DRIVE AHEAD!

WE ARE OFF! Hurray for 1900!
Gather up the reins, boys, for we are to do the driving for the first half of the century. We are starting at a mighty pace. Never has the world seen such a splendid burst of speed as that with which the United States of America crosses the line into the nineteen hundreds. We are boys in the very nick of time. We are coming into the strength of early manhood at the most splendid epoch of all time, with our own country—God bless her—like a young giant leading the way.

It behooves us as American boys to stand erect in proud appreciation of our heritage and in noble resolve to be worthy of the trust. It behooves us to be loyal to home and country, to improve ourselves by study and observation for exalted work, to train ourselves to think clearly and act promptly and wisely, to get all the education we can—in school if possible, out of school, if need be,—at any rate get education. There is to be no place in the coming century for the laggard; so let us get to the front in what we do and stay there.

There is to be no place in the coming century for grumblers; so let us learn to take things as they come and make them better.

There is to be no place for cowards; so let us have convictions and the courage of them.

If we have money it is better that we should drop it to the bottom of the sea than that it should make us forget that there is no honor in its possession, save as it represents manhood put into it.

If we have no money let us count ourselves fortunate in that to us will be given the blessed boon of labor, and the joy of seeing our fortunes grow by our own hands.

KEEP AHEAD!

THEN gather up the reins, boys, and let every throb of the world's life meet an answering throb in yours. With its every bound take a firmer grip and ride forward into the experiences of 1900 and the long string of years which THE AMERICAN BOY hopes may be yours, conquering and to conquer.

HOPE FOR THE "AVERAGE BOY."

The boy who is born and brought up among "the common people"—the average American boy, who has to dig for what he gets, who stands up against the conditions of life, who must meet thereby a real advantage over his seemingly more favored brother born amid affluence and surrounded by circumstances and conditions that go to make things easy for him. When the average boy comes into business he finds that the world is very largely made up of average people—people just like himself. By nature, therefore, he is fitted to talk with them, deal with them, influence them. He knows what appeals to them. The politician who knows best "the masses" is the politician who wins, hence the remarkable success of some men in this field who lack refinement and even a moderate education. Success in any business often depends largely on understanding the people—and this is where the boy from the country, untutored in college, but possessed of native muscle and grit, often wins it over the city boy who is college bred.

In this lies great hope for the boy on the farm and in the workshop, for even hard conditions may become the greatest factor in success, if amid these conditions he maintain his integrity and set a real purpose. All this is said for the encouragement of the dull boy, the honest student who never stands at the head of his class, the boy whom nobody ever calls a "genius," the boy who bears in his very constitution the inheritance of mediocre powers, the boy who must begin the struggle for recognition unaided by family name and ancestral wealth and position.

To this boy in this land of ours where every title must be earned by the right use of your very infirm-

Fifty Car Loads of Christmas Snow

(COPYRIGHT, 1899, BY CHARLES BATTRELL LOOMIS)

Roderick Dawson lives in that part of the United States where the mercury never gets lower than sixty and where snow is so entirely unknown that the very word has dropped out of the local dictionaries. It may have and plenty of it, but they wouldn't know snow if they saw it.

When Roderick was eleven years old he was invited to visit his cousin Frank Parsons of London Hill. Now for six months of the year they have snow every day at London Hill! It comes in the shape of a blast of a storm on November first and stays until May first, when the sun melts it and it goes off in a freshet, and does a lot of damage to people living below London Hill. But as water has never formed the pernicious habit of running up hill, the London Hillites are always safe.

It was in the middle of November when Roderick was driven from the train up to the Parsons household of course there was snow everywhere and his delight at moving smoothly along on runners was something to make a northern child wonder.

"Didn't you ever see this before?" asked Frank. "Why not. Does it really come from the sky as you said?"

"Of course it does. My, but you're green! Why, what do you do with your sleds down there?"

"Sleds? What's that?" asked Roderick, innocently and Frank concluded that he was not quite bright. But he never made a greater mistake in his life as he soon found out, for Roderick was as smart as any boy of his age and when he had learned all the uses of snow he wasn't behind any of the boys in applying it.

"Know 'sge. To be hit in the eye by a snow ball?"

"No, but just a much as it he had all his life."

And he never connected snow with anything that came from the sky, and if they didn't know it in Louisiana parish why there were lots of other things that were peculiar to the north. So he accepted snow as a curious but none the less delightful fact.

TO BE HIT IN THE EYE BY A SNOW BALL, HURT

He stood the cold weather very well for a southern boy and indeed sometimes went without an overcoat when his playmates were wearing both coats and overcoats.

Roderick was a generous little fellow and he often thought what a source of delight it would be to his old playmates of the south if they could have snow in which to play and build forts and caves and down which to coast and in one of his letters home to his brother he told him that he had just about decided, if it did not cost too much to send down a train load of snow as a Christmas present to his native place.

One day he and Frank and a half dozen other fellows were fashioning a gigantic snow woman. She was so tall that they had to use a forty-foot ladder to finish her head and they drew the snow up in buckets and a boy straddled her head and slapped the snow on in the proper place.

"We have a sculptor down here and he'd just about go crazy if he had a lot of snow to make his statues out of," said Roderick. "How much snow do you suppose it would take if I shipped some home? How many cars full?"

"Why, I guess it would take a whole lot to say fifty cars," answered Frank. He was

SHE WAS SO TALL THEY HAD TO USE A FORTY FOOT LADDER TO FINISH HER

to add that it would all melt and turn to water long before it got south, but a mischievous thought stopped him. "Say, fellows," said he, winking at his companions, "I want to send some snow down South. How much would it take, fifty car loads?"

Rawson Mawson thought it would take all of fifty but Will Bill thought forty-five would do it.

"Well, if the governor sends me enough next week, I'm going to ship some," said Roderick.

He went into the house just then after something and the boys exploded with mirth. The idea of sending snow to the South and expecting it to stay put was delightful.

"His father has oceans of money," said Will Bill. "Say we don't tell him that snow melts and then wait until his folks write up and ask him what he means by sending a lot of damp cars down there with nothing in 'em. Of course the water'll all run out."

This somewhat mean scheme appealed to all the boys who did not see its mean side and so when Roderick came out again they told him he could count on their aid.

"So he wrote to his brother, 'Dear Frederick, I have decided to send down to Tuscapoosa (this was the name of the town in which he lived) a train load of the beautiful thing called snow of which I wrote in my last, so that you will receive it by Christmas. You have no idea how nice it is and you will find you never knew what fun was before. I enclose instructions how to make a sled and I am sure that Jefferson Calhoun will be able to make them easily. Fancy getting it on top of a hill and just gliding by your own weight to the bottom. And you can have bully fun. We played civil war, using balls of the snow for bullets and cannon balls. I was captain of the Confederates and Cousin Frank was captain of the Union men. After my side won three days running. Uncle Thaddeus said it would be a good plan for me to change over to the Union side and we'd be reversing history. He's no end of fun and I like him immensely. I haven't told him about my idea of shipping snow as I'm afraid he'd think it was going to be too expensive. They have no idea how rich father is. Next week I expect to get the snow off. When you receive it, have the men distribute it as evenly as possible or else the sled runners will sink into it and you won't make as much speed. Be careful not to throw the snowballs too hard for they can hurt like sixty. You can spread a little of the snow on the sidewalk and then run and slide on it the way we used to on our hall room floor, only after it has been smoothed down a little you can go twenty or thirty feet. And I bet you'll tumble over when you first try it on. I did and I was at the head of about ten of the fellows and the way they all piled on me was a caution. No more now until I write to tell you that I've shipped it.' P. S. You'll have the merriest Christmas you ever heard of."

Frank Parsons and Will Bill managed the affair and they bribed the train hands not to tell Rod that the snow would melt. The day before he shipped it there was a big snow fall which made the work much easier. Roderick and all the workmen and by nightfall the snow was clean packed down.

And then Rod decided to want to see the fun myself, he came in a week or two, after the boys were sorry to have him like telling him of the trick at the station. Roderick, well bundled up, climbed into the cab with the engineer and waved a farewell to the boys. "Thanks, awfully, boys, for your help," he said.

The engineer muttered something about it being really too bad. "What's too bad?" asked Roderick. The engineer said he was talking to the fireman. At the last moment, Frank was seized with remorse and would have blurted out the secret to Roderick but Will Bill stuffed his handkerchief into his mouth and tumbled him over into a drift and when he picked himself up the train was moving swiftly away.

Now, it happened that the terrible cold wave that spread all over the country and did so much damage was just beginning. You may remember that the orange crop throughout the South was ruined and people saw ice who had never seen it before.

So that instead of losing all the snow when the train entered the South not a bit of it had melted, even when the train pulled up at the Tuscapoosa platform the day before Christmas. Fortune certainly favors the brave. Rod had become a great favorite on the train through his manly and unaffected ways and the men were glad to see that the trick had not succeeded.

The snow was in patent dumping cars and as the tracks ran alongside of the place where Rod wanted it dumped, it was an easy matter to distribute it, particularly as all the train hands fell to with a will and gave their services to the boy.

The train was met by the mayor and Rod's father and most of the leading men of Tuscapoosa and Roderick was thanked in any number of long speeches.

After the speeches had all been spun, everybody repaired to the coasting grounds where they found the snow ready for them. Sleds by the wholesale had been made by clever Jefferson Calhoun and old and young, men and women and children united in the new sport of coasting and snowball fighting, while the local sculptor made a beautiful statue of summer out of the snow. It was nightfall before any one thought of going home. And quite a number forgot to hang up their stockings they were so excited over the fun they would have the next day. Roderick was the happiest boy that ever gave pleasure to others. When he left

THE NAME OF

WHILE HE GAZED IN WONDER HE WAS WAITED ON BY THE MAYOR

there was only the one town policeman left to prevent any one from taking away the snow that wanted to do so. And while he might have coped with more men he was helpless when Jack Frost went home at 2 o'clock in the morning. Jack Frost had been south three days and he was tired of the place. As soon as he had taken his departure, the snow began to melt and by sunrise Christmas morning, the whole town was afloat.

Rod rose with the sun and looked out of the window. He could not believe his eyes. Where was the statue of summer? Where was any of the snow? While he gazed in wonder, he was waited on by the mayor and asked to explain this new and unpleasant development, but he had no answer ready.

The mayor said that while he was grateful to Roderick for affording the people a lot of amusement, still it was not pleasant to feel that half the cellars were flooded, and on Christmas day too. It could not have been worse in the rainy season which had just concluded the month before.

Roderick, much chagrined, went to the engineer of the freight train and asked him to explain why the snow had gone and that good man did so in a few words. He said: "Rod, you are the victim of as mean a trick as one boy ever played on another. Only you got the better of them for a time. Snow melts in warm weather and I expected to see it begin to flood the tracks before we left Pittsburg. If it hadn't been for this unheard of cold snap you would never have brought your snow here in good order. As it is you've had your fun and every one in the place has seen and felt snow, and you'd better cut an account of the whole proceedings out of the local paper and mail it to the boys up at London Hill. I'll make them feel like thirty cents."

And Roderick did so and if Frank and Will Bill and all the other boys did not feel like thirty cents (what-ever sensation that may be) they deserved to.

HOW THE PRIZE WAS WON

Jessie C. Newcomb.

CHAPTER II.

It was Saturday afternoon, and Ted was going slowly along the narrow street that followed the river bank through what was familiarly called "The Flats." His mother's poor little house stood near the further end of this shabby street.

"Momsey's" clothesline had broken that morning, and she had asked her son to bring her a new one when he came from his day's work. He had finished his job of wood sawing earlier than he had expected, and was now on his way home, although it was not much past mid-afternoon. He could hear the shouts from the skating grounds up the river, while from behind came the low, sullen roar of the water as it fell over the dam. But his heart was heavy, for the judges had decided the contest in favor of Ralph. He tried to be brave and make himself believe that he did not care, but it was hard work, and he could not help feeling discouraged and disheartened. Suddenly a cry from the skaters arrested his attention. He turned and saw the boys frantically waving their arms, and drifting slowly toward him, and into the

black water above the dam, a boy clinging to the jagged edges of a cake of ice.

Ted's quick eye took in the situation at a glance. For a few seconds he stood paralyzed with horror; then he sprang forward, uncoiled the clothesline as he ran, and wound it upon his hand and elbow as he had often seen his mother do after a day's wash.

On the bank of the stream was a large tree that had at one time stood upright, but now it overhung the water. Ted climbed nimbly out upon the trunk. Hastily knotting the end of the rope into a loop. He made his way into the overhanging tree top. He felt it giving way. Would it hold, or must they go over the dam together?

The drowning boy, now nearly abreast of the tree, was beginning to feel the drawing power of the terrible current. Peering out from amid the branches Ted discovered that the boy clinging to the ice was Ralph Rawlins.

"Ralph!" he cried.
"Oh, help, help!" came back, faintly.
"Catch this rope. Slip the loop under your arms, then let go. I'll hold you. Now, ready."

The loop whizzed through the air, passed over Ralph's head and fell with a splash into the water beyond, leaving the line lying across the boy's shoulders.

Ralph's numbed fingers set clumsily to work, while Ted fastened the other end of the rope securely around his own waist.

"Now, then," he shouted, "let go."
"I can't. I'm afraid. Oh, don't, don't."
The rest was lost, for Ted had given the line a sudden jerk and Ralph was struggling in the water.

Ted began to haul in the rope with all his might, hand over hand; but as the old tree felt the added strain there came a sudden sharp cracking sound and the boy felt himself sinking. He nearly lost his balance, but saved himself by throwing his arm around one of the limbs, keeping, however, a firm hold upon the rope.

A cry of terror went up from the shore but the tree still held.

Ralph had ceased to struggle now, and being an excellent swimmer he was trying to strike out for shore, but he was so benumbed he could do little more than cling to the rope with both hands.

How the fierce current fought for its prey! The brave boy in the tree pulled with every ounce of strength within him, pulled as if for his own life. Slowly but surely the half-drowned lad was drawn toward the swaying branches until he was almost directly beneath where Ted sat. Ted twisted the rope around a limb and cried:

"Can you climb up—with my—help?"
"I can try."
Ted tugged at the rope with one hand while he leaned far down extending his other.

"Here, give me your hand."
The chilled hand just reached his own blistered one, then by a superhuman effort Ralph was clinging to the branches.

Under the double weight, their frail support bent until its gnarled limbs were buried in the water.

Together they crawled along the feeble, tottering bridge to the shore. Suddenly Ted's legs trembled under him, while he thought he had never heard the water roar so loudly. He knew what it meant. Must they both die, after all? Well, it wouldn't matter so much, then, who won the prize; but he wondered what "Momsey" would say about his ruining her new clothesline.

Then he knew no more until he awoke at home and "Momsey" was crying over him as he lay snuggled up in warm blankets by the fire, and the old doctor sitting by his side.

When school convened on the first Monday morning after the holiday, Ralph Rawlins was not in his accustomed seat. This fact occasioned no surprise, for it was known that he had been quite ill as a result of his adventure in the river, but during the opening exercises of the afternoon session he did appear, looking somewhat pale and weak, accompanied by his father and Mr. Richards. He quietly took his place at his desk.

At the close of the exercises the principal, instead of giving the usual signal for the passing out of the classes, stood beside his table with a grave, troubled air that filled the pupils with wonderment. He finally turned his eyes upon Ralph. As though in answer to his teacher's glance, Ralph rose to his feet, but for a moment was unable to speak. The children noticed that Ralph's father bowed his head upon his hand.

"Schoolmates," began Ralph, his voice trembling, "as you all know, the boy's prize for composition was given to me this year. I don't deserve it. I didn't write my own essay—I only copied it. My cousin in New York who writes for the papers wrote it for me. I know as well as you do that I was a coward for doing it, but I couldn't bear to let Ted get ahead of me, as I was afraid he would."

"Now I am going to give back the prize and ask them to give it to Ted, for his essay comes next to

mine, and I'm going to ask Mr. Mansfield to take off the percentage I should have lost if I hadn't handed in any essay at all. I've already told Mr. Richards and he said I must tell you all—and he thinks Ted ought to have the prize."

"Now, I want to say something to Ted," and he stepped over to the boy and laid his hand on his shoulder. "Ted, you saved my life at the risk of your own, after I'd called you a coward. I'm sorry and ashamed, and if you'll let bygones be bygones I would like to prove to you that I've got manhood enough to appreciate what you did for me. I have learned that a boy can be a man, and a mighty good one, if he does have to work for a living; and I'd like to prove that I'm not all coward and bully. I can't thank you. I—I—" and the tears filled his eyes and choked his utterance. Ted's hand met his in a warm clasp.

To say that Ralph's broken and incoherent speech made a sensation would be putting it very mildly. Many of the girls were crying outright, and some of the boys looked as though they would like to.

Mr. Richards now came forward and told them he had talked with the other judges, and the unanimous decision was that Ted O'Neil was honestly entitled to the prize for the best essay of the year.

Upon hearing this, it became Ted's turn to grow uncomfortable. Springing to his feet he said earnestly that he felt he was no more entitled to the prize than Ralph was, for he, too, had done wrong; and he told them of the finding and reading of the lost essay, and of his struggle with the temptation to destroy it. When he had finished Mr. Richards again came forward with something very like tears in his eyes and said:

"Ted did wrong to read the essay, but I still think he is rightfully entitled to the prize. Sin does not consist in being tempted but in yielding to temptation and from what he tells us I am inclined to believe that this boy is as brave morally as he is physically, and for my part I am proud of him," and the grave, dignified Mr. Richards went down the aisle and shook Ted's hand heartily, his example being followed by Mr. Mansfield and Judge Rawlins, to the poor boy's utter confusion and bewilderment. The Judge tried to say something, but he choked over it, and sat down holding his handkerchief to his face.

Then, as on a former occasion, Joe, the incorrigible, gave the signal, and such a cheer as resounded through the old brick building was surely never heard there before. Ted alone did not join in it, for a fellow can't very well cheer for himself, can he?

TRUE HEROISM.

"Oh, how cold!" escaped my lips as I stumbled through the miserable attic door.

The mother was out, but her twelve-year-old boy was mounted guard over the other children as they played about the poorly furnished room. I shivered as the wind whistled through the broken window panes, causing me to pull my overcoat over my ears. The boy was in his shirt-sleeves, but I refrained from asking questions as to the whereabouts of his coat, in case its absence might have been the means of providing a crust of bread for the fatherless family.

"Are you not cold, my boy?" I asked. "No," said he, "not very." Yet I noticed how his pretty pretty teeth chattered. I waited awhile and spoke to them; then I took a look into the cradle, where, sleeping quietly and comfortably the baby lay, covered with the boy's coat! Talk about bravery in men facing cannon! In the heat of passion they will do anything. But there was a hero on a bitterly cold day in his shirt-sleeves, because he wanted to shield his little brother from the biting effect of a cold February wind.

Men say the age of heroism is past. 'Tis false! As long as the nation raises boys like this one, she has within herself the germs of a manhood that will keep her forever in the very forefront of the world's history—Watchman.

MILES AND KNOTS.

A statute mile, as every schoolboy knows, is 5,280 feet long. The Roman soldier covered, approximately, five feet at a step. A thousand of these steps was called by the Romans a mile. The English borrowed their measurement of a mile from the Romans, and we have borrowed it from the English. A nautical mile, or the term mile as used by sailors and by the government in marine matters, is 6,080.27 feet, so that the nautical mile is about 800 feet longer than the statute mile.

THE "WHITE HOUSE."

Many persons think of the White House, in which our Presidents reside, as being built of white marble. It ought to have been so built, but such is not the case. It is built of gray stone, and it is white only because of frequent and liberal applications of white paint. If you were to scrape off the successive layers of paint on the Executive Mansion you would doubtless find traces under the old paint of the fire that partially consumed the building some years ago.

Christmas on an Iceberg.

Roy Lambertson was discharged from Bellevue Hospital, New York City, last week, and started at once for his home in Yarmouth, N. S., where he will eat his Christmas dinner. Last Christmas he had no dinner to eat and passed Christmas day on an iceberg.

Lambertson is a youth of eighteen, but hardship and sickness make him look much older. When the brig Sea Serpent was moved to the Roberts wharf in Brooklyn early in March Lambertson went ashore, and after shaking hands with his shipmates proceeded to Bellevue Hospital, where he was treated for gangrene superinduced by frost bites.

"You are a sailor?" said the physician who examined him.

"Yes, sir, a sort of sailor-fisherman."

"Who brought you here?"

"I came from the Azores in the Sea Serpent."

"And how did you get to the Azores?"

"Part of the way on an iceberg and part of the way in the barkantine Nelly."

"Now," said the physician, "tell us how you received your injuries. And mind, I don't want a forecastle yarn or a sea-serpent story."

This is in substance the story told by young Lambertson and corroborated in part by letters from Nova Scotia to the hospital authorities:

"Father and I went out fishing on Christmas eve last from Clark's Harbor. We were after mackerel and were doing well but had not been long out when a Bay of Bunday fog surrounded us and we concluded to put back. The old man steered and I rowed, as there wasn't a breath of wind to fill the sail. After groping our way east for half an hour we struck against something or something struck against us and I was thrown clean overboard. I know now that the keel of our boat collided with the spur of an iceberg. When I rose to the surface I heard the old man shouting, but I couldn't answer him, and it seems to me that the spur got between us in the first place and then we were separated altogether by the entire berg. At all events I haven't seen the old man since, though he is alive and well, thank God. I am a pretty good swimmer, and after floundering around some time I managed to get on a ledge of the berg and maintain myself there by bracing my shoulder against a slight projection overhead. Knowing I could not keep this position very long I climbed with great difficulty to the top, though really there is no such thing as a top to a body which has no shape that one can make out. It was like one of those large rocks you may see taken out of the earth by blasting and it rolled and tumbled about in all sorts of ways. When I thought I was on top the berg would keel over until I found myself on the side, and at one time it turned a complete somersault and threw me once more into the water. I had a good mind to give up then and accept what seemed my fate, but I thought of the folks at home, and that my father being probably drowned the family would have to depend upon me. So I made another effort. The berg was rolling and presented many sharp points here and there, one of which I seized and by its means lifted myself to the ledge from which I had been thrown, realizing that I could not maintain myself in that position I climbed once more to the top and this time found myself in a saucer-shaped cavity. Wrapping out my knife I hacked away for dear life until I had scooped out a still deeper hollow, after much hard labor and suffering from thirst. I hoped that I might be taken off by some passing vessel, and meantime collected into a pile of pebbles and sea weed on which I rested my feet. Meantime my body, from the waist up, was exposed. Even at this I was in danger of falling out, or off, when the berg rolled over as it frequently did. I was therefore obliged to be constantly on the alert. From the situation I was now in I could think and think. The berg had evidently come down from Labrador in the warm current and was drifting in a southeasterly direction. The part of it above water was about twelve feet in altitude, and I had hoped that if I did not succumb to hunger and thirst I might be taken off by a passing ship. Exhausted from my exertions and though fearing that sleep might mean death I could not resist the drowsiness that came over me and so fell asleep. When I awoke after a few hours it was night and the stars were in the sky. To numb my hands and feet were numb I did not feel as cold as one might imagine. It is useless describing my sensations. I thought of the sad Christmas mother and the kids would pass without me and, perhaps, without the old man, and I prayed to God to save me. I was glad when the morning came—Christmas morning—but I suffered fearfully from hunger and thirst, especially from thirst. Christmas day passed over me like Christmas eve, and at the dawn of the 26th I gave up hope. But one should never despair, even though hundreds of miles out at sea or on an iceberg, for that evening I was taken off the berg by a boat from the barkan-

I WAS TAKEN OFF THE BERG BY A BOAT FROM THE BARKANTINE

time Sea Serpent of Charlottetown, P. E. I., commanded by Captain Ferguson and bound for the Azores. The captain treated me well, and after staying on the Azores a few weeks I came to New York in the Sea Serpent, a Liverpool brigantine.

"That is about all," concluded the young fisherman from Nova Scotia, "and, say, doctor, I don't want to spend no more Christmas days on a berg."

FRED DIDN'T; BUT KATY DID.

By HELEN RAYMOND WELLS

She did. There was no one else to do it. Grandpa was too old; father was away from home; mother, hardly well enough to be out of bed; Bill, the hired man, taken suddenly ill; and Fred, her big brother, who put on airs and snubbed her because she was only a girl, and teased her about everything, and especially her name, always chirping "Katydid" at her; well, he let her do it. He tried to pretend he did not believe it was true when little Sammy, who had been playing in the lower meadow, ran home nearly breathless and told them as fast as he could that one of the men who were driving a lot of cattle to town, had dropped the bars of their meadow and driven their calves out and off with the others.

They all scurried off to look and, sure enough, the bars were down, and the calves gone. All those fine young cattle, from the sale of which a few months later, father expected to make so much. And way down the road were the men and the drove fast disappearing from sight. A few minutes more would bring them to the stock yard, where they would, perhaps within the hour, be shipped on the cattle train and could never be reclaimed. Yet there Fred stood arguing about the improbability of such a thing being done.

"Never call yourself a man again, Fred, if you're afraid to try—"

"I'm not afraid, but it's nonsense," began Fred.

"Yes, it is nonsense," rejoined Katie, "to let all father's fine herd be stolen before our eyes without a word. Oh, they're nearly out of sight! Do, Bill, there's a good fellow, have the toothache some other time and go now—"

"Ugh, Miss Katy," groaned Bill, "ugh, oh, Ise nearly dade. It's de terrible gone pain in de pit oh my stummik. I believ it's de painter's colle. I bin all de mortin' paintin' de fence."

"Ha, ha," laughed Fred, "he's painted three pallings and that pain'll last him three days."

"There. They're out of sight!" exclaimed little Sammy. He was the only one who shared Katy's interest and anxiety. Once more she turned to her brother:

"Fred, will you go or not? If you two men are cowards I'll have to do it myself." At which Fred made a mocking gesture and sang:

"Katydid, Katydid, she did!"

Thereat Katy turned and ran to the house, and in a moment came running back, pinning her hat as she ran and holding something shiny in her hand, which Sammy recognized as his property

"At's my pistol, Katy, 'at Uncle Nat gived me. I wants it. I wants to play cowboy."

"Oh, ho," snouted Fred. "She's got that old rusted thing with the cylinder out. Let sister go, Sammy, she wants to play cowboy herself. Katydid, Katydid, d-d-d."

These last words were as much to keep up his own show of indifference as to annoy Katy, who now clattered out of the yard on the bare back of her own horse, Firefly.

Just at the edge of the town she caught up with the drovers, and reining up before the one she judged to be the leader said:

"Excuse me, sir, I do not believe you know it, but one of your men has driven our cattle out of our meadow and along with yours."

The man simply stered and Katie continued: "I am sure you would not wish to take them in such a dishonorable way, and I came to drive them home again."

"Where's your home?" he grunted gruffly.

"The last farm you passed, sir," Katy answered.

"How many head did you have?"

"Twenty-nine."

"The deuce! Here, Simms, how many cattle have we?"

"Oh, 'bout 120 or 140, thought we'd count them as we load," replied a rough looking fellow with a wink and a broad grin.

"There, you see, miss," said the leader, again turning to Katy, "it's impossible to tell within twenty or thirty head how many there'd ought to be, an' it's so near train time I ain't time to stop here an' count 'em nohow, even to oblige a purty lass like you."

"You mean, sir, that it was done with your knowledge, and you don't intend to give them up; but I intend that you shall!"

She wheeled her horse towards the town, feeling there must be some one or way to get justice done. As the men saw her intention they surrounded her and one made a grab for the bridle. She brought Firefly back almost on his haunches and covered the fellow with her revolver.

"By jove! she's a plucky un!" he exclaimed in fear and admiration. "Don't shoot, miss. You've got the best uv us. We'll hev to—"

"Whoop, hurra, it's a toy gun," yelled another who, standing more to one side, discovered the bogus character of the formidable looking weapon. The men made a movement toward her, but, backing her horse quickly and steadily away from them, Katie, with her mind almost made up to turn and fly for home, happened to see that her father's cattle had separated somewhat from the drove, and seemed inclined to return of themselves. Quick as a flash the girl gave the old familiar call, clear and strong:

"Co boss, co boss, co, co, co." Every one of them came running towards her. "There," she exclaimed, still backing away, "if you want to get off with the rest of your stolen property, you had better hurry on."

The men seemed fairly dazed at her daring and looked at their leader for directions.

"She's got grit, an' we've got no time to lose either. Let her go!" he said.

As she drove the calves into the meadow, Bill managed to put up the bars; and Fred never chirped "Katydid" again.

STORIES OF BOY HEROISM.

The First Two of a Series.

1. Samuel Davis.

By ANNAH ROBINSON WATSON.

2. George Petrie.

SAMUEL DAVIS.

ANNAH ROBINSON WATSON.

In a bright, joyous home near Smyrna, and about twenty miles from Nashville, in middle Tennessee, lived, when the civil war opened, the family of Charles Lewis Davis, in which were father, mother, several children and grandmother. The years had come and gone full of a quiet happiness for the household.

But the troublous days of 1861 came and very soon John, the eldest of the boys, joined the confederate army. Then in a short time Samuel, the second, only 19 years of age, enlisted in the company called the "Rutherford County Rifles," which was commanded by Capt. William Lebetter, of Murfreesboro.

Until then he had attended "Old Jefferson" school, and had been a marked favorite both with teachers and pupils.

"You can always trust him," the boys used to say; "his word is as good as his bond."

At home he was courteous and affectionate, scrupulous in the discharge of any duty assigned him, and faithful to the smallest promise made. So when the time came to leave the dear old home, those who loved him knew full well how firm and unflinching he would be in discharging the duties of the new life he was about to enter.

The day of parting came, and he stood clasping his mother's hand as they paused at the little gate.

"Mother, you will always know," he said, "that I will try to merit your approval. That I will try to live up to your teaching and to approach my own ideal." "God bless and keep my boy," she answered firmly; "God bless and keep my boy."

In a moment more he was gone, and the mother stood gazing after him through a mist of tears while she stifled the sobs that struggled for utterance.

He was only a boy private, serving in the ranks and bearing without complaint all the hardships which the life of a soldier brings, but both in camp and on the battlefield he distinguished himself by his intelligent and fearless discharge of duty, and by the keen perception which enabled him to accomplish successfully the most dangerous undertakings.

He was in many engagements—Shiloh, Perryville, Murfreesboro, and others, but, alas, it was not the fate the soldier courts upon the blood-stained field which awaited him.

The exigencies of war required the employment of numerous "scouts" on both sides. Their services were indispensable, but so fraught with danger that only the bravest, most daring and trustworthy men were selected to perform them.

The scouts attached to Gen. Bragg's army were under the command of an individual officially known as E. Coleman, Captain Commanding Scouts, though this was not his true name. His position as the head of the secret service of this department was one of great responsibility and peril, but he had conducted himself in such a manner as to win not only the esteem, but the implicit confidence of the commanding general. His work was of great value to the Confederates, and by the Federals his capture or death would have been considered a matter of sincere congratulation.

In the autumn of 1863 Gen. Sherman, acting under instructions from Gen. Grant, ordered Gen. G. M. Dodge to take his division (which was en route from Corinth, Mississippi, to Chattanooga, Tennessee) and rebuild the railway from Nashville to Decatur. This railroad was of great importance to Gen. Grant in the military operations he was then conducting, and Gen. Dodge, who was a civil engineer of high standing in his profession prior to entering the army, was peculiarly fitted for the work of rebuilding it. He at once went into camp, with his troops near Pulaski, Tennessee, and set about the task which had been assigned him. At the same time, having learned that the immediate section was infested with Confederate scouts, he gave special orders to his men to keep a sharp lookout, and lose no opportunity to effect a capture.

Gen. Bragg knew that Dodge's Division had left Corinth, but was completely in the dark as to its strength and ultimate destination. Reliable information upon these points was of the highest importance, and to a small band of seven men, noted for their coolness and daring, was assigned the duty of securing it. They were told that their mission was a most perilous one, and that if only one of the party escaped and brought back the information, its value would justify the sacri-

fice. To accomplish this mission they must enter and remain for days within the Federal lines; yet there was no hesitation in the little band. They started at once, going by different routes, but all bound upon the same desperate errand. Reaching middle Tennessee, they remained about ten days, and, having obtained the needed information, decided to return, each going alone and in his own way. Samuel Davis was one of this party, and to him was entrusted the largest number of papers and most important information. He also carried letters to soldiers, northern papers, and a number of small gifts from friends to those beyond the lines. He had been wonderfully fortunate upon similar service before, and though realizing his danger, was joyous, light-hearted and confident of success.

It was about the middle of November. He had now been in the saddle almost constantly for four days; his horse was worn and jaded; but he pressed forward, having in his keeping the knowledge which might prove of inestimable value to the cause he loved. He was riding slowly along the Lamb Ferry road, under a bluff near the river; only a few miles away were Pulaski and the Federal army.

Suddenly, just upon his path dashed a party of Federals. In an instant he was surrounded; but not losing for an instant his self-possession, he stood up in his stirrups and threw over their heads and off into the river, a package of papers; then he was overpowered and captured. The squad of soldiers belonged to the Seventh Kansas Cavalry, known as "the Jayhawkers." Their commander eagerly read the pass found upon the prisoner:

"Headquarters Gen. Bragg's Scouts, Middle Tennessee, September 25th, 1863. Samuel Davis has permission to pass on scouting duty anywhere in middle Tennessee, or south of the Tennessee river he may think proper. By order Gen. Bragg.

"E. COLEMAN, Captain Commanding Scouts."

"This will pass you safely enough to prison," the officer said briefly. Then the boy was bound and the party turned back to Pulaski. A short ride brought them to the headquarters of Gen. Dodge.

The prisoner entered. He wore an overcoat of dull butternut brown. It had once belonged to a Federal soldier, but after being captured had been dyed, and had now been worn by the young Confederate for some time. Under this was the gray uniform of the Confederate army and a homespun woolen vest. The young man was tall and slender but robust and supple. His fine features were clear cut and beautiful; his eyes blue-gray, and his fair hair lay in soft waves on his forehead.

He stood silent while the search was made. In his boot, which was cut off at the ankle and then split, were found papers containing the information which he had been ordered to obtain even at the risk of his life. In the seat of his saddle were discovered maps and descriptions of the fortifications at Nashville and other points, with a full and exact report of the Federal army in Tennessee. There were letters to Gen. Bragg and other officers, besides a large private mail. At last the work was finished. He had not spoken. Gen. Dodge, with a stern face, sat at his desk near by, examining the papers.

"I will see the prisoner here," he said at last, leading the way to his private office.

"It seems that you have accurate information in regard to my army," he continued, "and much of it could only have been procured from someone whose position afforded him special opportunities for obtaining it. I want the name of your informant."

"General Dodge, it is impossible for me to give it," was the courteous but decided reply.

"Impossible? You probably do not realize the danger of your position," answered the general.

"Yes, sir, I know the danger, and I am willing to take the consequences."

"But I must know," continued the general. "I must know the source of your information. Someone enjoying the confidence of the officers of my staff must have given it. If you persist in refusing I will be forced to call a court-martial. From the proof in our possession you will be condemned to death; you have only one chance, by revealing the truth."

"General Dodge, death may be the result of my refusal, but death is better than dishonor. There is no power on earth which can change my determination. You are doing your duty as a soldier, so am I. If I must die it will be in the discharge of the highest duty, a duty to my God and to my country."

General Dodge was greatly impressed by the bearing and integrity of the young soldier, and with a generous desire for his release, urged and insisted that the course he suggested should be followed, but his efforts were unavailing and provoked only the response:

"No, sir. It is useless to consider the matter; you can resort to a court-martial which will condemn me to death, but I cannot betray my trust. I thank you for your kindly interest, but to me there is only one course possible."

This closed the conference, and Samuel Davis, the young prisoner, was at once put into close confinement.

The court-martial was called, as will be seen from the following order:

Headquarters Left Wing Sixteenth A. C., Pulaski, Tenn., November 10, 1863. General Order No. 72.

A military commission is hereby appointed to meet at Pulaski, Tenn., on the 23d inst., or as soon thereafter as practicable, for the trial of Samuel Davis, and such other persons as may be brought before it.

Detail for the Commission: (1) Col. Madison Miller, Eighteenth Missouri Infantry Volunteers; (2) Lieut.-Col. Thomas W. Gans, Fiftieth Missouri Infantry Volunteers; (3) Major Latrop, Thirty-ninth Iowa Infantry Volunteers, Judge Advocate. The Commission will sit without regard to hours. By order of Brig.-Gen. G. M. Dodge, J. W. Barnes, Lieutenant and A. A. G.

The commission promptly met and found the young soldier guilty, and delivered sentence as follows:

The Commission does therefore sentence him, the said Samuel Davis, of Coleman's Scouts, in the service of the so-called Confederate States, to be hanged by the neck until he is dead, at such time and place as the commanding general shall direct, two-thirds of the Commission concurring in the sentence.

Finding the sentence of the commission approved, the sentence will be carried into effect on Friday, November 27, 1863, between the hours of 10 a. m. and 2 p. m.

After the decision of the military commission, Captain Armstrong, the provost-marshal, announced the result to Davis, who listened in silence.

"To be hanged!" he said at last. "I had hoped to die a soldier's death." But this was all; there was no word of complaint or remonstrance.

He was now placed in a cell in the jail, and Chaplain James Young, of the Eighty-first Ohio Infantry, was sent to visit him.

Among the Federals detailed to guard the prison was a young boy about his own age, C. B. Vaupelt, of South Bend, Indiana. He felt peculiarly drawn to the prisoner and visited him constantly during the days before the execution. Often they sat together and talked of home, of friends, of school days, for both had left their studies to enter the army and there seemed many points of congeniality between them.

Young Vaupelt begged of Davis that he save himself, that he give the source of his information, but with flashing eyes the hero exclaimed:

"I will die a thousand deaths rather than betray my cause!"

"But your mother—your home," said his friend.

"Think," Davis replied, "what you would do in my place? You, too, have loved ones at home. Their prayers have followed you; they have prayed that you might be spared to them, that you might return to them in safety, but not dishonored. So have mine prayed for me. I can die but I cannot be untrue to them."

Tears sprang to the eyes of each and slowly coursed down their cheeks; they stood in a long, warm hand clasp, the Federal and the Confederate, the captor and the captive, two American soldiers but on alien sides.

The Provost-Marshal, Captain Armstrong, came again and again to the cell upon the same kind mission, but he, too, failed. There was always one answer. "I thank you for this interest, it is very generous, but I cannot betray my trust."

Chaplain Young also visited Davis constantly and comforted him in every manner possible.

The last day was near at hand, and the thought of home and friends and their sorrow seemed to weigh more than all else upon the mind of the young prisoner. Again and again he had tried to write to his mother, but the words seemed too cruel to pen, but now it could no longer be postponed. His last night on earth had come. The letter was written, folded, directed, and placed ready to be entrusted to the care of the chaplain.

It ran:

Pulaski, Giles County, Tenn., Nov. 26, 1863.
Dear Mother—Oh, how joyful it is to write you. I have got to die tomorrow morning, to be hanged by the Federals. Mother, do not grieve for me. I must bid you good-bye forevermore. Mother, I do not fear to die. Give my love to all.
Your Son,
SAMUEL DAVIS.

Mother, tell the children all to be good. I wish I could see you all once more, but I never will any more. Mother and father, do not forget me. Think of me when I am dead, but do not grieve for me. It will not do any good. Father, you can send after my remains, if you want to do so. They will be at Pulaski, Tennessee. I will leave some things, too, with the hotelkeeper for you. Pulaski is in Giles county, Tenn., south of Columbia.

The Chaplain came late that night and they had

prayers; then together they sang, the boy's voice ringing out sweet and clear in the familiar hymn, "On Jordan's Stormy Banks I Stand." They parted with a tender handclasp, and then he lay down for his last dreamful slumber, to visions of home, and mayhaps of the Beyond.

Friday, November 27th, dawned clear and cool. Chaplain Young came early to the prisoner's cell. His young friend, Vampelt, preceded him to the place of execution.

A regiment of infantry marched down to the jail. With them was a wagon containing a coffin. The condemned boy, accompanied by the Chaplain and the Provost Marshal, calmly stepped forth from his cell. Getting into the wagon he stood erect for a moment and looked about him. Above, at the windows of the jail, he saw the faces of other Confederate prisoners, some of them his comrades. His hands were fastened behind him, but he bowed and smiled far-well.

Then seated upon his coffin he was borne away. The band played the dead march, the drums beat with a muffled wail, and the regiment moved forward.

The scaffold had been erected in the outskirts of the town, upon what was known as East Hill. Here a large body of soldiers had been assembled. They formed a hollow square about the gibbet. When the procession from the jail approached, one corner of the square opened, four men advanced, and, lifting the coffin, carried it within the enclosure. Samuel Davis, the Chaplain and Provost Marshal followed. The coffin was placed at the bottom of the steps, and Davis, taking a seat there, turned to the Marshal, asking, "How long have I to live?"

"Just fifteen minutes," was the reply.

"Will you be kind enough to tell me what our army is doing?" he asked.

"Bragg has been defeated at Missionary Ridge," answered Captain Armstrong.

The prisoner showed deep feeling, as he replied, "The boys will have to fight the rest of the battles without me."

"I never most deeply that my duty impels me to perform this deed," exclaimed Captain Armstrong. "I would almost prefer to resign my own life than be instrumental in taking yours."

"You are doing your duty," answered Davis calmly.

The hour lag came. As he counted the steps to the scaffold, someone came dashing madly from the town and hurried to the spot. It was Captain Chick, a staff officer of General Dodge's staff. He sprang from his horse, "It is not too late, there is yet time," he exclaimed, coming close to Davis. "I am sent to offer again, that in exchange for what we want, you shall have freedom, with your horse, side arms, and a safe escort beyond the Federal line."

The last effort of a generous foe had been made. But the young martyr, though in the last extremity, turned to him, answering proudly, "If I had a thousand lives I would give them all for my country. I would give them all rather than betray my friends or the confidence of those who trusted me. I beg that you will thank General Dodge, but I cannot accept his offer."

His hands were still bound and he turned to the Chaplain, asking that he would take from the pocket over his heart a few little keepsakes for his mother. Prayer was then offered, and facing Captain Armstrong he said in a steady voice:

"I am ready."

Then the black hood was adjusted. A spring was touched. The drop fell. The tragedy was ended.

The soldiers dispersed, the body was taken away for burial, and over all the town was a shadow of sorrow which affected Federal and Southern sympathizers alike.

News of what had occurred was carried to the country. It ceased on from lip to lip, until a week or two later it reached the old home down near Sumner.

The father heard it in the village. A little later the mother saw him enter the gate, his head bowed, his hands tightly clasped before him.

"What is it?" she cried, hastening to meet him. "Oh, what is it? Which of the boys, John or Samuel?"

The mother's prophetic sense told her the blow had fallen on one of the two.

"Samuel," he answered brokenly. "It is Samuel." She wrapped her arms about him and bowed her head upon his breast. So they stood for a moment, then she drew him aside to a seat under an old tree, where the leaves were falling in the first winds of winter.

He told her all he had heard. It was vague and much altered from the truth by its repetition from mouth to mouth. But it enclosed the one terrible statement that their boy was dead; that he had been buried at Pulaski.

"But, oh, it might be a mistake," she cried. "Someone like him, someone in the same command it might be. I cannot believe it, I will not believe it." Then she moaned and cried in low, piteous tones as one who could not be comforted.

"I believe it is true," answered her husband. "This kind of thing is always true."

"No, no, can't we send some one? Couldn't some one go through the country to Pulaski and find out? I cannot endure it. I will go myself!" she cried, springing up. "I cannot wait!"

"Don't, don't," he answered tenderly, drawing her back to the seat beside him. "Be quiet, we will think about it."

"I know, I know," she continued in a moment. "John Kennedy and little Oscar could go. John always knows just what to do."

Then they sent for John Kennedy, their neighbor, who came at once in response to the message, and his arrangements were quickly made.

"John," said the mother, calling him aside—she was calm and quiet now, but her face was pale and tear-stained—"John, I cannot believe that it is my boy. I want you to remember this and to get the truth in such a way that there may be no possibility of mistake." There was a gasp a quick catch in her breath, as she continued bravely: "He wore a vest of bright homespun; here is a piece of it. I made it myself. I put it in when he was home last. And here is a bit of the linsey lining of his jacket. You remember just how he looked, John? You remember? You could not mistake him, could you?—even if he is dead—and buried—look at him, John, for me, for his mother, and let Oscar look at him—you will?"

Tears were rolling down the face of the young neighbor as he answered brokenly, "You can trust me; I remember," and in a little while Kennedy and Oscar, the youngest boy in the family, started in a wagon to Pulaski.

That night they reached Nashville, and secured a metallic case and box. The next morning a pass was given them after some objection by General Rousseau, and they started upon the journey.

Three days later, having passed pickets at various points, they reached Pulaski, and entering the town, drove at once to the office of the Provost-Marshal.

John Kennedy approached the officer, Captain Armstrong, as he sat, busily engaged at a desk. He glanced up, asking, "What do you want?"

"The body of Samuel Davis, that I may carry it home to his people," was the brief reply.

"Samuel Davis?" exclaimed Captain Armstrong, rising at once and adding slowly, "Yes, you shall have the body—and tell his mother from one who was with him, one who saw him die, that he was the bravest of the brave, that he was an honor to her, an honor to his country, and that he had the respect of every man in this command, though in a sense they were his enemies."

Then the permit was issued for the removal of the body, with a pass for the return journey.

It was already late, and further effort was delayed until the following morning. Then John Kennedy, Oscar, and one or two friends, with the grave digger, went to the cemetery. While the earth was being removed a small party of Federal soldiers approached. One of them asked in a sympathetic voice if they could render any assistance.

They were answered in the negative, but did not leave, only retired a short distance and stood in silence and with uncovered heads.

The grave was opened, the coffin lifted and the cover removed. The gray jacket was turned back. The fragment like the vest, and that like the lining of the jacket were laid upon the pulseless breast. They were the same.

The face, though so sadly changed, was recognized by the friend and the brother. There could be no doubt; they were gazing upon the body of Samuel Davis.

The body was transferred to the metallic case and the little procession returned to the town.

Here Chaplain Young gave into the charge of John Kennedy the letter written the night before execution, some buttons cut from coat and vest, and a little book in which the boy had written a last message to his mother. This the boy had kept in the pocket over his heart until the fatal moment.

In the afternoon the party started upon its return journey. On the second day they reached the river near Columbia, and here it was found that all ferry boats had been stopped by order of the Federals, and there was no means of crossing unless by fording. Leaving Oscar with the wagon, John Kennedy went in search of the officer in charge to ascertain if he would not aid him in crossing the stream. He was found standing on the river bank and turned at once to an orderly with a command that the ferry should be called out to take the travelers across.

John thanked him and started back to the wagon. He found it surrounded by Federal soldiers, but in silence and without pause, went to the head of the team to lead the horses down the steep descent to the river. A soldier stepped to his side.

"Here, stranger," he said; "we know who this is; you get in the wagon; we'll see that it gets down safe."

And so they did, a lot of the noble-hearted fellows, enemies though they were called, put their shoulders to the wheels and almost carried the wagon down the hill and upon the ferry. Then they stood silently by its side, and when the other shore was reached, where the bluff was steep and difficult of ascent, again they came near, putting a hand or a shoulder to the burden until it reached the top. And then they stood waiting in silence until the travelers were out of sight.

Later on in the evening of the seventh day John Kennedy drove slowly in at the "big gate" of the farm, some distance from the house.

The father and mother of the dead boy were watching for his return, and came to meet him just outside the entrance to the yard.

"Was it true?" she cried; "Oh, was it true?"

"Yes," answered John Kennedy, turning away, "it was true."

She glanced into the wagon, threw her arms above her head, and fell fainting to the ground.

"Did you look at his vest, at his jacket lining, at his—his face?" she gasped later. "Yes, I did all I promised," he replied gently.

"May we see him?" asked the father.

"No, I think not. It is better so, remember him as you saw him last."

The following day Samuel Davis was buried in the little family cemetery, not far from the dwelling. His father had a monument placed to mark the spot, and after a while he, the mother, and the grandmother of the noble boy were all laid to rest near by.

Later "The Confederate Veteran," published at Nashville by S. A. Cunningham, himself a Confederate Veteran, at the suggestion of a Federal veteran who was present at the execution, started a subscription that a monument might be erected in memory of the young hero. To this fund General Dodge subscribed generously, saying:

"I appreciate fully that the people of the South and Davis comrades understand his soldierly qualities and propose to honor his memory. I take pleasure in assisting in the raising of a monument to his memory. Although the services he performed were for the purpose of injuring my command, they were given in the faithful performance of duties to which he had been assigned."

There have been various conjectures as to how Samuel Davis secured the information found in his possession when captured. One that a Federal lieutenant who was deeply interested in a Southern girl living near Pulaski, had given it to her. Another, that an official report was made in pencil, then copied, by order of General Dodge, and that the pencil copy was stolen by a negro from the office and sent to Coleman, Captain of the Scouts, and that he wrote the report and entrusted it to Davis. Coleman was the assumed name of Dr. Shaw, who was the head of the secret service already mentioned, but his connection with this branch of the service was only known to his comrades. He was captured within a day or two of the capture of Samuel Davis, and was temporarily lodged in the same jail. His captors thought him a personage of no consequence and later sent him north to prison. He was at Pulaski at the time of Davis' execution, and would certainly have been hung had his identity been revealed.

The young hero was cognizant of this fact, but locked within his own soul the secrets which, if disclosed, would bring disaster to Shaw and others. It is probable that several individuals were shielded by the sacrifice of his young life, and he died not only for his cause, and for his honor, but that others might live.

The day has come when American heroism is honored as it should be, both North and South, and nowhere in the annals of the country can be found the record of a more lofty devotion to duty or a nobler magnanimity on the part of a victorious foe, than in the events connected with the death of Samuel Davis.

GEORGE PETRIE, A BOY CAPTAIN.

ANNA ROBINSON WALTON

"Boys, let's get up a company; what do you say? The men are all drilling and I don't see why we can't, too?"

"All right!" answered half a dozen voices. "It will be fine fun; let's do it right away."

And so they did, meeting every afternoon on a level green meadow just beyond the limits of the village, a pretty little place in Shelby county, Kentucky.

George Petrie, the boy who had proposed the plan, was elected captain, and the other officers were filled by young patriots almost as zealous as he. First and second lieutenants, sergeants and corporals, all were represented.

George was most eager in the work. He had found out, even in his short life, that nothing can be well done without earnest effort. So he went as often as possible to see the men drill. He got from one of them a book explaining the "tactics," and was up early and late studying them.

It was the fall of 1861. President Lincoln had issued his proclamation on April 15th of that year, calling the State's Guards and others loyal to the government to the defense of the "Stars and Stripes." George secured a copy of that document and read portions of it aloud to his "men," as he called them, and did everything in his power to arouse their loyalty to the old flag.

At last a day came when the company of State's Guards which had been drilling all summer, had their last parade in the little town. There were sad farewells between mothers and sons, sisters and brothers, and husbands and wives. Then the company marched off, with the brass band playing, flags floating out on the breeze, amid the ringing hurrahs of many voices.

The boys continued to drill with unabated zeal.

"They may need us yet." George would say to those whose interest seemed to be flagging. "Old Kentucky is standing neutral, most of her men are going to join Morgan and Breckinridge and fight on the southern side, but we won't. Hurrah for the Stars and Stripes!" And then the boys would cheer until they were hoarse, thinking to themselves, we may be soldiers yet.

George was doing a great deal of thinking those bright fall days, but he kept the result to himself, until one afternoon, when his company came out to drill. He called "Attention!" and the boys stood, as soldiers should, straight and stiff in an unwavering line.

"I have something to say," Capt. Peirie began. "The Shelby County Guards, who left two weeks ago, have helped to form the Thirteenth Kentucky Infantry and have gone into camp at the Fair Grounds, near Louisville. I propose that we go down to see them. What do you say?"

There was a moment's silence, then such loud and ringing cheers that the town's people wondered whether a battle was raging just outside the town limits.

Then the matter was discussed with many and varied suggestions, and the next day all of these who decided to go met on the meadow and marched gaily away.

A day or two later when drill was just over at the camp at the Fair Grounds, there came marching down the road another company from Shelby county. It approached in well-formed ranks and fine order, the men holding their heads high and looking straight before them. Coming nearer they began to cheer, lifting their flag proudly, and seeming as though ready then and there to meet the foe in battle.

A loud answering cheer greeted them, and then a merry shout of hearty welcome as it was seen to be a company of children—boys from 12 to 14 years, just little fellows who had come to camp to encourage their seniors, and bid them farewell when the march southward should begin.

Quarters were assigned the boy company, and the members entered upon the routine of camp life with the greatest enthusiasm. But in a few days the time came for return home and they fell into line for the march.

"Attention!" called Capt. Peirie; "attention!" I wish to say to my men that they must go home without me! I'm bound for the front with the troops; I'm going right into the fight!" Then he formally resigned his position.

He was only a little fellow, barely 11 years, slender and small for that age, and some of the men hearing the speech laughed merrily, calling to him that they could not take a baby along, and that he would be in the way.

"When the time comes you'll see who her I'll be in the way!" he answered hotly. "I'm going. Good-bye! Good-bye!" he called to the boys, and so they turned homeward without him.

The next day preparations were being made in camp for departure, and the officer in command told George that it would be impossible for him to enlist, as he was not only under age but short of stature.

"Well, colonel, I'm going any way; there are lots of things a boy can do. Forty mules can't pull me away from the men. I'm going, sir."

"Why, he might beat the drum," said a kindly officer standing near; "let's take him."

"Yes, sir, I can beat the drum and I can cheer up the men; just so if I don't die."

And so it was decided. George went with the troops as a drummer-boy, and when the day came for going to the front he started on the march with his drum, but as soon as Louisville was left behind and the drum was not needed, he took the gun and knapsack of a sick comrade and carried them through the whole day's march.

"I'll show them what I can do," he said to himself. "I'm not too small to do a soldier's duty. A boy isn't small unless he feels so."

He was so unselfish and self-sacrificing, so bright and cheery, that his example was of immense benefit to the men, and there was always some sick soldier to help, some one whose burden he carried, so it was rare, even upon the longest marches, to see him without the full accoutrements of a soldier.

"Oh, I sleep better for helping somebody," he would say, singing a snatch of a merry song and marching on with the sturdiest veterans.

He became in a few weeks the little hero of the regiment, and his influence with the men was wonderful.

At the battle of Perryville, Ky., October, 1862, he was in the ranks and in the very thick of the fight. His regiment was in line behind a low rail fence, when the top rail was struck by a shot and hurled against an old man, an Irishman, who had recently joined the troops. The old fellow dropped his gun, staggered, then in a panic of fear, started "double-quick" to the rear.

"Hello, pap! Hello! Where are you going?" shouted George, eagerly.

"Oh, I'm kilt; I'm dead entirely; I'm goin' for the docther!" was the reply between gasps for breath.

"Dead! Dead! Not a bit of it!" called George. "You're worth ten dead men; come on; we can't spare

you! Here, take my gun, it's loaded. Look straight at the graycoats and fire. Hurrah for old Kentucky. hurrah! Come on!"

The boy's spirit and enthusiasm were so contagious, so irresistible, that the old man turned back, took the gun from his hand and, sure enough, went to firing in earnest.

"I've been working two guns all day," said George, after the battle was over, to a comrade.

"How's that?" was the reply.

"Why, pap, there, thought he was dead and was going to the rear as fast as his legs would carry him. I turned him back and he went to work lively, I tell you, with me looking after his gun and my own, too."

So the brave little fellow went through the war. He seemed to bear a charmed life, his spirit dominating his tiny body and putting to shame many a strong, burly soldier.

OUR WATER SPANIEL.

By L. A. LEWETT.

Boys and dogs have a natural affinity for each other, and the boy without his dog is an anomaly which is as unnatural as would be his indifference to sleds and skates in the winter season, or swimming and fishing in the summer.

Jack's dog was a water spaniel as handsome as a picture, with his great brown eyes, silken ears, and heavy coat of brown and white hair.

Jack was going with his father and mother to spend a month at the lakes and begged hard to take Dash with him.

"But what shall we do with him at night?" said his father.

"Why, he can stay in the stable with Ned, papa."

"Yes, I suppose so," was the reluctant answer, but Jack knew it meant consent, and was too happy to pay any attention to the inflection of a tone.

Now, Dash and Ned, the horse, were the best of friends; but they were bedfellows, and that was quite another thing. The protest against this arrangement was manifest by the kicking of one party, and the howling of the other, so that the stablemen brought the dog to his master in the middle of the night, where he was quiet enough until Jack's regular breathing showed that he was asleep, and then two soft paws would come up on the bed and a pitiful dog-voice would say, as plain as words, "Master, please wake up, it's so lonesome here."

Jack's rest was effectually broken, and he began to think it was not such fun, after all, to take a dog on a summer outing, but the next morning when a group of boys and girls went down to the shore, and Jack began to show off the dog's accomplishments by throwing sticks and hat in the water, and sending him after them, he was quite proud.

After a while Jack invited two of the girls to try his new boat with him, and as they had been admiring its trim build, bright cushions and pretty awning for some time, they were only too glad to accept his invitation, but alas! Dash had not given his consent to his master's deterring him, so he gave a jump to reach him, caught on the side of the boat which was still in shallow water and nearly tipped it over in his struggle to climb in. Jack used his most masterful tones to send him back to shore, but to no effect, and swimming bravely after them far into deep water, the dog so worked upon their sympathies that they returned to the shore. Repeated attempts showed Jack that he could not "go to sea" without his faithful follower.

Some of the older people had walked down to the shore, and among them Jack's mother, in a spotless white gown. They were all laughing heartily at Jack's discomfiture and the antics of the dog, when Dash, who had rolled himself in the loose sand, caught sight of his mistress' smiling face, and sprang upon her, saying, as well as dog language could:

"Yes, I've brought him back to you; I've taken care of him; aren't you glad?"

They soon found him a very troublesome comfort, and sent him home to the care of the servants, and the companionship of the old St. Bernard who used to dig nice deep holes in the damp flower beds, where he loved to lie in the warm summer afternoons and dream of the cool snow banks where his grandfather used to live, way up in the Swiss mountains.

Dash used to watch him while he dug, and then, loyal to his old friend, would dig a similar but smaller hole, and try to enjoy this—to him novel siesta; but it wouldn't do, so he gave it up, and wondered in his little dog heart why Cap preferred such a damp, disagreeable bed, to a clean rug on the sunny veranda.

At about this time Dash fell in love. He had always hated cats, and especially the black mother-cat and her brood of kittens; the newest arrivals, however, had among them a little snow-white bundle of fur, that immediately pleased the fancy of Mr. Dash, and taking her by the nape of the neck, he carried

her to his own especial rug in the corner of the veranda, and there held her a prisoner until her little short memory had forgotten that puss was her mother, and all that person's blandishments could not lure her away from her big, handsome lover. She ate from his plate, slept between his silken ears, or across his outstretched paws, played pranks all around him and all over him, and rode all over the place on his broad back.

When Snowball was half-grown Dash ran one day to his mistress and tried to tell her to come quickly, then seized her dress in his teeth and drew her out on the grass plot where poor little kitty, after the manner of pussdom, had fallen in a fit. He barked, and pranced around her, and switched his shaggy tail about her face to provoke her to play, but all his efforts were useless. Poor little Snowball was dead.

It was a long time before Dash could be coaxed away from her side, and Jack could bury the little thing in the garden. The next morning on opening the kitchen door the maid was startled to see Dash, with poor bedraggled Snowball lying across one paw and lovingly protected by the other, waiting to get in. Again Jack buried her and again Dash brought her home—then it was found necessary to shut the dog up until his little pet was safely hidden from his keen scent, and his loving care.

After a week's imprisonment he was set at liberty, but the relish seemed to have gone out of life for him, and he soon sickened and died. Jack buried him in a good pine coffin and painted on his headstone:

DASH.

Dash was a good dog; he died of a broken heart.

MISCHIEVOUS BLIND BOYS.

MRS. F. C. FRAZER.

Many people think that life in a School for the Blind must be rather a grave affair. They quite overlook the important fact that, sight or no sight, young people the world over are apt to be much alike, and even among blind lads and lasses a spirit of merry mischief-making may prevail.

A few incidents from the annals of our school may serve to convince some that the very errors and mistakes caused by the deprivation of sight, are often a source of lively amusement to those principally concerned.

I well remember the glee with which Jack Foster, a young blind lad, told me of one of his experiences. Hearing that a friend had lately come to town and was boarding in a distant part of the city, Jack dutifully set out to call on him. The street on which he presently found himself was a particularly quiet one, and as he was uncertain as to the exact locality of the house, it was with delight that he heard a regular footfall on the gravel sidewalk behind him. Turning about and doffing his cap politely, Jack courteously asked for a direction.

For answer a surprised Newfoundland dog gave a gruff how-wow-wow.

A tale, with a capital moral, is told of a lad whose carelessness in matters of dress made him a trial to all his friends. Despite kindly hints and even in defiance of strict orders, he persisted in wearing an aged coat to which he professed to be much attached. It was indeed a shabby garment, well broken at the elbows, burst at the seams, and entirely devoid of buttons.

One afternoon during play hour when he was thus apparelled, he was summoned to the reception room to meet two young ladies whom he had formerly known in his home. Hurrying to his dormitory he flung his old coat on the foot of the bed and laid out a garment of better appearance, in which he proposed to array himself. After a hasty wash and a brisk brushing of his hair, he drew on his coat and hurried to meet his friends. Alas for his pride, in his excitement he had drawn on the shabby coat which he had just thrown off, and did not discover his mistake until safely ensconced in the reception room, when accidentally he touched an elbow. The yawning hole revealed itself, and the lad who had heretofore been gaily self-confident in his talk had suddenly but little to say for himself.

It is probable that his visitors never knew the cause of his sudden change in manner from pleasing cordiality to painful diffidence, but the much needed lesson had at last been learned, and from that day out the lad was as particular in matters of personal appearance as his instructors could wish.

On another occasion when the weather had grown suddenly cruel, the young Superintendent of the school offered the loan of his overcoat to a tall lad who was about to do some errands in the city.

"The coat is hanging on the back of my bedroom door," said the Superintendent carelessly.

The youth immediately took possession of the garment thus described, and with his best hat and his silver-headed cane at once set out.

Now it happened that a gentleman who had been visiting the school had, unknown to the Superintendent, hung a dressing gown also on the hook at the back of the door. In style and cut the dressing gown was not at all unlike an overcoat. The material, however, was a brilliant plaid of red and green, and from the two straps sewn to either side of the back seams hung a heavy cord with tassels of mixed crimson and gold.

The lad very naturally drew on the garment found on the hook, wondered a little at its ample size and then complacently admiring the handsome silk lining, hurried to the city.

As he was a high spirited youth he resented not a little the attention which his movements seemed to excite. He observed that the shop girls giggled as they waited on him, and that a train of small boys seemed to dance in noisy attendance on his slightest movement. He was still unconscious of the cause of this unwonted commotion when a sharp tug at the cord and tassels which hung in the rear brought him suddenly to a standstill, and an irate gentleman demanded an explanation of his conduct.

The lad's feelings can better be imagined than described when he realized that he had been parading the whole length of the town appalled in a dressing gown and such a dressing gown! It is but fair to state that in this case some weeks elapsed before the lad could be brought by his teasing classmates to fully appreciate the humor of the situation.

It was Frank Nixon, a lively younger pupil of the school, who attempted a mild practical joke on one of his teachers who was also blind. They were strolling together along the streets, chatting at their leisure when it occurred to Frank that some fun would be in order.

No sooner had they left the sidewalk at the next street crossing, than the sharp, metallic sound of a horse's hoofs on the road sounded ominously near. Grasping Frank firmly by the hand the teacher in a few rapid steps crossed the highway and congratulated the boy on their narrow escape.

A similar incident happened at the next crossing, but at this second alarm the teacher's suspicions were aroused.

At the third crossing the galloping horse was again heard but this time the master did not run. Drawing Frank close to his side he calmly proceeded to examine his pockets, when he quickly discovered that the mischievous lad had, by jingling two bits of metal together been able to give an excellent imitation of the sound of a horse's hoofs upon the highroad.

The story goes on to say that though the teacher joined heartily in the laugh against himself, yet that he afterwards led his pupil such a dance along the mathematical high road that the youth forebore further practical joking with him at least.

There is a bit of unintentional humor in the story of Tom and Ralph, who were fast friends and allies. One night Tom, who was provided with the necessary permit for remaining out after closing time, found his chum prowling uneasily about the outer door. The rules of the school with reference to clos-

ing hours were strictly enforced and Ralph, who had been belated by accident, was hoping against hope that he might effect an entrance into the building before his absence had been discovered.

Tom's sympathies were at once enlisted in his case and he agreed, if possible, to give him safe conduct to his bedroom. The chief danger would be in passing the door of the principal teacher, whose bedroom at the head of the first stairway was in a commanding situation.

Acting on Tom's advice, Ralph drew off his boots and followed his chum up the winding stairway, the sound of his footsteps being drowned in the clatter of his friend's boots. They had scarcely climbed three steps before the principal's door opened a little.

"Who is it?" he asked shortly.

At the sound of Tom's voice the door closed again. Ralph half stumbled on the stairway in his excitement. But when the door closed he felt sure that all danger was now over and whispered something to that effect to his mate.

Tom's quicker ear detected that the teacher was still astray in his room, and meaning to cover his friend's voice began to sing carelessly.

At this unwonted sound at such an hour of the night, the principal indignantly threw open wide his door, when he was amazed to find not one but two lads. Ralph in his excitement let go of his boots, which rolled noisily down the winding stair, while Tom endeavored feebly to account for the position in which he found himself.

A prank that came near having a serious ending was played by a half dozen boys who had suffered much annoyance from the workmen on a neighboring building. Notwithstanding formal complaints made by the Superintendent of the school the men continued to obstruct the sidewalks by leaving their ladders up against the building after they were through their day's work.

In vain the lads remonstrated with them. At last being mindful of sundry knocks and bruises which the ladders had caused them on various occasions they decided to remove the obstructions for themselves. A committee was appointed to inspect the building each evening and to remove all ladders found in an upright position.

It so happened that on the very first inspection a ladder was discovered. The lads without more ado swung it boldly out, when to their horror they became aware that a belated workman who had just stepped on one of the upper rungs was screaming for help. Fortunately the man had a firm grasp on the ladder and was able to retain his hold while the boys with great care lowered him to the ground. It is needless to say that the workmen's habit of leaving ladders about was speedily mended and that the lads were a bit more careful afterwards in their methods of administering justice.

It is now many years since this incident occurred, but the pupils of the later day still account it as one of the most thrilling of their school adventures.

Strange as it may seem to those who have not had the pleasing experience, one could not wish for better entertainment than when of a winter's evening, the blind lads, gathered round the fire in their cosy

sitting room, revive the old tales or relate with keen appreciation the humorous incidents of their every day school life.

CAVALRY HORSES.

A veteran cavalry horse partakes of the hopes and fears of battle just the same as his rider. As the column swings into line and waits, the horse grows nervous over the waiting. If the wait is spun out he will tremble and sweat and grow apprehensive. If he has been six months in service he knows every bugle call. As the call comes to advance, the rider can feel him working at the bit with his tongue to get it between his teeth. As he moves out he will either seek to get on faster than he should or bolt. He cannot bolt, however. The lines will carry him forward, and after a minute he will grip, lay back his ears, and one can feel his sudden resolve to brave the worst, and have done with it as soon as possible. A man seldom cries out when hit in the turmoil of battle. It is the same with a horse. Five troopers out of six, when struck with a bullet, are out of their saddles within a minute. If hit in the breast or shoulder, up go their hands and they get a heavy fall; if in the leg, or foot, or arm, they fall forward and roll off. Even with a foot cut off by a jagged piece of shell, a horse will not drop. It is only when shot through the head or heart that he comes down. He may be fatally wounded, but hobbles out of the fight to right or left, and stands with drooping head until the loss of blood brings him down. The horse that loses his rider and is unwounded himself will continue to run with his set of fours until some movement throws him out. Then he goes galloping here and there, neighing with fear and alarm, but he will not leave the field. In his racing about he may get among the dead and wounded, but he will dodge them, if possible, and in any case, leap over them. When he has come upon three or four other riderless steeds they fall in and keep together as if for mutual protection, and the "rally" of the bugle may bring the whole of them into ranks in a body.

The little state of Wurttemberg, Germany, is about half as large as the state of Iowa, and supports a population of 2,000,000 people. In many respects it is a remarkable state. In the smaller towns are work-schools, which are schools for agricultural and technical education in trades. There are 700 co-operative banks with 60,000 co-operative members. Money is loaned out to farmers for three years at 4 per cent. Depositors in the bank receive 3½ per cent, the difference, that is, ½ per cent, covering the expenses of the banks, the management of these institutions being honorary.

The prosperity of this country is attributed to three things: First, the farmers on the farms; second, the technical schools; third, the co-operative system of banking. Out of the 4,300,000 acres of land which make up the state, the farmers own 2,720,000, an average of fourteen acres for each farmer. There are but 630 large farms in the whole country, and these average 730 acres. This little state gives in the way of taxes \$390,000 a year for agricultural education, including, however, \$5,500 for the establishment of village libraries.

A BOY IN THE UNITED STATES CONGRESS

CHAPTER III

I was not long in getting acquainted with both old Ben Butler. That doesn't sound very well, does it?

A boy of twelve could hardly be said to claim "acquaintance" with a big man who had been a great lawyer for a third of a century, a candidate for Governor of Massachusetts, a fighting Union General, and a Congressman of marked prominence, yet I am going to claim, for the boy I am writing about, that distinction.

General Butler is one of those men whom once you have seen you do not readily forget, and he is not one whom you will long fail to see when he is in the neighborhood. His face is one to attract attention and to fascinate, if by nothing more than its ugliness. I give you on this page his portrait; but the face is familiar to everyone. The peculiar slope and squint of the eyes makes you think of the Chinese; this with the droop of the mustache and the heavy brow and flabby cheeks make a face not soon forgotten.

Mr. Butler's desk was but a few feet in front of Father's, so it was in my territory; that is, I could move down the aisle from Father's desk to Mr. Butler's without much fear of attracting the attention of my early enemies whom I have described, namely, the "pages"

My first acquaintance with the bluff old General came in this wise. One day he was having great difficulty in finding his quill pen. A gentleman sitting near him and an arm's length away from where I stood called my attention to the quill as it lay in the aisle a foot or two beyond its owner's desk. It took me but a moment to restore it to its place.

The General had been fussing over his loss till his temper was spoiled, and he said something under his breath that he must have learned in the army. I turned to go back to Father's desk (which I must confess I did not at that stage of the game leave for long at a time) when he called me:

"What's your name?"

I answered,

"How long have you been here?"

"Two or three weeks."

"How do you like it here?"

"Very much, sir."

"Made any speeches yet?"

"No, sir."

"Republican or Democrat?"

"Father's a Republican."

"What are you?" This with a growl and a scowl that took all the stiffness out of my collar.

"The same."

"That's right, my boy, take a side and stick to it." Advice as I afterwards learned which he didn't follow himself.

"Would you take this note for me to Fernandy Wood?"

"Fernandy Wood" was another name to wake memories even in a boy. I had heard of him before I

became a Congressman's boy. For forty years he had been active in public matters. He was in Congress away back in the early forties, was Mayor of New York before the war, and at the breaking out of the war advised that New York City secede. He was another of the marked men in that remarkable Congress. Tall, white-haired, florid, commanding, he sat on the Democratic side, well back, near the center aisle. I knew the place. I had looked hard at the man often enough to know him; so I carried the note, and that was my first service as a "page," in which capacity I served for several sessions though without pay or recognition as such.

But I started out to tell about Ben Butler. He was a skillful fighter on the floor of the House. My supreme delight was in standing near him and watching him give and take in a battle of words. His thrusts were quick and keen, his sarcasm bitter, his invective overpowering. But he had foemen worthy of his steel, and they delighted in nothing so much as in stirring him up.

As an illustration I quote from the Congressional Record of March 23, 1871:

Mr. Morgan: Allow me a moment, I may, perhaps, have misunderstood the gentleman. I understood the gentleman from Massachusetts (Mr. Butler) to say that the bill which he introduced and asked to have referred to a committee met the approval of a majority of the Republicans on this floor. Am I right?

Mr. Butler, of Massachusetts: I will restate what I said, so that there shall be no mistake. I understand that the bill which I presented, and which is in print, does meet the approval of a majority of the Republicans on this floor. That it is perfect nobody dreams of claiming. Everything human is imperfect; everything human needs amendment, and nothing more and nobody more than my friends on the other side, except, perhaps, my bill.

Mr. Niblack: One moment. The gentleman will relieve us on this side of the House from some embarrassment if he will cease to call us his friends. (Laughter.)

Mr. Butler, of Massachusetts: Ah!

Mr. Niblack: We never recognize such relations.

Mr. Butler, of Massachusetts: There was a time when the Democratic party recognized me as a friend, eye, and as a leader, and they were very cross when I left them. (Laughter.) And, as a friend near me suggests, they have not got over it yet, but have been mad with me ever since. (Laughter.)

Mr. Morgan: How many of us followed the gentleman, when at the Charleston convention he voted more than fifty times for Jefferson Davis for President of the United States?

Mr. Butler, of Massachusetts: Certainly, I then voted for the representative man of the Democracy. Subsequent events have proved that the difference between the gentleman and myself is that he would not vote for Jeff Davis then but would now and I did then and would not now. (Laughter.) There is no trouble about understanding this matter at all.

Mr. Morgan: If the choice was between the member from Massachusetts and the gentleman from Mississippi the country would certainly justify me in making such a choice.

Mr. Butler, of Massachusetts: Will the gentleman repeat his statement? There is so much confusion here that I did not hear him. (After a pause.) I repeated my words for the gentleman when he did not hear me. Is he ashamed to repeat his? I did not hear him. (After another pause.) Then I will grant him the mercy of my silence as to what I did not hear.

To show the intensity of feeling that existed in Congress in these post-bellum days, I cannot forbear quoting from the Congressional Record again.

In a speech delivered by Hon. Benjamin F. Butler, in the House of Representatives, April 10th, 1871, Mr. Butler, in his closing sentence, quoted the couplet—

"John Brown's body lies moldering in the grave,
But his soul goes marching on."

On the following day Hon. John Ritchie, of Maryland, who represented in Congress the district in which lay the scene of John Brown's raid, took the floor and proceeded to call Mr. Butler to account for holding up John Brown as the patron saint of Republicanism.

Upon the conclusion of Mr. Ritchie's remarks, a controversy took place between Mr. Butler, Mr. Niblack, of Indiana, Mr. Swann, of Maryland, and Mr. Ritchie, of Maryland, which gives a good example of the heated repartee of the Forty-Second and other Congresses that closely followed the war.

Mr. Butler: Mr. Speaker, I desire not to reply to any personal remarks which have been made, but almost the only thing that elicits some of the gentlemen on the other side is abuse of me. (Laughter.) Some of them have been kind enough to tell me that the best card they had in their district was to show the people how they had "berated Ben Butler." (Laughter.) Therefore, I am always willing to afford gentlemen just as much as they please of that kind of appeal to the intelligence of their constituents.

Mr. Niblack: Orthodox Christians always abuse the devil on all suitable occasions. (Laughter.)

Mr. Butler: I have difficulty in hearing with readiness what my friend opposite says. I think I do hear, however, and I am glad to hear that he is orthodox. All I can say is to repeat one more that I am glad to allow all that kind of aid to the gentleman on the other side.

The other gentleman from Maryland (Mr. Swann), the Know-Nothing mayor of Baltimore a few years ago, whose election cost a thousand men murdered and strangled down in that city during his term, I doubt not—

Mr. Swann: I pronounce that a most infamous slander, coming from an irresponsible man—irresponsible, politically and socially.

Mr. Butler: Let us have no generalities of denial. Does the gentleman deny the Know-Nothingism, to begin with? (Laughter.)

Mr. Swann: I do deny that I ever belonged to any association that was not patriotic, that did not look to the support of the Union of the States.

Mr. Butler: I cannot yield for that.

Mr. Swann: But I do deny that I ever belonged to an association formed for the purpose of degrading innocent women and children and leaving the property of those who were thrown in contact with me and who were defenseless.

Mr. Butler: Now, then, does the gentleman deny that he was a Know-Nothing? (Laughter.)

Mr. Swann: Deny what?

Mr. Butler: Why, deny that you were a Know-Nothing?

Mr. Swann: No, sir; I do not deny that I did belong to that organization.

Mr. Butler: I do not yield any further. I have proved him a Know-Nothing. Now I will prove from the Baltimore Gazette, a paper published in his own district, that

at the late election, thousands of men were maltreated because he was made mayor. It is a Democratic organ. I would read it if I had it here; but I have sent for it to the committee-room. I will publish it.

Mr. Swann: In reply to that, if the gentleman will permit me—

Mr. Butler: I cannot yield.

Mr. Swann: Then, sir, he cannot yield because he is afraid of the truth.

Mr. Butler: I decline to yield. The gentleman took an hour gratuitously when I was out of the House to abuse me the other day.

Mr. Speaker, what I arose for was to say this: I think it important for gentlemen on the other side to call up John Brown as an instance of the invasion of a State government, because when he marched into Virginia with an army of seventeen thousand men, the State of Virginia could not conquer him until it had called for help the United States marines. (Laughter.)

A Member: He only had seventeen men.

Mr. Butler: They appeared to be seventeen thousand to the Virginians. (Renewed laughter.)

Mr. Ritchie: He went there, leaving his associates behind him.

Mr. Butler: I say again, all Virginia could not conquer old John Brown, with seventeen men, until they called for the assistance of the United States marines.

A Member: And the militia of Maryland.

Mr. Butler: Yes, sir, and the militia of Maryland besides. (Laughter.)

Mr. Terry: It was a Virginian who led them when John Brown was captured.

Mr. Butler: What is the matter with the gentlemen on the other side? They hop up as if sitting on hot pins.

"Let the galled jade wince, my withers are unwrung."

Mr. Swann: But they ought to be.

Mr. Butler: John Brown, Mr. Speaker, marched in the interest of freedom, into Virginia to do acts against the law and the Constitution. He did that which, under the law and Constitution, could not be justified at that time. When he was there, what was done? Exactly what we wish to pass a law to have done now. They called for United States troops to stop interference with State law, to protect the people's rights, and to secure to the people of every State peace and quiet. Nobody was more ready to call for the United States troops, when their people were interfered with, than the States of Virginia and Maryland.

Mr. Ritchie: They were called for by the legitimate authorities of the States, if at all.

Butler laid himself open to attack with perfect indifference. He seemed to invite ridicule. His career had been full of incidents that gave material for abuse on the part of his foes, and his sudden changes of political faith made him the object of mistrust even

BEN BUTLER

by friends, and invited their thrusts. His very facial manner presented constant temptations to the indulgence in witticisms from such men as "Sunset" Cox, the red-whiskered humorist of Congress, who wrote "The Buckeye Abroad" and "Why We Laugh."

But they all feared Butler while they could not withstand the temptation to jab a lance into him, if only to see that cock eye of his glisten.

He could simulate indifference better than any man I ever saw, and some of his most notable victories over his enemies were those gained by his absolute imperturbableness, which had the effect usually of worrying his tormentors into a frenzy, while he himself with the eyes of the whole house upon him sat as if utterly oblivious to surroundings, reading or more usually writing; and then when the tirade of abuse ended and everyone looked to see the leviathan rouse himself for reply, he would calmly fold his letter, seal it, rise in his place, and saunter out— invariably to the accompaniment of laughter on the Republican side, the disappointment of the galleries, and the discomfiture of his foes.

But on one notable occasion, I recall, he arose, not to leave the field, but to do valiant battle at arm's length with the strength of a giant—for such he could be. This is one of the scenes I witnessed as a boy that left an ineffaceable impress upon my mind. It is to-day as if it were but yesterday and not a quarter of a century ago.

Someone on the Democratic side, P. M. B. Young, I think, a Representative from Georgia, one of the Confederate Generals who were elected to Congress in the few years succeeding the war and known as "fire-eaters" because of their quickness to resent attacks upon the South and upon the motives of Southern men, had made on the floor an impassioned speech in which he had called in question the bravery of the colored troops during the war.

During the speech the whole attention of galleries and floor was on two men—Young and Butler. The former stood at his desk to the right of the Speaker, facing directly toward Butler. Butler sat at his desk writing. Instinctively I felt that something was to happen. I moved around to a position where I

could watch both men. I listened intently, as did every one, to the fiery words of the Southern orator—always earnest, often bitter and burning. The situation was intense. Men stopped their work, groups in the outer aisles scattered, and one by one the cloak rooms and retiring rooms were emptied of their occupants. The galleries were filled to repletion. Not a sound could be heard save the ringing voice of the distinguished Southerner, and the squeaky movements of Butler's quill pen as it drove laboriously over the white page.

The speaker finished. The situation was too strained for applause. The House took a long breath, turned its eyes toward Butler, and waited. Speaker Blaine made no movement to direct further business.

Butler leisurely finished his letter, signed his name with an extra squeak of the quill, folded it deliberately, threw it to one side, rose from his seat, cocked those squinty eyes of his first at one side of the House and then at the other, as if seeing the lay of the land and measuring his ground, walked down the aisle and to the open space directly in front of the Speaker, and with the calmness of a morning in May began his reply—and such a reply! People in the galleries leaned forward to a man; every man on the floor of Congress—Republican and Democrat alike—rose from his seat, pushed into the aisles and crowded down about the Speaker. Butler's troops during the war had been for the most part colored troops. He was speaking for the black men whom he himself had led, for the black men, hundreds of whom he had seen fall in the front of battle. I remember with what a burst of oratory he described how he had sent a regiment of blacks into a very hell of shot, and how they went with the shout of joy to almost certain death. The attack described was that on the Confederate works at Spring Hill, on New Market Heights, in the Petersburg campaign. The Spring Hill redoubt was very strong. On its front was a marsh, traversed by a brook fringed with trees, and it was further defended by an abatis. The eager troops swept across the marsh, scaled the heights, and carried the works at the point of the bayonet. The struggle was desperate and the victory was won by the black warriors at a fearful cost of life. Before the storming party reached the works, two hundred of them fell dead and not less than one thousand were killed, wounded, or captured.

I stood not ten feet away from the speaker. He seemed to me inspired. I looked into the faces of the men who formed a solid wall around that volcanic center of words, and scarcely a dry eye could be seen. Tears were raining down Father's cheeks, and then a big lump got into my own throat and would not down.

The speaker stopped at a mighty climax and turned to his desk, a tempest of congratulation rose from floor and galleries, and Congress settled back to business again.

The dry pages of the Congressional Record have embalmed the words, but can never hand down to posterity the inspiration of that hour as it must linger in the life of every man who was a part of it.

(To be Continued.)

ONE REASON WHY IT IS "OLD GLORY."

While the United States of America is one of the youngest nations in the world, its flag is one of the oldest, if not the oldest, having been adopted as the national ensign by act of Congress in 1777. The yellow and red of Castile was first down by Spain in 1785, the French tricolor in 1795, the red English ensign, with the present Union Jack in the upper canton, in 1801, the present Italian flag in 1849, the present Austro-Hungarian in 1867, and the German flag in 1871.

THE MINES OF AFRICA.

The celebrated Kimberley diamond mines, just outside the boundary of the Orange Free State, and about 600 miles north of Cape Town, Africa, supply 99 per cent of the diamonds of commerce. Since their discovery in 1867 over \$250,000,000 worth of rough diamonds have been taken from them. These diamonds after cutting are easily worth double that sum. Then there are the Johannesburg mines, located in the South African republic, where gold was discovered in 1883. \$55,000,000 of gold a year have been taken out of these mines during the last few years. Then there are, besides gold and diamond mines, vast coal mines, which are practically unlimited, and great fields of iron and lead untouched, making Africa a continent of mines.

REDEEMING WORN-OUT MONEY.

Every year the Treasury of the United States is called upon to redeem millions of bank notes which have become badly worn as a result of constant handling. During the fiscal year recently closed Treasurer Roberts gave new bills in exchange for old to the amount of \$290,000,000, breaking the record of the last six years. This is an indication that, with the return of prosperity money is in free circulation

WHAT BOYS ARE DOING.

BOYS AT SAN JUAN HILL.

Professor Draper, in his new book entitled "The Rescue of Cuba," is authority for the following:

"When Lieutenant Ord, at the head of his men, started on the rush up San Juan Hill, there was by his side a boy private from Ohio, who had joined the regiment just before it left for the front. He ran close to Ord until he fell, mortally wounded, a few yards from the summit. Ord heard him give a faint cry, and paused in his rush to say kindly as he saw the dying pallor on the boy's face, 'My poor fellow, I can do nothing for you.'"

"I didn't call you back for anything like that, lieutenant—I am done for, but I thought you had better take my steel nippers; there may be still another wire fence beyond the hill, and I won't be there to cut it for you."

The boy did not die until he heard the shout of victory; but he never knew that his gallant leader, to whom he had given such unselfish devotion, was lying dead not many yards away.

The third of the trio was even younger, and he, happily, did not die. He was a little flute-player, and was found sitting by the body of Lieutenant Ord, whom he had followed that day with manly daring and devotedness. Another officer came by and scolded him for sitting at a spot which was no place for children, and ordered him back to the hospital.

"I was going back," said the little boy. "I wanted to go back to the hospital and look after Colonel Egbert when he fell wounded, and I was doing no good at the front, for my flute is ruined with the mud and the rain. But just as I started back, I heard Mr. Ord say, 'Now, all the boys who are brave, follow me!' and then he rushed ahead. So, all the boys followed him, and as I was lighter, I got further ahead than most." A cavalry colonel, who had just seen his own son die, listened to the little fellow's narrative, and patted him on the back."

ENSIGN WALTER R. GHERARDI A BRAVE FELLOW.

Ensign Walter R. Gherardi, son of Rear-Admiral Gherardi, rescued more than 150 persons during the recent hurricane in Porto Rico. The young man's experience as a life saver is a splendid one. He was at one time attached to the battleship Maine when she was in a gale outside of Cape Hatteras. A gang was ordered forward to make the lashings of the big guns secure. Six of the crew were washed overboard. The life buoys were cut loose and a boat was lowered under the command of young Gherardi. Three of the drowning men were saved. This was in February, 1897, and six months later two men were thrown overboard from the Texas by the sudden fall of a boat. Gherardi plunged overboard and saved one of the men. During the war in Cuba, Gherardi had command of a boat from the Marblehead that removed the mines from Guantanamo Bay.

MAJOR GEORGE PICKETT.

Major George Pickett, paymaster of United States troops, is the son of Gen. Pickett, who made the famous Confederate charge at Gettysburg. A child at his father's death, he grew up as one whom his mother loved. She determined to educate him for a useful life and sent him to Annapolis, where in the Naval Academy he chose the profession of civil engineer, and came home to his self-sacrificing mother still a boy, but full of ambition and high hopes for the future.

He was immediately given a superintending position on the staff of engineers who were then making Washington the well-sewered, cleanly city that it now is. One day it became his duty to make an inspection of the work which had been done, and entering the sewer while the men were at their lunch, time passed more rapidly than he was aware of, and the men, whose orders were to flush the sewer, turned on the water overwhelming poor George in the on-rushing current, and sweeping him toward the outlet.

He was discovered half drowned and wholly unconscious. A low fever followed this terrible experience, and when he recovered he was totally deaf. His mother, who had hoped that her worst trials were over, then applied for a government clerkship for him, and left no mean untried to restore his hearing; but it was all in vain.

George never lost courage, and never complained, but kept his sweet nature intact, saying: "Never mind, mother, I shall find my place in the world somewhere yet."

He was afterward appointed to a minor clerkship in the Indian office, where diligence did duty for ears, and he has slowly regained his hearing.

On the breaking out of the war with Spain he was appointed paymaster; and a month or two ago ordered to the Philippines. Waiting in San Francisco for the vessel to sail, he was seized with pneumonia, and the vessel sailed without him. We cannot think that this is the end of his ambitions and his hopes, but if it should be, he will leave a good record of perseverance and earnest endeavor that is worthy of emulation.

THE HARD LOT OF A MESSENGER BOY AND SOME DUTIES NOT SO HARD.

Messenger boys, at least those in New York, get \$5 a week, or, rather, they think they do. It is really but \$4.50 a week, for 50 cents is taken out weekly until the price of their uniform is made up. Then they must look sharp or they will not get all of the \$4.50, for the big companies for which the messenger boys work have a regular schedule of fines for the smallest delinquencies; as, 15 cents for being late, 10 cents for appearing at the office with one of the brass buttons off the coat, etc.

A messenger boy is subject to a great many temptations. Frequently he has time on his hands, and here the dime novel gets in its work. The dime novel, however, is not the worst influence the messenger boy is subjected to. He goes to places which will have a more baneful influence on his life in an hour than the reading of an hundred dime novels. Messenger boys make money out of "tips," and a bright boy in some sections of New York can earn from five to ten dollars a week outside of his regular wages in this way.

Messenger boys are called upon to do strange things. An eccentric lady in New York hires the services of a boy every Sunday to carry her prayer-book to and from church. Ladies without male escorts often get a messenger to accompany them to the theater, and these boys often have a chance to eat out of the bon-bon box. Boys are called upon to give "My lady's" dog his constitutional, and there are half a dozen boys in New York whose regular duty it is between 9 and 10 o'clock to take out blooded dogs for an airing.

GEORGE H. ROOT.

AROUND THE GLOBE.

George H. Root, a seventeen-year-old boy residing at Mendon, Mich., enjoys the distinction of having traveled around the globe, a distance of 26,000 miles, in less than eleven months. The boy is what may be called an average American boy, but his life history is more full of romance and adventure than is that of the average boy. When the war with Spain broke out he was playing the baritone horn in a traveling band. As was the case with so many American boys on the breaking out of the war, he wanted to enlist. When his parents prevented it he was about as broken-spirited a lad as you could find. His efforts to be a soldier, however, were more successful when the President called for troops to the Philippines, for last December he enlisted in the 4th United States Regulars, Co. J, and after remaining in Fort Sheridan, Ill., for fourteen days started for Manila. He sailed from New York, and for the first 4,500 miles of his journey he was seasick. One can imagine that a large part of his enthusiasm for soldiering was lost under this experience. His life as a soldier is full of dramatic incidents. He knows what it is to have his tent riddled by the enemy's bullets, to guard duty in mud and water up to the belt, to be compelled to go for a fortnight without change of clothing and to lay in a hospital for three months with typhomalarial fever. When the boy's parents learned in what Company he had enlisted they petitioned the War Department for his discharge on account of his age, and his discharge was granted July 27, 1899. Two weeks thereafter he was on his way home, arriving Saturday, Nov. 11. His long journey around the globe was via New York City, Gibraltar, Suez Canal, Colombo, Singapore, Manila, Japan, the Inland Sea (where the hospital ship "Morgan City" ran aground with a lot of sick and wounded soldiers in October), Yokohama and San Francisco. The boy's souvenirs of Manila fill a large

trunk, and his stories would make a book. He writes to THE AMERICAN BOY that he is satisfied now to follow the life of a stay-at-home.

TWO BOY STOWAWAYS WHO WERE DISAPPOINTED.

The transport Grant brought back from the Philippines a few days ago two boys who had a burning desire to meet death on a battlefield. The lads stowed themselves away on the ship before she left San Francisco, and had to be put under a guard at Iloilo in order to prevent them from following the regiments ashore. The boys were Charley Messenger, of Sherborn, Mass., who followed the Twenty-sixth Massachusetts Regiment; and Walter Ehrhorn, of San Francisco, who followed the California Regiment. Charley wanted to go to the Philippines to fight; Walter, for the sake of adventure. Charley, who is only twelve years old, said to the captain when asked to be put ashore: "We have all to die, and I would sooner die in my boots fighting for my country, than quietly in my bed at home. My grandfather was killed fighting for the Union and my father went with the Fifth Regiment to Cuba, and I want you to give me a chance in the Philippines."

The boys have been sent home by the officers and are greatly disappointed.

ARTHUR GRIFFITH, AN ARITHMETICAL PRODIGY.

Arthur Griffith, of Milford, Ind., now attending the State University at Bloomington, Ill., bids fair to break all records in the line of mental arithmetic. The boy has been infatuated with numbers ever since he was six years old. He can repeat in their order any number of figures read to him up to twenty, and can correctly multiply any two amounts, each consisting of seven figures, in eight seconds. He can mentally extract the cube root of any number in ten seconds. He has devised forty-seven different methods of multiplication, six of division, six of addition, and one of subtraction.

The Chicago Tribune is authority for these statements, which seem incredible. It is said that the boy's devotion to arithmetic unfits him for anything else. He is being sent to the University in order that he may become interested in some other line of work.

KILLED AT FOOT BALL.

Jesse Norris Hicks, a student in the University at Berkeley, Cal., was killed in a foot ball game at Berkeley, Nov. 4, and the occurrence has thrown gloom over the whole university, the boy being well-known and popular. He was a fine big fellow, full of life and spirit, and lacked but three months of being twenty-one years of age. He was a graduate of Santa Cruz High School and entered the university with the class of 1900. He would have graduated next May. The accident has put a damper on "scrub games," as the contests between different classes or organizations are called. The blame of the occurrence is laid to the fact that the players were inexperienced.

This is the third fatal foot ball accident that has taken place in the State University of California. A young man by the name of Frank Woodward, in 1884, was killed while playing foot ball.

COUNTRY BOYS WHO MADE THEIR MARK.

Perry S. Heath, who is the first assistant postmaster-general of the United States, and who is making a remarkable success extending rural free delivery of mail, was born on a farm at Muncie, Ind. He became a distinguished journalist, beginning his newspaper career as a printer's devil.

Col. Geo. B. M. Harvey, the new head of the old Harper & Brothers' publishing house, editor and proprietor of the North American Review, and owner of street railways in Havana and other properties, was born on a farm in Vermont.

Montana's new senator, Wm. A. Clark, the richest man in the United States Senate, was brought up on an Iowa farm. His income is said to be \$17,000,000 a year.

A candidate for the position of alderman in Detroit offered a prize of \$5.00 to the boy in his ward who would write the best essay on "What Qualities Should an Alderman Possess?" The prize was earned by Albert Crumley, a school boy, of 666 Fourteenth Ave., Detroit.

A PHENOMENAL BOY PREACHER.

There are quite a large number of boys, many of whom are really men, advertising themselves as "boy preachers." There is one in Atlanta, Ga., who really deserves the name. He is a little colored boy who was born on Christmas day, five years ago. At first he built a pulpit, as he called it, on the porch of his father's house. Standing in this, he would imitate a preacher. He, of course, attracted the attention of passers-by, and it was not long before he was the talk of the neighborhood. His gift seemed so marked that it was finally decided by his parents to let him preach. He began at home, but, his fame travelling abroad, he was invited to occupy pulpits in neighboring towns, until finally his parents journeyed with him into other states, everywhere creating great excitement and a religious furor among the colored people. His plan of procedure is not of a stereotyped order. After being introduced to his audience he gives out a hymn, and after the singing of it, he says he is ready to be questioned. He answers all questions in detail, and, as the interest of his audience deepens, he proceeds to preach a sermon. His name is L. Laurence Dennis.

AN AMERICAN BOY TENOR IN PARIS.

A young Chicagoan is rousing musical Paris into ecstasies. George Dunlopp Odel went to Paris several years ago from Chicago to study vocal music. Within the last few months his beautiful tenor voice has been heard many times at studio and drawing-room musicales, and already it is predicted that he will in time rank with the leading tenors of the world. He possesses much dramatic ability, by which he comes naturally, being a cousin of Joseph Jefferson and a nephew of William Warren, of the Boston Museum. He has taken the name of "Odeleni" for stage purposes; so some day when it is announced that the great tenor "Odeleni" will sing in grand opera, remember that it is the young Chicago lad, whom you read about in THE AMERICAN BOY.

AN EXAMPLE OF ACHIEVEMENT BY A YOUNG AMERICAN.

G. B. M. Harvey, who has recently become president of Harper & Brothers, is not a boy, but his wonderful success, all attained before his thirty-sixth year, entitles him to a place in these pages. In his comparatively short business life he has held high editorial positions on the New York World and the Newark Journal, manager and part owner of one of the Staten Island electric railway systems, and similar enterprises at Long Branch, Asbury Park and Havana, Cuba; editor and proprietor of the North American Review, and now president of the great Harper & Brothers Publishing Co.

TWO BOYS AND THE BURGLARS.

Edward and John Daniels, aged six and eight years, sons of Frank C. Daniels, of Hornellsville, N. Y., successfully defended their home from two masked burglars, on the evening of Nov. 15. The boys' parents were spending the evening with neighbors, which fact was evidently known to the burglars. Admittance to the house being denied, the intruders threatened to break in the door, when Edward, the eight-year-old, seized his father's revolver, appeared at a window and ordered the men to leave, which they did in a hurry. The parents found the boys barricaded in the house, but on the alert, when they returned, and the boys became the heroes of the town.

PREVENTED A DISASTROUS FIRE BY PRESENCE OF MIND.

Rex Buell, a student at Ypsilanti, Mich., saved the main building on the campus of the Normal School from being destroyed by fire recently. Going into the chapel for the purpose of practicing on the pipe organ, he saw smoke coming from the opening between the organ and the wall. With rare presence of mind he turned on a stream of water from the stationary hose in the building, quelling the fire just as it was spreading to the wooden casing.

It is thought that the fire was started by three boys in a spirit of mischief.

THE BOY CANTOR.

A thirteen year old boy conducted the greater portion of the services in one of the Jewish Synagogues in Detroit one evening recently. The boy's name is David Hober. He is a young Hungarian whose home is in New York. He performs the duties in the synagogue of what is known as the Cantor, who recites the biggest part of the difficult ritual of his native church. He is in the Hebrew church practically what the lay reader is in the Episcopal church. The boy was born in Hungary and has been in this country but four years, yet he speaks English fluently and has become intelligent in the matter of American literature and public affairs. The boy's first attempt to recite the ritual was on his twelfth birthday, in a New York synagogue, and since that time he has been in demand as a Cantor, appearing in a number of cities.

HARVEY E. DEMEREST.

A TYPICAL MICHIGAN BOY WITH THE ARMY IN THE PHILIPPINES.

Among the Michigan boys who are fighting their country's battles in the Philippines, is Harvey E. Demerest, of Gaylord, Mich. He is eighteen years old and passed a very creditable examination on entering the army. He was assigned to Company M, Thirty-fifth United States Volunteers, and was soon afterward made second bugler, and left for Manila, where he is doing excellent service fighting for Uncle Sam.

Something of the spirit of the American boy who enlists in the service of his country on the field of battle, may be gathered from the letters written home by young Demerest. On Oct. 30, he wrote on board the transport Rio de Janeiro: "A week ago Saturday I was on guard and was up all night, and Sunday night about 10 o'clock as I was going to bed I heard someone groan. The First Sergeant and myself took a look around and found some of the boys suffering from cramps of the stomach, and by morning 375 men out of six or seven hundred were down sick. I worked among the sick Sunday and Monday nights and did not sleep for 86 hours. My dinner this noon was composed of three 'hardtacks,' one medium sized potato, a cup of soup and a pickle. No so very bad for a soldier? I tell you, if any boy is dissatisfied with his home and parents the best thing he can do is to go into this business; he will learn the value of home. I am not sick of it by a long shot, but I would not mind putting my legs under the home table once a day. Ha' ha! Just wait until I come home!"

In another letter written from Manila Nov. 7, he says: "I expect we will be on the firing line inside of a month. I don't know how I will act in my first battle, but I will never come home with 'coward' stamped on my back."

JOHN A. LOGAN, JR.

Major John A. Logan, only son of John A. Logan, the famous general known as "Black Jack" of the civil war, lost his life while gallantly leading his men to victory on a Philippine battlefield, Nov. 11. The following appeared in a recent number of the New York Journal, as being the words of Mrs. Logan to a reporter of that paper. If her words as reported are correct, it shows that the son came of heroic stock on both sides:

"If my boy had to die and leave me, I preferred that he should die as he did, fighting for his country, at the head of his battalion. And I am sure he died the death he would have chosen had the inexorable alternative of death in any form been forced upon him."

"My boy, how like his father he was in manliness, in courage, in sweetness and devotion to me, and in patriotism. It was the lion-heart, the indomitable soul of his father that bore him through that awful siege and which has emblazoned his name upon the nation's tablets with the names of others of his country's heroes."

"He would go to the war. Nothing I could say or do could shake his resolution. Ever since he was a tiny boy his whole heart and soul and mind have been centered on a military career. When he was born his father was a major-general in the victorious Union army, with battle scars all over his body. Scarcely had the boy begun to toddle and lisp before he was playing soldier with his companions. That

was, oh, so many years ago! And how proud and happy his father was when he came home to find that I was the mother of a son. It was July 24, 1865, when he was born.

"His father was at Louisville, Ky., mustering out the veteran troops of the nation, which for four years had been rocked by the storm of war. I was at Carbondale, Ill., where Gen. Logan was born and where he lived until the civil war was over. Our boy was nearly a week old when his father first saw him.

"He was never contented out of the army. Ill-health drove him from West Point before he could complete the course there. Then we put him back in the military academy at Chester, Pa., where he had been prepared for West Point. Even after he was married and settled down at Youngstown, O., he organized a military company, which was called the Logan Rifles. When the Spanish war came on he was commissioned by the president as a first lieutenant and assistant adjutant-general. He won promotion to the grade of major before Santiago on Gen. Bates's staff. He did that himself—all by himself—with no help from me or anybody else. When the war was over he went back to Cuba to serve his country. Then he fell sick of yellow fever and almost died.

"He quit the army early last summer because the fever had left him with no strength. When more troops were called for in July I instinctively knew he was going to volunteer. When he told me of his intention I tried to dissuade him. But he would not be dissuaded. And he did not want to again go on the staff. This time he wanted to be in the line, where he could touch elbows with the men who do the fighting, where he could feel the thrill of the impetuous charge and the shock and roar of battle under the flag with which his father had swept over so many bloody fields.

"I loved him so that I could not stubbornly stand out against the intensest desire of his heart, and I helped him all I could to get back into the army. Yes, I, his mother, helped him to get to the far-off Philippines with those brave, splendid fellows who followed him to death.

"And now he is dead. He is gone from me forever—from me, who loved him, oh, so much. He has died as he would have preferred to die. He has died for his country. That is my consolation. God help me to stand his loss."

DAWSON'S LAMP NEWSBOY.

Queer sight it was at Dawson, in the Klondike region, to see a long procession moving through the streets of the town, headed by a one-legged newsboy.

There has perhaps never been a better exhibition of pluck on the part of American boys, than shown by this little fellow, who alone has established an independent and regular newspaper service for Dawson and the mining camps beyond. His name is Ring. Whether he has any Christian name or not no one will know from us; sufficient to say, Ring is a hero in the eyes of the miners and needs no other name.

The procession referred to was on the occasion of Ring's leaving Dawson for a trip to the States on business.

Ring has founded the nucleus of a circulating library, and with his own ten-dog teams sends to his customers every week a library book, a newspaper, a magazine, and mail.

The papers are twenty-five cents each; magazines two dollars each, and books two dollars a month. He carries the mail simply as an accommodation, but never receives less than twenty-five cents a letter, sometimes much more, as he says he has received as high as sixteen dollars in gold dust for a letter, and the man who got the letter was so glad to see a human being and get something to read, that he thought he had made a good bargain.

Uncle Sam and Canada refuse second-class matter (newspapers, magazines and books), for the outposts of the mining region. Expressage is three dollars a pound, and, as many magazines weigh nearly a pound, you can readily see that Ring's charge of two dollars for a magazine is not high.

The miners in the far north have many hours of idleness. Lights must be lit for the long night as early as three o'clock in the afternoon, so that the great need is reading matter to shorten the long and silent hours of the night.

Prior to a year ago Ring was doing errands in the Seattle Athletic Club. A member returned from the Klondike with his pockets full of money and jokingly said to Ring: "Ring, if you were at Dawson I would give you the best job you ever dreamed of."

"Then I'll go," Ring answered.

"But no one-legged boy could get over the pass. It is all a strong man wants to do."

"I can go any place a two-legged boy can."

"You couldn't get over the pass."

"I can go any place a two-legged boy can," Ring insisted.

The result was Ring did set out for Dawson and found himself in the snow at the beginning of the long pass last October. It is a two days' trip, one on the actual pass. He hurried nervously because he was afraid of being benighted before he reached the other side.

"You'd better go slow, kid." "You can't do it." "Better give it up, youngster," came like a Greek

chorus from his fellow travelers with himself for the tragedy part. The first day he managed, but it was hard work. The second brought him to a place where he must jump from one stone to another. One leg and a crutch made it impossible.

"What are you going to do now, youngster?"

It was a big Irishman who spoke. He had been watching the boy during the trip.

Ring had no answer to give.

"Well, I'll tell you what's going to happen. I'm going to pack you."

"I'm too heavy," Ring answered, doubtfully.

"You! Why, I could lick an Indian with you on my back and forget you were there." The man was already carrying 250 pounds and with Ring's 20-pound pack and his 80 pounds avoirdupois, the man carried 350 pounds and jumped the stones.

So Ring got to Dawson. It was on the eve of the big fire he arrived, and when he had fallen comfortably into his tired sleep the boy was awakened and told to run for his life. He did and got out, but his job and his effects went up in the flames that night.

But Ring could not afford to sit down to cry. His first meal he earned helping to save goods from the burning buildings. His breakfast cost \$5.50. Naturally he turned to his old trade. He went back from Dawson about five miles and waited. Every traveller who comes in brings a newspaper that he usually throws or gives away. Ring stood five miles from Dawson and bought every paper he could. He stood on the corner in Dawson and sold them for \$1 each, and every relay of travelers put a good many dollars into the cripple's pocket.

When the boats came in there were tons of papers. The man who had the agencies spent most of his time in a comfortable saloon corner, and he was in no hurry to get out the papers for the impatient miners, because there was no other papers to be had. Ring persuaded the man to let him do the distributing, receiving a small sum for his work. His work was so prompt and satisfactory he was told if he could get the papers every one would patronize him. He wrote to the different papers and had his own consignments which he sold. He bought dog teams and sent the papers to his customers out on the creeks.

When the boats could not get to Dawson it meant no more papers. In the meantime Ring had got in about five hundred volumes for his library, and had fully as many patrons as books, which paid him \$1,000 a month at the rate of \$2 a month each. Ring saw his opportunity and decided to go to the States, make his arrangements with publishers of papers to become exclusive agent. He could come out by rail and boat as he had plenty of money. He made arrangements to purchase two fine dog teams of fourteen dogs each, and will establish an independent service for himself from Skagway, where the railroad ends, to Dawson. The trip can be made in thirty-five days at a cost of about \$250, and the sledge will carry 500 to 700 pounds of reading matter. There will be two trips a month, which will bring the news in and out of Dawson every two weeks.

So the little one-legged newsboy is to be an important personage in Dawson. One year more and Ring will be a rich man, for good chances are often offered him and he has plenty of ready money to take advantage of opportunities.

THE AMERICAN BOY IN SONG, IN CHURCH AND ON THE CONCERT STAGE.

It is remarkable, when one comes to canvass the subject, how manifold are the offices which the average American boy fills in the civic and domestic life of the nation. As newspaper distributor, telegraph messenger, "fire alarmist," and in other kindred roles he has come to be well nigh unique, and added to his other callings he has at last proved himself to be a no mean exponent of song, both in the sanctuary and on the concert stage. For years past the boy has been an indispensable element in the musical make-up of the cathedral and parish choirs of England; indeed, some of the most distinguished organists and composers in the Anglican church were once choir boys, notably Sir Arthur Sullivan, Sir Frederic Bridge, organist of Westminster Abbey; Sir George Martin, organist of St. Paul's Cathedral; Sir Joseph Barnby, Dr. Wesley and Dr. Edward Hopkins, all of whom have so largely and reverently contributed to enrich the musical portions of the beautiful services of the English Communion.

It is, however, with the American boy, rather than his English confrere, that we have to deal in this article as part and parcel of a "new departure," which democratic America viewed, for some time, with distrust lest the thin edge of the wedge should be inserted in grafting "strange and erroneous" practices on the Protestant Episcopal Church of America. This "grafting" was first attempted at Old Trinity Church, Broadway, New York, on the visit of the youthful Prince of Wales to these shores.

It was thought that a choir made up exclusively of male voices would make the Prince feel "more at home" when worshipping in an edifice with which "Queen Anne's bounty" had played so conspicuous a part in the past, but more particularly so because it would be in accordance with English usage. The "innovation" was so complete a success in the eyes of Americans that the boy element was no longer regarded as a disturbing factor in ecclesiastical circles,

but rather welcomed as an accession of strength in the musical services of the church.

Dr. Cutler, the organist, made the most of his opportunities, and it was not long before a boy named Croker, with a remarkable and well-trained voice, drew large congregations at "Old Trinity" to listen to his beautiful solo singing. The boy choir movement, by degrees, has taken such a firm hold upon the country that it is now difficult to visit any considerable city in the Union that cannot boast of one or more excellent vested choirs. The choir boy is now not only well trained, but well paid for his services in all the large and wealthy churches of the country.

To young Kavanagh, of Chicago, and Cyril Tyler, of Detroit, is due the honor of championing the claims of native born and native trained American boys to a high place in the annals of a beautiful and inspired minstrelsy. For several years young Kavanagh was the vocal magnate at Grace Episcopal Church, Chicago; his singing of oratorio numbers being especially broad, finished and sympathetic. While who, in Detroit, does not remember the splendid rendition Cyril Tyler gave to such numbers as "Angels Ever Bright and Fair," Gounod's "Ave Maria," Handel's "I Know That My Redeemer Liveth," under the careful direction of Mr. Stewart, organist of the church? Young Tyler subsequently enlarged the field of his operations, and after

FIVE BROTHERS AS CHOIR BOYS

creating a furor in the eastern American cities and London, England, by his operatic, oratorio, and ballad singing, visited the Australian colonies, where he also met with a large measure of success.

Trinity Church Corporation, New York, is particularly happy in the provision it has made for the choristers of its several churches. It not only educates its boys musically, but a secular and religious education is guaranteed by the establishment of separate schools, thus securing a paternal oversight of the best interests of those "cherubs of the temple," as a New Yorker once felicitously designated these young singers.

The training of boys' voices is conducted on principles the very opposite of dealing with the female voice. The voices are trained from the head tones downwards, the dove-tailing of the two registers—head and chest—at the proper place needing both skill and judgment on the part of the teacher. Correct breathing, an open throat, pronunciation and enunciation of no uncertain type, a full and free delivery of the voice with a dead set against "wobbling" in all its agonizing phases, are the principles to be inculcated in developing the first-class choir boy. As regards deportment in the choir room and a reverent regard for the services of the sanctuary, there will be little or no trouble under this head, providing the choirmaster be God-fearing—a man of tact and resource and, who, while maintaining the dignity and authority of his office, stands ever ready to be "one with the boys" in all the little social plans and contrivances for honest, healthy fun so dear to the heart of the young aspirant determined to make his musical life worth the living.

Instances could be cited and multiplied in which the chorister's life has been of great assistance to him, both from a material and artistic standpoint. Men in the church, at the organ, on the press and in other avenues of life can be found in all parts of the country ready to bear testimony to the elevating and character-building tendencies of a chorister's training.

With so much in the way of cultivating the graces, as well as promoting the more substantial aims of life, it is no wonder then that the heads of our more thoughtful families should encourage their sons to become choristers and so enhance the prospects of realizing a better and more useful citizenship, than, left

to themselves, falls to the lot of the ordinary individual. Example is, the world over, better than precept and the parent can, under the benign influence of a Christian musical leadership, secure for his sons a large slice of this very desirable commodity in the choir rooms of our churches and collegiate institutions throughout the country.

In closing this somewhat discursive article, we make mention of a fact, without a parallel, perhaps, in church history, that, at the age of 93, and after having served as choir boy, assistant, and afterwards senior organist, Dr. Longhurst, recently "disconnected himself" with Canterbury Cathedral after a manly and devoted service of exactly 70 years! To the American, accustomed to a constant moving of the panoramic scenes of life, this long service seems well nigh an impossibility, but so it was, and good Dr. Longhurst is the subject of it. H. G. GILMORE.

A BOY WHO IS BEING EDUCATED BY PRESIDENT MCKINLEY AND ADMIRAL DEWEY.

John P. D. Gridley, son of the man to whom Admiral Dewey said at the beginning of the Battle of Manila: "You may fire when you are ready, Gridley," has had one object in life, namely, to pass successfully the examination for a lieutenancy in the Marine Corps. When his father died, a few months ago, it became evident to young Gridley that he must forego the Marine Corps, and seek some occupation by which he might assist the family, who had been left poor. Information of these facts came to Admiral Dewey. Calling the boy to him, he said: "I think we can arrange matters. Meet me tomorrow, and we will go to see the President." They went to see the President, and Mr. McKinley said he would arrange the whole matter—in fact said to Mr. Gridley: "Admiral Dewey and myself have decided to bear your expenses until such time as you are able to finance yourself."

The boy is reported to be a manly looking fellow, with black hair, clear complexion, and straightforward, honest brown eyes. When a reporter interviewed him he said: "I always wanted to be a sailor, it was my father's desire that I should follow his occupation. At first I went to a school in Erie, Pa., and afterwards to St. John's Military School in Manlius, N. Y., where I remained two years and became a lieutenant in the Cadet Corps. When the war with Spain broke out I was at the Navy School at Annapolis, Md. I was appointed to the service about the middle of July as a Coast Naval Cadet and served aboard the U. S. Ships St. Paul, Yankee and Michigan, doing scout duty along the Cuban and Porto Rican coasts.

"When the war was over and father died, I thought that the best thing for me to do was to fit myself for business, but mother and myself were both anxious that I get into the service. I knew that if I passed the examination and obtained a commission in the Marine Corps I could be of assistance to the family. The family were all willing to make the financial sacrifice for my work of preparation, and I came on to Washington to study for the examinations. Then it came out in the papers that our family was in actual want, and I made up my mind not to accept another cent from home. Then Admiral Dewey and Mrs. Dewey took an interest in me, though the president had promised before that time that I should have an opportunity to take the Marine Corps examinations. I am going to do my very best to pass the examinations in a creditable way. Just think," he said, "of two great big men, like President McKinley and Admiral Dewey, going down in their pockets to back a fellow like me. It's the squarest and kindest thing I ever heard of."

STICKS TO HIS POST BECAUSE TOLD TO DO SO.

A few days ago a Chicago policeman found a sixteen-year-old colored boy, by name Edward Jackson, nursing a sick horse that lay on the grass on Madison street, near Prairie avenue, in that city. For several days and nights the boy had cared for the animal, covering it with a blanket and his overcoat. Residents in the vicinity urged the boy to go home, but he refused. "Why shouldn't I stay?" he asked, "The horse is too sick to leave alone and I promised to take care of him and that's what I mean to do." The boy said that two men told him to care for the animal until they returned. He had spent his last fifteen cents for medicine for the horse. When the policeman reported the facts in the neighborhood, a collection was taken and a veterinary surgeon employed to give the horse medical attention. They then asked the boy to leave the horse, with the promise that they would take care of it. "I can't," he told them, "I promised to stay with it." The boy had secured some straw and made beds for himself and the animal, curling himself up close to the animal's side at night, arousing himself now and then to administer the medicine.

The policeman, believing that the owners of the horse would not return and that they had played a trick on the boy, telephoned to the Humane Society and the agents of that organization took charge of the case.

Mrs. Frederick K. Vanderbilt gave a Thanksgiving dinner at Newport, R. I., to the newsboys, bootblacks and other poor boys of that city.

THE WORLD THRO' A BOY'S EYES.

COMMUNICATING BY SEARCHLIGHT.

Messenger pigeons are not the only means by which a besieged force can communicate with friends on the outside. The searchlight is being used for that purpose in South Africa, in the towns of Ladysmith, Kimberley and Mafeking, which are being besieged by the Boers. The powerful searchlights at Kimberley have been seen 115 miles away. General White uses in his war balloon at Ladysmith a searchlight that has been seen at a distance of thirty miles. By putting a flap or shutter over the searchlight aperture the ray of light can be cut up into dashes. At Kimberley two searchlights are employed. One is used for vowels and the other for consonants. The letters are separated by a short period of darkness and the words by a longer period. Our illustration shows how there may be read on the sky the message "Alls well."

A CHOICE PLACE FOR FUN FOR A FEW NEW YORK BOYS.

Central Park, of course, is the great playground for New York children, and any boy who behaves himself can have all the fun that can be crowded into daylight in this great park. Central Park is "way up town," as New Yorkers say. Boys who live way down town haven't as good an opportunity for sport as have their more favored brothers in the upper districts. Of course, there is the Battery Park, but that is as far down town as Central Park is up town. There is a little park known as Gramercy Park, just about midway between Central Park and Battery Park, in which a number of boys can be seen at any time of day having a good time. But Gramercy Park is not a public park, it is a private park; that is, only certain boys, or boys belonging to certain families, have access to it. It is a little park surrounded by a high iron fence. Each of the families that occupy houses facing this park has a key to its gates. Nearly every morning a dozen or more boys from six to ten years old are turned loose and allowed to play here to their hearts' content. They cannot get away, for they are locked in, and there is no danger of their being run over by the ice wagon or the trolley car. In the middle of the park there is a fountain spouting water up from the center of a shallow basin some 25 feet across. Around this basin in the summer time is a ring-shaped flower bed about four feet wide, and the whole is enclosed by a low wire railing. In the winter time the basin is dry. Hundreds and hundreds of tulip bulbs were this fall placed in the basin and covered by bushels of dead leaves from the park trees. In the circle where the flowers grow, the boys now have a miniature race track, around which they gallop at a lively rate. Ten times 'round make a race. Of course some of the boys are older than others and can run faster, so the older boys are handicapped; that is, the younger boys are allowed to have a good start. The little fellows with the short legs are allowed a start of five laps; those of middle size, two laps, and the biggest boys, who have to run the full ten circuits, must catch up with them or lose the race. It furnishes great amusement for those passing on the sidewalk outside the iron railing, to see the panorama of little legs flying around the basin. Occasionally a small boy stumbles and becomes the foundation of a pyramid of waving arms and legs. Recently one of the boys decided that the heap of leaves in the basin would make a great bonfire, so he ambled over to the iron fence and got a match from one of the big boys on the outside and with the aid of this innocent little piece of sulphur-tipped wood he soon had a pillar of smoke and blaze arising from thirty to forty square feet of ground. Of course the tulip bulbs were killed. Then the youngsters had a war dance, taking hold of hands and dancing around the fire like little Indians.

But some boys in New York are not given the chance to have fun that these boys have. Most of these boys have governesses, and when their governesses saw this war dance they rushed to the scene and captured the Indians and marched them back home.

Eddie McDuffie, mounted on a chainless wheel, rode the fastest mile ever ridden on a track, at Brockton, Mass., Oct. 10. The mile was made in 1:21.

SOME INTERESTING FACTS ABOUT COAL.

Someone has figured out that an Englishman requires more coal to keep him warm than does a Belgian, an American, a German, or a Russian. The Englishman, on an average, uses 3 3/4 tons a year; the Belgian, 2 7-10 tons; the American, 2 4-5 tons; the German, 1 1/2 tons; the Russian, 1-10 of a ton. Out of the Island of Great Britain are taken over 200,000,000 tons of coal a year, more than is taken out of the entire United States. What is almost as remarkable, all but 48,000,000 tons of this is used at home. It is said that in a year no less than 567,000,313 tons, representing over \$800,000,000 in value, are mined throughout the world. To dig it, 2,399,936 men are engaged throughout the year. Think of the tremendous hole in the earth which this great amount of mining makes! It has been computed that if the coal mined

in a year were spread over the Island of Great Britain it would cover it to the depth of three feet. And this is only the product for one year! Think how many years coal has been mined; then try to realize what a huge hole must have been hollowed out of the earth in this process. The world must be getting colder, for it uses more coal now than it ever did. Of course, much of it is used in our big factories.

WHERE THE KRUPP GUNS ARE MADE.

The history of the origin and growth of the Krupp Works, Essen, forms a most remarkable record of industrial development. The grandfather of the present Krupp started an iron foundry in 1810. For sixteen years he barely made a living. In 1826 his son Alfred succeeded to the struggles of his father. In 1832 he had only nine men in his employ. He, however, was making good steel and guns. His steel and one or two guns were in the great London Exhibition of 1851, and this brought him instant recognition, and orders from various governments began to pour in. On January 1 of the present year there were on the pay-rolls 41,750 men, of whom 25,000 were employed in the works at Essen. In 1895 there were in the steel works at Essen over 3,000 implements and machines, and 458 steam engines, aggregating 36,561 horse power. There are over 40 miles of leather belting. In the statistical year 1895-96 over 1,000,000 tons of coal and coke were consumed. The consumption of water is equal to that of Dresden with its population of 336,000, and more illuminating gas is used than in that city. There are 50 miles of railroad track on the premises, with 36 locomotives and 1,300 freight cars. There are 522 telephones.

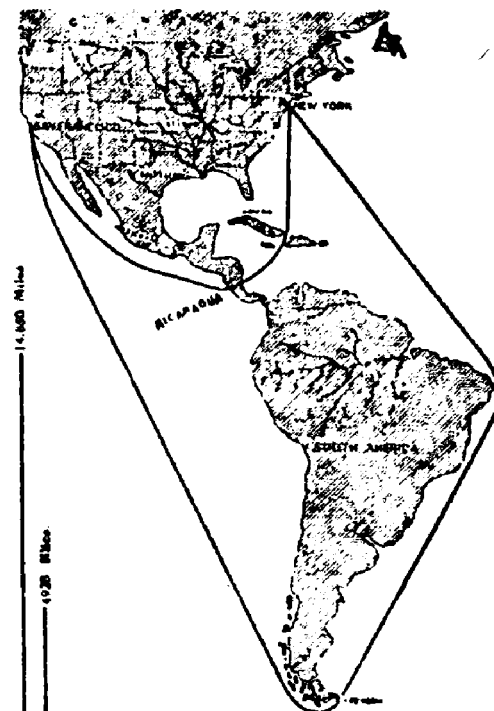

THE BRIDGE OF THE WORLD

THE NICARAGUA CANAL.

One of the achievements of the new century which we will soon enter will be the digging of a great ship canal through the great isthmus that connects North and South America.

This tremendous undertaking has been the dream of men for decades, and thousands of lives and millions of money have already been sacrificed in vain attempts to accomplish it.

AS 4928 MILES ARE TO 14,850.

But the task will be accomplished, and we mistake not if American money and American pluck does not bring it about.

Here is what President Grant said about it in February, 1881:

"In accordance with the early and later policy of the government; in obedience to the often expressed will of the American people; with a due regard to our national dignity and power; with a watchful care for the safety and prosperity of our interests and industries on this continent; and with a determination to guard against even the first approach of rival powers, whether friendly or hostile, on these shores, I commend an American canal on American soil to the American people, and congratulate myself on the fact that the most careful exploration has been started, and that the route, standing in this attitude before the world, is the one which commends itself as a judicious, economical and prosperous work."

We present two pictures, the first the "Bridge of the World," and the second the distance now traversed from New York to San Francisco, showing the miles that may be saved by the route through a canal across the isthmus.

We think the government should take this project in hand, because we believe that if the government does not take hold of the matter, it will be built within the next decade by private capital.

In that anxious time when the battleship Oregon was making her emergency trip around the Cape, every American would have been glad had we had such a canal through which she might have passed. But important as it might be in the time of war, it is very much more important in time of peace. Our increasing commerce with the nations of the east demands it. Our possession of the Philippines, and our relations to the Sandwich Islands, make it an imperative necessity. We say, therefore, let the canal be built, and let Congress take the matter in hand at an early day.

THE HEAVIEST PASSENGER TRAIN.

What is said to have been the heaviest passenger train ever hauled by a single engine out of New York was drawn from New York City to Albany on August 10 by engine 918 of the New York Central road. The train was made up of four sleepers, one dining car, three drawing room cars, five coaches, one long baggage and two postal cars, all heavily laden. It was the regular Southwestern Limited train, with three or four cars added. The locomotive with its tender weighed 270,000 pounds, while the weight on the drivers was 128,900 pounds. The locomotive is known as a ten-wheeler, with three driving wheels, 70 inches in diameter, on the side. Its cylinder was 20 by 28 inches. The size of the train, and the fact that it went over

the road on schedule time has attracted wide attention among railroad men, and a special report of the performance of the engine is being prepared for presentation at the next meeting of the International Railway Congress.

The inventor of wireless telegraphy, which is to be the closing achievement of this century, is Guglielmo Marconi, who was born near Bologna on April 25, 1874. He is now, therefore, but 25 years of age.

WHAT BECOMES OF OLD BICYCLES?

The question, "What becomes of all the pins," will soon give place to "What becomes of all the bicycles?" There are thousands upon thousands of bicycle riders who buy a new wheel at the beginning of every season, so that there must be hundreds of thousands of old, but serviceable wheels somewhere. The manufacturers tell us that they drift away in small lots to rural districts, to Canada, some to the Italian trade, and others to Mexico and the countries of South America. Very many are sent to the south and sold to the colored people. Formerly many second-hand wheels went to riding academies and to renting shops, but now those who rent out wheels find it almost impossible to rent wheels that are not up to date.

What do you suppose ever became of all the old 52-inch wheels, the "high wheels," as they were called? We are told that most of them went to Mexico, Brazil and other South American countries.

THE BIGGEST SHIPS.

Names.	L'gth. ft.in.	Br'th. ft.in.	D'th. ft.in.	D'm't. tons.
Great Eastern.....	680	83	57 6	27,000

The foregoing table covers a period of forty years, the Great Eastern making her first voyage in 1858.

THE BIGGEST WAGON EVER MADE.
THE BOY AT THE FRONT WHEEL IS A SUBSCRIBER TO THE AMERICAN BOY.

THE BIGGEST WAGON EVER MADE.

What would you think of a wagon whose height from the ground to the top of the seat is 13½ feet? Just such a wagon was built by M. P. Henderson & Son, of Stockton, Cal., for the Fortuna Mining Company of Fortuna, Ariz. The hubs of this wagon are 16 by 20 inches, and the spokes 4½ inches. The width of the tire is 6 inches, the depth of the rim 4½ inches, and the thickness of the tire, 1 inch. The front wheels are 5 feet in diameter, and the rear wheels are 8 feet. Think of the tallest man that you are acquainted with and then think that this rear wheel is two feet in diameter higher or longer than that man! The wagon bed is 20 feet long, 3 feet 8 inches wide, and 5 feet high inside. The wagon weighs 6,515 pounds and can carry 12 tons. It measures 33 feet from the tip of the pole to the tailboard, and requires for shipment the longest railroad flat car in use.

THE NEXT CENSUS.

The next census will be taken in 1900, at an estimated cost, including the publishing of the report, of between \$16,000,000 and \$20,000,000. The 1890 census report cost \$11,271,500, the 1880 report a little over half that sum, and the 1870 report a little less than one-third that sum.

The next census will be the eleventh, the first having been taken in 1800.

LARGEST EGG IN THE WORLD.

An egg, which is the largest in the world, is now in London and will shortly be offered for sale. It was found buried in sand in Madagascar by natives.

This egg is known to naturalists as the *alspyornis maximus*, measures nearly a yard in circumference and over a foot in length.

Its cubical capacity is equal to nearly six ostrich or 150 hen's eggs. Specimens of this gigantic egg, the lineal measurement of which is double that of an ostrich, have occasionally been met with in London and have fetched as much as \$350 apiece.

A TREE TWENTY-FIVE THOUSAND YEARS OLD.

A cedar tree, whose age has been reckoned at 25,000 years, has been found in California in a well preserved state. It was found on a spur of the Sierra Nevadas in Placer County. It was not found standing, however, as other trees stand—spreading its branches in the air, but buried in a lava bed. Its fiber, however, was so perfect that it has been cut up and used for timbering in the construction of a mining tunnel. The bark and some of the cones on it crumbled to dust as soon as they were exposed to the air; but the trunk, which was three feet in diameter at its base, remained firm and sound.

A THEATRE FOR BOYS AND GIRLS.

Two brothers, of an unpronounceable name, are building in St. Petersburg, Russia, a theatre exclusively for boys and girls. The building is a tiny one, costing about \$16,000. The plays given will be such as to amuse and instruct young people. Great play writers have been employed to write plays for it and these will be rendered by a permanent stock company. All the plays are to be given at matinees. A corps of women will be employed to look after the boys and girls, and arrangements will be made to have them taken to and from the theatre by attendants.

ing of two naval officers and their ship, inviting the other guests, ordering supplies and engaging waiters in half an hour, without her leaving the hall in which her telephone was situated. I do not know of any other city in the world where such a thing could be done."

AN AUTOMOBILE TO RUN UNDER THE SEA.

An automobile to run on the bed of the sea has been constructed. It is driven by gasoline engines and electricity, and is provided with electric fans, telephone system, sand pump, electric windlass, and search lights with which to illumine the ocean depths. When the divers wish to go out, a door is opened in a room which is filled with compressed air, so that not a drop of water can enter it. It is said that it is to be used in recovering treasures along the coast of Cuba. The Spaniards say that an immense amount of treasure was hid in Cuban waters to avoid its being taken, and large rewards are promised if it can be recovered.

THE FIFTEEN GREATEST PAINTINGS.

1. "The Last Judgment," Sistine Chapel, Rome, by Michael Angelo.
2. "The Sistine Madonna," in the Dresden Gallery, by Raphael.
3. "The Last Supper," in the Convent of St. Maria, at Milan, by Leonardo da Vinci.
4. "The Crucifixion," in the School of San Rocco, Venice, by Tintoretto.
5. "Aurora," in the Rospigliosi Palace, Rome, by Guido Reni.
6. "The Descent from the Cross," in the Antwerp Cathedral, by Peter Paul Rubens.
7. "Madonna and the Four Saints," in the Dresler Gallery, by Titian.
8. "Syndics of the Cloth Hall," in the Amsterdam Museum, by Rembrandt.
9. "Immaculate Conception," in the Louvre, Paris, by Murillo.
10. "The Virgin and Child Enthroned," in the Vienna Gallery, by Van Dyke.
11. Portrait in the Madrid Museum, by Velasquez.
12. "The Setting Sun," in Palazzo Sciarra, Rome, by Claude Lorraine.
13. "Ecce Homo," National Gallery, London, by Correggio.
14. "Coronation of the Virgin," Uffizi Palace, Florence, by Fra Angelico.
15. Portraits of Anne of Cleves, in the Louvre, Paris, by Hans Holbein the younger.

PLANTS AT WAR ARMED TO THE TEETH.

There is war in the vegetable kingdom—war all the time. Plants are fighting to live, just as animals and men do. It is real war in which one is trying to damage the other, either by crowding it out of its place or by actually giving and taking blows. There are plants, like the thistle, as great land grabbers as Russia, Great Britain, or any other nation which is constantly looking out for new territory. There are plants that are club-shaped, sword-shaped, helmet-shaped, ax-shaped, lance-shaped, buckler-shaped.

Every boy knows what a boomerang is. It is a remarkable weapon, yet plants have their boomerangs, for the leaves of the Australian gum tree, when thrown forward by the hand or by a gust of wind, return to within a very few feet of the point from which they are thrown.

Some plants are built in a way to defend themselves. Note the blade-like form of grass. Then the botanical world has its navy. The seeds of the double coconut go about in the water aboard of little boat-shaped capsules, seeking new territory, which they may conquer and occupy. It is said that the war vessels of the world were originally modeled on leaf structures. Then the vegetable world has torpedo boats. These are the leaves of the pepper tree, plentiful in California. Put one of these leaves, taken fresh from the tree, in a basin of water and it will propel itself forward in quick jerks.

So the entire vegetable world is on the offensive and the defensive, defending itself or going abroad to do battle.

AN HISTORICAL GAVEL.

Friends of the new speaker of the National House of Representatives have given to him a handsome gavel mounted in solid gold and containing thirteen kinds of wood taken from the battleship Oregon, which is the special pride of the Pacific coast. Congressman Henderson is the first man to be chosen speaker from that part of the country west of the Mississippi; hence the appropriateness of the gavel from the far west.

SILK FROM FISH.

Perhaps you do not know that some fish have the power of spinning silk. The fish is known as the Pianna, a species of shellfish found in the Mediterranean Sea. The shellfish spins the minute silk threads and with these attaches itself to the rocks. The Italians gather the material at low tide, wash it, dry it and straighten it, and weave it into a fabric whose color is a beautiful burnished golden brown.

THE TELEPHONE IN HONOLULU.

The Troy Budget publishes an interesting letter from a correspondent in Honolulu, from which we quote the following as showing the rapid strides in civilization that are being taken under the American flag in the far away islands of Hawaii:

"No more apposite illustration of Yankee energy can be afforded than the telephone system of the city of Honolulu. The wires run everywhere, even far out in the suburbs. They do not disfigure the view as in American cities, but seem a part of the vines and creepers which leap from wall to tree, from tree to tree and tree to house. Nearly every house and store is connected, and the rates are so small that they would make a Bell stockholder weep with sorrow and disgust.

"Most notable of all, the company owns small submarine cables and for a mere pittance will connect a man-of-war or a merchant ship anchored far out in the harbor with the city. Naval and marine folks are socially important, and this ingenious innovation proves an invaluable boon to the salons ashore and the ships afloat.

"In the stores you can hear captains, stewards, pursers and paymasters ordering goods over the wires, growling at dilatory messengers or making inquiries regarding a hundred subjects. On one occasion a friend arranged a dinner party of twelve persons. Everything was done, including the invit-

HOW TO DO THINGS.

How to Throw the Lasso.

What boy has not tried to throw a lasso? What boy who has ever seen Buffalo Bill's Wild West Show has not gone straightway to the back yard, taken down the clothesline and extemporized himself into a cowboy? Boys of the lasso age will appreciate the service we render them in telling them how to throw the lasso.

A lasso is about forty feet long. About ten or fifteen feet of the lasso is taken up in making the noose. It is said that the average cast is about 25 or 30 feet. The finest lassos are of rawhide, cut into thin strips and braided six-ply into a rope of from three-eighths to one-half inch in diameter. Hard twisted grass rope is sometimes used, but rawhide is the best, as it is heavier and is not affected by wet weather. Cowboys have a mixture of lard and beeswax with which they dress their ropes to keep out dampness.

Now as to how to throw the lasso. There are three methods. The first is the plain straight cast, the noose sweeping around above the head from right to left by a rotating wrist movement. Some throw a small loop, hard and fast, almost on a level; others a large, lazier kind. Experts say that the small loop thrown hard is the best. The aim should be somewhat to the right of the object to be roped—say a foot and a half on a 25-foot throw. The exact instant of the release is governed by the weight of the rope, the wind, the velocity of swing, etc. Judgment in this particular comes with practice. The rest of the rope is held coiled in the left hand and released as fast as desired, two or three coils being retained.

The second method is exactly the reverse of what has been described. That is, the noose is swung from left to right above the head before release. This is called the "California" throw. It gives a little greater range.

The third is called the "corral drag."

This is used when the thrower is on foot and in confined quarters. It consists in trailing out the loop on the ground behind one and snapping it forward by an underhand motion.

To "snub" the rope (that is, to wind it about the pommel of the saddle after casting), in the instant of time allowed, is a trick quite as difficult as throwing properly. The rope should be turned twice about the pommel and the horse or pony taught to settle back on his haunches the instant the rope begins to tighten.

How to Care for Your Watch.

A watch should be wound up every day at the same hour.

Avoid putting it on a marble slab or near anything excessively cold.

A sudden change of temperature, contracting the metal, may sometimes cause the mainspring to break.

The cold also coagulates the oil, and the pivots and wheel work less freely, and affect the regularity of the time-keeping.

In laying aside a watch be sure that it rests upon its case.

If suspended the action of the balance may cause oscillation, which will interfere with its going.

To keep your watch clean take care that the case fits closely and see that the watch pocket is kept free from fluff, which is so often given off by linings.

How to Talk to Boys About Their Faults.

A writer in the Woman's Home Companion says some very wise things about the talk that boys like. It runs about as follows:

After boys pass the age of fourteen or fifteen they are more sensitive than before to fault finding. When they have reached eighteen or twenty they have become exceedingly sensitive. Indeed, they

have become like grown persons in that respect. They do not want allusions to the fact that they are acquiring nasal tones; that their gait is awkward; that their taste in dress is bad;—that they have not good judgment in choosing associates, and so on. They object just as much to private discourses along these lines as they do to reference to them in public. It is, therefore, wise in administering medicine of this sort to growing boys and girls over fourteen years of age, to administer it in small doses, interjecting it with skill into conversations about ordinary matters, sugar-coated with artful compliment where deserved. It is only in this way that we can hope to be of much benefit to older boys. We should remember that boys know at twenty-five considerably more in certain lines than their parents at fifty. This is due often to the firm determination and consistent self-sacrifice of their parents. The most telling strokes that mold character into shape are those given before boys reach the age of fourteen.

How to Carve a Turkey.

As soon as I was able to use a knife my father surrendered to me, except on "state occasions," the carving of the fowls at the family table. It is one of the things that we have so commonly to do that we give it little attention, and few of us do it well. As this is the turkey season of the year it is a good time for boys to begin to learn, if they have not already done so, how to carve.

To carve well, one should have a chair sufficiently high to bring him above the table, a silver spoon to remove the dressing, a sharp, strong two-pronged fork, and a broad-bladed and sharp carving-knife. The bird should lie on its back, with the neck toward your left hand.

Insert the fork in the breast far enough back that slices of the white meat may be easily removed. Hold the knife firmly in the right hand, the forefinger extending over the back of the blade and sever the drumstick from the second joint at one cut. Next cut between the thigh and the body, down to the back and remove the thigh. To loosen the side bone insert the point of the knife between it and the backbone

and give the blade a sharp twist outward. Reverse the turkey and remove the other leg and wing. The white meat should be cut from the breast in thick slices and it is sometimes best to remove the wishbone before carving the breast of fowl.

Do not serve the pieces as you cut them off, but carve as rapidly as possible enough to go around and a little more, to show that you are not going to stop with one helping. If there is not room enough on the platter for the portions that have been carved off, assemble them on an extra plate and from this supply each plate in its turn as rapidly as convenient. One should not only be a skillful carver in the sense that he knows how and where to cut, but he should be a dexterous and quick carver, in order that the company, which may be an hungry one, may not have long to wait and the dinner grow cold.

How to Break Your Colt.

Many an American boy has tried to break a colt and has succeeded in breaking many other things before he did the colt. The way some people break a colt is to turn him out in a lot with a breaking harness on him, and allow him to spend three or four hours in an effort to kick it off. That kind of breaking will make an ugly horse. You want to teach your colt that when he has straps on he is on his good behavior.

Put him in the box stall, put a bridle on him, put a girth around him; go slowly with him. When he gets accustomed to a few straps, put a crupper on him. Stand by him all the time. If he is afraid, pat him. He soon gets accustomed to all these things, and he is very quick to learn whether he is going to be hurt; in other words, whether the man who is doing this work is his friend or enemy. If he is treated with kindness, no matter how high tempered he may be, he will very soon become docile. Then he can be taken out and led around with these straps on. Lead him around for a little time and then take him back into his box stall. Take the straps off and pat him and he finds out that he is not hurt. The next time it is an easy matter, and it is easier still after that.

THE BOY SCIENTIST.

The Sucker.

Take a piece of sole leather about 2½ inches in diameter, either round or square, attach a string to the middle. Wet the leather thoroughly in water. When pressed down upon any smooth surface, the air underneath is excluded, and the pressure of air will cause it to adhere. Quite heavy weights may be raised by the string.

A Fountain in a Vacuum.

Take a wide mouthed bottle and fit it with a cork tightly. Puncture the cork in two places and insert a piece of glass tubing and piece of rubber tubing. Invert the bottle and place the lower end of the glass tube in a basin of water. Apply the mouth to the rubber tube and exhaust the air from the bottle. Water will flow through the glass tube and fill the bottle.

A Pump.

A pump can be easily made and at small cost. An argand lamp chimney, a piece of rubber sheeting, two corks, and a wire are the materials needed. Make a hole about ¼ inch in diameter through each cork. Take a circular piece of sheeting about two inches in diameter. In the center cut nearly out a circular piece about ½ inch in diameter, allowing it to hold a little at one side of the cut. This is for a valve. Place it over the cork and insert in the bottom of the chimney. Prepare the other cork in a similar way, attaching to it a piece of

wire about a foot long for a handle. The second cork must be fitted so as to move easily but tightly up and down the chimney. Your pump is complete.

A Cheap Blackboard Paint.

Many a boy is in need of a blackboard and would have one if he only knew how cheaply and easily it could be made.

The following recipe taken from Horne's "Easy Experiments" makes a paint that will give a durable surface.

Half a pound of lamp black; two pounds of flour of emery; a quarter of a pint of Japan dryer; half a pint of copal varnish; half a pint of boiled linseed oil; two and three-quarter quarts of turpentine.

This makes one gallon of paint, which will cover 150 square feet two coats.

The Story of the First Phonograph.

Ray Stannard Baker tells for the first time the true story of Thomas A. Edison and the invention of the phonograph. Mr. Edison, who has grown very deaf of late, denies himself to most callers, and Mr. Baker was obliged to secure his interview through the medium of W. S. Mallory, the inventor's right-hand man, who went with him into Mr. Edison's private office. They found him in a characteristic attitude, his fingers thrust through his thick hair and his head leaning on his hand.

"Mr. Edison," shouted Mr. Mallory, "I heard an interesting story of your invention of the phonograph the other Sunday in Brooklyn. It was in church, and the

preacher said that when you were a boy you had your ear one day to the ice and heard in the distance the sound of skates. He said that the idea first came to you that way."

Mr. Edison raised his head.

"Did the preacher say that?" he asked.

"Yes."

"Bosh! Now, I'll tell you how it happened. My model-makers all worked by the piece in those days, and when I wanted a model I always marked the price on it. In this case it was eight dollars. I had the idea of the phonograph in my mind, and I drew my design and gave it to a workman named Kruesi, who finished it in thirty hours.

"Kruesi fitted the tinfoil on the cylinder and brought the machine to me. I turned the handle and recited:

"Mary had a little lamb,
Its fleece was white as snow;
And everywhere that Mary went
The lamb was sure to go."

"Then I set the recorder back to the starting point and began to turn the cylinder. At the very best I had expected to hear nothing more than a buzzing confusion, but to my astonishment and awe the machine began to repeat in a curious metallic voice, 'Mary had a little lamb!'"

"Thus the first words ever spoken into the phonograph were these four simple lines of 'Mother Goose.'"

The idea of the phonograph had come to Mr. Edison with a flash of inspiration, and the machine proved its marvelous possibilities on the first trial. Few inventions have ever been conceived or carried out so successfully.

"Kruesi's eight-dollar machine," added Mr. Baker, "which could now be bought for hundreds of dollars, is preserved in the Patent Museum at South Kensington, England."

An Hour with Liquid Air.

The Merchants & Manufacturers' Exchange, a commercial body of Detroit, Michigan, recently secured a lecture on liquid air from Professor Tripler, a noted New York scientist who has made a deep study of the subject, paying for the lecture \$1,200. An audience of 2,500 persons made up of the leading business men of Detroit and many ladies, crowded the largest audience room of the city to see and learn something about this wonderful discovery, of which so much is expected in the future.

It would be vain for us to attempt an explanation of how air is liquefied. Suffice it to say that the result is produced by the extraction from air of its heat. This is done by putting upon it immense pressure. When the heat is extracted the temperature falls to 312 degrees below zero, near which point the air ceases to be air and becomes liquid, remaining in the liquid state until it has absorbed heat from its environment sufficient to volatilize it or cause it to pass back into the form of air again. This is a crude and simple statement, but it is as far as we need to go for the purposes of this paper.

Professor Tripler appeared on the stage in Detroit with about twenty quarts of liquid air which he had brought with him all the way from New York. Much of the liquid that began the journey with him had escaped in the form of air before he had reached the end of his journey, but enough remained to enable him to conduct some most interesting experiments before his audience.

The crowd was so great that the writer was unable to examine the receptacles in which the liquid air had been brought on the cars and in which it stood upon the platform. At a distance one could believe that it was held in cans, or a series of cans fit-

ting the one into the other like the parts of a telescope, the space between the layers of the receptacles being filled with a substance which prevented in some measure close communication between the liquid and the surrounding air, thus allowing it to hold for a considerable time its very low temperature.

In performing his experiments Professor Tripler handled the liquid air very much as if it were very hot water. With what appeared to be an ordinary copper ladle he dipped it from its receptacle and proceeded to use it in a variety of ways. Taking a piece of raw beef the Professor laid it in a pan and poured upon it a pint or more of the fluid. In less than a minute the beef was taken from the liquid as hard as a rock. It had been frozen in less than sixty seconds into a substance as brittle as glass. Taking a hammer in hand, the Professor broke the frozen beef into an hundred pieces. He then put into the pan some potatoes. When taken out a moment later they were as hard as ivory, and when thrown upon the floor broke like an egg shell. It is remarkable that in performing these experiments the Professor repeatedly dipped his hand into the liquid. One would think it would be frozen as hard as stone in a moment. The explanation is that the hand was removed so quickly that the liquid did not have time to act upon it, just as one may dip his fingers into boiling water and take them out unhurt, if the action is quick enough. The result, we were told, of leaving the liquid in contact with the flesh for any appreciable time, would be the freezing and killing of the flesh. What this will mean to surgery can only be slightly imagined.

Then followed a cruel experiment. The Professor took a bouquet of gorgeous red roses and, turning them upside down, dipped them into the fluid. On their withdrawing they were found to be as brittle as an egg shell, and taken in the hand were crushed with a

crackling sound as of the crushing of peanut shells. He dipped into the liquid what appeared to be an ordinary tin dipper, and, on withdrawing it, broke it into a dozen pieces, the tin snapping like so much thin glass. Taking a quantity of ordinary cotton batting he poured a half pint of the fluid over it, and on applying to it a lighted match it exploded with a deafening roar and a flash of light that was blinding. Taking a piece of haircloth, which ordinarily does not burn on the application of a match but simply chars, he immersed it in the liquid and then setting fire to it burned it entirely away. Putting a drop of it into a steel pipe closed at one end and then driving a cork into the other end, a report followed like the crack of a rifle, and the cork struck the ceiling fifty feet above. This experiment showed the wonderful expansive power of a drop of liquid air in its change from liquid to air state. As further showing this, the lecturer held up a piece of battered steel pipe in which a few drops of the liquid had been confined, the pipe having been torn into a dozen shapes under the force of the explosion.

An interesting experiment was that of the freezing of mercury. Mercury, as every one knows, does not freeze until it reaches forty degrees below zero. Into a pan of liquid air was emptied a vial of mercury which after a few moments was withdrawn a solid mass, so solid that the Professor used it as a hammer and drove nails with it. This was all done as rapidly as I am writing it. No other experiment so thoroughly surprised the audience and so thoroughly convinced it of the intense cold of the new liquid. Further in this line, the Professor poured mercury into a mold the shape of a hook and on this poured liquid air. The liquid air froze the mercury solid so that when the mold was broken and the solid mercury hook was taken out and attached to a rope suspended from

the ceiling, it bore the weight of two men. This solid mercury when exposed to the air for a short time returned to its liquid form, as indeed did everything else that was frozen by the liquid, the temperature of the room soon overcoming the intense cold. The solid piece of mercury was handed out, for examination to the audience. In a short time it was reported that the mercury was on the floor in liquid form, whereupon the Professor sent a ladle of liquid air into the audience that it might be poured on the liquid mercury to reduce the mercury again to a solid. This was done, and the mercury was brought back to the stage in solid form.

The specific gravity of liquid air is heavier than that of water. To show this, the Professor placed a lamp behind a large globe of water, then poured the liquid air into the water, with the result that the audience saw the little globules of liquid air sinking to the bottom. The Professor dipped his handkerchief into the liquid air and drew it forth wet. In a moment it was dry again, the liquid on contact with the air having dissolved almost instantaneously back into air.

An amusing experiment was this: Placing an ordinary teakettle on a cake of ice, he poured into it a pint or more of liquid air. The result was that a dense vapor, like the steam from a teakettle, poured forth from the nozzle. The Professor explained that the ice was so warm in comparison with the liquid air that the former boiled the latter.

Samples of liquid air were sent out among the audience and people were given an opportunity to handle it. Many did so gingerly, but those who examined it most closely found that in appearance it was not unlike ordinary clear water; that it produced a lowering of temperature in its immediate vicinity, and that it could be touched with the hand without danger, if the movement was rapid enough.

Such curious and unheard of things

does this wonderful agency perform, that we may not be surprised in the near future to learn that it is the most important discovery commercially, medicinally, scientifically, of the latter half of the nineteenth century.

The Meaning of Train Signals.

The meaning of the common train signals is as follows: One pull of the bell cord means "stop;" two pulls mean "go ahead;" three pulls mean "back up;" one whistle means "down brakes;" two whistles mean "off brakes;" three whistles mean "back up;" continued whistles mean "danger;" rapid short whistles, "cattle alarm;" a sweeping parting of the hands on a level with the eyes means "go ahead;" a slowly sweeping meeting of the hands over the head means "back slowly;" downward motion of the hands, with extended arms, means "stop;" beckoning with one hand means "back;" a red flag waved on the track, "danger;" a red flag beside the road, "danger ahead;" a red flag on a locomotive, "an engine following;" a red flag at a station, "stop;" a lantern at night raised and lowered vertically, "start;" a lantern swung at right angles across a track, "stop;" a lantern swung in a circle, "back the train."

If you want to know what a workshop your body is and how the machinery is tearing along, put your fingers in your ears. You will hear a roar like a small Niagara, that comes from the movement of the body and the machinery of life—a tearing down and building up of tissues that is always going on in a living body.

A horse can draw on the worst kind of a road about four times as much as he can carry on his back. On a good macadamized road he can pull ten times as much, on a wooden road 25 times as much, and on a tram-line 58 times as much.

TALKS ON BUSINESS FOR BOYS.

What It Means to be a Paying Teller.

According to the estimate made by the comptroller of the currency for the year 1899, there are 12,804 banks throughout the United States with deposit accounts to the number of 13,153,874, showing that one in every five of the population of America is a customer of a bank.

The duties of the paying teller bring him into constant personal contact with every customer of his bank, as well as with all other persons who wish to draw money from the bank legitimately or otherwise. It will thus be seen that the requirements for such a position are of a very high and varied character. To the unthinking public his position is a "snap," one having simply to be pleasant and affable, to wear good clothes and a smile, and stand behind a wire screen five or six hours a day in the delightful occupation of handing out money.

Were these all the duties required of the paying teller, he might even then have enough to do, but the accuracy and speed with which he must handle large sums of money, important as these duties are, form but a small fraction of the multifarious duties and responsibilities of the paying teller. He is the man "behind the gun," upon whom devolves the guardianship of the bank's cash, as well as the task of satisfying every customer. The paying teller must have such a knowledge of each customer of the bank, his signature, usual business methods, amount of his credit and balance which may be drawn upon, as will enable him to act promptly and wisely under all and every circumstance.

The laws as to the responsibilities and liabilities of banks in paying money over to the right person, requires of the paying teller almost supernatural powers. He must have an instinctive knowledge and unerring judgment as to the right thing to do. No errors must enter into his calculations. In dealing with customers—

good or bad, those whose checks he may honor, as well as those whom he must refuse, the identification of payees, the genuineness or otherwise of a signature, and the hundred other emergencies which hourly arise must be decided at once and without the slightest hesitation. This decision must be correct, for on it depends often the losing of money or losing of a customer to the bank. He must have the wisdom of Solomon, the grace and urbanity of a Chesterfield and the detective instinct of a Sherlock Holmes. Yet we have heard people anatomizing and characterizing the paying teller as being, rude in manner and brusque of speech. Just let these complaining people put themselves behind the screen of a paying teller for a day, and they will conclude that for meekness and patience, the man at the teller's desk far outshines these hitherto much vaunted examples—Moses and Job.

Advice to Young Printers.

We believe in young men, and our advice to young printers is to gain as thorough a knowledge of the business as possible at an early age, and to be economical and saving, so that a capital may be accumulated with which to take advantage of the first promising opening to establish a business. At the age of 20 or 25 one has a great deal more courage to embark in a business enterprise than later on, presumably because of the lack of that experience which in after life inclines one to be timid of new undertakings, and the perhaps more weighty reason, that after attaining the age of 25 a young man is apt to have family cares and responsibilities which hold his nose too close to the grindstone to make it possible for him to launch out into an independent enterprise.

We do not advocate the starting into the printing business of those who have

not acquired an adequate knowledge of its technicalities. Every person will have to be his own judge as to competency. There are abundant opportunities now, through excellent printing publications, of learning what is being done in the trade, both in this country and abroad, and diligent application will place the aspirant in possession of the requisite mechanical facility.

Above all things, the young man, before setting himself up as a master printer, should acquire a familiarity with bookkeeping and the general principles of business, as without them he can not be wholly successful. In nearly all cities, and many of our larger towns, public evening schools are open for those who desire to study bookkeeping, and where there are no such schools it is possible to obtain the services of a private tutor at a moderate compensation. Any expenditure of time and money for the acquisition of knowledge of this kind will bring a large return. A great many employing printers, whose knowledge of the technic of their business is large, succeed indifferently because they failed to supplement their trade training with mercantile experience or study. Our counsel to young printers, then, is not to be deterred by ordinary obstacles, or by the discouragement of elders, but if they feel that they would like to engage in business for themselves, to make all circumstances bend toward that end and not to wait until advancing age destroys the ambition, or hard circumstances remove the opportunity.—Printers' Review.

The solicitor who comes into our office with a cigar in the corner of his mouth and strides up to our desk, without waiting to be asked, has put an obstacle in the way of getting an order. Other people, we are inclined to believe, feel as we do.

Insurance.

(Began in November)

The inquisitive American boy may wonder how these great companies know what to charge their policy-holders for protecting their estates, loved ones or old age as the case may be. As I said before, the premium rates (so much for each \$1,000 insurance) are fixed by the Actuary. These rates vary according to the kinds of companies, the different forms of policies issued and the several tables of mortality used. I might say, however, that in every rate charged, several elements must be considered.

Under what is called "legal reserve" companies (and all of the old, substantial companies are of this kind), premiums are composed of three parts: the mortality fund, or that portion which each policy-holder contributes to current death losses; the reserve, or that portion which is held by the Company, and improved at interest, to secure payment of that particular policy at maturity; and the loading for expenses, or that portion which each policy-holder pays for conducting the business. Owing to the uncertainty as to the exact number of selected lives that will die in any year, and also the rate of interest the company will earn on its invested reserve, and also the exact expense of management, the Actuary is unable to make exact premium rates that will furnish protection at a fixed low cost. He makes them large enough, however, so that all possible contingencies will be covered, and at the end of each year or when the next year's premium is paid, he returns to each policy-holder his share of the premium not used. This portion returned is given various names. Among them are premium abatement, surplus, dividends.

It is easy for the average boy to see that the company which is the most careful in selecting risks (insurable persons),

earns the highest rate of interest on its reserve, and conducts its business most economically, can furnish life insurance at the lowest cost. The lowest rate made by a company on a policy having a reserve is called an ordinary life rate. This is payable as long as a person lives. Next higher is a 20 payment life, then 15 payment, and so on to endowments. The highest rate charged by any company being for a single premium endowment.

There has been but little change in premium rates during the last fifty years. This is due to the fact that the mortality has not materially increased, the companies have been able to earn the rate per cent. of interest estimated and the expenses have been kept within the loading.

I am aware of the fact that the papers on such a dry subject may be uninviting to the younger readers of THE AMERICAN BOY, but the information contained in them will in some slight degree compensate for their dryness. In the next paper we will talk about the conditions of the contract, between the company and the insured.

(To be continued.)

Why So Many Fail to Succeed.

Failure to achieve success in business, the falling short of great desires and high aims on the part of young men, is traceable to one primal cause—the absence of thoroughness, says Robert C. Ogden, in The Saturday Evening Post. In the race for supremacy in all commercial undertakings nine out of every ten men either fail absolutely or become nonentities, not because they

lack ambition, not because the proper opportunities for advancement have not come to them, not because they have not received the best educational advantages or are handicapped by poor health, but because they have never been at the pains to master completely the thing that has been given them to do. The world is overcrowded with men, young and old, who remain stationary, filling minor positions and drawing meager salaries, simply because they have never thought it worth while to achieve mastery in the pursuits they have chosen to follow. Mostly, this is so because the average young man fears hard work, and would rather drift with the tide of circumstances than pull against it.

Everywhere I see mentally near-sighted young men discontented because of their small incomes, and chafing under the burden of their humdrum duties, wondering all the while why others are advanced and they are left behind, but never for an instant opening their eyes to the real fact that they have taken hold of their business with but half a heart and no mind except for what is just beyond the hour's need.

I think our American spirit of restlessness has much to do with personal failure. The fever to gain riches and honors in a hurry leads to a slurring of work and a laxity of morals. We have too little of the stubbornness of purpose of our early ancestors. Modern life is almost a game of touch and go. We are striving continually to accomplish more than we are built to accomplish; the end-of-the-century business man is a two horse-power engine trying to do the work of a freight locomotive. The tendency of the average young man

is to fly before he has learned to crawl. He will quote you Emerson's phrase, "hitch your wagon to a star," but he forgets that one must first get near enough to this particular star before the hitching process can be accomplished. There is one kind of ambition that works only for evil, and that is the kind of ambition which says, "I will succeed at once, let those who have to plod along. I will go straight to the mark." Nothing but purest folly could dictate such a procedure of conduct for a young man. Failure, after all, is merely the leaving undone, or badly done, those things which should have been done, and done thoroughly.

Roosevelt's Advice to a Young Lawyer.

"If I were you I would, on reaching home and hanging out my shingle, get a case. I don't care how you get it. Your own wits ought to find one case which no other lawyer has. I wouldn't take a justice shop, either. I'd find a case that was right up in the regular courts, which possessed some merit. I wouldn't take it for nothing, either, or on a contingency. I would have a decent fee attached to it. In other words, I would have as many respectable features attached to the case as possible under the circumstances.

"Having got that case," continued Roosevelt, "I would try it as if it were the last case I ever expected to have or which would ever be in the courts. I would not make a nuisance of myself. You know enough to avoid that, but you can be so persistent that you will win the respect of every one who

in any way comes in connection with the trial. Put all of yourself in the case. Get every side of it, and above all things, hammer it into your client by the force of your actions that your integrity is above reproach. When you get done with that case you will have a reputation that many lawyers waste years in trying to obtain. You will find that a second case is certain to come to you whether you lose or win the first one.

"I would treat the second case," he continued, "just as I did the first one. Live and act as if there never was a case in existence before, and master it just as you are required to master your studies here. If you find yourself weakening at all use the spur and whip until you have created an enthusiasm in your work that imparts itself to client, court and jury and results in your victory."

He paused after saying this, and the young man ventured to ask:

"How about the third case?"

"Go at it the same way," was the reply. "And for that matter, as your patronage increases give the same treatment to all your cases. You will create a confidence in yourself that will insure you a constant practice, and your clients, once secured, will never leave you.

"Enthusiasm in work is the best antidote for no patronage that I know of for any professional man. In fact, the rule applies to every walk of life. If your heart is in what you have to do, no matter how small the undertaking, the greater things are certain to come to you, and in rich reward."

Boys as Money-Makers and Money-Savers

It is a wonder that the custom of making boys their own bankers is not a universal one. Once the parent has started his boy with a bank account, no matter how small, both the parent and the boy will be amazed to see how it grows. Interest subtly adds itself to principal. A boy catches the spirit of the enterprise, and finally he is filled with pride and enthusiasm and needs no further urging in this direction. We do not realize how much money passes through the average child's hands. Keep a tally on it. Register the allowances, the gifts, and the earnings, or rather let the child do it, and both you and the child will learn a lesson.

No one need fear that a boy's bank account will develop in him an undue or corrupting love of money. Depositing money in a savings bank is not like hoarding it in a miserly way. It is an investment. It is subject to growth and the risks of invested capital. The process, instead of stunting the child's nature, educates and stimulates it. It will no more tend to injure the child than will the making of a garden. In either case the child cannot begin too soon to learn to control the forces of nature.

Boys should be taught the right uses of money; that money in itself is worthless; that only by economy and care in the use of money can they really enjoy it. Instead of giving to the boy the toys that he asks for give him in most cases the value of the toy in pennies, and teach him to save his money for something of real value.

An Eye to Business.

There is a lad of seven years in Ravenswood, Ill., who exhibits the shrewd judgment and executive ability which foretell a successful business career. This youth recognized in a recent athletic meet on Ravenswood field an opportunity for the acquisition of money. The day was very hot and the standard of thirst ran very high, so he established himself under the cool shade of

a maple tree and prepared to dispense lemonade at "3 cents a glass or two for 5."

Presently a thirsty college student came along and called for refreshment. The young proprietor took the dime his customer proffered and said: "I'm entirely out of pennies, but I have a nickel, so I 'spose you'll have to take another glass of lemonade."

Flakes Money By Carrying Meals.

"Success" tells about an energetic fourteen-year-old boy, named Thomas Mintzer, of Conshohocken, Pa., who has learned how to make money in an unusual way. About four months ago Tommy called on the employes of the different mills about town, offering to carry their meals for 15 cents a week. As many of the mills are running night and day his offer included suppers as well as dinners. The boy's offer was promptly accepted. At first he employed a toy express wagon drawn by a goat. Afterwards he got a large push cart, which he fitted up with shelves. Then he had to hire a horse and wagon, his customers numbering 130. Tommy starts out with the dinners of those who are farthest away at 11 a. m. He makes a second delivery at 11:45 and the third at 12:05. His weekly collections average \$19.50, and as he pays \$4.50 for the use of the horse and wagon, this leaves \$15 clear, which is more than some of the mill hands earn.

A Knight of the Shoe Brush.

"A Knight of the Brush," truly, even though it be a shoe brush.

Joe has talent and tact. He has the shoe blacking privileges of the Potter Building and is accumulating a fortune—that is, a fortune to him. In a few years he will retire, return to Italy and live better and easier than his associates.

There could be no better illustration of getting on in the world and the way to do it than Joe.

First of all, he attends to business. No matter how bad or how good the day, Joe is on hand. If he goes through the office without getting a single shine, he

returns just as confidently the next day. He is persistent and yet unobtrusive. You scarcely know that he is in the office unless he is at work on your shoes, and he cleans and polishes them so quick and quietly, that your attention is scarcely attracted to him and the work he is doing. What is more, his work is well done—without irritating your corns. He seems to know instinctively when you need new strings.

The former lessee of boot-blackening privileges charged ten cents for tan and patent leather shoes, and got but little to do. Joe charges five cents, with the result that tan shoes are almost as valuable to him as black.

Joe's predecessor gave it up—said he could make no money. Joe keeps two chairs on the corner busy as well as himself.—Geo. Batten & Co.'s Wedge.

Willing to Sweat and Think.

Sixteen years ago on a stormy night in the early fall, in a poorly furnished student's room, around the lamp, four earnest young men, all farm bred, were discussing the question of the "money power" that enabled them to take their college courses.

One had his wits only—no other backing in the world—sold books or anything that he could get hold of during vacations. One winter he had worked digging ditches in the day time, and evenings gave readings and recitations at country school houses, often walking miles to do so, developing brain and muscle and the power to interest an audience at the same time—having to think on his feet.

The next—His father gave him the poorest ten-acre piece on the farm to crop for himself. His mother gave him seed wheat which he himself planted and harvested during vacations.

The third boy's brother had given him a Poland China sow, and from the increase in pigs and pork, he was paying his way, helping out by such work as he could find to do during vacations. He said: "I deem it no disgrace to ride through college on a pig's back."

The fourth boy had made a bargain with his father by which he was to buy the clover seed for one round of the crop rotation, his father agreeing to give him the increase in each crop. He was best

off of them all and literally, to his fellows, "rolled in clover."

Today one of those boys is editor of the Rural New Yorker, has traveled extensively in the United States and Europe, has addressed hundreds of farmers' institutes and is an acknowledged authority on all agricultural topics. Another is a civil engineer of high standing, a national authority on the building of roads. A lawyer successful beyond his dreams accounts for one more. The other one owns a farm in Michigan and conducts it so successfully that he is regarded as a financier.

The first three also own and conduct successful farms that make money for their owners and are object lessons to their neighbors.

Talk of "sixteen to one," "hard times," "trades unions," "poor man has no show," "adverse circumstances"—anyone can get on in this country if he is only willing to sweat and think a little!—Geo. Batten & Co.'s Wedge.

How He Made His First \$100.

James C. Fargo, president of the great American Express Company, was one of a family of twelve children, who had either to earn his living or starve. He hired out as an errand boy in the office of an express company; his salary was to be \$10 a month; of this he gave \$5 to his father and spent the remainder for clothing. Then he became a clerk, but did not save any money for the first four or five years. It was not until he was nineteen or twenty that he came into the full possession of \$100.

Mr. Fargo has some advice for parents as well as for boys; he says: "If I were worth one hundred million dollars, I would make my son earn his living. I do not believe," he said, "in bringing boys up to be gentlemen loafers."

Money to be Made Out of Fowls.

A hen that is properly cared for can lay 200 or more eggs in a year. Her food costs less than a dollar for that time. There is an unlimited demand for eggs. One boy can feed and care for several thousand hens, if he gives his entire time to it. Here are some facts and figures from which anyone can figure out the probable profit.

The Boy in the Office, the Store, the Farm and the Factory

Honesty Cost Him His Position.

A gentleman from the country placed his son with a dry-goods merchant in street. For a time all went on well. At length, a lady came to the store to purchase a silk dress, and the young man waited upon her. The price demanded was agreed to, and he proceeded to fold the goods. He discovered, before he had finished, a flaw in the silk, and pointing it out to the lady, said: "Madam, I deem it my duty to tell you there is a fracture in the silk."

Of course she did not take it. The merchant overheard the remark, and immediately wrote to the father of the young man to come and take him home; "for," said he, "he will never make a merchant."

The father, who had ever reposed confidence in his son, was much grieved, and hastened to the city to be informed of his deficiencies. "Why will he not make a merchant?" asked he.

"Because he has no tact," was the answer. "Only a day or two ago he told a lady, voluntarily, who was buying silk of him, that the goods were damaged, and I lost the bargain. Purchasers must look out for themselves. If they cannot discover flaws, it would be foolishness in me to tell them of their existence."

"And is that all the fault?" asked the parent.

"Yes," answered the merchant, "he does very well in other respects."

"Then I love my son better than ever; and I thank you for telling me of the matter; I would not have him another day in your store for the world!"

Superfluous Knowledge.

In an interview published in the New York Sun, Senator Cushman K. Davis, of Minneapolis, Minn., gives advice which is well worth reading and remembering.

"One cannot have too much knowledge of a subject. I did not need all that information for a single lecture. It was my reserve. I believe in superfluous knowledge. It is superfluous knowledge that differentiates us. I believe, speaking generally, that young men starting out in life are much more nearly equal in capacity than is generally supposed. I have little faith in the thing called genius. I think any young man can attain success, and great success, by good, hard, studious labor, not intermittent labor, but constant, conscientious effort. The men who have achieved success are the men who have worked, read, thought more than was absolutely necessary, who have not been content with knowledge sufficient for the present need, but who have sought additional knowledge and stored it away for the emergency reserve. It is the superfluous labor that equips a man for everything that counts most in life. There would be fewer wasted opportunities if there was more real ability to grasp them when they present themselves. I began life as a telegraph operator. I believe I was proficient in my line of work, but I was not content with being merely a good telegraph operator. I wanted to be a good citizen, and I qualified myself for that position by doing what I have called superfluous work. I advise every young man to do the same thing. Good citizenship is a duty that requires a careful study of general politics. I do not believe in a young man taking up politics as a profession. Politics is a vocation that accompanies the ordinary business of life. If the community needs a man to take a public part in its political life it will call him. There is no such thing as making an opportunity; circumstances make the opportunity. The great thing is to be ready for the opportunity."

Some Left-Handed Advice.

Always treat the persons who call to see your employer with contempt, so that they will appreciate your importance.

If a lady should happen to call at the

office act real haughty and uppish. Perhaps she will mistake you for a junior member of the firm.

Always remember your employer is a fat-head and doesn't know his business. Why should he pretend to know anything?

If you should have an office boy under you, be sure to bulldoze him. As you were once bulldozed yourself, you have a perfect right to make it hot for Percival.

Act ugly around the office. Let the boss see you knock over a few chairs, pretending in the meantime you are hustling. He's a lobster, anyway, and will never get onto your curves.

Never forget that your employer owes his success to bullheaded luck. At your age he couldn't compare with what you are now.

If you are trusted with the handling of any of your employer's money, be sure you brag to him how much you lost on the prize fight. He will admire your sporting blood.

If the boss won't give you a raise, do everything as sloppy as you can until he does.

Tell everyone in the office just what you think of the old man. They will admire your acumen.

Don't worry a rap if the firm you work for is losing money. It isn't any of your funeral.

If any one attempts to call you down for your impudence, start to fight him on the spot. Nobody has a right to say anything to you.

When customers are talking over the telephone, holler at them. Let them know you have no time to monkey with them.

Always remember that callers are anxious to hear you express your views on politics and religion. If the person you are talking to looks pious use as much profanity as you can.—Chicago Journal.

The First Years of a Boy's Business Life.

The first few years of a boy's business life are the critical ones. He is in these years pliable material, that is, he is easily molded. It is necessary, therefore, if he is endeavoring to learn a trade and expects to escape being a commonplace workman, that he should take a keen interest in everything about him. If he is not to be a mere automaton he should learn to be punctual, energetic, thorough. Growing boys are often inclined when put to work to be slovenly and unmethodical. A boy's superiors in the workshop or the field may make or spoil him. The master should put the boy, if possible, in direct contact with skilled workmen, who may assist him with suggestions and examples. The master should show the boy that he takes an interest in his work and instill in him the idea that if he uses his brains he can himself some day be a master. A word of praise goes a long way with a boy. It makes him feel proud to think he has done something worthy of commendation and urges him on to attempt further improvement.

In every mechanical pursuit more than half of the craft are commonplace or average workmen, while less than 20 per cent of those who profess to be competent are really not what they pretend to be. There is really a need that we return to the old apprentice system by which a boy is required to work under a master for a fixed number of years before he becomes his own boss. Under the present method a boy gets a position either because he is a fairly good boy or somebody knows the father or the mother is a widow, and all concerned hope that the lad will be as grateful as his mother is, and he starts on his term of service with everybody's good wishes and his mother's fervent prayer for his ultimate welfare. The boy soon gets used to his new position, gets a smattering of the knowledge of the business, thinks he has learned it all, reckons how much he gets in wages, compares it with what he earns and begrudges his master the balance. This breeds discontent, which grows ever

greater. Gratitude goes out of the window and insubordination comes in. The result is a commonplace workman, who goes from place to place losing positions whenever work slacks up a trifle, and only used because of the necessity for help having some knowledge of the business, be it ever so little.

It is said that it is more difficult today to secure good workmen than it was ten years ago. One reason for the present condition of things is that there is a constant endeavor on the part of men to prevent boys learning to do men's work. In some trades there is a rule which limits the number of apprentices, and forces the apprentices to be non-thinking helpers rather than independent workers, under constant instruction. Men seem to regard apprentices as if they were burglars trying to steal away their birthright. The remedy lies in the hands of the master mechanics. An apprentice system should be adopted requiring apprentices to serve six years under a graduated pay scale, and during the last three of these years the apprentice should be teamed, that is, allowed to serve alongside of a competent instructor. This would send him into the world a master workman. Life insurance mortality tables tell us that the expectancy of life at twenty-two years of age is sixty-two; that is to say, when a young man of twenty-two starts to work as a master mechanic he has before him forty years of time in which to labor. If the boy's term of apprenticeship be six years, there should be at least one apprentice to every seven journeymen in order to keep up the supply of master workmen, not allowing for the constantly increasing number of men who are demanded by increasing business. Many of the trades, however, allow but one apprentice to every ten journeymen. The supply, if it is to be kept up, must therefore be kept up from the ranks of the incompetent.

Who Are the Heroes?

Some persons think that only those who do great things on the field of battle are the world's heroes; but there is heroism elsewhere than amid the smoke of gunpowder. There are heroes in business life. True, their names are not heralded and their fame unsung; but they are heroes nevertheless. Some business man goes to an untimely grave after making a struggle which is worthy of the pen of an historian or a poet.

Men have found that in the business life of today, to hesitate is to be lost. Men must take chances—decide quickly. To succeed amid the conditions that now prevail requires something of the stuff of which heroes are made. It is not alone among the heads of large business houses that heroes may be found. Some of the bravest men are those who are piloting a small business. Many a man who is a little man in the estimation of the street, is fighting a noble battle against fearful odds. You can tell some of these men by the deep furrows in their foreheads, their anxious looks, their ruined health. It took no higher order of heroism for Dewey to sail into Manila Bay than it does for many a business man to face the problems that confront him each morning.

About Idlers.

Shun the companionship of idlers. There are men hanging around every store, and office and shop, who have nothing to do, or act as if they had not. They are apt to come in when the firm is away, and wish to engage you in conversation while you are engaged in your regular employment. Politely suggest to such persons that you have no time to give them during business hours. Nothing would please them so well as to have you renounce your occupation and associate with them. Much of the time they lounge around the doors of engine houses, or after the dining hour stand upon the steps of a fashionable hotel or an elegant restaurant, wishing to give

you the idea that that is the place where they dine. But they do not dine there. They are sinking down lower and lower, day by day. Neither by day nor by night have anything to do with the idlers. Before you admit a man into your acquaintance ask him politely, "What do you do for a living?" If he says, "Nothing; I am a gentleman," look out for him. He may have a very soft hand, and very faultless apparel, and have a high-sounding family name, but his touch is death. Before you know it, you will in his presence be ashamed of your work dress. Business will become to you drudgery, and after awhile you will lose your place, and afterward your respectability, and last of all your soul. Idleness is next door to villainy. Thieves, gamblers, burglars, shop-lifters and assassins are made from the class who have nothing to do. When the police go to hunt up and arrest a culprit they seldom go to look in at the busy factory, or behind the counter where diligent clerks are employed, but they go among the groups of idlers.

During the past few years there has been a great deal of dullness in business. Young men have complained that they have little to do. If they have nothing else to do they can read and improve their minds and hearts. These times are not always to continue. Business is waking up, and the superior knowledge that in this interregnum of work you may obtain will be worth fifty thousand dollars of capital. The large fortunes of the next twenty years are having their foundations laid this winter by the young men who are giving themselves to self-improvement.—Christian Herald.

Give the Boys a Chance.

When Abraham Lincoln stood on the platform of the train that was to carry him to Washington to be inaugurated President of the United States, he gave some parting advice to his neighbors who had come to bid him good-bye. Among the things he said was: "Give your boys a chance." If he were living today he would repeat the advice. Doubtless Mr. Lincoln meant that the boys should be given a better chance than their parents had. Conditions surrounding the attaining of success are constantly changing. Better muscle and better brain—in a word, better men, is the ever-increasing demand. Every man should educate his boy better than he was educated. Every man should expect his boy to do greater things than he did and should prepare him with that in view. It is not enough simply to say that there are as many chances today as there were yesterday for a boy to get ahead, and that because the father succeeded on a small capital of brains and money that therefore the son can do so. Give the boys a chance; that is, put nothing in the way of their advancement, but rather give them every opportunity, every encouragement, every stimulus in right directions.

He Had Trained for It.

"So you want a job?" inquired the manager of the great mercantile establishment. "Ever had any experience in this business?"

"Well, no, not exactly," the young man replied. "You see, I have just got through college."

"Oh! Did you play football?"

"Yes; I was center rush in our varsity team last year."

"Good! And did you take any other part in athletics?"

"I hold a medal as a shot-putter."

"I suppose you were in all the cane rushes and hat smashings, too?"

"Yes, sir. I was the best hat smasher in my class."

"All right. John, give this young man work out in the ware-room. He'll be good at handling heavy boxes and barrels and such things—a college graduate, you know."—Chicago Times-Herald.

Business Habits.

To the readers of THE AMERICAN BOY, who are imbued with a desire to be successful men in the business, trade or profession which they may enter, and I trust there are very many, let me point out some of the habits which go far toward ensuring a prosperous career. In this extremely prosaic and matter-of-fact age, to talk of politeness and pleasant manners as business assets may provoke a smile; but let me say that the boy who treats those with whom he comes in contact with a pleasant smile and earnest attention to their wants or desires, lays the foundation of an ever-increasing prosperity, as well as extensive and lasting friendships, which may be of great value to him in after life. These habits are easily formed and cost nothing in the keeping, while the results which directly and indirectly flow from them are incalculable. Other habits which can be, and ought to be, formed in early youth are industry, frugality and caution. Then the eye should ever be open to modern methods of doing business.

System in business is also one of the most important factors in producing success. A boy who begins his business career in a slovenly, happy-go-lucky sort of way is almost sure to come to grief; whereas the boy who begins to practice systematic methods, that is, regularity and punctuality, and to have a "place for everything and everything in its place," will enjoy the confidence and respect of his patrons in an increasing business and certain prosperity.

Getting into the Wrong Groove.

One of the grave results flowing from the eager, grasping desire to accumulate wealth as speedily as possible, which is a too prominent characteristic of the present day and generation, is that a boy starts in to learn a trade or business without having given enough consideration either to his disposition toward it or his capacity for it, the chief thing in his mind being that he will get employment speedily. The temporary return is all that is thought of. What follows must be only too apparent. Soon the boy finds he is not fitted for the work or it is not to his liking, and he quits. He of course, has grown older, and lost some of the ambition of youth. He chooses again some temporary position, first one thing, then another, but never perhaps

in the line of his real nature. Two or three years of this life, and gradually but surely he subsides into that ever-increasing army of incompetents, receiving the contemptuous designation of "Jack of all trades, master of none."

The cure for this evil lies with both the parents and the boy. Very early in life the boy should be allowed to have practical observation of different fields of industry. In this way his mind broadens and expands, and he obtains an insight into practical methods and pursuits which no amount of theorizing or book-reading could ever give him. Pursuing this course the boy will also find what he is in search of—his life work, some branch of life's activities to which he decidedly leans, and in which he takes special delight. Into such branch the boy enters eagerly, labors at it with a firm determination to master it, does master it and succeeds.

Conditions Should Not Make Men; Men Should Make Conditions.

The question has been asked over and over again in a multiplicity of forms, why do such a small proportion of men in business succeed? Ask men who have failed the reason of their non-success, and you will receive a perfectly sincere reply from each. One will say, "Too much competition"; another, "Dull seasons," and another, "Unfavorable locality," etc.

There may be a grain of truth in these reasons, but in almost every case, if we probe below the surface, the true failure lies with the man himself, for it is notorious that the competitors of the first are flourishing, the dull seasons have not affected the brother merchants of the second, while the locality seems to have a fairly thriving effect upon the neighbors of the third.

In order to discern the real reason we must look at the man himself. Take number one who blames competition for his failure. As we enter his store we glance at the windows and find they need cleaning. Looking at the merchant himself, we cannot but observe the unclean, torn apron, dirty hands, and generally untidy appearance of both himself and his assistants. The store is in the same condition and we do not wonder that his customers have gone to his rival across the way. We enter the store of number two

and on inquiry for the proprietor we are gruffly informed by a young man with the stump of a cigarette between his lips and his thumb and forefinger discolored with nicotine, that he will be in shortly. We are not asked to sit down. When the proprietor comes our inquiries are answered in the same brusque, rough manner, and as we walk out, we are forced to conclude that the "dull seasons" are made by himself. Merchant number three we find a lordly personage, who is in the habit of patronizing and almost dictating to his customers what they shall purchase. Is it surprising that such laudable efforts meet with non-appreciation?

Now the real causes of the failure of these merchants may appear trivial, but THE AMERICAN BOY reader will remember the reply of the great sculptor, Michael Angelo, to a critic who characterized his faithfulness to details as trifles. "True," said the sculptor, "but trifles make perfection, and perfection is no trifle." The fault lay in the training of these merchants. As boys they had acquired habits of inattention, carelessness and indifference, which as the years went by had become fixed and almost ineradicable. Let us send out this warning, and with no uncertain sound, that the boy who is indifferent, careless and inattentive regarding his duties to himself and to others, is taking the straightest and shortest course to failure, while the boy who is cheerful, obedient, happy, tries to please, and who does not consider himself "too big" to master details, is the boy who will become a successful man, despite "competitors," "dull seasons" and "unfavorable locality."

A MESSAGE TO READERS OF "THE AMERICAN BOY" FROM SENATOR JOHN M. THURSTON, OF NEBRASKA.

I prefer that my boy shall face the world at his majority with a good education, the fear of God, and the love of country in his heart and plenty of grit and push, than to start him out loaded down with ancestral millions.

John Thurston

The Boy in the Home, Church and School

Diligence is the mother of good luck.

All nature stands aside for the man of a mighty purpose.

Boys starting out in life should have definite purposes in view and train their energies direct to these purposes; that is, don't scatter shot.

Dr. Arnold says of boys, that the difference between one boy and another consists not so much in talent as in energy.

Lord Wolseley's advice to young soldiers was: "If you want to get on, you must try to get shot." It means, "Keep in the thick of the fight, daring and doing, with the whole mind focused on the thought of victory."

It is said of Conan Doyle, when a boy, that his teacher took him into his room alone, as he was about to leave the school, and said to him: "Doyle, I have known you now for seven years, and as I know you thoroughly, I am going to say something you will remember in after life. Doyle, you will never come to any good."

The world knows how wrong that teacher's judgment was.

Farmers' Boys in College.

Out of a total of 52,000 boys in college—and such city colleges as Harvard, Pratt Institute, University of Rochester, Plisk University are not counted—The American Agriculturist finds that nearly 21,000, that is, a percentage of 40.2, are from the farm. It appears that the percentage varies largely in different sections of the country. It is 50.9 in the South, 45.8 in the far West, 29.4 in the Central West; 29.4 in the Middle States, and 29.1 in New England. This speaks volumes for the general intelligence of American farmers and the high aspirations of farmers' boys. There seems to be some reason for the complaint that is made against Mr. Markham, the poet who wrote "The Man with the Hoe," as that poem represents the tiller of the soil as never looking up.

Boys at the Famous Harrow School and Their Rules.

"Harrow" is a famous school at "Harrow-on-the-Hill, in Middlesex County, England. The boys at this great school have some curious rules which they have laid down and enforced by themselves. It is said these rules are better obeyed than are some laid down by the headmaster.

There are two distinct classes of Har-

rovians, i. e., those who have been in the school three years, and those who have not. Wearers of cricket caps or foot ball "fezzes" for their house elevens are exempt from rules altogether. A "three-yearer" may generally be recognized by his stand-up collar and his tie-pin, articles of dress which an unfavored "two-yearer" may look and long for—but no more. It is the exclusive privilege of "three-yearers" to walk in the road, or to carry folded umbrellas. Only Harrovians who have seen their third summer at the school may open their blue cricket coat, familiarly known as the "blue-er," when they wear it on half-holiday afternoons. It is considered "side" for a "non-three-yearer" to enter another boy's house, except on special business in the master's study. A "sidy chap" is universally detested, and every chance is seized to "take him down a peg." A "sidy chap" is one who "sides," but has no right to do so, being neither a "three-yearer," nor a "cap," or "fez." But when a boy blossoms out into "chokers" and tie-pins by virtue of having been at Harrow for three years, or athletic excellence, it is no longer considered "side," but as his due. Lastly, if a boy change his schoolhouse before he becomes a "three-yearer," he has to begin his three years all over again, starting from the time he enters the new house.

That Boys May Have an Education.

America boasts of 425 universities and colleges with an attendance of 175,000 students, invested capital of \$250,000,000, and employing as teachers and attendants 25,000 persons. The seven richest colleges with their endowments are: Girard, \$15,250,000; Leland Stanford, Jr., \$13,500,000; Harvard, \$10,000,000; Columbia, \$9,500,000; Cornell, \$8,000,000; Chicago, \$6,500,000; Yale, \$4,500,000. Each of these has an annual income of over \$1,000,000. The University of Texas is rich in land and gives promise one day to be the richest of all American universities. It holds title to 2,000,000 acres.

An Inhuman Father.

A. G. Sheldon, of the firm of Sheldon & Co., bankers, New York, received from a man of unpronounceable name in Austrian Galicia, an unusual message which read as follows: "Take this boy out west and drop him. I don't want him; I am tired of him."

The boy, who is fourteen years old, arrived in New York on the steamer Pennsylvania, consigned to Sheldon & Co., bankers.

The boy is to be sent back to his father, and the government of Austria is to be requested to compel the father to take care of him.

THE AMERICAN BOY could wish the little fellow better luck.

Moral Suasion for College Boys.

"Moral suasion will carry the day every time," an eminent college president was lately heard to say. "Yes, Sir, every time. I have seen all sorts of government tried; and fear will win for a time, but not all the time, nor for a long time. Boys are not animals. A nobler lot of young fellows never breathed than our college boys; but they are sent away from home at an immature age, and are placed under the influence of old traditions. College traditions, for the most part, came down from a brute force age—an age of comparative lawlessness. The college is a child of the mediaeval university, and that university system defied civil government. What the college faculty has on hand is to get rid of those traditions—to create a new sentiment, a new code of college life, to raise a moral standard for the boys. It is all true that education deals primarily with the intellectual faculties, but it deals just as directly with the moral faculties. If it fails with either, it fails with both in the end. The end of citizens' institutions is to create good citizens."

Story of President McKinley's Conversion.

A Cleveland correspondent of "The New York World" gives in a recent issue of that paper the story of President McKinley's conversion, as related by Rev. A. D. Morton, a retired minister, who was pastor of a Methodist church at Poland, Ohio, where the McKinley family lived in 1867, at the time William McKinley became a member of the church. The revival was held in the spring, and one night toward the end of the week William McKinley attended. He was not noticed until he expressed his conversion, when he made such an impression on the minister that the latter watched his course in after life and noted with satisfaction that the convert

was not a backslider. Telling the story, the Rev. Mr. Morton, seated in his home, said:

"Young McKinley's admission to the church made such a vivid impression on my mind that I will never forget it. He had been a frequent attendant at the Sunday services and was an earnest listener. On the evening McKinley 'got up' I had been exhorting all my hearers to repent deeply of their sins and seek salvation of their souls.

"After the preaching we had a prayer-meeting and young McKinley arose in his seat. He was about fourteen years old at the time, and a more dramatic figure of an earnest boy I never saw. Standing erect with bowed head, but looking every one full in the face, he said:

"I am determined to be a Christian. I believe that God is the greatest and best being of the universe, and I am determined to love and serve Him. I believe religion is the best thing in all the world and I am going to seek it with all my heart until I find it."

"There was nothing affected in the boy's manner, but his quiet, earnest manner attracted the attention of everybody in the church. The boy at that time was a student at the Poland Institute, and the stand he took for religion had a great amount of influence with the younger people.

"After young McKinley's declaration he was received into the church on probation. During the seven or eight months of that period he was carefully watched by me. He frequently led the young people's meetings in the church.

"When his period of probation ended he took issue with the other members of his family regarding his baptism. The church gives converts their choice of sprinkling, pouring or immersing. I always held that sprinkling was sufficient, but young McKinley wanted to be immersed.

"The place chosen was in a stream

that flowed near the church and which emptied into the Mahoning River. There had been a freshet the day before and the current was swift. I remember taking into the water one young woman and going out so far that the current almost swept us down.

"After he had been received into full membership in the church he was a regular attendant and became a teacher in the Sunday school.

"After he had removed to Canton he was elected superintendent of the Sunday school of the First Methodist church. Later he was elected a steward and then a trustee."

Teaching Boys to Work With Their Hands.

President John Henry Barrows, of Oberlin college, gives an interesting account of the manual training school at Toledo, Ohio, in the Review of Reviews for November. It is profusely illustrated, and the whole article commends itself to the reading of boys, as it gives a clear outline of the school work, and the advantages to be gained by this kind of training.

He quotes Carlyle as saying:

"Man without tools is nothing, with tools he is all," and further states that "Art and civilization depend upon the joint training of mind, eye and hand." He brings out also another idea, in regard to machine work, which places that in the category of manual labor. The word "manual," you know, means, by the hand. He quotes from an unknown writer that "the seven hand-tools are the axe, the saw, the plane, the hammer, the square, the chisel and the file," and that "the modern machine shop is an aggregation of these tools driven by steam."

In estimating the benefits accruing from this kind of training, he quotes Prof. C. M. Woodward, director of the manual training school of the Washington University at St. Louis, who says that he has noticed the following results:

(1) Larger classes of boys in the grammar and high schools; (2) Better intellectual development; (3) A more wholesome moral education; (4) Sounder judgments of men and things, and of living issues; (5) Better choice of occupations; (6) A higher degree of material success, individual and social; (7) The elevation of many of the occupations from the realm of brute, unintelligent labor to positions requiring and rewarding cultivation and skill; (8) The solution of labor problems," to which he might add the habit of industry, which so pleasantly fills the hours that there is no room for evil in them.

Is a "Genius" a Freak?

A very powerful factor in depriving young men of necessary self-reliance is the almost universally accepted statement that "geniuses are born, not made." I know this is usually applied to poets and artists, but wherever the life of a successful man is written up the impression is left that that man is more or less a freak of nature. That he was born that way and simply could not keep from blossoming into a genius. That he was so wonderfully endowed with the particular talents upon which his fame rests that they kept him awake nights. As an actual fact, the vast majority of those who are labeled "geniuses" came pretty close to being classed as block-heads during their youth.

At some particular time in their career they began to experience an intense love for some special line of activity; to sincerely believe in themselves and to work diligently. This kind of a combination—intense love for a particular work; supreme belief in one's latent ability, backed up by unflinching effort—will bring success—genius—every time.

The young man who starts in life with a suspicion that possibly he is choosing a line of work for which nature has not ordained and endowed him, will soon reach his level—failure.

BOOK REVIEWS.**The Oregon Trail.**

By FRANCIS PARKMAN.

"The Oregon Trail" can scarcely be called a boy's book, for it is written by one who went out in the character of an explorer, rather than an adventurer; and is, therefore, more descriptive of the great wild west of fifty years ago, than a continued narrative of heroic events such as boys are fond of reading.

The hunter, the trapper, the guide—each represented as they existed in that early day, and the Indians in this early stage of civilization are more mild-mannered and hospitable than we could hope to find them today. The two college-bred young men who followed the "trail" lived among these Indians, killed buffalo and other game, ate dog meat, and entered into the domestic life of their hosts like friends and brothers. There are no half-breath escapes, nor wild adventures, every day being a repetition of the previous day's experience in hunting the buffalo and the antelope, in changing camp, or making long journeys in that wild and unsettled region.

The work is illustrated by Frederic Remington; and to those who are interested in the mighty changes which have taken place since 1845, it will prove very interesting reading.

Little, Brown & Co., Boston. \$1.00.

"Remember the Maine."

By GORDON STABLES.

This book, as its name implies, is another of the numerous publications which have sprung into being since the Spanish-American war; and treats of the wonderful experiences of an Irish-American family who lived alternately on the island of Cuba, the Isle of Pines, and on shipboard, always attended by their bulldog and a Persian cat. A priest and a young lad, "Ted," were members of the family, which consisted of Captain and Mrs. Adrane, their son, Desmond, and a little daughter, Alison. Mr. Adrane is a speculator and rich.

The story opens just before the breaking out of the war, and the reader will soon discover that the sympathies of this family are entirely with the insurgents, and their hopes of the future of Cuba based on the intervention of the United States. At all events they are hastening home to offer their lives and means to the poor distracted country, which is now in open rebellion to Spanish rule.

Then follows all the honors of that war in which they each take an active part, even down to the dog and cat, the boys enlisting with the Rough Riders, and the remainder of the family, after being besieged and burned out at their hacienda, lived an ubiquitous sort of life on the yacht "Bonito," which is turned into a dispatch boat and seems to cover leagues of distance in an

THE BOY'S LIBRARY

almost incredible space of time, so as to become an eye-witness of most of the important battles which took place during the war.

Boys will find this interesting reading. George W. Jacobs & Co., Philadelphia. Cloth, \$1.25.

Fife and Drum at Louisbourg.

By J. MACDONALD OXLEY.

This book is somewhat out of the line of ordinary boy's books, as it deals with the period when the colonies were under royal government, and the colonists were yet loyal subjects of the king. It follows the adventures of two young boys (twins), who having learned to play the fife and drum from an old soldier and bandmaster, were welcome volunteers when the colonial troops sailed for Louisbourg, determined to take that strong French fortress in the name of their king.

The twins were staunch loyalists, and so manly and enthusiastic as to be an inspiration to their comrades, one of them proving himself a hero by climbing the dismantled flag pole of the fort, in the face of a hot fire of shot and shell, and attaching to it his own red coat in lieu of a flag, to show the British colors. They reach home in safety and find their friends ready to make heroes of them, showing that hero worship is not confined to the nineteenth century. Little, Brown & Co., Boston.

The Beacon Prize Medals, and Other Stories.

By ALBERT BIGELOW PAINE.

This book is a collection of short stories, and its heroes and heroines, though only country boys and girls, find many noble things to do at home and at school, that require hardly less courage than to face a battle.

The moral courage required in renouncing the prize medal, is worthy of emulation, and it is certain that such a struggle to do right is a wonderful lever to lift to the surface the better part of individual character.

"Out With the Tide" is a good, strong story and full of interest, more particularly as it deals with some aspects of the late war, and how a boy and girl drifted into the path of glory. Grief, the three-legged dog, is certainly the hero of the tale.

There are other shorter stories, well told

and full of interest, but the final story, "Christmas Eve at the Gulch," is well chosen as the climax, for it holds the breathless interest of the reader from beginning to end.

The terrible night ride, the thread on which a life may hang, the bravery of the "Kid," the great hearts of the rough miners, are all portrayed in short, crisp sentences, and with a rapid movement that keeps time with the mare's galloping feet.

The book is not a boy's book, but following the custom of the period is co-educational, commending itself to both boys and girls. \$1.25.

The Island Impossible.

By HARRIET MORGAN.

Impossible, indeed; but a beautiful conceit, full of fairy-like changes like the strange illusions of a dream, and fresh with all the innocence of childhood.

The reader is moved to irresistible laughter over the maple sugar escapade, and the lighthouse episode, and when the children are forced to man the whole ship of state in the new republic, it is curious to see how readily everything adjusts itself to their purposes of escape.

The writer has seized upon the very spirit of dreamland in the quick transitions, and subtle changes from danger to safety, and the irresponsibility of life "in the land where the popples grow." This book has all the charm of "Alice in Wonderland," its scenes being quite as impossible, while it has the added interest of a number of seemingly real actors, and a happy local outcome of all their adventures in their plans for the future, each boy having chosen his profession, and each girl her vocation, and left the impossible lands behind them; the real and the possible seeming nearer and more attainable, for the happy days of childhood, in the "fields where the popples grow."

Little, Brown & Co., Boston.

Amateur Photography.

By W. L. LINCOLN ADAMS.

This little book written for beginners in the art of photography, is also well worth reading by those who know nothing of the beautiful art, as it gives an interesting account of its discovery and growth, dating back to Daguerre's discovery August 10th, 1839. It also shows that genius is appreciated in France, for Daguerre was awarded

an annual pension by the government for his discovery.

The old Daguerreotype bore little resemblance to the photograph of today; but it contained a principle which has gone on developing until the art of picture-taking has become nearly perfect, as the illustrations of this book will prove. Some of them are as fine as steel engravings, with an accuracy of detail that no other art can rival. The nature views are extremely fine, and "An Evening at Home" is exquisite in expression and suggestiveness.

The remainder of the book is purely technical and tells the beginner all about the apparatus, the printing and toning, and the different kinds of photography.

The book will be of great value to those who are not within reach of personal instruction from a good teacher.

Baker & Taylor Co., New York. Cloth, \$1.25; paper, 75 cents.

The Boys of Marmiton Prairie.

By GERTRUDE SMITH.

The Boys of Marmiton Prairie are three—just such boys as we meet in other localities, with all the love of adventure, and carelessness of results, which distinguish boys in general; but the author has drawn the character of each boy with so graphic a pen, that we seem to know them as well as did their parents and friends.

Patty Landus seems to be the leader, and is evidently intended for the hero, but the interest really centers about the beautiful white horse, called "Napo," for whom Patty has conceived so great a love, that he is willing to sacrifice almost anything in the world to possess him. Many of the most stirring adventures related were encountered in pursuit of this object. Luke White is the least interesting of the boys, because his intuitions are less conscientious, and less manly than the others. Geo. Mercer is another type, more gentle, and more easily led.

The description of a prairie fire, and the terrors of a flood, are good, and the introduction of the college-bred young man and the friendly Indian adds to the interest, without being sufficiently dwelt upon to distract the attention from the boys. A bit of color is given to the story, by the advent of the little scarlet-robed eastern girl, who enters so heartily into all their sports and plans.

This is a good healthy story for boys, and will be a welcome addition to any boy's library.

Little, Brown & Co., Boston. \$1.25.

The Boys of Scrooby.

By RUTH HALL.

"The Boys of Scrooby" is a historical novel of that period preceding and coincident with the coming of the Pilgrims to these, then, unknown shores. The story begins with the persecutions of the Independents or Separatists, and their departure for Holland. It centers around the fortunes of three boys named Chisholm.

These boys become separated from their parents; Hugh, the elder, being taken to the colonies where he enters into the early life of the Virginians, has many adventures with the Indians, and becomes the friend of Pocahontas. Jack is taken into the royal family of Nassau, where he becomes part of the suite of Frederick, who married Elizabeth, daughter of James I., and afterward became king of Bohemia.

Stephen was adopted by a wealthy but childless couple, who stood high in court circles; in fact, belonged to the suite of King Louis.

These widely differing conditions did not prevent the boys from loving one another, and determining to reunite at some future period.

The book is clear enough for a good historian, but somewhat confusing to one who does not understand contemporary history. The sudden transition from the persecuted Separatists to Bohemian politics, and Italian intrigue, is evidently made to carry out the story of Stephen, not to enlighten the reader.

It all ends in America with a happy meeting, after many soul-stirring adventures, and is interesting to the close.

Houghton, Mifflin & Co., Boston and New York.

The Life of Nelson.

By CAPTAIN A. T. MAHAN, D. C. L., LL. D.

It will be a pleasure to those who are familiar with, and interested in, that period of English history embracing the years between 1793 and 1805, to read this "Life of Nelson," for it is far more specific in detail than any other as yet given to the world. It shows us, however, that, like the great Napoleon, he had his personal weaknesses which affected more or less his public career.

The life of a great hero, like Nelson, is an important part of a country's history, and at this momentous period the man was ready for the place, born at the right time, and dying at the right time, to stamp him as the greatest of naval heroes, and make an indelible impression on the pages of all history.

The book is well written, and one could hardly read it without becoming deeply interested in the man it so cleverly portrays, and the period of strife in which he was so important a factor. Dying in the hour of his greatest success, one can but feel that, like the warriors of old, he was beloved of the gods, and so at this climax of his career he was "placed among the stars." Little, Brown & Co., Boston. Price, \$3.00.

Worth Reading.

While there are many books written especially for boys, there are books, not so written, which will repay a boy's reading, especially if he be interested in the study of history. Among

these may be mentioned Stanley J. Weyman's "House of the Wolf." (F. M. Lupton Publishing Co., New York.)

The story is of that terrible period in French history when the massacre of the Huguenots, August, 1572, left an ineffaceable blot on the escutcheon of France. The story is told by one of three boys, aged respectively seventeen and eighteen years, the two last being twins.

These brave young boys lived in the house of their uncle, who was absent from home, and felt themselves to be the guardians of their young cousin, Katherine. A furious threat from a man high in power to destroy her accepted lover overwhelmed her with despair, and these brave boys, without hesitation, hastened to Paris to warn him of his danger. They had never been from home before, and their adventures were wildly exciting from first to last. Exposed to great dangers, for they reached Paris on the night of the terrible massacre, they fought like heroes to protect and help the frightened people, and at last returned in triumph with their cousin's lover to their country home. It is a vivid description of that momentous period. The real names of the actors are used, so that the reader will have no trouble in comparing the book with known history.

Regarding Boys' Books Now and Formerly.

A boy's library invariably begins with Mother Goose and the growth of his mind may be traced through Grimms' "Fairy Tales," "Robinson Crusoe" and Oliver Optic's series, through tales of adventure and impossible feats in hunting and fishing, to his first novel, which is likely to be one of James Fenimore Cooper's, dealing with the Indian character.

Indian stories have a great fascination for boys, and as they nearly always relate, in stirring words, to some period of the early history of our country, a double purpose is served by this kind of reading—amusement and information.

When boys have reached this period of mind-growth, they are very likely to read in the line of their studies, or to take up general reading, so that the boy's library

becomes a man's library very soon; but there are few men who do not cherish the memories that cluster around their early reading—the unquestioning faith of childhood, which believed in "Jack, the Giant Killer," and revelled in the thought of some time possessing a magic ring, or an Aladdin's lamp of their own. These books, however, dog-eared and thumb-worn, are always found on the dusty upper shelf, preserved for some hour of "looking backward," when a "really, truly" library seemed something quite unattainable to them.

In fact, the boy who is a man today, had few juvenile books to choose from, and returned again and again to his beloved "Robinson Crusoe," never missing the thrill of delight with which he first read its pages.

Now, boys' books are numerous, and some of them full of character and strength. Our best authors have discovered that "the boy makes the man," and that good reading is a strong factor in building up a clean and healthy manhood.

Books Received: Will be Reviewed Next Month.

"Ward Hill at Weston." "Little Beasts of Field and Wood." "Boys and Girls of the Philippines and Around the World." "The Iron Star." "Fenno's Elocution." "Commencement Parts." "A Ten Weeks' Course of Studying Elocution." "The Young Puritans in Captivity." "1779." "Little King Richard." "Wallow Castle." "Sunday Reading for the Young."

Ignorance of Boys Respecting the Bible.

Several years ago a college president determined to gather evidence as to what the boys in his college knew of the Bible. There were thirty-four men in the Freshman class. The president wrote on the blackboard twenty-two extracts from Tennyson, each of these having an allusion to some scriptural scene or truth. Each man was provided with paper and was asked to explain each allusion. We shall not quote all

of the selections. Here are a few of them:

"A Heart as Rough as Esau's Hand"—"Godiva."
"Ruth Amid the Fields of Corn"—"Aymer's Field."
"As Manna on My Wilderness"—"Supposed Confessions."

"Stiff as Lot's Wife"—"The Princess."

The young men were of about twenty years of age and born in the northern part of Ohio. They were sons of lawyers, preachers, teachers, merchants and farmers. Every one except one was affiliated with some church. Nine were Congregationalists, nine Presbyterians, five Methodists, three Baptists, two Reformed Church, one Free Baptist, one Unitarian, one Roman Catholic. Eleven failed to apprehend the "Manna on My Wilderness." Sixteen were ignorant of the significance of "Striking the Rock." Sixteen knew nothing about the "Wrestling of Jacob and the Angel." Thirty-two had never heard of the "Shadow Turning Back on the Dial for Hezekiah's Lengthening Life." Twenty-six were ignorant of "Joshua's Moon." Nineteen failed to indicate the peculiar condition of "Esau's Hand." Twenty-two were unable to explain the allusion to "Baal." Nineteen had apparently never read about "Ruth." Eighteen failed to indicate the meaning of "Pharaoh's Darkness." Twenty-eight stumbled on "Jonah's Gourd." Nine only were able to explain the allusion to "Lot's Wife," and so on.

The simple inference to be derived from this investigation is that the knowledge of the Bible as literature is exceedingly meager among people whose knowledge is supposed to be the most ample.

3,943 Cadets.

The United States military academy at West Point was founded in 1802. It has graduated 3,943 cadets. Of these, 2,010 are dead, 1,932 living. There are now in the army (on the active and retired lists) 1,582 graduates; in civil life, therefore, 350 living graduates. These numbers are derived from actual counts recently made by the treasurer of the trustees of the will of Gen. Cullom.

THE BOY JOURNALIST AND PRINTER.

THOMAS MCKEE, BUTLER, PA.,
SEC'Y UNITED AMATEUR PRESS ASSOCIATION.

The United Amateur Press Association.

This is the younger of the two leading amateur press associations, and its members seem to be, in the main, younger than those of the National Amateur Press Association, but it has a larger number of members, the total being about four hundred, we are informed. The last annual convention was held in New York City and was a most enthusiastic one. The officers elected were:

- President—Samuel DeHayn, 1732 S. 17th street, Philadelphia, Pa.
- Vice-president—Guy N. Phillips, Morning Side, Sioux City, Iowa.
- Secretary—Thomas McKee, 110 S. Washington street, Butler, Pa.
- Treasurer—Walter B. Littlefield, 88 Hooper street, Brooklyn, N. Y.

Official Editor—James A. Clerkin, 563 Jersey avenue, Jersey City, N. J.

Historian—Earle W. Topping, 303 Norfolk street, Dorchester, Mass.

Eastern MSS. Manager—Harris Reed, Jr., 1831 N. Park avenue, Philadelphia, Pa.

Western MSS. Manager—O. J. Lafanchi, Reclamation, Cal.

Laureate Recorder—George J. Houtain, 282 Putman avenue, Brooklyn, N. Y.

Directors—James C. Bresnahan, chairman, Washington and Bay streets, Jersey City, N. J.; Charles W. Heins, Edwin Harley Smith.

Official Organ—Little Star, Mankato, Minnesota.

We take pleasure in giving herewith a portrait of Thomas McKee, the secretary; and we will give portraits of the other officers and other prominent members later.

OBJECTS.

The objects of the association, as stated in Article II. of the Constitution, are: First, to unite fraternally all amateur journalists; second, to advance the cause of amateur journalism; third, to enable members to place before the public their literary productions; fourth, to instruct members in literary work; fifth, encourage the formation of local press clubs.

ELIGIBILITY AND ADVANTAGES.

Any person residing in the United States or Canada who edits or contributes prose or poetry to an amateur paper is eligible to membership, and the privileges of members are the use of the Manuscript Bureau, and the columns of papers connected with the association; a subscription to the official organ free; attendance at conventions; proxy repre-

sentation at elections, and laureate competitions.

The Manuscript Bureau receives manuscripts from members, revises them if necessary, and endeavors to secure their publication. There is an eastern and a western manuscript manager, the incumbents being elected, of course, from the members of the association. The work of this bureau is, of course, instructive.

The association also has a system of laureateships, or honors, which are awarded each year. The entries for the laureateships shall be editorials, essays, poems and stories, entries being published in an amateur paper and headed "Entered for the U. A. P. A. Laureateship," and a marked copy is sent to the laureate recorder. The judges award the certificates Laureate and Honorable Mention to the best and next most deserving contributions in each class.

One of the papers published by the members of the association is elected the official organ each year, and the official editor of the association conducts the department and approves all the official manuscript before publication therein.

The present official organ is the "Little Star," published at Mankato, Minn., by Ed. B. Howe.

Letter from President De Hayn.

The editors of THE AMERICAN BOY are just in receipt of a letter from President DeHayn, in which he says:

"On behalf of the board of officers and members of the United Amateur Press Association, I desire to express their appreciation and approbation of the inter-

est you have taken in amateur journalism by establishing a department devoted exclusively to this instructive hobby, if it may be so termed. I assure you, gentlemen, that your paper will ever be a welcome visitor, and anything that I, personally, may be able to do to further the interest already taken in your department I shall be only too happy to do, as I candidly believe your amateur journalism department will fill a long felt want. I further believe that it will do more to awaken the younger class to the true value of amateur journalism than anything else that could be done.

"The United Amateur Press Association is an organization composed of nearly four hundred active members at the present time. It will hold its fourth annual convention in Boston next July, and I feel safe in saying that that it is not only the largest and greatest amateur press association in existence today, but it is the strongest financially."

A Boy Cartoonist.

Harry Hohnhorst is one of the youngest artists engaged in newspaper work. Although only sixteen years of age, he has been connected with the art department of the Cleveland, Ohio, Plain Dealer for nearly two years, and has rapidly developed talent along the somewhat circumscribed lines of newspaper work. He has received no regular instruction in the principles of art, yet his cartoon work is excellent, and his talent for mimicry is shown in many admirable sketches. The young man's friends are confident that he has a bright artistic future before him.

Amateur Journalism; Its Followers.

By PHILIP F. McCORD.

Editor of "Boyishness," East Liverpool, Ohio.

Not until very recently has amateur journalism received any recognition from the professional press, and then only from papers inferior in true literary worth to the general standard of the amateur papers themselves. For this reason all amateurism is greatly encouraged by the interest taken in us by the publishers of THE AMERICAN BOY, and the manner in which that interest is manifested.

Though the first amateur paper appeared in 1812, this hobby has not had any widespread popularity until recent years.

One singular fact is that Philadelphia has always been the center of interest, instead of Boston, which place would naturally be expected to take the lead in a pursuit of this kind. About thirty years ago several well gotten up little papers abounded in the "City of Brotherly Love"—an uncle of mine having editorial charge of one—while even now, "The Hub" has not a single advocate in the field, although a so-called amateur press club exists there.

PHILIP F. McCORD, EAST LIVERPOOL, OHIO.
SECRETARY EASTERN AMATEUR JOURNALISTS' CLUB.

Interest in amateur journalism is not limited to our country. Indeed, it is fast becoming international. One paper is even published in Australia, while both England and Scotland have amateur press associations of their own.

But, of course, the progressive youth of our great nation lead in this as well as most other original ideas, there being probably as many as twenty-five more or less prosperous associations and clubs composed of amateur workers in this country. Approximately, a hundred papers are brought out by them, containing quite a variety of strictly amateur productions.

VARIETY OF PAPERS.

As with the professional press, we have all kinds of papers and compositions, some even bordering on yellow journalism; while others aspire to something far better and well merit the title of high literature.

Among the papers controlled by the better class and deserving especial mention are: "The Interpolitan Magazine," containing many gems of deep thought in every number; "Laurel Leaves," a dainty little paper published by a Massachusetts boy; and "The Patriot," almost exclusively devoted to editorials and poetry, while an Ohio paper, "The Dewey," supported by the majority of amateurs, has lately opened a crusade against some dime novelists who have been wielding an influence over certain of our amateur writers.

SOME PROMINENT AMATEURS

At the time of my entering the amateur ranks, A. J. did not receive the support that it does today, nor was the literary standard as high then. The most finished amateur writers of the present time were then making their initial attempts. Blomgren, with his words of many syllables; Wilson, with his abrupt sarcasm; Greenfield, with his clear descriptions; Burba, with his clean, healthy humor, and Tipton, whose editorial pen is no longer active, were then

the mainstays of the best papers. Anderson, Hurd, Murphy, Ogden and Wehking were almost unknown. None of these interesting writers would have developed their talent had amateur journalism not claimed their leisure hours, and every boy should consider it a duty to improve himself while he has the time.

A PASTIME, BUT SOMETHING MORE.

When entering any pursuit that requires time, even the boy of this enlightened age generally thinks of the financial gain before mental improvement. If this were reversed, the result would be extremely gratifying to all true supporters of amateur journalism.

Amateur journalism is not merely a pastime, but a splendid educational institution, as well. In order to write with a thorough understanding of the subject, it is necessary to do considerable reading in connection. It is not to be supposed that anyone can write intelligently on events in ancient history without posting himself beforehand; and, likewise, one could hardly attempt a story on life in Peru without some previous knowledge of that country and its people.

VALUE OF EXPERIENCE

Then, again, the writing of your thoughts in shape to be read by others is sure to concentrate them in your own mind. Should your article never appear in print, nor have any literary value whatever, it has fully repaid the effort taken to produce it. No diligent writer who endeavors to improve himself ever regrets the time spent on declined manuscripts. If your work is accepted later on, it only shows that you are becoming a better writer. "Practice makes perfect."

Another inducement is the acquaintanceship through correspondence that all amateurs make with others of like tastes. Any boy with a literary tendency is invariably one whose general character is above the average.

To any reader who desires to develop his mind and still hesitates to enter our ranks my advice is simply, investigate. THE AMERICAN BOY would hardly give this much valuable space to anything that does not deserve encouragement, and would not prove of some benefit to its many readers, which goes to show that you should be, as I am, an amateur journalistic enthusiast.

Notes.

Ed. B. Howe, editor of the "Little Star," the official organ of the United Amateur Press Association, published at Mankato, Minn., calls attention to the fact that the most exciting question now under discussion in the various amateur papers is the reading of dime novel stories, as they are termed—stories of half-breadth escapes, Indian fights, and the feats of detectives. Some of the amateur papers, we regret to note, are in favor of the reading of such literature by boys. Their arguments, however, are very poor. That such stories are exciting, especially to boys who are young enough to believe what they are reading, cannot be denied; but they are mere pluckings from the literary trash heap, containing much that is untrue and misleading, and nothing that is good, elevating or improving. It is a waste of time to read them. They are usually written in very bad English, and contain much vulgarity; and we regret to know that any of the bright and ambitious boys of amateur journalism would even read such stories, much less commend them to others. The so-called heroes of such stories are by no means heroes worthy of emulation or consideration.

The November issue of "The Cobweb," Plainwell, Mich., while a good-sized paper, is very largely made up of plate-matter, i. e., matter furnished by professional news associations in the form of plates ready for printing. While such matter may be very interesting, it is certainly out of place in an amateur paper, which should contain only matter written by the editor and other amateurs. If such a paper is made up of plate-matter, or matter clipped from professional publications, it is not doing the work that amateur papers are intended to do, and it is not serving the interests of amateur journalism.

The December number of the "National Amateur," the official organ of the National Amateur Press Association, is a very creditable number. Mr. W. J. Brodie, the official editor, is getting out a paper that the association should be proud of.

Amateur journalism has had a national organization in England, Scotland and Australia for years. France, too, has a vast number of amateur papers, and they maintain a high literary standard, but there is no national organization in that country. South Africa, Portugal, Russia, the West Indies, Central America, and other countries have a few amateurs, but investigation and recruiting are retarded by the language differences. The associations in this country and in England maintain friendly relations, and in 1895 Edwin Hadley Smith, of New York, attended the British convention at Manchester, Eng., and in 1898 ex-President Pearce, of the British Association, visited New York and attended the annual convention of the N. A. P. A.

One of the most enthusiastic amateur journalists in the country is Edwin Hadley Smith, of 130 West St., New York City. Mr. Smith has, it is said, the largest and most complete collection of amateur papers in the world. This collection now numbers eight thousand separate issues, dating back to 1866, embracing papers published in America, England, Canada, Scotland, Australia, France, Austria, South Africa and Portugal. They are also classified and arranged so that he can at a moment's notice lay his hands on any paper wanted. The collection is so valuable that it has to be kept in a fire-proof building. Hundreds of the papers in this collection cannot possibly be duplicated.

A. H. KRAUS, MILWAUKEE, WIS.

A. H. Kraus, 1721 Chestnut St., Milwaukee, is a wide-awake and ambitious amateur journalist. Apparently, he is what might be termed an "all-around" amateur newspaper man. His letter-head bears the title "Maker of Publicity." He has himself been the printer of the amateur papers with which he has been connected, the first of which was named "The Monthly News." The first number was issued in December, 1896; it was four pages, printed on pink paper, each page being 2x3 inches in dimensions, and the news which it contained was all in the form of advertisements. If paid for at proper rates, this doubtless was more profitable to the publisher than the printing of reading matter; but we would imagine that the advertisements would lose their interest to the reader if there were not some literary matter to give spice and variety to the paper. Later, Mr. Kraus became business manager of the "Amateur Penman," which was published for eight months during 1898, and was a very creditable publication. Beginning with Jan. 1st, he will be the editor of "The Pneumatic." Mr. Kraus is a great believer in advertising, and thinks boys should make a study of this great feature of modern commerce—and boys certainly might do so to their advantage. If they go into business for themselves, they will have to advertise to become successful; and the business of writing advertisements affords very profitable employment for many men nowadays.

"The Neighbors' Journal," published by Rex G. Mattice, 765 Williams avenue, Detroit, made its first appearance on December 1st. The publisher fails to tell us how often "The Neighbors' Journal" will visit its subscribers, but as the price is 2 cents per copy or 20 cents per

year, we judge it is intended to be a monthly. It has four pages of ordinary magazine size, two columns to the page. A page and a half are filled with miscellaneous matter from the pen of the editor, and a little over a column with neighborhood news notes. One column is also made up of plate-matter, which, while well selected, was probably some left-over stock in the printing office which did the mechanical work on the paper. We would urge the editor to either prepare more original matter, or cut down the size of his pages, rather than use plate-matter.

"The American Gem," published at 7805 Ivory avenue, St. Louis, Mo., is, so far as its contents are concerned, one of the most enterprising and pretentious amateur publications that we have received. Each issue contains one or two short stories; some poems, an essay; an installment of a continued story, and from one to three pages of editorial matter. The editorial paragraphs are excellently written. The editor is Charles A. Wendemuth, of St. Louis; the associate editor, Wm. R. Murphy, 1344 Park avenue, Philadelphia. The paper contains twelve pages and is a fine example of what an amateur publication can be in a literary sense. Its enterprise is shown by the fact that it has conducted a short-story prize contest, \$10 having been given as the first prize, and \$5 as the second. The prize winners were James E. Burke, of Kansas City, Mo., and Harry V. Van Demark, of Webster, Tex. In an editorial announcing the closing of the contest, we are assured that the winners have each received their money—something that does not always happen in prize contests.

Professional Representation.

Since the days of Oliver Optic's Magazine, amateur journalism has never been well represented in the professional boys' paper. It is true, there have been departments devoted to junior journalism in certain publications, but, with one exception, these publications have not been circulated among a class of boys likely to become the most desirable kind of recruits. That regular representation in a high-class professional boy's paper or magazine would be of inestimable advantage to amateur journalism needs no argument, and it has long been the hope of the editor of the National Amateur that some day he should see a department of this kind in such a publication as the Youth's Companion or St. Nicholas. The remembrance of a single article on amateur journalism, once published in St. Nicholas, has come down to the present day; indeed, there are some still with us who date their first knowledge of amateur journalism from this same article, which was written by Mr. Harlan H. Ballard, and was published in St. Nicholas for July, 1882.

We feel that professional representation would mean very much for the future of amateur journalism, and it is therefore a great pleasure to announce that Detroit, Michigan, has just sent out the opening number of a large, clean monthly magazine, one of the regular features of which is to be a department devoted to amateur journalism and amateur printing. The name of the magazine is THE AMERICAN BOY, and the opening number is very interesting and well calculated to be very attractive to the wide-awake, pushing American youth. If it secures a foothold in the already crowded literary field of today,—and we are inclined to believe it will, as it is distinctive and original in many of its features, seeking to create a new field for itself rather than to ask an entrance into the one already so thoroughly covered,—amateur journalism will, with it, reap a rich reward.

It is therefore the duty of the amateur journalist of the present day, as well as for his own interest, to support this new magazine, not only by sending in his own subscription, but also by showing it to his friends and inducing them to subscribe. The subscription price is \$1.00 per annum, and a letter addressed to THE AMERICAN BOY, Majestic building, Detroit, Mich., will undoubtedly bring a sample copy.—The National Amateur.

THE BOY PHOTOGRAPHER

Edited by JEDSON GRENNELL.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize each month, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and one dollar will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

The Two Dollar prize in December was won by George Plarr, Philadelphia. A second prize (\$1.00) was awarded to Clarence Corp, Corfu, N. Y.

Cloud Effects and "Moonlight Pictures."

A photograph of a landscape showing no clouds has been described by some witty person as a "baldheaded picture." This nickname is especially applicable where the sky line is not broken by any intervening object, as a tree, a high hill, or a building. To get rid of this "baldheadedness" it has become the fad of some to expose no plates excepting on days when the sky is full of cloud banks, with intervening blue between.

It is certainly true that a landscape view is enhanced in beauty and value by showing clouds in the sky. It takes away that weary monotony which, whether in foreground or elsewhere, is not desirable. This is the reason why clouds are much sought after, and the more pronounced they are the more happy is the amateur photographer.

It will be found, however, in some sections of our broad country—and especially in this true of the lower peninsula of Michigan—that good cloud days are few and far between, so that, if landscape views are to be taken only when the sky is propitious in this respect, the views obtained will be as "scarce as hens' teeth"—though not quite.

There is a way to get around this tendency of the weather man to prevent the amateur photographer getting clouds in his pictures. This is by having handy several "cloud negatives," which he can use to suit his convenience. To obtain these negatives all it is necessary to do is, on some favorable day, to point the camera at the clouds alone, making quick exposures and using small "stops."

After printing the "baldheaded" negative, cover the landscape part of the print with a piece of black or red paper, being sure that the sky line is accurately fitted. Then put this print into the printing frame with the cloud negative and print the clouds to any depth desired. In this way real clouds may be made to adorn an otherwise cloudless photograph.

When combining two negatives on one print, care must be taken to have the clouds somewhat in harmony with the scene; for it will never do to show heavy clouds on a picture which indicates by the shadows that the sun is brightly shining.

"Moonlight views" are somewhat in the nature of deceptions. These pictures are generally taken on bright but not cloudless days, with the camera pointed toward the sun. The result is that all objects in the field of vision are thrown into relief, much as they look on a bright, moonlight night.

Such pictures are especially effective in marine views, and if an old, dilapidated boat can be brought into the foreground, it will please romantically inclined people. Another beautiful effect is to show the reflection of the sun on lake or ocean when a breeze has rippled the surface of the water. With such a scene printed very dark, only those who are up to the

CLOUD EFFECT. PHOTO W. E. WINKLER.

"tricks of the trade" but will think that it is really a picture taken by moonlight.

For all views with cloud effects, the better plates give the best results. By enquiring at the photographic supply houses for "orthochromatic" or "isochromatic" plates the desired kind can be obtained. These are flowed with an emulsion which gives what is called "color values." They do not make the reds, yellows and greens come out black, nor do the blues print up pure white. The gradations add materially to the beauty of the completed photograph.

Photographic Notes.

Some of the queer names used for photographic papers and developers are Azo, Kloro, Aristo, Cyko, Dekko, Nox, Pyro and Eiko.

A sharp focus is often an objection in a portrait, as destroying the roundness of the face; but amateurs are recommended not to try for such effects, at the beginning of their photographic careers.

To accurately make solutions of the proper strength, hydrometers are necessary. The cost is about 40 cents.

It is said that a photograph colored is a photograph spoiled, but this is not always true. Those who want to experiment in colors can get a box of tints from any supply house for 25 cents, and if they are handy with their fingers, and have a fair notion of blending colors, considerable satisfaction will be obtained from the labor.

Photographers say that glossy prints will soon be the fashion again. Now everything runs to the dull finish, with sombre colored frames.

Do not attempt to take pictures of the interior of military fortifications, as nearly all governments have forbidden it.

If the amateur will occasionally wipe out the inside of the bellows of his camera with a damp rag or sponge, it will

help to lessen the number of pinholes in his negatives, which are mainly caused by dust settling on the plates.

Yellow stained negatives are sometimes good "printers," and when such is the fact, better leave them alone in their yellowness.

When there is no necessity for hurry, it is well to wait and get a few exposed plates on hand before developing. Then if something is wrong with the developer the difficulty can be remedied while it is fresh in mind.

A Handy Focusing Cloth.

There is no necessity of going to any considerable expense in procuring a focusing cloth. The velvet fabrics so often seen are nice, but they are expensive, thick and clumsy. Rubber cloth has the advantage of enabling one to wrap the camera in it, should it rain, or in the absence of a case. But a yard of black cotton cloth answers every purpose, is light, cheap, and can be carried in the front of the camera along with the lens. If necessary it may be put in the pocket, taking up very little more room than a handkerchief.

15 Photos for 15 Cents. Send cabinet photo and 15c. with your address for 15 Royal Aristo Copies. Cabinet returned with photos. Refer to local banks or business houses. W. E. SERVICE, Photographer, Bridgeton, New Jersey.

crowded. With such a lens a picture of a tall building can be obtained from across the street, or of three corners of a room. Any photographic supply house will give you a catalogue of prices of different makes.

Wm. T. Coulter—The plates you exposed on the seashore on a bright day should have been developed with a solution having plenty of bromide. Light on the water is always intense. A good plan is to begin the manipulation of such exposed plates with old developer. The same advice applies to "snow" pictures.

Horace Walker—"Ray filters" cost from \$1 to \$5, according to make and size. They have their uses, but it is well for the beginner to defer buying one until thoroughly familiar with the capacity of his camera.

Cyrus Williams—You were lucky in getting good pictures from snap shots taken in the woods, but the prints you send show that these particular ones were taken on the edge of the woods, which is a different thing.

Albert J. Watson—The expense of taking pictures depends on the number of failures. If no mistakes are made, and every plate counts, ten cents will cover the cost of plate, developing, printing, toning and mounting of a 4x5 picture. But suppose you average three or four failures to each picture really worth having?

Carl Vorce—Go to your village photographer and ask him how "retouching" is done. You will find it is quite an art.

Alexander Jones—"Pyro," which is short for pyrogallie acid, is one of the best developing agents, but its chief objection for amateurs is that it stains the hands, and is not quite so quick or penetrating as metol, for example. Probably more plates are developed with pyro than with any other developing agent.

Jules du Pont—A well made plate, kept in a cool, dry place, need not be developed for several months after it has been exposed; so you can take your camera to Florida, make your exposures, and do your developing after returning home.

George Greene—The density of your negative may have been caused by having the developer too strong. Try diluting it with an ounce of water to three ounces of the fluid.

Using the Home-Made Camera.

Green Ridge, Man., Nov. 18th, '99.
Dear Sir—Your paper is a good one, a very good one. It has everything that interests a boy. I am very pleased with it. Believe me, I feel a better boy from it.

Dear sir, I was reading the page on photography, and made a small camera from a cigar box, but do not know how to use it. Will you kindly tell me how to arrange the plate and articles preparatory to taking a picture?

I remain,
Yours truly,
ROBT. LOWE,
Green Ridge, Man.

Take your camera and box of plates into your darkroom. Any light-proof closet will answer for this purpose, if you have a ruby light. Open the box, take out a plate, and place it on the inside of the back of the camera. Close the camera tightly, keeping a finger or something else over the pinhole into which the light is to come to produce the picture. Place the camera in front of the scene desired to be reproduced, remove whatever stops the light from entering through the pinhole, and expose anywhere from five to thirty seconds or longer, according to the light and the distance from the object being photographed. If it is a picture of an interior, the chances are that the exposure should be for several minutes. The plate is then developed as usual.

Fine pictures have been obtained with home-made pinhole cameras, but it really takes more skill and experience to work them than it does cameras with lenses. Unless one is something of a mechanic, a home-made camera will be found a delusion and a snare; but where there is a natural faculty of putting things together "shipshape" there can be no greater pleasure than skillfully manipulating wood, leather and various other materials into useful and ornamental shapes.

Pictures of Landscapes.

While it is generally represented that landscape photography is the simplest branch of the art of taking pictures, yet no one should let the idea run away with them that there is no judgment to be exercised in choosing the time and place. For some views the morning is the best time to make the exposure; for others the afternoon will give the best results; while not a few views are most pleasing when the sun is high in the heavens. To satisfy one on this point it is a good idea for the amateur to select what he considers a good view, and then make several exposures at different times of the day. After being developed and printed, comparison will quickly demonstrate the necessity of using care in selecting both the point of view and the hour.

Taking Flashlight Photos.

Several correspondents want to know about how to use flashlights in a way that will prevent the "ghastly" looks that spoil so many flashlight pictures. The requests have come too late for this issue, but will be treated of in an early number.

Answers to Correspondents.

George Fuller—A reversible back is handy, but hardly necessary in hand cameras. Its object is to save the trouble of taking the camera off the tripod when an upright picture is wanted, instead of one running the longest way of the plate. Reversible backs are made by having the frame carrying the focusing screen so arranged as to be easily separated from the back itself, and then reversing its position. Its chief defects is that it enlarges the camera without enabling the photographer to take a larger picture.

Lewis Lockwood—Wide angle lenses are really necessary where quarters are

Boys in the Animal Kingdom

A SNAP AT THE PHILADELPHIA ZOO.

By GEO. PLARR, PHILADELPHIA. First Prize Amateur Photo.

A Bird of Nine Colors.

The most variegated bird in the world has been discovered in India. No less than nine different colors may be seen on its plumage. It has long legs, short tail and plump body, looking somewhat like a thrush. The bird is light brown, with black stripes on the upper part of its body. The head and sides of the neck are black, while a white line passes over the eyes, forming a kind of eyebrow. The throat and a part of the back are also white. On the under side the body is a yellowish brown with a greenish tinge. The tail and under parts of the wings are bright scarlet. The tops of the wings are bluish green, while the long wing feathers are a pale blue. The tips of the shoulders have spots of azure blue, and the pinions are black.

The Dog Came Back.

A short time ago a sheep dog named Rover, owned by a person at Robin Hood's bay, near Whitby, England, was sent by train to Liverpool and from there was removed to Egremont, where it was housed in the back yard of a residence. The following morning the dog had disappeared, and notices which were distributed about the district elicited no response. Rover, however, arrived in a week or so at Robin Hood's bay, weary and lame, and bearing unmistakable appearance of having had a long journey. The dog had jumped a high wall in order to escape and afterward crossed the Mersey, and subsequently traveled 170 miles in order to reach his destination.

An Affectionate Mother.

Some sailors caught a young seal near Anticapa Island, Cal., recently and took it on board ship. As the ship started home the mother seal followed, howling piteously. The little captive seal barked responsively. After reaching the wharf, the captive was tied up in a jute sack and left loose on the dock. When the ship came to anchor the seal responded to its mother's call, all tied up as it was in a sack. The mother seized the sack, and with her sharp teeth tore it open. She had followed the boat 80 miles.

Our Animal Protective League.

A society known as "Our Animal Protective League" has been organized in New York State, with principal office in New York City. The object of the society is to educate children in the care, protection, and kindly treatment of animals, to educate public opinion in the same direction, and to raise the standard of driving among drivers and farmers' clubs.

Some Stories Showing How Surgeons Operate on Animals.

Some time ago, in New York, Nero, the star lion in one of the shows, sustained a fracture of the right hind leg, an angry lioness having bitten him there. He was worth big money and it was determined to try and save his life by setting the leg. The first difficulty was to get him under the influence of some anesthetic, and he was at length induced to swallow a piece of meat on which morphia and antroprine were sprinkled. An hour elapsed before the potion took sufficient effect, and then he was bound to a table by stout robes. The broken leg was extended and the bones joined, and then it was bound up tightly with wood splints, over which a plaster of paris

cast was made. The operation lasted two hours, but it saved Nero's leg.

A still more singular piece of surgery was the operation performed on a fine male tiger in the Public Gardens, of Tre-vandrum, Bombay. The animal's claws were growing into his flesh, and one night, maddened by the pain, he pulled one of the claws out by the roots, leaving an ugly sore. He was put into a transport cage, in which a false roof, padded beneath with sacks, had been hung, and at a given signal twelve men forced down the false roof with iron bars. In this way the tiger was made absolutely helpless, and his paws were easily drawn through the opened bars. The leg to be operated on was noosed and fastened to a bar, and with a pair of clippers the offending claws were soon pulled out.

Some of them had grown nearly an inch into the flesh, but the worst wound was that made by the tiger himself when he pulled out one of his claws. There the bone was exposed, and a hole three inches long was seen, from which 100 maggots were taken. Indeed, when this was found, it was almost decided to shoot the poor brute, but the wound was dressed with antiseptics, and it was agreed to wait. Next day he was all right, and the other claws were treated, and every day for six weeks the injured limbs were dressed with antiseptic dressing, till at the end of that time he was quite cured and was restored to his run.

Caliph, the hippo in Central Park, was sick, and it was decided to give him a dose of medicine. Nine men held him with ropes, while three pills about the size of tennis balls were forced down his throat with a stick. They contained 2,340 grains of aloes and 40 drops of croton oil, mixed with linseed oil and ginger. Caliph did not like the treatment, but next day he was a better hippo. When an elephant takes physic it is given him by the gallon and one elephant which had influenza was dosed with ten gallons of whisky. But the elephant which had a toothache stopped has a much better claim to notice. He was in the Paris Zoo and gradually became a prey to melancholy.

Day after day he sat rubbing his jaw on the ground and his keeper said he had toothache. A surgeon came and found that one of his teeth was sadly decayed, and that it must be filled or extracted. It was decided to fill the molar. The risk lay in the possibility that in some spasm of pain during the operation the elephant might turn on his benefactor and kill him. But he seemed to realize what was being done for him, and he remained quite still during the hammering and filling, till at last he emerged a curiosity among his tribe. Ever after he was the dentist's good friend.

A bold man once pulled two teeth from the head of a lion while the animal was only strapped to a table. His roars were terrible to hear, but both the decayed teeth were got out without accident, and the lion showed his gratitude to the man who had done him this service by many signs of good will.

In the London Zoo the doctor has attended more elephants than any other animals, but at one time he has been in attendance on a brown bear suffering from hemorrhage of the stomach, a stork with a broken leg, a wolf which had bitten its tongue in half and had nearly bled to death, and a lot of monkeys in various stages of asthma and consumption. The stork's leg was put in splints, the wolf's tongue was stitched, but the bear would not take his syrup and little could be done for him.

Prize Anecdote About Animals.

We own a large and handsome cat, whose name is Paul. Like most other cats, he is afraid of dogs, but somehow or other he made friends with a large, brown dog named Jack, who lived just across the street. One day as Paul sat quietly on the lawn washing himself a dog which was running by happened to see him, and at once made a dash for him. Paul started for the nearest tree, but the dog gained on him at every step, and was just going to grab him by the back, when Jack, who was over in his own yard, came to the rescue. He came bounding across the street, and jumped on the dog and held him down by main strength until he saw that Paul had gained shelter in the nearest tree, then gave him a shake and walked quietly home.

Drivers Often Impart Fear to Their Horses.

One morning a big, muscular groom said to his employer: "I can't exercise that horse any more. He will bolt and run at anything he sees." The owner, a small man and ill at the time, asked that the horse be hooked up. Stepping into the carriage he drove a couple of miles, and then asked the groom please to station along the road such objects as the horse was afraid of. This was done, and the horse was driven by them quietly, back and forth, with loose lines slapping on his back. The whole secret was in a voice that inspired confidence. The man had been frightened at everything he saw that he supposed the horse would fear. The fear went to the horse like an electric message. Then came a punishing pull of the lines, with jerking and the whip. Talk to your horse as to your sweetheart.

Spiders Are Gluttons.

A scientist who carefully noted a spider's consumption of food during 24 hours, concluded that if the spider was built on the human scale he would eat at 6 o'clock a small alligator, at 7 a lamb, at 9 a young camelopard, at 1 a sheep, and at supper would take a lark-ple in which are ten birds.

The Home Aquarium.

PART II.

We were heart-broken for several days after the depopulation of our aquarium, and could not bear to look at the lonely stone arch, and the wicked, poisonous vine which had robbed us of our bright-eyed, graceful pets, but one morning our mother said:

"Get your aquarium ready, boys, and we will see what we can do with it."

We went to work and soon, by means of a siphon, had emptied and refilled the transparent glass box, taking care to remove all traces of the Madeira vine and then eagerly demanded: "What next?"

"Get your little tin palls from the pantry, and we will see what we can find for them," said mother, as she tied on her garden hat.

"I know," said Lettie, our little five year old, "S'es doin to det some poly-widdles."

"Hush, baby," said our mother, with finger on lip, and the little mouth was shut close, and locked by the tiny fingertips.

"She thinks she's keeping a secret now," said mamma, laughing.

We went down to the "brook" and looked about for some time before we found a little, quiet pool where there were hundreds of little wiggling things that seemed to be all head, with just a tiny fin-like tail that acted as a rudder to propel them through the water. We could not see any eyes or mouth. We soon had a number of the little things, and on our way home, passing a deserted rain trough, we scooped up some little black wigglers, not at all like the others in shape, but smaller and thinner.

We put them all in the aquarium, and Tom said in a disappointed tone:

"I don't care about these, they aren't half nor quarter as pretty as the fishes."

"No," said mamma, "we didn't get them for that, just wait a day or two."

"Shall we feed them, Mamma?"

"No, just watch them."

It would be impossible to tell how many times we turned away disappointed from that aquarium and the aimless lither and thither movements of the little black specks in the water.

Ned, who had been curiously watching them through a magnifying glass, one

LOOK OUT FOR TABBY IN A NEW DRESS NEXT MONTH.

all swelled up, and has some queer white spots on him, where his mouth ought to be, and on his side. By the way, Mamma, how do they breathe without any mouths?"

"You know how fishes breathe, through their gills, don't you? Well, these little day suddenly exclaimed:

"Here's one that looks sick; he seems things have internal gills, at least, it is supposed so, for they are not visible on the outside."

"What all this little fellow, anyway? He's getting worse."

"He is beginning to develop. Now watch."

A few hours later we heard a cry of "O, come quick!" and hastening to the aquarium we found Tom in a great state of excitement. The sick tadpole had burst the white skin, a little leg protruded helplessly from the aperture, and the swelled jaw looked as if he might have the tooth-ache, only the skin had the same stretched appearance that preceded the advent of the solitary leg.

We boys could hardly go to bed for fear that something would happen which we did not see. Bright and early we were on hand, and with exclamations of surprise and delight we found that another leg had appeared, one eye was half open, and the swelled mouth had split open like the mouth of a fish. Altogether he was a very disreputable looking fellow, with a leer like a circus clown. Some of the others were in process of transformation, and we were constantly looking for new developments.

"Look!" shrieked Tom, in irrepressible excitement, "where has the tad's tail gone?" and sure enough, the little propeller had almost disappeared. Just then our mother came in and on seeing this last change said:

"Oh, yes, boys, you must get a bog or a flat stone, right away, for the new frog to sit on. He can now no longer live entirely under the water, for he has lost

his tail, and has no fins to protect his breathing apparatus. He can dive in the water, but must come up to breathe."

We soon had quite a school of small frogs looking as unlike as possible to the queer little tadpoles we had brought from the brook in our pails. We did not know how to feed the blinking creatures, unless we waged war among the flies, and this we did not feel inclined to do, so we took them back to the brook, where there were plenty of bogs and stones.

We then turned our attention to the wigglers or polywogs; but we could not surprise them in their transitive state. This seemed always to take place at night, and then the mosquitoes grew thicker, so that in self defense we disposed of the whole brood of wingless creatures, before they had time to cultivate their harmless selves into instruments of torture.

Our aquarium was again desolate, but we had enjoyed beyond measure the lesson taught us of the wonderful developments of animal life.

"What next, Mamma?" said Ned, and three pairs of eager eyes watched the mother's smiling face, as she said:

"Not tired yet? Well, wait a few days and we will see."

(To be Continued.)

A Complaint.

(SEQUEL TO THE AQUARIUM STORY.)

"We collected tadpoles in our little tin pails, put them in the aquarium and saw them develop into frogs. . . . When they are fully developed they can no longer swim, but have to be supplied with a bog."

When the cool twilight fell Over vale, hill and dell,

I heard a voice say: Do you think it was well, To transform a poor tadpole into a frog, To sit on a bog, Or a slippery log,

And cry to the moon, With a croak and a groan, 'I'm here all alone?'"

When a tadpole, before I was brought to your door, I had plenty of company, Hundreds or more; But now, by myself, I'm laid on the shelf; As cold as a stone To murmur and moan I'm here all alone!

We tadpoles could sail With a swish of the tail And play hide and seek In a brooklet or pail, 'Tis true frogs can jump From a bog to a stump; But 'tis sad, you will own, To sit on a stone And cry to the moon, With a croak and a groan; So when we are tadpoles, Please let us alone!

J. A. L.

Don't Snub.

Don't snub a boy because he wears shabby clothes. When Edison, the inventor of the telephone, first entered Boston, he wore a pair of yellow linen breeches in the depth of winter.

Don't snub a boy because his house is plain and unpretending. Abraham Lincoln's early home was a log cabin.

Don't snub a boy because of the ignorance of his parents. Shakespeare, the world's poet, was the son of a man who was unable to write his own name.

Don't snub a boy because he chooses an humble trade. The author of "Pilgrim's Progress" was a tinker.

Don't snub a boy because of dullness in his lessons. Hogarth, the celebrated painter and engraver, was a stupid boy at his books.

A TEACHER'S VIEWS ON SCHOOL LUNCHEONS.

She Scores Mothers' Conventions for Not Ventilating the Question—Says Improper Food Eaten at Mid-day is Responsible for the Deplorable Nervous Condition so Common to Both Teacher and Pupil—Recommends the French Method.

"I believe," remarked the veteran school principal, "that the basis of most of the breakdowns on the part of both teachers and pupils is the luncheon question. What do you suppose causes the general collapse at the end of the school year which so many teachers regard as inevitable? Improper lunching, you'll find in nine cases out of ten.

"It's preposterous to think a boy of 11 or 12 years of age should become a bundle of nerves with water for blood under a routine of four hours school attendance and practically no work at home. Why do you know when I was a little boy going to a village school, everyone of us children had no end of chores to do around the house besides getting no end of lessons out of school hours, and we went to school at half-past eight and weren't dismissed until four. And did we break down under it? Never heard of such a thing. Even now in Germany and France children work much longer hours at school than they do here and breaking down is unheard of. Again it's the lunching question.

"In the country we either went home and had a hot dinner at noon, or took a wholesome cold lunch and ate it during the noon recess.

"City children are very often given an allowance of 5 or 10 cents a day with which to buy their luncheon. And as a rule they use about as little judgment as their mothers do in giving them the money. You can get a glass of milk and two large rolls for five cents at any of the little bakeshops nearby, but I've yet to hear of a youngster who buys anything so sensible. Cream puffs and ice cream soda are the most popular lunch. Once in a while an unconsciously sensible child lays out his lunch money on the penny chocolate bars of the slot machine. Of course he has a notion that he's indulg-

ing in forbidden candy, but chocolate is really nutritious and sustaining, while there's nothing at all to be said in favor of cream puffs and soda.

"When the children having their luncheons, as a few of them do in paper boxes or wrapped in a newspaper, I am always surprised how few of them have anything appetizing. As a rule they have nothing but thick slices of bread with the crusts on and the butter carelessly spread. The meat is in chunks, and the whole thing anything but tempting. Mothers don't seem to realize the importance of this luncheon question. They think anything will do, and as a result the children are ashamed of their lunch. They go off in a dark corner and gobble it hurriedly, or they throw half of it away. A very little forethought would enable even the busiest mother to have a variety of tasty and inexpensive lunches. It's a lack of appreciation of its importance, that's all.

"But the teachers, after all, are not much more sensible. We were discussing the luncheon problem among ourselves, not long ago, and one young teacher admitted that since school began her luncheon every day had consisted of ginger snaps and pickles, brought from the corner grocery by an obliging pupil. I've been watching her since, and I'm not surprised to find that she is decidedly irritable and impatient towards the end of the afternoon session. Another teacher assured me that she feels perfectly well on a luncheon of soda crackers and tea.

"I haven't any scheme to boom, but I think the French system a very wise one for both teachers and pupils. I suppose, however, it wouldn't take here at all, except, perhaps, in the very poorest sections of the largest cities, and there it might do as much harm as good. You know in Paris they regard a cook and a kitchen as quite as indis-

pensable a part of the school as janitors and teachers. Every child is given his bowl of soup and piece of bread in quite the same matter of course fashion that we give him calisthenics to make him a physically well developed person. I have an impression, though, that it is only in the primary schools that the custom prevails. In this country we need it more in the schools for older pupils. As a rule the primary children live near enough the school to go home at noon, and it is only the teachers who suffer. A majority of the grammar and high school pupils usually live further away.

"Where we have tried the lunch counter, I think it has been a failure. That is, for everybody except the caterer. He rents the privilege and sells his wares at a fair profit. There is no intelligent supervision and the school lunch counter does more harm than good to the children's digestive machinery. I know one little girl who boasts that her lunches only cost her five cents a day. For that sum she buys coffee and pie or doughnuts from the school caterer. I don't wonder at all that she has violent headaches and is getting round-shouldered and worn out. Such a diet would make a dyspeptic wreck of a sturdy adult, let alone a delicate girl. If there were somebody to supervise the counter and see that nothing but hygienic foods were served some good might be accomplished. If I could have forbidden coffee and tea and pie and doughnuts, and substituted cocoa and soup and brown bread and fruit, my little friend would be stronger at the end of the year than at the beginning, instead of the nervous wreck I'm sure she will be. I've really been rash enough to hope the mothers' convention might take up the subject, but of course they have nothing to do with anything so near at hand. The next century is more interesting, but I don't think it is more important; do you?"

Dyspepsia One of the many causes of dyspepsia is the use of cereal foods improperly prepared. People fancy that grain food is simple, and consequently healthful. Whole grains, wheat, oats, etc., contain quite largely an element as indigestible as wood and no more nutritious. CREAM OF WHEAT being entirely free from indigestible matter is peculiarly adapted to such as require an easily digested diet. When buying Cream of Wheat ask for our beautiful gravures of north-western scenery. Your grocer gives one with each purchase of two packages. Cream of Wheat Co., Minneapolis, Minn.

THINK OF THE COMFORT In an Ideal Oil Heater. In the morning you can light it without getting up. When it has made the bed-room comfortable, it will do the same thing for the bath-room. When you've bathed and dressed, roll it out into the dining-room. Costs only one cent an hour. It's a money-saver. There isn't the suspicion of an odor. That's guaranteed. Your money back if it isn't entirely satisfactory. Ask your dealer. A. G. Barler Mfg. Co., 104-106 Lake St., Chicago.

IRRESISTIBLE! You'll always get a speedy answer to a letter written on stationery marked with INGERSOLL'S MONOGRAM OUTFIT. It shows good taste, and that you know society's latest fad. The outfit consists of a rubber monogram, two bottles stamp ink, pad and a bottle NEW PROCESS GILDING POWDER in neat box. Work cannot be told from high-toned lithographing. Formerly sold at \$1.00 Catalogue free. Two-letter Monogram Outfit.....25c. Three-letter Outfit.....35c. Single Initial Outfit.....15c. A. N. INGERSOLL, Department 5, 46 Cortlandt St., New York.

Boys in Games and Sports.

Boys who take an interest in animals—and who doesn't?—are asked to send in authentic anecdotes about animals for this department. Send photographs of animals written about, where possible. Correct names and addresses must be given in every case. Address all communications Editor AMERICAN BOY, Detroit, Mich.

The Olympic Games and the Boys of Greece.

The boys of Greece were fond of all athletic sports and took part in the most splendid of all the Greek games—the Olympic games—which were celebrated every five years, in honor of Zeus, the father of the gods.

Women were forbidden to be present at these games, which usually lasted five days.

All who took part in these games were obliged to undergo preparatory training for ten months at the gymnasiums before they could participate in the games.

The first day was spent in offering sacrifices. The second was set apart for the boys who competed with each other in foot racing, wrestling, boxing and horse racing. The third and principal day was devoted to the contests of men in foot-racing, wrestling, boxing and racing in heavy armor.

On the fourth day there was leaping, running, throwing and wrestling, and chariot and horse racing.

The fifth day was set apart for processions, sacrifices and banquets to the victors, who were always crowned with a garland of wild olive, cut from a sacred tree.

After the games, the victors were great heroes, were feted upon their return for ten months at the gymnasium before were exempt from taxes.

Boys in the Klondike.

Did you ever try running in the snow on your bare feet? If you have you know how it feels. Up in the Alaskan country known as the Klondike, where great gold mines are located, are very few boys, but such as are there are hardy little fellows who can stand almost any exposure. Barefooted, they have been known to play in the snow

when the mercury marked 32 degrees below zero. It is said that the atmosphere is so dry that it never seems to hurt them, but we are inclined to think that this is one of those stories that gains by travel; and if any of the readers of THE AMERICAN BOY expect to go to the Klondike soon, we would advise them to buy some thick stockings and a tough pair of cowhide shoes.

TAKING SUBSCRIPTIONS FOR THE AMERICAN BOY.

Wanted to Shake the Boys' Hands.

At the conclusion of Governor Theodore Roosevelt's address to the students of Yale University on Nov. 20, the Governor said: "I want to shake the hands of the men who stopped Harvard on Saturday." This was only a few days after the great Yale-Harvard foot ball game, in which Harvard failed to score. As Captain McBride and each member of the Yale eleven stepped on to the stage to shake the Governor's hand the applause and cheers that shook the hall could be heard for blocks away.

It is needless to say that the Governor, who himself is a graduate of Harvard, made himself popular with the Yale boys.

To Plunge the Hand Into Water and Not Wet It.

Throw a piece of money, or ring, or any such thing, into a bowl full of water, and announce that you will take the article out with your hand, yet not wet it. To do this, it is only necessary to scatter on the surface of the water a powder that does not mingle with the water, and consequently will not become moist.

Lycopodium, which you can get from any druggist, is one of these, and costs very little.

Having thrown some of this powder on the water, thrust your hand boldly down to the very bottom of the bowl, bring out the ring, and show your audience that your hand is as dry as before. This is because the lycopodium forms an actual glove on your hand, on which water has no effect, just as you see birds dip, and dip again into water, yet come out dry because of the oil on their feathers. If you wish to carry this experiment further, you can try it with hot water, and find that, thanks to the lycopodium, you can put your hand in water that is almost boiling. You will feel the heat, but the skin tissues will be so protected that it will not burn you.

A Lilliputian Railroad.

When the editor of THE AMERICAN BOY was in Asbury Park last summer accompanied by his six-year-old son, he enjoyed a novel experience that would delight every boy who reads this. Behind the hotel near the ocean was an unoccupied piece of ground about as large as two city blocks. Around this lay a miniature railway track, and at one point in the circle was a little station house, in front of which stood a miniature engine hitched to three tiny cars. For five cents one can sit in one of these cars and enjoy a ride around the circle. The little locomotive is built in every respect like the big ones that draw the real trains on the great railroads. It is run by steam, and the engineer sits, as you see him in the illustration, with his hand on the throttle and rings the little bell, just as if he were managing a great locomotive on the New York Central.

It is said that boys who will visit Central Park in the future will have an opportunity to ride on one of these little railroads; so that boys who are accustomed to visiting this great park and have gotten tired of the swan boats, the goat carriages, the swings and the merry-go-rounds will have a new form of amusement. The track is to have a length of four blocks, starting from 106th street along the east side of the park and going as far as 110th street. The engine is to be two feet high and five feet long. Each car will hold two little passengers. The road will be a double track road, and the rails of each track will be a foot apart.

A dogs' cemetery is the latest thing in Paris. A company is promoting it with a capital of \$70,000. The promoters are women.

A Country Boy Taught a Club Man How to Fish.

"When I went to Maine last July for my vacation I did not go into camp in the backwoods," said a business man. "Instead I took up my quarters in a quiet village and drove to this or that pond or stream in its vicinity for the day's fishing, returning to my hotel at night. This is a comfortable way to do one's fishing, which I commend to those who practice the gentle art for the pleasure it gives rather than to gratify an ambition to break records in the taking of big strings of fish. Taken all in all, I had good luck beyond the average, with the minimum of tramping and fly bites and general discomfort. But I have to confess that I owed much of the success I had to the advice and guardianship of a barefooted, shock-headed, 12-year-old boy whose acquaintance I made in the second week of my stay at Hilltown.

"In my fishing excursions I had met the boy off and on from the day of my arrival, and had noted that when encountered near the end of the day he usually was carrying a fine string of fish. My acquaintance with him began

Libby's Pork and Beans

The best beans baked the best—in famous New England style, and even more delicious than mother used to bake. Drop us a postal and we'll send you post-paid and free our "How to Make Good Things to Eat" book which tells all about and how to serve the fire-saving, time-saving, trouble-saving, delicious, dainty Libby's Luncheons. Put up in convenient sized key-opening cans.

Libby, McNeill & Libby, Chicago

Soup For Six 10 Cents

"White Label" Brand

Seasoned just right—cooked just right and ready for instant use—"White Label Concentrated Soup"—enough in a ten-cent can for six generous platesfull—add a little boiling water and it's ready. Tomato, Mock Turtle, Consomme, Beef, Ox Tail, Vegetable, Chicken, Chicken Gumbo-Okra.

Economical Soup Booklet yours for a postal.

Be sure you get "White Label"

ADVERTISE IN
THE AMERICAN BOY

WHERE DETROIT NEWSBOYS GET FREE BATHS.

as I was whipping a pond one day from a boat which I had brought from the village in a wagon, and the boy at the same time was fishing from a bridge on the shore. We were using quite different rods and tackle. Mine was a six-ounce rod with silk line and flies of the most approved tying, while he was dangling from the end of a twenty-five-foot peeled spruce pole a line and hook that would have served a turn of a Banks fisherman; but our luck was the same, for neither one of us was catching any fish. We had passed some remarks disparaging the state of affairs in general, when at last he hailed me with a proposition:

"Say, mister, take me into yer boat and I'll show yer where yer can ketch some fish."

"I accepted his offer for company's sake, with little confidence in his offer to pilot me to fish, and in some dread of his astonishing fishing pole, which, with the tip sawed off, would have served as a mast for the boat. To my relief, as I headed for the shore, he detached his line from the pole and wound it about a fork-ended piece of shingle which he drew from his pocket. The pole he secreted in the bushes behind the ledge.

"What kind of bait yer usin' he asked as the boat touched the shore.

"I fish with flies," I answered with dignity.

"H'm! Yer'll never ketch trout in this pond with them things," he said, with authority. "Gimme yer net and bailin' dish till I git some minneys."

"I passed him the tin pail and landing net and he went to a little cove round the point of the ledge, threw a muck-worm into the water to entice the fish, and in ten minutes came back to me with about thirty minnows swimming in the pail. Then he took the oars and I told me to steer with the paddle for an old, blackened tree stub on the opposite shore. It was as unpromising a place for trout as one would care to see that we fetched up at after scraping through shoals and lily pads, a strip of black water by a low shore with snags and deadwood covering the bottom as far as eye could see, but as the boy was doing the work I let him go where he pleased. He did not at once find the precise place he wanted, but yawned about and squinted, trying to get all his landmarks to jibe together, while I stood by to drop anchor when he should find the spot to suit him. After backing and filling enough to have docked a ship he gave the word to let go, and playing out the clothesline with a stone tied to the end of it for anchor, I found bottom in eighteen feet of water.

"Better tie on a sinker and bait with a minny, mister," the boy said, as he stowed the oars and dived his hand into the pail for a minnow.

"For answer I cast my flies upon the water, while the boy dropped his hand-line over the boat's side. I heard the flopping of his first trout as I made my third cast, and he was kept busy bait-

ing his hook and jigging it from the bottom to the boat after that, with a thumping trout to show for every turn. He had landed five when I reeled in my first fish, and after that I could not get a rise. The boy kept right on catching fish, and as he swung the tenth, a two-pounder, into the boat I gave expression to my feelings in a remark that was more scriptural than pious.

"Never mind, mister. We're snucks on the fish, yer know," the boy said consolingly. "I'd jest as leve ketch 'em all."

"This token of condescension was too much. To borrow an expression of the late James Yellowplush, 'Flesh and blood couldn't bear it,' and I reeled in my line and snapped a bait hook on in place of the flies.

"Give me a minnow," I said to the boy, so savagely that he exclaimed, 'Jiminy!' as he scrambled for the bait pail and passed me over a live shiner. He lent me a sinker, and then, when all was arranged, I found myself, who pass for a crack fisherman at my New York club, hopefully bobbing my fly rod, with my fine silk line, dragged down to within a foot of the bottom, by the combined weight of a hook that would have landed a bluefish, a strip of sheet lead nipped on above it with my teeth, and a live minnow. But I had my compensation when, in a half a minute or more, I was tussling with a trout who gave me all the excitement I wanted in getting him into the boat. From that time on I kept even with the boy in our fishing. He had a box of angle-worms in his pocket, and when the minnows were all used up we caught a dozen trout with these. We had thirty-four trout, ranging in size from a half a pound to two pounds and a half, when we pulled back across the pond, to show for our day's fishing.

"After this experience I took the boy with me in most of my fishing trips. Sometimes I went it alone, but it always happened that the days I did this were not lucky ones. Abner—the boy's name was Abner Tucker—dug the worms, caught the minnows, and generally attended to providing the outfit for our trips, my part being limited to the financial details. I presented a civilized rod and tackle to him, a gift which he duly appreciated, but throughout the season he advocated to me the old-time fisherman's precept of 'More bait and less flies,' and I found my profit in following his advice. Sometimes we varied our trout fishing by trips to perch and pickerel ponds, and everywhere the boy knew exactly where the best fish lay and the bait that would tempt them most at the particular time of day and year. He introduced me to mysterious brooks winding through swamps and bogs, which seemed to begin and end nowhere, but were full of hungry trout. He knew and could humor every whim of the trout. One day we fished a meadow brook for two hours with flies and worms, catching but three trout for our pains. The trout were there, but they would not

bite. The boy caught a grasshopper and threw it into the water, and several trout rose together for it.

"We're only foolin' away our time tryin' 'em with flies and worms, mister," the boy announced. "They've got their minds sot on hoppergrasses, and they'd swim away from a fat grubworm if 'twas before their noses."

"We walked to a stubble field a mile away and went to catching grasshoppers. Abner captured about fifty while I was catching seven. With these for bait we went back to our fishing, and in an hour had landed forty-seven trout. For weeks the fish would hardly notice any other bait than grasshoppers. But the insects were agile and hard to catch, and it was difficult to provide enough of them for a day's fishing. Then, through Abner's experience, we discovered that in fishing a pool, after beginning with grasshoppers to excite their appetites, the trout for a while would snap at almost any lure we offered them. One day as we went to a fishing hole with a scant stock of grasshoppers in our bait boxes Abner stopped to rob a bumblebees' nest of its hoard, fighting the bees with his hat and picking them up as they fell. When he caught up with me he offered me half the honeycomb and showed me twelve dead bees that he had stowed away in his bait box. Baiting our hooks with these, after the fish had been enticed with grasshoppers, we caught a trout with every one.

"But the crowning achievement in my summer's fishing, which I owed to Abner's hopeful counsel, was in taking a splendid catch of trout from the Alder pool. The stream was a famous one for the trout, but there was a stretch of about a mile in its course that it was currently said had never been fished, owing to the morasses and thick undergrowth that bordered it. Somewhere in its course through the swamp was a deep pool which it was certain, in August, must be alive with the biggest kind of brook trout, gathered there through the partial drying up of the stream above and below. I had given up the idea of trying to get to this water, but the boy did some exploring on his own hook, and one day came to me with the announcement that he had found a path to the pool, and had a plan for fishing it. So we stocked up for the trip and went into the swamp, following a deer path that crossed the stream about twenty feet above the pool. After an hour's hard floundering we got to the stream and could see the pool below us, as likely a place for trout as one could wish, but with no way of getting nearer to it than we were. The bushes which overhung the stream prevented the casting of a line down to its waters, and to leave that path meant that I would be mired to the waist at the second step. I could think of no way to get a line and hook down to the pool from where I was, but unless a way were found all the trout in its depths might as well be in Manila bay for all the good they would do me. As I balanced myself at the crossing of the deer path it did not help my feelings to hear now and then the splash of a big trout down in the black water below me.

"But the boy had thought out the points of the situation and was prepared to meet it at every turn. He had brought a light ax with him and there was plenty of dead timber along the path behind us. Abner went back and I heard him chopping. Presently he returned with an armful of big chips and pieces of dry bark stripped from fallen spruces and hemlocks. Laying a piece of bark on the bank, he baited my hook with a worm, then pulling off some thirty feet of line from the reel, he coiled it upon the bark, with the hook resting at the bottom of the coil. He launched the piece of bark carefully in the stream and the current took it down to the pool, the line unwinding from the coil as it floated down. It drifted out upon the pool and then a little jerk of the rod yanked the rest of the line from the bark and the baited hook sank in the water. Before it had got half a foot below the surface a trout had it and I reeled him up the stream, fighting every foot of the way,

to opposite where I stood, when the boy waded in with the net and landed him. We had mastered the secret of taking trout from the Alder pool, and for hours Abner and I stood there by the stream launching the coiled line on a chip or piece of bark and drawing back a trout from the still black water below. When at last I reeled up my line and unjointed my rod, it was not that the fish ceased to bite, but because we had all we cared to carry back over the swamp trail. We brought home just 100 trout which weighed together more than forty pounds."

"Pike's Peak or Bust," is a mighty good phrase, a true Americanism, a secret of this country's accomplishment, and a motto for the penniless youth starting up the ladder. It expresses the only spirit that ever does things worth doing. It is a word of power, something worth thinking about and tacking up on some conspicuous part of your mind.

50c Quality Full Fashioned Hosiery 25 Cents a Pair.

Ladies'-Men's-Misses'-Boys'

How Can We Do This?

Heretofore all full fashioned hosiery was imported (full-fashioned hosiery means made on a machine that follows the lines of the foot and leg, so that it always fits like a glove and never loses that shape-keeping quality). Instead, we imported expensive knitting machines, and employed skilled workmen trained in the best foreign hosiery factories, with the result that we make hosiery, which, if imported, as formerly, could not be sold for less than 50c. that we can sell at 25 cents a pair!

For Sale by Live Dealers Everywhere. Look for "WAYNE KNIT MATCHLESS" stamped on each pair. Insist on your dealers supplying you. If he does not keep them send us his name; we will see that you and he are supplied. Sample pair, one pair only to any person, 25 cents. Send size wanted. If you don't want hosiery just now, send us your own and your dealer's name on a postal, and we will send you a very instructive book telling how the celebrated Wayne Knit Matchless, full fashioned sock hose are made so as to retail at 25c per pair.

WAYNE KNITTING MILLS, FT. WAYNE IND.

The Boy Stamp Collector.

During the past month some of the largest transactions which the stamp business has ever known have taken place, and first among them was the sale of the famous New York collection for the sum of forty-five thousand dollars (\$45,000.00).

This collection is mounted in twenty-three (23) blank albums with interchangeable leaves and contains over 30,000 specimens and the owner received the highest price which was ever paid for a collection of postage stamps in this country.

Among the rarest stamps to be found in this collection were the following:

- A pair of the 12p Canada imperf., worth \$1,000.00.
- Vancouver 5c rose, imperf., \$110.00.
- Dominica 1p on 6p green, \$250.00.
- Ceylon 4 and 8 p imperf., \$100.00 each.
- Great Britain £1, watermark anchor, \$600.00.
- Hawaii 13c, 1851, \$500.00.
- New Foundland 1sh scarlet used and unused U. S. Brattleboro, \$650.00.
- U. S., 1869, inverted center 15c, 24c and 30c, and a block of four 24c with inverted center.

On the first of January the sale of the newspaper and periodical stamps which the government placed on sale a year ago at \$5.00 a set will be discontinued and those remaining destroyed. If the government does this, as has been reported, the value of the set may increase in time, but the number in the hands of dealers and speculators will be large enough to prevent any great advance for some time.

Among the new varieties which have appeared since our last issue are the following:

- Is mauve Queensland, numerals in four corners.
 - ½p green Queensland, numerals in four corners.
 - Argentine, ½, 1, 2, 5, 10, 12, 16, 20, 24, 30 and 50c.
- This set is all the same design, but different colors. The Goddess of Liberty seated on the sea shore viewing the

rising sun, with arms resting on a shield bearing the coat of arms is the central design.

The set of Russian stamps surcharged China in Russian letters has also appeared.

From a review of the auction sales of the past month it is a notable fact that really fine specimens have brought much better prices than at former sales, which shows a return of confidence in the value of stamps as well as a revival of interest in collecting.

The demand for African stamps is very heavy just now and many values which are quoted at a low price in the catalogue are very hard to find in the salesbooks of the dealers and this scarcity cannot fail to advance the price before long.

The U. S. postage due stamps with the surcharges of both Cuba and Porto Rico are finding a ready sale, as did the regular postage stamps with the Cuba surcharge and those who bought the 2½c and the 10c special delivery before the new designs came out will find that they bought at the right time as they are now worth double the first quotations.

Since the U. S. army has occupied Manila the revenue officials have collected from all the towns captured all the stamps which Spain has issued for use there which remained in the offices and these are to be sold as one lot to the highest bidder on the 20th of December. The entire lot contains about 40,000,000 stamps.

This month some of the revenue stamps have appeared with the new rectangular perforation and it is reported from Washington that the entire series is to be so perforated. Because of this change some of the high values with the first perforation may become scarce, but the low values of both proprietary and documentary have been issued in such quantity that they will never be scarce.

The Boy Coin Collector.

"In God We Trust."

The sentence "In God We Trust" first appeared on the copper two-cent issue of 1864. It also appeared on the 1886 issue of the double eagle, eagle, half-eagle, silver dollar, half dollar and nickel five-cent piece in lieu of the long-existing motto, "E Pluribus Unum." The trade dollar of 1873 has both mottos. "In God We Trust" does not now appear on the cents, nickels or dimes.

Coins, Medals and Tokens.

The science that treats of coins and medals is called numismatics. A numismatist is one who makes a study of this science.

A coin is a piece of metal used in commercial interchange, on which certain characters are stamped, giving the piece a value authorized by law.

A medal is a piece of metal similar to a coin, but struck to commemorate some great event, some merited action, some illustrious person, or to serve as a reward. As a general thing they are not current as money, but there are exceptions to this, as shown by the Columbian half-dollars and Isabella quarters, struck by this government in 1892-3 to commemorate the four hundredth anniversary of the landing of Columbus on our shores, and also the Lafayette dollar, issued or about to be issued, in our mint. These are medallic pieces, but

allowed by law to pass current as coin. A medalet is a small medal.

A token is a piece of metal allowed to pass as money by sufferance, not being struck by the powers in authority. These have been extensively used at periods when other small change has failed to supply the demands of trade. Thousands of varieties of these pieces were struck in Great Britain in the seventeenth and eighteenth centuries and in our country during the civil war, and passed current as coin. Large numbers have also been struck for the colonies of Britain in Australia and Canada. The so-called Jackson or Hard Times pieces, the war and store cards, and the communion pieces of the Presbyterian church are all tokens.

Parts of a Coin.

For study, or descriptive purposes, a coin, medal or token is observed by the student as follows:

The obverse is that side of the coin which holds the head, bust or figure of ruler, some person in whose honor it has been struck, or some emblematic figure of the country or ruler. It is the principal or front side of the coin.

The reverse is the back of the coin, and usually holds the various figures or words expressing value.

The field of a coin is the great central surface and usually contains the portrait, inscription or value.

(Continued on Next Page)

The Boy Autograph Collector.

Autograph collectors, or boys who wish to become autograph collectors, will be interested in the autographs shown in this column. These autographs were collected by the editor when he was a boy fifteen years of age. His collection embraces over two hundred autographs of the most noted men of twenty-five years ago. A number of these autographs will be shown in each issue of "The American Boy."

As the readers of this paper will not be willing to mutilate their copies by cutting out the autographs, the publishers of "The American Boy" will send to any of its subscribers the ten autographs that appear below, printed in black ink on glazed paper, on receipt of ten cents in postage.

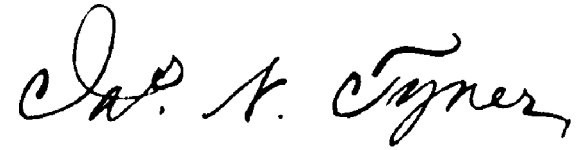

The November number of this paper contained fac simile autographs of U. S. Grant, Henry Wilson, Geo. M. Robeson, Wm. W. Belknap, Geo. F. Hoar, Alexander H. Stephens, John Young Brown, J. G. Blaine, J. M. Rusk and L. Crouse. These fac-similes on coated paper for 10 cents in postage.

The December number contained fac simile autographs of Jas. W. McDill, Nathan Clifford, Roger Q. Mills, C. Delano, David Davis, Geo. W. McCrary, W. S. Holman, Lloyd Lowndes, Jr., C. B. Farwell, Julius C. Burrows.

These fac-similes on coated paper for 10 cents in postage; or the thirty fac-similes that have so far appeared for 25 cents in postage.

JAS. N. TYNER.

Born 1826. Lawyer. Secretary Indiana Senate. Congressman. Postmaster-General. Counsel to the Post Office Department.

JOS. R. HAWLEY.

Born 1826. Lawyer. Editor. Brevetted Major General at close of Civil War. Governor of Connecticut. Congressman. Senator.

WM. LAWRENCE.

Born 1819. Lawyer. Jurist. Editor. State Legislature. Reporter of Supreme Court. Union Soldier and Officer. Congressman. First Comptroller of the Currency. Author.

H. L. DAWES.

Born 1826. Editor. Lawyer. Member of State Legislature of Massachusetts. Member of Congress from 1857 to 1873. Member U. S. Senate 1875 and re-elected several times.

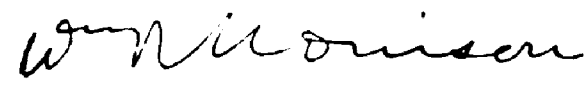

S. S. COX.

Born 1824. Editor. Known familiarly as "Sunset Cox." Congressman for twenty years. U. S. Minister to Turkey. Humorous Speaker and Writer.

WM. R. MORRISON.

Born 1825. Served in Mexican War. Lawyer. In State Legislature of Illinois. Speaker of House. Served in Civil War. Congressman for many years. Member Interstate Commerce Commission.

T. C. PLATT.

Born 1813. Merchant and Banker. Congressman. President U. S. Express Co. President Southern Central Railroad. U. S. Senator from New York.

THOS. T. CRITTENDEN.

Member of Congress from Missouri. Governor of Missouri, and at present Referee in Bankruptcy at Kansas City.

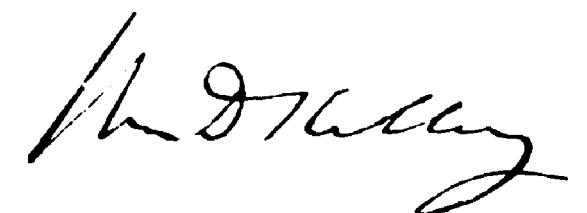

GEO. Q. CANNON.

Territorial delegate from Utah. Apostle of the Mormon Church.

W. D. KELLEY.

Member of Congress for many years from Philadelphia. Because of his efforts to get tariff protection for iron he became familiarly known as "Pig Iron Kelley."

Ten Fac Similes will be given in each number of "The American Boy" for a Year.

The border usually carries the legend. The energe is that portion of the coin at the base, and usually occupied by the date or some word, letter or symbol denoting place of mintage.

UNITED STATES HALF CENT. 1794

To better understand these terms we will illustrate them by means of this half-cent of 1794, and we will ask you to follow the reading.

Obverse: Head of Liberty to right, with cap and fall over left shoulder. Legend, Liberty. In energe, date, 1794. Reverse: In field within wreath, Half Cent. Legend: United States of America. In energe, 1-200. Edge, milled, size, 15. We might say here that the edges of coins may be either plain, reeded or milled. There are also two scales used for measurement of the diameter of coins. The American in sixteenths of an inch, and the French millimeter scale. The American scale is oftener used in our own country. By the millimeter scale this coin would be size 24.

BEFORE COINS WERE USED.

Though a large measure of trade has been done, and ever will be done, the time comes to every people when they feel the need of some more reliable and stable standard of value than cattle, sheep, shells, beads, etc., etc., and so the time came, just when we do not know, when the people turned to the metals, gold, silver, copper and iron, as standards of value and mediums of exchange. This was long before the art of coining, and the metals must have been in bars, lumps or rings, and passed by weight. The first price of which we have record was paid in silver, and for a grave. About 2000 B. C., Abraham for the cave of Machpelah, weighed out the value of 400 shekels of silver, current money of the merchant (Genesis xxiii., 16). On the ancient monuments of Egypt is shown how they weighed their bars of copper, silver, and other metals. This illustration is a faithful but reduced illustration taken from a tomb in ancient Egypt.

The ancient records of the Chaldeans, Babylonians and Assyrians prove beyond question that the same methods were employed among those ancient races. Gold in the form of rings of fixed weight was also used. Eleazar of Damascus carried to Rebecca rings and bracelets of fixed weight, and in the north of Europe, Gaul, Ireland and Britain, these golden rings of fixed weight were used before the Christian era, and great values have been exhumed in these later years. This was the only money of which Homer knew.

THE EARLIEST COINS.

Herodotus, the father of history, states that the Lydians were the first who coined money, and the first gold staters of Lydia were struck about 700 B. C. This one illustrated was issued during the time of Croesus.

LYDIAN STATER, 568-564 B. C.

Strabo, Aelian and others hold that the first coins were struck by Pheldon, king of Argos, for the island of Aegina, and there is little doubt but what the first silver coins were struck here.

DRACHM OF AEGINA, 550-500 B. C.

Again there are others who claim that the first coins struck were the gold staters of Miletus, a city south of Ephesus, on the Icarian Sea, in Asia Minor.

STATER OF MILETUS, 700-500 B. C.

Taking the character of the issues into consideration, the obverses with rude representations of the lion and ox, head of lion and tortoise, and the marks of the punch on the reverse we can readily believe that these three places began to strike coin at about the same time, and that period about 800 B. C. The specimens we illustrate are not of the very earliest coins of these localities, they were similar in design, but still more crude in workmanship.

DIDRACHM OF SYRACUSE, 400-485 B. C.

It will thus be seen that the earliest coins present only the punch-mark on the reverse or back of the coin, and this method prevailed up to the time of the

Persian wars. The coins, as a rule, are very crude in workmanship and design, and were no doubt made as follows: The die being prepared, a piece or bullet of metal of fixed weight was placed thereon, and by force driven into the die with a punch, the mark of which we see on the back of the coin. Later, we find more ornamental punch marks, sometimes similar to the face of the coin, which left the impression incuse or in bas-relief, and as the art improved, die punches were used which left on the coin important devices or symbols, as is shown in the above coin of Syracuse in the time of Gelon.

Few things are sadder than to observe how frequently the inheritance of great wealth or even of easy competence proves the utter and speedy ruin of a young man.

The Numismatic Sphinx.

In which all questions will be answered, and all the tangles which beset the coin collector, will be unravelled. All our boys, whether old boys or young boys, are invited to take part.

F. L. Gray—Your "flying eagle" cents of 1857 and 1858 have no premium. The 1856 flying eagle is the rare one, and in good condition readily sells for \$1.50. The two-cent bronze pieces were issued in the years 1864-1873, ten consecutive years, and with the exception of the last date, which was issued only in proof, are easy to obtain, though not now often seen in circulation. The V nickel of 1883 hardly commands a premium.

Harry H.—The Chinese coin, of which you send a rubbing, is a common cash of Kang Hsi, 1661-1722, and though it takes ten of them to make a cent of our money, they sell for ten cents each at the dealers. Your large oval brass coin with the square hole in the center is a Japanese tempo. They were first issued in 1835.

"X. Y. Z."—Nearly all coins have three values: 1. Intrinsic, the actual worth of the metal contained in the coin. 2. Legal, the value placed upon it by authority; and, 3rd, Numismatic or fictitious, the price it will bring at the collector's mart. For instance, a United States silver dollar of 1804 has an intrinsic value of about fifty cents, a legal value of one dollar, and on account of its extreme rarity a numismatic value of about one thousand dollars.

C. E. S.—The Kruger pennies, so-called, are those issued for the Transvaal, and have the portrait of President Paul Kruger (Oom Paul). By reason of the great interest in that part just now there is an active demand for them at twenty-five cents each. They were struck in Birmingham, England.

Fred R. S.—The 1853 quarter dollar with arrow points by the date, and rays about the eagle on the reverse, has no premium. The one without the arrows and rays is the rare one, which brings from three to five dollars. The same may be said of the half-dollar of same date.

Beginner, Cleveland—Your 1776 half-penny of George III. (England), though of a date which stirs one's patriotism, is very common and sells for five cents.

Harry H.—A common half-penny of Nova Scotia, 1832. No premium in its condition, which you say is only fair.

A. R. T.—Zealand, or Zeelandia, as the name appears on the coins, is one of the pennies of the Netherlands, which issued coins up to about 1800.

R. E. Jones—The value of a coin depends very much upon its condition. A very common coin may be desirable because of its fine to perfect condition, while a poor coin, however rare, because of its condition, may be worthless. We have more to say on this subject.

From One Position to Another

From a poor salary to a good one, without loss of time. This is the story of hundreds who have adopted the new system of education. *We will qualify you for a more lucrative occupation. The work is done at your leisure right where you are. Instead of waiting years, it is but*

WILLIAM C. SPRAGUE,
EDITOR.
GRIFFITH OGDEN ELLIS,
ASSISTANT EDITOR.

A boy makes a great mistake when he thinks that it takes muscle only to make a man; bigness is not greatness.

Scientists say that trees contribute to the heat in the atmosphere. Boys will believe that; birch has warned them of that many a time.

"Train a boy to be brave, and to speak the truth, and you have done your best by him; the rest he must do for himself."—Gen. Lew Wallace.

Wherever else you put your pennies don't put them in your mouth. The Chicago Health Department has proven that copper pennies are fairly loaded with disease germs.

A bright seven-year-old said to his mother, "I am like a tree growing; bad boys pull me over crooked and you straighten me. If mothers didn't do this, the boys couldn't grow straight."

The expression "He's a brick" is said to have been original with the Spartan King Agesilaus, who, on a certain occasion, pointing to his army, said, "They are the walls of Sparta. Every man there is a brick."

What are boys to do who are taught that it is wicked to lie to an employer, but excusable to lie to a customer? I suppose, at first, he wonders at this second-hand arrangement, then he gets used to it, and then he adopts it as being a law of successful business.

A young Irishman once went to a kind-hearted old squire for a recommendation. An elaborate one was written and read to him. He took it with thanks, but did not move. "What's the matter with it?" roared the squire. "Oh, nothin', sorr," said the lad, quickly. "Well, then, why don't you go?" "Sure, sorr, I thought on the stringth of a recommend like that you'd be wanting to hire me."

American Boys with good homes ought to be filled with interest in and the desire to help the work of Miss Clara Barton and the Red Cross society in Cuba. Miss Barton is establishing asylums for the thousands of orphan boys and girls of that unhappy country. She says there are 50,000 little fellows, dirty,

Gutchess College,

The vital importance, to young men and women, of the thorough business education cannot be overestimated. Competition grows more insistent daily. Opportunity develops with competition. The demand is for competent business assistants; the business man has no time to instruct apprentices, he must have assistants already trained in business methods. This College gives the practical business education—pupils here live in an atmosphere of business; they learn to do by doing. Every business facility is here. No other college can be better equipped. 250 students placed in good positions during the past year. Day and night sessions. Terms liberal. Full particulars on application. Address

ragged and often ill, running wild in Cuban towns. In three months this noble woman and her helpers have established twelve asylums in three of the provinces, accommodating 1,200 of these little orphans. If we pity the men and women of this war scarred land, what should be our feeling for the boys and girls who are the innocent victims of the crime and misfortunes of years.

Would that THE AMERICAN BOY had an arm long enough to take up a penny collection among all the boys of America for their new brothers and sisters in Cuba.

In every calling from that of the farmer or mechanic to that of the merchant, the lawyer, or the statesman, efficiency in small employments is the surest guarantee of mastery in great ones. Those beginners are most likely to succeed who are content at first to be beginners to start at the foot of the ladder and climb round after round to the top. The way to be a successful inn-keeper is to begin as waiter. The way to become a great merchant is to begin by sweeping a store and carrying letters to the post. Biography teems with illustrations of this. An English boy, on his way to school, picks up a horseshoe, carries it three miles to a blacksmith and sells it to him for a penny. Soon after he scrapes up some treacle which his sister, in drawing, had spilled on the floor, and sells it for three halfpence. Little by little his savings increase till he becomes a shopkeeper's clerk, and ultimately one of England's largest, most enterprising and most successful traders.

—Dr. William Matthews.

The American Boy Calculating Pencil

YOU NEED ONE.

xx

Have you ever thought that you might make a mistake at figures?

xx

Then get an
American Boy Calculating Pencil

Because it is the only reliable never-failing standby. It is the neatest educational novelty of the day. This Pencil is a marvel of ingenious mechanism. You will hardly believe that this pencil can figure quicker and more accurately than you can. It will calculate anything from 1x13 to 12x24 in the twinkling of an eye. It gives you 144 combinations and is absolutely correct. It can't make mistakes. It is made of pure aluminum and attached to a Faber Pencil. Fits any ordinary pencil. It has a good eraser. It protects your pencil point. It is a pencil lengthener and stays in your vest pocket.

THE BOY ORATOR AND DEBATER.

Hats Off!

Hats off!
Along the street there comes
A blare of bugles, a ruffle of drums,
A flash of color beneath the sky!
Hats off!
The flag is passing by!

Sea fights and land fights, grim and great,
Fought to make and to save the State;
Weary marches, and sinking ships;
Cheers of victory on dying lips.

Days of plenty and days of peace;
March of a strong land's swift increase;
Equal justice, right and law,
Stately honor and reverend awe.

Sign of a nation, great and strong
To ward her people from foreign wrong;
Pride and glory and honor, all
Live in the colors to stand or fall.

Hats off!
Along the streets there comes
A blare of bugles, a ruffle of drums,
And loyal hearts are beating high;
Hats off!
The flag is passing by!

The Country and Its Defenders.

Speech of President McKinley at the Banquet of Columbian Post of Chicago, at Buffalo, N. Y., August 24, 1897.

Mr. Toastmaster and Comrades and my Fellow Citizens: I wish I might frame fitting words to make suitable response to the more than gracious welcome which you have accorded me here tonight. I come with no set form of speech, I come with no studied phrases to present to you, but come in the spirit of comradeship, to talk with you as we have often talked in the past, around the camp-fires in war as well as the camp-fires in peace. To me, I see by the programme, has been assigned the toast "The Country and Its Defenders."

My fellow citizens, blessed is that country whose defenders are patriots.

Blessed is that country whose soldiers fight for it and are willing to give the best they have, the best that any man has, their own lives, to preserve it because they love it. Such an army the United States has always commanded in every crisis of her history. From the war of the revolution to the late civil war, the men followed that flag in battle because they loved that flag and believed in what it represented. That was the stuff of which the volunteer army of '61

was made. Every one of them not only fought, but they thought. And many of them did their own thinking, and did not always agree with their commanders.

That young soldier who in the late war, upon the battle line, ahead with the color guard bearing the Stars and Stripes way in front of the line, but the enemy still in front of him; the general called out to the color-bearer: "Bring those colors back to the line," and quicker than any bullet that young soldier answered back: "Bring the line up to the colors."

It was the voice of command; there was a man behind it and there was patriotism in his heart. "So nigh to grandeur is our dust, so near to God is man, when duty whispers 'Lo, you must,' the youth replies 'I can.'" And so more than 2,000,000 brave men thus responded and made up an army grander than any army that ever shook the earth with its tread and engaged in a holier cause than ever engaged soldiers before. What defenders, my countrymen, have we now? We have the remnant of this old, magnificent, matchless army of which I have been speaking, and then, as allies in any future war, we have the brave men who fought against us on southern battle-fields.

The army of Grant and the army of Lee are together. They are one now in faith, in hope, in fraternity, in purpose and in an invincible patriotism. And, therefore, the country is in no danger. In justice strong, in peace secure and in devotion to the flag all one.

My fellow-countrymen, I thank you and bid you good night.

Subjects for Debate.

Resolved, That England is justified in her course of action against the Boers.

Resolved, That the present jury system should be abolished.

Resolved, That the present system of caucus nomination ought to be abolished.

Resolved, That Congress should pass a resolution pledging to the Filipinos the amplest liberty of self-government compatible with the rights and obligations of the United States, pledging also the expenditure of all taxes raised in the Philippines for the benefit of the Philippines and their inhabitants.

SOMETHING FOR NOTHING
ABSOLUTELY NO CONDITIONS.
A PRIZE for every Correct Answer.
DON'T SEND ONE CENT.

To all who can find in the accompanying Picture Puzzle Admiral Dewey's head in outline, mark it and return to us, we will send at once, without conditions, a Tiffany Style Stick Pin, set with an exquisite simulative Opal or Ruby.

With your pin we send 12 packages of Impenetrable Perfume to sell for us, if you can, at 10 cents each. When sold return our money, and we will give you FREE for this service your choice of a Heavy Plated Carb Chain Bracelet, with lock and key, or a genuine Solid Gold Shell Birthday Ring. To all answering this WITHIN THREE DAYS from when first seen, we send with your ring or bracelet a Pearl Bangle Gold Alloy Initial Stick Pin. This is a fair proposition. Simply interpret our puzzle and we will send your prize at once, without money or price. Write immediately; don't put off till to-morrow what can be done to-day. **NATIONAL SUPPLY CO., 46-50 W. Larned St., DETROIT, MICH.**

John Billings in his Guide to Health says: Never run into debt, not if you can find anything else to run into. Marry young, and if you make a hit keep cool and don't brag about it. Be kind to your mother-in-law, and if necessary pay for her board at sum good hotel. Bathe thoroly once a week in soft water and kasteel soap and avoid tite boots. Exercise in the open air and don't saw wood until you have to. Laff every time you feel tickled and laff once in a while enny how.

What Shall We Do with the Philippines?

Prize essay by Frank P. Collins, Hancock, Wis.

By the late Philino war, the vast importance and wealth of the Philippines has been seen by the whole world; and if the United States were to abandon them today, they would be a prey for other nations of the world to pounce upon.

The Philipnos are an ignorant and uncivilized people, unflt for self-government, and must have a protector. What nation is more fit to be called their protector than that of the United States—a nation of freedom?

This war has cost the United States a vast sum of money, and surely it is fair for her to receive some recompense.

If the United States were to abandon all rights to the Philippines, they would be called a cowardly nation; they would be leaving a rich mine which they have opened, for other nations' benefit; and by abandoning these islands they would miss a great and noble object: that of converting a barbarous and uncivilized people into a progressive and industrious, freedom-loving nation, capable of having a government of their own.

The best way to dispose of the Philip-pines is to take them under our protection until they are fit to form a government of their own. To do this industries must be introduced, schools and churches established, and everything done that will plant in the hearts of these ignorant natives the seed of progressive-ness and thrift.

Speeches and Speechmaking
By Judge J. W. Donovan. Author of "Modern Jury Trials," "Tact in Court," "Skill in Trials," etc.
This successful work is the best of Judge Donovan's books, and judging by its sales, is to be the most popular of the series. Comprised of choice matter, arranged in taking form, it appeals at once to the great class of young men who are ambitious to acquit themselves well when invited by their fellows to speak at receptions, banquets, reunions, commencements, socials, lodges, holidays, birthdays, the bar, the school. By mail, postpaid, \$1.50. **The Collector Publishing Co., Detroit, Mich.**

Prize and Puzzle Department.

Winners of Postage Stamps.

The prize of one-half the foreign stamps accumulated in our office between Nov. 20 and Dec. 20 to the subscriber sending us the most subscriptions during the same period goes to Albert W. Fifield, Minneapolis, Minn. The total number of foreign stamps accumulated was 138. This gives to winner, 69 stamps, as follows: 4 Correos de Venezuelas (10 centimos); 1 New Zealand (2½d); 3 Correos de Mexicana (5 centavos), two styles; 5 1-cent Canada; 4 1-cent Canada (1897); 8 2-cent Canada (2 colors); one 5-cent Canada; 5 2-cent Canada ("Xmas, 1898"); 10 half-penny British; 2 one-penny British; 12 half anna, India; 3 one anna, India; 1 two piastres, French; 2 dos centavos, Cuba (two styles) one 1 centavo, Cuba; one 5 centavos, Cuba; 2 surcharged Porto Rico (2 cents); one Hawaiian Islands (5 cents); one 10-sen Japanese; one 2-sen Japanese; one 2-cent British Guiana.

The second prize, one-fourth of the accumulated stamps, goes to

He gets two 5-centivos Chile; one Correos de Venezuela, 10 centimos; one 5-cent Hawaiian Islands; 4 half-penny

British; two one-penny British; two Cinco Centavos Mexico; one 1-cent British Guiana; 16 assorted Canadian; one 10-cent Hong Kong; one 2-cent Philippines; two 2-cent Cuba; one Danish West Indies post cards; one unidentified.

The third prize, one-fourth of the accumulated stamps, goes to Geo. O. Bacon, Fort Scott, Kan.

He gets three 5-cent Hawaiian (one unused); one 5-cent Hong Kong; one 1d Jamaica; three 10-centimos Venezuela; one 2-cent British Guiana; four Cinco Mexican; one Cuba (2½c de peso); one 5-sen Japanese; one 5-cent newspaper stamp, Mexican; three 1-cent Porto Rico; four half-anna India; six assorted Canadian; four assorted British; one 20-pl. German.

The same offer is repeated to those who send in the most new subscriptions to THE AMERICAN BOY prior to January 18, 1900. Bear in mind that the boys who earned the stamps also received premiums selected from our premium list and they also become contestants for the money prizes advertised on the last page.

There are many lads whom all know well
Who share a varied fate,
But none have such vicissitudes
As the boy whom we call Nate.
There is Nate who is very lucky
And Nate who is very weak,
And Nate who fully intends
Your exact name to speak.
One Nate makes your way very light,
There is one who nicely adorns,
And one Nate there is who deludes,
Another detests, hates and scorns.
One nice little Nate deletes
(You learned his name while at school)
Another lies perfectly still,
Like a shallow, currentless pool.
One Nate there is who doth ponder,
And one who serveth all ends.
One Nate doth from one place proceed
While another mimics his friends.
Another Nate changes about,
While one Nate doth ever plan.
This Nate is frequently troublesome.
The best Nate charms every man.
Here are sixteen words ending with n-a-t-e. Your "Webster" will surely teach you their names to see.

Prizes.

The following prizes will be awarded for the first correct solutions of the puzzles appearing on this page:

- Puzzle No. 12—A pamphlet on Practical Punctuation, by the Editor of THE AMERICAN BOY.
- Puzzle No. 13—A pamphlet on Practical Punctuation, by the Editor of THE AMERICAN BOY.
- Puzzle No. 14—A pamphlet on Practical Punctuation, by the Editor of THE AMERICAN BOY.
- Puzzle No. 15—A six months' subscription to THE AMERICAN BOY in the name of any one not now a subscriber.
- Puzzle No. 16—A six months' subscription to THE AMERICAN BOY in the name of any one not now a subscriber.
- Puzzle No. 17—A six months' subscription to THE AMERICAN BOY in the name of any one not now a subscriber.
- Puzzle No. 18—A six months' subscription to THE AMERICAN BOY in the name of any one not now a subscriber.

Puzzle No. 19—A copy of "The Boys of Scrooby."
Puzzle No. 20—\$2.00.
For the first correct solution of the nine puzzles, \$3.00 cash.

Other Prizes.

To the subscriber to THE AMERICAN BOY sending us between Dec. 20 and Jan. 18 the largest number of new subscribers, we will give, not only the premiums to which he is entitled as shown in our Premium List, but also one-half of the foreign stamps that are received in our office during the same period.

To the subscribers to THE AMERICAN BOY sending in the second and third largest number of new subscribers within the same period, we will give in addition to the premiums to which they are entitled, as shown in our Premium List, one-fourth of the foreign stamps received during the same period.

For the best amateur photograph taken by a subscriber to THE AMERICAN BOY and sent us by him between Dec. 20 and Jan. 18, we will give \$2.00. For the second best photograph, \$1.00.
For the best 200-word essay on the subject, "Is England's Course in Her Present War Justifiable," written by and received from a subscriber to THE AMERICAN BOY between Dec. 20 and Jan. 18, we will give \$2.00. For the next best, \$1.00.

For the best anecdote of not over 150 words about animals, composed and sent in by a subscriber to THE AMERICAN BOY between Dec. 20 and Jan. 18, we will give \$1.00. For the same, where accompanied by photograph, \$2.00.

For the best anecdote about a boy, containing not over 100 words sent in by a subscriber to THE AMERICAN BOY between Dec. 20 and Jan. 18, we will give \$1.00. If accompanied by the boy's photograph, \$2.00.

HUSTLING BOYS

ARE AFTER THE \$1,000 IN MONEY PRIZES

For Subscriptions to

THE AMERICAN BOY.

XXXXXX

The first 15 contestants up to date who stand in the lead are

- | | |
|------------------------------------------|----------------------------------|
| ALBERT W. FIFIELD, Minneapolis, Minn. | FRED H. HILKER, Ft. Wayne, Ind. |
| EMERSON T. COTNER, Detroit, Mich. | FRANK FORD NORTHROP, Wayne, Neb. |
| GEO. O. BACON, Ft. Scott, Kansas | GEORGE PERCIVAL, Omaha, Neb. |
| WM. E. BAYER, Anderson, Ind. | J. PETTYJOHN, Farmington, Ill. |
| CLARENCE A. CAMPBELL, Dickinson, N. Dak. | ORLIN A. WEED, Seneca, Kan. |
| HOWARD DE LAMATRE, Omaha, Neb. | FRED B. ESTERLY, Columbia, O. |
| MOFFAT A. GRAY, Detroit, Mich. | DONALD ANNIS, Detroit, Mich. |
| EVERY C. HAND, Mansfield, O. | |

As the highest number yet reached by anyone of these is only 14 it will be seen that the race is but yet begun. Now, go in, boys, and show your pluck.

Every one who obtains a subscriber for THE AMERICAN BOY is entitled to the premium which he may select from our Illustrated Premium List, a copy of which is furnished free to subscribers.

In addition to this he becomes a competitor for the grand prizes to be distributed in November, 1900, as follows:

1. To the subscriber sending the largest number of new subscriptions at \$1.00 each during the year beginning Dec. 1, 1899, and ending Nov. 20, 1900, \$200.
2. To the one next in order in number of subscriptions sent, \$100.
3. To the two next in order, \$75 each.
4. To the three next in order, \$50 each.
5. To the five next in order, \$25 each.
6. To the fifteen next in order, \$10 each.
7. To the twenty-five next in order, \$5 each.

In this way, fifty-two persons will receive a total of \$1,000.

Subscriptions should be sent in when taken, and not held. We will keep an accurate record here of the total sent in by the contestants.

We shall print from month to month the names of the leaders in the contest until we reach the month of September, 1900, from which time on the records will be secret until published in the December number.

Prizes will be sent as a Christmas gift, to reach the winners in the contest on Christmas day, 1900.

THE OCEANIC, GIANTESS OF THE SEAS.

LANDING IN NEW YORK ON HER MAIDEN TRIP.

With flags flying and band playing, the Oceanic, the largest ship ever built, steamed into New York harbor and tied up at the dock of the White Star Line. We have called her the giantess of the seas, for such indeed she is. When the Great Eastern slid into the waters it was supposed that the largest vessel that could successfully ply the ocean had been launched. That was in 1858. Public opinion seemed to be verified when it was found that she could not successfully float as a passenger steamer. So no vessel of greater length or greater displacement in the past forty years was built

until the Oceanic came from the hands of her designer and started on her maiden voyage from Queenstown to New York, arriving there strictly on time, Monday, Sept. 13 last. The proprietors of the great White Star Line did not aspire to build a vessel that should make the shortest time across the Atlantic. Their chief object was the building of a vessel so large and so powerful that it would be unaffected by weather and could reach port on schedule time. Recent developments have shown that the hopes of the builders were not well founded, for giantess that she is, the ocean has

proved to be the master and the Oceanic has already been reported overdue.

A description of this magnificent steamer will be of interest to American boys. Think of a boat 704 feet long, a distance from bow to stern of over an eighth of a mile, displacing the enormous weight of 28,500 tons of water, with a horse power possessed by her engines of 28,000! As compared with her the Great Eastern, which was the marvel of forty years ago and which has not been outdone until now, is but a toy, for the horse power of the engines of that great ship was less

THE OCEANIC IN NEW YORK HARBOR.
TUGS COMING ALONGSIDE TO HELP HER TO HER BERTH.

than one-tenth of that of this mighty floating palace. She can carry 1,700 passengers besides the 400 men in her ship's crew. Her bunker capacity is 3,700 tons, which would enable her to steam around the globe without re-coaling at the rate of twelve knots an hour. Her width is less than that of the Great Eastern by 15 feet, thus decreasing the resistance of the waves, but her length is nearly 15 feet greater than that of her powerful, but unsuccessful, rival. She has seven decks, all plated, and her depth may be imagined from the fact that the captain's bridge is 80 feet above the keel. Her shape and vast size combine to render her so steady that the highest waves have no appreciable effect upon her. Her interior arrangements secure the maximum of comfort for her passengers. The decorations are elaborate, the most striking feature being perhaps the ornate glass dome which forms the ceiling of the grand saloon. This is adorned with four allegorical figures representing Great Britain, America, New York and Liverpool. She is provided with two libraries and two smoking rooms, for first and second-class passengers. The average tourist who crosses the Atlantic on the Oceanic may spend the entire voyage, excepting his sleeping and eating hours, in inspecting this great ship and find on his arrival in Liverpool that he has omitted many interesting features. The mere walking of the length of her four passenger decks means a trip of more than half a mile. To inspect in detail all the novel features contained in that half mile of travel requires a trifle more than the time of one straight trip across the Atlantic. One day could be profitably spent on the bridge—if Captain Cameron permitted. The entire movements of the great ship can be controlled from this bridge, every order being given by electric signal. Along the forward rail of the bridge are wrought iron standards which support signal boxes looking like clocks. By means of a lever swung from the center of each a signal can be instantly given to close the bulkheads, send all the men to their stations, man every boat, call the men to fire drill, stop the machinery, reverse the twin-screws, reduce or increase the speed, drop the anchors, cast off the shore lines, or make sail. Standing on the bridge of the Oceanic one is 70 feet above the water, but the bridge is steady

for the vessel's great length enables her to cross three ordinary waves, and only a great tempest can make her pitch to any great extent. On the promenade deck is the social hall, corresponding to a like hall on the spar deck. The former is finished in plain American oak and paneled in red morocco studded with brass nails. The railing of the stairway is of plain oak surmounted by a top rail of mahogany. The bannisters are of oak, richly carved. From the social hall are doors leading into the library, on whose sides are panels of solid oak decorated with elaborate carvings. Descending to the spar deck and thence to the saloon you may look the entire length of 80 feet of that magnificent apartment. The central dome of this saloon is a work of art, having an octagonal ground glass top projecting into the library two decks above. The kitchen is one of the most wonderful parts of the vessel, coal, coke, steam and electricity playing their part in its intricate arrangements.

Accustomed as we are to commonplace figures in dealing with ships and their crews, the mind scarcely grasps the meaning of those which have been compiled with reference to this floating city, for such she is when loaded and on her voyage. With a population of 2,000 she is indeed a community in herself. Scores of different trades and occupations are practiced on board. She carries independent lighting, heating and refrigerating plants, machine shops, a printing office, a carpenter shop—in fact, almost all the equipments of an up-to-date community. It requires the services of sixty men working steadily for forty hours to coal her for a voyage, and the operation costs about \$1,200. The coal costs as much as \$6,000. Taking as it does nearly six days for her to make the trip, her coal bill must be \$1,000 a day. A half a hundred tons of provisions must be taken on for each trip. Every plate and rivet must be inspected. She is cleaned from stem to stern by an army of laborers that swarm over her while she lies in port.

The ship's crew is divided into three departments, one department concerning itself with the sailing of the vessel, presided over by the chief navigator, under the directions of the captain; one, the engineer's department, with which the captain seldom interferes; and another, looking after the wants of the passengers, under the chief steward. The first named department includes the only men on shipboard who can properly be called sailors. These number 100. In the engineering department are 200 men, among them 65 stokers, divided into three shifts, whose duty it is to shovel into the twelve furnaces the 350 tons of coal required to keep the ship at full speed during every 24 hours. As many more "trimmers" pass the coal from the bunkers to the furnace doors, and thirty-five greasers look after the machinery of the engine rooms. The stokers, who perform the most arduous labor of which it is possible to conceive, are paid only \$25 a

month, while the trimmers and greasers receive a little less. Most of them are Scandinavians and Irish, though the engineers are usually Scotch or English.

It will surprise the average reader to know that no less than twenty-four meals are served on shipboard every day, four each for the first and second cabin pas-

A VIEW OF THE LIBRARY.

sengers and the officers, three each for the steerage passengers, the engineers, stewards and sailors. Each of these seven big families has its own staff of cooks, numbering between thirty and forty altogether. There are about seventy dining room stewards—waiters we would call them on shore—and about the same number of bedroom stewards or chamberlains. The chief steward must plan the menu for each day, a separate menu for each of his numerous families from the elaborate course dinner of the first cabin to the simple fare of the steerage and crew. The menus are printed by the ship's printer and distributed to the chefs of the various divisions. They estimate the various food materials that will be required and submit these estimates to the steward for his approval. Then a requisition is made on the store-keeper for the articles necessary to satisfy the sea appetites of 2,000 persons. The average provisions for a trip will run about ten tons of beef, three tons of such other meat as mutton and veal, two tons of chickens and nearly two tons of ducks, turkeys and game birds. The vessel also carries two tons of smoked and dried meats, 2,000 dozen oysters, with green vegetables and fruits in proportion. The fresh meats are kept in cold storage in the depths of the ship. In one cold storage room she carries 5,000 pounds of butter, 1,000 dozen eggs, 3,000 quarts of milk and cream, and 3,000 quarts of ice cream. Every day 50 pounds of coffee and over 30 pounds of tea are required. Think of the task of washing all the dishes! This is done by machinery. A force of 20 men, however, are kept busy washing the silver and finer china. The ship carries 1,000 tablecloths, 15,000 napkins and the same number of towels. Her laundry work is done on shore at the end of each trip in a plant maintained by the company for that purpose.

How would you like to sail the Atlantic on the Oceanic? Perhaps some day you may.

A BIT OF THE CENTRAL DOME IN THE MAIN SALOON.

PROMENADE DECK, LOOKING FORWARD.

SEPTIMUS GOOMUS.

By WINTHROP PACKARD.

Some naval reserve man of whimsical turn of mind named our South American ant-eater Septimus Goomus and we boys of the auxiliary cruiser adopted the name, as we did the animal, without question. He had long legs, a long snout, and a long monkey-like tail, also he had many monkey-like tricks. He was mischievous and meddlesome and he could, and did, climb most anywhere. He came on the Saturn, a big steam collier that brought coal to the fleet in general at Ponce, Porto Rico, and brought trouble to us in particular. Not only did we have to coal ship from the Saturn, passing the coal in bushel baskets from the depths of her hold, working day and night until the job was finished, but by-and-bye the Saturn ran aground on the shifting sand bar at the mouth of the harbor and we had to haul her off. We did it after a week of herculean labor including the throwing overboard of the greater part of her cargo of coal. Our reward was lame and blistered backs, for most of the boys went into this work stripped to the waist, coal grime galore, and Septimus Goomus, presented as a thank offering.

There were some who were troubled a bit at first lest he should die for lack of ants to eat, and later there were others who were troubled lest he shouldn't. As a matter of fact he did not seem to mind the lack of ants at all but devoured with cheerful appetite anything he could lay paws upon. The first thing he ate after he came aboard was a pair of socks belonging to the Lieutenant of Marines, just washed by one of the ward-room boys and hung to dry on the guard-rail of the after hatch. He seemed to particularly enjoy the colored stripes in these and he munched contentedly until the last vestige was gone, greatly to the delight of a number of onlooking jackies who did not love the Lieutenant of Marines.

We did not suppose he would eathardtack; few jackies believe that any creature will eathardtack unless forced to do so, but he proved the contrary by climbing up inside the leg of "Hardtack" Sawyer's wide trousers to get at the squares of it that always lined his pockets. This expedition was begun without Sawyer's knowledge or consent, and ended in a wild commotion and the breaking off of diplomatic relations between the two. Such pranks as these caused amusement at first, then distrust, and one day, after Septimus Goomus had jumped from one of the deck houses upon the neck of the navigating officer, causing that gentleman to lose his usual serenity, and career in a wild waltz about the quarter-deck in a vain attempt to dislodge his partner, the ant-eater was tried by drum head court-martial and condemned to death. This sentence was, however, remitted at the urgent request of "Big Charlie," a six-foot fireman, who promised to cage Septimus and take care of him.

He was forthwith caged in a slatted box, but it was difficult to keep him caged. Sometimes he himself broke out, but more often he was released by some mischievous jackie and "Big Charlie" spent a good part of his leisure hours in hunting up and recaging Septimus Goomus. It got to be a familiar thing to see the monkey-like animal scampering from deck to deck and from cover to cover, pursued by "Big Charlie" breathing threatenings and slaughter, the pair followed by a jeering crowd of jackies, no one of whom would have dared grapple with the ant-eater if he had the chance, for confinement had ruined the rascal's temper and he would allow no one but Charlie to handle him, and Charlie had to be circumspect.

One evening an incident occurred which put the ship in an uproar and put an end to this sort of play. Septimus Goomus got out, or was let out, just at dusk, and prowled

hungrily in the dark places, lurking from shadow to shadow, until he reached the spar deck. Here he slipped in at a deadlight and began to rummage in the paymaster's cabin. He pried in his monkey-like fashion into many things, turning all topsyturvey, and finally reached the desk where he nibbled the pencils, scattered the pens, overturned the ink, and viewed with delight a small roll of bills which the paymaster had placed under a paper weight.

These bills he sniffed, found to his taste, and sitting up monkey-fashion began to devour one by one as a rabbit might eat lettuce leaves. His evening meal was costing more money than the dinner of the whole ward-room mess.

The ward-room dinner over, the paymaster, mindful of the roll which he had left on his desk, hastened back to his state-room which he was dismayed to find in disorder, and his confusion was great on finding Septimus Goomus cheerfully masticating the next to the last of the bills. A scene of riot and confusion ensued. Round and round the little room galloped the ant-eater with the last bill gripped tightly in his teeth, and round and round the room went the paymaster, red-faced and appoplectic, in hot and vengeful pursuit. But it was much as if a freighter chased a torpedo boat and the ant-eater was easily a winner, slipping finally out of the dead light by which he had entered and in at another, the doctor's cabin being next door. The paymaster brought up with a crash and a wrecked table in the corner and gave up the chase. The uproar brought quite a crowd of onlookers and the hunt for Septimus Goomus was kept up for some time, but he had disappeared completely. It was freely suggested that he had jumped ship.

Some hours later the ship's crew were tucked away for the night, the officer of the watch was on the bridge, the anchor watch mustered on deck, and the last of the officers had just left the ward-room. With

these exceptions the ship slumbered. The officers were sleepy, too, and the doctor shut his state-room door, got out of his uniform into a long night gown, turned out his light and sprang into bed only to spring out again with a wild shout of dismay. He had landed full upon Septimus Goomus who was curled up in the middle of the bunk with the remnant of a dollar bill for company.

No one knows what took place in the next few moments, but all the watch heard the roars of the frightened doctor and the squeals of the equally dismayed ant-eater. There was a great commotion in the state-room and some one, seeing the flash as the doctor struggled to the electric light and turned it on, rang in a fire alarm and turned out the entire crew. Half clad men closed the hatches with a rush and a half dozen lines of hose were run out. The pipemen converging on the doctor's room met that gentleman rushing out in dismay, with Septimus Goomus clinging with all his claws and teeth to the rear of the long

ONE OF THE DINING ROOMS.

night gown where he stayed while the doctor pranced frantically about the deck trying in vain to shake him off.

There was much subdued hilarity then, but naval discipline ended for a moment with the shouts of laughter which rang out when "Big Charlie" rushed up, seized his pet by the prehensile tail, and after much tugging and scrambling drew him away with many squeals of terror and great rending of garment.

The next morning Septimus Goomus was again under sentence of death, but this was again commuted to imprisonment on the plea of his faithful jailor, who proved to the executive officer's satisfaction that the animal escaped from his cage only by the help of the men. Thereupon that official had the word passed that if the ant-eater was found abroad again, all jackies, irrespective of wage, watch, or previous condition of rectitude, should suffer extra duty.

Septimus Goomus remained in his cage during the remainder of the cruise, and the last I knew of him he had been discharged in company with some of the Fall River men and was spending his days in idleness, plenty, and a roomy cage, in that city.

THE FINAL PUSH OF THE LITTLE TUG ARMY.

AMINADAB SKELCH AND HIS FREE LIBRARY.

THE STORY OF A REALLY GOOD BOY
WITH A DEFECTIVE MORAL SENSE.

By CHARLES BATTRELL LOOMIS.

(Copyright, 1899, by Charles Battell Loomis.)

Aminadab Skelch had a defective moral sense, but you must not blame him for it too harshly. What could any one expect of a boy who, having such a dreadful name as Skelch, had been saddled with Aminadab when he was too young to protest. Of course the boys called him Dab or Dabby for short, or else Amen, which was just as bad, and he is certainly entitled to some consideration on that account. If he had been called Gandensius Stewart or Alcibiades Montrose he might have been a very noble little fellow but the name of Aminadab prepared people for the worst. And yet he was not the worst by any means. He had a love for the beautiful and he liked to do little kindnesses for people, and he was generous to a fault. His chief failing was that he did not know the difference between mine and thine, and it was this that led him into the trouble that I am about to describe.

One day he went to Philadelphia and while he was there he saw many fine buildings. Now the little town where he lived, up among the mountains near Plainfield, New Jersey, did not boast of a building more pretentious than a wooden house, and so these great

WHEN PEOPLE SAW HIM DIGGING FOR THE FOUNDATION THEY DID NOT STOP HIM

stone buildings seemed to him like fairy palaces, and he determined when he returned to Mullinsville to build a handsome library and present it to his fellow townsmen.

It is proper at this point to say that while Aminadab did not boast any acquaintanceship with the fairies, he did have a strength that was little short of supernatural. He was so strong that he could pull young saplings from the earth with one hand, and could raise a six hundred pound bag of meal as easily as you could handle a five pound bag of salt. Beside this he was remarkably handy. He was own cousin on his mother's side to the boy who made a trolley car with a jack knife as his only tool.

Now if Aminadab had possessed a good moral sense he would have gone to the proprietor of some stone yard and would have said, "I want enough stone to build a very handsome library. I have not the money to pay for it today, and I may never have it, but if you will trust me and my health does not give out, I will pay you before I die." Most any stone seller would have given him at least enough for a basement. Then he would have said practically the same thing at the pane of glass factory and the store where they sell planks of wood and the nail bazar and the paint depot. But he did none of these things. He said to himself, "Here, I am going to give my fellow townsmen a fine library. I am going to make it all myself, and I don't see why I can't help myself to material wherever I can find it."

Now, as you and I know, this was very wrong, but I'm not telling you what ought to have happened, but what did happen to a little New Jersey boy who didn't know any better.

First he selected a plot of ground on which to build the library. This was next door to the summer residence of a man who had gone to New York for the winter, and it was part of his land. When people saw Aminadab digging for the foundations they did not

A FEW KEGS OF NAILS, WHICH HE SHOULDERED TWO AT A TIME

stop him, for it was none of their business and besides, for all they knew, he had received permission from Mr. Hamerton, the owner. As I neglected to say, Aminadab was an orphan and not answerable to any one.

Of course, to such a strong and handy boy the work of digging a cellar thirty by fifty feet was not a thing to keep him busy long, and by nightfall of the day he had started it, it was all ready for the mason work.

It would not be very interesting to tell you how he mixed his mortar and did all the other prosy things that go to the making of a house. The remarkable thing is that he got every stone that went into the building of that library from the stone walls of the adjacent country. "A stone here and a stone there will never be missed," said he, and he was right, but although they weren't missed it was wrong in him to take them without asking. I'm not standing up for Dabby by any means.

There was a very thick evergreen hedge running along the front of the Hamerton place and no one noticed what was going on behind it, so Dabby was able to give his whole strength to his task without interruption. And it took a great deal of strength, and the boy ate his meals with a workman's appetite. It is no slight task to carry off two or three fifty pound stones for a mile or two, and set them up in place, but he was a cheerful worker and he knew that he was building a memorial to himself, and that made the task an easy one.

An armful of planks at a planing mill here and there, taken at the noon hour when the men were off eating their luncheon and a few kegs of nails which he shouldered, two at a time, and some quick, deft work and the floors were laid. And he had only been at work two or three days. I think he must have had a strong natural taste in architecture, for when the building was completed, several New York architects said that it was worthy of Richardson at his best. You ought to know if you don't that Richardson was one of the greatest of American architects, and it is a pity that he is not living today.

The panes of glass were harder to get, and I think that the way in which Aminadab got them was thoroughly reprehensible, for instead of buying them or even taking them without leave from a glazier, he stole a glazier's diamond and cut the panes out of various houses in town, thus letting in the cold air and putting people to a lot of trouble. You may say that in the end it gave the glazier plenty of work that he would not otherwise have had, but I tell you that a right that comes from a wrong is not the right kind of right.

At noon of the fourth day the boy had finished everything but the front doors, and he was puzzled where to get them. He wanted something handsome, but he didn't think that he was able to make doors with the few tools at his command, and he knew of no ready made doors that would do. So he took a day off and went to Philadelphia, and there on Market street or Chestnut or Arch—I can't be more exact, because those are the only Philadelphia streets I know—he saw two mahogany doors, most beautifully carved and evidently very valuable.

Oh, why did not Aminadab ask permission to carry those doors away with him? The owner, who was a rich man, might have granted his request if the lad had been courteous. But poor little Aminadab, the boy with the perverted moral sense, went up the steps and taking a screw driver from his pocket began to unscrew the hinges.

In fewer minutes than you can count, a policeman passed by, and when he saw the boy he asked him what he was doing. Aminadab had taken one door off and had leaned it up against the house, and a flood of keen autumn air swept into the rich hall.

Now, whatever else Dabby may have been, he was at least truthful, and he said without hesitating: "I am going to take these doors to Mullinsville to put them in my new free library there. They are just the right size and I can't make any nearly as good."

"But, my son," said the policeman, who had children of his own, and knew how to speak to boys, "don't you know that it is dishonest to take a man's doors away without his permission? Suppose Mr. Lippincott or Strawbridge or whatever the name of the gentleman is who lives here, should get pneumonia through the loss of his doors, it would be your fault."

Aminadab had not thought of that at all. To give a man pneumonia was the last thing he would have wished to do, and his eyes began to fill with tears.

While he was trying hard to keep back the sobs, a large, stout, kindly looking old gentleman came down the broad staircase, and seeing one of his doors off its hinges and a policeman on the steps, said: "Hello, what's the matter here? Is this the way you come in doors—by taking the doors off?"

Then Aminadab did what he ought to have done in the first place. He took off his hat and he made a low bow, and said in a manly tone: "I am building a library at Mullinsville, New Jersey, which I am going to give to the town, and I needed a pair of doors for it, and seeing that you must be rich or else you wouldn't have mahogany doors when black walnut would do just as well, I helped myself to them and didn't suppose that you'd miss them."

"Didn't suppose that I'd miss them? Holy, toity, am I so old that I can't see when my front doors are gone? However, I am glad to see that you are so public spirited, and if you and the officer will come inside out of the draught, I'd like to talk to you."

Aminadab motioned to the officer to go in, and then he placed the door in position and put back the screws. Then he came inside and sat down in the old gentleman's drawing room.

"Now, see here, young man, where did you get the rest of the material for your library?"

"I got the stone from the stone walls around the country."

"And did you have permission?"

"Why, no," said Aminadab, wonderingly. "What's a stone out of a wall here and there?"

The policeman looked at Mr. Strawbridge or Mr. Lippincott or whatever his name was, and shook his head sadly. To him the boy seemed pretty bad, and if he had had his say he would have carried him off to the police station.

But the old gentleman smiled kindly. "And who helped you take all this stone? Didn't your helpers tell you that it is wrong to steal?"

"I had no help, sir," said Aminadab. "I did it all myself."

"Well, you must be unusually strong. And how were you going to carry my doors back to Mullinsville?"

"On my back," said Aminadab, simply.

"A young Sampson," said the old gentleman, looking over the tops of his glasses at the policeman, who nodded affably.

"And the glass and timber, where did you get those?"

Aminadab told him. Somehow he was not afraid in the presence of this fine, patriarchal old man. He had heard of jails, but he did not believe that the gentleman was going to punish him.

Mr. Lippincott—if that was his name—heard him through, and then he said: "Officer, I don't think that this is a case for you. He has put back my door, and I will deal with him in a way that seems fit."

The officer rose and bowed and went out.

When Aminadab and the old man were alone together, the latter said: "My boy, a little fellow who has so much strength of body and such kindly instincts ought to learn that it is never kind to take

AMINADAB HAD TAKEN OFF ONE DOOR.

AMINADAB SEIZED THE GOOD MAN'S HAND AND WRUNG IT.

before nightfall he had visited every man who had unknowingly contributed to the new library. And to the glory of the inhabitants of Mullinsville, only one man refused to let Aminadab keep what he had taken, and that one was an old fellow who had miles on miles of stone fences, and from whom the boy had taken one stone. He insisted on its being returned to him, and as it was the bottom one in the foundation wall, Dabby had a hard time getting it and plenty of time to reflect on his misdoings.

It is a singular fact that after the library was dedicated there was no one who spent so much time in it as this old man who had refused to contribute a single stone towards its erection.

The day of the dedication was made a holiday in Mullinsville, and every one in town came to see what one small boy had been able to do, and old Mr. Strawberry or Lippincott told them all that they had ought to be proud of Aminadab, on the whole, because while dishonesty was a grievous quality, still it could be repented of, and doubtless Aminadab had already repented, but public spirit was a thing so rare that it ought to be encouraged by all possible means.

Then Aminadab got up and said: "I thought that I was going to give you this library myself, but since my kind friend here has opened my eyes I see that I had only two things to give you—my labor and what taste I may possess. The rest you have given yourselves, and the books he has given. So I say, let's give three cheers for him."

The cheers were given lustily, and then much to Aminadab's surprise Mr. Hamerton, who had come in late and unexpectedly, rose and said: "Dabby has forgotten that I own the ground on which he built the library, but I cheerfully give it to him to give to you, because I think that he is the most generous and the most public spirited boy in New Jersey. And after this we will trust him with anything."

And Dabby has proved faithful to that trust.

things that don't belong to him. Now, I believe that you acted thoughtlessly, and I am not going to punish you, although you committed a crime in taking down my door. Instead, I am going to make you a present of the doors and will have them sent out to Mullinsville, and I will also give you ten thousand books to put on the shelves, for a library without books is like cake without sugar. Only first you must go to each man from whom you—er—"borrowed" material and tell him what you have done, and restore his property if he objects. And I will make good any stone or glass or timber that is needed."

Aminadab seized the good man's hand and wrung it, and a few minutes later he was on his way home, and

his face set and white, his hand grasping his rifle, he struggled to his knees, crying:

"On boys! on boys! don't give an inch. Fire! fire!" Then he loaded and fired, loaded and fired, with a magnificent scorn of pain and an exaltation of patriotism in which the spirit bid defiance to the body.

Only a few seconds, and at his side fell his friend, Asel Wickham. He had received a wound almost identical with Sprague's, who, seeing it, cried wildly: "Come on, come on up! can't spare you, Wick! Load and fire!" and Wickham, following the brave example, lifted himself to a half upright position, and the two dauntless young heroes, these noble boys from Iowa, enwrapped as it were in a sheet of galling fire, were seen there, kneeling side by side and fighting with a courage which surely has never been surpassed.

The battle raged on, but they seemed to bear a charmed life, and late in the day, seriously wounded, they were captured and sent farther South with other prisoners. After a time they recovered, were exchanged, and both lived to see the close of the terrible war.

When the day was done and darkness came, the Confederates camped about Shiloh, a little country church, and from this the battle took its name. During the night General Grant received heavy reinforcements, and on the following day the Confederates retired. Shiloh, while one of the bloodiest conflicts of the entire war, may be called a "drawn battle," for the victory was not decisive for either side. On this field fell the gallant Albert Sidney Johnston.

The Boy Battalion at New Market
ANNAL ROBINSON WATSON

"Boys, I think it's a shame to stay here and have an easy time when General Lee needs men and our army is having such hard luck." It was Evans, the tall, slender color-bearer speaking. He stood in the center of a group of boys on the campus of the Virginia Military Institute.

"I'm in favor of forming a battalion of our own and slipping off some night. We could easily reach General Stuart," answered a boy at his side, "other cadets have done it."

"General Rosser broke camp yesterday," said another. "He has been ordered to join the main army, and when leaving presented the Institute with a captured Federal flag. I'm in favor of going for the enemy and getting one for ourselves instead of staying here to take care of one captured by somebody else."

"I feel that way, too, boys," added Cahell, "but who knows, we may do our cause a much greater service by waiting here under drill until we're ordered out. There may come a time when a cadet force two hundred strong will help to win some important victory. If we stop to ask what is duty we will stay right here under orders."

Cahell was first in his class and a boy of great influence among his companions. They listened attentively, but there was no time for reply, for just at this moment the bell sounded and the conversation was discontinued.

The time was May of 1864. The Civil War continued to deluge the country with blood, and peace seemed far away to the anxious hearts that longed for its coming. Lee and Grant, with their opposing armies, were on the soil of Virginia, the battle clouds had burst here and there all over the State, but the decisive conflict was not yet.

In the beautiful valley of the Shenandoah, at the Virginia Military Institute, were gathered boys from the entire South. All of them, like Evans, Cahell and their companions mentioned, were eager to go to the front, and were constantly urging that they be allowed to take part in the struggle. Despite all obstacles cadets had left from time to time and joined the army, but at this date there were over two hundred enrolled, from sixteen to eighteen, who were well drilled and prepared in every way to serve, should an emergency make it advisable for them to enter the army of Northern Virginia.

During the winter Rosser's force (Confederate) had been in the neighborhood of the Institute, and in this way the cadets had been in constant communication with the veterans. The influence of the stories of valor and heroism recounted by the soldiers filled the boys with the most intense enthusiasm, and when the captured Federal flag alluded to was presented, their eagerness to share the dangers, as well as the victories, of the Southern army knew no bounds.

The bell had interrupted the conversation and a little later all the cadets had assembled for "dress parade." Their white and gold banner, held aloft by Evans, fluttered in the evening breeze, and the band played their favorite airs. Quite a number of old people, young girls and little children had gathered to see them go through the familiar tactics and stood in groups near by.

"When will our time come? Why will they not let us go?" the boys asked each other when drill was over. "We will not wait much longer."

These were the words upon their lips when they

...TWO IOWA BOYS...

ANNAL ROBINSON WATSON.

It was the early spring of 1862. General Grant, with his magnificent army, was down in Tennessee. Generals Albert Sidney Johnston and Beauregard, Confederate Commanders, were also in that State, and they decided to unite their forces and attack General Grant in the hope of crushing his command before reinforcements could arrive.

With this end in view they prepared for an attack, but the southern troops were as yet inexperienced and without training. There was among them "more enthusiasm than discipline, more capacity than knowledge, and more valor than instruction." Many of their guns were old flint locks hastily altered, others were ordinary shot guns, and their equipment was in every detail poor and insufficient. Notwithstanding these disabilities the force which had been gathering at Corinth, Mississippi, now entered upon a rapid march of twenty miles to meet one of the most perfectly equipped armies the world had ever seen. The short distance was soon covered, and on the fifth of April the various commanders formed in line of battle within striking distance of the Federals.

At first there was only sharp skirmishing, but early on the following morning the Confederates fell upon the enemy with a resistless fury. They hurled division after division against them, and though met by a resistance fierce and determined it was soon evident that Sherman and McClernand were being forced back, and that Hurlbut, who had so stubbornly held "Hornet's Nest," would be compelled to yield his position.

The Federals fought desperately and contested every inch of the way, but by the afternoon thousands of

their men had been killed and wounded, and a rich spoil of artillery had been captured by the Confederates. The fortunes of war seemed utterly against them, despite the intrepid bravery manifested alike by officers and privates. But this fact only spurred them on to more reckless endeavor.

Among the gallant detachments in the lead was Company "A," of the Twelfth Iowa Regiment, commanded by Captain, later Colonel T. B. Edgington. No braver men ever faced an enemy than those composing this Company, and among them were two young boys, Kendrick S. Sprague, sixteen years of age, and Asel J. Wickham, who was probably about twenty. Sprague was small and slender, but in some way had succeeded in joining the troops, notwithstanding the effort on the part of the Government to prevent boys under eighteen from enlisting.

The two boys were fighting side by side, one impulse throbbing through their eager young hearts, to suffer, if need be, to die, for the dear old flag which could be seen even through the dense clouds of smoke that darkened the beautiful spring day.

It was growing late; the boys had been in the field since early morning when startled from a half finished breakfast, and they were very tired. But the fight grew momentarily more desperate. Their company was almost surrounded by the "Grey Coats," pressing ever nearer. It was under fire from the front, the rear, and from an enfilade, and in the hottest of the conflict was the boy of the company, Kendrick Sprague. His slight figure was lifted to its fullest height and his clear eyes ablaze with the light of heroism. There was no quailing, no hesitation as the foe dashed forward, but suddenly, just where he stood, came a storm of death-dealing balls which burst like burning hail from the guns right in front of him. They passed above and on every side, one of them piercing his leg just below the knee, tearing the flesh and splintering the bone.

He fell, for a moment helpless, the blood gushing from the gaping wound, but only for a moment. With

broke ranks and separated, but little did they realize that never again would they meet on the old campus as in the past, care-free, joyous, happy-hearted boys; the time for which they longed was near at hand.

When night came they went to the barracks, and to slumber; all was hushed and quiet. The hour of midnight passed and all was well, but suddenly a sound for which the soldier listens even in his dreams broke upon the stillness. Drums were beating the "long roll," and through the silent barracks the sound went thrilling and resounding. In a moment all was hurry and excitement. "What has happened? What has happened?" cried the boys to each other as they hastened down to their places in the ranks.

In full view of them all stood the adjutant. He held a paper which the other officers were reading over his shoulder. "Attention!" he called. "Attention! The forces of the enemy are advancing up the valley! General Lee can spare no troops to meet them. General Breckenridge has been ordered to assemble all troops in Southwest Virginia at Staunton. The cadets are to join them. You will march at daybreak."

He paused, there was a most profound silence, the boys standing in position of "parade rest," the dim lights and mysterious shadows lending a weird charm to the scene, while to each boy it seemed that the tumultuous beating of his heart must be heard by everyone present.

Then the order was given to break ranks, and down the campus they went with wild cheers and hurrahs. "Our time has come at last! Our time has come at last!" they cried.

Quickly preparations were made, knapsacks packed, letters written, and at four o'clock, in the dull grey of a May morning, the Boys' Battalion started on the march towards the Staunton pike under Commandant Shipp.

After two days of almost unbroken marching Staunton was reached, and that night the cadets were made the guests of honor at many festive functions held in the town.

They passed down the streets amid cheers and cries of welcome, and marched in review before a body of war-scarred veterans. The old soldiers, in friendly amusement at the proud and self-conscious manner of the Boy Battalion, held their guns across their arms, rocked back and forth and laughed aloud. Their band suddenly struck up "Rock-a-bye-baby."

"We will show them," thought the boys indignantly, "when fighting time comes. We will show them what such babies can do."

The next day orders were received for the movement of the army down the valley. After a long day's march, part of which was during heavy rain, camp fires were lit and the wearied troops lay down for rest, but a little after midnight came a hurried order that the march must be resumed at once. "Rolls" sounded, the Boy Battalion formed and stood waiting for the word to march.

Despite the darkness and excitement Chaplain Frank Preston, who had already faced the terrors of many battles, called the boys about him for prayer. He spoke of their homes, their fathers and mothers, of the approaching bloodshed and the hope of victory. He spoke of life and death and the home beyond to which some of them might now be very near. There were solemn faces and misty eyes when his voice ceased, then the command was given and the march to New Market began.

Four miles from New Market the Confederates, under Wharton, were overtaken and joined by the cadets. A little later a body of skirmishers dashed up and passed to take position in front of the infantry, then General Breckenridge and his staff galloped by. The entire command now advanced rapidly and reached a sharp bend in the road; turning it they saw New Market, and the enemy awaiting them.

On the left was a bold range of hills, on the right the Massanutten Mountains. At the base of the mountains was a creek; nearer still, and on its banks, a beautiful strip of green meadow land which skirted the village.

Here on the meadow were stationed the enemy's skirmishers, and in the cemetery around the village church they had already placed a six gun battery ready for action. It was in the rear of their infantry, and where it stood could shoot above their heads at the approaching Southern army.

The Confederate cavalry galloped to the cover of the creek. One of their brigades moved from the pike double quick, the skirmishers went forward at a run, while the artillery came thundering into position.

The six gun Federal battery in the cemetery opened at once upon the cadets, who were in the direct line of attack, and they answered with a hot fire from their own artillery. Now there was hurrying and dashing of troops, dense clouds of white and blue smoke, the exploding of shells, crashing of smaller arms, and the battle was on in earnest.

Four of the cadets had been left a short distance off to guard the baggage wagons, but suddenly a gallant young fellow, John Wise, called out. "Boys, the fight is on! the corps is going into action! I cannot wait here, decide for yourselves!"

His companions, Stanard, Redwood and Woodlief, sprang to his side. "We are with you!" they answered, and the four dashed forward, overtaking the Battalion just as it was moving double quick up a

slope. At this moment command was given to strip for action, and blankets, knapsacks—everything was dropped but the guns.

Then forward and up the slope the Boy Battalion rushed, "For Virginia! For dear old Virginia!" were the words echoing through their hearts, while cheer after cheer rang down the lines. As they advanced Sergeant-Major Woodbridge dashed forward 40 paces in front of the colors, but the reckless act was seen, and he was quickly ordered into line. Evans, brave and dauntless, bore aloft the white banner and every cadet lifted to the ensign eyes flashing with eager enthusiasm. So they went over the crest of the hill and appeared in full range of the enemy's guns.

On their right came Echols' brigade charging with the "rebel yell." In front they were met by a shower of shells from the Cemetery battery, and on all sides was the deadly rattle of musketry, but not one of them flinched nor turned. A shell came hurtling through the air, burst in the foremost ranks, and Young Wise, he who had voluntarily left a place of safety, fell, shot in the head. Sergeant Cahell saw it, but there was not a moment to lose, he could not pause, and only called out in a firm voice, "Close up men! Close up!" as they dashed on. A few feet from John Wise fell little Captain Hill, Reed and Merritt a short distance farther. Five were brought down by the same shot, but Wise was not mortally wounded. The Cadets were in the lead at this point, and the entire Confederate force was advancing. The six gun battery of the enemy kept up a galling fire, and their infantry poured forth volley after volley.

Suddenly Cahell, first sergeant of Company "D," fell dead. Near him Crockett and Jones went down mangled and torn by cannister. A little farther along lay McDowell, a bullet through his heart. Atwill, Jefferson and Wheelwright fell a few steps away, and Commandant Shipp lay, somewhat removed, dangerously wounded. "Down! Down!" ordered an officer in ringing tones, "Down and fire!"

The boys dropped, firing from their knees, all save Evans, who stood upright and unwavering, cheering and lifting the colors high above his head.

The crisis had been reached. The field was full of dead and dying. The Cadets halted a moment;

they must charge again or retreat, and at the moment Henry Wise, one of the most beloved of all their command, cried desperately:

"Rise boys! Rise and charge! Rise and charge!"

"Their's not to make reply,
Their's not to reason why,
Their's but to do and die!"

And "charge" they did. Right into the "jaws of death," in face of the blinding fire from the enemys' six-gun battery. With a cry of defiance they reached the Federal infantry, which retreated before them. Some of the gunners were leaving the battery and flying in confusion. The Cadets pressed on, exhausted, some of them shoeless and wet to the skin, but with intrepid bravery courting death at the mouth of the cannon. They reached the teams and disabled them, leaped upon the guns, and cheered and yelled in delirious joy over their victory. Evans sprang upon a caisson, waving the white banner and lifting it where it fluttered out over the Federal artillery.

The victory of New Market was won. It was evening and the picket fires were lighted. As the sun went down the Cadets turned back to the bloody field to pick up their comrades.

Out upon the green wheat field, now trampled and gory, were found three. Cahell, first in his class, second in the command, the peer of any boy in the battalion, was the first one recognized. Near him was little McDowell lying as if asleep. In the last agony he had torn open his jacket and shirt, and there on his white breast was the death wound. Not far away lay Stanard, his body still warm; he had died only a few moments before. There was a smile upon his lips as if they had just spoken words of tender farewell; death must have come to him mercifully.

Fifty were dead of that joyous band. Fifty were wounded. They were victorious, but in the presence of their dead the joy of victory was drowned in bitter tears.

The battle of New Market was over. The Boy Battalion had done its duty. No braver American soldiers fought in all the desperate conflict. Not one turned his back to the foe nor his face from the hurtling cannon.

HOW AN AMERICAN BOY IN INDIA CELEBRATED WASHINGTON'S BIRTHDAY.

BY IRA J. STODDARD, JR.

I know that every boy who reads this paper has admired the pluck of the boys in Boston who, during the Revolutionary War, visited General Gage and protested against his soldiers breaking up their skating ponds and destroying their snow forts.

I, as a boy, took that story in United States history as the principal reason for my dislike of British "Red Coats" and thought it had much to do with the continued coolness between the two countries. The following incident coming under my own observation, proved to me, however, that all "Red Coats" were not villains, as I had formerly supposed.

The English population of a small hill station in British India consisted of Major Cumber, chief magistrate of the district, one police officer, and the station doctor, with their families, while Mr. and Mrs. Carson and their son Hal were the only Americans in that part of the country.

Hal was a rumping, shouting boy about the noisy age of fourteen, who had lately been transplanted from a home on the Illinois prairies to the hills and heathen of India. His time was now mostly occupied in finding something to kill that time with, as he was the only white boy within a hundred miles and company was scarce.

In front of the Carson bungalow on the point of the hill was a square brick monument marking one of the points on the British triangulation survey of the Brahmaputra Valley. The top of this monument was some eight feet square and ten feet above ground, so situated as to be visible for many miles in all directions. In the center of it Hal had fastened a straight bamboo, forty or fifty feet long, for a flag pole, and on every occasion, when he could find an excuse for so doing, he would hoist thereon the Stars and Stripes he had brought from America. The arrivals of steamboats going up or down the Brahmaputra river two or three times a month were the most frequent events of interest to the little community on the hill. From the survey monument, Hal was generally the first person in town to see the smoke, miles away up the river or coming around the point five miles below. At first sight of smoke the flag was run up, as Hal said, "to comfort any homesick Yank who had strayed so far from home."

The only playmate Hal had was a native boy from the distant hills, whom Mrs. Carson had taken to raise. This boy, Jilly, was a bright wide awake fellow, always ready to help in any fun or mischief Hal might invent. The black boy knew how to snare the wild parrots and trap the big lizards that were plenty around the hill; while Hal in return taught him to speak English, spin tops, play checkers and shoot "white man's gun."

They made a matched team. The combination of Western independence with the savage instincts of the "hill boy" fresh from the jungle, frequently produced events that "hustled the East," and awoke the dreamy Hindus in the bazaar below.

One morning at sunrise, Hal took his shotgun from its rack and told Jilly to bring the flag out and hoist

THE CARSON BUNGALOW.

it on the pole. "Steamboat cum alone?" asked the native. "No! no boat, Jilly, but we'll run the flag up and then I'll tell you why."

So out to the monument went the boys, and the beautiful flag was soon flapping in the morning breeze, which at that time of year was blowing cool from off the snow tipped Himalayas, visible in the northern sky.

"Now, Jilly! you're an American, ain't you?" asked Hal.

"No! I no Merican. I Garo. Mother Garo; father Garo; all Garo; born way up in hills; no white man," replied the black boy, earnestly.

"O yes! I know that; but you'd like to be an American. You live in an American family; eat an American's food and are learning to read and talk American. Now, you've got to try being an American citi-

THE AMERICAN BOY

zen today, just to see how it goes. The very first thing an American boy learns about is George Washington, the greatest man that ever lived. He drove the British out of the United States. He never told a lie. He was first in war, first in peace, and first in the hearts of his countrymen. Today is his birthday! "Now take off your pagaree (turban) and hold as loud as you can yell. Three cheers for George Washington and the Stars and Stripes!"

"Hi! Hi! Hurra! Hurra! Hurra! Hurra! Hurra! Hurra!" And the American yell for the first time struck the hills of British India.

"Hello! you young scamps: what are you up to now?" And Major Cumber, the magistrate, out for his morning ride, reined up his Arabian at the base of the monument.

"No, sir!" replied Hal, "we're just celebrating Washington's birthday, and I'm teaching Jilly how to be an American citizen."

"Washington's birthday? American citizen?" shouted the Major. "Well, sir! Well, sir!" he continued, excitedly, "you'd better look out how you celebrate here. You're in British territory, and your George Washington you talk so much about was a notorious old traitor, and you'll soon be one if you keep this up. I think, as chief representative of Her Majesty in this district, I ought to arrest you for trying to lead astray one of her subjects."

"Jilly! (and the boy jumped as if he'd been struck by a cobra) you'd better be careful how you hurrah for George Washington; you belong to the British Government."

"Salam Sahib, me holla no any more; me no Merit-frightened at the officer's savage tone.

"Here, you shut up talking that way," interrupted Hal. "You've got to be an American today; you can't go back on it now. Guess we ain't hurtin' anybody. I'm goin' to holler for Washington all I want to. He's a better man than your Lord Cornwallis; he liked him too," said Hal crossly.

"Well! Well! You needn't bristle up so about it. You better drop it now. I'll let you know after breakfast what I think about it. I'm not sure you should be allowed to teach these hill savages your false notions of American freedom; they might want some of it themselves, and they're too saucy now."

And the Major galloped away toward the parade ground.

The Western boy hardly knew what to do. He stood looking at the fine horse and uniform disappearing over the hill.

But the boy of the dark skin had been taught to fear the law in the person of army officers.

"Better take the flag down, Lora Sahib," he said.

"Major he look very black."

"Take the flag down? Not much," answered Hal, angrily. "You're scared, you are; you've got the shivers, you ain't worth two cents for an American. In the United States we say, 'If any man attempt to pull down the American flag, shoot him on the spot,' so you'd better look out. We'll just let her wave. If the

Major wants it down, he'll have to take it down himself."

The boys went back to the house and Hal, angry all over, told his mother what had happened. Mrs. Carson advised him to take things cool and wait; anyhow, the Major had to be obeyed in that district. But the jungle boy would not be comforted. "He much very cross; he put us in khaboose; he kill plenty hill men; he maybe hang us."

But under the influence of a good breakfast and Mrs. Carson's advice the boys grew calmer.

Late in the forenoon the two boys were sitting on the veranda, having a game of checkers, when Jilly suddenly jumped up, exclaiming:

"Here come police! Got paper 'rest us!'"

And sure enough, here came the Major's tall orderly, in his big red turban and bright uniform.

He stepped up to Mrs. Carson, gave a left-hand salute, and handed her a note. Then in the same military manner he handed a large package to Hal.

Mrs. Carson opened her note and read as follows:

"My Dear Mrs. Carson:

"Will you and your family dine with us this evening at half-past seven?"

"Yours sincerely,

"ANNIE CUMBER."

With much fear and trembling Hal opened his package. Jilly looked on with starting eyes.

"And when the pie was opened the birds began to sing."

When the package was opened the boys began to

TWO BOYS AND A MAJOR

father had built for me during the winter. I so gloried in my new possession that the tippy canoe of former days was forgotten, and the silvers having been reduced by the wear of trousers thereon, it was presented to Farmer Banks and for a long time served as a watering trough in his barnyard.

The canoe pleased me greatly and many pleasant voyages were taken in her each summer for several years. Finally a number of sailing canoes were brought to our resort, and their speed so greatly surpassed that of my little cat that I became dissatisfied, and the next winter my leisure moments were spent in building my first canoe, which I called "The Gleam." I shipped this craft to Traverse Bay and sailed her successfully over most of the water courses of northern Michigan. The little ship proved to have many excellent qualities, and being of my own design and workmanship, I was of course greatly pleased.

I loved my boat, and enjoyed every moment of the many hours spent aboard her. For several years I was contented with my canoe, which carried me over many miles of water, but never a song she sang but bore a message from the sea, and I was truly becoming restless to try life on the real old "briny."

I had always wished to make a sea voyage; in fact such a trip had long been my fondest dream. Such air-castles as the active imagination of a youthful mind will build! Many times had I mapped out long cruises, but yachts of sufficient size in which to make such a journey are not always to be had, and it was not until our moving to our home in St. Joseph, Michigan, that I had the proper shop room and other facilities for the building of such a craft, and of course the hiring of one built was never even thought of.

My shop being completed, I immediately began to design my new craft. Owing to the fact that I intended my boat for service on lake, river and ocean, it was somewhat difficult to secure a combination of qualities which would make a craft suitable to so many waters, each peculiar in its requirements. After much study and thought, however, I finished my plans, which I hoped would prove satisfactory.

were in my case. I had the material in the shape of a good big cedar the 10 feet long and 14 inches wide. The official measurer said it would be fair for me to build as large a boat as possible out of said timber, so with this restriction the work was commenced, and after much choppin' "with my little hatchet," and the culmination of our screw driver, which had been pressed into service as a chisel, the new boat was finally completed, and many were the complimentary remarks passed on the beauty of her lines. The most flattering words were those of an old farmer, who declared that it would make a most excellent pig trough if the silvers were only smothered down a little.

Next thing was to secure a crew, but the sailor-lads objected to the quarters offered for their accommodation, so after trying in vain, the captain decided to navigate the craft alone.

Folks said I would get drowned and tried to discourage my desire to be a navigator. However, notwithstanding the tippy qualities my "dug-out" possessed, we became great friends. At first it was hard work to keep right side up, but after practicing some time, and balancing the contents of my pockets and adopting the new style of combing the hair, things went all right, and, strange to say, I did not drown, but returned to my winter home very much alive indeed.

During my youth I spent my summer vacations on Grand Traverse Bay, and it was there that my "dug-out" was built.

When June days came and school was done, we once more returned to our summer home. I was anxious to again try my boat, but alas, I had outgrown the ship, and try as I would I could not squeeze in.

Relief came, however, in the shape of a trim little

CHAPTER I

Luckily the style of parting the hair in the middle and my first creation of a yacht came into existence at about the same time, and this fact no doubt is responsible for my still being an enthusiastic follower of the sport.

Nowadays the yacht designer is given certain measurements, and is obliged to shape his model so as to come within the prescribed limits. But in the days of my first yacht things were just reversed; at least they

THE GAZELLE OF ST. JOSEPH

The Cruise of the Yacht Gazelle 6,000 Miles on Inland and Ocean Waters.

By KENNETH M. RANSON

The new boat was to be 30 feet over all, 22 feet long on the water line, 9 feet wide and 3 feet draft. Her sail area was 537 square feet in the yawl rig. In my design, my first aim was for staunchness and seaworthiness and comfortable accommodation for a crew of four. With these features I hoped to combine fair speed.

She was built with a modern spoon bow and overhanging stern. The cockpit was to be large and self-balling. Large lockers for robes, lanterns, tools and extra anchors were provided for in the wings under the seats.

All the rigging was simplified as much as possible. The running rigging all led aft to the helm.

GAZELLE'S CREW AND FRIENDS

Much attention was given to the cabin below, which was large and comfortable, being 14 feet long, 9 feet wide and 5 feet high. Forward was arranged a shelf for canisters, dishes, etc., while underneath was a row of four drawers, one for each of the crew, where might be kept wilting material, etc. The provision locker was below this, and, being large, afforded room for a big supply of duff. The berths were arranged with hinged tops, so that the large space beneath these could be used for the storage of satchels and other things. Straps were provided to hold the mattresses and bedding in a roll underneath the deck while not in use, and curtains, hung on hooks, hid them from view, giving a cozy look to the cabin during the day.

The table was hinged on to either side of the center-board box and when lowered took up little or no room. Many little things to add to the comfort of the crew and the coziness of our quarters below were included in the design, and thus was built the craft in which I expected to make a long voyage.

I was lucky to secure some splendid white oak, which, though harder to work, makes a very strong, serviceable craft. So I used this material entirely in the building of the hull.

THE BERTHOPLACE OF THE GAZELLE

I had the yacht well under course of construction before I began to say anything about the long voyage, but at last I laid my plans before Arthur Morrow, who was to be my mate, and he was so enthusiastic that he wanted to sign papers at once. Next we spoke to Clyde Morrow, Arthur's cousin, and although he didn't believe we were in earnest at first, after being convinced that we were, he was very anxious to become one of the crew. We waited a few days before selecting the fourth member of our crew, until our friend, Frank Chauvet, came home from Chicago, where he had just been graduated from the manual training school. Then we all met for consultation, and, although we expected to hear many objections from our parents, when we should lay our plans before them, we had shaken hands and sworn to stick like glue.

I was well pleased with my crew, for they were boys of the true blue type. I was the oldest of the four, but our ages ranged nearly the same, all being in the very early twenties.

Nailing our motto "Keeping everlastingly at it brings success," over the door, we worked diligently on the boat, and by the last of July had the hull com-

pleted and ready to move to the river, three-fourths of a mile distant.

This was an undertaking that very few people thought we would successfully accomplish. The boat was of an awkward shape to handle on land and weighed fully three tons. On the road were several turns and a steep hill and at its end a railroad crossing.

The boat was too large to go through the door, so the entire end of the shop had to be removed, but we did not care for this, and succeeded in safely moving her to the truck on which we intended to move her.

Our plans were carried out successfully and though it took us two days to do it, we were finally overjoyed to have her on the ways all ready to launch.

On the fourth of August, 1898, at three in the afternoon the little vessel was launched with all the pomp and ceremony generally accorded ships of which are expected great things. As she glided gracefully down the ways to the bosom of the shining river, she was christened "Gazelle" by one of St. Joseph's fairest maids. That evening the press contained the following:

THE LAUNCHING OF THE GAZELLE

The pleasure yacht *Gazelle* designed and built by Kenneth M. Ransom, of this city, was successfully launched this afternoon at 3 o'clock at Napier's bridge, where a large crowd had gathered to witness the event. Miss Ree christened the little vessel "Gazelle" in most excellent style, and everyone present wished a successful future for the trim little craft.

Much interest has been manifested in the boat and crew from the fact that Mr. Ransom and his associates, Arthur Morrow, Frank Chauvet and Clyde Morrow, all well known young men of this city, intend making an extended trip on the yacht.

They propose to be gone one year and will leave as soon as the work of finishing and rigging the boat is completed.

The proposed route is as follows: Leaving St. Joseph they will cross the lake to Chicago, where they will enter the Illinois and Michigan canal, which will take them to the Illinois river. On this stream they will strike the Mississippi river at Grafton, and proceed down the great stream to the Gulf of Mexico. Coasting around the gulf the party will visit all the places of interest on the coast line of Mississippi, Alabama and Florida, after which they will turn the point of Florida and continue up the Atlantic seaboard to New York City, thence by the Hudson river, the Erie canal and the Great Lakes, home to St. Joseph.

It is an undertaking full of risk and danger, but the boys are confident of success, and it is hoped their cruise will prove successful in every way.

ON THE WAY TO THE RIVER

People now began to ask us questions on all sides. It was indeed amusing to hear the remarks that were made in regard to our trip. Very few people thought we would ever start, and most thought we were crazy to even think of such a thing. Six thousand miles in so small a craft and much of the distance on the ocean, did seem almost impossible. Some tried to persuade our parents not to let us start, but we had set our hearts on going, so that they, too, were very much interested in the successful accomplishment of our proposed plans.

Those that thought we would start said: "Let the boys alone, they will get enough of it before they get to Chicago, and will be glad to return home." This is the kind of encouragement we received, but we didn't care, and just "went on sawin' wood" and soon the *Gazelle* began to look shipshape. There was much to do before we could start. There were the spars to make, the ballast to stow away, the rigging to be splinted on and set up, and so on.

Although we worked hard, August slipped by and a great deal still remained undone. Luck did not seem to favor us during the next month. In fact, we had so many little reverses that friends began to say we were "hoodooed," and that we had better give up until another year. Here were some of our strokes of bad luck:

Someone allowed a dog to come out to the yacht

GAZELLE ON THE WAYS, JUST BEFORE LAUNCHING

with him in a boat. The canine was wet and covered with mud. Notwithstanding this fact, however, his dogship jumped aboard and made himself comfortable on the freshly painted deck and before he was removed succeeded in making it a sad sight to behold. This was bad enough but to make matters tenfold worse it rained that night and the blue paint on the cabin roof ran down the nicely varnished cherry cabin house. When we beheld the sight next morning everything seemed "blue" indeed. After much scraping and sandpapering we had things once more cleaned up and

GAZELLE JUST AFTER BEING LAUNCHED

ready to repaint. This time we had splendid luck and the *Gazelle* certainly did look fine.

From now on all went well for some time. We were feeling jubilant over our better fortune and were almost sure our trials were at an end, but alas, one night a very strong wind blowing up stream raised the water in the river several feet, the *Gazelle* dragged her anchor and went ashore, after which the water again receded and left her nearly high and dry. This was indeed discouraging, for it would be a very difficult task to get her afloat again.

The river was still falling, leaving the boat higher and higher each hour, but try as we would we could not get her afloat until her ballast was unpacked and taken ashore. What a job it was; 3,500 pounds of scrap iron, and it all had to be carried to the bank in pails. It was not much sport toting the heavy loads ashore through water and mud nearly three feet deep. A nasty, cold October drizzle added to the discomfort of it all, but we kept at it all day, and by eight o'clock in the evening our efforts were rewarded by the *Gazelle's* again being afloat.

It was a wonder we did not catch cold or something worse. Next day we put the ballast aboard once more and from that time on we were careful to anchor the boat doubly secure. Notwithstanding the fact that it rained nearly every day during the month of October, we completed our work by the 15th and everything was ready aboard.

Sailing down the river to the harbor, we found good anchorage in the lee of the U. S. Life Saving Station, and began to put our stores aboard.

It was great fun, those last few days. The lake was very rough and the swells backed up the river and caused our little craft to roll and pitch at her anchorage, greatly to the discomfort of our many visitors, who invariably became sea-sick. The cook, too, threatened to jump his job unless he was provided with an assistant to hold things on the stove, but we told him that he must get used to such little discom-

U. S. LIFE SAVING STATION, ST. JOSEPH, WHERE THE START WAS MADE

forts. He did not seem to see it that way. Life on the rolling deep was a new thing to him.

It did seem as if we never would get all our stuff aboard, and it was wonderful the amount of things we packed away. Our girl friends were very kind to us, so that our lockers were well filled with homemade preserves, pickles, etc., and the number of loaves of bread, the cakes and pies which had been baked by friends who did not wish to see us go off to starve, made our yacht seem like a floating bakeshop. These same friends also made us many pretty and useful things for our cabin, including lounging pillows, curtains, a chart case and sewing bags complete with needle books, thread, buttons, etc., all useful to our bachelor life.

At last everything was complete and we triumphantly announced that we were ready to start. Day after day we waited for favorable wind and wave, hoping that it would moderate so we could give our craft a trial before starting across the lake, but the condition

of things grew worse if anything, and the season became so late that the sailing of the lake was fraught with great danger, so that once more our friends begged us to give up our cruise, at least until another year. We would not listen to this, however, but patiently waited for better conditions.

I took advantage of the delay to complete our little yawl boat, which we called Nibs. This boat was 11 feet long and although weighing but 45 pounds was very strong and in a pinch would carry our whole crew.

We also gave a little spread aboard and although the young lady guests insisted on doing the cooking, our chef did not seem to feel hurt, and did not even show evidences of disapproval of the dishes as they were served.

Another very pleasant event of those last few days was a dinner in honor of the crew, given by Miss Rice, who had named and christened the Gazelle. So that all in all our delay, though provoking, was not without its compensating pleasures.

On the morning of October 24, 1898, the wind, which had been a little north of west for several days, took a shift to the southeast. The barometer indicated a slight rise and I decided to make a start, with the hopes of reaching Chicago before another change. The weather still looked doubtful, however, but we would at least give our craft a good test.

Our parents and a number of our friends came down to the wharf to bid us adieu, and at eight o'clock our anchor was brought on deck, and as the wind filled our sails the Gazelle gathered headway and we were off.

As we rounded the south pier which forms the river harbor, we were heartily cheered by our friends who had gathered on its outer end. Our cannon had been loaded and as Gazelle rounded the pier and stood out into the lake, we fired a salute and sped on our way.

Besides our crew of four we had one guest, Mr. Fred Hamilton. Fred is a jolly fellow and as true a

sailor as ever walked a ship's deck. When we invited him to accompany us to Chicago we told him that most people said we would never reach there alive. Notwithstanding this he was glad to accept our invitation, and said: "Well, boys, I don't agree with them, but at any rate we will enjoy it as far as we go."

The day was cold and cloudy, a fine mist hung over the water, making oil-skin clothing very comfortable indeed. In fact, a sailor would say it was "nasty," and I predicted another blow in the near future.

If my hopes for my new craft had been high, her performance more than met my expectations. She balanced beautifully and the way she rode the short, choppy seas was splendid, showing beyond a doubt that she would prove a wonder in a sea way. So, with swelling sail and increasing gale I held her on her course for Chicago.

(To be Continued.)

A BOY IN THE UNITED STATES CONGRESS

CHAPTER IV.

Ben Butler was not always tragic, as I pictured him to you last month. He could be a buffoon at times, and here was one time. Butler had presented a bill for a pension in behalf of an old lady. The old lady had pestered the life out of her Congressman friend, coming to Washington, dogging his steps, writing him letters, soliciting interviews, and when not thus engaged, sitting in the House gallery as nearly over the place where Butler sat as possible, and leaning forward and intently watching every act and greedily devouring every word of the Honorable Ben. In the hope that the next moment she would hear the stentorian voice of the Reading Clerk announcing to the House by title:

"A BILL TO PENSION SARAH JANE BLANK."

I happened to be on hand at the moment when the bill to pension the poor old lady was put upon its passage, as they say. Butler evidently knew it was coming and doubtless he had told the old lady that this was to be the eventful day and hour. She was there. Her eyes were glued on Butler. He evidently felt the gaze, for repeatedly he turned and squinted his funny eyes up to where she sat and grimaced as if to say, "Just hold your horses, my dear; it's coming." Butler's neighbors got interested and they, too, spent much time watching the poor old pension-seeker. One man told another until half of the several hundred Congressmen present knew what was going on and waited with no little interest the denouement.

The Reading Clerk—a fat man of big voice, a Mr. Charles Clisbee of Michigan, now dead—was reading, by their titles, to an unattentive house a lot of bills which were being voted on and passed in a listless sort of way. Suddenly, with an extra depth of tone and unusual distinctness, for he had evidently known something of Mr. Butler's case, the Clerk roared out something like this:

"House Bill number 18926—A bill to pension Sarah Jane Blank," etc.

It was the old lady's bill. She heard her name. She was leaning far over the railing that alone kept her from tumbling headlong to the floor below. A hundred pairs of eyes were on her. Butler wore a big buttonhole bouquet. His face was radiant. The old lady's was white and drawn. The speaker put the vote and such a shout of "ayes" went up from the floor as was seldom heard.

Butler rose from his seat, faced the old lady, took the flowers from the lapel of his coat and threw them with all his strength into the gallery. The old lady rose and curtsied; Butler bowed like a French beau. The old lady curtsied again; Butler bent double. Again she curtsied, and this time she raised both her hands to her lips, planted a kiss on them with a smack that resounded through the hall and threw it with both hands to the gallant Ben. He responded in kind and the House resounded with shouts of laughter—but for just a moment, for the dear old woman who had been chasing the slow moving machinery of a not too grateful government, perhaps for years, fell in a faint. Butler hurried out of the west door of the hall, and the gallery doorkeepers lifted the prostrate form and carried it to an adjoining committee room. I went, too, and there I saw gruff old Ben Butler as tender as a mother bathing the old lady's forehead with cold water, rubbing her hands in his, and talking to her as a mother would talk to her sick babe. It was over in a few moments, and when I left them she was holding Butler's hand in both hers and reciting tearfully and feebly the story of her sorrows and her poverty, and raining blessings on the head of the old fellow who had been "cussed" by more people north and south than, I was about to say, any other man then living.

After writing this chapter I happened upon some interesting facts regarding Mr. Butler in the pages of Clark's "Life Sketches of Eminent Lawyers," and I cannot forbear going back and inserting some of the interesting items regarding this picturesque character which I there find.

Mr. Butler's practice before the war was the most lucrative of any lawyer in New England—at least \$25,000 a year, and the last few years it amounted to \$50,000. He died worth \$7,000,000. His largest fee was in the Prize Acts cases in the United States Supreme Court at the close of the war in which he received a \$75,000 fee. He was leading counsel for the prosecution in the impeachment of President Andrew Johnson. He held that a lawyer ought to know something about everything. He spent a week in a repair shop, coat off, hammer in hand, testing the resisting power of iron in order to intelligently try a railroad accident case. He studied all the books on scurvy that he could find in order to prosecute a sea captain, who was defended by Choate, and recovered a verdict for \$3,000 against the captain for negligence in not taking sufficient vegetables on board for the voyage. "He excelled all lawyers," said Judge Abbott. "In keeping out and getting in evidence." He once accused Judge Hoar of mistaking dyspepsia for a conscience. He was offered the Vice-Presidency with Lincoln in '64 but declined unless the President would agree to die within three months after his inauguration. He did die in less than a month and a half. Dr. Ayer was once an opponent of John K. Tarbox in a Congressional election. Butler alluded to the campaign as one between Tarbox and Pill-box. He didn't believe much in genius, saying that diligence, hard study and careful thought are the only roads to success in any branch of the law. He was not a great lawyer such as was Curtis, nor a great advocate like Choate, nor a skillful conductor of a case like Durant, and yet even before the war he had encountered and overthrown Choate, the redoubtable Farley and many more of a race of giants. His quickness, his marvelous memory which carried the details of the most complicated cases, his audacity, which amounted often to imprudence, his readiness, made him a formidable adversary. As an example of his imprudence, he said once of a Rhode Island District Judge that he was "an inferior Judge of an inferior Court of an inferior State." His judgment was bad, but he was full of resources. A trial with him was a battle, and politeness, even humanity, were entirely beside the question when he set out to win. He said of himself that he had committed the Four Gospels to memory and that he was able to recite them when called upon, even to the first eighteen verses of the Gospel of St. Matthew. "In which everybody seems to beget everybody else."

As an example of his quickness the following is related: When one of his witnesses gave some damaging evidence against his opponent the opposing counsel gave a groan, doubtless intended for effect on the jury. In an instant up sprang Ben with "Stop! Stop!! Stop!!!"

"What's the matter, Mr. Butler?" asked the Judge.

"May it please your honor, my brother L— is taken suddenly ill. Did you not hear him groan just now?" The Court might like to take a short recess, I thought.

It is needless to say the effect of the groan was neutralized.

He was cross-questioning a witness in a somewhat sharp manner and the Judge interrupted, reminding him that the witness was a Harvard professor. "I know it, your honor," he replied; "we hanged one of them the other day."

Senator Lyman Trumbull said of Butler: "He was of versatile talents, great resources and executive ability. He was egotistical, and not always scrupulous in the means employed to accomplish ends, but he possessed great ability and rendered his country valuable service."

In a letter to the Boston Herald on "How to Get Rich," Butler said: "If a young man's father can give him anything to start on in the world he had better invest it in real estate and let it accumulate and then himself set about earning his living."

As another example of his quickness the following is narrated: On one occasion he was discussing a point of law before the United States Supreme Court when one of the Judges remarked:

"Mr. Butler, that proposition of law is settled in *Brown vs. Smith*."

"I understand that, your honor, but I want to give the Court a chance to get right," said Butler, nothing daunted.

Butler's brain weighed 62 ounces, four ounces more than the brain of Daniel Webster, which until then was the second largest on record, the first being that of Cuvier, which weighed 65 ounces.

* * *

Speaking of the Reading Clerk, perhaps American boys would like to know something about this important official, or rather these important officials, for there are several Reading Clerks.

You would think to see the readings clerks of the Congress I am telling about—the Forty-second—that they had been chosen for their weight for they were big men,—that is, big of girth. But such was not the case. They were chosen for their big voices. These men serve many purposes. Long communications, long bills, long roll-calls, have to be read or repeated by some one who can be heard throughout the great hall—sometimes amid much confusion. So it is necessary to employ men able to do this sort of work easily and continuously. Much of the reading is mere matter of form and is not intended to be heard. In such cases the Reader takes a monotonous tone that is easy for him; he reads rapidly, without inflection or emphasis, much to the disgust of visitors, to whom even the prosiest matter has some interest. The Reading Clerk is a convenience to the members in the way of relieving them from continuous speaking. For instance, a member is in the midst of a long speech. His voice breaks or he tires. All he needs to do is to have at hand some extract from book or paper bearing on the subject, which he indicates he will send to the Clerk to be read. A "page" is at his side in a moment, takes the book or paper to the Reading Clerk's desk, and that individual rises and reads while the member takes his seat, rests, collects his thoughts, confers with his friends, or possibly takes a nap. When the Reading Clerk has finished, the member is in trim to resume his speech. In this way a member may hold the floor for hours and even days, and a continuous speech of a week's duration becomes a possible thing. Sometimes, to prolong debate and put off a vote, speakers will inject into their speeches some queer matter which by their direction is read from the Reading Clerk's desk. A speaker once sent up and had read whole books of the old testament. It was an abuse of privilege, of course, but privilege is not the only thing abused in the United States Congress.

The Reading Clerks are ranked as assistant clerks of the House, there being above them in rank the "Clerk" and the "Chief Clerk." Their salaries are, or were in those days, \$3,000 a year. It may interest my readers to know that the lower branch of Congress employed at that time 152 officers in the departments of the Clerk, the Sergeant-at-Arms, the Postmaster (for each branch of Congress has its own postoffice in the Capitol building), the Doorkeeper, making quite a little army of men drawing from \$800 a year to \$5,000 each, the last named amount being drawn by the important officer known as "The Clerk."

The Senate employed 110 officers, the highest salary, \$5,000, being paid to the official known as the "Secretary of the Senate," who corresponds in dignity and duties to the "Clerk" of the House.

WHAT BOYS ARE DOING.

REUBEN GILBERT DAYTON A SUCCESSFUL STUDENT IN THE YALE LAW SCHOOL, THOUGH BLIND.

Reuben Gilbert Dayton, a blind boy who is making a success of the study of law in Yale University, was born in New Haven, Conn., twenty-three years ago, and is now a resident of Bridgeport, in the same State. He himself tells the story of his loss of sight as follows:

"One day when I was twelve years old I was playing with a little companion. We were riding in a go-cart when suddenly it struck an obstacle and I was thrown to the ground, falling heavily on the edge of the curbstone. One summer afternoon about ten months afterwards while playing in the hot sun I was sun-struck. For twelve long weeks after this I was confined to my bed and many times my life was despaired of. I had the advantage, however, of a strong and vigorous constitution that pulled me through and sustained me through the period of weakness that followed. The doctor said there was no doubt that my blindness was brought on by the fall and the sunstroke. It was in the second week of my illness that my sight began to fail, and at the end of the third it had gone entirely. I was taken to the eye and ear infirmary in New York City and examined by expert oculists, who declared that they could do nothing for me. Then I was taken to Dr. Agnall, who was then declared to be the greatest

eye specialist in America. He pronounced my case a hopeless one. I was then sent to the Perkins Institution for the Blind at South Boston. There I spent ten years and was graduated in 1895. I remained, however, in the school until 1897 preparing for college. In the fall of 1897 I entered the junior class of the Bridgeport High School, where I met many kind and thoughtful friends, who extended to me at all times a helping hand and did everything in their power to assist me. I was graduated from this school in the class of '99. It had been my desire to take a college course and then enter a law school. My father was not able, however, to send me to college, and for this reason I entered the law school directly from the high school. This was made possible only by our practicing rigid economy. In learning my lessons I do not make use of embossed books or other devices designed for the exclusive use of the blind; all my lessons are read to me by a classmate. If the lessons happen to be unusually difficult a second reading and in some cases a third becomes necessary. When I complete my law studies it is my intention to enter on the practice of the law at Bridgeport."

Such stories as the life story of this young man are given in the pages of THE AMERICAN BOY for a purpose. That purpose is to impress upon boys everywhere what can be done by a boy amid almost overwhelming obstacles. Young Dayton says that his motto is *Nulla vestigia retro*, which in English means "No step backwards." It may well be the motto of every American boy.

Charles E. Woods, the son of a New York carriage manufacturer, while still a schoolboy, realized that his father's business was approaching important changes. He turned his mind to electrical studies, and when he left college entered the carriage factory in New York, and designed and started the manufacture of automobiles of elegant design with electricity for the motive power. Within a few years he has started the business in a new direction, in which he thinks all the big carriage builders will have to move soon.

It is well in education to have an eye for the future.

A BICYCLE RECORD FOR A YEAR.

On New Years day, 1899, Lin Hendricks, of Norristown, Pa., a twenty-year-old boy, made a resolution to ride his bike at least three miles each day out of doors during the year 1899. He kept his resolution, and during the year averaged 27 miles a day, running up a grand total of nearly 10,000 miles. He did his work every day, whether the sun shone or the rain came down. His toughest experience was during the blizzard which prevailed last February. On that day it took him three hours to ride his required three miles.

BOY GOLF CHAMPIONS.

There were 46 starts in the open New Year's tournament of the Golf Club of Lakewood, N. J., on the morning of Dec. 30. The temperature was a few degrees below zero and a north wind swept over the links, yet no less than five men had the good fortune to finish under 100 strokes. The best score of the day (93) was made by a boy of sixteen—N. Malouf, of Garden City, L. I. Under the circumstances the score was a very fine one, as a ball driven up into the air was blown all over the course.

A recent intercollegiate golf tournament at Garden City, L. I., brought a new star into the golf world. Percy F. Pyne in this tournament became the new intercollegiate golf champion. He is 18 years of age and the son of a multi-millionaire of Princeton, M. Taylor Pyne. Young Pyne has won seven cups during the past seven years and broken the records of all the local country clubs which he has visited during the summer vacations in California, Canada and New Hampshire. He never hurries himself nor gets "rattled." He plays his steadiest game when he has four down and four to go. His strong points are his driving and footing. His driving is exceedingly long and his stroke is very accurate. He is capable of making the Garrison finish nine time out of ten.

WINNERS OF THE PRIZES IN THE GRAND RAPIDS EVENING PRESS CONTEST.

The Grand Rapids Evening Press offered prizes for the best poems and the best stories written by newsboys. The first prize in the poem contest was won by Worthy Cone. This poem reads as follows:

There is a town in Michigan
Where the newsboy has a snap,
Hustling for the Evening Press -
The lucky little chap!
Grand Rapids is the town I mean,
Her newsboys are as bright
As any in this land of ours
Who sell on street at night.
He's not a walf—the Press boy ain't—
He works because he likes it,
He's training for a bigger field
When big enough to strike it.
I sell the Press and do not think
The Press could do without us;
I guess the Press is glad of this
When it stops to think about us.
Think about us?—you'd say it does;
It gives us many a treat.
Looks right after us all the time—
Oh, its record can't be beat
There is no boy in any place
That has a friend more ready;
We'll stand by it through thick and thin
And try to be as steady.

The first prize in the story contest was won by Arthur Loucks. The story is entitled, "A Newsboy's Opportunities." It reads as follows:

A newsboy, as he is today, has the best chance of any boy to become a statesman or great man. The newsboys of to-day ought to and will, most likely, follow the newsboys of past years, and become great men.

The newsboys are in the position, where they can see the good and evil of this world. They usually see how much better it is to be good and follow that course.

The two great classes of boys, who usually make great men, are newsboys and farmer boys. The farmer boy does not see the evil ways of this world and is brought up good, but he is more apt to fall in bad ways than a newsboy.

The newsboy is brought up among the the good and evil of this world, and if he takes the better side, he is not apt to go back and follow evil ways. The quotation is, "First a strong body and then a strong mind." The newsboys get all the fresh air and strength they need in their work. It is the boy who has to work for himself, that gets a strong mind and a good education. The largest per cent. of our statesmen were either newsboys or farmer boys. Who knows but what in our own town, there are newsboys selling papers, who will some day make great statesmen. The newsboys in Grand Rapids have just as good a chance to make great men, as the newsboys anywhere else. With the training and good advice they get in the Happy Hours, they are bound to become great men. And remember it's the boy who has to work for himself, that always wins.

THE SON OF EX-PRESIDENT GARFIELD.

Irvin McDowell Garfield, son of the martyred President James A. Garfield, is 29 years old. At the age of 23 he was graduated from Williams College and from Harvard University Law School in 1896. Both at Williams and at Harvard he was a great football player. He began the practice of law in Boston, and is a member of the law firm of Proctor & Warren.

James A. Garfield was wont to say to his sons, of whom he had four, "Whatever you win in life you must conquer by your own efforts, and then it is yours, part of yourself."

DRUMMER KEEP, THE GUARDS' BOY HERO.

The sergeant-major of the Third Battalion English Grenadier Guards during the Crimean war has given the following account of the conduct of a young soldier, who was only ten years old:

"This boy accompanied the army to the heights of Alma, preserving the most undaunted demeanor throughout the battle. Shot and shell fell about him like hail; but, notwithstanding the weariness of the day, present dangers, or the horrid sight, the boy's heart beat with tenderness towards the wounded. Instead of going into a tent to take care of himself after the battle, he was seen venturing his life for the good of his comrades, stepping carefully over one body after another, collecting all the broken muskets he could find, and making a fire in the night to procure hot water. He made tea for the sufferers, and saved the life of Sergeant Russell, and several of the private soldiers who were lying nearly exhausted from want. At Balaklava, again, he assisted the wounded. He did his duty by day, and worked in the trenches by night, taking but little rest. At Inkerman he was surrounded by Russians about twenty minutes, and, to use his own words, 'thought it was a case with him.' He received one shot, which passed through his coat and out at the leg of his trousers; but he was unhurt. He helped, with all the bravery of a man, to get in the wounded. He waited on the doctor when extracting the shot from the men, and on the men before and after. Some of the wounded say they would not have been alive now had it not been for this boy's unwearied watchfulness and kindness in their hours of helplessness."

A BOY POET.

Grand Rapids (Mich.) boasts of a boy poet of 12 years, by name Charles G. Hall, who at the age of 11 wrote the following verses. There have been many verses, good, bad and indifferent, written on "The Maine," but perhaps none have been written by a boy of 11 that are any better than these:

THE MAINE.

Grieving and weeping,
Calling in vain
For the ever lost friends
That went down with the Maine.
Crying for vengeance
In war against Spain,
And make them pay up
For the loss of the Maine.

The cause of the explosion
As yet is unknown;
But a hole in the bottom
The divers have shown
Leaves trace of torpedoes
With which it was blown,
That ship of our country,
Protecting our own.

War will soon follow
The wreck, we all know,
It is only delayed
'Cause the President's slow.
War must soon follow
The Maine's dreadful fate,
And punish the Spaniards
Before it's too late.

Charley says that many of the poets whom he has read about did not do very well at first, and that if his verses are not perfect in rhyme and measure he expects in time to make amends. The boy gets no assistance in his writing, has no unusual opportunities, is laughed at sometimes by his fellows for being a "dreamer," but he is an American boy and expects to make himself a success as a writer.

HIGH GRADE BOYS IN THE SAN FRANCISCO SCHOOLS.

THE eight boys whose pictures are given on this page received last year the highest grades in the San Francisco public schools; that is, they and four girls left nearly 37,000 other girls and boys behind them in the race for the highest grades. Isn't this something to be proud of?

The percentages received by these boys were as follows: Robert Dougherty, 94 per cent; Arnold Cohen, 93.8 per cent; Bert Theobold, 93.6 per cent; Laurence Bufford, 92 per cent; Carl Gerdes, 91.6 per cent; George Seelig, 90.8 per cent; Angelo Cuneo, 90.3 per cent. T. Fitzgerald, 90.3 per cent.

ARNOLD COHEN.

ANGELO CUNEO.

T. FITZGERALD.

AN HONEST BOY.

Henry Nieberding, who lives with his parents at 138 North Port street, Baltimore, deserves to be commended for his honesty. He is only nine years of age, but helps his parents by his daily labor in one of the large manufacturing houses of the city at a salary of two dollars a week.

One Saturday evening recently he had received his wages for the week. The money was in a little envelope, which he put in the inside pocket of his coat. He was on his way home, and at the north west corner of Baltimore and North streets he slipped on a grating. As he recovered himself he felt for his money, but it was gone. He looked through the grating, but could see no trace of it. He then burst out crying, and attracted the attention of the bystanders.

Captain Thomas Barranger, of the Central Police District, heard the boy's story. He pitied the little fellow, and, taking \$2 from his pocket he gave it to the little fellow, telling him that if he found his salary he was to return the money to him. Captain Barranger never expected to see the boy again, but the following evening he walked into the station house, and, asking for the captain, he handed him an envelope containing \$2. It was his pay envelope, and the boy explained that after he had gotten home he found the envelope where it had slipped down between the linings of his coat.

ELECTION AT HARVARD FOR "CLASS-DAY" OFFICERS, ORATORS, ETC.

The Senior class of Harvard college has elected the following as its "Class Day" orators, etc.:

First marshal, W. A. M. Burden, of New York city. He entered Harvard from the Groton School, where he was prominent in foot ball. He has been captain of the Harvard foot ball team during the past year. He is from an aristocratic family, but is unassuming and domestic in his ways. Second marshal, F. L. Higginson, Jr., of Boston. He received within ten votes of as many as went to Burden. He is the captain of last season's winning boat crew. He also prepared for college at Groton. Third marshal, Walter Ayres Boal, who was prepared for Harvard at the Harvard School in Chicago. He was a prominent member of the foot ball team but did not play in the most important games of the year because of an injured knee and a broken chest bone. He is a famous hammer thrower, bright in his studies, standing near the head of the class. Secretary, Elliot Spalding. This is the most important place on the list of officers. He prepared for college at the Hopkinson School, Boston, where he was noted as a manager of the school athletic teams and publications. In his freshman year he was manager at Harvard for the freshman foot ball team and crew. In his sophomore year he was assistant manager of the Harvard Crimson, and more recently manager. Last year he was assistant manager of the foot ball team. Orator, R. C. Bolling, of Little Rock, Ark. He was prepared for Harvard at Penn Charter School, Philadelphia. There were no votes in opposition to his being made class orator. He distinguished himself all through his college career as a debater. He was an editor of the Harvard Monthly in his junior year and has done creditable literary work. Poet, J. C. Arensberg, Pittsburgh. He was prepared for Harvard at Shadyside Academy. He is one of the editors of the Harvard Monthly and has made a good record as a literary man. He has also had marked success in student theatricals. Ivy Orator, Murray Seasongood, of Cincinnati. He was prepared for Harvard at Cincinnati high school. He is one of the editors of the Harvard Advocate and has done excellent literary work. Odist, Bartlett Brooks, of Orrington, Me. He was prepared for Harvard at the Bucksport Academy. He is said to have written some very clever verse. Chorister, Chester O. Swain,

of Malden, Mass. He has made a brilliant record in college as a foot ball player and musician. He was formerly leader of the Freshman Glee Club and now of the Varsity Glee Club. His athletic record is well known to every follower of Harvard athletics, and he is a very popular young man.

A BRAVE BOY OF FOUR YEARS.

A dainty little romance and an act of heroism worthy of a strong man is tied up in the following:

Peter Jackson, a four-year-old New York boy, has a sweetheart named Agnes Fortenbacher, three years old. We are told by the newspaper men that ever since they were big enough to talk and walk Peter and Aggie have been inseparable. Last fall they entered kindergarten together. Peter always saw Aggie home to lunch, and again in the afternoon after school. One day during December they were waiting at a street crossing for a heavy truck to leave the way clear so they could cross. When the driver of the big truck drove by there was no one to guard Aggie but Peter, and no one to protect Peter. The little girl got under the horses, but escaped by the assistance of the little boy, who rushed in and dragged her out more frightened than hurt, but the little fellow was kicked in the head by the horse and concussion of the brain, a fractured leg and a broken arm were the injuries the brave lad sustained. The first words he said when he recovered consciousness were: "How's Aggie?" When they told him she was all right, he said: "All right, doctor, go ahead; it doesn't hurt so bad now;" then he fainted.

It doesn't take a man nor even a big boy to be a hero.

FIFTY MILES IN A LEAKY BOAT TO SAVE LIFE.

Fred Hector, of Duluth, Minn., a boy of twenty years, together with Gustave Olson, faced death in an open boat during a storm on Lake Superior the night of Dec. 11, in order that they might save twenty-five lives. The two made their way in a leaky, rudderless boat, which every moment seemed going to destruction, from the point where the steamer, Hiram H. Dixon, was drifting helplessly on the gale-swept lake, fifty miles to Two Harbors, to give notice of the vessel's peril. When they reached Two Harbors their clothing was coated with ice, and both were numb with cold, but their mission was successful, and the Dixon is now safe in port.

When the Captain found that he had lost control of his boat by reason of the breaking of the propeller wheel, he searched among the passengers and crew to find men to whom he could entrust the responsibility of taking one of the lifeboats and making for Two Harbors to get a tug to come to his assistance. The Captain asked Gustave Olson, the North shore fireman of local fame, and an expert sailor, who was a passenger, if he would undertake the trip if a crew could be made up. Olson instantly consented. Then the Captain's son, Fred, volunteered to become a member of the crew, together with three others, but the three backed out and Olson and Fred Hector made the trip. The lifeboat contained oars but no sail. Darkness set in soon after they got started, the boat began to leak, and she lost her rudder. One man had to steer with an oar while the other bailed out the water that came in from the top and bottom. The weather was freezing cold, the spray turning to ice as soon as it struck the clothing of the men. They crept into Two Harbors at 12:45 o'clock in the morning, covering the fifty miles in eight hours, forty-five minutes, under circumstances that have few parallels in the long annals of dangers on the north shore of Lake Superior.

Congress will be asked to recognize the splendid skill of Olson and Hector.

BOY HEROES AT FIRES.

There was a fire at No. 70 Henry street, New York City, at 7 o'clock the morning of Dec. 16. The blaze was in the office of a coal concern occupying the first floor of a five-story brick tenement at that number. Two families lived on each of the four floors above the first. On the top floor lived the Monk family, consisting of the mother, a twenty-one-year-old son, and Mamie, George and Joseph, youngsters. Joseph, though only a small boy, works all night as a messenger. He reached home about the time the fire started, and, not being able to make his way into the burning building, he went through the house next door, to the roof, which is somewhat lower than the one in which he lives. The Monk family had gone to their own roof taking with them two small children belonging to another family. Joseph called to his brother John to throw the children, so the four little tots were thrown into the arms of Joseph, who by catching them, broke their fall and saved their lives.

A fire occurred at 110 Sullivan street, New York, on Dec. 19, and two other boys showed themselves possessed of intelligence and grit. A bracket lamp had fallen in the kitchen of an apartment occupied by John Sullivan and his family on the second floor of the building. There was in the apartment at the time only six children, the oldest of whom is Edward, a boy of twelve. As soon as Edward saw the flames he shouted "Fire!" and immediately began the work of saving his younger sisters and his brother, William Dewey, a little fellow of a year and a half. Edward picked up his baby brother and carried him to the fire escape outside the front window, at the same time leading his sister Lillie, nine years old, by the hand. He then went back into the room, and with the help of Henry Hager, a thirteen-year-old took out his other sisters, eleven, six and four years old, to the same place of safety. When the children had been properly cared for, the two boys ran back to the kitchen and succeeded in putting out the fire by boy who lives on the third floor of the same house, throwing water upon it. When the firemen reached the scene they found there was nothing left for them to do. The two boys had saved the tenement house and at least five little lives.

A ten-year-old newsboy in Chicago, Fogario Raphael, braved flames and smoke the night of Dec. 26 to rescue a helpless cripple from death. The boy was passing a house at 205 North Carpenter street at 8 o'clock, when he saw smoke coming from a window. He heard cries for help coming from the house, and shouts of "fire" from persons on the street. The boy did not hesitate for a moment, but ran up the steps through a cloud of smoke that almost overpowered him and found a man half suffocated lying in one of the rooms. The man proved to be a blind cripple who was alone in the house and at the mercy of the smoke and fire. The boy dragged the man over the floor to the door, where the firemen assisted him.

A BRAVE ENGLISH BOY.

Among the British regiments which took part in the hard fighting at the battle of Elandslaagte was the Fifth Lancers. Attached to this regiment is a fourteen-year-old boy who enlisted as a bugler. When the regiment engaged with the enemy, the little chap went out with his fellow soldiers and soon found himself in the thick of the fight. Dropping his bugle, he seized a revolver from a fallen soldier, and with this weapon went into the fight. When the regiment got back to the camp in safety, the men lifted the boy on their shoulders and carried him around in triumph.

DETROIT "EVENING NEWS" NEWSBOYS' BAND.

BRAVERY UNDER SUFFERING.

Instances of boy bravery are constantly coming to our notice. A boy sixteen years old, residing at Bowl's Ferry Road, Union Hill, N. Y., by the name of Frank Newberry, was employed by a company that was removing an old railway structure, and while at work going down a ladder, missed his footing and plunged ninety feet, bumping against rocks and timbers. His fellow employes carried him into a house near by, where a doctor attended him. The boy had a compound fracture of the left shoulder, and the ligaments of the same shoulder were torn, the elbow of his left arm was sprained and the arm broken in four places near the wrist. His right thigh was twisted and his whole body was bruised terribly. The boy refused to allow the doctor to administer chloroform to him, and while the doctor worked the boy sang. He declined to go to the hospital, and was taken to his home, where he will probably recover. The doctor says in his opinion the boy's bravery was without a parallel.

THE BOY PREACHER OF MANCHESTER.

Claude Hansburg Cooke, a twelve-year-old English boy, known among his friends as Jack Cooke, and in church circles as "The Boy Preacher of Manchester," is now in this country, astonishing and delighting all who hear him. What he says is impromptu, crudely expressed, but quickly and distinctly spoken, in an eloquent way. His face lights up as he speaks, lending a charm to his words. He seems to possess a certain instinctive knowledge, allowing him frequently to confound inquirers and surprise his hearers with the quickness and correctness of his replies.

A BOY BILLIARD WONDER.

Willie Hoppe, age eleven, is a genius with the billiard cue. He can do more with a cue in a minute than ninety-nine out of a hundred of us can do in five. He plays equally well at all kinds of billiards. Willie began to play at the age of five, and after that wanted to play all the time. He could play even when he had to stand on a chair to see across the table. When Willie was six his father took him on a tour around the country, and his exhibitions amazed those who saw them. One night he made 410 shots at a straight-rail game without a miss. Then he learned balk-line billiards, and could make from forty to sixty at a run. At twelve-inch balk-line he made a run of ninety-eight. The highest cushion carom he has made is twenty-eight. He never gets in the least excited, never shows temper or confusion, will not use a bridge, and half of his shots are played sitting in the middle of the table.

We are glad to know that his schooling is not being neglected while he is playing billiards. He is as successful in school as he is out. Last year he passed with a grade of 97 per cent., the best showing made by any boy in the class.

LOUIS MAGNUS, THE CHICAGO BOY VIOLINIST.

The following letter to the editor of THE AMERICAN BOY comes from Louis Magnus, the 13-year-old boy violinist of Chicago, who is becoming famous. The letter is quoted verbatim, and is well written, both from the point of composition and penmanship, and indicates that the boy is bright in directions other than music:

Dear Mr. Sprague:

I received your kind letter and I assure you it gives me pleasure to comply with your request. I was born in Chicago, July 8th, 1886. I took my first lesson on the violin when four years of age and played in concert at the age of six. I guess I have played in almost every church and society in Chicago. I practice about four hours a day, and in connection with my school work it keeps me pretty busy. I get very little time for play. I don't care much for any other pleasure than music. I read a great deal and attend all the fine concerts and operas that come here. I am in the seventh grade at school and expect to graduate this year. I have a repertoire of about 100 solos, most of them memorized. I have a juvenile concert company of my own, consisting of a chorus of ten boy singers from various church choirs in Chicago; a cornetist, age ten years; a pianist, age nine years; and a reader, age eleven years. I secure most of my own engagements. I have traveled a great deal with my own company. I enclose you program of the kind of work my concert company did last year. I give my parents credit for my advancement in music, as it is through their encouragement that I have made such rapid progress, as everybody knows how easy it is to get discouraged in music. I have always wished I could become a great master of the violin, and if practice will do it I think I ought to have my wish realized. I expect

next fall to have a class of my own. I never heard of a boy teaching, but I am sure I could do it, as I understand almost everything in music. I could get a number of pupils now, but I haven't the time to teach yet. I have often wished I could play in Detroit, as I know of a number of boys there who sing and play fine. I have often wished I could meet Master Belmont, of Detroit. I suppose you know him? They say he is great, and I guess he is. He is older than I am. My greatest successes in concert are Ballade et Polonaise, by Vieuxtemps; concerto, Mendelssohn. Nocturne No. 2, Op. 9, Chopin.

arranged by Reményi, Suite II, Goldmark, Concerto Op. 20, by Saint-Saens, Polish dances, Scharwenka, Faust Polonaise, Sarasate, Legend, Wieniawski, Concerto in D, Paganini, Witch's Dance, Paganini, Air on G string, by Bach, arranged by A. Wilhelmy. I send you my pictures by mail—one taken when I was nine years old, the other taken last November. I think I have told you all, so will close with kind wishes, from your friend, LOUIS MAGNUS.

I live with my parents at 368 Forty-fifth street, Chicago.

The following is a sample programme of the boy's concerts:

PROGRAM.

- Piano—a Grand Valse.....Chopin
- b Polonaise.....Magnus
- Miss Amelia Magnus.
- Vocal Solo—Flight of Ages.....Bevan
- Master Willie Brothers.
- Harp Solo—Nocturne.....Dreyschack
- Miss Percival Rice.
- Dramatic Recitation—A Vagabond Prince.....
- Master Norman C. Trumppour.
- Violin Solo—Sixth Concerto.....De Berliot
- Master Louis Magnus.
- Vocal Solo—Good-Bye.....Tosti
- Master Willie Brothers.
- Mandolin Solo—Applo.....Hughes
- Miss Percival Rice.
- Humorous Recitation.....Selected
- Master Norman C. Trumppour.
- Violin Solo—Romance.....Svendsen
- Master Louis Magnus.
- Vocal Solo—A Dream of Paradise.....Grey
- Master Willie Brothers.
- Harp Solo—Night Fall.....Ryder
- Miss Percival Rice.

MILWAUKEE "DAILY NEWS" BAND.

THE WORLD THRO' A BOY'S EYES.

Last year's statistics show that the population of London is 4,484,717.

The world's corn crop for 1899 is 2,611,000,000 bushels, of which the United States furnishes 2,200,000,000. Austria-Hungary furnishes 98,000,000, Argentina 72,000,000, Italy 68,000,000. The entire crop is about 111,000,000 bushels more than the average crop of the last four years.

The longest asphalted street in the world is Broad street, Philadelphia. It is of even width for eleven miles. It is also the straightest street. A carriage can be driven on this street and make only one turn in thirty-one miles. It is 113 feet wide, measures 69 feet from curb to curb, and thirty-five men can walk abreast on it.

WHO OWNS THE LAND?

Now that the United States is reaching out for new territory we are interested in learning that our globe has about 52,000,000 square miles of land surface, owned by some sixty different peoples. England has over 11,000,000 for her share; Russia, 8,000,000 in round numbers; then China, followed closely by France, and the United States, our own country having, without the Philippines, 3,609,630 square miles. Within the last eighteen years the great colonizing powers have added to their territories 8,670,120 square miles, in the following proportions:

	Square miles.
Great Britain	3,987,312
France	2,936,563
Germany	1,020,070
Russia	265,381
United States	160,601
Netherlands	123,677
Portugal	96,605
Spain	79,911

THE LARGEST FIELD OF WHEAT IN THE WORLD.

There is a little town in California known as Clovis. If you were up in a balloon just before harvesting time and were to look down upon it it would look like a speck of black in an ocean of yellow, for it is surrounded by an immense wheat field managed by a man by the name of Clovis Cole, and for him the town is named. Boys who live in the East and have never seen great Western wheat fields can hardly appreciate what we are going to tell them.

It requires fifty men and nearly 250 mules to harvest the Clovis field. If one man were to work in the way our grandfathers used to work in planting and sowing, it would take him thirty years to plow and sow this great field; really this field is as big as a dozen of our Eastern counties.

Clovis field in a heavy year yields enough grain to fill nearly a million sacks. It requires forty days for the five immense harvesters to harvest the grain, and at the end of that time four massive warehouses will be filled to bursting. The field contains 25,000 acres and is in Madera and Fresno counties. The owner of the field is a young man 38 years of age. He rides

about among his workmen clad in regular rancher's style, with overalls and cowhide boots. He roughs it with his employes, and goes about the big ranch as unassumingly as if he were a driver at two dollars a day instead of the wheat-growing king of the world. We have heard people call young Letter, the young man who made and lost so much in wheat on the Chicago Board of Trade, the "wheat king," but the title sounds hollow when used of him in comparison to its sound as applied to this young Californian who, standing in the middle of his sea of gold, may realize that he is helping to feed a hundred thousand men, women and children.

INFORMATION IN A NUT-SHELL.

Sound moves 743 miles an hour.—A rifle ball moves 1,000 miles per hour.—New York's net debt is \$240,000,000.—The Transvaal has 74 gold mining companies.—There are 9,000 cells in a square foot of honeycomb.—There are 17,000 students in 140 colleges in British India.—Four tons of gold from the Klondike will be exhibited at the Paris Exposition.—The elephant has 40,000 muscles in his trunk alone, while a man has only 577 in his entire body.—80,000 inhabitants of Naples never know today how they will buy their meals tomorrow.—Buffalo's new Union railroad station is to have the largest waiting-room possessed by any railroad in the world.—The United States hatched 200,000,000 shad in the Delaware and Susquehanna rivers the past year.—No American locomotives have yet been introduced into Germany; Germany having eighteen locomotive factories, with a capacity of 1,400 locomotives a year.—Cuba and Porto Rico used to buy annually \$5,000,000 worth of shoes of Spanish manufacture.—The Scotch fisheries exported last year nearly 1,000,000 barrels of Scotch herrings to ports in Northern Europe.—There is a police judge by the name of Herod in Chanute, Kans.—The Chicago Tribune, having kept a record for ten years, says that

"What's the matter over there, Jonathan?"
 "Same as over there, Sam."

the saloon business of this country is directly chargeable with a total of 53,436 murders in that time.—Thirty-five per cent. of the recent applicants for enlistment in the British army have been rejected for physical disability.—The profits of Great Britain's Postal Service are \$20,000,000 a year.—The most costly parliament in Europe is that of France. It costs \$1,500,000 a year.—In the Havana custom house are employed 214 Cubans, 84 Spaniards, and 32 Americans.—Forty-five per cent. of the houses of Berlin are owned by Jews.

The Transvaal is about the size of Pennsylvania, New York, Massachusetts, New Jersey, Connecticut and Vermont combined.

GENERAL WOOD AND THE BOYS IN CUBA.

If there is one popular man in Cuba, that man is General Leonard Wood, who has just been appointed governor of the island. There are not many boys and girls in the city of Santiago who do not know General Wood when they see him on his big gray horse as he rides about the town. I remember seeing three little half clad olive skinned boys stop in the middle of the street on seeing the general, pull off their tattered caps and salute him with military precision, all three showing their white teeth as they smiled. And the general saluted in return as if they had been soldiers.

The tenth of last October was a famous anniversary day for the Cubans—a sort of Cuban Fourth of July—but curiously enough the inhabitants of Santiago had decided to celebrate it in silence, to have no merry-making, no music, no processions. Of course this disappointed thousands of Cuban children quite as keenly as the boys of an American city would have been disappointed if they had been deprived of fire crackers on the Fourth of July. General Wood heard of the trouble and having a boy of his own, he knew just what to do. He sent an invitation to all the children of the city to take a ride on the harbor in the government vessels. Bright and early on the great day all the tugs and other harbor craft belonging to the Americans appeared at the wharf side tooting their whistles, and hundreds of children who had gathered all in their best attire, tumbled aboard. Boat after boat was loaded and set out down the bay, with a band playing "The Star Spangled Banner" and the Cuban national air. In each of the boats there was a barrel filled with lemonade, and the voyage which followed was such as only a crowd of children who had never before made such an excursion could enjoy. The Spaniards had been in command at Santiago for nearly four hundred years, but there was never a governor who took any interest in the boys until the Americans came.

Since then General Wood is known in Santiago as "Our Friend" by the boys. Not many weeks after the picnic on the harbor, a great delegation of children appeared at the palace and asked to see the governor. General Wood is a tall, powerfully built man and he wears a brown khaki suit and spurs. The average Cuban man reaches hardly above his shoulder and so when he appeared among the boys and girls he looked like a very giant. The spokesman presented the petition. He said that the boys and girls of Santiago had heard that the boys and girls of America were only required to go to school five days a week, whereas every Cuban school holds a session on Saturday the same as any other day. Now, were not the Cubans free? And shouldn't they be entitled to the same privileges as their friends, the American boys and girls? And thus they made a strong plea for a Saturday holiday—a plea with which every American boy and girl will sympathize. The governor heard them through and then he explained to them that the time had not yet come for making such changes in the school system of Cuba, but that some time they might expect to enjoy the same privileges as the American boys and girls. And they left him with a cheer.

There are, indeed, no stronger friends of the Americans in Cuba than the boys and girls. They want to know just what is done in American schools, how the American children act, what they play and everything else about them. And then they want to do exactly the same things. What is more, they are anxious to learn English and they are learning it much faster than the grown people. Frequently when you go into a store in Cuba the clerks can not understand what you say, but they will bring some boy who is able to talk with you.

WATER MORE DEADLY THAN DYNAMITE.

Dynamite is a very tame explosive compared with common water. In one day the water breaks up more earth and rock than all the gunpowder, gun cotton and dynamite in the world does in a year. Water runs into soil, freezes, expands, splits the earth into little pieces. Water runs into the cracks of the rocks, freezes, and splits them. Water or sap in the pores of a tree may freeze and split the tree from end to end with a report like a gunshot. The water of the sea is thought by some scientists to flow to enormous depths into the bowels of the earth where, meeting with intense heat, it expands, and, requiring an outlet, creates great upheavals which we know as earthquakes and volcanoes. It is a curious fact that there is no known living volcano at a greater distance than 150 miles from the sea.

A. J. Passino, a young man twenty-one years of age, has been appointed assistant chief clerk in the offices of the Pressed Steel Car Company at Pittsburgh, a responsible position seldom offered to one of his years. The company does a business which involves millions of dollars a year, and the work of the assistant of the chief clerk is a very important one.

"YANKEE DOODLE HOUSE."

"YANKEE DOODLE" HOUSE.

A stirring national tune has always served a very essential part in war or in peace for a nation. In what are called "the piping times of peace" even martial music is well appreciated. But it is when the clouds of contention gather, and a country, chafing under the lash of a wrong, either real or imaginary, feels the stirring of the patriotic impulse, that the great force of martial music makes itself supremely felt.

The country must be sordid indeed and unhistoric which can claim no melody sacred to its needs and its hopes.

How enthusiastic the Englishman grows when he hears the loud notes of "God Save the Queen." How the German thrills at the "Wacht am Rhein." And with what ringing cheers the excitable French respond to the "Marsellaise." Spain, Italy, Russia, Scandinavia all have their anthems, more or less distinctive, and more or less excellent as compositions.

We of America are somewhat peculiarly situated in respect to original national music. We have any number of tunes that pass for national, but whose melody, it is sad to confess, has almost every time been appropriated from some foreign source. The music of "The Star Spangled Banner" has been filched bodily; and so has that of "Hail Columbia," and almost all the rest. But they all answer the purpose of awakening enthusiasm for our country.

If you would know how real enthusiasm feels you would need to experience some such sensation as fell

to my lot many years ago. I was a very young lad in Paris during the first year of our great civil war. At that time throughout all Europe there was hardly to be found anywhere a gleam of sympathy for the national cause, or the least hope of a restored Union. Such hopes and feelings as there were kept themselves hidden among the poor and lowly.

But one evening I happened to drop in at a little music hall (what they call a "café chantant") on one of the boulevards, when the orchestra struck up "Yankee Doodle."

I never had so delicious a sensation, and never expect to have such another. I went wild with joy, and perhaps made an exhibition of myself.

"Yankee Doodle" isn't of itself any great thing, but in a forlorn condition of one's native land, and heard on a foreign shore, it is, I might say, almost angelic.

And yet the whole thing, original and distinctive as it is, was neither original with Americans nor intended to be distinctive for them. It was composed by a young British officer, about the year 1777, while he was quartered in an old stone house nearly opposite the city of Albany, N. Y., on the Hudson river.

It was written in ridicule of the American patriots, and doubtless that British subaltern little imagined that his rollicking and undignified words would, in the course of time, grow dear to the hearts of such a mighty nation as the "rebels" of that day have become.

"The first of a series, "Notable American Houses," by W. J. Roe.

"THE YOUNGEST PERSON WHO EVER BORE ARMS IN BATTLE."

H. M. WHITE.

It is not often that a boy of ten years lays the foundation for national fame, but that is what one little fellow who was attached to a Michigan regiment did.

Many who read THE AMERICAN BOY have heard of Johnny Clem, The Drummer Boy of Chickamauga, no doubt.

In the book called "Michigan in the War," page 428, may be found a brief account of his killing a hog belonging to a Confederate sympathiser, against orders, and excusing himself to the colonel by saying that he did not intend to let any rebel hogs bite him. The same note gives an account of his shooting a Confederate colonel from his horse at Chickamauga.

Little Johnny was but ten years old when he attached himself to the Twenty-second Michigan Infantry, after an unsuccessful effort to join an Ohio regiment, being a native of the Buckeye State.

He did service as a drummer boy more than a year before he was permitted to become a regularly enlisted soldier, which honor was conferred upon him in May, 1863.

At the battle of Shiloh his drum was smashed by a piece of shell, and from that time until the battle of Chickamauga he was known as Johnny Shiloh.

After Chickamauga he became known throughout the country as The Drummer Boy of Chickamauga, although in point of fact he acted as marker during that battle until his regiment was captured.

From the date of this great battle, Gen. George H. Thomas, until his death, took a deep interest in the boy veteran, and treated him as a son. Young Clem

The photograph from which the accompanying picture is made was taken at Chattanooga, Tenn., in 1863, and is vouched for as genuine by "Johnny," now Major John L. Clem of the regular army. "Johnny" is the boy whose arm is resting on the chair.

served on the general's staff for a time, and during all of that period the warm-hearted general caused the boy to be carefully taught by his nephew, Col. S. C. Kellogg.

It was through Gen. Thomas's influence that Johnny eventually secured an appointment in the regular army, in which he is at this time serving as major.

There is little doubt that Johnny Clem was the youngest soldier in the Federal army, and Lossing's History says that he was probably the youngest person who ever bore arms in battle.

Not long ago the writer was telling some friends about a few of Johnny's pranks during the war, when a gentleman who resides in Chattanooga asked him if he would like to see a picture of the little fellow, taken while in the army.

The next day he brought the picture which accompanies this sketch. It was taken in Chattanooga during the year 1863, when the Twenty-second Michigan regiment was stationed there.

The little girl was Alice Edwards, now Mrs. A. W. Lauter, of Chattanooga, the wife of an ex-federal officer. The other little boy was her brother, James Edwards.

In order to make sure that there had been no mistake or imposition, the writer had it copied and sent a copy to Major Clem, asking him if he could identify it.

He wrote in reply that he remembered the Edwards family very well, and distinctly remembered when the picture was taken. He also vouched for the truth of the pig story, and paid a high tribute to the memory of Gen. Thomas, saying:

"I, like every other soldier of the Army of the Cumberland, revere and honor Gen. George H. Thomas more than any general in the army. He was one of God's noblemen."

About the close of the war the ladies of Chicago gave little Johnny a fine new uniform. In his letter to the writer he sent a picture of his young son

This picture, reproduced from a newspaper illustration, shows "Johnny" Clem with his hat in his hand and Master Jack Clem, his son, some thirty years later, in the same suit of clothes.

dressed in the same uniform. The fit of the clothes seems to be perfect, and the boy resembles the father quite strikingly.

There are few better known officers in the regular army than Major John L. Clem, little Johnny Clem of those bloody days so happily passed, The Drummer Boy of Chickamauga, grown up.

GOLDEN WORDS FROM COLORADO.

A few years ago when the editor of THE AMERICAN BOY was paying a visit to Cripple Creek, Colo., the great gold mining camp, a companion pointed out to him W. S. Stratton, who at one time was a carpenter about Colorado Springs, earning a few dollars a day at his trade, and now is the chief owner of the Independence mine, one of the most wonderful gold-producing properties in the world. On Sept. 25 last, this wonderful mine paid a quarterly dividend to its stockholders of \$488,000—by far the largest dividend ever paid by any Colorado mining company. During the three months which this dividend covers the mine had produced \$700,000 worth of ore. It is said now to be producing ore at the rate of \$225,000 a month. The dividend paid during the last quarter must have left something like \$300,000 in the treasury. Over a million dollars' worth of ore has already been taken out of the mine, with untold millions in sight.

Speaking of Cripple Creek ore, someone has suggested that Cripple Creek should exhibit at the Paris Exposition a solid piece of gold worth a million dollars. Such a cube of gold would measure 16.7 inches each way.

...THE BOY SCIENTIST...

The atmosphere extends at the equator 26,000 miles beyond the earth, and at the poles 17,000.

Liquid hydrogen has been made clear as water but with only one-fourth its specific gravity, so that cork sinks in it as lead in water. It is intensely cold, having four times the cold of liquid air. Air freezes and sinks in it. When a brass cylinder is dipped in liquid hydrogen and then withdrawn, the cylinder liquefies the air of the room, causing it to drip from the cylinder. Cotton dipped into it shows magnetic affinities. By putting hydrogen in a glass tube and freezing it, a vacuum is made that an electric spark will not pass through.

Mixed Colors.

- Red and black make brown.
- White and brown make chestnut.
- White and carmine make pink.
- Indigo and lampblack make silver gray.
- White and lampblack make lead color.
- Blue and lead color make pearl.
- White and emerald green make brilliant green.
- White and green make bright green.
- White and green make tea green.
- Purple and white make French white.
- Red and yellow make orange.
- Blue and yellow make light green.
- White and yellow make straw color.
- Black and Venetian red make chocolate.
- Light green and black make dark green.
- Lake and white make rose.
- White, blue and lake make purple.
- White, blue and black make pearl green.
- White, lake and vermillion make flesh color.
- Umber, white and Venetian red make drab.
- White, yellow and Venetian red make cream.
- Red, blue, black and red make olive.
- Yellow, white and a little Venetian red make buff.

A Remarkable Clock.

There is perhaps no other clock in the world like the one we are about to describe.

From the picture of it which you see in this column you will say that it resembles the old style "grandfather's clock." This clock was designed by Christian Jensen and his son, Joseph J. Jensen, watchmakers, Richfield, Utah, about three years ago, and has only just been completed. It has recently been on exhibition at the State Fair at Utah and attracted a great deal of attention.

This clock does many things besides tell the time after the manner of an ordinary clock: it tells the time of day all over the earth. One can also tell at a glance how many hours difference in time there is between one country and another. The clock strikes the hour and quarter hour and repeats at the operator's will. It also gives the phases of the moon as viewed from the earth, and the calendar of the month. The movements of its hour, minute and second hands are like those of ordinary clocks. It stands 8 feet 4 inches high and is 2 feet wide at the base. It runs by weights and gives second beats.

Mr. Jensen expects to receive orders to make clocks similar to this one for use in schools.

The Pollak-Virag System of Telegraphy

A successful test has just been made of a new system of rapid telegraphy. The test was made from New York to Chicago, a message having been sent over the wires of the Western Union Telegraph Company from the office of the New York World to the office of the Chicago Tribune. The rate of transmission of the message was 65,000 words an hour. The test was successful, although it was snowing in Chicago and rain was falling at different points on the line at the time of the experiment. It is an automatic system, by which the message is flashed on sensitized paper. We present herewith a representation of the "photogram," as it is called.

A PHOTOGRAM.

The following is the translation of the message, a facsimile of which appears herewith:

"This message is the first sent in the United States by the Pollak-Virag automatic rapid telegraph and automatically recorded. It was sent from New York and received in the office of the Tribune in Chicago. The sending and receiving of this were to demonstrate the practical utility of the Pollak-Virag invention in sending and receiving messages at a great saving of time and of telegraph wires. It will be transmitted at a speed of more than 80,000 words an hour, and the receiving instrument will register the words on a photographic sheet as fast as they are sent."

In Budapest, Hungary, where the only other tests of this invention were made, the rate of 150,000 words an hour was attained. Messages will be sent later from the Tribune office in Chicago to New York. This is over a greater distance than has been heretofore attempted. These messages are called photograms by the inventors, because they are recorded photographically by the receiving instrument. The inventors and demonstrators of this invention of telegraphing are Anton Pollak and Josef Virag, electrical engineers of Budapest, Hungary.

A Miniature Electric Automobile.

The Knapp Electric & Novelty Company have tickled the fancy of boys by putting upon the market the first miniature electric automobile. In no department of activity has there been more rapid progress in recent years than

in the manufacture of toys. Of course, it was to be expected that some one would take advantage of the automobile craze to make a miniature automobile. We present a picture of the one made by the Knapp company. It is a perfect little piece of mechanism. Two dry cells, easily procured from an electrical supply house, are fastened in

the body of the wagon, overcoming the objectionable feature of acids in batteries. These little cells will drive the wagon without stopping for five hours, but if used a few minutes only each day, fifteen to twenty hours may be obtained. The motor, gear, etc. are placed under the body of the wagon and drive the rear wheels. The front axle is pivoted, and the lever may be turned to any angle. It is fitted with a starting switch. The length of the wagon is 12½ inches; width, 6½ inches; height, 7½ inches. Diameter of wheels, 3 inches. Size of cells, 6x2 7-16 inches. Weight, boxed, 10 pounds. Price, complete, \$5.00. Send us \$5.00 or six new subscribers to THE AMERICAN BOY and you can have it

Something About Wireless Telegraphy.

For several months past there has been constant communication between stations in England and France, 32 miles apart, by means of the Marconi system of telegraphing without wires. Marconi, the inventor, came to this country in October to report the international yacht races by means of his system. His work enabled the New York papers to set forth on a bulletin board the action and position of the Columbia and the Shamrock within two minutes of the exact instant of observation. The messages were sent to a fixed station on shore from a steamer moving on the sea, the greatest distance of the ship from the shore being about twenty miles, and the number of words sent about 33,000. The signals traveled from a vertical wire, which ran up to the top of a mast, to a corresponding wire on the shore, and the speed of transmittal was as great as that with the ordinary wire telegraph line. The system is too intricate for minute description here. Suffice it to say that the electric action at the end of the wire in motion, in the ether, waves that continue in force and form so as to take effect on the instrument at the point to which the message is sent, the greatest distance yet covered successfully being 110 miles. What is most remarkable about the discovery is that messages may be sent from one extremity of a

building to the other, through solid walls of brick or stone. The inventor says that the messages may be sent from one place to another in a city through scores of solid walls, and even through mountains. The value of this system to commerce and to the navy and the life-saving system is beyond measure. The battleships Massachusetts and New York have been fitted with additions to their masts for the reception of the apparatus required for this method of communication. Eight ships of the British navy have already been equipped with the apparatus. The admiral of the British fleet reports to his government that by means of this system he is able to hold his ships in as good control at a distance of eighty miles as at fifteen without it.

The inventor expects to so perfect the system as to send messages across the Atlantic. The chief obstacle in sending messages so far is the curvature of the earth, which is about 1,000 feet in 80 miles. During the summer of 1899, when Queen Victoria was staying at the Isle of Wight and the Prince of Wales was cruising in his yacht off the south coast of England, they kept in communication by means of the Marconi apparatus. Ships that pass in the night may report to one another at a distance of 100 miles. A ship in danger at sea may sound her cry for help over a circle 100 miles in diameter. This system will make a whispering gallery of the world.

Work of an Eyelid.

A scientist has calculated that the eyelids of the average man open and shut no fewer than 4,000,000 times in the course of a single year of his existence.

A process has been discovered enabling artists not only to make facsimiles of original paintings in every outline but also to produce the depth of coloring, as well as the peculiarities of manner characterizing the painters of the originals. The process is an intricate and costly one, is not patented, but is kept in strict secrecy. It is a process of photo-gravure.

"Mamma, please give me a drink of water; I'm so thirsty." "No; you're not thirsty. Turn over and go to sleep." A pause. "Mamma, won't you please give me a drink? I'm so thirsty." "If you don't turn over and go to sleep, I'll get up and whip you!" Another pause. "Mamma, won't you please gimme a drink when you get up to whip me?"—Tit-Bits.

HOW TO DO THINGS

How to Use the Gymnasium.

By PHYSICAL DIRECTOR E. J. GIANNINI, of the New York Athletic Club.

The first exercise I put a novice at is the pulley weights. This machine by means of various motions brings into play the muscles of the arms and the upper portion of the body only, as the legs are always kept in one position. Then I take the pupil over to the sculling machine. This apparatus imparts the same movements to the body as when a boat is propelled by a single oar from the stern. The same muscles are exercised here as with the pulley weights, only in a circular instead of straight motion and in a lateral direction.

The wrist roll is the next thing which I advise the beginner to work on. This exercise, which is designed to strengthen the muscles of the wrist and forearm, consists in turning a cylinder of wood to which is fastened a cord which winds up. At the end of this cord are hanging weights which furnish the necessary strain for the wrists. The finger machine is the next on the list. By its use the muscles of the hands are strengthened.

From the wrist machine I take the beginner to the abdominal pulley, which is useful for the purpose of strengthening and bringing into action the muscles of the abdomen and those of the trunk in general.

The waist reducer, with which I follow, is an endless pulley, and to work it one must go through exactly the same motions as when hauling on the main sheet of a boat or climbing a rope, except one does not have to pull up one's own weight. By means of a screw just so much friction is applied as is thought proper.

From the waist reducer we turn to the spring board, which, as every one is aware, gives the same exercise as running. This is the first leg exercise indulged in, as it may have been noticed that those heretofore described were for the upper part of the body. From this we go over to the chest bars. These are two upright poles set about two feet apart. One is grasped by each hand at a height a little below the shoulder. By means of these bars the muscles of the arm, back and abdomen are greatly strengthened.

It has been found by experience that the parallel bars are too severe a method of exercise for beginners, and as a substitute what is known as the traveling parallels have been invented. By this means the same exercise is gained, but instead of having to support his own weight the novice is enabled to use graduated weights by loading or unloading the machine.

I have mentioned no exercise that is likely to bring on a profuse perspiration, and that is just what is needed. So next we will have an inning on the bicycle machine. This mechanism allows for extra friction and consequently harder work by means of a lever. A dial in front of the rider tells him how far he has traveled, and after about a mile has been covered most men will be covered with moisture.

The intercostal pulleys are the next on the program. As the bicycle gave exercise to the legs, these are a return to motions for the upper half of the body, and they are very useful for developing the muscles in the neighborhood of the ribs.

In my own work with pupils I next give beginners an exercise which I have found by experience to be extremely useful for strengthening the neck, back and legs. I have a large ball, made like a medicine ball, only about twice as large and weighing 12 pounds. To use this you must lie on a mat on the floor and have some one to throw the ball to you. Then, after catching it, you throw it in the air and with your feet kick it to the assistant, who catches it and repeats the operation. All this time you

must lie with your legs and head off the mat.

The medicine ball is the next thing to take up. This I consider a small gymnasium in itself, and the use of it one of the most healthful exercises for a man, as it develops almost every muscle in the body. Care must be taken by a beginner not to exercise too fast at first, or dangerous sprains may result.

Now to wind up you should take a run around the tracks, if there is one in the gymnasium. The distance you should cover, of course, depends upon yourself and your condition. For the first week or so it is a good plan to run flat footed, so as to bring the muscles of the legs into shape by slow degrees and without straining any of the tendons.

In taking up any of these exercises it must be remembered that no fixed number of times for doing each exercise can be laid down. If you have an instructor, he will tell you when to stop; otherwise you must be guided by your own feelings and judgment. It should be remembered, however, that for the first few weeks it is better to do too little than too much.

Of course, after working in a gymnasium it is necessary to take a shower or other bath, and this calls for a word of caution. On no account should the bath immediately follow exercising. Much better wrap some covering around you, sit down quietly in some spot out of any draft for ten minutes or so.

Then, again, there are few people, even the strongest, who after exercising in this fashion can stand the shock of cold water as it comes from the faucet. Of course, there is no necessity to go to the opposite extreme and take a hot bath, but rather indulge in a tepid shower or plunge. After the bath do not go out into the open air or into a draft for some time, as all the pores are wide open and cold is easily caught.

Of course there are lots of exercises with dumbbells, bar bells and other machines of which I have not spoken, but every result for which these are intended may be attained by the methods I have mentioned.

How to Make a Pair of "Home-Made" Scales.

You can make a pair of scales out of two pieces of cardboard, a piece of string and two nails. Drive two nails into the edge of a horizontal shelf about 24 inches apart. Take a piece of string or thread about 3½ feet long, and tie in the middle of it a large knot; then tie the two ends to the nails, one end to each. Cut from cardboard two square pieces to serve as pans, and suspend them from the principal thread by four other threads. They should be suspended one on each side of, and about six inches distant from the knot in the center. Their weight will make the middle part of the principal thread take a horizontal position. Behind the central part of the horizontal thread

place a piece of cardboard and mark on the cardboard the place in front of which the knot lies when the two pans are at rest. Now put any article you wish to weigh into one of the pans. This, of course, will disturb the equilibrium, and the part of the thread that was horizontal will now take an oblique position, and the knot will no longer hang in front of the point marked on the cardboard. To bring the knot back to its place you must put weights in the empty pan, and when you have thus established a balance and brought the knot back to its place, the total of the weights will give the weight of the article. Of course, if you want to weigh heavy articles you must use heavy twine or rope. A thread will do for light-weight articles. These scales may be depended upon to give as accurate service as any scales that are sold in the stores.

How to Construct a "Dark Room."

In planning the construction of a dark room in a basement, we will suppose that the basement is unfinished and has a dirt floor and a rough joist ceiling. Select a site near a ventilating shaft or smoke flue, if possible. Level the dirt floor and construct a floor for the dark room as follows: For an 8 by 10 room, cut nine pieces of 2 by 4 scantling, 7 feet 8 inches long. Arrange these 15 inches from center to center. Take two pieces of scantling ten feet long, spike these to the ends of the shorter pieces, making a framework 8 by 10 feet in size. Cover this with a good quality of matched flooring, trimming the ends and sides even with the framework. Now spike scantling to the joists overhead, making a frame 8 feet 1¼ inches by 10 feet 1¼ inches inside. Directly above the floor construct the side walls of a cheap quality of matched flooring, nailing it to the frame above from the inside, and to the floor below outside, leaving an opening 2 feet 10 inches wide and 6 feet 6 inches high for a door in one of the 10 foot sides. Strip can be nailed around the room on the outside about three feet from the floor, if the top and bottom nailing is not considered sufficient. Now cover the ceiling and sides (inside) with red plastering board or red rope building paper of a heavy quality, lapping the joints about two inches, tacking it on neat and smooth. It can be tacked to the joists above, or the top can be celled like the sides and the paper tacked on this, as preferred. Be sure and have all joints neat and smooth and light-tight. Nail 3-inch battens over the paper around the door opening, having them project in the opening about one inch for the door to butt against. The door can be made of flooring, putting the battens on the outside, and covering the inside with paper. Hang the door with 6-inch strapped hinges; door to open on the outside. Put on a suitable lock or latch, but put it on in such a way that no openings are left for the light to get in.

Along the ten-foot side in the room, construct a shelf or table at a convenient height from the floor, making it about two feet wide. It can be made of the matched flooring, selecting some of the best. Make the table true and level; the ends can be supported by strips nailed to the end walls and the center by the framework or tray rack, as shown in the sketch. Cut an opening near the center for a galvanized iron sink—about 20 by 40 inches will be large enough—and let in the sink, making the edges flush with the top of the table. In the left-hand corner, at a convenient height above the table, fasten a dry-plate box, box to be large enough to take the largest plate used. Have this box perfectly light-tight. Line it with black velvet or felt, and have door fitted with a spring so as to keep it closed. To the right of the sink have a platform for developing. Have this fitted with a cover something like an inverted tray. The cover when

down should fit the platform, making a light-tight joint. It should be hinged to the platform at the back, so that when not in use the cover can be thrown back. The size should be large enough to take the largest tray used. This arrangement is handy for slow development, as you can let down the cover over the tray, and all is secure from dust and light. Have lamp in the right-hand corner, and directly above it put an inverted stove-pipe elbow—6-inch will do. Connect the pipe from this with the ventilating shaft or smoke-flue, which will carry off the lamp fumes, keeping the room cool in the summer and at the same time ventilating it.

On the right have hypo table. This may be about two feet wide and reach across the room. Let wash-basin in flush at the left end, and place tray-racks and shelves below for trays, hypo, etc., as shown. In left side of room have table for drying racks, plate-holder, etc., with

shelves below and above. These can be arranged to suit individual ideas and must be convenient.

Run water-supply pipe on outside of room, with pipes through the walls and terminating in taps above the sink, wash-basin and washing-box. The pipe may be ½-inch galvanized; this you can have cut and threaded to order, and by screwing it together you can save the expense of a plumber. The sink and wash-basin can be connected with drain or sewer by a 1¼-inch galvanized iron pipe.

Cut 6 by 8 inch air inlet under one of the tables near the floor. Cover it so as to let in air but keep out the light. A small shelf above the sink is for developing solutions.

Cover the tables and shelves with white enamel cloth. Keep a supply of old newspapers; use these on the hypo table under the fixing box and trays, renewing them frequently. This will keep the hypo dust out of the room and help to keep your negatives free from pinholes.

Size of dark room can be altered to suit location, but do not make it too small. Have large lamp with large openings, well protected with suitable glass and curtains, so as to get plenty of light, but be sure and have it safe.—Photo Beacon.

How to Paper Your Walls.

Provide yourself with a pair of long shears, a yard-stick, a brush with which to apply the paste (a whitewash brush will answer), and some soft, clean cloths.

To make the paste, sift the flour, add one ounce each of alum and borax to every pound of flour, mix it smoothly with cold water, and pour over it gently but quickly boiling water, stirring meantime constantly. When it swells and turns yellow it is done, but must not be used until cool. It should be quite thin. If the wall has already been papered the old paper should be removed. Cut all the full breadths that will be required for the room, matching and numbering each, and saving remnants for door and window spaces. Fit the widths together at the top, and gently press first the edge, then the entire space.

Boys as Money-Makers and Money-Savers

Raising Rabbits for the Market.

A Fine Business for an Ambitious Boy Who Has Small Capital—Growing Popularity of the Hare for Food—Rabbit Culture in the Far West and Just How to Proceed in Starting Professional Hutches.

By DELIA T. DAVIS

The timid hare has recently come up in the world tremendously as a market product. Americans have somehow heretofore been rather disinclined to accept the rabbit as a table delicacy, notwithstanding the example set them by their European cousins; but all that is changed now, and so great is the demand all through the west for a fine quality of home bred hare that it is simply impossible to meet the orders. Large numbers of people living in the cities, who have only basements and back yards in which can be placed a few dry goods boxes, are breeding and raising rabbits for the markets, and thousands more could do so with profit.

As a good example of the rapid gains in rabbit raising, may be cited the experience of a little boy who a year ago bought a nice pair of rabbits for \$5. During the year he has raised from the original pair fifty-one rabbits, forty-eight of which he has sold at a dollar apiece. The cost of feeding has not been more than two dollars, so that the end of the year finds him with five rabbits instead of two, and \$41 to his credit in the bank, after deducting the original capital.

Culture tells in this industry the same as in any other, and there is just as much difference between the carefully bred and reared rabbit and the one that comes up anyhow, as between the cat of the alley and the aristocratic angora. A visit a few days since to the largest rabbitry in the country situated at Woodstock, Illinois, resulted in bringing out some interesting points as to the best methods of raising rabbits either for pets or as a food product.

RABBIT CULTURE.

"On almost any place," said the keeper, "an unused building or even a corner in a barn or basement can be turned into a commodious rabbitry with a comparatively small outlay, and by the exercise of a little judgment made to pay a nice profit.

"It is best to start with a limited number of animals, acquiring some practical experience before branching out too extensively. The three essentials of a good rabbitry are ventilation, light and dryness. Once these points have been gained, it really matters very little what kind of a structure comprises the rabbitry. Pure air and plenty of it, is of first importance to the well being of friend Bunny, and the great percentage of losses in raising rabbits under cover can be directly traced to bad air. Light is another indispensable, while the dry place conduces greatly to health during the cold and damp months.

"Hutches for rabbits the size of the Belgian hare should not be less than four feet long, two feet wide and one and one-half feet high. For the smaller breeds, one of less dimensions will do. The floor should be made as tight as possible, either by means of cement or paint, and absolute cleanliness must be observed, the bunnies being supplied with fresh beds of hay every day. The hutches of the doe should be provided with a nest box; a biscuit or cracker box, with an aperture cut out as entrance and the interior divided into two sections, is admirably suited to the purpose.

"The rabbits should be fed principally on dry food, such as hay, oats, corn and stale bread. An occasional feed of carrots is also desirable. In summer they are especially fond of dandelions, never seeming to tire of this delicacy, and which, fortunately, never injures them. Clover, plantain and mallows they eat greedily. Grass they like, but it is not so much their natural food as weeds. Once a day the mother and little ones

should have a dish of bread and milk, which they will be found to devour with avidity. Like all other animals, rabbits should be given fresh water in a clean dish every day."

The little ones do not open their eyes until they are nine days old, and then they take advantage of the first seeing moment to leave the nest and follow their mother into the larger compartment where she rests and eats.

As with all animals, feeding time is the vital point of the day, and it is very interesting to watch them then. No sooner is the attendant heard to approach, than each little bunny gets up on his hind legs, dances a jig, laps his tongue around the wire of the door and indulges in all sorts of graceful and disgraceful antics. I fear very little can be said for their manners individually or collectively, as each clamors impatiently for his share, apparently quite unwilling to await his turn.

Since the raising of rabbits on any extensive scale is quite a new industry in this country, it was found necessary at Woodstock to import a large portion of their original stock from England and Germany. One very much interested in the subject speaks of his surprise upon visiting a rabbit show in Germany to note the interested and intelligent way in which the children there used the catalogue, betraying a knowledge of the different breeds that would astonish the average American child.

The Belgian hare has attained great popularity in this country both as a pet and a market product, and is perhaps the most widely known of all the high bred rabbits. It is usually distinguished by a handsome coat of rufous red, flecked with black, although there is the black Belgian hare which is greatly admired for its beauty. Of the stock imported at Woodstock, one of the finest market rabbits has proved to be the Flemish Giant, from the prize winning strain at Crystal Palace, London. This rabbit is distinguished by its large, round head, bright, bold eyes, strong, erect ears, massive shoulders and powerful legs and feet, combined with unusual size. Its correct color is dark steel grey, and it is considered altogether a noble looking animal. On account of their exquisite beauty, the black and tans are reared exclusively for pets. They were imported from England, where sixteen years of careful breeding has developed in them perfect colorings and markings. Their bodies are covered with a fine, black, glossy coat, marked with tan around the eyes, ears, nose and on the neck, chest and feet, the under portion of their bodies being tan and white. They are natural pets, being very docile and fond of caresses.

The boy ambitious to start in on a little business of his own can not do better than to experiment with a small rabbitry, after, of course, informing himself thoroughly upon the subject. At present the west, particularly the far west offers the best market for well bred stock.

A Boy's Big Pheasantry.

It is Owned by Wallace Evans, of Chicago, Who is Only Thirteen Years Old—He Raises Something Like Eight Hundred High-Priced Birds a Season, and Always Has a Ready Sale for Both Eggs and Pheasants, Making the Business Profitable.

Wallace Evans, a slender, 13-year-old lad in knickerbockers, owns the largest pheasantry in the west, selling 800 eggs in a season and hatching nearly as many birds.

Such an enterprise conducted by a boy is generally a makeshift, but the Evans pheasantry is perfect in construction, having about 175 by 200 feet under wire with the latest improved hatcher and houses. It is divided into a network of special yards, every gate closing and locking automatically so there is no danger of the birds escaping.

The flock of gold pheasants is a gor-

geous sight with their brilliant yellow heads, capes of orange and blue, lined with vivid green, scarlet bodies, burnished wings and long graceful tails dotted with black. They are a fad among fanciers and their price is increasing as they now bring \$30 a pair.

The beautifully plumaged hen lays 30 eggs in a season which are worth \$10 a dozen. He has a large number of English pheasants furnishing a fine contrast to the golden beauties. They lay from 50 to 75 eggs, which are readily sold for \$5 a setting.

His covey of quails would make a hunter's heart leap, as they fly to cover with a whir of wings and warning cries. The old birds were imported from Tennessee where thousands of the luckless birds follow a trail of grain leading straight into a wire enclosed corral and are there shipped to breeders.

In the center of each yard is a neatly stacked pile of brush and straw which affords a native retreat for all the birds. The English pheasants are very handy and frolic in the snow and ice like children, but the golden hover in their houses in bitter cold weather.

Wallace also raises canaries on a large scale, and this aviary is an ideal place, for the songsters never dream they are imprisoned. Their breeding cage is a building 15x20 feet, filled up with branches and boughs, where they build their nests like wild birds and their play cage is 20x30 feet. A red squirrel with a splendid brush is their sole companion.

Then there are fancy chickens, Golden Polish with dazzling feathers that look as if they had been dipped in gorgeous dyes and black Polish white crested fowls, whose snowy bonnets are like nodding chrysanthemums. Fear is unknown in the pheasantry, even the timid quail comes at his whistle. He will have a large exhibit at the fourth annual show of the Chicago poultry and pet stock exhibition in January, and expects to add to his fine collection of first prize ribbons.

Taken as a whole, the pheasantry reflects unbounded credit on its boyish proprietor, who in addition to having the sole care of it, is finishing the eighth grade course in the Oak Park school.

JENNIE VAN ALLEN.

Saving by Proxy—The Way He Got a Start in the World.

There is a gentleman in St. Louis who is fond of telling the story of how he got his first start in the world. "Before I was married," he says, "I received a pretty fair salary, spending every cent of it as I went along. Then

I fell in love, but, try as I would, I could not see how two could manage on what had scarcely been enough for one. We talked it over, she and I, and considered the question of ways and means. She thought we could manage with my salary, and we were both so desperately in love with one another that we were brave to the point of rashness, and were married. I did not care to assume the responsibility of making that salary go around, and so questions of finance were left to my wife. We lived modestly, but very comfortably, and gradually added pretty things to the little stock of furniture we had begun with, until at the end of five years we had all we had space for. Of course, my salary had increased in that time, but so had the family, and there were hundreds of demands for which we had made no allowance when we discussed the subject before marriage. One day, in the course of the day's work, I made the discovery that, if I had \$1,000 to use immediately I could make several thousands before the week was out. That night I went home dispirited and discouraged. I began to think of the dog's life I was leading, living from day to day with no prospect of anything better as far as I could see, and by the time I had reached home I was cross and taciturn, but a good dinner put me in a better humor, and as we sat together in the dining-room after the children had gone to bed I told the dear woman about the fortune that we had missed because I did not have a paltry \$1,000. "How soon will you need it?" she asked, when I had finished the story. I told her that the money would have to be forthcoming within the next three days, and asked her if she did not wish she had a fairy god-mother to supply the want. "I will have it in three days," she replied, confidently, and I took the answer as a joke and thought little more about it, but imagine my surprise on the third day when she handed me a check for the amount. There had not been a year since we were married that she did not save at least a couple of hundred dollars, and she had kept her own counsel about it, too, lending it in small sums to the best advantage. A thousand dollars may not seem much to you, but it was a mighty large sum to me in those days. I made the investment and made several thousand, and the first thing I did was to pay her back what she had lent me. The little bit of capital I then had was all I needed to make a start with, and from it has come all the money I have since been able to make."

Choose carefully your books and your friends, for you will be like them.

HOW TO DO THINGS

How to Use the Gymnasium.

By PHYSICAL DIRECTOR E. J. GIANNINI, of the New York Athletic Club.

The first exercise I put a novice at is the pulley weights. This machine by means of various motions brings into play the muscles of the arms and the upper portion of the body only, as the legs are always kept in one position. Then I take the pupil over to the sculling machine. This apparatus imparts the same movements to the body as when a boat is propelled by a single oar from the stern. The same muscles are exercised here as with the pulley weights, only in a circular instead of straight motion and in a lateral direction.

The wrist roll is the next thing which I advise the beginner to work on. This exercise, which is designed to strengthen the muscles of the wrist and forearm, consists in turning a cylinder of wood to which is fastened a cord which winds up. At the end of this cord are hanging weights which furnish the necessary strain for the wrists. The finger machine is the next on the list. By its use the muscles of the hands are strengthened.

From the wrist machine I take the beginner to the abdominal pulley, which is useful for the purpose of strengthening and bringing into action the muscles of the abdomen and those of the trunk in general.

The waist reducer, with which I follow, is an endless pulley, and to work it one must go through exactly the same motions as when hauling on the main sheet of a boat or climbing a rope, except one does not have to pull up one's own weight. By means of a screw just so much friction is applied as is thought proper.

From the waist reducer we turn to the spring board, which, as every one is aware, gives the same exercise as running. This is the first leg exercise indulged in, as it may have been noticed that those heretofore described were for the upper part of the body. From this we go over to the chest bars. These are two upright poles set about two feet apart. One is grasped by each hand at a height a little below the shoulder. By means of these bars the muscles of the arm, back and abdomen are greatly strengthened.

It has been found by experience that the parallel bars are too severe a method of exercise for beginners, and as a substitute what is known as the traveling parallels have been invented. By this means the same exercise is gained, but instead of having to support his own weight the novice is enabled to use graduated weights by loading or unloading the machine.

I have mentioned no exercise that is likely to bring on a profuse perspiration, and that is just what is needed. So next we will have an inning on the bicycle machine. This mechanism allows for extra friction and consequently harder work by means of a lever. A dial in front of the rider tells him how far he has traveled, and after about a mile has been covered most men will be covered with moisture.

The intercostal pulleys are the next on the program. As the bicycle gave exercise to the legs, these are a return to motions for the upper half of the body, and they are very useful for developing the muscles in the neighborhood of the ribs.

In my own work with pupils I next give beginners an exercise which I have found by experience to be extremely useful for strengthening the neck, back and legs. I have a large ball, made like a medicine ball, only about twice as large and weighing 12 pounds. To use this you must lie on a mat on the floor and have some one to throw the ball to you. Then, after catching it, you throw it in the air and with your feet kick it to the assistant, who catches it and repeats the operation. All this time you

must lie with your legs and head off the mat.

The medicine ball is the next thing to take up. This I consider a small gymnasium in itself, and the use of it one of the most healthful exercises for a man, as it develops almost every muscle in the body. Care must be taken by a beginner not to exercise too fast at first, or dangerous sprains may result.

Now to wind up you should take a run around the tracks, if there is one in the gymnasium. The distance you should cover, of course, depends upon yourself and your condition. For the first week or so it is a good plan to run flat footed, so as to bring the muscles of the legs into shape by slow degrees and without straining any of the tendons.

In taking up any of these exercises it must be remembered that no fixed number of times for doing each exercise can be laid down. If you have an instructor, he will tell you when to stop; otherwise you must be guided by your own feelings and judgment. It should be remembered, however, that for the first few weeks it is better to do too little than too much.

Of course, after working in a gymnasium it is necessary to take a shower or other bath, and this calls for a word of caution. On no account should the bath immediately follow exercising. Much better wrap some covering around you, sit down quietly in some spot out of any draft for ten minutes or so.

Then, again, there are few people, even the strongest, who after exercising in this fashion can stand the shock of cold water as it comes from the faucet. Of course, there is no necessity to go to the opposite extreme and take a hot bath, but rather indulge in a tepid shower or plunge. After the bath do not go out into the open air or into a draft for some time, as all the pores are wide open and cold is easily caught.

Of course there are lots of exercises with dumbbells, bar bells and other machines of which I have not spoken, but every result for which these are intended may be attained by the methods I have mentioned.

How to Make a Pair of "Home-Made" Scales.

You can make a pair of scales out of two pieces of cardboard, a piece of string and two nails. Drive two nails into the edge of a horizontal shelf about 24 inches apart. Take a piece of string or thread about 3½ feet long, and tie in the middle of it a large knot; then tie the two ends to the nails, one end to each. Cut from cardboard two square pieces to serve as pans, and suspend them from the principal thread by four other threads. They should be suspended one on each side of, and about six inches distant from the knot in the center. Their weight will make the middle part of the principal thread take a horizontal position. Behind the central part of the horizontal thread

place a piece of cardboard and mark on the cardboard the place in front of which the knot lies when the two pans are at rest. Now put any article you wish to weigh into one of the pans. This, of course, will disturb the equilibrium, and the part of the thread that was horizontal will now take an oblique position, and the knot will no longer hang in front of the point marked on the cardboard. To bring the knot back to its place you must put weights in the empty pan, and when you have thus established a balance and brought the knot back to its place, the total of the weights will give the weight of the article. Of course, if you want to weigh heavy articles you must use heavy twine or rope. A thread will do for light-weight articles. These scales may be depended upon to give as accurate service as any scales that are sold in the stores.

How to Construct a "Dark Room."

In planning the construction of a dark-room in a basement, we will suppose that the basement is unfinished and has a dirt floor and a rough joist ceiling. Select a site near a ventilating shaft or smoke flue, if possible. Level the dirt floor and construct a floor for the dark-room as follows: For an 8 by 10 room, cut nine pieces of 2 by 4 scantling, 7 feet 8 inches long. Arrange these 15 inches from center to center. Take two pieces of scantling ten feet long, spike these to the ends of the shorter pieces, making a framework 8 by 10 feet in size. Cover this with a good quality of matched flooring, trimming the ends and sides even with the framework. Now spike scantling to the joists overhead, making a frame 8 feet 1¼ inches by 10 feet 1¼ inches inside. Directly above the floor construct the side walls of a cheap quality of matched flooring, nailing it to the frame above from the inside, and to the floor below outside, leaving an opening 2 feet 10 inches wide and 6 feet 6 inches high for a door in one of the 10 foot sides. Strip can be nailed around the room on the outside about three feet from the floor, if the top and bottom nailing is not considered sufficient. Now cover the ceiling and sides (inside) with red plastering board or red rope building paper of a heavy quality, lapping the joints about two inches, tacking it on neat and smooth. It can be tacked to the joists above, or the top can be ceiled like the sides and the paper tacked on this, as preferred. Be sure and have all joints neat and smooth and light-tight. Nail 3-inch battens over the paper around the door opening, having them project in the opening about one inch for the door to butt against. The door can be made of flooring, putting the battens on the outside, and covering the inside with paper. Hang the door with 6-inch strapped hinges; door to open on the outside. Put on a suitable lock or latch, but put it on in such a way that no openings are left for the light to get in.

Along the ten-foot side, in the room, construct a shelf or table at a convenient height from the floor, making it about two feet wide. It can be made of the matched flooring, selecting some of the best. Make the table true and level; the ends can be supported by strips nailed to the end walls and the center by the framework or tray rack, as shown in the sketch. Cut an opening near the center for a galvanized iron sink—about 20 by 40 inches will be large enough—and let in the sink, making the edges flush with the top of the table. In the left-hand corner, at a convenient height above the table, fasten a dry-plate box, box to be large enough to take the largest plate used. Have this box perfectly light-tight. Line it with black velvet or felt, and have door fitted with a spring so as to keep it closed. To the right of the sink have a platform for developing. Have this fitted with a cover something like an inverted tray. The cover when

down should fit the platform, making a light-tight joint. It should be hinged to the platform at the back, so that when not in use the cover can be thrown back. The size should be large enough to take the largest tray used. This arrangement is handy for slow development, as you can let down the cover over the tray, and all is secure from dust and light. Have lamp in the right-hand corner, and directly above it put an inverted stove-pipe elbow—6-inch will do. Connect the pipe from this with the ventilating shaft or smoke-flue, which will carry off the lamp fumes, keeping the room cool in the summer and at the same time ventilating it.

On the right have hypo table. This may be about two feet wide and reach across the room. Let wash-basin in flush at the left end, and place tray-racks and shelves below for trays, hypo, etc., as shown. In left side of room have table for drying racks, plate-holder, etc., with

shelves below and above. These can be arranged to suit individual ideas and must be convenient.

Run water-supply pipe on outside of room, with pipes through the walls and terminating in taps above the sink, wash-basin and washing-box. The pipe may be ½-inch galvanized; this you can have cut and threaded to order, and by screwing it together you can save the expense of a plumber. The sink and wash-basin can be connected with drain or sewer by a 1¼-inch galvanized iron pipe.

Cut 6 by 8 inch air inlet under one of the tables near the floor. Cover it so as to let in air but keep out the light. A small shelf above the sink is for developing solutions.

Cover the tables and shelves with white enamel cloth. Keep a supply of old newspapers; use these on the hypo table under the fixing box and trays, renewing them frequently. This will keep the hypo dust out of the room and help to keep your negatives free from pin-holes.

Size of dark room can be altered to suit location, but do not make it too small. Have large lamp with large openings, well protected with suitable glass and curtains, so as to get plenty of light, but be sure and have it safe.—Photo Beacon.

How to Paper Your Walls.

Provide yourself with a pair of long shears, a yard-stick, a brush with which to apply the paste (a whitewash brush will answer), and some soft, clean cloths.

To make the paste, sift the flour, add one ounce each of alum and borax to every pound of flour, mix it smoothly with cold water, and pour over it gently but quickly boiling water, stirring meantime constantly. When it swells and turns yellow it is done, but must not be used until cool. It should be quite thin. If the wall has already been papered the old paper should be removed. Cut all the full breadths that will be required for the room, matching and numbering each, and saving remnants for door and window spaces. Fit the widths together at the top, and gently press first the edge, then the entire space.

Boys as Money-Makers and Money-Savers

Raising Rabbits for the Market.

A Fine Business for an Ambitious Boy Who Has Small Capital—Growing Popularity of the Hare for Food—Rabbit Culture in the Far West and Just Now to Proceed in Starting Professional Hutches.

By DEBRA T. DAVIS

The timid hare has recently come up in the world tremendously as a market product. Americans have somehow heretofore been rather disinclined to accept the rabbit as a table delicacy, notwithstanding the example set them by their European cousins; but all that is changed now, and so great is the demand all through the west for a fine quality of home bred hare that it is simply impossible to meet the orders. Large numbers of people living in the cities, who have only basements and back yards in which can be placed a few dry goods boxes, are breeding and raising rabbits for the markets, and thousands more could do so with profit.

As a good example of the rapid gains in rabbit raising, may be cited the experience of a little boy who a year ago bought a nice pair of rabbits for \$5. During the year he has raised from the original pair fifty-one rabbits, forty-eight of which he has sold at a dollar apiece. The cost of feeding has not been more than two dollars, so that the end of the year finds him with five rabbits instead of two, and \$41 to his credit in the bank, after deducting the original capital.

Culture tells in this industry the same as in any other, and there is just as much difference between the carefully bred and reared rabbit and the one that comes up anyhow, as between the cat of the alley and the aristocratic angora. A visit a few days since to the largest rabbitry in the country situated at Woodstock, Illinois, resulted in bringing out some interesting points as to the best methods of raising rabbits either for pets or as a food product.

RABBIT CULTURE.

"On almost any place," said the keeper, "an unused building or even a corner in a barn or basement can be turned into a commodious rabbitry with a comparatively small outlay, and by the exercise of a little judgment made to pay a nice profit.

"It is best to start with a limited number of animals, acquiring some practical experience before branching out too extensively. The three essentials of a good rabbitry are ventilation, light and dryness. Once these points have been gained, it really matters very little what kind of a structure comprises the rabbitry. Pure air and plenty of it, is of first importance to the well being of friend Bunny, and the great percentage of losses in raising rabbits under cover can be directly traced to bad air. Light is another indispensable, while the dry place conduces greatly to health during the cold and damp months.

"Hutches for rabbits the size of the Belgian hare should not be less than four feet long, two feet wide and one and one-half feet high. For the smaller breeds, one of less dimensions will do. The floor should be made as tight as possible, either by means of cement or paint, and absolute cleanliness must be observed, the bunnies being supplied with fresh beds of hay every day. The hutches of the doe should be provided with a nest box; a biscuit or cracker box, with an aperture cut out as entrance and the interior divided into two sections, is admirably suited to the purpose.

"The rabbits should be fed principally on dry food, such as hay, oats, corn and stale bread. An occasional feed of carrots is also desirable. In summer they are especially fond of dandelions, never seeming to tire of this delicacy, and which, fortunately, never injures them. Clover, plantain and mallows they eat greedily. Grass they like, but it is not so much their natural food as weeds. Once a day the mother and little ones

should have a dish of bread and milk, which they will be found to devour with avidity. Like all other animals, rabbits should be given fresh water in a clean dish every day."

The little ones do not open their eyes until they are nine days old, and then they take advantage of the first seeing moment to leave the nest and follow their mother into the larger compartment where she rests and eats.

As with all animals, feeding time is the vital point of the day, and it is very interesting to watch them then. No sooner is the attendant heard to approach, than each little bunny gets up on his hind legs, dances a jig, laps his tongue around the wire of the door and indulges in all sorts of graceful and disgraceful antics. I fear very little can be said for their manners individually or collectively, as each clamors impatiently for his share, apparently quite unwilling to await his turn.

Since the raising of rabbits on any extensive scale is quite a new industry in this country, it was found necessary at Woodstock to import a large portion of their original stock from England and Germany. One very much interested in the subject speaks of his surprise upon visiting a rabbit show in Germany to note the interested and intelligent way in which the children there used the catalogue, betraying a knowledge of the different breeds that would astonish the average American child.

The Belgian hare has attained great popularity in this country both as a pet and a market product, and is perhaps the most widely known of all the high bred rabbits. It is usually distinguished by a handsome coat of rufus red, flecked with black, although there is the black Belgian hare which is greatly admired for its beauty. Of the stock imported at Woodstock, one of the finest market rabbits has proved to be the Flemish Giant, from the prize winning strain at Crystal Palace, London. This rabbit is distinguished by its large, round head, bright, bold eyes, strong, erect ears, massive shoulders and powerful legs and feet, combined with unusual size. Its correct color is dark steel grey, and it is considered altogether a noble looking animal. On account of their exquisite beauty, the black and-tans are reared exclusively for pets. They were imported from England, where sixteen years of careful breeding has developed in them perfect colorings and markings. Their bodies are covered with a fine, black, glossy coat, marked with tan around the eyes, ears, nose and on the neck, chest and feet, the under portion of their bodies being tan and white. They are natural pets, being very docile and fond of caresses.

The boy ambitious to start in on a little business of his own can not do better than to experiment with a small rabbitry, after, of course, informing himself thoroughly upon the subject. At present the west, particularly the far west offers the best market for well bred stock.

A Boy's Big Pheasantry.

It is Owned by Wallace Evans, of Chicago, Who is Only Thirteen Years Old—He Raises Something Like Eight Hundred High-Priced Birds a Season, and Always Has a Ready Sale for Both Eggs and Pheasants, Making the Business Profitable.

Wallace Evans, a slender, 13-year-old lad in knickerbockers, owns the largest pheasantry in the west, selling 800 eggs in a season and hatching nearly as many birds.

Such an enterprise conducted by a boy is generally a makeshift, but the Evans pheasantry is perfect in construction, having about 175 by 200 feet under wire with the latest improved hatcher and houses. It is divided into a network of special yards, every gate closing and locking automatically so there is no danger of the birds escaping.

The flock of gold pheasants is a gor-

geous sight with their brilliant yellow heads, capes of orange and blue, lined with vivid green, scarlet bodies, burnished wings and long graceful tails dotted with black. They are a fad among fanciers and their price is increasing as they now bring \$30 a pair.

The beautifully plumaged hen lays 30 eggs in a season which are worth \$10 a dozen. He has a large number of English pheasants furnishing a fine contrast to the golden beauties. They lay from 50 to 75 eggs, which are readily sold for \$5 a setting.

His covey of quails would make a hunter's heart leap, as they fly to cover with a whirl of wings and warning cries. The old birds were imported from Tennessee where thousands of the luckless birds follow a trail of grain leading straight into a wire enclosed corral and are there shipped to breeders.

In the center of each yard is a neatly stacked pile of brush and straw which affords a native retreat for all the birds. The English pheasants are very handy and frolic in the snow and ice like children, but the golden hover in their houses in bitter cold weather.

Wallace also raises canaries on a large scale, and this aviary is an ideal place, for the songsters never dream they are imprisoned. Their breeding cage is a building 15x20 feet, filled up with branches and boughs, where they build their nests like wild birds and their play cage is 20x30 feet. A red squirrel with a splendid brush is their sole companion.

Then there are fancy chickens, Golden Polish with dazzling feathers that look as if they had been dipped in gorgeous dyes and black Polish white crested fowls, whose snowy bonnets are like nodding chrysanthemums. Fear is unknown in the pheasantry, even the timid quail comes at his whistle. He will have a large exhibit at the fourth annual show of the Chicago poultry and pet stock exhibition in January, and expects to add to his fine collection of first prize ribbons.

Taken as a whole, the pheasantry reflects unbounded credit on its boyish proprietor, who in addition to having the sole care of it, is finishing the eighth grade course in the Oak Park school.

JENNIE VAN ALLEN.

Saving by Proxy—The Way He Got a Start in the World.

There is a gentleman in St. Louis who is fond of telling the story of how he got his first start in the world. "Before I was married," he says, "I received a pretty fair salary, spending every cent of it as I went along. Then

I fell in love, but, try as I would, I could not see how two could manage on what had scarcely been enough for one. We talked it over, she and I, and considered the question of ways and means. She thought we could manage with my salary, and we were both so desperately in love with one another that we were brave to the point of rashness, and were married. I did not care to assume the responsibility of making that salary go around, and so questions of finance were left to my wife. We lived modestly, but very comfortably, and gradually added pretty things to the little stock of furniture we had begun with, until at the end of five years we had all we had space for. Of course, my salary had increased in that time, but so had the family, and there were hundreds of demands for which we had made no allowance when we discussed the subject before marriage. One day, in the course of the day's work, I made the discovery that, if I had \$1,000 to use immediately I could make several thousands before the week was out. That night I went home dispirited and discouraged. I began to think of the dog's life I was leading, living from day to day with no prospect of anything better as far as I could see, and by the time I had reached home I was cross and taciturn, but a good dinner put me in a better humor, and as we sat together in the dining-room after the children had gone to bed I told the dear woman about the fortune that we had missed because I did not have a paltry \$1,000. "How soon will you need it?" she asked, when I had finished the story. I told her that the money would have to be forthcoming within the next three days, and asked her if she did not wish she had a fairy god-mother to supply the want. "I will have it in three days," she replied, confidently, and I took the answer as a joke and thought little more about it, but imagine my surprise on the third day when she handed me a check for the amount. There had not been a year since we were married that she did not save at least a couple of hundred dollars, and she had kept her own counsel about it, too, lending it in small sums to the best advantage. A thousand dollars may not seem much to you, but it was a mighty large sum to me in those days. I made the investment and made several thousand, and the first thing I did was to pay her back what she had lent me. The little bit of capital I then had was all I needed to make a start with, and from it has come all the money I have since been able to make."

Choose carefully your books and your friends, for you will be like them.

The Boy in the Office, the Store, the Farm and the Factory

Do One Thing and Do It Well.

Many young men, and some older ones, too, make the great mistake of dividing their energies. They are strong, enthusiastic, and desire to "rise." In their zeal to accomplish much as soon as possible they have two or more kinds of work on hand at the same time—preach and go to school, teach school and preach, preach and farm, farm and dabble in politics to secure office, etc. The result is they do nothing well, are mediocre in everything.

Paul had the correct idea. He said, "This one thing I do." No man can make a brilliant success of two or more callings. The man who succeeds, be he preacher, lawyer, teacher, merchant, farmer, doctor, carpenter or common toiler, is the man who gives his undivided energies to the one work in hand.

The man who is abundantly able to make a success of one calling or trade becomes "too thin" when spread over two or more all at the same time to do any of them well.

Battleship Show Window.

Messrs. Peterson and Kees, of T. C. Taylor's hardware store, Pendleton, Ore., recently fitted up an attractive "Battleship" Show Window. The main body of the ship was made by bolting two cross-cut saws together and spreading them to give proper shape to vessel. The conning towers were funnels, and masts were of gun rods. The fore and aft guns consisted of hose nozzles mounted on casters, while the main gunning stations were represented by milk strainers inverted, with shells sticking out to give a gun effect. The smoke stack comprised two small tin pans with nurse can on top. The railing around the ship was provided for by clothes pins for uprights, and smooth wire did duty as guard rails. A dark lantern made a good search light, and the life-saving boats were suspended by pocket cork screws. Dog chains were used for the anchor chain, the anchor being made from heavy sheet iron cut out in the shop. Cotton strewed around the window gave the desired sea effect.

The Printer Boy.

In the year 1725 an American boy about nineteen years old found himself in London, where he was under the necessity of earning his bread.

He was not like many young men in these days, who wander about seeking work, and who are "willing to do anything," because they know how to do nothing; but he had learned how to do something, and knew just where to go to find something to do. So he went straight to a printing office, and inquired whether he could get employment.

"Where are you from?" inquired the foreman.

"America," was the answer.

"Ah," said the foreman, "from America seeking employment as a printer? Well, do you really understand the art of printing? Can you set type?"

The young man stepped to one of the cases and in a brief space set up the following passage from the 1st chapter of John:

"Nathanael said unto him, Can there any good thing come out of Nazareth? Philip said unto him, Come and see."

It was done so quickly, so accurately and administered a delicate reproof so appropriate and powerful, that it at once gave him influence and standing with all in the office.

He worked diligently at his trade, refused to drink beer and strong drink, saved his money, returned to America became a printer, publisher, author, Post master General, member of Congress, signer of the Declaration of Independence, ambassador to royal courts, and finally died in Philadelphia April 17, 1790, at the age of eighty-four, full of years and honors; and there are now more than a hundred and fifty counties, towns and villages in America named after that same printer boy, Benjamin Franklin, the author of "Poor Richard's Almanac."

A MODEL BOY—Do You Know Him?

Wanted—A boy, a brave, courageous, manly, hopeful boy; one who scorns a lie; one who hates deceit; one who loves his mother; one who does not know more than his parents; one who has the courage to say no, and stick to it; one who is willing to begin at the bottom of the ladder and work upwards; one who thinks it would be unmanly to smoke; one who thinks an education is worth striving for; one who is willing to obey his superiors; one who knows his home is better than the street; one who doesn't believe the marvelous tales told in the story papers and will not read the vile stuff; one who won't cheat in a fair game; one who won't do a mean act unseen; one who won't spend every penny he earns or gets; one who thinks he should respect himself and keep himself in decent appearance; one who won't attack an old man because he is feeble and defenceless; one who won't torture dumb animals; one who won't steal; one who won't swear; one who won't listen to or repeat nasty stories; one who won't revile or jeer at drunken persons on the street; one who won't do a dirty act for another boy who is too cowardly to do his own meanness; who loves to do right because it is right. Wanted a boy, a whole souled, earnest, honorable, square boy. Where can he be found? Does he live in your neighborhood? Is he a member of your family? Do you know him?—

American Teacher.

Advice on Learning a Trade.

You are learning a trade. That is a good thing to have. It is better than gold. Brings always a premium. But to bring a premium, the trade must be perfect—no silver-plated affair. When you go to learn a trade, do so with determination to win. Make up your mind what you will be, and be it. Determine in your own mind to be a good workman.

Have pluck and patience. Look out for the interests of your employer—thus you will learn to look out for your own. Do not wait to be told everything. Remember. Act as though you wish to learn. If you have an errand to do, start off like a boy with some life. Look about you. See how the best workman in the shop does, and copy after him. Learn to do things well. Whatever is worth doing at all is worth doing well. Never slight your work. Every job you do is a sign. If you have done one in ten minutes, see if you can't do the next in nine. Too many boys spoil a lifetime by not having patience. They work at a trade until they see about one-half of its mysteries and then strike for higher wages. Act as if your interests and the interest of your employer were the same. Good mechanics are the props of society. They are those who stick to their trades until they learn them. People always speak well of a boy who minds his own business, who is willing to work and who seems disposed to be somebody in time. Learn the whole of your trade. —Ex.

Character Better Than Knowledge.

The following sentences spoken by Dr. Benjamin Ide Wheeler in an informal talk to the students of the University of California are just as applicable to pupils in grammar and secondary schools and therefore seem worth repeating: "It is what goes over into spinal marrow, into real life, that makes us; and what we are going to get out of our university life is not bits of knowledge, not maxims and rules for getting this or that, for learning this or that, for attaining this or that; but, after all, it is this one thing which we talk so much about and understand so imperfectly—it is character. . . . As I grow older I come less and less to respect men of brilliancy, and to tie to men for their character.

. . . . In a university, or elsewhere in the world, heart is more than head and love is more than reason."

A Talk to Farm Boys.

In the first place, no matter what the opinion of other people may be, and perhaps your own as well, there is no more honorable occupation, or one having wider opportunities, than the business of farming. There is nothing that any man may aspire to that a farmer may not hope to win. No business will return more for the amount of labor and capital invested, if intelligently applied, than farming. There is no business that leads to success without labor guided by education. The farmer is not a drudge. The fact that there are so many hard-working, poor men on farms, rented or mortgaged, is that they have been attempting all their lives to have muscular force make up for lack of mental ability to farm. There is no uneducated successful farmer. A man may succeed who has no book-learning, but he has learned his lessons from Nature herself and the book of experience.

There are failures in every branch of business, and in every case it is lack of education for the business, or a natural unfitness for that particular calling that is the underlying cause of the failure. It is so with farming. The man who lacks ability to carry on other business will make the most dismal failure of farming as well. For the poor boy who has nothing but his health and ambition to aid in his struggle for manhood there is no better place in the world than on a farm. Study farming. Learn the science of it. Read farm literature. Talk with your neighbors of their methods and experiences.

Aim high, but do not hesitate to begin low. You cannot hope to reach the top without some falls, and if at the bottom it won't hurt so much and you can learn the lesson as well. You won't be overburdened with capital, so must look well before taking a step. Study and plan ahead, always allowing for a wide margin, and do not count on more than half the amount of profit your figures say will be yours. This will save you many bitter disappointments, and you will be greatly encouraged should you get more than you expected. Make every dollar you can honestly, and add it to

your little bank account. Every young man should start a bank account. It is what he must call upon when ready to buy that farm—for of course every farmer must own his own farm. Swell the account with every dollar you can add to it. Watch it grow, and plan how to raise it another five or ten dollars. And while laying by cash to buy the farm, lay by the education to work it when it is yours. Don't think that you are wasting your life working for some one else, but think rather that you are going through a college course, getting a business education, experimenting on some one else's farm, with board, tuition and apparatus furnished free and getting good pay besides. This is your position, and if you appreciate it your farm, which must be your diploma, will be a credit to you.

If circumstances will permit, it will be of the greatest benefit to you to attend some agricultural school. Of course, you have a good common-school education, perhaps a high-school, maybe even a college education; but an insight into the science of farming will be of great benefit, as it will teach intelligent observation, which is half the battle.

Subscribe for two or three good farm papers, study them carefully, and discuss the subjects of their columns with your neighbors. You will learn much from the actual experience of men right in your neighborhood in this way. You will not feel able to purchase many books, perhaps, but you should have a few standard works on farming, gardening, stock-raising, etc. You can learn much by discussing these with men whose business make them specialists in these lines. Of course, you should not ask advice of a veterinary surgeon without the expectation of paying for it, yet this would not apply to discussing points of his business with him in a social way.

Be diligent, and when your apprenticeship is done, and you are able to make a large enough payment on your farm to reduce the interest below what your rent would be, and you feel confident that you can meet the payments, buy the farm. But go slow. Do not venture too far while there is a debt over you. Push your business to the utmost. Work to improve your farm, plan each season so that the next will be more profitable to you than the last, and some not far distant day the debt will be paid and you will have a good farm, well cared for, all your own. Then you will be ready for living—for widening out and developing your resources.

Being an intelligent young man, of course your stock will be only the best, and the careful breeding you have already given them has started the finest herd of cattle, the best drove of swine and the most profitable yards of poultry in the country. Your business now has only to develop and increase to bring noble returns. Your career as a successful farmer is assured.

And, boys, do not forget that your calling is a gentleman's calling. While about your work in the fields it may be necessary to dress in coarse, strong clothes of a cut suitable for the labor you are performing; but it is not necessary to wear a heavy, dirty coat when off duty, and it will take but a moment to change your heavy boots for light footwear. And when your business calls you into town, you can afford to put on a neater suit than your work clothes. You will be more respected and looked up to for it. It pays every business man to advertise, and no one more than a farmer. Half the secret of prospering is in making the world realize that you are prosperous. You can advertise your calling in no better way than to let the world see that your occupation brings in enough that you are able to live and dress as a gentleman.

The object of all effort should be the home. Live always within your means, but realize that nothing is too good for the home and home folks. Let your ambition be to make your farm an ideal farm, your home an ideal home.

The Boy in the Home, Church and School

RIGHT: LEFT:

HURRAH FOR UTAH!

THE MAN BEHIND THE GUN.

THE DEWEY OF THE FUTURE.

PHOTOS BY JOHNSON, SALT LAKE CITY.

Curiosity is a trait for which all boys have a weakness, and unless there is something abnormal in their construction, they have an ever-enlarging share of whyness and whatness.

The possibilities of the boys are wonderful. They are diamonds in the rough, which, when the scars and ragged, jagged edges are hewn off, can be polished and transformed into precious jewels.

How to reach, how to hold, and how to develop the boys are vital questions that confront not only every Christian organization but every individual. Christian workers everywhere signally fail in this branch of the work.

Any one can work with boys who loves them. If you are a minister and do not love boys, you would better get out of the ministry at once! Love them, encourage and stimulate them to better living and higher thinking.

A big red apple, drawn from the deep recesses of a kind-hearted old-fashioned teacher's pocket has done more towards bringing a mischievous lad to the proper focus than quarts of hickory oil applied to his most vulnerable parts.

"You can't spell long words like hippopotamus and parallelogram," said the little boy who wore spectacles and a sailor suit.

"Well," answered the boy who was leading a dog by a piece of rope, "dat's where I'm lucky. I don't have to."—Washington Star.

A farmer was asked, "Is that horse yours?" "Why, yes, that is the finest horse in town, everyone knows that's my horse." "Is that your cow?" "Yes, the only thoroughbred Short-horn in town." "Is that your dog?" "Yes, he is a splendid setter. The very best one around here." "There is a boy. Is he yours?" "Well—er—yes, come to think of it, he is."

A boy is like a knife. Guess why? One boy says because he is sharp; au-

other says, because he has good metal, but it is not sharpness, nor good metal that fills our penitentiaries with boys instead of girls. A boy is like a knife because he may be lost, and because he is a good thing in good hands, and a bad thing in bad hands.

Even the worst boy loves his mother. He may give her lots of trouble by his disobedience, but he will roll up his sleeves and "pitch into" the boy who says aught against her. On the other hand, he will be willing to fight for the one who praises his mother and who strives by little courtesies to encourage him in doing that which his mother would like to have him do.

One boy, when asked why he didn't stay at home, answered that he used to when grandma was alive, for she would take me up to her room and we had good times together, but now sister has the parlor for her company and no time for me. Father doesn't stay at home unless he is sick, or "dead tired" and mother—well, she is a "reformer" and she has other things of more importance to think of and look after than boys.

I asked a class of boys if they were glad they were alive, and that all who were should put up their hands. Every hand went up instantly. If glad you are alive, what are you living for? No one answered. Finally one boy said, "We live to eat." That is true—many grown-ups are living for the same purpose. Each boy has a work that nobody else can do and we must make him to know that work.

A boy is frequently bad because everybody expects him to be so. This kind of youth may be tamed and even refined by having confidence reposed in him. Delegate him to perform some dainty little task requiring a certain amount of discretion, and note how his eyes will shine and his face soften into lovable lines. By appealing to his honor his gratitude is aroused, and gratitude is one of the noblest elements of character. It is not necessary that a child should express its appreciation of a favor by the oftentimes meaningless "I thank you."

Boys need encouragement. They feel that they are homely, awkward and in the way. Some of us have outlived that, but we can understand. After a boy has been away to school or college for a year, comes home expanded in body as well as intellect, and his mother criticises him, says he is big, awkward and uncouth, do you suppose that boy would feel like going anywhere, but to hide? But how much better he feels when father puts his arm around him and says "John you are such a big, manly fellow; why, you are almost as large as your father." Don't you believe that boy would go to church with his father?

Etiquette As Laid Down by George Washington.*

Every Action done in Company ought to be with Some Sign of Respect to those that are Present.

At Play and at Fire it's Good manners to give Place to the last Comer, and affect not to Speak Louder than ordinary.

When your Superiours talk to any Body, hearken not, neither Speak nor Laugh.

In Company of those of Higher Quality than yourself, Speak not till you are ask'd a Question; then Stand upright, put off your hat and answer in few words.

Be not Tedious in Discourse or in reading, unless you find the Company pleased therewith.

Be not curious to know the affairs of others, neither approach to those that Speak in Private.

Make no comparisons, and if any of the Company be Commended for any brave act of Virtue, commend not another for the Same.

Be no Flatterer; neither Play with any that delights not to be Play'd Withal.

Read no Letters, Books, or Papers in Company, but when there is a Necessity for the doing of it you must ask leave; come not near the Books or Writings of another so as to read them, unless desired, or give your opinion of them unask'd; also look not nigh when another is writing a Letter.

Let your Countenance be pleasant, but in Serious Matters Somewhat grave.

Do not laugh too loud or too much at

any Publick spectacle, lest you cause yourself to be laughed at.

Set not yourself at ye upper end of ye Table, but if it be your Due, or that ye Master of ye house will have it so, Contend not lest you Should Trouble ye company.—From Washington's "Rules of Civility."

*The spelling in this article is not to be considered in the prize contest for mistakes in spelling

Good Advice to Young Men.

The following epigrammatic periods are from President Porter, Yale College: "Young men, you are the architects of your own fortune; rely on your own strength of body and soul. Take for your star self-reliance. Inscribe on your banner: 'Luck is a fool, Pluck is a hero.' Don't take too much advice; keep at the helm and steer your own ship, and remember that the art of commanding is to take a fair share of the work. Think well of yourself. Strike out. Assume your own position. Put potatoes in a cart, go over a rough road and the small ones go to the bottom. Rise above the envious and jealous. Fire above the mark you intend to hit. Energy, invincible determination, with a right motive, are the levers that move the world. Don't swear. Don't deceive. Don't read novels. Don't marry until you can support a wife. Be civil. Read the papers. Advertise your business. Make money and do good with it. Love your God and fellow men. Love truth and virtue. Love your country and obey its laws"

The Best Soldiers.

Brig.-Gen. Guy V. Henry, a veteran of the United States army, said in an address to the men of his command encamped at Tampa, Florida: "It is not the bully and the fighter who makes the good soldier. I would rather have a regiment of Christian gentlemen than a regiment of roughs. The Christian makes the best soldier." History proves this to be true. Every commander of men in the field knows it. "Christian gentlemen" make the best soldiers, as they make the best men for every position in life. "A Christian is the highest style of man."

Boys and Cigarettes.

By CHAS. R. HARRETT.

So swift is time that the boys of to-day are to be the men of tomorrow, and it concerns the world as to the kind of men they shall be. Each boy is a problem to himself and unto the world.

The solution lies in developing talent and in making the best use of it. Herein lies a strong element of success. Promiscuous companionship is one of the dangerous pleasures of boys, and where this disposition is at all strong, habits are generally of a loose and pernicious character. It is surprising that boys will acquire a habit and even persist in its indulgence when they know it is detrimental to any ambition, as they cannot prolong an evil habit without destroying the mental activity and development that are the currents of business and professional life.

SMOKING CIGARETTES.

The most prevalent and destructive habit among boys of today is the smoking of cigarettes. The cigarette habit is not only a self-imposed disease, but a deliberate crime. It is unnecessary to warn boys against taking deadly poison, but the effect of cigarettes is none the less fatal. A boy addicted to the habit does not notice the influence the poison has upon his mental and physical being. It makes him stupid, but he is not capable of knowing it. When under the influence he cannot realize that his mind is dulled. It acts like the opium habit and eventually gets complete control of him and weakens mind and body. It weakens the blood and the action of the heart and undermines the health. Why will boys persist in a habit they know retards mental growth and takes a demoralizing hold on life? Why will they indulge a habit that destroys the capacity to think and even hinders physical activity? If the result of cigarette-smoking were suddenly fatal, or believed to be dangerous, it would be discontinued, but, like all habits that destroy human life, it is very cunning in its work. It never makes the victim aware of its strength and deceiving influence, but when it has sapped the life, how proudly it holds the wreckage up to public gaze, and then snares another that is sure to fall a victim to its devilish plan.

WORTHLESS AND STUPID.

A cigarette smoker is invariably worthless in school, never an interested and progressive student. Application is a lost art to him. He is always behind in his work. All that faithful teachers can do for him is counteracted by the effects of cigarettes. It is too bad boys

will not and seemingly cannot see their threatened condition. It is too bad they should be willing to sacrifice all benefits for the stupefying effects of cigarette poison.

The world likes a clean, bright, active, manly boy; one that has some appreciation of life; one that is interested in acquiring the qualities that make men; one that can appreciate time and opportunity. It enjoys his wholesome sports, his romping, daring nature, his innocent amusements, but it deprecates the habits he so often acquires that alienate him from his mother, his home, desirable companions and books, all of which are his birthright. Boys, why do you smoke cigarettes? You know you derive no benefit from it. You know it is injurious to your mind and body. Do you smoke them because they are cheap, and you think the habit is manly? Are you unable to appreciate a clear, active mind? Do you know its value in the world? Do you know that human life, rightly used, is the most precious thing in the world? Do you know if you were told you should lose your life tomorrow you would be likely to die of fright today? You would be appreciative of living if you could see the end. You would not smoke another cigarette if you knew it meant death to you. Are you aware that continuing to smoke them will put you in a condition that, to the intellectual world, is worse than death? There is nothing more pitiable than a weak-minded person, and especially one that has brought such a condition upon himself.

MISTAKE MADE BY BOYS.

The mistake on the part of boys is in thinking that the indulgence of such habits is a harmless pleasure. They are unable to see that real pleasure is the product of a well-developed mind, one that is directed toward noble living. A smoker of cigarettes is stupid in thought. He has no disposition to get hold of life. The easy, dependent way is his way. He has no appreciation of the qualities and influence of manhood. All that people do and are is through acquired habit, and the quality of the habit determines the quality of the man. He is free to do as he pleases with the tastes he acquires. Each is presumed to have a distinct individuality. He may, by practice, learn to do many things that nature does not designate, but if he violates nature's laws he is obliged to suffer for it. Nature distinguishes between man and animals by giving man the possibility of a superior intellectuality, and at the same time leaving him an entirely free will. Our usefulness is determined by our tastes. If the tastes are wholesome and well developed, we find they give us the

qualities of usefulness and the higher aims of life. If pernicious in any particular they are sure to destroy the possibilities or cause to be neglected the opportunities that are likely to come to every well-meaning person.

NEGLECTS HIMSELF.

The boy who is addicted to the cigarette habit is usually neglectful of his personal appearance. If he does not show it it is because somebody takes care of him. He rarely has taste in that direction. If he has the taste he rarely has the earning capacity to gratify it. The promising boy cultivates his mind, is thoughtful of his wearing apparel and does not neglect his teeth and hair and finger nails. He is anxious about the means of self-support. What benefits are derived from smoking? None whatever. Who seeks your services because you smoke? Nobody. Who thinks more of you because you smoke? Nobody. Then are you not foolish to smoke or do anything that detracts from your value to the world? It makes you dread work. It destroys ambition and the energies that belong to a healthy boy. That man is strongest mentally and physically, barring infirmities beyond his control, who is freest from dissipation. You know good habits command your respect. You know the power of evil habits is strong. Some of the greatest minds of the world have surrendered to it and are surrendering to it every day.

PERTINENT QUESTIONS.

Do you want to be somebody? Do you want to get hold of life? Do you expect to have the capacity to compete with others in the race? Do you think more of a destructive pleasure than you do of a good position? Are you willing to sacrifice happiness that you may indulge a worthless habit? Do you know that in deliberately weakening mind and body you are committing a crime? Do you know the difference between bravery and foolhardiness? It is foolhardiness to risk opportunity, intellectuality and life itself without a possible chance of reward. This is what you are doing.

Business men have established the custom of inquiring of the applicant for employment if he is addicted to the cigarette habit. If he is, he is immediately dismissed from any consideration for the position. They want wide-awake, active boys, and to such they offer good opportunities for advancement. They know the cigarette smoker has not the ability and the energy that are required in mercantile life.

If you are a cigarette smoker, do you know that you are stupid? Do you know that you lack neatness? Do you know that you don't like to work? Do you

know that you are ashamed of the habit? Do you know that you do not want your parents to know you have acquired the habit? Do you know it is hard for you to get up in the morning? Do you know you disgrace common sense? Then why do you do it? Do you remember when your mother first discovered that you were addicted to the habit? Do you remember how you tried to conceal it from her? Do you know how she feels about it? Do you know how sorry and disappointed she is? Do you know how proud a mother is of a promising boy? Do you know what your mother has done for you? Do you know what she is willing to do for you? Do you know that you cannot love her and smoke cigarettes? Then why do you smoke them?

BOYS CAN REFORM.

Habit long indulged is powerful, whether the habit is good or bad. Some time you may have tried to break away from a bad habit. Perhaps from smoking cigarettes. You summoned good resolves. You put forth all your energy and strength of character and purpose. Did you succeed? If you did, you possess the qualities that will make you strong and useful. Many instances are in mind where boys have overcome the habit and completely recovered from the effects. It can be done by any boy who is willing to accept advice and who has any determination. A good suggestion to one disposed to break away from the habit would be to smoke one less cigarette each day, until he found himself able to dispense with them altogether. It is doubtful if any one addicted to the habit can suddenly throw it off, but he can gradually do so. It would be a good evidence of character that a boy can say he has quit the habit, and he is worthy of commendation and congratulation on his rescue. His true friends will be ready to extend a hand of cordial support to him in his resolve. Bad habits are cowardly things. They are sneaky and vicious. They are unable to face manhood and womanhood. They lead you away from your mother's teachings. They make you disloyal to your opportunities. They delight in breaking mothers' hearts and in destroying human lives. Treat them as you would an enemy. They afford deceptive pleasures.

RESIST TEMPTATION.

Your mental capacity and conduct are to determine your place in the future, and your future depends upon the use you make of the present. To resist temptation is an assurance of a manly character. To possess and use such a character is to be a part of the best influence in the world.

How to Read.

A boy's library should not only contain the books which have stood the test of time as boys' books; but the more modern books as they come out. In addition to these the boy should have access to a good pronouncing dictionary, and, if possible Lippincott's Mythological and Biographical Dictionary, to which he should make frequent reference.

No unusual word should be passed over, if the reader is not sure that he knows not only its correct pronunciation, but its meaning. Allusions are frequently made in books to distinguished people who have written or said something worthy of note. Find out by your "Lippincott" when these people lived, what made them distinguished, and why their words live after them. Mythological allusions are also of frequent recurrence. If your book says: "It was a Procrustian bed," hunt up "Procrustes," and see what made it Procrustian; or if it says: "He slept like Endymion," try to find out how Endymion slept.

Some laughable mistakes are sometimes made by writers who have not made themselves familiar with these old stories; and the reader cannot fully understand what he has read without carefully observing this method of study. One who has never tried it cannot imagine the added interest of the story, and the hold it takes on the memory by these little helps.

Our outlook is broadening. Even

boys' books are dealing with large questions today, and the whole world is the scene of the exploits and adventures of boys in some momentous epoch of history, or at some remote geographical point; so, here, histories and maps should be consulted, to get the true conditions under which these things were accomplished, or supposed to be.

"This," you say, "will make slow reading." Yes, but it will be quite worth while to try it. A few books well read are far preferable to a great many books which you do not understand. Many of our most able statesmen, finest orators and best writers had few books, but read those few with diligence and care. Ruskin confessed to have based his inimitable style on continuous Bible reading, as when a boy it was his duty to read for his mother. Lincoln borrowed his first law books, which he read by the light of a fire of pine knots, and re-read until he thoroughly understood them.

To sum up, read carefully, slowly, thoroughly, understandingly.

LUCY A. LEGGETT.

THE BOY'S LIBRARY

A Talk With the Boys' Librarian.

Henry Wilson—For your library I would advise selections from the works of such writers as G. A. Henty, Horatio Alger, James Otis, W. J. Rolf, Mrs. E. E. Custer, Charles Carlton Coffin, J. T. Trowbridge, Rev. E. Kellogg, Kirk Munroe, W. O. Stoddard, W. I. Alden, J. G. Edgar, G. C. Eggleston, J. W. Knox, and Paul Belloni Du Chailu (dü-chá-yü). Of course, no American boy's library is complete without the inimitable stories of James Fennimore Cooper and Capt. Charles King.

As a birthday gift for your friend I would suggest G. A. Henty's "Bonnie Prince Charlie," for with the up-to-date boy Henty seems to bear off the palm in point of popularity, and in truth "Bonnie Prince Charlie" is a book to be read with pleasure and profit by young and old. Not once does the reader's interest flag as he pursues this thrilling but not overdrawn tale of adventure. The book is valuable, also, from a historical standpoint, and many a boy gathers more information from the "primrose paths" of historical romance than from tridgings

along the beaten track of text-book history.

The dashing young soldier-prince, Charlie, figures conspicuously in this story, but its real hero is Roland Leslie, son of the brave and chivalrous Leslie of Glenlyon. And the young hero is a character well worthy of the enthusiastic admiration of America's brave boys—boys whose hearts are ever ready to respond to the call "boots and saddles," and whose watchword (like that of brave Miltiades of old) is "Victory or Death."

Exciting episodes and thrilling adventures, that tread upon one another's heels in quick succession, and stirring experiences on the fields of Fontenoy and Culloden give to the story of the dauntless young Scot an interest that never lessens until the tale is told. And I think the eyes of every brave and chivalrous boy will grow dim as Roland (waiting in the starlit, blossom-scented garden of the old French convent of Tours) utters with indescribable tenderness the one word, "Mother," as he is folded to the heart of the parent whom for sixteen years he has known only in his dreams.

Richard Bradley—Yes, you were correct when you said that one of Washington's own guard was hanged as a traitor and a spy. The name of this guard was Thomas Hickey. A plot to murder, or at least to capture Washington and his generals was instigated by Governor Tryon, of New York, and his accomplice,

Mayor Matthews. A number of Americans were implicated in this plot, and among them were several of Washington's own guard. Fortunately for our brave commander-in-chief and his "ragged Continentals" the plot was discovered and frustrated in its incipency, and Thomas Hickey was hanged in a field near the Bowery.

In his interesting book, "A Tory Plot," James Otis gives an account of the exciting adventures and hair-breadth escapes of two New York lads, by whom the claims Gov. Tryon's plot was discovered. He asserts that America, the greatest of nations, whose glorious "Stars and Stripes" float on every breeze that blows from ice-bound Alaska to the far-off shores of the Philippines, owes its freedom to the daring and clearheadedness of two boys not over sixteen years of age. For a full account of this plot see Lossing's "Field Book of the Revolution," Vol. 2, and Fiske's "American Revolution," Vol. 1.

Thomas Fielding—The Bon homme Richard was the flag-ship of the first American squadron. It was commanded by the celebrated naval hero, John Paul, who was by birth a Scotchman, but who on account of the great injustice done him in Scotland, renounced his native land, and came to America in 1773. John Paul settled in Virginia, and for some reason assumed the additional name of Jones. No character in the realm of history or romance is possessed of more interest and magnetic attractiveness than that of the bold and fearless hero of the seas, John Paul Jones. His gallant services as commander of the American squadron in the eventful days of '77-79 won for him lasting fame, and the enthusiastic love and gratitude of his adopted country. For a graphic and thrilling description of the encounter of the Bon homme Richard and the formidable English vessel, Serapis, I refer you to Winston Churchill's book, "Richard Carvel." A book, by the way, which every American boy would do well to read, not only because, from cover to cover, it fairly throbs with wonderful and thrilling adventure by land and sea, but also because it brings its readers into personal and intimate knowledge and association, as it were, with some of the world's most noted men of his-

tory, literature and art. Such men, for instance, as Washington, John Paul Jones, Lord North, Lord Baltimore, Charles Fox, Horace Walpole, "Junius," and Garrick.

L. H.—The real name of Oliver Optic was William Taylor Adams. He was born at Medway, Mass., July 30, 1822, and died at Boston, March 27, 1897. He was the founder and editor of Oliver Optic's Magazine.

Edward Malone—"The Bells," which you tell me is to be played by the Dramatic Society of X—College, is translated from "Le Juit Polonais," a drama composed by two noted French writers, Charles Alexander Chatrian (shä-tre-on) and Emile Erckman (erk-man). The works of these two authors are known as the Erckman-Chatrian series. I advise you to see the play, if possible, for its presentation (even by amateurs) will give you an excellent knowledge of one of the greatest masterpieces of modern literature. Sir Henry Irving, the celebrated English actor, has become famous in the role of Mathias, the burgomaster of "The Bells."

Charlie Willis—Samuel Finley Morse, the inventor of the electric telegraph system, was born at Charleston, Mass., April 27, 1791, and died at New York, April 2, 1872. He was an artist by profession (portrait painting being his specialty), and the first president of the New York National Academy of Design. Professor Morse designed the model of the electric telegraph in 1832, and the first message sent over the wires was the announcement of James K. Polk's nomination for the presidency.

Willie R.—Yes, the seas you mention are similar in color to their names. The light reflected by the sea is always affected by the conditions of the atmosphere, and, therefore, the waters of the sea present at different times and places an exquisite and rainbow-like variety of coloring. There is still another reason for this variety of hue, and it is this: The body of every creature that dwells in the ocean is charged with a substance called phosphorus, and this substance (which, in itself, resembles white wax) shines in the dark like a dazzling flame. Consequently, the countless numbers of animals which dwell in the deep are like so many electric jets that cause the

waters of the sea to flash and scintillate like waves of flame. Certain sea animals produce certain shades, and the presence of myriads of such animals give to the seas you mention (the Red, Yellow, Vermilion and Black) their distinctive hues. No, the sea flowers are not real flowers, but animals, which are called flowers because they are like so many delicate and exquisitely tinted blossoms in the vast "garden of the sea." The wonderful and varied plant-animals are called sea-anemones. They can move about slowly, but have no eyes. They have slender arms, or "feelers," which they are constantly moving about in search of worms—the favorite food of the sea-anemone.

R. B.—There is no authentic evidence that Aesop ever really existed. The Greeks, however, claim that he was born in Greece, in the sixth century before Christ. Other countries, also, claim to have been his birthplace. Had Aesop really lived, he could not possibly have been the author of the celebrated "Fables," for it has been proven that many of them were composed eight hundred years before the time of Aesop. The fable of the lion and the mouse has recently been traced by the highest authority to Egyptian origin. Aesop is said to have been a slave in his youth, and in the Villa Albani at Rome there is a famous statue of Aesop which represents him as a dwarf, and nearly akin in appearance to the animals with which he was in such close sympathy.

By the way, boys, the Athenians perpetuated a noble sentiment when they erected a large statue of Aesop and placed it upon a lofty and enduring pedestal, thus signifying that to all men (no matter how lowly their station) the road to honor lies open. And that the sentiment embodied in the marble of the Athenians is a true one, each and every one of you has it in his power to prove. "Honor and shame from no condition rise," my boys, therefore each and every American boy can, if he will, become that noblest and grandest of all things—an honest man, and God Almighty's gentleman.

Sincerely your friend and librarian,
ALEXANDER JENKINS.

"Ward Hill at Weston."

By EDWARD T. TOMLINSON.

A characteristic story of a boys' boarding school is offered to young readers in "Ward Hill at Weston." The characters are so clearly drawn, and the temptations of school life so thoroughly exposed that one might imagine the author to be penning a leaf from his own experience, rather than drawing upon his imagination for the incidents here recorded. This, however, only goes to prove that boys' schools are very much alike all over the world. The importance of being able to say yes, and no, at the right time is made manifest in the young student Boyd, and the disastrous effects of a vacillating spirit, in Ward Hill's school career. Dr. Gray sums up the situation in a nutshell, when he says to Ward's father after the boy's failure to pass his examinations: "You are not entirely free from blame. You have kept your boy carefully from all evil, and that is right. I say no word against that, you understand, but there is a vast difference between keeping him from evil and training him to meet it. Ignorance is not strength."

Another evil has been clearly outlined in this sketch of boarding school life—the existence and baleful influence of secret societies, as shown by the "Zangs" of Weston. The book is so real that one rises from its reading with a feeling of having been one of the actors in this drama of school life, and with a desire to know the result of the bitter lesson which Ward's failure seems to have taught him.

The author promises this pleasure to his readers in a forthcoming book entitled "Ward Hill, The Senior." A. J. Rowland, Philadelphia. Price, \$1.25.

"Swallow Castle."

An English story of a blind soldier and his struggles with poverty to sustain his family, while he rightfully is joint heir with his sister to a small estate, is told in the vernacular of the English yeoman, by Frances Harriet Wood. The sister, thinking her brother dead, suppresses the will, and afterward discovers him as a blind man being led about by his young son, and trying to sell trifles from a basket.

The remainder of the story gives an account of her struggles with conscience, her desire to make restitution, and the fear of losing her good name and influence. It is not quite fair to an author to tell the whole story in a review, so we leave the outcome of her late repentance to the curiosity of the reader.

The book is not in any sense a boys' book, but a story of simple English people, living their daily lives, and bearing their daily burdens, as other people do the wide world over, sometimes with fortitude and courage, sometimes with weakness and fear. Published under the auspices of the Society for Promoting Christian Knowledge, London, England, and J. B. Young & Co., New York. Price 80 cents.

THE BOY JOURNALIST AND PRINTER.

The Southern Amateur Journalists' Convention.

New Year's Day came bright and crisp in Atlanta. The day was an ideal one. In parlor 112 of the Kimball House the amateur journalists of the South were preparing to hold their first annual convention. There was a fair attendance. At a few minutes past 10 o'clock a. m. Vice-president Wilmer W. Williams called the meeting to order, and made a neat little speech in which he expressed regret at being compelled to fill the place of the president, whose presence would have given so much pleasure to all. Then the regular order of business was disposed of, the most important and most eagerly discussed item being the adoption of a new constitution. After this a proxy committee was appointed to report during the afternoon session. At noon the convention adjourned for lunch.

At 3 o'clock in the afternoon the second session came to order. The reading of the proxy report was awaited with deep interest. Interesting communications were also read from clubs, associations and persons in all sections. Quite an inspiring document was read from the president of the New York Amateur Press Club. An ably written letter from Claude Trexler Reno was applauded—that is, that portion which referred to the "grand old National."

The most interesting feature of the day followed in the annual election of officers. The outcome in some respects, was surprising. The proxy ballots gave the presidency to Mr. Acee unopposedly. The other votes were extremely scat-

JOHN M. ACEE,
PRESIDENT SOUTHERN AMATEUR JOURNALISTS' ASSOCIATION.

tered. The following was the result of the election:

President, John M. Acee, of Georgia; vice-president, Elmer C. Wood, of Virginia; secretary and treasurer, W. W. Williams, of Georgia; official editor, Fred B. Smith, of Georgia; historian, John K. Arnold, of Kentucky. Next convention seat, Birmingham, Ala.

Mr. Louis M. Starring was awarded the title poet laureate, on verses written during the past year.

At 6 p. m., with the new president in the chair, the convention came to a close. The evening was given up to social functions which were greatly enjoyed.

The amateurs of Sioux City, Iowa, met on December 24th and formed an amateur press club, with Guy N. Phillips as president.

The First Annual Reunion of Philadelphia Amateurs.

On the evening of January 6th, under the auspices of the Irving Club, the first annual reunion of the Philadelphia amateurs, past and present, was held. The committee in charge consisted of Wallace B. Grubb, chairman; H. C. Hochstadter, Edwin Hadley Smith of New York, John A. Kugler, Wm. R. Murphy, Wm. H. Greenfield, Harris Reed, Jr., and George W. Darragh, all well-known amateurs.

The meeting was well attended and opened by Wallace B. Grubb in a very neat little speech. Mr. Reed suggested an organization which would insure annual reunions, and the idea was received with enthusiasm. A constitution was presented by Mr. Smith, and an annual reunion, to be held in January in Philadelphia, was provided for. Any person who is or has been a resident of Philadelphia, and is or has been an amateur journalist, is eligible to membership. Harry C. Hochstadter was elected president of the association; Wm. R. Murphy, secretary; Harris Reed, Jr., treasurer; Wallace B. Grubb, official editor. The "Clover Leaf" was chosen as the official organ.

After the business meeting a banquet was held, and toasts were responded to as follows: "Philadelphia's Place in the History of Amateur Journalism," by Edwin Hadley Smith, formerly of Philadelphia, now of New York; Theodore G. Meyer spoke on "Puzzledom's Relation to Amateur Journalism"; Charles W. Helms responded to "The Greater New York Amateur Press Club," and con-

veyed its fraternal greetings to the Philadelphia amateurs; George W. Darragh spoke briefly on "The Irving Club"; and Harris Reed, Jr., on the "Annual Reunion." Mr. Hochstadter, who was president of the Philadelphia Amateur Journalists' Club in 1888, gave some interesting reminiscences. J. William Townsend, of New York, and William R. Murphy also made a few remarks. The meeting on adjourning gave a vote of thanks to the Irving Club, and to the committee for the excellent management of this reunion.

Charles W. Helms, J. William Townsend, and Edwin Hadley Smith, officers of the Greater New York Amateur Press Club, attended the reunion as representatives of their club.

The Boston Convention Attending Corporation, which was organized last August by New York amateurs for the purpose of furthering the attendance at the convention of the National Amateur Press Association to be held in Boston next summer, will hold its second semi-annual stockholders' meeting February 4th in New York City. The company now has about \$50.00 in the bank.

"The Welcome News" is published by T. Mauritson, at Dunlap, S. D. Judging from the copy before us, it should not be called "The News," however welcome its issues may be to its readers. It is more in the nature of a magazine or story paper, and its stories are excellent ones, considering they are amateur work.

Starting an Amateur Paper.

From the Actual Experience of a Boy Publisher.

By PHILIP F. McCORD.

When I first saw an amateur paper, I inwardly resolved to sometime publish a paper of my own. Other boys had produced a paper worthy of considerable praise, and why should I not try to achieve as much?

Several months passed before my paper, "Boylshness," actually appeared, which delay was occasioned by my being under a false impression as to the amount of money actually required for the venture.

Long before it appeared, however, I prepared myself in many ways for its introduction in amateur circles. All the names of those interested in amateur journalism coming under my observation were carefully entered in a small book.

Besides this, I selected a staff of contributors and made many outlines of the space arrangement of my prospective paper. In my mind's eye it was already a thing of reality; but, in fact, it was far from it. Truly, I enjoyed the prospect almost as much as I have the reality.

One of the most important questions to consider when starting a paper is the choice of a name. Try to select one that is original and striking, as well as suited to the contents of the paper. This was one of my greatest difficulties, and I changed its name several times, first announcing that it would appear as "The Elevator" (aiming to elevate the minds of all its readers), "The Forger" and "The Dictator" were also considered by me, and I am not yet positive that my final choice was the best.

"Caprice," "Fly Paper," "Pastime," "Ambition," "The Advance" and "Quillings" are among the best named papers now extant.

One name, "The Boys' Herald," was used for several consecutive years by different publishers. Each one purchasing the right to use it from his predecessor. Even the same engraved headline was used throughout its career. I know of another case where one boy sold his printing outfit to a friend residing in another state, whereupon the latter continued the publication of the former's paper. Another publisher, after discontinuing publication, sold the name of his paper alone for five dollars.

It is best to adopt some policy when starting a paper. Endeavor to produce something distinctively different from any other amateur paper. Among the present papers we have story papers, all-editorial sheets, note papers, in which amateur affairs of all kinds are discussed; school papers, newspapers, papers devoted to stamp collecting, amateur photography, the mail order world, and other hobbies. Then there are some that have taken up questions of reform, such as "The Dewey's" crusade against dime novelists, "Bits and Chips" against non de plumer, "The Rambler's" against press clubs, and "Boylshness" against note writers.

After deciding upon some policy, next comes the securing of an able associate, providing you intend to edit the paper yourself. It is best to select some experienced amateur journalist, and one who not only is active, but whom you think will conform to your views and aid the venture to the best of his ability. If you are successful in this, your paper will all the sooner be recognized for its worth, and you will have some one to consult who is not a beginner like yourself. I followed the above policy and benefited thereby.

Next comes the question of printing. If your time permits of the work, you should do as many others have done, purchase an outfit and print your own paper. Then it will be a purely amateur product in every sense of the term. An outfit to print the average sized amateur, six by nine inches, including press, may be purchased for the moderate sum of \$40.00, and for a smaller paper proportionately less. The above figure is furnished by Mr. Warren J. Brodrie, one of the strongest advocates of "Every amateur his own printer." If you cannot print it yourself, there are many amateurs who will do it for you at a reasonable cost, and several professional printers make a specialty of this class of work.

There are boys who started by printing their own papers who are now earning their spending money through the papers, and something more, by doing work for others. Chas. E. Wing, of Cleveland, not only prints his own paper but has secured a position in a professional office, and assists somewhat on the "National Amateur." He is considered a practical printer.

During the interval, from the time the copy is sent to the printer until you receive the printed papers, you can prepare and address the wrappers for mailing. Some adopt a special colored wrapper and even ink; while others mail the papers flat in large envelopes, to avoid creasing them. Even if mailed in wrappers, they should never be rolled. Three folds produces the neatest form for mailing.

Most papers exchange at least two copies with all contemporaries, and it is best to do so, as they cost very little, especially if you are fortunate in securing second-class rates. My exchange list now consists of about fifty active papers.

Now, for a little advice in regard to the make-up of the paper. Always give as much variety as possible in every number. Avoid running more than one serial at a time if the paper is small, but give a generous installment of that one. Unless the story is too long for use entire in one number, never divide it, as so doing spoils the thread of interest. Even should it appear lengthy at first inspection, careful editing may condense it considerably. This process of "bolling down" contributions is one of the benefitting drills derived from an editorship; so be an editor in reality, and not in name alone.

Try to start as many articles as possible at the top of the page. Remember that the typographical appearance of the paper depends much on the exact arrangement of space. Most amateur

WILLIS EDWIN HURD,
NEWPORT, N. H.

EX-POET LAUREATE NATIONAL AMATEUR PRESS
ASSOCIATION.

papers average about three hundred words to the column. Never place two poems together—I've seen several poems grouped on one page of a certain paper, while the balance was devoid of poetry.

Several papers have adopted illustrating in a small way, which has resulted in many of the boys taking up this line of work. Already they have shown much talent for designing. Charles MacDonald, of Philadelphia, is very proficient indeed. Still, if no more than an engraved heading is secured, it gives a finish to the paper hardly obtainable by any other equal expenditure. Color work is also fast becoming popular.

If this article will not be of any practical service to you, I hope it has at least given some insight into the conducting of an amateur paper, but greater still would be my satisfaction if it has gained even one recruit for our cause. A friend of mine first heard of amateur journalism one day; the next he posed as an associate editor and was financially interested in a new paper.

As a parting word, let me advise my readers not to start a paper simply in the hope of pecuniary gain. While there may be financial profit, it will be the least of the advantages to be gained from the enterprise. Start a paper, if at all, because you hope for literary achievement. Have a strong love for the work, and a loyal admiration for the admirable cause of amateur journalism.

OLIVER HENRY LAFRANCHE,
RECLAMATION, CAL.

Oliver Henry Lafranchi is the western manuscript manager of the United Amateur Press Association. He is also a student of the Sprague Correspondence School of Journalism, of Detroit. His home is at Reclamation, Cal., where he intends soon to begin the publication of a paper, to be called "The Criterion." He was formerly editor of "The Pen," a very neatly gotten up twelve-page little publication.

A Unique Periodical.

By PEARL HOWARD CAMPBELL.

Perhaps some of the boys who belong to amateur press associations or who edit papers of their own will be interested in hearing about a little paper which was published "at intervals" on Dewey's flagship. Of course, on so large and important a vessel there were men of varied talents and among them was L. S. Young, who afterwards wrote a life of Admiral Dewey, and who was editor of the paper which I shall describe to you.

It is very appropriately called "The Bounding Billow" and is printed in the form of a magazine about a quarter of the size of THE AMERICAN BOY. Perhaps its most interesting edition was the one published in June, 1898, probably as soon after the battle as the editor could collect his copy, and his paper, for part of it was printed on paper captured from the Spanish. Under the title was the statement that it was published "in the interest of American man-of-war's men." Like the more pretentious magazines, it boasted a cover design in colors, and beneath the appropriate motto, "We came! We saw! We conquered," were the crossed flags of the navy and the United States. Under these, at their intersection, was the liberty bell, and on either side, as if to protect it, were guns. The American eagle perched upon a globe just above the bell. Laurel wreaths encircled the victorious flags and beneath the whole design was the couplet:

"'Twas for Cuba and our honor, to avenge
our heroes slain,
That victory wreathed our banners when we
fought the ships of Spain."

The story of the battle of Manila Bay has been told many times, but never with more eloquence than in the June issue of that little paper whose readers were largely men who participated in the fight. Following this was the Spanish account as it was printed in a Manila newspaper. There were also bits of news, an exchange column, an account of the death of Captain Gridley and three poems by the editor. On the last page was a map of Manila Bay, made by one of the sailors.

The price of the paper was one yen, or about twenty-five cents, but doubtless before many years are gone it will be worth as many dollars, not only as an interesting souvenir of a great battle but for the historical information it contains. So if any of you editors were fortunate enough to be on the exchange list of "The Bounding Billow," I should advise you to preserve your copies until the battle of Manila Bay is less a thing of the present.

W. B. Littlefield and B. F. Moss, of Brooklyn, have issued the first number of a paper which they call the "Brooklyn Amateur."

The Greater New York Amateur Press Club.

The New York Amateur Press Club and the Brooklyn Amateur Press Club consolidated at a meeting held on January 3rd, and formed the Greater New York Amateur Press Club. Meetings will be held alternately in Brooklyn and in New York City on the first and third Wednesday evenings of each month. The officers elected were: President, Charles W. Heins; vice-president, James J. Wilkinson; recording secretary, B. F. Moss; corresponding secretary, Herbert S. Greene; treasurer, W. B. Littlefield; official editor, Otto Henschel; critic, Louis A. Perlowski. Edwin Hadley Smith was appointed on the executive committee, and J. Wm. Townsend on the committee on activity. The official organ of the society is the "New York Amateur," copies of which have been sent us. It is a most creditable official organ.

MORRIS COHEN,
JACKSON, MINN.

Morris Cohen publishes "The Advance" at Jackson, Minn. Its contents consist principally of essays, editorials and communications in regard to amateur journalism. The editor evidently endeavors to make it of educational value, however, as he announces a series of articles on Greek history. He shows enterprise in announcing also a series of stories of college life.

The Chicago Amateur Press Club.

The Chicago Amateur Press Club meets the first and third Tuesday evenings of each month in the club rooms of the Briggs House, corner of Randolph street and Fifth avenue. Visitors are always welcome. The following are officers: President, Henry Ed. Nothomb; vice-president, Carrie E. Schermerhorn; secretary, R. Percival Kelley; treasurer, Wallace R. Thurman; official editor, L. Halstead Sawyer, 6158 Ingleside avenue. We have received a copy of the "Chicago Amateur," the official organ of the association, published by Mr. Sawyer. The club now has thirty-one members. Fourteen amateur papers are published by members of this club. It is a noteworthy fact that of the ten papers listed on the roll of honor in the "National Amateur," five are published by members of this club.

Editors of amateur papers throughout the country have been very appreciative of THE AMERICAN BOY and very kind in the matter of devoting space to commending this paper to the public. We certainly wish to thank them.

We also wish to express our appreciation of the action of the New York Amateur Press Club, which at a recent meeting directed its Secretary, Mr. J. William Townsend, to express to us the congratulations of the club "on the really readable and meritorious publication you have launched into—as I might say, a lamentably abused field of literature." as Mr. Townsend expresses it.

The December "Privateer," published by Mathew Teller Collins, at Fort Edward, N. Y., must have been an interesting number to all amateurs. Its leading article is one on amateur journalism, by Eleanor C. Dowden. This issue was the final amateur issue of the "Privateer." On the last page is an announcement that with the January issue the "Privateer" will be enlarged and changed to a semi-professional publication.

THE BOY PHOTOGRAPHER

Edited by JUDSON GREVELL.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize each month, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and one dollar will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

The first prize in the Photographic contest during the past month was won by Arthur V. Pillsbury, Reading, Mass.; the second prize was awarded to Joe Stone, Buffalo, N. Y.

Making the Camera Pay.

With a little practice it will prove an easy matter for any efficient amateur photographer to make money with his camera during the summer months. Wherever a boy with a camera travels, he is always besieged with the requests to "Take a picture of me, will you?" Young folks, as a rule, like to have their pictures snapped, and many are willing to pay for the same when completed. An industrious person, in a morning ramble through the park, will sometimes have a dozen opportunities to secure picnic groups numbering from ten to fifty persons.

The amateur has only to request the pleasure of taking a picture. Nine out of ten will answer "Yes, go ahead." The work of placing the group is something that requires experience, in order to do it with an eye to the best effect, but a little care in this direction will help any boy to pose them properly.

After the group has been taken, secure the names of those in the party, and a few days later you can show proofs. An order is certain to follow, for there are always some in every group that desire to retain a memento of the day's excursion.

Dark Development.

Amateurs will be surprised at the difference between a plate developed in absolute darkness and one which has been under the ruby light during the entire period of development, and the difference will be in favor of the one developed with the least light. The proper method is to cover the tray in which the plate is to be developed, with a piece of cardboard, immediately after it has been flowed with the developer. Keep it covered during the entire operation, except when hastily glancing at it to see if the development has been carried sufficiently far. By doing this a great deal of fogging that spoils so many pictures may be avoided.

An Excellent Formula.

It is not advisable for amateur photographers to make constant changes in their developing formulas. The makers

of plates, as a rule, know best what their particular plates require. But if the amateur really wants to experiment he is advised to try the following:

- Metol, 90 grains.
- Hydrochinon, 180 grains.
- Sal Soda, 3 ounces.
- Sulphite of soda, 3 ounces.
- Water, 32 ounces.

Dissolve the Metol in water, add the Hydrochinon, and then the sodas. After all the chemicals are thoroughly dissolved, it is a good plan to filter them. To develop, use one ounce of the stock solution to four ounces of water. On plates with a very short exposure, it is best to dilute the developer as high as one ounce to forty ounces of water. When sufficient details have appeared, the plate can be placed in developer of

FLASHLIGHT: by J. H. HOFNER, Detroit

normal strength—one ounce to four of water. Some makes of plates can be left in the developer several hours without fear of chemical fog spoiling the negative.

Taking Flashlight Pictures.

Flashlight pictures are more successful with interiors than with portraiture. A group engaged in some occupation, such as playing a game of cards, or apparently enjoying an afternoon tea, will produce more satisfactory results than where the subjects sit up stiff and staring, trying to look natural under the strain of a sudden blinding flash which is certain to shut eyes and distort countenances.

When a badly lighted room or hallway is desired, a flashlight is about the only way to obtain a picture. It makes a great difference, however, whether the walls are light or dark, yellow or blue, green or pink, in the quantity of magnesia to be used. These colors have different powers of absorbing light, and in the proportion as they reflect the flash the quantity of powder is to be graded.

As a rule, a "No. 2" cartridge box of flashlight powder will be sufficient to light a room 12 by 15 feet, provided the walls are not too dark. Perfectly light walls need less. Where a large flash is needed, two boxes of powder can be poured together. After the camera is properly focused, withdraw the slide and open the shutter, using a moderately large "stop." Put the flashlight cartridge on a shovel, a dustpan, or anything with a handle, in order that the hand may not be too near when apply-

ing the match and the magnesia bursts into light.

Hold your flash to one side, and considerably higher than the camera; then the shadows will fall under rather than above the objects photographed. These shadows should fall much as they would if the sun was shining at say three o'clock in the afternoon.

If you are taking an interior, it is well to make two flashes—one on each side of the camera. This cuts out shadows. It cannot be done when there are moving objects in the view. The flashes should follow each other quickly, before the smoke has time to fall. Make a point of closing the shutter as soon as possible after the flash.

It is best to develop flashlight pictures first with a weak solution, strengthening it after the details begin to appear on the negative. Finally, put the plate in a stronger bath to obtain good contrasts, and fix as is done with any negative.

Like everything else in the photograph line, experience is required in order to be uniformly successful in getting good flashlight photos. If the pictures on the wall are covered with glass, see to it that there is no reflection. Glass-covered bookcases must be moved so that the glass does not act as mirrors.

There is little danger of over-exposing except in the immediate foreground. If

will prevent them looking so out of proportion to the rest of her sweet little body.

Silas Wright—Always use enough developer to cover the plate instantly. While developing rub the face of the plate occasionally with a tuft of absorbent cotton, to break air bubbles and remove sediment.

Willie Fox—A panorama camera generally makes a negative four inches wide and twelve inches long. With a beautiful scene you will obtain a beautiful picture, much to be preferred over attempts to patch together two or three pictures.

Eugene Valentine—You must not use the same tray for both developing and fixing. The chemicals used in photography are very sensitive. If the least particle of the fixing bath gets into your developing solution it is liable to ruin the negative. Mark one tray "For Developing" and the other "For Fixing."

Clarence Corp—India ink makes very coarse retouching. With photographers it is only used to cover pin-holes or increase a high light. It cannot be used satisfactorily with a brush. No gelatine printing out paper will give good black and whites for snow pictures; try velox. A "real moonlight view," with the house lighted and the moon in evidence, will not be a satisfactory picture, for the length of exposure required will make the moon oblong instead of round, even if the light is strong enough to disclose the outlines of the surrounding objects. In taking a picture of clouds with the sun behind them try stop marked "16," with exposure marked "25."

Photographic Hints.

It is said that a pinch of salt in the gold toning bath will prevent the high lights from over-toning, bring the high lights and shadows up clear at the same time, and will save the details in white drapery.

"Agafa" is a one-solution intensifier lately put upon the market. Its object is to make a thin negative a better printer.

If you want to keep unmounted albumen prints flat, soak them in equal parts of alcohol, glycerine and water. Dry between blotting paper under slight pressure.

When a negative is too thick or intense, it can be reduced by rubbing it with a soft rag moistened with alcohol till the density softens down. For sharply defined outlines, use a stick of soft wood dipped in alcohol.

A good clearing solution can be made with 20 ounces of saturated solution of alum and an ounce of hydrochloric acid. Immerse negatives for a few minutes in this bath after fixing and washing. Then wash well after removal.

Making Pictures Glossy.

There are a great many admirers of extremely glossy prints. This kind of finish is not difficult to obtain. All that is necessary to do is to place the wet print on the smooth surface of a ferrotype plate, pressing it on firmly so as to exclude all the air. Let it stay there until perfectly dry, when it will readily come off with a brilliant finish.

Sometimes the print is inclined to stick to the plate, but this only occurs when the japanned surface has been roughened by repeated use. To obviate this, occasionally rub the plate with a solution of paraffin and benzine—a piece about as big as a pea in three ounces of benzine. Put it on the plate with a piece of chamois or a tuft of cotton wool.

Answers to Correspondents.

Charley Innis—Read the article on "Winter Photography," in the December number of THE AMERICAN BOY, and you will find all your questions answered.

Theodore Thobe—If the exposure of a plate is about right, it will develop in six to ten minutes, with the temperature of the developer at 60 degrees.

John H. Wilkie—Suppose you try your next snow picture with a ray filter or a color screen. Use a small "stop," and a quick exposure. The print you send is evidently very much over-exposed.

James Ward Kent—Read carefully all the literature that came with your camera; then read it all over again. If you follow the directions you will be sure to get good pictures. The camera is a good one.

Harry Brown—When you again take a picture of your little sister, be sure that neither her feet nor hands are nearer the camera than her face. That

Our special resolutions are usually made with the beginning of the new year, but this year they ought to be just one hundred times stronger and better than usual, for the year 1900 is, some say, the first year of a new century. Take time to think about it and let us have on a postal card your resolution for the year 1900. For the best one received from an AMERICAN BOY subscriber by February 18 we will give as a prize a copy of "The Beacon Prize Medals and Other Stories."

Boys in the Animal Kingdom

Twenty Thousand Rabbits Slain in One "Drive."

The biggest rabbit drives in the world are held in California—a state that rather prides itself upon its production of things on a large scale.

Jack rabbits multiply very rapidly and have a healthy appetite. Some years ago the supervisors of Fresno county bought \$300 worth of movable tight wire fencing, which could be set up anywhere in the shape of a gigantic "V" with a corral at the apex. On March 26, 1896, 8,000 people attended such a drive. The line of drivers was eighteen miles long, and, as it swept toward the corral, the rabbits fled in armies. Gov. Markham was one of those who watched the sight with interest as the drivers, some on foot, some on horseback, some driving light buggies—slowly closed in toward the center.

Thousands of rabbits were killed on the plain in attempting to make their escape, but the greater number poured through the fatal enclosure.

But if there were thousands dead there were thousands living, and men and boys went in with clubs to kill them. More than 20,000 rabbits were killed.

The Adventures of a Feline Pet During Months of Underground Wandering.

Little Annie McGinn, of West Butte, Montana, owns a kitten that has emerged from one of the strangest adventures that ever befell any little girl's feline pet. This cat in particular, after wandering through the mine workings under Butte, reappeared on the surface two miles from the place where she tumbled down a shaft. Pussy spent fully four months wandering through underground Butte, but has survived in good shape.

The cat becoming frightened at something, jumped down a shaft near the big Poulin hoist. She survived and opened up a howling contest by herself. Little Annie was heartbroken. Her brother secured a long rope and lowered it into the shaft, hoping the kitten would "catch on" and be hoisted, but the cat only howled louder. Annie used to carry bits of meats and bread over to the hole and throw them down for the cat to eat. After a couple of weeks the moaning in the shaft ceased. Annie gave up her pet as lost forever, and Christmas at Annie's home was not as cheerful for the owner of the lost kitten as it might have been had kitten not been so venturesome.

Early in the winter the miners in the Green Mountain, the Mountain Con and other shafts in the vicinity imagined they heard sounds similar to those made by a sick infant. Later the same noises were heard in the Anaconda, Mountain View, Gray Rock, Modoc, Mountain Chief, Rarus and the other workings on the Meaderville slope.

While some children were playing near the dump of the Colusa mine they were startled upon beholding a cat tumbling down the pile of rock with a car load of waste that had just been dumped. The cat mewed piteously as it rolled over just in time to escape a big chunk that came bounding past. The children ran to the rescue, and found a sorry-looking specimen of the cat family. Its hair was matted and soiled, its eyes red and it was sore and lame. The only mark of identification was the little ribbon about its neck, to which was attached a small silver bell. The feline underground explorer was, returned to its owner at once.—Anaconda (Mont.) Sentinel.

A Shipload of Cats for Manila.

It seems a little strange, but this country is not only sending soldiers but it is sending cats to fight in the Philippine Islands. The United States transport Sumner is to carry a cargo of up-

to-date American cats to Manila for the purpose of exterminating Filipino rats. It seems that the government warehouses in Manila are overrun with rats. A citizen of Manila wrote to a citizen of Newark, N. J., to this effect, saying that there were as many as 1,500 of them in one building and that they had teeth that could gnaw steel. In the letter the writer enclosed \$75, and asked his correspondent to buy and ship 500 cats. He expressed the opinion that \$75 ought to buy all the cats in New Jersey. The Newark man then inserted an advertisement in all the Newark papers, reading: "Wanted: Five hundred full-grown cats for the Philippine Islands. Deliver Friday and Saturday, 5 to 7 p. m. Price 15 cents each."

Such a hunt for cats as followed was never known in Newark. It seemed as if everybody in the town had a cat that he was ready to exchange for 15 cents. The commander of the National Guards of the collection—a handsome gray warrior named Miles. Soon the Newark man's cellar contained 335 feline soldiers. The debate in the cellar over the Philippine question and the discussion as to whether they would be able to finish the job and return to this country in time for the Thomas concert next June, grew so loud that the neighbors couldn't stand it. The Society for the Prevention of Cruelty to Animals compelled the Newark man to remove the cats to an empty house in the lower part of Newark, where the numbers were later swelled to 500. The cats will be taken on board in crates, fed raw beef and stale bread, but no milk. It is thought that this will get them in fighting trim by the time they reach their destination. They will be given an hour a day out of their cages for exercise, and as cats never jump into the water there will be no danger of their running away, and there will be no cry of "cat overboard." The cats have adopted as their war cry, "Down with the Filipino rats."

What Wild Animals Cost.

A well grown lion can be bought for less than \$1,000. Lions seldom go in the market over \$1,200. A well-trained elephant will bring \$3,000. The lowest price paid is \$1,500. A fine grizzly bear can be bought for \$250. Giraffes cost most, \$3,500 to \$5,000 being their usual price. These animals are very delicate and have to be treated like a hothouse flower. Ostriches are also delicate, and are expensive. Monkeys are cheap, but die so rapidly from no apparent cause whatever that a traveling show has to replenish its stock often during one season.

"Spectacled" Animals.

Birds are furnished with a peculiar membrane, which, in a state of repose, lies in the inner angle of the eye, but is movable by two distinct muscles, which draw it over the corner. It is, to a certain extent, transparent, for according to Cuvier, birds can look through it, as the eagle does when looking at the sun. This membrane forms a pair of spectacles, or, at least, answers the same purpose. The membrane is called the third eye-lid. One of the most comical and grotesque animals is the "spectacled bear" (*Ursus ornatus*), which derives its chief attraction from the light-colored rings around its eyes. These—the greater part of the face being like the body, black—have exactly the appearance of a pair of common "goggles," through which the beast seems to look with an air of mingled wisdom and imbecility. The "spectacled bear" is only found in the mountainous regions of Chili, South America.

The Elfant.

By JOHNNY BROWN.

The elfant is a great ingy rubber beast, and is the biggest of all beasts put together. He has a trunk as one end, and a tale at the other, so that you don't always no which way he is looken. The elfant can't read, but he has two beautiful paper cutters groin out of his mouth. He is useful and strong, and can bat down things like walls. Once I rode on an elfant at the cirkus, and it rode on a nikle. He made a noise like a trumpet, and I fell off. If he wasn't so big I would have kiked him. Once a taylor stuk a needle into a elfant, and years after the elfant soked his house for him. This elfant at the cirkus soked me for a nikle, and I didn't stick a needle in him. The elfant grows in hot climets like coka nuts. Most elfants are good elfants, but if you ever see the elfant that did me out of a nikle, soke him good for me.

A HIGH STEPPER.

It is said that the natives of Abyssinia frequently ride upon ostriches. We present herewith a picture taken by a correspondent of the Scientific American, showing a man astride the back of an ostrich belonging to a South Pasadena (Cal.) ostrich farm. It is not likely that this form of amusement will become very popular on the ostrich farms of America.

The Noble Horse; How to Manage and Care for Him.

No matter what your horse and team may do, never get angry.

Speak sharply or firmly, but hold your temper.

To abuse a horse is inexcusable and expensive, and may be paid for in dollars and cents.

Remember he is the dumb beast, you the intelligent being ordained to own and control him; but not as a tyrannical master without feeling or appreciation.

Train a colt to know that you are his friend as well as master, and you will never need to whip except in rare instances of frights or backing.

When you go into the horse pasture, take something in your pocket for young and old, for they seem to say "thank you" and "we love you." You will have no trouble to catch them at any time.

Smooth and pet your colt with the hand, speak to him, pick up his feet often as the smith does; halter him young, and never throw a harness on colt or horse, but lay it on gently, that he may know you do not intend to hurt him.

Make all his loads proportionate to his age and strength, and let them be in position easy to start.

Be sure that every part of your har-

ness is safe to use, for one runaway may be more expensive than sets of harness; make the latter to fit him, that is, not a buckle or a part too tight or too loose, and see that no part galls him.

It takes bushels of grain to replace strength that is lost by wounds, bruises, or galls, or an inconsiderate master.

Examine his feet often, and see that the frog and hoof are kept free and clean from manure and other substances to cause disease.

Feed and water him with regularity, and he will soon expect it only at such times.

Learn the individuality of each horse and you will know better how to manage him.

Provide warm stalls with plenty of bedding, and give tired horses rest after night-fall and on the Sabbath as well as yourself; don't let your team stand exposed in low temperature and chilly storms, for it is the continued chills that ruin horses.

Careful feeders of horses know that in feeding oats, especially the whole grain, much depends upon the nature of the hull or chaff. It is not always the heaviest grain which gives the best results. That which is much above the standard weight has often a rough, gritty chaff, which so acts on the stomach as to expel much of the grain in an undigested state. The hull, however soft its texture, is always laxative, and a moderate degree of laxativeness is beneficial, especially to breeding animals, but there is no gain in passing through the heaviest grain in a nearly whole state. Better use a light grain, which will be more thoroughly digested. It is commonly supposed that the oat which sells for the highest price is the best feed, but it is not always the case.

Our Home Aquarium.

(Begin in December.)

For some days after our aquarium had lost its last occupants, the frogs, we busied ourselves in finding out all that we could about frogs and other aquatic animals, thinking to get the start of our mother on her next installment of living lessons.

We began to get impatient, however, before a day of leisure came, but were all ready when she said:

"Boys, do you think you could find some trowels, some little earth-diggers, among the garden tools, and a flat market basket?"

Of course we could, and so we tumbled over each other in our haste, for we were curious to know what was coming next. This time we took Billy, our old gray nag, and the "Cass wagon" and drove out to the "Concord wagon" Tying Billy to the fence, we clambered over, and walked through the sweet-scented leaves to an open space where I remembered going to gather ferns last year. There were only the dead stalks now, but right here our mother stopped, and, taking a trowel, began carefully to remove large squares of sod.

This seemed like just dirt to us, and we began to hunt for some living, squirming thing, but she said:

"Be careful, boys, don't break it. See here," and she drew out of the rich loam which had been covered by the half decayed leaves, a long white stem with something resembling a flower at the end. "This," she said, "is called an Indian pipe, and belongs to the carnivora."

"What is carnivora, mamma?" said Ned.

"Eaters of meat, Ned."

"O, now, mamma, flowers can't eat meat. You're joking."

"Some of them can, my son, and this, while not really carnivorous, still has some relation to that family of plants: the pitcher plant is a little advance on this, because it has a deeper cup, and the capillaries are more defined."

"Now, what are they?" we all said.

"They are little hairs that grow inside the cup. These grow downward, and the cup has a sweet liquid way down at the stem. Little flies and insects are fond of this, and crawl down to get it; but alas, they cannot crawl out, as these little hair-spikes hold them back. Then the flower contracts, and what it does inside nobody knows, but when it opens again, the little prisoner is nowhere to

THE PRIZE CAT FOR JANUARY, 1900.

A Cat Contest

Do you own a cat? Well, there are cats—and cats. There are good cats and bad cats; smart cats and dull cats; pretty cats and ugly cats; blooded cats and common cats; long, short, fat, slim, white, black, Tom, Maria, and many other kinds of cats. But what we want is the best and prettiest all-around cat—that is, a picture of him. We want to make him famous by showing his picture to ten thousand boys and ever so many boys' mothers and fathers and sisters in the pages of this paper.

Each month for a while we will give to the boy sending the most interesting cat picture within the month a dainty little locket of silver with the cat's name engraved upon it, so it may be hung from the cat's neck by a pretty ribbon and say to all his friends, "I am the prize AMERICAN BOY cat for February," or March, or whatever month it

may be. Remember, one locket each month to the most interesting cat. After a while we will give the dogs a chance.

Now, boys, send in your cat pictures.

ADDRESS PRIZE DEPARTMENT

THE AMERICAN BOY,

MAJESTIC BLDG., DETROIT, MICH.

N. B.—All pictures accompanied by stamps will be returned.

be seen, so he has evidently been absorbed by the plant."

"Ugh! what a cannibal plant it is," said Ned, "I shall never want to touch one again."

"O, yes you will," laughed our mother, "for the common potato blossom is closely related to them. This will be a good study," she said, turning to me, "look for it under the head of carnivorous plants."

By virtue of my sixteen years, my mother had begun to treat me more like a thoughtful man than a boy, and I was very proud when she addressed me in that half confidential tone which made me feel that she regarded me as being capable of understanding the matter under consideration.

The second basket was filled with some of the nice black loam and we then started for home.

"There are many things," said our mother, "which can be made interesting objects of study in a long country walk, and a little later in the season we will look for them."

When we reached home Lettie's small face beamed a welcome at the window, and "more polly-widdles, mamma?" she asked. She was evidently not in the secret this time, for, peering into the baskets, she said in a tone of disgust:

"Nosing there but brack dirt."

Our aquarium had been previously cleaned, and an adjustable glass cover made for it. The large basket of loam was poured in, leveled to a depth of about four inches, and the sods from the other basket laid on the top and carefully pressed down into the loam. The stone arch was placed in the center. Mother had a fine lycopodium growing in a small pot. This she sank between the pillars of the stone arch, "for present use," she said; "it is not necessary for it to look ugly while we wait for developments."

We were rather disappointed. That long box of black dirt and decayed

leaves, with the already familiar plant of running moss in the center, did not promise very speedy or interesting results, but mother said:

"Never mind, boys, just keep the earth well watered, half-closing the cover each day, and watch. You know that patient waiting for results is as essential to success in anything, as is the labor which precedes it."

"Yes," laughed Ned, "I remember how Lettie planted her flower seeds last summer, and pulled them up every day to see what they were doing down there in their little warm bed."

"Ey went to seep, and had to be woked up," explained Lettie, her head in her mother's lap.

"But you didn't get any flowers, did you, Lettie, dear?" said mamma.

We watched and waited, and after a few days two or three little white rolls pushed themselves through the leaves and we wanted, like Lettie, to see what they were doing, but our mother said:

"Hands off, boys, they are very delicate now;" but they still came thicker and faster and more of them until the earth was quite dotted with them.

They were quite white when they first pushed themselves into sight, but as they grew taller they assumed a light shade of green and shot straight up for two or three inches, still holding tightly the little curl at the top; but pretty soon they began to unfold, and then we knew that we were cultivating a fernery; for the feathery leaves began to disclose themselves and when the first frond shook itself clear of the close grasp at the curled end, and the long leaf disposed itself in a graceful droop, we were delighted, for hundreds of others were in different stages of growth, and bid fair to fill the case with living green.

As we exclaimed upon the delicacy of the beautifully tapering ends of the leaves, our mother said:

"You can see now why they were so

carefully guarded: had they grown like other green things, directly out of the earth, they would have been broken and marred, and their beautiful symmetrical shape utterly destroyed."

At the proper time the lycopodium pot was removed, leaving the arch clear, and when the ferns were well developed, by a strange optical illusion, we seemed to be looking down a long vista of greenery, into the cool depths of which we longed to plunge and forget the dusty highways of life.

Lettie and Tom were not as interested in vegetable as in animal life, and kept asking when the "live things" were coming. Mamma tried to explain that they would not come at all this time, but one day Tom came running into the sitting-room saying:

"Mamma, I'm sure there's something alive in the aquarium. Come, see!"

Lettie was holding two small fingers on the glass, for Tom had told her that she must see if it moved while he was gone. The space between the fingers marked a fraction of an inch.

"It did move a teenty-weenty bit," she declared.

"Yes, it is a snail," said mamma, "one of the very lowest order of animals. It carries, as you see, its house with it, for this, which it seems to be dragging, is its shell into which it can retire at the approach of danger. See!" and removing the top of the case she touched the little jelly-like thing which seemed to shrink slowly back into its shell. "That is an instinct possessed in common by some animals, and some flowers," said mamma, "which I will tell you about some other time."

This last experiment was so beautiful in its effects that we said:

"Now, we can never bear to destroy this, so what will we do for our next study?"

"Wait and see," said mamma.

(To be continued.)

Dyspepsia

One of the many causes of dyspepsia is the use of cereal foods improperly prepared. People fancy that grain food is simple, and consequently healthful. Whole grains, wheat, oats, etc., contain quite largely an element as indigestible as wood and no more nutritious.

CREAM OF WHEAT

being entirely free from indigestible matter is peculiarly adapted to such as require an easily digested diet.

When buying Cream of Wheat ask for our beautiful gravures of north-western scenery. Your grocer gives one with each purchase of two packages.

Cream of Wheat Co., Minneapolis, Minn.

THINK OF THE COMFORT

In an Ideal Oil Heater. In the morning you can light it without getting up. When it has made the bed-room comfortable, it will do the same thing for the bath-room. When you've bathed and dressed, roll it out into the dining-room.

Costs only one cent an hour. It's a money-saver. There isn't the suspicion of an odor. That's guaranteed. Your money back if it isn't entirely satisfactory. Ask your dealer.

A Remarkable Foot-Ball Team.

American boys will be interested in a football team whose goal line was never crossed during the entire season of 1899. The remarkable record of 257 scores against 5 by her opponents was made by the University of Iowa team. No team east or west has played throughout the season with such a record, Harvard alone approaching it. The friends of the University of Iowa claim for the wearers of the "old gold" the championship not only of Iowa but of the west, and there are many who believe they are the equals in individual and team playing of any eleven in the country. The strength of this team in defense was only equalled by its fierceness and speed of attack. No team in the west came nearer perfection in getting plays started and keeping them going. The interference was off like a flash and moved as a unit. Once clear of the line, the speedy backs were sure of long gains. It was a great team, drilled in the famous Pennsylvania "guards back," with many important variations added by Dr. Knipe, the coach. The team was trained into perfect physical condition, and kept so. The spirit of the men was remarkable and showed in every play; the utmost harmony prevailed at all times, each man sacrificing his individual aspirations for the glory of his team and the honor of his university.

Two weeks were spent in preliminary training before the opening of the season, and when the school year began, the task of making a team out of the individuals tried was fairly under way. Her first game was with the Iowa State Normal and displayed speed, clever dodging and brilliant defenses, ending in a score of 22 to 0 in favor of Iowa. Then came the game with the Alumni of the University, resulting in a score of 36 to 0 in favor of the champions. The game with the Chicago University eleven ended in a tie, the score being 5 to 5, but even the Chicago papers admitted that the Chicago boys had been out-

played. Seven succeeding games played, one each with Penn College, Rush Medical, Ames, Nebraska, Grinnell, Knox and Illinois, resulted in a total score of 194 for the University of Iowa and 0 for their opponents, the season closing with 257 to the credit of Iowa and 5 to the credit of their opponents in ten hard-fought games. In the game against Illinois the score was: Iowa, 58; Illinois, 0. This was remarkable, because Illinois had been beaten by only 5 points by Michigan and 23 points by the strong Wisconsin team, and had itself beaten Purdue.

It is impossible to pick out any one or more of the players as the best. "Team work" was Dr. Knipe's hobby, and the result shows the correctness of his theory. The men had no chance to become individual stars. Capt. Moray L. Eby, both in offense and defense, played hard and fast. He is 22 years of age and weighs 165 pounds. J. S. Warner, the other tackle on blocking kicks and in breaking up plays, is undoubtedly the strongest player in the line. He was most used where a big gain was needed. In addition to his ordinary work, he was called upon to do all the kicking. In several important games he scored field goals from the 25 to the 40-yard lines. He is 23 years old and weighs 190 pounds. James M. Brockway did brilliant work at right guard in line-buckling. He is 20 years old and weighs 190 pounds. Emmet F. Burrier, at left guard, weighs 185 pounds. He was particularly strong at defense work. Both Burrier and Brockway were badly crippled in the middle of the season, but played a plucky winning game in spite of their injuries. Mark E. Baker played a wonderfully consistent game at center, being strong on defense and passing the ball perfectly in offense. He is 19 years old and weighs 190 pounds.

The ends, F. A. Williams and H. B. Watters, are both strong men, of tremendous endurance, each weighing 169 pounds. The times they have had their ends turned this year can be counted on

the fingers of one hand. Iowa never produced a better quarter-back than Clyde Williams. He is quick and at the same time deliberate in passing a ball. His generalship in conducting plays was the best ever seen on an Iowa team. In the back field he was sure on handling

J. M. BROCKWAY. THE CENTER TRIO. M. E. BAKER. E. F. BURRIER.

Libby's Pork and Beans

The best beans baked the best—in famous New England style, and even more delicious than mother used to bake. Drop us a postal and we'll send you post-paid and free our "How to Make Good Things to Eat" book which tells all about and how to serve the fire-saving, time-saving, trouble-saving, delicious, dainty Libby's Luncheons. Put up in convenient sized key-opening cans. Libby, McNeill & Libby, Chicago

THE ENDS.
H. B. WATERS. F. A. WILLIAMS

THE SUBSTITUTES
A. A. STRATFORD. LLOYD HOWELL. F. H. WIELAND
E. H. LITTLE. C. E. HOOVER.

punts and ran every kick back, regardless of how many men came down with the ball. He runs fast and dodges or hurdles his tacklers. He is 19 years of age and weighs 155 pounds. At half-back, Will C. Edson and Ray A. Morton were swift of foot, quick in dodging and alert for every opportunity. Morton at right half weighs 176 pounds; Edson at left, 146 pounds. The latter has wonderful speed. Let him get clear of the line once and he is invariably good for a long gain. J. G. Griffith, full-back, is a wonderful dodger and a hard runner. He is a little man for a full-back, but he can work his way through a hole in a line in less time than most bigger men. In backing up a line he is everywhere at the right moment. His age is 19 and his weight 150 pounds.

Of the substitutes, Howell is a first-class defensive player. Little is strong, heavy and swift, with unbounded energy and courage. Hoover is very speedy and a good dodger. Weiland, by reason of a lame knee, was unable to show what he was capable of doing this year, but gives promise of being a valuable man. Stratford developed into a most valuable substitute for the back positions.

The work of the team has brought renown for Dr. Knipe, as a football coach, and has given the State University of Iowa a position of influence in the football world.

Two Big Catfish and an Alligator Gar

There are on exhibition at the Aquarium, down at the Battery in New York, two big western catfish, one weighing 78 pounds and the other 75 pounds, which were taken in the Arkansas river, about 30 miles above its junction with the Mississippi.

They had gone into the mud. Larger fishes might have been secured, but these of medium size were preferred because of the greater certainty of their surviving the long journey east. They arrived in good condition.

These big catfish are each about four feet long. When one of them happens to lie athwart the tank it reaches from the glass at the front of the tiled wall at the back. They are of the same general appearance as the familiar smaller catfish of eastern waters, having the same familiar barbels and feeders around the mouth, the same round, wide snout and capacious jaws, and the same little eyes, set wide apart. The mouth is about ten inches wide and the tail

spreads about eight inches. The fishes are each about a foot in diameter at the biggest part of the body. They are big fishes, and they look it.

The western river catfish, however, as is well known, grow to be much bigger than this, attaining often a weight of 200 pounds and a length of six feet and more; fishes thus carried over a man's shoulder would trail their tails on the ground. As sold in the markets along the Mississippi, these big catfishes—nobody would want a whole fish weighing 100 or 200 pounds—are cut up in steaks, the same as halibut is in the markets here, or big steak cod. These 75-pound catfishes at the Aquarium would cut very fair-sized steaks.

At home in their native rivers these big catfishes eat frogs or whatever they can get. It would seem as though the frog could keep away from a comparatively slow-moving fish like the catfish, but it might even be that a frog would jump into the wide-open mouth of a catfish without knowing it until it was too late. The big catfishes at the Aquarium have as yet eaten nothing since they have been here, now about two weeks but this excites no uneasiness, for it might be easily that in the colder waters, in nature, at this season, they would go a month or more without eating. Food is offered, however, to them daily, and as they become more accustomed to their situation and surroundings, they will doubtless begin to feed, to be thus enrolled among the heavy eaters at the Aquarium's table.

There was brought from the same waters, and at the same time with the big catfishes, an alligator gar of about four feet and a half in length, which is a pretty sizable sort of a gar, though they grow much bigger. The alligator gar takes its name from the shape of its snout and mouth, which are something like those of the alligator. The alligator gar is at home in either salt or fresh water. Its mouth is furnished with needle-pointed teeth, increasing in size from the beginning of the jaws to the end of the snout. Like the big catfish, the gar may roam off through a break in a levee into the comparatively shallow water on over-flowed lands, and the big gars may be ferocious when attacked and if struck at, for instance, fight back as a dog would in similar circumstances.

The big catfishes and the alligator gar are placed at the Aquarium in tanks on the ground tier, fresh water side.

A Big Bonfire.

When Admiral Dewey visited his old home at Montpelier, Vt., after the great celebration in New York, boys, and men, too, did everything they could to welcome him. Among the things they did was the building of an immense

bonfire. A great cone of barrels and debris seventy feet in height was built and when it was set on fire it could be seen for a hundred miles.

By the side of such a bonfire the ones most of us boys have enjoyed do not amount to much.

What bridge is warranted to support any strain?
For the first correct answer we will give a six months' subscription to THE AMERICAN BOY to the person whose name is given us by the winner.

KISSING BUG Greatest mechanical novelty of the season. Fools everybody. Fun for men, women and children. 4,000 sold in a day. Everybody wants one. Sample 10c. None free. Special prices to agents. METROPOLIS CO., DEPT. 24, STA. B, Chicago, Ill.

Wayne Knit
TRADE MARK

MATCHLESS
HOSIERY

50c Quality Full Fashioned Hosiery 25 Cents a Pair.
Ladies' Men's - Misses' - Boys'

How Can We Do This?
Heretofore all full fashioned hosiery was imported (full-fashioned hosiery means made on a machine that follows the lines of the foot and leg, so that it always fits like a glove and never loses that shape-keeping quality). Instead, we imported expensive knitting machines, and employed skilled workmen trained in the best foreign hosiery factories, with the result that we make hosiery, which, if imported, as formerly, could not be sold for less than 50c., that we can sell at 25 cents a pair!
For Sale by Live Dealers Everywhere.
Look for "WAYNE KNIT MATCHLESS" stamped on each pair. Insist on your dealers supplying you. If he does not keep them send us his name; we will see that you and he are supplied. Sample pair, one pair only to any person, 25 cents. Send size wanted.
If you don't want hosiery just now, send us your own and your dealer's name on a postal, and we will send you a very instructive book telling how the celebrated Wayne Knit Matchless, full fashioned 50c hose are made so as to retail at 25c per pair.

WAYNE KNITTING MILLS, FT. WAYNE, IND.

Condition of Coins.

The value of a coin depends entirely upon its condition. A poor coin, no matter how old, has no numismatic value and should have no place in your collection.

- 1. Proofs, the first coins struck from the polished dies. These are not struck for circulation, but especially for collectors.
2. Uncirculated; sharp impressions fresh from the dies, that have never been in circulation; no spot or blemish.
3. Fine; a fine coin is one that may have been in circulation but on which every part appears clean, sharp and distinct.
4. Good; one in which the inscriptions, figures, dates, etc., are all sharply visible.
5. Fair; a coin may be considered in fair condition when its surface shows considerable wear or abrasion, its inscription and devices should be in a state easily determined though some portions may be worn down. The date, if any, should be visible.
6. Poor. Though a poor coin may have an illustrious ancestry and one of which it may feel proud, its hope of posterity is gone.

Besides these terms, others that modify them are often used to more particularly describe the condition, as "brilliant proof," "very fine," "good," or "fair." On the continent and in England the terms F. O. C., Fleur de coin and mediocre are used to describe these coins which are in the mint state or un-circulated, and those which grade between fair and good.

The Lafayette Dollar.

Most of our boys will remember that a few months ago collections were taken up in all our schools, with the object of providing a memorial to Lafayette. Many of you helped in this effort. It is said that between three and four million school children have contributed their pennies with this end in view.

The Numismatic Sphinx.

Tyro—The Columbian Isabella quarter sells for \$1.00.
Frank B., Omaha—An 1846 dime in good condition is worth \$1.50.
Tim—A very common coin is the 1827 U. S. cent. Ten cents each would purchase all you would want of them.
C. A. C.—For a Lafayette dollar write to Robt. J. Thompson, Secretary, care of American Trust and Savings Bank, Chicago, Ill. They sell for \$2.00 each.
C. M. G., Philadelphia—Your Mexican dollar of 1742 (Philip II. of Spain. 1724-46), in good condition should be worth \$2.50; at least the dealers would charge you that for one.

"X. Y. Z." Findlay—Your coin with strange characters is probably a Turkish coin or one of some of the Turkish dependencies. Send us a rubbing so that we may locate it correctly for you.

Jerry V., Des Moines—The coin you describe that your friend has in his collection is a cent of North Borneo. This

piece has a companion, a half-cent, and both were struck in England for North Borneo. The coin editor will send you both of these in mint state, or just as they came from the mint, on receipt of ten cents.

"Bob"—Your St. Helena half-penny is worth 25 cents. This is the only coin ever struck for this island, noted as the place of banishment of the great Emperor Napoleon. 1821 is the only date, and you will remember that this was also the date of the Emperor's death on that island.

C. H. F., Jr., Fishkill, N. Y.—Simply address your questions to "The Coin Editor, care of THE AMERICAN BOY, Majestic Building, Detroit, Mich." and they will receive attention. Regarding "rubblings" see answer to H. C. F. Coins need not be sent, a good description or rubbing is all that in most cases will be necessary.

H. C. F., Exeter—A "rubbing" of a coin is obtained by placing the coin beneath a smooth white paper, and while holding it firmly in place, rubbing over the face of the coin on the paper with the flat end of a lead pencil. The best results are had by using a hard pencil, say a No. 3 or 4 lead. A little practice will enable one to do good work in this way.

Beginner, Marshall, Mich.—Wants to know who deal in coins. This department is not intended to advertise any particular dealer in coins. The dealers will no doubt consult their interests in due time by placing their cards in THE AMERICAN BOY. The Coin Editor is not a dealer but he has hundreds of duplicates from his cabinet that he will dispose of at low prices to encourage anyone in their efforts to acquire a collection.

Willie I. Halsey, Chicago, Ill., describes very nicely two coins in his collection and asks their value. The first is a U. S. cent of 1798, the same type of coin of which we give an illustration.

These types of the head of Liberty began with 1796 and continued up to and included 1807. This date is one of the commoner ones of the series. The coin, if in good condition, should be worth 75 cents. The second coin is a half dollar of 1828. There are two varieties of these, large and small dates, one also has a square base 2, the other has the base of the 2 curled upwards. It is a common date in both varieties. In good condition, 75 cents.

Some Interesting Facts About Coins.

One of the daily newspapers is responsible for the following: Though there are 1,000,000,000 copper cents in circulation, the Philadelphia mint has to turn out 4,000,000 a month to accommodate the demand. There are no mint marks on copper coins and nickels as now coined, and collectors pay high for coins bearing a mint mark. The first cents struck for circulation bear the date 1793 and the six varieties sell from

\$2.50 to \$6.25 apiece. The \$5 gold piece of 1822 is very rare. Only three are now known to be in existence. In Texas some years ago a silver shekel was found dating back to 142 B. C. Intrinsically it is worth about 50 cents, but collectors put a price of \$5,000 on it. One of the earliest coins known is a didrachm of Aegina, coined in 700 B. C. It is worth in money value 30 cents, but sells to collectors for \$7. Only five of the New York doubloons coined in 1787 remain. On one side of this coin is a picture of the sun rising over a mountain, surrounded by the words, "Novo Eberica Columbia Excelsior." Below is the designer's name, "Brusher." These coins are worth about \$700 each.

CHARLES KING, 214 East 11th St., New York.

A Prize for Good Things from the Soldier Boys.

We all want to see our new foreign possessions through the eyes of our soldier boys, and to hear what is happening from their lips. These boys are writing home. Parts of their letters are sacred to the eyes of the home folks; there are other parts which should not be lost to the world—the plain story of their own and their comrades' self-sacrifice; a glint of humor; a witty thrust; a little description of the battlefield or camp in fact, any little tale from the front.

We will give a prize of \$1.00 to the subscriber sending us the best extract from a letter from a soldier boy, of the kind mentioned. If you have received a letter from the front, either forward to us the whole letter or copy out those parts that you feel are not meant for your eyes alone. Attach the name, rank and regiment of the writer, and the address and date of the letter. Address it "Prize and Puzzle Department AMERICAN BOY, Majestic Building, Detroit, Mich."

We would like to publish every extract that is sent in and will do so if there are not too many. February 18 is the day when the contest closes.

ADVERTISE IN... THE AMERICAN BOY... FOR RESULTS.

Prize for Mistake Hunters.

Look through this issue of THE AMERICAN BOY and find, if you can, a misspelled word. Call our attention to it at once on a postal card, giving page and line. Time allowance will be given to all competitors living at a distance. Address postal card to "Prize and Puzzle Department THE AMERICAN BOY, Majestic Building, Detroit, Mich."

The first prize of \$1.00 will go to the first subscriber advising us of the mistake, the second prize of 50 cents to the second so advising us.

A prize of \$2.00 to the subscriber finding the largest number of mistakes in spelling.

It was the well-aimed guns of the American gunners that won our war with Spain.

The barriers are not yet erected which shall say to aspiring talent, "Thus far and no farther."—Beethoven.

Clothes do count—the boy can not learn that too early. Not necessarily expensive clothes, but those that show neatness, correct style, appropriateness and good taste.

Do you want a good position? Pay the price and you can have it.
What is the price?

Work sufficient to prepare you for the place. The price of any good position is careful, painstaking, faithful preparation.

"A good book" says Anna Warner, "whether of fiction or not, is one that leaves you farther on than when you took it up. If, when you drop it, it drops you down in the same old spot, with no finer outlook, no clearer vision, no stimulated desire for that which is better and higher, it is in no sense a good book."

There are schools in almost every state for the purpose of reforming boys. They are generally known as Reformatories. There is one at Deer Island, Massachusetts. From recent reports it appears that of all the boys in the institution three-fourths of them are inmates for the second or third time. Now this looks discouraging; and yet it really is successful work if one boy out of four is reclaimed. The right kind of a father would think so if that one boy was his boy.

Gutchess College

The vital importance, to young men and women, of the thorough business education cannot be overestimated. Competition grows more insistent daily. Opportunity develops with competition. The demand is for competent business assistants; the business man has no time to instruct apprentices, he must have assistants already trained in business methods. This College gives the practical business education—pupils here live in an atmosphere of business; they learn to do by doing. Every business facility is here. No other college can be better equipped. 250 students placed in good positions during the past year. Day and night sessions. Terms liberal. Full particulars on application. Address

When Is a Bird Not a Bird?

Here is a simple yet very interesting puzzle for our subscribers. You will see the bird in the accompanying picture is composed of eleven separate pieces. Cut these carefully out, and with them you will find you can construct a totally different figure. You must, in order to win this prize, construct out of the lines the figure which we have in mind.

To the competitor who, before February 18th, first succeeds in accurately reproducing the figure that we have made, the prize will be a splendid book for boys entitled "The Island Impossible," by Harriet Morgan, published by Little, Brown & Co. In case no one is exactly right the prize will go to the one who produces the most interesting figure. All solutions must be in by February 18.

THE BOY ORATOR AND DEBATER.

Some Hints for Young Debaters.

During the early part of the century one of the most prominent features of New England town life was the lyceum or debating society. The golden era of American oratory was the period immediately preceding the Rebellion, and many of the brilliant orators of that time received their first training in public speaking in these societies. In these practical days, little attention is given to this phase of educational training, and as a result it seems that the quality of our public speaking is deteriorating.

It is often said that the orator is born and not made. While it is undoubtedly a fact that true eloquence is largely a natural gift, still by careful training and persistent effort anyone can become able to present his thoughts in a clear, logical and forcible manner. Such training may be acquired in a debating society, and to at least one such organization every boy should belong.

A few words regarding the formation and conduct of a debating organization may be helpful. The writer firmly believes that there should be one connected with each school. Debating, thereby, becomes more a part of the pupil's education, and less of a pastime. In addition the benefit of the supervision of the teacher could be had. The restraint and advice of an older person is almost indispensable, whether the discussions are carried on as a part of the school exercises or not.

When the time arrives for the debate the pupils for the time being should drop their customary relations and resolve themselves into a society. A chairman and secretary should be chosen. These should be elected at every meeting, so that all may receive the benefit of the experience obtained in those positions. Disputants, at least two upon a side, should be previously selected to open the debate. When they have finished, the discussion should be made general, and all given an opportunity to participate. A debate conducted at least once a week upon this plan will prove of inestimable benefit to the pupils.

A few words as to the subject. The subject chosen should be evenly balanced. It should not be beyond the pupils. For example, it would hardly be profitable for scholars in the lower grades to undertake to discuss the tariff or the monetary question. Questions of

this nature should be reserved for maturer years.

I well remember the first debate in which, as a boy, I participated. The question was, "Resolved, That the city has better advantages for a boy or girl than the country." Strange to say, the negative triumphed by the close vote of 25 to 24. Another discussion that proved instructive as well as entertaining was "Resolved, That electricity is a more valuable agent for man than steam." We also found the old question, "Resolved, That the pen is mightier than the sword," an interesting one.

Such topics are simple, and can be intelligently discussed by scholars from 12 to 15 years of age. As they grow older and their minds develop, the consideration of mooted questions, such as the expediency of abolishing trial by jury, capital punishment, election of senators by popular vote, prison labor, restriction of immigration, governmental ownership of railways, and many others will prove most helpful.

The benefits to be derived from such practice cannot be over-estimated. The boy debater, if patient and persevering, will find that not only are his powers of speech being developed, but that habits of reasoning are unconsciously being formed, that his mind is broadening, that he is becoming keen, observant, self-reliant, and systematic, and the result will be a more intelligent and a more patriotic American citizen.

W. F. STEPHENS.

Johnny's Speech.

A small orator made his debut in front of a large audience the other night, and it is safe to predict that he will not follow further in the footsteps of Demosthenes after his recent experience. His deluded but loving family, who had egged him on to this sacrifice were mostly with him in the dressing-room. His age being 7, they wanted him to be sure that his bangs did not fall over his eyes and obscure his view of his mother, father, aunt, uncle, and cousins in reserved seats directly in front.

"Now, Johnny," said the mother, "be sure you make a nice bow."

"You bet I will," said Johnny with a swagger.

"And let your hands hang easily by your side like this," and his father struck an attitude.

"Of course," assented Johnny.

SOMETHING FOR NOTHING
A PRIZE (without money or conditions) for every Correct Answer.
 To all who find in the accompanying Puzzle, Dewey's head in outline, mark it and return to us, we give at once an exquisite Tiffany Style simulative Opal or Ruby Sick Pin, FREE, and send 12 ten cent packages of Imperishable Perfume, to sell for us, if you can. When sold, return money and we give you FREE choice of a Heavily Plated Chain Bracelet, with lock and key, or a Solid Gold Shell Batcher Birthday Ring. Simply interpret puzzle, and we send prize without money or price. Write immediately. Don't put off till to-morrow what can be done to-day.

"Are you sure you know your piece?" asked his sister, anxious to have him succeed.

"Yep," said Johnny, and he recited the first two lines:

I wish I had a little dog,
 To pat him on the head.

"That's right; he'll do splendidly," remarked his mother. "You'll go on in a minute now, and we must get into our seats. Don't you be scared a bit, Johnny."

"Whoth scared?" asked Johnny, who began to feel a sinking of the knees, while his heart seemed to rise until it was in his mouth, and then somebody was pushing him forward, and he saw a lot of faces, not one of which he had ever seen before, and it was lighter than any electric searchlight he had ever seen.

"Speak up, now," said the manager of the entertainment. "Make your bow and say your piece."

Johnny made his bow and the audience applauded, but he had a difficulty in finding his tongue, which seemed lost in the roof of his mouth. His hands hung down as his father had suggested, making him look like a little wooden man, and when he forgot and stuffed them into his pockets the audience again applauded. The manager took that opportunity for a stage whisper:

"Speak up, now," and he began with the first line. Then Johnny said in a strange, hoarse voice:

I wish I had a little pat
 To dog him on the head.

Roars of laughter and frantic demonstrations on the part of Johnny's family.

He began again:

I wish I had a little pat
 To head him on the dog.

His father rose in his seat, but this only added to Johnny's confusion. Again the brave boy essayed:

I wish I had a little dog,
 To head him on the pat.

Then a weary family took Johnny by the hand and led him home.

gold were discovered it was greatly increased.

The British claimed that as they paid the larger share of the taxes they should have a voice in the lawmaking. Although the Boers proposed a naturalization law, trouble steadily increased. It was evident the British cared more for the mines than to become citizens of the Transvaal, and if the British settlers had been given the right of suffrage, they would have voted unanimously for annexation to Great Britain. Therefore if the Boers had succumbed to the wishes of England, their country would have been destroyed.

Although the British have at times apparently suffered injustice, the Boers are principally in the right. The present war is but a struggle to maintain their independence, and England's course in her present war is not justifiable.

Archie P. Whallon, aged 13 years, Fitchburg, Mich.

Prizes for Amateur Photographs.

The first prize of \$2 goes this month to Arthur V. Pillsbury, Reading, Mass.; the second prize of \$1 to Joe Stone, Buffalo, N. Y.

Award of Stamp Prizes.

The prize of one-half the foreign stamps accumulated in our office between the dates of going to press of the January and February issues of THE AMERICAN BOY, offered to the subscriber sending us the largest number of subscriptions during that period goes to Clarence Pyeatt, Fort Lemhi, Idaho. The total number of foreign stamps accumulated during the period was eighty. This gives to the winner of the first prize 40 stamps, as follows: One 1-cent blue Costa Rica; one 2-cent postal card Costa Rica; two 1/2-penny Great Britain; four 1-penny Great Britain; one 5-cent Newfoundland; six 8 Japan; one 10-cent Hong Kong; one 1-centavo, Mexico; four 5-centavo, Mexico; one 2 1/2 d. Jamaica; one half-penny Jamaica; one 2d. New Zealand; one 2-cent Philippines; three 2-cent Cuba; two half-penny Great Britain; ten assorted Canada.

The young man who got the stamps enumerated in the foregoing list earned them by getting seven subscribers. In addition to the stamps he received the premiums selected by him from our premium list.

awarded to the subscriber getting the second largest number of new subscriptions goes to Herman H. Smith Lamont, Ia. He receives three half-penny Victoria; one two pence half-penny Victoria; five 1-cent Hawaii; one half-penny Great Britain; one 2-cent Canada; one 1 anna, India; one 5-cent British Honduras; five assorted Mexico; one 5-cent Cuba; one 8 Japan; one Austrian postal card; one 3-Kr. Austrian. Mr. Smith obtained five subscriptions.

One-fourth of the postage stamps goes to Albert W. Fifield, of Minneapolis, Minn., who last month received one-half of the stamps accumulated during the thirty days preceding the date the competition closed. He receives four assorted Great Britain; one 10-cent Chinese; one 2-cent Chinese; seven assorted Canada; one surcharged Isle of Guam; one surcharged Cuba; one 5-cent Cuba; two 5-cent Mexico; one 1/2-cent Mexico; two half anna, India. Mr. Fifield sent in five subscriptions.

The same offer is repeated to those who send in the most new subscriptions to THE AMERICAN BOY prior to Feb. 18. Bear in mind that the boys who earned the stamps during the past month also received premiums selected from our premium list. In addition to that, they became competitors for the money prizes advertised on the last page of this paper.

The Prize Animal Story for this Month

The settlement of Rover, Kentucky, in June, 1768, was attacked by Indians.

The settlers found refuge in their little block house.

After they had shot their last shot they thought their fate was near at hand, but one of the trappers had a large, faithful dog who had often taken messages to Fort Forest, about 20 miles distant.

So that night a message asking for aid was tied to the dog's neck. The heavy oaken door was softly opened and the dog sprang out.

There was a whoop from an Indian and an arrow pierced the dog's breast, but he arrived at the fort and fell dead from his wound.

The message was read and a troop of cavalry came to the rescue of the settlement.

It was the dog that had saved the settlement, which was afterward called Rover in honor of him.

Composed by Willie Halsey, Chicago.

"Is England's Course in the Present War Justifiable?"

ESSAY WINNING FIRST PRIZE.

Before deciding this question we must review the past history of South Africa.

The Boers were the first settlers of Cape Colony, and upon the annexation of the colony to Great Britain moved to Natal, and from Natal to Transvaal; an attempt to annex the latter led to a revolt, and the Boers were successful.

Their war caused a jealousy between the Boers and British, and when diamonds and

Essay Winning Second Prize.

HERMAN H. SMITH

I believe that England is not justified in her course against the Boers.

In history Great Britain is always found as a robber nation, always pounding upon smaller nations and making them submit to her; trying to get as much dominion as she can—so she is today. In the following you will see her aggressive power:

In 1652 Dutch farmers (Boers) settled Cape Colony, but in 1806 the country was ceded to Britain, and the Boers removed to Natal. In 1849 the British took possession of Natal, and the Boers crossed the Vaal River and formed the Transvaal Republic. It was acknowledged as a republic by England in 1852. In 1877, England added the Transvaal to her possessions, though she had acknowledged it as a republic in 1852. In the end of 1880 the Boers rose in opposition to this, and in 1881, England again acknowledged them, but they were forbidden to make treaties with foreign nations without her consent. The present war is over the gold mines; but did the treaty of 1881 provide that England should manage the Transvaal gold mines? England had no right to meddle with their affairs in 1877, and she has no more right now. The Boers are fighting for what every American holds dear to his heart—liberty.

"Sol."

FIRST PRIZE STORY ABOUT A BOY

"Sol" was as black as ebony, good natured, obliging and appreciative. He was a "prairie nigger," and knew little of the comforts of life. He was taken sick and I gave him capsules filled with quinine. When he was convalescent he crept slowly to my house, and with tears glistening on his lashes, said: "Oa, Missus, I prelates you kindness, and I's brought all you little boxes back 'cause I thought you might need 'em." Carefully wrapped in some soiled paper I found all the empty capsules. LEOILA T. PARK.

Answers to Puzzles in January American Boy.

No. 18. C. P. Fleet, Culver, Indiana.
No. 19. Irving B. Phelps, Grafton, N. D.
No. 20. Ronald Wythe, Cleveland, O.

For the first (and only) correct solution of the nine puzzles, the prize is awarded to Irving B. Phelps, Grafton, N. D.

Correct solutions of many of the puzzles were received from Willie Halvey, Chicago; Robert Davis, Armonka, N. Y.; George Scherer, Minneapolis, Kas.; Archie P. Whallon, Pritchburg, Mich.; John Price, Alpena, Mich.; Clarence H. Corp, Corfu, N. Y.; Will O. McNelly, Waukon, Ia.; Richard L. Wauch, Mt. Vernon, Wash.; Bert Wilson, Buffalo, N. Y.; Griswold Hurbert, Warren, O.; F. Sawyer, Mitch II, Ont.; Mac Clark, Kingston, Ont.; Charles Leahy, Seattle, Wash.; Edgar Robinson, Geopomowoc, Wis.; Jerome Hoyt, Omaha, Neb.; Earl Robinson, Dickinson, N. D.; Alex. Brimmer, Harrow, Ont.; Claude M. Kellogg, Hines, N. Y.; Hal P. Wirtse, Chattanooga, Tenn.; Glenn Goldsmith, Chattanooga, Minn.; Douglas F. Martin, Benton Harbor, Mich.; Albert W. Field, Minneapolis, Minn.; Willis L. Elliott, S. Portland, Me.; George Shattuck, Nashua, N. H.; William E. Stelger, Palmyra, N. J.; Lewis Wheeler, Elmwood, Mass.; John S. Wilson, Dearfield Center, Mich.; George L. Mengel, Reading, Pa.; Ralph Ehrenfeld, Leechburg, Pa.; Howard De Lamotte, Omaha, Neb.; Wayne Perger, Johnstown, N. Y.; Foster Gilroy, Lansdowne, Pa.; W. S. Rindington, Milford Center, O.; Willie V. Watson, Toronto, Ont.; Redmond S. Cole, Kirksville, Mo.; C. L. Howell, Philadelphia, Pa.; Arthur Nichols, Chilli, N. Y.; Archie Norcross, Liberty, Neb.; Harris K. Hoag, Lacota, Mich.; Chester D. Swallow, Gold Hill, Colo.; Fred Miller, Allegheny, Pa.; Elmer J. Corp, Batavia, N. Y.; Willard S. McIntyre, Chipman, N. B.; Elbert Moffatt, St. Joe, Mich.; John L. Chase, Glenn Ellen, Cal.; Milton B. Oanley, Clear Creek, Tex.; H. T. McLean, Hackettstown, N. Y.; E. B. Abbey, Orchard Park, N. Y.; Merle Richard, New York City; Murray Elder, Hensell, Ont.; Walton N. Brownback, Rogersford, Pa.; Sydney Thurber, Henniker, N. H.; Hal R. Martin, Wilkesville, O.; Alex. Brimmer,

Harrow, Ont.; Justin Tabor, Fairhaven, Wash.; Geo. B. Cawthorne, Sultepec, Mexico; Clair M. Barber, Scott, N. Y.

Excellent essays were received from Frank P. Collins, Hancock, Wis.; Paul Van der Elke, New Glarus, Wis.; George S. Fowler, New Haven, Conn.; D. Frost-Hiler, Prattsburg, N. Y.; Gordon Roper, Mishawaka, Ind., and good ones were received from many others.

Many excellent anecdotes were received. Our only regret is that several could not receive prizes. Some neglected to put name or date on their papers. Remember that we take distance into consideration in awarding the prizes for puzzles. The neat-est and best prepared papers were sent by Willard S. McIntyre, Chipman, N. B.

Puzzles, essays and anecdotes were received too late for mention in January from Adde S. Collom, R. F. Waugh, Otto Kell, Alice Bishop, Harry W. Crane, Wm. McNally, Franklyn C. Wedge, Orsel Robey, Foster Gilroy, Oliver H. Lafranchi, and Mac Clark.

Puzzle No. 23—A pamphlet on Practical Punctuation, by the Editor of THE AMER- ICAN BOY.

Puzzle No. 24—A six months' subscrip- tion to THE AMERICAN BOY in the name of any one not now a subscriber.

Puzzle No. 25—A six months' subscrip- tion to THE AMERICAN BOY in the name of any one not now a subscriber.

Puzzle No. 26—A six months' subscrip- tion to THE AMERICAN BOY in the name of any one not now a subscriber.

Puzzle No. 27—A six months' subscrip- tion to THE AMERICAN BOY in the name of any one not now a subscriber.

Puzzle No. 28—A copy of Jack the Young Ranchman.

Puzzle No. 29—A copy of Little King Richard.

Puzzle No. 30—A copy of The Iron Star.
Puzzle No. 31—A copy of The Young Puritans in Captivity.

Other Prizes.

To the subscriber to THE AMERICAN BOY sending us before Feb. 18 the largest number of new subscribers, we will give not only the premiums to which he is en- titled as shown in our Premium List, but also one-half of the foreign stamps that are received in our office during the same period.

To the subscribers to THE AMERICAN BOY sending in the second and third largest number of new subscribers within the same period, we will give in addition to the pre- miums to which they are entitled, as shown in our Premium List, one-fourth of the foreign stamps received during the sam- period.

For the best amateur photograph tak- en by a subscriber to THE AMERICAN BOY and sent us before Feby. 18, we will give \$2.00. For the second best photograph, \$1.00.

For the best 200-word essay on the sub- ject, "How Can THE AMERICAN BOY (this paper) be improved," written by and received from a subscriber to THE AMER- ICAN BOY before Feb. 18, we will give \$1.00. For the next best, 50 cents.

For the best anecdote of not over 150 words about animals, composed and sent in by a subscriber to THE AMERICAN BOY before Feb. 18 we will give \$1.00. For the same, where accompanied by photograph, \$1.50.

For the best anecdote about a boy, con- taining not over 100 words sent in by a sub- scriber to THE AMERICAN BOY before Feb. 18, we will give \$1.00. If accompanied by the boy's photograph, \$1.50.

\$1,000 for Boys

A GOOD BIG SHARE OF THE \$1,000 IN MONEY PRIZES WHICH WE OFFER FOR SUBSCRIPTIONS TO

THE AMERICAN BOY

Is yours, if you want it hard enough. As you will see by looking over the list of competitors which follows, the race is hardly begun.

For fear that some of our late subscribers may not know the conditions of the contest, we now repeat them:

Every one who obtains a subscription for THE AMERICAN BOY is en- titled to the premium which he may select from our illustrated premium list, a copy of which is furnished free to subscribers. In addition to this he becomes a competitor for the grand prizes to be distributed in November, 1900, as follows:

- 1. To the subscriber sending the largest number of new subscriptions at \$1.00 each during the year beginning Dec. 1, 1899, and ending Nov. 20, 1900, \$200.
2. To the one next in order in number of subscriptions sent, \$100.
3. To the two next in order, \$75 each.
4. To the three next in order, \$50 each.
5. To the five next in order, \$25 each.
6. To the fifteen next in order, \$10 each.
7. To the twenty-five next in order, \$5 each.

In this way, fifty-two persons will receive a total of \$1,000.

Subscriptions should be sent in when taken, and not held. We will keep an accurate record here of the totals sent in by the contestants.

We shall print from month to month the names of the leaders in the contest until we reach the month of September, 1900, from which time on the records will be secret until published in the December number.

Prizes will be sent as a Christmas gift, to reach the winners in the contest on Christmas day, 1900.

The fifteen contestants up to date who stand in the lead are in their order:

- ALBERT W. FIFIELD, Minneapolis, Minn.
EMERSON T. COTNER, Detroit, Mich.
CLARENCE PYEATT, Fort Lemki, Ida.
HEMAN H. SMITH, Lamoni, Ia.
WILLIAM NORTHWOOD, Forest Hill, Cal.
KARL MATTHEWS, Dubuque, Ia.
FRED. H. HILKER, Ft. Wayne, Ind.
FRANK A. WRIGHT, Lewistown, Mont.
FRANK FORD NORTHROP, Wayne, Neb.
AVERY C. HAND, Mansfield, O.
ROBERT M. GRAY, Hasbrouck Heights, N. J.
MOFFAT A. GRAY, Detroit, Mich.
GEO. O. BACON, Ft. Scott, Kansas
C. NOONAN, Weaverville, Cal.
RAY LAMBERT, Anderson, Ind.

When we tell you that Albert W. Fifield, the highest on the list, has but nineteen subscriptions to his credit, you will see that it is possible for any boy to go in and take the highest prize before the distribution next winter. As fifty-five boys are going to share in this money, it is almost certain, if you do a little earnest work, that you will get something.

SHIPS AND BOYS,

A SHIP should run steady; so should a boy.
A ship can make no progress wrong side up;
neither can a boy.

A ship should be staunch and strong; so should a boy.

A ship should ride the storm without
fear; so should a boy.

A ship should carry ballast,
that she may keep level in a
boisterous sea; so should
a boy.

A ship should
present the least
possible points of
resistance to
the element

in which she moves; so
should a boy.

A ship should serve
the purpose for which
she is built; so should
a boy.

A ship should
have a good pilot,
and should obey
his command; so
should a boy.

A ship should
be able to run at
good speed
against the wind;
so should a boy.

A ship should
be frequently in-
spected and thor-
oughly cleaned
and made sea-
worthy; so should
a boy.

A ship should
be kept at work;
idle she spoils. Just
so with a boy.

A ship should
know her destination
and keep to it through
fair and foul; so should
a boy.

A ship should run
slow in a fog and listen for
warning signals; so should
a boy.

A ship should be polite
and observe the etiquette of
her calling; so should a boy.

A ship should be ready to
respond to signals of distress; so
should a boy.

A ship should fly a flag and be true
to it everywhere and at all times; so should
a boy.

A ship should have a name, and should be
proud of it, and never afraid to own it; so should a
boy.

A ship should have a country and be true to it; so should a boy.

A ship should be manned by a crew sufficient to meet all emergen-
cies; so should a boy.

A ship should have a lifeboat as a means of safety in case of disas-
ter; so should a boy.

A ship should be able to stop and run backwards, if necessary to
save life and honor; so should a boy.

A ship should never sacrifice safety to speed; nor should a boy.

A ship should be equipped in a way suited to her voyage, carry-
ing no unnecessary burdens; so should a boy.

A ship should carry a compass by which to keep her course, night
and day; so should a boy.

A ship should carry an anchor, which, when cast, should hold fast;
so should a boy.

A ship should trim her sails to catch favoring breezes, being ever
mindful of her destination; so should a boy.

GREAT BY ACCIDENT.

We are told by some persons that Admiral Dewey was
made great by an accident.

They forget that Admiral Dewey was placed
in command of the Asiatic Squadron because
he was thought to be just the man for it.
In other words, had not Admiral
Dewey prepared himself for just
the sort of a mission that he was
chosen to fill, he could not have
had the opportunity; so that
it was not so much of an
accident after all.

The thing for boys to
know is that they should
prepare themselves in
such a way that when
the opportunity comes
they may not be found
wanting.

Men are called every
day into opportuni-
ties, but the quali-
fied only are
chosen.

The work is in the
preparation.

Some men never
have opportuni-
ties, but the most
of them have, and
those who have
them seldom
measure up to
them.

Dewey built on
sure foundations
in the discipline of
himself, of his ships
and of his crew,
and the study of
great ideals.

He made himself
and his crew perfect
in little things.

Dewey believed in
himself, and never
flinched when asked to
assume responsibility.

So a boy must have faith in
himself and the courage to
undertake things.

Dewey was prompt to act.
This age does not wait for lag-
gards.

HORACE MANN'S ADVICE.

You are made to be kind boys—generous,
magnanimous.

If there is a boy in school who has a club-foot, don't
let him know you ever saw it.

If there is a poor boy with ragged clothes, don't talk about rags in
his hearing.

If there is a lame boy, assign him some part in the game that
doesn't require running.

If there is a hungry one, give him part of your dinner.

If there is a dull one, help him to get his lesson.

If a larger or stronger boy has injured you, and is sorry for it,
forgive him.

THE PATH UP THE RAVINE.

A HUNTING TRIP WITH RIP VAN WINKLE.

GEORGE W. SANFORD.

Rip Van Winkle lived in the Catskill Mountains. Of course he lived there for everyone believes that Rip did live, and I am sure he did because I have been where Rip took that long sleep of his. Did you ever see the mountains? The Rockies, or the Alleghanies, or the Green Mountains in Vermont. All mountains are not just like the Catskills, but mountains are mountains and the boy whose home is there learns to love them. And how he misses them when he goes away! Now, wouldn't you consider a boy fortunate to have a home where Rip had his? Of course, Rip lived and died many years before this boy was born, but the mountains never change.

Rip's home—if you call it home where a scolding wife holds sway—was in a little village at the foot of the Catskills. And it was on the mountains that Rip used to go hunting with his dog Wolf. It is upon one of Rip's hunting trips that I wish to take you. From the back of his house he could climb up a path through a ravine that a little brook had worn in its course down the mountain side. This was the only path that Rip could find and he always took it—up

and on, up and on—until he came to a large flat rock half way up the mountain side. Here he used to sit and rest—some one has since cut the words "Rip's Rock" upon it. There is a little house by the rock now, and a chair called Rip's chair, which looks too modern to be true. But this was not Rip's hunting ground, so after his rest he wanders on up the side of the mountain to the top. Mountains are often level at the top and Rip's mountain was not an exception. The top was where Rip and his dog Wolf were most happy, because there was no one to scold them there. What game did Rip hunt? Well there are partridges in the mountains now, and squirrels, but in those days there were wildcats and bears, and an occasional panther. He must have hunted these, though I suspect that squirrels were his chief game. But the partridges? Well a flint-lock gun is pretty slow to hunt partridges with, and I don't believe that Rip shot very many. Besides I doubt that Wolf was a bird dog anyway.

At the top of the mountain was a level spot, and I fancy that Rip used to lie here, with his gun in handy reach, and look out over the Hudson valley, and think and dream and wish. Far away to his left he could just see the tops of the Green Mountains. In front of him, in the distance, were the Berkshire hills. And most beautiful of all was the Hudson River wandering slowly and peacefully along—a silver ribbon in a map of green. Rip used to spend most of his time here instead of hunting. Wolf would wander around digging in old stumps and hollows, worrying the squirrels until he became tired, then looking up his master, would lie down and go to sleep. It was contagious. Rip caught it from the dog and he fell asleep up there one summer's day and slept for twenty years.

Do I write as if I loved the place and Rip? Well, I do, for it was my boyhood home, and Rip has always been a reality to me. I wonder if any boy can ask, "Who was Rip and where did he live?" If you do not know the story of Rip Van Winkle read Washington Irving's Sketch Book and the scene I have described will be as real to you as it is to me. Then sometime, perhaps, when you are older, you can visit the haunts of Rip and thus read the story again and enjoy it more than ever.

A Dash Through the Spanish Blockade

GEO. PARSON.

CAPTAIN PEREZ.

You would have laughed at the haste with which the flying fish of the old Bahama channel got out of the path of the Sommers N. Smith, newspaper dispatch boat, on the morning of June 4, 1898. For the Smith was wrathful, as you could see by the way she breathed and trembled and struck at the choppy seas, which continually sent showers of white spray on to her forward deck. She was wrathful because this was the sixth time within a month that she had been turned out of a snug berth in Key West harbor to search for Cervera's ships.

We on board propped our chairs to counteract the rolling of the boat, smoked, slept, speculated as to the whereabouts of the enemy's fleet, and prepared ourselves for another disappointment at Santiago, whither we were bound.

Toward noon we sighted the lighthouse on Lobos Key, a British possession at the southernmost point of the Bahama banks. As we approached, our binoculars showed several men putting off in a boat; and their feverish efforts with the oars, frequently interrupted to wave wild telegraphic signals, indicated their desire to intercept us. When we got close enough to see that they were Cuban insurgents we changed our course and picked them up.

I liked their appearance from the time they leisurely climbed over our rail. They were four in number, and were armed and clothed like brigands; but when you shook their hands and looked into their eyes you knew them for decent fellows. Their leader, Captain Perez, who spoke English, explained that they had been sent out by the insurgent government to get news of the progress of the Spanish-American war, as well as to lodge information with the American navy concerning a number of Spanish gunboats which were prowling about Nuevitaa, and which, he said, could easily be destroyed by an American cruiser.

We gave them a package of the latest newspapers,

promised to forward their information to Admiral Sampson, and were about to leave, when I announced my intention of accompanying them to the seat of their government. With Mr. Stephen Crane's revolver and cartridge-box, a ship's blanket, some canned meat from the galley, my camera and the captain's promise to call for me at Lobos on the fifteenth of the month, I dropped down the vessel's side into the open boat of the Cubans.

The Sommers N. Smith had become a smudge of smoke on the horizon before we reached Lobos key, to which place we rowed to await the afternoon breeze. Of Captain Perez's companions, two—Alonzo and Roque—were whites, while the third—Henrico—was a chunky black who resembled Napoleon, except for his color and teeth, which latter were sharpened to points, after the manner of cannibals. Their boat was a centre-board sloop, about twenty feet long. It possessed a compass, a home-made stove and no comfortable place to sit.

At Lobos key, which you can reproduce in miniature by sticking a lead pencil upright in the center of a buckwheat cake, Mr. Farrington, the head light-keeper, and his assistants, Messrs. Knowles and Smith, showed me a communication from Her Majesty which commanded them to preserve strict neutrality during the trouble between Spain and the United States. I hastened to assure them that I was not at all warlike, and that they would not endanger their interests by harboring me until the breeze sprang up.

At four o'clock we started, in a fair wind, for Palomas Key, which lay to the southwest, just beyond the horizon. We had scarcely left Lobos before Alonzo, who was the pilot, made out a smoke or "vapor" off to the southeast. I thought it must be the Smith, but as it approached we saw that it was a large steamer, which, when it discovered us, swung in several points to head us off. Henrico, after a careful scrutinizing of the stranger, declared that he had often seen her in Havana, and was for throwing our arms into the sea. I pointed out that if she were a Spaniard she would be towing the Smith, which could not possibly have escaped her. However, our feelings were decidedly unpleasant until, after approaching to within a mile of us, she suddenly put about and made off as rapidly as she had come. I afterward saw her in Puerto Rico, but at a distance, and without finding out her name or nationality.

Although the breeze freshened considerably with the coming of dusk, we did not reach Palomas key until nine o'clock. Here lived Pedro Roque, an uncle to the Roque in our party. Lowering sail, we cautiously brought our boat to a cluster of seine poles in front of his hut, from one of which fluttered an old strip of calico, a simple though eloquent signal that

the coast was clear for disembarking. Our hall brought an answering shout from the vigilant patriot on the key; shortly afterward a blinking lantern bobbed down toward the shore; and ten minutes later we were holding high carnival around the Roque fireplace—cooking our supper of canned meat and coffee, displaying our illustrated papers and recounting to a breathless family the details of Dewey's glorious annihilation of the enemy's squadron at Manila.

From Palomas Key it was ten miles across an arm of the sea to our next stop at Key Romano. By midnight, when we had done only half of this, the breeze, which had been light, died away altogether, necessitating an irksome turn at the oars; so that our watches pointed to three as we waded ashore at the house of

THE DISPATCH BOAT, SOMMERS N. SMITH.

Rafael Roque, our Roque's father. Here we had again searched for the private signal; in fact, our approach had been even more cautious than at Palomas, for Rafael Roque's nearest neighbors were Spanish soldiers, who were quartered at a fort six miles down the shore, and whose favorite diversion was patrolling the island in search of insurgent targets. Until daylight we fought mosquitoes, drank coffee and reviewed and prophesied events of the war. Then came breakfast, and after that a long and tedious wait for the cover of night.

About three o'clock in the afternoon Rafael, who had been faithfully on the lookout since daylight, came in and excitedly told us to run to the barn. It was not really a barn; rather more of a dilapidated shed, where he stored his fishnets. Once inside we glued our eyes to the cracks between the boards, and peering so, waited, revolvers in hand. Presently, from around a bend in the shore came a large sloop filled with soldiers. I asked Perez—and my voice was low, I remember, notwithstanding the boat was half a mile away—if they were Spaniards. He nodded his head affirmatively. As they approached we saw that they lined the cockpit in a solid row, their rifles between their knees. One steered, while another sat on the forward deck with his back against the mast and his rifle across his lap, smoking the inevitable cigarette and gazing indolently shoreward. Fortunately they remarked nothing of a suspicious nature about the Roque homestead, drifting past us, in the gentle summer zephyr, as silently as a float in a Labor-day parade.

At dark we moved our boat out of the clump of rushes which had screened it by day, said our farewells and left, determined to make the Cuban coast by morning. Our route lay along Romano key, past the Spanish fort, through a network of natural canals to Guanaja bay and thence to Guanaja. In the first half of the night there was little breeze, so we kept the boat in the shallow water near shore, preferring the pole to the oar. The moon rising, shone half-heartedly through a ghostly mist, which made vision uncertain and caused the brain to fill with strange fancies. Except for the occasional splash of a fish there were no sounds save the breathing of the men who poled and the ripple of water under the gunwales.

I think I must have been in a light doze when Captain Perez whispered sharply, "Los armos!" The boat

was instantly turned shoreward, while Alonzo passed along the machetes. Following the direction pointed out by Perez I saw a sail slowly creeping toward us. "Spanish patrol number two," thought I; "here's where I may get a chance to try Mr. Crane's revolver." We lay there fully half an hour, quietly killing mosquitoes, while the boat approached, glided past us by less than a hundred feet and disappeared in the mist and silver of the night.

Before we reached the fort a welcome breeze sprang up and swept away the fog. As we eagerly stepped our mast we imagined that our troubles were at an end, for with a steady wind four hours would see us in Guanaja. But, alas! it was a fickle night. Just as we were opposite the fort the breeze failed utterly. Amid groans and excited cautionings two men quickly took to the oars, and forthwith proceeded to make so much noise in the thole-pins that I thought we would surely be discovered. The poor fellows did their best, but they were fagged out, disheartened and nervous. With Captain Perez's permission I took their place and pulled two oars for an hour. There were many alarms, and we ducked more than once at electrical flashes from the sky back of the fort, but there was no challenge, no pursuit.

About midnight the breeze came to stay. And now Alonzo showed his worth as a pilot. Through a maze of narrow water courses, in and out among a thousand mysterious keys, under arches of hanging vines, across miasmal lagoons he brought us safely to Guanaja bay. It was through a region where a man might lose himself a hundred times; where he might wander and die and rot, and his friends be none the wiser.

As we burst from this ghoulish labyrinth into the bay our boat careened under the increased force of the wind. A crane, beating laboriously to windward, passed so close that I could have touched him with my hat. The full moon, gliding down the western sky behind a shifting veil of clouds, crested the waves with molten silver. I was thinking that I had never beheld so glorious a scene when Perez, touching my arm, pointed ahead to a dim shore on the horizon and said in a low tone of veneration, "Cuba." There was a stir among the men, they all looked, all pointed, all said "Cuba." They pronounced the word softly, as though it were the name of a dead parent.

Although Guanaja bay was a favorite rendezvous for Spanish gunboats we were fortunate enough to

cross it without detection, mooring our boat to the diminutive wharf at the ruins of Guanaja just as day was breaking. A pistol shot—aimed for the sake of practice at a buzzard which perched on a charred house-post—brought the mounted coast guards—Captain Perez's own company—with whom we breakfasted. Three horses were then led out, and Captain Perez, a guide named Sico and I started for the plantation of L'Esperanza, the residence of the government, thirty-five miles or more in the direction of the interior.

It was raining when we reached the coast, raining when we took horses for the interior, raining when we stopped at Rafael Mora's house for dinner; it rained all afternoon, all night, and for the next five days; for aught I know it is still raining in that pestilential and melancholy island. For the best part of two days we struggled through dripping jungles, swamps and overflowed streams, and on July 7 arrived at the government camp.

Space will not permit telling of our three days' stay with President Maso and his band of patriots; of our return to Lobos and our long wait for the Smith, which never came; of how we met Shafter's fleet in the old Bahama channel, and how the soldiers, mounting into the rigging, cheered our little party as we tossed about in the rough sea; of how I, shouting in the teeth of the gale, could not make them understand that I was an American and wished to be taken on board; or how, after another wait at Lobos, we finally set sail in our cockleshell for Key West, four hundred miles away, landing five days later at Miami, in want of water, sleep and food.

I have only tried to tell how one could reach the insurgent government in Puerto Principe province before Uncle Sam's troops came to Cuba.

The Cruise of the Yacht Gazelle 6,000 Miles on Inland and Ocean Waters.*

BY KENNETH M. RANSOM.

MOONLIGHT ON LAKE MICHIGAN.

CHAPTER II.

For two hours we held our course. The wind, which was fresh at the start, grew stronger as we left the land and its protecting lee. The sea, too, ran higher and higher, until under the power of the increasing gale it swept down upon us as if to wash our deck;

*In the autumn of 1897, the writer of this narrative conceived the idea of a yachting trip which should include a voyage from St. Joseph, Mich., by lake, canal and river to New Orleans; thence across the Gulf of Mexico, skirting the west and east coasts of Florida, by outside and inland sea, to New York City; up the Hudson River and the Erie Canal to Buffalo; and finally by the lakes to the place of departure.

The writer was but a boy. He enlisted the co-operation of several boy friends, and together they made a yacht with their own hands especially suited to the many and different conditions to be safely and successfully met on such a trip. The boat was built and christened the "Gazelle." On October 27, 1898, the cruise was begun, and in one year it was accomplished without serious mishap to boat or crew. It is an adventure full of incident, the story of which began in the February number of this paper.

Chapter I. tells how the idea first came into the writer's mind, how he went about getting together his crew, building his boat, and launching it. Seven illustrations accompany Chapter I.

the white crested billows tossing us about as they would a cork. Nevertheless the Gazelle forged steadily ahead, every stitch of sail drawing beautifully and so careened as to bring her lee rail just awash. What sport it was as she threw the spray in white foam from her bows and danced merrily on!

We were probably 18 miles from St. Joseph harbor, when an extra heavy squall made it necessary for us to reef our mainsail. This is a maneuver which is not always easily accomplished in a gale and heavy sea, but thanks to our yawl rig we experienced little difficulty in completing our task and soon had the sail again set with a double reef tied in.

I was greatly pleased to note that she balanced nicely under reefed canvas and still pointed well to windward.

After the squall passed the wind seemed to die out almost entirely, leaving us to roll about in the heavy sea without much headway. It was suggested that we restore the mainsail to its full size, but I remembered the old adage, "It's always calm before a storm" and decided to await results.

We were not kept waiting long, however. The wind, which had been southeast, shifted to southwest very suddenly and thus became dead ahead. I expected that it would change still more in a short time and eventually come out of the northwest, and such a wind is to be feared and avoided on the lakes at this late season of the year.

I had no desire to beat over forty miles to windward against a cold head gale and told the boys that with the wind in its present direction, we could not hope to reach Chicago before morning and that I thought it advisable to run back to "St. Joe."

At first a look of disappointment crossed their faces, for they were enjoying the sport and had never once thought of turning back. We thought of the remarks of those who said "we would never reach Chicago and would be glad to return soon," and heard the laughing jeers of those whom the term "land lubber" sufficiently describes. Of all this and much more we thought, but vanity soon gave way to reason, and all agreeing with Frank that "a live man was far better than a dead hero," we brought Gazelle about and were soon flying before the wind back to our haven of safety.

Fred and Frank, who had perched themselves on the stern, that they might notice the wake which we left astern as our craft fairly jumped from wave to

wave, called my attention to what appeared to be a heavy mist way off to windward, but coming nearer and nearer with wonderful rapidity. I knew at once that a severe squall was coming our way, and with all haste lowered the main sail. We were just in time. No sooner was the sail lowered and secured than the northwest gale struck us with tremendous force. The jib and mizzen sail tugged and pulled at their fastenings as if in one great effort to free themselves and fly off unhampered before the wind. Everything proved strong, however, and after the first few gusts, Gazelle settled down to business, and behaved so nicely that had it not been for the cold rain which chilled us through, we should have enjoyed it immensely.

The storm also made it difficult for us to see any landmarks, but we had our compass bearings and experienced no difficulty in reaching the entrance to the harbor. Great care had to be exercised in running in as the waves were breaking nearly over the piers and to strike the side walls meant instant destruction. It was no wonder, then, that we all gave a sigh of relief as the helm went down and Gazelle came into the wind safe once more at her mooring at "Old St. Joe."

Thus began the terrible storm of '98. Old sailors said it was the worst on record for many years. What little shipping there was at this time suffered great loss. But we were safe, and Gazelle had been tested in a manner that gave us great confidence in our craft even if we were glad that we were not abroad in the storm, which raged during the next two days and nights.

After our sails were furled and everything made snug on deck, we went below and after a rub-down and a change of clothing, we sat down to the meal which our cook had prepared. Never before had coffee been so welcome. Everything did taste so good; and some way we all felt jubilant.

Fred, who felt somewhat embarrassed when coaxed to accept a third cup of Rio, tried to excuse himself by proposing the toast, "Here's to the Gazelle, the boat that keeps on top." We all evinced our approval by a renewed effort to satisfy the cravings of our inner man and it was late in the afternoon before our feast was over, and we drew lots to see which ones would take shore leave first.

Frank and I were the lucky ones and spent the afternoon and evening on shore with our parents and friends, who were overjoyed that we were safe in port.

The storm reached its height during that night, but blew a tremendous gale all the next day and night. The lifesaving boys seemed worried at our crossing back and forth in our small yawl-boat, for the river was very rough, but the little boat was built for such service and caused us no uneasiness.

About four o'clock in the evening of the second day after our return the barometer began to rise rapidly

and we put everything in readiness for another start. At 8 o'clock the wind shifted to southeast and we all went ashore to bid our friends adieu once more. It was half-past ten when we again went aboard and in a few minutes all sail was set, and with moonlight beaming across Lake Michigan we slipped silently from our anchorage, and as we rounded the south pier on the port tack our little ship gracefully rose and fell on the choppy sea, and the last farewells of our friends ashore, who had come to bid us good-night, were mingled with the whistle of the wind in our rigging. The clock in the court-house pealed out eleven, and as the beacon light grew fainter and fainter the foaming crest at Gazelle's bows merrily sang "Well begun is half done."

It was a beautiful night—clear and crisp—and the wind, though somewhat ahead, was just strong enough to send us along at a lively clip. As the first faint streaks of dawn began to appear in the east, we knew by familiar landmarks that we were abreast of Michigan City, Indiana.

THE CREW OF THE GAZELLE.

After holding a short consultation, we decided to run in and send messages home. We found some difficulty in making the harbor, owing to a large steam barge having been wrecked at its entrance by the recent storm, but we finally succeeded in so doing, and after mailing short messages and a talk over the long-distance 'phone we again set sail. After an uneventful but pleasant sail of four hours we entered Chicago harbor in safety and our long cruise was at last begun.

Of course we were very greatly pleased to know that we were safely across the lake, but our experiences of the past few days were very fatiguing, so after supper we divided into four watches and all save the man on duty turned in.

The next two days were spent in selecting our outfit of dishes, cooking utensils, ammunition, etc., and in visiting the many places of interest to be seen in this great city. We also made arrangements for our towage up the Chicago River, to the first lock of the Illinois and Michigan canal at Bridgeport.

We bought everything we thought we would need in our cooking department, and when he had things in shape we invited our friends aboard to inspect our outfit. They all seemed greatly pleased and one lady remarked that we had more things than a woman would need to keep house with.

It was nearly dark when a tug took our line. The good-natured captain came out of the pilot-house and asked if we were all ready to start aboard the "Gazelle." He then gave the signal to go ahead and we were soon winding our way up the Chicago River. Although the many boats continually in motion on the river made it seem a regular labyrinth, our tug found a passage among them and we experienced no serious difficulty until we reached one of the immense steel grain ships, which for two days had been aground in the middle of the channel. Three tugs were pulling with all their strength in their effort to once more get her afloat. Our captain thinking there was no danger of her being free soon, undertook to pass her. We were about midships of the monster when, to our dismay, the stern began to swing around. It was too late for us to back out, so the captain rang on all steam in hopes of passing through before we were caught and crushed. It was no use, however, for the ship soon bumped into us and side by side we moved toward the wharf. Men gathered on the deck and shouted to us, but we were helpless and unable to better our condition. The steamer's bow was still fast in the mud and so utterly unmanageable. The captain, unable to do anything, contented himself by shaking his fist at our big companion, and saying some decidedly uncomplimentary things about her. It was a trying moment, but I was pleased to see how cool my crew were during this time of peril.

Nearer and nearer we were shoved toward the dock and it did seem as if our little "Gazelle" was doomed to certain destruction, but just as we were within about three feet of the piling the ship again grounded

and we were safe. A shout of joy went up on board all three vessels, for we had experienced a hair-breadth escape.

We backed out uninjured and passed the vessel on the port side and our little excitement was soon forgotten as we steamed along up stream. The captain having heard our call for supper, left his wheel in the hands of an assistant and came aboard, and helped us store away a large amount of bacon and pancakes and other good things which made our evening meal one to be long remembered.

At 9 o'clock we arrived at Bridgeport and after bidding us good-bye and wishing us every success for a pleasant voyage, our friends aboard the tug started back down the river. As she glided out of sight into the blackness of the night her shrill whistle echoed back a last farewell and we were left alone in the shadows of a great city.

We were up early next morning, and after paying our canal fees of \$2.88 we passed through the first lock and tied up in the basin to await a steam canal boat which we were informed would pass through the locks during the afternoon. We were in hopes of securing a tow and in this we were not disappointed, for at 2:30 our boat arrived and the captain being a jovial fellow, kindly took our line and we were soon travelling down the "big ditch" at the rate of five miles an hour. We enjoyed our afternoon very much, the scenery was new to us and very pleasing. The great drainage canal which the people of Chicago have built at an enormous expense could be easily seen from our deck. The derricks, inclined planes, and other apparatus used in building the canal were especially interesting.

The canal is 96 miles long and a system of 19 locks overcomes a fall of 140 feet. Owing to the lateness of the season, traffic on the canal was nearly at a standstill, so we were not always fortunate in getting tows, in fact 45 miles, or nearly half the distance, we towed the boat by hand. This was new life for us but we enjoyed our days as we had never done before. With ever changing scene, plenty of exercise and fresh air, together with our diet of coarse food, we all began to gain flesh in spite of our hard work towing the yacht.

The hunting along the canal was very good. Quail, prairie chicken, ducks and rabbits were quite plentiful, and in hunting them we not only had great sport, but kept our larder well supplied.

Finally after a journey lasting seven days we reached La Salle and the Illinois river. It was evening when we reached the city and although weary from our day's tramp on the tow-path, we went to the postoffice, where we found a large package of letters from home and friends. We forgot all about being tired or hungry in the enjoyment we found in the good news from home. After reading over our letters we brought forth our writing material and all the night and a portion of the next morning was spent in writing letters.

It was quite late when we awoke, and imagine our surprise upon finding the ground covered with snow. A thin layer of ice had also formed in the canal and gave us warning that we must hasten on our way. So again hoisting our masts and bending on our sails we were soon flying along, wafted by our white wings.

The Illinois River proved to be a very interesting stream. It is deep from bank to bank, making sailing very pleasant. All the bridges, towns and cities are for the most part well built and such farms as are not taken up by the game reserves are well kept.

Several little perplexing incidents relieved the monotony of plain sailing, but for the most part the run was easily and comfortably made.

At Peoria we found a sail boat called the "Ping," which we were told had been abandoned by its crew of Michigan boys who were nearly drowned by the boat's capsizing.

Although the boys had intended going to Florida their cold bath in the plain water of Peoria lake was sufficient, and not caring to repeat their act even in "Florida water" they returned home and their cruise was ended.

In order to keep the water in the Illinois River of sufficient depth to float the craft which carry grain, etc., down to the Mississippi River, four dams have been thrown across the stream at intervals. Thus a desired level is maintained and boats drawing five feet can navigate the stream even during low water. Great stone locks are built at the right of these dams, so that vessels can be locked from one level to another when passing up or down the stream.

It was about seven o'clock in the morning when we reached the first of these locks. We began blowing our horn several hundred yards above the lock, so as to give the gate-keeper time to open the gates that we might sail in. The wind was blowing fresh across the stream and with this beam wind we approached the lock with greater rapidity than we had anticipated. The gates were only partly opened when we reached them, so in order to avoid a collision I was obliged to tack ship and stand out into the stream. I had headed the Gazelle up stream as much as the wind would allow, so as not to incur a risk of running past the lock to port and going over the dam.

We did very nicely even against the current and were just coming about to run back into the lock, the gates of which were now wide open, when our wind failed us and losing our headway, we were

caught by a side current and carried past the lock toward the dam only a hundred yards below. The situation was critical. The current, which became swifter and swifter as we neared the dam, carried the yacht with great speed toward the brink. Old logs standing on end, together with other debris, made the seething mass look like a boiling death trap of destruction. To anchor would have been folly; there was only one thing to do—stick to the ship.

Imagine our feelings as we were carried on to what seemed to be certain destruction. We could now hear the water as it boiled below the fall, and as Arthur afterward described it, "We were about to see our finish," when a strong wind filled our sails and we began to hold our own with the current. Luck was with us and as the wind increased we began to gain inch by inch on the tide which went dashing by us. Once the wind seemed to fail and my heart dropped within me as I saw her lose headway, but we all gave a shout of joy as an extra hard puff struck us and we were able to turn the abutment of the lock into the still water.

It was a great nerve strain while it lasted, and we often thought of it as one of the most exciting incidents of our long journey down the river. It is needless to say that we exercised great caution in approaching the locks at the three remaining dams and had no further trouble.

It was Thanksgiving day when we reached Grafton and the Mississippi River, and we certainly had a great deal to be thankful for, including three mallard ducks and a complement of good things to make our dinner one which we will never forget.

Next day we proceeded on our journey and soon found we had a very tricky customer to deal with in "Old Mississippi." Sandbars, whirlpools, wing dams, sunken dykes, tow heads, etc., had to be watched with greatest care, but we passed the mouth of the Missouri river all right and soon after reached St. Louis.

This is a great city indeed, and many interesting sights and scenes we found. The Eads bridge, one of the finest structures of its kind in the world, greatly pleased us. It stands a lasting monument to the genius and ability of the distinguished engineer by whom it was planned and constructed. The levee was probably the most interesting place we visited. The stern-wheel river boats were new to us, and we were surprised at their size and power. We were greatly interested in the negro roustabouts who people the levee for a mile or more.

ON THE LEVEE AT ST. LOUIS.

During our stay in St. Louis the first heavy ice of the season filled the river and for several days all traffic on the stream was at a stand-still. We were somewhat worried for fear our yacht might be damaged but we bucked it out without mishap, and while the channel was still filled with the huge floes, we weighed anchor and with a light breeze wended our way down stream to the promised land of the "Sunny South."

(To be Continued.)

HOW ONE BOY WENT TO SCHOOL.

Several years ago an effort was made to collect all the chimney sweepers in the city of Dublin for the purpose of education. Among others came a little fellow who was asked if he knew his letters.

"Oh, yes sir," was the reply.

"Do you spell?"

"Oh, yes, sir," was again the answer.

"Do you read?"

"Oh, yes sir."

"And what book did you learn from?"

"Oh, I never had a book in my life, sir."

"And who was your school-master?"

"I never was at school."

Here was a singular case; a boy could read and spell without a book or master! But what was the fact? Why, another little sweep, a little older than himself, had taught him to read by showing him the letters over the shop doors which they passed as they went through the city. His teacher, then, was another little sweep like himself, and his books the sign-boards on the houses. What may not be done by trying? "Where there is a will there is a way."

THE PERMANENT SNOW COMPOUND

Bernard and Brainerd Catlin Bought Five Dollars Worth Unknown to Their Father and Realized Barrels of Fun on the Investment.

CHARLES HATTELL LOOMIS.

(Copyright by the Author.)

"I'd as soon sell you my farm for two cents as to buy your compound," said Farmer Catlin to the black haired and uncanny looking stranger. He had arrived just at nightfall at the close of a long winter's storm. The fields and trees, and fences and roofs were white with snow and the two Catlin boys were delighted, but their father, with his knowledge of the work that it entailed would have been glad to see the snow take the same wings that had brought it and fly to the uttermost parts of the earth. And here was this fellow having the impudence to offer him a compound that would make snow permanent.

Mr. Catlin had let the man into the little hall with its winding stairway that led to the bedrooms above, and now they stood talking while Bernard and Brainerd, his two sons eagerly listened to the stranger's entrancing conversation.

"Why, I've sold quantities of it to fellers down in New York who are going to use it to make toboggan slides that'll last all summer."

"Well, people in the city may have time for such foolishness, but what in tarnation do you suppose I want my farm buried under three foot of snow the year around for? Summer season's short enough as 'tis."

"But, papa," said Bernard, "you wouldn't have to work so hard."

"NOW DUMP THEM IN THE FIRE."

"And we'd live on the snow I s'pose. Snow pudd'n' and ice cream," said the old man sarcastically.

"And we could go sleigh ridin' when the weather was so warm that we'd wear just a shirt and trousers. Wouldn't that be dandy?" said Brainerd.

"Well, it's aout of the question. I ain't go'n' to buy your compaound an' the ain't no one so foolish in all South Ardmore to do sech a thing. Haow much is it?"

"Only five dollars a quart, and a quart will sprinkle an acre, besides which I donate a beautiful nickel plated machine for distributing it."

"Say, young man," said Mr. Catlin, suddenly. "I think you're dealin' in unlawful goods an' ef they ain't they ought to be. S'pose you was to strike some mischievous feller that had a grudge ag'in his neighbor? He'd sprinkle his fields with it while he slep' an' 't would be winter all the year 'raound on that farm. I don't question your bein' able to do it. Sence I see horse cars go alone I'm prepared for anythin', but you don't sell me nothin' of the kind. Good night."

With a little sigh the man slung his bag over his back and left the house.

Mr. Catlin went out to the barn to bed down the cattle and the boys followed the stranger.

"Say, do you sell that in small quantities?" asked Bernard.

"Don't like to open a can. You see a quart will last a life time, so you only have the first expense. Your father's got the wrong idea. I don't want to cover up his potato fields with snow the year round, but if he has a hill that ain't worth cultivating, and sprinkles it with this powder, you boys can coast all summer long and he can keep his milk and butter cool and comfortable without any need of ice."

"Wish we could see the thing work," said Bernard with caution. "Course such weather as this snow is going to stay anyway, but how do we know it would stay when a thaw came?"

"That's so," echoed Brainerd.

"Easy proved," said the stranger with a smile, "I'll build a little fire here out of some pine cones if you boys 'll get 'em, and I'll sprinkle a little of the powder on some snow and you can make snow balls that'll be good to play croquet with next August."

"Won't they melt?" asked Brainerd.

THEY WALKED AROUND THE HOUSE SPRINKLING IT IN A THIN LINE.

"If you can melt 'em I'll give you my whole outfit."

A bonfire in the snow always appeals to a boy, and they soon collected about a hundred cones from a tree near at hand. Then the stranger built a little pyramid of them, poured some kerosene oil on them from a tiny can that he carried in the pocket of his ulster and touching a match to it had a blaze in a few seconds.

The bright red blaze lighted up the snow and made it sparkle with a million diamonds, but the boys were too interested in watching the further processes of the stranger to notice the beauty of the scene. He took a little water sprinkler out of his other pocket and filled it with some of the powder. Then he dusted the snow with it for the space of a yard square.

"Now make the snow balls boys and put them into the fire."

The boys got to work and fashioned big, round snow balls, patting them into shape and hardening them by a pressure of the knees. When a dozen had been made the stranger said, "Now dump them in the fire."

The boys did so and were not at all surprised to see them resist the heat, for they had perfect confidence in the stranger. After they had been in the bed of coals for five minutes the stranger kicked them out of the fire, and although they were somewhat smoked they were otherwise just as good as when put in.

"Now, you see that my compound does just what I claim for it. You'd better buy a quart. Haven't you any money laid by for a rainy day?"

"Yes," said both boys.

"Well, put it into perpetual snow instead. Much more fun. You can make a coasting place on some hill that no one ever cultivates."

"Blakely Hill," said both boys together.

So Bernard sent Brainerd back to the house to get five dollars out of their tin banks—he generally made his younger brother run errands for him—and while he was gone the fascinating stranger gave him a quart can of the compound with a little nickel sprinkler, and then when Brainerd came back he counted ten half dollars into the stranger's hands.

"I think you boys are too good for this earth," said the stranger as he proceeded to go on his way.

"Why so?" asked Brainerd.

"Why, you seem so particular about only using it in places that ain't going to be cultivated. When I was a boy I would have sprinkled little patches here and there just for the fun of seeing heaps of snow in mid-summer."

"Oh, that'd be bully," said Brainerd, laughing at the

THE MOTHER KISSED THEM GOOD NIGHT.

idea, and Bernard seemed to think there were possibilities in it, so after the stranger had gone off into the darkness they opened the can and poured some of the white powder into the little feeder and then they walked all around the house sprinkling it in a thin line. Then they sprinkled the gate posts, and I am sorry to say the front path. The snow once hardened into place could not be shoveled off.

Then they got a lantern and set out for Blakely Hill, which was not far from the house, but which was three-quarters of a mile long, very steep, and never used for anything. On the way they passed the church, and whether by accident or design, they dropped a lot in front of the church on a big drift, and if you go up to Ardmore next summer you can see that drift gleaming in the hot summer sun. Everyone has to drive around it, but it has brought lots of summer people to the place, so no one has ever complained.

Arrived at Blakely Hill they sprinkled a path ten feet wide for the whole length and that used up all their powder but a little bit, which they saved for future use.

Then they went home and went to bed so early that Mr. Catlin said to his wife: "I declayre for't those boys get berrer'n better. I was always full of the ol' Harry when I was their age. Now I wouldn't have be'n contented to let that man go off with his mis'able compaound to-night if I'd be'n them. I'd a covered the farm with it."

"They're the best boys in the world, father," said Mrs. Catlin, and went up to their room to kiss them good night and tuck them in.

Boys are generally anxious to have snow remain, but in view of the queer things that were going to happen the Catlin boys wished hard for a thaw. But the weather held cold for two weeks and no one suspected that any snow had been chemically hardened. The boys built several bonfires on Blakely Hill to test it and it didn't melt a bit.

They hinted to their schoolfellows that when a thaw came there'd be more fun than a goat up at their house and at Blakely Hill, but beyond that they would say nothing.

WHEN THEY SAW MOTHERLY MRS CATLIN.

At last, toward the end of January, there came a warm rain, and snow in the vicinity of South Ardmore vanished like maple syrup and buckwheat cakes.

The boys heard the patter of the rain on the tin roof and they hugged themselves and chuckled. In the morning they were up as soon as it was light. The rain had stopped, but it was very warm. The mercury registered 52 on the front porch. They dressed and went out of doors in the morning twilight. Bare ground everywhere. Bare ground as far as they could see, except that on the front paths there was three feet of snow packed hard, and all around the house a drift, and two picturesque heaps on the gate posts, and under one of the pine trees a pile of ashes and half burned cones and twelve snow balls.

Mr. Catlin was disposed to be angry when he saw what had happened, but good Mrs. Catlin reminded him that boys would be boys and that they might have covered up his winter wheat.

"Well, it does beat all!" he said at last, and when he heard about the coasting at Blakely Hill he grinned like a boy and said: "Mother, what say we all go over there and renoo aour youth?"

Mrs. Catlin would never grow old. She was always ready for anything, so a merry family party, including the hired girl and the hired man, set out for the hill, drawing in their wake the boys' big bobsled.

Of course, lots of people saw them going up the road pulling the sled over the bare ground and many thought them crazy, but when a few minutes later they heard shrill cries of glee from Mrs. Catlin and the girl, and the deep bass laughter of the men, and the shouts and chortles of the boys, they ran out to see what was the matter.

And when they saw motherly Mrs. Catlin, her hair streaming in the wind, steering the bobsled down Blakely Hill on an eminence of hard snow, while all around the grass was fresh and green, owing to its winter blanket just removed, they came out, too, young and old, bringing sleds and trays and anything on which they could coast.

And from that time until people got tired of the sport, which wasn't until late in September, that hill was alive with coasting parties when the mercury was up in the hundreds and stored ice melted like heated butter.

But the pathway of three foot snow in the Catlin's front yard was a good deal of an eyesore to the old people, and at last they covered it with dirt and planted grass seed on it, and named their place "The Embankment," and took summer boarders on the strength of it, and now Mr. Catlin blesses the day the stranger sold the boys the wonderful compound.

White-Bob, Black-Bob and Gray-Bob

A Coasting Story of the New Hampshire Hills.

CHARLES STUART PRATT.

CHAPTER I.

"I tell you," asserted White-Bob, "it's the stunningest sled in the town!"

"And I tell you," declared Black-Bob, "it's the stunningest in the world!"

"Whose is all that?" inquired Gray-Bob, coming up to the two, and rounding a snowball in his mittened hands as he spoke.

"Tain't anybody's, and 'twon't be yet awhile," said Black-Bob.

"Well, then, where is it?" asked Gray-Bob, drawing back and sending the snowball smack into the center of the painted globe on the gable-end of the school-house.

"Well, you are a feller from 'way back, not to know 'bout Ripper Jones's latest! Why, Ripper Jones says he's beat his record, and when Ripper Jones says that, you can just believe it's the stunningest sled in the world."

"Let's chip in and buy it, then," cried Gray-Bob.

"You can't," put in White-Bob, "'tain't for sale."

"No," added Black-Bob, "he says he won't sell it—he's going to give it away!"

"All the better—we'll go right up after school and let him give it to us," laughed Gray-Bob.

"He ain't going to give it away till spring, and——"

"Why? 'Twon't be any good then, after the snow goes," broke in Gray-Bob.

"Why?" repeated Black-Bob and White-Bob both together—" 'cause he's going to give it to the feller, in all the 'Leven Districts, that makes the best——"

But that minute the master's bell jangled in their ears, and the three boys joined the rush to be the first in.

Just here I may as well say that the first name of each of the three boys was Bob, and that their last names were, respectively, Black, White and Gray; and so, to save all three answering when one was spoken to (or perhaps it was only in the regular course of country nick-naming), the other boys had prefixed the last names to the uncommon name of Bob.

And here, too, I may as well say a word about Mr. Timothy Jones—or, as he was commonly called by old and young all through the 'Leven Districts of Upton, Mr. "Ripper" Jones.

Mr. Jones had been the "boss carpenter" of Upton for many years, indeed up to the day the stinging on the Congregational steeple gave way after a gale, and dropped him a hundred feet or so down to the ground. When the pieces at last grew together, Mr. Jones was, as he himself drily put it, something of a man, but not much of a carpenter.

In truth he was a good deal of a man—shrewd, practical, ingenious and chock full of New England common sense and quiet humor. It was not long after the steeple-chase accident, as he jocosely called it, before the little shop by his house, to which he hobbled out every day, became a more popular resort than even the village stores. It was like the focus of a whispering gallery, and gathered all the news of the 'Leven Districts of Upton—yet no one heard evil or malicious gossip in Mr. Ripper Jones's shop.

Saturday was the boys' day, and to Mr. Jones they told all their haps and mishaps, and especially their quarrels; and he never failed to make peace, even in the quarrels between boys of rival districts. Long before arbitration became international, Mr. Ripper Jones was established as a final and absolute board of arbitration in the hill-town of Upton. So it was that whenever a boy thrust his head in at the door and called out, "I'm goin' over to Ripper Jones's!" his mother smiled and said, "All right!" because she knew it was all right.

Though Mr. Jones was now, as he said, not much of a carpenter, and could no longer build church steeples, or even houses, there were many things he could build. It was really amazing how many odd jobs, ranging from bird-houses to cradles and churns, the people of the eleven little neighborhoods of Upton found for him to do. They kept him so busy, indeed, that it is a wonder he ever found time to build the two famous sleds but for which this story would never have been told.

CHAPTER II.

Build two famous sleds he did, however—several winters before the events here related—and they fell into the hands of two boys in District Number Seven. These two boys were the heroes at every coasting meet of the winter, for no such sleds had ever before appeared on the hills of Upton. So perfect were the proportions of length and width, the balancing of weight and the spring of runners, that they swept by and beyond all other sleds, home-made or store-boughten, as a racer out-speeds and out-distances the all-round horse of the farm.

Now it chanced that District Number 'Leven was the rival of Number Seven, and that in Number 'Leven lived Mr. Jones and also the Bobby boys. And so, when the triumphs of their rivals could no longer be endured, the Bobby boys went to Mr. Jones's shop and laid the case before him, and demanded that he build for them a double-runner, or "double-ripper," as the Upton boys called it, which should utterly eclipse the two single sleds over in Number Seven.

The scheme of this rival double-ripper was kept a secret all through the summer, while Mr. Jones was working out the problem and building the sled, but with the first snow of autumn it somehow leaked out. I am not sure but the Bobby boys bragged about the new double-ripper themselves; and if they did it is little wonder, with the racer itself in their hands and Mr. Jones's predictions burning in their heads.

With the first good coasting a challenge went over to District Number Seven; and though the challenged ones hit upon a brilliant counter scheme, and worked all night to turn the two single sleds into a double-ripper, it was of no avail. The new sled went ahead of it in every quality of build, in beauty and comfort and speed, in a regular geometrical progression.

The victory of the Bobby boys was beyond their wildest dreams, and nothing short of fire-works and bell-ringing could express the rejoicing in District Number 'Leven. The shop-keeper gave the rockets, and Deacon Gray himself opened the church belfry to the boys.

Next day the new double-ripper was the talk of Upton, and on Saturday ten delegations of boys appeared at Mr. Jones's shop and besought him to build ten more double-rippers; and the boys of each district stipulated that their sled should surpass all the others.

Even Mr. Ripper Jones could not promise this last; but churns and cradles and bird-houses were set aside, and he did build ten sleds which were the wonder and delight of the districts that owned them. By midwinter coasting had become almost a mania in the hill-town of Upton. The men joined the boys on moonlight nights (the girls were with them from the start), and not only the men, but the maiden aunts and the mothers, and even, in some districts, the grandmothers too.

As the excitement grew, the doctors and deacons, and even the ministers, headed subscriptions toward bigger and faster sleds; and in one or two cases the district sewing-circles got up sociables in the district school-houses to raise money for double-rippers. To tell the various tales of these district sleds would take me too far from the present story.

The climax, however, was reached in the tremendous forty-footer which was the glory of District Number Ten. This monster, considering its length, could hardly have been strictly a double-ripper—at the very least it must have been a triple, and for aught I know it may have been a quadruple or even a sextuple ripper. If half the stories current be true, it must have been a marvelous experience to stand on the side of Tory Hill and behold this leviathan of sleds, with the forty men, women and children of the district on its back, sweep down the slope and go whizzing by with its accompaniment of whirlwinds on either side which carried away the hats of the spectators as it passed.

And so it came about that by spring no one in all the 'Leven Districts ever spoke of Mr. Timothy Jones by his baptismal name, or the more familiar Tim—every one spoke of him as "Ripper" Jones. This appellation was neither flippant nor disrespectful—it was rather a considerable compliment, quite as much as if they had called him "Colonel," or even "Commodore."

CHAPTER III.

And now it was Mr. Ripper Jones's turn to possess a secret.

Mr. Jones was put very much on his mettle by the fame of his sleds and the popular enthusiasm for coasting, and he became ambitious to break his own record and achieve a new triumph. To this end he had been secretly at work all through the summer, on other days than Saturdays, and at unheard-of hours when no one was likely to happen in. Working at this disadvantage, it was not until the end of November that his grand idea became a satisfactory reality.

The new record-breaker was a double-ripper. It was not remarkable for size, but its lines and proportions were as graceful and scientific as those of a Burgess yacht. It was painted a glowing red, and had a green leather seat stuffed with curled hair and edged with brass-headed nails; and on the morning of Thanksgiving day he had given the final touch—lines and curves of brass-topped nails along its sides which spelled its name, "Eureka."

On that day, too, after huge Thanksgiving dinners of roast rooster and duck and turkey, with cranberry

sauce and Indian plum pudding, and pumpkin pie and mince pie, Black-Bob and White-Bob stuffed their pockets with cracked butternuts and went over to Mr. Jones's shop to pull their wishbones.

Black-Bob came off victor in the first pull, with the bigger half of White-Bob's wishbone in his hand; and White-Bob was equally successful in the pulling of Black-Bob's lucky-bone. Then it came out that Black-Bob and White-Bob both had wished the same wish—a new double-ripper, a double-ripper to beat the world—which meant, of course, the ten other districts of Upton.

"Well, you Bobby fellers," remarked Mr. Jones, "I've got that very double-ripper right here, in my shop."

"You—have?" exclaimed the two boys as one. "Let's see it—won't you, please, Mr. Jones?"

Mr. Jones beamed on the boys, and then slowly answered, "Waal, I don't—know but what I will. I've been all summer a-makin' it, an' druv the last nail this blessed day before dinner—I'd never got any good o' my Thanksgivin' dinner 'f I hadn't—an' my word on't boys, she'll break the record!"

Mr. Jones fished about in his capacious trousers pocket, and at last brought up a key. Then he hobbled across the shop, the boys at his heels, and unlocked a closet door.

"It's red," cried Black-Bob, "and it's—"

"Eureka!" finished White-Bob, with a yell that gave some vent to his excited feelings.

"Yell away, boys," cried Mr. Jones, "yell away!—I feel a mighty sight like yellin' myself."

"Do, Mr. Jones! Do yell, do!" shouted Black-Bob and White-Bob—and Mr. Jones gave a terrific yell, to the ecstatic delight of the boys.

Having thus saluted his handiwork, Mr. Ripper Jones brought out the several parts and set up the "Eureka" on a long bench that ran the length of the shop.

"What do you ask for it?" cried Black-Bob the instant it was in place. "I hain't got much money with me," he added, diving into his pocket and slapping down on the bench a nickel, a dime, and five or six coppers, but that'll bind the bargain!"

"And that!" cried White-Bob, slapping down a silver quarter beside the smaller change—" 'cause district number 'Leven's got to have that sled, whatever it costs."

"Put that money straight back in your two pockets," said Mr. Jones with decision. "That 'ere sled ain't for sale."

"Who's—who's bought it? You oughter let us had a chance—you oughter, Mr. Jones," said Black-Bob, very much crest-fallen and not a little resentful.

"Nobody's bought it; nobody's seen it," said Mr. Jones; and the faces of the Bobby boys brightened. "And's I said," he went on, "that 'ere sled ain't for sale."

The faces of the Bobby boys fell again. They stared at the flaming red "Eureka," and then they stared at Mr. Jones—and at last they questioned in a slow chorus, "Ain't—for-sale—to anybody?"

"No, not to anybody, at any price—that sled's to give away," declared Mr. Jones in a tone that settled things, though there was a twinkie away back in his eye.

The Bobby boys stared again at the sled and at Mr. Jones, and this time they were speechless.

And then, in the silent shop, Mr. Ripper Jones announced that the "Eureka" was to be given as a prize to the boy in the 'Leven Districts of Upton who made the best coast between Thanksgiving Day and town meeting day in March.

So it was that the next day—and that was the day on which this story opens—Black-Bob and White-Bob went to school with the great "Eureka" secret bursting out of their buttoned-up overcoats. (Gray-Bob, it should be said, had been away to eat his Thanksgiving dinner at his grandfather's over in District Number Nine, which, being farthest from the main village, was rather slurringly known as "Way-back.")

Whispering and the passing of notes were forbidden in the district school of number 'Leven, but on this day after Thanksgiving, either because the master was less observant or more lenient than usual, an amazing amount of both went on unchecked. Long before night the news had spread to every desk in the room, and sharp on the stroke of four, every book and slate slid into place, and the first ring of the master's cracked bell, signalled a mob to the entry. Before the last had crowded through the schoolroom door, the foremost had got into coats and caps and mittens and were crossing the yard on the run. In three minutes a long line of flying figures was moving down the hill, along the level, and up the half-mile slope to Mr. Ripper Jones's shop.

As the Bobby boys entered the yard, the head of the line had reached the shop, where Mr. Jones stood in the open door. Between the short sharp pantings of his lungs, which jerked out the words brokenly, the leader cried,

"Oh, Rip—, Mr. Rip—, Mr. Jones, I've come up—to see—the prize sled—the 'Eureka'—double-ripper! All the fellers—are comin'—an' the girls, too!"

"Come in, come right in," said Mr. Jones, turning about and leading the way—and in five minutes, forty puffing boys and girls crowded the shop, and there was such an explosion of oh's and hurrahs and wordless yells that Mr. Jones declared the roof lifted a full inch. Then he had to tell them the whole story, and answer no end of questions.

"What's them? What's them?" called out Gray-Bob, in the first subsidence of the tumult. As he spoke he pointed to the wall, along whose length hung vast sheets of manila wrapping paper, numbered in order in big black numerals, one, two, three, up to eleven.

"Them?" repeated Mr. Jones. "Them's the score cards."

"The score cards!" echoed twenty boys. "The score cards!" echoed twenty girls.

"Yes—the score cards," said Mr. Jones. "And once a week, or so, you fellers of Number 'Leven, and the fellers in all the other districts, have got to come and report the best coasts—longest, swiftest, or otherwise—to go on them records. I put you on honor, to tell things—jest—as—they—is."

"We will that," cried Black-Bob.

"And win the sled, too!" cried White-Bob, full of faith in the prowess of Number 'Leven.

"Three cheers for Mr. Jones!" shouted Gray-Bob, and

having given, them with a will, and filled the air with flying caps, the forty boys and girls trooped out of the shop, and up the road, and down the road, away to their homes.

Mr. Ripper Jones stood in the door, a broad smile on his face, and watched them off. He knew that now, before another night, every boy in the 'Leven districts of Upton would know about the "Eureka," and have made up his mind to win her.

(To be Continued.)

How Russel Wray Joined the Yacht Club

FRANK H. SWEET.

CHAPTER I.

Almost from the time Russel Wray entered the employ of Schleight & Buckler, General Merchandise, at Upper Dam, his ambition had been to possess an ice boat. But a salary of five dollars a week, with four out for board, and clothing to be deducted from the other, does not leave much margin for what is not absolutely necessary; so the ice boat remained an ambition that seemed unlikely to be speedily realized.

Among Russel's duties was that of bringing the daily mail from Rube's Landing, ten miles away. Rube's Landing was a railroad town, and the distributing point for much of the upper country. Schleight & Buckler's merchandise was brought up from there in bateaus during the summer, and on sleds in the winter; and their pelts and the live wild animals which they occasionally dealt in, were sent down in the same way.

Russel usually took half a day or more to carry down and bring up the mail; starting at sunrise and not getting back in winter until an hour or two after mid-day. Generally he went on one of the company's horses; though sometimes in winter, when the snow was unusually deep, he found snowshoes easier.

At this point the river was more than half a mile from bank to bank, and widened to fully twice that distance lower down. There were few bends, and the prevailing winds during fall and early winter were lengthwise of its course. This kept the ice almost free from snow, even when the forests along the banks were drifted many feet deep.

Sixty miles down the river was Enterprise, a flourishing city of forty thousand or more inhabitants. Here was located a yacht club whose members divided their love between water craft in summer and ice craft in winter; and as the river was usually frozen by the middle of November and rarely open until the end of May, ice yachting was perhaps the more popular of the two.

It was these yachts sweeping gracefully over the ice which had first aroused Russel's desire to possess one. He was just from the backwoods, and glowing with his first wonder and admiration of the great river; and these almost living creatures, with their swaying, bird-like wings, seemed as much a part of the broad, beautiful vista as did the glittering ice and the snow-weighted foliage of the banks.

And even when he learned that some of them cost hundreds of dollars, and that few but wealthy people who had plenty of leisure cared to own them, his desire did not abate. Only it modified itself to something he might compass within his means, plain framework in place of costly, cheap cloth and low-priced runners instead of fine canvas and flawless steel. He watched the yachts as they swept along the river, and when one chanced to stop at Upper Dam, or at Rube's Landing when he was there, he examined it closely, minutely, and not altogether with an unskillful eye. He could make one that would be just as serviceable, he felt assured, even though it might not be as finely finished—that is, if he could obtain the runners and sail.

But a set of such runners as they used, he learned, would cost him fifty dollars; and even the cheapest grade in the market could not be had for less than twenty; and then there was the sail. The savings of an entire year—of two years—would not be enough to purchase both. But for all that, he began to select choice pieces of timber, and to fashion them after the best models he had seen. Except for the occasional arrivals of Indians with peltries, and the fortnightly pay days of the lumber camps, business was not brisk at Upper Dam. Schleight & Buckler had a book-keeper and a store clerk, and half a dozen Canadians and Indians to do the packing and hauling. Outside of carrying the mail, Russel's duties were light. He helped the clerk to assort and pigeon-hole letters and papers, and sometimes to give out the mail for an hour or two when business was unusually brisk; and he marked all the cases of peltries to be sent away, and on "lumber days," as the camp pay days were called, he remained in the store during the afternoon and evening.

At other times he did pretty much as he liked, and there were few forenoons that did not yield at least an hour or two to the slowly shaping timbers and planks. He selected a fine, straight tree for the mast, and cut it down and hauled it to the sawmill himself, where he had it squared. Then he rounded and shaped it with adze and drawing knife, and finished with sand-

paper and oil. It took him months to finish the mast alone, but the work was well and carefully done. Then there was the rudder and the rudder-post to fashion, and the frame-work for the steering runner, and the rails and box for the helmsman. It was nearly a year before everything was completed and ready for the runners and sail he was not able to buy.

As finished, his ice boat consisted of a triangle of planks, with the apex turned aft, and the base of the triangle square in front. Under each of the three corners the large skate-like runners were to be placed, the after one to be movable and controlled by a tiller. Into the center of the plank which formed the forward side of the boat, the mast was stepped, supported by rope stays running to the forward two angles of the boat. To this mast could be hung either a lug, lateen, sloop or leg-of-mutton sail, as he might choose.

Among the trees he had selected and cut was one which he found exceedingly hard to work. The grain was very close and almost like twisted wires. It had turned the edge of his tools so that they required continual sharpening. Finally he had laid the wood aside for oak, which would answer his purpose and not be so difficult to work. Now, one day, as he was debating the problem of sail and runners, a sight of this discarded timber gave him a sudden idea. But he took the timber into an unused corner of a store-room where he was not likely to be under the sur-

veyance of curious eyes. If the experiment proved a success he would not mind having it known, but if it did not he preferred it should be kept quiet. As yet he was only a tenderfoot in the country, and a fit subject for ridicule.

A week later he went to Mr. Buckler and asked if he might have some of the old sacking which came wrapped around certain of the goods, and which was always carefully removed and laid aside; but Mr. Buckler answered curtly that the company had use for it all. When he went out, Russel looked speculatively at a species of slender-trunked pine which grew on a hillside at a little distance, and especially at those trees which had dense, compact foliage.

About this time Schleight & Buckler received an order for a number of wild animals. A museum had been burned, and these animals were wanted to replace those lost by the fire. The order was urgent, and intimated that expense was not to be considered. Immediately all the hunters were notified, and extra inducements were offered to hasten success. But a week went by with only the capture of a pair of wolves; then came the report of three bears and a family of lynx being seen on an island thirty miles up the river, and the news was sent by swift messengers to the hunters in the immediate vicinity. Mr. Schleight himself went up to hasten capture.

"I CAN GET HIM THERE QUICKER THAN YOU."

Then nothing was heard for two days, but before sunrise on the third an Indian runner came with the information that Mr. Schleight had been badly hurt

could not do this; but for thirty miles up, the river was not less than half a mile wide, and was much wider lower down. With so much space, and with the smooth ice and steady breeze, he believed that he could use the tiller to make up for the inflexibility of the sail. To check the speed he had provided himself with a drag consisting of a mass of iron with a rough, jagged surface, connected to the boat by an iron chain.

Over the tree-tops the morning was beginning to break, and as he gathered headway and swept up past the company's wharf he heard a derisive shout, not unmixed with disapprobation at his going out when the head of the house was perhaps dying.

But a moment, and he had swept beyond them and even beyond a sight of the wharf. Ten miles up, and he was going at a high rate of speed, the wind slanting across his boat and the tiller holding firm. Ten miles more and he saw a dark speck in the distance, which rapidly resolved itself into a group of men bearing a litter. As he drew near he threw out the mass of iron, bringing the boat to a stop even sooner than he expected, and while the group was yet some rods away. By the time they reached him he had turned his boat to head down the river and arranged some cushions which he had brought in the box.

"Place him on these," he called eagerly. "I can get him there quicker than you."

The men laughed. "With a tree sail an' wooden runners," one of them sneered. "Why, boy, you're crazy."

But a moment, and he had swept beyond them and even beyond a sight of the wharf. Ten miles up, and he was going at a high rate of speed, the wind slanting across his boat and the tiller holding firm. Ten miles more and he saw a dark speck in the distance, which rapidly resolved itself into a group of men bearing a litter. As he drew near he threw out the mass of iron, bringing the boat to a stop even sooner than he expected, and while the group was yet some rods away. By the time they reached him he had turned his boat to head down the river and arranged some cushions which he had brought in the box.

"Place him on these," he called eagerly. "I can get him there quicker than you."

The men laughed.

"With a tree sail an' wooden runners," one of them sneered. "Why, boy, you're crazy."

But the injured man raised himself on the litter and regarded the boat curiously.

"Did you come up with that?" he asked.

"Yes, sir, in just an hour."

The man looked surprised.

"What, really!" he exclaimed. Then to the men, "Put me on the boat. The boy has been a good clerk, and I have confidence in him. And you know a good deal depends on my getting to a surgeon quickly. Never mind hurting me," as the men hesitated in lifting him, "only do it quickly."

Russel's face whitened a little as he took his place at the tiller, with the injured man on the cushions beside him. Coming up, he had only felt the exhilara-

tion of success and motion, now he suddenly realized the responsibility of his position.

But as the men grasped the boat and ran it out into the wind, and he felt himself gliding down the river, faster and yet faster, something of the old confidence began to return. From time to time he bent over the injured man, but always to meet with the same answer to his solicitous inquiry:

"I am doing very well, only hurry."

When they approached Upper Dam he again bent down.

"Shall I stop or keep on?" he asked. "If the runners don't give out I can take you to Enterprise in two hours, and then get back to Rube's Landing for the

mail almost as soon as I could go with a horse. If we stop here, it will be nearly two days before a surgeon can get to you. But of course there's a good deal of risk."

"We'll go on," said Mr. Schleight decidedly. "It is less risk than for me to stop."

On the wharf at Upper Dam a group of men were waiting for the litter to come in sight. When they saw the boat with pine tree sail and wooden runners sweep by, they looked at each other and laughed. But two hours later the boat ran alongside a wharf at Enterprise, and twenty minutes after that the injured man was under a surgeon's care.

(To be Continued.)

THE RETREAT OF HARRY'S BRIGADE

PERCIE W. HART.

Perhaps the title does not sound very fine. Of course, as a general thing, soldiers don't retreat unless they are beaten. But—however, I'll tell you all about it and you can judge for yourselves.

There are seventeen boys in Harry's Brigade, that is if you can count little Arthur Morrison, the drummer, as a whole one. Arthur is such a small boy that I scarcely know how they came to enlist him. He is only six years old his last birthday, and none of the rest are less than ten, and General Harry is fourteen. But Arthur can play a drum splendidly, though. His Uncle Jack taught him how to do it and his Uncle Jack was a drummer boy in the Rebellion, before he became a general. But hold on. By rights, I should begin with the highest in rank in telling you about the brigade; and here I am commencing with the drummer, the lowest.

A brigade, you know, is a small army. Not just a regiment of one kind of troops, but usually consisting of bodies of soldiers from various branches of the service. In Harry's Brigade there is a battery of field artillery, two regiments of infantry, a band and a staff. It is commanded by Brigadier-General Harry Bliss, called General Harry for short; and Jimmy Parsons is his aide-de-camp, with the rank of major. The battery of field artillery consists of two privates and a captain. This officer's name is Willie Stirling. They had to elect him captain or he would not have permitted the use of his pair of goats. The goats are used to drag the gun, instead of four horses as they have in the regular army.

The gun and limber look just like those in real war pictures. If you don't examine it too closely. Arthur Morrison's Uncle Jack showed the boys how to make it. For wheels they took flour barrel heads, and nailed battens across to hold the pieces together. Then they bored good-sized holes in the centers and fitted stout wooden axles, with wire nails put through gimlet-holes in the ends, for lynch pins. The gun is a big base ball bat, and the trail is made from a strong stick of wood, with a ringbolt screwed into the end, to slip over a hook on the side of the limber's axle. The limber has the same sort of wheels and axle as the gun, but with an old soap box fastened upon it for the ammunition chest and driver's seat. The pole from the goat's cart is handy to fasten upon the front of the limber. The whole business is painted a dark gray color. It looks almost like the real thing. But you can see it for yourselves and a good deal plainer than I can describe it, in the fine picture of Battery A of Harry's Brigade going into action, that the artist has drawn.

The infantry consists of two regiments, the First and Second, with four privates and one colonel to each. The privates, all except one in each regiment

who carries a flag, are armed with air guns and wooden bayonets to stick in the muzzles; and the officers have swords and paper-cap pistols.

There are two boys in the band, little Arthur Morrison, the drummer, that I told you about at first; and Fred Hayden, the fifer. It would be a splendid band, but Fred can only play one tune on the fife, and that is "Home Sweet Home. It's a pretty tune, but you can't march very good to "Home Sweet Home," at least, the way Fred plays it. But Arthur makes up for that by beating regular marching time on his drum.

Every Saturday Harry's Brigade has a drill. Arthur's Uncle Jack keeps a big stock farm, with lots of fine cattle and horses, and he lets the boys use one of the fields for a parade ground. Sometimes the old general and a crowd of other people come and watch the drill. But upon the particular Saturday that I am going to tell you about, there was something or other going on at the other end of the village, and the boys had the place all to themselves. Not that the young soldiers cared. Far from it. It did not seem real to have an audience watching them and clapping hands, when the brigade was supposed to be fighting a fierce battle.

And now for what happened upon this day.

It was clear and cool, with bright, blue sky overhead, and the little army never looked better, as it defiled along the road leading to the parade ground.

First of all was the band, with Fred Hayden playing "Home Sweet Home" on the fife, as quick as he possibly could, and Arthur Morrison beating away at marching time on the drum. Fred's father is very rich and had bought him a beautiful uniform all scarlet and gold and a big tall bearskin cap, just like the fines of the real bandmen wear. I tell you Fred looked splendid. Arthur had on his ordinary clothes, but with a great blue and gold sash that had been made for a tall man, around his shoulders. It was so long that it trailed on the ground and kept tripping the drummer every few minutes. That sash had a good deal to do with the disaster of the command, as I shall show, later on.

Behind the band came Brigadier-General Harry, accompanied by his aide-de-camp. Both of them looking very warlike with military caps and clanking tin-scabbarded swords at their sides.

Next followed the field battery, drawn by the two goats; with Captain Stirling driving, sitting upon the limber. The two artillerymen walked, one at either side of the gun. It wasn't exactly right to have an officer driving, but Willie was the only person that the goats would mind, so he had to do it.

Last of all were the two regiments of infantry, the privates marching with bayonets fixed and guns on the shoulder; the standard-bearers with their flags unfurled; and the colonels with swords in hand and pistols in their belts.

As soon as the brigade reached the field they swung into line and took position in extended order. Then Harry and his aide-de-camp went up and down the parade, attended by the commanders of the different

corps, and inspected them. After this the general and the band stood still, and the troops marched past; first at ordinary step, and then at the double. The goats did not like this last part of it very much and Willie had hard work with them, but the two infantry regiments performed the evolutions in fine style.

As soon as this preliminary drill had been gotten through with, the First regiment went out as skirmishers, the Second regiment formed in line of battle, and Battery A occupied a little piece of rising ground and made believe to throw shells into the enemy's position. In fact, a regular sham battle was fought out, and Gen. Harry at length announced that the opposing forces had been defeated with heavy loss.

This was fine fun while it lasted, what with firing volleys from the guns and charging across the field, the privates bayoneting the burdock leaves and the officers cutting off the heads of the tall weeds with their toy swords. But just when all the troops were pretty well tired out from the sport and lying down upon the soft grass to rest, before starting to march back home, another enemy and a real one, too, put in an appearance. It was a big bull, called Julius, very fierce and ugly-looking. He had broken out of his paddock, and probably attracted by the noise they had been making, now came charging down upon the halted command.

At the first sight of the vicious animal the goat team ran away, notwithstanding the best efforts of the three artillerymen. After breaking clear from the limber and gun, the goats finally reached home without even so much as a scrap of harness left upon their backs. But the troops of the brigade did not get off so easily. There was a good, strong fence close at hand, and the infantry could have run and climbed over it, and so been safe. But, unfortunately, the band happened to be several hundred feet nearer the roaring bull than the rest of the boys. Moreover, the brilliant scarlet uniform of Fred Hayden acted like a magnet upon Julius, for bulls become fiercer than ever at the sight of this rich color. Julius tore along, with horns to the ground, ready to toss and gore his victims, while the whole brigade set up a warning shout for the benefit of Arthur and Fred.

The latter was nimble of foot and ran like a very deer towards his companions. But Arthur was so little that he could not get over the ground very fast at his best, and the drum slung on his shoulder still further impeded his progress. But, worst of all, was the big sash. He had scarcely well started before it tripped him up and he fell full length upon the ground. He managed to scramble to his feet again, but the angry bull was almost upon him.

"First and Second regiments, charge!" called Gen. Harry, waving his toy sword aloft and gallantly leading his men.

All honor to Harry's brigade! There was not a single laggard!

Forming line as they ran and shouting at the top of their lungs, the little heroes flew to the succor of their comrade.

Julius, the bull, did not know just what to make of

THE GUN AND LIMBER.

this bold advance. He slackened his pace, pawed the ground viciously, and seemed undetermined about continuing his course. Profiting by this delay, the young soldiers reached little Arthur.

"Form square and prepare to receive cavalry!" shouted Gen. Harry.

Hastily fixing wooden bayonets in the muzzles of their air guns, the little command formed up, with the small drummer in their midst, the front ranks kneeling with pieces braced upon the sod, the rear rank men and officers holding their guns and swords at the charge.

At sight of this bristling array of defensive weapons the alarmed bull grew still more cautious. He con-

tinued to bellow savagely and to gallop around and around the small square, evidently seeking for some weak point at which to attack. But the soldiers of Harry's brigade stood shoulder to shoulder and back to back, and the efforts of Master Julius were all fruitless.

Slowly and steadily, the little phalanx retreated. Step by step they went, followed sullenly and persistently by the infuriated bull. But at length the stout fence was reached, and one by one the boys scrambled over it, until all were safe.

Then they gave three cheers for Gen. Harry. And little Arthur Morrison and the General gave three cheers for the brigade. And they marched back home.

"FORM SQUARE AND PREPARE TO RECEIVE CAVALRY!"

We Send a Boy Reporter to the Paris Exposition.

Every boy who reads THE AMERICAN BOY will be able to see the great Paris Exposition that opens in April through the eyes of a boy. We have employed an American boy reporter to visit the Paris Exposition and report for us what he sees. This will be much better than having it told to us by men. Boys are interested in things that men overlook. Boys see things that men do not.

Now if there is anything about the great Exposition that any of our readers desire particularly to know about, our boy reporter will tell about it. It is not at all unlikely that, after making an extended visit to the Exposition, our boy reporter will visit other parts of the old world and tell his story every month in these pages. We are sure that the boys who read this paper will appreciate our efforts in their behalf.

PATRICK BOGAN CASH

MISSING AT MURFREESBORO.

The fifth story of a series entitled "Stories of Boy Heroes."

By ANNIE ROBINSON WATSON.

It is very hard for the boys and girls of to-day to realize that only a short time ago, between thirty and forty years, a bitter war was raging over the fair southern states of the Union.

They have felt something of the enthusiasm and excitement caused by the Cuban war, when brave American soldiers enlisted under the "Stars and Stripes" to fight for the cause espoused by their country. But this does not make it possible for them to picture the sadness and agitation of those days when in the Civil war brothers went out from the same fireside to fight against each other; when men of the same blood, but living in different parts of the country, north and south, met on the green fields of Kentucky, Virginia and their sister states, and fought the bloodiest battles the world has ever seen.

No soldier known to history has excelled the American in daring and endurance, and on the hard-fought fields of the Civil war were heroes on both sides, of which the Nation is justly proud.

Some of these heroes were only boys, and in the varied scenes of life, whether in action or in camp, they were so earnest and faithful in the discharge of duty, so loyal to the banner under which they fought, that surely a memorial should be erected to the boy heroes of the conflict. If this is not done, at least they should be kept in loving memory by the youth of the land.

To one of these boy soldiers this sketch relates, Patrick Bogan Cash. He was only 16 years old, a fair haired, blue eyed stripling, descended from the best of Virginia's patriots who fought and bled in the struggles of the Revolution. The Spotswood, Dandridge, and other historic lines met in his blood, and he was courageous as a young lion, but tender-hearted as a woman.

He volunteered in the Thirteenth Tennessee Regiment, Confederate, and went into service, as did many of the southern boys, with his old negro body servant to watch over and wait on him. Ephraim was glad to go with his young master, and felt that no other duty in life was so important as serving him.

The time came for their departure, and the family circle gathered about the gate, which led from the beautiful grounds out to the far fields where cannon shot and shell were bringing death and destruction to thousands. The horses were pawing impatiently, and a deep silence fell for a moment upon the little group.

"Mother," said Patrick, turning back for a last farewell, "I will never surrender, and I will never be taken alive!"

She threw her arms around the boy and kissed him passionately, then, as the old servant bowed low and murmured "Good-bye, Mistis, good-bye," she said brokenly, "Ephraim, remember—remember—do not come home without your young master; dead or alive you must bring him back."

"Yes, Mistis," Ephraim replied solemnly, "de Laud heppin me, I will."

It was not long before the Thirteenth Tennessee was on the bloody field of Belmont. The shot and shell flew fast and with deadly aim, and here and there hand to hand encounters ended many a noble life. Our young soldier was fighting with a detached squad of men and suddenly saw a Federal officer dashing toward him.

The officer, as he approached, lifted his sword and called quickly, "Surrender! boy, surrender!"

"Surrender yourself!" answered the young Southerner, as he leveled two revolvers.

"Surrender!" again cried the officer, leaning forward with a wave of his sword, but on the moment two shots from the pistols cut the air.

The aim was true, and with a momentary shudder, the officer fell from the saddle pierced by both balls, dead, his sword bathed in his own blood. His eyes seemed even in death to be fixed upon the face of the boy, and the two were so near, the encounter so sudden, that the young fellow dropped upon his knees, crying out in bitter agony, "Oh I didn't want to kill you, I didn't want to do it, but you wouldn't surrender. Oh, I'm so sorry, so sorry!" and he bent over the prostrate form in a flood of passionate tears.

This, then, was war. He had killed a human being, one who had never harmed him, nor done him wrong. It was his first actual experience of the "horrors of war."

Suddenly a part of his command surged by, and one of his friends stopped and knelt at his side. "What are you doing?" cried his comrade, "what is the matter, wounded?"

"Oh, no, but see what I have done; this fine fellow is dead, but I had to do it, he would not surrender!"

A pitying smile passed over the face of the veteran. "Come on! Come on!" he cried, fastening to his side the sword of the Federal officer, which was still red with blood. "Come on; there's no time to wait here!"

A week or two later the mother of the boy received

by a messenger a package. It contained a beautiful sword, and on the hilt was fastened a slip of paper with this inscription:

" 'Twas on that dread immortal day
I met the Federal band;
A colonel drew his sword on me,
I tore it from his hand."

It was the sword of the young Federal officer, who had been killed by her boy. It had been sent her by a captain in the Thirteenth Tennessee Regiment.

Weeks passed by, the fight of Murfreesboro was on and this regiment was hotly engaged. The fortunes of the South hung in the balance, and the line of fight was wavering, when Lieutenant Rolof Duke sprang forward, rallying the men. Just at his side was our young soldier crying, "Come on, boys! come on!"

Ephraim was not far away. He saw his young master disappear in the smoke and confusion, and heard his clear, ringing voice calling to his comrades, "Come on! Come on!"

At home news was received of this battle with the information that many were wounded, many killed, and some missing. Days passed and the mother waited and waited for news of her boy, but it did not come.

One evening she stood in the twilight on the broad gallery looking into the shadows, listening, watching, waiting. Surely she must hear from him soon, some word or token must come, she thought.

A mysterious feeling crept over her; the feeling of an unseen presence, yet there had been no sound save the birds stirring in the vines that quivered near by, and no one was in sight. But thrilling with apprehensive dread she waited, and suddenly a low, half-stifled sob reached her ear. Turning, just behind her, kneeling on the floor, she saw dimly a figure rocking to and fro. It was old Ephraim, his face hidden in his hands between which the tears fell slowly.

A moment there was silence, then she cried hoarsely, "Ephraim! Ephraim! Your young master! where is he?"

"De Laud only knows, Mistis, I done look fur him

ev'ry whar; he ain' 'mong de dade an' he ain' 'mong de livin'. I done spen' all dese days sence de fight a sarchin' fur him, but he done gone—gone. De Laud hab mercy on us! de Laud hab mercy!"

Then a long, low wail rent the air. The mother and the faithful old servant together mourning the loved one they would never see again until the last great day.

"Among the missing at Murfreesboro," that was all they ever knew. He had said he would never surrender, never be taken alive.

A little later, through the influence of Northern friends, every prison where Confederate soldiers were confined was searched. She thought he might have been captured and imprisoned. The poor mother could not believe him dead, her dear, her beautiful boy, the brave, tender-hearted young soldier, but he was never found.

The mother has long ago gone to join him in the land of unbroken peace, but the sword sent her from the battle field of Belmont is kept as a sacred relic by those who are left of the old family circle!

THE BOY TRAVELER.

ANNOUNCEMENT—We take pleasure in announcing that we have secured a series of articles from Harry Steele Morrison, who is known as "The Boy Traveler," in which he will describe his adventures as a 16-year-old boy on a tramp through Europe. The boy was living in 1896 in a small town of Illinois, but in that year became suddenly ambitious to go to Chicago to work. He lived in that city for a year, working as office boy at \$3.50 per week, and then, being determined to become a reporter, he started upon his famous trip to Europe. He had saved \$25, and with this money started for New York, stopping off at Washington where he was received by the President and Mrs. McKinley. From New York he worked his way to London as a pantry-boy on a cattle-ship, and arrived in England, where he worked for his room and board in an inn. He succeeded in interviewing Mr. Gladstone, Queen Victoria and the King of Belgium. He visited the late President of France and the Lord Mayor of London, and altogether saw more famous men than any other person could possibly have interviewed. He was lost in the Alps and had many startling adventures of various sorts. The trip was remarkable in every way. The story of his achievements is extremely valuable. It will give American boys a knowledge of the opportunities which are open to them, and teach them that with industry and courage, the boy who is early thrown upon his own resources may rise by his own efforts and make a success in life.—The Editor.

CHAPTER I.

Our house at home was surrounded by a large yard that extended back to the railroad which ran from our little town to the great city to the north. It was very fortunate for me that we did have a big back-yard, for otherwise I might have had less money with which

ON THE ROAD.

to buy my clothing and school-books. As it was, the yard was an excellent garden-spot, and during the spring of 1896 I was very busy raising lettuce and radishes and other "green stuff" to sell to the neighbors. This was the fourth season I had spent in gardening. I began selling vegetables when I was ten years old, and now I had quite a number of customers among the townspeople. Every morning before school I started out with my basket, and when I returned home at eight o'clock I nearly always had thirty or forty

cents in my pocket for my morning's work. I always made enough in this way to pay for my new spring suit, and to buy what books I needed at school. Then I had money enough left to lay up a few dollars in the bank and to go to the circus and the dog and pony show when they came to town.

In the winter, when there were no vegetables to sell, mother helped me to make mince-meat, and I sold that instead. We had some horse-radish in the garden, too, and I grated that in the winter and sold it at ten cents a teacup full. So it was that all the year round I managed to have something to sell to my customers.

In 1894 there had been established in our town a "Free Public Library." This institution soon became exceedingly popular, and from one small room its quarters were soon enlarged to two larger rooms. More and more cards were issued every week and it

kept the librarian very busy indeed trying to serve the townspeople with reading matter. Saturday was the very hardest day in all the week for the librarian, so the library board generously agreed to allow her an assistant for that day. It was decided that this assistant should be paid twenty-five cents for each Saturday, and when I heard this I determined to try to secure the position. To be sure, twenty-five cents was not a large sum of money, but I didn't have anything in particular to do Saturday afternoons, so I wanted the place. I knew that in a public library I would be sure to learn a great deal about books that I had never known before, and the librarian was an educated woman, who could help me in many ways. This was in reality the chief reason why I desired the place.

When I made the application the library board, after some delay, decided that I would do. I was only twelve years old, but this fact did not seem to stand in the way. The board probably realized that it would not be easy to find an older person who would work for twenty-five cents. My work at the library was decidedly interesting. I certainly had no room to complain that I hadn't enough to do. I kept the books straight upon the shelves, arranged the latest books upon the counter, and did all I could to aid the people in their selection of reading matter. It took me some time to learn the names of all the books, and I made some ludicrous mistakes before I did learn, but after a time I became very efficient in helping our patrons select their books.

I began work at nine o'clock on Saturday mornings and worked until twelve. In the afternoon I began at two and worked until six. In the evening I was there from seven until nine. I was busy every minute of the time. If there was no one to be waited upon, there was always a pile of returned books to be placed upon the shelves, and the librarian was never at a loss to find work for me to do. Every Saturday night I went home with twenty-five cents in my pocket and something that I had learned during the day.

After I had been Saturday assistant in the library for a time, the old colored man who acted as janitor died, and it was suggested that I take his place. I would receive as janitor the munificent sum of two dollars a month, and this, added to my weekly wage of twenty-five cents as assistant, would raise my monthly receipts from the library to three dollars.

I accepted the new position without much thought of the work I would have to do. I had no idea what my work would be, but I was not left long in ignorance. The rooms were open on three days of each week and it was my duty to have them in "apple-pie order" on those days. One room had a Brussels carpet on the floor, and this had to be swept every-other day. The other room had a bare, wooden floor, and this I kept carefully scrubbed, and as clean as possible at all times. The windows were usually dirty, according to the librarian, but I labored faithfully to keep them clean. Then there were the fires to be made in winter. The library was on the second floor of the building, and I had to carry fuel up a long flight of steps. But this was not the worst thing about the position. For many months I scrubbed the flight of steps at the front of the building, though it was not the place of the library to have this done. The stairs were dirtied by members of the lodge which met on the third floor, but the librarian insisted that I keep them clean. I did this for a long time, but finally rebelled. "I won't do that any longer," I said one day. "Very well," answered the librarian, "you can give me your keys."

I gave them over, and thought I was out of the library forever. Mother was persuaded to have me return, but when I went back I didn't have the stairs to scrub.

All the time that I was acting as janitor and assist-

ant in the library, I continued my vegetable and mince-meat business. I was going to school at the same time, studying hard in the difficult eighth grade. But, strange to say, I got along better at school while working hard outside than I ever did before. I seemed to have an increased capacity for study, and rather enjoyed being kept so busy. I didn't have even my noon hour to myself, for then I had to go to the library and start the fires, so that the rooms would be comfortable when opened at two o'clock. The early morning, as I said, was spent in making the rounds of my customers. Every afternoon when school was out there was something to take me to the library. My evenings were for the most part spent in study.

The summer was the happiest time at home. I managed then to have more time to play, and we boys in

Harry Steele Morrison

THE BOY TRAVELER.

our neighborhood managed always to have good times. When a circus came to town it was almost certain to unload behind our house, and I could always find some way to work for admission to the "greatest show on earth." Sometimes I carried water for the elephants, and sometimes I passed bills. Then occasionally some of the showmen would want errands run to the laundry or the drug store, and in payment for these errands I always received tickets. It was seldom indeed that I paid to go in.

The most fun of all during the summer, to me, was the fun of camping out for a day or two at a time. There was a very small stream of water about five miles from town, and many a day two or three of us boys in the neighborhood would tramp out there to play at camping. To be sure there wasn't always water in the bed of the stream, but there was always trees about, and we could imagine that we were in some unexplored wilderness. We always brought with us a few cooking utensils and after we had built a fire we cooked our meals. We didn't have a varied bill of fare. Eggs and fried potatoes were all we usually attempted to cook, and I ate so much of them through the summer that I finally sickened of them and couldn't eat any for a long time. When we remained out over night, which wasn't often, we stretched ourselves in blankets and slept on beds of twigs and leaves.

My experiences in walking to the creek and camping out were to be of great value to me later on when

I lived alone in a great city and when I went through Europe afoot. But at this time I had no idea of ever going abroad, or even of working in the city.

In the fall of the year there was always the fair at our county seat, twelve miles away, and I always attended that. The last time I went I came home ignominiously in a cattle car. I had gone over with enough money to pay all my necessary expenses, but became infatuated with the chances for making money in a nickel-in-the-slot machine, and lost all I had. This was my first and last lesson in gambling. The impression left upon my mind by this experience is still quite vivid. When the last train left for our town I had no money with which to pay my fare, and after a great deal of hesitancy I decided that the only thing to do was to return in one of the stock cars. I met some tramps, who assured me it would be an easy thing to do, so I crawled in. The tramps were shrewd enough to hide themselves under the roof, and I remained in the lower car. After the train had gone a few miles the brakeman entered, and I was almost overcome with fright. It was dark, and he didn't see me at first, but after a minute his lantern shone full upon my scared white face, and he came over and shook me roughly. I could have cried out, but I kept quiet and waited for him to speak. "Thought you'd steal a ride, did you?" he demanded. "Well, I've a notion to kick you off right here." I spoke up now, and told him tremblingly that I had no money to pay my fare or I would have done so. He seemed to believe me, and finally went off. Then one of the tramps called down from his hiding place, "Good boy, you are fer not squealin' on us. You're all right, see?" I was relieved when the train entered the outskirts of our town, and when I was safely on the ground I made up my mind that I had stolen my last ride.

But in spite of numerous adventures, life in our little town soon became insufferably dull to me. I was beginning now to feel discontented with all my surroundings. It was monotonous to be always cleaning the library and always peddling things among the neighbors. I had done this long enough. It was time I was doing something new.

Many a time I stood at the back fence and watched the trains speed by toward the great city, and I wished with all my heart that I was aboard one of them. I felt sure that I would be very happy if I was only working in the city. There would be so much to see there, and so much that I could learn. And I would

be sure to make great progress, once there. While working in the public library I had read a great many books for boys, and in many of these books boys had left their homes in small towns and gone to large cities. And—a very remarkable fact—all of these boys in the books, had become rapidly rich and famous as soon as they reached the city. I didn't expect that I would become rich and famous as rapidly as these boys, but I did think I would make more rapid progress than I had made at home.

HOME OF THE BOY TRAVELER.

This idea of going to the city was more in my mind every day as time went on. I thought of going as I worked in the garden, and I thought of it as I swept out the library. I found my mind wandering continually to the great city streets, with their tall buildings and crowded sidewalks. I could even imagine myself seated in an office in one of those great sky-scrapers, working for some elderly man with gray whiskers, who took an interest in boys. I hadn't decided yet what I would like to do in case I went, but I read the "ad" columns very carefully in the morning papers, and noticed that a great many boys were wanted to fill positions of various kinds. The only thing that worried me was the fact that most employers were offering only three and three and a half dollars a week to boys, and I doubted if I could live upon so small

a sum in so large a city. I was willing to try it, however.

Finally I made bold to mention the plan to mother. She laughed at me in the beginning, as did all my friends. "You must be crazy," she said. "There are a plenty boys born and raised in the city, and who can't get work, without you going up there." And so the subject was dropped for that time. But I didn't cease thinking about it, and finally mother became so tired of hearing me ask for her consent that she said I might go. "But I will expect you back in a week," she said, and this was the general expectation in the neighborhood. Everyone understood that I was allowed to go simply to satisfy my longing, and it was generally taken for granted that I wouldn't be able to get work.

Now that it was decided I was to make the effort, my days were filled with happiness. There was so much now to look forward to, and so many plans to make. I was determined to go the very next day after school closed, for I needed no delay. I had saved fifteen dollars from my vegetable money, and this was enough to pay my expenses for a time.

At night I wasn't so anxious to go. When I awoke suddenly from a sound sleep, and realized that in a few days I would be in the great city alone, I felt less ambitious to make the attempt. But my fear disappeared with the morning, and my determination returned. There were but few preparations to make. I gathered together my few belongings and packed them in a cardboard box. I decided to take with me a few cooking utensils, some of the same we boys had used when camping out. I planned to do light house-keeping in the city, and to this end carried with me a small coffeepot, a stew pan and a skillet. With these and an alcohol lamp, I thought I could get along, and I little thought that before returning home these things would travel over Europe.

At last came the great, eventful day on which I was to leave home. I was up very early in the morning, and soon everything was ready and I started for the train. None of us were very tearful. I was delighted to be at last leaving for the city, and the others thought I would certainly return in a week or two. It would have been a more unhappy time all-around, no doubt, if we had but known that I would travel many thousands of miles, and over two continents, before returning home again.

(To be Continued.)

LIBERTY HALL, ELIZABETHTOWN, N. J.

"LIBERTY HALL."

Near Elizabethtown, in New Jersey, stood during the Revolution—and, I believe, still stands—the elegant mansion known as "Liberty Hall," the seat of William Livingston, one of the most effective of the "war governors" of the struggle for freedom.

William Livingston was a descendant of that famous

*The second of a series "Notable American Houses," by W. J. Roe.

family whose progenitor in this country was Robert, first "Lord of the Manor of Livingston" on the Hudson river. A patriot to the heart, William left New York and took up his residence in New Jersey, from which state he was elected a delegate to the first Continental Congress.

In 1776 the people, thoroughly weary of Tory rule, tenderly escorted the insincere son of their beloved Benjamin Franklin across their borders into Connecticut, and elected Livingston chief magistrate in his

stead—an office which he continued to hold, term after term, until his death.

Livingston made himself so extremely active in the cause of the colonists as to greatly excite the anger of the British, who made not a few attempts to seize his person, none of which, however, were successful. It is even said that Sir Henry Clinton set a price upon his head, though this tradition wholly lacks confirmation. Livingston himself, who was not only a patriot, but a thorough going partisan, believed, or professed to believe it, and wrote a stinging letter to Clinton charging him with the perfidy. Clinton returned a prompt answer in which he said that even if he had contemplated so foul a crime as assassination, it would not have been to attain so trifling an object as the life of the governor.

Probably this passed in New York for the severest of satire and the most delicate wit, while it doubtless had the effect to make Livingston detest Great Britain and all her works more than ever.

Livingston's life is an example of a thorough partisan and an incorruptible man, worthy to be attentively studied, when so much that is political is depraved.

JOHNNY SLEEPY-HEAD.

They call me Johnny Sleepy-Head.
The reason why, I think,
Is 'cause I like to lie in bed
For "just another wink."

My father makes the fire below,
And calls, "Come, Johnny;" then
I say, "Y-e-e-s, sir"—and first I know
I'm fast asleep again.

Then mother calls, "Come, Johnny dear,"
So very soft and kind,
It almost seems that I don't hear,—
At any rate don't mind.

Then father calls "John Thomas!"
In a tone that makes me quake;
I pull my pants on wrong side up,
Before I am awake.

HOW TOMMY FELT.

It was my boy's sixth birthday,
And how proud he was, the lad,
Of his pair of tiny breeches,
Quite the first he'd ever had!

And when he knelt before me
To say his evening prayer,
I gave him six big kisses
And I stroked his dear soft hair.

"Oh, tell me, Tommy darling,"
Low I whispered in his ear,
"Do tell me, are you happy
That you're now a man, my dear?"

The boy looked straight up at me
As he tightly clutched my skirts.
"Oh, mother," Tommy answered,
"I'm so happy, it—it hurts!"

—Harper's Bazar.

WHAT BOYS ARE DOING.

Arthur J. Griffith
5 to lightning calculator.

ARTHUR GRIFFITH'S REMARKABLE FEATS OF MEMORY AND CALCULATION.

Millford, Ind., is the birthplace and home of Arthur Griffith, a boy of nineteen, who has the right to call himself the "lightning calculator." Items of interest regarding him have been published from time to time within the last few months in the daily and weekly press of the country, some of the New York papers giving extended descriptions of the Indiana prodigy and his work.

In the January number of THE AMERICAN BOY we said a word or two about this remarkable boy. He is worthy of more extended notice. The editor of THE AMERICAN BOY has some letters from the young man. In one of which he says:

"My home is at Millford, Ind. I early discovered for myself six methods for addition, fifty for multiplication, and six for division. I know the multiplication table up to 130. I can multiply in my head any numbers anybody gives me. I can run down three columns in addition at once. Am now staying at the Indiana University at Bloomington, Ind. I will get all this arithmetic copyrighted in my name and sell all of it that I can, so that I can go to some large business house and get a position. When I see a freight train go out that has not more than twenty cars on it I can hold all the numbers on all the cars after it has gone. I have been with many professors of high schools and not one of them carries so much arithmetic in his head as I do in mine."

Dr. Lindley, the head of the department of psychology in the Indiana University, investigated the marvelous feats of memory and calculation exhibited by this boy. He told his classes afterward that the boy's powers are far beyond those of anyone on record, notwithstanding the fact that the boy had attended school only up to the eighth grade. Dr. Lindley certifies to the fact that the boy knows the multiplication table up to 130, has a knowledge of the squares up to 130 and the cubes to 100. He knows the fourth powers up to twenty, and can multiply to five place numbers in six seconds. "His particular skill," says Dr. Lindley, "is in finding short methods. He can repeat in their order any number of figures read to him up to twenty, and can correctly multiply any two amounts each consisting of seven figures in eight seconds. He can mentally abstract the cube root of any number in ten seconds."

The boy is the oldest of a family of six children. His father is a stone mason in moderate circumstances. Those who have searched have been unable to discover any record of physical or mental peculiarity or defect in his ancestry. As soon as he was able to talk the boy began to count. Before his fifth year he was able to keep a record of the number of grains of corn he fed the chickens. The total for three summers, according to his childish count, was 42,173 grains. He says he could remember weeks afterward how many grains he fed the chickens on a given day. When seven years old, after a severe illness, he became epileptic. Partly because of this misfortune he did not enter school until his tenth year. At school he has made a fair record in general and his record in mathematics has been simply marvelous. When about twelve years old he began to develop methods of rapid calculation. While his memory is remarkable, it does not compare with that of other rapid calculators that might be named. In rapidity of calculation he ranks among the most rapid. His rapidity, it is said, is due not to his single processes, but to his short cuts. He is an inventor. He is a discoverer of methods, remembers his methods well and is able to describe them. Professor Bryan, of the University of Indiana, says: "The secret of his speed in figures

lies in his doing fewer things than other people have to do in order to obtain results. There have been many mathematical freaks, but none like Arthur Griffith, who knows why he does a thing and can tell you how and when he got his methods. To show his method, take this example: 1161 multiplied by 963 by the old method requires twenty-seven mental operations; Arthur does this in two mental operations. 384 multiplied by 421 requires by the old method twenty-one mental operations; Arthur gets his result in two mental operations. To get the third power of 995 requires sixty-nine operations by the old method; Arthur does this in six. To get the fifth power of 991 requires 356 mental operations; Arthur gets the result in thirteen." Professor Bryan says that if he can make the next scientific step to algebra he will be a new man, and the most wonderful prodigy of his type on record.

The professors are anxious to get suggestions in regard to the best method of employing and developing this boy's talents. They want him to write a book and describe the methods of rapid calculation which he has worked out. They are trying to discover whether the things he does have ever been done by others. Without ever having heard of algebra, he has discovered the binomial theorem and applied it to arithmetic. If he can grasp algebra, there will be no limit to his powers. The boy himself says that it is his habit to always note the numbers on everything that he sees, as freight cars, numbers on delivery wagons, telephone numbers, etc. While riding with Dr. Lindley on a train he saw on a car on a passing train the number 58,283. On still another car he saw the number 31,423. He multiplied these two numbers together while they were passing the train, giving as the result 1,831,426,709. He says he can never remember dates in history, while he can locate every town in the state and draw a map of the state from memory, accurately locating all its points. The boy is ambitious to get an education and do something in the world.

C. H. CAHOON, ALTERNATE. F. L. HEWITT.
T. F. COONEY. M. H. SULLIVAN

BOSTON UNIVERSITY LAW SCHOOL BOYS BEAT THE HARVARD WRANGLERS IN DEBATE.

In January a joint debate on the Boer question was held between the Boston University School of Law and the Junior Wranglers of Harvard University. The debate was not an intercollegiate one, in the sense of being arranged by the two universities. The challenge for the debate was issued by the Junior Wranglers of Harvard to the William E. Russell Class of the Boston University Law School. The Harvard men supported the proposition that the claims of Great Britain in the present controversy with the South African Republic are justifiable. The Boston University men fought for the Boers, on the ground of treaty rights, based on international law. Both sides showed careful preparation.

The presiding officer was Hon. Josiah H. Benson, Jr. The judges were: President Elmer H. Capen, of Tufts; ex-Governor John Q. A. Brackett, and Assistant Attorney-General Franklin T. Hammond.

The Harvard speakers were Henry P. Chandler, of Indian Orchard, Mass.; Waddill Catching, Louisville,

Ky., and Walter S. Heilborn, Boston. The B. U. men were T. F. Cooney, of Providence; M. H. Sullivan, of Boston, and Fred L. Hewitt, of Wollaston, all of the senior class in the law school.

Each speaker was allowed twelve minutes in his opening speech and five for rebuttal, and was very promptly notified by the chairman at the expiration of his time.

The judges announced a unanimous vote in favor of the negative.

RECEIVED THE PRIZE FOR THE BEST BIOGRAPHY.

The Shelby County Leader, Shelbyville, Ill., offered a money prize for the best biographical sketch sent in by a boy or girl residing in Shelby County. The prize was won by Claude Burgener, of Pleak, Ill., fifteen years old.

A BOY MINE HERO.

A few weeks ago the lowest levels of the No. 1 shaft in the Isle Royale Mines were flooded by water from an abandoned shaft in the Old Isle Royale Mine, which was broken into by a blast in the seventh level of the No. 1 shaft. At the first warning all but three men in the mines escaped. John Schulte, a boy of sixteen, at the risk of his life slid down the ladders and notified those who were working at the bottom of the shaft, and all escaped uninjured.

A LITTLE CRIPPLED BOY WHO PAINTS.

The youngest pupil ever admitted to the School for Crippled and Deformed Children in Boston is Joseph Crowley, now a nine-year-old boy, but at the time of his entrance in the school, five years old. The little fellow's sufferings have been almost constant since he first began to walk, when by a fall he received an injury to his spine. One is filled with wonder at the marvelous patience, even cheerfulness, with which the little fellow endures his troubles. He has developed extraordinary skill in penciling and painting. His work in this direction serves to divert his thoughts from his physical condition. He is a great reader, and the books that he receives from kind friends have enabled him to bear up like a veritable hero. Some time ago, one of his friends, who was about to travel in Southern Europe and the far East, gave to him a book descriptive of those regions. The gift was made that the little fellow might mentally pursue the distant journey with the giver of the book. His friend writes him letters from abroad, and these, together with the book, make him well acquainted with distant lands; so while the little invalid's body has been growing feebler, his mind has been strengthened and invigorated.

CALDWELL'S FLAG BILL WAS SUGGESTED BY A LITTLE BOY IN OHIO.

When John A. Caldwell, ex-mayor of Cincinnati, was a member of Congress, he fathered the bill that later became a law, making it an offense to print advertisements on the national flag or to deface it in any way, says the McKeesport (Pa.) Evening Times.

Behind the passage of the bill is a pretty little story showing how the words that fell from the lisping lips of a patriotic little boy suggested the law.

While Mr. Caldwell was a candidate for Congress and just before his election, a parade of some character was given in the city.

One of the most interested lookers-on that day was Daniel Dehner, son of John Dehner, a United States gauger, who lives in Home City, Ohio.

The little fellow is unusually bright and observant, and from his earliest recollection has been taught by his mamma and papa to revere the name of Uncle Sam and respect the Stars and Stripes.

The day of the parade the boy was looking at the decorations hung out by various business houses, and on some of them he saw the names of different kinds of goods offered for sale. He thought the printed matter marred the beauty of Old Glory, and, turning his face up to his papa, whose thumb he was holding at the time, he exclaimed:

"Papa, don't you think it is wrong to put pictures and letters on the flag of our country? The flag is not near so pretty that way, is it, papa?"

The child's observations, through friends of his father, reached the ears of the future congressman, and one of the first things that Mr. Caldwell did after taking his seat in Congress was to frame a bill making it an offense to convert the flag of the nation into an advertising medium.

A YOUNG TYPOGRAPHER.

Master William Slocum, the seven-year-old son of Fred Slocum, the well-known publisher of the Tuscola County Advertiser, at Caro, Mich., seems to have early developed ability along the typesetting line. He first began by setting up pica borders in em lengths, and for the past year has averaged about a column of leaded brevier each week, being paid therefor at the rate of one-half cent per line, pasting his string and receiving his envelope with the balance of the help on Saturday night. Of course, his working hours were varied with those

for play, the latter being largely in excess of the former. A few weeks ago George E. Miller, the Washington representative of the Detroit News and Tribune, with his wife and two little boys, spent Sunday at the Slocum home. They were about the age of young William, and so on Sunday afternoon he asked for the keys to the printing office to show his young friends "his" office. A couple of hours later the boys came back to the house with about a dozen cards like the one herewith, and careful inquiry developed the fact that young William had, unaided and alone, set up the form, in his 13-em stick, with no suggestion from anyone, justified it, put it on a small jobber and printed the cards for the boys.—Inland Printer.

A SMART CHINESE BOY.

There is a public school for Chinese pupils in San Francisco, Cal. Some persons will be surprised to learn that at the recent examinations this school reached a higher percentage than any other public school having no grade higher than seven. The percentage was 100.

One of its pupils, Wong Bock Yue, attained a higher percentage than any other pupil of any other grade or color in the city. Last month we gave a picture of Robert Dougherty, who received 94 per cent, but Wong Bock Yue received 97. Several of Wong Bock Yue's classmates gained as high a percentage as young Dougherty, who was the highest white boy. The seventh grade of the Chinese School ran from 84 to 97. In the fourth grade (primary) the individual percentage of 99 was attained, while no pupil ran lower than 82. In some of the White grades pupils ran as low as 0, while one entire grade averaged only 16. When we consider that Wong Bock Yue had, approximately, 36,999 competitors, his record is a wonderful one. The presiding teacher of the school is Miss Rose Thayer. She is assisted by five associate teachers. Her pupils number 150.

We have received a letter from the superintendent of schools of San Francisco, reading as follows:

San Francisco, Cal., Nov. 10, 1899.

Mr. W. C. Sprague,
"American Boy,"
Detroit, Mich.

Dear Sir:—

Replying to your favor of the 27th ult: Of the 88 schools in this department, one is devoted to the Chinese, and located adjacent to the Chinese section of the city. In last May-June questions were issued from this office under the direction of the Board of Education for the examination of fourth-ninth grades inclusive, as a basis for promotion and grading. Teachers of the next higher grades were the examiners, the ninth, and highest grammar grades, examined in the High Schools. Pupils' papers and reports were forwarded to this office, and to the astonishment of all, the Chinese pupils seemed to have made a remarkable record; that is, in the percentages of promotion in classes and average of individuals; in grasp of subject, power of expression and excellence of penmanship. This was the more surprising, considering the environment of the children when out of school. The Chinese pupils hear no language but the Chinese at home or about their plays; observe only such scenes as are in the Orient; and more remarkable, generally attend a school conducted in their own language, each day, after their dismissal from the public school. A local editor accounts for this success by the attitude of parents, the Chinese papa and mamma both being ready, he surmises, to assist by disciplinary measures in the preparation of home lessons, and support of teachers, making it a point to keep informed of the progress of their children.

The capacity of Wong Bock Yue could hardly be judged as compared with that of Robert Dougherty, because these boys were in different grades. The first obtained 97 per cent. in the seventh grade, average of five studies, and the latter 94 per cent. in the ninth grade. Again, the first was in a class of much smaller number of pupils. There is much credit due to Miss Rose Thayer and her assistants who manage the Chinese school, as well as to Miss Nellie Sullivan of the Mission Grammar School, who prepared Robert Dougherty to carry off the highest honors

of all the ninth grade pupils. In this department there are about 1,000 teachers, imparting instruction to about 40,000 children.

Very respectfully yours,

R. H. WEBSTER,
Superintendent of Schools.

By L. A. JORDAN,
Asst. Sec'y Board of Education.
(Superintendent's office.)

The editor of THE AMERICAN BOY recently heard Rev. Dr. Ashmore, for thirty years a Chinese Missionary in China, say that the Chinese mind was equal, if not superior, to the American. The people of San Francisco have a demonstration of this before their very eyes.

YOUNG INVENTOR GETS \$5,000.

Abraham Allan Hendrickson, twenty years of age, son of John Hendrickson, of St. Albans, Vt., has sold all the patent rights in an exerciser invented by him and known as the "Hendrickson Exerciser" to Dr. E. Read Partridge, of 33 Union Square, Manhattan, for \$5,000. Hendrickson has had his exerciser patented in the United States, and has filed caveats in Great Britain and Germany. As Hendrickson is a minor, his father acted as his guardian in the transaction. Young Hendrickson has several other inventions about to be patented, which, it is said, are very valuable.

JAMES S. MOFFAT, THE YOUNGEST AMERICAN HISTORIAN.

So many histories of the Spanish-American war, good, bad, and indifferent, have been rushed into print during the past year that the topic has ceased to have interest for many people, but an exception will be made, we are sure, in favor of a booklet on the subject now before us, which has the unique distinction of having been written and published by a lad only fourteen years of age, Mr. James Stanley Moffat. Without going into critical details, we may say that some of the histories written by the "grown-ups"

have less actual and intrinsic merit than this little book. In its style, grammatical construction and other literary features it is, in fact, a remarkable and highly creditable production for a mere boy. It is clear, comprehensive and interesting. It is to be noted that this history is Master Moffat's first attempt at authorship. He gathered the facts on which it is based from the newspapers, beginning the work of compilation at the opening of the war. Young Moffat is a native of Florida, and his home is at West Palm Beach, where he holds the honored and responsible position of sole operator in charge of the International Ocean Telegraph Company's office. The fact that he is considered capable of filling such an important post, together with his achievements as a historian, shows that James is a boy of far more than ordinary ability. The world will doubtless hear of him again.

A BOY BUILDS A STEAM ENGINE.

Probably the youngest practical inventor that the world has ever known is Villa Shultz, thirteen years old, who lives on a farm six miles from Hagerstown, Ind. He has invented and made by himself, without any outside assistance, a steam engine which works perfectly. The engine is made of the crudest and roughest materials, which are ill adapted to such a purpose, but, notwithstanding, it is noiseless in movement and very rapid, is perfectly balanced and adjusted, and the parts are fitted together with the utmost accuracy. The boy had practically no tools to work with and the finished engine appears almost remarkable when considered as the production of a mere child with no tools, and only such materials as he could pick up about the barnyard. An expert and experienced mechanic and inventor was amazed at the boy's handiwork, and declared that but few skilled mechanics, if provided with only the tools and material the boy had, could have produced such an engine.

The engine is by no means a simple and useless toy, but is practical and is applied daily to useful purposes. The young inventor has made several machines, all of original design, which he operates with his engine. One of these machines is a bean huller, which hulls beans at a rapid rate.

The cylinder of the engine is composed of lead and pieces of scrap iron. The lead was first molded around a short piece of gas pipe, after which the pipe was removed and the inside of the cylinder shaped to a nicety with a steel scraper, also made by the boy. The steam chest is likewise of lead, and the valve, which is of the sliding pattern, is made of a piece of scrap steel cut and finished with a small file. This valve is operated by connection with a wooden eccentric on the shaft of the fly wheel. The piston heads are disks cut from pieces of an old crosscut saw. The piston rod and wrist are of steel. Every part is fitted perfectly. There is not a particle of packing about the steam chest, cylinder or valves, yet so nicely are the parts fitted together that no steam escapes. The boiler is fully as original as the engine, and very effective. It has steam gauges, whistle and safety valve, which

latter controls the steam pressure exactly. The boiler is built over a specially designed furnace, also constructed by the boy. The connection between the boiler and engine is a small gas pipe, into which the supply valve is fitted.

Villa Shultz' recreation is to work with tools, and he finds pleasure in making something. In making his machines he has worked with infinite patience at stubborn metals with dull files until his energy and genius triumphed over his difficulties. He is the personification of action and enthusiasm, and when not employed on his father's farm is working on his machines.

Harrison I. Drummond

Harrison I. Drummond, of St. Louis, Mo., is one of the solid young men of the country. He is the son of James T. Drummond, the leading spirit in the tobacco industry. He began his studies at Weyman Institute, in Alton, Ill., from which school he went to Yale, where he was graduated with honors in 1890. He at once entered his father's factory, where he spent three years in learning the details of the business. By close application he mounted round after round of the industrial ladder, and in four years was elected vice-president of the Drummond Tobacco Company. Three years later his father died, and he became head of the family. He was at once elected president of the company, and when the Drummond Tobacco Company was sold to the American Tobacco Company, a great syndicate, he was elected its first vice-president, which position he held until June, 1899, when he retired in order to devote himself more closely to his important personal affairs. He is a director in the American Tobacco Company, the Continental Tobacco Company, the Mississippi Valley Trust Company, and the Merchants' Laclede National Bank—the last two of St. Louis. He is the moving spirit in the Drummond Realty & Trust Company, incorporated to keep intact the estate of his father, which amounts to millions of dollars.

HERMAN NEGGESMITH GETS A MEDAL FOR SAVING LIFE.

Herman Neggesmith, the thirteen-year-old son of Policeman George J. Neggesmith, of 31 East One Hundred and Thirty-third street, New York, is a hero among his playmates. One Sunday evening in January, President Jones and a committee from the State Volunteer Life Saving Corps presented the boy with a silver medal and a set of resolutions commending in high terms his rescue of Phillip Schaefer, a thirteen-year-old companion, from drowning on August 21 last. Young Neggesmith was standing on the Harlem Rowing Club's float watching some boys, among whom was Schaefer, who were swimming. Suddenly Schaefer was seized with cramp, and sank. His companions swam in terror toward the shore. Neggesmith plunged in, fully dressed as he was, and began diving for Schaefer, who had gone down. He found the boy on his second dive and brought him to the surface, and swam, unaided, to the float with his burden.

Neggesmith is called the champion boy swimmer of the Harlem river. He has saved three of his companions from drowning in the last three years and is said to be the youngest person ever awarded a medal by the Life Savings Corps.

JOSEPH MOSHEIN—A LITTLE LIFE SAVER.

Another instance of boy heroism is that of the saving from drowning on the evening of January 29, at Pottstown, Pa., of Walter, the nineteen-year-old son of George Whitman, of that city. He was skating with a number of companions when the ice gave way and the lad sank into deep water. His companions were greatly frightened and all ran away except Joseph Moshein, a lad of seven years, who bravely pushed his little sled within the drowning boy's reach just as he was about to go down for the third time.

Walter grasped it for dear life, while little Joe, at full length upon the creaking ice, held on to the other end, and in this manner kept the drowning boy's head above the water until men came with planks and ropes, and dragged him out of danger.

THE WORLD THRO' A BOY'S EYES.

THE POPULATION IN JUNE, 1900.

Government Actuary J. S. McCoy and Dr. H. S. Pitchard, superintendent of the coast and geodetic survey, have made estimates as to the population of this country in June, 1900. The two gentlemen are not far apart in their estimates. The former predicts a population of 77,766,000; the latter, 77,472,000. If the population of this country increases during the next century as rapidly as it has during this, we shall have a population in the year 2000 of over 385,000,000.

A BIG AUTOMOBILE.

Men in Cleveland are building an automobile 22½ feet long, which resembles an ordinary street car. It has a seating capacity of thirty persons, and is equipped with a 30-horse power gasoline engine. It is said it will consume but five gallons of gasoline in ten hours, and that it will run at any required rate of speed. The advantage of the new invention is that it requires no special track and can run where an ordinary vehicle can run. It may revolutionize the present system of street transportation.

OUR CHANCES IN EAST ASIA.

The United States of America has before it great opportunities in East Asiatic countries. Commerce and industry in those countries are still in their infancy, and yet their foreign trade in 1897 represented the enormous value of over six hundred million dollars. There are about four hundred million persons living in East Asia. The population and commerce of Japan alone exceed those of the whole of South America. No market of the far east should be neglected; the entire field should be exploited from Siberia to Siam with the same energy that is displayed in this country, but with ways and means suited to Asiatic characteristics and conditions.

MATCHES.

It is estimated that we use annually in the United States over 90,000,000,000 matches. These indispensable little articles were first used in this country less than 70 years ago. At that time a box containing 25 was sold for 25 cents, or one cent each. Today we buy a thousand for five cents. The industry is controlled by a gigantic trust, the only competition coming from Japan, which, strange to say, is exporting many matches to this country. The trust holds its control through a monopoly of the patents on the machines for making matches. A new machine has been invented, however, which will reduce the cost one-half. The inventor assures the public that he proposes to keep control of these machines and lease them to independent factories not controlled by the trust. It is to be hoped he will adhere to his good intention.

OUR NEW PEOPLE.

The total arrivals in this country, as shown by the report of the Immigration Bureau, during the year ending June 30, 1899, were 311,715, an increase over the preceding year of 36 per cent. Through a defect in the law, probably 25,000 persons came who were not listed. Those who came from Canada and Mexico were not included in the statistics. Of the total arrivals, Europe supplied 297,349; Asia, 8,972; Africa, 51; and all other countries 5,343; 195,177 were males and 116,438 were females. There were 43,983 under fourteen years of age; 60,446 could neither read nor write. There were 39,071 who had \$30 or over in their possession, and over four times that many had less than that amount. The total exhibited to the officers was \$5,414,462. A total of 3,798 persons were

refused admission to the country as being paupers, persons likely to become personal charges, contract laborers, diseased persons, convicts, or insane.

THE VICTORIA CROSS.

Every British soldier covets the Victoria cross, awarded for conspicuous bravery or devotion to country in the presence of the enemy.

The Victoria cross is a small Maltese cross, with a disc in its center bearing the royal crest. Underneath is an escrol bearing the inscription, "For Valour." The cross is hung by a blue ribbon, in case its recipient is in the navy, and by a red ribbon, if in the army. It is always worn on the left breast. The crosses are made from cannon captured at Sebastopol. For each additional act of bravery a clasp may be given, but it is said that not one has yet been conferred. Each wearer of the cross is entitled to a pension of £10 a year, with an additional pension of £5 for each clasp. Four hundred and twenty-five Victoria crosses have been given. Among the officers now fighting in the British army in South Africa, General Buller, General Roberts, General White, and a number of others are wearing the cross.

DENSITY OF POPULATION—A FEW INTERESTING COMPARISONS.

No region in the world offers the large or small farmer better opportunities for a competency than the South.

There are thousands of broad acres there awaiting intelligent development and cultivation. As demonstrating this fact the most recent authentic statistics give the following figures showing the population per square mile in the countries of the world, compared with that of the Southern States:

Germany	237
Bavaria	189
Prussia	223
Baden	285
Saxony	606
Belgium	541
Netherlands	379
Great Britain and Ireland	315
Italy	270
Austria-Hungary	171
France	188
Russian Poland	168
Denmark	148
Greece	88
Turkey in Europe	80
Russia in Europe (except Poland)	52
United States of America	21
The Southern States	9

The area of the German Empire is 211,108 square miles, a little more than one-fourth as great as that of the South. Its population is 49,421,064. If the South were as densely settled it would have more than 190,000,000 people.

Austria-Hungary has an area of 201,591 square miles, and its population is 41,827,700. With the same number of people to the square mile the South would have 169,000,000.

The area of the United Kingdom of Great Britain and Ireland is 120,973 square miles, and its population is now more than 38,000,000. If the South were as densely settled it would have 256,000,000 inhabitants.

The kingdom of Italy embraces an area of 110,665 square miles, and its population is 29,699,000. If the South had as many people to the square mile its inhabitants would number 219,000,000.

The area of the Netherlands is 12,680 square miles; the population is 4,450,879. If the South were as densely populated it would have 287,000,000 people living within its borders.

Belgium has an area of 11,373 square miles, and its population is 6,030,043. If the South had as many people to the square mile as Belgium its population would be more than 430,000,000.

These figures, however, are likely to be changed during the next decade so far as they relate to the South at least, for the march of emigration is making a wide sweep toward milder climates, and men and women are fleeing from regions of half winter half summer to a more equable zone. They are beginning to discover that it is an immense waste of energy and money to spend so large a proportion of their time in the mere effort to keep warm and comfortable, when they may have that condition for nothing.

THE WORLD'S COMMERCE AND THE UNITED STATES' SHARE OF IT.

From the standpoint of wealth, the United States ranks first among the nations of the world. Great Britain has 75 per cent., France 60 per cent., and Germany 50 per cent. of the wealth of the United States.

In the value of the annual products of its manufacturing industries the United States also ranks first, the value of those of Great Britain being 44 per cent., Germany 35 per cent., and France 30 per cent. of that of the United States.

In commerce, although the wealthiest and also the largest manufacturing nation, the United States ranks third.

The commerce of the world in 1897, including both imports and exports, amounted in value to about \$18,500,000,000; Great Britain had 18.3 per cent., Germany, 10.8 per cent., and the United States 9.7 per cent. of this amount.

As the manufactures of the United States have increased enormously our manufacturers have been compelled to seek outlets for their surplus products. As a result the exports of manufactures have increased 237 per cent. since 1876, while the exports of all other goods have only increased 75 per cent.

The Centennial Exhibition of 1876 gave an impetus to our foreign trade by bringing to the notice of foreign visitors the character of our products. It also had the effect of placing American manufacturers in direct contact with the buyers and sellers in other countries. Aided by other causes, that Exhibition has had the effect of increasing our exports, until, in 1898, we led the world in the amount of the export of articles of domestic production.

Our trade has been mainly along what might be called the line of least resistance—that is, with nations using the English language. During the last year, English-speaking countries purchased more than one-half of all our exports.

The Philadelphia Commercial Museum is endeavoring to increase the foreign trade of the United States and secure for our merchants and manufacturers a more direct and mutual trade with every nation of the world.

In order to aid in the accomplishment of this the Museum has, by means of the International Congress and the Export Exposition, attempted to bring together buyer and seller, fully confident that mutual intercourse will result in profit to both foreign and native manufacturers and merchants.

In round numbers about \$25,000,000 is spent on charity in the State of New York every year. This is almost enough to pay the interest on the national debt. It is equal to a per capita tax of about four dollars for every man, woman and child in the Empire State.

Canada is 300,000 square miles larger than the United States, and lacks less than that number of square miles of being as large as the whole continent of Europe.

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member. All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used. THE AGASSIZ ASSOCIATION welcomes

members of all ages, and every one who is interested in any form of natural science is cordially invited. Established in 1875. Incorporated in 1892. Short notes of personal observation are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.

The Agassiz Association and The American Boy.

We haven't now the time to tell you the history of the Agassiz Association. You will learn something of that later, for THE AMERICAN BOY has taken us in, and we hope to meet you all in these columns every month. First and last, we have had about thirty thousand members, scattered over all the United States and most of the countries beyond. This Association has seen a great many curious and beautiful things, has grown acquainted with hosts of jolly, good people, has done a good deal of hard work, and has had no end of fun; but a few years ago it did one very foolish thing—it began to grow old.

The boys and girls who first joined it grew to be men and women, and somehow the society began to catch their grown-upness, and to wear high collars and men's sizes of words; and long dresses with buttons in the back. This was the greatest mistake of its life. It has now been corrected. Henceforth we shall make it a rule to keep young. How young? Oh, anywhere from four to a hundred! It isn't years that matter; it's the way you feel, and talk, and behave. The worst thing of all is getting so old that you know too much. You can always tell that you are young enough to belong to the Agassiz Association by the feeling that there is plenty left to learn.

Now it's your turn to say something! What do you think of the idea of starting a little society at home? If you like the plan, write to us, and tell us a little about yourself and your folks, and we will tell you just how to go to work, and help you all we can.

For two years we kept a list of all the questions asked us by boys and girls about the Agassiz Association and its history and methods of work, how to organize a chapter, how to make by-laws and rules, how to start a museum, how to exchange specimens, how to collect and preserve all kinds of things; insects, and plants, and minerals, and birds; how to do this and how to do that—and then we wrote out the answers to all these questions as well as we could, and printed them. Would you believe it? the answers make a book! one hundred and fifty pages. It is called "Three Kingdoms, a Handbook of the Agassiz Association." This book tells pretty nearly everything we know, or that you will be likely to ask about our society. Before we printed it we used to have to write long letters to the boys and girls who sent us their questions, but there are so many of you! Sometimes we had to sit up till midnight writing letters. It was fun, but we had to draw the line at midnight, and there were still piles of letters unanswered. So now we have to ask you to send for a copy of this handbook, the very first thing, and it costs 75 cents, but then, after you join us there aren't any "dues" to be paid. That's something!

We don't mean that we do not wish to hear from you unless you buy a book; not at all—only that we can't possibly get time to write the whole book out in a letter to each one of you. If you want answers to all the questions the book answers, you must have the book, of course, but we want to hear from you all, any-

way; and you may address, Mr. Harlan H. Ballard, President A. A., Pittsfield, Mass.

Agassiz Association.

The Agassiz Association was founded in 1875. Its purpose is to encourage personal work in natural science, and to stimulate and direct that sort of original study which was the delight of Louis Agassiz from his boyhood to his death.

There are still some parts of the country where you cannot get good scientific training in the public schools.

If you happen to live in a place like that, the Agassiz Association will help you.

Most of the great observers made their observations close by home. Gilbert White watched the swallows that nested under the eaves; Darwin studied the angle-worms in his garden; Agassiz drew the fishes that he caught in the neighborhood brooks; Palissey found his fossils near his own dwelling.

So we like to set young people to work just where they are living. We like to have them make local museums, in which they shall have—not foreign curiosities and monstrosities—but complete and well-labeled collections of the plants and minerals to be found within a radius of five or ten miles from their door.

We invite you all to join us in this delightful work. You can join as a corresponding member, or you can organize a local club or "chapter." For this, only three besides yourself are needed, and they may all be members of your own family. We think the club plan is the best for several reasons.

The union of kindred students promotes the interest of each. Every one who finds anything wants some one he can show it to. A pleasure shared is a pleasure doubled. At the meetings of your society you are sure of an attentive and friendly audience.

Then, too, you can do many things as a society that you could not do alone.

You can purchase good books and apparatus; rent rooms; engage lecturers. take excursions, make a museum, and start a library.

The Boy Out of Doors.

The American boy is usually out of doors whenever he is not obliged to stay in. The house is good enough to eat and sleep in—barring camping season—and it is all right for rainy days—except during trout time—and rough winter evenings. At other times, boys indoors are like steam in a boiler, held in only by something that can resist a mighty pressure to the square inch. Recesses and vacations are safety-valves on the educational engine.

To the American boy out of doors, the Agassiz Association makes its strongest appeal. Not to teach him to open his eyes, nor how to see things. His eyes are wide open, and what he doesn't see, his American sister will show him. But a fellow sees so many things that he'd like to know more about. And he can't learn it all without somebody to help him. "What kind of bird is that?" "Well! look at that for a bug! Is it a kissing-bug?" "What's all this froth on the grass?" "How did this big, round

rock get into the middle of this smooth field?" "How does the sap get up into a tree?" "If this is a moth, what is a butterfly?" "Are these berries poisonous?" "If gills are to help fishes get air into their blood, why do they die when they are taken out of the water, where they can get it more easily?"

These and thousands of different questions arise to puzzle our boys and girls whenever they go roaming through wood and field. The whole world is full of interest and wonder.

"An upland fringed with orchard trees,
A meadow with its droning bees;
Between the two a marshy wedge
Of rushes green and angled sedge.
Wherein a brook has lost its way
Amid the tangled shadow's play.

"Between the marsh and meadow's bound
The sweet-flag's hidden wealth is found;
In blackest mold it has its birth—
The life-blood of its honest worth;
Its wrinkled roots, all fibrous grown,
Have magic virtues of their own!—
A taste, and lo! there spring again
These boyhood pictures in the brain!"

Wild Creatures in the City.

Boys who live in cities have abundant opportunity to study nature out of doors. Wild life in our great parks is better protected from snare and gun than in rural fields and forests. Many a successful botanizing and entomological expedition has been made within "city limits."

The frequent digging up of great streets, and the blasting of rock for deep foundations reveal unsuspected specimens of rare and interesting minerals.

The boys of the Agassiz Association have thus found beautiful crystals in the upturned foundations of Broadway and Fifth avenue.

But besides all these permanent resources of the boy naturalist in the city, there are occasional instances of stray "cattle" to delight his heart. He may be awakened in the gray dawn by the loud "honk-honk!" of wild geese, and even get a shot with opera glass or camera at the arrow-shaped flock as it cleaves the pure air above the city's smoke. He may note now and then amid a flock of hustling sparrows, some shy stranger bird, whose varying plumage and provincial airs brand him at a glance as country-born and bred.

In smaller cities visits from bewildered wild-folk are, of course more fre-

quent. Pittsfield, Mass., is a city of some 25,000 inhabitants only, but it is not the place where you would expect to "put up" grouse. Last fall, however, a fine fat "partridge," as we here call the ruffed grouse, flew from somewhere and alighted on our next door neighbor's lawn, where he strutted about for a few moments with the dignity of a lost Indian chief, and then with a loud "whirr" was up and away again. I hope he fared better than another of the same species a year before. This fellow came skimming along from the forest over the Housatonic river, and, entering the city proper, flew down a long street that extends from the west toward the writer's home, and finally, about 5 o'clock one morning, aroused the family by dashing through the window pane into the dining-room. He was so injured by the glass, that, as he crouched broken and bleeding on the sideboard, he was then and there put out of misery, and into the larder, by a boy's shot from a Flobert.

Last fall, while strolling on a hillside and within a rod of a cultivated farm almost inside the fire district of the city, we were startled by a dark red flash, and before we realized it a large fox had leaped the stone wall in front of us and vanished into his hole under the roots of a venerable beech.

About the same time a flying squirrel visited our elm trees. Bessie saw him first and exclaimed, "O, papa, see that funny bob-tailed squirrel!" and again, "He's running up that elm!" and then, "O, he flew right across the street!" We all laughed at this, but she insisted that she had seen him fly, and in a moment cried out, "There he goes!" and surely enough, we caught furry glimpses of the tiny creature running up and up to the very tip-top of a tall American elm, where he poised a moment like a bobolink, and then stretching out his legs, and the wing-like membrane that spreads between, he boldly launched forth upon the air, from a height of at least sixty feet, and with a downward, and later a gentle upward curve, made the grand "chute" to another tree, which, by measurement, was one hundred and fifty feet distant. It beat to-bogganing to death!

These are but a few instances, all coming under our personal observation, which may help answer the oft repeated question, "How is a fellow going to study about nature in a city?"

If all our readers who have seen wild creatures astray in cities will write and tell us about it, we shall be glad, and will say, "Thank you!"

HOW TO DO THINGS

A Champion Skater Tells How to Skate Fast.

Leroy See, a graceful young skater of the New York Athletic Club, gives great promise of becoming the champion of America. He is seventeen years old, and is now skating within a few seconds of the one-mile record. He recently covered a mile in 2 minutes and 57 seconds, and three miles in 10 minutes and 13 seconds. He holds the New York Indoor record for one mile, having made it in 3 minutes and 45 seconds. The young man is six feet in height and has practiced skating ever since he was in short dresses. His father is a veteran expert on the ice.

When asked as to how to skate properly, he told a New York Journal reporter that general physical development was one of the most necessary things. He said: "During the fall months ride a bicycle and work in the gymnasium. Take all kinds of exercise and plenty of it. Ankle straps should not be used at any time as they stop the circulation of blood, and under such conditions no man can do good work. By skating two or three miles a day one's wind is improved, and before one really is aware of it he acquires considerable speed without being conscious of fatigue or loss of breath. When it comes down to actual racing it is strokes that count. While there are many kinds of strokes, the most advantageous is the long straight sweep. This is a directly forward stroke, with the weight of the body thrown upon the entire foot. It leaves almost a straight line behind, which saves the distance that is lost when a

side angular stroke is used. Do not sweep the forward leg in starting, but simply shove ahead, pressing to the side with the opposite foot. As one skate shoots forward the other skate is gradually raised from the ice, the front point being the last to leave. On the start, the stroke must necessarily be short; but as momentum is acquired its length is easily increased. This is best done by thrusting one foot ahead powerfully, and pressing the ball of the other foot against the ice. Don't start a stroke with a jerky hip movement; it is not graceful, and retards the speed. Paulsen, the old-time Swedish champion, joined his hands behind his back and kept his eyes straight to the front. This reduces the wind resistance and is less exhausting than the sweeping of the arms. The body should be kept rigid. All unnecessary muscle exertion should be avoided. When moving along, raise the idle leg just enough to clear the ice, but always have it ready for the next stroke in case an unseen obstacle should interfere with the stride. Always have the pressure of the foot even when the stroke is at full speed. As the stroke dies out the heel is lifted first, and as one plunges ahead for the next sweep the toe assists in getting into full motion. The most effective way to get around curves is to take a comparatively long, easy stride, avoiding the choppy stride popularly known as "grinding." Skate on the inner edge of the right skate and the outer edge of the left. Incline the body inward, and give the skate very little forward pressure. One foot should cross the other about every two or three yards. The legs must sweep forward quickly all the while,

and not only be moving fast ahead but sweeping around the turn. This stroke requires much practice, but when learned the skater has mastered the secret of speedy work in rinks. Always have a warm robe to slip on after the practice spin, and never dress after hard work on the ice without first having a rub-down.

Sailing an Ice Yacht.

Sailing an ice yacht is a totally different matter from that of managing the ordinary vessel that sails through water. The highest speed can be made on smooth black ice from which all particles of snow have been swept, and, contrary to the prevailing opinion among laymen, the ice yacht makes her fastest time when both side runners are on the ice, and not when the windward one is six feet or more in the air, as the average draughtsman depicts her. The principal difference between the method of sailing an iceboat and that of sailing an ordinary yacht is when running before the wind. The summer yachtsman just eases sheets until the boom is broad off, and steers a straight course. Not so with the ice yachtsman. He never eases sheets on his craft, and it is a fact that on nearly every boat in the fleet the sails have been hauled aft as flat as they can be brought, and the sheet made fast on a cleat and never altered during the entire season. The ice yacht can never sail directly before the wind, but is compelled by a series of jibes to tack to leeward, first taking the wind on one side and then on the other. The reason for this is that there is so little resistance to

the forward movement of an ice yacht that she would quickly run out of the wind and be taken aback suddenly, with disastrous results, both to the rigging and the men who, even under ordinary circumstances, must cling to the backbone with all their strength. On other points of sailing the ice yacht behaves similarly to the craft whose mission is to plow the deep, except perhaps in the matter of speed.

The method of stopping the craft is by throwing her up in the wind, when the action of the breeze quickly brings her to a standstill. The rudder is then jammed hard over, so that it is at right angles with the runners at the extremities of the crossbeam. She is then as securely anchored as though held by a chain cable.

How to Cut Paper.

If you wish to cut paper into three or five equal parts, roll the sheet into a scroll until the ends meet twice; then mark the junction point with finger-nail or pencil, and the sheet will be divided into three parts. If one-fifth is desired, roll the paper four times. This is a simple trick, but everybody doesn't know it.

EVERY BOY

His Own Toymaker—

A great book for boys, telling how to make a Steam Engine, Photographic Camera, Windmill, Microscope, Galvanic Battery, Electrical Machine, Telegraph, Telephone, Magic Lantern, Boats, Kites, Balloons, and many other things. Over 200 illustrations. Price 10c. Catalog free.

JOS. T. STEELE, 2215 Beech Ave., Baltimore, Md.

Boys as Money-Makers and Money-Savers

Making Money by Trapping.

One of the country boy's most important sources of revenue in the western states comes from the trapping of the muskrat, raccoon, opossum, fox, wolf, skunk, pole cat, mink, civet and otter. The market for the furs from these animals is not overstocked. Twice as many country boys could engage in this pastime with profit to themselves. In the states of Kansas, Missouri and Nebraska there are dealers in all the important towns who buy these furs from the boys and sell them to an exporting house in Kansas City. The prices of these furs at present are about as follows:

Opossum furs, ten to twenty-five cents; raccoon, from twenty-five to sixty cents; muskrat, five to ten cents; skunk, twenty-five cents to \$1; mink, seventy-five cents to \$1.50; otter, \$2 to \$7; civet, ten cents to \$1; wolf and fox, fifty cents and upward. The manner in which the animals are skinned and the color of the furs enter into the value of the skins more than their size.

HOW THE TRAPPING IS DONE

Successful trappers never use dogs or guns, but depend solely on No. 1 and No. 2 steel traps of the kind used in catching rats. The No. 1 steel trap is for all animals except foxes and wolves. For foxes and wolves No. 2, or larger traps, must be used. It does not pay men to make a business of trapping, because one person can cover only one patch of woods. At times, however, an experienced lad makes from \$5 to \$10 a week from his traps. This lasts only through the winter months, as the country boys are busy through the summer, when the animals breed and multiply and replenish the woods. Thus as long as the trapping business remains in the hands of the country boy there is little danger of the supply diminishing.

The methods which the boy trapper employs are simple. Early in the fall he walks through the woods and watches

for tracks. Just after a rain is the best time, or, better still, after the first snow. If he has trapped for several years he knows the tracks of all the animals valuable for furs, and readily distinguishes them from those of the squirrels, rabbits or dogs. As all the animals he wants run at night, the best time to watch for tracks is early in the morning.

NO BAIT IN THE TRAP

Finding where the most tracks are, he goes home and gets out about 20 steel traps. He takes them to the woods and picks out a location for each. He scrapes a hole perhaps an inch deep in the ground and in it he places a trap. He then sets the trap, and gently covers it with leaves. The trap is never baited. He sets all his traps in this way, fastens them to a tree or bush, and leaves them until the next morning, when he is up at daybreak, dresses hurriedly and makes a rush for his traps, before the morning chores are done.

It is necessary for him to make an early visit to the traps, for the animal, if left too long, will gnaw off the leg which is held and scamper away on three legs. The experienced trappers say it is seldom that they fail to catch at least one animal in a night.

The animals are quickly killed, and with a sharp knife an incision is made into the flesh, usually at the nose, and the skin is peeled off with the hands; the knife is seldom used. This done, all fat and flesh must be carefully removed from the skin, which is then spread out on a board to dry. Mink, skunk, civet, fox, opossum and otter must be "cased," or turned inside out. Skins bring from 10 to 15 per cent more when marketed in this form. Raccoon, wolf and beaver must be left with the fur side out. The skins can be kept a week or so, but should reach the importer within a month.

A SKUNK IS NOT A POLE CAT.

Perhaps the novice will be dismayed because pole cats and skunks will be the principal animals captured, but they are easily handled, and not the terrors the public imagines. Skunks and pole cats are killed as easily as a rabbit, and the pole cat furs are now in great demand. Many people imagine there is no difference between a skunk and a pole cat, but this is a mistake. The skunk is much the larger animal of the two. Squirrels have beautiful furs, but women will not have them, and so they have no fur value in the market.

If the youthful trapper lives near a creek or lake he will trap for muskrat and mink. The mink is by far the smartest animal with which he must contend. In order to catch him, the trap must be put partly under the water, and the other part covered with leaves. If the trap is baited with a choice morsel the mink is likely to become suspicious and carefully avoid the trap.

TANNED IN GERMANY.

The remarkable thing about furs shipped to Europe is that, after they are tanned, a large per cent of them are then exported to the United States and some are no doubt sold again within a few miles of where the animals were originally caught, after having traveled thousands of miles. The explanation of this is that the tanning operations must be largely done by hand and labor is cheaper in Europe. Besides, the art of tanning is not known in the United States as it is in Europe. Furs from this part of the country are tanned largely in Leipzig, Germany. Whole families engage in the work and reduce the cost of curing the furs to a minimum.

The value of the different furs fluctuates, according to the fancy of the women. Just now the fur of the skunk and opossum are popular. There are two white streaks in the fur of the skunk. All this white must be cut out, and only the pure

black used in the high grade garments. The white is dyed black, and the fur is sold at a lower price. But the dyed fur fades in time.

The skin of the muskrat is used principally in making men's fine hats. It makes a very light hat, and water does not damage it, as the muskrat is a water animal.

How to Find the Points of the Compass.

If you are lost and have not a compass nor the sun to guide you, the trees will serve as a safe index as to direction. The bark of the pine, fir, and other cone-bearing trees is lighter in color, harder and dryer on the south side, and often is covered with mould and moss on the north side. The gum that oozes out from the wounds and knotholes is usually hard and often of amber color on the south side, while on the north side it remains sticky longer, and is usually covered with insects and dirt. The nests and webs of insects, spiders, etc., in the rough bark of trees will always be found in the crevices on the south side. More large branches will also be found on the south side.

Ledges of rock will also testify. For instance, the sunny side will usually be bare, or at most only thinly grown over with dry mosses, while the north side will be found damp and mouldy and often covered with soft mosses and ferns.

A boy in San Francisco built up a profitable business through overhearing a remark made by a business man, as he was passing through one of the big office buildings. The business man said: "A scissors grinder could make money by visiting large office buildings and putting all the scissors and knives, etc., in order." The boy prepared himself and started out. He now has a regular route and averages \$15.00 a week.

What Two Boys Did With a Camera.

A. C. Burns.

Many boys have said to themselves, "I wish I knew how I could earn a little money," but still they make no effort to do so. As THE AMERICAN BOY is a paper for boys, I will endeavor to tell the boys through it, how a friend and myself earned a neat little sum with a camera.

About the middle of last October we conceived the idea of making and selling stereopticon views of the principal streets and buildings of our town, and

THE TWO BOYS.

the scenery in the vicinity, and as the town has a population of about 1,800 we felt sure we would be able to sell our pictures.

We procured the necessary supplies which consisted of cards, paper, etc., and made our samples. While one of the firm did the canvassing the other did the printing. In this way we were able to keep up with our work.

Our Camera was only an ordinary 4x5 camera, and not a stereopticon camera. On the plates we placed a piece of cardboard the size of the picture wanted, and marked it so that we could make all the prints alike. In making stereopticon views this way we had to make two prints for one view, so we required to be very careful in our printing to obtain the exact shade in both prints.

When we got about 50 views or 100 prints we toned, prepared and mounted them.

On the face of our cards we printed our names at one end and our address at the other, while on the back we put the list of views.

As I wish to make this article as brief as possible, I will say that we sold the views at 15 cents a single view or \$1.50 per dozen.

That our pictures were appreciated by our townspeople is proven by our sales, which amounted to 700 views within two months, netting us \$65.54 clear, or \$32.77 each, besides each of us having a copy of every view taken.

We were very careful to do our work well and did not lose over \$1.00 for waste and spoiled ones. The views were just as good apparently as those made by old reliable companies.

I sent THE AMERICAN BOY two of our views, that they might judge of the quality of the work done by two boys.

There is a disposition on the part of many persons to decry riches and say hard things against rich men. A rich man can do more good as a rich man than by giving his all to the poor and becoming poor himself. A man with capital may employ a number of less favored men, and the capitalist and the laborer may thus mutually support each other.

TWO OF THEIR PICTURES.

Dr. Lyman Abbott is authority for the following statement: "If Adam was in truth born six thousand years ago, and were now living, and if every day of his life had been spent in honest toil, resting only on the Lord's day and he had in addition to supporting his large family, been able to lay aside as the result of his toil one hundred dollars every day, the idea of interest not in the dominant social system or in the practice under it, having been conceived—in all this six thousand years of accumulation, Adam today would not be worth as much as Mr. Rockefeller, Mr. Vanderbilt, or Mr. Gould who had nothing or whose father had nothing, comparatively, a few years ago."

The Boy in the Office, the Store, the Farm and the Factory

Advice to Store Clerks.

J. Angus MacDonald has issued a pamphlet entitled "Rules and Regulations for Store Employees." He writes from an experience of many years. Some of the things he says will bear repetition:

"No matter how slow or annoying a customer may be, the last word on your part should be a pleasant one. Remember that you in a measure represent the dignity of the house. While a clerk's ability and salary are judged largely by the number of sales he makes, yet the wise employer watches evidences of his patience with his customers, methods of displaying stocks, and general demeanor. Many a shopper has learned to dread the supercilious smile of a clerk when a timid request is made for some lower priced grade of the article which is shown. It is the look more than the curt statement, 'we never keep any such things as that,' which makes the customer resolve to try some other establishment in the future. Then there is the clerk who has absolutely lost all interest in his place, and answers inquiries with an air of such complete indifference that one feels like an intruder. Then there is the clerk who tells you by word or action that you really ought to buy after wasting his time. He should learn the time-honored maxim, that it is no trouble to show goods. Never leave a purchaser in the midst of his purchases in order to go to luncheon. One clerk calls to another, 'John, will you finish up my customer; I am going to lunch,' and departs, leaving his work in the middle and making it necessary for the customer to go all over again the explanation of what he wants. Many clerks pay too much attention to their own personal affairs in working time. No conversation between groups of employees, reading or writing personal notes, or perusal of books, newspapers, etc., should be permitted. Manicuring, mending of garments, etc., are matters to be attended to elsewhere."

As a final paragraph in his directions to clerks, he says: "Avoid slang, gum,

onions, tobacco, drugs and drinks. Avoid frowziness, be honest, be truthful, be businesslike, be a credit to yourself and to your employer.

How to Make a Bicycle Out of Groceries for Display Purposes.

The rims of the wheels are made of hoops from coffee drums, using the full size for the outer rim and cutting the hoop and lapping the ends for the inner rim and springing it in so that it will hold the cans in place. I used cans of cream between the rims, because they are just the proper size. Inside of the rims I nailed four spokes and covered them with a piece of red cardboard, cut round and with strips cut out to represent spokes. Around the outside of the rim I pasted labels from spice cans and my wheels were complete. The diamond frame I made from wood, 2x1. I then covered it with packages of soap, which I tacked on. The sprocket wheel was made from a round piece of wood, covered with red cardboard, painted to represent spokes and cogs. The chain I made by stringing prunes on a piece of wire. The pedals were made of cakes of soap attached to a wooden crank. For a saddle I used two packages of figs, tacked on a board made the same shape. The handle bars were made by fastening two bottles of catsup on two pieces of wood, nailed onto the head of the frame.—Exchange.

Make the Farm Home Attractive.

If the boy is so worked on the farm that when he gets out with other boys and learns how they enjoy life and have their little seasons of innocent amusement he feels like a bird out of the cage, there is little wonder that he gets tired of the farm; he will seek something either better or worse. Whether the boys remain on the farm or not is a question with which parents have to deal, and it is in their power to make the farm home so attractive and dear to them that they will manifest no disposition to desert it.

Politeness.

"Can you write a good hand?" asked a man of a boy who applied for a situation.
"Yaas," was the answer.
"Are you good at figures?"
"Yaas," was the answer again.
"That will do, I don't want you," said the merchant.
After the boy had gone a friend said: "I know that lad to be an honest, industrious boy; why don't you try him?"
"Because he has not learned to say 'Yes, sir,' and 'No, sir,'" replied the merchant. "If he answered me as he did, how will he answer customers?"—Union Gospel News.

Looking for Work.

An employment secretary of one of the largest of the Young Men's Christian Associations says:
One of the severest trials of our employment secretaries is the man who hunts "most any kind of a job." With no clearly-defined idea of his own wants or ability, he willingly leaves it all to the secretary and contents himself with just "wanting work." We haven't many such members, but the following conversation has its moral:
"Have you got anything for me today?"
"What are you looking for?"
"Oh, most anything."
"How would a position as coachman suit you?"
"Oh, I don't want anything like that."
"What can you do?"
"Most anything."
"Except coaching!"
"Yes, except coaching, and things like that."
"Are you a machinist?"
"No, I never learned that."
"Blacksmith?"
"No."
"Carpenter?"
"No, no carpenter."
"Stenographer?"
"No."
"Bookkeeper?"
"No, I never did any bookkeeping."

"Well, what can you do?"
"Anything except those things."
"Would you care to run an elevator?"
"How much is there in it?"
"About \$6 or \$7 per week."
"Where is it?"
"In the Suburb building."
"That's a good ways out. How many hours do you have to work?"
"I don't know."
"Is there anything else in this morning? I would like to get something that would pay about \$15 a week."
It is seldom our department is able to place such a man.

The Printer's Devil.

About the beginning of the fifteenth century, Aldus Manutius, a famous printer of Venice, owned a black boy whom he had purchased from a corsair, and whom he trained to assist him in his work. The art of manufacturing books in great numbers and at small expense was then so little understood by the majority of people that the honor was ascribed to Satan, it being impossible for them to understand how, without the aid of magic, they could be so rapidly multiplied. The suspicion that the Evil One had something to do with the new art was intensified in Venice by the presence in the office of Manutius of the black servant. So strong was the feeling that there was danger of his house and office being mobbed and his machinery wrecked. To prevent this Manutius proclaimed that he would bring his boy into the public square, and place him on a platform, which he did, and declared that any person not satisfied that the boy was flesh and blood could come and pinch him and make sure. The mistaken impression was thus removed, but before this time the name "Printer's Devil" had been attached to the boy, and was thenceforth applied generally to the boyish assistants in a printing office.—Detroit Free Press.

For Superior Mercantile-Training.

President Elliot, of Harvard University, thus spoke at the Commercial Congress held in Philadelphia last October, on the subject "Commercial Education":

"I ask your attention for a few moments to the chief features of a commercial education capable of preparing men and women for much more than clerical service and much more than narrow retail training. An indispensable element in the training I have in view is a sound secondary education—that is, an education in a first-rate school, public, endowed, or private, which occupies the whole school time of the pupil from 13 or 14 till 18 years of age. This secondary education should include the modern languages—an essential part of a good preparation for the higher walks of business life. It may or may not include Latin and Greek. For international commercial life in English-speaking countries, a good knowledge of three languages besides English is desirable—namely, French, German, and Spanish. A reading knowledge of the languages will ordinarily suffice for principals, but for travelling agents or agents resident abroad a speaking knowledge of at least two of these languages is desirable. This knowledge should be acquired at the secondary school.

"The following list of subjects is by no means complete, but may serve to give a fair idea of the diversity and difficulty of the subjects appropriate to superior commercial education: Economics, statistics, banking, currency, exchange, arbitrage, insurance, government tariffs, transportation by land and water, commercial geography, climates, ethnology, commercial products by region and by nationality or race, consumption by region and by race, maritime legislation, blockade rights, neutrals' rights, commercial law, industrial combinations of capital, labor unions, and—if I may use a new but convenient word—financing new undertakings.

"The successful merchant has to know more today than he ever did before, and he has to be more alert and more inventive. Hence his preliminary training should be both ample and more appropriate than it has been in the past."

Much Depends on the Clerks.

"It is difficult for a clerk to actually draw customers to a store," said an old merchant the other day, "but it is the easiest thing in the world for him to drive them away. Nine persons out of ten who suffer some real or imaginary discourtesy at the hands of an employe will resolve then and there to go somewhere else in future, and the consequence is that the proprietor never knows why he lost their trade. It is one of the serious problems of all large retail establishments. Of course, customers are themselves trying at times, but the clerk who is scrupulously polite always has the best of such encounters.

The Well-Informed Farm Boy.

A writer in the "Farm and Fireside" says: "Having had more than ten years' intimate association in an educational way with boys born and raised on and off the farm, I say without any hesitation, that so far as mental powers, solid foundation for any business or profession and general character are concerned, I would prefer the chances of the boy who spent the first fifteen years of his life on a farm where he had to work hard, rather than of the boy who has spent the same period of his life in the average city or village home."

The same writer, in referring to the means by which the boy on the farm may become well informed, says:

"First he should read and put into practice the material in some good farm paper. He can get one of these papers for fifty cents a year. Next a dollar should be invested in a good, clean, city weekly newspaper. This is better for him than a daily containing too much stuff simply to fill up. He will get all important matter in the weekly, and get it soon enough, too. Another dollar I would advise him to put in a good monthly magazine. Today there are several good magazines containing first-class articles on science, history, theology and fiction published at that price. But there are also magazines at this price filled simply with trash, so he must investigate before he subscribes. He can't afford to spend what little time he has on any-

thing poor. Not one farm boy in a thousand has an encyclopedia to use, and in most cases he would not use it to advantage if he had it, for too much matter would be given."

The Apprentice System in America.

The evils of our present mode of treating apprentices are so very apparent that they need not be catalogued. One of the worst is permitting a boy to spend the best years of his life in fitting himself for an occupation that will be swept from him by machinery. It is incumbent on everyone in the trades that this sort of confidence game should be stopped. Boys are being taken into printing offices supposedly to learn a trade, and are permitted but small opportunity to learn, to say nothing of instructions being given. After a term of five years or more they have learned to set type, and that is about all. If good workmen are scarce, it is largely because of the pernicious system, or lack of system, that leaves youth to its folly from indifference, or imposes on its confidence that some good thing will come from spending valuable years in learning to pick type, when the knowledge should be acquired in a few months under competent instruction, allowing time for a proper technical education within the prescribed period.—Inland Printer.

A Boy Knows What He Wants.

A thirteen-year-old boy is employed as manuscript reader by a firm which publishes juvenile books. He is paid for the work, and is required to make a written report. Some of these reports, says the Chicago Inter-Ocean, are amusing.

A short time ago a manuscript which had been reported upon favorably by two of the regular readers was given to him. His report was as follows: "It's very good, but I don't think it'll do. I don't think the boys in my school would read it." He was asked to explain his report, and said: "Well, it's over their heads. That's all." A criticism which was afterward shared by the reviewers when the book was finally published.

Lately a manuscript was given to him to read. In about a quarter of an hour Henry was seen playing with his dog.

He was called to attention and went on reading, but left off in a few minutes to look out of the window. The book was not accepted. His mind's wandering, showing the writer's inability to fasten the boy's attention, was criticism enough, and this time his report was heeded, although the book possessed much literary merit from the grown-up person's point of view.

One of the books recently submitted to him is by a new writer, a Brooklyn girl. It is a book of adventure. He became fascinated and could not leave it. His report was most favorable, and the book was accepted.

"It's just fine," he wrote. "I couldn't go to bed till I had read it."

Keep That Boy.

Never let a boy who is heart and soul with your business leave your employ if there is the slightest chance of retaining him, says the Drygoodsman. He is the reserve force of your work and is the supporting army for all aggressive movements. There may be hundreds who can be hired for a great deal less money, but it is like dropping coins into the sea. The boy who pushes and pulls, who suggests and carries out, offers and fulfills, is not measured entirely by dollars and cents and you cannot afford to let him go because another is a little cheaper.

Well tilled gardens pay better than poorly managed farms.

Before proceeding to tame a bad boy a wise teacher should definitely understand just wherein the boy is bad.

"Men are usually tempted by the devil," runs a Spanish proverb; "but an idle man positively tempts the devil."

It isn't very consoling to know, As hither and thither we flap, That while it's overcrowded below There is always room at the top.

"A busy man," says a Turkish proverb (and it applies to a boy), "is troubled with but one devil, an idle man with a thousand."

Clothes do count—the boy can not learn that too early. Not necessarily expensive clothes, but those that show neatness, appropriateness and good taste.

Why is it that when a man falls in life he usually says, "I can't help it; I am as

God made me," and that when he succeeds he probably proclaims himself "a self-made man"?

An exchange says that two important events in the life of man are when he examines his upper lip and sees the hair coming, and when he examines the top of his head and sees the hair going.

"Now, Bobble," said a teacher in the natural history class, "what is a panther?"

"A man that maketh panth," lisped Bobble.—Exchange.

Professor Huxley defined "luck" as taking advantage of one's opportunities. Dr. Anderson Critchett, of London, holds to the theory that the moment when persons are expecting nothing from fortune is the moment when fortune is most likely to overwhelm them with her favors.

A Dartmouth catalogue of 1821 estimates the expenses of a college year for an economical student at \$98.65. The corresponding estimate in the 1899 catalogue amounts to \$273. The chief increase is in the cost of board and tuition, the latter having jumped from \$27 a year to \$100.

Charles Kingsley very beautifully says: "Let anyone set his heart to do what is right, and ere long his brow is stamped with all that goes to make up heroic expression." To which Phillips Brooks adds: "No man can live a half life when he has genuinely learned that it is a half life. The other half, the higher half, must haunt him."

A teacher in a north of England board school was recently examining a class of small boys in mental arithmetic. She said, "If your father gave your mother thirty shillings today and two pounds tomorrow, what would she have?" And a small boy near the bottom of the class replied, "She would have a fit."

Provided the dunce has persistency and application, he will inevitably head the cleverer boy devoid of these qualities. It is perseverance that explains how the relative positions of boys at school are so often reversed in real life. This explains why we read so often that certain men who have won fame were dunces while at school.

About two and one-half years ago a distinguished divine of this country complained and said too many farmers' sons were being educated and made dissatisfied with conditions. Ah, my friend, who can tell whose son to educate? Admit there is a child to be denied the blessings of education; whose child shall it be? Who can tell which child the fate of a nation depends on.

Blind fish were recently drawn from the bottom of an artesian well 188 feet deep. They are colorless and square-mouthed. Their heads are large, and they have legs, with four tiny fingers on the front, and five toes on the hind foot. Down deep in the bowels of the earth, completely shut off from all communication with the upper world, these blind animals, it is said, have hunted other blind animals for uncounted cycles.

Boys are not things we can choose a pattern for and then turn them out by that pattern. Each boy has a soul of his own. Each boy lives in a world of his own and holds his own secret thoughts that we can never fathom. Don't try too hard, therefore, to make boys after your own image. You may make cruel mistakes.

Young men should make hay while the sun shines. On one of the eastern railroads it has been announced that after an employe passes forty-five he is too old to compete with younger men. You young fellows who are wasting time should remember this. This is becoming an immensely practical age, when an employer places the age limit at forty-five.

Once when Ruskin was standing before a great picture intently gazing on it, a boy burst into the room with a laugh. Ruskin looked around with a somewhat forbidding look and said: "Ah! You had better laugh when you are young, for every year you live will be more and more miserable."

If that was the best message Ruskin had to give to boys, we are disappointed in the man.

There is a vessel putting out to sea! Put your lips to the megaphone and ask "Whither bound?" Suppose the answer should come back, "Nowhere!" The Empire State Express is slowly steaming out of the Grand Central Station. Shout to the engineer, "Whither bound?" Suppose he should say, "Nowhere!" And yet millions are living like that; living, but to no high purpose, with no strenuous aim or compelling motive.

FREE!

A SELF INSTRUCTOR WITH EACH MANDOLIN OR GUITAR

Purchased direct from the manufacturer on the basis of actual cost of production with one small profit added. Special Bargain Guitar, antique quarter sawed oak, full standard size, beautiful inlaid wood down center of back. The International Correspondence School, Box 1878, Scranton, Penna.

MOUTH-HARP PLAYERS. Latest and Greatest Musical Novelty. THE HARP-O-CHORD

Mouth-Harp and Simple Chords Combined. Wonderful Tone. 10 times louder than any mouth-harp, mouth-harp players play it on sight and astonish everybody.

A Whole Band in one instrument, and any one can easily learn to play it. For entertainments or the serenade it excels all. Louder than a small orchestra. A sensation wherever played. 17 inches long, mahogany finish, elegantly decorated. Price with case, key and full instructions, etc., but \$4.00. Send only \$1.00 with order and pay balance only if satisfied after trial.

Big Money to Agents. Write quick. Fine sample Harp-o-chord with grand tone, agents' case, circulars, agents' printing outfit, etc., \$1.00. Less price after first sample \$1.00 to \$5.00 a day easy. Every harp player wants one. General agents wanted to put out canvassers. Fine illustrated catalog sent prepaid for 5 names of Harp Players.

THE HARP-O-CHORD CO., 38 L St., COLUMBUS, OHIO.

How a Bad Boy Was Tamed. Some years ago a boy in Mr. Wana-maker's Sunday school behaved so badly that after trying for many months to get along with him by putting him in different classes, the officers and teachers held a meeting to discuss the advisability of expelling the boy. "It is a pity to turn him out in the street again," said the superintendent, "but we can't let him break up the school." Just then a timid, refined girl said: "Mr. Superintendent, I wish you would let me try what I can do with Johnny." The superintendent told her he thought it was no use. There is Sister This and Brother That and Elder So-and-So who have tried everything that possibly could be done to civilize him, and I guess you would not make out any better. "Still," he added, "if you really want him I will see that he goes to your class next Sunday." His new surrounding subdued him slightly the first two Sundays, but after that he misbehaved worse than ever. After school one day, the teacher put her arm around him and said: "Johnny, I am going to walk home with you." "Naw ye ain't," said he, pushing her away from him. "Well, then, you walk home with me," she continued. "I wouldn't be caught on de street with you," was his reply. She endeavored to interest him in some way, but it was all of no avail, and the surly child ended the rather stilted colloquy by spitting in her face. Even this did not daunt the persistent girl, for wiping her face on her handkerchief, she made a desperate effort to reach the boy by other means. Taking a visiting card from her pocketbook, she handed it to the boy, saying: "Here is my address, Johnny. Next Wednesday afternoon there will be a package for you at my house. I want you to come and get it." Wednesday came, and so did Johnny. Snatching the box from the servant who opened the door of his teacher's home in response to his ring at the bell, he hurried down the steps and into the street without a word of thanks. Stopping in the shade of a big tree a short distance away, he opened the package, and there

displayed to his wondering gaze was a jacket—just his size—a jack-knife and a ball. A little note accompanying the gifts said: "Dear Johnny: I love you." That stroke of diplomacy on the part of his teacher transformed a terror to a model scholar, and today he is an honored and well-known business man in a western city. The price of an education, whether gotten in school or out, is vigilance and self-labor. There is such a powerful element of failure in all human affairs that a shrewd man is always saying to himself, "What shall I do if that which I count upon does not come out as I expect?" This foresight dwarfs and depresses all but men of great resolution. The best temperament for great affairs is a combination of the apprehensive and the resolute. There are two classes of men in the world—men of action and men of contemplation. The former can do a thing when they are told how, and the latter know how it should be done, but cannot do it. It is rare that these two qualities are united in one person. Robert Browning teaches us to be satisfied with the present duty in his poem, "The Boy and the Angel." The boy Theocrite in doing his daily work cheerfully and well is pleasing and praising God. But the thought comes to the boy that he would like to praise God in some great way. His wish is granted, and he is lifted to what the world calls a higher sphere. The angel Gabriel is represented as asking the place and doing the work of the boy.

Gutchess College. The vital importance, to young men and women, of the thorough business education cannot be overestimated. Competition grows more insistent daily. Opportunity develops with competition. The demand is for competent business assistants; the business man has no time to instruct apprentices, he must have assistants already trained in business methods. This College gives the practical business education—pupils here live in an atmosphere of business; they learn to do by doing. Every business facility is here. No other college can be better equipped. 250 students placed in good positions during the past year. Day and night sessions. Terms liberal. Full particulars on application. Address GUTCHESS COLLEGE, Ramlet Block, Detroit.

Study Law at Home. You can obtain by home study a complete legal education, under the guidance of the most successful correspondence school in the world, without its interfering with your present employment and without the expenditure of much money. We can convince you of this if you will write us for particulars. Our students are everywhere—in this and foreign countries. Hundreds of them have completed the course and are practicing Law with great success. We are the oldest correspondence Law School in existence and have the support of leading educators and business men at home and elsewhere. We will refer you to persons right in your own neighborhood. It matters not how you are situated we can help you get a legal education, which you can use as a lawyer or in general business. A great opportunity! Send today for our Catalogue. It costs nothing and will interest and inspire you. It tells about our three law courses, namely: Preparatory Law, Business Law, Regular College Law Course. ADDRESS The Sprague Correspondence School of Law, No. 500 Majestic Bldg., DETROIT, MICH. Yours for the young man with no class M. C. Sprague, Pres.

What to Read.

L. A. LEIGHT

This subject resolves itself, as do nearly all things educational, into child-study, for one must follow the tendencies of the child-mind to map out the course of reading which will most benefit that particular child, and if he is judiciously let alone, he will take the initiative in that direction himself.

The imaginative boy will read Grimm's "Fairy Tales" and the "Arabian Nights Entertainment" until they are dog-eared and thumb-worn, and all his life will be colored by the wondrous glow of the fairy torches and magic lamps which made his childhood such a beautiful dream of the impossible; yet it has not been time lost, for this boy, well trained, will have the creative faculty in literature.

The patriotic boy will want to know all about his country. Perhaps you think that comes by cultivation, but some boys are born patriotic. The music of the fife and drum are to them sweeter than any other music on earth, and their playground is a miniature field of Mars with the measured tramp of small marching feet, handkerchiefs doing duty for flags, and sticks for rifles. These boys will want to read stories of the Revolution, of the Civil war, and now of the Spanish-American war. They will want to know the why and wherefore of these dissensions, and as they grow older will become wise in their day, and worthy to exercise the right of free-born American citizens—the right to cast their ballot for true principles, just laws and good government.

The boy who is a born mechanic will want to read all about measurements, and everything pertaining to the line of work which his young fingers are eager to grasp, and there are books written on these subjects which are of intense interest.

Books of adventure commend themselves to most boys, and are broadening to the mind. They lead to a desire for travel, and stimulate a craving for knowledge of men and things that is

only to be gratified by seeing some of the wonderful things of which they read. Out of this tendency has grown all the knowledge we possess of the earth's surface, and the grand possibilities which promise to enrich the whole civilized world in the years to come.

None of these books need to be dry reading, for our novelists and writers, mindful of the dryness of history, have woven into many books a silver thread of romance, which, while instructive, also amuses and holds the interest of the young reader. These books, judiciously selected, are worthy to form the nucleus of a boy's library, around which may be clustered the heavier volumes which will naturally follow them.

For the history of our own country Fiske has furnished us a full, yet brief and comprehensive, account almost as interesting as a novel; Cooper has given us a series of stories which never cease to be of absorbing interest—there are stories of the early days of the pilgrim and the puritan and of the later days of the Republic which will well repay the reading.

To understand our own history, we must also know something of that of other countries, especially that of England and France.

Read first, Green's Short History of the English People." Read Bulwer's "Harold" for the Norman Conquest; Scott's "Ivanhoe," "Kenilworth" and Shakespeare's Kings, for the days of the Plantagenets and Tudors; "The Abbott" and "Woodstock" for the days of Mary Queen of Scots and Cromwell. Read Dickens' "Tale of Two Cities" for the days of the French Revolution. These books are all standard and will never need to be relegated to the back shelf.

THE BOY'S LIBRARY

BOOK REVIEWS.

"Boys and Girls of the Philippines and Around the World."

By HARRIET L. GEROME.

This book is evidently written for small readers, as it avoids carefully all words of more than two syllables, and imparts information by asking and answering questions, for instance:

"Is there a brick chimney on their house like the one on your house?"

"No, there is only a smoke-hole in the middle of the roof, with boards standing up around it."

The present volume gives the manners and customs of the children of Alaska, Mexico, Norway, Sweden, Cuba, Puerto Rico, Philippines and Hawaii. It also describes the animals of those regions and the industries and mode of life of some of the older peoples of these countries. The book is copiously and finely illustrated, and as the name of Stella W. Carroll appears upon the title page with that of Harriet L. Gerome, and not upon the cover, we are inclined to give her the credit of the illustrations.

There is much information between the covers of this little book for both young and old. Morse Co., New York and Boston.

"Little Beasts of Field and Wood."

By WILLIAM EVERETT CRAM.

To those who are interested in nature studies this little book will be intensely interesting, for it gives a description of the little denizens of the field and wood in such clear, concise, and well-chosen language that one instinctively feels that the writer is as familiar with the habits and customs of the "beasties" as observation and study can make him, and loves them for "all their tricks and their manners."

The work is well illustrated and presents the little creatures in some distinctive or

characteristic attitude, which serves to explain much of the text. It is not in the least didactic but makes running comments in a familiar conversational manner, and tells little stories to illustrate the peculiarities of the "beast" under consideration, until the reader feels that he is well acquainted with these small things of God's creation, and longs to know more of forest and field. Small, Maynard & Co., Boston.

"Commencement Parts."

By HARRY CASSELL DAVIS.

A very interesting collection of valedictories, salutations, orations, essays, class poems and toasts are given in this volume of "Commencement Parts," which will well bear studying by students and others who are preparing for any kind of public declamation.

The selections have been well made and will serve as models of good English, as well as illustrate the happy application of subject and thought to time and occasion. It is sometimes very difficult to select a subject suitable for the occasion, and the author, being mindful of this, has given a list of fruitful subjects from which one can choose at pleasure.

The book, while intended to be instructive, is not in any sense didactic; it can better be termed suggestive, and is at the same time readable, recalling one's own college days, and the stirring occasions which called for eloquent speech.

Hinds & Noble, New York.

SONGS AND STORIES

The only monthly that contains complete copy right sheet music of up-to-date ballads, rag time,coon songs, cake walks and lots of live ginger stories. Complete sample copy free. Address: WILL ROSSITER, Prof. Song Publisher, 54 1/2 Ave., CHICAGO

Success Maxims

If you want to succeed in life, which you certainly do, read SUCCESS MAXIMS. It will be a solid stepping stone to that end. It gives the best hints on success known, some from the wealthiest and most successful men of the present day. It tells what enabled them to achieve success and is full of sound advice that will be of great benefit to every one, especially to the young man and young woman just starting out in life. Every one should have it. Parents should not fail to place it in the hands of their children. Nicely printed on good paper with neat paper covers. Price 25 cts., stamps or silver. THE CRESCENT NOVELTY CO., Lock Box 200, Canton, Ohio.

THE PARKER JOINTLESS LUCKY CURVE FOUNTAIN PEN

No Joint to Leak. No Threads to Break. Fitted with new anti-break cap. Prices—\$2, \$2.50, \$3, \$4, \$5. One of the best dealers sell them. Write for booklet "PARKER PEN CO., P. O. Box 111, Janesville, Wis., U. S. A."

THE BOY JOURNALIST AND PRINTER.

Climbing the Ladder of Journalism.

By BLISS STANHOPE

When I was a green, countrified boy in my early teens, and young in my intense desire to be editor of the New York Tribune, then my only ideal in newspaperdom, I often wondered how the men who so mysteriously collect the news of the day and publish it every morning, ever got a start in the business.

Realizing what a problem this question was to me, it might not be amiss to explain how one boy without money, influence, education or special talent, attained a position in the ranks of the wage-earners in this fascinating profession; a position low, it must be acknowledged, when compared with those occupied by the stars who have already figured in it, but nevertheless a position where he can combat with his equals in the contest, and rise above them if he so wills.

While trying to do a man's work with a boy's strength and for less than a boy's wages at my employment, I happened upon my first newspaper acquaintance. Penrose Robinson was half owner of a little weekly country sheet. He was in need of a correspondent from my town and offered me the position. The pay consisted of the necessary stationery and a copy of the paper each week. I was overwhelmed at his generosity and grasped the offer quickly to insure against his changing his mind. My "engagement" with the "Public Spirit" lasted for three years.

Shortly before leaving "The Spirit," I accidentally met with a copy of another weekly county paper, which I saw was not represented in my town. I applied for the position and, having no competi-

tors, I got it. My pay, outside of stationery and the paper itself, was 15 cents a week. This was raised to 25 cents shortly afterwards. I stayed with this paper four years, and got from it about \$40 in that time. Some may say that a salary of \$10 a year is rather modest. It was not the money that I was working for. I had a deep yearning to get farther on in the race and was willing to take anything to attain the goal before me—that editorial chair. It is this earnestness which accounts for the fact that young men and women persist in burning the midnight oil in study, or painfully scribble off their weekly budget of local gossip for their respective sheets. I ultimately realized that no matter how much country news I might send weekly to my employers, it would never get me a position on a city newspaper, so I determined to get a position as local correspondent on the Philadelphia Inquirer, then the most progressive paper in that city. No doubt my several letters and personal visits to the managing editor, amused him. My boyish scrawl, my green manners, misfit, worn clothing were hardly in place in that handsome, well-equipped office. At last, after persistent effort, I got the commission to represent the paper in my locality. I was to keep the state editor in touch with regular state happenings, the society editor with social events, and the Sunday news editor with local happenings for the weekly supplement. The bare chance of earning \$5 if I got a column in the paper almost overwhelmed me.

But I found, as everybody else who has tried has found, that columns of newspaper copy do not grow as fast as mushrooms. The first month I received 30 cents, the next 54. I was half a year in

the business before I got more than one dollar for a month's work.

Success with the one paper spurred me on to try others in the city. It took but little trouble, with the experience I already had, to get permission from the "Times" to represent that paper. Six months later I secured a like position with the North American.

Of course, all this reporting was carried on in conjunction with my regular work. When all the family had retired for the night, I would "light up" in my room and get "copy" ready for my papers. Many times after a hard day's work with the pick and shovel, I have stayed up until 2 o'clock the following morning to this special work. When I say that I never made more than \$15 a month at it, some may think the result disproportionate. I have, however, proved to myself that it was otherwise.

It was but a year ago that I at last secured a regular position on a newspaper. I stayed with the "Times" for three months. A better offer made by the "North American" drew me to that paper. At present I am no more than a "space man" on the staff. That exalted editorial chair of the "New York Tribune" is yet far beyond my sight even. Notwithstanding that, however, I am firmly convinced that but for the practice I had with those country sheets several years ago, I would not have been prepared for the work I have since been able to do. My experience, slight though it may have been, as a graduated amateur journalist, has taught me that a firm resolve to get there at any cost, a noble ideal and an unflinching devotion to the cause, are the essentials necessary to win success as a newspaper man.

Print Your Own Paper.

The article on the above subject, which we give below, appeared in a recent number of "The National Amateur," the official organ of the National Amateur Press Association. The members of the N. A. P. A. and the U. A. P. A. have doubtless read it, but this department of THE AMERICAN BOY has awakened an interest in so many boys who are not members of any of the associations, and who wish just the information this article gives, that we have decided to reprint it:

"There are many boys who are taken with amateur journalism, but who are kept from an active participation in it by an erroneous idea in regard to the necessary cost of the publication of a paper. There are others who are having their papers printed by amateur and professional printers, who do not realize what a small outlay is necessary in order to get out a paper of respectable size and appearance. If one is really careful in his selection of material, and knows how to expend his money to the best possible advantage, a very few dollars will place him in possession of a sufficiently large outfit of new material to get out a "uniform page" paper at a nominal cost. Now let us figure on just what is absolutely necessary. A font of 25 lbs. (or better, 50 lbs.) of eight point or ten point type, a few pounds of leads, two feet of brass rule, a composing stick, a pair of news cases, a galley, a hand roller, a little ink, a small bottle of benzine, an old tooth or nail brush, and a few yards of wood furniture, are all that are absolutely necessary, provided a professional printer is handy where you can have your forms made up and press work done. Twenty-five pounds of leaded type will very

nearly set up two "uniform" pages, and by the expenditure of a dollar or two for sorts, a 25 lb. font can be pieced out so that it will set up two full pages, or a 50 lb. font four pages. A galley on which to take a proof and carry the type to the printer can easily be made out of a pine board and couple of strips. A dry goods box is easily convertible into a stand for your cases, and any boy can, with the aid of a file, make himself a composing rule out of a piece of brass rule. The actual cost of the material is as follows:

- 25 lbs. eight point type.....\$8.26
- 10 lbs. two point leads..... 1.00
- 2 feet two point brass rule.. .14
- Pair news cases..... 1.00
- Composing stick..... .25
- Hand roller..... 1.00
- 1/2 lb. of ink..... .25

Total\$11.90

"To these figures must be added the cost of a stereotyped heading, which ought not to be more than 25 to 50 cents. Even these figures can sometimes be scaled down 40 to 50 per cent by the purchase of a font of second hand type and cases.

"It is often an easy matter to pick up a small marble slab for an imposing stone; otherwise, a thick, smooth piece of a plank will answer. The type can be set up, emptied on your galley, wedged in with wood furniture, a proof taken and the errors corrected. Then it can be carried to the printing office on your galley, or you can borrow a couple of chases and eight pairs of Hemple quoins, make up your own forms and carry them in the chases to the printer, and the press work will cost very little.

"There are other tools and materials which, although not absolutely indispensable, are quite necessary in the office of an amateur newspaper; for instance, a 5 lb. font of italics to match your body type, and a 1/2 case for same; a few fonts of job type for headings; a pair of tweezers, a planer, a mallet, a half dozen patent quoins with key, a few pounds of slugs and a cheap lead cutter. If you can go one step farther, and purchase a small printing press, you will then be in

shape to not only do the entire work of your paper, but also go into the job printing business, by means of which you can earn considerable money. A new self-inking 6 1/2 x 10-inch Pilot press can be purchased for \$28.50 cash. This press is made by Chandler & Price, of Cleveland, O., the makers of the celebrated C. P. Gordon press, and with this little machine you can do as fine work as any office in the land, although it is a lever press, and necessarily slow of operation.

"If this article meets the eye of any one who wishes to fit up an office of this kind, we shall be glad to correspond, and offer such advice or assistance as is within our power."

Notes.

RAYMOND N. CARY, DOWAGIAC, MICH.

"The Stork," published by Raymond N. Cary, of Dowagiac, Mich., is a bright and well edited publication. We have been furnished with quite a number of copies, and they indicate that the editor's idea as to size and style changes about once a month. We would suggest the adoption and maintenance of one size and style. F. R. Switzer, 235 1/2 North Pearl street, Albany, N. Y., is the editor of the paper. The paper is newsy, treating principally of matters in relation to amateur journalism and the various societies.

No amateur periodical that comes to our desk makes a better appearance than "The Scribe," edited by Franklin Curtiss Wedge and Claude Trexler Reno, of Torrington, Conn. The editors do not overstep the mark when they characterize their magazine as "a dainty relish

FRANKLIN CURTISS WEDGE, TORRINGTON, CONN.

in the literary line." Everything in the paper is well written. The contents, however, seem limited to essays and editorial matter, with one eight-line poem on "Success" thrown in for spice. Mr. Wedge is eighteen years of age, and was educated in the public and private schools at Torrington, Conn. His first article appeared in print in 1896, but his interest in amateur journalism dates back only a little over a year. The first issue of "The Scribe" appeared in February, 1899, but the paper is already recognized as one of the leading amateur papers of the country, and we should say deservedly so.

"The Cavalier" for February, edited by Harry Saynor and R. Percival Kelley, and published at 1612 Michigan avenue, Chicago, makes a handsome appearance in its neat blue cover. The first article is a review of Opie Reed's "The Jucklins," by Miss Octavia Meben. Henry Ed. Nohomb, president of the Chicago Amateur Journalists' Association, contributes a poem entitled "The Gift of Sympathy." Then there is a story entitled "One Day's

Sunshine," by Armanda E. Frees; and the editor contributes a column of short notes.

"The Courier," edited by T. Otley, with H. M. Post and H. Meyer as associates, and published in Chicago, is certainly an enterprising publication. The first contribution is a story of the "Malay Pirates," by Walter Lynn. The remainder of the paper seems to run pretty much to club news, there being exchange clubs, stamp and coin clubs, the Young Authors' Society, corresponding clubs and camera clubs among the number mentioned.

The Aurora Corresponding Society, many of the members of which are amateur journalists, held its annual party at Eldert Hall, Brooklyn, January 6th. It was a success. The party was given in honor of the Greater New York Amateur Press Club and visiting amateurs. The festivities included a banquet and a reception. B. Franklin Moss, recording secretary of the Greater New York Amateur Press Club, is president of the society, and acted as toastmaster at the banquet.

The Greater New York Amateur Press Club is planning for a reception at Boston next July to the amateurs in attendance at the N. A. P. A. and U. A. P. A. Conventions, as both associations will hold their conventions there in the first week of that month. At the meeting of the club, held February 1st, Samuel De Hayn, president of the U. A. P. A., applied for membership in the club.

BOYS we will print and send, post paid, 100 business cards for 30 cents, 500 for \$1.00. F. E. CHEADLE, ERWIN, OKLA.

THE BOY PHOTOGRAPHER

Edited by JUDSON GREENELL.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and one dollar will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

Answers to Correspondents.

Ralph Greene—You should wash your Velox prints for at least 30 minutes in running water. It will do no harm to let them lie in the hypo for 20 minutes, except in warm weather.

Arthur Croydon—Yes, "Uko" is considered one of the new developing papers. It is somewhat similar to Velox and comes in special glossy, special matt, special rough for portraits; in carbon glossy, carbon matt and carbon rough for views.

Harry J. Weed—The negative you sent was developed too rapidly in too strong a solution. Take more time in developing, using a weak solution for the first five minutes and strengthening if

needed. When you develop quickly you force the high lights without giving time to bring out the necessary detail in the shadows.

James McCormick—Red blotches, such as are on your prints, are caused by handling the paper with greasy fingers. A combined toning bath should be changed frequently to get the best results, and prints should be washed at least 30 minutes in running water before drying them.

Flashlight Silhouettes.

Flashlight silhouettes give plenty of chances for artistic posing, and will be found to afford a good deal of sport. Put up a sheet in the middle of the room or between two doorways, and have the sitter reasonably close to it. Focus sharply. Profile views, with fluffy hair, and a position denoting alertness will give the most satisfaction. Burn your flashlight at the back of the sheet.

Pinholes in Negatives.

The best of photographers have pinholes in their negatives, and no amount of care will prevent them. But the number of pinholes can be greatly reduced by care in dusting plates before loading the plateholders; by the occasional wiping out of the interior of the camera with a damp cloth; by filtering the water used in the developer, thus getting rid of par-

ticles of sand; by filtering the developer when it becomes discolored by use; and by dissolving the developing agents thoroughly before using. Just as soon as pinholes are discovered in your negatives, the chances are that the precautions you should have taken have been neglected, instead of the manufacturer sending out defective plates.

One of the famous photographs of the world is Mr. H. C. Wilson's photograph of the great nebula in Andromeda, which necessitated a four hours' exposure. The nebula is full of gigantic whorls, and a better confirmation of the nebular hypothesis of world formation cannot be found, says Mr. Wilson.

Do Not Save on "Hypo."

"Hypo" is so cheap that it does not pay to keep it when it has become discolored by use. Take a two-quart fruit jar and put in it a pound of hyposulphite of soda and fill it up with water. Keep this as a stock solution, only putting a little at a time in the fixing tray. Do not pour any back from the tray to the jar. In the hottest kind of weather fresh "hypo" will prevent plates frilling, though it is best to use an acid bath in the summer. Whatever economy it is necessary to practice in taking pictures, the right place to commence is in the exposing of the plates. Five cents' worth of "hypo" will fix a hundred negatives.

About Velox Paper.

Velox paper is not a hard kind for amateurs to handle, and when once understood, will be preferred for many kinds of pictures to the regular printing out papers.

The directions that accompany velox paper are very full and explicit, but, as in many other things, practical experience is worth much more than theoretical knowledge. The writer has used probably half a dozen gross of the paper, and is sure he is not misleading the amateur when he advises the use of such papers

as velox, of which there are several kinds on the market.

As is well known, the paper is put in the printing frame with the negative in a subdued light, as it is very sensitive. Then it is exposed to lamp, electric or gas light for from 15 to 60 or more seconds, according to the density of the negative. Give your first picture a 25-second exposure, the holder being held a foot from the light. When it is taken out, there is no image, any more than there is on a plate before being developed. In fact, the paper is developed just as you would a plate, though the developer is much stronger. What to use for this purpose is told in a circular from the maker accompanying the package of paper. Suffice it to say here, that it is a mixture of metol, hydrochinon, sulphite and carbonate of soda, and a drop or two of a saturated solution of bromide of potassium. The print after being developed, is "hypo-d" and was e l the same as a plate. The fixing bath must be clean.

If you have a thin negative, use "carbon" velox; if the plate is thick and contrasty, use "special portrait." If you want a gray print, dilute the developer, if a green tone is desired, use plenty of bromide. Old developer will give a brown tone, and if you want red, soak the print in a bath composed of a strong solution of alum and hypo—half of each.

Every negative requires a different degree of exposure, because they are of different densities. There is no "toning" to be done after the print is developed, and, best of all, it is permanent, and will not fade.

15 Photos for 15 Cents. Send your Photo and 15c. with your address for 15 Royal Artiste Copies. Photo returned. Send stamps or silver. Pictures in ten days. W. E. SERVICE, Photographer, BRIDGEPORT, N. J.

The Bewitched Camera.

Jack is a good fellow. Folks say he's one of the nicest boys in the block, and that means a good deal, for Willie Wrinkle, Tommy Egan and a half score of other young fellows live next door to or across the avenue from him.

The boys were delighted when they first heard that Jack had a camera. Boys usually are when something new enters their field of view, and a camera was to them a rarity.

It was a standard amateur, 4x5, all done up in a black leather case with lens, finder, plate-holders, a bulb and rubber tube and the other paraphernalia.

It took about two weeks' pattering around for Jack to get a dark-room. He tried the shed, the cellar and the attic, but his sisters, cousins and aunts wouldn't let him build a dark-room in any of these places, and so he finally rigged up the closet in his bedroom where he could work undisturbed.

of playing marbles or indulging in the ordinary and routine enjoyments of his old playmates.

At first the pictures were just awful. Jack studied them, read and re-read the directions that came with the camera, and began to discover his mistakes. Once discovered, a mistake was never repeated. It was less than a month before the whole world, as Jack thought, lay before him, to be photographed at his leisure.

But a paper came home one night. It was a catalogue of photographic material and had a lot of new information, particularly about ghost pictures.

With Jack to think was to act. In two days he had given a printer an order for 50 tickets which read:

"This ticket will admit one boy (or girl) to my show. I have a bewitched camera.

At 2 p. m., Saturday. Price 1 cent. "JACK JOSLYN."

P. S.—The show is in my shed.

All at once it became the fashion to talk about bewitched cameras. Mothers who sent their little girls to the store after dark had hard work getting them to go. Bad boys on the corner cried "ghosts"—and how the little girls ran.

Lanterns, too, were seen on the street—those made out of cigar boxes with queer images cut out and red paper pasted on the inside, all lighted by a candle—a terrifying object when seen at a distance. This increased the fear of ghosts.

Tommy Egan became inquisitive and wanted to know all about the ghost pictures, but as Jack suspected him of being one of a band of conspirators who had tried to scare his sister the night previous he refused to say a word, only promising that if Tommy wanted to see his show—and maybe his own ghost—Saturday afternoon, he could pay a cent and find out—if he could—all about them.

Saturday afternoon the shed was full. There were seats for all and none were empty. As a theatrical manager would say, Jack was playing to the capacity of the house.

The children looked around, but they could see nothing to indicate that ghosts were near them. Upon a small platform at one side stood a queer object with three legs, a piece of dark cloth and a black box. Jack stood in the door and collected his tickets and then marched

up on his improvised stage. Bowing and advancing to the front with all the graces of a concert performer he could manage, he said:

"I have here this afternoon a small leather covered camera. Observe me closely and you will see that I have nothing concealed about me whatever. What I do will depend upon how quiet you keep, and how you follow my directions.

"I am about to indulge in a wonderful feat with the aid of my black box. The ancient sorcerers of Egypt carried a black box and why should not I? With this box I shall take a picture of some one of you, and you shall also see on the self same picture, when the negative is developed and printed, that person's ghost. Now who will volunteer?"

It was a long speech and it made Jack tired, but he soon forgot his fatigue in the excitement that broke loose when he talked about showing little boys and girls their own ghosts.

Some of the wee ones cried, and two started for home. But Tommy Egan got up quite brave and said he wasn't afraid to see his own picture and his own ghost.

Jack was delighted to get a subject so easily. He opened up the big wide doorway, to let in plenty of light, and, seating Tommy in a chair facing the camera, took his picture. Quickly developing and then drying the plate with alcohol he made a Velox print, and sure enough there was Tommy sitting in the chair and Tommy, quite a shadow, though plainly distinct, standing beside himself!

Jack explained that ghosts always look like their owners and Tommy took the picture and rushed home. He has been a good boy ever since. He goes to Sunday School regularly and doesn't miss his prayers, morning or night.

As for Jack. He is the envy of the boys of the neighborhood—and some of the elders. His mysterious camera is talked about and his ghost pictures—for he has since made many—are wonderful. No one knows how he does it, but all respect the power that controls such a wonderful machine as The Bewitched Camera.

NOTE: An article on ghost pictures, with illustrations, telling just how they are made, will be printed in the next issue of THE AMERICAN BOY.

Selecting a Landscape.

Many French artists consider that a landscape is no picture unless there are three planes or parts—a foreground, a middle distance and an extreme distance. The importance of these three planes may be varied endlessly. As a rule a strong foreground is a necessity. If there

is no middle distance, it is like a jump from a mountain edge to the plain below—rather unsatisfactory. And without distance there is a shut-in feeling. Here are points that all amateur photographers should keep in mind when selecting landscapes for subjects.

A Hint to the Farmer Lad.

A "hard row to hoe" may be an easy row to photograph. If some farmer lad who has a camera will take a series of pictures of a field of growing corn, for example, starting in with the plowing and planting, and ending with the harvesting, he will have something of real value, especially if the dates are attached, and any other observations that may come to mind. There should be at least six exposures to make a set.

Photographic Notes.

You can obtain a "dull finish" by placing your prints between two clean blotters.

The American Aristotype Company have placed a self-toning paper on the market.

Never make an exposure of a plate just for the sake of "taking something." Always have an object in view.

During cold weather it is always best to warm your developer a trifle. It will act better on the plate and give you the contrast so necessary to good pictures.

Watch the sky for wind clouds, so called, and the thunder storms that occur at night for lightning flashes. Both are worth photographing.

A picture taken in the early springtime, with a haze over the distant hills, sometimes has an artistic value much higher than those taken with clear skies and no "atmosphere," or hazy effect.

Sir John Herschel, of England, owns the first daguerreotype ever taken. The subject was Miss Dorothy Catherine Draper, and the photographer was her brother, Prof. J. W. Draper, of the New York University.

"The Professional Pointer" says concerning Aristo-Platino paper: "When paper prints brown or purple, with muddiness in the half-tones, it is quite fresh and should be placed near a radiator or other warm place for a few days. Paper treated in this way will soon print a rich red color. Fresh paper must be printed darker than old paper which prints a cherry red. Always print in a warm temperature if you wish the best results."

FIRST PRIZE PHOTO, JANUARY CONTEST. To ARTHUR V. PILLSBURY, READING, MASS.

Jack learned lots of things those days. He developed until his arms ached from rocking the tray. He learned to say "hypo" as glibly as a professional, and as for toning solutions—well, Jack had the entire list from A to Z stuck up on the closet wall.

Camera work proved, quite naturally, great fun, and, to the envy of the other boys, Jack spent his spare time in the dark-room when he was not busy snapping the views around his home. Instead

Boys in the Animal Kingdom

The Most Beautiful Fish.

The most beautiful and costly fishes in the world come from China, and the rarest and most expensive of all is the brush tail goldfish. Specimens of these have sold for as high as \$700 each, and in Europe the prices range from \$250 to \$500. The brush tail gold-fish is so small that a five shilling piece will cover it, and probably there is no living thing of its size and weight that is worth so much money.

Our Home Aquarium.

(Began in December Number.)

We lived near the sea, and our greatest pleasure was a visit to the coast. Sometimes we spent the day in wandering along the shore hunting for a gray stone, dignified by the name of diamond, as when the outer crust was removed a clear crystal was disclosed. This crystal after passing through the hands of a lapidary was hard to distinguish from a genuine diamond.

Sometimes, on hot days, we simply burrowed in the sand, and on rare occasions were permitted to bathe in the surf, but above all we loved to go up to the hut of fisherman John, and persuade

him to take us out in his boat, where we could see the star-fish expand like a gorgeous blossom on the top of the water as if coming up to meet the sun, and then suddenly fade to a dull brown as we touched the water with our oars.

Many were the stories old John told us of the wonders of the sea, and when our father said, one morning:

"Let's go down to the shore today, Mary, and take all the boys," our hearts jumped with delight.

"Me, too, mamma," said Lettie, with shining eyes.

"Yes, let her go this time," said papa, "we'll all help take care of her," for Lettie's small feet were apt to get very tired on long excursions.

The little concord wagon was soon made ready and after a little mysterious whispering between papa and mamma, a small rainwater keg was put in the back of the wagon.

"Doin' to bring home de ocean," was Lettie's comment, but we boys asked no questions, for we dearly loved a surprise.

The summer visitors had not yet arrived so we had everything pretty near our own way. Old John was getting his fishing tackle ready for the season, and his wrinkled face beamed with satisfac-

tion, when papa proposed that he should come with us up to Shark river to hunt for crabs.

Why the crabs all seem to congregate there is a mystery. The river is shallow and broadens out into a sort of pond just about deep enough to float a flat-bottomed boat, and we could see the creatures crawling about on the sand, apparently quite within reach of our little spears, but when we were sure we had them, they had backed with incredible speed out of sight.

"Why," said Tom, "I jabbed my spear right in front of his head; how did he get away?"

"He's a two-headed critter," said old John, "and runs putty nigh as fast one way as t'other."

"Has he really two heads?" asked Ned.

"No, I s'pect not; but he kin back water mighty quick, though."

Lettie was hanging over the side of the boat and poking around with a stick, when a vindictive little fellow rushed out from underneath a stone and seized the end of the stick.

"O, papa, mamma, I've dot one," she cried, holding pluckily onto her stick, then after an ineffectual pull she began to jump up and down and exclaim, "No, he's dot-ten mel!"

SECOND PRIZE PHOTO, JANUARY CONTEST.

To JOE STONE, BUFFALO, N. Y.

"NED," THE CAT THAT WON THE FEBRUARY LOCKET.

Another Cat Contest.

Do you own a cat? Well, there are cats—and cats. There are good cats and bad cats; smart cats and dull cats; pretty cats and ugly cats; blooded cats and common cats; long, short, fat, slim, white, black, Tom, Maria, and many other kinds of cats. But what we want is the best and prettiest all-around cat—that is, a PICTURE of him. We want to make him famous by showing his picture to twenty-five thousand boys and ever so many boys' mothers and fathers and sisters in the pages of this paper.

We will give to the boy sending the most interesting cat picture before March 18, a dainty little locket of silver with the cat's name engraved upon it, so it may be hung from the cat's neck by a pretty ribbon and say to all his friends, "I am the prize AMERICAN BOY cat for March." Next month we will give the dogs a chance.

Now, boys, send in your cat pictures.

ADDRESS PRIZE DEPARTMENT

THE AMERICAN BOY,
MAJESTIC BLDG., DETROIT, MICH.

N. B.—All pictures accompanied by stamps will be returned.

ECCS—\$1.00 per 15; \$2.00 per 40. From 15 leading varieties of Thoroughbred Poultry. Fine 90-page catalogue at S. K. MOHN, No. 8, Coopersburg, Pa.

J. H. TANGER, Hatton, Cumberland Co., Pa.

Breeder and shipper of most all leading varieties of Thoroughbred Poultry. Brahma, Cochins, Langshans, Wyandottes, Plymouth Rocks, Games, Houdans, Polish, Leghorns, Hamburgs, Bantams, Pekin Ducks. Eggs \$1.00 per setting. Bronze Turkey eggs 20 cents each; \$2.00 per eleven. Send for catalogue.

ADVERTISEMENTS IN THE "ANIMAL DEPARTMENT" Should Pay.

Libby's Pork and Beans

The best beans baked the best—in famous New England style, and even more delicious than mother used to bake. Drop us a postal and we'll send you post-paid and free our "How to Make Good Things to Eat" book which tells all about and how to serve the fire-saving, time-saving, trouble-saving, delicious, dainty Libby's Luncheons. Put up in convenient sized key-opening cans. Libby, McNeill & Libby, Chicago

Of course we all laughed, and papa called her the "champion fisherman."

After we had caught a few of the ugly sprawling things we concluded that if we picked up any diamonds that day we must go back to the shore; so back over the country road we went, and after eating the lunch we had brought with us, loitered on the sands, picking up shells, and gathering "diamonds," few of which were perfect, however; then walked around the little deserted village and finally back to John's cottage, to prepare for home.

"Did you get them for me, John, as I wrote you?" asked papa.

"Ya'as, cose I did, but they don't grow 'round yere very plentiful. I put 'em in an old junk bowl putty well soaked with sea water, and the keg is putty near full, so best not joggle 'round much goin' home."

We were very curious to know what surprise was in store for us, but had been taught to wait, so we said nothing.

The next morning we found that the keg was filled with salt water, so Lettie was nearly right, after all; we had brought home as much of the ocean as we could. Papa then showed us in the bottom of the bowl or keeler some things that looked like a white jelly, and others that resembled pieces of brown bark.

"I wanted," said papa, "to show you the animal life which seemed to have an affinity with certain flowers or plants. I think mamma was telling you something about them the other day. Now, this one resembles the mimosa or sensitive plant, and expands its flower-like leaves when absorbing its food, but folds them up instantly when touched; see!"

While talking papa had been arranging the bed for them, and putting in new sea water. He then scattered a tiny bit of fish food, which sank to the bottom instead of floating on top like that we used to give our gold fish. Pretty soon the colors began to show themselves and a bright-hued flower disclosed itself to our wondering eyes.

"Now, make it shut up, papa," said Ned, and papa slowly approached it with a stick, when the leaves began to curl, and it was soon apparently nothing but a piece of jelly again.

"You haven't told us the name of this wonderful flower," I said.

"No. It is the sea-anemone. We have a plant flower by the same name, with the same sensitive characteristics."

"What about this brown thing, papa?" we all cried.

"He is not as pretty as the anemone, but for all that, he is a curious creature. This animal is called a barnacle, and fastens himself to the bottoms of ships,

sometimes spreading so thickly as to impede their progress, and they then have to be scraped off to free the working gear. These are parasitic, answering somewhat to the mistletoe in plant life, drawing their food from the thing to which they attach themselves. It is somewhat difficult to provide food for them when they are detached, as it consists of the slimy stuff which gathers on old wood, but perhaps we have enough to keep them alive for a few days."

Papa then began to feed them but they were obstinate or stupid for a long time, then a few of them slowly pushed out their tentacles or feelers and scooped in the food. We were so interested in the little things, that we would have kept them eating the whole time, but papa said that would not do, we must wait until they were hungry or they would not show us what they could do.

We kept these while the sea water lasted, and here received our first lesson in the close analogy existing between plant and animal life. Weeks of textbook study could never have impressed on our minds the truths taught us by these experiments.

The March of the Geese.

Some interesting stories are told of wild geese. We think of them as flying, not realizing that they have a reputation for marching. Years and years ago, before the days of railroads in England, history tells us that once nine thousand geese marched from Suffolk to London, a distance of one hundred miles; that for this long march but one cart was provided to carry the geese that might fall lame; the owners knew how well the geese would walk. It is said that once a drove of Suffolk geese and a drove of turkeys left Suffolk for London together, and the geese reached London forty-eight hours in advance of the turkeys.

Only a few months ago a flock of three thousand geese, in charge of three gooseherds, were driven down the quay at Antwerp and up the gang-plank aboard an English vessel. There was a narrow canvas side to the gang-plank. They walked sedately aboard and crossed the deck, going down an inclined board to the lower deck into an inclosure made ready for them.

It is said that a flock of geese can march ten miles a day. Thirteen miles a day is the regulation march of a German soldier. A traveler in the Arctic region says that he has seen the wild geese marching in those regions. They choose leaders who direct them as well as lead them. They walk about ten in a line, but

in a column, and carry their heads high. At a signal they spread out and feed, but at another signal from the leaders they fall into line again. These geese, when they cross water in their journey, swim as they march, in a column ten geese wide.—Exchange.

Electricity for Balky Colts.

A boy, residing in the classical town of Napoleon, O., had a Napoleonic idea suggested to him by a novel recipe for balky horses, indorsed by the West Pennsylvania Humane Society. As a result of his experiment he now limps about with his face in a sling and a broken arm. Electrical treatment had been the means recommended.

A small storage-battery, a push-button and wire were accordingly purchased by the boy. The battery was then rigged up on a buckboard, to which the animal was attached, the wires connecting with the bit and crupper. As was anticipated, the horse refused to budge. Young William, who was seated in the car, looked at his father, who was an interested spectator, and giving him a knowing wink, said: "Now see the fun, dad," touching the button connected with the battery.

The amateur horse-trainer's mind was a blank from the moment his fingers came in contact with the button, and remained so for over an hour. The surgeon who was called to restore the young man to citizenship and life received a detailed account of the electrical experiment by the lad's father, who said: "When Willie touched that button that colt gave a snort, kicked and jumped like she was possessed. She became so lively that I don't know just how it all did happen. Poor Will laid there on the ground; his face was white and his nose was bleeding. I thought he was dead. I got a bucket and poured water all over him. The buckboard was on top of the fence, and the colt was going down the road at a Nancy Hanks gait. Electricity for automobiles may be all right, but for balky colts it's no good. Is it, Wille?"—Collier's Weekly.

A little boy defined an octopus as an "eight-sided cat."

Another little boy was told that an abstract noun is the name of something which you can think of but not touch, and when asked to give an example said, "A red-hot poker."

A question for boys: Are you an automobile or a perambulator? You know one is full of push and the other has to be pushed.

Dyspepsia

One of the many causes of dyspepsia is the use of cereal foods improperly prepared. People fancy that grain food is simple, and consequently healthful. Whole grains, wheat, oats, etc., contain quite largely an element as indigestible as wood and no more nutritious.

CREAM OF WHEAT

being entirely free from indigestible matter is peculiarly adapted to such as require an easily digested diet.

When buying Cream of Wheat ask for our beautiful gravures of north-western scenery. Your grocer gives one with each purchase of two packages.

Cream of Wheat Co., Minneapolis, Minn.

THINK OF THE COMFORT

In an Ideal Oil Heater. In the morning you can light it without getting up. When it has made the bed room comfortable, it will do the same thing for the bath-room. When you've bathed and dressed, roll it out into the dining-room.

Costs only one cent an hour. It's a money-saver. There isn't the suspicion of an odor. That's guaranteed. Your money back if it isn't entirely satisfactory. Ask your dealer.

A. G. Barler Mfg. CO., 104-106 Lake St., Chicago.

Electric Novelties for Boys.

For Sale by The Collector Pub'g Co., Detroit, Mich.

LITTLE HUSTLER MOTOR.

Price, \$1.50, Delivered.

This is an entirely new departure in a cheap Motor. The armature has three poles, causing the motor to start without assistance when the current is applied.

It is a complete specimen of electrical science and workmanship and head and shoulders above the poorly made toy motors sold at this price.

A critical examination will prove the truth of our statement.

It drives a 5-inch fan at a high rate of speed and is fitted with a pulley for running Toys, etc.

Any battery from the cheapest up, that will run any motor, will drive the Little Hustler. A cheap and efficient cell is an ordinary carbon cylinder cell.

LITTLE HUSTLER FAN OUTFIT.

Price, \$2.00, Complete.

Consisting of 1 Motor, 1 Cell, 1 5-inch Fan, 3 extra Zincs, Connecting Wire, directions and formula for making the solution.

One battery charge will drive the motor 10 to 12 hours when it is easily refilled. Material that will last several charges can be purchased for a few cents from a druggist.

Sent by express, charges to follow. Weighs 7 lbs.

MOTORS LARGER THAN LITTLE HUSTLER.

Style A, \$1.70, Delivered; with 5-inch Fan, \$2.02, Delivered.

This is the finest small motor ever produced.

Has a three pole armature, adjustable brushes, the frame work is finished in black enamel and all brass parts are beautifully nicked.

Style B (2 to 4 volts) \$3.00, express to follow. Weight, 1 1/4 lbs. Height, 4 1/4 inches. With 6-inch fan, 4 blades, \$3.50, express to follow.

Style C (2 to 6 volts) \$5.00, express to follow. Weight, 4 lbs. Height, 6 1/4 inches. With 8-inch fan, 4 blades, \$6.75, express to follow. Fan guard extra, \$1.00.

Style D (2 to 8 volts) \$8.00, express to follow. Weight, 7 1/4 lbs. Height, 7 1/4 inches. With 10-inch fan, 4 blades, \$9.00, express to follow. Fan guard, \$1.00 extra.

BOYS IN GAMES AND SPORT.

A Top That Spins for Over Forty-three Minutes.

Prof. Charles Jacobus, formerly city superintendent of public schools of New Brunswick and now manager of the C. A. Nicholas Publishing House at Springfield, Mass., is the inventor of the most scientific top that we know anything about. It has a record of spinning 43 1/2 minutes. It is of bronze, and has a steel point about one-fourth as large as the head of a pin. Even when it stops it does not wobble. The professor always carries it with him when he travels, for the amusement he gets out of it.

Mr. Jacobus was the principal of Naples Academy, Naples, Mass., from 1866 to 1869. He has always been an educator in the highest sense. He has used the top in illustrating his views of a symmetrical life. It serves admirably the purpose, as when properly started it spins quietly on and on through a long life, never wobbling, never tumbling, and even while motionless still erect and firm because of its own proper symmetry. Mr. Jacobus is not in the top business. The top is not made for sale. He has had many letters regarding it, but he is too busy a man to answer all the questions put to him. There seems to be no new principle observed in the making of this top. It is simply the most perfect top that has yet been made. The making of a top that can do such wonderful things was partly accidental. One can understand this when he considers that a man may make a thousand violins, and that very singularly one of these violins turns out to be worth more than the other nine hundred and ninety-nine. So it has happened that this top, constructed perhaps on a principle not differing from that on which tops have been made since before the time of the Pyramids, can do things that no other top can do and hence is worth more in proportion.

Coach Stagg and His Nine Months Old Boy.

A. A. Stagg is the professor of athletics, if we may coin the title, in the Chicago University. Items have been going the rounds of the papers lately telling of the wonderful things that Mr. Stagg has been able to accomplish with his little boy less than a year old, in the way of developing him physically by a system of gymnastics in the nursery.

The papers say that the boy began active training at the age of four weeks; that from that time on he was given regular and systematic exercise, and that he now has strength and skill in muscular movement which surpasses that of children three times his age. The first attempts at exercising the little fellow were experiments, but the results soon showed that these were a great success. Simple movements of the head, arms and legs constituted the first week of training. The effect was noted from the first. Not only did the little fellow grow in strength in his arms and legs, but his general health improved. Light massage and easy movements were introduced for the body muscles, and the child was taught to hold his head up by the muscles of his neck. Friends of the athlete were often startled to see him roll the little fellow about and gather him up by the clothing without supporting his head, the youngster all the time crowing and smiling under the rugged treatment. He is now said to be the picture of robust health and happiness. He takes his exercise three times a day under the tutorage of his father. He is a good sleeper and keeps excellent hours. A short time ago the father left the city and the course of training stopped, and during that time the little fellow was peevish and fretful. Mr.

Stagg has taught his son several tricks. Since the boy was two weeks old he has been tossed about in rough and tumble fashion on the soft couch. His tumbling feats consist of head stands, somersaults and roll-overs, helped, of course, by a strong hand. When three months old the little fellow could toddle across the floor, supported by guiding hands which did not allow him to bear his weight on his feet. His next accomplishment was to raise himself from a sitting posture to his feet by simply using the leg muscles. Many a grown person would find it difficult to accomplish this feat. He has been taught to arch his back like a little wrestler, thus bringing into use the head muscles. He has been taught to use the abdominal muscles by raising the weight of the body from a horizontal to a vertical position without using the arms. One of his spectacular performances is to stand on his father's hands, effectively balancing his weight. He stiffens his back, throws out his chest, and looks every inch a man. At the age of eight months he hung by his hands from a small trapeze bar for a minute at a time. He is never in better humor than when taking his exercise.

Mr. and Mrs. Stagg are both athletes. Mr. Stagg's reputation is too well established to need comment. Mrs. Stagg has a record at the university in basket ball and tennis. She was one of the leading tennis players of the country in the summer of 1897. The newspapers say that the example set by Mr. Stagg in the treatment of his boy is being followed in the neighborhood, and that other infants are receiving regular exercise, the experiments in all cases being a success.

A Trick with Straws.

There are many interesting little tricks which may be accomplished with straws. One of them is as follows:

Get several straws and a coin, and fix the straws round the coin so that by catching hold of the end of one straw the coin may be lifted into the air.

A glance at the illustration will show how this can be accomplished.

The Obedient Sailor.

The Obedient Sailor is an interesting little toy. It should be made of plith cork, or some very light wood, and carved out as shown in the illustration. In its arms a rifle at the "shoulder arms" position should be placed. The barrel of the rifle must be made hollow, in order that in it may be placed, when desired, a piece of solid steel wire. The whole figure is to be fastened at the feet on to the flat side of the half of a leaden bullet. Upon the steel wire being inserted in the barrel of the rifle the sailor will lie down, and upon its being removed he will stand upright. The secret of these actions should rest with the performer who shows off the ways of the Obedient Sailor. The exhibitor should use some dexterity in placing the steel wire in the barrel in order to keep the secret of the sailor.

Electric Novelties for Boys.

For Sale by The Collector Pub'g Co., Detroit, Mich.

TYPES C AND D.

ELECTRIC AUTOMOBILE.

Price, Complete, \$5.00; Express to Follow.

It teaches, amuses and gives great pleasure. As an Electrical and Scientific piece of mechanism it is unsurpassed.

Two Dry Cells of regular size easily procured from any Electrical Supply House are fastened in the body of the wagon and overcomes the objectionable feature of acids in batteries.

Continuously, the battery will drive the wagon about five hours, but by using a few minutes only each day fifteen to twenty hours may be obtained.

The Motor, double reduction gears, etc., are placed under the body and drive the rear wheels. The front axle is pivoted and the lever may be turned to any angle.

The body is beautifully enameled in green with gold trimmings, and fitted with a starting switch.

Length 12 1/2 inches. Width, 6 1/2 inches. Height, 7 1/4 inches. Diameter of Wheels, 3 inches. Size of Cells, 5x2 7-16 inches. Weight, boxed, 10 lbs.

ELECTRIC THRILLER.

Price, \$1.50, Delivered.

This little Shocking Machine is a surprise in mechanical perfection, finish and cheapness. Can be manipulated to make a giant tremble or not to injure a child.

Every boy wants one for instruction and experiment. It is a veritable Fun Factory and in a group, side splitting laughter is created by the many amusements and tricks the machine is capable of producing.

It strengthens the nervous system, costing nothing to run, can be applied without aid and supersedes Induction Coils and Medical Batteries. Furnished complete in a highly finished Cabinet with Hand Electrodes, Sponge Electrode for application to the afflicted parts, Crank, Multiplying Gear, etc., etc.

Electric Novelties for Boys.

For Sale by The Collector Pub'g Co., Detroit, Mich.

ELECTRIC QUESTIONER.

Price, \$8.00; Express to Follow.

Answers by electricity. Funny, entertaining, instructive. Every family in the land should have one.

Description—There are seventy-two pins on top of desk, over which a perforated card is placed, with thirty-six questions on the left side, and thirty-six answers on the right.

To Operate—Place the key attached to the left flexible cord on any of the thirty-six questions desired. Take the pointer attached to the right flexible cord and tap pins consecutively until the signal is given, when the answer can be taken from around that pin.

Pa.

A Trick With Chairs.

Place a chair on the ground, so that the front half rests on the floor, the back and the two hinder legs being in the same horizontal plane. (See Fig. 1.)

Now invite a friend to kneel on the rail which crosses between the two hind-legs, and while in that position to pick up with his mouth a coin or a sweet resting on the back of the upper rail.

The thing at first sight seems a very easy matter; but if the boy who tries the experiment is not careful to bend his

knees and draw his body well back, so that his center of gravity shall remain in rear of the seat of the chair it will in-

evitably tip forward as shown in the second illustration, and the victim will see the prize shoot away from him at the very moment when he thinks he has secured it.

Very amusing indeed (to the onlookers, of course) are the antics which the victim will perform in endeavoring to get the prize from the top rail of the chair.

Helping Somewhere.

An unknown writer related a pretty little incident recently of a lady who called at the house of a physician, and, finding him out, asked his son where his father could most likely be found.

"Well," replied the lad, "you'll have to look for him some place where people are sick or hurt, or something like that; I don't know just where he is, but he's helping somewhere."

"Helping somewhere!" Is there a grander, sweeter, better life in the world than that led by those who are always helping somewhere?"

KENNETH M. RANSOM,

DESIGNER AND BUILDER OF

SMALL BOATS OF EVERY DESCRIPTION.

Canadian Canoes a Specialty,

CORRESPONDENCE SOLICITED.

Box 44, St. Joseph, Mich.

The Boy Stamp Collector.

A Typical Amateur Stamp Collector.

Editor THE AMERICAN BOY, Detroit, Mich.: I am an American boy and a devotee of stamp collecting. I became interested in this hobby in 1894. My collection began with the common United States stamps. Then I looked over old letters that belonged to my parents, and from them I secured many old and foreign stamps. My interest in stamp collecting increased, and in less than a year I had an album full of them. I made my album myself. Two pieces of cardboard served for the covers, and these, with a few dozen pages between, made up the album. It held about 800 stamps. I bought some stamps for cash and exchanged or traded for others, so that to-day I am the happy possessor of several hundred stamps, among them some that are quite valuable; and they are growing more valuable every year. I have several hundred Columbian and Omaha stamps. There is a premium on the Columbians, and the Omahas are in great demand. I am still getting Columbian stamps. The other day I ordered 100 of them from the east. My stamps are of a number of varieties, among them United States, France, Canada, England, Germany, Austria, Peru, Hawaiian Islands, Spain, Portugal, Switzerland, Italy, Japan, Netherlands, etc.

OLIVER HENRY LAFRANCHI, Reclamation, Cal.

We learn this month of the good fortune of one of our readers who was anxious to start a collection of stamps. He began to hunt up all the old letters and papers which he could find containing stamps, and upon some of them he found the five and ten cent stamps of 1847. Keeping one of each for himself, he wrote to one of the dealers whose advertisement he found in THE AMERICAN BOY, and asked what he would give for the stamps, stating that he was anxious to collect. The dealer replied that he would give him an International Album containing spaces for stamps from all countries and 1,000 all different foreign stamps with 2,000 stamp hinges for putting the stamps in his album, and he sent the stamps and received the packet and album. In this way he has started a collection which cost him nothing but the trouble of hunting for the stamps. There are lots of stamps to be found on old letters and papers which dealers will

gladly buy or exchange with you for a good start at making a collection of stamps, and undoubtedly many of our readers might be just as fortunate as the boy we describe.

Old letters written before stamps were issued are of no value. Beside old postage stamps don't forget that the early revenue stamps are valuable, too. These will be found on old legal papers such as deeds and mortgages, and on medicine bottles and packages.

A large number of the stamps of the British Colonies were already in these colors in the 1/2p, 1p, and 2 1/2p, which are the same as our 1c, 2c and 5c, and so change was unnecessary, but so many were changed that many collectors feel discouraged at the great increase in the number of varieties, and are therefore specializing, that is, collecting only such countries as particularly interest them.

Answers to Correspondents.

C. S. R.—A four-cent playing card stamp in nice condition any dealer will give you \$4.00 worth of stamps for.

M. A. S.—There are about 50 different revenue stamps of the United States which can be bought for 60 cents.

B. E. R.—The first issue of the stamps of the Hawaiian Islands are among the rarest stamps in existence, but all the stamps of these islands are very much in demand, even to the very cheapest varieties.

H. A. R.—The majority of stamps are worth no more on the original envelopes than off them, but almost all old stamps are worth more on the envelopes than off. It is better not to remove old stamps from the envelopes until you have written someone who can tell you about them.

J. R. T.—The stamps on the back of old photographs are sometimes valuable. The two-cent orange playing card and three-cent green playing card are sometimes found in this way and will bring from \$1 to \$3 each.

C. C. S.—The 3c playing card revenue unperforated, is a very rare stamp and if in good condition will bring a very high price. Don't be mistaken about unperforated,

Electric Novelties for Boys.

THE PAN AMERICAN STAMP CO.,

which means that the stamps have no means of separation one from another but cutting, while the perforated stamps can be torn apart.

K. S. M.—A watermark in a stamp is the same as a watermark in a sheet of writing paper only smaller.

The present issue of United States stamps are watermarked U. S. P. S., but the watermark is so large that only part of each letter shows in each stamp.

The present issue of the stamps of most of the British Colonies are water-

marked crown and C. A., and the watermark is so small that in most cases the whole watermark shows in each stamp.

The difference between triangles 1, 2 and 3 of the 1895 issue of U. S. stamps is as follows:

In 1 the lines of the background of the stamp are the same thickness where they cross the triangle.

In 2 the lines of the background are much finer where they cross the sides of the triangle.

In 3 the lines of the background are broken where they cross the sides of the triangle, so that the background is plain between the edges of the triangle.

The Austrian stamp for which you ask a description is a revenue, so you will not find a place for it in your album.

The Boy Coin Collector.

AMPHIPOLUS, HEAD OF JUNO, B. C. 400-336.

Why Collect Coins?

They teach us mythology. Would you see the faces of Hercules, Jupiter, Apollo, Neptune, Bacchus, Mercury, Vulcan, Mars, Juno, Pallas, Proserpine, Ceris, Diana and Venus as idealized by those who deified them, and see the very coins they saw who worshiped them?

They teach us architecture. The temples of Romulus, Concord, Vesta, Venus, Jupiter and Janus. The Trajan Forum, the Circus Maximus, the Colosseum, the arches of Claudius and Nero and the Nearclan aqueduct are only a few among the many ancient and historic edifices we find on coins handed down to us.

PLEASURES OF ASSOCIATION.

One of the delights of collecting coins is the idea of association. How many coins have been handed down as heirlooms from generation to generation in families, and though the metal is often valueless, how they are prized by their custodians.

have looked on that one before his sight forever left him, or this coin Washington may have held in his palm. We do not know.

WHAT COINS TO COLLECT.

This is simply a matter of taste and must depend largely upon one's ability to purchase. When one realizes that the world's largest collections are far from complete, and never will be complete, it is vain to have serious ambitions in that way.

We want to impress upon the mind of the collector, that it is not the number of coins he has that he knows little or nothing about, that will be a pleasure or benefit to him, so much as the few he may have that he knows well.

The coin should be your teacher; mute though it is, it can teach you much if you will but use it as a text. Where is it from? Study the history of the country or city at the period or time it was struck.

Be persistent; keep your eyes open; and you will ere long be surprised at the fund of instruction and entertainment you have accumulated for yourself and friends.

George Dalton, of Norwood, Mich., on Feb. 6, found carefully concealed in an old wood pile in a piece of woods near the C. R. & S. railway, a collection of old coins that are presumed to be of value.

INDIAN RELICS, Geodes, Minerals, Fossils, Sea Shells, Corals and Curios.

CURIOS, Sea Wonders, Old Paper Money, Shells, Crystals, Gems, Minerals, Birds' Eggs, etc.

A HANDSOME AND VALUABLE MINERAL SPECIMEN CABINET. BEAUTIFUL AND INSTRUCTIVE. Prepaid by mail for \$1.00. Containing 22 specimens of 22 different kinds of ores, minerals, petrifications and semi precious stones, as follows:

J. H. BLAKE, 1630 WELTON ST., DENVER, COL. (Mention this Journal.)

The Numismatic Sphinx.

Carl Holbrook, West Roxbury, Mass.—Your 1852 copper cent and 1864 nickel are both very common; the former worth 5 cents.

Fred Targatz, Schroyer, Kas.—There is no premium on the 1845 dime, 1854 dime and quarter with arrow points, or five cents of 1867.

Salon, Hackettstown, N. J.—The Columbian half dollar of 1893 sells for 75 cents, 1892 is the rarer date. Both are, however, easily obtained often at face value.

M. C. Dittmann, Phila.—The half-dollars of 1812, 1824, 1825 and 1836 are worth in good condition 75 cents each. There is a variety of 1836, without lettering on the edge, that is worth \$2.50.

J. W. B. Fulton, N. Y.—Though the 2 and 3-cent pieces are no longer issued by the U. S. mint they are still easily obtained and your pieces of 1864, 1865 and 1868 command no premium.

Wayne Knit
TRADE MARK
MATCHLESS
HOSIERY

50c Quality Full Fashioned Hosiery 25 Cents a Pair.

Ladies'-Men's- Misses'-Boys'
How Can We Do This?

Heretofore all full fashioned hosiery was imported (full-fashioned hosiery means made on a machine that follows the lines of the foot and leg, so that it always fits like a glove and never loses that shape-keeping quality). Instead, we imported expensive knitting machines, and employed skilled workmen trained in the best foreign hosiery factories, with the result that we make hosiery, which, if imported, as formerly, could not be sold for less than 50c. that we can sell at 25 cents a pair!

For Sale by Live Dealers Everywhere. Look for "WAYNE KNIT MATCHLESS" stamped on each pair. Insist on your dealers supplying you. If he does not keep them send us his name; we will see that you and he are supplied. Sample pair, one pair only to any person, 25 cents. Send size wanted.

If you don't want hosiery just now, send us your own and your dealer's name on a postal, and we will send you a very instructive book telling how the celebrated Wayne Knit Matchless, full fashioned 50c hose are made so as to retail at 25c per pair.

WAYNE KNITTING MILLS, FT. WAYNE IND.

Soup For Six 10 Cents

"White Label" Brand

Seasoned just right—cooked just right and ready for instant use—"White Label Concentrated Soup"—enough in a ten-cent can for six generous plates full—add a little boiling water and it's ready. Tomato, Mock Turtle, Consomme, Beef, Ox Tail, Vegetable, Chicken, Chicken Gumbo-Okra.

Economical Soup Booklet yours for a postal. Be sure you get "White Label"

Packed only by **ARMOUR PACKING COMPANY** Department 16, Kansas City, Mo., U. S. A.

Ralph V. R., Onancock, Va.—The coins you send are an Annamese pewter cash and 1819 U. S. cent. You can purchase pieces in this condition for 5 cents each. They are worth more to keep than to sell.

Sphinx, Fishkill, N. Y.—A common army and navy token of 1863, issued during the civil war. There were many hundred varieties of these issued at this period and they passed current as cents during and for a time after the war.

J. B. L., Jr., Pa.—Your coin with a horse head over a plough, Nova Caesarea, and with reverse shield and E Pluribus Unum, is a New Jersey cent. These cents were issued by that state in the years 1786, 1787 and 1788. There are many varieties of these pieces and they are worth from 25 cents to \$3.00 each, depending upon variety and condition. Your rubbing does not show date, but is one of the common varieties.

W. G. Pratt, Alton Bay, N. H.—Not a pine tree "shilling," but a pine tree "III pence." A pine tree III pence in the condition yours seems to be is worth about \$3.50. The oak tree III pence is worth much more. These pieces of the denominations of II, III, VI and XII pence were issued for the colony of Massachusetts, and though all bear date 1652, the records show they were struck from year to year up to 1682. The only exception is the 41 pence oak tree, which is dated 1662.

E. H. Armor, Allegeny—Your 1794 half cent is illustrated in our December issue. Its value depends upon its condition, which you do not mention. If in good condition it should be worth \$1.50. Your other piece is a political medal of Abraham Lincoln. These presidential or political medals are quite common and but little collected. It is a difficult matter to put a price on them. Their sale is mainly through the auction room, where they bring from 10 to 25 cents each, some more and some less.

Henry Maclean, Detroit—The rubbings you sent we believe to be of a medal of

Poland and a medalet of Victoria. The former, while having a date of 1791, we believe to have been struck in 1891 to commemorate some Polish centennial event. Your rubbing is not distinct enough to give us all the inscription and you do not state whether the metal is silver or bronze. We have seen several varieties of the Victoria medalet similar to this, some of them struck in iron and silvered. Of no particular value.

H. O. W., Buena Vista, Cal.—There were three varieties of the 1883 United States nickel 5-cent pieces. First, those with the large 5 surrounded by rays, with shield on the obverse; second, those with head of liberty, and reverse large V and motto, "E Pluribus Unum," and the third, similar to last, but with the word "cents" in place of the motto. The second variety was discontinued because they were gilded by unscrupulous persons and passed for \$5 gold pieces, the lack of the words expressing the denomination being confusing to many. There is a general impression that this second variety is rare and commands a premium. A great many were struck and we do not believe this to be true.

Willie G. Halsey, Chicago.—Your rubbing is taken from a coin of Morocco. It is a 3-falus piece. Morocco is a Mohammedan country and dates its coins from the Hegira, or flight of Mahomet, which was in A. D. 622. This, added to the date of your coin (1288), would give us 1910 A. D. Of course, this is wrong, but we must remember that the Mohammedan year is a lunar and not a solar year, which makes it a much shorter one than ours, so a further mathematical calculation reduces your coin to 1871 A. D., when your coin was—I was going to say struck—but you will notice that it is a cast coin—one made in a mould. The geometric design on the reverse is held to represent the seal of King Solomon. This common coin is an interesting piece and is puzzling many older heads than yours. One virtue it has, that of being very common.

Baker's Bedside Table
ADJUSTABLE for serving meals, reading, writing, etc. Adapted for use over Bed, Lounge, Chair, etc.

A GREAT COMFORT FOR THE SICK.

The University of Michigan Debating Team Defeats the Chicago University Team.

Between athletic seasons student enthusiasm at the University of Michigan

bate being the semi-final of the second series of the Central Debating League, which consists of the Northwestern University, University of Minnesota, University of Chicago and University of Michigan. Last year the University of Michi-

debate on January 12 was on the question: "Resolved, That municipal ownership and operation of street railroads is preferable to ownership and operation by private companies." Chicago had the affirmative, and Michigan the negative. General R. A. Alger presided, and the judges were, Hon. Harry A. Garfield, Cleveland; Prof. C. A. Waldo, Purdue University, Ind., and J. K. Hamilton, Toledo, O. The Michigan debaters were all members of the law school. They were: A. M. Cloud, of Earlville, Ia., a graduate of Lenox College, who has won many oratorical contests and is an excellent debater; Martin H. Carmody, of Grand Rapids, Mich., who was a member of the Michigan team that defeated the University of Pennsylvania, in debate last year, and won first prize in the University oratorical contest; and Gustavus Ohlinger. Mr. Ohlinger, though an American, was born in China, and is now the stenographer to President Angell, of the University. The Chicago debaters were A. E. Bistor, R. S. Williams and B. Samuels. Mr. Bistor represented his college in the Northern Oratorical League last year and won second honors. The judges decided in favor of the Michigan debaters. This was quite a triumph for the University of Michigan. In the five debates so far held with the University of Chicago, Michigan has been successful four times, while Chicago has had to be contented with a single victory.

A. M. CLOUD. GUSTAVUS OHLINGER. M. H. CARMODY.

gans time to vent itself in intercollegiate contests in debating and oratory. On January 12, the debating team from the University of Michigan met the team from the University of Chicago, this de-

gan practically won the debating championship of the West by defeating both the Northwestern and the Chicago Universities, and every effort is being made to repeat the achievement this year. The

CHALMERS & CO., 218-220 Dearborn St., Chicago.

ADVERTISE IN THE AMERICAN BOY

The Old School Exhibition.

Oh, the old school exhibitions! Will they ever come again. With the good old-fashioned speaking from the girls and boys so plain? Shall we ever hear old "Iser," with his rapid roll and sweep, "And 'Pilot, 'tis a fearful night; there's danger on the deep?"

Sweet Mary doesn't raise her lambs as Mary did of old; Their fleece is not "as white as snow;" they're wandering from the fold. The boy upon "the burning deck" is not one-half as fine— He was not "born at Bingen—at Bingen on the Rhine."

The girls don't speak in calico, the boys in cotton jeans; They've changed the old time dresses 'long with the old time scenes; They smile and speak in ancient Greek. In broadcloth and in lace; And you can't half see the speaker for the collar 'round his face.

Oh, the old school exhibitions—they are gone forevermore! The old school house is deserted and the grass has choked the door; And the wind sweeps 'round the gables, with a mournful whine For the old boys "born at Bingen—at Bingen on the Rhine!" —Atlanta Constitution.

Live Topics for Debate.

- 1. Should Congress authorize the Secretary of the Treasury to issue bonds at will as advised in President's McKinley's message?
2. Is the new currency bill an adequate remedy for the money stringency?
3. If Cuba is entitled to independence why not the Philippines?
4. Is Christianity consistent with ordinarily reputable business competition?
5. Should Hawaii have representatives in our Congress?
6. The President recommends government aid to the American merchant marine. Is that a wise policy?

A little lad not more than five years of age heard his father and some friends discussing various matters. Suddenly one of the party exclaimed: "Well, say what you like, an honest man's the best thing in all the world." This roused the little one, who interposed excitedly thus: "I know that isn't true, for my mother is better than any man in the world."

Who Said It.

The publishers of THE AMERICAN BOY will give \$1.00 to the first one of its subscribers who sends in the names of the Americans who uttered the following sayings:

- "Give me liberty, or give me death."
"We must all hang together, or assuredly we shall all hang separately."
"These are times that try men's souls."
"My only regret is that I have but one life to give to my country."
"'Tis our true policy to steer clear of present alliance with any portion of the foreign world."
"Millions for defense, but not one cent for tribute!"
"To the memory of the man, first in war, first in peace, and first in the hearts of his countrymen."
"Don't give up the ship!"
"We have met the enemy and they are ours."
"Our country! In her intercourse with foreign nations may she always be in the right; but our country, right or wrong."
"I would rather be right than be President."
"If anyone attempts to haul down the American flag shoot him on the spot."
"Hold the fort! I am coming!"
"With malice toward none, with charity for all."
"Let us have peace."
"You may fire, Gridley, when ready."
"Don't swear—Shoot!"
"Don't cheer! The poor devils are dying."

Prize Resolution.

By HARRY E. CLAY, Lowell, Mass. My resolution for 1900 is: "I resolve to do my best in whatever I undertake."

Prize Essay on How Can the American Boy Be Improved.

By ALEXANDER MURRAY, Wilkesbarre, Pa. Although THE AMERICAN BOY treats of nearly every subject of interest to a boy I think it has overlooked a few. One of these which it has overlooked is the subject of drawing. There are many American boys who do not own a camera and cannot afford the same. But any boy can buy a pencil and some paper, and all it requires to draw is a little talent and practice.

Now I think if THE AMERICAN BOY would give prizes for original sketches and drawing it would get a great many more subscribers.

Another subject which would be greeted with applause is of stories and poems. Some boys have had incidents in their lives that are worthy of mention, but a greater number have not and those that have not may be able to write a story which would be appreciated by the readers of your paper just as much.

Then, again, you might give prizes for the best essay or composition on any subject, accompanied by photograph or drawing, such as Coal, How it is mined; Paper, how it is made, etc.

This paper might also give prizes for poems written by a subscriber of THE AMERICAN BOY on a subject chosen by the paper or boy, contained in so many lines, etc.

Jimmy's Physiology.

Prize Anecdote About a Boy, by ALLEN SRELY Kemptville, Ont. Jimmy was anxious to shine in school and eager to answer any question; but, alas! Jimmy was also very liable to get his answers sadly mixed. When the teacher

told the physiology class that "man's stomach was in the abdominal cavity below the diaphragm." Jimmy salted the fact for future use. Sure enough, soon after, the class came to a standstill at the question, "Where is the stomach situated?" This was Jimmy's opportunity! Excitedly he snapped his fingers, "I know." At last came the welcome, "Well, Jimmy," and then Jimmy's answer, "It's in the abominable cavity below the fryin' pan!"

ALLEN SEELY.

The Prize Letter from the Philippines.

San Mateo, P. I., Dec. 24, 1899. I will write you a few lines giving you the details of our great general's death. We were in the scrap and it was a pretty hot one. It lasted over three hours of hard fighting and we got it pretty hard. We had three men killed, one of which was Gen. Lawton, and two privates; eleven were wounded two horses were killed and five wounded.

We left camp here on the evening of Dec. 18, at twelve and marched all night over the hills, and at a good rate to the northern end of the town. The infantry crossed down below to attack the south and west of the town. We had the town surrounded on three sides and on the fourth side were high hills and we could not get any troops over as they were all held by the enemy. After the cavalry were all out of the hills, the signal gun was fired and the battle commenced. There is a river about the town on three sides and that gave them a good advantage over us. We lay in a cane field and poured in a steady fire, but they returned it steadily. They showed as much nerve as we did. The fighting continued until about eight o'clock, thirty minutes, when one of Gen. Lawton's aides came and told us of the brave general's man.

Map of San Mateo, P. I., showing the position of Gen. Lawton's camp and the route of the Philippine army to the town.

MAP OF BATTLE IN WHICH GENERAL LAWTON WAS KILLED. DRAWN BY TEDDY GEISSMAN.

death. Then nothing could hold us back. We just gave a yell, passed it along the line what had happened, and for a time acted more like a lot of lunatics than soldiers, but pretty cool. We just swarmed that river, which was over our necks in some places, and had a strong current. We all crossed safely but one of our troop, who was hit by a bullet in his left breast. We didn't wait for orders but just swarmed their trenches and the "niggers" disappeared in a hurry, vamoosed to the hills, where we could not dislodge them. Our regiment's adjutant got a mauser in the left leg. C troop had three wounded, one died on the 21st of December, and the rest were of the infantry. We escorted Gen. Lawton's body back to Manila and then we took a ration-train out and we are still here. We had no artillery in the fight, as we could not get it across the river at San Turce. I could not write sooner as we were kept a hustling getting grub for our horses and ourselves.

Very respectfully, TEDDY GEISSMAN.

No. 21. Clarence Gray, Bellevue Hospital, New York City.
No. 22. Robert A. Jerauld, Peru, Ind.
No. 23. Gerald J. Blee, Sandwich, Ill.
No. 24. Albert J. Matter, Waterloo, Iowa.
Nos. 25, 27, 28. Philip Savage, 44 Davenport street, Detroit.
No. 29. Harvey Miller, Fulton, Kans.
No. 30. No correct solution sent.
No. 31. Clarence Corp. Corfu, N. Y.
Correct solutions to many of the puzzles were received from 138 subscribers, besides those who received the prizes. Nearly every state is represented among them.
For best essay on "How can the AMERICAN BOY be improved?" to Alexander Murray, Wilkesbarre, Pa.; second prize for foregoling, to Benny Wikke, Montezano, Wash.
The prize for the longest list of mistakes is awarded to Glenn W. Bugbee, Parish, N. Y. The prize for the first received goes to Thos. J. Edwards, 813 E. Ann street, Ann Arbor, Mich. The prize for the second received goes to Frank Chaplin, 248 Abbott street, Detroit.
For the best animal anecdote (with photo), Howard Park Dawson, 399 Orange street, New Haven, Conn.
For best anecdote about a boy, Allen Seely, Kemptville, Ont.
When is a bird not a bird. Allen Seely, Kemptville, Ont.
For best resolution for the new year, Harry E. Clay, 31 Race street, Lowell, Mass.
For answer to puzzle, "What bridge can stand any strain," J. P. Garver, Linwood, Md.
For best soldier letter from the Philippines, Archibald C. Torney, Milwaukee, Wis., the letter being from Teddy Geissman.

QUAINT AND INTERESTING PICTURES MADE BY BOYS OUT OF THE ELEVEN LINES OF FIGURE 10.

largest number of subscriptions during that period, goes to Albert W. Fifield, Minneapolis, Minn. The total number of foreign stamps accumulated during the period was 152. This gives to the winner of the first prize 66 stamps, and among them are some from Cuba, Hawaii, the Philippines, Mexico, India, Japan, Fiji, Trinidad, France, Brazil and others.
For the second largest number of subscriptions during the period, one-fourth of the stamps go to Byron Leigh, Douglas, Alaska, among them being some from New South Wales, Mexico, Hawaii, Fiji, France, Puerto Rico and others.
For the third largest number of subscriptions during the period, one-fourth of the stamps go to O. J. Poland, Big Bend, La., among them being some from Venezuela, New South Wales, Hawaii, Mexico, France, Japan, Jamaica and others.

Pisistratus.

Prize Animal Anecdote by HOWARD PARK DAWSON, New Haven Conn.

Pisistratus was a cat with a long pedigree and even longer name; but, alas, he had one failing, a fondness for chicken a la raw. One morning he came into the house with a half grown chicken in his mouth, which now and again would make a brave dash for liberty only to be recaptured by Pisistratus. At this stage of the proceedings the cat's master put in his appearance, gave the chicken its liberty, and returned to punish the cause of all the trouble. A pail of water standing near

gave him an idea, and Pisistratus was soon enjoying (?) a rather sudden bath. Whether the cat was a firm believer in "the water cure," or whether the supply of chickens ran low I cannot say. At any rate Pisistratus never caught another chicken, and he died at a good old age, lamented by all his friends. HOWARD PARK DAWSON.

When is a Bird Not a Bird?

In our February number, we printed the outline of a bird which is reproduced in figure 10 of the group shown herewith. We took the eleven separate pieces of which this bird was composed, and constructed of them another picture. We then offered a prize of one dollar to the first boy who, before February 18, should send us a picture made from these eleven lines that should be nearest like the one we had made. The prize goes to Allan Seely, Kemptville, Ont., who drew figure No. 6. Many interesting pictures were made by our boy friends. We show eight of the unsuccessful ones, and regret that we cannot show them all, for they are all unique and interesting. Number 1 was made by Willie H. Halsey, Chicago, Ill.; No. 2 by Richard E. Chapman, Hyde Park, Mass.; No. 3 by Eddy Foy, Toronto, Ont.; No. 4 by Walter J. Burch, age 12, Madison, Wis.; No. 5, as stated, by Allan Seely, Kemptville, Ont.; No. 6 by Ralph Ruth, Galveston, Tex.; No. 7 by Cecil Bock, Hebron, Neb.; No. 8 by Mrs. C. Fowler, Detroit, Mich.; and No. 9 by John W. Harsha, Charlevoix, Mich.

Prizes.

- The following prizes will be awarded for the first correct solutions of the puzzles appearing in this department:
Puzzle No. 32—An AMERICAN BOY Base Ball Scorer.
Puzzle No. 33—An AMERICAN BOY Key Ring.
Puzzle No. 34—A six months' subscription to THE AMERICAN BOY in the name of any one not now a subscriber.
Puzzle No. 35—A six months' subscription to THE AMERICAN BOY in the name of any one not now a subscriber.
Puzzle No. 36—A six months' subscription to THE AMERICAN BOY in the name of any one not now a subscriber.
Puzzle No. 37—A six months' subscription to THE AMERICAN BOY in the name of any one not now a subscriber.
Puzzle No. 38—A copy of "Little Beasts of Field and Wood."
Puzzle No. 39—A copy of "Amateur Photography."
Puzzle No. 40—A copy of "Massasoit."

Other Prizes.

To the subscriber to THE AMERICAN BOY sending us before March 18 the largest number of new subscribers we will give, not only the premiums to which he is entitled as shown in our Premium List, but also one-half of the foreign stamps that are received in our office during the same period.
To the subscribers to THE AMERICAN BOY sending in the second and third largest number of new subscribers within the same period, we will give in addition to the premiums to which they are entitled, as shown in our Premium List, one-fourth of the foreign stamps received during the same period.
Hundreds of American boys are handy with a pen or pencil. We offer a prize of \$1.00 for the best sketch, either pen and ink or pencil, by a boy under 18 years of age, the sketch to be in our hands by March 18. We offer a second prize of 50 cents to the one sending the next best sketch. Choose your own subject. Use a soft pencil, so that the picture of the sketch may be dark enough to reproduce, as we want to show in the next number of THE AMERICAN BOY what boys can do in this line.

Award of Stamp Prizes.

The prize of one-half the foreign stamps accumulated in our office between the dates of going to press of the February and March issues of THE AMERICAN BOY, offered to the subscriber sending us the

Do You Want to Earn Money? \$1,000 FOR BOYS

Do NOT FORGET that the time is rapidly approaching when we are to divide \$1,000 among 55 boys. Would you not like to be one of those who, in December next, will receive our check? Some boy will get \$200; another will get \$100; two will get \$75 each, three \$50 each, five \$25 each, fifteen \$10 each, twenty-five \$5 each. The boy who has sent us the largest number of \$1.00 subscriptions for THE AMERICAN BOY by the 20th of next November will get the prize of \$200; the next in order \$100, the two next \$75 each, and so on. Fifty-five boys in all will get a share in this \$1,000. You can easily be one of the fifty-five. You may not get the head prize, but you can get one of the smaller ones just as easy as anything. The boy who is ahead for the first prize of \$200 has only sent in twenty-six subscriptions, so that the race is still an open one for the \$200. There remains nearly nine months within which to work for these prizes. The twenty-five contestants who up to date stand in the lead are, in their order: Albert W. Fifield, Minneapolis, Minn.; Emerson T. Cotner, Detroit, Mich.; Clarence Pycatt, Fort Lembi, Idaho; Herman H. Smith, Lamoni, Ia.; Wm Northwood, Forrest Hill, Cal.; Fred H. Hilker, Fort Wayne, Ind.; Karl Matthews, Dubuque, Ia. Moffat A. Gray, Detroit, Mich.; Frank A. Wright, Lewiston, Mont.; Robt. M. Gray, Hasbrouch Heights, N. J.; Geo. O. Bacon, Fort Scott, Kas.; Frank Ford Northrop, Wayne, Neb.; Avery C. Hand, Mansfield, O.; Clarence A. Campbell, Dickinson, N. D.; Wm. R. Franklin, Clio, Mich.; Byron Leigh, Douglas, Alaska; Geo. F. Barclay, St. Louis, Mo.; Donald Annis, Detroit, Mich.; Wyndham S. Scott, Wytheville, Va.; O. J. Poland, Big Bend, La.; C. Noonan, Weaverville, Cal.; Ray Lambert, Anderson, Ind.; Wm. G. Hurlbert, Warren, O.; Herbert Hotchkiss, St. Ignace, Mich.; Anton T. Johnson, Chicago, Ill.

We are making a very liberal offer, as not only do you stand a chance of getting the money prizes mentioned but you have in addition the privilege of selecting a prize from our premium list for every subscription you send us. You get not only the premium, but you get a chance at the money prizes.

Now go right to work, as you will find THE AMERICAN BOY an easy paper to solicit for. Respectfully,

Detroit, Mich. The Sprague Publishing Company.

THE AMERICAN BOY

The Only Distinctively Boy's Paper
in America.

(Entered at the Detroit, Mich., Post-office as second-class matter.)

The American Boy is an illustrated monthly paper of 24 pages. Its subscription price is \$1.00 a year, payable in advance.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper shows to what time your subscription is paid.

Discontinuances. Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrears must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE SPRAGUE PUBLISHING CO.,

WILLIAM C. SPRAGUE,
EDITOR.

GRIFFITH OGDEN ELLIS,
ASSISTANT EDITOR.

Prize for Mistake Hunters.

Look through this issue of THE AMERICAN BOY and find, if you can, a misspelled word. Call our attention to it at once on a postal card, giving page and line. Time allowance will be given to all competitors living at a distance. Address postal card to "Prize and Puzzle Department THE AMERICAN BOY, Majestic Building, Detroit, Mich."

The first prize of \$1.00 will go to the first subscriber advising us of the mistake; the second prize of 50 cents to the second so advising us.

A prize of \$2.00 to the subscriber finding the largest number of mistakes in spelling.

25,000 Boys.

We have the privilege this month of talking to 25,000 boys who subscribe for and read THE AMERICAN BOY. We consider it something of an achievement to have gotten, in less than five months, the attention and interest of so many boys. We may be mistaken, but we doubt whether any publication for boys or girls or both ever did the like before in the first five months of its existence. Then, if we take into consideration that each paper—particularly those that go to libraries—is probably read by at least two boys, we may with fairness claim to be talking this month to more than 50,000 boys and ever so many fathers and mothers—and sisters, too, for we know instances where the girls have fallen in love with THE AMERICAN BOY; quite natural, you say.

Over 25,000 boys will within a few days be wearing "The American Boy Button"—a big army which, single file, allowing them to march two feet apart, would stretch over hill and plain, a distance of nearly 20 miles.

Recruits are coming to this big army at the rate of 300 a day, counting Sundays. The full strength of a company of Uncle Sam's soldiers is 100 men, so that three full companies of boy recruits join our forces every day, making two full regiments of 1,000 boys each, every week—nearly nine regiments a month.

We say it is a privilege to talk to so many boys. It is a privilege to talk to one boy, to enter into the freshness of his spirit, imbibe a little of his enthusiasm, and give him a little of our encouragement and our counsel, to help him over a hard lesson, and if need be in order to hear his hearty laugh get down on all fours and tire ourselves all out in an undignified romp. So if it be a privilege to get down or up—which is it?—to the level of one boy, how much more is it a privilege to do so with 20 miles of boy.

THE AMERICAN BOY believes that it knows something of the boy nature. A

Three Favorite Flowers 6¢

Sweet Peas—Over 50 varieties of the best European and American named sorts.
Perfected Royal Show Pansies—Over 100 colors and markings, all the finest European varieties and largest flowering strains.
Nasturtium Dwarf—The best ever produced, and not surpassed for gorgeousness of color and brilliant effects.
One full sized packet of each variety for only 6¢, and addresses of two of your flower loving friends, will also include a copy of "Floral Culture," which tells how to grow flowers from seeds, and the Gaieties catalogue published, devoted exclusively to flower seeds.

Miss C. H. Lippincott—The Pioneer Seedswoman of America
325 6th Street South Minneapolis Minn.

dignified representative of an old eastern publishing house asked us a few days ago if we were not lowering our dignity as a publication in dealing so largely in personalities—in writing up this and that boy and giving portraits and otherwise getting down off the plane of "high toned" journalism.

Why, bless you, it is just as if you had come up to the window of our house last night and peeping in had found us having a romp with our boys just before the "good-night." You never had a boy and never did that, and you pitied us and exclaimed, "How disgraceful! How pitiful!" And when our boys went off to bed with a bound and a laugh and we settled back in our easy chair, tired and all out of breath, you said "Poor man!"

When you open one of these papers you see us at home with our boys and if we choose to let down our dignity for them it is our business and theirs, not yours. They like it and no matter how unbecoming we may appear to the critic who has only one standard of style and no boy, we like it. This is a boy's paper. The boys can do what they please with it, so long as they don't run it into the sort of journalism that appeals to the worst elements in a boy or run it into the cut and dried groove of youths' papers, all but one or two of which have met with disastrous failure in the past few years. The critic who would run this paper for us is invited to take his stand by the highway while this 20 solid miles of enthusiastic boy goes by and then come and tell us what is necessary to our success in publishing a boy's paper.

A Word to Advertisers.

The immediate favor with which THE AMERICAN BOY has been received by boys, and the consequent and rapid growth in its circulation, is evidenced in no better way than by advertisements appearing in this number. We venture the assertion that no publication for boys, and few publications of any character, have in their fifth month developed so great an advertising clientele as has THE AMERICAN BOY. Advertisers are favorably impressed with the character of the paper itself, and are convinced that it occupies a special field and is well suited to fill it. They are confident that we will exclude from our pages, so far as possible, objectionable advertisements. They are convinced that we are in earnest in building a circulation. Given, therefore, a good paper and a large circulation and reasonable advertising rates, there can be no question as to the patronage of these columns by the American advertiser who wishes to reach boys, and incidentally, boys' fathers and mothers.

Five thousand copies of the first issue of this paper were printed, 8,800 of the second, 10,000 of the third, and two editions of the fourth, aggregating 17,000 copies, while this, the fifth issue, is 25,000 copies, with a prospect that a second edition of this issue will be necessary before the close of March. The April number will approximate 35,000 copies, at a conservative estimate.

The advertising rate is 25 cents a line (fourteen lines to the inch) subject to change without notice. Advertisements that come prior to the 15th of the month preceding date of issue will be given positions in the departments of the paper appropriate to their nature; that is, coin and stamp advertisements in The Boy Collector department, book advertisements in The Boys' Library department, pet and animal advertisements in The

Boy in the Animal Kingdom department, etc. The advantage of this classification to advertisers must be apparent.

A FIRST-CLASS BINDER

"THE AMERICAN BOY."

Many subscribers desire to keep their copies in permanent form, and for this purpose we offer the "EMERSON BINDER," the most practical binder made. Marbled Slides, Duck Back and Corners. Price, \$1.00, Delivered.

FOR MOTHER TO READ

A Few Facts About Wyandotte Washing Powder

It is the only perfect washing preparation on the market, because it is the only one which does not contain caustic alkali; therefore, will not injure the hands, the most delicate textures, nor silverware, cutlery, pans or painted woodwork.

It is the only general household cleaner; equally effective in a hundred ways.

It makes washing easy and speedy—will not fade colors—acts as a bleach with white goods, cleanses thoroughly with little work; will not shrink flannels; acts like magic in washing lace curtains and dainty fabrics, and saves one-half the soap ordinarily used.

It removes grease from the hands, from dishes and cutlery; makes a perfect wash for silverware and glassware; cleans the bath tub, and once tried becomes indispensable to both kitchen and laundry.

It washes painted woodwork without marring or removing the fresh appearance; it will not injure oil cloth or linoleum; it removes the dread of housecleaning by making it light labor; it is always ready for use.

Wyandotte Washing Powder is the largest package on the market for five cents; it is, therefore, the most economical as well as the best of all washing preparations.

Get a package from your grocer and try it; if it does not more than meet every claim we make, the dealer will return your money.

On each package of Wyandotte Washing Powder are two trade marks (The Indian). For these trade marks we give handsome and useful premiums. Ask the grocer for one of our Premium Lists.

SAVE THAT BOY

THERE were sixteen thousand boys arrested and thrust behind prison bars in Chicago last year. Add the number for five hundred other American cities. Then add again for the countless American towns, villages and country hamlets. Look at the result with complacency, if you can, Mr. Taxpayer, Mr. Philanthropist, Mr. Educator, Mr. Christian Gentleman. These boys were in most cases imprisoned for stealing — stealing a living! The story is ever the same: Homeless, neglected, abandoned, a day of hunger, a petty theft, a pre-arranged sale, and then one more blessed, mysterious, indigestible meal, for which "the law," grown robust on three "square" meals a day, sentences the tattered and terrified boy to a term in prison or "pardons" him that he may resume his life of hardship. Kind neighbors or friends usually take care of the helpless girls; the boys are abandoned, to live or die as they can or will. And these are American Boys! In free, enlightened, prosperous America! The land of "opportunity"! Christian America! Who will take care of the Boys? Who will save them?

A few good men and women in isolated spots, have gone down into filthy cellars and underground dens, and brought forth to God's sunshine, poor, tiny bits of humanity, with greasy, matted hair, finger-nails like claws, and clothes reeking with vermin, deserted by profligate parents, with nothing to eat but refuse, and by the alchemy of sun, air, water, bread and butter, and love have transformed and redeemed them.

Such men and women are Herman Lee Swift, of Children's Temple Home in Chicago, W. R. George, of the George Junior Republic, the promoters of the National Farm School at Doylestown, Pa., and of the National Junior Republic at Annapolis Junction, Md., and others whom we might name.

Can you believe us when we say that some, if not all of these, have had to fight in this work against actual hostility on the part of professedly good men and women, and in one case, at least, against hostile legislation?

Do we realize that these are American boys — American citizens in embryo? That the vote of one of these degenerates will count for as

much as will the vote of that other boy refined and cultured tho' he be?

Right here are the foundation stones of the Twentieth Century Republic of America being laid.

If you were building a house for your old age and for your children, and were the masons to lay the foundations in mire and put in here and there crumbling stone; were the carpenters to lay joists worm-eaten and rotten at the core, you would, on the instant, summon every

another. We will give sixty dollars to one of these institutions and let it select a boy for us from the city's slums. It will feed, clothe, educate, save him. He will be our boy.

How many readers of THE AMERICAN BOY will join in saving another boy? Send us one penny for every year you have lived. If you are ten years old send us ten cents; if fifteen years old, fifteen cents. If you can not do this send what you can, if only a penny. If sixty dollars is not raised in this way by June

1st next we will add enough to make up that amount. If you send enough to save two boys, it will be so used—every penny of it. We will acknowledge receipt of your subscriptions in our July issue and will publish the name and the picture of the boy chosen for you and give frequent reports from the good people who will have the care of him. This will be your boy.

Send your pennies, your dimes, or your dollars and watch for a miracle.

Street corners are poor colleges.

There is no poverty like ignorance.

What goes into the brain today comes out tomorrow.

Boys are the most neglected portion of the community.

It is no small tribute to be chosen as a friend by a boy.

Boy friends are as dear and beautiful a source of inspiration as this old world affords.

A good condensation of the greater part of advice to boys is, "Work hard and keep straight."

Many men do not discover the true relation of father and son until it is too late to save the boy.

More than once a Christian teacher has found a boy's father standing between him and the boy.

A boy and his father should be confidential friends, even if it takes a little time from the father's business.

Charles Dickens says: "I love these little people, and it is no slight thing when they, who are so fresh from God, love us."

OSCAR WEBBER AS HE WAS

workman before you, and in unmistakable terms denounce the imposition and demand good material. Yet is not the substructure of our future country, which we ourselves expect to enjoy yet many years, and leave as a blessed heritage to our children, being erected before our very eyes from materials which we know will work its eternal injury and perhaps its destruction, without a word of protest?

We are told by one of these boy-saving institutions that sixty dollars will save a boy. Is he worth it? Would he be worth it if he were your boy?

But let's be practical. THE AMERICAN BOY will save one boy if its readers will save

OSCAR WEBBER
AS HE IS

THE BOY WHO MADE A TROLLEY CAR

By CHARLES HATTRELL LOOMIS

(Copyright by the Author.)

George Starbuck had always lived in the country, which was the best thing that could have happened to him. Have you ever thought, you city child, how little chance you have to become great or famous? You may become rich but the chances are that you will never be President, and all because you were unfortunate enough to be born and brought up in the city.

You have been taught to laugh each week at the poor countryman who is pictured in the comic weeklies as a sort of cross between a monkey and a sharper, but the countryman learned what neighborliness meant when he was a boy, and you will never know its meaning unless you leave the crowded city before it is too late. Go up into the country and learn to be neighborly and self reliant and you may get into the history books, and future little boys will have to learn all about you as you have to about George Washington and Gen. Grant and Daniel Webster and Chauncey M. Depew—all country boys.

George Starbuck lived at Graytown near Worcester in Massachusetts and he could make anything that he had ever seen. At seven he made a wagon, whittling the wheels out of soft pine wood and his father rode in it a half hour before it fell to pieces and broke his leg.

So when Mr. Starbuck took George to Boston and showed him trolley cars or "electrics," which is the absurd name they give them there, George said: "I'll make one when I get home." Remember he was only thirteen. But make one he did. How he knew what kind of timber to use passes me, but at the end of a week he called his father out to his workshop, which had formerly been a wagon shop and there was a

HE CALLED HIS FATHER OUT . . . AND THERE WAS A TROLLEY CAR.

trolley car, life size, and for all the world like one of those that run out to Cambridge and Arlington.

Mr. Starbuck was delighted. "What are you going to do with it, my son?" asked he.

"Well, I had some thoughts of selling it!" said George, "but after all, money is not everything, so now I think I'll take you and mother and a party of neighbors down to Boston in it, and when I get there the neighbors can go sight seeing, and I'll make enough money running it to raise the mortgage that is on this farm."

When you grow up you will find that farmers raise a great many things on their farms, but that mortgages are sometimes very hard to raise, but it is a heap of satisfaction to raise one, so you see George was a good boy to answer his father in that way.

"There's no time like the present for things that are pleasant," said Mr. Starbuck, so they decided to take the trolley to Boston the very next day. Now you may have taken the trolley to Boston yourself, but not in the way they took it—on a platform car.

They invited their neighbors to come early next morning and start with them for Boston, and twenty accepted the invitation. George and his father and mother ran the heavy trolley car upon a low hung wagon that they used when they wanted to carry plate glass to market, and then the neighbors and all piled into the car, and George hitched a pair of cattle—which is country for a yoke of oxen—to the wagon and they were drawn down to the station with ease. It was, of course, easier to take the car off the wagon than to put it on. They started the willing oxen home, sure that they would find their way by themselves.

Then they all sat down in the car to wait for a freight train to come. In a few minutes a freight train stopped to unload some empty milk cans, and George removed his cap and politely asked a brakeman if he would help him put his trolley car upon a platform car, as he was going to take it to Boston. The brakeman had been born in the country and that made him willing to be helpful, so he jumped down and signalled the engineer not to start, and then after the neighbors had all gotten out of the trolley, he, with the help of the Starbucks, put the car upon the platform car. Then George and his parents and all the neighbors stepped inside of the car and the train started for Boston.

Pretty soon the conductor, who was a city bred man, came along and asked them for their fare.

George's feelings were hurt, and he said: "Why, why should we pay any fare? I am taking my parents and some neighbors to Boston in my own trolley car. I will pay you freight for the car, but not one cent for car fare."

The neighbors all cheered these noble words, which sounded very much like the famous sayings of famous men, and the conductor was covered with confusion and left them to enjoy their trip. In a few hours they ran into the freight yards at Boston, and then the pleasant brakeman assisted the three to place their car upon a trolley track and their journey was ended. You may wonder why the neighbors did not assist. They wanted to the worst way, but George said: "No, this is a holiday trip and I don't want you to feel that you have any chores to do. Mother and father and I will do all that is necessary, and you must have as good a time as you can and meet me here at twelve tonight, for I expect to go back then."

The neighbors gave him three times three and a tiger, but as he didn't know what to do with a tiger in Boston he gave it back to them and they went away with it.

George fitted the trolley to the overhead wires and his mother turned on the current and then took her seat inside and Mr. Starbuck acted as motorman and they glided up Summer street as if they had always done it. I think that George is deserving of a good deal of credit for having made so big a vehicle in a week with no tools but a jack knife and a scythe.

At Arch street they were hailed by a man who was standing on the corner. Mr. Starbuck stopped at once. This naturally puzzled the man on the corner, because, as a general thing, a trolley car does not stop for passengers. As soon as he stepped on board he asked George, who came around for his fare, why the car stopped.

"Why, this is father's first trip and he doesn't know the ropes very well. He thought it would be easier for you to get onto the car if it stopped. The fare is ten cents, for you see this is really my private car and I'm trying to raise the mortgage on father's farm."

The passenger, who had been born in the country, paid the ten cents at once, but he advised George to stick to the usual five cent fare. "For," said he, "most of these people are city bred and they won't care a snap about your mortgage. They are not neighborly enough."

This was the first time that George had heard that city people were not neighborly and it grieved him. But the car soon filled up and even at five cents a head he had a pocket full of nickels. He went out on the front platform. "I guess we can go back tomorrow with the mortgage raised."

Then his mother came out and joined them. They were going through the shopping district and could not move any faster than a mile an hour, because there were so many women crossing the tracks to go to the shops.

"Look here," said Mrs. Starbuck to George, "there's no use in letting these people ride far for five cents. It's a private car. Why not call out 'change cars' and then fill up the car with new passengers?"

I fancy that Mrs. Starbuck had a little city blood in her. George was a dutiful son and he immediately stepped to the door of the car and yelled "All out!" and the passengers scrambled out like a flock of sheep and he was free to fill it up again. Only the first passenger stayed in and said: "That was a clever move." So George said he might ride all day long if he wanted

to, and although he was very busy, he did ride all day long because such chances don't come very often.

Along in the afternoon they were passing the Hotel Vendome and the neighbors came out and hailed the car, not recognizing George. They had been sight seeing and they had all registered at the hotel in hopes of seeing their names in the newspapers. Of course George would not let them pay a cent, and as they nearly filled the car and rode way out to Brookline, he didn't make much money that trip. But he left them at Brookline and ran back quickly to the shopping district, where he soon made up a load.

One time a stout, prosperous looking man got upon the car and asked George what line he belonged to. George told him politely that it was a little line of his own.

Then the prosperous looking man, who said he was the president of one of the leading car lines, quoted the famous words of Gen. Grant and said: "Do you propose to fight it out on this line all summer?"

"No, sir, as soon as I raise the mortgage I am going to take my car home and make a hen house out of it."

THEY PUT THE CAR UPON THE PLATFORM CAR.

"Are you a country boy?" asked the man.

"I am, sir," said George proudly.

"Run all you want, my boy. I give you permission. I was once a country boy myself and if you can make an honest penny out of these people, you deserve to raise your mortgage. Only you must give me a dollar to pay for your license."

George handed him the dollar and he got off the car. And now I must tell you that the man was not president of any company, but simply a bad man who saw a chance to make a dollar out of simple hearted George. But George was rewarded, as a big theater

ALL TIRED OUT AND LOADED DOWN WITH SAMPLES FROM THE FOOD SHOW.

party boarded the car and rode five blocks to the theater, and when they left he counted up his money and found that he had just enough to raise the mortgage.

It was eight o'clock and as none of them had had a bite to eat all day, he ran the car off on a siding and they took dinner at the Parker House, where they had Parker House rolls and maple syrup.

After dinner they went back to the car and found it full of street boys. "Want a ride?" asked George, and the street boys shouted yes, so George took them all over the city for nothing. But I am sorry to say that the boys were rude enough to ask him whether the car wasn't homemade, and this so incensed Mr. Starbuck that he drove them all out.

But by this time it was nearly twelve o'clock, so they ran down to the freight yards and were lucky enough to find the same brakeman there. The neighbors had come, too, all tired out and loaded down with handbills and samples of different foods, for they had been to a food show at the Mechanics' Institute. They reached Graytown early in the morning. The faithful oxen had come down to meet them, and this time all the neighbors helped to lift the car onto the wagon, so it made it easier.

Then when they had reached the Starbuck's, George raised the mortgage as high as he could and they all cheered and cheered and told him they had never had so good a time in their lives and they hoped he'd have many happy returns of the day.

THE HENS TOOK TO IT AT ONCE.

Then George put the trolley car into the hen yard and the hens took to it at once.

As for George he became a simple country boy once more. But if he had been a city boy he would have run that trolley car into the ground.

But there is not a city boy in the United States from Portland, Maine, to Portland, Oregon, who could have built a trolley car inside of a week, inside of a shed, with a jack knife and a scythe.

The House of Too Much Trouble.

ALBERT BIGELOW PAINE in the Juvenile.

In the House of Too Much Trouble
Lived a lonely little boy;
He was eager for a playmate,
He was hungry for a toy.
But 'twas always too much bother
Too much dirt and too much noise,
For the House of Too Much Trouble
Wasn't made for little boys.

And sometimes the little fellow
Left a book upon the floor,
Or forgot and laughed too loudly,
Or he failed to close the door.
In the House of Too Much Trouble
Things must be precise and trim—
In the House of Too Much Trouble
There was little room for him.

He must never scatter playthings,
He must never romp and play;
Every room must be in order
And kept quiet all the day.
He had never had companions,
He had never owned a pet—
In the House of Too Much Trouble
It is trim and quiet yet.

Every room is set in order—
Every book is in its place,
And the lonely little fellow
Wears a smile upon his face.
In the House of Too Much Trouble
He is silent and at rest—
In the House of Too Much Trouble
With a lily on his breast.

JOHN'S KING OF THE FAIRIES

JENNIE HELMES BLANCHART

HERE'S no use! I can't speak pieces! I'd rather stan' in front of a cannon, any day, than get up like a girl and speak 'Twinkle, Twinkle, Little Star,' or 'The Boy Stood on the Burnin' Deck.' I never know what to do with my hands, and everybody makes fun of me 'cause I'm such a great overgrown booby.

"I'll just write my own excuse tomorrow, tell Miss Jones I had to stay out to help mother wash. I'll have a picnic here by the river, all alone by myself."

Thus soliloquizing, John Brant flung himself down under a wide-spreading willow tree, in the soft green grass. He was not alone, for sweet-throated songsters made the wood ring with their melody. But John was too intent on mischief to listen to their songs.

"Guess I'll make a whistle."

Cutting off a small branch, he moistened it with his lips, gently pounded it with his knife handle, and at last trimmed and finished it. He blew such shrill blasts that a robin flew in affright from the branches overhead.

"Oho! oho! so you've a nest up yonder? Well, I'll just put away this whistle and try my hand at a sling-shot. I'll pepper your nest so full of holes you won't know it from a hornet's nest when you get back."

Chuckling with delight, he rolled lazily over, and crawled on his hands and knees to the edge of the bank, where he cut a pronged stick, trimmed it to proper size, then began searching in the pockets of his capacious jeans for the necessary strap, string and rubber. All were found but the last named, and as a successful sling cannot be made without rubber, John's temper gave way. Screwing his face up into a mass of puckers, he probed deep into his vest pocket with fore finger and thumb.

"It's no go. I'm positive I put that in my pocket this forenoon; bet a nickel Ben Wade stole it; he's meaner'n anything anyway, always puttin' up some job on me. I'll get even with him, I'll put a bent pin in his seat to pay him for spoilin' my fun. Oh, hum, wish't I had a rifle. It's no fun 'thout a fellow can kill something."

Stretching his hands above his head, he rolled over on his back and began to throw sticks and stones at the nest overhead.

"I'll climb up after a while and throw nest and all into the river, just to see the old bird show off when she comes back with a worm in her bill. Wonder what she'll think. Oh, this is lots nicer than being in the old hot school room. I feel drowsy; wonder what mother'd think if she knew I'd played hookey? Hark! what was that? I thought I heard something; sounded like a cricket. Hello! there it goes again."

John opened his eyes very wide and there, close to his face, perched on the unfinished sling shot, stood a little man no larger than a grasshopper, wearing a tiny crown of gold and clothed in kingly garments. John stared and tried to rub his eyes, but something held him as if in a vice.

"So, ho! Master Hookey, here you are. Pretty chap, you—nice fellow—mother home, bent low over the washtub, washing day in and day out to support her four children, and you idling, who should be her main stay, her helper. But, then, she's educating you. You're to be a doctor some day. Eh? Ran away from school because your teacher wanted you to give a recitation, and you just wouldn't speak pieces, 'rather kill birds' and lie than do that. Oh, you're a fine specimen! I shall have to examine you more closely."

Stepping over on John's cheek, he thrust the end of his needle-like sceptre into the corner of his wide-stretched eye.

"Oh! oh! oh!" screamed the now thoroughly frightened boy, "Oh, please let me up!"

"Oh, stop your shouting. I'll let you up presently." Stepping over on to a twig, he waved his sceptre

majestically over John's face, so close that it grazed his nose, chanting a dirge-like tune three times over in a foreign tongue. At last, with a grand flourish, the little king commanded him to rise. But wonder of wonders! Instead of a healthy, fun-loving boy, stood a poor crippled robin, with drooping head and broken leg dangling pitifully.

STOOD A POOR CRIPPLED ROBIN.

"Oh, you need not try to cry. You can't.

Birds can't cry; they can only chirp and look their distress, just as you are looking now. I know it hurts to have eyes put out and legs broken; but then, boys must have fun—and they can't without a rifle or sling-shot. Hop off, now, and don't make such a fuss; you'll get over the broken leg in time. Ben Wade was a little mean to use your rubber to maim you, but then, he must shoot something. Just hop up into the tree and look into Mother Robin's nest; see how happy she is with babies four. She'll not mind you, a crippled bird. Listen to her happy voice as she feeds her little ones; then ask yourself if it isn't a good thing the fairy king changed you to a bird before you climbed the tree to destroy this happy family. Oh, don't look so woebegone; it's better any time to be a bird than a great, lazy, cruel boy, thinking of nothing and doing nothing good, lying in idleness under a tree, thinking and planning how to kill God's little innocents. Oh, you'll be much happier; you'll be more useful, too"

"I would advise you to go far into the forest where the little songsters have perfect happiness—no bad boys there. You're thinking of mother's nice biscuits and honey; never mind, you'll get used to worms; they'll taste queer at first, but you'll gradually forget all the goodies you've been used to; and you'll miss, for a time, mother's good-night kiss. Mothers love their children, no matter how badly they may have been treated by them. Of course, she'll worry for a time and miss you—miss your muddy foot tracks she always had to clean whenever she asked for a pail of water or of coal, miss the sour face and saucy answers when told to do the most trifling thing, miss you at meal time, miss buying your clothes. Poor widowed mother!"

"You're feeling badly; no one ever told you of your badness before; you no doubt would change, would do better; but all you can do now is to sing. I'd advise you to do that.

"Well, I must be going; I've work to do. I'm sorry to say there are many bird-boys running at large; I'm always on the lookout for them. Good-bye! I trust if ever by chance you change your form and become a boy again, mother, teacher and birds will see a change in you."

Bowing low, the king of the fairies vanished from sight.

With a twinging pain in his leg and a throbbing sensation in his head, John awoke—to find he had fallen over the bank, with one foot dangling in the water. Blood was trickling down his nose and his ankle pained, but he didn't care, for, blessed knowledge, he was a boy again. Looking back, he could see the nest and Mother Robin, with her head turned sideways, eyeing him suspiciously.

"Oh, you needn't fear me, I'll not harm you. I've learned my lesson; my leaf is already turned; I've profited by what I've heard. Henceforth mother'll never have to ask me to fetch a pail of water, and I'll lick the very first boy I see makin' a sling."

Gathering himself together, he limped slowly towards home, making good resolutions as he went.

"I'll make a clean breast of it to mother, and she'll write my excuse for me. I'm sure. I mean to surprise Miss Jones tomorrow with 'Sheridan's Ride.' Yes, sir! I'll speak it tomorrow if I have to sit up all night to learn it. Gracious! but I'm stiff and sore. I've had a narrow escape; nothing'll ever make me believe I haven't seen a real fairy, and actually been a bird."

HE LIMPED SLOWLY TOWARD HOME.

Review of Chapter I.

"Chip" was a New York newsboy who had never been outside of New York City and had never seen fruit growing on trees. Another newsboy who had been in the country told him that out in the country beyond the big houses there were apples, peaches and pears hanging from the trees. He tried to imagine how the trees would look, but it was too much for him. The night following the day on which he had received this information, while trying to sell the few evening papers that still remained of his

stock, he fell in with a richly dressed young man who was clinging to a lamp post, drunk. A notorious sneak thief was preparing to go through the young man's pockets when Chip remonstrated and threatened to call a policeman. Chip then called a cabby, and persuaded him to take the young man home. The boy climbed into the cab, under protest from the driver, and saw his intoxicated companion safely inside of the latter's home. The butler who answered the door rewarded the cabby, but forgot to reward Chip. Strolling down Fifth avenue a few hours later, the idea suddenly struck the boy that he would go out and see the "country" where apples grew on trees. He had in his pockets twenty-seven cents. Chapter I ends with Chip stacking his two nickels and seventeen pennies upon the counter of the ticket seller at the Grand Central depot.

CHAPTER II.

"Gimme a ticket," he said.

"Where to?" inquired the man, smiling.

"Ah, go on!" said Chip. "D'ye suppose I care? Jist gimme a ticket fer twenty-seven cents."

"I can give you one for twenty-five or one for twenty-eight. That's the nearest I've got."

"Well," said Chip, "if yez can't oblige a feller, why gimme one fer twenty-five. An' yez kin give me back me odder two cents, see."

The small boy got his two cents and his ticket, and marched past the gateman and boarded the train, feeling "de biggest man in de hull caboozh," as he afterwards put it himself. He lounged back in the soft velvety seats with an air of oriental luxuriance.

"Say!" he thought, "dis is like de divan what Princess Paulina sat on when Diamon' Dan seen her."

sat on when Diamon' Dan seen her.

The chances are that Chip will grow old before he ever forgets that brief half-hour's ride. Everything was new to him. There was the car itself and the mighty depot, there were rows of houses and tunnel openings and gas-lights flashing by in a bewildered maze; then by and by, and best of all, there was the country, another world, a land of dreams to this little waif of the streets. The idea of so much land was a totally new one to him. He had seen vast extents of water, from the battery where he used to swim and dodge "cops." But land to his mind was a city lot bounded by a fence, or a city park with railings and "keep off the grass" signs. It was no wonder that he gasped and stared about him and gasped again.

And the grass and trees and flowers! He recalled what Scrapy had said—"Dey ain't no cops in de country." He wondered if it really could be so, if people would actually let him turn somersaults on that grass. He longed to get out and try, but he remembered that the farther from the city he went, the thicker the fruit ought to be. So he kept his seat and waited.

Once a man came along and tried to steal Chip's ticket. The youngster hung on; he did not mean to be "buncoed." At last, however, seeing others giving up theirs peaceably he concluded that it was all right, and let go of his. After that there was nothing to disturb his reveries, and he was whirled on past station after station, until the blue coated man came again.

"Tickets," he said, tapping Chip on the arm.
 "Ah, go on!" cried Chip.
 "Where's your ticket?"
 "Say, you, how many tickets do you want anyhow Ain't I giv'n yez on?"

"Where was it to?"
 "Say! How should I know?"
 "Don't you know where you are going?"
 "Naw!"
 "How much did you pay for it?"
 "A quarter."
 "A quarter! Good gracious, boy, you've passed; station long ago."
 "I don't care," said Chip. "De company's out, dat I'll git out at de next station."
 And he did.
 "Now de first ting" he mused, as he gazed about "is to git a line on some o' dem trees. I'm jist lu' nough to light right in."

He did not see anything very promising at the station. There were houses and streets just the same as in New York. But he had seen country just before the entered the place, so he made up his mind that all he to do was to walk; and he started.

He found to his joy that he had not very far to go the big broad avenue before the houses began to be far apart and the trees thicker. Yes, he was really get out into the country. And then suddenly he stopped. Across the way was a lawn with all kinds of plants flowers; and right near the fence was a big tree grunting with a burden of laughing, red, fat apples. There was a high iron fence, but Chip didn't mind. For if apples were free and there were no cops, 'nough Chip climbed the fence.

It was a good, tall tree that he stood beneath. E would have made no difference if the first limb had even twice as far from the ground, he would have climbed somehow. For two P. M. yesterday was the portion of our friend's last meal, and he was hungry in portion. He didn't wait to climb very high; he reared the first limb he could, seized the first apple he could started. He stopped some fifteen minutes later. I don't know how many he ate, but an apple a minute is not fast for a boy. So no wonder he stopped.

A person who has been hungry as often as had Chip is not likely to forget that there is a fit. Consequently his next care was to stuff his pockets began then to think of getting down, an intention which was suddenly accelerated by a most unexpected rupture.

"Help! Thief! Stop him! Grab him!"
 It was a shrill female voice. Chip did not for a moment suppose that it was meant for him, until he peered over saw the owner of the voice running across the lawn shouting meantime for "Tige" and the gardener. He realized the situation then; he dropped to the ground, climbed over the fence, and "lit out" for dear life. female and Tige and the gardener were all a memory few minutes and then Chip sat down to rest.

"I wonder if it's women what's cops in dis place, say, I wonder if dis is still Ameriky, anyhow. I c'n awful long ways."

He spent that day in the country, and in part there never yet was so much fun all crowded into day. He watched squirrels and chickens and cow picked flowers and climbed trees; he played ball in green field with some village boys he met (and he them); he went in swimming in a little stream, for the first time in his life without fear of the cops; and in the

He was busily absorbed in devouring his supper.

all these glorious recreations he munched the apples he had brought with him.
 The supply gave out late in the afternoon and he got hungry again. If there were only women to chase him, he said, no reason to fear, so he returned to the same place, climbed the fence and the tree and fell to work as before.

But this venture did not turn out quite so happily. He was busily absorbed in devouring his supper and did not pay much attention to anything, until finally he happened to look down towards the ground. He was startled to see a man peering up at him.

"Aha, ye rascal, ye! So oi hov yez! Coom down out av that, now, an' be spy or oi'll coom up an' fetch yez."

Chip came, considerably surprised and bewildered by it all. The man seized him roughly by the collar and marched him up towards the house.

"Is dis a cop? Or what?" thought Chip.
 "O'ive got the rascal, Mrs Marcy," shouted the captor.
 "O'ive got him! The same spalpeen, too, what coom this mornin'—the wan cook was tellin' yez about."

There were a man and a woman sitting on the piazza of

J I M
A TRUE HUNTING STORY
BY KARL EDWIN HARRIMAN

"JIM"—a commonplace, unsignifying, ordinary name, that, is it not? But Jim was no commonplace, unsignifying, ordinary dog. I don't know how it happened that I called him Jim in the first place. Probably that was the only name that occurred to me the night I brought him home, wrapped in my overcoat, a lank, staring-eyed puppy, but one with a pedigree that stamped him a member of the best and most

us. By the time Sandson and I had taken up our position at the deer-run, with Loch, his cries had died away altogether—swallowed by the distance.

Loch was now loosened. We waited at the run. Shortly we heard him on the opposite side of the lake.

this time, both of us were thoroughly frightened. Sandson, then and there, voted we pack the outfit and return home the next day. I remember that he said, in a half whisper, "Ken, the dog has died, and it's the wall of his spirit that we hear. Have you noticed that Loch has not answered the cry of his friend once?" I pondered over this strange feature of the case, and I was not prepared to smile at Sandson's explanation. Toward three o'clock, a cold shiver was sent over me by hearing my dog's call again.

I nudged Sandson.

"Did you hear that?" he said. He was wide awake.

"Yes," I replied, "where do you make out it comes from."

"From the south," he replied. "Ken; I'm going to get out of this. It's getting closer. I have as much nerve as the next man, but this is too unearthly for me." We heard nothing further, but we breathed a deep-drawn sigh of relief at sight of the first tinge of gray and yellow in the eastern sky.

At breakfast I noted the look of dogged determination on Sandson's face, and judged that he still held to his idea of breaking camp that day. As I arose from the rough bench at the table, I was startled at the sound of an animal's footfalls, behind me, in the underbrush that encircled the open space of our camp. Sandson and I awaited breathlessly the approach of whatever might prove to be the creature there invisible. Shortly, into the scant open, walked, with painful slowness, a huge, gray fox. He was little more than a skeleton. His eyes protruded from his head, and his tongue lolled from his mouth—tremendously swollen, and of a gray green color. Seeing us he made to sheer away. He staggered, uttered a strange,

AT NOON WE . . . HEARD HIM AGAIN.

gurgling sound, and fell lifeless in his tracks. We had scarcely arrived at a comprehension of the situation when, from the opening made by the fox in the bush, came Jim. I was too dazed even to utter an exclamation of wonder. Sandson stood statue-like, his lower jaw relaxed. My dog's bones seemed just ready to prick through his hide. His eyes, too, were protruding, and his tongue, bleeding, dangled between his teeth. Blood from wounds made by the thorns of the underbrush was sticky in the hair of his breast, and his legs were dyed deep red where the life fluid of his own body had dried on them. He saw me and, for an instant, the old light of friendship seemed to glow in his red eyes. Then it went out. His legs gave way beneath him, and he sank dead, there, before me.

In my study now, in front of the little table in the corner, is a rug of dog-skin. Jim is with me still. Though not the Jim that chased the gray Canadian fox for three days and three nights—faithful to his kind even unto death.

on't father be glad to hear that ing."

ving they had been scouring the r"—up the lake and down, to this back into the interior to various ers, to Fagan who kept the store to John Faquier, the fur trader, alf-breed at the foot of the hills—

bearing the message that all were to gather at their house on the following Sunday, and that Father Burns himself, of Duluth, would be there to speak. And every one of them, not even omitting the half-breed, had promised to come.

Side by side the boys sped on, the miles slipping away easily behind. Now and then a point of land rushed up and past, dim and shadowy in the white light of the moon; and once or twice in the far distance they heard the sinister voice of some night-prowling animal. On and still on, and then through the crisp air came the sharp click of other skates, followed by the glimpse of a dim figure, which rapidly grew plainer as it approached.

As it came near, one of the boys said, "Aunt Jane," and the other added, "Going home to see her mother," and then the figure shot past, waving its hand and smiling brightly, and they raised their fur caps and

flew on, feeling a sudden glow of pleasure at the unexpected meeting. Everybody knew and loved Aunt Jane, the neighborhood "aunt" who went from house to house doing sewing or nursing; and who, in spite of her fifty odd years, could still give the boys and girls something to do when she went skating with them. Now she was on her way to spend the holidays with her mother at the foot of the lake. Everybody knew she was going, and everybody felt glad, and everybody wished they could be there to see the meeting.

One, two, five minutes passed; and then came a long, menacing howl which made the boys shiver involuntarily and bend forward to their work. They knew that voice. Every winter, when snows grew deep and food scarce, wild animals were accustomed to make predatory incursions from their northern fastnesses; and among them it was not uncommon to hear the howling of wolves. But this was not a wolf of an ordinary pack, but an outcast from its own kind, grown fiercer and more cunning through its isolation. All the country round had learned to fear him, and to hunt him, and to lay traps for him—but so far in vain. The boys' faces grew tense as they sped on, and they listened, almost with bated breath, for the swift following of footsteps behind. Ordinarily, they

HERE was a crackling of snow as two figures pushed their way through the underbrush down to the edge of the lake, and there paused to brush the still-clinging masses of white from their leggings, and to fasten their skates firmly and securely to their heavy, home made boots. Then they shot out across the smooth, frozen surface, almost as buoyantly as birds, and almost as naturally, the sharp click, click of their steel runners ringing clear and musical in the crisp, still air.

"This is better," one of them called to his companion, with an inflection of satisfaction in his voice. "Twenty minutes more, and we can be at home."

"Yes, ten miles this way is easier than one on foot ploughing through the woods," rejoined the other,

Review of Chapter I.

"Chip" was a New York newsboy who had never been outside of New York City and had never seen fruit growing on trees. Another newsboy who had been in the country told him that out in the country beyond the big houses there were apples, peaches and pears hanging from the trees. He tried to imagine how the trees would look, but it was too much for him.

The night following the day on which he had received this information, while trying to sell the few evening papers that still remained of his stock, he fell in with a richly dressed young man who was clinging to a lamp-post, drunk. A notorious sneak thief was preparing to go through the young man's pockets when Chip remonstrated and threatened to call a policeman. Chip then called a caddy, and persuaded him to take the young man home. The boy climbed into the cab, under protest from the driver, and saw his intoxicated companion safely inside of the latter's home. The butler who answered the door rewarded the caddy, but forgot to reward Chip. Strolling down Fifth avenue a few hours later, the idea suddenly struck the boy that he would go out and see the "country" where apples grew on trees. He had in his pockets twenty-seven cents. Chapter I ends with Chip sticking his two nickels and seventeen pennies upon the counter of the ticket seller at the Grand Central depot.

CHAPTER II.

"Gimme a ticket," he said.

"Where to?" inquired the man, smiling.

"Ah, go on!" said Chip. "D'ye suppose I care? Jist gimme a ticket fer twenty-seven cents."

"I can give you one for twenty-five or one for twenty-eight. That's the nearest I've got."

"Well," said Chip, "if yez can't oblige a feller, why gimme one fer twenty-five. An' yez kin give me back me odder two cents, sec."

The small boy got his two cents and his ticket, and marched past the gateman and boarded the train, feeling "de biggest man in de hull caboozh," as he afterwards put it himself. He lounged back in the soft velvety seats with an air of oriental luxuriance.

"Say!" he thought, "dis is like de divan what Princess Paulina sat on when Diamon' Dan seen her. It's great!"

The chances are that Chip will grow old before he ever forgets that brief half-hour's ride. Everything was new to him. There was the car itself and the mighty depot, there were rows of houses and tunnel openings and gas-lights flashing by in a bewildered maze; then by and by, and best of all, there was the country, another world, a land of dreams to this little waif of the streets. The idea of so much land was a totally new one to him. He had seen vast extents of water, from the battery where he used to swim and dodge "cops." But land to his mind was a city lot bounded by a fence, or a city park with railings and "keep off the grass" signs. It was no wonder that he gasped and stared about him and gasped again.

And the grass and trees and flowers! He recalled what Scrappy had said—"Dey ain't no cops in de country." He wondered if it really could be so, if people would actually let him turn somersaults on that grass. He longed to get out and try, but he remembered that the farther from the city he went, the thicker the fruit ought to be. So he kept his seat and waited.

Once a man came along and tried to steal Chip's ticket. The youngster hung on; he did not mean to be "buncoed." At last, however, seeing others giving up theirs peaceably he concluded that it was all right, and let go of his. After that there was nothing to disturb his reveries, and he was whirled on past station after station, until the blue coated man came again.

"Tickets," he said, tapping Chip on the arm.

"Ah, go on!" cried Chip.

"Where's your ticket?"

"Say, you, how many tickets do you want anyhow Ain't I giv'n yez on?"

"Where was it to?"

"Say! How should I know?"

"Don't you know where you are going?"

"Naw!"

"How much did you pay for it?"

"A quarter."

"A quarter! Good gracious, boy, you've passed your station long ago."

"I don't care," said Chip. "De company's out, dat's all. I'll git out at de next station."

And he did.

"Now de first ting" he mused, as he gazed about him, "is to git a line on some o' dem trees. I'm jist hungry 'nough to light right in."

He did not see anything very promising at the start. There were houses and streets just the same as in New York. But he had seen country just before the train entered the place, so he made up his mind that all he had to do was to walk; and he started.

He found to his joy that he had not very far to go up the big broad avenue before the houses began to be farther apart and the trees thicker. Yes, he was really getting out into the country. And then suddenly he stopped. Across the way was a lawn with all kinds of plants and flowers; and right near the fence was a big tree fairly grunting with a burden of laughing, red, fat apples. There was a high iron fence, but Chip didn't mind that. For if apples were free and there were no cops, 'nough said! Chip climbed the fence.

It was a good, tall tree that he stood beneath. But it would have made no difference if the first limb had been even twice as far from the ground, he would have climbed somehow. For two P. M. yesterday was the precise hour of our friend's best meal, and he was hungry in proportion. He didn't wait to climb very high; he reached the first limb he could, seized the first apple he could and started. He stopped some fifteen minutes later. I do not know how many he ate, but an apple a minute is not very fast for a boy. So no wonder he stopped.

A person who has been hungry as often as had little Chip is not likely to forget that there is a future. Consequently his next care was to stuff his pockets. He began then to think of getting down, an intention which was suddenly accelerated by a most unexpected interruption.

"Help! Thief! Stop him! Grab him!"

It was a shrill female voice. Chip did not for a moment suppose that it was meant for him, until he peered out and saw the owner of the voice running across the lawn and shouting meantime for "Tige" and the gardener. The boy realized the situation then; he dropped to the ground, climbed over the fence, and "lit out" for dear life. The female and Tige and the gardener were all a memory in a few minutes and then Chip sat down to rest.

"I wonder if it's women what's cops in dis place. An' say, I wonder if dis is still Ameriky, anyhow. I come a awful long ways."

He spent that day in the country, and in paradise. There never yet was so much fun all crowded into one day. He watched squirrels and chickens and cows; he picked flowers and climbed trees; he played ball in a fine green field with some village boys he met (and he beat them); he went in swimming in a little stream, for the first time in his life without fear of the cops; and in between

He was busily absorbed in devouring his supper.

all these glorious recreations he munched the apples he had brought with him.

The supply gave out late in the afternoon and he got hungry again. If there were only women to chase him, he said, no reason to fear, so he returned to the same place, climbed the fence and the tree and fell to work as before.

But this venture did not turn out quite so happily. He was busily absorbed in devouring his supper and did not pay much attention to anything, until finally he happened to look down towards the ground. He was startled to see a man peering up at him.

"Aha, ye rascal, ye! So of hov yez! Coom down out av that, now, an' be spy or o'ill coom up an' fetch yez."

Chip came, considerably surprised and bewildered by it all. The man seized him roughly by the collar and marched him up towards the house.

"Is dis a cop? Or what?" thought Chip.

"O'ive got the rascal, Mrs. Marcy," shouted the captor. "O'ive got him! The same spalpeen, too, what coom this mornin'—the wan cook was tellin' yez about."

There were a man and a woman sitting on the piazza of the big homestead. Chip could not see the man's face for a honeysuckle vine was in the way; but the other rose at Chip's approach and he saw that she was an elderly woman with a sweet kindly face. He took heart at once.

"Why, how very, very tiny he is!" she exclaimed.

"Faith, mum, an' there's room fer mischief a plenty in him."

It seems so. Little boy, what makes you steal our apples?"

"Stealin em? Ain't dey free?"

"Why no, of course not. Pray, what put such a notion into your head?"

"Don't yez let him be a foolin' av yez, Mrs. Marcy," said the gardener. "He's a sly rascal."

"He doesn't look very sly, Perkins. And I really don't think you need hold him quite so tight. You won't run away, will you, little boy?"

"Hain't got no place to run to," said Chip.

"Mercy me! Haven't you any home?"

"No'm."

"You don't say so! And were you hungry? Was that why you stole?"

"I didn't steal," said Chip, feeling about to burst out crying.

"An' you mustn't say so. I never stole in my life. De fellers all told me, down in de city where I'm a newsboy, dat apples growed on trees in de country an' was free. An' I paid all me money but two cents fer to come up here an' see. An' den you go an' say I stole. I didn't mean to steal. I hadn't had anything 't eat since yistidday noon—"

"Mercy me!" cried the lady.

"But I wouldn't a cared. If I'd a know'd 'at dem apples was your'n I wouldn't a taken one. So now!"

"You poor, dear little boy. Why, if you had only asked me, you should have had all the apples you could eat!"

"I had two cents," put in Chip. "I could a' buyed some. P'rhaps," brightening up, "p'rhaps it'll pay fer what I took an' den you won't call me a thief."

"You may go, Perkins," said Mrs. Marcy, smiling.

"I do not think this little fellow needs to be held. What is your name, my boy?"

"Chip, mum."

"Chip! How funny! What else?"

"McGinnis, mum."

"Chip McGinnis. Well, Chip, you needn't mind about the two cents. You may say I gave you the apples. But I do not think they make a very satisfactory meal, so I'm going in to see what else the cook can find. You wait for me."

She entered the house, and Chip and the man on the piazza were left all alone. Just then the latter rose to his feet and yawned. Chip started back.

"Say!" he exclaimed, "it's de feller who was drunk."

The young man gazed at him languidly.

"Souny, haven't I seen you somewheres before?" he asked. "I think I know your face."

"Y'ought to," said Chip. "I'm de boy what took yez home las' night."

"Great Caesar!"

The young man turned pale with fright.

"For Heaven's sake, my boy, don't breathe a word of that."

"Why not?" inquired Chip, innocently. "Ain't ashamed of it, are yez?"

"As ashamed of it as I ever was of anything in my life. Boy, I swear to you on my heart it was the first time I ever tasted liquor in my life. And I mean that it shall be my last. It would kill mother if she knew it."

"All right," said Chip, I'll be mum. But if I was you, I wouldn't feel so ashamed of it. You ain't de on'y one what gits dat way. Now dere's me fadder, fer instance. He's dat way all de time. He's on'y ashamed when he ain't. An' me mudder was jis de same."

"Has she reformed?" asked the other, laughing.

"Me mudder? Naw! She's dead," answered Chip.

"Oh," said the young man.

Just then his mother came out again, followed by "anodder buttons wid a bang up spread."

"Mother," said the penitent, "I have been talking to this boy, and I find that I knew him in the city. I owe him a good turn, too, so I think we shall have to keep him somehow."

Chip is a "norfice boy," now.

The young man gazed at him languidly.

"JIM"—a commonplace, unsignifying, ordinary name, that, is it not? But Jim was no commonplace, unsignifying, ordinary dog. I don't know how it happened that I called him Jim in the first place. Probably that was the only name that occurred to me the night I brought him home, wrapped in my overcoat, a lank, staring-eyed puppy, but one with a pedigree that stamped him a member of the best and most celebrated fox-hound family in the county. His mother's name was "Dora," and his father's "Fox"—"John Fox," to be exact—but he himself was "Jim," just plain "Jim."

In time Jim developed into a superbly marked animal, with an exquisitely pointed muzzle, and a brace of ears that distinguished him among a hundred of his kind. His friendliness with "Loch," a big stag-hound, was a trait that came to light very early in his career. The two were inseparable in kennel, and when one was loosened and the other kept tied, he whom it was necessary to leave behind, would pine and mope at the end of his chain until the bounding, leaping return of his fellow, when he would express his great delight in the glisten of his eyes, the cavorts of his body, and the energetic, emphatic wagging of his tail.

Jim and Loch were often my companions in the hunt, and not once had I occasion to feel that my confidence in either of them was, in the slightest degree, mis-

A BUCK LEAPED INTO THE WATER

placed. When occurred the verification of a prophecy made of Jim by his earliest master (of which I shall tell you shortly), that he had in him the making of a magnificent fox-hound, he was a few weeks past his second birthday. A new, bright, brass collar had been the gift marking that anniversary.

With my friend Sandson I set out one day for the big game country of Northern Ontario, ostensibly in search of deer, but, in reality, ready to bag whatever might show itself. We were allowed the two dogs by the Canadian laws governing the pursuit of game in the Dominion, and a journey of three days found us in the heart of the deer country.

Early the first morning, as we were tramping along toward the little lake which was our destination, the two dogs sniffing now and again in anticipation of what we all hoped might soon occur, Jim suddenly seemed to catch a scent. He was off at once, baying deeply, as is the custom of the fox-hound when following his true vocation. As we continued to push forward we heard him farther and farther in advance of

us. By the time Sandson and I had taken up our position at the deer-run, with Loch, his cries had died away altogether—swallowed by the distance.

Loch was now loosened. We waited at the run. Shortly we heard him on the opposite side of the lake.

"IT'S THE WAIL OF HIS SPIRIT THAT WE HEAR."

I offered the chance to Sandson. He accepted, holding his gun in readiness. We both watched the bank across from us. Suddenly a splendid buck came bounding through the foliage and leaped into the water. Sandson held back until he saw that the animal felt the bottom beneath his hoofs, and then fired. The buck jumped clear of the surface, fell to his knees and toppled forward in the shallow. Shortly, Loch came swimming across, apparently eminently satisfied with his share in the work of securing our first deer. Until noon we lingered there at the edge of the lake for Jim to put in an appearance. Sandson shouted between his palms, but there was no answering cry. We carried our buck back to camp. Toward four in the afternoon Sandson startled me by exclaiming, "There's Jim!" I listened. Yes; from away over in the west came the bay I recognized. Gradually it died away. As night fell we began to fear that Jim had lost our scent, and both Sandson and I hallooed until we thought our throats were cracked. There was no reply. At about ten o'clock we were shaken by hearing the old, familiar cry again, this time further toward the north. Once in the early morning I awakened to hear Jim's hunting bay. I smiled as I pictured his fagged appearance at daybreak. But he did not come with daybreak. At noon we imagined that we heard him again, but decided that we must have been mistaken, as now the call sounded well from the north.

But at sunset, that evening, it was no mistake. I recognized Jim's bay as clearly as I recognize my own hand-writing on this sheet of paper. And before we turned in, we both heard it again. The affair by this time had ceased to be a matter of laughter. I saw by Sandson's face that he was worried. Besides, it was not conducive to merriment suddenly to hear, away off there in the blackness, the weird, ghostly baying of a hound. We caught no further sound of Jim until the next afternoon, then it seemed to come from the due east. As we lay awake in the night, Sandson and I heard, across the stillness, the same, long, low cry. I shall only be telling the truth when I say that, by

this time, both of us were thoroughly frightened. Sandson, then and there, voted we pack the outfit and return home the next day. I remember that he said, in a half whisper, "Ken, the dog has died, and it's the wail of his spirit that we hear. Have you noticed that Loch has not answered the cry of his friend once?" I pondered over this strange feature of the case, and I was not prepared to smile at Sandson's explanation. Toward three o'clock, a cold shiver was sent over me by hearing my dog's call again.

I nudged Sandson. "Did you hear that?" he said. He was wide awake. "Yes," I replied, "where do you make out it comes from." "From the south," he replied. "Ken; I'm going to get out of this. It's getting closer. I have as much nerve as the next man, but this is too unearthly for me." We heard nothing further, but we breathed a deep-drawn sigh of relief at sight of the first tinge of gray and yellow in the eastern sky.

At breakfast I noted the look of dogged determination on Sandson's face, and judged that he still held to his idea of breaking camp that day. As I arose from the rough bench at the table, I was startled at the sound of an animal's footfalls, behind me, in the underbrush that encircled the open space of our camp. Sandson and I awaited breathlessly the approach of whatever might prove to be the creature there invisible. Shortly, into the scant open, walked, with painful slowness, a huge, gray fox. He was little more than a skeleton. His eyes protruded from his head, and his tongue lolled from his mouth—tremendously swollen, and of a gray green color. Seeing us he made to sheer away. He saw me and, for an instant, the old light of friendship seemed to glow in his red eyes. Then it went out. His legs gave way beneath him, and he sank dead, there, before me.

In my study now, in front of the little table in the corner, is a rug of dog-skin. Jim is with me still. Though not the Jim that chased the gray Canadian fox for three days and three nights—faithful to his kind even unto death.

A BRAVE CHASE

By FRANK H. SWEET

THERE was a crackling of snow as two figures pushed their way through the underbrush down to the edge of the lake, and there paused to brush the still-clinging masses of white from their leggings, and to fasten their skates firmly and securely to their heavy, home made boots. Then they shot out across the smooth, frozen surface, almost as buoyantly as birds, and almost as naturally, the sharp click, click of their steel runners ringing clear and musical in the crisp, still air.

"This is better," one of them called to his companion, with an inflection of satisfaction in his voice. "Twenty minutes more, and we can be at home."

"Yes, ten miles this way is easier than one on foot ploughing through the woods," rejoined the other,

cheerily. "But won't father be glad to hear that every body is coming."

Since early morning they had been scouring the surrounding country—up the lake and down, to this trapper and that, back into the interior to various farmers and squatters, to Fagan who kept the store at the cross-roads, to John Faquier, the fur trader, and even to the half-breed at the foot of the hills—bearing the message that all were to gather at their house on the following Sunday, and that Father Burns himself, of Duluth, would be there to speak. And every one of them, not even omitting the half-breed, had promised to come.

Side by side the boys sped on, the miles slipping away easily behind. Now and then a point of land rushed up and past, dim and shadowy in the white light of the moon; and once or twice in the far distance they heard the sinister voice of some night-prowling animal. On and still on, and then through the crisp air came the sharp click of other skates, followed by the glimpse of a dim figure, which rapidly grew plainer as it approached.

As it came near, one of the boys said, "Aunt Jane," and the other added, "Going home to see her mother," and then the figure shot past, waving its hand and smiling brightly, and they raised their fur caps and

flew on, feeling a sudden glow of pleasure at the unexpected meeting. Everybody knew and loved Aunt Jane, the neighborhood "aunt" who went from house to house doing sewing or nursing; and who, in spite of her fifty odd years, could still give the boys and girls something to do when she went skating with them. Now she was on her way to spend the holidays with her mother at the foot of the lake. Everybody knew she was going, and everybody felt glad, and everybody wished they could be there to see the meeting.

One, two, five minutes passed; and then came a long, menacing howl which made the boys shiver involuntarily and bend forward to their work. They knew that voice. Every winter, when snows grew deep and food scarce, wild animals were accustomed to make predatory incursions from their northern fastnesses; and among them it was not uncommon to hear the howling of wolves. But this was not a wolf of an ordinary pack, but an outcast from its own kind, grown fiercer and more cunning through its isolation. All the country round had learned to fear him, and to hunt him, and to lay traps for him—but so far in vain. The boys' faces grew tense as they sped on, and they listened, almost with bated breath, for the swift following of footsteps behind. Ordinarily, they

would not have run from one wolf, but this was different, almost as dangerous as an entire pack, and besides, they were unarmed.

But suddenly one of them cried, "Aunt Jane!" and then both sunk their skate heels deep into the ice and came to an abrupt stop. A quick look into each other's eyes, and then they whirled and sped back over the course they had just come. That long, exultant howl had meant more than mere defiance; it proclaimed the discovery of prey. Aunt Jane had gone in that direction, and the wolf had scented her trail.

Scarce a minute had passed since the fierce howl of discovery, but only too well they understood what even that might mean. Side by side, with heads forward and elbows close pressed to their sides, their skates clicking sharply and regularly, they flew on, having no further thought of themselves, but only of the woman on her way home to spend the holidays. She was a woman, with little knowledge of wild animals; while they were strong young fellows, accustomed to hunting.

If any plan of action flashed through their minds, it was to draw the attack of the wolf, and then to lead it away to some other part of the lake. They were

in keeping ahead of them now, they wondered a little uneasily how it would be in case they were pursued.

However, there was little danger of that so long as they pressed him closely. He was running now with nose to the ice and ears flat, the very embodiment of frantic haste and fear. A mile was passed in this way—two; and then Lone Wolf swerved in toward a long, narrow cove, beyond which lay the denser forest and his stronghold.

On and still on, and now the boys were thinking more of their own escape than the wolf's. By this time Aunt Jane was too far away to be in danger; besides, if the animal had not already forgotten her scent, it would take time for him to recover it. Once or twice they slackened their speed slightly, thinking to let him increase the distance between them before they turned back up the lake. But the instant their speed decreased his decreased also, and they could see him turn back his head inquiringly. Then they sped forward again, more impetuously than ever. His fear was their only safety now. That gone, they could not stand against him without weapons; and they were not as confident about distancing him on skates as they had been.

THERE CAME A FLASH AND REPORT . . .

accounted the swiftest skaters in all the country round, and on a fair field of ice, with no obstacles, felt that they would stand a fair chance with even the "Lone Wolf," as he was called. Perhaps they might outdistance him, and then circle back and escape. Of course, if a skate-strap should break, or any one of a possible dozen accidents happen—but they would not think of that.

Almost as these thoughts flashed through their minds they saw him ahead, his nose in the air and his ears forward. Evidently he had heard the sharp ringing of their skates, and was waiting to see what it might portend.

As they sped straight at him, swiftly, unswervingly, another wolf would have turned and fled; this one moved toward them slowly, his head up, showing his teeth.

But as they rushed on to within twenty yards, ten yards, five yards, implacable, silent save for the clicking of their skates, even the Lone Wolf's front began to waver. What did it mean? He was accustomed to see people turn and fly, or at least hide behind trees or rocks and shoot at him. But these did neither; they were rushing down on him as though perfectly sure of the result—as of course they were, otherwise they would not do it.

And apparently with this conclusion Lone Wolf's last vestige of bravado gave way, for he turned and fled incontinently down the lake. The boys gave one ringing shout and followed.

But as they flew on they wondered how the thing would end. It was more inspiring to chase than be chased; but they knew enough of wolf nature to feel assured that the moment they stopped the wolf would stop also, and the moment they turned back he would follow. And as the animal seemed to have no trouble

On and still on, and at length they saw the faint, glimmering light of a camp-fire in the distance. It rushed toward them rapidly, like the headlight of a locomotive; but the wolf, with his head turned back, fearful and suspicious of his pursuers, did not see it until too late to swerve aside. As he reached the circle of light and turned sharply at right angles to his course, there came a flash and report, and with one convulsive bound he rose into the air and then fell back upon the ice, motionless. A second later the boys came to a stop beside him.

"Too late, partners," the owner of the campfire called gruffly, "he's my pet now. I shot him." Then, as he came forward, "Hello, Maurice and Ed Collamore! You here? What you doin' huntin' a critter like Lone Wolf in the night; hey, boys? Where's your guns?"

"Haven't any," Ed answered, coloring a little, "and for that matter, not even a jackknife." Then he told of their meeting with Aunt Jane, and the subsequent chase of the wolf. The man listened incredulously at first, then derisively, then with something else coming into his deep-set eyes.

"It's the craziest, most idiotic, foolishest—" he stopped suddenly and placed a hand upon each of the boys' shoulders—"bravest thing I've come across. I'm glad Aunt Jane's all right. She nursed my little girl back to life once. But come up to the fire an' eat supper with me. It's jest ready. Then I'll skin the wolf an' after that go back home with you. Mebbe there's more wolves prowlin' round, an' it's jest as well to have somebody along with a gun. Chased old Lone Wolf clean across the lake without so much as a jack knife! H'm! h'm! most idiotic—h'm! bravest thing I ever knew."

*RANDOLPH FAIRFAX

The seventh story of a series entitled "Stories of Boy Heroes"

By ANNAB ROBINSON WATSON

Many have been the noble scions of the noble house of Fairfax since it was established in Colonial days in America, but foremost among them all should be recognized this young soldier who possessed, in a most eminent degree, the exalted attributes of his people.

His father was Dr. Orlando Fairfax, of Alexandria, Virginia, who was the grandson of Lord Fairfax. His mother was Virginia Randolph, and it is interesting to know that through her he was tenth in descent from Pocahontas and her husband, John Rolfe. His ancestors rendered notable services to the mother country, and one of them, William Henry Fairfax, was killed at the battle of Quebec. Before the engagement General Wolfe touched him on the shoulder, saying, "Young man, when we come into action remember your name."

Randolph Fairfax was born November 23, 1842, and from early childhood was remarkable for great personal beauty. His eyes were a clear liquid hazel, his hair brown with a golden tinge, his features regular, and his complexion clear and brilliant.

Even when quite a little child it was observed that in every emergency he was concerned to know what was right to do, not what pleased him best, and when the decision was once made there was no further hesitation.

He was light-hearted and joyous, a great favorite in the family circle and among his young companions, but recognized by everyone who came in contact with him as possessing a firm will and unwavering courage.

When about ten years of age he belonged to a club of boys who, on summer afternoons, went boating on the Potomac river. Sailing had been prohibited by his mother. It was understood between them that he could only go out in the boats when the oars were used.

One day the boys had a meeting to arrange an excursion up the river.

"The weather is so fine," said one of them, "that we will not have the trouble of rowing, the sail and wind will do the work."

"Then I cannot go," said Randolph Fairfax briefly.

"Not go," replied his friend, "what's the matter?"

"Don't you know?" was the reply, "I promised my mother not to go out in the sail boat."

"Oh, well, that makes no difference; she only meant when the weather was bad; no one could object on a day like this."

"She said nothing about the weather, neither did I. I gave my promise not to go except when we used the oars."

"It'll be easy enough," said another boy. "Just ask her about it, she'll say yes, of course."

"I can do that," replied Randolph, and so he hastened home and to his mother's room.

He threw his arm caressingly about her neck, as was his custom, saying, "Mother, dear, I have something to ask. The weather is so fine that the boys are going sailing. May I go, too, just this once?"

She looked into his eager, young face with a tender light on her own. Then she hesitated a moment, gazing out into the beautiful sunlit garden.

"Go sailing, dear? I am very sorry, but really I cannot, cannot consent; it is so dangerous, an accident might easily happen to a party of boys in a sail boat."

"Well, never mind," he answered cheerfully. "I would not go without your consent. Perhaps they will be satisfied to use the oars. They are waiting for me now, I will not join them unless they do." He kissed her good-bye and went off smiling.

The hours passed by, the afternoon was advancing rapidly, the mother was wondering what detained him so long, the sun was setting and it was warm and sultry. Suddenly she heard his merry whistle on the lawn. "I'm back again, mother," he called, coming in and throwing himself on the cane seat on the verandah. He was warm, dusty and tired.

"Why, where have you been, Randolph?" she asked hastily. "I thought you were enjoying the cool breeze on the river."

"Well, mother, the boys consented to use the oars but when we had gone four miles up the river they insisted upon raising the sail. I felt that it would be wrong to stay in the boat, so made them row to the shore and let me get out. It was hot and dusty to walk back those miles, but I could not break my promise to you."

The spirit characterizing his entire life is shown in this incident. Unfailing devotion to duty and loyalty to principle.

In August, 1864, he went to visit his aunt, Mrs. Gouverneur Morris, of New York, who had a son near his own age, and accompanied them on a tour through out the Northern States. His uncle, Mr. Morris, being familiar with the historical associations of the points

*Permission was secured to use facts and passages from letters and diary, as given in the "Memoir of Randolph Fairfax," which was published in 1863 by Rev. Phillip Slaughter. To this memoir the writer is deeply indebted as well as to correspondence with friends of the young hero.

A. R. W.

visited, made the trip both interesting and profitable for the two boys.

While on a Lake Champlain steamer, Mr. Dewy, an ex-Senator of New York, was much attracted by Randolph's appearance and introduced himself. On hearing the boy's name he remarked: "I would not like to have a name so famous that I could add nothing to it."

"It is the name of my ancestors, and if they have made it famous I at least will try and do nothing to impair its brightness," was the earnest reply.

In the fall of 1857 Randolph entered the Episcopal High School, under the care of the Reverend John P. McGuire. On his fourteenth birthday he asked his mother to give him a Bible, saying he would try to make good use of it. A little later he was confirmed at St. Paul's Church, Alexandria, where Reverend Mr. Johnson was then rector.

About this time he commenced a diary which, after his death, was found among his papers. In one of the first entries was given his idea of life and duty. He says: "Throughout each day I shall try to preserve a sense of the presence of God, and try thus to regulate my actions. Feeling the salvation of my soul as paramount to all other aims, and that it is my duty to work in Christ's cause in season and out of season, I will try to do my best by word and deed to lead others into the way everlasting.

"I will endeavor to improve every moment of time—to think much of the shortness of life, and that I may at any moment be called away to meet a just God. I will do nothing out of revenge, nor anything I should justly think mean in another."

RANDOLPH FAIRFAX.

These were the rules written by himself, a boy only fourteen years of age, for self-discipline and guidance. At the examination in June of this year, 1858, he took the honors in every class and went home laden with medals and certificates of proficiency.

In 1859 he took the highest prize of the school, the gold medal, besides many smaller prizes. Mr. McGuire, being asked which one of the boys under his care he considered the most gifted, said: "Take him altogether, Randolph Fairfax."

In his diary, written at this time, he says, "How little are these vain honors compared with the crown of glory! Oh, that I could estimate them aright and could see myself as God sees me! Oh, Father, have mercy upon me for Christ's sake!"

From the high school he went to Dinwiddie Academy, from there to the University of Virginia, in 1860.

Before the close of this session Virginia seceded from the Union, but, restrained by the wishes of his parents, he did not join the Southern army until August 12, 1861, when he enlisted as a private in the Rockbridge artillery, at Manassas Junction. He was now in his nineteenth year.

In a letter home, dated November the 12th, 1861, he says: "Last Friday we marched from six o'clock in the morning till seven in the evening, stopping only to water the horses, marching twenty-five miles, of which I walked twenty-two. Slept that night in a barn; next day crossed the Blue Ridge in a drenching rain."

Speaking of the battle of Kernstown he says: "On our way to position our battery had to cross a wide, open bottom, exposed to the fire of artillery. Seven shells exploded near us, disabling one of our guns. Just before we got into position a shell passed through one of the wheel horses of our third piece and into the other, where it exploded, tearing off the legs of the driver and the foot of a man walking by the gun. It was a horrible sight to see the mangled horses and men lying on the ground. * * * I have great reason to be thankful to God for my preservation and that of my friends. My only trust in such times of danger is that I am entirely in God's hands and He will preserve me until His own good time. Our piece was the last to leave the field. I escaped with a bullet hole through the skirt of my coat."

Of a later engagement he says: "For an hour we were exposed to the heaviest artillery fire I ever saw. Shot and shell seemed to pour over in one successive stream and burst in our midst. * * * I was struck by a piece of a shell on the collar-bone, but fortunately received from it only a bruise which put me on the disabled list yesterday. * * * Don't trouble yourself about my promotion. * * * I would not feel right in accepting a position that would take me out of active service."

Speaking of the battle of Slaughter's Mountain in August, he says: "We had a splendid view of the battle from a hill on which our battery was posted. It was the grandest sight that I ever saw. Artillery was blazing from every rise in the valley below, shells bursting in every direction, batteries and horsemen galloping over the field in pursuit, while away off on our right we could see the long line of Yankee Infantry

drawn up to oppose Longstreet and sheets of smoke bursting from their guns. Soon a cloud of smoke enveloped the plain and we could only hear the successive roar of artillery and rattling of the musketry gradually becoming more and more distant."

In November, 1862, the Rockbridge Artillery, to which Randolph Fairfax belonged, after a march of fifteen days, encamped near Port Royal, on the Rappahannock River. From this point Dec. 7, he wrote, "The weather now is intensely cold and I fear many of our poor soldiers are suffering. Oh, how I wish that this cruel war would cease. I think when peace is declared, I shall be like a man just released from prison, or a condemned criminal just receiving his pardon. May God bless and keep you all."

On the 11th of this month, only four days later, he wrote his last letter; it was to his mother, just after the first day's engagement at Fredericksburg.

"Remembering your injunction to write immediately after every battle, I hasten to obey it and relieve you of any anxiety on my account that may have been awakened by the engagement of yesterday. * * * The enemy has crossed the river and now has possession of Fredericksburg. * * * The day before yesterday we had an affray with the gunboats on the river below. Our battery was sent down with the long range guns. We only succeeded in getting five or six shots at a boat passing up, but our twenty-six pounder, with a Whitlock gun, had a sharp duel with five gunboats above."

On the next day the fight continued, and the section of artillery to which Randolph Fairfax belonged was under the most tremendous fire. He was working, with companions, one of the twenty-pound Parrots. Late in the afternoon it had ceased firing for a short time when Gen. Jackson rode up and ordered all the guns to be shot and fired simultaneously. This drew the fire of the enemy's guns and a shower of shot and shell deluged the spot occupied by the Parrot gun and its brave defenders. About sunset, facing the burning hall, Randolph Fairfax fell, his left temple pierced by a fragment of shell.

At his side, mortally wounded, were two of his comrades, Lieut.-Col. Coleman, and Arthur Robinson of Baltimore. "Coleman was professor of Latin at the University of Virginia. Arthur Robinson was of the best blood of Maryland and Virginia. Both were Christians and died full of hope."

Lieut. Thomas McCorkle and Berkeley Minor bore Randolph Fairfax from the field. McCorkle only lived an hour or two longer, and together the two friends were buried by their comrades on the field of glory, only a short distance from the point where they fell, on Saturday night, December the 13th, 1862.

So ended the life of a boy Confederate, a private barely nineteen years of age. On the battlefield, calm, earnest and determined; in camp, uncomplaining and cheerful; on the march, in cold, heat or hunger, he was never heard to murmur. In conversation and deportment, he bore himself with the purity which would have been seemly in the presence of his mother and sisters. At the battle of Malvern Hill he received a wound which many would have considered a sufficient reason for retiring from the awful scene, but he persisted in remaining at his post and did the work of two until the battery was ordered off the field. Surely it is well that a record of the lives of such American boys be faithfully preserved.

Reverend P. J. McGuire, for years his preceptor, says: "Intellectually, he was undoubtedly one of the first young men of his day. * * * Morally, I have not known his superior. * * * With a quick conscience and a most sensitive regard to whatever was right, * * * he was ever ready to resist the slightest offense against a stainless morality. The uncommon purity and blamelessness of his whole life cannot be accounted for without looking to those spiritual influences which alone sanctify the heart, and clothe the life in the beauty of holiness."

Among the many tributes paid to his memory received by his parents was this letter from Gen. Robert E. Lee:

Camp Fredericksburg, Dec. 28th, 1862.

My Dear Doctor:—

I have grieved most deeply at the death of your noble son. I have watched his conduct from the commencement of the war, and have pointed with pride to the patriotism, self-denial, and manliness of character he has exhibited. I had hoped that an opportunity would have occurred for the promotion he deserved; not that it would have elevated him, but have shown that his devotion to duty was appreciated by his country. Such an opportunity would undoubtedly have occurred; but he has been translated to a better world, for which his purity and his piety have eminently fitted him. You do not need to be told how great his gain. It is the living for whom I sorrow. I beg you will offer to Mrs. Fairfax and your daughters my heartfelt sympathy, for I know the depth of their grief. That God may give you and them strength to bear this great affliction is the earnest prayer of your early friend,

R. E. LEE.

Randolph Fairfax, noble scion of a noble house, but only a private in the Confederate ranks, a gunner in the artillery service. He reached in his nineteen years the fullest measure of an exalted manhood, and was a "faithful soldier, alike of his country and of his God."

BIOGRAPHY OF A "PUSHER."

I am going to tell you a true story about a not very remarkable boy who never did any great thing. That will not be very interesting, you say. Well, I shall tell it, nevertheless, because the editor says that common, everyday boys get the notion sometimes that it is only the boy of great family or great opportunity who gets ahead in the world, and he wants these boys to see what just a poor, common, everyday kind of a lad can accomplish.

Now, there are very few boy readers of THE AMERICAN BOY who began so far down as the boy about whom I am going to tell you, because this boy found himself at the age of ten in New York City without father or mother to help him, without a home he could call his own, without an influential friend to assist him, with only a few cents in his pocket, and without ten words of the English language at his command. How many ten-year-old boys who read this paper are in so bad a fix as that?

I am going to tell you how, by his own efforts, this boy came in eleven years to graduate at one of the greatest universities in America, and then, starting to practice law without a penny in his pocket, how in one year more he had an office of his own, and in three years more brought to America his old father and his little sister and gave them a home, and how he amassed in these three years a little fortune of five thousand dollars, as shown by his savings bank book, and built up a business that will pay him in his fourth year of practice five thousand dollars.

There are so many people who are crying out against our country, and against labor and political conditions that prevail, declaring that a poor boy in this country has no chance, that I must tell this little story to show that it is still possible for a poor boy to make his way, if only he has good habits and enough patience and grit.

But to my story.

The boy was born in April, 1874 (twenty-six years ago), in Kowno, Prussia. His father was a school teacher and a great student of the classics. His grandfather was a wise old fellow whom people called a philosopher; indeed he wrote a big two-volume treatise on Psychology, and went about talking like old Socrates.

But with all this good blood in his veins nothing could take the place of the mother who died when the little Prussian was nine years of age. Then life became hard for him, and, child as he was, he began to cast longing eyes toward America, which he had heard was the land of opportunity, though an older brother who had already crossed the ocean was doing little to prove it in the great city of New York.

He was now ten years old. He managed to get together forty-two dollars, the greater part of which his father gave him, and with his little valise containing a few clean handkerchiefs, the little Prussian ten-year-old set out alone for America. Think of it, boys!

Get down your maps and look for Kowno, Prussia; then look for New York, U. S. A.; then think of a ten-year-old boy with forty-two dollars in his pocket and not a word of English on his tongue, starting on that long journey.

We shall not relate the story of his trip, as that is not to our purpose. Suffice it to say that he counted the days and the hours, as he told me, till his eyes should rest on "the land of the free and the home of the brave."

When immigrants land from the big ships in New York they come through Castle Garden. Here Edward, for that is his name, found himself in due time, jostled here and there, hugging tight his little valise, which contained the few handkerchiefs that "a beautiful young English maiden," as he described her, washed for him on board the steamer, and one dollar and twenty-five cents in money.

But he was in America! His heart beat hard against his little breast, and his eyes lit up with wondering interest as he stepped out on Broadway and he at last realized, as best a mere boy might, that he had the great new world of opportunity before him.

Safely stowed away in a pocket of his jacket was a little paper on which was written "62 Christy St." Here he was to find his brother. But where was 62 Christy St.? The search began in the morning, and 'twas not 'till late in the evening that, footsore and weary, the little fellow appeared at the door of his brother's home and received a kindly welcome.

You might think that the next day this boy would want to see New York. If it were you, instead of Edward, perhaps you would have said: "Well, I have had a long hard trip. I will rest a while here at my brother's. He is poor and can ill afford to keep me long, but he certainly will allow me to spend a few days getting acquainted with his family and seeing New York. To-day I will go up to Central Park; tomorrow I will go across the Brooklyn bridge; next day I will visit Brooklyn and the Navy Yard; then I'll get something to do."

Not so with Edward; and here is revealed one of the secrets of his success. Not one day elapsed ere he had searched and found work. He engaged to work for a man who made canes and umbrellas. He was to work from seven in the morning 'till six in the evening, and to receive as wages one dollar and seventy-five cents a week. It was a hard job at poor pay, but it was work; it was a chance to do something; it was a start; it was the first rung of the ladder, and he mounted it eagerly.

(To be Continued.)

THE BOY TRAVELER

ANNOUNCEMENT—We present herewith the third chapter of the narrative from the pen of Harry Steele Morrison, who is known as "The Boy Traveler," in which he is describing his adventures as a 16-year-old boy on a tramp through Europe. The boy was living in 1886 in a small town of Illinois, but in that year became suddenly ambitious to go to Chicago to work. He lived in that city for a year, working as office boy at \$2.50 per week, and then, being determined to become a reporter, he started upon his famous trip to Europe. He had saved \$25, and with this money started for New York, stopping off at Washington, where he was received by the President and Mrs. McKinley. From New York he worked his way to London as cabin-boy on a cattle-ship, and arrived in England where he worked for his room and board in an inn. He succeeded in interviewing Mr. Gladstone, Queen Victoria and the King of Belgium. He visited the late President of France and the lord mayor of London, and altogether saw more famous men than any other person could possibly have interviewed. He was lost in the Alps and had many startling adventures of various sorts. The trip was remarkable in every way. The story of his achievements is extremely valuable. It gives American boys a knowledge of the opportunities which are open to them, and teaches them that with industry and courage, the boy who is early thrown upon his own resources may rise by his own efforts and make a success of life.—The Editor.

CHAPTER III.

My visits to the city editors didn't encourage me very much in my ambition to become a reporter. When I told them my age they laughed at me, and said I had better wait a few years before beginning work. Some of them asked me what I had to write about. I told them I hadn't anything in particular, but thought I could find something if they would just give me a position. Then they laughed again, and told me to find something first; they would see later on about giving me a place.

From one office to another I made my way, meeting with absolutely no encouragement until one day I made up my mind to call upon the man who was considered the ablest editor in all this part of the country. I rather dreaded going, fearing that he might be even more discouraging than the others, but when I entered his office he received me very pleasantly, and carefully questioned me as to my aim in wanting to enter newspaper work. He gave me much good advice; and before leaving I had it fully impressed upon my mind that if I wanted to be a reporter I would have to first find something interesting to write about. The great editor told me that I was too young to take a regular position upon a paper. "But if you can do something extraordinary," he said, "something that will give you interesting material to write about, I am sure you can sell the articles, and in that way get a start in your chosen profession."

His words made a very deep impression upon my mind, and for a long time I tried my best to think up something new that I could do. I thought of doing a great many wonderful things, and had a new idea every day, but somehow all of them had some great obstacle in the way of their accomplishment. I soon became rather discouraged again, and even thought I would have to give up my determination to be a reporter, when I read in a newspaper a particularly glowing account of the preparations for the coming Queen's Jubilee in London. The article told of the wonderful decorations there would be, of the great throng sure to be present from all over the world, and of the gorgeous parade. I read it all with wonderful interest, for it had just occurred to me that if I could get to London, could see the Queen's Jubilee, and perhaps see Mr. Gladstone and the Queen herself, I would have done something that perhaps no other boy had done, and have something interesting to write about for the papers.

Little by little it dawned upon me that here at last was the thing I ought to do. This was the plan I must follow if I wanted to get my start. It seemed a truly glorious idea, and I could have jumped up and down with joy when it came to me. The day had not passed when I had the trip outlined in my mind. I thought I knew exactly what I would do, and how I would do it. I had it all arranged very nicely. Of course I had no money to start with except my twenty-five dollars earned in the checkroom. Therefore, I would want to save as much as possible, and in order to do this I thought it would be a good plan for me to work my way on a lake steamer from Chicago to Buffalo; and as I had a very little idea of distances in the east, I thought that once in Buffalo I could get to New York very easily. Those cities being in the same state I thought they must be very near together, and if it cost too much to pay my way, I could walk. Of course I didn't think of the distance being four hundred and fifty miles.

Once in New York, I thought I would work my way abroad by washing dishes or doing work of some kind on a steamer. I had read advertisements in New York papers calling for men to work their passage, and I thought if there was work for men, there must be something I could do as well. Once in London, I would of course send articles to the editors, they would send me large checks in payment, and after that it would all be smooth sailing. This was the trip as I planned it first. It turned out to be a very different experience than I had expected it would be.

The very next day I went around again to see the editors, and to tell them about the trip I had planned. Most of them laughed at me more on this second visit

than on the first, and I felt much hurt over it. They said they had heard of boys starting out on trips of this kind, and they never had known any of them to get through successfully. They said they didn't think I would be any exception to the rule, and advised me to remain in Chicago, even if I was earning only three dollars and fifty cents a week.

All this was very discouraging. I had started out hoping that some of them would sign a contract with me for articles before I went and pay me some money in advance. If they would do this, I would be able to start with more than twenty-five dollars. But they ridiculed the idea, said that I wouldn't likely get any further than New York, and that therefore they didn't think it good policy to pay me any money in advance. So I saw that I would likely have to go with what I had in hand, and I was quite willing to do so. I felt sure I would be able to reach England and that I would send articles to the papers, which they would want to print. So I went ahead and completed what few arrangements there were to make before leaving.

When I thought it about time to start, it occurred to me that I had better write home and let mother know what I expected to do. I anticipated having some difficulty in getting her consent, and hesitated some time before I could decide what sort of a letter I had better write. Then I wrote a short note announcing that I expected to leave for Europe very soon, and that I didn't have time then to tell the particulars. I can imagine now the consternation caused by this letter when it reached home, but I was surprised and hurt at receiving a special delivery letter saying that if I wrote anything more about taking such a wild-goose chase they would feel obliged to send an officer to Chicago and bring me home!

ASKING A POSITION FROM THE EDITOR.

I hardly knew what to do then. I wondered if this was really to be the end of the whole trip, but by this time I had lain awake so much at night, thinking about the wonderful things I was going to do and see, that I felt I simply couldn't exist unless I went. When this feeling comes over a boy he is usually sure to accomplish his purpose. Almost every day for two weeks I wrote long letters home, asking them to allow me to make the attempt, and finally I got an answer saying that as I was so very persistent, I might as well try. So after all I succeeded in getting the necessary consent.

There was now nothing to hold me back and I decided to start as soon as possible. Before leaving, however, I thought of a better and simpler plan of getting to New York than working my way on a lake steamer. I decided to call upon the editor who had shown such an interest in me at first, and ask him if he couldn't get me a pass to New York over one of the railroads. He laugh'ed when I asked him, and very readily gave me transportation as far as Philadelphia. I knew it wouldn't cost me very much to get from Philadelphia to New York and was glad that I had made the request, for it saved me no small amount of work and worry.

On the great day I had set for my departure, I arose very early in the morning and put the few things I wanted to take with me into an empty shirt-box. I had no grip to take, and anyhow I thought this box would be very convenient to carry. When it should be worn out I could discard it and secure something else in its place, and it held just the things I wanted to take, which weren't numerous at all. When everything was ready I went alone to the station, for there was no one to see me off. I couldn't help feeling that it was rather discouraging to start off alone in this way, but I kept up my courage and said to myself that there would be friends to meet me if I came back successful.

The train was a fast one, and I was soon well

started on my way East. As soon as I looked at my pass, I saw that by its provisions I could stop over, if I cared to, at Washington, and as soon as I read this I determined to take advantage of it and make an effort, at least, to secure an interview with President McKinley. I thought if I were going to Europe to see Mr. Gladstone and the potentates there, I ought to start out by seeing our own President. So when the train pulled into Washington I left it, checked my box at the station, and hurried at once up to the White House. I was delighted with everything I saw on my way, and when I finally reached the Executive Mansion I was overflowing with patriotic enthusiasm. I encountered several officers at the door of the building, who asked me whom I wanted to see. "I want to see Mr. Porter, the President's secretary," I said to them, and they allowed me to pass and reach the waiting-room. There I met a doorkeeper who was exceedingly pompous and self-important. "Whom do you want to see, young man?" he demanded. I told him that I wanted to see Mr. Porter, please. "Well, you needn't wait around here, Mr. Porter ain't got no time to waste on boys." "Time isn't valuable with me," I replied, "and I think I'll wait for a time." The doorkeeper looked at me in astonishment, while I seated myself, but he said nothing more in the way of remonstrance.

It was very interesting in this waiting-room. There were men and women there from all parts of the country and of the world, almost. The majority of them had come to ask the President for office of some kind, but others were there hoping merely to shake his hand. Most all of them were disappointed, for but few entered the President's office that afternoon. I sat very quietly in my chair, observing all that was going on, and after awhile I saw Mr. Porter himself pass through from one door to another. I knew him from his pictures, and, waiting until he returned, I went up to him, and told him of the trip I expected to take. "I am very anxious to see the President before leaving," I said.

Mr. Porter was very much interested. "You certainly deserve credit for undertaking such a trip," he said, "and if you will wait until after four o'clock, when the President's office is closed to the usual visitors, I think I can get you in all right."

Of course, I was delighted at having been so pleasantly received, and sat down again. The pompous doorkeeper now beamed upon me in a charming manner; he had evidently been much impressed with my conversation with Mr. Porter. At four o'clock all those waiting were sent away, and Mr. Porter soon came to take me to the President. We passed through many rooms to the private office, but Mr. McKinley was not to be seen. I thought he had certainly gone out somewhere, and that I wouldn't be able to see him after all. But Mr. Porter was persistent. "Having gone this far we'll keep on," he said, and we finally came to the President, seated with Mrs. McKinley, in the private sitting-room of the White House. I was introduced, asked to sit down, and had to tell them all about the trip I had planned, and of the wonderful things I hoped to accomplish before returning. They were as kind as could be to me, and I think I can almost say that the President was the first man to really encourage me to take the trip. In Chicago everyone had either done everything possible to induce me to remain at home, or else they had said nothing at all, treating the plan with contempt. But the President was different. "When an American boy starts out with a good end in view, and tries hard in the right way, he's very likely to succeed." With these words the President left me, and I went out feeling more happy than for many a day.

I did not remain in Washington, but went on to New York, where I arrived one evening about eight o'clock. It was now early in the month of May, so that it was quite dark at this time in the evening. I was quite bewildered when I disembarked from a ferry-boat on the New York side of the Hudson river. I had never before been in a city so large. I knew nothing of the neighborhood in which I found myself, and I didn't know where I might be able to get a bed for the night. I went up to a policeman and asked him if he could recommend a cheap boarding-house, but he didn't seem to know of any. He scratched his head and thought for some time, and finally announced that he knew of a Mrs. McNulty living uptown who took in boarders. "How far away does she live?" I asked. "Oh, about eight miles," he answered, so I decided I wouldn't go to Mrs. McNulty's that evening. I then walked over to a brilliantly-lighted thoroughfare, and went into a drug store, where I inquired for a cheap lodging-place. They were very pleasant to me here, and sent me to a good clean place, where I secured a bed for twenty-five cents.

The next morning when I awoke, I started down Broadway to see something of the city, and saw before me, all at once, the tall building of the New York World. I didn't know anything about the newspaper, but I was immediately impressed with the building, and it occurred to me that perhaps the editor of

this paper would be more willing to make a contract with me for articles and pay me some money in advance, than the editors in Chicago had been. I determined to call upon him, at any rate, so I entered the elevator and went up to the eleventh floor. There I came to a door with the words, "Editorial Offices of the Evening World," upon it. There were also the words, "No Admittance," but I walked right in. I had already learned in Chicago that it doesn't pay to stop at signs in newspaper offices.

I found the editor seated in his closet-like compartment, and lost no time in stating my business. I was very self-confident at this time, and felt that I had a great deal ahead of me to do. I told the editor that I was going to Europe after about three days; that I was going to see Mr. Gladstone and perhaps the Queen. "And if you want anything in the way of such articles," I said, "you had better tell me now, for I certainly won't have time to come back again before sailing." The kind editor looked at me in astonish-

ment. They are probably used to seeing all sorts of persons in the office of the World, but at this time I was no doubt a new sort.

"How do you expect to get to Europe?" he asked. "Why," I replied, "I have twenty-five dollars to start with, and I am going to work my way across the ocean on a cattle-steamer." He didn't wait to ask me any more questions, but called one of the reporters. "Here," he said, "is a chap you had better write up, and get P—, the artist, to make a sketch of him."

I sat down, and the reporter began to ask me all sorts of questions. Finally, he wanted to know if I could write as well as I could talk. "I always thought I could write much better," I said. "Well, if that's the case, you had better write the story yourself," answered the reporter. So I sat down and wrote the story of my trip so far, and told also of the many things I expected to do. The artist, in the meantime, made a sketch of me.

About two hours later I crossed City Hall Park, outside the building, and heard the newsboys crying out, "Extry paper, all about the Boy Reporter going to Europe to interview Mr. Gladstone," and when I bought a copy, I saw there upon the front page, the first two columns filled with the story of the trip I expected to take, and they had an imaginary sketch of me seated at Haward castle, interviewing Mr. Gladstone. It was all very wonderful, and I could hardly believe my eyes. In the first place, it was a new experience for me to have my name in the paper, and then again I wasn't used to the ways of New York journalism and it seemed scarcely possible that they had issued the paper in such a short time after I first visited the office.

All that day I went about New York, hearing the newsboys crying out, "Extry paper, all about the Boy Reporter," and I could hardly believe I was the boy all this noise was being made about.

(To be Continued.)

The Cruise of the Yacht Gazelle 6,000 Miles on Inland and Ocean Waters

By KENNETH M. RANSOM.

NATIONAL CEMETERY AT VICKSBURG.

CHAPTER IV.

It was to be my day at the tiller, and I had promised the boys an early start and a big day's run toward Natchez, which we were to visit next. So when the alarm sounded at half-past five, I rolled over, rubbed my eyes, and bumping up against the center-board box to make sure that I was awake, jumped up, donned my clothes, lit the fire and put on the tea kettle, for the benefit of the cook. But cooks must not be humored, even on a cruise, so I gave one mighty call, "All hands up for breakfast," and went on deck.

Experiences of the past had taught us that we should not be surprised at weather changes, but as my head reached the open-air, at the same time receiving a huge piece of snow, which had fallen from the furled mainsail, I was certainly perplexed.

Was this indeed far south Mississippi? Was this the sunny south we had hoped for?

As I looked out into the dark gray of early morning, I beheld the whole face of nature covered by a white veil of "the beautiful." Our cockpit, too, had received its share and even more, for the wind-swept decks had there deposited for safe-keeping their share, until our standing room was now two feet deep on a level.

But, no, it is surely old Mississippi, for there nestling among the trees was the plantation house, the cabins where the darkies make their homes hard by; and, as a last proof that we were truly in the south, only under exceedingly strange circumstances, an old negro approached with a basket of sweet potatoes. "Wid de mastah's compliments." As I handed him back the basket, which I had emptied, he remarked, "The lawd hab mercy on pooh, ole frozen Dick."

NEGRO BOYS SELLING WAR RELICS AT THE BASE OF THE GRANT-PEMBERTON MONUMENT, VICKSBURG.

Using our dustpan for a snow shovel, I soon had everything once more in sailing order on deck.

Cold as it was, the wind was in our favor, so we hoisted our frozen canvas, bade adieu to our friends and were soon speeding along at a rate that bid fair to break the record for a day's run. We were making fine headway and all in all, felt quite satisfied with the day, until nearly noon, when the wind increased to almost a gale; then rain fell and froze as fast as it fell, making the decks slippery, the sails like boards, and the rigging stiff and hard to manage. We stuck to it, just the same, notwithstanding the fact that under such circumstances the navigation of a sailboat becomes very hazardous. The fact was, we were unable to lower our sails on account of the icy ropes not running through the pulleys, so it became a matter of necessity to keep on regardless of results, until we could find some cove which would furnish us complete protection, should we be compelled to pass the night without lowering our canvas.

The river channel was very crooked, making it necessary for us to change our course often. This greatly complicated matters, for with our sails and ropes in their frozen condition, the former could not easily be changed, and it was necessary to depend entirely on the helm to keep the channel while the position of the sails remained the same. I was certainly glad when we finally reached a nice sheltered cove in the lee of a great forest. Running the boat up to the

DRIVING A BARGAIN ON WAR RELICS ON THE VICKSBURG BATTLE-FIELDS.

bank, we made fast to a large cypress tree. So protected was the place that scarcely any wind struck us. This was indeed lucky, for it gave us a chance to limber up our ropes and lower our sails, which would, under other circumstances, have broken all to pieces in their frozen condition. Although we tied up soon after one o'clock, we found, upon consulting our light-book, that we had traveled forty-one miles, leaving a distance of fifty-two miles still to be traveled before reaching Natchez.

Our landing place was a splendid one, for, notwithstanding the very high stage of water, the land was here high and dry. The forest was composed mostly of gigantic cypress trees, from whose branches hung in beautiful festoons the Spanish moss, which grows in such abundance in parts of the south. As evening began to fall the sky cleared and the moon came out bright and silvery, its rays falling on the ice-covered moss, making it seem like one great mantle of crystal lace fashioned in patterns rare and beautiful. Like a million jewels it shone, as the gentle breeze awayed it slowly back and forth in the moonbeams. Surely this was indeed a deep, tangled wild wood.

With promise of a fine day for the morrow, we retired in good spirits. The barometer was rising and when morning dawned, we found it had indicated rightly, for although the air was still cold and wintry,

the sky was clear. It was Arthur's day to sail, but being still delicate from his long siege of sickness, I did not deem it prudent for him to expose himself; so I took his place at the helm and at an early hour had the yacht again under way.

It was a splendid run. The river channel was deep and the beacon lights so placed as to be easily found. Great bends in the river, with the channel on the concave side, made it possible for us to run quite close to the banks, thus giving us a splendid oppor-

NATURE RUN WILD.

tunity to see the great levees which are built up to keep the water from inundating the surrounding country.

These levees are built and maintained at an enormous expense. They are simply great V shaped hills made of clay or other firm soil. They are often one hundred and fifty feet through at the base, with a width at the apex hardly wide enough for a wagon road.

River life is very interesting in this section. Almost every variety of river boats are now seen. The typical Mississippi river houseboat is here found in all its glory. All sizes, shapes and conditions of this type of boat are met. Some neat and tidy, others slung together of rough lumber or driftwood, but all floating down stream in hopes of some day reaching New Orleans.

The crews of these boats form the different classes of river life. Some of these boats are owned by merchants who ply up and down the river on legitimate business, but a far greater number are captained by a desperate class of men. Almost every kind of vice is carried on by these house boatmen. Their dishonest dealings with the people living along the river have given the latter just reasons for being suspicious of navigators, and one must certainly come well recommended to get a favorable reception.

All kinds of schemes are devised for cheating the ignorant negroes out of their hard-earned money, and it is a common thing in passing a boat to be hailed with the inquiry, "What graft you workin'?"

Notwithstanding the fact that we were often thrown in contact with these men, we so shaped our ways

ALONG THE MISSISSIPPI.

that we did not once enter into a quarrel or altercation with them during our voyage down, and we are quite proud of this record.

During the afternoon we passed one of the government snag boats. These boats are very interesting, indeed, being very wide and built with two hulls so that the derricks and windlasses used in raising snags, trees, etc., can be worked from the center between the hulls. Every appliance and the most modern

A MISSISSIPPI BEACON LIGHT.

machinery is provided for these boats, which are a great success in keeping the channel free from dangerous obstacles. The snags, after being raised, are sawed up into wood and when they become somewhat dry are used to feed the fires under the boilers.

It had been our plan in the first place to try and reach New Orleans some time before Christmas, and after a brief visit, to continue on to the Gulf of Mexico and reach the Florida coast by the first of the year, spending the winter months in a cruise among the ten thousand islands, and, as soon as spring was far enough advanced, continuing up the Atlantic seaboard to New York. The unusual winter with which we had been obliged to cope and our long delay in the ice at Philadelphia Point, and the severe illness of our mate and consequent delays, had long since made us abandon all thought of carrying out our original plan so far as time was concerned. But we did hope to reach New Orleans in time to be present at the Mardi Gras festival which was to take place in the middle of February. We were planning our runs so that with reasonable good luck we would be there in good season for the event.

About three o'clock in the afternoon we rounded the last bend in the river before reaching Natchez, which we could plainly see in the distance. Gazelle now having a course nearly before the wind was speeding along beautifully, and in less than an hour had come to anchor in a protected place at the foot of the road which leads up the hill to the city far above.

It had been a pleasant and very speedy day's run. The day, however, was not yet done, so after furling sails Frank and I went up to the city for our mail and to look about us. Long will I remember that evening at Natchez. How we climbed the hill to the level plateau on which is situated this beautiful city. Never before had I witnessed such a glorious sunset as was now before me.

I was glad to find a message from home at the post-office. It informed me that my next mail would be sent to Baton Rouge, which news greatly worried me for we had hoped to receive our funds, and our exchequer, on account of our prolonged stops, was now low. If luck favored us, however, we could reach Baton Rouge in two days and we had enough provisions to last until then if we were prudent.

After spending the greater part of the next day looking about Natchez, we again set sail and at dusk came to anchor at a little parish called Green's Store. For

GAZELLE RESTING A BIT.

our oil might not last until reaching Baton Rouge, and anxious to be on the safe side in having plenty of provisions in case of an unexpected delay, the cook proposed a scheme to replenish our larder even though our exchequer was lacking, until we should reach the capital city of Louisiana. Producing an immense cake griddle which had been purchased with the rest of our outfit, but which, on account of its being a great deal larger than the top of our stove, had never been of use to us, he proposed that we take it ashore and make a trade for provisions. No one seemed anxious to demonstrate his ability to make an advantageous bargain, so it became necessary for us to draw lots to see who would do the deed. As usual, I drew the short end of the stick and Arthur the next shortest, so he and I started forth to trade. It took us some time to convince the storekeeper that a cake griddle of such a tremendous size was an absolute necessity in every first-class stock, but we finally won him over and returned aboard with coal oil and provisions galore. Our conscience did not trouble us a bit, though he allowed us twice as much as we paid for the article in Chicago. Why should we, when he set his own price? Anyway cake griddles are expensive things at this parish, and we had to make our "freight."

One more day and we reached Baton Rouge, just in time to get our mail, cash our checks, and put a big supply of provisions aboard. We had hoped to leave Baton Rouge before nightfall, for it is a very exposed place, the river having a straight-away sweep of over eight miles. During the afternoon our barometer had fallen far lower than ever before recorded. This meant that something unusual was going to happen, and our fears were certainly confirmed when we read the dispatches stating that a terrible blizzard was sweeping over the entire country and would reach us by night. It was too late to move far in the darkness of the night and there was danger of making a bad matter worse, so we were obliged to remain where we were. The storm, which raged for the next three days, was the

THE OLE CABIN HOME.

most severe ever recorded in the South. Even at Baton Rouge the mercury registered as low as five degrees below zero. During this storm we had a terrible time, but again the Lord was with us, and though it seemed as if we would certainly meet destruction from being dashed onto a raft of logs anchored but three feet astern of us, our anchor had fouled on a root and thus held and proved our salvation. The sea ran high even in the river and the flying spray, which froze as fast as it struck the boat, soon formed a coating of ice over six inches thick all over the boat. This tremendous weight was a source of great danger. It therefore became necessary for us to chop the ice off with our axes. This was a severe experience. The weather being so cold we could work but a few minutes at a time; the spray dashing clear over us and freezing on our faces and hands, which were already cut and bleeding from the sleet driven by the furious gale. How we accomplished the work without mishap I know not, for while we worked it became necessary to lash ourselves to the mast and rigging to keep from slipping overboard. By hard and persistent labor, however, we managed to keep the boat afloat until the storm abated and our dangers were over. Our safety was purchased at the price of frozen hands and ears, and bumps and bruises too numerous to mention.

At the little parish town of St. Gabriels, ninety

miles above New Orleans, we succeeded in finding a protected pocket before the coming of the heavy ice which filled the main channel of the river for a week. It was too bad to be thus delayed, but we were at least safe and here was a chance to rest. We became acquainted with the people, who were very kind to us and made our stay among them a very pleasant one.

Everyone seemed interested in the little boat, which had traveled all the way from far away Michigan, and our visitors were numerous. Sunday we decorated the Gazelle in her international code colors, and during the entire day the darkies begged us to give them "one ob dose flags fer de quilt."

On February 21 the ice was nearly gone, so we thought it best to make all haste for New Orleans. It was three in the afternoon when we left the little old-fashioned town, but we got a good start at any rate and night found us at the village of St. Germaine. It did not seem possible that our journey down the great river was nearly done, but such was the case; two days at most and we would reach New Orleans. Next night found us only thirty-seven miles from the goal which we would reach on the morrow with anything like fair luck.

When we awoke next morning there was not a breath of air stirring, but I predicted a good breeze before the end of the day, and in this I was right, for it came, but from whence I know not, for not a cloud appeared in the sky. What a day! Surely this is "the sunny South" at last! How beautiful the mansions situated among fine groves of magnolias and rare imported trees which seem to grow to perfection in this mellow climate.

The Gazelle seemed glad as she forged ahead, as if to say, "Hurrah! I have conquered, I have stood old Mississippi's bumps and jars! All these are of the past and now for Old Ocean!"

Light after light was passed and marked off on the list, and soon the last one shone out. It had no name, so as we lustily gave three cheers for the last of the little beacons which had so long been our guides and dubbed it "Omega," the Gazelle sped on with only the smoke of the great cotton market as a guide, and we at last had reached the Crescent City—New Orleans.

(To be Continued.)

The Little Arab.

By J. E. TORRANCE.

Hello, Mister Lawyer,
good mornin' to you.
Has you got any work
What a Arab kin do?
Where does I live at?
Say? Oh, mos' any-
wheres;
Stays sometimes in cel-
lars an' sometimes in
stairs,
An' sometimes I sleeps
in a railroad caboose;
But mos' of the time I is
jist runnin' loose.

'Member the time when
you gived me a nick,
Fer cleanin' yer shoes
and fer doin' 'em sick?
Well, what do you s'pose
ever went with that
med?
Spent it immejit fer a
big loaf of bread.
I was mos' mighty hun-
gry and went to the
bake
An' blowed it all in fer
my poor stummick's
sake.

Then I struck out fer home—oh, yer smilin' at that;
My home's anywheres that I takes off my hat—
An' I met an ol' woman a-beggin' her way,
But she 'd got nary penny the hull blessed day
To pay fer her supper, an' she was real old,
An' her clothes was so thin, she must a-bin cold.

Her hair was all white an' her ol' back was bent
Where the aches an' the twists of the rheumatiz went,
An' her eyes was so sad an' her fingers was blue,
An' her shoes they was tored an' her toes had come
through;

An', mister, you looks like you 's goin' to laugh—
But I couldn't give that ol' beggar jist half.

I dumped the hull loaf in her shaky ol' lap
An' when she said "bless
you," I pulled down my
cap

An' swallered a lump—
not bread, 'member
that—

But a lump in my throat
mos' as big as your hat;
Fer my buzzum it heaved
an' my heart jumped
about
'Till I thot it 'd mighty
nigh flop itself out.

Say! I'd ruther go
hungry mos' any ol' day
Than to see a poor wo-
man a-suffrin' that
way—

I'd ruther help her than
buy a new toy—
I makes an' I spends like
a 'Merican boy.

What is that, Mister
Lawyer, a dollar fer
me?

An' 'thout any workin' ?
Y'r trumps, does yer
see?

GREAT FREE SHOW FOR THE MILLIONS THIS MONTH

In one respect the sun's total eclipse on the 28th of this month will be without precedent. Its path, instead of extending over the sparsely settled regions that intervene between Iowa and the western coast as in 1878, or stretching over the watery expanses of the Pacific as in 1883, when the United States had to send an expedition to the Caroline Islands, four thousand miles west of South America, or let the eclipse go unobserved, will cross the six states of Louisiana, Mississippi, Alabama, Georgia, South Carolina and North Carolina, touch Virginia and traverse a very fairly settled portion of the republic which is covered with a perfect network of rail. The track of totality begins on the Pacific Ocean just west of Mexico at sunrise, trends due eastward over Mexico, enters the United States very near New Orleans, La., extends northeastward over Mobile and Montgomery, Ala., passes close to Atlanta, Ga., and Columbia, S. C., over Raleigh, N. C., and leaves this country in the region of Norfolk, Va., and Cape Henry. Besides the cities named, it includes thirty other towns that are large enough to find place on the smaller maps. After leaving the United States the path of the eclipse crosses the Atlantic Ocean and touches Europe at Colmbra, Portugal, takes in Algiers and Northern Africa, and terminates near the northern end of the Red Sea at sunset. The eclipse will last about one minute and twelve seconds near New Orleans and one minute and forty seconds near Norfolk.

Hitherto only the favored few, who could afford to spend days and perhaps weeks in travel, have been able to view the great spectacle; this time a million of people at least can witness the phenomenon from their own doorsteps. Other millions dwell within an easy day's journey of the path of totality, and far more than half the entire population of the country will be able to witness a portion of the show at home, for a partial eclipse will be visible in every state east of the Mississippi. Nature has arranged no similar display with such consideration for the masses within a generation. Total eclipses were visible in the United States in 1867, 1878 and 1889, but their paths did not traverse closely settled regions.

"ALL ABOARD FOR THE ECLIPSE."

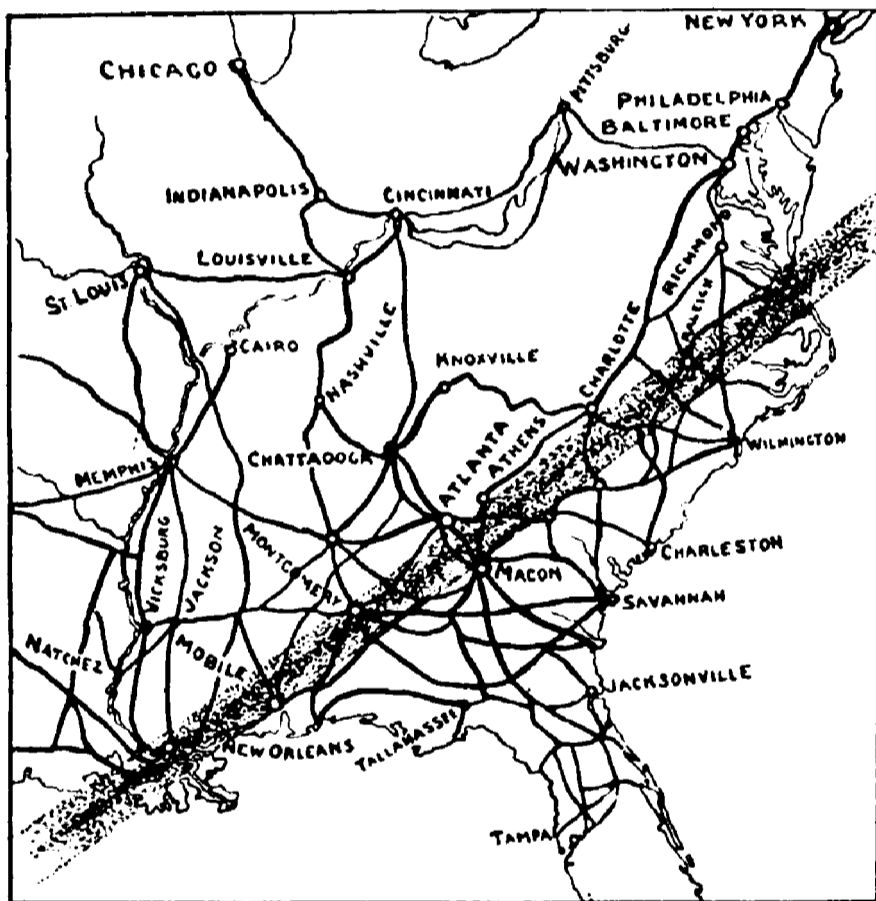

Already the railroads have begun to take advantage of the situation. None of the great cities of New York, Philadelphia, Baltimore, Washington, Richmond, Pittsburg, Cincinnati and Louisville is more than twelve or fourteen hours removed from the path of totality, while some are much nearer. And, according to Professor S. J. Brown, astronomical director of the Naval Observatory, arrangements are being made by several of the lines which connect these cities with convenient localities where the eclipse will be total to run special eclipse excursions, some on the day of the event and some on the day just preceding it. This will undoubtedly result in a temporary boom for many of the eclipse cities. Besides the great towns mentioned, every one of the Atlantic Coast cities south of Norfolk is within easy reach of the great show, and every one of them will unquestionably send its quota of sightseers.

The accessibility of the path of the eclipse will render the coming event of incalculable value to science. Preparations are being made by nearly every scientific institution in the country to place their best instruments and most skilled observers in the field. The United States government will spend thousands of dollars establishing observation stations along the path of the eclipse. As Uncle Sam's chief star gazer, Prof. Brown will have charge of the government's principal observations. He is making preparations for the work with a knowledge born of long experience and a natural genius in all matters appertaining to his science. He has been connected with the observatory for nineteen years. He is a graduate of the Naval Academy at Annapolis and holds the rank of commander in the navy.

"Greater results are probable from the observations this year," says Prof. Brown, "than from any taken

heretofore. During the half decade since the last total eclipse there have been great strides in improvements in the apparatus employed in the work. Photography has been wonderfully developed and the improvements in photography alone may effect remarkable discoveries during this year's eclipse. Moreover, the ease with which the eclipsed region may be visited will increase the number of scientific observers enormously.

"The government is already preparing to occupy several stations along the path of totality. The necessary apparatus is being gathered and arranged, and men specially adapted for the work are being engaged and their special parts in the observations are being outlined. Congress has allowed \$5,000 to the Naval Observatory for expenses and \$4,000 to the Smithsonian Institute. The Naval Observatory will send out two expeditions. The points from which they will observe the eclipse have not yet been chosen definitely, but they will probably be located about two hundred miles apart, one in North Carolina and the other in Georgia. A floating cloud which might obscure the eclipse at

ALL ABOARD FOR THE ECLIPSE.

MAP SHOWING NET WORK OF RAILROADS THAT MAY BENEFIT BY NATURE'S GREAT FREE SHOW THIS MONTH.

one point may not affect in the slightest the view from the other, and it is to obviate the danger from cloudiness that has caused the division of forces.

"In anticipation of this year's eclipse, the weather bureau has, for three years past, been collecting data of the weather conditions in past Mays along the line of totality at all times of the day. The result of this investigation has been to show that there is less danger of cloudiness in central Georgia and eastern Alabama, nearly due south of Atlanta, and that therefore this is the best region for locating the eclipse stations so far as that consideration is concerned. The scientists of the observatory, however, have taken thought of other conditions also, and although the period of eclipse is longer in the neighborhood of Norfolk, have about decided to establish stations on high ground in North Carolina and Georgia. The stations selected will be occupied two or three weeks before the eclipse. The instruments will be erected and the part each man is to take will be thoroughly rehearsed. There will be a careful division of the work during the eclipse. Each man will be assigned to some particular duty, and he will bend every effort to the gathering of all data possible in that connection. There will be but a minute and a half in which to make all the observations, and it is imperative that the whole affair should be carefully systematized and that each man should know definitely and absolutely what he is to do.

THOUSANDS WILL TAKE OBSERVATIONS.

"No previous eclipse has had the attention of so many skilled observers as will watch this one. The Smithsonian Institute will have a corps in the field under Prof. S. P. Langley. Princeton College will have a force under Prof. Young; the University of Pennsylvania under Prof. Stone, and the Yerkes Observatory will conduct an expedition with Prof. Hale at its head. These are only a few of the institutions which are preparing for the field. In fact, practically every college and scientific institution in the country will be represented. All told, probably a hundred expeditions of this kind will be sent to the path of totality well equipped for some portion of the work.

"The eclipse will be a great attraction for amateurs—persons who own photographic outfits or other scientific instruments used in observing the phenomena of the solar eclipse. Letters have been received at the observatory which warrant the prognostication that probably one thousand of these unattached 'amateurs' will be somewhere along the path of the eclipse. The government does not discourage these amateurs, but rather gives them every encouragement, and courts contributions of photographs and data from them to add to the government records. It is remembered that one of the finest sets of photographs of the eclipse in India in 1896 was taken by an amateur with a home-made camera, but one having an excellent lens. Amateurs have been a help in the field in many instances, and they are always ready to volunteer their services. When Prof. Cambell, of the Lick Observatory, went to observe the eclipse in India, he took only his wife for assistant; on the field he found all the trained volunteers necessary to manipulate the seven instruments he made use of.

"The expeditions to be sent out by the Naval Observatory will not be large ones. They will consist probably of five or six observers, including photographers. But the men sent will be the best procurable. The government naturally has superior resources to draw on for making observations. It has at its disposal the lenses and spectroscopes gathered during the last twenty-five years, and its appropriation of money is probably larger than any of the institutions could afford to devote to the purpose. Large instruments are now being prepared for use next May. A number of special photographic instruments, ranging from a forty-inch telescope down will be erected on the field. Instruments will be selected in all cases because of special fitness."

The Naval Observatory will shortly have ready for distribution a little pamphlet containing a map of the path of the eclipse on a sufficient scale to show most of the towns and cities, railroads and streams and the elevation of points along the path of totality, together with the exact time of the eclipse. It will also contain suggestions for amateurs, by following which they may be able to contribute much that is valuable from their observations. After the eclipse the observatory will publish a complete report of observations, with reproductions of photographs and drawings. Any sketches, photographs and observations of contacts in any observation, of sufficient merit to make them worthy of preservation, will gladly be received by the scientists and included in this publication.

A HUGE CLOCK.

Philadelphia has one of the three great clocks of the world. It is located in the tower of the Municipal Building. It has four dials, each twenty-five feet in diameter, these dials, including the frame work and glass, weighing forty thousand pounds. The total weight of the four faces of the clock is eighty thousand pounds. The clock is operated by compressed air. The time indicating device is a marvel of mechanism. There is a separate driving mechanism for each dial. The hands are made of sheet copper, the long one measuring twelve feet and the short one nine feet. A pneumatic service turns on or off six hundred electric lights, illuminating the dials at night. Since January 1, 1899, when the clock was put in operation, it has kept nearly perfect time.

The mints in China are established, not by the authority of the central government, but by the men in control of the various provinces. Each has its own standard, so that the coins turned out by each mint have a different value. The so-called "dollars," for instance, vary in value from 62 cents to 71 cents, according to the province in which they are made. Even the copper "cash," which are made with a hole in the center, to facilitate stringing them together, have no fixed value. In some cases 1,000 of them equal a dollar, while in others twice as many are required.

WHAT BOYS ARE DOING

EDGAR GOLIFFE, A SUCCESSFUL BOY SALESMAN.

placed so many young Americans in the front ranks of business life.

Edgar Goliffe, fourteen years old, is an enthusiastic salesman for Goliffe Bros., cycling agents, Plymouth, Mich. Goliffe Bros. ordered eleven Featherstone bicycles for their trade last season and the fourteen-year-old boy sold them all. There was only one firm in Plymouth that sold more wheels than he did, and that firm only beat him by three sales. He is possessed of that spirit and energy that the world calls "hustle" and which has

VALENTINE MILLER, ANOTHER "BLIND TOM," PERHAPS.

Ukiah, Cal., has a musical prodigy in the person of a blind boy of seven, Valentine Miller by name. He is the younger of two sons, both blind, born to Mr. and Mrs. W. H. Miller. Valentine is straight, and slim of figure. His face is oval, and his head is unmistakably that of a musician. His hands are of such marvelous pattern that it would seem as though they were fashioned only for the making of music. His mother tells wonderful stories regarding the effect of musical sounds upon him when he was an infant. Until he was five years old, the only music that he heard at home was that which was ground out of a small music box. Nothing in the world pleased him so much as to sit and turn the little crank and listen to "Home, Sweet Home," "Way Down Upon the Suwanee River," and "Old Black Joe." It was impossible, almost, to get him to play out doors, so long as he could sit and play with his music box. When he was five years old an uncle bought him a zither, and within a week he could pick out on the strings all the tunes in his music box. Shortly before he reached the age of seven, he was given the opportunity of playing on the piano. It was a second-hand piano, and when it reached the Miller home it was out of tune. The boy detected the fault at once, and pointed out the keys that needed tuning. Within two or three weeks he was playing all the pieces he had ever heard. Experts have tested the boy in various ways. New songs have been sung to him, and he has at once gone to the piano and played them. Complicated chords have been played on the piano, and the boy has promptly stated the number of keys struck and the notes they represented. He plays the piano, violin, harp, zither, guitar, mandolin and banjo.

Charlatan Kittredge, a writer in the Overland Monthly for March, tells of a visit to the home of this boy. He says that after hearing the boy play on a variety of instruments, the little fellow said:

"You play for me, please!"

"Imitating his own example in willingness I played through the first part of 'A Song Without Words.' Valentine, meanwhile, sitting close by my side, his ear bent to the piano, his breath coming quickly, and the color deepening in his cheeks. When I stopped he said softly, breathlessly, 'That's pretty—play it again!'"

"I commenced again at the beginning, with the conviction that I was playing for a critic, and one well worth pleasing. This feeling was intensified as I went on. The child's head swayed in time with the music, his lips parted, the wonderful hands moved restlessly in the air, and presently, as I neared the final movement, like one inspired, he began to direct me with masterly certainty, while my fascinated eyes never left his glowing face.

"Now the loud pedal—now the soft—both pedals now—no, softer, softer—don't play it so loud! Now come out louder—there, there, now softer—soft—soft, oh, very, very soft: so—up, quick—higher, louder! There—stop loud! Take off your hands! . . . You played it right then."

"There was a thrilled stillness in the now dusky room, all eyes were wet, and mine at least were brimming. I could only clasp the quiet little form and weep and wonder. 'Out of the mouths of babes' again; but this wisdom seemed the most wonderful of all."

TO THE KLONDIKE ON A BICYCLE.

Oliver Lawson rode a bicycle most of the way from Dawson City to Skaguay recently, the distance being 324 miles. He made the trip in fourteen days, and believes from his experience that when the lakes freeze and the trails become worn and packed, the time between Dawson and Skaguay can be reduced four to five days. He carried 25 pounds of baggage strapped to his handle bars.

A HERO OF THE PIANO.

Max Hambourg is a boy of twenty who has fairly stormed the public with his performances at the piano. He is a veritable hero of the piano at the present time. He has been playing with the Boston Symphony Orchestra recently, and has captured the public with his dazzling command of technique. He is said to lack somewhat in expression, his tone being an immense one. When he comes to rushing the last movement to a climax, no one, even among the older masters of the keyboard, is to be mentioned in comparison with him.

LORD "BOBS" WHEN A BOY.

The editor of THE AMERICAN BOY takes great pleasure in giving a picture of a number of young English army officers reproduced from a photograph taken in 1862 by C. W. Carter, a photographer now at Salt Lake City, Utah, who was at that time serving under the now Lord Roberts as a subaltern officer in the Royal Artillery. The picture shows one young man sitting. That is Lieutenant Roberts, who is now leading the British forces to victory in the Transvaal and is known throughout Great Britain and her colonies as "The Hope of England."

FLAVEL HENRI LACQUES-WAGGONER, A CUBANO-AMERICAN BOY ARTIST.

A picture of the boy who won the prize of five dollars offered last year by the Bowen-Merrill Company, of Indianapolis, for the best poster design to be used in the announcement circular of the popular book, "When Knighthood Was in Flower," will interest, we are sure, the readers of THE AMERICAN BOY, particularly when we say this boy's mother was a Cuban and his father a white American. He is a fourth year pupil in the Indianapolis High School, is eighteen years of age, frail of body but industrious, and genuinely in earnest in all he does. From the fact that he won the prize referred to, we may know that he has marked ability with pen and pencil. The firm offering the prize gave no suggestion as to the conception or composition of the poster, the creative genius of the artist being relied upon entirely. The boy had seven competitors, and won easily over all. His contribution to the Arts and Crafts Exhibit at the Indianapolis High School last year was the subject of much favorable comment, and several of his sketches have since been exhibited in Chicago, San Francisco, and other cities. His inclination to art, however, has not caused him to neglect other branches. He is proofreader for the Daily Echo, the school journal, and often contributes verse to that journal and to Indianapolis daily papers.

JOHN H. TOOMER, A TYPICAL YOUNG COLORED MAN OF THE NEW SOUTH.

John H. Toomer is a representative young colored man of the State of Georgia. He is twenty-three years

of age, and shows much of the enterprise and ability that is coming more and more to characterize colored boys. His schooling was received between the ages of seven and fourteen. Leaving school, he entered the office of the Labor Union Recorder in Savannah, as printer's devil. In three years he was business manager. Beginning in 1895, he for one year published a paper of his own known as "The Youth's Enterprise." In 1896 he sold the paper to a

Macon company, which now publishes it. He was then made state agent of the International Migration Society, and during the year 1896 he sent two steamships full of emigrants to Liberia. In 1897 he enlisted in the revenue cutter service on board the U. S. S. Boutwell, remaining until the war with Spain began, when, with a number of his mates, he received orders to transfer from the Boutwell to the U. S. S. McLane, then doing blockade duty on the Cuban coast under Commodore Watson. He was at once appointed captain's orderly. After the war he returned home and became city reporter of the Savannah Evening Journal, this being the first time that a colored man was ever employed on the reportorial force of a newspaper published by whites in Savannah. In April, 1899, Mayor Myers, of Savannah, appointed Toomer superintendent of the colored cemetery. Resigning this in a short time, he was appointed messenger in the city's department of public works. He remains true to his first love, however; and in addition to his work as messenger, he manages the Monthly Advocate, a paper "devoted to the social, political and intellectual interests of the young people of the colored race. He is an orator of no mean ability, and, being small of stature, he has been dubbed by his acquaintances "The Kid Orator."

A THREE-YEAR-OLD-BOY RUNS AWAY WITH A LOCOMOTIVE ENGINE.

Little Charlie Evans, aged three, ran a locomotive twenty miles out into the country from Portland, Oregon, recently, all by himself. Charlie says that he ran the engine for fun, but it wasn't much fun for his father and hundreds of persons who witnessed the performance. No one was aboard the engine but the little three-year-old. Nothing was between him and a frightful accident, save the frail strength of his little arm resting upon the big quivering lever.

The engine was standing with steam up in the yard of the Fort Johns line. The engineer, Charlie's father, had gone to lunch. The yard was almost deserted. The only sound to be heard was the breathing of the giant iron horse. The little fellow toddled into the yard and concluded it was a good time for him to learn how to run an engine. He wasn't the least bit afraid of the big horse. It was papa's, and anything that papa had was all right. After many slips he succeeded in getting into the engine. Reaching out with both chubby hands he took hold of the lever just as he had seen his father do. Slowly the big monster moved out of the yard, the young engineer laughing in glee. People saw it moving, but nobody paid particular attention to it, thinking that the engineer was in the cab. Charlie had been gone ten minutes when the father came out to look for him. He found no Charlie and no engine. Instantly the truth flashed upon him. Hurried inquiry developed the fact that the engine had been gone for ten minutes. Then people began to look grave, for a runaway engine is a dangerous thing. Telegraph and telephone wires were immediately set to humming. Portsmouth was the first station beyond Portland. The men at the Portsmouth depot were telephoned and urged to stop the runaway, but that was easier said than done, and the big engine and its infant driver whirled by Portsmouth amid a waving of arms and shouting of voices. The boy was apparently enjoying his trip too well to stop the machine. He didn't know, of course, that the steam in the big horse was running down, and that gradually she was losing pace. Soon he struck an up-grade and ere long the little fellow was grasped in the arms of a strong man and the big horse was at a standstill. The little fellow wanted to know what was the matter and asked the man if he couldn't "fix it" so that he could keep on going. The man, of course, told him that he couldn't, and the little fellow was disappointed.

JOHN D. ROCKEFELLER, JR.

John D. Rockefeller, Jr., is the twenty-three year old son of the richest man in America, the head of the Standard Oil Co. He has already given evidence that he possesses much of his father's ability to make money. The young man is quite simple in his tastes and as different from the usual rich man's son as one could imagine. In this particular he is a "chip from the old block," for the senior Rockefeller is a man of plain and simple tastes. The editor remembers but a few years ago meeting Mr. Rockefeller on the platform of the little Sunday school in Cleveland. The millionaire superintendent of that Sunday school was as simple and quiet in his manners as if he were the poorest among them all. The son is a graduate of Brown University. He teaches a class in the Fifth Avenue Baptist Church Sunday School in New York city, as his father did at one time. He is of medium height, blue eyes, clean shaven, strongly built, and straightforward in manner and speech. He is fond of horseback riding, does not smoke nor drink. He was a hard student when at Brown, but not a recluse. He went in for football and skating, but cared nothing for lawn tennis or chess. He plays the violin, and in this respect he is not unlike other members of the family. In the Cleveland Sunday school to which we referred, the orchestra was made up largely from the Rockefeller family, Mrs. Rockefeller playing the piano and several of the daughters playing stringed instruments. About a year ago young Rockefeller was elected a director of the Delaware, Lackawanna & Western railroad. He is already well versed in the affairs of the Standard Oil Co., in whose office he has a desk, before which he sits and works as hard as does any clerk in the office.

Riches hurt most young men. Not so with this one.

DAVID STUART FULTON, A BOY WHO PREVENTED A RAILROAD COLLISION.

Some person unknown had opened the throttle of an engine as it stood in the Northern Central round-house at Shamokin, Pa., February 12. The engine shot out of the round-house and tore through the streets of the town. But for the timely action of David Stuart Fulton, a twenty-year-old boy, a frightful collision between the engine and the Lehigh Valley passenger train, near Excelsior, Pa., would have taken place.

DAVID S. FULTON.

The boy, who is a clerk in the train-master's office at the Northern Central and Lehigh Station, saw the runaway as it approached the station, and quickly running to the edge of platform he waited until the locomotive was abreast of it, when he jumped and landed on the tender. Then recovering himself he crawled into the cab and brought the engine to a standstill.

Young Fulton started to work for the Pennsylvania Railroad Company as messenger boy in the superintendent's office. He has been promoted several times, and by this act has earned further promotion.

A BRAVE LAD.

They were playing tag on the barge Seth Low at the foot of Broad and South streets, New York City. There were about a dozen of them, all boys varying in ages from nine to fourteen years, and they were having a merry time.

"Say, fellows," shouted Charley Tague, who is nine years old, and who lives at No. 23 Coenties slip, "let's all jump from the barge to the dock. I'll do it first; it's easy."

He jumped, but fell into the river. It was here that the heroism of his companions asserted itself.

Tague had hurt himself in his fall and was unable to swim. James Dolling saw this. He is only twelve years old and lives at No. 38 Front street. He tied a rope around himself. "I'm goin' to jump into the river after Charley," he said, "and I want you fellows to pull us up when I say the word."

So Dolling jumped into the water and in a few moments he had the almost drowned boy in his arms. "Now, boys, pull for your life!" he cried.

Among those who pulled were Joseph Harrison, thirteen years old, of No. 71 Reade street; William Doran, aged twelve, of No. 107 Broad street, and Michael Rielly, whose father is captain of the Seth Low. They pulled with a will and landed the two boys in safety. The little Tague boy was hurried to his home, where he was resting comfortably last night, out of all danger.

It was only after he had taken the Tague boy home that Dolling thought of his own wet condition. When he entered his home his mother was at first inclined to scold him, but when she heard what he had done she took him in her arms and kissed him.

GOUNOD ROMANDY, A SIX-YEAR-OLD VIOLINIST.

On the return of Battery D, Los Angeles Volunteers, from the Philippines, recently, the committee having in charge the celebration in honor of the boys, received from Gounod Romandy a note which read as follows: "I am Dion Romandy's little son Gounod. My father played at the Orpheum, and if he was alive I know he would play for the returning soldiers. I am only six years old, but would like to play for the Soldiers' fund. I will try my best. Will you be kind enough to let me take part? Gounod Romandy." He did take part, and the audience was thrilled to see a tiny child, with hair long and silky—an almost pathetic little figure—standing on the chair of the orchestra conductor and drawing from a violin most beautiful music.

When Gounod Romandy was a year old he showed a passion for music. His father bought a small violin for him. The boy at once dropped all his other toys for this new and greatly beloved one. He insisted on taking lessons from his father, and up to the day of the elder Romandy's death the little fellow was his pupil. Gounod has an artist's temperament. He is dreamy, sensitive and poetic. His eyes are deep and are expressive of that which is far beyond the years of the ordinary boy of six. He is exceedingly reserved. His grief over his father's death is touching. Every week he goes to his father's grave with a violin case full of flowers. One day his mother missed him and a search was instituted. He was found at his father's grave, lying by the side of the mound weeping with all the bitterness that babies are not presumed to feel.

A BOY COMPOSER.

The editor of THE AMERICAN BOY has received from Howard Van Sinderen Tracy, a 12-year-old boy of Evanston, Ill., a piece of piano music of his own composition. He says it is his first musical production. It is entitled "Vulvis et Umbra," translated, "Light and Shadow." Musicians who have seen the composition consider it something remarkable. The boy's little sister at the age of nine won a prize offered by the New York Herald for best pen and ink sketch.

HOWARD VAN SINDEREN TRACY.

From boys and girls who give such great indication of talent much may be expected in the future. Perhaps we can obtain from our young friend, the composer, a sample of his work for some future issue of THE AMERICAN BOY.

A BOY WITH A SWEET VOICE.

Grover Anderson, a fourteen-year-old boy of Goshen, Ind., was one day singing in an alley in the rear of the Goshen Opera House. A member of a company playing "The Heart of Maryland" in the opera house at the time, was attracted by the voice, called the boy into the building and asked him to sing. The manager of the company visited the mother of the boy and offered to give him a musical education. She at first refused, but some weeks afterwards, when urged by letter, consented. The boy will go to New York and receive instruction from a master.

A YOUNG NEGRO COMPOSER.

Samuel Coleridge-Taylor, a gifted negro composer, who was born at London, England, twenty-five years ago, has been making a profound impression recently through the performance of his aria entitled "Onaway! Awake Beloved!" from "Hilawatha's Wedding Feast." The qualities shown in the work of this young man are positive evidence that he is to take rank with some of the leaders in musical composition. He is the son of a negro doctor who left Sierra Leone, on the western coast of Africa, more than twenty-five years ago, for England, to pursue studies in medicine. The son of the physician exhibited pronounced musical tendencies at an early age, beginning to play the violin at six. Ten years ago the beneficence of a friend made it possible for the young man to enter the Royal College of Music in England as a student of the violin. Later he was made a professor of violin playing in the Croydon Conservatory of Music, and took the conductorship of the string orchestra in that institution. He won a composition scholarship at the College in 1893; then worked unceasingly for the next four years under the guidance of Professor Stanford, a composer of international reputation. Since that time he has made steady and rapid strides forward. He has been heard recently in this country at concerts of the Chicago Orchestra.

WILFRED YOUNG.

"Success" gives a short account of a New York school-boy, Wilfred Young, a bright little singer who about a year ago made an engagement at fifty dollars a week to sing in one of the Metropolitan theaters, and who afterwards went to Paris to take lessons under one of the best violin instructors of Europe. The boy is sixteen years of age and has the gift of a singularly clear and beautiful voice. His voice was discovered when he first sang in a surpliced choir. He went on the concert stage at the age of fourteen, and now aspires to be a great dramatic singer. His great ambition is, he says, to be rich enough to buy for his parents a country seat somewhere near New York and get for himself an automobile.

ORRIS BENSON.

ORRIS BENSON.

Orris Benson, a pupil in the New York Institution for the Instruction of the Deaf and Dumb, lost both sight and hearing when a child three years old, from spinal meningitis. Since the fall of 1889 he has been in the New York Institution for the Instruction of the Deaf and Dumb. He was at first placed in the Male Kindergarten at the Mauston House.

At the time of admission the boy had no remembrance of the general appearance of persons and things, but had

a somewhat indistinct idea of black and white. The first word he learned to speak by means of a manual alphabet was "key." Then, little by little, step by step, he learned the names of other common objects. In the same slow, tedious way he was later taught the elements of speech. He was not required to do much at any one time. Soon he could understand easy conversation and compose a few simple sentences. After being transferred to the main building of the institution he was taught to converse by speech.

The boy shows great fondness for history. Heroic exploits of the makers of the nation arouse him to such an extent that he has several times expressed regret that he could not be a soldier. He also enjoys studying geography, with the help of raised maps. He has been studying arithmetic lately, but has not yet advanced far in this branch.

Orris Benson has become an expert modeler in clay, and the most clever thing he has done is Grant's tomb in miniature. His eyes have not seen the tomb, and he has not more than touched its massive columns, yet he has faithfully copied it. He has not even heard a description of it, but has seen it through the eyes of one of his fellows, who has been told, by fingers as clever as his own, how the beautiful structure looks and how the various details of its architecture are arranged. This is really a wonderful thing, when it is considered that the boy knows absolutely nothing about the appearance of the building except such information as is conveyed to him through the sense of touch. Orris is also an expert typewriter and is quite proud of the accomplishment.

At home, during vacations, he assists his father, who is a carpenter. Last summer he helped a friend during the haying season, and was quite elated when called upon to pitch hay. In the Trade School of the New York Institution he learned to cane chairs, and in this and various other ways he manages to earn his spending money during the long summer vacation. When alone, he thinks and plans and tries to invent something useful. His chief aim in life is to fit himself to earn a comfortable living when his school-days are over and the battle of life is begun.

A BOY GETS THIRTY THOUSAND DOLLARS DAMAGES.

Henry Walters, a nine-year-old boy, was awarded \$30,000 damages by a jury in the court of Judge Holcomb, in Chicago, a few days ago, the defendant being the city of Chicago. The little fellow was rendered helpless for life by an injury sustained in falling through a hole in the viaduct at thirty-fifth street. This is said to be the largest verdict ever given against the city of Chicago in a suit for personal injuries.

Charles Hardwick, a fourteen-year-old Peru (Ind.) boy, rescued his mother and three sisters from their burning home the morning of Feb. 27. When he found the house on fire he jumped from the second story window. Remembering his mother and sisters were still in the house, he fought his way through the flames and succeeded in alarming them and getting them out before the roof fell.

WILLIAM LABARON BELL.

AUBREY STRANSON NASH.

HAROLD YALE.

PEZANT BAGDASARIAN.

The Choir Boys of Grace Church and Their School

VINCENT VAN MARTER BEEDE.

A famous place of worship in this country is Grace Episcopal Church, in New York City, and at Grace Church is one of the few American choristers' schools patterned on those of the English cathedrals. To some people Grace Church seems a little out of place; for nestling against it is a famous restaurant and bakery, and it is hemmed in by shops and great department stores. The endless rumble of a great city beats against its gray walls. Buzzing and clanging cable-cars add to the din. But set your foot inside the threshold of those carved doors, open all day and every day, and you are in a quiet world, miles and miles away from busy Broadway—although you are within a few feet of it! You may be tired when you first sit close against that stone pillar; when you go out of the doors you are stronger and better.

Riding up Broadway on the cable-car, and still blocks and blocks away from the church, you can see, on a bright day, the tapering gray spire and the golden cross. If the wind is in your direction, and you are in an open car, may be you can catch the notes of Grace chimes. I don't know how many people, men, women and children, rich and poor, stand still to listen when those rich notes soar above the din of the street. Grace chimes pay no attention to the nervous cable gongs. "Let them bang," they seem to say; "they are doing their best to keep folks from being run over; and we're trying to make people happier. We all have our use."

One day the choir-master of Grace Church asked me if I wanted to see where nine of his boys ate and slept and played games. He called a curly-headed little chap, his choicest solo boy, and said to him, "George, take good care of my friend, and show him everything."

This boy was dressed in a dark blue military suit trimmed with white braid. His shoulder-straps ranked him as captain, if I remember. He was a well-mannered, merry fellow, and we got on nicely together.

We passed through a dingy door and up a dark staircase; and now there was an end to dinginess and darkness.

"This is rather an old house," said George, by way of apology, "but we boys are glad to be together. We used to live in different places. Isn't this a bully room, though?"

I agreed with him. In the dining and living rooms at the front of the second story two boys were playing crokinole, and the game was so exciting that they did not notice that we were in the room. One of the boys, the little brother of George, would have made a good Cupid. He had a great shock of curly hair which George said was "so handy because Chester doesn't have to comb it often." On this floor and the one above it were eight little rooms into each of which my guide insisted on piloting me. He was obeying the choir-master's orders like the good little soldier that he was.

"This is Geordie's room," said he. "He likes red so much that the House Mother has given him a red carpet and table spread. They're pretty nice; but green's my favorite color. Geordie's a nice boy. Do you know him? His mother and father died and now the church takes care of him. I'm sorry most of the boys are away this afternoon."

"You fellows like books," I remarked, "I've seen a good many in every room, so far."

"Oh, yes, we read whenever we get a chance. Henty's our favorite; and don't you think 'At the Back of the North Wind' is great? This is Baggy's room we're in; Baggy's short for Bagdasarian. See that set of histories? He got the books for Christmas from the choir-master."

In the next room we found a sick boy; for choir boys are sick once in a while, although they take more pains to keep well than do most boys. The sick child was the brother of Baggy. Baggy and his brother are

Armenians. George—Baggy—has an unusually sweet voice and often sings solos.

The choir boys' house is intended principally for out-of-town members, of whom there are a number. Until six years ago Grace Church had never known a boy choir, a quartette of grown persons supplying the music. The vestry was afraid of boys. "The little rascals are too hard to control," they said, "and their voices don't amount to much." How mistaken we sometimes are! Nowadays, people travel many miles to hear these boys sing; and if you hear them, you will not wonder. Mr. James M. Helfenstein, a young man and a graduate of Columbia University, was organist and choir-master at All Souls'. He persuaded the vestry of Grace Church to allow him to train a boy choir, and after that first service in which the youngsters took part, the vestry said, "The boy choir has come to stay."

A boy passing examination for Grace Church choir must be 11—manly, truthful, neat about his clothes, fond of a cold bath, not a bit fresh, a hater of cigarettes, and, of course, the owner of a voice that can be trained into a thing of beauty. Candidates from outside the city are advertised for in church papers. Nine years is a good entrance age. Last year four boys were chosen in this way, one coming from Steubenville, O., another from Cambridge, Mass., a third from Elizabeth, N. J., a fourth from Ashland, Pa. These boys, in return for their singing, are given by the church a home, food, clothes, and such schooling as you have in a private school, besides the thorough musical training which the choir-master provides. By means of written agreements drawn up between parents and vestry, the boys are dedicated to the services of the church until their voices "break" It is a noble occupation for any boy—this singing to the glory of God in one of His churches. I wonder if the little fellows in choirs this country over realize how much comfort they are giving to others by their singing?

The Grace Church boys lead a busy life, with about one-quarter the time for "sport" each day, that boys usually have. Yet they are as happy a lot as you can find. The Tower School-Room, at the rear of the church, is an attractive little place, as you can see by the picture. Here the boys work hard at the usual studies for boys of their age. They are taught by one

of the rector's assistants, the House Mother, and others. While this school hardly fits a boy for college, because the treble voice rarely lasts up to the sixteenth year, it does all but that; and a Hobart College Scholarship awaits the painstaking lad.

The little choristers are organized into a military company and are drilled twice a week at the armory of the Sixty-ninth Regiment. Honor boys—in study, drill, and conduct—are made officers and wear swords. I once met the company as they were stepping along steadily on crowded Broadway, with guns at "carry." Every one made room for the boys, who took notice of neither laughs nor stares. They were a pretty sight. The bobbing golden hair of the one little chap seemed to catch all the stray sunshine there was on the crowded thoroughfare.

Grace Church boys are not prigs. They know that a solo voice, though it may be naturally of fine quality, must be constantly trained to keep it in proper condition. They are certain that it doesn't do to catch cold; and they don't keep on wet shoes, nor get overheated and then cool off suddenly. The most promising voices have private training from the choir-master each day. So what with secular studies, vocal practice, general rehearsals, and military drill, no wonder the solo boys have little time for base ball. Nevertheless, one of the boys finds time to practice on the violin.

There are three, four, and sometimes five general rehearsals a week, the afternoon rehearsals taking place in the choir-room, and final practice taking place in the chancel. At this time the seven boy altos—these are big boys—the five tenors, and the five basses join with trebles, the harp and the organ. Miss Maud Morgan is the harpist. On Sunday the choir boy offers the results of his careful

training to the ears of a congregation which knows and must have the best and the best rendered church music. There are three regular Sunday services, for each of which must be provided difficult music.

The boys sing at weddings and funerals and occasionally at secular concerts. For this latter work, however, they have little time. I heard seven of them sing at the Waldorf-Astoria, New York, and at a benefit concert in Elizabeth, N. J., these same boys supplied five songs in chorus and four solos. Think of a boy of fourteen singing with perfect ease selections from oratorios like "Elijah" and "The Messiah!"

"Do the boys appreciate what they are singing?" I once asked a choirmaster.

"Indeed, yes," he answered. "The other day I gave my solo boy a Christmas carol to sing. Before service I showed him some pictures of the Madonna, explaining to him, as best I could, something of what the words meant. I accompanied that boy on the organ, with tears in my eyes. He sang wonderfully well."

To the Grace Church boys the spring is a joyous

season, for it is at this time that the trip to West Point is taken and a visit made to the home of William Rhineland Stewart, in Tuxedo. Two years ago the boys gave a concert in Washington, D. C., going and coming in a private car. In June, Prize Day comes off, when there is recognition of scholarship and good conduct in the chorister's school. Earlier in the month the final military review takes place. Though the prizes awarded on these occasions are eagerly striven for, a name engraved on the honor roll of the south transept door is the dearest laurel.

The boys see so much of each other that they come into a chummy good fellowship. The discipline and thorough musical training smooths out many wrinkles in a boy's character. If you are a chancel choir boy that fact alone proclaims that you have a voice and are trying to use it to the best advantage. It means that you are an honest worker in the world, paid fairly for your services. If you have a better voice than Clement or Harold, you will be paid more than they receive. If their voices develop as yours has de-

veloped, they also will be paid a high price. The choir is a miniature school of life—and a healthy one. Singing is good for weak throats, weak lungs, weak characters.

Indeed, some churches pay a solo boy as high as six hundred dollars a year; but, quite naturally, boys supported by a church do not receive any such sum, although a boy coming into Grace Church choir when he is young may have from five hundred dollars to one thousand dollars in the bank at the end of his service. The pay of the average chorus boy is two dollars a month.

Have you read Mrs. Ewing's "Story of a Short Life?" Please do so if you haven't. And when you come to New York be sure to hear the Grace Church boys sing "the tug-of-war" hymn which the little boy Leonard, who lived that heroic short life, loved so well:

"The Son of God goes forth to war,
A kingly crown to gain,
His blood-red banner streams afar:
Who follow in His train?"

Birthplaces of Hawthorne and Whittier

FOURTH AND FIFTH OF A SERIES, "NOTABLE AMERICAN HOUSES," BY W. J. ROE.

HAWTHORNE'S BIRTHPLACE.

Hawthorne was born in a modest wooden house on a secluded street of Salem, Massachusetts. He was the chronicler of the romance of his own town, and of a time in its history long antedating his own—of Salem, the city of witchcraft and witches, of frocked fanaticism and Puritan diablerie, of the ghastly mania that—worse than plague or pestilence—ran its evil course towards fatal Gallows Hill. Chronicler also of two of the more modern, better periods, of the placid port, the sea-shore and sea-faring men whose occupation has in the main slipped away.

Hawthorne was one of those men of letters, perhaps most distinguished of them all, who, crossing the Atlantic, laid down their charming works for the entertainment, and, truth to tell, no little astonishment of our kin across the sea.

Hawthorne dignified American literature. He was one of those pioneers who civilized the wilderness of the commonplace in our fiction.

Apart from his fame as an author, beyond even the renown of his "Scarlet Letter" and "House of Seven Gables," above the plaudits of the public for his public work, I hold Hawthorne's private bequests to posterity to have been more largely meritorious. Surely his must have been a noble, as well as a highly gifted character, which was so fitly framed as to leave

NATHANIEL HAWTHORNE. JOHN GREENLEAF WHITTIER.

hostages to memory in his honored children. Who will not understand all I mean that has seen the lovely if lowly ministrations of his daughter among the poor, oppressed with the most horrible of afflictions of the body—the poor of the awful East Side of the City of New York? Who will not honor the father for the work of Rose Hawthorne Lathrop?

WHITTIER'S BIRTHPLACE.

Seldom has a wiser epigram been uttered than that which tells us—"Let me make the songs of a people and I care not who makes the laws."

The songs are the expression of a nation's higher emotions, of its feeling, its dominant sentiment, while law, after all, is only this sentiment reduced to the form of statutes and constitutions.

It is because he was a singer of a great moral truth that John Greenleaf Whittier achieved fame and was a potent influence in his country's history. He sang the song of equality under the law, of the soul colored in common for all humanity, beneath the pallid face or the dusky, of the rights of those who wore the "livery of the burnished sun," of the free hand and the broken chain.

While the ultra-abolitionists of the north forty years ago raged and stormed, Whittier (more ultra

than them all), yet pleaded in charitable rhythm for a peaceful solution of that vexed question of slavery, bequeathed to the Union by the greed and passions of our forefathers. He remembered what they ignored, that at the first, all the statesmen of the south looked hopefully to the future for a deliverance from the incubus of chattel servitude. He knew, as they seemed not to know, how inherent in the heart of the race, and especially of that branch of the race which we call—not altogether properly—the Anglo-Saxon, was the strenuous respect for precedent, and protest against coercion. Whittier sang the song of peace and good will to men, of a vast charity and the largest philanthropy.

So he will be remembered when greater poets will have sunk into oblivion. In fact, he was not a great poet at all, except as the earnest heart and the true thought are always great.

Whittier was born in an old-fashioned, clap-boarded farm-house, not far from the banks of the winding Merrimack in Massachusetts, a locality immortalized in that charming pastoral, "Snow Bound." Differing in nothing from the multitudes of New England farmsteads, surrounded by the usual retinue of barns and sheds and outbuildings, this home of the sedate and serious Quaker family, nurtured the man in all the arduous and homely ways which have done so much to rear men whose influence has been felt far and deep in all our political life.

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member. All correspondence for this department should be sent to Mr. Harlan E. Ballard, Pittsfield, Mass. Long articles cannot be used. THE AGASSIZ ASSOCIATION welcomes members

of all ages, and any one who is interested in any form of natural science is invited. Established in 1876. Incorporated in 1892. Short notes of personal observation are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.

Agassiz Association.
MOSESSES.

What good will the Agassiz Association do me?

A fair question, but a large one, and best answered in pieces. Besides the ordinary local clubs or branches already described, the Association has several "Corresponding Chapters." These are of special advantage to those who live apart from the large towns. Each Corresponding Chapter devotes itself to one branch of natural science. One Chapter studies birds, another minerals, another insects, and so on. One such Chapter may illustrate all.

The Sullivant Moss Chapter, has its headquarters in Brooklyn, N. Y., where the secretary, Mrs. Annie Morrill Smith, lives at 78 Orange street. Now, if any boy or girl, or grown person for that matter, is interested in mosses, he cannot do better than to join this live and growing branch of the A. A.

Mrs. Smith writes, under date of March 13, 1900: "I will recommend THE AMERICAN BOY to all whom I think it will interest. I have already gotten several subscriptions for it among the families of those interested in our Moss Chapter. I feel quite sure that you have not a Chapter more thoroughly alive and at work than ours, No. 284. We have a membership of fifty. We never lose sight of the beginner. During the year letters have been exchanged with almost every member, starting beginners with named sets of mosses and instructions for study, and identifying mosses for those interested in field work."

We speak of this "Moss Chapter" now to show that the Agassiz Association is ready to help scattered students even in the study of somewhat unusual subjects.

QUAIL AND DEER IN A CITY.

Much interest has been aroused by the article on "Wild Creatures in the City," published in our issue for March.

A wide-awake Detroit boy writes: "Having received the March number of THE AMERICAN BOY, I shall be a constant reader of it hereafter. Every boy should read this paper as it gives boys new ideas and helps them to succeed in whatever they undertake. Speaking of wild creatures in cities, I was returning from school with a friend, when, to our astonishment, we heard quail calling in a park in a densely populated portion of Lansing, Mich. We began to whistle quail-fashion, and soon the birds came nearer and nearer until there were five or six of them in the trees and on the ground about us. We could study them quite closely. Another similar instance occurred several years ago in Battle Creek, Mich. Kindly use only my initials, D. L. M."

The next letter is from Elgin, Ill.:

"Having seen the article, 'Wild Creatures in the City,' inviting boys to tell of any instances within their own knowledge, I will tell of a stray deer that passed through Elgin, Ill. It was a warm February morning, about eight o'clock, when suddenly a deer was seen leisurely wandering through the yard of a friend of mine, just east of Lord's Park. My friend snatched his hat and was after it in a minute. Other boys and the park custodian joined the pursuit. They tried in vain to drive it into

the open gate of the newly constructed deer-yard. The deer then followed Willow Creek for a mile. It then went north over corn-stubble fields and pastures, clearing barbed wire fences with graceful leaps fifteen or twenty feet long. At this point two farm dogs gave chase to the pretty creature, which changed its

course to the northeast, only to be shot at by a boy with a rifle. The 'ping' of the bullet frightened it, so that it gained greatly on the dogs, escaping them only to be killed by a hunter in the woods adjoining Trout Park." Ernest L. Olson.

"UP AND DOING."

The old phrase, "Up and Doing," seldom finds more literal fitness than in the case of that bright American lady, Miss Klumpke, who has added new laurels to her fame by her recent success in observing the Leonids or "shooting-stars" for the Paris Observatory. The city was enveloped in fog, and the French astronomers were discouraged, but Miss Klumpke "rose to the occasion" in a balloon. She had a little tray suspended around her neck and lighted with an electric jet. On this tray were the blank charts on which to sketch her observations. With her aeronauts and a secretary she started from St. Denis, a little after midnight, rose through and above the curtain of cloud, and made a successful series of observations which proved of interest and value.

A NEW A. A. BADGE.

In response to hundreds of requests for an inexpensive badge, we have had a new Agassiz button designed and manufactured, as shown above. It reproduces a favorite photograph of Professor Louis Agassiz, surrounded by the legend, Agassiz Association, in the Swiss colors, red and white; while below it, is a representation of the Swiss Cross, which has for years been adopted as our emblem. To members of the Agassiz Association, these beautiful badges will be sent, postpaid, for five cents each. To any boy or girl not now a member, who will send us one record of an interesting personal observation in any branch of natural science, accompanied by a sketch or photograph, we will send, free of charge, a card of membership in the Association, and a badge. To Chapters of the Association the badges will be furnished for fifty cents a dozen.

Spring Notes.

BY AN AMERICAN BOY OF EIGHT YEARS.

- April 29. Attacus cecropia came from its cocoon, in the school-room.
- May 1. Lily of the valley leaves noticed.
- May 3. Strawberry blossoms seen.
- May 5. White clover blossoms out. A tree-toad noticed. Forsythia in blossom.
- May 6. Pansies in blossom out of doors. Cherry blossoms out. Lily of the valley in bud. Dandelions are out. Wild violets in blossom. Baltimore oriole seen and heard. Red and white tulips seen.
- May 7. White butterflies seen.

H. H.

What Boys See in California.

Napa, Cal., Jan. 10, 1900.

Napa Chapter A. A. has one more active member. In one of our trips on the river we found an island covered with low bushes, the breathing place of thousands of small birds, chiefly the American and Lawrence's gold-finch, the Purple-finch, and the Song sparrow. I

send you a photograph of one of the largest fan palms in California.

GEORGE M. HERRON,
Secretary.

Dyed Food for Birds.

Dr. Sauermann, an Austrian, has obtained curious results in coloration by feeding birds on food dyed with aniline. Pigeons became of a beautiful red. Other birds turned a fine blue with methyl violet. Canaries very soon bred with the rainbow. The experiments promise to have important results in this direction. The English sparrow by a little art in his nourishment might emulate the humming bird. Whether this would be to his advantage is another question. We are afraid that fashion might cast envious eyes upon him and cause him to regret his sober livery.

A. A. Notes.

Manhattan Chapter No. 87, New York, B., sends a finely printed annual report, showing, besides regular meetings, four field excursions, five new members, and one hundred and ten dollars and thirty two cents in the treasury. Christian F. Groth, 141 East Fortieth street, secretary.

Chapter 883, North Weare, N. H., set two pairs of English pheasants free in the woods at Amesbury, Mass., but the winter proved too severe for them. The bird is nearly as large as a partridge, a rich golden brown on the breast, with a changeful metallic lustre, the crown of a glossy green. Mrs. Lucy P. Osborne, secretary.

Chapter 286, Portage, Wis., has reorganized with twelve members, after being disbanded two years. Charlotte Epstein, secretary.

Chapter 824, Fall River, Mass. Mr. J. B. Richards, who, about 15 years ago, was the boy president of Chapter 824, has organized a new Chapter in Fall River in connection with the Boys' Club, and has secured the old number 824. The Boys' Club has a large building in the city and also a farm out in the country. Two of the gentlemen interested in the new Chapter, besides Mr. Richards, were also members of the former Chapter years ago. One of them is now the principal of a grammar school and an expert in entomology and geology; the other is an authority on local ornithology. Mr. Lynward French, a fourth member of the old Chapter, died on board the U. S. Steamer Prairie, during the late war. Address of the Secretary, Box 332. Nothing gives us greater pleasure than thus to welcome back our old boys as leaders of the younger set now growing up.

Reports of the Sixth Century, Chapters 501-600, should reach the President by June 1.

Typical Chapter Report.

We do not propose to print the annual reports of our Chapters as a rule, but as a general guide to new Chapters, and for its intrinsic interest, we give the following account of the doings of Chapter 176, of Detroit, Mich.—(Ed.)

March 12, 1900.

The first year of our club as a Chapter of the Agassiz Association is nearing its close. From January to June, 1899, we took up a course in botany under the supervision of Mr. W. S. Cooper.

Two botanical gardens were started, both in Elmwood Cemetery. One is near a stream for aquatic plants, and the other is a large shrub bed. Only wild flowers are planted.

In May the Chapter held its annual field meeting at Grosse Pointe, 10 miles from the city. Among the plants found was a rare orchid, also large ferns, Jack-in-the-Pulpits, and blue and white violets. The day was a beautiful one and the club members had a very enjoyable time, roaming over fields and forests in search of curious and uncommon specimens of plant life. At noon we gathered around a fallen tree and ate our dinner with a zest, not known in more conventional circles. Other trips were made during the season, to Belle Isle, and Pontiac, the latter twenty-six miles away.

A camp was formed in the early part of July, on an island in a small inland lake at Waterford, thirty-four miles from Detroit. It was called "Camp Minerva," and for three weeks the members lived a wild life. Two species of orchids were found, and butterflies were captured and classified.

The past winter the members have studied mineralogy and ornithology.

The Club meets every Friday evening at the home of Rev. D. M. Cooper, 1015 Jefferson avenue, where we have our room. In the club room is a library of some fifteen volumes, and several magazines. We have two cases of collections and a cabinet. One case is devoted to mineralogy, the other to butterflies, insects, etc., while in the cabinet aquatic specimens are kept. On the walls are fifteen colored pictures of animals, minerals, etc. We have two pairs of deer's antlers as ornaments. Of course the charter is to be seen.

The Chapter now has ten members, the last being admitted in December, 1899.

Respectfully yours,
RALPH W. GRESELL,
Secretary.

Mixed Family.

Mother Quail Raising Two Chicks With Her Brood.

Shelbyville, Ind., Aug. 18, 1898.—"Arno Haehl, a farmer near here, while plowing in a stubble field frightened up an old quail, the bird running along in front of his team, making a noise as if in deep distress. After a few minutes search Mr. Haehl found a mixed brood, consisting of two little chickens and three quails. The chicks were just at the age where the feathers begin to show on the tips of the wings. The brood was replaced, and Mr. Haehl continued his work, seeing the old bird and her peculiar family every day until the plowing was completed. Mr. Haehl says the quail was as attentive to the chicks as she was to the quails. Mr. Haehl is of the opinion that a brown Leghorn hen laid the two eggs in the nest of the quail, and that they were hatched out during the warm days of the summer."

The above was clipped from a local paper. A similar incident came under my own personal observation. August 26, 1898, one of my brothers found two young chickens that had been hatched by a quail. They were found near a quail's nest in a raspberry patch. The shells of the chicken eggs were still in the quail's nest together with ten quail eggs. One of these eggs was accidentally broken in removing the chicken egg-shells, and in it was found a young quail so nearly hatched as to show signs of life. To the regret of the discoverers, the shy mother-bird abandoned the nest, and her natural brood was not hatched. The two chickens were given to a foster mother of their own species. One of the waifs died a few days later; the other was living the last time I inquired about it.—J. E. Walter, Secretary A. A. Chapter 834, Peru, Ind.

Boys as Money-Makers and Money-Savers

Helping Boys to Save.

EDWIN N. NORTHROP

I consider the savings bank one of the best features of boys' club work. It is a practical businesslike way of inculcating lessons in thrift and economy. The bank once successfully introduced advertises itself. Boys are persuaded to become depositors because they see the bank books owned by their companions and are anxious to possess one themselves. To own a bank account, even if the deposits are counted by pennies, means much to the average boy. Then the growing amounts, the rapid way that pennies increase, is often a genuine surprise to boys who little realized that the few pennies spent here and there for candy and cigarettes soon amounted to dollars.

It is really a study to watch the faces of boys as they line up awaiting their turns to deposit their small savings. Some give the cashier their money as if loath to part with it and half fearful that they will never see it again. Others advance with all the pride and confidence of a Vanderbilt, depositing their nickels and dimes as though they were the proud owners of a fortune. No millionaire ever counted over his riches with more satisfaction than some youngsters display as they show their first dollar saved. I have always encouraged in my club the idea of saving for some definite object—a pair of shoes, an overcoat, a suit of clothes, even a bicycle—anything a boy can look forward to buying with his own money. Boys, even the poorer ones, frequently have more money than at first seems possible. Nearly every street boy picks up a good many pennies selling papers, blacking shoes or running errands. If he is at all ambitious the sum may amount to considerable. A good many carry most of their earnings home, but nearly every one has something for himself, and this is where, if they begin the habit of saving, the little amounts they soon appreciate the value of even a penny.

There is another class of depositors in our bank, boys who have steady employment and make it a business to save some definite sum weekly—some five cents, some ten, others as high as fifty cents or a dollar. I had one boy in Meriden, Conn., who saved two hundred and fifty dollars in about four years. That was the largest accumulated sum I have ever handled for one boy. I have one boy now who has saved the small sums in our bank, then transferring to the regular savings bank, until now he has nearly one hundred dollars saved. He is eighteen years old. Another boy has over sixty dollars now on deposit. It will help a boy long after he is too old to attend the club, if he forms a habit of saving when young. It means much. When every penny is spent just as soon as it comes into one's possession, it is simply wasted. No one derives any benefit from it. It is a good plan to require depositors to give one week's notice before drawing out their money. This may seem a little hard at first, but it prevents a boy from drawing out his money on the spur of the moment in order to buy something he thinks he wants. Many times boys give notice and before the week is up change their minds and keep their money in the bank, concluding that they can get along without it. When withdrawing money, boys should sign a receipt, even if only for one cent. It teaches business methods and prevents any misunderstanding. For instance, some time ago a boy lost his bank book; he had money on deposit and wanted to draw it out. He received the money and signed a receipt for the same. Some time later his mother found the missing book and sent for the money. Of course there was no money on deposit and the boy's signature was the convincing proof that the money had been drawn. By the way, never pay the money out to the parents of boys without the depositor's signature or verbal consent. In the Worcester Boys' Club Bank the boy's consent to have his money withdrawn is absolutely necessary. This is to prevent the

parents getting money unbeknown to their sons, and inspires the confidence of youngsters who otherwise would be afraid to put their money into the club banks. I have had fathers, and mothers too, come asking for money their boys had saved, not wanting the boys to know anything about it. Legally perhaps the fathers have a right to the money, but they do not get it from our bank without the depositor's consent.

Many interesting experiences come to us in connection with this work, some amusing, some pathetic. One boy, after diligent saving for several years, accumulated over thirty dollars, the foundation, as he earnestly hoped, of a future fortune. His parents encouraged his thrift, and from personal observation, I believed the boy would succeed in saving and keeping the money that came into his possession. After a time, however, some of the family were sick, then the father was out of work, and little by little the money was drawn out to pay for family necessities, until it was all gone. I felt sorry for the lad, but he took it very well indeed, and was only too glad that he had the money saved so that he could help his parents in their time of need. One boy of seventeen saved twenty-five dollars and then gave notice he wanted to draw it out. We were anxious to know what he wanted it for, but he did not wish to tell, and I was afraid he intended to spend the money foolishly. Judge of my surprise and gratification when I learned later that the money had been used to buy comfortable winter clothing for two younger brothers. One very cold winter evening a young man, probably eighteen years old, came into the club and asked for eight cents he had deposited two years before. In urging him to let the amount remain and add to it, we discovered that he was actually suffering with hunger. Without a home, out of work, without money or food, he had remembered the few pennies deposited in the Boys' Club Bank and came for it with the idea that it would buy enough bread to satisfy his hunger. Among the very poor you will find a generosity and self-sacrifice scarcely to be equalled anywhere. After saving a few dollars for some cherished object, boys frequently draw out their money for rent, food or coal, things it would seem that they would feel no responsibility about. But these little men learn very early in life the meaning of anxiety and care, and frequently share in the burdens and perplexities borne by their parents; often, too, suffering from the cruelty and neglect of those from whom they should receive only care and kindness.

Every club should have a banking system, banking hours, neat bank books with good strong envelopes, a complete set of books, i. e., a day book and ledger, that all accounts may be accurately, easily and systematically kept. This means business, for every penny deposit requires as much work as though the pennies were dollars, but the work pays. How much better to teach a boy that if he saves his money he can buy a neat suit of clothes for himself than it would be to give him one! How much better for a boy to learn that one cent saved at a time soon makes 100 cents and 100 cents make \$1, than to let him spend the pennies foolishly, as is often the case! Get the fact thoroughly instilled into the mind of a youngster and instead of becoming a spendthrift, a vagabond or a pauper, he will eventually show you that through the influence of a careful saving habit he has added many comforts and improvements to his circumstances, becoming perhaps a man of intelligence, wealth and respectability.

The Poor Boy's Chances.

"The poor boy's chances today are as good as they ever were, and the sickening doctrine of the pessimist that bewails the lack of opportunity today should never find a responsive echo in the breast of any American boy with a strong arm and a level head."—James Oliver.

Made Money Catching Lobsters.

L. M. Robinson, Providence, R. I., writes THE AMERICAN BOY that he has noticed in the story of "The Boy Traveler," how the boy made his first money selling vegetables. He says: "As I live in the country, I cannot make money that way. We go to the seashore every summer, so last summer I thought that I would try to make some money by catching lobsters. I bought nine traps and set them about a quarter of a mile apart. I soon found that I caught more in some traps than in others, so I took up the ones in which I didn't catch any and set them near the ones in which I did catch some. I had good luck and caught from three to seven a day. I then went around to the homes of the people who lived near the shore and easily found sale for my 'catches.' I sold them at twelve cents a pound; and as a fair sized lobster weighs from one and one-half to two and one-half pounds, I got from fifteen to thirty cents apiece for them. In this way I paid for my traps and made a profit of fifteen dollars in the season."

Made Money by Selling Beetles.

It may interest American boys to know that two boys paid their way through college by selling a rare kind of Tiger Beetle. It seems that beetles of this species are very rare; and at the time of which we write, the spring of 1878, a single specimen sold at twenty-five dollars. There was a great demand for them on the part of scientists and museums. Professor Snow, of the Kansas University, Lawrence, Kas., told two of his students that he believed these beetles could be found in Western Kansas, and the three set forth on an expedition to find them. In Wallace county, so many beetles of this species were captured, that each of the young men sold his one-third interest in the collection to Professor Snow, for enough money to pay his way through college. Professor Snow then had one thousand beetles of this rare species in his possession. He sold enough of them to make good his payment to the students and reimburse himself for the expenses of the expedition, and by exchanging the remainder he obtained a collection of nine thousand species of North American beetles, the largest collection, it is said, in the world. He still has a number of the rare species, and they are said to be the only available ones in the world for collectors.

It is said that numerous expeditions have been made to Wallace county since, but no further traces of this rare member of the beetle family have been found. This particular species have no eyes, and no wings, and have to feel their way, feeding on insects in the dusk of morning and evening.

How Do You Make Money?

Boys, tell us how you make money. You do make money; everybody makes money. Give us your schemes. Write us an account of what money you have made. In our June number you will find what other boys say about how they make money.

Philadelphia, Pa.

The Boy in the Office, the Store, the Factory and on the Farm

May.

MORNING STARS: Mercury, Mars, Jupiter and Saturn. EVENING STARS: Mercury, Venus, and Jupiter after May 27. LEGAL HOLIDAYS: May 10, Confederate Memorial Day in North Carolina and South Carolina; May 11, Confederate Day in Tennessee; May 20, Anniversary of the Signing of the Mecklenburg Declaration of Independence in North Carolina; May 30, Decoration Day in all the States and Territories and District of Columbia, except Alabama, Arkansas, Florida, Georgia, Idaho, Louisiana, Mississippi, New Mexico, North Carolina, South Carolina, Texas and Virginia. ANNIVERSARIES: May 1, 1898, Dewey destroyed the Spanish fleet at Manila; May 13, 1607, first English settlement in America at Jamestown, Va.; May 13, 1783, Society of the Cincinnati was organized by officers of the Revolutionary Army; May 20, 1775, Mecklenburg (N. C.) Declaration of Independence; May 24, 1319, Queen Victoria born.

The trouble with most young men who start in business for themselves is that they are not prepared for the responsibilities that come with taking the step.

There are men who howl because their employees drop their pens at six o'clock and spill ink on their books, and yet these same men never encourage or helped their employees in a single case.

You lack a valuable qualification as a salesman if you have a solemn manner, a doleful countenance, and are the victim of a gloomy disposition. But never let cheerfulness degenerate into undue familiarity. The over-familiar clerk is more offensive than the solemn one.

A messenger boy should be sharp of wit, quick of foot, and clean. A messenger boy in London showed himself so proficient that, although only thirteen years of age, he was selected to carry a message from England to the United States and bring back the answer. He won the confidence reposed in him by his simplicity, his courtesy, his cleanliness, and his soldierly bearing. It is said that in one American city, messenger boys have formed a league for self-improvement. They intend to keep their faces and hands clean and clothes neat, and to be quick, truthful and courteous.

A Word to Employers.

Encourage the clerks to suggest ways for improving the store and the system employed; yours may not be the only creative head in the establishment. We know of several large concerns which distribute hundreds of dollars a year in prizes to such of their employees as make valuable suggestions. Every employee is encouraged to suggest ideas for the improvement of the manufactured article. So far as possible, every employee is allowed to work out any idea he may have for the improvement of the article. A box is placed in every department, and the ideas and suggestions are slipped in by the employees themselves. The different departments are managed by committees selected by the employees, all being under the supervision, of course, of the general management. The plan could be followed to advantage in some form by almost any store or business.

AUTHENTIC PORTRAIT OF EUCLID.

DRAWN BY OUR OFFICE BOY, WHO HAS LATELY BEGUN TO STUDY MATHEMATICS.

Good Morning.

"Sorry our elevator boy has left, Thompson," remarked my lawyer friend to his friend as we walked down the hallway. "Yes, nice little chap, wasn't he? I quite miss him."

"Why do you miss him?" I asked my friend as we turned into the street. "The boy in there seems to be able to run the elevator."

"Oh, yes. Well, I don't know. What do you say, Thompson? Why do we miss the last boy more than we usually miss boys?"

"Why, it's his bright 'Good morning, sir,' that I miss. It was a pleasant beginning to the day. I came to look for it. This new chap is as dumb as an oyster, runs the elevator all right, though, and 'Good morning' is not 'in the bond,' I suppose."

"Good morning, sir." A small thing for a busy man with an important day's work ahead of him to notice, one might think; but it is just these courtesies, the things "not in the bond," that make life not only bearable but sweet.—M. E. Fletcher.

A Recipe for Reaching Success.

Someone at La Crosse, Wis., who signs himself "XXX," in writing letters of advice to young men for the Milwaukee Journal, says:

"After receiving all the education you can command, proceed to select some business occupation which you think you would like to follow; having fully settled on that, investigate as to what firm or corporation stands high comparatively in that business; call on the firm and ask politely if you could have three minutes' interview with the manager or proprietor; if asked what your business is, say it is personal. Should you be told that they were then engaged, ask permission to be allowed to remain until such time as they could comply with your request; if not convenient that day, ask if a time could be named to give you such interview later. If a date is named, be sure and be on time to the second. When you meet the gentleman with whom you have the engagement, say to him: 'I come to you, sir, to offer my services to do anything I may be called upon to do in your business. I expect to begin at the bottom round of the ladder, and if hard and conscientious work, strict attention to business and always looking out for your interest will count, as I think it will, I expect to make you a useful man. If you will kindly give me a trial, I will feel very grateful. Wages, other than enough to pay for my board, is no object.'

"Should you be accepted, then it all depends on yourself. Make up your mind to be civil to everybody you come in contact with and attend to your business in such a way that it will be plain to all you are trying hard to please. Be prompt in everything, getting to place of business sharp on time, and remaining until everything has been fully attended to, and the business day closed. Do not linger on your way home. Be as prompt to your meals as you are to your business. Shun bad company, and spend your evenings at home, improving yourself by study, and reading good books. Indulge in no bad habits to please anybody. Keep away from society no matter how good. By following the above advice you will become a useful man as well as a necessity to your employers. Your reputation once established, you will be forced to the front, and never need look for employment as everybody will want your services."

The letter closes with the statement that the writer of it has tried the recipe and has found that it works like a charm.

The editor of THE AMERICAN BOY can find no fault with the advice, unless it be in the suggestion that the young man "keep away from society no matter how good." The writer perhaps gives to the word "society" some special meaning. Certainly he would not advise the young man to make a recluse of himself.

The World Still Offers Wide Opportunities to Boys.

James Oliver, the millionaire plow manufacturer, of South Bend, Ind., in response to a question as to whether he

JAMES OLIVER.

could repeat his success if he were to begin over again today, said to a correspondent of the Chicago Chronicle:

"If some wonderful fairy would appear to me this night, and with her magic wand transform these sparse white locks of mine into the shaggy black hair I once

had, and would give me back my youth and the old, wrinkled overalls and broad-brimmed hat that I wore when a boy, I would willingly and happily lay at her feet all that I have in this world, and start barefooted and penniless from this door ready for another struggle to success, for I believe that I could repeat today what success I have achieved in the past, though perhaps it would be along other lines. The idea or feeling that some men have that there is no chance for them in the world today, that opportunities three score years back were greater than they are now, is absurd. This world is a just world if she is strict, and she always finds places for men of ability and integrity. A young man starting out in business should at once banish the diseased idea that there is no room for him. There is room, and plenty of it, for every young man, and the only trouble is there are not enough capable men in the world to fill the places that the world offers. I believe that every young man starting out in life today will sooner or later meet his opportunity, and his success or failure will depend upon his ability or inability to see and to grasp his opportunity when it comes to him. I repeat that the world today offers as great advantages as ever for worldly success."

Every young man should have a nobler conception of business than that it exists for simply what he can get out of it, but rather for what he can put into it, for the glory of God and the good of mankind.

My Boy Consider this proposition—

Gutchess College, one of the best Business Colleges in the country, has more demands for Gutchess-trained assistants than it can supply. For this reason it guarantees to the graduates of its combined course of Stenography and Bookkeeping the return of the entire tuition fee if a position be not secured within a reasonable time after graduation. This course can be taken by mail. Write us for particulars. This proposition is only open to those who enclose copy of this advertisement with their letters to us.

Gutchess College, Bamlet Building, Detroit, Mich.

PEN ARTIST

EXPERT ACCOUNTANT

HUNDREDS of ambitious YOUNG MEN and WOMEN are making a brilliant success of our HOME STUDY COURSE IN Penmanship and Book-keeping by Mail

We have the cheapest and best course for home study of these subjects now before the public. Just think of it, we will send you 75 beautifully illustrated lessons in Penmanship for 75c, an average of only 1c per lesson. We will send you 100 lessons in Book-keeping and furnish all the blank books, checks, drafts, notes, and instruction, for only \$5.00, an average of only 5c per lesson. These lessons will prepare you for lucrative positions, rapid promotion and business success. To demonstrate their superior merits we will send you

two lessons in Practical and Artistic PENMANSHIP

if you will send us 2c stamp to pay postage. If you cannot afford to pay the above prices for instruction, write us and we will show you a way by which you can earn either of the courses without canvassing and with very little time.

The Boy in the Home, Church and School

Out of a vacant store, filled with games and books to entice boys off the street, has been evolved "The Welcome Home," a four-story brick building, with a reading room, school room and gymnasium, recently dedicated in Brooklyn.

"I am not much of a mathematician," said the cigarette, "but I can add to a man's nervous troubles; I can subtract from his physical energy; I can multiply his aches and pains, and I can divide his mental powers; I can take interest from his work and discount his chances of success."

"The difference between the newsboy and the boy who is too proud to sell newspapers, is simply this," says The Newsboy, a paper for newsboys published in New York: "One shows his wares, and the other wears his father's old pants cut down."

The metre of this is rather uncouth, but the truth is forcibly apparent.

Nearly two hundred boys in the C. W. Schaefer Public School of Philadelphia have organized an anti-cigarette league. They have taken the pledge not to use tobacco in any form until they are old enough to vote, and to try to prevent others from smoking. Each of the boys wears a pretty badge, with the letters "A. C. L." in a monogram, and a motto in gilt letters "The cigarette must go."

Your Chances and Lincoln's.

Now, is there an American boy, between Maine and California, who has not advantages equal to those of Abraham Lincoln? His parents were poor, ignorant and obscure. His early home was a hovel with a dirt floor and a leaky roof. His companions were no more favored than he. His schools were the crudest known in his time. From boyhood his days were spent in hard work. His studying was done by night, and his thinking by day while his hands were busy. What was there in his early surroundings that furnished food for his ambitions? What made him hope and strive for something better? He hardly knew there was anything better. What was there in himself or in his surroundings that gave a hint of the marvelous career of the man?

Lincoln, as a boy, was always honest, truthful, and loyal to his employer. The very fibre of the man, through and through, was sincere. One of the first things that drew the attention of people to Lincoln as a boy was the fact that he could be trusted. As he grew in years the friends he made found that he could be trusted, and gradually he was advanced to larger and larger responsibilities. He lacked polish and the culture of the schools, but his simple, direct, always to be relied on honesty—his sterling character made him a trusted leader in the most momentous crisis of his country's history.—Nebraska Farmer.

A Newsboy's Sermon.

He was working his way through a crowded car, offering his papers in every direction in a way that showed him well used to the business, and of a temperament not easily daunted.

The train started while he was making change, and the conductor, passing him, laughed.

"Caught this time, Joe?" he said. "You'll have to run to Fourteenth street."

"Don't care," laughed Joe, in return. "I can sell all the way back again."

A white-haired old gentleman seemed interested in the boy, and questioned him concerning his way of living and his earnings. There was a younger brother to be supported, it seemed. "Jimmy" was lame, and "couldn't earn much himself."

"Ah, I see! That makes it hard—you could do better alone."

The shabby little figure was erect in a moment, and the denial was prompt and somewhat indignant.

"No, I couldn't! Jim's somebody to go home to—he's lots of help. What would be the good of havin' luck if nobody was glad, or of gittin' things if there was nobody to divide with?"

"Fourteenth street!" called the conductor, and, as the newsboy plunged out into the gathering dusk, the old gentleman remarked to nobody in particular: "I've heard many a poorer sermon than that!"—Forward.

Boys, Look at This.

Three beers a day for one year costs enough to bring into your home

- 1 Barrel of flour.
- 50 Pounds of sugar.
- 20 Pounds of corn starch.
- 10 Pounds of macaroni.
- 10 Quarts of beans.
- 4 Twelve-pound hams.
- 1 Bushel sweet potatoes.
- 3 Bushels Irish potatoes.
- 10 Pounds of coffee.
- 10 Pounds of raisins.
- 10 Pounds of rice.
- 20 Pounds of crackers.
- 100 Bars of soap.
- 3 Twelve-pound turkeys.
- 5 Quarts of cranberries.
- 10 Bunches of celery.
- 10 Pounds of prunes.
- 4 Dozen oranges.
- 25 Good beefsteaks.

But this is not all; there would be in one pocket of your trousers a five-dollar bill marked, "A new dress for mother," and in another pocket a ten-dollar bill marked, "To buy shoes for the brothers and sisters."

Baby's Shoes.

They were having a sale of unclaimed articles at the Cleveland office of the American Express Company. Small bundles, big bundles, square, round and oval bundles, bundles of every conceivable shape and size, were being sold to the highest bidder. One man got a small package for fifty cents. It was battered and dirty, and every one smiled when it was handed him. Opening it, he drew out a lady's gold watch and a tiny pair of baby shoes. To the shoes was pinned a letter, which read:

"Dear Wife—I send you my mother's watch, and baby a pair of shoes. As you know mother gave me this watch as she was dying, and through all reverses I have never parted with it, but I am dying now. The climate has not helped me. Kiss baby goodby for me, and—"

Here the letter was torn. The man irreverently folded the letter up, put it into one of the shoes and cast it, with the other one, to a ragpicker.

How Boys Enter the Religious Life.

ABSTRACT OF PAPER BY E. M. ROBINSON

1. For convenience consider the boy as a responsible individual, capable of choice and decision. Until he comes to this place, whatever religious life he seems to have is not his, because he has had no choice in the matter. It is the property of whoever may have poured it into his open, indiscriminating life. What he chooses, accepts, decides upon, is his own.

2. Boys enter the religious life in at least as many ways as they enter the water for swimming. (a) Some plunge in—a definite decision which settles once for all what their attitude toward right and wrong shall be; what their relation to their God shall be. (b) Some wade in—deliberately, cautiously, step by step, each step revealing that another step is desirable. (c) Some run in a little way and then come out again, but continue to run in a little farther each time, till at last they swim off—a number of changes of mind. (d) Some are forced in—they may, finding themselves in, decide to remain, or they may make frantic struggles to get out. (e) Some sit down on the beach and simply let the tide come up about them, till it floats them off—by not

resisting the tide about them, they practically accept the situation.

3. A boy's choices and decisions largely lie along the line of his ideals. His ideals are of the heroic type. He is not attracted by an effeminate Christ, but he is attracted by the heroic Christ. He admires and wants to be like the man who can do hard things, who can despise pain, who can rescue others regardless of cost to himself, who can love violently, fight valiantly, etc. When he sees that Christ is all this and more, when he hears the call to enlist with such a Christ for the accomplishment of some gigantic, heroic, noble task, he will respond with all the enthusiasm of his being. True, he may under stress follow the effeminate Christ, who is so frequently and unfortunately presented to him, but it will be a shame-faced, half-hearted following.

A Hero of the Last War.

By CORA S. DAY.

"There goes a hero of the last war," said one man to another as an old man passed them on the street.

"Why, I thought he did not go to the front," was the surprised reply.

"He did not, and that is why I call him a hero," said the first speaker, and then he went on to explain his strange remarks.

"When the war broke out, John Horner and his brother were both wild to go. A great many of the young men of the place in which they lived were going, and they were carried away with the excitement and enthusiasm of it all.

"His brother went—went without a word of farewell or blessing from his parents, for he went without letting them know of his intention. Then John fought and won the battle that makes me call him a hero. His mother and father were old and feeble, they were almost prostrated with grief at the enlistment of their oldest son, and they clung to their only remaining boy with fear that was almost terror lest he, too, would go. The farm needed some one to attend to it, and gather the crops that meant a living for the old folks during the coming winter.

"But out in the street the drums beat and the crowds cheered, and the flags waved in the sunlight, while the boys in blue—the boys he had known all his life marched away to fight for their country. And every fiber of his heart thrilled with the longing to go with them.

"But he could not go—he could not leave home and turn his back on the duty that lay so plain and clear before him; he must stay at home and comfort and support the old folks. And he stayed—knocking by his bedside, with his tear-wet face hidden in his hands and the doors and windows closed, that he might not hear the music and the cheers. And that is why I call him a hero."

"You are right. He is the hero of the battle that is harder than those fought at the front—the battle of duty and self-sacrifice."

Henry Ward Beecher to His Son.

Brooklyn, N. Y., Oct. 18, 1878.

"My Dear Son:—You are now, for the first time, launched into life for yourself. You go from your father's house, and from all family connection, to make your own way in the world. It is a good time to make a new start to cast out faults of whose evil you have had an experience, and take on habits the want of which you have found to be so damaging.

"1. You must not go into debt. Avoid debt as you would the devil. Make it a fundamental rule. No debt—cash or nothing.

"2. Make few promises. Religiously observe even the smallest promise. A man who means to keep his promises cannot afford to make many.

"3. Be scrupulously careful of all statements. Accuracy and perfect frankness. No guess work. Either nothing or accurate truth.

"4. When working for others, sink yourself out of sight; seek their interest

Make yourself necessary to those who employ you, by industry, fidelity and scrupulous integrity. Selfishness is fatal.

"5. Hold yourself responsible for a higher standard than anybody expects of you. Keep your personal standard high. Never pity yourself. Be a hard master to yourself, but lenient to everybody else.

"6. Concentrate your force on your own proper business; do not turn off. Be constant, steadfast, persevering.

"7. Do not speculate or gamble. You go to a land where everybody is excited and strives to make money; suddenly, largely, and without working for it. They blow soap bubbles. Steady, patient industry is both the surest and safest way. Greediness and haste are the two devils that destroy thousands every year."

Boys Need Playgrounds.

Wherever you find open playgrounds for boys, there you will find the least badness among them. Wherever you find green grass and trees you may expect to find the least trouble with boys. Such has been the experience of the New York police. This fact has led to the passage of an ordinance in New York City, providing that hereafter no school house shall be constructed in the city of New York without an open air playground attached or used in connection with the same."

ELECTRICITY TAUGHT BY MAIL. Instruction at home, adapted to everyone. Electrical or Mechanical Engineering, Mechanical Drawing. Guidance of experienced, able instructors. Takes spare time only. Thos. A. Edison and others endorse lecture. Catalogue free. ELECTRICAL ENGINEER INSTITUTE, Dept. 95, 241 West 23rd Street, NEW YORK.

Every harp player wants one. General agents wanted to put out canvassers. Fine illustrated catalog sent prepaid for 5 names of Harp Players.

THE HARP-O-CHORD CO., 38 L St., COLUMBUS, OHIO.

Look Over Your Wheels.

Now that spring has come, be careful about the adjustments of your bicycle before using it. There should be a critical examination now made of all the parts. A loose or improperly adjusted handle-bar may fail to hold at a critical moment. A pedal that is not screwed tight may work part way out, and the threads on the pedal-pin or in the crank will soon be ruined. See that the rear axle-nut is secure, for if it is not it will surely pull the wheel out of true and against the frame. If a machine has been left standing all winter in a remote corner it is certain to be in a pretty bad condition. The bearings will be dry and rusty, and the tires in bad shape. You should have detached the wheels, half inflated

the tires, hung them in a place not too damp, smeared the nickel parts with gasoline, cleaned the bearings and bearing cups and covered the frame. Few boys have done these things, and their negligence will cost them something.

The first thing you should do is to take your wheel entirely apart and examine every inch of it, giving special attention to the joints and points of bearing. You can use kerosene for cleaning, but let none of it get on the enamel or the tires. When removing the bearings, a cloth should be spread under the wheel so that you do not lose any of the little steel balls. Keep the sets of balls separate, as it seems to make quite a difference if one set is put in the place of another. Each set seems to adjust itself to the

AUNT EM'S LETTER TO LITTLE BOYS.

Home, April 14, 1900.

Dear Boys:

True to my promise, I will tell you about the boy who had great visions as to "what he would do" if fortune favored him with five hundred dollars.

Before I tell you, however, let me remind you of my request that you would let me know your opinion as to the best manner of disposing of it. When I was a little girl, my fondest dream and hope was that in some way father might be the owner of a candy store and appoint me to wait on customers. Then I would have had all the sweets I craved for without paying for them. Five hundred dollars was quite far away from my youthful mind, you see.

Well, this boy said: "If I had five hundred dollars, I would put it in the bank and leave it there for one year. At the end of the year I would have five hundred and twenty, because they give four per cent interest. For fifty-two cents I would buy school supplies at G. Smith & Co.'s, where they are sold the cheapest. I would buy a pair of school shoes for two dollars at Sanders & Co. They have very good shoes there. I would read the advertisements in the "Times" and find out where suits are sold the cheapest, and are the best. I would buy at that place a suit for six dollars. At A. L. Goodwin's I would buy a hat for ninety-eight cents, and for four dollars I would buy a second-hand watch. Then I would be all right. As winter would be coming near, I would prepare for it.

"As I have winter clothes from last year I would not buy any. But my old gloves are worn out, therefore I would buy a pair for fifty cents at Hill & Co.'s. For two dollars, I would buy a fine sled at

Brown & Grose's. For another two dollars I would buy a second sled for my brother. As Moses's Bible commands us to give to charity one-tenth of what we make (?) I would give away two dollars to beggars. Altogether it would come out twenty dollars that I would spend. That would be the interest. I would do about the same every year. Five hundred dollars, I would always leave in the bank, and spend the interest.

"I would always remember the one that would give me five hundred dollars."

We cannot prophesy ahead, but when this young writer gets to be a gray-haired man, I can pretty clearly see him in a comfortable home of his own. He will have tasteful furniture, and artistic pictures. He will urge his wife not to use her best china or glass for every day, so that they may have fine things for a dinner party—china that is neither chipped nor broken from constant use.

Do you know why I think this? I should not ask such a question. As, of course, you can tell what a good business head our friend seems to have. Like India rubber, he has tried to pull and stretch the five hundred dollars out to its utmost limit. When he really owns so much money, he certainly will make good use of it.

I did not notice any allowance made for candy, or soda water, did you? His last remark interested and amused me. Of course he would remember the giver; wouldn't you?

Remember, that any letter will be cheerfully answered, and any questions you will trust with your Auntie will receive her careful attention.

Very sincerely,

AUNT EM.

E. C. HOWE, 825 Bay State Building, CHICAGO, ILL.

path it wears in the cups. Vaseline is a very good lubricant for bearings. Better have an expert look after the tires. The tires in all cases where a wheel has been left standing all winter, should be removed and freshly cemented to the rim. The old cement cracks and will not hold. Examine the head and steering gear; it is a very important part of the machine and is constantly in motion. In the adjustment of the head, care should be taken that it is neither too tight nor too loose. Any looseness can be detected by taking hold of the handle-bar and lifting it up and pressing it down alternately. If there is any looseness it must either proceed from the head or front wheel. After lubricating the bearings turn the front wheel around several times so that the bearings find their proper adjustment. The head should work freely, but should always be rigid.

To get wealth is not dishonorable. It is the methods of making money and using it that mark the man.

As men are only boys grown tall, it has been found that the easiest way to reach the men is by taking the boyhood route.

It is imprudent to enter into partnership with a covetous man, or a very passionate man, or an obstinate man, or a revengeful man, or a familiar "crony," or a man involved.—Freidley.

I can conceive of no happier thing than for a man to realize the truth that God has sent him into the world to fill a certain place and do a certain work. And yet how few are able to say, "For this cause came I into the world."

Letter From Our Librarian.

"History maketh a young man to be old, without either wrinkles or gray hairs!"—Fuller.

"WITH WOLFE IN CANADA."

By G. A. HENTY.

I must tell you, boys, of what this book reminds me. Of course, you have all eaten those delicious, yet wholesome nut-candies prepared for you by a good mother or sister, or, maybe, by "just a nice girl-friend." Well, this delightful story of our favorite, G. A. Henty, reminds me very much of these same delicious sweetmeats, for the author of "With Wolfe in Canada" has skillfully enclosed a kernel of most valuable and interesting information within as charming and wholesome a romance as it was ever your good fortune to read. In Sergeant Wilks (one of the most important personages of this story) and his winsome little grand-daughter, Agnes, Henty gives us two of the most natural, as well as lovable characters in the realm of "Bookland," while the history and adventures of the noble and truly heroic, boy-hero, James Walsham, lead adroitly over land and sea, to the eventful days of 1755, when France and England contended so fiercely for colonial supremacy in Canada. The defeat of Braddock, the massacre of the English at Fort William Henry, by the Canadian Indians, the sieges of Louisberg and Ticonderoga, the capture of Quebec by the English, and the sad and tragic deaths of Lord Howe and General Wolfe are the most thrilling and important historical events of this story, in which Henty has so skillfully interwoven history, adventure and romance, that we say of the book when it is finished: "Which is stranger or most interesting—its truth or its fiction?"

Matthew Gardener—No, Richard the First, of England, was not the only monarch to whom the epithet, "The Lion-Hearted," was applied. Ladislaus the First, of Poland, was also called "Coeur de Lion." In the Odyssey the same title is given to Ulysses by Penelope, his wife; All, the Saracen ruler, was called "The Lion of God"; Gustavus Adolphus, of Sweden, was called "The Lion of the North"; Henry of Bavaria, and Louis the Eighth, of France, were both called the "Lion." Queen Elizabeth, of England, was called the "Lion-ess."

An American Boy—Our national motto, "E Pluribus Unum" (one out of many, one composed of many) was first suggested by John Adams to the Secretary of Congress,

Charles Thomson. This motto, which appeared on the cover of the "Gentlemen's Magazine," published in England in 1759, was suggested to Mr. Adams (during his ministry to England) by the celebrated antiquary, Sir John Prestwick, who thought this motto would forcibly express the unity existing between the American Colonies. A half-penny, or cent, struck in New Jersey in 1786, was the first coin inscribed with our national motto.

Eugene—The Battle of Syracuse ranks second in the list of the world's great battles. It was fought by the Syracusans and the Athenians four hundred and thirteen years before Christ. The defeat of the Athenians by the Syracusans brought about the downfall of Grecian supremacy and laid the foundation of Roman power. "Thus," says Arnold, the historian, "the future of the whole western world was decided by this famous battle of Syracuse, which formed a decisive epoch in the strife for universal empire which engaged all the great states of antiquity, one after the other."

Student—Napoleon Bonaparte was the emperor who once rode his horse to the top of a bell tower. On the 16th of May, 1797, the city of Venice surrendered to the armies of Napoleon, whereupon, the emperor rode to the top of the Campanile, or bell tower of St. Mark's Cathedral (the celebrated church of Venice) to signal to his fleet that his armies had won the day, and that Venice had surrendered. The Campanile was three hundred and thirty-two feet in height.

BOOKS OF TRAVEL.

"As the Spanish proverb says: 'He who would bring home the wealth of the Indies must carry the wealth of the Indies with him'; so it is in traveling; a man must carry knowledge with him if he would bring home knowledge."—Johnson.

"BOY TRAVELERS."

By THOMAS W. KNOX.

This is the Way the Story Goes, Boys.—Dr. Bronson, a kindly and intelligent American physician, and a great traveler, accompanied by his young nephews, Fred and Frank, starts upon a long and most delightful journey to the far-away lands of Japan and China. Away go the three merry travelers, over the Erie Railway, across the lovely valley of the Neversink, stopping to visit far-famed Niagara, and then onward, again, over the Great Western and the Michigan Central to Chicago; from thence across the prairies of Illinois and Iowa to Omaha, and on over the great plains to San Francisco, a distance of one thousand eight hundred and ninety-eight miles. Arrived in San Francisco, Dr. Bronson takes his young nephews "sight-seeing" to all the points of interest in and about that wonderful "City by the Sea."

Embarking on the good ship "Oceanic,"

our travelers sail away to foreign lands, and Fred and Frank find the pleasure of their ocean voyage much enhanced by the sea yarns of "Captain Spofford," whose forte is the telling of whale stories.

At last the great light-house at the entrance to Yeddo Bay sends out a cheery welcome to the "Oceanic," and in a few hours our travelers are landed at Yokohama, and now begin their delightful trip through Japan and China. Very few of us, comparatively speaking, can follow the footsteps of the "Boy Travelers" in reality; but by saving our spare "coppers" we can all enjoy the next best thing—that is, we can buy this very interesting and instructive book, and by reading it attentively we can enjoy an unalloyed pleasure, and gain a knowledge of China and Japan which will enable us to "hold our own" with Fred, or Frank, or any other boy who has really visited these wonderful countries. Your Librarian.

ALEXANDER JENKINS.

Congressman Amos J. Cummings, of New York City, entered a printing office at the age of twelve, and has set type in nearly every state in the Union. He has been twelve years in Congress and is one of the most influential members there, as well as one of the very best newspaper writers in the country.

THE BOY JOURNALIST AND PRINTER

An American Boy in Central America—Printing and Publishing an Amateur Paper.

By BARRATT O'HARA.

The small fruit steamer, bobbing over the waves of the great gulf, on the sixth day out from New Orleans, rounds a high bank and anchors in the bay of Bluefields, Nicaragua. The passenger leans over the rail and looks about him in pleasant surprise. He is in a paradise. He swears the Garden of Eden could not have been more magnificent.

Seven miles away, at the farther end of the lagoon, lies Bluefields, reposing so quietly and softly under the clear tropical heavens that for all the world you are reminded of a child resting in its mother's arms.

You wander about the town enchanted with its beauty. The residences are surrounded with bushes bearing roses 12 months in every year. Trees hanging over the thatched roof huts drop juicy oranges, tart lemons, heavy cocoanuts, green breadfruit into the very lap of the native. Its thousand-fingered leaves, flapping with the gentle breezes, the stately coconut guards the hallowed scene. Such is Bluefields—the greatest banana port in the world—and the larg-

est American colony in Spanish-America.

Here in February, 1895, an American boy, barely in his teens, landed with his father, the newly-appointed consul to San Juan del Norte. The writer was that son.

Living in Bluefields at this time was Dr. Rolando Kuehn, a jolly little man. He had traveled over most all the world and had had some wondrous adventures. Some years previous he had drifted to Bluefields, become interested in some mines, and finally decided to make it his home. He opened a drug store in a little wooden hut and succeeded in selling numberless boxes of Hood's Sarsaparilla, Carter's Little Liver Pills, and other celebrated medicines. His professional services were soon in great demand, especially by the Mosquito king, a black Indian of limited education, who had a love affair gnawing at his heart. The genial American doctor prescribed for his royal highness and incidentally composed his love epistles for him. Success henceforth was fleet-winged, and was the doctor's constant companion. He was appointed port physician at a good salary, and was in a fair way to wealth when the Mosquito rule was brought to a sudden termination by the Nicaraguans in 1894.

During the days of his prosperity Dr. Kuehn had purchased an army printing press and a collection of type and furniture. With these he printed a weekly newspaper—a good newspaper, too, as journals run in Central America. But his editorial policy was unfavorable to the Nicaraguan rulers, and the paper one day suspended publication. The newspaper office was deserted and the climate soon played havoc with the material.

This was the condition of affairs when I made the ex-editor's acquaintance. He at once, on learning I knew something of the printer's art, offered me the plant to run on percentage. I was forced to refuse the offer, however, as my home was to be in San Juan del Norte and not in Bluefields. A week yet remained before we sailed for our destination, and I determined to run the office on trial during that week.

One morning I opened the door of the shanty, and waited for business. Nor had I long to wait. Presently a portly American gentleman entered the shop. He was a travelling dentist stopping for a few days in Bluefields. His stock of cards had run out and he desired a hundred printed. He offered me \$6 for the job, he to furnish the blank cards.

I readily accepted the offer and immediately set to work.

An Army press, rusted in the "joints," is but little better than no press at all. At first the machine would not work, but a liberal use of the oil can finally removed a little of the friction. The wheel moved and the first impression was made. It was not a sample of artistic printing. The type was not of equal height or of similar figure; nor was the impression equal in all parts. The cards were turned out, however, delivered and paid for.

Shortly afterwards we sailed for San Juan del Norte and Kuehn's printing establishment again sank into oblivion.

The following June I received a 5x8 Excelsior press from the United States. I set the press up in my chamber at the hotel and immediately started to issue an amateur magazine. For one week I labored—setting the type, printing the page, and explaining the machine to many native friends who, having never seen such an apparatus before, flocked to my room and hurled scores of questions at me. On the eighth day the paper came out.

It was called "The Youth's Magazine," rather a dignified name for a four-page, two-column publication. The first page contained a sketch of Paul

Revere. The second was the editorial page, and in some blood-stirring items I urged with equal force the completion of the Nicaraguan canal and the placing of advertisements in "The Youth's Magazine." Another editorial extolled the character of a prominent politician of the country. The third page was filled with clippings of interest to my Nicaraguan readers. The fourth page was given over to advertisements.

The paper was put on sale at once. Forty copies were sold in San Juan del Norte at five cents a copy. Some 200 numbers were sent to friends and exchanges in the United States, and another hundred scattered through the Central American countries. The paper had about 400 circulation in all. As far as I know, this was the first amateur publication issued in the Republic of Nicaragua.

A little job printing was taken in and promptly executed. I was working up a good business and making more money than boys of my age usually do, when one day a highly educated Colombian woman called on me.

Her husband had been the editor of one of Colombia's most influential journals, and one of the leading politicians of the republic. He had, unfortunately, joined an attempt against the existing government and been killed in battle. Mrs. Castro was then compelled to flee from her native land and had come to

San Juan del Norte. Here her ability was soon recognized and she had been given a position in the public schools.

She did not speak English, nor I, at that time, Spanish, so an interpreter was employed.

"I understand you have a printing press, Mr. O'Hara."

"Yes, ma'am."

"Well, that is interesting. I desire to issue a weekly paper, about the size of your 'Youths' Magazine,' I believe. Of course the paper will be in Spanish. What will be the cost of such a paper?"

Here was a fine job. I figured a little and finally told her \$10 an issue. She readily agreed to my terms and I returned to my room with the manuscript for the first issue.

It is a difficult operation to read another's handwriting, when the words are in a language unfamiliar to you. You must decipher every word, and do it accurately. I soon found out I had undertaken a work too great for my capacity. I made sorry progress. At last I threw up the job in despair.

Mrs. Castro had set her heart on her embryo journal, and my failure to turn out the paper saddened her greatly. She made an offer for the purchase of my outfit and after many moments consideration I sold out to her for \$60 cash.

The press was speedily transferred to Mrs. Castro's home. She knew nothing of the printer's art, yet her original

mind soon invented a plan. She called in all her friends—the pretty Peruvian woman, the persistent Nicaraguan lover with the mustache pointed wildly at each end, the good-hearted wife of the governor of the state, the Costa Rican youth who would have given half his life to outstrip his rival in the lady's affection. It was explained to them that a paper was to be issued. It must be out in a week's time. There stood the press, there stood the type, there the manuscript. Let them pitch in.

And pitch in they did. My! how the type disappeared from the cases. The governor's wife attempted to outstrip the Peruvian woman; the Costa Rican worked as he had never worked before to decisively defeat his Nicaraguan rival; and both the Peruvian woman and the Nicaraguan man worked with a determination not to be outdone. The proprietress, happy in the success of her scheme, passed quietly about the room, directed the puzzled, smiled sweetly—as only a Spanish-American lass can smile—at first one and then another, and corrected the many mistakes of her co-workers. For five days the work continued and at last the paper appeared in all its glory.

Readers declared the contents of the little journal brilliant. Brilliant they no doubt were, but as to the typographical appearance—well, that's another story.

A few days after the journal had been issued the editor received an appointment as instructor in the largest college of the republic. She left San Juan del Norte, the Nicaraguan youth and the Costa Rican lover. Her printing press went with her into the interior and today somewhere in tropical America lies a press from which the first amateur paper of San Juan del Norte was printed.

100—BUSINESS CARDS—20cts. Postpaid. F. E. CHEADLE, ERWIN, OKLA.

START A PAPER! No capital or outfit required. We print it for you, or will sell press and new type at sacrifice to reduce over stock. Send stamps for particulars. Commercial, West Brighton, N. Y.

THE BOY PHOTOGRAPHER

Edited by JUDSON GREWELL.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and one dollar will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

Value of Criticism.

Any old picture which he takes himself is a source of delight to the amateur photographer when he first begins. He will show his "horrors" with as much pleasure as if they were prize pictures. But if he attends meetings of a camera club he soon begins to discriminate between the good and the bad, and it is not long before his maiden efforts are relegated to the ash heap or the darkest corner in his dark closet.

Criticism is the best teacher the amateur photographer can have. Let others who are unbiased and have some knowledge of the art look at your work. If it is received in the right spirit, calling attention to the defects will prevent their repetition, and while the negatives will not increase quite so rapidly, those that do pass muster will repay the outlay of time and expense in securing them.

Do not be thin-skinned. The more severe the criticism the better you should like it.

The Jex Bardwell Developer.

Some months ago Jex Bardwell, of Detroit, Mich., one of the oldest and most observing photographers in the country, made a new developer which the members of the Minneapolis Camera Club claim has become their favorite. It consists of water, 2 oz.; saturated solution of sodium sulphite, 2 drams; acetone, 1

dram; dry pyro, 5 grains. The alkali being absent, danger of chemical fog is slight. In under-time plates the developer should be considerably weakened by the addition of more water.

A Trick Camera.

There has been put on the market a trick camera called the "X" Ray," which apparently does a wonderful thing. The camera, with its pneumatic ball, is placed in position before a sitter, in front of whose body is placed a sheet, apparently of white paper, without a mark upon it. Behind the body is placed a lamp with a light. The "exposure" is made by pressing the ball. Gradually the paper loses its whiteness, the various organs of the body quickly depict themselves, first in faint color, then almost immediately in brilliant reds for the lungs, a duller red for the heart, and blue for the veins; other parts in black. This result, however, is only a trick. The white piece of paper has previously been painted over with strong and diluted sulphocyanide solution, ferrocyanide solution, weak and strong, and finally with tannin, the details being supplied by an anatomical drawing, over which the paper is placed while the organs are being painted by the various solutions named. The squeezing of the bulb does not, as imagined, open the lens, it simply ejects upon the paper a spray of solution of ferric chloride from a concealed source. The well-known reaction of the salt with the chemicals named produces the various colors.

Pressing the button is but a small part of photography. It takes brains as well as hands to do good work. I would give a word of advice:

Do not depend upon printed instructions and expect very good results. A little instruction at the hands of some one who is experienced is worth a good deal of printed matter. Many failures are the result of adhering to printed instructions and not using common sense and asking questions. The trouble with most amateur photographers is that they are not willing to apply themselves. In this, as in everything else, practice makes perfect.

FLUFF SMELLS MEAT.

FIRST PRIZE AMATEUR PHOTO. MARCH CONTEST. L. H. MOODY, HARTFORD, CONN.

Use the Ground Glass.

The use of the ground glass tells just what will appear on the plate. The photographer cannot depend on his eyes to give him this information, for he has two eyes, while the camera has but one. The objects seen in the foreground with the eyes cover much less of the background than does the object seen through the camera. The perspective being different, the picture is different. Here is a very good reason why one should always use the ground glass, when possible, even if it is some trouble. Then a little shifting to one side or the other, or back or forward, will make a good picture of what would otherwise have been a poor one.

Answers to Correspondents.

Sydney Cooper—Highly glazed pictures are out of style. Now everything runs to dull surface effects. Have you ever tried Aristo Platino? It makes a beautiful finish.

John Crosby—If you will send on your negative, will try to tell you what is the matter with it. The print you forward is not good enough from which to form an opinion.

Jules Stanley—By a "fuzzy" picture is meant one that is slightly out of focus. The Impressionist school of photographers ape this style. You had better stick to plain, nicely focused photography for the present.

Henry Robinson—You need a wide angle lens to take an interior such as you describe. Then, by standing the camera in one corner, you can obtain almost all of the room. Place the furniture so that it will not look bunched.

Charles Moulton—You are using too strong developer for your snap-shots. As a rule instantaneous pictures need a diluted developer. It takes a little longer,

but it will save many an undertimed picture, as snap-shots are apt to be.

Harry Wayne—Non-halation plates are expensive. Suppose you experiment with some kind of non-halation backing, which can be obtained from any photo-supply house. If you do buy the real plates, follow the directions that come with them.

W. S.: Where can I get a good work on photography for amateurs?

The following are published by the Baker & Taylor Co., and are good books: "Sunlight and Shadow," one hundred and fifty pages and one hundred photo-engravings, bound in art canvas, with gilt design, \$2.50.

"In Nature's Image," the companion volume to "Sunlight and Shadow," supplementing it and completing the subject of Pictorial Photography, \$2.50.

"Amateur Photography," A practical guide for the beginner; paper, 75 cents; cloth, \$1.25.

"The Photographic Instructor," a textbook for the professional and amateur, of which seven thousand have been printed, two hundred and fifteen pages; paper, \$1.00.

Any of these books can be purchased from the publishers of THE AMERICAN BOY at the prices named.

Life is short; Use Velox. A print free.

LEWIS & MYERS, 586 87th Street. CHICAGO, ILL.

Walter Holmes—A pretty fair photographic outfit, for developing and printing as well as the camera itself, can be obtained for \$15. If you will send on that amount and tell just what kind of pictures you want to take, THE AMERICAN BOY will select and send you an outfit, free of charge.

Willie Watson—A country boy has a better chance of getting prize pictures than the city chap. Pictures of animals with artistic surroundings such as a stream, and hills, and valleys afford, are always in demand.

Edgar A. Graves—There is money in amateur photography if you will confine your work to views that people want to buy, and do it properly.

D. D. Mohny—The light streak across the bottom of the print you send is caused by light entering the camera—probably when you withdrew the slide to make the exposure. The camera was

placed too low; the lens should have been as high as the chin, at least. Use alcohol for your flash lamp, and for the flash expose as long as the powder burns. If your hypo is old or dirty, it is apt to stain the print.

The Center of Interest.

Every picture should possess a center of interest. That means that there should be one point on which the eye naturally rests. Some one object of importance should be the most prominent. If the picture "scatters," if it contains a number of objects equally interesting, the effect is not so good as where there is more simplicity. Long focus lenses cut off much that appears in a picture where one of wide angle has been used. Therefore "professional" amateurs are likely to advise the use of the long focus lens in landscape views. Study the scene well before making the exposure. Have the center of interest well in the fore-

ground, but not in the center. Don't try to crowd in too much. Then, if care is taken in the development and printing, your friends will not vote you a photographic bore.

SECOND PRIZE PHOTOGRAPH.
By F. E. FOSTER IOWA FALLS, IA.

Olberton W. H.
March 25, 1900
Sprague Pub. Co.
Detroit Mich.
Dear Editor;
Here is an item you may publish in the Animal Kingdom of the American Boy; you may of heard of this animal before. I will give the story as it was told to me. This animal was found in Brazil it is strong, five ft. tall. It is called the Boogum. It was asleep when found hanging from a tree with head downward. Its home will be in the Philadelphia Zoo. It can tear wood into splinters, therefore it must be kept in a cage of metal. This is its picture as near as I can draw it. Yours truly
Deane Mahony
Illerton, N. J.

Boys in the Animal Kingdom

Dr. Talmage on Dogs.

Dr. Talmage in a recent sermon said: "I have seen dogs and owned dogs that I would not be chagrined to see in the heavenly city. Some of the grand old watch-dogs, who are the constabulary of the homes in solitary places, and for years have been the only protection for wife and child; some of the shepherd dogs that drive back the wolves and bark away the flocks from going too near the precipice, and some of the dogs whose neck and paw Landseer, the painter, has made immortal, would not find me shutting them out from the gate of shining pearl. Some of those old St. Bernard dogs, that have lifted perishing travelers out of the Alpine snow, the dog that John Brown, the Scotch essayist, saw ready to spring at the surgeon lest in removing the cancer he too much hurt the poor woman whom the dog felt bound to protect, and dogs that we caressed in our childhood days, or that in later time lay down on the rug in seeming sympathy when our homes were desolated, I say, if some soul entering heaven should happen to leave the gate ajar, and these faithful creatures should quietly walk in, it would not at all disturb my heaven."

Save the Gulls and Terns.

One of the most charming features of the seacoast—the seabirds, is rapidly passing away. Not long ago the whole Atlantic coast was thronged with the Terns, the most exquisite of the Gull family. They have nearly been wiped out by the agents of the milliners. This year will see almost the last pair killed. The larger Gulls, which are not only very beautiful, but absolutely necessary as harbor scavengers, are being rapidly exterminated, also.

We make an appeal to the American boy, and through him to his mother and sister, in behalf of these birds, whose exquisite beauty, wild voices and romantic lives add so much to the grandeur of the sea coast. Let the evil eye of fashion turn for a time to other victims and let us save the comparatively few gulls that will have reached their breeding places by the time this paper is in the hands of its readers and will be eagerly sought for by an army of hunters.

Sea-birds do more than simply lend attraction to the sea coast; they are absolute necessities. One in speaking of the value of sea-birds to the health of the community, has said:

"An immense horde of them, which naturalists think number anywhere from a hundred thousand to a million, gorge twice a day in New York Bay upon garbage. As the hour of the dump approaches, these multitudes fill the whole air to an immense height, over an area of several miles, then gradually settle on

the sea in vast white sheets. The whistle of the police boat, the signal to dump, seems to waft them simultaneously into the air, to gather, like dense snow clouds, over the floating masses just emptied from the many scows.

"Imagine from what an amount of putrid matter these birds, as big as hens, save the adjacent beaches, not to speak of their perpetual gleaning in the actual harbors! And this is a specimen of what occurs at every port.

"And shall this incalculable sanitary benefit, and all this beauty, terminate forever, and for no worthy purpose?"

The places to be protected are certain islands on the coasts of Maine, Long Island, New Jersey, Maryland, and perhaps Virginia and Florida. The American Ornithologists' Union is an organization formed for the purpose of guarding every breeding place where there is a law to back it, and this organization should have not only the moral but the financial support of every bird lover.

Correspondence regarding the subject may be had with Wm. Dutcher, treasurer of the union, 525 Manhattan avenue, New York City.

A Valuable Dog.

Lieutenant-Commander Herbert Winslow, executive officer of the United States Naval Training Station at Newport, R. I., has perhaps the rarest and most valu-

"LI HUNG CHANG"
PEKIN PUG, AGE 4, OWNED BY COMMANDER WINSLOW, U. S. NAVY.

able dog in the country. He is a thoroughbred Pekin pug. It is said that even in Pekin, China, where almost alone these dogs are found, it is with the greatest difficulty that one can get a

thoroughbred. Mr. Winslow's dog is named Li Hung Chang. His age is four. The Pekin pug differs from the Japanese pug, with which he is often confounded, in that he has greater intelligence, more sturdiness, and a broader forehead. Li Hung Chang has almost human intelligence. He jumps, sits up, speaks, whispers, dies for his country and talks, in dog fashion. Throw him a bone and tell him that it is Spanish meat, he treats it with the greatest disdain; if you tell him it is Chinese meat he eats it with a great relish.

A Dog Goes to Jail With His Master.

The judge of a Hoboken court the other day passed a sentence of fifteen days in jail on a mongrel dog. The dog's master got a sentence of the same length. The master was fifty-two years old and looked older; he was gaunt from hunger, and clad in rags. There wasn't anything very handsome about the dog. His tail was only a stump, his ribs had no flesh on them; and he was a generally run down animal—a match for his master. His name was Kaiser.

The man appeared at the police station, saying that he had been driven in by the cold, and asked admission to the almshouse. The poormaster said that he thought he could accommodate the man, but he refused to take in the dog. The old man straightened up and for a moment presented a brave front as he said, "Then he and I will go and die on the streets together." The man began to sob and dropping on one knee stroked the dog's head, saying, "No, Kaiser, they can't separate us. We have no one but each other and we will die together if we can't do any better." Then the old man told his story.

The poormaster gave the pair shelter and food for the night and the next day took them before the judge of the Police Court, where the man told his story again and the court passed a sentence upon the pair as vagrants, and they went to jail happy, because they were together. When they reached the jail the janitor told the old man he would give him a meal, but that he would have to feed the dog later. The old man refused to have it that way, however, and shared the meal with his chum. They went to sleep on a bench, Kaiser curling himself upon his master's breast.

When the prisoner's name was being taken down in the jail office on their arrival at the place of confinement, the old man proudly launched into a story of Kaiser's virtues. He loyally and lovingly asserted that his friend had all sorts of blue blood running through his veins. Kaiser meanwhile cocking his exceedingly plebeian head to one side and pounding on the floor with his tail, as if trying to make a good impression.

"All right, old man, you go upstairs. I'll look after the dog," said the warden. "Hold on, Capt. don't do that," said the old man in alarm. "Please don't separate me and my dog. We couldn't stand it. You know we've been together too long. I don't want much. Just put me where my dog is. I'll be satisfied."

The warden gave in, and the two were locked up together in the ward for "fifteen-day men."

HOW TO TRAIN ANIMALS This book written by an experienced animal trainer, tells you how to teach your dog to leap, walk erect, dance, jump rope, sit, lie down, beg, sneeze, stand on his head, etc. It also tells how to train horses, mules, cats, hogs, goats, monkeys, rats, mice, frogs, toads and birds to perform the most remarkable feats of intelligence. Handsomely illustrated. Price only 10 cents. Interesting catalog free. Boys write at once. JOE. U. STEELE, 2218 Beech Ave., Baltimore, Md.

The Dog Contest.

"TAFFY," THE PRIZE DOG.

IN our April number we offered a prize of a handsome collar for the swellest looking dog, photographs to be in our hands by April 15. The dogs, or rather their photographs, have been coming. There is "Nellie," "Gypsie," "Sceptre," "Ned," "Taffy," "Judge," "Gaynelle," "Archie," "Prince," "Dewey" from Nebraska and "Dewey" from Michigan, "King," and several whose names do not appear. The prize goes to "Taffy" owned by Albert Percival Cushman, Ellsworth, Maine. Honorable mention to "Dewey" of Michigan, and "Gypsie," whose portraits will appear next month.

We are very sorry that we cannot give a prize for all these dogs, every one of which is a beauty, though some of the photographs are so poorly taken that they do not do the originals any credit.

We shall try again. We will send to the best looking dog whose picture reaches us by the time we go to press with the June number, a handsome collar, with his name engraved on it.

Boys, get ready for the pony contest. See announcement in our June number.

SPRAGUE PUBLISHING Co., DETROIT, MICH.

BOYS IN GAMES AND SPORT

How to Make Tailless Kites.

N. R. BRIGGS.

The construction of the modern tailless kite is as easy once you know how, as is the old style kite with its cumbersome-looking tail. Why this new kite should have been so long in coming to the front, when it is known that it was made and flown centuries ago by the Javanese, Chinese and Malaysians, is hard to account for.

Now that the kite-flying season is again at hand, no doubt the young readers—perhaps the older ones, too—of THE AMERICAN BOY will be interested in knowing how to construct these new kites, now so much used for scientific purposes.

I shall give the methods for two kinds of these kites—the Parakite and Box kite:

Beginning with the Parakite, select a sound, straight-grained stick—pine or spruce woods are the best—and from it

saw out two pieces one-quarter inch square and thirty-six inches long. The cross-arm A C intersects the upright stick B D at E seventeen per cent of its length (six and one-half inches) from top, and is securely fastened there. The cross-arm is then bent back, bow fashion, ten per cent (three and one-half inches), and fastened with a string as if for a bow. Strong twine or picture frame wire (No. 0) is now tied around the whole frame, and securely fastened at points A B C D, so that they can not slip; but taking care to see that the distances between points A D C and A B C are equal, otherwise, the kite frame will not be in true shape. The covering is best made from some light strong cotton goods, such as percalline, and of any color fancy dictates. Having made your selection, lay it out smoothly upon the floor, and placing the kite frame upon it, cut the material as follows: First, make a mark on each side of upright stick near cross-arm, and also a mark two inches above point B.

Now, holding the lower end of frame D fast, move the top part of frame to right (as shown in dotted lines) of central mark five per cent (one and seven-eighths inches), and draw a line one inch wider than kite frame B C D, for a margin to paste over frame. Then, in same manner move frame to left of central mark, and draw a line an inch wider, as on the right side. Now cut along the lines the covering for your kite. This done, and while frame is still in position on left side, paste over side D A, and then move to right side and paste over side D C. Then begin with the top portion, by pasting along from A and C towards B, gathering the fullness equally from both sides along at the same time to within two inches on either side of B, where it is made into a box pleat and pasted nicely over the frame. The purpose of this fullness at the top of the kite is to allow of the wind forming concaves on each side of the upright stick, which gives stability to the flight of the kite. It is this feature and the bowing of the cross-arm, that permits flying the kite without a tail. The bridle-string is now cut long enough so that when one end is fastened about an inch from the bottom end at D, and the other end to the upright close to and above the cross-arm at E, the loop end would come to within an inch of the end of the cross-arm at C. The main line is then fastened to this loop at a point which would fall about an inch below the end of cross-arm. This point may have to be changed a little up or down to secure absolute poise—a fractional part of an inch often sufficing. Once this point is secure, rather than untie the main line at this point when through with a flight, cut the main line about twenty inches from this point of fastening, and make a loop in it to which the main line may be fastened more quickly. This short piece is called a whip line.

The Box or Cellular kite, which is also of the tailless variety, is preferred by some to the Parakite, owing to its greater novelty in shape; but it requires a stronger wind to fly it on account of its being much heavier. It is made as follows: Four straight grained pieces of pine or spruce three-eighths of an inch square and thirty inches long are sawed out. Two each of these are fastened together by a strip one inch wide, one-eighth inch thick, and eight inches long,

three inches from top and bottom ends, and form the sides of the kite. A small hole is then bored through each of these pieces about one inch from the ends. Four pieces more, one-quarter inch square and twenty-four inches long, are also sawed out and fitted with shoulder to enter these holes, which are to hold the sides of the kite apart, and complete frame. Two strips of any-colored muslin are now cut six inches wide when hemmed, to prevent raveling, and long enough to go around the kite frame and fasten together at the ends. These strips are tacked tightly around the frame, one at the top and one at the bottom ends, so that they will not slip up or down on the frame sticks. The bridle-cord is now cut six feet long, and so fastened to each side of the frame close to and about an inch below the top strip of muslin. The main line is then tied to the loop end of this bridle at the center, when the kite is ready for a trial flight, and if carefully made it should be a good flyer. It may be necessary to raise or lower the bridle on the sticks a trifle according as the wind is light or strong, raising them evenly if the wind is strong, or lowering them if very light.

Kite flying is a most fascinating, as well as health-giving exercise to young and old of both sexes; and, in many respects, it is more interesting and exciting than bicycling.

Perhaps the most practical as well as novel experiment that has yet been made with a kite is that of fishing from the shore; the kite being made to carry a line with baited hooks well out from the shore, when the line is dropped into the water and hauled slowly in.

New Tricks with Soap Bubbles.

Here is an Explanation of the Way to Blow Three Soapy Globes One Inside of the Other.

It is easy enough to blow three soap bubbles one inside of another. It is very simple when you know how, and here is the explanation of the trick. In the first place the important matter is to have the right kind of water to make good bubbles. Take some soap containing a large amount of glycerine, or better still, take one-third of a part of chemically pure glycerine and one and one-third distilled water containing a little oleic acid natron. Make two tubes out of rolled wrapping paper, covering the paper with mucilage on both sides before rolling it up. Let one tube be about an inch in diameter at the outer end and the other two inches. Whip the water up so that it is soapy, and after a little experimenting, if soap is used, the proper consistency will be obtained, so that the bubbles stand well. Do not blow the bubbles in too warm a

Did You Ever Puncture a Tire and Walk Home?

You Never Will If You Own a

SKINNER Automatic Pump.

It inflates the tire while you ride. It does not disfigure the wheel. It will fit any wheel. It makes pumping easy and is always ready. It can be thrown out of gear and left on wheel. It can be instantly detached and placed in Tool bag if desired. It weighs six ounces and costs but \$2.00, delivered to any point in the United States. Write for descriptive booklet.

SKINNER MFG. CO.,
214 MECHANIC ST., JACKSON, MICH.

room, as the evaporation bursts them. Then cover a plate with a thin layer of the soapy water. Blow a bubble from the widest tube and lay it gently on the plate. Soak the other smaller tube in the soapy water, so that it is wet some distance

from the outer end. Then very gently insert the tube and blow a bubble with it in the large bubble already on the plate, as in figure 1. Now you have two bubbles inside of one another. To make the third, take a common clay pipe, wet it well on

the outside in the soapy water, and then, inserting it very gently into the inner of the other two bubbles, blow a bubble, not too large, and fill it with smoke through the pipe to make it more distinct. Release the bubble from the pipe end, withdraw the pipe and you have three bubbles miraculously inside of each other, or at least it seems miraculous to any one who does not know how it is done.

THE ENCHANTED HANDKERCHIEF.

This handkerchief is used for causing the disappearance of such articles as a coin, a card, an egg, or a watch. It consists of two handkerchiefs—colored ones are the best—of the same pattern carefully stitched together all around the edges, but with a slit in one of them about four inches in length in the middle. The space between the handkerchiefs thus forms a pocket, the slit being the opening. In shaking the handkerchief—which no one will dream is a double one, if the thing is managed cleverly—keep the side with the slit next to you. In placing any article in the

center it will fall inside and upon shaking the handkerchief the article seems to have disappeared and it can be made to appear at pleasure

A SPINNING HANDKERCHIEF.

This is an amusing and mysterious trick, but one easily managed. A short stick and a large handkerchief are required. Throwing the handkerchief in the air, it is caught on the end of the stick and spun rapidly around in all directions, and thrown off the end of the stick, it is caught again as it is falling, and before it reaches the floor. The secret of this trick is that at the end of the stick a needle is inserted and allowed to project about half an inch with the point outwards. Therefore, the handkerchief when thrown into the air is caught upon the point of the projecting needle, which being very fine, is not noticeable.

THE GEYSER BOTTLE.

Take a small bottle, the neck of which should not be more than a sixth of an inch in diameter. Fill this bottle full of

red wine and place it in a glass vessel, whose height exceeds that of the bottle about two inches. Fill the vessel with water. The wine will shortly come out of the bottle and rise to the surface in the form of a column, while at the same time the water entering the bottle will supply the place of the wine. The reason for this is, of course, because the wine is not so heavy as the water.

THE OBEDIENT WATCH.

This is a very simple trick, but it causes much fun and astonishment. Have concealed in the palm of your left hand a small magnet, and borrowing a watch, ask the owner if it is in good order and going. He will, of course, say "Yes." Place it to his ear and ask him if it is going. He will again reply "Yes." Place it to the ear of the next person and he will say "No," and so on from one person to another. To cause the watch to stop, it is taken in the left hand in which the magnet is concealed. Taken in the right hand it will go all right, but it will stop when in the left.

The Boy Stamp Collector

A Famous Young Stamp Collector. How Tippecanoe Casey Paid Off the Mortgage.

J. S. Higgins, a 14-year-old boy living in Manchester, England, is undoubtedly the foremost boy stamp collector in the world," says "The Young Stamp Collector," published in London. His collection of stamps and postmarks is arranged in a manner worthy

of the greatest philatelists of the day. The Judges at the Manchester Philatelic Exhibition last August awarded this boy two silver medals and one bronze medal for his exhibits. He says that his first idea of stamps was gained by reading an article in Pearson's Weekly in May, 1896, at which time he cut the illustrations from the article and gummed them into an ordinary exercise book and then painted them. Someone gave him, on his eleventh birthday, a five-shilling Lincoln Album. He says: "I then set to work collecting stamps, but I did not get the right sort. An expert advised me to collect the better class of stamps, and I took his advice. I believe in specializing. I collect only British stamps, and I have them arranged in the three albums, with interchangeable leaves, in all five thousand varieties being represented."

The boy is a member of the Junior London Philatelic Society. Through the courtesy of "The Young Stamp Collector," we are enabled to present to our readers pictures of the boy and of two of his medals.

Rare New Stamp.
The government of New Zealand has issued a new stamp, which is likely before long to become extremely rare. Some miles out to sea, beyond Auckland, there is a tiny fertile spot, inhabited by some ten families, which no regular boat service joins to the archipelago. It is called Great Barrier Island. Some time ago a pigeon service was instituted by the authorities between this little isle and Auckland, and there is now a regular mail, which goes out once a fortnight. It is for the letters, or pigeograms, as they are called, that the new stamp is to be used. The letter itself may not be more than ten inches by four inches in size, and is written upon specially prepared thin paper. The stamps are pink—a pigeon with a letter in its beak, with the inscription, "Great Barrier Island—Special Post—one shilling." Only one thousand eight hundred stamps have been printed for the first issue; so, as before mentioned, the stamp is likely to be very rare.

As every true story has to have a location, I locate this one in the town of C., in Cortland county, N. Y., where, in 1892, Tippecanoe Casey, a thirteen-year-old boy, lived with his mother and two sisters. Tip (the name by which everybody in the town called him), was not a model of perfection as a boy, but was just a wide-awake, well-balanced, truthful, honorable boy, which is not so bad a model, after all. Tip and his family lived in a very pretty little home, the only unsightly thing about it being the mortgage which covered every inch of it. How to get this dreadful mortgage off had been the subject of speculation with Tip and his mother for a long time. Tip was a brave lad and used to say to his mother, "Never mind, mother, next time we may succeed; some time we will." Three years before the time of which I am writing, when Tip was ten years old, his uncle Silas, who had visited many countries as a government official, gave to Tip a small collection of odd coins and stamps. Tip never tired of studying them, and with the aid of a big geography he located the homes of all the specimens and learned quite a good deal, not only about stamps but about countries. His uncle had given him some books from which he could find out the history of the stamps and something about their value and the cause of their issuance. Three years of study made Tip a fairly intelligent stamp collector. He could readily tell the market value of almost any rare stamp, as well as the country to which it belonged and the circumstances of its issuance. In this town also lived, for a great many years, an old German by the name of Andrew Van B., who for nearly a quarter of a century, had been a thorough stamp student and a good collector, so much so that he possessed a very valuable collection. There were shilling stamps of New Brunswick and of Nova Scotia, and many early United States stamps, including Department, Confederate, and locals. A great many of the stamps were in unused condition. Mr. Van B. died, and his heirs, not caring anything for the old stamps and knowing little about them, put them in the hands of an auctioneer for sale. Now came Tip's opportunity. There were few persons at the sale who had any idea of the worth of stamps. Tip got a peep into the albums and saw at once that he had a prize within his grasp. The auctioneer called for bids, and someone bid five dollars. Tip doubled it. For a moment or two there was no advance, and then some venturesome person raised the bid another five dollars, to which Tip promptly added another five

BIG VALUE MADE IN AUSTRIA

We Buy Rare Stamps

BOSTON STAMP COMPANY,
 26 Bromfield Street,
 J. FAYILL CAPRON, Manager. BOSTON, MASS.

THERE IS A DIFFERENCE IN STAMPS.

There is a difference between Bishop's stamps and stamps as usually sold. The difference is in quality, not in price; the lowest priced stamps are seldom, if ever, the cheapest. Hundreds of collectors know the difference, they have been our steady customers for years. In order that hundreds more may learn just what this difference actually is, we offer to the readers of the AMERICAN BOY during the month of May only.

25 UNUSED Barbadoes, Mauritius, Canada Maple Leaf, Congo, Egypt, Sudan, etc. 25c

50 fine Canada, 18c; 5 Orange States, 9c; 15 Philippine Is., '98 1m to 60c unused, \$1.75; 7 Straits Settlements, 10c; 6 Congo pictures, 50c; 6 Transvaal, 10c; 5 Hong Kong, 8c; 8 Uruguay, 10c.

30 Unused Cuba '56-'83, ONLY 35c.

We do not sell surcharges, reprints or "varieties" of any sort. Over 500 copies of the "Gem Pocket Album" are sold every month—the finest album of its kind ever published. Contains spaces for over 450 stamps, and four pockets for 150-200 loose stamps. Printed on bond paper and bound in fine leatherette cover. Price only 10 cents.

WHAT HAVE YOU TO SELL?

W. F. BISHOP & CO.,
 LA GRANGE, ILL.

ESTABLISHED SINCE 1882. WE SEND OUT NO APPROVAL SHEETS.

dollars. Then everybody began to stare. Someone cautioned the boy, but he shook his head and listened for another bid; but none came. The albums were passed over to Tip, who hugged them to himself and in an undertone exclaimed, "Mine!" Tip knew that there were single stamps in that collection that were worth more than all that he had given for the collection. He hurried home with them and began a careful examination of his treasures. Making up his mind what they were worth, he hurried off to a dealer whom he knew and sold the collection for enough money to remove the mortgage from the house and carry home in his pockets exactly two hundred and thirty-seven dollars and fifty cents, two hundred dollars of which at once went into good hands, where it drew for Tip six per cent interest.

This is a true story. Who can say that a knowledge of philately, or of numismatics, is of no importance and of no value to a boy? Aside from the financial benefit, the collector learns a great deal about civil government, history and geography.

Our readers should bear in mind that we neither buy nor sell stamps. We will answer questions regarding stamps and help the boys all that we can in making their collections; but we are not stamp dealers.

The Boy Coin Collector

The Numismatic Sphinx.
 O. Smyth, Brandon, Minn.—No premium on U. S. quarter of 1893.

Clarence Vittum, Reinbeck, Ia.—The 1853 dimes, quarters and half dollars with arrow points each side date have no premium. Those dates without the arrows and rays are the rare ones. A good 1804 half cent is worth twenty-five cents.

Francis S. S., Des Moines, Iowa.—The United States mint has been at Philadelphia since 1793: New Orleans, La. (O), organized in 1838; Dahlonega, Ga. (D), organized 1838, suspended 1861; Charlotte, N. C. (C), organized 1838, and suspended 1861; San Francisco, Cal. (S), organized 1854; Carson City, Nev. (C. C.), organized 1870. This mint has coined no silver since 1878, and is now suspended. Mint marks, therefore, first began to appear on coins in 1838. Coins with no mint mark, and this would include all the minor coins—copper, bronze, three-cent silver and all nickel coins—have always been struck in the Philadelphia mint. All the coins issued in the parent mint have no mint mark.

Rev. H. Montgomery, New Brunswick.—Sends rubbing of a coin which may be described as follows: Obverse Maltese cross with ornaments in angles and inscription, "In hoc signo vinces," and date 1748. Reverse, inscription in three lines, "Half a--moldore--or 13.6." This coin was struck by Portugal for some of her colonies, and if genuine should be in gold with an intrinsic value of \$3.10. If it is of brass or some other alloyed metal, as we often find copies of these gold coins of Spain and Portugal, it becomes simply a copy of a genuine piece, and only an object of curiosity. Your jeweler would quickly determine for you the genuineness of the coin.

Lafayette Aulb, Mishawaka, Ind.—A "proof" coin is the first product of the finished die, they have a bright mirror-like surface. A "common" coin is just what its term would indicate, a coin that is common or easy to obtain. A "proof" coin may be a "common" coin, because some proof pieces are easily obtained.

Ralph V. Rich, Onancock, Va.—The six coins you send are all very common. Your dime of 1876, C. C. mint, is common. The rare C. C. (Carson City) dimes are 1871, '72, '73, '74. Other mint mark dimes that are rare is the O (New Orleans) 1860, and S (San Francisco) 1858, '59, '70 and '85. Other rare silver coins issued by our branch mints are: Dollars C. C., 1870, '71, '72, '73; S, 1859, '72, '73; O, 1846, '50. Half dollars, O, 1838, '53, no arrows in rays; S, 1855, '57, '78; C. C., 1873, no arrows.

A Few Canadian Notes.

The following is a list of the values of the Jubilee stamps issued in 1897: 1/2c black, 1c yellow, 2c green, 3c red, 5c blue, 6c brown, 8c, 10c, 15c, 20c, 50c, \$1, \$2, \$3, \$4, \$5.

They were all of the same design and size.

The 12d black stamp (Canadian) issued in 1851, can be easily sold for \$400. Less than 2,000 were issued and thus it is one of the world's 150 rarest stamps. In each corner are the figures 12. In the center is the bust of Queen Victoria; above which is "Canada Postage" and below "Twelve Pence."

109 varieties very fine. India, Egypt, hinges, etc. Catalogued \$1.50, only 10c. 6 v. Sardinia unused, 5c. Fine sheets 50 per cent. Lists free. Samuel P. Hughes, Omaha, Neb.

HOW TO MAKE \$4.25!
 Send me 75c for 100 green Canada law stamps, large and handsome, which sell easily at 5c each. Make splendid "traders," too. W. KELSEY HALL, Peterboro, Ont.

300 VARIETIES FOR 25 CENTS

Our 300 variety packet has proved a great winner, and you should get in the push and order one. Price, post free, **A WINNER** 27 cents. There is not a cut card, Revenue or U. S. stamp in the lot and every stamp a picked copy. Address: Echo Stamp Co., Box 897, Watertown, N. Y.

Quarter dollars, C. C., 1870, '71, '72, '73; S, 1864, '66, '71. Twenty cents, C. C., 1876. Half dimes, O, 1838, '42, '44, '48, '49, '52; S, 1871.

J. Ferd Jossen, Mobile, Ala.—Asks the value of a gold quarter of 1870. There are at least four varieties of these gold quarters of this date, two varieties octagonal and two round. They are all rare, and worth from \$1.75 up to \$3.00.

V. A. Gonzales, Atlanta, Ga., and others, ask where catalogues may be obtained showing the premium value of coins, etc. The last standard catalogues of coins, and the best ever issued in any country, were published by the Scott Stamp & Coin Co., of New York City, in 1893. A little later they gave up their coin business and the catalogues have been for some time out of print. None others deserving to be compared have been issued since. The great range in coin collecting renders a complete catalogue impossible. No dealer could afford or pretend to keep a full stock of coins in even any one line. At the same time, there are dealers like H. E. Morey & Co., 31 Exchange St., Boston, Mass.; J. W. Scott Co., 43 John St., New York; Stevens & Co., 69 Dearborn St., Chicago, Ill.; F. E. Ellis, 212 N. Fourth St., St. Louis, Mo., and others who carry very good lines and will no doubt be glad to send their circulars, catalogues, etc., to all applicants. In some instances a merely nominal fee is charged for catalogues, which can be learned by addressing them.

The only monthly coin magazine published in America is The Numismatist, of Monroe, Mich., intended for those who wish to drink deeper from the numismatic fount. Its publisher will send a sample copy on receipt of ten cents, to all who ask.

R. W. W. H. S.—No. 1, "Ship Colonies and Commerce," a common Canadian token. No. 2, England, Victoria penny, 1853, worth 10 cents. No. 3, a bouquet sou token of Montreal, Canada. There are many varieties of these bouquet tokens, some of them rare. Yours, however, is a common variety. A good 1825 cent is worth 25 cents. There were many, many hundred varieties of half-penny tokens struck in Great Britain during the latter part of last century. Yours of 1793, with a female seated with staff in hand, and a stork on the reverse, is one of them. Your other coin is a copper of Louis XVI, of France. This coin represents an interesting period in French history, the beginning of the end of imperialism, and the beginning of the first French republic. Louis XVI, is represented on the obverse as "Roi des Fran-

800 VARIETIES OF GENUINE POSTAGE STAMPS \$3.00

We lead, others follow. This offer of 800 different postage stamps for \$3.00 is a marvelous offer when it is considered that we make a guarantee that proves that this is no ordinary lot of stamps. 400 stamps at 1/2 of a cent each! Post free to any part of the U. S. or Canada. If \$3.50 is remitted, we will send an album—cloth bound, fully illustrated, with spaces for 4000—as well as the 800 different stamps, both for \$3.50! If you already have an album, or only want the stamps to sell or trade, remit \$3.00 and the stamps go by return mail.

OUR GUARANTEE.

Every packet FULL COUNT, because we put in \$10 to make up for any stamp that may be defective. Over 100 DIFFERENT STAMP ISSUING COUNTRIES OR COLONIES represented in each packet. The catalogue value of each packet is over \$20.00 by Scott's 5th Edition catalogue. Every stamp guaranteed genuine. No reprints.

All for \$3.00. Post Free.

C. H. MEKEEL STAMP & PUBLISHING CO.
 Dept. B Century Building. ST. LOUIS, MO.

YOUR ATTENTION ONE MOMENT, PLEASE.

My name is TUTHILL, Luther B., of South Creek, N. C. I want to interest you in OLD PAPER MONEY, a hobby that many are riding and in interest it rivals COINS or STAMPS.

To secure a trial order, I offer
 7 varieties of Confederate Bills for 16c
 7 of Broken Bank Bills 17c
 10 of various kinds, sizes and values 30c
 A souvenir of the Rebellion with each order.
 Remit in stamps.

coins" (king of the French). On the reverse we find the fasces (the emblem of liberty), surmounted by the liberty cap itself, with the legend: "La Nation—la Loi—la Roi" ("the Nation, the Law and the King"). Notice that in the trinity the king is mentioned last. In the exergue, 1791, 2 or 3, with the year of liberty; 3, 4 or 5, de la Liberte. Remember that in January, 1793, the king suffered death by the guillotine. Many of these coins are struck in bell metal, the church bells being taken for this purpose, melted and cast into coin. The letter A on your coin is the Paris mint mark.

John Markham, Chicago, Ill.—Asks the value of a gold dollar piece of 1892, O under wreath. As the O (New Orleans) mint only coined gold dollars for 1849, '50, '51, '52, '53 and '55, and none have been issued in any United States mint since 1889, we are at a loss to know just what our correspondent has. All the gold dollars have a premium and are worth from \$1.50 up.

The monogram of Christ is often seen on the coins of Constantine, 337 A. D., down to Constantine IV., 668 A. D. On the coins of Michael, I., A. D. 811-13, Michael III., A. D. 866-67, and Constantine X., 912-959, Christ is represented as holding a copy of the Evangelists in his right hand. On other coins He is shown seated. John I. Zimice, A. D. 969-75, gives us His full face picture, the same as we see Him represented in illustration today, with the legend translated, "Jesus Christ King of Kings."

THE BOY CURIO COLLECTOR

Be a Collector; Make Your Wants Known.

The boy in the coal regions can pick up from his path every day hundreds of little chunks of iron ore, which to the boy in other regions, would be curious and valuable.

How are you to go about it? Simply write the editor of THE AMERICAN BOY, telling him what you have and what you want, and he will make it known free of charge to the eighty thousand boys who will read the June number of this paper.

Frank Noah, Whiteside, Mo., has some Indian arrows, which he wishes to trade for some foreign stamps.

The Thanks of the Editor.

The editor of THE AMERICAN BOY has received from S. Kenwood, of Oakland, Cal., some interesting curios, with the compliments of the sender: a piece of flint from an old Spanish gun, from the "Mastranza," Fort Santiago, Manila.

It is needless to say that the editor was glad to be the recipient of these interesting articles from the far away Philippines.

J. G. Bingham, McGraw, N. Y., sends to the editor a copy of the York Courant of date Tuesday, October 23, 1744.

Jules Verne's Autograph and Biography.

WILLIS EDWIN HURD.

Last month I outlined to you somewhat of my ideal of what an "Autograph Collector's Department" should be, giving a letter from Edward S. Ellis, with a biographical sketch of the author.

This month I purpose telling you of a man whose stories have interested more American boys than have the works of any other foreign writer for young people.

JULES VERNE.

Three years ago the coming summer, I was in the height of an autograph collecting fever. Those of you who have created stories or poems for the love of it, who have been animated by any pleasurable thought in work or recreation, who have desired an addition to any

collection, know well such feelings. I believe that Shakespeare should have remarked:

"The lunatic, the lover and the poet," (Even the fad-men, in fat fancies fried—Stamps, autographs, and half the world beside—)

"Are of Imagination all compact."

When I asked M. Verne for his autograph, as also the name of one of his latest books which he would recommend me to read, the hope was small—but brilliant what there was of it—of a reply. As I had no French stamps, I did a laughable thing—blindly enclosed what I knew the author could never use—a United States stamp, and trusted to luck.

The original is here given, followed by the translation, so that any reader may avail himself of the opportunity for a comparative interpretation.

Amiens, 1 Août 97
Cher Monsieur
You see a un demandeur de la poste
avec un papier à votre lettre vous
pardonner, et dans quel Newport
vous demandez; enfin, je vous en
tend de mieux de vous remercier
à l'instant vous le saluez des
glaces, qu'on le presse volume
votre de paraitre. J'ai pu faire
base un roman d'Edgar Poe
de j'ai dédié cet ouvrage à la
mémoire de votre grand père
et aussi à vous aussi d'Amérique
ça pleure que je pense vous compter
parmi eux, et je me dis
Votre bien dévoué
Jules Verne

"Amiens, Aug. 1, '97.

"Dear Sir:—

"There is no use in asking if this little word in response to your letter will reach you, and in what Newport you live, but I will write you just the same and recommend to you the new romance, "The Ice Sphinx," the first volume of which has just appeared. I have used for a foundation a romance of Edgar Poe, and I have dedicated this work to the memory of your great poet, and also to my friends in America. I think I may count you among them, and I am

"Your very devoted,
"JULES VERNE."

While in Boston last fall, I saw on a book counter in the Archway store the story of "An Antarctic Mystery," by Jules Verne. I looked it through. I purchased it. It was the tale of the Ice Sphinx—a search for the survivors of the Grampus, the marvelous voyage which is told in Poe's romance of "The Adventures of Arthur Gordon Pym."

LIFE AND WRITINGS.

Verne's early years were spent by the Loire—a river that rushes down from between old volcanic peaks, receiving ships on the tide as far up as Nantes where the author was born. There were three boys and two girls in the family, of whom Jules and Paul were afterwards the most famous both friends in the highest sense, although brothers. When they became old enough, one of their greatest delights was in paddling on the Loire, making mariners and jolly adventurers of themselves.

At twelve he began writing poetry, copying and correcting repeatedly even at this early time. Occasionally he was quite complimented upon his success with some clever hit. At seventeen he wrote tragedies and comedies, and even novels. For then he was full of a love for the drama, knowing Victor Hugo and learning pages of his spirited work by heart. Two of his dramas were "The Gunpowder Plot," and "Alexander III." At twenty-one he became acquainted with Alexandre Dumas, the younger, who introduced him to the senior novelist. With Dumas he wrote comedies.

Jules Verne was educated at the Lycee of Nantes, then sent to Paris for the study of law. Here he was conservative in his acquaintances. He exhibited a taste for music and literature, and but little for law. Besides composing dramas and novels, with another musician he composed music and songs. About this time he began contributing short stories to various magazines. Some of the first were about musicians, or of a geographical nature, for Jules had also a passion for geography, knowing the works of Reclus by heart. One of his late novels, which I have before me, combines both with his inventive faculties. It is "The Floating Island," a tale of the adventures of four musicians upon a mechanical island made by Yankee brains, which floats among the archipelagos of Polynesia.

The romance did his first real successful work at twenty-five, when "Five Weeks in a Balloon" ushered a new imagination into literature. It was not until several years later that he went up in a basket himself. But with this important production, his path in letters seems to have been cut out. He was not to be a French author, but an author for the world. Today he would have been an immortal of the French Academy had he walked in the footsteps of Zola, Dumas, or De Maupassant. But he is original, cosmopolitan, Verne; and, somehow, the academy did not make him a member, when his name was proposed. He has, however, been decorated with the rosette of the Legion of Honor, and that just two hours before the emperors died.

Although the French master was never enamored of science, he originated the wonder science and biography novel, "From the Earth to the Moon." "All Around the Moon," and "Topsy Turvy" form a connected trilogy of remarkable tales. "20,000 Leagues Under the Sea," "The Mysterious Island" and "In Search of the Castaways," also connected, raise imaginatively power to an art. "To the Sun" and "Off on a Comet," cause the reader to revel in tales of space, in a style which no other nineteenth century author has equaled, although romancers on such topics are now many. In "The Giant Raft" appears a cryptogram, such as he learned to delight in studying, from Edgar Allen Poe.

Verne loved to go over the ground which he desired to picture, in person wherever possible. He visited Norway before writing "Ticket No. 8672." He traveled in Scotland before his "Underground City." He came to America in the Great Eastern and visited the Niagara before the appearance of his "Floating City." It was his greatest desire to journey again to the United States, to see this people whom he admired the most of any under the sun, and even lecture to them, although only those who knew French could have understood him personally, but he was one day visited by a favorite nephew, who went mad during the conversation, and shot his uncle in the leg, causing a wound which prevented the going abroad. Since then he has relied upon the accounts of other travelers for his geographical information, usually with a success at depiction such as Moore obtained solely from his reading, to set forth in "Lalla Rookh."

ber more than eighty, of which I cannot title more than one-half in translation. And such a variety of translations in our language as there are! I cannot close my talk without alluding to them. As a lover of Verne I am sorry that he reaches us usually but in abridged form. Notice that in his letter he speaks of issuing the first volume of his "Ice Sphinx." The American edition has only one. Read the single volume editions of "From the Earth to the Moon," and "Hector Servadac"—the "Off on a Comet" story—as ordinarily found in the public libraries, and compare with McKay's edition in two volumes. The latter contains twice the amount of reading in both cases. A few years ago an English translation of "A Journey into the Interior of the Earth" was completed, the proceeds of which were to go to the aid of Icelanders made homeless on an Easter Day, by an eruption of Mount Hecia. Comparing this with our American edition, I found that while the latter included perhaps twenty thousand more words of matter, yet it is lacking in the poetic ease and beauty of description which characterizes the smaller work.

Long live Jules Verne in his labors. They will live long in us. "Fifteen of Cooper's works are immortal," said Henry, but how many shall I thus say of Verne's? WILLIS EDWIN HURD.

CURIOS—Parties interested in Curios send 2c stamp for list, etc. J. W. SELLS, 10 N. 8th St., St. Louis, Mo.

GOLD DUST Genuine Gold, mixed with black sand as it is taken from the ground. A curiosity! Small package sent post free, 25 cents. J. W. SELLS, 104 North 8th St., St. Louis, Mo.

The Cleronians, of Lincoln, Neb., and the Demosthenians, of Omaha, Neb., the former for the affirmative and the latter for the negative, debated on March 9 at Omaha the following question:

"Resolved, That civilization demands that the United States adopt the policy she is now pursuing in the Philippine Islands."

The judges decided in favor of the Omaha debaters by a narrow margin. The debaters on both sides were high school boys. The speakers all did well.

The Lincoln men, however, introduced inconsistencies into their argument which the Omaha representatives were not slow to seize upon, and of which they made good capital.

Those who represented the Cleronians of Lincoln were: Mason Wheeler, John Tobin, Charles Sawyer. The fresh laurels for the Demosthenians of Omaha were won by Arthur Jorgensen, Burdett Lewis and Warren S. Hillis.

William N. Martin, of Poygan, Wis., delivered the Washington Day oration at the Northern Indiana Law School at Valparaiso, Ind., having won over several competitors in a contest for the honor. He is twenty-four years of age and will be graduated from the Law School at Valparaiso next month. His oration, "The Life and Services of Washington," was delivered in the college auditorium Feb. 22, before an audience of 2,000 people.

Leslie E. Needham, of Neoga, Ill., was awarded first prize in the oratorical contest held by the students of the Illinois College of Law at Handel hall, Chicago, February 22. Mr. Needham's subject was the retention of the Philippines.

The second prize was won by Frank E. Herrick, of Wheaton, Ill., his subject being "Bismarck." The winners are members of the freshman class. The other competitors and their subjects were Charles Harry Fich, "A Comparison of Two Republics"; John J. Ives, "Americanism"; Craig A. Hood, "Patriotism," and Melvin C. Moyer, "Abraham Lincoln."

A Boy's Mother.

My mother, she's so good to me,
 If I was good as I could be,
 I couldn't be as good. No, sir;
 Can't any boy be good as her!
 She loves me when I'm glad or mad,
 She loves me when I'm good or bad,
 An', what's the funniest thing, she says
 She loves me when she punishes.
 I don't like her to punish me,
 That don't hurt, but it hurts to see

Her cry. Nen I cry, an' nen
 We both cry—an' be good again.
 She loves me when she cuts and sews
 My little coat and Sunday clothes.
 An' when my pa comes home to tea
 She loves him most as much as me,
 She laughs and tells him all I said,
 An' hugs me up an' pats my head.
 An' I hug her an' hug my pa
 An' love him purt nigh much as ma,
 —James Whitcomb Riley.

The American Chromatic Harp
 Only perfect, strongest, lightest, most beautiful and easiest learned. Plays any piano music. Greatest addition to orchestra. Music teacher can readily instruct and sell them. For circular and sample music send two stamps to American Harp Office & Studio, 26 N. Clark St., Chicago, Ill.

Every Lover of Art
 Will be glad to know that we have arranged for the exclusive right to reproduce twenty-five of the Masterpieces of America's Greatest Artists in the Finest Photogravure Process. These photogravures represent paintings that have been sold for thousands of dollars, and others that are fresh from the artists' brush. They would sell rapidly at any art store at \$5.00 each, but they cannot be purchased except directly from us, as we absolutely control the copyrights. The Masterpieces of twenty-five of our Greatest Native Artists now for the first time available in a single collection. Beautify Your Home. The Artists (Each represented by his best painting). J. Carroll Beckwith, A. T. Bricher, J. Appleton Brown, J. G. Brown, Carlton T. Chapman, William A. Coffin, Bruce Crane, Charles C. Curran, J. H. Dolph, Seymour J. Guy, Hamilton Hamilton, James M. Hart, Child Hassam, E. L. Henry, Francis Coates Jones, H. Bolton Jones, Robert C. Minor, Thomas Moran, H. R. Poore, F. K. M. Rehn, R. M. Shurtleff, A. F. Tait, R. W. Van Boskerck, Edgar M. Ward, Carleton Wiggins. AN ART EDUCATOR. This magnificent collection will at once stimulate and cultivate a desire for the artistic. Accompanying each picture is given a description of the painting, also a portrait and biographical sketch of the artist, an interesting account of his early studies, how he was led to take up art as a profession, in what schools and under what masters he received his instruction. It describes his trips and sojourns abroad, where and when his paintings were first exhibited and the honors they received both in Europe and America. The titles of the artist's most notable paintings are also given, and where they now are. All of this information is not only interesting, but exceedingly instructive. SPECIAL PROPOSITION. Good During April Only. Prices Advanced May 1. "Seeing is believing" and we want to convince you and have you tell your friends about this beautiful, exclusive and valuable collection. To those, therefore, who write at once we will send one of our original specimen sets, being the first sharp, clear impressions from the fresh, new plates. The price will be less than one-third, the payments easy, with the privilege of returning if not satisfactory. Clip this special proposition and send with your letter. WRITE AT ONCE FOR FULL PARTICULARS TO American Art Publishing Co., No. 156 Fifth Avenue, New York City.

IN THE HANDS OF THE ENEMY.

Harold: "We are very repentant and will never again molest Farmer Jones' bees—no, never!"
 Gilbert: "We are dreadfully fond of honey; but, oh, my! how we have suffered."

THE AMERICAN BOY

The Only Distinctively Boy's Paper in America.

[Entered at the Detroit, Mich., Post-office as second-class matter.]

The American Boy is an illustrated monthly paper of 24 pages. Its subscription price is \$1.00 a year, payable in advance.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper shows to what time your subscription is paid.

Discontinuances. Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

75,000 FOR JUNE.

The Story of Success Continued.

With the coming of May we write the seventh chapter in the story of THE AMERICAN BOY'S success. This chapter begins with the circulation of THE AMERICAN BOY at 45,000 and closes with it at 65,000—a gain of 20,000 in the month of April, and an average growth for the ten days of April preceding publication of 642 a day. Within the past sixty days the Manager of our Advertising Department has visited every prominent advertiser and advertising agency in Chicago, Buffalo, Rochester, Springfield (Mass.), Boston, New York and Philadelphia, and has everywhere met a cordial welcome and an assurance of patronage. In many places he has received unusual courtesies, and in no place was THE AMERICAN BOY looked upon as any other than a high-toned, meritorious aspirant for business.

Our Editorial Motto—Everything Good for Boys, and our Advertising Motto—One Rate to All. Special Concession to None. First-class Patrons or None, appeals to business men and makes soliciting easy. We know that advertisers are really more anxious to find good mediums than are publications to find advertisers, and that is saying much. We therefore are bending our energies first to the producing of a meritorious publication in which boys and their parents will have confidence, and then, with that gained, we confidently expect the advertiser to come. This paper does not cut rates, does not make special concessions, does not employ special representatives, does not employ solicitors, aside from its Advertising Manager, who himself will, at convenient intervals, go over the field, and its statements as to circulation, terms, etc., can be fully relied on.

The June issue of THE AMERICAN BOY will be at least 75,000 copies, and copy for advertisements must be in our office by May 10 to get favorable position.

By E. MILLER. NEW YORK CITY. AGE, 10 YEARS.

THE AMERICAN BOY

CALCULATING PENCIL YOU NEED ONE.

Have You Seen ?

The American Boy's Wonderful Calculating Pencil? The pencil that figures with a twist of the wrist? That figures quicker than you can and never makes a mistake? That calculates anything from 1 x 18 to 12 x 24 in the twinkling of an eye? That gives you hundreds upon hundreds of calculations with the swiftness and accuracy of an expert?

The American Boy Calculating Pencil?

Can you tell as quickly as this pencil how much 11 x 24 is? or, what 9 dozen at \$1.80 costs? or, how much 8 per cent of \$1617 is? etc.

"It is truly a little wonder," says the Pittsburg Press. "It is a marvel of ingenious mechanism and has excited a great deal of interest among our readers," says the Boston Traveler. An article of the greatest educational merits," says the Youths Companion.

Can You Beat It? Made of pure Aluminum, and is attached to a pencil of standard quality. Fits any common lead pencil. Is also a pencil point protector, a pencil lengthener and eraser. Can be carried in the vest pocket.

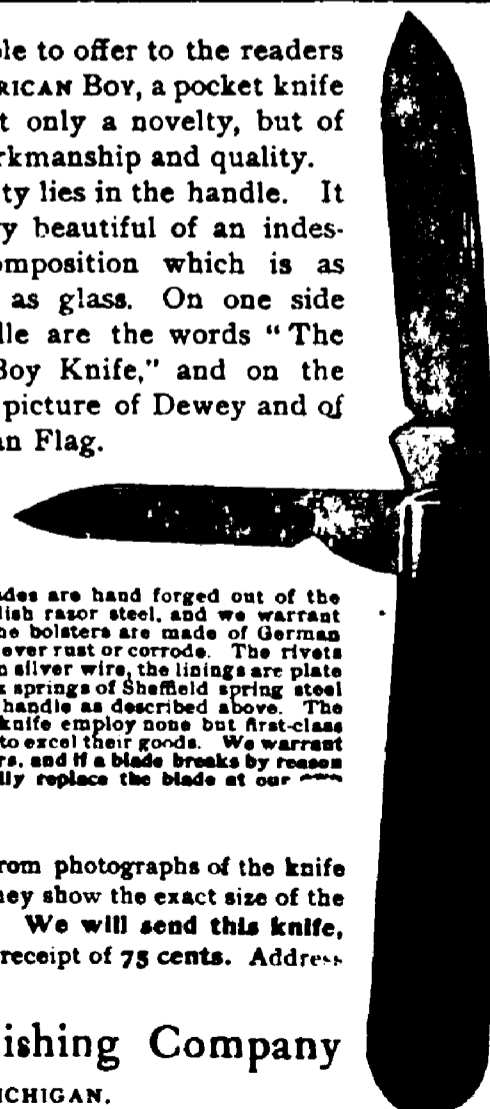

BY MAIL, Address PREPAID, 15c. **THE AMERICAN BOY, DETROIT, MICH.**

THE "AMERICAN BOY" Pocket Knife

¶ We are able to offer to the readers of THE AMERICAN BOY, a pocket knife which is not only a novelty, but of superior workmanship and quality.
¶ The novelty lies in the handle. It is made very beautiful of an indestructible composition which is as transparent as glass. On one side of the handle are the words "The American Boy Knife," and on the other side a picture of Dewey and of the American Flag.

The material entering into this knife is of the very best quality; the blades are hand forged out of the very finest English razor steel, and we warrant every blade. The bolsters are made of German silver and will never rust or corrode. The rivets are hard German silver wire, the linings are plate brass. The back springs of Sheffield spring steel and the finish of handle as described above. The makers of this knife employ none but first-class skilled cutlers and they defy the world to excel their goods. We warrant this American Boy Knife to all purchasers, and if a blade breaks by reason of a flaw in the steel, we will cheerfully replace the blade at our expense.

¶ The cuts herewith are taken from photographs of the knife itself and are full size, that is they show the exact size of the knife when open and when closed. We will send this knife, postage prepaid, to any address on receipt of 75 cents. Address

The Sprague Publishing Company
DETROIT, MICHIGAN.

Pen and Pencil Contest.

Two hundred and seventy-two contestants entered for the prizes offered in the March number of this paper to the boys under eighteen who could make the best sketches with pen or pencil. Of course, with so many contestants and so many good pictures that came, we have been greatly bothered to know how to decide on the winners. The first prize goes to Evert Packford, Detroit. The second prize to John S. Spicer, Harrisburg, Pa. We give a page in this number of our paper reproducing some of these pictures. This contest was a very interesting one, so we repeat the offer made in the April number to boy artists: A prize of one dollar will be given to the boy under eighteen who sends us the best sketch, either pen or pencil, the sketch to be in our hands by May 15. The second prize of fifty cents goes to the one sending the next best sketch. Choose your own subject. Make your sketch as black as possible, for otherwise we cannot reproduce it. Always write your name, address and age on the back of the sketch.

Photograph Prizes.

The first prize amateur photograph in the last month's contest goes to Chester Padlock Mills, West Point, N. Y.; second prize to Forest S. Harvey, St. Albans, Vt. The pictures that won the prizes will appear in our June number.

Boys Who Won the Stamps.

We have received one hundred and sixty-two foreign stamps since the issue of the March number of THE AMERICAN BOY. As promised, we give the boy sending the largest number of subscriptions during the past month one-half of these stamps. Albert W. Fifield, of Minneapolis, Minn. gets them. We send to the boy getting the next largest number one-fourth of the stamps, and John D. Cronenweth of Detroit gets

them. Louis Straka, of David City, Neb., gets one-fourth for sending in the third largest number during the month. Now we repeat the offer: Will give to the boy who sends us the largest number of subscriptions by May 10, one-half of the foreign stamps that accumulate in our office, and to the boy sending in the second and third largest numbers one-fourth each of the stamps.

Prizes Offer.

To the boy who sends us the first correct solution of Puzzle No. 47, we will give a six months' subscription to THE AMERICAN BOY in the name of some boy whom the winner may choose. To the boy who sends us the first correct solution of Puzzle No. 48, we will give a six months' subscription to THE AMERICAN BOY in the name of some boy whom the winner may choose. To the boy who sends us the first correct solution of Puzzle No. 49, we will give an AMERICAN BOY Base Ball Scarf. To the boy who sends us the first correct solution of Puzzle No. 50, we will give an AMERICAN BOY Key Ring. To the boy who sends us the first correct solution of Puzzle No. 51, we will give an AMERICAN BOY Watch Charm.

Short Story Contest.

On the front page of this number of THE AMERICAN BOY appears a picture. Write us a five hundred word (or less) story, using this picture for a text. We will publish the best one in the June issue, and will pay the writer of it \$2.00. We will publish the next best one in the same issue and pay the writer of it \$1.00.

Prizes for Mistake Hunters.

To the boy first notifying us of a mistake in spelling (dialect not considered) in this number of THE AMERICAN BOY, we will give \$1.00. To the boy next in point of time who detects a mistake, 50 cents. To the boy sending in the largest list of mistakes, \$2.00.

NEW PUZZLES.

DAWSON SOAP CO., 54-58 FIFTH AVE., DEPT. 180, CHICAGO, ILL.

GOOD WEATHER COMING. Good Time for the \$1,000 Boys

There are fifty-five boys, each of whom, next Christmas, is to receive a prize of from \$5 up to \$200, for getting subscriptions to THE AMERICAN BOY. In all, \$1,000 will be distributed. If you send in one subscription, you are in the race. If you send in two, you are a little nearer a prize than is the fellow who has sent one. If you have sent five, or will have sent five by next December, you stand a good chance of getting a prize. One boy is ahead of all. If he keeps ahead he will get \$200, and the fifty-four who follow him in order will all get nice cash prizes, none of which are under \$5.00. The head boy has not sent in very many—not so many but that you can catch up with him and pass him easily.

Remember, too, you get a premium, to be selected from our premium list, for every subscription, just the same as if you were not trying for the money prizes.

The Twenty at the Top.

Eight boys have jumped up to a place among the first twenty, during the month that has just passed, namely: John D. Cronenweth, of Detroit, Mich., who has jumped into fourth place. His name did not appear last month as one of the first twenty; now it is one of the first four. The other new ones are, Charles Meader, Chicago, Ill.; Louis Straka, David City, Neb.; Frank Brine, Revere, Mass.; Fordyce Kinsala, Gilby, N. D.; T. R. Smith, Mokane, Mo.; Harry Clark, Norfolk, Conn., and Harry R. Mohler, Ephrata, Penn. The list of the first twenty, as they now stand in their order, is Albert W. Fifield, Minneapolis, Minn.; Charles Gustafson, Chicago, Ill.; Emerson T. Cotner, Detroit, Mich.; John D. Cronenweth, Detroit, Mich.; J. Lawrence Hirschland, Reading, Pa.; Clarence Pyeatt, Fort Lemhi, Ida.; Carl Mathews, Dubuque, Ia.; Herman H. Smith, Lamoni, Ia.; Donald Annis, Detroit, Mich.; Charles Meader, Chicago, Ill.; Robert M. Gray, Hasbrouck Heights, N. J.; William Northwood, Forest Hill, Cal.; Louis Straka, David City, Neb.; Fred H. Hiker, Fort Wayne, Ind.; Frank Brine, Revere, Mass.; Fordyce Kinsala, Gilby, N. D.; Frank Wright, Lewiston, Mont.; T. R. Smith, Mokane, Mo.; Harry Clark, Norfolk, Conn.; Harry R. Mohler, Ephrata, Pa.

Do Not Forget.

Would you not like to be one of those who, in December next, will receive our check? Some boy will get \$200; another will get \$100; two will get \$75 each, three \$50 each, five \$25 each, fifteen \$10 each, twenty-five \$5 each. The boy who has sent us the largest number of \$1.00 subscriptions for THE AMERICAN BOY by the 20th of next November will get the prize of \$200; the next in order \$100, the two next \$75 each, and so on. Fifty-five boys in all will get a share in this \$1,000. You can easily be one of the fifty-five. You may not get the head prize, but you can get one of the smaller ones just as easy as anything. The boy who is ahead for the first prize of \$200 has only sent in thirty-nine subscriptions, so that the race is still an open one for the \$200. There remains nearly seven months within which to work for these prizes.

Now go right to work, as you will find THE AMERICAN BOY an easy paper to solicit for. Respectfully,

Detroit, Mich. The Sprague Publishing Company.

FOR SELLING OUR JEWELRY NOVELTIES.
Watches, Cameras, Bracelets, Gold Rings, given away ABSOLUTELY FREE for selling our jewelry. No money required. Send us your name and full address on a postal card, and we will send you 18 gold pins scarf and stick pins, all set with different colored stones, to sell for 10 cents each. A YOUNG THIEF AND HOW HE WAS SAVED

...A SCHOOL STORY...

RALPH C. ELY

School had slipped along delightfully all through the year, and pupils, teachers and principal were in the most kindly spirit, one toward another. Of course there had been a skip now and then when a spell of mischief seemed to settle down for a day, but as a whole, nothing had occurred from September to April, that gave cause for regret. The senior class was the largest and best within the memory of the oldest inhabitant—seven lovely girls and six sturdy, manly boys, the choicest product of the community.

One day in April, however, when the fellows were making assessments for the spring sports, and the girls were preparing for the gayest frolics of the year, Professor Bradley was told that a little money, left in the pocket of a wrap in the wardrobe, was missing. He passed from room to room, looking long and hard at the faces before him, trying to believe that the thief was there, but he could not. Then the incident was forgotten. A few days—maybe two weeks—passed and a similar complaint was filed at the office. A girl's pocketbook had been taken from her desk. Then a teacher lost some change and finally another teacher lost her hand-bag containing several dollars and a check for a full month's salary. The matter had grown serious. Professor Bradley was worried. He was educating someone for the penitentiary—not a pleasant prospect for a schoolmaster who loves his boys and girls, whose reward in great part is to be found in their future usefulness and worth. It is not our purpose to relate just what steps this pedagogical Pinkerton took to "land his man;" enough now to say, the eye of an affectionate, though stern friend, was on the youngsters during the next few weeks. Day and night, at work and at play, in school and out, he sought out that one of his unfortunate charges upon whom the blight had fallen, determined to cut away the dead wood and save the tree. Finally he fixed upon Frank Larned, the brightest, jolliest, most popular boy of the senior class. He struggled hard against the conviction, because the lad had grown strongly upon him during all the years of their association, and, like a boy with a sore finger, he wished it had been any other one. Then he sought evidence of other slips by the weak one and found them on every hand through several years. The poor old mother tearfully admitted that she had lost her guiding influence months and months before, and as Professor Bradley reviewed his own efforts he remembered that every suggestion which had been made, every instance where discipline had been even slightly irksome to the boy, he had wilfully taken his own course in absolute disregard of all authority both at home and at school. With all this in his mind and great anxiety for the boy in his heart, the schoolmaster

RELUCTANTLY ADMITTED EVERY THEFT.

first sought to stay the wayward course, but to no avail. As a final step, the boy was confronted with evidences of his guilt and, brought to bay, reluctantly admitted every theft. It was the same sad story of how "the little foxes gnaw the vines." First sugar, then cookies, then pennies, then dimes. Hardly a year had passed, since he was an infant, but recorded one or more thefts, and here he was, a young man, elegant to look upon, a leader in athletics, almost brilliant in his classes, clean in every way except that he was a thief and had been for years. He was almost ready to be graduated as a pupil in the High School, and quite as ready as a criminal.

Mr. Bradley and Frank talked over conditions with the utmost candor and the boy explained how, tempted from time to time, he had stifled conscience so often that only fear of punishment deterred him now from greater wrongs. He looked the future fairly in the face.

"Hard as it may be at this time, Mr. Bradley, I am glad you have found me out. I hope that you will do whatever you think is best; I do not want to live an outcast, but fear that as things are I cannot withstand such temptations as men must often meet."

The schoolmaster had not slept much the night be-

fore, and out of the silence and gloom had shaped his plans. His voice trembled a little as he replied:

"Frank, I am too fond of you to let it pass. The fiber of your soul is firm and strong, like the muscles of your body, and the lesson must be harsh now if it prove effective. I shall make complaint against you this morning for petty larceny. Your offense would warrant a more serious charge. You must plead guilty, and our friend, the Justice, will probably sentence you to ninety days in the House of Correction. When the weeks of the winnowing are passed we will see how much of manhood is left."

"That is a little tough, Mr. Bradley," said the boy, "but I am ready. May I see the girls whose money I have taken, sir?"

Then one after another of those against whom he had offended entered the room and received his penitential confessions of theft, and his solemn pledges to make good the amount when he should "get out of jail." Everyone in the school room was in tears, and the boys from more comfortable homes whose thoughtless gibes had no doubt done their part in Frank's temptation, were engaged in searching scrutiny of their own responsibility.

The five o'clock train bore Frank away to the enforced companionship of crime. His father and Bradley were at the station with hearts as heavy as his own. He was to pass in and out among murderers, counterfeiters, highwaymen, outlaws of every sort. The father was to bear his anguish and seek to console a heart-broken mother. The teacher was to face a wrathful community and an alienated school, aroused because of his severity. Each had his burden, but the boy's was infinitely the heaviest.

The iron doors clanked behind him, shutting out liberty and life and love. He was designated as No. 10,729 and identity and selfhood were wiped away. He was assigned a cell—a cage with hardly more than a plank to rest upon, and the human side of life was gone. His books, selected for the dreary hours by Mr. Bradley, were taken from him, and his mind was left an unbroken plain over which the strong winds of passion and tempests of repentant thought could sweep. He was assigned the task of assorting buttons, and for three weary months he stood at a bench in explanation for his sin, unspeaking and unspoken to. Once only, joy peeped in behind the bars. A convict, hardened by former service, and touched by the picture of the boy's despair, smiled at him, and his soul was so lifted up that he smiled an answer back. "This is not a place for smiles," growled the guard. Then memories of the happy days surged through his repentant heart.

The weeks rolled heavily away. The school sorely missed Frank's hearty, happy spirit, and the community in many ways expressed its disapproval. Lawyer Squibs, who felt the loss of a possible fee most keenly, declaimed upon the barbarism of a conviction without an argument. The women sputtered at their societies because of the lack of the milk of human kindness in the teacher's heart. The preachers successively came to Bradley and told him what he ought have done. Frank's father and mother alone retained their faith in his purposes and spoke no word of criticism or of censure. Professor Bradley merely urged his critics to try and undo the wrong which they thought he had done. On the evening of the boy's home-coming, the former culprit and his accuser walked arm in arm up and down the street together, viewing the future and taking stock. Their plans were laid and hope revived. It was a little hard to find employment, but by and by a man, hard in a bargain but who knew life's seamy side full well, took Frank upon his farm for the harvest and fall work. The boy had not known that year the sun's fierce rays. The work was heavy and he was weak from the coarse and unappetizing food of the prison, but he took hold with a will. What were sun-burns and blisters and stone-bruises to him? He was working for his restoration. On each successive pay day he took his scant reward and trudged manfully to the wronged ones to restore what he had taken. By February he was ready to resume his tasks at school. How he dreaded to meet the faces of his friends! How lonely the old room would be without his cherished class! Would the little ones stare at the boy who had been in jail?

"Monday," said Mr. Bradley in chapel one day. "Monday we are to receive a trust into our keeping. A friend is to come among us whose future we, in a measure, hold in our hands. Our own prodigal one, sorry for his wanderings, which, my dear young friends, were long before he ever left us, is to come back again. Let us be glad at his home-coming and

make him glad. I trust that there is not one here who will so far forget himself as by word, or act, or look to make his return harder than it must needs be."

Frank hardly felt that he had been away. His old seat was awaiting him. The boys left the same peg for his hat. He was accorded his place in the sports and was welcomed into the new senior class. It was all so kindly done, with so much of youthful grace and ease, that there seemed no barrier between them any more, and he felt himself to be a freer, better, manlier fellow than for months before his humiliation.

As the year drew toward its close he saw first one and then another neglected task of those wicked weeks cleared away. Note books, experiments, essays, examinations, reviews, evaded duties of every sort were recalled and, with it all, his daily work was done so well that Professor Bradley would willingly have lightened the anxieties and burdens of examination week if Frank had agreed; but he desired to win his spurs, to redeem himself, to prove himself a man, and would accept no remission of his tasks.

Commencement evening came. He had triumphed in every test. A year before, with tearful eyes he had read in jail the commencement program of his class; but tonight he was, as valedictorian by choice of his newer associates, to bid adieu for them and for himself to the dear old red-brick schoolhouse where he had fallen and had risen again. The light, the music, the vast throng of spectators, the group of former graduates on the stage, above all his old class, whom he knew and loved so well, all uplifted, but bewildered and frightened him. The essays and orations over, he heard his name, saw Professor Bradley smile, took his place a moment with hardly concealing utterance, heard cheer after cheer, and knew that he had won applause. It was so like a pleasant dream, so unlike that horrible nightmare of the past, that he almost feared it would float out of memory, even as another memory haunted him.

Then all the class arose while Mr. Bradley spoke the final words of congratulation and of parting. Honest John Bigelow, for half a generation president of the Board of Education, stood by the professor's side, his arms full of diplomas, his eyes full of tears, his heart full of benedictions. The good man passed the scrolls to each of the honored ones, but not to Frank, who beheld with a sudden sickening of heart that there was none for him. But while the whirl was yet in his brain, he saw Professor Bradley approach with his diploma, felt him take his hand in congratulation and lay an arm affectionately across his shoulders. The two thus stood at the front of the platform.

"Friends," said the man who loved him well enough to hurt him for his good, "there is no greater pleasure possible than that which I enjoy at this moment. You all know a little of this boy's struggle, of the price he has paid for this night's honor; but you know only a little. He stands before you tempered by fire. He

"HE STANDS BEFORE YOU TEMPERED BY FIRE."

has faced what few have the courage to face. He has endured what few have the strength to endure. I introduce him to you tonight, not as a boy of promise worthy of this diploma, but as a treasured friend, a manly man who has paid the price of great wisdom and is worthy of your unbounded confidence. Let us treasure in our memories forever the record of his heroic struggle, and honor the manhood of the victor."

Tears streamed down kindly faces, and hard hearts were softened. Then the multitude arose and with one mighty voice paid tribute to the boy culprit who had endured and triumphed. Back among the last year's class there was a sweet little face covered with blushes, two great blue eyes swimming with pride, and a gentle heart beating hard with pleasure at the public endorsement of her faith. While among the group of parents there were none more happy than the aged pair holding each the hand of the other, and in the midst of the tumult sending up a silent thanksgiving to God for the redemption of their boy.

JACK AND JILL

HARRY NEWTON GARDNER

It was the second morning of school. A slight buzz, denoting a proper attention to study, was to be heard within the rough, little log schoolhouse.

The first class had just been called, when a slight titter was heard throughout the room. Noticing the direction in which the pupils were looking, I turned to the door, which had been quietly opened. There

THERE STOOD ONE OF THE QUEEREST PERSONS IMAGINABLE.

stood one of the queerest persons imaginable. The body was evidently that of a boy. To the face it would have been possible to ascribe almost any age. One eye was gone, gouged out by an accident; the other first sparkled as with the wisdom of years, then turned to the floor with the most childish diffidence. The mouth was one of youth; the lines that led away from the corners of it into the hollow cheeks were those of old age. The clothes were peculiar, even for that locality, where but slight attention was paid to fashion and one could see almost any kind of costume imaginable. The copper-toed boots, the coarse, ragged trousers, too long for short pants, too short for long ones; the coat, a sort of sack cutaway that had been made for a much larger person; and the old hat, which had once been a glossy "stove-pipe," but was now battered down into a mass of creases with part of a brim attached; all these appurtenances of dress led the imagination by easy stages from extreme youth to old age.

Noticing the embarrassment of the newcomer, I went to him and began: "Well—" Here I paused, hardly knowing whether the expression, "my boy" would be applicable, then began again: "Well, what can I do for you?"

"I'm Jack Holland, an' Pap says 'at I can come. Couldn't come yeast'day."

"All right, Jack. Have you ever been to school before?"

"Went two months a couple o' years ago, over'n the Fallin' Angel diggin's."

"And how old are you, Jack?"

"Twelve, goin' on thirteen."

Then he was only a child, after all; one of those children, such as you often meet, from whose faces suffering and hardship have erased the marks of youth, substituting therefor an ogreish expression of age.

Suppressing the laughter and remarks of the pupils caused by his strange appearance and actions, I soon learned as much as possible about his previous schooling, found him a seat and directed him in his studies.

Suddenly, during the recitation of the first class, there was a noise just outside the door—a squeaking, rasping, unearthly noise, as if a whole mill full of saws were being filed.

The new boy must have discovered a look of surprise on my face.

"That's Jill," he explained, unmindful of the laughter of the other pupils.

A moment later the door was unceremoniously pushed open, and in came the owner of the voice.

A beautiful Colorado burro never existed, but Jill was about the homeliest of her species.

Lacking the bashfulness of her master, she came unhesitatingly into the room. I started to drive her out.

"Better look out! She's mighty unsartin with strangers—at that end," cautioned Jack, the latter part of his sentence added because of the "about face"

movement of the quadruped, and the vicious manner in which the heels from "that end" beat a lively tattoo in the air, altogether too close to my ears for comfort.

Unmindful of the flying heels, Jack walked up, placed his arm around the burro's neck and led her from the room.

After that Jack and Jill were regular attendants at the school. The burro never again essayed to enter the house, although she would often look in at the door. Although not tied, she never wandered but a few yards from the house. Let any of the other children go near her, and her heels would instantly fly in the air. Whenever Jack was outside she would follow close at his heels like a dog. Several times every day the monotony of the school room would be interrupted by the sound of her voice.

I never saw Jack when Jill was not close at hand. If Jill was seen patiently standing in front of a saloon, it was proof that Jack was in search of his father. If a discordant sound came floating from the mountain side, one could be certain that "Jack and Jill were going up the hill." If Jack was ever seen when he was not perched in the home-made saddle on her back, one was sure to see "Jill come following after."

Knowing almost nothing of books at first, Jack soon developed an insatiable desire for knowledge. The manner in which his quick mind grasped every bit of information was marvelous.

Noticing that he never took part in the games of the other children, and seemed to hold aloof from them, I went one noon to the place among the sage where he had gone to eat his dinner.

"Why don't you play with the other boys?" I inquired.

"Cause they laugh at me, an' they call me 'one-eyed Jack.' Not that they mean anythin' by that," he hastily continued, fearing he had said something that might get the others into trouble, "but you know they have to have some way to 'stinguish me from Jack Brandon: an'—you know it kind a' hurts."

Then pointing to his book that lay open on the ground before him, he continued: "I want to study all the time I can. You see, I don't know how soon this lead'll peter out, an' I got to work it for all there is in it."

Something led me to ask him about the loss of his eye. He hesitated, as if loath to answer, then replied: "Well, you see, Pap didn't 'low for to do it. He wouldn't a' slung the pine chunk at me if he'd a' knowed what he was doin'."

So it was his father, in one of his drunken furies, who had thrown a stick of wood, tearing the eye from its socket.

Many times during my stay in that town I saw Jack lead his father from some saloon, and steady the staggering steps as he led the drunken man up the trail toward the cabin on the mountain side, where the two lived alone.

"JACK AND JILL WERE GOING UP THE HILL."

One day the boy's eye sparkled as he told me that "when Pap strikes it rich" he was going to college.

That night I saw him getting his drunken father away from the worst saloon in town. The next morning when he came to school his one eye was surrounded by purple marks and so swollen that he could hardly see. In answer to my inquiries as to the cause of the injury, he hesitated, then stammered: "He wouldn't a' done it if he'd a' knowed what he was a' doin'. Pap's good to me when he's hisself. He says when he strikes it rich—"

I turned away sick at heart. It was easy to foretell when such a man would strike it rich.

One morning near the first of December, Jack and Jill were absent from school. It was the first time that the boy had not been in his seat at the ringing of the bell. It was not until night that I learned that his father had been in an uglier mood than ever the night before. On his going home, the man had attempted to shoot the boy. In a scuffle, the weapon had been discharged and the bullet had passed through Jack's arm, so shattering it that the physician was compelled to take it off, just below the elbow.

It was impossible for me to go to see Jack that night; but the next afternoon as soon as school was dismissed, I hurried up the trail to the cabin.

Mr. Holland was outside, sober, crestfallen and thoroughly repentant. Not knowing when another

opportunity would come, I waited outside long enough to deliver a scathing temperance lecture, hoping the wreck of a man would profit thereby.

When I entered the cabin Jack was lying on a rude bunk propped up with some old garments and a single pillow. He must have heard what I said to his father, for as soon as I entered he began: "Pap didn't go fur to do it. You see I knew 'at he didn't know what he was doin', and I grabbed hold o' the gun, an' that's the way it happened."

Poor boy! Still striving to excuse his miserable father. He did not know that I knew that if he had not "grabbed hold o' the gun," it would have been through his body instead of his arm that the bullet would have gone.

An open book lay before him. Even so soon after his accident he was trying to go on with his studies. As I picked up the book he pointed to it and offered the explanation: "With one hand an' an eye gone, I won't be worth much for work, an' I've got to follow that vein now 'til I strike the main lead."

As I sat talking with him, Jill pushed the door open and marched to the side of the bunk.

I MADE OUT THE FIGURE OF A BOY WEARILY GUIDING THE FOOTSTEPS OF A STAGGERING MAN.

"Good Jill! You're sorry for Jack, ain't you?" murmured the boy as he put his arm around her neck and placed his cheek against her shaggy head.

The poor child had long been exposed to hardship and abuse; but he had a hardy constitution, and the cut arm healed rapidly. The doctor said it would only make him worse to keep his books from him; so I used to go up several times a week and hear him recite. It was his right arm that was gone; but he resolutely set to work to learn to use his left, and even before he was out he could write fairly well.

It was but a few days before the close of the session when he was able to come to school again. Such was the admiration for him felt by the other pupils since they had come to know more of him that he was accorded quite an ovation when he first reappeared among them. There were no more jeers and uncomplimentary remarks and Jack was quite the hero of the hour.

What seemed to please him most was the information that he imparted to me one day that "Pap's been himself ever since that night, and he thinks he'll strike it rich pretty soon now."

The next morning I noticed the joyful look was gone from his face. The old lines of sadness and age had returned. When I called him to me and put my arm around him he said nothing, but began to cry. No words were needed to tell me what was his trouble.

Three days later I left the place. As the stage went up the winding road above town, I looked across the canon. On the trail leading up the other side of the mountain, a short distance below the lonely cabin, I saw three moving objects. Taking a pair of glasses I easily made out the figure of a boy wearily guiding the footsteps of a staggering man. Close behind them, with her head down, as if she, too, realized the shameful situation, followed a burro.

A moment later there was borne to my ears across the canon a doleful sound, a sound like the squeaking of a rusty hinge.

Poor Jack and Jill were going up the stony hill of life.

That was fourteen years ago. During those years I heard no more of Jack.

Last summer business took me to a progressive mining town in central Colorado. Inquiring at the hotel for a good attorney to attend to some legal business, I was told that Holland was one of the best lawyers on mining law, or any other kind of law, for that matter, to be found in the country. My informant imparted the further information that the lawyer mentioned then had a case on in court, and that I could find him at the court house.

Following the directions given me, I was soon inside the crowded court room. Before the bar of justice sat a bear-eyed wreck of a man, charged with grand larceny, a crime committed while he was intoxicated.

The defendant's attorney was just making his plea. I soon found myself, like the other listeners, spellbound by his eloquence. Soon I noticed that his few gestures were all made with his left hand. I saw that

the right hand was missing. When I got a glimpse of his face I saw that one eye was gone.

As I stepped up to him at the adjournment of court, the young attorney hesitated a moment, then as a look of recognition flashed over his face, my hand was seized in one of the heartiest clasps it has ever felt.

As we passed from the court house I asked him about his father.

"Father's pretty old and feeble now; he's with me," was the reply; then, half apologetically still, he continued: "You know father never did seem to strike pay dirt."

"And Jill?" I inquired.

Before he could answer, a harsh, discordant noise, low at first, then swelling louder and louder, came echoing from somewhere down the street.

"She's calling me now," he replied with a laugh. "She's getting old, too, and you see age has not improved her voice; but to my ears there is no sweeter music on earth."

ADINORAM PENWHISSEL AND THE PERSIAN PRINCESS

CHARLES BATTALL LOOMIS

(Copyright by the Author.)

Adinoram Penwhissel lived in East Bigtown, a village somewhere between the Atlantic and Pacific coasts in the United States, and he was very fond of going to the circus. That is, if a person can be fond of doing a thing that he has done but once in his life. For until he was twelve his circus going had been limited to one small circus, and as a tornado had whipped the tent out of sight before the show began he really did not see much of that one.

But soon after he was twelve a real "Aggregated Amalgamation," as it was called on the posters, came to Bigtown Center and Adinoram, after he had feasted his eyes on a picture of a green and pink snake swallowing himself in a den of lions hurried home, and taking out his little tin bank drew therefrom twenty-three cents with the aid of his "toad-sticker."

Twenty-three cents, and the admission for boys was a quarter of a dollar! Adinoram was on the point of tears, for he knew that his father did not believe in circuses, having entirely forgotten his own youth. No, that is not the way to put it. Abraham Penwhissel had not forgotten his youth; he had never had any. He had been one of those sober and distressing boys who think it silly to laugh and foolish to play, and he was just as much an old man when he was eight years old as when he was sixty. Rather rough to remain a boy all through life.

Adinoram had no mother from whom to get two

ONLY TWENTY-THREE CENTS.

cents, so he did not see how he was going to buy the ticket. He had been six months saving up the twenty-three cents, and the ways to earn money at East Bigtown were few and far between. At last, knowing nothing of the ways of ticket sellers, he resolved to try to get in on twenty-three cents.

He lived some miles from Bigtown Center and so he did not see the lovely street parade with the most beautiful woman in the whole world—bar none—sitting on top of a rickety gilded globe and smiling hard enough to give her facial paralysis. But his father needed corn meal for the chickens, and not knowing anything about the circus he told Adinoram that he could go and get it, and even said that he needn't hurry, as the horse was a little lame. This was sufficient excuse for Adinoram, and he determined to squeeze the circus in somewhere. But on the way into town he forgot that the horse was lame, and really made a record that Betsy had not equaled since her younger days, some twenty years previous.

He got the meal and put Betsy under the Baptist church sheds, and then his two feet ran a race to the circus tent that was pitched in a flat field near the Mad river.

The ticket seller, in a gorgeous red wagon with an opening at one end, was a very busy man just then, and the stream of people approaching him was very long, but he was just clawing in money and slapping down red and yellow pasteboard tickets, but when Adinoram reached him he put his twenty-three cents down before him, and speaking quickly and to the point, said: "I lack two cents. Give me a ticket and I'll come out before it's over."

Now, I leave it to you if most ticket sellers would not have told him to get away from the wagon and not ask silly questions, but there was something in Adinoram's very honest little face that made him slap down a ticket and say with a smile: "You can see the whole show and pay the rest next year."

"YOU'RE IN DEBT TWO CENTS."

An old man just behind Adinoram put a kindly hand upon his shoulder and said, "Don't forget, sonny, you're in debt two cents. Don't get in any deeper." And Adinoram said, "You bet I won't." He felt so big hearted just then that if he had found a quarter I believe that he would have given it all to the pleasant ticket seller.

But although he didn't find a quarter he did find himself in quarters that were more delightful than any he had ever imagined. This was a real circus, with three rings, and the sight of rows upon rows of happy and expectant people, the delightful smell of peanuts and sawdust combined with the animal smell, made it seem like a little heaven to him.

The performance in the ring would not begin for a half an hour, so he went into the menagerie and looked at the animals. There was a sacred ox that looked as if he had anything but a sacred temper, and an animal that Adinoram took to be a zebra, whose neck had been accidentally stretched until he heard a small boy call it a "gyrafe" and then he knew the animal and the pronunciation, too, for Adinoram had picked up a good deal of information of various kinds.

But of all the animals, the tigers interested him the most, and when he came opposite their cage the tigress stopped in her restless walk and looked him right in the eye. And Adinoram, being an honest youth, returned her gaze with intensity. Now, you know that no beast, wild or tame, can stand the steady gaze of the human eye and yet this tigress looked at Adinoram as steadily as bad boys look at girls at school when they are trying to stare them out of countenance and the teacher is looking the other way.

Adinoram had a logical mind. He said to himself, "I know that wild beasts can not stand the human stare. This tigress can stand it, therefore she is not a real tigress. And if she isn't a real tigress, what is it likely that she is?"

He thought a moment, still keeping up the stare, and then it came to him in a flash. She was a beautiful princess, who had been condemned to take the form of a tigress to please the whim of some wicked magician.

This much Adinoram was sure of, but he did not know what steps to take in order to dissolve the enchantment.

You may wonder how a boy like Adinoram, a half orphan, with a severe and busy father, could have known about such things, but the year before an aunt, who lived in the east, had sent him a copy of Grimm's "Fairy Tales," and after that Adinoram lived in a

new world. He worked just as hard, but he had an added horizon, if you know what I mean. He could see much further and he was happier.

He was now divided in his sense of duty. He supposed that the ticket seller was the proprietor of the show. Simple hearted little Adinoram! As a matter of fact, the ticket seller was sick of his situation and wished that he could become a clerk in a dry goods store, where he would not have to think so fast and would not run the risk of losing large sums of money. Fancy having a chance to go around with a circus, and wishing you were in a dry goods store! But Adinoram did not know this, and as the ticket seller had passed him in for twenty-three cents, he thought it would be a very mean thing for him to turn the tigress into a princess and so make the circus short one valuable animal.

While he stood there, swaying between two impulses, the tigress stepped toward him and gave a low moan. That settled it. Ticket seller or not, he hadn't the heart to let a poor princess suffer like that, and he said in a low voice:

"I will rescue you, my dear,
I will help you, never fear."

Then he left the cage and walked away to think of the best mode of doing what he wished.

He knew that princesses who had been compelled to assume human forms were released only after the hero had done some doughty deed, and Adinoram did not know what he could do in that line. There were no giants to kill, no dragons to slay, nothing for him to do. And yet the remembrance of that moan made him so unhappy that he did not hear the flourish of trumpets that announced the entrance of the grand congress of riders. The people began to leave the animal tent to go into the main tent. In a minute Adinoram was all alone with the beasts. He went back to the tiger's cage and took up his stand in front of the tigress. She put her paw out between the bars and he fearlessly took it in his—or as much of it as he was able. While he was holding it a keeper came into the tent and was struck dumb at seeing Adinoram playing with one of the fiercest beasts in the menagerie.

When he recovered the use of his tongue he said, without stirring an inch, and in a low tone, "Stand still, boy, and don't say a word and I'll get you free!" But Adinoram only laughed and put his other hand between the bars, stroking the tigress as you would stroke a cat.

But Adinoram had failed to take into account that although she was friendly, her mate, the Royal Bengal tiger, was not of the enchanted kind, and he would not stand for an instant this thing that he regarded as an indignity to his wife. He crouched low and then sprang for Adinoram's arm!

He would have caught it, too, had not the tigress ward off the blow by a box on his ears that knocked him on his side.

The tigress had saved Adinoram's life and he was now doubly bound to free her from bondage. His

ADINORAM KISSED HER SQUARE ON THE CHIN.

face grew white, for he realized how narrow had been his escape. Then he heard a voice that seemed to come from inside of his head which said:

"Kiss the tigress on the chin
If you'd save the maid within."

All this time the keeper had stood transfixed. He now uttered a cry of horror, for he saw the fearless and reckless boy put his foot on the floor of the cage, and grasping two of the bars, raise himself so that his face came on a level with that of the tigress, who bent her head down that he might kiss her.

Adinoram kissed her square on the chin and dropped just in time to save himself from the second onslaught of her enraged mate.

The attendant yelled and people came rushing into the tent. They saw a strange sight. Adinoram stood in front of the cage with an agonized expression on his face, and in the cage stood a beautiful young Persian princess!

And the tiger, instead of knocking her down rubbed up against her like an immense amiable cat.

"Quick, the key," said Adinoram, and the keeper hastened to the cage and opened the door. The princess patted the tiger on the head and calmly stepped out of the cage and the door was slammed behind her—and just in time. As it was, the tiger lunged against it and bent one of the bars outward so far that the attendants had to transfer him to another cage after the uproar had subsided. For wild beasts are very responsive creatures and these events had not taken place without stirring them to the utmost. The lions were roaring, the hyenas were snarling, the elephants were trumpeting, the monkeys were chattering and the giraffes looked as if they wished they were not voiceless that they might take part in the concert.

In the midst of the uproar the owner of the circus came in, and he proved to be a very different sort of man from the genial ticket seller.

"Here, what's this rumpus about, interrupting the performance and irritating the animals?"

In a few words the keeper told him what had happened.

"My goodness, boy, why didn't you tell me you were going to do this. We would have gone to Chicago or St. Louis and advertised it, and it would have been worth a three years' trip around the world for this circus. I'd have made barrels of money. Now, no one outside of this tent will believe it happened, and I've lost the most valuable beast I had and

all I've gained is another woman for the congress of beauties."

"I WILL NEVER CONSENT TO BECOME ONE OF A CONGRESS OF BEAUTIES."

But at this the princess drew herself up and said with regal dignity, and in English, with just a touch

of Persian accent: "I will never consent to become one of a congress of beauties. Before I was enchanted I was considered the most beautiful lady in the East. I can trace my ancestry back a hundred years before Adam's time, and I am the first one in all that line who has ever been connected with a circus. If you will advertise me as the Princess Scheherezade, lineal descendant of the heroine of the Arabian Nights, I will stay with you, and your circus will be the greatest on earth. Otherwise I must return to Persia. As for this boy, who has saved me from a wretched existence, you must do something handsome for him. I myself will give him a letter of introduction to the Shah of Persia, who is my uncle."

She meant well, no doubt, but fancy an American boy wanting a letter of introduction to a Shah!

Little Adinoram squeezed her hand and said he wanted nothing, but the owner of the circus, who realized what an attraction he had, said to him: "Whatever you wish you shall have—in reason."

So Adinoram said: "Well, I owe your ticket seller two cents. Forgive me the debt and let me in to the performance tonight, because I've missed half of it this afternoon."

And as he had asked, so he received.

But I'm sure I don't know what old Mr. Penwhissel said to him when he returned at midnight with the bag of meal. Probably he gave him a lecture. A lecture after a circus!

A YOUNG PARTISAN

E. J. MURPHY

One day, late in the spring of 1780, a detachment of Col. Tarleton's regiment, fresh from their victory at the Waxhaws, turned into a narrow road that wound through the very heart of Great Pee Dee swamp. The road was flanked on either side, for several miles, by thick forests, made denser by an almost tropical growth of vines and underbrush.

Ignorance of the position of the Partisan forces rendered extreme caution necessary, and the party was proceeding almost noiselessly, when a sharp cracking of sticks and the tread of a horse brought every man to a standstill.

It was only a little boy riding out from the forest into the warm sunlight with the May winds blowing his pretty curls about his sweet young face. He was recognized at once as the son of some wealthy country gentleman.

IT WAS ONLY A LITTLE BOY RIDING OUT FROM THE FOREST INTO THE WARM SUNLIGHT.

His cheeks paled as the Red-coats gathered around him, and the officer demanded his name.

"William James, sir," came the answer in a firm voice.

"By Jove, a prize!" exclaimed the officer.

"Now, my boy, will you be so kind as to tell us where you have been and where you are going?"

"No, sir, I cannot."

"Cannot!" and why?"

"I promised I wouldn't."

"Whom, pray?"

The boy was silent.

"Come, we want only a plain answer to our question, then you may go home if you like."

Still the boy did not answer.

"Did not your father join Gen. Marion, on Snow Island, this morning?"

"I cannot tell anything about my father, sir."

"Oh, is that the answer we are expected to be satisfied with?"

"Now, see here, boy, if you will not give a plain answer to a plain question there's a way to make you."

"Forward!" came the command, and the boy was riding between two Red-coats, a prisoner, on his way to Tarleton's camp.

Carried before Bloody Bill, as that officer lay on a blanket in the light of the camp-fire, he presented a picture of helpless innocence that might have moved to pity even that cruel Briton.

"Now, young rebel, tell us where that father of

yours is spending the night, for we must trap the fox, Marion, before morning."

The little fellow looked across the swarming mass of British soldiers and then again at the stern face so unrelenting in its cruelty.

"I cannot tell you, sir."

"Cannot, or will not?"

"I have given my word that I will not."

"Oh, you have! But do you know I have the power to force you to tell?"

"No, sir."

"What! I haven't the power?"

"No, sir."

Tarleton sprang to his feet. "Boy!" he exclaimed, "I will have you lashed till you do tell. Do you see that pine knot? When the fire reaches the end I will ask you once again, and then I shall expect a very direct answer and no lying."

The little fellow's gaze was riveted upon the fast consuming flame. Surely he would be frightened into a confession.

"Now," exclaimed Tarleton, as the blaze reached its allotted limit, "is not Gen. Marion somewhere in this vicinity?"

"If I knew I would not tell you."

Tarleton sprang forward, seized the child, and dealt him two severe blows across the head, then kicked him to the earth with his heavy boot. The blood gushed from a wound near the temple.

"Here! take care of this cub!" he called to a passing soldier.

Just then there came the sharp report of musketry, and the beat of horses' hoofs. The British had been surprised in their fancied security, and Marion was not at Snow Island, but in the British camp.

The dying embers lighted up the return of the victorious Americans, and threw a ghastly light over the

THE EYELIDS PARTED SLOWLY.

pale face of the prostrate boy. A tall soldier bent over him. "William, it is father. Look up, my boy."

The eyelids parted slowly.

"I did not tell them, father; Col. Tarleton could not make me tell."

It was all over. The young patriot had given his life for his country.

ANECDOTES ABOUT BOYS CONTRIBUTED BY BOYS.

Will I go to work or go to school? This was the thought of a boy who had just graduated from a grammar school. He decided on the latter. He went to school for about two months and then it got kind of tiresome, so he thought he would stop. So he stopped school, sold his books and spent the money. But his mother found it out before many days went by, and now you can see the boy in one of our retail houses running cash for \$2.50 a week, trying to make money enough to buy back his books and start school once more.

HENRY W. LANGE.

Chicago.

"I HOLD 'IM DONNIE."

I am now over eleven years of age and my brother ten. But the anecdote of which I am going to write happened when I was about three and one-half years old and my brother about two. We own a beautiful black horse named Prince. It was summer, the barn door was open and the horse was in the stall. We were playing in the yard and barn, when the thought struck us that the horse needed some hay. We went into the barn. My brother sat with his arms and legs around the horse's hind legs and tail. Although the flies were bad, the horse did not even move an ear. I was trying to climb in the manger to put a handful of hay in it. My mother came out just in time to hear my brother say, "I hold 'im, Donnie."

Respectfully submitted,

TARLETON SPRANG FORWARD AND SEIZED THE CHILD.

THE BOY TRAVELER

ANNOUNCEMENT We present herewith the fourth chapter of the narrative from the pen of Harry Steele Morrison, who is known as "The Boy Traveler," in which he is describing his adventures as a 16 year old boy on a tramp through Europe. The boy was living in 1896 in a small town of Illinois, but in that year became suddenly ambitious to go to Chicago to work. He lived in that city for a year, working as office boy at \$3.50 per week, and then, being determined to become a reporter, he started upon his famous trip to Europe. He had saved \$25, and with this money started for New York, stopping off at Washington, where he was received by the President and Mrs. McKinley. From New York he worked his way to London as cabin-boy on a cattle-ship, and arrived in England, where he worked for his room and board in an inn. He succeeded in interviewing Mr. Gladstone, Queen Victoria and the King of Belgium. He visited the late President of France and the Lord Mayor of London, and altogether saw more famous men than any other person could possibly have interviewed. He was lost in the Alps and had many startling adventures of various sorts. The trip was remarkable in every way. The story of his achievements is extremely valuable. It gives American boys a knowledge of the opportunities which are open to them, and teaches them that with industry and courage, the boy who is early thrown upon his own resources may rise by his own efforts and make a success of life. -The Editor.

CHAPTER IV.

I remained in New York some time, and had many interesting experiences. I wrote several articles for the "World" and was paid enough for them to defray all my expenses while in the city. I stayed much longer than I had expected because I found it very difficult to get a chance to work my way across the ocean. When I first started upon the trip I thought this would be one of the very easiest things to accomplish. I had read advertisements in New York papers calling for men to work, and I thought if there was work for men there must be something a boy could do, as well.

I spent several days going up and down the North River docks in New York calling at every vessel I could find, bound for any port in England. I began by visiting the famous ocean greyhounds, and finally spent my time in hunting tramp and cattle steamers. But I was received in the same way aboard every ship. I told the stewards that I was willing to wash dishes, scrub, peel vegetables, or do just anything if they would only let me go with them, but somehow they always had some excuse to offer. They said I wasn't old enough, or strong enough, or that I hadn't had experience, and sometimes they didn't exert themselves to make any excuse at all, but simply swore at me and ordered me off the ship. This was very hard to bear. I could stand almost anything, but I didn't like being sworn at, and finally I began to fear the very sight of a man in a steward's uniform.

I became more and more discouraged with each day, and at last felt very much like taking my twenty-five dollars and buying a ticket back to Chicago. But I never entertained such an idea for very long. I was determined not to return without having seen England at any rate. I knew very well that if I went back everyone would laugh and say, "I told you so," and I couldn't risk that at all. So for a time things looked very dark and I hardly knew what to do.

At last I made up my mind that I probably wouldn't be able, after all, to work my passage, so I decided to take my money and buy a steerage ticket upon some fast liner. I was tired of the delay, and was afraid, besides, that unless I reached England very soon the Queen's Jubilee would be over and gone before my arrival. One morning I suddenly decided to wait no longer, and hurried with my shirt-box down to the Cunard pier, expecting to take their steamer. But I reached my decision too late, for when I arrived at the pier the vessel had already sailed and was going downstream. I could almost have cried with disappointment, and for some time I sat around and scarcely knew which way to turn next. But after awhile I observed in the next dock one of a certain popular line of cattle steamers which also carries passengers, and as I had not yet been aboard this steamer, I decided to go and ask the steward if he didn't need a boy. To my great surprise he received me very pleasantly. "Yes, we do need a boy," he said, "and if you want to go, you had better remain aboard, for the vessel sails this evening." So I did succeed, almost by accident, in getting a chance to work my way, and I remained aboard.

I didn't have to begin work this first evening. I was shown down into a small, stuffy room in which I was to sleep with seven men, and I thought I had better get to bed early, so that I would be ready to begin my work next morning. But when I undressed I found things so crowded that there was absolutely no place at all where I could put my clothing. So I rolled it up and put it underneath the mattress. Afterward I learned that it didn't really pay to undress at all. I had such a short time to sleep. When I got into my bunk I found that they had given me a very short one, so that I could hardly lie at full length, and then

it was too narrow to permit of my lying sidewise, in bear fashion. I passed, therefore, a very uncomfortable night, and it seemed that I had finally just closed my eyes when at four o'clock in the morning one of the sailors came down and gave me a shake. "Out of this, now," he said, "get up on deck and start working, ye lazy youngster." So out I got, and looked about in vain for a place to wash. I afterwards found a bucket the most useful wash-bowl, but this first morning I hurried up the ladder just as I was. Once on deck, I looked about me and could see nothing anywhere save a broad expanse of water, and a little feeling of homesickness came over me. I had no time to think about it, however, for the steward was waiting for me. He showed me into the pantry, a small place about 8x10 in size, and told me that my chief duty during the voyage would be to wash dishes.

I was glad to hear this, for I had an idea that dish-washing was very easy work. I had had a little of it to do at home occasionally, and it had never seemed very hard. So I set to work with a will, here, and fixed my hot water and soap. There was already quite a large pile of dirty dishes waiting to be washed, and I had them almost done, when another and larger pile came in from the dining-room. That was the way things went all day long. I no sooner finished one pile, than another was waiting, and I don't think I ever before saw so many dirty dishes. There were about sixty passengers aboard beside the cattlemen, and five meals were served each day. Sometimes I

I DON'T THINK I EVER BEFORE SAW SO MANY DIRTY DISHES

used to think that each passenger must dirty at least six plates a meal, judging by the number which came to me to be washed. It kept me busy from four in the morning until nine o'clock at night, with just one hour off in the afternoon for rest. It may not be hard work to wash dishes, but it certainly becomes monotonous when one has it to do during sixteen hours of the day.

I think I might have got along very nicely, however, if I hadn't been so very sea-sick. I had hoped to escape that experience, but the second day out from New York I felt it coming. I hurried at once to the pantryman, or "Pants," as we called him for short, and told him that I must certainly get up on deck for some fresh air. But he simply pointed to a bucket under the sink, and told me to stay down in the pantry and get the dishes washed. So I simply had to remain, and for three days I was sea-sick and

washed dishes at the same time. I am sure no one can imagine a more horrible combination than that.

I didn't get along very well with my work. It seemed to me that I was in hot water all the time in more senses than one. "Pants" was very disagreeable, and proved a hard master. If, by any chance, there were no dishes to wash, he had no difficulty in finding something else for me to do. He was particularly fond of sending me over the ship on errands of various kinds, and one place to which he often sent me was the cold storage room, where most of the provisions were kept. I had charge of the keys to this room and was supposed to keep them hanging upon a nail in the pantry. I was continually in trouble on account of those keys. I was sent one evening to the storage room to get some milk. It was but half an hour before dinner and I was in a great hurry. I was nervous besides, having been scolded by "Pants" all day. I went into the room, laid down the keys, went out again, and shut the door. It was a spring lock, and when I realized what I had done, I am sure I must have turned pale with fright. I knew that I would never hear the last of this if "Pants" learned of it. I felt very much like getting out and walking, but this, of course, was hardly an easy thing to do. So I finally went to see the chief steward himself. "You haven't any idea what I've done now," I said, in a trembling voice, for I was afraid he, too, would be angry. "If it's anything worse than what you've been doing, it must be very bad," he said, laughing, "and now tell me what it is." Reassured, I told him all about it, and he sent a carpenter to break the lock. This wasn't an easy thing to do, and dinner was delayed for more than half an hour. "Pants" stormed about in a great temper, but as he never learned who was responsible for the locking-in of the keys, I escaped being scolded about it.

Another evening I went down to bed with the keys in my pocket, and suffered for it, too, next day. They had been unable to serve the usual midnight lunch because they couldn't get into the storage room.

I had so many hard experiences aboard ship that I wasn't sorry when the twelve days' voyage was over, and we anchored in the Thames, off London. I was glad to get ashore, and though I had no very definite plans ahead of me, I had already decided that it would be a good idea to earn some money in the beginning if I could. I, of course, expected to send articles to the Chicago papers and the one in New York, and I expected to get money in return for those articles, but until I did, I wanted to earn at least my room and my board if I could. I bought a copy of one of the London evening papers, and there, in the "ad" columns, I saw that a boy was wanted, in an inn, to work for his room and board. I was overjoyed when I read this, and lost no time in inquiring of a policeman the location of this inn. I thought it would be just the kind of place I wanted, and such it did turn out to be. Because I got there before any of the English boys, I secured the place. I had to work only during the mornings, the afternoons I had to myself to do as I pleased in, and of course I spent them in going all over London and seeing whatever there was to see. Every morning I was up at five o'clock, when I had the floors to sweep, the fires to make, and the fuel to bring in for the day. Then I had various errands to run, the lamps to clean, etc., but by noon I was always through.

I liked London from the very first. There was so much to see, and so much going on all the time. But at the end of two weeks the day for the Queen's Jubilee came around, and I was glad it did, for by this time I had visited most of the usual sights. Early on the morning of the great day I started out in order to get a good place from which to view the procession, and I came to a church, built out upon one of the streets through which the parade would pass. In one of the window-sills of this church there were two boys seated, so I got up there beside them, and I am sure I had a much better view than many people who paid ten and fifteen dollars for seats in grand stands up and down the street. I enjoyed the parade very much indeed, but the crowd was so great I was glad to get back to the little inn again in the evening.

When the Jubilee was over, it occurred to me that it was time I was getting my interview with Mr. Gladstone. I had been so sure of seeing him that I had promised the article to the editors before I left home, and indeed I had always the impression that Mr. Gladstone was an easy man to get at. I did, however, take the precaution before going down, to write and let them know that I was coming, and I expected to receive an answer saying that it would be all right, that they would be glad to see me. But I was very

much mistaken. I waited three days and then received a short note saying that "Mr. Gladstone's Secretary regrets that, owing to his ill-health, he is unable to receive strangers." This meant that it would be no use for me to come, and I was very much disappointed. But I decided to persevere, and wrote another letter in which I told how important it was for me to secure the interview. I said I had promised it to the editors and that if I didn't get it, they would say I couldn't do what I had started out to do, and after that they wouldn't have much faith in my ability. But this letter didn't call forth any reply. I sup-

advantage of having a friend at court. I was at last permitted to see the chamberlain, who was a very elderly man, and he read my letter through twice with great care. Then he said only that I should return in three days and he would be able to let me know whether he could do anything for me. From his manner when he read my letter I was afraid I needn't expect a favorable answer, so I was very much surprised when I returned to have him say that if I came the next afternoon he could get me in, he thought.

I hurried back to the inn, and told the good news.

MR. GLADSTONE SEEMED TO FIND IT VERY INTERESTING INDEED.

pose they thought one answer was enough. There was then an excursion to the country round about Hawarden, and I took advantage of the low rates to go down and see what I could do when on the ground.

I arrived in the village one Saturday evening and it was exactly four days before I saw the inside of the castle, and they were four days of very hard work. I went first to see Mr. Stephen Gladstone, rector of the Episcopal church at Hawarden, but he sent me to see his sister at the castle. Miss Helen Gladstone refused to let me in, too, and finally, as a last resort, I saw Mrs. Gladstone herself, and asked her to help me. I showed her the clipping from the Evening World, with the story of my trip, and the sketch of me seated with Mr. Gladstone, and she was very much amused. She said she thought if he would see me it would be at least a change for him! She went into the library, and when she came out again she said I might enter if I wouldn't stay too long.

Mr. Gladstone was seated in a large arm chair, with shawls and cushions all about him. He looked very feeble, but he was cordial, and, holding out his hand to me, asked me to bring my chair up close to his, as he couldn't talk to me if I sat far away. I sat down, and he began at once to ask me all sorts of questions about myself and my life at home. I had to tell him all about my trip from the very beginning, and he seemed to find it very interesting indeed. He took such a great interest in me that I remained nearly three-quarters of an hour, and before leaving mustered up my courage and told Mr. Gladstone how very anxious I was to see the Queen. I told him that if I could see her I could go back home happy. He laughed and said he wasn't sure that it would be possible, but that he was willing to help me in any way he could. He said it was possible I would be received, because the Queen took a great interest in boys and young men who were trying to help themselves.

So he gave me a letter to Lord Lathom, who was at that time chamberlain at Windsor Castle, and the first thing I did upon my return to London was to go out there and present the letter. They weren't going to let me through even the outside gate until I told them that I had the letter, and I realized then the

Then I began to worry about what I ought to wear. The chamberlain, to my surprise, didn't tell me anything about what I ought to do, so I couldn't decide. I knew that a dress suit wouldn't be proper in the afternoon, and anyhow I didn't have one. I went to the Guildhall library and took out a book on Court Etiquette, but it told me so many things that ought to be done, I decided the safest way would be to do none of them; so when I went out to the castle I wore a little suit that I had paid five dollars for in a Chicago department store. And I am sure they were all much better pleased than if I had attempted anything in the way of dress or ceremony. At the castle everything was decidedly informal. I was received very pleasantly, conducted through several hallways and rooms which were furnished more beautifully than anything I had ever seen before, and shown into a pleasant apartment which I learned is called the Red Drawing Room.

Almost the first person I saw upon entering was the Queen herself, seated near one of the windows. She had evidently been reading a book, for one was lying open upon the table beside her, and she wore large glasses. Altogether, she looked very much like most of her pictures, with the exception that she was much more pleasant in appearance. She always looked to me very stern in her pictures, but she smiled as I entered, and I thought I had never seen a more friendly smile. With her in the room were her daughter, the Princess Beatrice, and her grand-daughter, the Princess Victoria of Wales. They were

all very pleasant, and dressed in very simple costumes. The chamberlain introduced me by simply saying, "This is the boy," and they opened the conversation by asking me to step up nearer. Then Princess Beatrice asked me all about my trip, and I had to describe my experiences. Then they asked me my impressions of various English things, and I told them very frankly what I thought. They seemed to find it all very amusing, and I am quite sure they secured a great deal more amusement from the interview than I did, for I was somewhat embarrassed. The Queen didn't talk much, but when leaving said just a few words congratulating me on what I had accomplished, and hoping I would continue to succeed.

I remained about six or seven minutes, and when it was all over I had to go back to the little inn where I was working for my room and board. The change seemed very great.

(To be Continued.)

THE NATIONAL SOCIETY OF THE CHILDREN OF THE AMERICAN REVOLUTION.

The National Society of the Children of the American Revolution was incorporated in the District of Columbia, April 11, 1895, and by such incorporation the headquarters of the society are fixed in the city of Washington.

The objects of the society are: The acquisition of a knowledge of American history; the doing of patriotic work; the saving of places made sacred by American men and women who forwarded American independence; the finding out and honoring the lives of children and youth of the colonies and of the American revolution; the promoting and celebrating of all patriotic anniversaries; the placing of the Declaration and other patriotic documents in every place appropriate for them; the holding of the American flag sacred above every other flag; the loving, upholding and extending of American institutions and principles.

Any girl or boy is eligible to membership from birth to the age of 18 years for the girls, and 21 years for the boys, provided he or she is "descended from a man or

woman who with unflinching loyalty rendered material aid to the cause of independence; from a recognized patriot, a soldier, sailor or civil officer in one of the several colonies or states, or of the united colonies or states."

Local societies under the jurisdiction of the National society may be formed.

The president of the local society must be a Daughter of the American Revolution. Local societies must be named after persons, events or places associated with the early history of the country.

The seal of the society has upon its face the figures

I WAS SOMEWHAT EMBARRASSED.

of a girl and boy in dress appropriate to the Continental period; between them is a shield; above them are the thirteen stars arranged in a symbolic setting; around the rim is the legend, "Children of the American Revolution." The insignia of the society is a solid silver pin, overlaid with gold, the outer rim being a garter of heraldic blue enamel, carrying the legend, "Children of the American Revolution," and ending with a buckle whereon is an eagle with wings outspread, in the attitude of "Old Glory." The eagle occupies the center of the space, together with the flag, which he holds in his talons.

There are two hundred branches of the National society, with over four thousand members enrolled.

DETROIT BRANCH.

The Paul Jones Society, Children of the American Revolution, is the Detroit Branch of the National society and was organized about two years ago under the guidance and direction of the Daughters of the American Revolution. The president of the local society is Mrs. George William Moore. This branch numbers over 60 members.

The programs of their monthly meetings consist of: First, the singing of "America," then the lifting high and saluting of the American flag, from whose staff floats a pennant, on which is inscribed in letters of gold, "Paul Jones Society, Children of the American Revolution." Standing about the banner, with right hands uplifted, palms downward to a line with the forehead, and close to it, all the members repeat the following pledge: "I pledge allegiance to my flag and to the republic for which it stands: one nation indivisible, with liberty and justice for all." At the words, "To my flag," the right hand is extended gracefully, palm upward toward the flag, and remains this way until the end of the affirmation, when immediately all hands drop to the side.

Our readers will recall that this pledge of allegiance was given by more than twelve million public school children during the National Public School Celebration of Oct. 21, 1892. This pledge has been perpetuated and is still given in thousands of schools. It may well be called "The National Salute."

Following the giving of the pledge are literary and musical numbers patriotic in their nature.

"RATTLESNAKE PETE"

The Noted Scout, Plainsman and Deputy United States Marshal Tells How He Got His Name.

WRITTEN FOR THE AMERICAN BOY BY CHEYENNE BOB

One day last week, as I was passing along the street, I met my old friend W. H. Liddiard, and thinking I might get some items of interest for THE AMERICAN BOY, I stopped the veteran plainsman and asked if he would tell me how he came to get the name of "Rattlesnake Pete."

Pete has lived on the plains for the last thirty-five years, serving as scout and guide, and for nine years was a Deputy United States Marshal. He had charge of the Indians at the Trans-Mississippi Exposition in Omaha in 1898, and is as well known in the West as any man who ever crossed the muddy old Missouri. He has been all over the western country, and knows every foot of ground from the Missouri River to the Rockies; he has associated a great deal with the various tribes of Indians; he has eaten dog soup with old Sitting Bull, and smoked the pipe of peace with Bear Eagle and hundreds of other Indian chiefs; he has chased the bushy-headed, lumbering buffalo, and has been hugged more than once by a grizzly; but no amount of persuasion will induce him to tell how many Indians he has sent to the happy hunting grounds. In reply to my question, he said:

"Why, of course, Bob; you know I'm always ready and willing to accommodate an old friend. The way it happened was like this. Along about sixteen years ago, when the Indians were hunting scalps every other Friday, Ben Baker came to me and wanted me to pilot him through the Bad Lands. I didn't care much about going, as I had some other matters to attend to, but Ben said he'd have to make the trip and he just couldn't get through without me. A bargain was finally made, and a few days later we struck out from Chadron, well provisioned and with plenty of presents for the Indians.

"A couple of weeks before we started on this trip, two men had been up that way and had cheated some of the Indians on a trade for pelts. They got away with their plunder, but the Indians were mad through and through and said they would kill the first bunch of palefaces they ran across. Baker and I had heard nothing of the trouble, so we walked right into the trap, as it were.

"On the second day out—we hadn't seen sign of an Indian yet, mind you,—I caught sight of a band of a dozen red-skins rounding a bend in the trail, coming towards us, about a mile away. We rode along and soon met the Indians. Baker thought he would get on the good side of them, so he ran his hand down in the saddle-bags and fished up a handful of glass beads and some tobacco.

"Much heap magnificent, make papoose look purty," said Baker, handing out a lot of the beads, but the red devils only grunted, shook their heads, and never offered to take them.

"Red man heap tobac, smoke with paleface brother," said Baker, offering an old buck a package of Bull Durham.

"Ugh, waugh! Tobac heap bad medicine," was the only answer.

"I thought it funny they wouldn't accept anything from Baker, so I tried my hand, but they only stood around, with their hands hid under their blankets. I knew then that something was up, so I told Baker we had better 'pull our freight' and the sooner the better; that if we didn't get away soon we might as well

count our beads and lay our plans for fording the River Jordan when we got to it.

"Do you really think there's any danger?" inquired Baker.

"I told him I thought we had got ourselves in a nice mess, and advised him to brace up, put on a bold front,

THE BAD LANDS.

and we'd make a grand bluff to get away. The Indians allowed us to pass along, but we kept our rifles handy, in case we'd have to use 'em. We traveled along until about noon, Baker looking over his shoulder every few minutes to see if the redskins were following us. Presently we came to the summit of one of those peculiar, odd-shaped mounds which one meets so frequently in the Bad Lands, reminding one of the pictures of the pyramids of Egypt, or the tower of Babylon, or in fact almost anything can be imagined of them. The hill on which we stood was the highest one anywhere around. I was just remarking what a fine toboggan slide the sides would make. I knew the place very well, and told Baker the hill was sacred to certain tribes of Indians. There was an old legend about it which the Indians believed. It ran something like this:

"Many years ago the Ollawallas lived in the Bad Lands and had their hunting grounds on the prairies surrounding the deep ravines which were natural fortresses. They were a happy, easy-going band, not at war with any of the other tribes. The Sioux coveted the cozy winter quarters of the Ollawallas, with their great hunting grounds, alive with buffalo and other game, and they coveted it to such a degree that they planned a general war upon the unsuspecting Ollawallas, with the intention of exterminating the tribe.

"The Sioux had everything nicely planned and the day appointed for the attack. They sent out two scouts the day before. The scouts came, so the legend says, to the top of the hill where Baker and I then were sitting, eating our lunch, to look over into the valley below and count the number of tepees of the Ollawallas. It was raining very hard at the time, and as the two warriors stood at the brow of the hill, looking over, they began to slip and to roll and roll like tumble weeds down the greasy, gumbo sides. The Ollawallas saw them sliding down and—

"A couple of shots were fired and I heard a dozen war whoops at the foot of the hill. The Indians we had left behind us that morning were coming up the hill, firing their guns and whooping and yelling like mad.

"Save me, Bill, I'm a goner! Oh, what a fool I was that I didn't know enough to stay in Chadron! Ouch, I'm hit again!" shrieked Baker.

"Come on, let's find a hole and stand 'em off. We can kill one or two of the redskins before they can get us, if that's any consolation. You're worth a dozen dead men yet," I said.

"We found an old cave and in it we went, both trying to get in first, creeping on all fours for thirty feet or more. We heard the Indians yelling and whooping outside, and I was just getting my rifle ready to send one to the happy hunting grounds when Baker shouted:

"Great Caesar's ghost! What's this thing crawling over my leg? Where are you Bill?"

"I knew in a second that we had crawled into a den of rattlesnakes, for I could hear 'em shaking their rattles on all sides of us, so I says to Baker:

"Lay down, you big galoot, and play you're dead. Don't you know a rattlesnake won't bother a dead man? How long have you been in this country, anyway?"

"We both lay on the damp floor of the cave for about ten minutes—it seemed like six weeks to me—with the snakes crawling all around us and all over us. Finally I could stand it no longer, so I grabbed my rifle and made a break for the mouth of the cave, preferring to die fighting Indians to staying in there. Just as I stepped outside, a big Sioux buck met me and held out his hand, saying:

"How coolah! Indian heap glad to see white brother. Bear Eagle smoke brother's pipe."

"Just then another Indian came out from behind a rock, extended his hand, and said:

"Indian heap dry, drink much firewater," and then half a dozen more bobbed up and wanted me to give them some tobac.

"I heard a noise behind me and there was Baker, but such a sight you never saw! He had long hair and it was as black as the bottom of a coffee pot when he went into the cave; when he came out it was as white as the driven snow! We gave the Indians all the beads and tobac we had, and struck out for Chadron. Baker was the happiest man in the world when we got back, even if his hair had turned white. From that day to this I've been called 'Rattlesnake Pete,' and to tell you the honest truth, Bob, I've almost forgotten what my real name is."

OUR BOY SAVING FUND

Seventy-three boys and friends of boys have contributed up to date one-fourth the amount needed to rescue one boy, by the plan proposed on the front page of our May number. Sixty dollars is required and fifteen dollars and ten cents has been sent us so far. The names of all contributors will appear in our July number. The result of the appeal has been disappointing in one sense, encouraging in another.

As promised, we have taken two boys from the streets—one for ourselves and one for our readers. One of them is now safe in the care of the Beulah Land Farm for Boys at Leoni, Mich. He is "your" boy. We have rescued another boy and placed him with the National Junior Republic at Annapolis, Maryland. This boy will be our boy. The publishers of THE AMERICAN BOY will pay for his care. Every reader of this paper should take a hand, sending at least a penny toward this work. We shall need for five dollars more for "your boy." We have already paid for you and for ourselves a good share of the money asked by these two institutions and the boys are "saved"; at least, they are started and have good care, good instruction, and good homes. Would that we could receive enough money to save a boy a month!

Next month we will show you pictures of these two boys and will tell you something about them.

But there is more to our story. Two good women, one in Iowa and one in Virginia, each offered a good home for a boy whom we might select, and we are going to find the boys. This will cost you and cost us no money. So that as a result of the little appeal in our May number, four American boys will be taken out of wicked and degrading surroundings and started on the road to right living. Isn't it worth our interest and effort, boys? Then help.

Respectfully,
THE SPRAGUE PUBLISHING CO.,
Publishers of THE AMERICAN BOY.

"GYPSIE."

WHO RECEIVES HONORABLE MENTION IN THE DOG CONTEST

Aunt Em's Letter to Little Boys

A COMPOSITION ON MOTHERS.

ALAN T. TARBELL, DORCHESTER, MASS.

A mother is an excellent person to have round with their loving words and helping hands ready to assist you in doing right. Some boys think their mothers very mean if she don't give you a nickel any time you want it or expect to go to the theatre at any time. But it's all for the best, boys, remember. It is best to be bad and tell of it than be bad and keep it from your mother. For that matter, boys, try not to be bad and worry her. You always will not have a mother to tend you when sick and bruised. After you become a man you will look back and wish you had done lots of things for her.

Home, May 10th, 1900.

To Alan T. Tarbell:

My Dear Friend—Your good composition on Mothers pleased me very much. At once I could see that your mother must be an exceptionally good one, and that you love her devotedly. A lady who has been visiting me brought her twin boys, eight years old, with her. If you could only see how tenderly at-

tached they are to her, you would be sure that your wise words about "mothers" are true. When she says "no" to them they know at once that she means "no," and so do not ask again.

You say "it is best to tell your mother when you are bad rather than keep it from her." Surely that is the only way to do. It all depends upon what your motive is, however. Now, my oldest boy sprained a muscle on his right hip, playing "throw the hammer." A sudden, extra effort to send the hammer farther than the other boys could, resulted in a snapping of something, he knew not what. The swelling caused him some alarm.

Fearing to tell me (for good reasons, which I will tell you), he went at once to our physician. Together they kept this fact from me, until, by his pale face, I mistrusted something had happened to him.

When my boy saw that he could keep it secret no longer, he came to me frankly and told me all about it, giving this as his apology:

"Mamma, I thought that you had worries enough, so I didn't want to add to them before I had to." His motive was good, so I freely forgave him for not confiding in me sooner. I do not call that being bad, do you?

Please let me know whether your mother was delighted with your composition on "Mothers," and

does it not make you desirous of becoming a writer some day?

Do you believe that dreams mean anything? The other night a man had a curious one which so impressed him that he has actually turned it to a purpose, and he may become wealthy from having dreamed it. This is the story; whether or not it is true, I leave to you. He dreamed that he invented a novel kind of carpet stretcher. In the dream he was fortunate enough to be given such an accurate idea of its size and workings that when he awoke, he drew an exact picture of it. Then he went down town, found a bright inventor, explained his dream, showed the design he had made, and together they bought the needful things, as boards, screws, etc., and in a short time actually put together a fine new carpet stretcher. When completed it looked like a fire-screen and occupied very little room. Then the man borrowed some money and set himself up in business. Today, the story goes, these carpet stretchers are being turned out from the manufactory at the rate of four thousand a day. Think of the fortune he must be making! All because he carried out in every detail a dream!

Why not write a composition on dreams? Will not my little boy readers try it?

Always cordially yours,

"AUNT EM."

MY BOY JACK

MARY JOSLYN SMITH

The paper, as usual, was pinned up to the rafters of the loft, and Jack was bolstered up a little, in order to be able to read. It was the only reading matter he had that was at all new, and he had saved one column unlooked at, fresh for that particular day.

It proved to be a column of letters from "shut-ins," asking for various things or offering thanks to the paper and friends for the helpful things sent.

"I wish I could get an advertisement into that paper for second-hand reading matter. I wonder what I shall do after I finish this paper," thought Jack.

Weeks afterward when Miss Pomeroy, a gray-haired teacher in a western city was looking over a boys' and girls' paper to find some new story to tell her pupils, she noticed a not uncommon advertisement: "Wanted, second-hand reading matter by a crippled boy in ———, Kansas."

"I have a large number of papers and magazines for young people, and I could answer that, if I knew it was a real want," said the teacher. After a moment's thought she added, "I will send a package to that address."

When she made up the package to go by express she enclosed a kind note, asking for some account of the boy. The boy lived far from a railroad or express office, so there was much delay in the arrival of the papers at the cabin, and then it took a long time for Jack to get anyone to write a letter to the teacher.

The mother had not written letters in so long she was all out of practice; and her daily work was so exhausting she was sure she could not write to a stranger; while the father was too tired, but would write some day, he always promised.

At last Jack was made happy by knowing that a letter had been taken eight miles away to mail in answer to the first letter he had ever received. Of course the letter told the story of the family. They had gone into Kansas from an Ohio home, and had taken up a homestead by paying or promising to pay a dollar or two an acre. At first they lived in a dug-out, but finally had built a cabin with one room below and a loft which was reached by a ladder.

In the letter which Jack dictated, he told how drouth and grasshoppers and disasters of various kinds had hindered his father from making a living from the land. Then Jack himself had fallen sick with rheumatism and was crippled in every part of his body. It was because Jack was so crippled and yet so anxious to read that his mother now and then stole up to the loft and moved the paper or turned a fresh page and again fastened it to the rafters for him. He had not been out of the loft for a year. In the dictated letter Jack said, "I have the dearest mother in the world and a kind, patient father." The whole tone of the letter was cheerful, and over and over it expressed much gratitude for the large bundle of papers and the letter which had come with it.

JACK WAS BOLSTERED UP A LITTLE.

From the day Miss Pomeroy read the letter she always spoke of "my boy Jack." She began to plan and interest others in the boy, saying, "something, yes, many things, must be done for my boy Jack."

She had earned her own living for many years and was not a rich woman, but she could spare some money for Jack's comfort, and so could other women where she boarded. They sent him a flannel gown and a pair of flannel blankets, and later a nice hair mattress,

MISS POMEROY WROTE TO FRIENDS ABOUT HER BOY JACK.

as well as healthful foods. Miss Pomeroy wrote to friends about her boy Jack and they offered to help with money to send a skillful physician, a specialist, to see Jack, and ascertain whether he could be helped, if not cured. A physician was found who would and did go to the Kansas farm, asking only his expenses, and he brought back the happy message that he felt sure Jack could be helped. He had also found a doctor ten miles from the cabin who would take care of Jack under his advice and would write him occasionally as to Jack's condition.

Jack got the use of his hands and began to write letters to this friend whom he had never seen. They were beautifully written and so well expressed that Miss Pomeroy was proud to show to her pupils and friends what a boy could do toward his own education. If he was only in earnest and hungering for knowledge.

With the help given by these friends, a lean-to was built at the south end of the cabin for Jack's room, and the room was well furnished with books and pictures and everything for comfort. Five years have now passed since Miss Pomeroy sent the "second-hand reading" to Jack, and he is no longer a boy but a healthy, vigorous young man. His letters showed so much interest in study that his friends made it possible for him to study in special lines through one of the University Extension courses. He has written one story of what a boy can do if he tries, and especially, if he finds a friend like Miss Pomeroy. It has found ready sale and Jack is delighted to add something, instead of always taking, as he expresses it.

The wildest dream of Jack is at last realized, and he is in a technical school, studying for what he hopes will be a successful life work. The change of climate, too, makes him stronger, and life looks bright.

"Behold how great a fire a little matter kindleth." Jack's advertisement was the torch. Miss Pomeroy has never yet seen Jack, but whenever he is mentioned to her, she says: "Jack has done more for me than I ever did for him, for life is brighter to me since 'My Boy Jack' came into it."

JACK GOT THE USE OF HIS HANDS.

DANIEL DECATUR EMMETT

Author and Composer of "Dixie"

DWIGHT ANDERSON

When a large body of Confederates who had been captured were being marched through Washington, Abraham Lincoln ordered the Union bands to play "Dixie." As the president stood on the steps of the capitol a cabinet officer rushed up to him and cried:

"Treason! Treason! They are playing 'Dixie' in the streets!"

"Yes," replied Lincoln.

"Why don't you have it stopped at once? That's the piece the rebels went out of the Union under! That's the tune they sang when marching away to fight their countrymen!"

"True," said the president, "but didn't we capture the song with the men?"

Daniel Decatur Emmett, the author and composer of this favorite song of the Southland, is still living near Mt. Vernon, Ohio, where he was born, October 29, 1815. He learned the printer's trade on the local "Gazette" and in three years rose from the position

Daniel D. Emmett
Author of
"Dixie!"

of devil to that of foreman. Early in boyhood he displayed decided musical talent, and before he was fifteen years old composed several quaint negro melodies. At the age of fifteen he engaged with Sam P.

Stickney's circus to beat the bass drum and drive a team of horses, which duties he faithfully performed for several years.

Young Dan had no appreciation of the value of money. He was forever thinking of music, and so, at the end of an especially successful season, he found himself penniless, and went home to live with his father until the next season began.

"Dan," said Abraham Emmett, his father, "I suppose you have quite a bit of money?"
"No, sir; not a cent."

Emmett senior was angry. His son had been out a whole season and had come back to live on his father! "You are no son of mine, Dan Emmett," he cried. "You are not worth the salt you eat, sir!"

Twenty years later "Dan" walked into a rehearsal of Bryant's Minstrels, in New York, with a manuscript in his pocket.

"Here's a new 'walk 'round,' boys," he said.
"What do you call it?" they asked.
"Dixie!"

In a week the whole city was whistling it, and soon the entire country took it up. But the South claimed the song as its own, and the piece is now associated entirely with that section.

The writer rapped at the little cottage in which the renowned musician is spending his last days. The door was opened and a pleasant faced old man of eighty-four appeared and greeted the newcomer warmly. Mr. Emmett wears a cap and overcoat in the house, fastening the latter to his body by means of a strap. He has blue eyes, which are continually laughing, and with all his years of hard work and privation, he is a pleasant, sociable, kind-hearted old man.

"How did you come to write 'Dixie?'"
"It was in the fall of '59 when I was with Bryant's Minstrels in New York. One Saturday night after the performance, Jerric Bryant said:

"Dan, I want a new 'walk 'round' one that will be popular and that the people will whistle and sing."

"The next day I got out pen, ink and paper, and sat down to fill the order. I remembered how once a number of showmen gathered together in a small town in Wisconsin. I think it was; at any rate, we were very cold, and stood rubbing our hands in front of a small stove. One remarked, 'I wish I was in Dixie's land.' That came back to me like a flash. In ten minutes I had the music down on paper precisely as it is sung today. I was three-quarters of an hour writing the plantation verses, however. The next day I took the entire composition down to rehearsal, and you know the rest."

"To what do you attribute your robust old age?" I asked.

"I naturally had a very strong constitution, sleeping some seasons for weeks at a time in wet, soggy clothing, without experiencing any evil results. But I never smoked, chewed or drank, and I consider that to be the reason I am living today."

Before the writer left, the old gentleman presented him with an autograph, which is herewith reproduced. Mr. Emmett wrote it with a quill pen for he prefers that to steel. He also allowed the visitor to take, for publication, the following negro hymn, which was composed thirty years ago, and has never before been published.

Do kum along,—do kum along,
For de habrest am ripe an' de lamb wants to
gadder 'em,
Do kum along,—do kum along,
An' gain de bictory.
When you gits 'ligion, keep good holt,
Don't krek de harness like a colt,
For de ole boss will nebber bolt,
But pull straight ahead to glory.

Do kum along,—do kum along,
You all heah to-day but whar is you to-morrer?
Do kum along,—do kum along,
An' gain de bictory.
'Poah sinner, why you kum so slow?
Ef you should die, 'en whar'll you go?
Den sorbe your Jesus, whedder or no'
An' walk right straight to glory.

Mr. Emmett is a very modest man. When, in 1888, he returned to Mt. Vernon to spend his last days, nobody knew he was the Daniel Emmett who composed the immortal "Dixie," and he never told a soul. He lived quietly in his little home oblivious to cares. But this condition of affairs did not last. In 1895, Al. G. Fields, a theatrical manager with whom Mr. Emmett traveled at one time, came to the town to show in the opera house. "Uncle Dan," as he was called, was standing on the main street as the troupe turned the corner with banners waving and musicians tooting. As they passed the picturesque figure of the old gentleman the second time recognized him.

"Hullo! Uncle Dan!" he cried.
The entire company looked around and then shouted as one person:
"Hullo, Uncle Dan!"

"Why, there's Dan Emmett," screamed Fields, and he whispered a word to the bandmaster. Every man took off his hat. Every man opened his mouth to sing. Then Fields himself raised his cane high in the air, and led the band down the street to the tune of "Dixie."

Old Emmett straightened himself up, and stood like a statue until the entire procession had passed out of sight.

The Ocean Grove Rough Riders

JOHN ED. QUINN

Prof. Tallie Morgan is the leader of music and director of entertainments at Ocean Grove, N. J., during the summer season. Three years ago he organized a children's chorus. In this band of juvenile singers were six hundred boys and girls, the latter predominating in the proportion of about five to three.

The girls were prompt at rehearsal, besides being obedient to their instructor; the boys were—well, they were boys. Irregular in attendance, they came and went as they pleased, and it was a hard task for the leader to get them interested in the study of music.

How to engage the boys' attention was a puzzling problem, even to a man so resourceful as Mr. Morgan, who, for two summers had suffered their indifference with praiseworthy patience. He hit upon a happy solution.

Soldiers!
The bare mention of organizing them into military

ley; but the President's visit to Ocean Grove the same day made it imperative that he should have a body-guard—the boys thought—so they stayed at home for bigger game.

The youthful Rough Riders went into camp in true military style during the annual picnic of the Children's chorus in August. The scene was Benson Park, perhaps two miles distant from Ocean Grove. Like veterans the boys marched to the grounds, where they pitched their tents and placed a picket line around the camp.

An incident of the day is worth recounting. While the young soldiers were drilling, a number of envious or jealous boys of the neighborhood, stationed on a bluff across the railroad tracks, hooted at them and taunted them with being play soldiers, a cheap imitation of the real thing. They stood the insults for some time, as long as possible for youthful endurance, when, at the command of a sergeant, a squad of the juvenile Rough Riders made a gallant charge across the railroad tracks, stormed the local San Juan hill, and completely routed their tormentors, soundly trouncing those who had the temerity to stand their ground.

The Ocean Grove Rough Riders were the feature of the annual "baby parade" in Asbury Park, where they were cheered to the echo all along the line of march.

THE OCEAN GROVE ROUGH RIDERS

companies, fully uniformed and equipped, set the boys agog. At once there was a reversal of form. Tardy ones were now to be found in their places at the appointed hour, and there was noticeably an increase in the number of boys with "voices." Ocean Grove was alive with lads who wanted to enlist.

A military organization was perfected with the complement of two battalions of Rough Riders, two full companies to each battalion. Happily at the time there were upon the ground, and available for instruction and drill, two ex-officers of the United States army, whose very presence was an inspiration to the numerous juvenile soldiers aspiring for military honors upon a bloodless field.

Major Louis B. Holt, Sixth United States Volunteers, commanded the first battalion, and Major Edward Killmer, Second United States Volunteers, the second.

It was impossible at the outset to appoint captains from among the boys, owing to their want of experience in matters military. The sergeants and corporals, however, were taken from the ranks, four sergeants and six corporals to each company.

To give heightened color to the military idea, an ambulance corps was added to each company. This relief corps was made up of six boys, with a sergeant in command. They carried the regulation army litter.

At first there was no thought of uniforms. These were made possible a little later by the large department stores furnishing an inexpensive imitation of the Rough Rider costume as a novelty for boys. Then followed the purchase of arms—a very fair pattern of the death-dealing Krag-Jorgensen in wood.

It was remarkable how quickly the boys, down to the very smallest shaver recruited, adapted themselves to military tactics. His excellency, Governor Roosevelt—himself the noblest Rough Rider of them all—paid the lads a high compliment by saying they were beyond question the best-drilled boys he had ever seen. Their fame spread beyond the borders of Ocean Grove. They were invited to participate in the military tournament at Long Branch last August, when the troops were reviewed by President McKin-

The crowning triumph achieved by the boys, and one in which their sisters shared, was at the Children's Concert in the great Auditorium, during the Ocean Grove Musical Festival. An audience of eight thousand paid tribute to their prowess. The girls, in the dress of the Red Cross nurse, entered the building at its sixteen doors, a company to each door. There were several hundred of them, each carrying an American flag at right shoulder. While the audience was applauding the pretty sight, the orchestra struck up "Marching Through Georgia." The word

A TYPICAL ROUGH RIDER

was passed, "Here come the Rough Riders." A company of the boys came in at each of the sixteen doors, their guns at right shoulder. Down the aisles they marched with military precision, in columns of four. Cheer upon cheer greeted them. Enthusiasm was rampant. Like true soldiers, the boys kept their eyes straight ahead. Where the converging aisles center the advancing columns met and the "fours" became "eights" without the loss of a step. It was as pretty a military evolution as can be conceived of, in admiration of which the large audience shouted itself red in the face, nor ceased its manifestation of approval until the Rough Riders ascended the platform and finished their drill.

SOME FACTS ABOUT WHEAT.

When we come to talk about wheat figures, the mind is lost in the magnitude of the figures. The ordinary boy has difficulty counting up into the thousands. What shall he do when he comes to count up into the millions? We suppose it is as impossible for a boy to imagine a million as it is for a man to do so. We can imagine what a hundred bushels of wheat would look like, but how many of us can measure with our mind's eye a thousand bushels? What sort of a notion do we get when we say that every twelve months one hundred million bushels of wheat, besides twenty-five million bushels of other grain, are received in Minneapolis? Of course, that much grain is not kept in Minneapolis the whole year round; it is coming and going. Where do they keep it? In immense elevators, that is, in great, tall, peculiar looking buildings, with-

out windows for the most part, such as you see along the railroad tracks in almost any large city. Minneapolis is one of the greatest wheat markets of the world. The wheat from the great Northwest, and particularly from the Red River Valley, which you will see by your maps lies in the northern part of Minnesota, is poured into Minneapolis, trainload after trainload. Of course, a very large part of it goes to Duluth, and from thence to eastern markets by the Lakes, a large part of it also finding its way across the Atlantic; but Minneapolis is still the primary wheat market of the country. It is interesting to note the growth of the elevator capacity of Minneapolis. The picture of the elevator capacity for 1900, which is shown, does not represent one building, but represents the capacity of all the grain elevators in Minneapolis. You will note that in 1870 there was room enough in the elevators of Minneapolis to hold a million bushels. In 1875 the

elevators of the city held a million and a half. In 1885, nine millions—quite a jump in ten years. In 1895 the capacity was fifteen million bushels, and in 1900 thirty million bushels. That is, in the last five years the capacity has doubled. The meaning of this is that now there is enough room in the Minneapolis elevators to hold thirty million bushels of grain at one time

In a Day, the flour mills of Minneapolis can grind 75,700 barrels of flour. This, if made into bread, would yield 1,930,300 loaves. So that the mills of Minneapolis, by grinding steadily, could give a loaf of bread every day to every man, woman and child living in this thickly settled area.

In a Year they would make at this rate 27,630,300 barrels of flour.

These if laid end to end would stretch half way around the earth

In a Year they actually do produce 15,000,000 barrels of flour. These would fill 75,000 ordinary freight cars and make a train 511 miles long.

With the necessary locomotives to draw these cars, they would reach from Minneapolis to Kansas City.

WHAT BOYS ARE DOING

WILLIE AND WILBUR STONESTREET—BOYS WHO PREVENTED A TRAIN WRECK.

Willie and Wilbur Stonestreet are the twelve year old twin sons of Mr. and Mrs. John Stonestreet, living near Cedar, Ind. We want to present their pictures to you because on April 19 last they did something which really classes them as boy heroes. About five o'clock in the afternoon of that day as they were walking along a railroad track near home upon a

grade fully ten feet high, they discovered a broken rail. They knew that soon the St. Louis Western Express was due. Hurrying home they notified their father, who reported the boys' discovery to the Wabash Railroad agent. The agent, guided by the boys, hurried to the scene, reaching there just in time to flag the express, whose headlight was lighting their path. The train was brought to a stop just a few feet from the broken rail. The prompt action of the two boys prevented a wreck that might have cost the lives of many persons.

Let us hope that the Wabash Railroad will reward the boys in some substantial way.

A FINE BOYS' CLUB AT TROY, N. Y.

Rev. Father Geo. E. Quinn, of Troy, N. Y., is conducting a very successful boys' club. The rooms are fitted up with everything that a boy's heart could

desire. There is a complete gymnasium, two pool tables, all kinds of games, good and entertaining literature. In the rooms every night in the week gather from one hundred to two hundred boys. Father Quinn is always there, and with his broad sympathy, ready understanding and kindly nature, he enters into the sport of the boys and is one of them. There are two pianos in the rooms, and every evening the boys sing, under the direction of their leader. Every Wednesday night the boys go in a body to service at the church, and often there are fully five hundred of them who bow in prayer together. There is a temperance organization among them in which all the boys sign pledges to leave intoxicants alone. It is said that Father Quinn knows every boy in the society by name and nickname, and that he always uses the latter when addressing them. He makes periodical calls at the homes of the boys and keeps track of their circumstances and position in life, and of their health. Father Quinn is the author of a book entitled, "Organizers and Their First Steps."

EARL GULICK SINGS FOR THE PRESIDENT.

On the front page of our April number appeared a picture of Earl Gulick, the great boy singer. When President McKinley was in New York recently, Earl received an invitation from him requesting the pleasure of his presence at the Manhattan hotel one Sunday afternoon. When the boy and his mother reached the hotel they found part of the large parlors screened off and the Presidential party, consisting of about forty persons, seated about the piano. The President had sent for Earl that he might hear him sing. The boy sang for an hour, and when he had finished the President shook his hand heartily and said, "You have a wonderful gift, my boy."

Earl began to sing at the age of four, but has been singing professionally only about a year. This celebrated little singer is a thoroughly boyish boy. He is unusually robust, although in the picture he appears very angelic, and you would not think of him

as a leader in athletic games, which indeed he is in Trinity School, New York. He recently won the boxing championship of his class, and he is much prouder of this distinction than he is of his musical success.

LEAGUE OF GOOD CITIZENSHIP.

The principal of Grammar School No. 4, Wilmington, Del., has organized a League of Good Citizenship in the first, second and third grades in the boys' department, and already about one hundred boys in those classes have joined. The constitution of the league, which explains at length the scope of the organization, is as follows:

"League of Good Citizenship, Public School No. 4, Third and Washington streets, Wilmington:

"Article 1.—This association shall be called the League of Good Citizenship of Public School No. 4.

"Article 2.—The object of this association shall be to work for a clean and healthful condition of the streets of Wilmington.

"Article 3.—Section 1. It shall be the duty of each member of the league to refrain from throwing paper, bits of fruit, or any refuse whatever into the streets or any other public place, and to refrain from injuring or defacing property, and to observe city ordinances. "Section 2.—Any member showing continued neglect of duty shall be dropped from the league."

Meetings are held on the last Tuesday of each month. The boys have entered into it with all their hearts. One of the younger members of the league remarked at his home: "Mamma, you mustn't fuss if you find paper in my pockets now; there aren't any barrels on the street to put loose paper in and I have to pick up every piece I see, so I guess I'll have to carry it home."

In many eastern towns civic clubs among boys are becoming popular, with the result that not only are school properties kept neat and clean, but the streets are notably in better condition. Children enjoy the work, and the opportunity should not be neglected to thus instill into the boys civic pride and habits of neatness.

LIEUT. HARRY H. CALDWELL, ADMIRAL DEWEY'S SECRETARY.

Wm. Emmet Moore.

The career of Lieut. Harry H. Caldwell, of the navy, made prominent as it has been by his gallant conduct at the battle of Manila, and his close connection with

Admiral Dewey in the capacity of secretary, is full of lessons to young Americans, showing the possibilities before every boy in this land who has determination and ability to do the tasks that are set before him. Faithfulness and devotion to duty, whatever it might be or wherever it might carry him, has ever characterized this young naval officer. To be the right hand man of one of the greatest warriors of the age is not allowed to many men, and few would be able to successfully fill a position so trying both in war and in peace.

Lieut. Caldwell has had a great career since he left his home in Quincy, Ill., about ten years ago to report as a newly appointed cadet at the naval academy at Annapolis. Since then he has served in every quarter of the globe,

and has been fortunate in always being in that part of the world where history was being made. As a cadet, he was on board the ship sent out to protect the American missionaries in China during the Chinese-Japanese war and saw one of the greatest land battles between the opposing forces. Again, he was on the first ship sent to Chile when war between that country and the United States seemed imminent. His greatest good fortune came when he was appointed secretary to Admiral Dewey (then Commodore Dewey), and ordered to the Asiatic station. Every one who has kept up with the career of the great admiral since that May morning when he sailed in the dark, past the frowning battlements of Cavite and Corregidor, up through the deadly mines of the harbor, and sunk the proud fleet of Spain, knows something of the young secretary who wrote all the admiral's dispatches and acted as buffer between him and the curious world which would encroach on the time of the hero.

The story of this young man should be told in the school books as an incentive to ambitious boys of coming generations.

His life before he entered Annapolis is soon told. It does not differ from that of thousands of other boys. He was born in St. Louis, Mo., Feb. 5, 1873, and when two years old moved to Quincy, Ill., with his parents. Quincy has been his home since then and is today his home when his profession allows him a vacation. As a boy he attended the public schools and at fourteen was in the High School. At that time a vacancy at the Naval Academy for his congressional district occurred. Young Caldwell knew nothing of the vacancy until the morning upon which the examination took place, but when he learned of it he walked into the school room and presented himself as a candidate. While working away on the examination papers in the afternoon, he suddenly realized that it was time for him to "carry his route" on an afternoon paper. He had been a carrier for several years and had never failed to be on hand at the right hour. Here he first showed conspicuously his devotion to duty. The examiners told him it was against the rules governing the examination to allow a candidate to leave and resume again. He put down his questions and answers and said with determination that won the admiration of the examiners, "Then I must give this up. I must carry my route"; and he did.

But the lad had made such an impression upon the

board and the congressman who had the appointive power that they sent for him that evening, and in the congressman's office he finished the papers his devotion to duty had interrupted. It is hardly necessary to say he won the appointment. At the Naval Academy his career was in keeping with his start, and although the youngest man in his class he graduated twelfth.

At the battle of Manila the lieutenant volunteered his services to fight one of the secondary batteries, as the quota of line officers was short. Later he volunteered to lead an armed boat's crew into the Pasig river to destroy two Spanish gunboats that had taken refuge there. This expedition meant that not a man would probably get back alive; but at the last moment the admiral refused to allow the men to take the chances.

Since Dewey's start for home Caldwell has been with him in all the ovations that were offered him in foreign ports and at home. And to cap the long list of honors, he was the admiral's best man at his romantic marriage to Mrs. Hazen, and accompanied him on his recent visit to Chicago, St. Louis, Memphis and other places.

HARRY COCKRELL, ONE OF "RONEY'S BOYS."

Harry Cockrell, a member of a concert company known as "Roney's Boys," is ten years old, a plump and sturdy American boy, with rosy cheeks and splendid health. His voice is, however, the wonderful thing about him. It is a flexible and very high soprano, clear and pure in quality, ranging from "middle B" to "high F." He began his studies with Mrs. Cotton, choir mistress of the Cathedral (Episcopal) of Omaha, Neb., and for some time was a member of the Cathedral choir. Last fall he went to Chicago to make preparations for concert work, and arrangements were made with Prof. Henry B. Roney by which he was introduced to the concert stage. For several months now he has been one of "Roney's Boys," a term by which for years the boys whom Prof. Roney has educated and brought before the public have been known. Prof. Roney himself writes us that Harry is bright and intelligent, neat in personal appearance, natural and unspoiled in manner, remarkably amiable and even-tempered, and always a little gentleman, with a bright and winning smile. "A commendable trait in Harry's character," says Prof. Roney, "is a readiness to acknowledge a fault and to own up when caught in a mischievous prank. His rare traits of personal beauty and frankness inspire confidence and insure him success and good friends always."

The concert company to which Harry belongs returned to Chicago early in May from a four month's concert tour of the south. In the accompanying illustration the boy sitting is Harry Cockrell. The other members of the group are Prof. Henry B. Roney, manager of the company; Master Francis Murphy, a thirteen year old contralto with a deep voice of wonderful power and pathos and a grandson of Francis Murphy, the noted temperance evangelist; Master Arthur Goff, a ten year old cornetist, with the style and execution of a professional, and Jamie Crippen, a dainty little contralto gentleman of eleven.

Blatchford Kavanagh, whom Prof. Roney discovered in 1888 as a frail little boy with dark hair and big eyes and who afterwards became the most noted boy singer in America, if not in the world, has recently, though now grown to be a man, been one of the company. The life history of young Kavanagh is an interesting one. When he first began to sing under Prof. Roney the full possibilities of his voice were scarcely dreamed of. Soon his rendering of the selection "Angels Ever Bright and Fair" attracted wide notice, and the announcement that he was to sing was sufficient any Sunday to crowd Grace Episcopal Church.

A NEWSBOY OF THIRTEEN SAVES A LITTLE GIRL'S LIFE.

Joseph Hartley, a thirteen year old boy, rescued a little tot from the wheels of a trolley car in Baltimore one day in March. He has been overwhelmed with compliments for his bravery. The sturdy little fellow was selling papers on the corner of Hudson and Chesapeake streets, when he saw a baby girl two years of age, toddle out into the street, unmindful of danger and stop between the car tracks, waving her chubby hands at a trolley car that was coming toward her down grade, only a few yards away. The motorman

After two years of fighting and hard work and eventful happenings, Lieut. Caldwell went back to his old home at Quincy to receive, at the hands of his admiring fellow-citizens, the tribute they had been waiting anxiously to pay him. He was received at the railway station by a reception committee of citizens and the military and naval reserve forces of the city. On the evening of Nov. 23, 1899, a brilliant banquet was given at the Hotel Newcomb, at which two hundred representative citizens and distinguished guests from abroad were present. At the banquet a silver loving cup was presented to him, as a testimonial of the esteem of his townsmen. The cup is a beautiful piece from one of the leading silversmiths of the country. It stands eighteen inches high, and is twelve inches from tip to tip of handles. The urn-shaped cup is gold lined, and the fancy scroll work is in French gray finish and the body of the cup is brightly polished. On one side is engraved the cruiser Olympia and on the other the following inscription: "Presented to Lieut. Harry Handley Caldwell, U. S. N., by his fellow-citizens of Quincy, Ill., Nov. 23, 1899, commemorating his gallant services at the battle of Manila, May 1, 1898."

Chicago, to the doors. He was then just completing his eleventh year. In 1890, at which time he was passing from boyhood into manhood, his voice broke, and an end for the time was put to his wonderful work. Then followed a period of seven years, which he devoted to travel and study. He took a course in electrical engineering in the Armour Institute, and later spent some time in the music house of Lyon & Healy, of Chicago. When he was nineteen years of age it was discovered, to the delight of his teacher,

PROFESSOR RONEY AND HIS BOYS.

that he had a sweet baritone voice of rare quality. At once the cultivation of the voice was resumed, with the result that it has developed into one of sweetness and virility, with unusual range and sympathy.

About two years ago Prof. Roney organized the concert company known as the "Blatchford Kavanagh and Roney's Boys Concert Company," which has been heard with delight by many thousands in every section of the country.

made efforts to stop the car, but on account of the momentum, could only slightly decrease its speed. In a second, Joe took in the situation. Dropping his papers, he leaped in front of the car and jerked the little child away, just as it passed over the very spot on which the baby had stood. He carried the little one to the sidewalk, where its mother received it, then calmly picked up his papers and resumed business.

Not all the heroes of these days wear the uniform of the army or navy, and not all of them are big, broad-shouldered fellows, waging war against their fellowmen.

JAMES FRANCIS SMITH.

An American Messenger Boy Who Carries a Message, to President Kruger of the South African Republic, Signed by 28,854 Philadelphia School Boys.

When the American liner St. Paul left her New York pier and sailed into the stream, bound for Southampton, April 11, a large crowd of district messenger boys, one hundred and thirty-two Philadelphia schoolboys and a delegation from the schools of New York stood on the pier and cheered heartily. At the big ship's forward rail stood messenger boy No. 1534, James Francis Smith, of Brooklyn, a bright American boy, smiling and waving a little American flag as he began his long voyage to Pretoria, the capital of President Kruger's country. The boy was dressed in a new uniform and carried a box containing the message of sympathy to President Kruger, signed by 28,854

Photo by Davis & Sanford, N. Y.

schoolboys. The box was suspended by a large strap from his shoulder, on which was printed "Special messenger of the Philadelphia North American," which newspaper originated the idea of the schoolboy greeting to the President of the South African Republic. A reporter of that paper goes with him. His father, mother, sister and brother accompanied him to the boat. Just before the line was thrown off there was an affecting little bit of leave taking. The mother was weeping, to be sure. What mother would not, when her boy was to part from her for a journey far away in the big world? You could see, however, that she was proud of the distinction the lad had won.

The hour of ten had arrived. The second bell of warning struck.

"Good-by, mom," he said in a way that must have sounded familiar, for the woman smiled through the tears.

"Daddy," said the boy, "good-by!"

"Good-by, my boy. You'll win—you'll deliver the message, eh, Jim?"

For answer the boy extended his arms and big Jim Smith caught him up to his breast. There was a kiss for Nellie and a hug for Eddie and then the little messenger gravely but unflinchingly watched them descend the gangplank to the pier.

Deafening cheers went up when the bright faced boy appeared at the rail.

The captain, all smiles, called to the North American correspondent:

"Bring the little fellow on the officers' deck. The crowd can see him better there, and heaven knows they want to see."

With alacrity, A. D. T. Messenger 1534 went up the ladder and stood alone on the deck, in fair view of the gazing thousands. Cheers rang—not in unison, not spasmodically, but men and boys and women, too, shouted and shouted until their strained throats failed to utter what they wished—so that while their lips moved they were silent, or croaked hoarsely.

Gracefully the St. Louis had swept clear of her pier. Two shrill whistles sounded. The Western Union and the Clara steamed beside the ocean liner. Wildly enthusiastic boys, with all the force of their energy and strength of their lungs, united in a tremendous, glorious farewell cheer to their chosen envoy to far-off Africa.

Young Smith is an earnest and brave boy. He is a crack base ball player, can swim, run like a deer and hold his own in all the athletic sports known to boys. He was selected from among two thousand boys by the general superintendent of the American District Telegraph Co. in New York. This gentlemen sent

orders to the district messengers to have each pick out his best boy and send him to the general office. About forty boys came, and from these three were chosen. These three were kept under close observation for two or three days and finally the choice fell to young Smith. Then this boy was kept under scrutiny for several days and was then suddenly asked:

"Will you carry a message to President Kruger?"

"Yes, sir," came the instant reply.

"Do you know where to find him?"

"Yes, sir; in South Africa."

"Supposing you find that President Kruger has been taken to St. Helena when you reach South Africa, what will you do?"

"Follow him to St. Helena, or to the end of the earth, if necessary."

"Do you know where St. Helena is?"

"Yes, sir; it is the island where Napoleon was imprisoned and died."

The message to President Kruger reads:

"We, the undersigned students of the public schools of Philadelphia, the city where our own forefathers enlisted in their splendid and successful struggle against English oppression, desire to express to you and to the fighting men of the South African Republic their great admiration for the genius and courage that has checked English invasion of the Transvaal; and the undersigned extend their most earnest wishes that in the end the South African Republic will triumph over England in a war in which the Boer cause is noble, the English cause unjust."

It is interesting to note that the boys of the Windsor, Ontario, schools determined to send a message of sympathy to Aguinaldo as a sort of retaliation for the action of the Philadelphia boys, but the Windsor Board of Education vetoed the plan.

A VICTIM OF DIME NOVELS.

Dime novels are to blame for a little fourteen year old boy, Frank M. Adams by name, going all the way from Pittsburgh to San Francisco to pick up gold and fight Indians. A reporter of the San Francisco Call recently found him, penniless and discouraged, his face pinched and white and his body weary. "If it hadn't been for the novels I'd be home now," he said. "I have read all the novels I ever want to. Somehow I got hold of those paper-covered stories that tell about California, and that started me. I took all the money I could get and bought these books and weekly papers that have that kind of stories in them. Some of the stories made out that California was all a big gold field—nothing to do but walk out and pick up nuggets in the road. I thought mining was just about play. I read a book that made me think that it would be no trouble to get from here to the Klondike. Some of these stories told about the barrels of money to be made packing fruit out here. All of those fellows in the book started out with a penny and came back home in a little while and felt big and let their mothers kiss them and cry, and then they said, 'the house is a little shabby, isn't it?' and so they stepped out and put up a house with marble steps and presented it to their mothers, and when the folks said 'thank you,' they said, 'don't mention it.'"

"But all I want now is a kind of a job as bell boy, elevator boy, or anything that I can live on and get decent clothes and have a chance to go to night school."

Someone asked him how he got so far away from home. Then he told the story. "With ten dollars that my mother gave me to buy clothes I bought a half-fare ticket to Chicago. From there on I had to work my way. I got a chance to go to Rock Island by break-

ing coal for the engine. When I got as far as Omaha I began to look for the gold mines. It was at Omaha that 'Dick the Dangerous' went for a walk and came home with dusty shoes, and when he went to brush them, he found it was all pure gold he was brushing off. He had to kill nineteen Indians there to keep them from killing him, but that was easy. Have only seen three Indians since I left home, and they looked too lazy to care about fighting. I stopped for a while at Grand Island, Neb., and got a job as bell boy. I spent all my money for dime novels, for I was getting a little discouraged and needed something to brace me up. One of the books told me that a boy dropped a plum stone on the ground in San Francisco and a tree started and that gave him an idea, so he planted fruit and made eighty thousand dollars. That discouraged me. At last, after a load of trouble, I got to San Francisco, and then there wasn't any further west to go. I didn't find anything that the books told me I would find. It's a big city and I don't know anybody, and there are more boys here than there are jobs," and the little fellow looked absurdly incapable set in contrast with the big, hustling, jostling world about him.

LIEUTENANT GRIDLEY.

In our January number we gave an account of the efforts of John P. D. Gridley, son of Captain Gridley who was with Admiral Dewey in the Battle of Manila, to obtain a lieutenancy in the Marine Corps. Captain

Gridley died, as the world knows, last fall, leaving his family in such circumstances that the son was for a time compelled to give up his attendance at school and seek some occupation by which he might assist them. Information of these facts coming to Admiral Dewey, the Admiral took the son of his former Captain with him to see President McKinley, with the result that they

decided to bear the expenses of the young man in his efforts to complete his education and obtain a lieutenancy. We have recently received a letter from the young man informing us that he has passed an examination for the coveted position and is now a Second Lieutenant of Marines, stationed at Boston.

Allen Balch, a six year old boy at Manchester, Conn., saved a little five year old girl from drowning a few days ago. The children ventured too far out on some thin ice and suddenly the little girl broke through. The boy ran to the bank, obtained a broken limb from a tree and crawled over the ice until within reach of his little companion. She seized the limb and held on while the little boy called for help.

SENECA FALLS (N. Y.) DRUM CORPS.

JOHNNY'S PLANS FOR VACATION.

CAPTAIN MAYO AND HIS CHIVALROUS ENEMY

*The eighth story of a series entitled "Stories of Boy Heroes."

By ANNIE ROBINSON WATSON.

Captain Mayo was a young officer in the Confederate artillery, and at the battle of Newbern, North Carolina, March, 1862, he was assigned with his command to the defense of the fort held by the Confederates at that point.

The tide of battle turned against the Confederates and it soon became evident that they could only save themselves by retreat. An order was accordingly sent Captain Mayo: "Retire at once. Blow up the magazine."

He received the order and stood for a moment in deep thought. Its execution would, he knew, be fraught with the most imminent danger to the one who should undertake it. He realized that it would mean almost certain death to him who should lay and

*In every sketch given in this series the central incident is true, the accessories and background as nearly so as possible. It is not certain that "Lowell" is the correct name of the federal officer in this story.

fire the train. There was not an individual in his command who would hesitate a second to obey the order if given, but he paused, seeing as in a flash of light all that made it hard to give up life. "Which one of my men shall be sacrificed," he asked himself. "Which shall I choose?"

The Federals were very near, there was no time for longer indecision; in a firm voice he gave the word of command and the men retired in good order. Only one was left, Captain Mayo himself. Quickly he laid the train and applied the match.

A few moments later an unearthly sound filled the place. It was as if a volcano had burst forth in flame and smoke. Great timbers went speeding skyward like straws blown by the wind. The air seemed full of curses with its bursting shells and other death-dealing missiles.

The company had reached a place of safety when the explosion took place, and a detachment of the Eleventh Connecticut, which had been advancing towards the fort, retreated hastily just in time to escape. They fell back a short distance to a point where a number of wounded prisoners had been left when the Trent river bridge had been burned by the Confederates.

It was now almost dark, and they were passing through a thick grove, when unexpectedly they came upon a group of three Confederates who were bending over a mangled form lying on a blanket.

"Who is this?" asked Lowell, one of the Federals, looking towards the wounded man.

"It is Captain Mayo," was the reply. "He ordered his company to leave the fort. They obeyed without knowing that it was his intention to lay and fire the train which caused the explosion. He did this himself rather than expose one of his men to the danger. We found him a few moments ago and brought him here."

The body on the blanket seemed to be bleeding from a score of wounds. Both legs were broken, the face, neck and hands burned black, and the eyes sightless. It was terrible to behold, and the Federal soldier bending nearer, said tenderly: "So he died for his men, a noble deed."

A feeble sound came from the lips of the man on the blanket. "Water! water!"

"He is not dead!" exclaimed one of those near, while Federals and Confederates alike bent over him eagerly. Then his head was lifted and the canteen of one of the captors placed to his lips.

"Go to the ambulance corps at once for a stretcher," said Lowell to two of his companions, and they hurried off, while water from the canteen was used to moisten the lips and bathe the face of the wounded soldier. Soon the stretcher was brought; he was lifted upon it tenderly, and carried to Federal headquarters at the Second North Carolina cavalry camp. Here he was given the most comfortable place available, but lay in inexpressible agony until about midnight, when Dr. Whitcomb came to dress his wounds.

He was quite conscious and asked, "Is there no one else who needs you more than I do, doctor?"

"No one, my poor fellow," answered the doctor, kindly. "Then I will thank you to help me as best you can."

His body was horribly lacerated and bruised, the bones broken and eyes seriously injured, but through all the painful ordeal of dressing and bandaging, not a single groan escaped his lips.

The next morning Major Lowell, the Federal officer, who had already been so kind, came to the temporary hospital. The heroic conduct of the young captain had roused his deepest admiration, and he said to a comrade, "He's our prisoner, of course, but he shall never need a friend so long as I live. He voluntarily faced that terrible death rather than require it of one of his men. They all escaped the explosion, and when they missed him and went back to search he was found fully one hundred feet from the point where the catastrophe occurred. I am going to see him now."

Captain Mayo was lying on a cot when his Federal friend entered and replied feebly but distinctly.

"Can you do anything for me? I was just longing to have someone write a letter to my mother. Could you do me this kindness and get it through the lines?"

"Why, of course I could. I will write immediately, and it shall be dispatched under a flag of truce."

"I cannot possibly express my thanks," said the prisoner, "but if you have a mother you will understand what I feel. Mine is watching and praying for me constantly; she knows that I was in the engagement yesterday. I cannot bear to think of her terrible suspense."

"Tell me what you wish to say, Captain, and the letter shall go without delay."

"Tell her, please, that I was wounded, but am receiving the best care and attention the Federal surgeons can give. That I have kind friends near at hand who yesterday were my enemies. That I will hope to be well soon, and she must be my brave little mother and not worry. Tell her I send my very best love and am thinking of her all the time. Don't let her know about—my eyes."

"I will write just what you have said," answered Major Lowell, kindly, "but what is it about your eyes?"

"It is probable that I will be blind," replied the wounded man firmly.

Lowell was silent a moment, then pressed the other's hand warmly and rose, saying, "the letter shall go at once."

The days passed slowly for the wounded man, but he was treated with the greatest kindness and attention. Lowell spent as much time as possible at his bedside, reading aloud and solacing many of the tedious hours with his violin. Often during long and trying hours of wakefulness, when everyone else was asleep, Lowell sat by the side of "his prisoner," as the men called Captain Mayo, while the low, plaintive tones of the violin came faintly from the room.

"It seems impossible that we were ever enemies," said Mayo one night, clasping his companion's hand tenderly, "a brother could not have been kinder nor more self-sacrificing."

"Well, we are not enemies now," was the cordial answer, "I loved you from the moment I heard of that gallant deed."

Weeks and months passed by. The case which at first had seemed quite hopeless, by degrees yielded to the skillful and faithful attention of the Federal physicians. With eyesight restored and heart throbbing with thankfulness, the young captain was at last well enough to travel.

A pathetic farewell took place between himself and his chivalrous enemy. Few words were spoken, but they were both deeply moved when the time came for parting. Words are empty and meaningless when the heart is so full; at such times silence is more eloquent than sound.

With a special escort furnished by General Burnside, Captain Mayo was sent through the lines and to his old home.

Shall the Baby Stay?

One View.

YES, I've got a little brother.
Never asked for him from
mother,
But he's here;
But I s'pose they went and
bought him.
For last week the doctor brought him;
Ain't it queer?

When I heard the news from Molly,
Why, I thought at first 'twas jolly;
'Cause you see
I just 'magine I could get him,
And our dear mamma would let him
Play with me.

But when once I had looked at him,
I cried out, "Oh, dear! Is that him?
Just that mite?"
They said, "Yes, and you may kiss
him!
Well, I'm sure I'd never miss him.
He's a fright!

He's so small, it's just amazing.
And you'd think that he was blazing.
He's so red;
And his nose is like a berry,
And he's bald as Uncle Jerry
On his head.

He's no kind of good whatever,
And he cries as if he'd never,
Never stop;
Wont' sit up—you can't arrange him.
Oh, why doesn't father change him
At the shop?

Now we've got to dress and feed him,
And we really didn't need him.
Little frog!
And I cannot think why father
Should have bought him when I'd
rather
Have a dog!
—London Daily News.

Another View.

IN a little brown house,
With scarce room for a mouse,
Came with morning's first ray,
One remarkable day
(Though who told her the way
I cannot say),
A young lady so wee,
That you scarcely could see
Her small speck of a nose;
And to speak of her toes,
Though it seems hardly fair,
Since they surely were there;
Keep them covered we must;
You must take them on trust.

Now this little brown house
With scarce room for a mouse,
Was quite full of small boys,
With their books and toys,
Their bustle and noise.

"My dear lads," quoth papa,
"We're too many by far;
Tell us what can we do
With this damsel so blue?
We've no room for her here,
So to me 'tis quite clear,
Though it gives me great pain,
I must hang er again
On the tree whence she came
(Do not cry there's no blame).
With her white blanket 'round her,
Just as Nurse Russell found her."

Said stout little Ned:
"I'll stay all day in bed
Squeezed up nice and small,
Very close to the wall."
Then spoke little Tommie: "I'll go
To the cellar below.

I'll just travel about,
But not try to get out,
'Till you're all fast asleep;
Then upstairs I'll creep
And so quiet I'll be
You'll not dream it's me."

Then flaxen-haired Will:
"I'll be dreffully still;
On the back stairs I'll stay,
Quite out of the way."

Master Jamie, the fair,
Shook his bright curly hair:
"Here's a nice place for me,
Dear papa, you see?
I just fit it so tight
I could stand here all night."
And a niche in the wall
Held his figure so small.

Quoth the father: "Well done,
My brave lads. Come on:
Here's a shoulder for Will;
Pray sit still, sir, sit still!
Valiant Thomas for thee
A good seat on my knee,
And Edward, thy brother,
Can perch on the other.
Baby John take my back.
Now, who says we can't 'pack'?"

"So love gives us room,
And our birdie shall stay.
We'll keep her, my boys,
Till God takes her away."
CLARENCE BEACH (Age 12).
For "THE AMERICAN BOY."
Mina, N. Y.

HAVE YOU SEEN?

THE AMERICAN BOY CALCULATING PENCIL? The Pencil that figures with a twist of the wrist? That figures quicker than you can and never makes a mistake? That calculates anything from 1x13 to 12x24 in the twinkle of an eye? That gives you hundreds upon hundreds of calculations with the swiftness and accuracy of an expert?

THE AMERICAN BOY CALCULATING PENCIL?

Can you tell as quickly as this Pencil how much 11x\$24 is? Or, 9 dozen at \$1 80 cost? Or, how much 3 per cent of \$1,617 is? etc. "It is truly a little wonder," says the Pittsburg Press. "It is a marvel of ingenious mechanism and has excited a great deal of interest among our readers," says the Boston Traveler. "An article of the greatest educational merits," says the Youths' Companion.

CAN YOU BEAT IT?

Made of pure Aluminum and attached to a pencil of standard quality. Fits any common lead pencil. Is also a pencil point protector, a pencil lengthener and eraser. Can be carried in the vest pocket. A regular 25-cent article. Special introductory price, 15 cents.

ADDRESS **SPRAGUE PUBLISHING CO.,**

DETROIT, MICH.

GEN. R. E. LEE

APPOMATTOX

GEN. U. S. GRANT

IN the parlor of the unpretentious McLean homestead at Appomattox in Virginia, Grant and Lee met to arrange the terms of surrender of the last remnant of the Confederate army. The struggle, so long, so ably, and so indomitably kept up, here was brought to a proper and peaceful close.

Surrounded by a numerous, well armed, equipped and provisioned force, elated by the series of successes of previous weeks, the condition of the Southern army manifestly was hopeless. Lee knew it, and Grant knew it. The situation was such that had the two generals lived in an age of old, before the pure principles of Christianity had begun to permeate and civilize even ruthless war, it would have been only a question of how much brutal glory and sordid spoil could have been extorted, and how much humiliation visited upon the vanquished.

What a contrast was here presented to those barbaric days of old. With a large number of the people of the North, Grant was regarded as a stern, relentless man; the sobriquet of "butcher" had even for a while attached to his

THE M'LEAN HOMESTEAD AT APPOMATTOX

Sixth of a Series. "Notable American Houses," by W. J. Roe.

name because of the multitude of lives that—seemingly heedless of their value—he had offered up on the bloody altars around the insurgent capital. Men remembered the terms of an earlier surrender, when at Fort Donelson he sent the proud message—called by the defeated chief "unchivalrous"—of "unconditional surrender."

What humiliating terms might he not now exact? But Grant proved himself to be purely, nobly chivalrous. When Donelson surrendered, the fate of the Union demanded rigor; till the constant attrition of arms against arms crumbled the Confederate forces, no sacrifice of life seemed too great to achieve the end. Now the end had come; a powerless few, pent in, ill clad, and hungry, alone remained.

The terms Grant offered were worthy of the man, worthy of the great nation now reunited, and worthy of the dawn of a new and nobler civilization. His generosity extended to every man in the capitulated army, and the kindly sentence, "Take your horses home with you, men; you will need them for the spring ploughing," will live with that other, equally famous: "Let us have peace!"

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.
 All correspondence for this department should be sent to Mr. Harlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.
 THE AGASSIZ ASSOCIATION welcomes members

of all ages, and anyone who is interested in any form of natural science is invited. Established in 1892, incorporated in 1892.
 Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.

Agassiz Association.

Swift and gratifying have been the responses to our invitation to join the Agassiz Association. Our desk is heaped inches high with letters from wide-awake American boys and girls—and their fathers and mothers, too—all expressing a hearty interest in nature, and in our plans for becoming acquainted with her wonderful works and ways. These letters, as will be seen presently, do not come from any one section of the country, but from Rhode Island and Massachusetts, California and Dakota, Michigan and Colorado, and many places between. To one and all we offer a hearty welcome. We shall have space for only a few of the many interesting communications received, and will look first at a

GIGANTIC BEETLE.

This insect comes via North Dakota with a question mark as big as himself. Who is he? What is the gentleman's name? Mr. Alson L. Brubaker, of Fargo, writes under date of March 7: "Enclosed you will find a photograph of a beetle which belongs to my collection. Up to the time of writing I have been unable to find out its name. Its color is brown. It was caught on my father's plantation in Central America. The horn is two inches long, the body four inches long and two and one-half wide. The two front legs are very long."

To every reader who will send us the correct name of this insect we will mail free one of our new A. A. badges with photograph of Professor Agassiz as described in THE AMERICAN BOY for May. By the way, what is the difference between a bug and a beetle?

The next paper we take up is a letter from Mr. D. C. Bartley, giving a vivid account of

A DAY AMONG FOSSILS.

The summer of 1881 spent at Bay View, Michigan, situated on the banks of Little Traverse Bay.

Before I went north I had read in a book written by Dana, that some very interesting fossils were obtained in that region, and as soon as I arrived I began to inquire for the best localities in which to search for them. Much to my astonishment, no one could inform me.

I then determined to take a cruise along the shore and find out the truth of the statement for myself. Accordingly, I obtained the use of a large flat-bottomed boat and, accompanied by two other boys (from Central America), started one cloudless morning in quest of fossils.

We rowed about a mile before turning toward the shore, keeping close watch on the bank for a place suitable for a landing.

This we soon found, for rowing round a point, the scenery suddenly changed. Instead of a low, sandy beach the water dashed upon rocks and boulders strewn hither and thither, and in the background

FIG. I.

the gray limestone rose in regular terraces, with here and there large deposits of blue clay, which we pictured in imagination teeming with fossils.

Springs of clear, sparkling water were bubbling out here and there, forming streams which wended their way through the rocks, now forming a cascade, now rushing and leaping among the disintegrated limestone, until they found their way into the bay.

After landing, closer observation showed that we were in the vicinity of a deserted limestone quarry, for huge piles of shale and blue clay were scattered about in profusion. A partially destroyed tramway gave further evidence that our surmises were correct.

Drawing our boat up on the beach, and unloading our provisions, we began our search for fossils, and found them in great numbers.

Hammers were useless, as we could pick the specimens out of the clay, filling several baskets and pails in a short time. The fossils were all of a bluish color, due to their being imbedded in the blue clay, and of a great many varieties and degrees of

FIG. II.

perfection. The most abundant were the cup-corals (Fig. II.). These were from two to six inches in length, with a cup-like depression at the top, and tapering to a point. Next in abundance were the corals of which Fig. III. is a drawing.

There are so many of these in this region that they are worn away by the action of the water and then thrown upon the beach that they are known as Potoskey stones, and in the city by that name there are twelve or fifteen shops, which are engaged in smoothing and polishing this variety of good specimens making beautiful ornaments.

FIG. III.

The fossils that most attracted my attention were those pictured in Fig. I. I first thought they were mollusks, as they had a hard shelly covering, but upon research I found they were a variety of sea-worm, their interior construction consisting of long, spiral, fringed arms. It is these which give them the name Brachiopod (arm feet), although they are really gills.

To my mind these fossils are the most interesting, because they were the first well-known indications of life in our world. Mantell terms them, sure "medals of creation."

I found a great variety of these fossils, five of which I have drawn from specimens I obtained at the time.

While hunting among the heaps of clay I several times noticed fossils like those in Figure IV., which I recognized as fragments of crinoid stems.

These curious plant-like animals were composed of jointed stems surmounted by plumose arms, which, when expanded, must have presented a truly flower-like appearance, and their fossilized remains are therefore called "stone lilies."

BEETLE DESCRIBED BY MR. BRUBAKER.

I gathered the broken stems of a great many of them, and have them in bottles. Those in Fig. IV. were the most common varieties I obtained.

After having filled all available space with the fossils, we sat down on the beach to eat our lunch, after which we assorted our specimens, keeping only the better ones. If I had taken all I wished I could have filled a wagon.

FIG. IV.

With light hearts and a heavy load we began our homeward voyage, well pleased with the fruit of our day's labor, and believing more than ever with Shaler that "the rocks form a great stone book, the pages of which are often ragged, and the stens often hard to decipher, but the story is still plain if we study it well."

Mr. Bartley and the companions of his fossil-hunting excursions will find many congenial spirits among the Chapters of the A. A. Curiously enough, next to his article on our desk, lies the following account of the excellent work done during the past year by the

BUFFALO GEOLOGICAL CHAPTER OF THE A. A.

Chapter 132, of Buffalo, N. Y., is an association of workers in the field of local geology, consisting of twenty-four members.

It holds meetings on the second and fourth Thursdays in the month, in the rooms of the Buffalo Society of Natural Sciences, of which it is an affiliated society. Excursions have been made to a number of points during the summer and fall, and the Chapter expects to continue these during the spring. The preparation of papers was not confined to the members of the Chapter, outsiders having given valuable aid. The members have been engaged in the collection of fossils from this locality, which they have procured in abundance, and they will be glad of an opportunity to sell or exchange with interested parties, and particularly pleased to communicate with members of other Chapters on this subject. Two of the members of the Chapter belong to the International Geological Congress, and it is hoped that Buffalo, and the Chapter will be represented at the eighth session of that body which will meet in Paris this year. The following officers have been elected to serve for the year: President, Richard F. Morgan; vice-president, Eugene V. Chamberlain; secretary, Miss Imogene C. Strickler; treasurer, Robert M. Codd,

Jr.; director of collections, Amadeus W. Grabau.

TWO MORE CORRESPONDING CHAPTERS.

We have already explained that besides our ordinary local chapters, we have several Chapters whose membership consists of widely scattered individuals united by their interest in a common study. Among the most successful of these is the Gray Memorial Botanical Chapter from whose retiring president, Mr. O. A. Farwell, we have a very gratifying annual report, which we should like to print if space permitted. We must at least offer our congratulations to Mr. Farwell for the excellent record he has made, and our welcome to his successor in office, Mr. James A. Graves, of Susquehanna, Pa., and the officers associated with him. The secretary's address is Mr. W. H. McDonald, 122 Pearl street, Elizabeth, N. J., and to him are referred all whose interest in botany may lead them to wish to join this Chapter.

Conducted on similar lines, though with so different a subject of interest, is the Isaac Lea Conchological Chapter, which, as its name implies, is devoted to the study of shells. All shell-collectors and students are cordially invited to join, and may address the President of the Chapter, Professor Josiah Keep, Mills College, Alameda Co., Cal. Now for a few

NOTES OF PERSONAL OBSERVATION

1. LAUGHING JACKASS. My uncle in Australia sent me, a twelve year old boy, and member of the Lindenwold Chapter, A. A., a "laughing jackass." That is a bird prized and protected by the Australian government because it kills and eats snakes. I also have a white cat, named "Snowball," and he was jealous of the bird. They were never very good friends until "Jack" came off best in a few battles they had. One day the cat watched Jack with great interest as he killed a snake on the lawn. A few days later Snowball was very busy in the berry-bushes, and presently brought out a big gopher-snake, which he dragged and laid down before Jack, and then sat back and looked at him as much as to say, "This is the way I return good for evil." Woodford Kron, Santa Cruz, Cal., April 8, 1900.

2. FOX-FIRE. I had purchased some lamb-chops and they lay on a plate in the pantry. Going in after dark, I was startled to see a peculiar brilliant light on the shelf. I called my husband, who was equally surprised. The light came from the bones only, and presented fantastic shapes. Was the meat wholesome? Mrs. C. E. Flitner, Secretary St. Paul Chapter, 354 E. Magnolia street, St. Paul, Minn.

3. CHIMNEY SWALLOWS. For a number of years I knew three or four pairs of chimney swallows to build their nests against the boards on the inside of the gable of a barn, in Bern, Berks county, Pennsylvania. C. L. Gruber, Kutztown, Pa.

4. FLYCATCHER AND DRAGON FLY. I noticed a crested flycatcher enter its nest in my yard with a large dragon fly in its mouth. I had never before observed the dragon fly used as food by any bird. Of five nests built in

the same hole, for five successive years, four contained cast-off snake skins. Ibid.

5. BLUE JAY AND SQUIRREL FIGHT. One morning we heard a great commotion in a tree. Looking from the window we saw a fight between a red squirrel and a blue jay. The jay was chasing the squirrel all over the tree, and both were making a great chatter. The jay drove the squirrel out of the tree. Grace Sherman McKinney, 177 Retreat avenue, Hartford, Conn. (Ten years old.)

6. WHITE-WINGED CROSS BILL. Near my home stands a very large Norway spruce. Many different birds are seen in its branches during the year. One afternoon in the early part of March a few birds came to the tree and enjoyed a feast from the cones. They proved to be the white-winged cross bill, a bird not seen in this region for twenty-five years. They came again the next afternoon and have not been seen since. Ibid.

7. TAXIDERMY. Is the "embalming"

method of taxidermy practicable and successful? W. H. Hiller, 147 W. Twenty-third street, Los Angeles, Cal.

8. SYCAMORE TREES. What influences the peeling of the bark of the Sycamore (Buttonwood) trees? It varies greatly in different years, and in different localities. Bluet Chapter, New York City.

REPORTS FROM THE SEVENTH CENTURY, CHAPTERS 601-700, SHOULD REACH THE PRESIDENT OF THE A. A. BY JULY 1.

Boys as Money-Makers and Money-Savers

How Do You Make Money?

Every boy is a money-maker, if he is a real boy. If he does not make it one way he makes it another. The average boy is a genius in thinking up ways to make money. We are very desirous of getting letters from the boy readers of this paper, giving information along this line. Of every boy who reads the paper we ask: "Tell us how you make money." Don't write a long letter, but tell it in as few words as possible. Every boy will reap an advantage from reading how other boys succeed in making money. You are interested, of course, also, in how boys spend money and how they save it—but that is another story, which we will tell later.

How Boys Make Money.

Claude M. Swanson, Varna, Ill.: You want to know how I make money. My father is a storekeeper and every Saturday I count eggs for him. He gives me for my work on that day fifteen cents. Every Saturday morning I sell newspapers. I have a route. I get two cents a copy for the papers I sell.

Ford Willers, Orion, Mich.: I live about one and a half miles out of Orion, a summer resort. There are many springs around here, and Grandpa and I set boxes in them so the water runs into the boxes. We catch minnows and put them in these boxes, and sell the minnows for bait at one cent apiece to the resorters. Last season we made about fifteen dollars, besides getting a lot of pleasure out of it.

Arthur Hassler, Santa Ana, Cal.: I am thirteen years old. I make money by picking apricots during the season, and in walnut season I make money by gathering walnuts and selling them. There is a cannery here, and for a week or two I made money there pitting fruit, and I have made some money recently by peddling advertisements. I expect shortly to go into a drug store to learn the drug business.

Willie F. Sawyer, Bowling Green, Ky.: I will tell you how I have made money. I worked during the summer in my uncle's barn, getting a dollar a week. In the winter I have a job on an ice wagon which paid me three dollars a week. Lately I have got a job on the railroad where I can support myself and put away ten to fifteen dollars a month, and now have seventy-five dollars and don't owe anybody a cent.

Louis A. Elliott, Brooks, Me.: I know a boy who had some spare money and invested it in rabbits. He sold the young ones that he raised for fifty cents a pair. Papa is going to get me a pair of them. A few weeks ago I saw a chance to make a little money by selling tinware. I got a sample and catalogue and succeeded in taking about seven dollars' worth of orders. I got the goods and delivered them and used the money for camera supplies.

Charles F. Hassler, Santa Ana, Cal.: I am fifteen years of age and have made money working as a syruper and fruit carrier in the cannery located here. The syruper puts the syrup into the cans of fruit. The fruit carrier carries the fruit to the cutters. During my school days I worked whenever I was not in school and could get a chance at peddling advertisements. I have a printing press and make some money printing. I am also raising Belgian Hares. My paper is called "The Boy's Own." Subscription price fifteen cents a year.

Charles D.: If you want to make money buy six or seven ducks from a reliable poultry dealer before the fall of the year. Make a small duck house, with a nest for each duck. When you get your ducks keep them up for a few days so they can get acquainted with their new home. Feed them first on warm food in the morning and at night on grain. In the winter time feed with warm food both morning and night. In February the ducks will begin to lay. Keep up the ducks at night. When the young ducks come feed them three times a day. They will soon be large enough for the market. This is a good way to make money, as I know by experience.

Herbert Stedman, Everett, Mass.: I began making money selling apples from our own trees. I averaged for a time seventy-five cents a day. In winter I shoveled snow and passed bills for a firm, receiving a dollar a week. I made a contract later to pass bills one year for fifty dollars. I saved my money and bought a second-hand five by eight printing press. I worked up quite

NO BOY of eight years or over should say that he can not make one dollar. Any live boy can find some way of making a little money and thus learn how to make more. Let us suppose you have five cents. Where is the boy who can not "scheme a way" to get five cents? No, how can you start in business on five cents? Here is one way: Send us the five cents and we will send you a copy of this number of THE AMERICAN BOY. The regular price of one copy is ten cents. Take the copy under your arm to some

copies, which you can easily sell for forty cents. Send us the forty cents and we will send you eight copies, for which you can get eighty cents. Send us eighty cents and you will get sixteen copies, which you can sell for one dollar and sixty cents.

Perhaps you can start with more than five cents. Suppose you start by sending us twenty-five cents. We send you five copies, which you sell for fifty cents. You can easily get ten persons who will agree to buy the paper from you every month at ten cents a month. If you can, you will make in twelve months six dollars, which will pay your own subscription and leave you five dollars profit. Any boy with any

man or woman who has a boy, or indeed to any good man or woman who has no boy, and sell it for ten cents. You have nearly doubled your money; you sent us five cents for the copy and used a two-cent stamp. You paid out seven cents and got back ten. Send us the ten cents and we will send you two copies, for which you can easily get twenty cents. Send us the twenty cents and we will send you four

American grit in him can do that, and many can do more. If you can get only four persons to buy THE AMERICAN BOY from you every month, you make twenty cents a month or one dollar and forty cents a year over and above your own subscription. You make five cents on each paper delivered. Work up a list and try it. Any body will buy THE AMERICAN BOY from you.

ALBERT W. FIFIELD

Here is the picture of a twelve year old boy, Albert W. Fifield of Minneapolis, who has got forty-four subscribers, and one of a nine year old boy, Emerson T. Cotner of Detroit, who has got fifteen subscribers.

Can't YOU do something? Anyway, don't ever say YOU can't make a dollar. You can.

ADDRESS

The Sprague Publishing Company,
Publishers of "The American Boy,"
DETROIT, MICH.

EMERSON T. COTNER

a little business this way and I now average between five and six dollars a week with my printing, all of this outside of school hours. Any boy can do this if he has the money and his parents should be willing to set him up in business, for it's a good thing.

Charles H. Russell, Philadelphia, Pa.: I earned a little money last winter printing cards on my printing press for my friends. I am going to start an amateur paper. I am fourteen years old, but other

boys have done this and I think I can, but I have no type. My press prints a six by eight page. Ask the readers of THE AMERICAN BOY if they have any type (about twenty-five pounds) that they would sell cheap. I will go into partnership with anyone furnishing type. I doing the press work. I am a pupil of the Freshman Class of the Central High School, and have been interested in stamp collecting, amateur photography and amateur journalism for two years past.

Newsboys Saving Money.

The "Kansas City Star" gave each of its newsboys for a Christmas present a bank book issued by the Fidelity Trust Co., of Kansas City, and a deposit of one dollar. Every boy was given the privilege of drawing out his money at once, if he wished to do so, but The Star expressed the hope that the boys would be encouraged by this neat egg to add a little to it each week. At the end of three months many of the boys had drawn out their dollars. Some had added to the deposit. Frank Regnery leads in the amount saved, as he has thirty-two dollars to his credit. Frank is a red-faced, tousley-headed little fellow, with a bright eye and lots of business push. He clears about seventy-five cents a day. Of this he pays his mother twelve dollars a month for board and has ten dollars and a half left. His bank book shows that he has deposited on the average of ten dollars a month. He says he is going to leave his money in the bank until it grows into a big pile. He has not yet determined what he will do with it.

Considerably more than one-half of the boys whose accounts were opened still have the original deposit to their credit. The vice-president of the Trust Company says it is quite amusing to note the businesslike and important demeanor with which the boys come in, march up to the teller's window and make their deposits. He says that the boys who are adding to their one dollar are bright little fellows who are bound to make their way in the world. Some, he says, were doubtless compelled by necessity to withdraw their money. He gives one pathetic instance of a little fellow who left his dollar and finally was able to add another to it, but later came in one very cold day and said he could not stand it any longer; that he would have to have his two dollars to get some shoes.

The Star has offered to add on July 4 a dollar to the account of every boy who has the first dollar still to his credit.

THE BOYS' LIBRARY

A Few Minutes in the Company of Izaak Walton, Washington Irving and Henry David Thoreau.

"A glimmering haze hung over The face of the smiling air; And the green of the trees and the blue of the leas And the sky gleamed everywhere."

"And the lark went palpitating Up through the glorious skies. His song spilled down from the blue profound As a song from paradise." James Whitcomb Riley.

On such a June day, when the earth is flooded with sunshine, and the "green of the trees and the blue of leas and sky" is everywhere, when the soft south wind, as it ripples

"Over the meadows And along the willow way," is fragrant with clover and blossoming grape, my thoughts wander away from our cozy little library into the realm of Nature—that other and greater library not built by human hands. In imagination I inhale the delicious breath of the summer woods, I see about me the leafy green of trees, and above me the white-flecked azure of Heaven, and I catch the gleam of the river, whose banks are starred with snowy saxifraga, and affume with wild geraniums, and whose "Ripples shod

With the sunshine of the day" flow over many a silvery trout. Therefore, boys, I am irresistibly led to talk to you of the three writers who so loved Nature, so longed to live ever close to her great, pure heart that the God of Nature gave to them the power to interpret and describe, as few other writers have ever done, the manifold wonders and beauties of His own special realm. These three great interpreters are Izaak Walton, Washington Irving and Henry David Thoreau.

Izaak Walton, most renowned of fishermen, was born at Stafford, England, August 9, 1593, and although an Englishman, he is dear to the heart of the angler in every land. A biographer says of him:

"No other writer, however great, has won more sincere and lasting love and fame than Izaak Walton, and multitudes of those who never put a worm on hook are constant and enthusiastic readers of this delightful writer." His first book, "The Complete Angler" (in which he tells us all about fishing), made Izaak Walton forever famous; and in this charming book is to be found this paragraph so expressive of its author's love of Nature, and trust in God:

"When I would beget content and increase confidence in the power, wisdom and providence of God, I walk the meadows by some gliding stream, and contemplate the lilies that take no care, and the very many little living creatures that are created and fed by the goodness of the God of nature, and, therefore, trust in Him."

In the same book good Izaak Walton asks the perpetual blessing of the Great Fisherman upon "all that are true lovers of virtue, and dare trust in providence, and be quiet, and go a angling."

Washington Irving is the pride of every American. He was born at New York, April 3, 1783, and died at his home, Sunnyside, near Tarrytown, N. Y., in 1859. Irving has been called "The Father of American Literature," and justly so, for Washington Irving has done for our literature exactly what George Washington did for our country—freed it from English control. "The Alhambra," "The Life of George Washington," "The Voyages and Companions of Christopher Columbus" are his most noted works; but his book dearest to the heart of an American boy is the inimitable "Sketch Book," in which are to be found "Rip Van Winkle," "The Legend of Sleepy Hollow," "The Spectre Bridegroom," "The Angler," and other delightful stories.

And now, comrades, I come to my own especial and much loved favorite, Henry David Thoreau, who was born at Concord, Mass., July 12, 1817. This great writer went straight to the heart of Nature, and to him Nature confided all her wondrous secrets. He knew the history of every tree and blossom, of moss and stone; he talked with birds and animals, and fed the fishes in the brook. He lived for two years in a little cot, by the banks of the Walden, a beautiful woodland stream, a few miles from Concord. "Walden," "In the Maine Woods," "Field and Forest," and "Cape Cod" are his books a boy would most enjoy.

In these long vacation days I want you, boys, nay, I urge you, to spend many hours in the company of such great and good men as Izaak Walton, Washington Irving and Henry David Thoreau.

Your librarian,
ALEXANDER JENKINS.

A Ten Weeks' Course in Elocution.
By J. B. COOMBS, Assisted by VIRGIN A. PINKLEY.

A course of study in elocution embraces not only voice work, but gesture, expression, articulation, enunciation and pronunciation, but also a knowledge of literature and its mission to the world.

The authors of this method, have crowded into a ten weeks' course a theoretic exposition which might well be extended into a two years' course of practical work. The book is full of suggestions and is eminently fitted for the teacher's table, for, as Professor Pinkley truly observes, "Instruction from the lips of the living is essential to the understanding and right application of what is found in books." He illustrates this point by the following application: "One might read all that has ever been written on swimming, and thereafter drown on the first exposure to water."

We say, therefore, that this book is not only of value to the student, but to the teacher. The division which is devoted to the "Art of Delivery" may well be studied by those who are preparing for the professions which require oratory and correctness of speech. Examples are given for practice, with instruction in vocal training; for each style of work.

The last half of the book is given to selections. Many of them are familiar to readers, and seem like old friends. Others are new and will be welcome to those who like change.

Hinds & Noble, New York City.

The Boy in the Office, the Store, the Factory and on the Farm

June.

MORNING STARS: Mars, Saturn to June 23. EVENING STARS: Mercury, Venus, Jupiter, Saturn after June 23. LEGAL HOLIDAYS: June 3, Jefferson Davis' Birthday in Florida and Georgia. ANNIVERSARIES: June 6, 1742, General Nathaniel Green born; June 15, 1215, King John granted Magna Charta; June 17, 1775, Battle of Bunker Hill; June 18, 1815, Battle of Waterloo; June 28, 1776, Battle of Fort Moultrie, Charleston, S. C.

Without good health success is always doubtful.

The first thing for a boy to do when he leaves school and goes to work in the busy world is to fall in love with his work.

Neatness in personal appearance can be maintained at far less cost than many suppose. It counts powerfully as an element of success.

Of the "Has Beens" there are many, Of the "Ne'er Was" more by far, The "Going to Be" are legion, But how few of those that "Are."

The only way for a young man to succeed in business is to work early and late, and take the same interest in his employer's business as he would in his own.

In the early days a man could lead a wild life and still make a sort of success of business, but nowadays the man who acts the part of a rake can hope for nothing but failure.

When you are going to take a position with a firm other than the one you have been working for, do not part with your employer in anger. Always keep your temper, and postpone the wind up of affairs with him until you are in a good humor.

In a Barred Shirt.

The other day a youth in a barred shirt came sailing down Commercial street in a livery stable sleigh at two dollars an hour, with a sweet young thing by his side. As he struck Seventh avenue, merchants whom he owed began to glare at him; one clothing dealer who owns the trousers on the youth's bandy legs broke down and wept. That boy is virtually the king of Hot Foot Society in Emporia. He has burned more coal and kerosene and has spoiled more Sunday dinners in houses where they keep two hired girls than any other boy in town. Yet he is absolutely worthless. When he passes forty, if he marries a girl as poor as he is, she will be keeping a boarding house. If he marries rich, he will get proud and walk around snubbing his fellow clerks and looking terribly worried about the responsibility of great wealth. But he won't marry rich. Generally, girls whose fathers and mothers have to dig their money out of the earth, have too much sense to follow off a necktie and a pair of soulful eyes. Day before yesterday that boy drew from his boss his week's wages. He is always pestering his boss to overdraw. He is a great nuisance, and gets a new job oftener than any other fellow. But he is a lovely character and knows all about the two-step. So he can break into society.

This afternoon a farmer wearing a seventy-five cent cap, an eight-dollar suit of clothes and a four-dollar overcoat, came into the Mit-Way and backed up to the stove and stood there till he steamed and smelled like a slaughter house. Yet Mr. Farmer Boy has eighty acres of land, thirty head of steers, a drove of shoats and six horses all in his own hands. His note is good at the bank for one thousand dollars any time, and in twenty years Mr. Pretty Town Boy will be handing Mr. Farmer money

through a wire wicket and complaining about the arrogance of wealth. And, yet a lot of town girls would scream with horror if their sensible mothers and fathers should invite Mr. Farmer Boy out to the house for the evening. In twenty years from now these same girls will be mighty glad to tie red strings on silver spoons borrowed from the farmer boy's wife, when they give their pitiful little receptions. The "Gazette" is no prophet, but it can see that far ahead without specs.—Emporia Gazette.

The Choir Boy's Chance for Getting Into Business.

A writer in the St. Louis Republic says: "It is generally considered that a boy who has been a member of a vested choir for any length of time, has his chances for securing a position in the business world greatly improved thereby. The members of the church take an interest in him and help him in many ways." He cites as instances the boy soloists at Christ Church Cathedral in St. Louis. All of the boy soloists who have served at any time during the thirteen years the cathedral has been in existence, have good positions.

The Successful Business Career.

There are no miracles in a business career. The man who wins success has toiled early and late with all his powers of body and mind. He has been subservient to his ambition. He has pushed aside, because it was the first step toward success, every habit and desire that stood between him and his goal. No man was ever numbered among the successful ones unless he was waiting and prepared for Fortune when she knocked at his door. She has never yet been known to wait for any man or boy to prepare himself for her company. I know of no one habit that so thoroughly molds the character of a young man as the habit of economy. It gives him strength of will. It teaches him to look beyond an action to its final result. It continually reminds him that the pure, sweet, innocent pleasures of life are almost to be had for the asking, and that Satan is not only a cruel but an expensive taskmaster.—Saturday Post.

The Black Boy Beat the White.

Two boys were selling fans on a warm day in the cars. One of them, a white boy, drawled out: "Fans, five cents." He sold just two. After him came a colored boy, calling out briskly: "Keep yourselves cool now, ladies and gentlemen! Coney Island breezes! A big fan for only five cents! Zephyrs from de billows! Buy 'em while ye can!" And he sold sixty-seven fans!

Stroke After Stroke.

A boy in felling a tree got discouraged and said: "It's no use." "Pooh! my boy," said an old chopper behind him, "you can do it. Just keep at it. Stroke after stroke will cut down the biggest tree that ever grew!"

CHORISTERS' SCHOOL OF GRACE CHURCH NEW YORK

BE YOUR OWN PHYSICIAN While Traveling.
The sudden illness of travelers is often dangerous and fatal because no remedies are instantly available. 250 Tablet doses of medicine in a fine morocco case, size of a pocket book, contains 8 vials filled with remedies for Sea-Sickness, Car-Sickness, Dyspepsia, Diarrhoea, Headache, Constipation, Cough, Malaria, Neuralgia, La Grippe. Full directions on each vial. PRICE, \$1.00. No travel, by sea or land, by rail or summer "outer," should be without one. Standard remedies put up under physicians' direction. Larger case for domestic use \$1.50. Refilled for per vial. Salesmen wanted in every county in the U.S.
Palmer Emergency Case Company, 14 Opera House Block, Port Huron, Michigan.

DENT'S Toothache Gum
SIPS TOOTHACHE INSTANTLY.
The only Perfect Remedy. It is antiseptic, arrests decay, is healthful to the teeth and gums. Highly recommended by leading Dentists. All druggists 15c. or by mail upon receipt of price.

A newly found letter by P. T. Barnum, one of the last he wrote, advises young men to learn stenography and typewriting, and adds: "Keep your brain free from fumes of alcohol, your blood free from its taint. Avoid tobacco as the poison it really is. Keep yourself clean physically and morally. Give your body the care you would give to any machine of which you require much good work."

"Johnny's mamma never scolds and never frets and is always just as good as she can be," said little Frank. "I wish my mamma was like that."
"What kind of a boy is Johnny?" asked his aunt, to whom he was talking.
"Oh, he is a good, kind little boy. Nora says he is the best boy to mind she ever saw. Nora used to work at his house, you know. Why, auntie, he likes to have other folks have a good time like himself."
"Perhaps that is the secret of his mamma's never scolding," said Frank's aunt. "Good boys make happy, good mothers."

Getting Rid of His Brains.
"I hate to see a boy so conceited as Tommy Bills!"
"Conceited! Why?"
"Why? There he goes now, smoking a cigarette, and nowadays that's like hanging out a notice: 'I have more brains than I need, and this is the easiest way to get rid of them!'"

Where the College Boys Come From.
The Ohio State University recently published a table showing the occupations of the parents of seventeen hundred pupils who had entered that institution in 1895-6-7-8. It was found that farmers furnished nearly one-third of the students; merchants, a little more than a tenth; manufacturers, one-seventeenth; lawyers, one-twentieth; physicians, one-twenty-third; railway employees and traveling salesmen, about one-twenty-third.

The Majesty of Law.
That lesson once came home to me very impressively. I was a sailmaker's apprentice, and two of us were called upon to help a constable levy on a sail on board a schooner. Not a soul was there except us three. The sail lay on the deck, and we were about to furl it, when the constable said, "Hold on!" and took a legal paper out of his pocket, and told us to take off our hats, as he did. And there, in the open-air, with bared and bowed heads, he reverently read his warrant, authorizing him in the name of the state to seize that property. I felt the awful presence of Law—an invisible Authority and Power—speaking through that paper—an Invisible Master controlling us and all around us. I learned, then and there, that I was living under Law and could not escape from its hold.—C. A. V.

Mr. Gladstone to Boys.
What Mr. Gladstone has to say to young boys about success in life ought to be worth reading and worth thinking about.
"Be sure that every one of you has his place and vocation on this earth, and that it rests with himself to find it."
"Do not believe those who too lightly say effort—honest, manful, humble effort—does not succeed by its reflected action, especially in youth, better than success, which, indeed, too easily and too early gained, not seldom serves, like winning the first throw of the dice, to blind and stupefy."
"Get knowledge all you can."
"Be thorough in all you do, and remember that, though ignorance often may be innocence, pretension is always despicable. But you, like men, be strong and exercise your strength."
"Work onward and upward, and may the blessing of the Most High soothe your care, clear your vision, and crown your labors with reward!"—Union Gospel News.

The Knights of King Arthur.
WILLIAM BYRON FORBES
The Order of the Knights of King Arthur is an order of Christian Knighthood for boys. Its purpose is to bring back to the world, and especially to its youth, the spirit of chivalry, courtesy, courage and Christian daring. To revive the best of ancient Christian knighthood. To re-establish a round table of true men in the Church of Christ. To build a Christ-like kingdom in the heart of the great republic.

To reach boys who are not interested in prayer meetings, who have no safe place to go evenings, who have no home, or who need the nurture of good men and great ideals.
To restore to young men that deferential and chivalrous regard for women, which ancient knighthood felt, and to make young women worthy of such deference. To lift the mutual relations of boys and girls above silliness and frivolity.
To give the lonely boy or girl a great fraternity to belong to.
To give earnest, self-controlled mature people a chance to make rich and eternal investments in lives, by showing them how to help boys and girls.
These things the Knighthood of King Arthur stands for. And all these in perfect loyalty to Christ and the Church.
The basis of the order is the study and emulation of heroes. The two themes are loyalty and service. The form of the order is that of a knightly fraternity, rather than of a lodge or military society. The order is not secret. Some of the castle work may be private from boys not members, as the family is private. Parents are honorary members of the castles and local approval is insisted upon.
The local organization is called a castle and its officers are King Arthur, the presiding officer, and Merlin, the scribe, who is the adult leader. There are three classes of members: Pages, who promise

The Boy in the Home, Church and School

No. 5.

"Got a hickin' from the teacher, but it didn't hurt. The feller that I punched, he got one too, an' he hollered; I laughed."

No. 6.

"Cut Burt Jones out at noon. He aint in it any more; am glad I practiced nights standin' on my hands, 'cause when I did that I was Irr-a-zistable."

No. 7.

"Farmer Jones's dog delayed me an' another feller after school to-day. Got the back of my vest tord somehow."

No. 8.

"Jones told Pa why I was late. Wisht a sweepin' tornado would blow him and his dog into the briny deep forevermore."

loyalty; Esquires, who also promise to be temperate, pure and reverent in word and action; Knights, who, in addition to the above, promise to serve their Master, their church, and their order as true Christian knights.

The boys assume the names of King Arthur's knights or other heroes, and are addressed by those names with the prefix "Sir" in castle meetings. The attractions are the delightful ritual, interesting and instructive initiations, the ranks of nobility earned by efforts in athletic, literary and moral lines, and such local lyceum or club work as may be desirable. Room is given for the adoption of the best features of other forms of clubs. Each castle works out its own castle life, and is self-governing. The offices are held in turn, and thus jealousy is avoided. On the ground that missions is the best chivalry, some castles adopt a missionary as "a knight on a crusade who is in distress." The "siege perious" is reserved as an honor for worthy actions.

Enrollment as a castle or individually is free. Other boys' clubs may be affiliated and use the plans without change of name. The author believes that along this line of personal leadership, hero-study and loyal, knightly service, of a moral kingdom in the great republic, is a coming method of the successful boys' club.

Father Blake, and His Work for Homeless Boys.

At No. 7 Poplar street, Brooklyn, N. Y., in an old house which has stood for 50 years, Rev. Father Blake is struggling cheerfully and manfully to provide shelter for homeless boys. The home

is known as "St. Vincent's Home for Boys." Bishop Loughlin conceived of the idea back in '68. The church had free orphanages, schools, etc., but no institution for waifs. At his suggestion, plans were discussed, and in '69 a charter was procured and twenty six incorporators named to guard the interests of the new charity. Then the home was bought, which since that date has struggled along under many difficulties. It is Father Blake's worthy ambition to build an industrial home for his boys where they may learn useful trades.

ST. VINCENT'S HOME FOR BOYS.

"These homeless wanderers," says

Father Blake, "are always with us; their number increases day by day. They fill our streets and lodging houses, where they live in an atmosphere of im-

BED ROOM AT ST. VINCENT'S HOME.

morality and intemperance and blasphemy. Hundreds of them are forced, on cold winter nights, to seek refuge in barrels and boxes under the Brooklyn Bridge—everywhere and anywhere that affords a shelter to their poorly clad and half-starved bodies. Is it not a Godlike charity to save and care for such boys? Is it not a charity, think you, dear to the tender heart of our Divine Lord, who loved the poor so much? Is it not charity that must appeal to every true Christian heart? Let any city boast of her culture, her intellectual activity, her colleges, academies, literary societies, her champions of advanced thought and patrons of higher education, all of which are good and commendable; but until she realizes the necessity of providing for her poor and homeless waifs she cannot lay claim to the title of a true Christian city, nor can her people say they are following in the footsteps of Him who said: 'It is not the will of your Father who is in heaven that one of these little ones should perish.' Why should we wonder at the increase of crime among the children of the poor, if these same children are allowed to drift aimlessly about upon the troubled waters of the stormy sea of life, no star of hope to guide them or hand outstretched to welcome them, no voice to tell them of the God whom they have forgotten, the God whom, perhaps, they never knew?"

MODEL OF BOAT MADE BY ONE OF THE BOYS.

THE BOY JOURNALIST AND PRINTER

Cost of an Amateur Printing Plant.

R. C. NEWBOLD.

This article is written with the intention of giving any boy ambitious to enter "Amateurism" an idea of how much it will cost him to print a four-page paper, type matter four and one-third by seven inches. It pays to print your own paper -- if you have any stick-to-it-iveness. If you haven't, you had better either give up the paper or get some one else to print it. If you are your own printer, whenever you want to enlarge your paper, for some special issue, as Christmas, you can do it without wondering where the extra money to pay for it is coming from, as it costs but a little more time and extra paper. I have printed a paper for over a year; its regular issue is six pages, but whenever I have more time I get out eight.

In the list hereinafter given I have included several second-hand articles, but all type should be new. I have been in the business long enough to know that it does not pay to buy secondhand type, as the edges are generally worn and it makes your paper look slovenly. Of course the estimates for type and paper are only approximate, as the prices of both vary. The style and size of type may be changed at pleasure, but fifteen pounds, at least is needed. These estimates are for printing one page at a time, as that is the biggest form the press will take. I still print one page at a time, and don't find it so very hard.

I advise any one who wishes to become an editor to get together a few of his friends and if, after talking it over, they find they have not enough money to buy an outfit, to issue one hundred shares or stock certificates at from ten to twenty-five cents each.

When you are sure of your money, go to some professional printer, tell him what you intend doing, and get him to show you his place and give you some valuable hints. Any bright boy can make a stand for his type cases out of old lumber and a galley to hold the type as he sets it, and file head-lines and a column rule out of his brass rule. All articles in the following list are new, except those marked:

A \$25.00 OUTFIT

Table listing printing equipment items and prices: 1 second-hand self-inking hand-power press (Model No. 1) \$10.00, 15 lbs. 8 pt. Old Style type 5.50, Stereotyped heading (about) .50, 1,500 sheets 9x12 cheap book paper 1.00, 1 Yankee Job composing stick .57, 5 sticks galleys (2 nonpareil, 2 pica, 1 4-line pica) .20, 3 lbs. 2-point leads (1 lb. uncut and 2 lbs. cut to width of column) .75, 2 feet 2-point brass rule .16, Assorted quins .20, A piece of marble for imposing stone, about 7x11 inches .25, Half pound book ink .25, 1 maple planer .30, 1 bottle benzine .10, 2 second-hand job cases .75, 1 font 8-point De Vinne Series (capitals and lower case) 2.00, 1 font O. S. Italic for 8-point type. 2.30, Sponge and bodkin .17, Total \$25.00

Of course, if you have money you can get an eighth Gordon foot press (second-hand) for fifty to sixty dollars instead of the hand press, and several other things which are needful but not absolutely necessary. In this list I have aimed to put down only those things necessary and not found about an ordinary house, but I have not named a mallet or hammer for driving the quins, supposing that most boys would own one. I was led to write this article by the fact that many persons believe that a printing outfit costs a small fortune, while, on the other hand, many more suppose a good-sized paper can be printed by oneself for two or three dollars.

The Pleasures of Amateur Journalism.

N. B. WOODZELLE.

This is a "special" for boys all over America.

We are having a good time, the very best, and don't you want to join us?

"We," are boys and girls who print papers, write stories and poems, join ourselves into clubs and associations, have regular conventions, get acquainted with one another, talk about our pleasures, our work and our plans for the future. In other words we are amateur journalists. And we are ready always to welcome new members.

Of course, you think you "can't," but you are an American boy, and that word "can't" should never pass your lips. Try -- see if you can! Your first effort in writing will not reach your ideal; you will think it is not good enough to print. Well, now, let me tell you, if you have a great horror of the printer and the waste basket, you are on the wrong tack, for the amateur printer is only another boy, with no more brains perhaps than you have. Then you think what you write is not good enough to read. Oh, yes, it is, for your readers will be boys, too, and girls -- young people who are not themselves free from mistakes.

There! your first article is printed. How funny your name looks in print! And oh, what a lot of mistakes there are! You can see them yourself now; for an article looks different in print.

Then you go over and correct it. You will not make the same mistakes a second time, and your next article will be better. Then you and the other boys talk it over. They have noticed mistakes that you have not. When they first tell you of them you feel chagrined and may be a little angry, but on second thought, the criticism is all so good-natured, you see that they mean it only to help you. And then other boys are laughing at mistakes they have made, so you all have a good-natured laugh and talk and go your different ways, your hearts filled with ambition to do better next time. This will be your constant aim.

How rapidly you are learning! and this is a school of amateur journalism. Not a bit dull or prosy, is it?

In this number of THE AMERICAN BOY you will find the names of the officers of the Amateur Journalists' Association, and you can apply to any one for information. I have not told you half, but my article would be too long. I may tell you more later, if you are interested.

Some Warnings to Amateur Journalists.

MAURICE MURRAY.

It seems to be the ambition of most every boy, when he is thirteen or fourteen years old, to have a printing press. Scarcely does he learn the use of it before he wants to become an editor and publish an amateur paper. At least, that was my experience. I got a press when I was fourteen and published a paper until I was eighteen. Now, I want to give some advice to boys who have such ambitions.

For a boy to want to learn to print is well and good. It shows thrift and a desire for knowledge. However, if a boy prints a paper because he wants to learn the art of journalism, I think his chances of success are small. I do not say this to reflect criticism on present amateur journals or to discourage beginners, but for the purpose of helping them. When boys print amateur journals and print them without having them criticized by anyone of superior education. Now, if we make them so, our mistakes are the great stepping stones to our improvement; but if there is no one to correct our mistakes, we continue to make the same ones over and over, and so create and strengthen the habit of doing those things wrong. Amateur journalists, therefore, should have their work criticized by some superior before it is printed.

We hear young writers complain that their stories are not published when sent to professional publications, whereas, if sent to an amateur editor, they are printed and generally commented on as good by the writer's associates. Trouble comes from this, for the writer gets the idea that his work is correct, when it is not, and he thus loses a valuable lesson. When I entered High School I was still publishing my paper, and several times I wrote stories and sent them to the editor of the High School paper. I had thought they were good enough for my paper, and so was surprised when the editor of the High School paper refused them. It is hardly possible to be both teacher and pupil.

Of course, there are amateur journals the editors of which have superiors to correct their mistakes; but generally the boy wants to run everything by himself. Amateur journalism offers an opportunity for getting very valuable experience, and if the writer's work is criticized by a competent superior it will prove an excellent school. Otherwise, there is danger that the writer will simply grind in the mistakes that he is making.

The Youngest Editor of a Daily Newspaper.

Probably the youngest manager and editor of a daily newspaper in the country is Roy W. Steele, of the Knightstown, Ind., Journal, and the paper that he issues is one of the best of what are known as country dailies that we have seen. It is a sprightly little sheet, and the circulation, advertising, printing, editing and everything else connected with it are looked after by Mr. Steele. He is but eighteen years old and founded his paper of which he is the sole owner, over a year ago. His newspaper career had its beginning at the Indiana State University and has been attended with marked success.

He obtained an important position on one of the College publications, at the same time acting as correspondent for several city papers and contributing to some of the magazines, thus supporting himself and paying his own expenses. Upon his return home, with this experience, he founded the Journal. He is known and liked by everybody in the county. Soon after founding the Journal he began an agitation for the organization of a commercial club, the needs of which he urged editorially. When the commercial club was organized he was elected secretary and he is one of its most active and aggressive members.

For one so young, Mr. Steele has had rather a varied business experience. He has been a clerk in a drug store, where he made a study of chemistry. He has also worked in his father's grocery and in a dry goods store, and, after completing a business college course in stenography, he did court reporting. By these employments and his newspaper work while at the State University, he paid for his own education. We judge from his paper that he is not only an enterprising and aggressive boy, but that he has the good, hard common-sense not to allow his present successes to turn his head, and that we may look to see him in the not far distant future in positions of even greater prominence and responsibility than that of editor of a daily in one of the smaller cities.

Amateur Journalists' Associations.

For information in regard to the various Amateur Journalists' Associations and the manner of joining such associations, address the following gentlemen: For the National Amateur Press Association, W. J. Brodke, 478 The Arcade, Cleveland, Ohio; for the United Amateur Press Association, Thomas McKee, Butler, Pa.; for the Eastern Amateur Journalists' Club, Philip F. McCord, East Liverpool, O.; for the Southern Journalists' Association, John M. Acee, box 222, Atlanta, Ga. Both the N. A. P. A. and the U. A. P. A. will hold their annual conventions this year in Boston, during the week of July 4th.

"The Pontiac Star," published by E. P. Sanford and F. W. Barnett, at Pontiac, Mich., is a unique publication. It is printed on ordinary wrapping paper and from its appearance we should judge with a press that will print only one line at a time. The number before us is illustrated by hand. The contents consist principally of short news notes, some humorous matter and a few proverbs. The boys announce that they are fixing up a new printing office. The issue before us is numbered Volume I, No. 4. We trust that the boys will persevere until they are able to bring out as well printed a paper as any of the others.

THE BOY PHOTOGRAPHER

Edited by JUDSON GREENELL

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and one dollar will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant.

Photographic Notes.

If you want to make your photograph look like an old print, soak it in a strong solution of coffee.

When the surface of the paper is soft, it is not best to put the print between blotters to dry, as the fuzz is apt to stick to the picture.

In landscape photography a medium slow plate will greatly reduce the number of failures, as the increased time gives considerable leeway.

In taking a picture of a house, get in some of the surroundings—the trees, the shrubbery, etc.—and the effect will be much more pleasing than when the house alone fills the plate.

When a ray screen is used with the ordinary plate, the exposure must be increased seventy-five times. With an "orthro" plate and a ray screen, the exposure must be increased by three.

Never stand in the middle of the road to take a picture, if it is possible to avoid it. Stand at one side. If you are in the woods, do not have the trunk of a tree on the edge of the plate. In both cases the effect is not the best.

The proper length of an exposure depends on the lens, the plate, the stop, the light and the developer. With such a combination, it is impossible to formulate a reliable scale. Only experience with these different combinations can solve the problem.

Instead of lugging around a large camera, the present inclination of those who have had some experience and still like to take pictures, is to get a 4x5 camera with a very superior lens. Then enlarge those worth the trouble. This plan cuts down the original cost of a picture, and prevents the expense running away with one's pocketbook.

An excellent way to develop Velox or Dektro paper is to first immerse print in water, then place carefully on a piece of glass, sensitive side up. Now dip a broad camel's hair brush in your developer, and pass lightly over the exposed paper. Any spot that lags in development can be helped along by an extra application of the developer.

Trim Your Pictures.

An ordinary print, properly trimmed and nicely mounted, will often give greater satisfaction than a superior picture that has been marred by carelessness in the final finishing. Sometimes it is necessary to cut off part of the sky, and sometimes part of the foreground, and sometimes both, to get the very best effect; and even the sides may be sacrificed to obtain symmetry and proper balancing. Often a 5x7 print can be trimmed to 2x6, and the result is a beautiful panel, with all objectionable features eliminated.

Try your prints by covering different

portions, until you are satisfied with the general effect of hiding all that is objectionable or unnecessary. Pay particular attention to sky and foreground, but do not trim so that the horizon line, if a landscape, cuts the print in two equal parts. This must be avoided.

Good pictures do not depend upon their size. In the Detroit Camera Club the little pictures have generally taken the gold medal. Not that they were taken with little cameras, but that the makers trimmed them down until every bit was picture. Stick to good square corners, too, for, unless it is an oval, it is seldom that a picture is improved by indulging in fantastic shapes.

Profit for Amateurs.

A new field for the operation of the amateur photographer and a profitable one, too, is the supplying of pictures of interiors of machine and other shops. There is hardly an establishment in the country that does not want a picture of its plant. Sometimes it is only a reminder of where the work is done that keeps the pot boiling for Mary Ann and the children. Oftener, however, it is because, with a photograph, it is easy to have a line drawing or a half tone made that can be used on bill and letter heads.

Then, again, the employes of a factory generally desire a picture of the place where most of their time is spent, or at least most of their daytime. Besides, to get their own picture along with those of Jack and Charlie and Will, and perhaps Mary, Julia or Bertha, and the rest of the boys and girls, is an event not to be neglected. So when the amateur photographer comes along with a 5x7 camera, say, which is about as small as is commercially available, both the employer and the employed look upon it as a favor to get themselves and their surroundings transferred to a negative from which any number of prints can be struck off.

Of course a professional photographer might be employed to do this. In many instances this will result in the production of something beyond the capacity of the amateur. But to do this necessitates a calculating of the probable expense and of cogitating over the problem, "Will it pay?" On the contrary, let the amateur come along, with the proposition that as many pictures as they choose to take will cost them only a quarter of a dollar or so apiece—and if they want it they can have the negative also—and the ordinarily careful amateur will be able not only to have considerable sport, but to clear up a nice little pile besides.

There is still another field that the amateur photographer might exploit with considerable pecuniary advantage. One can seldom pass along the lovely avenues of a cemetery with camera and tripod swung over back, without being accosted with the query if a picture might not be secured of some plot, under the sod of which lies the remains of a loved one. In this case as much as a dollar or two can be had for a couple of prints, and as most cameras for amateurs are best adapted to views, there need be hardly a single failure.

As has been before remarked, the public parks will always furnish customers to the amateur. Picnic grounds also furnish pictures which may be sold by the dozen to persons who may wish to send them to "old country" friends and relatives just to prove to them that the "land of the free and the home of the brave" is a beautiful country for the poor folk.

Let the amateur photographer pick out some one of these methods of paying for his supplies, and he will find at the end of the season just opening that his fun and enjoyment has had a wide range without costing him a cent.

EASTMAN KODAK CO.'S BROWNIE CAMERA \$1.00

Makes pictures 2¼ x 2¼ inches. Loads in daylight with our six exposure film cartridges and is so simple that it can be easily

Operated by any School Boy or Girl.

Fitted with fine Meniscus lenses and our improved rotary shutter for snap shots or time exposures. Strongly made, covered with imitation leather, has nicked fittings and produces the best results.

The Birds and I.

L. H. BAILEY.

The springtime belongs to the birds and me. We own it. We know when the mayflowers and the buttercups bloom. We know when the first frogs peep. We watch the awakening of the woods. We are wet by the warm April showers. We go where we will, and we are companions. Every tree and brook and blade of grass is ours; and our hearts are full of song.

There are boys who kill the birds, and girls who want to catch them and put them in cages; and there are others who steal their eggs. The birds are not partners with them; they are only servants. Birds, like people, sing for their friends, not for their masters. I am sure that one cannot think much of the springtime and the flowers if his heart is always set upon killing or catching something. We are happy when we are free, and so are the birds.

The birds and I get acquainted all over again every spring. They have seen strange lands in the winter, and all the brooks and woods have been covered with snow. So we run and romp together, and find all the nooks and crannies which we had half forgotten since October. The birds remember the old places. The wrens pull the sticks from the old hollow rail and seem to be wild with joy to see the place again. They must be the same wrens that were here last year and the year before, for strangers could not make so much fuss over an old rail. The bluebirds and wrens look into every crack and corner for a place in which to build, and the robins and chipping-sparrows explore every tree in the old orchard.

If the birds want to live with us, we should encourage them. The first thing to do is to let them alone. Let them be as free from danger and fear as you or I. Take the hammer off the old gun, give pussy so much to eat that she will not care to hunt for birds, and keep away the boys who steal eggs and who carry sling-shots and throw stones. Plant trees and bushes about the borders of the

Mention the American Boy.

BOYS IN THE ANIMAL KINGDOM

place, and let some of them, at least, grow into tangles; then, even in the back yard, the wary cat-bird may make its home.

For some kinds of birds we can build houses. Some of the many forms which can be used are shown in the pictures. Any ingenious boy can suggest a dozen other patterns. Although birds may not appreciate architecture, it is well to make the houses neat and tasty by taking pains to have the proportions right. The floor space in each compartment should be not less than five by six inches and six by six or six by eight may be better. By cutting the boards in multiples of these numbers, one can easily make a house with several compartments: for there are some birds, as martins, tree swallows and pigeons that like to live in families or colonies. The size of the doorway is important. It should be just large enough to admit the bird. A larger opening not only looks bad, but it exposes the inhabitants to dangers of cats and other enemies. Birds which build in houses, aside from doves and pigeons, are bluebirds, wrens, tree swallows, martins, and sometimes the chickadee. For the wren and chickadee the opening should be an inch-and-a-half augur hole, and for the others it should be two inches. Only one opening should be provided for each house or compartment. A perch or door-step should be provided just below each door. It is here that the birds often stop to arrange their toilets; and when the mistress is busy with domestic affairs indoors, the male bird often sits outside and entertains her with the latest neighborhood gossip. These houses should be placed

on poles or on buildings in somewhat secluded places. Martins and tree swallows like to build their nests twenty-five feet or more above the ground, but the other birds usually prefer an elevation less than twelve feet. Newly made houses, and particularly newly painted ones, do not often attract the birds.

But if the birds and I are companions, I must know them more intimately. Merely building houses for them is not enough. I want to know live and happy birds, not dead ones. We are not to know them, then, by catching them nor stuffing them, nor collecting their eggs. Persons who make a business of studying birds may shoot birds now and then, and collect their eggs. But these persons are scientists and they are grown up people. They are trying to add to the sum of human knowledge, but we want to know birds just because we want to. But even scientists do not take specimens recklessly. They do not rob nests. They do not kill brooding birds. They do not make collections merely for the sake of making them; and even their collections are less valuable than a knowledge of the bird as it lives and flies and sings.

Boys should not make collections of eggs, for these collections are mere curiosities, as collections of spoils and marbles are. They may afford some entertainment, to be sure, but one can find amusement in harmless ways. Some people think that making collections makes one a naturalist, but it does not. The naturalist cares more for things as they really are in their own homes than for museum specimens. One does not love the birds when he steals

50c BRINGS ALL TO YOU!

M. & S. CAMERA
 Send us 50 cents, and we will send you at once by express our **341 00** M. & S. Camera, C. O. D. \$3.99, subject to examination.

You can examine it, and if satisfactory pay agent C. O. D., less 50c already sent us, or \$3.49, and the Camera is yours.

The Camera is a beauty, takes pictures 4 x 5, has best lens, takes time and instantaneous exposures, has two view finders, and is covered by best leather. The Camera is worth \$6.00. Our price, \$3.99.

HOW TO TRAIN ANIMALS

This book written by an experienced animal trainer, tells you how to teach your dog to leap, walk erect, dance, jump rope, sit, lie down, beg, sneeze, stand on his head, etc. It also tells how to train horses, mules, cats, hogs, goats, monkeys, rats, mice, frogs, toads and birds to perform the most remarkable feats of intelligence. Handsomely illustrated. Price only 10 cents. Interesting catalog free. Boys write at once **JOE. U. STEELE, 2218 Beech Ave., Baltimore, Md.**

BOYS READ these Advertisements

their eggs and breaks up their homes; and he is depriving the farmer of one of his best friends, for birds keep insects in check.

Stuffed birds do not sing and empty eggs do not hatch. Then let us go to the fields and watch the birds. Sit down on the soft grass and try to make out what the robin is doing on yonder fence or why the wren is bursting with song in the thicket. An operaglass or spyglass will bring them close to you. Try to find out not only what the colors and shapes and sizes are, but what their habits are. What does the bird eat? How much does it eat? Where is its nest? How many eggs does it lay? What color are they? How long does the mother bird set? Does the father bird care for her when she is setting? For how long do the young birds remain in the nest? Who feeds them? What are they fed? Is there more than one brood in the season? Where do the birds go after breeding? Do they change their plumage? Are the mother birds and father birds unlike in size or color? How many kinds of birds do you know?

These are some of the things which every boy wants to know; and we can find out by watching the birds. There is no harm in visiting the nests, if one does it in the right way. I have visited hundreds of them and have kept many records of the number of eggs and the dates when they were laid, how long before they hatched, and when the birds flew away; and the birds took no offence at my inquisitiveness. These are some of the cautions to be observed: Watch only those nests which can be seen without climbing, for if you have to climb the tree the birds will resent it. Make the visit when the birds are absent if possible; at least, never scare the bird from the nest. Do not touch the eggs or the nest. Make your visit very short. Make up your mind just what you want to see, then look in quickly and pass on. Do not go too often. Once or twice a day will be sufficient.

See how intimately you can become acquainted with some bird this summer!

Some one says, "Boys are so noisy." True, so are steam engines. That is one way we know a steam engine, and that is part of the beauty of a boy. Some mothers would be glad in after years if they might only have that "noisy boy" back again. "Boys wear out the carpets so." But remember, one yard of boy is worth more than a thousand yards of carpet.

For the most stylish looking pony, as shown by picture sent us before June 15th, we will give a handsome bridle. Write name of pony and name and address of owner on back of picture. Address

THE AMERICAN BOY, DETROIT, MICH.

BOYS IN GAMES and SPORT

His Decision.
A BASEBALL STORY.
FRED HEFTER, AGE, 18 YEARS.

Two Pretty Tricks.
THE MAGICAL MIRROR.

The excitement in Dalesville, Wis., was at its highest pitch, for the next day the deciding baseball game of the year was to be played in the boys' league called the Delevan Association. The two contesting teams, which were tied, were the Snowballs and the Camerons. The Snowballs had had bad luck during the first of the season, but by fine playing had tied the leaders. George Davidson, the shortstop of the Snowballs, was walking home that evening in high joy, when he was accosted by Joe Kranz, the captain of the Camerons. After talking a few minutes, Joe said: "George, if you will lose the game I'll give you five dollars! Will you?" Davidson consented. The next morning was a beautiful one and both teams felt sure they would win. An immense crowd was there to see the game, for the boys were very popular. The game commenced. Each pitcher was doing his very best, but in the eighth inning the Snowballs secured one run. In the ninth inning the people were breathless, for with three men on bases and two out, the captain of the Camerons came to bat. He hit the first ball pitched straight to the shortstop. George's heart gave a bound. Should he let it go by and lose the game and take the money? He decided in the negative, and making a fine stop he threw it straight to the catcher, who touched the man out. George gave the money back to Joe, happy in the thought he had done right and not first followed his inclination to lose the game. He received many congratulations for his fine stop and he determined never again to accept a bribe.

FRED HEFTER.

An ordinary mirror of any size or shape, a piece of French chalk, pointed so that it can be used to write, and a silk handkerchief are the requisites. Draw upon the mirror, with the chalk, any design or words you choose. With the handkerchief wipe the glass lightly, until the glass is perfectly clear and no writing or design is apparent. Having all this prepared beforehand, show to some one and request that he breathe gently on the face of the glass, when he will see—say a picture of his future wife—for the design drawn will show very distinctly. This can again be wiped off and if breathed upon the design will be again visible.

A BALL TRICK.
Get a turner to make a large, wooden ball and have a hole bored through the ball, not straight but curved. Through this hole pass a fine rope or thick cord and tie a knot in each end to prevent its coming off. In showing the ball have the cord out of it and then in sight of every one pass the cord through the hole in the ball. The ball will run easily backwards and forwards on the rope. Taking the ball at one end of the rope, place your foot on the other and hold it almost perpendicular and allow the ball to slide down; you can cause it to stop instantly by simply drawing the rope perfectly tight and upon again slackening it the ball will again slide down the rope. In this way the ball can be made to walk a few inches and then stop and then to go on again, by straining or slackening the rope.

PERFECTION TIRE Repair Tool—best on the market—makes perfect repair on single tubes in 1 minute. Sample, 10c. KOCH BROS., R. 497, PEORIA, ILL.

chine, and which is kept constantly stirred and at an even temperature. The pulp then passes through a strainer which frees it from lumps, and afterwards the pulp flows over a leathern surface, from which it falls and spreads out upon an endless wire cloth. Having distributed itself over this gauze, the superfluous liquid is shaken from the pulp and the wire cloth moves along, taking with it the coating of pulp and passing under the "dandy-roll," a cylinder on which in relief is the watermark design.

After it has passed the "dandy-roll" the gauze carries its burden over a vacuum box, which relieves the pulp of more of its superfluous water. It is then passed between felt-covered cylinders and afterwards between heated iron rollers. The paper is then sized and passed between the hot cylinders again, after which process it is considered finished.

The varieties of paper with which we have to deal are caused by the variations in the texture of the wire gauze used in the paper-making machines.

The two chief classes are Wove and Laid. Wove paper is the product when the wire gauze is woven like cloth, and Laid paper is made when the wire is set in parallel lines. The papers can easily be distinguished.

The current United States stamps are printed on wove paper, and the present issue of Russian stamps is on laid paper.

Other papers which have been used for postage stamps are: DICKINSON PAPER, which has a silk thread running through it. BATONNE, which has the familiar appearance of foreign note paper. QUADRILLE, which is "laid" in squares. An example of this kind of paper may be found in the common fifteen-centime stamp of France. GRANITE, which contains minute threads of silk. The Swiss stamps of 1881-2 may be taken as an example of this variety of paper.

The watermarks in the paper on which stamps are printed are for the purpose of preventing forgery. The designs are worked in relief on the "dandy roll" which, pressing upon the only half formed paper, leaves the part at which it touches the film of pulp thinner than the remainder.

The designs which have been used for watermarks are numerous and greatly varied. Letters, crowns, animals, flowers, stars, crosses and many more subjects for watermarked designs have been introduced into the manufacture of postage stamps.

It not infrequently happens that two stamps which outwardly appear to be exactly alike, vary in watermark. This difference often alters the value of the stamps in question to a very considerable extent.

(To be Continued)

Questions Answered.

W. R. T.—The stamps which you mention are all very common and would be found in any beginner's packet of 100, all different, for 10c.

C. Mc. S.—Approval sheets, as advertised, are sheets with stamps on them, all priced, which the dealers will send to you if you give satisfactory reference. Fifty per cent. commission is the discount which they allow from the prices marked, and fifty per cent. is one-half.

R. S. Niles, Mich.—The 2c Japanese stamp with the head of the Mikado is listed in the catalogue at .04 unused and .03 used.

There are a great many counterfeits of Japanese stamps, some of them very dangerous to the young collector, and we should advise you to be careful in buying rare specimens at low prices.

R. M. W.—The stamp you describe is a revenue and as there are very few collectors of foreign revenues in this country, the stamp has no particular value.

United States revenues which are so much in demand in our own country are thought very little of in Europe, and consequently have less value there. A large packet of foreign revenues can be had for 10c, and the stamp you mention would doubtless be found in it.

F. N., Richmond, Va.—The stamps you mention are all very common, and are quoted in the stamp catalogue at .01 each but you would find them in a 100 variety packet for .10.

In reply to your question about stamps of Iceland, we would say that there are 39 different stamps of that country. The first seven were issued in 1873, the next seven in 1876 and the rest of the regular issues from 1882-95. Ten of the whole number are official stamps.

There are only two designs used in all the stamps, the difference being in the colors and denominations. The stamps are very similar to Denmark, as Iceland is a Danish possession.

H. E. D.—1. 25c second issue United States revenue. 2. United States 1862 2c Jackson black. 3. United States 1875 5c Taylor blue. 4. 1873, printed by Continental Bank Note Co. We describe the above stamp as printed by the company named for the reason that in 1870 stamps of the same design were printed by the National Bank Note Co. and in 1879 by the American Bank Note Co. each of the companies having the contract for making the stamps at the dates mentioned. 5. 1882, 5c Garfield. 6. Deccan, 1871, 1/2 red-brown Hyderabad or Deccan is one of the Native Indian States, of which there are about 30. These states all have separate issues of their own or have had in some past time, but most of them are now using the current stamps of India, which are printed by the British government with the name of the state surcharged in black or red across the face of the stamp.

Type-set Design.

THE BOY COIN COLLECTOR The Numismatic Sphinx. Alfred L. Casey, St. Paul—An 1832 dime in good condition sells for twenty-five cents. Harry Popper, Macon, Ga.—The half cents of 1809 and 1854, in good condition, are worth fifteen cents each. Mrs. S. Bellah, Orsi, Cal.—No particular premium on the half dollar of 1855. Yours is from the O (New Orleans) mint. Arthur Stevens, St. Albans, Vt.—The cents for 1819, 1826, 1837 and 1851 are all common and sell at the dealers for five and ten cents each. Geo. M. Gamble, Coffeyville, Kas.—The half dollar of 1824 is worth seventy-five cents. The dollar of 1878 or English penny have no premium. M. H. Weyranch, Liberty, N. Y.—The 1852 copper cent is worth five cents. The U. S. paper currency is always worth face value, and if in fine condition commands a premium with collectors. C. J. Williams, Agricola, Kas.—No premium on the half dollars of 1854, 1893 and 1898 unless in proof condition. The small a and o beneath the eagle shows that they were struck at the San Francisco and New Orleans mints. Robt. N. Smith, Springfield, Mass.—Your Brazilian coin, 200 reis, with this inscription, "Decreto No. 1817 de 3 de Setembro de 1870." is not a silver coin, as you imagine, but a nickel piece. It is worth, in good condition, twenty cents.

100 Foreign Stamps, Transvaal, South African Republic, etc., 5c. AM. STAMP CO., Rogers, Ark.

800 VARIETIES OF GENUINE POSTAGE STAMPS \$3.00 We lead, others follow. This offer of 800 different postage stamps for \$3.00 is a marvelous offer when it is considered that we make a guarantee that proves that this is no ordinary lot of stamps. 800 stamps at 3/4 of a cent each! Post free to any part of the U. S. or Canada. If \$3.50 is remitted, we will send an album—cloth bound, fully illustrated, with spaces for 4000—as well as the 800 different stamps, both for \$3.50! If you already have an album, or only want the stamps to sell or trade, remit \$3.00 and the stamps go by return mail.

OUR GUARANTEE. Every packet FULL COUNT, because we put in \$3.00 to make up for any stamp that may be defective. Over 100 DIFFERENT STAMP-ISSUING COUNTRIES OR COLONIES represented in each packet. The catalogue value of each packet is over \$20.00 by Scott's 5th Edition catalogue. Every stamp guaranteed genuine. No reprints. All for \$3.00. Post Free.

1900 ALBUM UP-TO-DATE AND BEST. Postage Stamp Album CHEAP EDITION JUST ISSUED. PRICES: Bound in boards, half cloth, . . . \$1.00 Bound in full cloth, gilt, . . . 2.00 Send for New Price List—free. G. H. MEKEEL STAMP & PUBLISHING CO. Dept. B Century Building. ST. LOUIS, MO.

E. B. Ford, Louisville, Ky.—A good half dollar of 1821 sells for seventy-five cents. A gold dollar of 1852 commands \$1.75 if in good condition. The copper cent of 1851 is worth five cents.

G. H. C. Brewster, N. Y.—The half dollar of 1873, either with or without arrow heads at date, if fine, sell for seventy-five cents each. The same may be said of the 1893 Columbian half dollar.

D. R. A., Plainville, Kas.—There is no premium on the eagle cents of 1857 or 1858. The rare eagle cent is that of 1856, which commands about \$4.50. Your other rubbing shows a 2 centime of Belgium, 1843, Leopold I. (1831-1865), no particular value.

Frank Noah, Whiteside, Mo.—Your rubbing is from a 2 real coin of Mexico, Charles III., of Spain, 1780. This was issued while Mexico was under Spanish dominion. The price usually charged for it in the condition yours seems to be is about fifty cents.

Clyde French, S. Rockwood—Your "Ships Colonies and Commerce" coin is a Canadian half penny token. There are many varieties of this piece, usually selling for five cents each. One variety in which the ship flies the American flag is worth twenty-five cents.

John C. Moore, Winton, Mich.—An 1802 half dollar in good condition is worth \$1.00. There are two varieties of the half dollar of 1832, one with large letters in the legend, the other with small letters. The first one only commands a premium, and sells, in good condition, for about \$2.50.

C. W. Mechanics Falls, Me.—A twenty dollar gold piece of 1869 S (San Francisco mint) is worth just twenty dollars. California, in 1849 and in the early fifties, issued considerable private gold coin of the higher denominations. We do not remember that any gold has ever been issued from Sacramento.

Harvey Weller, Wayland, Pa.—The two coins you describe are from Denmark and Spain. The first a 16 skilling of Frederick VII. (1848-63), worth perhaps twenty cents; the other of Carolus

(Charles) III. (1759-88), in poor condition, as yours seems to be, worth only bullion value of silver.

Merle Rounds, North Enid, Oklahoma—As there were no U. S. dollars issued between 1805 and 1836 you must be in error when you state that you have a fine one of 1832. Look at it again and see if you are not mistaken in the date. No premium on Canada half pennies or pennies of 1852. See answer to D. R. A.

Wm. Polocleck, Milwaukee, Wis.—The half cent of 1853 is worth twenty cents. The half penny of George II. (1727-60), England, 1745. If in good condition, twenty-five cents. The figure on the reverse is that of Britannia seated, not Liberty, as you state. The silver twenty cents of 1875 and 1876 are worth face only. The rare ones are of 1877 and 1878, which were issued only in proof, and are worth about \$3.00 each. The half dime of 1857 only face value.

Noel Towling, Bay Minette, Ala.—The rubbings you send are taken from a Mexican centavo, 1889, Mo. (Mexico mint). Chinese cash, Chien-Lung, 1735-96. Both are common. The other, obverse head of Queen Victoria to left; inscription H. M. G. M., Queen Victoria. Reverse, the queen on horseback galloping to right, inscription above, To Hanover. In the exergue, date, 1837. This piece, in spite of your nitric acid test and your opinion that it is good, we must conclude to be only a brass political medalet of the time and of value only as a curio.

Willard F. Reese, Lima Centre, Wis.—Your half dimes of 1833 and 1853 seem to be fine and should be worth twenty cents each; 1850 cent is worth five cents. There are two varieties of the 1878 dollar; one with seven feathers in the eagle's tail, the other with eight. The latter variety seems to be a little the scarcer, the extra tail feather being judged worth half a dollar, but the coin, eagle, tail feathers and all hardly bring a premium unless the coin is just as it came from the mint. In mint condition \$2 and \$2.50 is considered the correct price by the dealers.

Roy C., Anaheim, Cal.—(1) There is no premium on the United States 1882 dime, 1854 quarter or 1853 half dollar with rays. (2) Your Chinese cash are of Chien-Lung, 1735-96, both common. (3) The Isabella quarter was struck for the board of lady managers of the Chicago Exposition in 1893. The obverse bears a crowned portrait of Queen Isabella; 40,000 were coined. They have always sold for \$1.00 each.

Harold, E. D., Jermyn, Pa.—Your rubbings are taken from coins or tokens, as follows: No. 1, France, Napoleon III., 10 centimes, 1855 (W. Lille mint mark); no premium. No. 2, New Jersey cent, 1787, worth thirty-five cents. No. 3, flying eagle cent, 1857, face value only. No. 4, one of the innumerable war tokens, "Army and Navy," of no particular value. No. 5, Chinese of Kang-Hsi dynasty, 1661-1722. No. 6, Korea, cash of the period 1605-1633. These last two usually can be purchased at ten cents each. Fractional currency, except it is in good to uncirculated condition, is worth only face value.

J. E. Tanner, West Appomattox, Va.—Your George III. half penny of 1775 is, as you say, "a very old coin," but you must not think because a coin happens to be old that it is necessarily rare. Rarity depends altogether upon limited issue and not upon age. The half pennies of George III. can be picked up for five cents each, and hundreds of varieties of the coins of ancient Greece and Rome, struck between 1,500 and 2,300 years ago, can be obtained for twenty-five cents or less each. On the other hand, good cents of the years 1793, 1799, 1804 and nickel of 1856 bring from \$4.50 each upwards, and a dime of 1894 of the San Francisco mint is almost unobtainable. Age of itself does not, therefore, make a coin valuable or desirable. Your 1812 cent, if good, should be worth about half a dollar. There are two varieties, the large and small date, the latter being somewhat the rarer of the two. The cents of 1826 and 1842 are common.

Curios at the Paris Exposition.

Unique among the exhibits in preparation for the Paris exposition of 1900 is that of the American Numismatic and Archaeological Society, says the New York Herald. The coins and medals to be shown are all the property of the members of the society, but names of owners will not be given. The history of the United States and the colonies that preceded it as it will be told in silver and gold and bronze will be divided into periods or cycles. The federation period will embrace a remarkable series of State cents, one of the most rare and curious of these, known as the "Washington First" cent. This cent was coined by some private individual, an early imperialist of the deepest dye, who evidently wished to see Washington I. Emperor of the Americas. Almost every important event in the history of the country, the great discoveries, the important public works, the victories of peace and war have been commemorated by medals. Besides the historic medals, this story of America will include specimens of all the coinage in gold and silver and copper of all the governments on the two continents, past and present, as far as the society can command them.

BOYS' EXCHANGE

NOTICE.

When you have what a boy asks for or wish to trade with a boy whose name appears in these columns, write the boy himself, don't write us.

Scott B. Williams, 314 Common street, Shreveport, La.: I will exchange leaves from Arkansas trees for others from other States.

Anna Johnson, box 34, Village Creek, Ia.: I have some fine foreign stamps that I want to exchange for Indian arrows, shells and other curiosities.

Herbert Jackson, 293 Milwaukee avenue west, Detroit, Mich.: I have some petrified things which I would like to exchange for some Indian relics.

Harold E. Davis, Lock Box 38, Jermyn, Pa.: I have thirty-six United States coins, from 1831 to 1857, which I will trade for Indian arrows or foreign stamps.

Harry S. Johnson, 301 E. Burlington street, Fairfield, Ia.: I would like to exchange maple, oak, hickory, walnut, elm, apple, peach, pear and quince leaves for tropical leaves.

E. B. Atwood, 16 Beacon street, Orange, Mass.: I have some genuine gold dirt, just as it came from the ground, which I want to trade for some good (not common) foreign stamps.

Arthur G. Schuman, Bern, Pa.: I will exchange Florida orange leaves, crystalline formation from Mammoth Cave, Ky., Cornwall iron ore, for other leaves, minerals and ores.

J. F. Moseley, Columbia, Fla.: I will trade pear leaves, peach leaves, persimmon leaves, blackberry leaves or chinquapin leaves for similar things from other parts of the country.

Will S. Carnahan, 260 Santa Fe avenue, Denver, Colo.: I have pebbles from summit of Pike's Peak and porcupine quills which I will exchange for curios from extreme East, North, West and South.

Fred N. Scribner, Ellensburg, Wash.: I would like to exchange pressed leaves of plants, shrubs and trees of the Northwest for those of other parts of the United States, especially the Southern and New England States.

Fred Nubling, 25 West Sixty-eighth street, New York City: I have a German stamp, 1870, worth half a dollar, and a South Aus-

THE BOY CURIO COLLECTOR

The Arrow-Head Collector.

JOSEPH HATCH.

Boys who live in the country have unlimited chances for finding and collecting Indian arrow-heads. Very few how-

ever, avail themselves of the opportunity, because they fail to see the beauty in the rough little stones. Farmers, in tilling the soil, frequently find arrow-heads, and now and then a stone ax-

tralian stamp worth sixty cents, which I will trade for one Indian arrow.

William Treffelsen, 5601 Summer street, Philadelphia, Pa.: I have some pieces of flint found in the navy yard at League Island, near my home, which I would trade for pieces of gold, silver, or copper ore.

Raymond Curtis, 5914 State street, Chi-

Some neglect even to pick them up; and where they do take the trouble to rescue the curious-shaped pieces from the soil which has hidden them for so long, they put them in some unbecoming place under the center-table, in the button box, or on the clock shelf, where they are lost in the shuffle until the housewife does her spring cleaning, at which time they are resurrected and nine times out of ten, thrown away. A few years ago, when the collecting fever struck me, I began casting about for a place to find arrow-heads. It was toward the farm I turned and here I secured some good specimens at a small price. Some farmers whom I approached placed no value at all on the relics and offered them gratis. I found one man who had carelessly thrown an Indian hatchet into the woodshed; he said he considered it worth nothing. I gave him an old dollar watch for it, and when we parted company it was difficult to tell which of us was the most pleased. The hatchet (a sketch of which I give) is of granite color. I have bought heads for three cents apiece, but it is seldom you can find them at that price, as they are becoming scarcer. Many a pleasant and instructive hour may be spent studying their differences in form, material, color and workmanship. In years to come the collections in our cabinets will be the only reminders of the fast disappearing red man.

cago: I have a one-cent Costa Rica, five-cent Venezuelan, one-cent Porto Rico, fifty-cent New South Wales, five-cent Belgian, two-cent Argentine, five-cent New South Wales, one-cent Chile, eleven-cent Victoria, and an Italian, Japanese and Spanish stamp, all of which I will give for one Indian arrow."

THE BOY-ORATOR AND DEBATER

The Debater's Preparation.

W. F. STEPHENS.

An arduous and thorough preparation is essential to success in public speaking. The young man who proposes to become a public speaker, or to follow a calling in which skill in speaking is required, should lose no time in preparing himself for his work. The process of storing his mind with information and training his reasoning faculties cannot begin too soon.

One of the first of these preparatory steps is the acquisition of a good, working vocabulary. An anecdote which is related of Phillips Brooks, noted for his elegance of diction and facility of expression, illustrates how spare moments may be utilized for this purpose. When a young man at school he and his fellow-students were accustomed to eat together. After they were seated at the table there was generally more or less delay before they were served, and while the other young men employed the time in laughing and talking, young Brooks always had a dictionary at hand, and while waiting he would familiarize himself not only with the meaning, but also with the etymology of one or more words. To this practice he attributed the fluency and ease with which he spoke in after years.

The study of standard writers is helpful. The careful and studious perusal of the masterpieces of English literature will enable the student gradually and unconsciously to assimilate something of the purity and grace which characterize the style of their authors. Constant practice in writing will prove beneficial in many ways. This is the best way to fix firmly in the mind words already acquired; it is also an aid to correct expression and the proper construction of sentences.

The study of Latin, which is condemned by so many as profitless, is an invaluable help in learning new words. Many of our words are from the Latin, and any student will find that a knowledge of that language will enable him to better grasp the exact meaning of words and to express himself with greater ease and clearness.

The reasoning powers can be developed by the study of logic, and in various other ways. Geometry disciplines the mind, because each step has to be explained as it is taken. Abraham Lincoln ascribed the logical powers which he displayed in his arguments both at the bar and upon the stump to the long weeks he had spent in his younger days in mastering the contents of a work on geometry. During that time his mind became accustomed to habits of systematic and logical thought, from which it never deviated. A certain portion of each day should be devoted to thought and meditation. Reasoning powers can be developed in no better way than by using them.

Those desiring to attain distinction as public speakers should amass a wealth of general and miscellaneous information. Especially is this true of those who desire to excel in forensic oratory. Some one has said that a young man with a good fund of general information, coupled with an ordinary amount of common sense, possesses a capital which will insure him success. This knowledge is to be obtained not merely from books, but by observation and by intercourse with others. Benj. F. Butler once won a case because he thoroughly understood the mechanism of a locomotive; he won another important case because he understood something of medicine.

Henry Ward Beecher, perhaps the greatest pulpit orator America has ever produced, in visiting his summer home, was obliged to travel several miles on a

stagecoach. He made it a custom to sit outside with the driver for the purpose of conversing with him and thereby adding to his stock of information. He realized that the stagedriver, illiterate and uncultured though he might be, knew many things of which he was ignorant. The lesson is obvious. The aspirant for oratorical honors should despise no opportunity for increasing his fund of knowledge. Time spent in learning is never wasted.

The Benefits of Debating.

GEORGE W. MARTIN.

At the academy which I attended a few years ago, there were two literary societies. I was a member of one of them and participated frequently in its exercises.

I believe now that those societies did more real good and played a greater part in bringing every faculty of the students' minds into full play than did any other feature of the school work.

The many debates which the societies held were the chief means of advancing the students in the ability to think and reason logically and to express themselves.

The societies debated at least once each month. The subjects of debate were always such as were of interest and were calculated to stimulate thought as well as induce reading.

The interest shown in the debates proved that this feature of the society's work was of great benefit.

Debating is of benefit to any young man, whether he intends to follow a profession or not, for the reason that, particularly at the present day, trained thinkers, writers and speakers are in demand. It matters not to what department of work we refer, the same remark applies.

This training of the mind is a powerful factor in developing the true man.

Let us observe the good derived in preparing for a debate. The student with the question of debate before him is set to vigorous thinking. Nothing strengthens and develops the mind more than deep thinking.

The student must not only think out for himself the points in his favor, but must coin those thoughts into appropriate language. He must use language that carries the thought the easiest and the quickest—that has effect—remembering that simple and direct language has the greatest force. Proper preparation for debate also requires reading. Books treating on the question must be read closely, that the points may be understood and retained.

Practice reproducing the thoughts in your own language.

After a period of reading, write down the thoughts that you desire to use in the debate, being careful to have your sentences plain, short and significant.

You now have your material collected. The next step is the construction of your debate, that is, the arrangement of leading thoughts or points in their logical order. The success of your arguments will depend mainly upon the manner of their arrangement.

Here considerable skill may be shown, the effect of which will be felt by the judges.

Study the general points with care and arrange them in order of their strength, the weakest first. Under each head, set down all the thoughts, facts and arguments that apply to it.

You are now ready to begin the task of committing to memory the thoughts under each general point. The value of this can not be over-estimated.

To derive the greatest benefit and to produce the best effect, never debate with a manuscript before you. How

difficult it is for many to do this! Their hearts fail as they thus rise to face an audience.

A slip of paper with the leading points in their order is sufficient. The rest ought to have been studied so that the mind can easily recall it.

When not encumbered with a manuscript, many new thoughts, new allusions, new arguments will flash upon the mind of the debater as if by inspiration.

Debating also teaches men to stand by their principles and defend them. In politics, religion, law and other fields, men become great by their loyalty to vital principles. Preparing for debates also teaches one to be tolerant. He will be quick to see that there are two sides to every question.

The benefit a student derives from debates during their progress is even greater than that derived during their preparation.

When a debate is in progress every faculty of the mind is stimulated to the highest pitch, not only in defending one's own position, but also in originating arguments to destroy the opposition. The wits of the debater are then doubly sharpened to detect error.

It teaches one to weigh his statements before he utters them.

The debater should always be self-possessed while under fire, if he wishes to win the battle. When the debater loses his self-control the opposition always makes a distinct gain.

Debaters are also taught to modestly estimate their own abilities and respect the abilities of others. They have excellent chances for showing courtesy to their opponents and proving their manhood. Not all young men have the opportunity of joining a debating society. Of late years, however, the custom of organizing societies in district schools, high schools, academies and colleges is meeting with great favor. In the near future our boys—the coming men—will be able to enjoy more extensively than they do now this splendid training for the duties of life.

\$10,000.00 PAID TO AGENTS EVERY ONE GETS PART

We want to add fifty thousand names to the subscription list of "PETS AND ANIMALS" during the next six months. In order to secure the necessary co-operation, we will pay to agents who will assist us, the enormous sum of ten thousand dollars. Payment will be made in cash or merchandise, at agents' option. While we will award special prizes of great value, consisting of piano, bicycles, pleasure trips, cameras, typewriters, etc., etc., as well as of cash, to those who raise the largest clubs, our plan is such that EVERY person who acts as agent for us will be liberally paid, in amount proportionate to the number of subscribers sent in.

All our Agents get Something. We want Helpers from every Walk of Life.

"PETS AND ANIMALS" is the only publication of its kind, and subscriptions for it are easily obtained. In every home there are persons deeply interested in the objects of our journal. A paper devoted to the needs of our dumb friends has been desired for many years. There is no more popular journal published, and at the low subscription price—50 cents a year—club raising for it is an easy task. School teachers and their pupils, preachers, farmers, clerks, postmasters, everybody can make good money working on our proposition during the summer months. Remember, we propose to pay ten thousand dollars to agents and club raisers for fifty thousand yearly subscriptions. Send for full particulars they will be furnished free. Address Home City Publishing Co., 19 Gotwald Bldg., Springfield, Ohio, (Agents' Department.)

THE AMERICAN BOY

The Only Distinctively Boy's Paper in America.

(Entered at the Detroit, Mich., Post-office as second-class matter.)

The American Boy is an illustrated monthly paper of 24 pages. Its subscription price is \$1.00 a year, payable in advance.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper shows to what time your subscription is paid.

Discontinuances. Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE SPRAGUE PUBLISHING CO., MAJESTIC BLDG., DETROIT, MICH.

WILLIAM C. SPRAGUE, EDITOR.

GRIFFITH OGDEN ELLIS, ASSISTANT EDITOR.

90,000 FOR JULY.

No words of ours are needed to convince the public that THE AMERICAN BOY is pleasing advertisers. This number—the eighth—of the publication is evidence sufficient. It indeed speaks for itself. A comparison of the May number with this one shows that 102 out of 128 May advertisers repeat their announcements in June and 118 new patrons in addition make their appearance this month. When it is borne in mind that we are now in the summer months and that the publication is but eight months old, every one must concede that the result is a splendid testimonial to THE AMERICAN BOY as a magazine worthy of respect and confidence. Now, for July we are printing a three color cover and introducing other new features in make up and contents that will surprise and delight readers and advertisers.

The issue for July will be 90,000, an increase over June of 15,000.

Study Law at Home.

Special For You Now

We are now making a special offer for new students, calculated to give everyone a chance to study law by mail. Fees, time of study, course, adapted to your needs. Apply at once for free particulars. Special chance for you now.

REMARKABLE SUCCESS. Our Mr. Sprague was the first educator to advertise a home study course in any subject. That was over ten years ago. Now we have many imitators. None, however, have equalled us in the character of work done and the high esteem of the public. Our record is unimpeachable. Hundreds have obtained a legal education who, without our school, would never have gained it. Hundreds in every state testify to our work. On request we will send you, from among our students, the names and addresses of 31 editors and publishers, 12 ministers, 104 teachers, professors, educators, 26 physicians, 15 army officers, 81 bank cashiers and assistant cashiers, 54 officers of corporations, 5 federal office holders, 15 post-masters, 29 officers of fraternal societies, 5 officers in national political organizations, 10 officers in national labor organizations, 26 city officers, 4 mayors, 12 judges, 150 county officers, 15 state officials.

Every one of these and hundreds of others in your own state studied with us, and every voice testifies that our course is comprehensive, thorough, easily adapted to the needs of busy men and women, and reasonable in price. Preparatory Law, Business Law and College Law course. We prepare for the bar.

We want your spare time only. We want it now. All we ask is that you drop us a postal asking for particulars. We will send you full descriptive catalogue and special terms. Write for it to-day. It may change the course of your whole life and be the first step to great success for you. Address,

ANSWERS TO CORRESPONDENTS.

R. W. Wallace (and others): We cannot write you that your puzzles were received, nor can we notify you whether you receive a prize. The only notification we can give to any is in our printed list of prize winners, which appears in these columns each

Boys Working for a Share in the \$1,000

\$1,000 divided into 55 cash prizes ought to be a big incentive for work; and it is indeed proving to be so, for boys are sending in subscriptions every day. The boy who sends us the largest number of \$1.00 subscriptions for THE AMERICAN BOY by the 20th of next November will get a prize of \$200; the next in order \$100, the two next \$75 each, and so on. Fifty-five boys in all will get a share in this \$1,000. They will get, in addition, the premiums they may select from our premium list. You can easily be one of the fifty-five. You may not get the head prize, but you can get one of the smaller ones just as easy as anything. Albert W. Fifield, of Minneapolis, age twelve, took the lead some months ago, and he holds first place today, though very closely followed by several. Louis Straka, who was thirteenth in the race last month, has jumped to fourth place. He is almost sure now of getting at least \$50, and at the present rate he will soon overtake young Fifield, though Straka lives in a small city and Fifield in a large one. Fred H. Hilker, of Fort

Wayne, has jumped from the fourteenth place to the sixth. The twenty-five highest are in their order: Albert F. Fifield, Minneapolis; Chas. Gustafson, Chicago; Emerson T. Cotner, Detroit; Louis Straka, David City, Neb.; John D. Cronenweh, Detroit; Fred H. Hilker, Fort Wayne, Ind.; J. L. Hirschland, Reading, Pa.; Clarence Pyeatt, Fort Lemhi, Idaho; Donald Annis, Detroit; Karl Matthews, Du-buque, Ia.; Chas. Meader, Chicago; R. M. Gray, Hasbrouck Heights, N. J.; H. H. Smith, Lamoni, Ia.; Wm. Northwood, Forest Hill, Cal.; Frank A. Wright, Lewistown, Mont.; Geo. O. Bacon, Fort Scott, Kan.; Lyman Scriber, Detroit; T. R. Smith, Mokane, Mo.; F. F. Northrop, Wayne, Neb.; H. R. Mohler, Ephrata, Pa.; F. G. Kin-sala, Gilby, N. D.; A. C. Hand, Mansfield, O.; Herbert Hotchkiss, St. Ignace, Mich.; E. O. Henderson, Stockton, Cal.; M. A. Gray, Detroit. The boy at the head of the list has sent only 44. You can get into this race and win one of the many five dollar prizes if you don't get a big one. Now, get to work, boys, and show what you can do.

THE AMERICAN BOY, Detroit, Mich.

month. Due allowance is made for distance and the prizes are not awarded until the magazine is ready for the printer.

De Witt Gillis (and others): It is impossible to print the entire list of solvers each month, as the number always runs into the hundreds.

Charles Kincaid (and others): Read each prize offer carefully. We do not offer a prize to each one who sends in a correct solution, nor to each finder of a mistake, but to the first one to be received—time and distance duly considered. We should be delighted to reward the industry of each American boy, but this is impracticable. We can only say to each and every boy, Try again. You have our best wishes for success next time.

Prizes for Mistake Hunters.

To the boy first notifying us of a mistake in spelling (dialect not considered) in this number of THE AMERICAN BOY, we will give \$1.00. To the boy next in point of time who detects a mistake, 50 cents. To the boy sending in the largest list of mistakes, \$2.00.

Why is a Boy Like a Piece of Flannel?

To the boy first sending us a correct answer to this conundrum we will give a six months' subscription to THE AMERICAN BOY, in the name of some boy whom the winner may choose.

Prize Offers.

- For the first correct solutions of the puzzles we will give prizes as follows: Puzzle No. 52—An AMERICAN BOY Base Ball Scorer. Puzzle No. 53—An AMERICAN BOY Watch Charm. Puzzle No. 54—A Coin and Stamp Guide. Puzzle No. 55—An AMERICAN BOY Knife. Puzzle No. 56—An AMERICAN BOY Fountain Pen.

Foreign Postage Stamps.

To the boy sending the largest number of new subscriptions to THE AMERICAN BOY by June 10 we will give, in addition to the regular premium offered, one-half of the foreign stamps accumulated in our office for the month ending that date; to the two next in order, one-fourth each.

A FOUNTAIN PEN FREE

We will give a Parker "Silver Dollar" Fountain pen (value \$1.00). Free to anyone selling 15 boxes of our Mer-lin Tooth Powder, or a Parker "Lucky Curve" Fountain Pen (value \$2.00), to anyone selling 30 boxes. Also Cameras, Watches, Books, etc. given away. AMBITIOUS BOYS and GIRLS

Here is a chance for you to earn quickly 10 dollars and more during a little spare time, by selling for a big wholesale house some of their Fine Jewelry to Friends and Neighbors. It costs you not one cent to make the trial. The firm will send you the goods on credit, and one-half the amount you sell you keep for your trouble; the other one-half you send to the firm. They take back all goods YOU RUN NO RISK. Besides, they offer a Camera or a Fine Watch as extra premiums to those who sell the goods the quickest. Be the first in your town to send your name and address with two references to KING HARVARD CO., Dept. F, CHICAGO, ILL., and they will send you the goods by mail prepaid.

DON'T READ THIS If you are looking for a Toy or some Novelty or an old fashioned Zither The Zitho-Harp is a new overstrung instrument of highest standard and excellence, producing a tone nearly equal to that of a Piano. It is a double instrument, Zither and Harp combined, the Harp strings arranged in harmonic chords, crossing the Zither or Melody strings at right angles, a feature found in no other instrument, making it not only easier and more convenient to play, but adding a beauty and fullness to the tone such as can not be approached on any other instrument. Complete outfit including a model self-instructor of 24 pages, played either by notes or figures FREE with every instrument. No teacher needed. A few hours' practice and you can play anything. To introduce the Zitho-Harp we shall sell it for a limited period at \$5.00, the cost of production. Send \$1.00 and pay balance on approval, or sent C. O. D. Descriptive circular and sample music free to any address BREDHALL & FABER, Manufacturers, 791 Milwaukee Avenue, CHICAGO, ILL.

The only all-steel Air Rifle

FREE This gun is 31 inches long, beautifully nickel-plated and highly polished. Either single shot or repeater. The Repeater shoots 150 times without reloading. You can have this gun or a fine Watch, Fountain Pen, Knife, or your choice of several articles, by selling our housekeepers' wonder worker. It is not "Hot Cakes," but sells like them. Or sell our Magic Silver Polish. No money required for sample. Write to day for information. W. WHEATON SMITH, Detroit, Mich.

HOUSEHOLD SUNSHINE

WYANDOTTE WASHING POWDER.

Calling Wyandotte Washing Powder "household sunshine" is no misnomer, since by its use, in a thousand ways, it brings light and cheer to the household, saving the hands, saving labor, saving time, saving expense. Containing no caustic alkali, it is the only perfect washing preparation on the market.

In the Kitchen—for washing the dishes, cutlery, silverware, and for cleaning the refrigerator or ice box; for keeping the bath tub bright, for cleaning the sink, for cleaning the floor and woodwork, it acts like magic, saving half the usual labor.

In the Laundry—for washing muslin, dimity and silk shirt waists, fine textures, the linens;—the household washing loses its "drudgery." It softens the water, lifts the dirt, and will not injure the fabrics.

A large 24 oz. package for 5 cts.—Your grocer has it, or will get it for you. See that the trade mark of the Indian is on the package—then you get the genuine.

SAVE TRADE MARKS, AND GET OUR PREMIUM LIST.

The J. B. Ford Company, Wyandotte, Mich.

MANUFACTURERS OF WYANDOTTE WASHING POWDER, BELL STARCH, AND WYANDOTTE BAKING SODA.

Now, Boys, earn a watch in a day. Our plan is so easy that some boys have earned as many as 6 watches.

John Adderley, 117 Twenty-first St., Detroit, writes, "I earned my watch in about one hour." Write us to-day for particulars. THE J. B. FORD COMPANY, Wyandotte, Mich.

What Success Means.

Chauncey M. Depew said in a recent speech: "As an employer of 35,000 men, my experience leads me to believe that men fail because they do not grasp the opportunities before them. I went into the office of a great lawyer and said to him, 'You are working yourself to death,' he replied, 'I know it, and I will tell you why. It is because everyone in this roomful of clerks is watching to see when I go out, so that he can fool away his time, or watching the clock for the hour to quit work. If there was a single one who would take up a case and work on it all the afternoon, and into the night if necessary, as I did, I would make him a partner; but there is not one, and so I am working myself to death.'"

A Mean Man and His Hen.

We are not prepared to vouch for the truth of the following story, which we find in an Illinois newspaper:

The meanest man in Illinois lives at Centralia. He put a large porcelain egg in the nest of an ambitious hen and found that the eggs she had afterward laid were increased in size. Then he put a goose egg in the nest, and the aforesaid hen laid an egg just as large. He was so well pleased with the scheme that he put a whitewashed football in the nest and waited results. When he went the next time to search for eggs, he found one as big as a football, but no hen in sight. Securing the egg, he saw engraved on it by hen photography these words: "I'm no ostrich, but I have done my best." Later he found the hen inside of the egg.

Billy, a Horse Hero.

A few days ago there died at Cheyenne, Wyo., "Billy," the only survivor of the Custer Massacre, at which Gen. Custer and his brave band on the Little Big Horn in 1876 met death. Billy was one of Gen. Custer's cavalry horses, and after the massacre the animal was found wandering around on the battlefield, badly wounded, hunting his master. Medicine and kind treatment soon made a good horse of him again.

Billy was bred in old Kentucky. He was a beautiful light bay, with long mane and four white feet, attracting attention wherever he went, because of his magnificent carriage and stately stride. The horse, thirty-five years of age at the time of his death, was buried in a secluded spot in the garden belong to his owner, and a stone suitably inscribed marks the last resting place of the only survivor of that memorable event in American history.

Effects of Smoking.

From measurements of 187 of the class of 1891, Yale, Dr. Stivers found the non-smokers gained in weight during the college course 10.4 per cent. more than the regular smokers, and 6.6 more than the occasional smokers. In height, the non-users of tobacco increased 24 per cent. more than the regular users and 12 per cent. more than the occasional. In increase of chest girth the non-users had an advantage of 26.7 and 22 per cent., and an increase of lung capacity of 77.5 and 49 per cent. respectively. These observations are corroborated by observations of the class of 1891 at Amherst by Dr. Hitchcock. In France, the difference between the students who smoked cigarettes and those who did not, as shown by the class standings, was so great that the government prohibited absolutely the use of tobacco in all government schools.

Contains—Reminiscences of cruises on U. S. Men-of-War, Illustrations of daily occurrence of National interest in our Navy. Correspondents on every U. S. Ship, in all parts of the World, as our Special Contributors. The only Illustrated Monthly Magazine pertaining to the U. S. Navy. A Naval supplement of a War-Ship with each number. Sample Copy 10 cents, 4 Months trial 25 cents.

THE GREAT War Game

Amusing, Interesting, Instructive.

This latest parlor game, follows the engagements of the British and Boers as they occurred in the real campaign. You become familiar with the action, gains and reverses of both armies. Cities, rivers, all mapped out as situated in South Africa. Exciting, absorbing to old and young. Send 25c and the game will be sent together with full instructions to any address.

Wisconsin Enterprise Co., Station A, Racine, Wis.

FREE BICYCLE

Ladies or Gents, to any reader of this paper who will send our Victoria Needle Package at 10c each; 25 assorted needles in each pkg. A necessity in every household. Send name and address, but no money. We send needles and premium list free. When you send us money and get your premium. You can easily earn a Bicycle, Camera, or other article.

Address: **A. NEEDLE CO., Beaver Springs, Pa.**

WATCH AND CHAIN FREE

For a Few Moments' Work, Solid Nickel Silver Watch, looks and wears like Solid Silver. Keeps good time. From Wind and Set, runs 30 hours. We send to Boys and Girls for selling 50 Gold Filled Dress Pins at 5c each. The best sellers offered by any firm. Send your address by return mail, say you will sell Pins or return them. We send Pins and a large Premium List by mail. When sold send us the 50c and we send Watch and Chain to you at our expense. Commission paid if preferred. No money required in advance.

C. S. Horner Mfg. Co., 1405 Penn. Av., Pittsburg, Pa.

PATRIOTIC BOYS

Here's a chance for you to get an elegant Savings Bank FREE. To quickly introduce our Patriotic Bank, we give anyone who writes us this opportunity. Unlike other savings banks our Patriotic Bank gives candy from bank when you put a penny in it. Made of metal. Size 1 1/2 x 4 1/2 in. Price, \$1.00 or write for particulars for securing a bank FREE.

BOHERTY & YOUNG, 181 La Salle St., CHICAGO.

THE MAN IN THE BUBBLE.

An amusing novelty. You can blow a single bubble with a figure inside, or a cluster of 8 to 15 bubbles alone, or with a figure in the center of the cluster. The outfit is unbreakable. It contains one fancy turned-wood pipe, one tin cluster blower, two fancy metal figures with wire attachments. Complete outfit, with prepared soap and illustrated circular giving full directions, sent prepaid, for 5c. stamps or currency. Home Amusement Co., 251 Kosciuszko St., Brooklyn, N. Y.

THE "LITTLE WONDER" WATER MOTOR

is a small hydraulic motor, very cheap and entirely practical, which can be readily attached to any faucet to which hose may be coupled. The Equipment that comes with each motor consists of an emery wheel, a buffing wheel and a small pulley. By interchanging these parts knives and tools of all kinds may be sharpened. Silver-ware and bicycle parts may be cleaned and buffed or light power may be obtained to run sewing machine, etc. Only forty pounds water pressure required. Twenty thousand of these motors are in daily use. Price, \$5.00. Circulars on request.

THE FOURTH OF JULY

"Our own dear land, our native land,
Home of the brave and free!
In vain we search old ocean's strand
To find a home like thee.

Thy towering hills, thy prairies wide,
Thy forests old and dim,
Thy streams that roll in matchless pride,
Thy torrents' thunder-hymn."

THE Anniversary of the Day of Independence, July 4, 1776, is always celebrated as a great national festival throughout the United States. John Adams, the second president, and one of the most distinguished signers of the Declaration of Independence, made a prediction as to the manner in which the day would be celebrated, and that prediction has been realized. There is not a city, town or hamlet throughout all the land, but shows in some way and to some extent, more or less conspicuous, that a great national event is taking place.

Everywhere the people come together to rejoice and be glad, and the ringing of bells, firing of cannon, together with the lusty cheers that every moment ascend, testify to the joy that the event inspires.

Many people doubt whether it is morally expedient thus to keep alive the memory of facts which as certainly infer mortification to one party as glorification to another. But the bond of sympathy between our beloved country and Great Britain is now too strong to be affected by any demonstration of joy in the celebration of the day; and, after all, it is only natural and to be expected

that our country's natal day should be held dear in the hearts of her people and that tokens of rejoicing should be heard and seen on every hand.

But in all this there is no reflection on the old land. In a centennial oration delivered by Robert C. Winthrop in the year 1881, he said:

"We would not, if we could, recall at this hour anything that would even seem like casting reproach upon the rulers of old Mother England. We are here to revive no animosities resulting from the War of the Revolution, or from any other war remote or recent—rather to bury and drown them all deeper than any plummet sounded.

"For all that is grand and glorious in the career and example of Great Britain we can entertain nothing but respect and admiration: while I hazard little in saying that for the continued life and prosperity of her illustrious Sovereign, the American heart beats as warmly to-day as if no Independence Day had ever separated us."

These noble words may be re-echoed in this year of 1900.

The country over which the Star Spangled Banner floats to-day, exhibits to other nations the great prosperity of a free, self-governed people. And few can look upon her flag rippling in the breeze without pride of country, and surely this pride is pardonable; the sun shines not upon a land more fair, or upon a land where human happiness is valued at so high a rate or so little abused; where institutions are so strong or people more free.

Let every American boy remember that he has a definite share in the national celebration. Do not let any one forget his part. Every boy in this great Republic has much to do in the maintaining of the State and upbuilding of the Nation.

And let us all, while exulting in the prosperity of our land, not forget, amid the other voices of the hour, to lift to God a great thanksgiving, for without God nations are as naught. May He grant that our country's Star Spangled Banner shall forever float "O'er the land of the free and the home of the brave."

"God bless the flag, let it float and fill
The sky with its beauty, our heart-strings thrill
To the low sweet chant of its wind-swept bars,
And the chorus of all its clustered stars.
Embrace it, O mothers, and heroes shall grow
While its colors blush warm on your bosoms of snow.
Defend it, O fathers, there's no sweeter death
Than to float its fair folds with a soldier's last breath.
And love it, O children, be true to the sires
Who wove it in pain by the old camp fires."

THE DAILY CEREMONY OF FLAG RAISING AT THE BEGINNING OF THE SCHOOL DAY.

Instruction of the Deaf and Dumb.

SCRUB

E. EVERETT HOWE

Scrub began school with the winter term. During the several months of his attendance, he led all other boys in the notice he attracted, if not in popularity. He exhibited, it was said, but two colors, yellow and blue.

His trousers, which were patched; his hands, which were evidently stained by butternuts or walnuts; and his hair, which was cut square on a line an inch below the bottom of the ears, were yellow.

His eyes and his jacket were blue. This jacket was

THE RULER FELL HEAVILY AT FIRST.

the real glory of his raiment. It was a relic of the civil war, which had been made to fit some corpulent cavalryman. It had yellow stripes, long sleeves, and brass buttons. It had been taken up at the top and bottom, and now it bulged like a gopher's pocket at the front. There the boy carried his reader to and from school; and there, too, he might have carried his slate and his dinner-pail. The attention given such a figure by a crowd of boys was not born of reverence. In answer to inquiries the newcomer told his questioners that his name was William Searl. Once when the question suggested disrespect instead of curiosity, William promptly informed the questioner that he was no "scrub." From that time the new boy was "Scrub."

Scrub was mercilessly ridiculed and teased. If he was quick to resent an affront, his tormentors were not less ready to provide him an opportunity. Their ingenuity was always suggesting new means to annoy him.

One night after school the boys singled out Scrub as a mark for snowballs. Affairs had not gone well with him that day. He had been unjustly accused of crowding in the class and had lost his recess for failing to solve a problem in fractions. When Mark Shaw hit him on the side of the head with a hard snowball, Scrub rushed at him and struck him in the face.

The teacher had come to the door just in time to see the concluding act of the difficulty.

"You can come in, William," he said.

Scrub defiantly obeyed.

"Take your seat," commanded the master.

From his desk Scrub watched the teacher poring over the pages of his register. At last he saw him close it, remove his spectacles, pick up his ruler and walk slowly down the aisle.

The teacher stood a moment looking sternly and fixedly at the boy. Then he spoke:

"William, why did you strike Mark?"

"He hit me with a snowball," Scrub replied.

"That is a boys' game," said the master; "he was only playing."

"It ain't no play to me," returned Scrub, "to have a water-soaked snowball take me on the ear."

"That will do," the teacher replied; "you have said enough. I did not ask you what was play to you. You are very ill-tempered, William."

"Ain't it enough to make a feller mad," cried Scrub, pushing his face forward in a belligerent manner pe-

culiarly his own, "the way they do? They're always a pullin' my hair an' a jerkin' my coat an' a callin' me names. They don't never call me by my right name. At noon they tried to get Jim an' Fred to fight me. They wouldn't do it, an' then they held me, an' let 'em hit me, an' there's the mark, an' right there's a bunch where Mark hit me with the snowball. There couldn't nobody stand that."

The teacher stood thoughtfully. The boy whom Scrub had struck was a son of the director, a man who loved his rights and loved to assert them. Still the master would not acknowledge, even to himself, that he was influenced by this consideration.

"I told you you had said enough," he said sternly; "hold out your hand."

Scrub extended his brown chapped hand. The ruler fell heavily at first, and then lightly, four times in all. It rose again; but the teacher's heart failed him, and it descended hesitatingly, and not on the boy's hand. Long afterwards, when the boy's whereabouts were unknown to the neighborhood, the master thought mournfully and remorsefully of those reddened palms, and of that pathetic, reproachful look, which would not leave his memory.

Scrub came from the school-room filled with the hate that had been gathering the entire winter. He decided that he would not attend school another day. He would work a week or two longer for the farmer with whom he boarded, and then he would quit the neighborhood forever.

As he descended the steps, one of the boys tripped him. Choking back his anger he picked himself up and was hurrying away, when Jim Ball, one of the larger boys, caught the bottom of his cavalry jacket.

"Let go," said Scrub.

"All right," Jim replied, "why don't you go?"

"Let go," repeated Scrub, turning as far as he could and vainly striking at his tormentor.

FOR ONE AWFUL MOMENT HE LOOKED AT THE PROSTRATE FORM.

Jim loosed his hold and Scrub fell forward. His fall was followed by a shout of laughter from the boys. It so chanced that he landed directly upon a small ball-club. With the shouts of the boys still in his ears, he rose and struck Jim, who instantly fell.

For one awful moment he looked at the prostrate form, and then he ran. He knew not and cared not whither he was going. Flight, in whatever direction, would take him away from that spot in the snow and mud where the boys were crowding closer and closer.

The schoolhouse was a quarter of a mile from the village. Up the white road fled the frightened boy. In the distance he saw an approaching wagon. He turned aside, climbed a fence, and, crossing a field, entered a wood. But he dared not stop here. On he went until he had left the wood, passing through several open fields, crossed another highway and found the shelter of another wood. Here the boy seated himself on a rotten log. The sun shone pleasantly between the bare limbs of the trees. Birds were hopping in the branches above. One pioneer robin stood on a bare knoll that rose from the spotted plain.

Scrub's anguished eye scarcely marked these things; his thoughts were at the playground, with the group around the fallen boy.

He remembered how bright the spring days had

looked to him a year before, how delicious had been those reveries when he had watched the brown earth bursting like a young giant from the white clothes which it seemed outgrowing, how his heart had swelled with delight as he felt himself filling with the vigor of the spring.

The sun went down; the darkness grew in the woods. Poor Scrub began to think of the future. He had committed murder; his life was ruined. He might escape the law, but he could not escape his conscience. As long as he lived, he would see in his dreams and in his

EAGERLY HE PEERED INSIDE.

waking hours, the horror on the faces of the school boys and that greater horror within the speechless circle.

And then a faint but joyous doubt came to Scrub. He was not sure that he had killed Jim. He must settle this uncertainty at once.

It was a walk of about a quarter of an hour to Mr. Ball's house. Scrub probably covered the distance in ten minutes. He slackened his pace as he neared the house. Scrub passed around it several times, but he dared not approach closely. He was not used to prowling about people's houses. At last his intense desire to learn something of Jim overcame his fear.

Within a few feet of the kitchen was an old building called "the shop." Scrub approached in its shadow. Timidly, nervously he moved an empty barrel toward a window. He hesitated before mounting it. He raised one foot and then stopped. What if someone should chance to look out?

Again he started to mount the barrel, and again he stopped. Finally he clambered on top.

Eagerly he peered inside. No one was in sight. They were probably with Jim. Scrub's decision was at once formed. He would deliver himself up to justice. If he must be a criminal, he would not be a hunted criminal.

As he climbed from the barrel, a man came around the corner of the shop. Scrub forgot his resolution. He rushed through the narrow alley, full against another person, who was coming from the opposite direction.

"Hello!" exclaimed that individual, in a voice which Scrub recognized.

Scrub darted out into the starlight and stood still. Jim slowly approached him, and Scrub in some apprehension retreated. At last Jim made a quick dash to seize him, when Scrub fled.

"Hold on!" shouted Jim, "hold on or I'll fix you! Sam, Sam, head him off!"

Two boys came from the barnyard and stared at Jim and the fugitive.

"Why don't you catch him?" yelled Jim. "It's Scrub!"

The two boys sprang in pursuit. Scrub knew that capture meant harsh treatment. He ran through an orchard and came to a large field. He was drawing away from Jim and his brother but he was slowly and

"YOU CAN STAY HERE AS LONG AS YOU WANT TO."

surely being overtaken by Sam Newman. He put forth a new effort. For a brief space he gained, then he barely held his own, and now he was losing ground. To his joy he was nearing a patch of shrubs. He crowded hurriedly into this retreat, intending to hide when he found a favorable opportunity. But he soon reached the opposite side, where he saw a swamp, with an open, marshy border.

Almost exhausted, he hurried forward and threw himself into the grass. The boys were crashing in the bushes behind him. They emerged and looked about them.

"Where did he go?" asked Jim, gasping for breath. "He must have gone on," replied Sam.

"I'd like to catch him," said Jim, "and I will, too, if I have to chase him to Canada. That was an awful rap he gave me. Spread out, boys. Don't let him get away from us."

They separated and advanced. Scrub sprang up and fled before them. He could hear them tearing through the bushes after him. He was nearly through

the swamp. He was wondering how he could endure another run, when he saw a field of ice stretching before him. At its edge he was stopped by the warning water.

"Here we are!" shouted Jim, mockingly. "Come visiting, have you, Scrub?"

Scrub clutched a tamarack stake. But he did not hold it long. He thought of that other club, which he had wielded with such terrible effect. He threw the stake from him.

One moment he looked at the ice and water, and then he ran and leaped. He struck the ice, which instantly broke beneath him, and he sank to his neck. He grasped the ice, which treacherously broke. His feet no longer touched bottom. With his face still toward the ice he struggled frantically. Once more his hands grasped the uncertain support. This time he raised himself from the water.

"Come back!" called Jim. "We won't hurt you. Come back."

The boy did not heed them.

"Come on back," urged Jim. "You'll drown, Scrub. We won't hurt you at all."

"No," said Scrub, "I'll never come back."

On he went across the narrow arm of the lake. At the opposite side he floundered as before, but he pushed resolutely through.

For days the boys heard nothing of Scrub. Then a rumor reached them that he was sick. Jim found him and took him home.

It was several weeks afterward when Scrub, with a pale, thin face, stood before Jim's father.

"You can stay here as long as you want to," said Mr. Ball.

"I'm much obliged," replied Scrub, pushing his face forward, almost defiantly. "I owe you a lot; but I'm goin'; an' I'm a goin' to keep a goin' till I git where they don't hate me."

In the following November Mr. Ball received in a registered letter the full amount of Scrub's board during his sickness. After that he never heard of the boy again.

Tod and the Stolen Holidays

CHARLES BATTALL LOOMIS

(Copyright by the Author.)

It would have been easy to discover good qualities in Tod Pendleton. He was kind hearted and brave and good humored, but he was also greedy. As an illustration of this latter quality let me tell an incident connected with his boyhood. My grandfather told me. Years ago there was a kind of candy known as the "Jackson ball." It was as large around as a crab apple and as hard as a stone pavement is when you fall headlong on it. Well, one day Timotheus Pauncefort found a cent in the road, and as he was a most generous little fellow he immediately invited Tod to go with him to the little candy store on the corner, and he'd treat him to whatever he wanted. Most boys would have chosen taffy as being easy to divide, but Tod, never thinking about Timotheus, said he guessed he'd take a Jackson ball, and Timotheus bought one—they came one for a cent. But as there is no way to dispose of them but to suck them to their dissolution, Timotheus didn't get a taste. They came out of the candy store two happy boys, Timotheus happy because he had provided a feast for his friend, and Tod happy because the feast had been provided without its costing him anything.

It was when Tod was eleven years old that his greed caused trouble to the whole of the United States on two very important days. Just what year it was I can not say, but your great-grandfather may remember. His parents took him to a balloon ascension at Rockefeller Park, a country place where they hold fairs and poultry shows every fall.

It is not for me to say how he managed to do it. I don't think he was ever clear in his own mind how it came about, but it is a well known fact that when you cut the rope that holds a balloon to the earth that balloon is going to escape if it has a spark of animation. I suppose the balloonist had gone to lunch, but wherever he was he was not in the balloon when Tod stepped into the basket to see how the old thing worked, and as Tod was a perfectly fearless and reckless boy he did not think of the moral or physical consequences, but simply sawed away at the rope with his jackknife until the balloon sprang up like a lark from its nest in the meadow, and was soon out of hearing of the angry owner.

My grandfather told me that a farmer's horse began to cut up just as Tom was severing the rope, and that that drew away the attention of the sightseers. Certainly there never was a madder man than the

owner of that balloon, and he called the bystanders all sorts of names for not interfering to save his precious balloon.

As for Tod, he was tickled to death. He waved farewell to the crowds below, he sang snatches of songs and sat on the edge of the basket with his legs dangling over until his mother fainted, and as he happened to see her he drew in his legs. He did not like to occasion unnecessary pain.

After he had been in the balloon some ten hours and had sailed I don't know how many miles he became very hungry, and, seeing land a quarter of a mile above him, he decided to leave the balloon and take a short walk for exercise if he could fasten his anchor anywhere. The balloonist had an emergency anchor in the balloon, and if he hadn't no one would ever have heard of Tod again. So my grandfather said.

He was now some three hundred miles above the earth, higher than any man of science has ever been, and yet he did not feel cold, nor bleed at the ears, nor do any of those unpleasant things that aeronauts seem to consider so necessary.

That there should be land up in the air struck him as odd at first, and then he reflected that there were many things connected with the heavens that he knew nothing about, and this land was undoubtedly one of them.

As he sped past a little cape of land that jutted out into the air he was able to throw the anchor into a tree, and a moment later the balloon was captive, and he was sliding down the rope to what looked like solid earth. But it was not as solid as it looked. In fact, it was a cloud, and if a handsome little boy clad in what looked like an autumn sunset had not stretched out his hand and caught him Tod would have had a bad fall.

"Here, drink this and you'll be able to walk without sinking," said the little stranger. He handed a golden cup to Tod as he spoke, and that boy was only too glad to drink, for he was thirsty after his three hundred mile flight. The liquid tasted like all the kinds of soda water you ever heard of, poured into one glass and flavored with essence of orange flower. As soon as Tod had drunk it he felt as light as a feather, and walked on the cloud as if it had been terra firma, which, my grandfather told me, is Latin for solid ground. Ask your teacher whether the old gentleman was right.

"What's the name of this place and how far is it to earth, and what's your name, and what do you do up here, and where can I get such a pretty suit? It looks like the view from our verandah when the sun is going down."

"I can tell you're from the earth by the questions you ask," said the other boy, laughing. He was such a pretty fellow. Very much like the cupids on valentines.

"Well, I'd never learn anything if I didn't ask questions. Where do you live, and why don't you fall through?"

"I'm the child of the sunset; but, say, you haven't learned anything so far by asking questions, for you don't wait for the answers. You only ask to keep your tongue from getting lazy."

Tod laughed and said: "I bet I can beat you running."

"I guess not," said the sunset boy, and with that both of them began to run as hard as they could, but, although Tod's feet hardly touched the ground, so easily did he move through cloudland, yet the other boy moved twice as fast and soon vanished behind a high wall that surrounded a huge castle that looked like those cloud palaces that rear themselves on June days when you are lying on your back out in the fields and wishing that the long vacation would begin.

It was snowy white and had towers and minarets, and the wall of salmon pink that surrounded it changed its shape continually.

While Tod was wondering what castle it was and whether any giants lived within it a tall warrior, who looked exactly as if he was fashioned out of a silver cloud with little flashes of opalescent fire running through him, came to an opening in the wall and said: "What is your name, Earth Boy, and why have you come to the storehouse of the holidays?"

"WHAT IS YOUR NAME, EARTH BOY?"

Before Tod could answer, his friend, the Sunset Boy, popped out from behind the wall and said: "He's all right. He can run half as fast as I can."

The warrior seemed astonished. "Why, that is impossible. No one in Cloudland can run a quarter as fast as you."

"Well, he did. I leave it to him if he didn't. And he's hungry and he wants to know everything. And say"—this in a lower tone—"can't you give him seven or eight holidays? We have such a lot."

"But," said the warrior, who, all this time had been changing his shape like an April cloud, and was by turns a Polar bear, a Hubbard squash, a hippopotamus, a load of hay and an apple tree, "there are just so many holidays. If I let him have some the earth folk will have to do without them."

Tod now spoke up: "Say, my father says he wishes there were no such things as holidays. He's so used to working that he never knows what to do on a holiday, and he gets awful cross, and he's always glad when night comes. Last Christmas he said he wished Christmas had never been discovered."

"Well," said the warrior, who now looked like the map of France and a moment later like a teapot, "if that's the case you can have all the holidays you want. I thought people prized them down there."

"No, indeed," said Tod. "Why, teacher says they de-de-demortalize the boys, and we never do as well the day after a holiday."

"Come inside, then, and help yourself. What days do you want?"

Tod stepped into the cloud palace and found himself in the midst of banks of such beautiful colors as you never saw, even when the sun was doing his prettiest. Bounding billows of purple and saffron and green and crimson and violet—Tod was on'y a boy, and boys don't go in for that sort of thing very much, but he told his mother afterward that it was all so gorgeous that it made him feel like crying.

"Take a header into the midst of them and you'll reach the room where the Christmasses are stored."

Tod dived and a moment later found himself in a room filled to overflowing with Christmas presents and Christmas trees and Christmas horns and sleigh-bells, and yards upon yards of good will.

"Now," said his guide, who had become another being like the Sunset Boy, only older, "take your choice. You can have one Christmas or one Fourth, but you can't have more than one at once. In the next room are Lincoln's days and the room next to that is filled with Grant's days."

"What's Grant's day?" asked Tod.

"Oh, that's a holiday that they haven't begun to use yet, but when they do they'll find me prepared."

Tod thought he'd like one Christmas, and he had no sooner expressed the wish than he found him

WHEN HE SAW HIS MOTHER FAINT HE DREW IN HIS LEGS.

HE WANTED TO GO TO SLEEP.

self and the Sunset Boy on a cloud by themselves surrounded with all the Christmas presents that a boy ever wished for. Guns, pistols, marbles, books, skates, baseball bats, footballs, fencing foils, double rippers, wheels, kodaks and a big hand organ with a grinning monkey sitting on it, and candy and fruit until you'd think of a doctor. He told the Sunset Boy to pitch in, and all that day he ate and read and rode and shot holes in distant clouds and took snapshots of the Sunset Boy and taught him how to box, and by nightfall was the tiredest boy who ever visited a cloud. He had had enough Christmas to last him three years.

The next morning he woke up in the Fourth of July room, and he wanted to turn over and go to sleep, but the warrior said that he must choose a holiday as long as he had been so keen for it. So he chose the Fourth because the warrior had pulled one out of place and he didn't want to oblige him.

At sight of the heaps of firecrackers and Union torpedoes and grasshoppers and fiery dragons and cannons his enthusiasm returned, and when he and the Sunset Boy found themselves on a new cloud with nothing to remind him of Christmas on it he set out to have fun, but the premature discharge of a bunch of cannon crackers set fire to the cloud on which they were sailing, and when the Sunset Boy had put out the fire with a rain cloud he found that all the firecrackers were wet, and so the morning was not as noisy as you might have supposed it would be. In the evening Tod did thoroughly enjoy

himself. Every set piece you ever heard of was there, and he and the Sunset Boy hung them on the edge of a great bank of clouds that looked portentous and lowering until it was lighted up, and then it resembled fairyland. One million rockets going off at once make a spectacle that you don't see every day in the year, and there were long articles in the earth papers the day after telling about the shooting stars that had come ahead of time. But the astronomers were able to give good reasons for their appearance, and not a soul imagined that Tod was at the bottom, or rather the top, of the display.

The morning after the Fourth Tod had a splitting

headache, and said he was sick of holidays and he'd like to go down to earth.

His two friends bade him good-bye and he stepped into the basket of the balloon, and thanks to a little help from a heavy wind cloud that he fastened under the basket, he reached the earth in a few minutes, and in the midst of a terrific wind storm.

When the third of July came the next month it found people everywhere making preparations for the celebration of the Fourth, but greedy Tod had already celebrated it up in Cloudland, and there was no Fourth. People everywhere slept through that day, and there were some who would have blessed Tod, but the small boys were furious. They could not explain it. They went to bed with all their ammunition within reach, and when they woke up they realized that somehow the Fourth had come and gone and they hadn't fired a shot—and yet it had all disappeared.

Tod slept with the rest, but when the Christmas season came along he hoped that he could celebrate it. His adventure was now six months back, and six months in a boy's life are a good deal more than half a year. He made his preparations for Christmas as usual, in common with all the rest of the boys who make much of the great holiday, but it was all to no purpose. As your grandparents may have told you, everybody slept over the glad season and woke the day after with much better digestions, but deeply regretting that they had lost a Christmas that they could never regain.

And Tod felt worse than anybody else and realized what a pig he had been. He really cultivated his generosity to good effect for the next few weeks.

But the following year all the holidays went off with a bang, and I've heard my grandfather say that he believed it did folks good to go without a holiday once in a while, as they appreciated them better. But I say a place for each holiday and every holiday in its place.

Boy Patriots of Seventeen Eighty

A. M. BARNES

The sound of horse's hoofs was heard coming down the long avenue of live oaks. From the appearance of the rider it was evident that something very exciting had happened. He was a mere youth, not more than sixteen or seventeen years of age, but tall, strong of limb, and as supple as a young ash. His body was bent slightly forward in the eagerness to urge on his horse, but his head was well up, and his eyes, keenly on the watch, glowed with the fire of excitement.

Suddenly he turned from the avenue and struck off through the myrtles toward a dense part of the woods. He had gone a half mile or so when he stopped, threw back his head, and gave the hoot of an owl.

Receiving an answer, without further hesitation he plunged on again as fast as the undergrowth would allow. In a few minutes he had passed through the tangle and entered an open space. As he did so he came upon what seemed to be a camp of soldiers, or rather what had been one, for the soldiers themselves had disappeared, leaving five or six youths, the most of them no older than the rider. They were gathered about a smoldering fire watching some ash cakes bake. Like the young rider, they were dressed in the uniform of the Continental army, but so worn and faded they could barely be recognized as such. Indeed, the coats of some of the youth were entirely gone, and in their place they wore hunting shirts of rough buckskin, confined at the waist by a leather belt.

"Boys," cried James Pinckney, as he dashed into their midst, "where is Colonel Drayton and the rest of the men?"

"Gone for a brush with the Britishers," was the quick reply. "They were sent for by Gen. Marion. He is in a tight place and wants them to help him out of it. They left us to care for the camp and the things they couldn't carry."

"Well, that's too bad!" cried James. "I fully expected to find our men here. Now, what shall I do?"

"Why, James, what is the matter?" asked Arthur Broughton, while the others showed the curiosity they had not yet expressed in words.

"O, there's something dreadful about to happen! But I haven't time to explain now, at least not time for you to stand there listening when every moment is so precious. Eat your cakes in a hurry. Never mind if they aren't more'n half done. Then catch your horses and mount them as quick as ever you can, and I'll talk all the time you're doing it."

"That wretch, Balfour, down in Charleston," continued James, speaking rapidly, but distinctly, "has ordered the execution of old Colonel Rutledge. The British claim that he hasn't kept his vow of loyalty to the mother country. He has not only contributed to the needs of our soldiers, but a week ago he was caught wearing the uniform. It certainly was reckless of him, after joining Marion, to venture back to his

home, almost in the sight of the garrison at the Dorchester fort. He might have known he would be caught. But it was all on account of his daughter. I know. He wanted to get her to a place of safety. And now they have captured him, and are going to hang him for his disloyalty, they say; but there are many of us who believe it's because the Colonel won't tell where his family plate and other treasures are hidden.

"Now, boys, we must save him. There's no one else to do it since our men are gone off to help Marion."

"So hurry, hurry, boys, or the old Colonel will be past even our help. He is to be hanged at eleven o'clock at a place a mile west of the fort. There will be a detachment of soldiers in charge of the execution, but not more than eighteen or twenty of them."

"Boys, mount quickly. We'll station ourselves along the road. We must rescue him."

"But, James, what can a handful of boys like us do?" Arthur asked doubtfully. "It seems to me it's nothing short of madness to throw ourselves into battle with all those soldiers."

"We are one to three!" cried James boldly. "Didn't Marion whip out that whole army of Britishers down on the Santee last week, when he hadn't but one to ten? That's the way our soldiers fight."

"Yes, but we are not Marion," replied Arthur.

"But we are Marion's men!" cried James, the fire of manhood aflame in his eyes. "Besides," raising his eyes reverently to the blue of the sky, where it gleamed in the rift of the trees above them, "does not God rule, and has He not promised to help those who rely on Him?"

"Yes," affirmed more than one pair of youthful lips, while Arthur said firmly, "We are ready."

"That we are," cried another voice; "ready to do loyal battle for God, for right, for native land! We'll teach these tyrants that tyranny shall not always conquer. Forward, Marion's men!"

The words acted like a trumpet call. Each young soldier buckled on his pistol, seized his rifle, and sprang to horse, repeating the cry, "We are ready!"

Once through the thicket, they halted about two hundred yards from the edge of the public road, for consultation. It was agreed that they were to divide themselves into two squads. One squad was to take up its position covered by a dense growth of wild myrtle, about an eighth of a mile from the intended place of execution. The other was to be concealed in a thicket of scrub turkey oak, within two or three hundred yards of the first squad on the opposite side of the road. It was agreed that the attack was to be made when the soldiers from the fort carrying the old Colonel to execution were midway between the two squads and with all the noise and demonstration possible. They had but little more than taken their places when the procession from the fort was seen approaching. There were twenty soldiers. Eight were walking in front and eight behind, while in the center was Colonel Rutledge with two soldiers on each side of him; these five were on horseback. The old man's hat had fallen off. He rode with head erect, the sunlight gleaming down upon his silvered locks. His hands were tied behind his back, but he looked every inch the courtly gentleman.

The procession came along slowly. Evidently the soldiers were in no hurry. Step by step they neared the first squad of young patriots concealed in the thicket. Suddenly the hoot of an owl rang out. It was answered by another. The second had barely died away when there was a quick report of firearms, then the clang of sabers, while above the din came the cry of "Marion! Marion!"

At the first sound of firearms the British soldiers stopped, threw up their heads, and stood ready for the word of command. The attack had evidently come from the front, for the noise and smoke continued in that direction. As the word was given, the soldiers raised their muskets and fired. The noise had barely died away, when there came the sound of attack from another direction. The soldiers turned in consternation, the officer losing control of them. To add to the panic there arose again that dread cry, "Marion! Marion! Marion!"—a cry that at that time never failed to carry terror to the heart of even the bravest Britisher.

The soldiers were at once thrown into confusion. It looked as if they were being closed in upon by the enemy, and beyond a doubt by Marion's whole detachment, for was not that dread cry resounding on all sides?

The eight men in the rear were the first to break ranks and flee. By making a dash for the woods to the right of them, they felt that they might yet make the fort in safety. The eight in front seeing their comrades desert, and hearing the noise of the combined attacks, also lost courage and turned to fly. Only the four about Colonel Rutledge seemed determined to remain. They closed around their prisoner, and for a moment or so showed stubborn fight. But a rush of soldiers on horseback from the woods, from two directions, was more than even their nerve could stand. Wheeling their horses they, too, joined in the flight. But before turning to flee two hands had sought to grasp the bridle reins of the steed Colonel Rutledge rode, so as to compel him to follow. But they were not quick enough. Despite the danger, James Pinckney dashed to the Colonel's side, the others closely following. It was too much for the British. Believing a whole army was now bearing down upon them, they turned and fled.

James reached Colonel Rutledge and grasped his horse by the reins, but he did not wait to untie the old gentleman's hands. Even then, the British, beginning to realize the true state of things, might be forming for the return.

"Sit steadily, Colonel," said James. "we are going to make a dash back to the cover of the woods."

Colonel Rutledge's astonishment was great when he discovered that he had been rescued by a band of boys. "Why, boys," he said, "I was like the British. I thought it was Marion."

"Well, we are Marion's men, Colonel," declared James, with a smile of pride. "I am glad you think we have done credit to our commander."

"That you have, boys; bless you; and I feel sure now this country of ours is going to be saved when even the boys show such spirit."

How truly he spoke we know, for history eloquently records many such brave deeds on the part of the young patriots of Seventeen Eighty.

IN THE LITTLE HOSPITAL

The Way Joe and the Big Navy Sailed Together.
.....Leaving Pain and Trouble Behind Them.....
P. Y. BLACK

In the little country hospital the young nurses were very good and attentive to everybody, not having been in the business long enough to have grown callous. They were nice girls, mostly in their first year's course, and their lips would twitch and their faces whiten very often in the operating room, or when they held a patient's hand while he died in the night. But they were brave and went about the pretty hospital singing softly in the cool corridors, carrying little white clothed trays to the sick rooms, and being the best of medicines themselves by reason of their neatness, their bright eyes and their kind voices.

Now one beautiful bright spring afternoon, at the railroad junction in the town, two trains filled with pleasure seekers, smashed together, and the doctors and the matron and the nurses were plunged into a world of work, for ambulance after ambulance came driving up from the scene of the accident and left to the care of the girls many people sorely hurt. And among them was a very little boy, about six years old, whom nobody knew anything about because his father and mother were both killed in the collision, and there was nothing on them to show who or what they were, except that they were very poor. It is comprehensible that a very great deal of attention was paid to this little fellow, and he would have been placed in the woman's ward, as the hospital was too small for a children's ward, but the woman's ward was full. So the boy, quite insensible, was laid on a cot in the men's ward, and next to him was laid a big brown bearded man, also insensible, from whose clothes had been gathered quite a sum of money and whose few papers went to show he had been a sailor. He was a very rough looking man indeed.

The man came to his senses first, and it was night. The nurse on watch was quite frightened at the man. He was in pain and great allowance must be made for that, but never, in all her life, had the little nurse had to listen to such words as came from the big brown bearded man's lips. He wanted to get up and go right away, but he found he could not move his great massive legs. So he began to abuse his fate, and the railway and the hospital and the nurse and mankind in general. He was a very bitter mouthed man indeed. The little nurse, by the light of the night lamp, did her best to soothe him, because he roused other patients, and there was a terrible groaning and walling in the small ward. And all at once the little boy came to his senses too, just for a minute, and his face was turned to the sailor's face, and his eyes fell upon the sailor's eyes. He was not quite sensible yet, for it seemed he mistook the sailor for his dead papa, and he said very prettily:

"Good morning, dad. How are you this morning?"

The sailor looking into the little fellow's eyes, was abashed and stopped his swearing, and was silent for a moment, and then muttered clumsily:

"I'm all right."
"That's nice," said the boy, and became unconscious again.

The sailor did not abuse anything any more just then, but lay groaning, and every now and again when the little nurse

slipped by in the shadows, he called to her softly, and the first time he said:

"Pretty little chap."

The nurse nodded and smiled and the sailor smiled back and, until morning came at last, he only groaned and watched the child, and did not curse at all, but every time the nurse came to wipe his brow, or give him a drink, he whispered to her to look at the boy.

"Pretty chap—he thought I was his dad," he said, and would have laughed, only his pain made him groan instead. Again he caught the nurse's hand.

"Said it was nice, he did. Cute, ain't he?" and then his face was twisted in pain.

Now it will not be good to talk much of the next few terrible weeks, because the doctors were very, very busy, and the poor nurses quite worn out. But the rough man and the little boy still lay in cots next each other, and for a long time neither knew where they were, and they talked of many things which had nothing to do with their surroundings, the sailor of the ships and seas and shores, and the child of playmates in a land far, far away from the little hospital.

Then at last they both became sensible, but neither could be removed, and the boy was much distressed at his father and mother not being with him. Then the little nurses, with good hearts, told him that his mother had been hurt, too, and his father, but they would come for him soon. This they said believing, for they whispered to each other that the good God would surely let the mother come to meet the pretty child when it was time for him to go. And the doctors brought him wonderful presents every day in their pockets and told the matron that the boy could not last long. The matron would kiss him every night in his cot, and tuck him in—he had to lie still on his back always—and so the boy grew reconciled to waiting for his father and mother to come to him.

But neither could the sailor rise from his back, and neither could the sailor hope to sail the sea again, for he was in the same case with the child, and both were slowly dying. At first sometimes the big brown man would forget himself in his pain, and the nurses would shut their ears, terrified, and the matron would threaten to move him to a room by himself, and that frightened him to silence, for ever since the accident he had a great love for the child. The child would look at his huge friend in surprise when he fell in one of his rages and say:

"Oh! John, that's not nice."

And John would bite his lips at once and be patient. Then the child would say:

"How do you feel, John?"

And the sailor would answer:

"First rate, Joe."

"That's nice," little Joe would say, and they would lie quiet and look out of the window at the river and beyond where the big hills purpled to the skies, and were always looking up.

So it was in the mornings, when Joe seemed always first awake, and ready to have his hands and face washed by the nurse. He could not turn about to see the other patients, but he learned all their names and as soon as he heard them moving, he always asked very politely:

"How do you feel, Mr. Smith?"

And Mr. Smith would always answer, because it pleased the child:

"First rate, Joe."

"That's nice," said Joe, and so he would ask each in turn and to each answer always the same, he would reply cheerfully: "That's nice."

And when they asked him how it went with him, he always said, though sometimes with an effort, "I'm pretty well, thank you." Then everybody would say with real pleasure, "That's nice, Joe."

But after a while the patients went away, one by one, shaking hands with Joe, and only the sailor and Joe remained, and became very fond of each other. The sailor became so good, as he grew weaker and weaker, that the matron allowed their cots to be drawn together so close that they could touch each other's hand if they woke at night, and so be comforted.

The sailor did not think very much of his own troubles, it seemed, but grew quite anxious to amuse Joe, and had consultations almost every day with the matron, which resulted in the expressman often stopping to deliver wonderful packages for the child, who soon had picture books and toy ponies and all sorts of things to delight him.

"Who was nice to send me them, John?" said Joe.

"I guess your mammy," said John, with a pleased smile.

"But nobody sends anything to you, John—poor John!"

"I ain't good enough, Joe."

"But you're nice, John," said the child.

In the long, lonely days and evenings the boy would ask for stories, and John would tell wonderful things of strange seas and strange peoples, but often in the dim of the night lamp, Joe would tell John stories, all very strange and wonderful to the sailor, of fairies and angels and stars. Very often, when the child, out of pain, fell asleep after telling a story, John would lie awake, so that the little nurse coming round in the night would find him looking out of the window at the night, Joe's little hand in his, and tears, salt as the seas, upon the sailor's cheeks.

Joe would not go to sleep without first saying his

prayers, and at first John was dreadfully worried, when the matron came at nightfall to hear the child repeat them, and ask for blessings upon father and mother and the matron and the nurses and all sick people and dear John. But one night when they were both very weak, John asked Joe to give him his hand while he prayed.

"I never was taught to pray myself, mum," he whispered to the matron, "but I want to be counted in."

So the summer went on and very few patients came to the little hospital, and John and Joe were all alone save for the nurses, who grew to dread the time that was soon to part the friends.

At last they told the sailor that there was no hope at all for him—a clergyman came to prepare him. He took the news very calmly, but instantly whispered:

"And the little fellow, Joe?"

"Don't tell him," said the minister, "he is so innocent he needs no preparation. But you?"

For days the poor sailor was in much trouble, and one night he whispered to his little companion:

"Joe, say you was rich as Vanderbilt, and was going a long sail, would you leave me behind?"

"No, John," said the child, very earnestly. "I would want you to come, too."

"Would you feel sorry, Joe, to sail away and leave me on the wharf, or—or if you was safe on a fine big ship, see me busted to pieces on the rocks?"

"John!" said the child, "I would jump out and pull you to my ship, I would."

"Good old Joe," said the sailor, and said nothing more until prayer time, when he squeezed Joe's hand and whispered:

"Pray hard, Joe. Pray hard for me to come along. Pray for two, Joe."

And little Joe prayed for two.

The two used to watch for the search light of the big night boat which ran between two great cities on the river. When the steamer turned a point, its light flashed for an instant full on the front of the little hospital. Joe and John, hand in hand, very, very weak now, would lie and watch for it. Joe had made a story that it knew they were there and smiled in on purpose to say "good night." Always he piped "good night," in return, and John also. Then Joe, squeezing the once powerful hairy hand, would feebly ask:

"How do you feel, John, tonight?"

"First rate, Joe," poor John would answer, with a smothered groan.

"That's nice."

And they would lie very still or gradually go to sleep. And so one night the steamboat came up the river and turned the point and cast its light upon the little hospital.

"Good night," said the sailor, in a very low husky whisper, while Joe's little hand rested on his. But the boy's eyes were wide with a strange light.

"It didn't say 'good night,' John," he whispered, and tried to squeeze his friend's hand. "It said 'good bye.'"

The sailor tried to rise in the bed, but was unable even to call out. He saw the river, but he could not see the other side. It was dark. He was afraid. His fingers closed round the child's feebly.

"How—do—you—feel to-night, dear John?" said little Joe's voice very softly and tenderly.

There was a moment's pause. The sailor's voice rang out with a glad cry.

"First rate, Joe."

"That's nice," said the child.

And the little nurses, running in, found the friends had gone together.

THE FRIENDS HAD GONE TOGETHER.

"WHO WAS NICE TO SEND ME THEM, JOHN?"

THE SPY

ADELE E. THOMPSON

The little lad stood with one hand on the gate, looking after the group of boys running down the road, his lip was quivering, and the flush on his cheek was deep and red.

Turning, he walked hastily up the narrow brick-paved walk and opened the house door.

THE LITTLE LAD STOOD WITH ONE HAND ON THE GATE.

"Mother!" The word was like a cry of indignant pain. "It's an awful thing to have a father you're ashamed of!"

"Why, my son?" With a startled face Mrs. Honeyman dropped her sewing in her lap.

"I can't help it, mother," his breath coming almost as a sob, "and I wouldn't say it to anybody but you. But so many of the boys have fathers they are proud of; fathers who are fighting with Washington, fighting for the freedom of the colonies; and to think that my father should be a Tory, and leave us all to go and join the British. I don't see how he could do it. I wish I was a man so that I could fight on the right side and make up for it," and he clenched his small hands hard.

"And that isn't the worst, either," he went on. "Do you know what they are telling about him now? They say he is a spy."

"A spy!" Mrs. Honeyman's exclamation was one of alarm.

"Yes, the boys were calling after me as I came home from school. 'Son of a spy! son of a spy!'"

"Never mind what the boys said," His mother's voice was tenderly soothing. "Just think what a good, kind father he has always been to you and the children; and remember, too, how brave he was with Wolfe at Quebec; that surely was something to be proud of, and perhaps some day you may be proud of him again."

But Johnny shook his head. "I never can be, I'd rather he had been bad to me, then nobody need have known it. And I haven't told you all, mother; they say he has been arrested and put in prison."

"When? Where?" asked the mother with breathless eagerness.

"Captain James has just brought the story from the army and every one is talking about it. I stopped at the store, as you told me, to get the knitting needles, and I heard him telling it. He didn't see me, for I kept behind some corn sacks.

"It was only a few weeks ago, he said, but three days before Washington and his troops crossed the Delaware, father had come over onto the Jersey side to buy some cattle—folks say he's getting rich selling cattle to the British, but I don't want a penny of it—and Washington must think he is a dreadful man, for he had given orders to the soldiers to arrest him if they could and bring him in, but to be sure he was alive and unharmed. So when the soldiers saw him they had a hard time to catch him, for he fought them with his cattle whip, and you know how strong he is. But they caught him and carried him to camp. General Washington must be a good man for he sent the guards away and talked with father a long time. I suppose he was trying to have him come back to the right side, and I shall always love him for it. But it must be it did no good, for the General called the guard to put him in the prison, and watch him all night, for in the morning he was to be tried by court-martial."

"By court-martial!" gasped his mother, pressing her hand to her heart.

"I know how you feel, mother, every word they said cut me like a knife, but I kept listening."

"But was he tried? Do tell me that."

"No, mother, he wasn't. In the morning when they opened the door of the prison there was no one inside. Then the guard remembered that in the night they had seen a fire near the general's quarters and had run to put it out before it had done any harm, and they think he must have escaped then."

Mrs. Honeyman drew a breath of relief. "And do they know where he is now?"

"Yes; Captain James said they found out by one of the prisoners they took at Trenton. He said father came back there, and, just think of it, he crossed the river on the ice as far as he could, and then jumped in and swam. Wouldn't that have been grand if it had only been for our side, and wouldn't I have been proud? But, instead, he told the British, so the soldier said, how he had been captured, and was to have

been shot in the morning, only he managed to escape and get back to his friends. And then—oh, how could he ever have done it! He made fun of the Continental army, told how badly armed it was, that it was half starved and discouraged, officers and men alike.

"Then the Colonel in command laughed and said they need not be afraid of Washington's ragamuffins, and that the British soldiers might have as jolly a Christmas as they wanted to. I guess they changed their minds though, when Washington and his 'ragamuffins' made them run."

Yes, but do they know where your father is now?"

"They said he had gone away before the surprise at Trenton, and was sure to be safe somewhere. And, mother," hesitating as he spoke, "you don't know how dreadfully they talked about father—the people who have been neighbors to him. They said he was not only getting all the cattle he could for the British army, but that he was gathering all the news he could for them, and that he ought to be hung as high as Haman for it. I tell you, I didn't show myself to ask for anything. And don't go out if you can help it or let the children; people looked ugly at me as I came home, and the boys ran after me, as I said, and called, 'Son of a spy! son of a spy!' There were some men too, on the tavern porch as I came past, and one asked, 'when did your father come home?' And another swore that he believed he was hiding here."

"But you told them that he was not at home?"

"Of course I did; that he hadn't been for a long time; but I don't think they believed me. Oh, dear, it is all so dreadful!"

Mrs. Honeyman sighed, "Yes, it is dreadful, but though the people may be angry I am sure we have no cause to be afraid of them. And, Johnny, do not tell anything of this to the younger children, and keep as good courage as you can."

"You need not be afraid of my telling it; and I'll try to do my best."

That night, Johnny wakened suddenly, and sitting up in bed seemed to hear a strange commotion in the street outside, the tramping of many feet, loud and excited calls, while in at his window shone the light of flaring torches. At first he thought there must be a fire, and while he was still wondering what it could mean, there came a loud and violent knocking on the outer door.

Hastily dressing he ran down the stairs where he met his mother, her face pale with alarm.

"Keep the children back, Johnny," she paused to say.

Then unbolting and opening the door, she looked into the threatening faces of her neighbors, who, excited past control by the quickly spread story of Honeyman's capture and escape, and the firm belief that he had come home, had gathered there, an angry and increasing mob.

"Fetch out your Tory husband," was the cry that greeted her. "We know he's come back and is hiding. If he doesn't come out and give himself up we'll burn the house and all there is in it!"

"He is not here. He is not here," the poor woman protested over and over. "I have not seen him; he has not been home for weeks."

But the crowd only laughed in her face and cried the louder; "Bring him out if you don't want your house burned."

"Listen to me," she begged; "come in and search the house, and that will show you."

"And let him shoot us?" they cried. "No, bring him out; constantly nearer and more threatening the torches were gleaming."

Mrs. Honeyman saw that the people were beside themselves with passion, and there was no time to lose.

"Johnny," she said, stepping aside where he was trying manfully to keep up the courage of the younger children, "run up to my room and bring me the paper in the little ebony box on my bureau."

When she reappeared outside, the folded paper was in her hand. "Captain James," she asked, signalling him out of the crowd, "will you read this for me so that every one can hear?"

There was a murmur of curiosity as the Captain mounted the upper steps. What was to be read? A sudden hush fell on the angry mob, and the torches were held higher to give him light.

THE TORCHES WERE HELD HIGHER TO GIVE HIM LIGHT.

This was what they heard:

"American Camp, New Jersey, 1776.
"To the good people of New Jersey, and all whom it may concern: It is hereby ordered that the wife and children of John Honeyman, of Griggstown, the notorious Tory, now within the British lines and probably acting the part of a spy, shall be, and are hereby protected from all harm and annoyance from every quarter until further orders. But this furnishes no protection for Honeyman himself."

"GEORGE WASHINGTON,
Commander in chief."

A moment of deep silence followed the reading of this strange order; then the question ran from lip to lip, why had it been given? Nobody could answer this, and though there was grumbling and oaths, no-

FOLLOWING THEM CAME TWO HONSEMEN.

body present dared disobey an order of the Commander in chief, and, one by one, the crowd, already half ashamed of their action, melted away, leaving the mother and her little flock safe and alone.

Through long and weary months, with varying fortune, the war went on, till at last the glad news spread that Cornwallis had surrendered, and everywhere bells rang and cannon boomed in token of the universal joy.

One day a crowd again filled to overflowing the streets of Griggstown, surging most thickly around the Honeyman home, but this was in the open sunlight, and the faces wore smiles instead of frowns. From every side flags were flying, and across the street was a flower-decked arch. Presently there was heard the sound of martial music heralding the approach of a body of soldiers. Following them came two horsemen. One, a man of commanding presence and noble countenance, was the beloved Washington whom the hearts of the people had so long and truly trusted. By his side rode a tall, fair-looking man of military bearing who shared with the Commander the applause of the people.

The procession made its way to the house which this same people had once gathered to burn. In the

doorway stood Mrs. Honeyman, not now frightened and distressed, but radiant with smiles, and by her side was Johnny, now grown a tall and slender lad, his head erect, and a look of pride in his eyes.

When the eventful day was at last over and the guest of honor had departed, Johnny threw his arms about the neck of the tall soldierly man, and cried, "Oh, father, what a grand day this has been!"

"Then," said the man smiling, "you were not ashamed of your father to-day?"

"Ashamed of him! I guess not. All Griggstown is proud of him and I am prouder than they all. It was splendid the way you let everybody denounce you as a Tory, and even made the British think you were a spy for them, when all the time you were getting information for Washington. And to hear him say to-day that it was owing to the news you brought him of the British at Trenton that he attacked them and won the great victory! People know now how mother came by the safeguard from Washington, that even I wondered at."

Honeyman smiled again. "I have served two men as noble as ever lived, Wolfe and Washington. And Washington was always thoughtful of my safety and

that of my family. It was like him, as soon as the war was over, to tell the story of the small service I had been able to render, which made possible not only my happy home-coming, but the welcome my good neighbors have so kindly given me."

His son laughed. "Yes, the men who once wanted to burn the house cheered you to-day till they were hoarse; and the people who wouldn't speak to mother can't do enough for her now. But then I can't blame them much. I was ashamed of you myself in those days."

"And had I really been what I seemed, you would have had reason to be," said the father.

"And to think," said the boy, "how I used to wish you were a soldier; and now the General says you were braver and did more than a company of soldiers. It must have been hard, though, to let people think ill of you so long, and you were a real hero, everybody says you were, to do it for Washington and the Colonies."

John Honeyman sat silent a little while, the affection, esteem, honor were doubly sweet to him after those years of obloquy and contempt. "Yes, it was hard," he said, "at times harder than I can ever tell, but it was the best I had to give, and no one should ever offer less than his best, for his country."

THE BOY TRAVELER

ANNOUNCEMENT—We present herewith the fifth chapter of the narrative from the pen of Harry Steele Morrison, who is known as "The Boy Traveler," in which he is describing his adventures as a 16 year old boy on a tramp through Europe. The boy was living in 1896 in a small town of Illinois, but in that year became suddenly ambitious to go to Chicago to work. He lived in that city for a year, working as office boy at \$3.50 per week, and then, being determined to become a reporter, he started upon his famous trip to Europe. He had saved \$25, and with this money started for New York, stopping off at Washington, where he was received by the President and Mrs. McKinley. From New York he worked his way to London as cabin-boy on a cattle-ship, and arrived in England, where he worked for his room and board in an inn. He succeeded in interviewing Mr. Gladstone, Queen Victoria and the King of Belgium. He visited the late President of France and the Lord Mayor of London, and altogether saw more famous men than any other person could possibly have interviewed. He was lost in the Alps and had many startling adventures of various sorts. The trip was remarkable in every way. The story of his achievements is extremely valuable. It gives American boys a knowledge of the opportunities which are open to them, and teaches them that with industry and courage, the boy who is early thrown upon his own resources may rise by his own efforts and make a success of life.—The Editor.

CHAPTER V.

After having been in England and Scotland for about three months, I felt ready and anxious to start on a tour of the continent of Europe. I felt that I had seen most of what there was to see in London, and though I had been having a pleasant time there in most ways, I was very glad to think I was going to see something of other countries.

Having seen Mr. Gladstone, and been admitted to the castle, I was able to see and interview a great many other famous men and women. I wrote articles about them for some of the London papers and while they didn't pay me a great deal, they paid me enough to help me on quite a little. I was able to defray my expenses while in England and Scotland, and save a little money besides, so that when I was finally ready to leave for the continent, I had forty-five dollars instead of the twenty-five with which I had arrived in England. I had also been sending articles to the papers in Chicago and New York during my stay, but to my great disappointment, the editors didn't send me any money. I knew they had used the articles, because I met persons who had read them, and I couldn't imagine why they didn't pay me. I wrote letters, finally, asking for money, but I didn't get even a reply. I thought that the money must certainly be coming very soon, however, and I left word in London for my mail to be sent to the office of the American Express Co. in Paris. I calculated that after I had made a circular tour of the continent and had reached Paris upon my return, there would be some money waiting for me there.

I planned to visit Belgium, Holland, Germany, Switzerland and France and expected that the trip would occupy about four months. I had only my forty-five dollars to start with, and because I had always lived so cheaply in London, I hoped I could make this money last or else get work of some kind to help

me on if I ran short. I took passage from London to Ostend, in Belgium, aboard a freight steamer. This was much cheaper than traveling on a regular passenger steamer, and as time was of no value to me, I didn't mind the slow trip. But there were a great many others who seemed anxious to travel cheaply, and when bedtime came there weren't enough beds to go around, and I was left out, being a boy. The steward said he supposed I would have to sleep on the dining-room table. I told him I wouldn't mind that if I could only stick on. So he gave me a blanket and a pillow and I went to sleep. As I expected, the English Channel was very rough, and I didn't succeed in staying on the table very long. I soon rolled off and spent the most of the night on the floor underneath the table, which wasn't pleasant. When morning came I went on deck expecting to see ahead of us the coast of Belgium, for we were billed to arrive at eight o'clock, but instead of that we were surrounded by a very heavy fog. Our progress for the rest of the voyage to Ostend was very slow indeed, and we didn't reach the dock until nearly midnight. When I stepped ashore I realized that I was in a queer predicament. I hadn't expected to arrive at midnight in a strange country, where I couldn't speak the language, and I wondered how I would be able to get a bed. I knew, of course, that I couldn't afford to go to a large hotel, where they would have English-speaking waiters, and my only hope was that I could find some peasant awake and make him understand what I wanted by means of signs. Fortunately, this had been a holiday and a great many people were still up. I started out through a side street, with my knapsack over my shoulder, and finally came to an old lady seated in the doorway of her house. She was motherly in appearance so I decided to try and get a bed in her house for the night. I went up to her and rubbed my eyes vigorously with my fists, laid my head in my arm, and went through all sorts of motions trying to make her understand that I was sleepy and wanted a bed. She looked at me with a horrified expression upon her face, and I am sure she must have supposed me to be some lunatic escaped from an asylum, for she got up hurriedly and made for the inside of the house. This wasn't very encouraging to me, and I hardly knew what to do next. I stood about the house for a minute or two, and was glad afterward that I didn't go away, for after a while the old lady came out again. It must have occurred to her that I couldn't speak French and that a bed was what I wanted, for she had written a scrap of paper the price of a bed, and as I could understand the terms. She took me up stairs to one of the best old rooms I had ever been in. The floor was covered with a carpet, and the walls were frescoed in fantastic designs, and I undressed I found that the bed was so high from the floor I had to take a run and a jump to get into it. And then, instead of having the usual quilts and comforters in the way of covering, I had to sleep on a feather bed over me, which of course wasn't at all pleasant. But I managed to pass a comfortable night, in spite of the feather bed, and when I awoke the next morning I secured my breakfast in much the same way that I had secured my lodging, by means of signs. I pointed to my mouth first, then to what I wanted to fill it with; and all during my stay upon the continent, I depended very much upon my ability to make myself understood by means of signs. Of course, I very often found myself in queer situations, but usually I managed very well, and it was really surprising that I was so successful in getting along without knowing any of the languages.

When I left Ostend to go through Belgium I, of course, walked from one place to another, because, in the first place, this was much cheaper than traveling by rail, and naturally that was an important con-

sideration with me. But then, too, I saw much more of the peasants, and the way in which they lived, than if I had traveled only from one large city to another by express train. I went from Ostend to Bruges, and from Bruges to Ghent, passing through the intervening towns, where I had many interesting experiences. Then from Ghent I went on to Brussels, which I enjoyed more than any other city I visited on the continent. It was filled with people from all over Europe at the time of my visit, for the Exposition was on there, and I considered myself fortunate in securing a room as cheaply as I did. My expenses during the early part of my stay in Belgium had been much heavier than I had expected they would be, so now I was very anxious to save, and the only way I could do so was to cook some of my own meals. I had brought with me from Chicago my little coffee-pot and my alcohol lamp, and with them I managed always to make my own breakfast of bread and coffee. And sometimes, too, I managed to get other meals in my lodging, for when I had hot coffee I was willing to have other things cold. And because I was thus able to live cheaply, I remained in Brussels several days and enjoyed the stay very much.

Leaving the capital city, I went through northern Belgium to Holland, and it was in Amsterdam that I earned the first money which came to me on the continent.

I felt the need of earning some money. I was afraid that if I didn't get it I would have to go back to England sooner than I wanted to. So the first thing I did upon arriving in Amsterdam was to call upon the consul there and ask him if he didn't think I would be able to earn some money while in the city. He was much interested in the story of my trip, and gave me the address of an exporting house with an English department. I called at this place, and they asked me if I could use a typewriter. I told them I had used one in Chicago, so they gave me work for several days at typewriting circulars which they were going to send to their English customers. They paid me enough for the work to help me quite a little on my way.

After passing through Holland, I visited Germany and found it to be a delightful country. The people were hospitable and pleasant to meet, and the country was so beautiful in most parts that it was a real pleasure to walk from one place to another. There, too, the living was very cheap, and I was able to remain in the country for some time. I didn't always find it easy, however, to make the Germans understand what I wanted by means of signs. They hardly seemed able to grasp my meaning as quickly as the Belgians and Dutch had done. There was one experience came to me in Cologne which I will never forget, for, though there were others almost as embarrassing, there were none so ridiculous. I was walking through a small side street, when I saw in the window of a little shop something that looked exactly like white vanilla taffy, broken into bits. I had always been particularly fond of white taffy, and as I hadn't eaten any since leaving home, I was very hungry for some. I therefore determined to go into the store and buy some. When I entered the shop I handed the woman a few pfennige and pointed to the stuff in the window. She, of course, didn't know what I wanted it for, so she put several pieces in a bag and handed it to me. I was so hungry for taffy that I began to eat it as soon as I had left the shop. And oh, what a taste it had! I spit out what I hadn't swallowed of it, and went to a fountain to try and wash the taste away, but it remained with me so long that I could almost taste it the next day.

I decided to save the rest of this supposed-to-be taffy and wait until I could get some English-speaking German to tell me what it was. When I met and showed them what I had bought for candy, they

burst out laughing. "Why," said one of them, "you have eaten a piece of disinfectant! It wasn't candy at all!" Of course I was obliged to laugh, too, but when they told me that the disinfectant contained poison, I was frightened, and determined that I would be very careful what I bought to eat thereafter, since appearances were so deceptive.

I didn't usually find it difficult to get a bed at night in Germany, for people were nearly always hospitable enough to take me in, whether they understood who I was and where I was from, or not. It was the custom, on entering a German village at nightfall, to say to the first person one meets in the street, the word, "schlafen." I didn't know exactly what this word meant, but I knew that when I used it I nearly always secured a bed. And one evening I discovered, quite by accident, that there were places in almost every German town where I could get a bed very cheaply, and also my meals.

I had entered a little village along the Rhine one evening, and, as usual, said "schlafen" to the first pleasant looking person I met. This happened to be a woman, who smiled and called a boy to take me somewhere across the town. We finally stopped in front of a long, low building, upon which were the words "Herberge zur Heimat." I wondered very much what these words could mean, but without waiting to find out, I entered the building. I found myself in a

large front room which was filled with men and boys of every description. There were two or three blind men, several cripples and a great many young men with knapsacks, who seemed to be traveling. At the first glance I almost thought that I must be in a kind of hospital, but I decided it couldn't be that, and sat down to await developments.

After I had been sitting for a time, I saw upon a wall a printed bill of fare, and as most everyone was eating supper, I decided to have something, too. I had already learned the names of some things to eat, and I saw that for a very few cents I could get a much better supper than I had lately been having. And for about four or five cents in our money I secured some bread and butter, coffee, an egg and potato salad. It was all clean, wholesome and well cooked, and when I had finished I decided that this was much the best place I had found.

When we had all eaten supper, the landlord brought out a bible and read us a selection from that, and then the men repeated the Lord's prayer in German. The service over, the landlord brought out another and larger book, and we all signed our names before selecting our beds for the night. They had beds there for four cents, six cents, and eight cents, and this first night I took one at six cents, because I was afraid to try the four-cent ones. When we were all ready the landlord conducted us all upstairs in sec-

tions, and I found that I was to sleep in a room with five others. As usual we had feather beds under us and over us, but by this time I had become accustomed to them and didn't mind them at all.

The landlord stood by with a candle while we got into bed, and when we were all in I observed, to my disgust, that he took his candle and examined our clothing very carefully. I wasn't at all used to being examined, and regretted that I couldn't speak German, because I wanted to tell him that he needn't bother with mine—that I had been "disinfected" at Cologne.

The next morning we all went upstairs and washed in a trough of water. Then, downstairs, we had bread and coffee for breakfast for two cents. I decided then that there was no longer any object in getting my own breakfast when I could get it so cheaply here. I learned that these places were to be found in almost every part of Germany, so after that, when I entered a German village at nightfall, I always inquired for the "Herberge zur Heimat." By living in such places I was able to keep my expenses down to twenty-five cents and sometimes twenty cents a day. In this way I was able to keep within the expense limit I had set when leaving London, and also to make up for some of my very great extravagances while in Belgium.

From Germany I went south into Switzerland, where my experiences were varied and exciting.

(To be Continued.)

AN IMPROVISED FORT.

After the unfortunate result of the battle of Brandywine, Washington fell back towards Philadelphia and encamped at Germantown. For several weeks following there were marches and countermarches, attempts at maneuvers, and endeavors to circumvent Howe in his determination to take possession of Philadelphia. In all these efforts the Americans were wholly unsuccessful, and what was then the capital of the young nation fell into the hands of the enemy.

Washington was not, however, disposed to yield the place without a further struggle. Howe's forces had been weakened and the patriots reinforced; so at a council of war it was resolved to advance upon the outposts at Germantown.

It was a foggy morning of October, 1777, that the advance began. The British, furiously attacked by Sullivan, were upon the point of being routed when Muirgrave, commanding the center of the British line, threw himself with several companies of infantry into the Chew mansion, and there, barricading the windows, made a most determined stand. This edifice was of stone, with very thick walls, and admirably adapted for purposes of defense. The musketry of the Americans made no impression upon the substantial walls, and of ordnance sufficient to batter them down there was none.

With the exception of Colonel Muirgrave's troops, the British were in great confusion, and were rapidly retreating, as it was said, towards Chester. Undoubt-

Chew House, Germantown, Pa.

edly a prompt advance would have resulted in the recovery of the city of Philadelphia, with all the prestige and advantage of the reconquest of the capital.

One general officer only (Reed) advocated instant and hot pursuit. His counsels were, however, overruled, especially by Knox, who claimed that it would be contrary to all military precedent to "leave an enemy in a fort in the rear."

It was thus that the possession of the Chew mansion turned the tide of battle, for while the Americans were making futile efforts to capture or destroy the "fortress," other combinations turned against them, with the result that they in turn were forced to retreat, abandoning for the time all attempts to repossess Philadelphia.

The incident shows quite clearly the necessity for the effectual handling of rules that they may be always under the guidance of strong common sense. Knox was technically right; but Reed seems to have had the soldierly instinct for proof of the exception.

"A NATION SPRUNG FROM MARTYR BLOOD."

H. M. WILTSIE.

I had been wandering around the noted North End, in Boston, seeing some of the places of historic interest which abound there.

I had visited Paul Revere's birthplace; the home of Governor Hutchinson, built in 1710; the home of Cotton Mather; Copp's Hill Cemetery, dating from 1660; and the Mather tomb.

It was rather a disappointment that darkness was fast falling when I reached Christ Church, in narrow Salem street. I could not see to read the tablet on the steeple, which tells of the signal lanterns of Paul Revere. While I was vainly trying to do so a little Hebrew boy, perhaps ten years old, approached and politely asked me if I could make out the inscription. I replied that I could not.

"Let me read it for you," said he.

He proceeded without pause;

"THE SIGNAL LANTERNS OF
PAUL REVERE
DISPLAYED IN THE STEEPLE OF THIS CHURCH,
APRIL 18, 1775.
WARNED THE PEOPLE OF THE MARCH
OF THE BRITISH TROOPS
TO LEXINGTON AND CONCORD."

"Did you really read the inscription, or do you know it by heart?" I asked.

"I know it by heart," he said with a smile; "they teach us to commit it to memory in the public schools."

The church was built in 1728, and is better known as Old North Church than by its original name of Christ Church. From the old tower, in which the lanterns were hung, General Gage witnessed the battle of Bunker Hill. This tower was blown down in 1804, but I am told the present one is a copy of it.

Reminded thus forcibly of Paul Revere's famous ride—made doubly so by Longfellow's poem—I determined to visit the place where the first engagement of the Revolution occurred, Lexington.

I recently saw it stated in a small encyclopedia apparently published principally for the use of children and youth, which has attained wide circulation, that the first blood of the Revolution was shed at Concord. Not so. During that fateful morning of April 19th, 1775, seven men of Lexington were killed and nine were wounded; "a quarter part of all who stood in arms on the green," according to the historian Bancroft.

Lexington is about eleven miles from Boston, and about six miles nearer to it than Concord. At the latter place important munitions of war were stored, and that was the principal reason for the march of the British troops with that village as the point of destination.

"So through the night rode Paul Revere;
And so through the night went his cry of alarm
To every Middlesex village and farm,—
A cry of defiance and not of fear,
A voice in the darkness, a knock at the door,
And a word that shall echo forevermore!
For, borne on the night wind of the Past
Through all our history, to the last,
In the hour of darkness and peril and need,
The people will waken and listen to hear
The hurrying hoof-beats of that steed,
And the midnight message of Paul Revere."

Walking from East Lexington along the road called Massachusetts Avenue, the first historical tablet that I found was at the corner of that road and Pleasant street. It informs the visitor that Benjamin Wellington, a minuteman, was surprised there by British scouts and disarmed. He borrowed another gun, however, and joined his comrades on Lexington Green. He served his country subsequently at White Plains and Saratoga, having the distinction of being the first armed man taken in the Revolution.

The first weapon actually used against us in that struggle was the pistol of Maj. Pitcairn, a flint-lock, which is on exhibition in the rooms of the Lexington Historical Society.

A mile or so from the town I saw the old Manroe

Tavern, built in 1695, where Earl Percy had his headquarters and hospital during the fighting of the 19th. In the dining room can be seen a bullet hole made by a British bullet. One is almost moved to exclaim, "Alas for the ever present march of improvement!" when he observes the electric light over the entrance to this venerable structure.

On the Common, in the village, is a rock upon which are engraved the combined figures of a gun and powder-horn, and underneath is an inscription which tells that the stone marks the line of the minutemen. Then follow the words of their commander, Captain John Parker—"Stand your ground. Don't fire unless fired upon. But if they mean to have a war, let it begin here."

History says, "Jonathan Harrington, Jr., was struck in front of his own house, on the north side of the common. His wife sat at the window as he fell. With blood gushing from his breast he rose, in her sight, tottered, fell again, then crawled on hands and knees toward his dwelling; she ran to meet him, but only reached him as he expired on their threshold."

The house in which he lived, and where he so nobly died, is still standing, and a sign makes known that it is occupied by a woman physician.

Several minutes' walk from the common, upon a considerable hill, is an old tower which was built in 1761. In it hung the bell which rang out the alarm in the early morning when so much history was made.

THE HANCOCK-CLARK HOUSE, LEXINGTON, MASS.

One of the most interesting objects in the village is the Hancock-Clark House. In it John Hancock and Samuel Adams were sleeping when Paul Revere arrived to warn them that a detachment of British troops were on the way to arrest them.

This house was built in 1698 by Rev. John Hancock, the second minister of Lexington, and grandfather of that John Hancock who was the first governor of Massachusetts and president of the Continental Congress.

It was occupied by the Hancock family during a period of more than sixty years, and was then purchased by Rev. Jonas Clark, having first been enlarged by a two-story addition, in 1734, which was erected by Thomas Hancock who built the historic Hancock mansion in Boston.

One of the many interesting relics which may be seen in the house, owing to the enterprise of the Lexington Historical Society, is the desk used by the Rev. Mr. Clark, on which he wrote over two thousand sermons.

He was not only a devout minister of the gospel but a fearless and active patriot.

The accompanying picture of the house is an excellent one, and I wish it could have been made to show the scores of interesting relics of those stirring days, which may be seen there; relics of both war and peace, which teach the history of the time and the manners of the people quite as graphically as words can be made to do.

The Cruise of the Yacht Gazelle; 6,000 Miles on Inland and Ocean Waters

KENNETH M. RANSON

This is the fifth chapter in the story of a six thousand mile cruise by four Michigan boys in a boat of their own construction. Setting sail from St. Joseph, the "Gazelle," by which name their craft was known, proceeded by way of lake, river and canal to the Mississippi, thence to New Orleans and the Gulf, along the gulf coast to the Atlantic, thence to New York harbor by way of the ocean, thence by river, canal and lake, home to Michigan.

CHAPTER V.

A feeling of great satisfaction came over us as Gazelle responded to the tiller, which was thrown hard down, and headed into the wind. A few flaps of the sails in the evening breeze, the sudden splash of the anchor forward, followed by the swir of the cable as it ran through the chocks, and the creaking pulleys as our sails were lowered, was the music in honor of Gazelle's successful voyage from far away Michigan to New Orleans.

A ROUSTABOUT.

Our trip of one thousand eight hundred miles had been full of pleasure and satisfaction, purchased, however, at the price of much hard labor and many hardships. Sickness had visited us at a time when our location made medical aid impossible; the most severe winter recorded, accompanied with the ice packs and low stages of water, made it seem many times as if we were indeed candidates for admission into the realms of "Davy Jones' locker."

But all this was now of the past, for here we were anchored in a snug cove in the outskirts of the southern metropolis, strong, well, happy, and in all ways improved by our struggles.

The sun was still two hours high when Frank and I rowed ashore in the Nibs and scrambled up the steep side of the high levee which protects the city from inundation.

As we looked back on Gazelle, so peacefully riding at her anchorage, we felt like giving three lusty cheers for our floating home. How good she did look with "Old Glory" so proudly flying at her masthead! Beyond the yacht and moored at the docks were two immense ocean-going steamships, while a short distance up the river was a full rigged ship with loosened canvas falling in graceful folds from the yards. The scene before us was a pleasing one, for we were lovers of the sea and these monster boats had a peculiar charm for us. But the "clang," "clang" of a bell suddenly awakened us from our reverie, and we started in all haste to get down town for our mail and the good things for our evening spread, in honor of our safe arrival.

A big budget of letters awaited us at the office, and this made us glad. We had promised the rest of the crew to return as soon as possible, so we did not stop to read, but as soon as we could buy our provisions, we hastened to the boat.

Never will I forget that first bushel of shell oysters which we bought. The little old Italian woman couldn't understand why we had not brought along something to put them in, and I did not know it was necessary, but we afterwards learned it was very much so. We made up our minds that we could get them to the boat in a big paper sack, and although the woman laughed at us, we started out. We did not go far, however, for the damp shells soon wore holes through the bag, and finally the bottom dropped completely out and our oysters tumbled in a heap upon the ground.

Necessity proved to be the mother of invention, however, and a coat with sleeves knotted and well buttoned up was pressed into service as a sack, and thus outfitted we trod our homeward way.

What a jolly time we had that night, notwithstanding the fact that our hands were all more or less cut by the sharp oyster shells, for we were at this time very green indeed in the art of opening this most toothsome bivalve.

Newspaper men had been awaiting our arrival, and during the second day we were besieged by them. Curious people, anxious to see "the boat and boys who had come so far," visited us. Some took enough interest in us to offer to do anything they could to make our visit a pleasant one and our future course a prosperous one.

I had hoped that after a visit of ten days in the Crescent City, during which time we would make all necessary repairs on our boats and put them in first-class shape for work in the open sea, we would leave the river and coast around the gulf, to the ten thousand islands of Florida.

The sad fate of the sixty-five foot launch, "Paul Jones," which was wrecked in the Bird Island Sound a few weeks before, was still fresh in the minds of the

people. Our friends now began to write us from all sides, imploring us to give up the remainder of the voyage and return home. They all held that it was certain that if a boat twice our size could not withstand the elements, that we would certainly not survive in "our little shell."

All kinds of schemes were tried by our friends to stop our further progress, and when they found their efforts to influence us personally were in vain, they labored with our parents at home to recall us. We were left, however, to decide the matter for ourselves.

We, of course, sought information from those who were qualified to tell us the conditions of sea sailing just as they existed. During the first two weeks of our sojourn we were visited by several pilots, each of whom was very anxious to procure a berth aboard at a large fee to act as our pilot and sailing master, their prices ranging from three dollars to ten dollars per day. Strange to say, however, when we produced the charts of our great lakes and they noted the nearly straight, bold shore of Lake Michigan, with a sweep of three hundred miles from north to south, they began to wonder and to express themselves as entirely satisfied with the gulf sounds and bays. So we made up our minds from the start that pilots were expensive luxuries which we could not well afford.

Among our friends who took a lively interest in us was a gentleman by the name of Bollingham, who had been a sailor and navigator and knew all about the gulf coast, both east and west of the river. This gentleman was very kind, and gave us much information which proved of great value to us in after days.

Our friend was exceedingly pleased with our craft and did not hesitate to say, that in his opinion, she would live out a great storm if properly handled. He advised us, however, to remain in New Orleans the remainder of February and through March, which are the roughest months on the gulf. This seemed a long delay, but we made up our minds to do as he advised; so we got things in good order aboard, that we might enjoy our long stay and learn as much as possible about the city and surrounding country.

We visited the Italian oyster fishermen, and after becoming acquainted with them we often asked to accompany them out on the gulf while they loaded oysters. Life aboard a "Dago lugger" is somewhat

"DAGO OYSTER LUGGERS."

rough, and one is expected to do his share of the work. It was great fun for us to help rake and tong oysters and sail around among the beds and oyster reefs.

Life on salt water was to our liking, and the knowledge we gained from these trips was very beneficial. These Italians are splendid sailors. Their luggers carry immense sails, and it takes great skill and daring to keep their craft right side up when not loaded.

It was great sport to sail through the creeks leading through the marshes. Oftentimes a dozen sails could be seen gliding along seemingly in the tall green grass.

What yarns these followers of the sea would spin! Time and time again did we hear the story of the terrible storm of '93, when the tidal wave and gale swept over the low islands of the gulf, drowning the poor inhabitants and destroying happy homes. Thousands of vessels were wrecked and many carried by the tide far inland, there to be left as the tide receded, to decay. We saw many of these monuments, which stand as an evidence of a terrible calamity which befell this poor seafaring people.

New Orleans was, of course, very interesting to us from a historic standpoint, and it was indeed a great pleasure to visit it and be able to see with our own eyes under what conditions and circumstances our brave Jackson met the British, and gained such a brilliant and decisive victory and save Louisiana from invasion, stop the war, and again crown the American arms with laurels of victory.

The old cathedral, where Jackson was crowned as the savior of Louisiana, still stands, and near by is the beautiful park named in his honor, Jackson Square.

It was not long before we began to feel that New Orleans was our home. We became acquainted with many nice people and received many kind invitations to share in the good times the young people enjoyed. Of course, we made the yacht our home, and lived aboard during our stay of two months and a half.

Our location was a very pleasant one, in the suburb known as Carrollton. Our mail came to a station near by, and convenient stores and markets made our anchorage very much preferable to a location farther down stream amid the noise and shipping.

Audubon Park, with its beautiful great live oaks and splendid conservatory, was only a short distance from us, and, although the business portion was five miles

A NEGRO BAPTIZING.

distant, we always enjoyed the car ride, and even our frequent walks to and fro were very enjoyable, as we never failed to see many things of interest.

One of the most interesting places I ever visited was the Stuyvesant docks and elevators. Here, great ships of all nations are found loading and unloading every kind of cargo, from the small, heavy pigs of iron, copper and lead, to great logs. The sailors who make up the crews of these ships are a study in themselves—a mixture of all nations. Don't imagine, boys, that they are the type of sailor you have so long had in your mind's eye, with bell-shaped blue flannel trousers, and blue shirt with white braided collar and stars and anchored corners. Such Jacks are hard to find outside of books and story papers. These men are easily satisfied when it comes to clothing—a pair of greasy overalls and one old shirt and a bit of rope or strap for a belt complete the general run of clothing with which Jack Tar seems to be content.

It's a very wonderful sight to see the cotton screwers pack away the bales into the hold. Every inch of room must be used and the cargo has to be tightly packed so as not to cause a shift when the vessel rolls in a heavy sea. The cotton packers have a union, and so particular is the work that competent cotton screwers are paid from five to eight dollars a day for their services.

We were treated very nicely on several of the big steam freighters, and imagine my joy one day to find I had so won my way into the heart of the brawny mate that he gave me a slip containing the privilege of visiting every part of the great vessel. I thus had a splendid opportunity to make a study of a vessel's construction. This was a great treat for me, as I am greatly interested in naval architecture.

A walk of several miles along the docks brings one down to the river boat landing. Here is hustle and bustle for you, for the great packets from up river are loading and unloading immense cargoes of cotton and sugar. Hundreds of negroes are employed as roustabouts at this wharf, and an afternoon among them is indeed well spent. They are a funny, jolly lot, and a person cannot help being interested in them.

The stevedores or roustabouts have to work very hard and are kept at it for long hours, but they are well paid and most always glad of a chance to get a job aboard the packets, but once in a while they try to take advantage of the mate for a raise in wages. This is the way they go about it: There is much strife between the different river boat lines to see which one will get the most freight out of New Orleans for "upriver." They all leave, when possible, together, and many animated races for first chance at the long river freights are run. Of course, the steamer that reaches the landings first gets first chance at the freight. The darkies know this and so refuse to ship aboard for a trip until a certain amount of salary is promised, and they remain stubborn (thus holding the boat) until they gain their point, or the mate can coax a few to start, in which case he wins; for once they begin to give in (the supply being always larger than the demand) they become anxious to sign for fear of being left out entirely.

It is indeed a pretty sight to see several of the large two-stacker river boats racing along up stream, and I am told that a pilot would as soon take poison as be beaten in one of these impromptu affairs.

(To be Continued)

THE McMASTER-BROWNELL
GAME
C. C. FRASER

It was indeed a crushing blow to the McMaster Varsity team when Blake Twindle, their crack second baseman, was suddenly called away from college by the serious illness of his father.

The very next afternoon they were to meet the Brownells, from a rival college about eighteen miles from their own, the only one of the six clubs composing the Inter-State College League which threatened to snatch the silken pennant from their grasp. From the very first, the struggle in the league had been a pretty one, but now, near the close of the season, McMaster and Brownell had gradually drawn away from the other teams, leaving the battle for first place practically between these two.

The game on the morrow was to decide the championship. McMaster's and Brownell's percentage of games lost and won stood exactly the same—.860, and the conversation of the boys, wherever they chanced to meet, for the preceding week or more, had been of the forthcoming contest, and to say that it was feverishly awaited is putting it very mildly.

But now McMaster's hopefulness quickly vanished, and all because of Blake Twindle's departure. All through the season he had covered second base famously, and the three-baggers rapped out by his stick, many asserted, had really been the means of giving his team their present high standing. No wonder the boys were disheartened.

"I suppose it's all up with McMaster now," observed Reg Chase, the team's lanky pitcher. "The loss of Twindle will weaken us terribly."

Jim Stivers, the other end of the battery, picked up a pair of Indian clubs and whirled them savagely.

"Weaken us!" he exclaimed. "Why, man, our goose is cooked already. Tomorrow we'll have to eat it!"

"You mean Brownell will eat it, don't you, Stivers?" put in "Shorty" Smith, who looked after the position of shortstop. "The chances are ten to one that all we'll get will be the bones."

"See here, Shorty!" said Chase, pausing part way in a fancy evolution to look at the little shortstop suspiciously. "I hope you don't mean anything personal by that remark."

"About the bones?" queried Smith, placing himself carefully out of reach of the lanky twirler. "Oh, not in the least. I was only about to add that—that—we already have a sufficiency."

Chase glared at Shorty for an instant as though he would devour him, then venting his feelings somewhat in a fierce blow at a punching-bag near at hand, he turned again and observed:

"Fellows, there's no use of wailing over Twindle; he's gone and that settles it. The thing to be done is to get some one to fill his place. Now, who shall it be?"

For the first time Dick Pond, the Varsity's captain, spoke up.

"Well, boys," he announced, "I'll tell you what I've made up my mind to do: I'm going to ask Hamilton to play with us tomorrow."

"Hamilton!" echoed the group, in surprise.

"Yes, Hamilton—Mart Hamilton."

It was easy to be seen that the student referred to was not very popular, at least in an athletic way. Martin Hamilton was the son of a poor country clergyman, and received his tuition in exchange for the duties which he performed as janitor of the college. He was in his first, or freshman year, and little was known of his possibilities in sports, the students taking it for granted that he was not far, if at all, advanced in such matters. All of his spare time out of study hours was given to work, and when there was a holiday he found employment in town. On two occasions, however, Mart had played in practice games with the college "Reserves," and Captain Dick Pond, who as a keen observer, was much impressed with his playing, although, as it happened, circumstances gave Mart small opportunity to demonstrate his true ability.

Since that time, Dick had formed a strong liking for the boy, whom most of the others avoided, and as their friendship increased, the captain of the regular team had learned considerable of Mart's history.

"Oh, I say, Pond!" protested Stivers, when he had recovered his power of speech after the captain's announcement. "you don't really intend putting that chump of a Hamilton in the game tomorrow? Why, he can't play ball as good as my sister!"

"That's all you know about it," asserted Pond, quietly. "Let me whisper something: I have learned that last summer Hamilton was the star fielder of the New London team and played in the game at the time they beat the Columbia Giants, the strongest independent organization of baseball players in this country. You remember reading about that game?"

"In that case, it's funny he hasn't done anything here at McMaster," said Stivers.

"That is easily accounted for," answered Captain Dick. "His family is very poor, and he puts in every

moment of his spare time earning a little money to help them along. A fellow who does that can't find time to play ball, and I want to add that some of you who are now turning up your noses at him may some day be glad to have him notice you."

The young captain spoke seriously, and the boys were silent for some minutes. Finally Chase said:

"Where will you put Hamilton?"

"Out in left field, if he will play. That's his position, but I'm not certain yet whether he will join us or not. I'll see him tonight."

Accordingly, after supper Captain Dick visited Mart in his room, and after some persuasion, managed to gain the latter's consent to participate in the approaching game, and bright and early the following morning Mart was out with the rest of the Varsity team, putting in some hard practice. He played very quietly, but it was evident to every member of the nine that Dick Pond knew what he was about when he made his selection, and when they left the diamond, towards noon, Dick's face wore a satisfied smile.

The two o'clock train from the east that afternoon brought fourteen cars full of boys to witness the great contest. The nine from Brownell University, including substitutes and scorers, occupied the first coach all to themselves, and as they piled out they were met by a committee of the McMaster team and conducted to the ball grounds, followed by an immense throng.

At an early hour, the grandstand and "bleacheries" had been filling with McMaster adherents, and now when the contingent from the rival town had arrived, the seating capacity was taxed to its utmost limits. The presidents of both colleges, and nearly all of the under-professors were there in full force, each as anxious to see the institution which he represented win as were the individual members of the contesting nines themselves.

When it became generally known that the formidable Twindle was not to play with McMaster, victory seemed already to perch on the banner of Brownell, and their joy was expressed in their oft-repeated college yell:

"T-e-a-d-s! leads! leads! leads!"

"On others—o-t-h-e-r-s—Brownell feeds!"

Only to be taken up by:

"Eec-nickey-fee! nicky-fi! nicky-fum!"

"McMaster! McMaster! We are some!"

It was a good-natured crowd, and every good play made in the preliminary practice was liberally applauded. At length, with the fever heat at its highest, it was time to commence the game. McMaster won the toss of the coin, and took the field, and with a new regulation ball in his hand, Chase waited in the pitcher's box for the signal.

"Play ball!" called the umpire, and the decisive contest was on.

Chase's swift balls seemed to dazzle the first Brownell man at bat, and he was declared out on strikes. But the second batter "had his eye with him," and after the third attempt, sent the drop ball which the pitcher gave him, flying out towards right field. It came straight for Mart; it would not be necessary for him to move three feet to reach it, and it was over-confidence, perhaps, that caused him to fumble it. Before he could return the ball, the runner was safe at second.

This un'fortunate error was greeted with a storm of mingled cheers and jeers from the spectators, and Mart bit his lip with vexation. He was greatly relieved, a moment afterward, when Sammy Osgood threw the runner out while attempting to steal third base. The man at the plate fouled out to Stivers, and then McMaster came in.

But they, too, were retired without scoring, after getting two men on base. In their half of the second inning the Brownell nine, by fast work, succeeded in bringing in one score, and thus it stood until the last half of the fifth inning, when the McMaster boys took the bench. They had been finding great difficulty in solving the curves of Brownell's "south-paw"—Wells by name—and much more in placing their hits, although Chase was apparently just as much of a mystery to the other nine.

In this inning Wells became a trifle wild, and Stiver, the first man up for McMaster, walked to his base on called balls. Chase wanted much to do something, but as a rule pitchers are weak hitters, and he went out on a little grounder to short.

Mart Hamilton came next, and seizing the willow, he picked up one of Wells' twisters for a clean hit over the first baseman's head, and just inside the boundary. Immediately the McMaster coachers set up cries of encouragement, and Stivers, who was the fleetest man in the nine, ran like a deer. He was about to pause on third, but at a word from Osgood, on the coaching line, he kept on. A long slide, and he touched the plate, just before the catcher jammed the ball between his shoulders.

Cheer after cheer rent the air, sent up by hundreds of McMaster adherents, and the pink and blue that waved from countless canes and parasols, showed Mart that he had retrieved himself somewhat, at least, in the estimation of the onlookers.

With the score standing 1 to 1, the game, which before was not lacking in interest, became more intense than ever. Mart "died" on third, after sending Stivers in, and the sixth inning was a blank for

both sides. The seventh ended the same way; the eighth, ninth, and even the tenth, showed large ciphers on the scoring board. Up to this point only one error had been made by either college, and that was the unlucky one of Mart's in the first inning.

Both universities were playing remarkable ball, and bright, clean plays had become so common that the multitude failed to notice any ordinarily good piece of work, as they did at first, by their plaudits. They laughed nervously as at the beginning of the eleventh inning Brownell was once more sent to the field with a whitewash. And still more nervous was their merriment when McMaster also retired on a beautiful triple-play on the part of their opponents.

With the opening of the fourteenth, the strain began to tell on Chase. After allowing the first man up to make first on a hit, and the following batsman to sacrifice the runner to second, he gave the next player his base on four balls. Things began to look blue for McMaster, but the shadow lifted a trifle when the succeeding batsman drove a swift line fly, at Shorty Smith, and the doughty little fellow "squeezed it" tight.

There were now two out and two on base. A buzz of excitement went up from the seats, for the next at bat was Tuscombe, well-known as Brownell's boasted heavy hitter. Captain Dick Pond looked anxious as Tuscombe took his place, and signalled his men to play farther out.

Chase realized that now, of all occasions, he must do his best work, and he sent a speedy out-curve over the plate. However, Tuscombe gauged it correctly, and the following moment he knocked a stinging fly towards the territory that Mart had been occupying. It looked like a safe drive, and the McMaster boys felt their hearts sink within them.

Having obeyed his captain's admonition to play well out, Mart saw that he must do some fast work in order to reach the sphere. He sprang forward and ran like a deer for the low-lying ball. It seemed impossible that he could reach it in time. Every eye was on him as he finally made a desperate spring forward and apparently caught the swift-descending ball several inches from the ground.

"Striker's out!" shouted the umpire.

And then throats already hoarse grew hoarser still from cheering, while handkerchiefs, hats and canes were waved aloft, so phenomenal did the catch appear.

In the midst of all the excitement, and while the enthusiastic spectators were yet crying out his name, Mart came panting in from the field.

"That man isn't out!" he declared to the astonished umpire. "I didn't catch the ball in the air. It was only a pick-up."

"Well, did you ever see such a ninny!" exclaimed Stivers, aside to Osgood. "If he'd only kept his mouth shut no one would have been the wiser."

A crowd of players gathered around the umpire, and immediately he was the center of a heated shower of argument.

"Of course, then, if it was only a pick-up, as he says, the runner is safe," said the official, nervously.

"But you have already given your decision," spoke up Smith.

"Yes, I know," was the troubled reply, "but it looked like a fair catch to me."

"Hamilton says himself, that it was only a pick-up," put in several of the Brownell men.

"Look here, fellows!" said Captain Dick, "it's disappointing, of course, but Hamilton is right in admitting it. McMaster will win this game fairly or not at all. No more kicking. Get back into your positions and show the people what kind of stuff you are made of."

The people cheered lustily as McMaster again took the field. Misfortune seemed to pile up around the home team in this inning, for the fellow who followed Tuscombe at bat raised a double to the right field which could not be reached, and Tuscombe and the man ahead of him scored. The next player, however, to face Chase, fanned, and Brownell was retired.

When the McMaster boys came in the score stood 1 to 1 in favor of the rival college. Every one of Captain Dick's men had a do-or-die expression upon his face. He knew that his nine must either tie the score this time or suffer the bitter gall of defeat, and the thought of losing such a hard-fought contest was any thing but pleasant.

Brownell, on the other hand, took no pains to conceal their elation. With three runs in the lead, they considered their position as an absolute sinecure. But over-confidence is a bubble which invariably bursts without the prickings of a needle, and the larger it is permitted to expand the sooner comes its destruction. So it was with the Brownell nine. Dick Pond was the first to step to the plate for McMaster. He meant business, and Wells came to the same reluctant conclusion when the captain pounded out a hot one between the Brownell pitcher's legs. Before he could care for it, Pond was safely on first base. Stivers came up next, but he ignominiously fouled out to the third baseman, and some of the spectators were beginning to leave the grand stand, believing that the game was practically decided, when a shout arose from the diamond and it was seen that Chase had singled over shortstop's head, sending Pond to second base.

Then Sammy Osgood took up the stick, only to strike out, much to his disgust, and Shorty Smith strode up. Shorty was after a "life," or four balls,

and being a small mark, he easily got them, and walked to first.

"Hamilton to bat; Cook on deck!" shouted the scorer.

With two men out, three on base and their last chance, Mart stepped forward. His face was slightly pale, and his heart beat like a trip-hammer as he realized that everything depended upon himself. Wells bowled the ball in like a shot—and Mart missed.

"Strike one!" called the umpire.

Again the Brownell pitcher launched the ball toward the plate.

"Strike two!"

One more strike—that was all! The contest would be ended then. The great throng almost stopped breathing. What would Mart Hamilton do?

Mart himself just then was doing everything possible to bolster up.

"Come, old fellow," he was saying, "don't lose your nerve at the last moment; this is only a little game of scrub, and that is little brother Freddie tossing me his yarn ball. There it comes now."

Yes; there was no doubt of it, but instead of a piece of yarn, it was a hard-leathered ball that came hurtling toward him, propelled with all the strength of Wells' strong arm. But Mart saw only Freddie and his yarn ball; he swung his stick far back and there was a sharp

VIEW FROM WEST POINT LOOKING UP HUDSON RIVER. SIEGE BATTERY IN FOREGROUND. FIRST PRIZE PHOTO, BY CHESTER PADDOCK MILLS, WEST POINT, N. Y.

crack like that of a whip. The next moment the ball was seen sailing far over the center fielder's reach, and with the hit the McMaster men began circling the bases.

It seemed as if pandemonium had broken loose as

Mart raced around the diamond, easily reaching home before the Brownell catcher got the ball. McMaster Varsity had won the game by a score of 5 to 4.

Then such cheering! The spectators swarmed out of their seats upon the field, and Mart's comrades insisted on carrying him around the bases on their shoulders.

"That was a magnificent hit of yours, Hamilton—the longest I ever saw made," said the captain of the Brownell team, shaking his hand. "Defeat is a hard thing to swallow, but McMaster won the game on its merits and I don't think the pennant could fall into more worthy hands."

"Thank you, Archer," responded Captain Dick Pond, "and let me say in return that your men put up the cleanest and most clever exhibition of ball that it has been our lot to meet. I'll guarantee that this fourteen-inning game will go down in college annals as one of the greatest ever played. Boys, three cheers for Brownell!"

And as the students from the rival college fled out of the enclosure, the cheers of McMaster followed them, making their defeat far less hard to bear and paving the way to a more friendly feeling between the two institutions of learning.

After that day, Mart Hamilton was one of the most popular fellows at McMaster.

THE PONY CONTEST

The Pony Editor of THE AMERICAN BOY, to whom has been given the task of deciding on the most stylish pony owned by the boy readers of this paper, has been going about with his head bandaged for the past two or three days, all due to an overheated brain. The trouble heretofore experienced in determining

the prize winners in the cat and dog contests is not a circumstance to that which has been experienced with the ponies. We shall content ourselves with leaving the decision as to the ponies with the readers of THE AMERICAN BOY and will, therefore, ask that you look at the pictures on this page and then drop a postal card to the Pony Editor of THE AMERICAN BOY, Detroit, Mich., telling him which one you select as a prize winner. We have not given the pictures of all the good looking ponies. That would be entirely impracticable. We have selected for the pictures the "best lookers," as we see it, but this is not saying that other ponies, whose pictures are before us, are not handsome ones. For instance, there is Merrylegs, owned by Spar Simmons, Viola, Wis., a pony with as pretty a head as we have ever seen; there is Billy, owned by Pearl Thomas, of Lindsay, Ohio, with a tail reaching to the ground; there is Bill, owned by L. H. Moody, Hartford, Conn., a white fellow who looks like a good driver; there is Beppo, owned by George C. Welch, of Stoughton, Mass., with a white spot in his

four white stockings, forty-one inches high and weighing three hundred and eighty-five pounds, owned by E. Homer and Stewart C. Buxton, Warsaw, N. Y.; Kipling, owned by John W. Weybrecht, Alliance, Ohio.

Send in your postals, boys, to the Pony Editor.

"JACK," OWNED BY ED. W. NEIDIG, GOSHEN, IND.

"QUINTEL S." OWNED BY E. HOMER AND STEWART C. BUXTON, WARSAW, IND.

"MAXIMUS," OWNED BY A. D. SCHOFIELD, MACON, GA.

"KIPLING," OWNED BY JOHN W. WEYBRECHT, ALLIANCE, OHIO.

"BERTHA," OWNED BY G. B. HALL, BARRY, ILL.

forehead, whose photograph having faded does not do him justice; there is Dick, owned by Willie Harrah, of Worthington, Ind., with a topknot to be proud of, and another Dick, owned by Howard Hutchins, of Carlsbad, N. M., with his owner astride his back and looking like a veritable cowboy; there is Beauty, owned by Colvin Coulter, of Austinburg, Ohio, a fat little dumpling of a pony hitched to a stylish little cart; there is Commodore Schley, the smallest pony in the whole collection, with the greatest name. His master says he can do several clever tricks. The picture of this pony is quite imperfect or readers of THE AMERICAN BOY would be given an opportunity to see him.

There is Nib, owned by B. Hollinger Glatfelter, Spring Forge, Pa., a bright bay, whose picture we are sure does not do him justice.

Now for the ponies whose pictures we give. There is Maximus, owned by A. D. Schofield, Jr., Macon, Ga.; Jack, by Ed. W. Neidig, of Goshen, Ind.; Bertha, owned by G. B. Hall, Barry, Ill. (the owner says he has refused one hundred and fifty dollars for her); Quintel S., a dark sorrel with a silver mane and tail and

A HANDSOME BRIDLE FOR THE MOST STYLISH PONY. NEXT CONTEST CLOSSES AUGUST FIFTH

WE INVITE BOY OWNERS OF PONIES TO TRY AGAIN IN A NEW CONTEST

FRANK,
"OUR BOY."

Wards of The American Boy

Readers of THE AMERICAN BOY have been invited to contribute the sum of sixty dollars for the purpose of rescuing a boy from the slums of the city and putting him into a good home. The publishers of THE AMERICAN BOY agreeing to contribute from their own treasury a like sum for the purpose of saving another boy. Enough money has been received from our readers to insure the saving of one boy, and in accordance with our promise we have selected the boy, or rather good friends have selected him for us, and he is now in the safe keeping of the National Junior Republic, at Annapolis, Md. the boy having been taken from the streets of Baltimore. We present his picture, but withhold his name, for the reason that his parents are living and we prefer not to bring further disgrace upon them than they have brought upon themselves by their treatment of Clarence. The boy was born on Christmas day, 1896. His father and mother have been recently arrested for disturbing the peace, both being hard drinkers. William Claire Rogers, the superintendent of the farm conducted by the National Junior Republic, tells us that Clarence is slightly under size for his age, but is a remarkably bright and sweet little boy, and that he has the greatest hope that the boy will become a good citizen. Every reader of THE AMERICAN BOY who has subscribed to the support of Clarence ought to feel proud of the part he has had in this good work, no matter how small the contribution. Less than ten dollars remains to be subscribed to make up the sixty dollars, and we have confidence that by the time this issue of the paper is in the hands of its readers the entire sum will be in our hands. Clarence is the ward of the readers of THE AMERICAN BOY, and we shall be glad from time to time to relate how he is getting along.

Now, you will perhaps wish to see the face of the boy whom the publishers are to stand sponsor for. Here he is. He was taken from the streets of Chicago and is now at the Reulah Land Farm for Boys, at Le ni, Mich. His name is Frank; his age twelve. His mother is dead and his drunken father deserted him seven years ago. He is a boot-black, taken from the toughest gang in Chicago, given to drinking, chewing, smoking, and stealing. He has a queer combination of traits. When found he was desperately tough, but intensely affectionate. He has been at the Farm now for some weeks, and it is his delight to throw his arms around the necks of those whom he loves and cover them with kisses. We would not care to kiss a boy who has as dirty a face as Frank has in the picture, but we are assured that he looks much nicer with good clothes on and the dirt washed off. Herman Lee Swift, the manager of the Farm, writes us, "Just as surely as the sun rises so surely do we believe that Frank will make a grand, good man—an honor to himself and a credit to THE AMERICAN BOY." He was known among his comrades in Chi-

cago as "Rusty," because of his red hair. We shall keep you informed of how Rusty also is getting along. Now, have we reached the limit of what we can do? Subscribers to THE AMERICAN BOY have been nearly two months in sending us nearly sixty dollars with which to save Clarence. Do you think that boys and parents of boys would send us, were we to ask it, sixty dollars more within the next sixty days with which to rescue another boy? Not one reader in one hundred has contributed a penny. There are ninety thousand readers of THE AMERICAN BOY this month. Suppose every one should give a penny. The result would be nine hundred dollars, or enough to rescue fifteen boys from a miserable, homeless, sinful life, and put them under the care of Christian men and women in good homes where they might learn to be honest and industrious and grow up to be good citizens. Our success in our initial effort to do good along this line encourages us to ask readers of THE AMERICAN BOY to come once more to the aid of their unfortunate little brothers.

CLARENCE,
"YOUR BOY."

BIOGRAPHY OF A "PUSHER"

This is the second installment of the story of a boy, now twenty-six years old, who, at the age of ten, left his home in Kowno, Prussia, and came to America alone to seek his fortune, and at the age of twenty-six, after having been in this country fifteen years, found himself possessed of the degree of Bachelor of Laws from one of America's great universities, and comfortably settled as a practicing lawyer in the great city of Chicago. The story is remarkable for its evidence of "push." If for nothing else. We are accustomed to hearing the phrase "land of opportunity" as descriptive of the United States of America. Here is evidence, in concrete form, that the phrase is truly descriptive, and is not merely rhetorical. The story is told simply to show what can be done in this land of ours by a boy. The boy, whose biography is related, started on his career in America, as the first installment of the story suggests, without the ability to use our language, without an acquaintance with our customs, without friends or acquaintances who were truly helpful to him, and without money.

At the point of our story where we left off in the May number of THE AMERICAN BOY, Edward had found employment with a cane and umbrella maker, and was to receive for his services one dollar and seventy-five cents a week, his hours of work being from seven in the morning till six in the evening. Such hard manual labor as was required of him would, if continued, have dwarfed him both physically and mentally. Edward, however, was not the boy to be contented under such hard conditions. Young as he was, he had set an education before him as a goal. He had come to this country partly because he had heard that here a boy could readily get an education and a start in the world. He was not going to be bound down in a shop from morning till night, working like a slave, for a bare pittance, and give up the fulfillment of his desires to rise in the world and become an educated man.

Small as was his pay, he managed, by dint of great sacrifice and hardship, to save a little money. With this he set out for Philadelphia, where some one had told him a boy could get along better than in the great city of New York. He tramped the streets of Philadelphia for days, asking for employment at every door, and finally, seeing his little savings almost gone, took a position with a clothing merchant, his duty being to stand at the door of the store and invite customers to buy. Every morning at six he must open the doors and sweep out, and at night must close the store, after taking in the "dummies" and display stands. This was indeed harder work than what he had done in New York, though he received more money for it.

Being desirous of obtaining time for study, he made an arrangement with his employer by which he was to receive less money and have his evenings to himself. He now received twelve dollars a month, including board and lodging in the home of his employer, and had his evenings to spend as he liked. Eagerly he grasped the opportunity to use the city library. Every night and all of his Sundays he read from the books he obtained in the library, getting a little help in his reading from the family of his employer.

After some months spent in this way, the desire grew upon him to go farther west where he believed he

might find the opportunities he had been led to expect in Free America, and which, up to that time, he had failed to find. Pittsburgh was his next stopping place. In this city he repeated his Philadelphia experience, tramping from place to place seeking employment where he could earn a living and at the same time carry out his cherished plan of getting an education by study at night. Here he found employment with a picture frame manufacturer, but the hours were very long and study out of the question.

About this time an older brother of Edward located in Columbus, Ohio. Edward heard of it and packing up his few belongings went to Columbus, thinking that his brother might assist him to better employment. His brother, however, did not treat him cordially, and was of no substantial assistance to him, so the hardy little fellow returned to Pittsburgh and took up the position he had left, at a salary of five dollars a week.

So faithfully did he do his work that one who observed him said, "You are too bright a fellow to be spending all your time in this sort of work. I will give you a position where you can make more in a week than you are now making in three." His new employer sent him about soliciting, his duties being to solicit the enlargement of photographs. The first week netted him ten dollars; the second week, thirteen. In a short time he had the reputation of being the most faithful agent employed by his firm. It was not long before the firm sent him out on the road at eighteen dollars a week and "expenses." This gave him the opportunity to travel and learn the manners

and customs of the people. Traveling through the States of Pennsylvania and Ohio, in this work, he came in contact with all classes of people, and, as he was bright and communicative, made many acquaintances, some of whom were of great assistance to him in after years.

Everywhere he went he carried with him a trunk, the greater part of which was filled with books which he read and studied on the cars and whenever he got an opportunity. At Washington, Pennsylvania he made the acquaintance of several of the professors in Washington and Jefferson College. These men gave him good advice, which he jotted down and followed.

After working for over a year in this way he had saved up about eight hundred dollars. With this he spent a year in the Park Institute, a preparatory school in Pittsburgh. His money being then gone, he secured a position as solicitor for a real estate firm. He was now nineteen years of age. In a short time he made, by several fortunate turns, several hundred dollars, and was now ready to go to school again. An influential friend gave him a letter to the superintendent of

public schools at Pittsburgh, who in turn gave him a letter to the principal of the Pittsburgh high school, which letter contained the request that the boy should be given an examination for admission to the high school. Successfully passing the examination, he entered upon his work, as hungry for it, as he has told me, as a growing boy for a good dinner.

Before high school days were over he found himself without money. Again he sought work with a real estate firm; again made money; and again returned to school. Before graduation his money was again spent. Leaving school, he organized a building and loan association, and was elected to the office of secretary and treasurer. In a few months, after reviewing his studies, he presented himself for the preliminary law examination in Washington County, Pennsylvania, and was there registered as a student at law. Being informed that he would have to stay in a law office three years or go to a law school and spend the last year in an office, and not having the money to do this, he gave up for the time being his ambitions in the line of the law.

It was at this time that fortune threw something in his way. A lawyer friend announced that he was about to go to Ann Arbor, Michigan, on business, and promised that he would see the dean of the faculty and inquire from him as to whether there was a good chance for a deserving young man to earn some money and pay his expenses while attending the University of Michigan. One bright day a little later he received word from his lawyer friend that he should take the next train for Ann Arbor. He did so, reaching the College town in a heavy snow storm, with no money and nothing but the suggestion of his friend that the dean of the faculty wanted to see him. The result was that he registered as a student of law on January 6, 1895, though he did not have a dollar with which to pay his tuition. There was something so honest in the boy's demeanor and something so determined in his look and word that the dean accepted him as a student on the promise that the tuition fee would be paid some day.

He was now in school and fairly on the road to the goal of his ambition. He had no place to sleep, however, and nothing with which to buy bread. He tramped the little town of Ann Arbor as he had theretofore tramped Philadelphia and Pittsburgh, and not until late that first night did he secure a place to sleep, and not even then except at the price of taking care of the furnace in the house, chopping wood and bringing in coal. He secured a place where he might satisfy the wants of his inner man by serving as a waiter in one of the College boarding houses, his duties being to help wash the dishes, lay the table and serve the meals. For this he received his board. Perhaps no young man ever entered a law school under less favorable circumstances. No one certainly deserved success more than did the boy of whom we are writing. We shall see in our next installment what came of his promise to the dean to pay his tuition, and whether the dean was justified in extending him his confidence.

(To be continued)

WHAT BOYS ARE DOING

GEORGE LOOSE, A REMARKABLE BOY SINGER.

GEORGE LOOSE.

Though only fifteen years old, Master George Loose has the most wonderful boy's voice ever heard in New York. Able to reach A Flat, he unites with this great range, rich quality, perfect action, great power and wonderful pathos. It is in the last that he is surprising. Henry E. Duncan, who is choir master of the Church of the Heavenly Rest has dealt with boy singers for years, and is an authority in musical circles, says that he can not speak

highly enough of the talent of his young protege.

"I've had the boy in charge for three months," says he, "and every day I am more pleased with him. He is remarkable. How did I find him? Here he comes; let him tell you."

A bright, handsome boy, with black hair and fine black eyes, entered Mr. Duncan's studio. He carried himself in a manly fashion and showed no trace of conceit. He smiled when the reporter stated his errand.

"Yes," he said, shaking his black hair from his forehead, "I came here three months ago. I didn't know anybody in New York. My mother was with me. I had been with a company giving concerts. We started from Chicago, went to San Francisco and then to New York. Oh, I like New York. When I reached here I made up my mind to stay.

"New York's so big," he smiled and added, "and I wanted to go into business." His face became serious. "My voice, you know, won't last over a year and a half, and I want to be prepared to support my mother and myself then. I practice an hour each afternoon, and sing at concerts, too.

"How did I know I could sing? Oh, that was simple. Why, I used to sing when I was small. I was born in Springfield, Ill., and when we moved to Chicago I sang in the choir at Grace Church. Henry B. Roney was organist there, and he was very able. He trained my voice so I could use it properly: all head tones, you know. Afterward I sang in the choir at St. Bartholomew's. Then I went on a concert tour. When I got here I didn't know what to do. I heard that Mr. Duncan's choir was the best in New York. So one afternoon I took my music and press notices and went to the church. After hearing me sing he gave me a place in the choir.

"I knew I ought to work, so I got a place down town. All the money I make I save. I support my mother, too. I went through the eighth grade in the grammar school. Of course I'd like a fine education, but when my voice changes I can't sing. I can't tell whether it will be good after it does change. Sometimes the best voice turns out worst and the worst best."

The young singer took his leave, and Mr. Duncan, speaking of him, said:

"He has to sing difficult music, oratorio, solos and English church music, which is very trying. He sings without effort; his tones are as clear as a bell. Now, most boys' voices lack his distinguishing quality—pathos and feeling. Ordinarily a boy's voice is like a picture painted on glass. It lacks color and warmth as seen in an oil painting. The boy feels what he sings. Last Sunday he gave "There is a Green Hill Far Away," and those who heard it were carried away with admiration. I received letters only today from musicians of note commenting on his remarkable power of expression. His voice has been properly placed.

"I have been given full charge of him by his mother, and I only hope that his voice will retain its power and feeling after it changes. Last Sunday, when he sang "They Have Taken Away My Lord" the great congregation could hardly restrain itself. His method of rendering themes where intellectual appreciation dominates equals that of mature singers."—New York World.

WEALTHY YOUNG MEN.

John D. Rockefeller, Jr., who is not yet twenty-five, is heir to more millions than any other young man in the country. He has no appetite for club or social life and devotes his time to business.

Alfred Vanderbilt, who inherited the bulk of his father's fortune, is twenty-three.

Wm. K. Vanderbilt, Jr., is the prospective heir to his father's one hundred millions. He is a born business man rather than a student.

The son of William Waldorf Astor, who lives in England, is nineteen. He will get the bulk of his father's fortune, estimated at over two hundred millions.

The nine year old son of John Jacob Astor of New York has in prospect over seventy-five millions.

Kingdon Gould, oldest son of George Gould, is but a mere child. He will get a large part of George Gould's seventy millions or more.

One of the richest young men of the next century will be Harry Payne Whitney. He will probably be heir to three great fortunes. His father is worth probably not less than seventy-five millions; his uncle nearly as much more, and his wife, who was Gertrude Vanderbilt, will receive something like fifteen millions from her father.

Theodore A. Havemeyer, Jr., is the heir of the Havemeyer millions and will be worth close upon fifty millions.

HAROLD STANFORD KIGGENS, A BOY ORATOR.

HAROLD STANFORD KIGGENS

club women of California. His mother says that she and her husband do not consider the boy a wonder in any sense of the word. She says he is a perfectly normal wide-awake American boy.

Santa Monica, Cal., boasts of a boy orator in the person of Harold Stanford Kiggins, the seven year old son of J. T. Kiggins, attorney at law of that place. When Jack Cooke, the boy preacher, was in Santa Monica, Harold recited at one of his meetings, and many then expressed the opinion that he was a greater wonder than was Jack. One evening later he made a speech at the big Anti-Saloon meeting in the Methodist church at Santa Monica that will not soon be forgotten by those who were fortunate enough to hear him. The boy's ability as a speaker does not seem to be the result of training. He appears to comprehend and feel every word he utters, and oratory comes naturally. His father and mother are both good speakers, his mother being one of the best platform talkers among the club women of California. His mother says that she and her husband do not consider the boy a wonder in any sense of the word. She says he is a perfectly normal wide-awake American boy.

AMMON MONROE AURAND, JR., THE YOUNGEST TYPESETTER IN AMERICA.

AMMON MONROE AURAND, JR.

the treadle of the press, he climbs on a chair and places the card or sheet on the platen, gets down and turns the fly-wheel of the press by hand until the impression is made. He has been known to repeat this operation for hours. We have seen some work done by the little fellow and it compares favorably with the work of old compositors.

Ammon Monroe Aurand, Jr., is not yet five years of age and yet the little fellow has learned to set type in his father's office, his father being the publisher of the Beaver Springs (Pa.) Herald. Occasionally he sets up stories for his father's paper and he has succeeded in doing very good work in setting up matter for cards, circulars and envelopes. His ability to handle type was gained while playing about the office and imitating the men compositors.

Being too small to operate

CHARLES A. PHELPS, KING OF THE FORT WAYNE (IND.) NEWSBOYS.

Charles A. Phelps, known as the "King of the Fort Wayne Newsboys," began to sell papers in Fort Wayne in the spring of 1888, at the age of six. For a start he bought one paper for one cent and sold it for two. After a while he added to his stock in trade papers of other cities, until in 1894 the Chicago Journal appointed him their sole agent for Fort Wayne. At that time they were sending twenty papers daily to that city. They are now sending three hundred. During the Luetgert murder trial young Phelps handled over two thousand papers a day, and did nearly as much during the war with Spain. He says: "I tried to be fair and honest with everybody in my dealings, and in the end it has proved to be the best policy." He says that after taking the Chicago Journal agency at Fort Wayne other papers appointed him. The condition on which he took an agency was that he should be the sole agent for the town. He now supplies Fort Wayne with the Chicago Journal, St. Louis Post-Dispatch, St. Louis Globe-Democrat, Chicago Inter-Ocean and Indianapolis News. At present he is handling six hundred papers per week day and one thousand on Sundays.

In spite of the hard work he has done, young Phelps has managed to secure a fair education. In 1896 he organized the newsboys of Fort Wayne into a union. Two years of hard work resulted in his obtaining unanimous support of the newsboys in an organization for their benefit. The mayor of the city allowed the use of the City Hall for a meeting place and young Phelps was elected president at the first meeting, and has been three times re-elected. He gives the newsboys good talks frequently, telling them to always help and protect one another, be honest and save their money, and not chew, swear or smoke, or drink liquor. The penalty for doing any of these things is expulsion from the union. The result is that Fort Wayne is one of the best newsboy communities in the country. Their leader has drilled the boys in military tactics so that they drill very well.

Young Phelps has managed to save a little money. He says that he noticed that other boys spent a few cents every day on things that did not benefit them. He made up his mind to save instead of spend. So fast did his savings grow that it surprised him. Last November he was enabled to purchase the stock and fixtures of the Fort Wayne Book and News Company. He thus became not only his own employer but he has twenty-two newsboys who sell for him, and these he has organized into a band and drum corps. In addition to the boys on the street who are his regular agents, he employs two clerks in his store.

Young Phelps is now eighteen years of age, has a good business, handling from six hundred to twelve hundred papers a day, is honest, sober and industrious. He says in a letter to THE AMERICAN BOY: "Any American boy can do the same as I have done if he tries." The newsboys, and the people generally, have dubbed him "King of the Newsboys." He says he would rather be King of the Newsboys than King of England.

The Story of Tommy Stringer

WILLIAM H. GREENFIELD

Tommy Stringer was born thirteen years ago, in the town of Washington, Western Pennsylvania. Before his lips framed a single word he suffered an attack of spinal meningitis, which deprived him of sight and hearing. Following upon this came the untimely death of his mother; and his father, unwilling to be encumbered by such a helpless infant, relieved himself of his charge by deserting him.

The forsaken child was taken to a hospital in Allegheny, where he remained for an unknown but somewhat lengthy period. After little Tom had been cured of his illness, he became a formidable problem to the hospital authorities. Physically he was far from being frail. Except for his double affliction, he was as well as any child. After several weeks had passed, the doctors were thrown into confusion and uncertainty over the question of the final disposition of the strange "case." A blind asylum would not receive Tommy because he was deaf, and an institution for the deaf could not have him because he was blind. So he remained in the hospital, a mere lump of clay, with deadened consciousness.

Examination failed to show the slightest trace of intelligence. There was absolutely no approach to his intellect. The compass of the crib was to him the breadth and full extent of the world. He retained no impressions, and only knew that something reached through the blackness to attend to his physical wants. He was insensible to everything but the drear, appalling darkness that enveloped him. The special attentions of a night nurse transformed the night into day, and he remained awake all night and slept through the hours of daylight. The undue predominance of this idea of the order of day was one of the first difficulties to be met with when he was removed from the hospital.

Helen Keller heard of his plight, and her tender heart was touched. She thought that the poor blind and deaf boy in distant Pennsylvania could be saved, as she had been, from the rayless night and unspeakable void in which he dwelt, and she determined that there should be an attempt made to teach him as she had been taught. While she was settling about this humane work and enlisting many of her friends in the cause, her pet dog, Lionel, was shot by a policeman. Letters from all parts of this country and European countries containing offers of a new dog or of money to purchase one poured in upon her. She thankfully declined all the offers to replace her lost Lionel, but added that she would be happy to receive any money as a gift to little Tommy Stringer, whose pathetic story she eloquently related.

The results exceeded her fondest anticipations. She was fairly deluged with contributions, some small, some large, but all very acceptable. Others took up the work, and not long after, mainly owing to her efforts, Tommy Stringer was taken to Boston, and placed in the Kindergarten for the Blind.

At the time he entered the kindergarten, Tommy was five years old, and as coarse and savage a little animal as could be found. His body was an unattended shell; his soul had not yet been revealed. His face was vacant and staring, and his crouching posture had the listless stoop of imbecility. He would not walk except backwards on all fours.

Then began a long, strenuous struggle to convey the idea of speech to that poor little vacant mind. At the start Helen Keller and her teacher undertook the task. Tommy was subjected to the espionage of one or the other all the time to discover the first gleam of intelligence in those sodden eyes. The letters of the manual alphabet were formed on his fingers and spelled on his hand. Whenever he was given a piece of bread the letters "b-r-e-a-d" were made on his fingers, and the same word was spelled into his hand. It took time and patience, but the task was not abandoned.

The nine months that dragged by seemed interminable. Ultimately, the triumph was won. The conception of speech entered Tommy's brain one day when

he was hungry, and he spelled out the word "b-r-e-a-d."

That was the first shaft of the light that was to illumine the dark cell of Tommy's mind. Thereafter the process was slow but certain. His vocabulary daily increased. His progress was rapid and complete.

A great transformation took place. He began to devote himself to study, and it was not long before he could converse with his teacher

I am very
Glad that you
are coming to
Boston so soon
for I want to
see you
Goodbye with
love and a
big kiss from
Tom.

er on a score of topics. As the light flooded into his brain his soul manifested itself in many touching little letters written to friends, for he had learned to write soon after he had been taught finger speech.

Physically the transformation was no less great and gratifying. As the mind within expanded, so did the exterior develop and improve until Tommy was a tall, sturdy, handsome lad, with springing step and confident mien. Today he is as straight as an arrow, and physically perfect.

TOMMY STRINGER.

The Tommy Stringer of today is an original thinker and has a mind that is a storehouse of knowledge. He is proficient in all the common branches ordinarily taught to boys, and can hold converse on a variety of difficult subjects. Now that his intelligence has developed it seems to be of the higher order, and it is only fair to say that he knows more than the average boy of his age. His quick wit and the originality of his imagination is surprising. When his present teacher, Miss Conley, asked him how he would go to Washington alone he replied: "On a train." She reminded him that he could not speak to the conductor, or anyone else, and consequently would never reach his destination. He coolly replied that he would teach the conductor how to talk on his fingers.

•••••

"Five weeks from to-night we start for Philadelphia.
Won't we have fun?"

A SENTENCE IN DEAF AND DUMB WRITING.

Some of his conceits are odd. He formed the habit several years ago of calling his teachers and intimate friends by the names of animals. For example, Helen Keller is Blackbird and his teacher Fly.

He has built the model of a house which he declares he will occupy when he is married. It is built strictly for purposes of utility, and is really one of his most remarkable creations. Everything that Tom likes is duplicated in his model of a house. His likes and dislikes are shown in it. There are two elevators, two bath rooms, four desks and a pond in the cellar.

Tom has studied history, geography, physiology, botany, natural history, reading and writing in square, script and Brail print. He studies arithmetic by means of a special slate, on which he can work problems with astonishing celerity.

The construction of his model house is ample demonstration of Tommy's skill in the use of tools, but that is only one proof of his cleverness. The fact is he understands much more about carpentering and other branches of mechanics than the average man who is not a skilled mechanic. He does many a job of carpentering in the kindergarten with ease and dexterity.

When with some of his friends who know finger speech Tommy is a veritable interrogation point. His inquiring mind seeks to know everything unfamiliar, and his every ready inquiry is: "What for?" He uses a vocabulary far exceeding that of the average boy.

Weighed down by the awfulness of his affliction, this brave boy has fought against stupendous odds to acquire an understanding of life and a breath of its sweetness. He is an example and an incentive to every American boy; for if it was possible for him to do what he has done retarded by his threefold affliction, is not there boundless possibilities of grand and noble achievements open to the American boy whose sight, hearing and speech are unimpaired?

DONALD L. JACOBUS, A TWELVE YEAR OLD GENEALOGIST.

Someone has sent us a clipping from a New Haven (Conn.) daily paper which contains an essay written by Donald L. Jacobus, of that city, a twelve year old boy. The essay is entitled "A Remarkable Essay." The essay is written to prove that Inachus, the old mythological patriarch, is identical with Nachor or Nahor, the brother of Abraham, and son of Terah. The boy says that the subject first attracted his attention while he was summing up the ancestry of the Trojan kings. He noticed that Inachus was of the same generation as Nahor, i. e., the twentieth from Adam. The essay abounds in mythological and biblical quotations and references, and altogether is a remarkable production for a boy. The little fellow began the study of genealogy with the tracing of the genealogy of the kings and queens of Europe and of bible characters. He has a retentive memory and takes the keenest delight in this the driest of subjects.

GEORGE LEWIS FERRY RECEIVES A GOLD MEDAL FROM A BOARD OF EDUCATION.

GEORGE LEWIS FERRY.

The Kenosha (Wis.) Board of Education has given to George Lewis Ferry, a school boy, a handsome gold medal and pin. On one side of the medal is the inscription, "Presented to George Lewis Ferry by the Board of Education of Kenosha," and on the other side, "For Bravery at the Central Building Fire March 16, 1900."

On the date named the High School gave an entertainment in the High School building. While the hall was crowded a lamp was upset, causing the oil to run between the cracks in the floor of the stage. A fire

started under the stage, which was then crowded with children. With great presence of mind young Ferry rushed from the rear of the hall, and at the risk of his life, crawled under the stage through a narrow passage and smothered the fire with his clothes, but not until he was considerably burned.

EUGENE BURKIN INVENTS A RAPID FIRE MACHINE GUN.

Eugene Burkin, a colored boy of nineteen who lives in Chicago, is the inventor of a rapid fire machine gun which some have said is destined to throw the inventions of Maxim and Nordenfeldt into the scrap heap. Experts declare the gun to be a marvel of ingenuity. The Chicago Inter-Ocean says that the boy has refused an offer of fifty thousand dollars for his invention. He has never had any mechanical training, yet all the work on his model has been his

EUGENE BURKIN.

own. His first model was of wood, and the only tool used was a jackknife. When he had obtained a little money he went to an iron works, which gave him the use of tools and machinery for five dollars a day. Here he constructed the model which he sent to the patent office at Washington, resulting in his obtaining a patent covering seventeen claims. The gun has been christened "The Maine."

THE PARIS EXPOSITION

REPORTED BY A BOY REPORTER ESPECIALLY FOR THE READERS OF THE AMERICAN BOY

FIRST LETTER

When I first made up my mind to attend the Paris Exposition I knew I would have to travel as cheaply as possible. I was quite willing to do this, because I knew it was worth passing through hardships to spend a summer at this most wonderful of world's fairs.

I thought of working my passage across the ocean, for there are often chances for boys to secure places aboard the Trans-Atlantic steamers, but I had done that before, and wanted to have some new adventures this time. After consideration, I decided that the cheapest and most interesting way for me to go would be as a steerage passenger. I had read of what the steerage was like, and thought a boy could have a very interesting time there. I accordingly purchased a ticket for twenty eight dollars and made preparations to start. There wasn't much packing to do, for I had determined to carry no baggage except my camera and my hand satchel; so when I stepped aboard the great ocean greyhound at New York one Saturday afternoon I might almost as well have been starting for Boston, to judge by my appearance and what I had with me. Most of the first-class passengers had half a dozen trunks, to say nothing of steamer rugs and flowers and deck chairs. I'm sure I enjoyed myself more at the start than they did, having nothing to look after but my satchel and camera.

I stood at the vessel's rail as we moved slowly down the majestic Hudson, through the harbor, and into the bay. I had done everything so quickly that I could hardly believe I was on my way to Europe, and it was not until the farthest buildings on Sandy Hook faded from view that I realized I was really started. Then I sat down on one of the benches and had a look at my fellow passengers. To my surprise I found them not a bad looking lot at all. I had often seen pictures of the "cattle" which travel in the steerage and I expected these would be of the same sort. But

but the dirt increased with each day of the voyage, and when we finally reached Liverpool it wasn't fit to stay in. I found it very hard to sleep the first two nights on account of the bad air, but gradually became used to it and slept soundly during most of the remaining nights. When we reached Liverpool I was so accustomed to the whole arrangement of living that I wasn't very anxious to land.

But if the beds were passable, the food was not, and I never did get so I

A TYPICAL SCENE IN IRELAND.

could eat much of it. I had often heard what it was like, but as I had always been sick at sea I supposed I would have no appetite for food of any kind, and didn't expect to go to the table. But instead of getting seasick I remained quite well, and my appetite increased every day until at last I was actually hungry. I had brought along some crackers and dried beef, and this helped me for two days. After that I was obliged to eat the steerage fare or starve. About all we had to eat was bread and several variations of meat stew. Sometimes the meat was beef and sometimes it was mutton. Both were very bad and I never tasted either. I lived chiefly on gruel and bread and tea. Some of the

three instruments playing at the same time, and then we all sang some of the popular "rag-time" music. On Sunday we had service, at which the music was truly excellent. Most of us knew the familiar hymns, and we managed to get along fine without books.

Sometimes we got together and told stories, and then we had the most fun of all. Some of the men had such interesting personal experiences to tell, but no doubt they had traveled widely. One big fellow we called "Klondike," because he had been to the gold fields, and he had the most wonderful stories to tell. Another man had been to South Africa and used to tell us about the Boers, in whom we were all much interested. As he was Irish the Boers were pictured in a way greatly to their credit.

Everyone in the steerage had a nickname. On account of my hair I was "Reddy." I didn't mind the title, since it wasn't nearly so bad as some. There

was from America, he said, "You American boys have a great many generals to be proud of. You have Grant and Sherman and Stonewall Jackson, and several others who were the equals of any men the world has produced. I am sure you boys must love those heroes very much." I assured him that we do, and I, for one, will think all the more of them now that I have heard an English general speak so highly of what they have done.

There is lots to do in London and many famous persons to see, but the Exposition is getting into shape at Paris and I must hurry. I know there are more wonders there than I have ever dreamed about.

AUNT EM'S LETTER TO LITTLE BOYS

Home, June, 10, 1900.

My Dear Boys:

Would you like to have me tell you about a dream that I enjoyed one night last week? Perhaps I may have been

thinking of what I told you of the carpet stretchers, before I fell asleep; as the saying is "Dreams are but the continuation of waking thoughts."

I seemed to be in the upper room of an enormous factory. A large packing box was

shown to me, and I seated myself quite naturally, as I would have done in any wagon. Suddenly, by some unseen power, it lifted itself, and was carried, or floated around the vast room. The ceiling was not very far from my head, at any time.

This strange craft in such constant motion, afforded me great delight. None of the employes seemed to notice me nor did the flying machine cause me any uneasiness. I took good care, however, that my strange conveyance did not take me too near the large open window at the end of the building.

After flying around an hour or so the machine came down with a gentle thud, and I stepped out. A stranger came up and urged me to be seated in another and larger flying machine. Already it had one occupant, a lady. I accepted the invitation.

This double box was fitted up with a lining of corks, not unlike one of the modern life preservers you see on steamers. The seats were tastefully upholstered. Then there were plenty of cords and ropes all around us, and while not secured to any particular place yet by the slightest pull of the large rope, we went hither and thither all over the factory. Just as we were longing to make a safe exit into the outer world through the open window—I awakened.

Wasn't it too bad that I had to curtail the trip in that provoking manner? Think of all the fun I missed!

Ever since I learned that poem, "Darius Green and his flying machine," in school days, I have been interested and hopeful that some one might invent the genuine working article. Not being of an inventive turn of mind, I cannot turn this dream to good account, can you?

Early in July I hope to go abroad, and with many other American tourists visit the Paris Exposition and the Oberammergau Passion Play. Then I hope to see Holland and all the quaint places and picturesque people there.

Would you like me to write you something of the queer sights and possible adventures I may have while traveling?

Always sincerely yours,

"AUNT EM."

THE VOYAGE ENDED.

they were for the most part well-dressed and well-behaved. All nationalities seemed to be represented in the crowd. There were Swedes, Norwegians, Irish, English, Germans, French, Hungarians, Spanish, etc. I think I was the only born American among them. The Swedes and Irish predominated, and this was fortunate, because they were the most orderly and well-behaved. Most of the people were going to their old homes, some on a visit, others to bring relatives back with them.

As soon as we lost sight of land we all went below to select our bunks for the voyage. We were obliged to climb down two ladders to reach our quarters, which were divided into three general sections, one for men, one for women and one for married couples. Each section was subdivided, and in my room there were no less than sixteen bunks. One can imagine what the air is like when sixteen men are sleeping together in the hold of a ship. The place was clean enough when we left New York,

Irish girls had brought along some tea and a pot, so we were always sure of a good cup of tea if we could eat nothing else. We used to make tea between meals, for, of course, the men and women ate at different tables at meal-time. If it hadn't been for these girls I would certainly have been very hungry many times.

There was lots of fun on board. One of the Germans had a concertina on which he played, while the girls and boys danced. Every evening we had a regular ball on our deck, and the first-class passengers used to look down on us as if they wished they could dance, too. Then one of the Irish fellows had a harp, on which he could play and dance a jig at the same time. He was really our star performer, and always had the most applause. Two of the Norwegian girls had an autoharp, on which they accompanied their songs. They could sing most beautifully and were always willing to do so when we asked them. Sometimes we had all

was "Irish Jim," "Lazy Pete" and "Kruger," so-called because of his Boer-like beard. Then there were the "Tin Soldier," who had been with the Seventy-first New York in the Spanish war, and "Brandy-nose," who certainly took too much spirits. Even the girls had nicknames. One of the nicest of the Irish girls was "Gumdrops," because she had some teeth out in front. Another was "Ginger," because of the color of her hair. None objected to their names, and it would have been useless if they had, for they would have been dubbed with a worse one.

During three days of the voyage we had stormy weather, and we all remained below. It was very exciting one night, when the vessel was pitching and tossing in a frightful way, for some of the women screamed constantly with fear. They thought the ship was certainly going to sink, and the stewards were kept busy reassuring them. But there wasn't much sleep for any of us on board.

A week from the day we left New York the vessel touched at Queenstown, and there most of the Irish passengers landed. I was truly sorry to say good-bye to some of them.

Next day we anchored in the River Mersey at Liverpool, and the long voyage was over. There were many long good-byes and handshakes, and soon I was on the special train which was to carry me on to London. On this last day I decided that I was very glad to have come steerage, for the experience was one I never can forget. And I learned, among other things, that not nearly all good people travel first-class.

It was a hot afternoon on which I arrived in London, and the streets were crowded with men, women and children out for their Sunday walk. There was the same old noise and the same innumerable vehicles in the streets, and I was very glad to be in dear old London once again. It didn't take me long to find a modest lodging, and I went to bed early in the evening, glad once more to be in a clean place.

On Monday morning I went out into the streets, and was not surprised to see flags flying everywhere. General Sir George White had returned from the war in South Africa and the city was giving him a warm welcome. I read about him in the papers, and I determined to call and see him the very next day. I found him to be every bit as fine a man as I expected, and when I told him that I

THE AMERICAN BOY is the only official organ of the Agassiz Association and should be in the hands of every member.

All correspondence for this department should be sent to Mr. Hurlan H. Ballard, Pittsfield, Mass. Long articles cannot be used.

THE AGASSIZ ASSOCIATION welcomes members

of all ages, and anyone who is interested in any form of natural science is invited. Established in 1876. Incorporated in 1892.

Short notes of personal observations are particularly desired for use in the A. A. department. Send illustrations when convenient. Questions are invited.

MIDSUMMER

Midsummer, the time of vacation, of rest from school and office work, the world's play time, is the busy season of the Agassiz Association. Then are our chapters off for field days, and long excursions in search of the wonderful things to be found in field and forest: the commonest being often the most wonderful. It is not the unusual that is the most surprising, or the most delightful.

It is not the double fern-frond, or the four-leaved trillium, or clover, or the Albino robin, or the four-legged chicken that best rewards our search; but it is the continual discovery under all seeming variations of Nature's essential unity. It is the orderly procession of the seasons, the unflinching punctuality of the planets, the narrow limits allowed to deviations from the standard form of leaf and tree and crystal; the universal conformity to law that at once most amazes and delights us.

Professor Lowell was once annoyed by a young organist. It is said, who insisted upon introducing sensational airs from the opera into his church preludes and interludes. The caustic professor found his opportunity for a sharp rebuke, when he had occasion, at a fashionable reception, to introduce the accomplished artist to a lady of high rank in England. "My Lady Blank," said he, in his shrill staccato tones, "permit me to present Mr. Dashkins, our university organist. He always pleases, and, sometimes, astonishes; and I may add, the less he astonishes, the more he pleases."

To some of us, at least, the same is true of Nature.

At the same time, there are many, especially among amateur naturalists, who are most pleased by that which is most strange and startling; and for them also Nature makes full provision. In her infinite museum she, too, has her "Chamber of Horrors," wherein earthquake and volcano, whirlwind and hail, and water-spout, disease, deformity and death may ever be found by those who are curious to look.

Like Mr. Stockton's Queen, Nature knows that the true way to get people interested in her treasures is to include among them the things in which the people take an interest.

This natural desire for something new and rare leads to a general fondness for

EXCHANGES OF SPECIMENS.

One of the features of the Agassiz Association is the interchange of specimens among members. In these exchanges there is both advantage and peril. The advantage is evident. The flower or mineral or insect which is common in your town is rare in scores of other towns which are, nevertheless, within easy reach by mail.

In the last issue of THE AMERICAN BOY we told you how a western professor built up a grand collection of insects on a foundation of beetles which he found in abundance; while elsewhere they were almost unknown.

I know a gentleman, who, through the fortunate discovery of a ledge rich in rare "black garnets," secured material for exchanges which enabled him at little expense to secure a really notable collection of minerals.

An incidental, though capital advantage of exchanging, results in a widening knowledge of geography, and of the varied resources of our country, and in the making of new acquaintances and friends; in an enlarged horizon.

NOTES OF PERSONAL OBSERVATION.

Our offer of a card of membership in the Agassiz Association, and a badge, to every one who will send us an account of anything of interest he has observed in any line of natural history, has brought many replies. The offer is still open. Notes should be accompanied by a photograph or drawing.

Our offer is a liberal one, as the fee for membership is fifty cents, and the badges are five cents each.

It will be seen from the notes which follow that we do not require difficult or unusual work, nor that the observations shall necessarily add new facts to the sum of human knowledge; only that they shall be bona fide results of original independent work.

NOTES.

9. Robin Finding His Young.—I saw a robin fly into an elm with a few worms in his bill. I saw quite a big nest there, and three little brown heads with three little yellow bills sticking up out of it. Then I saw the father robin put a piece of a worm into one of the gaping mouths, and then into the others. He then flew away and got some more.—Herbert A. Sweet, nine years old, Bridgewater, Mass. [Now watch a robin as he searches for worms on the lawn. Why do you think he turns his head sideways so intently just before he pounces down on a worm? Is he listening? Do worms make any noise as they move about under the earth? Suppose you put your own ear down close to the earth and listen. Then report.]

10. Dobsons.—

While passing under an electric light, a long bug or worm, with movements and propulsion similar to a worm, wobbled across the sidewalk in front of me. The peculiarity of this insect would have arrested the attention of the most negligent observer. Here is a sketch of it. When I prodded it with a stick it stopped, opened its pinchers, stuck its head up in the air and swung it from side to side. It showed an ugly disposition, and I determined to kill it; so I set my foot on it, gently at first; with enough pressure to kill any ordinary insect instantly. But this one walked away with as much unconcern as though a toothpick had dropped upon him. Not until after repeated stamps with my foot did it give up. I carried it home, where it died a day after. It is three and a quarter inches long and of a dark mud color. The head and second section is a hard black shell, while the rest of the body is soft like a worm's body. It has six legs with little hooks that slightly turn down and make a sure mode of propulsion. Protruding from underneath the

body are twelve feelers. Its appearance would be much improved if it would refrain from moving its head from side to side like a lizard when it walks. I am at a loss to know what its name is; possibly some of the readers of THE AMERICAN BOY have met it.—Joseph Hatch, Elkhart, Ind.

[Mr. Hatch has found a "Dobson," as this curious larva is called by bass fishermen. If he will catch a few alive, and keep them in an aquarium, he may see an interesting transformation. The sketch, which accompanies this note, represents this larva with eighteen segments, counting the head. A picture in one of our standard entomologies gives only thirteen, which is correct? The insect belongs to the order Neuroptera. Who will tell us more about it? A badge will be sent to the one who shall send us the best account of it.]

11. Owl and Trap.—During Christmas week, 1899, while hunting in the woods near Lewisville, Ark., I killed a large owl. On its right leg was a steel trap which weighed about two pounds. About three-quarters of a mile from where I shot it, the trap had been set. It had been on the owl's leg for three days and nights. From tip to tip of the owl's wings it measured four feet.—Scott B. Williams, 314 Common street, Shreveport, La.

12. Shale Pebble.—I send you a curious pebble in thin flakes like mica. When I found it, it was an inch and a half long, three-fourths of an inch wide, and half an inch thick with rounded edges, the whole being roughly egg-shaped. On picking it up, it separated into fourteen very thin scales, most of them perfect in shape, and having a satiny lustre.—E. B. B.

13. Odd Walnuts.—Most walnuts that I have seen have shells that split into two equal portions. Today I found one whose shell is in three segments, and another in four, each half being naturally cleft in two, lengthwise.—Ibid.

14. Tent Caterpillars.—Today I noticed a curious swelling near the end of a small twig. It is almond-shaped, and nearly encircles the twig. It is three-fourths of an inch long, one-fourth of an inch wide, and not quite so thick. Its color is brownish gray, corresponding to the color of the bark. In and upon this excrescence are about fifty tiny black caterpillars. They are no thicker than a fine cambric needle, and are only one-sixteenth of an inch long. About the size of the letter i (lower case), in the reading matter of THE AMERICAN BOY. They are covered with very minute gray hairs. A part of the gray growth is broken away on one side, and underneath it, and fast to the twig, is a layer of hundreds of small white eggs, each no bigger than an ordinary period, or the printed dot over an i.

The caterpillars have evidently come from these eggs, some of which are open and empty.

Under the microscope these broken egg shells look like mother-of-pearl, and shine with rainbow colors. The top of each unbroken egg is nearly flat and seems to be provided with a round cover, rising in the middle to a tiny boss or point. The under side of each egg is dented in the middle.

The gray protective substance with which the layer of eggs is covered is hard to account for. It is cellular in structure, resembling under the glass a dainty honeycomb with exceedingly thin transparent walls to the cells, whose sides vary from four to six.

Already the baby caterpillars are making their little webs. Here is one hanging down an inch from the twig on an invisible cable.

While watching one of the caterpillars through the microscope, trying to determine whether he was feeding; the delicate cellular tissue of his winter home, I saw upon one of his hairs a still smaller creature, a bright red mite, scampering along with six nimble legs, and was reminded of the old lines:

"And the small fleas in turn
Have lesser fleas to bite 'em,
And these again have lesser still,
And so ad infinitum."

But how the eggs get covered remains a mystery; who will solve it?—A Friend.

14a. Tent Caterpillars.—Remembering how much praise I had heard from some boys of Watertown, I resolved to buy a copy of THE AMERICAN BOY. I can only say that it eclipses all other boy papers. After having read it, I went right over to Cary Moon's and had him subscribe me for three months. After that I intend to subscribe for a year. As I looked over the paper I came to the Agassiz Association. I would like to belong to the association and obtain the badge, as I am a fervent admirer of

old Dame Nature and all her ways. As I was going home from school, I noticed on an apple tree an enlargement of a branch. I took the branch home and put it in water, and as the tender buds came out, so did numbers of little caterpillars. They at once ascended to the buds and began to make a meal out of them. They continued these actions for three days. Each night would see them all hovering over the eggs, and each morning they ascended to the buds. As the buds were getting pretty thin they began to spin their tent. It was completed in about four or five days, when the caterpillars were about a fourth of an inch long. They seem to come out of the tent at morning and go into it at night.—Dwight C. Howard, No. 35 Keyes avenue, Watertown, N. Y.

15. House Spiders.—Spiders are to be found more or less abundantly in every part of the world, but how many boys and girls know where a spider gets the material to make a web?

After patiently examining spiders with a strong magnifying glass, I solved what seemed to me a mysterious problem.

The thread or silk comes from the short, fleshy appendages under the abdomen, which are called spinnerets. I have noticed there are two, four, or six of them in different spiders. Sometimes one pair is very long and projects from behind like two tails. Each spinneret has on its end a large number of minute tubes, which can be seen with a strong magnifying glass. The material forming the web is a fluid within the body, which hardens as soon as it is exposed to the air. The fluid streams from each of the spinnerets in many fine fibres, according to the number of tubes, and then all unite from the six spinnerets forming a single thread. If a spider wishes to fasten a thread to any object it simply presses its spinneret against it, and forces out enough of the silk to adhere, then it moves off and the thread is drawn out. The spinning is also often aided by the hinder pair of legs, whether to guide the thread or pull it from the spinnerets, or for both purposes. I do not know—Arthur Garfield Schuman, Bern, Pa.

ARCTURUS VERSUS THE LIGHTNING EXPRESS.

Prof. Simon Newcomb, writing of astronomical wonders in the Youth's Companion, says: On a summer evening you may see Arcturus high up in the south or southwest in June or July, and farther down in the west in August or September. You will know it by its red color. That star has been flying straight ahead ever since astronomers began to observe it, at such a speed that it would run from New York to Chicago in a small fraction of a minute. You would have to be spry to rise from your chair, put on your hat and overcoat and

gloves and go out on the street while it was crossing the Atlantic ocean from New York to Liverpool. And yet if you should watch that star all your life, and live as long as Methuselah, you would not be able to see that it moved at all. The journey that it would make in a thousand years would be as nothing alongside its distance.

CHAPTER 473, WORCESTER ACADEMY, MASS.

May 21, 1900.

Our chapter has had a very successful year. Seventeen meetings have been held. The principal features of the programmes of these meetings have been

lectures on natural history, and related topics by members of the school faculty, or by student members of the chapter. One lecture was delivered by Dr. Gulliver, of St. Mark's School.

The total membership of the chapter is 53, and the attendance at meetings is usually between twenty-five and thirty.

Last spring the chapter went to Purgatory, Mass., on bicycles, and had a very enjoyable outing. The following fall Mount Wachusett was visited, and this spring a trip is planned to Rutland, Mass.

The society occupies an excellent room in Kingsley Laboratories. We

have a good collection, which is valued at several hundred dollars.

This spring a contest is being held for the best collection of insects from around Worcester. A prize of books on insects to the value of five dollars has been offered for the best collection.

All communications for this Department should be addressed to

MR. HARLAN H. BALLARD,

President of the Agassiz Association
Pittsfield, Mass

Boys as Money-Makers and Money-Savers

Advice to Boys, Given by James Oliver the Millionaire Plow Maker.

"A man may acquire a goodly share of the world's goods by dishonest methods, trickery and deceit, but his success will be shortlived, unstable and unsatisfactory. No man base in deed is at rest in mind, and if money will not bring mental as well as bodily comfort, of what good is it? Worst of all a dishonest career must some day close, and the mere thought of the ultimate reckoning will undo all the pleasure that ill-gotten gain may have given.

A young man should be scrupulously honest and honorable in all his actions. Never should he sacrifice conscience to gain wealth, or foster the belief that success is simply the accumulation of money. Then he must persevere. He cannot gain worldly success without an invincible determination to succeed, and ability, talents and circumstances will count for little without tenacity of purpose—stubborn perseverance to get to the front. Upon no one but himself should he rely. He is the best friend he has on earth and nothing will in after life be more hurtful to him than to look outside himself for support while his character is shaping itself. It weakens his character and curtails the scope of his intellect.

HEART MUST BE IN IT.

"Further, a young man to be successful in business must apply himself unswervingly to his work. His whole mind and heart should go deep into it and he should cultivate a growing fondness for it. Unsteadiness or fickleness can never be made to harmonize with success.

"No matter how insignificant may be a young man's first situation, he will find that there is much to learn from it and he should be always keenly observing. Accuracy, too, should be one of his characteristic qualities. His work should never necessitate a second 'going over' by someone else. Then, he should learn to do his work systematically. The smallest business requires system. He should study carefully some method by which he can economize time and then live up to it. At his work he should always be on time. Punctuality is a virtue that employers perhaps recognize as quickly, if not more so, than any other. If an employer sees an employe always behind time in coming to work while engaged under his very nose, he is apt to conclude that if that employe were placed wholly upon his own responsibility he would be even more reckless, and in consequence the employer appoints a more regular man to the responsible position and the laggard wonders why there has been any discrimination against him.

"The successful young man should do his work quickly, yet accurately, and should have the greatest regard for time. Persistent effort on the part of any young man will be the means of cultivating such habits as are necessary in the successful performance of business.

FAITH IN THE POOR BOY.

"I have every faith in the possibilities of the poor boy and it is needless for me to cite any examples substantiating my belief. There isn't a boy in the land who cannot himself number offhand scores of men who have risen from the lowest ranks of poverty to the highest stations of eminence. The world's great-

est artists, inventors, poets and philosophers have forced their way to fame over the most stubborn rocks of adversity. The educational advantages that the poor boy may lack may in a way handicap him in the race of life, and he may have to solve his mathematical problems by longer methods than algebraic, but if he possesses those essential qualities to success—honesty, perseverance and good common sense—he is bound to succeed.

"I believe that poverty is a great aid in the development of success. We all know that too many advantages at the threshold of life's journey are a misfortune, because they dampen ambition, and a young man without ambition can never hope to succeed. The poor boy must resolve at the outset to encounter all the hardships of life unflinchingly and, above all, to be patient. In that I do not mean to be effortless, to sit idly by waiting for success to come around to the door like the postman, but I would say that never should he be discouraged in his work."

How Willie Jones Made Money.

A certain small Boston boy got into the habit of teasing his mother for pennies, until at last she said to him: "Now, Willie, I don't like to give you pennies; if you want money, you should go to work and earn it." The boy remained thoughtful for some time. Then, within a few days, the mother perceived that Willie had plenty of pennies. She wondered a little where he got them, but did not question him. But one summer day she noticed that some sort of a hullabaloo was going on in the backyard. Looking out, she saw Willie surrounded by a mob of boys, who were yelling with delight. She went down into the yard to see what was going on; and as she passed out she saw, stuck up on the back wall of the house, this notice, quite neatly "printed" out with a pencil:

WILLIE JONES WILL EAT

- 1 small green worm, for..... 1 cent
- 1 large green worm, for..... 2 cents
- 1 small fuzzy worm, for..... 3 cents
- 1 large fuzzy worm, for..... 5 cents
- 1 small green toad, for..... 25 cents

And Willie was apparently doing a thriving business.—Boston Transcript.

Spend Less Than You Make.

F. L. DAWSON.

I was riding on a train between St. Louis and Chicago, one night in September, 1898. My seatmate was a young fellow on his way to the latter named city to get work. I was impressed with his fine, manly bearing and I determined to help him, if he needed help.

As we talked together he told me something of his life. I asked him if he expected to succeed when he reached the city. He replied in a very earnest manner that he saw no reason why a boy who was ambitious and led a clean life should not succeed. I asked him what he would do if he failed to get work on his arrival. He answered that he had some money which he had saved, and told me of a rule which he followed—one that has made many men wealthy: "No matter what I make in a day, I have always spent a little less," he said, "and although I have no parents I have always some money in my pocket." Within a few hours after arriving in the city the boy was at work, and he has

had steady employment ever since. He is now connected with a large packing company, occupying a good position for a boy of his age, and is on the way to a successful business career. Poverty is no stumbling block to the boy that has the right kind of stuff in him. He will make it a stepping stone instead. Let the readers of THE AMERICAN BOY learn the lesson of spending a little less than they make, and we shall hear of many of them succeeding in life.

How Boys Make Money.

Horace Mulkey, Bronaugh, Mo.—I live on a farm three miles south of Bronaugh. Last fall I drove a team for a hay press for about forty days at fifty cents a day. When I received my money I bought a few sheep. I sheared them a few days ago and the wool paid for the sheep and a little over. I have hired out this coming season to drive for the same man. I am nearly fourteen years old.

E. J. M., New Haven, Conn.—I make about twenty-five dollars every summer out of chickens. I also have a paper route and make seventy-five cents a day at that. Last summer I made bluing and sold it at ten cents a bottle, making a good profit. From my savings I have bought a wheel.

Sidney S. Wurtsman, Savannah, Ga.: I got a piece of ice and several bottles of flavors. I shaved the ice and made balls out of the shaved ice and poured flavors on them and sold the balls at one cent each. You can see these snowball stores on nearly every block here.

Carl Richert, Whitehall, Ill.: I raised some chickens and sold them for three dollars and fifty cents. Then I bought two pigs for the money and fed them on leavings from the kitchen, small potatoes, etc., that we did not need. When they were fattened I sold them for eighteen dollars and twenty-six cents. This was the largest sum of money that I ever had. I gave eight dollars of it to my father for the feed, and had about ten dollars left. With this I bought a nice violin, on which I am now taking lessons.

George Zahn, Atchison, Kas.: I made money last winter helping put up ice near my home. I made seventeen dollars and fifty-two cents. I now work every Saturday evening and make twenty-five cents. I am putting my money in the bank and saving it.

\$8 Paid Per 100 for Distributing Samples of Washing fluid. Send 6c stamp. A. W. SCOTT, Cohoes, N. Y.

4 CENTS brings you sample Microscope; 2c doz. Sell 10c each; big profits. Daimaru Bazar, Pathfinder, D.C.

BOYS MAKE \$8.00 A DAY EASY for particulars, International Co., 241 Biscell St., Chicago, Ill.

BOYS! Send 10c for the formula of Capsule Bluing, and start a business that will win you many Dollars; others have done it, so can you. C. I. Peacock, Poplar Ridge, N. Y.

BE YOUR OWN BOSS—Go in Mail Order Business. No capital. For particulars send stamp. R. MOTTER, Box 49, New London, Ohio.

CAMPAIGN BOOK. 60 pages. Authentic history of parties and all issues. Lives of candidates. Every voter wants it. Big money for agents. Act quickly. Full outfit free. Salary or commission. Standard Pub. Co., 41 N. 6th St., Philadelphia, Pa.

BOYS WANTED
To sell our new Scientific Flying Machines size 15x22 patented Oct. 3d, 1899. A marvelous invention. Send 10 cents for sample machine and terms to agents. Armstrong Mfg. Co., 127 South Barry St., Olean, N. Y.

WE PAY \$1.00 FOR 500 NAMES
Dime for enrollment book with space for 500 names, or 2 cents for book with space for 100 names. You can fill the larger book in one day which means \$1.00 for you. ROGER & STOVER, Amsterdam, N. Y.

AMERICAN BOYS

Don't waste your evenings, we furnish light legitimate work, any distance, \$3 to \$4 a week easily made. Particulars, enclose stamped addressed envelope. **BEN. M., Dept. A, Lippincott Bldg. Philadelphia.**

A Cool Drink by Mail!

ORANGE-AID! Better than lemonade. Concentrated fruit powder, ready to mix with water. No sugar required. For use of Families, Restaurants, Fruit Stands, Parties, Picnics, Fairs, etc. 20 glasses made in 2 minutes, at a cost of 10c. Sample free for 2c postage, or one gal. trial package for **BOYS MAKE MONEY!** **CHICAGO BARGAINS CO., Dept. 10, 124 Van Buren Street, CHICAGO, ILL.**

\$175 A MONTH selling PHOTO Buttons, Pins, Brooches, Etc. Each has a photograph of the wearer's friend, child, wife or relative. These are the most popular novelties ever produced and best sellers known. Be first in your locality **SAMPLE FREE** **F. HODGSON BUITON CO., Cincinnati, Ohio.**

3 CASH PRIZES For Boys and Girls. \$5.00, \$3.00 and \$2.00. For the three largest lists of names of babies under two years, by Aug. 1, 1900. Write name, age and address plainly.

AMERICAN GO CART CO., DETROIT, MICH., Manufacturers of English Folding and Reclining Go Carts. Can be taken on street cars.

BOYS
We Set You Up in Business
We want Boys for Agents in every town, to sell
THE SATURDAY EVENING POST
(Of Philadelphia)
We will furnish you with ten copies the first week **FREE OF CHARGE**, to be sold at 5 cents a copy; you can then send us the wholesale price for as many as you find you can sell for the next week.
You can find many people who will be glad to patronize a bright boy, and will agree to buy of you every week if you deliver it regularly at the house, store or office.
You can build up a trade in a short time; permanent customers who will buy every week. You can thus earn money without interfering with school duties, and be independent.
Address **THE CURTIS PUBLISHING COMPANY, Philadelphia**

THE BOY'S LIBRARY

Bayard Taylor, the Poet Laureate of America.

The readers of THE AMERICAN BOY are, I am sure, thoroughly up-to-date in the best sense of this expressive phrase. It is natural, therefore that they should delight in the works of such writers as Henty, Knox, Rathbun, Trowbridge, King, Stevenson and Kipling, all of whom deserve the strong hold they have upon the interest and preference of our boys. There are, however, certain other writers whose books possess a value that time cannot destroy. And these books must be read by every boy who desires to be well informed.

Nothing does more to make us true gentlemen than intimate association with men of learning, culture and clean, wholesome lives, and every American boy may form such an association by reading the books written by wise and good men.

Bulwer says that "the pen is mightier than the sword," and this is true, boys. He who, by the God-given power of intellect defends the right, uplifts the weak, and leads his fellowmen upward to better thoughts and worthier lives does more to vanquish evil than the mightiest hero in "the world's broad field of battle." Pre-eminent among the names which should thus be honored, is that of James Bayard Taylor, the poet laureate of America, upon whom was conferred the honor of writing the national ode for our country's great Centennial of 1876.

Every American boy ought to be familiar with the life and writings of Bayard Taylor. "Views Afoot," "Eldorado," "A Journey to Central Africa," "The Lands of the Saracen," "Travels in Greece," "Egypt and Iceland," "Boys of Other Countries," and "At Home and Abroad," are some of Taylor's books, which are as thoroughly delightful and fascinating as those of your modern favorites.

For the benefit of my young friends whose knowledge of the world and its great wonders must (for the present) be derived from books, I suggest the reading of "At Home and Abroad." Among the delightful "journeys" to be found in this book is a trip to that greatest of natural wonders—the "Mammoth Cave" of Kentucky.

Bayard Taylor's description of this subterranean wonderland is remarkably correct, and exquisitely beautiful. "Mammoth Cave" is Nature's masterpiece, famous the wide world over.

In describing the entrance to the cave, Bayard Taylor says:

"The scene was wild and picturesque in the extreme, yet the first involuntary sensation was something akin to terror. The falling in of the roof of the main avenue of the cave has formed a gap or pit, about fifty feet in depth, terminating in a dark, yawning portal. Trees grew about the edges of this pit almost roofing it with shade; ferns and tangled vines fringed its sides, and a slender stream of water, flowing from the rocks, which arched above its entrance, dropped like a silver veil before the mysterious gloom. Taking each a lighted lamp we descended some rocky steps to the floor of the cavern, passed behind the tinkling cascade, and plunged into the darkness. . . . What are the galleries of the Vatican, the Louvre, Versailles, and the Crystal Palaces of London and Paris to this gigantic vault hewn in the living rock?"

And, again, Taylor thus tells us of the world-famous "Star Chamber."

"We were in the celebrated 'Star Chamber.' We looked upwards, lost in wonder. Your reason vainly tells you that it is but a crust of black oxide of manganese, sprinkled with crystals of gypsum. You see that it is a fathomless

heaven, with constellation twinkling in illimitable space. The guide, by a skillful arrangement of his lights, produced the appearance of a thunder cloud rising and gradually spreading over the sky. The stars are lost, the gorge is wrapped in darkness. Then the clouds break away, and the stars seem to twinkle with a more bright and frosty lustre. 'Take care of yourselves,' cries the guide, as we hear his footsteps under the floor. He has all our lamps, and we can now see but a faint glimmer through the opening he entered. Now it ceases altogether. Yes, this is darkness—solid, palpable darkness. After awhile a golden nebulous glow stole upon the darkness, seemingly brighter than the sunrise radiance of the east, and increased until our guide and lamps rose above the horizon."

The Bottomless Pit, the Dead Sea, Echo River (with its white, eyeless fish), the Vineyard, where a perfect vine, springing from the base of lofty cliffs supports myriad clusters of equally perfect grapes "which gleam with blue and violet tints through the water which trickles over them," Elindo Avenue, "a subterranean conservatory, filled with the flowers of all zones," the Rocky Mountains, and all the mysteries and beauties of "Mammoth Cave" are to be found in "At Home and Abroad."

In commenting upon this remarkable work of Nature, Bayard Taylor says:

"What power is it which lies behind the mere chemistry of Nature? What but the Divine Will, which is never weary of multiplying for Man the lessons of His infinite wisdom?"

Your Librarian,
ALEXANDER JENKINS.

"Nature's Miracles."

By ELISBA GRAY.

In these "familiar talks on science" Prof. Gray has made clear to the young student what has for many years seemed miraculous until the student has become interested in the philosophy of nature's workings through a long course of study, but now even a child can understand from these explanations the growth of the earth and the action of air and water.

It is natural for the child, and, in fact, for those of older growth, to ask questions, and Prof. Gray has anticipated these by describing minutely yet clearly many of the common things which we daily meet, wonder at and yet hesitate to ask about.

Life has a stronger, truer meaning when we understand its mysterious workings and know the why and wherefore of all the changes which take place in temperature, in the action of dew and frost, in cloud formation, and the numerous ways in which nature tries to tell us her story of the building of a world.

Prof. Gray has made this language plain to us, and has thereby given a new zest to the bare fact of living, not only to the student but to others who have not made a study of Nature's miracles.

This is one of the Handy Volume series, which takes up the subject, "World Building Life," "Energy and Vibration," and "Electricity and Magnetism." They are published by Fords, Howard & Hulbert, 47 East Tenth Street, New York. Price 60 cents.

"Dorsey, the Young Inventor."

By E. S. ELLIS.

"Dorsey, the Young Inventor," is the story of a country boy who is gifted with an inventive genius, and hardly knowing his own powers, makes use of them to lighten the work about the farm and brickyard. He is first accused of laziness because he sees an easier way to churn than by the old-fashioned dashes up and down, and how to transport bricks by the thousand and instead of singly and at great expense. The water power back of his father's house became to him a treasure trove out of which grew wondrous power for good, and people soon began to recognize the boy's genius without understanding it, one farmer expressing his surprise by:

"I don't know what to think of that 'ere boy, he's going to make either a blamed fool or a powerful smart man; and I'll be hanged if I know which."

This is the spirit in which most inventors are received, and very few of them are as fortunate, as was young Dorsey, in having his father to back him in his experiments. His experience in having his window fastener appropriated is not an unusual one, for many of the smaller inventions are caught up by some one who would never have thought them out, but seeing their utility and having money to bring out the patent, easily claim them as their own.

Here, again, young Dorsey has help to secure his rights.

The author has given his inventor more business ability than usually accompanies the powers of an inventor; otherwise the book is very true to the subject it represents, and boys will find it very instructive as well as interesting. Published by Fords, Howard & Hulbert, New York.

"Sunday Afternoons for the Children."

A MOTHER BOOK.

By MRS. E. FRANCES SOULE.

This is truly the children's day—a time when the study of child nature and its tendencies are watched and heeded; when mothers' meetings are held and ways devised to bring these little minds under the influence of thoughts which will lead to well-ordered lives.

The mother's life is a busy one and the little German motto, "Ohne hast, ohne rast" (without haste, without rest) applies to her life, even without the busy Sunday afternoons; but Mrs. Soule has opened up such pleasant paths for little feet by her suggestions, that the work may become a pleasure, not a sacrifice, to the mother-teacher. Such lessons are helpful to the teacher and do not lose their power by being retold. The author has evidently a close acquaintance with the new methods of child education, and has carried out in object lessons the truths she wished to impress upon the child's mind, and all in such simple earnest language that any child can understand. It is a book to commend to any mother's reading and adoption.

Published by Fords, Howard & Hulbert, New York. Price, cloth, 75 cents.

"A Bonnie Boy."

By JULIA MACNAIR WRIGHT.

The new education begins in the home, and Julia MacNair Wright has taken "A Bonnie Boy" of three years, scarcely able to master the powers of speech, through all the questioning age of childhood up to his eleventh birthday, showing what wise and tender guidance can do toward encouraging a healthy growth of mind and body.

Jack was a regular interrogation point, but was never checked with an impatient:

"Go away; don't bother me now; I am too busy."

His wise grandma always answered his questions, and encouraged him to think for himself, so that he in turn delighted to impart his new information to his playmates and friends.

His little girl playmate, Margaret, came in for much of this wise teaching.

"Mar'det," said he, "do you know the big fair moon? It is a big, big, round world, far, far away. Ball round, not plate round."

Margaret insists that it is like a plate, when Jack still further informs her that it is a dark body "all cold, hard, black stones."

Margaret denies this also and says:

"The moon over at your house may be all flat stones, but the moon at my house is all clear bright shine," whereupon Jack declares, "You're folks don't know anything."

He is told the story of the siege of Troy, and forthwith proceeds to enlighten a college professor with his version of the story, to the great amusement of his hearers.

The book abounds in little touches of wit, and is full of information about the small everyday things of life, which children must encounter, but do not understand until they are explained to them; and many boys and girls of an older growth will be fascinated with the happy way in which the whole story is told.

The illustrations are not numerous, but they are fine and clear-cut as steel engravings.

"American Tract Society." Price \$1.00.

"The Sacred Tree."

WRITTEN BY A LOS ANGELES BOY FOR THIS PAPER.

On the banks of the Arroyo Seco, near Pasadena, Cal., there stands a lofty live oak tree, which is said to be at least 100 years old.

On the trunk of this tree there is what seems to be a long scar in the rough bark, but upon closer investigation you can plainly see that it has the form of a cross.

There is a story told by some of the old Mexicans still living about here to the effect that in the early days of this country the Mission Fathers, who taught the Catholic religion to the natives, used the cool shade of this tree for one of their places of worship, and they carved the cross on the tree; and to this day we find Mexicans who consider the tree sacred.

A short time ago the man owning this property wished to have the tree trimmed, so he hired an old Mexican, who lived near, to do the job; but on seeing what tree it was, the man with a look of awe on his face, refused to touch it, saying "If I should cut a single limb of it something dreadful would happen to me." After some persuasion and a more liberal offer he overcame his scruples and did the work.

Huntington's Secret.

Collis P. Huntington has been persuaded to give some advice to young men on the way to succeed in life. "In regard to myself," says Mr. Huntington, "I live within my means." As Mr. Huntington's means run into seven figures, this achievement will perhaps not strike most of us as remarkable. "There is another principle that must be obeyed," says Mr. Huntington; "business before pleasure. There will be an important meeting here tonight, but one of the gentlemen said he could not attend because he had to go to an entertainment with his wife." In referring to "false pride" as an obstacle to success, he exclaims: "Why, I know young men in New York city who would not carry a trunk along Fifth avenue if you should give all the frontage they could pass, simply because they'd be afraid they'd meet some girl they knew." Mr. Huntington's most important utterance relates to college education. "Certain classes of young men make a mistake in going to college. They lose the most receptive and important part of their lives—from 17 to 21—in filling themselves with knowledge of other men's deeds that can be no practical use to the commercial world." Think of that! The most receptive and important part of their lives wasted in studying matters that have nothing to do with commerce—that merely broaden their minds and teach them that there are other things worth living for besides accumulating money and getting the advantage of their neighbors! Mr. Huntington's philosophy is summed up in these complacent words: "I never wanted anything that I needed; I always got it."

The Proper Time for Commencing Business on One's Own Account.

It is imprudent in any one to embark in business without that moderate capital ordinarily required in the business. It is imprudent in a young man to accept a loan from a money-lender, giving his friends as security, in order to get that moderate capital. But suppose that the friends of a young man who is of age and out of his apprenticeship, propose to furnish him the necessary capital to set up business, is it prudent in him to embark? I will merely express a few of the arguments on both sides, and leave it to the exercise of the individual judgment. A good deal undoubtedly depends on the person's previous education, and the extent of his knowledge. On the one side it is stated that experience is a relative term; a man at twenty-four has frequently more knowledge than many men of forty. Knowledge, not experience, is the one thing needful. Experience is only one of the ways of arriving at knowledge. "Wise men are instructed by reason; men of less understanding by experience; the most ignorant by necessity, and beasts by nature." The mind is a thing of impulse, of quick penetration; it acquires its knowledge of life by bounds and flights. In war, literature, and statesmanship, the greatest exploits of the most renowned men have been performed at an early age. Hannibal crossed the Alps before he was twenty-four. Alexander the Great died at thirty-three; Byron wrote Child Harold at twenty-one; Bonaparte was first consul before he was thirty. "Of all the great human actions ever heard or read of," says Montaigne, "of what sort

soever, I have observed, both in former ages and our own, more have been performed before, than after the age of thirty; and oft-times in the very lives of the same men. May I not confidently instance those of Hannibal, and his great competitor, Scipio? The latter half of their lives, they lived upon the glory they had acquired in their youth."

On the other side, we have the general observation of mankind, that those who have been most successful in business, have generally begun life with "an ax and a tow-shirt," and worked themselves gradually up. We have the facts that Girard was a poor man at thirty, and even at forty; that Rothschild did not get his capital of £20,000 till after he was thirty years old; that at thirty Astor had not made his first \$1,000, which, he says, was harder to make than all the others. We have the assertion of men who have spent twenty years in their avocation, that, although they thought themselves wise when they began, they were exceedingly ignorant. We have the knowledge that an energetic prosecution of business makes large draughts on the physical constitution; and the assertion of medical men that the frame does not harden till thirty; and, lastly, we have the example of the Saviour, who, although able to confound the doctors at twelve, did not commence his ministry till he was thirty years of age. Now, when doctors disagree, who shall decide? I will merely remark, that a man who has, or can obtain, a good situation, should not abandon it from slight reasons; that the task of the employed is easier than that of the employer; and that the reputation of doing business on one's own account is a consideration too trifling to influence a wise man's decision.—Freudley.

To Boys Who Don't Like to Do the Dirty Work.

"I have had to quit school in order to earn something to help support our family, as my father is not very well and does not earn enough to live on. I have tried three different places, but they put me at the hardest, most menial work, and I have been accustomed to doing the easy work around the house, and it hurts me to have to do dirty work."
