3}{4}$ mm. apart. The upright stroke of the T of PORT is 3 mm. distant from the beginning of the C of CANTONAL.

Left-hand half.

The stamp is $14\frac{1}{2}$ mm. wide,* by $15\frac{1}{2}$ mm. high. The thin, inner, vertical line of the frame, on the left-hand side, is drawn too long, so that it touches the centre frame, both at the top and bottom of the stamp. The P of POSTE has no head-stroke, but the left upper corner of its head touches the thin line of the frame to left of it. The S slants over towards the T, and the said T has a head-stroke at the back. There is a similar head-stroke at the back of the D of DE, and the D does not touch the outline of the frame above it. The upright shaft of the D is under the left-hand half of the O of PORT. There are about thirty-four lines, of various thicknesses, in the glory; and eight of these lines touch the joined bases of the DE. The G of GENÈVE does not touch the outline above it, and the cross-stroke to this letter extends inwards, into the hollow of it, but not outwards. There is no stop after GENÈVE. The 5 has a very peculiar head or flag, as the thin neck joins it halfway between the beginning and the middle, instead of at the beginning. The thin neck is nearly vertical. There is a largish stop after the 5, midway between it and the side of the shield. There is a stop after the C, and it is nearer to the frame than to the C. There is hardly any head-stroke, and very little foot-stroke, to the P of PORT. It is a tall, lanky letter, with a shaft decidedly too long, below the head. The T has a marked head-stroke at the back, and the tail curls up. The first L of LOCAL has a foot-stroke both sides, and a very short head-stroke on the left side. It does not touch the shield, and is not under the central dividing-line of the shield, but considerably to the left of the said line. The final L of this word is taller than the first; it has a long, horizontal head-stroke on the left side, and a long foot-stroke on the right side.

Right-hand half.

The stamp is $15\frac{1}{2}$ mm. wide, and about $15\frac{1}{2}$ mm. high. The thin, inner frame has a distinct break in the left top corner, and the right-hand vertical line of it is drawn too high, so that it joins the top of the stamp. The P of POSTE has no head-stroke, and the left corner of its head, apparently, does not *quite* touch the thin line of the frame, to left of it. The S slants over towards the T, which has a head-stroke projecting not only backwards, but slightly forwards as well. The D of DE has a head-stroke, like the left-hand half of the stamp, and it does not touch the frame above it. The upright shaft of the D of DE is exactly under the shaft of the L of CANTONAL. Two or three lines of the glory cut through the E of DE; they do not cut through the letter in the other half. There are about thirty-one lines in the glory; they are more irregular than in the left-hand half; about eight of them touch the DE. The G of GENÈVE just touches the outline above it; the tail is of a very ugly, irregular shape. There is a distinct stop after GENÈVE. The neck of the 5 slopes a good deal, instead of being vertical, and it joins the beginning of the flag or head in the usual manner. There is a stop after the 5, midway between it and the shield; there is also a stop after the C, midway between it and the frame. The P of POST has a fairly long head-stroke, and a tolerably wide foot-stroke, wider on the right side than on the left. The T is like that of the left-hand stamp. The first L of LOCAL has a long head-stroke on the right side, but none on the left; it has a short foot-stroke on the right side, but hardly any on the left, and it stands exactly under the central dividing-line of the shield. The position of this L is an easy test for deciding which half one is dealing with, in the case of a cut stamp. The final L is rather shorter than the

* This is given wrongly as " $13\frac{1}{2}$ " in M. de Reuterskiöld's book.

Left-hand half.

If the right-hand vertical outline of the shield were prolonged downwards, it would just graze the right-hand edge of the shaft of the L. There is a stop after this last word, its centre being about $\frac{3}{4}$ mm. from the centre of the L. I ought to mention here that all the stops are quite distinct, though few of them are actually circular. The thin, inner line of the central shield is broken in the top left corner. There are thirteen dots, irregularly placed, within the shield, above the eagle, and twenty-two below the eagle. These numbers include a triangle of three dots in the hollow between the head and the wing, and three dots in the hollow between the wing and the leg. There are eight large feathers in the wing, alternating with seven very thin ones. One of the claws touches the sixth large feather and one of the thin ones. The beak is open, and there is a horizontal, black stroke in the opening, to represent a tongue. There is no eye. The crown, which does not touch the head, has a curved, lower outline, and is placed so far back that the front of the lower edge is to the right of the junction between head and beak. The second and third large feathers of the wing, and two of the thin feathers, are all joined to the left-hand frame. There are twelve thin, vertical lines in the shield, counting at the top, and thirteen at the bottom, reckoning the central dividing-line. The one next to the dividing-line is not straight, but gradually leans towards the dividing-line, and joins it before reaching the top of the shield. The key is 5 mm. high; it has a long line up the barrel, with a short line to left of it. Its handle roughly represents a pair of *very* bow legs, with a small ball between the feet. The central dividing-line of the shield is drawn too long; it cuts through the thin, inner outline of the bottom of the shield, and runs into the thick, outer out-

Right-hand half.

first one, not coming down so low. It has a short, rather oblique head-stroke to the left, and a foot-stroke both sides. There is a rather large stop after it, the centre of the stop being 1 mm. from the centre of the L. The thin, inner line of the central shield is broken at the left top corner, just opposite the tip of the eagle's wing. As far as I can make out, through the postmark of my specimen, there are thirteen dots in the shield, above the eagle, and seventeen below the eagle. These numbers include three dots in a slightly curved, vertical line, in the hollow between the head and the wing, and a single dot in the hollow between the wing and the leg. There are about nine feathers in the wing, *not* divided regularly into broad and narrow, like the wing of the other eagle. The third and fourth feathers from the top touch the left side of the shield. The beak is wide open, with no sign of any tongue. My specimen has a mere speck of an eye, but this would probably be filled in, in heavily-printed copies. The crown is like that of the left-hand half. There are thirteen thin, vertical lines in the shield, including the dividing-line. This dividing-line, as in the left-hand half, is drawn beyond the inner outline at the bottom, and joins the thick, bottom outline, at the point. The key is $4\frac{1}{2}$ mm. high. It has one vertical line in the barrel, broken in the middle.

Left-hand half.

line, at the point. The motto-scroll touches the frame on the right side, but is $\frac{1}{2}$ mm. from the frame on the left side. The motto on the scroll ought to be POST TENEBRAS LUX, but only the letters OST of POST, and LU of LUX are legible. There are five lines across the scroll, before the T of TENEBRAS, the fifth cutting through the left arm of the T. The A of this word has no cross-bar.

For easy identification of the two halves, when separated, the following are the simplest tests: Left-hand half; L of LOCAL far to the left of dividing-line of shield; no stop after GENÈVE. Right-hand half; L of LOCAL exactly under dividing-line of shield; stop after GENÈVE.

First Forgery.

Top of the stamp.

The 1 of 10 is blunt at the top, and the side-stroke is very short. There is no stop after the 10. The foot-stroke of the P of PORT is nearly $\frac{1}{2}$ mm. from the line to left of it, instead of almost touching it; and the foot-stroke to the first limb of the R projects to the left, but not to the right as well. The first N of CANTONAL is nicely shaped. The forgers have copied the inverted v's of the genuine. There is a very faint stop after CANTONAL. The stop after CENT. is less than $\frac{1}{2}$ mm. from the vertical line to right of it, and fully $\frac{1}{2}$ mm. from the end of the tail of the T.

Left-hand half.

The stamp is only 14 mm. wide, by $15\frac{1}{2}$ mm. high. The thin, inner line of the frame, on the left side, touches both the top and the bottom outer frames, as in the genuine. The P of POSTE is like the genuine; the head of the s is rather larger than the tail, and it leans over very slightly towards the T. There is very little head-stroke to the back of the T. The D of DE has no head-stroke, and it touches the frame above it. The upright shaft of the D slopes over slightly to the right; so that, if prolonged upwards, it would pass almost through the centre of the O of PORT. There are thirty-one lines in the glory; two of them touch the D, and two the E of DE. The G of GENÈVE is fairly like the genuine; there is a stop after the word. The 5 has a short, and very concave flag; the neck joins the front end of the flag, in

Right-hand half.

The motto-scroll very nearly touches the frame on the *left* side, but is $\frac{1}{2}$ mm. from it on the right side. The letters in the glory are JHS, and they are a good deal smaller than those of TENEBRAS. Both POST and LUX are legible. There are five lines across the scroll, before the T of TENEBRAS; the fifth cuts through the left arm of the T. The A of this word has no cross-bar.

Right-hand half.

The stamp is $14\frac{1}{2}$ mm. wide, by $15\frac{1}{2}$ mm. high. The thin, inner line of the frame on the left side touches the outer frame, both top and bottom, like the other half of this forgery. The head-stroke of the P of POSTE cuts slightly through the inner outline of the frame, and the head of the s is rather bigger than the tail, and it leans over very slightly towards the T. There is very little head-stroke to the back of the T. The D of DE, so far as I can make out, through the postmark, has no head-stroke, and it touches the frame above it. The upright shaft of the D of DE is under the very tip of the tail of the L of CANTONAL. There are about thirty-two lines in the glory; two of them touch the D, and two of them the E of DE. The G of GENÈVE does not touch the outline above it; the letter is better made

Left-hand half.

the usual manner. The stop after it is exceedingly small and faint. The stop after the C is rather nearer to the frame than to the C. The P of PORT has well-defined head and foot-strokes, and it hardly reaches down at all below the level of the rest of the letters. The T has hardly any head-stroke, and the tail curls up very little. The L of LOCAL is in the same position as in the genuine, but it touches the bottom of the shield. The final L of this word is fairly like the genuine, but a little too much to the left, so that, if the thick vertical right-hand outline of the shield were prolonged downwards, it would not even touch the right-hand foot-stroke of the L. The centre of the stop is exactly 1 mm. from the centre of the L. The thin, inner line of the central shield is broken in the left top corner, but not in the same place as in the genuine; for it is the horizontal line which is broken in the genuine, while it is the vertical line which is broken in this forgery. There are about eighteen dots in the shield, above the eagle, and seventeen below it, including two in the hollow, between the wing and the neck, and two in the hollow, between the leg and the body. The wing shows fourteen feathers; only two of them are broad, and only two of them touch the frame to left of them. One of the claws touches the eleventh and twelfth feathers of the wing. There is no stroke in the beak to represent a tongue. There is a large, shapeless blank patch on the side of the face, extending down the neck; this contains a *black* dot for an eye. The crown is much more to the left than in the genuine, so that its front edge is above the inner end of the opening of the beak. The shield contains fifteen vertical lines, counting at the top, and fourteen at the bottom, the central, dividing-line being decidedly thicker than the rest. The one next to the dividing-line is broken, and does

Right-hand half.

than the genuine. The centre of the stop after this word is only $\frac{1}{2}$ mm. from the right-hand frame; but in the genuine, the centre of the stop is fully 1 mm. from the frame. The neck of the 5 slopes very little; the stop after it is very faint. The rounded back of the 5 is $1\frac{1}{2}$ mm. from the side of the shield, but in the genuine, it is exactly 1 mm. from the side of the shield. The P of the lower PORT is some distance from the O, though the head of the P almost touches the O in the genuine. The T has hardly any head-stroke, and its tail has not nearly the bold hook of the genuine. The first L of LOCAL has no head-stroke. It touches the shield, like the left-hand half, and is in the same position, far to the left of the dividing-line of the shield. It has no sign of any foot-stroke. The final L is taller, instead of shorter, than the first L, with a slight, horizontal head-stroke, and hardly any sign of a foot-stroke. The postmark covers the left top corner of the shield, so I cannot say whether the inner line is broken there or not. The dots above the eagle in the shield are partly hidden by the postmark in my specimen, but there are more than thirteen, including two in the hollow, between the neck and the wing. Below the eagle, there are nineteen dots, including two between the leg and the wing. There are about fourteen feathers in the wing, most of them broad. The third from the top touches the frame of the shield, and possibly others may touch, though the postmark covers them in my specimen. There is an uncoloured patch on the cheek and neck, rather similar to that of the left-hand half. The right-hand half of the shield shows fifteen vertical lines, counting along the top, and fourteen along the bottom. This includes the dividing-line, which is thicker than the rest. The dividing-line is not drawn down across the inner boundary-

Left-hand half.

not reach to the bottom of the shield. The key is only $4\frac{1}{2}$ mm. high; the short line, inside the long one up the barrel, is merely a dot. The motto-scroll does not quite touch the frame on the right side, and it is $\frac{3}{4}$ mm. from the frame on the left side. The letters OS and part of the T of POST are legible, also LU of LUX. The lines before the T of TENEBRAS are obliterated in my specimen, but I fancy there are only three of them.

Right-hand half.

line, at the bottom point of the shield, as that of the left-hand half is. The key is $4\frac{1}{2}$ mm. high. It bears one long, vertical line of shading in the barrel, with another very short line beside it at the top, and another at the bottom. The motto-scroll touches the frame on the right side, but is $\frac{3}{4}$ mm. from it on the left side. The letters JHS are quite as large as those of TENEBRAS. The letters OS and part of T of POST, and LU of LUX are legible. There are only two clear lines of shading before TENEBRAS, the rest being merged in the rows of shading.

Second Forgery.

This dates from 1872. Lithographed, on thick, hard, rather yellowish-green wove paper.

Top of the stamp.

The three rectangles into which this is divided measure, respectively, 5, $20\frac{1}{2}$, and 5 mm., instead of the $5\frac{1}{2}$, $20\frac{3}{4}$, and $5\frac{1}{2}$ mm. of the genuine. The I of 10 has a sloping, pointed top, but there is hardly any sign of a serif. The foot-stroke is equally long right and left, instead of being longer on the right. There is no stop after the 10, and the stop after PORT is very small and faint. Each A of CANTONAL is crossed, and the first N is of normal shape. The foot-stroke of the P of PORT is about $\frac{1}{2}$ mm. from the frame to left of it. The stop after CENT is very close to the frame to right of it—hardly $\frac{1}{4}$ mm. from it—but is further than that from the tail of the T. The upright stroke of the T of PORT is $2\frac{1}{4}$ mm. from the back of the C of CANTONAL.

Both halves of the stamp.

These are practically identical. They are $14\frac{1}{2}$ mm. wide by $15\frac{1}{2}$ mm. high. The thin, inner outline of the frame of the stamp is complete all round, and not drawn too far anywhere. The corner of the head of the P of POSTE just touches the side of the frame, but not so distinctly as in the left-hand half of the genuine. The O, S, and E are 1 mm. high, instead of only a little more than $\frac{1}{2}$ mm.; the S does not lean over towards the T, and the T has hardly any tail. The letters DE are fairly like the genuine in shape and position, though too large, like those of POSTE. One line of the glory runs up clear between the D and E, to almost the height of the E, and another cuts slantingly through the E, as it does in the right-hand half of the genuine. The upright shaft of the D in the right-hand half is under the space between AL of CANTONAL, instead of under the vertical stroke of the L. There are forty radiating lines in the glory; one of them touches the E of POSTE, and several of them touch various letters of GENÈVE. In the genuine, both halves, the two words are quite clear of the glory. Four of the lines touch the D, and three the E, of DE, and the two letters are not joined. Between the TENEBRAS-scroll and the top of the shield there are twenty-eight distinct, radiating lines, joining the scroll to the shield. In the genuine, left-hand half, these lines are all

blotched together, so that they cannot be counted, and in the genuine, right-hand half, there are about nineteen of these lines. The G of GENÈVE is a tall, thin letter, $1\frac{1}{2}$ mm. high, instead of 1 mm. It does not touch the frame above it, and the cross-stroke touches the E. There is a stop after this word. The 5 is of normal shape, not like that of the left-hand half of the genuine. The neck is vertical, and is formed of two lines, instead of one. The stop after it is small. The P of PORT, at the bottom of the stamp, has a long foot-stroke to left, and hardly any to right. It is not at all a lanky letter. The cross-stroke to the T is almost invisible, making it look rather like a short L. The head-stroke to it shows right and left. The first L of LOCAL is far to the left of the dividing-line of the shield, which is over the beginning of the O; the second L is on a line with the right-hand edge of the shield, and its top goes very close to the right bottom corner of the shield. It is about the same height as the first L. The centre of the stop is 1 mm. from the centre of the L. The dots in the left-hand half of the shield are very small and numerous; there are about eighty-nine of them altogether, in the whole shield. The eagle's wing does not touch the side of the shield, so I have had to count the dots in one lot, instead of two. The wing is nicely drawn; it contains eight very distinct feathers, all of them broad. The foot points *downwards*, towards the PO of PORT, instead of turning up to the wing. (This is an easy test.) The bird has a crest, projecting at the back of the head, which does not exist in the genuine, and the upper mandible of the beak is much longer than the lower one. There is no tongue. There is a blank blotch near the crest, for an eye. There are sixteen vertical lines in the key-half of the shield. The dividing-line is double, all the way down; and the last line to the right divides slightly at the bottom. The lines are straighter and more regular than the genuine. The dividing-line does not cut through the inner outline, at the base of the shield. The key is $5\frac{1}{2}$ mm. high, and the barrel is less than $\frac{1}{2}$ mm. wide, instead of $\frac{3}{4}$ mm.; it has the two lines in it, like the left-hand half of the genuine. The handle is a sort of trefoil. The motto-scroll touches the frame on the right, and *almost* touches it on the left. Only OS of POST, and LU of LUX are legible. The N of TENEBRAS is of normal shape. The easiest test for the identification of this particular forgery is, that the foot of the eagle points obliquely downwards, towards the PO of PORT.

Third Forgery.

Lithographed, on stout, rather soft, dark yellow-green wove paper. This is the same as the first forgery of de Reuterskiöld's little book. It dates from 1865.

Top of the stamp.

The three compartments measure, respectively, $5\frac{1}{4}$, $20\frac{1}{2}$, and $5\frac{1}{4}$ mm. The 1 of 10 seems to have a square head, with very little sign of a head-stroke. There is no stop after the 10, and a *very* faint stop after CANTONAL. The N of this word is of normal shape. The T of CENT lacks the head-stroke, cross-stroke, and hooked tail of the genuine; and the centre of the stop after it is less than $\frac{1}{2}$ mm. from the end of the label, instead of fully $\frac{3}{4}$ mm. The (very thin) foot-stroke to the P of PORT is nearly $\frac{1}{2}$ mm. from the beginning of the label, instead of *almost* touching it. The upright stroke of the T of PORT is $2\frac{3}{4}$ mm. from the C of CANTONAL. There is no vertical dividing-line between the two stamps.

Both halves of the stamp.

These are both the same. Each half is $14\frac{1}{2}$ mm. wide, by $15\frac{1}{2}$ high, like the left-hand half of the genuine, from which this counterfeit is

presumably copied. The thin, inner outline of the frame is not broken anywhere, and is not drawn too far at any of the corners. The P of POSTE touches this inner outline, as in the left-hand half of the genuine. The upper half of the S of this word is larger than the lower half, and it slants very little towards the T. The said T has no head-stroke at the back. The D of DE touches the frame above it, and it has a sort of lump, instead of the clearly-defined head-stroke of the genuine. The lines in the glory are the same as in the genuine, but there is one which runs up between the D and E, to the level of the middle of the E. The G of GENÈVE is jammed firmly against the top frame, and its head projects further than the tail. There is a stop after this word, which is placed over the space between LU. In the genuine, it is placed over the X. The neck of the 5 is *almost* vertical; it has an especially short flag, which joins the neck in the normal manner. The P of PORT is of normal shape. The O is larger than the R, instead of shorter and smaller. The T has no head-stroke, and the hook of the tail is very small. The first L of LOCAL touches the base of the shield; it has no head-stroke, and is far to the left of the dividing-line of the shield. The C of this word comes down much lower than the other letters, and the foot of the final L seems to touch the A. This L is a long way to the left of the right-hand vertical edge of the shield, indeed, if this edge of the shield were prolonged downwards, it would almost touch the stop after LOCAL. There are sixteen dots in the shield, above the eagle, including three, in a curved line, in the hollow between the wing and the neck; there are about twenty-one dots below the eagle, including three, in a triangle, between the leg and the body. There are six broad feathers, and one narrow one, in the wing; the second from the top touches the side of the frame. The foot does not touch the wing. There is a pointed lump for a crest, at the back of the head. (In the genuine, both halves, the back of the head is rounded, without any sign of a crest.) There is no tongue, and the bird has a large, circular, blank patch for an eye, and a large, star-shaped patch in the centre of the breast. The crown comes too far forward, so that its front edge is almost over the middle of the beak. There are fourteen vertical lines in the key-half of the shield, the dividing-line being a good deal thicker than the others; they are more regular than the genuine, and the one next to the dividing-line does not touch it. The key is not quite 5 mm. high; its right-hand outline is *very* thick. There is only one short line of shading in it, just at the centre of the top. The central dividing-line of the shield cuts through the inner outline of the shield, and touches the base-point, as in the genuine. The motto-scroll touches the frame on the right side, but is $\frac{1}{2}$ mm. distant from the frame on the left. OS and LU are legible. The letters JHS are about the same height as those of TENEBRAS; the J comes down more than the HS. There is a distinct cross-bar to the A of TENEBRAS.

The readiest tests to identify this forgery are: the eagle's circular, green eye, the almost star-shaped green patch on its breast, and the C of LOCAL coming below the level of the other letters; besides, of course, the fact that both halves are alike.

Fourth Forgery.

The two halves are practically alike. Lithographed, on thick, hard, blue-green, yellow-green, or *dull yellow* wove paper. The top of the I of IO is not pointed, and the O is badly shaped, pointed at the top, and often broken at the bottom. The foot-stroke to the P of PORT is absurdly wide—fully 1 mm.—yet it does not come nearer than $\frac{1}{2}$ mm. to the vertical line to left of it. The shaft of the T is $3\frac{1}{2}$ mm. from the C of CANTONAL. The first A of this word has an extremely oblique cross-stroke,

and the second A has a slightly slanting cross-stroke. The first N is of normal shape, and there is a little vertical stroke above the front part of the head of the second N, as though the vertical stroke had been drawn too high. The stop after CENT is nearly $\frac{3}{4}$ mm. from the end of the label. The three rectangles of this top frame measure $5\frac{1}{2}$, 20, and $5\frac{1}{2}$ mm. respectively. Both stamps are $15\frac{1}{2}$ mm. square. The thin inner line of the frame is not broken anywhere, and is not drawn too long anywhere, except in the right top corner, where the vertical line runs up to join the thick top frame. The P of POSTE has a long head-stroke, and the head-stroke (not the corner of the P itself) touches the left-hand, inner outline of the frame. There is no head-stroke at the back of the T, and it has hardly any sign of the cross-stroke, and hardly any tail. There are thirty-one radiating lines in the glory; five of them peep above the top of the E of DE, but they do not go through the E. The D and E are not joined at the base. The G of GENÈVE does not touch the frame above it, and its cross-stroke extends outwards, as well as inwards. There is a stop after this word. The 5 is of a normal shape, and the stop is nearer to the 5 than to the shield. The stop after the C is nearer to the C than to the frame. In the bottom inscription, the P of PORT is not lanky, and it has a wide foot-stroke. The T of this word has no head-stroke at the back, and the tail is horizontal. The first L of LOCAL is well to the left of the dividing-line of the shield; it has a head-stroke on the left side, and a foot-stroke both sides. The final L is not quite so tall as the other; it has a slight head-stroke on the left side, and a short foot-stroke both sides. The central dividing-line of the shield is prolonged downwards to touch the base of the shield. If prolonged still further, it would pass clear of the L, and almost clear of its foot-stroke. The dots in the left-hand half of the shield are *very* small. There are about 125 of them altogether, above and below the eagle, including about seven in the hollow between the wing and the neck, and about ten between the leg and the wing. There are eight feathers in the wing, all of them broad, and none of them touch the frame. The claws do not touch the wing, but point towards the 5; and the bend of the leg is an extremely *rounded* curve, instead of being rather angular. The upper mandible of the beak is a little hook, which very nearly touches the point of the lower mandible. The crown comes so far forward, that its top edge is above the point of the beak. There is a small crest at the back of the head. In the key-half of the shield, there are fifteen vertical lines, counted at the top, and fourteen at the bottom. They are straighter and more regular than the genuine, though the five which touch the top of the barrel of the key are rather crowded. The one next to the dividing-line is straight, like the rest. The key is $4\frac{1}{2}$ mm. high; it shows two thin, long lines, and parts of one or two others, up the barrel. The wards are indented at the top and bottom, but in the genuine there is no indentation. The ball at the bottom of the handle is not visible. In the ends of the motto-scroll, OS and most of the T are legible, and the whole of LUX can be faintly seen. The scroll does not touch the frame, either side. The A of TENEBRAS has a distinct cross-bar, and also a bar across the top of its head, which is more distinct in the right-hand stamp than in the left-hand one. There are about thirty radiating lines between the TENEBRAS-scroll and the top of the shield.

For identification of this forgery, I think the easiest tests are: the numerous, very fine dots behind the eagle, its hooked upper mandible, the wing not touching the shield, the claws pointing to the 5, and the extremely rounded joint of the leg.

Fifth Forgery.

Lithographed, on very thick, blue-green wove paper. Both halves of the stamp are identical. The oblique side-stroke to the 1 of 10 is *very* faint. It is blunt at the top, and there is no stop after the 10. Each A of CANTONAL has a cross-bar; the first N is of normal shape, and the blank centre of the O has square, instead of rounded ends. The foot-stroke to the left side of the P of PORT is very short, so that it is $\frac{1}{2}$ mm. from the upright line to left of it, instead of *very* nearly touching it. The tail of the T of CENT is very short, so that there is $\frac{1}{2}$ mm. between the tail and the stop after it. The measurements of the three divisions of the top frame are: $5\frac{1}{4}$, 20 (nearly), and $5\frac{1}{4}$. The right edge of the T of PORT is hardly $2\frac{1}{4}$ mm. from the C of CANTONAL. Each stamp measures $14\frac{1}{2} \times 15\frac{1}{2}$ mm. The thin, inner vertical lines of the frame are both drawn too long at the bottom, so that their ends touch the thick outline of the bottom of the stamp. The head of the P of POSTE is at some distance from the side-frame. The S does not slant towards the T, and there is no head-stroke at the back of the T. The upright shaft of the D of DE, in the right-hand stamp, is under the end of the tail of the L of CANTONAL. There are only about twenty-nine lines in the glory; two of them touch the D of DE, but none touch the E. The G of GENÈVE is a long way from the frame above it, and the cross-stroke goes outwards as well as inwards. There is no stop after this word. The flag of the 5 joins the neck in the normal way. The stop after this numeral is considerably nearer to the 5 than to the shield. The C has a very round shoulder, and the stop is a little nearer to the C than to the frame. The P of PORT has an absurdly long foot-stroke on the right side; it is not at all a lanky letter; the top of the head is broken, and the top of the head *very* nearly touches the O. The T of this word has no head-stroke, and the cross-stroke goes right through the letter, and touches the head of the R. The curl or hook of the tail is very small, unlike the large, bold hook of the genuine. Each L of LOCAL has an extremely long head-stroke on the left side, longer and thinner than the genuine. The first L is far to the left of the dividing-line of the shield. The final L is rather shorter than the first, and has an equal foot-stroke both sides. The right-hand edge of the shield, if prolonged downwards, would very nearly cut into the stop after LOCAL. There are about fifty-seven dots in the left half of the shield, including three in a curved line, between the wing and the neck. There are no dots in the hollow between the leg and the wing. The lower joint of the leg is like a straight stick, without any claws; the place where the claws ought to be nearly touches two of the wing-feathers. The wing contains seven feathers, several of them being split at the end; none of them go anywhere near the side of the frame. The beak is long, and drawn out, and the head looks rather like that of a raven. There is an oval, blank patch on the side of the head, containing a cluster of three dots. The base of the crown is almost straight, and is very close to the head. The right half of the shield contains nineteen vertical lines, the dividing-line being very much thicker than the others. This line does not touch the base of the shield. The lines are fairly straight and regular. The key is $4\frac{1}{2}$ mm. high, and there is no line of shading up the barrel, which is less than $\frac{1}{2}$ mm. wide, instead of $\frac{3}{4}$ mm. The handle roughly resembles a mulberry or blackberry, being a cluster of seven oval balls. The motto-scroll does not touch the inner frame either side; it is $\frac{3}{4}$ mm. from it on the right side, and nearly $1\frac{1}{2}$ mm. from it on the left side. The PO of POST can be read; there is a horizontal stroke above the two letters, which are very small. LUX is altogether absent. Part of the shaft of the T of TENEBRAS is dark, but the head and all the rest of the letters

are very faint. There are only three vertical lines before the T, and the A has a cross-bar. The H of JHS leans over towards the S. It is crossed very low down, and is far nearer to the S than to the J.

For easy identification of this particular forgery, I think the PO in the left-hand end of the label, and the crooked and misplaced H of JHS, are the easiest tests.

Sixth Forgery.

Lithographed, on thick, blue-green, wove paper.

Top of the stamp.

The 1 of 10 slopes up to a very sharp point, but there is very little side-stroke. There is no stop after the 10. I fancy there is no stop after CENT, but my specimen is cut in the right top corner, so I cannot be sure. The shaft of the T of PORT is $2\frac{3}{4}$ mm. from the C of CANTONAL. There is no cross-bar to either A of this word, and the first N is of normal shape. The compartment containing the 10 is about $5\frac{1}{4}$ mm. wide; the next compartment is $20\frac{1}{2}$ mm. wide; as the third compartment is cut, I cannot tell the width of it.

Left-hand half.

The stamp measures a shade over 14 mm. wide by $15\frac{1}{4}$ high. The thin, inner vertical line of the frame on the left side is drawn too long at the bottom, so that it touches the bottom outline of the stamp; the thin line under PORT LOCAL is drawn too long at the right-hand end, so that it touches the right-hand edge of the stamp. The corner of the head of the P of POSTE touches the frame. There is no head-stroke at the back of the T of this word. The D of DE has no head-stroke, and touches the outline above it. There are about thirty-three lines in the glory, but some of them are very blotchy. As far as I can make out, three of them touch the D, and three the E. The two letters are not joined, and the E has no cross-bar, so that it looks exactly like a C. The G of GENEVE is rather near to the frame above it, and it has no cross-bar. There is a stop after this word, but it looks rather as though it had been added, since the stamp was printed. The 5 has a normal head, and the neck is absolutely vertical. The stop after it is very small, and rather nearer to the 5 than to the shield. The P of PORT has a distinct head-stroke, but there doesn't seem to be any foot-stroke on the right

Right-hand half.

The stamp is about $15\frac{1}{4}$ mm. square. There is no break in any of the corners of the inner frame, and the lines of this frame are not drawn too long anywhere. The P of POSTE is a long way from the side of the frame, which is an easy test for this forgery. There is no head-stroke to the T of this word, and its tail is drawn at an angle, instead of being a rounded curve. There is a sort of angular hump at the head of the D of DE, and its upright shaft is under the tail of the L of CANTONAL. The two letters are not joined. One ray of the glory seems to touch the D, and two touch the E, one of them cutting slightly through its tail. The cross-bar of the E is very high up. There are about thirty-six lines in the glory. The G of GENEVE does not touch the frame above it; it is a better shape than the genuine. There is no stop after this word. The flag of the 5 is extremely short, but it joins the neck like the genuine does; the neck is nearly vertical. The stop after the C is very much nearer to the C than to the frame. The foot-stroke to the P of PORT is equal both sides; the T has no head-stroke, and the tail is very faint. The L of LOCAL is far to the left of the dividing-line of the shield,

Left-hand half.

side. It is not at all lanky. The T has no head-stroke. The first L of LOCAL touches the shield above it. It is a long way to the left of the centre of the shield. The O is considerably smaller than the C, instead of being slightly larger. The last L does not seem to have any head-stroke. The thin, inner line of the shield is not broken in the left top corner. There are about fourteen dots above the eagle, including two in the hollow between the wing and the neck. Below the eagle, there are nineteen dots, including two between the wing and the leg. The wing shows about eleven feathers, all broad, but they are difficult to count; four of them, or two pairs, touch the side of the shield. Two of the feathers touch the foot. There is no tongue in the beak. There is a large, irregular blank, for an eye, which is continued down the neck to the breast, by a wavy line. In the right half of the shield, there are fifteen vertical lines, counting along the top, and fourteen, counting along the bottom, the dividing-line being a good deal thicker than the rest. The one next to the dividing-line begins all right at the top, but it runs into the eagle, where the eagle joins the dividing-line. The key is only $4\frac{1}{2}$ mm. high, and has one extremely short, vertical line in it, not much more than a dot. The dividing-line does not go down to the base of the shield. The left-hand end of the motto-scroll contains OS; the right-hand end only has L. The letters JHS slope slightly down to the left; they are fully as tall as the letters of TENEBRAS.

Right-hand half.

and it touches the shield like the left-hand half. There is hardly any foot-stroke to this letter. The O is very much shorter than the C, and the final L has a head-stroke both sides, and a foot-stroke on the right side only. It is rather taller and thicker than the first L. The stop after it is very small. There are fourteen dots above the eagle, one of them touching the crown, and two touching the back of the head and neck. There are only two dots in the hollow between the wing and neck; below the eagle there are about eighteen dots, including one in the hollow between the leg and the wing. The wing shows eleven feathers, the upper five being very broad; the third and fourth feathers touch the frame. The beak and eye are the same as in the left-hand half, except that the line from the eye to the breast is absent. There are fifteen vertical lines in the shield, at the top, and fourteen at the bottom, the two right-hand ones being not at all parallel. The dividing-line is much thicker than the others, and it does not come down to the base of the shield. The key is the same as in the left-hand half, except that in the wards there is only a vertical line, instead of a cross. Only OS and L are legible in the two ends of the motto-scroll; the scroll does not touch the frame either right or left; indeed, on the left side, it is $1\frac{1}{2}$ mm. from the frame. The J of JHS slopes towards the H, and the H does not seem to have any cross-bar; the letters are fully as large as those of TENEBRAS.

I think perhaps the very short O of LOCAL in both halves is about the simplest test for this particular forgery.

Seventh Forgery.

This appears to be the same as the third forgery of de Reuterskiöld. It dates from 1878. My single specimen is a washed-out-looking thing, but more correct in the details than some of the counterfeits already described. Lithographed, on rather thin, very yellow-green wove paper.

Top of the stamp.

There is no visible serif to the head of the *l* of *lo*, and the stop is very small and faint. The first *A* and *N* of *CANTONAL* are like the genuine; *i.e.*, with no cross-bar to the *A*, and the *N* malformed. The second *A* has a distinct cross-bar. The vertical line between *lo* and *PORT* has disappeared. The vertical lines enclosing *CENT* (the only ones visible in my specimen) are $5\frac{1}{2}$ mm. apart. The upright shaft of the *T* of *PORT* is only $2\frac{1}{2}$ mm. from the *C* of *CANTONAL*.

Left-hand half.

The stamp is the same size as the genuine. The thin, inner frame is not drawn too far at any of the corners. The corner of the head of the *P* of *PORT* does not quite touch the frame, and the head-stroke of the *T* is a sort of slanting ball. The head and shoulders of the *G* of *GENÈVE* are curiously bent forwards, apparently to avoid touching the frame. There is an acute accent over the second *E* of this word (*Ê*), instead of a grave accent (*È*), which is a very easy test. The glory contains twenty-two lines, the middle ones very faint. None of them seem to touch either the *D* or the *E* of *DE*. The head of the *5* is the same as the genuine. The neck slants very slightly *forwards*. The stop after the *C* almost touches the frame. The *P* of *PORT* has a long head-stroke, and long foot-strokes, and the *O* seems to slant to the right, while the head-stroke to the *T* is rather concave or crescent-shaped. Its tail curls up very slightly. The shape and position of the letters of *LOCAL* are very like the genuine, except that the last *L* has a foot-stroke both sides. The thin inner line of the central shield is not broken at the left top corner. I can only make out twelve dots above the eagle, including three in the hollow, between the wing and the neck, and twenty-two below the eagle, including three in the hollow, between the leg and the wing. These dots are exceedingly faint. There are eight broad feathers in the wing, as in the genuine, but only six thin ones. None of the feathers touch the wing. The beak is open, but there is no tongue; and the whole head reminds one of

Right-hand half.

The stamp is $15\frac{1}{2}$ mm. wide, by $15\frac{1}{2}$ mm. high. There is a break in the left top corner of the inner frame, like the genuine, and the right vertical line of it, as in the genuine, is drawn too high, and touches the thick, top line of the frame. The head of the *P* of *POST* touches the frame. The *D* of *DE* *almost* touches the frame above it, and has hardly any sign of a head-stroke. Its upright shaft is decidedly to the left of the centre of the shaft of the *L* of *CANTONAL* above it. Three lines of the glory touch the *D*, one of them cutting into its body, and two touch the *E*. These letters are not joined. There are about twenty-nine rays in the glory; they are very blotchy on the right side. The *G* of *GENÈVE* does not touch the frame above it, and the first stroke of the *N* comes down lower than the other. There is a grave accent over the second *E*, and a stop after the word, as in the genuine. The top of the *T* of *PORT* curls backwards, but it has no proper head-stroke. The dividing-line of the shield is not prolonged to the base. If this line were prolonged downwards, it would only graze the right edge of the first *L* of *LOCAL*, instead of cutting centrally through it; *i.e.*, the *L* is a little too much to the left. The *O* of this word slopes to the right, and the final *L* has a short head-stroke both sides. The thin, inner line of the central shield shows a break in the left top corner, like the genuine, and the right vertical line joins the top line under the stop after *CENT*, as in the genuine. There are only ten dots in the shield, above the eagle,

Left-hand half.

that of a young nestling ready for food. There is a distinct eye. I can only make out nine vertical lines in the shield, counting at the top, and thirteen, counting at the bottom. The one next to the dividing-line seems to run into the said dividing-line, near the top. They are all very faint. The dividing-line does not run down to the base of the shield. The key is $4\frac{1}{2}$ mm. high. It has no knob at the top; a test which will distinguish it both from the genuine, and from all other counterfeits with which I am acquainted. It has one long line up the barrel, and a short one and a dot at the top. The right and left halves of the handle are not alike. OST and LUX can be read on the scroll. It touches the frame on the right side, but not on the left, the same as the genuine. The letters JHS are smaller than those of TENEBRAS, and the s of the former word has its head much higher than the tail, and higher than the JH. There are only two very faint lines before TENEBRAS. The A has no cross-bar, the same as the genuine.

Right-hand half.

with apparently none in the hollow, between the wing and the neck, and about eighteen below the wing, including one dot in the hollow, between the leg and the wing. The wing shows about eight broad feathers, and two narrow ones. The foot touches the seventh broad feather from the top. The third feather from the top touches the side of the shield, and the second from the top very nearly touches it. The beak has a long upper mandible. It is open. The eye is distinct, but small. It is placed higher up than in the left-hand half. The base of the crown, in both halves, is flat, instead of concave. There are thirteen vertical lines in the shield at the top, and twelve at the bottom. The dividing-line is thicker than the others, which are very faint. The said dividing-line does not reach down to the bottom of the shield. If prolonged downwards, it would graze the right-hand edge of the last L of LOCAL. The key is $4\frac{1}{2}$ mm. long; it has a knob, like the genuine. The s of JHS is taller than the other letters. OST and LUX can be made out in the scroll. The said scroll does not touch the frame either side.

The easiest tests for the identification of this particular forgery are: the lack of a knob to the top of the left-hand key, and the acute accent to the second E of the left-hand GENÈVE, while the right-hand GENÈVE has a grave accent.

Eighth Forgery.

Lithographed, on thick, hard, blue-green wove paper.

Top of the stamp.

The head of the t of 10 is square, instead of sloping to a sharp point. The three compartments measure $5\frac{1}{2}$, $20\frac{1}{2}$, and 6 mm., respectively. The first A of CANTONAL has a cross-bar, and the first N is of normal shape. The shaft of the r of PORT is less than $2\frac{1}{2}$ mm. from the C of CANTONAL. If the dividing-line between the two stamps were prolonged upwards, it would cut centrally through the first N of CANTONAL, but, in the genuine, the line would cut through the right foot of the first A.

Both halves of the stamp.

These are both alike. The stamp is 15 mm. square. The thin, inner frame is not broken, or prolonged, at any of the corners. The P of POSTE touches the frame, like the genuine, but it has a very square-looking head. The s does not slant at all towards the T. The said T has no head-

stroke, hardly the faintest sign of a cross-stroke, and no hook to its tail. The D of DE touches the frame above it. It has no head-stroke. In the left-hand stamp, the shaft of this D comes under the right end of the P of PORT, and, in the left-hand half, the D comes under the very end of the tail of the L of CANTONAL. The letters JHS are about as tall as those of TENEBRAS, but the J is too short. The glory contains twenty-five lines, and no lines can be counted behind DE, as the word is sunk into the glory, so that the bases of the letters are level with the edge of the central sun. One line touches the back of the D. Part of the back of the head of the G of GENÈVE is cut off entirely, by the thin line above it. This part does not show above the thin line, but is erased altogether, so that the upper tongue of the G appears to be a projection from the frame. There is no stop after GENÈVE. The 5 is a normal figure, but the end of the flag is thick and clumsy. The stop after it is very much nearer to the shield than to the flag. The P of PORT has head- and foot-strokes; it leans very slightly backwards. There is no head-stroke at the back of the T. The first L of LOCAL is exactly under the dividing-line of the shield. It touches the shield, and has a most ridiculously-long head-stroke on the left. The O is *very* much smaller than the C. The final L is shorter than the other, and is just under the right-hand edge of the shield. The stop after this L is only $\frac{1}{2}$ mm. from its centre. The thin, inner line of the central shield is not broken in the left top corner, but the left-hand line projects a little above the top horizontal line. There are twenty-three dots in the shield above the eagle, including three very faint dots in the hollow, between the wing and the neck, two which touch the back of the eagle, and two which are joined to the dividing-line. Below the eagle, there are about thirty-six dots, including nine dots in the hollow, between the wing and the leg. The upper part of the wing is a black mass, which does not show the individual feathers. It is firmly joined to the frame. The joint of the leg is a very *rounded* curve, and the claws do not go near the wing. The beak is open; it touches the wing, which is an easy test. There is a good-sized eye, placed very low down. There is no crown, which is another easy test. The key-half of the shield contains fourteen vertical lines; they are all parallel. The key is $4\frac{1}{2}$ mm. high; it has one line in it, running from top to bottom of the barrel; its handle is like an old-fashioned door-knocker. The dividing-line of the shield does not touch the bottom of the shield. The motto-scroll just touches the frame on the left, but not on the right. POS is legible, but there is no sign of any of the letters of LUX. The second E of TENEBRAS has no tongue, and the A is crossed.

I think the crownless eagle, with the beak touching the wing, is the easiest test for identifying this particular forgery.

Ninth Forgery.

This is a very poor production, and I really do not think it is necessary for me to give an elaborate description of it. Coarsely lithographed, on thick, very soft, blue-green wove paper. The upper inscription is far too large and too tall, so that the 10 and PORT CANTONAL reach almost from top to bottom of the containing-label; indeed, the 1 and PORT actually stand on the lower line. The dividing-line between the stamps, if prolonged upwards, would cut into the N of CANTONAL to the left of its centre. The inscription in the glory is JMS, instead of JHS. There is no trace of any part of POST or LUX in the scroll, and its two ends are a long way from the sides of the frame. The two stamps are not quite alike, but I think the above description will be found amply sufficient.

The JMS and the tall upper inscription will easily identify this particular counterfeit.

Tenth Forgery.

Lithographed, in bright *blue*, on yellowish-white wove paper. Of course the paper and colour instantly condemn this forgery in its present state; but it is quite possible that it may also exist in black, on green, and therefore I must describe it.

Top of the stamp.

There is no stop after 10 or CENT. The o of 10 is much smaller than the i. My specimen is cut in two, and the first A of CANTONAL is missing, so I cannot say whether it is crossed, but the second A is. The first N is of normal shape. The O is too small, and leans over slightly towards the T.

Left-hand half.

The thin, inner line of the frame is not broken or drawn too long, at any of the corners. The back of the head of the P of POSTE touches the frame. The S does not slant towards the T. The T is quite as tall as the P, instead of much shorter, and it has no head-stroke. The D of DE touches the frame above it. The glory, in my specimen, is damaged, so I am unable to say how many rays there are. The rays are short in the centre, to allow of the insertion of the DE, so that none of them touch the bases of the letters. The back of the head of the G of GENÈVE is slightly cut away by the frame-line above it; the N is a reversed (not inverted) letter, and the grave accent is absurdly long, coming over the N as well as the E. The head of the 5 joins the neck in a normal manner. The neck is much slanted. The stop is nearer to the 5 than to the shield. The P of PORT has long head- and foot-strokes. It is not lanky. There is no head-stroke to the T. The first L of LOCAL is in the proper position, but its head-stroke is too long and the foot is too long and too thick, both sides. The c has no tail. If the right-hand edge of the shield were prolonged downwards, it would pass far to the right of the shaft of the last L, instead of grazing it. The thin, inner line of the central shield is not broken anywhere. I cannot give the number of dots in the eagle-half of the shield, as my specimen is damaged. The wing

Right-hand half.

The thin, inner line of the frame is not broken, or drawn too long, at any of the corners. The P of POSTE has a long head-stroke, and it is a long way from the side of the frame. The S slants very slightly towards the T, which has no head-stroke. The D of DE has hardly any sign of a head-stroke, and is a long way from the frame above it. The upright shaft is under the space between the L and the stop of CANTONAL. There are about twenty-two rays in the glory. The rays are shortened, to let in the DE, much the same as in the left-hand half. The accent on the È of GENÈVE is also the same as in the left-hand half. The neck of the 5 slopes even more than the genuine, and it has the appearance of an italic figure. The C leans rather backwards, and its back is not much more than $\frac{1}{4}$ mm., instead of 1 mm., from the edge of the shield. The P of PORT has long head- and foot-strokes, as in the left-hand half, and the T has no head-stroke, but it runs up to a sort of point. The first L of LOCAL is in the same position as in the left-hand half, instead of being under the dividing-line of the shield. It has a wide foot both sides. The foot of the last L touches the A on the one side, and the stop on the other, and its head-stroke is absurdly too long. This last L is in the same position as in the left-hand forgery. The inner frame of the shield is not broken anywhere. There are only nine dots above the eagle, including two in the hollow, between the

Left-hand half.

shows one very large, pointed feather at the top, and seven short spikes below, none of them touching the side of the shield. I do not think that the claw touches the wing, as far as I can see in the damaged state of my specimen. There is a coloured dot for an eye, in a white space. The key-half of the shield shows fourteen vertical lines at the top, and thirteen at the bottom, several lines being missing below the handle of the key. The dividing-line of the shield is much thicker than the rest, and it does not run down to the base of the shield. The key is $4\frac{3}{4}$ mm. high. It has no long line up the barrel. The handle is of an indescribable shape, something like an old-fashioned door-knocker, which has been badly broken on the right side. The motto-scroll does not touch the frame either side. OS and UX (or UK?) can be seen. The A of TENEBRAS is crossed.

Right-hand half.

wing and the neck; and fourteen below the eagle, including one dot between the wing and the leg. The wing shows a large feather at the top, and the others are irregular and branching. The second from the top touches the side of the shield. None of the claws touch the wing. The lower mandible of the beak is so very short as to be practically invisible. Most of the face is white, with a coloured dot for an eye. The white extends in a dotted line down the back. The crown slopes downwards over the beak, and is in two parts. The key-half of the shield shows thirteen vertical lines at the top, and fifteen at the bottom. The dividing-line does not run down to the base of the shield. The key is $4\frac{3}{4}$ mm. high. It has one long, broken line up the barrel. The upper part of the handle is framed by a large ring, which encircles the barrel. The motto-scroll does not touch the frame either side. OS and UK (*sic*) can be seen. The A of TENEBRAS is crossed.

The stamp being in blue on white is a very easy test for identification of this particular forgery; but, should it exist in black or green, which is quite probable, the ring round the handle of the key in the right-hand half will suffice as a test. I have only had the right-hand half lately, but the left-hand half has been many years in my possession.

Eleventh Forgery.

This is the fourth forgery of M. de Reuterskiöld, and dates from about 1886. I have not seen it, and copy the description. Much better done than most of those hitherto described. It is sold at Geneva, with the word *facsimile* at the back. The word can easily be erased, and the colour of the paper (a very bright yellow-green) can be altered without difficulty, so that this counterfeit may become dangerous. It exists also on paper like the genuine. All the details of the design are well imitated except the following:—The three compartments of the top label measure $5\frac{1}{4}$, $2\frac{1}{4}$, and $5\frac{1}{4}$ mm. The width of the stamp is correct, but they are only $15\frac{1}{2}$ mm. high.

Left-hand stamp.

The vertical, inner line of the left-hand frame is drawn too high, and touches the thick, top frame; it does not touch at the bottom. The dividing-line of the shield does not run down to the base of the shield. The stop after the C touches the frame.

Right-hand stamp.

The inner, left-hand frame of the stamp is not drawn too high. The dividing-line of the shield does not run down to the base of the shield.

Twelfth Forgery.

This is the fifth forgery of de Reuterskiöld's book. It dates from 1889. I have not seen it, and transcribe the details. It is sold Geneva, with *facsimile*, in violet, on the face of the stamp.

Top of the stamp.

The three compartments measure $5\frac{1}{4}$, $20\frac{1}{2}$, and $5\frac{3}{4}$ mm., respectively. There is no stop after the 10. The letters of **PORT CANTONAL** are too large. The line separating the two stamps is *double*.

Left-hand stamp.

The stamp is $14\frac{1}{4}$ mm. wide, by $15\frac{3}{4}$ mm. high. The thin, inner line of the frame, on the left-hand side, is drawn too high, and touches the top of the stamp, like the genuine, but it does not touch at the bottom. In the inscription, **POSTE DE GENÈVE**, as in the genuine, the P touches the frame, while the D and the G do not touch. There is no stop after **GENÈVE**. **POST** and **LUX** are fairly legible. The letters **JHS** are very small. The dividing-line of the shield does not run down to the base of the shield. There are eleven vertical lines in the key-half of the shield. The first L of **LOCAL** very nearly touches the shield. The eagle's tail does not touch the frame below it. (In the genuine, neither tail touches the frame below it, but the tail in the left-hand stamp is further from the bottom than in the right-hand half.) There is no stop after **LOCAL**.

Right-hand stamp.

The stamp is $15\frac{1}{4}$ mm. wide, by $15\frac{3}{4}$ mm. high. The thin, inner line of the frame, on the right-hand side, is drawn too high, and touches the top of the stamp, as in the genuine, but it does not touch at the bottom. The thin, horizontal line at the top is drawn too long on the left side, and touches the left-hand side of the stamp, which is not the case in the genuine. The inscription, **POSTE DE GENÈVE**, **POST**, **LUX**, **JHS**, and the dividing-line of the shield, are all the same as in the left-hand half. There are twelve vertical lines in the key-half of the shield. The first L of **LOCAL** is at a good distance from the shield. The eagle's tail touches the frame below it. There is no stop after **LOCAL**.

The next three counterfeits I only possess as half-stamps, all being copied from the left-hand half of the genuine, judging from the position of the first L of **LOCAL**. As there is no indication of any top compartment, etc., I cannot say whether they were originally made as double stamps, or in their present condition.

Thirteenth (single) Forgery.

Poorly lithographed, in black, on very pale blue-green, or on dark blue-green. Also in black on *rose*, and in yellow-green on *white* wove paper. The stamp measures $14\frac{1}{2}$ mm. wide, by $15\frac{1}{2}$ mm. high. Specimens with a margin show an outer frame, of a thin line, surrounding the stamp, about $\frac{1}{2}$ mm. from it. The thin, vertical inner line of the frame is sometimes, but not always, drawn too high, so as to touch the top of the stamp, like the genuine; and the thin, horizontal line at the bottom of the stamp is almost always drawn too long on the left side, so as to touch the left frame. The thin, vertical line at the right side of the stamp is broken, in one or more places. The corner of the head of the P of **POSTE** does not touch the frame. The T of this word has no head-stroke,

but its cross-stroke goes right through the letter. There is hardly any sign of a head-stroke to the D of DE, and its top is further from the frame above it than the genuine is. There are twenty-two lines in the glory; none of them touch the D, and, usually, only one touches the E. The D and E are not joined. The G of GENEVE is a long way from the frame above it, and its cross-stroke extends outwards, as well as inwards. The head of the 5 joins the neck normally, and the said neck is perfectly upright. There is no stop after the 5, or after the C. The P of PORT has large head- and foot-strokes. The T has no head-stroke, and the cross-bar goes right through it. There is a stop after this word, which does not exist in the genuine, or in any other forgery. The first L of LOCAL is in the same position as in the left-hand half of the genuine, but its head-stroke is too long. The second L is too far to the right, being exactly under the right-hand outline of the shield, like the right-hand half of the genuine. It has a foot-stroke both sides. The thin, inner outline of the central shield is not broken in the left top corner. There are about eleven dots above the eagle, with no dots in the hollow between the wing and the neck, and about fifteen exceedingly faint dots below the eagle. The head is a good test, as it is merely *outlined*, instead of solid, and the front of the neck is not even outlined. The eye is a distinct, black dot. There is no crown, but one or two little spikes stick up from the top of the head. The lower mandible of the beak is absent. The wing has eight feathers, the lowest three being merely stumps. The second and third from the top touch the side of the frame. The knob of the key touches the frame above it. There are five vertical lines to left of the knob, and seven to right of it. Counting along the bottom of the shield, there are fifteen rather blotchy, vertical lines. The key is slightly over 5 mm. high; its knob slants to the right; there is no line up the barrel. The handle is a plain ring, with a knob at the bottom; and the vertical lines of the background show through the ring, and through its hollow centre. The dividing-line of the shield is thicker than the others, and does not reach down to the base of the shield. The motto-scroll is a good distance from the frame on the right side, and quite $1\frac{1}{2}$ mm. from it on the left side. No portion of POST is visible, but the LU of LUX can be made out. The letters of TENEBRAS are of different sizes, and the A is crossed. The left leg of the H of JHS touches the outline below it. The clear space in which JHS is placed, is a transverse oblong, instead of an oval.

Fourteenth (single) Forgery.

Lithographed, in black, on light and dark yellow-green, light blue-green, and also on *white*, and on pale *ochre-yellow* paper. This is not at all a bad-looking forgery, when printed on the light yellow-green paper. It is intended to represent the left-hand stamp. It measures a shade under 14 mm. wide, by rather less than $15\frac{1}{2}$ mm. high. The inner line of the frame, down the right side, is drawn too long, and touches the bottom frame. This is not the case with the genuine, where it is too long at the top and bottom of the *left* side. The P of POSTE has a distinct head-stroke, and this head-stroke (and not the corner of the head of the P) touches the frame. The glory contains about thirty-one lines. Two of them, above the N of TENEBRAS, are much shorter than the rest. One line touches the D, one nearly touches the E, and one cuts through the tail of the E. The D and E are not joined. The cross-bar to the tail of the G of GENEVE extends outwards, as well as inwards, the centre stroke very nearly touching the E. The flag of the 5 is like the genuine. The P of POST has a thick head-stroke, and also a fairly long foot-stroke on the right side, though there is very little foot-stroke on the left side. The

first L of LOCAL is in the same position as in the left-hand stamp of the genuine, but its head-stroke is exaggerated. The second L is too much to the left, so that, if the right-hand edge of the shield were prolonged downwards, it would pass clear to the right of the shaft of the L, instead of grazing it. The inner outline of the central shield is not broken in the left top corner. There are thirteen dots above the eagle in the shield, including a triangle of three dots in the hollow, between the wing and the neck, as in the genuine; and twenty-one dots below the eagle, including two dots between the wing and the leg. The wing is nicely done, and shows eight broad feathers, and about six narrow ones. As a rule, none of the feathers really touch the frame, but in heavily-printed copies, either the second broad feather or the second narrow one will just touch the frame. The upper mandible of the beak has a peculiar Roman-nosed shape, like the nose of a rhinoceros, when the horn has been removed. There is no sign of any tongue. The central peak of the crown touches the frame above it. The central toe of the foot is absolutely straight. It does not touch the wing, and points towards the bottom peak of the motto-scroll. There are thirteen vertical lines in the other half of the shield, counting at the top, and fourteen at the bottom. The dividing-line does not run down to the base of the shield, and the line next to it only runs up as far as the middle of the shield. The key is only $4\frac{1}{2}$ mm. high. There is one line of shading in the barrel, from the top, nearly to the bottom. The motto-scroll touches the frame on the right side only, as in the genuine left-hand half. OST and LU are legible. Perhaps the best test for the identification of this particular forgery is that the central point of the crown touches the frame above it.

Fifteenth (single) Forgery.

This is very poor. Coarsely lithographed, on *yellow* paper, which has been coloured a sort of Prussian-green on the face. This is meant to imitate the left-hand stamp. My specimen is closely clipped, so I cannot give measurements. The thin, inner line of the frame does not appear to be drawn too long, at any of the corners. The T of POSTE has no head-stroke at the back. There are twenty-seven lines in the glory. Four short ones are under the D of DE, but do not touch it. One touches the E. The D and E are not joined. The G of GENEVE touches the outline above it, and the cross-stroke to its tail extends not only inwards, but also outwards, touching the E. There is a stop after GENEVE. The head of the 5 is normal, its neck is *very* slanting. The stop after it is nearer to the 5 than to the shield. The P of PORT has large head- and foot-strokes. The T of this word slants over to the right; it has no head-stroke at the back. The first L of LOCAL is in the same position as the genuine. The last L is too much to the left; so that, if the right-hand edge of the shield were prolonged downwards, it would pass considerably to the right of the shaft of the L. There is no break in the left top corner of the inner frame of the central shield. Above the eagle, there are nine large, easily-counted dots, and these include two dots between the wing and the neck. There are about sixteen dots below the eagle, but my specimen is damaged, so I cannot be sure as to the exact number. There is one dot between the wing and the leg. The foot does not touch the wing, and it points towards the 5. The wing has only one large feather, and about seven little spikes. The topmost spike just touches the frame. The beak is like that of a crow, and is *very* slightly open. There is a light speck for an eye, and a larger one just below it. The front point of the crown touches the frame above it. There are fourteen vertical lines in the key-half of the shield, counting at the top,

and about twelve at the bottom. They are *very* badly drawn. The key is only $4\frac{1}{2}$ mm. high. It has one long, crooked line up the barrel. There is only a black dot in the wards, in place of the cross of the genuine. The handle looks like two or three links of a chain, twisted up together in a complicated manner. The central dividing-line of the shield does not reach down to the base of the shield, but two of the lines to the right of it do. The motto-scroll does not touch the frame, either side. OS and UX are legible. The A of TENEBRAS is crossed. The letters JHS are quite as tall as those of TENEBRAS, and the J slopes over, towards the H. The dot, instead of a cross, in the wards of the key, and the fact that the front peak of the crown touches the frame above it, will serve to identify this particular forgery.

POSTMARKS.

Genuine.—Three “rosettes” are found, two of them somewhat after the style of 25, which is a Zürich cancellation. In the first, there is a six-pointed star in the centre of the cross, and the outer corners, (where the four balls of the Zürich postmark come), have heart-shaped ornaments, and the centres of the ends of the four broad petals are broken, with the ends curling in towards the ends of the cross. The second cancellation has a cross, with ace-of-spades ends, in the centre of the outlined cross; and there are *two* balls in each of the outer corners of the postmark. The third cancellation is very different. There is no outlined cross, but only four petals, with the heart-shaped ornaments outside the corners of the petals. I have never seen this cancellation myself. All the above are struck in red.

First Forgery.—25, in red.

Second Forgery.—25, in red.

Third Forgery.—25, in red.

Fourth Forgery.—This is very like the second genuine cancellation described above, but the ends of the little cross in the centre of the large one are shaped like acorns. This is struck in red.

Fifth Forgery.—34, in red; also 25, in black.

Sixth Forgery.—My specimen has an indistinct, red blotch, probably 25.

Seventh Forgery.—Something like 25, in red; but there are some indistinct marks in the central cross.

Eighth Forgery.—Rather like 25, in red; but there are no balls in the outer angles.

Ninth Forgery.—51, in black.

Tenth Forgery.—Uncancelled.

Eleventh Forgery.—Cancellation not known to me.

Twelfth Forgery.—Cancellation not known to me.

Thirteenth Forgery.—Uncancelled; also 51, in black.

Fourteenth Forgery.—25, in red; but generally uncanceled.

Fifteenth Forgery.—Uncanceled.

LATER ISSUES.

Of these there are three types:—

Type 1. 5 c., black on green. Round-headed eagle, with open beak, and five claws; wing pointing upwards, and not touching the side of the stamp; fine glory.

Type 2. 5 c., black on green. Flat-headed eagle, with closed

beak, and six claws (two of them very thin); wing not pointing upwards, but touching the side of the stamp; fine glory.

Type 3. 5 c., envelope, green on white. Crowned eagle, with widely-open beak, and four claws; wing pointing upwards, as in type 1, but touching the side of the stamp, as in type 2; very coarse glory.

To avoid confusion, I will describe the three genuine types first, and then take the whole of the forgeries afterwards; as many of the counterfeits contain portions of two, or even of all three of the genuine types, besides being sometimes both in black on green, and in green on white; so that it is not always easy to determine which of the three types is intended.

Issue of 1st April, 1845. Type 1. 5 c., black on yellow-green.

Genuine.

This is usually known as the "small eagle" type. Lithographed, on the same yellow-green wove paper as that of the double stamp, just described. The stamp is $16\frac{3}{4}$ mm. wide by $19\frac{1}{2}$ mm. high, and the central shield is $9\frac{1}{4}$ mm. wide at the top. The top-stroke at the back of the head of the P of POSTE not only touches, but actually cuts through the thin, inner line of the frame to left of it. The glory contains IHS, in very thin letters, much smaller than those of TENEBRAS. There are forty-nine rays in the glory; the ends of twenty-two of them show below the TENEBRAS-scroll, between it and the top of the shield. Some of the rays above the scroll reach further to the left than the T of TENEBRAS; some reach further to the right than the S of that word; and one ray touches the foot of the I of IHS. (This is very distinct in fine specimens.) The forked ends of the motto-scroll point downwards, towards the 5 and the C, respectively. These ends do not go near the frame; the point of the outer fork on the left side being $\frac{3}{4}$ mm. from the left-hand frame, and the point of the outer fork on the right side being 1 mm. from the right-hand frame. The Latin motto is POST TENEBRAS LUX, which can be easily read. The cross-stroke to the tail of the G of GENÈVE touches the following E, and indeed, the cross-stroke in the E appears to be a continuation of that of the G. There is a grave accent over the second E, and a stop after the word. The 5 has a large, rounded body, a short neck, which is very short between the flag and the body, and the flag itself is *very* hollow at the top, and tapers to a fine point. The ball of the tail is thick, heavy, round, and large, for the size of the numeral. There is a stop after it, nearer to it than to the shield. There is no stop after the C. Three of the feathers of the eagle's tail touch the bottom of the shield, and the end of the lowest feather, which is a mere, curved hair-stroke, cuts through the inner line of the base of the shield, touching the outer line, and pointing towards the head of the C of CANTONAL. There are about eleven broad, dark-coloured feathers in the wing, but they are rather difficult to count. The tip points upwards, towards the T of TENEBRAS, and none of the feathers touch the frame. The beak is open, with the upper mandible curving down, to about level with the point of the lower one. In rather heavily-printed copies, the space between the two open mandibles is filled in with black, so that it is not always easy to see that the beak is

open. The key-half of the shield contains twenty-two vertical lines at the top, and twenty-one at the bottom. The second line merely touches the central dividing-line, and is very crooked. The dividing-line is drawn too high at the top, and cuts through the inner line of the top frame, though not quite touching the outer line. The one to the right of the dividing-line is drawn too low, and cuts through the inner line of the base of the shield, though not touching the outer line. One of the lines runs vertically up, through the barrel of the key. The key itself is nearly $6\frac{1}{2}$ mm. high, and nine of the vertical lines can be seen through the handle. The said handle has three outlined balls outside it (one at the bottom, and one each side), but the upper ones are hooks, rather than balls, as the curve of the outline is not complete. There is an oblique stroke to the head of the T of CANTONAL, and a similar, but much fainter one, to the T of POST. There is a stop after CANTONAL, which almost touches the foot of the L.

Issue of 1847-8. Type 2.

5 c., black on yellow-green (January, 1847).

Black on dark green (August 22nd, 1848).

These are two distinct printings. The first was on the same yellow-green paper that was employed for the double stamp, and for the 5 c., type 1, just described. I conclude that, when the original paper was exhausted, no further supply could be procured of the same tint. Fifty thousand stamps were, I believe, printed on the dark green paper. It will be understood that the design is the same for both printings.

Genuine.

This is known as the "large eagle" type. Lithographed, on yellow-green, or on dark green paper, as above. The stamp is $16\frac{3}{4}$ mm. wide, by $19\frac{1}{2}$ mm. high, as in type 1, but the shield is $9\frac{1}{2}$ mm. wide, instead of $9\frac{1}{4}$ mm. The very long top-stroke to the head of the P of POSTE touches, but does not cut through the frame-line to left of it. The glory contains IHS, in rather larger and thicker letters than in type 1, but behind it can be seen traces of JHS, in very much larger letters, which have been drawn first, and more or less imperfectly erased. There are about seventy-three rays in the glory,

but they are difficult to count, as some of them are split. The ends of about sixteen of them can be seen, between the bottom of the TENEBRAS-label and the top of the shield. They are not so plain as in type 1, because the TENEBRAS-label is much closer to the shield. On the left side, only one ray reaches as far to the left as level with the middle of the T of TENEBRAS, and there is no ray touching the I of IHS. The outer fork of the left-hand end of the scroll turns outwards, towards the frame (instead of downwards, towards the 5), and it goes rather close to the frame. The outer fork of the right-hand end of the scroll not only reaches, but *cuts through* the inner line of the frame to right of it. (Almost all the forgeries fail in this test.) The motto is perfectly plain, especially LUX, behind which there is no shading whatever; and behind POST, there is also no shading, but there is a little line, proceeding from the hollow of the fork, which touches the P of POST. The G of GENÈVE is of an ugly shape, with the lower portion much larger than in type 1, so that its cross-stroke, if prolonged to the right, would almost pass over the head of the following E, instead of forming the cross-stroke to the E. The cross-

stroke to the G does not touch the E. There is a grave accent over the second E, and a stop after the word, which is much closer to the final E than in type 1. The 5 has a small body, a very long neck, and a thick, blunt flag, the top of which is nearly horizontal, except at the end, which turns up slightly. The end of the tail of this numeral can hardly be called a ball. There is no stop after it, and none after the C. A thin, curved hair-line from the eagle's tail touches the inner outline of the base of the shield, but none of the feathers of the tail touch the said base. There are ten rather light-coloured feathers in the wing; the tip points to the left, towards the T of POST, and the third and fourth feathers from the top touch the side of the frame, while the second from the top *very* nearly touches the side of the frame. The top of the eagle's head is flat; the beak is closed, with the upper mandible curving down, beyond and below the lower one. There are eight dots in the hollow, between the head and the wing. The key-half of the shield contains eighteen vertical lines. The top end of the central, dividing-line is drawn very slightly too high, so as just to cut through the inner line of the frame above it; while the bottom end of the said dividing-line is drawn so long that it cuts through the inner line of the base of the shield, and joins the thick outer line. One broken line runs up through the barrel of the key. The key itself is the same height as in type 1, and eight of the vertical lines can be seen through its handle. Of the three balls, outside the handle, the bottom one is much the same as in type 1, but the side-balls have degenerated into simple lines, nearly horizontal. The top of the T of CANTONAL, in good copies, shows a slightly forward slant, in place of the sloping line of type 1. The T of POSTE has a faint, horizontal head-stroke at the back, instead of the sloping line in front. There is a stop after CANTONAL, but it is further from the foot of the L than in type 1, and on a slightly higher level. Three lines of the glory run up, between DE and GENÈVE; the left one reaches a good deal higher than the top of the E, and nearly touches its head; the right one nearly touches the back of the G, and the middle one runs clear between the two words.

Issue of February 27th, 1846. Type 3. Envelope stamp; 5 c., green on white.

There were 40,000 of these envelopes printed; sizes 139 × 111, 139 × 77, and 139 × 56 mm. In 1849 and 1850(?) some of them were cut, officially, and used as adhesives. De Reuterskiöld and Mirabaud's book says that they have generally been cut with a paper-knife at the top and to the right, and with scissors at the bottom and to the left. Most of the used genuine ones found in collections have forged cancellations.

Genuine.

Lithographed, in yellow-green, on rather rough, white wove paper, usually made yellowish by age. The stamp is $17\frac{1}{2}$ mm. wide, by $20\frac{1}{2}$ mm. high, and parts of the design are a mixture of both the preceding types. The central shield is $9\frac{1}{2}$ mm. wide. The head-stroke of the P of POSTE is some distance from the frame to left of it. The glory is very coarse, and contains JHS, in letters considerably larger than those of TENEBRAS. There is a distinct, circumflex accent over the H. The glory contains forty-two rays; some of them reach almost to the top of the stamp; one goes nearly as far as the P of POSTE, of the upper inscription, one touches the right side of the E of DE, one goes up vertically, clear between DE and GENÈVE, one goes up vertically, through the centre of the G, one cuts slantingly through the first E, one touches the base of the

second E, one touches the base of the V, one touches the base of the last E, and one runs almost as far as below the base of the stop after GENEVE. The upper fork of the right-hand end of the motto-scroll *almost* touches the frame, while the upper fork of the left-hand end of the scroll is $\frac{3}{4}$ mm. from the frame. These ends do not point either to the S or the C. The motto is quite legible, although it is in much smaller letters than before. The G of GENEVE is the same ugly shape as in type 2. There is a grave accent over the second E, and a large stop after the word. The S is much the same as in type 2, but has a shorter neck, and a well-developed ball to the tail. There is no stop after it, but there is one after the C. The said C has an inward-curving tail. The eagle's tail does not touch the bottom of the shield; it consists of two feathers, curving to the left, instead of the six almost straight feathers (and a hair-stroke) of type 1, and the five almost straight feathers of type 2. The foot shows only four broad claws and a stump, whereas there are five, rather thin, dark claws in type 1, and six claws, two of them thin, in type 2. (Evidently, these heraldic eagles have borrowed an odd claw or two, from the Dorking variety of a commoner species of the feathered race; or perchance naturalists were rare amongst Swiss artists, in the first half of the nineteenth century!) The tip of the wing points upwards, towards the T of TENEBRAS, as in type 2, though the end is more curved. There are ten feathers altogether, of which the second, third, fourth, and fifth touch the side of the shield, something like type 2. They are easy to count. The whole wing is of absolutely solid colour. The head is flat, as in type 2, but there is a crown over it, which does not exist in either of the other types, and the front of the bottom of the crown usually touches the front of the head. The beak is wide open, with the upper mandible projecting much further than the lower one. There are about thirteen dots in the hollow, between the wing and head of the eagle. The key-half of the shield contains fourteen coarse, vertical lines; the dividing-line is drawn a little too high at the top, but less than in type 2. The lines are all parallel, and one broken one goes up the barrel of the key. The dividing-line does not go to the thick, bottom outline of the shield, but the curved, inner outline of the shield itself touches the bottom outline. The key is much taller than in the other types, being $7\frac{1}{2}$ mm. high, and only two lines of the background can be dimly seen through its handle, which is very unlike the other types, and is more like two human ears, placed facing one another. There is a large, ball-shaped lump at the bottom of the handle, but no balls or lines at the sides of it. There is a heavy horizontal head-stroke to the back of the T of POSTE; and the S is quite flat at the bottom. The D of DE, the T of PORT, and the L of CANTONAL have similar head-strokes, but not so thick. There is no stop after CANTONAL. The J of JHS has a top-stroke, but the H is a sans-serif letter.

Forgeries of the three types above described.

For each forgery I will put, when possible, the type which it is intended to represent.

First Forgery.

(Type 1; FOST.)

Lithographed, on rather dark, yellow-green wove paper, thick and hard. The stamp is 16 mm. wide, by nearly 19 mm. high, and the shield is $8\frac{1}{2}$ mm. wide at the top. The stroke at the back of the head of the P of POSTE is curved, and raised above the head, and does not quite touch the frame to left of it. The letters IHS are very nearly as large as those of TENEBRAS, and the I leans over towards the H. There are about fifty-two rays in the glory; one very faint ray extends to under the E of POSTE,

and six or seven extend to the right, further than the S of TENEBRAS ; only about ten of their ends show below the TENEBRAS-scroll. The first word of the motto, in my specimen, appears to be POST, but the F may be only a broken P. The last word is rather covered by the postmark, but it seems to be either LWX, or UNX. The cross-stroke to the tail of the G of GENÈVE extends inwards only, and not outwards to the E. I cannot say whether there is a stop after GENÈVE, on account of the postmark. The left-hand, forked end of the scroll is 1 mm. from the side of the frame. Ten lines and a dot can be seen, after the S of TENEBRAS. The body of the 5 is fairly like the genuine, but it has a ridiculously short flag, less than $\frac{1}{2}$ mm. long, instead of over $\frac{3}{4}$ mm. There is no stop after it. The eagle's tail is nearly 1 mm. from the inner outline of the base of the shield. The feathers of the wing are so run together, that I have not been able to count them. The tip points up the left top corner of the shield. The lower mandible of the beak bends down, in the same curve as the upper one, so that it looks like a tongue. The key-half of the shield has twenty-one vertical lines, counted at the top, and twenty at the bottom. The lower part of the dividing-line is dotted. This line is not drawn too high, but the second to right of it, and the fourth and fifth from the right-hand end, all trespass across the top, inner line of the frame. There is one dotted line up the barrel of the key. The three balls outside the handle of the key are solid black, instead of merely outlined. Eight vertical lines can be seen through the handle. The stop after CANTONAL is equidistant between the side of the frame and the foot of the L. The L has an extremely long head-stroke on the left side. The eagle has four drooping claws, instead of the five spreading ones of the genuine, and the whole of its face is quite bare of shading.

Second Forgery.

(Type 1; TREBLE FRAME.)

Apparently engraved in *taille-douce*, on very dark, blue-green wove paper, rather thin. The stamp is $16\frac{1}{2}$ mm. wide, by $19\frac{1}{2}$ mm. high, and the shield is $8\frac{3}{4}$ mm. wide. The head-stroke to the P of POSTE just touches the frame. There are about sixty-five rays in the glory ; many of them extend beyond the T and the S of TENEBRAS. The ends of at least thirty-four of them show below the TENEBRAS-scroll. The letters of POST and LUX are larger than those of TENEBRAS. The cross-stroke to the G of GENÈVE does not go near the E. The outer point of the left-hand end of the motto-scroll is less than $\frac{1}{2}$ mm. from the left-hand frame. The 5 is a nicely-shaped figure, with a large flag, and a normal neck. The eagle's tail only touches the base of the shield with one feather. There are about seven broad feathers in the wing, and the tip points up to the beginning of the TENEBRAS-label. There are twenty-two vertical lines in the key-half of the shield ; most of them have an appearance as though they were double. This is probably caused by want of ink. None of them are drawn too long. The thick outline of the shield also appears to be double, from the reason just mentioned. The thick, outer outline of the whole stamp is also double, nearly the whole way round ; so that the stamp has three thin outlines, instead of one thick one and one thin one. The key is only $6\frac{1}{4}$ mm. high. The stop after CANTONAL touches the foot of the L. The treble frame is an easy test for this forgery.

Third Forgery.

(Type 2?; 1NS.)

This has the scroll and flat-headed eagle of type 2, but the wing does not touch the frame. I will describe the differences between it and type 2.

Coarsely lithographed in black, on medium, blue-green, or on thin, *rose* wove paper; also in green, on white and yellowish-white wove paper. The stamp is $16\frac{1}{2}$ mm. wide, by $20\frac{1}{2}$ mm. high, and the shield is $9\frac{1}{2}$ mm. wide at the top. The top-stroke to the P of POSTE does not touch the frame; the head of the T of this word has a slanting point, instead of a cross-stroke, and the cross-bar goes through the letter. The glory contains INS, without any trace of erased letters; and the glory itself is simply an oval of triangular teeth, like those of a circular saw. None of these teeth extend further than the end of the N, and the beginning of the A, of TENEBRAS. The motto is very plain. Before the P of POST, in the said motto, there are some short strokes, which do not exist in the genuine. DE is equidistant between POSTE and GENÈVE, instead of being nearer to the latter word. There is no grave accent to the second E of GENÈVE, and no stop anywhere. Although there are no lines in the glory, the supposed ends of ten lines show between the TENEBRAS-scroll and the top of the shield. The outer fork of the left-hand end of the scroll goes within $\frac{1}{2}$ mm. of the side of the frame; the outer fork of the right-hand end of it touches, but does not cut through the right-hand frame. There is no line from the re-entering angle of the left-hand fork to the P of POST, and there are a few lines of shading both before and after LUX. The neck of the 5 slants too much, and there is a large ball to the tail. No part of the eagle's tail touches the base of the shield. There are eight feathers in the wing; none of them touch the frame. The head is flat, as in type 2, but the crest is much too large. There are only four dots in the hollow, between the wing and the neck. The key-half of the shield contains seventeen vertical lines; none of them are drawn too high, or too low. There is no line up the barrel of the key, which is $6\frac{1}{2}$ mm. high. Ten vertical lines of the background can be seen through the handle of it. The balls are absent, though there is a sort of knob at the bottom. The top of the T of POSTE has a forward slant, like that of the T of CANTONAL. There are, of course, no lines of glory running up between DE and GENÈVE.

Fourth Forgery.

(Type 2; INS. FIST.)

This is very like the last in general appearance, with the motto-scroll of type 2, and the flat-headed eagle, with the wing not touching the frame. Lithographed, on dark, blue-green wove paper. The stamp is $16\frac{1}{2}$ mm. wide, by $19\frac{1}{2}$ mm. high; and the shield is $9\frac{1}{2}$ mm. wide. The very thin head-stroke to the head of the P of POSTE just touches the frame. The glory contains INS, as in the last forgery, but in thinner letters, and the motto is FIST TENEBRAS LUX, though the F of the second word may be only a broken E. The rays of the glory are *very* short, and quite uncountable; they do not extend, right and left, further than the N and A of TENEBRAS; but some of them cut through the E of DE, and the G of GENÈVE. The supposed ends of about twenty-three of the rays show between the TENEBRAS-label and the top of the shield. The outer fork of the left-hand end of the scroll goes as near to the frame as in the last forgery, and the outer fork of the right-hand end of the scroll touches, but does not cut through, the frame, also as in the last forgery, but is blunter. There is no line, from the re-entering angle of the left-hand fork, touching the F of FIST. The G of GENÈVE is of a better shape than the genuine; the cross-stroke, if prolonged, would cut into the following E, above its cross-stroke. The said stroke does not touch the E. There is a fairly large stop after GENÈVE, but nowhere else. The stop is midway between the E and the frame. The 5 has a large and very concave flag, and a large ball to the tail. One of the feathers of the eagle's tail

touches the base of the shield. There are only six feathers in the wing, and none of them touch the frame. The top of the head, as before stated, is flat, like type 2, but the crest is too prominent, and points slantingly upwards to the right, instead of being horizontal. The point of the beak touches a blotch, which touches the wing. There are seven rather indistinct dots in the hollow, between the head and the wing. There are only fourteen vertical lines in the key-half of the shield. The eighth from the centre and the fourteenth are both drawn too high, and touch the outer frame at the top; while the ninth from the centre is drawn too low, and touches the base of the shield. None of the other lines are too long. One broken line runs up, through the barrel of the key. The key itself seems to be about $6\frac{1}{2}$ mm. high, but the bottom is covered by a postmark, so that I am not sure. Nine vertical lines can be seen through the handle, and there are no balls or lines at the sides. The T of POSTE has a flat top, and the cross-stroke goes right through the letter. About six short lines of the glory run up between DE and GENÈVE, about the height of the middle E, which one of them touches. The eagle has five claws, as in the last forgery.

Fifth Forgery.

(Type 2; INS. FIST.)

I think I ought to have put this before the forgery just described, as it seems to be an earlier state of the same design. Lithographed, on medium, dark green wove paper. The stamp is $16\frac{1}{2}$ mm. wide, by $19\frac{1}{2}$ mm. high, and the shield is $9\frac{1}{2}$ mm. wide. It is exactly the same as the fourth forgery in all respects, except that the rays of the glory are much longer. They are very faint, but, on the left side, some of them extend so far as to touch the side-frame. On the right side, they do not seem to extend further than the G of GENÈVE.

Sixth Forgery.

(IHS. FIST.)

This is very like the last, but the glory is much more distinct. Lithographed, in black, on thick *rose* paper; also in green, on thick, white paper. The stamp is $16\frac{1}{2}$ mm. wide, by $19\frac{1}{2}$ mm. high, and the shield is $9\frac{1}{2}$ mm. wide, the same as in the last two forgeries. The N of INS has been altered to H, the remains of the slanting stroke of the N being more or less visible. The glory, in good specimens, extends from the P of POSTE to the stop after GENÈVE. The F of TENEBRAS has been altered to an E. The other tests are the same as in the last two forgeries.

Seventh Forgery.

(INS.)

This is copied from type 2; it is a shockingly bad production. Coarsely lithographed, on fairly thick, blue-green wove paper. The stamp is $15\frac{1}{2}$ mm. wide, by $20\frac{1}{2}$ mm. high, and the shield is $8\frac{1}{2}$ mm. wide. The letters of POSTE DE GENÈVE are very much smaller, instead of larger, than those of TENEBRAS. The head-stroke of the P of POSTE touches the frame. There is no stop anywhere. The glory is very like that of the third forgery, having short, triangular teeth, like a circular saw. It contains INS, instead of IHS. The ends of about twelve supposed rays can be seen between the TENEBRAS-label and the top of the shield. I can only make out the LU of LUX in the motto. The outer fork of the left-hand end of the scroll is prolonged into a line, which touches the frame; the outer fork of the right-hand end of the scroll touches, but

does not cut through the right-hand frame. The opening of the left-hand fork is almost semicircular, instead of V-shaped, and there is some shading before the P, and some very heavy shading after the LU. The G of GENEVE is a very narrow letter, and the grave accent over the second E is a mere dot. The 5 has a very large body, as compared with the head, and the flag is extremely concave. The ball of the tail is very well developed. The eagle has a rounded head, which touches the top of the shield; the whole of the face is absolutely unshaded, and the beak appears to have no lower mandible. There are six outlined feathers and a stump in the wing, and four of the feathers touch the side of the shield. There seem to be only four dots in the hollow, between the wing and the neck. The key-half of the shield contains about sixteen vertical lines at the top, and eighteen at the bottom, but they are so very broken and irregular, that this is merely an approximation. The key is about 6 mm. high; the handle is a mere oval ring, showing five vertical lines through its centre. I cannot make out any line up the barrel, or any side-balls or lines outside the handle. The bottom point of the shield very nearly touches the head of the C of CANTONAL, though, in the genuine, this point is above the A, but a long distance from it. The T seems to be pointed at the top. I do not think this counterfeit is likely to deceive any one but a tyro. There is an extra line running all round the stamp, about $\frac{3}{4}$ mm. from it.

Eighth Forgery.

(Type 2; I.H.S.)

Lithographed, in black, on pale blue-green wove paper; and also in yellow-green, on white wove paper. The stamp is $16\frac{1}{2}$ mm. wide, by $19\frac{1}{2}$ mm. high, and the shield is $9\frac{1}{2}$ mm. wide. The top-stroke at the back of the head of the P of POSTE does not touch the frame to left of it. The glory contains I.H.S., in letters slightly thicker and darker than those of TENEBRAS, and there is a stop after each letter. (These stops are an easy test.) There is no sign of any obliterated letters. The rays of the glory are exceedingly fine and faint; there are about eighty of them, and the points of about twenty-four of them show below the TENEBRAS-scroll, between the scroll and the top of the shield. These numbers are only approximate, as the lines are very difficult to count. The longest rays on the left side can be traced to under the S of POSTE, and the longest on the right to under the second E of GENEVE. The outer fork of the right-hand end of the scroll *just* touches the right-hand frame, but does not cut through it; the outer fork of the left-hand end of the scroll is $\frac{1}{2}$ mm. from the left hand frame. The whole motto is quite legible. The T of POSTE has no head-stroke, but the head is cut off with a forward slope, and the cross-bar runs through the letter. The word DE is very nearly equidistant between POSTE and GENEVE, instead of being decidedly nearer to the latter word. The cross-bar to the G touches the back of the head of the E. The last E of this word appears to be a C; and the stop is large, and some distance from it, instead of almost touching it. The 5 has a large ball to the tail, and the neck is shorter than in the genuine type 2, only measuring 1 mm. from the top of the numeral to the bottom of the neck, instead of nearly $1\frac{1}{2}$ mm. The C is equidistant between the shield and the frame; but, in the genuine, it is very much nearer to the frame than to the shield. There are only three curved feathers, instead of five nearly straight ones, in the eagle's tail; and two of them touch the bottom of the shield. There are twelve or thirteen feathers in the wing, and four of them touch the side of the shield. As far as I can see through the postmark, there are only about six dots, in the hollow, between the neck and wing of the eagle. In

the key-half of the shield, there are twenty-two vertical lines; the dividing-line being much thicker than the others. The said dividing-line is not drawn too high. The key is nearly 7 mm. high; the line to left of the handle is a hook, the line to right is nearly horizontal. The top of the T of PORT is cut off square, and the cross-stroke goes right through the letter. The T of CANTONAL is the same as the T of PORT. The stop after CANTONAL is too large, and slightly lower, instead of higher, than the foot of the L. The tongue of the second E of TENEBRAS is a wedge, like that of the first E; but, in the genuine, while the tongue of the first E is a wedge, that of the second E is a very distinct *cross*.

Ninth Forgery.

(Type 2.)

This is a very different affair from any of the counterfeits described so far, and is decidedly dangerous, when printed on the proper paper. Lithographed, on yellow-green, on blue-green, on *rose*, and also on *greenish-faced*, white wove paper. The tests are the same as in the genuine type 2, except as hereafter specified. I can only make out sixty-nine rays in the glory. Only one ray (instead of three) touches the E of POSTE. In the genuine, the central dividing-line of the shield is the only one which is drawn too long at the bottom; but, in this counterfeit, the seventh and eighth vertical lines from the centre are both too long, and trespass across the inner boundary of the base of the shield, sometimes one, and sometimes both touching the thick, bottom outline of it. Beyond these small points, I really do not see any differences that I can describe, between the genuine and the forged; indeed, if I had not possessed this type on *rose*, and also on the *green-faced*, white paper (which are, of course, bogus), I should probably have passed the yellow-green and the blue-green as genuine!

Tenth Forgery.

(Type 3.)

Lithographed, in yellow-green, on medium, hard, white wove paper. The stamp is 17 mm. wide, by 20 mm. high, and the shield is fully $9\frac{3}{4}$ mm. wide. There is hardly any sign of a head-stroke to the P of POSTE, and the corner of the head is quite 1 mm. from the left-hand frame, instead of only $\frac{1}{2}$ mm. The bottom of the S is rounded, instead of flat. There is no circumflex accent over the H of JHS. There are only about thirty-five rays in the glory, above the TENEBRAS-scroll, and the ends of about fourteen rays show (instead of about eighteen) between the scroll and the top of the shield. The rays are a good deal too long; some of them touch the left side of the stamp, and many of them touch the top. The rays touch *all* the letters of the inscription, POSTE DE GENÈVE, but I cannot see one cutting through the centre of the G. The D of DE is upright, instead of slanting over considerably to the left, and it is joined to the E. There is no stop after GENÈVE, or after C, but there is a distinct stop after CANTONAL. The 5 has a thin, very concave flag, and a large ball to the tail. The tail of the C is short, and does not curve inwards. POST and LUX in the scroll are not very legible, but TENEBRAS is plain. The left-hand fork of the scroll is hidden by the postmark in both my specimens, but the right-hand fork is almost closed, instead of being widely open. The said fork points downwards, towards the head of the C, instead of slantingly, towards the right side of the stamp. The eagle's tail is a mere blotch. One of the claws points down to the T of PORT. This claw, in the genuine, points towards the P of that word. The tip of the

wing touches the top of the shield. There are eleven feathers in it, and only one of them touches the left side of the shield. The crown is firmly fixed down on the eagle's head, and the upper mandible of the beak, as far as I can make out, is like that of a parrot, and touches the wing. There are about nine large dots in the hollow, between the wing and the neck. The key-half of the shield contains fourteen vertical lines at the top, and fifteen at the bottom.

Eleventh Forgery.

(Type 3.)

This is much better than the last. It is lithographed, in yellow-green or white, and also in *black*, on *blue-green* wove paper. It measures a little over 17 mm. wide, by $20\frac{1}{2}$ mm. high, and the shield is $9\frac{1}{2}$ mm. wide. The S of POSTE is rounded at the bottom, instead of flat; and the cross-stroke of the T goes right through the letter. The H of JHS has distinct head- and foot-strokes. There are only thirty-four rays in the glory, above the scroll, and the ends of sixteen rays (with a blotch at each end) show between the scroll and the shield. Three of the rays reach far to the left of the P of POSTE. There are two almost perpendicular rays, passing clear up between POSTE and DE, without touching either word. (In the genuine, the rays just there are very oblique, so that one touches the top of the E of POSTE, and very nearly touches the base of the D of DE.) On the other hand, the rays between DE and GENÈVE slant too much, so that there is no ray passing up clear between the words. There is no ray through the G, and one cuts right through the last E. The upper forks of both ends of the scroll are less than $\frac{1}{2}$ mm. from their respective sides of the frame. The stop after GENÈVE is very small. There is a stop after C, and another after CANTONAL. The tail of the C does not curve inwards. The eagle's foot has only three claws. There are eleven feathers in the wing; the tip of the top one touches the top of the shield, and the fifth touches the side of the shield. There are some light marks on the wing. The whole length of the bottom of the crown is *very* close to the head. The beak is only slightly open. My specimens show from six to thirteen dots, between the wing and the neck; they vary. In the key-half of the shield, there are seventeen vertical lines at the top, and sixteen at the bottom; the dividing-line is not drawn too high. The inner outline of the shield does not touch the outer outline at the point. The key is *very* little more than 7 mm. high. Five lines of the background can be seen inside its handle. Some of the later printings (?) of this forgery show hardly any lower mandible to the eagle's beak, the stop after CANTONAL has entirely disappeared, and the stop after the C is almost invisible. As all the other tests are exactly the same as before, I have not thought it worth while to make these into a separate forgery. The dots in the hollow, between the wing and the neck of the eagle, are heavier in these later specimens, and vary from five to eight.

Twelfth Forgery.

(Type 3.)

Lithographed, in rather dark yellow-green, on thick, hard, smooth, very white wove paper. The stamp is rather more than $17\frac{1}{2}$ mm. wide, by *very* nearly 21 mm. high, and the shield is nearly $9\frac{1}{2}$ mm. wide. My single specimen is torn in the left top corner, but I can see that the cross-stroke to the T of POSTE goes through the letter, instead of being only on the right side. The top point of the circumflex accent over the H of JHS is under the end of one of the rays of the glory (the one which

touches the back of the G of GENÈVE; in the genuine, the top point of this accent comes under the space between this ray and the one to the left of it. The glory contains forty-five rays, and the ends of about nineteen rays show, between the scroll and the top of the shield; but I have had to guess at this number, as several of them are blotched into a solid mass, under the B of TENEBRAS. The upper fork of the right-hand end of the scroll touches the frame, the end of the left-hand fork is covered by the postmark. The shading on these forks is much too prominent. As far as I can make out through the postmark, the 5 has a very curved flag, and a very small ball to the tail. There is a stop after GENÈVE, but not anywhere else. The tail of the C does not curve inwards at all. The eagle's tail seems to have only one curved feather, and I cannot make out more than two claws, on the foot. The tip of the wing is too blunt; there are only nine feathers in the wing, and I think only the third and fourth feathers touch the side of the shield. The head appears to be rounded, but I can give no details, on account of the postmark. There are only about ten dots in the hollow, between the wing and the neck. The key-half of the shield contains fourteen vertical lines, as in the genuine. The dividing-line is not drawn too high at the top, and the inner outline of the shield does not bend down to touch the outer one, at the point of the base. The upper corners of the inner outline of the shield are slightly rounded, instead of being perfectly square. The right-hand half of the handle of the key comes down rather lower than the left-hand half; but both are level in the genuine. I can only see a part of one of the lines of the background through the handle. The inner outline of the shield is broken, below the handle of the key, though it is continuous in the genuine. There is no top-stroke to the J of JHS. I hope the above details will be found sufficient for the detection of this forgery, but my description is confessedly imperfect, on account of the heavy postmark. The two-toed foot is an easy test.

Thirteenth Forgery.

(Type 3.)

Lithographed, in light yellow-green, on thick, hard, yellowish-white wove paper. The stamp is nearly $17\frac{1}{2}$ mm. wide, by nearly 21 mm. high, and the shield is less than 9 mm. wide, its outer outline being too narrow. The head of the P of POSTE touches the inner outline of the frame, which is an easy test, and the S is rounded at the bottom. The glory round the JHS has altogether disappeared; and there is a straight stroke, like a hyphen, in place of the circumflex accent, above the H. The letters of TENEBRAS are much too large, reaching almost to the top and bottom outlines of the scroll. The upper fork of the right-hand end of the scroll touches the frame, and the upper fork of the left-hand end is about $\frac{1}{2}$ mm., instead of $\frac{3}{4}$ mm., from the frame. There is a rather small stop after GENÈVE, but none anywhere else. The 5 has an extremely curved flag, and the ball is rather too small. The tail of the C is short and inconspicuous, and it does not curve inwards at all. The eagle's tail has two short, curved feathers, very much shorter than the genuine. The hind claw is almost horizontal, instead of curving downwards. The front claws are blotched, so as to appear like one thick claw. The tip of the wing is exceedingly sharp, and appears to point between the ST of POST, in the motto. There are eleven feathers in the wing, and none of them touch the side of the shield. The four upper feathers are separate from the rest of the wing, there being no outline connecting them. The crown is thin, and joined to the top outline of the shield; it is far above the head of the eagle, not touching it anywhere. The upper mandible of

the beak is not much curved, and does not look like the beak of a bird of prey. The neck and back of the head are almost entirely unshaded, and the breast is very white. The dots in the hollow between the wing and the neck are too faint to be counted. There are eighteen vertical lines in the key-half of the shield; the dividing-line goes right up to the outer outline. The inner outline, at the point of the shield, does not curve down to touch the outer outline there. The inner outline in the left top corner of the shield is drawn too high, and touches the top of the shield. There are parts of two lines running up the barrel of the key. I cannot trace any lines of the background through the handle.

NOTE.—Thus far, I have described from counterfeits in my own possession. For the rest of the forgeries of the 5 c. I am not responsible; I simply copy or translate the descriptions. It is possible that some of them may be the same as one or other of the thirteen described above.

Fourteenth Forgery.

(Type 1; DE REUTERSKIÖLD.)

This is sold at Geneva, usually with the word *facsimile* printed in violet on the face of the stamp. It is $16\frac{1}{2}$ mm. wide, by $19\frac{3}{4}$ mm. high. The top-stroke of the P of POSTE touches the inner line of the frame. There is no stop anywhere. The right-hand end of the scroll is too near the C.

Fifteenth Forgery.

(Type 3; ATLEE.)

This has no stop after GENÈVE. The G and E of GENÈVE are quite distinct (whatever that may mean!). That portion of the scroll which should contain LUX is filled in with a hieroglyphical inscription of some kind, X being the only readable letter. JHS is larger than in the original.

Sixteenth Forgery.

(DE REUTERSKIÖLD.)

This has INS, instead of IHS, in the glory. (Probably my third forgery.)

Seventeenth Forgery.

(Type 2; DE REUTERSKIÖLD.)

This is sold at Geneva, with the word *facsimile* on the back. It is $16\frac{1}{2}$ mm. wide, by 20 mm. high. There is no trace of any partially-erased JHS to be seen behind the IHS. The last E of GENÈVE touches the inner line of the frame. There is no stop after this word, and none after CANTONAL, though the foot-stroke of the L is prolonged somewhat to the right.

Eighteenth Forgery.

(Type 2; DE REUTERSKIÖLD.)

This is found on the light green and dark green paper. It is sold at Geneva with the word *facsimile* on the face. The stamp is $16\frac{1}{2}$ mm. wide, by $19\frac{1}{2}$ mm. high. There is no trace of the partially-erased letters behind the IHS, except that the I looks rather like a partly-erased J. There is no stop after GENÈVE. In the key-half of the shield, there are only fifteen vertical lines, and the dividing-line does not reach the lower outline. There is no stop after CANTONAL.

Nineteenth Forgery.

(Type 3; ATLEE.)

Finely engraved; too much so, in fact. The P of POSTE does not touch the frame. No lines going through key. Shield not divided as in the original. Printed on dull, dark green paper.

Twentieth Forgery.

(Type 3; DE REUTERSKIÖLD.)

This is well imitated, except for the following details:—The stamp is $17\frac{1}{2}$ mm. wide, by 21 mm. high. The P of POSTE touches the inner frame; the right-hand end of the scroll also touches the inner frame. There are only eight dots, instead of twelve, in the hollow, between the wing and the neck. The vertical, left inner outline of the frame is rather too long at the top, and extends beyond the upper, horizontal, inner line. (This may possibly be my twelfth forgery.)

Twenty-first Forgery.

(Type 3; DE REUTERSKIÖLD.)

This is sold at Geneva, with the word *facsimile* on the face. It is $17\frac{1}{2}$ mm. wide, by $20\frac{1}{2}$ mm. high. Except in the following points, it is well imitated. There are only thirteen vertical lines in the key-half of the shield, and ten or eleven dots between the wing and neck of the eagle.

Twenty-second Forgery.

(Type 1 or 2? ATLEE.)

More roughly engraved. IHS too large. P of POSTE almost touching frame. Portion of scroll inscribed LUX touches, but does not go through, the border-line. Distance between the words in the upper inscription equal. On pale-green, and also on *pink* paper.

Twenty-third Forgery.

(Type 3; ATLEE.)

A very coarse-looking label, with JHS encircled with a few remnants of halo, supposed to be due to the worn state of the die. Point of shield comes between A and N of CANTONAL. (In the genuine, the point of the shield is above the last stroke of the A.) Yellow-green.

Twenty-fourth Forgery.

(Type 3; ATLEE.)

This is so very scarce, and so finely engraved, as to lead to the supposition of its being an essay; but all that can be said now is, that it is not from the accepted die.* The P of POSTE is at some distance from the border. LUX is easily readable. Very small stop after GENÈVE. J in the sacred monogram has a top-stroke. Six dots between the wing and neck of the eagle. Printed both in bright green on white, and also in black upon green. (This is probably my eleventh forgery.)

* It will be noticed that Mr. Atlee speaks of "engraving," and a "die"; but, as already stated, the Geneva stamps are all lithographed. The forgeries also are all lithographed, except my second forgery, which is engraved in *taille-douce*.

Twenty-fifth Forgery.

(Type 3; ATLEE.)

Much like the last, only with eight dots between the wing and neck of the eagle. Printed in black, on dark-green paper.

Twenty-sixth Forgery.

(Type 3; ATLEE.)

Same die, only altered to seven dots. Printed in black, on bluish-green paper.

Twenty-seventh Forgery.

(Type 3; ATLEE.)

Three dots only, between wing and neck of eagle. Printed in black, on yellow-green paper, and in pale sap-green, on white paper.

Twenty-eighth Forgery.

(Type 3? ATLEE.)

Very smudged and black eagle. Full-stop almost joined on to final E of GENÈVE. In black, on dull green paper.

Twenty-ninth Forgery.

(Type 1? DE REUTERSKIÖLD.)

The stamp is $17\frac{1}{2}$ mm. wide, by 20 mm. high. The letters of POSTE DE GENÈVE are much too large. The P of POSTE touches the frame. There is a stop after GENÈVE. This counterfeit is surcharged *facsimile*.

Thirtieth Forgery.

(Type 1.)

This is very poor. The shield is $8\frac{1}{2}$ mm. wide. The eagle has no feathers, and resembles a chicken just hatched. There is a stop after CANTONAL, but nowhere else.

Thirty-first Forgery.

This is also very poor. It bears a *crowned* eagle, like type 3. The stamp is $17\frac{1}{2}$ mm. wide, by 21 mm. high.

Thirty-second Forgery.

(Type 2.)

The letters IHS are too large. The right-hand, inner frame is prolonged to the outer frame at the top. The P of POSTE does not touch the frame. There are twenty-two lines in the key-half of the shield. The stop after CANTONAL is on a lower level than the lettering.

Thirty-third Forgery.

(Type 3.)

The stamp is $17\frac{1}{2}$ mm. wide, by $20\frac{1}{2}$ mm. high. The letters of POSTE DE GENÈVE are too close together. The DE is exactly over the JH. (In the genuine, the E is over the J.) The rays of the glory are long, and strongly marked; they traverse the words POSTE and GENÈVE, but do not touch the frame. There is no stop after GENÈVE. The scroll does not touch the frame either side. There are seventeen lines in the key-half of the shield, and eight dots between the wing and neck of the eagle. (This may possibly be my tenth forgery.)

Thirty-fourth Forgery.

(Type 3; DE REUTERSKIÖLD.)

This stamp was made at Geneva, and is generally printed on the blank parts of original envelopes; often sold in *pairs*! It is $17\frac{1}{4}$ mm. wide, by $20\frac{1}{2}$ mm. high. It is a very good imitation, and has had an extensive sale in England. The two vertical lines after the S of TENEBRAS are too far apart. (In the genuine, they are less than $\frac{1}{4}$ mm. apart.) POST and LUX are too clear. There are only thirteen vertical lines in the key-half of the shield. The stop after C is too large. There are only eight or nine dots in the hollow, between the wing and neck of the eagle, instead of twelve; but this is not a very reliable test, as they are seldom all visible in the genuine.

POSTMARKS.

Genuine.—The three postmarks already described in the case of the double stamp. Also one exactly like the second cancellation of the double stamp, but without the little cross in the centre of the outlined cross. I believe this is only found in the dark green, type 2. The above are all in red. Also 40 in black, on type 2.

First Forgery.—The black on green bears 34 in red; the green on white is uncanceled.

Second Forgery.—This bears an imitation of the first of the genuine postmarks, struck in red, but I cannot make out whether the ornament in the centre of the outlined cross is a star or a cross.

Third Forgery.—80. Also uncanceled. Also one in red, something like 25, but without the four balls.

Fourth Forgery.—PP, in thin, black letters, $8\frac{1}{2}$ mm. high.

Fifth Forgery.—PP, in thick, black letters, 9 mm. high, with a stop after each letter.

Sixth Forgery.—PP, in very thick red or black letters, $9\frac{1}{2}$ mm. high.

Seventh Forgery.—98, in black.

Eighth Forgery.—25, in red, without the balls.

Ninth Forgery.—The fourth genuine cancellation, in red. Also an imitation of the first genuine cancellation, in red. Also a four-petalled flower, without any ornament inside or outside it. This is struck in blue, on the black on pink counterfeit.

Tenth Forgery.—34, in black. Also PP, in red letters, 8 mm. high.

Eleventh Forgery.—25, in red, with or without the balls. Also uncanceled.

Twelfth Forgery.—25, in red.

Thirteenth Forgery.—Uncanceled.

I do not know the cancellations of any of the other counterfeits.

NEUFCHÂTEL (*so-called*).

Issue of August, 1850. 5 Centimes, black and red.

I keep to the old names, so as not to puzzle any of my readers; but the stamp here illustrated (as also the two known as "Vaud," to be hereafter described) belongs to Geneva. The work on the stamps of Switzerland, already several times quoted, states that the

canton of Geneva, instead of using the 2½ rappen "Poste Locale" of the Federal Government, preferred to get rid of its stock of the 5 c. Vaud (so-called) for local correspondence; and when these stamps were exhausted, issued the 5 c. of Neuchâtel (so-called). It will be understood, then, that not only are the Neuchâtel and Vaud stamps issues for the canton of Geneva, but that the Vaud labels were earlier than the Neuchâtel ones.

Genuine.

(Figure 8 at top of stamp.)

Lithographed (?), on rather thin and hard, greyish-white wove paper. The letters of the inscription, POSTE LOCALE, are exactly 1 mm. high, and the label containing them is 2 mm. high. The P of POSTE and the E of LOCALE are equidistant from their respective ends of the label. The O of LOCALE is taller than the rest of the letters. The upper fork of the right-hand end of the top label *almost* touches the thin outline of the stamp to the right of it, and the upper fork of the left-hand end is about 1 mm. from the thick outline to the left of it. The shield is 7½ mm. wide, by 9½ mm. high. The little floral ornament, above the top of the shield, is exactly under the centre of the L of LOCALE (*i.e.*, the centre of the letter as a whole, not merely of its first stroke). The lowest peak of the shield points slightly to the right of the centre of the T of CENTIMES. (In this I speak only as regards the black portion of the stamp, as the red part is not always in its proper place.) The S of CENTIMES, in the lower label, slopes over very decidedly to the right. There is a large stop after the S. The 5 at the other end of the label is, in its nearest part, 1 mm. from the left-hand, vertical end of the scroll. There is a sort of trefoil-shaped leaf at each end of this lower label; the right-hand one is very close to the frame of the stamp, but the left-hand one is ½ mm. distant from the frame. The right-hand one, though close to the frame, does not touch it, but is, perhaps, ⅓ mm. from it. The top outline of the POSTE LOCALE label is 1¼ mm. from the thin, inner outline of the top of the stamp. This space is filled in with a tracery of curly black lines, and just above the first L of LOCALE will be found *the* test for this stamp, which is a distinct figure 8, placed upright, between the POSTE LOCALE label and the top of the stamp, and just above the first L of the latter word. The thin, inner lines of the top and bottom frame both run too far to the right, so as to touch the thick outline of the right-hand frame. The thin, inner outline of the bottom frame is broken near the left lower corner. There is no black outline round the white cross, in the shield.

First Forgery.

(No figure 8.)

Nicely lithographed, on moderately stout, rather soft wove paper, which has been steeped in something, to give it a look of age, making the paper a pale buff colour; also on greyish-white, like the genuine. The letters of the inscription, POSTE LOCALE, are much too large, being more than 1½ mm. high, and the containing-label is 2½ mm. high. The E of LOCALE is very much nearer to the right-hand end of the label than the P of POSTE is to the left-hand end of it. The O of LOCALE is the same height as the rest of the letters. The right-hand end of the top label is a trifle nearer to the frame of the stamp than the left-hand end is, but does not

touch the side of the stamp. The S of CENTIMES, in the lower label, is perfectly upright; it is very close to the end of the label, and there is no stop after it. The 5 at the beginning of the label is even closer to its end of the label, being hardly $\frac{1}{2}$ mm. from it. The trefoil-shaped ornaments, at the ends of this lower label, both touch the inner outline of the stamp. The top outline of the POSTE LOCALE label is not more than $\frac{1}{2}$ mm. from the inner outline of the top of the stamp, and there is no figure 8 above the first L; the space above STE LOCA of POSTE LOCALE being quite blank, instead of bearing the curly lines. The lower point of the shield is above the space between NT of CENTIMES, rather nearer to the N. The white cross in the red shield has a black outline. (This is an easy test.) The shield is a little over 6 mm. wide, by a shade more than 9 mm. high. The middle point of the floral ornament above the shield is under the vertical stroke of the first L of LOCALE. The thin, inner line of the top frame is very badly drawn in the middle, being double above the ST of POSTE, and far too thick above the E of that word, and above the LO of LOCALE. The frame has an extra (thin) line all round it, besides the two of the genuine. There are many more differences, but I think the above will be found amply sufficient.

Second Forgery.

(No figure 8.)

Lithographed, on rather hard, very thin, greyish-white wove paper. The letters of POSTE LOCALE are a little more than 1 mm. high, and the label containing them is a little more than 2 mm. high. The O of LOCALE is the same height as the rest of the letters. Neither end of the upper label touches the border of the stamp, and the left-hand end is nearer to it than the right-hand end is. The S of CENTIMES is perfectly upright; the stop after it is not very conspicuous. The 5 at the other end of the label is less than 1 mm. from the left-hand end of the label. Both the trefoil-shaped ends of this lower label touch the sides of the stamp. The upper outline of the POSTE LOCALE label is barely 1 mm. from the thin outline of the top of the stamp. This space is filled up with curly lines. There is no figure 8 above the first L of LOCALE, but above TE LO of POSTE LOCALE there are three curly lines, each very like a badly-formed 3, placed on its face. The lower point of the shield is above the beginning of the T of CENTIMES, instead of above its very centre. The shield is $7\frac{1}{2}$ mm. wide, by a little over 9 mm. high. The middle point of the floral ornament above the shield is below the vertical stroke of the L of LOCALE. The inner line of the top frame is actually thicker than the outer line, and is far too thick on the other three sides. This inner line is not drawn too far to the right, and there is no break in the inner line at the left bottom corner.

Third Forgery.

(No figure 8.)

Lithographed, on yellowish-grey wove paper, hard, and moderately stout. The letters of the inscription, POSTE LOCALE, are $1\frac{1}{2}$ mm. high, and the label containing them is $2\frac{1}{2}$ mm. high. The P of POSTE is very slightly nearer to its end of the label than the E of LOCALE is to the other end of it. The O of LOCALE is the same height as the rest of the letters; but too far from the C, which is badly drawn. Neither end of this upper label touches the frame of the stamp, the right-hand end being a little nearer to it than the left. The S of CENTIMES, in the lower label, is upright. There is an extremely small stop after this S, which almost

touches the end of the label. The 5 at the other end of the label is only $\frac{1}{4}$ mm. from the beginning of the label. The trefoil-shaped leaves at the end of this bottom label both touch the sides of the stamp. The top outline of the POSTE LOCALE label is not much more than $\frac{1}{4}$ mm. from the thin outline of the top of the stamp, and there is no figure 8 above the first L of LOCALE. The lower point of the shield is above the end of the N of CENTIMES. The shield is $6\frac{3}{4}$ mm. wide, by $9\frac{1}{2}$ mm. high. The middle point of the floral ornament above the shield is quite to the left of the vertical stroke of the first L of LOCALE. The frame has three lines, instead of two, as in the first forgery. There is a large, backward-sloping s above the right-hand, forked end of the upper label. The inner frame on the right side is drawn too high, and touches the top of the stamp. This inner frame is not broken in the left bottom corner. The white cross has a black outline round it, and the said black outline, at the bottom of the cross, is drawn too long, and projects to the left of the end of the bottom arm.

Fourth Forgery.

(No figure 8.)

Lithographed, on yellowish-grey wove paper, of medium thickness. The letters of the upper inscription are $1\frac{1}{4}$ mm. high, and the label containing them is $2\frac{1}{2}$ mm. high. The E of LOCALE is much nearer to the side of the label than the P of POSTE is. The O of LOCALE is the same height as the other letters. The left, upper fork of the scroll *almost* touches the thin, inner line of the frame; while the right, upper fork is at some little distance from the frame. The shield is 7 mm. wide, by 10 mm. high. The S of CENTIMES is perfectly upright, and close to the E; while the stop is very near the S. The 5 is about 1 mm. from the side of the label. The trefoil at the right-hand end of this label touches the inner line of the frame; and the trefoil at the left-hand end *very* nearly touches the inner line of the frame. The top of the stamp is composed of one thick line, the thin, inner line being absent. There is barely $\frac{1}{2}$ mm. between this thick line and the nearest part of the POSTE LOCALE label. There is no 8 in this space. The lower point of the shield is to the left of the T of CENTIMES. The middle point of the floral ornament above the shield is to the left of the first L of LOCALE. There is a 3 above the right-hand forked end of the upper scroll. The inner frame is not broken in the left bottom corner.

Fifth Forgery.

(Figure 8 at top of stamp.)

Lithographed, on thick, hard, yellowish, or yellow-grey wove paper. The letters of POSTE LOCALE are 1 mm. high, and the containing-scroll is 2 mm. high. The E of LOCALE is nearer the end of the scroll than the P of POSTE is. The O of LOCALE is the same height as the C; but the last I. and E are much taller than the OCA. The S of CENTIMES is perfectly upright, and the stop is nearer to the S than to the side of the label. Neither end of this label touches the frame of the stamp, but the right-hand end is nearer than the other. The thin, inner line of the top frame is more than 1 mm. from the nearest part of the POSTE LOCALE label, and *there is an 8 above the first L*, as in the genuine. (This is the only one of my forgeries showing the 8.) The floral ornament above the shield is slightly to the right of the centre of the L of LOCALE, and the point of the shield is above the centre of the T of CENTIMES. The shield is about 7 mm. wide, by 9 mm. high. There is a thin line, running round the stamp, about $\frac{1}{2}$ mm. outside the outer frame. This is more likely to deceive

than any of the forgeries hitherto noted, on account of the 8. However, the upright S of CENTIMES is a good test. The inner frame is not drawn too far to the right, either at the top or the bottom, and there is no break in this inner frame in the left bottom corner. In the genuine stamp, there is a little circle or ring, below the bottom of the lower label, between it and the bottom frame, exactly under the T of CENTIMES. In this forgery, there is a semicircle or crescent, instead of a circle, and it is not under the T, but too much to the left.

Sixth Forgery.

(DE REUTERSKIÖLD.)

(No figure 8.)

I have not seen this. The letters of POSTE LOCALE are $1\frac{3}{4}$ mm. high; and the containing-label is $2\frac{1}{2}$ mm. high. The O of LOCALE is the same height as the other letters. Neither end of the upper scroll touches the frame. The S of CENTIMES is upright, and there is a very small stop after it, which *almost* touches the frame. The trefoil-ends of the lower label both touch the thin, inner line of the frame. The point of the shield is above the N of CENTIMES. The upper scroll very nearly touches the top frame of the stamp, and there is no 8 above the first L of LOCALE.

Seventh Forgery.

(DE REUTERSKIÖLD.)

This also I have not seen. It belongs to the set of counterfeits sold at Geneva, with the word *facsimile*, in microscopic, violet letters, on the upper part of the face of the stamp. The letters of POSTE LOCALE are $1\frac{1}{4}$ mm. high; and the containing-label is $2\frac{1}{2}$ mm. high. The O of LOCALE is the same height as the rest of the letters. Neither end of the upper scroll touches the frame. The S of CENTIMES leans over *slightly* to the right; there is no stop after this word. The right-hand trefoil of the containing-label touches the frame; the left-hand one does not. The 5 and the letters of CENTIMES are much too large; they are only $\frac{1}{2}$ mm. from the lower border of the label, though they are 1 mm. from it in the genuine. De Reuterskiöld does not say whether there is an 8 or not.

Eighth Forgery.

(Two circles, instead of an 8, at top of stamp.)

I got this quite recently, from Mr. Boulton, of Leicester. It has *facsimile*, in violet letters, in a curve across the shield. Lithographed, on thick and somewhat soft, very white wove paper. The letters of POSTE LOCALE are about $1\frac{1}{2}$ mm. high, and the containing-label is a shade over 2 mm. wide. The P of POSTE is nearer to the end of the label than the E of LOCALE is. The O of this latter word is badly drawn, and comes to a point, both at the top and the bottom, while the A leans slightly to the left, instead of to the right. The upper, right-hand fork of the top label does not touch the inner outline of the frame. The shield is only 9 mm. high. The central peak of the three-lobed ornament under the first L of LOCALE does not touch the thin outline above it, though it does in the genuine. The 5 is taller (instead of shorter) than the C of CENTIMES; the M is $1\frac{3}{4}$ mm. wide, instead of $1\frac{1}{2}$ mm.; the S is taller than the E, though it slopes very nearly as much as the genuine. There is no stop after the word. The middle point of the trefoil, at the right-hand end of the lower label, touches the inner outline of the stamp. There is, apparently, an 8, above the first L of LOCALE, but it is, in reality, merely two equal-sized circles, one above the other, and not touching. These two circles will serve

to identify this particular forgery. The thin, inner line of the frame, down the right side of the stamp, is prolonged, to touch the thick, bottom outline, but none of the other thin lines are prolonged. The large break in the thin, bottom outline, near the left lower corner, is not shown in this forgery.

POSTMARKS.

Genuine.—Usually a grille, of nine or thirteen lines, like 30, but without the central square and numeral, in black, blue, or greenish. Also P.P. in red or green. Also P.P., in oval frame, in black. Also P.D., in italic capitals, in rectangular frame, in black. Also I. Also I, with outlined cross at the bottom, in black. Also 29, in different sizes, in blue or greenish, with or without post-horns or crosses separating the words.

First Forgery.—98, bars thinner, in black.

Second Forgery.—34, many bars broken, in black.

Third Forgery.—34, in black.

Fourth Forgery.—25, in black.

Fifth Forgery.—25, in black.

Sixth Forgery.—I do not know the cancellation.

Seventh Forgery.—I do not know the cancellation.

Eighth Forgery.—Uncancelled, except for the printed word, *facsimile*.

TESSINO.

BOGUS STAMP.

5 Rappen, red and black, on white.

I have not seen this stamp, but M. de Reuterskiöld says that it was made, a good many years ago, at Lyons, and formerly deceived a good many collectors. It resembles the Neufchâtel stamp, except that the shield is oval, and the arched band at the top bears TESSINO, and the value-label bears 5 RAPPEL.

VAUD (*so-called*).

Issues of 1849-50. 4 c., 5 c., black and red.

These stamps were for the canton of Geneva. The design was identical, except the figure of value. The earliest obliteration of the 4 c. is said to be December 1, 1849. This value had a very short life, as the rate was altered to 5 c., and, by January 22, 1850, an official notice authorised the sale of 5 c. stamps for the town and canton of

Geneva. The original design of the 4 c. was transferred one hundred times to a lithographic stone, and when the rate was altered, the figure 4, on each of the hundred stamps, was erased, and a 5 drawn by hand. Bearing these facts in mind, we can under-

stand why the 4 c. value should be so exceedingly rare, as compared with the 5 c., and also why the numeral varies on the 5 c. I ought to mention that the process of lithographic transfer caused many slight variations in the design. Also each of the four corner stamps of the sheet bears a register-mark, consisting of a red dot in the centre of the white cross.

Genuine.

(Seventeen turns of ribbon.)

Lithographed. The 4 c. is in red and black on bluish, and in red and grey-black on yellowish wove paper. The 5 c. is found in red and grey-black or jet-black, on thick to thin, white or yellowish wove paper. The red shield varies in colour, including pale and bright red, vermilion and carmine. There is a distinct and very unmistakable break in the left top corner of the stamp, where the top and side-lines do not meet. (This is an easy test, as most of the forgeries have the corner complete, or *almost* complete.) In the right bottom corner, there is a black dot, where the lines meet; and in the right top corner, there is another dot, or rather, a horizontal projection. The scroll-work, on the left side, touches the left corner of the foot of the P of POSTE, but no portion of the scroll touches the head of the P. On the right side the point of one of the leaves of the scroll touches the right bottom corner of the E of LOCALE, and there is a stop after this word. Under the first L, there is a little, rounded knob; a line drawn down the right-hand edge of the upright shaft of the L would cut almost centrally through this knob. The thin, horizontal line under POST LOCALE does not pass through the said knob. There are four solid black dots, of graduated sizes, in the scroll-work, each side of the value-label. There is no black outline round the cross, and none immediately round the red shield; *i.e.*, the ring of the post-horn is only outlined externally. The tube of the horn is bound to the ring by seventeen turns of tape or ribbon. The last three or four turns to the left are narrower than the rest, and the first turn to the right is bound only round the horn and not round the ring as well. The last turn to the left, if prolonged downwards, would pass through the centre of the uppermost of the four graduated dots on the left side. Some of these turns of ribbon have one line of shading in them, and some have two, but there are never more than two. The inner edge of the wide mouth of the horn appears to very nearly touch the black outline of the ring; and the left-hand edge of the small end of the horn goes very near to the left-hand edge of the scroll-work on which it is placed. About half-way between the small end of the horn and the last of the wrappings, there is a horizontal, white line, joining the horn to the ring, but it is not very prominent. The top of the shaft (not the serif) of the P of POSTE is $\frac{1}{2}$ mm. from the top curl of the left-hand scroll, and the top of the E of LOCALE is rather more than $\frac{1}{2}$ mm. from the top curl of the right-hand scroll. The C of LOCALE is nicely shaped. Underneath the POST LOCALE label, between it and the scroll-work, there is a shading of wavy, horizontal lines, close together. The top, horizontal line forms the bottom of the POST LOCALE label. This line is quite straight, and some distance above the wavy ones.

First Forgery.

(Twelve turns of ribbon.)

Of this I have both values. Lithographed, on very yellowish wove paper, fairly thick and hard. The left top corner of the stamp has a blotch in it, but it is not broken. There are no dots in the right-hand corners. The part of the scroll below the P of POSTE does not touch its

foot; if it did touch, it would be the right corner, instead of the left. On the other hand, the top curl of the scroll touches the head of the P. No part of the scroll goes near the E of LOCALE, and there is no stop after this word. The horizontal line below POSTE LOCALE cuts right through the rounded knob or prominence under the first L, and this prominence stands under the very centre of the shaft of the L. There are only three graduated black dots each side of the value-label. There is a black outline round the cross, and the ring of the post-horn is outlined internally as well as externally. There are only twelve turns of the wrapping round the horn; they are all about the same width, except the last two to the right, which are broader than the rest; and the first turn to the left, if prolonged, would pass far to the right of the uppermost of the three black dots. Only two of the turns of the ribbon are shaded by two lines; the rest have, some three, and some four lines of shading. The inner edge of the wide mouth of the horn is some distance from the outline of the ring, and the small end of the horn is a long way (nearly 1 mm.) from the left-hand edge of the scroll-work on which it is placed. There is no white line, joining the tube to the ring. The C of LOCALE is very badly shaped, the tail being too short, and the head absurdly too large. The shading between the bottom of the POSTE LOCALE label and the scroll-work is composed of crossed lines. There is a horizontal line below the value-label, half-way between it and the bottom of the stamp. This line does not exist in the genuine.

Second Forgery.

(Twelve turns of ribbon.)

Lithographed, on rather thick, hard, very white wove paper. I have only the 5 c., though the 4 c. probably exists as well. There is no break in the left top corner, and the left side of the frame has been drawn too high, and projects above the top of the stamp. The right top corner of the stamp is rounded, instead of square, and there is no dot in the right bottom corner. The scroll-work does not touch either the P of POSTE, or the E of LOCALE. There is no stop after LOCALE. The knob is under the beginning of the first L; it is pointed, instead of rounded, and the line under POSTE LOCALE cuts through it. There are four graduated black dots in the scroll-work, to left of the value-label, but only three dots to the right of the label, these three being equal in size, instead of graduated. There is a black outline round the white cross, and the ring of the post-horn has a black, inner outline, as well as an outer one. As in the first forgery, there are twelve turns of the wrapping round the horn, all of about equal width, and each having, apparently, three lines of shading. The last turn to the left, if prolonged downwards, would pass far to the right of the uppermost of the four dots. The inner edge of the wide mouth of the horn is too far from the ring, but rather nearer than in the first forgery; and the left-hand edge of the small end of the horn is quite as far from the left-hand edge of the scroll on which it is placed, as in the first forgery. There is no horizontal, white line, joining the left side of the horn to the ring. The topmost curl of the left-hand leaf goes rather near to the P of POSTE, but the corresponding curl of the right-hand leaf is a long way from the E of LOCALE. The shading between the bottom of the POSTE LOCALE label and the scroll-work below it is *very* dark, and is composed of crossed, horizontal and oblique lines. These lines are not wavy. The bottom edge of the value-label has *two* outlines, close together, the lower one being rather thicker than the other. The twelve turns of the ribbon, and the three equal-sized dots on the right side of the value-label will easily identify this particular forgery.

Third Forgery.*(Thirteen turns of ribbon.)*

I have both values of this. Lithographed, on medium, grey-white wove paper. There is no break in the left top corner of the stamp, and no dot in the right bottom corner. The scroll-work does not touch either the P of POSTE, or the E of LOCALE. This forgery has a stop after LOCALE. Of the four dots to left of the value-label, the upper three are almost the same size. There are only thirteen turns of the ribbon round the ring. They are fairly like the genuine, except in number, and are not so flat as in the first two counterfeits. The last turn on the right joins both ring and horn like the rest, instead of being wrapped round the horn only. The last turn on the left, if prolonged downwards, would pass very far to the right of the uppermost dot. The S of POSTE is too tall; the bottom of the O of LOCALE is decidedly above the level of the bottom of the L; and the foot of the C is too close to the A, while the foot of the A is joined to the following L. This is a better counterfeit than either of those already described, but of course the thirteen turns of the wrapping will at once condemn it.

Fourth Forgery.*(Fifteen turns of ribbon.)*

Of this, I have only the 4 c. Lithographed, in scarlet-vermilion and grey-black, on rather thick, grey-white wove paper. There is no sign of any break in the left top corner of the frame, and there are no dots in any of the corners. The knob below the L of LOCALE is under the very centre of the upright shaft of the L. The lowest of the four graduated dots, to the right of the value-label, is so very lightly shaded, that it is practically invisible. The ring of the horn has a black outline round the inside, as well as the outside. The tube of the horn shows fifteen wrappings, as far as I can make out; the last one to the left being very broad, and badly drawn. This last turn to the left, if prolonged downwards, would pass to right of the centre of the large, uppermost dot, on the left side. There are two lines of shading in each turn of the ribbon. The C of LOCALE is rather hump-shouldered. The top of the shaft of the P of POSTE is only about $\frac{1}{3}$ mm. from the top curl of the left-hand scroll; while the top of the E of LOCALE is more than $\frac{1}{4}$ mm. from the top curl of the right-hand scroll.

Fifth Forgery.*(Twelve turns of ribbon.)*

Of this I have only the 4 c. It is lithographed, in bright scarlet or vermilion and rather dark black, on thick, grey-white, or yellowish-white wove paper. There is no break in the left top corner of the frame. In the left bottom corner there is a large, square dot, caused by the little rectangle being filled in with ink, and the bottom outline of the frame is drawn too long, and projects to the left. The little circular dots in the right-hand corners are absent. The scroll-work on the left side touches the right corner, instead of the left, of the foot of the P of POSTE. No portion of the scroll touches the E of LOCALE. The stop after this E is very large and prominent, and it is not placed between two points of the leaf, as it is in the genuine. The rounded knob under the first L of LOCALE is almost under the serif of the tail of that letter. There are four graduated dots to left of the value-label, but only three dots to right of it. (This is an easy test.) There are twelve turns of the wrapping round the tube of the horn, and none of them are joined to the ring at all. The few lines of shading on these turns of the ribbon are horizontal, instead of vertical. The

last turn to the left is a very long way to the right of the uppermost dot. The inner edge of the wide mouth of the horn is a long way from the edge of the ring. The horizontal white line, half-way between the small end of the horn and the last of the wrappings, which ought to join the horn to the ring, is absent. The distance between the top of the P of POSTE and the top end of the scroll to the left of it is about the same as the genuine; but the top curl of the right-hand scroll is very nearly 1 mm. from the top of the E of LOCALE. There is a prominent cross-stroke on the top of the A of LOCALE, and an absurdly wide top-stroke to the following L. The horizontal lines of shading under the POSTE LOCALE label are perfectly straight, and wavy.

Sixth Forgery.

(Sixteen turns of ribbon.)

Of this I have only the 4c. Lithographed, on thick, hard, very yellowish-white wove paper. The red centre is decidedly crimson. There is no break in the left top corner, and no dot in the right bottom corner. There is no outline along the top of the stamp; though in the genuine, and in the counterfeits already described, there is a horizontal line along the top, joining together the outer ends of the fringe of little vertical lines. The graduated dots, each side of the value-label, are not filled in solid, like the genuine, but are shaded by lines. There are only sixteen wrappings round the tube of the horn; the last turn to the left, if prolonged downwards, would pass to the right of the uppermost dot. Several of the turns on the left side, and the last but one on the right, have no lines of shading in them; though, in the genuine, every turn of the wrapping has one or more lines in it. The inner edge of the wide mouth of the horn touches the black outline of the ring, which, at this part, is much more clearly defined than in the genuine. The left-hand end of the mouth-piece of the horn is about $\frac{1}{2}$ mm. from the left-hand edge of the scroll-work on which it is placed, instead of almost touching the edge. The lower limb of the E of POSTE is a little cross, which does not touch the letter; so that it is really an F, with a cross after it. The bottom outline of the value-label is single, instead of double. In the other tests, this forgery is a fair copy of the genuine.

Seventh Forgery.

(Fourteen turns of ribbon.)

Lithographed, on moderately thick, hard, grey-white wove paper. I have only the 5c. of this counterfeit. The red shield is not so crimson as in the sixth forgery. There are no dots in the right-hand corners, and no break in the left top corner. The leaf of the scroll touches almost the centre of the foot of the P of POSTE, and the leaf which touches the foot of the E of LOCALE is thick and blunted, instead of ending in a sharp, curved point. There is no stop after LOCALE. Three of the four graduated dots on the left side show lines of shading in them, instead of being solid. There is a thin, black outline, immediately outside the red shield. The ribbon is wound only fourteen times round the tube of the horn, and all the turns are about the same width. The top of the A of LOCALE is very square, instead of being rounded.

Eighth Forgery.

(Eleven turns of ribbon.)

Apparently engraved in *taille-douce*, with lithographed shield, on very thick, white wove paper. I have only the 4c. of this counterfeit. The shield is vermillion. There is no break in the left top corner, and no dot

in either of the right-hand corners. No portion of the scroll-work touches any part of the E of LOCALE, and the top curl of the scroll this side has a spiral curl in its centre, which does not exist in the genuine, or in any other forgery. The rounded knob under the first L of LOCALE contains a crescent-shaped line (inverted) which does not exist in the genuine. The said knob is exactly central under the shaft of the L. The graduated dots, each side of the value-label, are shaded with horizontal lines, instead of being solid. There is a black outline round the red shield; *i.e.*, the ring of the post-horn is outlined on the inside, as well as on the outside. There are eleven turns of the wrapping round the tubes of the horn, and they are rounded, like cord, instead of being flat, like tape. Some of the turns are shaded by three lines. The white line which joins the thin part of the tube to the ring (above the largest dot on the left side) is *very* prominent, and slopes down to the left, instead of being quite horizontal. The top of the shaft (not the serif) of the P of POSTE is fully $\frac{3}{4}$ mm. from the top curl of the scroll to left of it, while the top of the E of LOCALE is less than $\frac{1}{2}$ mm. from the top curl of the scroll to right of it. The horizontal lines of shading under the POSTE LOCALE label are almost perfectly straight, instead of wavy. The uppermost of these lines is close to the rest.

Ninth Forgery.

(Fourteen turns of ribbon.)

Of this I have both values. It is very similar to the seventh forgery. Lithographed, on thin, grey-white wove paper. There is no break in the left top corner, and no dot in either of the right-hand corners. The stop after LOCALE is faint and shapeless. A line drawn down the right-hand edge of the first L of LOCALE would pass decidedly to the right of the centre of the rounded knob under the L. The lowest of the four graduated dots on the right side is simply a circle, with a white centre, instead of being solid; and the other three dots this side have rings round them. The ring of the post-horn is outlined both outside and inside, so that there is a black line immediately round the red shield. There are only fourteen turns of the wrapping round the horn; each of the turns has two lines of shading in it. The horizontal white line, joining the middle of the tube of the horn to the ring, is simply formed by part of the black shading being omitted. As far as I can make out from my two specimens, both of which are rather imperfect, the nearest part of the top curl of the right-hand scroll is a full millimetre from the top of the E of LOCALE. The central tongue of this E is a thick, straight line, instead of a little triangle; the C is much too narrow, and the A is ridiculously broad at the top. I think the tongue of the E of LOCALE is the easiest test for this particular forgery.

Tenth Forgery.

(Thirteen turns of ribbon.)

Engraved in *taille-douce*, on very thick, greyish-white wove paper. I have only the 5 c. of this counterfeit. The shield is a light vermillion. There is no break in the left top corner, and no dot in either of the right-hand corners. The frame of the stamp is composed of two very thin lines, all the way round, but the genuine has the outline single. The serif to the head of the P of POSTE is so long, that it touches the topmost curl of the scroll to left of it, and the long foot-stroke of the said P touches the lower leaf of the scroll; but the said leaf does not curl round, to touch the bottom of the shaft of the P. On the right-hand side, one leaf of the scroll comes up so far, that its top appears to form a portion of the serif at the tail of the E of LOCALE, instead of merely touching it.

There is no stop after this word. A line down the *left-hand* edge of the first L of LOCALE would pass almost centrally through the little rounded knob, under the L, and the lower outline of the POSTE LOCALE label passes right through the said knob. There are four dots to left of the value-label, all of about the same size, but there are only two dots, instead of four, to right of the value-label. (This is a very easy test.) All these six dots have horizontal lines of shading in them, instead of being solid. The ring of the post-horn is outlined, inside as well as outside; and the inner outline is double. There are thirteen turns of wrapping round the horn, the right-hand turn being bound round both horn and ring, like the rest, instead of round the horn alone. The wrapping appears to be round, like cord, instead of flat, like tape. The inner edge of the wide mouth of the horn encroaches very slightly on the ring, and the left-hand edge of the small mouthpiece looks as though a piece had been taken off it. There is a line of dots along the thin part of the tube, from the mouthpiece to the wrappings. These dots do not exist in the genuine. The horizontal white line, which ought to join the middle of this thin part of the tube to the ring, is absent. The top of the shaft (not the serif) of the P of POSTE is more than $\frac{1}{2}$ mm. from the top curl of the left-hand scroll; and the top of the E of LOCALE is decidedly less than $\frac{1}{2}$ mm. from the top curl of the right-hand scroll. The rounded part of the P of POSTE comes down too low, making the part of the shaft below it look very short. The bottom of the S is very much larger than the top; and the central tongue of the E is so long vertically, that it touches the bottom of the letter. The C of LOCALE has a very small, squeezed-in tail, and there is a sharp, vertical point to the top of its head, which does not exist in the genuine. The tongue of the E of this word is very nearly as large as that of the E of POSTE. Both these tongues are very small in the genuine. The bottom outline of the POSTE LOCALE label is very close to the horizontal shading below it, and the said horizontal shading is quite straight, instead of wavy.

Eleventh Forgery.

(Thirteen turns of ribbon.)

Of this, I have only the 5 c. Lithographed, in rather dark black, on thick, hard, yellowish-white wove paper. The shield is crimson, and, in my single specimen, is printed very much out of place. There is no break in the left top corner, but there is a dot or projection in the right top corner, and no dot in the right bottom corner. The leaf does not touch the foot of the P of POSTE, but is rather close to it. The graduated dots are shaded by more or less oblique lines, instead of being solid. There are, as far as I can make out through the heavy postmark, only thirteen turns of the wrapping round the tube of the horn, though there may, possibly, be fourteen, but not more. The very distinct outline of the broad end of the horn touches the outline of the ring. There is no head-stroke to the P of POSTE, and the A of LOCALE is sharply pointed. The horizontal lines under the POSTE LOCALE label are almost straight, and the uppermost line is not separated from the rest. The other tests are fairly like the genuine.

Twelfth Forgery.

(Twelve turns of cord.)

This is very poor; I have only the 4 c. Coarsely and faintly lithographed, in grey-black, on medium, hard, grey-white wove paper. The shield is dull vermilion. There is no break in the left top corner, and there are no dots in the right-hand corners. The head-stroke of the P of POSTE touches the scroll to left of it, and no part of the scroll touches the

foot of the P. There is no stop after the E of LOCALE, and the scroll does not touch the foot of that letter. The rounded knob under the first L of LOCALE is represented by a pointed projection, like those each side of it, and this point comes under the centre of the horizontal limb of the L. The horizontal line under POSTE LOCALE passes, unbroken, above this pointed projection, whereas it stops short each side of the little ornament in the genuine. The graduated dots, each side of the value-label, are shaded by oblique lines, and the right-hand set of dots does not curve inwards, like the left-hand set. There is a black outline immediately round the red shield, but it has no outer outline, so that there is no real ring to the post-horn at all. There are only twelve turns of cord (not tape) round the tube, and only about six of the turns touch the black outline of the red shield. The last turn to the left does not point towards the uppermost dot that side. Most of the turns are unshaded, but a few of them show some fine, oblique lines. The broad mouth of the horn appears to be a thick, solid ring; this appearance is due to a curved line, near the end, which is not found in the genuine. There is no horizontal, white line, joining the middle of the thin tube to the ring. The top of the E of LOCALE is very nearly 1 mm. from the topmost curl of the leaf to right of it. The serif to the head of the S of POSTE is squarer and heavier than that to the tail. There is an oblique line, or scratch, joining the bottoms of the letters CAL, and the two words are badly spaced, so that the TEL of POSTE LOCALE are at equal distance from one another, while the L is too close to the following O. The horizontal lines below the inscription are quite straight, and the uppermost line is not separated from the rest. I do not think this counterfeit is likely to deceive.

Thirteenth Forgery.

(Fifteen turns of ribbon.)

This is similar to the fourth forgery in general appearance, and has the same number of wrappings (fifteen). I have only the 5 c. Lithographed, on thick, hard, greyish-white wove paper. The shield is of a rather terracotta red. My specimen is not very perfect, but I think there is no break in the left top corner, and there are no dots in the right-hand corners. The leaf does not touch the foot of the P of POSTE. A line drawn down the right-hand edge of the first L of LOCALE would pass decidedly to the right of the centre of the rounded knob below it. The lowest of the four graduated dots on the right side has a white centre, but all the other dots, both sides, are shaded by oblique lines. There are fifteen turns of the tape round the horn. The rest of the tests are like the genuine.

Fourteenth Forgery.

(Sixteen turns of ribbon.)

Except that the tape is wrapped sixteen times round the horn, this is very like the thirteenth forgery. I have only the 5 c. Lithographed, on thick, rather hard, yellowish-white wove paper. The shield is almost crimson. There are no dots in the right-hand corners, and no break in the left top corner. A thin, curved line, proceeding from the leaf (not the point of the leaf itself) touches the foot-stroke of the P of POSTE. Lines of shading can be seen in most of the graduated dots. There are, as I have already stated, sixteen wrappings round the tube of the horn. The top, horizontal line, under POSTE LOCALE, is only very slightly separated from the lines below it. The other tests are like the genuine.

Fifteenth Forgery.*(Fourteen turns of ribbon.)*

This was the tenth forgery of my second edition, and I gave M. de Reuterskiöld's notes concerning it, not having seen it myself. Quite lately, Mr. J. G. Boulton, of Leicester, sent me a 4 c., and I now give a full description of it. Lithographed, on thick, hard, very white wove paper. There is the word *facsimile*, in a curve, printed in tiny, violet letters across the centre. There is a very slight break in the left top corner, and a small, horizontal projection in the right top corner. The shield is bright scarlet. The first L of LOCALE just touches the rounded knob below it, though they are $\frac{1}{4}$ mm. apart in the genuine. The letters CA and LE of LOCALE touch each other at the bottom, and there is no stop after this word. The red shield is too small, making the white ring round it look too wide (nearly 1 mm., instead of about $\frac{1}{2}$ mm.). There are fourteen wrappings round the horn, and *all* of them join the ring. The last turn to the left is far to the right of the uppermost, graduated dot. All the turns, except one, show a single line of shading in them, the fifth from the right having two. The inner edge of the wide mouth of the horn touches the ring. There is no white, horizontal line, to join the middle of the thin part of the tube to the ring. The top of the E of LOCALE is $\frac{3}{4}$ mm. from the nearest part of the curl to right of it. The stamp is slightly too wide, measuring nearly $21\frac{3}{4}$ mm., instead of about $21\frac{1}{4}$ mm. The wavy lines under the POSTE LOCALE label are not horizontal, but slope somewhat down to the left. Altogether, though a new forgery, I do not call this a very successful counterfeit.

Sixteenth Forgery.

I give this on the authority of M. de Reuterskiöld, not having seen it myself. He does not say whether it exists in both values. It is sold at Geneva, with *facsimile* at the back. Almost all the details are well copied, but somewhat coarsely executed. The wrappings of tape or ribbon round the horn are too indistinct to permit of their being counted. There is no white, horizontal line, joining the thin part of the tube to the ring.

Seventeenth Forgery.*(4 centimes.)*

This is the very latest and best. I have not seen it, but learn that it is made by taking a *genuine* specimen of the 5 c., erasing the numeral, and printing a "4" in place of it, to make the rare 4 c. It would be well, therefore, for collectors, having any apparently genuine 4 c. offered to them, to examine the numeral of value very closely, to see that the "4" is really part of the original design, lithographed, and in the same ink. I conclude that the numeral, in those fakes, is *printed* in, for it could not well be lithographed on single stamps. I regret that I have not been able to procure a specimen for dissection.

POSTMARKS.

Genuine.—The third Geneva rosette, as already described in the double Geneva stamps. Also the fourth Geneva rosette, as described in the single Geneva stamps. These are in red. Also the fifth Geneva rosette, which is exactly like the third rosette, but without the large outlined cross in the centre. This is in black. Also 40, in black. Also five thick bars, of graduated lengths, the longest in the centre, something like 66 would be, if the circle and letter were removed, and the bars continued. This is also in black.

First Forgery.—34, also 41, in black.

Second Forgery.—34, in black.

Third Forgery.—An indistinct rosette, in red. Also uncanceled.

Fourth Forgery.—34, in black.

Fifth Forgery.—25, without the balls in the angles, in black. Also 30, without the central oblong and numeral, in black. Also 34, in black.

Sixth Forgery.—A rather clumsy imitation of the fourth Geneva rosette, in red.

Seventh Forgery.—34, in black.

Eighth Forgery.—25, in red.

Ninth Forgery.—An indistinct rosette, in red.

Tenth Forgery.—Apparently the same as the sixth forgery, in red.

Eleventh Forgery.—The same as the sixth forgery, but thicker, and in very bright red.

Twelfth Forgery.—Part of a large, irregular circle, in black.

Thirteenth Forgery.—40, in black.

Fourteenth Forgery.—34, in black.

Fifteenth Forgery.—Uncanceled.

Sixteenth Forgery.—I do not know the cancellation.

Seventeenth Forgery.—As this is a fake, from the genuine 5 c., it must naturally bear genuine postmarks.

NOTE.—In order to save my readers the trouble of wading through many weary pages of description to identify any particular forgery of the Vaud stamps, I append here, in tabular form, the number of wrappings of the ribbon round the horn in each forgery.

First forgery.—Twelve turns of ribbon.

Second forgery.—Twelve ditto.

Third forgery.—Thirteen ditto.

Fourth forgery.—Fifteen ditto.

Fifth forgery.—Twelve ditto.

Sixth forgery.—Sixteen ditto.

Seventh forgery.—Fourteen ditto.

Eighth forgery.—Eleven ditto.

Ninth forgery.—Fourteen ditto.

Tenth forgery.—Thirteen ditto.

Eleventh forgery.—Thirteen ditto(?).

Twelfth forgery.—Twelve ditto.

Thirteenth forgery.—Fifteen ditto.

Fourteenth forgery.—Sixteen ditto.

Fifteenth forgery.—Fourteen ditto.

Sixteenth forgery.—Too indistinct to count.

Seventeenth forgery.—Seventeen ditto. (The genuine stamp, faked.)

The *Stamp Collector's Fortnightly* for August 31, 1891, mentions two dangerous forgeries of the 4 c. and three of the 5 c., but does not describe them; and I do not know whether any of them are among the counterfeits here dissected.

WINTERTHUR (*so-called*).

Issue of (March?) 1850. 2½ Rappen, black and red.

This was a Zürich stamp, issued by the Eighth Postal District, and used in the large towns of that district, in the cantons of Zürich, Schaffhausen, Thurgau, and Zug. I do not know how many stamps there were on the sheet.

Genuine.

(*Large stop after Ortspost.*)

Lithographed, in black and red, on rather thick, white wove paper. In the margin, outside the stamp, there is a double-headed arrow, opposite to each of the four sides of the stamp, each arrow being loosely wrapped with a ribbon, in nine spiral folds; the arrows and spirals are all in red. The frame of the stamp is double, all the way round, the outer line being hardly any thicker than the inner one. The ring of the post-horn is suspended from the top of the stamp by two ropes, with a tassel between them. The ropes touch the *outer* outline

of the frame; the left-hand rope has seven oblique black lines across it, to mark the strands, and the right-hand rope has eight. The tassel hangs by two thin, black lines. Both ropes distinctly touch the ring. At the top of the ring, there are thirteen little black lines drawn across it, but three of them do not go right across. The part of the horn below the ring is crossed by about seventeen lines, several being broken. The central cross has a double outline, the outer one much thicker than the inner one; and this said outer outline is thicker at the right side and the bottom, than it is at the left side and the top; but the difference is slight. The inscription, ORTSP. POST. LOCALE, is in thick, block or sans-serif letters, and there is a large, conspicuous stop after ORTSP. slightly nearer to the P of POSTE than to the last letter of ORTSP. There is a stop after the R in the left top corner, and another after the R in the right bottom corner. The head of this latter R does not touch the scroll-like outline above it. This outline is treble under E LO of POSTE LOCALE, and double for the rest of the way. It ends in a curl at the bottom, and the bottom of the curl is cut off flat, or obliterated, by the bottom outline of the stamp. The similar, scroll-like outline, above the 2½ in the left lower corner, is single, all the way; and the bottom of the curl at the lower end of it is not obliterated by the bottom outline of the stamp, but cuts slightly through it. (In both cases, I am speaking of the *inner* of the two horizontal lines, forming the bottom frame of the stamp.) The long, thin stem of the horn is joined to the ring by a short, white band, bounded by two black lines, level with the P of ORTSP. and there are four black lines drawn across this thin stem, at varying distances, near the end, apparently to represent joints. If produced to the left, one of these lines would cut through the O, another through the R, another through the beginning of the T, and the fourth would pass between TS of ORTSP. There are ten short, oblique lines of shading near the wide end of the horn, and four lines can be seen across the very rim of this wide end. Four curved lines are drawn across the wide part of the horn, at regular distances, opposite, respectively, to the A, the L, the space between LE, and the E of LOCALE. Of these four lines, the one opposite to the L does not go right across. Of the horizontal red lines, thirty-nine can be counted, in the part of the stamp containing ORTSP. reckoning from the curve below the R, in the

right top corner, to the very bottom of the stamp, under POSTE. There is no black dot anywhere, in the white central cross, or its black, inner outline.

First Forgery.

(No stop after Ortspost.)

Lithographed, on thick, hard, *very* yellowish, or pale buff wove paper, also on thin, white wove paper. The red arrows and spirals outside the stamp are absent. The outer line of the frame is very much thicker than the inner one, all round. The two ropes from which the ring of the horn is suspended only go to the inner outline of the top of the stamp, and each rope has only five oblique black lines across it to mark the strands. The tassel hangs by one solid, black line, which does not quite touch the inner outline of the frame above it. There are no lines across any part of the ring of the post-horn. The outer outline of the central cross is extremely thick at the right side and the bottom, while it is a mere hair-line at the left side and the top. The inscription is in *very* thin, block letters, and there is no stop after ORTSPOST. The head of the R, in the right lower corner, touches the curved outline to left of it; this outline is double all the way, and the thick curl at the bottom of it is not cut flat by the inner outline of the bottom of the stamp. The similar curl, at the bottom end of the curved line above the 2½, in the left lower corner, does not touch the bottom of the stamp at all. There is no white band to join the stem and ring of the horn, opposite to the P of ORTSPOST; and there are only three joints in the stem, opposite ORT. There are nine graduated lines of shading, near the wide end of the horn, and some of them run a long way down the horn, the longest of them actually reaching as far as the E of POSTE. There are eleven very short lines drawn across the very rim of the horn, instead of four; and, in place of the four curved lines which go right across the horn, opposite to the ALE of LOCALE, there are ten lines, only going partly across; the uppermost being high above the E of LOCALE, and the lowest opposite the O. There are only thirty-four horizontal, red lines, counting from under the R to the bottom of the stamp. There is a black dot in the upper part of the top arm of the white cross. In the middle of the horn, above POSTE, there are fifteen vertical lines drawn across the tube, most of them being unbroken.

Second Forgery.

(Very small stop after Ortspost.)

Poorly lithographed, on rather thin, white or greyish-white wove paper. There are only about five turns of the spiral ribbon round each of the red arrows, in the margins, between the stamps, and they are most irregularly drawn. The outer frame of the stamp is *very* much thicker than the inner one. There are six black lines, for strands, across each of the two ropes by which the horn is suspended. There are seventeen little black lines across the top of the wing, none of them broken, and twenty-one similar lines across the middle of the horn, above POSTE, none of them broken. At the centre of the top of the inner outline of the central cross, there is a black dot, hanging from the outline; and there is another black dot between the two outlines of the bottom of the cross. A very small, irregularly-shaped stop is visible after ORTSPOST, and there is a rather large stop after LOCALE, which does not exist in the genuine. There is no stop after the R, in the left top corner. The scroll-like outline, above the R in the right bottom corner, is triple all the way, and the very long head-stroke of the R cuts through the two thin lines, and touches the thick line. My specimen is imperfect, and I cannot see whether the inner outline of the bottom of the stamp cuts off the bottom of the curl at the lower

end of the scroll near the R. The curl of the scroll, near the 2½, in the left bottom corner, is cut off flat, and does not project below the inner outline of the bottom of the stamp. The white band, joining the stem of the horn to the ring, if prolonged upwards, would touch the left top corner of the central cross; and, if prolonged downwards, it would cut into the second O of ORTSPOST. (In the genuine, it would, if prolonged, pass below the centre of the cross, and cut through the P of ORTSPOST.) As far as I can make out, there are only two joints at the thin end of the horn. There are eight rather thick, short lines, near the rim of the horn, and about nine short lines on the very rim of the horn. The four lines across the wide part are in the same positions as in the genuine, but all four go right across the thick part. There seem to be thirty-three horizontal, red lines, counted as before, but they are broken and irregular. I do not think this forgery is at all likely to deceive.

I have a specimen of this forgery which does not show the two black dots in the cross, and the head-stroke to the R, in the right lower corner, only cuts through the first of the three parallel, curved lines to left of it. In all other respects, the tests are the same. It is better printed, but I cannot say whether it is an earlier or later state of the stone.

Third Forgery.

(No stop after Ortspost.)

Lithographed, on thin, white wove paper. The red arrows to right and left, in the margin, have nine spiral turns of the red ribbon round them, as in the genuine, but there are twelve turns of the ribbon above the stamp, and eleven below it, in my specimen, so that some stamps on the sheet must necessarily show the opposite of this, *i.e.*, eleven above and twelve below; as, of course, the spirals are cut through, longitudinally, in dividing the stamps. The outer frame of the stamp is a good deal thicker than the inner one. There are only five black strands in each rope, and the cord from which the tassel hangs is solid. The ropes only touch the inner outline of the top of the stamp. There are no lines across the ring, between the ropes. There are about twenty-four lines across the centre of the horn, above POSTE, but many of them are exceedingly faint, and some are blotched together, so that I cannot be sure of the number. The outer outline of the central cross is much thicker on the right side and at the bottom, than it is on the left side and the top. There is no stop after ORTSPOST, which is an easy test; though one of my specimens has had this omission rectified in pen-and-ink! The R in the left top corner also has no stop after it. The head-stroke of the R in the right bottom corner cuts through the first of the three lines to left of it, and touches the central line. The curl at the bottom of these lines is perfect, and not flattened by the bottom outline of the stamp. The similar curl, near the 2½, in the left bottom corner, *hardly* touches the outline below it. There is no white line, or band, to join the post-horn to the ring. The small end of the horn shows three joints. If produced to the left, one of the black lines, forming these joints, would cut through the O, one through the R, and one through the beginning of the S of ORTSPOST. There are eleven graduated lines near the wide end of the horn, and twelve short lines across the very rim of the horn, three of them not going quite across. The four lines across the horn, near the thick end, are fairly like the genuine, but only two of them seem to go right across. There are thirty horizontal, red lines, counted as before, and they are bold and very regular. The serif to the I of the fraction in the left lower corner touches the large 2, but it does not do so in the genuine.

Fourth Forgery.

(*Very small stop after Ortspost.*)

Lithographed, on rather thick, soft, white, or slightly yellowish-white wove paper. Instead of a spiral, of nine turns, round the shaft of each of the red arrows in the margin, there is a set of nine discs, or cups, separate from each other, strung along the shaft. The outer line of the frame of the stamp is a good deal thicker than the inner one. The ropes touch the inner line only, at the top of the stamp; each rope showing six black strands. At the top of the ring, between the ropes, there are ten vertical, black lines, going across the ring, besides three lines which only go half-way across, just the same as the genuine; but there are only fifteen lines, all unbroken, drawn across the middle of the tube of the horn, above POSTE. The outer outline of the central cross is the same thickness, all the way round. There is a very small stop between ORTSPOST. POSTE LOCALE, and it is nearer to the T, than to the P. In the genuine, these two letters are very nearly parallel with each other; but, in this forgery, the T slopes too much over to the right, so that their shafts would meet, if produced to a little above the centre of the stamp. The tail of each 2 of the 2½, in the corners, is slightly curly in the genuine; but, in this forgery, all four are perfectly flat at the base, with a sloping end. The white band, joining the middle of the thin stem of the horn to the ring, is too broad (½ mm., instead of ¼ mm.), and it points towards the second O of ORTSPOST, instead of to the P. The thin neck of the horn is too thick, being as thick as the end joint, or mouthpiece; but, in the genuine, this end joint is thicker than the neck, and is like a button mushroom. There are only nine lines of shading near the wide mouth of the horn, and seven little lines across the very rim. The four curved lines across the widening part of the horn are opposite, respectively, to the space between AL, the space between LE, the E, and high above the E of LOCALE. They all go right across the horn. There are only twenty-nine horizontal red lines in the shield, counting as before. This is a much better forgery than any of the three already described; but, when there is sufficient margin, the cups, strung along the shafts of the arrows, in place of the continuous, spiral ribbon of the genuine, will be found an easy test.

Fifth Forgery.

(*Small stop after Ortspost.*)

Lithographed, on very thick, very hard, white wove paper. In my specimen, there are twelve spiral turns of red ribbon round the arrow above the stamp, thirteen turns below the stamp, ten on the right side, and ten on the left side. This is an easy test; but it will be understood that some specimens must needs show thirteen turns above the stamp, and twelve below. The outer frame of the stamp is *very* much thicker than the inner one. The left-hand rope shows five black strands across it; the right-hand one has six. The ropes are joined to the *inner* line at the top of the stamp. The tassel hangs by one solid, black line. There are no lines across the ring, and the two circular outlines of the ring are far too close together, leaving only a *very* thin, white line (⅓ mm., instead of ½ mm.) between them. I can see fifteen lines across the horn, above POSTE, but there is a heavy postmark just there, and there are very probably about twenty. The outer outline of the central cross is *very* much thicker at the right side and the bottom, than it is at the left side and the top. The inner outline of this central cross has the two lines forming the left bottom corner drawn too far both ways, "Oxford-frame" fashion. The letters of the inscription are too thin: and the stop after ORTSPOST

is too small, and much too near to the T. There is no stop after the R, in the left top corner. The head of the R in the right bottom corner touches the middle one of the three curved lines to left of it, and it lacks the curled-up tail of the R of the genuine. The inner one of the said three curved lines is continued up above the level of the head of the R; but, in the genuine, this line stops short, before reaching the R. As far as I can see through the postmark, neither of the black curls touches the inner outline of the bottom of the stamp. There is no white band to join the ring to the thin stem of the horn. There are only three joints at the thin end, and the top joint is a *very* tiny ball, not so wide as the next joint. There are about thirteen (instead of four) little lines across the very rim of the ball of the horn; but I cannot be sure of the exact number, on account of the postmark. There are five curved lines across the widening part of the horn, and they are short, not going across the horn. They are opposite, respectively, to the space between OC, the space between CA, the space between AL, the space between LE, and high above the E, of LOCALE. There are only thirty-four horizontal, red lines, counted as before.

Sixth Forgery.

(*Small stop after Ortspost.*)

In my second edition, I described this from notes furnished me by M. de Reuterskiöld. I now describe from a specimen given me by Mr. Boulton, of Leicester. Lithographed, on medium, hard, very white wove paper, with the word *facsimile*, in microscopic, violet letters, in a curve, across the centre. The arrows and spirals are well imitated. The outer frame of the stamp shows a slight break in the left top corner; the right top corner projects horizontally to the right, and the left bottom corner projects vertically downwards. These projections are only slight. There are seven black strands across each of the ropes, and they are rather irregular. The two black lines from which the tassel hangs are too far apart. There are no lines across the ring, between the ropes. There are twelve lines and a dot across the tube, above POSTE. All the lines, except the last one to the left, go across the tube, and the third from the left is much thicker than the others. The inner outline of the central cross is broken and irregular at the top. The inscription is very like the genuine, but the stop is rather too small, and the E of LOCALE very nearly touches the horn. The C of LOCALE is very like a G. There is no stop after either R, which is an easy test. The serif of the head of the R in the right lower corner touches the inner one of the three lines to left of it; and this said inner line is prolonged to nearly the level of the bottom of the C of LOCALE, instead of stopping short before reaching the R. This R has not the curled tail of the genuine, though the one in the left top corner has the curl. The lower, black outline of the white band, joining the ring to the thin part of the horn, is continued *across* the tube, in this forgery. There are only three black lines, for joints, across the thin end of the tube, and the fourth joint is enlarged into a knob, very different from the slight enlargement of the genuine. The four curved lines across the widening part of the horn all go right across, and are opposite, respectively, to the space between CA, between AL, between LE, and above the E, of LOCALE. There are thirty-eight horizontal, red lines, counted as before; and these red lines are, evidently printed *after* the black parts of the stamp, so that they are visible above and across the letters of the inscription. This forgery has a raw look, and is not likely to be found very deceptive.

Seventh Forgery.*(Small stop after Ortspost.)*

I have not seen this, and give M. de Reuterskiöld's description of it. The red arrows are fairly well imitated. There are six oblique lines across each of the ropes, at the top of the stamp. There is a small stop after ORTSPOST. The mouthpiece of the horn is joined to the central ring by an *oblique* white band, bounded by two black lines; it has three lines across it, near the end. This part of the horn is larger than the central ring, which is not the case with the genuine. There are twelve little black lines in the upper part of the central ring, and fifteen in the lower part of the horn. There are twenty-nine red lines behind ORTSPOST, counting from the bottom of the stamp to the curve under the R in the left top corner, as before.

POSTMARKS.

Genuine.—34, with thicker lines, in black; also P.P., in red.

First Forgery.—98, with thinner lines.

Second Forgery.—Something like 33; also uncanceled.

Third Forgery.—25, in blue or black, with and without the oblique lines.

Fourth Forgery.—P.P., in black.

Fifth Forgery.—25, in black.

Sixth Forgery.—Uncanceled, except for the violet *facsimile*, across the face.

Seventh Forgery.—I do not know the cancellation of this stamp.

NOTE.—Mr. Atlee speaks of three forgeries of this stamp in his possession, which have the arrows in the margins *in black*, instead of in red. He does not particularise them further, but they must be different from any of mine, as all the counterfeits above described have the arrows in red, like the genuine.

ZÜRICH.

Issue of March, 1843. 4 Rappen, Local-Taxe; black on white.

There are five types of these stamps. They are very scarce; I wish I could say the same for the forgeries, which are to be found in most schoolboys' albums.

Genuine.

Lithographed, on moderately stout, greyish-white wove paper, which is ruled all over with very fine red lines, either vertical or horizontal, according to the way in which the paper was placed in the press. These lines are arranged, two very close together, then one further off, alternately. The corners of the stamp are composed of crossed lines, with five square dots on the lines, forming a cross; and the five dots forming the cross in the right top corner are quite distinct from one another. Down each side of the stamp there is a row of semicircles—six entire ones, with a half-semicircle at the top, on the left side; and six entire ones, with a half-semicircle at the bottom, on the right side. The half-semicircle, in each case, has one more or less comma-shaped, black dot

in it ; and each of the semicircles contains three dots, pear-shaped and comma-shaped. The groundwork of the stamp is a sort of lattice-work of oblique lines. These lines vary according to the type, and they afford a ready means of distinguishing not only the five types of the genuine, but the different counterfeits also. Before I give the table of the types, I had better offer a few words of explanation. The oblique lines of the groundwork are in groups of four, with or without odd lines in the corners, so that, to describe each type, six sets of numerals will be required. In all cases, I begin to count at the left top corner. Thus the formula, 1.15.3 \times 0.16.0, means that there is a single oblique line in the left top corner, then fifteen complete groups of four, then three lines in the right bottom corner ; then beginning to count at the right top corner, the other half of the formula means that there are no lines in the right top corner, sixteen groups of four lines, and no lines again in the left bottom corner. This is actually the formula for type I. of the 6 rappen.

Here is the table :—

Types of the genuine 4 rappen.

Type I.	2.15.2 \times 0.16.0.
Type II.	0.16.0 \times 0.16.0.
Type III.	0.16.0 \times 3.15.2.
Type IV.	3.15.1 \times 2.15.3.
Type V.	2.15.2 \times 2.15.3.

In all the types, there is a very distinct hyphen between the words LOCAL-TAXE. The shading to the back of the 4 is perfectly vertical and straight. There are two dots over the U of ZÜRICH in all the types, though they are not very clear in Type II., as the U is so close to the top line. The horizontal lines in the top and bottom frames vary in number and position, according to the type. The following are the special notes for each type :—

Type I. The upper frame has seven horizontal lines, and one of them passes below ZÜRICH, without touching any of the letters. The R and the I very nearly touch the top outer line of the frame. The lower frame has eight lines, none of them showing below LOCAL-TAXE. There is a stop after TAXE in this type, but not in any of the others.

Type II. The upper frame has six lines, none of them showing below ZÜRICH. The Ü and the I almost touch the upper border. The lower frame has eight lines ; none of them show below LOCAL-TAXE.

Type III. The upper frame has six lines. The letters of ZÜRICH are all equal, and exactly fill the space between the first and the sixth lines. The lower frame has eight lines ; one of them shows below LOCAL-TAXE.

Type IV. The upper frame has seven lines ; one of them shows below ZÜRICH. The lower frame has nine lines ; one of them is very close to the outer border.

Type V. The upper frame has seven lines ; one of them shows below ZÜRICH. The lower frame has nine lines ; two of them showing below LOCAL, and one below TAXE.

First Forgery.

(Dated.)

Rather nicely lithographed, on very yellowish-white wove paper. An easy test is that it has the date, 1-8-4-3, in the corners. The lines, as described above, are : 0.20.2 \times 3.20.0. There are no dots over the U of ZÜRICH, and no hyphen between the words LOCAL-TAXE. The red lines are fairly like the genuine.

Second Forgery.

(Dated.)

Like the last, this has 1-8-4-3 in the corners. There are dots over the U of ZÜRICH, and a hyphen between LOCAL-TAXE. The red lines are single, and nearly 1 mm. apart; *i.e.*, six or seven times further apart than the genuine.

Third Forgery.

(Dated.)

I saw this many years ago, and can only remember that it had the date 18-43, in the two bottom corners.

Fourth Forgery.

(Dated.)

This is also dated, 1-8-4-3, in the four corners. It is finely engraved in *taille-douce*, on very greyish-white wove paper. There are no red lines; no *trema* over the U of ZÜRICH; no hyphen between LOCAL-TAXE. There is a black cross showing behind the numeral in each corner. This stamp is much better-looking than the genuine; but, of course, the date-figures afford an instant means of detection.

Fifth Forgery.

This has CANTONAL-TAXE in the bottom frame. I have no other notes, but this will be quite sufficient.

Sixth Forgery.

Coarsely lithographed, on very white wove paper. The background-lines are $0.17.1 \times 0.16.2$. The red lines are arranged one and one, as in the second forgery, but rather closer together. The square dots in the right top corner all run together, so as to form a solid, black cross. The half-semicircle at the top of the left-hand frame contains a mark like a note of interrogation; the one at the bottom of the right-hand frame contains a comma, and part of a dot. The shading to the back of the tail of the 4 is rather wavy, instead of straight.

Seventh Forgery.

This is far better than any of the others, and is dangerous. Apparently engraved, on yellowish-white wove paper, thicker than that of the genuine. The lines of the groundwork are $3.15.2 \times 0.16.0$. The red lines are tolerably well done; but each double line has its component parts very nearly as far off as the distance between it and the adjoining single one; *i.e.*, there is not sufficient separation into two and one. The half-semicircle at the top of the left-hand frame contains two dots; and the half-semicircle at the bottom of the right-hand frame contains a large and shapeless dot. There is a stop after TAXE, like type I. of the genuine.

Eighth Forgery.

The lines are: $1.15.1 \times 2.15.2$. The half-semicircle on the left side is at the bottom, instead of the top, and has two dots in it. There are no vertical, black lines in the side-frames.

Ninth Forgery.

The lines are: $2.17.3 \times 2.18.0$. There are thirteen thin, horizontal lines in the top frame, and fourteen in the bottom one. There is no *trema* over the U of ZÜRICH, and no hyphen after LOCAL. The red lines are

arranged two and one, but are all too far apart. I have a note of one of these counterfeits with a stop after TAXE, but the specimen from which I am describing has no stop.

Tenth Forgery.

The lines are: $0.16.0 \times 0.16.0$. This agrees with type II. of the genuine, but there is a stop after TAXE, and the half-semicircle in the left-hand frame contains two black dots.

Eleventh Forgery.

The lines are: $1.14.3 \times 0.15.0$. I give this on M. de Reuterskiöld's authority, not possessing it myself. I have no further notes.

Twelfth Forgery.

The lines are: $2.15.2 \times 0.16.0$. I have not seen this. M. de Reuterskiöld says that it has the word *facsimile*, in microscopic letters, above the numeral.

Thirteenth Forgery.

The lines are: $3.16.2 \times 0.17.0$. There are *two* stops after ZÜRICH in this forgery.

Fourteenth Forgery.

This has never been described before. The lines are: $2.16.0 \times 3.15.3$. There are nine thin, horizontal lines in the top frame, all the letters of ZÜRICH resting on the ninth. In the bottom frame, there are fourteen lines. The letters LOC rest on the thirteenth line; AL and T on the twelfth line; AX on the thirteenth line, and the final E comes down between the thirteenth and fourteenth lines. There is no *trema* over the U of ZÜRICH, and there are no red lines.

POSTMARKS.

Genuine.—25, in red, black, blue, or greenish. Also an upright oval, containing AUSLAG at the top, and VON ZÜRICH, in two lines, at the bottom.

First Forgery.—Something like 25, but without the four diagonal lines. Struck in red.

Second Forgery.—Similar to 25, but the four arms of the central cross are pear-shaped, instead of rectangular, and the crossed lines in the centre of the cross form part of the outline of the cross itself, instead of being inside it. Struck in red on black.

Third Forgery.—I have no notes of the cancellation.

Fourth Forgery.—Like 25, but the arms of the cross seem to be wedge-shaped (I can only see a portion of the postmark). Struck in black.

Fifth Forgery.

Sixth Forgery.

Seventh Forgery.

Eighth Forgery.

Ninth Forgery.—Like 25, but there are no crossed diagonal lines, and no pearls outside the rosette.

Tenth Forgery.

Eleventh Forgery.

Twelfth Forgery.

Thirteenth Forgery.

Fourteenth Forgery.—Like 25, but the arms of the cross are pear-shaped. Struck in red.

I have no notes of the cancellations of these.

I have no notes of the cancellations of these.

Same Issue. 6 Rappen, black.

There are five types of this value also. I have twenty different forgeries, but, fortunately, in not one of the twenty are the lines the same as any of the types of the genuine.

Genuine.

Types of the genuine 6 rappen.

- Type I. 2.15.2 × 0.16.1.
- Type II. 1.15.3 × 3.15.1.
- Type III. 0.15.3 × 2.15.3.
- Type IV. 0.16.0 × 1.15.3.
- Type V. 2.15.1 × 1.16.0.

The red lines, the half-semicircles with their single dots, and the semicircles with their triple dots, are all the same as in the 4 rappen. There is a distinct *trema* over the U of ZÜRICH, and a hyphen between the words CANTONAL-TAXE. The cross of square dots in each corner is also the same as in the 4 rappen, and the five dots in the upper right-hand corner are quite distinct from one another. The following are the special notes for each type:—

Type I. The upper frame has eight horizontal lines. The lowest one (very near the bottom of the frame) shows below ZÜRICH. The lower frame has eight lines. One line shows below CANTONAL-TAXE, nearly touching the X.

Type II. The upper frame has eight lines, one showing below ZÜRICH. There is a stop after ZÜRICH in this type, but in none of the others. The lower frame has eight lines. One of them shows below CANTONAL-TAXE.

Type III. The upper frame has eight lines, one of them showing below ZÜRICH. The lower frame has eight lines, one showing below the inscription. There is no stop after CANTONAL-TAXE.

Type IV. The top frame has eight lines, one showing below ZÜRICH. The bottom frame has eight lines; one line shows below the inscription, touching only the T of TAXE. There is a stop after this word.

Type V. The top frame has eight lines, two showing below ZÜRICH. The bottom frame has nine lines, one showing below the inscription. There is a stop after TAXE.

First Forgery.

(Dated.)

This is very like the first forgery of the 4 rappen. Lithographed, on medium, almost buff-faced, white wove paper. The lines are 3.20.1 × 3.20.2. The corners show the date-figures, 1-8-4-3, instead of the crosses of dots. There is no *trema* over the U of ZÜRICH, and no hyphen between the words CANTONAL-TAXE. The red lines are much the same as the genuine. There are ten horizontal lines in the top frame, and nine in the bottom frame. The end of the tail of the 6 joins the body, making a solid figure; but in all types of the genuine, the tail runs down by the side of the body of the numeral, as in the illustration.

Second Forgery.

(Dated.)

Lithographed, on medium, yellowish-white wove paper. The lines are: 0.17.1 × 3.16.2. The date, 1-8-4-3, appears in the corners. There is no

trema over the U of ZÜRICH, and no hyphen after CANTONAL. Down the left side of the stamp, there are eight perfect semicircles; and down the right side, there are seven perfect semicircles, with a half-semicircle at the top, and another at the bottom. There are six horizontal lines in the top frame, and the same number in the bottom one.

Third Forgery.

(Dated.)

Lithographed, on hard, yellowish-white wove paper. The corners of the stamp bear the date-figures, 1-8-4-3. There is a *trema* over the U of ZÜRICH, but no hyphen after CANTONAL. The half-semicircle at the top of the left side contains two dots, instead of one; and the half-semicircle at the bottom of the right-hand frame also contains two dots. I have no notes of the lines in the background.

Fourth Forgery.

(Dated.)

This is nicely lithographed, on thick, greyish-white wove paper. The lines are: 2.17.2 × 2.17.2. It bears the date-figures, 1-8-4-3, in the four corners. There is a *trema* over the U of ZÜRICH, a hyphen after CANTONAL, and a stop after TAXE. There are eight horizontal lines in the upper frame, the letters of ZÜRICH resting on the lowest of them. The bottom frame contains eight lines on the left side, but the top line gradually merges into the frame above it, so that, behind TAXE, only seven lines can be counted. The red lines are single, and far apart.

Fifth Forgery.

Lithographed, on yellowish-white wove paper, stouter than the genuine. The four corners of the stamp are filled with a plain network of crossed, vertical and horizontal lines, without any square, black dots. (This is an easy test.) There is no *trema* over the U of ZÜRICH, and the word is in staring type, larger than the genuine, or any of the other forgeries. There is a hyphen after CANTONAL, and a stop after TAXE. The half-semicircle at the top of the left-hand frame contains two dots, instead of one; and the half-semicircle at the bottom of the right-hand frame also contains two dots. I have no notes of the lines in the background.

Sixth Forgery.

I do not possess this stamp, but it can be easily detected by the fact that it has the inscription LOCAL-TAXE instead of CANTONAL-TAXE.

Seventh Forgery.

This is the third forgery in M. de Reuterskiöld's book. It may be known by the fact that the tail of the 6 is joined to the body in one solid piece, like my first forgery.

Eighth Forgery.

Lithographed, in jet-black, on rather thin, very white wove paper, and also on thick, hard, yellowish-white wove paper. The lines are: 0.17.1 × 0.16.3. There is a *trema* over the U of ZÜRICH, but there is no hyphen after CANTONAL. There are only seven lines in the top frame, the letters of ZÜRICH standing on the sixth line. There are eight lines in the bottom frame; the letters CANTON stand on the seventh line, part of the A goes down to the eighth line, and the X and E of TAXE also go down to the eighth line. There are two dots, instead of one, in the half-semicircle, in each side-frame. The red lines are single, and far apart.

Ninth Forgery.

The lines in the background are: $2.18.2 \times 2.18.2$. I have no other notes.

Tenth Forgery.

The lines are: $3.14.1 \times 0.15.0$. I have no other notes.

Eleventh Forgery.

The lines are: $0.16.3 \times 0.16.3$. I have no other notes.

Twelfth Forgery.

The lines are: $0.16.2 \times 2.15.2$. I have no other notes.

Thirteenth Forgery.

I think this is about the best-looking of all my forgeries of this value. Lithographed, on thick, hard, yellowish-white wove paper. The lines are: $2.15.2 \times 3.15.2$. Fortunately, they do not agree with any type of the genuine. There are only seven horizontal lines in the top frame. The letters ZÜRICH rest upon the bottom line, and CH upon the frame itself. There are eight lines in the bottom frame, though a ninth line can be traced above the CAN of CANTONAL. Most of the letters of the bottom inscription rest upon the lowest line but one, while the T and second A of CANTONAL, and the AXE of TAXE, rest upon the bottom line. There is a stop after TAXE, and the letters AX are joined together. There is a hyphen after CANTONAL. The half-semicircle at the top of the left-hand frame contains two dots. The red lines are ruled two and one, but the pairs are too far apart.

Fourteenth Forgery.

The lines are: $0.17.0 \times 0.17.0$. There is a stop after ZÜRICH in this forgery. I have no other notes.

Fifteenth Forgery.

The lines are: $0.16.0 \times 2.16.0$. This has the word *facsimile*, in microscopic letters, above the numeral. I have no other notes.

Sixteenth Forgery.

The lines are: $0.16.2 \times 3.15.2$. The top frame contains thirteen horizontal lines. I have no other notes.

Seventeenth Forgery.

The lines are: $3.15.0 \times 0.15.3$. In *both* side-frames, the half-semicircle is at the bottom. There are no vertical lines in the side-frames. I have no other notes.

Eighteenth Forgery.

Lithographed, on extremely thick, very yellowish-white wove paper, almost as stout as thin card. The lines are: $0.18.3 \times 3.18.1$. There is a *trema* over the U of ZÜRICH, and a hyphen after CANTONAL. The lines in the top frame are so indistinct, that I am not able to say how many there are. The C of ZÜRICH comes down lower than the other letters. I fancy there are nine lines in the bottom frame, but they are almost as indistinct as the others. The tail of the 6 joins the body in this forgery. The red lines are fairly like the genuine. The four outer dots of the cross in each corner of the stamp are wedge-shaped, instead of square. The joined tail of the 6 is the easiest test for this forgery.

Nineteenth Forgery.

Lithographed, on rather thin, white wove paper. The lines are : 1.17.0×0.17.0. There is a *trema* over the U of ZÜRICH, and there are two distinct stops after this word. There are seven horizontal lines in the top frame, and the letters of ZÜRICH all rest upon the seventh line. There is no hyphen after CANTONAL. There are seven lines in the bottom frame, and the letters rest upon the sixth line. The red lines are tolerably like the genuine. The five dots in the right top corner are very much blotched in my specimen, but I cannot say if this is always the case.

Twentieth Forgery.

Lithographed, on rather thin, yellowish-white wove paper. The lines are : 2.15.2×3.15.1, but I must mention that the middle line of the three in the right top corner is double, and the fourth line of the first group of four, under the H, is also double.

POSTMARKS.

Genuine.—As in the 4 rappen.

First Forgery.—Something like 25, but without the four pearls. My specimen is struck in red, but it is exceedingly faint, and only a portion shows on my specimen, so that I cannot be sure of the exact shape.

Second Forgery.—Something like 25, struck in red, but there are no pearls, and no diagonal lines.

Third Forgery.—I have no notes of the cancellation of this.

Fourth Forgery.—Something like 25, in black. As far as I can see, there are no pearls, and the arms of the cross are wedge-shaped.

Fifth Forgery.

Sixth Forgery.

Seventh Forgery.

Eighth Forgery.—What looks like a portion of 25, in black. Also 98, in black.

Ninth Forgery.

Tenth Forgery.

Eleventh Forgery.

Twelfth Forgery.

Thirteenth Forgery.—Something like 25, in bright red. The pearls are pear-shaped, and the cross is like four shields, point to point. There are no oblique lines.

Fourteenth Forgery.—Something like 25, in pale red ; the cancellation is so very faint that I can give no details.

Fifteenth Forgery.

Sixteenth Forgery.

Seventeenth Forgery.

Eighteenth Forgery.—Uncancelled.

Nineteenth Forgery.—Something like 25, in red ; but too pale for me to give details. The pearls appear to be pear-shaped.

FEDERAL ADMINISTRATION.

Issue of April, 1850. Poste Locale. 2½ Rappen.

These stamps were made at Berne by the lithographer, Durheim ; and Mirabaud and Reuterskiöld state that they were intended for French Switzerland, while the Ortspost stamps were for German Switzerland, but the distinction was not really observed. There are forty types, in five horizontal rows of eight ; and each sheet contained four transfers of these forty stamps, *i.e.*, 160 stamps in all. I have never seen a complete sheet, but conclude that the four panes were separated by a space. Some of the stamps are found of a grey-black, and finely executed ; others dark black, and not so clear. The explanation given is, that the fine, grey-black stamps were from the original, engraved stone ; and the darker and coarser ones from the lithographic transfers. If this be correct, then I fancy the grey stamps would probably be found only in single panes.

Genuine.

(Forty types.)

Engraved on stone (grey-black), or a lithographic transfer of the engraving (dark black), as above described, on rather thin, greyish-white wove paper. The shield is a fairly bright scarlet, and the central cross is found both with and without a thin, black outline all round it. Those without the line are very scarce. The ring of the post-horn is composed of three lines, *i.e.*, a thin line runs more or less completely all round the ring, between its two outlines. There are three sets of lines or cords round the body of the horn, consisting of two lines near the large end, three to left of these, and parallel with them, then three (or four, according to the type) nearer to the small end, and slanting the other way. One type, out of the forty, also shows another set of two lines across the thin end, near to the mouthpiece. The darkest part of the extremely ornamental outline of the central shield is not one thick, solid, black line, but shows itself, under the microscope, as three thickish lines, close together ; though, at the top, under the horn, the three seem to be more or less merged into one thick line. (Other, thin lines accompany these, all the way round, and each side of them ; but I speak only of the darkest part of the outline.) The A-shaped lines, inside the ring of the horn, are usually both double ; but in two or three of the types, the right leg of the A is single. There is a sort of curly rope or cable hanging from the POSTE-LOCALE label, and encircling the space round the shield and value. Except in very heavily-printed transfers, this rope shows white and black spaces in it, for strands, and is *not* a solid, black line. In thirty-two of the types, there is a little hook, of varying shape, projecting inwards, from the rope, into the bottom of the almost circular space which contains 2½, and, in thirty-eight of the types, there is a similar hook, projecting inwards, below RP. The rounded part of the rope, to the left of the 2½, does not touch the left-hand outline of the stamp. The head of the little 2 of 2½ is *very* close to the fraction-line. The letters of the inscription are less than 1 mm. high, and do not touch each other anywhere ; while the top point of the A-shaped mark in the ring of the horn is just centrally under the space between the two words. (I have called this a "point," but it is really a knob.)

First Forgery.

Lithographed, in not very dark black, on thin, to medium, greyish-white wove paper. The shield is usually crimson, rather than scarlet, but I have one specimen in bright scarlet. The easiest test is the black outline round the white cross, which is decidedly thicker on the right side than on the left, instead of being equally thin all the way round. (This is copied from the genuine ORTSPOST stamp, which *has* the right side thicker than the left.) The ring of the post-horn is double, instead of treble. There are four sets of lines drawn across the horn, 2, 3, 3, and 2. The darkest part of the ornamental outline of the shield is practically solid all the way round; that is to say, it is a solid (or nearly solid) line, closely accompanied by a very thin one. The two legs of the Λ , inside the ring of the horn, are single lines. The rope encircling the shield and value is a fair copy of the genuine. There is no inward-projecting hook from this rope in either of the lower circles. The rounded part of the rope, to the left of the $2\frac{1}{2}$, just touches the frame to left of it. The head of the little 2 of $2\frac{1}{2}$ is a long way from the fraction-line. The letters of the upper inscription are just 1 mm. high, and the feet of the A of LOCALE touch the C, and very nearly touch the L. The apex of the Λ in the ring is under the middle of the E of POSTE.

Second Forgery.

Rather coarsely lithographed, in dark black, on thick, yellowish-white wove paper. The shield is a fairly bright red. There is no black line round the central cross. The ring of the post-horn is double, instead of treble, and there are five little lines drawn across it, at the top, which are not found in the genuine. There are four sets of lines across the body of the horn, 3, 3, 3, and 3. The darkest part of the outline of the shield is absolutely solid, all the way round. The Λ in the ring is of single lines, the apex being below the beginning of the first L of LOCALE; and the said Λ leans over to the left, instead of being upright. The curly rope is too dark, and parts of it are solid. There is no inward-projecting hook under either $2\frac{1}{2}$ or RP. The upper inscription looks much too large, the letters being $1\frac{1}{2}$ mm. high, though the label containing them (which, in the genuine, is 2 mm. wide) is slightly less than 2 mm. wide; so that there is very little space between the letters, and the outlines, above and below them. The letters ALE of LOCALE are all joined together at the bottom.

Third Forgery.

Very coarsely lithographed, in dark black, on rather thick, white or greyish-white wove paper. The shield is vermilion. There is no black outline round the central, white cross. Most of the ring of the post-horn is one solid, black line, though it shows two lines on the left side. There are four sets of lines across the horn, 2, 2, 2, and 2. The darkest part of the outline of the shield is plainly composed of three lines all round, even under the horn. The two legs of the Λ are single; and, in my specimen, the right leg is too short, and does not touch the ring. The whole of the curly rope is quite black, without any white spaces for strands. There is no inward-projecting hook, under the $2\frac{1}{2}$, but there is a small, projecting lump under the RP. The stop after the RP. touches the rope. The letters of the upper inscription are $1\frac{1}{2}$ mm. high, and are very coarse and ragged.

POSTMARKS.

Genuine.—40, in black. Also a gridiron, with broken corners ("Eagle grille"), in black. Also one like 80, but with six bars, in black. Also one like 41, but with five thick, graduated bars, in black. Also one like 30,

but without the central square, in black or blue. Also eighteen short bars, in six rows of three, in black. Also a sort of ornamental, floral star of eight points, in black. Also P.P., in blue or black.

First Forgery.—P.P., in black. Also 33, ditto.

Second Forgery.—P.P., in black. Also 41, ditto.

Third Forgery.—98, in black.

Same Issue. Ortspost, 2½ Rappen.

(Forty types.)

Of this stamp I had formerly several counterfeits; but not possessing the forty types, I took no notes of them, and they are no longer in my possession, so I can give no details.

Issue of 1st October, 1850. Rayon I. 5 Rappen, black on blue.

From this time, prepayment by stamps was compulsory; 5 rappen for the first Rayon; 10 rap. for the second, 15 rap. for the third, etc. There are forty types, in five horizontal rows of eight. I understand that, in the earlier printings, there was no black outline round the white cross, but that the outline was subsequently added.

Genuine.

Lithographed, on thin to medium, white wove paper. The blue ground, with which the whole face of the stamp, except the central shield, is covered, is in greenish-blue, medium, and deep blue. The stamp is found, with or without a black outline round the cross, as above stated. As in the POSTE LOCALE stamps, the darkest part of the very ornamental outline of the central shield is composed of three parallel lines, close together, and not one solid, thick, black line. The curly rope, enclosing the shield and value-labels, shows, as before, light and dark spaces; though, in heavily-printed copies, more or less of the rope is solid black. The outer, right-hand fork of the RAYON-label does not touch the circular kink in the rope below it. In most of the types, the stop after R.P. is nearer to the edge of the label than to the P. As the stamps all differ so very greatly, I can give no further general tests.

First Forgery.

Lithographed, on medium, white wove paper. This stamp has one small mark in common with No. 14 on the sheet; i.e., there is a small 5 in the maze-work, level with the end of the upper label, and almost touching the right-hand edge of the stamp. As No. 14 is the only stamp on the sheet that shows this 5 (which is, of course, merely an accidental curve of the maze-work), I will give the points of difference between this forgery and type 14 of the genuine. There is a strong black outline round the cross. The darkest part of the ornamental outline of the central shield is solid everywhere, except in a few places on the right-hand side. The curly rope is also solid nearly all the way round. The head of the 5 is almost as wide as the body, but is extremely short in type 14. The left leg of the A in the ring of the post-horn is double, instead of single, and comes down as low as the right leg, instead of

being much shorter. The ball or knob at the top of this A stands under the beginning of the O of RAYON, instead of under the foot of the Y. The stop after the I is small, and very much nearer to the I than to the end of the label; while type 14 has a good-sized stop, which is exactly half-way between the I and the end of the label. The foot of the Y comes down decidedly lower than the A, instead of being exactly level with it. I think these tests will probably be sufficient.

Second Forgery.

This is not so good. Lithographed, on medium, white wove paper. The blue of the background is fairly light, and very slightly greenish, while the shield is a brighter red than the first forgery. There is no black outline round the cross. The darkest part of the ornamental frame of the shield is quite solid, most of the way round; the curly rope is also solid the whole way. The outer, right-hand fork of the RAYON-label touches the circular kink in the rope below it. The stop after RP. is a good deal below the level of the head of the P, which is not the case with any of the genuine. The maze-work at the right-hand edge of the stamp, between the two kinks of the rope, shows, close to the upper kink, first a small circle (not closed at the bottom), with two tails hanging from it, right and left; then, below this, a circle, joined to the right-hand frame by two little, horizontal lines; then, below this, an object like a clumsy foot and ankle, pointing downwards. These are only microscopic tests, but they are not to be found in any of the genuine. Both legs of the A, in the ring of the post-horn, are double, and the apex of the A is under the space between AY of RAYON.

Third Forgery.

Lithographed, on medium, white wove paper. The blue ground is *very* deep, like the colour of the very darkest specimens of the Brunswick, 2 sgr., black on blue. There is no black outline round the cross, which, in my specimen, is smeared with the blue of the ground-work. The darkest part of the ornamental outline of the shield is mostly solid black. The curly rope, enclosing the shield and value-labels, is perfectly solid, without any light spaces. The curled-up tail of the R of RP. very nearly touches the P, and, in my specimen, there is a hyphen above the stop after the P. (τ)

Fourth Forgery.

Lithographed, on medium, hard, white wove paper. The ground is rather a light blue, much the colour of the "pale blue" 2 neugroschen, Saxony, of 1851. There is no outline round the white cross. The darkest part of the ornamental outline of the shield is quite solid; the curly rope is also solid. The stop after RP. almost touches the outline of the containing-label. This is not at all a good forgery.

POSTMARKS.

Genuine.—These are very various. Mirabaud and de Reuterskiöld's book, to which I have so frequently referred, mentions the following: the Zürich cancellation, 25, in red or blue; the Geneva grille, 40, in black; the Lucerne grille, something like 30 (without the central square and numeral), with nine lines in black; the St. Gall grille, like 30, but with SG in the centre, in black; the eagle grille of Vaud, in black, which is an oblong frame, with three bars across it, and the top right corner, and bottom left corner, broken by wide gaps; also 98, of six bars in black; the Yverdon grille, in black, something like 33, but with only five, thick bars;

also the same, but with ten bars, in black, blue, red, or brown; the curious diaper pattern of Zursach, in black; the Coire grille, like 40, but much smaller, in blue; the square of square dots of Pfaffnau, in black; the Sonceboz grille, consisting of six rows of dashes, three in a row, in black; the oval, floral cancel of Pfyn, in black; also an oblong frame, with rounded corners, solid triangles in the spandrels, and a solid oval in the centre, containing M.L., in white, in script characters; also 101 (Bienne), in black. Of lettered cancellations, the following are known: FRANKO, in black; *FRANCO*, in italic capitals, in black; FRANCO, in large capitals, in a double-lined, oblong frame, with truncated corners, in black, blue, or red; FRANGO, in thick capitals, in black; R.L. (Rayon Limitrophe), in an oblong frame, in black; R., in square frame, in black; $\frac{LB}{PH}$, in black, or red; also P., P.P., P.D., with or without frames, in black or red, etc.

First Forgery.—25, in black.

Second Forgery.—A pen-stroke.

Third Forgery.—34, in black.

Fourth Forgery.—P.P., in a circular frame, in black, with pen-strokes in addition.

Same Issue. Rayon II. 10 Rappen, black and red, on yellow, orange, or buff.

Genuine.

Lithographed, as before, on thin to medium, white wove paper, but the ground is in yellow, orange, or buff. The stamp is found with or without traces of the black lines, round the white cross. As in the 5 rappen, the darkest part of the ornamental outline of the central shield is not one thick, solid line, but three thin, parallel lines, close together. The light and dark spaces in the curly rope are very distinct; much more so than in the 5 rappen, on account of the light-coloured ground. As in the 5 rappen, there are four sets of lines across the body of the post-horn; the two inner sets being composed of three lines each, and the outer ones of two lines. The ring of the horn is not one solid line, but formed by two concentric lines, with a space between them. The stop after RP. does not actually touch the outline of the containing-label, though it is *very* close in some of the types.

Forged.

I have only one specimen, and cannot call it dangerous. Rather coarsely lithographed, on thick, hard, buff-faced white wove paper. There is no trace of any black outline round the white cross. The three parallel, black lines of the darkest part of the ornamental outline of the central shield are fairly like the genuine; but the curly black rope is one solid line, all the way round, without any light spaces. There are four sets of lines across the post-horn, but each set has only two lines (2, 2, 2, 2, instead of 2, 3, 3, 2). This is the easiest test. The stop after RP. is joined to the outline of the containing-label.

POSTMARKS.

Genuine.—I fancy most of the very various obliterations described for the 5 rappen may be found in this value.

Forged.—98.

Issue of 1st January, 1852. Small numerals; 15 Rappen, vermillion, rose.

(Ten types.)

The ORTSPOST stone was used for the design of these labels; transfers being made of the second and third vertical rows of stamps on this stone; the original inscription being altered to RAYON III. 15 RP., and the central shield filled, behind the white cross, with vertical, coloured lines. These stamps, with value in RAPPEN, were intended for the German-speaking Cantons.

Genuine.

Lithographed, in rose or vermillion, on thick, white wove paper. The curly rope round the central space has white spots or spaces in it, as before; and the four sets of lines across the post-horn are 2, 3, 3, 2. There are either seventeen or eighteen vertical lines in the shield, according to the type; and the outline of the central cross is decidedly thicker at the right side and bottom, than it is at the left side and top. In all the types, some of the vertical lines of the shield are drawn too high, cutting into the curly white ornaments, under the post-horn; and these white ornaments which form the top of the shield, are outlined all round, and have a trefoil between them, just under the top of the cross.

Forged.

I have only one specimen, and do not fancy it is very common. Lithographed, in pale vermillion, on rather thin, very white wove paper. The curly rope is one solid line all round, without any white spaces. The four sets of lines across the post-horn are all alike, 2, 2, 2, 2. There are only fourteen vertical, coloured lines in the shield. They are not drawn too high, and do not cut into the white curly ornaments above them. The said ornaments show very little trace of outline, and there is no trefoil between them, above the cross. The outline of the cross is the same thickness, all the way round.

POSTMARKS.

Genuine.—As in the 5 and 10 rappen.

Forged.—As far as I can make out, this appears to be PP, in black.

Same Issue. 15 Centimes, rose, vermillion.

(Ten types.)

The transfers for these were from the same ten stamps of the ORTSPOST stone that were employed for the 15 rappen, but with the value expressed in CENTIMES, for use in the French-speaking Cantons. I do not think that the difference was observed very strictly. Only 100,000 of the 15 cts. were ordered, as compared with 300,000 of the 15 rp.

Genuine.

Lithographed, in rose or vermillion, on thick, white wove paper. The tests for the 15 rappen just described will serve for this stamp.

First Forgery.

Lithographed, in rosy-vermillion, on medium, white wove paper. The curly rope is one solid line, without any white spaces in it. There are nineteen vertical lines, with indications of a twentieth, in the shield. None of these lines are drawn too high.

Second Forgery.

Lithographed, in orange-vermilion, on thick, very yellowish-white wove paper. The curly rope is one solid line. This counterfeit may be easily detected by the post-horn, which is shaded with thick, coarse, oblique lines, much thicker than the vertical lines in the shield. The sets of lines across the horn are also very different from the genuine, seeming to be (counting from the left) 1, 0, 2 (blotched together), 2 (also blotched together). The place where the second set ought to be is hidden by the coarse, oblique shading described above. There are fifteen vertical lines in the shield, with parts of another line each side. The outline of the central cross is absurdly thick, especially at the end of the right arm. The curly white ornaments, at the top of the shield, are very thin, being partially obliterated by the coarse shading of the horn. I cannot make out any trefoil between them; but my specimen is post-marked just there. The darkest part of the ornamental outline of the shield is one solid line, instead of three thin, parallel ones.

Third Forgery.

Lithographed, in scarlet, on thick, hard white wove paper. The curly rope is one solid line. The sets of lines across the horn are 2, 2, 2, 2; but each pair is generally blotched together, into one single line. There are thirteen coarse, thick vertical lines in the shield; and none of them are drawn too high. There is a blotch between the two curly, white ornaments, at the top of the shield; but it is not a trefoil. This is the worst of the counterfeits, and not likely to deceive.

POSTMARKS.

Genuine.—Most of the cancellations already described.

First Forgery.—33; also uncanceled.

Second Forgery.—42, without numerals.

Third Forgery.—Something like 33, but with thicker lines.

Issue of the middle of 1853. Large numerals; 15 Rappen, rose, vermilion.

(*Ten types.*)

These stamps are from new transfers, taken from the fourth and fifth vertical rows of the ORTSPOST stone. The value is expressed in rappen only; and the numerals are considerably larger than those of the 15 rappen and 15 centimes, already described.

Genuine.

Lithographed, in rose or vermilion, on fairly thick, white wove paper. The tests of the first issue of 15 rappen will serve for this; but the numerals are much taller: the 1, for instance, instead of being 2 mm. high, is 2½ mm. high.

Forged.

I have only one specimen. Lithographed, in a sort of carmine-vermilion, on medium, white wove paper. The curly rope shows a few white spaces to the left of 15, otherwise it is a solid line. There are sixteen clear, vertical lines in the shield, with an extra line each side, cutting into the sides of the shield. None of the lines are drawn too high. The lines across

the post-horn, counting from the left, are 2, 2, 3, 2. The darkest part of the ornamental outline of the shield is one solid, thick line, instead of three parallel lines.

POSTMARKS.

Genuine.—Most of the postmarks already described.

Forged.—33.

Issue of 1855.

BOGUS STAMP.

No value, green on white.

(Similar to the annexed illustration.)

I mention this stamp, as some collectors may be puzzled by it. It is lithographed in green, like the usual green of the 40 rappen (which stamp it is probably intended to imitate), on white wove paper. The centre is very similar to that of the above-named stamp; but there are *no inscriptions*; each of the four frames being filled with a white Etruscan, or key-pattern. My specimen is cancelled with a few blotches of writing-ink. I know nothing of its history.

Issue of 1882. 15 Centimes, yellow-buff.

(Type of accompanying illustration.)

Tête-bêche variety.

Genuine.

My publishers' catalogue says: "The 15 c. was formerly listed, printed *tête-bêche*; but it is doubtful if this is a genuine variety."

Faked tête-bêche.

I have some rather clever fakes, one of which, I see, is priced £12! They are on the *granité* paper. The fakers have taken two stamps, turned one of them upside down, and then very carefully joined the edges of the perforations together. The mark of the join may be seen with a strong microscope, but it is very well done, and looks as though the two stamps had been folded together, and made an almost imperceptible crease. The mount seems to strengthen the weak joint, and sometimes there is a bit of paper at the bottom of the pair as well, to avoid all risk of their coming apart. The fakers have been clever enough to use some insoluble adhesive, instead of gum arabic, so that the stamps *will bear soaking in water*. My specimens are not cancelled.

TASMANIA.

Issue of November 1, 1853. One Penny, blue.

Genuine.

Engraved in *taille-douce*, on white wove paper, varying from stout to almost *pelure*. The gum is brownish. There are twenty-four varieties on the sheet, as each stamp was separately engraved. Of course it will be understood that any points here mentioned are common to all the twenty-four types. There is a distinct apostrophe before the S of DIEMEN'S; it varies considerably in shape, but is always visible. The line of the Queen's mouth, if prolonged to the left, would cut into some part of the V of VAN. The Queen's tiara shows three square-ended projections, where the crosses *pattée* or other ornaments usually stand. The ground of the central medallion, behind the bust, shows *vertical* lines, sometimes crossed by oblique ones; but the vertical lines are plainly to be seen in all the types. There are two lines, forming the outer outline of the oval which contains VAN DIEMEN'S LAND ONE PENNY. The two cannot be traced all the way round in all the types, but parts of both are always visible. Of these two lines, the outer one is very thick on the right side, and very thin on the left side; while the inner one is very thin on the right side, and very thick on the left side. Several of the types have a line all round the stamp, from $\frac{1}{4}$ to $\frac{3}{4}$ of a millimetre from it; but the whole line does not show in all the types. Nevertheless, every stamp on the sheet has a distinct line along its base, and another down its right side, at the above-mentioned distances from the stamp itself. The letters C.W.C.* are engraved on the broad part of the base of the neck, where it is cut away.

First Forgery.

Lithographed, in a sort of dark sky-blue, on very poor, medium, yellowish-white wove paper. There is no sign of any apostrophe before the S of DIEMEN'S. The line of the Queen's mouth, if prolonged, would pass far below the V of VAN. The tiara shows two *fleurs-de-lys*, and a white patch intended for a third. The groundwork of the central medallion, behind the bust, is composed of crossed, oblique lines, without any sign of vertical lines. The outer outline of the white oval is composed of one coloured line, instead of two; and it is thin all the way round. The other line, which ought to accompany it, is simply the thickened edge of the coloured spandrels. Below the bottom of the stamp there is a thin line, quite $1\frac{1}{2}$ millimetre distant from it; but there is no line round the other sides of my specimen, which has a broad margin to the right, and at the top. The base of the neck is all dark, without the engraver's initials. The crossed, oblique lines of which the spandrels are composed, are so very close together, that all the portions of the stamp outside the white oval band appear quite solid at a little distance.

Second Forgery.

Lithographed, in indigo, on fairly stout, yellowish-white wove paper. There is no apostrophe before the S of DIEMEN'S. The line of the Queen's mouth, if prolonged to the left, would pass below the V of VAN. The tiara is quite plain, without any projections. The shading of the

* These are the initials of the engraver, C. W. Coard.

central medallion, behind the portrait, is of horizontal lines only. There is only one line round the outside of the lettered oval; it is a little thicker on the right side than on the left. There are no initials on the base of the neck. My single specimen has a white spot, with dark centre (something like a candle-flame), just over the top of the head, but I do not know whether this always exists.

Third Forgery.

This is a very different affair, and much more dangerous than either of the other counterfeits. Engraved in *taille-douce*, in slate-blue, or dull ultramarine, on thick, very yellowish-white wove paper. The line of the Queen's mouth is the easiest test; it slopes down absurdly to the left, so that, if prolonged, it would pass very near to the beginning of the o of ONE. The whole stamp is surrounded by a line, thick on the right side, and thin elsewhere. The engraver's initials can be seen on the neck.

POSTMARKS.

Genuine.—I have no cancelled copy.

First Forgery.—The cancellation on my specimen is extremely faint and illegible; but I think it is 64.

Second Forgery.—10, 52.

Third Forgery.—62. This is a New South Wales postmark, and I fancy I have seen it on the genuine.

NOTE.—The engraved stamps, sometimes to be met with, showing two thick strokes across the portrait, are reprints, made from the defaced plate in 1879.

Same Issue. Fourpence, orange-yellow.

(Two plates, each of twenty-four types.)

Of the two plates, plate 1 is finely engraved, and plate 2 has coarser lines. There are twenty-four types on each plate, so that there are forty-eight types altogether. The orange, or reddish-orange stamps seem to be always from plate 1.

Genuine.

Engraved in *taille-douce*, paper as before.* The crossed lines of the background, behind the bust, are fine, regular, and close together. The white line, immediately round the central oval, between it and the inscribed oval, is about half a millimetre wide, and wider in some types. The inner outline of the VAN DIEMEN'S LAND oval, next to the white line above described, is very thin on the right side, and very thick on the left side. The two outer outlines of this said VAN DIEMEN'S LAND oval are very close together. The lattice-work outside this is very regular; and the small, intersecting semicircles, which touch the octagonal border, are darker and more distinct than the lattice-work. Two distinct lines form the outside of the stamp, *i.e.*, the eight sides; and, in the majority of the types, the outer one is thickest on the right side, and the inner one thickest on the left side. The ink, of course, stands out from the paper, as is the manner of a

* There exists a 4d. on laid paper, with wide vertical lines; but this is believed to be merely a proof.

taille-douce engraving, but not absurdly so. The C.W.C. on the base of the neck is distinct in all the types of plate 1, but can only be made out on a few of the types in plate 2.

First Forgery.

This is the latest and best; and has, I fancy, deceived a good many collectors. Engraved in *taille-douce*, on rather thin, yellowish-white wove paper, with a grain very like that of the old green $\frac{1}{2}$ d. newsband of 1870. The crossed lines in the background, behind the bust, are irregular, especially on the left side, where some are close together, and some far apart. The white line surrounding the portrait-oval is *very* narrow, being hardly a quarter of a millimetre wide. The inner outline of the VAN DIEMEN'S LAND oval is about the same thickness all the way round; being much too thick on the right side, as compared with the genuine, and hardly thick enough on the left side, by the same comparison. The outer outlines of this said oval are about half a millimetre apart. The lattice-work is very irregular on the left side; and this is the easiest test. The intersecting semicircles outside the lattice-work are not at all prominent, so that they would not be noticed, unless specially looked for. Both outlines of the stamp are of equal thickness, except on the side nearest to FOUR, where the outer line is thicker. It will be understood that I speak of only *one* of the eight sides of the stamp. The ink stands out in high ridges from the face of the stamp, so that it is very perceptibly rough to the finger. The C.W.C. on the base of the neck is *too* distinct. The stamp is in orange, like plate 1.

Second Forgery.

This is not nearly so deceptive as the one just described. Lithographed, in a pale orange, on stout, white wove paper. Nearly the whole of the shading in the central oval, behind the bust, is composed of horizontal lines only; there being merely a few oblique lines under the chin, and a few behind the head. The horizontal lines are far apart. The white line, outside this, is much too wide (very nearly a millimetre). The two outer outlines of the VAN DIEMEN'S LAND oval are twice as far apart as in the genuine, so that there is a *very* visible space between them all round, which is hardly the case with the genuine. The lattice-work outside this is much more regular than in the first forgery, but differs from that of the genuine, in showing long white diamonds between the lattice-lines; whereas, in the genuine, a good many of them are triangles with one or more rounded faces. Outside the lattice-work is a border of white cones, or sugar-loaves, with their points inwards, instead of the intersecting circles of the genuine. I cannot make out any letters on the base of the neck.

Third Forgery.

Lithographed, in a very peculiar, brownish ochre-yellow, on medium white wove paper. The groundwork of the central medallion, behind the bust, is of solid colour, without any lines. There are only a few traces of the single inner, and double outer border of the VAN DIEMEN'S LAND oval, so that the said oval looks much too broad. The lattice-work is pretty regular; but the interlacing semicircles, forming the border, outside the lattice-work, are so very small and close together that, for a good part of the way round, they are simply a blotch. There are no letters on the base of the neck; and the apostrophe in DIEMEN'S is absent; though both the other forgeries show it, as well as the genuine. The Queen does not appear to have a tiara, but of this I am not quite certain. I do not think this forgery is at all likely to deceive.

POSTMARKS.

Genuine.—57 ; also a pen-stroke.

First Forgery.—54 (sometimes with the lowest line at the bottom wanting).

Second Forgery.—Same as first forgery.

Third Forgery.—1 ; also what appears to be 10.

One Penny, carmine, red, brown-red, brick-red, rose.

There are a good many varieties of this value, but the design is the same in all.

1. Issue of August, 1855. Carmine ; white wove paper ; watermark large star ; unperforated.

2. 1856-7. Pale brick-red ; thickish and *pelure* white wove paper ; no watermark.

3. 1857-70. Brown-red, brick-red, vermilion, carmine ; white wove paper ; watermark double-lined numeral. (The stamps issued in 1857 had inverted watermark.)

4. 1864-9. Perforated issues. It will not be necessary to give the date of issue of each variety, but the following are found : Roughly rouletted 8, and straight-cut roulette 5, vermilion, carmine.

Pin-perforated 10½, 12½, carmine. Oblique roulette, 11 to 13, brick-red, vermilion, carmine. Serrated perforation 19, carmine. Perforated 10, brick-red, vermilion, carmine. Perforated 11½ to 12, carmine. Perforated 11½ × 12, carmine. Perforated 12½, 13, brick-red, vermilion, carmine.

Genuine.

Engraved in *taille-douce* ; varieties as above. The upper part of the tiara bears three crosses *pattée* and three shapeless masses of jewels, alternately. The base of it shows three rows of rather shapeless jewels (*not pearls*), the upper row being so close to the part of the tiara above it as to be invisible at a first glance, so that there seem to be but two rows of jewels. The pearls of the necklace are small at the sides and larger in front, the four in the very front being very much larger than the others. The oval outline containing the design is broken at the bottom by the value-label, and at the top and sides by the rectangular outline of the top and sides of the stamp. The inner point of the square in the lower, right-hand corner (like the point of the left-hand square) is at some distance from the outline of the oval. The label containing the word POSTAGE begins over the first stroke of the N of ONE, and ends over the commencement of the Y of PENNY. The inscription ONE PENNY is in fat and well-drawn letters. The background behind the head is formed of crossed, vertical and horizontal lines, so close together as to seem solid.

**Forged.**

Lithographed, on slightly thinner and softer, very yellowish-white wove paper ; no watermark, unperforated, or badly perforated 12½. The ornaments on the upper part of the tiara appear to be four crosses *pattée*, and

two shapeless masses of jewels. The base of it shows three rows of *pearls*, the upper row being particularly distinct. The pearls in the necklace do not vary much in size, and the central ones are not specially larger than the rest. The outline of the outer oval is broken at the bottom, as in the genuine; but it is complete at the top (running *outside* the frame), and at the sides also (running *inside* the frame). The inner point of the square in the right-hand bottom corner *almost* touches the outline of the oval, but the left-hand square is at some distance from the said outline. The label containing the word POSTAGE begins over the middle of the N of ONE, and ends over the middle of the second N of PENNY. The inscription, ONE PENNY, is in thin, irregular letters, and the letters of POSTAGE are too tall for the label which ought to contain them, so that their bases are cut off. The crossed lines of the central background are plainly visible.

POSTMARKS.

Genuine.—39 (with TASMANIA in centre); 54; 55; 62.

Forged.—1; 10; also one like 54, but much larger, and with the bottom line absent.

Same Issues. Twopence, deep green, emerald-green, blue-green, sage-green, yellow-green.

Most of the varieties of paper, perforation, watermark, etc., already enumerated for the 1d., may be found in this value.

Genuine.

Engraved in *taille-douce*; varieties as in the 1d; watermark as illustrated. The tiara, the rows of jewels, the necklace, the oval outline, and the lower squares are exactly the same as in the genuine 1d. The POSTAGE-label begins over the first stroke of the W of TWO, and ends above the beginning of the last E of PENCE.

Forged.

Lithographed, in sage-green and bright yellow-green, on thickish, white or yellowish-white wove paper, unperforated, or perforated 11½ or 12; no watermark.

The tiara, the rows of jewels, the necklace, the oval outline, and the lower squares are the same as in the forged 1d., already described.

The POSTAGE-label begins between the first and second strokes of the W of TWO, and ends exactly above the middle of the C of PENCE.

I have two different types of this forgery, but they are both alike in the tests given above.

POSTMARKS.

Genuine.—57.

Forged.—10; also a shapeless blotch; also a very thick, black bar.

Same Issues. Fourpence, shades of blue.

This stamp is found in most of the varieties enumerated above, though I have never seen it rouletted.

Genuine.

Engraved in *taille-douce*, on white wove paper; watermark as illustrated. The tiara, the rows of jewels, the necklace, the oval outline, and

the lower squares are all the same as in the genuine 1d. The POSTAGE-label begins between the F and O of FOUR, and ends above the end of the C of PENCE. The T of POSTAGE is exactly above the first stroke of the P of PENCE. The letters of the value are fat, and nicely drawn.

Forged.

Lithographed, on thick, very white wove paper; no watermark; perforated 12. The tiara, the rows of jewels, the necklace, and the oval outline are all the same as in the forged 1d. The right-hand, lower square is a good deal nearer to the outline of the oval than the left-hand square is, but does not absolutely touch it. The POSTAGE-label begins over the middle of the O of FOUR, and ends over the last stroke of the N of PENCE. The T of POSTAGE comes between the words FOUR PENCE. The letters of these last two words are very badly drawn and ragged-looking. The squares are also very badly drawn.

POSTMARKS.

Genuine.—57.

Forged.—10; 65; also 78, with numerals in the centre.

Same Issues. One Shilling, vermillion, orange-vermillion.

The following are the varieties:—

1. January, 1858. White wove paper; watermark figures of value, as illustrated.
2. 1864. The two kinds of roulette, as in the one penny.
3. 1864-9. Perforated 10, also perforated 11½ to 12.
4. 1864-9. Perforated 12½, 13.
5. 1871-80. Perforated 11 to 11½. (This last variety is found both in the ordinary vermillion of the other issues, and in orange-vermillion.)

Genuine.

Engraved in *taille-douce*; varieties as above. The tiara, necklace, and rows of jewels are the same as in the genuine 1d. The dark and

loop-shaped piece of engine-turning above the M of TASMANIA does not touch the M. There is no stop after the S of this word, nor is there any dot above the first L of SHILLING. The colour is a vermillion-red, sometimes darkened by time.

Forged.

Lithographed, on medium, bluish-white, and on white wove paper, also on thicker white wove paper, with a yellowish wash over the front, to give age; unperforated, or perforated 12, often in oval holes; no watermark. The ornaments on the top of the tiara are like those of the genuine, but the three rows of jewels, or rather pearls, are the same as in the forged 1d. The necklace consists of large, coarsely-drawn pearls, the one in the very front being the smallest of all; and there are only eleven or twelve of them, instead of sixteen. The dark and loop-shaped piece of imitation engine-turning over the M of TASMANIA touches the top of the M, and is much too prominent. There is a mark, like a

wedge-shaped stop, below and between the S and M of this word, and there is a distinct stop above the first L of SHILLING. The colour is a sort of brown-lilac, like that of some of the 6d. stamps, but not in the least like that of the genuine 1s.

POSTMARKS.

Genuine.—As before.

Forged.—1 ; 29 ; 57 ; also one like 39, with TASMANIA in the centre.

It will be seen from the foregoing, that none of the Tasmanian forgeries can be considered at all dangerous, except the third forgery of the blue one penny, and the first forgery of the octagonal fourpence.

THESSALY.

Issue of 1898. 10 Paras, yellow-green ; 20 Paras, bright aniline rose ; 1 Piastre, dull blue ; 2 Piastres, brownish-orange ; 5 Piastres, mauve.

Some forgeries have lately been brought to my notice by Messrs. Whitfield King, which hail, I am told, from Constantinople. I trust the following dissection will enable my readers to detect them.

Genuine.

Lithographed, on fairly stout, white wove paper, perforated 13½, yellowish-green. There are 112 oblique white strokes in the outer border. The two curly tendrils, near the corners of the broad top label, do not touch the outline of the border of the stamp above them, indeed, the left-hand tendril points horizontally to the right. The outer end of the label containing the English word of value, and the outer end of the similar label on the other side of the stamp, are both cut somewhat forked, so that the small white space, left at the end of each label, is shaped rather like a lance-head. The left side of the Sultan's monogram is formed by two concentric ovals, crossed by a crooked line, and there is a sort of ball in the centre of the inner oval, resting on the crooked line ; this ball cannot be mistaken for a spiral. Below the monogram there is a smudgy landscape, with a bridge of seven arches in the foreground. These arches are rather indistinct, and none of them are pointed. The parapet shows indistinct, cloudy shading. The lower point of the inverted *fleur-de-lys*, below the centre of the bridge, crosses over the inner boundary-line below it, so as to touch the next coloured line. There are a great many places in the arabesque ornamentation which have been badly copied in the forgeries, but they cannot be explained without special diagrams. The colours are : 10 paras, yellow-green ; 20 paras, bright rose ; 1 piastre, pale dull blue ; 2 piastres, bright brownish-orange ; 5 piastres, mauve.

Forged.

Lithographed, on smooth-faced, white wove paper, thinner than the genuine, perforated 11½, ungummed. There are only 107 oblique white strokes in the outer border; both the tendrils at the top of the stamp curl decidedly upwards, and the end of the left-hand one touches the inner outline of the border above it. The outer ends of the value-labels are scooped out almost semicircularly, instead of being forked; the white space at the end of the right-hand label is much larger than the one at the end of the paras (piastres) label, and neither of them is in the least like a lance-head. The ball in the Sultan's monogram is changed into a spiral, and looks like a sort of exaggerated comma, lying on its face. The bridge in the landscape is much too distinct, and the arches are decidedly pointed. The whole length of the parapet of the bridge is shaded by short vertical lines. These lines are quite distinct, and form an easy test. The bottom point of the inverted *fleur-de-lys* ornament, below the centre of the bridge, touches the inner line of the frame below it, but does not trespass beyond this line. The colours are: 10 paras, dull green; 20 paras, dull carmine; 1 piastre, dull indigo; 2 piastres, orange-brown; 5 piastres, cold violet.

POSTMARKS.

Genuine.—I have never seen any postmarked specimen.

Forged.—Like 29, but much larger, the outer circle measuring 29 mm. across. In the centre are three lines of Turkish figures with M.A.I. 6 (or 8), 98 below. The outer circle contains a varying name, in European letters, and some Turkish characters. One of my specimens has LARISSA (YENIDJE); another has DOMOKOS; another VOLOS, etc.

These stamps were employed by the Turkish army of occupation, during the Græco-Turkish War, in 1898.

**TOBAGO.****FORGED POSTMARKS ON FISCALS.**

August, 1879. 1d., rose; 3d., blue; 6d., orange;
1s., green; 5s., slate; £1, mauve; watermarked CC;
perforated 14.

Genuine.

These are the stamps *without* POSTAGE below the head, in the dark ring. They are ordinary fiscals; but, pending the arrival of stamps bearing the word POSTAGE, they were used provisionally as postals.

**Forged.**

The above stamps may often be met with, duly postmarked, but having a cleaned appearance, or showing traces of pen-cancellation. They are simply fiscals, which have been used fiscally, and faked by the total or partial removal of the penmarks, and the addition of a forged postmark. I have the 3d., with postmark 54, lettered A 10, and the 5s., also with 54, but lettered A 11.

Stamps of above type, but watermarked CA.

These are also fiscals, but they were *not* allowed to be used postally, the stamps inscribed POSTAGE having in the meantime arrived. Specimens are, nevertheless, commonly found in collections. I have no postmarked copies, but have seen some. It will be understood that the CA stamps of this type are merely fiscals; and if they bear postal cancellations, these cancellations are forged.

SURCHARGED STAMPS.

HALFPENNY.

1d

1 PENNY

FIG. 1.

POSTAGE

FIG. 2.

Genuine.

The surcharge, Fig. 1, is found on the 2½d., blue, 6d., stone, and 6d., orange-brown. Fig. 2 is found on the 4d., lilac and carmine.

BOGUS.

I have the 1d., Venetian-red, of 1882, CA, perforated 14, with the surcharge here illustrated. This is really a Dominica surcharge, and does not exist on any Tobago stamp. My specimen is uncanceled.

Half
Penny

I have not seen any proper imitations of Figs. 1 and 2, or of the two types of 2½d. surcharge.

TOLIMA.

Issue of 1871. 5 Centavos, brown.

Genuine.

Lithographed, on yellowish-white wove paper. The two inscriptions round the central circle are separated from each other by a coloured dot, surrounded by a dark ring, to right and left of the central circle, *i.e.*, before and after E. S. DEL TOLIMA. The curved line above the CIN of CINCO, and the similar curved line above the TS of CENTS, do not touch the outline of the central circle. The ornament at the centre of the top of the stamp is a long diamond.

Forged.

This is sold as a second type, also as a reprint. It is, in reality, a bogus reprint; *i.e.*, when the stamps of 1871 were reprinted in 1881, the matrix of the 5 c. was probably too much damaged by the cancelling-cuts to be available; and so an entirely new one was made. It is lithographed,

on paper very similar to that of the genuine. The two inscriptions in the central circle are separated by stars, instead of ringed dots. The curved lines above CIN and TS respectively, run into the outline of the central circle. The ornament at the top of the stamp is a sort of cross, instead of a long diamond.

POSTMARKS.

Genuine.—I have no cancelled copy of the genuine.

Forged.—The forgery is also unused.

Issue of 1879. Registration-label. 10 c., black on tricolour.

There is also a 50 c. value, but I have not seen a forgery of it.

Genuine.

A very elaborate description of this label is not necessary, as the counterfeit was not intended to deceive, but was issued as an "Art Supplement" to the January number of *Senf's Illustrierte Briefmarken-Journal*, of 1890, and is twice marked with the word "facsimile." The stamp is printed in black, on tricoloured wove paper, stout, and rather rough, and backed with brownish-yellow gum.

The label measures 154 × 63 mm., from outside to outside. There are no flaws in the circles which contain the figures of value each side; the C of CENTS is distinctly taller than the rest of the letters, in each case, and the stop under the little s of each CENTS does not touch the outline of the containing-circle. The third star from the left in the central circle is, at its nearest point, very nearly 1 mm. from the shoulder of the condor's wing, and the tip of the left wing (right side of the stamp) just touches the staff of the lower flag. The foot of the I of COLOMBIA does not touch the foot of the following A. The line after SALIÓ DE is composed of short dashes or hyphens. The paper of the label is yellowish-white, and it is only the face which is coloured, evidently by lithography, buff, blue, and red. The blue can be traced for nearly 60 mm., where it gradually merges into the buff on one side and the red on the other. At the bottom of the label, outside, is the imprint, LITAGR. DE PAREDES CA. BOGOTÁ.

Forged.

Printed, like the genuine, on white wove paper, tricoloured on the face. The colours are decidedly brighter than those of the genuine; the yellow being more orange than buff, and the red more of a vermilion, the surface feeling very smooth to the touch. The blue band in the centre of the tricolour is very narrow, and can only be traced for a width of about 35 mm., instead of 60 mm. It is ungummed. From outside to outside it measures 154½ × about 62½ mm. In each value-circle, two of the horizontal lines of shading, above the 10, and near the top of the circle, are blotched together. Two thin lines, gradually approaching one another, run from the centre of the bottom of the circle, right through the N of CENTS; and there is another line, joining the top of the o of 10 to the edge of the circle, below the TA of CENTAVOS. There is a small blotch, which connects the stop under the s of CENTS with the outline of the circle. All these flaws are the same in each value-circle; the right circle has, in addition, a black line or scratch, running up, obliquely, from the centre of the 1 of 10 to the edge of the circle, just below the centre of the E of CENTAVOS. The C of CENTS, in each case, is no taller than the rest of the letters. In the

central circle, the bottom point of the third star on the left very nearly touches the wing of the condor, and the tip of the other wing does not touch the lower flag. The letters RT of LIBERTAD, in the motto-scroll, touch at the top, and the A of that word has no cross-bar. The foot of the I of COLOMBIA touches the foot of the following A. The dashes of the line after SALIÓ DE are so very small, that they appear to be dots. In the lined lower half of the label, each side of the blue portion, is the word FACSIMILE, in large block letters. The imprint at the bottom, outside the label, is KUNST BEILAGE ZU SENF'S "ILLUSTRIRTEM BRIEFMARKEN JOURNAL." No. 1. 1890.

POSTMARKS.

Genuine.—I have not seen a cancelled specimen, but the date would be filled in with the name of the place, and the amount remitted.

Forged.—The forgery is uncanceled.

TRANSVAAL.

One Penny, red, black.

(*Two plates.*)

The following are the principal varieties:—

1. 1869. Thin paper, clear impressions; brown-lake, orange-red; imperforate, and fine roulette, $15\frac{1}{2}$ to 16.
2. 1870. Thin, ready-gummed German paper; coarse impressions; dull rose-red, reddish-pink, carmine-red; imperforate, fine roulette, $15\frac{1}{2}$ to 16, also (carmine-red) wide roulette, $6\frac{1}{2}$.
3. April, 1870. Thick, hard paper, streaky yellow gum; pale rose-red, carmine-red; imperforate.
4. May, 1870. Same paper as No. 3; thin, smooth yellow gum; carmine-red; fine roulette, $15\frac{1}{2}$ to 16.
5. July, 1870. Medium paper, heavy, blotchy impression, whitish gum; deep red, rose-red, carmine-red; imperforate, and fine roulette, $15\frac{1}{2}$ to 16.
6. September, 1870. Stout paper, whitish gum; black, greyish-black; imperforate, and fine roulette.
7. September, 1870. Thin, transparent paper; black, bright carmine; fine roulette.
8. December, 1872. Thinnish, opaque paper, clear impression; reddish-pink, carmine-red; fine roulette.
9. December, 1872. Thickish to very thick paper; dull rose, brownish-rose; fine roulette.
10. September, 1874. Thin, transparent paper; brick-red, brownish-red; also thicker, opaque paper, pale red; both perforated $12\frac{1}{2}$.
11. April, 1875. Very thin, soft, opaque paper; orange-red; imperforate, fine roulette, $15\frac{1}{2}$ to 16, and wide roulette, $6\frac{1}{2}$.
12. 1876. Very thin, hard, transparent *pelure* paper; brownish-

red, orange-red, imperforate; orange-red, bright red, fine roulette, 15½ to 16, also wide roulette, 6½; dull red, pin-perforated.

13. 1876. Stout, hard, surfaced paper; smooth, white gum; bright red; imperforate, fine roulette, wide roulette.

14. 1876-7. Coarse, soft, white paper; brick-red; imperforate, fine roulette, wide roulette.

15. 1876-7. Hard, thick, coarse yellowish paper; brick-red; imperforate.

16. 1883. Reissue of same type; grey, grey-black, black; perforated 12.

Genuine.

Engraved in *épargne*; varieties as above. The eye of the eagle is a circular, white patch, with a coloured dot, almost in its centre. The

lower part of the shaft of the spear, on the right side, behind MAGT, is almost entirely one thick, solid line, and it does not quite touch the outline of the label, below the G of that word. The ball at the bottom of this shaft stands above the space between the IE of REPUBLIEK, but nearer to the I. The lower end of the other spear-shaft, behind EENDRAGT, is composed of two thin, parallel lines, and the ball at the end of the shaft is centrally above the space between the AF of AFR. The stops after Z. and AFR. are both on the same level. The points of the eagle's wings do not touch the flag-staves, though the point of the right wing (left side of the stamp) goes very close to the flag-staff to left of it. The left upper compartment of the shield contains fourteen vertical lines, not counting the thick dividing-line; and the last of these lines to the left is only a dot. The animal in this compartment has a small, white patch in the centre of its face, containing a very tiny dot, for an eye. Its body is almost all dark, with two white patches on it; and the left front paw very nearly touches the outline of the anchor-shield. The right upper compartment has about eighteen horizontal lines in it. The Boer in this compartment is standing full-faced. He has a single dot, by way of features; and at his left hand (right side of the stamp) there is a reading-desk or a camera, on a pillar-stand, with tripod foot. His pipe is not visible. There are about twenty-six oblique lines in the lowest compartment of the shield, the outer ones being very short. The top outline of the waggon is parallel with the horizontal dividing-line of the shield, but the lower outline of the top of the said waggon slopes down to the left. There are eight spokes in the hind wheel, and apparently the same number in the front wheel, but these latter are usually a good deal blotched. The shaft very nearly touches the left outline of the shield. The horizontal dividing-line of the shield is broken in the centre, to allow the point of the small anchor-shield to show itself. There is a thin line from the point of the anchor, which touches the bottom of the little shield, and the lower corners of this shield are equally rounded. The motto on the ribbon is EENDRAGT MAAKT MAGT. The P of POSTZEGEL is close to the side of the containing-label, but the L is further off. There is only one spike sticking out from the back of the eagle's head; and, from that spike to the neck, the back of the head gets gradually smaller, or narrower.

First Forgery.

This is very poor. Lithographed, in black or chalky rose, on white wove paper, rather soft and thick, ungummed, perforated 13. The

whole of the eagle's face (instead of a central circle) is white, so that the eye is too prominent; and there is a projecting lump, below the spike at the back of the head. The shaft of the spear, behind MAGT, is solid below the G, but double-lined above it, and the ball at the bottom is unshaded, and stands exactly above the I of REPUBLIEK. The stop after AFR. is above the level of the stop after Z. There are fifteen vertical lines in the left upper compartment of the shield, exclusive of the dividing-line, which shows signs of being double. The face of the animal in this compartment is entirely white, with a prominent eye in its centre, and the body has but little shading on it. The left front paw is some distance from the outline of the anchor-shield. The right, upper compartment contains about twenty lines of shading. The Boer is walking towards the right side of the stamp, with his hands behind his back, and he has an enormous pipe, with thin and very curly stem, in his mouth. He has a dot for a chin, but no other features. The object which I have likened to a reading-desk, or camera on a tripod stand, is absent. There are twenty-eight oblique lines in the lowest compartment of the shield. Both the upper outlines of the waggon slope down irregularly to the right. The hind wheel shows six spokes, and the front wheel five. They are quite distinct. The end of the shaft is a long way from the side of the shield. The horizontal dividing-line of the shield is two distinct, short pieces; the left one about $3\frac{1}{2}$ mm. long, and the right one $2\frac{1}{2}$ mm. In the genuine, the left piece is 4 mm. long, and the right piece over $3\frac{1}{2}$ mm. There is no sign of any thin line, proceeding from the point of the anchor. The right side of the bottom of the anchor-shield is very badly drawn. The G of EENDRAGT is a distinct C, and the G of MAGT is also rather like a C. The left-hand edge of the P of POSTZEGEL is 1 mm. (instead of $\frac{1}{2}$ mm.) from the perpendicular white line at the beginning of the label.

Second Forgery.

This is often called a "reprint," but I believe Herr Otto had only the *frame* of the original, and the centre is redrawn, so that the stamp may be classed with the ordinary forgeries. It is engraved in *épargne*, on thin, rather shiny, transparent white wove paper, rouletted 15, in light, chalky red, or in bright black. I think I have also seen it unperforated. The white patch on the face of the eagle is not a circle, but quite irregular in shape, and is split on the right side, so that part of it runs into the upper mandible of the beak, and part into the lower one. (In the genuine, the white patches on the beak are not connected with the white round the eye.) The eye itself is joined to the top edge of the white patch, instead of being in its centre. The lower end of the shaft of the spear, below GT of MAGT, is formed by two very distinct, parallel lines, and is joined to the edge of the label, below GT. The ball at the bottom of this shaft is exactly above the I of REPUBLIEK. The stop after AFR. is slightly lower than that after the Z. The point of the eagle's right wing (left side of the stamp) just touches the flag-staff to left of it, and is sharper than the genuine. In lightly-printed specimens, the animal in the left, upper compartment of the shield has a *large* white patch on the face, with an oblique stroke for an eye, and two large patches on the body, the patch on the loins being shaded by four or five oblique lines. In heavily-printed specimens, there is a very tiny, white patch on the face, without eye, and another very tiny patch on the shoulder; while the left front paw touches the anchor-shield. There are about twenty horizontal lines in the right, upper compartment of the shield. There are twenty-five oblique lines in the lowest compartment of the shield. The shaft of the waggon, in heavily-printed specimens, touches the side of the shield, and the horizontal line, dividing the shield, appears to run right across though,

in lightly-printed specimens, these two tests are the same as in the genuine. There is no thin line from the point of the anchor to the bottom of the anchor-shield.

Same Issues. Sixpence, blue.

The varieties of paper, etc., are the same as Nos. 1, 2, 3 (but not wide roulette), 5, 6 (fine roulette), 7, 8, 9, 10, 11, 12, 13 (also with dark-brown gum, staining the paper), 14 (but not wide roulette).

Genuine.

Engraved in *épargne*; varieties as above. Readers will please bear in mind that this first type of the 6d. has the same eagle as the 1d. The tests are the same as in the genuine 1d., except those noted below. The ball of the right-hand spear-shaft is above the space between LI of REPUBLIEK, but nearer to the I. The ball of the left-hand spear-shaft is above the A of AFR., but nearer to the A. In fine copies, the eyes of the Boer, as well as the nose, can be seen. None of my specimens show any thin, perpendicular line, from the point of the anchor to the bottom of the shield. The P of POSTZEGEL slopes slightly backwards (as in the 1d. and 1s.), but it is $\frac{3}{4}$ mm. from the beginning of the label, instead of only about $\frac{1}{4}$ mm. The S of each ZES is very like an 8, and the C of each PENCE is nicely shaped.

First Forgery.

This is uniform with the first forgery of the 1d. Coarsely lithographed, in sky-blue and medium, to dark Prussian-blue, on thick, hard, white or yellowish-white wove paper, perforated 13. The tests are the same as for the first forgery of the 1d., with the following additions:—The S of each ZES is more like a badly-formed 5, than an 8, and the C of each PENCE has its tail projecting almost horizontally, instead of curving upwards, and thus looks like a G. There is a white stop after REPUBLIEK, which does not exist in the genuine.

Second Forgery.

This is uniform with the second forgery of the 1d. Engraved in *épargne*, on medium, transparent, white wove paper, rouletted 15; also on bright azure paper, thin, but not transparent, unperforated, or rouletted 15. The tests are the same as those for the second forgery of the 1d., with the following additions:—The balls at the ends of the spear-shafts are placed as in the genuine 6d. Some of my specimens show a perpendicular line from the point of the anchor to the bottom of the containing-shield. The P of POSTZEGEL is almost upright. The stop after AFR. is slightly higher than that after the Z.

Same Issues. One Shilling, green.

The following are the varieties, according to the numbers of those given for the 1d. value: 1, also 1 on thicker, denser paper, imperforate, and fine roulette, 15 $\frac{1}{2}$ to 16, 3, 4, 5, 8, 9, 14, 16.

Genuine.

Engraved in *épargne*, varieties as above. The tests are the same as for the genuine 1d., with the following additions:—The first E of EEN, in the left-hand label, is 1 mm. from the beginning of the label, and the G of SHILLING is only about $\frac{1}{2}$ mm. from the end of the label. The first E of EEN, in the right-hand label, is only $\frac{1}{2}$ mm. from the beginning of the label. The S of each SHILLING is very like an 8; and the inward-curling tail of each G is level with the centre of the letter.

First Forgery.

This is uniform with the first forgery of the 1d. Lithographed, in several shades of green, on medium, white and yellowish-white wove paper, perforated 13. The tests are the same as for the first forgery of the 1d., except the following :—There are sixteen vertical lines in the left upper compartment of the shield, one of them touching the central dividing-line. The first E of EEN, in the left-hand label, is 1 mm. from the beginning of the label, and the first E of EEN, in the right-hand label, is very nearly 1 mm. from the beginning of the label. The S of each SHILLING is not in the least like an 8, and the G is more than $1\frac{1}{2}$ mm. from the end of the label. The incurving tail of the G in the left-hand label is not nearly level with the centre of the letter.

Second Forgery.

This is uniform with the second forgery of the 1d. Engraved in *épargne*, on thin, transparent, white wove paper, rouletted 15. The tests are the same as for the second forgery of the 1d., with the following additions :—The first E of EEN, on the left side, is only $\frac{3}{4}$ mm. from the beginning of the label, and the feet of the letters EEN SHILLING, in the right-hand label, are *very* close to the edge of the label.

Threepence, lilac, mauve, etc.

1. April, 1871. Hard, medium paper, clear print, greenish gum ; imperforate ; pale reddish-lilac.
2. July, 1871. Thin paper, clear print ; fine roulette, $15\frac{1}{2}$ to 16 ; pale reddish-lilac, mauve.
3. December, 1872. Same as No. 8 of the 1d. ; grey-lilac.
4. April 29, 1875. Same as No. 11 of the 1d. ; lilac.
5. 1876. Same as No. 12 of the 1d. ; lilac, deep lilac.
6. Reissue. Same as No. 16 of the 1d. ; grey-black on rose, black on rose, orange-red, chestnut, red-brown ; all perforated 12.

These stamps have an entirely different eagle, as shown in the illustration.

Genuine.

Engraved in *épargne* ; varieties as above. The tests for the genuine 1d. will serve for this value, except as follows :—The bird is now really an eagle, instead of the impossible fowl of the first type ; and its right wing, under the T of POST, points inwards, towards its foot, instead of outwards, towards the upper flag-staff. The spear-point of the lowest flag-staff on the left side *almost* touches the left side of the frame, and there is usually a tiny flaw at the edge of the frame, close to the said point. The lower end of the flag-staff, below MAGT, is composed of two parallel lines, like the left-hand staff, and there is hardly the slightest sign of a continuation of the staff, between the MAGT-scroll and the central oval. The ball at the bottom of this staff is exactly above the I of REPUBLIEK. The white line under the 3, in each upper corner of the stamp, goes right across the coloured label, cutting it off from the DRIE PENCE label. There is a small ball to the head and tail of each 3. The D of each DRIE is fully $1\frac{1}{2}$ mm. from the beginning of the label, and the last E of each PENCE is rather more than $1\frac{1}{2}$ mm. from the end of the label. The central tongue of the E of DRIE,

in the left-hand label, is the same length as the upper limb; and the central tongue of the second E of PENCE, in the right-hand label, is also the same length as the upper limb; in every other E of the four inscriptions, the central tongue is shorter than the upper limb.

Forged.

Lithographed, in dull reddish-mauve, dull red, scarlet, red-purple, indigo, etc., on medium to fairly thick, white and yellowish-white wove paper, perforated 13. This counterfeit is uniform with the first forgery of the 1d., except as follows (it will be understood that the eagle is the same extraordinary bird as in the said first forgery):—The lowest spear-point, on the left side of the stamp, does not go within $\frac{1}{2}$ mm. of the side-frame, and there is no flaw in the frame there. The continuation of the flag-staff, between the MAGT-scroll and the central oval, is quite distinct, and formed by two short, parallel lines. The ball at the end of this flag-staff is too far to the right, and almost over the space between 1E of REPUBLIEK. The white line under each 3 is much too short, and does not go right across the label. The numerals are badly drawn, and not alike; and the ball at the head and tail of each is very undecided. The D of the left-hand DRIE is $2\frac{3}{4}$ mm. from the beginning of the label, and the D of the right-hand DRIE is $2\frac{1}{2}$ mm. from the beginning of the label. The last E of PENCE, each side of the stamp, is less than $1\frac{1}{2}$ mm. from the end of the label. The first E of PENCE, in each side-label, has all three limbs the same length; every other E, in all four inscriptions, has the central tongue shorter than the upper limb.

Sixpence, lilac; Type II., with eagle like the 3d.
Issue of September 30, 1874. Thin, smooth paper, clear print; fine roulette, $15\frac{1}{2}$ to 16; bright ultramarine.

Genuine.

Engraved in *épargne*; paper, etc., as above. The tests are the same as for the 3d. I have not seen any forgeries of this type, their place being supplied by the reprints.

POSTMARKS OF THE ABOVE ISSUES.

Genuine.—4, but larger.

First Forgery.—98.

Second Forgery.—Uncancelled; also 4, larger; also 6, without numerals.

REPRINTS OF THE ABOVE ISSUES.

The stamps which I have described as the "second forgeries" of the 1d., 6d. (Type I.), and 1s. are sold as reprints; but the centre, at any rate, was re-engraved by Otto, so they are really forgeries. Of the 3d., he retained a duplicate die, and from this he made a plate, and printed stamps for dealers and collectors. Unfortunately, it is not possible to distinguish these reprinted 3d. stamps from the originals which were sent to S. Africa, but they are brighter in colour, and different in gum, from the locally-printed stamps. They are also found in fancy colours: ultramarine, dull rose, ochre, etc., both uncanceled, and with forged postmarks. The reprints of Type II. of the 6d. are hardly to be distinguished from the stamps sent out, though the colour is duller, and the paper thicker. They exist, also, in various fancy colours; and are found with forged cancellations, as well as unused.

The reissued 3d. of 1883, black on rose and red on white, was

also reprinted by Otto. The lilac-rose of the original paper is, in the reprint, bright rose, and the impression brownish-black, instead of grey-black and deep black. The red reprint is a dull, deep orange-red, the paper too thin, and the gum yellowish. The reprints are perforated 12, like the genuine; but, if measured side by side with the genuine, the dents do not exactly fit.

FIRST BRITISH OCCUPATION.

V. R.

V. R.

TRANSVAAL.

FIG. 1.

TRANSVAAL.

FIG. 2.

Preceding issues, surcharged, as in the illustrations, in red or black. Fig. 1 is the ordinary type of surcharge; but No. 11 on the pane, in some printings, is surcharged with Fig. 2.

1. July, 1877. Red surcharge. 3d., 6d., 1s., imperforate, also fine roulette, $15\frac{1}{2}$ to 16, and wide roulette, $6\frac{1}{2}$.
2. Red surcharge. *Pelure* paper. 3d., imperforate.
3. Double surcharge, red and black. 3d., imperforate.
4. 1877. Black surcharge. *Pelure* paper. 1d., imperforate, and fine roulette.
5. Black surcharge. Hard-surfaced paper. 1d., imperforate, fine roulette, and wide roulette.
6. Black surcharge. Coarse, soft paper. Imperforate. 1d., 3d., 6d., 1s.
7. Black surcharge. Same paper. 1d., 3d., 6d., 1s., fine, and also wide roulette.
8. August 31, 1877. Black surcharge. 6d., Type I., blue on rose, imperforate, fine roulette, and wide roulette.

Genuine.

Varieties as above. The point of the V of the surcharge is exactly 5 mm. from the *centre* of the vertical stroke of the R; the centre of the first stop is about $2\frac{1}{4}$ mm. from the point of the V, and 3 mm. from the centre of the vertical stroke of the R. The centre of the stop after the R is 3 mm. from the centre of the said vertical stroke. The centres of the two stops are $5\frac{3}{4}$ mm. apart. The two lines of surcharge are 9 mm. apart in Fig. 1, and about $12\frac{1}{2}$ mm. in Fig. 2, but I have no specimen of the latter, and cannot be sure of the exact measurement. The centre of the vertical stroke of the T of TRANSVAAL is $15\frac{3}{4}$ mm. from the centre of the vertical stroke of the L, and 17 mm. from the beginning of the stop after the word.

First Forgery.

These are surcharged on the "second forgeries" of the 1d., 6d., and 1s., and on the reprint of the 3d., already described. I have only the black surcharge. They may easily be detected by the great distance apart of the V.R. The point of the V is less than 2 mm. from the centre of the stop after it, and about $8\frac{1}{4}$ mm. from the centre of the upright stroke of the R. The centre of the second stop is $2\frac{3}{4}$ mm. from

the centre of the said upright stroke of the R. The two lines of surcharge are $10\frac{1}{2}$ mm. apart. The centre of the vertical stroke of the T of TRANSVAAL is $16\frac{3}{4}$ mm. from the centre of the vertical stroke of the L, and nearly $18\frac{1}{2}$ mm. from the beginning of the stop after the word.

Second Forgery.

These are printed on the "second forgeries" and reprint just described, but the surcharge is much nearer the real thing in appearance. I have the surcharge both in red and in black. The point of the V is somewhat less than 2 mm. from the centre of the stop after it, but it is 5 mm. from the centre of the upright stroke of the R, as in the genuine. The centre of the said stop after the V is $3\frac{1}{3}$ mm. from the centre of the upright stroke of the R, and the centre of the stop after the R is only $2\frac{3}{4}$ mm. from the centre of the vertical stroke of the R. The centres of the two stops are exactly 6 mm. apart, instead of $5\frac{3}{4}$ mm., and the two letters are *very* nearly 3 mm. high, though the genuine are only $2\frac{3}{4}$ mm. high. The two lines of surcharge are just $8\frac{1}{2}$ mm. apart. The centre of the vertical stroke of the T of TRANSVAAL is $15\frac{1}{2}$ mm. from the centre of the vertical stroke of the L.

POSTMARKS.

Genuine.—4, larger.

First Forgery.—4, larger; also more often uncanceled.

Second Forgery.—Ditto.

Later surcharges, with Transvaal in capitals and lower-case, as in Figs. 3-6.

V. R.

V. R.

FIG. 5.

Transvaal

FIG. 6.

I have only forgeries of Figs. 3 and 4.

Upright V. R., wide apart, as in Fig. 3.

October, 1877. 1d., red on blue or orange; 3d., mauve on buff; 3d., mauve on green (1879); 6d., blue on green or blue; imperforate, fine roulette, and wide roulette.

Genuine.

The point of the V is $2\frac{1}{2}$ mm. from the centre of the stop after it, 8 mm. from the centre of the upright stroke of the R, and nearly 11 mm. from the centre of the stop after the R. The letters V R are nearly 3 mm. high. The point of the V is $10\frac{1}{2}$ mm. from the lower-case letters beneath it. The T of TRANSVAAL is $2\frac{1}{2}$ mm. high, and the L is $2\frac{3}{4}$ mm. high. From the centre of the vertical stroke of the T to the centre of the L, the distance is 13 mm.

First Forgery.

I have the 1d., red on blue, of the "second forgery," imperforate, and fine roulette; 1d., red on orange, ditto, imperforate; 3d., reprint, lilac on buff, imperforate and fine roulette; 6d., "second forgery," Type I., blue on pale green, fine roulette; 6d., ditto, blue on light and on dark blue, imperforate. The point of the V is 2 mm. from the centre of the stop after it, $8\frac{1}{2}$ mm. from the centre of the vertical stroke of the R, and 11 mm. from the centre of the stop after the R. The letters V R are

$2\frac{3}{4}$ mm. high. The point of the V is $10\frac{1}{2}$ mm. from the lower-case letters beneath it. The T of TRANSVAAL is 2 mm. high, and the L, $2\frac{1}{4}$ mm. high. From the centre of the vertical stroke of the T, to the centre of the L, the distance is $13\frac{1}{2}$ mm.

Second Forgery.

I have this only on a genuine 3d., red on white, of the 1883 reissue, which is, of course, bogus with this surcharge. There are no stops. From the point of the V, to the centre of the vertical stroke of the R, the distance is $8\frac{3}{4}$ mm. The letters V R are very nearly 3 mm. high. The point of the V is $10\frac{3}{4}$ mm. from the lower-case letters beneath it. The T of TRANSVAAL is very nearly 3 mm. high, and the L, $2\frac{3}{4}$ mm. high. From the centre of the upright stroke of the T, to the centre of the L, the distance is 16 mm.; so it will be seen that this surcharge is very much longer than either the genuine or the first forgery.

Italic V.R., as in Fig. 4.

1d., red on orange; 3d., mauve on buff; 6d., blue on blue; imperforate, fine roulette, and wide roulette.

Genuine.

The point of the V is $2\frac{3}{4}$ mm. from the centre of the stop after it, $8\frac{1}{4}$ mm. from the centre of the first stroke of the R, and $11\frac{1}{2}$ mm. from the centre of the stop after the R. The letters V R are 3 mm. high. The point of the V is $10\frac{1}{2}$ mm. from the lower-case letters beneath it. From the centre of the upright stroke of the T to the centre of the L, the distance is $13\frac{1}{2}$ mm.

Forged.

I have only the 6d. (Type I.), "second forgery," deep blue on blue, fine roulette. The point of the V is 2 mm. from the centre of the stop after it, $8\frac{1}{4}$ mm. from the centre of the first stroke of the R, and 11 mm. from the centre of the stop after the R. The letters V R are barely $2\frac{3}{4}$ mm. high. The point of the V is $10\frac{3}{4}$ mm. from the lower-case letters beneath it. From the centre of the vertical stroke of the T to the centre of the L, the distance is $13\frac{1}{2}$ mm.

POSTMARKS.

Genuine.—As before.

I only possess counterfeits of Figs. 4 and 6, but I fancy I have also seen Fig. 7, and others may exist.

Surcharge, Fig. 4.**Genuine.**

The surcharge is in black or red, as stated above. The *l* is $3\frac{3}{4}$ mm. high, and the projecting end of the serif at the head is cut off slantingly. The shaft is only $\frac{1}{2}$ mm. thick. The *P* is $3\frac{3}{4}$ mm. high, and the projecting end of the serif at the head is only $\frac{1}{2}$ mm. thick. The foot is $\frac{3}{4}$ mm. thick. The greatest height of the first *N* is $2\frac{3}{4}$ mm. From the beginning of the foot of the *l* to the beginning of the foot of the *P*, the distance is $3\frac{1}{4}$ mm.

Surcharge, Fig. 4.**Forged.**

I only have this surcharge in red. The *l* is 4 mm. high, and the projecting end of the serif at the head is cut off vertically. The shaft of the said *l* is $\frac{1}{2}$ mm. thick. The *P* is 4 mm. high, and the thickness of the foot of this letter is 1 mm. The first *N*, in its tallest part, is 3 mm. high. From the beginning of the foot of the *l* to the foot of the *P*, the distance is only 3 mm. The square end of the serif to the *l*, and the *very* thick foot of the *P*, ought to condemn this counterfeit at once.

Surcharge, Fig. 6.**Genuine.**

From the left-hand edge of the *l*, the following are the distances: To the left-hand edge of the *P*, rather less than 3 mm.; to the left-hand edge of the *E*, $5\frac{1}{4}$ mm.; to the left-hand edge of the first *N*, $7\frac{1}{4}$ mm.; to the left-hand edge of the second *N*, 10 mm.; to the right-hand edge of the *Y*, $13\frac{1}{4}$ mm.

Surcharge, Fig. 6.**Forged.**

I have this in red, upright, and in black, inverted. The inverted surcharge is bogus. From the left-hand edge of the *l*, the distances are: To the left-hand edge of the *P*, exactly 3 mm.; to the left-hand edge of the *E*, 5 mm.; to the left-hand edge of the first *N*, $7\frac{1}{4}$ mm.; to the left-hand edge of the second *N*, $9\frac{3}{4}$ mm.; to the right-hand edge of the *Y*, 13 mm. It will be seen, from the above measurements, that this is a much more deceptive counterfeit than the other, except when inverted.

Genuine.—4, larger.

POSTMARKS.

Forged.—The surcharges have been applied to stamps with genuine cancellations.

Issue of 1895. Ten Shillings, pale brown; waggon with pole. Type of annexed illustration.

Genuine.

Engraved in *épargne*, on medium, white wove paper, perforated $12\frac{1}{2}$. The shaft of the *T* of POSTZEGEL points down to the space between RE of REPUBLIEK, and would hardly touch the *E* if produced downwards. The front of the head of the *G* of the former word almost touches its tail. The *P* of REPUBLIEK leans over very perceptibly to the right, and the *l* is centrally under the space between the EL of POSTZEGEL. All the letters of EENDRAGT are of the same height, and the *G* is not like a *C*. There are five distinct, graduated, vertical coloured lines after MAAKT. There is a serif to the head of the *l* of *to*, and the *o* is not octagonal. The first

L of SHILLING *very* nearly touches the second, and the second *very* nearly touches the I, while the head of the G curls down towards the tail, so as to go rather close to it. The right lower flag hangs down in *two* folds, above the LIN of SHILLING, so that there is one rounded portion, or scallop, above the LI, and another over the last stroke of the N. The first of these scallops rests on the lowest line of horizontal shading, above the outline of the bottom label; and the second, or right-hand scallop does not reach the said line. The left lower flag has two similar folds; one above the o of 10, not touching the lowest line of shading, and one above the S of SHILLING, resting on the lowest line. The spokes of the wheels of the waggon are represented by six-pointed stars, or asterisks. There are twenty-nine oblique lines of shading behind the waggon, very clearly drawn. The Boer in the right, upper compartment of the shield has two distinct legs, fairly wide apart, and the top of his rifle reaches up exactly to the level of the top of his shoulder. The central, vertical dividing-line of the upper half of the shield is much thicker than the lines to left of it, of which there are sixteen. The animal in this compartment is clearly a lion, with a mane. I think these tests will be found quite sufficient.

Forged.

This is quite new to me (1906). Lithographed(?), on medium, white wove paper, perforated about $13 \times 12\frac{1}{2}$. The shaft of the T of POSTZEGEL points towards the left top corner of the first E of REPUBLIEK; and the head of the G does not curl down towards the tail, while the tail itself entirely lacks the re-entering tongue of the genuine. The P of REPUBLIEK is upright, and the I, if prolonged upwards, would touch the left bottom corner of the L above it. The first two and last letters of EENDRAGT are much smaller than the rest, and the G is very like a C. There are only three indistinct lines of shading after MAAKT. There is no serif to the head of the I of 10, and the o is octagonal. The letters LLI of SHILLING are not at all close together, and the head of the G points forwards, instead of towards the tail. Each of the lower flags has only a single fold or scallop at the bottom, and the said folds are flat, instead of rounded, and rest on the lowest line of shading, above the bottom label. There is only a dot in the centre of each of the wheels, to represent spokes. There are only about twenty-three indistinct, oblique lines of shading in the lowest compartment of the shield. The Boer has only one wide leg, or else two wooden legs, according to whether the two vertical lines be taken to represent outlines of a single leg, or two sticks. The top of his rifle reaches up to the level of the centre of his face. There are only fifteen indistinct, vertical lines in the left, upper compartment of the shield, including the dividing-line, which is no thicker than the rest. The animal in this compartment appears to be a dog (a Great Dane?) with prick ears and a collar.

FIG. 3.

FIG. 1.

V.R.

FIG. 4.

Cancelled

V-R-I.

FIG. 5.

Fig. 2 is the regular surcharge, printed at Pretoria, in black; Fig. 3, locally printed in Lydenburg, in black; Fig. 4, locally hand-stamped in Rustenburg, in violet; Fig. 5, locally printed at Wolmaranstad, in blue, or ($2\frac{1}{2}$ d.) in red. I give all the different surcharges here, as the forgeries now to be described are not like any of them; but I give the measurements of the normal surcharge, Fig. 2.

Normal surcharge, Fig. 2.

Genuine.

The surcharge is printed in black, and the letters are $2\frac{1}{2}$ mm. high, and fat. From the centre of the bottom point of the V, to the centre of the stop after it, the distance is $1\frac{3}{4}$ mm., and to the centre of the stop after the R, $7\frac{1}{2}$ mm. The vertical strokes of the R and I are $\frac{3}{4}$ mm. wide, and the stops are about $\frac{1}{2}$ mm. wide. The head- and foot-strokes to the I are almost invariable.

Forged.

Of this I have only the $\frac{1}{2}$ d. and 1d.; and they are quite unlike any of the genuine surcharges. Hand-stamped in violet, the stops actually piercing the paper in my specimens. The letters are very thin, but of correct height. From the centre of the point of the V, to the centre of the stop after it, the distance is $2\frac{1}{2}$ mm., and to the centre of the stop after the R, $7\frac{3}{4}$ mm. The vertical strokes of the R and I are from $\frac{1}{4}$ to $\frac{1}{2}$ mm. thick, according to the amount of pressure used, and the stops are 1 mm. wide, being very much too large. The easiest test is the I, which has enormous head- and foot-strokes, 2 mm. wide, making it look like a Roman I.

POSTMARKS.

Genuine.—29.

Forged.—My specimens are not cancelled.

1869. Provisional Envelopes.

I have various hand-stamps, of different sizes, more or less like the annexed illustration, but with the value, "6d.," written, in red or black, in the space above the date. I believe they are all considered bogus, though in 1869, Mr. Atlee showed me a letter from Mr. Jeppe, the postmaster at Potchefstroom, containing the first lot of the German-printed adhesives, together with specimens of the envelope here illustrated. I fancy that his letter was *post-marked* with this very hand-stamp (of course without value written in); for we discussed the curious fact of the hand-stamp being used simultaneously for a cancelling-mark and an envelope. My specimen went either to Captain F. Norton or Judge Philbrick. It was, I believe, on white laid paper, size about 136 × 78 mm. The specimens before me are:—

1. Large, like illustration. ✕ POTCHEFSTROOM ✕ Z.A.R.; G.P.E. 6d. Value in red. Thin, white laid paper. Cut.
2. Large. ✕ POTCHEFSTROOM ✕ Z.A.R.; G.P.E. 6d. st. 1869. Value in black. Thick, yellowish-white wove paper. Cut.
3. Smaller. ✕ POTCHEFSTROOM ✕ Z.A.R.; G.P.K. 6d. 1869. Value in black. Thick, grey wove paper. Cut.
4. Small. POTCHEFSTROOM × ZUID AFRICA × Z.A.R. 6d. 69. Value in black. Thick, greyish laid paper. Cut.
5. Large. ✕ POTCHEFSTROOM ✕ Z.A.R.; G.P.E. 6d. st. Value in red. Thick, buff laid paper. Cut.
6. Like No. 4, but on thick, coarse, brown *granité* wove paper. Value in black. Cut.
7. Like No. 6, but Z.A.R. 6d. written in red ink. Cut.
8. Like No. 2, but with 6d. (without "st.") written in black, and G.P.K., instead of G.P.E. On thick, bright blue laid paper.
9. Small. POTCHEFSTROOM × ZUID AFRICA × Z.A.R.; 6d. Pence, written in black. Thick, white laid paper. Entire, size 136 × 78 mm.

Issue of 1872. Envelope. Sixpence, lilac, Type I.

Genuine.

This is an impression from the first type of the sixpence adhesive, already described. I have no specimen by me, and do not remember the paper or the size.

Forged.

This is easily detected, as it is the "second forgery" of Type I. of the adhesive. It is engraved in *épargne*, in sky-blue, and dull, darker blue, on thick, white laid paper, size 142 × 79 mm.

Genuine.—4, larger.

POSTMARKS.

Forged.—Uncancelled.

Of the 6d. envelope of 1873, with the ZES and numeral in each side-label printed in blue, on white tablets, I have seen no forgery. My (cut) specimen of the genuine is on thick, hard, yellowish-white laid paper, and is postmarked with 4, larger.

TRINIDAD.

Issue of 11 April, 1851.

(One Penny) Blued paper. Brick-red, brown-red, purple-brown, blue, grey, grey-brown.

White paper. Dull red, purple-black, grey-black.

Genuine.

Engraved in *taille-douce*; paper as above, wove, and rather thin. The shield is shaded all over, except just at the rim; and it bears traces of the Union Jack, which can be seen without much difficulty. The collar of Britannia is composed of three rows of shells, fastened in front with the head of one of the cat tribe as a brooch. The ship is very nicely drawn and distinct; it shows ten sails, and there is a long white streamer from the mast-head, pointing towards Britannia. The sea is distinct, and two waves can be seen. The large bale on which Britannia is sitting shows a broad band, tied round its very centre. The foot is very distinct, with five toes, and it does not touch the bottom of the spear. There is a thing, like some sort of animal, couching on the top of the helmet, and a very distinct, five-pointed star below it. The background is formed by engine-turned lines. There is a very marked, white outline round the back of the hair. There are six or seven dark, vertical lines down the front of the chest, to represent folds. All four knuckles can be seen on the hand which holds the spear.

First Forgery.

Very badly lithographed, on stout, blue-faced, or very yellowish-white wove paper. I have this forgery in carmine, Prussian-blue, dull blue, and violet; the last two on blue-faced paper. The shield shows far too much white along the rim, and there is no trace of the Union Jack upon it. The collar is a mere blotch round the neck, with a few white spots on it; and the brooch is very badly done. The ship is very poor and indistinct; it shows only six or seven sails, and there is no white streamer from the top of the mast. The sea is merely a white blotch, without waves. The band on the bale on which Britannia is seated is tied high above the centre. The foot is a blotch, and either touches or goes *very* close to the bottom of the spear, and none of the toes can be seen. The top of the helmet bears an indistinct white knob or ball, and there is no star visible. The background is very poor; in the imitations of the first issue it is almost solid, with hardly any traces of lines, and in the imitations of the white-paper issue, though the lines show more, they are only a very faint approximation to the fine engine-turning of the genuine. There is no white outline round the hair, which fades off into the background. There are only three dark lines down the front of the chest to represent folds of the dress, and they are far thicker and darker than in the genuine. The knuckles of the hand which holds the spear are quite invisible.

Second Forgery.

Lithographed, on greasy-faced, and also on rather rough, medium, yellowish-white wove paper. I have this forgery in mauve, and in black; but have not seen it on the blue-faced paper. The shield is shaded all over, and the Union Jack can be made out upon it. The right side of the collar (left side of the stamp) seems to be of shells, but there is a

white mark, like an inverted V, near the brooch. The other side of the collar is composed of wavy or zigzag lines. The cat's-head brooch is fairly done. Portions of eight sails can be made out on the ship, which has a short streamer. There seems to be only one wave visible in the sea. The foot shows five toes; but it is very square and splayed. There is a white ball on the helmet, with a white blotch to the left of it; but this blotch does not look like an animal. The white star on the helmet is absent. The background is poor, being mottled and cloudy; not at all like engine-turning. There are no vertical lines down the front of the chest. Only two knuckles can be seen on the hand which holds the spear. The spear-point is of a long, sharp, candle-flame shape. This is a much better forgery than the one just described.

Third Forgery.

Very badly lithographed, on medium, very hard, *very* yellowish-white wove paper. I only have this counterfeit in brownish-red. There is a *very* wide rim of white to the shield, which shows no trace of the Union Jack. The collar is represented by some very faint shading, and there is no brooch. The sails of the ship cannot be counted, and there seems to be a rather large white flag, instead of the streamer. The (very white) sea seems to be continued down to the right bottom corner of the central rectangle; the shadow of the shield looking like an island in it. There are some scratchy marks on the other side of Britannia, but they look more like chests than bales; and there is no band round the one on which the figure is seated. There is no trace of a foot. Britannia wears a white mob-cap, with a little shading over the forehead; the eyebrows are very heavy. There is no hair to be seen; and the white outline round where the hair ought to be is also absent. There are no vertical lines down the chest, which is bare, showing both breasts very plainly. There is a curious little dark cross, near the point of the right elbow, which does not exist in the genuine. The knuckles of two fingers can be seen on the hand holding the spear; and the point of the said spear runs up to join the interlaced crescents at the top of the stamp. This forgery is not likely to deceive, unless, indeed, it might be mistaken for one of the locally lithographed stamps.

POSTMARKS.

Genuine.—Like 54, but with the central numeral enclosed in a square frame.

First Forgery.—Uncancelled. Also 51.

Second Forgery.—54, without numerals.

Third Forgery.—6, but smaller.

Lithographed Stamps (One Penny). Blue, greenish-blue, grey-blue, slate, dull red, bright red.

October, 1852. Yellowish wove paper, fine impressions, with lines of background clear and distinct.

1853. The same, but on blue cartridge-paper.

1855. Thin paper, impression less distinct.

1855. Impression still less distinct, only faint traces of lines in the background.

1860. Impression shows none, or hardly any, of the lines of the background.

Genuine.

Lithographed in the colony, paper and impression as above. The impression varies so much, that I cannot give any reliable tests, but I did not like to omit all mention of the stamps.

Forged ?

I have a slate and a dull red stamp before me, both said to be forgeries. They are ostensibly of the 1860 issue showing no lines in the background, and are lithographed on soft, rather thin, yellowish-white wove paper, showing exactly the same regular graining as some specimens of the genuine, which reminds one of the graining of our own first green $\frac{1}{2}$ d. wrappers. In the slate stamp, the first I of TRINIDAD goes down to the very bottom of the stamp, not being cut off at the bottom by any coloured line, and the same I, in the red stamp, goes quite to the bottom, though there is a thin outline below it. In my genuine specimens of the 1860 stamps, the first I is quite short.

POSTMARKS.

Genuine.—54. Also one somewhat similar, but numeral in a square.

Forged ?—The second of the above cancellations ; also uncanceled.

Fourpence, grey-lilac, dull purple, brown-lilac, dull mauve, reddish-purple, bright violet.

Sixpence, shades of green.

One Shilling, indigo, deep purple, purple-blue, lilac-blue, bright blue, bright mauve, red-lilac, grey-lilac.

Issue of May 9, 1859. No watermark ; unperforated.

Issue of September, 1859. No watermark ; pin-perforated $12\frac{1}{2}$, also 14.

Issue of August, 1860. No watermark ; clean-cut perforation 14 to 16.

Issue of June, 1861. No watermark ; rough perforation 14 to 16.

Issue of 1863. Thick paper ; no watermark ; perforated $11\frac{1}{2}$ to 12, $12\frac{1}{2}$, 13.

Issue of 1864-76. Watermark crown and C C ; perforated $12\frac{1}{2}$.

Genuine.

Engraved in *taille-douce* ; paper, etc., as above, according to the date of issue. The name is at the top, and the value at the bottom, as in the illustration, otherwise the design is very similar to that of the first issue. The lines in the background are, however, set very much closer together. The name-label is placed so very close to the top of the stamp, that only the very tops of some of the white, outlined crescents of the top border can be seen above the said label, and there are twelve and a half of these crescents across the top of the stamp. The ship shows, as before, ten sails ; and it has a long streamer from the top of the mast, pointing towards Britannia. There are six or seven fine, vertical lines down the front of the chest, to represent folds in the dress.

First Forgery.

Lithographed, on rather stout, hard, very white wove paper ; unperforated. The background is a very weak imitation of the engine-turning of the genuine. The name-label is placed so low down that a good portion of the central crescents of the upper border can be seen above it. There are only eleven and a half of these crescents across the top of the stamp. The ship has about seven sails, and there is the merest apology for a streamer at the mast-head. There are no vertical lines of shading down the front of the chest, though there are plenty of oblique ones. This seems to be the same in the central design as the second forgery of the first issue.

Second Forgery.

Of this I have only the SIXPENCE. Poorly lithographed, in pale yellow-green, on buff-faced, very yellowish-white wove paper, rather stout and hard, unperforated. This is exactly like the first forgery, except that there is no band round the bale on which Britannia is seated, and the Union Jack cannot be discerned on the shield ; so I expect it is a second edition, or later printing of the first forgery, with the above-mentioned lines worn out.

POSTMARKS.

Genuine.—1 ; 2 ; also the cancellation of the older issues ; the latter being rare, I think.

First Forgery.—54, without numerals.

Second Forgery.—A bar in pen-and-ink. Also *very* large letters, in a rectangular frame. My specimen bears COBO ; probably part of FRANCO-BOLLO.

**TURKEY.**

Issue of June, 1863. *Pelure* paper ; 20 Paras, 1, 2, 5, Piastres.

Issue of December, 1863. Thick paper ; 20 Paras, 1 Piastre.

20 Paras, yellow.

Genuine.

Engraved, in black ; paper as above. The proper position of the stamp is as in the illustration, with the hollow part of the crescent uppermost, and the two almost horizontal lines which stick out from the side of the central monogram pointing to the right. The dark, central portion of the monogram, level with the projecting, horizontal lines, has no large dot in its centre. The outer point of the ornament in the right upper corner of the stamp is more than a millimetre distant from the said corner. This ornament is joined to the similar one in the left upper corner by a semicircular line, round part uppermost, which touches the thin, inner line of the top of the stamp. Each of these two ornaments contains, in its centre, a very round-looking black oval. The right oval is rounder and larger than the other ; but both are very nearly as broad as they are long. Both points of the crescent are of the same height ; the left-hand one being level with the

very centre of the egg-shaped part which projects from the left side of the monogram. The Arabic figure 2 at the bottom of the stamp is like a 7, with the head pointing to the right, instead of to the left; it gets thinner towards the bottom, and stands on, and is joined to, a sort of black, raised lump or mound, at the bottom of the containing-oval. The diamond-shaped dot after the 2 (which stands for the cypher) is placed high up in the oval, not far below the top part of the figure. There are four small black dots in each of the two horseshoe-shaped scrolls, right and left of each of the ovals in the top corners. The outer edge of the stamp has a sort of fringe of alternate, long and short lines; there are thirty of the longer lines across the top border of the stamp, thirty-one along the bottom, forty-seven down the right side, and forty-six down the left side.

20 Paras. Forged.

Nicely lithographed, on very thin, *pelure* paper, not such a dead-looking yellow as that of the genuine. The forgers have made the mistake of gumming the face of the stamp and postmarking the back; so that, if the stamp were placed in the position intended by the makers, the two long, almost horizontal lines projecting from the side of the monogram would point to the left. (In describing the stamp, it will be understood that I speak of it as it ought to be placed, not as the forgers intended.) The ornament in the right upper corner comes within half a millimetre of the corner of the stamp. The centre of the monogram has a large light space in it, which contains a black dot. This must not be confounded with the similar dot in the centre of the egg-shaped part, which is found in both genuine and forged. The semicircular line at the middle of the top of the stamp, joining the two corner-ornaments together, does *not* touch the thin, inner outline of the top of the stamp, though it goes very close to it. The centres of the two upper corner-ornaments are long ovals, twice as long as they are broad, and almost exactly the same size and shape. The left-hand point of the crescent is decidedly higher than the other, and it comes up almost to the very top of the egg-shaped piece, which projects from the left side of the monogram. The Arabic figure 2, at the bottom of the stamp, gets thicker towards the bottom, and there is no black lump in the containing-oval, for it to stand on. The diamond-shaped dot after the figure is placed low down in the oval, below the centre of it, and opposite to the centre of the figure. The horseshoe-shaped scrolls, each side of the ovals in the top corners, are so blotched that three of them only show two little dots in each; the upper one in the right corner alone showing the four. There are thirty-three of the longer lines of the fringe along the top of the stamp, thirty-three along the bottom, forty-five along the right side, and forty-two along the left side.

Same Issues. 1 Piastre, black on slate, or purple. Genuine.

Engraving and paper as in the 20 PARAS. The outer point of the ornament in the left top corner touches the thin, inner outline of the stamp. The bottom of the crescent usually touches the point of the ornament, immediately above the figure 1, and also the stem of the leaf-ornament to the left of it; but it decidedly does not touch the stem of the similar leaf-ornament to the right of it. The centre of the monogram is solid. There is a very distinct dot above the oval containing the figure 1, and exactly above the top of the 1. The bottom outline of the crescent is shaded by very short, vertical lines; these lines are not very distinct, and only show below the central writing in the crescent, the rest of the

outline being solid to both points of the crescent. I have found this stamp difficult to describe, owing to the floriated nature of the design ; but I hope the above tests will be sufficient.

1 Piastre. Forged.

Lithographed, as before ; paper the same as in the forged 20 PARAS, but of a bluish neutral tint. The stamp is gummed on the face, and postmarked on the back, as in the above-named counterfeit. The outer point of the ornament in the left top corner does not touch the said corner. The bottom of the crescent touches both the point of the ornament, immediately above the figure 1, and the stem of the leaf-ornament to the left of it ; it also *almost* touches the stem of the similar leaf-ornament to the right of it. The centre of the monogram contains a light-coloured space, with a dot in the middle. The dot above the figure 1 is not at all distinct, being partially merged into the shading above the oval, which is much more pronounced than in the genuine. The bottom outline of the crescent is shaded by very distinct and prominent, vertical lines, which can be traced almost to the very points of the crescent. The prominent dot above the 1, and the indistinct shading to the bottom of the crescent, will be found the best criterions of the genuine.

Same Issue. 2 Piastres, black on blue.

Genuine.

Engraved as before, but on the thin paper only. The right point of the crescent is higher than the left. The centre of the monogram is solid. The bottom outline of the crescent, in all my specimens, appears to be almost entirely solid. The top-stroke of the figure 2 is *very* concave, or hollowed in its outline. The upper point of the leaf, below the left side of the crescent, is as far from the left side of the frame as the upper part of the similar leaf, below the right side of the crescent, is from the right side of the frame. There are twenty-two pearls or balls outside the top of the frame, counting the corner ones ; twenty-one at the bottom of the frame, counting the corner ones ; twenty-nine down the right side, counting the corner ones again ; and twenty-eight down the left side, also counting the corner ones.

2 Piastres. Forged.

Paper, etc., the same as in the forged 20 PARAS. The right point of the crescent is very much *lower* than the left. The centre of the monogram has a light-coloured space in it, containing a black dot. The bottom outline of the crescent is shaded with vertical lines, like those of the forged 1 PIASTRE, but not so clear ; and they are merged into one solid line, towards the ends of the crescent. The top-stroke of the figure 2 is very nearly straight. The upper point of the leaf, below the left side of the crescent, touches the side of the frame, but the similar point of the leaf, to the right of the crescent, is a good distance from the right side of the frame. There are twenty-four pearls outside the top of the stamp ; twenty-four at the bottom ; thirty-one down the right side ; and thirty-one down the left side ; counting the corner ones in each case. The colour of the genuine is a pale, dull, Prussian-blue ; that of the counterfeits is *green*, bluish-green certainly, but decidedly green.

Same Issue. 5 Piastres, crimson, pale red.

Genuine.

Engraved as before, on the thin paper only. The centre of the monogram is quite solid. The crescent is equally sharp at both points,

and both of these points are more than half a millimetre from the ornaments in the upper corners. The leaf-ornament at the bottom of the stamp does not go into the left bottom corner at all; and the semicircular line at the middle of the bottom of the stamp, below the figure of value, *almost* touches the thin, inner outline of the bottom of the frame. The outline of the 5 (which, by the way, is a transverse o) is nearly as thick at the sides as at the top and bottom. The vertical lines of shading in the bottom outline of the crescent can be traced as far as the writing in the crescent extends.

5 Piastres. Forged.

Printing and paper the same as in the forged 20 PARAS. The colour varies, sometimes being of a very pale and washed-out magenta shade, and sometimes being almost a burnt-sienna colour. The stamp is gummed on the face, and postmarked on the back. The centre of the monogram is light, and contains a black dot. The right side of the crescent is very much sharper than the left, and its extreme apex touches the ornament above it. The left point of the crescent also *almost* touches the similar ornament above it. The leaf-ornament at the bottom of the stamp goes quite into the left bottom corner, and touches it. The semicircular line at the middle of the bottom of the stamp is almost half a millimetre distant from the thin outline of the bottom of the frame. The outline of the transverse o, or 5, is *very* thin at the sides, and very thick at the top and bottom. The vertical lines of shading in the bottom outline of the crescent are so very close together that they generally run into one solid line.

NOTE.—The paper, in both genuine and forged, is not strictly what is called "coloured paper," but is white paper, with a coloured wash on the face of it. This is very easy to see in the thick-paper series of the genuine; but the thin paper is so transparent that the colour shows through, making it look like really coloured paper.

POSTMARKS.

Genuine.—I have only one cancelled specimen, and the postmark seems to be composed of rather large dots, but it is so much blotched, that I cannot say, positively, what it is.

Forged.—37 and 42, both without numerals; also a large C, with a stop after it; also a large 2. I have some scores of specimens before me, but all the postmarked ones have the cancellations struck on the back of the stamp, as stated above.

Issue of 13 January, 1865. 10, 20 Paras; 1, 2, 5, 25 Piastres.

FIG. 1.

FIG. 2.

These are the stamps like Fig. 1. The black surcharge at the top of the stamp is shown, enlarged, in Fig. 2. The 20 paras and 1 piastre may be found without rays to the star.

Genuine.

Engraved in *épargne*, on moderately stout, rather hard, white wove paper, perforated $12\frac{1}{2}$. The oval ring, round the crescent and star, contains forty-eight pearls, which are large, and close together. There is a thin, oval outline, separating the pearled oval from the crescent and star. The outer frame of the stamp is composed of a white line, surrounded by a coloured one, and the coloured line is very little thicker than the white one. The bottom surcharge is the value in words, and differs, of course, for each denomination, the Turkish characters for "paras" being *parah*, and those for "piastres" being *grush*. I have not thought it necessary to have these characters engraved.

First Forgery.

Very nicely lithographed, on paper much the same as the genuine, perforated 13, or $13\frac{1}{4} \times 12\frac{1}{2}$. There are forty-three pearls round the crescent and star, and some of them are oval, instead of circular, and they are not all of the same size. The coloured, outer frame of the stamp is decidedly thicker than the white line immediately inside it. I have only the 20 paras, and the 2 and 25 piastres of this forgery, and in each, the value, in the bottom surcharge, is a feeble copy of the value on the 1 piastre ("*bir grush*"?). The upper surcharge lacks the hooked dot in the right-hand character (see Fig. 2), and the V-shaped mark under the two dots in the large, hollow letter to the left, also the oblique stroke under this letter.

Second Forgery.

This is not nearly so good as the one just described. Rather coarsely lithographed, on medium to fairly thick, white wove paper, perforated $12\frac{1}{2}$. There are forty-two pearls, and they are some little distance from the oval outline outside them, instead of nearly touching it, and there is no white oval line inside the pearled oval, though there is a distinct one in the genuine, and in all the other forgeries. The pearls themselves are not so round and regular as the genuine. The top surcharge is very badly imitated, its right-hand character does not contain the hooked dot shown in Fig. 2, and the head of this character is joined to the loop to left of it. I have the 10 paras, bright yellow-green, and the 20 paras, *carmine*, of this forgery. The characters for the value in the bottom surcharge are alike in both, and imitated from the 20 paras, though the cluster of three dots below the last character but one to the left is absent. There is one curved white line in the hollow of the crescent, instead of two; it is short, not nearly reaching to the points of it, though, in the genuine, the upper white line reaches quite as high as the points of the crescent. This is not at all a dangerous forgery, principally because the surcharge looks so very heavy and clumsy.

Third Forgery.

Lithographed, on rather thick, hard, white wove paper, perforated $11\frac{1}{4} \times 13\frac{1}{4}$, $11\frac{1}{2} \times 11\frac{3}{4}$, $12\frac{1}{2}$, $12\frac{1}{2} \times 12\frac{3}{4}$, etc. I have the 10 paras, blue-grey, 20 paras, brown-yellow, 2 piastres, blue, and 25 piastres, deep orange. There are forty-eight pearls in the oval, and they are small and irregular. The white line, inside the printed oval, is raggedly drawn, and usually broken in several places. The upper surcharge is fairly well imitated, but the V-shaped mark below the last large character to the left is represented by an oblong dot. The bottom inscription in the 10 paras is copied from that of the 2 piastres; and that of the 25 piastres is apparently copied from that of the 2 piastres. There is only one white

line in the hollow of the crescent ; it is short, and parallel with the curve of the crescent, whereas, in the genuine, the lines are very close to the crescent near the points, and much further off near the middle. The forty-eight pearls ought to be an easy test.

Fourth Forgery.

Rather coarsely lithographed, on fairly thick, very white wove paper, perforated $11\frac{3}{4}$, $10\frac{1}{2} \times 11\frac{3}{4}$, $11\frac{3}{4} \times 13\frac{3}{4}$. I have the 5 piastres, carmine, and 5 piastres, brown-red, the latter being probably meant to imitate the unpaid. There are fifty-seven pearls in the oval, so they are much smaller than the genuine. The white oval line, inside the pearled oval, is often much thicker in some parts than in others. The crescent affords an easy test, as the two parallel, curved white lines, inside the hollow, are very short, not reaching to the points of the crescent. The upper surcharge is nicely copied, though there are two round dots, instead of one hooked dot, in the hollow of the right-hand character ; and the two dots above the V-shaped mark, over the hollow of the left-hand character, are absent. The bottom surcharge is a fair copy of that on the 5 piastres value.

POSTMARKS.

Genuine.—Similar to 52, in black or blue, but not so oblong, and with Turkish lettering in the centre.

First Forgery.—52, in black.

Second Forgery.—1. Also 37, without numerals.

Third Forgery.—Shapeless blotches.

Fourth Forgery.—Blotches. Also what looks like part of 54. Also 37, without numerals.

Issue of 1874-5. 10 Paras, lilac.

Genuine.

Engraved in *épargne* (typographed) as before ; unperforated, or perforated $13\frac{1}{2}$. The perforated issue also includes the 20 paras, green, and the 1 piastre, yellow, orange ; but I have only counterfeits of the 10 paras. The tests are the same as in the 1865 issue, but the top surcharge is now like the enlarged illustration here given (Fig. 3). It will, of course, be understood that the surcharge is in black, as before.

FIG. 3.

Forged.

Lithographed, in bright lilac-rose, or in slate-black, on very thick, very yellowish-white wove paper. A wavy line is *printed* round the stamp, to represent perforations. There are forty-six nice, large, regular pearls in the oval. The two white lines inside the crescent are tolerably like the genuine, though the ends of the upper one come up rather higher than the genuine. At first sight, the stamp appears to be without surcharge, as the four surcharges are printed as part of the original design, in the same colour as the rest of the impression. In the bottom set of characters, the three dots, below the central character, are absent.

POSTMARKS.

Genuine.—As in the last issue.

Forged.—My lilac-rose specimen is uncanceled ; the slate-black one has some irregular bars.

Issues of January, 1876, surcharged as Fig. 4, with additional surcharge, Fig. 5, in the centre of it.
 $\frac{1}{4}$, $\frac{1}{2}$, $1\frac{1}{2}$, 2, 5 Piastres.

FIG. 4.

 $\frac{1}{4}$ **Pre**

FIG. 5.

The design of the stamp itself is the same as in the last issue; but the four sets of characters, forming the oval surcharge, are much more elaborate (Fig. 4), and there is an additional surcharge in the centre (Fig. 5) for the international set. As the tests for the ground design are the same as in the last issue, I need not repeat them, but I shall have to take the five values separately.

$\frac{1}{4}$ Pre, on 10 Paras, mauve.

Genuine.

Engraved in *épargne*, as before, on medium to thick white wove paper, perforated $13\frac{1}{2}$. The central surcharge is " $\frac{1}{4}$ Pre"; the little 1 has a serif and a foot-stroke; the fraction-line is nearly $3\frac{1}{2}$ mm. long, and, if prolonged downwards, it would cut into the left top corner of the P. The 4 is stumpy, with a wide, flat top, and a long foot-stroke. From the bottom of the 1, to the top of the R below it, the distance is $7\frac{1}{2}$ mm.

Forged.

I have seen no forgery of this surcharge so far.

$\frac{1}{2}$ Pre, on 20 Paras, green.

Genuine.

Paper and perforation, the same as in the $\frac{1}{4}$ pre. The 1 has a serif and a foot-stroke. The fraction-line is the same length as in the $\frac{1}{4}$ pre, but if prolonged downwards, it would pass considerably to the left of the P. The 2 is a curiously-shaped numeral, very like the surcharged "2" on the vermillion 5 c. of Argentine, issued in 1887.

Forged.

I have seen no forgery of this surcharge so far.

$1\frac{1}{2}$ Pre, on 50 Paras, rose.

Genuine.

Paper and perforation the same as in the $\frac{1}{4}$ pre. The value is in the singular, "Pre." The large 1 has a long, drooping serif, which hangs down to below the level of the centre of it. Its top is cut off square, and it has no foot-stroke. The small 1 has a serif and a foot-stroke. The fraction-line does not seem to be always the same length, as I have it $2\frac{1}{2}$ and $3\frac{1}{2}$ mm. long. If prolonged downwards, it would pass clear between the P and R of PRE. The little 4, which is only $1\frac{1}{2}$ mm. high, is crossed *very* low down, and its head is cut off square. Its oblique line is slightly hollowed. The P is 8 mm. high, and the tail of the E projects slightly further than the head.

First Forgery.

Lithographed, in pale rose, on fairly thick, yellowish-white wove paper, perforated 12½. The ground of the stamp is the same as in the first forgery of the 1865 issue, with forty-three pearls in the oval, instead of forty-eight. The oval surcharge (Fig. 4) is very carefully copied. In the central surcharge, the large 1 has a foot-stroke, and the shaft of the numeral is thinner near the bottom than at the top, instead of being of one thickness throughout. The foot-stroke to the little 1 is too wide. The fraction-line, if prolonged downwards, would cut into the left top corner of the R of PRE. The 4 is nearly 1½ mm. high, and it is crossed rather low down, but not absurdly so, as the genuine is. Its oblique stroke is not hollowed. The P is nearly 2½ mm. high, and the tail of the R does not project further than the head.

Second Forgery.

This is bogus, as it is impressed on the 10 paras, mauve. The genuine 1½ PRE surcharge is only found on the 50 paras, carmine. The surcharge is printed on a genuine stamp. The value is in the plural, "1½ PRES," which is an easy test. The large 1 has a short serif, which projects well to the left, instead of hanging down; and it is hardly one-third of the length of the shaft. It has a distinct foot-stroke. The little 1 is a simple straight line, without serif or foot-stroke. The fraction-line is very faint in my specimen, and if prolonged downwards, it would cut a good deal more deeply into the head of the P than the genuine does. The little 4 is sharp at the top; it is crossed in the centre, and the oblique stroke is bowed outwards in the middle, instead of being hollowed.

2 Pres, on 2 Piastres, orange-brown.**Genuine.**

Paper, etc., as before. The value is in the plural, "2 PRES," and there is a distance of 6 mm. between the 2 and the R below it.

Forged.

I have no forgery of this value.

5 Pres, on 5 Piastres, blue, grey-blue.**Genuine.**

Paper, etc., as before. The ball at the tail of the 5 curls rather inwards. The P is 2 mm. high.

Forged.

Lithographed, in very pale slate-blue, on thick, white wove paper, perforated 12½, ungunmed. This is, as to the ground design, the same as the first forgery of the 1865 issue, with forty-three pearls, instead of forty-eight. The oval surcharge is well copied, though the lithographic mode of printing makes the characters rather patchy. The ball of the 5 projects rather outwards, and the P is more than 2½ mm. high, and has a long head-stroke (nearly ½ mm.), instead of the extremely short head-stroke of the genuine.

POSTMARKS.

Genuine.—29. Also two concentric octagons, usually in blue. Also 1, smaller.

Forged.—The bogus 1½ PRE, on 10 paras, mauve, bears the genuine cancellation, 29. The others have a blue gridiron, like 22, but with a double outline.

Issue of 15 September, 1876. 50 Paras, blue and yellow.

Genuine.

Engraved in *épargne*, in blue, with (lithographed?) background in yellow, on rather thin, white wove paper, perforated 13½. The inner blue line of the right-hand frame, if prolonged downwards, would cut well into the end of the blue label, after the N of OTTOMAN. Under EMP: OTTOMAN, there are two small scrolls. The right-hand end of the right-hand scroll is rather sharp, and points to the foot of the A of OTTOMAN; while the left-hand end of the left-hand scroll is blunter, and curls up, so as to point to the right bottom corner of the M of EMP. The head or flag of the 5 is wedge-shaped, and a straight-edge, laid along the top of it, would pass clear below the N of OTTOMAN. It points towards the outer end of the left-hand scroll. The 5 is only a shade taller than the O. The S of PARAS leans over somewhat to the right, and seems slightly above the level of the rest of the letters of the word.

Forged.

Lithographed, on rather thick, white wove paper, perforated 12½. The blue is much paler than the genuine, and the yellow is a dull ochre. The inner, vertical blue line of the right-hand frame, if prolonged downwards, would coincide exactly with the end of the blue label containing EMP: OTTOMAN. The outer portion of the scroll, below OM of OTTOMAN, is composed of two lines, like the genuine; but the outer end of the left-hand scroll, below the P of EMP, is a single line, instead of being double. This line ends in a little ball; and if prolonged, it would almost meet the flag of the 5. The said flag is deeply hollowed in the centre, and curls up, so as to point to the M of EMP. The 5 is a good deal taller than the O. The S of PARAS is upright, and on the same level with the other letters. The rest of the design is well imitated.

Same Issue. 5 Piastres, red and pale blue.

Genuine.

Engraved as before; paper and perforation as in the 50 paras. The test of the inner line of the right-hand frame is the same as in the said 50 paras. In the crescent, there are two triangles. Each triangle contains four ornaments, the largest being two concentric circles; the second, a circle with a dot in it; the third, a circle without any dot in it; and the fourth is a simple dot. The 5 is the same as in the 50 paras. None of the letters of PIASTRES touch each other, and the S leans over to the right, as before, while the A is almost exactly under the separation between the two little scrolls. The colon after EMP: leans decidedly over to the left, and the M and A of OTTOMAN do not touch each other.

Forged.

Lithographed, in a sort of pale Indian-red, with *very* pale, greenish-blue background, on thick, white wove paper, perforated 13, ungummed. The inner outline of the right-hand frame, if prolonged downwards, would coincide with the top of the end of the red label, containing EMP: OTTOMAN. In the triangle, in the left side of the crescent, the largest ornament is a circle, with a dot in it, just like the second ornament, but larger. In the other triangle, the largest ornament has a dot in it, but the dot has a white centre, though it cannot be called a circle. The head of the 5 is well imitated. The foot of the I of PIASTRES joins the foot of the A, and the A is not exactly under the centre of the opening,

but near the two little scrolls, and a little to the left. The final s is upright. The colon after EMP: is very nearly upright. The foot of the M of OTTOMAN is joined to the foot of the A.

Same Issue. 25 Piastres, plum and lilac-rose.

Genuine.

Engraving, paper, and perforation the same as in the lower values. The inner line of the right-hand frame is the same as before. The inner circle of the largest ornament in each of the triangles in the crescent is also the same as before. The upper stop of the colon after EMP: does not touch the upper edge of the coloured label containing it. The top of the A of OTTOMAN is a blunt, rather rounded point, and there is a well-marked head-stroke to the right top corner of the N. The 2 of 25 is much shorter than the 5. The I of PIASTRES does not touch the foot of the A, and the S leans over to the right.

First Forgery.

Lithographed, on thick, white wove paper, perforated 13, ungummed. The colours are rose-lilac and greenish. The inner line of the right-hand frame coincides with the top corner of the EMP: OTTOMAN label. The largest ornament in each of the triangles in the crescent has its inner circle *very* small. The upper stop of the colon after EMP: touches the top edge of the containing-label. The top of the A of OTTOMAN is very wide, and cut off square; and the last limb of the N has no sign of a head-stroke. The 2 of 25 is *taller* than the 5, instead of much shorter. (This ought to be an easy test.) The foot of the I of PIASTRES is joined to the foot of the A, and the S is quite upright. The point of the A is not centrally under the space between the two ornamental scrolls, as is the case with the genuine, but is too much to the left.

Second Forgery.

I have a photographic illustration of another forgery of this 25 piastres, but know nothing about the paper, perforation, colours, etc. As far as I can judge, it is an excellent imitation; but the 2 of 25 is *almost* as tall as the 5; the first S of PIASTRES is taller than the R, and the final S slopes to the left, instead of to the right.

POSTMARKS.

Genuine.—29, 32, generally in blue.

First Forgery.—22, with two outer lines, in blue.

Second Forgery.—Uncancelled.

MOUNT ATHOS STAMPS.

1880. Various issues, surcharged in blue with the triangle here illustrated.

The following stamps are catalogued with this surcharge:—

- 1869. 5 piastres, blue; perforated 13½.
- 1871. 2 piastres, red; 5 piastres, blue; perforated 7 to 11.
- 1871. 2 piastres, brown-red; perforated 12 to 13.
- 1875. 10 paras, red-lilac; perforated 13½.

April, 1876. 10 paras, mauve; 20 paras, green; 1 piastre, yellow; perforated 13½.

Mr. Westoby says that this surcharge was used on stamps coming from the Greek Monastery of Mount Athos; the three Greek letters (CH. S. P.) being the initials of the postmaster of the monastery. They would, therefore, be about on a par with the Swiss locals for the mountain hotels, and are not likely to interest the generality of collectors.

Genuine Surcharge.

The line forming the triangle is thick, being about ¾ mm. wide. The central peak of the S (the character very much resembling an E) only reaches to about the centre of the letter. It is centrally above the space between the other two letters, as in the illustration, and does not lean backwards.

Forged Surcharge.

The line forming the triangle is a good deal too thin, being less than ½ mm. wide. The central peak of the S projects to the right, very nearly as far as the top and bottom limbs do. The said S is placed too far to the left, and leans over backwards. This is very noticeable.

POSTMARKS.

Genuine.—29.

Forged.—Something like 11, but smaller.

UNPAID STAMPS.

Issue of 1863. 20 Paras, 1, 2, 5 Piatres; all on red, and also on brown paper.

Genuine.

These are exactly the same as the ordinary postals of 1863, but all the values on red, or on brown paper.

Forged.

These are the same as the forgeries of the 1863 issue, printed on red, on on pale brown *pelure* paper.

POSTMARKS.

Genuine.—I have no cancelled specimens.

Forged.—38 or 42, without numerals; but more frequently a large C, followed by a colon. These postmarks are generally on the *back* of the stamp.

Issue of 1865. Printed in brown; 20 Paras, 1, 2, 5, 25 Piatres; perforated 12½.

Genuine.

These are the same as the ordinary postals, but are all printed in brown.

First Forgery.

I no longer possess these, but my second edition describes them as being the same as the first forgery of the 1865 issue, but printed in various shades of yellow-brown.

Second Forgery.

These also I no longer possess. They are the same as the second forgery of the 1865 issue, but are all printed in shades of red-brown.

Issue of 1871. 20 Paras, 1, 2, 5 Piastres, all in brown, with surcharge in black-brown.

FIG. 1.

FIG. 2.

Genuine.

The design of the stamps is the same as in the 1865, etc., issues, but the surcharge is like Fig. 1, and Fig. 2 is an enlarged representation of the upper surcharge. Engraved in *épargne*, perforated 7 to 11.

Forged.

I have only the 2 piastres. Coarsely lithographed, on thick, wove paper, with the perforations *printed* in. There are fifty-two pearls in the oval, instead of forty-eight, and the white line, inside the crescent, is very thick and coarse, and its ends join the ends of the crescent. There is a Turkish 2 in each corner of my specimen; but the value, as given in the Turkish characters of the bottom surcharge, is "10 paras." The top surcharge is a very poor imitation of the genuine: there is a vertical stroke above the middle character; and the left-hand character, instead of the two dots and the V-shaped mark of the genuine, merely shows four irregular dots above it. The left-hand end of this said top surcharge is shorter, and more hollowed out than the genuine. I don't think this counterfeit is likely to deceive anybody.

POSTMARKS.

Genuine.—As before.

Forged.—Similar to 52, but shorter, and with some hieroglyphics in the centre. This is struck in black.

LOCALS FOR CONSTANTINOPLE.

Issue of December, 1865. 5 Paras, black on blue;
20 Paras, on green; 40 Paras, on rose.

Westoby says that this local post, for Constantinople and the suburbs, was established by a Greek, M. de Lianos, in virtue of a firman of the Sultan, dated August 15th, 1865. The officials put such difficulties in his way, that, after commencing operations in December, 1865, he was compelled to relinquish the post in the following July.

These are the stamps with crescent and star in a circle, in the centre, the value, in Turkish words, in the top frame, and Turkish numerals in the top corners; POSTE LOCALE down the left side; Turkish words up the right side; PARAS at the bottom, and ordinary numerals in the bottom corners. It will be remembered that the Turkish numeral for 5 is a sort of o; 20 is like a 7, with the head turned to the right, and a dot after it; 40 is like a w on its side, with a dot after it (40).

Genuine.

Typographed in black, on moderately stout, coloured wove paper, unperforated, or perforated 14. There are sixty-one vertical lines in the central circle, the first and last being very close to the sides of it. They are even and regular, and not blotched. The central rectangle is $12\frac{3}{4}$ mm. across, between the inner, vertical lines of the frame; and there are thirty-nine radiating lines above the central circle, and thirty-nine also below it, the outer ones being, of course, *very* short. The ring round the central circle is composed of sixty-four little oblongs, or bricks. The Turkish numerals in the upper corners denote the same value as the Turkish words in the top frame, and the ordinary numerals in the bottom corners.

First Forgery.

Of this I have only the 5 paras. It is lithographed, on very dark blue wove paper, unperforated, or perforated 12. There are only forty-seven vertical lines in the central circle. The inner rectangle measures 13 mm. across. There are about forty radiating lines above the central circle, and about forty-two below it. The ring contains sixty-six oblongs; they are much less distinct than the genuine, as the ring is narrower. The Turkish words and numerals and the ordinary numerals are correct; *i.e.*, they all correspond.

Second Forgery.

Of this also I have only the 5 paras. Lithographed, on thick, rather bright blue wove paper, perforated 13. There are fifty-two vertical lines in the central circle, and they are fairly regular. The inner rectangle measures $12\frac{3}{4}$ mm. across. The radiating lines are not easy to count; but there are about thirty-nine above the circle, and about thirty-seven below it. There are only fifty-four oblongs round the circle, and they are much larger and more distinct than those in the first forgery. The words and numerals correspond.

Third Forgery.

Of this I have only the 20 paras. It is nicely lithographed, or possibly typographed, on rather thin, dark green wove paper, perforated 12. There are only fifty-five vertical lines in the central circle. The width of the rectangle is the same as the genuine. There are forty-nine radiating lines above the circle, and forty-eight below it. The ring contains seventy-three oblongs. The words and numerals correspond.

Fourth Forgery.

Of this I have only the 40 paras. Lithographed, on medium, rose paper, unperforated. There are only forty-six vertical lines in the central circle. The width of the rectangle is the same as the genuine. There are thirty-four radiating lines above the circle, and thirty-six below it. The ring contains about seventy-two oblongs. The words and numerals correspond.

Fifth Forgery.

Of this type I have the 20 paras, on rather thin, dark yellow-green wove paper, pin-perforated 13, and the 40 paras, on thicker, rose paper, unperforated. In each case, the top of the stamp does *not* correspond in value with the bottom, having the Turkish words and numeral for "5 paras." Rather coarsely lithographed, paper as above. There are forty-eight or forty-nine vertical lines in the circle. The central rectangle is too narrow, measuring only $12\frac{1}{4}$ mm. across. There are thirty-two radiating

lines above the circle, and the same number below it. The ring contains fifty-seven oblongs. This is the usual forgery; the others I have only got lately.

POSTMARKS.

Genuine.—The unperforated stamps I have seen obliterated with a number of fine, round dots, with a Turkish word in the centre.

First Forgery.—Uncancelled.

Second Forgery.—Like 98, but with the bars closer together.

Third Forgery.—Uncancelled.

Fourth Forgery.—Uncancelled.

Fifth Forgery.—38, without numerals. Also a curious lattice-work, of crossed, oblique lines, without outline.

TURKS ISLANDS.

Issue of April 1, 1867. 1d., 6d., 1s.; no watermark; perforated 11 to 12½.

Issue of 1873-9. 1d., 1s.; small star watermark; perforated 11 to 12½ × 15, nearly.

Genuine.

Engraved in *taille-douce*, on stout, yellowish-white wove paper, varieties as above, backed with brownish-yellow gum. The mouth is open; the lips parted, with a pleasant expression; the chin is rounded. The ornaments on the top of the coronet are four crosses *pattée*, and three five-lobed leaves; a leaf between every two crosses. Both the crosses and the leaves are perfectly distinct. The front cross projects into the white, oval ring, round the central medallion, but it does not touch the *outer* line of the said white, oval ring. There are two very distinct, dark, diamond-shaped dots, formed in the engine-turning—one in front of the forehead, where the hair joins the coronet, and the other a little above it, in front of the coronet; there is also a smaller, dark dot, in the edge or outline of the centre of the profile of the forehead. Along the band of the coronet, there is a row of thirteen pearls; they can be counted without difficulty. The ear is large, but very faint. The lettering on the two labels is so tall that it reaches very nearly to the top and bottom of the labels. The engine-turning is very finely done.

First Forgery.

Poorly lithographed, on very white paper, soft, thin, and without watermark; badly pin-perforated 13. The gum, when there is any, is quite white. The mouth is pursed up, as though the Queen were whistling; and the expression is sour. The point of the chin is sharp. The crosses *pattée* on the top of the coronet are very indistinct, so that it is almost impossible to tell what they are meant for; and the first of the flowers is a trefoil, instead of having five lobes, like the others. The front cross *pattée* projects so far into the white, oval ring, round the central medallion, that it touches the outline of the said ring. The small,

dark dot, in the centre of the outline of the forehead, is absent, and the two dots opposite the front of the coronet are represented by large, shapeless blotches, instead of distinct, dark diamonds. There are thirteen pearls along the band of the coronet, as in the genuine; but those towards the back are difficult to see. The ear is exceedingly small, almost invisible; in fact, the only part which shows is the very bottom tip of it. In the genuine, quite half of the ear can be seen. The lettering on the two labels is much too short, so that a good space of colour shows in the labels, above and below the lettering. The imitation engine-turning is very poor and coarse.

Second Forgery.

I take the description from my second edition; as this forgery is no longer in my possession. Lithographed, on medium, yellowish-white wove paper; no watermark; very nicely perforated. The mouth is partly open; the expression rather sentimental; the chin curved considerably forwards. The ornaments along the top of the coronet are: a cross *pattée*, a shamrock, a cross *pattée*, a sort of asterisk, a cross *pattée*, and then two indescribable things, one of which *may* be a trefoil. They are all extremely indistinct. The dark dots in the engine-turning, in front of the forehead, are not to be seen. There does not seem to be any ear at all. The letters in the lower label are much too short; so that there is a good space of the background of the label visible, both above and below the letters. The imitation engine-turning is poor, but better than in the first forgery.

POSTMARKS.

Genuine.—Similar to 54, enclosing the letters TI.

First Forgery.—A number of circular dots, forming a rectangle.

Second Forgery.—62.

SURCHARGED STAMPS.

In my last edition, I spoke of sundry forged surcharges, which I had seen, but was not able to dissect at the time. I now give a description of those in my possession.

Issue of June 1, 1881. $\frac{1}{2}$ d., surcharged on 1d., red.

FIG. 1.

FIG. 2.

FIG. 3.

FIG. 4.

Of the above, Fig. 1 is found on all the values; Fig. 2 on the 1d. and 1s.; Fig. 3 on the 1d. only; and Fig. 4 on the 1d. only. My single counterfeit is an imitation of Fig. 3, which I now describe.

$\frac{1}{2}$ d., on 1d., red; Fig. 3.

Genuine.

This is found on the 1d. of 1873, small star watermark, perforated 11 to $12\frac{1}{2} \times 15$, nearly. It is the only type with a flat-footed 2, and exists with and without fraction-bar. The 1 is very nearly 5 mm. high, and the shaft is rather over $1\frac{1}{2}$ mm. broad. The foot is 3 mm. wide; the serif slopes up, in a somewhat concave curve, to the back of the numeral, and

is pointed in front. The fraction-line is $3\frac{1}{2}$ mm. long. The top of the 2 is $1\frac{1}{2}$ mm. from the base of the 1; its flat foot is a shade over 4 mm. wide, and $1\frac{1}{2}$ mm. thick in the thickest part. Its head is a very large, inward-curving ball, 2 mm. across in the widest part. The thickest part of the back of the head is fully $1\frac{1}{2}$ mm. wide. The turned-up end of the tail is pointed.

Forged.

My specimen is struck on the proper issue of the 1d. The 1 is $4\frac{1}{2}$ mm. high, and the shaft is very much too thin, being less than 1 mm. wide. The foot is only $2\frac{1}{2}$ mm. wide; the top of the numeral is quite flat, and the serif, which is blunt at the end, starts from the front edge of the shaft, instead of running up, in a curved slope, to the back edge. The fraction-line is very short and curved; it is hardly $1\frac{1}{2}$ mm. long. The top of the 2 is 2 mm. from the base of the 1; its flat foot is $3\frac{1}{2}$ mm. wide, and less than 1 mm. thick. The ball of the head is quite small, and hardly curves in at all; it is about $1\frac{1}{2}$ mm. across at the widest part. The thickest part of the back of the head is about $\frac{3}{4}$ mm. wide. The turned-up end of the tail is quite blunt. Except for the flat foot of the 2, this surcharge closely resembles Fig. 1.

Same Issue. 2½d., on 1d., red.

FIG. 5.

FIG. 6.

FIG. 7.

FIG. 8.

FIG. 9.

FIG. 10.

FIG. 11.

FIG. 12.

These surcharges are found on various values of the issues of 1867 and 1873; but I only possess one forgery, which is struck on the 1d. of 1873. The forgers have imitated Fig. 5, which I here describe.

Fig. 5. Genuine.

The bottom end of the oblique stroke of the large 2 is rounded, almost into a ball; and the front of the foot, where it joins this oblique stroke, is quite 1 mm. thick. The end of the tail points almost vertically upwards, so that, if prolonged, it would only cut very slightly into the back of the head of the numeral. The fraction-line of the $\frac{1}{2}$, in all my specimens, is not more than 2 mm. long, and is either horizontal, or slopes down to the right.

Forged.

I only have this on the 1d. of 1873. This is fortunate, because Fig. 5 does not exist on the 1d. The bottom end of the oblique stroke of the large 2 is cut off horizontally; and the front of the foot where it joins this oblique stroke is extremely thin, being less than $\frac{1}{2}$ mm. thick at that part. The end of the tail curls somewhat inwards as well as upwards, so that, if prolonged upwards, it would run into the very centre of the very thickest part of the numeral. The fraction-line of the $\frac{1}{2}$ is much thinner than the genuine, and more than 3 mm. long; it slopes very much down to the left.

Same Issue. 4d., on 1d., red.

FIG. 13.

FIG. 14.

FIG. 15.

All three of the above surcharges are found on the 6d. of 1867; Figs. 13 and 14 on the 1d. of 1873; and Figs. 14 and 15 on the 1s. of 1873. I have a forgery of Fig. 13, on the 6d. of 1867, and forgeries of all three types on the 1d. of 1873. I shall have, therefore, to describe them all.

Fig. 13. Genuine.

The 4 is 8 mm. high; the vertical shaft is nearly 2 mm. wide; the top is a blunt point, $\frac{1}{2}$ mm. wide; the cross-bar is nearly $5\frac{1}{4}$ mm. long; the foot is $3\frac{1}{2}$ mm. long; the oblique stroke, measured along the outside edge, is $7\frac{1}{4}$ mm. long; the base of the white triangle in the numeral is 2 mm. wide; the distance from the bottom of the foot to the bottom of the cross-bar is $1\frac{1}{2}$ mm.

Fig. 13. Forged.

This is a "fake," made by lengthening the top of a genuine 4 of Fig. 15 to imitate Fig. 13. The measurements (except for the added top) of course correspond with those of Fig. 15, described below. A careful microscopic examination will detect the fake, especially if the stamp be held up to the light, and looked through from the back, when the dark ink of the genuine numeral will show up, in contrast to the fainter ink of the added part. I have this fake on the 6d. of 1867, of which the surcharge, Fig. 15, before being tampered with, is catalogued at 50s. The faking of the numeral, to represent Fig. 13, ostensibly makes it worth £5—a gain of £2 10s. by the addition of a tiny patch of black ink!

Fig. 14. Genuine.

This is found on the 6d. of 1867, and on the 1d. and 1s. of 1873, the last two being rare. The height of the numeral is $6\frac{1}{2}$ mm.; the vertical shaft is $2\frac{1}{2}$ mm. wide; the top is $1\frac{1}{2}$ mm. wide; the cross-bar is 6 mm. long; the foot is $4\frac{1}{2}$ mm. long; the oblique stroke is 6 mm. long; the base of the white triangle is 2 mm. wide; the distance from the bottom of the cross-bar to the bottom of the foot is 1 mm.

Fig. 14. First Forgery.

I have this on the 1d. of 1873. The height of the numeral is $6\frac{1}{2}$ mm.; the shaft is $2\frac{1}{2}$ mm. wide; the top is $1\frac{1}{2}$ mm. wide; the cross-bar is $6\frac{1}{2}$ mm. long; the foot is 4 mm. long; the oblique stroke is 7 mm. long; the base of the white triangle is $2\frac{3}{4}$ mm. wide; the distance from the bottom of the cross-bar to the bottom of the foot is $1\frac{1}{3}$ mm.

Fig. 14. Second Forgery.

This also I have on the 1d. of 1873. The numeral is only 6 mm. high; the shaft is $2\frac{3}{4}$ mm. wide; the top is $1\frac{3}{4}$ mm. wide; the cross-bar is $6\frac{3}{4}$ mm. long; the foot is 4 mm. long; the oblique stroke is rather more than 6 mm. long; the base of the white triangle is 2 mm. wide; the distance from the bottom of the cross-bar to the bottom of the foot is 1 mm.

Fig. 15. Genuine.

This is found on the 6d. of 1887, and on the 1s. of 1873, but *not* on the 1d. of 1873. The numeral is $6\frac{1}{2}$ mm. high; the shaft is 2 mm. wide, though in examining a number of specimens, I have found some not quite so wide; the top is $1\frac{1}{2}$ mm. wide; the cross-bar is nearly $5\frac{3}{4}$ mm. wide; the foot is $3\frac{3}{4}$ mm. wide; the oblique stroke is nearly 6 mm. wide; the base of the white triangle is 2 mm. wide; the distance from the bottom of the cross-bar to the bottom of the foot is rather more than $1\frac{1}{2}$ mm.

Fig. 15. First Forgery.

I have this on the 1d., dull red and rose-red of 1873, which does not exist as a genuine stamp. I have two different forgeries, and the peculiarity is that they are not only forged, but faked as well; that is to say, the overprint is an imitation of Fig. 15, to which a top has been subsequently added, to represent Fig. 13. The added top of the numeral can be seen by careful examination, as recommended in the case of the fake of Fig. 13, already described. The original numeral was evidently $6\frac{3}{4}$ mm. high, and the addition has made it $7\frac{3}{4}$ mm.; the shaft is $1\frac{3}{4}$ mm. wide; the original top was $1\frac{1}{4}$ mm. wide, and the added top is 1 mm. wide; the cross-bar is $5\frac{1}{4}$ mm. wide; the foot is $3\frac{1}{2}$ mm. wide; the oblique stroke is 6 mm. long to the top of the original figure, and 7 mm. long to the top of the added part; the base of the white triangle is $1\frac{3}{4}$ mm. wide; the distance from the bottom of the foot to the bottom of the cross-bar is $1\frac{1}{2}$ mm. It will be understood why this forgery has been faked, namely, that, finding they had made a mistake in choosing a type of surcharge for imitation which did not exist on the 1d., the forgers altered it, to represent a real surcharge, which, by the way, is worth £6.

Fig. 15. Second Forgery.

I have this only on the 1d. of 1873, in the brighter red colour. Like the last, it is a forgery and fake combined; being an imitation of Fig. 15, with an addition to the top of the numeral, to make it represent Fig. 13. The height of the original numeral is $6\frac{1}{2}$ mm., and the height to the top of the numeral is 8 mm.; the shaft is only $1\frac{1}{2}$ mm. wide; the original top was $1\frac{1}{2}$ mm. wide; the added top is $\frac{1}{2}$ mm. wide; the cross-bar is $4\frac{3}{4}$ mm. long; the foot is $3\frac{1}{2}$ mm. wide; the oblique stroke is 6 mm. long to the top of the original numeral, and 7 mm. to the top of the added portion. The base of the white triangle is only $1\frac{1}{2}$ mm. wide; the distance from the bottom of the foot to the bottom of the cross-bar is 2 mm.

NOTE.—I have not tried photographing these stamps, but it would be well worth while for dealers who have many specimens, to take a photograph of them, as I believe the camera would show faked specimens at once. I remember an instance of some English 2½d. stamps, plate 7, faked with an added numeral, to change them into the scarce plate 17. The colour of the added numeral was exactly similar to the eye, but I found that the camera refused to be deceived, and showed the added numeral of quite a different tint.

POSTMARKS.

Genuine.—A large copy of 54, with T I (probably intended for T I) in the centre.

Forged.—My ½d. and 2½d. stamps are all uncanceled; the 4d., on 6d., is also uncanceled; the various 4d., on 1d., stamps have genuine cancellations. Those who write about forgeries usually appear to assume that it is an easy matter to see when a postmark has been struck on the

top of a surcharge, or the surcharge printed on the top of a postmark. In reality, it is often a matter of extreme difficulty to decide which was done first. In such cases, if the stamp be held obliquely, facing the light, at such an angle that the ink of the postmark shines or glistens, it is sometimes quite possible to see whether the postmark is on the top of the surcharge, or *vice versa*. Sometimes a straight view with a magnifying glass will answer.

TUSCANY.

FIG. 2.

FIG. 1.

FIG. 3.

Issue of 1851-2. Type of Fig. 1, with watermark of Coronets in the sheet, as Fig. 2. 1 Quattrino, 1, 2 Soldi, 1, 2, 4, 6, 9, 60 Crazie.

Issue of 1853. Type of Fig. 1, as before, but with watermark of Ellipses and Words in the sheet, as Fig. 3. 1 Quattrino, 1 Soldo, 1, 2, 4, 6, 9 Crazie.

There were 240 stamps on the sheet, so it will be understood that only a very infinitesimal portion of the entire watermark appears on any one stamp; *i.e.*, part of one vertical line, or of one or two horizontal lines, or some small portion of a coronet, in the case of Fig. 2, and parts of two or three ellipses in the case of Fig. 3. In the rather puzzling Tuscan coinage, the lira was divided into 60 quattrini, or 20 soldi, or 12 crazie.

Genuine.

Engraved in *épargne*, on blue wove, or on greyish-white (1 quatt., 1 sol., 1, 2, 4, 6, 9 crazie only) wove paper, brownish gum, watermark Fig. 2 or Fig. 3, according to the date of issue. The paper, which is extremely rough, especially at the back, is hand-made. The centre of the spike at the top of the lion's crown is under the left-hand edge of the vertical stroke of the T of POSTALE, and rarely shows itself as a cross. In the base of the crown, there are three white pearls, more or less round. Just below the last of these pearls, there is a white patch in the mane (the highest) different in shape from the rest of the white marks in the mane, and evidently intended for the ear. The dark mark, forming the nostril, reaches to the front of the profile of the nose, and points to the centre of the eye. The front edges of both lips are rounded, and the lower jaw comes forward, very nearly as far as the upper one. There is a semicircular, curved line, from the outer corner of the eye nearly to the mane, and a similar one from near the corner of the mouth, to the

mane. The paw on the top of the shield shows four distinct toes, and there are also four toes on each of the feet on the ground. The front leg has two oblong dots near the front edge, above the ankle, and two dots near the back edge, rather higher up. The upper dot of these latter two is oblique, instead of horizontal. The shading-lines on the body run across it, *very* nearly to the outline of the back, leaving only a very thin, white line, down the outline. The lower outline of the body, joining the front and back leg, slopes considerably down to the right. The tail goes between the feet, behind the shield, and curls round, to left of the base of the shield. The tip of it is rather like three fingers of a hand, with the middle finger *much* the longest; the left "finger" is short; the right one reaches down to the bottom of the first white slab, or stone, or whatever it is, on which the lion is sitting; the middle "finger" reaches down to the bottom of the lower white line, below the lion, and points at the numeral of value. The inner, white outline of the shield is rounded at the top; but the outer outline is cut into flat faces; one opposite NC of FRANCOBOLLO; one near the CO; one under the lion's paw; and the fourth is hidden by the chest and mane. The corner-ornaments are all alike. Each consists of a white St. Andrew's cross, with a very thin, white ring drawn in it, leaving the ends of the arms slightly projecting beyond the ring. Each of the said arms ends in a sort of ace-of-spades enlargement. The F of FRANCOBOLLO is nearer to the end of the containing-label than the final O is; and the C has a serif to the tail, like that of the head. The horizontal, coloured line, below the first slab on which the lion is seated, if prolonged to the left, would scarcely graze the right-hand edge of the shaft of the F of FRANCOBOLLO.

First Forgery.

This is very bad. Poorly lithographed, on medium to thick, hard, white wove paper, with a coloured wash (generally greenish) on the face, no watermark. There is no spike or cross at the top of the crown; and the base, which ought to be coloured, with three white pearls, is white, with three coloured dots or dashes, faintly visible. There is no sign of an ear, and the outline of the mane is merely a continuation of the outline of the back, instead of forming a respectable hump. The face is that of a bear, and not of a lion; the nostril is an almost square gap in the profile; the mouth is very long, and almost horizontal, instead of pointing up towards the ear; the lower lip comes to a sharp point, and is much too retreating. There is no semicircular line, either at the outer corner of the eye, or on the cheek. The paw on the shield shows two clumsy toes, with a slight indication of a third. The front paw on the ground is like a camel's foot, and does not seem to have any claws, and the hind foot is almost entirely hidden by the tail. The fore-leg shows one upright, coloured dash, high up, near the back edge, and sometimes another, similar one, below it. The body has only two thick lines of shading across it, behind the mane, in place of the very numerous lines of the genuine. The tail apparently ends in a stump, just behind the fore-leg, and does not go round behind the base of the shield at all. The coloured, horizontal line, immediately below the piece of ground on which the lion sits, if prolonged to the left, would obliterate the shaft of the F of FRANCOBOLLO; and the white line below this coloured one is *very* thin, instead of being decidedly wider than the top outline of the value-label, immediately below it. The outer outline of the shield is rounded at the top, like the inner outline, and shows no flat faces. The ornament in each of the corners of the stamp consists simply of four white petals not touching one another. The F of FRANCOBOLLO is thin and ragged; the

C has no serif to the tail ; the B is taller than the O after it ; the two L's are too far apart ; and the final O is too close to the end of the label, compared with the F. I could give many more tests ; but the above are, I think, abundantly sufficient for this very poor counterfeit.

Second Forgery.

This is better than the first. Lithographed, on rather thin, smooth, white wove paper, no watermark. The cross on the crown is very distinct, and exactly under the very centre of the T of POSTALE. There are three, and sometimes four, horizontal, white dashes on the base of the crown, instead of the three small pearls. The lion's nostril is an oblong dot, which does not come to the front edge of the profile. The face is rather like that of a monkey. There is no semicircular line at the outer corner of the eye ; and the curved line on the cheek is not nearly a semicircle, and does not touch the mane. The paw on the shield is malformed, and only shows two complete toes. There are from two to six small, scattered dots on the fore-leg, but they are not at all prominent. The lower outline of the body, between the legs, has a rather concave outline. The white line of the tail can be traced all the way up the outline of the back, much more distinctly than in the genuine, as the shading-lines on the body do not go so near the back outline as they ought to do. The white ring in the St. Andrew's cross in the right top corner of the stamp is not circular, but of a sort of diamond shape. The cross *under* the T, and the absence of the semicircular line at the outer corner of the eye, will suffice to identify this forgery.

Third Forgery.

This is, in some respects, a caricature. I have only the 2 soldi, in blood-red. Engraved in *épargne* (electrotyped?), on thick, very hard, bluish-white paper, which appears to be transversely laid, no watermark. There is a tall, blunt, outlined spike at the top of the crown, exactly under the T of POSTALE. The base of the crown does not show any pearls ; and the crown itself is quite different from the genuine in shape, having a flat top, and sharp corners. The mane of the lion is very small, with no sign of an ear. The face is like the profile of a man. There is no semicircular line on the cheek, and the mouth is almost invisible. The paw on the shield is, as far as I can make out, a sort of two-toed hoof. The front paw on the ground, in my specimen, has only three toes, and the hind foot seems to have only two. There is no tail at all, though the tip of what should be the tail peeps out from behind the base of the shield. The doubled-up hind leg, which is such a prominent feature in the genuine and most of the other forgeries, is not visible, the hind foot coming directly from the body. (This is a very easy test.) The ground on which the lion sits is a straight, horizontal, white line, instead of a sort of mound ; and the coloured line between this white line and the one below it, if prolonged to the left, would obliterate the shaft of the F of FRANCOBOLLO. The shield is hardly visible, but I think there are flat places at the top of the inner outline, as well as the outer one. In my single specimen, which is very heavily inked, the ornament in the right top corner is fairly like the genuine ; but that in the right bottom corner is quite invisible, and both the left-hand corners have St. Andrew's crosses, without any rings. The lettering is irregular, and is embossed slightly above the surface of the paper. The R of FRANCOBOLLO is a badly-made P. The human-faced lion and the flat-topped, angular crown will serve to distinguish this counterfeit.

Fourth Forgery.

This appears to be a lithograph, and if so, it is probably merely a transfer of the third forgery. I have only the 1 quattrino. It is printed in jet-black, on thick, hard, yellowish-white wove paper, no watermark. It is exactly like the third forgery, except in the following details:—The outlined spike at the top of the crown is only half the height of the spike in the said third forgery, but still exactly under the T of POSTALE; the front leg on the ground has its outlines shaped and rounded, instead of being an absolutely straight shaft; and there are four toes on the foot of this leg, instead of three. The crosses in the left top corner and right bottom corner have no signs of any rings round them, but the other two crosses show faint attempts at rings. All the other tests are the same as in the third forgery.

Fifth Forgery.

This is not particularly dangerous. I have only the 1 crazia, rose-pink. Lithographed, on medium, rather hard, smooth, white wove paper, no watermark. The cross on the crown is quite distinct, and it is under the centre of the T of POSTALE. The base of the crown, in my single specimen, is covered by the postmark; but I fancy there is a horizontal, white line, where the three pearls ought to be. The mane of the lion hardly rises above the level of the outline of the back. The nostril is a long line, quite as long as the mouth. The face is rather like that of a pig. The line at the corner of the eye is arched upwards, instead of downwards; and the line on the cheek is not a true semicircle, and does not touch the mane. The paw on the shield has four claws, but one of them is a stump. The front paw on the ground has four toes, but the fourth points backwards, instead of forwards, making a wide cleft between it and the rest. This front leg has a number of horizontal lines of shading on it. The end of the tail is entirely covered by the postmark in my specimen, so I cannot give any details of it. The inner outline of the top of the shield is thickened, and not very well drawn, near the lion's chest; and the pearls between the two outlines of the said shield are so large and distinct, that they can be easily counted, which is *not* the case with the genuine. The rings of the corner-ornaments are too thick and clumsy, dwarfing the crosses. There is no serif to the C of FRANCO-BOLLO, or to that of TOSCANO. The backward-pointing, fourth toe of the front foot is the easiest test for this forgery.

Sixth Forgery.

In some respects, this is better than any of the five forgeries already described. I have only the 60 crazie, in carmine-vermilion. Lithographed, on very thick, very hard, rough, white wove paper, indistinctly watermarked with faint ellipses. The crown slopes over to the left, and the blunt spike at the top of it is as far to the left of the centre of the T of POSTALE as in the genuine. I can only make out two thin, dim horizontal dashes along the base of the crown, instead of the three pearls. The hair of the lion's mane hangs down too straight, instead of being very curly. The line of the mouth is curved and split, which produces a sort of grin. The said line is so long, that it nearly touches the end of the semicircular line on the cheek. (In the genuine, the mouth points almost to the centre of the semicircular line.) The paw on the shield is very clumsy, the fourth toe or claw being bent, and malformed. The front leg has three sloping lines near the front edge, and two near the back edge, and the front toe of this foot is raised above the other three, and does not touch the ground, though all four are on the same level in the genuine. The hind foot has three long toes, instead of four moderately short ones.

The middle lobe of the tip of the tail does not touch the coloured, horizontal line, above the value-label. The similar, coloured line above this, immediately below the ground on which the lion sits, if prolonged to the left, would run along the lower edge, instead of the upper edge of the horizontal shaft of the F of FRANCOBOLLO. The A of TOSCANO is lower than the letters each side of it, and its left foot is badly shaped, and nearly touches the C. In my single specimen, the top of the F of FRANCOBOLLO is broken. The forward-sloping crown will serve to identify this forgery.

Seventh Forgery.

This is rather good. I have only the 60 crazie, in vermilion-red. Engraved in *épargne*, on thick, hard, rough, bluish-white wove paper, watermarked with three horizontal lines. There seems to be a ball on the top of the crown, and it is *very* slightly to the left of the centre of the T of POSTALE. The line on the lion's cheek is not a full semicircle; and the semicircle at the corner of the eye does not curl up enough. The paw on the shield has three clumsy toes. There is no shading about the knee of the front leg, except what is joined to the front or back outline. (I do not speak here of the long, pointed locks of hair, hanging down the leg, which are found in the genuine, and in nearly every one of the forgeries.) The lower outline of the body, between the front and back legs, is quite invisible in the dark shading. Of the tip of the tail, only the central lobe is distinct. There is only an excessively thin, coloured line dividing the top of the value-label from the white line above it; though this said coloured line is thick and well marked in the genuine. The inner outline of the top of the shield shows a couple of flat faces, instead of being quite rounded. There is no serif to the C of FRANCOBOLLO, or to that of TOSCANO; and the letters of FRANCOBOLLO almost touch the lower outline of the containing-label.

Eighth Forgery.

This is a curious affair, which I got lately (1906), and I have only the 9 crazie. Engraved in *taille-douce*, in dull, dark purple, on medium, rough, hard, bluish wove paper, watermarked with three *oblique* lines. There is a wedge-shaped knob on the top of the crown, and the crown goes very much closer to the top of the stamp than it does in the genuine. The ornaments in the base of the crown seem to be three diamonds, instead of three pearls. There is a large, bald place in the lion's mane, level with the eye. The face is almost exactly like that of a sheep; and the nostril, which does not quite reach the profile of the nose, points towards the inner corner of the eye, instead of towards the centre of it. The paw on the shield shows three large toes and a small stump; the hind foot, in defiance of natural history, shows five toes. There are five dots on the fore leg: three small ones near the front edge, and two large, horizontal ones near the back edge. The lines of shading across the body are continuous, instead of being mostly dotted. The tail appears to be broken, or badly drawn, above the hind foot; and the tri-lobed end is very defective, the middle point or lobe does not reach down to the coloured line above the value-label. The shield comes far too close to the left-hand edge of the central rectangle, especially near the beginning of the N of FRANCOBOLLO. There is a vertical, white line, after the E of POSTALE, which only exists in this forgery. The ink stands out from the surface of the paper, as is usual with *taille-douce* engravings. I think one of the easiest tests is the background, behind the lion. In the genuine, it is of solid colour;

in this forgery, it is composed of dark lines, scratched, in all directions, on a white ground. Those who know the difference between *taille-douce* and *épargne* will not find this at all a dangerous counterfeit.

Ninth Forgery.

The crown is exceedingly faint; otherwise this is fairly deceptive. I have only the 1 and 2 soldi. Lithographed, on white, or strongly blued wove paper, medium to thick, no watermark. The crown is almost or quite invisible, so that I can give no details of it. The curls of the lion's mane hang down too limply. The semicircular line on the cheek-bone is too short, and does not touch the mane. The paw on the shield is very clumsy; there are two divisions, making three toes, and the rest is a white mass. The front paw on the ground has three well-defined toes, with indications of a fourth; there seem to be only three toes on the hind foot. There is one rather large, pear-shaped dot near the back edge of the front foot, and a smaller one near the front edge. The middle lobe of the tail is very little longer than the one to the right of it. The horizontal, coloured line, below the first piece of ground on which the lion is seated, if prolonged to the left, would pass along the middle of the shank of the F of FRANCOBOLLO. The letters RAN of this word have their feet joined together in some specimens. The four arms of the Saint Andrew's cross in the left top corner are much too wide, and the ornament looks like a four-petalled flower. The ornament in the left bottom corner also looks like a flower.

Tenth Forgery.

Of this I have the 2 soldi and the 9 crazie. They are fairly good counterfeits. Lithographed; the 2 soldi on smooth, thin, blue wove paper, watermarked with what seem to be portions of crowns; and the 9 crazie on thin, smooth, yellowish-white wove paper, watermarked with ellipses. The centre of the cross on the crown is under the centre of the T of POSTALE. The nostril is pear-shaped, and it points rather above the eye, instead of towards its centre. The line on the cheek-bone is nearly horizontal, in place of being semicircular. The paw on the shield has four thin toes; it looks rather like the head of a garden-rake. The middle lobe of the tail, showing from behind the base of the shield, is too short, and does not touch the coloured, horizontal line, immediately above the value-label. There are two upright dots or dashes on the front leg, nearly level with one another; one of them near the front edge, and the other near the back edge. An easy test is the horizontal, coloured line, immediately below the piece of ground on which the lion sits. If prolonged to the left, this line would pass almost clear to the *left* of the shank of the F of FRANCOBOLLO, instead of along its *right-hand* edge. The corner-ornaments are too large and too thin, the rings being very faint. The labels are all too wide, and the letters too tall. In the genuine, the coloured part of each label, within the white lines, measures $1\frac{3}{4}$ mm. In this forgery, the coloured part of each side-label is fully 2 mm. wide, while the coloured part of the POSTALE-label is nearly $2\frac{1}{2}$ mm. high. The lettering is $1\frac{1}{2}$ mm. high, instead of about $1\frac{1}{3}$ mm. In the 2 soldi, the stop after the numeral is more like a hyphen than a circular dot, and the head and tail of the s of SOLDI are of the usual shape, though in the genuine they are rather squeezed-in, towards the body of the letter.

Eleventh Forgery.

Lithographed, on thick, hard, rough paper. I have the 9 crazie in lavender-grey, watermarked with crowns; the 1 quattrino and 9 crazie

with ellipses; and the 1 quattrino and 2 soldi without watermark. The cross on the crown is to the left of the T of POSTALE, as in the genuine. The pearls in the base of the crown are diamond-shaped, instead of round, and there seems to be a fourth pearl in the right-hand end of the base. The face of the lion has a slightly surprised expression. The toes of the paw on the shield are rather more leaf-shaped than the genuine. The rough paper does not take the ink very well, and I cannot give further details; but, as far as I can see, the design has been very accurately copied, and this counterfeit might easily deceive.

Twelfth Forgery.

Lithographed, on thin, soft, rough, white wove paper, watermarked with ellipses. Of this I have only the 1 quattrino. The cross on the crown is slightly to the *right* of the centre of the T of POSTALE. There are three dashes or hyphens, instead of pearls, in the base of the crown. The centre lobe of the tip of the tail is like the genuine, but the lobe to right of the centre one is about the same length as the lobe to left of the centre one; though, in the genuine, the right lobe is decidedly longer than the left one. With these exceptions, the stamp is a very accurate copy of the genuine, but the background has not taken the ink well, and is spotty.

Thirteenth Forgery.

Of this I have only the 60 crazie, in dull red-brown. Lithographed, on thin, soft, rough, yellowish-white wove paper, watermarked with part of a coronet. The cross on the lion's crown is to left of the T of POSTALE, as in the genuine. There are three long dashes, or hyphens, in the base of the crown, in place of the three pearls of the genuine. The slit of the nostril is very nearly as long as the mouth, instead of being decidedly shorter. The semicircle on the cheek-bone has too flat a curve, and is too long. The toes of the hind foot are too acutely pointed, and not curved enough. The front leg is hidden by the postmark, but I fancy the dots on it are not like the genuine. The right lobe of the tail is no longer than the left lobe. The ornaments in the right upper, and left lower corner are simply four-leaved florets, with a white dot in the centre. The C of TOSCANO is almost exactly like a G.

POSTMARKS.

Genuine.—1, 29, 60 (with truncated corners). Also bars, somewhat like 51. Also diamond-shaped dots (larger than those of 42) forming a blunt oval, without outline. Also the letters P. D., without any frame, a little more than $\frac{1}{4}$ inch high. Also one somewhat like 95.

First Forgery.—29, 100.

Second Forgery.—51. Also P.D., in letters $\frac{3}{4}$ inch high.

Third Forgery.—A *very* small copy of 41, with the bars only $\frac{1}{2}$ inch long.

Fourth Forgery.—Some red blotches.

Fifth Forgery.—51.

Sixth Forgery.—Uncancelled.

Seventh Forgery.—1 (dated 27 Ago. 1859). 42, without numerals; 51. Also uncancelled.

Eighth Forgery.—Uncancelled.

Ninth Forgery.—Uncancelled. Also one somewhat similar to 95.

Tenth Forgery.—1 (dated Firenze, 11. I. 51); also Livorno, . . . 1854). Also uncancelled.

Eleventh Forgery.—1. Also uncancelled.

Twelfth Forgery.—1.

Thirteenth Forgery.—A blotch.

REPRINTS OF THE ABOVE ISSUE.

(Official Forgeries?)

Bacon's book says that "in 1866, the 2 soldi and 60 crazie were re-printed, on bluish wove paper, watermarked with crowns and lines in the sheet, and with yellowish-white gum. The labels used for both values (I think he means the value-labels) have been newly engraved, and differ in type from those of the original stamps; that of the 60 crazie has the numerals and the letters of the word CRAZIE too large. The colour of both reprints is much too brown, and the impression is too blurred and heavy."*

Besides these re-engraved "reprints," there is a full set of ordinary reprints, on white wove, unwatermarked paper, but Dr. E. Diena declares that these are printer's proofs.

Issue of 1 January, 1860..

1, 5, 10, 20, 40, 80 Centesimi, 3 Lire.

Genuine.

Engraved in *épargne*, on rough, greyish-white wove paper, watermarked with ellipses, as in Fig. 3, page 559. The centre of the cross on the crown is well to the left of the centre of the T of POSTALE. The circlet at the base of the crown shows five very small, white pearls, and there are two pearls in the arch, under the cross. The top corners of the shield are quite square, not being splayed out at all; but there is a white lump at each corner, to which the upper ends of the collar of the Golden Fleece are fastened. The said collar is usually very indistinct, and would hardly be noticed at a first glance. The Golden Fleece itself,

below the bottom of the shield, does not in the least resemble any animal. It is a thin, arched white line, from each end of which hangs a thing like a sloping 8. Inside the arch, there are two sloping patches, like a moustache, with a division in the centre; and, passing through the bottom edge of the mantle, there is a vertical patch; so that the whole is somewhat like an old man's face, with white hair at the temples (formed by the two 8's), a white moustache and white imperial, but no eyes or nose. The knots or rosettes, or whatever they are called, where the mantle is looped up, near the first L of BOLLO, and the T of TOSCANO, are nearly alike: each of them roughly resembles a three-arched crown, with the centre arch defective. In each of these knots, there are three white dots, besides the oblique patch which I have likened to a defective arch. At the neck of each knot there are two white lines sticking out—apparently the strings, with which the knot has been tied up. In each of the four compartments of the shield, there are five vertical, coloured lines. In the upper compartments, the line nearest the cross is a shade wider than the rest, and the same is the case in the right lower compartment. There are no vertical, fringing-lines in the mantle, between the crown and the top of the shield; but the whole mantle shows a number of irregular, white specks. The vertical side-folds of the mantle can be traced down, as low as the level of the middle of the N of FRANCO, and the very end of the N of TOSCANO. The corner-ornaments are the same as in the first issue. No part of the mantle touches the frame any-

* Westoby says, of these two values: "The printing-blocks of the two stamps were not in existence, and the blocks of some of the other values were made use of, by altering the lower inscription. In the 60 crazie, the numerals were too small and the letters too thick."

where ; nor does the cross on the crown touch the outline of the frame above it. In the rare 3 lire, there is a stop after the 3, level with its centre, and another stop after the 17, level with the bottom of the T.

First Forgery.

Of this I have the 5, 20, and 80 centesimi. Coarsely lithographed, on medium, to thick, rather rough, yellowish-white wove paper, no watermark. There are some indistinct projections, like a couple of balls, on the crown, where the cross ought to be ; the larger of the two being well to the right of the centre of the T of POSTALE. The central arch of the crown is so blotched, that the pearls cannot be made out. In the genuine, there are two unoutlined pearls, on a coloured ground. There are three (and sometimes four) white pearls in the base of the crown, the centre one being very much larger than the others. The collar of the Golden Fleece round the shield is much too white and distinct, but it is very badly drawn. The ornament of the Golden Fleece itself, below the shield, slightly resembles the (arched-up) skeleton of a dog, or some other animal, with a white ball for a head, and a thick tail ; the two feet of the animal touch the bottom outline of the mantle. The looped-up, left upper corner of the mantle contains only two white, oblong dots ; the right upper corner has three white dashes, or hyphens. In the genuine, the inner string of the left-hand looping points to the centre of the crown, and the inner string of the right-hand looping points to the base of the crown. In this forgery, the left inner string curls up, so that it points towards the P of POSTALE, while the right inner string curls up, so as to point to the top of the loop of the mantle. The vertical, coloured lines in the four compartments of the shield are very much thinner than the genuine ; the broadest of them being, respectively, the outer one in the right top compartment, and the outer one in the left bottom compartment. The left vertical side-fold of the mantle only reaches down level with the end of the N of FRANCO. The lower outline of the mantle is too white and too prominent.

Second Forgery.

Lithographed, rather better than the first forgery, on medium, to thick, smooth, yellowish-white wove paper, no watermark. I have the 5, 10, 20, and 40 c. of this type of counterfeit. Instead of a cross, there is a large, and very distinct white, circular ball on the top of the crown, and it is far to the right of the centre of the T of POSTALE ; so far as to be almost under the space between the TA. The centre arch of the crown contains three pearls with coloured outlines, on a white ground, instead of two unoutlined pearls on a coloured ground. The top corners of the shield are splayed out, instead of having two white lumps. The collar of the Golden Fleece does not join either of the splayed-out corners. The Golden Fleece, at the bottom of the mantle, is a skeleton animal, like that of the first forgery, but with very much longer legs. The loop at the left top corner of the mantle contains two large, oblong, white dots, and the inner string of this loop curls round, so as to join the loop itself. The loop at the right top corner of the mantle contains a small, white dot, above two dashes or hyphens ; and the inner string curls round, so as to almost touch the loop. There are a number of vertical, white lines, like a fringe, in the mantle, above the top of the shield, and the rest of the mantle shows a number of short, white lines, some vertical, some sloping, in place of the irregular, white specks of the genuine. The vertical side-folds of the mantle, on the right side, reach down to level with the beginning of the last O of TOSCANO.

Third Forgery.

Of this I have the 40 and 80 c. Lithographed, on thick, rough, yellowish-white wove paper, no watermark. The cross on the crown is distinct, but it is far to the right of the centre of the T of POSTALE. There are no pearls at all in the circlet at the base of the crown; and there is only one (hardly visible) pearl in the centre arch. There are no white knobs at the top corners of the shield. The collar of the Golden Fleece is an easy test. In the genuine (when visible), it is a very elaborate, ornamental chain. In this forgery, it is simply a set of plain, white rings, not touching each other; and the ornament hanging from it is a large, white figure 8, upside down, the head hanging down below the bottom of the mantle. The knots at the upper corners of the mantle have no white dots in them, and there are no white strings. Above the shield, there are a number of very short, vertical white lines, forming a fringe. There are nine rather large white dots in the mantle, in the lower half, following the curve of it. These are to represent the irregularly-placed white specks all over the mantle in the genuine. The vertical side-folds of the mantle can be traced down as far as the level of the beginning of the N of FRANCO, and the middle of the A of TOSCANO. Each corner-ornament consists of four white petals, with a white dot in the centre. The C of FRANCO has an ordinary tail, without the serif of the genuine, and the C of TOSCANO ditto.

Fourth Forgery.

Of this I have only the 3 lire. Lithographed, in pale ochre-yellow, on thick, hard, fairly smooth, white wove paper, watermarked with very distinct ellipses. The centre of the cross on the crown is only *very* slightly to the left of the centre of the T of POSTALE. The white pearls in the circlet, at the base of the crown, seem to vary; as I have a strip of four stamps, on which the pearls are, respectively, 6, 4, 3, 3; but 3 seems to be the normal number. I can only make out one pearl in the centre arch. The right-hand end of the ornament of the Golden Fleece touches the bottom of the mantle. There is one white dot in the left-hand knot of the mantle, and the right-hand knot shows two white dots. An easy test is that the inmost, coloured vertical line above the right arm of the cross in the shield, and the similar, inmost coloured vertical line below the said right arm, are both *much broader* than the rest of the lines—quite twice as broad. The inner strings of both knots of the mantle are loops, instead of lines. The short, vertical, white fringing-lines, in the mantle, above the top of the shield, which are scattered and hardly visible in the genuine, are very distinct and beautifully regular in this forgery. The vertical side-folds of the mantle hang down to about level with the end of the N of FRANCO, and the beginning of the N of TOSCANO. In the corner-ornaments, the white rings are too prominent. The right side of the mantle touches the frame by the C of TOSCANO. The stop after the 3 in the bottom label is very small. There is a faint stop after LIRE, and a still fainter one after IT, so that the inscription reads 3· LIRE. IT.; instead of 3· LIRE IT.

Fifth Forgery.

Of this I have the 1 c., in dull violet, 5 c., dull slate, and 40 c., deep carmine. Engraved in *épargne*, on thick, hard, wove or transversely-laid paper, no watermark. The design looks nicer than the genuine, but can be easily detected. The crown is a long way below the top frame; and there is a neat, perfectly distinct white ball or pearl on it, instead of the cross; and this pearl is under the centre of the space between ST of POSTALE. The three *fleurs-de-lys*, from which the arches of the crown

spring in the genuine, are absent in this forgery, and there are no pearls in the circlet at the base of the crown. The collar or chain of the Golden Fleece is absent, its place being taken by two dotted oblique lines, running obliquely down from the knots of the mantle, to the "thing" at the bottom of the mantle. This "thing" is intended for the ornament of the Golden Fleece, but is simply a somewhat oval ring, half showing above, and half below, the bottom of the mantle. In each knot of the mantle there is one white line, and there are no strings to the knots. The vertical, coloured lines, in the four compartments of the shield, are a great deal thinner than the genuine. There is no sign of any vertical fringing-lines above the top of the shield. The side-folds of the mantle come down as low as the level of the beginning of the A of FRANCO, and the middle of the last O of TOSCANO. The ornaments in the corners are white St. Andrew's crosses, without any rings. The letters of the various inscriptions are too tall, being $1\frac{3}{4}$ mm. high, instead of $1\frac{1}{2}$ mm. The head of the F of FRANCO touches the R, and there is no serif to the tail of the C of that word, or that of the C of TOSCANO.

Sixth Forgery.

Of this I have only the 3 lire. It is very like the fourth forgery, only it is engraved in *épargne*, in dull yellow-ochre, on medium, white wove paper, watermarked with ellipses. The lettering, the frame-lines, and the white cross are all decidedly *embossed*. The cross on the crown is centrally under the T of POSTALE. There seem to be three short dashes in the circlet at the base of the crown. The Golden Fleece and the collar and chain are extremely faint, but seem to be tolerably well copied. As far as I can make out, there are no white dots in the right-hand knot of the mantle, and only one dot in the left-hand knot; and I cannot see any strings. The inmost vertical, coloured line, in each of the right-hand compartments of the cross, is broader than the rest. The vertical fringing-lines above the shield, though very faint, are evidently much too long, and almost touch the top of the shield. I can only see one white speck in the mantle, near the N of FRANCO. The vertical side-folds of the mantle come down as far as the level of the beginning of the N of FRANCO, and about the beginning of the N of TOSCANO. The upper corner-ornaments are almost invisible. The mantle seems to touch the frame near the A of TOSCANO, but I am not sure about this. The stop after the 3 is like the genuine, but too near to the 3. There is a small stop after LIRE, and another almost invisible one after IT. I think the embossing of the white parts (caused by the pressing of the dark parts into the paper) is a good test for this counterfeit.

Seventh Forgery.

Of this also I have only the 3 lire. Engraved in *épargne*, in brownish-yellow, on thick, hard, white wove paper, watermarked with ellipses. The white parts of the stamp show the same embossing as the sixth forgery. There is a ball, or rather a white comma, on the top of the crown, and it is to the right of the shaft of the T of POSTALE. There are no pearls in the circlet at the base of the crown; and the crown itself is hardly visible. I cannot see any sign of the collar, or of the ornament of the Golden Fleece. The knots of the mantle do not seem to have any white dots in them, and no strings are visible. The inmost vertical lines, in the right-hand compartments of the shield, are broader than the others. I cannot make out any fringing-lines above the shield, or any white specks in the mantle; and the side-folds of the mantle are so faint, that it is impossible to see how far they hang down. The corner-ornaments

are usually filled in with colour, so that, except for the embossing, they would be solid squares of colour. There is no stop after the 3, but there is one after *LIRE*, and another after *IT*.

NOTE.—In some of the “watermarks” of the above counterfeits it is plainly evident that they were impressed, after the paper was made, instead of being done during the manufacture. I conclude that after being impressed, the “watermarks” are flattened out. In the fourth forgery, it is easy to see (by holding the stamp obliquely in front of the light) that the ellipses have been impressed from the front of the paper.

POSTMARKS.

Genuine.—As before. Also 1, small.

First Forgery.—P.D., 10 mm. high. Also 38 (no numerals); 41; 98.

Second Forgery.—1, large; 23; 38 (no numerals). Also P.D.

Third Forgery.—38 (no numerals); 41.

Fourth Forgery.—Uncancelled.

Fifth Forgery.—38 (no numerals); 51. Also uncanceled.

Sixth Forgery.—Uncanceled.

Seventh Forgery.—42 (no numerals); 80. Also 29, with *ASCIANO 4 AGO. 1860*.

UNITED STATES.

I have accumulated a good many forgeries of this country since my second edition appeared, but unfortunately of some of them, notably a parcel of envelopes, I have not been able to procure genuine specimens for comparison, so I shall be obliged to omit all notice of them.

POSTMASTERS' STAMPS.

NEW YORK.

Issue of 12 July, 1845. 5 Cents, black.

Genuine.

Engraved in *taille-douce*, on rather thin, hard, grey or white wove paper; also on white, *pelure* paper; also on ribbed paper; also with part of a watermark, in large, Roman capitals. The iris of each of Washington's eyes is shaded by horizontal lines, and there is a distinct, black pupil in the centre of each iris. There is a dark lump, projecting from the back of the neck, which is evidently part of the bow which ties the queue. It is shaded by very thick, oblique lines, running down from left to right, crossed by much thinner, oblique lines, running down from right to left. The spaces between these crossed lines are diamond-shaped, and each diamond has a very fine line running down through it, from left to right. The lips are shaded by oblique lines; but there is a blank spot in the centre of the lower lip. The left corner of the mouth

(right side of the stamp) turns down considerably, so as to point towards the S of CENTS. The face is shaded nearly all over. There is no vertical line from the nose to the centre of the upper lip. The collar of the coat evidently ends above the vertical stroke of the E of CENTS; the triangular piece above the C of this word is plainly part of the waistcoat. The projecting end of the white cravat is plainly visible above the E and C of FIVE CENTS, and it has a little cross-shading, as well as the diagonal shading. There is an unshaded, white ball in the right top corner of the stamp. In the left bottom corner, there is a white triangle, shaded by six short lines, which touch the left outline of the stamp, but do not reach more than half-way across the triangle. The similar triangle in the right bottom corner of the stamp has only three lines of shading, and they go right across the triangle. The letters of NEW, in the left top corner of the stamp, are all joined together at the top: and the letters ORK of YORK, in the right top corner, are all joined together at the bottom. The outermost peak of the hair, or wig, on the left side of the stamp comes between the seventh and eighth vertical lines of the background, counting from the left edge of the oval, the first of these lines being very close to the said edge. The outermost peak of the hair, on the right side of the stamp, comes between the fifth and sixth vertical lines of the background, counting from the right-hand edge of the oval. The background, in the medallion, is formed by regular, crossed vertical and horizontal lines. These lines are sufficiently far apart to be seen plainly without a microscope.

First Forgery.

Nicely engraved in *taille-douce*, on thick, bluish-grey wove paper. There are no horizontal lines of shading in the iris of either eye, and the pupils are scarcely visible. There is no white gap in the centre of the oblique shading of what would be the red part of the lower lip. The left corner of the mouth (right side of the stamp) does not slope down so much as the genuine, and if prolonged downwards, it would pass far above the CENTS-label. The ribbon of the queue at the back of the neck is shaded like the genuine, but the oblique lines, running down from right to left, are as thick as the other lines, instead of being much thinner. The triangular piece of waistcoat, above the C of CENTS, is not distinguishable from the collar of the coat. The white ball in the right top corner of the stamp has a minute, oval ring in its centre. The white triangle in the left bottom corner of the stamp contains four oblique lines of shading; they do not touch the left outline of the stamp, but three of them are drawn to touch its bottom outline. The triangle in the right lower corner of the stamp contains four lines of shading, three of them being drawn across the triangle. The top of the E of NEW does not actually touch either the N or the W, and the foot of the R of YORK does not touch the O. The crossed lines of the background are drawn very close together, so that a microscope is required, to see that the ground is not solid. The word FALSCH is engraved, in small letters, across the base of the cravat.

Second Forgery.

Coarsely lithographed, on thick blue, or very thick white wove paper, ungummed. The crossed lines of shading of the bow of the queue are drawn in such a way that the white parts are squares, instead of diamonds. Both sets of lines are of equal thickness, and there are no fine lines across the little squares. The iris and pupil of each eye are one solid mass. There is no shading at all on the under lip, except a single dot

near the left corner of the mouth. The said corner is horizontal, instead of being curved downwards. All the central part of the face is quite white, without the dotted lines of shading. The corner of the waistcoat is nearly square, instead of triangular, and it is above the CE of CENTS, instead of above the C only. The bow of the cravat, above the E of FIVE, has very thick, dark outlines. There is a black space in the right top corner of the stamp, where the white ball ought to be. The white triangle in the left lower corner has a blotch of three very short lines in it, and the triangle in the right lower corner is all white, with a curved top outline. The W of NEW is widely separate from the E. The letters of YORK are shaded by dots, instead of transverse lines. In both these words, the secondary outlines of the letters are lacking. The outermost part of the hair on the left side of the stamp comes between the seventh and eighth vertical lines from the left, as in the genuine, but these lines are irregularly drawn. The outermost part of the hair, on the right side of the stamp, comes between the eighth and ninth vertical lines from the right. In the background to the medallion, the vertical lines are very irregular, some of them being altogether missing, below the P of POST.

Third Forgery.

This is exceedingly poor. Very coarsely lithographed, on medium, white wove paper, the front of which is covered with a pale buff, or a dull, sage-green wash. The bow of the queue at the back of the neck is usually a solid, black mass. The iris and pupil of each eye are also a solid, black mass. There is no shading at all on the lower lip, and the left corner of the mouth is horizontal. There is hardly any shading on the face, except round the mouth, which shows a number of irregular dots, as though Washington had forgotten to use his razor. There is a strong vertical line coming down from the nose towards the upper lip. The coat and waistcoat seem to be all one. The bow of the cravat, above the VE of FIVE, is not tall enough, and shows only oblique lines of shading. There is no ball in the right top corner, and no definite triangle in either of the lower corners. The letters of NEW are all separate and solid; the letters of YORK are also solid, and the R does not touch the O. The background of the central medallion is formed by crossed, oblique lines, very irregularly drawn. The frame of the stamp is double, all the way round.

Fourth Forgery.

Lithographed, even more coarsely than the counterfeits already described, on green-faced, medium, white wove paper. The bow of the queue cannot be distinguished from the back of the coat. The iris of each eye is not shaded, and contains an oblong, black dot, by way of pupil. The lower lip has only two or three dots for shading. The left corner of the mouth (right side of the stamp) is a long, wavy, horizontal line, reaching almost into the cheek. The shading on the face consists of very irregular dots, leaving several places bare. The waistcoat, above the E of FIVE, is plainly part of the coat. There is no bow to the white cravat, no white ball in the right top corner, and no triangle in either of the lower corners. The letters of NEW and YORK are all solid, and all separate from one another. The background of the central medallion is composed of exceedingly irregular, crossed, oblique lines; and just below the hair, on the right side of the stamp, the lines are not crossed. Like the third forgery, this counterfeit has a double-lined frame all round.

POSTMARKS.

Genuine.—I have no cancelled copy, but my specimens are initialled in red, A.C.M., or R.H.M.

First Forgery.—Uncancelled.

Second Forgery.—Uncancelled.

Third Forgery.—10, or uncanceled.

Fourth Forgery.—10.

REPRINTS.

Reprints were made in 1862, on bluish-white wove paper. Originals measured $20\frac{3}{4} \times 27\frac{3}{4}$ mm., the reprints $20\frac{1}{2} \times 28\frac{1}{4}$ mm. Originals are $1\frac{1}{2}$ mm. apart on the plate, reprints $2\frac{1}{2}$ mm.

PROVIDENCE, RHODE ISLAND.

Genuine.

Engraved in *taille-douce*, on medium, rather transparent, greyish-white wove paper, yellow gum. The plate contained twelve stamps: eleven types of the 5 c., and one type of the 10 c. I have no forgery of the 5 c. The triangle in the left top corner contains three lines, pointing towards the centre; and the wide end of the triangle is crossed by five oblique lines, two of them blotched. The triangle in the right top corner shows six lines, pointing towards the centre of the stamp, and one short, horizontal line. The wide end of this triangle is crossed by a thick line and a thin line of about the same length, and a third, much shorter line. The triangle in the left bottom corner contains four lines, pointing towards the centre of the stamp. This triangle is crossed by three long lines—a thick one and two thin ones. The triangle in the right bottom corner contains three lines, pointing towards the centre of the stamp. This triangle is also crossed by three lines—a thick one and two thin ones. The square, white dot, at the top of the stamp, between the four white balls, has an unbroken outline all round it. The leaf-ornament to the left of the P of POST cuts into the round, white ball below it; and the leaf-ornaments in the right upper and lower corners both touch the white ball in the right-hand frame. The horizontal lines in the central oval are drawn too short to left of the head of the P of PROV, so that twelve of them do not touch the left outline of the oval. Of these said horizontal lines, ten pass clear above the O of OFFICE, twelve pass clear between the shadow of the said O and the V of PROV below it, twelve pass clear between the shadow of the V of PROV and the C of CENTS below it, and six pass clear between the said C and the bottom of the oval. The tongue of the first F of OFFICE is fully as long as the head; and the shadow of the head of the E of this word touches the outline of the oval. The two feet of the R of PROV are only separated by a very thin, vertical line, and the same is the case with the following R. My specimen shows a very thin, vertical guiding-line outside the right top corner of the stamp, and a horizontal line and a large dot at the left top corner of the stamp. The top leaf of the ornament in the right bottom corner is not forked, like the leaf above the ball, and it touches the ball.

**Forged.**

Lithographed, on rather thin, yellowish-white wove paper, ungummed. The triangle in the left top corner contains about four short lines, point-

ing to the centre of the stamp, and it is crossed by four long lines, the one at the wide end being dotted. The triangle in the right top corner contains three lines, pointing to the centre of the stamp, and is crossed by four lines, three of them close together. The triangle in the left bottom corner contains about three lines, pointing to the centre of the stamp. This triangle is crossed by two thin lines, blotched together, and a third line further off. The triangle in the right bottom corner contains about six radiating lines, and is crossed by three lines, two of them close together, and one further apart. The square, white dot at the top of the stamp, above the O of OFFICE, has the left top corner of its outline broken. The leaf-ornament in the left upper corner, to left of the P of POST, does not go near the white ball below it. The leaf-ornaments above and below the ball in the right-hand frame are both forked, though only the upper one is forked in the genuine, and they do not go near the ball. The horizontal lines in the central oval are all drawn the whole way from side to side, so that there is no break in any of them, near the head of the P of PROV. Of these said horizontal lines, only eight pass clear above the O of OFFICE, ten pass clear between the shadow of the said O and the V of PROV below it, nine pass clear between the shadow of the V of PROV and the C of CENTS below it, six, as in the genuine, pass clear between the said C and the bottom of the oval. The tongue of the first F of OFFICE is shorter than the head, but not so short as that of the second F; the top of the E of this word does not go near the outline of the oval. There is a wide separation between the two feet of the R of PROV, and also between the two feet of the following R. There is usually a guiding-dot at each of the upper corners of the stamp.

POSTMARKS.

Genuine.—I have no cancelled copy.

Forged.—All my specimens are uncanceled.

REPRINTS.

Reprints were taken from the plate of these stamps in 1893, on hard, white, thin yellowish, and thick yellowish wove papers, and in 1898 on thin, tough, white wove paper, sometimes with *lilac* threads in the substance. The reprints have a large capital letter at the back of each stamp in yellow-brown, the combination of these letters on the entire sheet of twelve stamps forming the names "BOGERT DURBIN."

GENERAL ISSUES.

Post Office. 5 Cents, brown, red-brown, orange-brown.
Issue of August 5, 1847.

Genuine.

Engraved in *taille-douce*, on thinnish, to medium, grey-blue wove paper, brownish gum. The chief test is the piece of white shirt-front, coming from the cravat, over the *IVE* of *FIVE*. The annexed illustration gives a fair idea of it. It will be noticed that the left-hand outline of this white patch is, roughly, a straight line, pointing down towards the middle of the *F*, and without any V-shaped gap in the said outline. There is a long line of shading (broken, or very faint in the middle) on this white patch, near to the dark outline of the coat, and parallel with it, above the *E*. (There are also two other long, radiating lines of shading, but the

forgery has these two.) There are twelve horizontal lines of shading, of varying lengths, across the front of the cravat, under the chin. The long curl of *very* dark hair, which comes from below the left ear (right side of the stamp), is very spiral, and gradually decreases, almost to a point, reaching to above the space between FIVE and CENTS. The background of the central medallion is *very* much darker on the right side than on the left. The shadow of the head of the P of POST touches the O; and the corner of the shadow of the I of OFFICE *just* touches the C. The shadow of the head of the C of CENTS runs into the shadow of the tail. In the white outline, at the bottom of the stamp, below E CE of FIVE CENTS, are the initials of the engravers R.W.H. & E. The stamp measures 18 x 23 mm. from outline to outline.

Government Forgery.

(*Soi-disant* "Reprint.")

This official imitation is the only forgery that I have seen of this value; it is engraved in *taille-douce*, on rather thick, grey-blue wove or laid paper, ungummed, or with white gum. I have many specimens of the wove, but have not yet met with the laid paper. The left-hand outline of the piece of white shirt-front above the I of FIVE has a deep, almost V-shaped gap in it, apparently caused by the encroachment of a curl of the hair. Only just the *very* ends of the long line of shading on this white patch, parallel with the edge of the coat, can be seen. There are fourteen horizontal lines of shading across the front of the cravat, under the chin. The long curl of hair ending above the CE of CENTS is lighter in shade than the genuine, the spiral is not so marked, and the end seems to get wider, instead of more pointed, above the C. The background of the medallion is not much darker on the right side than on the left, and the left side very often has a slightly rubbed appearance. The shadow of the head of the P of POST is quite distinct from the O, and the shadow of the foot of the I of OFFICE is some distance from the C; the shadow of the head of the C of CENTS, except in very heavily-printed copies, does not run into the shadow of the tail. The engravers' initials, in the bottom outline, are much fainter than in the genuine; usually only the w is readable. The stamp measures $18\frac{1}{2} \times 22\frac{1}{2}$ mm.

POSTMARKS.

Genuine.—I have often seen this stamp postmarked, but do not remember the cancellation.

Forged.—Usually uncanceled, but I have one specimen postmarked with 22, in red.

Same Issue. 10 Cents, black.

Genuine.

Engraved in *taille-douce*, on thin, to medium, grey-blue wove paper. I have it also on grey paper, but I fancy the blue tint has either faded, or been discharged. Both the eyes of Washington are equally dark, and the pupil of each can be distinguished from the iris. The inner end of the broad, dark shading of the left eyebrow (right side of the stamp) stops short above the level of the eye, and there is no black blotch under the said eye. There is a distinct, dark, double chin, hanging over the top of the front of the cravat. The back of the cravat runs into an acute point, between the back of the coat-collar and the back of the neck; and part of the black bow, tying the queue, can be dimly seen in the

dark background, behind the coat-collar. The piece of the top of the waistcoat, above the E of CENTS, is quite distinct from the coat, and darker. The vertical outline of the other side of the coat-collar, above the S of CENTS, if prolonged downwards, would pass clear to the left of the said S, and cut into the foot of the T. There is a vertical line of division between the two head-strokes of the U, in the left top corner of the stamp, so that they do not join into one line across the top of the letter. The white part of the foot of the S in the right top corner does not touch the white part of the C below it. The O of OFFICE goes very near to the top of the stamp; it touches the second of the fine, horizontal lines above it. As in the forgery of the 5 c., the shadow of the head of the P of POST touches the O. The head of the X in the left bottom corner *almost* touches the left border of the stamp; and the shadow of the head of the X in the right bottom corner *almost* touches the right border of the stamp. The engravers' initials, R. W. H. & E., below N CE of TEN CENTS, are very distinct. The stamp measures 18 x 23 mm., as before. The following tests will be useful for the detection of the Government forgery. The lowest part of the hair on the left side of the face (right side of the stamp) has in its centre a minute, dark ring; and there is a still more minute, slightly oval ring inside this. The bottom of the cravat, under the ENT of CENTS, is simply bounded or cut off by the inner outline of the central oval; *i.e.*, the cravat itself has no bottom outline of its own.

First (Government) Forgery.

(*Soi-disant* "Reprint.")

I have not got this stamp, which is unfortunate; as, of course, it is more dangerous than any other counterfeit likely to be offered. Engraved in *taille-douce*, on bluish wove paper, ungummed, or with white gum. The two little concentric circles in the hair are absent. The bottom of the cravat, under the ENT of CENTS, has an outline of its own, in addition to the inner outline of the oval. The shading of the coat-collar, and that of the cravat, are not so distinctly separated as in the genuine.

Second Forgery.

This is a very poor affair, and not likely to deceive. It is badly lithographed, on thick, very yellowish-white wove paper; also on slightly thinner paper, the latter having the face coloured with a bluish-green wash. The left eye of the portrait (right side of the stamp) is large, very dark, and quite solid, and there is a large, prominent black blotch under the outer corner of this eye. The right eye is smaller, and grey, not black, and there is no pupil visible in the iris. The inner end of the left eyebrow (right side of the stamp) comes down to the level of the inner corner of the eye. There is no particular double chin. The back of the white cravat, where it ends, between the back of the coat-collar and the back of the neck, is quite blunt, instead of sharp, and joins the hair. The bow of the queue is not visible. The front edge of the coat-collar, above the C of CENTS, is quite white, instead of dark. The other vertical side of the collar, above the S of CENTS, if prolonged downwards, would cut through the very centre of the S. The top of the U, in the left upper corner of the stamp, is an undivided white bar, across the top of the letter. The white part of the foot of the S, in the right top corner, touches the outline of the C of OFFICE, below it. The O of this word is a *long* way from the top of the stamp, and there is a wavy line above it, instead of the horizontally-lined background of the genuine. The P of POST is a long way from the O, and the background is solid

behind these letters. The head of the X, in the left lower corner of the stamp, does not go near the left border, and the background is quite solid behind this letter. The shadow of the head of the X, in the right lower corner, is a very long way from the right border (the shadow of the foot of this X touches the border in both genuine and forged). The engravers' initials at the bottom of the stamp are absent. The stamp measures 19 x 20 mm. Besides the outline, close round the stamp, there is an extra one, 1 mm. from the other, all round.

POSTMARKS.

Genuine.—1, very large, in red. Also 100 in red, but of an oval shape, instead of round. Also pen-marked.

First Forgery.—I do not know whether this is ever found cancelled or not.

Second Forgery.—1, in black; also uncanceled.

Issue of February, 1857. 90 Cents, dark blue.

Genuine.

Engraved in *taille-douce*, on rather thick, white wove paper, perforated 15, 15½. The gum is brownish. The white portions of the stamp generally show a faint tinge of blue, owing to imperfect wiping of the plate. The stops after the letters U.S. are large, being nearly one-third of the height of the letters. The dark centre of the O of POSTAGE leans over very decidedly to the left. The foot of the T of this word is joined to the A. The cross-bar of the tail of the G is shorter on the inside than on the outside, and does not run in, to touch the inside of the back of the letter. The T of NINETY is properly shaped. There is a fairly wide gap between the head and the tail of the C of CENTS, and the T of that word is correctly shaped, but its head touches the N before it. The bottom outline of the stamp is composed of three fine, parallel, horizontal lines, very close together; and the arched, top outline of the stamp is also of three lines, but the middle one is thicker than the others. The white, curved beginning of the upper label, close to the U, is crossed by five short, faint, coloured lines; and the similar end of the label, close to the E of POSTAGE, is also crossed by five short lines. The background, behind the portrait, is composed of fine, horizontal lines, placed exceedingly close together, and apparently crossed by oblique lines; but it requires a good microscope to see this, and the background looks quite solid at a little distance. The nose of the portrait is shaded quite all over, and there are only about five or six dots missing, in the shading on the forehead. The upper lip, also, is shaded all over. There are numerous short lines of shading, sloping different ways, on the cravat, besides the thin, dark shading each side, down by the inside of the collar of the coat. There are eight fine white lines on the right breast of the coat, above the IN of NINETY; and nine similar, white lines on the other breast, above the NT of CENTS. One line, in each case, is very faint. There is a rather shapeless button on the left breast, centrally above the vertical shaft of the E of CENTS, and shaded by four oblique lines. The left eyebrow is not a regular arch, but is bent in the centre. The serif of the beginning of the U very nearly touches the side of the label to left of it.

First Forgery.

Lithographed, without any smear of ink, on medium, very white wove paper, perforated 12½. The colour is a *very* dark blue, a good deal darker than the genuine, and more of an indigo tint. The stamp is not gummed. The stops after U.S. are small, being not more than one-quarter of the height of the letters. The dark centre of the O of POSTAGE is upright; the foot of the T does not touch the A; and the foot of the tail of the G points downwards, instead of being rounded off. The head of the T of CENTS does not touch the N, and its left arm hangs down further than the right one. The bottom outline of the stamp is composed of two lines, the lower one a good deal thicker than the other; and the top, arched outline of the stamp is a single line, with traces of a second line, part of the way. The five short, coloured lines, across each curved, white end of the U.S. POSTAGE label, are absent. The background to the portrait is of crossed, rather thick, vertical and horizontal lines, *very* close together: being coarser, they are easier to see than the fine lines of the genuine. The nose is quite white, all down the front; and there is a somewhat circular patch of white on the forehead, above the left eye, where something like twenty-five dots of the shading are missing. There is very little shading on the upper lip. The cravat looks much too white and conspicuous, as there is hardly any shading on it except at the sides, close to the coat-collar. There are eight rather coarse white lines on the right breast of the coat, above the INE of NINETY, and about ten similar, white lines on the other breast, several of them being partly double. The button of the coat is small, white, and circular, with one line of shading in it; and it is too far to the left, so as to be almost above the space between the CE of CENTS. Both eyebrows are fairly regular arches. The U of U.S. stands well away from the end of the label to left of it.

Second Forgery.

Lithographed, in dull Prussian-blue, on thick, hard, bluish-white wove paper, coloured with a blue wash on the face, unperforated; yellowish gum. The stops after U.S. are slightly larger than in the first forgery. The dark centre of the O of POSTAGE leans over very slightly to the left, but not nearly so much as the genuine; the foot of the T does not touch the A; and the inner end of the cross-bar to the tail of the G runs in, so as nearly to touch the inside of the back of the letter. In the word NINETY, the top of the first N is joined to the I, though the genuine is not joined; and the left arm of the T hangs down a little lower than the right arm. The N and T of CENTS are not joined; and the S is upright, instead of leaning over very slightly to the right. The bottom outline of the stamp is a single line, which is continued, like a frame, right round all four sides of the stamp, though there is no frame in the genuine. The arched, upper outline, above U.S. POSTAGE, is also only one single line. There are no coloured lines across the two curved ends of this upper label. The background, behind the portrait, consists of rather coarse, horizontal lines, which can be easily seen. The nose is quite unshaded, all down the front; and some of my specimens have no shading on any part of it. A good deal of the forehead, also, has no shading, and the lips, part of the chin, and part of the cheek, near the corner of the mouth, are bare of shading. Each side of the turned-back corners of the coat-collar shows only one button-hole, instead of two distinct ones. There are about eight thin, white lines each side of the breast of the coat, but they are difficult to see. The button is very shapeless, and is shaded by four oblique lines, of varying thickness. It stands above the centre of the E of CENTS, instead of above the

beginning of that letter. The eyebrows are arched in a regular curve. The serif to the beginning of the U is a good way from the end of the containing-label.

POSTMARKS.

Genuine.—A pen-stroke. Also 1, very large, with name and date, in large capitals.

First Forgery.—A lithographed imitation of a pen-stroke.

Second Forgery.—22, 23.

Issue of September, 1861. 10 Cents, green.

Genuine.

Engraved in *taille-douce*, in shades of green, on white wove paper, perforated 12.

Bogus Colour.

I have no forgery of the 10 c., but the genuine stamp may frequently be met with in bright *blue*, instead of green. This change is easily effected by soaking in a common and well-known chemical, which changes all greens of this class into blue. It will be understood that the colour is not merely a blue-green, but an actual, unmistakable blue.

POSTMARKS.

Genuine.—As before.

Bogus Changeling.—The changed stamps have, of course, genuine postmarks.

Issue of July, 1863. 2 Cents, black.

Genuine.

Engraved in *taille-douce*, on rather thick, greyish-white wove paper, perforated 12. A few tests will suffice, as the forgery is very bad. There is a 2 in each upper corner of the stamp. There is a large stop after the U and the S, in the upper label, and the U does not break into the white line on which it stands. The U and the S in the lower corners of the stamp are formed of fine, vertical lines, and the U is joined together at the top, making a closed figure. The white collar, on the right side of the neck, near TWO, is shaded by horizontal lines. The coat-collar, waistcoat, and cravat are all easily distinguishable. The S in the right bottom corner does not run into the CENTS-label above it.

Forged.

This is a ridiculous affair, and I have only seen it lately (1906.) It is coarsely lithographed, in *purple-brown*, on thick, hard, yellowish-white wove paper. The easiest test is, that there is a 0 in each upper corner, instead of a 2. There is no stop after the U or the S, in the top label, and the U breaks into the white line on which it stands, entirely hiding that portion of the line. The U and the S, in the bottom corners of the stamp, are of solid colour, instead of vertical lines; and the S breaks into the CENTS-label, under the N, while the upper ends of the U are not joined together. The white collar on the right side of the neck, near TWO, is shaded by vertical lines. The coat-collar, waistcoat, and cravat cannot be distinguished from one another.

POSTMARKS.

Genuine.—Usually 29, larger.

Forged.—Uncancelled.

Issue of 1862. 3 Cents, scarlet.
Genuine.

Engraved in *taille-douce*, perforated 12. The type is the same as the ordinary 3 c. of this issue, but the colour is bright scarlet. It is a decidedly scarce stamp, catalogued at £18, unused.

Proof, with Forged Perforations.

I have lately come across a proof of the above stamp, in scarlet-vermilion, on fairly thick, very white wove paper, with bogus perforations, gauging 12 at the bottom, about 12, irregularly, at the top, 11 on the left side, and 10½ on the right side. The design, of course, is the same as the genuine, but the mixed perforation, instead of 12 all round, is an easy test.

POSTMARKS.

Genuine.—I have never seen the genuine cancelled.

Proof.—The above proof is uncanceled.

Same Issue. 24 Cents, purple.

Genuine.

Engraved in *taille-douce*, on medium, hard, greyish-white wove paper, perforated 12. There are a good many shades of colour: purple, reddish-purple, 1861; slate, lavender, dull purple, deep lilac, 1862-6; and violet for the official reprint of 1875, which was available for postage.

REPRINT (?).

I have a specimen before me, which agrees, line for line, with the genuine, so I conclude that, if not a proof, it is a reprint, though it is not the one mentioned by Bacon. Engraved in *taille-douce*, in a very brilliant, deep red-lilac, on very white wove paper, thicker and softer than the genuine, and perforated 10½ × 11½. This abnormal perforation will, of course, easily distinguish the stamp from the genuine.

POSTMARKS.

Genuine.—1, very large; 14, with two concentric circles in the centre, and no numerals; 18, 20, 76, 101.

Forged.—Uncanceled.

Issue of 1867. 3 Cents, with grille covering the entire stamp.

The 1, 3, 5, and 30 cents of the 1861 issue are catalogued, with the large *grille*, covering the whole stamp, but I have never seen any but the 3 c. This is priced at £6 10s., unused, and 35s., used; so it no doubt paid the forgers to imitate the *grille*.

Genuine.

The *grille* is struck from the back, so that the centres of the little squares are raised on the face of the stamp. The lines of squares are perfectly regular and parallel, and gauge 23½ each way.

First Forgery.

It will be understood that the stamp is genuine. The *grille* is struck from the front, so that the centres of the squares are raised on the back—just the opposite of the genuine. The lines of little squares are tolerably regular and parallel, like the genuine; but they gauge not quite $23\frac{1}{2} \times 25\frac{1}{2}$.

Second Forgery.

In this, also, the *grille* is struck from the front, so as to be embossed on the back. The lines of squares are not all truly parallel, and the squares gauge $27 \times$ about $26\frac{1}{2}$.

POSTMARKS.

Genuine.—I have only an unused specimen, but conclude that some of the postmarks already mentioned will be found.

First Forgery.—The stamp has a genuine postmark.

Second Forgery.—Uncancelled.

Issue of 1875-80. 2 Cents, vermillion.

This is the same design as the 2 c., brown, of 1873, printed by the Continental Bank Note Co., with the "secret mark" of a diagonal line under the ball of the scroll over U.S. The following are the varieties:—

1. June, 1875. Thin, hard paper, perforated 12.
2. Ditto, unperforated.
3. Ditto, with *grille*, $7\frac{1}{2} \times 9\frac{1}{2}$.
4. 1875. Special printing, on white paper, perforated 12, carmine-vermillion.
5. 1879. Printed by American Bank Note Co., on soft, porous paper, perforated 12, orange-vermillion.
6. 1880. Reissue, same paper, available for postage, perforated 12, scarlet-vermillion.

Genuine.

Engraved in *taille-douce*, varieties as above. The background of the central medallion is composed of crossed, oblique lines, which are plainly visible under the microscope. The portrait of Jackson has a fairly good-tempered look; there is no pupil to the eye, and the expression is not in the least glaring. The cut-off edge of the neck, above 2 CE, is shaded by distinct, horizontal lines. The sharp-pointed, left-hand end of the scroll, above T of TWO, does not touch the shaded outline of the oval to right of it, and the said shading is formed by horizontal lines. The tail of the 2 is not broken off from the rest of the numeral. Both inscriptions are in very fat letters, and there are extremely large stops after U and S, each stop being fully $\frac{3}{4}$ mm. wide. The curl of the upper scroll, above the space between US, is turned into a ball; and the similar curl, above the space between GE of POSTAGE, is also a white ball. There are three distinct oak-leaves and an acorn in the part of the oval above TWO, and four laurel-leaves in the part of the oval above CENTS. These are quite distinct. There is no patch of white above the said laurel-leaves. Further details are needless, as the counterfeit is extremely poor.

Forged.

Coarsely lithographed, in carmine-vermilion, on white-faced, brown card, with perforations gauging $12\frac{1}{2}$, *printed* in. The background of the central medallion is of solid colour, without any lines. Poor Jackson has been given a most ghastly, glaring expression. There is a dot for a pupil, low down on the ball of the eye. The cut-off edge of the neck above 2 CE is almost entirely solid, with traces of the horizontal lines. The pointed, left-hand end of the scroll, above T, touches the shading to right of it, and the said shading is quite solid. The tail of the 2 is broken off from the rest of the numeral, and the balls of the head and foot of it are not nearly large enough. The inscriptions are in thin, mean-looking letters, and the stops after U and S are merely white specks, instead of large balls. The curls of the upper scrolls, above US, and the G of POSTAGE respectively, are simply thin hooks, instead of balls. Only two of the oak-leaves above TWO are distinct, and there is no acorn. Both leaves touch the shading to right of them, which seems to be solid, instead of horizontally lined. The laurel-leaves, above CENTS, are extremely indistinct, and touch the shading to left of them, which is also solid, instead of horizontally lined. There is a long, vertical patch of white, above the laurel-leaves, which is not visible in the genuine. This miserable counterfeit is not at all likely to deceive.

POSTMARKS.

Genuine.—1, very large. Also a cancellation like 11, but with the circles very much thicker. Also 19, 20, etc.

Forged.—Something like 23, but with the outer oval broken, between each pair of lines. I think this cancellation is *lithographed* on the stamp.

Issues of 1870-82. Three Cents, green.

The following are the varieties:—

1. 1870-1. Printed by the National Bank Note Co., on thin, hard paper, perforated 12, with *grille*, $8\frac{1}{2}$ to $9 \times 10\frac{1}{2}$ to $11\frac{1}{2}$ mm.; no secret marks.
2. Ditto, but without *grille*.
3. May, 1873. Printed by the Continental Bank Note Co., same paper, perforated 12; with secret marks.
4. Ditto, with *grille*, $8 \times 9\frac{1}{2}$ mm.
5. 1875. Special printing, in deeper and brighter colours, on white paper, secret marks, no *grille*, perforated 12. (To complete sets for the Centennial Exhibition.)
6. 1879. Printed by the American Bank Note Co., on soft, porous paper, secret marks, perforated 12.
7. 1880. Special printing, paper as in No. 6, perforated 12. Reissue, available for postage.
8. 1881-2. Re-engraved die, perforated 12.

I have not troubled to take up any of my fast-diminishing space with a description of the secret marks, etc., as those of my readers who are not acquainted with them will find them in my publishers' catalogue.

Genuine.

Engraved in *taille-douce*, varieties as above. The background of the central oval is formed of horizontal lines, set very close together. The white line, surrounding this oval, is about the same thickness all the way

round. There is a partly-shaded, white ball, outside each end of the label containing U.S. POSTAGE, and each ball adheres to the centre of the horizontal end of the label. The stops are very large, and transversely oval in shape. The feet of the T and A of POSTAGE are joined, and the tail of the G is nicely shaped. The C of CENTS is as tall as the rest of the lettering. All the letters of both inscriptions are short and fat, 1 mm. high; and the fat, sharp hook of the head of the large 3 is the same shape (though, of course, reversed) as that of the tail. The shading outside the lower half of the central medallion varies in thickness, but, even in the re-engraved stamps, if prolonged into the lower label, it would only cover the top half of the final E of THREE, and *just* touch the left top corner of the E of CENTS. The outer edge of the stamp, down the left side, is formed by horizontal lines only; the outer edge, down the right side, shows vertical, as well as horizontal lines.

Forged.

Typographed (?), in pale *lilac*, on white-faced, enamelled brown card. The background of the central oval has the horizontal lines much too far apart, and they are crossed by oblique lines, which are not visible in the genuine. The white line, surrounding this oval, is much thinner under U.S. POSTAGE than elsewhere. The balls adhering to the outer ends of this upper label are not opposite to the centres of the ends, but too near to the outside in each case. The stops are small and round. The T and A of POSTAGE do not touch, and the tail of the G is of a very ugly shape. The C of CENTS is very much shorter than the following E. All the letters except this C are too tall, being quite $1\frac{1}{2}$ mm. high. The tail of the large 3 has a sharper hook than the head, and the central tongue of the said 3 points half-way between the middle and lower limbs of the last E of THREE; though, in the genuine, it is exactly level with the bottom of the E. The shading outside the lower half of the central medallion gets very much too wide at the bottom; so that, if it were carried down, it would cover half of the first E, and the whole of the second E of THREE, and the whole of the C, and most of the E of CENTS. The outer edge of the stamp shows vertical and horizontal lines, both on the right-hand edge and on the left.

POSTMARKS.

Genuine.—As before.

Forged.—My specimen is uncanceled.

Issue of 1894-5. 2 Cents, scarlet.

(Type similar to annexed illustration.)

Genuine.

Engraved in *taille-douce*, on thick, hard, white wove paper, perforated 12. There are three types of triangles in the upper corners; the forgers have imitated type B, here given. The background of the central oval is formed by horizontal lines, crossed by oblique ones, all very accurately drawn. The engraver has given Washington a well-marked double chin. The mouth, lips, and chin, are shaded all over, without any white patch anywhere. In the upper label, all the letters of UNITED, except the final D, are joined together at the top, and the letters TED are joined at the bottom. The letters TATE of STATES and

TAGE of POSTAGE are also joined together at the bottom. The shading below the bottom of the central oval, above CEN of CENTS, is composed of vertical lines, through which can be seen some of the horizontal lines of the general background. The lighter portion of the background, below CE of CENTS, is a white triangle, containing three horizontal lines; and the sharp point of the triangle very nearly touches the bottom of the stamp. The bottom edge of the stamp is not solid, but formed by four thick, horizontal lines. The right and left borders of the stamp are also formed by horizontal lines, which are perfectly distinct. The lettering is not spotted anywhere, and is clearly drawn.

Forged.

Lithographed, on thick, white wove paper, rather coarser in grain than the genuine, nicely perforated 12. The corner-triangles are type B, as already stated. The background of the central oval is poorly done, more than half of it being quite solid. There is no real double chin; the front of the upper lip and the point of the chin are quite white, and there is a dark spot in the lower lip, not shown in the genuine. None of the letters of the inscriptions touch each other anywhere, except the TE of STATES, which are joined at the top. There is a large, coloured blotch, obliterating part of the said E, and breaking into the white line above it, in my specimen; I think it is very probable that this may appear in all the forgeries, but of course I am not certain of this. The shading, below the bottom of the central oval, and above CE of CENTS, is perfectly solid. The light-coloured triangle below CE of CENTS has its point broken off, so that it looks like a semicircle, and it does not go near the bottom of the stamp. The bottom edge of the stamp is of solid colour, and the right and left borders of the stamp are also solid in many places. I have only seen this forgery lately (1906), and it was labelled "Chicago Forgery," so I conclude it hailed from that city.

POSTMARKS.

Genuine.—101, smaller. Also a lettered oval. Also the flag postmark.

Forged.—My specimen is uncanceled.

Department of State. 5, 10, 20 Dollars, black and green.

Of these scarce stamps, I have two different counterfeits, and a fake.

Genuine.

Engraved in *taille-douce*, in blue-green and black, on medium, hard, white wove paper, perforated 12. The background of the central medallion is formed by horizontal lines, crossed by oblique lines, from right to left, and from left to right; the medallion itself is usually fairly centred. The white feet of the letters EPARTMEN, at the top of the stamp, are all joined together. There is no vertical line of the background down the centre of the space between the two legs of the U, in the left lower corner. The lower boundary of the shadow, under the U.S. of A., in the right lower corner, undulates, according to the shape of the letters, as in the similar shadow in the left lower corner. Each side of the stamp, there is a bundle of rods (lictors' *fusces*), tied together by crossed ribbons, like a St. Andrew's cross, at the top and bottom. Each ribbon is divided, lengthways, by

a line down its centre. Calling them crosses, for convenience: in the left upper cross, the upper half of the left upper arm shows two faint, vertical lines of shading at each end, and the lower half of this arm is shaded by six vertical lines in the left lower cross; the upper half of the left upper arm shows six very faint, vertical lines of shading, so faint that it is practically white; and the other arm, which runs across this, shows five, rather thick, vertical lines at the top end of its upper half, and two lines at the lower end. The lower half of this long arm is deeply shaded. In the right upper cross, the upper half of the left upper arm shows three faint, vertical lines at the top end, while the lower half of this arm has six strong lines of shading. The long arm, crossing over it, shows seven vertical lines of shading near the top end, and two lines near the bottom end of its upper half, while the bottom half is deeply shaded all along. In the right lower cross, the top half of the right upper limb has five lines of shading; the top half of the left lower limb has three lines at the upper end, and two, wide apart, at the lower end. The upper half of the long limb, crossing over this, has three lines at its top end, and five strong ones at the bottom end. The top outline of the stamp, above RTMEN of DEPARTMENT, is only about twice as thick as the upper outlines of the corner-triangles, each side of it. The edge of Seward's lower lip is shaded by about four lines; and all the strong, oblique lines of shading in the cut-off base of the bust are plainly thicker in the middle than at the ends.

First Forgery.

Nicely engraved, in *taille-douce*, in yellow-green and black, on thick, yellowish-white wove paper, perforated 11½. The word FACSIMILE is printed in the curve, between DEPARTMENT and STATE. This word is frequently scratched out, pen-marked, or postmarked by fraudulent sellers. The central medallion is often very badly centred. There is a slight line of separation dividing the feet of the RT and TM of DEPARTMENT from one another. There is a vertical line of shading of the background visible right down the centre of the space between the two legs of the U, in the left lower corner. The lower boundary of the shadow under the U.S. of A., in the right lower corner, is horizontal, except for one wedge-shaped gap under the stop, after the U. In regard to the St. Andrew's crosses, formed by the crossed ribbons already described, the left upper cross has the whole of its left upper arm quite unshaded, and the long arm which crosses over it has its upper half quite unshaded, with the exception of one line at the top end, and three lines at the bottom end, and the shading on the lower half of this long arm is very light. The left lower cross has both halves of its left upper arm unshaded; the whole length of the long arm crossing over it has its upper half unshaded, and its lower half very lightly shaded. In the cross in the right upper corner, the left upper arm has its upper half quite unshaded, and its continuation in its right lower half is also unshaded; the long arm which crosses over this has its upper half unshaded, except for about three faint, vertical lines at the top end. The cross in the right lower corner has the upper half of all four arms unshaded, and the lower halves very slightly shaded. The top outline of the stamp, above RTMEN of DEPARTMENT, is *very* much thicker than the top outlines of the corner-triangles each side of it. In the portrait, the top edge of the lower lip is absolutely unshaded. The strong, oblique lines of shading on the cut-off edge of the bust are pretty well the same thickness for their whole length, instead of tapering at the ends. There are other small differences, but I hope the above will be sufficient for the detection of this counterfeit.

Second Forgery.

Lithographed, in yellow-green and black, on thick, hard, white wove paper. There is a wavy line all round the stamp, to imitate perforations, but in addition to this, and irrespective of it, the stamp has been perforated about 14. This is a very poor affair, compared with the other, and it has the word **FALSCH** in rather large letters, printed across the **TATE** of **STATE**. The central medallion, in my single specimen, is printed far too much to the left. This said medallion affords an easy test, as the background is composed of very thick, horizontal lines, *without* any oblique lines crossing them. In the word **DEPARTMENT**, the feet of the letters do not touch each other anywhere, and they are on a solid, instead of a lined ground. The letters **U.S. of A.**, in the lower corners, are also on a solid ground, instead of a lined one. The St. Andrew's crosses formed by the ribbons are all alike; that is to say, there is no longitudinal division in any of the arms, and each arm is shaded with vertical lines for its whole length. The top outline of the stamp is the same thickness all the way along, from corner to corner. There are numberless other differences, but those already described will be found quite enough for the detection of this forgery.

Faked Stamp.

I have a curious fake of the ten dollars. It is a proof on cardboard, which has been peeled or thinned down in some way, and then perforated 12, nearly. The result is an apparently genuine stamp, on paper somewhat thinner than the normal.

POSTMARKS.

Genuine.—I have no cancelled specimen.

First Forgery.—19.

Second Forgery.—Uncancelled.

Faked Stamp.—Uncancelled.

REPRINTS.

These stamps, together with the other departmentals, were reprinted in March, 1875, on hard, white wove paper, perforated 12, and surcharged **SPECIMEN** in small block capitals.

NEWSPAPER STAMPS.**Issue of 1865. 5, 10, 25 Cents.**

The following are the varieties:—

1. White wove paper, with coloured border; 5, 10, 25 c.
2. Ditto, with white border; 5 c.
3. Pelure paper; coloured border; 10, 25 c.
4. Ditto, with white border; 5 c.

5 Cents. Genuine.

Engraved in *épargne*, perforated 12; varieties as above. From the fine, horizontal white line at the very top of the stamp, to the similar

horizontal white line below NATIONAL BANK NOTE COMPANY, the height of the stamp is $94\frac{1}{2}$ mm.; and the width of the stamp between the two fine, vertical white side-lines is 51 mm. The white numerals, white lettering, and some of the white engine-turning are all somewhat embossed, from being forced into the hollows of the plate during the process of printing. The white outline of the top of Washington's head is not at all prominent. In the word AND, just below PA of NEWSPAPERS, there is a distinct white dot below the middle of the N, and the vertical stroke of the D is joined to the white outline below it by a tiny white dot, much narrower than the said vertical stroke. The inscription, NATIONAL BANK NOTE COMPANY, NEW YORK, is in perfectly readable letters, and none of them touch the broad white line above them, except the O of NOTE and the C of COMPANY, though I have one specimen in which the B of BANK also touches. In all my specimens, the top of the O of YORK is badly broken, leaving a wide gap.

5 Cents. First Forgery.

This is the stamp with coloured border. Very nicely lithographed, in light blue on medium, white wove paper, perforated 11. I have the variety with coloured border, without embossing, and the variety with white border with the white parts embossed. This embossing affords a good test, as it has been done afterwards with numerals and letters that are too small for the white spaces intended to be embossed; and it is quite easy to see in each 5 the U.S., and the stops after them, and the POST and G of POSTAGE. The stamp with coloured border has not the faintest sign of any embossing, and my specimen has white dots round three sides, some of them being cut out by the perforations. Measured as before, the stamps are $92\frac{1}{2}$ mm. high, by about $49\frac{1}{2}$ mm. wide; thus they are considerably shorter than the genuine, though the perforations cut the paper out to the same size as the genuine. The white outline of the top of Washington's head is too prominent. There is an *exceedingly* small dot under the middle of the N of AND, and the D is blotched into the white line above it, which is not the case in the genuine; while the vertical stroke of the said D is plainly carried down to join the white line below it. The inscription at the very bottom of the stamp is not nearly so legible as the genuine, and the O of NATIONAL, the O and E

of NOTE, and the CO and P of COMPANY, and the R of YORK, are all joined to the white line above them. The M of COMPANY is not so tall as the P, while the break in the O of YORK is not so prominent as in the genuine. The very thin, inner white outline of the stamp is somewhat broken on the left side, opposite the left top corner of the N of NEWSPAPERS. Considering the extremely elaborate nature of the engineering, I must say that the design has been marvellously well copied, as the above are really the only differences that I can see.

5 Cents. Second Forgery.

Typographed, on thick, hard, white wove paper, perforated $11\frac{1}{2}$; printed in dull, dark blue. I have this only in the variety with white border. Measured as before, the stamp is a shade under $94\frac{1}{2}$ mm. high, by 50 mm. wide; so it will be seen that, while about the correct height, the design is decidedly too narrow. The perforations cut the stamp out rather larger than the genuine. The embossing is very good, being caused, of course, in the same way as the genuine, owing to the typographic impression. The white outline of the top of Washington's head is still more prominent than in the first forgery, owing to the darker background. There is no sign of any white dot under the N of AND; the D is joined to the white line above it by two very distinct, white dots, and the vertical stroke of the said D, which is excessively thin, is carried down, to join the white line below it. In the bottom inscription, the T of NATIONAL is a white blotch, and the O is joined to the white line above it. The O and E of NOTE, the CO and P of COMPANY, and the R of YORK, are all joined to the line above them. The K of YORK is very badly drawn, and there is an oblique scratch right through the K, running into the white outline above it, and down to the middle of the dark line below the R. The pegtop-shaped space in the large dark V in the circle, to right of the central medallion, shows an oblique, white line or scratch going across it, and projecting on the right side. There is no such white scratch in the genuine, which contains seven neatly-drawn, graduated, horizontal white lines. The thin, inmost vertical white line, down the left side of the stamp, is broken, as in the first forgery, to left of the head of the N of NEWSPAPERS; and to right of the last s of this word the broad, white line down the right side of the stamp gets suddenly thinner, for about the height of the S. There is a large, distinct white dot, touching the top of the A of PERIODICALS.

POSTMARKS.

Genuine.—I have no postmarked specimens.

Forged.—Both forgeries are uncanceled.

Same Issues. 10 Cents, green.

The varieties are :—

1. White wove paper, coloured border, deep green, yellow-green.
2. *Pelure* paper, coloured border, deep green, pale green.

Genuine.

Engraved in *épargne*, as before; varieties as above; perforated 12. Measured in the same way as the 5 c., the design is $94\frac{1}{2}$ mm. high, by $50\frac{1}{2}$ mm. wide. The white outline of Franklin's eyebrow does not join the white outline of the top of the forehead. There is very little sign of any white outline round the letters of the words NEWSPAPERS and PERIODICALS, though there is a fairly distinct, white stroke under the foot of each of the letters PAPER. There is no white comma under

the second P of APPROVED. The letters of the tiny bottom inscription are quite distinct, and none of them touch the broad, white outline above them, except the O of NATIONAL, the CO of COMPANY, and, very slightly, the O of YORK.

First Forgery.

Lithographed, in blue-green, and embossed afterwards, on medium, white wove paper, perforated 11. Measured as before, the design is $92\frac{1}{2}$ mm. high, by 49 mm. wide, so the design is decidedly too small, though the perforations cut the stamp out considerably taller than the genuine, and slightly wider. The white outline of Franklin's eyebrow joins the white outline of the forehead. In the word NEWSPAPERS, nearly every letter has a very well-marked white outline all round it, and most of the letters of PERIODICALS also have white outlines, but not quite so marked. There is a distinct, reversed (not inverted) white comma, under the second P of APPROVED. The small inscription at the bottom looks very ragged; the T and O of NATIONAL, the B of BANK, the CO of COMPANY, and the YO of YORK, all touch the white outline above them. In some of my copies, the embossing does not fit the white numerals, etc., showing in the green background, as well as in the white. The size of the design, and the white comma under the second P of APPROVED, are the easiest tests for this forgery.

Second Forgery.

Typographed, in yellow-green, and embossed, on stout, white wove paper, perforated 11. This has a much better appearance than the first forgery. The fine, outer outline of the design is extremely thin. Measured as before, the design is $93\frac{1}{2}$ mm. high, by $49\frac{3}{4}$ mm. wide, but the perforations cut the stamp out much larger than the genuine ($101\frac{1}{2}$ by $56\frac{1}{2}$ mm. instead of 99 by 55 mm.). A white line renders the horizontal outline of Franklin's lower lip much more conspicuous than it is in the genuine, and the upper lip is sucked in too much. The white lines on the chest are also far too prominent; they are barely visible in the genuine. There are white lines, not visible in the genuine, along the tops of the NEW and P of NEWSPAPERS, while the white lines along the feet of PAPER are far too prominent. The horizontally-lined background behind these words has a ragged and indistinct appearance, because the white lines are much thinner than the coloured ones, instead of being of the same thickness. The small bottom inscription is barely readable; the T and O of NATIONAL, the C of COMPANY, and the O of YORK, touch the white outline above them. The embossing is part of the design, and is very well done in this forgery, which might easily deceive, except for the perforation and the measurements.

POSTMARKS.

Genuine.—I have never seen a cancelled specimen.

First Forgery.—Uncancelled. Also 1, large, containing NEW YORK.

Second Forgery.—Uncancelled.

Same Issues. 25 Cents, carmine-red, orange-red,
brown-red.

The following are the varieties:—

1. Medium, white wove paper, coloured border, all three of the above shades, perforated 12.

2. *Peture* paper, coloured border, carmine-red, orange-red, perforated 12.

Genuine.

Engraved in *épargne*, and embossed, as before ; varieties as above. The design is 95 mm. high, by 50 mm. wide. The white outlines of Lincoln's collar, coat, and tie are only very slightly embossed, and the white outline of the back and shoulder looks soft and natural, and not a stiff, white ridge. The WE of TWENTY and the VE of FIVE are apparently joined, but the microscope shows a division between the letters, in each case. The first stroke of the N of AND is not too short. In each corner of the stamp is a square-ended ornament, with a white ball outside it, and outside each of these white balls there is a small white dot. The little inscription at the bottom of the stamp is very legible, and none of the letters touch the white outline above them.

Forged.

Typographed (?), and embossed, in orange-red, on rather thin, white wove paper, perforated 11, or 12½. The design measures 93 mm. high, by 49 mm. wide, but the perforation cuts the stamp to the full size of the genuine. The white outlines of Lincoln's collar, coat, and tie, as well as part of the beard, are highly-embossed ridges, the one down the back of the coat looking especially stiff. The WE of TWENTY and IV of FIVE are firmly joined together. The first stroke of the N of AND is much too short. There is no white dot outside the white ball in each of the corners. The little inscription at the bottom of the stamp is almost unreadable, owing to the high embossing of the horizontal white line above it. As far as I can make out, the T and O of NATIONAL, the O of NOTE, the E of NEW, and the O of YORK, touch the said white outline. The engine-turning round the portrait is irregularly embossed, much too high in some places, and not at all in others.

POSTMARKS.

Genuine.—I have no cancelled specimen.

Forged.—Uncancelled. Also 1, containing NEW YORK, and some unreadable letters or figures.

BOGUS STAMPS.

I have the 5 cents, in carmine-vermilion ; the 10 cents, in deep reddish-purple ; and the 25 cents, in gold. They are all on medium, rather soft, white wove paper, perforated 11 (5 and 10 c.), and perforated 12½ (25 c.). The 5 c. shows no trace of embossing ; the 10 c. is slightly embossed ; and the 25 c. is embossed in ridges, like the forgery last described. They may possibly have been offered as *soi-disant* proofs, but the design is forged in each case. They are all postmarked with 1, large, containing BOSTON-MASS. *

REPRINTS.

Bacon's *Reprints* says : "The 10 cents and 25 cents, with coloured border, and the 5 cents, with white border, were reprinted in July, 1875, on hard, white wove paper, ungummed, and perforated 12. The colours are darker and heavier than those of the issued stamps. A further reprint of the 5 cents was made in 1880 (?), on soft, porous, white wove paper, ungummed, and perforated 12." I have all these reprints, but my specimens on the (very) thick paper are unperforated, and the thick paper has prevented all embossing. The printing has been most care-

fully done. As the genuine stamps are rather scarce, and the reprints tolerably common, I would advise my readers to take particular note of the paper of any specimens that may be offered to them.

Issues of 1875, etc. 1, 2, 3, 4, 6, 8, 9, 10 c., black.

The following are the varieties :—

1. 1875. Printed by the Continental Bank Note Co., on thin, hard, wove paper, perforated 12 ; 2, 3, 4, 6, 8, 9, 10 c.
2. Special printing, on very white paper, perforated 12 ; 2, 3, 4, 6, 8, 9, 10 c.
3. 1879. Printed by the American Bank Note Co., on soft, porous paper, perforated 12 ; 2, 3, 4, 6, 8, 10 c.
4. 1883. Special printing, perforated 12 ; 2 c., intense black.
5. 1885. New value, 1 c., black, perforated 12.
6. 1894. Printed by the Bureau of Engraving and Printing, on soft, white wove paper, perforated 12 ; 1, 2, 4, 6, 10 c., intense black.

Genuine.

Finely engraved in *taille-douce*; varieties as above. The standing figure has a wreath of four stars round her head, and all four stars are shaded with transverse lines. Each of the small balls near the bottom of her upper skirt contains one or more curved lines of shading. The left hand holds a shield and a wreath, and six white leaves of the wreath show from behind the shield. There are eight horizontal lines in the tablet containing U.S. POSTAGE, and all the letters of this inscription stand upon the bottom line but one, and reach up to the top line but one, so that there is a clear line above, and another below the lettering. The dark label, containing NEWSPAPERS, is placed on a much lighter label of fine, vertical lines, and the same is the case with the similar label down the other side of the stamp, containing PERIODICALS; and these fine lines, in all my specimens, are faintly visible through the white letters. The three stars, in each of the shields in the bottom corners of the stamp, are all shaded with vertical lines. The points of the shields come down to the very bottom of the stamp. The globe on which the figure stands is shaded by horizontal rows of dashes, so that it does not look much like a globe.

First Forgery.

Of this I have only the 5, 9, and 10 cents. Nicely engraved, in *taille-douce*, on thick, hard, very white wove paper, perforated 11½. Across the lower part of the skirt is the word FACSIMILE, in rather large type, in indigo, or blue-black, and below this again is the word FALSCH, in some of the values, but not in all. An easy test is the star over the eye of the figure, which is white, while the other stars are shaded, like the genuine. Nearly all the balls across the bottom of the skirt are unshaded. There seem to be about eight white leaves in the wreath behind the shield, but they are badly drawn, so it is not easy to say how many there are. There are only seven horizontal lines behind U.S. POSTAGE, though there are some remains of an extra line below the top one, and of another line above the bottom one. Some of the letters reach quite up to the top line, and the O of POSTAGE almost touches the bottom line. The foot

of the T is thick, and firmly joined to the foot of the A. In the genuine, they are only joined by the thin line on which they stand. The dark label, containing **NEWSPAPERS**, is on a perfectly white ground, and the similar label, containing **PERIODICALS**, is also placed on a white ground, which, however, shows a very few traces of the fine lines of the genuine. There are no lines across the white lettering in either label. The stars in the shields in the bottom corners of the stamp are all white, without any shading, and the points of the said shields do not reach down to the bottom of the stamp.

Second Forgery.

Of this I have only the 2 and 4 cents. This is a very poor affair, compared with the counterfeit just described. It is coarsely lithographed, in greenish-black, on thick, soft, very white wove paper, badly perforated 11. There is one unshaded star over the eye of the figure, and a dark projection at the back of the head, probably intended for another of the stars. A large, shapeless white blotch occupies the place where the small, dark eye ought to be. The white balls near the bottom of the skirt are all unshaded. There are six white leaves in the wreath, with portions of one or two others. There are only six horizontal lines in the U.S. POSTAGE tablet, and the letters all reach up to the top line, and all but the U stand upon the bottom line. The T and A are joined together by the very thick foot of the T. The dark tablets, containing **NEWSPAPERS** and **PERIODICALS**, are on a white ground, and there are no lines through the letters of these words. The three stars in each of the bottom shields are all white, and the points of the shields do not go down to the bottom of the stamp. The figure stands upon a very evident globe; the shading of dashes follows the curve of the globe, instead of being horizontal, and there are white lines of longitude radiating from under the figure. Above the head, close to the top of the central picture, there is the word **FALSCH** to the left, and **FACSIMILE** to the right. These words are part of the design.

POSTMARKS.

I have no postmarked copies of the genuine, or of either of the forgeries.

Same Issues. 12 c., 24 c., carmine, rose.

The varieties of printing are the same as Nos. 1, 2, 3, 5, and 6 of the black stamps, already described.

Genuine.

Engraved in *taille-douce*; paper as above; perforated 12. The scales have their beam not truly level, but inclining slightly to the right.

The eyebrows of Justice are nicely shaped, and the face and neck are shaded almost all over, except the lower part of the nose, and a patch under the left eye. The eagle on the large shield has its beak open, and there are many dots between the horizontal lines of shading on the said shield. The point of the shield resting on the ground is blunt. The upper part of the little shield on the eagle's breast has six or seven vertical lines drawn right across it; these lines have nothing to do with the thick, vertical lines which form the shading on the breast of the eagle. There is a stop after the U at the top of the stamp, but not after the S.

This must be noted as an easy test for the first forgery, hereafter

described. The ball at the bottom of the stamp, above the last E of TWELVE, or the O of FOUR, contains a perfect, dark ring, with a dark, semicircular line inside the ring. There are four distinct toes on the left foot (right side of the stamp), but there are only two distinct toes on the right foot. The letters of value at the bottom of the stamp are on a solid ground. The background of the central picture is shaded by horizontal lines, crossed by oblique ones.

First Forgery.

Nicely engraved in *taille-douce*, on thick, hard, white wove paper, perforated 11½. The word FALSCH is engraved, as part of the design, in the right lower corner of the central picture, and the word FACSIMILE is printed in large, dark blue letters, across the lower part of the said picture. The beam of the scales is accurately horizontal. The eyebrows of Justice are shaped somewhat like circumflex accents, with a peak in the centre. The left side of the cheek and neck are quite white. The beak of the eagle on the large shield is closed, and there are no dots between the horizontal lines of shading on the said shield. The point of the shield resting on the ground is exceedingly sharp, and is joined to the head of the F of FALSCH. There is a short, horizontal line in the upper part of the little shield on the eagle's breast; and a number of the vertical lines, forming the shading on the eagle's breast, have been drawn too far, and trespass into the top part of the little shield. There is a stop after the S, at the top of the stamp, as well as after the U, which is an easy test. The ball at the bottom of the stamp, above the last E of TWELVE, has the semicircular line in it, but not the complete ring. The fourth toe on the left foot is almost invisible, and three toes can be made out on the right foot. The words of value at the bottom of the stamp are on a ground of thick, horizontal lines, placed close together.

Second Forgery.

Of this I have both values. FACSIMILE is printed as part of the design, just above the scales; and FALSCH, in white letters, in the right lower corner of the central picture. Lithographed, in bright red, on thick, soft, very white wove paper, nicely perforated 11. Justice is represented with a most malignant scowl; the left side of her face is entirely white, from the eye to the shoulder. The eagle on the large shield has no lower mandible to the beak, and there are no dots between the horizontal lines of shading on the shield. The scales of the armour on the cuirass are here represented by oblong white dots, and the buckle of the belt is a white square, instead of being shaded with horizontal lines. The large white brooch, which fastens the band of the mantle at the throat in the genuine, cannot be seen in this forgery. The point of the large shield seems to be broken off. The upper portion of the little shield on the eagle's breast has no vertical lines in it, and the lower portion of the said shield shows three short, vertical white lines on a coloured ground, instead of long, dark lines on a white ground. As in the first forgery, there is a stop after the S, as well as after the U, at the top of the stamp. The ball at the bottom of the stamp is a shapeless object in the 12 cents, and has one horizontal line in it in the 24 cents. The left foot shows two toes, and portions of two others; the right foot has three distinct toes. The background of the central picture is composed entirely of vertical lines.

POSTMARKS.

I have no postmarked copies of the genuine, or of either of the forgeries.

Same Issues. 6 Dollars, blue.

The varieties of printing are the same as Nos. 1, 2, 3, of the 1 cent.

Genuine.

Engraved in *taille-douce*, in ultramarine-blue ; paper and printing as above ; perforated 12.

Clio has a five-pointed white star in her head-dress. There is no white outline to the puff of hair on the right side of the face (left side of the stamp). The shading on the bare arm, above the elbow, is composed of oblique lines, running down from left to right ; and below the elbow it is formed by rows of dotted lines, running slightly down from right to left, crossed by oblique, continuous lines running down from left to right. The little finger of the left hand, holding the tablet, is nearly as long as the first finger. The white ball, hanging down near the knee, is shaded by two crescent-shaped lines, the left-hand one being larger and darker than the other. The whole of the background shows crossed, oblique lines, as well as horizontal ones, though this is not so plain on the right side of the stamp as on the left. In the left-hand label, the top of the *w* of *NEWSPAPERS* is quite separate from the *s*, and there is no flaw under the space between *EW*. In the right-hand label, the end of the tail of the *C* of *PERIODICALS* is cut off wider than the head. At the top of the stamp, the uppermost of the three pearls after the *E* of *POSTAGE* contains two semicircular lines ; the inner line is very small, but the outer one is really more than a semicircle. The two vertical white lines in the *S* in the right top corner are of the same length, so that the left-hand one projects below the *S* as far as the right-hand one does. In the bottom label, there is an oval ball above the *OL* of *DOLLARS* ; this ball contains a curved line of three parts of a circle, with a dot in the centre of it.

Forged.

Rather nicely engraved in *taille-douce*, in steel-blue, on thick, soft, white wove paper ; perforated 11½. There is no white star in the head-dress, and there is a strong white outline to the puff of hair on the right side of the face. There is no shading on that portion of the bare arm which is between the elbow and the breast ; and, from the elbow to the hand, the arm is shaded by oblique lines of dots, without any other lines crossing them. The little finger of the hand holding the tablet is extremely short, and seems to bend into the third finger, instead of being separate. The white ball, hanging down by the knee, contains only one semicircular line. Almost the whole of the background is composed of horizontal lines only. The top of the *w* of *NEWSPAPERS* touches the *s*, and there is a dark stroke or flaw under the *EW*, at the bottom of the label. In the right-hand label, there is a vertical scratch in the foot of the *P* of *PERIODICALS*, and the end of the tail of the *O* is no wider than the end of its head. At the top of the stamp, the uppermost of the three pearls near the *E* of *POSTAGE* contains only one crescent-shaped mark, and it is less than a semicircle. Of the two white, vertical lines in the *S*, in the right top corner, the left-hand one does not project so far below the *s* as the right-hand one does. The oval ball, above *OL* of *DOLLARS*, in the bottom label, contains two crescent-shaped lines.

This counterfeit has the word **FALSCH** engraved, in small, dark letters, just above the **X D** of **SIX DOLLARS**, and **FACSIMILE** is printed in black, across the lower part of the body.

Forged.—My copy is uncanceled.

Same Issue. 9 Dollars, orange.

The varieties are the same as Nos. 1, 2, 3, of the 1 cent.

Genuine.

Engraved in *taille-douce*; varieties as above; perforated 12. Minerva has an eager, interested look, and her eyes are soft, and not glaring. There seem to be five fingers on the left hand, and the upper joint of the first finger of the right hand, grasping the spear, is horizontal. The small bit of spear-shaft showing under this joint is all dark, and the bottom of the shaft, where it passes in front of the foot, is heavily shaded. In the left-hand label, the foot of the **N** of **NEWSPAPERS** touches the outline of the bottom scroll, above the **I** of **NINE**, and the foot of the **R** is firmly joined to the foot of the final **S**. In the right-hand label, the foot of the **P** of **PERIODICALS** is joined to the **E**, and the tail of the **C** curls decidedly inwards. The outline down each side of the stamp is exactly the same thickness as the line adjoining it. The curl under the tail of the 9 in the left top corner encroaches plainly into the shading of the 9; and the similar curl, just above the point of the spear, encroaches into the shading of the back of the 9. In the right top corner, the curl under the right side of the base of the 9 encroaches deeply into the shading near the base of the 9, and the curl or leaf opposite the middle of the back of the 9 just touches the shading. The curved line outside the **D** of **DOLLARS** touches the **O**, and the similar curved line outside the said **O** touches the middle of the back of the first **I**. The curved line outside the head of the **R** touches the back of the head of the **S**. The 9 below the **O** of **DOLLARS** comes up to the bottom outline, under the **O**, but the head of this numeral is not cut off by the said outline. It is on a ground of horizontal lines only. There is a white ball, exactly under the centre of the 9, containing a crescent-shaped line, which is nearly a complete ring, and inside this there is a very tiny crescent. There is a strong, bottom outline to the stamp, apparently composed of three fine lines, touching one another.

Forged.

Nicely engraved in *taille-douce*, on thick, white wove paper; perforated 11½. Minerva has two glaring, beady, dark eyes, which cannot fail to strike the observer at once, and the mouth is turned down in a very sour curve. The left hand has four distinct fingers; the upper joint of the first finger of the right hand points slantingly upwards, instead of being horizontal, and the portion of spear-shaft visible under this finger is not shaded. The bottom of the shaft, also, where it passes in front of the foot, is not shaded at all. In the left-hand label, the foot of the **N** of **NEWSPAPERS** does not touch the outline of the bottom scroll, above the **I** of **NINE**; and the foot of the **S** is separated by a sloping line from

the foot of the final S. In the right-hand label, there is a line of division between the foot of the P of PERIODICALS and the foot of the E; while the tail of the C does not curl inwards, but if produced would join the head. The outline down each side of the stamp is more distinct than the line adjoining it. The curl under the tail of the 9 in the left top corner touches the shading of the base of the 9 without encroaching, and the curl above the point of the spear also merely touches the shading of the back of the 9 without encroaching into it. In the right top corner, the curl under the right side of the base of the 9 does not touch the shading of the numeral at all, and the curl opposite the middle of the back of the 9 is a long way from it. The curved line outside the D of DOLLARS does not go near to the O, and the curved line outside the O merely touches the foot of the L. The curved line outside the head of the R does not touch the back of the head of the S. The 9 under the O of DOLLARS has the top of its head completely cut off or obliterated by the lower outline of the dollar-scroll, and the said 9 is on a ground of crossed, vertical and horizontal lines. There is no white ball under the centre of the bottom of the 9. The bottom outline of the stamp is no thicker than the side-outlines. The word *FALSCH* is engraved, in dark letters, above the NE of NINE, and *FACSIMILE* is printed in dark blue across the knees of the figure.

POSTMARKS.

Genuine.—I have no postmarked copy.

Forged.—My specimen is uncanceled.

Same Issues. 12 Dollars, deep green.

The varieties are the same as Nos. 1, 2, 3, of the lower values.

Genuine.

Engraved in *taille-douce*; varieties as above; perforated 12. The forefinger of the hand with which Vesta is holding up her robe is nicely curved, and rather blunt. The foot in the background is indistinctly drawn, so that it is almost impossible to say how many toes there are. The hair is tolerably well drawn, and does not look like a cap. The whole of the background of the central picture is formed by crossed, perpendicular and horizontal lines. In the left-hand label, the foot of the N projects right across the white outline of the label, and the whole word *NEWSPAPERS* is nearer to the top than to the bottom outline of the label, so that there is a much wider space below the letters than above them. The point of the A projects above the rest of the letters. In the right-hand label, the top of the P of PERIODICALS goes across the white end of the label, and the top of the A is taller than the rest of the letters, and very sharp. The white outline under *CALS* is no wider than the rest. In the left top corner, the upper ends of the two vertical white lines can be plainly seen, projecting above the head of the S, and the shadow of the head of the S touches the head of the 1. In the right top corner, the ends of the two white lines projecting above the top of the S are bent a little to the right, and do not come up to the top outline of the shading; these two lines are not crooked where they show below the middle of the body of the S. The shading at the back of the 1 is quite solid, as is also the shading at the back of the 2. In the bottom label, the head of the W of *TWELVE* touches the T and E each side of it, and the V touches the head of the final E. The foot of the A of *DOLLARS* is joined to the R, and very nearly touches the L.

Forged.

Engraved in *taille-douce*, in a greener blue than the genuine, on thick, white wove paper; perforated 11½. The word *FALSCH* is engraved just underneath each of the top corner-shields, in dark letters, and *FACSIMILE* is printed in black across the ankles of *Vesta*. The forefinger of the hand holding the robe is nearly straight, and acutely pointed. The foot in the background shows four distinct toes. The hair has so much white in it, that it looks almost like a cap. The darker parts of the background seem to be formed by horizontal lines only. In the left-hand label, the foot of the *N* does not trespass into the white outline to left of it. The word *NEWSPAPERS* is not too near to the upper outline of the label; indeed, the white outline is broader above *WSP* than elsewhere, being irregularly drawn. The top of the *A* is no higher than the rest of the letters, and is blunt, instead of sharp. The tail of the *R* is badly drawn. In the right-hand label, the top of the *P* does not trespass across the white outline, and the top of the *A* does not project above the rest of the letters, and is blunt, instead of sharp. There is a dark flaw just under the space between *DI*, and the white outline is wider under *CALS* than elsewhere. The vertical lines through the *S* in the left top corner do not project above the head of the *S*, and the shadow of its head does not touch the head of the *i*. The white lines in the *S* in the right top corner are crooked, where they emerge from behind the middle of the *S*. The shading at the back of the *i*, and that at the back of the head of the *z*, is composed of crossed, vertical and horizontal lines, instead of being solid. In the bottom label, all the letters of both words are separate.

POSTMARKS.

Genuine.—I have no postmarked specimen.

Forged.—My forgery is uncanceled.

Same Issues. 24 Dollars, purple.

The varieties are the same as Nos. 1, 2, 3, of the lower values.

Genuine.

Engraved in *taille-douce*; perforated 12; varieties as above. The column against which *Peace* is leaning is fluted, and five vertical, rounded flutes can be plainly seen, just below the head; the shading is of vertical lines only, but all the rest of the column shows horizontal, as well as vertical lines. The front of the tail of the *z*, in each upper corner, curls under, till it almost forms a ball, with dotted centre. The tail of the *L* of *PERIODICALS*, in the right-hand frame, is rather thin or narrow, but not abnormally so. The dark shading, to left of the *T* of *TWENTY*, in the bottom label, ends between the sixth and seventh vertical lines, counting from the left outline of the stamp; and the dark shading at the other end of the label, after the *R* of *FOUR*, touches the fifth vertical line, counting from the right-hand outline. The feet of the letters *LIAR* of *DOLLARS* seem to be all joined together. The bottom of the stem of the olive-branch which *Peace* is holding would, if prolonged downwards, cut into the *A* of *PERIODICALS*, and the said stem is quite dark and solid. I cannot make out any berry on the stem. The right and left, vertical outlines of the stamp are not doubled, in any part of their length.

First Forgery.

This is a very accurate copy of the original, and there are few points of difference. Engraved in *taille-douce*, on thick, white wove paper; perforated 11½. The vertical lines, indicating the flutings in the column, are not distinct enough, so that the top part of it, at any rate, looks circular, instead of fluted, and there is hardly any horizontal shading, except in the lower part of the column. The front of the tail of each 2 curls under, but hardly at all inwards, so that it is not in the least like a ball. The tail of the L of PERIODICALS is abnormally thin or narrow. The dark shading, to left of the T of TWENTY, in the bottom label, reaches to the sixth vertical line of shading from the left; and the similar shading at the other end of the label, to right of the R of FOUR, touches the sixth vertical line of shading from the right. The feet of the AR of DOLLARS are slightly joined together, but none of the other letters are joined. The bottom end of the stem of the olive-branch, below the hand, has shading in it, but is not a solid mass. If prolonged downwards, it would cut into the C of PERIODICALS. The right, vertical outline of the stamp is broken and double near the top, and the left outline is double, or irregular, near the large, left-hand star. The word FALSCH is engraved, in dark letters, across each of the stars; and FACSIMILE is printed in black, across the stamp, below the knees of the figure.

Second Forgery.

This is very like the other. Engraved in *taille-douce*, on very thick, white wove paper; rather badly perforated 13 (nearly). The flutings and cross-shading on the column are more like the genuine than in the first forgery, but still not dark enough. The front curl of the tail of each 2 is the same as in the first forgery, except that the left one has a more oval curl. The tail of the L of PERIODICALS is ridiculously thin. The dark shading, to left of the T of TWENTY, in the bottom label, touches the fifth vertical line from the left; and the similar, dark shading, at the other end of the label, after the R of FOUR, touches (like the genuine) the fifth thin, vertical line from the right. (Outside this thick outline, there is a hair-line, not given in the genuine, or in the first forgery.) In the word DOLLARS, the A and R are the only letters which touch each other. The bottom of the stem of the olive-branch has a white line in it, instead of being solid; and if prolonged downwards, it would touch the foot of the second I of PERIODICALS. There is a distinct, dark berry, adhering to the stem, below the fourth leaf. The left outline of the stamp is double, from about the level of the first P of NEWSPAPERS, nearly to the top. The word FALSCH is engraved, in small, dark letters, as before, on each of the stars, but there is no FACSIMILE.

POSTMARKS.

Genuine.—I have no cancelled specimen.

First Forgery.—Uncancelled.

Second Forgery.—The word FALSCH, across each of the stars, has been obliterated in pen-and-ink, otherwise my single specimen is uncanceled.

Same Issue. 48 Dollars, red-brown.

The varieties of printing are the same as Nos. 1, 2, 3, of the 1 cent.

Genuine.

Engraved in *taille-douce*, in red-brown, or yellow-brown; varieties as above; perforated 12. Hebe's left hand, which lies on the shoulder of

the eagle, is nicely shaped, and the knuckle of the little finger is separate from the other three, and slightly higher. The hand is not at all like a claw. The little finger of the right hand, holding the cup, is held far away from the other three fingers. In the right foot, which is flat on the ground, the great toe is very nearly as long as the second, and there is a wide, dark division between them. In the left-hand label, the W of NEWSPAPERS does not touch the E, and the head of the first P does not touch the A. The letters of this word are on an absolutely solid ground. Outside the beginning of this label, near the head of the N, there is a comma-shaped ornament, the tail of which does not run into the white ring round the U to left of it. The two vertical strokes through the S, in the shield, in the left top corner, can plainly be traced to where they are supposed to be hidden behind the centre of the S; the same is also the case with the S in the right top corner. Both little shields are outlined all the way round. The oblique shading in the left-hand shield reaches as far as the middle of the 4, and the similar shading in the right-hand shield reaches as far as the beginning of the 4. In the right-hand label, PERIODICALS is on an absolutely solid ground; the top point of the floral ornament, over the D, touches the outline of the stamp, and the foot of the A almost touches the L. The comma-shaped ornament, outside the end of this label, near the head of the S of PERIODICALS, has a thin tail, not nearly so wide as the head. The S in the white ring, above the T of EIGHT, has thick, solid shading down the right side and along the bottom. In the bottom label, there is a line of separation between the feet of the T and V of FORTY, and the heads of these two letters do not touch. There is a good wide space between the head of the E of EIGHT and that of the following I; the cross-bar of the G does not touch the inside of the body of the letter, and the serif to the head of the said G does not extend very far beyond the centre of the tail. There is an oval white ball below the second I of DOLLARS; it contains a crescent-shaped line, which is three-quarters of a circle, and a small semicircle inside this. There is an outlined, white ball at each end of the label containing FORTY-EIGHT, and each of these balls contains a crescent-shaped dark line.

Forged.

Nicely engraved in *taille-douce*, on thick, white wove paper; perforated 11½. The colour is a rather dark yellow-brown. The fingers of Hebe's left hand, holding the eagle, are sharp-pointed, and very like a bear's claws; the knuckles are all one continuous white line; that of the little finger not being separate from the rest, or raised. The little finger of the right hand, holding the cup, goes under the bottom of the cup, but is not otherwise separate from the rest. The great toe of the right foot, above the Y of FORTY, is *very* much shorter than the next toe, and lies close to it, instead of being separate. In the left-hand label, the head of the E of NEWSPAPERS is solidly joined to the head of the W, and there is only a thin line between the head of the first P and the A. The groundwork behind these letters is formed by crossed, vertical and horizontal lines, very close together; this can best be seen at the end of the label, after the final S. The comma-shaped ornament, outside the beginning of this label, near the head of the N, is very thick and clumsy; and it runs, without any division, into the white ring round the U, in the left bottom corner. The S in the shield in the left top corner has the pairs

of lines at the top and bottom drawn too short, something like elongated commas; they do not touch the body of the \$. The similar lines in the \$ in the right top corner are even shorter than the others. The left side of the left-hand shield is only outlined by one of the vertical lines of the background, and is not complete in the left lower corner. The left side of the right-hand shield is only outlined part of the way up. The oblique shading in the left-hand shield only reaches as far as the right side of the 4, and the shading in the right-hand shield does not reach even so far as that. In the right-hand label, PERIODICALS is, apparently, upon a ground of close-set, vertical and horizontal lines, but it is rather difficult to see that this ground is not absolutely solid. The top point of the floral ornament, over the D, touches the outline of the stamp, and the foot of the A is some distance from the foot of the L. The comma-shaped ornament, outside the end of this label, near the head of the S of PERIODICALS, has a thick tail, almost as wide as the head, and cut slopingly off to an acute point. The S in the white ring above the T of EIGHT has a double outline round the lower bend, instead of the thick shading. In the bottom label, there is no line of separation between the feet of the T and V of FORTY, and the heads of these two letters are also joined together. The head of the E of EIGHT is only separated from the head of the I by a tiny line; the cross-bar of the G touches the inside of the body of the letter, and the serif to its head is very far to the right of the centre of the cross-bar. The oval, white patch, below the second L of DOLLARS, has no mark in it; and the white balls, outside each end of the label containing FORTY-EIGHT, also have no mark in them. This forgery has the word FALSCH engraved in dark letters, above the GH of EIGHT, and the word FACSIMILE, printed in blue, across the lower part of Hebe's body.

POSTMARKS.

Genuine.—I have no postmarked specimen.

Forged.—My single specimen is uncanceled.

Same Issues. 60 Dollars, violet.

The varieties of printing and paper are the same as Nos. 1, 2, 3, of the 1 cent.

Genuine.

Engraved in *taille-douce*; varieties as above; perforated 12. There are ten white rays in Minnehaha's head-dress, and the largest of them is pointed, and reaches up *very* nearly to the top of the picture. The bunch of grapes which she holds up is very straggling. The white band across her body is rather irregularly drawn; its outlines are not parallel, and the upper end stops short under the middle of the right breast (left side of the stamp). In the shading on the right leg, from the knee to the dress, the shading is formed by crossed, oblique lines, and *both* sets of lines go completely across the leg, from side to side. The knee of the other leg is indicated by horizontal shading, in addition to the oblique lines. There is a well-marked, three-lobed leaf (maple?), from the foliage in the right top corner, lying on the left shoulder. Of the three poles, sticking out of the wigwam under her left hand, the middle one is slightly longer than the

right-hand one. In the left-hand label, there are seven objects, projecting from above and below the NEWSPAPERS-tablet—the handles above, the heads below, and the centres hidden by the tablet. They may be intended for prehistoric hoes. All seven handles are unshaded and all seven heads are shaded. In the right-hand label, there are also seven of these hoes, or whatever they are, with heads and handles all shaded; but the one above the first 1 of PERIODICALS has no head. In the left top corner, the outermost, vertical line of shading in the little shield is carried right up, touching both the tail and the back of the head of the \$. There is a large, diamond-shaped stop after the U of U.S., at the top of the stamp. The central lobe of the ornament, under the T of POSTAGE, is a ball, containing a crescent-shaped line of shading, which is very nearly a complete ring.

Forged.

Nicely engraved in *taille-douce*, on thick, white wove paper; perforated 11½. There are eleven white rays in Minnehaha's head-dress. Six of them have their ends cut off square, and the widest of them is at some little distance from the top of the picture. The bunch of grapes is of a nice, regular shape, not straggling, like the genuine. The white band across the body is much narrower than the genuine, and its outlines are neat, and parallel. The upper end goes right across the body, and is visible beyond the projecting outline of the breast. In the shading on the right leg, the oblique lines running down from left to right go quite across the leg, but the lines running down from right to left stop short in the middle of the leg. The other leg has no horizontal lines to indicate the knee. There is a darkly-outlined, egg-shaped object on the left shoulder, presumably some sort of fruit from the foliage. The right-hand pole from the wigwam sticks out further than the middle one. In the left-hand label, the first of the seven handles, above NEWSPAPERS, is shaded, and has evidently been added as an after-thought, as the shading consists of the crossed lines of the background. The other ends of these hoes (?), below NEWSPAPERS, are only six in number, and they have no heads to them, and are very slightly shaded. In the right-hand label, there are six of these things above, and six below PERIODICALS, all without heads, and almost unshaded. In the left top corner, the outermost, vertical line of shading touches the tail of the \$, but stops short, before reaching the back of its head. There is no stop between the letters US, at the top of the stamp, which is a very easy test. The central lobe of the ornament, which, in this forgery, is under the space between ST of POSTAGE, is a saw-tooth, instead of a ball, and does not contain any crescent-shaped line. The word FALSCH is engraved, in dark letters, just above the LLA of DOLLARS, and FACSIMILE is printed, in black, across the thighs.

POSTMARKS.

Genuine.—I have no postmarked copy.

Forged.—Uncancelled.

REPRINTS.

Bacon says: "All twenty-four values were reprinted about March, 1875, on wove paper, very white and hard. The reprints are without gum, are perforated 12, and the printing was very carefully done, the impressions being clear and sharp."

ENVELOPE STAMPS.

Issue of 1857. 3 c., red; 6 c., red; 10 c., green.

Small oval.

Genuine.

Engraved in *épargne*, and embossed, on obliquely-laid, buff or white paper, tolerably thick, and watermarked with the letters POD, U.S. in two lines, many times repeated over the envelope. The oval, measuring where the outside colour begins, is 20 mm. wide, and $24\frac{1}{2}$ mm. high. The two stars have long, sharp points, and one point of each star touches the inner, white oval ring. Both stars are some distance from the outer, white oval ring. There is, apparently, a small brooch on the shoulder, to hold the drapery; and, from this brooch to the space between and above the letters PO of POSTAGE, there are four folds of the drapery, of almost equal width, the top one being the longest. The upper eyelid is not prominent, and the eye does not stick out. The line of the mouth, if prolonged to the right, would pass through the middle of the right-hand star. The chin is small and pointed. The outline of the front of the throat, opposite the U, is 2 mm. in length.

Forged.

There seem to be three different types, but they are very nearly alike. Engraved in *épargne* (electro-plate *clichés* probably), and embossed on thin, shiny, very smooth, and very white wove paper, and also on thin, not very smooth, buff wove paper; both without watermark. The oval measures $21\frac{1}{2}$ mm. wide, and 26 mm. high, in the SIX CENTS value; but it is a trifle smaller in the other values. The points of the two stars are short and blunt, having a stumpy appearance. Neither star touches the white, inner oval; but the left-hand star, in the TEN CENTS value, almost touches the white, outer oval. There is no brooch on the shoulder, and the four folds are not equal, the two inner ones being very much shorter than the outer ones. The upper eyelid is much too prominent, and the eye sticks out, like a small, embossed point. The line of the mouth, in the SIX CENTS value, if prolonged to the right, would cut through the top of the star; and, in the TEN CENTS, it would pass midway between the star and the E of POSTAGE. The chin is too round. The outline of the front of the throat, opposite the U, is only $1\frac{1}{2}$ mm. long in the SIX CENTS, but rather longer in the other values. The expression of the face, in these forgeries, is very different from that of the genuine. In the genuine, it is the face of a rather stern, soldier-like man; but in these forgeries, if a few feathers were stuck into the hair, it would make a most excellent Red Indian.

POSTMARKS.

Genuine.—A very large circle, with name following the curve of the circle, and date of month in the centre, without the year.

Forged.—All the forgeries which I have seen were uncanceled.

I consider these rather deceptive forgeries. The embossing is a good deal higher and clearer than that of the genuine stamps, which have it rounder and less sharp.

Issue of 1876. Centennial Envelopes.**3 Cents, vermilion, green.****Genuine.**

Embossed, on white laid paper; water-marked with the letters **PODUS**, in monogram, two varieties. The **U** of **U.S.** touches the inner boundary with its top-stroke on the left-hand side. The bridle is very distinct.

**Forged.**

Embossed, on white wove paper; no water-mark. The top-stroke of the **U** of **U.S.** touches the *outer* line of the boundary, as well as the inner one. The bridle is not visible. The lower points of the ribbon which contains **POSTAGE** touch the inner boundary-line on both sides, though they do not touch in the genuine. The vertical stroke of the **T** in this word is carried too far, and shows above the cross-stroke. The steam from the engine appears to be in eight distinct puffs, which cannot be counted in the genuine.

POSTMARKS.

Genuine.—A set of five *very* thick, parallel bars; also an upright oval of nine bars, with a large numeral in the centre.

Forged.—Thick bars, arranged in a circle, instead of a rectangle; also a large cross *pattée*, with a broad line opposite to each face of the cross.

"JEFFERSON" POST CARD.

I copy the following from the *Fortnightly*, for May 10, 1902. I have not seen the forgery, nor have I seen any further notice concerning it.

"Not for some considerable long time has the United States postal department been called upon to cope with a forger, but that is the position of affairs at the present moment; and we have the word of the *Metropolitan Philatelist's* Washington correspondent for it, that the case is causing the Department considerable uneasiness.

"It appears that a counterfeit of the 'Jefferson' post card has turned up in considerable quantities in New York, and it is feared that others may come to light in other quarters.

"The counterfeit is not a fine one (remarks *The Optimist*), but so little attention is given to the detail of printing on postal cards by the route-agents and stampers, that even a poor imitation may get through, without detection. In this counterfeit, the tops of the name-lines run together, whereas the genuine is spaced; the lines of Jefferson's face, instead of being uniform and even, are coarse and broken, and readily detected, if one examines the portrait. The wreath is also poor. The word 'Jefferson,' in the counterfeit, is a light-faced type, whereas the genuine has a heavier type. There is a marked distinction in the paper used. The counterfeit

has a coated or glazed surface, and differs radically from the genuine. The matter has been brought to the attention of the secret-service men and will have close watching."

CARRIERS' STAMPS.

These stamps were used to defray the postage from a post office to the addressee (within the district which that post office served), both before and after the introduction of the general issues. Formerly the ordinary postage only defrayed carriage of mail matter from post office to post office, even in the largest cities and towns, and this still prevails to some extent, outside thickly-populated districts.

Issue of September, 1851. No value, blue on rose.

This is the stamp with head of Franklin to left, as illustrated below. I have no forgery of it, but as the originals are very scarce, costing about £10, and the reprints are to be found everywhere, I thought it would be better to try to give some tests for their detection.

Genuine.

Engraved in *taille-douce*, on medium, rose wove paper. My single specimen has the outer frame broken in the left top corner, but this may be only an accidental damage to this particular specimen. The background of the central medallion is distinctly composed of horizontal lines, crossed by oblique lines, running down from right to left, and from left to right. It will be noticed, in that part of the background between the chin, front of the body, and outline, that the oblique lines running down from left to right are stronger than those running down from right to left. In the piece of background below the cut-off part of the neck, about the MP of STAMP, the oblique lines running down from right to left are altogether absent.

REPRINT.

This is, of course, engraved in *taille-douce*, as before; but I cannot help thinking that the lines of the background of the central medallion have been deepened. According to Mr. Bacon, there were two reprints: the first in April, 1875, on some remainder-sheets of the original paper; and the second in December of the same year, on thicker paper, of a duller and paler rose. All these reprints are ungummed. The left vertical outline of the stamp is carried up to *very* slightly above the level of the top outline in my specimens on the pale rose paper; while in all my specimens on the deep rose paper, the said left-hand outline ends nearly $\frac{1}{2}$ mm. below the level of the top of the stamp. The background of the central medallion is exceedingly dark and heavy, and both sets of oblique lines are about equally strong all over.

POSTMARKS.

Genuine.—My only used specimen is postmarked with a small copy of 92, in red, measuring about $12\frac{1}{2}$ mm. from the opposite points of the star.

Reprints.—I have not seen any of these cancelled, but of course any postmark would be bogus.

Issue of November, 1851. 1 Cent, blue on white.

This is the stamp with eagle to left, as here illustrated.

Genuine.

Engraved in *taille-douce*, in rather dark blue, on fairly thick, white wove paper, the front of which is generally tinged with blue, from imperfect wiping of the plate; unperforated. It is also said to exist with an unofficial pin-perforation (gauge?), which I have never seen. The gum is very brown. The eagle's eye is small, and perfectly distinct from the eyebrow. There are seven very distinct white feathers in its tail. The upper mandible of the beak is strongly hooked, and where the white neck joins the dark body, the shading is of lines, and not of dots. The rays of glory above the eagle are all composed of dotted lines. The branch on which the eagle stands is perfectly distinct, and every leaf is also distinct. In the lettered oval, the blank space each side, between the upper and lower labels, is filled in by fine, horizontal lines; there is a white crescent, more or less distinct, at each end of each label. All the lettering is beautifully engraved and very distinct; there is a white hyphen after PRE, and an outline all round the stamp.

Forged.

This is a very poor affair, and not at all likely to deceive. Coarsely lithographed, in pale, milky-blue on thick, white wove paper, not at all blued on the face, badly perforated about 12½, ungummed. The eagle's eye is very large, and blotched into one mass with the eyebrow. There are seven feathers in the tail, but the one over the O of ONE is so heavily shaded, that it does not seem to belong to the rest. The upper mandible of the beak is hardly hooked at all, and the lower one is very badly drawn. Where the white neck joins the body, there are a number of blotchy dots, instead of short lines. Nearly all the rays of glory are continuous, instead of dotted. The lettered oval is uniformly solid all round, and there are no separate labels, with white crescents at the ends, to enclose the upper and lower inscriptions. The lettering is poor and blotchy; in my single specimen, the left side of the A of DESPATCH, and the head and tail of the C and E of CENT, are missing. There is no white hyphen after PRE.

POSTMARKS.

Genuine.—I have no cancelled specimen.

Forged.—My single copy bears a portion of 22, in black.

REPRINTS.

These are plentiful enough, though I do not happen to have any of them. Bacon says: "This stamp was reprinted in April, and in December, 1875, on hard, white wove paper. The earlier reprints were perforated 12, the later were unperforated, and all were ungummed. The paper is whiter than that of the original." Both reprints were printed in deep blue.

Bogus Carrier's Stamp. Blue on yellow.

I have a curious stamp in my forgery-book, very like the 1 cent, Franklin, here illustrated. It is lithographed in ultramarine, on very thick, very hard, lemon-yellow wove paper. The word CARRIER'S appears where U. S. POSTAGE ought to be, and STAMP where 1 CENT ought to be.

SEMI-OFFICIAL ISSUES.

BALTIMORE.

Issue of 1851. 1 Cent, black or red on white.

This is the oblong stamp, with horseman to right. There are ten types on the sheet of each colour, but unfortunately I have only two or three specimens of each, and must do the best I can with these.

Genuine.

Typographed, in fairly deep black, on thick, hard, yellowish-white wove paper, brown gum; or in red, on what seems to be whiter paper, with white gum. In all my specimens, there are sixteen rays of glory above the horseman, one of them

being outside the ONE CENT label, and two showing below the NT of CENT. Some of the types have all the rays touching the label above them, others have short rays below the VER of GOVERNMENT. In all my specimens, the forked ends of the 1 CENT label touch the label above them. The horse's tail ends in four spread hairs, not in a solid point. The tongue of each E of GOVERNMENT is joined to the vertical stroke. There is a thin outline all round the stamp. Inside this, to right and left of the horse, the frame consists of three vertical lines, the middle one being dotted, and almost every dot is square. In each of the top corners of the stamp there is a white ornament, something like a straggling *fleur-de-lys*, and there are traces of a similar one in the left bottom corner. Along the top of the stamp, every one of the dark, vertical lines of shading has a white break in it, near the top. The effect of these breaks, in the shorter lines, above ERNM of GOVERNMENT, is to make a row of little white H's. The vertical, white lines of shading at the bottom of the stamp are similarly broken, but the white H's in the centre of the row are not visible, as the CITY DISPATCH label comes down too low to show the central one.

First Forgery.

Typographed, in intense black, on very thick, very hard, very white wove paper, ungummed. There is a dot between each of the rays under the V, E, R, and N of GOVERNMENT. All the rays touch the top label, except the second from the left, and the fifth from the right. The ends of four rays show below CENT, and there is a stop after this word, which does not appear in any of my types of the genuine. The horse's tail is solid, and ends in a point. In the vertical, dotted line down the left side of the stamp there are thirty very distinct dots, and many of them are round. In the similar, dotted line down the right side of the stamp there are also thirty dots, many of them being round. There is not the slightest trace of any white ornament in any of the corners of the stamp. The vertical lines along the top and bottom of the stamp are not broken, so that there are no little white H's.

Second Forgery.

I only have this in red. Typographed, in scarlet, on medium, white wove paper, ungummed. There are only fifteen complete rays of glory above the horseman, though there is a short, thin ray between the first two on the right side. Nearly all of them touch the label above them.

There is no ray to left of the ONE CENT label. As in the first forgery, there is a stop after CENT. No rays show below CENT. The forked ends of this label do not touch the label above them. The horse's tail ends in spread hairs, like the genuine. There is a vertical row of dots down each side of the stamp, as before; there are thirty-one dots down the left side, and about thirty-three down the right side, and they are all transverse oblongs, instead of being square. I cannot be certain about the number on the right side, as my specimen has a flaw of five white lines, running obliquely from the top of the stamp, above the M, to the right-hand side-frame. There is no trace of any white ornaments in the corners of the stamp. The vertical lines at the top and bottom are not broken anywhere, except by the flaw of five white lines, already mentioned; so that there are no little H's to be seen. There is a faint stop after GOVERNMENT.

Third Forgery.

I have this typographed, in grey-black, and in brownish-vermilion, on very thick, hard, white wove paper, ungummed, or with white gum. There are eighteen rays of glory above the horseman, including a very short one outside the forks of the ONE CENT label, and a very faint one between the forks. Most of them touch the label above them. The forked ends of the ONE CENT label are a long way from the label above them. The horse's tail ends in a point, but it is not solid, like the first forgery is. The tongue of each E of GOVERNMENT does not touch the body of the letter. There is no vertical line of dots down each side of the stamp, and the vertical lines along the top and bottom are not broken. There is no trace of any white ornament in the corners of the stamp. The E of CENT is usually more or less broken. My specimens are all cut very close; but, as far as I can see, the outline round the stamp is not complete on the left side.

Fourth Forgery.

Typographed, on medium, white wove paper. I have only the black, and the colour is darker than the third forgery. There are only fifteen rays of glory, and none of them touch the label above them. No rays show below the ONE CENT label, and the lettering on this label is larger in the middle than at the ends. The forked ends of this label are a long way from the label above them. The horse's tail is not solid, but it ends in a point. The tongue of each E of GOVERNMENT does not touch the vertical stroke. The outline round the stamp is very thick, and is broken in the right top corner. There are no vertical rows of dots down the sides of the stamp, and there is no trace of a white ornament in any of the corners. The vertical lines along the top and bottom of the stamp are not broken. In the word DISPATCH, the cross-bars to the A and the H are not joined to the sides of the letters, though they are in the genuine.

POSTMARKS.

Genuine.—One of my specimens has a couple of pencil lines scored across it, but all the others are uncanceled.

Forged.—None of my forgeries are cancelled.

Issue of 1852. 1 Cent, red, blue.

This is the little oblong stamp, labelled POST OFFICE ONE CENT, DESPATCH, illustrated at top of next page. There are ten types, but I do not know what the variations are, and must content myself with dissecting my one single genuine specimen.

Genuine.

Engraved in *épargne*, in red or blue, on pale blue wove paper. All the coloured portions of the stamp are decidedly sunk into the paper, so that the lettering and frame are slightly embossed. Measuring from outside to outside of the coloured edge of the stamp, the size is $20 \times 11\frac{1}{2}$ mm.; or, measuring across the white outlines on the inside of the coloured border, the size is $18\frac{1}{2} \times 10\frac{1}{2}$ mm. All the words are in thin, wiry letters. The left arm of the T of POST is as long as the right arm. The O of OFFICE slopes over to the left; the tongue of each F is $\frac{1}{2}$ mm. long, and the bottom of the E is 1 mm. long. The H of DESPATCH is crossed rather high up.

**Forged.**

Lithographed, in brown-red, or pale blue, on medium, very white wove paper. The impression is absolutely flat on the paper. From edge to edge, the stamp measures $20\frac{1}{2} \times 12$ mm. Measuring the white outlines, the size is 19×11 mm. The letters are not wiry. The left arm of the T of POST is very much shorter than the right arm. (This is the easiest test.) The O of OFFICE, if anything, slopes over a little to the right; the tongue of each F is barely $\frac{1}{2}$ mm. long, and the bottom of the E is about $\frac{3}{4}$ mm. long. The H of DESPATCH is crossed in the middle, and its right-hand, vertical stroke, if prolonged upwards, would just touch the right-hand corner of the head of the T of CENT; whereas, in my genuine specimen, if this stroke of the H were prolonged upwards, it would cut through the right-hand side of the foot and the left-hand side of the head of the said T. As a matter of fact, in the genuine, the right-hand stroke of the H is in exactly the same position with regard to the T above it, as the *left*-hand stroke is in the forgery.

POSTMARKS.

Genuine.—My single specimen is cancelled with a pen-and-ink cross.

Forged.—All my copies are uncanceled.

Issue of 1856 1 Cent, red, blue.

This is the stamp with a coin in the centre of a white oval, as here illustrated.

Genuine.

Lithographed, on extremely thick, white wove paper, brown gum. The colour is a pale, dull red. The white ring round the central coin is the same width all the way round, and the edge of the disc inside this ring is dotted or milled, below the RRI of CARRIERS, and above the P of DISPATCH. Inside the oval, to left of the coin, there are six curved, vertical rows of dots, with two dots of a seventh row above the I of DISPATCH. There are seven similar rows of dots at the right-hand end of the oval, with a cluster of three separate dots above the C of DISPATCH. The tongue of the E of CARRIERS does not join the vertical stroke; the I of DISPATCH just touches the bird below it; the bottom of the head of the P of this word is not joined to the vertical stroke; the cross-bar to the A does not touch either side of the letter; and the cross-bar to the H also does not touch the sides of the letter. The bird in the left top corner is very nicely drawn, and looks like a thrush, though it has

a forked tail. The front of the breast and neck are dotted. The bird in the right top corner shows a foot of three toes; the neck points directly towards the right top corner of the stamp, and it has a long beak, like that of a stork, in which it is holding a letter of the usual, oblong shape. The head and white eye of the bird in the left bottom corner are quite distinct, and its beak is some distance from the left-hand outline of the stamp. The bird in the right bottom corner has a long, thin tail, and there is a single dot in the fork. None of the oblique lines of shading in the lower half of the stamp touch the outline of the central oval.

Forged.

Lithographed, in carmine-vermilion, on thick, hard, white wove paper, un gummed. The colour is *very* much deeper than that of the genuine. The white ring round the central coin is thinner on the right side than on the left, and there is no milling to be seen on the edge of the disc, inside this white ring. There are seven curved, vertical lines of dots in the oval to left of the coin, the outer three rows being almost continuous, and seven similar rows in the right side of the oval, the outer line being continuous and blotched. There are no separate dots either side. The tongue of the E of CARRIERS joins the vertical stroke, the cross-bars of the A and H of DISPATCH go right across the letters, and the bottom of the head of the P is joined to the vertical stroke. The bird in the left top corner is a very clumsy swallow; the neck is not dotted, and the breast is covered by the letter which it is carrying. The bird in the right top corner has no foot; its head is bent down, carrying an egg-shaped object. The bird in the left bottom corner has a clumsy head, without an eye, and the beak touches the side of the stamp. The point of the upper wing almost touches the S of DISPATCH, though there is a long distance between them in the genuine. The fork of the tail is very indistinct. The bird in the right lower corner appears to have two heads, one pointing to the right, and the other downwards, though this latter is probably only the thickened corner of the letter which it is carrying. The tail is thick and stumpy, and there is no dot in the fork. Most of the oblique lines in the lower half of the stamp touch the outline of the central oval.

POSTMARKS.

Genuine.—I have no cancelled copy.

Forged.—My specimen is uncanceled.

CHARLESTON.

HONOUR'S CITY POST.

Issue of May 8, 1850. 2 Cents, black on bluish.

Genuine.

There are many different types, but the one here illustrated is the only one of which I possess a forgery. Typographed, in black, on medium, hard, bluish or greenish wove paper. The frame of the stamp is composed of large balls, each having a black crescent in the centre, surrounded by a black ring, which is broken, opposite the opening of the crescent. In the top row, the crescent in the left top corner has its opening upwards; the next two crescents to the right have their openings pointing to the right; and all the rest in the row have their openings upwards. In the bottom row, the ball in the left lower corner has the

opening of the crescent to the left ; the second, third, and fourth all open at the bottom ; the fifth opens to the right ; the sixth and seventh open at the bottom. In the left-hand border, exclusive of the corner-balls, the four crescents all open to the left. In the right-hand border, the first crescent below the top corner opens to the right ; the second opens obliquely down to the right ; the third opens at the top ; and the fourth opens to the right. (My readers will understand that I am describing from a single genuine specimen, and I am afraid it is in the highest degree unlikely that every specimen on the sheet has been set up in this irregular manner ; so the tests given so far very possibly only refer to one single stamp on the sheet.) The dot to the I of PAID is a long way below the outline of the ball above it, and the I does not touch the foot of the A before it. The two feet of the H of HONOUR'S do not touch. The stop after POST does not touch the ball to right of it. The end of the tail of the 2 curls upwards, and slightly outwards. The two feet of the N of CENTS are joined, and the T *almost* touches the S.

Forged.

Typographed, on thin, pale blue wove paper. All the crescents along the top of the stamp point upwards ; all those along the bottom of the stamp point downwards, except the one in the left bottom corner, which, like the four above it, points to the left. The four in the right-hand border point to the right. The dot to the I of PAID just touches the ball above it, and the A and I are joined together. The feet of the H of HONOUR'S are joined together, and the two strokes at the top of the N of this word *very* nearly join, though they are far apart in the genuine. The stop after POST touches the ball to right of it. The end of the tail of the 2 curls not only upwards, but inwards as well ; so that, if prolonged, it would cut across the middle of the back of the numeral. The two feet of the N of CENTS are not joined, and the T and S stand well apart.

POSTMARKS.

Genuine.—My specimen is cancelled with a pen-and-ink cross.

Forged.—My specimen is uncanceled.

STEINMEYER'S CITY POST.

Issue of 1858-9. 2 c., black on bluish, yellow, or pink.

Genuine.

Typographed, on thick, rather rough, yellow paper, also on bluish or on pink. The frame is composed of long ovals, with a ball attached to each end of each oval. Each ball contains a black crescent. The four balls at the top have the crescents pointing upwards ; the four balls at the bottom have their crescents pointing downwards ; and the two balls in each of the side-frames have their crescents pointing inwards. There is no third ball between the two above the ME of STEINMEYER'S, nor is there a third ball at the bottom below the D—2 of PAID—2 CENTS. The apostrophe after the R of STEINMEYER'S does not touch the R. The head of the C of CITY, in my specimen, is broken from the body, but I cannot say whether this is always the case. The O of POST is an upright oval. The line after PAID is no nearer to the D than to the 2, and the C of CTS is of an upright oval shape.

Forged.

I only have this in red. Typographed, on fairly thick, pink-faced, white wove paper, with an enamelled appearance. The long ovals, with their attached balls, are very blotchily printed, so that some of the crescents cannot be seen at all. A very easy test is, that there is an upright, pointed, oval ornament between the two balls above NME of STEINMEYER'S, and a similar ornament between the two balls below the D—2 of PAID—2 CENTS. Each of these oval ornaments contains a crescent; the upper crescent points upwards and the lower one points downwards. The apostrophe in STEINMEYER'S touches the R. The head of the C of CITY is not broken, and the I has no head-stroke, though the genuine shows a very marked head-stroke. The O of POST is very circular. The line after PAID almost touches the D, but is further from the 2. The C of CRS is of a very circular shape.

POSTMARKS.

Genuine.—My specimen is not cancelled.

Forged.—This is also uncanceled.

LOUISVILLE.

BROWN & MCGILL'S POST.

Issue of 1858. (1 Cent), blue, black.

Genuine.

Lithographed, on thick, white wove paper, brown gum. This is evidently copied from the eagle Carrier, as the annexed illustration will show. The eyebrow of the eagle is waved in the centre, instead of being an arch. The white part of the neck ends under the space between & and M of the top inscription; the right wing is shadowy, but fairly complete. The double outline of the left wing is carried right round the front point of the wing. Of the seven white feathers in the tail, the fourth from the top is the longest. The horizontal lines of the background touch the inner outline of the oval, from the level of the bottom of the B of BROWN to the level of the top of the P of P. O. There are two badly-drawn, inner outlines to the oval, and the outer one runs into the lettered oval, below the WN of BROWN. The coloured outline, outside the lettered oval, can be traced all the way round, even right through the foliage. Each end of the lettered oval shows two white crescents, and the space between the crescents is, in each case, filled in with crossed, horizontal and vertical lines. There is a distinct apostrophe before the S of GILL'S. The letters in the lower half of the label are all the same height, and there is a stop after the O as well as after the P. The C of MC is almost invisible. The branch on which the eagle stands has a few dark dots, by way of leaves. There is a very thin line all round the stamp.

**First Forgery.**

Lithographed, on medium, very white wove paper, ungummed. The eyebrow of the eagle is a plain arch. The whole of the top of the right wing is broken off, but the rest of it is very distinct. The front point of the left wing has only a single outline, as the outer outline stops short there. Of the seven white feathers in the tail, the third from the top is the longest. The horizontal lines of the background do not touch the inner outline of the oval anywhere. There are, as in the genuine, two coloured outlines inside the oval, but the outer of these two lines does not touch

the lettered oval anywhere. The coloured outline outside the lettered oval disappears into the mass of dark shading at the left side of the oval, between BROWN and P.O. The two white crescents at each end of the lettered oval have no crossed lines between them. There is no apostrophe in GILL'S. The lettering in the lower half of the oval gets gradually larger from beginning to end, and there is no stop after the O. There is no sign of any C to MC. The leaves of the branch on which the eagle stands are long and dark. There is a thick, dark frame all round the stamp, four or five times thicker than the genuine.

Second Forgery.

Lithographed, on thin, white wove paper, in a sort of dark sky-blue, ungummed. The eagle is nearly all dark ; it has a fierce, dark, strongly-hooked beak, in place of the white, slightly-curved beak of the genuine. The eye and the eyebrow are merged into one long streak. The white part of the neck is short, and ends almost under the N of BROWN. The right wing is quite as dark as the left ; the left wing ends in three points, instead of one, and the middle point touches the outline of the oval, above the centre of the H of DESPATCH, instead of opposite to the stop after the S of U.S. The broad, white streak and double upper outline of the left wing are absent. There are only five feathers in the wing, and they are real feathers, with mid-ribs instead of the white patches of the genuine. One of them touches the outline above the A of DESPATCH ; though, in the genuine, the nearest feather is $1\frac{1}{2}$ mm. from the outline. The whole of the background is filled in with horizontal lines, bounded by a thin outline ; and between this and the lettered oval there is a single, thick outline, regularly drawn. The foliage outside the oval is continuous all the way round the stamp, though, in the genuine, there is a wide break in the said foliage, from above the N of BROWN to above the I of GILL'S. Instead of the crescents, enclosing crossed lines, at each end of the oval, there is a white branch, bearing seven leaves. There is a very distinct C, with a stop under it, in MC. The branch appears to be carried by the eagle, instead of supporting it, and it bears seven large, white leaves. The thin line round the stamp has two oblique lines joined to it, one inside and one outside, level with the P on the left side. It will be seen by the above description that this forgery only very faintly resembles the genuine.

POSTMARKS.

Genuine.—I have no cancelled specimen.

Forged.—Both forgeries are uncanceled.

NEW YORK.

U.S. MAIL. ONE CENT.

This stamp is found on rose, on yellow glazed, and also on buff glazed paper.

Genuine.

Typographed ; varieties as above. There is a stop after the U, as well as after the S, and a short hyphen in PRE-PAID. The M of MAIL is upright, and its first stroke is exactly above the first stroke of the N of ONE. The first stroke of the said N is above the end of the E of CENT. The O of ONE is a rather pointed oval. The centre of the R of PRE does not touch the vertical stroke. The two concentric circles of the stamp are $3\frac{1}{2}$ mm. apart.

First Forgery.

Lithographed (?), on medium, buff wove paper, not glazed. The serif to the right limb of the U is represented by a black ball. The hyphen in PRE-PAID is almost an oval dot. The M of MAIL leans slightly over to the right, and the N of ONE leans slightly over to the left, so that, though the foot of the first stroke of the N is below the foot of the first stroke of the M, they are not in one vertical line; indeed, if the first stroke of the N were prolonged upwards, it would pass quite to the left of the M above it. The foot of the said first stroke of the N is above the *centre* of the E of CENT. The O of ONE has its left top corner badly drawn. The centre of the R of PRE joins the vertical stroke. The two concentric circles are a little over $3\frac{1}{2}$ mm. apart.

Second Forgery.

Typographed, on *very* thick, very hard, very pale rose wove paper (looking exceedingly like pink blotting-paper), ungummed. There is no stop after the U, which is an easy test, and the hyphen after PRE is simply a large, round dot. As before, the M of MAIL leans very slightly over to the right, and the first stroke of the N of ONE, if prolonged upwards, would pass to the left of the first stroke of the M. The N of ONE is above the *centre* of the E of CENT. The O of ONE is not at all pointed. The centre of the R of PRE *hardly* touches the vertical stroke. The two circles, from the inside of the one to the outside of the other, are fully 4 mm. apart.

POSTMARKS.

I have no postmarked specimens of either genuine or forged.

PHILADELPHIA.

Issue of 1850-2. 1 c., blue, black, gold.

There are three varieties of this stamp: 1 c., blue, on white wove; 1 c., black, on white wove; 1 c., gold, on black glazed paper.

Genuine.

I have only the 1 c. on white wove paper; rather rough, and thick and hard. Typographed, in a sort of pale ultramarine. The letters U.S. are slightly thinner than P.O.; and the portion of the shaft of the P which projects below the head is abnormally short. The shaft of the P of PAID is the same width all the way up. If a vertical line be drawn up, through the centres of the two large stops, respectively above and below the word PAID, it will pass far to the right of the stop after the S, which is not in a line with the said two stops. The 1 in the bottom label has the serif to its head on the *right* side, instead of the left, but the forgers have imitated this. The foot of the said 1 is very short, and nearly $\frac{1}{2}$ mm. from the stop after it. The tongue of the E of CENT is less than $\frac{1}{2}$ mm. long, and the left arm of the T is longer than the right arm. In my single specimen, the thin, inner outline, down the left side of the stamp, has a little bent place in it, level with the middle of the P of PAID. There are three radiating lines in each corner of the stamp. Of the three in the left top corner, the points of the upper two both touch the outline above them. Of the three in the right top corner, the lower two touch the corner. Of the three in the left bottom corner, none

appear to touch the outline. Of the three in the right bottom corner, the lowest one touches the bottom outline, and the middle one touches the corner.

Forged.

I have this, typographed, in dark, indigo-blue, on thick, hard, white wove paper, yellow gum; also in gold, on medium, black-faced, glazed, white wove paper; also in what appears to be silver, on the same black-faced paper. The letters in the top label are all exactly the same thickness. The part of the shaft of the P in this label, which projects below the head, is of the normal length. The shaft of the P of PAID is wedge-shaped, being thickest at the bottom, and thinnest at the top. (This is very easy to see.) The stop after the S, and the two stops above and below PAID, are in line with one another, so that a straight-edge would pass through the centres of all three stops. The foot of the I in the bottom label goes *very* close to the stop after it (far less than $\frac{1}{4}$ mm. from it). The tongue of the E of CENT is $\frac{3}{4}$ mm. long, and the left arm of the T is no longer than the right arm. There is no bend in the inner outline, on the left side of the stamp. Of the radiating lines in the left top corner, the upper line touches the corner, and the middle line touches the upper line. Of the lines in the right top corner, the lower two run into the corner. Of the lines in the left bottom corner, the upper one runs into the corner, and the second touches the upper one. Of the lines in the right bottom corner, the upper one runs into the corner, and the second touches the bottom outline of the stamp.

POSTMARKS.

Genuine.—My specimen is postmarked with 92, in red.

Forged.—None of my forgeries are cancelled.

URUGUAY.

Issue of October 1st, 1856.

"Diligencia," 60 Centavos, blue.

Genuine.

Lithographed, on rather thin, white wove paper. The key-pattern begins the same way on each side of the stamp, *i.e.*, with a horizontal white line from right to left (┐). There are ten outward turns of this pattern down the left side, with a small, white oblong at the bottom, which is, presumably, part of an eleventh turn; and there are nine outward turns down the right side, with two sides of a rectangle at the top, as part of a tenth turn. The outer frame of the stamp is broken at all the corners, except the left bottom corner; and the inner frame is broken at the top and bottom corners, on the right-hand side. The tail of the L of DILIGENCIA is often abnormally short; the head of the G hardly bends down at all towards the tail; the tongue of the E is placed centrally, and is actually longer than the top and bottom limbs, which are absurdly short; there is a wide gap in the C; and the right leg of the A is *very* much broader than the left one. Usually, a thin, white foot-stroke can be seen to the foot of the said right leg. The N of CENTAVOS comes almost exactly under the chin of the sun's face. There are about

104 rays round the sun; they are not at all regular, and about nine of them touch the boundary-line round them. The sun's chin is *very* pointed. The eyes are fairly large and open, looking straight forwards; and the white can be seen, each side of the iris. The left eyebrow (right side of the stamp) has its outer side too short, so that it does not come to the outer corner of the eye. Sometimes a line can be seen joining this eyebrow to the nose. The mouth is a thin line, and has a rather irregular curve: in my specimen, the end on the right side of the stamp is too short. The chin has a semicircular line on it, with the ends downwards. The hair has a wide, white central parting, and one lock, on the left side of the stamp, *almost* touches the middle of the right eyebrow (*not* the outer end of the eyebrow).

First Forgery.

Nicely lithographed, in a pale, very greenish-blue, on stout, white wove paper. The key-pattern down the left side of the stamp begins, as in the genuine, with a horizontal stroke from right to left (┐); but the pattern down the right side begins the opposite way, with the horizontal stroke from left to right (┌). There are nine complete outward turns of this pattern both sides of the stamp, which is an easy test. The inner and outer white frame-lines are not broken at any of the corners. The tail of the L of DILIGENCIA is of normal length; the second I is too short at the bottom; the head of the G has a small serif, which is absent in the genuine; the E is of the normal shape, with long top and bottom limbs, and a short tongue, which is placed rather too high; the oblique stroke of the N is the same width as the vertical strokes, instead of being much wider; the C has a backward-slanting serif to its head, which is not found in the genuine; and both legs of the A are of equal thinness, the right leg being too short, and destitute of the little foot-stroke of the genuine. The sun's chin is above the space between CE of CENTAVOS, and the oblique stroke of the N of this word is as narrow as the vertical strokes, instead of being very much wider. There are about eighty strong, continuous rays round the sun, not counting a few faint, dotted rays, in between the others, here and there. None of these rays touch the boundary. The sun's chin is rounded, but there is a depression in the outline of it, above the NT of CENTAVOS. The eyes are very large, but almost the whole oval of each is filled up with solid colour. Both eyebrows reach as far as the outer corners of the eyes. The nose and eyebrow are not joined. The mouth is nicely shaped, and central; the line forming it is thicker and shorter than the genuine. The mark on the chin is a rather slanting blotch. The parting of the hair is not white; one lock very nearly touches the outer corner of the eyebrow on the right side of the stamp; but on the left side of the stamp, the hair does not go near the eyebrow.

Second Forgery.

In some respects this is much more like the genuine. Lithographed, on rather thin, very white wove paper. The key-pattern begins the same way as the genuine, both sides (┐). There are ten outward turns of this pattern down the left side, with no portion of an eleventh turn at the bottom; the right side is the same as the genuine. The inner frame-line is broken in the right bottom corner, above the S of CENTAVOS; all the other frame-lines are continuous. The tail of the L of DILIGENCIA is short, like the genuine; the head of the G bends down towards the tail; all three limbs of the E are very short, and the central tongue is placed far too high up; both sides of the A are equally thin. The sun's chin is

above the space between NT of CENTAVOS. There are only about ninety-eight rays round the sun, including the dotted ones; the horizontal one in the middle of the right-hand circle cuts slightly through the boundary-line; there are only about two other rays which actually touch the boundary. The sun's chin is not very pointed. The eyes are rather squinting; the right eye (left side of the stamp) looking forwards, and the left eye looking inwards and upwards. The eyebrow over this left eye is not particularly short, but the right eyebrow is not much more than half the width of the eye, and the end of it touches the hair. There is no line joining eyebrow and nose. The mouth is short, and has a very pursed-up expression. The semicircle on the chin is the same as in the genuine. There is a narrow white parting in the centre of the hair, crossed by a white line.

Third Forgery.

Lithographed, in rather a deep sky-blue, on *very* thick, very yellowish-white wove paper. Both strips of key-pattern begin the same way as the genuine (□). There are eleven perfect, outward turns of this pattern down the left side of the stamp; the right side is the same as the genuine. The inner and outer frames are not broken at any of the corners; but, in my single specimen, the outer frame along the top of the stamp has a small break above and to the left of DILIGENCIA, and a large break near the right top corner. The inner frame at the bottom also has a rather wide break, exactly above the E of CENTAVOS. (Of course, having only one specimen, I cannot say whether these breaks invariably occur.) The letters of DILIGENCIA are too thin; the head of the G is a mere hair-stroke; the bottom limb of the E is longer than the other two, and very much thicker; the C and I are almost hair-strokes, and there is no foot-stroke to the A. The sun's chin is above the space between NT of CENTAVOS. There are about ninety-nine rays round the sun, including the dotted ones, and about seven of them touch the outer line. In my specimen, below the N of DILIGENCIA, two of the rays are joined together by an almost horizontal line, near their outward ends; and there is a very distinct, dotted line, from the chin to the space between NT of CENTAVOS, which is not to be seen in the genuine. The eyes are large, and the lower eyelid, in each case, is merely a short, thick oblique line from the outer corner, pointing towards the mouth. In the genuine, the lower eyelid of the right eye is a continuous thin line; and the lower eyelid of the left eye reaches from the outer corner to below the middle of the eye, and points towards where the middle of the nose ought to be. The eyebrows are very thick and heavy, and neither of them goes near the hair. There is no line joining eyebrow and nose. The mouth is of a very extraordinary shape. The left-hand corner (right side of the stamp) is exactly as wide as the nose above it; the right side is much longer, and bends up, and then sharply downwards. There is a coloured dot, which joins the mouth to the semicircular line below it. The thin white parting of the hair is not in the centre of the forehead, but too much to the right side of the stamp. The inner points of the converging rays of the sun are all blotched together, so that the space immediately round the face is solid colour, and the outline of the hair cannot be traced. In the genuine, the whole outline of the hair and face stands out well and distinctly from the rays.

Fourth Forgery.

Very nicely lithographed, on thick, hard, slightly yellowish-white wove paper. I have only lately come across this counterfeit (1907). The key-pattern on the right side begins the opposite way from that on the left

side, which is an easy test. There are only nine outward turns of this pattern down each side. The white frame-lines are not broken at any of the corners, but the inner line at the top is damaged under the A of DILIGENCIA, and the inner line down the right side has a wide break opposite to the second turn of the key-pattern. The tail of the L of DILIGENCIA is long; the head of the G is bent round till it very nearly touches the cross-bar; the top and bottom limbs of the E are long, and the tongue short; both sides of the A are equally thin, and it is crossed in the centre, instead of very low down. The long, thin white foot to the right side of this A is absent. The sun's chin is above the space between EN of CENTAVOS. There are about 104 rays round the sun, counting all the dotted ones, and only two of the rays actually touch the boundary-line. They are much more regular than the genuine, or any of the forgeries hitherto described. I can give very few details of the face, as the cancellation in my specimen partly covers it; but I can see that the whole oval of each eye is filled up with solid colour, and that the hair does not go near the eyebrows. In the word CENTAVOS, the gap in the C is very narrow; the top and bottom limbs of the E are very long; the oblique stroke of the N is no wider than the vertical strokes; the shaft of the T is as thin as the cross-stroke, instead of being much thicker; both sides of the A are equally thin, though the right side is much thicker than the left in the genuine; and the V is very broad and square at the bottom, instead of being pointed.

Fifth Forgery.

Nicely lithographed, on thick, hard, white wove paper. The key-pattern down the right side begins the opposite way from that on the left side. There are nine perfect, outward turns of the said pattern, down each side, as in the first forgery. The frame-lines are not broken at any of the corners, but there is a wide gap in the line just above the O of CENTAVOS. An easy test is that all the letters have all their lines thick, and the letters of DILIGENCIA are thicker than those of CENTAVOS. The tail of the L of DILIGENCIA is long; the head of the G curls down till it almost touches the cross-stroke, and the said cross-stroke projects inwards only, and not both inwards and outwards like the genuine; the top and bottom limbs of the E are considerably longer than the tongue; the oblique stroke of the N is no thicker than the first vertical stroke; there is a very small gap in the C; both sides of the A are of equal thickness; it is crossed almost in the centre, instead of very low down, and has no foot. The sun's chin is exactly above the N of CENTAVOS, as in the genuine. There are about 111 rays round the sun, very nicely drawn, and none of them dotted; only two of them touch the outline, one exactly above the N of CENTAVOS, and the other pointing towards the left bottom corner of the stamp. The sun's chin is of an ugly shape; it makes a sudden, outward curve beyond what should be the proper outline of the face. The eyes are vertical dots; the right eye seems to be looking towards the left side of the stamp, and the end of the eyebrow above it runs into the hair. The mouth is rather nicely shaped, and there is a little dot between it and the nose. The mark on the chin is a small, roughly-made cross. The parting of the hair is a small, V-shaped opening, which does not reach to the top outline of the head. The hair has far too much white on it in this forgery, and it has a thick outline. The letters of CENTAVOS have all their limbs of equal thickness; all three limbs of the E are of equal length; the left side of the head of the T is too short; the bottom of the V is extremely broad, instead of being pointed.

POSTMARKS.

Genuine.—I have never seen a cancelled specimen.

First Forgery.—Uncancelled.

Second Forgery.—Invariably cancelled with a pen-stroke.

Third Forgery.—Uncancelled.

Fourth Forgery.—Pen-stroke.

Fifth Forgery.—Uncancelled.

Same Issue. 80 Centavos, green.**Genuine.**

Lithographed; paper as before. The tests for the 60 centavos will serve for this value, though some specimens show the inner, vertical frame split, either at the top or at the bottom.

Forged.

Lithographed, on rather thin, hard, yellowish-white wove paper. The colour is so nearly blue that I found I had put this among the forgeries of the 60 centavos on my working-sheet. The key-pattern, both sides of the stamp, begins with a vertical line, unlike the genuine, or any of the forgeries hitherto described. Down the left side there are nine perfect outward turns, besides the half-turn at the top, and a half-turn at the bottom. Down the right side there are eight perfect outward turns, with three-quarters of a turn at the bottom. This side ends, as well as begins, with a vertical stroke. (The genuine ends with a horizontal stroke each side of the stamp.) The frame-lines are not broken at any of the corners. The tail of the L of DILIGENCIA is long; all three limbs of the E are of equal length, and much longer than the genuine; the top of the C curls over too far, forwards and downwards, so that it seems about to fall forwards on its face; the A is crossed in the centre, and has no foot. All these letters are too thin. The sun's chin is above the N of CENTAVOS, like the genuine. There are one hundred rays round the sun, nearly every second ray being dotted; only five of them touch the border. The sun's chin is rounded; the eyes are rounder, and more widely open, than the genuine, with very little sign of lower eyelids. The right eyebrow (left side of the stamp) has its outer end running into the hair; the left eyebrow runs a good way down towards the nose. The mouth is a better shape than the genuine, and the mark on the chin is slanting, and not a semicircle; the o of 80 is nearly circular, instead of oval. The tongue of the E of CENTAVOS is as long as the other limbs; the oblique stroke of the N is hardly any thicker than the vertical strokes; the shaft of the T is no thicker than the cross-stroke; the right side of the A is very little thicker than the left side, and it is crossed in the middle, instead of very low down; the right limb of the V is longer than the left; the S slopes very much over to the right. (This should be an easy test, as the S in the genuine is quite upright.)

POSTMARKS.

Genuine.—I have no cancelled copy.

Forged.—My single specimen is pen-stroked.

Same Issue. 1 Real, vermilion.**Genuine.**

Lithographed, in a sort of carmine-vermilion; paper as before. The tests for the 60 c. will serve for this, except the following:—The outer

frame is usually not broken, though I have a specimen that has a break in the right lower corner. The inner frame, in all my copies, shows a slight break in the right upper corner, and a larger one in the right lower corner. The sun's chin is above the space between the RE of REAL. There is just about space enough to put another R between I and REAL. The horizontal line of the inner frame, above I REAL, is double, for nearly its whole length.

First Forgery.

Lithographed, in scarlet-vermilion, on thick, hard, white wove paper. This stamp has slightly brownish gum. I have no gummed specimens of the genuine, or of any other counterfeit. The key-pattern on the left side begins the same way as the genuine (□), but that on the right side begins the opposite way (⌋). There are nine perfect, outward turns each side, with no parts of other turns, either at the top or the bottom. As a rule, there is no break anywhere in the outer or inner frame-lines. The tail of the L of DILIGENCIA is of normal length; the head of the G bends down, and the tail curls inwards, without any cross-bar; the top and bottom limbs of the E are long, and the tongue short; the oblique stroke of the N is no thicker than the vertical strokes; there is a very small gap in the C; the left side of the A is very nearly as thick as the right side, and it is crossed in the centre, instead of very low down, and has no foot-stroke. The sun's chin is above the very centre of the R of REAL, and it is rounded, instead of pointed. There are about 101 rays round the sun, almost every one of them continuous, and about twenty of them touching the boundary-line. The eyebrows are very regular curves, reaching the full width of the eyes; and neither of them touches the hair. An easy test for this forgery is, that the two dots, intended for the nostrils, are either altogether absent (making the face noseless), or else placed high up, quite close to the eyes. The mark on the chin is a crescent, but with the points upwards; and, above this, touching the upper lip, there is another crescent, with the points downwards. The parting of the hair is very indistinct; often it is merely a dot. The I is so far from REAL, that there is room to put two letters between. The horizontal line of the inner frame, above I REAL, is a single, rather thick line, instead of two thin ones.

Second Forgery.

This is, in some respects, much more like the genuine. Lithographed, on medium, white wove paper. The key-pattern, on the left side, begins with a vertical stroke (⌋), but I can see a slight mark, as though more carefully-printed specimens might show the horizontal line, from right to left. The key-pattern on the right side begins like the genuine. There are nine outward turns on the left side, with part of another turn at the top (two sides of a rectangle) and part of another turn at the bottom (two sides of a rectangle). There are nine outward turns, on the right side, with two sides of a rectangle at the top. The outer frame, in my single specimen, is broken at the right top corner, and near the left bottom corner; the inner frame has a slight break at both corners on the right side, at the left bottom corner, and near the right top corner. The cross-bar to the G of DILIGENCIA slopes down to the right, instead of being horizontal; and both limbs of the A are of about the same thickness; there is no sign of a foot to the right limb. The sun's chin is above the E of REAL. There are about 105 rays round the sun; they have a very spotty appearance, as so many of them are dotted, and at least sixteen

of them touch the boundary-line, instead of about nine. The face is very like the genuine, only the parting of the hair is not at all distinct. There is a tiny dot to represent the lower lip, but no semicircle on the chin below this. The whole oval of each eye is filled up with solid colour. The mouth is a straight line. The horizontal line above **I REAL** is not double.

Third Forgery.

Very badly lithographed, in brownish-orange, on thin, hard, bluish-white wove paper. The key-pattern begins the same way both sides, with a vertical stroke, instead of a horizontal one. There are only six outward turns of the pattern down the left side, with three-quarters of a turn at the top, and half-turn at the bottom. Down the right side there are seven outward turns, with a vertical stroke at the top. The outer frame of the stamp does not exist at all, though there are a few traces of it down the right side, and part of the way along the bottom. The inner frame is broken in the right top corner only. The tail of the **L** of **DILIGENCIA** is long; the head of the **G** comes well down towards the tail, which has no cross-stroke; the top and bottom limbs of the **E** are long, and the middle tongue is very short; the **C** is just like a **G**; both limbs of the **A** are of equal thickness, and the little foot to the right limb is absent. The sun's chin is above the centre of the **E** of **REAL**. There are about sixty-six rays round the sun; they are very coarse, and only one of them touches the boundary-line. The sun's chin is not very pointed. The right eyebrow (left side of the stamp) is enormously thick; the inner corner touches the corner of the eye, and it does not touch the hair. The left eyebrow is smaller, thinner, and on a lower level. Each eye is represented by a semicircular line, points upwards. If these are intended for lower eyelids, then there are no eyes and no upper lids. The mouth is faint and pursed-up. The semicircle on the chin touches the lower lip, instead of being far below it. The parting of the hair is on one side, immediately above the left eye. The letters of **REAL** are in Roman capitals, instead of sans-serif letters. This forgery is not likely to deceive, and the face is a mere caricature. There is not room for another **R** between the **I** and the **R**, and the top of the **R** is broken. The horizontal line above **I REAL** is not double.

Fourth Forgery.

Lithographed, in ochre-yellow, on thick, rather soft, yellowish-white wove paper. The key-pattern begins with a vertical stroke on each side of the stamp. There are six outward turns down the left side, with three-quarters of a turn at the top, and half a turn at the bottom; and seven outward turns down the right side, with a vertical stroke at the top, the same as in the third forgery. The outer frame of the stamp cannot be traced all the way round; but I can see a wide break in the right bottom corner. The inner frame is not broken at any of the corners; and there is a short, diagonal white line, running into the right bottom corner of the inner frame, which does not exist in the genuine. The tail of the **L** of **DILIGENCIA** is long; the sides of the **A** are squeezed together, and it has no foot. I cannot give further details of this word, as the postmark covers it in one of my specimens, and the other specimen is torn just there. The sun's chin is above the **E** of **REAL**. There are about sixty-six rays round the sun; they are coarse, and only one of them touches the boundary-line. The sun's chin projects below the general oval of the face, but it is not particularly pointed. I have two specimens, evidently the same forgery, but the sun's face is not at all alike in the two forgeries, probably from bad printing. In both stamps,

the eyes are solid dots, and the mouth and chin almost invisible. One has the right eyebrow (left side of the stamp) a thin, straight line, and the left eyebrow a wedge-shaped blotch. The other has the right eyebrow curved at the inner end, and the left eyebrow a thick, irregular semicircle, with the outer end coming down much too low, and the face bearing a horrified expression. The eyebrows do not go near the hair in either forgery. There is no real parting to the hair in either case. The letters of REAL, as in the third forgery, are in Roman capitals; the R is usually broken at the top, and there is no room for another R between I and REAL. The horizontal line above I REAL is not double.

POSTMARKS.

Genuine.—I have seen a genuine stamp with a postmark something like 26, dated 1862, but I should say this is probably forged.

First Forgery.—Uncancelled.

Second Forgery.—Uncancelled.

Third Forgery.—10.

Fourth Forgery.—10.

Issue of November 1, 1857. 120 c., blue, slate-blue.

Genuine.

Lithographed, on medium, rather soft, yellowish-white wove paper. The solid, blue central rectangle is $17\frac{1}{2}$ mm. wide, by 16 mm. high. All the stops, in the corners of the stamp, are shaded by horizontal lines; though some of them look solid, when the stamp is heavily printed. The coloured, vertical outline of the inner frame, under the letters of the left-hand CORREO, if prolonged upwards, would pass along almost the extreme outer edge of the M of MONTEVIDEO; and its lower end, if prolonged downwards, would cut exactly centrally through the I of 120. The similar, vertical, inner outline of the right-hand frame, if prolonged upwards, would pass about $\frac{1}{4}$ mm. to right of the last O of MONTEVIDEO; and if prolonged downwards, it would go rather near to the narrow white centre of the O of the right-hand 120. The white centre of each O, in all four inscriptions, is very narrow, being merely a white line. The stop under the little S of CENT^s is a horizontal stroke, or hyphen. There are 148 rays round the sun; their outer ends are vandyked into twelve peaks, but the peaks on the left side are not nearly so deep or distinct as the rest. Very few of the rays touch the outline of the circle: one touches opposite to the right bottom corner of the stamp; two touch above the S of CENT^s; one above the N of CENT^s; and two, pointing to the C of the left-hand CORREO. The inner outline of the hair is wavy, and it is not at all prim, and has no large, projecting puffs over the ears. The face is pleasant, but not at all grinning. In my single specimen, there is a dark mark under the left eye (right side of the stamp), but I cannot say whether this is always the case. The whites of the eyes are quite distinct, and the chin is rounded.

First Forgery.

Clearly lithographed, in sky-blue, on rather thick, hard, white, or yellowish-white wove paper. The solid blue rectangle is 17 mm. wide, by rather less than $15\frac{1}{4}$ mm. high. The stops are all solid, and the outermost one in the right lower corner is defective, i.e., only a portion of the stop has printed. The M of MONTEVIDEO is placed too far to the left, so that if the vertical, coloured, inner outline of the left-hand frame

were prolonged upwards, it would pass along the *inner* edge of the first stroke of the M, instead of along its outside edge. The said outline, if prolonged downwards, would pass along the right-hand edge of the 1 of the first 120. The said 1, like the 1 of the other 120, has a large, sloping serif to its head, though each 1, in the genuine, is simply a vertical stroke, without any serif. The vertical, coloured, inner outline of the right-hand frame, if prolonged upwards, would pass a full millimetre to the right of the last O of MONTEVIDEO; and, if prolonged downwards, would cut through the o of 120, well to the right of its centre. The white centre of each O of all four inscriptions is a good-sized oval, instead of a narrow, white line. The stop under the little S of CENTS is a solid semicircle. There are about 133 rays round the sun; the peaks or vandykes are more distinct than in the genuine; and one or two of the longest rays in each peak touch the outline of the circle, except those of the peak which points to the C of the right-hand CORREO, which do not touch the circle. The hair is exceedingly prim; not at all wavy at the top; and with two large white puffs over the ears. The whole hair is much too white. The lower eyelids are partly visible (there are none in the genuine); the eyes are very wide open, and glaring; and the left eyebrow runs into the hair. The chin is very pointed.

Second Forgery.

I think this is merely a later (and worse) printing of the first forgery. The tests for the first forgery will do for this, except for the following:—Lithographed, on medium, very white wove paper. There is no imperfect stop. I think the numerals have been redrawn, as the vertical line over the left-hand 1, if prolonged downwards, would cut well into the 1, though not centrally. There is a serif to the head of each 1, but smaller and thinner than in the first forgery. The rays of the sun are fainter, and beginning to print badly. The left eyebrow does not touch the hair. There is a dark circular dot in the very centre of the bridge of the nose, which will serve to identify this forgery; and the lower lip is represented by a dot, to the right of the centre. All the other details are the same as in the first forgery.

Third Forgery.

This is, apparently, a still later "state" of the first forgery. Lithographed, in a pale slate-blue, very like the colour of some of the genuine stamps, on rather thin, hard, white wove paper. The tests are the same as for the first forgery, except for the following:—The rays of the sun have become very short on the left side, and there are some short, thick strokes, apparently added to the rays, under the TE of MONTEVIDEO, which do not at all improve the appearance of that part of the stamp. None of the peaks on the left side are long enough to touch the outline. The lower eyelids have disappeared, and the eyes partly fill up the ovals of the eyelids. The rays of the sun are very nearly one solid blotch, so that they cannot be counted. The rest of the details are the same as in the first forgery.

Fourth Forgery.

Lithographed, in extremely dark blue, on very thin, white wove paper. The solid, blue central rectangle is $17\frac{1}{3}$ mm. wide, by a shade over 16 mm. high. The stops are very imperfect, some of them being only crescents. Two of the stops in the right top corner are shaded with oblique lines, running down from right to left. Some of the other stops have disappeared altogether. The coloured, vertical outline of the inner frame on the left-hand side has disappeared altogether, except its two ends. The upper end (which is only a short stroke, hardly reaching

down to the level of the colon after CORREO), if prolonged upwards, would cut into the first stroke of the M of MONTEVIDEO; that is to say, the M is placed a little too far to the left. The lower end of this line (which only reaches up to the level of the C of CORREO) would pass well to the right of the 1 of 120. The left-hand 1 has a very slight horizontal top-stroke; the right-hand 1 is a vertical line, like the genuine, but its top is ragged. The vertical line down the right side of the stamp has, in most of my specimens, entirely disappeared. The last O of MONTEVIDEO is almost exactly flush with the edge of the solid rectangle, as in the genuine. The white centre of the first O of MONTEVIDEO is a narrow line, like the genuine, but every other O, in all four inscriptions, has a broad, oval white centre. Some of my specimens have no stop under the little S of CENT^S; others lack the thin, coloured horizontal line, above the value. In some specimens, the sun's rays have degenerated into a mere blotch around the face; in others there are about 120 rays, not one of them actually touching the outline. The said outline, by the way, is irregularly drawn, and does not truly follow the shape of the solid blue ground outside it. The hair is very like the genuine, but too white. The left eye, when visible at all, fills up the whole oval of the eyelid. The face looks rather sad, and the eyebrows are a good deal too short. There is no dark mark under the left eye.

Fifth Forgery.

Clearly lithographed, on thick, soft, yellowish-white wove paper. The solid, blue, central rectangle is $17\frac{3}{4}$ mm. wide, by $16\frac{1}{4}$ mm. high. Some of the stops are solid, the rest are shaded like the genuine. All the lettering is very thin, quite unlike the genuine, or any of the forgeries hitherto described, and this should be an easy test. The M of MONTEVIDEO is placed too far to the *right*, so that the vertical coloured line under CORREO, if prolonged upwards, would pass $\frac{1}{4}$ mm. clear to the left of the said M. If prolonged downwards, the said line would pass considerably to the left of the 1 of 120. The similar line on the right-hand side, if prolonged upwards, would pass $\frac{1}{2}$ mm. to the right of the last O of MONTEVIDEO; and, if prolonged downwards, it would hardly graze the o of 120. The 1 of each 120 has a small, sloping serif. Each O of all four inscriptions has a wide, oval centre. The little S of CENT^S has no stop under it, and it is placed low down in the label, level with the middle of the T, instead of touching the outline above it. (This is an easy test.) The rays of the sun are much more regular than in the genuine; there are ninety-four of them, and at least nineteen touch the circle outside them. They form sixteen distinct peaks, instead of twelve. The hair is much primmer than the genuine, but it has not the two white puffs over the ears, that are seen in the first three forgeries. There is, in my single specimen, a large, slanting gash between the eyebrows. The eyes fill up solid the whole space of the eyelids. There is no mark under the left eye. The eyebrows very nearly meet, and the outer corner of the left one runs *almost* to the outline of the face. The contour of the face is ugly, being somewhat hollowed in below the level of the eyes.

Sixth Forgery.

Lithographed, in deep blue, on thick, hard, very white wove paper. The solid, blue rectangle is very nearly 18 mm. wide, by $16\frac{1}{2}$ mm. high. One or two of the stops show traces of horizontal shading, but the rest are quite solid. There are two stops, joined together, before the M of MONTEVIDEO, which will serve as an easy means of identifying this particular forgery. The M of MONTEVIDEO is placed too far to the right, so that it is flush with the left-hand edge of the solid central rectangle. The

vertical line on this side, under the letters of CORREO, is double, instead of single. If prolonged upwards, both lines would pass well to the left of the M. If prolonged downwards, the inner one would pass a little to the left of the centre of the shaft of the I of 120, and the outer one would just clear the outside of the shaft, cutting through the long serif at the head of the I. The similar, vertical line, under the letters of the right-hand CORREO, is single, like the genuine; but if prolonged upwards, it would pass a full millimetre to the right of the final O of MONTEVIDEO; and if prolonged downwards, it would just graze the outer edge of the O of 120. The white centre of each O, of all four inscriptions, is a large oval. There is no stop under the little S of CENT⁵, and it is placed low down, as in the fifth forgery. There are 102 very distinct rays round the sun, with twelve distinct peaks. Only ten of the rays touch the outline. The inner outline of the hair is wavy; there is less of it than in most of the other forgeries. There is a dark, irregular blotch between the eyes. The expression of the face is child-like; the eyes are very large, and looking rather to the right of the stamp. The mouth is a straight line, with widened ends. The chin is rather pointed. There is a long serif to the head of the I of each 120.

Seventh Forgery.

I have only lately seen this (1907). Rather nicely lithographed, in pale, greenish-blue, on thick, very hard, white wove paper. The solid, central rectangle is 18 mm. wide, by 16 mm. high. The stops are very light in colour, many of them showing the horizontal lines of shading, and the rest being simply tinted. The M of MONTEVIDEO is much too far to the right, so that even the vertical edge of the solid rectangle would pass $\frac{1}{2}$ mm. to left of it. The left, vertical outline of the inner frame, if prolonged downwards, would pass down the left-hand edge of the I of 120, cutting off the serif. (There is a serif to the head of each I.) The similar, vertical outline, on the right side of the stamp, if prolonged upwards, would pass $\frac{1}{2}$ mm. to the right of the final O of MONTEVIDEO; and if prolonged downwards, it would cut well to the right of the centre of the O of 120. Each O, in all four inscriptions, has a large, white centre. There is a long hyphen under the little S of CENT⁵, and the S does not touch the outline above it, though it does in the genuine. There are about 127 rays round the sun. They only form eleven peaks, instead of twelve; and the central ray of each peak is thicker than the rest. Only four of these thick rays touch the outline. The hair is *very* wavy, or curly; it is much too white. There is no mark under the left eye. The expression appears somewhat surprised. The left cheek (right side of the stamp) has a slight swelling in the outline, level with the end of the nose. The chin projects a little, below the general outline of the lower jaw, and it is above the space between the EN of CENT⁵. In the genuine, it is above the N. The eleven peaks of the rays of the sun are the easiest test for this particular forgery. I don't know any stamp quite the colour of this counterfeit. I should call it a milky, greenish sky-blue!

POSTMARKS.

Genuine.—I have never seen a postmarked specimen.

First Forgery.—62. Also bars.

Second Forgery.—Similar to 27.

Third Forgery.—27. Also a blotch.

Fourth Forgery.—27, small, lettered FRANCO CORREO.

Fifth Forgery.—38, without numerals.

Sixth Forgery.—Pen-stroke. Also uncanceled.

Seventh Forgery.—Uncanceled.

Same Issue. 180 c., green.

Genuine.

Lithographed, in shades of green, on thin, to medium, rather soft, yellowish-white wove paper. The solid, central rectangle measures $17\frac{1}{2} \times 16$ mm., as in the 120 c. The stops are also the same. The vertical line to the left, if prolonged upwards, would pass *exactly* flush with the extreme edge of the M of MONTEVIDEO; and if prolonged downwards, it would cut *centrally* through the I of the left-hand 120. (The I, in each case, is a *thick*, vertical stroke, without any serif to its head.) The vertical line on the right side, if prolonged upwards, would pass $\frac{1}{2}$ mm. to the right of the final O of MONTEVIDEO; and if prolonged downwards, it would pass through the centre of the right-hand half of the O of 120. Each O of all four inscriptions has a very narrow, white centre—a mere white line. The little S of CENT^s is jammed against the outline above it, it is wider than the S in the 120 c., measuring $1\frac{1}{4}$ mm., instead of $\frac{3}{4}$ mm.; and the stop under the said S is a hyphen, very nearly 1 mm. long. There is a distance of $1\frac{1}{2}$ mm. between the S and the vertical edge of the following I. Round the sun there are about 136 rays, instead of the 148 rays of the 120 c.; only about four of them touch the boundary-line, and there is no curly or crooked pair of rays pointing to the head of the T of CENT^s. The hair is the same pretty, wavy coiffure as in the 120 c., with no white puffs over the ears; and there is no mark, or gash, between the eyes, as some of the forgeries have. The eyes are distinct, and the chin is rounded, and exactly above the first stroke of the N of CENT^s.

First Forgery.

Clearly lithographed, on very thick, hard, yellowish-white wove paper. The central rectangle measures 17×15 mm. The stops are all perfectly solid. The M of MONTEVIDEO is much too far to the left, so that the vertical line, if prolonged upwards, would pass along the right-hand edge of the first stroke of the M. If prolonged downwards, the said line would pass clear to the right of the I of 180. The I in each case is barely $\frac{1}{2}$ mm. wide, and has a prominent serif to its head; and the right-hand vertical line, if prolonged upwards, would pass fully 1 mm. to the right of the final O of MONTEVIDEO; and if prolonged downwards, it would cut into the white centre of the O of 180. Each O, of all four inscriptions, has a wide, white centre. The little S of CENT^s does not touch the outline above it; it is only $\frac{3}{4}$ mm. wide, and the stop under it is a short, solid semicircle, $\frac{1}{4}$ mm. wide. The distance from the S to the vertical edge of the I of 180 is $1\frac{1}{2}$ mm. There are 134 rays round the sun, and two of the rays, which point to the left top corner of the T of CENT^s, are joined together and are crooked. Sixteen of the rays touch the outline. The hair is very prim and smooth, with a large white puff, covering each ear. A small dot, representing the lower lip, is placed to the right of the centre. The eyes are large and glaring, and the pupils seem to be oblique ovals. The chin is pointed, and is a shade to the right of the first stroke of the N of CENT^s. The D of MONTEVIDEO is $2\frac{3}{4}$ mm. high, instead of 2 mm., and the vertical stroke of the D is only $\frac{1}{2}$ mm. wide (in measuring the letters, I shall in all cases take the D, for convenience).

The next three forgeries are really hardly worth separating into distinct counterfeits; I fancy they are all, most probably, from the same sheet as the one just described.

Second Forgery.

Lithographed, paper the same as in the first forgery. The tests are exactly the same, except for the following slight differences:—The vertical

line on the right side, if prolonged downwards, would pass through the centre of the right-hand limb of the 0 of 120. The little s of CENT\$ is 1 mm. from the vertical edge of the 1 of 180. Fifteen of the rays of the sun touch the circle. There is a large blotch of colour below the left eye (right side of stamp). These are the only differences.

Third Forgery.

Lithographed, paper as before. Except for the following differences, the tests are exactly the same as for the first forgery:—There is a small stop *after* the s of CENT\$, beside the usual stop below it, and the s is 1 mm. from the vertical edge of the 1 of 120. Eleven of the sun's rays touch the outline. In all other respects this is the same as the first forgery.

Fourth Forgery.

Lithographed, paper as before. The tests are exactly the same as for the first forgery, except for the following small differences:—The distance between the s of CENT\$ and the 1 of 120 is $\frac{3}{4}$ mm., and there is a small vertical stroke just before the foot of the 1, which, by the way, has a distinct foot-stroke on its right side, besides the serif at its head. Eighteen of the sun's rays touch the outline.

Fifth Forgery.

Lithographed, on medium, white wove paper. The rectangle measures $17\frac{3}{4} \times 16\frac{1}{2}$ mm. Most of the stops are solid, but one or two have a single horizontal line in the centre. The vertical line on the left side is double in this forgery, but both lines, if prolonged upwards, would pass clear to the left of the M of MONTEVIDEO. If prolonged downwards, this double line would pass through the centre of the serif to the head of the 1 of 120, without touching the body of the numeral. The vertical line on the right side, if prolonged upwards, would pass 1 mm. to the right of the final 0 of MONTEVIDEO, as in the first four forgeries; and if prolonged downwards, it would cut into the 0 of 120, so as to just graze the white centre. Each 0 of all four inscriptions has a wide white centre. The little s of CENT\$ does not touch the line above it, and has no stop below it; it is 1 mm. wide, and is $1\frac{1}{2}$ mm. from the edge of the 1 of 120. Each 1 has a serif to its head, as in the other counterfeits. There are only 102 rays round the sun, and five of them touch the outline. The hair is fairly like the genuine, though not so wavy. There is a three-cornered gash on the bridge of the nose, level with the eyes. The eyes themselves look too solid, and nearly fill up the oval of the eyelids. The chin projects below the contour of the jaw; it is above the very centre of the N of CENT\$. The D of MONTEVIDEO is $2\frac{1}{2}$ mm. high, and its vertical stroke is only $\frac{1}{2}$ mm. wide.

Sixth Forgery.

Lithographed, in a much brighter yellow-green than the other counterfeits, on fairly thick, yellowish-white wove paper. The central rectangle measures $17\frac{3}{4} \times 16\frac{1}{2}$ mm. The stops are shaded with horizontal lines, like the genuine. The M is a great deal too far to the right, so that the vertical line, if prolonged upwards, would pass $\frac{1}{2}$ mm. to the left of it; if prolonged downwards, this line would pass along the left-hand edge of the 1 of 120. The right-hand, vertical line, if prolonged upwards, would pass $\frac{1}{2}$ mm. to right of the final 0 of MONTEVIDEO; and if prolonged downwards, it would just cut into the white of the 0 of 180. The white centre of each 0 of all four inscriptions is particularly wide. The little s of CENT\$ does not go near the outline above it; it is 1 mm. wide, has no stop under it, and is $1\frac{1}{2}$ mm. from the 1 of 180. Each 1 has a serif to

its head, and, like the rest of the lettering, is thin. There are only ninety-five rays round the sun, and eighteen of them touch the boundary. The hair is somewhat wavy, but there are some long side-curls hanging down below the level of the mouth, and bending inwards. There is a large, slanting gash on the forehead, between the eyes. The right eye is circular, while the left eye completely fills up the oval of the eyelid. The D of MONTEVIDEO is $2\frac{1}{2}$ mm. high, and its vertical stroke only $\frac{1}{2}$ mm. wide. This will give an idea as to how very much thinner the lettering is than the genuine.

Seventh Forgery.

Lithographed, in dark yellow-green, on thick, hard, white wove paper. The central rectangle measures $18 \times 16\frac{1}{2}$ mm. The stops are shaded like the genuine. The vertical line on the left side, if prolonged upwards, would pass *just* clear to the left of the M of MONTEVIDEO; and, if prolonged downwards, it would cut through the serif of the 1 of 180, but pass clear to the left of the body of the numeral. The right vertical line, if prolonged upwards, would pass 1 mm. to the right of the final O of MONTEVIDEO; if prolonged downwards, it would cut through the right side of the o of 120, without touching its white centre. The centre of each O of all four inscriptions is wide, but not quite so wide as in the sixth forgery. The little S of CENT\$ does not go near the outline above it, and has no stop below it; it is $1\frac{1}{2}$ mm. from the vertical edge of the 1 of 120. Each one has a serif to its head. There are 126 rays round the sun, and no fewer than twenty-two of them touch the outline. The hair is fairly like the genuine, though not quite so wavy. The eyes are looking too much to the right of the stamp. The chin is nicely rounded, and is nearly above the middle of the N of CENT\$. The D of MONTEVIDEO is $2\frac{1}{2}$ mm. high, and its vertical stroke is $\frac{1}{2}$ mm. wide.

Eighth Forgery.

Lithographed, in light yellow-green, on fairly thick, very hard, yellowish-white wove paper. The central rectangle measures $17\frac{1}{2} \times 16\frac{1}{2}$ mm. The stops on the left side are only half formed; those on the right side are shaded by oblique lines. The vertical line on the left side is very much broken; the small portion visible at the top, if prolonged upwards, would cut well into the first stroke of the M of MONTEVIDEO; the portion visible at the bottom, if prolonged downwards, would cut into the beginning of the 8 of 180. The vertical line on the right side is also broken, except at the top and bottom. If prolonged upwards, it would pass $\frac{1}{2}$ mm. to the right of the final O of MONTEVIDEO; if prolonged downwards, it would touch the right-hand side of the o of 180. The centre of each O of all four inscriptions is narrower than in any of the seven forgeries already described, but still a good deal wider than the genuine. The S of CENT\$ touches the line above it, and has a hyphen below it, like the genuine; it is only $\frac{1}{2}$ mm. from the 1 of 180. Each 1 is a thick vertical stroke, without serif, like the genuine. The rays of the sun are so much blotched together that it is impossible to count them, and none of them touch the outline. The said outline, in this forgery, is so badly broken, that it only shows here and there, instead of all round the circle. What can be seen of the hair is fairly like the genuine. The right eyebrow is too short, and the left eyebrow too thick. The chin projects a *little* below the contour of the jaw, and it is above the very centre of the N of CENT\$. The D of MONTEVIDEO is $2\frac{1}{2}$ mm. high, and its vertical stroke is $\frac{1}{2}$ mm. wide.

Ninth Forgery.

Lithographed, on fairly thick, very hard, yellowish-white wove paper. The central rectangle measures $17 \times 16\frac{1}{2}$ mm. Several of the stops,

especially on the left side, are imperfect, and most of the others are solid. The M of MONTEVIDEO is too far to the left, so that the vertical line on the left side (which is broken all but its two ends), if prolonged upwards, would cut well into the first stroke of the said M. The vertical line on the right side is also similarly broken. If prolonged upwards, it would pass $\frac{1}{4}$ mm. to the right of the final O of MONTEVIDEO; and if prolonged downwards, it would cut into the o of 180, exactly half-way between its white centre and its outer edge. The centre of each O is narrower than in any of the other forgeries; the centre of the o of the right-hand 180 being nearly as narrow as the genuine. The S of CENT^s touches the outline above it; it is 1 mm. wide, the hyphen under it is $\frac{1}{2}$ mm. long, and the distance between the S and the 1 of 180 is $\frac{3}{4}$ mm. Each 1 is a thick stroke, without serif. The rays of the sun are blotched. I think there are about 121 of them; only three rays touch the outline, which is badly broken in several places. The hair is fairly like the genuine. The left eye entirely fills up the oval of the eyelids. The chin projects below the contour of the jaw, and is above the centre of the N of CENT^s. The D of MONTEVIDEO is $2\frac{1}{2}$ mm. high, and its vertical stroke $\frac{3}{4}$ mm. wide.

Tenth Forgery.

Lithographed, on fairly thick, white wove paper. The central rectangle measures $17\frac{3}{4} \times 16\frac{1}{2}$ mm. The stops are shaded like the genuine. The left vertical line, if prolonged upwards, would pass just along the outside edge of the M, barely touching it. If prolonged downwards, it would pass along the outside edge of the 1 of 180. The right vertical line, if prolonged upwards, would pass 1 mm. to the right of the final O of MONTEVIDEO; if prolonged downwards, it would cut into the right side of the o of 180 without touching the white centre. The white centres of the various O's are all different, some are wide and some narrow. The S of CENT^s does not quite touch the outline above it; it has no stop below it; it is $1\frac{1}{2}$ mm. wide, and is $\frac{3}{4}$ mm. from the 1 of 180. The left-hand 1 has a small serif; the right-hand 1 is bent a little to the right, and has no serif. There are 116 rays round the sun, and only three of them touch the outline. The hair is not wavy enough; on the left side of the face there is a large, dark puff; on the right side of the face a much smaller one. The left eyebrow has a double curve, and it runs into the hair. The eyes are very large, and quite fill up the oval of the eyelids. The chin projects a good deal below the contour of the jaw, and it is exactly above the space between EN of CENT^s. The D of MONTEVIDEO is $2\frac{1}{2}$ mm. high, and its vertical stroke is $\frac{3}{4}$ mm. wide.

POSTMARKS.

Genuine.—A lettered oval, something like 26, but smaller, and without inner outline.

First Forgery.—27, with single outer outline.

Second Forgery.—Ditto.

Third Forgery.—27, with double outer outline.

Fourth Forgery.—27, with single outer outline.

Fifth Forgery.—Like 98, but with bars closer together.

Sixth Forgery.—38, dots larger. My specimen has 500 in the centre.

Seventh Forgery.—27, in green.

Eighth Forgery.—26, lettered FRANCO CORREO, with M in the centre.

Ninth Forgery.—Ditto; also pen-stroked.

Tenth Forgery.—27, without inner oval.

Same Issue. 240 c., red.

Genuine.

Lithographed, on thin, white or greyish-white wove paper. The central rectangle measures $17\frac{3}{4} \times 16$ mm. The stops are horizontally shaded, as before. The M is placed more to the right than in the lower values; so that the left, vertical line, prolonged upwards, would pass to the left of the M, barely touching it. Prolonged downwards, the said line would cut through the 2 of 240, rather to the left of its centre. The right vertical line, if prolonged upwards, would pass 1 mm. to the right of the final O of MONTEVIDEO. Prolonged downwards, this right-hand line would cut through the O of 240, to the right of its centre, so as just to graze the narrow white centre of the O. The centre of each O, of all four inscriptions, is very narrow—a mere white line, as in the lower values. In my single specimen of the genuine, the little s of CENTS is extremely thin, and slopes backwards. It is only $\frac{1}{2}$ mm. wide, and the point of its head is about $\frac{1}{4}$ mm. from the nearest part of the head of the 2. It does not touch the outline above it, and there is a short hyphen below it, less than $\frac{1}{2}$ mm. wide. Each 2 has a straight foot, and the cross-bar of each 4 does not project at the back, behind the vertical stroke. There are 156 rays round the sun, and about thirteen of them, in the lower half, touch the outline. The hair is the same as in the 180 c., and the mouth is curved upwards at the ends. The chin is rounded, and is above the very beginning of the N of CENTS. The D of MONTEVIDEO (taking this as a sample of the lettering) is 2 mm. high, and its vertical stroke is $\frac{3}{4}$ mm. thick. The top and bottom limbs of the first E of MONTEVIDEO, measured from the back edge, are nearly $1\frac{1}{2}$ mm. long, and the central tongue, measured also from the back, is 1 mm. long. The E of CENTS has its top and bottom limbs 1 mm. long, and the tongue $\frac{3}{4}$ mm.

First Forgery.

Lithographed, in scarlet-vermilion, on thick, hard, white wove paper. This is like the first forgery of the 180 c. The central rectangle measures 17×15 to $15\frac{1}{2}$ mm. All the stops are solid. The M of MONTEVIDEO is much too far to the left, so that the left vertical line, if prolonged upwards, would pass along the *right*-hand edge of the first stroke of the M. Prolonged downwards, the said vertical line would cut into the 2 of 240, considerably to the *right* of its centre. The right-hand vertical line, prolonged upwards, would pass less than 1 mm. to the right of the final O of MONTEVIDEO; and prolonged downwards, it would cut through the right side of the O of 240, without grazing the white centre, although the said centre is far wider than the genuine; indeed, the white centre of each O of all four inscriptions is very much wider than the genuine ($\frac{3}{4}$ mm. wide in the broadest part, instead of a mere white line). The little s of CENTS is not particularly thin, and is quite upright. It is about $\frac{3}{4}$ mm. wide, and the point of its head is only about $\frac{1}{4}$ mm. from the nearest part of the head of the 2. The foot of each 2 is curly, instead of straight; and the cross-bar of each 4 projects to the right, beyond the vertical stroke. There are from 132 to 135 rays round the sun, and about eighteen of them touch the outline, from nine out of the twelve peaks. The hair is primly plastered down, with a large, white puff over each ear, as in the first forgery of the 180 c. The chin is very pointed, and is above the first stroke of the N of CENTS. The D of MONTEVIDEO

is $2\frac{1}{2}$ mm. high, and its vertical stroke is less than $\frac{1}{2}$ mm. wide. The top and bottom limbs of the first E of MONTEVIDEO are only a shade over 1 mm. long, and the central tongue only $\frac{3}{4}$ mm. long. The E of CENT^s has the same measurement as the E of MONTEVIDEO. Most of my specimens show the pair of crooked rays, pointing towards the left-hand end of the T of CENT^s.

Second Forgery.

Lithographed, in fairly bright vermilion, on medium, hard, white or yellowish-white wove paper. This is very like the eighth forgery of the 180 c. The central rectangle measures 17×16 mm. Some of the stops show one or two oblique lines of shading; but many of them are imperfect, especially on the left side. One of the stops after the right-hand CORREO touches the o of 240, and there is a small stop after this 240, which does not exist in the genuine. The left vertical line is so badly broken, that only its ends can be seen. If the upper end were prolonged, it would slightly cut into the first stroke of the M; and if the (very faint) lower end were prolonged, it would cut well into the 4 of 240. The right vertical line is also badly broken. If its upper end were prolonged, it would pass about $\frac{1}{2}$ mm. to the right of the final o of MONTEVIDEO; and if the lower end were prolonged, it would cut into the *left* side of the o of 240, not touching the white centre. The white centre of each o, in the top and side inscriptions, is fairly wide, though not quite so wide as in the first forgery, but the centre of the o of each 240 is narrow. The s of CENT^s is thick and upright. It is a shade over 1 mm. wide, and the point of its head is less than $\frac{1}{2}$ mm. from the nearest part of the head of the 2. There is the merest trace of a dot below it. The foot of the left-hand 2 is straight, while that of the right-hand 2, though straight, turns up a little at the end. The cross-bar of each 4 projects beyond the vertical stroke. There are about 126 rays round the sun, but they are much blotched and too short, and this number must only be taken as approximately correct. Only three or four of these rays seem to reach to the outline. What can be seen of the hair is fairly like the genuine. The mouth is straight. The chin projects very slightly below the general contour of the jaw, and is rather to the right of the first stroke of the N of CENT^s. The D of MONTEVIDEO is $2\frac{1}{2}$ mm. high, and its vertical stroke is slightly over $\frac{1}{2}$ mm. wide. The top and bottom limbs of the first E of MONTEVIDEO are quite $1\frac{1}{2}$ mm. long, and the central tongue is 1 mm. long. The top and bottom limbs of the E of CENT^s are about $1\frac{1}{2}$ mm. long, and the tongue nearly 1 mm. long.

Third Forgery.

Lithographed, in scarlet, on fairly thick, white wove paper. This is practically the same as the sixth forgery of the 180 c. The central rectangle measures nearly $17\frac{3}{4} \times 16\frac{1}{2}$ mm. The stops are shaded, very much like the genuine. The M is placed too far to the right, so that the left vertical line, if prolonged upwards, would pass clear to the left of the M, without touching it. (This left vertical line is double.) If prolonged downwards, it would pass very nearly clear to the left of the 2 of 240. The right vertical line, if prolonged upwards, would pass $\frac{3}{4}$ mm. to the right of the last o of MONTEVIDEO; and if prolonged downwards, it would cut very slightly into the right side of the o of 240. The white centre of each o of all four inscriptions is extremely wide (1 mm. in the broadest part). The little s of CENT^s is placed far from the line above it. It is about 1 mm. wide, and there is no stop or hyphen under it. It is quite upright, and the point of its head is $1\frac{1}{2}$ mm. from the nearest part of the head of the 2. Each 2 has a rather curly foot, which curves

up at the end. The cross-bar of each 4 projects slightly to the right of the vertical stroke. There are only 102 rays round the sun. They are more distinct than the genuine, and the central ray of all the peaks but one touches the boundary. The hair is fairly like the genuine. The chin projects considerably below the general contour of the jaw. All the lettering is tall, and very thin. The D of MONTEVIDEO is $2\frac{1}{4}$ mm. high, and its vertical stroke is less than $\frac{1}{2}$ mm. thick. The top and bottom limbs of the first E of MONTEVIDEO are $1\frac{1}{4}$ mm. long, and the central tongue is 1 mm. long. The top and bottom limbs of the E of CENT^S also measure $1\frac{1}{4}$ mm. long, and the central tongue is $\frac{3}{4}$ mm. long.

POSTMARKS.

Genuine.—I have no cancelled specimen.

First Forgery.—26, smaller; also 29.

Second Forgery.—26, smaller, lettered FRANCO CORREO, with M in the centre.

Third Forgery.—26, lettered BIMO^N DE CORREO, ARREGONA, REP. . .

Essay. 240 c., dull vermilion.

This stamp is practically the same type as the genuine 240 c., and I have seen a good many specimens in the last three or four years, which the owners seemed to consider were remainders. Typographed, in dull vermilion, on very thin, white wove paper, and usually having two holes punched out, each about the size of the hole-cancellation of the Spanish used telegraph stamps. The central rectangle measures $17\frac{3}{4} \times 16$ mm., like the genuine. Nearly all the stops are solid. The left vertical line, if prolonged upwards, would pass *quite* clear to the left of the M of MONTEVIDEO. Its lower end touches the 2, and if prolonged downwards, would pass through the very centre of the said 2. The right vertical line is like the genuine. The white centre of each O of all four inscriptions is fairly narrow, but much broader than the genuine. The little S of CENT^S is upright; it has no stop under it, is $\frac{3}{4}$ mm. wide, and the point of its head is only about $\frac{1}{4}$ mm. from the nearest part of the head of the 2. The foot of each 2 is straight, but the end of the foot of the left-hand 2 turns up at right angles into a point. There are only about 122 rays round the sun, and only about four of them touch the outline. The hair is very flat to the head, and there is a small, curved white line (not very conspicuous) sticking out of the back of the parting, and curving over to the left. The chin is rounded, like the genuine, but it is above the space between the EN of CENT^S. The D of MONTEVIDEO is the same height as the genuine (2 mm.), but its vertical stroke is only $\frac{1}{2}$ mm. thick. The top and bottom limbs of the first E of MONTEVIDEO are $1\frac{1}{4}$ mm. long, and the tongue is $\frac{3}{4}$ mm. long. The top and bottom limbs of the E of CENT^S are also $1\frac{1}{4}$ mm. long, and the central tongue is *very* nearly 1 mm. long. The impression is slightly indented into the paper.

POSTMARKS.

This essay is, of course, not postmarked; but, as already stated, specimens are commonly to be met with, cancelled by a couple of holes, punched into them.

NOTE.—Some of the counterfeits described above are the very commonest of all forgeries; and I really believe that there is hardly a school-boy collection in Great Britain which does not boast of one or more specimens.

Issue of June 26, 1859. Thin numerals (Fig. 1).
60, 80, 100, 120, 180, 240 Centésimos.

Issue of November 26, 1860. Thick numerals (Fig. 2).
60, 80, 100, 120, 180 Centésimos.

Before proceeding to the dissection of the forgeries, I had better say a few words about the two types, as some of my correspondents do not always seem able to distinguish them.

FIG. 1.

TYPE I., THIN NUMERALS.

The central, solid rectangle is about $16\frac{3}{4}$ mm. wide, by 15 mm. high, but heavily-printed specimens show a larger measurement. The M of MONTEVIDEO has no line or bar across its top, and the foot of the T of this word is not joined to the N. The letters RE of the left-hand CORREO are not joined together at the bottom. There is no bar across the bottom of the M of CENTÉSIMOS. In the 60 c., the top of the 6 hardly curls over at all, and it has no ball to its head. In the 80 c., the thick, oblique stroke slopes down from right to left. In the 100 c., the serif slopes up to the top of the letter, making it end in a slanting point at the top. In the 120 c., the 1 is the same as in the 100 c., and the little turned-up point of the tail of the 2 goes straight upwards. In the 240 c., the flat foot of the 2 turns up vertically at the end, and the long, sloping first stroke of the 4 comes down level with the bottom of the numeral.

FIG. 2.

TYPE II., THICK NUMERALS.

The solid, central rectangle is $16\frac{3}{4}$ mm. wide, by $14\frac{3}{4}$ mm. high. The letters RE of the left-hand CORREO are joined together at the bottom, and sometimes at the top as well. There is a bar right across the M of MONTEVIDEO; and there is a long stroke joining the N to the foot of the T of this word. There is a bar right across the foot of the M of CENTÉSIMOS. In the 60 c., the top of the 6 curls well over, and there is a large ball to the head, which almost

touches the body of the numeral. In the 80 c., the thick, oblique stroke slopes down from left to right. In the 100 c., the 1 has a flat top, and the serif only runs to its left top corner, instead of to the back. In the 120 c., the 1 has a similar flat top; and the turned-up end of the tail of the 2 slopes outwards to the right, instead of vertically upwards. The following description applies to both types of the genuine, unless otherwise stated.

Genuine.

Lithographed, on thin to medium, white wove paper. The central rectangle, as already stated, is $16\frac{3}{4}$ mm. wide, by 15 mm. high in type I; and $16\frac{3}{4}$ mm. wide, by $14\frac{3}{4}$ mm. high in type II. The left-hand CORREO, measured from the rounded back of the C to the widest part of the right-hand edge of the O, is $8\frac{1}{2}$ mm. long; while the right-hand CORREO measures $9\frac{1}{2}$ mm. MONTEVIDEO is $12\frac{1}{2}$ mm. long, measured from the first vertical stroke of the M. CENTÉSIMOS is 11 mm. long, and there is a distinct acute accent over the second E of this word. Each C in the inscriptions has a serif to the tail as well as to the head, so that head and tail are both alike. The distance between the final S of CENTÉSIMOS and the nearest part of the four-petalled floret in the right lower corner is 1 mm.; and the said S is $\frac{1}{2}$ mm. to left of the right-hand vertical edge of the solid rectangle; *i.e.*, if a line were drawn down the edge of the rectangle, it would pass $\frac{1}{2}$ mm. to right of the S. There are ninety-seven rays to the sun, and they are alternately straight and wavy, forming twelve long peaks. There are no stops anywhere. The letters RR of the left-hand CORREO are not joined together in either type; but, as already stated, the letters RE are joined at the bottom in type II., but not in type I. There are no blotches on the sun's face.

First Forgery.

(*Thick numerals.*)

Of this I seem to have only the 60 c., type II. Lithographed, in a sort of lilac-brown, on thick, hard, yellowish-white wove paper. The central rectangle is $15\frac{1}{2}$ mm. wide, by $14\frac{1}{2}$ mm. high. The left-hand CORREO measures $8\frac{1}{2}$ mm., like the genuine; but the right-hand CORREO is only $8\frac{1}{2}$ mm., instead of $9\frac{1}{2}$ mm. MONTEVIDEO is only 12 mm. long; the M and the NT of this word are the same as in type I. of the genuine, though the thick numerals are those of type II. CENTESIMOS is 11 mm. long, and has no accent. Each C in the inscriptions has the tail of an ordinary English C, without a serif. The S of CENTESIMOS is $\frac{1}{2}$ mm. from the floret to right of it; and a line drawn down the right-hand, vertical edge of the central rectangle would be flush with the edge of the said S. There are about ninety-seven rays round the sun, but some of them are very faint, so that I am not at all sure whether this number is correct. In the genuine, every eighth ray is much longer than the rest; but in this forgery, in many instances, the fourth ray is very nearly as long as the eighth. The letters of the left-hand CORREO are not joined. There are no blots on the sun's face.

Second Forgery.

(*Thick numerals.*)

Lithographed, in pale lilac-brown, on very thick, hard, yellowish-white wove paper. I have only the 60 c., and my specimen is backed with brown gum. The central rectangle is $15\frac{1}{2}$ mm. wide, by $16\frac{1}{2}$ mm. high. The left-hand CORREO measures $8\frac{1}{2}$ mm., and the right-hand one

9½ mm. MONTEVIDEO is 13 mm. long, and the M and NT are those of type I. CENTESIMOS is far too long, measuring 13½ mm.; there is no accent, but there is a stop after the word. The 6 of 60 is jammed against the floret to left of it, and the final S of CENTESIMOS is ½ mm. from the floret to right of it. There is no serif to the tail of any C. The final O of the right-hand CORREO slopes away from the E. The final S of CENTESIMOS is just about flush with the vertical edge of the rectangle. There are only eighty-seven rays round the sun, and nearly all of them are straight. The letters RR of the left-hand CORREO are joined together at the bottom, and the letters RRE of the right-hand CORREO are all joined together at the bottom. There is a blotch or large dot at the inner corner of the left eye (right side of stamp).

Third Forgery.

(*Thick numerals.*)

Of this I have the 80 and 240 c. Lithographed, on thick, hard, white wove paper, white gum. The central rectangle is 16½ mm. wide, by 14½ mm. high. The left-hand CORREO is 8½ mm. long, and the right-hand one 9 mm. MONTEVIDEO measures 12½ mm., like the genuine; the M is like type I., and the letters NT are joined at the *top*. CENTESIMOS is 11 mm. long, like the genuine, but there is no accent. Each C of the inscriptions has a tail without serif. The final S of CENTESIMOS is ¼ mm. to *right* of the vertical edge of the rectangle above it; and the said S is ½ mm. from the floret to right of it. There are ninety-seven rays to the sun, and they are very well done. The letters RE of the left-hand CORREO are not joined. There is sometimes a small dot, near the end of the sun's nose, and the left cheek (right side of the stamp) has a very square look, as the outline is almost vertical.

Fourth Forgery.

(*Thick numerals.*)

Of this I have the 80, 100, 180, and 240 c. Lithographed, on thick, to very thick, hard, white wove paper, yellowish gum. The central rectangle measures 16½ × 14½ mm. The left-hand CORREO measures 8½ mm., and the right-hand one 8¾ mm. MONTEVIDEO is 12½ mm. long, like the genuine; there is a head-stroke sticking out from the first stroke of the M, and the letters NT are joined at the *top*. CENTESIMOS measures 11¾ mm., and there is no accent; the final S of this word is ½ mm. from the floret, and ¼ mm. to right of the vertical edge of the rectangle above it. None of the C's have any serif to the tail. There are ninety-eight rays to the sun, and they are nicely drawn. The letters RE of the left-hand CORREO are not joined, while the RE of the right-hand CORREO *are* joined at the foot. There is a large, V-shaped blotch on the bridge of the nose, and some blotchy shading on the left cheek.

Fifth Forgery.

(*Thinnish numerals.*)

Of this I have the 80 c., orange; 100 c., brown-red; and 240 c., bright orange-vermilion. The central rectangle measures 15½ × 14½ mm. Each CORREO is 8½ mm. long. MONTEVIDEO only measures 12 mm. The 80 c. has the numerals of type II., the 100 c. ditto, while the 240 c. has no turned-up end to the foot of the 2, and the sloping first stroke of the 4 does not come lower than the middle of the numeral, and the right-hand end of the cross-bar turns up, instead of being straight. CENTESIMOS is 11¾ mm. long, and there is no accent; the final S is ½ mm. from the floret, and is so placed that a line down the vertical edge of the

rectangle would almost cut it in two. There is no serif to the tail of any of the C's. The sun's rays are about ninety-three in number, and they are all straight. The R and E of the left-hand CORREO are not joined. There is a mark like a rough cross on the bridge of the sun's nose.

Sixth Forgery.

(*Thick numerals.*)

Of this I have only the 180 c. Lithographed, in bright green, on medium, white wove paper. The central rectangle measures $17 \times 15\frac{1}{2}$ mm. The left-hand CORREO measures $10\frac{1}{2}$ mm., and the right-hand one 11 mm. MONTEVIDEO is $13\frac{3}{4}$ mm. long; the right-hand leg of the M is joined to the point of the V-shaped middle, and the letters TE are joined together at the base. CENTESIMOS is $13\frac{1}{2}$ mm. long; there is no accent; the final S is $\frac{1}{2}$ mm. from the floret, and $\frac{1}{2}$ mm. to the left of the vertical edge of the rectangle above it. There is no serif to the foot of any C. The sun shows only eighty-two rays; they are very badly drawn, and all straight. The two eyebrows meet, and there is a large blotch over the right eyebrow (left side of the stamp).

Seventh Forgery.

(*Thinnish numerals.*)

Of this I have only the 100 and 180 c. The numerals are thin, but the serif to the 1, in each value, is *almost* horizontal, instead of strongly sloping. The central rectangle measures 17×15 mm. The left-hand CORREO is $8\frac{3}{4}$ mm. long, and the right-hand one 9 mm. MONTEVIDEO measures only $11\frac{1}{2}$ mm.; the M is like type I., and the NT are joined together at the *top*. CENTESIMOS measures 12 mm.; it *has* a faint accent over the second E; the final S, like the genuine, is 1 mm. from the floret, and it is also $\frac{1}{2}$ mm. to left of the vertical edge of the rectangle above it. There is no serif to the tail of any C. The sun has only ninety rays, and the hair hangs down too low at the sides, almost level with the chin. The letters RE of the left-hand CORREO are not joined. There is usually a small dot on the chin, above the N of CENTESIMOS.

Eighth Forgery.

(*Thick numerals.*)

Of this I have only the 80 c. (many specimens). Lithographed, in a sort of ochre-yellow, on thick, hard, white wove paper. The central rectangle measures $16\frac{1}{2} \times 16$ mm. The left-hand CORREO is $9\frac{1}{2}$ mm. long, and the right-hand one $8\frac{1}{2}$ mm. MONTEVIDEO measures 13 mm., and the M and NT are like type I. CENTESIMOS is $12\frac{1}{2}$ mm. long; it has no accent; the first S is $\frac{1}{2}$ mm. from the floret, and $\frac{1}{2}$ mm. to left of the vertical edge of the rectangle above it (the same as the genuine). There is no serif to the foot of any C. The sun has only seventy-four rays, and almost all of them are straight. The RE of the left-hand CORREO are joined, as in type II. There is a blot in the inner corner of the left eyebrow (right side of the stamp).

Ninth Forgery.

(*Thick numerals.*)

Of this I have only the 60 c. The 6 is something between type I. and type II., and is jammed against the floret to left of it. Lithographed, in a sort of reddish-bistre, on thick, hard, white wove paper. The central rectangle measures $15\frac{1}{2} \times 16\frac{1}{2}$ mm. The left-hand CORREO measures $8\frac{3}{4}$ mm., and the right-hand one $9\frac{1}{2}$ mm. MONTEVIDEO is $12\frac{3}{4}$ mm. long; the M has the same projecting head-stroke on the left

side as is found in the fourth forgery ; the NT are like type I. CENTESIMOS is $13\frac{1}{2}$ mm. long ; there is no accent ; the final S is $\frac{1}{2}$ mm. from the floret, and flush with the vertical edge of the rectangle above it. There is a stop after the said S. There is no serif to the tail of any C. The sun has only eighty-four rays, and they are all straight. The letters RR of the left-hand CORREO are joined at the base, and the RRE of the right-hand CORREO are also all joined at the base. There is a blotch on the nose, by the inner corner of the left eye.

Tenth Forgery.

(*Bogus colours.*)

Of this I have the 60 c. in a sort of lilac-rose, 60 c. in bright pink, and 60 c. in bright, deep blue. Lithographed, on thick, hard, white wove paper. These counterfeits are usually more clearly printed than the genuine, or than any of the other forgeries. The central rectangle measures 16×15 mm., the left-hand CORREO 8 mm., and the right-hand CORREO 9 mm. MONTEVIDEO is $11\frac{1}{2}$ mm. long ; the M and NT are like type I. CENTESIMOS is 11 mm. long ; there is no accent ; the final S of this word is 1 mm. from the floret, like the genuine, and it is $\frac{1}{2}$ mm. to left of the vertical edge of the rectangle above it. This forgery has a serif to the tail of each C, like the genuine. The sun shows ninety-seven rays, very well done. There is an extremely small and faint colon after CENTESIMOS, level with the centre of the S. The letters RE of the left-hand CORREO and the RR of the right-hand CORREO *almost* touch at the base, but the foot-strokes are *very* thin, so that it is not always easy to see whether they really do touch or not. The hair has a curious, outlined appearance, as the separate hairs are hardly blotched together at all.

Eleventh Forgery.

(*Thinnish numerals.*)

Of this I have only the 180 c. It is rather poor. Typographed, in bright green, on medium, rather soft, very white wove paper, white gum. The 1 of 180 has the square top of type II. ; the 8 leans over to the right, and its base touches the foot of the 1. The central rectangle is $16\frac{1}{2} \times 14\frac{1}{2}$ mm. ; the left-hand CORREO 9 mm., and the right-hand CORREO also 9 mm. MONTEVIDEO is 12 mm. long, and the M and NT are like type I. CENTÉSIMOS is 11 mm. long, like the genuine ; there *is* an accent over the second E ; the final S is $\frac{3}{4}$ mm. from the floret to right of it, and $\frac{1}{2}$ mm. to left of the vertical edge of the rectangle above it. Each C has a serif to the tail, as well as to the head, like the genuine. The sun has only ninety-five rays, and they are all quite straight. The letters RE of the left-hand CORREO are joined at the base by a strong line, and the letters RR of the right-hand CORREO are also joined at the base. The hair is very dark, and comes down lower on the left side, above the E, than it does on the right side.

Twelfth Forgery.

Of this I have the 80 c., thin numerals ; 100 c., thin numerals ; 180 c., thick ; and 240 c., thin numerals. Lithographed, in bright colours, on medium, white wove paper. The rectangle measures $16\frac{1}{2} \times 15$ mm. ; the left-hand CORREO is $8\frac{1}{2}$ mm. long, and the right-hand one $9\frac{1}{2}$ mm., like the genuine. MONTEVIDEO is only 12 mm. long, and the M and NT are like type I. CENTÉSIMOS is 11 mm. long, like the genuine ; there is an accent over the second E ; the final S is $\frac{3}{4}$ mm. from the floret, and $\frac{1}{2}$ mm. to left of the vertical edge of the rectangle above it. Each C has a serif to the tail, as well as to the head, like the genuine. The sun only shows ninety-four rays ; they usually print very unequally, with the straight

lines much too strong, and the wavy ones too weak. None of the letters of any of the inscriptions touch each other anywhere. There is a small blotch in the inner corner of the left eye.

Thirteenth Forgery.

(*Thin numerals.*)

Of this I have only the 120 c. Typographed, in dull ultramarine, on medium, white wove paper, thick, crinkled, yellowish gum. The rectangle measures $16\frac{1}{2} \times 15$ mm.; the left-hand CORREO $8\frac{1}{2}$ mm., and the right-hand CORREO 9 mm. MONTEVIDEO is 12 mm. long; the M and the NT are like type I. CENTÉSIMOS is $11\frac{3}{4}$ mm. long; there is an accent over the second E; the final S is $\frac{3}{4}$ mm. from the floret, and $\frac{1}{4}$ mm. to right of the vertical edge of the rectangle above it. Each C has a serif to the tail, as well as to the head, like the genuine. The sun has ninety-five rays, and they are all quite straight, many of them getting thicker towards their outward ends. There is a faint line, joining the bases of the RE of the left-hand CORREO. The sun's face shows a rather large blotch in the corner of the left eye.

Fourteenth Forgery.

(*Badus colour.*)

Of this I have only the 60 c., in rather bright blue. It is, in many respects, very like the blue 60 c. of the tenth forgery. Lithographed, on thick, very yellowish-white wove paper. The rectangle measures $16\frac{1}{2} \times 15$ mm.; the left-hand CORREO $8\frac{1}{2}$ mm., and the right-hand CORREO 9 mm. MONTEVIDEO is 12 mm. long, and the M and NT are like type I. though the numerals are type II. CENTÉSIMOS is 11 mm. long, like the genuine; there is an accent over the second E; the final S is 1 mm. from the floret, and $\frac{1}{2}$ mm. to left of the vertical edge of the rectangle above it, as in the genuine. Each C has a serif to the tail, as well as to the head. The sun has ninety-six rays, nicely drawn. The letters VI of MONTEVIDEO are joined at the top, but none of the other letters of any of the inscriptions touch each other. The sun's chin projects below the general contour of the jaw, and the hair on the right side of the face (left side of stamp) comes down somewhat lower than on the other side. If printed in the proper colours, this would be a deceptive forgery.

NOTE.—In the genuine and all the forgeries, the measurements of the rectangle often vary $\frac{1}{4}$ mm. more or less than the measurements given, which are the average of a large number of specimens. If heavily inked, the mass of solid colour would naturally tend to spread in the press.

POSTMARKS.

Genuine.—1. Also 1, with an oval in the centre. Also 26, without inner outline, in black, violet, or green. Also CERTIFICADO, in a truncated, oblong frame. Also an oval formed by two crescents, joined at their points, with lettering in each crescent, and in the centre, in black or green. Also (rarely) one something like 27.

First Forgery.—27, in blue.

Second Forgery.—My single specimen has only a very small portion of a postmark; it may be 1, or 26.

Third Forgery.—26, in black or blue.

Fourth Forgery.—54. Also the same, much larger.

Fifth Forgery.—A small circle, without lettering. Also a small oval, containing B.M. Also a solid ring, 4 mm. thick, with a small, solid diamond in the centre. (I have never seen this postmark on any other stamp, genuine or forged, of any country.)

Sixth Forgery.—51.

Seventh Forgery.—Part of a postmark like 26.

Eighth Forgery.—1, 51.

Ninth Forgery.—1.

Tenth Forgery.—The two joined crescents of the genuine.

Eleventh Forgery.—Uncancelled.

Twelfth Forgery.—Uncancelled.

Thirteenth Forgery.—Uncancelled.

Fourteenth Forgery.—Uncancelled.

Issue of April 13, 1864. 6, 8, 10, 12 Centésimos.

Genuine.

Lithographed, on rather thin, to medium, yellowish-white ribbed paper. Sometimes there is hardly a trace of the ribbon; but sometimes it is very evident. There is an acute accent over the second E of CENTÉSIMOS; and this is a very good test, as all the five forgeries now to be described have no accent. There is a frame-line, all round the stamp, rather less than $\frac{1}{2}$ mm. from it; and, measuring from these frame-lines, the size of the stamp is $18\frac{1}{2}$ mm. wide, by 21 mm. high. The letters RI of ORIENTAL are joined at the base. There is a round, white stop, shaded with perpendicular lines, before the R of REPUBLICA, above the C of

CENTÉSIMOS; and a similar stop, after the L of ORIENTAL, above the IM of CENTÉSIMOS. A thin, white ring separates the circular inscription from the central design; and the ring runs all the way round, except where the ribbon is, which ties the wreath. The face shows eyes, eyebrows, and nose. The nose is, as it were, hooked on to the top of the oval shield; and it is outlined on the right side (left side of the stamp). The left, upper compartment, and right, lower compartment of the shield are shaded by horizontal lines. The wreath has five bunches of leaves each side. There are two white streamers coming from the two ends of the oblong centre of the bow of ribbon tying the wreath, and which hang down like a frog's legs. The one to the right (from the knee to the foot) points to the second E of CENTÉSIMOS, and the one to the left points to the first E of this word. All four corners of the stamp are filled with thick, vertical lines. The sun's white rays fill up the space between the upper flags, and most of them touch the white ring outside them. The furthest ray to the left, if prolonged, would cut almost into the centre of the shaft of the L of REPUBLICA; and the furthest ray to the right, if prolonged, would cut into the join of the bases of the RI of ORIENTAL. The best test of the genuine is the left lower corner of the value-label. The dark outline of the said corner projects well beyond the outline of the stamp, into the space between it and the outer frame; and, in very heavily-printed copies, it sometimes actually touches the frame-line. There are three distinct flags each side of the shield; the outer half of each flag is white (with a little shading), and the inner half is darkly shaded with vertical lines. The perpendicular dividing-line of the shield, if prolonged upwards, would cut almost centrally through the A of REPUBLICA; and, if prolonged downwards, it would cut centrally through the T of CENTÉSIMOS. The horizontal dividing-line of the shield, if prolonged to the left, would cut through the head of the P of REPUBLICA; and, if prolonged to the right, it would cut into the last stroke of the N of ORIENTAL. The letters of the upper inscription are 2 mm. high; those of CENTÉSIMOS are 1 mm. high.

First Forgery.

Of this I have only the 12 c., but I fancy that all four values exist. Lithographed, on rather thick, hard, very white wove paper. The size of the frame is $19\frac{1}{2} \times 21\frac{1}{2}$ mm. There is no accent over the second E of CENTESIMOS. The letters RI of ORIENTAL are not joined. There is a shapeless, unshaded stop before the R of REPUBLICA, and my specimen shows a whole cluster of small, shapeless white dots after the L of ORIENTAL. There is no white ring between the circular inscription and the central design. The sun's nose is a transverse blotch; it is connected with the eyebrows by a line like the genuine. There are only a few horizontal lines of shading in the left upper and right lower compartments of the shield. There are only four bunches of leaves in each side of the wreath; and, as a matter of fact, each bunch is really a single, three-lobed leaf. The six thin streamers which hang down from the bow of the wreath are not like a frog's legs; the left one points to the N, and the right one to the right top corner of the T of CENTESIMOS. The top corners of the stamp are of quite solid colour, though the lower corners have vertical lines. The sun's rays look like a white fan; the outer edge is split into about twenty-four square-ended rays. The left lower corner of the value-label does not go near the left-hand edge of the stamp, much less project beyond it. The flags are fairly distinct, but they are not divided into a dark, inner half and white, outer half, as the genuine are. The perpendicular dividing-line of the shield, if prolonged upwards, would cut almost through the centre of the A of REPUBLICA, and, if prolonged downwards, it would just cut into the second E of CENTESIMOS. The horizontal dividing-line, if prolonged to the left, would cut into the first stroke of the N of that word; if prolonged to the right, it would cut into the last stroke of the N of ORIENTAL, like the genuine. The letters of the circular inscription are only about $1\frac{3}{4}$ mm. high, while those in the value-label are $1\frac{1}{4}$ mm. high; thus the former are too short, and the latter too tall.

Second Forgery.

Lithographed, on medium, yellowish-white, wove paper. The frame measures $19\frac{1}{2} \times 21\frac{1}{2}$ mm. CENTESIMOS has no accent. The R and I of ORIENTAL are not joined. The stop before the R of REPUBLICA is unshaded. It would hardly be noticed, as it actually touches one of the ribbons of the wreath. It stands above the space between CE of CENTESIMOS, instead of above the C. There is no stop after ORIENTAL, and there is no white ring between the circular inscription and the central design. The sun's face is very like the genuine. There are two or three horizontal lines of shading in the two upper compartments of the shield. There seem to be only three bunches of leaves each side of the wreath. There is only one ribbon hanging down below the bottom of the shield; it looks like a human leg and foot. A line drawn down through the knee and foot would cut into the I of CENTESIMOS, but the toe of the foot points to the second E of that word. The upper corners of the stamp are entirely solid; the lower corners nearly so. The rays of the sun are much the same as in the first forgery; they can hardly be called rays, as the white patch of which they consist merely has two long, vertical coloured lines in it, above the head, and twelve or thirteen very short coloured lines along the rest of the edge. The left bottom corner of the lower label projects, in this forgery, very nearly as much as the genuine. The markings at the sides of the shields are not at all like flags. In the genuine they are, as it were, a series of three steps each side, but in this forgery they

make an unbroken curve. If the vertical dividing-line of the shield were prolonged upwards, it would cut through the right leg of the A of REPUBLICA ; if prolonged downwards, it would pass between the TE of CENTESIMOS. If the horizontal dividing-line were prolonged to the left, it would graze the beginning of the U of REPUBLICA ; if prolonged to the right, it would cut into the last stroke of the N of ORIENTAL, like the genuine. The letters of the circular inscription are 2 mm. high, and those in the lower label are $1\frac{1}{4}$ mm. high.

Third Forgery.

Of this I have the 6, 8, and 12 c., in their proper colours ; also some bogus stamps—1 c., rose ; 6 c., yellow ; 8 c., rose. Lithographed, on medium, white, also on thick, yellowish-white wove paper. The size of the frame is $18\frac{1}{2} \times 20\frac{3}{4}$ mm. There is no accent to the second E of CENTESIMOS. The letters RI of ORIENTAL are not joined. There is no stop either before REPUBLICA or after ORIENTAL. The white ring round the central design is thicker and more prominent than in the genuine. The face is drawn and shaded in such a manner as to appear somewhat in relief, instead of flat ; and the point of the nose is some little distance above the rim of the shield, instead of resting upon it. The nose is outlined on the *left* side (right side of the stamp). All four quarters of the shield are unshaded. There are six bunches of leaves each side of the wreath ; it is bound round with three very loosely-tied, broad turns of ribbon, and the two long, thin, hanging ends of the genuine are absent. All four corners of the stamp have the vertical lines of the genuine. The sun's rays are exactly like a hand of cards, spread fanwise, in the usual manner. The left-hand outer edge of this fan, prolonged upwards, would pass clear between the LI of REPUBLICA ; and the right-hand outer edge, prolonged, would cut almost centrally through the R of ORIENTAL. The left lower corner of the value-label is a long way inside the edge of the stamp. There are only two distinct flags, each side of the central design. If the vertical dividing-line of the shield were prolonged upwards, it would pass through the A of REPUBLICA, like the genuine ; but if prolonged downwards, it would pass clear between the TE of CENTESIMOS. The horizontal dividing-line, prolonged to the left, would pass between the PU of REPUBLICA ; and prolonged to the right, it would cut deeper than the genuine into the N of ORIENTAL. The letters of the circular inscriptions are $1\frac{1}{2}$ mm. high, and those of the value are $1\frac{1}{4}$ mm. high.

Fourth Forgery.

Of this I have only the 6 c. Lithographed, in extremely dull rose, on thick, fairly hard, very yellowish-white wove paper. The size of the frame is $18\frac{1}{2} \times 20\frac{3}{4}$ mm. There is no accent. The letters RI of ORIENTAL are not joined. There is no stop, either before REPUBLICA, or after ORIENTAL. The ring round the central design is thick ; and, opposite to the NTAL of ORIENTAL, it is *very* thick, and double. The nose is represented by a tiny dot, and it is not outlined. There are no horizontal lines of shading in either of the upper compartments of the shield. The bunches of leaves in the left side of the wreath are very difficult to count ; I think there are seven. Those on the right side are distinct, but very thin and scraggy ; there are five of them this side. The ribbons, tying the wreath, are, in this forgery, represented by what appears to be a spreading bunch of leaves. One of them points down to the first E of CENTESIMOS ; another points between the TE of this word ; another to the S ; and another to the M. The corners of the stamp are composed of vertical

lines, like the genuine. The sun's rays are formed by eight broad patches, most of them having fringed ends; *i.e.*, the white fan is cut by seven coloured lines, and the edges of these portions are fringed or ragged. The left lower corner of the value-label is a long way inside the edge of the stamp. The white patches each side of the central design do not in the least resemble flags. If the horizontal dividing-line of the shield were prolonged to the left, it would cut into the head of the U of REPUBLICA. The letters of the name are $1\frac{3}{4}$ mm. high, and those of the value are $\frac{3}{4}$ mm. high.

Fifth Forgery.

Of this I have only the 10 c. (many specimens). Lithographed, in ochre-yellow, on medium, hard, white wove paper. The size of the stamp is $19 \times 21\frac{1}{2}$ mm. There is no accent. The letters RI of ORIENTAL are not joined, and there is no stop either before or after the name. The white ring round the central design is absent. The nose is represented by a very large, irregular blotch, and it is not outlined. There is no horizontal shading anywhere in the shield, and the right half of the horizontal dividing-line is double. There are four bunches of leaves each side of the three hanging ends of ribbon; one points between the CE, another to the T, and the third to the I, of CENTESIMOS. The corners of the stamp have the vertical lines of the genuine. The sun has about twenty-one blunt, white rays. The left lower corner of the value-label is quite $\frac{3}{4}$ mm. inside the edge of the stamp. The flags are not divided into shaded and unshaded halves. If the horizontal dividing-line of the shield were prolonged to the left, it would cut well into the U of REPUBLICA. The lettering is the same height as the genuine.

NOTE.—I have not attempted to give the number of the vertical lines in the corners, as the shorter ones so frequently run together, or are mere dots.

POSTMARKS.

Genuine.—Something like 26. Also a truncated, oblong frame, containing CERTIFICADO. Also a peculiar mark, somewhat resembling half of 14, probably intended for the sun, with rays. Unfortunately, the few specimens before me, bearing this postmark, show only a small portion of it, so that I am unable to say what the entire cancellation is.

First Forgery.—26.

Second Forgery.—26, without heads to the arrows. Also 22, 51.

Third Forgery.—26, 54, larger, 62.

Fourth Forgery.—1, 21, with headless arrows, 51.

Fifth Forgery.—1, 21, with headless arrows, 51, 54, larger.

Issue of January 1, 1866. Stamps of the 1860 issue, surcharged with new values, 5, 10, 15, 20 c.

Of these stamps I have seen no forgeries; but as they are of less value than the unsurcharged ones, it is not very likely that the surcharges will be forged on any genuine stamps; and, if any should exist with the surcharges placed on forged stamps, my readers will be able to detect them easily, from the description of the genuine stamps of 1864, given above.

Issues of 1866-72. 1 c., black.

The following are the varieties :—

1. October 1, 1866. Black or grey-black, on rather thin, white wove paper, unperforated.
2. The same, but with a large, circular black dot at the back of the numeral, near the mountain.
3. January 4, 1867. Paper as before, perforated $11\frac{1}{2}$ to $13\frac{1}{2}$.

Genuine.

Lithographed; varieties as above. The accent over the *ú* of REPÚBLICA is between the *U* and the beaded oval outline to left of it, slightly cutting into the said oval outline, and the accent is partly outlined, like the letters are. The outline to the *A* of REPÚBLICA does not touch the fold of the scroll after it. The foot of the *D* of DEL does not touch the fold of the scroll to left of it. The second *O* of CORREOS is broken at the bottom. Both edges of the scroll or ribbon are beaded, right round the stamp, except above DEL URUGUAY, where it has a plain outline. There is a black accent over the second *E* of CENTÉSIMOS; and the said *E* is placed exactly in the centre of the large numeral. The two scale-pans of the balance in the left top compartment of the shield touch the same horizontal line of the background, leaving one clear line between them and the double outline below them. The easiest test is afforded by the right, upper compartment. The horizontal lines in the top of this compartment only reach down to about level with the *D* of DEL. There are nine of these lines, and there is a large white space between the lowest line and the building on the top of the hill. There is a large, black oblong patch before the *C* of CENTÉSIMOS, and a similar patch after the *O*. There are many more tests, but the above will be found quite sufficient.

First Forgery.

Lithographed, usually in greyish-black, on thick, white, or yellowish-white wove paper, unperforated. The accent over the *U* of REPÚBLICA is not between the *ú* and the outline, but *outside* the outline; and the oval is plain, instead of beaded. The foot of the *A* of REPÚBLICA touches the fold of the scroll to right of it. The bottom corner of the *D* of DEL is joined to the fold of the scroll to left of it. The second *O* of CORREOS is not broken at the bottom. Both edges of the scroll are plain, all the way round the stamp. There is no accent over the second *E* of CENTESIMOS, and the letter is considerably to the left of the centre of the large numeral. The left scale-pan hangs lower than the right, just touching the double line below it; and the right scale-pan rests on the line above this. There are fifteen horizontal lines, instead of nine, in the upper part of the right top compartment; they come down so low, that they cover nearly the whole of the building on the mountain. In the genuine, this building is about $\frac{1}{4}$ mm. high, but in this forgery, it is nearly $1\frac{1}{2}$ mm. high. There is no black patch before the *C* or after the *O* of CENTESIMOS.

Second Forgery.

(Atlee.)

I have not seen this counterfeit. Mr. Atlee says that the horizontal shading above the mountain comes down level with the bottom of the *D* of DEL, and the bull in the right lower compartment is like a mule, or a Noah's Ark lamb.

POSTMARKS.

Genuine.—My only used specimen has what appears to be a small portion of an oval, in red ; probably part of 26.

First Forgery.—26, in black. Also 98.

Second Forgery.—I do not know the cancellation.

Same Issues. 5 c., blue.

1. January 10, 1866. London print, unperforated.

2. 1872. Perforated $11\frac{1}{2}$ to $13\frac{1}{2}$.

There are several errors and other varieties in the sheet, but I do not think I need trouble my readers with them.

Genuine.

Lithographed ; paper as before ; varieties as above. The stamp measures $19 \times 23\frac{1}{2}$ mm. The thin, vertical, left-hand outline of the stamp, inside the frame, prolonged upwards, would cut through the very centre of the R of REPUBLICA ; prolonged downwards, it would pass along the first stroke of the M of MONTEVIDEO. The right vertical outline, prolonged upwards, would cut through the Y of URUGUAY, slightly to left of its centre. The letters UBL of REPUBLICA do not touch each other at the base. There is no horizontal stroke through the second U of URUGUAY, and the top of the Y does not touch the frame-line to right of it. There is a good space between each of the words of the upper inscription. There is no bar across the bottom of the M of MONTEVIDEO ; there is no line joining the tops of the letters TE ; the V is very sharp at the bottom ; and the I has short head and foot-strokes, of equal length both sides, top and bottom. The background is composed of numerous repetitions of 5 CENTECIMOS. There are sixty-six lines of this legend. There are eight radiating, dotted lines to right of the sun, and five or six to left of it. In the head of the 5 there are, normally, four horizontal coloured lines. The curved, inner outlines of the body and tail of the 5 are regularly drawn. The flag on the top of the mountain in the right, upper corner of the shield does not touch the outline above it. In the right, lower corner of the shield there are about fourteen horizontal lines, including the dividing-line. The profile of the horse's face in the left, lower corner only slopes very slightly down to the left, and the very tip of its nose just touches the curled tail of the 5.

Forged.

Lithographed, on medium, soft, or thick, hard, white wove paper. The stamp measures $18\frac{1}{2} \times 24$ mm. The thin vertical outline on the left side, if prolonged upwards, would pass between the R and E of REPUBLICA, cutting into the tail of the R. This line is drawn too long at the bottom, and passes $\frac{1}{4}$ mm. to the left of the first vertical stroke of the M. The right vertical outline, prolonged upwards, would pass a good deal to the left of the centre of the Y of URUGUAY, and the said Y is splayed out so widely, that its right arm almost or quite touches the frame. The letters UBLI of REPUBLICA are usually all joined together at the base ; the foot-stroke of the R very nearly touches the frame, and the A has a cross-bar on the top. There is a line joining the centres of the R and L of DEL,

and another line drawn right across the centre of the second U of URUGUAY. The three words are very much too close together. In the word MONTEVIDEO, the M has a long top-stroke which very nearly touches the frame to left of it, and there is a stroke right across the bottom of the letter. In some of my specimens, the head and foot-strokes of the N nearly touch the O; and in all specimens, the head of the E is joined to the T before it; the point of the V is rather blunt; the head and foot-strokes of the I only show on the right-hand side. I have one specimen in which the I might easily be mistaken for a C. In the genuine, the bottom line of inscription in the background has 5 CENTECIMOS, right and left. In the forgery, the left side reads 5 CENTEC, the right side reads TECIMOS. There are only fifty lines of inscription in the forgery, instead of sixty-six. There are no radiating lines in the white patch to right of the sun, but to left of the head of the 5 there are five hyphens, touching the head. There is a good space between the side of the sun's hair and the dark, vertical shadow of the neck of the 5 to left of it. In the genuine, the hair goes very close to the said shadow and touches it in heavily-printed copies. In the head of the 5, there are five horizontal lines. The curved inner outlines of the body and tail of the 5 are very crookedly and raggedly drawn, as though by a shaky hand. The flag on the building on the mountain touches the outline above it. In the right lower corner, there are about the same number of horizontal lines as in the genuine, but they are much further apart. The profile of the horse's face slopes very much down to the left, and the face is jammed deeply into the shadow of the tail of the 5.

POSTMARKS.

Genuine.—26, rare. Also 29, but with the outer outline octagonal, instead of circular. Also 55. Also a truncated, rectangular frame, about the size of 73, containing CERTIFICADO. Also a similar, truncated rectangular frame, in blue, containing . . . CA, probably FRANCA. Also 29. Also a postmark something like 55. Also a lattice-work postmark, after the style of 7. Also 30.

Forged.—26, 33, 62, 98.

Same Issues. 10 c., green.

1. January 10, 1866. Unperforated.
2. 1872. Perforated $11\frac{1}{2}$ to $13\frac{1}{2}$.
3. Perforated 10, $10\frac{1}{2}$.

Genuine.

Lithographed; paper as before; varieties as above. The stamp measures $19 \times 23\frac{1}{2}$ mm. If the left-hand vertical line were prolonged downwards, it would pass along the first vertical stroke of the M of MONTEVIDEO. If the right-hand vertical line were prolonged upwards, it would cut almost through the centre of the V of URUGUAY; if prolonged downwards, it would graze the right-hand edge of the O of MONTEVIDEO. The letters UB of REPUBLICA do not touch each other, and the L is no taller than the I. The horizontal line under REPUBLICA, etc., is usually single, but I have a specimen which shows a double line there. There is hardly any sign of a head-stroke to the left top corner of the M of MONTEVIDEO; the O is upright; the foot-stroke to the N is very short; the T is upright, with a short foot-stroke; the V is sharply pointed, and does not come any lower than the I; the O is nicely shaped, and not ragged. The bottom line of inscription in the background is IOCENTECIMOSIOCENTECIMOSIOC.,

without any separation; but I have one specimen where this line is placed a shade higher up, and a portion of the tops of the letters and figures of a similar inscription can be seen below it. Normally, there are twenty-five lines of inscription in the background. There are eleven large pointed rays to the sun. The top of the 1 cuts through the third line of inscription from the top, and there is, normally, a perfect line of inscription below the shadow of the foot of the 1. The sun's hair does not touch the shadow of the back of the 1. The top line of inscription inside the o is TEC, the second line is EC, the third line is C, with part of an E before it. The shadow of the right-hand edge of the o is $\frac{1}{2}$ mm. from the side of the stamp, at its nearest point. The bottoms of the numerals are 1 mm. from the line above MONTEVIDEO. There is a line before DIEZ, and another after CENTECIMOS, in the curved inscription in the right-hand limb of the o of 10.

Forged.

Lithographed, on medium, soft, and also on very thick, hard, white wove paper. The stamp is the same size as the genuine. If the left-hand vertical line were prolonged downwards, it would pass nearly 1 mm. to the left of the vertical edge of the M of MONTEVIDEO. If the right-hand vertical line were prolonged upwards, it would pass between the AY of URUGUAY, cutting the foot of the A and the foot of the V. Prolonged downwards, the said line would pass almost clear to the right of the O of MONTEVIDEO. The letters UB of REPUBLICA are joined, top and bottom, and the L is considerably taller than the 1. The horizontal line under REPUBLICA, etc., is always double, and drawn slightly too long on the right side. One of my specimens shows the upper line drawn too long on the left side, under the R. There is a long head-stroke to the left top corner of the M of MONTEVIDEO; the O looks too small, and slopes somewhat to the right. The N has a long foot-stroke to the left; the T seems to slant a little to the right, and has more foot-stroke on the left than on the right; the point of the V is blunt, instead of sharp, and the two head-strokes join at the top, instead of being separate; the I is very short, and does not come down nearly so low as the V. The outline of the O is rather ragged at the top. The shadows of the large numerals partly cover the bottom line of inscription, the right-hand half of which is evidently 10D . . TECIMOS, the E and N not being drawn at all. There are only twenty lines of inscription in the background. I can only see ten rays to the sun; their edges are more darkly shaded than the genuine. The top of the 1 touches the second line of inscription from the top. The sun's hair is firmly joined to the shadow of the back of the 1. The top line of inscription inside the o is INT, the second line is IT, and the third is a hyphen. The shadow of the right-hand edge of the o is only about $\frac{1}{4}$ mm. from the stamp at its nearest point. The bottoms of the numerals are $\frac{1}{2}$ mm. from the line above MONTEVIDEO. There is no line either before DIEZ or after CENTECIMOS, in the right-hand limb of the o.

POSTMARKS.

Genuine.—As in the 5 c.

Forged.—Diamond-shaped dots, as in 42, but I think the postmark is oval. Also 26. Also 98.

Same Issues. 15 c., yellow.

1. January 10, 1866. Unperforated.
2. 1872. Perforated 11 $\frac{1}{2}$ to 13 $\frac{1}{2}$.
3. Perforated 10, 10 $\frac{1}{2}$.

Genuine.

Lithographed; paper as before; varieties as above. The stamp measures $19 \times 23\frac{1}{2}$ mm. The tests of the vertical edges of the stamp are the same as in the 5 c. The C of REPUBLICA is no higher than the letters each side of it. There is a space of $\frac{1}{2}$ mm. between REPUBLICA and DEL, and rather more between DEL and URUGUAY. The horizontal line below these words is single in all my specimens. The vertical edge of the M of MONTEVIDEO is nearly $\frac{3}{4}$ mm. from the inner edge of the left-hand frame, and the final O is less than $\frac{1}{2}$ mm. from the inner edge of the right-hand frame. There are seventy-five lines of the legend CENTECIMOSCENECIMOS in the background. There are five peaks to the sun's rays. The top of the large 1 cuts through the third line of inscription of the background, and there is one clear line of inscription below the shadow of the foot of the 1. The word of value along the 1 and in the back of the 5 is, in each case, spelt CENTECIMOS. The sun's face comes in front of the neck of the 5, but is behind the shield, so that the shield covers it as far as the point of the nose. The tail of the 5 does not touch the shadow of the foot of the 1. The outer frame is $\frac{3}{4}$ mm. thick. There are many other tests, but those here given will be quite sufficient.

Forged.

Poorly lithographed, in dull lemon-yellow, or greenish-yellow, on medium to thick, hard, white wove paper. The stamp measures $19\frac{1}{2}$ (nearly) $\times 23$ mm. If the left vertical edge of the inner frame were prolonged upwards, it would cut into the E of REPUBLICA; and, if it were prolonged downwards, it would pass slightly to the right of the vertical edge of the M of MONTEVIDEO. If the right-hand edge were prolonged upwards, it would cut into the right leg of the A of URUGUAY; and, if prolonged downwards, it would pass clear to the right of the final O of MONTEVIDEO. The C of REPUBLICA is taller than the letters each side of it. In some of my specimens, the foot of the A of this word almost touches the foot of the D of DEL, and there is a space of nearly 1 mm. between DEL and URUGUAY. The horizontal line below these words is double, except in heavily-printed copies, when the two lines run together. The vertical edge of the M of MONTEVIDEO is $1\frac{1}{4}$ mm. from the inner edge of the left-hand frame, and the final O is nearly $1\frac{1}{4}$ mm. from the inner edge of the right-hand frame. The background only shows seventeen lines of inscription, instead of twenty-five, and it is spelt everywhere CENTESIMOS. The peaks of the sun's rays are quite uncountable, being so exceedingly faint. The top of the large 1 cuts into the second line of inscription, and the shadow of its foot cuts into the lowest line, rendering it unreadable. The value in the two numerals is spelt, in each case, CENTESIMOS, and this is, I think, the easiest test for this forgery, as the word in the 1 is quite legible. The side of the sun's face is cut off by the neck of the 5, which is in front of it, but the point of the shield does not hide any portion of the face. The tail of the 5 touches the corner of the shadow of the foot of the 1. The outer frame of the stamp is too narrow, the line being barely $\frac{1}{2}$ mm. thick. The whole stamp has a very poor and washed-out appearance.

Genuine.—As before.

POSTMARKS.

Forged.—26, very small; 62; 76, smaller; 98.

Same Issues. 20 c., rose.

1. January 10, 1866. Unperforated.
2. 1872. Perforated $11\frac{1}{2}$ to $13\frac{1}{2}$.
3. Perforated 10, $10\frac{1}{2}$.

Genuine.

Lithographed as before; varieties as above. The stamp measures $19 \times 23\frac{1}{2}$ mm. The tests of the vertical edges are the same as in the 5 c. The U of REPUBLICA is upright, and properly shaped. The last O of MONTEVIDEO is barely $\frac{3}{4}$ mm. from the inner edge of the vertical frame. There are two clear lines of the inscription, CENTECIMOSCENECIMOSCENECIMOS, below the shadows of the feet of the numerals. There are sixteen peaks to the sun's rays, with signs of a seventeenth on the left side, the last two on the right side being quite white. The coloured line before the CENT in the body of the 2 is $1\frac{1}{4}$ mm. long, and the word in the right side of the large o is spelt CENTECIMOS. The vertical dividing-line of the shield, if prolonged upwards, would pass well to the left of the sun's nose. I think the above tests will be found amply sufficient.

**Forged.**

Lithographed, on medium to thick, hard, white wove paper. The size of the stamp is $18\frac{1}{2} \times 23\frac{1}{2}$ mm. If the left vertical edge of the inner frame were prolonged upwards, it would cut into the tail of the R of REPUBLICA, instead of through its centre; and, if prolonged downwards, it would cut through the very centre of the M of MONTEVIDEO. The right edge, prolonged downwards, would pass clear to the right of the last O of MONTEVIDEO. The head- and foot-strokes of the R of REPUBLICA are too long, and very nearly touch the frame to left of them. The last O of MONTEVIDEO is fully 1 mm. from the frame to right of it. There is only one clear line of inscription below the shadows of the large numerals, and it is CINTICIMOSCENECIMOSCIMOS. There are nine broad rays to the sun, and they have no peaks, but are like a fan. The coloured line before the CENT in the body of the 2 is $2\frac{1}{4}$ mm. long, and the word in the right side of the o is spelt CENTESIMOS. If the vertical dividing-line of the shield were prolonged upwards, it would cut exactly through the very centre of the sun's nose.

Genuine.—As before. **POSTMARKS.**

Forged.—26, 38, without numerals; 52, 98.

NOTE.—These stamps (except the 1 c.) are in sheets of 200, containing 100 varieties. I have given the tests common to all my numerous specimens, but I have not seen any entire sheets. A watermark of a letter or parts of letters is sometimes found, which is part of an inscription across the sheet. The forgeries never show any watermark.

Issues of 1884. 5 c., blue.

There are two types of this stamp. In the first type (Fig. 1), the shadow of the back of the 5, in each of the right-hand corners,

FIG. 1.

FIG. 2.

touches, or nearly touches, the vertical edge of the stamp; there are forty-five horizontal lines in the triangle in the left top corner,

and ninety rays round the sun. In the second type (Fig. 2), the shadow of the back of the 5 in each of the right-hand corners is nearly $\frac{1}{2}$ mm. from the frame to right of it; there are only thirty horizontal lines in the left top corner, and seventy-two rays round the sun. The forgeries are intended to imitate type II., which I describe below.

5 c., Type II. Genuine.

Lithographed, in fairly deep blue, on thin, hard, white wove paper, perforated 12 $\frac{1}{2}$, 13, but also found unperforated. The sun has a pleasant look; the hair is parted in the centre, and does not come down lower than the ears. There are thirty-two horizontal lines in the right lower corner, and thirty in all the other corners. (I do not include the outer frame, or the boundary-line of each triangle in these figures.) There are, as before stated, seventy-two rays round the sun. The right and left points of the lozenge-shaped frame round the sun are firmly joined to the sides of the outer frame of the stamp. The coloured line under the left-hand CINCO CENT\$ is not broken at the bottom point of the lozenge.

Forged.

Apparently typographed, on rather thick, yellowish-white wove paper. My single specimen is unperforated, and it is printed in a sort of lilac-blue. The sun has a very evil look, and is vigorously squinting inwards. The hair is not parted, and gradually merges into the outline of the face, so that it seems to reach nearly to the chin. There are thirty horizontal lines in the left top corner, not including the double frame-lines; and twenty-six in the left bottom corner; twenty-nine in the right top corner; and twenty-seven in the right bottom corner. There are ninety rays round the sun, as in type I. of the genuine. The left point of the lozenge just touches the frame-line to left of it, but the right point is more firmly joined to the frame. The coloured line under the left-hand CINCO CENTS is broken at the bottom point of the lozenge. The numerals in the four corners are all different, and very unlike those of the genuine; but a diagram would be necessary to show the differences. The tail of the 5 in the left lower corner is less than $\frac{1}{4}$ mm. from the vertical outline to left of it, while the tail of the said 5, in the genuine, is $\frac{3}{4}$ mm. from the vertical outline. In some respects, this forgery is better-looking than the genuine.

POSTMARKS.

Genuine.—1, 27, 29. Also one something like 55, but with horizontal lines each side of the central numeral, instead of curved lines.

Forged.—My forgery is uncanceled.

OFFICIAL STAMPS.

OFFICIAL

FIG. 1.

OFFICIAL

FIG. 2.

OFFICIAL

FIG. 3.

There are three types of surcharge, as illustrated above. The forgers have imitated the first type.

Fig. 1 is found in black on the following numbers of Gibbons' 1906-7 Catalogue: 132, 133, 135, 136, 137, 139. In red, on

Nos. 143, 137. In blue, on Nos. 134, 96. These were issued in 1880-1. The same surcharge in black, on Nos. 141, 142 (1882). The same surcharge in black, on No. 144; in red, on No. 146; and in blue, on No. 147 (1883). The same surcharge in black, on the provisionals, Nos. 151, 152. Also on 156 and 157 (1883-4). The same surcharge in black, on Nos. 158 to 170 (1884). The same surcharge in black, on Nos. 166, 173 to 178 (1887-8). The same surcharge in black, on Nos. 182 to 190 (1890). The same surcharge in black, on Nos. 209 to 217 (1895). The same surcharge in black, on Nos. 220 to 227 (1896). Same surcharge in black, on Nos. 232 to 237 (1897). Same surcharge in black, on Nos. 238 to 246 (1897-8). Same surcharge in black, on Nos. 264 to 267 (1899). Same surcharge in black, on No. 182 (1901). I need not give the stamps with the other surcharges, as they have not been imitated.

FIG. 1. Genuine.

The letters of the surcharge are $3\frac{1}{2}$ mm. high; and, from the left-hand edge of the F to the point of the tail of the L, the distance is $15\frac{1}{2}$ mm. The inside oval of the O is nearly $1\frac{1}{2}$ mm. wide. The forged surcharge is found on the stamps here illustrated.

No. 1.

No. 2.

No. 3.

No. 4.

No. 5.

No. 6.

No. 7.

No. 8.

No. 9.

No. 10.

No. 11.

First Forgery.

I have this in black on all the above but No. 6, which is in violet. No. 8 is on the brown stamp, and No. 7 on the deep orange. The surcharge is $3\frac{1}{2}$ mm. high, and the distance F—L is $13\frac{1}{2}$ mm. The centre of the O is very little more than 1 mm. wide.

Second Forgery.

I have this in black on No. 5 and No. 8. The latter is the mauve stamp. The surcharge is $3\frac{1}{2}$ mm. high, and the distance F—L is $14\frac{1}{4}$ mm. The centre of the O is about 1 mm. wide.

POSTMARKS.

Genuine.—As before.

Forged.—All the forgeries, when cancelled, appear to be on stamps with genuine postmarks.

**VENEZUELA.****Issues of 1859-60. $\frac{1}{2}$, 1, 2 Reales.**

The following are the varieties:—

1. 1859. Lithographed. Thin to medium, white wove paper; $\frac{1}{2}$, 1, 2 reales.
2. Ditto, bluish wove paper; 1, 2 reales.
3. 1860. Engraved. Thicker, yellowish-white wove paper; $\frac{1}{2}$, 1, 2 reales.
4. Ditto, greenish paper; $\frac{1}{2}$, 2 reales.
5. Ditto, yellowish paper; $\frac{1}{2}$, 2 reales.

Genuine.

Varieties as above. The gum is usually white on the lithographed stamps, and brownish on the engraved ones. The letters of CORREO are all the same height. The tongue of the first E of VENEZUELA is central, and there is no stop after the word. LIBERTAD is equidistant from the upper and lower outlines of the containing-label. The central, vertical dividing-line of the upper half of the shield is no thicker than the lines to left of it. The horse's legs are thin; the left front foot touches the rounded side of the shield; the right front foot touches the bottom of the shield; and the right hind foot very nearly touches the rounded part of the shield behind it. The head is not jammed up against the semicircular outline above it, though it is very close in the 2 reales. (The design is really separately drawn for each value, but I only take the points common to all.) The background to the horse is composed of horizontal lines. If the central dividing-line of the shield were prolonged upwards, it would pass through the tail of the Z of VENEZUELA; the Z itself is quite upright, and stands under the tail of the second R of CORREO. The right-hand tail of the scroll, above the L of REAL, or the S of REALES, is cut off square by the right-hand frame of the stamp. The left-hand tail is similarly cut off by the left-hand frame, but, in the $\frac{1}{2}$ and 2 reales, it tapers somewhat, before being cut off. Neither tail touches the horizontal outline above the value. There are eight leaves coming out from behind the right-hand end of the LIBERTAD-scroll, five of them being very prominent. There are about twenty-four white leaves on the branch coming from behind the left-hand end of the said scroll. The crossed stems of these branches are white, and their ends do not

touch the horizontal outline below them. The staff of the flag in the right, upper compartment of the shield is composed of two thin, parallel lines. The two crossed tails of the two cornucopiæ above the shield are almost centrally under the Z of VENEZUELA in the $\frac{1}{2}$ and 2 reales, and under ZU in the 1 real. The background, behind the shield, etc., is formed by vertical lines.

First Forgery.

Lithographed, on fairly thick, white wove paper. The E of CORREO is taller than the rest of the letters in the $\frac{1}{2}$ real, and the O and E are taller in the other values. This is caused by a white lump on the top of the said letter or letters. The central tongue of the first E of VENEZUELA is placed too high up. LIBERTAD is much too high in the containing-label, so that the tops of the letters are close to the outline above them, while there is a good space between them and the outline below them. The central, vertical dividing-line of the shield is double; *i.e.*, there is a thick line, with a thin line to left, and almost touching it. The horse's legs are thick and clumsy; the left front foot touches the rounded side of the shield. In the space under his body there are two small objects, like a marble and an earthworm, which are not visible in the genuine. The head is jammed up against the semicircular outline above it, so that it even projects, very slightly, into the outline of the right upper compartment of the shield. The horse has a distinct, dark dot in its neck, which is not found in the genuine, or any other forgery. The background, behind the horse, is almost white, the horizontal lines being very faint or altogether absent. If the central dividing-line of the shield were prolonged upwards, it would pass centrally between the EZ of VENEZUELA, and the Z is sloping to the right, and stands under the EO of CORREO. The right-hand tail of the scroll comes to a point before it touches the side-frame; and the left-hand tail almost comes to a point also. Not more than six leaves (and sometimes only five) can be seen in the right-hand branch; and there are only about sixteen white leaves in the left-hand branch, which is extremely coarse and clumsy. The crossed, lower ends of these branches have a good deal of dark shading on them, and their ends rest on the horizontal outline below them. The crossed tails of the cornucopiæ are exactly centrally under the EZ of VENEZUELA. (This is a very easy test.) The background, behind the shield, etc., is of crossed lines, instead of vertical ones only.

Second Forgery.

Lithographed, a good deal better than the first forgery, on rather thick, hard, yellowish-white wove paper. The letters CO of CORREO are not so tall as the rest. There is a stop after VENEZUELA, which distinguishes this forgery from any other. The central dividing-line of the shield, if prolonged upwards, would cut into the tail of the Z of VENEZUELA, like the genuine; but the Z leans very decidedly over to the left, instead of being nearly upright. The left fore-foot of the horse does not touch the outline of the shield. The tips of the ears just touch the semicircular outline above them. The end of the tail is split, or forked; it is pointed in the genuine. The tail of the scroll on the left side goes into the left bottom corner of the stamp; in the genuine, it is $\frac{1}{4}$ mm. above the corner. There are eight leaves to the right of the scroll, as in the genuine, and about twenty-three in the branch to left of the scroll, which are very nicely done. The crossed stems of both branches rest on the outline below them. The flagstaff in the right upper corner of the shield is single at the top, and double or thicker below. The coloured dots in this compartment are much smaller than the genuine, which are coarse and

irregularly shaped. The crossed tails of the cornucopiæ on the top of the shield are under the ZU of VENEZUELA, but decidedly nearer to the Z than to the U. There is a very large, white flower under the VE of VENEZUELA, something the shape of a daisy. It has a large white centre, with a coloured dot in the middle of it, and about eight white petals surrounding this centre. To the right of this flower, under the N, there is another flower with five petals, like a primrose. In the genuine, the big flower below the VE is absent, and under the N there is a flower something like a cineraria, with seven petals. The background, behind the shield, etc., is formed by crossed, vertical and horizontal lines.

Third Forgery.

Of this I have only the $\frac{1}{2}$ real, and it is so very indistinct, that I can give hardly any tests. It is lithographed, in brownish-orange, on thick, very greenish wove paper. The C of CORREO is a good deal smaller than the O. None of the horse's feet appear to touch the boundary-line. The Z of VENEZUELA leans over considerably to the left. The left-hand tail of the scroll goes into the bottom corner. I can only make out five broad leaves to right of the LIBERTAD-label, and the leaves of the branch on the other side are uncountable. The crossed stems of the branches rest on the horizontal outline below them. The background behind the shield, etc., is of solid colour.

Fourth Forgery.

There is a curious history connected with these stamps. They, together with a set of the issues of 1861, 1863, 1866, and 1874, which I shall describe later, in due order, were seized by the Government. In order not to waste these confiscated labels, and to turn a dishonest penny at the same time, the Government, instead of destroying them, sold them to collectors. They are lithographed, on thick, very white wove paper, white gum. The O of CORREO is broken at the top, and the E is taller than any of the other letters. LIBERTAD is in much thicker letters than the genuine; the B and E are very badly drawn, and there are dots, connecting the B and the R with the outline below them. The central, vertical line of the shield is double; if prolonged upwards, it would cut almost centrally through the Z above it; the Z stands below the RE of CORREO. Three of the feet of the horse touch the bottom of the shield, and the left hind leg is a stump in some copies; while, in others, all four feet touch the outline of the shield. The nose points towards the I of LIBERTAD, though, in the genuine, it points above the left-hand end of the scroll, containing that word. The horizontal lines, behind the horse, are irregularly drawn, and not parallel. The dividing-line of the shield is double, consisting of two thin lines, very close together. If prolonged upwards, these lines would pass through the centre of the Z of VENEZUELA, which stands under the RE of CORREO, but nearer to the E. The tails of the scroll go into the corners of the stamp, touching both the vertical frame, and the horizontal line above the value. There are seven rather poorly-drawn leaves in the right-hand branch, and about twenty-two in the left-hand one. Their crossed stems are dark and short. In the right upper compartment of the shield, the flag is to the right, instead of to the left, and the flagstaff is a single line. The crossed tails of the cornucopiæ are centrally under the Z of VENEZUELA, and there are two apples and some leaves coming out of the mouth of the left-hand one, instead of the flowers of the genuine. The background behind the shield, etc., is composed of vertical lines, but they are not nearly so regularly drawn as the genuine.

POSTMARKS.

Genuine.—29, large. Also a numeral, like 87. I have also seen a set of square dots, and a curious, long, blunt oval. Also a star, like 92, but much smaller. I have also seen three rows of black oblongs, six in a row, those in the top row being wedge-shaped.

First Forgery.—1 ; 38 without numerals.

Second Forgery.—1.

Third Forgery.—1.

Fourth Forgery.—Usually uncanceled, but I have one specimen bearing 29.

BOGUS STAMP (OR ESSAY?).

$\frac{1}{2}$ Real, orange, orange-vermilion.

I thought this stamp was probably an essay, but I am told that it is altogether bogus. It measures $18\frac{1}{2} \times 22\frac{1}{2}$ mm., while the genuine stamps are only $14 \times 19\frac{3}{4}$ mm. The design, as far as its centre is concerned, is a fair copy of the genuine; but a frame, $1\frac{1}{2}$ mm. wide, has been added, at the bottom and each side. In each of the four corners there is a shaded white ball, on a solid ground. The three strips of frame have a peculiar pattern in them, which I can only describe as being like a row of very fat, white capital r's, with the corner of the foot of each joined to the corner of the head of the next by a diagonal, white bar. The r's slant outwards in the side-frames, and are horizontal in the bottom frame. The tails of the LIBERTAD-scroll are as wide as the scroll itself; they are forked at the ends, and do not go near the side or bottom frames.

POSTMARKS.

My specimens are uncanceled.

Issue of 1861. $\frac{1}{4}$ c., green.

Genuine.

Lithographed, on thin to medium, yellowish-white wove paper; white gum. There are seventeen pearls down the left side of the frame, seventeen down the right side, and nineteen along the bottom, counting the corner-pearls in each case. The tail of the C of CORREO is very square, like a G, but without cross-bar; and the D of DE is as tall as the O before it. The stop after VENEZUELA is placed between the two outlines of the frame. The circle formed by the crossed tails of the cornucopie is almost centrally under the E of DE. The said tails cross where they lie on the shield, and again close to their tips. The L of LIBERTAD does not touch the outline below it, but the E does. The crossed ends of the branches, below the LIBERTAD-scroll, are tied together with a stiff bow of ribbon. The horse (which now, by the way, is galloping to the left, instead of to the right) has the usual four legs, and his hind hoof is very distinct, and turned upwards. The upper outline of the compartment containing the said horse is curved, as in the first issue. I think these tests will be found amply sufficient.

First Forgery.

Lithographed, on thick, yellowish-white wove paper. There are sixteen pearls down the left side of the stamp, eighteen down the right side

(the lowest but one is almost hidden by the fork of the scroll), and nineteen along the bottom, counting the corner-pearls in each case. The tail of the C of CORREO is rounded in the usual manner, and not at all like a G; and the D of DE is only half the height of the O before it. There is no stop after VENEZUELA. The circle formed by the crossed tails of the cornucopiæ is almost centrally under the V. The end of the tail of the L of LIBERTAD almost touches the outline below it, and the E does not touch the outline. The lower ends of the branches do not cross, but there are some objects under the BERT of LIBERTAD which somewhat resemble a horse-shoe and an inverted stirrup-iron. There is no bow of ribbon. The horse has five legs, and his hind hoof does not turn up. The outline of the compartment above him is a straight, horizontal line.

Second Forgery.

This belongs to the set seized by the Government, and sold to collectors. Lithographed, in pale emerald-green, on thick, very white wove paper. There are twenty-one pearls down the left side (the lowest but one is hardly visible), sixteen down the right side, and seventeen along the bottom, counted as before. In the genuine, every pearl has a dark crescent in it; but in this forgery, some of the pearls have dots in them, and most of those along the bottom have straight dashes or hyphens, instead of crescents. The C of CORREO leans to the left, instead of to the right; and the cross-stroke or serif at the back of the top of the D of DE is omitted. The L and A of VENEZUELA touch at the base, and there is no stop after the word. The crossed tails of the cornucopiæ (which are more distinct than in the genuine) are below the E V of DE VENEZUELA. The horizontal lines in the part of the shield containing the horse seem to be in pairs (two close together, and then a wider space); and the horse's hind hoof is very badly shaped.

POSTMARKS.

Genuine.—Some of the cancellations of the first issue.

First Forgery.—29.

Second Forgery.—Uncancelled.

Same Issue. $\frac{1}{2}$ Centavo, grey-lilac, brown-lilac.

Genuine.

Lithographed; paper as before. There are sixteen pearls down the left side, eighteen down the right side, and eighteen along the bottom. The D of DE is as tall as the O before it, and the stop after VENEZUELA is placed between the two outlines of the frame, as before. The crossed tails of the cornucopiæ are slightly to the left of the point of the V above them. The I of LIBERTAD leans over slightly to the right. The bow of ribbon fastening the branches is a little broader than in the $\frac{1}{4}$ c. The horse, and the outline of the compartment above his head, are the same as in the $\frac{1}{4}$ c.

First Forgery.

This is like the first forgery of the $\frac{1}{4}$ c. Lithographed, in lilac or violet, on thin to thick, yellowish-white wove paper. There are sixteen pearls down the left side, eighteen down the right side, and nineteen along the bottom. The head of the C of CORREO touches the O, and the D of DE is only about half the height of the O before it, which is shaped exactly like a D. There is no stop after VENEZUELA. The crossed tails of the cornucopiæ, as in the first forgery of the $\frac{1}{4}$ c., are very like a ball and do

not seem to belong to the cornucopiæ, but are, as it were, laid upon them. The I of LIBERTAD leans over very much to the right. As before, the horse-shoe and inverted stirrup-iron replace the bow of ribbon which ought to tie the branches below the scroll. The horse has five legs, and the outline of the compartment above him is straight, instead of curved.

Second Forgery.

Lithographed, in slate-grey, on thick, white wove paper. There are fifteen pearls down the left side (the fork of the scroll encloses the lowest but one), fifteen down the right side (one missing where the fork crosses), and eighteen along the bottom. Nearly all the pearls have dots in them, instead of crescents. The D of DE has an exaggerated head-stroke, making it look top-heavy. There is no stop after VENEZUELA, and the A is joined to the pearl below it. The crossed tails of the cornucopiæ are below the E V of DE VENEZUELA. The I of LIBERTAD is upright. The left-hand end of the branch is above the I, instead of above the O of MEDIO, and it does not touch the pearl below it, though it does in the genuine. The outline above the horse is horizontal, instead of curved.

Third Forgery.

Lithographed, in dark slate, on thick, hard, white wove paper. There are about sixteen pearls down the left side, though some of them are almost invisible, and the top one is a spiral curl, instead of a pearl; there are fifteen down the right side, the top one being only a semicircle; and about nineteen along the bottom. Only a few of these pearls show crescents in them, the majority having a dot, or nothing at all in them. The D of DE is only half the height of the O before it, and is badly drawn. There is no stop after VENEZUELA, and the A is joined to the pearl below it. The forms of the cornucopiæ cannot be made out. There is a large, partly-outlined ball, where the crossed tails should be, and it is centrally under the E V of DE VENEZUELA. The I of LIBERTAD leans over *very* much to the right, and is badly drawn. The space between the LIBERTAD-scroll and the pearls below, is quite blank, as the crossed branches and the bow of ribbon are absent. The shield is divided into four compartments, by a vertical and a horizontal line, crossing one another, and the vertical line cuts right through the body of the horse, which is like a wolf. The wheat-sheaf in the left upper compartment is represented by a tumbler, with vertical sides; there is no flag on the flagstaff, and the oblique sword has become a long battle-axe, while the vertical sword is omitted. This is the worst of all the forgeries, and not likely to deceive.

Fourth Forgery.

This belongs to the set seized and sold by the Government. Lithographed, in cold violet, or in red-lilac, on thick, hard, white wove paper. There are twenty-one pearls down the left side, sixteen down the right side, and seventeen along the bottom. The top pearl on the left side and the bottom pearl on the right side have no marks in them, and very few of the pearls have really well-shaped crescents in them. The letters RRE of CORREO touch each other at the base, and there is no head-stroke to the D of DE. There is no stop after VENEZUELA. The tips of the tails of the cornucopiæ face one another, instead of crossing, and they stand centrally under the E V of DE VENEZUELA. The E of LIBERTAD is absurdly small, compared with the letters each side of it. The ribbon tying the branches has rounded ends, instead of nearly square ones. The end of the branch over the N of CENTAVO does not touch the pearl beneath it, though it does in the genuine. The horse is the same as in

the second forgery of the $\frac{1}{2}$ c. The head-stroke to the M of MEDIO is so long, that it touches the left side of the stamp; while, in the genuine, the said head-stroke is a full millimetre from the side. There is a white space in the centre of the wheat-sheaf, with a coloured dot in its centre.

Fifth Forgery.

Lithographed, in very red lilac, on medium, yellowish-white wove paper. There are sixteen pearls down the left side, eighteen down the right side, and eighteen along the bottom, like the genuine; and the pearls have the dark crescents in them; but all the pearls down the left side have the hollow parts of their crescents facing *inwards*; whereas, in the genuine, the crescents in the two top pearls on the left side face outwards, instead of inwards. The D of DE leans over to the left, and has no serif at the back of the head. There is no stop after VENEZUELA. The motto is LIBERTAD, and the E is smaller than the B each side of it. The letters look too large for the scroll, and go much too close to the ends of the label (about $\frac{3}{4}$ mm., instead of about $1\frac{1}{2}$ mm.). The horse's hind foot does not turn up, but points to the D of LIBERTAD.

POSTMARKS.

Genuine.—As before.

First Forgery.—1.

Second Forgery.—1, 51.

Third Forgery.—1.

Fourth Forgery.—Uncancelled, or two concentric ovals, close together.

Fifth Forgery.—29.

Same Issue. 1 Centavo, brown.

Genuine.

Lithographed, as before. There are sixteen pearls down the left side, seventeen down the right side, and eighteen along the bottom. The D of DE is as tall as the O before it, and it has a thin serif at the back of its head. The bottom of the C of CORREO almost touches the pearl below it. The stop after VENEZUELA, in this value, is *on* the inner frame-line, *i.e.*, the line is drawn through the stop. The crossed tails of the cornucopiæ are exactly under the space between the E V of DE VENEZUELA. If the central dividing-line of the shield were prolonged upwards, it would just graze the left top corner of the V of VENEZUELA.

The L and A of LIBERTAD just touch the outline above them; and the D is the proper distance from the A. The bow of ribbon is much the same as in the $\frac{1}{2}$ c. As in the other values, there are two flags in the right top compartment of the shield, the second being a very small and ragged affair. The horse is the same as in the other values, only his legs are not so well drawn.

First Forgery.

Lithographed, in grey, and in grey-brown, on medium to thick, white wove paper. There are fifteen pearls down the left side, sixteen down the right side, and twenty-one along the bottom. Most of them contain dots, instead of crescents. The C of CORREO is a long way from the pearl below it ($\frac{3}{4}$ mm.); the D of DE is only half the height of the O before it, and has no serif to the back of its head. The name is spaced

VENEZUELA, and there is no stop after it. The B of LIBERTAD leans over to the right, very much more than the genuine, and the letters BERT and D all touch the outline below them. The horse is a caricature, and the horizontal lines in the background are badly drawn, and not at regular distances apart. The outline above the horse is *almost* straight, instead of being strongly curved. There is only one flag.

Second Forgery.

Lithographed, in purple-brown, on thick, very yellowish-white wove paper. There are sixteen pearls down the left side, eighteen down the right side (the lowest but one very small), and eighteen along the bottom, like the genuine $\frac{1}{2}$ c. The D of DE touches the O before it, and has no serif at the back of its head. There is no stop after VENEZUELA. If the central dividing-line of the shield were prolonged upwards, it would cut centrally through the V. The motto is LIBERTAD, as in the fifth forgery of the $\frac{1}{2}$ c. The central point of the bottom of the shield is above the space between the EE of LIBERTAD. In the genuine, the said point is above the beginning of the R. There is only one flag, and the dots of the background show through it.

Third Forgery.

Lithographed, in chestnut-brown, on thick, yellowish-white wove paper. There are sixteen pearls down the left side, eighteen down the right side (the one next to the bottom being very indistinct), and nineteen along the bottom. The C of CORREO is a long way from the pearl below it, and the D of DE is only half the height of the O before it, and has no serif at the back of its head. There is no stop after VENEZUELA. The cornucopiæ are the same as in the first forgery of the $\frac{1}{2}$ c., and the ball which replaces the crossed tails is almost centrally under the V. If the central line of the shield were prolonged upwards, it would cut through the centre of the V. The horse is the same five-legged beast that is depicted in the first forgery of the $\frac{1}{2}$ c.; and the outline above him is straight, instead of curved. There is only one flag. The wheat-sheaf is like a Christmas cracker.

Fourth Forgery.

This is one of the stamps seized and sold by the Government. Lithographed, in grey-brown, on thick, very white wove paper. There are twenty-one pearls down the left side, sixteen down the right side, and seventeen along the bottom. Most of the pearls contain dots, instead of crescents; but those along the bottom chiefly show dashes or hyphens. There is no serif to the back of the head of the D of DE, and no stop after VENEZUELA; the A being at some distance from the frame to right of it. The tips of the tails of the cornucopiæ face one another, instead of crossing. The wheat-sheaf has a white space in the centre, with a coloured dot in it. There is only one flag. The B of LIBERTAD just touches the outline below it, and the E is absurdly small. The I leans over to the left. The right-hand stem of the branch, below the bow, does not touch the pearl below it, so that the opening between the stems contains three pearls, instead of two. The stop after CENTAVO is nearer to the frame than to the O. In the genuine, it is nearer to the O than to the frame.

POSTMARKS.

Genuine.—As before.

First Forgery.—22, 51.

Second Forgery.—29.

Third Forgery.—1.

Fourth Forgery.—Uncancelled.

Fifth Forgery.—I do not know the cancellation.

Issue of 1863-4. $\frac{1}{2}$ (Medio) Centavo, red.

Genuine.

Lithographed, on medium, white wove paper. There are fifty-five pearls round the eagle; and the engraver's secret mark is a vertical, coloured line in the central pearl on the left side of the circle. There are forty-five vertical lines behind the stars, the left-hand line being *very* close to the frame; and, between the second and third lines, under and to the left of the F of FEDERACION, there is a coloured blotch, or irregularly-shaped dot. The said F is more than $\frac{3}{4}$ mm. from the left-hand end of the label. The central star is exactly under the R of FEDERACION.

Forged.

Lithographed, in a sort of salmon-pink, on thinnish, slightly bluish-white wove paper. There seem to be about fifty-nine pearls round the eagle, but many of them are so jumbled together, that it is almost impossible to count them, and there is no secret mark. My specimen is so faint, that I cannot count the vertical lines behind the stars; but they are wider apart than the genuine, and so there are no doubt fewer. The blot in them, below the F of FEDERACION, is absent, and the F is only about $\frac{1}{4}$ mm. from the left-hand end of the label. The central star is under the space between RA of FEDERACION. MEDIO is quite unreadable in my specimen. I cannot give further details, owing to the faint printing, but this is really a good-looking forgery.

POSTMARKS.

Genuine.—I have never seen any other postmark but 29. The stamp is seldom found cancelled.

Forged.—A large oval, with two thin outlines, close together, containing VENEZUELA, etc.

Same Issue. 1 (Un) Centavo, grey.

Genuine.

Lithographed; paper as before. There are fifty-seven pearls round the eagle; and the engraver's secret mark is, as before, a vertical, coloured line in the central pearl on the left side. There are forty-three vertical, coloured lines behind the stars. The said stars are five-pointed, and the central one is slightly to the left of the centre of the R of FEDERACION; none of them touch each other, or the outline above them. The F is $\frac{3}{4}$ mm. from the left-hand end of the label. The eagle's beak is open, and it has just the faintest sign of a crest. In the right claw (left side of the stamp), it grasps two horizontal, white rods, and a slanting pole, with a cap of liberty on it. In the other claw, it holds what looks a flowering stem of white lilies. The name is written VENEZOLANA. The stop after CENTAVO is under the opening of the forked end of the scroll.

First Forgery.

This is a miserable affair, but extremely common. Lithographed, in pale grey, on thick, very yellowish-white wove paper. There is no secret mark in the pearl. The circle has only forty-three pearls; they are far apart, and easy to count. Behind the stars, there are forty-five vertical lines. The stars are much too large (some of them $2\frac{1}{2}$ mm. across, instead of $1\frac{1}{2}$ mm.), and two, and sometimes three, of those on the left side are joined together. The central star is exactly under the middle of the R of FEDERACION. The F is $1\frac{1}{2}$ mm. from the left-hand end of the label. The eagle's beak is short, and not at all hooked. There is a large white crest, sticking out from the back of the head. The right foot (*very badly drawn*) nearly touches the wing, and occupies the place where the slanting pole should be; the left leg is amputated, showing a stump, but no foot; and there is no lily-stem. The name is VENEZULANA. The stop after CENTAVO is under the outer point of the forked end of the scroll.

Second Forgery.

This is better than the first, though I have only a rather poor specimen. Lithographed, in lavender, on thick, white wove paper. There are, as far as I can make out, forty-seven pearls round the eagle; many of them are oblongs, instead of being circular, and there is no secret mark. I cannot see the vertical lines behind the stars, as they are hidden by the postmark in my specimen. The central star is under the RA of FEDERACION, and the F is about $\frac{3}{4}$ mm. from the left-hand end of the label. The letters of this word are irregular, and placed too high in the label. The eagle's beak seems to consist of the upper mandible only; the eye is at the top of the head, and there is no sign of a crest. The slanting pole in its claw has no cap of liberty on it. The rest of the tests are hidden by the postmark. The name is VENEZOLANA, like the genuine, but the O is larger than the other letters, as though the artist had known of the wrong spelling of the first forgery, and had desired to show that the letter was really an O, and not a U.

Third Forgery.

Lithographed, in greenish-grey, on rather thick, white wove paper. There are forty-seven pearls round the eagle, and the secret mark is absent. Behind the stars, there are fifty-six vertical lines. The central star is almost exactly under the R of FEDERACION. The F is 1 mm. from the left-hand end of the label. The eagle is very like that of the first forgery, with a strongly-marked crest, and its left foot amputated. The right foot (left side of the stamp) touches the wing, instead of holding a pole, with a cap of liberty. The postmark covers the name in my single specimen, but I think it is VENEZOLANA. The stop after CENTAVO is under the outer fork of the end of the label above it.

Fourth Forgery.

Lithographed, in greenish-grey, on stout, rather soft, white wove paper. This is exceedingly like the first forgery, but there are forty-seven pearls round the eagle. There is no secret mark. Behind the stars, there are fifty-six vertical lines, many of them wavy. The two stars under the ED of FEDERACION are joined together, and the central star is rather to the right of the centre of the R above it. The F is $1\frac{1}{4}$ mm. from the left-hand end of the label. The eagle's head is very similar to that of the first forgery (*i.e.*, rounded, with a crest, and very unlike the low, flat, long

head of the genuine). The left foot (right side of the stamp) is amputated, and there is, of course, no lily-stem. The right foot has a long claw touching the wing, and the pole and cap of liberty are absent. The name, as in the first forgery, is VENEZOLANA.

Fifth Forgery.

This belongs to the set seized and sold by the Government. Nicely lithographed, in blue-grey, on fairly thick, white wove paper. There are forty-seven pearls round the eagle, and the secret mark is absent. Behind the stars, there are fifty vertical lines, the left-hand one being double, lower down. The left-hand star is badly shaped, and appears to have only four points. The F of FEDERACION is barely $\frac{3}{4}$ mm. from the left-hand end of the label. The eagle's head is rather pointed at the top; there is no crest, and there is a sort of wattle under the beak. The left foot carries a long cross, or cross-handled sword; and the object in the right foot (left side of the stamp) looks very like one of the long-handled sponges, used for sponging out a cannon. The letters of the bottom inscription are placed too near the bottom of the containing-label; the V of VENEZOLANA is above the space between UN and CENTAVO, instead of centrally above the N of UN; and the C of CENTAVO is exactly below the first E of VENEZOLANA, instead of below the NE of that word. The right-hand end of the VENEZOLANA-scroll ends in two tails, instead of a V-shaped fork. There is no stop after CENTAVO.

Sixth Forgery.

Badly lithographed, in bluish-slate, on thick, hard, very yellowish-white wove paper. There are forty-nine pearls round the eagle, some of those on the right side being accompanied by smaller, white dots. There is no secret mark, but the pearl which ought to have it is only a half-pearl (left-hand half), so the forgers have evidently copied from a specimen of the genuine, in which defective printing had caused the vertical secret mark to obliterate the right-hand half of the pearl. There are forty-one thick, vertical lines behind the stars. The stars are very shapeless, and two of them on the left side appear to be six-pointed. The F of FEDERACION is 1 mm. from the left-hand end of the label, and all the letters of this word are much too thin. The eagle's head is exactly like that of a common hen, and there is no crest. The lily-stem in its left foot looks like a cross-handled sword. VENEZOLANA is in very small, and scarcely readable letters. The V of CENTAVO is sharply pointed, instead of being cut off square at the bottom.

POSTMARKS.

Genuine.—29.

First Forgery.—1, 29.

Second Forgery.—An oval, like 27, but smaller.

Third Forgery.—1.

Fourth Forgery.—1.

Fifth Forgery.—1.

Sixth Forgery.—Uncancelled.

$\frac{1}{2}$ (Medio) Real, yellow, orange.

There are two types of this stamp, which I must describe separately, as there are many points of difference. My publishers' catalogue speaks of what I call "type 2," as "from a retouched die"; but I should rather call it a redrawn design.

Issue of 1863-4 (Type 1). Genuine.

Lithographed ; paper as before. There are forty-nine pearls round the eagle. The engraver has put *two* secret marks—the vertical line in the left-hand pearl, as before, and a dot in the top pearl, above the eagle's head. There are about fifty-nine vertical lines behind the stars, and the central star is, as before, slightly to the right of the centre of the R of FEDERACION. The F of this word is only about $\frac{1}{3}$ mm. from the left-hand end of the label ; the white, vertical line to left of the said F is broad (about $\frac{1}{4}$ mm.) ; and the N is about $\frac{3}{4}$ mm. wide. The eagle's head is like that of the 1 c., but there is no sign of any crest. The left foot holds the lily-stem, as before ; but the right foot seems to have only *one* almost horizontal, white line, besides the slanting pole, with cap of liberty. The lower inscription is in letters rather too short, and which do not come up to the upper outline of the label. The vertical stroke of the E of MEDIO is *almost* as wide as the I ; and the L of REAL is too thick, compared with the rest of the letters. There is a nearly square stop after REAL.

**Issue of 1865 (Type 2). Genuine.**

Lithographed ; paper as before. There are fifty-two pearls round the eagle. There is the dot for a secret mark, in the pearl above the eagle's head, but my single specimen does not show the vertical line in the left-hand pearl. There seem to be about seventy-three vertical lines behind the stars, but they are very faint in my specimen. The central star is under the space between the RA of FEDERACION. The F is $\frac{3}{4}$ mm. from the left-hand end of the label ; and the vertical line to left of the F is a mere hair-line. The N is fully 1 mm. wide. The lower mandible of the eagle's beak is shorter than in type 1. The left foot holds the lily-stem, as before ; but the right foot has a spear, in place of the pole with cap of liberty. The letters of the lower inscription come to the top outline of the label ; the E of MEDIO is *very* thin, and the I is far too thick. The L of REAL is almost as thin as the E of MEDIO. I cannot make out any stop after REAL. There are three distinct, graduated dark balls or dots at the upper end of each of the side-labels ; while, in type 1, there are only two balls on the left side.

First Forgery.

Lithographed, on thick, yellowish-white wove paper. There are only forty-three pearls round the eagle, and many of those on the right side are oval, instead of round. Behind the stars, there are about forty-three vertical lines. The central star is under the space between RA of FEDERACION, but nearer to the A. (This is probably meant for an imitation of type 2.) The second star on the right side has six points, instead of five. There is no secret mark. The F of FEDERACION is like a P or a D, and is $\frac{1}{2}$ mm. from the left-hand end of the label. All the letters of this word are *much* too short, not going near the upper or lower outline of the containing-label, and the N is $\frac{3}{4}$ mm. wide. The eagle's beak has no lower mandible, and the eye is at the top of the head. There is, apparently, a long flash of lightning in the left foot, and the slanting pole in the right foot has no cap of liberty on it, while the two almost horizontal lines below the said pole are too prominent. The letters of the bottom inscriptions are fairly regular, but they are too short, not going near the upper and lower outlines of the containing-label. The O of VENEZOLANA is much wider than the Z to left of it. The L of REAL, if

prolonged upwards, would cut exactly into the V-shaped fork of the right-hand end of the VENEZOLANA-scroll; though, in both types of the genuine, the said L would pass far to the left of the fork. There is no stop after REAL. There are three graduated, coloured dots at the top end of the left-hand frame, but only two at the top of the right-hand frame.

Second Forgery.

Lithographed, on medium, hard, yellowish-white wove paper. This is identical with the first forgery of the 1 c., and the tests are the same, except the following: The letters of MEDIO REAL are nicely drawn, but too short; the M is less than $\frac{1}{2}$ mm. from the left-hand end of the label, instead of more than $\frac{1}{2}$ mm. (type 1), or nearly 1 mm. (type 2). The L of REAL, if prolonged upwards, would cut exactly into the left-hand point of the right-hand forked end of the scroll. The name, VENEZULANA, is a very easy test.

Third Forgery.

Lithographed, in orange-vermilion, on thick, white wove paper. There are forty-seven pearls round the eagle; they are irregular, and some of them blotched together. The secret marks are absent. There are only forty-two vertical, coloured lines behind the stars. The middle star is centrally under the R of FEDERACION. The F of this word is more than $\frac{3}{4}$ mm. from the left-hand end of the label. The white, vertical line before the F is wider than the hair-line of type 2, but not so wide as in type 1; while the N is narrow, as in type 1, but badly drawn. The eagle's head is postmarked, in my specimen; but I can see that the back of it runs up into a sort of point, and the beak is that of a fowl. Instead of a lily-stem, there is in the left foot (right side of the stamp) a long-stemmed cross, or a cross-handled sword. The letters of VENEZOLANA are very small. In both types of the genuine, the R of REAL is under the first A of VENEZOLANA, but in this forgery, it is centrally under the L. The letters of MEDIO REAL are in ordinary, Roman type, instead of sans-serif letters, and the E of MEDIO looks like an F. The cross-bars of the top and bottom of the I of this word ought to be an easy test, as the letter is simply a straight stroke, in both types of the genuine. This bottom inscription is set decidedly too high in the containing-label, showing far more space below than above it. There is no stop after REAL.

Fourth Forgery.

Lithographed, in orange-yellow, on thick, hard, white wove paper. This is the same as the fourth forgery of the 1 c., and the tests are the same as for that counterfeit, with the following additions:—The secret marks are absent. The D of FEDERACION, in my specimen, has no back, which makes it into an E. The words MEDIO REAL are regular, as in type 1, but they are too tall, touching the white line above them. The R of REAL is not centrally under the first A of VENEZULANA, but under its right leg.

Fifth Forgery.

This, like the fifth forgery of the 1 c., is the counterfeit seized and sold by the Government. Lithographed, in lemon-yellow, and in rather deep orange, on rather thick, very white wove paper. The tests are the same as for the fifth forgery of the 1 c., with the following additions. There are no secret marks. The N of FEDERACION is the wide letter of type 2, but the I of that word is no thicker than the first stroke of the N, though it is very much thicker in type 2 of the genuine. The white, vertical line to left of the F is the broad line of type 1. There is no stop after REAL.

Sixth Forgery.

Lithographed, in ochre-yellow, on thick, hard, white wove paper. There are usually forty-nine pearls round the eagle, but one of my specimens has three very small pearls, instead of one large one, level with the top of the eagle's left wing (right side of the stamp). There are about forty-two vertical, coloured lines behind the stars. The middle star is centrally under the R of FEDERACION, and several of the stars have six points, instead of five. There are no secret marks. The F of FEDERACION is a full millimetre from the white line to left of it, which is of medium thickness, and the N is $\frac{3}{4}$ mm. wide. The eagle's head is too high at the back. The left foot holds a cross-handled sword, instead of a lily-stem. The top of the O of VENEZOLANA is often broken, making it look like a U, and all the letters of this word are too small. The bottom inscription is in ordinary, Roman capitals, instead of sans-serif letters. The R of REAL is under the L of VENEZOLANA, instead of under the first A. There is no stop after REAL.

Seventh Forgery.

Lithographed, in orange-yellow, on rather thin, hard, white wove paper. There are fifty large, rather oval pearls, very easy to count, round the eagle. Behind the stars, there are about fifty vertical, coloured lines. The central star is nearly under the space between the RA of FEDERACION, like type 2 of the genuine. There are no secret marks. The F of FEDERACION is $\frac{3}{4}$ mm. from the white line to left of it, which is of medium thickness, and the N is nearly $1\frac{1}{4}$ mm. wide. The eagle has a very distinct crest. The stem or branch in the left foot is very coarse. The two parallel white rods (or whatever they are) in the right foot, slope considerably upwards, and touch the inner outline of the pearled circle, though they do not touch it in the genuine. The slanting pole is badly drawn; it appears to be partly double, and there is no cap of liberty on it. (By the way, the said cap of liberty, in the genuine, is often exceedingly like a spear-head.) The letters of the bottom inscription have their vertical strokes all as wide as the I of MEDIO in type 2. There is no stop after real.

Same Issue. 1 Real, blue.**Genuine.**

Lithographed; paper as before. There are fifty-two pearls round the eagle. The secret mark is, as before, a coloured, vertical line in the middle pearl, on the left side of the stamp. There are forty-five vertical lines behind the stars, all rather wavy. The middle star is centrally under the RA of FEDERACION. The F of this word is rather more than $\frac{1}{2}$ mm. from the left-hand end of the label, and the N is exactly 1 mm. wide. The letters of this word do not reach to the top or bottom of the solid background of the label. The eagle's beak is open. There is hardly a trace of any crest. The claw clasping the lily-stem forms a distinct, four-rayed white star. The slanting pole, and two parallel white lines are the same as in the other values. The point of the V of VENEZOLANA is exactly above the right-hand limb of the U of UN, and there is a space of *almost* 2 mm. between the words UN REAL. The stop after REAL is square; it is $\frac{1}{2}$ mm. from the L, and nearly $1\frac{1}{2}$ mm. from the right-hand end of the label, while the U of UN is 2 mm. from the left-hand end of the said label.

First Forgery.

This is uniform with the first forgery of the $\frac{1}{2}$ real, with forty-three pearls round the eagle, most of them oval, instead of round. There are

forty-two vertical lines behind the stars, and they are straight, instead of wavy. There is no secret mark. The tests for the first forgery of the $\frac{1}{2}$ real will serve for this counterfeit, with the following additions:—On the eagle's left foot there is a plain, slanting white bar; and on the other there are two almost horizontal, parallel white bars, crossed by a slanting bar, exactly like the one on the other foot. I say "on," instead of "in," as there are really no feet to grasp the implements. There is, of course, no white star for a claw. The F of FEDERACION is a P, and the D is an O; and the letters do not reach nearly to the top and bottom of the label. The point of the V of VENEZOLANA is a shade to the left of the right limb of the U of UN, and the space between the words UN REAL is barely $1\frac{1}{2}$ mm. There is no stop after REAL, which is an easy test, as the stop is very distinct in the genuine. The U is $2\frac{1}{2}$ mm. from the left-hand end of the label, instead of 2 mm.

Second Forgery.

This is the same as the second forgery of the $\frac{1}{2}$ real, with forty-three pearls round the eagle, and the name written VENEZULANA. The secret mark is absent. There are about forty-three vertical lines behind the stars, most of them straight. The stars are much too large, and three of them are joined together, under the EDER of FEDERACION, the middle star being centrally under the R. The F is $1\frac{1}{2}$ mm. from the left-hand end of the label, and the N is slightly less than 1 mm. wide. The eagle has a large, white crest. The beak is not in the least like that of an eagle; both mandibles slope upwards, and the upper one is not curved. The left foot (right side of the stamp) is amputated, leaving a stump, and the right foot just touches the point of the wing; this being instead of the pole with cap of liberty. The point of the V of VENEZULANA is a shade to the right of the right limb of the U of UN, and the A of REAL is exactly under the last A of VENEZULANA, instead of under the NA. The U of UN is less than 2 mm. from the left-hand end of the label. The space between the two words is only $1\frac{1}{2}$ mm. The stop after REAL is oval, rather than square, and it is only $\frac{1}{2}$ mm. from the end of the label.

Third Forgery.

This belongs to the set seized and sold by the Government. It is lithographed, on thick, white wove paper. There are forty-seven pearls round the eagle, with no secret mark. Behind the stars, there are fifty-one vertical lines, hardly any of them wavy. The middle star is centrally under the R of FEDERACION, and the top ray of the left-hand star is bent over to the left, instead of being vertical. The top of the eagle's head is a sort of blunt peak, and the opening of the beak is long, and curves down, in the direction of the throat, instead of being short and almost horizontal. FEDERACION is in good, bold letters, except the C, which is both thin and narrow. The N is only about $\frac{1}{2}$ mm. from the end of the label, instead of $\frac{3}{4}$ mm. The eagle's right foot holds a cannon-sponge, instead of the pole, with cap of liberty; and the two parallel, white lines are absent. The left foot holds a cross-handled sword, in place of the lily-stem. The R of REAL is under the Z, instead of under the OL of VENEZOLANA. The U of UN is only $1\frac{1}{4}$ mm. from the left-hand end of the label; there is a space of $1\frac{3}{4}$ mm. between the two words; the L of REAL is only 2 mm. from the end of the label, and there is no stop after the word. (This is an easy test.) The white circle round the pearls, in the genuine, encroaches slightly into the side-frames of the stamp; but in this forgery, the said white circle does not even touch the side-frames.

Fourth Forgery.

Lithographed, in dull blue, on yellowish-white wove paper. This is the same as the fourth forgery of the 1 centavo. There are forty-seven pearls round the eagle; all large, round, and easy to count. There is no secret mark. The middle star is centrally under the R of FEDERACION, and the two stars under the ED are joined together. There are about fifty-six vertical lines behind the stars. The F of FEDERACION is $1\frac{1}{4}$ mm. from the left end of the label; the central tongue of the first E is as long as the top and bottom limbs, instead of being much shorter; the central tongue of the second E is also *very* nearly as long as the top limb; the N is *barely* 1 mm. wide. The name is written VENEZULANA. The eagle has a very distinct crest, and there is a deep depression where the upper mandible of the beak joins the head. The opening of the beak slopes strongly downwards to the right, instead of being nearly horizontal. The left foot is amputated, leaving the stump sticking up in the air; and the right foot touches the wing. The pole with cap of liberty is absent. The U of UN is barely 2 mm. from the beginning of the label; the space between the two words is only $1\frac{1}{2}$ mm.; the A of REAL is under the right leg of the last A of VENEZULANA; the stop after REAL is circular, and only $\frac{1}{4}$ mm. from the L, and a shade over 1 mm. from the end of the label. The white circle round the pearls does not encroach on the side-frames at all.

Fifth Forgery.

This is like the sixth forgery of the $\frac{1}{2}$ real. There are forty-nine pearls round the eagle, and no secret mark. There are only forty-two vertical lines behind the stars. The stars are too small, and several of them are six-pointed. The middle star is centrally under the R of FEDERACION. Most of the letters of this word go to the very top and bottom of the containing-label. This is not because the letters are too tall, but because the label is too narrow for them, being only $1\frac{1}{2}$ mm. high, instead of $1\frac{3}{4}$ mm. The F of FEDERACION is $1\frac{1}{4}$ mm. from the left-hand end of the label, and the N is badly shaped; the upper part being only about $\frac{1}{2}$ mm. wide. The eagle has a fowl's head, and it sticks up at the back. The lily-stem is a coarse branch, and there is no four-rayed, white star for claws. The point of the V of the VENEZOLANA is over the middle of the N of UN. Between UN and REAL there is a space of only $1\frac{1}{4}$ mm., and there is a white spur, point uppermost, between the words. (This is quite distinct.) There is a large white dot, after the A of REAL, high up, and a similar dot, on the same level, after the L, but no stop in the proper place. The U of UN is less than 1 mm. from the beginning of the label. This is a very coarse and blotchy counterfeit, and not likely to deceive.

Sixth Forgery.

Lithographed, in rather bright blue, on thick, very hard, very white wove paper. This is like the seventh forgery of the $\frac{1}{2}$ real. There are fifty large and fairly round pearls in the circle, and no secret marks. Behind the stars, there are fifty vertical lines. The middle star is below the space between the RA of FEDERACION. The F of this word is $\frac{3}{4}$ mm. from the beginning of the label, and the N is a shade over 1 mm. wide. The lily-stem is rather too coarse, but the four-rayed star, representing the claws, is visible. The bird's head is not in the least like that of an eagle; it is very rounded at the top, and there is a sharply-pointed, distinct crest. The space between UN and REAL is only $1\frac{1}{2}$ mm., instead of $1\frac{3}{4}$ mm. The R in REAL is centrally under the O of VENEZOLANA,

but in the genuine, the O is above the vertical stroke of the R. The stop after REAL is $1\frac{3}{4}$ mm., instead of $1\frac{1}{4}$ mm., from the end of the label. This is, I think, one of the best of the forgeries of this value.

POSTMARKS.

Genuine.—I have only seen 29.

First Forgery.—Something like 27, but smaller and without the inner line.

Second Forgery.—29.

Third Forgery.—Uncancelled.

Fourth Forgery.—26.

Fifth Forgery.—98, 100.

Sixth Forgery.—29.

Same Issue. 2 Reales, green.

Genuine.

Lithographed, in yellow-green or blue-green; paper as before. There are fifty-three pearls round the eagle, with the secret mark of a line in the middle pearl on the left-hand side; but the line, in this value, slants very slightly down to the left, instead of being vertical. There is also a comma-shaped mark in the pearl under the A of FEDERACION. Behind the stars, there are fifty-one vertical lines. The middle star is a little to the right of the centre of the R of FEDERACION. The tests for the F and N of FEDERACION are the same as in the genuine 1 real; the lily-stem is also the same, but there is no four-rayed star for the left foot (right side of stamp). On the other hand, there is a four-rayed star for the right foot (not visible in the 1 real), which grasps the pole and slanting lines. The D of DOS is $\frac{3}{4}$ mm. from the left-hand end of the label, and the S is like a reversed Z. The R of REALES is exactly $1\frac{1}{4}$ mm. from the nearest part of the S of DOS. The first E is extremely narrow, being less than $\frac{1}{2}$ mm. wide, while the second E is fully $\frac{3}{4}$ mm. wide. The S is more misshapen than the S of DOS, and looks like a badly-made 5. The stop after this word is a short hyphen. The point of the V of VENEZOLANA is over the right-hand edge of the O of DOS, and the S of DOS is below the EN. The R of REALES is centrally below the Z. The first E is below OL, the A is centrally below the A, and the first stroke of the L is below the last stroke of the N. The value is in sans-serif capitals, as before.

First Forgery.

Lithographed, in yellow-green, on thick, soft, yellowish-white wove paper. This is like the first forgery of the 1 real. There are forty-three very oblong pearls round the eagle, and no secret marks. Behind the stars, there are forty-four vertical lines. The second star, under the D of FEDERACION, is much smaller than the rest; the third star seems to have six points; the middle star is under the RA of FEDERACION, but nearer to the A; the last star but one is centrally under the O, instead of under the IO, and has six points. The letters of FEDERACION do not go anywhere near the top and bottom outlines of the containing-label; the F is only $\frac{1}{4}$ mm. from the left-hand end of the label; the D is a distinct O; the N is $\frac{3}{4}$ mm. wide, and 1 mm., instead of about $\frac{1}{4}$ mm., from the end of the label. The lily-stem is represented by a plain white rod, and the claw holding it looks very like a white crab, with all its legs stretched out. There is no cap of liberty on the slanting pole on the other foot; the foot itself is not visible. The eagle's head is the same as in the forgery

of the 1 real. The D of DOS is rather like a P, and it is $1\frac{1}{2}$ mm., instead of $\frac{3}{4}$ mm., from the left-hand end of the label. The O slants over to the right, and the head of the S is very much larger than the tail, making it look a note of interrogation, facing the wrong way. The A of REALES slopes very much over to the left, and the S is not like a Z. There is no stop after this word. The point of the V of VENEZOLANA is above the centre of the O of DOS; the S of DOS is exactly below the N. The R of REALES is under the ZO; the first E is exactly under the L; the A is under the AN; and the first stroke of the L is below the first stroke of the final A.

Second Forgery.

Lithographed, in yellow-green, on thick, hard, yellowish-white wove paper. This is uniform with the second forgery of the 1 real, with forty-three pearls round the eagle, about forty-three vertical lines behind the stars, and the name written VENEZULANA. There are no secret marks. The tests for the said second forgery of the 1 real will serve for this counterfeit, with the following additions:—The D of DOS is $1\frac{1}{2}$ mm. from the left-hand end of the label, and the S is not like a reversed Z. The R of REALES is only 1 mm. from the nearest part of the said S; and each E is 1 mm. wide. The S is very similar to the S of DOS. There is no stop after REALES. The point of the V of VENEZULANA is centrally above the O of DOS, and the S of DOS is below the N. The R of REALES is below the ZU; the first E is below the L, but so far to the right, as to be almost under the LA; the A is below the N. This counterfeit ought not to deceive, but all values of this set are very common.

Third Forgery.

This belongs to the set seized and sold by the Government. Lithographed, in very bright yellow-green, on rather thick, very white wove paper. There are forty-seven pearls round the eagle, and about fifty-one vertical lines behind the stars. The secret marks are absent. The tests are the same as for the third forgery of the 1 real, with the following additions:—The D of DOS is only $\frac{1}{2}$ mm. from the right-hand end of the label, and the S is $1\frac{1}{2}$ mm. wide, instead of about $\frac{3}{4}$ mm. Each E of REALES is 1 mm. wide, and the S is a good deal too far from the E. There is no stop after this word. The V of VENEZOLANA is above the S of DOS; the R of REALES is below the second E; and the upright stroke of the L is below the middle of the N.

Fourth Forgery.

Lithographed, in bright green, on medium, white wove paper. This is the same as the fourth forgery of the 1 real. There are forty-seven pearls round the eagle, and about fifty-six vertical lines behind the stars. The secret marks are absent, and the name is written VENEZULANA. The tests are the same as for the fourth forgery of the 1 real, with the following additions:—The R of REALES is only $1\frac{1}{4}$ mm. from the nearest part of the S of DOS; the first E is wider than the second; the point of the V of VENEZULANA is clear to the right of the O of DOS; the A of REALES is under the AN; and the vertical stroke of the L is under the last A.

Fifth Forgery.

Lithographed, in deep yellow-green, on thick, hard, yellowish-white wove paper. This is the same as the fifth forgery of the 1 real. There are forty-nine pearls round the eagle, with no secret marks, and forty-two perfectly straight, vertical lines behind the stars. Most of the tests

for the fifth forgery of the 1 real will serve for this counterfeit, with the following additions:—The lily-stem is a cross-handled sword. The value is in Roman capitals, instead of in sans-serif letters. The D of DOS is 1 mm. from the left-hand end of the label, and there is a white blotch in the left-hand corner of this label. The vertical shaft of the R of REALES is only 1 mm. from the nearest part of the S of DOS. The point of the V of VENEZOLANA is above the space between the OS of DOS; the S of DOS is centrally below the first E of VENEZOLANA; the R of REALES is below the second E; and the L is below the NA. There is no stop after REALES.

Sixth Forgery.

Lithographed, in bluish-green, on rather thick, hard, white wove paper. This is the same as the sixth forgery of the 1 real, with fifty pearls round the eagle, no secret marks, and about fifty vertical lines behind the stars. The tests for the sixth forgery of the 1 real will serve for this counterfeit, with the following additions:—The D of DOS is $\frac{1}{2}$ mm. from the left-hand end of the label; the R of REALES is $1\frac{1}{4}$ mm. from the nearest part of the S of DOS; the bottom of the first E is $\frac{3}{4}$ mm. wide, and the bottom of the second E is 1 mm. wide. There is a small, circular stop after this word, much nearer to the end of the label than to the S. The A of REALES is under the right leg of the first A of VENEZOLANA, instead of under its centre; and the vertical shaft of the L is under the last stroke of the N. I think this is about the best of the counterfeits.

POSTMARKS.

Genuine.—As in the other values.

First Forgery.—Uncancelled.

Second Forgery.—29.

Third Forgery.—Uncancelled.

Fourth Forgery.—1.

Fifth Forgery.—100.

Sixth Forgery.—29.

Issue of 1866-7. $\frac{1}{2}$ Centavo, green.

In the stamps of this issue, the arms in the shield have undergone another change. The wheat-sheaf, which was in the left top corner in the first two issues, is now in the right top corner; and the horse, which runs to the right in the first issue, and to the left in the second issue, now runs to the right again.

Genuine.

Lithographed, in yellow-green, on medium, white wove paper. There are about sixteen vertical, coloured lines in the left top compartment of the shield, including the dividing-line, and also the short lines in the played-out left corner. There is no horizontal row of dots below the wheat-sheaf, in the right top compartment. There are about thirteen horizontal lines behind the horse, including the horizontal dividing-line. His ears just touch the said dividing-line, and the eye is far in front of the ears, i.e., not below them. The bottom point of the shield is just above the vertical stroke of the D of FEDERACION. The whole motto on the scroll is DIOS Y FEDERACION, and the Y is as tall as the F. There are six white leaves to right of the shield, and, apparently, seven to left of it; but the seventh is like a wavy strap, instead of a laurel-leaf. If the

vertical dividing-line of the shield were prolonged upwards, it would just touch the tip of the central tongue of the first E of the inscription, E.E.U.U., above it. Each of these letters has a stop after it. The letters CEN of CENTAVO are perfectly upright. There is a star before MEDIO, and another after CENTAVO. Each star is double, *i.e.*, there is a four-pointed, coloured star, with one of its points vertical, and on this is a four-pointed, white star, with its rays pointing obliquely. The left-hand star is nearly 2 mm. across.

First Forgery.

Lithographed, on thick, slightly surfaced, very white wove paper. The colour, though yellow-green, is quite a different tint from that of the genuine, but I don't know the proper name for it. There are two coarse, vertical lines in the left top compartment of the shield, and the oblique flag-staff ends at the bottom in a very large, dark blotch, instead of distinctly running down to touch the central dividing-line. A row of dots can be seen below the wheat-sheaf in the right-hand compartment; and the bottom of the sheaf is hardly splayed out at all, though it is widely splayed in the genuine. There are only eight horizontal lines behind the horse, including the dividing-line; and the two which pass behind the face are widely separated from those above and below them. The horse's eye is much too prominent, and is exactly under one of the ears. The bottom point of the shield is centrally above the second E of FEDERACION. The O of this word is a U, and the Y is only half the height of the F after it. There are only five white leaves to right of the shield, and two disconnected, jumbled bunches of leaves to left of it; the upper bunch has six leaves in it, and the lower one four. If the central dividing-line of the shield were prolonged upwards, it would cut through the stop after the first E, at the top of the stamp. The letters CEN of CENTAVO slope over greatly to the left. There is no star either before MEDIO or after CENTAVO, which is a very easy test for this counterfeit.

Second Forgery.

Lithographed, on thick, hard, yellowish-white wove paper. There are about twelve vertical lines in the left top compartment of the shield, including the dividing-line, and a horizontal row of four dots is plainly visible below the wheat-sheaf. The bottom of the wheat-sheaf is hardly splayed out at all. Behind the horse, there are twelve horizontal lines, including the dividing-line. The head is not that of a horse at all; it has a long, dark muzzle. The eye seems to be just below one of the ears. The motto is almost unreadable; it seems like *IOS Y FNTACOS*; and the point of the shield is above the N of FNTACOS. There are five white leaves to right of the shield, and six to left of it, the wavy, strap-like leaf being absent. Of the four letters, E, E, U, U, at the top of the stamp, there is a very faint stop after the first E, and a large one after the second U, but none after either of the others. The two stars, before MEDIO and after CENTAVO, are only about half the size of the genuine, the left-hand star being only about 1 mm. across.

Third Forgery.

This is very poor. Coarsely lithographed, on medium, yellowish-white wove paper. The shield is almost undecipherable; I can only see parts of two vertical lines in the left top compartment, and the crossed swords and flag are a mere jumble. There is no band round the wheat-sheaf, though there is one in the genuine. The lines behind the horse are uncountable; but the horizontal and vertical dividing-lines are very strong, and the vertical one has a thin line each side of it. The horse

seems to have a rabbit's hind-quarters, and a bird's head; the tail is invisible. Only two or three of the letters of the motto can be read, and the point of the shield is above the space between DE of FEDERACION. There are five leaves to right of the shield, and the leaves in the large bunch to left of the shield cannot be counted. The only divisions between the first words of the inscription are where they change their slope to fit the octagon, so that they read CORRE ODELO SEE., instead of CORREO DE LOS EE. The letters are very badly drawn, and there is no stop after the first E of E.E.U.U. Between the left-hand star and the C of CORREO, there is a blotch, like a thick hyphen, which is only found in this counterfeit.

Fourth Forgery.

Lithographed, very much better than the last, on thick, very hard, yellowish-white wove paper. In the left top compartment of the shield, the vertical lines at the left side of the said compartment are missing. There is a coloured dot to left of the hilt of the upper sword, and another to right of the hilt of the lower sword; these dots are not in the genuine. The horse is nearly hidden by the postmark in my single specimen; but I fancy he has only one fore-leg, instead of two, and the ears are like those of a rabbit; while the tail droops, instead of being horizontal. The motto, as far as it is legible under the postmark, is SIO SECEDFRADON. There are five leaves to right of the shield, and seven very distinct laurel-leaves to left of it. The first E and first U of E.E.U.U., at the top of the stamp, have no stops after them. The stars are very small; and the left-hand star has the white star nearly vertical, instead of the coloured one. The point of the shield is above the end of the D of SECEDFRADON.

POSTMARKS.

Genuine.—29. Also the same, with each circle double-lined.

First Forgery.—Usually uncanceled; but I have one specimen which has a thick, curved mark, like part of a very large U.

Second Forgery.—51.

Third Forgery.—29, the outer circle much thicker than the other.

Fourth Forgery.—1, very small. Also the same, ordinary size.

Same Issue. 1 Centavo, blue-green.

This is the stamp which is always sold as genuine, so I suppose it is all right, though the drawing is inferior to that of any of the other values.

Genuine.

Lithographed, in blue-green; paper as before. There are about thirteen vertical lines in the left top compartment of the shield, including the dividing-line, which is slightly thicker than the rest. There are only two dots below the level of the bottom of the wheat-sheaf, and the flagstaff in the opposite compartment goes up to the top of the shield. Behind the horse, there are about thirteen horizontal lines; but, except the dividing-line, they are very faint in my specimen. The horse has one white ear, which touches the dividing-line below the centre of the wheat-sheaf; and the eye is oblong, and far to the left of the ear; while the mouth is V-shaped, and wide open. The point of the shield is above the vertical stroke of the D of FEDERACION, but just a shade to the left of it. The motto is not very distinct, and the Y is half the height of the letters each side of it. There are five leaves to right of the shield, and, apparently, seven to left of it. If the vertical dividing-line of the

shield were prolonged upwards, it would cut into the (very faint) stop after the first E of E.E.U.U. The letters CENT of CENTAVO are quite vertical, and the A is very nearly vertical. The two stars are like those of the $\frac{1}{2}$ c., but rather larger; in the left-hand star, the two longest white rays are more than 2 mm. across, from point to point.

First Forgery.

This belongs to the set seized and sold by the Government. Lithographed, in blue-grey, on thick, smooth, white wove paper. There are only about ten vertical lines in the left compartment of the shield, and the top of the flagstaff does not go anywhere near the top outline of the shield. There are five dots below the wheat-sheaf. Behind the horse, there are about nine horizontal lines, and they are partly arranged in pairs, with a wider space after each pair. The horse has two dark ears, and they do not touch the dividing-line above them. The eye is a large, coloured dot, very much more prominent than the genuine; it is exactly under the front ear. The muzzle is dark, pointed, and closed. The point of the shield is above the beginning of the second E of FEDERACION. There seem to be eight leaves to left of the shield, in three bunches. The stop after the first E of E.E.U.U. is large and oblong, and it touches the foot of the second E. The letters CENTA, at the bottom of the stamp, all slope over greatly to the left. There is a coloured line below the right side of the N of UN, which is not found in the genuine. The left-hand star is poorly drawn, and too small. The L of LOS slopes over to the right, instead of being parallel with the E of DE.

Second Forgery.

This is very like the third forgery of the $\frac{1}{2}$ c. Lithographed, in dark yellow-green, on thin, yellowish-white wove paper. There are about sixteen vertical lines in the left compartment of the shield, but only the three lines to the right are at all continuous or prominent. The horizontal lines behind the horse are fine and numerous, but are covered by the postmark in my single specimen. The horse seems to have a dog's head, with a crown on. The inscription in the octagon is curiously spaced; it reads, CORRE ODELO SEE.U. U.DE VENEZ². In the bottom inscriptions, there is very little space between UN and CENTAVO, though there is a wide space in the genuine. The T of the latter word is above the level of the CEN, and the A slopes very much over to the left. There is a small, oblong stop after the T. If the vertical dividing-line of the shield were prolonged upwards, it would cut well into the second E of E.E.U.; and there is no stop after the first E. There is a large, dark, comma-shaped mark between the left-hand star and the C of CORREO, an oblong stop after the T, and a dot under the O of CENTAVO.

Third Forgery.

Lithographed, on thick, hard, yellowish-white wove paper. There are about twelve full-length vertical lines in the left top compartment of the shield. Level with the bottom of the wheat-sheaf, there are three large dots and two faint ones; and below the bottom of it, there is one large dot and one faint one. There are about nine horizontal lines behind the horse, including the dividing-line, which is decidedly thicker than the rest. The horse appears to have one dark ear. The mouth is closed, and not V-shaped. The T of CENTAVO is shorter than the N before it, and the V, in my one specimen, is very much blotched. In the genuine, the outer outline of the octagon is double, all the way round; but in this forgery, they are blotched into a single, thick line, all round, except outside the U. DE V. I think this is the best of the counterfeits.

POSTMARKS.

Genuine.—29.

First Forgery.—Almost always uncanceled ; but I have one specimen bearing a mark which looks like part of a very large letter, and another with 27, smaller.

Second Forgery.—10, 29, 51.

Third Forgery.—Uncanceled.

Same Issue. $\frac{1}{2}$ Real, rose, lilac-rose.

Genuine.

Lithographed ; paper as before. There are about sixteen vertical lines in the left top compartment of the shield, including the (thicker) dividing-line, but not counting the short lines in the splayed-out, left top corner of the shield. There are about fourteen horizontal lines behind the horse, including the (thicker) dividing-line. The horse has no ears ; the eye is faint and oblong, and close to the top outline of the face. There are five leaves to right of the shield, and about ten to left of it. The point of the shield is above the space between DE of FEDERACION. The L of LOS is parallel with the E before it, and the S is quite upright. The first U of E.E.U.U. is also quite upright. The top limb of the E of MEDIO is cut off slopingly, and is slightly shorter than the central tongue, which has a rounded end. The bottom limb is longer than the central tongue, but not absurdly so. The first stroke of the R of REAL is very nearly vertical ; and the central tongue of the E is very much shorter than the top limb, which is, again, shorter than the bottom limb. There are five dots, irregularly placed, below the level of the bottom of the wheat-sheaf, which splays out well, above and below the band that ties it together. The flag is like a boy's kite, upside down, and is in one fold.

First Forgery.

This belongs to the set seized and sold by the Government. Lithographed, in dull red, carmine, rose-carmine, pink, or vermillion, on thick, somewhat surfaced, white wove paper. There are only about eleven coarse, vertical lines in the left top compartment of the shield, including the dividing-line. Behind the horse, there are nine or ten horizontal lines, arranged in pairs. The horse has two distinct, dark ears, and the eye is a large, more or less circular dot, in the middle of the head. On the left side of the shield, there are two bunches of leaves, five in each bunch. The point of the shield is above the beginning of the second E of FEDERACION. The L of LOS slopes *very* much away from the E of DE, and the S leans over to the left. The first U of E.E.U.U. leans over to the right. The top limb of the E of MEDIO is cut off square, and is longer than the central tongue, which is also cut off square ; and the bottom limb is ridiculously long, almost double the length of the top limb. The first stroke of the R of REAL leans over to the left, and all three limbs of the E are of equal length. As in the genuine, there are five dots below the level of the wheat-sheaf, but they are much too dark and prominent. The wheat-sheaf does not splay out very much, either at the top or at the bottom. The flag is in two distinct folds.

Second Forgery.

This is not nearly so good. Lithographed, in a sort of lilac-rose, on thick, rather soft, very yellowish-white wove paper. The vertical lines

in the left top corner of the shield are so faint that they are almost invisible, but I think there are about ten of them. There are about ten horizontal lines behind the horse, besides three in the point of the shield, which is white in the genuine and in the first forgery. The horse has one small, dark ear, and the oblong eye is joined to the outline of the top of the head. Its tongue is hanging out. There are only four leaves to right of the shield, and about five to left of it. The point of the shield is above the *first* E of FEDERACION. The serif to the foot of the second E of E.E.U.U. touches the foot of the first E, and there is no stop between them. The E of MEDIO has long top and bottom limbs, and a short, central tongue. The same is the case with the E of REAL. In my single specimen, there are no dots at all in the wheat-sheaf compartment of the shield, and the wheat-sheaf is badly drawn, and has a *very* large and solid-looking band. The flag is exactly like a leg of mutton.

POSTMARKS.

Genuine.—29.

First Forgery.—29, very large ; but generally uncanceled.

Second Forgery.—A square of very small dots.

Same Issue. 1 Real, vermilion.

Genuine.

Lithographed, in vermilion, on rather thick, yellowish-white wove paper. My single specimen does not show the vertical lines clearly in the left top compartment, and I cannot say how many there are. There seem to be about twelve horizontal lines behind the horse, including the dividing-line. The horse's ears are joined together, and almost exactly under the centre of the wheat-sheaf, the top of which splays out so much that it touches the middle of the central vertical dividing-line. The horse's eye touches the top outline of the head, and it is solid ; the mouth is open, and it looks as though it were laughing. There are five leaves to right of the shield, and about seven to left of it. The point of the shield is above the space between ED of FEDERACION. The D of DE slopes over towards the E, but the L of LOS is parallel with the said E, and the S is nearly upright, and does not touch the O. There is no mark between the left-hand star and the U of UN, and the top of the U goes very close to the top of the N. The R of REAL is vertical. The top limb of the E is shorter than the bottom one, and there is a distinct stop after the word. DIOS, in the motto, is perfectly readable. There is only one dot under the A of VENEZ^A.

Forged.

This belongs to the set seized and sold by the Government. Lithographed, in scarlet, on very thick, hard, white wove paper. There are about ten coarse, vertical lines in the left top compartment of the shield, and ten horizontal lines and a piece of ground behind the horse. The horse has two distinct ears, and a large, open eye in the centre of its head. The mouth is drawn out into a long muzzle, as in the other counterfeits of this set. The top of the wheat-sheaf is very slightly splayed, and it does not go near the left side of the compartment. There are about ten leaves to left of the shield, divided into three bunches. The point of the shield is above the beginning of the second E of FEDERACION. The D of DE is parallel with the E ; the L of LOS slopes very much away from the said E, and the tail of the S is firmly joined to the O. There is a mark like an A, between the left-hand star and the U of UN ; the top of the U is a long way from the top

of the N. The R of REAL leans over a little to the left; the top limb of the E is longer than the bottom one; there is a dot under the A, and there is no stop after the L. The word DIOS looks like UICS. There are two small dots, side by side, under the A of VENEZ^A.

POSTMARKS.

Genuine.—29.

Forged.—A portion of what appears to be 10.

Same Issue. 2 Reales, yellow.

Of this I have not been able to procure a specimen.

First Forgery.

This belongs to the set seized and sold by the Government. Lithographed, in lemon-yellow, on medium, white wove paper. The design is the same as the forgery of the 1 real, with altered value.

Second Forgery.

Poorly lithographed, in orange, on thick, smooth, white wove paper. This is the same as the third forgery of the $\frac{1}{2}$ centavo, with altered value.

POSTMARKS.

Genuine.—29.

First Forgery.—Uncancelled.

Second Forgery.—51.

Issues of 1874. The same stamps, but with a black surcharge in two lines.

The varieties are:—

1. Contraseña—Estampillas de Correo.
2. Estampillas de Correo—Contraseña.
3. Like No. 2, but correo has a small c.
4. Larger lettering, Contraseña—Estampilla de Correos.

Of No. 1, the values are: $\frac{1}{2}$ c., yellow-green; 1 c., blue-green; 1 c., lilac; 2 c., yellow-green; $\frac{1}{2}$ real, rose; 1 rl., brick-red; 2 rs., yellow.

Of No. 2: 1 c., lilac; 2 c., green; $\frac{1}{2}$ rl., rose; 1 rl., vermilion; 2 rs., yellow.

Of No. 3: $\frac{1}{2}$ rl., rose; 1 rl., red.

Of No. 4: 1 c., lilac; 2 c., green; $\frac{1}{2}$ rl., rose; 1 rl., red; 2 rs., yellow.

Genuine.

In all the varieties, each CONTRASEÑA is in tiny Roman lower-case letters, with a capital C, and a *tilde*, or accent, over the N.

Forged.

These are all variety 1, and are placed on the forged stamps of the set seized and sold by the Government, and already described under each value. I have the 1 c., grey-lilac; 2 c., blue-green; 2 c., yellow-green; $\frac{1}{2}$ real, light rose; 1 rl., scarlet; and 2 rs., yellow. Each CONTRASEÑA is

in tiny block capitals, with a large capital C. There is no accent over the N, and one of the words has the R omitted, and reads CONT ASENSA. Both genuine and forged are found with the surcharge inverted.

POSTMARKS.

Genuine.—29. Also 29, with each circle double-lined. Also, very commonly, a pen-and-ink flourish.

Forged.—Uncancelled.

VICTORIA.

One Penny, red.

Issue of 5th January, 1850. White wove paper, varying in substance; whitish gum; no frame; brown-red, orange-vermilion.

Ditto, with outer frame to stamp; brown-rose, brick-red.

Issue of 1854. With outer frame, but stamps printed wider apart on sheet; dull brick-red, rose, pink.

Genuine.

(*Lettered E W.*)

Lithographed; varieties as above. Every stamp has the letters EW in the bottom corners. This is a very easy test. The background, behind the head, is a *moiré* pattern of fine wavy lines, not separated into groups or bands. There is a strip of the same *moiré* pattern down each side of the stamp, separated from the central picture by a faint, somewhat irregular, coloured, vertical line. The V and A of VICTORIA are equally distant from the ends of the label. The P of PENNY is $1\frac{1}{2}$ mm. from the nearest part of the E of ONE. The locket on the Queen's neck seems to be a heart, with a crown on the top of it, and the necklace from which it hangs is often so thin as to be invisible. The first finger of the hand holding the sceptre is above the shaft of the P of PENNY, and the other three fingers taper towards it, so as almost to come to a point. There are seven ornaments on the top of the coronet. The hand holding the orb shows a thumb and three fingers, and the cross on the orb is a stumpy cross *pattée*. There are many other tests that I might give, but the above will be found amply sufficient.

Forged.

(*Crosses in corners.*)

Lithographed, in dull pink, or carmine-vermilion, on thick, white wove paper, the face of which is coloured by a yellowish wash. I have never seen this forgery rouletted. In each lower corner of the stamp, instead of an E or a W, there is a white floret, like a St. Andrew's cross. The background, behind the head, shows a plaid pattern, formed by sets of three wavy lines, with white spaces between the sets. These sets of lines cross each other, running down, respectively, obliquely from left to right, and from right to left. The side-frames have strips of fine *moiré*, something like the genuine, with a strong, vertical line separating each strip from the central picture. There is *always* an outer line, down each side of the stamp, touching the *moiré* strip, though one variety of the genuine

has no outline to the *moiré*, either side. The V of VICTORIA is much further from the end of the label than the A is. The P of PENNY is 2 mm. from the nearest part of the E of ONE. The locket is oval, and has no crown on the top of it; it hangs from a necklace of good-sized pearls. The first finger of the hand holding the sceptre is above the middle of the head of the P of PENNY. There are *five* fingers, and no thumb, and they are parallel, instead of converging to a point. There are only three ornaments on the top of the coronet. The hand holding the orb has three fingers, and no thumb; and the cross on the orb is an ordinary one, instead of a cross *pattée*.

POSTMARKS.

Genuine.—The so-called “butterfly-postmark,” which is a gridiron, in the shape of a dice-box, with a numeral above one hollow side, and V below the other side. Also one like 54, but a good deal larger. Also 63.

Forged.—1, 29, 54, 62 (bars closer).

Issue of 1854. Same stamps, rouletted.

Genuine.

These are the stamps with outer frame, and printed close together on the sheet. I think the colour is always rose. The rouletting gauges about 7.

Forged Roulette.

I have specimens of both brick-red and rose (genuine stamps). They have no outer frame, and the rouletting gauges $12\frac{1}{2}$, so these counterfeits are not particularly dangerous.

POSTMARKS.

Genuine.—As before.

Forged.—The rouletting is done on stamps with genuine cancellations.

Issue of 5th January, 1850. Twopence, lilac, grey-lilac, brown-lilac, cinnamon.

The following are the varieties:—

1. Fine background, fine border; lilac (type I.).
2. Coarse background, fine border, no outer frame; grey-lilac, brown-lilac (type II.).
3. Ditto, with outer frame; grey-lilac, brown-lilac (type II.).
4. Coarse background, coarse border, outer frame; grey-lilac, lilac-brown, cinnamon (type III.).

Type I. Genuine.

(Lettered T H.)

Lithographed; paper as before. The lines of the *moiré* pattern in the fine border gauge six to 1 mm. The plaid pattern of the central background, in all three types, is arranged in triplets of wavy lines, with a white space between every two triplets. From the left-hand edge of one triplet, to the left-hand edge of the next triplet, the distance is just $\frac{1}{2}$ mm. The bottom corners of the stamp always bear the letters T and H, respectively. From the left-hand edge of the shaft of the T of TWO, to the left-hand edge of the shaft of the P of PENCE, the distance is very nearly $6\frac{1}{2}$ mm. The first finger of the hand which

holds the sceptre points to the left of the P of PENCE. There is a round, white dot (secret mark?) in the left-hand corner of the background, 1 mm. to the right of the side-frame, and $\frac{3}{4}$ mm. above the T of TWO. The locket, necklace, converging fingers, ornaments on the coronet, left hand, and cross on orb are the same as in the one penny value.

Type II. Genuine.

(*Lettered T W.*)

The lines in the fine border gauge six to 1 mm., as before; but the background of the picture is much coarser. Each triplet of lines is, in itself, $\frac{1}{2}$ mm. wide; and, from the left-hand edge of one triplet, to the left-hand edge of the next, the distance is not far short of 1 mm. The letters T and W are in the bottom corners of the stamp. The round, white dot in the left-hand corner is higher up in this type, being $1\frac{3}{4}$ mm. above the top of the T of TWO, and $\frac{1}{2}$ mm. from the side-frame. The third finger of the hand holding the orb has nearly disappeared. The rest of the stamp is the same as in type I.

Type III. Genuine.

(*Lettered T W.*)

The lines in the coarse border gauge about $4\frac{1}{2}$, instead of 6, to 1 mm.; the background of the central picture is like that of type II. The letters T and W are, as before, in the bottom corners. The white dot is not visible in the left-hand corner. There are only two fingers and a thumb on the hand holding the orb. The rest of the stamp is the same as in type I.

First Forgery.

(*Crosses in corners.*)

This is the same as the forgery of the one penny, with altered value. Lithographed, in grey-lilac, rose-lilac, dull red, or dull brown-red, on thick, hard, white wove paper, the face of which is coloured by a yellowish wash. The lines in the border gauge six to 1 mm., as in types I. and II., and the triplets of wavy lines in the background, behind the picture, are the same as in type II. The first finger of the hand holding the sceptre points midway between the P and E of PENCE. From the left-hand edge of the shaft of the T of TWO, to the left-hand edge of the P of PENCE, the distance is a shade over 5 mm. The rest of the design, including the St. Andrew's crosses in the bottom corners, is the same as in the forgery of the one penny.

Second Forgery.

(*T and W in corners.*)

This is a much more pretentious affair, which I have only seen quite lately (1907). Lithographed, in shades of sepia, cinnamon, and lilac-brown (all rather dark), on thick, very hard, white wove paper. The lines of the *moiré* pattern in the side-frames are very blotchy and heavy, so that it is difficult to gauge them. I think, however, that there are four to 1 mm. The plaid pattern of wavy lines in the central background is *very* coarse; and the lines which run obliquely down from left to right are all arranged in *fours*, instead of in triplets, which is an easy test. Nearly all those which run down from right to left are also in fours. The distance between the sets of four averages $1\frac{1}{4}$ mm. The bottom corners of the stamp have the letters T and W, like all the genuine types. There are two types of this forgery. In the first, the (very blunt) first finger of the hand holding the sceptre, if pro-

longed downwards, would pass almost centrally down the shaft of the P of PENCE; in the other, the said finger is very sharp, and points clear to the left of the P. From the left-hand edge of the shaft of the T of TWO, to that of the P of PENCE, the distance is only 6 mm. There is no white dot in the left lower corner of the central picture. The hand holding the orb shows three fingers and a thumb, as in type I., but the thumb strongly resembles a very fat, little finger. In all my six specimens, the postmark covers most of the coronet, but the ornaments on it seem to be a confused jumble; whereas, in the genuine, as far as I can make out, (counting from the left) the said ornaments are: a small cross *patée*, a pearl, another small cross, a much larger cross, a small cross, a pearl. The locket, necklace, converging fingers, and the cross on the orb are fair imitations of the genuine.

POSTMARKS.

Genuine.—As before.

First Forgery.—1. Also uncanceled.

Second Forgery.—The “butterfly” postmark. Also 39, 62, 63.

NOTE.—All my specimens of the second forgery are on pieces of paper, with the postmark showing on the paper, as well as on the stamp. I have a horizontal pair of the second type of this counterfeit which are 1 mm. apart.

Issue of 5th January, 1850. Threepence, blue.

The following are the varieties:—

1. Short band across orb, as in Fig. 1; no frame. Type I.
2. Long band across orb, as in Fig. 2; no frame. Type II.

FIG. 1.

FIG. 2.

3. Same as type II., but with outer frame.
4. Ditto, stamps $1\frac{1}{2}$ to 2 mm. apart on sheet.
5. Ditto, but printed 2 to $2\frac{1}{2}$ mm. apart.

Type I. Genuine.

(E E in corners.)

Lithographed; paper as before; varieties as above. The white line across the centre of the orb is very short, and does not reach nearly to the left-hand edge of it (see fig. 1). The hand which holds it is generally a mere blotch of white. The plaid pattern of the central background is in sets of four, and sets of three, alternately. The left-hand bottom corner of the stamp always bears the letter E, and there is also an E in the right-hand corner, but this latter is generally very difficult to make out. The first finger of the hand holding the sceptre points to the left edge of the top of the shaft of the second E of THREE. From the left-hand edge of the shaft of the T of THREE, to the centre of the shaft of the P of PENCE, the distance is 8 mm. From the left-hand edge of the shaft of the T of THREE, to the end of the last E of PENCE, the distance is 14 mm., and the space between the two words is 1 mm.

The locket, necklace, converging fingers of the hand holding the sceptre, and ornaments on the coronet, are the same as in the genuine one penny.

Type II. Genuine.

(*E E in corners.*)

The white line across the centre of the orb is much longer than in type I., and projects over the left-hand edge of the orb (see fig. 2). The hand which holds it shows a thumb and two fingers, and sometimes part of a third. The other tests are the same as in type I.

First Forgery.

(*Crosses in corners.*)

This is the same as the forgery of the one penny, with altered value. Lithographed, in very pale blue, on rather thin, very white wove paper. The white line across the orb just comes to the left-hand edge of it, without projecting over, and the convex, upper part of the shading on the said orb is outlined, though it is not in the genuine. The hand holding the sceptre is the same as in the forgery of the one penny. The plaid pattern of the central background is an easy test, as the whole of it is in sets of three lines, instead of three and four, alternately. The bottom corners of the stamp bear florets, like St. Andrew's crosses. The first finger of the hand holding the sceptre points far to the left of the P of PENCE. From the left-hand edge of the T of THREE, to the centre of the shaft of the P of PENCE, the distance is only 7 mm. From the same place, to the end of the last E of THREE, the distance is a shade over 13 mm.; and the space between the two words is $\frac{3}{4}$ mm. The hand holding the orb shows a thumb and three fingers. The locket, necklace, hand holding the sceptre, and ornaments on the coronet are the same as in the forgery of the one penny.

Second Forgery.

(*E and cross in corners.*)

This is the same as the second forgery of the twopence, with altered value. Lithographed, in dark, indigo-blue, on yellowish-white wove paper. It is intended to represent type I. of the genuine. The hand holding the sceptre is perfectly distinct; the extremely square-ended first finger is above the right-hand edge of the shaft of the last E of THREE. The plaid pattern of the background is all in sets of four lines, instead of four and three, alternately, and this is an easy test. There is, as in the genuine, an E in the left bottom corner of the stamp, but the right bottom corner contains a perfectly distinct, four-petalled flower, or outlined cross *pallée*, with a large, dark dot in the centre. The first finger of the hand holding the sceptre points to the right edge of the top of the shaft of the second E of THREE. The space between THREE and PENCE is only $\frac{3}{4}$ mm. The bracket, necklace, hand holding the sceptre, ornaments on the coronet, etc., are the same as in the second forgery of the twopence. Both in the second forgery, and in this counterfeit, there is a heavy, dark line running down the centre of the chin, from the lower lip. This line is not found in the genuine.

POSTMARKS.

Genuine.—As before.

First Forgery.—1, 24, 54, without numerals; 62, 100. Also what looks like a portion of 51.

**Issue of 1850. The same stamp, rouletted. Type II.
Genuine.**

The roulette gauges about 7.

Forged Roulette.

I have a few genuine stamps of type II., with forged roulette, gauging 9. The rouletting is very neatly done, but of course the gauge exposes it.

POSTMARKS.

Genuine.—As before.

Forged.—The rouletting is done on stamps bearing genuine postmarks. I have seen no forgeries of the variety perforated 12.

Issues of 1852-4. Twopence, brown, etc.

The following are the varieties :—

December, 1852. Engraved, on stout, hard, yellowish-white wove paper; reddish-brown.

1854. Lithographed, from transfers of the engraving; similar paper; brown-lilac, red-lilac, mauve.

Genuine.

(*Fifty Types.*)

The lower corners are lettered, somewhat after the fashion of our own early stamps. The corner-letters in the sheet of fifty stamps are here given :—

A	E	B	F	C	G	D	H	E	I	F	K	G	L	H	M	I	N	K	O
L	P	M	Q	N	R	O	S	P	T	Q	U	R	V	S	W	T	X	U	Y
V	Z	W	A	X	B	Y	C	X	D	A	F	B	G	C	H	D	I	E	K
F	L	G	M	H	N	I	O	K	P	L	Q	M	R	N	S	O	T	P	U
Q	V	R	W	S	X	T	Y	U	X	W	Z	X	A	Y	B	Z	C	W	M

I have only one or two specimens, and must do the best I can with these; but the forgeries are not dangerous. The top outline of the

Queen's dress is of the usual, concave shape, running up to join the bows on the shoulders. The diagonal ribbon of the Garter is composed of several lines—I have a specimen with five lines, and another with four. The crown is more or less of the shape shown in the annexed illustration, with two rounded puffs or wings. The Queen is looking to the right of the stamp; the neck is slim, and outlined with dots; the two puffs of hair hang down about level with the mouth, and there are no curls below the puffs. The flowers in the top corners of the stamp are quite small, measuring (in my specimens) from 1 to 1½ mm. in diameter. The top peak of the throne ends in a sort of ball, with a smaller ball on the top of it, and there is one vertical line down the centre of each of the side-turrets. The sceptre has a more or less lance-shaped head, which touches the horizontal line of the throne above it, and the lower end is thickened. The bottom outline of the dress is

dotted; the left side of it (right side of the stamp) lies on the top step of the throne, but it slants upwards, to the left of the stamp, revealing part of the footstool, which is shaded with vertical lines, and has a wavy, bottom outline. The dark robe or mantle, on the right side of the stamp, hangs down over the bottom step, so as to touch, or almost touch, the outline above *TWOPENCE*, in the right bottom corner. The arch above the throne is composed of four coloured lines. None of my specimens show any horizontal line across the orb.

First Forgery.

Lithographed, on very thin, white wove paper, the face of which is coloured with a buff wash. The stamp imitated is the eighth in the second row, which has the corner-letters *sw*, and there is a continuation of the inner outline of the pilaster at the right side of the stamp, which cuts right through the *w*, and trespasses below the bottom outline of the stamp. The upper end of this said line runs right to the very top of the stamp, cutting through the right-hand corner of the arch, into the right-hand flower, and across the white space, between the two outlines of the top frame. (This ought to be an easy test.) There are no bows on the Queen's shoulders, and the top of the bodice of the dress, in my specimen, is entirely absent, no portion of the dress showing above the diagonal line of the Garter, except just above where the lower corner of the Garter comes down to the waist. The Garter-ribbon itself shows only the two outlines, with a white space between them. The crown has some small ornaments along the top, in place of the two rounded wings. The Queen's face is looking to the right side of the stamp, but her eyes are looking to the front. There is no dotted outline to either side of the neck, which is rather thick and short. The hair on the left side (right side of the stamp) comes down to the shoulder, and on the other side, it lies along the shoulder. The flowers in the top corners are too large; the one on the right is $1\frac{3}{4}$ mm. across, and the one on the left is 2 mm. across. There is one very tiny ball to the left of the top of the peak of the throne. The side-turrets have several vertical lines down them. The sceptre has no head, and is about the same thickness throughout; its outline is wavy, and the top is $\frac{3}{4}$ mm. from the horizontal line above it. The bottom outline of the dress is a broken, wavy line, not dotted; it lies horizontally along the top step of the throne, and there is no sign of any footstool. The mantle, on the right side, does not go below the upper edge of the bottom step of the throne. The arch, above the throne, has a double upper outline, but there are only the very faintest indications of the line between this and the lower outline. There is a distinct, horizontal band across the orb. The mantle is bordered with ermine, both sides; but all my specimens of the genuine only show the ermine spots on the left side of the stamp, and not on the right as well. In the genuine, the whole of the background, behind and each side of the throne, is formed by sets of curved lines, crossing each other obliquely. In this forgery, the background consists of outlined lozenges, each lozenge having a diamond-shaped patch of dots in the centre.

Second Forgery.

This counterfeit I no longer possess, and must transcribe the details from my second edition. Lithographed, on extremely thick, hard, very yellowish-white wove paper, with a surface-wash not so dark as in the first forgery. It is imitated from the sixth stamp in the second row on the sheet, bearing the position-letters *QU* in the lower corners. There is no sign of a footstool, and the dress is parallel with the top step, and

at some distance from it. There is no sceptre in the Queen's hand, which is raised, with the first finger pointing upwards. The left arm is very shapeless, and out of drawing, with a distinct bracelet, which is not visible in the genuine. The orb has a large, distinct, outlined cross on it (*i.e.*, on the *body* of the orb), which does not exist in the genuine. The dress is cut extremely low, leaving the right shoulder completely bare, with no bow on it. The ribbon of the Order of the Garter is absent; but there is a sort of scarf coming from the bow on the left shoulder, getting wider and wider as it goes, obliquely, across the bust and lap, till it touches the right side of the robe (left side of stamp). The forgers have mistaken the ribbon of the Garter for part of the ermine-fringed robe. The background, behind the throne, is better imitated than in the first forgery. The point of the throne is not in the centre of the arch, though it is central both in the genuine and in the first forgery.

POSTMARKS.

Genuine.—63, 64, and one somewhat like 54, only larger.

First Forgery.—Uncancelled.

Second Forgery.—Uncancelled.

Issues of 1854. Sixpence, orange-yellow.

Genuine.

This stamp exists unperforated, rouletted 7 or 9½, serrated 19, serpentine-perforated about 10½, and a compound of serrated and serpentine.

Forged Roulette.

I have no forgery of the stamp itself, but possess some of the genuine stamps rouletted about 8½; this is sufficiently near to the genuine to be dangerous. The cuts are very clean, each cut being 1½ mm. long.

POSTMARKS.

Genuine.—39; also one like 54, but larger.

Forged.—The rouletting is done on stamps with genuine postmarks.

Issues of 1858-61. Two Shillings, green.

(*Same type as 6d. above.*)

Genuine.

This stamp is found unperforated, rouletted 7½, and perforated 12.

Forged Roulette.

This is a genuine stamp, very nicely rouletted 9, exactly.

POSTMARKS.

Genuine.—The same as in the sixpence just described.

Forged.—The stamps used for the forged rouletting bear genuine postmarks.

One Shilling, octagonal, blue.

The varieties of this stamp are the following:—

1. July 6th, 1854. Unperforated.
2. 1857. Rouletted 7.
3. 1861. Perforated 12.

Genuine.

Lithographed, on fairly stout, white wove paper; varieties as above. The background of the central circle is formed by crossed, vertical and horizontal lines, close together. The band of ribbon which ought to go to the top of the head, under the T of VICTORIA, shows parts of four lines, but only the right-hand line of the four reaches the top of the head, and even this one is broken. There is an almost circular, white dot or ball in the chignon, opposite the foot of the A of VICTORIA, and another rather smaller and shaded white ball below it. The back of the neck shows thirteen nearly horizontal lines of shading, some of them dotted; and from the front of the neck to the front of the ear, there are nineteen rows of dotted lines, the uppermost line consisting of two dots only. The horizontal arm of the left-hand cross, if prolonged to the right, would pass centrally through the eye. There are sixty-five vertical lines in the outer background, counting along the bottom of the stamp; the left lower face of the octagon, under ONE S, includes nineteen of these lines; the bottom face, under SHILL, includes twenty-six, reckoning the nineteenth line as number one; the right lower face includes twenty-two, reckoning the twenty-sixth as number one.

**Forged.**

Lithographed, in light or dark blue, on rather thin, bluish, white wove paper, unperforated; or on thick, yellowish-white wove paper, very nicely perforated 12. The background of the central circle is quite solid. Of the four lines forming the band of ribbon, under the T of VICTORIA three go unbroken, right to the top of the head, and the fourth or front one goes within $\frac{1}{8}$ mm. of the top. There are no white balls in the chignon, and the curl hanging from the back of it is much more distinct than the curl in the genuine, and hangs down far below the level of the G of SHILLING, instead of to about the level of the top of it. The shading at the back of the neck is so very blotchy, that the lines cannot be counted; there are only eight lines in front of the neck. The horizontal arm of the left-hand cross slopes down to the right, so that, if prolonged to the right, it would pass far below the level of the eye. There are seventy-three vertical lines in the outer background, counting along the bottom, as before. There are twenty-two vertical lines included in the left lower face, under ONE S, but the twenty-second line does not go quite to the corner of the octagon; there are twenty-eight included in the bottom face of the octagon, under SHILL, counting the twenty-third line as number one; there are twenty-two lines in the right lower face. The forgers have mistaken the lowest lock of the hair in front of the ear for a third ribbon; this ribbon starts above the level of the eye, runs down to the top of the ear, then is looped up a little behind the ear, and then runs to the chignon, in which it loses itself.

POSTMARKS.

Genuine.—Usually something like 54, only larger.

Forged.—54, larger; 63.

Forged Perforations.

I have a genuine stamp, nicely perforated 11 $\frac{1}{2}$, and another, nicely perforated 14 $\frac{1}{4}$.

Issue of October, 1856. One Penny, green.**Genuine.**

Engraved in *taille-douce*, on thick, yellowish-white wove paper, unperforated ; watermark, large star.

**Forged Roulette.**

I have no forgery of the stamp, but possess a specimen with a bogus roulette, irregular, gauging about $6\frac{1}{2}$.

POSTMARKS.

Genuine.—54 (larger), etc.

Forged.—The stamp bears a genuine postmark.

Issue of November, 1858. Same type. Sixpence, blue.**Genuine.**

Engraved in *taille-douce*, in deep blue, on thick, yellowish-white wove paper, rouletted ; watermark, large star. The engine-turning of the background, behind the throne, etc., is so close that it is absolutely solid, with the exception of a few scattered, white specks. Two steps of the throne can be seen above the POSTA of POSTAGE, and a white foot shows on the lower step, in the space between and above the TA. There are nine white, outlined scallops down each side of the stamp. The white ball in the left top corner has a coloured dot in its centre (secret mark?), but the balls in the other corners have no dots. The top peak of the back of the throne goes up centrally into the space between the TO of VICTORIA, touching both letters.

Forged.

Lithographed, in very pale sky-blue, on thick, white wove paper ; no watermark ; unperforated. A very easy test for this counterfeit is the background, behind the throne, etc., which consists simply of thick, straight vertical lines. The bottom of the Queen's dress is level, so that only the lower step of the throne can be seen, and there is no white foot. There are only 7½ outlined scallops down each side of the stamp. There is a coloured dot in each of the balls in the four corners. The top peak of the back of the throne is much sharper than in the genuine, and is much nearer to the O than to the T of VICTORIA. There are plenty of other differences, but the above will be quite sufficient.

POSTMARKS.

Genuine.—54 (large), etc.

Forged.—An oblong, like 73, with VICTO at its right-hand end, and the left-hand end blank.

Issue of 1860. Sixpence, orange.

(Type of the annexed illustration.)

This is one of the scarcest of the Victoria stamps. I have never come across an unused specimen.

Genuine.

Engraved in *épargne*, on rather thin, white wove paper, watermarked SIX PENCE, perforated 12. The colour is usually a rather brownish orange. In the centre of each side-frame there is an oval, containing a

distinct numeral, 6. There are twenty-three pearls round the upper half of the central oval, from one of the little, side-ovals to the other, and twenty-three also round the lower half.

Forged.

Lithographed, in orange-yellow, on thin, soft, yellowish-white wove paper; no watermark; unperforated. This forgery may be easily detected by the side-ovals, each of which contains a tall, white 6, instead of a 6. There are twenty-one pearls round the top half of the central oval, from one side-oval to the other, and twenty-one also round the lower half.

POSTMARKS.

Genuine.—54 (larger).

Forged.—An imitation of the genuine postmark.

Issue of 1868. Five Shillings, blue on yellow.

Genuine.

Engraved in *épargne*, in blue, on yellow wove paper, perforated 12, 13; watermark, V and crown. There are three coils of plaits in the chignon, the laurel-wreath round the head shows (more or less completely) twelve leaves, and the front leaf does not touch the outline of the central circle. The hair on the top of the head is divided into two portions; the front half being brushed almost vertically downwards, and the other portion brushed back, towards the chignon. The lower portion of the Queen's ear is plainly visible below the hair; the iris and white of the eye are distinct, and there are a number of short, oblique lines of shading up the side of the nose, to the inner corner of the eye. The nose itself is sharply pointed, and its outline almost perfectly straight. The middle arch of the crown rests upon a cross *pattée*; there is a *fleur-de-lys* each side of this; and each of the outer arches rests on a cross *pattée*, seen in profile. The left *fleur-de-lys* is much nearer to the left cross *pattée* than to the centre one; and the right *fleur-de-lys* is about equidistant between the two crosses. Each side-arch of the crown bears seven pearls; and the top outline of the cross *pattée*, on the top of the crown, slopes down to the right.

First Forgery.

This is a wretched production, and not likely to deceive. Coarsely lithographed, in Prussian-blue, on stout, yellow wove paper, no watermark, perforated 11, in oval holes, also perforated 12. Two loose, untidy coils of plaits (sometimes only one) can be discerned in the chignon. It is quite impossible to count the leaves of the laurel-wreath. The part of the hair at the top of the head, under the TO of VICTORIA, which is brushed downwards in the genuine, looks, in this forgery, like part of the laurel-wreath. No part of the ear is visible; the whole of the eye-opening is filled with solid colour, and the profile of the nose varies considerably, in different specimens, according to the amount of colour used in the printing. I have one stamp with the pug-nose of the Queen of Spain, others with a Roman outline, and others with a wavy one. The details of the crown are far too much smudged to be seen; I can make out part of one cross *pattée*, but no *fleur-de-lys* is visible. The pearls on the arches are uncountable. In the genuine, there is a small, coloured ring each side of VICTORIA, with a coloured dot in the centre of each ring. In this forgery, the right-hand ring is a solid disc.

Second Forgery.

This looks very much better, though the details will not bear a close examination. Typographed (?), in deep ultramarine, on orange-faced, white wove paper, fairly thick, no watermark, and with the perforations *printed*, as part of the design, and gauging 10½ to 12, along the same line. Four coils of plaits can be seen in the chignon. There are fifteen laurel-leaves in the wreath, and the front leaf touches the outline, under the beginning of the C of VICTORIA. The hair on the top of the head, above the wreath, is not divided into two portions, but is *all* brushed back towards the chignon. The eye is very small, and is not so much in profile as the genuine is. There is no shading at all up the side of the nose, and the profile of it is decidedly Roman. The crosses *pattée* in the lower portion of the crown are fairly like the genuine; but the right *fleur-de-lys* is much too close to the central cross *pattée*, and the left *fleur-de-lys* is equidistant between the crosses. There are ten pearls on each of the side-arches of the crown. The upper outline of the cross on the top of the crown is horizontal. Below the HI of SHILLING, there is a curly ornament, like a sort of crescent, with its rounded side upwards. In the genuine, this crescent has its *hollow* side upwards, and the said hollow side contains five more or less comma-shaped marks. The cross-bars to the A of VICTORIA and the H of SHILLING are not joined to the side-limbs, though they are in the genuine.

POSTMARKS.

Genuine.—39, 54 (large), and one something like 56.

First Forgery.—10. Also what appears to be part of 58.

Second Forgery.—Uncancelled.

Issue of 1868-81.

Same type. Five Shillings, blue and red.

Genuine.

Engraved in *épargne*, in different shades of blue and red, on thick, yellowish-white wove paper, watermarked V and crown, perforated 12, 13. The tests are the same as for the five shillings, blue and yellow, described above.

Forged.

Coarsely lithographed, in bright blue and carmine, on thick, white or yellowish-white wove paper, no watermark, perforated 12, in oval holes. This is the same as the first forgery of the five shillings, blue on yellow, except that it is printed in two colours. The red part of the design has been drawn to the radius of too large a circle, so that it will not fit properly into the blank ring of the blue design. For instance, even suppose the letters TOR of VICTORIA are exactly in their right position, the SH of SHILLING will encroach considerably outside the blank ring. The tests for the first forgery of the blue on yellow stamp will serve for this counterfeit. I have seen no forgeries of the later varieties of this value.

POSTMARKS.

Genuine.—As before.

Forged.—A cancellation similar to 32. Also a blotch.

Issues of 1873-6. Ninepence, red-brown on rose.**Genuine.**

Engraved in *épargne*, on rose wove paper, watermarked with the numerals 10, or with V and crown, perforated 12. Along the base of the crown there are a number of jewels of various shapes and sizes. The side-arch of the crown, which joins the middle cross *pattée* to the top of the crown, and points to the RI of VICTORIA, has two dots on it. The solid background in the corners does not fill up the points of the scallops which bound it, but leaves a triangular, uncoloured piece at the point of every scallop. Inside the white ring of the central circle, there is a border all round of inward-pointing scallops, and in the hollow of each scallop, there is a small uncoloured ring, with a coloured dot in the centre of it. These dotted rings are not at all prominent, indeed, I have not been able to count them with certainty. The horizontal lines of shading behind the portrait gauge seven to 1 mm., and as a rule they are not at all blotched together.

**Forged.**

This is quite new to me (1907), but is not likely to deceive. Typographed, in bright carmine, on thick, hard, white wove paper, no watermark, unperforated. Along the base of the crown, the whole space is filled in with vertical lines, or what would be vertical lines, if the crown were straight. These are in place of the jewels of the genuine. The side-arch of the crown which points to the RI of VICTORIA does not show the two coloured dots of the genuine. The solid background in the corners fills in the outward-pointing scallops completely, so that it is the edge of the solid background itself which is scalloped, instead of having a border of outlined scallops outside it. Inside the white ring round the central circle is a broad ring of solid colour, not scalloped, but edged, next to the horizontal-lined background, by a circle of small, but prominent white rings, with dark centres. Unfortunately, my specimen is damaged, but I think there are forty-five of these white rings. The horizontal lines of the central background gauge six to 1 mm., and show numbers of small blotches in many parts.

POSTMARKS.

Genuine.—1, 39.

Forged.—My specimen is uncanceled.

Issue of 1873-83. One Penny, green on yellow.**Genuine.**

This stamp was issued on white, yellow, and drab wove paper. The white is, of course, a very common stamp; but the one on yellow paper is worth 12s. 6d., and the one on drab, 30s.

Dyed Stamp.

The forgers have taken the common white stamp, and have dyed the paper yellow. The shade is a very good imitation, and I really do not know of any test for the detection of this fake. Perhaps some of our chemical friends might find a test for us. It is quite possible that the white paper may also have been dyed to imitate the drab, but so far I have seen no specimens.

Issue of 1885. Halfpenny, salmon, on white.

Genuine.

This stamp was only issued on white wove paper.

Dyed Stamp.

I have a specimen of this stamp on very distinctly *blued* paper, which is bogus. The dyeing is not at all well done, as the back of the stamp is irregularly stained.

BOGUS PROVISIONAL.

Halfpenny on One Penny, red-brown.

I have a specimen of the 1 penny like the annexed illustration, with the value obliterated by a black bar, $2\frac{1}{4}$ mm. wide, running

HALFPENNY

right across the base of the stamp, and **HALF PENNY** in sans-serif capitals above the bar, very like the illustration, but only 15 mm. long. This stamp is altogether bogus, so I need say no more about it.

POSTMARKS.

Genuine.—1 ; 29 ; 39 ; 54, larger.

Forged.—The faked stamp has a genuine cancellation.

VIRGIN ISLANDS.

One Penny, green.

The following are the varieties :—

First issue of 1866. White wove paper, perforated 12.

Second issue of 1866. Toned paper, perforated 12.

Issue of 1867-8. White wove paper, perforated 15.

Issue of 1879. White wove paper, C C watermark, perforated 14.

Genuine.

Lithographed ; paper, etc., as above. There are, as far as I can make out, eighty-five horizontal lines in the central oval ; they are so close

together, that seven occupy the space of 1 mm. The top lamp on the left side rests on the nineteenth line. The outline of the central oval (inside the broad, white oval) is formed by two coloured lines, very close together. The upper, white label is a shade over $1\frac{1}{2}$ mm. high, and the lower label is $1\frac{3}{4}$ mm. high. If the first I of VIRGIN were prolonged upwards, it would cut exactly through the centre of the rose in the left top corner. The Virgin's face is very pleasing; the eyebrow is short, and the chin comes well forward. Her right hand is nicely shaped, and the separation-line between the thumb and the finger does not go near the back of the hand. The two strings of the lamp meet in a point at the point of the thumb. The left hand has an abnormally long thumb, longer than the finger, so that it really looks like another right hand. The lily-stem projects barely $\frac{1}{2}$ mm. below the end of the finger; its upper end bears three white lilies, the top one touching the shoulder. The Virgin's foot is nicely drawn, long and slim. The cords or strings by which the lamps are suspended are so faint, that they are not visible at the first glance. As the letters in the lower label are no taller than those in the upper label ($\frac{3}{4}$ mm.), there is, of course, a much wider space above and below ONE PENNY, than above and below VIRGIN ISLANDS.

Forged.

Poorly lithographed, on thick, yellowish-white wove paper, perforated 11; on medium, very yellowish-white wove paper, perforated 12; and on thick, hard, white wove paper, perforated and pin-perforated 13. There are only about sixty horizontal lines in the central oval, and five (on an average) occupy the space of 1 mm. The top lamp on the left side rests on the fourteenth line. The outline of the central oval (inside the broad, white oval) is single most of the way round, and ragged. The letters in the upper label are 1 mm. high, and those in the lower label $1\frac{1}{4}$ mm. high, so that both sets go considerably nearer to the top and bottom outlines of their respective labels than the genuine do. If the first I of VIRGIN were prolonged, it would pass above the centre of the rose in the left top corner. The Virgin's face is very inane-looking, with an abnormally long eyebrow, and an excessively retreating chin. The thumb of the right hand is absurdly long, as the line of separation between thumb and finger reaches almost to the back of the hand. One cord of the lamp meets the point of the finger, and the other, the point of the thumb, so that the two cords do not meet. The left hand seems to have a *very* short, pointed thumb, and *two* short fingers. The lily-stem projects nearly 1 mm. below the end of the thumb; its upper end bears three white flowers and one dark one; the dark one is near the shoulder, but does not touch it. The foot is rather clumsy, and has a double outline to the sole. The cords of the lamps are very dark and prominent.

POSTMARKS.

Genuine.—54, with the colony-number, A 91, in the centre.

Forged.—1; 37, without numerals; 100.

Same Issues. Sixpence, rose.

The varieties are the same as the first three issues of the 1d.

Genuine.

Lithographed; paper and perforation as in the 1d. of 1866 and 1867-8. The background of the central rectangle is composed of *wavy*, horizontal

lines. There are thirteen fine, horizontal lines in the top label, and fourteen in the bottom label, the lowest line in this bottom label being very close to the outline below it. The head and tail of the G of VIRGIN are separated by a distinct gap, through which one of the horizontal lines runs clear of both. There is no dot joining the S and L of ISLANDS, and the L does not touch the A. The little white balls or loops at the top of the lamp-cords are all *very* small. The halo on the head of the Virgin does not touch the outline above it; the face is pleasant, as in the one penny value, with a well-developed chin; the eyebrow is visible, and the hair does not go near the eye. The lily-stem shows three white flowers and two dark ones; one of the white flowers lies against the shoulder, as in the lower value. The toe of the front foot turns up. Each of the side-frames shows thirteen bars of the trellis-work, sloping down from left to right, and thirteen sloping down from right to left. In the word PENCE, each E has its lowest limb somewhat longer than the top limb, and the middle tongue is nearer to the top than to the bottom of the letter.

Forged.

Coarsely lithographed, on medium to thick, white, bluish-white, or yellowish-white wove paper, perforated 12, 12½, or 13. The wavy background of the central picture is much too light; the lines gauge five to 1 mm., whereas the genuine gauge six to 1 mm. There are only eleven horizontal lines in the top label, the top and bottom lines being very close to the outlines. There are twelve similar lines in the bottom label, the first and last of them touching the outlines. The head and tail of the G of VIRGIN are so close together, that their inner outlines touch. There is a large dot between the feet of the S and L of ISLANDS, and the foot of the L touches the A. The loops at the top of the lamp-cords are much too large and prominent. The halo round the head of the Virgin touches the outline above it; the face is a caricature; there is hardly any chin; the hair *almost* touches the eye, and there is no eyebrow. The lily-stem has four white flowers, one of them touching the shoulder. The toe of the front foot does not turn up at all; in one of my specimens, it runs to an acute point, which goes across the boundary, between the two horizontal lines beneath it. The strip of lattice-work down the right side of the frame is like the genuine, with thirteen lines or bars each way; but the strip on the left side only shows eleven bars each way. Each E of PENCE has its top and bottom limbs of equal length, and the tongue of the letter is central.

POSTMARKS.

Genuine.—As before.

Forged.—1; 37, 38, both without numerals.

Fourpence, lake-red, lake-brown, etc.

The following are the varieties:—

1867-8. Pale rose or flesh-coloured paper, perforated 15.

1887-9. Chestnut on white, CA, perforated 14.

Genuine.

There are 127 pearls round the central circle. The white line above VIRGIN ISLANDS, and the similar white line below FOUR PENCE, are both

fully as broad as the width of the first I of VIRGIN ; while the white line *below* VIRGIN, and the white line *above* FOURPENCE, are twice as broad as the width of the said I. There is a row of faint pearls above and below each inscription, but I do not think the whole of the pearls in each row are ever visible. In my specimen, I can make out about sixteen pearls above, and about twenty-four below, VIRGIN ISLANDS ; and fourteen above, and about twelve below, FOUR PENCE. Of the eight stars above the Virgin's head, the two central ones touch the outline above them, and the two end ones hang down level with the left eye (right side of the stamp). The face is nicely drawn, and the parting of the hair points to the centre of the fifth star from the left. The left side of the bodice of the dress (right side of the stamp), below the clasped hands, is shaded by four oblique, coloured lines, and the right side is shaded by seven similar lines. All these oblique lines join the busk, which runs down the front of the bodice, making the whole into one single piece ; and the bottom end of the busk is closed. There are only very faint traces of a white ring, inside the circle of pearls. The groundwork, outside the central circle, is a sort of mosaic of heraldic roses, each having an extremely small, white dot in the centre. Each of the flowers in the bottom corners of the stamp has a fair-sized, circular white dot in the centre, from which radiate eight extremely thin, white spokes. The A of ISLANDS is crossed very low down.

First Forgery.

This is the common one, which is seen in every schoolboy's collection. Lithographed, in brownish-red, on medium, rose paper, perforated 12 or 13. There are only eighty-two pearls round the central circle, and they are larger and more distinct than the genuine. The white lines above and below VIRGIN ISLANDS and FOUR PENCE are all thinner than the width of the I of VIRGIN. In the genuine, almost the first thing that strikes the eye is the thickness of the white, bottom outline of the upper label, and the similar, white, top outline of the lower label ; so that the thinness of these two lines is an easy test for this counterfeit. There are twenty-two prominent, white pearls above VIRGIN ISLANDS, and the same number below those words ; fifteen above, and fifteen below FOUR PENCE. Only one of the stars above the Virgin's head (the fifth from the left) touches the outline above it. The end star on the left side of the stamp hangs down level with the end of the nose, and the end star on the right side is level with the eye. The face is very coarse ; the eyes are two staring dots ; the mouth appears to be part of the shading of the front of the neck ; and the parting of the hair points between the fifth and sixth stars from the left. The bottom of the busk is not closed, so that the shading in the bodice is in two pieces ; that on the right side, (left side of the stamp) showing four oblique, coloured lines, and that on the other side, three oblique lines. There is a distinct white ring inside the pearled circle, similar to the one outside it. The groundwork of the corner-spandrels is very coarse, the dot in the centre of each "rose" being as large as one of the pearls above VIRGIN ISLANDS. (It is difficult to recognise the things as heraldic roses.) The flowers in the bottom corners of the stamp are much too prominent. The radiating lines in these flowers do not seem to touch the central white dot. The A of ISLANDS is crossed almost in the centre.

Second Forgery.

I have only seen this quite recently (1907). Lithographed, in light red (very much lighter than the genuine or the first forgery), on rather thin, very hard, slightly-tinted wove paper, perforated 11. There are about 129 pearls round the circle. (I have had to guess one or two, through the postmark of my single specimen, but I think that is the number.) The white line above FOUR PENCE is very broad, almost $\frac{1}{2}$ mm. (In the genuine, it is about $\frac{1}{3}$ mm.) The other lines are about the same thickness as the 1 of ISLANDS. There are forty distinct pearls above, and forty below, VIRGIN ISLANDS; and twenty-three above, and twenty-three below, FOUR PENCE. There is an upright line, instead of a colon, between the latter words. The eight stars above the Virgin's head are smaller than the genuine, and none of them touch the outline of the circle. The outer stars are level with the eyes. None of them have more than six points, though some of the genuine have eight. The head is nearly upright in this forgery, though it is *very* much inclined, both in the genuine and in the first forgery. The parting of the hair runs, open, to the back of the head, though it does not in the genuine; it is under the left side of the fifth star from the left. The shading on the bodice of the dress is too indistinct for description, but there is a row of pearls, like a girdle, near the base of it, which does not exist in the genuine. The busk is closed at the bottom, like the genuine. The white ring inside the pearled circle can be traced all the way round. The mosaic of heraldic roses in the spandrels is very like the genuine, but too faint. The flowers in the bottom corners of the stamp are extremely coarse, the right-hand one being almost square; the rays are joined to the central dot in each case, and many times thicker than the genuine. All the lettering is much too thick; the G of VIRGIN is merely an O with a gap in it; the first E of PENCE has all three limbs of equal length, but in the genuine, it has the central tongue much shorter than the upper and lower limbs.

POSTMARKS.

Genuine.—As before.

First Forgery.—1; 37, without numerals.

Second Forgery.—54, with 40... in the centre.

One Shilling, rose-carmine.

Issue of 1867-8. White wove paper, perforated 15 (Fig. 1).

Ditto, toned paper, perforated 15.

Ditto, with double-lined frame, perforated 15.

FIG. 1.

FIG. 2.

Ditto, on blued paper, perforated 15.

Ditto, with broad crimson margin, as in Fig. 2, on white or toned paper, perforated 15.

Genuine.

Lithographed; varieties as above. The background of the central picture shows thirty-six horizontal rows of a sort of white chain-pattern, consisting of links, with dots between. This pattern can be traced through almost the whole figure of the Virgin, except from the waist to the knees; the space left for the reception of the figure being evidently much too small. The rays of glory are faint and hardly noticeable at a first glance; those from the elbow upwards are nearly vertical. The eight stars are small, and the upper ones are almost twice as far from the outline of the head as the side ones are. The N of VIRGIN is $1\frac{1}{2}$ mm. wide. The I of ISLANDS slopes so much to the left that, if a card be laid along its left-hand edge, it will cut into the first L of SHILLING; the first S of ISLANDS is upright; the A is crossed *very* low down; and the D is nicely shaped. The letters of ONE SHILLING are nearer to the bottom than to the top of the label. The E of ONE has its central tongue nearly as long as the other limbs, and the N of SHILLING is $1\frac{1}{4}$ mm. wide.

First Forgery.

This has the narrow red border, like Fig. 1. Coarsely lithographed, in deep crimson, or in rose, on thinnish to medium, white wove paper, perforated 12, $12\frac{1}{2}$, $12\frac{3}{4}$. There are only thirty horizontal rows of the chain-pattern in the central picture; and the pattern, as a rule, is not visible through any part of the figure of the Virgin, though I have two specimens in which the figure is printed rather too high up, and, in these two, the pattern can be seen behind the upper part of the face. The rays of glory are too coarse and prominent, and those from the elbows upwards slant outwards much more than the genuine. The eight stars are too large; most of them are six-pointed; they are all much about the same distance from the outline of the head. The N of VIRGIN is barely $1\frac{1}{2}$ mm. wide. The I of ISLANDS does not slope very much to the left, so that a card laid along its left-hand edge would pass clear to the left of the first L of SHILLING. The first S of ISLANDS leans over very much to the right; the A is crossed nearly in the centre; the D is very nearly square. The letters of the lower inscription are much nearer to the top than to the bottom of the containing-label, and the outline above them is barely half as thick as in the genuine. The E of ONE has its central tongue very much shorter than the top and bottom limbs, and the N of SHILLING is only 1 mm. wide. In the genuine, the lowest line or black base of the figure is 13 mm. long, but in this forgery it is barely 10 mm. This base, by the way, is a portion of a white moon, surrounded by clouds, both in the genuine and in the forged. I have not gone into particulars of the figure of the Virgin, as the thirty horizontal lines of chain-pattern are such an easy test.

Second Forgery.

This is the stamp with the broad red margin, like Fig. 2. Lithographed, on medium, white wove paper, perforated 13. Except for the broad margin, this forgery is the same as the other.

POSTMARKS.

Genuine.—As before.

First Forgery.—23; 37, 42, both without numerals.

Second Forgery.—37, without numerals.

WESTERN AUSTRALIA.

Issues of 1854. One Shilling, brown.

The varieties are:—

1. Rather thin, yellowish-white wove paper, unperforated; pale brown, grey-brown, red-brown, chocolate.
2. Ditto, rouletted 8 to 14, and compound; pale brown, grey-brown.

Genuine.

Lithographic transfers from a steel die, colonially printed; water-marked with a swan, as here illustrated. In the word POSTAGE, the dark

centre of the O is very narrow, being not more than about $\frac{1}{2}$ mm. across, and the G is very like a C, and not at all like the G of SHILLING, which has a very distinct foot. The first A of AUSTRALIA is rather squeezed in, and the spread of the base is less than $1\frac{1}{2}$ mm. The feet of the second A are a good distance from the R and the L each side of it; and the final A is also a good distance from the foot of the I. The centre of the O of ONE is narrow, like that of the O of POSTAGE. The top of the S of SHILLING is a long way from the H; the first I is parallel with the H; and the last I is parallel with the N. The swan's eye is white, and it is exactly under the stop after POSTAGE. The short lines of shading on the wing all slope upwards to the right. There is a distinct, horizontal white line at the top of the water, below the swan's body; and the leg can be seen, pointing between the IN of SHILLING. The upper part of the water is formed by more or less horizontal lines, but the lower half, above SHILLI, consists of dots. In the background, there is a vertical strip of lattice-work, from the A of POSTAGE to the N of ONE; and, on the other side, a wide lattice-work pattern fills the whole space between AUSTRA and the swan.

Forged.

This is new to me (1907). Rather nicely lithographed, in *black*, on thick, hard, *dirty pink* wove paper, no watermark. The bottom edge of my single specimen bears some traces of rouletting, gauging about 9. The dark centre of the O of POSTAGE is fully $\frac{1}{2}$ mm. wide; and the G has a long, sloping tongue, like that of the G of SHILLING. The lowest point of the tongue goes *very* near to the E. The first A of AUSTRALIA is wide, having a spread of 2 mm. at the base; the second A is squeezed in, and *very* nearly touches the R and the L; the last A very nearly touches the I. The centre of the O of ONE is broad, like that of the O of POSTAGE. The top of the S of SHILLING goes very close to the top of the H; the top of the first I slopes over too much, towards the top of the H; and the top of the second I slopes very much over, towards the top of the N. The swan's eye is black, and there is a distinct, straight eyebrow. The said eye is not under the stop after POSTAGE, but a great deal too far to the left. The short lines of shading on the wing are all horizontal. There is no white line along the top of the water, and the swan's leg is not visible. The whole of the water is formed by straight, horizontal lines, without any dots in the lowest part. The whole background, behind the swan, is a uniform pattern of vertical scallops, formed by fine

dots, regularly arranged ; but there is a blank space under the w, which is filled in with dots in the genuine. This counterfeit is clearer than the genuine ; but, of course, the colour of the ink and paper will instantly condemn it.

POSTMARKS.

Genuine.—70.

Forged.—Uncancelled.

Issues of 1857. Sixpence, bronze.

The varieties are :—

1. Medium to thick, yellowish-white wove paper, unperforated ; grey-black, black-bronze, golden bronze.
2. Ditto ; rouletted 9 to 14, and compound ; black-bronze.

Genuine.

Lithographed as before, watermarked with a swan. The O of POSTAGE is circular, and the top limb of the E is as long as the bottom one. I expect that the original, engraved die shows a white line all round the frame, close to its outside edge, and a similar one all round, close to its inner edge ; but, in these transfers, the outer line seldom shows anywhere, except below SIXPENCE, and outside AUSTRALIA ; and the inner line, in all my specimens, only shows for part of the way below POSTAGE. There is a bunch of about four reeds (one of them split) in front of the breast of the swan ; they are growing out of the side-frame, and not out of the water. They all lean over towards the swan. The bunch of leaves under the tail of the swan contains four leaves bending towards the swan, one nearly upright, and three bending away from the swan. The bill is long and slender. The top outline of the wing runs up, for half its length, towards the G of POSTAGE, and then bends off to the right, towards the S of AUSTRALIA. Only the one wing can be made out. Its right-hand edge is rounded, and shows the rounded tips of four feathers. The place where the tail meets the lower edge of the wing is level with the tail of the R of AUSTRALIA, and the upper outline of the swan's tail slopes strongly upwards to the right. The engraved die probably showed a dotted background, behind the swan ; but, in all my specimens, the dots have all disappeared, except three or four rows below POSTAGE, and a few scattered ones to the right of WESTERN.

First Forgery.

Lithographed, in greenish-gold, on thick, hard, very white wove paper, no watermark, unperforated. The O of POSTAGE is oval, and the top limb of the E is much shorter than the bottom one. There is a very distinct white line all round the frame, close to its outside edge, and another, rather narrower, all round, near the inside edge. In front of the breast of the swan there are seven reeds. They are growing almost perpendicularly out of the water ; five of them bend towards the swan, and the outer two bend away from it, the second from the left being much the longest. In the bunch of leaves under the tail of the swan, there are three radiating from one stalk, and an upright one to left of the three ; the outer one of the three bends over to the right, and *nearly* touches the frame, by the foot of the second A of AUSTRALIA ; the left-hand one bends over to the left, towards the tail of the swan ; and the centre one bends over towards the R, and has a knob near the

end. The bill is more stumpy than the genuine. There are two distinct wings, both tolerably sharply pointed; they point towards the right top corner of the stamp, and the ends of the feathers of the front wing cannot be made out. The top outline of the tail is horizontal, and the place where the tail meets the wing is level with the space between the TR of AUSTRALIA. There are no dots in the background, behind the swan, which is an absolute blank. The first A of AUSTRALIA is simply a triangle.

Second Forgery.

I must transcribe the description of this from my second edition, as it is no longer in my possession. Very nicely lithographed, on stout, extremely hard, white wove paper, which has been stained with something, to give it a look of age; ungummed; no watermark. The paper is much smoother than that of the genuine; thus the impression is better. There are *six* distinct reeds or flags in front of the breast of the swan, all of them curved like scimitars, the second and third from the top being very blunt, and with white centres; *i.e.*, not solid. The bunch near the tail is exactly like the bunch of leaves on the top of a pine-apple; the second one from the left touches the very tip of the tail. The two middle leaves of this bunch reach considerably above the level of the tail. A perpendicular line, drawn upwards through the centre of the I of SIXPENCE, would cut deeply into the front of the breast, and cut off the whole of the bill. In the genuine, a line so drawn would pass clear to the left of the breast and bill. It will be understood from this, that the point of the bill comes much more forward to the left in the forgery, than it does in the genuine. The bill is thick, sharp at the point, and the profile of it is curved like a Roman nose. The end of the tail is split up into several feathers, and it is quite level, pointing towards the bunch of reeds, and the beginning of the second A of AUSTRALIA. The solid frame has no white line in it anywhere. There are ten coarse, heavy lines to the left of the swan's breast, to represent the water. There are a good many other differences besides those named above, but the tests given ought to be quite sufficient to detect this forgery.

Genuine.—70.

POSTMARKS.

First Forgery.—A very thick, curved line, which is probably part of a large circle.

Second Forgery.—Uncancelled.

Issues of 1854. One Penny, black.

The varieties are :—

1. Rather thick, yellowish-white wove paper, unperforated.
2. Ditto, rouletted 9 to 14, and compound.

Genuine.

Engraved in *taille-douce*, watermarked with a swan. The two points of the W of WESTERN are cut off square at the bottom, and the top limb of the first E of this word is much longer than the central tongue. The centre of the O of POSTAGE is a pointed oval. The top of the first A of AUSTRALIA is very broad and square, and the U is nicely rounded at the bottom. Both the E of ONE and the E of PENNY have the bottom limb decidedly longer than the top limb. The lettered labels are not solid, but show a white, lattice-work pattern, which can be seen, more or less

distinctly, in the spaces between the letters, especially in the space before the P of POSTAGE, which shows a mark like a \lessapprox placed sideways, interlaced with part of another w. The first and last letters of AUSTRALIA are *very* close to the ends of the label, and all the letters of this word are as broad as the letters of the other inscriptions. The shading on the swan's wing is in short lines, *not* all sloping the same way, and the tail is very blunt. The top, horizontal line of the water, behind the said tail, if prolonged to the right, would cut centrally through the L of AUSTRALIA. There are some oblong, white patches, like large, indistinct hyphens, in the engine-turned pattern of the background; *i.e.*, about five horizontal ones, in a vertical row, in front of the swan's breast; four vertical ones, behind the back of the neck; and a vertical row of three horizontal ones, above the tail.

Forged.

Lithographed, on very white, and also on neutral-tinted paper, very thin and poor, no watermark, unperforated, also perforated 12. The colour is usually a much deeper black than that of the genuine. The left bottom point of the W of WESTERN is sharp, while the right point is often blunter, and rounded. The top limb of the first E of this word is almost exactly the same length as the central tongue. The centre of the O of POSTAGE is a wide, upright oblong, rounded at the top and bottom. All the letters of AUSTRALIA are thinner than those of WESTERN; the top of the first A is much too narrow, and cut off slopingly, instead of square, while the bottom outline of the U is quite flat. The label containing WESTERN is practically solid, with hardly any trace of white lines between the letters. The top label shows a few white dots and scratches, but there is no recognisable w before the P of POSTAGE. The right-hand label is almost perfectly solid. In the bottom label, there is a white lattice-work after the E of ONE, a couple of marks under the P of PENNY, a zig-zag, upright white line between the NN, and a similar white line between the NY. The first A of AUSTRALIA is much nearer to the end of the label than the last A is. The shading on the swan's wing is nearly all in long, parallel lines, sloping up to the right; and the tail is rather sharply pointed. The top outline of the water, under the swan's tail, if prolonged to the right, would pass along the centre of the shaft of the L of AUSTRALIA, instead of through the centre of the letter. The oblong, white hyphens of the background are absent; but a long, vertical white line can be seen, at the point of the swan's tail, reaching up as high as the beginning of the middle of the U of AUSTRALIA, and down to the water-line. There are two similar white lines in front of the swan's breast; the outer one, in a line with the left-hand edge of the P of POSTAGE, can be traced upwards to level with the tail of the R of WESTERN, and downwards to the level of the middle of the W. The second, similar vertical line is parallel with this, and about 1 mm. to the right of it. It is split at the top. These straight lines are hardly noticeable in the genuine.

POSTMARKS.

Genuine.—70.

Forged.—6, without numerals; 54, ditto; 69; 101.

Issues of 1860. Twopence, orange.

The varieties are:—

1. Hard, yellowish-white wove paper, swan watermark, unperforated; pale orange, orange-vermilion.
2. Ditto, rouletted, $7\frac{1}{2}$ to 14.

Genuine.

Engraved in *taille-douce*, watermarked with a swan; varieties as above. Each E of PENCE has its lowest limb longer than the top limb. The head of the T of TWO almost touches the end of the label, and the lowest limb of the last E of PENCE is less than $\frac{1}{2}$ mm. from the other end. The P and E of POSTAGE are $1\frac{1}{2}$ mm. from their respective ends of the label, and the dark centre of the O, though not so pointed as in the one penny value, is only a shade over $\frac{1}{4}$ mm. broad at its widest part. The centre of the O of TWO is also only a shade over $\frac{1}{4}$ mm. in its widest part. The C of PENCE has no lump on it; it is simply an O, with a wedge-shaped piece removed; the bottom limb of the last E of this word is longer than the top limb. The four lettered labels are quite solid, showing no trace of the white lattice-work visible in the one penny value. The other tests are the same as in the one penny.

First Forgery.

Lithographed, in orange, on thick, hard, white wove paper, badly perforated 12, no watermark. (This may be intended to imitate the issue of 1882, CA, perforated 12, but the colour is a decided orange, instead of chrome-yellow.) The top limb of the first E of PENCE is thinner than the bottom one, and the top limb of the second E is as long as the bottom one. The head of the T of TWO is $\frac{3}{4}$ mm. from the left-hand end of the label, and the last E of PENCE is $\frac{3}{4}$ mm. from the other end. The dark centre of the O of POSTAGE has very blunt ends, and it is fully $\frac{1}{2}$ mm. wide in its broadest part. The centre of the O of TWO is a badly-shaped, sharply-pointed oval, and is $\frac{3}{4}$ mm. wide in the widest part. The tail of the C of PENCE has a small lump on it, so that it is more a G than a C. The ink of the background of the lettered labels is quite flat on the paper, instead of standing out, as it does in the genuine. The other tests are the same as in the forged one penny.

Second Forgery.

This is worse than the last. It is poorly lithographed, in dull, ochre-yellow, on thick, hard, greyish-white, vertically *laid* paper, no watermark. The W of WESTERN is badly drawn, with the bottom of the last limb having a lump on it, and the top of it much thinner than the top of the first limb. The centre of the O of POSTAGE is a very blunt oval. The top of the T of TWOPENCE is nearly $\frac{1}{2}$ mm. from the left-hand end of the label; the right side of the O is misshapen, and its centre very much narrower than that of the O of POSTAGE. The top limb of each E of PENCE is quite as long as the bottom limb, and the last E is $\frac{1}{2}$ mm. from the end of the label. The lettered labels show white specks in the background. The C of PENCE is rather like a G. There is a distinct white line up the swan's neck, which is not noticeable in the genuine, and the part of the body above OPE of TWOPENCE is principally shaded with blotches, instead of short, curved lines. The background is very white, showing very little of the engine-turned work of the genuine. The swan's eye is a solid, dark blotch, though it is white, with a dark pupil, in the genuine.

Third Forgery.

This is decidedly the best; and except for being lithographed, instead of engraved, it is deceptive. Lithographed, in orange-vermilion, on thin, hard, white wove paper, no watermark. There is a line round the stamp, which does not exist in the genuine. The right bottom peak of the W of WESTERN is fairly square, but the left one is sharper and more

rounded. The P of POSTAGE is only $\frac{3}{4}$ mm. from the left-hand end of the label, and the E is only 1 mm. from the right-hand end. The centre of the O of this word is a very round oval, $\frac{3}{4}$ mm. wide. The centre of the O of TWOPENCE is like that of the O of POSTAGE; the top limb of the first E is slightly longer than the bottom limb; the C is rather like a G, and the bottom of the final E goes *very* close to the end of the label. The lines of shading on the swan's wing *all* slope the same way (upwards to the right). The leg is not visible, though it is very distinct in the genuine. The dark, top outline of the water, behind the swan, if produced to the right, would pass through the tail of the L of AUSTRALIA, very near its end; and the white, horizontal line under the swan, if similarly produced to the right, would pass along the I of that word, rather above its centre; though the said line in the genuine, which is not so prominent as in this forgery, would pass between the L and I, touching both. The engine-turning of the background is rather nicely done, though it is too faint, and is evidently formed by coloured dots on a white ground, instead of white lines scratched out of a dark background.

POSTMARKS.

Genuine.—70.

First Forgery.—70, without numerals, in black or blue.

Second Forgery.—54.

Third Forgery.—70, without numerals, in blue.

Same Issue. Sixpence, green.

The varieties are the same as in the twopence, orange:—

1. Unperforated.
2. Rouletted $7\frac{1}{2}$ to 14.

Genuine.

Engraved in *taille-douce*, watermarked with a swan; varieties as above. The tail of the S of SIX, at its nearest point, is only $\frac{1}{2}$ mm. from the left-hand end of the label; and the top limb of the last E of PENCE is $\frac{3}{4}$ mm. from the other end. The P and E of POSTAGE are, as before, $1\frac{1}{4}$ mm. from their respective ends of the label; the A is crossed very low down; and the head and tail of the G, at their nearest point, come within less than $\frac{1}{2}$ mm. of each other. The four labels are solid, as in the twopence. I have not been able to make out the white hyphens in the engine-turned background, but the rest of the tests are the same as in the genuine one penny value.

Forged.

Lithographed, on medium, white wove paper, unperforated, no watermark. The bottom corner of the tail of the S of SIX is $1\frac{1}{4}$ mm. from the left-hand end of the label, and the top limb of the last E of PENCE is nearly 1 mm. from the other end. The P of POSTAGE is $1\frac{1}{4}$ mm. from the left-hand end of its label, and the E is also $1\frac{1}{4}$ mm. from the other end; the A is crossed in a normal way, and the head and tail of the G are nearly $\frac{3}{4}$ mm. apart. The labels are solid, but the other tests are the same as in the forged one penny.

POSTMARKS.

Genuine.—As before.

Forged.—Like 101, but with four concentric circles.

Later Issues.**Genuine.**

I need not enumerate these, for the reason given below.

Forged.

All the forgeries in the following list are exactly the same as the forged one penny, so that the tests for that counterfeit will serve for the detection of them all. I possess—

ONE PENNY: brownish-carmine, on bluish-white wove paper; no watermark; unperforated.

ONE PENNY: dull rose-carmine, on medium, soft, white wove paper; no watermark; badly perforated $12\frac{1}{2}$.

ONE PENNY: red-brown, marone, rose-carmine, on thin, white wove paper, the face of which has an almost buff wash; no watermark; perforated $10\frac{3}{4}$.

TWOPENCE: very dull blue, on medium, very white wove paper; no watermark; unperforated.

TWOPENCE: chalky, greenish-blue, on medium, rather soft, very white wove paper; no watermark; badly perforated 12.

TWOPENCE: rather dark, dull blue, on rather thick, very yellowish-white wove paper; no watermark; perforated 11.

FOURPENCE: a sort of lilac-rose, on stout, very yellowish-white wove paper; no watermark; unperforated, or perforated about 14.

SIXPENCE: chestnut-brown, also darker red-brown, on medium, very white wove paper; no watermark; unperforated.

SIXPENCE: dark red-brown and purple-brown, on thin, soft, greyish-white wove paper; no watermark; perforated about 12.

SIXPENCE: intense, dark mauve, on stout, white wove paper; no watermark; perforated about 12.

ONE SHILLING: dull, dark yellow-green, on thin, hard, greyish-white wove paper; no watermark; unperforated.

ONE SHILLING: yellow-green, on soft, rather thin, very yellowish-white wove paper; no watermark; very nicely and clearly perforated $12\frac{1}{2}$.

ONE PENNY: bistre, yellow-brown, on stout, rather hard, white wove paper; no watermark; unperforated.

TWOPENCE: orange-yellow, on thinnish, soft, very yellowish-white wove paper; no watermark; very nicely and clearly perforated $12\frac{1}{2}$.

POSTMARKS.

Genuine.—As before.

Forged.—6, without numerals; 54; also 54, without numerals; 69; 70.

Issue of 1879. Twopence, mauve. Error of colour.

Genuine.

This is the same as the twopence of 1865, *i.e.*, with watermark CC, perforated $12\frac{1}{2}$.

Dyed Stamp.

This is the grey twopence of 1889; watermarked CA; perforated 14. In the genuine error, the stamp is in mauve, on white paper. In this fake, the whole stamp has been dyed mauve, so that it is in mauve on mauve.

POSTMARKS.

Both the genuine and the fake bear genuine postmarks.

Issue of March, 1875. Twopence, yellow, surcharged ONE PENNY, as illustrated, in green.

Genuine.

($12\frac{1}{2}$; CC.)

The stamp surcharged is the twopence of 1865, CC watermark, perforated $12\frac{1}{2}$. The following are the measurements of the surcharge:—

1. Height of O and P, $2\frac{3}{4}$ mm.
2. Height of other letters, $1\frac{3}{4}$ mm.
3. Width of ONE, $7\frac{1}{4}$ mm.
4. Left-hand edge of vertical shaft of E of ONE to left-hand edge of vertical shaft of P, $4\frac{1}{4}$ mm.
5. Width of PENNY, from left-hand edge of vertical shaft of P to left-hand edge of vertical shaft of Y, $9\frac{3}{4}$ mm.
6. Left edge of P to left edge of E, $2\frac{3}{4}$ mm.
7. Width of inside of O, $1\frac{3}{4}$ mm.
8. Width of inside of head of P, 1 mm.

ONE PENNY**First Forgery.**

($12\frac{1}{2}$; CC.)

Like the genuine, this is printed on the twopence of 1865, CC, perforated $12\frac{1}{2}$. I have this inverted. The following are the measurements, numbered to correspond with those of the genuine, to avoid repetition:—

1. 3 mm.
2. 2 mm.
3. 7 mm.
4. $5\frac{1}{4}$ mm.
5. $9\frac{1}{4}$ mm.
6. $2\frac{1}{4}$ mm.
7. $1\frac{1}{2}$ mm.
8. $1\frac{1}{4}$ mm.

Second Forgery.

($12\frac{1}{2}$; CC.)

This is, as before, on the twopence of 1865, CC, perforated $12\frac{1}{2}$. The following are the measurements:—

1. 3 mm.
2. $1\frac{1}{4}$ mm.
3. $7\frac{1}{4}$ mm.
4. $4\frac{1}{2}$ mm.
5. $9\frac{1}{4}$ mm.
6. $2\frac{1}{4}$ mm.
7. 1 mm.
8. $1\frac{1}{8}$ mm.

The measurements are very like those of the genuine, but the P seems to lean over *very* slightly to the right.

Third Forgery.(14; C.C. *Bogus.*)

I have this on the twopence of 1872, C.C., perforated 14, which is bogus. The following are the measurements:—

1. O, 3 mm.; P, $3\frac{1}{4}$ mm.
2. 2 mm.
3. $6\frac{1}{2}$ mm.
4. $4\frac{1}{2}$ mm.
5. $9\frac{1}{4}$ mm.
6. $2\frac{1}{2}$ mm.
7. 1 mm.
8. $1\frac{1}{2}$ mm.

The head of the P slopes down slightly where it joins the middle of the letter, instead of being truly horizontal.

Fourth Forgery.

(Both stamp and surcharge forged.)

The whole stamp is forged, the surcharge being lithographed on the first forgery of the twopence, already described. The following are the measurements of the surcharge:—

1. $2\frac{3}{4}$ mm.
2. $1\frac{1}{4}$ mm.
3. 7 mm.
4. $4\frac{1}{2}$ mm.
5. $9\frac{1}{4}$ mm.
6. $2\frac{1}{4}$ mm.
7. $1\frac{1}{2}$ mm.
8. $1\frac{1}{4}$ mm.

Fifth Forgery.(12; C.A. *Bogus.*)

This is on the twopence of 1882, C.A., perforated 12. I give this bogus stamp on the authority of my publishers' catalogue, as I have not seen it myself.

Sixth Forgery.(14; C.A. *Bogus.*)

This is on the twopence of 1882-90, C.A., perforated 14. I give this bogus stamp on the above authority, not having seen it.

The following table gives all the measurements together, for convenience of reference. The first column shows the tests in the order in which they are described in the foregoing pages.

	G.	1 F.	2 F.	3 F.	4 F.

WURTEMBERG.

(Type of illustration.)

Issue of 1851-2. 1 Kreuzer, black on buff.

Genuine.

(Teeth = 32.32.32.32.)

Engraved in *épargne*, on fairly thick, buff wove paper, brownish-white gum. The stamp is about $22\frac{1}{2}$ mm. square, but it varies slightly, according to the quantity of ink on the plate. The left-hand inscription is DEUTSCH=OESTR. POSTVEREIN, with two parallel, slanting hyphens after the first word, and a stop after each of the others. In the top label, the end of the projecting tail of the left bottom corner of the W of WÜRTEMBERG is exactly 1 mm. from the left-hand end of the label; and the left-hand dot of the two over the U is not above the first stroke of the U, but considerably to the right of it. The short letters of this word are equidistant from the top and bottom outlines of the containing-label. The right-hand label contains VERTRAG V. 6. APRIL 1850. The F of FREIMARKE has a tongue sticking out of the middle of its right side, and the K is the usual, German, lower-case K, which is like a lower-case T, with an extra, curved stroke on the right side of its head. There is a large, diamond-shaped stop after FREIMARKE. The words in each of the side-labels are enclosed in two rows of saw-teeth, and there are thirty-two inward-pointing teeth in each of the four rows. None of the points of the central diamond touch the inner frame. The squares in the diamond are carefully drawn, all the same size, and are in thirteen rows, of thirteen in a row. The top of the large 1 cuts across the centre of the fourth vertical diamond from the top; and the bottom of the said 1 covers more than half of the fourth vertical diamond from the bottom. I think the four rows of thirty-two saw-teeth are the best test.

First Forgery.

(Teeth = 29.31.26.28.)

Rather coarsely lithographed, on medium, dark buff, or on thicker, light buff wove paper, ungummed. The stamp varies from $22\frac{3}{4} \times 23$ mm., to $22\frac{1}{2} \times 23\frac{1}{4}$ mm. The left-hand inscription is DEUTSCH. OESTR. POSTVEREIN, with a small stop after each of the words. The point of the projecting tail of the W of WÜRTEMBERG is nearly $1\frac{1}{2}$ mm. from the left-hand end of the label, and the right-hand dot of the two over the U touches the said U, though it is high above it in the genuine. The short letters of this word are much nearer to the outline below them than to the one above them. The right-hand label bears VERTRAG D. 6. APRIL 1850, with no stop after 1850. There is no tongue to the centre of the right side of the F of FREIMARKE, and the K of this word is very like the K before it in shape, though much taller. There is no stop after the word. The inward-pointing saw-teeth down the left side are twenty-nine and thirty-one, and those down the right side, twenty-six and twenty-eight respectively. The right-hand point of the central diamond *almost* touches the frame to right of it. The top of the head of the large 1 leaves only a very tiny portion visible, of the fourth vertical diamond above it; and the fourth diamond below the foot of the said 1 is as nearly as possible perfect; i.e., the numeral is set a shade too high.

Second Forgery.*(Soi-disant Reprint.)**(Teeth = 29. 29. 28. 28.)*

This is an official imitation, made in September, 1864. It is engraved in *épargne*, on medium, pale buff wove paper, white gum. The stamp measures $22\frac{1}{2} \times 23$ mm. In the genuine, the long S of DEUTSCH has a very short, horizontal head, the end of which is $\frac{1}{2}$ mm. from the shaft of the H, while the head of the S of OESTR. touches, or almost touches, the head of the T, and the heads of the S and T of POSTVEREIN are joined. In this forgery, the head of the S of DEUTSCH is long, and curls upwards at the end, which is only about $\frac{1}{4}$ mm. from the top of the H, while the head of the S of OESTR. is also long, and slopes upwards at the end, and does not touch the T. The heads of the S and T of POSTVEREIN do not touch. The point of the left bottom tail of the W of WÜRTEMBERG is $1\frac{1}{2}$ mm. from the end of the label, and the left-hand dot over the U is exactly above the left stroke of that letter. The T of VERTRAG is too short, being hardly any taller than the R each side of it. The tongue of the F of FREIMARKE touches the R, though they are separate in the genuine. There are only twenty-nine saw-teeth in each of the left-hand rows, and twenty-eight in each of the right-hand rows. The stop after WÜRTEMBERG is nearly round, instead of a distinct diamond.

Same Issue. 6 Kreuzer, black on green.**Genuine.***(Teeth = 32. 32. 32. 32.)*

Engraved in *épargne*, as before, on thin to medium, green wove paper. The top point of the large diamond, containing the 6, is not under the centre of the first E of WÜRTEMBERG, but to the right of it; and the bottom point of the said diamond is to the right of the central stroke of the M of FREIMARKE. All the other tests, except those which refer to the central numeral, are exactly the same as in the genuine 1 kreuzer.

Forged.*(Soi-disant Reprint.)**(Teeth = 29. 29. 28. 28.)*

This is the same as the second forgery of the 1 kreuzer. It is engraved in *épargne*, on medium, rather blue-green, instead of yellow-green, wove paper, white gum. The top point of the central diamond is exactly under the centre of the first E of WÜRTEMBERG, and the bottom point is exactly above the central stroke of the M of FREIMARKE. The other tests are the same as in the second forgery of the 1 kreuzer.

Same Issue. 9 Kreuzer, black on rose.**Genuine.***(Teeth = 32. 32. 32. 32.)*

Engraved in *épargne* on medium, rose wove paper. The top point of the central diamond is decidedly to the right of the first E of WÜRTEMBERG, and the bottom point is slightly to the right of the central stroke of the M of FREIMARKE. The other tests are the same as for the genuine 1 kreuzer.

Forged.

(Soi-disant Reprint.)

(Teeth = 29. 29. 28. 28.)

This is uniform with the second forgery of the 1 kreuzer. Engraved in *épargne*, on rather thin, pale rose wove paper, white gum. The rose has a slight shade of blue in it. The top point of the central diamond is exactly under the centre of the first E of WÜRTEMBERG, and the bottom point is slightly to the left of the middle stroke of the M of FREIMARKE. The other tests are the same as for the second forgery of the 1 kreuzer.

Same Issue. 18 Kreuzer, black on purple.

As this value is very much scarcer than the others, the forgers have imitated it much more frequently.

Genuine.

(Teeth = 32. 32. 32. 32.)

Engraved in *épargne*, on fairly thick, purple wove paper, brownish-white gum. The stamp is about 23×23 mm. in size. The inscriptions are the same as in the genuine 1 kreuzer, but the left bottom tail of the W of WÜRTEMBERG is only about $\frac{3}{4}$ mm. from the left-hand end of the label, in all my specimens. There are, as before, two rows of thirty-two saw-teeth down the left side, and two rows of thirty-two teeth down the right side. The central diamond has a ground of horizontal lines, behind the numerals. The heads of the said numerals touch the twelfth line from the top, and their feet touch the fourteenth line from the bottom. Nine lines can be seen in the hollow head of the 8, and eleven in the lower half.

First Forgery.

(Teeth = 28. 30. 27. 31.)

Lithographed, on medium, wove paper, about the same shade as the genuine. The stamp measures $21\frac{1}{2} \times 22\frac{3}{4}$ mm. The stop after POSTVEREIN is almost invisible. The left lower tail of the W of WÜRTEMBERG is only about $\frac{1}{2}$ mm. from the end of the label, and the second T and the B almost touch the top outline of the label. The stop after 1850 is a mere speck. There are only twenty-eight and thirty teeth down the left side, and twenty-seven and thirty-one down the right side. The tops of the numerals come between the eleventh and twelfth horizontal lines from the top; the base of the 1 slants a little, so that its left side comes between the eleventh and twelfth lines from the bottom, and its right side touches the eleventh line. The 8 rests on the eleventh line; and eight lines only can be seen through its upper half, and ten through its lower half.

Second Forgery.

(Teeth = 28, 31 ? 28, 31.)

Typographed (?), on medium, very pale purple wove paper; size 22×23 mm. The S of DEUTSCH is bent over into a very distinct hook, and the C and H are separate, though they are joined together in the genuine. The tails of the said S and H, and the S of OESTR., are all so long that they very nearly touch the saw-teeth, instead of being no longer than the other letters. The stop after POSTVEREIN is only just visible. There are twenty-eight and (I think) thirty-one teeth down the

left side, and twenty-eight and thirty-one also down the right side. The tops of the numerals come between the eleventh and twelfth horizontal lines from the top, and the top of the 1 is rather sloping and ragged, instead of perfectly square. The base of the 1 comes between the eleventh and twelfth lines from the bottom, though the right-hand end of the said base touches the eleventh line. The 8 rests on the eleventh line; only seven lines can be seen through its upper half, and six through the lower half.

Third Forgery.

(*Soi-disant Reprint.*)

(*Teeth* = 29. 29. 28. 28.)

Typographed, on rather thin, reddish-purple wove paper; ungummed; size $22\frac{1}{2} \times 23$ mm. The inscriptions are the same as in the second forgery of the 1 kreuzer. There are twenty-nine teeth in each of the rows down the left side, and twenty-eight in each of the two rows down the right side. The horizontal lines are the same as in the genuine.

Fourth Forgery.

(*Teeth* = 29. 31. 26. 28.)

Lithographed, on thin, very dark purple wove paper; size $22\frac{1}{2} \times 23$ mm. The inscriptions are the same as in the first forgery of the 1 kreuzer. There are twenty-nine and thirty-one saw-teeth down the left side, and twenty-six and twenty-eight down the right side. The tops of the numerals touch the tenth line from the top, and their bases rest on the eleventh line from the bottom. Eight lines can be seen through each half of the 8.

Fifth Forgery.

(*Teeth* = 30. 32. 31. 32.)

Typographed (?), on medium, reddish-purple wove paper; size $22\frac{1}{2}$ mm. square. There is no stop after OESTR. The tail of the w of WÜRTEMBERG is 1 mm. from the left-hand end of the label. There are thirty and thirty-two teeth down the left side, and thirty-one and thirty-two down the right side. The tops of the numerals come between the fourteenth and fifteenth lines from the top; and their bases between the fifteenth and sixteenth lines from the bottom. Nine lines are visible through the upper half of the 8, and eleven through the lower half.

Sixth Forgery.

(*Teeth* = 31. 31. 30. 33.)

Lithographed (?), on fairly thick, purple wove paper; size $21\frac{3}{4} \times 22$ mm. The marks over the U of WÜRTEMBERG are like two acute accents ('), instead of two dots. There are thirty-one teeth in each row down the left side, and thirty and thirty-three down the right side. The tops of the numerals come between the twelfth and thirteenth lines from the top (the top of the 1 is ragged), and their bases rest on the sixteenth line from the bottom. Nine lines can be seen through the top half of the 8, and ten through the lower half.

Here is a table of the numbers of teeth down the two sides of the 18 kreuzer, for reference. The first two numbers, in each case, are those down the left side, and the other two, those down the right side.

POSTMARKS.

Genuine.—As before.

First Forgery.—1.

Second Forgery.—Two lines of capital letters, without frame.

Third Forgery.—Uncancelled.

Fourth Forgery.—Uncancelled.

Fifth Forgery.—29, with the outer circle double-lined.

Sixth Forgery.—29.

Issue of December, 1856. 1, 3, 6, 9, 18 Kreuzer.

I have no forgeries of this issue, but the reprints (which were made in September, 1864, at the same time as the official imitations of the first issue, already described) are rather common, and I thought it best to mention them. Moens says they were allowed to pay postage.

Genuine.

The stamps are all on thick, white wove paper, with a horizontal, *orange* silk thread running through it. There is only a space of $\frac{3}{4}$ mm. between the stamps on the sheet.

REPRINTS.

There is a full set of these, with *red* silk thread ; and besides these, the 6 kreuzer exists with *yellow* thread, and there are fancy varieties of the 1 kreuzer, in green, lilac, and bistre, with *deep blue*, vertical thread.

POSTMARKS.

Genuine.—29. Also the same, with the outer circle double-lined.

Reprints.—Uncancelled.

Issue of 1858. 1, 3, 6, 9, 18 Kreuzer.

Genuine.

These are the same type as the 1856 issue, but are on plain paper, without silk thread. The stamps are only 1 to $1\frac{1}{2}$ mm. apart on the sheet.

REPRINTS.

There is a full set of these, the 1 kreuzer on thin white wove, the other values on thick ditto. The stamps are $1\frac{1}{2}$ to $1\frac{3}{4}$ mm. apart on the sheet, and single specimens with little margin are difficult to distinguish from the genuine. I have an assortment of specimens of the 1 kreuzer, in various fancy colours, on *pelure*, thin, thick, and cartridge paper.

POSTMARKS.

Genuine.—As in the last issue.

Reprints.—Uncancelled.

Issue of 1863-4. 1 Kreuzer, green, perforated 10.

Issue of 1865-8. Ditto, rouletted 10.

This is the same design as the 1856 issue, but with the colour changed.

Genuine.

Engraved in *épargne*, and embossed, on medium, white wove paper. The ornaments in the corners are six-petalled florets, with each petal nicely rounded. The central peak of the M of FREIMARKE comes down to the very bottom of the letter, even trespassing a shade below the level of its two feet. The outer frame-line is much broader than the inner one; the outer one being broader than the width of the shaft of the F of FREIMARKE, while the inner one is decidedly narrower than the said shaft. The lion's crown adheres closely to his head; his features are quite recognisable; the mouth is open, and the tongue sticks out. The end of the tail curls over, and points downwards to the left, towards the bottom of the first E of the left-hand KREUZER. The left hind leg appears to be almost separate from the body. The stag's nose is sharply pointed, and there is a white projection, which is either a beard, or the tongue hanging out. The crown on the top of the helmet is very nicely done, and not at all lop-sided; the helmet is a royal one, with six vertical bars. There is no colour on it. The central background is formed by rows of thin, white, horizontal chains, on a coloured ground, each link of each chain having a large, coloured, oval centre. The forked, right-hand end of the scroll is over the right-hand limb of the bottom KREUZER.

Forged.

Lithographed, on thick, white wove paper. The ornaments in the corners are stumpy, six-pointed stars. The central peak of the M of FREIMARKE does not come down quite to the level of the bottom of the feet. The white line of the outer frame of the stamp is as thin as the inner one—very much thinner than the shaft of the F of FREIMARKE. The lion's crown does not touch his head, and the face is an absolute caricature. The end of the tail has a blunt knob, in place of the long, tapering tassel of the genuine; it points upwards, towards the middle of the Z of the left-hand KREUZER. The left hind leg is well joined to the body. The stag's nose is blunt, and there is no tongue. The crown on the helmet is badly done; the left side is unlike the right. The helmet is represented by a turnip, marked by coloured eyes, nose, and mouth. The central background is a chequer-work of alternate white and green oblongs, rather irregularly disposed; or it might be described as horizontal rows of white oblongs, on a coloured ground. In any case, it is not all like the white chain-work pattern of the genuine.

POSTMARKS.

Genuine.—29.

Forged.—Uncancelled.

COMMISSION FÜR RETOURBRIEFE.

I have several counterfeits of the black labels of various towns, bearing arms, and the inscription COMMISSION FÜR RETOURBRIEFE; but they are not worth describing, as the originals are only tickets of the Dead Letter Office.

ZULULAND.

Issue of 1888-92.

Current British Stamps, surcharged ZULULAND.

In a sheet of stamps sent to me in 1905, for examination, I found a 2d. with a forged surcharge. It is so very different from the genuine that it is hardly worth describing, but I thought I might as well include it in this book, lest any youthful collector should be imposed upon by it.

Genuine.

The surcharge is in sans-serif or block letters, not quite 3 mm. high. The whole length of the surcharge is 16 mm., but, as this is rather awkward to measure accurately, I may say that, from the **ZULULAND** left-hand edge of the first upright stroke of the first U, to the right-hand edge of the last stroke of the N, the distance is a shade under 12 mm. The impression is in *black*.

Forged.

The surcharge is in large, ordinary Roman capitals, $3\frac{1}{2}$ mm. high. The whole length of it is about $19\frac{1}{2}$ mm. The distance from the U to the N, measured as before, is $13\frac{3}{4}$ mm. The impression is in *aniline violet*.

POSTMARKS.

Genuine.—29.

Forged.—My specimen is surcharged on a stamp that had evidently done duty on a parcel; as it bears the familiar, thick, concentric circles, so commonly employed in the parcel post.

BOGUS STAMP.

I have lately come across the English $\frac{1}{2}$ d., slate-blue, of April, 1884, as here illustrated, surcharged ZULULAND in rather short, black, outlined sans-serif letters, $2\frac{1}{2}$ mm. high, and the word fully 20 mm. long. The stamp bears a British postmark, and is, of course, altogether bogus.

In Great Britain it will be cheaper for our readers to order *G. S. W.* from their nearest Newsagent or Stationer, or from the Railway Bookstall. This will save postage, and the paper will be delivered flat, instead of folded as it would be if posted.

The Monthly Journal

Edited by MAJOR E. B. EVANS.

The *Monthly Journal* is chiefly intended for Stamp Collectors who are rather advanced. The chief features are—

- 1st.—A series of entirely Original Articles by the leading Philatelic Writers of the day on all subjects of interest to Stamp Collectors.
- 2nd.—A special and most carefully compiled list of all New Issues, Discoveries, Minor Varieties, etc.

Subscription: 2/- per Annum.

*All Subscriptions must be prepaid, and commence with the first number of a volume.
Collectors who subscribe now will receive the back numbers of the current volume.*

STANLEY GIBBONS, Ltd., 391 Strand, London, W.C.

"NEW ISSUES" AT FIFTEEN PER CENT. OVER NOMINAL VALUE.

**A Department is now in operation for the supply of
NEW ISSUES to Stamp Collectors.**

CUSTOMERS who desire to receive "New Issues" regularly are advised to apply for the allotment of one of our *boxes* in which "New Issues" are placed (according to requirements) as soon as they appear. The contents of these boxes are forwarded to *box-holders* once a month, and when the value amounts to Ten Shillings or over we pay *postage*.

This New Issue Service is conducted quite separately from the other branches of our business, and customers are kindly requested to help us in this respect by keeping any remittances, orders, correspondence, etc., relating to such service distinct from other matters.

Each month the face value of the contents of the boxes will be calculated, and **Fifteen per cent.** will be added for our commission.

Are you interested in New Issues?

If so, please send us a postcard, and we will send you full details of our scheme.

A GOOD INVESTMENT

is appreciated by everybody, and "New Issues" supplied at the small premium we mention cannot fail to prove a good investment.

TO STAMP DEALERS.

We regret that we cannot undertake to supply Dealers on these terms. Our "New Issue Service," based on such small profits, is established mainly for the convenience of Collectors, and to secure our best efforts must be confined to **Collectors only.**

Address all communications regarding "New Issues" to:—

STANLEY GIBBONS, LIMITED,

"NEW ISSUE DEPARTMENT,"

391 STRAND, LONDON, W.C.

STANLEY GIBBONS APPROVAL SHEETS

are made up of picked copies.

They are arranged in over sixty differing sheets, so that a Collector who goes through them all will have had the chance of making his selection from more than

Six Thousand different Stamps.

We keep a record of every sheet a Collector has had, so that we never send a Collector the same sheet twice.

On these sheets we allow a discount of 10 per cent. = 2s. off each 20s. May we send you a sample sheet of your favourite country?

**STANLEY GIBBONS, LIMITED,

STANLEY GIBBONS, LTD.

Foreign Stamp Dealers.

Grand Collection Packets.

NEW AND GREATLY REDUCED PRICES.

No. 64 contains 100 Varieties, including used and unused. Post-free, 7d.

No. 65 contains 250 Different Varieties, both used and unused Stamps, Envelopes, and Post Cards, and is well recommended as a capital start for a collector. Post-free, 2s. 1d.

No. 66, 500 Varieties, and is strongly recommended as the cheapest collection of 500 different Stamps ever offered—the Stamps could not be bought separately for three times the marvellously low price at which it is now offered. The Stamps, &c., are clean, picked specimens fit for any collection. The best 500 varieties in the trade. Post-free, 4s. 1d.

No. 67, 1000 Varieties.—This packet contains 1000 different Stamps (and no Envelopes, Bands, and Cards), and is the **cheapest packet** ever offered by S. G. Ltd., satisfaction being absolutely guaranteed. The price it is offered at is the lowest ever quoted for such a collection, embracing as it does scores of scarce varieties, provisionals, new issues, and many very fine and obsolete varieties. Price 15s., post-free and registered.

No. 68, 1500 Varieties. Each specimen is in perfect condition, and the 1500 different Stamps form a noble start for any one. A large number of really rare and valuable Stamps are contained in this collection; but it is impossible to enumerate them, as we are constantly adding New Issues and Older Stamps when we purchase such. Satisfaction is guaranteed. Price £1 15s., post-free and registered.

No. 69, 2000 Varieties. A grand packet for a dealer or collector, every stamp being different and genuine, and thus forming a choice collection in itself, or a stock to make up sheets or for exchange purposes. Price £3, post-free and registered.

No. 69a, 3000 Varieties. A very fine packet, containing many rare stamps, all arranged in order, and mounted ready to price or remove to a collection. Price £8 10s., post-free and registered.

No. 69b, 4000 Varieties. A valuable collection, all mounted on sheets in order. Real good value; being sold by us to collectors at less than the price usually charged in the trade. Price £14, post-free and registered.

The Prices for Postage are those for Great Britain only.

NOTICE TO COLLECTORS.

We are often asked to advise clients who are about to start collecting as to the most advantageous method of starting, and how to obtain the best value at the commencement.

If a client starts a collection by ordering even the cheapest stamps from our Catalogue, the cost soon runs to an appreciable amount, as our lowest unit for a single stamp is one penny, whereas it is only a fraction of that amount if he starts with the cheaper packets.

We therefore recommend beginners to start with a good **PACKET**; the larger and greater number of stamps that it contains, the better will be the value he will get for his money.

When the contents of the packet have been arranged in his album, the collector will then be able to see in which countries he is weakest, and can then with great advantage turn to the **SET LIST**, in which we quote nearly 2000 different sets of stamps, at prices from 20 per cent to 50 per cent less than our retail Catalogue prices. He can then select just those sets that will help to make a good display in his album; and eventually, when he has filled up his pet country or group in this manner, can then turn to the retail Catalogue and order any particular variety he may be short of in his collection.

STANLEY GIBBONS, LTD., 391 STRAND, LONDON, W.C.

The Stamp Collector's Library.

A good library of the best and most reliable Philatelic Publications is a prime necessity to the Stamp Collector who wishes to thoroughly study the Stamps he collects. The most successful collectors pride themselves upon the range of their philatelic libraries. Handbooks and other works by writers of established reputation are, in fact, indispensable to supplement the Stamp Catalogue, which at best is only a Dealer's Price List of what he has to sell.

STANLEY GIBBONS CATALOGUE. Part I, British Empire. Cloth, 2/9. Part II, Foreign Countries, 2/9.

STAMPS AND STAMP COLLECTING. By MAJOR E. B. EVANS. A glossary of terms used in Stamp Collecting. Invaluable as a reference book. Full of information as to the various kinds of paper used, methods of printing, embossing, perforating, etc. Fully illustrated. Paper cover, 2/3; cloth, 4/3.

STAMP COLLECTING AS A PASTIME. By EDWARD J. NANKIVELL. A peep behind the scenes, explaining how it is that, after nearly half a century, Stamp Collecting has never been more popular than it is to-day. Contents: The Charm of Stamp Collecting—Stamps with a History—Great Rarities—Romance of Stamp Collecting—Stamp Collecting as an Investment—What to Collect and how to Collect, etc. Cloth, 1/3.

ALBUM WEEDS. By REV. R. B. EARRÉ. Forgeries, and how to detect them. Fully illustrated. New and Revised Edition, greatly enlarged. Vol. I, cloth, 8/-; Vol. II, cloth, 8/-.

THE STAMP COLLECTOR. By W. J. HARDY and E. D. BACON. Contents: Collecting, its Origin and Development—Stamps made for Collectors—Art in Postage Stamps—Stamps with Stories—History in Postage Stamps—Famous Collections, etc. Cloth, 4/9.

REPRINTS of Postal Adhesives and their Characteristics. By E. D. BACON. A guide to the Collector to enable him to separate Reprints from originals, with a history and detailed description of all known Reprints. With 426 illustrations. Paper cover, 4/3; cloth, 5/9.

PORTUGUESE INDIA. By the late GILBERT HARRISON and LIEUT. F. H. NAPIER, R.N. A Handbook for Specialists, full of notes and explanations of all the issues. Two full-page plates. Paper cover, 4/9; cloth, 6/3.

SOUTH AUSTRALIA. By LIEUT. NAPIER and the late GORDON SMITH, M.A. A most exhaustive work on the issues of South Australia; indispensable to the Specialist and useful to the General Collector. Three full-page plates of photographic illustrations, showing the various types of surcharge on the old stamps, etc. Cloth, 9/9.

SHANGHAI. By W. B. THORNHILL. An important handbook, with eight full-page plates of photographic illustrations showing the variety of the early issues and the later surcharges, etc. Paper cover, 5/3; cloth, 7/9.

ST. VINCENT. By LIEUT. F. H. NAPIER, R.N., and E. D. BACON. Illustrated with two full-page autotype plates, one of which shows illustrations of the stamps and surcharges, and the other the various perforations found in the stamps of the colony. Paper cover, 5/3; cloth, 7/9.

BARBADOS. By E. D. BACON and LIEUT. F. H. NAPIER, R.N. Illustrated with three autotypes of stamps, specially showing all the varieties on the 1d. on half of 5/-, three facsimile reproductions of the Star watermarks, and a list of the number of stamps of each value printed by Messrs. Perkins Bacon & Co. and Messrs. De La Rue & Co. Paper cover, 7/9; cloth, 10/9.

GRENADE. By E. D. BACON and LIEUT. F. H. NAPIER, R.N. An exhaustive history of the stamps of this colony with their many intricate and minor varieties; to which is prefixed an account of the perforation of the Perkins Bacon printed stamps of the British Colonies. Illustrated with nine full-page autotype plates. Paper cover, 7/9; cloth, 9/9.

SICILY. By DR. EMILIO DIENA, translated by MAJOR EVANS. A complete history of the exceptionally interesting series of stamps of this country, with a brief history of Sicily, a biography of the celebrated artist by whom the fine portrait of King "Bomba" was engraved, a full account of the circumstances under which the stamps were issued, of the difficulties in the production of the plates, of the various essays and proposals for subsequent issues, and a description of the postmarks and obliterations. Illustrated with twenty full-page autotype plates, showing seven complete or reconstructed sheets, varieties of retouches, etc., and various illustrations in the text. Paper cover, 21/6; half morocco, 30/9.

STANLEY GIBBONS, Ltd., 391 Strand, London, W.C.

"THE STAMP KING." A PHILATELIC NOVEL.

By MESSRS. BEAUREGARD & GORSSE.

Translated from the French by EDITH C. PHILLIPS.

The story commences at the New York Philatelic Club, and traces out in a most amusing manner the struggles of the two leading members to secure the rarest stamp in the world. The chase leads these collectors to London, Paris, and Naples, and ends, after many curious adventures, in New York.

Half bound in Art Buckram, cloth sides, gilt lettering, plain edges, 200 pages, 80 fine Illustrations.

Post-free, 6/4; abroad, 6/8.

THE FOLLOWING PUBLICATIONS OF

The Royal Philatelic Society, London, CAN NOW BE SUPPLIED.

"AFRICA," PART I. The Postage Stamps, Envelopes, Wrappers, Post Cards, and Telegraph Stamps of the British Colonies, Possessions, and Protectorates in AFRICA.

This part comprises *British Bechuanaland, British East Africa, British South Africa* (including *British Central Africa*), and the *Cape of Good Hope*. The Illustrations include those of the Stamps described, and also Eight Sheets of Photo-mezzotypes of the Envelopes, Wrappers, and Post Cards. This Work, already out of print, is now rare.

S. G., Ltd., have a limited supply. Price 50/-; post-free 50/3; abroad, 50/4.

"AFRICA," PART II. Comprising Gambia, Gold Coast, Griqualand East, Griqualand West, Lagos, Madagascar, Matabeleland, Mauritius, and Natal.

With Illustrations of the Stamps described, Thirteen Sheets of Photo-mezzotype Illustrations, and One Sheet of Coloured Autotype Illustrations.

247 pages. Price 16/-; post-free, 16/4; abroad, 16/8.

"AFRICA," PART III. Comprising New Republic, Northern Nigeria, Oil Rivers and Niger Coast Protectorate, Orange River Colony with Orange Free State, St. Helena, Seychelles, Sierra Leone, Southern Nigeria, Stellaland, Swaziland, the Transvaal with South African Republic, Uganda, Zanzibar, and Zululand.

As may be seen from this list, the work is one of the most important that the Society has issued.

The work is edited by *Mr. E. D. Bacon*, and his collaborators were *Messrs. W. D. Beckton, C. J. Daun, T. W. Hall, A. de Reuterskiöld, and R. B. Yardley*.

The full-sized plates are thirty in number, and some hundreds of Illustrations are dispersed throughout the text.

The entire edition of the work consists of 750 copies; of these about 300 were wanted for members of the Society and for other purposes, so that only about 450 remained for sale.

450 pages. Price 40/-; post-free in Great Britain, 40/6.

It will be advisable to order early, as similar publications by the Society have soon been at a premium. We might mention that *West Indies* has sold at 80/- and *North American Colonies* at 110/-, and no copies of either are now on sale anywhere.

"INDIA & CEYLON." The Postage Stamps, Envelopes, Wrappers, Post Cards, & Telegraph Stamps of BRITISH INDIA & CEYLON.

With Twenty-four Sheets of Autotype Illustrations.

Price 25/-; post-free, 25/4; abroad, 25/6.

A History of the Adhesive Stamps of the BRITISH ISLES

AVAILABLE FOR POSTAL AND TELEGRAPH PURPOSES.

By HASTINGS E. WRIGHT AND A. B. CREEKE, JUN.

With Twelve Plates of Photo-mezzotype Illustrations and Twenty-six Plates of Diagrams.

This work is the most complete History of the Stamps of our own Country which has ever appeared, and consists of about 290 pages, *Imperial 8vo*. The text contains numerous Illustrations of Watermarks, Marginal Inscriptions, etc., in facsimile, in addition to the Plates of Illustrations mentioned above.

Price post-free, 24/6; abroad, 25/-

A Supplement to the British Isles (With a Plate of Ten Illustrations).

By A. B. CREEKE, JUN.

Price 2/6; post-free, 2/7.

THE IDEAL ALBUM.

**200 POSTAGE STAMPS, all different,
presented free with each Ideal Album.**

On the inside of the front cover there is a permanent linen pocket for duplicates, and in this pocket the above packet of Stamps will be placed in the first 4000 Ideal Albums.

600 pages. Size—9½×11½ inches. 5,200 Illustrations.

A New and Thoroughly Up-to-Date Album.

For some years past we have had a great demand for a simple Album, fully illustrated, with a square for each Stamp, and omitting all minor varieties, and we trust that collectors and the trade will be pleased with this our latest production.

It is essential that an Album of this description should be in one volume, and in order to make this possible we have had to print it upon both sides of the paper and to rigidly cut down varieties.

With the aim before us of producing a book to suit the great bulk of *general* collectors, we have, after much consideration, decided to limit **THE IDEAL ALBUM** to the *Postage Stamps of the World*, and to omit all such varieties as Postal Fiscals, Official or Service Stamps, Postage Due or Unpaid Letter Stamps, etc. etc.

This Album is *arranged strictly alphabetically*—thus Vathy will be found under the V's and not in French Consular Offices, Aitutaki under the A's and not after New Zealand, etc. etc.

IDEAL I.—*On extra stout paper, strongly bound in cloth, artistically designed cover in assorted colours, sprinkled edges, gold lettered on back, 600 pages.*

Price, post-free, U.K., 10/7 ; abroad, extra.

IDEAL II.—*As last, but INTERLEAVED to prevent any chance of Stamps rubbing, and in superior and stronger binding.*

Price, post-free, U.K., 15/10 ; abroad, extra.

IDEAL III.—*Sumptuously bound in half-morocco, gilt edges and lettering, and INTERLEAVED as Ideal II.*

Price, post-free, U.K., 25/9 ; abroad, extra.

IDEAL Nos. I. and II. can be supplied bound in blue, green, or red.

IDEAL No. III., bound in half red or green morocco only.

STANLEY GIBBONS, Ltd., 391 Strand, London, W.C.

THE "FACILE" Postage Stamp Albums

(PROTECTED BY
ROYAL LETTERS PATENT.)

A—SHOWING LEAVES RELEASED.

THESE Albums present externally the same appearance as our well-known

"ORIEL" and "PHILATELIC" BLANK ALBUMS

and are identical in all respects except as regards the method of holding the detachable leaves, which is now a vast improvement upon the old system.

The leaves instead of being threaded upon pegs have a groove cut across each end of the linen joint (see A), and, together with a protecting cover, are held in position by means of two "V"-shaped projections, the whole being securely fastened by an ingenious spring.

When it is desired to remove the leaves it is only necessary to release the spring, when the "V"-shaped projections open automatically, and the contents can be removed with one hand. A great feature of this improvement is that a single leaf can be inserted or detached without disturbing the contents of the Album. Collectors already using the "ORIEL" and "PHILATELIC" can conveniently continue with the "FACILE."

Leading Features of the "FACILE."

1. It is undoubtedly the "acme" of loose-leaf albums.
2. Changing position of, or adding to the number of the leaves can be effected instantly and without disturbing contents of Album.
3. The binding of cover being rigid, all possibility of friction between the leaves is prevented.
4. The patent binder has no loose or detachable parts, and therefore cannot get out of order.
5. The action of the patent binder is automatic, and can be perfectly understood the moment it is seen.

(CONTINUED ON NEXT PAGE.)

Stanley Gibbons, Ltd., 391 Strand, London, W.C.

The "FACILE" Postage Stamp Albums—continued.

B—SHOWING LEAVES SECURED.

At present we are applying this improvement to the following, supplies of which are now ready :—

THE "FACILE" ORIEL ALBUM.

Containing fifty detachable leaves (10 in. \times 10 $\frac{1}{4}$ in.), of the best handmade paper, overprinted with quadrillé network, faced with Japanese tissue paper, and bound in half-red morocco with cloth sides, finished in gold.

Each Album is contained in a cloth drop-in case lined with lambswool.

Price 30s.; post-free in U.K. 30s. 6d.

THE "FACILE" PHILATELIC ALBUMS.

Each containing 100 leaves of a very fine quality white card paper, overprinted with quadrillé network, and strongly bound in half-morocco, gilt ornaments and lettering, and packed in a box.

A—Size, 12 $\frac{1}{2}$ in. \times 10 $\frac{1}{4}$ in. Price 30s.; post-free U.K. 30s. 9d.

B „ 11 „ \times 9 $\frac{1}{4}$ „ „ 25s.; „ „ 25s. 7d.

The same improvement is being applied to the "G.H.S." Albums, and a supply of these will be ready shortly. Prices will be announced later.

STANLEY GIBBONS, LIMITED,
391 STRAND, LONDON, W.C.

STANDARD HELPS FOR STAMP COLLECTORS.

THE "IDEAL" PERFORATION GAUGE.

Can be carried in the pocket, and stamps measured without removing them from the album. *Price 7d., post-free.*

GUMMED STAMP MOUNTS.

The "S. G." Stamp Mounts, in tin boxes, per 1000, *7d. post-free.*

Better quality, in three sizes, per 1000. *1/- post-free.*

TWEEZERS for Handling and Sorting Stamps.

No. 1.—Blunt ends, post-free, 2/7.

No. 2.—Round ends, post-free, 2/1.

No. 3.—Pointed ends (in use in our offices, and highly recommended), post-free, 2/1.

"MY DUPLICATES."

A small but handy pocket book, with slips to contain duplicates or new purchases. Very useful. *Post-free 1/1.*

A larger POCKET COLLECTING BOOK,

with large pocket at back and patent fastening on flap. *Post-free, 2/7.*

POCKET MAGNIFYING GLASSES.

AFTER examining some scores of different sorts, we have been able to get one combining the greatest power with the largest field obtainable for pocket use. These glasses are mounted in handsome vulcanite frames, and are very compact. There are two lenses in each, which may be

used singly, or if a very strong power is desired, may be combined.

Price 7/6; post-free, 7/7; abroad, 8/4.

NEW STAMP MAGNIFYING GLASS.

WE have pleasure in bringing to the notice of our readers the new Magnifying Glass shown in the illustrations. It is specially useful for the examination of stamps, to find out the plate-numbers and for the detection of forgeries in conjunction with the new edition of *Album Weeds*. It is used by placing the flat side in contact with the stamp to be examined.

Price of the Magnifying Glass, 5/-; post-free in Great Britain, 5/1.

STANLEY GIBBONS, Ltd., 391 STRAND, LONDON, W.C.

COLLECTING BY CATALOGUE.

The shrewdest and most eminent collectors collect by Catalogue. They may have their own ideas on minor varieties, and other minor points, but —————

GIBBONS' CATALOGUE

is for all the basis of the best collecting of the day, for the very good reason that it is the mature work of the most eminent philatelists of our time, and it is subjected to their continual criticism and revision. So indispensable has the Catalogue become to all that it has been styled —————

The "Philatelists' Bible."

Country after country has been revised and rewritten in the light of the latest researches, in fact no trouble or expense is ever spared in the unceasing endeavour to make and keep —————

GIBBONS' CATALOGUE

well abreast of the times as the one indisputable and acceptable authority for the advanced collector and specialist. The method adopted by the publishers of pricing only what they have in stock has made the Catalogue the best and most reliable —————

Guide to Market Values.

D.	6½ „ 5 . .	1/2 .	10/- . .	D, 2½d. „ 7d. „

Abroad by Parcel Post or Express at actual cost.

WATERMARK DETECTOR.

MANY Collectors experience great difficulty in detecting the Watermarks in some Stamps, such as Barbados Stars, United States, 1904 issues, etc. etc. We have therefore put into stock a small contrivance for holding Benzine, which does not affect either the colour or the gum on a Stamp, and reveals the watermark instantly. This is a most useful little Article and is in constant use in our offices every day of the year.

Price 1/-; post-free in Great Britain, 1/2.

**STANLEY GIBBONS, LIMITED,
391 STRAND, LONDON, W.C.**

TERMS FOR Examination of Stamps

OWING to the great number of forgeries being offered for sale by unscrupulous persons, a great portion of our time is taken up with the expert examination of surcharges, cancellations, perforations, added margins and corners, and the scores of other tricks that are resorted to by the faking fraternity.

As this examination can be done only by experts, whose time is valuable, we have found it necessary to increase our charges, which in future will be as follows :—

ONE SHILLING PER STAMP.

Postage and Registration extra.

In exceptional cases where special knowledge is necessary, e.g. examination of U.S. grilles or Italian postmarks, additional time will be required to allow of such stamps being sent to the recognized experts abroad.

The stamps should be sent lightly fastened on sheets, with sufficient space above each stamp for the insertion of the desired information. The following abbreviations are used in giving an opinion :—

- "B." = Bogus, *i.e.* never existed.
- "F." = Forged.
- "G." = Genuine.
- "G.F." = Stamp Genuine, surcharge Forged.
- "R." = Reprint.
- "W." = Watermarks.
